Biological Resources Report

3615 MAIN STREET, SUITE 103
RIVERSIDE, CALIFORNIA 92501

June 2, 2020 10773

Allan L. Davis
Retain Development Advisors, President
27890 Clinton Keith Road, D490
Murrieta, California 92562

Subject: Biological Resources Letter Report and MSHCP Consistency for the Vineyard III Retail Development Project, City of Murrieta, California

Dear Mr. Davis:

This biological resources habitat assessment and Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) consistency analysis letter report describes the existing biological conditions of the proposed Vineyard III Retail Development Project (project) site, and provides an assessment of potential biological impacts. The proposed project and potential impacts to special-status biological resources are analyzed in the context of the California Environmental Quality Act (CEQA) and in the context of the MSHCP. This report describes the project site, the general biological reconnaissance survey conducted, any special-status biological resources present or potentially present on site, any potential constraints to development that may be posed by biological resources on the project site, and recommended mitigation. This report also covers an MSHCP consistency determination for the following requirements (relevant MSHCP sections are provided in parentheses):

- Riparian/Riverine, Vernal Pool, and Fairy Shrimp Requirements (Section 6.1.2)
- Species Survey Requirements (Sections 6.1.3 and 6.3.2)
- Urban/Wildlife interface Guidelines (Section 6.1.4)

1 Project Location

The 6.7-acre project site is located at the northeast corner of the Interstate 215 (I-215) and Clinton Keith Road, within the City of Murrieta in Riverside County (Figure 1, Project Location; all figures can be found in Attachment A). The project site occurs within the U.S. Geological Survey (USGS) 7.5-minute Murrieta quadrangle map, with the approximate center of the property at longitude 117°10'21.02"W and latitude 33°35'57.53"N.

The proposed project would involve construction of a retail development center with associated surface parking. Four retention basins, two at the northwest corners and two at the southwest corners of the project site, are included in the project design.

2 Methods

2.1 Literature Review

Special-status biological resources potentially present on the project site were identified through a literature search using the following sources: U.S. Fish and Wildlife Service's (USFWS) Critical Habitat and Occurrence Data (USFWS 2018); California Department of Fish and Wildlife's (CDFW) California Natural Diversity Database (CDFW 2018); the California Native Plant Society's (CNPS) online Inventory of Rare, Threatened, and Endangered Plants

(CNPS 2018); and the Calflora database, which compiles observation and plant data from both private and public institutions, including the Consortium of California herbaria (Calflora 2018). Searches were completed for the following U.S. Geological Survey quadrangles: Lake Elsinore, Romoland, Winchester, Wildomar, Murrieta, Bachelor Mountain, Fallbrook, Temecula, and Pechanga.

For this report, "special-status" species are those that are (1) listed, proposed for listing, or candidates for listing under the federal Endangered Species Act as threatened or endangered ("listed species"); (2) listed or candidates for listing under the California Endangered Species Act as threatened or endangered ("listed species"); (3) a state fully protected species; (4) a CDFW Species of Special Concern ("non-listed special status species"); or (5) a species listed on the CNPS Inventory of Rare and Endangered Plants with a California Rare Plant Rank of 1B or 2B ("non-listed special status species").

Special-status vegetation communities are those communities identified as high priority for inventory in the List of Vegetation Alliances and Associations (CDFW 2019) by a state rarity ranking of S1, S2, or S3.

2.2 Field Reconnaissance

Dudek biologist Anna Cassady conducted a general biological survey of the study area (project site and natural habitat within an associated 500-foot buffer) on January 4, 2018. The survey was conducted from 8:15 a.m. to 10:20 a.m. Weather conditions were favorable, with clear skies, wind speeds from 1 to 2 miles per hour, and temperature ranging from 53°F–64°F. All native and naturalized plant species encountered within the study area were identified and recorded. The potential for special-status plant and wildlife species to occur within the study area was evaluated based on the vegetation communities and soils present. Vegetation communities and land covers on site were mapped directly in the field. In addition, an investigation of presence and distribution of jurisdictional waters of the United States regulated by the U.S. Army Corps of Engineers (ACOE), jurisdictional waters of the state regulated by the Regional Water Quality Control Board (RWQCB), and jurisdictional streambed and associated riparian habitat regulated by CDFW was conducted.

Latin and common names for plant species with a California Rare Plant Rank follow the CNPS Inventory of Rare and Endangered Plants (CNPS 2018). For plant species without a California Rare Plant Rank, Latin names follow the Jepson Interchange List of Currently Accepted Names of Native and Naturalized Plants of California (Jepson Flora Project 2018) and common names follow the United States Department of Agriculture's Natural Resources Conservation Service Plants Database (USDA 2018a). Natural vegetation communities were mapped in the field using Vegetation Alliances of Western Riverside County (Klein and Evens 2006) with modifications to accommodate the lack of conformity of the observed communities to those included in these references. Latin and common names of animals follow Crother (2012) for reptiles and amphibians, and the American Ornithologists' Union for birds (AOU 2015).

To meet requirements in the MSHCP, a habitat assessment was conducted to identify suitable habitat for burrowing owl (*Athene cunicularia*) within the project site and a 500-foot buffer. While the 500-foot buffer includes land west of I-215, this area was not included in the study area habitat assessment due to lack of direct or indirect impacts to land across the freeway. This assessment was conducted in accordance with the *Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area* (RCA 2006). In addition, a habitat assessment was conducted to identify suitable habitat for Narrow Endemic Plant Species

Survey Area (NEPSSA) species. The project site is within Survey Area 4. These species include San Diego ambrosia (*Ambrosia pumila*), many-stemmed dudleya (*Dudleya multicaulis*), spreading navarretia (*Navarretia fossalis*), Wright's trichocoronis (*Trichocoronis wrightii* var. *wrightii*), California orcutt grass (*Orcuttia californica*) and munz's onion (*Allium munzii*).

The results of the reconnaissance survey were digitized using ArcGIS software.

3 Results

3.1 Site Description

The project site is characterized as a westward sloping, vacant site. Elevations range from approximately 1,530 to 1,560 feet above mean sea level. The surrounding area includes a former sand and gravel mass grading operation to the east and I-215 to the west and north. To the south is a residential subdivision and a school, south of which lies open space associated with the Hogback Hills. Representative photographs of the project site are included in Attachment B.

3.2 Soils

Four soil types are mapped on the project site: Cajalco fine sandy loam, Las Posas loam, Las Posas rocky loam, and Cieneba sandy loam (Figure 2, Soils).

- **Cajalco Series** consists of well drained, moderately permeable soils formed in alluvium from igneous rock. These soils are typically found in foothills and interior valleys (USDA 2020b). Within the study area, this soils series makes up the northern and western side.
- **Las Posas Series** consists of well drained, moderately deep soils formed from igneous rocks. These soils are typically found within mountainous uplands and foothills (USDA 2020b). Within the study area, this soil series makes up the southern and eastern side.
- **Cieneba Series** consists of excessively drained, very shallow and shallow soils formed from granitic rock. These soils are typically found on hills and mountains (USDA 2020b). Within the study area, this soil series makes up a small portion of the southern tip.

3.3 Vegetation Communities and Land Covers

Five vegetation communities and two non-natural land cover types were classified for the project site: chamise–black sage, chamise-California buckwheat, disturbed California buckwheat, non-native grassland, disturbed land, and developed land. Figure 3, Biological Resources Map, illustrates the distribution of vegetation communities and land covers and Table 1 provides a summary of each land cover's extent within the study area.

Table 1 Vegetation Communities and Land Covers within the Project Site and Natural Habitat within Associated 500-foot buffer (Study Area)

Vegetation Community/Land Cover	Acreage
Chamise – Black Sage	0.32
Chamise – California Buckwheat Association	0.94
Disturbed California Buckwheat	0.87
California Buckwheat	3.74
Non-Native Grassland	3.45
Disturbed Land	17.13
Developed Land	16.36
Total	42.81

* 42.81 acres represents the project parcel and natural habitat within a 500-foot buffer (i.e., the associated study area.) The proposed project includes the 6.7-acre project site.

3.3.1 Chamise – Black Sage

The chamise – black sage vegetation community is co-dominated by chamise (*Adenostoma fasciculatum*) and black sage (*Salvia mellifera*) with an intermittent to continuous canopy within the shrub layer. The shrub layer may occur in two separate strata: low shrubs at 0.5-2 meters tall and taller shrubs 1-5 meters tall (Klein and Evens 2006).

Within the study area, this vegetation community is located within the southern portion of the project site. It is comprised primarily of chamise and black sage, but also contains some California buckwheat (*Eriogonum fasciculatum*), as well as a sparse understory of non-native grasses.

3.3.2 Chamise–California Buckwheat Association

The chamise–California buckwheat vegetation association is either dominated or co-dominated by chamise and California buckwheat with a shrub layer of open to continuous canopy. The shrub layer may occur in two separate strata: low shrubs at 0–2 meters tall and taller shrubs 0.5–5 meters tall. Trees may occur at trace cover and the herbaceous layer typically remains open to intermittent cover (Klein and Evens 2006).

Within the study area, this association occurs within the northern portion of the project site and the very southern end of the project site. It is comprised primarily of chamise, but is also co-dominated by a continuous presence of California buckwheat. The herbaceous layer is comprised of non-native grasses.

3.3.3 California Buckwheat

The California buckwheat vegetation association is an open to continuous shrub layer where California buckwheat typically dominates. The shrub layer often occurs in two separate strata: low shrubs at 0–2 meters tall and tall shrubs at 1–5 meters tall. A variety of native or non-native species may make up the herb layer and emergent trees only infrequently occur (Klein and Evens 2006).

Within the study area, California buckwheat scrub is located in the northeastern portion of the study area on the eastern side of Antelope Road outside of the project site.

Within the study area and project site, a disturbed form of this association occurs on steep slopes on the west side of Antelope Road. Additionally, disturbed California buckwheat occurs along the southern slope of the project site north of Clinton Keith Road. The community on the west side of the road and southern boundary of the project site is also heavily incised and disturbed, likely due to the grading of Antelope Road. Scattered California buckwheat occurs along the slopes in addition to intermittent black sage. The herbaceous layer contains some non-native grasses, but is mostly comprised of bare ground.

