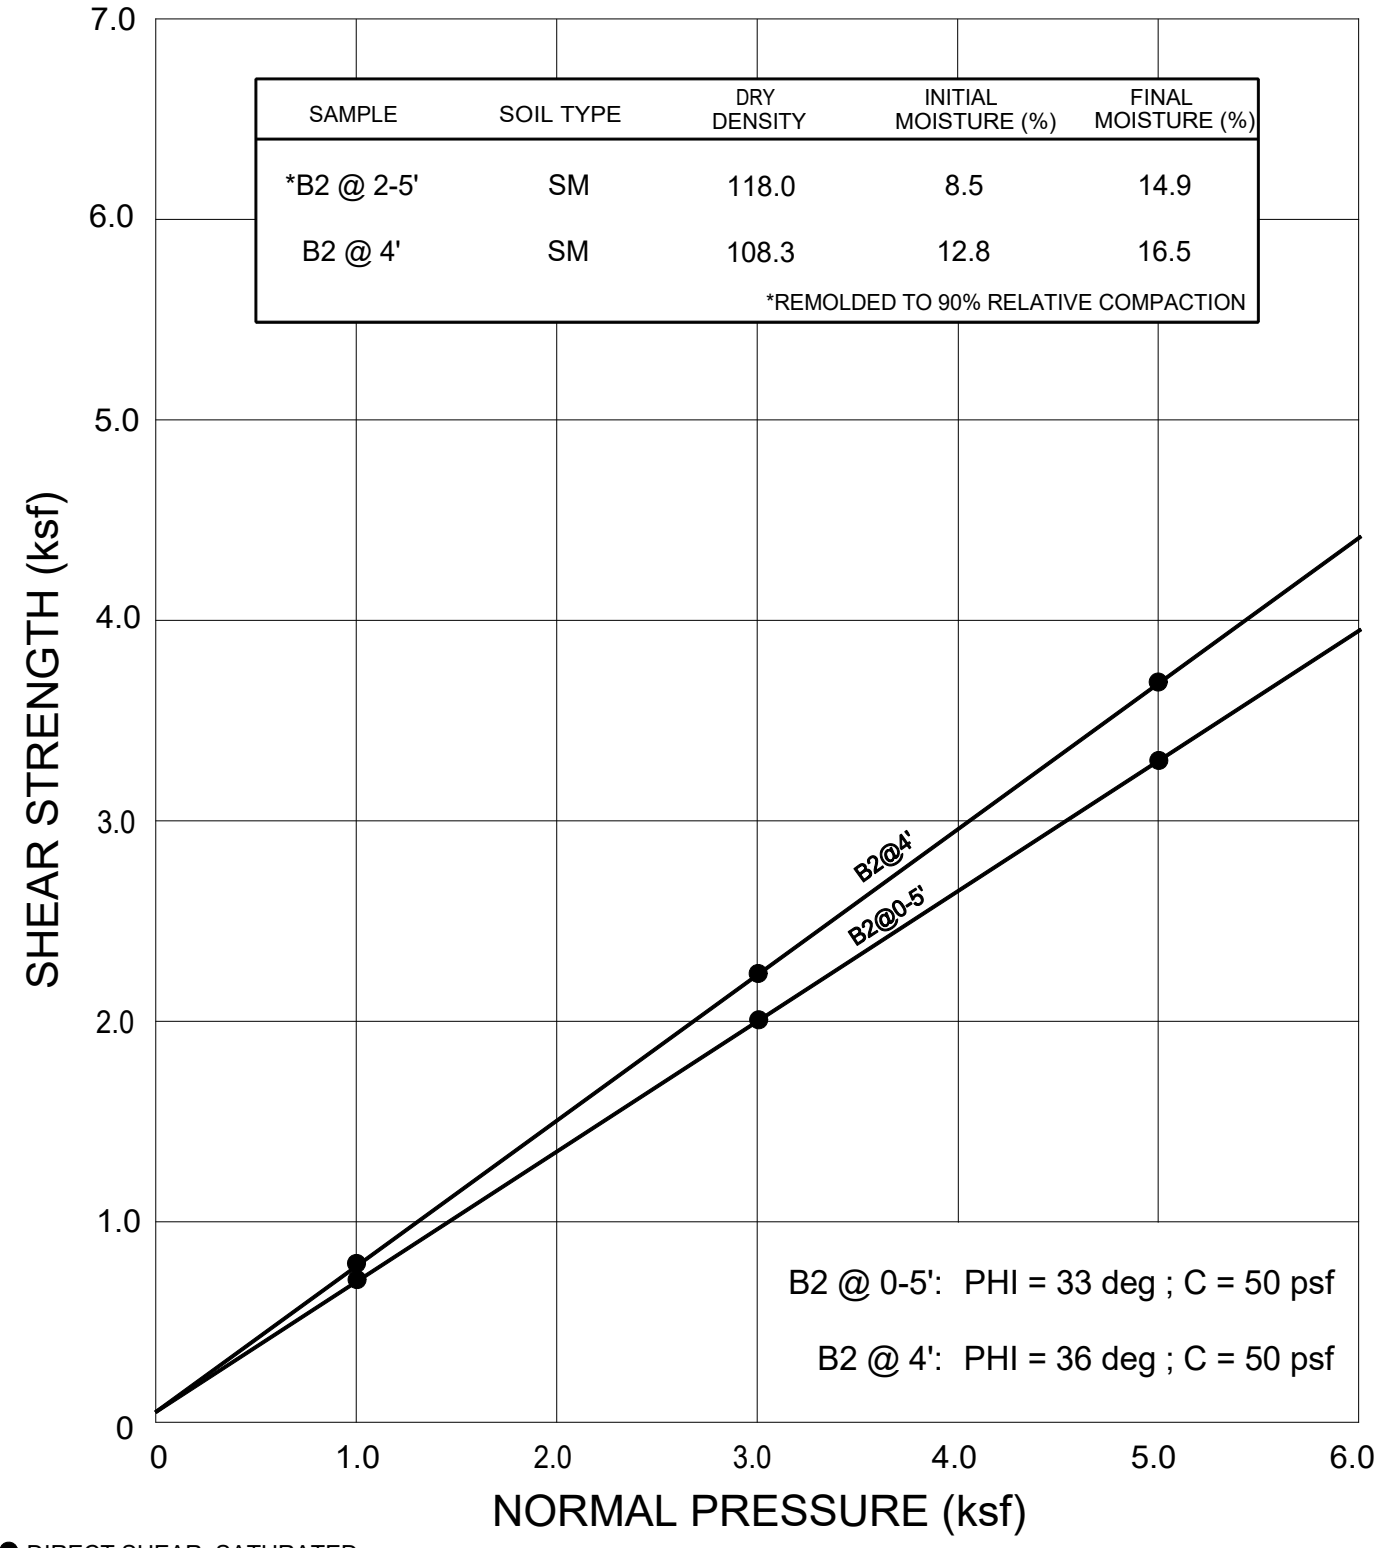
APPENDIX B



APPENDIX B

LABORATORY TESTING

Laboratory tests were performed in accordance with generally accepted test methods of the "American Society for Testing and Materials (ASTM)", or other suggested procedures. Selected samples were tested for direct shear strength, consolidation, compaction, expansion characteristics, corrosivity, and in-place dry density and moisture content. The results of the laboratory tests are summarized in Figures B1 through B9. The in-place dry density and moisture content of the samples tested are presented on the boring logs, Appendix A.

SAMPLE	SOIL TYPE	DRY DENSITY	INITIAL MOISTURE (%)	FINAL MOISTURE (%)
*B2 @ 2-5'	SM	118.0	8.5	14.9
B2 @ 4'	SM	108.3	12.8	16.5

*REMOLDED TO 90% RELATIVE COMPACTION

Appendix A: Technical Noise Data

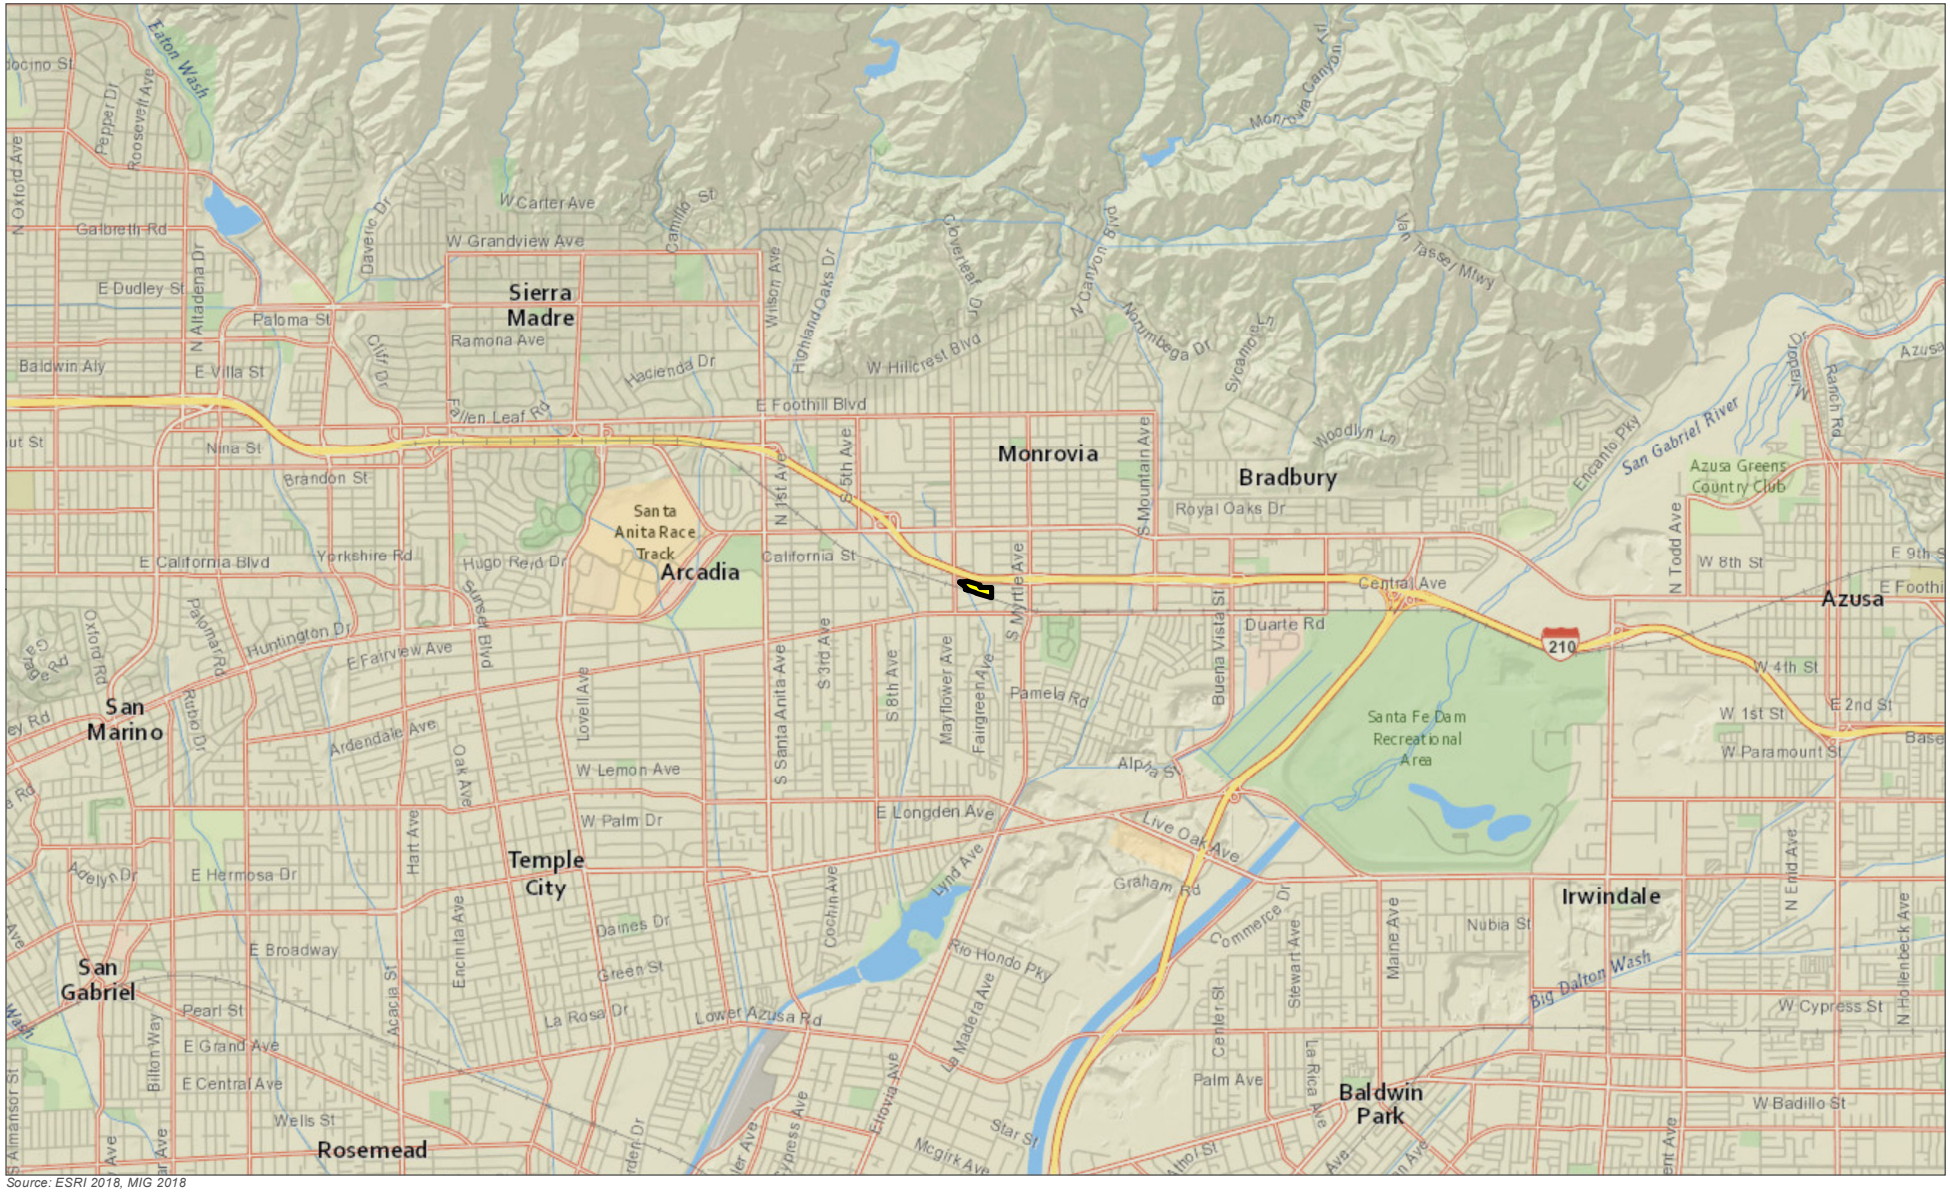
List of Acronyms, Abbreviations, and Symbols	
Acronym / Abbreviation	**Full Phrase or Description**
ADT	Average Daily Traffic
Caltrans	California Department of Transportation
CEQA	California Environmental Quality Act
CNEL	Community Noise Equivalent Level
dB	Decibel
dBA	Decibels, A-Weighted
dBV / VdB	Velocity Decibels
Ldn / DNL	Day-Night Noise Level
EIR	Environmental Impact Report
FHWA	Federal Highway Administration
FTA	Federal Transit Administration
GPA	General Plan Amendment
HVAC	Heating, Ventilation, and Air Conditioning
HUD	Department of Housing and Urban Development
Hz	Hertz
Leq	Average / Equivalent Noise Level
Lmax	Maximum Noise Level
Lmin	Minimum Noise Level
LT	Long Term (noise measurement)
METRO	Los Angeles County Metropolitan Transportation Authority
OITC	Outdoor/Indoor Transmission Class
PPV	Peak Particle Velocity
ROW	Right of Way
SEL_{ref}	Source Reference Level
ST	Short Term (noise measurement)
STC	Sound Transmission Class
TIA	Traffic Impact Analysis
ZCA	Zoning Code Amendment

This Page is Intentionally Left Blank.

1 INTRODUCTION

This report presents the environmental noise assessment for the proposed Planned Development General Plan Amendment (PD GPA) and Planned Development Zoning Code Amendment (PD ZCA), as well as the proposed 6.77-acre Alexan Foothills Specific Plan within a portion of the area proposed for the PD GPA and PD ZCA in Monrovia, California. The Project area, which comprises the entire area proposed for the PD GPA and PD ZCA, comprises one City block on approximately 9.63 acres (Figure 1-1 and Figure 1-2). The City block is bounded by West Evergreen Avenue to the north, South Magnolia Avenue to the east, South Mayflower Avenue to the west, and the METRO Gold Line to the south. The 6.77-acre Alexan Foothills Specific Plan area is depicted in Figure 1-3. The Specific Plan would allow a 436-unit, five-story apartment complex and an eight-level (seven stories) parking structure, containing 797 stalls.

MIG, Inc. (MIG) prepared this Noise Impact Assessment Report (Report) at the request of Trammell Crow Residential. This Report evaluates the potential construction- and operations-related noise impacts of the proposed Project using Project-specific information provided by Trammel Crow Residential. Where necessary, MIG has supplemented available information with standardized sources of information, such as model assumptions pertaining to construction equipment activity levels. In general, this Report evaluates the potential "worst-case" conditions associated with the proposed Project's construction and operational noise levels to ensure a conservative (i.e., likely to overestimate) assessment of potential noise impacts is presented.



This Report is intended for use by the Lead Agency to assess the potential noise and vibration impacts of the proposed Project in compliance with the California Environmental Quality Act (CEQA; PRC §21000 et seq.) and the State CEQA Guidelines (14 CCR §15000 et seq.), particularly in respect to the noise and vibration issues identified in Appendix G of the State CEQA Guidelines. This report does not make determinations of significance pursuant to CEQA because such determinations are solely the purview of the Lead Agency.

1.1 REPORT ORGANIZATION

This Report is organized as follows:

- **Chapter 1, Introduction,** explains the contents of this Report and its intended use.
- **Chapter 2, Noise Fundamentals,** provides pertinent background information on the measurement, propagation, and characterization of noise levels.
- **Chapter 3, Environmental setting,** describes the existing noise setting of the proposed Project.
- **Chapter 4, Regulatory setting,** provides information on the federal, state, and local regulations that govern the proposed Project's noise setting and potential noise impacts.
- **Chapter 5, Proposed Project Description**, provides an overview of construction and operational activities associated with the proposed Project.
- **Chapter 6, Impact Assessment,** identifies the potential construction and operational noise impacts of the proposed Project and evaluates these effects in accordance with Appendix G of the State CEQA Guidelines.
- **Chapter 7, Report Preparers and References** list the individuals involved, and the references used, in the preparation of this Report.

2 NOISE FUNDAMENTALS

2.1 FUNDAMENTALS OF ENVIRONMENTAL ACOUSTICS

"Noise is generally defined as unwanted sound and widely recognized as a form of environmental degradation. Airborne sound is the rapid fluctuation of air pressure above and below atmospheric pressure. The frequency (pitch), amplitude (intensity or loudness), and duration of a sound all contribute to the effect on a listener, or receptor, and whether or not the receptor perceives the sound as "noisy" or annoying.

Pitch is the height or depth of a tone or sound and depends on the frequency of the vibrations by which it is produced. Sound frequency is expressed in terms of cycles per second, or Hertz (Hz). Humans generally hear sounds with frequencies between 20 and 20,000 Hz and perceive higher frequency sounds, or high pitch noise, as louder than low-frequency sound or sounds low in pitch. Sound intensity or loudness is a function of the amplitude of the pressure wave generated by a noise source combined with the reception characteristics of the human ear. Atmospheric factors and obstructions between the noise source and receptor also affect the loudness perceived by the receptor. Sound pressure levels are typically expressed on a logarithmic scale in terms of decibels (dB). A dB is a unit of measurement that indicates the relative amplitude (i.e., intensity or loudness) of a sound, with 0 dB corresponding roughly to the threshold of hearing for the healthy, unimpaired human ear.

Sound levels in decibels are calculated on a logarithmic basis. An increase of 10 dBs represents a ten-fold increase in acoustic energy, while 20 dBs is 100 times more intense, 30 dBs is 1,000 times more intense, etc. In general, there is a relationship between the subjective noisiness or loudness of a sound and its intensity, with each 10 dB increase in sound level perceived as approximately a doubling of loudness. Due to the logarithmic basis, decibels cannot be directly added or subtracted together using common arithmetic operations:.

$$50\ decibels + 50\ decibels\ \neq 100\ decibels$$

Instead, the combined sound level from two or more sources must be combined logarithmically. For example, if one noise source produces a sound power level of 50 dBA, two of the same sources would combine to produce 53 dB as shown below.

$$10 * \ 10\ log\left(10^{\left(\frac{50}{10}\right)} + \ 10^{\left(\frac{50}{10}\right)}\right) = 53\ decibels$$

In general, when one source is 10 dB higher than another source, the quieter source does not add to the sound levels produced by the louder source because the louder source contains ten times more sound energy than the quieter source.

2.1.1 Sound Characterization

Although humans generally can hear sounds with frequencies between 20 and 20,000 Hz, most of the sounds humans are normally exposed to do not consist of a single frequency, but rather a broad range of frequencies perceived differently by the human ear. In general, humans are most sensitive to the frequency range of 1,000–8,000 Hz and perceive sounds within that range better than sounds of the same amplitude in higher or lower frequencies. Instruments used to measure sound, therefore, include an electrical filter that enables the instrument's detectors to replicate human hearing. This filter, known as the "A-weighting" or "A-weighted sound level" filters low and very high frequencies, giving greater weight to the

frequencies of sound to which the human ear is typically most sensitive. Most environmental measurements are reported in dBA, meaning decibels on the A-scale. See Table 2-1 for a list common noise sources and their A-weighted noise levels.

Sound levels are usually not steady and vary over time. Therefore, a method for describing either the average character of the sound or the statistical behavior of the variations over a period of time is necessary. The continuous equivalent noise level (Leq) descriptor is used to represent the average character of the sound over a period of time. The Leq represents the level of steady-state noise that would have the same acoustical energy as the sum of the time-varying noise measured over a given time period. Leq is useful for evaluating shorter time periods over the course of a day. The most common Leq averaging period is hourly, but Leq can describe any series of noise events over a given time period.

Variable noise levels are the values that are exceeded for a portion of the measured time period. Thus, the L1, L10, L50, and L90 descriptors represent the sound levels exceeded 1%, 10%, 50%, and 90% of the time the measurement was performed. The L90 value usually corresponds to the background sound level at the measurement location.

When considering environmental noise, it is important to account for the different responses people have to daytime and nighttime noise. During the nighttime, background noise levels are generally quieter than during the daytime but also more noticeable due to the fact that household noise has decreased as people begin to retire and sleep. Noise exposure over the course of an entire day is described by the day/night average sound level, DNL (or Ldn), and the community noise equivalent level, or CNEL, descriptors. Both descriptors represent the 24-hour noise exposure in a community or area. For DNL, the 24-hour day is divided into a 15-hour daytime period (7 AM to 10 PM) and a 9-hour nighttime period (10 PM to 7 AM) and a 10 dB “penalty” is added to measure nighttime noise levels when calculating the 24-hour average noise level. For example, a 45 dBA nighttime sound level would contribute as much to the overall day-night average as a 55 dBA daytime sound level. The CNEL descriptor is similar to Ldn, except that it includes an additional 5 dBA penalty for noise events that occur during the evening time period (7 PM to 10 PM). The artificial penalties imposed during DNL and CNEL calculations are intended to account for a receptor’s increased sensitivity to noise levels during quieter nighttime periods.

Table 2-1: Typical Outdoor and Indoor Noise Levels		
Common Outdoor Activities	**Noise Level (dBA)**	**Common Indoor Activities**
	-110-	Rock Band
Jet flyover at 1,000 feet

2.1.2 Sound Propagation

The energy contained in a sound pressure wave dissipates and is absorbed by the surrounding environment as the sound wave spreads out and travels away from the noise generating source. The strength of the source is often characterized by its "sound power level." Sound power level is independent of the distance a receiver is from the source and is a property of the source alone. Knowing the sound power level of an idealized source and its distance from a receiver, the sound pressure level at a specific point (e.g., a property line or a receiver) can be calculated based on geometrical spreading and attenuation (noise reduction) as a result of distance and environmental factors, such as ground cover (asphalt vs. grass or trees), atmospheric absorption, and shielding by terrain or barriers.

For an ideal "point" source of sound, such as mechanical equipment, the energy contained in a sound pressure wave dissipates and is absorbed by the surrounding environment as the sound wave spreads out in a spherical pattern and travels away from the point source. Theoretically, the sound level

attenuates, or decreases, by 6 dB with each doubling of distance from the point source. In contrast, a "line" source of sound, such as roadway traffic or a rail line, spreads out in a cylindrical pattern and theoretically attenuates by 3 dB with each doubling of distance from the line source; however, the sound level at a receptor location can be modified further by additional factors. The first is the presence of a reflecting plane such as the ground. For hard ground, a reflecting plane typically increases A weighted sound pressure levels by 3 dB. If some of the reflected sound is absorbed by the surface, this increase will be less than 3 dB. Other factors affecting the predicted sound pressure level are often lumped together into a term called "excess attenuation." Excess attenuation is the amount of additional attenuation that occurs beyond simple spherical or cylindrical spreading. For sound propagation outdoors, there is almost always excess attenuation, producing lower levels than what would be predicted by spherical or cylindrical spreading. Some examples include attenuation by sound absorption in air; attenuation by barriers; attenuation by rain, sleet, snow, or fog; attenuation by grass, shrubbery, and trees; and attenuation from shadow zones created by wind and temperature gradients. Under certain meteorological conditions, like fog and low-level clouds, some of these excess attenuation mechanisms are reduced or eliminated due to noise reflection.

2.1.3 Noise Effects

Noise effects on human beings are generally categorized as:

- Subjective effects of annoyance, nuisance, and/or dissatisfaction;
- Interference with activities such as speech, sleep, learning, or relaxing; or
- Physiological effects such as startling and hearing loss.

Most environmental noise levels produce subjective or interference effects; physiological effects are usually limited to high noise environments, such as industrial manufacturing facilities or airports.

Predicting the subjective and interference effects of noise is difficult due to the wide variation in individual thresholds of annoyance and past experiences with noise; however, an accepted method to determine a person's subjective reaction to a new noise source is to compare it to the existing environment without the noise source, or the "ambient" noise environment. In general, the more a new noise source exceeds the ambient noise level, the more likely it is to be considered annoying and to disturb normal activities.

Under controlled conditions in an acoustical laboratory, the trained, healthy human ear is able to discern 1-dB changes in sound levels when exposed to steady, single-frequency ("pure-tone") signals in the mid-frequency (1,000–8,000 Hz) range. In typical noisy environments, changes in noise of 1 to 2 dB are generally not perceptible. However, it is widely accepted that people are able to begin to detect sound level increases of 3 dB in typical noisy environments. Further, a 5 dB increase is generally perceived as a distinctly noticeable increase, and a 10 dB increase is generally perceived as a doubling of loudness that would almost certainly cause an adverse response from community noise receptors.

2.2 GROUNDBORNE VIBRATION AND NOISE

Vibration is the movement of particles within a medium or object such as the ground or a building. Vibration may be caused by natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or humans (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources are usually characterized as continuous, such as factory machinery, or transient, such as explosions.

As is the case with airborne sound, groundborne vibrations may be described by amplitude and frequency; however, unlike airborne sound, there is no standard way of measuring and reporting amplitude. Vibration amplitudes can be expressed in terms of velocity (inches per second) or discussed in dB units in order to compress the range of numbers required to describe vibration. Vibration impacts to buildings are usually discussed in terms of peak particle velocity (PPV) in inches per second (in/sec). PPV represents the maximum instantaneous positive or negative peak of a vibration signal and is most appropriate for evaluating the potential for building damage. Vibration can also be measured in vibration velocity levels or velocity decibels (Vdb).

Vibration can impact people, structures, and sensitive equipment. The primary concern related to vibration and people is the potential to annoy those working and residing in the area. Vibration with high enough amplitudes can damage structures (such as crack plaster or destroy windows). Ground-borne vibration can also disrupt the use of sensitive medical and scientific instruments, such as electron microscopes.

Common sources of vibration within communities include construction activities and railroads. Ground-borne vibration generated by construction projects is usually highest during pile driving, rock blasting, soil compacting, jack hammering, and demolition-related activities. Next to pile driving, grading activity has the greatest potential for vibration impacts if large bulldozers, large trucks, or other heavy equipment are used.

2.2.1 Existing Noise and Vibration Environment

Located in the southern part of the City of Monrovia, the Project area is generally configured in an east-west orientation and is bounded by South Magnolia Avenue to the east, South Mayflower Avenue to the west, Evergreen Avenue and Interstate-210 (I-210, or the Foothill Freeway) to the north, and the METRO Gold Line light rail to the south. The Project area consists mostly of a mix of light industrial and commercial land uses, although five residential units are present in the Project area. In general, medium and high density residential development borders the Project area, across Magnolia Avenue, Mayflower Avenue, and the METRO Gold Line.

The Project is adjacent to the City's Station Square Transit Village, and the Gold Line Monrovia Station is located less than 500 feet east of the Project (addressed at 1641 South Primrose Avenue). Several transit-oriented, multi-family developments are planned for the near future (e.g., the Station Square South project, located adjacent to the Project, across South Magnolia Avenue and South of the Gold Line). The closest airport to the Project is the San Gabriel Valley Airport, located approximately 3.7 miles southwest of the Project.

The General Plan Noise Element identifies traffic noise on major arterial streets and the I-210 as the most pervasive source of noise in certain areas of the City. The General Plan specifically notes that residential areas south of I-210 are impacted by freeway noise. The eastbound segment of I-210 includes an approximately 12-foot high wall that terminates on the eastern side of South Mayflower Avenue; a similar wall begins 200 feet west of South Magnolia Avenue. For the most part the segment of I-210 directly adjacent to the Project (i.e., between South Mayflower and South Magnolia Avenue) does not contain a sound wall. This portion of the I-210 is elevated, approximately 20 feet above the Project area.

The General Plan Noise Element was prepared in 2002, before the METRO Gold Line began operation, and does not identify potential noise levels associated with Gold Line operation; however, the Gold Line Foothill Extension Pasadena to Montclair Final Environmental Impact Report predicted the following noise levels for eastbound and westbound light rail service at residential receptors in the City:

- Eastbound Gold Line noise levels south of the right of way (ROW) were predicted to be 72 DNL or less within approximately 40 feet of the eastbound track, 65 DNL or less within approximately 50 feet of the eastbound track, and less than 60 DNL approximately 100 feet of the eastbound track (Metro Gold Line Foothill Extension Construction Authority [MGLFECA] 2007, Table 3-11.6).
- Westbound Gold Line noise levels north of the ROW were predicted to be 71 DNL or less within approximately 40 feet of the westbound track, 68 DNL or less within approximately 60 feet of the westbound track, and less than 60 DNL approximately 100 feet of the eastbound track (MGLFECA 2007, Table 3-11.6).

The City's 2008 General Plan Land Use Policy 6.1 requires that new residences proposed near the I-210 and METRO railroad tracks are designed to reduce the intrusion of sound into the dwellings.

The existing ambient noise and vibration environment at and near the Project area is described in more detail below.

2.2.2 Measured Ambient Noise Levels

The existing ambient noise levels in the Project area were monitored in June 2018 (MIG 2019; see Appendix I). Ambient noise levels were measured with two Larson Davis SoundTrack LxT Type 1 sound level meters; ambient noise measurements were collected in 10-minute intervals. Conditions during the monitoring were generally clear and sunny during the daytime, with a daily high of approximately 90 degrees Fahrenheit and winds from the west/southwest between approximately five to 10 miles per hour.

The ambient noise monitoring conducted for this EIR included five short-term (ST) and two long-term (LT) measurements at locations selected to:

- Provide direct observations of existing noise sources at and in the vicinity of the Project;
- Determine typical ambient noise levels at and in the vicinity of the Project; and
- Evaluate potential Project noise levels at nearby sensitive receptors (see Noise Sensitive Receptors below).

The ambient noise monitoring locations are described below and shown in Figure 3-1.

- **Location ST-1** was at the intersection of South Magnolia Avenue and the METRO Gold Line, at the southeast corner of the Project area. The ambient noise levels measured at location ST-1 are considered representative of background daytime noise levels associated with local commercial land uses in the area, the METRO Gold Line, and traffic on South Magnolia Avenue.
- **Location ST-2** was at the intersection of South Magnolia Avenue and West Evergreen Avenue, at the northeast corner of the Project area. The ambient noise levels measured at location ST-2 are considered representative of background daytime noise levels associated with the local commercial and other lands uses in the area, as well as traffic noise levels associated with I-210.
- **Location ST-3** was at the intersection of South Mayflower Avenue and West Evergreen Avenue, at the northwest corner of the Project area. The ambient noise levels measured at location ST-3 are considered representative of background daytime noise levels associated with the local commercial and other land uses in the area, as well as traffic noise levels associated with I-210.
- **Location ST-4** was at the intersection of South Mayflower Avenue and the METRO Gold Line, at the southwest corner of the Project area. The ambient noise levels measured at location ST-4 are considered representative of background daytime noise levels associated with the local residential land uses in the area, the METRO Gold Line, and traffic on South Mayflower Avenue.

- **Location ST-5** was on Evergreen Avenue, approximately 100 feet east of Mayflower Avenue. The ambient noise levels measured at location ST-5 are considered representative of background daytime noise levels associated with the local commercial and other land uses in the area, as well as traffic noise levels associated with I-210.
- **Location LT-1** was on Evergreen Avenue, approximately 205 feet west of South Magnolia Avenue. The ambient noise levels measured at location LT-1 are considered representative of 24-hour ambient noise exposure levels in the northern half of the Project area.
- **Location LT-2** was adjacent to the METRO Gold Line, approximately 215 feet west of South Magnolia Avenue (as measured along the METRO right-of-way [ROW]). The ambient noise levels measured at location LT-2 are considered representative of 24-hour ambient noise exposure levels in the southern half of the Project area.

Based on observations made during the ambient noise monitoring, the existing noise environment in the Project vicinity consists primarily of transportation noise sources, particularly vehicular traffic on I-210 and rail activity on the METRO Gold Line. Table 3-1 summarizes the results of the ambient noise monitoring conducted for this EIR.

3 ENVIRONMENTAL SETTING

3.1 PROJECT LOCATION AND SITE DESCRIPTION

This report presents the environmental noise assessment for the proposed General Plan and Zoning Code Amendment (PD GPA and PD ZCA) and proposed Alexan Foothills Specific Plan within a portion of the area proposed for the GP/ZCA in Monrovia, California. The Project area, which comprises the entire area proposed for the PD GPA and PD ZCA, comprises one City block on approximately 9.6 acres (Figure 1-1 and Figure 1-2). The City block is bounded by West Evergreen Avenue to the north, South Magnolia Avenue to the east, South Mayflower Avenue to the west, and the METRO Gold Line to the south. The 6.77-acre Alexan Foothills Specific Plan area is depicted in Figure 1-3. The Specific Plan would allow a 436-unit, five-story apartment complex and an eight-level (seven stories) parking structure, containing 797 stalls. The area outside of the Specific Plan Area totals approximately 2.83 acres and would allow for the development of approximately 82 dwelling units in the future.

3.2 EXISTING NOISE AND VIBRATION ENVIRONMENT

Located Located in the southern part of the City of Monrovia, the Project area is generally configured in an east-west orientation and is bounded by South Magnolia Avenue to the east, South Mayflower Avenue to the west, Evergreen Avenue and Interstate-210 (I-210, or the Foothill Freeway) to the north, and the METRO Gold Line light rail to the south. The Project area consists mostly of a mix of light industrial and commercial land uses, although five residential units are present in the Project area. In general, medium and high density residential development borders the Project area, across Magnolia Avenue, Mayflower Avenue, and the METRO Gold Line.

The Project is adjacent to the City's Station Square Transit Village, and the Gold Line Monrovia Station is located less than 500 feet east of the Project (addressed at 1641 South Primrose Avenue). Several transit-oriented, multi-family developments are planned for the near future (e.g., the Station Square South project, located adjacent to the Project, across South Magnolia Avenue and South of the Gold Line). The closest airport to the Project is the San Gabriel Valley Airport, located approximately 3.7 miles southwest of the Project.

The General Plan Noise Element identifies traffic noise on major arterial streets and the I-210 as the most pervasive source of noise in certain areas of the City. The General Plan specifically notes that residential areas south of I-210 are impacted by freeway noise. The eastbound segment of I-210 includes an approximately 12-foot high wall that terminates on the eastern side of South Mayflower Avenue; a similar wall begins 200 feet west of South Magnolia Avenue. For the most part the segment of I-210 directly adjacent to the Project (i.e., between South Mayflower and South Magnolia Avenue) does not contain a sound wall. This portion of the I-210 is elevated, approximately 20 feet above the Project area.

The General Plan Noise Element was prepared in 2002, before the METRO Gold Line began operation, and does not identify potential noise levels associated with Gold Line operation; however, the Gold Line Foothill Extension Pasadena to Montclair Final Environmental Impact Report predicted the following noise levels for eastbound and westbound light rail service at residential receptors in the City:

- Eastbound Gold Line noise levels south of the right of way (ROW) were predicted to be 72 DNL or less within approximately 40 feet of the eastbound track, 65 DNL or less within approximately 50 feet of the eastbound track, and less than 60 DNL approximately 100 feet of the eastbound track (Metro Gold Line Foothill Extension Construction Authority [MGLFECA] 2007, Table 3-11.6).

- Westbound Gold Line noise levels north of the ROW were predicted to be 71 DNL or less within approximately 40 feet of the westbound track, 68 DNL or less within approximately 60 feet of the westbound track, and less than 60 DNL approximately 100 feet of the eastbound track (MGLFECA 2007, Table 3-11.6).

The City's 2008 General Plan Land Use Policy 6.1 requires that new residences proposed near the I-210 and METRO railroad tracks are designed to reduce the intrusion of sound into the dwellings.

The existing ambient noise and vibration environment at and near the Project area is described in more detail below.

3.2.1 Existing Ambient Noise Levels

The existing ambient noise levels in the Project area were monitored in June 2018 (MIG 2019; see Appendix A). Ambient noise levels were measured with two Larson Davis SoundTrack LxT Type 1 sound level meters; ambient noise measurements were collected in 10-minute intervals. Conditions during the monitoring were generally clear and sunny during the daytime, with a daily high of approximately 90 degrees Fahrenheit and winds from the west/southwest between approximately five to 10 miles per hour.

The ambient noise monitoring conducted for this Report included five short-term (ST) and two long-term (LT) measurements at locations selected to:

- Provide direct observations of existing noise sources at and in the vicinity of the Project;
- Determine typical ambient noise levels at and in the vicinity of the Project; and
- Evaluate potential Project noise levels at nearby sensitive receptors (see Noise Sensitive Receptors below).

The ambient noise monitoring location are described below and shown in Figure 3-1.

- **Location ST-1** was at the intersection of South Magnolia Avenue and the METRO Gold Line, at the southeast corner of the Project area. The ambient noise levels measured at location ST-1 are considered representative of background daytime noise levels associated with local commercial land uses in the area, the METRO Gold Line, and traffic on South Magnolia Avenue.
- **Location ST-2** was at the intersection of South Magnolia Avenue and West Evergreen Avenue, at the northeast corner of the Project area. The ambient noise levels measured at location ST-2 are considered representative of background daytime noise levels associated with the local commercial and other lands uses in the area, as well as traffic noise levels associated with I-210.
- **Location ST-3** was at the intersection of South Mayflower Avenue and West Evergreen Avenue, at the northwest corner of the Project area. The ambient noise levels measured at location ST-3 are considered representative of background daytime noise levels associated with the local commercial and other land uses in the area, as well as traffic noise levels associated with I-210.
- **Location ST-4** was at the intersection of South Mayflower Avenue and the METRO Gold Line, at the southwest corner of the Project area. The ambient noise levels measured at location ST-4 are considered representative of background daytime noise levels associated with the local residential land uses in the area, the METRO Gold Line, and traffic on South Mayflower Avenue.

- **Location ST-5** was on Evergreen Avenue, approximately 100 feet east of Mayflower Avenue. The ambient noise levels measured at location ST-5 are considered representative of background daytime noise levels associated with the local commercial and other land uses in the area, as well as traffic noise levels associated with I-210.
- **Location LT-1** was on Evergreen Avenue, approximately 205 feet west of South Magnolia Avenue. The ambient noise levels measured at location LT-1 are considered representative of 24-hour ambient noise exposure levels in the northern half of the Project area.
- **Location LT-2** was adjacent to the METRO Gold Line, approximately 215 feet west of South Magnolia Avenue (as measured along the METRO right-of-way [ROW]). The ambient noise levels measured at location LT-2 are considered representative of 24-hour ambient noise exposure levels in the southern half of the Project area.

Based on observations made during the ambient noise monitoring, the existing noise environment in the Project vicinity consists primarily of transportation noise sources, particularly vehicular traffic on I-210 and rail activity on the METRO Gold Line. Table 3-1 summarizes the results of the ambient noise monitoring conducted. Please refer to Appendix A for detailed ambient noise monitoring results and data sheets.

Table 3-1: Existing Ambient Noise Levels at the Project Area (dBA)

Monitoring Site	Duration	Lmin	Lmax	Leq Range			CNEL
				Daytime (7 AM – 7 PM)	Evening (7 PM – 10 PM)	Nightime (10 PM – 7 AM)	
ST-1	30 Minutes	49.7	87.9	63.7 - 70.3	--	--	--
ST-2	30 Minutes	60.3	79.4	66.2 - 77.4	--	--	--
ST-3	30 Minutes	57.9	86.7	67.8 - 68.7	--	--	--
ST-4	30 Minutes	53.5	94.4	67.5 - 73.9	--	--	--
ST-5	20 Minutes	61.1	78.2	66.5 - 66.9	--	--	--
LT-1	24-Hours	47.8	92.3	64.3 - 70.3	67.0 - 73.1	62.1 - 70.0	73.5
LT-2	24-Hours	39.2	93.5	68.9 - 73.5	68.2 - 71.8	61.6 - 71.5	75.1

Source: MIG, 2018 (See Appendix A.)

3.2.2 Existing METRO Gold Line Noise and Vibration Levels

The Project area is located adjacent to the METRO Gold Line. Rail-related noise comes from several potential sources. A locomotive engine's propulsion system generates noise from mechanical and electrical systems. The interaction of wheels with the track produces various noises, particularly where the wheel encounters a flaw or defect along smooth wheel / track surfaces. Finally, train horn or bells and railroad crossing warning devices generate short but loud alerts pursuant to federal safety regulations.

The METRO Gold Line is a commuter rail line with eastbound and westbound service at the Monrovia Station every 7 to 14 minutes Monday through Friday. Peak hourly weekday activity occurs during the AM and PM commuter periods when 9 eastbound and westbound trains can occur in an hour; typical service involves 4 to 5 eastbound and westbound trains per hour. During the weekday, service runs nearly 20 hours a day. Weekend service also runs nearly 24 hours a day, with 3 to 5 eastbound and westbound trains per hour. The METRO Gold Line crosses South Magnolia and South Mayflower Avenue at grade, with guards and warning bells provided for safety.

During the ambient noise monitoring, noise levels associated with the METRO Gold Line were observed to be in the range of 69 to 94 dB while passing at distance of approximately 5 to 20 feet from the center of the westbound track. The higher noise levels were associated with longer light rail trains (4 cars instead of 3 cars) accelerating westbound from the Monrovia Station.

Vibration monitoring was not conducted specifically for the Project; however, vibration monitoring was conducted in January 2018 for the Initial Study/Mitigated Negative Declaration for the adjacent South Station Square project (City of Monrovia 2018). The vibration monitoring for the South Station Square project was conducted approximately 525 feet from the Project, at a distance of 20 feet from the track centerline. The results of this monitoring indicate vibration levels generated by the existing METRO Gold Line are less than 0.002 PPV and 61 velocity decibels (VdB) (a measure of the vibration velocity level).

3.3 NOISE-SENSITIVE RECEPTORS

Noise sensitive receptors are buildings or areas where unwanted sound or increases in sound may have an adverse effect on people or land uses. Residential areas, motels and hotels, hospitals and health care facilities, school facilities, and parks are examples of noise receptors that could be sensitive to changes in existing environmental noise levels. Table 3-2 summarizes the noise sensitive receptors in proximity of the proposed boundary of the Alexan Specific Plan as well as the boundary of ZCA Areas A and C.

Table 3-2: Sensitive Receptor Locations

Receptor	Land Use	Direction / Location	Distance From	
			Alexan Foothills Specific Plan	ZCA Areas A and C(A)
R-1A	Single-Family Residential	East; along S. Magnolia Ave, W. Evergreen Ave, and Pomona Ave	60 ft	60ft
R-1B	Multi-Family Residential			
R-2	Multi-Family Residential	South; across the METRO Gold Line ROW (accessed via S. Mayflower Ave and Genoa St)	70 ft	70 ft
R-3	Single-Family Residential	West; along Diamond Street and the western portion of S. Mayflower Ave	260 ft	80 ft
R-4	Single-Family Residential	West; along the eastern portion of S. Mayflower Ave	70 ft	--(B)

Source: MIG 2019

(A) ZCA Areas A and C are comprised of a western portion (Parcels 4, 5, 6, 9, 14, and 15).

(B) There is no distance reported because R-4 is located within ZCA Areas A and C..

In addition, once constructed and occupied, the residential receptors associated within the Alexan Foothills Specific Plan would represent new sensitive noise receptors. However, the nearest receptor locations to each Project component are shown in Table 3-2.

4 REGULATORY SETTING

4.1 FEDERAL NOISE REGULATIONS

4.1.1 Federal Transit Administration

Noise and Vibration Impact Assessment document sets ground-borne vibration annoyance criteria for general assessments. The criteria vary by the type of building being subjected to the vibrations, and the overall number of vibration events occurring each day. Category 1 buildings are considered buildings where vibration would interfere with operation, even at levels that are below human detection. These include buildings with sensitive equipment, such as research facilities and hospitals. Category 2 buildings include residential lands and buildings were people sleep, such as hotels and hospitals. Category 3 buildings consist of institutional land uses with primary daytime uses. The FTA standards vary for "frequent" events (occurring more than 70 times per day such as a rapid transit project), "occasional" events (occurring between 30 to 70 times per day) and "infrequent" events (occurring less than 30 times per day). The FTA's vibration annoyance criteria are summarized in Table 4-1.

Table 4-1: FTA Ground-Borne Vibration Impact Criteria for General Assessment

Vibration Land Use Category/Type	Frequent Events	Occasional Events	Infrequent Events
Category 1 – Buildings with sensitive equipment	65 VdB	65 VdB	65 VdB
Category 2 – Buildings where people sleep	72 VdB	75 VdB	80 VdB
Category 3 – Institutional buildings	75 VdB	78 VdB	83 VdB

Source: FTA 2006
Note: VdB = Velocity decibel

4.2 STATE NOISE REGULATIONS

4.2.1 California Building Standards Code

The California Building Standards Code is contained in Title 24 of the California Code of Regulations and consists of 11 different parts that set various construction and building requirements. Part 2, California Building Code, Section 1207, Sound Transmission, establishes sound transmission standards for interior walls, partitions, and floor/ceiling assemblies. Specifically, Section 1207.4 establishes that interior noise levels attributable to exterior noise sources shall not exceed 45 dBA DNL or CNEL (as set by the local General Plan) in any habitable room.

The California Green Building Standards Code is Part 11 to the California Building Standards Code. Relevant sections of Chapter 5, Nonresidential Mandatory Standards are noted below:

- Section 5.507.4.1.1 sets forth that buildings exposed to a noise level of 65 dB Leq (1-hour) during any hour of operation shall have exterior wall and roof-ceiling assemblies exposed to the noise source meeting a composting sound transmission class (STC) rating of at least 45 (or an outdoor indoor transmission class (OITC) of 35, with exterior windows of a minimum STC of 40.
- Section 5.507.4.2 sets forth that wall and roof assemblies for buildings exposed to a 65 dBA Leq pursuant to Section 5.507.4.1.1, shall be constructed to provide an interior noise environment

attributable to exterior sources that does not exceed 50 dBA Leq in occupied areas during any hour of operation. This requirement shall be documented by preparing an acoustical analysis documenting interior sound levels prepared by personnel approved by the architect or engineer of record.

4.2.2 CEQA

CEQA requires lead agencies to consider noise impacts. Under CEQA, lead agencies are directed to assess conformance to locally established noise standards or other agencies' noise standards; measure and identify the potentially significant exposure of people to or generation of excessive noise levels; measure and identify potentially significant permanent or temporary increase in ambient noise levels; and measure and identify potentially significant impacts associated with air traffic.

4.2.3 Caltrans

The California Department of Transportation's (Caltrans) Transportation and Construction Vibration Guidance Manual provides a summary of vibration criteria that have been reported by researchers, organizations, and governmental agencies (Caltrans 2013). Chapters Six and Seven of this manual summarize vibration detection and annoyance criteria from various agencies and provide Caltrans' recommended guidelines and thresholds for evaluating potential vibration impacts on buildings and humans from transportation and construction projects. These thresholds are summarized in Table 4-2 and Table 4-3.

Table 4-2: Caltrans' Vibration Threshold Criteria for Building Damage

Structural Integrity	Maximum PPV (in/sec)	
	Transient	Continuous
Extremely fragile buildings, ruins, monuments	0.12	0.08
Fragile buildings	0.2	0.1
Historic and some older buildings	0.50	0.25
Older residential structures	0.50	0.30
New residential structures	1.00	0.50
Modern industrial and commercial structures	2.00	0.50

Source: Caltrans,2013b
Note: PPV = peak particle velocity

Table 4-3: Caltrans' Vibration Threshold Criteria for Human Response		
Human Response	**Maximum PPV (in/sec)**	
	Transient	**Continuous**
Barely perceptible	0.035	0.012
Distinctly perceptible	0.24	0.035
Strongly perceptible	0.90	0.10
Severely perceptible	2.00	0.40
Source: Caltrans,2013b Note: PPV = peak particle velocity		

4.3 COUNTY NOISE REGULATIONS

Section 12.08.560 of the Los Angeles County Noise Control Ordinance limits vibration levels from a source to other properties of 0.01 in/sec PPV.

4.4 LOCAL NOISE REGULATIONS

The City of Monrovia General Plan and Municipal Code establish standards related to noise and vibration control.

4.4.1 City of Monrovia General Plan Noise Element

The City of Monrovia Noise Element includes several noise control programs designed to protect the City's residents from the adverse effects of uncontrolled noise by controlling noise at its source, as well as attenuating noise between the source and the receiver. The General Plan includes the following noise control programs that are relevant to the Project:

- Program No. 1: The City will continue to implement and enforce the City of Monrovia's noise ordinance for the control of unnecessary and unwanted noises. The ordinance should be enforced by the Building and Planning Department and the Police Department. The noise ordinance enforcement program should be provided with the necessary funding and expertise to ensure its effective enforcement.
- Program No. 2: The City will extend the California Building Code (California Code of Regulations, Title 24, Part 2, Appendix Chapter 12) requirements for noise mitigation in the design and construction of new multi-family residential developments, hotels, motels, dormitories, and apartment houses to include all types of residential developments. The regulations state: "Interior noise levels attributable to exterior sources shall not exceed 45 dB in any habitable room. The noise metric shall be either ... Ldn or ... CNEL, consistent with the noise element of the general plan." Additionally, an acoustical design analysis shall be required of any planned residential building or structure which is to be located where the exterior CNEL or Ldn exceed 60 dB. The residential design should be such that the interior living spaces are exposed to an Ldn or CNEL of no more than 45 dB. This may be accomplished by implementing a combination of the following:

    1. A reduction of the exterior noise to which the dwelling is exposed.
    2. Installing sound rated window suitable for the noise reduction required.

3. Configuring and insulating exterior wall and roofing systems to reduce the interior noise to acceptable levels.
4. Locating (or eliminating) vents, mail slots, etc., to minimize sound propagation into the home.
5. Installing forced air ventilation as needed to provide a habitable living space if the interior Ldn or CNEL level is to be met with all or some windows closed.

- **Program No. 3:** The City may implement a noise zoning code, defining compatible land usage requirements based on the guidelines of Figure 2. The City would require an analysis of whether or not the proposed development would be in compliance with this code. If the development falls in the CNEL or Ldn range above that indicated for the normally acceptable category, noise control design steps must be included in the project plans.
- **Program No. 6:** Future projects within the City will reflect a consciousness on the part of the City regarding the reduction of unnecessary noise near noise-sensitive areas such as residences, schools, parks, hospitals, libraries, and convalescent homes. Actions that can be taken to implement this program can include:
    1. Maintain liaison with transportation agencies such as Caltrans and the FHWA regarding the reduction of noise from existing facilities. The design and location of new facilities will also be considered.
    2. Consideration should be given to buffering noise-sensitive areas from noise-generating land uses.
    3. Noise monitoring within the City will be an ongoing process conducted by the appropriate departments.
    4. Ensure that the segment of the Pasadena Blue Line Extension project that would go through the City of Monrovia will be designed to meet FTA and other relevant noise criteria; close attention shall be paid to the potential adverse noise effects on residences and other noise sensitive receptors located in the vicinity of the proposed Blue Line station near the Myrtle Avenue / Duarte Road intersection, as well along the transit route.
    5. Close attention shall be paid to the noise evaluation in environmental assessments, environmental impact reports and environmental impact statements.

Regarding Noise Control Program No. 3, the land use compatibility guidelines referenced in the 2002 General Plan Noise Element are reproduced in Table 4-4; however, the City has not adopted nor incorporated land use noise compatibility standards into its zoning code.

