SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Longitude (West):	118.153634 - 118° 9' 13.08''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	394323.5
UTM Y (Meters):	3838637.8
Elevation:	2366 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630747 LANCASTER WEST, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

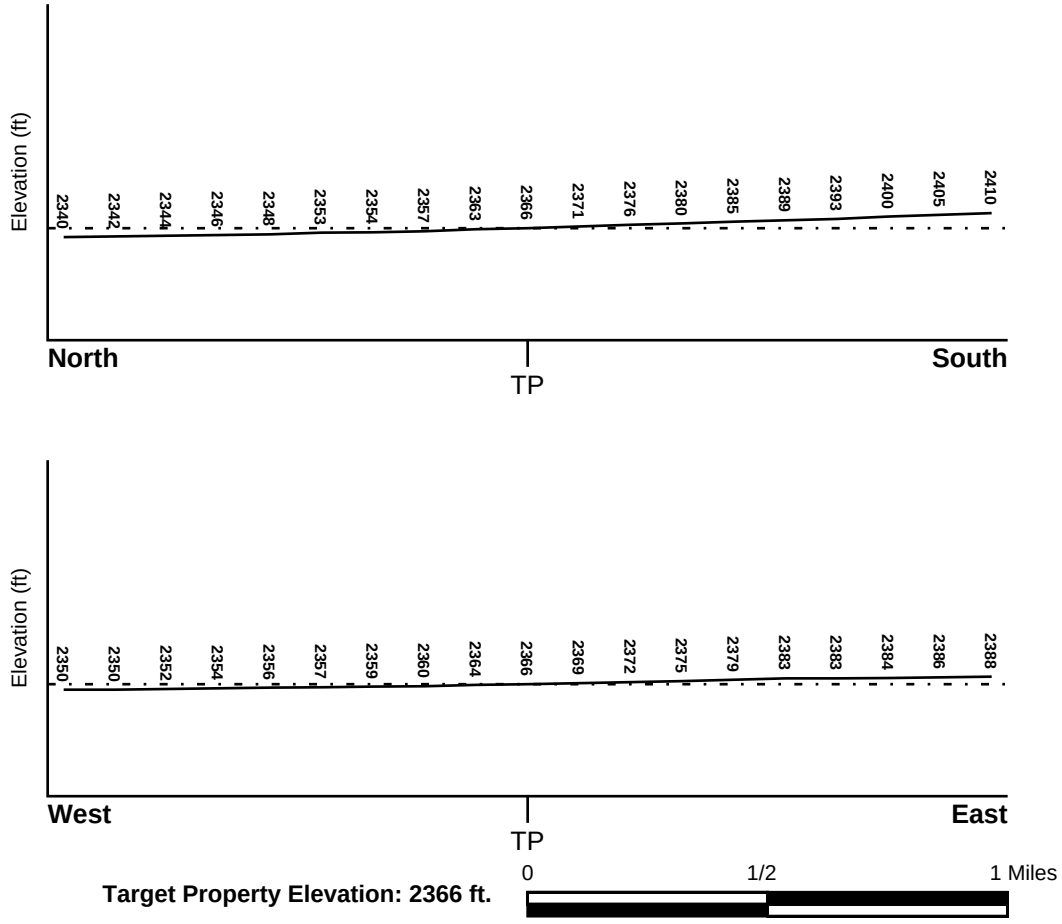
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C0420F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C0410F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LANCASTER WEST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Rosamond

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	7 inches	59 inches	stratified loam to silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: Pond

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	3 inches	24 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Elastic silt.	Max: 4 Min: 1.4	Max: 9.6 Min: 8.5
3	24 inches	72 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Elastic silt.	Max: 4 Min: 1.4	Max: 9.6 Min: 8.5

Soil Map ID: 3

Soil Component Name: Sunrise

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4
2	18 inches	31 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 9 Min: 7.9
3	31 inches	48 inches	cemented	Not reported	Not reported	Max: 0 Min: 0	Max: Min:
4	48 inches	64 inches	stratified gravelly sandy loam to loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.4

Soil Map ID: 4

Soil Component Name: Hesperia

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 6.1
2	3 inches	53 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4
3	53 inches	77 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4

Soil Map ID: 5

Soil Component Name: Cajon

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Leighton Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # AD1B-448F-B987

PO # NA

Project Lancaster Health District

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: AD1B-448F-B987

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Leighton Consulting (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EDR Inquiry # 4926832.4	Contact: Wallace Sconiers

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Leighton Consulting were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:		*Coordinates:*	
P.O.#	NA	**Latitude:**	34.685809 34° 41' 9" North

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Lancaster, CA 93534	Irvine, CA 92614
EDR Inquiry # 4926824.3	Contact: Wallace Sconiers

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Leighton Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # B9EF-4148-BF32

PO # NA

Project Lancaster Health District

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: B9EF-4148-BF32

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Leighton Consulting (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

43999 15th St W	Leighton Consulting
43999 15th St W	17781 Cowan
Lancaster, CA 93534	Irvine, CA 92614
EDR Inquiry # 4926836.3	Contact: Wallace Sconiers

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Leighton Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # A43E-4B31-9119

PO # NA

Project Lancaster Health District

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: A43E-4B31-9119

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Leighton Consulting (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2017 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc. or its affiliates is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

GBA GEOENVIRONMENTAL REPORT

Leighton

Important Information about This

Geoenvironmental Report

Geoenvironmental studies are commissioned to gain information about environmental conditions on and beneath the surface of a site. The more comprehensive the study, the more reliable the assessment is likely to be. But remember: Any such assessment is to a greater or lesser extent based on professional opinions about conditions that cannot be seen or tested. Accordingly, no matter how many data are developed, risks created by unanticipated conditions will always remain. *Have realistic expectations.* Work with your geoenvironmental consultant to manage known and unknown risks. Part of that process should already have been accomplished, through the risk allocation provisions you and your geoenvironmental professional discussed and included in your contract's general terms and conditions. This document is intended to explain some of the concepts that may be included in your agreement, and to pass along information and suggestions to help you manage your risk.

Beware of Change; Keep Your Geoenvironmental Professional Advised

The design of a geoenvironmental study considers a variety of factors that are subject to change. Changes can undermine the applicability of a report's findings, conclusions, and recommendations. *Advise your geoenvironmental professional about any changes you become aware of.* Geoenvironmental professionals cannot accept responsibility or liability for problems that occur because a report fails to consider conditions that did not exist when the study was designed. Ask your geoenvironmental professional about the types of changes you should be particularly alert to. Some of the most common include:

- modification of the proposed development or ownership group,
- sale or other property transfer,
- replacement of or additions to the financing entity,
- amendment of existing regulations or introduction of new ones, or
- changes in the use or condition of adjacent property.

Should you become aware of any change, *do not rely on a geoenvironmental report.* Advise your geoenvironmental professional immediately; follow the professional's advice.

Recognize the Impact of Time

A geoenvironmental professional's findings, recommendations, and conclusions cannot remain valid indefinitely. The more time that passes, the more likely it is that important latent changes will occur. *Do not rely on a geoenvironmental report if too much time has elapsed since it was completed.* Ask your environmental professional to define "too much time." In the case of Phase I Environmental Site Assessments (ESAs), for example, more than 180 days after submission is generally considered "too much."

Prepare To Deal with Unanticipated Conditions

The findings, recommendations, and conclusions of a Phase I ESA report typically are based on a review of historical information, interviews, a site "walkover," and other forms of noninvasive research. When site subsurface conditions are not sampled in any way, the risk of unanticipated conditions is higher than it would otherwise be.

While borings, installation of monitoring wells, and similar invasive test methods can help reduce the risk of unanticipated conditions, *do not overvalue the effectiveness of testing.* Testing provides information about actual conditions only at the precise locations where samples are taken, and only when they are taken. Your geoenvironmental

professional has applied that specific information to develop a general opinion about environmental conditions. *Actual conditions in areas not sampled may differ (sometimes sharply) from those predicted in a report.* For example, a site may contain an unregistered underground storage tank that shows no surface trace of its existence. *Even conditions in areas that were tested can change*, sometimes suddenly, due to any number of events, not the least of which include occurrences at adjacent sites. Recognize, too, that *even some conditions in tested areas may go undiscovered,* because the tests or analytical methods used were designed to detect only those conditions assumed to exist.

Manage your risks by retaining your geoenvironmental professional to work with you as the project proceeds. Establish a contingency fund or other means to enable your geoenvironmental professional to respond rapidly, in order to limit the impact of unforeseen conditions. And to help prevent any misunderstanding, identify those empowered to authorize changes and the administrative procedures that should be followed.

Do Not Permit Any Other Party To Rely on the Report

Geoenvironmental professionals design their studies and prepare their reports to meet the specific needs of the clients who retain them, in light of the risk management methods that the client and geoenvironmental professional agree to, and the statutory, regulatory, or other requirements that apply. The study designed for a developer may differ sharply from one designed for a lender, insurer, public agency...or even another developer. *Unless the report specifically states otherwise, it was developed for you and only you.* Do not unilaterally permit any other party to rely on it. The report and the study underlying it may not be adequate for another party's needs, and you could be held liable for shortcomings your geoenvironmental professional was powerless to prevent or anticipate. Inform your geoenvironmental professional when you know or expect that someone else—a third-party—will want to use or rely on the report. *Do not permit third-party use or reliance until you first confer with the geoenvironmental professional who prepared the report.* Additional testing, analysis, or study may be required and, in any event, appropriate terms and conditions should be agreed to so both you and your geoenvironmental professional are protected from third-party risks. *Any party who relies on a geoenvironmental report without the express written permission of the professional who prepared it and the client for whom it was prepared may be solely liable for any problems that arise.*

Avoid Misinterpretation of the Report

Design professionals and other parties may want to rely on the report in developing plans and specifications. They need to be advised, in writing, that their needs may not have been considered when the study's scope was developed, and, even if their needs were considered, they might misinterpret geoenvironmental findings, conclusions, and recommendations. *Commission your geoenvironmental professional to explain pertinent elements of the report to others who are permitted to rely on it, and to review any plans, specifications or other instruments of professional service that incorporate any of the report's findings, conclusions, or recommendations.* Your geoenvironmental professional has the best understanding of the issues involved, including the fundamental assumptions that underpinned the study's scope.

Give Contractors Access to the Report

Reduce the risk of delays, claims, and disputes by giving contractors access to the full report, *providing that it is accompanied by a letter of transmittal that can protect you* by making it unquestionably clear that: 1) the study was not conducted and the report was not prepared for purposes of bid development, and 2) the findings, conclusions, and recommendations included in the report are based on a variety of opinions, inferences, and assumptions and are subject to interpretation. Use the letter to also advise contractors to consult with your geoenvironmental professional to obtain clarifications, interpretations, and guidance (a fee may be required for this service), and that—in any event—they should conduct additional studies to obtain the specific type and extent of information each prefers for preparing a bid or cost estimate. Providing access to the full report, with the appropriate caveats, helps prevent formation of adversarial attitudes and claims of concealed or differing conditions. If a contractor elects to ignore the warnings and advice in the letter of transmittal, it would do so at its own risk. Your geoenvironmental professional should be able to help you prepare an effective letter.

Do Not Separate Documentation from the Report

Geoenvironmental reports often include supplemental documentation, such as maps and copies of regulatory files, permits, registrations, citations, and correspondence with regulatory agencies. If subsurface explorations were performed, the report may contain final boring logs and copies of laboratory data. If remediation activities occurred on site, the report may include: copies of daily field reports; waste manifests; and information about the disturbance of subsurface materials, the type and thickness of any fill placed on site, and fill placement practices, among other types of documentation. *Do not separate supplemental documentation from the report. Do not, and do not permit any other party to redraw or modify any of the supplemental documentation for incorporation into other professionals' instruments of service.*

Understand the Role of Standards

Unless they are incorporated into statutes or regulations, standard practices and standard guides developed by the American Society for Testing and Materials (ASTM) and other recognized standards-developing organizations (SDOs) are little more than aspirational methods agreed to by a consensus of a committee. The committees that develop standards may not comprise those best-qualified to establish methods and, no matter what, no standard method can possibly consider the infinite client- and project-specific variables that fly in the face of the theoretical "standard conditions" to which standard practices and standard guides apply. In fact, these variables can be so pronounced that geoenvironmental professionals who comply with every directive of an ASTM or other standard procedure could run afoul of local custom and practice, thus violating the standard of care. Accordingly, when geoenvironmental professionals indicate in their reports that they have performed a service "in general compliance" with one standard or another, it means they have applied professional judgement in creating and implementing a scope of service designed for the specific client and project involved, and which follows some of the general precepts laid out in the referenced standard. To the extent that a report indicates "general compliance" with a standard, you may wish to speak with your geoenvironmental professional to learn more about what was and was not done. *Do not assume a given standard was followed to the letter.* Research indicates that that seldom is the case.

Realize That Recommendations May Not Be Final

The technical recommendations included in a geoenvironmental report are based on assumptions about actual conditions, and so are preliminary or tentative. Final recommendations can be prepared only by observing actual conditions as they are exposed. For that reason, you should retain the geoenvironmental professional of record to observe construction and/or remediation activities on site, to permit rapid response to unanticipated conditions. *The geoenvironmental professional who prepared the report cannot assume responsibility or liability for the report's recommendations if that professional is not retained to observe relevant site operations.*

Understand That Geotechnical Issues Have Not Been Addressed

Unless geotechnical engineering was specifically included in the scope of professional service, a report is not likely to relate any findings, conclusions, or recommendations about the suitability of subsurface materials for construction purposes, especially when site remediation has been accomplished through the removal, replacement, encapsulation, or chemical treatment of on-site soils. The equipment, techniques, and testing used by geotechnical engineers differ markedly from those used by geoenvironmental professionals; their education, training, and experience are also significantly different. If you plan to build on the subject site, but have not yet had a geotechnical engineering study conducted, your geoenvironmental professional should be able to provide guidance about the next steps you should take. The same firm may provide the services you need.

Read Responsibility Provisions Closely

Geoenvironmental studies cannot be exact; they are based on professional judgement and opinion. Nonetheless, some clients, contractors, and others assume geoenvironmental reports are or certainly should be unerringly precise. Such assumptions have created unrealistic expectations that have led to wholly unwarranted claims and disputes. To help prevent such problems, geoenvironmental professionals have developed a number of report provisions and contract terms that explain who is responsible for what, and how risks are to be allocated. Some people mistake these for "exculpatory clauses," that is, provisions whose purpose is to transfer one party's rightful responsibilities and liabilities to someone else. Read the responsibility provisions included in a report and in the contract you and your geoenvironmental professional agreed to. *Responsibility provisions are not "boilerplate."* They are important.

Rely on Your Geoenvironmental Professional for Additional Assistance

Membership in the Geoprofessional Business Association exposes geoenvironmental professionals to a wide array of risk management techniques that can be of genuine benefit for everyone involved with a geoenvironmental project. Confer with your GBA-member geoenvironmental professional for more information.

Between Avenue J and Avenue J-8	3	10	45,000	65	0	1.8%	0.7%	76.5	105	326	1,013	3,148
Between Avenue J-8 and Avenue K	3	10	62,000	65	0	1.8%	0.7%	77.9	144	447	1,389	4,316

Notes:
(1) Alpha Factor: Coefficient of absorption relating to the effects of the ground surface. An alpha factor of 0 indicates that the site is an acoustically "hard" site, such as aspalt. An alpha factor of 0.5 indicates that the site is an acoustically "soft" site such, as heavily vegetated ground cover.

"-" = contour is located within the roadway lanes or within 75 feet of the roadway centerline.

Noise levels and distances to contours do not assume any natural or constructed barriers that may attenuate noise.

24-Hour Traffic Distribution for Roadways Designated as "Major," "Arterial" Highways or "Expressways"

	Weighted Traffic Distribution (%)			
	Day	Evening	Night	Totals
Auto	77.70%	12.70%	9.60%	100.00%
Medium-Duty Trucks	87.43%	5.05%	7.52%	100.00%
Heavy-Duty Trucks	89.10%	2.84%	8.06%	100.00%

Notes to Modeler: This model is for roadways designated as "major," "arterial" highways or "expressways by Riverside County." For roadways designated as "secondary," "collectors," or smaller, use the traffic distribution shown below. Vehicle mix for medium- and heavy-duty trucks was provided by Riverside County. Obtain traffic volumes from the traffic engineer. For state and federal highways, obtain percentages and traffic distribution data from the Caltrans website. Column H under Notes: should total 100%.

Notes:
(1) Alpha Factor: Coefficient of absorption relating to the effects of the ground surface. An alpha factor of 0 indicates that the site is an acoustically "hard" site, such as aspalt. An alpha factor of 0.5 indicates that the site is an acoustically "soft" site such, as heavily vegetated ground cover.

"-" = contour is located within the roadway lanes or within 75 feet of the roadway centerline.
Noise levels and distances to contours do not assume any natural or constructed barriers that may attenuate noise.

24-Hour Traffic Distribution for Roadways Designated as "Major," "Arterial" Highways or "Expressways"

	Weighted Traffic Distribution (%)			
	Day	Evening	Night	Totals
Auto	77.70%	12.70%	9.60%	100.00%
Medium-Duty Trucks	87.43%	5.05%	7.52%	100.00%
Heavy-Duty Trucks	89.10%	2.84%	8.06%	100.00%

Notes to Modeler: This model is for roadways designated as "major," "arterial" highways or "expressways by Riverside County." For roadways designated as "secondary," "collectors," or smaller, use the traffic distribution shown below. Vehicle mix for medium- and heavy-duty trucks was provided by Riverside County. Obtain traffic volumes from the traffic engineer. For state and federal highways, obtain percentages and traffic distribution data from the Caltrans website. Column H under Notes: should total 100%.

APPENDIX I

Public Services Correspondence

OFFICE OF THE SHERIFF

COUNTY OF LOS ANGELES

HALL OF JUSTICE

ALEX VILLANUEVA, SHERIFF

June 12, 2019

Victoria Boyd, Project Manager
Meridian Consultants
920 Hampshire Road, Suite A5
Westlake Village, California 91361

Dear Ms. Boyd:

REQUEST FOR SHERIFF PROTECTION SERVICES INFORMATION
MEDICAL MAIN STREET MASTER PLAN PROJECT
STATE CLEARINGHOUSE NO. 2017051076

Thank you for inviting the Los Angeles County Sheriff's Department (Department) to provide information in response to your Request for Sheriff Protection Services Information (Request), dated May 7, 2019, for the Medical Main Street Master Plan Project (Project) in the City of Lancaster (City).

The proposed Project will approve the Medical Main Street Master Plan (Master Plan). The Master Plan area encompasses 272 acres, generally bounded by West Avenue J to the north, West Avenue K to the south, State Route 14 and 20th Street West to the west, and 15th Street West, Lowtree Avenue, 12th Street West, and Kingtree Avenue to the east. The Master Plan will enable the replacement and expansion of the existing Antelope Valley Hospital, development of hotel facilities, and development of additional office, commercial, and residential uses in the Master Plan area.

The proposed Project is located within the service area of the Lancaster Sheriff's Station (Station). Accordingly, the Station reviewed the Request and authored the attached responses (see correspondence dated May 31, 2019, from Captain Todd P. Weber).

Also, for future reference, the Department provides the following updated contact information for all requests for review comments, law enforcement service information, California Environmental Quality Act documents, and other related correspondence:

Tracey Jue, Director
Facilities Planning Bureau
Los Angeles County Sheriff's Department
211 West Temple Street
Los Angeles, California 90012

Attention: Maynora G. Castro, Departmental Facilities Planner II
MGCastro@lasd.org

Should you have any questions regarding this matter, please contact me at (323) 526-5657, or your staff may contact Ms. Maynora Castro, of my staff, at (323) 526-5578.

Sincerely,

ALEX VILLANUEVA, SHERIFF

Tracey Jue, Director
Facilities Planning Bureau

FILE NO: N/A

OFFICE CORRESPONDENCE

FROM: TODD P. WEBER, CAPTAIN
LANCASTER STATION

TO: TRACY JUE, DIRECTOR
FACILITIES PLANNING BUREAU

SUBJECT: RESPONSES TO A REQUEST FOR SHERIFF'S DEPARTMENT SERVICE INFORMATION FOR THE PROPOSED MEDICAL MAIN STREET MASTER PLAN PROJECT

Lancaster Station (Station) provides the following information in response to a Request for Sheriff Protection Services Information (Request), dated May 7, 2019, from Meridian Consultants LLC (Meridian), for the Medical Main Street Master Plan Project (Project) in the City of Lancaster (City).

The proposed Project will approve the Medical Main Street Master Plan (Master Plan), a long-range planning document intended to guide future development in the 272-acre Master Plan area. The Master Plan area is irregularly-shaped, and generally bounded by West Avenue J to the north, West Avenue K to the south, State Route 14 and 20th Street West to the west, and 15th Street West, Lowtree Avenue, 12th Street West, and Kingtree Avenue to the east. The Master Plan area is located within the Station's service area, and is approximately two miles away from the Station.

The Master Plan area includes the Antelope Valley Hospital (420 beds; 691,930 square feet), housing (435 single- and multi-family units), and office/commercial development (1,270,430 sq. ft.). The proposed Project will enable the replacement of the Hospital (420 beds; 961,000 sq. ft.), allow the development of hotels (150 rooms), and facilitate additional office/commercial (1,090,000 sq. ft.), and housing (1,600 single- and multi-family units) development. No actual development associated with the Master Plan is proposed at this time.

The information provided below is formatted to correspond with the Request:

1. **Current number of sworn Los Angeles County Sheriff's Department officers total and that would service the Plan Area.**

As of June 1, 2019, the Station is staffed by 228 sworn personnel, of which 191 are assigned to patrol duties during day, night, or early-morning shifts. No patrol deputies, however, are assigned specifically to the Master Plan area.

2. **Officer-population staffing ratio per 10,000 residents.**

   As of January 1, 2010, the resident population of the Station's service area was 191,000. Based on the Station's current staffing levels (see Item #1, above), our service ratio is ten (10) patrol deputies per 10,000 residents. We suspect, however, that the resident population of our service area has increased significantly since 2010, therefore our service ratio is expected to be less than 10:10000.

3. **Number of crimes per 1,000 residents.**

   As of June 1, 2019, the (Part 1) crimes-to-population ratio in the Station's service area is 11.12 per 1,000 residents. This ratio is expected to be affected by current statistical data pertaining to the resident population of our service area.

4. **Types of crimes.**

   Criminal activities reported the Station include all Part 1 crimes (homicide, sexual assault, robbery, aggravated assault, burglary, larceny, auto theft, arson), as well as other offenses, including but not limited to, traffic violations, narcotics, prostitution, trespassing, disorderly conduct, etc.

5. **Number of calls per 1,000 residents.**

   As of June 1, 2019, the Station's call ratio is 152.65 per 1,000 residents. This ratio is expected to be affected by current statistical data pertaining to the resident population of our service area.

6. **Will there be any adjacent stations that could respond to calls to the Plan Area?**

   The Station will continue to respond to all calls for service from the Plan Area. In extreme emergencies, assistance can be provided by other Sheriff's Stations, the nearest being Palmdale Station (approximately 9 miles), and Santa Clarita Valley Station (approximately 45 miles).

7. **What is the average response time for emergency calls and non-emergency calls?**

As of June 1, 2019, the Station's average response times for emergent, priority, and routine calls for service are 6 minutes, 20 minutes, and 133 minutes, respectively. Note that these times are affected by traffic conditions, the deployment of radio cars elsewhere within the Station's service area when the call for service is received, and the remote settings of portions of our service area.

8. **What is the department's target goal response time for emergency calls?**

   The Department generally adheres to the following, widely-accepted industry standard among law enforcement agencies in urbanized settings for responding to emergent, priority, and routine calls for service: 10 minutes, 20 minutes, and 60 minutes, respectively.

9. **Does the Los Angeles County Sheriff's Department have any plans to construct new or expand existing facilities that would serve the Plan Area?**

   The Station is not aware of any plans to construct new facilities or expand the existing facility that would serve the Plan Area.

According to the Request, the information provided by the Station will be used to prepare a Draft Environmental Impact Report (Draft EIR) for the proposed Project. The Station requests the Draft EIR address the following issues and concerns:

10. The proposed Project will increase the employee and daytime populations of the Station's service area, which, in turn, will generate an increased demand for law enforcement services we provide. The Station expects the Draft EIR to quantify these population increases, describe potential impacts to our resources and operations, and identify measures to mitigate these impacts to a level of insignificance.

11. The Station expects the Draft EIR to analyze the proposed Project's impacts to the local transportation and circulation systems. Traffic levels on major streets, at key intersections, and at points of access to SR-14 must be quantified and analyzed. A Construction Traffic Management Plan should also be prepared and implemented to address construction-related traffic congestion and emergency access issues. If temporary lane closures are necessary for the installation of utilities, etc., the Station must be notified in advance, and emergency access must be maintained at all times. Flag persons and/or detours should also be provided as needed to ensure safe driving conditions, and signage should be posted to advise motorists of reduced construction zone speed limits.