3.3.4 Non-Native Grassland

As defined by Klein and Evens (2006), California annual grassland is usually dominated by annual grasses and herbs of various assortments that are in upland habitats. Specifically, red brome (*Bromus madritensis* ssp. *rubens*) or ripgut brome (*B. diandrus*) are abundant with other non-native and native species.

The majority of the site is non-native grassland comprised primarily of weedy species including, but not limited to, Brome species (*Bromus* sp.), short-podded mustard (*Hirschfeldia incana*), common Mediterranean grass (*Schismus barbatus*), dove weed (*Croton setiger*), prickly wild lettuce (*Lactuca serriola*), and common cryptantha (*Cryptantha intermedia*). A single blue elderberry (*Sambucus nigra* ssp. *caerulea*) is located on the southwestern side of the project site and several Peruvian peppertrees (*Schinus molle*) are clustered at the northwestern edge of the project site; however, neither of these trees warranted their own vegetation community due to the small scale of their cover.

3.3.5 Developed Land

Although not recognized by the Natural Communities List (CDFG 2010), "developed land" refers to areas that have been constructed on or disturbed so severely that native vegetation is no longer supported. Developed land includes areas with permanent or semi-permanent structures, pavement or hardscape, landscaped areas, and areas with a large amount of debris or other materials.

The portions of the study area mapped as developed include the associated roads, freeway, and surrounding residential development.

3.3.6 Disturbed Land

The classification of disturbed land is due to the predominance of bare ground and compacted soils with a sparse covering of non-native plant species, and other disturbance-tolerant plant species. Oberbauer et al. (2008) describes disturbed habitat as areas that have been physically disturbed by previous human activity and are no longer recognizable as a native or naturalized vegetation association but that continue to retain a soil substrate.

Within the study area, disturbed habitat lies on the eastern side of the project site in the form of a dirt access road. Within the study area, disturbed habitat lies west of the project site in the area between I-215 and Antelope Road. Disturbed habitat also lies in the eastern portion of the study area where mass grading operations previously occurred.

3.4 Floral Diversity

A total of 16 species of native or naturalized plants—10 native (63%) and 6 non-native (38%)—were recorded within the study area. This low plant diversity reflects the study area's disturbed environment and its proximity to adjacent developed areas. Plant species observed within the study area are listed in Attachment C.

3.5 Wildlife

A total of four bird species were detected within the study area: house finch (*Haemorhous mexicanus*), Anna's hummingbird (*Calypte anna*), Say's phoebe (*Sayornis saya*), and California towhee (*Melozone crissalis*). No active bird nests were observed within the study area during the reconnaissance survey; however, the vegetation throughout the project site could support nesting birds. No amphibian species were observed and none are expected to occur due to the lack of aquatic habitat. One reptile species was observed during the survey: western fence lizard (*Sceloporus occidentalis*). Scat from one mammal species was observed during the survey: coyote (*Canis latrans*). The low wildlife diversity reflects the relatively disturbed nature of the study area, as well as the lack of contiguous habitat. Wildlife species observed within the study area are listed in Attachment D.

3.6 Special-Status Plant Species

No plant species listed or proposed for listing as rare, threatened, or endangered by either CDFW or the USFWS were detected within the study area. No plant species considered sensitive by the CNPS were observed. The study area is not within Critical Habitat for any special-status plant species (USFWS 2020).

Based on the results of the literature review and database searches, 59 special-status plant species have been documented within the region. All of these species were evaluated for potential to occur within the study area. Criteria used include soils, current disturbance levels, vegetation communities present, elevation ranges, and previous known locations based on the CNDDB, CNPS, and CalFlora records. One species, intermediate mariposa lily (*Calochortus weedii* var. *intermedius*) was determined to have high potential to occur and is described further below. Two species, smooth tarplant (*Centromadia pungens* ssp. *laevis*) and Parry's spineflower (*Chorizanthe parryi* var. *parryi*) were determined to have moderate potential to occur and are described further below. The remaining species were determined to either have low potential to occur or were not expected within the study area. A list and determination of potential to occur for these species can be found in Attachment E.

3.6.1 Intermediate Mariposa Lily

Intermediate mariposa lily is a CRPR 1B.2 species, indicating that it is a rare, threatened, or endangered species within California with a moderate degree/immediacy of threat. It is a covered species under the MSHCP.

This species is a perennial, bulbiferous herb that typically occurs in rocky and/or calcerous soils at elevations between 340 and 2,805 feet above mean sea level. Characteristic vegetation associations include chaparral, coastal scrub, and valley and foothill grasslands.

Within the project site, there is high potential for this species to occur. The project site is within the appropriate elevation range, has rocky loam substrate, and contains chaparral and grassland vegetation communities. This species has been documented as occurring directly west of the project site and the I-215 interchange with Clinton Keith Road (CDFW 2018). This plant species was not observed within the study area; however, the reconnaissance survey was conducted outside of its blooming period.

3.6.2 Smooth Tarplant

Smooth tarplant is a CRPR 1B.1 species, indicating that it is a rare, threatened, or endangered species within California with a high degree/immediacy of threat. It is a covered species under the MSHCP.

This species is an annual herb that typically occurs in alkaline soils at elevations between 0 and 2,100 feet above mean sea level. Characteristic vegetation associations include chenopod scrub, meadows and seeps, playas, riparian woodland, and valley and foothill grassland.

Within the project site, there is moderate potential for this species to occur. The project site contains suitable grassland habitat for this species and is within the appropriate elevation range. Additionally, smooth tarplant is known to occur in disturbed habitat. According to Calflora, numerous collections of smooth tarplant have been made around Murrieta and near the study area (Calflora 2018). This plant species was not observed within the study area; however, the reconnaissance survey was conducted outside of its blooming period.

3.6.3 Parry's Spineflower

Parry's spineflower is a CRPR 1B.1 species, indicating that it is a rare, threatened, or endangered species within California with a high degree/immediacy of threat. Parry's spineflower was conditionally covered under the MSHCP; however, as of 2018 MSHCP Annual Report, this species has had its conservation objectives met, as listed in Table 9-2 of the MSHCP. Parry's spineflower is now considered a fully covered species under the MSHCP (RCA 2018).

This species is an annual herb that typically occurs in sandy or rocky soils at elevations between 900 and 4,005 feet above mean sea level. Characteristic vegetation associations include chaparral, cismontane woodland, coastal scrub, and valley and foothill grassland.

Within the project site, there is moderate potential for this species to occur. The project site is within the appropriate elevation range and supports chaparral and grassland vegetation communities. The survey area also consists of the appropriate sandy soils. This species withstands disturbance like that seen within the study area. According to Calflora, Parry's spineflower is most likely to occur in western Riverside County and populations are documented near the study area (Calflora 2018). This plant species was not observed within the study area; however, the reconnaissance survey was conducted outside of its blooming period.

3.7 Special-Status Wildlife Species

No wildlife species listed or proposed for listing as rare, threatened, or endangered by either CDFW or the USFWS were detected within the study area. The study area is not within Critical Habitat for any special-status plant species (USFWS 2018)

Attachment F lists 43 special-status wildlife species that are known to occur in the USGS 7.5-minute Murrieta quadrangle and the eight surrounding quadrangles (CDFW 2018). For each species listed, a determination was made regarding potential use of the study area by the species based on information gathered during the field reconnaissance, known habitat preferences, and knowledge of the species' relative distributions in the area.

Four special-status wildlife species, red diamond rattlesnake (*Crotalus ruber*), coast patch-nosed snake (*Salvadora hexalepis virgultea*), loggerhead shrike (*Lanius ludovicianus*) and San Diego black-tailed jackrabbit (*Lepus californicus bennettii*) were determined to have moderate potential to occur within the study area. The remainder of the species were determined to either have low potential to occur or were not expected at the study area. None of these species were observed within the study area during the reconnaissance survey.

3.7.1 Burrowing Owl Habitat Assessment

The proposed project is located within the MSHCP Burrowing Owl Habitat Assessment Area. In accordance with the MSHCP, a habitat assessment must be conducted for this species and focused surveys completed if suitable habitat is present.

The burrowing owl is a California Species of Special Concern. With a relatively wide-ranging distribution throughout the west, burrowing owl is considered to be a habitat generalist (Lantz et al. 2004). In California, burrowing owl is a yearlong resident of open, dry grassland and desert habitats, and in grass, forb, and open shrub stages of pinyon–juniper and ponderosa pine habitats (Zeiner et al. 1990). Preferred habitat is generally typified by short, sparse vegetation with few shrubs; level to gently sloping topography; and well-drained soils (Haug et al. 1993).

The presence of burrows is the most essential component of burrowing owl habitat, as they are required for nesting, roosting, cover, and caching prey. In California, western burrowing owl most commonly lives in burrows created by California ground squirrels (*Spermophilus (Otospermophilus) beecheyi*). Burrowing owl may occur in human-altered landscapes such as agricultural areas, ruderal grassy fields, vacant lots, and pastures if the vegetation structure is suitable (i.e., open and sparse), useable burrows are available, and foraging habitat is close (Gervais et al. 2008). Debris piles, riprap, culverts, and pipes can also be used for nesting and roosting.

The nearest documented occurrence of burrowing owl is approximately 2.7 miles southeast of the study area. This occurrence was documented in 2003 (CDFW 2018).

The project site contains chaparral and annual grassland throughout; however, no California ground squirrels or burrows 4 inches or greater in diameter were observed within the study area. One rock pile with marginal interstitial space was located on the northwestern side of the project site that could be used as a perching site for burrowing owl; however, no burrowing owl sign or burrows were observed within these features. This, in combination with the developed nature of the surrounding environment, makes the potential low for this species occurring.

3.8 Nesting Birds

The project site provides potential nesting habitat for commonly occurring birds such as Anna's hummingbird (*Calypte anna*) or house finches (*Haemorhous mexicanus*). The project site did not contain large trees suitable for raptor nesting. No nests were observed within the study area during the survey; however, the reconnaissance survey was conducted outside the nesting season for most species.

3.9 Jurisdictional Waters and Significant Drainage Courses

A concrete, roadside ditch is located along the northwestern boundary of the project site. This feature lies in a topographic low-point and appears to convey freeway runoff from the south which then sheetflows into an area just north of the project site. There is no further evidence of ponding or surface flows and runoff conveyed by this ditch is assumed to percolate or evaporate. This feature would not be considered jurisdictional by the ACOE, RWQCB or CDFW. Figure 3 illustrates the location of this roadside ditch.