Table 4-4: General Plan Land Use Compatibility Guidelines				
Land Use Category	**Community Noise Equivalent Level (in dBA, CNEL)**			
	Normally Acceptable	**Conditionally Acceptable**	**Normally Unacceptable**	**Clearly Unacceptable**
Residential – Low Density Single Family, Duplex, Mobile homes	≤ 60	≤ 70	≤ 75	> 75
Residential – Multi Family	≤ 65	≤ 70	≤ 75	> 75
Transient Lodging – Motels, Hotels	≤ 65	≤ 70	≤ 80	> 80
Schools, Libraries, Churches, Hospitals, Nursing Homes	≤ 70	≤ 70	≤ 80	> 80
Auditoriums, Concert Halls, Amphitheaters	--	≤ 65	--	> 80
Sports Arenas, Outdoor Spectator Sports	--	≤ 70	--	> 70
Playground, Neighborhood Parks	≤ 70	--	≤ 75	> 75
Golf Course, Riding Stables, Water Recreation, Cemeteries	≤ 75	--	≤ 80	> 80
Office Buildings, Business Commercial and Professional	≤ 70	≤ 77.5	> 77.5	--
Industrial, Manufacturing, Utilities, Agriculture	≤ 75	≤ 80	> 80	--
Land Use Compatibility Interpretation:				
Normally Acceptable:	*Specific land use is satisfactory based upon the assumption buildings involved are of normal conventional construction, without any special noise insulation requirements.*			
Conditionally Acceptable:	*New construction or development should be undertaken only after a detailed analyses of noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.*			
Normally Unacceptable:	*New construction or development should be generally discouraged. If new construction or development does proceed, a detailed analysis of noise reduction requirements must be made and needed noise insulation features included in the design.*			
Clearly Unacceptable:	*New development should generally not be undertaken.*			

Source: City of Monrovia General Plan Noise Element

4.4.2 City of Monrovia Municipal Code

The City's existing Municipal Code regulates unnecessary, excessive, and annoying noise and vibration generated by certain sources of noise. The City's code is intended to maintain quiet residential areas that exhibit low noise levels, and to implement programs that reduce noise in residential areas where noise levels are above acceptable values.

Existing Municipal Code Title 9, Public Peace, Morals, and Safety, Chapter 9.44, Noise, includes the following standards related to noise:

- **Section 9.44.030, General Prohibition,** sets forth that it is unlawful for any person to willfully generate any loud, unnecessary, or unusual noise which unreasonably disturbs the peace and quiet of any neighborhood or which causes any discomfort or annoyance to any reasonable person of normal sensitivity, given factors such as the volume, intensity, nature, duration, and timing of the noise.
- **Section 9.44.040, Allowable Noise Levels**, sets forth that no person shall create or allow the creation of noise on any residential property which causes the noise level to exceed the actual

measured median ambient noise level, or the following presumed ambient noise level, whichever is greater:

- During the daytime (7 AM to 9 PM), the allowable noise level is 55 dBA
- During the nighttime (9 PM to 7 AM), the allowable noise level is 50 dBA

If the intruding noise source is continuous and cannot be reasonably discontinued for sufficient time in which the ambient noise level can be determined, the presumed ambient noise level shall be used.

- **Section 9.44.060, Permitted Increases in Noise Levels,** sets forth that increase in the allowable noise levels described above are permitted as follows:
  - A 5 dBA increase is permitted for 15 minutes per hour
  - A 10 dBA increase is permitted for 5 minutes per hour
  - A 15 dBA increase is permitted for 1 minute per hour
  - A 20 dBA increase is permitted for less than one minute per hour.
- **Section 9.44.080, Exemptions**, sets forth that the following activities are exempt from the noise control provisions of the City's Municipal Code:
  - Emergency sounds
  - Noise generating activities made while performing governmental duties
  - Noise generating activities conducted on public playgrounds and public or private school grounds
  - The handling of boxes, crates, containers, garbage cans, or other similar objects between the hours of 7 AM and 7 PM
  - The operation of mechanically powered saws, drills, grinders, lawn or garden tool, or similar tool between 7 AM and 7 PM Monday to Friday and 10 AM and 10 PM on weekends and holidays
  - Construction or demolition work conducted between the hours of 7 AM and 7 PM Monday to Friday and 9 AM and 6 PM on weekends and holidays
- **Section 9.44.090, Radios, Television Sets, and Similar Devices**, sets forth that it is unlawful for any person within any residential zone to use or operate any radio, musical instrument, stereo system, entertainment system, television set, or other machine or device for producing or reproducing sound between the hours of 10 PM and 7 AM in a manner that disturbs the peace, quiet, and comfort of neighboring residents or any reasonable person of normal sensitivity residing in the area.

Existing Municipal Code Title 17, Zoning, Chapter 17.32, Performance Standards, includes the following standards related to noise and vibration:

- **Section 17.32.040, Noises**, sets forth that the maximum sound level radiated by any use of facility, when measured at the boundary line of the property on which the sound is generated, shall not be obnoxious by reason of its intensity, pitch or dynamic characteristics, as determined by the City.

- **Section 17.32.040, Vibration**, sets forth that no vibration shall be permitted which causes a noticeable tremor beyond the boundary line of the property upon which the vibration exists.

This page intentionally left blank.

5 PROPOSED PROJECT DESCRIPTION

The City of Monrovia (City) is proposing a new Planned Development (PD), Planned Development 27 (PD-27), Station Square West, within a 9.63-acre Project area. Within this area, a Planned Development General Plan Amendment (PD GPA) and Planned Development Zoning Code Amendment (PD ZCA) are proposed, as well as a proposed 6.77-acre Alexan Foothills Specific Plan (Specific Plan) within a portion of the area proposed for the GP/ZCA.

The City is in the San Gabriel Valley region of Los Angeles County. The Project area comprises one City block on approximately 9.63 acres. The block is bounded by West Evergreen Avenue to the north, South Magnolia Avenue to the east, South Mayflower Avenue to the west, and the METRO Gold Line light rail to the south. The Project area is located primarily within an urbanized industrial area.

General Plan Amendment

The GPA area encompasses the entire Project area. Current land uses within the 9.63-acre GPA area include a mix of residential, industrial, and institutional uses, which are described in more detail below under the ZCA area heading.

Zoning Code Amendment

The ZCA area encompasses the same 9.63 acres as the GPA area and involves establishment of new Planned Development 27. The Project area is currently developed with a mix of light industrial (approximately 70,750 square feet) and warehouse (approximately 10,120 square feet) uses with five single-family residences, an institutional place of worship (approximately 6,630 square feet), and an office. The Project area also contains private surface parking throughout the area and two cellular towers. Three areas have been defined with the ZCA area, referred to as Areas A, B, and C (Figure 3-3), which are described as follows:

- Area “A” encompasses 2.30 acres in the western portion of the Project area where there is a mix of residential and commercial/industrial buildings;
- Area “B” encompasses the middle 6.77-acre portion (the Alexan Foothills Specific Plan area). This area is developed with three light industrial structures, one residential unit, the institutional place of worship and associated trailers, the commercial office building, and one asphalt covered storage lot, all constructed between 1942 and 1987. The following parcels are within the Alexan Foothills Specific Plan boundaries (Assessor Parcel Numbers [APNs] 8507-006-016, -022, -024, -035, -041, -042, -043, and -044); and
- Area “C” encompasses the 0.56-acre northeastern portion of the Project area and is developed with three commercial/industrial buildings.

Alexan Foothills Specific Plan

The Alexan Foothills Specific Plan would allow a 436-unit, five-story apartment complex and an eight-level (seven stories) parking structure, containing 798 stalls. The apartment complex would include two pools and several tenant amenity courtyards. The Magnolia Avenue street frontage proposes a two-story lobby, fitness room, and four live-work units, all with apartments above. Three outdoor/rooftop amenity decks are planned on top of the apartment complex’s fourth level; two rooftop decks face the San Gabriel Mountains to the north, and the other faces west. Other tenant amenities include a pet spa, bike “kitchen” (i.e., bicycle repair area), tenant lounge, centralized mail/package delivery room, and a golf simulation room. No offsite improvements to utilities are proposed under the Specific Plan.

This page intentionally left blank.

6 NOISE IMPACT ANALYSIS

This chapter describes potential impacts related to noise and vibration that could result from the proposed Project. The chapter also recommends mitigation measures as needed to reduce significant impacts.

6.1 THRESHOLDS OF SIGNIFICANCE

Based on the CEQA Guidelines, Appendix G: Items XIII (a) through (c), implementation of the Project would have a significant impact related to noise and vibration if it would:

- Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in:
    - The City of Monrovia Municipal Code Title 9, Public Peace, Morals, and Safety, Chapter 9.44, Noise; or
    - The City of Monrovia Municipal Code Title 17, Zoning, Chapter 17.31, Performance Standards; or
    - The City of Monrovia General Plan Noise Element; or
    - Other potentially applicable state or agency standards.
- Generate excessive ground vibration or ground-borne noise levels.
- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would expose people residing or working in the project area to excessive noise levels.

For the purposes of this Report, the proposed Project would result in a substantial permanent increase in ambient noise levels if it would:

- Cause the Ldn at an adjacent land use to increase by 5.0 dBA or more where noise levels would remain below the land use compatibility guidelines referenced in the 2002 General Plan Noise Element (reproduced in Table 4-4); or
- Cause the Ldn at an adjacent land use to increase by 3.0 dBA or more where noise levels would equal or exceed the land use compatibility guidelines referenced in the 2002 General Plan Noise Element (reproduced in Table 4-4).

For the purposes of this Report, the proposed Project would result in a substantial temporary or periodic noise impact if it would:

- Result in a 10 dB or greater increase in hourly noise levels above ambient conditions for two or more hours per day, five days a week, for a period of 12 months or more.

For temporary construction noise, the City considers construction activities resulting in a 10 dB increase in hourly noise levels above ambient conditions to be a temporary and substantial increase in noise levels, provided this increase occurs for two or more hours a day, five days a week, for more than 12 months. A 10 dB increase above existing ambient conditions is typically perceived as a “doubling” of loudness, which in limited doses would not be substantial. Prolonged exposure to project-specific construction noise levels that are twice as loud as the ambient environmental level in which the receiver is

accustomed to, however, would be considered substantial, even if such noise levels occur on a temporary basis.

6.2 ENVIRONMENTAL IMPACTS

6.2.1 Noise and Land Use Compatibility / Compliance with Applicable Standards

The Project would result in the placement of new, noise-sensitive, residential land uses in close proximity to the I-210 and METRO Gold Line. The following analysis evaluates if new residential receptors in the Project area would be exposed to noise levels that exceed City standards. The analysis also evaluates if the new residential developments would generate noise levels that could exceed City standards.

Exposure to Noise Levels that Exceed Standards

As shown earlier in Table 3-1, the Project area is subject to high ambient noise levels that are primarily associated with traffic noise from I-210 and rail noise from the METRO Gold Line. Measures daytime and nighttime hourly noise levels were generally above 65 dBA Leq (as measured at the Project area boundary) and did not fluctuate significantly, indicating noise levels associated with the I-120 and the METRO Gold Line are consistent throughout the daytime and nighttime period.

The calculated CNEL (at the Project area boundary) adjacent to the I-210 and METRO Gold Line is 73.5 and 75.1 CNEL, respectively (Table 3-1). Although these noise levels represent existing conditions, they are not expected to change substantially in the future since traffic volumes on I-210 are already substantial and the METRO Gold Line currently operates with a high level of frequency.

Alexan Foothills Specific Plan Noise Exposure

The current conceptual site plan for the Alexan Foothills Specific Plan includes a number of design features that would reduce noise levels at exterior building facades and corresponding interior noise levels, including:

- Building setbacks of at least 20 feet or more from the edge of the West Evergreen and METRO Gold Line ROWs.
- Building orientation that limits exterior residential wall exposure to direct noise from the I-210 and the METRO Gold Line. The current conceptual site plan shows 27 units with exterior wall exposure to the I-210 (plus one exterior roof deck) and 45 units with exterior wall exposure to the METRO Gold Line. Thus, only 16% of the total available units would be subject to the worst-case noise levels at the site.
- Residential unit design that places bedrooms on the interior of the unit and less sensitive spaces (kitchens, closets, etc.) along the exterior wall facing the I-210 and METRO Gold Line ROW.
- Use of outdoor recreation space and the proposed parking garage to buffer residential units from noise associated with the I-210 and the METRO Gold Line. Higher noise levels are generally acceptable in outdoor recreation spaces due to the shorter exposure period (i.e., non-continuous, short-term exposure) and the fact that outdoor activities are typically less sensitive to the subjective and interference effects of noise (e.g., annoyance, nuisance, interference with sleep or speech).

- Incorporation of a vegetated screening wall along the southern property line to limit line of sight / direct observation of METRO Gold trains.

With building setbacks, the CNEL at exterior building facades for the Alexan Foothills Specific Plan would likely be in the range of 71 to 72 CNEL in the northern and southern parts of the Alexan Foothills Specific Plan area. Exterior noise levels at proposed Courtyard #3 and the secondary recreation courtyard would not exceed 70 dB CNEL.

ZCA Areas A and C Noise Exposure

The ZCA would allow for development of multi-family land use(s) in ZCA Areas A and C that would likely be similar to the proposed Alexan Foothills Specific Plan area (i.e., a multi-story residential development); however, no specific development is proposed at this time. Since building setbacks would be similar to those proposed for the Alexan Foothills Specific Plan, future residential buildings within the ZCA Areas A and C would likely be exposed to similar noise levels as the Alexan Foothills Specific Plan (72 to 74 CNEL in the northern and southern parts of the Project area, respectively).

Impact Significance Determination

Based on the ambient noise measurements performed for the Project, potential residential units within the Project area that front West Evergreen Avenue and the I-210 would be exposed to noise levels of approximately 72 CNEL, while potential residential units that front the METRO Gold Line ROW would be exposed to noise levels of approximately 74 CNEL.

Ambient noise levels greater than 70 dB CNEL in the Project area exceed the levels at which the California Building Standards Code, California Green Building Standards Code, and the General Plan require the preparation of an acoustical analysis documenting compliance with applicable interior noise standards of 45 CNEL in any habitable room (pursuant to the Section 1207.4 of the California Building Code, Part 2, Volume 1) and 50 dBA Leq (1-hour) for any occupied room (pursuant to Section 5.507.4.2 of the California Green Building Standards Code)[1].

Standard construction techniques and materials are commonly accepted to provide a minimum exterior to interior noise attenuation (i.e., reduction) of 22 to 25 dBA with all windows and doors closed, which would result in interior noise levels of approximately 47 to 50 CNEL dBA for units fronting I-210 and approximately 49 to 52 CNEL for units fronting the METRO Gold Line ROW[2]. Since interior noise levels

[1] Part 2 of the California Building Code, Section 1207, Sound Transmission, establishes sound transmission standards for interior walls, partitions, and floor/ceiling assemblies. Specifically, Section 1207.4 establishes that interior noise levels attributable to exterior noise sources shall not exceed 45 dBA DNL or CNEL (as set by the local General Plan) in any habitable room. Chapter 5 of the California Green Building Standards Code, Section 5.507 sets forth environmental comfort/acoustical control requirements for building assemblies that are prescriptive- based (i.e., assemblies meet certain prescribed exterior to interior noise attenuation levels) or performance-based (i.e., the interior noise environment shall not exceed 50 dBA on an hourly equivalent noise level basis in occupied areas. Both the prescriptive and performance standard contained in the Green Building Standards Code apply to projects located within a 65 CNEL noise contour of an airport, freeway, railroad, industrial source, etc. or otherwise exposed to a noise level of 65 dBA on an hourly Leq basis.

2 The U.S. Department of Housing and Urban Development (HUD) Noise Guidebook and supplement (2009a, 2009b) includes information on noise attenuation provided by building materials and different construction techniques. As a reference, a standard exterior wall consisting of 5/8-inch siding, wall sheathing, fiberglass insulation, two by four wall studs on 16-inch centers, and 1/2-inch gypsum wall board with single strength windows provides approximately 35 dBs of attenuation between exterior and interior noise levels. This reduction may be

would continue to exceed applicable City and State standards, this is considered a potentially significant impact.

To ensure potential interior noise levels meet applicable standards, the City shall require all development proposals in the Project area, including the Alexan Foothills Specific Plan, to implement mitigation measure MM NOI-1, which requires the preparation of an acoustical analysis to document compliance with interior noise level requirements. Mitigation measure MM NOI-1 would ensure applicable exterior and interior noise standards are met by new development within the Project area. Thus, this measure would ensure that buildout of the Project would not expose people to noise levels that exceed standards and impacts would be reduced to a less than significant level.

Mitigation Measures

Mitigation measure MM NOI-1 is applicable to the Alexan Foothills Specific Plan and future developments within ZCA Areas A and C.

Mitigation Measure NOI-1: Prior to the issuance of a building permit for any development in the Project area, the City shall review and approve an acoustical analysis, prepared by or on behalf of the applicant, and based on the final design, that:

1. Identifies the exterior noise levels at the:
    a. Exterior building facades that face West Evergreen Avenue/I-210, South Magnolia Avenue, and the METRO Gold Line ROW; and
    b. Exterior recreation areas, including patios, that face and have a line of sight to West Evergreen Avenue/I-210, South Magnolia Avenue, and the METRO Gold Line ROW.
2. Identifies the final site and building design features that would:
    a. Attenuate exterior building façade noise levels to interior levels that do not exceed 45 CNEL in habitable rooms and 50 dBA Leq (1-hour) in other occupied rooms. Potential noise insulation site and building design features capable of achieving this requirement may include, but are not limited to:
        i. Sound barriers;
        ii. Enhanced exterior wall construction/noise insulation design;
        iii. Use of enhanced window, door, and roof assemblies with above average sound transmission class (STC) or outdoor/indoor transmission class (OITC) values; or
        iv. Use of mechanical, forced air ventilation systems to permit a windows closed condition in residential units.

Plan Requirements and Timing: An acoustical report shall be submitted to City Planning for review and approval prior to the issuance of building permits, documenting that actual interior and exterior noise level at the locations indicated in this measure, meet City and State standards.

Monitoring: City Planning staff shall approve the acoustical analysis prior to issuance of building permits.

---

slightly lower (2-3 dBs) for traffic noise due to the specific frequencies associated with traffic noise. Increasing window space may also decrease attenuation, with a reduction of 10 dBs possible if windows occupy 30% of the exterior wall façade.

Proposed Project Generation of Noise Levels that Exceed Standards

Once constructed, the proposed Alexan Foothills Specific Plan and future development in ZCA Areas A and C would generate noise levels from increased vehicle parking activities, stationary sources of equipment such as potential heating, ventilation, and air conditioning (HVAC) equipment, and a back-up generator and fire pump. The potential noise levels generated by these activities and equipment are described below.

Alexan Foothills Specific Plan Operational Noise Generation

Parking Garage Noise. The proposed Alexan Foothills Specific Plan parking garage would increase the noise levels at the site by providing additional parking capacity, reflection of sound waves, etc. Noise sources associated with the parking garage (e.g., car horns, doors slamming, cars starting, etc.) would be intermittent. These types of noises would not differ substantially from the noise generated by existing parking activities in the Project area, but the frequency of these events would increase. Potential increases in noise resulting from the new parking garage were quantified using the following equations contained in the FTA's *Transit Noise and Vibration Impact Assessment* manual (FTA 2006).

$$\mathbf{Leq(h) = SEL_{ref} + C_N - 36.5}$$

and

$$\mathbf{C_N = 10 \times \log(N_A / 1{,}000)}$$

Where:

Leq(h)	=	Hourly Leq at 50 feet
SEL_{ref}	=	Source Reference Level at 50 feet
C_N	=	Volume Adjustment (SEL_{ref} is based on 1,000 cars in peak activity hour)
N_A	=	Number of Automobiles per Hour

To calculate the Leq and CNEL at 50 feet from the parking garage, hourly noise levels were first calculated throughout the day using the equations above, where, according to the FTA, the SELref for parking garages is 92 dBA. The AM peak hour calculations accounted for 143 hourly trips, the PM peak hour (calculations accounted for 194 hourly trips, and the remaining 1,601 trips were divided evenly throughout the remaining 22 hours in the day (i.e., approximately 73 average trips her hour). This methodology is considered conservative (i.e., likely to overestimate CNEL) since it likely overestimates activity at the parking garage from the hours of 10:00 PM to 7:00 AM, when a 10 dBA penalty is applied to the hourly noise levels used to calculate the CNEL (see Section 2.1.3).

The results of the calculation indicate the parking garage would result in a worst-case hourly Leq value of 49.3 dBA (during the PM peak hour activity) and a CNEL of 51.8, which is more than 20 dBA lower than the existing ambient noise level measured at LT-2 (75.1 CNEL). In general, when two noise levels are 10 dB or more apart, the lower value does not contribute significantly (less than 0.5 dB) to the total noise level. Thus, potential noise levels from the Alexan Foothills Specific Plan parking garage would comply with the standards contained in Municipal Code Section 9.44.040 and would not result in a substantial increase in ambient noise levels in the vicinity of the Project.

Mechanical Equipment. The proposed parking garage would be an open air structure and would not require fresh air supply or exhaust supply fans to provide ventilation throughout the garage.

Mechanical equipment associated with the Alexan Foothills Specific Plan would include pool equipment (e.g., pumps), elevators, and individual HVAC units. Pool and elevator equipment would be contained within mechanical rooms, and the HVAC units necessary to cool and ventilate residential units would be small charge/load units mounted on each rooftop and contained behind a parapet wall that would direct sound upwards. The mechanical equipment associated with the proposed Alexan Foothills Specific Plan would comply with the standards contained in Municipal Code Section 9.44.040 and would not result in a substantial increase in ambient noise levels in the vicinity of the Project.

Other Operational Noise Sources Including Stationary Noise Sources

The Alexan Foothills Specific Plan would include ground level and rooftop recreational spaces, resident amenities such as a pet spa and fitness center, refuse collection services, a 50-horsepower emergency generator, and a 50-horsepower emergency fire pump which could be tested approximately one-half hour to one-hour per month.

The Specific Plan's recreational spaces and amenities would provide residents recreation and residential services, including areas to sit, eat, and socialize. This type of anticipated activity is consistent with other land uses in the area and would not result in a substantial increase in noise levels in the immediate area.

Refuse collection services would be congregated in the center of the Specific Plan area, with collection services occurring on West Evergreen Avenue, adjacent to the I-210 and away from sensitive receptors. Thus, refuse collection services would not generate substantial noise levels at noise sensitive receptor locations.

The 50-horsepower back-up generator and 50 hp emergency fire pump would be located within designated mechanical rooms. These pieces of equipment would only be used on an intermittent emergency basis with the exception of regular testing (assumed to be one hour per month). Noise from these pieces of equipment would also be shielded by their enclosures, and therefore, would not exceed noise standards at the locations of residences.

Therefore, operational noise impacts generated by the proposed Alexan Foothills Specific Plan would be less than significant.

Mitigation Measures

No mitigation measures are required.

Operational Noise Generation in ZCA Areas A and C

Although a specific development is not proposed at this time, future development in the remaining Although a specific development is not proposed at this time, future development in ZCA Areas A and C would be likely to generate noise levels from the same type of sources as the Alexan Foothills Specific Plan. However, the overall noise generating activities in these areas would likely be approximately 80% less than that of the Alexan Foothills Specific Plan, based on potential development capacity in ZCA Areas A and C. As described above, the Alexan Foothills Specific Plan would not generate onsite noise levels that have the potential to exceed City standards or result in a substantial permanent increase in ambient noise levels. Since the ZCA would result in less noise generating activities and equipment than the Alexan Foothills Specific Plan, it would also not have the potential to generate onsite noise levels that have the potential to exceed City standards or result in a substantial permanent increase in ambient noise levels. Therefore, impacts would be less than significant.

Mitigation Measures

No mitigation measures are required.

Operational Noise Levels Associated with Entire Project

The potential for noise sources in the Alexan Foothills Specific Plan area and ZCA Areas A and C to combine is limited to two areas where the different properties would abut each other. Otherwise, residential buildings, parking garage, and other structures in the proposed development under the Alexan Foothills Specific Plan, would shield adjacent properties.

The first area would be in the northeast corner of the Project area, near the intersection of South Magnolia Avenue and West Evergreen Avenue. The noise generating activities from the Alexan Foothills Specific Plan in this area would generally be limited to low-speed vehicle noise associated with vehicles entering and exiting the development, as well as some office and commercial activities associated with the leasing office in this area. Although there is no specific development proposal for this ZCA area (Area C) at this time, because this area is currently an industrial use, sensitive receptors are not expected in this area in the future. Therefore, combined noise levels in this area could only affect receptors R-1A and R-1B, located approximately 60 feet east of the Project, across South Magnolia Avenue.

The second area would be in the interior of the Project area, where the western boundary of the Alexan Foothills Specific Plan abuts the eastern boundary of the ZCA Area A along Mayflower Avenue. The noise generating activities from the Alexan Foothills Specific Plan in this area would generally be limited to use of the secondary recreation courtyard, residential uses, and roof deck activities. Although there is no specific development proposal for ZCA Area A at this time, it is assumed that the noise generating activities from future development in this area would consist of similar noise generating activities. The combined noise levels in this area could only affect the residence located approximately 70 feet south of the Project, across the METRO Gold Line ROW (i.e., sensitive receptor location R-2; see Table 3-2).

The combined noise levels generated by the Alexan Foothills Specific Plan and future development in ZCA Areas A and C, would not be substantially different than the individual noise levels associated with each Project component. As described in Section 2.1.2, when two or more sources of equivalent noise are combined, the resulting increase in noise levels is approximately 3 dB. An increase in 3 dB is barely perceptible by humans and would not be significant. Therefore, this impact would be less than significant.

Mitigation Measures

No mitigation measures are required.

6.2.2 Substantial Permanent Increases in Ambient Noise Levels

Alexan Foothills Specific Plan and ZCA Areas A and C

The Alexan Foothills Specific Plan and other future development in ZCA Areas A and C would not generate noise levels that exceed City standards or result in a substantial permanent increase in noise at or in the Project area.

However, the Alexan Foothills Specific Plan and future development in ZCA Areas A and C would generate traffic that would be distributed onto the local roadway system, potentially increasing noise levels along travel routes. The following analysis evaluates the potential increases in traffic noise levels resulting from the Alexan Foothills Specific Plan, future development of ZCA Areas A and C, and both combined.

Caltrans considers a doubling of total traffic volume to result in a 3 dBA increase in traffic-related noise levels (Caltrans 2013a). If the Project would not result in a doubling of traffic volumes on the local roadway system, it would not result in a substantial permanent increase in traffic-related noise levels. A noise level of less than 3 dBA is typically not perceptible to the human ear in an outdoor environment.

Alexan Foothills Specific Plan Increases in Traffic Noise Levels

The TIA identifies that the Alexan Foothills Specific Plan would result in a net increase in trip generation equal to 1,938 vehicle trips (LSA 2018). Table 6-1 and Table 6-2 identify the increases in traffic noise levels attributable to the Alexan Foothills Specific Plan under existing (2018) and cumulative (2035) conditions, based on the trip distribution assumptions contained in the TIA.

Table 6-1: Alexan Foothills Specific Plan Net Change in ADT (Existing 2017)

Table 6-2: Alexan Foothills Specific Plan Net Change in ADT (Future 2035)					
ID	**Road**	**Segment**	**Future ADT**	**Future Plus SP ADT**	**Percent Change**
2B	W. Evergreen Avenue	Magnolia to Myrtle	2,700	2,900	7.41%
3A	Huntington Drive	Mayflower to Magnolia	28,600	28,800	0.70%
3B	Huntington Drive	Magnolia to Myrtle	28,500	28,600	0.35%
4A	Mayflower Avenue	North of Evergreen	16,900	17,200	1.78%
4B	Mayflower Avenue	Evergreen to Duarte	16,700	16,800	0.60%
4C	Mayflower Avenue	South of Duarte	7,900	7,900	0.00%
5A	Magnolia Avenue	Huntington to Evergreen	8,100	8,800	8.64%
5B	Magnolia Avenue	Evergreen to Duarte	7,700	8,200	6.49%
6A	Myrtle Avenue	Huntington to Central	24,900	25,100	0.80%
6B	Myrtle Avenue	Central to Duarte	24,000	24,000	0.00%
6C	Myrtle Avenue	South of Duarte	24,100	24,200	0.41%
Source: LSA 2018					

As shown in Table 6-1 and Table 6-2, the Alexan Foothills Specific Plan could result in up to an additional 26% increase in traffic volumes on roadways segments near the Project (West Evergreen Avenue). Since the Alexan Foothills Specific Plan would not double traffic volumes on roadways in the Project vicinity, traffic noise would not increase by 3 dBA. Therefore, this impact is less than significant.

Mitigation Measures

No mitigation measures are required.

ZCA Areas A and C Increases in Traffic Noise Levels

TThe TIA identifies that future development in the ZCA Areas A and C would result in a net increase in trip generation equal to 425 vehicle trips (LSA 2018). Table 6-3 and Table 6-4 identify the increases in traffic noise levels attributable to future development in the ZCA areas under existing (2018) and cumulative (2035) conditions, based on the trip distribution assumptions contained in the TIA.

Table 6-3: GP/ZCA Net Change in ADT (Existing 2017)

Source: LSA 2018					

As shown in Table 6-3 and Table 6-4, ZCA Areas A and C could result in up to an additional 4.35% increase in traffic volumes on roadways segments near the Project (West Evergreen Avenue). Since potential future development in ZCA Areas A and C would not double traffic volumes on roadways in the Project vicinity, traffic noise would not increase by 3 dBA. Therefore, this impact is less than significant.

Mitigation Measures

No mitigation measures are required.

Combined Increases in Traffic Noise Levels

The TIA identifies that the Alexan Foothills Specific Plan and potential future development in ZCA Areas A and C would result in a combined net increase in trip generation equal to 2,363 vehicle trips (LSA 2018). Table 6-5 and Table 6-6 identify the increases in traffic noise levels attributable to the Alexan Foothills Specific Plan and potential future development in ZCA Areas A and C under existing (2018) and cumulative (2035) conditions, based on the trip distribution assumptions contained in the TIA.

As shown in Table 6-5 and Table 6-6, the Project could result in up to an additional 30.4% increase in traffic volumes on roadway segments near the Project (West Evergreen Avenue). Since the combined Project development would not double traffic volumes on roadways in the Project vicinity, traffic noise would not increase by 3 dBA. Therefore, this impact is less than significant.

Mitigation Measures

No mitigation measures are required.

6.2.3 Substantial Temporary or Periodic Increases in Ambient Noise Levels

Alexan Foothills Specific Plan and ZCA Areas A and C

The construction of the Alexan Foothills Specific Plan and other future development within ZCA Areas A and C would generate a temporary and periodic increase in ambient noise levels over an approximately two-and-a-half-year period. The construction of the Alexan Foothills Specific Plan is anticipated to occur over an approximately 30-month period between 2020 and 2022, while construction of future development in ZCA Areas A and C is anticipated to occur over a 12-month period between 2021 and 2022. As a conservative approach, this EIR's analysis assumes future development of the ZCA Areas A and C would occur during the final twelve months of the Alexan Foothills Specific Plan construction schedule (i.e., construction activities in the Alexan Foothills Specific Plan and ZCA Areas A and C would occur at the same time). The following analysis first presents the estimated construction noise levels associated with the Alexan Foothills Specific Plan, then the construction noise levels associated with future development in ZCA Areas A and C, and finally the combined noise levels associated with simultaneous development of both Project components.

Demolition of existing buildings as well as erection of new structures associated with the Alexan Foothills Specific Plan and buildout within ZCA Areas A and C would require the use of heavy-duty, off-road construction equipment throughout development activities. Table 6-7 presents the noise levels associated with typical types of construction equipment that could be used during construction activities.

Alexan Foothills Specific Plan Construction Noise Levels

The Alexan Foothills Specific Plan area is generally located within the center of the overall Project area and extends to the eastern boundary of the site. Parcel 7, located in the northwestern portion of the Project area is identified as ZCA Area C.

Table 6-7: Typical Construction Equipment Noise Levels (dBA)

Equipment	Reference Noise Level at 50 Feet (Lmax)(A)	Percent Usage Factor(B)	Predicted Noise Levels (Leq) at Distance(C)					
			50 Feet	100 Feet	150 Feet	250 Feet	350 Feet	450 Feet
Bulldozer	85	40	81	75	71	67	64	62
Backhoe	80	40	76	70	66	62	59	57
Compact Roller	80	20	73	67	63	59	56	54
Concrete Mixer	85	40	81	75	71	67	64	62
Crane	85	16	77	71	67	63	60	58
Excavator	85	40	81	75	71	67	64	62
Generator	82	50	79	73	69	65	62	60
Pneumatic tools	85	50	82	76	72	68	65	63
Scraper	85	40	82	76	72	68	64	62
Delivery Truck	85	40	81	75	71	67	64	62
Vibratory Roller	80	20	73	67	63	59	56	54

Sources: Caltrans 2013a and FHWA 2010.

(A) L_{max} noise levels based on manufacturer's specifications.
(B) Usage factor refers to the amount of time the equipment produces noise over the time period.
(C) Estimate does not account for any atmospheric or ground attenuation factors. Calculated noise levels based on Caltrans, 2009: L_{eq} (hourly) = L_{max} at 50 feet – 20log (D/50) + 10log (UF), where: L_{max} = reference L_{max} from manufacturer or other source; D = distance of interest; UF = usage fraction or fraction of time period of interest equipment is in use.

Construction activities associated with buildout of the five-story residential buildings and six-story parking structure would generate a variety of noise levels from operation of different kinds of construction equipment. Day-to-day noise levels at individual locations would vary depending on the equipment staging, location of operation, where materials are being stored onsite, and access routes used to import materials. Demolition, site preparation, grading / excavation, building construction, paving, and architectural coating processes involve equipment and vehicles that are known to produce temporary but intrusive levels of noise when operated in close proximity to sensitive residential receptors, particularly if equipment operation occurs during early morning, evening, or nighttime hours.

In general, construction noise levels would be highest during site preparation, grading, and excavation phases, when large pieces of earthmoving equipment would be required. Bulldozers, excavators, and graders would likely be the largest pieces of equipment operating at the same time during these phases. As a conservative approach, it is estimated up to three such pieces of equipment could be operating concurrently near a property line for an hour or two at a time. At a distance of 50 feet, the hourly Leq noise level associated with operation of a bulldozer, excavator, and grader would be approximately 86 dBA. Table 6-8 summarizes the hourly Leq noise levels that would be generated by the operation of these three pieces of equipment at sensitive receptor locations and compares these estimated noise levels against the existing ambient noise level environment.

Table 6-8: Alexan Foothills Specific Plan: Estimated Construction Noise Levels					
Receptor	**Distance from Construction Activity**	**Noise Level (dBA)**			
		Existing Ambient	**Construction**	**With Barrier Attenuation(A)**	**Change(B)**
R-1A / 1B	60 ft	63.7(C)	84.2	--	**+20.5**
R-2	70 ft	63.7(D)	82.9	72.9	+9.2
R-3	260 ft	67.5(E)	71.8	--	+4.3
R-4	70 ft	67.5(E)	82.9	--	**+15.4**

Source: MIG 2019

(A) A permanent noise barrier is located along the southern side of the METRO Gold Line, adjacent to receptors represented by R-2. Effective noise barriers can reduce noise levels by 10 to 15 dBA. The attenuation provided by this barrier (assumed to be 10 dBA) has been factored into the estimated noise level at R-2.

(B) Per the criterion outlined in Section 6.1, a significant temporary or periodic noise impact would occur if construction activities resulted in an increase of 10 dBA Leq or more at sensitive receptor locations. Bold values indicate an increase of more than 10 dBA above the ambient level.

(C) The Leq value measured at ST-1 is considered representative of ambient conditions at receptor location R-1A and R-1B. Both ST-1 and ST-2 were taken along South Magnolia Ave, along which Receptor R-1A and R-1B are located. Between ST-1 and ST-2, ST-1 had the lowest Leq value recorded, and therefore represents a conservative indication of ambient noise levels at receptor locations east of the Project.

(D) The Leq value measured at ST-1 is considered representative of ambient conditions at the property boundaries of receptor location R-2. Measurements at ST-1, LT-1, and ST-4 were all located along the southern boundary of the Project area, adjacent to the METRO Gold Line. ST-1 had the lowest Leq value recorded, and therefore represents a conservative indication of ambient noise levels at receptor locations south of the Project.

(E) The Leq value measured at ST-4 is considered representative of ambient conditions at receptor locations R-3 and R-4. Both ST-3 and ST-4 were taken along Mayflower Ave, along which Receptors R-3 and R-4 are located. Between ST-3 and ST-4, ST-4 had the lowest Leq value recorded, and therefore represents a conservative indication of ambient noise levels at receptor locations east of the Project.

The values presented in Table 6-8 reflect conservative (i.e., worst-case), yet realistic estimate of potential hourly Leq noise levels. The above estimates assume all equipment is operating at the Project's boundary nearest the receptor location. In actuality, equipment onsite would move around the work area and would generally not be situated at the same location for more than a few hours at a time. Equipment operating further away would produce lower noise levels than those presented. Nonetheless, as shown in Table 6-8, construction activities associated with the Alexan Foothills Specific Plan are anticipated to increase hourly ambient noise levels by 10 dB or more for two or more hours per day, seven days a week, for a period of 12 months or more. This is considered a potentially significant impact.

To reduce noise levels during construction of the Alexan Foothills Specific Plan, the City would require the applicant and/or the applicant's contractors to implement mitigation measure MM NOI-2, which requires preparation of a construction noise plan and implementation of the plan to minimize noise disturbance at adjacent sensitive receptor locations, to establish designated truck routes to minimize noise disturbance associated with deliveries to the site, and to install noise barriers along the eastern and western perimeters of the Alexan Foothills Specific Plan area to reduce noise levels by a minimum of 11 dBA. These requirements would reduce construction noise levels such that sensitive receptor locations would not be exposed to noise levels in excess of 10 dBA above ambient conditions for more than year. Implementation of this measure would reduce impacts to a less than significant level.

Mitigation Measures

Mitigation measure MM NOI-2 is applicable to the Alexan Foothills Specific Plan and future developments within ZCA Areas A and C.

Mitigation Measure NOI-2: To reduce temporary construction noise impacts on adjacent land uses, the applicant or the applicant's construction contractor shall implement the following construction-period noise abatement measures for any development within the Project area:

- *Construction Activity Notification.* All residential units located within 500 feet of the construction site shall be sent a notice regarding the construction schedule for the proposed development. A sign, legible at a distance of 50 feet shall also be posted at the construction site. All notices and signs shall indicate the dates and duration of construction activities, as well as provide a telephone number where residents can enquire about the construction process and register complaints.
- *Noise Disturbance Coordinator.* A "noise disturbance coordinator" shall be established. The disturbance coordinator shall be responsible for responding to any local complaints about construction noise. The disturbance coordinator shall determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and shall be required to implement reasonable measures such that the complaint is resolved. All notices that are sent to residential units within 500 feet of the construction site and all signs posted at the construction site shall list the telephone number for the disturbance coordinator.
- *Construction Traffic.* Route all construction traffic to and from the construction site via designated truck routes to the maximum extent feasible. Prohibit construction-related heavy truck traffic in residential areas where feasible.
- *Noise Disturbance Coordinator.* A "noise disturbance coordinator" shall be established. The disturbance coordinator shall be responsible for responding to any local complaints about construction noise. The disturbance coordinator would determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and would be required to implement reasonable measures such that the complaint is resolved. All notices that are sent to residential units within 500 feet of the construction site and all signs posted at the construction site shall list the telephone number for the disturbance coordinator.
- *Construction Traffic.* Route all construction traffic to and from the construction site via designated truck routes to the maximum extent feasible. Prohibit construction-related heavy truck traffic in residential areas where feasible.
- *Equipment Noise Controls:* The applicant and/or its construction contractor shall implement the following equipment noise control measures during all phases of construction:
    - *Mufflers*. All construction equipment shall be equipped with muffles and other suitable noise attenuation devices (e.g., engine shields).
    - *Equipment Selection*. Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible.
    - *Provide Electric Hook-Ups*. If feasible, electric hook-ups shall be provided to avoid the use of generators. If electric service is determined to be infeasible for the site, only whisper-quiet generators shall be used (i.e., inverter generators capable of providing variable load.
- *Temporary Barriers*. During all demolition and construction activities, one or more physical barriers capable of achieving a minimum reduction in predicated noise levels by 11 dB shall be installed between future development and Magnolia Avenue and Mayflower Avenue, and between the western boundary of the Alexan Foothills Specific Plan and ZCA Area A. Potential options for achieving this level of attenuation can include, but are not limited to:
    - A concrete, wood, or other barrier installed at-grade (or mounted to structures located at-grade, such as K-Rail) along the property line. Such a wall/barrier shall consist of material

that has a minimum rated transmission loss value of 21 dB (or equivalent rating) and shall contain no gaps in the structure through which noise may pass.

- Commercially available acoustic panels or other products such as acoustic barrier blankets installed along the property line, building envelope or, if feasible and necessary, at or near sensitive residential receptor areas.
- Any combination of noise barriers and commercial products capable of achieving an 11-dB reduction in construction noise levels at sensitive receptor locations.

Requirements and Planning: This measure shall be printed on all construction drawings and included in construction contracts.

Monitoring: City Planning staff shall ensure that this measure is located on final construction drawings. City Planning staff shall conduct inspections during construction to ensure that measures are implemented.

Construction Noise Levels in ZCA Areas A and C

The type of equipment required to buildout ZCA Areas A and C would be similar to those required for the Alexan Foothills Specific Plan. Based on the smaller area of ZCA Areas A and C, it is estimated that only two large pieces of off-road equipment would be needed during the most intensive phases of construction (e.g., bulldozers, graders, excavators) of future development in ZCA Area A, and one large and small piece of equipment (e.g., bulldozer and backhoe) are assumed to be involved in any future redevelopment of ZCA Area C. Table 6-9 summarizes the hourly Leq noise levels that would be generated by construction activities at the nearest sensitive receptor locations in ZCA Areas A and C and compares these estimated noise levels against the existing ambient noise level environment.

Table 6-9: Remaining GP/ZCA Area: Estimated Construction Noise Levels

Receptor	Distance from Construction Activity	Noise Level (dBA)			
		Existing Ambient	Construction	With Barrier Attenuation(A)	Change(B)
R-1A	60 ft	66.2(C)	80.6	--	**+14.4**
R-2	70 ft	67.5(D)	82.9	72.9	+5.4
R-3	80 ft	67.5(E)	81.7	--	**+14.2**

Source: MIG 2019

(A) A permanent noise barrier is located along the southern side of the METRO Gold Line, adjacent to receptors represented by R-2. Effective noise barriers can reduce noise levels by 10 to 15 dBA. The attenuation provided by this barrier (assumed to be 10 dBA) has been factored into the estimated noise level at R-2.

(B) Per the criterion outlined in Section 6.1, a significant temporary or periodic noise impact would occur if construction activities resulted in an increase of 10 dBA Leq or more at sensitive receptor locations. **Bold** values indicate an increase of more than 10 dBA above the ambient level.

(C) The Leq value measured at ST-2 is considered representative of ambient conditions at receptor location R-1A, because the eastern portion of construction associated with the ZCA areas is closest to ST-2.

(D) The Leq value measured at ST-4 is considered representative of ambient conditions at the property boundaries of receptor location R-2, because ST-4 is the closest measurement location to R-2 in relation to where construction activities associated with the western side of theZCA areas would occur.

(E) The Leq value measured at ST-4 is considered representative of ambient conditions at receptor location R-3. Both ST-3 and ST-4 were taken along S Mayflower Ave, along which Receptor R-3 is located. Between ST-3 and ST-4, ST-4 had the lowest Leq value recorded, and therefore represents a conservative indication of ambient noise levels at receptor locations east of the Project.

As shown in Table 6-9, the estimated construction noise levels attributable to development of ZCA Areas A and C would result in potentially significant impacts at receptor locations R-1A and R-3, whether or

not construction associated with ZCA Areas A and C were to occur concurrently with implementation of the Alexan Foothills Specific Plan. Consistent with the discussion presented under the construction noise analysis for the development of the Alexan Foothills Specific Plan, these noise values represent conservative (i.e., worst-case) yet realistic estimate of potential hourly Leq noise levels. In actuality, equipment onsite would move around the work area and would generally not be situated at the same location for more than a few hours at a time. Equipment operating further away would produce lower noise levels than those presented.

Nevertheless, impacts would be potentially significant. Implementation of mitigation measure MM NOI-2 would reduce impacts to less than significant levels.

Mitigation Measures

Refer to Mitigation Measure MM NOI-2.

Combined Project Noise Levels

As described previously, the Project being analyzed is the buildout of the Alexan Foothills Specific Plan over an approximately 30-month period, with future development of ZCA Areas A and C potentially occurring during the final 12 months of the Alexan Foothills Specific Plan construction.

Development in the Specific Plan area would be well underway by the time demolition and earthmoving activities would begin in ZCA Areas A and C. The residential buildings and parking garage would likely be into vertical building construction phases by the time site preparation, grading, and/or exaction would begin in ZCA Areas A and C. The types of equipment needed for vertical structure development would generally include a crane, pneumatic tools (e.g., nail gun), and a forklift (similar in terms of horsepower as a backhoe). At a distance of 50 feet, the hourly Leq noise level associated with operation of a crane, pneumatic tool, and forklift would be approximately 84 dBA. Table 6-10 summarizes the hourly Leq noise levels that would be generated by vertical structure development within the Alexan Foothills Specific Plan area, and Table 6-11 presents the worst-case, combined noise level under full buildout of the Project area.

Table 6-10: Alexan Foothills Specific Plan: Construction Noise Levels (Structure Development)

Receptor	Distance from Construction Activity	Construction Noise Level (dBA)
R-1A / R-1B	60 ft	82.4
R-2	70 ft	81.0
R-3	260 ft	69.6
Source: MIG 2018		

Table 6-11: Combined Construction Noise Levels of the Alexan Foothills Specific Plan and ZCA Areas A and C

Receptor	Distance from Construction Activity	Noise Level (dBA)			
		Existing Ambient	Construction	With Barrier Attenuation(A)	Change(B)
R-1A / R-1B	60 ft	66.2(C)	84.6	--	**+18.4**
R-2	70 ft	67.5(D)	85.1	75.1	+7.6
R-3	80 / 260 ft	67.5(E)	82.0	--	**+14.5**

Source: MIG 2018

(A) A permanent noise barrier is located along the southern side of the METRO Gold Line, adjacent to receptors represented by R-2. Effective noise barriers can reduce noise levels by 10 to 15 dBA. The attenuation provided by this barrier (assumed to be 10 dBA) has been factored into the estimated noise level at R-2.

(B) Per the criterion outlined in Section 6.1, a significant temporary or periodic noise impact would occur if construction activities resulted in an increase of 10 dBA Leq or more at sensitive receptor locations. **Bold** values indicate an increase of more than 10 dBA above the ambient level.

(C) The Leq value measured at ST-2 is considered representative of ambient conditions at receptor location R-1A and R-1B, because the most affected receptor by construction in the eastern portion of the Project would be across, or near, ST-2.

(D) The Leq value measured at ST-4 is considered representative of ambient conditions at the property boundaries of receptor location R-2, because the most affected receptor south of the Project would have combined noise levels from construction in the Alexan Foothills Specific Plan area and the ZCA areas (on the western side).

(E) The Leq value measured at ST-4 is considered representative of ambient conditions at receptor location R-3, because of ST-3 and ST-4, ST-4 had the lowest Leq value recorded. ST-4 therefore represents a conservative indication of ambient noise levels at receptor locations east of the Project.

As shown in Table 6-11, combined unmitigated construction noise levels could be as high as 18.4 dBA above the existing ambient environment, under a worst-case scenario at sensitive receptor locations R-1A and R-1B. This change is less than the incremental increase identified for R-1A and R-1B (see Table 6-8), which would occur during earthmoving activities associated with development of the Alexan Foothills Specific Plan. As such, implementation of mitigation measure MM NOI-2, which requires a noise barrier be constructed along the eastern and western portions of active construction areas, capable of reducing noise levels by a minimum of 11 dBA, would also ensure that combined, construction noise levels associated with development of the entire Project area would not increase ambient noise levels at sensitive receptor locations by more than 10 dBA during construction activities. With implementation of mitigation measure MM NOI-2, impacts would be reduced to less than significant impacts.

Mitigation Measures

Refer to mitigation measure MM NOI-2.

6.2.4 Expose People to or Generate Excessive Groundborne Vibration or Noise

Alexan Foothills Specific Plan and ZCA Areas A and C

Buildout of the Project would require the use of heavy construction equipment that could produce groundborne vibration. The following analysis evaluates if construction of the Project would generate excessive groundborne vibration levels. Once operational, development in the Project area would not result in the use of equipment or machinery that could generate significant groundborne vibration. However, the Project is situated adjacent to the METRO Gold Line ROW, and trains travelling within the ROW would generate groundborne vibration. The analysis also evaluates if new residential receptors in the Project area would be exposed to excessive groundborne vibration from the operation of the METRO Gold Line.

Construction Vibration in the Alexan Foothills Specific Plan and ZCA Areas A and C

There is the potential that site preparation, grading, foundation construction, and other construction activities associated with the Alexan Foothills Specific Plan and other future development in ZCA Areas A and C could result in groundborne vibration that would, at worst case, occur approximately 60 feet from existing structures on South Magnolia Ave (sensitive receptor locations R-1A and R-1B, see Table 3-2). Table 6-12 lists the groundborne vibration levels associated with the potential type of construction equipment that would most likely be required while undertaking construction in the Project area.

Table 6-12: Estimated Project Construction Groundborne Vibration Levels

Equipment	Peak Particle Velocity (in/sec) (A)			Velocity Decibels (VdB) (B)		
	25 feet	60 feet	100 feet	25 feet	60 feet	100 feet
Large bulldozer	0.089	0.034	0.019	87.0	75.6	68.9
Small bulldozer	0.03	0.011	0.007	58.0	46.6	39.9
Loaded truck	0.076	0.029	0.017	86.0	74.6	67.9
Jackhammer	0.035	0.013	0.008	79.0	67.6	60.9

Sources: Caltrans 2013b and FTA 2006.

Notes:

(A) Estimated PPV calculated as: PPV(D)=PPV(ref)*(25/D)^1.1 where PPV(D)= Estimated PPV at distance; PPVref= Reference PPV at 25 ft; D= Distance from equipment to receiver; and n= ground attenuation rate (1.1 for dense compacted hard soils).

(B) Estimated Lv calculated as: Lv(D)=Lv(25 feet)-30Log(D/25) where Lv(D)= estimated velocity level in decibels at distance, Lv(25 feet)= RMS velocity amplitude at 25 f; and D= distance from equipment to receiver.

As shown in Table 6-12, , receptors 60 feet away from construction activities could be exposed to groundborne vibration levels of up to 0.034 in/sec PPV and 75.6 VdB during operation of large bulldozers. Based on Caltrans' transient criteria (see Table 4-3), these vibration levels would be "barely perceptible." Therefore, groundborne vibration levels are not predicted to exceed Caltrans' vibration damage threshold criteria for historic or older buildings (0.25 in/sec PPV), a threshold considered protective of all nearby buildings, which are presumed to be of more recent construction, and thus, not as susceptible to damage from vibration as older, unreinforced structures. Groundborne vibration from construction activities would also be infrequent and short in duration (lasting a few hours or days as equipment would not operate in the same location for a prolonged amount of time), would not damage buildings or structures, would not result in long-term incompatibility with existing land uses, and would, therefore, not be excessive. Thus, this impact would be less than significant.

Mitigation Measures

No mitigation measures are required.

Exposure to Excessive Groundborne Vibration from the METRO Gold Line in the Alexan Foothills Specific Plan and ZCA Areas A and C

The Monrovia General Plan Proposed Land Use and Circulation Elements EIR (City of Monrovia 2008) requires consideration of potential METRO Gold Line vibration impacts on residential projects located within 300 feet of the Gold Line (EIR Mitigation Measure NOI-B). Accordingly, a discussion of potential METRO Gold Line vibration impacts on development in the Project area is provided below.

The approval of the proposed Alexan Foothills Specific Plan and other future development within ZCA Areas A and C would result in the placement of new, sensitive residential land uses in close proximity to the METRO Gold Line. As explained in Section 7.1, "Existing METRO Gold Line Noise and Vibration Levels," vibration monitoring was not conducted for the Project; however, vibration monitoring was conducted in January 2018 for the Station Square South Specific Plan, an approximately 3.79-acre residential project located approximately 100 feet southwest of the Project (City of Monrovia 2018). The vibration monitoring for the South Station Square project was conducted approximately 525 feet from the Project, at a distance of 20 feet from the track centerline (Veneklassen 2018). The results of the vibration monitoring conducted for the Station Square South Specific Plan indicate groundborne vibration from passing METRO Gold Line trains was below 0.002 in/sec PPV and 65 VdB. These vibration levels are below both the Los Angeles County Vibration Limit of 0.01 in/sec PPV and the FTA's recommended vibration limit of 72 VdB for frequent events where people sleep (see Table 4-3).

The proposed Alexan Foothills Specific Plan and other future development within ZCA Areas A and C would not result in the placement of structures 20 feet or closer to the METRO Gold Line due to the width of the METRO ROW and City zoning setback requirements. Thus, the operation of the METRO Gold Line would not expose people living in the Project area to excessive groundborne vibration or groundborne noise levels. This impact would be less than significant.

Mitigation Measures

No mitigation measures are required.

6.2.5 Airport-Related Noise Levels

Alexan Foothills Specific Plan and ZCA Areas A and C

The closest airport to the Project area is San Gabriel Valley Airport, located approximately 3.7 miles southwest of the Project area. This public airport has one runway and does not generate substantial airport-related noise in the City of Monrovia. Development of the Project would not expose people living or working in the Project area to excessive airport-related noise levels. This impact would be less than significant.

Mitigation Measures

No mitigation measures are required.

6.3 IMPACT CONCLUSIONS

Buildout of the Project has the potential to place residents in areas where ambient noise levels exceed City and State standards for interior noise levels due to the proximity of the Project to I-210 and the METRO line. Impacts would be potentially significant, but they would be reduced to less than significant levels with implementation of mitigation measure MM NOI-1, which requires implementation of design features to ensure interior noise standards can be met and an acoustical analysis to confirm that standards can be met.

In addition, construction under buildout of the Alexan Foothills Specific Plan, ZCA Areas A and C, and both have the potential to result in a significant temporary increase in noise at sensitive receptor locations along Mayflower Avenue and Magnolia Avenue or between the western boundary of the Alexan Foothills Specific Plan and ZCA Areas A and C. Mitigation measure MM NOI-2 would require installation of noise barriers to reduce construction noise at sensitive receptor locations, thereby reducing impacts to less than significant levels.

