Project CalEEMod Notes

Note 1. Land uses and sizes associated with development of the proposed project are drawn from correspondence with the Project Applicant as well as the Urban Arena Overall Site Plan, dated August 16, 2021.

Land uses utilized in the models represent the following:

Residential > Condo/Townhouse > 116 x Dwelling Unit = Proposed attached senior housing.

Residential > Single-Family Housing > 249 x Dwelling Unit = Proposed detached senior housing.

Recreational > Fast Food Restaurant with Drive Thru > 10 x 1000 sqft = Proposed quick service food retail use.

Recreational > City Park > 40 x Acre = Proposed open space area containing park and trail uses, conservatively assumed to be irrigated and maintained.

Note 2. According to information provided by the Applicant, construction of Project Phase 1 is anticipated to begin in April 2022 and last for 3 years, concluding in April 2025, and construction of Project Phase 2 is anticipated to begin July 2022 and conclude in June 2023. To retain the total workdays anticipated for each construction activity from the 2018 analysis, construction is assumed to occur 7 days per week.

Note 3. According to information provided by the Applicant, various soil import and export activities would take place during project construction. Phase I Grading would involve grading at Planning Areas 1, 2, 3, and 6 while Phase II Grading would involve grading at Planning Areas 4 and 5. Planning Areas 1 and 2 are anticipated to import approximately 84,599 cubic yards of soil, 50 percent from Planning Area 3 and 50 percent from Planning Area 6. Planning Area 3 is anticipated to export approximately 62,064 cubic yards of soil, approximately 42,300 cubic yards of which would be hauled to Planning Areas 1 and 2. Planning Areas 4 and 5 are anticipated to balance cut and fill soil volumes on-site. Planning Area 6 is anticipated to export approximately 48,234 cubic yards of soil, approximately 42,300 cubic yards of which would be hauled to Planning Areas 1 and 2.

As such, soil hauling would consist of the following activities:

1. 42,300 cubic yards would be exported from Planning Area 3 to Planning Areas 1 and 2, approximately 1 mile away.
2. 19,764 cubic yards would be exported from Planning Area 3 to an undetermined location. Model default hauling distance is 20 miles.
3. 42,300 cubic yards would be exported from Planning Area 6 to Planning Areas 1 and 2, approximately 1.5 miles away.
4. 5,934 cubic yards would be exported from Planning Area 6 to an undetermined location. Model default hauling distance is 20 miles.

Based on the above information, a total export volume of 110,298 cubic yards was assigned to Phase I Grading and a weighted hauling distance of 5.6 miles was applied to Phase I Grading hauling activity in the model.

Note 4. Based on information provided by the Project Applicant, the proposed project would remove approximately 2,500 square feet of existing buildings.

Note 5. District Rule 1113: Architectural Coatings was applied to project construction, which requires the VOC coating concentration to be no greater than 50 grams/liter (g/L). In addition, as the model assumes 50 percent of all surfaces to be painted during Project Phase 1 and 50 percent during Project Phase 2, the square footages of areas to be painted were adjusted to show the

Note 6. According to the Traffic Impact Analysis (TIA) prepared for the proposed project,[1] an estimated 1,624 daily vehicle trips would be generated at full buildout of the proposed project; however, this average daily traffic volume accounts for internal capture rates between residential and nonresidential land uses. As such, the daily trip generation rates in the operational models were adjusted to match those utilized in the TIA prior to the application of internal capture reductions. Saturday and Sunday daily trip rates were adjusted proportional to the adjustments made to the weekday daily trip rate. Please refer the Daily Trip Rate Adjustments calculation sheet included in this Appendix.

For the different land uses, the fleet mix was adjusted to reflect the anticipated vehicle types utilized in vehicle trips generated by that land use. As such, the retail land use vehicle fleet mix remained unchanged and the residential land use fleet mixes were adjusted to account for the removal of the HHD vehicle type. Please refer the Fleet Mix Adjustments calculation sheet included in this Appendix.

Note 7. District Rule 445: Wood-Burning Devices was applied to the project modeling, which prohibits the installation of any wood-burning device in new development.