No other potential jurisdictional features were observed within the study area.

3.10 Wildlife Corridors and Habitat Linkages

Wildlife corridors are linear features that connect large patches of natural open space and provide avenues for the migration of animals. Habitat linkages are small patches that join larger blocks of habitat and help reduce the adverse effects of habitat fragmentation; they may be continuous habitat or discrete habitat islands that function as stepping stones for wildlife dispersal. Wildlife movement through the project site is unlikely due to the developed nature of the surrounding area. A former sand and gravel operation existed to the east, I-215 lies to the west and north, and a small subdivision and school exists to the south. Therefore, the study area has limited to no value as a potential wildlife corridor or habitat linkage.

4 Western Riverside County MSHCP Consistency Analysis

The project site is located in the MSHCP Southwest Area Plan and is not within an MSHCP Criteria Cell (Figure 4, Western Riverside County MSHCP). Therefore, no Reserve Assembly requirements would apply to the project site. The project's compliance with the relevant sections of the MSHCP is discussed below.

4.1 MSHCP Section 6.1.2 Riparian/Riverine Resources

The MSHCP defines riparian/riverine areas as "lands which contain habitat dominated by trees, shrubs, persistent emergent, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year." The MSHCP further clarifies those areas "demonstrating characteristics as described above which are artificially created are not included in these definitions" (County of Riverside 2003).

The study area contains an un-vegetated roadside ditch on the northwestern side of the project site that appears to be used to manage road runoff associated with I-215. The majority of the ditch is concrete lined and runoff conveyed by the ditch sheetflows and dissipates into undeveloped areas within the study area. This feature is artificially created, does not rely on a fresh water source, and does not convey flows to downstream riverine resources; therefore, it is not a riverine resource as defined by the MSHCP.

A storm drain inlet is located at the southern end of the project site at the southern terminus of Antelope Road. This storm drain appears to drain runoff from the associated roadways into underground pipes that travel east into residential development on the other east side of the former mass grading area (Smith 2019). The project site does not contain riparian or riverine features that lead to the storm drain.

The project site does not contain riparian vegetation and therefore does not contain habitat for riparian bird species.

4.1.1 Vernal Pool and Fairy Shrimp Habitat

No indicators of ponding were observed during the site visit. No topographic low points or indicators of ponding were observed within the study area and are not present on historic aerials or topographic maps. The project site does not contain clay soils, bedrock, or other poorly drained soils typically associated with vernal pools. Furthermore, upon surveying, there are no areas that would likely hold water for an extended amount of time, and therefore the site does not support any vernal pools or other potential fairy shrimp habitat.

4.2 MSHCP Section 6.1.3 Narrow Endemic Plant Species Survey Area

The proposed project is located within the Narrow Endemic Plant Species Survey Area 4. In accordance with the MSHCP, a habitat assessment must be conducted for these species and focused surveys completed if suitable habitat is present. The target narrow endemic plants are San Diego ambrosia, many-stemmed dudleya, spreading navarretia, Wright's trichocoronis, California orcutt grass and munz's onion. Details regarding the habitat requirements for each of these is provided in Attachment E.

San Diego ambrosia, spreading navarretia, California orcutt grass, and Wright's trichocoronis are not expected to occur within the study area. These species are commonly found in association with vernal pools and an evaluation of the study area did not yield conditions suitable for vernal pools (see further discussion on vernal pools below in Section 4.1.1).

Munz's onion and many-stemmed dudleya are also not expected to occur within the study area as the study area lacks clay soils with which these species are associated. Because the habitat assessment for narrow endemic plant species did not identify habitat characteristics associated with these species, focused rare plant surveys are not required

4.3 MSHCP Section 6.3.2 Criteria Area Species Survey Area

The MSHCP establishes habitat assessment requirements for certain species of plants, birds, mammals, and amphibians. The project site is in a required habitat assessment area for burrowing owl. As discussed in Section

3.7, Special-Status Wildlife Species, of this report, the habitat assessment did not identify potential burrowing owl habitat or suitable burrows features; therefore, focused surveys are not required.

4.4 MSHCP Section 6.1.4 Urban/Wildlife Interface Guidelines

According to the MSHCP, the Urban/Wildlands Interface Guidelines are intended to address indirect effects associated with locating development in proximity to the MSHCP Conservation Area (MSHCP, p. 6-42). The project site is not within or adjacent to any conserved areas (Figure 4) and the Urban/Wildlife Interface Guidelines are not applicable.

5 Impacts Analysis and Recommendations

This section addresses potential impacts to special-status biological resources that could result from implementation of the proposed project. This section follows the CEQA checklist for biological resources. For the purposes of this biological analysis, it is assumed that the entire project site would be permanently impacted (Figure 5, Impacts Map).

5.1 Sensitive Natural Communities

No sensitive natural communities occur on the project site; therefore, no potential impacts to sensitive natural communities would occur with project implementation. The following Table 2 lists impacts to the vegetation communities and land covers found on the Project site.

Table 2 Impacts to Vegetation Communities and Land Covers within the Project Site

Vegetation Community/Land Cover	Acreage
Non-Natural Land Covers	
Chamise – Black Sage	0.32
Chamise – California Buckwheat Association	0.94
Disturbed California Buckwheat	0.60
Non-Native Grassland	2.17
Disturbed Land	0.67
Developed Land	1.96
Total	**6.65**

5.2 Special-Status Plants

One special-status plant, intermediate mariposa lily, has high potential to occur on the project site and two special-status plants, smooth tarplant and Parry's spineflower, have moderate potential to occur within the project site. These species were not observed within the study area; however, the reconnaissance survey was conducted outside of its blooming period. Intermediate mariposa lily and smooth tarplant are both fully covered under the MSHCP. Parry's spineflower was conditionally covered under the MSHCP; however, as of 2018 MSHCP

Annual Report, this species has had its conservation objectives met, as listed in Table 9-2 of the MSHCP. Parry's spineflower is now considered a fully covered species under the MSHCP (RCA 2018). Given that all three species are fully covered under the MSHCP; therefore, with compliance with the MSHCP including payment of the MSHCP development mitigation fee, there would be no significant impacts to these species.

5.3 Special-Status Wildlife

Three special-status wildlife species, red diamondback rattlesnake, loggerhead shrike, and San Diego black-tailed jackrabbit, have moderate potential to occur on the project site and are covered under the MSHCP. Therefore, with compliance with the MSHCP including payment of the MSHCP development mitigation fee, there would be no significant impacts to these species.

One species, coast patch-nosed snake, has moderate potential to occur on the project site and is not covered under the MSHCP. This species was not observed within the study area. Although this species is not covered by the MSHCP, the MSHCP conserves habitat also suitable for this species. The removal of 1.86 acres of potentially suitable habitat for this species would be less than significant in the context of higher quality habitat conserved within the region. Individuals of this species, if present, would be able to move away during construction activities within the site. If some individuals were directly impacted during construction, this would be less than significant in the context of the regional population of this species.

5.3.1 Burrowing Owl

The burrowing owl habitat assessment did not yield suitable habitat, burrowing owl, or burrowing owl sign within the study area; therefore, focused surveys were not conducted. However, project site conditions could change between the time of the reconnaissance survey and the time of project implementation. If burrowing owl should occupy the site prior to initiation of construction activities, direct impacts to burrowing owl would be significant. Additionally, if burrowing owl occupy surrounding habitat within 500 feet of construction activities, indirect impacts could be significant. To avoid potential for significant impacts to burrowing owl during construction activities, a pre-construction burrowing owl survey should be conducted and avoidance measures implemented if burrowing owl are present (MM-BIO-1).

5.3.2 Nesting Birds

Project construction could result in direct and indirect impacts to nesting birds, including the loss of nests, eggs, and fledglings if vegetation clearing and ground-disturbing activities occur during the avian nesting season (typically March 1 through August 31). If the nesting bird season cannot be avoided, a nesting bird survey should be conducted and avoidance measures implemented if nests are documented within the impact footprint or within 300 feet of the impact footprint (MM-BIO-2).

5.4 Jurisdictional Waters

The proposed project site does not contain jurisdictional waters; therefore, the proposed project would not result in impacts to this resource.

5.5 Wildlife Corridors and Nursery Sites

The project site does not function as a wildlife corridor and does not support any wildlife nursery sites. As a result, implementation of the proposed project would not result in impacts to these resources.

5.6 Habitat Conservation Plans

The project site is within the MSHCP Plan Area. As described in Section 4, the project site does not support riparian/riverine resources, vernal pools or fairy shrimp habitat, narrow endemic plant habitat, or criteria area species habitat; therefore, there are no requirements under the MSHCP for these resources. The project is also not adjacent to conservation areas. The project does not support burrowing owl habitat; however, burrowing owl have the potential to occupy the site in the future. With implementation of the burrowing owl pre-construction surveys and implementation of avoidance and minimization measures if applicable, the project would be consistent with the MSHCP burrowing owl requirements. With implementation of mitigation measure MM-BIO-1, Burrowing Owl Pre-construction Surveys and payment of the MSHCP Development Mitigation Fee, the proposed project would be consistent with the MSHCP.

The project site is within the Stephens' Kangaroo Rat Habitat Conservation Plan boundary. With payment of the Stephens' Kangaroo Rat Habitat Conservation Plan Development Mitigation Fee, the proposed project would be consistent with the Stephens' Kangaroo Rat Habitat Conservation Plan.

5.7 Other Local Ordinances

The City of Murrieta Development Code, Article III, Section 16.42, Tree Preservation, identifies the following as protected trees:

- Mature Native Oak Tree;
- Mature Native Tree;
- Mature Tree;
- Historically Significant Trees;
- Any tree required to be planted or preserved as environmental mitigation, or condition of approval for a discretionary permit.

There are no resources on the project site that meet the above criteria; therefore, a tree removal permit in accordance with the City of Murrieta Development Code is not required. There are no other local ordinances applicable to the project.

6 Avoidance, Minimization and Mitigation Measures

The following measures are recommended to avoid, minimize and/or mitigate for impacts to special-status resources.