Traffic noise impacts, noise impacts associated with stationary equipment, and vibration impacts would be less than significant.

May 2018

EXECUTIVE SUMMARY

LSA has prepared the following Traffic Impact Analysis (TIA) to identify any traffic impacts that could result from the development of 432 apartment dwelling units (DU) and 4 live/work units (a total of 436 DU) at 1625 Magnolia Avenue in Monrovia. The existing site for the 1625 Magnolia Avenue Project (project) includes 53,717 square feet (sf) of industrial use, 30,000 sf of automobile-sales use, and two single-family detached housing units. The project will replace the existing structures and construct 432 apartment DUs and 4 live/work units. Access to the project site will be provided via a full-access driveway along Evergreen Avenue between Mayflower Avenue and Magnolia Avenue, and a full-access driveway along Magnolia Avenue between Evergreen Avenue and Pomona Avenue.

This study focuses on the daily, a.m. peak hour (one hour between 7:00 a.m. to 9:00 a.m.), and p.m. peak hour (one hour between 4:00 p.m. to 6:00 p.m.) levels of service (LOS) at 10 intersections. Project impacts were determined based on analysis of the following scenarios:

1. Existing condition;
2. Existing plus project condition;
3. Cumulative year (2020) condition; and
4. Cumulative year (2020) plus project condition.

The study also analyzed the California Department of Transportation (Caltrans) ramp intersections using *Highway Capacity Manual* (HCM 6th Edition, Transportation Resources Board 2016) methodology. The ramp intersection analysis is not part of the City of Monrovia's (City) TIA guidelines, but is included for Caltrans disclosure purposes.

A future year 2035 roadway link analysis has been performed consistent with the City of Monrovia's (City) *Traffic Study for the Proposed Amendment to the Land Use and Circulation Elements of the Monrovia General Plan* (General Plan Traffic Study, 2007). Daily traffic forecasts are estimated for a 2035 year horizon to reflect General Plan build out. The forecast roadway segment impacts were determined based on a comparison of these forecasts to theoretical daily capacities of General Plan arterials in the study area. Scenarios included are:

5. Future year 2035 condition; and
6. Future year 2035 plus project condition.

The project incorporates design features to accommodate pedestrian circulation on site. Pedestrian traffic is accommodated via sidewalks throughout the site that connect to the public street system. On-street (Class III) bicycle routes are available along Magnolia Avenue.

Transit facilities are accessible from the project site within a 0.25-mile (mi) radius. Metro bus stops are provided at the northeast and southwest corners of Mayflower Avenue/Duarte Road, and at the northwest and southeast corners of Magnolia Avenue/Duarte Road. The Metro Gold Line Station is southeast of the project site, within a 0.20 mi walk. The project site and the train station are accessible via sidewalk and crosswalk connections.

California has been preparing to move away from vehicle delay and LOS analysis as the primary measure of effectiveness for California Environmental Quality Act (CEQA) transportation analysis, and is switching to vehicle miles traveled (VMT). VMT is a measure of the number of miles traveled by vehicles within a specified region for a specific time period. A VMT analysis has been provided for disclosure purposes.

Based on the results of this TIA, the project can be implemented without creating significant impacts to the performance of the studied intersections or roadway segments, with the exception of the intersection of Magnolia Avenue/Evergreen Avenue and the intersection of Myrtle Avenue/Central Avenue and the Interstate 210 (I-210) westbound ramps. In order to mitigate the impact at the intersection of Magnolia Avenue/Evergreen Avenue, the centerline for the northern and southern legs of the intersection will be restriped and moved 2 feet to the west, to allow for de-facto northbound right-turns. In order to mitigate the impact at the intersection of Myrtle Avenue/Central Avenue and the I-210 westbound ramps, the intersection can be restriped from a shared southbound through-right lane and a southbound through lane to an exclusive southbound right-turn lane and two southbound through lanes. The center median on the southern leg of Myrtle Avenue at the intersection may require minor modifications. The City of Monrovia is in the process of studying an area-wide Transportation Impact Fee that would allow new development to pay a trip fee to assist in project mitigation. If this program is adopted prior to the final entitlement of the proposed project, the project may be asked to participate in the program rather than implement the improvement at Myrtle Avenue/Central Avenue and the I-210 westbound ramps.

Also included in this analysis is a future programmatic scenario of up to 518 apartment DUs that looks at the potential development over the balance across the entire block. Based on the results of this program scenario, the 518-unit potential development could be implemented in the future year 2035 condition without creating significant impacts to the performance of the studied roadway segments.

INTRODUCTION

LSA has prepared this Traffic Impact Analysis (TIA) to identify any traffic impacts that could result from the planned development of 432 apartment dwelling units (DU) and 4 live/work units (a total of 436 DU) at 1625 Magnolia Avenue in Monrovia. This TIA for the 1625 Magnolia Avenue Project (project) was prepared in accordance with the applicable sections of the City of Monrovia's (City) *General Plan Circulation Element* (adopted by the City on January 15, 2008, and amended on November 6, 2012) and guidance through discussions with the City traffic engineer.

PROJECT SITE

Figure 1 shows the project site location. The project includes the demolition of existing structures (53,717 square feet [sf] of industrial use, 30,000 sf of automobile-sales use, and two single-family detached housing units) and construction of 432 apartment DUs and 4 live/work units.

The project site is bound by Evergreen Avenue to the north, the Metro Gold Line light rail to the south, scattered residential units and Mayflower Avenue to the west, and Magnolia Avenue to the east. Access to the project site will be provided via a full-access driveway along Evergreen Avenue between Mayflower Avenue and Magnolia Avenue, and a full-access driveway along Magnolia Avenue between Evergreen Avenue and Pomona Avenue. Both full-access driveways will have one inbound lane and one outbound lane. Figure 2 shows the project site plan.

Study Area Boundary

As illustrated in Figure 1, the study area includes the following intersections:

1. Mayflower Avenue/Diamond Street-Evergreen Avenue (unsignalized)
2. Mayflower Avenue/Duarte Road (signalized)
3. Project Driveway 1/Evergreen Avenue (unsignalized)
4. Magnolia Avenue/Huntington Drive (signalized)
5. Magnolia Avenue/Evergreen Avenue (unsignalized)
6. Magnolia Avenue/Project Driveway 2 (unsignalized)
7. Magnolia Avenue/Duarte Road (signalized)

PERFORMANCE CRITERIA

Intersection Criteria

The intersection capacity utilization (ICU) methodology was used to determine the peak-hour operations at signalized intersections within the study area. The ICU methodology compares the volume-to-capacity (v/c) ratios of conflicting turn movements at an intersection, sums these critical conflicting v/c ratios for each intersection approach, and determines the overall ICU. The resulting

Site Plan

I:\MMF1701\G\Site Plan.cdr (5/10/2018)

ICU is expressed in terms of level of service (LOS), where LOS A represents free-flow activity and LOS F represents overcapacity operation. Parameters set by the City for ICU calculations, including lane capacity, right-turn treatment, and clearance interval, are incorporated in the analysis.

According to the City's *General Plan Circulation Element* (2012), LOS at an intersection is considered to be unsatisfactory when the ICU exceeds 0.90 (LOS D) within the City, except at locations where LOS F conditions currently exist. The relationship of ICU to LOS is demonstrated in the following table.

Levels of Service	ICU
A	0.00–0.60
B	0.61–0.70
C	0.71–0.80
D	0.81–0.90
E	0.91–1.00
F	> 1.00

Source: *Highway Capacity Manual* (Transportation Research Board 2016).
ICU = intersection capacity utilization

Based on discussion with the City traffic engineer, a project impact occurs when the intersection in question exceeds the acceptable LOS of E or F, or the impact of the development results in an increase of 0.04 or greater for LOS C, 0.03 or greater for LOS D, 0.02 or greater for LOS E, or 0.01 or greater for LOS F. Project mitigation will be required back to acceptable levels, or baseline, if the baseline ICU is greater than 0.90.

In addition to the ICU methodology of calculating signalized intersection LOS, the *Highway Capacity Manual* (HCM 6th Edition, Transportation Resources Board 2016) methodology was used to determine the LOS at unsignalized study area intersections and signalized intersections at freeway interchanges. The HCM unsignalized and signalized intersection methodology looks at delay (in seconds per vehicle), as opposed to capacity, as the measure of effectiveness. The resulting delay is expressed in terms of LOS, much like the ICU methodology. The relationship of delay to LOS is illustrated in the following table.

Levels of Service	Signalized Intersection Delay (seconds)	Unsignalized Intersection Delay (seconds)
A	≤10.0	≤10.0
B	>10.0 and ≤20.0	>10.0 and ≤15.0
C	>20.0 and ≤35.0	>15.0 and ≤25.0
D	>35.0 and ≤55.0	>25.0 and ≤35.0
E	>55.0 and ≤80.0	>35.0 and ≤50.0
F	>80.0	>50.0

Source: *Highway Capacity Manual* (Transportation Research Board 2016).

This study, consistent with City guidelines, evaluates traffic impacts based on ICU methodology. The HCM methodology is another method to evaluate operational conditions at signalized intersections, and takes into consideration signal timing and can calculate queue lengths at turn lanes. HCM methodology is also required by the California Department of Transportation (Caltrans) to analyze Caltrans ramp intersections. Acceptable LOS for Caltrans intersections is considered to be LOS D or better.

Based on a discussion with the City Traffic Engineer, the Caltrans significant impact criteria specified in the *SANTEC/ITE Guidelines for Traffic Impact Studies in the San Diego Region* (San Diego Regional Traffic Engineers Council/ITE 2000) are used. These criteria identify a significant impact at a Caltrans ramp intersection when the intersection operates at unsatisfactory LOS, and the impact of the development results in an increase of at least 2 seconds of delay. All HCM analysis for this study has been developed using Synchro (Version 10.1) software.

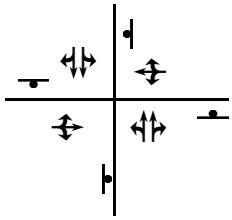
Roadway Segment Criteria

A future year 2035 roadway link analysis has been performed consistent with the City's *Traffic Study for the Proposed Amendment to the Land Use and Circulation Elements of the Monrovia General Plan* (General Plan Traffic Study, 2007). The future year 2035 roadway link v/c ratios were determined using the City's theoretical daily capacity of 9,000 vehicles per lane for primary arterials, secondary arterials, and collector streets. Facility types for studied roadways were taken from the City's *General Plan Circulation Element* (2012). The roadway segments of Huntington Drive and Myrtle Avenue are classified as primary arterials, Duarte Road is classified as a secondary arterial, and the segments of Mayflower Avenue, Magnolia Avenue, and Evergreen Avenue are classified as collector streets.

The City has established the maximum desirable daily LOS for specific facility types, shown in the following table.

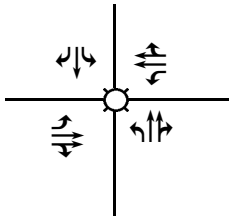
Type of Street	Maximum Desirable Daily LOS and v/c
Primary Arterial	LOS D (v/c ≤0.90)
Secondary Arterial	LOS Mid-D (v/c ≤0.85)
Collector Street	LOS C (v/c ≤0.80)
Local Street	LOS A (v/c ≤0.60)

Taken from the City of Monrovia's *General Plan Circulation Element* (2012)
LOS = level of service
v/c = volume-to-capacity ratio



A project impact occurs when the roadway link in question exceeds the acceptable LOS and the project-related traffic increases the daily traffic by 2.5 percent or more.

EXISTING (2017) CONDITIONS



Existing Site Uses

The existing site currently includes 53,717 sf of industrial use, 30,000 sf of automobile sales use, and two single-family detached housing units. These uses will be replaced by the proposed 432 apartment DUs and 4 live/work units. In order to take the existing site traffic into account, 24-hour counts were taken at the shared driveways of the existing facilities. The 24-hour driveway counts were obtained from National Data and Surveying Services (NDS). Appendix A provides the existing driveway count data. Figure 3 illustrates existing lane configurations.

Existing Intersection Geometrics

Existing Baseline Traffic Volumes and LOS

Peak-hour intersection turn volumes and roadway segment average daily traffic (ADT) volumes for the study area intersections and roadway segments were obtained from the City and collected for LSA by NDS. All counts used in this traffic study were conducted on a Tuesday, Wednesday, or Thursday. Counts were collected at the time the initial TIA was prepared between 2016 and 2017.

The project application was filed after the TIA was started, and a period of time passed between the completion of the TIA and the processing of the project. The original counts must be factored up to account for any potential changes that occurred between the time the counts were taken and the beginning of 2018. A regional ambient growth rate of 0.82 percent per year was added to the existing traffic volumes to escalate the counts to the year 2018. This growth rate was obtained from the Los Angeles County *Congestion Management Program* (Appendix D, Exhibit D-1, 2010), for regional statistical area (RSA) 25. The growth rate per year was calculated from the growth of year 2015 to year 2020. Figure 4 presents the existing a.m. peak-hour (one hour between 7:00 a.m. to 9:00 a.m.) and p.m. peak-hour (one hour between 4:00 p.m. to 6:00 p.m.) turn-movement volumes at the study area intersections. Appendix A provides the existing count data.

The intersection of Myrtle Avenue/Duarte Road operates concurrently with a Metro Gold Line train crossing at the north leg of the intersection. LSA staff observed the train crossing times on June 20, 2017, recording the duration of when the train crossing gates moved down to when the gates completely opened. The train was observed to add approximately 20 percent of delay to the intersection per hour (approximately 12 minutes per hour). The train crossing adds delay to only conflicting movements and partially overlaps with the standard intersection loss time of 10 percent per hour (approximately 6 minutes per hour). However, to present a conservative analysis, the train crossing loss time was analyzed to affect the entire intersection. This loss time percentage is calculated by adding the total train loss time to the standard intersection loss time, for a total of 30 percent, and is reflected in the intersection analysis for Myrtle Avenue/Duarte Road.

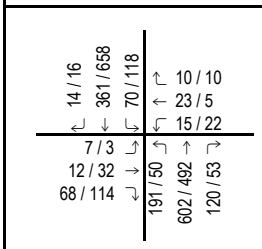

Table A summarizes the results of the existing a.m. and p.m. peak-hour LOS analysis. As previously discussed, the ICU methodology was used to determine the LOS at signalized study area intersections, and HCM methodology was used to determine the LOS at unsignalized study area intersections and the freeway ramp intersections. As shown in Table A, all study area intersections currently operate at satisfactory LOS.

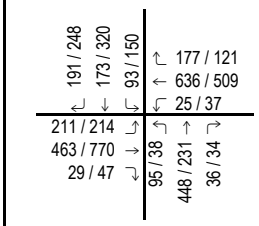
PROPOSED PROJECT TRAFFIC



Trip Generation

Trip generation calculations for the project were based on the daily and peak-hour trip rates taken from the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 9th Edition (2012), shown in Table B. It is noted that the ITE recently published a 10th edition of this *Trip Generation Manual*. The trip rates for apartment use are greater in the 9th edition than the 10th edition. At the direction of City staff, the 9th edition rates were used for a more conservative assessment. Based on discussions with the City traffic engineer, vehicle trip generation has been reduced by 20 percent for trip credits based on transit use. The trip credits based on transit use accounts for the project site's

1 Trip rates referenced from the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 9th Edition (2012).
2 Office trip generation calculated from the total office space in the live/work units.
3 Workspace trip rate per unit is based on total workspace divided by the number of live/work units.
4 Residential trip rate is calculated by multiplying the apartment trip rate with the residential ratio in the live/work unit. The ratio is 65% residential space/ 35% office space.
5 Blended trip rate is calculated by taking the sum of the Workspace Trip Rate and Residential Trip Rate.
6 Live/Work peak-hour trips use the calculated Live/Work Unit trip rates.
7 Based on local observations from City of Monrovia staff, the trip generation rate has been adjusted by 20 percent.
8 Existing Uses taken from 24-hour driveway counts.
ADT = average daily traffic, DU = dwelling unit

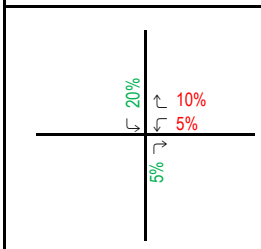
proximity to the Metro Gold Line Station, as well as four bus stations at Mayflower Avenue/Duarte Road and Magnolia Avenue/Duarte Road.

As Table B indicates, the existing land uses generate 393 trips per day, including 36 trips during the a.m. peak hour (25 inbound and 11 outbound) and 25 trips in the p.m. peak hour (8 inbound and 17 outbound). The project trips, with transit use, will result in a net project trip generation of 2,331 trips per day, including 179 trips in the a.m. peak hour (37 inbound and 142 outbound) and 219 trips in the p.m. peak hour (140 inbound and 79 outbound). The total net trip generation will add 1,938 trips per day, including 143 trips in the a.m. peak hour (12 inbound and 131 outbound) and 194 trips in the p.m. peak hour (132 inbound and 62 outbound).

Trip Distribution and Assignment

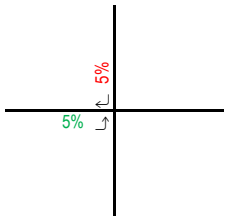
Trip distribution for the project was based on the project's location in relation to local and regional transportation facilities and origins/destinations, along with input and concurrence from the City Traffic Engineer. Figure 5 shows the trip distribution for the project. Figure 6 displays the resulting project trip assignment for study area intersections.

Existing Baseline and Plus Project Traffic Volumes and LOS



To demonstrate the effect that the project would have on the study area intersections in the existing condition, an existing plus project LOS analysis was prepared. This analysis assumes that the existing land uses are removed and replaced by the proposed project of 432 apartment DUs and 4 live/work units. Figure 7 displays the existing plus project peak-hour volumes for the study area intersections. The existing and plus project LOS worksheets are provided in Appendix B. A summary of existing and plus project intersection LOS is presented in Table C, which indicates all study area intersections currently operate at satisfactory LOS. With the addition of the project in the existing setting, all study area intersections would continue to operate at satisfactory LOS. The increase in ICU does not exceed the threshold of significance at any of the intersections; therefore, the project can be implemented in the existing setting with no significant peak-hour intersection impacts.

CUMULATIVE (2020) CONDITIONS



To present a cumulative (2020) traffic condition, a regional ambient growth rate was determined and traffic volumes for the related projects in the vicinity were developed, which were added to the existing traffic counts.

To reflect regional growth in the study area, a growth rate of 0.82 percent per year (total of 1.64 percent) was calculated from the growth of year 2015 to year 2020 for RSA 25 and was added to the existing (2018) traffic volumes. This growth rate was obtained from the Los Angeles County *Congestion Management Program* (Appendix D, Exhibit D-1, 2010). A list of cumulative projects was provided by the City of Monrovia Planning Division (Appendix C). Significant projects located near the proposed project were analyzed as cumulative projects and are illustrated on Figure 8. Table D shows the cumulative projects and their respective trip generations. It should be noted that there are a total of fifteen cumulative projects listed in Appendix C. Of these fifteen projects, only seven have the ability to measurably affect traffic within the study area. The remaining eight projects were

too far to affect traffic in the study area, or were included as part of the regional annual growth rate, due to their small project sizes.

The cumulative project trip distribution was determined based on each project's land use and location. The residential development used the same regional trip distribution as the project, due to its close proximity and similar land use type. The Artisan Food Village (The Lumberyard) regional trip distribution was distributed 15 percent to the north, 10 percent to the south, 45 percent to the west, and 30 percent to the east, favoring local routes. A 25 percent trip credit was taken for transit use. The cumulative project trip distribution for the Duarte Road Apartments project is from the Duarte Road Apartments TIA. The resulting combined trip assignment at the study intersections for the cumulative projects is provided on Figure 9.

The cumulative future condition was developed by adding ambient growth and cumulative project traffic to existing traffic volumes. The resulting cumulative (2020) peak-hour traffic volumes are shown on Figure 10. The cumulative plus project peak-hour traffic volumes are shown on Figure 11. In order to assess the project's potential impact in cumulative conditions, an analysis of future LOS was prepared for the study area intersections. This analysis assumes existing intersection geometrics. As Table E indicates, all study area intersections are anticipated to operate at satisfactory LOS during the cumulative baseline setting, with the exception of Myrtle Avenue/ Central Avenue–I-210 WB Ramps during the p.m. peak hour, Myrtle Avenue/Evergreen Avenue–I-210 EB Ramps during the p.m. peak hour, and Myrtle Avenue/Duarte Road during the p.m. peak hour. With the addition of the project in the cumulative baseline setting, all study area intersections would continue to operate at satisfactory LOS, with the exception of the previously identified deficient intersections and Magnolia Avenue/Evergreen Avenue during the p.m. peak hour. The addition of project trips will exceed the threshold of significance at the intersections of Magnolia Avenue/Evergreen Avenue and Myrtle Avenue/Central Avenue–I-210 WB Ramps. Mitigation measures to reduce the project's impact to less-than-significant levels are discussed later in this report. The LOS worksheets are included in Appendix B.

RAMP INTERSECTION ANALYSIS

Existing and Existing Plus Project Ramp Intersection Analysis

To demonstrate the effect that the project would have on the Caltrans jurisdiction ramp intersections in the existing condition, an existing plus project HCM analysis was prepared. Appendix D provides the ramp intersection HCM LOS worksheets. Table F presents a summary of existing and existing plus project ramp intersections, which indicates that all study area ramp intersections currently operate at satisfactory LOS during the a.m. and p.m. peak hours. With the addition of the project in the existing setting, all study area freeway ramp intersections would continue to operate at satisfactory LOS. Therefore, the project can be implemented in the existing setting with no significant peak-hour ramp intersection impacts.

Cumulative and Cumulative Plus Project Ramp Intersection Analysis

To demonstrate the effect that the project would have on the Caltrans jurisdiction ramp intersections in the cumulative (2020) condition, a cumulative plus project HCM analysis was prepared.

Table G presents a summary of cumulative and cumulative plus project ramp intersections, which indicates all study area freeway ramp intersections are projected to operate at satisfactory LOS during the a.m. and p.m. peak hours. With the addition of the project in the cumulative setting, all study area intersections would continue to operate at satisfactory LOS. Therefore, the project can be implemented in the cumulative setting with no significant peak-hour ramp intersection impacts.

FUTURE YEAR 2035 CONDITIONS

A future year 2035 roadway link analysis has been performed acknowledging the City's *General Plan Traffic Study* (2007). The regional ambient growth rate (7.65 percent, 0.45 percent per year for 17 years) and traffic volumes from the related projects identified earlier in the report were applied to the existing roadway segment ADT in order to arrive at forecast 2035 conditions. The growth rate for the future year 2035 conditions was calculated from the growth of year 2015 to year 2035 for

RSA 25, obtained from the Los Angeles County *Congestion Management Program* (Appendix D, Exhibit D-1, 2010).

Project traffic added to the future year 2035 roadway link analysis uses the same trip generation and trip distribution as in the existing and cumulative conditions, based on the daily and peak-hour trip rates taken from the *Trip Generation Manual,* 9th Edition (ITE 2012), with a 20 percent trip credit based on transit use. The trip generation and trip distribution for project traffic are found in Table B and Figure 5. The project trip assignment for the studied roadway segments is shown in Table H, under Project ADT.

This analysis uses existing roadway segment lane assignments. Appendix E provides the roadway segment ADT counts, provided by the City Traffic Engineer. As Table H indicates, all study area roadway segments are anticipated to operate at satisfactory LOS during the future year 2035 baseline setting. All study area roadway segments would continue to operate at satisfactory LOS with the addition of the project traffic in the future year 2035 baseline setting. Therefore, the project can be implemented in a future year 2035 setting with no significant roadway segment impacts.

FUTURE YEAR 2035 CONDITIONS – PROGRAM SCENARIO

The 9.6-acre block where the project is located is bounded by Evergreen Avenue, Magnolia Avenue, Mayflower Avenue, and the Metro Gold Line. The entire block will undergo a General Plan Amendment and a Zoning Code Amendment. The entire block can be divided into two pieces – the project area (6.77 acres) and the remaining parcels (totaling 2.83 acres). The remaining parcels are privately owned but do not have any specific development/redevelopment plans at this time. As a result, the proposed Alexan Specific Plan project will be subject to an environmental analysis at a "project level", while the redesignation of the remaining parcels will be subject to an environmental analysis at a program level scenario.

The future program level analysis analyzes up to 518 apartment DUs using the same roadway segment analysis as the future year 2035 traffic condition. The purpose of this analysis is to examine the maximum development potential and the potential to create any circulation impacts for development over the entire block.

Trip generation calculations for the program scenario were based on the daily trip rates taken from the *Trip Generation Manual*, 9th Edition (ITE 2012). Project traffic added to the future year 2035 roadway link analysis compares 518 apartment DUs with the existing uses, with a 20 percent trip credit for transit use, for a net trip generation of 2,363 ADT. This program scenario assumes existing roadway segment geometrics and a similar trip distribution to the existing, cumulative, and future year 2035 conditions. The project trip assignment for the studied roadway segments is shown in Table I, under Project ADT.

As Table I indicates, all study area roadway segments will operate at satisfactory LOS during the potential maximum project's future year 2035 baseline setting. All study area roadway segments would continue to operate at satisfactory LOS with the addition of the 518 potential apartment DUs in the project's future year 2035 baseline setting. Therefore, the 518 potential apartment DUs can

be implemented in the project's future year 2035 setting with no significant roadway segment impacts.

SPECIAL ISSUES

Access Analysis

Access to the 1625 Magnolia Avenue project site will be provided via two full-access driveways along Evergreen Avenue and Magnolia Avenue. Both driveways will have one lane of travel for inbound and outbound directions. HCM based intersection analysis has been utilized as the metric to evaluate the adequacy and performance of the two unsignalized driveways.

As presented previously in Tables C and E, the intersections of Project Driveway 1/Evergreen Avenue and Magnolia Avenue/Project Driveway 2 are anticipated to operate at satisfactory LOS during the a.m. and p.m. peak-hour periods in both the existing plus project and cumulative plus project scenarios.

Consistent with HCM unsignalized intersection analysis methodology, the LOS results shown in Tables C and E represent the delay in seconds for the worst affected movement, in this case the outbound left-turn movements. In the interest of assessing the performance of inbound vehicles coming off of Evergreen Avenue and Magnolia Avenue, the calculated delay values of the inbound left-turn movements are presented in Table J. As shown in the table, all inbound left-turn movements are anticipated to operate at LOS A.

Table J: Access Analysis

Intersection		Movement	Existing Plus Project				Cumulative Plus Project			
			AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
			Delay (seconds)	LOS	Delay (seconds)	LOS	Delay (seconds)	LOS	Delay (seconds)	LOS
3	Project Driveway 1/ Evergreen Avenue	WBL	7.7	A	7.9	A	7.7	A	7.9	A
6	Magnolia Avenue/ Project Driveway 2	NBL	7.9	A	8.3	A	7.9	A	8.4	A

LOS = level of service
NBL = Northbound left
WBL = Westbound left

Right-turning vehicles entering either driveway from an uncontrolled adjacent roadway should not experience any control delay and, therefore, are not represented in Table J.

Sight Distance Analysis

Sight distance has been reviewed at both project driveways. Evergreen Avenue and Magnolia Avenue have a speed limit of 35 miles per hour (mph). The Caltrans *Highway Design Manual* (2017) recommends a corner sight distance of 385 feet (ft) for a design speed of 35 mph.

More than 385 ft of sight distance is available for the driveway along Evergreen Avenue in both directions. More than 385 ft of sight distance is available for the driveway along Magnolia Avenue in

both directions. Based on this analysis, no obstructions are anticipated for outbound project vehicles exiting onto the circulation system from the project site based on existing roadway design and the proposed site plan layout. The sight distance lines are presented in Figure 12.

Alternative Mobility Modes

The project incorporates design features to accommodate pedestrian circulation on site. Pedestrian traffic is afforded safe travel via sidewalks throughout the site that connect to the public right-of-way.

Transit facilities are accessible to and from the project site within a 0.25 mi (mi) radius. Metro bus stops are provided at the northeast and southwest corners of Mayflower Avenue/Duarte Road (Routes 264 and 267), and at the northwest and southeast corners of Magnolia Avenue/Duarte Road (Routes 264 and 267). These Metro bus routes provide transportation to the cities of Altadena, Pasadena, Arcadia, El Monte, and Duarte. The Metro Gold Line Station is southeast of the project site, within a 0.2 mi walk. The project site and the Metro Gold Line Station are accessible via the existing pedestrian connection across the street at Magnolia Avenue, north of the railroad tracks. The Metro Gold Line provides transportation from Azusa to East Los Angeles via downtown Los Angeles. Figure 13 presents the locations of the transit stations near the project site. In the vicinity of the project site, on-street (Class III) bicycle routes are indicated by the City along Magnolia Avenue in the General Plan.

Vehicle Miles Traveled Analysis

California has been preparing to move away from vehicle delay and LOS analysis as the primary measure of effectiveness for California Environmental Quality Act (CEQA) transportation analysis, and is switching to vehicle miles traveled (VMT). VMT is a measure of the number of miles traveled by vehicles within a specified region for a specific time period. The purpose of this disclosure is to provide an alternative to LOS that may be used to evaluate transportation impacts in the future. Based on the California Emissions Estimator Model (CalEEMod), the VMT calculations for apartment land use are presented in Table K. The City has not yet adopted specific criteria for VMT analysis; therefore, the estimated VMT is provided for disclosure purposes only. Because the existing uses were taken together and are indistinguishable, the existing ADT will be split based on a ratio created from the square footages of the existing uses.

Off-Ramp Queuing Analysis

A queuing analysis was conducted using Synchro (Version 10.1) software at the I-210 eastbound and westbound off-ramps intersecting Myrtle Avenue during the a.m. and p.m. peak-hours, in order to anticipate any spill-back of vehicles from the off-ramps onto the I-210 freeway.

The I-210 eastbound off-ramp is a dual-lane ramp approximately 815 ft long (total of 1,630 ft) of queue storage. The off-ramp queuing analysis utilized the traffic volumes available at the intersection of Myrtle Avenue/Evergreen Avenue-I-210 eastbound off-ramp. The eastbound traffic data at this intersection is the sum of the I-210 eastbound off-ramp traffic and eastbound through traffic along Evergreen Avenue. This data is compared to the 95th percentile queue formed from the combined off-ramp and Evergreen Avenue volumes to the vehicle storage capacity along the off-ramp to see if the queues would not spill back onto the I-210 freeway. It should be noted that there is an additional storage length of 360 ft (dual-lane of 180 ft each) between the intersection's eastbound stop bar and the off-ramp. This distance is not accounted for in the total queue distance. The queue distance is measured from the gore point to the entrance of the ramp.

The I-210 westbound off-ramp is a single-lane ramp approximately 990 ft long of queue storage. The off-ramp queuing analysis utilized the traffic volumes available at the intersection of Myrtle Avenue/Central Avenue-I-210 westbound off-ramp. The westbound traffic data at this intersection is the sum of the I-210 westbound off-ramp traffic and westbound through traffic along Central Avenue. This data is compared to the 95th percentile queue formed from the combined off-ramp and Central Avenue volumes to the vehicle storage capacity along the off-ramp to see if the queues would not spill back onto the I-210 freeway. It should be noted that there is an additional storage length of 420 ft between the intersection's westbound stop bar and the off-ramp. This distance is not accounted for in the total queue distance. The queue distance is measured from the gore point to the entrance of the ramp.

The queuing analysis worksheets for the existing (baseline and plus project) and cumulative (baseline and plus project) settings are provided in Appendix F and presented in Tables L and M. As shown in the tables, all queues are projected to fit within the provided capacity along the I-210 eastbound and westbound off-ramps.

Table L: Existing and Existing Plus Project Off-Ramp Queue Summary

Freeway Off-Ramp	Lane Description	Vehicle Storage Capacity (ft)	Vehicle Queue Length (ft)[1]				Exceeds Capacity?
			Existing		Existing Plus Project		
			AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour	
Myrtle Avenue/Central Avenue-I-210 WB Off-Ramp	Single-Lane Ramp	990	628	751	670	865	No
Myrtle Avenue/Evergreen Avenue-I-210 EB Off-Ramp	Dual-Lane Ramp	1,630	376	468	404	490	No

[1] 95th percentile queues were calculated by the Synchro 10 software.
EB = eastbound I-210 = Interstate 210
ft = foot/feet WB = westbound

Table M: Cumulative and Cumulative Plus Project Off-Ramp Queue Summary

Freeway Off-Ramp	Lane Description	Vehicle Storage Capacity (ft)	Vehicle Queue Length (ft)[1]				Exceeds Capacity?
			Cumulative		Cumulative Plus Project		
			AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour	
Myrtle Avenue/Central Avenue-I-210 WB Off-Ramp	Single Lane Ramp	990	739	881	739	933	No
Myrtle Avenue/Evergreen Avenue-I-210 EB Off-Ramp	Dual Lane Ramp	1,630	1,504	1,220	1,504	1,578	No

[1] 95th percentile queues were calculated by the Synchro 10 software.
EB = eastbound I-210 = Interstate 210
ft = foot/feet WB = westbound

REQUIRED MITIGATION MEASURES AND/OR RECOMMENDATIONS

Based on the results of this analysis, the development of the 1625 Magnolia Avenue Project will result in a significant impact to the intersections of Magnolia Avenue/Evergreen Avenue and Myrtle Avenue/Central Avenue–I-210 WB ramps in the cumulative year horizon. The addition of project traffic exceeds City thresholds for performance at both intersections of Magnolia Avenue/Evergreen Avenue and Myrtle Avenue/Central Avenue–I-210 WB Ramps during the p.m. peak hour for the cumulative plus project scenario. Therefore, project mitigation measures are required.

In order to mitigate the impact at the intersection of Magnolia Avenue/Evergreen Avenue, the centerline for the northern and southern legs of the intersection is recommended to be restriped and moved 2 feet to the west, to allow for de-facto northbound right-turns.

The southbound travel lanes at this intersection are recommended to be re-striped from a shared southbound through-right lane and a southbound through lane to an exclusive southbound right-turn lane and two southbound through lanes. This appears to be favorable within the existing right of way without modifying the existing curb or centerline. An analysis of this improvement is prepared in Table N and indicates the intersection would operate at levels of service better than in the baseline setting. These recommended improvements are anticipated to bring the project-related difference to an acceptable threshold of significance. The mitigation LOS worksheets are provided in Appendix G.

Table N: Cumulative Plus Project Mitigation LOS Summary

Intersection		Cumulative				Cumulative Plus Project				Cumulative Plus Project with Mitigation			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		ICU/ Delay	LOS	ICU/ Delay	LOS	ICU/ Delay	LOS	ICU/ Delay	LOS	ICU/ Delay	LOS	ICU/ Delay	LOS

I-210 = Interstate 210
HCM = Highway Capacity Manual
ICU = intersection capacity utilization
LOS = level of service
WB = westbound

The City of Monrovia is in the process of studying an area-wide Transportation Impact Fee that would allow new development to pay a trip fee to assist in project mitigation. If this program is adopted prior to the final entitlement of the proposed project, the project may be asked to participate in the program rather than implement the improvement at Myrtle Avenue/Central Avenue and the I-210 westbound ramps.

APPENDIX C

CUMULATIVE PROJECT LIST

City of Monrovia
Cumulative Project List – Land Development Projects

1. **725 East Huntington Drive (Former Albertsons Center)**
    - Commercial center façade renovations and interior tenant improvements. Possible future addition of square footage to west end of center. Potential subdivision of center into 3 potential brand name retails stores.
    - Lot Size: 6.06 Acres
    - Building Area: 98,000 SF (Existing area under proposed Tenant Improvement)
    - Under Construction

2. **530 Fano Street (12-Unit, 3-story, Residential Condominium Development)**
    - (New Construction) 12 unit residential condominium development with attached two car garages and six guest parking spaces.
    - Lot Size: 22,393 SF
    - Building Area: ±16,920 SF
    - In Building Plan Check

3. **1218 South 5th Avenue (City of Hope –Tenant Improvement)**
    - A façade remodel and additional roof-top equipment and ground level mechanical equipment for a new laboratory and research space.
    - Lot Size: 38,277 SF
    - Building Area: 42,936 SF (Existing area under proposed Tenant Improvement)
    - Under Construction

4. **SWC of Pomona Avenue between Primrose and Magnolia (MODA)**
    - 261 residential units for lease, including 2 courtyards totaling 18,500 sf and a two-story fitness gym. Total building height is 5 stories.
    - Lot Size: 2.8 acres (93 units per acre)
    - Building Area: 225,220 SF
    - Under Construction

5. **1110 – 1212 South Fifth Avenue (5th and Huntington)**
    - Residential/Commercial Mixed-Use Project, 4-story mixed use containing 154 residential units for lease and a ground floor retail space.
    - Lot Size: +/- 2.86 Acres
    - Building Area: 131,400 SF (154 Units) + 1,340 Retail Use
    - Under Construction

6. **137 West Pomona Avenue (The Lumber Yard) An Artisan Food Village**
    - Repurpose of two existing industrial buildings into chic food-hall. Existing *Building 1* totals ±9,490 square feet and existing *Building 2* totals ±15,364 square feet. A new ±2,040 square foot building will be added to the site.
    - Lot Size: ± 59,368
    - Total Floor Area Breakdown:
        i. Restaurant - 12,617 sf

ii. Coffee Shop - 2,165 sf
iii. Brewery Manufacturing - 3,477 sf
iv. Retail (Wine Retail and Tasting) - 2,675 sf
v. Mezzanine Storage- 4,841 sf

- Entitlements Approved

7. **239 West Chestnut Avenue (10-Unit Development)**
    - New 10 unit industrial condominium development with 38 parking spaces
    - Lot Size: 34,212 SF
    - Building Area: 16,349 SF
    - In Building Plan Check

8. **303 South Madison Avenue (6-Unit Planned Unit Development)**
    - 6 detached, two-story residential units for sale.
    - Lot Size: 20,241 SF
    - Building Area: 9,305 SF
    - Under Construction

9. **717-721 West Duarte Road-(8-Unit Residential Condominium Development)**
    - 8-unit residential condominium development (replacing two existing units)
    - Lot Size:18,652 SF
    - Building Area: 13,667 SF
    - In Planning Review (entitlements not yet granted)

10. **N/E Corner of Magnolia Avenue and Duarte Road (296 Residential Apartments)**
    - 205 and 225 W Duarte Road, 1725 Peck Rd (8507-003-045, 046, 047 and 048)
    - Site Area: 163,254 SF (3.75 Acres)
    - Density: 79 units per acre
    - Total New Residential Square Footage: 251,348 SF
    - In Planning Review (entitlements not yet granted)

11. **8251 South Myrtle Avenue (113 Units Residential Units)**
    - APNs: 8508-006-040, 0039,038, 037, 055, 054)
    - Site Area: 2.1 acres
    - Concept Stage – Currently On Hold.

12. **Corner of Myrtle and Lime - Myrtle Lime Apartments (140 Residential Units)**\
    - Former Frontier and Existing City Parking Lot Property
    - Concept Stage - Massing Study Submitted

City of Monrovia (City) staff requested for the analysis of additional cumulative projects that were not included in the original cumulative project list, dated June 5, 2017. This request was made on April 18, 2018, in the City's screencheck comment letter for the 1625 Magnolia Avenue project Traffic Impact Analysis in the City of Monrovia, California. The additional cumulative projects are shown below:

- Station Square North Burke North – 280 dwelling units
- Marriott Town Place Suites – 109 rooms (Southwest corner of Huntington Drive and Myrtle Avenue)
- Thomas & Saffron Associates Residential Development – 103 dwelling units (current City park-and-ride lot)

Subject: 1625 Magnolia Avenue Parking Analysis

Dear Mr. Schiffer:

LSA is pleased to present this parking analysis for the 1625 Magnolia Avenue residential development (project) in Monrovia, California. This analysis is based on the project site plan dated September 27, 2018. The proposed project is a residential development comprising a total of 436 apartment dwelling units. Of the 436 dwelling units, 20 will be studio, 254 will be one-bedroom (4 of which are live-work units), 147 will be two-bedroom, and 15 will be three-bedroom for a total of 613 bedrooms in the complex. A total of 797 parking spaces will be provided; 631 parking spaces are allocated for apartment residents, 9 spaces for live work parking, 112parking spaces are allocated for apartment guests, 11 parking spaces are allocated for leasing office guests, and 34 parking spaces are for paid public use. The 34 paid public parking spaces will be provided mainly for the Metro Gold Line Station. Therefore, a total of 763 parking spaces will be available primarily for the project's use. The project will also provide 262 bicycle parking spaces on site for residents of the project and patrons of the Metro Gold Line Station.

The project site is close to alternative modes of transportation. A pedestrian sidewalk connecting the project site and the Metro Gold Line Station will be constructed for ease of circulation. Three Metro bus stops are within walking distance of the project site and are accessible via sidewalk connections. On-street (Class III) bicycle routes are located along Magnolia Avenue, next to the project site.

PARKING ANALYSIS

City Parking Requirements

City of Monrovia (City) Zoning Code 17.24.030 states that multiple-family housing developments within Monrovia shall provide 2.5 parking spaces per dwelling unit for multifamily residential projects with six or more units. Based on these rates, the proposed 436 apartments would require 1,090 parking spaces; however, this method does not account for the more urban transition of the area and the transit-adjacent nature of the project.

Published Survey Data

The Institute of Transportation Engineers (ITE) Parking Generation, 4th Edition, provides information based on three decades of research. Empirical data for high-rise apartments shows the 85th percentile peak-period parking demand to be 1.52 spaces per dwelling unit, as presented in Table A. High-rise apartments are rental units that have five or more levels and one or more elevators. Low- or mid-rise apartments (Land Use code 221) are a related use, but are composed of as little as three other buildings (i.e., quadraplexes) or units of one to four levels. Some of the sample of low- or mid-rise were affordable units and some were outside continental United States. The Land Use code

description and parking demand data from the *Parking Generation* Manual is provided as an attachment. The 436-unit project would create a demand for 663 parking spaces, according to the ITE parking rate.

As Table A shows, the current site plan could provide adequate parking to satisfy the parking demands of the project based on ITE parking research. The parking supply exceeds the calculated parking demand by 134 spaces.

Table A: Proposed Project Parking Demand from ITE Parking Rates

	ITE Parking Demand
85th Percentile Observed Rate	1.52 spaces per dwelling unit
Proposed Project	436 dwelling units
Parking Demand	663 parking spaces
Proposed Parking	797 parking spaces
Parking Surplus (Proposed Parking – Parking Demand)	134 parking spaces

Surveys of Similar Sites

In May 2014, National Data and Surveying Services conducted parking demand surveys on behalf of LSA at three apartment complexes in Southern California. These sites have similar characteristics to the proposed project. Specifically, on-street parking is not permitted adjacent to the surveyed sites, one-bedroom units account for approximately one-half of the units at each complex, and a parking supply ratio of less than two spaces per bedroom is provided at each site. At these complexes, residential parking spaces were observed to be shared with guest parking spaces. Therefore, the parking demand observed is the total parking demand for all patrons, guests and residents. It should be noted that the locations are not adjacent to transit; therefore, the parking demand may be higher than the proposed project.

The three surveyed sites were IMT Valencia (208 units and 397 parking spaces) at 28100 Smyth Drive in Valencia, Alara Links (230 units and 448 parking spaces) at 25330 Silver Aspen Way in Valencia, and Ridgestone (352 units and 665 parking spaces) at 39415 Ardenwood Way in Lake Elsinore. LSA calculated observed parking rates based on the total number of dwelling units within the apartment complexes. Tables B and C present the resulting parking rates per dwelling unit.

Table B: Weekday Surveyed Apartment Parking Rates per Dwelling Unit

	IMT Valencia		**Alara Links**		**Ridgestone**

9:00 p.m.	341	1.05	342	1.07	496	0.94

Note: **Bold** numbers indicate the highest calculated parking rate for each site.

As anticipated, the parking demand was highest late at night and early in the morning. Table F summarizes the highest period of parking demand observed at each site and calculates the average parking rate from the three surveyed sites. A weighted average of 1.65 parking spaces per dwelling unit and 1.11 parking spaces per bedroom was utilized in the observed apartment complexes.

Table F: Peak Surveyed Apartment Parking Rates

	Peak Period	Peak Parking Rate (Dwelling Units)	Peak Parking Rate (Bedrooms)
IMT Valencia (208 dwelling units; 326 bedrooms)	Weekday 6:00 a.m.	1.86	1.19
Alara Links (230 dwelling units; 320 bedrooms)	Saturday 6:00 a.m.	1.64	1.18
Ridgestone (352 dwelling units; 528 bedroom)	Saturday 6:00 a.m.	1.53	1.02
Weighted Average		**1.65**	**1.11**

The 1625 Magnolia Avenue project proposes to construct 20 studio, 254 one-bedroom, 147 two-bedroom, and 15 three-bedroom dwelling units for a total of 436 dwelling units and 613 bedrooms. Table G calculates the estimated parking demand for the proposed project based on the average parking rates developed above. Table G also compares the estimated parking demand for the proposed project to the proposed parking supply.

Table G: Proposed Project Parking Demand from Surveyed Parking Rates

	Empirical Parking Demand per Dwelling Unit	Empirical Parking Demand per Bedroom
Peak Observed Rate	1.65 spaces per dwelling unit	1.11 spaces per bedroom
Proposed Project	436 dwelling units	613 bedrooms
Projected Demand	719 spaces	680 spaces
Proposed Parking Supply	797 spaces	797 spaces
Parking Surplus	78 spaces	117 spaces

As Table G shows, applying the surveyed parking rates from Table F (1.65 spaces per dwelling unit and 1.11 spaces per bedroom) to the proposed project renders parking demand with a surplus in both considerations: by dwelling unit (78 spaces) and by bedroom (117 spaces). Therefore, whether the parking demand is generated based on a rate per dwelling unit or a rate per bedroom, the proposed project will offer adequate parking supply.

Live-Work Guest Parking

The ITE Parking Generation, 4th Edition, was used to identify a parking rate for the live-work commercial parking spaces. The live-work units are considered to be a mix of residential and commercial office uses. Given the nature of the space, office use or professional service is the most likely use for the space. The office use shows the 85th percentile peak-period parking demand to be 2.98 spaces per 1,000 square feet, as presented in Table H. The proposed office space within the live-work units is approximately 1,561 square feet. The calculated demand of parking spaces based on this ITE parking rate is seven spaces. As shown in Table G, the parking surplus for parking demand based on dwelling units and bedrooms will be greater than seven spaces; therefore, the commercial parking supply is anticipated accommodate the parking demand for live-work guests.

Table H: Proposed Live-Work Commercial Parking Demand from ITE Parking Rates

	ITE Parking Demand
85th Percentile Observed Rate	2.98 spaces per 1,000 square feet
Proposed Project	1,561 square feet
Calculated Demand	5 spaces

Bicycle Parking

The City's Bicycle Master Plan (June 2016) states that all new major developments in Monrovia are recommended to provide bicycle parking. The bicycle parking guidelines state that multifamily residential uses are recommended to provide 1 short-term bicycle parking space per 10 residential units and 1 long-term bicycle parking space per 2 residential units. Based on this guideline, the proposed project of 436 dwelling units is intended to provide 44 short-term bicycle parking spaces and 218 long-term bicycle parking spaces, for a total of 262 bicycle parking spaces. The proposed project will provide 44 short-term bicycle parking spaces and 218 long-term bicycle parking spaces, for a total of 262 bicycle parking spaces in a bike storage area on the project site. Furthermore, the project will provide an additional 11 bicycle parking spaces for leasing and Metro Gold Line Station guests.

CONCLUSION

The City's Zoning Code requires 2.5 parking spaces per dwelling for multifamily residential projects with six or more units. Nationwide studies (ITE Parking Generation) determined that the parking generation rate for apartments is 1.52 spaces per dwelling unit based on the 85th percentile rate. Surveys taken in Southern California in May 2014 identified average parking generation rates of 1.65 spaces per dwelling unit and 1.11 spaces per bedroom. Although the proposed parking rate is lower than the City's required parking rate of 2.5 spaces per dwelling unit, the proposed rate is greater than the surveyed parking demand rates. If these parking rates are applied to the proposed project, then the proposed 797 parking spaces would provide a surplus of parking spaces.

The project's proximity to multiple transit uses and provided bicycle parking spaces will help to alleviate the project's parking demand. Additionally, there are 34 public parking spaces that are primarily intended to serve transit patrons. These spaces should be available to serve the project parking demand during nights and weekends when the transit parking demand is lower. The amount of provided parking spaces for the project is anticipated to be adequate based on the results of this analysis.

Sincerely,

LSA Associates, Inc.

Anthony Petros
Principal

Attachment: Institute of Traffic Engineers *Parking Generation* 4th Edition Land Use 222: High-Rise Apartment

Land Use: 222
High-Rise Apartment

Description

High-rise apartments (rental dwelling units) are units located in rental buildings that have five or more levels (floors) and most likely have one or more elevators. Low/mid-rise apartment (Land Use 221) is a related use.

Database Description

The database consisted of a mix of central city, not downtown (CND) and urban central business district (CBD) sites. Parking demand rates at the CND sites differed from those at the CBD sites and, therefore, the data were analyzed separately.

- Average parking supply ratio: 2.0 parking spaces per dwelling unit at the CND sites. Parking availability was not provided for the CBD sites.

All study sites were within three blocks of transit service.

Parking demand counts were submitted between 12:00 and 5:00 a.m. on a weekday.

The two CBD sites had 740 and 940 dwelling units and peak parking demand rates of 0.34 and 0.56 parked vehicles per dwelling unit, respectively. The parking demand information from these sites was excluded from the data plots and analysis.

Parking surveys of apartments should attempt to obtain information on occupancy rate. Future parking surveys should also indicate the number of levels contained in the apartment building as well as the number of bedrooms for each unit.

MEMORANDUM

DATE: July 15, 2019

TO: Ashley Swarts, Trammell Crow Residential

FROM: Anthony Petros, Principal, LSA

SUBJECT: 1625 Magnolia Avenue Traffic Study Cumulative (Year 2022) Analysis

The *1625 Magnolia Avenue Traffic Study* LSA prepared in May 2018 evaluated Cumulative and Cumulative Plus Project impacts using a 2020 Year horizon. This reflected a 2-year construction period. This cumulative analysis evaluated 10 study area intersections using the Highway Capacity Manual (HCM) methodology for unsignalized intersections and California Department of Transportation (Caltrans) facilities and Intersection Capacity Utilization (ICU) methodology for signalized city intersections, based on the City of Monrovia's (City) thresholds of significance. Ambient growth between 2018 and 2020 was applied to existing counts and included the contribution of seven cumulative projects.

As shown in the Traffic Study, results of the Cumulative Plus Project (Year 2020) condition suggest impacts to intersection levels of service (LOS) at Myrtle Avenue/Central Avenue-Interstate 210 (I-210) westbound off-ramp (Caltrans facility) and Magnolia Avenue/Evergreen Avenue. Recommended mitigation measures include restriping the Magnolia Avenue/Evergreen Avenue northern and southern leg centerline allowing for the inclusion of a de facto right-turn lane and adding a southbound right-turn lane at Myrtle Avenue/Central Avenue-I-210 eastbound off-ramp. Application of these mitigation measures, illustrated in Table N of the Traffic Study, offset these project impacts.

Cumulative and Cumulative Plus Project (Year 2022) Analysis

As directed by City staff, an amendment to the Cumulative analysis was initiated to reflect Year 2022 conditions. To prepare the 2022 cumulative traffic base, the ambient growth was increased by an additional 2 years (or 1.64 percent). At the direction of City staff, no new cumulative projects were added to this scenario.

As a result, Table E (Cumulative and Cumulative Plus Project LOS Summary), Table G (Cumulative and Cumulative Plus Project Ramp Intersection Summary), and Table M (Cumulative and Cumulative Plus Project Off-Ramp Queue Summary) were updated to reflect the 1.64 percent growth rate increase.

Table A (Cumulative and Cumulative Plus Project LOS Summary), Table B (Cumulative and Cumulative Plus Project Ramp Intersection Summary), and Table C (Cumulative and Cumulative Plus Project Off-Ramp Queues Summary) of this memorandum are provided to illustrate results of the Cumulative Year 2022 scenario (all tables are provided in Attachment A). HCM and ICU worksheets are provided in Attachment B.

Based on the results of the Cumulative Year 2022 analysis, impacts to Myrtle Avenue/Central Avenue-I-210 westbound off-ramp and Magnolia Avenue/Evergreen Avenue still occur. Mitigation measures previously mentioned are recommended for these intersections. With the increased growth rate, a new impact to ramp LOS is shown at Myrtle Avenue/Evergreen Avenue-I-210 eastbound off-ramp in the p.m. peak hour. Mitigation recommended for this intersection includes reassigning the eastbound through movement to an eastbound through-left movement. As shown in Table D, application of this mitigation measure will eliminate the impact at Myrtle Avenue/Evergreen Avenue-I-210 eastbound off-ramp and bring ramp operations back to acceptable levels of service. Both improvements to Myrtle Avenue/Central Avenue-1-210 westbound off-ramp and Myrtle Avenue/Evergreen Avenue-I-210 eastbound off-ramp are included in the Monrovia Citywide Fee Program.

The City has conducted an Area Traffic Study and is devising a Development Impact Fee (DIF) program to address the cumulative effects of major development projects on the transportation system in the vicinity of the Monrovia Gold Line Station. The DIF will include each project's fair share cost of the traffic study and the recommended mitigation measure(s) identified for that project's specific impact(s). If the City Council adopts the DIF, it shall be paid prior to recording the Final Map or the amount of the DIF included in the bonds. Payment or bonding of the DIF shall fully satisfy the project's mitigation obligation for those improvements covered by the DIF. If the City Council does not adopt a DIF but does approve an Area Traffic Study that commits future applicants to pay fair share fees and obligates the City to spend those fees on specified improvements, the project will not pay a DIF, but will be responsible for their fair share as a fee in-lieu of improvements for mitigating the specific impacts identified in the project's Traffic Study. The costs of those improvements or fee-in-lieu of for mitigation shall be paid prior to the Final Map recording, or a bond equal to the determined amount shall be posted prior to the Final Map recording.