12. The Department generally prescribes to the principles of Crime Prevention Through Environmental Design (CPTED). The goal of CPTED is to reduce opportunities for criminal activities by employing physical design features that discourage anti-social behaviors, and encourage the proper use of the site. The overall tenets of CPTED include defensible space, territoriality, surveillance, physical security, and strategically-located lighting and landscaping. The Station recommends the proposed Project consult with CPTED advisors as site-specific development occurs.

13. The Station recommends that Facilities Planning Bureau be included on the distribution list for future correspondence, documents, notifications, etc., pertaining to the proposed Project.

Thank you for including the Station in the environmental review process for the proposed Project. Should you have any questions of the Station regarding this matter, please feel free to contact Operations Sergeant Jeffrey Rhea at (661) 940-3805.

Subject: Parks Information

Importance: High

Victoria,

Please see below for the responses to your questions pertaining to park services in the City of Lancaster.

1. The City of Lancaster has approximately 450 acres of parks within the City limits, totaling 13 parks. The City also has several museums, community buildings and a baseball stadium which were not included in the total acres. All of these facilities are located within a 5 mile radius of the plan area and serve the existing and any future residents. Specifically, the parks and their locations are provided below. Additional information regarding each of these parks can be found on the City's website at https://www.cityoflancasterca.org/about-us/departments-services/parks-recreation-arts/parks.
    - American Heroes Park; 701 West Kettering Avenue
    - Deputy Pierre Bain Park/Eastside Pool; 45045 North 5th Street East
    - El Dorado Park; 44501 North 5th STreet East
    - Forrest E. Hull Park, 2850 West Avenue L-12
    - Jane Reynolds Park/Webber Pool; 716 Oldfield Street
    - Sgt Steve Owen Memoral Park/Big 8 Softball Complex; 43063 10th Street West
    - Lancaster National Soccer Center
    - 43000 30th Street East
    - Mariposa Park; 45755 North Fig Avenue
    - Prime Desert Woodland Preserve; 43201 35th Street West
    - Rawley Duntley Park; 3334 West Avenue K
    - Skytower Park; 43434 North Vineyard
    - Tierra Bonita Park; 44910 27th Street East
    - Whit Carter Park; 45635 Sierra Highway

2. The City has no plans at this time to develop additional parks. The City is in the process of installing a skateboard park/area at the existing Jane Reynolds Park. Some residential subdivisions are being developed with open space/recreational amenities; however, these facilities would be for the residents of the specific development and would be owned and maintained by a homeowner's association.
3. The current ratio of parkland to resident in the City of Lancaster is 2.81 acres/1,000 population. It is not possible to determine the ratio for the Plan area.
4. All developments within the Plan area would be required to pay the various park fees as established in the City's fee schedule.
5. In addition to the City Parks discussed above, Apollo is a County Park located within the City limits at 4555 West Avenue G. This is a 54-acre park with 3 man-made lakes. It was not included in the parkland ratio.

Please let me know if you need anything else.

Dear Ms. Boyd:

REQUEST FOR FIRE PROTECTION SERVICES INFORMATION, "MEDICAL MAIN STREET MASTER PLAN," PROPOSES TO CREATE A WALKABLE AND COMPACT CAMPUS CORE THAT BUILDS UPON AND ENHANCES EXISTING HOSPITAL FACILITIES, MEDICAL OFFICE, COMMERCIAL, PARKING, AND OPEN SPACE USES, LANCASTER, FFER 201900050

The Request for Fire Protection Services Information has been reviewed by the Planning Division, Land Development Unit, Forestry Division, and Health Hazardous Materials Division of the County of Los Angeles Fire Department.

The following are their comments:

PLANNING DIVISION:

1. Which Fire Stations serve the Plan Area specifically within 5 miles?

   Fire Station 33 is located at 44947 N. Date Ave., in Lancaster, approximately 1.5 miles from the project site. It is staffed with a 3 person paramedic assessment engine company comprised of 1 fire captain, 1 firefighter specialist, and 1 firefighter paramedic, a 4 person quint comprised of 1 fire captain, 1 firefighter specialist, and 2 firefighters, and a 2 person paramedic squad comprised of 2 firefighter paramedics.

Fire Station 134 is located at 43225 N. 25th St. West, in Lancaster, approximately 1.5 miles from the project site. It is staffed daily with a 3 person paramedic assessment engine company comprised of 1 fire captain, 1 firefighter specialist, and 1 firefighter paramedic and a 2 person paramedic squad comprised of 2 firefighter paramedics.

Additional Fire Stations within 5 miles of the Plan Area are Fire Stations 129 and 130 which serve as backup stations.

Fire Station 129, located at 42110 N. 6th St., in Lancaster, is approximately 3 miles from the Project Site. It is staffed daily with a Hazardous Materials Task Force which consists of a 4 person engine company comprised of 1 fire captain, 1 firefighter specialist, and 2 firefighters, a 3 person engine company, and a 2 person hazardous materials squad.

Fire Station 130, located at 44558 N. 40th St. West, Lancaster, is approximately 2 miles from the project site. It is staffed daily with a 4 person engine company comprised of 1 fire captain, 1 firefighter specialist, and 2 firefighters and a 2 person paramedic squad comprised of 2 firefighter paramedics.

2. Do the response times and distances for each fire station serving the Plan Area meet the performance standards of the LACoFD?

   Currently, the response times and distances for both the jurisdictional stations are adequate in the plan area.

3. Does LACoFD have any plans to construct new or expand existing fire stations that would serve the Project?

   Currently, the LACoFD has a plan for Fire Station 33 expansion to accommodate an additional engine company due to the growth in the plan area. The estimated target completion is 2021-22.

4. Please summarize any plans for Fire Department's service improvements plans or expanded capacity (personnel, equipment), if any, that would serve the project area?

   See response to question 3 above.

5. What are the minimum fire flow, hydrant, and residual water pressure requirement's for the Plan Area?

   To be answered by Land Development Division.

6. Will LACoFD be able to serve any known cumulative developments in addition to the Proposed Project?

   While each additional development creates greater demands on existing resources, at this time it appears the project would not have a significant effect on service demands.

7. How would the proposed project affect LACoFD's ability to provide services? Please comment on any area of specific concern.

   The effects of cumulative impact by new development are evaluated on a case by case basis. However, this project is expected to have a less than significant impact.

8. Please provide any additional comments and/or information regarding fire provisions related to the Proposed Project.

   We have no additional comments.

For any questions regarding this response, please contact Kien Chin, Planning Analyst, at (323) 881-2404 or Kien.Chin@fire.lacounty.gov.

LAND DEVELOPMENT UNIT:

The development of this project must comply with all applicable code and ordinance requirements for construction, access, water mains, fire flows, and fire hydrants.

Specific fire and life safety requirements will be addressed with the submittal of plans to the Fire Department.

The following Land Development Unit comments are "Preliminary" and are "Subject to Change"

Access Requirements:

1. All on-site Fire Apparatus Access Roads shall be labeled as "Private Driveway and Fire Lane" on the site plan along with the widths clearly depicted on the plan. Labeling is necessary to assure the access availability for Fire Department use. The designation allows for appropriate signage prohibiting parking.

2. Fire Apparatus Access Roads must be installed and maintained in a serviceable manner prior to and during the time of construction. Fire Code 501.4.

3. All fire lanes shall be clear of all encroachments and shall be maintained in accordance with the Title 32, County of Los Angeles Fire Code.

4. The Fire Apparatus Access Roads and designated fire lanes shall be measured from flow line to flow line.

5. Buildings 30 feet or less: Provide a minimum unobstructed width of 26 feet exclusive of shoulders and an unobstructed vertical clearance "clear to sky" Fire Apparatus Access Roads to within 150 feet of all portions of the exterior walls of the first story of the building, as measured by an approved route around the exterior of the building. Fire Code 503.1.1 and 503.2.2.

6. Buildings Over 30 feet: Provide a minimum unobstructed width of 28 feet exclusive of shoulders and an unobstructed vertical clearance "clear to sky" Fire Apparatus Access Roads to within 150 feet of all portions of the exterior walls of the first story of the building, as measured by an approved route around the exterior of the building when the height of the building above the lowest level of the Fire Apparatus Access Road is more than 30 feet high or the building is more than three stories. The access roadway shall be located within a minimum of 15 feet and a maximum of 30 feet from the building, and shall be positioned parallel to one entire side of the building. The side of the building on which the Aerial Fire Apparatus Access Road is positioned shall be approved by the fire code official. Fire Code 503.1.1; 503.2.2; Appendix D104.1, D104.2 and D104.3.

    a. Overhead utility and power lines shall not be located over the Aerial Fire Apparatus Access Road or between Aerial Fire Apparatus Access Road and the building. Other obstructions shall be permitted to be place with the approval of the fire code official. Fire Code Appendix D104.4.

7. If the Fire Apparatus Access Road is separated by island provide a minimum unobstructed width of 20 feet, exclusive of shoulders, and an unobstructed vertical clearance "clear to sky" Fire Department vehicular access to within 150 feet of all portions of the exterior walls of the first story of the building, as measured by an approved route around the exterior of the building. Fire Code 503.1.1 and 503.2.2.

8. The dimensions of the approved Fire Apparatus Access Roads shall be maintained as originally approved by the fire code official. Fire Code 503.2.2.1.

9. Dead-end Fire Apparatus Access Roads in excess of 150 feet in-length shall be provided with an approved Fire Department turnaround. Fire Code 503.2.5; Appendix D103.6, D103.6 (1) and D103.6 (2).

    a. The dimensions of the turnaround with the orientation of the turnaround shall be properly placed in the direction of travel of the access roadway on the plan.

10. Fire Apparatus Access Roads shall be provided with a 32-foot centerline turning radius. Indicate the centerline, inside, and outside turning radii for each change in direction on the plan. Fire Code 503.2.4 and Appendix D103.5.

11. Fire Apparatus Access Roads shall be designed and maintained to support the imposed load of fire apparatus weighing 75,000 pounds and shall be surfaced so as to provide all-weather driving capabilities. Fire Apparatus Access Roads having a grade of 10 percent or greater shall have a paved or concrete surface. Fire Code 503.2.3; Appendix D102.1.

12. Provide approved signs or other approved notices or markings that include the words "NO PARKING - FIRE LANE." Signs shall have a minimum dimension of 12 inches wide by 18 inches high and have red letters on a white reflective background. Signs shall be provided for Fire Apparatus Access Roads, to clearly indicate the entrance to such road, or prohibit the obstruction thereof and at intervals, as required by the Fire Inspector. Fire Code 503.3.

13. Fire Apparatus Access Roads shall not be obstructed in any manner, including by the parking of vehicles, or the use of traffic calming devices, including but not limited to, speed bumps or speed humps. The minimum widths and clearances established in Section 503.2.1 and Section 503.2.2 shall be maintained at all times. Fire Code 503.4.

14. Traffic Calming Devices, including but not limited to, speed bumps and speed humps, shall be prohibited unless approved by the fire code official. Fire Code 503.4.1.

15. A minimum 5-foot wide approved firefighter access walkway leading from the Fire Department Access Road to all required openings in the building's exterior walls shall be provided for firefighting and rescue purposes. Clearly identify firefighter walkway access routes on the site plan, and indicate the required width, along with the slope and walking surface material. Fire Code 504.1.

16. Security barriers, visual screen barriers, or other obstructions shall not be installed on the roof of any building in such a manner as to obstruct firefighter access or egress in the event of fire or other emergency. Parapets shall not exceed 48 inches from the top of the parapet to the roof surface on more than two sides. Clearly indicate the height of all parapets in a section view. Fire Code 504.5.

17. Approved building address numbers, building numbers, or approved building identification shall be provided and maintained so as to be plainly visible and legible from the street fronting the property. The numbers shall contrast with their background, be Arabic numerals or alphabet letters, and be a minimum of 4 inches high with a minimum stroke width of 0.5 inch. Fire Code 505.1.

18. Multiple residential and commercial buildings having entrances to individual units not visible from the street or road shall have unit numbers displayed in groups for all units within each structure. Such numbers may be grouped on the wall of the structure or mounted on a post independent of the structure and shall be positioned to be plainly visible from the street or road as required by Fire Code 505.3 and in accordance with Fire Code 505.1.

19. The method of gate control shall be subject to review by the Fire Department. All gates to control vehicular access shall be in compliance with the following:

    a. The keypad location shall be located a minimum of 50 feet from the public right-of-way.

    b. The gated entrance design with a single access point (ingress and egress) shall provide for a minimum width of 20 feet, clear-to-sky, with all gate hardware is clear of the access way.

    c. Where the Fire Apparatus Access Road consists of a divided roadway provide a minimum of on each side of the roadway. Each side of the roadway shall be clear-to-sky.

    d. Construction of gates shall be materials that allow manual operations by one person.

    e. Gates shall be of the swinging or sliding type.

    f. The security gate shall be provided with an approved means of emergency operation and shall be maintained operational at all times and replaced or repaired when defective.

    g. Electric gate operators, where provided, shall be listed in accordance with UL 325.

    h. Gates intended for automatic operation shall be designed, constructed, and installed to comply with the requirements of ASTM F2200.

    i. All locking devices shall comply with the County of Los Angeles Fire Department Regulation 5, Compliance for Installation of Emergency Access Devices.

    j. An approved key box listed in accordance with UL 1037 shall be provided as required by Fire Code 506. The location of each key box shall be determined by the Fire Inspector. Fire Code Sections 503.5; 503.5.1; 503.2; 503.6; Appendix D103.7.

Water System Requirements:

1. All fire hydrants shall measure 6"x 4"x 2-1/2" brass or bronze conforming to current AWWA standard C503 or approved equal and shall be installed in accordance with the County of Los Angeles Fire Code.

2. All required public fire hydrants shall be installed, tested, and accepted prior to beginning construction. Fire Code 501.4.

3. All required private on-site fire hydrants shall be installed, tested, and approved prior to building occupancy. Fire Code 901.5.1.

    a. Plans showing underground piping for private on-site fire hydrants shall be submitted to the Sprinkler Plan Check Unit for review and approval prior to installation. Fire Code 901.2 and County of Los Angeles Fire Department Regulation 7.

4. All on-site fire hydrants shall be installed a minimum of 25 feet from a structure or protected by a two (2) hour rated firewall. Fire Code Appendix C106.1.

5. The public and on-site fire locations will be determined by the Fire Department with the review of the plans. Both public and on-site fire hydrants are required to be every 300 feet.

6. The required fire flow for the public fire hydrants and on-site will be determined with the review of the plans. The fire flow for this project will be set in accordance of Fire Code Section 507.3 and Appendix B105.1. The Fire Department will need the type of construction, the square footage, and verification of the installation of an automatic fire sprinkler system for all existing and proposed buildings.

For any questions regarding the Land Development Unit response to this report, please contact FPEA Wally Collins at (323) 890-4243 or Wally.Collins@fire.lacounty.gov.

FORESTRY DIVISION – OTHER ENVIRONMENTAL CONCERNS:

The statutory responsibilities of the County of Los Angeles Fire Department's Forestry Division include erosion control, watershed management, rare and endangered species, vegetation, fuel modification for Very High Fire Hazard Severity Zones, archeological and cultural resources, and the County Oak Tree Ordinance. Potential impacts in these areas should be addressed.

Under the Los Angeles County Oak tree Ordinance, a permit is required to cut, destroy, remove, relocate, inflict damage or encroach into the protected zone of any tree of the Oak genus which is 25 inches or more in circumference (eight inches in diameter), as measured 4 1/2 feet above mean natural grade.
If Oak trees are known to exist in the proposed project area further field studies should be conducted to determine the presence of this species on the project site.

The County of Los Angeles Fire Department's Forestry Division has no further comments regarding this project.

For any questions regarding this response, please contact Forestry Assistant, Joseph Brunet at (818) 890-5719.

HEALTH HAZARDOUS MATERIALS DIVISION:

The Health Hazardous Materials Division of the Los Angeles County Fire Department has no comments regarding the project request for fire protection service information.

Please contact HHMD senior typist-clerk, Perla Garcia at (323) 890-4035 or Perla.garcia@fire.lacounty.gov if you have any questions.

If you have any additional questions, please contact this office at (323) 890-4330.

Very truly yours,

MICHAEL Y. TAKESHITA, ACTING CHIEF, FORESTRY DIVISION
PREVENTION SERVICES BUREAU

Attn: Victoria Boyd
Re: Medical Main Street Master Plan

Dear Ms. Boyd,

The Antelope Valley Union High School District (AVUHSD) is pleased to provide information for the project surrounding the Antelope Valley Hospital. We are the High School District serving students in grades 9 through 12, in the Lancaster, Palmdale and Littlerock areas. We also provide adult education services within our attendance boundaries.

According to the vicinity map provided, our Lancaster High School (LHS), located at 44701 32nd Street West, will be the school of attendance per our current school site boundaries, and will be the school site primarily impacted by this project. Last year's enrollment at LHS was 2,662, we do not have a current site student capacity report to provide. AVUHSD has contractual limits to the number of students per teacher both per class period and total served in the day. These numbers fluctuate depending on the subjects taught or the educational programs we are providing.

AVUHSD does not currently have an overcrowding standard or policy. Should the need arise, we would follow our school board policy for the formation of such a standard. The following tables provide our student generation rates (SGR) per commercial construction and our current residential/commercial construction developer fee structure.

The student generation rate (2018-19) associated with employment is based on the types of commercial/industrial designations, the following employment based SGRs for the Commercial/Industrial Development (CID) and are based on 1,000 square feet of CID space:

CID Category	CID SGR (Grades 9-12)
Retail & Services	0.0177
Office	0.0277
Research & Development	0.0241
Hospital	0.0221

AVUHSD currently levies a Level II Developer fee for residential construction. The commercial fees are set at $.16 cents per square foot of development with one exception, as noted below.

Land USD	Developer Fee/ Square Foot
Level I Residential	$0.99
Level II Residential	$2.18
Level III Residential	$4.36
CID – Retail & Services	$.16
CID – Office	$.16
CID – Development & Research	$.16
CID – Industrial/Warehouse/Manufacturing	$.16
CID – Hospital	$.16
CID – Hotel/Motel	$.16
CID – Self-Storage	$.11

ANTELOPE VALLEY UNION HIGH SCHOOL DISTRICT

Please contact my office with any additional questions or clarifications.

Sincerely,

Brian Hawkins

RE: Medical Main Street Master Plan Project - Request for School Facility Information

Dear Ms. Boyd:

Please find the following information and supporting documents attached in response to your May 7, 2019 request:

1. Lancaster School District elementary and middle schools within 5 miles of the Plan Area:
   Schools, Enrollment and Capacity – See attached Exhibit A

2. Lancaster School District school overcrowding standards:
   Kindergarten through 6th grade standard classrooms are loaded at 25 students per classroom and 7th through 8th grade classrooms are loaded at 27 students per classroom.
   – See attached pages 8-9 of Lancaster School District/SFNA 2018

3. Lancaster School District current student generation rates are calculated based on residential units within the District:
   Single Family Detached is .389, Multi-Family is .488, and Affordable is .667 – See attached page 11 of Lancaster School District/SFNA 2018

4. Lancaster School District current school developer fees – See attached Exhibit B

5. Lancaster School District currently does not have plans to develop new school facilities or expand existing school facilities.

Should you have any questions, please contact me at (661)948-4661.

Sincerely,

Larry Freise, Ed.D.,
Assistant Superintendent of Business Services

APPENDIX J

Transportation Impact Analysis

APPENDIX J.1

VMT Analysis

Vehicle Miles Traveled Analysis

LANCASTER HEALTH DISTRICT MASTER PLAN

JULY 2020 | DRAFT REPORT

Prepared For:

Prepared By:

Kimley»Horn

INTRODUCTION

This report documents a Vehicle miles Traveled Analysis conducted for the Lancaster Health District Master Plan for the City of Lancaster. The Lancaster Health District Master Plan consists of a master planned mixed-use development that is projected to occur over the next twenty years. The project site is located primarily between 20th Street West, Avenue J, 15th Street West, and Avenue J-8 in the City of Lancaster, CA. The project will also include development east of 15th Street West in the East Neighborhood and south of Avenue J-8 in the South Neighborhood. The site is currently occupied primarily by the Antelope Valley Hospital and some associated facilities, all of which would be replaced as part of the project. The project site also includes a mixture of existing retail, residential, and restaurant land uses that would remain as the project is developed. The remainder of the site is occupied by surface parking lots and unimproved land. The project will include a new Antelope Valley Hospital with 380 beds along with additional development of 284 hospital beds for sub-acute care, up to 150 KSF of retail space, 90 KSF of restaurant space, 200 KSF of office space, 400 KSF of medical-dental office space, 180 hotel rooms, a 70 KSF convention center, 300 senior housing dwelling units, 100 assisted living dwelling units, 250 single-family residential dwelling units, and 1,350 multifamily residential dwelling units. The Master Plan also includes the redesign of the internal circulation system.

VEHICLE MILES TRAVELED ANALYSIS

State Senate Bill (SB) 743 amended the California Environmental Quality Act (CEQA) Guidelines to provide an alternative to LOS for evaluating transportation impacts. Since its passing, the Governor's Office of Planning and Research (OPR) has proposed changes to the CEQA Guidelines that identify vehicle miles traveled (VMT) as the most appropriate metric to evaluate a project's transportation impacts. Since adoption by the California Natural Resources Agency in 2018, automobile delay, as measured by LOS and other similar metrics, generally no longer constitutes a significant environmental effect under CEQA.

The intent of this legislation is to balance the need for traffic LOS standards with the need to build infill housing and mixed-use commercial developments within walking distance of mass transit facilities, downtowns, and town centers. In doing so, this legislation aims to provide greater flexibility to local governments to balance these (sometimes) competing needs. However, a jurisdiction may still adopt LOS as a performance standard for analyzing traffic conditions and maintaining throughput on its highway system.

CITY OF LANCASTER VMT GUIDELINES

VMT analysis for development projects in Lancaster is based upon the latest version of the Southern California Association of Governments (SCAG) model developed for the 2016 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). This version of the model was previously used to identify the Antelope Valley Planning Area Baseline VMT metrics for 2020.

VMT for the Lancaster Health District Master Plan reflects all land uses within the Master Plan site. The daily Total VMT per service population was calculated for the project site. A VMT impact would occur if the Total VMT per service population of the Master Plan exceeds the City's threshold of 15% below the Antelope Valley Planning Area Baseline VMT.

VMT ANALYSIS & IMPACTS

Fehr and Peers conducted the VMT Analysis for the Lancaster Health District. The technical memorandum is included as an **Appendix**.

The total VMT per service population generated by the project was calculated for base year (2020) and future year (2040) conditions compared to the Baseline VMT.

The Lancaster Health District generates 34.0 total VMT per service population in the base year (2020) and 28.7 total VMT per service population under future year (2040) conditions, in comparison to the Antelope Valley Planning Area Baseline VMT of 41.8. For both existing and future years, the project generated VMT is more than 15% below the Antelope Valley Planning Area Baseline VMT and therefore below threshold of a significant impact.

The project's effect on VMT for the region was also analyzed to determine the potential for cumulative transportation impacts. The total VMT in the Antelope Valley was calculated with and without the buildout of the Lancaster Health District Master Plan. The results showed that the future VMT in the Antelope Valley would be approximately 0.5% lower with the project in place.

The VMT analysis shows that the project is not forecast to generate a significant VMT impact.

APPENDIX – VMT TECHNICAL MEMO

FEHR PEERS

Technical Memorandum

Date: May 21, 2020

To: Robert Blume, Kimley-Horn

From: Sarah Brandenberg

Subject: **DRAFT** - Lancaster Health District VMT Analysis

LA20-3197

This technical memorandum documents the Vehicle Miles Traveled (VMT) analysis for the Lancaster Health District Master Plan. The Health District Master Plan site is generally bounded by Avenue J to the north, 20th Street West to the west, 10th Street West to the east, and Avenue K to the south. The Master Plan will guide development within the site over the next 20 years and establishes the maximum amount of development that can occur within the site. The Master Plan will replace the existing Antelope Valley Hospital main facility with a new hospital and supporting uses and provide new commercial, office, hotel, and residential uses within the site. The VMT analysis conducted for the Health District Master Plan is part of an environmental impact report being prepared for the project and follows the California Environmental Quality Act (CEQA) guidance for determining transportation impacts in accordance with Senate Bill (SB) 743.

On September 27, 2013, Governor Jerry Brown signed Senate Bill (SB) 743 into law, which initiated a process to change transportation impact analyses completed in support of CEQA documentation. SB 743 eliminates level of service (LOS) as a basis for determining significant transportation impacts under CEQA and provides a new performance metric, vehicle miles traveled (VMT). As a result, the State is shifting from measuring a project's impact to drivers (LOS) to measuring the impact of driving (VMT) as it relates to achieving State goals of reducing greenhouse gas (GHG) emissions, encouraging infill development, and improving public health through active transportation.

In response to SB 743, the City of Lancaster is adopting new transportation impact thresholds to adhere to CEQA requirements and provide guidance on conducting transportation studies in the City[1]. The VMT analysis for the Health District Master Plan is based on the City's new guidance for transportation impacts. The methodology and VMT analysis findings are presented below.

[1] Reference City's final guidelines if publicly available and/or adopted thresholds.