MM-BIO-1: Prior to initiation of construction activities, a burrowing owl pre-construction survey shall be conducted in accordance with the *Burrowing Owl Survey Instructions for the Western Riverside*

Multiple Species Habitat Conservation Plan Area (RCA 2006). In accordance with these instructions, this survey would occur within 30 days prior to ground-disturbance activities. A minimum of one survey site visit within the described time frame prior to disturbance is required to confirm presence or absence of owls on the site. Pre-construction surveys shall be conducted by a qualified biologist.

If surveys confirm occupied burrowing owl habitat is located within the impact footprint or within 500 feet of the impact footprint, avoidance measures shall be implemented consistent with the requirements of the MSHCP.

MM-BIO-2: To maintain compliance with the Migratory Bird Treaty Act and Fish and Game Code, if ground disturbance and/or vegetation clearance activities are scheduled to occur during the avian nesting season, a pre-construction nesting bird survey shall be conducted by a qualified biologist within the project footprint and a 300-foot buffer around the project footprint. Surveys shall be conducted within 3 days prior to initiation of activity and will be conducted between dawn and noon.

If an active nest is detected during the nesting bird survey, avoidance buffers shall be implemented as determined by a qualified biologist. The buffer will be of a distance to ensure avoidance of adverse effects to the nesting bird by accounting for topography, ambient conditions, species, nest location, and activity type. All nests will be monitored as determined by the qualified biologist until nestlings have fledged and dispersed or it is confirmed that the nest has been unsuccessful or abandoned.

6.1 Other Recommendations

In addition, Dudek recommends implementing the following measure to avoid and minimize potential environmental impacts resulting from the commercial construction:

- Avoid the use of any invasive, non-native plant species rated as “high” or “moderate” by the California Invasive Plant Council’s Invasive Plant Inventory (Cal-IPC 2020) for future landscaping of the site.

If you have any questions regarding the contents of this report, please either email acassady@dudek.com or call at 951.300.1088.

Sincerely,

Anna Cassady
Biologist

Special-Status Plant Species Detected or Potentially Occurring in the Study Area

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Abronia villosa var. *aurita*	chaparral sand-verbena	None/None/1B.1	Chaparral, Coastal scrub, Desert dunes; sandy/annual herb/(Jan)Mar–Sep/245–5250	Low potential to occur. The project site contains suitable chaparral vegetation and is within the appropriate elevation range; however, the site consists of disturbed topsoil and numerous non-native weed species.
Allium munzii	Munz's onion	FE/ST/1B.1/ MSHCP NEPS	Chaparral, Cismontane woodland, Coastal scrub, Pinyon and juniper woodland, Valley and foothill grassland; mesic, clay/perennial bulbiferous herb/Mar–May/970–3510	Not expected to occur. The project site contains suitable chaparral vegetation and is within the appropriate elevation range; however, there are no clay soils.
Almutaster pauciflorus	alkali marsh aster	None/None/2B.2	Meadows and seeps; alkaline/perennial herb/June–Oct/785–2625	Not expected to occur. Although the project site is within the appropriate elevation range, there is no meadow and seep habitat that could support this species.
Ambrosia pumila	San Diego ambrosia	FE/None/1B.1/ MSHCP NEPS	Chaparral, Coastal scrub, Valley and foothill grassland, Vernal pools; sandy loam or clay, often in disturbed areas, sometimes alkaline/perennial rhizomatous herb/Apr–Oct/65–1360	Not expected to occur. Although the project site contains chaparral and grassland vegetation communities, it does not support vernal pool habitat. Additionally, the project site is outside of the known elevation range for this species. According to CalFlora, populations of San Diego ambrosia occur east of the 79 interstate and north of Lake Elsinore.
Arctostaphylos rainbowensis	Rainbow manzanita	None/None/1B.1	Chaparral/perennial evergreen shrub/Dec–Mar/670–2200	Not expected to occur. The reconnaissance survey was conducted during this species' blooming period and this perennial shrub would have likely been detected during the survey.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Astragalus pachypus var. *jaegeri*	Jaeger's bush milk-vetch	None/None/1B.1	Chaparral, Cismontane woodland, Coastal scrub, Valley and foothill grassland; sandy or rocky/perennial shrub/Dec–June/1195–3200	Not expected to occur. The reconnaissance survey was conducted during this species' blooming period and this perennial shrub would have likely been detected during the survey.
Atriplex coronata var. *notatior*	San Jacinto Valley crownscale	FE/None/1B.1	Playas, Valley and foothill grassland (mesic), Vernal pools; alkaline/annual herb/Apr–Aug/455–1640	Not expected to occur. The project site does not contain alkaline soils or support vernal pool habitat.
Atriplex pacifica	South Coast saltscale	None/None/1B.2	Coastal bluff scrub, Coastal dunes, Coastal scrub, Playas/annual herb/Mar–Oct/0–460	Not expected to occur. The project site is outside of the appropriate elevation range for this species and there is no coastal dune, coastal scrub, or playa habitat.
Atriplex parishii	Parish's brittlescale	None/None/1B.1	Chenopod scrub, Playas, Vernal pools; alkaline/annual herb/June–Oct/80–6235	Not expected to occur. The project site does not contain alkaline soils or support chenopod scrub, playa, or vernal pool habitat.
Atriplex serenana var. *davidsonii*	Davidson's saltscale	None/None/1B.2	Coastal bluff scrub, Coastal scrub; alkaline/annual herb/Apr–Oct/30–655	Not expected to occur. The project site is outside of the appropriate elevation range for this species, there are no alkaline soils, and there is no coastal dune, coastal scrub, or playa habitat.
Ayenia compacta	California ayenia	None/None/2B.3	Mojavean desert scrub, Sonoran desert scrub; rocky/perennial herb/Mar–Apr/490–3595	Not expected to occur. The project site does not contain desert scrub. The survey area contains disturbed topsoils and numerous non-native species. In addition, the project site is outside of the known geographic range of this species. According to CalFlora, populations of Californian ayenia generally occur east of Mt. San Jacinto.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Berberis nevinii	Nevin's barberry	FE/SE/1B.1	Chaparral, Cismontane woodland, Coastal scrub, Riparian scrub; sandy or gravelly/perennial evergreen shrub/(Feb)Mar–June/225–2705	Not expected to occur. Nevin's barberry is a perennial evergreen shrub that would have been detected during the reconnaissance survey. According to Calflora, Nevin's barberry generally occurs east of Temecula and north of the city of Riverside.
Brodiaea filifolia	thread-leaved brodiaea	FT/SE/1B.1	Chaparral (openings), Cismontane woodland, Coastal scrub, Playas, Valley and foothill grassland, Vernal pools; often clay/perennial bulbiferous herb/Mar–June/80–3675	Not expected to occur. The project site is within the appropriate elevation range and contains chaparral and grassland vegetation communities; however, there are no clay soils and the site is highly disturbed (disturbed topsoils and numerous non-native species).
Brodiaea orcuttii	Orcutt's brodiaea	None/None/1B.1	Closed-cone coniferous forest, Chaparral, Cismontane woodland, Meadows and seeps, Valley and foothill grassland, Vernal pools; mesic, clay/perennial bulbiferous herb/May–July/95–5550	Not expected to occur. The project site is within the appropriate elevation range and supports chaparral and grassland vegetation communities; however, there are no clay soils or vernal pool habitat.
Brodiaea santarosae	Santa Rosa Basalt brodiaea	None/None/1B.2	Valley and foothill grassland; basaltic/perennial bulbiferous herb/May–June/1850–3430	Not expected to occur. The project site is within the appropriate elevation range and supports a grassland vegetation community; however, Santa Rosa Basalt Brodiaea occurs in the Santa Ana Mountains in undisturbed areas. .
California macrophylla	round-leaved filaree	None/None/1B.2	Cismontane woodland, Valley and foothill grassland; clay/annual herb/Mar–May/45–3935	Not expected to occur. The project site is within the appropriate elevation range and supports a grassland vegetation community; however, there are no clay soils.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Calochortus weedii var. *intermedius*	intermediate mariposa lily	None/None/1B.2	Chaparral, Coastal scrub, Valley and foothill grassland; rocky, calcareous/perennial bulbiferous herb/May–July/340–2805	High potential to occur. The project site is within the appropriate elevation range, has rocky loam substrate, and contains chaparral and grassland vegetation communities. The species has been documented as occurring directly west of the project site at the Highway 215 interchange with Clinton Keith Road (CDFW 2018). This species was not observed within the study area; however, the reconnaissance survey was not conducted during the appropriate blooming period.
Ceanothus cyaneus	Lakeside ceanothus	None/None/1B.2	Closed-cone coniferous forest, Chaparral/perennial evergreen shrub/Apr–June/770–2475	Not expected to occur. The project site is within the appropriate elevation range and supports a chaparral vegetation community; however, this perennial evergreen shrub would have been detected during the reconnaissance survey. According to Calflora, the closest documented location of Lakeside ceanothus is on Mt. Palomar.
Ceanothus ophiochilus	Vail Lake ceanothus	FT/SE/1B.1	Chaparral (gabbroic or pyroxenite-rich outcrops)/perennial evergreen shrub/Feb–Mar/1900–3495	Not expected to occur. The project site is not within the appropriate elevation range for this species.
Centromadia pungens ssp. *laevis*	smooth tarplant	None/None/1B.1	Chenopod scrub, Meadows and seeps, Playas, Riparian woodland, Valley and foothill grassland; alkaline/annual herb/Apr–Sep/0–2100	Moderate potential to occur. Smooth tarplant thrives on disturbance like most tarplants. The project site contains suitable grassland habitat for this species. According to Calflora, numerous collections of smooth tarplant have been collected around Murrieta and near the survey area. This species was not observed within the study area; however, the reconnaissance survey was not conducted during the appropriate blooming period.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Chaenactis glabriuscula var. *orcuttiana*	Orcutt's pincushion	None/None/1B.1	Coastal bluff scrub (sandy), Coastal dunes/annual herb/Jan–Aug/0–330	Not expected to occur. The project site is not within the appropriate elevation range and does not contain suitable coastal bluff scrub or dunes.
Chorizanthe parryi var. *parryi*	Parry's spineflower	None/None/1B.1	Chaparral, Cismontane woodland, Coastal scrub, Valley and foothill grassland; sandy or rocky, openings/annual herb/Apr–June/900–4005	Moderate potential to occur. The project site is within the appropriate elevation range and supports chaparral and grassland vegetation communities; The survey area consists of the appropriate sandy soils. This species withstands disturbance like that seen within the survey area. According to Calflora, Parry's spineflower is most likely to occur in western Riverside county and populations are documented near the survey area. This species was not observed within the study area; however, the reconnaissance survey was not conducted during the appropriate blooming period.
Chorizanthe polygonoides var. *longispina*	long-spined spineflower	None/None/1B.2	Chaparral, Coastal scrub, Meadows and seeps, Valley and foothill grassland, Vernal pools; often clay/annual herb/Apr–July/95–5020	Not expected to occur. The project site is within the appropriate elevation range and supports chaparral and grassland vegetation communities; however, there are no clay soils.
Clarkia delicata	delicate clarkia	None/None/1B.2	Chaparral, Cismontane woodland; often gabbroic/annual herb/Apr–June/770–3280	Low potential to occur. The project site is within the appropriate elevation range and supports a chaparral vegetation community; however, there are no gabbroid type soils or cismontane woodlands.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Clinopodium chandleri	San Miguel savory	None/None/1B.2	Chaparral, Cismontane woodland, Coastal scrub, Riparian woodland, Valley and foothill grassland; Rocky, gabbroic or metavolcanic/perennial shrub/Mar–July/390–3525	Not expected to occur. The project site does not contain suitable rocky soils and this perennial evergreen shrub would have been detected during the reconnaissance survey.
Cryptantha wigginsii	Wiggins' cryptantha	None/None/1B.2	Coastal scrub; often clay/annual herb/Feb–June/65–900	Not expected to occur. The project site is not within the appropriate elevation range, does not contain clay soils, and does not support suitable coastal bluff scrub.
Dodecahema leptoceras	slender-horned spineflower	FE/SE/1B.1	Chaparral, Cismontane woodland, Coastal scrub (alluvial fan); sandy/annual herb/Apr–June/655–2495	Not expected to occur. The project site is within the appropriate elevation range and supports a chaparral vegetation community; however, there are no alluvial fan formations.
Dudleya multicaulis	many-stemmed dudleya	None/None/1B.2/MSHCP NEPS	Chaparral, Coastal scrub, Valley and foothill grassland; often clay/perennial herb/Apr–July/45–2590	Not expected to occur. The project site is within the appropriate elevation range and supports a chaparral vegetation community. However, there are no clay soils and this perennial species would have been detected during the reconnaissance survey if present.
Dudleya viscida	sticky dudleya	None/None/1B.2	Coastal bluff scrub, Chaparral, Cismontane woodland, Coastal scrub; rocky/perennial herb/May–June/30–1805	Not expected to occur. The project site is within the appropriate elevation range and supports a chaparral vegetation community. However, sticky dudleya is more likely to be found on coastal rocky cliff faces like those found on Camp Pendleton. This perennial species would have been detected during the reconnaissance survey if present but no rocky cliff habitat was present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Eryngium aristulatum var. *parishii*	San Diego button-celery	FE/SE/1B.1	Coastal scrub, Valley and foothill grassland, Vernal pools; mesic/annual / perennial herb/Apr–June/65–2035	Not expected to occur. The project site is within the appropriate elevation range and supports a grassland vegetation community. However, the project site does not support vernal pool habitat and this perennial species would have been detected during the reconnaissance survey if present.
Geothallus tuberosus	Campbell's liverwort	None/None/1B.1	Coastal scrub (mesic), Vernal pools; soil/ephemeral liverwort//30–1970	Not expected to occur. The project site does not support mesic coastal scrub or vernal pool vegetation communities.
Hesperocyparis forbesii	Tecate cypress	None/None/1B.1	Closed-cone coniferous forest, Chaparral; clay, gabbroic or metavolcanic/perennial evergreen tree//260–4920	Not expected to occur. While the project site contains chaparral vegetation communities and is within the appropriate elevation range, there are no clay soils and this evergreen tree would have been detected during the reconnaissance survey.
Horkelia cuneata var. *puberula*	mesa horkelia	None/None/1B.1	Chaparral (maritime), Cismontane woodland, Coastal scrub; sandy or gravelly/perennial herb/Feb–July(Sep)/225–2655	Not expected to occur. Although the project site is within the appropriate elevation range, this perennial species would have been detected during the reconnaissance survey if present. According to Calflora, mesa horkelia has a generally coastal distribution.
Horkelia truncata	Ramona horkelia	None/None/1B.3	Chaparral, Cismontane woodland; clay, gabbroic/perennial herb/May–June/1310–4265	Not expected to occur. Although the project site is within the appropriate elevation range, there are no gabrroic soils and marginally suitable habitat (chaparral). This perennial species would have been detected during the reconnaissance survey if present.
Juncus luciensis	Santa Lucia dwarf rush	None/None/1B.2	Chaparral, Great Basin scrub, Lower montane coniferous forest, Meadows and seeps, Vernal pools/annual herb/Apr–July/980–6695	Not expected to occur. Although the project site is within the appropriate elevation range, there is no suitable semi-aquatic habitat (meadows, seeps, vernal pools).