Conclusion

Based on this analysis of Cumulative Year 2022 conditions and application of mitigation measures, the project can continue to be implemented without significantly impacting the surrounding study are intersections in the future year scenario.

I trust this information will be useful in your planning efforts. If you have any questions, please call me at (949) 553-0666.

Water Supply Assessment
City of Monrovia
September 2018

Executive Summary

The proposed "Alexan Monrovia Project" (Project) is located within the City of Monrovia (City). Water service in the City is provided by the City's water system. The proposed Project will result in an additional water demand during an average/normal year of up to 69 acre-feet per year (AFY) by fiscal year 2019-20 and thereafter. The City's estimated water demands with the Project is approximately 7,106 AFY by the year 2040. The City currently meets water demands by pumping groundwater from the Main San Gabriel Basin. Management of the Main San Gabriel Basin, including delivery of untreated imported water for groundwater replenishment, allows the City (and all other producers within the Main San Gabriel Basin) to use groundwater to meet water demands without limitations on the quantity of groundwater pumping from the Main San Gabriel Basin. Reliability of the Main San Gabriel Basin groundwater supplies has been demonstrated during droughts with no resulting limitation of groundwater production. Based on the demonstrated reliability of the City's water supply sources, sufficient water supplies can be reasonably concluded to be fully reliable and available to meet the City's existing demands and future demands through 2040, with the Project, including during single and multiple dry years.

1.0 Introduction

The proposed Project will consist of 436 residential units. The proposed Project will be constructed on property which is currently improved and currently served water by the City. The water demand for the existing improvements on the property is approximately 1.2 AFY. Water demands within the City and the long-term water supply for the City are discussed below.

1.1 City of Monrovia

The City's water system is located in Los Angeles County and serves the City of Monrovia (see Figure 1). The City's water system is a "public water system" as defined by California Water Code Section 10912 (c). Currently, there are approximately 9,600 service connections serving a population of approximately 36,600 people. The City's water system will provide water service to the Project (see Figure 1).

1.2 Water Supply Planning Provisions

Population growth in the State of California has resulted in additional water demand on water systems. The State legislature has enacted laws to ensure the increased demands are adequately addressed and a firm source of water supply is available prior to approval of certain new developments. The regulations include California Water Code Division 6, Part 2.10, Sections 10910-10915 (Water Supply Planning to Support Existing and Planned Future Use) (California Water Code) which is briefly described below. The provisions of the California Water Code and the Government Code seek to promote more collaborative planning between local water suppliers, cities and counties and require detailed information regarding water availability to be provided to city and county land use planners prior to approval of certain specified large land use development projects.

This Water Supply Assessment (WSA) was prepared pursuant to the requirements of the California Water Code and the Government Code for the approach, required information, and criteria to confirm the City has sufficient water supplies to meet the

projected water demands of the Project, in addition to existing and other planned future uses. The Urban Water Management Plan (UWMP) is a foundational document for compliance with the California Water Code. The provisions of the California Water Code repeatedly identify the UWMP as a planning document that can be used by a water supplier to meet the standards set forth in both statutes. California Environmental Quality Act (CEQA) guidelines section 15083.5 contains similar provisions regarding consultation with water agencies for certain projects. The City's 2015 UWMP (June 2016), Metropolitan Water District of Southern California's (MWD) 2015 Regional UWMP (June 2016), and Upper San Gabriel Valley Municipal Water District's (USGVMWD) 2015 UWMP (June 2016), prepared pursuant to California Water Code Division 6, Part 2.55, Section 10608 (Sustainable Water Use and Demand Reduction) and California Water Code Division 6, Part 2.6, Sections 10608-10656 (Urban Water Management Planning) and the Water Conservation Act of 2009 (also known as SB X7-7), describe future water demands and future availability of the water supply sources used by the City and other retail water agencies operating within the Main San Gabriel Basin. These UWMP documents were used to prepare this WSA. The projected water demands for the Project are not included in the City's 2015 UWMP.

1.2.1 California Water Code (Sections 10910-10915)

Existing law requires every urban water supplier to identify, as part of its UWMP, the existing and planned sources of water available to the supplier. Existing law prohibits an urban water supplier that fails to prepare or submit its UWMP to the Department of Water Resources (DWR) from receiving financial or drought assistance from the State until the plan is submitted.

The California Water Code requires an urban water supplier to include in its UWMP a description of all water supply projects and programs that may be undertaken to meet total projected water use over the next 20 years. The California Water Code requires a city or county that determines a project is subject to the CEQA to identify any public water system that may supply water for proposed developments and to request those public water systems to prepare a specific WSA. If the water demands for the proposed developments have been accounted for in a recently adopted UWMP, the water supplier

may incorporate information contained in that plan to satisfy certain requirements of a WSA. The California Water Code requires the assessment to include, along with other information, an identification of existing water supply entitlements, water rights, or water service contracts relevant to the identified water supply for the proposed project and the quantities of water received in prior years pursuant to those entitlements, rights, and contracts.

The California Water Code also requires the public water system, or the city or county, as applicable, to submit its plans for acquiring additional water supplies if that entity concludes that water supplies are, or will be, insufficient.

1.2.2 Government Code 66473.7

Government Code 66473.7 prohibits approval of a tentative map, or a parcel map for which a tentative map was not required, or a development agreement for a subdivision of property of more than 500 dwelling units, except as specified, including the design of the subdivision or the type of improvement, unless the legislative body of a city or county or the designated advisory agency provides written verification from the applicable public water system that a sufficient water supply is available or, in addition, a specified finding is made by the local agency that sufficient water supplies are, or will be, available prior to completion of the project. Sufficient water supply is the total water supply available during normal, single-dry, and multiple-dry years within a 20-year projection that will meet the projected demand, in addition to existing and planned future uses.

2.0 Water Demands

2.1 Historical Water Demand

The City's primary water supply source is groundwater from the Main San Gabriel Basin (see Figure 2). In addition, the City can purchase treated imported water supplies from MWD through its USG-7 connection. Table 2 provides the City's city wide historical water use. Over the past 20 years, the City's groundwater production has ranged from approximately 5,810 acre-feet per year (AFY) to approximately 9,706 AFY, with an average production of approximately 7,690 AFY. The City historically has not utilized imported water supplies to meet demands.

Table 1. City Wide Historical Water Demands (AFY)

Calendar Year	Main Basin	MWD USG-7	Total Demand
1998	7,466	0	7,466
1999	9,073	0	9,073
2000	8,477	0	8,477
2001	8,812	0	8,812
2002	5,810	0	5,810
2003	9,706	0	9,706
2004	8,497	0	8,497

2016	6,410	0	6,410
2017	7,006	0	7,006
20-Year Average	7,690	0	7,690

Sources: Main Basin production from 1998 through 2017 from 2015 UWMP and Main San Gabriel Basin Annual Reports. Treated Imported Water data from 2015 UWMP and Main San Gabriel Basin Annual Reports.

2.2 Projected Future Water Demand

The proposed Project will consist of approximately 436 residential units. The City's water system will provide potable water to the entire Project.

2.2.1 Project Water Demand

According to the California State Water Resources Control Board, the indoor water standard will be 55 gallons per capita per day (GPCD). Assuming 2.5 persons per residential units, the estimated population from the proposed Project is about 1,090 (436 units x 2.5). Based on the 55 GPCD and an estimated 1,090 people living in the proposed Project, the estimated demand from the proposed Project is approximately 67 AFY (55 GPCD x 1,090 x 365 days in a year / 325,851 gallons in an acre-feet).

According to a landscape plan prepared by EPT Design, the proposed Project will have approximately 47,894 square feet of irrigated areas. The Project landscape irrigation demand was estimated using a water budget calculator from the California Department of Water Resources. Based on an evapotranspiration rate of 52.30 inches per year (City of Pasadena), an irrigation efficiency of 0.7, a plant factor of 0.4 for low to moderate water use plants, and a unit conversion factor of 0.62, the estimated irrigation water use rate is approximately 2.5 AFY per acre (or 52.30 x 0.62 x 0.4 x (1 / 0.7) x (43,560 sq. ft / 1 acre) x (1 acre-foot / 325,851 gallons)). The estimated irrigation water demand for the Project is approximately 2.7 AFY (or 47,894 sq. ft. x (1 acre / 43,560 sq. ft.) x 2.5 AFY per acre). The total estimated demand is approximately 70 AFY (or 67 AFY + 2.7 AFY).

The proposed Project will be constructed on property which had an existing water demand of 1.2 AFY. Consequently, the additional demand from the proposed Project is approximately 69 AFY (or 70 AFY – 1.2 AFY).

2.2.2 City Wide Projected Future Demands

The City's 2015 UWMP includes current and projected future water demands for its service area over the next twenty years. However, the projected water demands for the Project are not included in the City's 2015 UWMP. The projected water demands in the City's 2015 UWMP were calculated based on: (1) urban per capita water use targets developed pursuant to Senate Bill SBX7-7 (Water Conservation Act of 2009); and (2) population projections. Urban per capita water use targets were identified in the City's 2015 UWMP. The population projections incorporated in the City's 2015 UWMP were projected using growth rate projections obtained from the Southern California Association of Governments (SCAG), an organization mandated by the federal government to research and draw up plans for transportation, growth management, hazardous waste management, and air quality.

Table 2 shows the projected water demands through 2040 for the City's service area including the Project's water demands. It is anticipated the projected water demands for the Project will begin by 2020.

Table 2. City Wide Projected Water Demands (AFY)

Fiscal Year	Water Demands (AFY)	
	2015 UWMP [1]	Including Alexan Monrovia Project [2]
2019-20	6,635	6,704
2024-25	6,734	6,803
2029-30	6,833	6,902
2034-35	6,935	7,004
2039-40	7,037	7,106

Notes:
1/ The projected water demands for the Project are not included in the City's 2015 UWMP.
2/ Includes an additional demand of approximately 69 AFY from the Alexan Monrovia Project

3.0 Water Supply Sources

3.1 Main San Gabriel Basin

The total fresh water storage capacity of the Main San Gabriel Basin is estimated to be approximately 8.7 million AF. Of that storage, about 1,000,000 AF is historically considered to have been actively managed for local public water supply. The Court adjudication of the Main San Gabriel Basin in 1973 provided groundwater management that allows operation of basin storage to meet water demands and provide a mechanism to fund the purchase and replenishment of untreated imported water to supplement recharge of local water. The management of basin storage, and the use of supplemental imported water for recharge, expand and increase the reliability of the available basin groundwater supply. A description of the elements of the adjudication that allow efficient management of the Main San Gabriel Basin is included in the Main San Gabriel Basin Judgment (see attached Appendix A). Although there is no limit on the quantity of groundwater that may be extracted by Parties to the Main San Gabriel Basin adjudication, including the City, groundwater production in addition to a pumper's proportional share (pumper's share) of the Operating Safe Yield (see Appendix B), requires the pumper to bear the cost of imported Replacement Water to recharge the Main San Gabriel Basin. The City's pumper's share is currently 3.09472 percent of the Operating Safe Yield.

3.1.1 Groundwater Wells

The City pumps groundwater from its five active wells, Wells No. 2, No. 3, No. 4, No. 5, and No. 6, which are located within the Main Basin. These wells have a combined capacity of about 10,000 gpm.

Table 3 shows the City's historical groundwater production from the Main San Gabriel Basin, which ranged from 5,810 AFY to 9,706 AFY, with an average of approximately 7,690 AFY. The reliability of the Main San Gabriel Basin to meet all demands is discussed below in Section 3.1.2.

Table 3. City's Production from the Main San Gabriel Basin (AFY)

Calendar Year	Total Demand
1998	7,466
1999	9,073
2000	8,477
2001	8,812
2002	5,810

2017	7,006
20-Year Average	7,690

Source: Calendar Years 1998 through 2017 from 2015 UWMP and Main San Gabriel Basin Annual Reports.

3.1.2 Main San Gabriel Basin Reliability

The City's primary water supply is from the Main San Gabriel Basin (additional water supply from MWD is discussed in Section 3.2). The 1973 Court adjudication required the efficient management of groundwater supplies. Historical water supplies used within the Main San Gabriel Basin to meet its demands are shown in Table 4 and include groundwater extractions, surface water diversions, and direct delivery of treated imported water (from USGVMWD and Three Valleys Municipal Water District (TVMWD)) within the Main San Gabriel Basin. Table 5 provides rolling ten-year averages of the total water demand. Although historical total water demands in the Main San Gabriel Basin had generally increased as population increased, the rolling ten-year averages for the past ten years show a decrease in average total water demand.

Table 4. Historical Water Demand in the Main San Gabriel Basin (AFY)

Fiscal Year	Recorded Production [1]			Direct Deliveries (Treated Imported Water) [2]			Total Water Demand [3]
	Groundwater	Surface Water	Sub-Total	USGVMWD	TVMWD	Sub-Total

2016-17	245,641	-3.9%

Source: Main San Gabriel Basin Watermaster Annual Reports. 10-Year Rolling Average based on Table 4.

Future total water demands in the Main San Gabriel Basin can be projected based on population growth. Population projections within the Main San Gabriel Basin were based on population data provided in USGVMWD's 2015 UWMP, San Gabriel Valley Municipal Water District's (SGVMWD's) 2015 UWMP, and TVMWD's 2015 UWMP. Based on the population data, the total population within the combined service areas for all Main San Gabriel Basin water producers was estimated (see Table 6). The total population served by Main San Gabriel Basin water producers is projected to increase from approximately 1,202,300 people, in 2015, to approximately 1,355,200 people, in 2040. This represents an increase of approximately 153,000 people over twenty five years, which is an average annual growth rate of approximately 0.6 percent.

Table 6. Projected Population Served by Main San Gabriel Basin Producers

Year	Population
2015	1,202,260
2020	1,226,492
2025	1,253,721
2030	1,296,341
2035	1,325,459
2040	1,355,200

Sources: Population projections from Upper San Gabriel Valley Municipal Water District's 2015 UWMP, San Gabriel Valley Municipal Water District's 2015 UWMP, and Three Valleys Municipal Water District's 2015 UWMP

Total water demands in the Main San Gabriel Basin (excluding major industrial uses and exports to the Central Basin) can be compared with population information to obtain a per capita water use rate. Between fiscal years 2012-13 and 2016-17 (see Table 7), the average annual demand in the Main San Gabriel Basin was approximately 231,188 AFY; the average total export to the Central Basin was approximately 37,552 AFY; and the average total major industrial demand was approximately 5,828 AFY. Based on the net average demand over the recent five years in the Main San Gabriel Basin of approximately 187,808 (231,188 – 37,552 – 5,828) AFY and a 2015 population in the Main San Gabriel Basin of approximately 1,202,260 people, the average annual per capita water use rate was approximately 0.16 AFY (187,808 AFY / 1,202,260 people) for a single family residence. For the purposes of this WSA, it is assumed the per capita water use rate of 0.16 AFY (about 140 GPCD) will continue over the next twenty years (from 2020 through 2040). Based on the estimated per capita water use and projected population growth, total water (local plus treated imported) served by producers in the Main San Gabriel Basin will increase from approximately 234,974 AFY, in 2020, to approximately 257,080 AFY, in 2040, as shown in Table 7, with an annual growth rate of approximately 0.4 percent.

Table 7. Projected Main San Gabriel Basin Water Demands (AFY)

Year	Population [1]	Main San Gabriel Basin Demands (AFY)				Less Treated Imported [5]	Net Local [5]

2040	1,355,200	211,699	39,552	5,828	257,080	16,814	240,266

Notes:
* In fiscal year

[1] See Table 6

[2] Based on an average annual water use rate of approximately 0.16 AFY per capita which is about 140 gallons per capita per day

[3] 2020 exports are based on average exports between fiscal years 2012-13 and 2016-17; Exports are anticipated to increase and have been estimated to increase approximately 2,000 AF over a 20 year period and assumed constant thereafter

[4] Based on average industrial demands between fiscal years 2012-13 and 2016-17; assumed to remain constant

[5] See Table 4

Producers in the Main San Gabriel Basin obtain water supplies from groundwater extractions, surface water diversions, and direct deliveries of treated imported water. As discussed in Appendix B, producers within the Main San Gabriel Basin have a share of the Operating Safe Yield of the Main San Gabriel Basin and can produce that amount of water without paying a Replacement Water Assessment. A few producers also have surface water rights (approximately 10,500 AFY) in addition to their share of the Operating Safe Yield and can produce those rights free of a Replacement Water Assessment. Producers that extract a groundwater and/or surface water amount greater than their allocated share are charged a Replacement Water Assessment, which is used to purchase untreated imported water for replacement/recharge into the Main San Gabriel Basin. Untreated imported water for replacement/recharge purposes

is purchased from one of three municipal water districts overlying or partially overlying the Main San Gabriel Basin that provide imported water for groundwater replacement/recharge or for direct use (see Appendix B). The three municipal water districts are USGVMWD, SGVMWD and TVMWD. The City is located within USGVMWD's service area. The management of the Main San Gabriel Basin and the large volume of groundwater in storage allow groundwater producers, including the City, to produce groundwater even when Replacement Water is not available. Any requirement to purchase untreated imported water for replacement/recharge purposes can be met when such water is available in the future. Also discussed in Appendix B is the cyclic storage provision allowing producers, like the City, to store supplemental water within the Main San Gabriel Basin for the purpose of supplying a future Replacement Water requirement. For example, the City and other producers have added/deducted from cyclic storage accounts and as a result, have a total balance of approximately 73,923 AF in cyclic storage accounts as of June 2018 illustrating the effectiveness of this water resource program in meeting the Replacement Water requirements of water producers.

The Replacement Water requirement in the Main San Gabriel Basin is determined by the Operating Safe Yield, production rights and Main San Gabriel Basin production. The Operating Safe Yield in the Main San Gabriel Basin has averaged about 156,000 AFY over the past five (5) years (fiscal years 2013-14 through 2017-18) plus the surface water rights are fixed at about 10,500 acre-feet for a total of about 166,500 acre-feet of water rights. As shown in Table 8, over the past five (5) years (fiscal years 2012-13 through 2016-17), the average water production from the Main San Gabriel Basin has been approximately 214,375 AFY, and the average Replacement Water requirements and Cyclic Storage deductions (total Basin over production) has been approximately 34,733 AFY.

Based on the projected water demands (see Table 7) and the recent historical average water production of 214,375 AFY (during fiscal years 2012-13 through 2016-17 as shown in Table 8) in the Main San Gabriel Basin, the Replacement Water requirement can be projected for future years, assuming other sources of water supply remain at

historical levels. Other sources of water supply historically used in the San Gabriel Valley include direct delivery of approximately 16,814 AFY of treated MWD imported water (discussed below). The projected total water demands (less direct delivery) can be compared with the recent historical average water production (214,375 AFY) to determine the incremental additional Replacement Water requirement. The total projected Replacement Water requirement is estimated to be the sum of the recent historical average Replacement Water requirement (34,733 AFY) and the incremental additional Replacement Water requirement.

Table 8. Operation of Main San Gabriel Basin (AFY)

Fiscal Year	Total Production [1]	Direct Deliveries [1]	Replacement Water Requirements and Cyclic Storage Deductions [2]
2012-13	242,914	14,344	29,769
2013-14	240,552	22,216	40,113
2014-15	208,339	22,517	45,828
2015-16	182,826	12,740	26,420
2016-17	197,243	12,251	31,536
5-Year Average	**214,375**	**16,814**	**34,733**

Notes:

[1] See Table 4

[2] Includes Replacement Water Requirements and deductions from Producer Cyclic Storage. From Main San Gabriel Basin Annual Report for FY 2016-17

For the purpose of this WSA, the adopted 2018-19 Operating Safe Yield of 150,000 AFY (which was influenced by the decreasing water levels in the Main San Gabriel Basin due to the recent dry hydrologic cycle) was assumed to remain the same through 2040 and was used to determine potential future Replacement Water requirements. The estimated Replacement Water requirement in 2019-20, based on an Operating Safe Yield of approximately 150,000 AFY, 2020 demand less direct deliveries compared with the average water production (during fiscal years 2012-13 through 2016-17 as

shown in Table 8), and adding the 5-year historical average Replacement Water requirement, is calculated to be 38,518 AFY.

In addition to untreated supplemental replacement/recharge deliveries, treated imported water is available to Main San Gabriel Basin water producers as a direct delivery (see Table 4). Over the past five years, total direct deliveries of treated imported water have ranged from approximately 12,300 AFY to 22,500 AFY, with an average of approximately 16,814, as shown in Table 8. Demands for direct delivery water in the Main San Gabriel Basin previously increased (approximately 50,800 AF in 2003-04) due to groundwater contamination. However, these demands have declined with the completion of large-scale groundwater treatment facilities in 2005 and 2006.

Based on the average total direct delivery of treated imported water of approximately 16,814 AFY and the calculated 2019-20 Replacement Water requirement of 38,518 AFY, the estimated total current imported water demand is approximately 55,332 (16,814 + 38,518) AFY based on an Operating Safe Yield of 150,000 AFY. Table 9 projects the total future imported water requirement (including replacement/recharge and direct delivery) for producers in the Main San Gabriel Basin, without assuming increased use of other sources of water supply such as recycled water. Table 9 shows that total imported water requirement could increase by approximately 1,361 AF between 2020 and 2040. Because other sources of water supply, including groundwater imported from the Raymond Basin and groundwater recharge of local rainfall runoff, have been assumed to remain at historical levels, it is assumed the increasing Main San Gabriel Basin water demands listed in Table 9 will be met by increases in imported water. Increased water demands can also be met through increased use of recycled water in the Main San Gabriel Basin. Recycled water supplies are not incorporated in determining the future imported water requirements shown in Table 9. Increases in imported water demands in Table 9 will be a combination of increased Replacement Water deliveries and a constant level of direct delivery of imported water. The reliability of imported water supplies is discussed further in Section 4.2.

Table 9. Projected Total Main San Gabriel Basin Imported Water Demands (AFY)

Year	2020	2025	2030	2035	2040
OSY of 150,000 AFY					
Untreated Imported Water	38,518	39,487	41,891	39,782	39,879
Treated Imported Water	16,814	16,814	16,814	16,814	16,814
Total Imported Water	**55,332**	**56,300**	**58,705**	**56,595**	**56,693**
Net Increase	--	968	3,372	1,263	1,361

3.2 Imported Water Supplies

The City can receive direct deliveries of treated imported water from MWD through its USG-7 connection, which has a capacity of 6,300 gpm or 9.1 MGD. The City historically has not utilized imported water supplies to meet demands, as shown in Table 1.

As discussed previously, the Main San Gabriel Basin Watermaster purchases untreated imported water from SGVMWD (from the California State Water Project (SWP)) and untreated imported water supplies from MWD through USGVMWD and TVMWD. Further discussions of imported water supplies are provided in Sections 3.2.1 through 3.2.3.

3.2.1 SWP Water Reliability

MWD and SGVMWD contract with the State of California, through the SWP, for the delivery of northern California water through the California Aqueduct. The SWP is a water storage and delivery system maintained and operated by the California Department of Water Resources (DWR). The SWP is a statewide water conveyance system that diverts and stores water in Northern and Central California and conveys water (including through the Sacramento-San Joaquin Delta region) to 29 water agencies throughout the State. The SWP has delivered water since the 1960's through a network of aqueducts, pumping stations and powerplants. In order for the SWP to

increase deliveries to the maximum amount of contractual commitments to water, the SWP must expand its water conveyance facilities to divert greater flows from north of the Bay-Delta area into the California Aqueduct.

The San Francisco Bay -Sacramento River Delta area (Bay-Delta) is a part of the SWP water delivery system. The reliability of the Bay-Delta to deliver water may be impacted by potential risks associated with endangered species, earthquakes, levee failure, and climate change.

The Bay Delta Conservation Plan (BDCP) grew out of the CALFED Bay-Delta Plan's Ecosystem Restoration Program Conservation Strategy. A draft BDCP was prepared through a collaboration of state, federal, and local water agencies, state and federal fish agencies, and a broad range of stakeholders. The BDCP identifies conservation strategies, water flow, and habitat restoration actions in California's Sacramento-San Joaquin Delta. The goal of the BDCP is to provide for both species/habitat protection and improved reliability of water supplies. During the extensive environmental review period for the BDCP, State and Federal agencies proposed that the California WaterFix Project replace the proposed BDCP as the State's proposed project. The California WaterFix Project consists of new water conveyance facilities with three new diversion points in the north Delta, Delta tunnel conveyance and ancillary facilities, operational elements, and habitat restoration and other environmental commitments. The California WaterFix Project was evaluated in a partially Recirculated Draft BDCP, EIR/EIS published on July 10, 2015. In December 2016, the Final EIR/EIS was made available to the public. This Final EIR/EIS has been certified as complying with CEQA as required under Section 15090, subd. (a)(1) of the CEQA Guidelines. The Final EIR/EIS describes the alternatives, discusses potential environmental impacts, and identifies mitigation measures that would help avoid or minimize impacts. It also provides responses to all substantive comments received on the 2013 Draft EIR/EIS and 2015 partially Recirculated Draft EIR/Supplemental Draft EIS. The BDCP is intended to meet the standards of the Sacramento-San Joaquin Delta Reform Act of 2009, described in the paragraph below. On July 21, 2017, DWR certified the Final EIR, adopted the CEQA Findings and a Statement of Overriding Considerations, adopted the Mitigation Monitoring and Reporting Program, approved the California WaterFix, and filed the

Notice of Determination (NOD) with the Governor's Office of Planning and Research for the California WaterFix project, which includes the three new diversion points in the north Delta, Delta tunnel conveyance and ancillary facilities, operational elements, and habitat restoration and other environmental commitments. The Record of Decision for the California WaterFix project will be issued by the U.S. Bureau of Reclamation at a future date.

The State of California enacted comprehensive legislation, including the Sacramento-San Joaquin Delta Reform Act of 2009 (California Water Code Division 35) which provided for an independent state agency, the Delta Stewardship Council. Pursuant to that act, the Delta Stewardship Council developed a comprehensive management plan that provides more reliable water supply for California and protects and enhances the Delta ecosystem (through development and implementation of a Delta Plan). The Delta Stewardship Council adopted a final Delta Plan in May 2013 which is the comprehensive long-term management plan for the Delta to improve statewide water supply reliability and to protect the Delta. Subsequently its 14 regulatory policies were approved by the Office of Administrative Law and became effective with legally-enforceable regulations on September 1, 2013. The Delta Stewardship Council also adopted a Programmatic Environmental impact Report (PEIR) on the Delta Plan in May 2013. The PEIR evaluates the potential impact of the Delta Plan and identifies mitigation measures. The Delta Plan was amended on February 2016, September 2016, and again in April 2018 to include refined performance measures; an exemption for single-year water transfers to be considered as covered actions; recommendations for conveyance, storage and operations; and policy for setting priorities for State investments in Delta levees.

In June 2013, a lawsuit was filed by the State Water Contractors and others seeking to overturn the Delta Stewardship Council’s adoption of the Delta Plan, promulgation of related regulations, and certification of the above referenced PEIR. The litigation brought by the State Water Contractors and others claims that the Delta Stewardship Council exceeded its authority under the Sacramento-San Joaquin Delta Reform Act of 2009 and failed to analyze impacts under CEQA, particularly foreseeable impacts of the

Delta Plan on water supplies around the state. In May 2016, the Superior Court upheld the Delta Stewardship Council on the vast majority of issues, including that the Council used best available science in developing the Delta Plan. The Court also ruled that the Delta Plan's regulations promote improved water quality, its flow recommendations promote conditions for species recovery, it promotes risk reduction strategies, and its conservation measures promote reduced reliance on the Delta. The Court, however, invalidated the entire Delta Plan because of what it identified as inadequacies in the following areas:

- The lack of enforceable, quantifiable targets for achieving reduced Delta reliance, reduced harm from invasive species, restoring more natural flows and increased water supply reliability, and
- Inadequate "promotion" of conveyance options to improve the way water projects move water across the Delta.

In November and December 2016, the Delta Stewardship Council and other parties have appealed the Court's ruling, which means the invalidation of the Delta Plan has been stayed (placed on hold) pending further action by the Appellate Court until specified revisions are completed. The Delta Plan remains in force and project proponents with covered actions remain legally required to file consistency certifications with the Delta Stewardship Council.

Governor Brown announced the creation of the California EcoRestore program in April 2015, committing to restore more than 30,000 acres of Delta habitat, which will be implemented on an accelerated timeline independent of the proposed water conveyance facilities. This comprehensive suite of habitat restoration actions under the California EcoRestore program includes specific targets for floodplain, tidal and sub-tidal, managed wetlands, and fish passage improvements to benefit native fish species and a commitment to adaptive management.

DWR's "State Water Project Final Delivery Capability Report 2017" (2017 Report), dated March 2018, indicates that there is a 77 percent likelihood (74 percent in the 2015 State Water Project Final Delivery Capability Report) that more than 2,000 thousand acre-feet per year (taf/year) of Table A water will be delivered under current conditions.

The 2017 Report incorporated future impacts on water deliveries as a result of climate change and potential limited pumping of the SWP to protect salmon, smelt, and other species in the Sacramento-San Joaquin Delta and Central Valley areas, including operational restrictions of the biological opinions issued by the U.S. Fish and Wildlife Service (USFWS) in December 2008 and the National Marine Fisheries Service (NMFS) in June 2009 governing the SWP and Central Valley Project (a Federal water storage and conveyance facility) operations. Subsequently, a U.S. District Court Judge remanded the biological opinions to the USFWS and NMFS for further review and analysis. The long term impact of these issues cannot be fully quantified at this time. DWR plans to develop additional water supply facilities in order for the SWP to deliver contracted water beyond historical delivery quantities. In addition, the 2017 Report included the CA WaterFix Project. In June 2017, the Final Biological Opinions for the CA WaterFix were released. In July 2017, the incidental take permit (20181(b) document) was issued.

3.2.2 Colorado River Water Reliability

In addition to obtaining water from the SWP, MWD obtains water from the Colorado River. MWD owns and operates the Colorado River Aqueduct which conveys water from Lake Havasu on the Colorado River to water transmission pipelines and to Lake Matthews for storage. MWD's Colorado River water right includes a fourth and fifth priority under the 1931 Seven Party Agreement relating to California's share in the Colorado River water supply. In 1964 a United States Supreme Court decree (Arizona v. California) limited California to 4.4 million AF per year from the Colorado River plus any available surplus water. An amount of 550,000 AF was allotted to California under the fourth priority right and an amount of 662,000 AF was allotted to California under the fifth priority right. MWD can receive water under the fifth priority right when the United States Secretary of the Interior determines that there is a surplus of water or if Arizona or Nevada does not use all of their allocated water. Through farm and irrigation conservation programs, improved reservoir system operations, land management programs, and water transfer and exchanges, MWD has increased the reliable supply from the Colorado River Aqueduct. According to MWD's "The Regional Urban Water

Management Plan" (RUWMP), dated June 2016, the supply capability of the Colorado River Aqueduct through the year 2035 is about 1,911,500 AFY during average, single dry, and multiple dry year conditions. A further discussion of MWD's additional water supplies is provided below.

3.2.3 Metropolitan Water District of Southern California

The City can purchase treated imported water from MWD through USG-7. In addition, MWD provides approximately 95 percent of the total imported water supplies to the Main San Gabriel Basin for both replacement/recharge purposes and direct delivery. As discussed in Appendix B, imported water from MWD is provided through USGVMWD and TVMWD, which both deliver and sell water. Untreated imported water can be spread and stored in the Main San Gabriel Basin for replacement/recharge. Treated imported water can be delivered directly to retail water utilities in the Main San Gabriel Basin with available connections.

MWD's 2015 RUWMP provides information regarding MWD's water supply reliability and the ability to meet all projected water demands. MWD has indicated in its 2015 RUWMP that, with the addition of all water supplies existing and planned, MWD would have the ability to meet all of its member agencies' projected supplemental demand for the next twenty five years, even during a repeat of the worst drought scenario.

MWD's 2015 RUWMP considers DWR's 2015 Report. MWD's 2015 RUWMP concludes that MWD will have sufficient water available for anticipated water demands in its service area, including the San Gabriel Valley area, through the year 2040. In addition, because the San Gabriel Valley primarily requires Replacement Water from MWD and delivery of Replacement Water can be shifted from dry years (when water supplies may be limited) to wet years (of water surplus), the available information shows adequate Replacement Water will be available through the year 2040.

Because of critically dry conditions in 2007 affecting MWD's main water supply sources and Federal Court rulings protecting the Delta Smelt and other aquatic species in the

Sacramento-San Joaquin River Delta, SWP water deliveries were reduced. As a result, MWD adopted a Water Supply Allocation Plan (WSAP) in February 2008 to allocate available water supplies to its member agencies. The WSAP establishes ten different shortage levels and a corresponding Allocation to each member agency. Although member agency water use is not restricted to the Allocation, additional charges would be assessed on water used above the total annual Allocation. The WSAP provides a separate reduced Allocation to a member agency for its 1) Municipal and Industrial (M&I) retail demand and 2) replenishment demand. The WSAP considers historical local water production, full service treated water deliveries, agricultural deliveries and water conservation efforts when calculating each member agency's Allocation.

In general, the WSAP process calculates total historical member agency demand. That historical demand is then compared to member agency projected local supply for a specific Allocation year. The balance required from MWD, less an Allocation reduction factor, is the member agency's "Water Supply Allocation". When an MWD Member Agency (such as USGVMWD and TVMWD) reduces its local demand through conservation or other means, the portion of the Allocation which may be delivered as imported water increases. The increased Allocation can be used for Full Service replenishment deliveries when an Allocation is in place.

In addition, MWD prepared a 2015 Update of its Integrated Resources Plan to evaluate water supply availability considering the recent developments discussed elsewhere in this WSA and provide a water resource strategy to meet future demands including anticipated groundwater replenishment demands.

In April 2015, MWD approved a WSAP Allocation Level 3 for fiscal year 2015-16. The WSAP Allocation for M&I demand and Replenishment demand for USGVMWD was estimated to be 27,913 AF for fiscal year 2015-16. MWD rescinded the WSAP Allocation for fiscal year 2016-17 and currently has not approved a WSAP Allocation for fiscal year 2017-18.

Tables 10, 11, and 12 show MWD's projected total water supplies and demands through year 2040 for average, single dry, and multiple dry years, respectively. MWD

has sufficient water supplies to meet all of its member agencies projected supplemental demand for 2020 through 2040, even during multiple dry years. MWD's greatest water demands, which occur during a multiple dry year, will increase at a rate of approximately 0.6 percent per year from approximately 2,001,000 AFY, in 2020, to 2,258,000 AFY, in 2040.

Table 10. MWD's Projected "Average" Year Water Supplies and Demands (AFY)

	2020	2025	2030	2035	2040
Supplies (Current Programs)	3,448,000	3,550,000	3,658,000	3,788,000	3,824,000
Demands	1,860,000	1,918,000	1,959,000	2,008,000	2,047,000

4.0 Comparision of Future Water Demand and Supply

The City's primary source of water supply is groundwater from the Main San Gabriel Basin. In addition, the City can purchase treated imported water from MWD's USG-7. The existing collective capacity from the active wells is about 10,000 gpm or about 14.4 million gallons per day (MGD). The City produced over 9,700 AFY in 2003 (which is equal to only 60 percent of the City's available well capacity). Assuming the City uses 60 percent of available well capacity (which has been demonstrated in the past) during calendar years 2020 through 2040, the City would be able to produce about 8.6 MGD (about 9,700 acre-feet).

As shown on Table 2, the projected water demands including the Project ranges from 6,705 AF to 7,107 AF from fiscal year 2019-20 through fiscal year 2039-40. The estimated projected average day water demand, including the Project, is calculated to range from about 6 MGD to about 6.4 MGD from fiscal year 2019-20 through fiscal year 2039-40. Consequently, it is anticipated the City will be able to meet its Average Day Demand from fiscal year 2019-20 through fiscal year 2039-40 with its total water supply of about 8.6 MGD.

Tables 13 through 17 show the City's projected water demands, including the Project, and sources of water supply, under future average, single dry, and multiple dry year scenarios, from 2020 to 2040. The City has historically met all of its water demands with groundwater production. Even with the City's historically reliable water supply, the City included a Drought Regulations and Water Conservation Standards (Ordinance No. 2015-05 and Resolution No. 2015-41) in its 2015 UWMP identifying actions to be taken to respond to a severe or extended water shortage (see Appendix C). If water supplies are temporarily insufficient to meet customer demand, the City may implement its Drought Regulations and Water Conservation Standards (Ordinance No. 2015-05 and Resolution No. 2015-41).

The City can increase production from the Main San Gabriel Basin in accordance with the Main San Gabriel Basin Judgment (see Appendix B), even during periods of drought

to meet its demands. As described in Appendix B, groundwater pumping limitations have never been applied to groundwater producers with rights in the Main San Gabriel Basin.

Tables 13 through 17 show that the combined capacities from the City's sources of supply will provide sufficient water supply for the City's projected water demand, including the Project, under all conditions from 2020 to 2040.

Table 13. City's Projected Water Demands Including Project and Supplies in 2020 (AFY)

	Average/Normal Water Year	Single Dry Water Year	Multiple Dry Water Years		
			Year 1	Year 2	Year 3
Total Demand [1]	6,704	6,036	6,036	6,527	6,671
Supply [2]					
Main San Gabriel Basin Supply [3]	6,704	6,036	6,036	6,527	6,671
MWD USG-7 Supply	0	0	0	0	0
Total Supply	6,704	6,036	6,036	6,527	6,671
Surplus/Deficiency	0	0	0	0	0

Notes:

[1] Total Demand includes the Project water demand of approximately 69 AFY for an Average/Normal Water Year, as shown on Table 2. Single and multiple dry year demand are based on the proportions of average water demand to single dry year and multiple dry year water demands, identified in Table 7-1 of City's 2015 UWMP.

[2] Based on proportion of 2015 supplies from City's 2015 UWMP

[3] The reliable current total pumping capacities of City's groundwater wells is estimated to be about 9,700 AFY (60% well operating factor)

Table 14. City's Projected Water Demands Including Project and Supplies in 2025 (AFY)

	Average/Normal Water Year	Single Dry Water Year	Multiple Dry Water Years		
			Year 1	Year 2	Year 3
Total Demand [1]	6,803	6,125	6,125	6,624	6,770

Total Supply	7,004	6,306	6,306	6,819	6,970
Surplus/Deficiency	0	0	0	0	0

Notes:

[1] Total Demand includes the Project water demand of approximately 69 AFY for an Average/Normal Water Year, as shown on Table 2. Single and multiple dry year demand are based on the proportions of average water demand to single dry year and multiple dry year water demands, identified in Table 7-1 of City's 2015 UWMP.

[2] Based on proportion of 2015 supplies from City's 2015 UWMP

[3] The reliable current total pumping capacities of City's groundwater wells is estimated to be about 9,700 AFY (60% well operating factor)

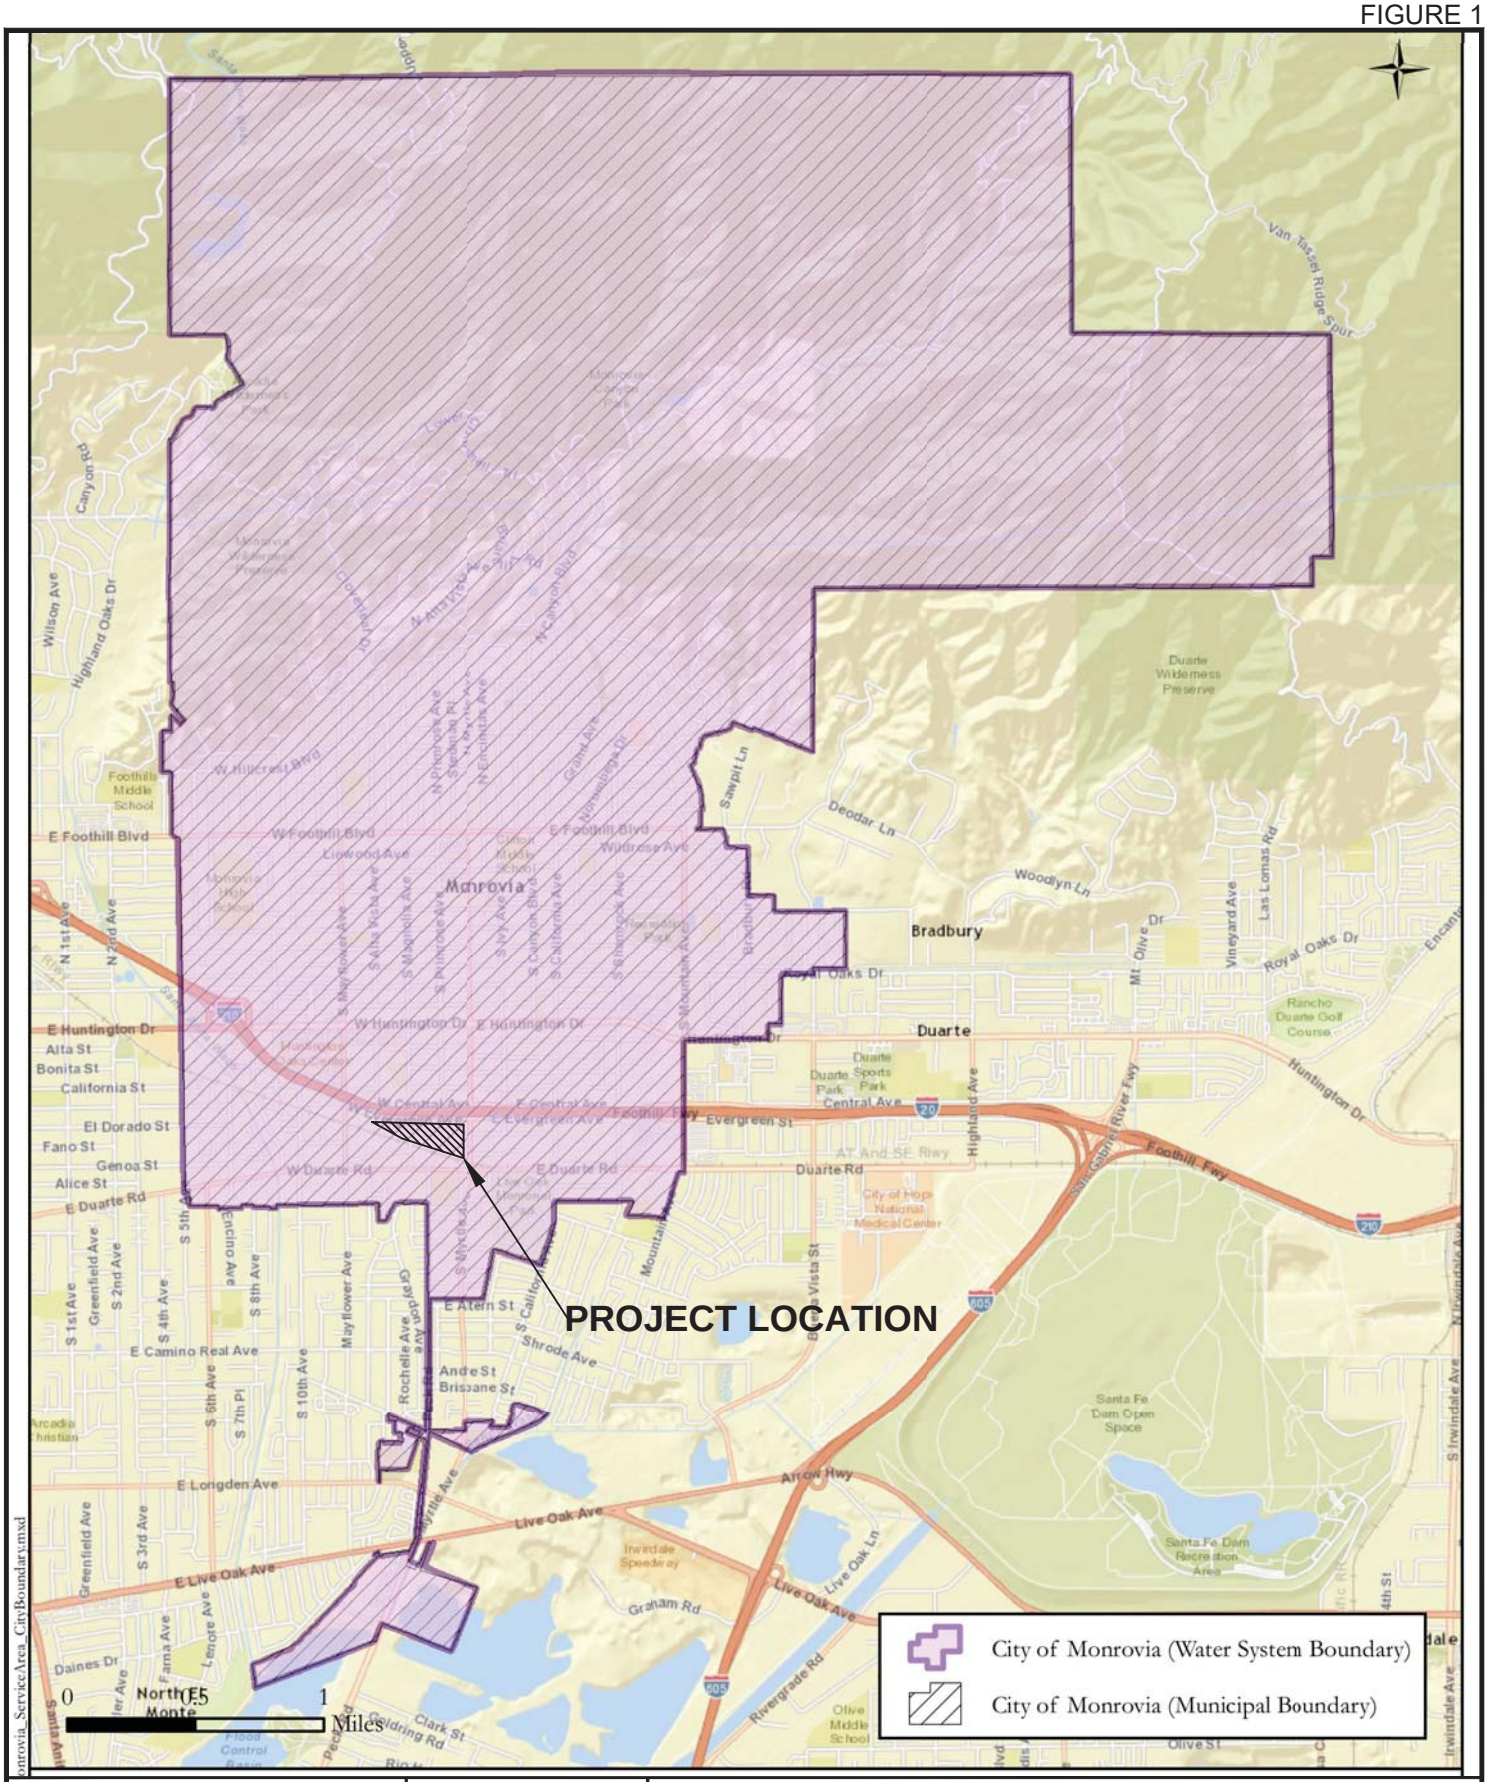
Table 17. City's Projected Water Demands Including Project and Supplies in 2040 (AFY)

	Average/Normal Water Year	Single Dry Water Year	Multiple Dry Water Years		
			Year 1	Year 2	Year 3
Total Demand [1]	7,106	6,398	6,398	6,919	7,071
Supply [2]					
Main San Gabriel Basin Supply [3]	7,106	6,398	6,398	6,919	7,071
MWD USG-7 Supply	0	0	0	0	0
Total Supply	7,106	6,398	6,398	6,919	7,071
Surplus/Deficiency	0	0	0	0	0

Notes:

[1] Total Demand includes the Project water demand of approximately 69 AFY for an Average/Normal Water Year, as shown on Table 2. Single and multiple dry year demand are based on the proportions of average water demand to single dry year and multiple dry year water demands, identified in Table 7-1 of City's 2015 UWMP.

[2] Based on proportion of 2015 supplies from City's 2015 UWMP



[3] The reliable current total pumping capacities of City's groundwater wells is estimated to be about 9,700 AFY (60% well operating factor)

In addition to the City's groundwater extraction from the Main San Gabriel Basin, the City has the ability to obtain supplemental water supplies from its Main San Gabriel Basin cyclic storage account. Under the Main San Gabriel Basin, cyclic storage provisions allow producers, including the City, to store supplemental water within the Main San Gabriel Basin for the purpose of supplying Replacement Water.

As presented in Section 4 and Appendix B, active and effective groundwater management enables water producers in the Main San Gabriel Basin to historically meet water demands, including during single and multiple dry years. Based on the demonstrated reliability of water resources available to the City, including the City's access to the Main San Gabriel Basin water supplies including imported Replacement Water and the City's access to treated imported water from MWD, the City has sufficient and reliable water supplies to meet its future demands, with the Project from 2020 to 2040, including during single and multiple dry years.

EXHIBITS

"A" -- Map entitled "San Gabriel River Watershed Tributary to Whittier Narrows"
"B" -- Boundaries of Relevant Watershed
"C" -- Table Showing Base Annual Diversion Rights of Certain Diverters
"D" -- Table Showing Rights and Pumper's Share of Each Pumper

Exhibits Continued

"E" -- Table Showing Production Rights of Each Integrated Producer
"F" -- Table Showing Special Category Rights
"G" -- Table Showing Non-consumptive Users
"H" -- Watermaster Operating Criteria
"J" -- Puente Narrows Agreement
"K" -- Overlying Rights
"L" -- List of Producers and Their Designees (New)
"M" -- Watermaster Members, Officers, and Staff Including Calendar Year 1989 (New)

(d) Diverter -- Any party who Diverts.

(e) Elevation -- Feet above mean sea level.

(f) Fiscal Year -- A period July 1 through June 30, following.

(g) Ground Water -- Water beneath the surface of the ground and within the zone of saturation.

(h) Ground Water Basin -- An interconnected permeable geologic formation capable of storing a substantial Ground Water supply.

(i) Integrated Producer -- Any party that is both a Pumper and a Diverter, and has elected to have its rights adjudicated under the optional formula provided in Section 18 of this Judgment.

(j) In-Lieu Water Cost -- The differential between a particular Producer's cost of Watermaster directed produced, treated, blended, substituted, or Supplemental Water delivered or substituted to, for, or taken by, such Producer in-lieu of his cost of otherwise normally Producing a like amount of Ground Water. (Amended 1/29/91)

(k) Key Well -- Baldwin Park Key Well, being elsewhere designated as State Well No. 1S/10W-7R2, or Los Angeles County Flood Control District Well No. 3030-F. Said well has a ground surface Elevation of 386.7.

(l) Long Beach Case -- Los Angeles Superior Court Civil Action No. 722647, entitled, "Long Beach, et al., v. San Gabriel Valley Water Company, et al."

(m) Main San Gabriel Basin or Basin -- The Ground Water Basin underlying the area shown as such on Exhibit "A".

(l) Production in excess of a Pumper's Share of Operating Safe Yield; (2) The consumptive use portion resulting from the exercise of an Overlying Right; and (3) Production in excess of a Diverter's right to Divert for Direct Use.

(dd) Responsible Agency -- (Prior Judgment Section 4 (cc)) The municipal water district which is the normal and appropriate source from whom Watermaster shall purchase Supplemental Water for replacement purposes under the Physical Solution, being one of the following:

(1) Upper District -- Upper San Gabriel Valley Municipal Water District, a member public agency of The Metropolitan Water District of Southern California (MWD).

(2) San Gabriel District -- San Gabriel Valley Municipal Water District, which has a direct contract with the State of California for State Project Water.

(3) Three Valleys District -- Three Valleys Municipal Water District, formerly, "Pomona Valley Municipal Water District", a member public agency of MWD.

(ee) Stored Water -- (Prior Judgment Section 4 (dd)) Supplemental Water stored in the Basin pursuant to a contract with Watermaster as authorized by Section 34(m).

(ff) Supplemental Water -- (Prior Judgment Section 4 (ee)) Nontributary water imported through a Responsible Agency and reclaimed water. (Amended 4/2/91)

(gg) Transporting Parties -- (Prior Judgment Section 4 (ff)) Any party presently transporting water (i.e., during the 12 months immediately preceding the making of the findings

herein) from the Relevant Watershed or Basin to an area outside thereof, and any party presently or hereafter having an interest in lands or having a service area outside the Basin or Relevant Watershed contiguous to lands in which it has an interest or a service area within the Basin or Relevant Watershed. Division by a road, highway, or easement shall not interrupt contiguity. Said term shall also include the City of Sierra Madre, or any party supplying water thereto, so long as the corporate limits of said City are included within one of the Responsible Agencies and if said City, in order to supply water to its corporate area from the Basin, becomes a party to this action bound by this Judgment.

(hh) Water Level -- (Prior Judgment Section 4 (gg)) The measured Elevation of water in the Key Well, corrected for any temporary effects of mounding caused by replenishment or local depressions caused by Pumping.

(ii) Year -- (Prior Judgment Section 4 (hh)) A calendar year, unless the context clearly indicates a contrary meaning.

(jj) Reclaimed Water -- Water which, as a result of treatment of waste, is suitable for a direct beneficial use or a controlled use that would not otherwise occur. (Amended 4/2/91)

11. Exhibits. (Prior Judgment Section 5) The following exhibits are attached to this Judgment and incorporated herein by this reference:

Exhibit "A" -- Map entitled "San Gabriel River Watershed Tributary to Whittier Narrows", showing the boundaries and relevant geologic and hydrologic features in

the portion of the watershed of the San Gabriel River lying upstream from Whittier Narrows.

Exhibit "B" -- Boundaries of Relevant Watershed.

Exhibit "C" -- Table Showing Base Annual Diversion

operating condition, at the cost of each party, such necessary measuring devices or meters as may be appropriate; and to inspect and test any such measuring device as may be necessary.

(e) Assessments. To levy and collect all Assessments specified in the Physical Solution.

(f) Investment of Funds. To hold and invest any and all funds which Watermaster may possess in investments authorized from time to time for public agencies in the State of California.

(g) Borrowing. To borrow in anticipation of receipt of Assessment proceeds an amount not to exceed the annual amount of Assessments levied but uncollected.