VMT Methodology

The Southern California Association of Governments (SCAG) 2016 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) trip-based model is a travel demand forecasting model with socioeconomic and transportation network inputs, such as population, employment, and the regional and local roadway network, that estimates current travel behavior and forecasts future changes in travel demand. The current SCAG model has 2012 as the base year and 2040 as the forecast year and can be used to estimate VMT for current year 2020 conditions. The 2040 model contains the planned transportation improvements in the RTP and the growth projections in the SCS.

Given that development of the Health District Master Plan site will be implemented over the next 20 years and that CEQA requires a comparison to baseline conditions, both the base year and future year versions of the SCAG model were updated to reflect buildout of the site. The socio-economic data in the base year and future year SCAG models was updated to reflect the proposed growth in the Health District Master Plan site as shown in **Table 1.**

Table 1: Lancaster Health District Master Plan Land Uses

Land Use Type	Developer Proposed Uses
Single Family Residential	250 units (condos)
Multi-Family Residential	1,350 units (apartments)
Hotel	180 rooms/259,200 sf
Conference Center	70,000 sf
Commercial/Office • MOB • Office • Retail • Restaurant	740,000 sf • 400,000 sf • 200,000 sf • 150,000 sf • 90,000 sf
Continuum of Care • Asst Living • Senior Housing	400 rooms/480,000 sf • 100 rooms/120K sf • 300 rooms/360K sf
Parking Garage	1,100 stalls/385,000 sf
Acute Care • Hospital • Central Plant • Psych Hospital • Rehab Hospital	380 beds/791,000 sf • 300 beds/700K sf • 12,000 sf • 40 beds/38,000 sf • 40 beds/41,000 sf
Sub Acute Care • Skilled Nursing • Drug Rehab • Rehab	284 beds/249,800 sf • 160 beds/142K sf • 24 beds/22,800 sf • 100 beds/85,000 sf

When calculating VMT for a project site, such as the Lancaster Health District Master Plan, the VMT methodology should match the methodology used to establish the Baseline VMT metrics and impact thresholds. In the City of Lancaster, an origin-destination (OD) VMT methodology was used to establish the Baseline VMT, which is defined as the VMT generated by land uses within the Los Angeles County Antelope Valley Planning Area (Antelope Valley). The OD VMT method estimates the VMT generated by land uses in a specific geographic area. All vehicles traveling to/from the defined area are tracked within the SCAG model and the number of trips and length of trips are used to calculate the OD VMT. While the OD VMT is accounting for all vehicle trips generated by land uses within a defined area, the full length of those trips is accounted for in the VMT estimate.

For the purposes of analyzing VMT for transportation impacts, VMT can be reported as an efficiency metric. For land use plans, such as the Lancaster Health District Master Plan, the City's VMT methodology and impact thresholds are based on Total VMT per service population. This VMT metric reflects the Total VMT calculated by the OD VMT methodology and then divides the Total VMT by the service population (employees and residents) to get the efficiency metric of Total VMT per service population. Given that the project contains a combination of residential and employment generating uses and that the hospital, hotel, and retail uses will also generate visitor trips, the use of Total VMT per service population allows for all trip types to be captured in the analysis.

Following the VMT analysis of the Lancaster Master Plan site, the Total VMT per service population of the Master Plan site was then compared to the Antelope Valley Baseline VMT per service population to determine if it exceeds the City's impact threshold. In addition, given the amount of development being proposed and the size of the development site, the change in Total VMT in the Antelope Valley under Year 2040 conditions with and without buildout of the Health District Master Plan site was evaluated to assess potential cumulative project impacts.

VMT Analysis Metrics

The Total VMT per service population of the Lancaster Health District site was calculated for both base year (2020) and future year (2040) conditions using the SCAG travel demand model. While the project will be built over time, the Year 2020 analysis shows how the VMT generated by the Health District Master Plan site compares to current travel and VMT characteristics in the area. The 2040 analysis shows how the VMT generated by the Master Plan site would change as additional growth occurs in the City and throughout the Antelope Valley. As discussed above, the Total VMT per service population reflects all VMT generated by the land uses within the defined area and then divides the Total VMT by the number of residents and employees within the area to report VMT as an efficiency metric. **Table 2** shows the Total VMT per service population of the Lancaster Health District Master Plan site.

Table 2: Lancaster Health District Master Plan Site VMT Metrics

VMT Metrics	Total VMT per Service Population
Antelope Valley Planning Area Baseline (2020) VMT	41.8
Health District Master Plan Site Base Year (2020) VMT	34.0
Health District Master Plan Site Future Year (2040) VMT	28.7

As shown above, the Lancaster Health District Master Plan site generates 34.0 Total VMT per service population in the base year and 28.7 Total VMT per service population under future conditions. In comparison to the Antelope Valley Baseline VMT, the project site is more VMT efficient due to the mixed-use nature of the project site and the higher development densities in comparison to the broader Antelope Valley area. In addition, the location of the project in the urban core area of Lancaster provides closer proximity to other nearby uses that can result in shorter travel distances and reduce VMT. The lower VMT under future conditions reflects the shorter travel distances in the area with planned nearby growth in the City of Lancaster and in the Antelope Valley.

VMT Impact Thresholds and Findings

To determine a VMT impact, the VMT generated by the Health District Master Plan site was compared to the Antelope Valley Baseline VMT. The total VMT per service population of the Master Plan site was compared to the Antelope Valley Baseline VMT per service population to determine if it exceeds the City's threshold of 15% below the Antelope Valley Baseline VMT. The Baseline VMT and VMT impact thresholds for land use plans in the City of Lancaster are summarized in **Table 3**.

Table 3: Baseline VMT and VMT Impact Threshold for Land Use Plans in Lancaster

VMT Metrics	Year 2020	
	Baseline VMT	VMT Impact Threshold*
Total VMT per Service Population	41.8	35.5

* The VMT Impact Threshold for is 15% below the Baseline VMT.

To determine if the Lancaster Health District Master Plan site would result in a VMT impact, the Total VMT per service population was compared to the City's impact threshold. As shown in **Table 4**, the Lancaster Health District Master Plan site would not exceed the City's VMT impact threshold under base year (2020) or future year (2040) conditions.

Table 4: Lancaster Health District Master Plan Site VMT Impact Findings

VMT Metrics	Total VMT per Service Population	VMT Impact Threshold	Significant VMT Impact?
Health District Site Base Year (2020) VMT	34.0	35.5	No
Health District Site Future Year (2040) VMT	28.7	35.5	No

VMT Analysis for Cumulative Conditions

For cumulative conditions, a project that is below the VMT impact thresholds and does not have a VMT impact under baseline conditions would also typically not have a cumulative impact as long as it is aligned with long-term State environmental goals, such as reducing GHG emissions, and relevant plans, such as the SCAG RTP/SCS[2]. Rather than simply relying on the impact findings above and given the magnitude of development that is proposed within the Health District Master Plan site, the change in regional VMT with the proposed development was analyzed in greater detail.

In addition to analyzing VMT as an efficiency metric, a project's effect on VMT can also be analyzed to determine if it would result in an overall increase in VMT in the region. This analysis is useful in assessing potential cumulative transportation impacts that could occur as a result of growth within the Health District Master Plan site. Therefore, the total amount of VMT within the Antelope Valley was calculated with and without the buildout of the Health District Master Plan site in Year 2040. The total VMT in the Antelope Valley is shown in **Table 5**.

Table 5: Antelope Valley VMT with Buildout of the Lancaster Health District Master Plan Site

VMT Metrics	Total VMT
Antelope Valley Planning Area Future Year (2040) No Project VMT	31,264,100
Antelope Valley Planning Area Future Year (2040) With Project VMT	31,117,900
Change in VMT	-146,200
% Change	-0.5%

The above results show that while development within the project site will generate additional travel demand in the immediate project vicinity, the future VMT in the Antelope Valley will be lower with the project in place. This is because the project will create additional employment opportunities and will also provide expanded medical services for those residing in the Antelope Valley. Without the Health District Master Plan, residents would be traveling longer distances to commute to work

[2] Governor's Office of Planning and Research, Technical Advisory on Evaluating Transportation Impacts in CEQA, 2018.

and to reach medical services. The shift in travel patterns can be further explained by comparing the VMT generated by households and employees in the Antelope Valley.

Table 6 presents the Home-Based VMT and Home-Based Work VMT in the Antelope Valley. The Home-Based VMT captures all vehicle travel to and from households in the Antelope Valley, and the Home-Based Work VMT captures all vehicle travel between home and work for employees who work in the Antelope Valley. As shown, while Home-Based Work VMT increases with the Health District Master Plan due to the additional number of jobs in the area, the amount of Home-Based VMT is reduced because more people living in the Antelope Valley can work closer to home and can also access medical services closer to home.

Table 6: Additional VMT Metrics for the Antelope Valley

VMT Metrics	Future Year (2040) No Project VMT	Future Year (2040) with Project VMT	Change in VMT	% Change
Total VMT	31,264,100	31,117,900	-146,200	-0.5%
Home-Based VMT	10,980,200	10,596,300	-383,900	-3.5%
Home-Based Work VMT	987,300	1,187,500	200,200	20.3%

Based on the results shown in Tables 5 and 6, the Health District Master Plan site would reduce VMT in the Antelope Valley Planning Area under Year 2040 conditions, and therefore, would not result in a cumulative VMT impact.

Summary and Conclusions

This technical memorandum documents the process to determine the potential VMT impacts of the proposed Health District Master Plan site in the City of Lancaster. The following summarizes the results of the VMT analysis:

- The VMT analysis for the Health District Master Plan is based on the City's new guidance for transportation impacts. The VMT analysis methodology for the Master Plan site is consistent with the methodology used to establish the Baseline VMT metrics and impact thresholds for projects in the City of Lancaster.
- For land use plans, the Total VMT per service population is analyzed for projects in the City. Given that the Master Plan site contains a combination of residential and employment generating uses and that the hospital, hotel, and retail uses will also generate visitor trips, the use of Total VMT per service population allows for all trip types to be captured in the analysis.
- Given that development of the Health District Master Plan site will be implemented over the next 20 years and that CEQA requires a comparison to baseline conditions, the Total

VMT per service population generated by the Master Plan site under base year (2020) and future year (2040) conditions was compared to the Baseline VMT.

- The Lancaster Health District Master Plan site generates 34.0 Total VMT per service population in the base year (2020) and 28.7 Total VMT per service population under future conditions (2040) in comparison to the Antelope Valley Baseline VMT of 41.8. The project site is more VMT efficient due to the mixed-use nature of the land uses and the higher development densities in comparison to the broader Antelope Valley area. In addition, the location of the project in the urban core area of Lancaster provides closer proximity to other nearby uses that can result in shorter travel distances and reduce VMT.
- To determine if the Lancaster Health District Master Plan site would result in a VMT impact, the Total VMT per service population was compared to the City's impact threshold. The total VMT per service population of the Master Plan site is more than 15% below the Antelope Valley Baseline VMT per service population, which means the Master Plan site does not result in a VMT impact.
- In addition to analyzing VMT as an efficiency metric (i.e., Total VMT per service population), a project's effect on VMT can also be analyzed to determine if it would result in an overall increase in VMT in the region to determine the potential for cumulative transportation impacts. The total amount of VMT within the Antelope Valley was calculated with and without the buildout of the Health District Master Plan site, and the results showed that future VMT in the Antelope Valley will be approximately 0.5% lower with the project in place. This is because the project will create additional employment opportunities and will also provide expanded medical services for those residing in the Antelope Valley. Therefore, the Master Plan site would not result in a cumulative VMT impact.

APPENDIX J.2

Traffic Operational and Safety Analysis Addendum

Technical Memorandum

To: Matthew L. Simons, T.E., P.T.P.
Senior Engineer – Traffic
Development Services Dept.
City of Lancaster, CA 93534

From: Sri Chakravarthy, P.E., T.E.
Matt Stewart, P.E.
Kimley-Horn and Associates, Inc.

Date: October 12, 2020

Subject: Lancaster Health District Master Plan – Traffic Operational and Safety Analysis Addendum

INTRODUCTION

This technical memorandum is an addendum to the Operational and Safety Analysis Final Report (August 5, 2020) prepared by Kimley-Horn and Associates, Inc. (Kimley-Horn) and approved by the City of Lancaster. Since the finalization of the report, several changes to the Lancaster Health District ("Project") internal roadway network were proposed by the Antelope Valley Hospital. These changes are limited to the internal roadway layout and network, and do not impact the size or type of land uses included on the Project site. The change to the internal roadway network is anticipated to result in changes to number of Project site trips at various access driveways and streets adjacent to the Project site. However, minimal to no impact is anticipated on the roadway network further away from the Project site.

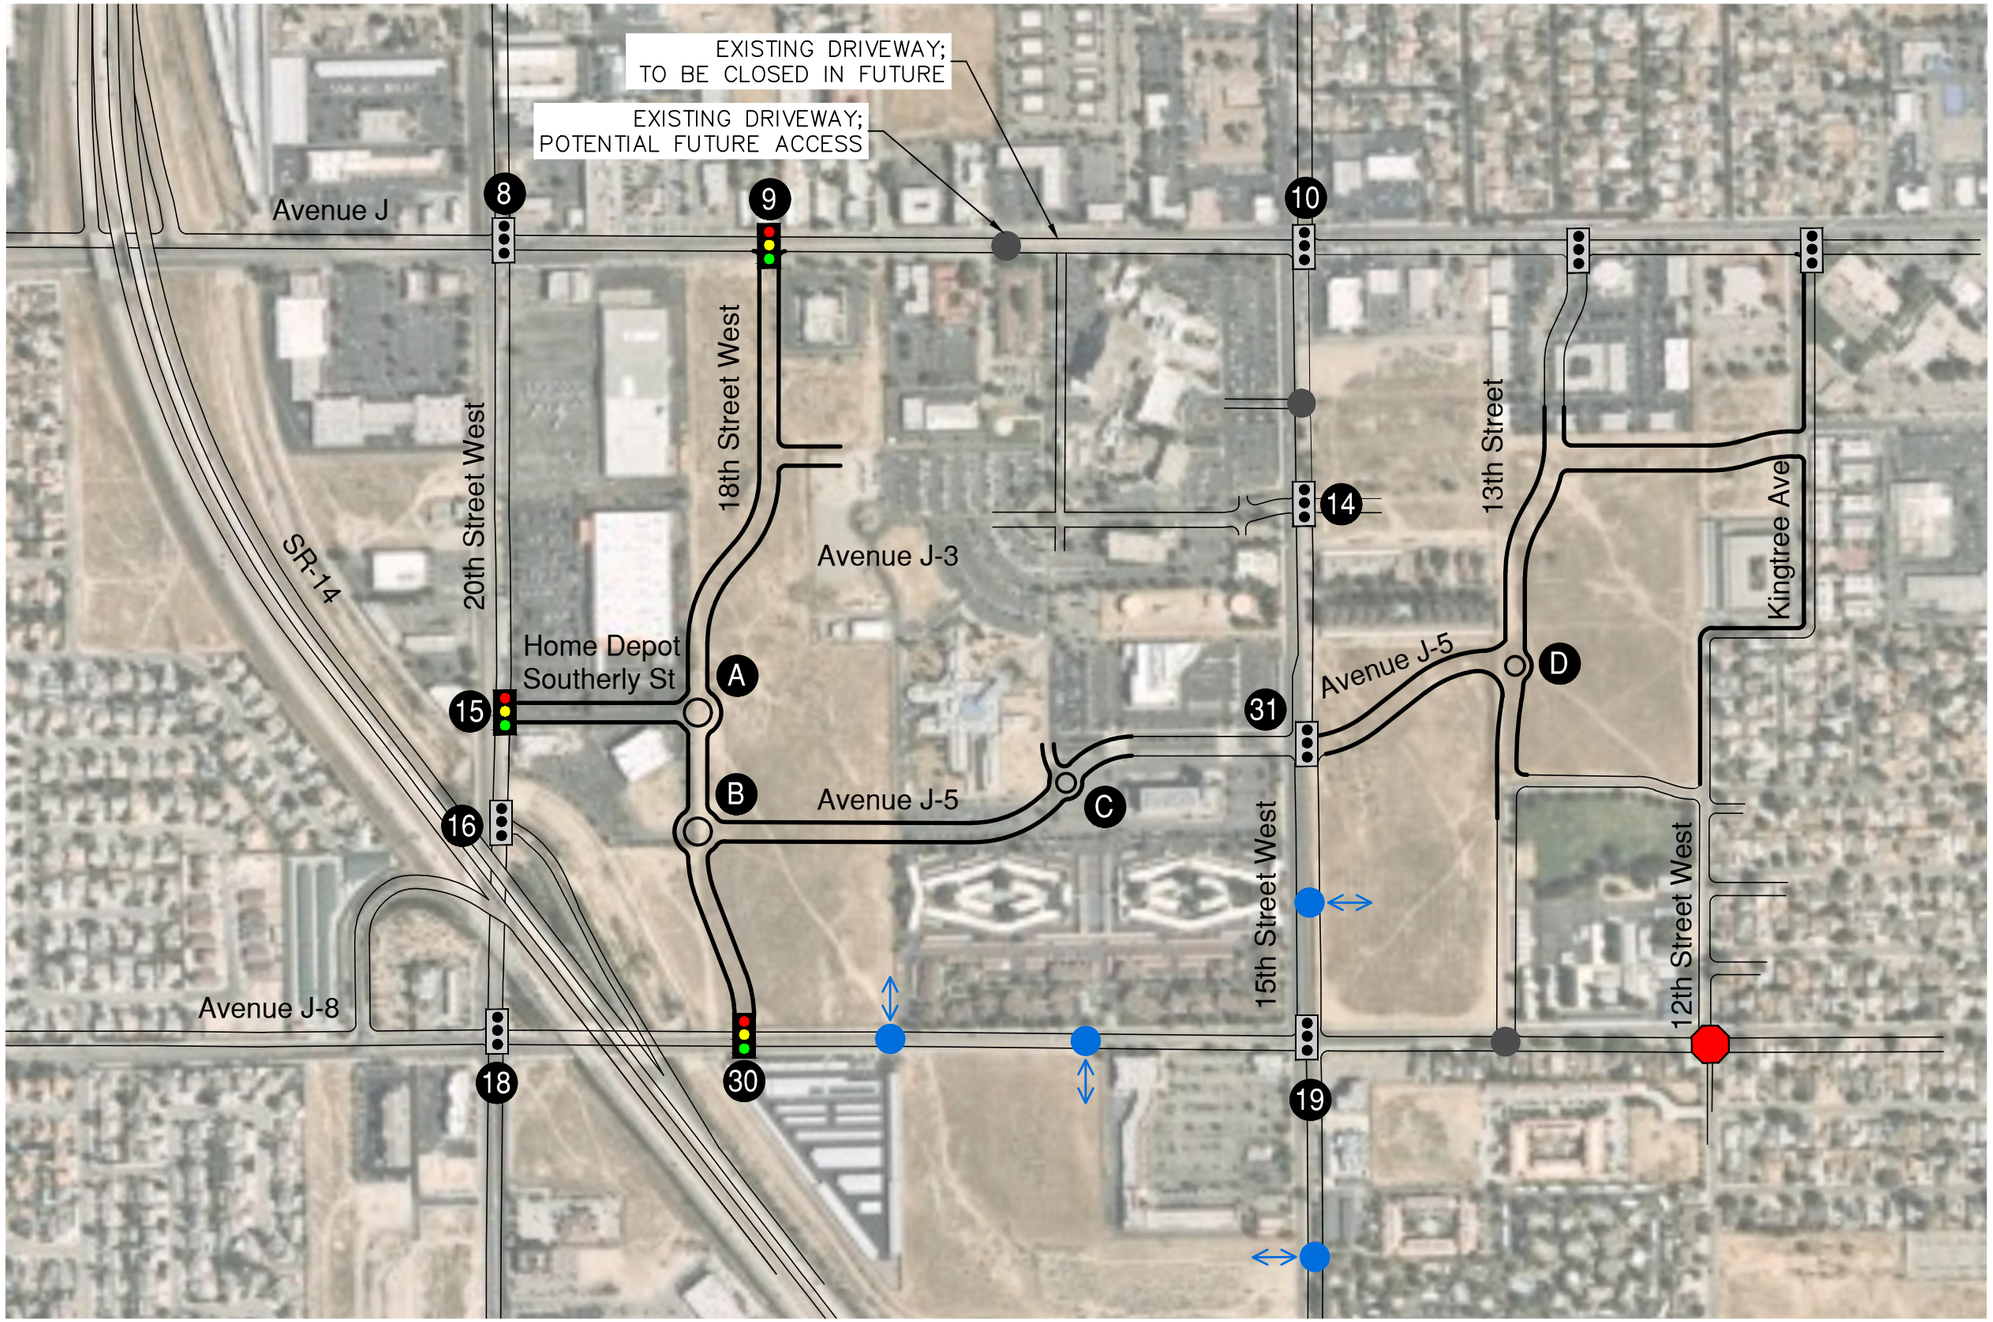
This addendum to the Operational and Safety Analysis (Kimley-Horn, August 2020) documents the changes to the proposed internal roadway network and provides a revised analysis at ten (10) study intersections surrounding the Project site. These intersections include:

1. 20th Street West and Avenue J;
2. 18th Street West and Avenue J;
3. 15th Street West and Avenue J;
4. 15th Street West and Avenue J-3;
5. 20th Street West and Home Depot Southerly Street;
6. 20th Street West and SR-14 NB Ramps;
7. 20th Street West and Avenue J-8;
8. 15th Street West and Avenue J-8;
9. 18th Street West and Avenue J-8; and,
10. 15th Street West and Avenue J-5.

It is noted that the intersection of 15th Street West and Avenue J-5 was not included as part of the August 2020 Final Report, but is included as part of this revised analysis. Further, it is assumed that the changes to the internal roadway network would not result in changes to Vehicle Miles Traveled (VMT), hence VMT is not required to be reanalyzed.

SITE CIRCULATION

The following internal roadway network layout is proposed as part of the Project Master Plan:



- Constructing 18th Street West from Avenue J to Avenue J-8
- Constructing Avenue J-5 from 18th Street West to 13th Street West
- Terminating Avenue J-3 at the proposed Antelope Valley Hospital
- Constructing 13th Street West between Avenue J-2 and Avenue J-5
- Constructing various other circulatory roadways around the proposed Antelope Valley Hospital including a roadway between 18th Street West and Avenue J-3, around the north side of the proposed hospital
- Constructing roundabouts at the following intersections within the District Core:
  - Home Depot Southerly Street and 18th Street West (3-leg roundabout with west, north, and south legs)
  - Avenue J-5 and 18th Street West (3 leg roundabout with north, east, and south legs)
  - Avenue J-5 and North/South Street east of Women & Infants Pavilion (3-leg roundabout with west, north, and east legs)
- Constructing roundabouts at the following intersections within the East Neighborhood:
  - Avenue J-5 and 13th Street West (3-leg roundabout with west, north, and south legs)

Compared to the internal roadway network proposed in the original study (Operational and Safety Analysis, August 2020), the following changes have been made:

- Avenue J-3 was previously analyzed as continuous between 18th Street and 15th Street but is now planned to terminate at the proposed Antelope Valley Hospital
- Avenue J-5 was not previously analyzed as continuous between 18th Street to 15th Street but is now analyzed as the primary east/west connector street within the Lancaster Health District
- Two driveways on Avenue J that were previously included in the trip distribution were removed from the analysis because they will be closed in the future
- The intersection of Avenue J-5 and 13th Street West was previously analyzed as a four-leg roundabout but is now analyzed as two offset intersections

Additional roundabouts may be planned and constructed at a future period. Traffic operations for future roundabouts should be reassessed when individual projects are proposed.

Figure 1 shows the study area with roadways and intersections that will be used to provide access to the Lancaster Health District. Access roadways and intersections that were included in this study include existing roadways and potential future access roadways based on the preliminary hospital and developer plans.