Note 8. District Rule 403: Fugitive Dust Prohibitions was applied to project construction. This was represented in the model by selecting options for watering exposed areas at minimum twice per day and limiting construction vehicle speeds to 15 miles per hour on unpaved roads.

Note 9. According to project information provided by the project applicant, each dwelling unit would include solar panel electricity generation in compliance with the California Building Code. According to the California Code of Regulations, Title 24, Part 6, Subchapter 8 – Low-Rise Residential Building – Performance and Prescriptive Compliance Approaches, "[a]ll low-rise residential buildings shall have a photovoltaic (PV) system meeting the minimum qualification requirements as specified in Joint Appendix JA11, with annual electrical output equal or greater than the dwelling's annual electrical usage as determined by Equation 150.1-C:"

Equation 150.1-C Annual Photovoltaic Electrical Output

$$kW_{PV} = (CFA \times A)/1{,}000 + (NDwell \times B)$$

Where:

kW_{PV} = kWdc size of the PV system

CFA = conditioned floor area

[1] Urban Crossroads. 2021. Trails at Corona Traffic Impact Analysis.

NDwell = number of dwelling units

A = Adjustment factor from Table 150.1-C

B = Dwelling adjustment factor from Table 150.1-C

As the project is located in climate zone 10, the A adjustment factor mentioned above is identified as 0.627 and the B adjustment factor mentioned above is identified as 1.41. The conditioned floor area is estimated based on the number and type of dwelling units and the associated default floor area contained in CalEEMod Version 2020.4.0.

Therefore:

$$kW_{PV} = (564{,}200 \times 0.627)/1{,}000 + (365 \times 1.41) = 868.4043$$

While this accounts for the entire project's kW PV system, it does not provide the annual production rate that would be generated by this size of system. Therefore, the total kW PV system was reduced to a per-dwelling-unit kW PV system to determine the expected annual production rate. 868.4043 kW PV divided by 365 dwelling units results in an average 2.4 kW PV system per dwelling unit.

According to TheEcoExperts.com,[2] a 2 kW PV system has an average annual production rate of 1,750 kWh/year. The below equation proportionally applies the same average annual production rate to the calculated 2.4 kW system per each dwelling unit.

$$(2.4/2) * 1{,}750 \text{ kWh/year} = 2{,}100 \text{ kWh/year}$$

Therefore, the proposed project is expected to result in an average on-site electricity generation rate of 2,100 kWh per dwelling unit per year. The following equation converts this to total annual on-site electricity generation.

$$2{,}100 \text{ kWh/year} * 365 \text{ Residences} = 766{,}500 \text{ kWh/year}$$

Note 10. As the proposed project would exceed the maximum daily thresholds for VOC emissions during construction and the localized significance thresholds for particulate matter, appropriate mitigation was identified for the proposed project and included in the mitigated construction model run. The mitigated construction model includes the application of MM AIR-1a, MM AIR-1b, and MM AIR-1c, which would require the use of ultra-low VOC architectural coatings containing no greater than 10 grams of VOC per liter of product, the use of Tier IV engines for construction equipment greater than 50 horsepower, and the watering of exposed construction areas of no less than 3 times per day, respectively.

                                             ***     MODEL SETUP
OPTIONS SUMMARY       ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for   287
Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =    100000.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.
        6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
        ADJ_U*   - Use ADJ_U* option for SBL in AERMET
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  DPM

 **Model Calculates ANNUAL Averages Only
```

```
 **This Run Includes:    287 Source(s);       6 Source Group(s); and
783 Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    284 VOLUME source(s)
                 and:      3 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
         Model Outputs External File(s) of High Values for Plotting
(PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values
(SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for
Calm Hours
                                                                 m for
Missing Hours
                                                                 b for
Both Calm and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =
198.00 ;  Decay Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units =
GRAMS/SEC                                ;  Emission Rate Unit Factor
=   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      4.3 MB of RAM.

 **Input Runstream File:          aermod.inp
 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Phase I construction.err
 **File for Summary of Results:   Phase I construction.sum