(h) Purchase of and Recharge with Supplemental Water. To purchase Supplemental Water and to introduce the same into the Basin, including a maximum of 30,000 acre-feet per year of Reclaimed Water, for replacement, Replacement Water, and cyclic storage purposes in the Basin, subject to the affirmative vote of six (6) members of Watermaster provided, the California Department of Health Services and the Los Angeles Regional Water Quality Control Board have approved such Reclaimed Water for said uses, Watermaster has given prior notice to all parties of its intention to use said Reclaimed Water for such purposes, held noticed hearings thereon, and approves such uses. Reclaimed Water used by Watermaster as Supplemental Water for said purposes shall not be a violation of Sections 3 (b) or 3 (c) of Exhibit "H" hereto. (Amended 4/2/91)

(i) Contracts. To enter into contracts for the performance of any administrative powers herein granted, subject to approval of the Court.

(j) Cooperation With Existing Agencies. To act jointly or cooperate with agencies of the United States and the State of California or any political subdivision, municipality or district to the end that the purposes of the Physical Solution may be fully and economically carried out. Specifically, in the event Upper District has facilities available and adequate to accomplish any of the

order that Watermaster may be free to utilize both existing and new and developing technological, social and economic concepts for the fullest benefit of all those dependent upon the Basin, it is essential that the Physical Solution hereunder provide for maximum flexibility and adaptability. To that end, the Court has retained continuing jurisdiction to supplement the broad discretion herein granted to the Watermaster.

40. Watermaster Control. (Prior Judgment Section 32) In order to develop an adequate and effective program of Basin management, it is essential that Watermaster have broad discretion in the making of Basin management decisions within the ambit hereinafter set forth. Withdrawal and replenishment of supplies of the Basin and Relevant Watershed and the utilization of the water resources thereof, and of available Ground Water storage capacity, must be subject to procedures established by Watermaster in implementation of the provisions of this Judgment. Both the quantity and quality of said water resource are thereby preserved and its beneficial utilization maximized.

(a) Watermaster shall develop an adequate and effective program of Basin management. The maintenance, improvement, and control of the water quality and quantity of the Basin, withdrawal and replenishment of supplies of the Basin and Relevant Watershed, and the utilization of the water resources thereof, must be subject to procedures established by Watermaster in implementation of the Physical Solution provisions of this Judgment. All Watermaster programs and procedures shall be adopted only after a duly noticed public

hearing pursuant to Sections 37 and 40 of the Amended Judgment herein.
(Amended 1/29/91)

(b) Watermaster shall have the power to control pumping within the Basin by water Producers therein for Basin cleanup and water quality control so that specific well production can be directed as to a lesser amount, to total cessation, as to an increased amount, and even to require pumping in a new location in the Basin. Watermaster's right to regulate pumping activities of Producers shall be subordinate to any conflicting Basin cleanup plan established by the EPA or other public governmental agency with responsibility for ground water management or clean up, whether existing at the time of this Judgment or subsequent hereto. (Amended 2/24/92)

(c) Watermaster may act individually or participate with others to carry on technical and other necessary investigations of all kinds and collect data necessary to carry out the herein stated purposes. It may engage in contractual relations with the EPA or other agencies in furtherance of the clean up of the Basin and enter into contracts with agencies of the United States, the State of California, or any political subdivision, municipality, or district thereof, to the extent allowed under the applicable federal or state statutes. Any cooperative agreement between the Watermaster and EPA shall require the approval of the appropriate Agency(s) of the State of California. (Amended 1/21/91)

(d) For the regulation and control of pumping activity in the Basin, Watermaster shall adopt Rules and Regulations and

programs to promote, manage and accomplish clean up of the Basin and its waters, including, but not limited to, measures to confine, move, and remove contaminants and pollutants. Such Rules and Regulations and programs shall be adopted only after a duly Noticed Public Hearing by Watermaster and shall be subject to Court review pursuant to Section 37 of the Amended Judgment herein. (Amended 1/21/91)

e) Watermaster shall determine whether funds from local, regional, state or federal agencies are available for regulating pumping and the various costs associated with, or arising from such activities. If no public funds are available from local, regional, state, or federal agencies, the costs shall be obtained and paid by way of an In-Lieu Assessment by Watermaster pursuant to Section 10 (j) of the Amended Judgment herein. Provided such In-Lieu Assessments become necessary, the costs shall be borne by all Basin Producers. (Amended 1/21/91)

(f) Watermaster is a Court empowered entity with limited powers, created pursuant to the Court's Physical Solution Jurisdiction under Article X, Section 2 of the California Constitution. None of the powers granted herein to Watermaster shall be construed as designating Watermaster a political subdivision of the State of California or authorizing Watermaster to act as "lead agency" to administer the federal Superfund for clean up of the Basin. (Amended 1/21/91)

41. General Pattern of Contemplated Operation. (Prior Judgment Section 33) In general outline (subject to the specific provisions hereafter and to Watermaster Operating Criteria set forth in Exhibit "H"), Watermaster will determine

annually the Operating Safe Yield of the Basin and will notify each Pumper of his share thereof, stated in acre feet per Fiscal Year. Thereafter, no party may Produce in any Fiscal Year an amount in excess of the sum of his Diversion Right, if any, plus his Pumper's Share of such Operating Safe Yield, or his

Attorney for Watermaster

SUPERIOR COURT OF CALIFORNIA, COUNTY OF LOS ANGELES

UPPER SAN GABRIEL VALLEY MUNICIPAL WATER DISTRICT, Plaintiff, vs. CITY OF ALHAMBRA, et al., Defendants.	No. 924128 AMENDED JUDGMENT Hearing: August 24, 1989 Department 38, 9:00 A.M.

The Petition of the MAIN SAN GABRIEL BASIN WATERMASTER for this AMENDED JUDGMENT herein, came on regularly for hearing in this Court before the HONORABLE FLORENCE T. PICKARD, ASSIGNED JUDGE PRESIDING, on August 24, 1989; Ralph B. Helm appeared as attorney for Watermaster - Petitioner; and good cause appearing, the following ORDER and AMENDED JUDGMENT are, hereby, made:

I. INTRODUCTION

1. Pleadings, Parties, and Jurisdiction. The complaint herein was filed on January 2, 1968, seeking an adjudication of water rights. By amendment of said complaint and dismissals of certain parties, said adjudication was limited to the Main San Gabriel Basin and its Relevant Watershed. Substantially all

defendants and the cross-defendant have appeared herein, certain defaults have been entered, and other defendants dismissed. By the pleadings herein and by Order of this Court, the issues have been made those of a full inter se adjudication of water rights as between each and all of the parties. This Court has jurisdiction of the subject matter of this action and of the parties herein.

2. Stipulation for Entry of Judgment. A substantial majority of the parties, by number and by quantity of rights herein Adjudicated, Stipulated for entry of a Judgment in substantially the form of the original Judgment herein.

3. Lis Pendens. (New) A Lis Pendens was recorded August 20, 1970, as Document 2650, in Official Records of Los Angeles County, California, in Book M 3554, Page 866.

4. Findings and Conclusions. (Prior Judgment Section 3) Trial was had before the Court, sitting without a jury, John Shea, Judge Presiding, commencing on October 30, 1972, and Findings of Fact and Conclusions of Law have been entered herein.

5. Judgment. (New) Judgment (and Exhibits Thereto), Findings of Fact and Conclusions of Law (and Exhibits thereto), Order Appointing Watermaster, and Initial Watermaster Order were signed and filed December 29, 1972, and Judgment was entered January 4, 1973, in Book 6791, Page 197.

6. Intervention After Judgment. (New) Certain defendants have, pursuant to the Judgment herein and the Court's continuing jurisdiction, intervened and appeared herein after entry of Judgment.

7. Amendments to Judgment. (New) The original Judgment herein was previously amended on March 29, 1979, by: (1) adding definition (r [1]) thereto, (2) amending definition (bb) therein, (3) adding Exhibit "K" thereto, (4) adding Sections 14.5 and 16.5 thereto, and (5) amending Sections 37(b), 37(c), 37(d), and Section 47 therein; it was again amended on December 21, 1979, by amending Section 38(c) thereof; again amended on February 21, 1980, by amending Section 24 thereof; again amended on September 12, 1980, by amending Sections 35(a), 37(a), and 38(a); again amended on December 22, 1987, by adding Section 37(e) thereto; and last amended on July 22, 1988 by amending Section 37(e) thereof and Ordering an Amended Judgment herein.

8. Transfers. (New) Since the entry of Judgment herein there have been numerous transfers of Adjudicated water rights. To the date hereof, said transfers are reflected in Exhibits "C", "D", and "E".

9. Producers and Their Designees. (New) The current status of Producers and their Designees is shown on Exhibit "L".

10. Definitions. (Prior Judgment Section 4) As used in this Judgment, the following terms shall have the meanings herein set forth:

(a) Base Annual Diversion Right -- The average annual quantity of water which a Diverter is herein found to have the right to Divert for Direct Use.

(b) Direct Use --Beneficial use of water other than for spreading or Ground Water recharge.

(c) Divert or Diverting -- To take waters of any surface stream within the Relevant Watershed.

(d) Diverter -- Any party who Diverts.

(e) Elevation -- Feet above mean sea level.

(f) Fiscal Year -- A period July 1 through June 30, following.

(g) Ground Water -- Water beneath the surface of the ground and within the zone of saturation.

(h) Ground Water Basin -- An interconnected permeable geologic formation capable of storing a substantial Ground Water supply.

(i) Integrated Producer -- Any party that is both a Pumper and a Diverter, and has elected to have its rights adjudicated under the optional formula provided in Section 18 of this Judgment.

(j) In-Lieu Water Cost -- The differential between a Producer's non-capital cost of direct delivery of Supplemental Water and the cost of Production of Ground Water (including depreciation on Production facilities) to a particular Producer who has been required by Watermaster to take direct delivery of Supplemental Water in lieu of Ground Water.

(k) Key Well -- Baldwin Park Key Well, being elsewhere designated as State Well No. 1S/10W-7R2, or Los Angeles County Flood Control District Well No. 3030-F. Said well has a ground surface Elevation of 386.7.

(l) Long Beach Case -- Los Angeles Superior Court Civil Action No. 722647, entitled, "Long Beach, et al., v. San Gabriel Valley Water Company, et al."

(m) Main San Gabriel Basin or Basin -- The Ground Water Basin underlying the area shown as such on Exhibit "A".

(n) Make-up Obligation -- The total cost of meeting the obligation of the Basin to the area at or below Whittier Narrows, pursuant to the Judgment in the Long Beach Case.

(o) Minimal Producer -- Any party whose Production in any Fiscal Year does not exceed five (5) acre feet.

(p) Natural Safe Yield -- The quantity of natural water supply which can be extracted annually from the Basin under conditions of long term average annual supply, net of the requirement to meet downstream rights as determined in the Long Beach Case (exclusive of Pumped export), and under cultural conditions as of a particular year.

(q) Operating Safe Yield -- The quantity of water which the Watermaster determines hereunder may be Pumped from the Basin in a particular Fiscal Year, free of the Replacement Water Assessment under the Physical Solution herein.

(r) Overdraft -- A condition wherein the total annual Production from the Basin exceeds the Natural Safe Yield thereof.

(s) Overlying Rights -- (Prior Judgment Section 4 (r) [1]) The right to Produce water from the Basin for use on Overlying Lands, which rights are exercisable only on specifically defined Overlying Lands and which cannot be separately conveyed or transferred apart therefrom.

(t) Physical Solution -- (Prior Judgment Section 4 (s)) The Court decreed method of managing the waters of the Basin so as to achieve the maximum utilization of the Basin and its water supply, consistent with the rights herein declared.

(u) Prescriptive Pumping Right -- (Prior Judgment

Section 4 (t)) The highest continuous extractions of water by a Pumper from the Basin for beneficial use in any five (5) consecutive years after commencement of Overdraft and prior to filing of this action, as to which there has been no cessation of use by that Pumper during any subsequent period of five (5) consecutive years, prior to the said filing of this action.

(v) Produce or Producing -- (Prior Judgment Section 4 (u)) To Pump or Divert water.

(w) Producer -- (Prior Judgment Section 4 (v)) A party who Produces water.

(x) Production -- (Prior Judgment Section 4 (w)) The annual quantity of water Produced, stated in acre feet.

(y) Pump or Pumping -- (Prior Judgment Section 4 (x)) To extract Ground Water from the Basin by Pumping or any other method.

(z) Pumper -- (Prior Judgment Section 4 (y)) Any party who Pumps water.

(aa) Pumper's Share -- (Prior Judgment Section 4 (z)) A Pumper's right to a percentage of the entire Natural Safe Yield, Operating Safe Yield and appurtenant Ground Water storage.

(bb) Relevant Watershed -- (Prior Judgment Section 4(aa)) That portion of the San Gabriel River watershed tributary to Whittier Narrows which is shown as such on Exhibit "A", and the exterior boundaries of which are described in Exhibit "B".

(cc) Replacement Water -- (Prior Judgment Section 4 (bb)) Water purchased by Watermaster to replace:

(1) Production in excess of a Pumper's Share of Operating Safe Yield; (2) The consumptive use portion resulting from the exercise of an Overlying Right; and (3) Production in excess of a Diverter's right to Divert for Direct Use.

(dd) Responsible Agency -- (Prior Judgment Section 4 (cc)) The municipal water district which is the normal and appropriate source from whom Watermaster shall purchase Supplemental Water for replacement purposes under the Physical Solution, being one of the following:

(1) Upper District -- Upper San Gabriel Valley Municipal Water District, a member public agency of The Metropolitan Water District of Southern California (MWD).

(2) San Gabriel District -- San Gabriel Valley Municipal Water District, which has a direct contract with the State of California for State Project Water.

(3) Three Valleys District -- Three Valleys Municipal Water District, formerly, "Pomona Valley Municipal Water District", a member public agency of MWD.

(ee) Stored Water -- (Prior Judgment Section 4 (dd)) Supplemental Water stored in the Basin pursuant to a contract with Watermaster as authorized by Section 34(m).

(ff) Supplemental Water -- (Prior Judgment Section 4 (ee)) Nontributary water imported through a Responsible Agency.

(gg) Transporting Parties -- (Prior Judgment Section 4 (ff)) Any party presently transporting water (i.e., during the 12 months immediately preceding the making of the findings herein) from the Relevant Watershed or Basin to an area outside

thereof, and any party presently or hereafter having an interest in lands or having a service area outside the Basin or Relevant Watershed contiguous to lands in which it has an interest or a service area within the Basin or Relevant Watershed. Division by a road, highway, or easement shall not interrupt contiguity. Said term shall also include the City of Sierra Madre, or any party supplying water thereto, so long as the corporate limits of said City are included within one of the Responsible Agencies and if said City, in order to supply water to its corporate area from the Basin, becomes a party to this action bound by this Judgment.

(hh) Water Level -- (Prior Judgment Section 4 (gg)) The measured Elevation of water in the Key Well, corrected for any temporary effects of mounding caused by replenishment or local depressions caused by Pumping.

(ii) Year -- (Prior Judgment Section 4 (hh)) A calendar year, unless the context clearly indicates a contrary meaning.

11. Exhibits. (Prior Judgment Section 5) The following exhibits are attached to this Judgment and incorporated herein by this reference:

Exhibit "A" -- Map entitled "San Gabriel River Watershed Tributary to Whittier Narrows", showing the boundaries and relevant geologic and hydrologic features in the portion of the watershed of the San Gabriel River lying upstream from Whittier Narrows.

Exhibit "B" -- Boundaries of Relevant Watershed.

Exhibit "C" -- Table Showing Base Annual Diversion

Rights of Certain Diverters.

Exhibit "D" -- Table Showing Prescriptive Pumping Rights and Pumper's Share of Each Pumper.

Exhibit "E" -- Table Showing Production Rights of Each Integrated Producer.

Exhibit "F" -- Table Showing Special Category Rights.

Exhibit "G" -- Table Showing Non-consumptive Users.

Exhibit "H" -- Watermaster Operating Criteria.

Exhibit "J" -- Puente Narrows Agreement.

Exhibit "K" -- Overlying Rights, Nature of Overlying Right, Description of Overlying Lands to which Overlying Rights are Appurtenant, Producers Entitled to Exercise Overlying Rights and their Respective Consumptive Use Portions, and Map of Overlying Lands.

Exhibit "L" -- (New) List of Producers And Their Designees, as of June 1988.

Exhibit "M" -- (New) Watermaster Members, Officers and Staff, Including Calendar Year 1989.

II. DECREE

NOW, THEREFORE, IT IS HEREBY DECLARED, ORDERED, ADJUDGED AND DECREED:

A. DECLARATION OF HYDROLOGIC CONDITIONS

12. Basin as Common Source of Supply. (Prior Judgment Section 6) The area shown on Exhibit "A" as Main San Gabriel Basin overlies a Ground Water basin. The Relevant Watershed is the watershed area within which rights are herein adjudicated. The waters of the Basin and Relevant Watershed constitute a common source of natural water supply to the parties herein.

13. Determination of Natural Safe Yield. (Prior Judgment Section 7) The Natural Safe Yield of the Main San Gabriel Basin is found and declared to be one hundred fifty-two thousand seven-hundred (152,700) acre feet under Calendar Year 1967 cultural conditions.

14. Existence of Overdraft. (Prior Judgment Section 8) In each and every Calendar Year commencing with 1953, the Basin has been and is in Overdraft.

B. DECLARATION OF RIGHTS

15. Prescription. (Prior Judgment Section 9) The use of water by each and all parties and their predecessors in interest has been open, notorious, hostile, adverse, under claim of right, and with notice of said overdraft continuously from January 1, 1953 to January 4, 1973. The rights of each party herein declared are prescriptive in nature. The following aggregate consequences of said prescription within the Basin and Relevant Watershed are hereby declared:

(a) Prior Prescription. Diversions within the Relevant Watershed have created rights for direct consumptive use within the Basin, as declared and determined in Sections 16 and 18 hereof, which are of equal priority inter se, but which are prior and paramount to Pumping Rights in the Basin.

(b) Mutual Prescription. The aggregate Prescriptive Pumping Rights of the parties who are Pumpers now exceed, and for many years prior to filing of this action, have exceeded, the Natural Safe Yield of the Basin. By reason of said condition, all rights of said Pumpers are declared

to be mutually prescriptive and of equal priority, inter se.

(c) Common Ownership of Safe Yield and Incidents Thereto. By reason of said Overdraft and mutual Prescription, the entire Natural Safe Yield of the Basin, the Operating Safe Yield thereof and the appurtenant rights to Ground Water storage capacity of the Basin are owned by Pumpers in undivided Pumpers' Shares as hereinafter individually declared, subject to the control of Watermaster, pursuant to the Physical Solution herein decreed. Nothing herein shall be deemed in derogation of the rights to spread water pursuant to rights set forth in Exhibit "G".

16. Surface Rights. (Prior Judgment Section 10) Certain of the aforesaid prior and paramount prescriptive water rights of Diverters to Divert for Direct Use stream flow within the Relevant Watershed are hereby declared and found in terms of Base Annual Diversion Right as set forth in Exhibit "C". Each Diverter shown on Exhibit "C" shall be entitled to Divert for Direct Use up to two hundred percent (200%) of said Base Annual Diversion Right in any one (1) Fiscal Year; provided that the aggregate quantities of water Diverted in any consecutive ten (10) Fiscal Year period shall not exceed ten (10) times such Diverter's Base Annual Diversion Right.

17. Ground Water Rights. (Prior Judgment Section 11) The Prescriptive Pumping Right of each Pumper, who is not an Integrated Producer, and his Pumper's Share are declared as set forth in Exhibit "D".

18. Optional Integrated Production Rights. (Prior Judgment Section 12) Those parties listed on Exhibit "E" have elected to be treated as Integrated Producers. Integrated Production Rights have two (2) historical components:

(1) a fixed component based upon historic Diversions for Direct Use; and

(2) a mutually prescriptive Pumper's Share component based upon Pumping during the period 1953 through 1967.

Assessment and other Watermaster regulation of the rights of such parties shall relate to and be based upon each such component. So far as future exercise of such rights is concerned, however, the gross quantity of the aggregate right in any Fiscal Year may be exercised, in the sole discretion of such party, by either Diversion or Pumping or any combination or apportionment thereof; provided, that for Assessment purposes the first water Produced in any Fiscal Year (other than "carry-over", under Section 49 hereof) shall be deemed an exercise of the Diversion component, and any Production over said quantity shall be deemed Pumped water, regardless of the actual method of Production.

19. Special Category Rights. (Prior Judgment Section 13) The parties listed on Exhibit "F" have water rights in the Relevant Watershed which are not ordinary Production rights. The nature of each such right is as described in Exhibit "F".

20. Non-consumptive Practices. (Prior Judgment Section 14) Certain Producers have engaged in Water Diversion and spreading practices which have caused such Diversions to have a

non-consumptive or beneficial impact upon the aggregate water supply available in the Basin. Said parties, and a statement of the nature of their rights, uses and practices, are set forth in Exhibit "G". The Physical Solution decreed herein, and particularly its provisions for Assessments, shall not apply to such non-consumptive uses. Watermaster may require reports on the operations of said parties.

21. Overlying Rights. (Prior Judgment Section 14.5) Producers listed in Exhibit "K" hereto were not parties herein at the time of the original entry of Judgment herein. They have exercised in good faith Overlying Rights to Produce water from the Basin during the periods subsequent to the entry of Judgment herein and have by self-help initiated or maintained appurtenant Overlying Rights. Such rights are exercisable without quantitative limit only on specifically described Overlying Land and cannot be separately conveyed or transferred apart therefrom. As to such rights and their exercise, the owners thereof shall become parties to this action and be subject to Watermaster Replacement Water Assessments under Section 45 (b) hereof, sufficient to purchase Replenishment Water to offset the net consumptive use of such Production and practices. In addition, the gross amount of such Production for such overlying use shall be subject to Watermaster Administrative Assessments under Section 45 (a) hereof and the consumptive use portion of such Production for overlying use shall be subject to Watermaster's In-Lieu Water Cost Assessments under Section 45 (d) hereof. The Producers presently entitled to exercise Overlying Rights, a description of the Overlying Land to which

Overlying Rights are appurtenant, the nature of use and the consumptive use portion thereof are set forth in Exhibit "K" hereto. Watermaster may require reports and make inspections of the operations of said parties for purposes of verifying the uses set forth in said Exhibit "K", and, in the event of a material change, to redetermine the net amount of consumptive use by such parties as changed in the exercise of such Overlying Rights. Annually, during the first two (2) weeks of June in each Calendar Year, such Overlying Rights Producers shall submit to Watermaster a verified statement as to the nature of the then current uses of said Overlying Rights on said Overlying Lands for the next ensuing Fiscal Year, whereupon Watermaster shall either affirm the prior determination or redetermine the net amount of the consumptive use portion of the exercise of such Overlying Right by said Overlying Rights Producer.

C. INJUNCTION

22. Injunction Against Unauthorized Production. (Prior Judgment Section 15) Effective July 1, 1973, each and every party, its officers, agents, employees, successors and assigns, to whom rights to waters of the Basin or Relevant Watershed have been declared and decreed herein is ENJOINED AND RESTRAINED from Producing water for Direct Use from the Basin or the Relevant Watershed except pursuant to rights and Pumpers' Shares herein decreed or which may hereafter be acquired by transfer pursuant to Section 55, or under the provisions of the Physical Solution in this Judgment and the Court's continuing jurisdiction, provided that no party is enjoined from Producing up to five (5) acre feet per Fiscal Year.

23. Injunction re Non-consumptive Uses. (Prior Judgment Section 16) Each party listed in Exhibit "G", its officers, agents, employees, successors and assigns, is ENJOINED AND RESTRAINED from materially changing said non-consumptive method of use.

24. Injunction Re Change in Overlying Use Without Notice Thereof To Watermaster. (Prior Judgment Section 16.5) Each party listed in Exhibit "E", its officers, agents, employees, successors and assigns, is ENJOINED AND RESTRAINED from materially changing said overlying uses at any time without first notifying Watermaster of the intended change of use, in which event Watermaster shall promptly redetermine the consumptive use portion thereof to be effective after such change.

25. Injunction Against Unauthorized Recharge. (Prior Judgment Section 17) Each party, its officers, agents, employees, successors and assigns, is ENJOINED AND RESTRAINED from spreading, injecting or otherwise recharging water in the Basin except pursuant to: (a) an adjudicated non-consumptive use, or (b) consent and approval of or Cyclic Storage Agreement with Watermaster, or (c) subsequent order of this Court.

26. Injunction Against Transportation From Basin or Relevant Watershed. (Prior Judgment Section 18) Except upon further order of Court, all parties, other than Transporting Parties and MWD in its exercise of its Special Category Rights, to the extent authorized therein, are ENJOINED AND RESTRAINED from transporting water hereafter Produced from the Relevant Watershed or Basin outside the areas thereof. For purposes of

this Section, water supplied through a city water system which lies chiefly within the Basin shall be deemed entirely used within the Basin. Transporting Parties are entitled to continue to transport water to the extent that any Production of water by any such party does not violate the injunctive provisions contained in Section 22 hereof; provided that said water shall be used within the present service areas or corporate or other boundaries and additions thereto so long as such additions are contiguous to the then existing service area or corporate or other boundaries; except that a maximum of ten percent (10%) of use in any Fiscal Year may be outside said then existing service areas or corporate or other boundaries.

D. CONTINUING JURISDICTION

27. Jurisdiction Reserved. (Prior Judgment Section 19) Full jurisdiction, power and authority are retained by and reserved to the Court for purposes of enabling the Court upon application of any party or of the Watermaster, by motion and upon at least thirty (30) days notice thereof, and after hearing thereon, to make such further or supplemental orders or directions as may be necessary or appropriate for interim operation before the Physical Solution is fully operative, or for interpretation, enforcement or carrying out of this Judgment, and to modify, amend or amplify any of the provisions of this Judgment or to add to the provisions thereof consistent with the rights herein decreed. Provided, that nothing in this paragraph shall authorize:

(1) modification or amendment of the quantities specified in the declared rights of any party;

(2) modification or amendment of the manner of exercise of the Base Annual Diversion Right or Integrated Production Right of any party; or

(3) the imposition of an injunction prohibiting transportation outside the Relevant Watershed or Basin as against any Transporting Party transporting in accordance with the provisions of this Judgment or against MWD as to its Special Category Rights.

E. WATERMASTER

28. Watermaster to Administer Judgment. (Prior Judgment Section 20) A Watermaster comprised of nine (9) persons, to be nominated as hereinafter provided and appointed by the Court, shall administer and enforce the provisions of this Judgment and any subsequent instructions or orders of the Court thereunder.

29. Qualification, Nomination and Appointment. (Prior Judgment Section 21) The nine (9) member Watermaster shall be composed of six (6) Producer representatives and three (3) public representatives qualified, nominated and appointed as follows:

(a) Qualification. Any adult citizen of the State of California shall be eligible to serve on Watermaster; provided, however, that no officer, director, employee or agent of Upper District or San Gabriel District shall be qualified as a Producer member of Watermaster.

(b) Nomination of Producer Representatives. A meeting of all parties shall be held at the regular meeting of Watermaster in November of each year, at the offices of Watermaster. Nomination of the six (6) Producer

representatives shall be by cumulative voting, in person or by proxy, with each Producer entitled to one (1) vote for each one hundred (100) acre feet, or portion thereof, of Base Annual Diversion Right or Prescriptive Pumping Right or Integrated Production Right.

(c) Nomination of Public Representatives. On or before the regular meeting of Watermaster in November of each year, the three (3) public representatives shall be nominated by the boards of directors of Upper District (which shall select two [2]) and San Gabriel District (which shall select one [1]). Said nominees shall be members of the board of directors of said public districts.

(d) Appointment. All Watermaster nominations shall be promptly certified to the Court, which will in ordinary course confirm the same by an appropriate order appointing said Watermaster; provided, however, that the Court at all times reserves the right and power to refuse to appoint, or to remove, any member of Watermaster.

30. Term and Vacancies. (Prior Judgment Section 22) Each member of Watermaster shall serve for a one (1) year term commencing on January 1, following his appointment, or until his successor is appointed. In the event of a vacancy on Watermaster, a successor shall be nominated at a special meeting to be called by Watermaster within ninety (90) days (in the case of a Producer representative) or by action of the appropriate district board of directors (in the case of a public representative).

31. Quorum. (Prior Judgment Section 23) Five (5) members

of the Watermaster shall constitute a quorum for the transaction of affairs of the Watermaster. Action by the affirmative vote of five (5) members shall constitute action by Watermaster, except that the affirmative vote of six (6) members shall be required:

(a) to approve the purchase, spreading or injection of water for Ground Water recharge, or

(b) to enter in any Agreement pursuant to Section 34 (m) hereof.

32. Compensation. (Prior Judgment Section 24) Each Watermaster member shall receive compensation of One Hundred Dollars ($100.00) per day for each day's attendance at meetings of Watermaster or for each day's service rendered as a Watermaster member at the request of Watermaster, together with any expenses incurred in the performance of his duties required or authorized by Watermaster. No member of the Watermaster shall be employed by or compensated for professional services rendered by him to Watermaster, other than the compensation herein provided, and any authorized travel or related expense.

33. Organization. (Prior Judgment Section 25) At its first meeting in each year, Watermaster shall elect a chairman and a vice chairman from its membership. It shall also select a secretary, a treasurer and such assistant secretaries and assistant treasurers as may be appropriate, any of whom may, but need not be, members of Watermaster.

(a) Minutes. Minutes of all Watermaster meetings shall be kept which shall reflect all actions taken by Watermaster. Draft copies thereof shall be furnished to

any party who files a request therefor in writing with Watermaster. Said draft copies of minutes shall constitute notice of any Watermaster action therein reported; failure to request copies thereof shall constitute waiver of notice.

(b) Regular Meetings. Watermaster shall hold regular meetings at places and times to be specified in Watermaster's rules and regulations to be adopted by Watermaster. Notice of the scheduled or regular meetings of Watermaster and of any changes in the time or place thereof shall be mailed to all parties who shall have filed a request therefor in writing with Watermaster.

(c) Special Meetings. Special meetings of Watermaster may be called at any time by the chairman or vice chairman or by any three (3) members of Watermaster by written notice delivered personally or mailed to each member of Watermaster and to each party requesting notice, at least twenty-four (24) hours before the time of each such meeting in the case of personal delivery, and forty-eight (48) hours prior to such meeting in the case of mail. The calling notice shall specify the time and place of the special meeting and the business to be transacted at such meeting. No other business shall be considered at such meeting.

(d) Adjournments. Any meeting of Watermaster may be adjourned to a time and place specified in the order of adjournment. Less than a quorum may so adjourn from time to time. A copy of the order or notice of adjournment

shall be conspicuously posted on or near the door of the place where the meeting was held within twenty-four (24) hours after adoption of the order of adjournment.

34. Powers and Duties. (Prior Judgment Section 26) Subject to the continuing supervision and control of the Court, Watermaster shall have and may exercise the following express powers, and shall perform the following duties, together with any specific powers, authority and duties granted or imposed elsewhere in this Judgment or hereafter ordered or authorized by the Court in the exercise of its continuing jurisdiction.

(a) Rules and Regulations. To make and adopt any and all appropriate rules and regulations for conduct of Watermaster affairs. A copy of said rules and regulations and any amendments thereof shall be mailed to all parties.

(b) Acquisition of Facilities. To purchase, lease, acquire and hold all necessary property and equipment; provided, however, that Watermaster shall not acquire any interest in real property in excess of year-to-year tenancy for necessary quarters and facilities.

(c) Employment of Experts and Agents. To employ such administrative personnel, engineering, geologic, accounting, legal or other specialized services and consulting assistants as may be deemed appropriate in the carrying out of its powers and to require appropriate bonds from all officers and employees handling Watermaster funds.

(d) Measuring Devices, etc. To cause parties, pursuant to uniform rules, to install and maintain in good

operating condition, at the cost of each party, such necessary measuring devices or meters as may be appropriate; and to inspect and test any such measuring device as may be necessary.

(e) Assessments. To levy and collect all Assessments specified in the Physical Solution.

(f) Investment of Funds. To hold and invest any and all funds which Watermaster may possess in investments authorized from time to time for public agencies in the State of California.

(g) Borrowing. To borrow in anticipation of receipt of Assessment proceeds an amount not to exceed the annual amount of Assessments levied but uncollected.

(h) Purchase of and Recharge with Supplemental Water. To purchase Supplemental Water and to introduce the same into the Basin for replacement or cyclic storage purposes, subject to the affirmative vote of six (6) members of Watermaster.

(i) Contracts. To enter into contracts for the performance of any administrative powers herein granted, subject to approval of the Court.

(j) Cooperation With Existing Agencies. To act jointly or cooperate with agencies of the United States and the State of California or any political subdivision, municipality or district to the end that the purposes of the Physical Solution may be fully and economically carried out. Specifically, in the event Upper District has facilities available and adequate to accomplish any of the

administrative functions of Watermaster, consideration shall be given to performing said functions under contract with Upper District in order to avoid duplication of facilities.

(k) Assumption of Make-up Obligation. Watermaster shall assume the Make-up Obligation for and on behalf of the Basin.

(m) Water Quality. Water quality in the Basin shall be a concern of Watermaster, and all reasonable steps shall be taken to assist and encourage appropriate regulatory agencies to enforce reasonable water quality regulations affecting the Basin, including regulation of solid and liquid waste disposal.

(n) Cyclic Storage Agreements. To enter into appropriate contracts, to be approved by the Court, for utilization of Ground Water storage capacity of the Basin for cyclic or regulatory storage of Supplemental Water by parties and non-parties, for subsequent recovery or Watermaster credit by the storing entity, pursuant to uniform rules and conditions, which shall include provision for:

(1) Watermaster control of all spreading or injection and extraction scheduling and procedures for such stored water;

(2) calculation by Watermaster of any special costs, damages or burdens resulting from such operations;

(3) determination by Watermaster of, and

accounting for, all losses in stored water, assuming that such stored water floats on top of the Ground Water supplies, and accounting for all losses of water which otherwise would have replenished the Basin, with priorities being established as between two or more such contractors giving preference to parties over non-parties; and

(4) payment to Watermaster for the benefit of the parties hereto of all special costs, damages or burdens incurred (without any charge, rent, assessment or expense as to parties hereto by reason of the adjudicated proprietary character of said storage rights, nor credit or offset for benefits resulting from such storage); provided, that no party shall have any direct interest in or control over such contracts or the operation thereof by reason of the adjudicated right of such party, the Watermaster having sole custody and control of all Ground Water storage rights in the Basin pursuant to the Physical Solution herein, and subject to review of the Court.

(o) Notice List. Maintain a current list of party designees to receive notice hereunder, in accordance with Section 54 hereof.

35. Policy Decisions -- Procedure. (Prior Judgment Section 27) It is contemplated that Watermaster will exercise discretion in making policy decisions relating to Basin management under the Physical Solution decreed herein. In order to assure full participation and opportunity to be heard for

those affected, no policy decision shall be made by Watermaster until thirty (30) days after the question involved has been raised for discussion at a Watermaster meeting and noted in the draft of minutes thereof.

36. Reports. (Prior Judgment Section 28) Watermaster shall annually file with the Court and mail to the parties a report of all Watermaster activities during the preceding year, including an audited statement of all accounts and financial activities of Watermaster, summary reports of Diversions and Pumping, and all other pertinent information. To the extent practical, said report shall be mailed to all parties on or before November 1.

37. Review Procedures. (Prior Judgment Section 29) Any action, decision, rule or procedure of Watermaster (other than a decision establishing Operating Safe Yield, see Section 43[c]) shall be subject to review by the Court on its own motion or on timely motion for an Order to Show Cause by any party, as follows:

(a) Effective Date of Watermaster Action. Any order, decision or action of Watermaster shall be deemed to have occurred on the date that written notice thereof is mailed. Mailing of draft copies of Watermaster minutes to the parties requesting the same shall constitute notice to all such parties.

(b) Notice of Motion. Any party may, by a regularly noticed motion, petition the Court for review of said Watermaster's action or decision. Notice of such motion shall be mailed to Watermaster and all parties. Unless so

ordered by the Court, such petition shall not operate to stay the effect of such Watermaster action.

(c) Time for Motion. Notice of motion to review any Watermaster action or decision shall be served and filed within ninety (90) days after such Watermaster action or decision.

(d) De Novo Nature of Proceeding. Upon filing of such motion for hearing, the Court shall notify the parties of a date for taking evidence and argument, and shall review de novo the question at issue on the date designated. The Watermaster decision or action shall have no evidentiary weight in such proceeding.

(e) Decision. The decision of the Court in such proceeding shall be an appealable Supplemental Order in this case. When the same is final, it shall be binding upon the Watermaster and the parties.

F. PHYSICAL SOLUTION

38. Purpose and Objective. (Prior Judgment Section 30) Consistent with the California Constitution and the decisions of the Supreme Court, the Court hereby adopts and Orders the parties to comply with this Physical Solution. The purpose and objective of these provisions is to provide a legal and practical means for accomplishing the most economic, long term, conjunctive utilization of surface, Ground Water, Supplemental Water and Ground Water storage capacity to meet the needs and requirements of the water users dependent upon the Basin and Relevant Watershed, while preserving existing equities.

39. Need for Flexibility. (Prior Judgment Section 31) In

order that Watermaster may be free to utilize both existing and new and developing technological, social and economic concepts for the fullest benefit of all those dependent upon the Basin, it is essential that the Physical Solution hereunder provide for maximum flexibility and adaptability. To that end, the Court has retained continuing jurisdiction to supplement the broad discretion herein granted to the Watermaster.

40. Watermaster Control. (Prior Judgment Section 32) In order to develop an adequate and effective program of Basin management, it is essential that Watermaster have broad discretion in the making of Basin management decisions within the ambit hereinafter set forth. Withdrawal and replenishment of supplies of the Basin and Relevant Watershed and the utilization of the water resources thereof, and of available Ground Water storage capacity, must be subject to procedures established by Watermaster in implementation of the provisions of this Judgment. Both the quantity and quality of said water resource are thereby preserved and its beneficial utilization maximized.

41. General Pattern of Contemplated Operation. (Prior Judgment Section 33) In general outline (subject to the specific provisions hereafter and to Watermaster Operating Criteria set forth in Exhibit "H"), Watermaster will determine annually the Operating Safe Yield of the Basin and will notify each Pumper of his share thereof, stated in acre feet per Fiscal Year. Thereafter, no party may Produce in any Fiscal Year an amount in excess of the sum of his Diversion Right, if any, plus his Pumper's Share of such Operating Safe Yield, or his

Integrated Production Right, or the terms of any Cyclic Storage Agreement, without being subject to Assessment for the purpose of purchasing Replacement Water. In establishing the Operating Safe Yield, Watermaster shall follow all physical, economic, and other relevant parameters provided in the Watermaster Operating Criteria. Watermaster shall have Assessment powers to raise funds essential to implement the management plan in any of the several special circumstances herein described in more detail.

42. Basin Operating Criteria. (Prior Judgment Section 34) Until further order of the Court and in accordance with the Watermaster Operating Criteria, Watermaster shall not spread Replacement Water when the water level at the Key Well exceeds Elevation two hundred fifty (250), and Watermaster shall spread Replacement Water, insofar as practicable, to maintain the water level at the Key Well above Elevation two hundred (200).

43. Determination of Operating Safe Yield. (Prior Judgment Section 35) Watermaster shall annually determine the Operating Safe Yield applicable to the succeeding Fiscal Year and estimate the same for the next succeeding four (4) Fiscal Years. In making such determination, Watermaster shall be governed in the exercise of its discretion by the Watermaster Operating Criteria. The procedures with reference to said determination shall be as follows:

(a) Preliminary Determination. On or before Watermaster's first meeting in April of each year, Watermaster shall make a Preliminary Determination of the Operating Safe Yield of the Basin for each of the succeeding five Fiscal Years. Said determination shall be

made in the form of a report containing a summary statement of the considerations, calculations and factors used by Watermaster in arriving at said Operating Safe Yield.

(b) Notice and Hearing. A copy of said Preliminary Determination and report shall be mailed to each Pumper and Integrated Producer at least ten (10) days prior to a hearing to be held at Watermaster's regular meeting in May, of each year, at which time objections or suggested corrections or modifications of said determinations shall be considered. Said hearing shall be held pursuant to procedures adopted by Watermaster.

(c) Watermaster Determination and Review Thereof. Within thirty (30) days after completion of said hearing, Watermaster shall mail to each Pumper and Integrated Producer a final report and determination of said Operating Safe Yield for each such Fiscal Year, together with a statement of the Producer's entitlement in each such Fiscal Year stated in acre feet. Any affected party, within thirty (30) days of mailing of notice of said Watermaster determination, may, by a regularly noticed motion, petition the Court for an Order to Show Cause for review of said Watermaster finding, and thereupon the Court shall hear such objections and settle such dispute. Unless so ordered by the Court, such petition shall not operate to stay the effect of said report and determination. In the absence of such review proceedings, the Watermaster determination shall be final.

44. Reports of Pumping and Diversion. (Prior Judgment

Section 36) Each party (other than Minimal Producers) shall file with the Watermaster quarterly, on or before the last day of January, April, July and October, a report on a form to be prescribed by Watermaster showing the total Pumping and Diversion (separately for Direct Use and for non-consumptive use, if any,) of such party during the preceding calendar quarter.

45. Assessments -- Purpose. (Prior Judgment Section 37) Watermaster shall have the power to levy and collect Assessments from the parties (other than Minimal Producers, non-consumptive users, or Production under Special Category Rights or Cyclic Storage Agreements) based upon Production during the preceding Fiscal Year. Said Assessments may be for one or more of the following purposes:

(a) Watermaster Administration Costs. Within thirty (30) days after completion of the hearing on the Preliminary Determination of the Operating Safe Yield of the Basin and Watermaster's determination thereof, pursuant to Section 43 hereof, Watermaster shall adopt a proposed budget for the succeeding Fiscal Year and shall mail a copy thereof to each party, together with a statement of the level of Administration Assessment levied by Watermaster which will be collected for purposes of raising funds for said budget. Said Assessment shall be uniformly applicable to each acre foot of Production.

(b) Replacement Water Costs. Replacement Water Assessments shall be collected from each party on account of such party's Production in excess of its Diversion

Rights, Pumper's Share or Integrated Production Right, and on account of the consumptive use portion of Overlying Rights, computed at the applicable rate established by Watermaster consistent with the Watermaster Operating Criteria.

(c) Make-Up Obligation. An Assessment shall be collected equally on account of each acre foot of Production, which does not bear a Replacement Assessment hereunder, to pay all necessary costs of Administration and satisfaction of the Make-Up Obligation. Such Assessment shall not be applicable to water Production for an Overlying Right.

(d) In-Lieu Water Cost. Watermaster may levy an Assessment against all Pumping to pay reimbursement for In-Lieu Water Costs except that such Assessment shall not be applicable to the non-consumptive use portion of an Overlying Right.

(e) Basin Water Quality Improvement. For purposes of testing, protecting or improving the water quality in the Basin, Watermaster may, after a noticed hearing thereon, fix terms and conditions under which it may waive all or any part of its Assessments on such ground water Production and if such Production, in addition to his other Production, does not exceed such Producer's Share or entitlement for that Fiscal Year, such stated Production shall be allowed to be carried over for a part of such Producer's next Fiscal Year's Producer's Share or entitlement. In connection therewith, Watermaster may also

waive the provisions of Sections 25, 26 and 57 hereof, relating to Injunction Against Unauthorized Recharge, Injunction Against Transportation From Basin or Relevant Watershed, and Intervention After Judgment, respectively. Nothing in this Judgment is intended to allow an increase in any Producer's annual entitlement nor to prevent Watermaster, after hearing thereon, from entering into contracts to encourage, assist and accomplish the clean up and improvement of degraded water quality in the Basin by non-parties herein. Such contracts may include the exemption of the Production of such Basin water therefor from Watermaster Assessments and, in connection therewith, the waiver of the provisions of Judgment Sections 25, 26, and 57 hereof.

46. Assessments -- Procedure. (Prior Judgment Section 38) Assessments herein provided for shall be levied and collected as follows:

(a) Levy and Notice of Assessment. Within thirty (30) days of Watermaster's annual determination of Operating Safe Yield of the Basin for each Fiscal Year and succeeding four (4) Fiscal Years, Watermaster shall levy applicable Administration Assessments, Replacement Water Assessments, Make-up Water Assessments and In-Lieu Water Assessments, if any. Watermaster shall give written notice of all applicable Assessments to each party on or before August 15, of each year.

(b) Payment. Each Assessment shall be payable, and each party is Ordered to pay the same, on or before

September 20, following such Assessment, subject to the rights reserved in Section 37 hereof.

(c) Delinquency. Any Assessment which becomes delinquent after January 1, 1980, shall bear interest at the annual prime rate plus one percent (1%) in effect on the first business day of August of each year. Said prime interest rate shall be that fixed by the Bank of America NT&SA for its preferred borrowing customers on said date. Said prime interest rate plus one percent (1%) shall be applicable to any said delinquent Assessment from the due date thereof until paid. Provided, however, in no event shall any said delinquent Assessment bear interest at a rate of less than ten percent (10%) per annum. Such delinquent Assessment and interest may be collected in a Show Cause proceeding herein or any other legal proceeding instituted by Watermaster, and in such proceeding the Court may allow Watermaster its reasonable costs of collection, including attorney's fees.

47. Availability of Supplemental Water From Responsible Agencies. (Prior Judgment Section 39) If any Responsible Agency shall, for any reason, be unable to deliver Supplemental Water to Watermaster when needed, Watermaster shall collect funds at an appropriate level and hold them in trust, together with interest accrued thereon, for purchase of such water when available.

48. Accumulation of Replacement Water Assessment Proceeds. (Prior Judgment Section 40) In order to minimize fluctuation in Assessments and to give Watermaster flexibility in Basin

management, Watermaster may make reasonable accumulations of Replacement Water Assessments. Such moneys and any interest accrued thereon shall only be used for the purchase of Replacement Water.

49. Carry-over of Unused Rights. (Prior Judgment Section 41) Any Pumper's Share of Operating Safe Yield, and the Production right of any Integrated Producer, which is not Produced in a given Fiscal Year may be carried over and accumulated for one Fiscal Year, pursuant to reasonable rules and procedures for notice and accounting which shall be adopted by Watermaster. The first water Produced in the succeeding Fiscal Year shall be deemed Produced pursuant to such Carry-over Rights.

50. Minimal Producers. (Prior Judgment Section 42) In the interest of Justice, Minimal Producers are exempted from the operation of this Physical Solution, so long as such party's annual Production does not exceed five (5) acre feet. Quarterly Production reports by such parties shall not be required, but Watermaster may require, and Minimal Producers shall furnish, specific periodic reports. In addition, Watermaster may conduct such investigation of future operations of any Minimal Producer as may be appropriate.

51. Effective Date. (Prior Judgment Section 43) The effective date for commencing accounting and operation under this Physical Solution, other than for Replacement Water Assessments, shall be July 1, 1972. The first Assessment for Replacement Water shall be payable on September 20, 1974, on account of Fiscal Year 1973-74 Production.

G. MISCELLANEOUS PROVISIONS

52. Puente Narrows Flow. (Prior Judgment Section 44) The Puente Basin is tributary to the Main San Gabriel Basin. All Producers within said Puente Basin have been dismissed herein, based upon the Puente Narrows Agreement (Exhibit "J"), whereby Puente Basin Water Agency agreed not to interfere with surface inflow and to assure continuance of historic subsurface contribution of water to Main San Gabriel Basin. The Court declares said Agreement to be reasonable and fair and in full satisfaction of claims by Main San Gabriel Basin for natural water from Puente Basin.

53. San Gabriel District - Interim Order. (Prior Judgment Section 45) San Gabriel District has a contract with the State of California for State Project Water, delivered at Devil Canyon in San Bernardino County. San Gabriel District is HEREBY ORDERED to proceed with and complete necessary pipeline facilities as soon as practical.

Until said pipeline is built and capable of delivering a minimum of twenty-eight thousand eight-hundred (28,800) acre feet of State Project water per year, defendant cities of Alhambra, Azusa, and Monterey Park shall pay to Watermaster each Fiscal Year a Replacement Assessment at a uniform rate sufficient to purchase Replenishment Water when available, which rate shall be declared by San Gabriel District. When water is available through said pipeline, San Gabriel District shall make the same available to Watermaster, on his reasonable demand, at said specified rate per acre foot. Interest accrued on such funds shall be paid to San Gabriel

District.

54. Service Upon and Delivery to Parties of Various Papers. (Prior Judgment Section 46) Service of the Judgment on those parties who have executed the Stipulation for Judgment shall be made by first class mail, postage prepaid, addressed to the Designee and at the address designated for that purpose in the executed and filed counterpart of the Stipulation for Judgment, or in any substitute designation filed with the Court.

Each party who has not heretofore made such a designation shall, within thirty (30) days after the Judgment shall have been served upon that party, file with the Court, with proof of service of a copy thereof upon Watermaster, a written designation of the person to whom and the address at which all future notices, determinations, requests, demands, objections, reports and other papers and processes to be served upon that party or delivered to that party are to be so served or delivered.

A later substitute designation filed and served in the same manner by any party shall be effective from the date of filing as to the then future notices, determinations, requests, demands, objections, reports and other papers and processes to be served upon or delivered to that party.

Delivery to or service upon any party by Watermaster, by any other party, or by the Court, of any item required to be served upon or delivered to a party under or pursuant to the Judgment may be made by deposit thereof (or by copy thereof) in the mail, first class, postage prepaid, addressed to the Designee of the party and at the address shown in the latest

designation filed by that party.

55. Assignment, Transfer, etc., of Rights. (Prior Judgment Section 47) Any rights Adjudicated herein except Overlying Rights, may be assigned, transferred, licensed or leased by the owners thereof; provided however, that no such assignment shall be complete until the appropriate notice procedures established by Watermaster have been complied with. No water Produced pursuant to rights assigned, transferred, licensed, or leased may be transported outside the Relevant Watershed except by:

(1) a Transporting Party, or

(2) a successor in interest immediate or mediate to a water system on lands or portion thereof, theretofore served by such a Transporting Party, for use by such successor in accordance with limitations applicable to Transporting Parties, or

(3) a successor in interest to the Special Category rights of MWD.

The transfer and use of Overlying Rights shall be limited, as provided in Section 21 hereof, as exercisable only on the specifically defined Overlying Lands and they cannot be separately conveyed or transferred apart therefrom.

56. Abandonment of Rights. (Prior Judgment Section 48) It is in the interest of reasonable beneficial use of the Basin and its water supply that no party be encouraged to take and use more water in any Fiscal Year than is actually required. Failure to Produce all of the water to which a party is entitled hereunder shall not, in and of itself, be deemed or constitute

an abandonment of such party's right, in whole or in part. Abandonment and extinction of any right herein Adjudicated shall be accomplished only by:

(1) a written election by the party, filed in this case, or

(2) upon noticed motion of Watermaster, and after hearing.

In either case, such abandonment shall be confirmed by express subsequent order of this Court.

57. Intervention After Judgment. (Prior Judgment Section 49) Any person who is not a party or successor to a party and who proposes to Produce water from the Basin or Relevant Watershed, may seek to become a party to this Judgment through a Stipulation For Intervention entered into with Watermaster. Watermaster may execute said Stipulation on behalf of the other parties herein but such Stipulation shall not preclude a party from opposing such Intervention at the time of the Court hearing thereon. Said Stipulation For Intervention must thereupon be filed with the Court, which will consider an order confirming said Intervention following thirty (30) days' notice to the parties. Thereafter, if approved by the Court, such Intervenor shall be a party bound by this Judgment and entitled to the rights and privileges accorded under the Physical Solution herein.

58. Judgment Binding on Successors, etc. (Prior Judgment Section 50) Subject to specific provisions hereinbefore contained, this Judgment and all provisions thereof are applicable to and binding upon and inure to the benefit of not

only the parties to this action, but as well to their respective heirs, executors, administrators, successors, assigns, lessees, licensees and to the agents, employees and attorneys in fact of any such persons.

59. Water Rights Permits. (Prior Judgment Section 51) Nothing herein shall be construed as affecting the relative rights and priorities between MWD and San Gabriel Valley Protective Association under State Water Rights Permits Nos. 7174 and 7175, respectively.