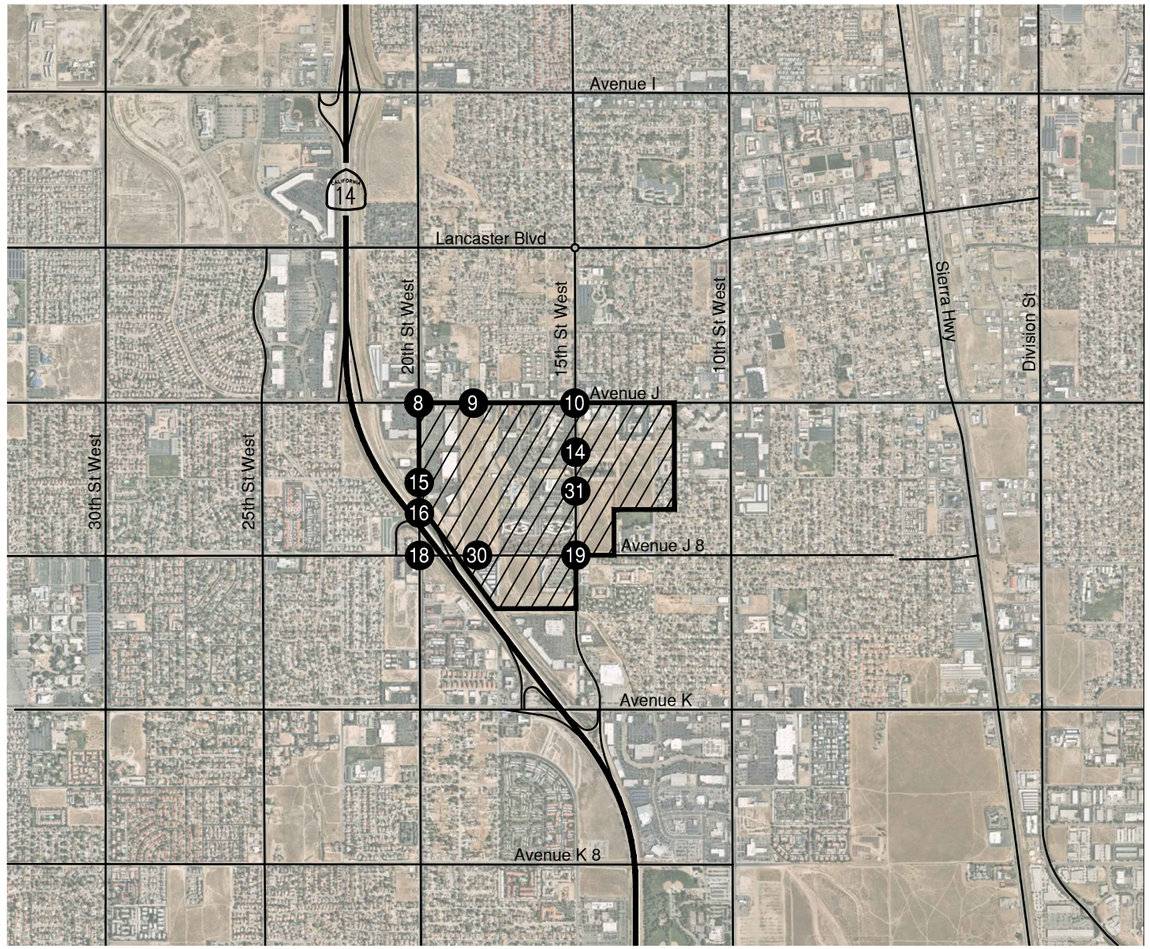
STUDY METHODOLOGY

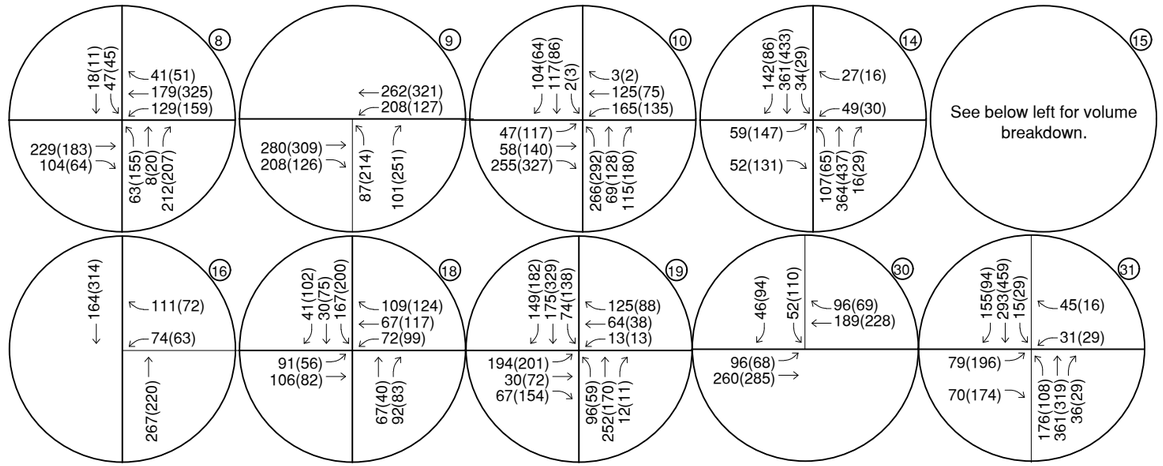
Existing morning and afternoon peak period traffic counts were developed at all study intersections as part of the original study (Operational and Safety Analysis, August 2020) except the 15th Street West and Avenue J-5. Existing and future traffic volumes at this intersection was estimated based on volumes at adjacent study intersections - 15th Street and Avenue J-8 for northbound volumes and 15th Street and Avenue J-3 for southbound volumes.

The changes to the proposed Lancaster Health District roadway network would not impact the external trip distribution patterns, but would impact how traffic accesses the site from adjacent roadways. Therefore, only the study intersections immediately adjacent to the project site were analyzed as part of this addendum. The study intersections as well as the existing and proposed control are tabulated in **Table 1**.

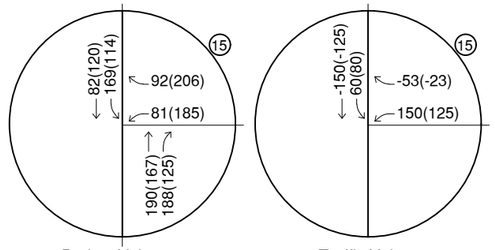
Table 1: Study Area Intersections



Intersection			Jurisdiction	Control (2019)	Control (w/ Project)
#	North/South	East/West			
8	20th Street West	Avenue J	Lancaster	Signal	Signal
9	18th Street West	Avenue J	Lancaster	-	Signal
10	15th Street West	Avenue J	Lancaster	Signal	Signal
14	15th Street West	Avenue J-3	Lancaster	Signal	Signal
15	20th Street West	Home Depot Southerly Street	Lancaster	TWSC	Signal
16	20th Street West	SR-14 NB Ramps	Caltrans	Signal	Signal
18	20th Street West	Avenue J-8	Lancaster	Signal	Signal
19	15th Street West	Avenue J-8	Lancaster	Signal	Signal
30	18th Street West	Avenue J-8	Lancaster	-	Signal
31	15th Street West	Avenue J-5	Lancaster	Signal	Signal



For Level of Service (LOS) analysis, this technical memorandum provides analysis of the following two scenarios:



- Future (2040) with Project Conditions
- Future (2040) with Project and Roadway Improvements Conditions

Per City of Lancaster Traffic Impact Analysis guidelines, signalized intersections within the City of Lancaster jurisdiction were evaluated using the Intersection Capacity Utilization (ICU) methodology. Microsoft Excel was used to perform the ICU analysis. Signalized study intersections within Caltrans jurisdiction were evaluated using the Highway Capacity Manual (HCM), 6th Edition methodology. Synchro software, version 10 was used to model the study intersection.

The trip distribution was updated to reflect the changes to the internal roadway network. Compared to the trip distribution assignment in the original study, this addendum assumes a larger number of trips entering via 15th Street & Avenue J-5 and 18th Street and Avenue J. The project traffic shown in the original study was distributed to the street system within the study area via existing and future project driveways and roadways. The resulting Project Weekday Peak-Hour turning movement volumes are shown in **Figure 2**.

FUTURE (2040) WITH PROJECT CONDITIONS

Estimated project traffic is added to the Future (2040) without Project conditions to develop Future (2040) with Project Conditions. This scenario is used to evaluate the net change in the traffic conditions and to identify potential operational issues associated with the proposed project for the buildout conditions.

Figure 3 illustrates the AM and PM peak hour traffic volumes at the study intersections for Future (2040) with Project Conditions. The Intersection Capacity Utilization (ICU) and Highway Capacity Manual (HCM) reports are provided in **Appendix A** for Future (2040) with Project Conditions.

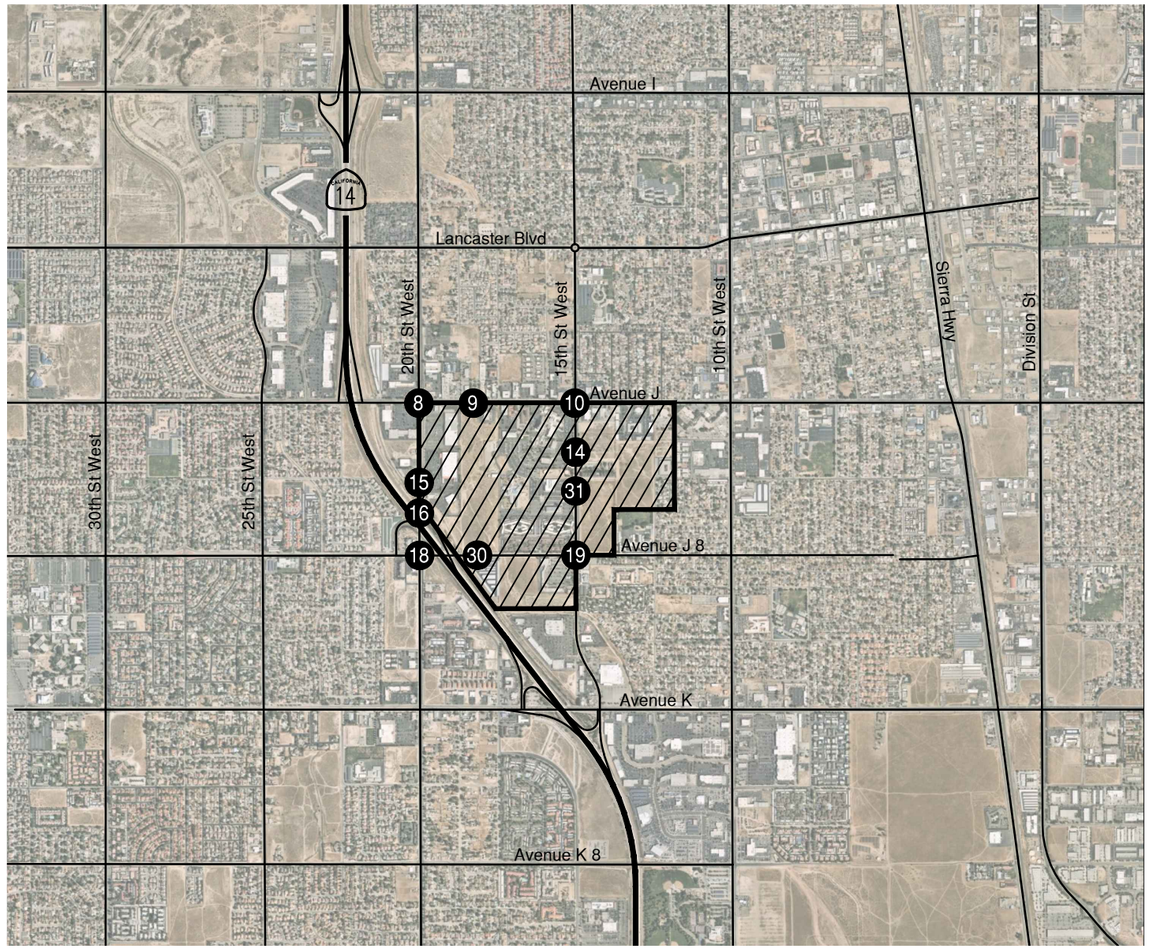

Table 2 presents a summary of the Future (2040) with Project Conditions for each intersection and tabulates the LOS and volume to capacity (V/C) ratio applicable to City intersections or delay (seconds) applicable to Caltrans intersection.

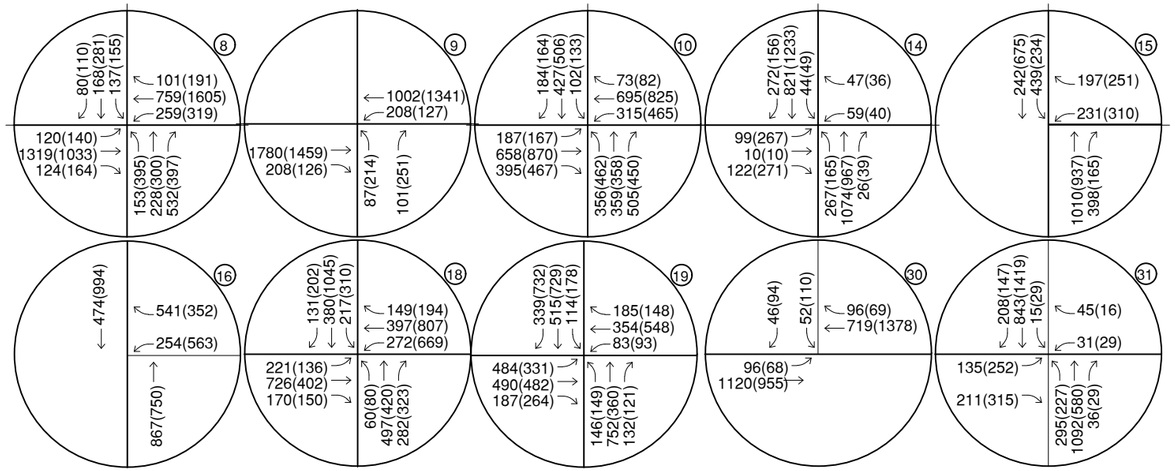

Table 2: Summary of Intersection Operations – Future (2040) with Project Conditions

Intersection			Jurisdiction	Control	AM Peak Hour		PM Peak Hour	
#	North/South	East/West			V/C Ratio	LOS	V/C Ratio	LOS
8	20th Street West	Avenue J	Lancaster	Signal	0.90	D	**1.04**	**F**
9	18th Street West	Avenue J	Lancaster	Signal	0.84	D	0.77	C
10	15th Street West	Avenue J	Lancaster	Signal	**1.12**	**F**	**1.42**	**F**
14	15th Street West	Avenue J-3	Lancaster	Signal	0.68	B	0.80	C

30	18th Street West	Avenue J-8	Lancaster	Signal	0.83	D	**1.07**	**F**
31	15th Street West	Avenue J-5	Lancaster	Signal	0.62	B	0.84	D
Intersection			**Jurisdiction**	**Control**	**AM Peak Hour**		**PM Peak Hour**	
#	**North/South**	**East/West**			**Delay (s)**	**LOS**	**Delay (s)**	**LOS**
16	20th Street West	SR-14 NB Ramps	Caltrans	Signal	12.5	B	20.7	C

The Future (2040) with Project Conditions traffic analysis results presented in **Table 2** indicate that compared with the original study, all study intersections would operate at the same level of service but with a slightly different V/C ratio. Consistent with the original study, the following intersections have an increase in V/C ratio or delay above the threshold that may result in a potential operational and/or safety issue during the AM and PM peak periods:

- Intersection #8: 20th Street West and Avenue J
- Intersection #10: 15th Street West and Avenue J
- Intersection #18: 20th Street West and Avenue J-8
- Intersection #19: 15th Street West and Avenue J-8
- Intersection #30: 18th Street West and Avenue J-8

PROJECT OPERATIONAL AND SAFETY ISSUES AND POTENTIAL IMPROVEMENTS

This analysis per this addendum show that the study intersections that were shown to have potential operational or safety impacts in the original study would continue to have impacts during the same peak periods. Therefore, the roadway improvements recommended as part of the original study are retained.

Table 3 presents a summary of the V/C ratio or delay (seconds) and the corresponding LOS for each intersection. The ICU and HCM reports are provided in **Appendix B** for Future (2040) with Project and Roadway Improvements Conditions.

Table 3: Comparison of Intersection Operations – Future (2040) with Project Conditions without and with Roadway Improvements

Signalized Intersection			V/C or Delay	AM Peak Hour				PM Peak Hour			
#	North/South	East/West		V/C Ratio or Delay (s)	LOS	V/C Ratio or Delay (s)	LOS	V/C Ratio or Delay (s)	LOS	V/C Ratio or Delay (s)	LOS
				No Improvement		With Improvement		No Improvement		With Improvement	
8	20th Street West	Avenue J	V/C	-	-	-	-	1.04	F	HCM[1]	
			Delay	-	-	-	-	57.3	E	38.5	D
10	15th Street West	Avenue J	V/C	1.12	F	0.90	D	1.42	F	**1.14**	**F**
			Delay	110.3	F	50.9	D	192.5	F	**67.2**	**E**
18	20th Street West	Avenue J-8	V/C	1.02	F	1.02	F	1.20	F	**1.15**	**F**
			Delay	70.1	E	**65.7**	**E**	139.6	F	**89.2**	**F**
19	15th Street West	Avenue J-8	V/C	0.93	E	0.82	D	0.97	E	0.80	C
30	18th Street West	Avenue J-8	V/C	-	-	-	-	1.07	F	**1.07**	**F**

[1]Recommended improvements assessed based on HCM methodology. Improvements are a result of proposed right-turn overlaps.

Table 3 indicates that if the recommended roadway improvements are implemented, one study intersection would operate at LOS E (using the HCM delay methodology), and the other study intersections would operate at LOS D or better during the AM peak period. During the PM peak period, two study intersections would operate at LOS F, one at LOS E (using the HCM delay methodology), and the other study intersections would operate at LOS D or better. These results and recommendations are consistent with the findings of the original study.

I. INTRODUCTION

This report documents an Operational and Safety Analysis conducted for the Lancaster Health District Master Plan for the City of Lancaster. The Lancaster Health District Master Plan consists of a master planned mixed-use development that is projected to occur over the next twenty years. The project site is located primarily between 20th Street West, Avenue J, 15th Street West, and Avenue J-8 in the City of Lancaster, CA. The project will also include development east of 15th Street West in the East Neighborhood and south of Avenue J-8 in the South Neighborhood. The site is currently occupied primarily by the Antelope Valley Hospital and some associated facilities, all of which would be replaced as part of the project. The project site also includes a mixture of existing retail, residential, and restaurant land uses that would remain as the project is developed. The remainder of the site is occupied by surface parking lots and unimproved land. The project will include a new Antelope Valley Hospital with 380 beds along with additional development of 284 hospital beds for sub-acute care, up to 150 KSF of retail space, 90 KSF of restaurant space, 200 KSF of office space, 400 KSF of medical-dental office space, 180 hotel rooms, a 70 KSF convention center, 300 senior housing dwelling units, 100 assisted living dwelling units, 250 single-family residential dwelling units, and 1,350 multifamily residential dwelling units. The Master Plan also includes the redesign of the internal circulation system.

Figure 1 illustrates the study area and project location in its regional setting.

PROJECT DESCRIPTION

The Lancaster Health District Master Plan covers three areas of the project site – the District Core, East Neighborhood, and South Neighborhood. The majority of the development is projected to occur in the District Core. The primary purpose for the project is to replace the existing 342 bed Antelope Valley Hospital with a new hospital facility consisting of 300 general hospital beds, 40 psych hospital beds, 40 rehab hospital beds, 160 skilled nursing hospital beds, 24 drug rehab hospital beds, and 100 rehab hospital beds. The project would also include development of up to 1,350 multi-family residential units, 250 single family residential units, 300 senior housing units, 100 assisted living beds, a hotel with 180 rooms, a conference center of up to 70 KSF, up to 400 KSF of medical-dental office buildings, up to 200 KSF of general office buildings, up to 150 KSF of retail, and up to 90 KSF of restaurant. The project would also include the construction of a parking garage with up to 1,100 stalls.

The majority of the development is projected to occur in the District Core, which is generally bound by SR-14 and 20th Street West to the west, Avenue J to the north, 15th Street West to the east, and Avenue J-8 to the south. Development of retail, restaurant, and residential land uses will occur in the East Neighborhood, which is generally bound by 15th Street West to the west, Avenue J to the north, Kingtree Avenue and 12th Street West to the east, and Avenue J-8 to the south. Development of retail, restaurant, and residential land uses will also occur in the South Neighborhood, which is generally bound by SR-14 to the west, Avenue J-8 to the north, 15th Street West to the east, and the Antelope Valley Center Shopping Center to the south.

The land-use and building area summary associated with the proposed project is as follows:

Table 1: Land Use and Building Area Summary

Project Component	Unit	Size			
		Total	District Core	East Neighborhood	South Neighborhood
Hospital (Total Net New)	Bed(s)	**300**	300		
Existing (To Be Removed)	*Bed(s)*	*-342*	*-342*		
Psych	Bed(s)	40	40		
Rehab	Bed(s)	40	40		
Skilled Nursing	Bed(s)	160	160		
Drug Rehab	Bed(s)	24	24		
Rehab	Bed(s)	100	100		
Multi-Family Residential	Dwelling Unit(s)	**1,350**	802	465	83
Single Family Residential	Dwelling Unit(s)	**250**	0	40	210
Senior Housing	Dwelling Unit(s)	**300**	300		
Assisted Living	Bed(s)	**100**	100		
Hotel	Room(s)	**180**	180		
Conference Center	1,000 SF	**70**	70		
Medical-Dental Office Building	1,000 SF	**400**	400		
General Office Building	1,000 SF	**200**	200		
Retail	1,000 SF	**150**	75	37.5	37.5
Restaurant	1,000 SF	**90**	45	22.5	22.5
Parking Garage	Parking Stalls	**1,100**	1,100		

Access to the site would be provided by several new and existing full access driveways as well as new and existing right-in-right-out driveways. The following intersections would serve as the primary access points for the project site:

- 20th Street West & Avenue J-5 (existing driveway would be converted to a traffic signal)
- 18th Street West & Avenue J (new traffic signal)
- 15th Street West & Avenue J-3 (existing traffic signal)
- 15th Street West & Avenue J-5 (existing traffic signal)
- 18th Street West & Avenue J-8 (new traffic signal)

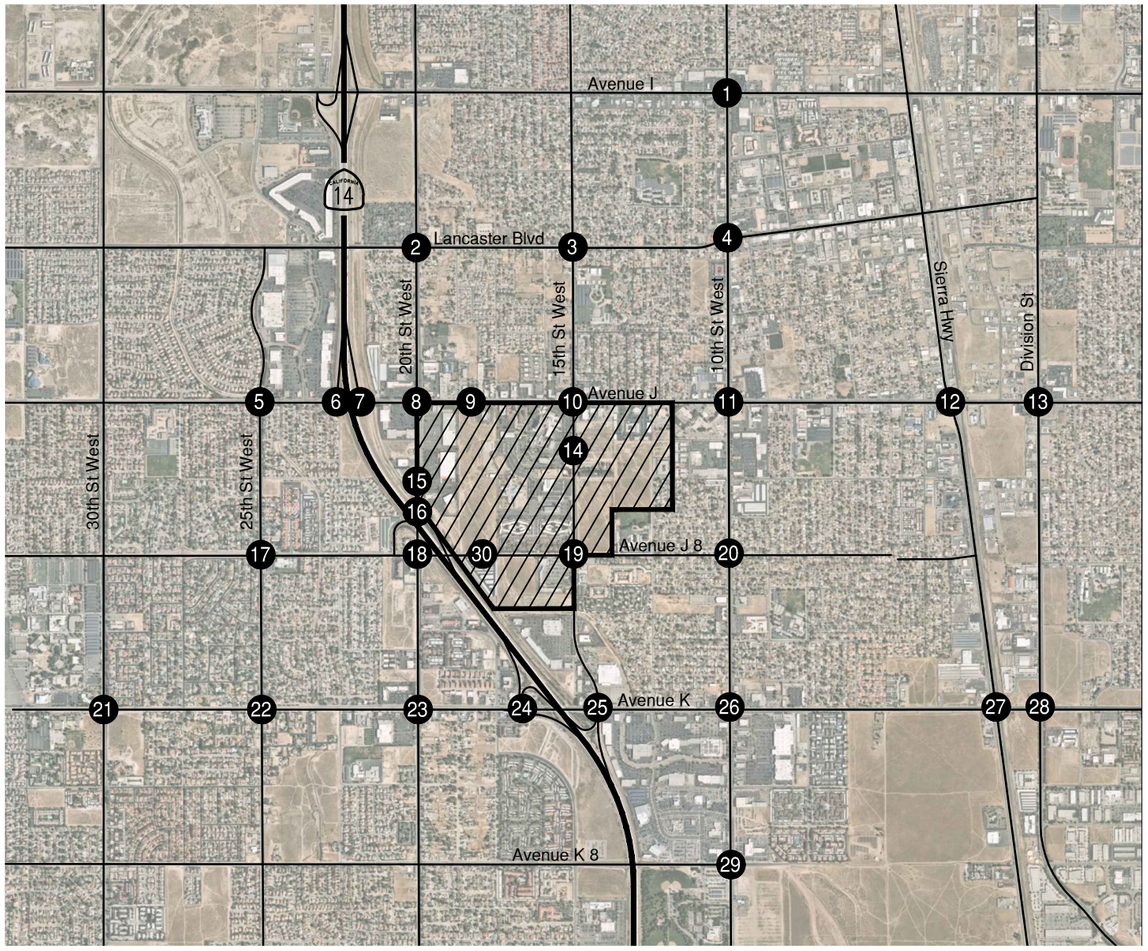
Additional existing and new driveways would provide access to the project site from Avenue J, 15th Street West, and Avenue J-8.