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Lasthenia glabrata ssp. *coulteri*	Coulter's goldfields	None/None/1B.1	Marshes and swamps (coastal salt), Playas, Vernal pools/annual herb/Feb–June/0–4005	Not expected to occur. While the project site is within the appropriate elevation range, there is no playa or vernal pool habitats to support this species.
Lepechinia cardiophylla	heart-leaved pitcher sage	None/None/1B.2	Closed-cone coniferous forest, Chaparral, Cismontane woodland/perennial shrub/Apr–July/1705–4495	Not expected to occur. While the project site contains chaparral vegetation, it is outside of the appropriate elevation range for this species and heart-leaved pitcher sage would have been detected during reconnaissance surveys.
Lilium parryi	lemon lily	None/None/1B.2	Lower montane coniferous forest, Meadows and seeps, Riparian forest, Upper montane coniferous forest; mesic/perennial bulbiferous herb/July–Aug/4000–9005	Not expected to occur. The project site is outside of the appropriate elevation range and does not contain riparian or coniferous forest habitat.
Limnanthes alba ssp. *parishii*	Parish's meadowfoam	None/SE/1B.2	Lower montane coniferous forest, Meadows and seeps, Vernal pools; vernally mesic/annual herb/Apr–June/1965–6560	Not expected to occur. The project site is outside of the appropriate elevation range and does not contain riparian or coniferous forest habitat.
Mielichhoferia shevockii	Shevock's copper moss	None/None/1B.2	Cismontane woodland (metamorphic, rock, mesic)/moss//2460–4595	Not expected to occur. The project site is outside of the appropriate elevation range and does not support cismontane forest.
Monardella hypoleuca ssp. *intermedia*	intermediate monardella	None/None/1B.3	Chaparral, Cismontane woodland, Lower montane coniferous forest (sometimes); Usually understory/perennial rhizomatous herb/Apr–Sep/1310–4100	Not expected to occur. The project site supports marginally suitable habitat (chaparral), but lacks woodland overstory to support this species. This perennial species would likely have been detected during the reconnaissance survey if present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Monardella hypoleuca ssp. *lanata*	felt-leaved monardella	None/None/1B.2	Chaparral, Cismontane woodland/perennial rhizomatous herb/June–Aug/980–5165	Not expected to occur. The project site supports marginally suitable habitat (chaparral), but lacks woodland overstory to support this species. This perennial species would likely have been detected during the reconnaissance survey if present.
Monardella macrantha ssp. *hallii*	Hall's monardella	None/None/1B.3	Broadleafed upland forest, Chaparral, Cismontane woodland, Lower montane coniferous forest, Valley and foothill grassland/perennial rhizomatous herb/June–Oct/2395–7200	Not expected to occur. The project site supports marginally suitable habitat (chaparral), but lacks woodland overstory to support this species. This perennial species would likely have been detected during the reconnaissance survey if present.
Navarretia fossalis	spreading navarretia	FT/None/1B.1/ MSHCP NEPS	Chenopod scrub, Marshes and swamps (assorted shallow freshwater), Playas, Vernal pools/annual herb/Apr–June/95–2150	Not expected to occur. Although the project site is within the appropriate elevation range, it does not support chenopod scrub or vernal pool habitat.
Navarretia prostrata	prostrate vernal pool navarretia	None/None/1B.1	Coastal scrub, Meadows and seeps, Valley and foothill grassland (alkaline), Vernal pools; Mesic/annual herb/Apr–July/5–3970	Not expected to occur. Although the project site is within the appropriate elevation range, it does not contain alkaline soils nor support meadows, mesic seeps, or vernal pool habitat.
Nolina cismontana	chaparral nolina	None/None/1B.2	Chaparral, Coastal scrub; sandstone or gabbro/perennial evergreen shrub/(Mar)May–July/455–4185	Not expected to occur. The project site does not contain sandstone or gabbro soils and this conspicuous, evergreen shrub would have likely been detected during the reconnaissance survey. According to Calflora, chaparral nolina populations occur south of Temecula.
Orcuttia californica	California Orcutt grass	FE/SE/1B.1/ MSHCP NEPS	Vernal pools/annual herb/Apr–Aug/45–2165	Not expected to occur. While the project site is within the appropriate elevation range, it does not support vernal pool habitat.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Packera ganderi	Gander's ragwort	None/SR/1B.2	Chaparral (burns, gabbroic outcrops)/perennial herb/Apr–June/1310–3935	Not expected to occur. While the project site is within the appropriate elevation range and contains chaparral, it is located outside of the known geographic range of this species. According to Calflora, Gander's ragwort occurs almost entirely within San Diego county.
Pseudognaphalium leucocephalum	white rabbit-tobacco	None/None/2B.2	Chaparral, Cismontane woodland, Coastal scrub, Riparian woodland; sandy, gravelly/perennial herb/(July)Aug–Nov(Dec)/0–6890	Low potential to occur. The project site is within the appropriate elevation range and contains chaparral vegetation. However, the survey area is highly disturbed. According to Calflora, white rabbit tobacco occurs south of Temecula and west of Murrieta.
Saltugilia latimeri	Latimer's woodland-gilia	None/None/1B.2	Chaparral, Mojavean desert scrub, Pinyon and juniper woodland; rocky or sandy, often granitic, sometimes washes/annual herb/Mar–June/1310–6235	Not expected to occur. The project site is not located in Mojavean desert scrub or a wash environment. According to Calflora, Latimer's woodland gilia occurs on Mt. San Jacinto and east of Mt. San Jacinto.
Scutellaria bolanderi ssp. *austromontana*	southern mountains skullcap	None/None/1B.2	Chaparral, Cismontane woodland, Lower montane coniferous forest; mesic/perennial rhizomatous herb/June–Aug/1390–6560	Low potential to occur. The project site does not support a mesic, woodlands and only marginally suitable chaparral habitat.
Senecio aphanactis	chaparral ragwort	None/None/2B.2	Chaparral, Cismontane woodland, Coastal scrub; sometimes alkaline/annual herb/Jan–Apr(May)/45–2625	Low potential to occur. The project site is within the appropriate elevation range and supports a chaparral vegetation community, but it does not contain alkaline soils.
Sibaropsis hammittii	Hammitt's clay-cress	None/None/1B.2	Chaparral (openings), Valley and foothill grassland; clay/annual herb/Mar–Apr/2360–3495	Low potential to occur. The project site is within the appropriate elevation range and supports chaparral and grassland vegetation communities, but does not contain clay soils.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Sidalcea neomexicana	salt spring checkerbloom	None/None/2B.2	Chaparral, Coastal scrub, Lower montane coniferous forest, Mojavean desert scrub, Playas; alkaline, mesic/perennial herb/Mar–June/45–5020	Low potential to occur. The project site is within the appropriate elevation range and supports a chaparral vegetation community, but it does not contain alkaline soils.
Sphaerocarpos drewei	bottle liverwort	None/None/1B.1	Chaparral, Coastal scrub; openings, soil/ephemeral liverwort//295–1970	Low potential to occur. The project site is within the appropriate elevation range, but supports marginally suitable habitat (chaparral).
Symphyotrichum defoliatum	San Bernardino aster	None/None/1B.2	Cismontane woodland, Coastal scrub, Lower montane coniferous forest, Meadows and seeps, Marshes and swamps, Valley and foothill grassland (vernally mesic); near ditches, streams, springs/perennial rhizomatous herb/July–Nov/5–6695	Not expected to occur. The project site is within the appropriate elevation range, but does not contain vernally mesic grassland or other mesic environments.
Trichocoronis wrightii var. *wrightii*	Wright's trichocoronis	None/None/2B.1/ MSHCP NEPS	Meadows and seeps, Marshes and swamps, Riparian forest, Vernal pools; alkaline/annual herb/May–Sep/15–1425	Not expected to occur. The project site is within the appropriate elevation range, but does not support vernal pools, riparian, or other mesic environments. Additionally, there are no alkaline soils within the project site.
Tetracoccus dioicus	Parry's tetracoccus	None/None/1B.2	Chaparral, Coastal scrub/perennial deciduous shrub/Apr–May/540–3280	Not expected to occur. Although the project site is within the appropriate elevation range and supports a chaparral vegetation community, this conspicuous perennial shrub would have likely been detected during the reconnaissance survey. According to Calflora, Parry's tetracocus generally occurs within San Diego county.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Tortula californica	California screw-moss	None/None/1B.2	Chenopod scrub, Valley and foothill grassland; sandy, soil/moss//30–4790	Low potential to occur. While the project site contains grassland and is within the appropriate elevation range, the survey area is highly disturbed.