60. Costs. (Prior Judgment Section 52) No party shall recover any costs in this proceeding from any other party.

61. Entry of Judgment. (New) The Clerk shall enter this Judgment.

DATED: August 24, 1989.

s/ Florence T. Pickard
Florence T. Pickard, Judge

Exhibit "B"

BOUNDARIES OF RELEVANT WATERSHED

The following described property is located in Los Angeles County, State of California:

Beginning at the Southwest corner of Section 14, Township 1 North, Range 11 West, San Bernardino Base and Meridian;

Thence Northerly along the West line of said Section 14 to the Northwest corner of the South half of said Section 14;

Thence Easterly along the North line of the South half of Section 14 to the East line of said Section 14;

Thence Northerly along the East line of said Section 14, Township 1 North, Range 11 West and continuing Northerly along the East line of Section 11 to the Northeast corner of said Section 11;

Thence Easterly along the North line of Section 12 to the Northeast corner of said Section 12;

Thence Southerly along the East line of said Section 12 and continuing Southerly along the East line of Section 13 to the Southeast corner of said Section 13, said corner being also the Southwest corner of Section 18, Township 1 North, Range 10 West;

Thence Easterly along the South line of Sections 18, 17, 16 and 15 of said Township 1 North, Range 10 West to the Southwest corner of Section 14;

Thence Northerly along the West line of Section 14 to the Northwest corner of the South half of Section 14;

Thence Easterly along the North line of the South half of Section 14 to the East line of said section;

Thence Northerly along the East line of said Section 14, and continuing Northerly along the West line of Section 12 of said Township 1 North, Range 10 West to the North line of said Section 12;

Thence Easterly along the North line of said Section 12, to the Northeast corner of said Section 12, said corner being also the Southwest corner of Section 6, Township 1 North, Range 9 West;

Thence Northerly along the West line of said Section 6 and continuing Northerly along West line of Sections 31 and 30, Township 2 North, Range 9 West to the Westerly prolongation of the North line of said Section 30;

Thence Easterly along said Westerly prolongation of the North line of said Section 30 and continuing Easterly along the North line of Section 29 to the Northeast corner of said Section 29;

Thence Southerly along the East line of said Section 29 and continuing Southerly along the East line of Section 32, Township 2 North, Range 9 West, and thence continuing Southerly along the East line of Section 5, Township 1 North, Range 9 West to the Southeast corner of said Section 5;

Thence Westerly along the South line of said Section 5 to the Southwest corner of said Section 5, said point being also the Northwest corner of Section 8;

Thence Southerly along the West line of said Section 8 and continuing Southerly along the West line of Section 17, to the Southwest corner of said Section 17, said corner being also the Northwest corner of Section 20;

Thence Easterly along the North line of Sections 20 and 21 to the Northwest corner of Section 22, said corner being also the Southwest corner of Section 15;

Thence Northerly along the West line of said Section 15 to the Northwest corner of the South half of said Section 15;

Thence Easterly along the North line of said South half of Section 15 to the Northeast corner of said South half of Section 15;

Thence Southerly along the East line of Section 15 and continuing Southerly along the East line of Section 22 to the Southeast corner of said Section 22, said point being also the Southwest corner of Section 23;

Thence Easterly along the South line of Sections 23 and 24 to the East line of the West half of said Section 24;

Thence Northerly along said East line of the West half of Section 24 to the North line thereof;

Thence Easterly along said North line of Section 24 to the Northeast corner thereof, said point also being the Northwest corner of Section 19, Township 1 North, Range 8 West;

Thence continuing Easterly along the North line of Section 19 and Section 20 of said Township 1 North, Range 8 West to the Northeast corner of said Section 20;

Thence Southerly along the East line of Sections 20, 29 and 32 of said Township 1 North, Range 8 West to the Southeast corner of said Section 32;

Thence Westerly along the South line of Section 32 to the Northwest corner of the East half of Section 5, Township 1 South, Range 8 West;

Thence Southerly along the West line of the East half of said Section 5 to the South line of said Section 5;

Thence West to the East line of the Northerly prolongation of Range 9 West;

Thence South 87° 30' West to an intersection with the Northerly prolongation of the West line of Section 27, Township 1 South, Range 9 West;

Thence Southerly along the Northerly prolongation of said West line of Section 27 and continuing Southerly along the West line of Section 27 to the Southwest corner of said Section 27, said point being also the Southeast corner of Section 28;

Thence Westerly along the South line and Westerly projection of the South line of said Section 28 to the Northerly prolongation of the West line of Range 9 West;

Thence Southerly along said prolongation of the West line of Range 9 West to the Westerly prolongation of the North line of Township 2 South;

Thence Westerly along said Westerly prolongation of the North line of Township 2 South, a distance of 8,500 feet;

Thence South a distance of 1,500 feet;

Thence West a distance of 10,700 feet;

Thence South 29° West to an intersection with the Northerly prolongation of the West line of Section 20, Township 2 South, Range 10 West;

Thence Southerly along said Northerly prolongation of the West line of said Section 20 and continuing Southerly along the West line of Section 20 to the Southwest corner of said Section 20;

Thence South a distance of 2,000 feet;

Thence West a distance of two miles, more or less, to an intersection with the East line of Section 26, Township 2 South, Range 11 West;

Thence Northerly along said East line of Section 26 and continuing Northerly along the East line of Section 23, Township 2 South, Range 11 West to the Northeast corner of said Section 23;

Thence Westerly along the North line of said Section 23 to the Northwest corner thereof, said point being also the Southeast corner of Section 15, Township 2 South, Range 11 West;

Thence Northerly and Westerly along the East and North lines, respectively, of said Section 15, Township 2 South, Range 11 West, to the Northwest corner thereof;

Thence continuing Westerly along the Westerly prolongation of said North line of Section 15, Township 2 South, Range 11 West to an intersection with a line parallel to and one mile East of the West line of Range 11 West;

Thence Northerly along said parallel line to an intersection with the Northerly boundary of the City of Pico Rivera as said City of Pico Rivera existed on July 17, 1970;

Thence Westerly along said City boundary to an intersection with the East line of Range 12 West;

Thence Northerly along said East line of Range 12 West to the North line of Township 2 South;

Thence Westerly along the North line of Township 2 South to an intersection with the Southerly prolongation of the East line of the West half of Section 26, Township 1 South, Range 12 West;

Thence Northerly along said Southerly prolongation of said East line of the West half of said Section 26 to the Southeast corner of said West half;

Thence Westerly along the South line of Sections 26, 27 and 28, Township 1 South, Range 12 West, to the Southeast corner of Section 29, Township 1 South, Range 12 West;

Thence Northerly along the East line of said Section 29 to the Northeast corner of the South half of said Section 29;

Thence Westerly along the North line of the South half of said Section 29 to the Northwest corner thereof;

Thence Northerly along the West line of Sections 29, 20, 17 and 8, Township 1 South, Range 12 West;

Thence continuing Northerly along the Northerly prolongation of the West line of Section 8, Township 1 South, Range 12 West to an intersection with the North line of Township 1 South;

Thence Easterly along said North line of Township 1 South to the Northeast corner of Section 3, Township 1 South, Range 12 West;

Thence North 64° 30′ East to an intersection with the West line of Section 23, Township 1 North, Range 11 West;

Thence Northerly along the West line of said Section 23 to the Northwest corner thereof, said point being the Southwest corner of Section 14, Township 1 North, Range 11 West and said point being also the point of beginning.

TABLE SHOWING
SPECIAL CATAGORY RIGHTS

PARTY	Nature of Right
The Metropolitan Water District of Southern California	Morris Reservoir Storage and Withdrawal (a) A right to divert, store and use San Gabriel River Water, pursuant to Permit No. 7174. (b) Prior and paramount right to divert 72 acre-feet annually to offset Morris Reservoir evaporation and seepage losses and to provide the water supply necessary for presently existing incidential Morris Dam facilities.
Los Angeles County Flood Control District (Now Los Angeles County Department of Public Works)	Puddingstone Reservoir Prior Prescriptive right to divert water from San Dimas Wash for storage in Puddingstone Reservoir in quantities sufficient to offset annual evaporation and seepage losses of the reservoir at approximate elevation 942.

TABLE SHOWING
NON-CONSUMPTIVE USERS

Party	Nature of Right
Covina Irrigating Company Azusa Valley Water Company Azusa Agricultural Water Co. Azusa Foot-Hill Citrus Co. Monrovia Nursery Company	"Committee-of-Nine" Spreading Right To continue to divert water from the San Gabriel River pursuant to the 1888 Settlement, and to spread in spreading grounds within the Basin all water thus diverted without the right to recapture water in excess of said parties' rights as adjudicated in Exhibit "E".
California-American Water Company (Duarte System)	Spreading Right To continue to divert water from the San Gabriel River pursuant to the 1888 Settlement, and to continue to divert water from Fish Canyon and to spread said waters in its spreading grounds in the Basin without the right to recapture water in excess of said party's rights as adjudicated in Exhibit "E".
City of Glendora	Spreading Right To continue to spread the water of Big and Little Dalton Washes, pursuant to License No. 2592 without the right to recapture water in excess of said party's rights as adjudicated in Exhibit "E".
San Gabriel Valley Protective Association	Spreading Right To continue to spread San Gabriel River water pursuant to License Nos. 9991 and 12,209, without the right to recapture said water.
California Cities Water Company	Spreading Right To continue to spread waters from San Dimas Wash without the right to recapture water in excess of said party's rights as adjudicated in Exhibit "E".
Los Angeles County Flood Control District	Temporary storage of storm flow for regulatory purposes; Spreading and conservation for general benefit in streambeds, reservoirs and spreading grounds without the right to recapture said water. Maintenance and operation of dams and other flood control works.

EXHIBIT "H"

WATERMASTER OPERATING CRITERIA

1. Basin Storage Capacity. The highest water level at the end of a water year during the past 40 years was reached at the Key Well on September 30, 1944 (elevation 316). The State of California, Department of Water Resources, estimates that as of that date, the quantity of fresh water in storage in the Basin was approximately 8,600,000 acre-feet. It is also estimated by said Department that by September 30, 1960, the quantity of fresh water in storage had decreased to approximately 7,900,000 acre-feet (elevation 237) at the Key Well).

The lowest water level at the end of a water year during the past 40 years was reached at the Key Well on September 30, 1965 (elevation 209). It is estimated that the quantity of fresh water in storage in the Basin on that date was approximately 7,700,000 acre-feet.

Thus, the maximum utilization of Basin storage was approximately 900,000 acre-feet, occurring between September 30, 1944, and September 30, 1965 (between elevations 316 and 209 at the Key Well). This is not to say that more than 900,000 acre-feet of storage space below the September 30, 1944 water levels cannot be utilized. However, it demonstrates that pumpers have deepened their wells and lowered their pumps so that such 900,000 acre-feet of storage can be safely and economically utilized.

The storage capacity of the Basin between elevations of 200 and 250 at the Key Well represents a usable volume of approximately 400,000 acre-feet of water.

2. Operating Safe Yield and Spreading. Watermaster in determining Operating Safe Yield and the importation of Replacement Water shall be guided by water level elevations in the Basin. He shall give recognition to, and base his operations on, the following general objectives insofar as practicable:

(a) The replenishment of ground water from sources of supplemental water should not cause excessively high levels of ground water and such replenishment should not cause undue waste of local water supplies.

(b) Certain areas within the Basin are not at the present time capable of being recharged with supplemental water. Efforts should be made to provide protection to such areas from excessive ground water lowering either through the "in lieu" provisions of the Judgment or by other means.

(c) Watermaster shall consider and evaluate the long-term consequences on ground water quality, as well as quantity, in determining and establishing Operating Safe Yield. Recognition shall be given to the enhancement of ground water quality insofar as practicable, especially in the area immediately upstream of Whittier Narrows where degradation of water quality may occur when water levels at the Key Well are maintained at or below elevation 200.

(d) Watermaster shall take into consideration the comparative costs of supplemental and Make-up Water in determining the savings on a present value basis of temporary or permanent lowering or raising of water levels and other economic data and analyses indicating both the short-term and long-term

propriety of adjusting Operating Safe Yield in order to derive optimum water levels during any period. Watermaster shall utilize the provisions in the Long Beach Judgment which will result in the least cost of delivering Make-up Water.

3. Replacement Water -- Sources and Recharge Criteria. The following criteria shall control purchase of Replacement Water and Recharge of the Basin by Watermaster.

(a) Responsible Agency From Which to Purchase. Watermaster, in determining the Responsible Agency from which to purchase supplemental water for replacement purposes, shall be governed by the following:

(1) Place of Use of Water which is used primarily within the Basin or by cities within San Gabriel District in areas within or outside the Basin shall control in determining the Responsible Agency. For purposes of this subparagraph, water supplied through a municipal water system which lies chiefly within the Basin shall be deemed entirely used within the Basin; and

(2) Place of production of water shall control in determining the Responsible Agency as to water exported from the Basin, except as to use within San Gabriel District.

Any Responsible Agency may, at the request of Watermaster, waive its right to act as the source for such supplemental water, in which case Watermaster shall be free to purchase such water from the remaining Responsible Agencies which are the most beneficial and appropriate sources; provided, however, that a Responsible Agency shall not

authorize any sale of water in violation of the California Constitution.

(b) Water Quality. Watermaster shall purchase the best quality of supplemental water available for replenishment of the Basin, pursuant to subsection (a) hereof.

(c) Reclaimed Water. It is recognized that the technology and economic and physical necessity for utilization of reclaimed water is increasing. The purchase of reclaimed water in accordance with the Long Beach Judgment to satisfy the Make-up Obligation is expressly authorized. At the same time, water quality prob'ems involved in the reuse of water within the Basin pose serious questions of increased costs and other problems to the pumpers, their customers and all water users. Accordingly, Watermaster is authorized to gather information, make and review studies, and make recommendations on the feasibility of the use of reclaimed water for replacement purposes; provided that no reclaimed water shall be recharged in the Basin by Watermaster without the prior approval of the court, after notice to all parties and hearing thereon.

4. Replacement Assessment Rates. The Replacement Assessment rates shall be in an amount calculated to allow Watermaster to purchase one acre-foot of supplemental water for each acre-foot of excess Production to which such Assessment applies.

EXHIBIT "J"

PUENTE NARROWS AGREEMENT

THIS AGREEMENT is made and entered into as of the 8th day of May, 1972, by and between PUENTE BASIN WATER AGENCY, herein called "Puente Agency", and UPPER SAN GABRIEL VALLEY MUNICIPAL WATER DISTRICT, herein called "Upper District".

A. RECITALS

1. Puente Agency. Puente Agency is a joint powers agency composed of Walnut Valley Water District, herein called "Walnut District", and Rowland Area County Water District, herein called "Rowland District". Puente Agency is formed for the purpose of developing and implementing a ground water basin management program for Puente Basin. Pursuant to said purpose, said Agency is acting as a representative of its member districts and of the water users and water right claimants therein in the defense and maintenance of their water rights within Puente Basin.

2. Upper District. Upper District is a municipal water district overlying a major portion of the Main San Gabriel Basin. Upper District is plaintiff in the San Gabriel Basin Case, wherein it seeks to adjudicate rights and implement a basin management plan for the Main San Gabriel Basin.

3. Puente Basin is a ground water basin tributary to the Main San Gabriel Basin. Said area was included within the scope of the San Gabriel Basin Case and substantially

all water rights claimants within Puente Basin were joined as defendants therein. The surface contribution to the Main San Gabriel Basin from Puente Basin is by way of the paved flood control channel of San Jose Creek, which passes through Puente Basin from the Pomona Valley area. Subsurface outflow is relatively limited and moves from the Puente Basin to the Main San Gabriel Basin through Puente Narrows.

4. Intent of Agreement. Puente Agency is prepared to assure Upper District that no activity within Puente Basin will hereafter be undertaken which will (1) interfere with surface flows in San Jose Creek, or (2) impair the subsurface flow from Puente Basin to the Main San Gabriel Basin. Walnut District and Rowland District, by operation of law and by express assumption endorsed hereon, assume the covenants of this agreement as a joint and several obligation. Based upon such assurances and the covenants hereinafter contained in support thereof, Upper District consents to the dismissal of all Puente Basin parties from the San Gabriel Basin Case. By reason of said dismissals, Puente Agency will be free to formulate a separate water management program for Puente Basin.

B. DEFINITIONS AND EXHIBITS

5. Definitions. As used in this Agreement, the following terms shall have the meanings herein set forth:

(a) Annual or Year refers to the fiscal year July 1 through June 30.

(b) Base Underflow. The underflow through

Puente Narrows which Puente Agency agrees to maintain, and on which accrued debits and credits shall be calculated.

(c) Make-up Payment. Make-up payments shall be an amount of money payable to the Watermaster appointed in the San Gabriel Basin Case, sufficient to allow said Watermaster to purchase replacement water on account of any accumulated deficit as provided in Paragraph 9 hereof.

(d) Puente Narrows. The subsurface geologic constriction at the downstream boundary of Puente Basin, located as shown on Appendix "B".

(e) Main San Gabriel Basin, the ground water basin shown and defined as such in Exhibit "A" to the Judgment in the San Gabriel Basin Case.

(f) San Gabriel Basin Case. Upper San Gabriel Valley Municipal Water District v. City of Alhambra, et al., L. A. Sup. Ct. No. 924128, filed January 2, 1968.

6. Appendices. Attached hereto and by this reference made a part hereof are the following appendices:

"A" -- Location Map of Puente Basin, showing major geographic, geologic, and hydrologic features.

"B" -- Map of Cross-Section Through Puente Narrows, showing major physical features and location of key wells.

"C" -- Engineering Criteria, being a description of a method of measurement of subsurface outflow to be utilized for Watermaster purposes.

C. COVENANTS

7. Watermaster. There is hereby created a two member Watermaster service to which each of the parties to this agreement shall select one consulting engineer. The respective representatives on said Watermaster shall serve at the pleasure of the governing body of each appointing party and each party shall bear its own Watermaster expense.

a. Organization. Watermaster shall perform the duties specified herein on an informal basis, by unanimous agreement. In the event the two representatives are unable to agree upon any finding or decision, they shall select a third member to act, pursuant to the applicable laws of the State of California. Thereafter, until said issue is resolved, said three shall sit formally as a board of arbitration. Upon resolution of the issue in dispute, the third member shall cease to function further.

b. Availability of Information. Each party hereto shall, for itself and its residents and water users, use its best efforts to furnish all appropriate information to the Watermaster in order that the required determination can be made.

c. Cooperation With Other Watermasters. Watermaster hereunder shall cooperate and coordinate activities with the Watermasters appointed in the San Gabriel Basin Case and in Long Beach v. San Gabriel Valley Water Company, et al.

d. Determination of Underflow. Watermaster shall annually determine the amount of underflow from Puente Basin to the San Gabriel Basin, pursuant to Engineering Criteria.

e. Perpetual Accounting. Watermaster shall maintain a perpetual account of accumulated base underflow, accumulated subsurface flow, any deficiencies by reason of interference with surface flows, and the offsetting credit for any make-up payments. Said account shall annually show the accumulated credit or debit in the obligation of Puente Agency to Upper District.

f. Report. Watermaster findings shall be incorporated in a brief written report to be filed with the parties and with the Watermaster in the San Gabriel Basin Case. Said report shall contain a statement of the perpetual account heretofore specified.

8. Base Underflow. On the basis of a study and review of historic underflow from Puente Basin to the Main San Gabriel Basin, adjusted for the effect of the paved flood control channel and other relevent considerations, it is

mutually agreed by the parties that the base underflow is and shall be 580 acre feet per year, calculated pursuant to Engineering Criteria.

9. Puente Agency's Obligation. Puente Agency covenants, agrees and assumes the following obligation hereunder:

a. Noninterference with Surface Flow. Neither Puente Agency nor any persons or entities within the corporate boundaries of Walnut District or Rowland District will divert or otherwise interfere with or utilize natural surface runoff now or hereafter flowing in the storm channel of San Jose Creek; provided, however, that this covenant shall not prevent the use, under Watermaster supervision, of said storm channel by the Puente Agency or Walnut District or Rowland District for transmission within Puente Agency of supplemental or reclaimed water owned by said entities and introduced into said channel solely for transmission purposes. In the event any unauthorized use of surface flow in said channel is made contrary to the covenant herein provided, Puente Agency shall compensate Upper District by utilizing any accumulated credit or by make-up payment in the same manner as is provided for deficiencies in subsurface outflow from Puente Basin.

b. Subsurface Outflow. To the extent that

the accumulated subsurface outflow falls below the accumulated base underflow and the result thereof is an accumulated deficit in the Watermaster's annual accounting, Puente Agency agrees to provide make-up payments during the next year in an amount not less than one-third of the accumulated deficit.

c. Purchase of Reclaimed Water. To the extent that Puente Agency or Walnut District or Rowland District may hereafter purchase reclaimed water from the facilities of Sanitation District 21 of Los Angeles County, such purchaser shall use its best efforts to obtain waters originating within San Gabriel River Watershed.

10. Puente Basin Parties Dismissal. In consideration of the assumption of the obligation hereinabove provided by Puente Agency, Upper District consents to entry of dismissals as to all Puente Basin parties in San Gabriel Basin Case. This agreement shall be submitted for specific approval by the Court and a finding that it shall operate as full satisfaction of any and all claims by the parties within Main San Gabriel Basin against Puente Basin parties by reason of historic surface and subsurface flow.

IN WITNESS WHEREOF the parties hereto have caused this Agreement to be executed as of the day and date first above written.

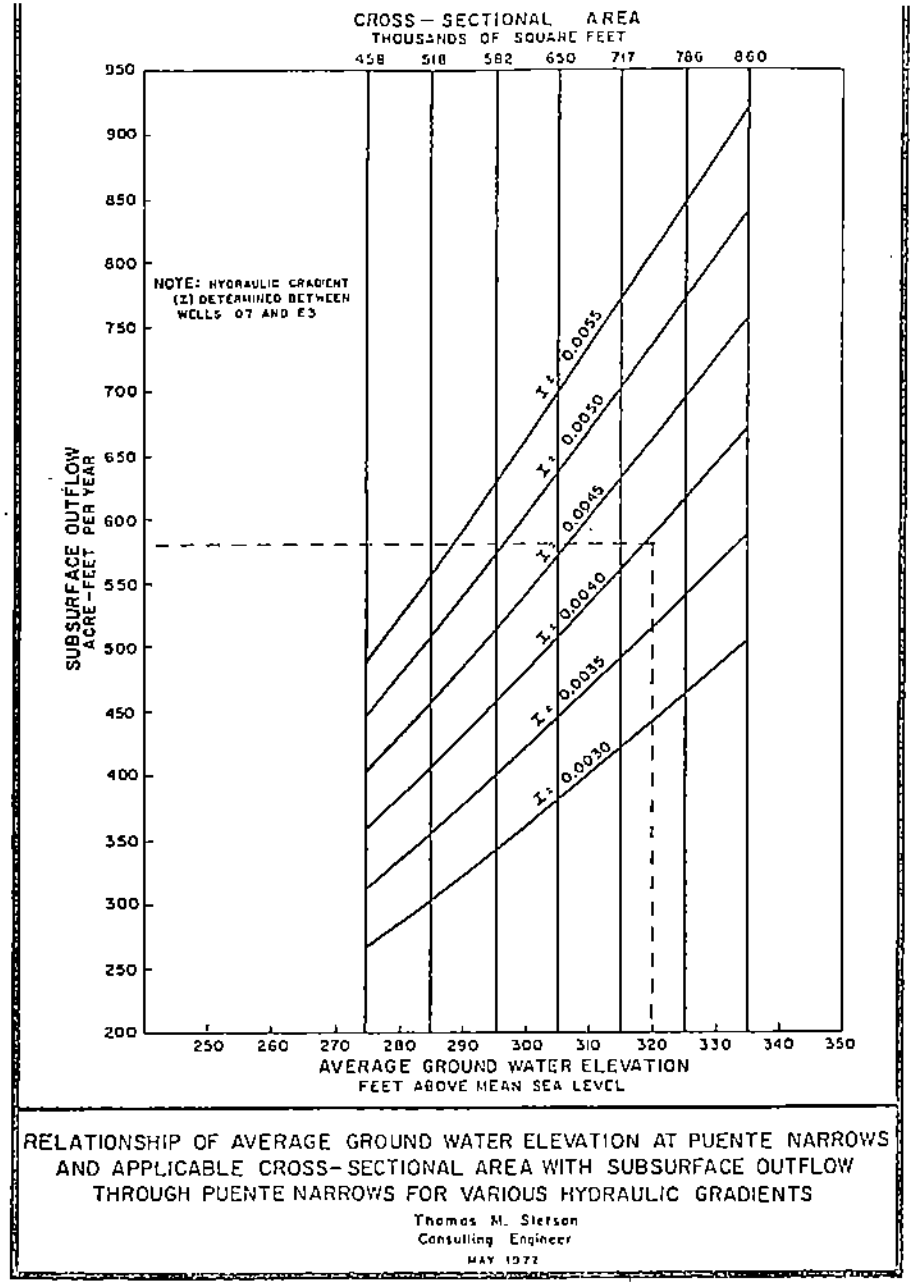
APPENDIX "A"
EXHIBIT "J"

APPENDIX "B"
EXHIBIT "J"

ENGINEERING CRITERIA

APPENDIX "C"

1. Monitoring Wells. The wells designated as State Wells No. 2S/10W-9Q7 and 2S/10W-8E3 and Los Angeles County Flood Control District Nos. 3079M and 3048B, respectively, shall be used to measure applicable ground water elevations. In the event either monitoring well should fail or become unrepresentative, a substitute well shall be selected or drilled by Watermaster. The cost of drilling a replacement well shall be the obligation of the Puente Agency.



2. Measurement. Each monitoring well shall be measured and the ground water elevation determined semi-annually on or about April 1 and October 1 of each year. Prior to each measurement, the pump shall be turned off for a sufficient period to insure that the water table has recovered to a static or near equilibrium condition.

3. Hydraulic Gradient. The hydraulic gradient, or slope of the water surface through Puente Narrows, shall be calculated between the monitoring wells as the difference in water surface elevation divided by the distance, approximately 9,000 feet, between the wells. The hydraulic gradient shall be determined for the spring and fall and the average hydraulic gradient calculated for the year.

4. Ground Water Elevation at Puente Narrows Cross Section. The ground water elevation at the Puente Narrows

cross section midway between the monitoring wells shall be the average of the ground water elevation at the two wells. This shall be determined for the spring and fall and the average annual ground water elevation calculated for the year.

5. Determination of Underflow. The chart attached is a photo-reduction of a full scale chart on file with the Watermaster. By applying the appropriate average annual hydraulic gradient (I) to the average annual ground water elevation at the Puente Narrows cross section (involving the appropriate cross-sectional area [A]), it is possible to read on the vertical scale the annual acre feet of underflow.

RELATIONSHIP OF AVERAGE GROUND WATER ELEVATION AT PUENTE NARROWS AND APPLICABLE CROSS-SECTIONAL AREA WITH SUBSURFACE OUTFLOW THROUGH PUENTE NARROWS FOR VARIOUS HYDRAULIC GRADIENTS

EXHIBIT "K"

OVERLYING RIGHTS

I. NATURE OF OVERLYING RIGHT

An "Overlying Right" is the right to Produce water from the Main San Gabriel Basin for use on the overlying lands hereinafter described. Such rights are exercisable without quantitative limit only on said overlying land and cannot be separately conveyed or transferred apart therefrom. The exerciser of such right is assessable by Watermaster as provided in Paragraph 21 of the Amended Judgment herein (prior Paragraph 14.5 of the Judgment herein) and is subject to the other provisions of said Paragraph.

II. OVERLYING LANDS (Description)

The overlying lands to which Overlying Rights are appurtenant are described as follows:

"Those portions of Lots 1 and 2 of the lands formerly owned by W.A. Church, in the Rancho San Francisquito, in the City of Irwindale, County of Los Angeles, State of California, as shown on recorder's filed map No. 509, in the office of the County Recorder of said County, lying northeasterly of the northeasterly line and its southeasterly prolongation of Tract 1888, as shown on map recorded in Book 21 page 183 of Maps, in the office of the County Recorder of said County.

"EXCEPT the portions thereof lying northerly and northwesterly of the center line of Arrow Highway described 'Sixth' and the center line of Live Oak Avenue described 'Third' in a final decree of condemnation, a certified copy of which was recorded August 18, 1933 as Instrument No. 354, in Book 12289, Page 277, Official Records.

"ALSO EXCEPT that portion of said land described in the final decree of condemnation entered in Los Angeles County Superior Court Case No. 805008, a certified copy of which was recorded September 21, 1964, as Instrument No. 3730, in Book D-2634, Page 648, Official Records."

III. PRODUCERS ENTITLED TO EXERCISE OVERLYING RIGHTS AND THEIR RESPECTIVE CONSUMPTIVE USE PORTIONS

The persons entitled to exercise Overlying Rights are both the owners of Overlying Rights and persons and entities licensed by such owners to exercise such Overlying Rights. The persons entitled to exercise Overlying Rights and their respective Consumptive Use portions are as follows:

OWNER PRODUCERS	CONSUMPTIVE USE PORTION
BROOKS GIFFORD, SR. BROOKS GIFFORD, JR. PAUL MNOIAN JOHN MGRDICHIAN J. EARL GARRETT	3.5 acre-feet per year
Present User: Nu-Way Industries	
PRODUCERS UNDER LICENSE

APPENDIX B

Main San Gabriel Basin - Groundwater Basin Description

Location of the Main San Gabriel Basin

The San Gabriel Valley is located in southeastern Los Angeles County and is bounded on the north by the San Gabriel Mountains, on the west by the San Rafael and Merced Hills, on the south by the Puente Hills and the San Jose Hills, and on the east by a low divide between the San Gabriel River system and Upper Santa Ana River system. The San Gabriel River, and its distributary, the Rio Hondo, drain an area of about 490 square miles upstream of Whittier Narrows. Whittier Narrows is a low gap between the Merced and Puente Hills, just northwest of the City of Whittier, through which the San Gabriel River and the Rio Hondo flow to the coastal plain of Los Angeles County. Whittier Narrows is a natural topographic divide and a subsurface restriction to the movement of ground water between the Main San Gabriel Basin and the Coastal Plain. Of the approximate 490 square miles of drainage area upstream of Whittier Narrows, about 167 square miles are valley lands and about 323 square miles are mountains and foothills.

The Main San Gabriel Basin (Basin) includes essentially the entire valley floor of San Gabriel Valley with the exception of the Raymond Basin and Puente Basin. The boundaries of the Basin are the Raymond Basin on the northwest, the base of the San Gabriel Mountains on the north, the groundwater divide between San Dimas and La Verne and the lower boundary of the Puente Basin on the east, and Whittier Narrows on the southwest.

The Basin is a large groundwater basin replenished by stream runoff from the adjacent mountains and hills, by rainfall directly on the surface of the valley floor, subsurface inflow from Raymond Basin and Puente Basin, and by return flow from water applied for overlying uses. Additionally, the Basin is replenished with imported water. The Basin serves as a natural storage reservoir, transmission system and filtering medium for wells constructed therein.

There are three municipal water districts overlying and partially overlying the Basin. The three districts are Upper San Gabriel Valley Municipal Water District (USGVMWD),

San Gabriel Valley Municipal Water District (SGVMWD) and Three Valleys Municipal Water District (TVMWD).

Sources of Water Supply to Producers

Water producers within the Basin obtain their water supplies from a combination of groundwater production, diversion of surface runoff from the San Gabriel River system and/or purchase of imported water. The following sections identify and describe the various water resources available to producers.

The Main San Gabriel Basin Judgment[1] (Judgment) was entered on January 4, 1973 (See Appendix D). The Judgment is administered by a nine-member Court-appointed board -- six members are nominated by water producers in the Basin and three are public members with two nominated by water producers in the Basin and three are public members with two nominated by USGVMWD and one by SGVMWD. The board is called the Main San Gabriel Basin Watermaster (Watermaster). The Watermaster files a report on Basin operations with the Court. The Fiscal Year 2016-17 Annual Report of the Main San Gabriel Basin Watermaster was filed on November 1, 2017. The Watermaster operates on a fiscal year basis, July 1 to June 30. Selected provisions of the Basin Judgment are summarized below.

The adjudication included the relevant watershed of the Basin because surface water diversions from tributary streams affect the safe yield of the Basin. The rights adjudicated include: (1) Prescriptive Pumping Rights (groundwater only); (2) Base Annual Diversion Rights for surface diversions by those parties who do not also own prescriptive pumping rights; (3) Integrated Production Rights for those producers who hold both Diversion Rights and Prescriptive Pumping Rights enabling the designation of any portion of the annual combined production as surface diversion or groundwater production; (4) Special Category Rights, for storage of water in Morris and

[1]Upper San Gabriel Valley Municipal Water District v. City of Alhambra, et al., Case No. 924128, Los Angeles County.

Puddingstone Reservoirs; (5) Non-Consumptive Use Rights mainly for temporary storage of storm flows and for water spreading operations; and (6) Overlying Consumptive Use Rights.

Each producer must report water production to Watermaster at the end of each calendar quarter. All production is metered. Watermaster tests meters at least once every two years.

Groundwater

The prescriptive pumping rights in the Basin were adjudicated on the basis of mutual prescription resulting in a specific quantity, in acre-feet, for each producer. Such rights were then converted to a pumper's share, expressed in percent of the aggregate of all prescriptive rights. Each year the producer is allowed to extract, free of Replacement Water assessment, the proportional share (pumper's share) of the Operating Safe Yield. Any producer can extract all the water required for beneficial use. If the extraction is less than the producer's pumper's share, the unused portion of the right in a given fiscal year may be carried over for one fiscal year. The first water produced in the succeeding fiscal year is deemed to be such carried over right. The portion of such extraction, which exceeds the sum of the producer's share of Operating Safe Yield, or any carry over rights or leased water rights, is assessed at a rate (Replacement Water assessment), which will purchase one acre-foot of Supplemental Water for each acre-foot of excess production.

Operating Safe Yield is the annual quantity of groundwater, which can be produced from the Basin without obligation for replacement with supplemental water (imported water). The quantity of adjudicated water rights of each producer is used to determine each producer's share of the Operating Safe Yield each year.

In May of each year Watermaster establishes the Operating Safe Yield for the ensuing fiscal year. This is done on the basis of, among other things, groundwater storage

conditions, seasonal rainfall and local water recharge, and water stored in local surface reservoirs. In order to provide sufficient storage capacity in the Basin to capture as much of the local water as practicable, the Amended Judgment provides that supplemental water will be spread, insofar as practicable, to maintain that elevation above 200 feet.

If Basin storage is low, as indicated by the Key Well elevation, Operating Safe Yield is usually lowered so that more Replacement Water can be purchased to increase Basin storage. If Basin storage is relatively high, Operating Safe Yield is usually increased so that Replacement Water is reduced and Basin storage will be beneficially used.

The total fresh water storage capacity of the Basin is estimated to be about 8.7 million acre-feet. Of that, only the top 125 feet of storage, or about 1,000,000 acre-feet is considered to have been used in historic Basin operations. The change in groundwater elevation at the Baldwin Park Key Well (Key Well) is representative of changes in groundwater storage in the Basin. One foot of elevation change at the Key Well is roughly the equivalent of about 8,000 acre-feet of storage. The historic high groundwater elevation was recorded at approximately 329 feet in April 1916, while the historic low was recorded in September 2016 at approximately 172 feet. The Key Well hydrograph shown on Figure 1 (Annual Report) illustrates the cyclic nature of basin recharge and depletion. The hydrograph also illustrates the dramatic recharge capability of the Basin during wet periods.

Figure 1 graphically shows that since the adjudication, water was withdrawn from storage in the Main Basin between 1969 and 1977, and again between 1983 and 1991. Each time the Basin was rapidly recharged by above-average rainfall and recharge of storm water runoff.

The historic production from the Basin, including surface diversions, which are described below, along with water levels at the Key Well and Operating Safe Yield are shown on Table A. The historic low water level, prior to June 2016, was recorded

1/ As of July 1

in September 2016 at 172.2 feet. Although Watermaster reduced the Operating Safe Yield for fiscal year 2016-17 to 150,000 acre-feet, it was estimated that approximately 7.3 million AF of groundwater remained in storage. In addition there was no limit on the quantity of water that could be pumped from the Basin.

Under the Judgment there are three basic annual assessments levied on water production. These assessments are: (1) an Administration Assessment, levied on all water production to pay for the administration of the Judgment; (2) a Make-up Water Assessment, levied on all water production which does not bare a Replacement Water Assessment, to pay the cost of the Make-up Obligation under the Long Beach Judgment; and (3) a Replacement Water Assessment, levied on all water produced in excess of each producer's share of the operating safe yield and other rights he may have. Replacement water assessments are used to purchase supplemental water to replace the excess water produced. In addition, since fiscal year 1989-90, a special administration assessment has been levied to assist the City of Alhambra with provisions of the Cooperative Water Exchange Agreement.

The ownership or use of any adjudicated water right may be transferred, assigned, licensed or leased by the owner to other parties to the Judgment after appropriate notice to and approval by Watermaster. There are occasional sales of water rights. Leasing of water rights occurs frequently.

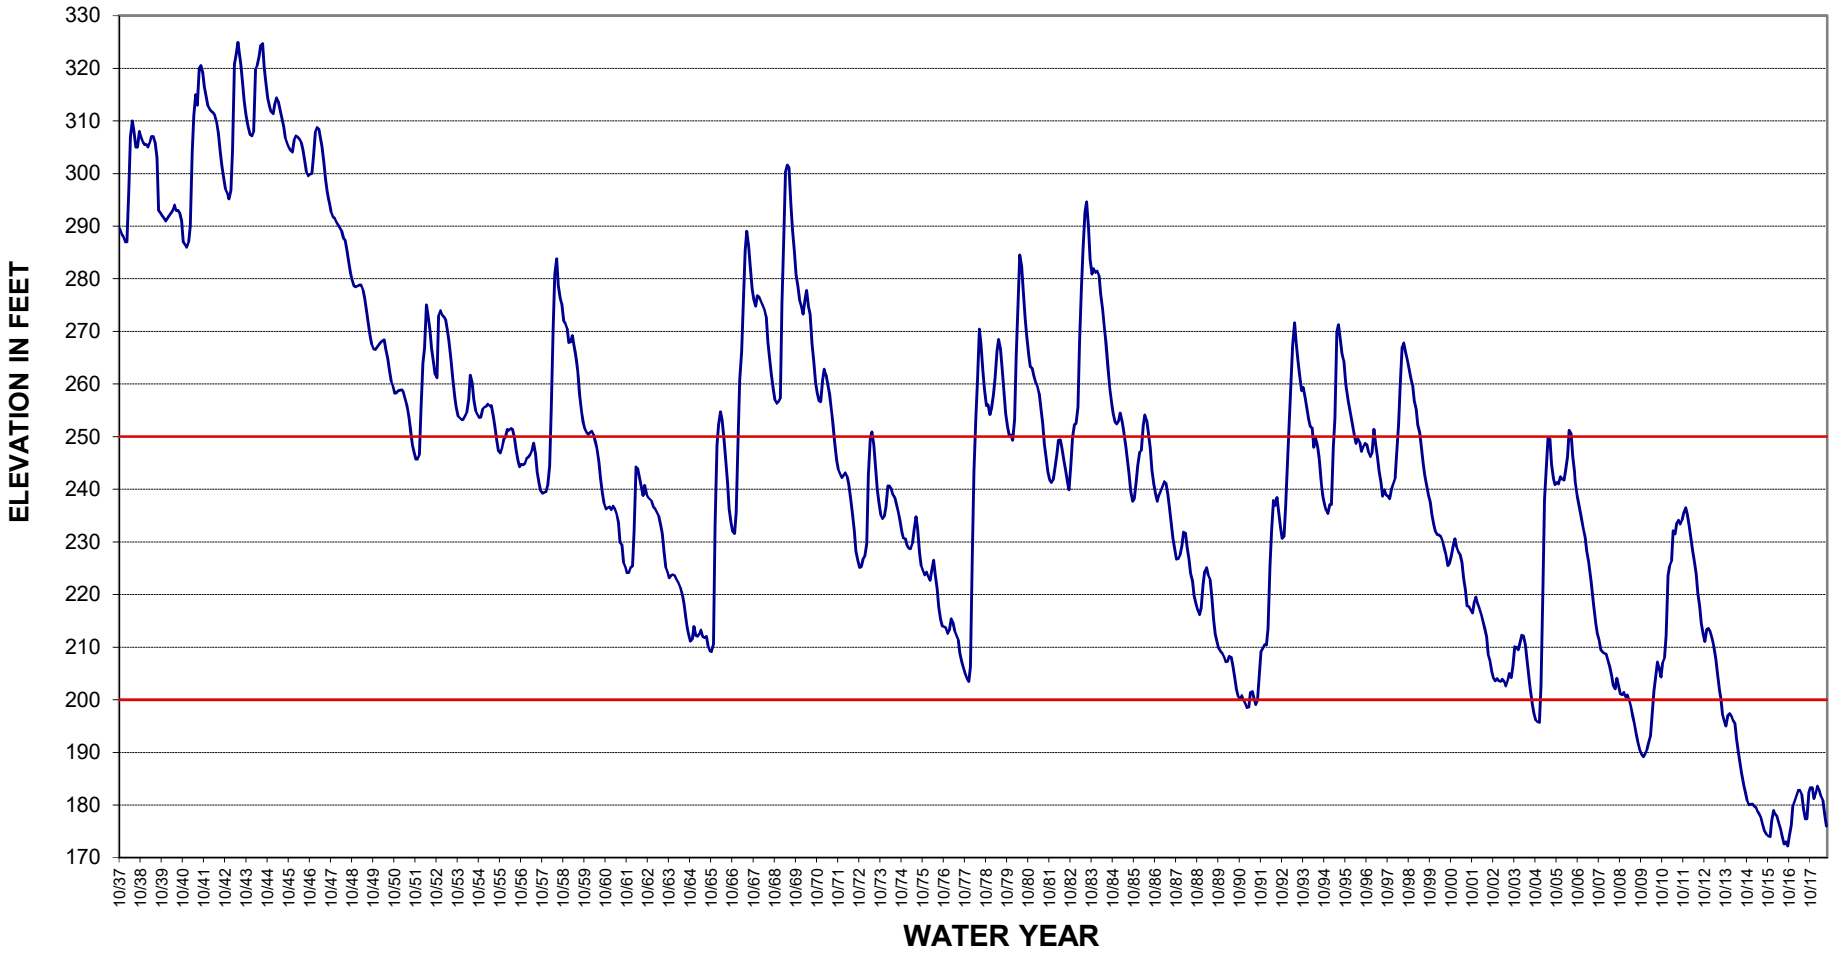
Another unique feature of the Judgment is a provision allowing cyclic storage of imported water in the Basin. The Watermaster may enter into cyclic storage agreements whereby supplemental water may be stored in the Basin for subsequent recovery by the storing entity as supplemental water. Any party may submit an application to Watermaster for a cyclic storage agreement as noted in Section 26 of the Watermaster's Rules and Regulations. When reviewing such applications, the Watermaster will consider the operation of the Basin under the physical solution provisions of the Main Basin Judgment. In general, Watermaster should consider available storage capacity in the Basin to mitigate the potential loss of local water due to

cyclic storage of supplemental water. Also, Watermaster should consider the cumulative impact of all cyclic storage accounts in the Basin.

Water stored under cyclic storage agreements can be utilized only for the purpose of supplying replacement water when requested by Watermaster. Such stored water is assumed to float on top of the native water in the Basin. Any loss of stored water either directly or indirectly is deemed first to be water from the cyclic storage accounts. To date, there has been no such loss of cyclic stored water.

San Gabriel River

Some parties to the Judgment elected to be treated as integrated producers. Integrated production rights are comprised of (1) a fixed diversion component based upon historic diversions for direct use; and (2) a prescriptive pumping right component based upon pumping during the period 1953 through 1967 that may vary annually with the Operating Safe Yield. The gross quantity of the total integrated production right in any fiscal year may be exercised at the sole discretion of each integrated producer by either diversion of surface water or pumping groundwater or any combination thereof. As is the case with prescriptive pumping rights, the prescriptive pumping component and the corresponding pumper's share is affected by the annual determination of Operating Safe Yield.



Just as with groundwater, there is no institutional limit on the quantity of San Gabriel River water that can be diverted for use. Whenever an integrated producer exceeds its total water rights it will be levied a Replacement Water assessment, along with other applicable assessments, similar to groundwater pumpers.

Groundwater Recharge

The Main San Gabriel Basin has a fresh water storage capacity of about 8.7 million acre-feet, of which the top 125 feet of storage, or about 1,000,000 acre-feet has been used for historic Basin operations. Local runoff is stored in a series of reservoirs operated by the Los Angeles County Department of Public Works and diverted into spreading grounds to replenish the groundwater supply. Figure 1 indicates that groundwater recharge occurs almost every year and is exhibited as increasing water levels. High rainfall years can be identified on Figure 1 as increases in the groundwater level of 30 feet or more in one year.

In addition to groundwater replenishment with local storm runoff, the Watermaster maintains records of each producer's water rights and annual production. Although there is no limit on the quantity of water that may be produced, production in excess of a water right is subject to a Replacement Water assessment. Watermaster uses funds collected from producers' overproduction to purchase imported water from municipal water districts. USGVMWD and TVMWD obtain their water from MWD. SGVMWD has its own contract for SWP water. Watermaster coordinates purchase and delivery of imported water to replenish the ground water basin, thus offsetting the producers' overproduction and making the Basin whole.

APPENDIX C

Drought Regulations and Water Conservation Standards (Ordinance No. 2015-05 and Resolution No. 2015-41)

ORDINANCE NO. 2015-05

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MONROVIA, CALIFORNIA, AMENDING CHAPTER 13.20 OF THE MONROVIA MUNICIPAL CODE, TO ESTABLISH ADDITIONAL RESTRICTIONS ON THE USE OF POTABLE WATER

WHEREAS, on April 1, 2015, Governor Brown issued Executive Order B-29-15 that, among other things, directs the State Water Resources Control to impose restrictions to achieve a statewide 25 percent reduction in potable urban usage through February 2016.

WHEREAS, on May 5, 2015, the State Water Resources Control Board approved revised emergency water conservation regulations in order to implement Executive Order B-29-15.

WHEREAS, the City of Monrovia ("City") is an urban water supplier, as defined in Water Code Section 10617, and is required to comply with the State Water Board's emergency water conservation regulations.

WHEREAS, the City has codified the water conservation measures in its water shortage contingency plan at Chapter 13.20 of the Monrovia Municipal Code.

WHEREAS, the City Council wishes to continue to implement and fairly enforce the water conservation measures identified in Chapter 13.20 of the Monrovia Municipal Code, and enhance the City's water conservation efforts to ensure a stable and reliable water supply for residents and businesses and to help the State address the ongoing drought.

THE CITY COUNCIL OF THE CITY OF MONROVIA, CALIFORNIA, DOES ORDAIN AS FOLLOWS:

SECTION 1. Section 13.20.030 of the Monrovia Municipal Code is hereby amended to read as follows (text to be added is underlined, text to be deleted is shown in ~~strikethrough~~):

"13.20.030 DEFINITIONS.

The following definitions apply to this chapter:

BASE PERIOD ALLOCATION. The Base Period Allocation shall be the amount of water used by a water customer during each billing period in calendar year 2013. Any existing customer who has experienced a change in situation which could warrant a review of their water usage during the Base Period Allocation, and / or any new customer who was not a customer on the premises to which water service is provided during the corresponding billing period in the Base Period Allocation, may be assigned a revised Base Period Allocation amount that shall generally be determined by the amount of water used at the same or similar premises in the base years, as determined by City Manager or his / her designee. ~~The amount of water used by a water customer~~

~~during the corresponding billing period in the base five years, except that a customer's base period allocation shall be augmented by 10% for the May billing period, and by 10.9% for the June billing period. Any customer who was not a customer on the premises to which water service is provided during the corresponding billing period in the base years shall be assigned a base period allocation determined by the amount of water used at the same or similar premises in the base years, as determined by the manager of the Infrastructure Maintenance Division or his designee.~~

BASE YEAR. The five fiscal years prior to a declaration of implementing a phase of this Ordinance.

BILLING UNIT. The unit amount of water employed for purposes of customer billing. One unit equals 748 gallons of water.

CITY. The city of Monrovia.

CUSTOMER or WATER CUSTOMER. Any person, association, corporation or governmental entity supplied or entitled to be supplied with water service by the city.

DEPARTMENT. The city's Department of ~~Public Works~~ Public Services.

DIVISION or UTILITIES DIVISION. The city Utilities Division within the Department of ~~Public Works~~ Public Services.

SECTION 2. Section 13.20.070 of the Monrovia Municipal Code is hereby amended to read as follows (text to be added is underlined, text to be deleted is shown in ~~strikethrough~~):

"13.20.070 WATER CONSERVATION PHASES.

The water conservation plan consists of six phases, each separately implemented by resolution of the City Council. The six phases are as follows:

(A) Phase I consists of mandatory water use restrictions and voluntary water conservation of 10%. This phase becomes effective upon determination by the City Council that water usage should be reduced by 10%. There will be no surcharge for excess water usage in this phase.

(B) Phase II consists of mandatory water use restrictions and mandatory water conservation of at least 10%. This phase becomes effective upon determination by the City Council that water usage should be reduced by at least 10% and that mandatory conservation measures are required. During Phase II, a customer whose water usage exceeds 90% of the base period allocation ~~shall be billed at 2.5 times the then-current rate for water service~~ may be charged a penalty to be established by resolution of the City Council for each billing unit in excess of the base period allocation.

(C) Phase III consists of mandatory water use restrictions and mandatory water conservation of at least 15%. This phase becomes effective upon determination of the City Council that water usage should be reduced by at least 15%. During Phase III, a customer whose water usage exceeds 85% of the base period allocation may be charged a penalty to be established by resolution of the City Council ~~shall be billed at three times the then-current rate for water service~~ for each billing unit in excess of the base period allocation.

(D) Phase IV consists of mandatory water use restrictions and mandatory water conservation of at least 28% ~~20%~~. This phase becomes effective upon determination by the City Council that water usage should be reduced by at least 28% ~~20%~~. During Phase IV, a customer whose water usage exceeds 72%~~80%~~ of the base

period allocation may be charged a penalty to be established by resolution of the City Council ~~shall be billed at 3.5 times the then-current rate for water service~~ for each billing unit in excess of the base period allocation.

(E) Phase V consists of mandatory water use restrictions and mandatory water rationing of at least 40%~~28%~~. This phase becomes effective upon determination by the City Council that water usage should be reduced by at least 40%~~25%~~. During Phase V, a customer whose water usage exceeds 60 ~~75%~~ of the base period allocation may be charged a penalty to be established by resolution of the City Council ~~shall be billed at four times the then-current rate for water service~~ for each billing unit in excess of the base period allocation.

(F) Phase VI consists of mandatory water use restrictions and mandatory water rationing of at least 50%. This phase becomes effective upon determination by the City Council that water usage should be reduced by at least 50%. During Phase VI, a customer whose water usage exceeds 50% of the base period allocation may be charged a penalty to be established by resolution of the City Council ~~shall be billed at 4.5 times the then-current rate for water service~~ for each billing unit in excess of the base period allocation.

SECTION 3. Section 13.20.080 of the Monrovia Municipal Code is hereby amended to read as follows (text to be added is underlined, text to be deleted is shown in ~~strikethrough~~):

"13.20.080. PROHIBITION OF NONESSENTIAL WATER USE.

(A) No person shall cause, use, or permit the use of water from the City water system in a manner contrary to any provision of this Chapter.

(B) No person shall cause, use, or permit the use of water from the City water system in excess of any limit established by the City Council by resolution.

(C) Phase I - The following water use restrictions shall be in effect and will be enforced on all customers and any other person who uses water from the City's potable water system for any purpose. For the purpose of this Chapter, the term person shall include individuals and corporations, partnerships, and associations of any kind:

(1) No person shall use a hose to wash any sidewalk, walkway, driveway, parking area, tennis or sport court, or other paved surfaces, except as is required for sanitary purposes, and only with a water broom or similar device or hose equipped with a nozzle or quick relief shutoff valve.

(2) Washing of motor vehicles, trailers, boats and other types of mobile equipment shall be ~~done~~ permitted only with a hand-held bucket or a hose equipped with a positive shut-off nozzle for quick rinses and the water flow shall be shut off when not rinsing the vehicle, except that washing may be done at the immediate premises of a commercial car wash.

(3) No water shall be used to clean, fill or maintain levels in decorative fountains, ponds, lakes or other similar aesthetic structures unless such water is part of recirculating system.

(4) No restaurant, hotel, cafe, cafeteria or other public place where food is sold, served or offered for sale shall serve drinking water to any customer unless expressly requested by that customer.

(5) All customers shall promptly repair all leaks from indoor and outdoor plumbing fixtures within 48 hours of discovery.

(6) The following restrictions shall apply to all residential, commercial, industrial, institutional and public landscaped areas, with the exception of commercial nurseries, golf courses and other water dependent uses:

a. No person shall spray irrigate any lawn or landscape area between more than every third day between the hours of 6:00 p.m. and 8:00 a.m of the following day. This subsection shall not apply to any drip irrigation system, irrigation system maintenance, leak repair or new planting of low water usage plants or if reclaimed water is utilized as permitted by law.

b. No person shall irrigate any landscaped area for more than fifteen (15) minutes per watering day.

c. No person shall permit or cause irrigation water to spray or flow to any impermeable private or public surface, including but not limited to, walkways, driveways, sidewalks, alleys, streets, or storm drains.

d. No person shall operate sprinklers, fountains or other water features when winds are so high as to create water drift causing runoff or flow to any impermeable private or public surface, including, but not limited to, walkways, driveways, sidewalks, alleys, streets, or storm drains.

e. No person shall water or irrigate any landscaping within 48 hours of a one-tenth of an inch (0.10") or greater rainfall event.

f. ~~(7)~~No person shall cause or allow water to run off landscaped areas onto adjoining streets, sidewalks or other paved areas due to incorrectly directed or maintained sprinklers or as the result of excessive watering.

~~(5) All lawns, landscape or other turf area shall be watered down not more than every third day, with the watering only during the hours between 5:00 p.m. and 10:00 a.m. This provision shall apply to residential, commercial, industrial and public~~

~~authorities, but shall not apply to commercial nurseries, golf courses and other water-dependent industries.~~

(D) ~~(B)~~Phase II - The following water use restrictions shall be in effect and will be enforced on all customers:

(1) All of the restrictions listed under Phase I shall be in effect, except that the restrictions on watering lawn, landscape or other turf areas shall be modified to prohibit watering more often than every fourth day~~, with even-numbered addresses watering on even-numbered days and odd-numbered addresses watering on odd-numbered days~~, with watering only allowed between the hours of 6:00 p.m. and 8:00 a.m. ~~the following day~~.

(2) No customer shall cause, use or permit the use of water for any purpose in an amount in excess of 90% of said customer's base period allocation.

(3) Commercial nurseries, golf courses and other water-dependent industries shall be prohibited from watering lawn, landscaping or other turf areas more often than every other day, with watering only during the hours between 6:00 p.m. and 8:00 a.m.

(4) Water used on a one-time basis for the purposes such as construction and dust control, shall be limited to that quantity identified in a plan submitted to the user which describes water use requirements. An approved plan from the Department shall be the basis for such usage. Water sources other than potable water shall be utilized where available.

(5) All hotels, motels and bed and breakfast establishments shall provide customers the option of choosing not to have towels laundered daily. Each establishment shall prominently display notice of this option in each bathroom and sleeping room using clear easily understood language. All guest room toilets installed after the effective date of this ordinance shall be low flow toilets utilizing the best technology feasible at the time of installation.

(6) All non-residential buildings in the City shall maintain public toilets and urinals with best available technology low flow or waterless toilets or urinals as required by applicable codes, and shall acquire water efficient dishwashers and washing machines upon replacement of existing machines or installation of new machines.

(E) Phase III - The following water use restrictions shall be in effect and will be enforced on all customers:

~~(1)~~ All of the restrictions listed under Phases I and II shall be in effect. ~~, except that the restrictions on watering lawn, landscape or other turf areas shall be modified to prohibit watering more often than every fourth day, with even-numbered addresses watering on even-numbered days and odd-numbered addresses watering on~~

~~odd-numbered days, with watering only allowed between the hours of 6:00 p.m. and 6:00 a.m.~~

(2) No customer shall cause, use or permit the use of water for any purpose in an amount in excess of 80% of said customer's base period allocation.