STUDY METHODOLOGY

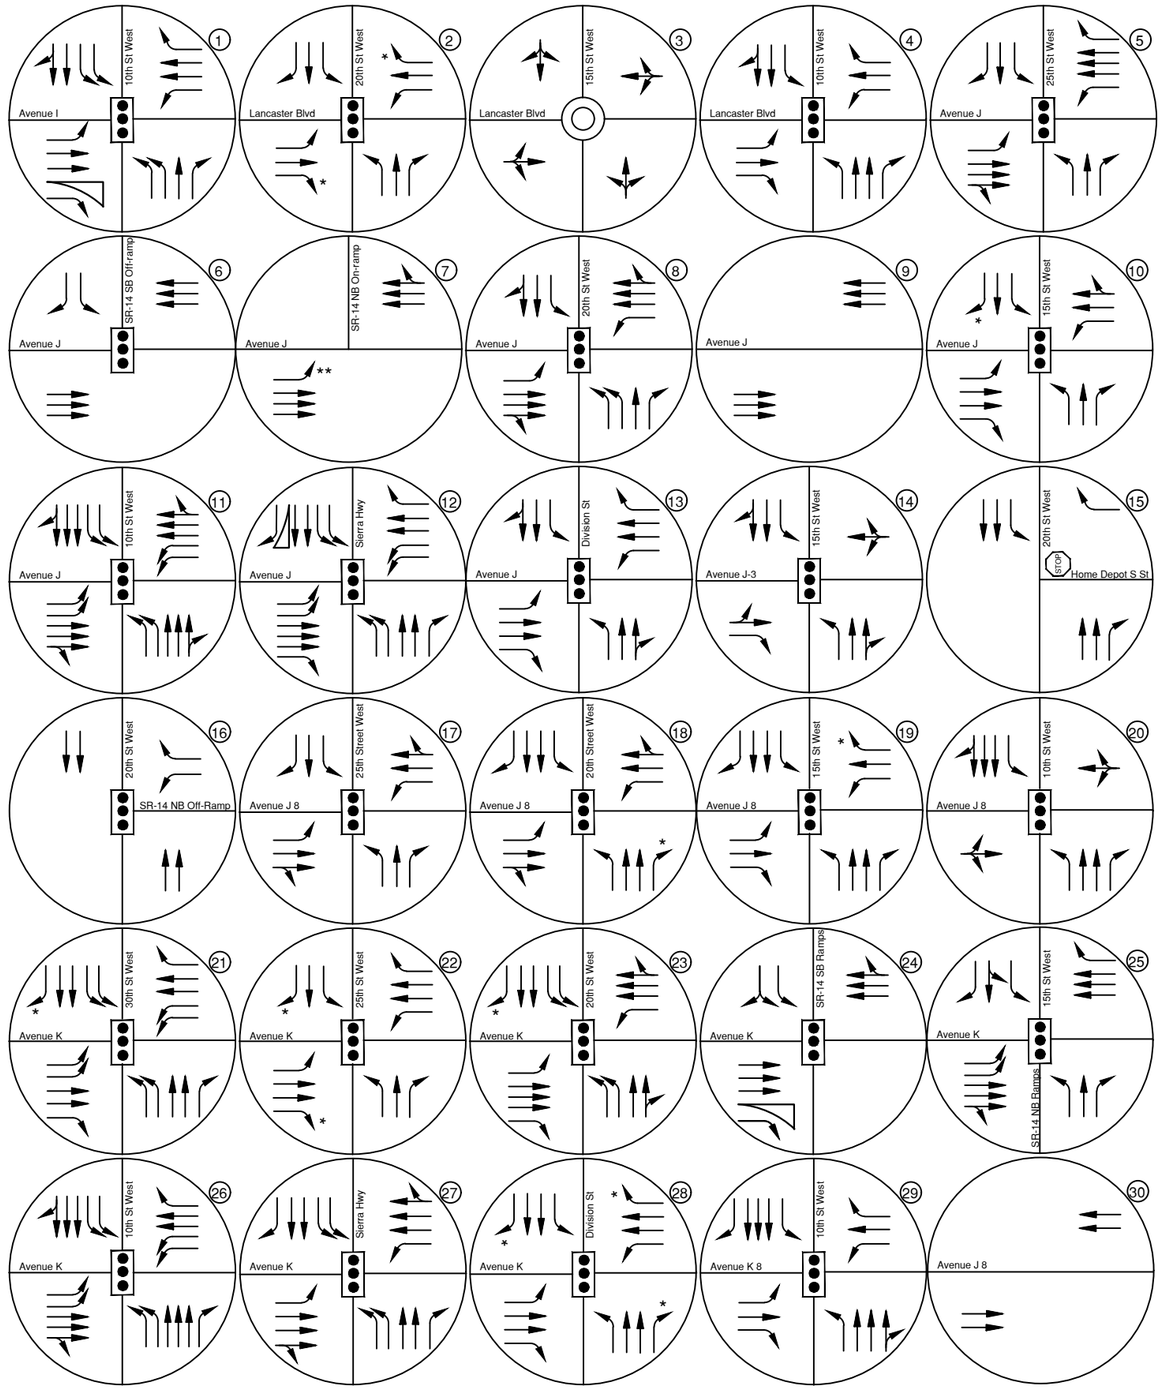
The project site is located in the City of Lancaster in the County of Los Angeles. The format of the operational and safety analysis follows the City of Lancaster guidelines. The study area and intersections for this project were identified in consultation with the City of Lancaster.

For LOS analysis, this study provides analysis of the following four scenarios:

- Existing (2019) Conditions
- Future (2040) without Project Conditions
- Future (2040) with Project Conditions
- Future (2040) with Project and Roadway Improvements Conditions



II. EXISTING CONDITIONS



STUDY AREA

30 study intersections were identified in conjunction with City staff and are listed below in **Table 2**. Existing lane configuration and traffic control for the study intersections are illustrated in **Figure 2** on the following page.

Table 2: Study Area Intersections

EXISTING ROADWAY SYSTEM

The following sections describe the roadway system including arterials, collectors, and local streets that traverse the study intersections and serve the project site.

Avenue I is an east-west major arterial that is located north of the project site. It has three lanes in each direction with a raised median that is broken to provide access to driveways and intersections and on-street parking is prohibited. Between 15th Street West and 10th Street West, there are two lanes in each direction and parking is permitted on the north side between 13th Street West and 10th Street West. The posted speed limit ranges between 40 and 45 mph. There are Class II bike lanes in each direction between 15th Street and 10th Street.

Lancaster Boulevard is an east-west secondary arterial that is located at north of the project site. East of Valley Central Way it has one lane in each direction and a TWLT median that provides access to driveways and local streets. On-street parking is prohibited on both sides of Lancaster Boulevard the posted speed limit is 40 mph. There are Class II bike lanes in each direction.

Avenue J is an east-west major arterial that is located at the north end of the project site. It has three lanes in each direction and a raised median that is broken to provide access to driveways and intersections. On-street parking is prohibited on both sides of Avenue J and the posted speed limit is 40 mph east of 20th Street West and 45 mph west of 20th Street West.

Avenue J-8 is an east-west secondary arterial that is located between the District Core and South Neighborhood of the project site. West of 15th Street West it has two lanes in each direction with a TWLT median that provides access to driveways and local streets. On-street parking is prohibited on both sides of Avenue J-8 and the posted speed limit is 45 mph. It also has Class II bike lanes in each direction. East of 15th Street West it has one lane in each direction, narrows down to have no median, and on-street parking is permitted in both directions. The posted speed limit is 35 mph and there are no bike lanes.

Avenue K is an east-west major arterial that is located south of the project site. East of 25th Street West it has three lanes in each direction and a mix between a raised and flush median that allows access to driveways and intersections. On-street parking is prohibited on both sides of Avenue K and the posted speed limit ranges between 40 and 50 mph.

Avenue K-8 is an east-west secondary arterial that is located south of the project site. It has one lane in each direction with no median. On-street parking is prohibited and the posted speed limit is 45 mph. There are Class II bike lanes in each direction.

30th Street West is a north-south major arterial that is located west of the project site. It has two lanes in each direction with a mix of a flush and raised median. On-street parking is prohibited and the posted speed limit is 50 mph. There are Class II bike lanes in each direction.

25th Street West is a north-south secondary arterial that is located west of the project site. It has two lanes in each direction with a TWLTL median that provides access to driveways and local streets. On-street parking is prohibited and the posted speed limit is 45 mph. There are Class II bike lanes in each direction.

20th Street West is a north-south major arterial that is located on the west end of the project site. South of Avenue J, it has two lanes in each direction and a raised median that is broken to provide access to driveways and intersections. North of Avenue J, there is one lane in each direction. On-street parking is prohibited on both sides of 20th Street West and the posted speed limit is 40 mph. There are Class II bike lanes in each direction.

15th Street West is a north-south secondary arterial that is located between the District Core and the East Neighborhood of the project site. South of Avenue J there are two lanes in each direction with a mix between raised and flush median. On-street parking is prohibited on both sides of 15th Street West and the posted speed limit is 40 mph. North of Avenue J there is one lane in each direction with Class II bike lanes and on-street parking is permitted in both directions.

10th Street West is a north-south major arterial that is located east of the project site. There are three lanes in each direction with a flush median. North of Lancaster Blvd there are two southbound lanes and three northbound lanes. On-street parking is prohibited on both sides of 10th Street West and the posted speed limit ranges between 40 and 45 mph. There are no bike lanes.

Sierra Highway is a north-south major arterial, located east of the project site, that runs northwest to southeast along railroad tracks. There are two lanes in each direction with a flush median. On-street parking is prohibited on both sides of Sierra Highway and posted speed limit ranges between 45 and 55 mph. There is a Class I two-way bike path that is raised and separated from the street that runs parallel to Sierra Highway on the east side. There are also several at grade railroad crossings that occur immediately east of Sierra Highway.

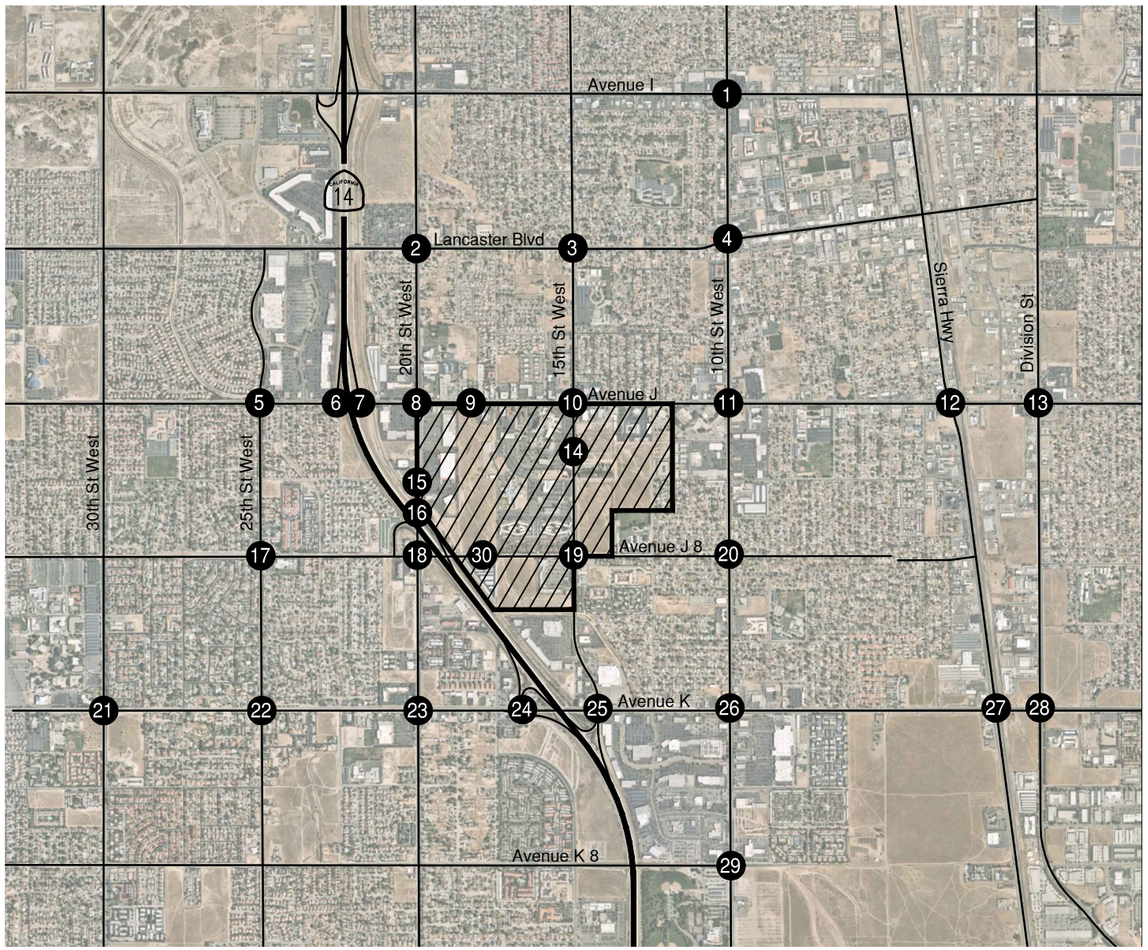
Division Street is a north-south major arterial located east of the project site and east of Sierra Highway. There are two lanes in each direction with a flush median. There are two lanes in each direction with a flush median. On-street parking is prohibited on both sides of Division Street and posted speed limit is 45 mph. There are Class II bike lanes in each direction.

EXISTING TRANSIT SYSTEM

The existing public transit lines that operate within the study area are shown in **Table 3** on the following page. Local bus service is provided by Antelope Valley Transit Authority (AVTA), which provides four lines that operate adjacent to the project site. Commuter rail service is provided by Metrolink on the Antelope Valley Line which operates with primarily outbound trips toward downtown Los Angeles in the early morning and primarily inbound trips in the afternoon and evening. Trains depart from the Lancaster Metrolink Station, approximately 1.25 miles northeast of the project site. Commuter bus service is also provided by AVTA with buses departing from Owen Memorial Park, approximately 1 mile southeast of the project site.

Table 3: Existing Public Transit Service Summary

Agency	Line	From	To	Via	Weekday Peak Frequency	Saturday Peak Frequency
Metrolink	Antelope Valley Line	Lancaster Metrolink Station	Downtown LA	Santa Clarita, San Fernando Valley	30-60 minutes	2 hours
Antelope Valley Transit Authority (AVTA)	1	Metrolink Station	Palmdale	10th Street West	15 minutes	30 minutes
Antelope Valley Transit Authority (AVTA)	7	Metrolink Station	Palmdale	Avenue J	60 minutes	60 minutes
Antelope Valley Transit Authority (AVTA)	8	Antelope Valley College Palmdale Center	Antelope Valley College Lancaster Campus	Avenue K and Sierra Highway	80-90 minutes	N/A
Antelope Valley Transit Authority (AVTA)	9	Quartz Hill	Lancaster City Park	Avenue I, Sierra Highway, Avenue K	95-100 minutes	95-100 minutes
Antelope Valley Transit Authority (AVTA)	11	Owen Memorial Park	Northeast Lancaster	15th Street West	30 minutes	60 minutes
Antelope Valley Transit Authority (AVTA)	12	Owen Memorial Park	Northeast Lancaster	Avenue J	30 minutes	60 minutes



EXISTING TRAFFIC VOLUMES

Existing morning and evening peak hour turning movement counts were collected for the study intersections between 2014 and 2019. It should be noted that when this Operational and Safety Analysis was prepared, the COVID-19 pandemic was causing unusual traffic volumes on City roads. Therefore, no new traffic counts were collected during the study. However, all existing counts were grown to reflect a 2019 estimate based on growth rates from the City's travel demand model developed by Fehr and Peers. Existing (2019) traffic counts are shown in **Figure 3**.

Due to a lack of existing traffic counts, traffic volumes for the following intersections were estimated:

- Intersection #9 – 18th Street West and Avenue J – Eastbound through volumes estimated based on traffic volumes at Intersection #8 (20th Street West and Avenue J). Westbound through volumes estimated based on traffic volumes at Intersection #10 (15th Street West and Avenue J).
- Intersection #15 – 20th Street West and Home Depot Southerly Street – Northbound and southbound through volumes estimated based on traffic volumes at Intersection #16 (20th Street West and SR-14 NB Ramp). Traffic volumes for northbound right, southbound left, and westbound right were estimated based on trip generation patterns for the Learn4Life Lancaster West school.
- Intersection #30 – 18th Street West and Avenue J-8 – Eastbound through volumes estimated based on traffic volumes at Intersection #18 (20th Street West and Avenue J-8). Westbound through volumes estimated based on traffic volumes at Intersection #19 (15th Street West and Avenue J-8).

Copies of the traffic data worksheets are provided in **Appendix A.**

INTERSECTION ANALYSIS METHODOLOGY

Study intersections were evaluated to assess operational and/or safety issues. Per City of Lancaster Traffic Impact Analysis guidelines, signalized study intersections within the City of Lancaster jurisdiction were evaluated using the Intersection Capacity Utilization (ICU) methodology. Microsoft Excel was used to perform the ICU analysis. The roundabout study intersection and proposed Master Plan roundabouts were evaluated using the Highway Capacity Manual (HCM), 6th Edition methodology. Sidra software, version 8, was used to model roundabout intersections.

Signalized study intersections within Caltrans jurisdiction were evaluated using the Highway Capacity Manual (HCM), 6th Edition methodology. Synchro software, version 10, was used to model signalized intersections

Operating conditions are expressed in terms of Level of Service. Level of Service designations range from LOS "A" to "F," with LOS "A" representing comfortable, free-flowing traffic conditions with minimal delays and LOS "F" representing congested conditions with long delays. A qualitative description of each Level of Service is presented in **Tables 4-6.**

Table 4: ICU LOS Definitions (City of Lancaster Signals)

LOS	V/C Ratio	Description
A	0.00 – 0.60	Free flow conditions; low traffic volumes and density; high speeds; no restriction to maneuver pass; drivers can maintain desired speeds with little or no delay
B	0.61 – 0.70	Stable flow; operating speeds beginning to be restricted; drivers still have some freedom to select speed and lane of operation
C	0.71 – 0.80	Still in the stable flow zone; Speeds and maneuverability closely controlled by higher volumes; most drivers' freedom restricted to select their own speed and lane; relatively satisfactory speed is still obtained
D	0.81 – 0.90	Approaches unstable flow; tolerable operating speeds still maintained; fluctuations in volume and temporary restrictions to flow may substantially drop operating speeds; drivers have little freedom to maneuver
E	0.91 – 1.00	Unstable flow at or near capacity; lower operating speeds typically, but not always, 30 mph; stoppages for momentary duration
F	1.00+	Forced flow operation at low speeds; volumes are below capacity; in extreme cases both speed and volume can drop to zero; stoppages may occur for short or long periods of time due to downstream congestion

Source: Intersection Capacity Utilization Guidelines

Table 5: HCM LOS Definitions (Roundabouts)

LOS	Control Delay (sec/veh)
A	10 or less
B	Between 10 and 15
C	Between 15 and 25
D	Between 25 and 35
E	Between 35 and 50
F	Greater than 50

Source: Highway Capacity Manual (HCM) Guidelines

Table 6: HCM LOS Definitions (Caltrans Signals)

LOS	Control Delay (sec/veh)	Description
A	10 or less	The volume-to-capacity ratio is low and either progression is exceptionally favorable or the cycle length is very short. If it is due to favorable progression, most vehicles arrive during the green indication and travel through the intersection without stopping.
B	Between 10 and 20	Progression is highly favorable or the cycle length is short. More vehicles stop than with LOS A.
C	Between 20 and 35	Progression is favorable or the cycle length is moderate. The number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.
D	Between 35 and 55	Progression is favorable or the cycle length is moderate. The number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.
E	Between 55 and 80	The volume-to-capacity ratio is high, progression is unfavorable, and the cycle length is long. Individual cycle failures are frequent.
F	Greater than 80	The volume-to-capacity ratio is very high, progression is very poor, and the cycle length is long. Most cycles fail to clear the queue.

Source: Highway Capacity Manual (HCM) Guidelines

LEVEL OF SERVICE THRESHOLDS

The City of Lancaster assesses the level of service at study intersections for without project and with project conditions. The City of Lancaster's threshold for potential operational and/or safety issues for roadways and intersections is LOS D. For the City of Lancaster, an operational and/or safety issue may occur, per the current guidelines, if:

1) The project would degrade the level of service at a location from LOS A, B, C, or D to LOS E or F; or
2) The project adds a significant number of trips to an intersection that is currently or is projected to operate at LOS E or F. The project could result in an operational and/or safety issue if it increases the V/C ratio by V/C 0.02 or more at signalized intersections.

Per the City's General Plan Article 14.1.1(c), as part of the development review process, the city will evaluate the potential impacts of traffic generated by projects using a dual analysis process and determine the effects on adjacent land uses and surrounding neighborhoods, while utilizing a more flexible LOS criteria that encourages transit ridership, bicycling, and walking. In the event a development project significantly degrades the effective use or safety of City streets; improvements may still be required. Required improvements should consider transit, bicycle, and pedestrian improvements as well as road improvements.

For Caltrans, an operational or safety issue would occur if the level of service would degrade below LOS D.

EXISTING (2019) CONDITIONS

Existing (2019) forecast morning and evening peak hour traffic volumes were used for analysis of 29 study intersections. The ICU reports are provided in **Appendix B** and the HCM reports are provided in **Appendix C** for Existing (2019) Conditions.

Table 7 on the next page presents a summary of the Existing (2019) Conditions V/C ratio or delay (seconds) and the corresponding LOS for each study intersection.

[1] Delay not reported because no movements are required to stop

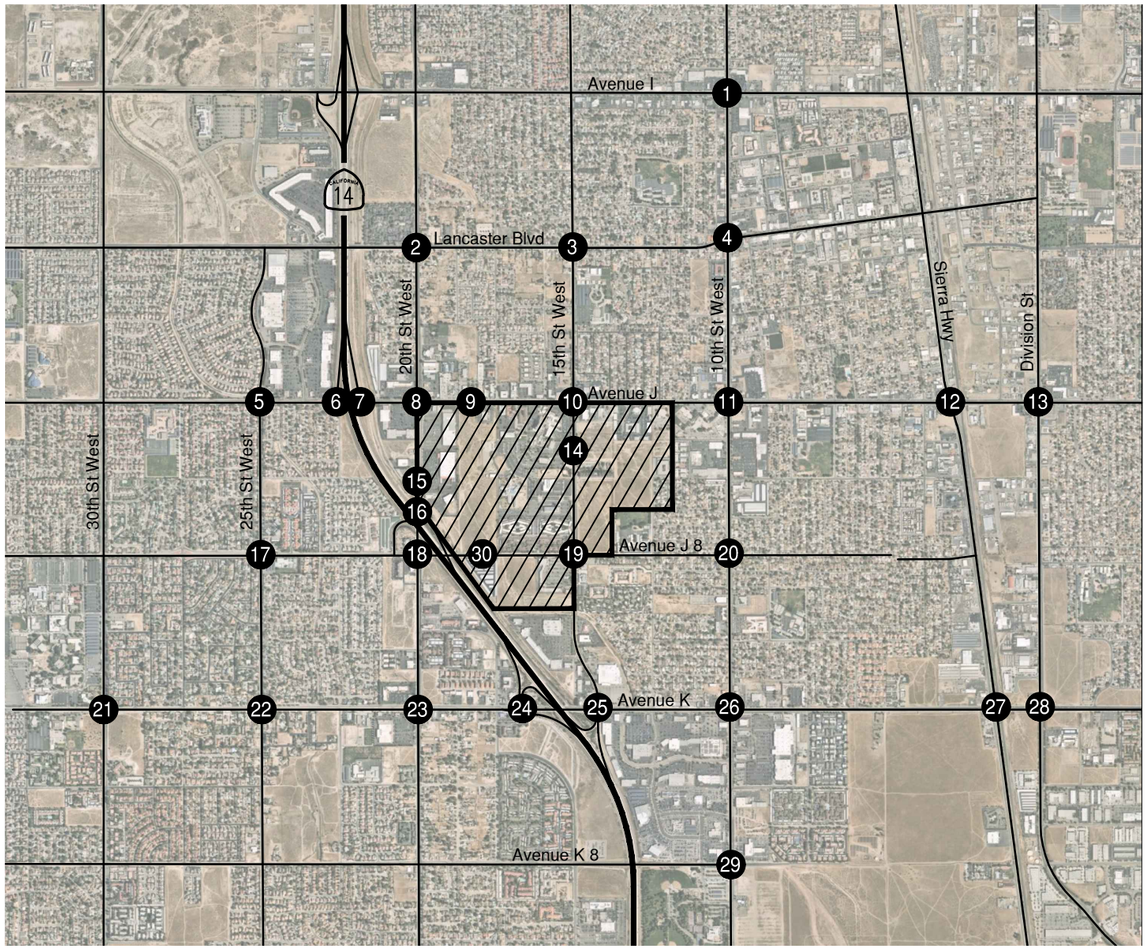
[2] Delay reported by minor street approach

The Existing (2019) Conditions traffic analysis results presented in **Table 7** indicate that during the AM peak period, all built-out study intersections would operate at an acceptable LOS D or better. During the PM peak period, all built-out study intersections would operate at an acceptable LOS D or better.