Attachment F

Special-Status Wildlife Species Detected or Potentially Occurring in the Study Area

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Amphibians				
Anaxyrus californicus	arroyo toad	FE/SSC	Semi-arid areas near washes, sandy riverbanks, riparian areas, palm oasis, Joshua tree, mixed chaparral and sagebrush; stream channels for breeding (typically third order); adjacent stream terraces and uplands for foraging and wintering	Not expected to occur. The project site does not support suitable aquatic or upland habitat for this species.
Rana draytonii	California red-legged frog	FT/SSC	Lowland streams, wetlands, riparian woodlands, livestock ponds; dense, shrubby or emergent vegetation associated with deep, still or slow-moving water; uses adjacent uplands	Not expected to occur. The project site does not support suitable aquatic or upland habitat for this species.
Spea hammondii	western spadefoot	None/SSC	Primarily grassland and vernal pools, but also in ephemeral wetlands that persist at least 3 weeks in chaparral, coastal scrub, valley–foothill woodlands, pastures, and other agriculture	Not expected to occur. The project site does not support suitable aquatic or upland habitat for this species.
Taricha torosa (Monterey Co. south only)	California newt	None/SSC	Wet forests, oak forests, chaparral, and rolling grassland	Not expected to occur. The project site does not support suitable aquatic or upland habitat for this species.
Reptiles				
Actinemys marmorata	western pond turtle	None/SSC	Slow-moving permanent or intermittent streams, ponds, small lakes, and reservoirs with emergent basking sites; adjacent uplands used for nesting and during winter	Not expected to occur. The project site does not support suitable aquatic or upland habitat for this species.
Arizona elegans occidentalis	California glossy snake	None/SSC	Commonly occurs in desert regions throughout southern California. Prefers open sandy areas with scattered brush. Also found in rocky areas.	Not expected to occur. The project site does not contain open, sandy habitat that could support this species.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Aspidoscelis tigris stejnegeri	San Diegan tiger whiptail	None/SSC	Hot and dry areas with sparse foliage, including chaparral, woodland, and riparian areas.	Low potential to occur. The project site supports marginally suitable habitat (chaparral) that could support this species.
Coleonyx variegatus abbotti	San Diego banded gecko	None/SSC	Rocky areas within coastal scrub and chaparral	Low potential to occur. The project site supports marginally suitable habitat (chaparral) that could support this species.
Crotalus ruber	red diamondback rattlesnake	None/SSC	Coastal scrub, chaparral, oak and pine woodlands, rocky grasslands, cultivated areas, and desert flats	Moderate potential to occur. The project site supports suitable chaparral and grassland habitat that could support this species. This species was not observed within the study area.
Phrynosoma blainvillii	Blainville's horned lizard	None/SSC	Open areas of sandy soil in valleys, foothills, and semi-arid mountains including coastal scrub, chaparral, valley–foothill hardwood, conifer, riparian, pine–cypress, juniper, and annual grassland habitats	Low potential to occur. The project site supports marginally suitable habitat (chaparral and grasslands that lack sandy soils) that could support this species.
Salvadora hexalepis virgultea	coast patch-nosed snake	None/SSC	Brushy or shrubby vegetation; requires small mammal burrows for refuge and overwintering sites	Moderate potential to occur. The project site supports suitable chaparral habitat with small mammal burrows that could support this species. This species was not observed within the study area.
Thamnophis hammondii	two-striped gartersnake	None/SSC	Streams, creeks, pools, streams with rocky beds, ponds, lakes, vernal pools	Not expected to occur. The project site does not support suitable aquatic or upland habitat for this species.
Birds				
Agelaius tricolor (nesting colony)	tricolored blackbird	None/SSC, WL	Nests near freshwater, emergent wetland with cattails or tules, but also in Himalayan blackberry; forages in grasslands, woodland, and agriculture	Not expected to occur. The project site does not support freshwater or emergent wetland habitat that would support nesting for this species.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Aquila chrysaetos (nesting & wintering)	golden eagle	None/FP, WL	Nests and winters in hilly, open/semi-open areas, including shrublands, grasslands, pastures, riparian areas, mountainous canyon land, open desert rimrock terrain; nests in large trees and on cliffs in open areas and forages in open habitats	Not expected to occur. The project site is surrounded by development and does not contain open areas suitable for nesting or wintering. In addition, there are no cliff-sides or large trees to provide nesting habitat.
Athene cunicularia (burrow sites & some wintering sites)	burrowing owl	None/SSC	Nests and forages in grassland, open scrub, and agriculture, particularly with ground squirrel burrows	Low potential to occur. The project site supports grassland and chapparal vegetation communities suitable for this species. However, no California ground squirrels or their burrows were observed on the project site. One rock pile with marginal interstitial space was located within the project site.
Buteo swainsoni (nesting)	Swainson's hawk	None/ST	Nests in open woodland and savanna, riparian, and in isolated large trees; forages in nearby grasslands and agriculturals areas such as wheat and alfalfa fields and pasture	Not expected to occur. The project site is surrounded by development and does not support woodlands or open areas suitable for nesting or foraging.
Campylorhynchus brunneicapillus sandiegensis (San Diego & Orange Counties only)	coastal cactus wren	None/SSC	Southern cactus scrub patches	Not expected to occur. The project site does not contain cactus scrub to support this species.
Charadrius alexandrinus nivosus (nesting)	western snowy plover	FT, BCC/SSC, WL	On coasts nests on sandy marine and estuarine shores; in the interior nests on sandy, barren or sparsely vegetated flats near saline or alkaline lakes, reservoirs, and ponds	Not expected to occur. The project site does not support aquatic habitat suitable for this species.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Circus cyaneus (nesting)	northern harrier	None/SSC	Nests in open wetlands (marshy meadows, wet lightly-grazed pastures, old fields, freshwater and brackish marshes); also in drier habitats (grassland and grain fields); forages in grassland, scrubs, rangelands, emergent wetlands, and other open habitats	Not expected to nest, low potential to forage. The project site does not contain wetland habitat that would support the nesting of this species; however, the project site contains grassland that could support foraging, but it is an isolated stand surrounded by development.
Coccyzus americanus occidentalis (nesting)	western yellow-billed cuckoo	FT, BCC/SE, WL	Nests in dense, wide riparian woodlands and forest with well-developed understories	Not expected to occur. The project site does not support riparian vegetation for this species.
Elanus leucurus (nesting)	white-tailed kite	None/FP	Nests in woodland, riparian, and individual trees near open lands; forages opportunistically in grassland, meadows, scrubs, agriculture, emergent wetland, savanna, and disturbed lands	Not expected to occur. The project site does not support woodlands or riparian areas near open lands for this species to nest. However, the project site contains grassland that could support foraging, but it is an isolated stand surrounded by development.
Haliaeetus leucocephalus (nesting & wintering)	bald eagle	FDL, BCC/SE, FP	Nests in forested areas adjacent to large bodies of water, including seacoasts, rivers, swamps, large lakes; winters near large bodies of water in lowlands and mountains	Not expected to occur. The project site does not support forested areas near aquatic habitat for this species to nest and/or winter.
Icteria virens (nesting)	yellow-breasted chat	None/SSC	Nests and forages in dense, relatively wide riparian woodlands and thickets of willows, vine tangles, and dense brush	Not expected to nest or forage. The project site does not support riparian vegetation for this species to nest.
Lanius ludovicianus (nesting)	loggerhead shrike	None/SSC	Nests and forages in open habitats with scattered shrubs, trees, or other perches	Moderate potential to occur. The project site supports some suitable habitat (chaparral with open habitat) for this species to nest; however, it is an isolated stand because it is surrounded by development. This species was not observed within the study area.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Polioptila californica californica	coastal California gnatcatcher	FT/SSC, WL	Nests and forages in various sage scrub communities, often dominated by California sagebrush and buckwheat; generally avoids nesting in areas with a slope of greater than 40%; majority of nesting at less than 1,000 feet above mean sea level	Low potential to occur. The project site lacks suitable sage scrub habitat, but supports chaparral that contains scattered buckwheat suitable for foraging. This marginally suitable habitat is isolated and surrounded by development. The species has been documented as occurring approximately 0.25 mile west of the project site near McElwain Road (CDFW 2018).
Vireo bellii pusillus (nesting)	least Bell's vireo	FE/SE, WL	Nests and forages in low, dense riparian thickets along water or along dry parts of intermittent streams; forages in riparian and adjacent shrubland late in nesting season	Not expected to occur. The project site does not support riparian vegetation for this species to nest.
Fishes				
Gila orcuttii	arroyo chub	None/SSC	Warm, fluctuating streams with slow-moving or backwater sections of warm to cool streams at depths >40 centimeters (16 inches); substrates of sand or mud	Not expected to occur. The project site does not support aquatic habitat for this species.
Mammals				
Antrozous pallidus	pallid bat	None/SSC	Grasslands, shrublands, woodlands, forests; most common in open, dry habitats with rocky outcrops for roosting, but also roosts in man-made structures and trees	Low potential to occur. The project site supports a grassland vegetation community suitable for foraging; however, the stand is isolated and surrounded by development.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Chaetodipus californicus femoralis	Dulzura pocket mouse	None/SSC	Open habitat, coastal scrub, chaparral, oak woodland, chamise chaparral, mixed-conifer habitats; disturbance specialist; 0 to 3,000 feet above mean sea level	Low potential to occur. The project site is within the elevation range for this species and supports marginally suitable habitat (chamise chaparral, but completely surrounded by development) for this species. The species has been documented as occurring approximately 3.5 miles south of the project site near Jackson Avenue (CDFW 2018).
Chaetodipus fallax fallax	northwestern San Diego pocket mouse	None/SSC	Coastal scrub, mixed chaparral, sagebrush, desert wash, desert scrub, desert succulent shrub, pinyon–juniper, and annual grassland	Low potential to occur. The project site is within the elevation range for this species and supports limited chaparral and annual grassland habitat suitable for this species (isolated by surrounding development). The species has been documented as occurring approximately 0.75 mile south of the project site (CDFW 2018).
Dipodomys stephensi	Stephens' kangaroo rat	FE/ST	Annual and perennial grassland habitats, coastal scrub or sagebrush with sparse canopy cover, or in disturbed areas	Low potential to occur. The project site is within the elevation range for this species and supports limited annual grassland habitat suitable for this species (isolated and surrounded by development). The species has been documented as occuring approximately 0.6 mile southeast of the project site (CDFW 2018). However, this historic occurrence (1987) is unlikely to have persisted.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Eumops perotis californicus	western mastiff bat	None/SSC	Chaparral, coastal and desert scrub, coniferous and deciduous forest and woodland; roosts in crevices in rocky canyons and cliffs where the canyon or cliff is vertical or nearly vertical, trees, and tunnels	Not expected to occur. The project site lacks supports marginally suitable foraging habitat and lacks suitable roosting habitat.
Lasiurus xanthinus	western yellow bat	None/SSC	Valley–foothill riparian, desert riparian, desert wash, and palm oasis habitats; below 2,000 feet above mean sea level; roosts in riparian and palms	Not expected to roost or forage. The project site does not support riparian or palms suitable for this species.
Lepus californicus bennettii	San Diego black-tailed jackrabbit	None/SSC	Arid habitats with open ground; grasslands, coastal scrub, agriculture, disturbed areas, and rangelands	Moderate potential to occur. The project site contains both agriculture and disturbed landscapes suitable for this species. This species was not observed within the study area.
Neotoma lepida intermedia	San Diego desert woodrat	None/SSC	Coastal scrub, desert scrub, chaparral, cacti, rocky areas	Low potential to occur. The project site supports marginally suitable chaparral habitat for this species. The project site lacks rocky areas and is completely surrounded by development.
Nyctinomops femorosaccus	pocketed free-tailed bat	None/SSC	Pinyon–juniper woodlands, desert scrub, desert succulent shrub, desert riparian, desert wash, alkali desert scrub, Joshua tree, and palm oases; roosts in high cliffs or rock outcrops with dropoffs, caverns, and buildings	Not expected to occur. The project site does not support riparian or desert wash habitats suitable for this species.
Onychomys torridus ramona	southern grasshopper mouse	None/SSC	Grassland and sparse coastal scrub	Low potential to occur. The project site supports marginally suitable grassland habitat for this species. The project site is completely surrounded by development.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Perognathus longimembris brevinasus	Los Angeles pocket mouse	None/SSC	Lower-elevation grassland, alluvial sage scrub, and coastal scrub	Low potential to occur. The project site supports marginally suitable grassland habitat for this species. The project site is surrounded by development. The species has been documented as occurring approximately 4.3 miles southeast of the project site (CDFW 2018).
Perognathus longimembris internationalis	Jacumba pocket mouse	None/SSC	Desert scrub and sparse sage scrub in areas with fine sandy soils	Not expected to occur. The project site does not support suitable desert scrub or sparse sage scrub habitat with fine sandy soils.
Invertebrates				
Branchinecta lynchi	vernal pool fairy shrimp	FT/None	Vernal pools, seasonally ponded areas within vernal swales, and ephemeral freshwater habitats	Not expected to occur. The project site does not support vernal pools or seasonal depressions suitable for this species.
Branchinecta sandiegonensis	San Diego fairy shrimp	FE/None	Vernal pools, non-vegetated ephemeral pools	Not expected to occur. The project site does not support vernal pools or seasonal depressions suitable for this species.
Euphydryas editha quino	quino checkerspot butterfly	FE/None	Annual forblands, grassland, open coastal scrub and chaparral; often soils with cryptogamic crusts and fine-textured clat; host plants include Plantago erecta, Antirrhinum coulterianum, and Plantago patagonica (Silverado Occurrence Complex)	Low potential to occur. The project site supports marginally suitable habitat (chaparral that lacks cryptogamic crusts or clay soils). Additionally, no known host plants are present on the project site.
Streptocephalus woottoni	Riverside fairy shrimp	FE/None	Vernal pools, non-vegetated ephemeral pools	Not expected to occur. The project site does not support vernal pools or seasonal depressions suitable for this species.