(3) Commercial nurseries, golf courses and other water-dependent industries shall be prohibited from watering lawn, landscape or other turf areas more often than every third day, with watering only during the hours between 6:00 p.m. and 6:00 a.m the following day.

(4) Water used on a one-time basis for the purposes such as construction and dust control shall be limited to that quantity identified in a plan submitted by the user which describes water use requirements. An approved plan from the Department shall be the basis for such usage. Water sources other than potable water shall be utilized where available.

(5) The use of water from fire hydrants shall be limited to fire fighting and related activities and other uses of water for municipal purposes shall be limited to activities necessary to maintain the public health, safety and welfare.

(F) Phase IV - The following water use restrictions shall be in effect and will be enforced on all customers: The restrictions in Phase IV shall be the same as Phase III, with the exception that no customer shall cause, use or permit the use of water for any purpose in the amount in excess of ~~75%~~ 72% of said customer's base period allocation.

(G) Phase V - The following water use restrictions shall be in effect and will be enforced on all customers: The restrictions in Phase V shall be that same as Phase IV, with the exception that no customer shall cause, use or permit the use of water for any purpose in an amount in excess of 60%~~50%~~ of said customer's base period allocation.

(H) Phase VI - The following water use restrictions shall be in effect and will be enforced on all customers: The restrictions in Phase VI shall be that of Phase V, with the exception that no customer shall cause, use or permit the use of water for any purpose in an amount in excess of 50% of said customer's base period allocation."

SECTION 4. Section 13.20.090 of the Monrovia Municipal Code is hereby amended to read as follows (text to be added is underlined, text to be deleted is shown in ~~strikethrough~~):

"13.20.090. EXCEPTIONS TO RESTRICTIONS.

(A) Commercial car washes with water recycling systems and commercial laundries shall be exempt from allotment restrictions.

(B) The restricted uses of water provided for in this chapter are not applicable to that use of water necessary for public health and safety, for the essential health care services or governmental services such as police, fire and other similar public emergency services, as determined by the Manager of the Infrastructure Maintenance Division.

(C) Any use of groundwater from outside the City's system or reclaimed water as permitted by law shall be exempt from restrictions."

SECTION 5. The City Council ratifies and re-adopts the provisions of Ordinance No. 2014-10 unchanged by this Ordinance as if set forth in full herein.

SECTION 6. The City Clerk shall certify to the adoption of this ordinance and cause the same to be published in the manner required by law and, pursuant to Water Code Section 375, said ordinance shall become effective immediately upon its final passage following a noticed public hearing.

INTRODUCED this 16th day of June, 2015.

RESOLUTION NO. 2015-41

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MONROVIA, CALIFORNIA, IMPLEMENTING PHASE IV OF THE WATER CONSERVATION PLAN AND APPROVING AN ENFORCEMENT PLAN AND FEE PENALTY STRUCTURE PURSUANT TO MONROVIA MUNICIPAL CODE TITLE 13, CHAPTER 13.20 (WATER CONSERVATION).

WHEREAS, the Governor of the State of California on January 17, 2014, issued Proclamation No. 1-17-2014 declaring a State of Emergency to exist in California due to severe drought conditions; and

WHEREAS, the Governor of the State of California on April 25, 2014, issued an executive order proclaiming a Continued State of Emergency to strengthen the State's ability to manage water and called on all Californians to redouble their efforts to conserve water; and

WHEREAS, the Governor of the State of California on April 1, 2015, issued Executive Order B-29-15 that replaced earlier calls for voluntary conservation with directives for the State Water Board to impose restrictions to achieve a statewide 25% reduction in potable urban water usage following the State's water supplies being severely depleted and with no end to the drought in sight; and

WHEREAS, the State Water Board on May 5, 2015, adopted an emergency regulation amending and readopting an existing drought emergency regulation, which includes end-user conservation restrictions and mandatory conservation requirements for urban water suppliers, and

WHEREAS, the regulations adopted by the State Water Board mandate that the City of Monrovia to achieve a 28% reduction in potable water usage; and

WHEREAS, the City Council of the City of Monrovia has adopted amendments to Monrovia Municipal Code Title 13, Chapter 13.20 (Water Conservation) wherein Phase IV water conservation standards meet or exceed all State water conservation requirements for Monrovia; and

WHEREAS, a public hearing has been duly noticed and held as part of a regularly scheduled meeting, pursuant to the requirements of Government Code 66018, at which hearing every interested person has had an opportunity to present oral and written statements; and

WHEREAS, pursuant to Phase IV water conservation standards, the City has the authority to adopt a Water Conservation Plan, Enforcement Plan, and Penalty Fee Structure Plan by Resolution.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MONROVIA DOES RESOLVE AS FOLLOWS:

1. To achieve the State mandated 28% reduction in potable water usage, the City chooses to manage water conservation efforts primarily through the use of education and outreach.

2. To further support water conservation efforts, the City also hereby implements a Water Conservation Plan that includes an Enforcement Plan and Penalty Structure pursuant to the amended Monrovia Municipal Code Title 13, Chapter 13.20 (Water Conservation) at the Phase IV level.

3. Implementation details related to the Water Conservation Plan shall include the following components:

    1. The following Enforcement Plan shall go into effect 45-days from the adoption of this Resolution (September 5, 2015), to allow Monrovian's time to be informed on the elevated Phase and new restrictions.

    2. Beginning on September 5, 2015, those customers who violate the City's Phase IV water use restriction regulations shall be subject to the following progressive Enforcement Plan and Penalty Structure:

        a) Any first offense will result in notification to the customer of the violation via a door hanger. This notification will include information on what the customer can do to correct the violation.

        b) Any second offense will result in staff contacting the customer directly. Staff will discuss with the customer ways to correct the violation. Should the resident have any extenuating circumstances that caused the violation, a variance may be issued pursuant to Chapter 13.20 of the Monrovia Municipal Code.

        c) Any third offense will include a formal notification to the property owner regarding their violation, along with information regarding a potential future fine. This contact will also include information on what the customer can do to correct the violation.

        d) Any fourth offense may result in a fine of $100.

        e) Any fifth offense may result in a fine of $200.

        f) Any sixth offense may result in a fine of $300.

3. The City reserves the right to elevate any violation of the City's Phase IV water conservation standards (pursuant to Title 13, Chapter 13.20 of the Monrovia Municipal Code) to any level of the Enforcement Plan and Penalty Structure at the City's discretion, based on the severity of the violation and customer compliance levels with the City's Phase IV water conservation measures.

APPENDIX K2
UTILITY COMMENT LETTERS

July 18, 2019

Ashley Swarts
Development Coordinator
Maple Multi-Family Land CA, L.P.
5790 Fleet Street, Suite 140
Carlsbad, CA 92008

Re: Conditional Water and Sewer Will Serve Letter for Proposed Development in Monrovia, California for Parcel Map No. 82326

Dear Ashley Swarts,

The City of Monrovia is willing to serve the proposed development based on the recommendations of a feasibility study by Stetson Engineers Inc., for any added impacts or project driven deficiencies to the city's water system. This feasibility study is the responsibility of the applicant/developer and is needed to determine if the City has an adequate water system and infrastructure to serve your proposed project. The City has received several applications for the development of various multi-family projects immediately adjacent to the proposed project area and based on the feasibility study by Stetson Engineers Inc., the recommended improvements are:

- One booster pump No. 6 installed at the City well field facility
- Upgrade 980 feet (On Magnolia From Duarte to Evergreen) of water pipeline from existing 8 inch to 12 inch.

The City has determined that a fee-in-lieu of water improvements in the Transit Village Area shall be assessed to each project, per unit, to support the additional water demands on the City water system due to the construction of these projects.

The City of Monrovia is willing to serve the proposed development based on the recommendations of a feasibility study by a firm selected by the City, for any added impacts or project driven deficiencies to the city's sanitary wastewater collection system. The City has selected David

Evans and Associates to perform the feasibility study. The City has received several applications for the development of various multi-family projects immediately adjacent to the proposed project area and based on the feasibility study by David Evans and Associates, the City's wastewater collection system and infrastructure is adequate for your proposed project. The City of Monrovia only has collection of wastewater and conveys these effluents to Los Angeles County Wastewater Collection System. Connection permits and fees are not the responsibility of the City of Monrovia and proof of connection permit and fees will be needed for City permits.

This letter does not constitute either water supply verification or a water supply assessment required by California Government Code Section 66473.7 or California Water Code Section 10910. If you have any questions or require any additional information, please feel free to contact Sean Sullivan, Public Works Division Manager at ssullivan@ci.monrovia.ca.us or (626) 932-5522.

Sincerely,

Alex Tachiki
Senior Management Analyst – Public Works Department

Re: Alexan Monrovia
Monrovia, CA

Thank you for contacting Athens Services regarding the proposed services for the above location.

Athens Services has reviewed the project for Alexan Monrovia and based on the waste management plan submitted, we will be able to provide services to this location.

The above location is located in a Franchise City for waste collection. Athens Services is contracted by the City of Monrovia to provide disposal service to all commercial and residential locations.

Please do not hesitate to contact me directly at (626) 594-4415 if I can be of further assistance.

Sincerely,

Elizabeth Ramirez
Director of Government Affairs
elizabethramirez@athensservices.com

APPENDIX K3
WATER CAPACITY STUDY

DRAFT TECHNICAL MEMORANDUM

2171 E. Francisco Blvd., Suite K • San Rafael, California • 94901
TEL: (415) 457-0701 FAX: (415) 457-1638 e-mail: jeffh@stetsonengineers.com

TO:	City of Monrovia	DATE:	1/15/2019
FROM:	Stetson Engineers Inc.	JOB NO:	2630-14
RE:	Water Capacity Study for Proposed Station Square Transit Village Projects		

INTRODUCTION

The City of Monrovia (City) is reviewing the available capacity of the City's water system to provide adequate water service to the proposed new developments in the Station Square Transit Village. The currently proposed new developments (proposed Projects) include the following:

- 296 units in the Station Square South project;
- 436 units in the Alexan project;
- 284 units in the Arroyo project;
- 310 units in the Fifield project; and
- 109 units in the City Lot project

The proposed Projects are located in the "Mountain Pressure Zone" (Mountain Zone) of the City's water system near the intersection of Magnolia Avenue and Pomona Avenue, south of the 210 Freeway. The locations of the proposed Projects are provided in Figure 1. As part of the City's review process, the City has requested that Stetson Engineers Inc. (Stetson) prepare a water capacity study to evaluate the potential impacts of the proposed Projects on the water delivery capability of the City's water system.

Stetson previously developed a hydraulic model of the City's water system in 2014 using H2OMAP software (from Innovyze). Stetson has updated the model to include pipelines in the Mountain Zone that are included in the Capital Improvement Plan (CIP) from the City's 2015 Water Master Plan, which the City is currently implementing. For this study, additional updates to the water

system infrastructure and water demands in the hydraulic model, discussed below, were incorporated. The model has not been fully calibrated due to a lack of available fire flow test data.

Figure 1 Locations of Proposed Projects

The model was used to evaluate whether there would be any hydraulic impacts associated with the proposed Projects and to identify solutions to resolve these impacts or deficiencies (including fire flow, pressure, head loss, and velocity deficiencies). The review examined available fire flow during an emergency at Maximum Day Demand (MDD), as well as pressure and flow at Peak Hour Demand (PHD). The study included the following steps:

(1) Update the existing hydraulic model to incorporate CIP projects identified in the City's 2015 Master Plan for the Mountain Zone
(2) Update the existing hydraulic model to incorporate anticipated water demands associated with the 256-unit MODA project.
(3) Perform hydraulic modeling to identify deficiencies within the City's existing water system in the Mountain Zone
(4) Update the hydraulic model to incorporate water system pipeline improvements to meet existing hydraulic deficiencies in the Mountain Zone
(5) Incorporate anticipated water demands associated with proposed Projects and perform hydraulic modeling to identify hydraulic impacts associated with the proposed Projects; and
(6) Propose improvement solutions to resolve water deficiencies caused by the proposed Projects.

1.0 EVALUATION CRITERIA

Design guidelines for transmission and distribution pipelines vary from state to state and from utility to utility. The American Water Works Association (AWWA) provides some guidelines and many states regulate certain performance criteria. In addition, the 2016 California Fire Code sets standards for fire flow requirements for different types of structures. The standards listed in Table 1 were used to evaluate the City's water system capacity. While certain water deficiencies may already exist in the City's water distribution system, this capacity study focused on the additional or incremental water system deficiencies (stand alone impacts) caused by the proposed Projects.

Table 1 Design Standards for Distribution Pipelines

Parameter	Demand	Criteria
Minimum Pressure [1]	PHD	35 psi
Maximum Pressure [1]		120 psi
Pipe Velocity [2]		Not greater than 7 feet per second
Maximum Head Loss [2]		10 feet per 1,000 ft
Fire Flow in Multiple Pressure Zones [3]	MDD	
Mountain System (~330,000 sf)		2,000 gpm for 4 hrs
Cloverleaf System (~135,300 sf)		1,938 gpm for 4 hrs
Ridgeside System (~25,300 sf)		1,500 gpm for 4 hrs
Norumbega System (~5,700 sf)		2,000 gpm for 2 hrs
Upper Cloverleaf System (~4,500 sf)		2,500 gpm for 2 hrs
Emerson System (~6,200 sf)		2,000 gpm for 2 hrs
Canyon System (~4,500 sf)		1,500 gpm for 2 hrs

Notes:
gpm = gallons per minute
psi = pounds per square inch
MDD = Maximum Day Demand, which is usually derived by multiplying a factor to the Average Day Demand.
PHD = Peak Hour Demand, which is usually derived by multiplying a factor to the Average Day Demand.

[1] City standard.
[2] AWWA standard.
[3] The 2016 California Fire Code standards, which depends on building types/sizes.

2.0 HYDRAULIC ANALYSIS

2.1 Model Overview and System Updates ("Baseline" Condition)

The existing hydraulic model covers all the City's water facilities that are needed for the hydraulic modeling of the system, including 5 active wells, 12 reservoirs, 18 booster pumps, and about 114 miles of pipes, distributed in 7 pressure zones.

The estimated Average Day Demand (ADD) in 2016, approximately 6,400 acre-feet per year (AFY) or 3,975 gpm, was considered as the existing water demand. The values for PHD and MDD were derived by multiplying factors of 2.4, and 1.6 to Average Day Demand (ADD), respectively. Water demands and the distribution of water demands as a percentage of total demand for pressure zones in the City's water system for existing demands (2016) are summarized in Table 2.

Table 2 Water Demands under Existing Conditions

Pressure Zone ID	Pressure Zone Name	ADD (gpm)	MDD (gpm)	PHD (gpm)	Percentage
Z1	Mountain	399	639	958	10%
Z2	Cloverleaf	2,390	3,823	5,735	60%
Z3	Ridgeside	833	1,333	2,000	21%
Z4	Norumbega	139	222	333	3.5%
Z5	Upper Cloverleaf	119	191	286	3.0%
Z6	Emerson	91	146	219	2.3%
Z7	Canyon	4	7	10	0.1%
	Total	3,975	6,361	9,541	100%

Note: MDD = 1.6*ADD; PHD = 2.4*ADD.

The existing water system infrastructure in the hydraulic model was updated to create a "Baseline" condition. As indicated above, the existing model was updated to include pipelines in the Mountain Zone that are included in the CIP from the City's 2015 Water Master Plan. The existing model was also updated to incorporate the water demands associated with the 256-unit MODA project. Hydraulic modeling was then performed to identify deficiencies within the City's water

system in the Mountain Zone. Potential pipeline upgrades were identified to address deficiencies associated with size, pressure, fire flow, and head loss. The Baseline model includes these new and/or anticipated City pipeline upgrades to address existing water system hydraulic deficiencies.

2.2 Proposed Projects Modeling Conditions (Projects Condition)

The proposed Projects are located near the intersection of Magnolia Avenue and Pomona Avenue (see Figure 1). The elevations of the proposed Projects range from about 430 to 455 feet AMSL. The estimated water demands for the proposed Projects were added to the model under a "Projects" condition. The peak demands for the proposed Projects were estimated based on the proposed number of units and water use rates from the separate "Water & Sewer Capacity Feasibility" analysis previously prepared by Tryco Consulting Inc. for the City. There is currently a total of 1,435 units proposed with a total water demand of about 3,174 gallons per minute (gpm) at PHD. The total MDD was estimated by the PHD by a factor of 1.5, which is about 2,116 gpm, as shown in Table 3.

Table 3 Estimated PHD and MDD for Proposed Projects

Project Name	Number of Units	PHD (gpm)	MDD (gpm)
Station Square South	296	651	434
Alexan	436	906	604
Arroyo	284	629	420
Fifield	310	677	451
City Lot	109	311	207
Total	1,435	3,174	2,116

2.3 Modeling Results – System Impacts

Stetson performed four model scenario runs (Scenarios) to evaluate the impacts from the proposed Projects to the Baseline distribution system. The criteria from Table 1 were used to examine water deficiencies in all Scenario runs. The four modeling Scenarios were:

(A) Baseline system without the proposed Projects at Baseline MDD plus fire flow;
(B) Baseline system with the proposed Projects at projected MDD plus fire flow;
(C) Baseline system without the proposed Projects at Baseline PHD;
(D) Baseline system with the proposed Projects at projected PHD.

Under modeling Scenario (A), the Baseline system without the proposed Projects at MDD plus fire flow was evaluated. As shown in Table 3, the proposed Projects are estimated to add a total water demand of 2,116 gpm under Scenario (B) during MDD. The system hydraulics identified in Scenarios (A) and (B) were compared with each other to determine the impacts of the proposed Projects on fire flow capability during MDD. The modeling results indicate that most of the reductions of available fire flow due to the proposed Projects occur in the City's Mountain Zone. A total of 224 hydrant nodes were estimated to deliver less fire flow during fire events as a result of the proposed Projects. A total of 46 hydrant nodes (out of the 224 hydrant nodes) were associated with fire flow deficiencies (up to about 130 gpm) that did not meet the fire flow design criteria (see Figure 2) from Table 1. Most fire flow reductions occur in the southeastern Mountain Zone and a few areas in the southwestern Mountain Zone.

Scenarios (C) and (D) were simulated and compared with each other to evaluate the impacts of the proposed Project to system pressure at PHD. The proposed Projects add an extra water demand of 3,174 gpm in Scenario (D) during PHD. Based on the modeling results, the proposed Projects led to pressure reductions below the 35 psi design criteria (see Table 1) at 19 nodes (see Figure 3). The pressure reductions at these nodes ranged from about 0.1 psi to 4 psi and mostly occurred in the northeast portion of the Mountain Zone.

Pipe head loss throughout the water system was simulated and compared in Scenarios (C) and (D) under PHD. Based on the modeling results, the proposed Projects led to an increased amount of head loss above the 10 feet per 1,000 ft design criteria (see Table 1) in approximately 980 ft of

pipeline (see Figure 4). The maximum increase in head loss in these pipelines is about 7 feet per 1,000 ft.

Based on the modeling results, the maximum increase in velocity by the proposed Project is about 3.6 feet per second (fps) at PHD. However, the flow velocities in these affected pipes are less than 7 fps design criteria (see Table 1). As a result, no solutions were proposed to mitigate the impacts on pipe velocity due to the proposed Projects.

The potential improvement solutions to resolve the identified deficiencies are discussed in Section 2.4 below.

2.4 Potential Improvement Solutions

The hydraulic model was used to identify potential solutions to address the impacts or deficiencies (identified in Section 2.3 above) as a result of the proposed Projects. Examination of the existing pipeline network suggested that additional booster pump capacity at the City's Forebay Pump Station would mitigate a majority of the impacts of the proposed Projects. The Forebay Pump Station is located in the southern portion of the Mountain Zone and supplies water from the City's Forebay Reservoirs 1 and 2 to the pipeline network within the Mountain Zone. The addition of a new booster pump (design head and flow of 260 ft and 3,200 gpm, respectively), in parallel with three existing booster pumps (Forebay 1-4, 1-5, and 1-7) which are directly connected to the City's Forebay Reservoirs 1 and 2, was evaluated.

In addition to a new booster pump, further modeling analysis of the deficiencies determined that specific pipelines should be upgraded in order to mitigate the remaining impacts of the proposed Projects. The analysis indicated a total length of about 980 feet of pipeline replacements or upgrades along Magnolia Avenue (in the vicinity of the Station Square Transit Village) are also needed to address deficiencies. Appendix A provides the sizes and locations of the proposed pipeline upgrades.

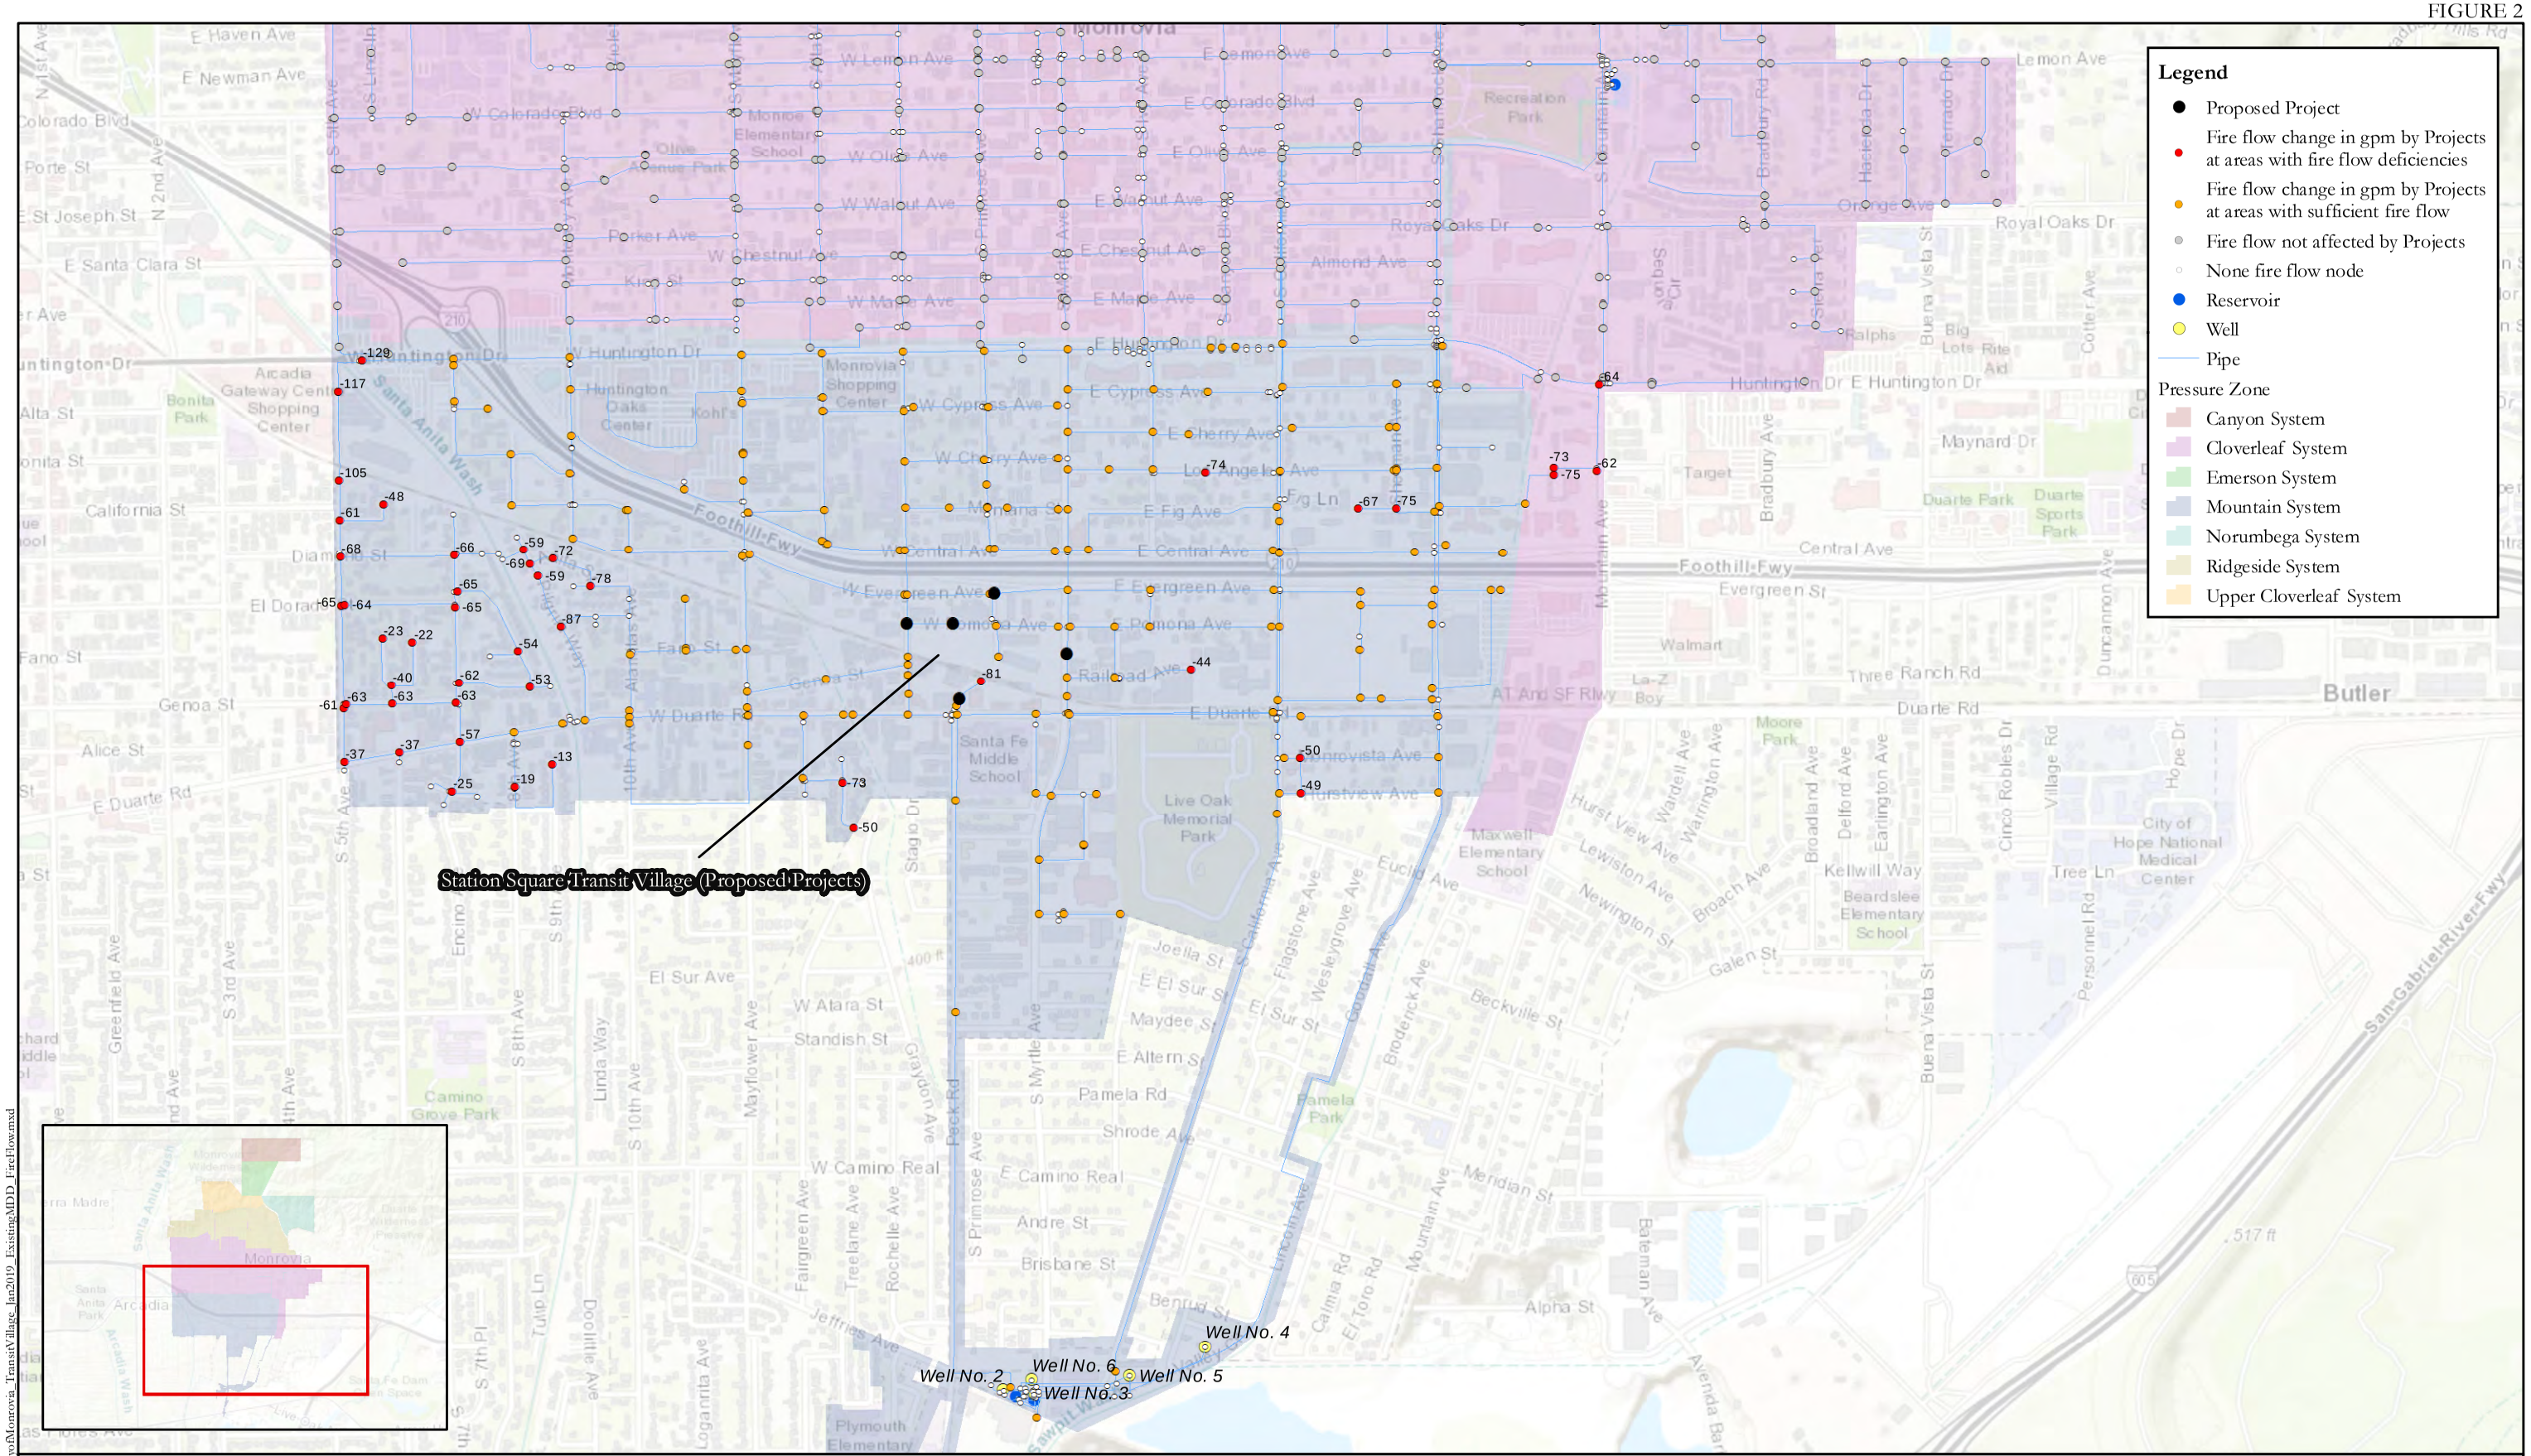
It should be noted the hydraulic model also identified the need to upgrade the pipeline on Peck Road, north of Duarte Road, to the end of the cul-de-sac, in order to resolve fire flow

deficiencies during MDD. However, it is our understanding the City will abandon this pipe segment (from the intersection of Peck Road and Duarte Road to the end of the cul-de-sac) and the developer for the Station Square South project will be responsible for the pipeline improvements to that segment.

The hydraulic model was then used to run the following additional Scenarios (E) and (F) to evaluate the recommended solutions in resolving the deficiencies resulting from the proposed Projects:

(E) Baseline system with Project and proposed solutions at projected MDD plus fire flow;
(F) Baseline system with Project and proposed solutions at projected PHD.

A comparison at MDD plus fire flow between Scenario (E), with the proposed solutions, and Scenario (A), under Baseline conditions, indicates there are no deficient fire flow reductions as a result of the proposed Projects with the proposed solutions incorporated.



A similar comparison at PHD between Scenario (F), with the proposed solutions, and Scenario (C), under Baseline conditions, indicates all pressure and head loss deficiencies would be eliminated by the proposed solutions incorporated.

3.0 FINDINGS AND RECOMMENDATIONS

The proposed Projects include the Station Square South, the Alexan, the Arroyo, the Fifield, and the City Lot projects. This capacity study reviewed the additional or incremental deficiencies (stand alone impacts) to the City's water system caused by the water demands from the proposed Projects.

The hydraulic modeling results indicate that the proposed Projects would result in significant fire flow, head loss, and pressure deficiencies to the City's water system in the Mountain Zone. In order to resolve these deficiencies, it is recommended additional booster pump capacity be added to the City's Forebay Pump Station (design head and flow of 260 ft and 3,200 gpm, respectively). In addition, a total length of 980 feet of pipeline replacements or upgrades along Magnolia Avenue (near the Station Square Transit Village) is recommended to mitigate the impact of the proposed Projects. These solutions should be able to resolve the deficiencies caused by the proposed Projects.

Transit Village Water Improvements
Fair share fee-in-lieu-of improvements

FROM: **City of Monrovia**
Public Services Department
Public Works Division
Brad Merrell, P.E., City Engineer

SUBJECT: **Fee-in-lieu-of water improvements for multiple projects in the Transit Village Area**

DATE: **January 14, 2019**

Draft

INTRODUCTION

The City of Monrovia (City) has received several applications for the development of various apartment complex projects. The purpose of this memo is to state the required development impact fee (DIF), per unit (apartment unit), to be assessed to each project to cover additional water infrastructure which would be required to support the additional water demands on the City water system due to the construction of these projects.

FEASIBILITY STUDIES

The City has had several feasibility studies prepared by Stetson Engineers Inc. to evaluate the effect to the City's water system from these projects. These studies established the needed water system improvements in order to maintain adequate water supply and pressure to the City's water users and to these added projects, based on the added demand by these projects.
In short, the recommended improvements are:

- One booster pump No 6 installed at the City well field.
- Upgrade of 980 feet (on Magnolia from Duarte to Evergreen) of water pipe line from existing 8 inch to 12 inch.

ESTIMATED COST OF IMPROVMENTS FOR MITGATION

The City has estimated (attached) the total cost of these improvements at $1,293,981 to be divided by the total units in the following projects:

- 296 units in the Station Square Project (Richmond)
- 436 units in the Alexan Foothill Project (Trammel Crow)
- 284 units in the Station Square North (Arroyo)
- 310 units in the Fifield
- 100 units in the City Park N Ride Lot

For a total of 1,426 units. This would equate to $1,293,981/1,426 units = $907.42 per unit.

Therefore the “Fair-Share” contribution to the City from each of the above projects shall be $907.42 per unit within that respective project.

Estimated Cost Per Project

- Station Square 296 x $907.42 = $268,596
- Alexan 436 x $907.42 = $395,635
- Station Square North 284 x $907.42 = $257,707
- Fifield 310 x $907.42 = $281,300
- City Lot 100 x $907.42 = $90,743

$1,293,981

APPENDIX K4
WASTEWATER CAPACITY STUDY

DAVID EVANS
AND ASSOCIATES INC.

MEMORANDUM

DATE: May 29, 2018

TO: Brad Merrell, PE
City Engineer
Department of Public Works
City of Monrovia

FROM: David Stuetzel

SUBJECT: Sewer Capcity Analysis – Multi Development Areas

PROJECT: Task order 05 – On Call Contract
MONR000-0002

CC: Alex Tachiki, City of Monrovia
Rob Bathke, DEA

As requested by the City of Monrovia, David Evans and Associates was requested to evaluate the feasibility and potential impact of connecting multiple new development properties located around the Monrovia Metro Station in the area located south of the Foothill Freeway (Rte 210), West of Myrtle Avenue, North of Duarte Road and east of Mayflower Avenue. The new developments include the following properties:

Development Name	Development Type	Parcel Size (SF)*	Unit Count
Trammell Crow Residential	Residential	318,800	472
Station Square North	Apartments	143,900	280
Mixed Use Project	Apartments	80,000	250
MODA at Monrovia Station	Apartments	125,600	261
Thomas Saffron Associates	Apartments	46,700	103
Richman Development	Apartments	144,200	294
Potential Residential	Residential	85,300	150

* Parcel Sizes were determined from google maps and may not represent actual parcel size.

The existing land parcels being considered for new development are shown in the City's Land use Map as Manufacturing and Planned Use developments. The manufacturing land use has a sewer flow demand value of 200 gpd/1000 SF, and the Planned development parcels were shown with a sewer demand value of 1600 gpd/acre as listed in the City's current Sewer Master Plan report.

In calculating the proposed development sewer flow tributary to the City's existing sewer pipeline system, the sewer flow value for the existing parcels was removed form the sewer study. The proposed developments tributary sewer flows were determined using the Los Angeles County Sanitation District estimated daily average sewage flows for various occupancies, with a minimum flow demand of 250 gpd/unit.

DATE: May 29, 2018 **FROM:** David Stuetzel

TO: Brad Merrell, PE **SUBJECT:** Sewer Capcity Analysis – Multi Development Areas

The configuration of the City's existing sewer for the proposed developments will connect to existing sewer pipelines in local/side streets with connections to the City's main collection system within Magnolia Avenue and Myrtle Avenue. Flows collected in these streets will continue southerly to Duarte Road. Sewer flows flor the developments included in this study will combine at the intersection of Peck Road and Duarte Road and continue southerly along Peck Road to the Southerly City limits at Live Oak Avenue.

TO:	Brad Merrell, PE	**SUBJECT:**	Sewer Capcity Analysis – Multi Development Areas

'* Parcel Sizes were determined from google maps and may not represent actual parcel size

** Peaking Factor based on the flow measurements conducted as part of the 2015 Sewer Master Plan

The previously developed sewer master plan hydraulic model was used to evaluate the hydraulic capacity of the downstream City sewers. The variations of flow were captured in the hydraulic model using diurnal curve method with a peaking factor of 1.61. The peak flows in Table 1 and the previously developed diurnal curve were input at the point of connections along the public street connections to the City sewer pipelines and the model was run for both existing and proposed flow conditions. Appendix D shows the SMP model results. The following summarizes the major findings of the analysis:

- The City sewers receiving sewer flow from the proposed Developments range in size from 10-inch to 24-inch in diameter. According to LACSD, for sewer mainlines less than 15-inch in diameter, the capacity is considered full when the ratio of depth of flow (d) over the pipe diameter (D) is equal to 0.5. Expressed as d/D=0.5. For 15-inch and larger sewers, the full capacity is set at a d/D of 0.75 by LACSD.
- Under the existing flow conditions, the existing d/D ratio for pipe segment 173-029 to 172-010 along Duarte west of Myrtle Avenue was found to have the d/D ratio at 0.61, which exceeds the recommended LACSD flow ratio of 0.50 for sewer pipeline flow. All other pipeline d/D ratios downstream of the proposed developments were found to be below the criteria.
- Under the proposed flow conditions, the existing d/D ratio for pipe segment 162-022 to 172-007 in Magnolia Ave was found to have a d/D ratio at 0.68, pipe segment 173-028 to 173-029 on Duarte Road was found to have a d/D ratio at 0.52, and pipe segment 173-029 to 172-010 on Duarte Road was found to have a d/D ratio at 0.66 which exceeds the recommended LACSD flow ratio of 0.50 for sewer pipeline flow. All other pipeline d/D ratios downstream of the proposed developments were found to be below the criteria.

NOTES:

1. AN ON-SITE ACCESS ROAD SHALL BE PROVIDED FOR THE WEST SIDE OF THE PROJECT WITH A MINIMUM 26 FEET IN WIDTH AND PROVIDED WITH A MINIMUM 13 FEET 6 INCH HEIGHT CLEARANCE.
2. FIRE LANE MARKING AND SIGNAGE SHALL BE PROVIDED AS REQUIRED BY M.F.D.
3. FIRE HYDRANT SHALL BE PROVIDED ALONG ALL PUBLIC AND ON-SITE ACCESS ROADS. HYDRANT SHALL BE WITHIN 120 FEET OF THE STRUCTURE AND SPACED AT NO MORE THAN 200 FEET. THE MINIMUM FIRE FLOW SHALL BE 2,000 GPM AT 20 PSI.
4. A CLASS 1 STANDPIPE SYSTEM SHALL BE PROVIDED IN ALL STAIRWELLS ON ALL LEVELS INCLUDING THE ROOF AS SET FORTH BY BUILDING CODE AND FIRE CODE 905. STANDPIPES LOCATED BETWEEN STAIRWELLS MAY ALSO BE REQUIRED.
5. AN AUTOMATIC FIRE SPRINKLER SYSTEM AND FIRE ALARM AS SET FORTH BY FIRE CODE 903 AND 907.
6. DWELLING UNITS AND COMMON AREAS SHALL BE PROVIDED WITH VISIBLE ALARM NOTIFICATION APPLIANCES.
7. SMOKE ALARMS SHALL BE PROVIDED IN EACH ROOM FOR SLEEPING PURPOSES AND AT A POINT CENTRALLY LOCATED IN THE CORRIDOR OR AREA GIVING ACCESS TO EACH SEPARATE SLEEPING AREA.
8. CARBON MONOXIDE ALARMS SHALL BE PROVIDED EITHER WITHIN ALL SLEEPING UNITS OR ELSE THE BUILDING SHALL BE PROVIDED WITH A CARBON MONOXIDE ALARM SYSTEM THAT PROTECTS ALL COMMON AREAS.
9. A MINIMUM OF ONE RATED STAIRWELL SHALL EXTEND TO THE ROOF FOR EACH BUILDING.
10. ALL RATED EXIT STAIRWELLS SHALL HAVE KEYED EXTERIOR DOORS ON THE GROUND LEVEL. KNOX BOXES SHALL BE PROVIDED ADJACENT TO ALL EXIT STAIRWELL EXTERIOR DOORS AT APPROVED LOCATIONS. A KNOX BOX SHALL ALSO BE PROVIDED ADJACENT TO THE MAIN ENTRANCE OF ALL BUILDINGS AT AN APPROVED LOCATION.
11. ALL BUILDINGS SHALL HAVE A MINIMUM OF ONE ELEVATOR CAPABLE OF ACCOMMODATING GENERAL STRETCHER DIMENSIONS.
12. AN APPROVED NUMBER OR ADDRESS SHALL BE PROVIDED ON ALL NEW BUILDINGS IN SUCH A POSITION AS TO BE PLAINLY VISIBLE AND LEGIBLE FROM THE STREET OR ROAD FRONTING THE PROPERTY. NUMBERS SHALL BE A MINIMUM OF 6-INCH HIGH BY ½-INCH STROKE AND BE A CONTRASTING BACKGROUND.
13. PORTABLE FIRE EXTINGUISHERS SHALL BE INSTALLED PER CFC.
14. AN EMERGENCY RESPONDER RADIO COVERAGE SYSTEM SHALL BE PROVIDED.
15. A MINIMUM OF ONE STANDPIPE SYSTEM FOR USE DURING CONSTRUCTION SHALL BE PROVIDED. SUCH STANDPIPE SHALL BE INSTALLED WHEN THE PROGRESS OF CONSTRUCTION IS NOT MORE THAN 40 FEET IN HEIGHT ABOVE THE LOWEST LEVEL OF FIRE DEPARTMENT ACCESS.

TRASH NARRATIVE

Trash Truck Routing
Trucks will park at the building's entry along Evergreen Ave. The Waste company will pull out the bins from the trash staging area and move them to the trash loading area to commence operations (1000 ft. max).

Trash Rooms
Solid Waste:
- A min. total of twelve 12) 3-cu.yard trash bins are anticipated to be on site at all times for twice a week pick-up schedule.
- Trash bins within each trash room: Trash Room #1 will have six (6) 3-cu.yard trash bins; Trash Room #2 will have six (6) 3-cu.yard trash bins.

Recyclable:
-A min. total of four (4) 3-cu.yard recycle bins are anticipated to be on site at all times for twice a week pick-up schedule.
- Recycle bins each within trash room: Trash Room #1 will have two (2) 3-cu.yard trash bins; Trash Room #2 will have two (2) 3-cu.yard trash bins.

Dimensions for Trash Room #1 are +/- 15'-10" x 27'-5" (434 s.f.); Dimensions for Trash Room #2 are +/- 15'-10" x 27'-5" (434 s.f.).

Collection will be via recyclable and compacted solid waste trash chutes located within two separate enclosures located in the parking structure at each level. The two trash termination rooms will provide for a total number of twelve (12) 3-cu.yd. solid waste trash bins, four (4) 3-cu. yd.recycling bins.

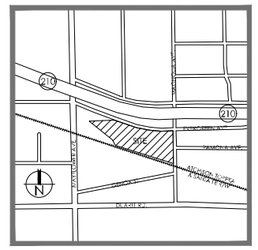
Tenants will not access the trash termination rooms directly, but through trash-chute rooms located at every level of the building off the residential corridors.
The trash chutes will contain a mechanism that will allow complete shut-off in order to remove/replace the bins as they require emptying and limit access to all other floors when any one chute door is opened. A porter will be required to monitor the trash levels throughout the day as a part of daily duties. A vehicle appropriate for towing trash bins will be part of contracting with the service provider.
Satellite trash rooms for Residents will be monitored throughout the day as part of Property Managements duties and brought to the trash rooms located within the parking structure when full.

Staging Area
The Staging Area is where the collection of all bins will take place and where the hauler (trash truck) will pick-up the bins.

Maintenance of Trash Rooms
The maintenance of the trash rooms will be monitored and managed by Property Management.

Roll Out Service and Pick-up
Trash collection bins will be moved from the two trash rooms at Level 1 (parking structure) with an appropriate retrieval vehicle (stinger-truck). The property owner will contract for the property management company to provide on-site trash management to ensure that full bins are replaced with empty ones. A Service Provider will be contracted by the property owner to empty the bins as necessary per schedule.

The rental/ownership of the bins and the trash service for the tenants will be paid for by the building owner.
The Service Provider will be contracted to provide stinger-truck service for conveyance of bins to the staging area and collection of bins from the staging area.



WASTE MANAGEMENT

These plans are copyright protected. Under such protection unauthorized use is not permitted. These plans shall not be reproduced or used without written permission by Architects Orange.

GENERAL NOTES:

1. ALL GRADING AND CONSTRUCTION SHALL CONFORM TO THE 2014 COUNTY OF LOS ANGELES BUILDING CODES AND THE STATE MODEL WATER EFFICIENCY LANDSCAPE ORDINANCE UNLESS SPECIFICALLY NOTED ON THESE PLANS.
2. ANY MODIFICATIONS OF OR CHANGES TO APPROVED GRADING PLANS MUST BE APPROVED BY THE BUILDING OFFICIAL.
3. NO GRADING SHALL BE STARTED WITHOUT FIRST NOTIFYING THE BUILDING OFFICIAL A PRE-GRADING MEETING AT HE SITE IS REQUIRED BEFORE THE START OF THE GRADING WITH THE FOLLOWING PEOPLE PRESENT: OWNER, GRADING CONTRACTOR, DESIGN CIVIL ENGINEER, SOILS ENGINEER, GEOLOGIST, COUNTY GRADING INSPECTOR(S) OR THEIR REPRESENTATIVES, AND WHEN REQUIRED THE ARCHEOLOGIST OR OTHER JURISDICTIONAL AGENCIES. PERMITTEE OR HIS AGENT ARE RESPONSIBLE FOR ARRANGING PRE-GRADE MEETING AND MUST NOTIFY THE BUILDING OFFICIAL AT LEAST TWO BUSINESS DAYS PRIOR TO PROPOSED PRE-GRADE MEETING.
4. APPROVAL OF THESE PLANS REFLECT SOLELY THE REVIEW OF PLANS IN ACCORDANCE WITH THE COUNTY OF LOS ANGELES BUILDING CODE AND DOES NOT REFLECT ANY POSITION BY THE COUNTY OF LOS ANGELES OR THE DEPARTMENT OF PUBLIC WORKS REGARDING THE STATUS OF ANY TITLE ISSUES RELATING TO THE LAND ON WHICH THE IMPROVEMENTS MAY BE CONSTRUCTED. ANY DISPUTES RELATING TO TITLE ARE SOLELY A PRIVATE MATTER NOT INVOLVING THE COUNTY OF LOS ANGELES OR THE DEPARTMENT OF PUBLIC WORKS.
5. ALL GRADING AND CONSTRUCTION ACTIVITIES SHALL COMPLY WITH COUNTY OF LOS ANGELES CODE, TITLE 12, SECTION 12.12.030 THAT CONTROLS AND RESTRICTS NOISE FROM THE USE OF CONSTRUCTION AND GRADING EQUIPMENT FROM THE HOURS OF 8:00 PM TO 6:30 AM, AND ON SUNDAYS AND HOLIDAYS, (MORE RESTRICTIVE ACTIVITY TIMES MAY GOVERN, AS REQUIRED BY THE DEPARTMENT OF REGIONAL PLANNING AND SHOULD BE SHOWN ON THE GRADING PLANS WHEN APPLICABLE.)
6. CALIFORNIA PUBLIC RESOURCES CODE (SECTION 5097.98) AND HEALTH AND SAFETY CODE (SECTION 7050.5) ADDRESS THE DISCOVERY AND DISPOSITION OF HUMAN REMAINS. IN THE EVENT OF DISCOVERY OR RECOGNITION OF ANY HUMAN REMAINS IN ANY LOCATION OTHER THAN A DEDICATED CEMETERY, THE LAW REQUIRES THAT GRADING IMMEDIATELY STOPS AND NO FURTHER EXCAVATION OR DISTURBANCE OF THE SITE, OR ANY NEARBY AREA WHERE HUMAN REMAINS MAY BE LOCATED, OCCUR UNTIL THE FOLLOWING HAS BEEN MEASURES HAVE BEEN TAKEN:
   A. THE COUNTY CORONER HAS BEEN INFORMED AND HAS DETERMINED THAT NO INVESTIGATION OF THE CAUSE OF DEATH IS REQUIRED, AND
   B. IF THE REMAINS ARE OF NATIVE AMERICAN ORIGIN, THE DESCENDANTS FROM THE DECEASED NATIVE AMERICANS HAVE MADE A RECOMMENDATION FOR THE MEANS OF TREATING OR DISPOSING, WITH APPROPRIATE DIGNITY, OF THE HUMAN REMAINS AND ANY ASSOCIATED GRAVE GOODS.
7. THE LOCATION AND PROTECTION OF ALL UTILITIES IS THE RESPONSIBILITY OF THE PERMITTEE.
8. ALL EXPORT OF MATERIAL FROM THE SITE MUST GO TO A PERMITTED SITE APPROVED BY THE BUILDING OFFICIAL OR A LEGAL DUMPSITE. RECEIPTS FOR ACCEPTANCE OF EXCESS MATERIAL BY A DUMPSITE ARE REQUIRED AND MUST BE PROVIDED TO THE BUILDING OFFICIAL UPON REQUEST.
9. A COPY OF THE GRADING PERMIT AND APPROVED GRADING PLANS MUST BE IN THE POSSESSION OF A RESPONSIBLE PERSON AND AVAILABLE AT THE SITE AT ALL TIMES.
10. SITE BOUNDARIES, EASEMENTS, DRAINAGE DEVICES, RESTRICTED USE AREAS SHALL BE LOCATED PER CONSTRUCTION STAKING BY FIELD ENGINEER OR LICENSED SURVEYOR, PRIOR TO GRADING, AS REQUESTED BY THE BUILDING OFFICIAL. ALL PROPERTY LINES, EASEMENTS, AND RESTRICTED USE AREAS SHALL BE STAKED.
11. NO GRADING OR CONSTRUCTION SHALL OCCUR WITHIN THE PROTECTED ZONE OF ALL OAK AS REQUIRED PER TITLE CHAPTER 22.56 OF THE COUNTY OF LOS ANGELES ZONING CODE, THE PROTECTED ZONE SHALL MEAN THAT AREA WITHIN THE DRIP LINE OF AN OAK TREE EXTENDING THERE FROM A POINT AT LEAST FIVE FEET OUTSIDE THE DRIP LINE, OR 15 FEET FROM THE TRUNK(S) OF A TREE, WHICHEVER IS GREATER.
13. A PREVENTIVE PROGRAM TO PROTECT THE SLOPES FROM POTENTIAL DAMAGE FROM BURROWING RODENTS IS REQUIRED PER SECTION J101.8 OF THE COUNTY OF LOS ANGELES BUILDING CODE. OWNER IS TO INSPECT SLOPES PERIODICALLY FOR EVIDENCE OF BURROWING RODENTS AND A FIRST EVIDENCE OF THEIR EXISTENCE SHALL EMPLOY AN EXTERMINATOR FOR THEIR REMOVAL.
14. WHERE A GRADING PERMIT IS ISSUED AND THE BUILDING OFFICIAL DETERMINES THAT THE GRADING WILL NOT BE COMPLETED PRIOR TO NOVEMBER 1, THE OWNER OF THE SITE ON WHICH THE GRADING IS BEING PERFORMED SHALL, ON OR BEFORE OCTOBER 1, FILE OR CAUSE TO BE FILED WITH THE BUILDING OFFICIAL AS ESCP PER SECTION J110.8.3 OF THE COUNTY OF LOS ANGELES BUILDING CODE..
15. TRANSFER OF RESPONSIBILITY: IF THE FIELD ENGINEER, THE SOILS ENGINEER, OR THE ENGINEERING GEOLOGIST OF RECORD IS CHANGED DURING GRADING, THE WORK SHALL BE STOPPED UNTIL THE REPLACEMENT HAS AGREED IN WRITING TO ACCEPT THEIR RESPONSIBILITY WITHIN THE AREA OF TECHNICAL COMPETENCE FOR APPROVAL UPON COMPLETION OF THE WORK. IT SHALL BE THE DUTY OF THE PERMITTEE TO NOTIFY THE BUILDING OFFICIAL IN WRITING OF SUCH CHANGE PRIOR TO THE RECOMMENCEMENT OF SUCH GRADING.