III. FUTURE (2040) WITHOUT PROJECT CONDITIONS

FUTURE (2040) ROADWAY IMPROVEMENTS

Based upon available information, any upcoming street improvement projects that are programmed by the City, Caltrans, or County of Los Angeles on study intersections and roadways were identified and included in the analysis. The following are planned projects within the study area that are programmed to be completed prior to 2040. The planned roadway improvements are summarized below:



- Avenue J/J-8 Design Alternative 2B
  - Adding two ramps from SR-14 at Avenue J to create a full interchange, allowing full access to and from the south (study intersections 6 and 7). Signalization will be added to the interchange on the east side (study intersection 7)
  - Adding capacity to the existing off-ramp at Avenue J (study intersection 6).
  - Reducing to the number of through lanes along Avenue J to add a bike lane (study intersections 5, 6, 7, 8, 9, and 10)
  - Adding capacity to the existing northbound off-ramp at 20th Street West (study intersection 16).
  - Removing the existing southbound on-ramp at Avenue J-8.
- Avenue K Interchange
  - Adding capacity to the existing northbound ramps at Avenue K and 15th Street West and intersection capacity improvements (study intersection 25)
  - Adding capacity to the existing southbound off-ramp at Avenue K and adding a westbound right-turn lane (study intersection 24)
- Pedestrian Gap Project
  - Constructing bulb outs at 15th Street/Avenue J-8 (study intersection 19)

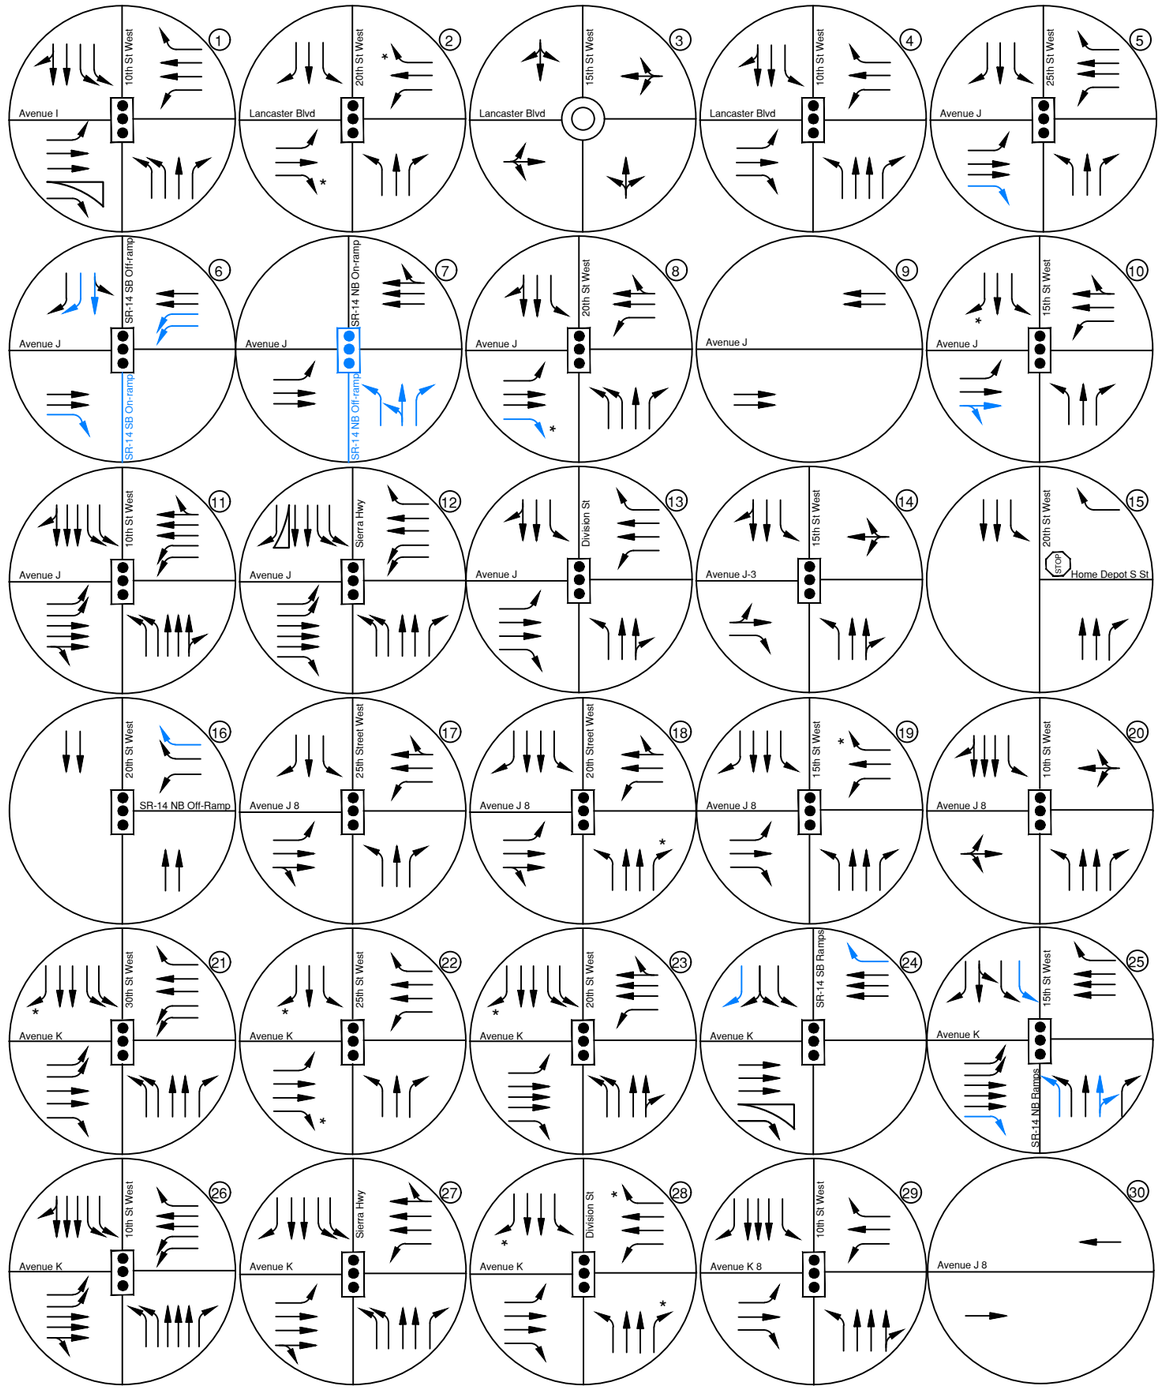


Figure 4 on the following page shows the Future (2040) Intersection Lane Configuration and Traffic Control.

FUTURE (2040) VOLUME DEVELOPMENT

Future (2040) traffic volumes were forecast by Fehr and Peers for all study intersections based on the City of Lancaster Travel Demand Forecasting (TDF) Model. The model contains future year 2040 growth projections for the City including projected developments and planned local and regional transportation improvements.

Figure 5 illustrates the AM and PM peak hour traffic volumes at the study intersections for the Future (2040) without Project conditions. The ICU reports are provided in **Appendix B** and the HCM reports are provided in **Appendix D** for Future (2040) without Project conditions.

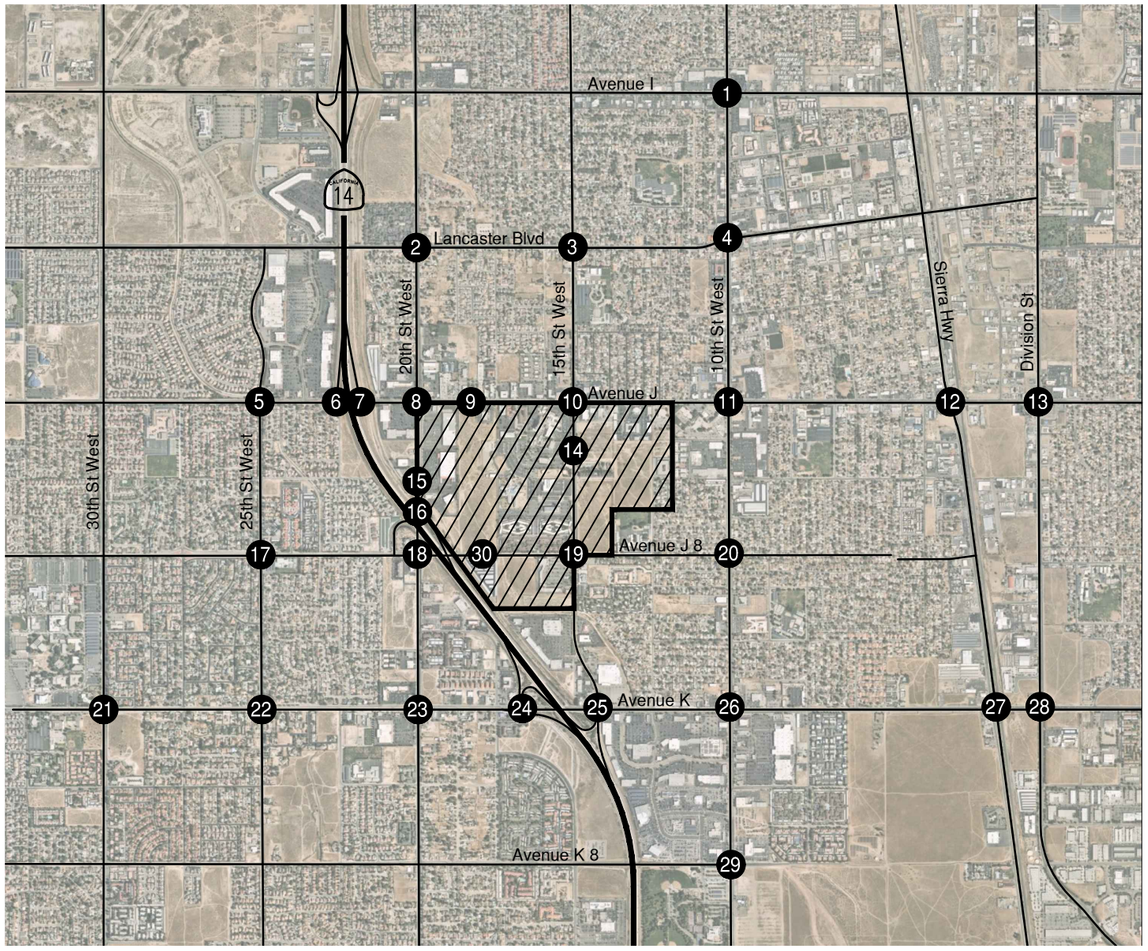
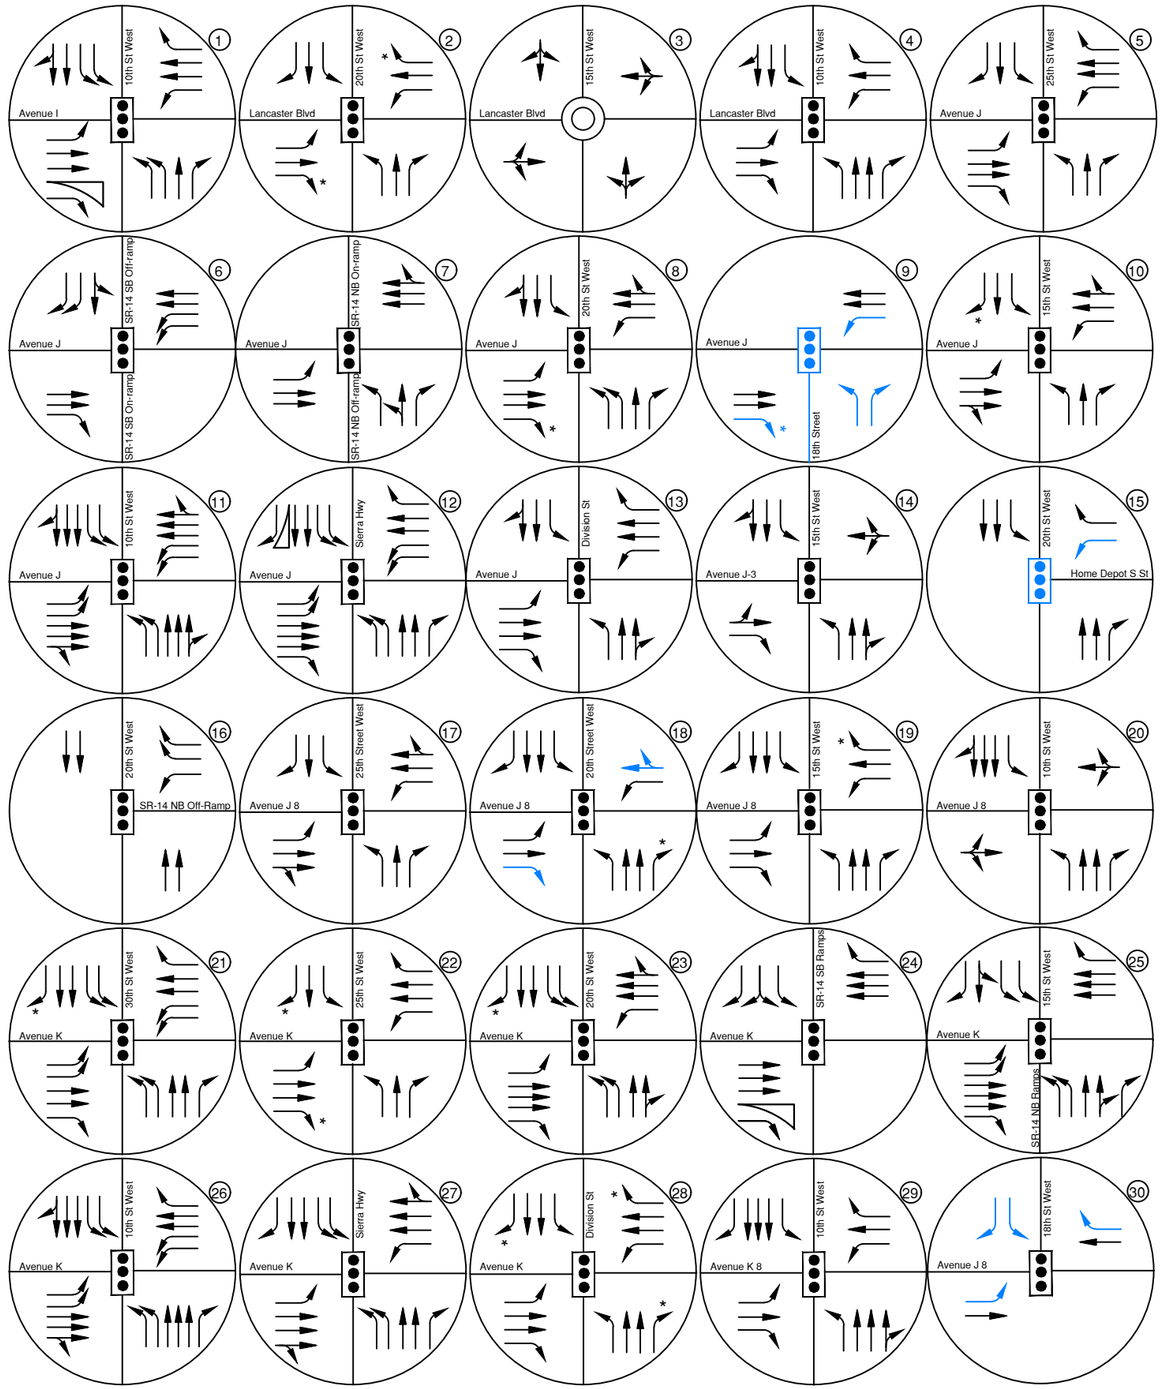
[1] Delay reported by minor street approach

The Future (2040) without Project Conditions traffic analysis results presented in **Table 6** indicate that all intersections are projected to operate at LOS D or better during the AM peak period. During the PM peak

period, two intersections are projected to operate at LOS E, and the other 26 intersections are projected to operate at LOS D or better.



IV. FUTURE (2040) WITH PROJECT CONDITIONS



PROJECT ROADWAY IMPROVEMENTS

The Lancaster Health District Master Plan includes roadway improvements internal to the site and along the project boundaries. The proposed project roadway improvements internal to the project site are listed below:

- Medical Main Street Project
  - Extending Avenue J-3 from 15th Street West to 18th Street West.
  - Constructing 18th Street West between Avenue J and Avenue J-8.
    - Installation of a new traffic signal at intersection of Avenue J and 18th Street West (study intersection 9)
    - Installation of a new traffic signal at intersection of Avenue J-8 and 18th Street West
  - Constructing "Home Depot Southerly Street" south of Home Depot to link 20th Street West and 18th Street West.
    - Installation of a new traffic signal at the intersection of "Home Depot Southerly Street" and 20th Street West (study intersection 15)
    - Removal of existing traffic signal at 20th Street West and Home Depot Driveway.
  - Constructing 13th Street West between Avenue J-2 and J-8.
  - Extending Avenue J-5 from 15th Street West to 13th Street West, widening it between 13th Street West and 12th Street West.
    - The existing traffic signal at Avenue J-5 and 15th Street West will be modified to include the addition of the east leg.
  - Avenue J-8 Project
    - Addition of buffered Class II bicycle lanes and reduction in lanes from four to two between 15th Street West and 20th Street West (study intersections 18 and 19)

Figure 6 on the following page shows the Future (2040) with Project Intersection Lane Configuration and Traffic Control.

PROJECT TRAFFIC

Trip generation estimates were calculated for the proposed development in order to determine the potential operational or safety issues as a result of the proposed project on the study intersections providing access to the project site. The following paragraphs describe trip generation, distribution, and assignment for the project.

PROJECT TRAFFIC GENERATION

Weekday daily, AM, and PM peak hour trips were estimated for the project using trip generation rates from the Institute of Transportation Engineers (ITE) publication entitled *Trip Generation*, 10th Edition. The morning and evening peak hours correspond to the peak hours of the adjacent street system. Trip generation rates are summarized in **Table 9**.

Trip generation was calculated separately for project trips from the District Core, East Neighborhood, and South Neighborhood. The resulting trips that would be generated by the proposed project are summarized in **Tables 10-12** for each neighborhood. The trip generation estimate includes the following two types of credits:

1) The first trip generation credit is for internal capture of trips using multiple land uses within the project site. Internal capture credits are applied to projects where some of the trips generated by the project are expected to be captured by other land uses within the project. Since the Lancaster Health District Master Plan includes several land uses in close proximity, some percentage of visitors to a given land use could visit other land uses of the Lancaster Health District on a single trip before leaving. Internal capture of trips is expected to occur throughout the Lancaster Health District, with people arriving at the site in one area of the District and walking to other land uses in the District Core, East Neighborhood, and South Neighborhood, before leaving. To be conservative, this analysis assumes that internal capture of trips would only occur within the land uses among each neighborhood within the Lancaster Health District.

   Internal capture of trips in each neighborhood was calculated per the NCHRP Internal Trip Capture Estimation Tool. The Internal Capture calculation spreadsheets are shown in **Appendix E.**

2) The second trip generation credit is the pass-by reduction. Pass-by trips are trips that would already be on the adjacent roadways (and so are already counted in the existing traffic) and will be shown as turning into the site while passing-by. Pass-by trip reductions are provided by the ITE *Trip Generation* manual.

Table 9: ITE Trip Generation Rates

Net Project Total				**3,898**	**121**	**190**	**208**	**114**

Tables 10, **11**, and **12** indicate that the proposed project will generate approximately 40,043 new daily trips, with 3,070 new trips during the AM peak hour and 3,558 new trips during the PM peak hour.

PROJECT TRAFFIC DISTRIBUTION AND ASSIGNMENT

Trip distribution assumptions for the project trips were developed based on the roadway system and land uses in the vicinity of the project. The project traffic shown in **Tables 10**, **11**, and **12** was distributed to the street system within the study area based on the trip distribution percentages shown on **Figure 7**. Project trips were distributed to the external road network via several existing and future project driveways and roadways.

The resulting Project Weekday Peak-Hour turning movement volumes are shown on **Figure 8.**

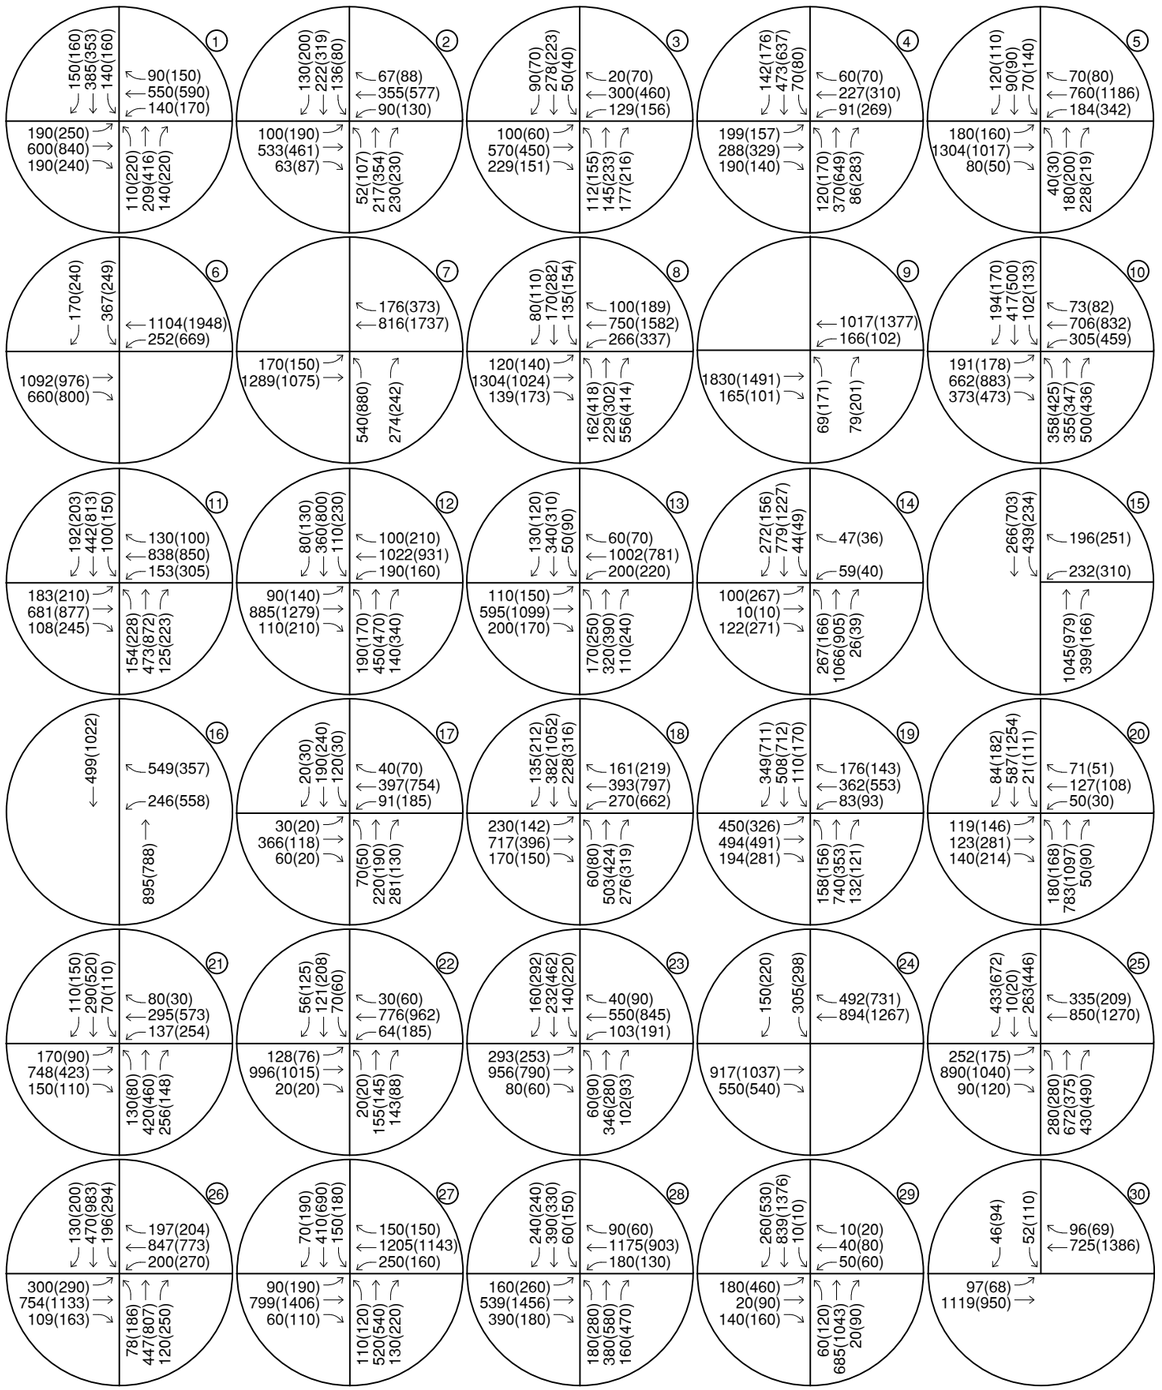
FUTURE (2040) WITH PROJECT CONDITIONS



Estimated project traffic is added to the Future (2040) without Project conditions to create Future (2040) with Project Conditions. This scenario is used to evaluate the net change in the traffic conditions and to identify potential operational or safety issues associated with the proposed project. Future (2040) with Project volumes were assigned to the street network and study intersections to evaluate the net change in the traffic conditions and to identify potential operational or safety issues associated with the proposed project for the buildout conditions.