Subject: ***Cultural Resources Inventory for the Vineyard II Project within the City of Murrieta, Riverside County, California***

Dear Mr. Davis:

Dudek was retained by Retail Development Advisors to conduct a cultural resources study in support of the proposed Vineyard II Project (project) in the City of Murrieta, California. The purpose of this study is to identify all cultural resources within the proposed project site and determine whether implementation of the proposed project would have the potential to impact known and unknown cultural resources. The City of Murrieta (City) is the lead agency responsible for compliance with the California Environmental Quality Act (CEQA). All cultural resource fieldwork and reporting for this proposed project has been conducted by archaeologists meeting the Secretary of the Interior's Professional Qualifications Standards.

The present study documents the results of a California Historical Resources Information System (CHRIS) records search conducted at the Eastern Information Center (EIC), a Native American Heritage Commission (NAHC) Sacred Lands File (SLF) search, the results of informal tribal consultation, and an intensive-level pedestrian survey.

The EIC records identified 46 previously recorded cultural resources within 1.0-mile (1,609 meters (m)) of the proposed project site; none of these resources were identified within the proposed project site. However, a review of the NAHC's SLF did identify the presence of Native American cultural resources within the records search area of the project site, though no specific information regarding the type and location of the resource(s) was provided. Subsequent Native American outreach letters for the proposed project resulted in four responses. In addition, an intensive-level pedestrian survey conducted of the proposed project site and surrounding area did not identify cultural resources.

PROJECT LOCATION

The 6.65-acre project site is located at the northeast corner of the Interstate (I)-215 and Clinton Keith Road, within the City of Murrieta in Riverside County, California. The proposed project

site is located within Section 34 of the public land survey system (PLSS) Township 6 South, Range 3 West as shown on the *Murrieta*, CA 7.5-minute USGS Quadrangle (Appendix A: Figure 1). The proposed project site is bound by I-215 to the west, Clinton Keith Road to the south, and Antelope Road to the east. North County Sand & Gravel is located immediately east of the proposed project site. Specifically, the project site is located in the northern portion of the City of Murrieta and contains approximately 6.65 acres of mostly vacant land composed of Assessor's Parcel Numbers (APNs) 392-270-030, 392-270-031, 392,270-032, and 392-270-033, in the northeastern corner of the northbound on-ramp to I-215 and Clinton Keith Road (Appendix A: Figure 2).

PROJECT DESCRIPTION

The proposed project would involve the construction and operation of approximately 32,120 square feet of new development, including an auto-related services/retail store, tire store, retail pad, three-tenant food and retail pad with one drive-through lane on the west and south of the building, drive-through fast food restaurant, and a two-lane drive-through ATM bank. The project would include 204 parking spaces (179 required by the City) adjoining the retail and other commercial uses.

REGULATORY SETTING

This section includes a discussion of the applicable state laws, ordinances, regulations, and standards governing cultural resources, which must be adhered to before and during construction of the proposed project.

State

The California Register of Historical Resources (CRHR)

In California, the term "historical resource" includes, but is not limited to, "any object, building, structure, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California" (California Public Resources Code (PRC), Section 5020.1(j)). In 1992, the California legislature established the California Register of Historical Resources (CRHR) "to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Section 5024.1(a)). The criteria for listing resources on the CRHR were expressly developed to be in accordance with previously established criteria developed for listing in the National Register of Historic Places (NRHP), enumerated below. According to PRC Section 5024.1(c)(1–4), a resource

is considered historically significant if it (i) retains "substantial integrity," and (ii) meets at least one of the following criteria:

(1) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.