INSPECTION NOTES:

16. THE PERMITTEE OR HIS AGENT SHALL NOTIFY THE BUILDING OFFICIAL AT LEAST ONE WORKING DAY IN ADVANCE OF REQUIRED INSPECTIONS AT FOLLOWING STAGES OF THE WORK. (SECTION J105.7 OF THE BUILDING CODE.)
   A. PRE-GRADE - BEFORE THE START OF ANY EARTH DISTURBING ACTIVITY OR CONSTRUCTION.
   B. INITIAL - WHEN THE SITE HAS BEEN CLEARED OF VEGETATION AND UNAPPROVED FILL HAS BEEN SCARIFIED, BENCHED OR OTHERWISE PREPARED FOR FILL, FILL SHALL NOT BE PLACED PRIOR TO THIS INSPECTION.
   NOTE: PRIOR TO ANY CONSTRUCTION ACTIVITIES, INCLUDING GRADING, ALL STORM WATER POLLUTION PREVENTION MEASURES INCLUDING EROSION CONTROL DEVICES WHICH CONTAIN SEDIMENTS MUST BE INSTALLED.
   C. ROUGH - WHEN APPROXIMATE FINAL ELEVATIONS HAVE BEEN ESTABLISHED; DRAINAGE TERRACES, SWALES AND BERMS INSTALLED AT THE TOP OF THE SLOPE, AND THE STATEMENTS REQUIRED IN THIS SECTION HAVE BEEN RECEIVED.
   D. FINAL - WHEN GRADING HAS BEEN COMPLETED; ALL DRAINAGE DEVICES INSTALLED; SLOPE PLANTING ESTABLISHED, IRRIGATION SYSTEMS INSTALLED AND THE AS-BUILT PLANS, REQUIRED STATEMENTS, AND REPORTS HAVE BEEN SUBMITTED AND APPROVED.
17. IN ADDITION TO THE INSPECTION REQUIRED OF THE BUILDING OFFICIAL FOR GRADING, REPORTS AND STATEMENTS SHALL BE SUBMITTED TO THE BUILDING OFFICIAL IN ACCORDANCE WITH SECTION J105 OF THE COUNTY OF LOS ANGELES BUILDING CODE.
18. UNLESS OTHERWISE DIRECTED BY THE BUILDING OFFICIAL, THE FIELD ENGINEER FOR ALL ENGINEERED GRADING PROJECTS SHALL PREPARE ROUTINE INSPECTION REPORTS AS REQUIRED UNDER SECTION J105.11 OF THE COUNTY OF LOS ANGELES BUILDING CODE. THESE REPORTS, KNOWN AS "REPORT OF GRADING ACTIVITIES", SHALL BE SUBMITTED TO THE BUILDING OFFICIAL AS FOLLOWS:
   1. BI-WEEKLY DURING ALL TIMES WHEN GRADING OF 400 CUBIC YARDS OR MORE PER WEEK IS OCCURRING ON THE SITE;
   2. MONTHLY, AT ALL OTHER TIMES; AND
   3. AT ANY TIME WHEN REQUESTED IN WRITING BY THE BUILDING OFFICIAL.

   SUCH "REPORT OF GRADING ACTIVITIES" SHALL CERTIFY TO THE BUILDING OFFICIAL THAT THE FIELD ENGINEER HAS INSPECTED THE GRADING SITE AND RELATED ACTIVITIES AND HAS FOUND THEM IN COMPLIANCE WITH THE APPROVED GRADING PLANS & SPECIFICATIONS, THE BUILDING CODE, ALL GRADING PERMIT CONDITIONS, AND ALL OTHER APPLICABLE ORDINANCES AND REQUIREMENTS. THIS FORM IS AVAILABLE AT THE FOLLOWING WEBSITE http://dpw.lacounty.gov/bsd/dg/default.aspx. "REPORT OF GRADING ACTIVITIES" MAY BE SCANNED AND UPLOADED AT THE WEBSITE OR FAXED TO (310) 530-5482. FAILURE TO PROVIDE REQUIRED INSPECTION REPORTS WILL RESULT IN A "STOP WORK ORDER".
19. ALL GRADED SITES MUST HAVE DRAINAGE SWALES, BERMS, AND OTHER DRAINAGE DEVICES INSTALLED PRIOR TO ROUGH GRADING APPROVAL PER SECTION J105.7 OF THE COUNTY OF LOS ANGELES BUILDING CODE.
20. THE GRADING CONTRACTOR SHALL SUBMIT THE STATEMENT TO THE GRADING INSPECTOR AS REQUIRED BY SECTION J105.12 OF THE COUNTY OF LOS ANGELES BUILDING CODE AT THE COMPLETION OF ROUGH GRADING.
21. FINAL GRADING MUST BE APPROVED BEFORE OCCUPANCY OF BUILDINGS WILL BE ALLOWED PER SECTION J105 OF THE COUNTY OF LOS ANGELES BUILDING CODE.

DRAINAGE NOTES:

22. ROOF DRAINAGE MUST BE DIVERTED FROM GRADED SLOPES.
23. PROVISIONS SHALL BE MADE FOR CONTRIBUTORY DRAINAGE AT ALL TIMES.
24. ALL CONSTRUCTION AND GRADING WITHIN A STORM DRAIN EASEMENT ARE TO BE DONE PER PRIVATE DRAIN (PD) No. _____ OR MISCELLANEOUS TRANSFER DRAIN (MTD) No. _____.
25. ALL STORM DRAIN WORK IS TO BE DONE UNDER CONTINUOUS INSPECTION BY THE FIELD ENGINEER. STATUS REPORTS REQUIRED UNDER NOTE 18 AND SECTION J105.11 OF THE COUNTY OF LOS ANGELES BUILDING CODE SHALL INCLUDE INSPECTION INFORMATION AND REPORTS ON THE STORM DRAIN INSTALLATION.

AGENCY NOTES

26. AN ENCROACHMENT PERMIT FROM COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS IS REQUIRED FOR ALL WORK WITHIN OR AFFECTING ROAD RIGHT OF WAY. ALL WORK WITHIN ROAD RIGHT OF WAY SHALL CONFORM TO COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS ENCROACHMENT PERMIT.
27. AN ENCROACHMENT PERMIT /CONNECTION PERMIT IS REQUIRED FROM THE COUNTY OF LOS ANGELES FLOOD CONTROL DISTRICT FOR ALL WORK WITHIN THE COUNTY OF LOS ANGELES FLOOD CONTROL DISTRICT RIGHT OF WAY. ALL WORK SHALL CONFORM WITH CONDITIONS SET BY THE PERMIT.
28. PERMISSION TO OPERATE IN VERY HIGH FIRE HAZARD SEVERITY ZONE MUST BE OBTAINED FROM THE FIRE PREVENTION BUREAU OR THE LOCAL FIRE STATION PRIOR TO COMMENCING WORK.
29. ALL WORK WITHIN THE STREAMBED AND AREAS OUTLINED ON GRADING PLANS SHALL CONFORM TO:
   ARMY CORP 404 PERMIT NUMBER: N/A
   CALIFORNIA FISH & GAME PERMIT NO.: N/A
30. ALL CONSTRUCTION/ DEMOLITION, GRADING, AND STORAGE OF BULK MATERIALS MUST COMPLY WITH THE LOCAL AQMD RULE 403 FOR FUGITIVE DUST. INFORMATION ON RULE 403 IS AVAILABLE AT AQMD'S WEBSITE: http://aveqmd.com.

GENERAL GEOTECHNICAL NOTES:

31. ALL WORK MUST BE IN COMPLIANCE WITH THE RECOMMENDATIONS INCLUDED IN THE GEOTECHNICAL CONSULTANT'S REPORT(S) AND THE APPROVED GRADING PLANS AND SPECIFICATIONS.
32. GRADING OPERATIONS MUST BE CONDUCTED UNDER PERIODIC INSPECTIONS BY THE GEOTECHNICAL CONSULTANTS WITH MONTHLY INSPECTION REPORTS TO BE SUBMITTED TO THE GEOLOGY AND SOILS SECTION, (900 S. FREMONT, ALHAMBRA CA 91803 - 3RD FLOOR)
33. THE SOIL ENGINEER SHALL PROVIDE SUFFICIENT INSPECTIONS DURING THE PREPARATION OF THE NATURAL GROUND AND THE PLACEMENT AND COMPACTION OF THE FILL TO BE SATISFIED THAT THE WORK IS BEING PERFORMED IN ACCORDANCE WITH THE PLAN AND APPLICABLE CODE REQUIREMENTS.
34. ROUGH GRADING MUST BE APPROVED BY A FINAL ENGINEERING GEOLOGY AND SOILS ENGINEERING REPORT. AN AS-BUILT GEOLOGIC MAP MUST BE INCLUDED IN THE FINAL GEOLOGY REPORT. PROVIDE A FINAL REPORT STATEMENT THAT VERIFIES WORK WAS DONE IN ACCORDANCE WITH REPORT RECOMMENDATIONS AND CODE PROVISIONS (SECTION J105.12 OF THE COUNTY OF LOS ANGELES BUILDING CODE). THE FINAL REPORT(S) MUST BE SUBMITTED TO THE GEOTECHNICAL AND MATERIALS ENGINEERING DIVISION FOR REVIEW AND APPROVAL.
35. FOUNDATION, WALL AND POOL EXCAVATIONS MUST BE INSPECTED AND APPROVED BY THE CONSULTING GEOLOGIST AND SOIL ENGINEER, PRIOR TO THE PLACING OF STEEL OR CONCRETE.
36. BUILDING PADS LOCATED IN CUT/FILL TRANSITION AREAS SHALL BE OVER-EXCAVATED A MINIMUM OF THREE (3) FEET BELOW THE PROPOSED BOTTOM OF FOOTING.
   NOTE: PAVEMENT SECTIONS BASED ON RECOMMENDATIONS FROM "SUPPLEMENTAL GEOTECHNICAL RECOMMENDATIONS, PROPOSED RETAINING WALLS, UNIVERSAL HOLLYWOOD DRIVE" DATED MARCH 7, 2014 BY AMEC.

FILL NOTES:

37. ALL FILL SHALL BE COMPACTED TO THE FOLLOWING MINIMUM RELATIVE COMPACTION CRITERIA:
   A. 90 PERCENT OF MAXIMUM DRY DENSITY WITHIN 40 FEET BELOW FINISH GRADE.
   B. 93 PERCENT OF MAXIMUM DRY DENSITY DEEPER THAN 40 FEET BELOW FINISH GRADE, UNLESS LOWER RELATIVE COMPACTION (NOT LESS THAN 90 PERCENT OF MAXIMUM DRY DENSITY) IS JUSTIFIED BY THE GEOTECHNICAL ENGINEER.

   THE RELATIVE COMPACTION SHALL BE DETERMINED BY A.S.T.M. SOIL COMPACTION TEST D1557-91 WHERE APPLICABLE. WHERE NOT APPLICABLE, A TEST ACCEPTABLE TO THE BUILDING OFFICIAL SHALL BE USED. (SECTION J105.7 OF THE COUNTY OF LOS ANGELES BUILDING CODE).
38. FIELD DENSITY SHALL BE DETERMINED BY A METHOD ACCEPTABLE TO THE BUILDING OFFICIAL. (SECTION J107.5 OF THE COUNTY OF LOS ANGELES BUILDING CODE.) HOWEVER, NOT LESS THAN 10% OF THE REQUIRED DENSITY TEST, UNIFORMLY DISTRIBUTED, AND SHALL BE OBTAINED BY THE SAND CONE METHOD.
39. SUFFICIENT TESTS OF THE FILL SOILS SHALL BE MADE TO DETERMINE THE RELATIVE COMPACTION OF THE FILL IN ACCORDANCE WITH THE FOLLOWING MINIMUM GUIDELINES:
   A. ONE TEST FOR EACH TWO-FOOT VERTICAL LIFT.
   B. ONE TEST FOR EACH 1,000 CUBIC YARDS OF MATERIAL PLACED.
   C. ONE TEST AT THE LOCATION OF THE FINAL FILL SLOPE FOR EACH BUILDING SITE (LOT) IN EACH FOUR-FOOT VERTICAL LIFT OR PORTION THEREOF.
   D. ONE TEST IN THE VICINITY OF EACH BUILDING PAD FOR EACH FOUR-FOOT VERTICAL LIFT OR PORTION THEREOF.
40. SUFFICIENT TESTS OF FILL SOILS SHALL BE MADE TO VERIFY THAT THE SOIL PROPERTIES COMPLY WITH THE DESIGN REQUIREMENTS, AS DETERMINED BY THE SOIL ENGINEER INCLUDING SOIL TYPES, SHEAR STRENGTHS PARAMETERS AND CORRESPONDING UNIT WEIGHTS IN ACCORDANCE WITH THE FOLLOWING GUIDELINES:
   A. PRIOR AND SUBSEQUENT TO PLACEMENT OF THE FILL, SHEAR TESTS SHALL BE TAKEN ON EACH TYPE OF SOIL OR SOIL MIXTURE TO BE USED FOR ALL FILL SLOPES STEEPER THAN THREE (3) HORIZONTAL TO ONE VERTICAL.
   B. SHEAR TEST RESULTS FOR THE PROPOSED FILL MATERIAL MUST MEET OR EXCEED THE DESIGN VALUES USED IN THE GEOTECHNICAL REPORT TO DETERMINE SLOPE STABILITY REQUIREMENTS. OTHERWISE, THE SLOPE MUST BE REEVALUATED USING THE ACTUAL SHEAR TEST VALUE OF THE FILL MATERIAL THAT IS IN PLACE.
   C. FILL SOILS SHALL BE FREE OF DELETERIOUS MATERIALS.
41. FILL SHALL NOT BE PLACED UNTIL STRIPPING OF VEGETATION, REMOVAL OF UNSUITABLE SOILS, AND INSTALLATION OF SUBDRAIN (IF ANY) HAVE BEEN INSPECTED AND APPROVED BY THE SOIL ENGINEER. THE BUILDING OFFICIAL MAY REQUIRE A "STANDARD TEST METHOD FOR MOISTURE, ASH, ORGANIC MATTER, PEAT, OR OTHER ORGANIC SOILS" ASTM D-2974-87 ON ANY SUSPECT MATERIAL. DETRIMENTAL AMOUNTS OF ORGANIC MATERIAL SHALL NOT BE PERMITTED IN FILLS. SOIL CONTAINING SMALL AMOUNTS OF ROOTS MAY BE ALLOWED PROVIDED THAT THE ROOTS ARE IN A QUANTITY AND DISTRIBUTED IN A MANNER THAT MAY WILL NOT BE DETRIMENTAL TO THE FUTURE USE OF THE SITE AND THE SOILS ENGINEER APPROVES THE USE OF SUCH MATERIAL.
42. ROCK OR SIMILAR MATERIAL GREATER THAN 4 INCHES IN DIAMETER SHALL NOT BE PLACED IN THE FILL UNLESS RECOMMENDATIONS FOR SUCH PLACEMENT HAVE BEEN SUBMITTED BY THE SOIL ENGINEER AND APPROVED IN ADVANCE BY THE BUILDING OFFICIAL. LOCATION, EXTENT, AND ELEVATION OF ROCK DISPOSAL AREAS MUST BE SHOWN ON "AS-BUILT" GRADING PLAN.
43. CONTINUOUS INSPECTION BY THE SOIL ENGINEER, OR A RESPONSIBLE REPRESENTATIVE, SHALL BE PROVIDED DURING ALL AND COMPACTION OPERATIONS WHERE FILLS HAVE A DEPTH GREATER THAN 30 FEET OR SLOPE SURFACE STEEPER THAN 2:1. (SECTION J107.8 OF THE COUNTY OF LOS ANGELES BUILDING CODE).
44. CONTINUOUS INSPECTION BY THE SOIL ENGINEER, OR A RESPONSIBLE REPRESENTATIVE, SHALL BE PROVIDED DURING ALL SUBDRAIN INSTALLATION. (SECTION J107.2 OF THE COUNTY OF LOS ANGELES BUILDING CODE).
45. ALL SUBDRAIN OUTLETS ARE TO BE SURVEYED FOR LINE AND ELEVATION. SUBDRAIN INFORMATION MUST BE SHOWN ON AN "AS BUILT" GRADING PLAN.
46. FILL SLOPES IN EXCESS OF 2:1 STEEPNESS RATIO ARE TO BE CONSTRUCTED BY THE PLACEMENT OF SOIL AT SUFFICIENT DISTANCE BEYOND THE PROPOSED FINISH SLOPE TO ALLOW COMPACTION EQUIPMENT TO BE OPERATED AT THE OUTER LIMITS OF THE FINAL SLOPE SURFACE. THE EXCESS FILL IS TO BE REMOVED PRIOR TO COMPLETION OF ROUGH GRADING. OTHER CONSTRUCTION PROCEDURES MAY BE USED WHEN IT IS DEMONSTRATED TO THE SATISFACTION OF THE BUILDING OFFICIAL THAT THE ANGLE OF SLOPE, CONSTRUCTION METHOD AND OTHER FACTORS WILL HAVE EQUIVALENT EFFECT. (SECTION J107.5 OF THE COUNTY OF LOS ANGELES BUILDING CODE.)

PLANTING AND IRRIGATION NOTES:

47. PLANTING AND IRRIGATION ON GRADED SLOPES MUST COMPLY WITH THE FOLLOWING MINIMUM GUIDELINES:
   A. THE SURFACE OF ALL CUT SLOPES MORE THAN 5 FEET IN HEIGHT AND FILL SLOPES MORE THAN 3 FEET IN HEIGHT SHALL BE PROTECTED AGAINST DAMAGE BY EROSION BY PLANTING WITH GRASS OR GROUNDCOVER PLANTS. SLOPES EXCEEDING 15 FEET IN VERTICAL HEIGHT SHALL WITH SHRUBS, SPACED AT NOT TO EXCEED 10 FEET ON CENTERS, OR TREES, SPACED AT NOT TO EXCEED 20 FEET ON CENTERS, OR A COMBINATION OF SHRUBS AND TREES AT EQUIVALENT SPACING. IN ADDITION TO THE GRASS OR GROUNDCOVER PLANTS, THE PLANTS SELECTED AND PLANTING METHODS USED SHALL BE THE SUITABLE FOR THE SOIL AND CLIMATIC CONDITIONS OF THE SITE. PLANT MATERIAL SHALL BE SELECTED WHICH WILL PRODUCE A COVERAGE OF PERMANENT PLANTING EFFECTIVELY CONTROLLING EROSION. CONSIDERATION SHALL BE GIVEN TO DEEP-ROOTED PLANTING MATERIAL NEEDING LIMITED WATERING, MAINTENANCE, HIGH ROOT TO SHOOT RATIO, WIND SUSCEPTIBILITY AND FIRE-RETARDANT CHARACTERISTICS. ALL PLANT MATERIALS MUST BE APPROVED BY THE BUILDING OFFICIAL. (SECTION J110.3 OF THE COUNTY OF LOS ANGELES BUILDING CODE)
   NOTE: PLANTING MAY BE MODIFIED FOR THE SITE IF SPECIFIC RECOMMENDATIONS ARE PROVIDED BY BOTH THE SOILS ENGINEER AND A LANDSCAPE ARCHITECT. SPECIFIC RECOMMENDATIONS MUST CONSIDER SOILS AND CLIMATIC CONDITIONS, IRRIGATION REQUIREMENTS, PLANTING METHODS, FIRE RETARDANT CHARACTERISTICS, WATER EFFICIENCY, MAINTENANCE NEEDS, AND OTHER REGULATORY REQUIREMENTS. RECOMMENDATIONS MUST INCLUDE A FINDING THAT THE ALTERNATIVE PLANTING WILL PROVIDE A PERMANENT AND EFFECTIVE METHOD OF EROSION CONTROL. MODIFICATIONS TO PLANTING MUST BE APPROVED BY THE BUILDING OFFICIAL PRIOR TO INSTALLATION.
   B. SLOPES REQUIRED TO BE PLANTED BY SECTION J110.3 SHALL BE PROVIDED WITH AN APPROVED SYSTEM OF IRRIGATION THAT IS DESIGNED TO COVER ALL PORTIONS OF THE SLOPE. IRRIGATION SYSTEM PLANS SHALL BE SUBMITTED AND APPROVED PRIOR TO INSTALLATION. A FUNCTIONAL TEST OF THE SYSTEM MAY BE REQUIRED. FOR SLOPES LESS THAN 20 FEET IN VERTICAL HEIGHT, HOSE BIBS TO PERMIT HAND WATERING WILL BE ACCEPTABLE IF SUCH HOSE BIBS ARE INSTALLED AT CONVENIENTLY ACCESSIBLE LOCATIONS WHERE A HOSE NO LONGER THAN 50 FEET IS NECESSARY FOR IRRIGATION. THE REQUIREMENTS FOR PERMANENT IRRIGATION SYSTEMS MAY BE MODIFIED UPON SPECIFIC RECOMMENDATION OF A LANDSCAPE ARCHITECT OR EQUIVALENT AUTHORITY THAT, BECAUSE OF THE TYPE OF PLANTS SELECTED, THE PLANTING METHODS USED AND THE SOIL AND CLIMATIC CONDITIONS AT THE SITE, IRRIGATION WILL NOT BE NECESSARY FOR THE MAINTENANCE OF THE SLOPE PLANTING. (SECTION J110.4 OF THE COUNTY OF LOS ANGELES BUILDING CODE).
   C. OTHER GOVERNMENTAL AGENCIES MAY HAVE ADDITIONAL REQUIREMENTS FOR LANDSCAPING AND IRRIGATION. IT IS THE RESPONSIBILITY OF THE APPLICANT TO COORDINATE WITH OTHER AGENCIES TO MEET THEIR REQUIREMENTS WHILE MAINTAINING COMPLIANCE WITH THE COUNTY OF LOS ANGELES BUILDING CODE.
48. THE PLANTING AND IRRIGATION SYSTEMS SHALL BE INSTALLED AS SOON AS PRACTICAL AFTER ROUGH GRADING. PRIOR TO FINAL GRADING APPROVAL ALL REQUIRED SLOPE PLANTING MUST BE WELL ESTABLISHED. (SECTION J110.7 OF THE COUNTY OF LOS ANGELES BUILDING CODE)
49. LANDSCAPE IRRIGATION SYSTEM SHALL BE DESIGNED AND MAINTAINED TO PREVENT SPRAY ON STRUCTURES. (TITLE 31, SECTION 5.407.2.1)
50. PRIOR TO ROUGH GRADE APPROVAL THIS PROJECT REQUIRES A LANDSCAPE PERMIT. LANDSCAPE PLANS IN COMPLIANCE WITH THE "MODEL WATER EFFICIENT LANDSCAPE ORDINANCE" TITLE 23, CHAPTER 2.7 OF CALIFORNIA CODE OF REGULATIONS (AB 1881) MUST BE SUBMITTED TO THE DEPARTMENT OF PUBLIC WORKS, LAND DEVELOPMENT DIVISION, (900 S. FREMONT AVE. ALHAMBRA - 3RD FLOOR, CA 91803 (626) 458-4921). TO OBTAIN LANDSCAPE PERMIT APPROVED PLANS AND WATER PURVEYOR ACKNOWLEDGEMENT FORM MUST BE SUBMITTED TO THE LOCAL BUILDING AND SAFETY OFFICE.

PRIVATE/UTILITY EASEMENT:

ANY PROPOSED WORK WITHIN A PRIVATE/UTILITY EASEMENT OR ACCESS EASEMENT REQUIRES PERMISSION LETTERS AND/OR COVENANTS FROM EASEMENT HOLDER, PERMISSION FROM THE EASEMENT HOLDER MAY NOT BE REQUIRED IF IT CAN BE SHOWN THE PROPOSED CONSTRUCTION WORK IS CONSISTENT AND IN CONFORMANCE WITH INTENDED EASEMENT USE. COPIES OF RECORDED EASEMENT SHALL BE SUBMITTED FOR REVIEW. GRADING PLANS MUST SHOW ALL BEARINGS, DISTANCES, (LINEAR AND CURVE DATA) FOR THE ENTIRE EASEMENT(S).

AS CIVIL ENGINEER/LAND SURVEYOR OF THIS PROJECT, I HAVE IDENTIFIED THE LOCATION OF ALL EASEMENTS WHICH ARE DEPICTED ON THESE PLANS, I HAVE REVIEWED THE PROPOSED EASEMENT DOCUMENTS AND VERIFIED THE PROPOSED CONSTRUCTION DOES NOT CONFLICT OR INTERFERE WITH THE INTENDED EASEMENT USE.

LEGAL DESCRIPTION

PARCEL A:

PARCEL 1 INCLUSIVE OF PARCEL MAP NO. 7763, IN THE CITY OF MONROVIA, COUNTY OF LOS ANGLES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 97 PAGES 73 AND 74 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

PARCEL B:

THAT PORTION OF LOT "M" IN BLOCK 12 OF MONROVIA TRACT, IN THE CITY OF MONROVIA, COUNTY OF LOS ANGLES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 9, PAGES 73 AND 74 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

COMMENCING AT A POINT IN THE NORTH LINE OF SAID LOT "M" DISTANT SOUTH 89° 50' WEST THEREON 170.00 FEET FROM THE NORTHEAST CORNER OF SAID LOT "M"; THENCE SOUTH PARALLEL WITH THE EAST LINE OF SAID LOT "M", 241.00 FEET TO THE TRUE POINT OF BEGINNING; THENCE SOUTH PARALLEL WITH SAID EAST LINE 51.00 FEET; THENCE PARALLEL WITH SAID NORTH LINE SOUTH 89° 50' WEST 191.22 FEET, MORE OR LESS, TO A POINT IN THE SOUTHWESTERLY LINE OF THE PARCEL OF LAND DESCRIBED IN DEED TO J.H. HENSON AND WIFE, RECORDED AS INSTRUMENT NO. 12 ON MAY 19, 1948, IN SAID COUNTY RECORDER'S OFFICE; THENCE ALONG SAID SOUTHWESTERLY LINE NORTH 49° 07' WEST 77.66 FEET MORE OR LESS TO A LINE PARALLEL WITH THE NORTH LINE OF SAID LOT "M" WHICH PASSES THROUGH THE TRUE POINT OF BEGINNING; THENCE PARALLEL WITH SAID NORTH LINE NORTH 89° 50' EAST 249.94 FEET MORE OR LESS TO THE TRUE POINT OF BEGINNING.

PARCEL C:

PARCELS 2, 3 AND 4 INCLUSIVE OF PARCEL MAP NO. 7763, IN THE CITY OF MONROVIA, COUNTY OF LOS ANGLES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 97 PAGES 73 AND 74 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

PARCEL D:

PARCEL 1:

THE SOUTHERLY 50 FEET OF THE WESTERLY 190 FEET OF THAT PORTION OF BLOCK 12 OF MONROVIA TRACT, IN THE CITY OF MONROVIA, COUNTY OF LOS ANGLES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 9 PAGES 73 AND 74 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

BEGINNING AT A POINT IN THE WEST LINE OF MAGNOLIA AVENUE, DISTANCE THEREON 1650 FEET SOUTH FROM THE CENTER LINE OF HUNTINGTON DRIVE (FORMERLY FALLING LEAF AVENUE), THENCE WEST 634.50 FEET TO THE PROLONGATION NORTHERLY OF THE EAST LINE OF LOT "M", BLOCK 12 OF SAID TRACT, THENCE SOUTH ALONG PROLONGATION OF SAID EAST LINE OF LOT "M" TO THE NORTHEAST CORNER OF LOT "M", THENCE SOUTH ALONG THE EAST LINE OF SAID LOT "M" AND THE PROLONGATION THEREOF SOUTHERLY 343.08 FEET, MORE OR LESS, TO THE CENTER LINE OF EVERGREEN AVENUE; THENCE EAST ALONG THE CENTER LINE OF EVERGREEN AVENUE AS VACATED, 634.50 FEET TO THE WEST LINE OF MAGNOLIA AVENUE, THENCE NORTH ALONG THE WEST LINE OF MAGNOLIA AVENUE TO THE POINT OF BEGINNING.

EXCEPT THEREFROM THAT PORTION CONVEYED TO THE STATE OF CALIFORNIA IN THE DEED RECORDED JANUARY 16, 1968 AS INSTRUMENT NO. 428, OFFICIAL RECORDS AND MORE PARTICULARLY DESCRIBED AS FOLLOWS:

THAT PORTION OF BLOCK 12 OF SAID MONROVIA TRACT, LYING WITHIN THAT CERTAIN PARCEL OF LAND CONVEYED TO CHARLES B. SIMONS AND DOROTHY M. SIMONS, BY DEED RECORDED IN BOOK 51124, PAGE 296 OF OFFICIAL RECORDS IN THE OFFICE OF THE COUNTY RECORDER, DESCRIBED AS FOLLOWS:

BEGINNING AT THE NORTHEAST CORNER OF SAID PARCEL OF LAND; THENCE ALONG THE NORTHERLY LINE OF SAID PARCEL OF LAND, WESTERLY 26.81 FEET TO THE INTERSECTION THEREOF WITH A CURVE CONCAVE NORTHEASTERLY AND HAVING A RADIUS OF 1026.00 FEET; THENCE ALONG SAID CURVE SOUTHEASTERLY AN ARC DISTANCE OF 28.05 FEET TO A POINT IN THE EASTERLY LINE OF SAID PARCEL OF LAND, DISTANT ALONG SAID EASTERLY LINE, SOUTHERLY 8.35 FEET FROM THE POINT OF BEGINNING; THENCE ALONG SAID EASTERLY LINE NORTHERLY 8.37 FEET TO SAID POINT OF BEGINNING.

SAID LAND IS SHOWN AS PART OF PARCEL "L" ON RECORD OF SURVEYS RECORDED IN BOOK 69, PAGE 30, RECORD OF SURVEYS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

PARCEL 2:

THAT PORTION OF THAT CERTAIN PARCEL OF LAND IN BLOCK 12 OF THE MONROVIA TRACT, IN THE CITY OF MONROVIA, COUNTY OF LOS ANGLES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 9 PAGES 73 AND 74 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF LOS ANGELES COUNTY, CONVEYED TO THE STATE OF CALIFORNIA, BY DEED RECORDED IN BOOK D3000 PAGE 526, OFFICIAL RECORDS, IN SAID OFFICE, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING AT A POINT IN THE SOUTHERLY LINE OF SAID PARCEL OF LAND, DISTANT ALONG SAID SOUTHERLY LINE SOUTH 68° 52' 58" WEST 26.81 FEET FROM THE SOUTHEASTERLY CORNER OF SAID PARCEL OF LAND, SAID POINT BEING THE INTERSECTION OF SAID SOUTHERLY LINE WITH A CURVE CONCAVE NORTHEASTERLY AND HAVING A RADIUS OF 1026.00 FEET; THENCE NORTHWESTERLY ALONG SAID CURVE FROM A TANGENT WHICH BEARS NORTH 72° 58' 22" WEST THROUGH AN ANGLE OF 0° 58' 22" AN ARC DISTANCE OF 17.42 FEET; THENCE TANGENT TO SAID CURVE NORTH 72° 00' 00" WEST 67.55 FEET; THENCE SOUTH 1° 00' 58" EAST 27.67 FEET TO A POINT IN SAID SOUTHERLY LINE DISTANT ALONG SAID SOUTHERLY LINE SOUTH 68° 52' 58" WEST 65.55 FEET FROM THE POINT OF BEGINNING; THENCE ALONG SAID SOUTHERLY LINE NORTH 68° 52' 58" EAST 65.55 FEET TO SAID POINT OF BEGINNING.

EXCEPT FROM SAID PARCEL NO. 2, ALL MINERALS, OILS, GASES AND OTHER HYDROCARBONS BY WHATSOEVER NAME KNOWN THAT MAY BE WITHIN OR UNDER THE PARCEL OF LAND HEREINABOVE DESCRIBED, WITHOUT HOWEVER, THE RIGHT TO DRILL, DIG, OR MINE THROUGH THE SURFACE THEREOF, AS RESERVED BY THE STATE OF CALIFORNIA, BY DEED RECORDED JANUARY 16, 1968 AS INSTRUMENT NO. 782, OF OFFICIAL RECORDS.

APN: 8507-006-041 (AFFECTS: PARCEL A); 8507-006-042 (AFFECTS: PARCEL 2 OF PARCEL C)
8507-005-043 (AFFECTS: PARCEL 3 OF PARCEL C); 8507-006-044 (AFFECTS: PARCEL 4 OF PARCEL C)
8507-006-022 (AFFECTS: PORTION OF PARCEL B) AND 8507-006-024 (AFFECTS: PORTION OF PARCEL B)
8507-006-016 (AFFECTS: PARCEL D)

ROUGH GRADING PLAN
Title

C2.00

STORM WATER POLLUTION PLAN NOTES:

1. IN CASE OF EMERGENCY, CALL _____ AT _____.
2. TOTAL DISTURBED AREA AC
3. A STAND-BY CREW FOR EMERGENCY WORK SHALL BE AVAILABLE AT ALL TIMES DURING THE RAINY SEASON (NOVEMBER 1 TO APRIL 15). NECESSARY MATERIALS SHALL BE AVAILABLE ON-SITE AND STOCKPILED AT CONVENIENT LOCATIONS TO FACILITATE RAPID CONSTRUCTION OF EMERGENCY DEVICES WHEN RAIN IS IMMINENT.
4. EROSION CONTROL DEVICES SHOWN ON THIS PLAN MAY BE REMOVED WHEN APPROVED BY THE BUILDING OFFICIAL IF THE GRADING OPERATION HAS PROGRESSED TO THE POINT WHERE THEY ARE NO LONGER REQUIRED.
5. GRADED AREAS ADJACENT TO FILL SLOPES LOCATED AT THE SITE PERIMETER MUST DRAIN AWAY FROM THE TOP OF SLOPE AT THE CONCLUSION OF EACH WORKING DAY. ALL LOOSE SOILS AND DEBRIS THAT MAY CREATE A POTENTIAL HAZARD TO OFF-SITE PROPERTY SHALL BE STABILIZED OR REMOVED FROM THE SITE ON A DAILY BASIS.
6. ALL SILT AND DEBRIS SHALL BE REMOVED FROM ALL DEVICES WITHIN 24 HOURS AFTER EACH RAINSTORM AND BE DISPOSED OF PROPERLY.
7. A GUARD SHALL BE POSTED ON THE SITE WHENEVER THE DEPTH OF WATER IN ANY DEVICE EXCEEDS TWO FEET. THE DEVICE SHALL BE DRAINED OR PUMPED DRY WITHIN 24 HOURS AFTER EACH RAINSTORM. DRAINAGE DEVICES MUST COMPLY WITH THE APPROPRIATE BMP FOR DEWATERING OPERATIONS.
8. THE PLACEMENT OF ADDITIONAL DEVICES TO REDUCE EROSION DAMAGE AND CONTAIN POLLUTANTS WITHIN THE SITE IS LEFT TO THE DISCRETION OF THE FIELD ENGINEER. ADDITIONAL DEVICES AS NEEDED SHALL BE INSTALLED TO RETAIN SEDIMENTS AND OTHER POLLUTANTS ON SITE.
9. DESILTING BASINS MAY NOT BE REMOVED OR MADE INOPERABLE BETWEEN NOVEMBER 1 AND APRIL 15 OF THE FOLLOWING YEAR WITHOUT THE APPROVAL OF THE BUILDING OFFICIAL
10. STORM WATER POLLUTION AND EROSION CONTROL DEVICES ARE TO BE MODIFIED, AS NEEDED, AS THE PROJECT PROGRESSES. THE DESIGN AND PLACEMENT OF THESE DEVICES IS THE RESPONSIBILITY OF THE FIELD ENGINEER. PLANS REPRESENTING CHANGES MUST BE SUBMITTED FOR APPROVAL IF REQUESTED BY THE BUILDING OFFICIAL.
11. EVERY EFFORT SHOULD BE MADE TO ELIMINATE THE DISCHARGE OF NON-STORMWATER FROM THE PROJECT AT ALL TIMES.
12. ERODED SEDIMENTS AND OTHER POLLUTANTS MUST BE RETAINED ON-SITE AND MAY NOT BE TRANSPORTED FROM THE SITE VIA SHEET FLOW, SWALES, AREA DRAINS, NATURAL DRAINAGE COURSES OR WIND.
13. STOCKPILES OF EARTH AND OTHER CONSTRUCTION RELATED MATERIALS MUST BE PROTECTED FROM BEING TRANSPORTED FROM THE SITE BY THE FORCES OF WIND OR WATER.
14. FUELS, OILS, SOLVENTS, AND OTHER TOXIC MATERIALS MUST BE STORED IN ACCORDANCE WITH THEIR LISTING AND ARE NOT TO CONTAMINATE THE SOIL AND SURFACE WATERS. ALL APPROVED STORAGE CONTAINERS ARE TO BE PROTECTED FROM THE WEATHER. SPILLS MUST BE CLEANED UP IMMEDIATELY AND DISPOSED OF IN A PROPER MANNER. SPILLS MAY NOT BE WASHED INTO THE DRAINAGE SYSTEM.
15. EXCESS OR WASTE CONCRETE MAY NOT BE WASHED INTO THE PUBLIC WAY OR ANY OTHER DRAINAGE SYSTEM. PROVISIONS SHALL BE MADE TO RETAIN CONCRETE WASTES ON-SITE UNTIL THEY CAN BE DISPOSED OF AS SOLID WASTE.
16. DEVELOPERS/CONTRACTORS ARE RESPONSIBLE TO INSPECT ALL EROSION CONTROL DEVICES AND BMPS ARE INSTALLED AND FUNCTIONING PROPERLY IF THERE IS A 40% CHANCE OF 0.25 INCHES OR GREATER OF PREDICTED PRECIPITATION, AND AFTER ACTUAL PRECIPITATION. A CONSTRUCTION SITE INSPECTION CHECKLIST AND INSPECTION LOG SHALL BE MAINTAINED AT THE PROJECT SITE AT ALL TIMES AND AVAILABLE FOR REVIEW BY THE BUILDING OFFICIAL (COPIES OF THE SELF-INSPECTION CHECKLIST AND INSPECTION LOGS ARE AVAILABLE UPON REQUEST).
17. TRASH AND CONSTRUCTION RELATED SOLID WASTES MUST BE DEPOSITED INTO A COVERED RECEPTACLE TO PREVENT CONTAMINATION OF RAINWATER AND DISPERSAL BY WIND.
18. SEDIMENTS AND OTHER MATERIALS MAY NOT BE TRACKED FROM THE SITE BY VEHICLE TRAFFIC. THE CONSTRUCTION ENTRANCE ROADWAYS MUST BE STABILIZED SO AS TO INHIBIT SEDIMENTS FROM BEING DEPOSITED INTO THE PUBLIC WAY. ACCIDENTAL DEPOSITIONS MUST BE SWEPT UP IMMEDIATELY AND MAY NOT BE WASHED DOWN BY RAIN OR OTHER MEANS.
19. THE CONTRACTOR SHALL INSTALL PORTABLE WHEEL WASH STATIONS FOR THE DURATION OF CONSTRUCTION ACTIVITIES TO PREVENT THE SPREAD OF INVASIVE WEED SEED FROM THE TIRE TREADS OF VEHICLES ENTERING AND LEAVING THE PROJECT SITES. THE BASINS COLLECTED FROM THE DEBRIS BASINS OF THESE WASH STATIONS SHALL BE DISPOSED OF IN GREEN WASTE OR TRASH RECEPTACLES WHEN THE BASINS REQUIRE MAINTENANCE.
20. ANY SLOPES WITH DISTURBED SOILS OR DENUDED OF VEGETATION MUST BE STABILIZED SO AS TO INHIBIT EROSION BY WIND AND WATER.
21. AS THE ARCHITECT/ENGINEER OF RECORD, I HAVE SELECTED APPROPRIATE BMPs TO EFFECTIVELY MINIMIZE THE NEGATIVE IMPACTS OF THIS PROJECT'S CONSTRUCTION ACTIVITIES ON STORM WATER QUALITY. THE PROJECT OWNER AND CONTRACTOR ARE AWARE THAT THE SELECTED BMPs MUST BE INSTALLED, MONITORED, AND MAINTAINED TO ENSURE THEIR EFFECTIVENESS. THE BMPs NOT SELECTED FOR IMPLEMENTATION ARE REDUNDANT OR DEEMED NOT APPLICABLE TO THE PROPOSED CONSTRUCTION ACTIVITY.

DAVID MARTIN, PE RCE # C74143 Date

22. AS THE PROJECT OWNER OR AUTHORIZED AGENT OF THE OWNER, I HAVE READ AND UNDERSTAND THE REQUIREMENTS TO CONTROL STORM WATER POLLUTION FROM SEDIMENTS, EROSION, AND CONSTRUCTION MATERIALS, AND I CERTIFY THAT I WILL COMPLY WITH THESE REQUIREMENTS. I, OR MY REPRESENTATIVE, CONTRACTOR, DEVELOPER, OR ENGINEER WILL MAKE CERTAIN THAT ALL BMP SHOWN ON THIS PLAN WILL BE FULLY IMPLEMENTED, AND ALL EROSION CONTROL DEVICES WILL BE KEPT CLEAN AND FUNCTIONING. PERIODIC INSPECTIONS OF ALL BMPS WILL BE CONDUCTED AND A CURRENT LOG, SPECIFYING THE EXACT NATURE OF THE INSPECTION AND ANY REMEDIAL MEASURES, WILL BE KEPT AT THE CONSTRUCTION SITE AT ALL TIMES AND WILL BE AVAILABLE FOR THE REVIEW OF THE BUILDING OFFICIAL.

AS THE PROJECT OWNER OF AUTHORIZED AGENT OF THE OWNER, "I CERTIFY THAT THIS DOCUMENT AND ALL ATTACHMENTS WERE PREPARED UNDER MY DIRECTION OR SUPERVISION IN ACCORDANCE WITH A SYSTEM DESIGNED TO ASSURE THAT QUALIFIED PERSONNEL PROPERLY GATHER AND EVALUATE THE INFORMATION SUBMITTED. BASED ON MY INQUIRY OF THE PERSON OR PERSONS WHO MANAGE THE SYSTEM OF THOSE PERSONS DIRECTLY RESPONSIBLE FOR GATHERING THE INFORMATION, TO THE BEST OF MY KNOWLEDGE AND BELIEF, THE INFORMATION SUBMITTED IS TRUE, ACCURATE, AND COMPLETE. I AM AWARE THAT SUBMITTING FALSE AND/OR INACCURATE INFORMATION TO UPDATE THE LOCAL SWPPP TO REFLECT CURRENT CONDITIONS, OR FAILING TO PROPERLY AND/OR ADEQUATELY IMPLEMENT THE LOCAL SWPPP MAY RESULT IN REVOCATION OF GRADING AND/OR OTHER PERMITS OR OTHER SANCTIONS PROVIDED BY LAW.

Owner or Authorized Representative (Permittee) Date

23. DEVELOPERS/CONTRACTORS ARE RESPONSIBLE TO INSPECT ALL EROSION CONTROL DEVICES AND THAT BMPs ARE INSTALLED AND FUNCTIONING PROPERLY AS REQUIRED BY THE STATE CONSTRUCTION GENERAL PERMIT. A CONSTRUCTION SITE INSPECTION CHECKLIST AND INSPECTION LOG SHALL BE MAINTAINED AT THE PROJECT SITE AT ALL TIMES AND AVAILABLE FOR REVIEW BY THE BUILDING OFFICIAL.
24. THE FOLLOWING BMPs FROM THE "CASQA CONSTRUCTION BMP ONLINE HANDBOOK" MUST BE IMPLEMENTED FOR ALL CONSTRUCTION ACTIVITIES AS APPLICABLE. AS AN ALTERNATIVE, DETAILS FROM "CALTRANS STORMWATER QUALITY HANDBOOKS, CONSTRUCTION SITE BEST MANAGEMENT PRACTICES (BMP) MANUAL" MAY BE USED. ADDITIONAL MEASURE MAY BE REQUIRED IF DEEMED APPROPRIATE BY THE BUILDING OFFICIAL.

GRADING AND DRAINAGE PLAN
(SHEET 1 OF 6)
Title

C3.10

CONSTRUCTION NOTES

1. CONSTRUCT CONCRETE CURB PER SPPWC PLAN 120-1, A1-8(150)
2. CONSTRUCT RETAINING WALL, TYPE 7B PER SPPWC STD PLAN 616-3 OR APPROVED SIMILAR
3. CONSTRUCT 4" CONCRETE WALK PER DETAIL 3 ON SHEET C5.00, FINISH PER LANDSCAPE
4. 6" THICK REINFORCED CONCRETE PAVEMENT PER DETAIL 1 ON C5.00
5. CONSTRUCT 15' WIDE ACCESS ROAD PER DETAIL ON SHEET 5.00
6. CONSTRUCT CONCRETE DRIVEWAY PER SEPARATE PERMIT
7. CONSTRUCT FLUSH CURB, 0" CF PER SPPWC PLAN 120-1, TYPE A1
8. INSTALL 24"x24" BROOKS AREA DRAIN OR APPROVED SIMILAR
9. INSTALL PVC STORM DRAIN, SLOPE & LENGTH PER PLAN
10. INSTALL PVC STORM DRAIN OVERFLOW, SLOPE & LENGTH PER PLAN
11. INSTALL STORM DRAIN CLEANOUT PER DETAIL ON SHEET 7 C5.10
12. INSTALL STORM DRAIN MANHOLE PER SPPWC STD. PLAN 321-2
13. INSTALL INFILTRATION BASIN, SIZE PER PLAN PER DETAIL 5 ON SHEET C5.00
14. INSTALL RAINWATER HARVESTING SYSTEM PER DETAIL ON SHEET C5.00
15. INSTALL 12"x24" CATCHBASIN, ZURN MODEL Z887, WITH CONNECTING TRENCH DRAIN 6" W x 12" D. ZURN MODEL Z886 WITH REINFORCED SLOTTED STAINLESS STEEL GRATE CLASS C, OR APPROVED EQUAL
16. EXISTING ADJUST TO GRADE
17. 3' WIDE LONGITUDINAL GUTTER PER DETAIL 4 ON SHEET C5.00
18. 12"x12" BROOKS AREA DRAIN OR APPROVED SIMILAR

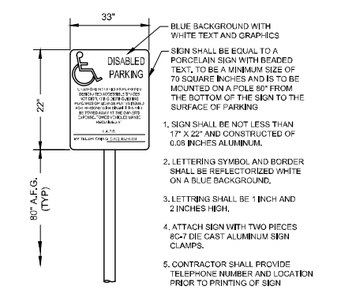
12"	12	16	9	6	3



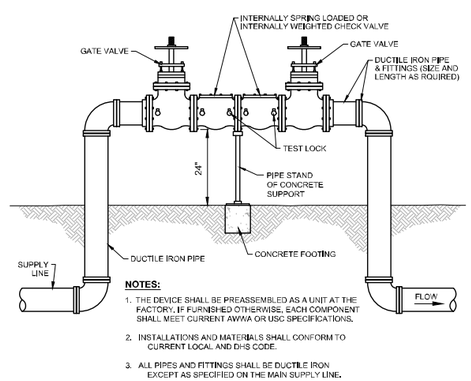
* INCLUDES TEES, PLUGS, CAPS, HYDRANTS & VALVES.

GENERAL NOTES:

1. ALL THRUST/ANCHOR BLOCKS SHALL BEAR AGAINST UNDISTURBED SOIL
2. CONCRETE SHALL ATTAIN A MINIMUM COMPRESSIVE STRENGTH OF 2000 PSI AT 28 DAYS
3. ALL ANCHOR RODS AND ANCHOR BOLTS SHALL BE MINIMUM 1/2" DIA & ANCHOR STRAPS SHALL BE 1/2" X 2" BAR
4. THRUST BLOCK DESIGN IS BASED ON A WATER PRESSURE OF 150 PSI, AND A MAXIMUM ALLOWABLE SOIL BEARING VALUE OF 2000 PSF FOR MAXIMUM SOIL BEARING VALUES OF 1000 PSF INCREASE BEARING VALUES BY A FACTOR OF 2
5. THE RATIO OF WIDTH TO HEIGHT OF THRUST BLOCKS SHALL NOT EXCEED 1.5 TO 1
6. ANCHOR BLOCKS FOR VERTICAL BENDS SHALL BE CONSTRUCTED PER SPECIAL DETAIL

6 THRUST AND ANCHOR BLOCK DETAILS

NOT TO SCALE



SIGN SHALL BE EQUAL TO A PORCELAIN SIGN WITH BEADED TEXT, TO BE A MINIMUM SIZE OF 70 SQUARE INCHES AND IS TO BE MOUNTED ON A POLE 80" FROM THE BOTTOM OF THE SIGN TO THE SURFACE OF PARKING

1. SIGN SHALL BE NOT LESS THAN 17" X 22" AND CONSTRUCTED OF 0.08 INCHES ALUMINUM.
2. LETTERING SYMBOL AND BORDER SHALL BE REFLECTORIZED WHITE ON A BLUE BACKGROUND.
3. LETTRING SHALL BE 1 INCH AND 2 INCHES HIGH.
4. ATTACH SIGN WITH TWO PIECES 8C-7 DIE CAST ALUMINUM SIGN CLAMPS.
5. CONTRACTOR SHALL PROVIDE TELEPHONE NUMBER AND LOCATION PRIOR TO PRINTING OF SIGN

12 SITE ACCESSIBILITY TOW AWAY DETAIL

NOT TO SCALE

NOTES:

1. THE DEVICE SHALL BE PREASSEMBLED AS A UNIT AT THE FACTORY, IF FURNISHED OTHERWISE, EACH COMPONENT SHALL MEET CURRENT AWWA OR USC SPECIFICATIONS.
2. INSTALLATIONS AND MATERIALS SHALL CONFORM TO CURRENT LOCAL AND DHS CODE.
3. ALL PIPES AND FITTINGS SHALL BE DUCTILE IRON EXCEPT AS SPECIFIED ON THE MAIN SUPPLY LINE.
4. VALVES SHALL BE OUTSIDE STEM AND YOKE.

HORIZONTAL CONTROL AND STRIPING PLAN (SHT 1 OF 2)
Title

C6.00

GENERAL NOTES:

1. ALL STRIPING AND PAVEMENT MARKINGS SHALL CONFORM TO THE CALIFORNIA MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES (MUTCD) 2012; CALTRANS STANDARD PLANS AND SPECIFICATIONS (JULY 2010); AND CITY OF GLENDALE STANDARD PLANS. SEE CALTRANS STANDARD PLANS A20(A-D) AND A24(A-E) FOR STRIPING DETAILS INCLUDING INSTALLATION AND REMOVAL OF RAISED PAVEMENT MARKERS.
2. ALL WORK AND MATERIALS FOR THE FURNISHING AND APPLICATION OF TRAFFIC STRIPES, PAVEMENT MARKINGS, AND PAVEMENT MARKERS SHALL CONFORM TO THE CALTRANS STANDARD SPECIFICATIONS, SECTIONS 84 AND 85.
3. ALL TRAFFIC STRIPES AND PAVEMENT MARKINGS SHALL BE THERMOPLASTIC.
4. STRIPING SHALL BE CAT TRACKED AND APPROVED BY THE CITY ENGINEER PRIOR TO FINAL INSTALLMENT.
5. PRIOR TO COMPLETION OF THE FINAL SIGNING AND STRIPING, THE CONTRACTOR SHALL NOTIFY THE CITY ENGINEER WHEN THE STRIPING LAYOUT IS COMPLETE BEFORE APPLYING ANY PAVEMENT MARKERS.
6. LANE WIDTHS SHALL BE MEASURED BETWEEN THE CENTER LINES OF EACH ADJACENT SINGLE OR DOUBLE STRIPE OR CURB FACE AS APPROPRIATE.
7. ALL LANE LINES AT INTERSECTION APPROACHES AND DEPARTURES SHALL BEGIN AND END WITH 30 FEET OF CONTINUOUS PAINT (TYP).
8. CONTRACTOR SHALL REMOVE ALL CONFLICTING PAINTED LINES, MARKINGS AND PAVEMENT LEGENDS BY WET SANDBLASTING. SANDBLASTING DEBRIS SHALL BE REMOVED CONTINUOUSLY DURING SANDBLASTING OPERATIONS.
9. PAVEMENT THAT IS DAMAGED DUE TO THE REMOVAL OF MARKERS OR STRIPING SHALL BE REPAIRED TO THE SATISFACTION OF THE CITY ENGINEER.
10. LOCATION OF PAVEMENT LEGENDS SHALL MATCH THE CITY STANDARDS AND STENCILS.
11. SIGNING SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AND SHALL BE SUBJECT TO CITY ENGINEER'S APPROVAL. ALL SIGNS SHALL CONFORM TO THE CALIFORNIA MUTCD 2012.
12. ALL SIGN FACE REFLECTIVE SHEETING SHALL BE HIGH INTENSITY GRADE WITH PROTECTIVE OVERLAY FILM
13. A SINGLE BLUE RAISED REFLECTIVE PAVEMENT MARKER SHALL BE INSTALLED ADJACENT TO ALL EXISTING FIRE HYDRANTS IN ACCORDANCE WITH CALIFORNIA MUTCD 2012, FIGURE 3B-102.
14. ALL DAMAGED OR OBLITERATED PAVEMENT MARKINGS AND ARROWS SHALL BE REAPPLIED IN KIND AS DIRECTED BY THE CITY ENGINEER.

CONSTRUCTION NOTES

1. APPLY PARKING STALL STRIPING 4" WHITE SOLID LINE
2. APPLY DOUBLE ACCESSIBLE PARKING STALL STRIPING PER DETAIL ON SHEET C5.10
3. APPLY TYPICAL PARKING SYMBOL OF ACCESSIBILITY PER DETAIL PER DETAIL ON SHEET C5.10
4. INSTALL ACCESSIBILITY PARKING SIGNAGE PER DETAIL ON SHEET C5.10
5. APPLY 4" WHITE DIAGONAL STRIPING AT 2FT ON CENTER
6. INSTALL SITE TOW AWAY SIGN PER DETAIL ON SHEET C5.10
7. INSTALL CONCRETE WHEEL STOP PER DETAIL ON SHEET C5.10