The existing signal at Home Depot is being relocated south to the proposed Home Depot Southerly Street, and the left-in/left-out movements at the existing access point will be closed. Because of these changes, existing traffic volumes for Home Depot and Desert Sands Charter High School were rerouted through the new intersection #15 in the following ways:

- For Home Depot
    - WBL and SBL volumes were rerouted through Home Depot Southerly Street.
    - NBR and WBR were assumed to remain accessing Home Depot through the existing driveway and that a negligible amount would use the new signal.
- For Desert Sands Charter High School
    - It was assumed that there was a 50/50 split for vehicles going northbound/southbound leaving the school, and that for vehicles going southbound, there was a 50/50 split between vehicles driving through Home Depot and making a WBL at the existing signal and vehicles making a WBR from Home Depot Southerly Street in order to make a U-turn at the existing signal. All of these trips have been rerouted to make a WBL at the new signal, which results in a reduction in SBT and WBR at this location.

Figure 9 on the following page illustrates the AM and PM peak hour traffic volumes at the study intersections for Future (2040) with Project Conditions. The ICU reports are provided in **Appendix B** and the HCM reports are provided in **Appendix F** for Future (2040) with Project Conditions.

The Future (2040) with Project Conditions traffic analysis results presented in **Table 13** indicate that three intersections are projected to operate at LOS F, one intersection is projected to operate at LOS E, and the remaining 26 study intersections are projected to operate at LOS D or better during the AM peak period.

During the PM peak period, four intersections are projected to operate at LOS F, three intersections are projected to operate at LOS E, and the remaining 23 study intersections are projected to operate at LOS D or better.

For the Future (2040) with Project Conditions, the following intersections have an increase in V/C ratio or delay above the threshold that may result in a potential operational and/or safety issue during the AM and PM peak periods.

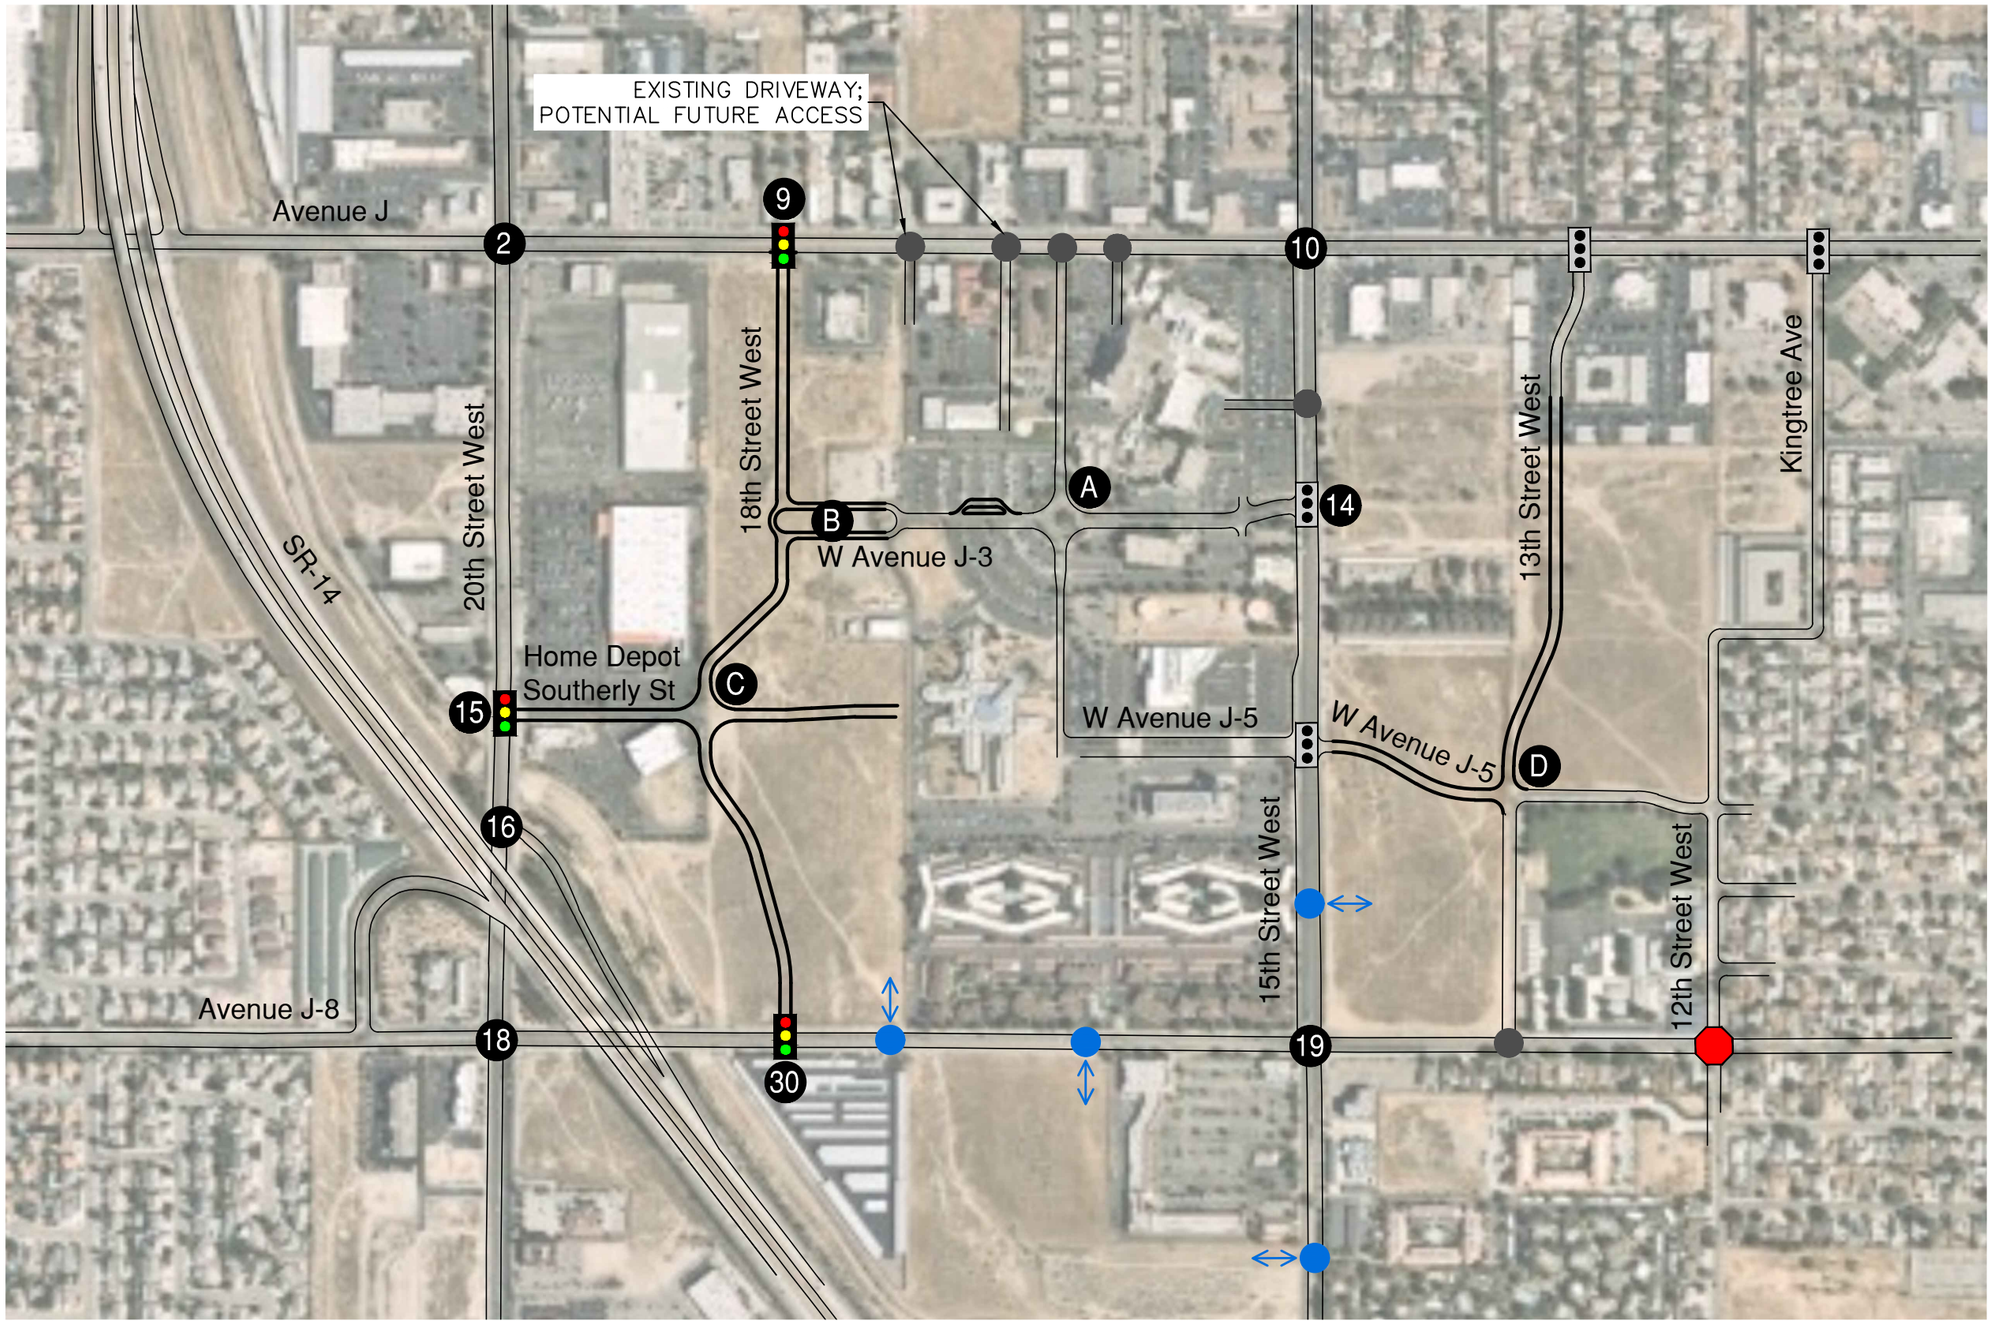
- Intersection #3: 15th Street West and Lancaster Boulevard
- Intersection #8: 20th Street West and Avenue J
- Intersection #10: 15th Street West and Avenue J
- Intersection #18: 20th Street West and Avenue J-8
- Intersection #19: 15th Street West and Avenue J-8
- Intersection #20: 10th Street West and Avenue J-8
- Intersection #28: Division Street and Avenue K
- Intersection #30: 18th Street West and Avenue J-8

V. SITE CIRCULATION

As described in previous sections, the Lancaster Health District Master Plan includes several new roadways and intersections. Primary internal street network connections include the extensions of Avenue J-3 and J-5 to provide east-west connectivity, and 18th Street West and 13th Street West/Lowtree Avenue to provide north-south connectivity. All internal roadways will be two-lane facilities with sidewalks and will operate at acceptable levels of service with the forecast traffic levels. Construction of internal street improvements will be sequenced in coordination with individual developments and construction of the new hospital building.

Figure 10 on the following page shows the roadways and intersections that will be used to provide access to the Lancaster Health District. Access roadways and intersections that were included in this study include existing roadways and potential future access roadways based on the preliminary developer plan.

An analysis was conducted of traffic operations at the roundabouts on the Lancaster Health District Master Plan site. Future traffic volumes at Master Plan roundabouts were estimated based upon the locations proposed for specific components of the Master Plan. Traffic operations for the following existing and proposed roundabouts were analyzed:



<u>District Core</u>

- Home Depot Southerly Street and 18th Street West – Expected to operate at LOS A in the Future (2040) with Project Conditions
- Avenue J-3 and 18th Street West – This oblong roundabout is expected to operate in a one-way counter-clockwise direction. Yield control is recommended for side street approaches to the roundabout. Expected to operate at LOS A in the Future (2040) with Project Conditions.
- Avenue J-3 and North/South Street – This is an existing dual-lane roundabout with single northbound, eastbound, and southbound approach lanes and dual westbound approach lanes. The roundabout is proposed to be modified to a single-entry lane from all directions. Expected to operate at LOS A in Future (2040) with Project Conditions.

<u>East Neighborhood</u>

- Avenue J-5 and 13th Street West – Expected to operate at LOS A in the Future (2040) with Project Conditions.

Additional roundabouts may be planned and constructed at a future period. Traffic operations for future roundabouts should be reassessed when individual projects are proposed.

VI. PROJECT OPERATIONAL AND SAFETY ISSUES AND POTENTIAL IMPROVEMENTS

LEVEL OF SERVICE OPERATIONAL AND SAFETY ISSUES

The Future (2040) with Project and Roadway Improvements analysis shows that potential operational and/or safety issues may occur at 8 study intersections.

Per the City's General Plan Article 14.1.1(c), as part of the development review process, the city will evaluate the potential impacts of traffic generated by projects using a dual analysis process and determine the effects on adjacent land uses and surrounding neighborhoods, while utilizing a more flexible LOS criteria that encourages transit ridership, bicycling, and walking. In the event a development project significantly degrades the effective use or safety of City streets; improvements may still be required. Required improvements should consider transit, bicycle, and pedestrian improvements as well as road improvements.

LEVEL OF SERVICE WITH ROADWAY IMPROVEMENTS

Possible roadway improvements for study intersections include demand management techniques and capacity enhancement techniques. Demand management could be accomplished by implementing Transportation Demand Management measures. Potential capacity enhancements include providing additional lanes, modifying traffic signal timing, coordinating traffic signal timing along arterials, and modifying traffic signal phasing.

The following physical capacity enhancements and other improvements are recommended for study intersections. Typically, level of service as measured by ICU methodology improves when there are capacity enhancements. Where there is no physical capacity enhancement possible, improvements in level of service can be measured by HCM methodology. HCM methodology can calculate improvements in LOS as a result of implementing improvements including signal phasing changes and optimized signal synchronization.

- Intersection #3: 15th Street West and Lancaster Boulevard
  - Physical capacity constrained. No feasible capacity enhancements
- Intersection #8: 20th Street West and Avenue J
  - Physical capacity constrained. No feasible capacity enhancements
  - Signal modification to add Northbound Right overlap
- Intersection #10: 15th Street West and Avenue J
  - Add additional northbound left turn lane (dual lefts)
  - Add eastbound right turn lane
- Intersection #18: 20th Street West and Avenue J-8
  - Avenue J-8 road diet project will reduce westbound through lanes from 2 to 1
  - Add westbound through/right turn lane
- Intersection #19: 15th Street West and Avenue J-8
  - Add westbound through/right turn lane
- Intersection #20: 10th Street West and Avenue J-8
  - Restripe the eastbound approach to create an Eastbound Left/Through lane and a de facto right turn lane. This could be accomplished by restriping the double yellow line on the west leg of the intersection to the north.

- Intersection #28: Division Street and Avenue K
  - Physical capacity constrained. No feasible capacity enhancements.
  - Add Eastbound Right turn overlap
- Intersection #30: 18th Street West and Avenue J-8
  - No feasible capacity enhancement due to road diet for eastbound & westbound.

Table 14 presents a summary of the Future (2040) with Project and Roadway Improvements Conditions V/C ratio or delay (seconds) and the corresponding LOS for each intersection. The ICU and HCM reports are provided in **Appendix G** for Future (2040) with Project and Roadway Improvements Conditions.

Table 14: Summary of Intersection Operations – Future (2040) with Project and Roadway Improvements Conditions

Intersection			Control	AM Peak Hour				PM Peak Hour			
#	North/South	East/West		V/C Ratio or Delay (s)	LOS	V/C Ratio or Delay (s)	LOS	V/C Ratio or Delay (s)	LOS	V/C Ratio or Delay (s)	LOS
				No Improvement		With Improvement		No Improvement		With Improvement	
3	15th Street West	Lancaster Boulevard	ROB	53.9	F	**53.9**	**F**	-	-	-	-
8	20th Street West	Avenue J	Signal	-	-	-	-	1.03	F	HCM[1]	
				-	-	-	-	61.4	E	39.9	D
10	15th Street West	Avenue J	Signal	1.09	F	0.88	D	1.39	F	**1.13**	**F**
				105.4	F	50.4	D	184.8	F	**64.7**	**E**
18	20th Street West	Avenue J-8	Signal	1.02	F	1.02	F	1.21	F	**1.14**	**F**
				67.9	E	**63.2**	**E**	137.1	F	**91.1**	**F**
19	15th Street West	Avenue J-8	Signal	0.91	E	0.79	C	0.97	E	0.79	C
20	10th Street West	Avenue J-8	Signal	-	-	-	-	0.91	E	0.78	C
28	Division Street	Avenue K	Signal	-	-	-	-	0.92	E	HCM[1]	
				-	-	-	-	85.0	F	49.3	D
30	18th Street West	Avenue J-8	Signal	-	-	-	-	1.08	F	**1.08**	**F**

[1]Recommended improvements assessed based on HCM methodology. Improvements are a result of proposed right-turn overlaps.

The Future (2040) with Project and Roadway Improvements traffic analysis results presented in **Table 14** indicate that if the recommended roadway improvements are implemented, one study intersection would operate at LOS F, one at LOS E, and the other study intersections would operate at LOS D or better during the AM peak period. During the PM peak period, two study intersections would operate at LOS F, one at LOS E, and the other study intersections would operate at LOS D or better.

Development of the complete LHD Master Plan is expected to occur over a 20-year timeframe. The operational and safety impacts that may result from the LHD Master Plan and ambient traffic growth in the City of Lancaster would not be expected to occur for up to 20 years. The results in Tables 13 and 14 present the LOS results when the full buildout of LHD occurs. In the early stages of the LHD development, the study intersections are not expected to experience any operational or safety impacts. Over time as individual projects within the Master Plan are proposed, additional operational and safety analyses should be conducted to determine the then operational performance of the adjacent intersections and identify any improvements due to the traffic generated by individual development projects. Additional roadway improvements not listed in this report may be identified in the future as a result of the development of specific projects.

Site Level of Service (LOS) Method: Delay & v/c (HCM 6). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Sign Control.
Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.
LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).
Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 6).
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 6). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Sign Control.
Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.
LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).
Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 6).
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 6). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Sign Control.
Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.
LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).
Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 6).
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Restaurant	46%	37%
Cinema/Entertainment	N/A	N/A
Residential	7%	17%
Hotel	4%	89%

[1]Land Use Codes (LUCs) from *Trip Generation Manual*, published by the Institute of Transportation Engineers.

[2]Total estimate for all other land uses at mixed-use development site is not subject to internal trip capture computations in this estimator.

[3]Enter trips assuming no transit or non-motorized trips (as assumed in ITE *Trip Generation Manual*).

[4]Enter vehicle occupancy assumed in Table 1-A vehicle trips. If vehicle occupancy changes for proposed mixed-use project, manual adjustments must be made to Tables 5-A, 9-A (O and D). Enter transit, non-motorized percentages that will result with proposed mixed-use project complete.

[5]Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-A.

[6]Person-Trips

*Indicates computation that has been rounded to the nearest whole number.

Site Level of Service (LOS) Method: Delay & v/c (HCM 6). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Sign Control.
Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.
LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).
Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 6).
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

1.0 PURPOSE

In order to address some of the uncertainty regarding water supply and provide for a more detailed understanding of water availability for individual projects, the California State Legislature adopted Senate Bill (SB) 610 and SB 221.

Senate Bill (California Water Code Division 6, Part 2.10, Sections 10910-10915) requires the preparation of water supply assessments (WSAs) for larger development projects or land use plans that are subject to the California Environmental Quality Act (CEQA) process. SB 610 applies to a project if the project includes any of the following:

- A proposed residential development of more than 500 dwelling units.
- A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space.
- A proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space.
- A proposed hotel or motel, or both, having more than 500 rooms.
- A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area.
- A mixed-use project that includes one or more of the projects specified in this subdivision.
- A project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500 dwelling unit project.

The Lancaster Health District Master Plan would allow for the replacement of the existing 342 bed Antelope Valley Hospital main facility with a 300-bed/700,000 square foot main facility, a 40 bed psychiatric hospital and a 40 bed rehab hospital. To supplement the hospital facility, 284 sub-acute care beds (skilled nursing, rehab, and drug rehab) and 400 continuum of care beds are planned. In addition to these medical uses, the District Master Plan would allow for 250 single family residential dwelling units; 1,350 multifamily residential units; 180 hotel rooms; 70,000 square foot conference center; 842,000 square feet of commercial and office space; and a 1,100 stall parking structure. Therefore, the master plan qualifies as a project and requires a WSA pursuant to Sections 10912(a)(1), (2), (3), (6), and (7). The WSA must be included in the environmental document addressing the potential environmental impacts of the project. In order for the project to be approved, the Water Supply Assessment must conclude that the supply of domestic water available to the development is adequate, and will continue to be adequate over the next 20 years during normal, single-dry, and multiple-dry years.

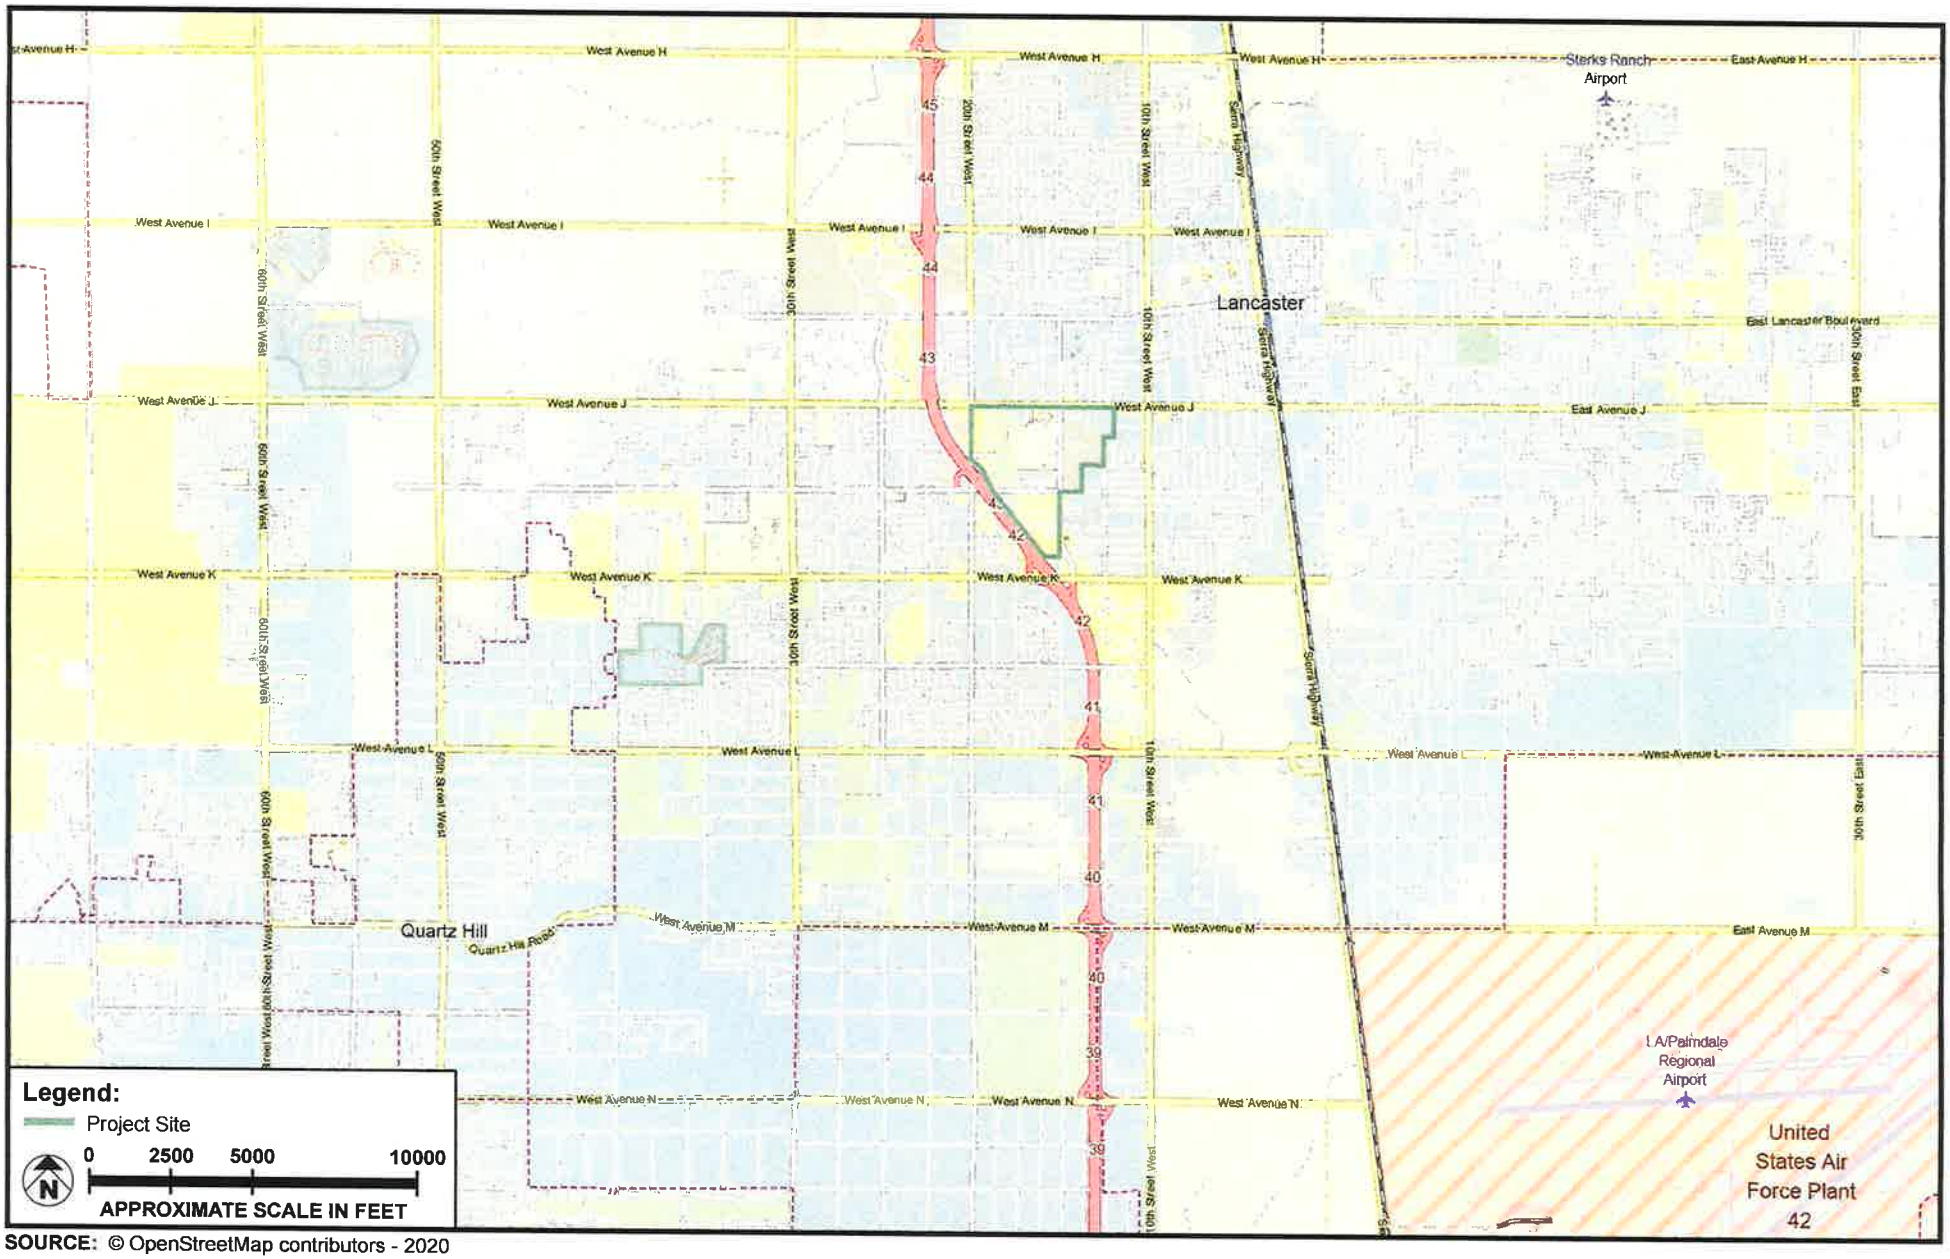
SB 221 covers approvals of subdivision maps with more than 500 units and prohibits agencies from approving a subdivision map of more than 500 units with a letter of verification that sufficient and reliable water is available. Sufficient water supply is the total water supply available during normal, single-dry, and multiple-dry years within a 20-year projects that will meet the projected demand of the proposed project, in addition to existing and future planned uses.

This WSA is produced for the Los Angeles County Waterworks Districts (LACWD), District 40 to meet the requirements of SB 610 and support a letter of verification to meet the requirements of SB 221. The District was formed to supply water for urban use throughout the Antelope Valley.

2.0 BACKGROUND

2.1 Project Description

The project area encompasses approximately 272 gross acres in the central portion of the City of Lancaster around 15th Street West (Figure 1 and Figure 2). Specifically, the project area is generally bounded by Avenue J, Avenue K, 20th Street West/State Route 14 (SR), and Kingtree Avenue. The Lancaster Health District Planning Area has been divided into three subareas:



- Subarea 1 bounded by Avenue J, 15th Street West, Avenue J-8, and 20th Street West
- Subarea 2 bounded by Avenue J, 15th Street West, Avenue J-8, and Kingtree Avenue
- Subarea 3 bounded by Avenue J-8, 15th Street West, Avenue J-12, and SR-14

The proposed Master Plan would allow for a maximum level of development throughout the plan area and would encompass a variety of land use types. The land uses and units/square footages are shown in Table 1. The proposed land uses are in addition to the existing land uses within the plan area. The 300-bed main hospital facility[1] would replace the existing hospital and as such would not be expected to increase water usage; however, the proposal also includes smaller specialized hospital facilities which would increase the total number of beds provided. Additionally, a 202,000 square foot continuum of care facility was previously approved on a portion of the project site; however, it is likely that the project will expire. Therefore, all of the land uses below have been included in the water calculations to ensure an accurate estimate.

Table 1
Lancaster Health District Land Uses (New Development)

Land Use	Square Footage	Units
Single Family Residential – condos		250 dwelling units
Multi-Family Residential		1,350 dwelling units
Office/Commercial	842,000	
Hotel	259,200	180 rooms
Conference Center	70,000	
Hospital (including plant facility)	712,000	300 beds
Acute/Sub Acute Care Beds	328,800	364 beds
Continuum of Care	480,000	400 rooms/beds
Parking Garage	385,000	1,100 stalls

[1] The existing 78-bed Antelope Valley Women and Infant Pavilion would remain unchanged. The existing 342 bed Antelope Valley Hospital will be demolished and replaced with a 300 bed main hospital and several smaller specialty "hospitals".

The uses identified in Table 1 would be distributed throughout the plan area. The anticipated distribution of these uses in the plan area is shown in Table 2.

Table 2
Lancaster Health District New Land Uses by Subarea

Land Use	Subarea 1	Subarea 2	Subarea 3
Single Family Residential – condos	--	40 unit	210 units
Multi-Family Residential	802 units	465 units	83 units
Office/Commercial	720,000 sf	61,000 sf	61,000
Hotel	180 rooms		
Conference Center	70,000 sf		
Hospital (including plant facility)	300 beds		
Acute/Sub Acute Care Beds	364 beds		
Continuum of Care		400 rooms/beds	
Parking Garage	1,100 stalls		

2.2 REGIONAL URBAN WATER MANAGEMENT PLAN

The adopted 2015 Urban Water Management Plan (UWMP) for District 40, dated January 2017, provides a summary of the agency's water supplies, demands, plans to ensure future reliability, detailed discussions of current and future water supply, and water supply strategies for the Antelope Valley. The District is currently preparing the 2020 UWMP; however, a copy of that plan is not currently available. In the absence of an approved 2020 UWMP, the available draft 2040 water supply and demand estimates have been provided by District 40. The 2020-2035 numbers provided in the analysis below are from the adopted UWMP; the draft water numbers that were available for 2040 have been included for information purposes.

3.0 WATER DEMAND

The 2015 UWMP identifies water use factors by land use type that, if utilized, will allow the District to meet the water demand reduction targets mandated by SB X7-7, or a 20% demand reduction by the year 2020. These water use factors are typically used to determine the water consumption based on the area (acreage) of each land use type. The Lancaster Health District Master Plan includes five land use development types: single family residential, multi-family residential, commercial, institutional/governmental, and mixed use (hotel/conference center). The water demand factors for these land use types, provided in the UWMP, are summarized in Table 3. However, these factors are based on acreages and do not account for the increase in density proposed under the Master Plan. As such, more appropriate water demand factors for the different uses were identified by District 40 or through research. These factors are provided in Table 4.

Water demand for the residential uses was also provided by LACWD. The demand for medium density residential was identified as 0.82 afy/lot. The medium density residential was based on lots between 4,000 and 7,000 square feet. Due to the proposed density for the single family residential uses of 14 to 24 units to the acre, a water demand of 0.82 afy/lot was utilized. With a total of 250

single family residential units proposed within the plan area, the total water demand for single family residences would be 205 afy.

Table 3
Water Use Factors in Acre-Feet per Year (AFY) per Acre by Land Use

Land Use Type	Water Demand (afy/acre)
Single Family Residential	3.90
Multi-Family Residential	2.50
Commercial	2.25
Heavy Industrial	0.30
Light Industrial	1.10
Institutional/Governmental	2.60
Mixed Use	2.5
Source: 2015 UWMP Plan, Table 3-2	

Table 4
Specific Water Demand Factors by Proposed Land Use

Project Land Use	Water Demand Factor
Single Family Residential	0.82 acre-feet/year/dwelling unit
Multi-Family Residential	81 gallons/day/person
Office/Commercial	4.17 acre-feet/year/39,999 sf bldg
Hotel	81 gallons/day/person with 1.5 people per room @ 85% occupancy
Conference Center	4.17 acre-feet/year/39,999 sf bldg
Hospital	156 gallons/day/bed
Acute/Sub-Acute Care Beds	156 gallons/day/bed
Continuum of Care	156 gallons/day/bed
Parking Garage	N/A
Source: Office/Commercial and Hotel factors were provided by District 40. The conference center utilized the office/commercial rate. The water demand for the hospital, acute/sub-acute care and continuum of care facilities was obtained by utilizing the wastewater generation rates for convalescent type uses and multiplying it by a factor of 1.25.	

Actual water consumption for multi-family residential uses was previously provided for another project for the years 2010 to 2016. This resulted in an average per capita use/day of 92 gallons (Table 5). This average was sent to the District for confirmation that it was still accurate and the District requested that 81 gallons/capita/day be utilized assuming one (1) occupant per studio unit; two (2) occupants per bedroom in one- and two-bedroom units; and five (5) occupants per 3-bedroom unit.

Table 5
Historical Multi-Family Water Consumption

Year	Consumption (AFY)	Population	Gallons Per Capita Per day
2010	853.64	7,950	96
2011	869.42	8,037	97
2012	891.66	8,125	98
2013	855.93	8,212	93
2014	863.75	8,299	93
2015	821.37	8,387	87
2016	766.61	8,474	81
		Average	92

Source: Water Supply Assessment for the Avanti South Specific Plan, adopted by the Board of Supervisors June 20, 2017

The projected yearly water demand for multi-family residences within the Lancaster Health District at buildout was estimated using the 81 gallons/capita/day (Table 6).

Table 6
Multi-Family Residential Demand

Unit Type	% of Units	# of Units	Population Per Unit	Total Population	Demand (gpd)	Demand (afy)
Studio	10	135	1	135	10,935	12.25
1-bedroom	30	405	2	810	65,610	73.49
2-bedroom	50	675	4	2,700	218,700	244.98
3-bedroom	10	135	5	675	54,675	61.24
	Total	**1,350**		**4,320**	**349,920**	**391.96**

Based on 81 gallons per capita per day and occupant loads as identified by District 40 (LACWD Email May 14, 2019)

Based on the information provided above, the total water demand for the proposed uses within the plan area at build out were estimated. Based on these calculations, all the proposed land uses within the plan area at buildout would require a total of 899.19 acre feet of water on a yearly basis. The net increase in water consumption, less the existing hospital use and the credit for TTM 22804, would be 836.05 acre feet per year (see Table 7).

Table 7
Total Water Demand by Land Use Type

Land Use	Number of Units/Square Feet	Demand Factor	Gallons Per Day	Total Demand (afy)
Single Family Residential – Condos	250 du	0.82 afy/dwelling unit		205
Multi-Family Residential	1,350 du	81 gallons/day/person	349,920	391.96
Office/Commercial	842,000 sf (21.05 bldgs)	4.17 afy/39,999 sf bldg		87.71
Hotel	180 rooms	81 gallons/day/person with 1.5 people per room @ 85% occupancy	18,590	20.83
Conference Center	70,000 sf (1.75 bldgs)	4.17 afy/39,999 sf bldg		7.29
Hospital	300 beds	156 gallons/day/bed	46,875	52.51
Acute/Sub-Acute Care Beds	364 beds	156 gallons/day/bed	57,031	63.88
Continuum of Care	400 rooms/bed	156 gallons/day/bed	62,500	70.01
Parking Garage	1,100 stalls	N/A		
			Total	**899.91**
			Less Existing Hospital	59.86
			Less Credit for TTM 22804	4
			Net Increase in Water Demand	**836.05**

4.0 DISTRICT 40 PROJECTED SUPPLY AND DEMAND

Projected supply and demand data for the District uses data from the adopted 2015 UWMP for District 40 as the 2020 UWMP is currently under preparation. The supply and demand data for the years 2020-2035 was obtained from the adopted 2015 UWMP. Some draft water data for 2040 has been provided by the District and included for informational purposes. Where differences exist between the draft data provided and the adopted 2015 UWMP for years 2020-2035, the data from the adopted plan was utilized.

4.1 WATER USE

The District serves water to eight regions, encompassing 554 square miles, within the Antelope Valley. The communities of Lancaster and Palmdale are served by Regions 4 and 34 which are integrated and operated as one system. These regions include a large majority of the existing development within the District's service area. The six other regions within the District's service area include the communities of Pearblossom (Region 24), Littlerock (Region 27), Sun Village (Region 33), Rock Creek (Region 39), Northeast Los Angeles County (Region 35), and Lake Los Angeles (Region 38). The demand projections by land use type for the District are summarized in Table 8. As stated in the 2015 UWMP, the District does not currently use or project to use recycled water, although recycled water is used and sold by others within the service area.

Table 8
District 40 Projected Yearly Water Demand by Land Use Type

Land Use	Projected Water Use (afy)				
	2020	**2025**	**2030**	**2035**	**2040[1]**
Potable and Raw Water Demand					
Single Family Residential	66,410	74,330	82,170	90,020	49,892
Multi-Family Residential	3,590	4,020	4,440	4,870	6,965
Commercial	5,050	4,450	3,840	3,230	13,168
Industrial	5,380	6,030	6,660	7,300	132
Institutional/Governmental	1,680	1,480	1,280	1,080	4,741
Losses	6,180	6,800	7,410	8,020	5,655
Subtotal	88,290	97,110	105,800	114,520	80,780
Recycled Water Demand	8,200	10,900	13,600	16,300	N/A
Total Water Demand	96,490	108,010	119,400	130,820	80,780

Note: 2040 draft projected water use provided by District 40, November 18, 2020.
N/A – not available.

4.2 PROJECTED WATER SUPPLY (NORMAL YEAR)

District 40 currently purchases water imported from the State Water Project (SWP), from the Antelope Valley East-Kern Water Agency (AVEK) and pumps groundwater from the Antelope Valley Groundwater Basin. Water use declined in 2015 as a result of the Governor's mandated

demand reductions. To maximize the use of SWP supplies, AVEK has developed the Westside Water Bank within its service area. The District anticipates purchasing banked groundwater to use for future dry years when supplies from the SWP and groundwater will not meet future demands. Projected water supply during a normal water year, through 2040 is summarized in Table 9.

Table 9
Projected Water Supplies During Normal Water Year

Water Supply	2020	2025	2030	2035	2040[1]
Purchased/Imported Water (AVEK)	61,000	61,000	61,000	61,000	61,000
Groundwater	36,790	36,790	36,790	36,790	36,500
Anticipated New Supply (Purchased/ Imported – Developer Fee)	4,100	12,900	21,600	30,300	39,000
Recycled Water	8,200	10,900	13,600	16,300	N/A
Total	110,090	121,590	132,990	144,390	136,500

2040 draft data provided by District 40, November 18, 2020.
N/A – not available

4.3 RESPONSE TO SUPPLY DEFICIENCES

4.3.1 Climate Change Impacts

The most recent drought in California has made water supply deficiencies a major concern prompting Governor Brown to issue a proclamation of a State of Emergency in January 2014 and an Executive Order requiring a statewide reduction in water use of 25% in 2015. To achieve this reduction, each agency was assigned a mandated water reduction target. The District's mandated water reduction target was 32%. Governor Brown lifted the drought emergency in April 2017.

4.3.2 Recycled Water

Recycled water helps provide the Antelope Valley a beneficial reuse of treated wastewater. The distribution infrastructure that conveys recycled water to users is referred to as the Antelope Valley Backbone. Only a portion of the Antelope Valley Backbone is constructed. As funding sources become available, the Antelope Valley Backbone will be expanded to serve additional recycled water demands.

The Lancaster Water Reclamation Plant (LWRP), Palmdale Water Reclamation Plan (PWRP) and Rosamond Wastewater Treatment Plant (RWWTP) are the wastewater treatment plants serving the area that would provide tertiary treated water to supply recycled water demands.

4.3.3 New Water Supply

The District has projects planned in the near future to increase supplies and reliability. The District will also purchase additional SWP water, if available, to be banked by AVEK for extraction during future dry years.

In order to acquire sufficient water supplies for future demands, the District has established, through a Memorandum of Understanding (MOU) with AVEK, a New Water Supply (Developer Fee) for new developments, which provides a method to acquire additional imported water supplies. The method creates a coordination effort between the developer, the District, and AVEK. The developer and the District work together to determine the volume of new water supply needed, which the developer then pays AVEK to receive a letter of commitment from the District for the new water supply. AVEK then designates this new water supply to the District for the developer over and above the District's current allocation of supplies. Developers may secure entitlements by entering into agreements with the District to purchase a permanent water supply. New developments proposed within the Lancaster Health District will require a New Water Supply Entitlement Acquisition Agreement with the District for any water beyond existing use.

4.3.4 Water Supply – Dry Years

The 2015 UWMP projected water supply for the single-dry year and multiple-dry year scenarios through 2035. The District is currently preparing the 2020 UWMP which would account for water supply and demand through 2040; however, the document is not currently available. The water data for 2020-2035 was obtained from the adopted 2015 UWMP. The available draft water numbers for 2040 were provided by the Water District and is provided for informational purposes. Not all 2040 data was available. These scenarios are summarized through 2040 in Tables 10 and 11.

Table 10
District 40 Normal, Single-Dry and Multiple-Dry Water Years (AFY)

		2020	2025	2030	2035	2040[1]
	Demand	**96,490**	**108,010**	**119,400**	**130,820**	**80,780**
Normal Water Year	Purchased/Imported (AVEK)	61,000	61,000	61,000	61,000	61,000
	Groundwater	36,790	36,790	36,790	36,790	36,500
	Recycled Water	8,200	10,900	13,600	16,300	N/A
	New Supply	4,100	12,900	21,600	30,300	39,000
	Total Supply	**110,090**	**121,590**	**132,990**	**144,390**	**136,500**

Total Projected Supply					
Normal Year	110,090	121,590	132,990	144,390	136,500
Single-Dry Year	96,490	108,010	119,400	130,820	
Multiple-Dry Year	96,490	108,010	119,400	130,820	

5.0 WATER SUPPLY ENTITLEMENTS, RIGHTS, SERVICE CONTRACTS, AND MEMORANDUMS OF UNDERSTANDING

In 2015, the District received an estimated 38,410 acre feet (AF) of water that was a combination of groundwater and SWP water (2015 USMP Table 1-1). The District's current sources are as follows:

- Imported SWP Water – purchased from the Antelope Valley – East Kern Water Agency (AVEK).
- Banked Groundwater – purchased from AVEK for use in future dry years.
- Groundwater – the District operates production wells with supply coming from the Antelope Valley Groundwater Basin, a sub-basin of the South Lahontan Hydrologic Region Basin.
- Recycled Water – the District does not currently provide recycled water for irrigation purposes although recycled water is used and sold by others within the service area.

Water supply sources are provided in the 2015 URMP and are summarized below. The District provides retail water service to customers located within its service area, all of which is located with AVEK's boundary. The sources of supply include groundwater and imported water which AVEK has obtained from the SWP for delivery on a wholesale basis to retail water purveyors within AVEK's boundaries, such as the District.

5.1 PURCHASED WATER

The District purchases imported water from AVEK. AVEK has an entitlement to SWP water delivered to the Antelope Valley. The Antelope Valley began to receive water deliveries from the SWP in 1972. AVEK has an allocation of 144,844 acre-feet/year of water from the SWP. The amount of water listed in "Table A" of the contract between the SWP and contracting agencies represents the maximum amount of water an agency may request each year. The District is not a SWP contractor and cannot obtain additional "Table A" entitlement.

To maximize the use of SWP supplies, AVEK has developed the Westside Water Bank within its service area. Through the Westside Water Bank facilities, AVEK can take delivery of SWP supplies exceeding customers' demands for use as groundwater recharge for future recovery in dry years.

Water banking is a crucial strategy that water purveyors will use to help navigate the uncertainties in the availability of water supplies for the area. Water banking involves storing water when it is available in wet years or low-demand periods and recovering it during periods of drought or high demands.

At full buildout, the Antelope Valley Water Bank (AVWB) will be a banking facility capable of 100,000 acre-feet/year of recharge, 100,000 acre-feet/year of recovery; and 500,000 acre-feet of total storage capacity within the underlying aquifer. The AVWB would contribute to existing and future water requirements in the Antelope Valley during periods when surface water supplies are deficient.

5.2 GROUNDWATER

Historically, groundwater has been the secondary source of water supply within the District. Groundwater is extracted from the Antelope Valley Groundwater Basin. Prior to the 2015 UWMP, the groundwater basin was under adjudication. In 2015, the Superior Court of California (Court) entered a judgement and physical solution in the Antelope Valley Groundwater cases. The judgement imposed pumping restrictions, which will be fully implemented following a 7-year ramp down period starting in 2016. As part of the judgement, a "Watermaster" board was appointed by the Court to implement and enforce the judgement. The board has the power to impose a fee on those that pump more than their allocated right.

The Antelope Valley Groundwater Basin (basin), located within the South Lahontan Hydrologic Region, is bounded on the northwest by the Garlock fault zone at the base of the Tehachapi Mountains; on the southwest by the San Andreas fault zone at the base of the San Gabriel Mountains; on the east by ridges, buttes, and low hills; and on the north by the Fremont Valley Groundwater Basin.

Natural recharge to the basin is primarily accomplished by perennial runoff from the surrounding mountains and hills. Most recharge occurs at the foot of the mountains and hills by percolation through the head of alluvial fan systems. The Big Rock and Little Rock Creeks, in the southern part of the basin, contribute to 80% of natural runoff into the basin. Other minor recharge is from return of irrigation water and septic system effluent.

The District extracts groundwater from the Basin. The Basin was found to be in overdraft by the adjudication court. From the 1990s agricultural uses have significantly increased groundwater production, exacerbating the drop in groundwater levels across the basin.

Groundwater projections from the 2015 UWMP allow for a total groundwater right of 36,790 acre-feet/year starting in 2020. For the purposes of water supply projections, the 2015 UWMP assumed that this right will be applicable for all water year types. If not, groundwater banked in previous years will be used.

5.3 MEMORANDUM OF UNDERSTANDING (MOU) BETWEEN AVEK AND THE DISTRICT

In August 2013, AVEK and the District signed a Memorandum of Understanding (MOU). The MOU requires applicants seeking a water service commitment from the District to submit a formal request to the District and execute a New Water Supply Entitlement Acquisition Agreement between the applicant and the District. As part of the agreement, the District may require the applicant to deposit with the District the amount of money estimated by AVEK to be necessary to fund AVEK's cost of purchasing additional imported water supplies required by the District as a condition of providing a service commitment to the applicant's development. As of the effective date of the MOU, costs are estimated to equal $10,000 for each acre-foot of additional imported water supplies that need to be acquired. It is anticipated that this MOU will be updated in the near future.

6.0 CONCLUSION

1. The Los Angeles County Waterworks Districts (LACWD), District 40 has been identified as the public water distributor for the Lancaster Health District Master Plan.

2. Water demand projects include anticipated development. The projected acreage is based on the amount of land that is currently vacant or planned for future redevelopment from 2020-2040.

3. The net increase in the calculated water demand for the Lancaster Health District Master Plan is 836.05 acre feet per year. The Lancaster Health District Master Plan is a planned development that has been accounted for in the 2015 UWMP and will be accounted for in the 2020 UWMP which is currently under preparation.

4. Through a combination of existing supply, groundwater banking, new supply and recycled water, the 2015 UWMP projects that total supply will meet demand, including the demand generated by the Lancaster Health District, through 2035 under normal, single-dry, and multiple-dry year water conditions. It is also expected that supply will meet demand under these same conditions through 2040 based on the data provided by the District 40, even though 2020 UWMP is currently under preparation (Tables 10 and 11).

This WSA has shown that the District's total projected water supplies available during normal, single-dry, and multiple-dry water years will meet the projected water demand for the Lancaster Health District Master Plan over the next 20 years (through 2040).