(2) Is associated with the lives of persons important in our past.

(3) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.

(4) Has yielded, or may be likely to yield, information important in prehistory or history.

In order to understand the historic importance of a resource, sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource. A resource less than 50 years old may be considered for listing in the CRHR if it can be demonstrated that sufficient time has passed to understand its historical importance (see 14 California Code of Regulations [CCR] 4852(d)(2)).

The CRHR protects cultural resources by requiring evaluations of the significance of prehistoric and historic resources. The criteria for the CRHR are nearly identical to those for the NRHP, and properties listed or formally designated as eligible for listing in the NRHP are automatically listed in the CRHR, as are the state landmarks and points of interest. The CRHR also includes properties designated under local ordinances or identified through local historical resource surveys.

California Environmental Quality Act

As described further, the following CEQA statutes (PRC Section 21000 et seq.) and CEQA Guidelines (14 CCR 15000 et seq.) are of relevance to the analysis of archaeological, historic, and tribal cultural resources:

- PRC Section 21083.2(g) defines "unique archaeological resource."
- PRC Section 21084.1 and CEQA Guidelines Section 15064.5(a) defines "historical resources." In addition, CEQA Guidelines Section 15064.5(b) defines the phrase "substantial adverse change in the significance of an historical resource"; it also defines the circumstances when a project would materially impair the significance of a historical resource.
- PRC Section 21074(a) defines "tribal cultural resources."

- PRC Section 5097.98 and CEQA Guidelines Section 15064.5(e) set forth standards and steps to be employed following the accidental discovery of human remains in any location other than a dedicated ceremony.
- PRC Sections 21083.2(b) and 21083.2(c) and CEQA Guidelines Section 15126.4 provide information regarding the mitigation framework for archaeological and historic resources, including examples of preservation-in-place mitigation measures. Preservation in place is the preferred manner of mitigating impacts to significant archaeological sites because it maintains the relationship between artifacts and the archaeological context, and may also help avoid conflict with religious or cultural values of groups associated with the archaeological site(s).

More specifically, under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (PRC Section 21084.1; CEQA Guidelines Section 15064.5(b)). If a site is listed or eligible for listing in the CRHR, or included in a local register of historic resources, or identified as significant in a historical resources survey (meeting the requirements of PRC Section 5024.1(q)), it is an "historical resource" and is presumed to be historically or culturally significant for purposes of CEQA (PRC Section 21084.1; CEQA Guidelines Section 15064.5(a)). The lead agency is not precluded from determining that a resource is a historical resource even if it does not fall within this presumption (PRC Section 21084.1; CEQA Guidelines Section 15064.5(a)).

A "substantial adverse change in the significance of an historical resource" reflecting a significant effect under CEQA means "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (CEQA Guidelines Section 15064.5(b)(1); PRC Section 5020.1(q)). In turn, the significance of a historical resource is materially impaired when a project does any of the following:

(1) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or

(2) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to Section 5020.1(k) of the PRC or its identification in an historical resources survey meeting the requirements of Section 5024.1(g) of the PRC, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

(3) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a lead agency for purposes of CEQA (CEQA Guidelines Section 15064.5(b)(2)).

Pursuant to these sections, the CEQA inquiry begins with evaluating whether a project site contains any "historical resources," then evaluates whether that project will cause a substantial adverse change in the significance of a historical resource such that the resource's historical significance is materially impaired.

If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (PRC Sections 21083.2(a)–(c)).

Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

(1) Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.

(2) Has a special and particular quality such as being the oldest of its type or the best available example of its type.

(3) Is directly associated with a scientifically recognized important prehistoric or historic event or person (PRC Section 21083.2(g)).

Impacts on non-unique archaeological resources are generally not considered a significant environmental impact (PRC Section 21083.2(a); CEQA Guidelines Section 15064.5(c)(4)). However, if a non-unique archaeological resource qualifies as a TCR (PRC Sections 21074(c) and 21083.2(h)), further consideration of significant impacts is required.

CEQA Guidelines Section 15064.5 assigns special importance to human remains and specifies procedures to be used when Native American remains are discovered. As described below, these procedures are detailed in PRC Section 5097.98.

California State Assembly Bill 52

Assembly Bill (AB) 52 of 2014 amended PRC Section 5097.94 and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. AB 52 established that TCRs must be considered under CEQA and also provided for additional Native American consultation requirements for the lead agency. Section 21074 describes a TCR as a site, feature, place, cultural landscape, sacred place, or object that is considered of cultural value to a California Native American Tribe and that is either:

- On or determined to be eligible for the California Register of Historical Resources or a local historic register; or
- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1.

AB 52 formalizes the lead agency–tribal consultation process, requiring the lead agency to initiate consultation with California Native American groups that are traditionally and culturally affiliated with the project site, including tribes that may not be federally recognized. Lead agencies are required to begin consultation prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report.

Section 1 (a)(9) of AB 52 establishes that "a substantial adverse change to a tribal cultural resource has a significant effect on the environment." Effects on TCRs should be considered under CEQA. Section 6 of AB 52 adds Section 21080.3.2 to the PRC, which states that parties may propose mitigation measures "capable of avoiding or substantially lessening potential significant impacts to a tribal cultural resource or alternatives that would avoid significant impacts to a tribal cultural resource." Further, if a California Native American tribe requests consultation regarding project alternatives, mitigation measures, or significant effects to tribal cultural resources, the consultation shall include those topics (PRC Section 21080.3.2[a]). The environmental document and the mitigation monitoring and reporting program (where applicable) shall include any mitigation measures that are adopted (PRC Section 21082.3[a]).

California Health and Safety Code Section 7050.5

California law protects Native American burials, skeletal remains, and associated grave goods, regardless of their antiquity, and provides for the sensitive treatment and disposition of those remains. California Health and Safety Code Section 7050.5 requires that if human remains are discovered in any place other than a dedicated cemetery, no further disturbance or excavation of the site or nearby area reasonably suspected to contain human remains shall occur until the county

coroner has examined the remains (Section 7050.5(b)). PRC Section 5097.98 also outlines the process to be followed in the event that remains are discovered. If the coroner determines or has reason to believe the remains are those of a Native American, the coroner must contact NAHC within 24 hours (Section 7050.5(c)). NAHC will notify the "most likely descendant." With the permission of the landowner, the most likely descendant may inspect the site of discovery. The inspection must be completed within 48 hours of notification of the most likely descendant by NAHC. The most likely descendant may recommend means of treating or disposing of, with appropriate dignity, the human remains and items associated with Native Americans.

Local Regulations

County of Riverside General Plan

The County of Riverside General Plan (2013) specifies preservation of cultural resources under their Land Use Element. The policies laid out in this element that pertain to cultural resources include:

Policy LU 9.1 [Development should] Provide for permanent preservation of open space lands that contain important natural resources, cultural resources, hazards, water features, watercourses including arroyos and canyons, and scenic and recreational values.

Policy LU 9.4 Allow development clustering and/or density transfers in order to preserve open space, natural resources, cultural resources, and biologically-sensitive resources.

County of Riverside Cultural Resource Review Process

If deemed necessary by the County of Riverside Planning Department a Phase I Cultural Resource Review is required to be conducted for proposed private development projects within unincorporated Riverside County. These reports should be submitted directly to the office of the County Archaeologist.

City of Murrieta Historic Preservation Advisory Commission

The City of Murrieta Historic Preservation Advisory Commission (HPAC) acts in an advisory capacity to the City Council with regard to the preservation of cultural and archaeological resources within the City's boundaries. Through the City Planner or Community Development Director, the HPAC makes recommendations to the City Council regarding the designation of cultural resources. Such resources may include individual properties, archaeological districts, or Historic Murrieta Specific Plan within the City. In addition, the HPAC is responsible for

maintaining the register of designated cultural resources within the City; reviewing land use, redevelopment, municipal improvement and other planning matters and programs undertaken by the City with regard to cultural resources; providing recommendations to the City Council on the use of available Federal, State, local and private funding sources for protection of the City's cultural resources; and, reviewing applications for certificates of appropriateness related to demolition permits and development plan approval, in compliance with the City's *Development Code* for designated cultural resources (City of Murrieta 2011).

The City of Murrieta's Municipal Code Chapter 16 (Development Code) includes subchapter 16.26.050, which defines the City's designation criteria for cultural resources as copied below:

City of Murrieta Development Code

16.26.050. Designation Criteria for Cultural Resources Archaeological Districts and Historic Districts.

For the purposes of the ordinance codified in this section, an improvement or natural feature may be designated a cultural resource by the city council and any area within the city may be designated as an archaeological district or historic preservation district by the city council if it meets any of the following criteria:

A. Individual Resource Designation.

1. It exemplifies or reflects special elements of the city's cultural , architectural, aesthetic, social, economic, political, artistic and/or engineering heritage;
2. It is identified with persons, a business use or events significant in local, state or national history;
3. It embodies distinctive characteristics of style. type, period or method of construction or is a valuable ex-ample of the use of indigenous materials or craftsmanship;
4. It is representative of the notable work of a builder, designer or architect; or
5. Its unique location or singular physical characteristic represents an established and familiar visual feature of a neighborhood, community or the city:

B. Local District Designation.

A geographic area may be designated as a local archaeological district or historic preservation district if the city council, after hearing(s) finds that all of the requirements set forth below are met.

Concurrent with the designation of a historic preservation district, design guidelines shall be developed and shall apply to all properties within the historic preservation district.

1. Archaeological District.

    a. The area is a geographically definable area:

    b. The area possesses either:

        1. A significant concentration or continuity of archaeological resources ; or

        2. The area is associated with the prehistory of Murrieta.

    c. The designation of the geographic area as an archaeological district is reasonable, appropriate, and necessary to protect, promote and further the goals and purposes of the ordinance codified in this chapter and is not inconsistent with other goals and policies of the city.

2. Historic Preservation District.

    a. The area is a geographically definable area:

    b. The area possesses either:

        1. A significant concentration or continuity of buildings unified by past events or aesthetically by plan or physical development; or

        2. The area is associated with an event, person, or period significant or important to Murrieta history.

    c. The designation of the geographic area as a historic preservation district is reasonable, appropriate, and necessary to protect, promote and further the goals and purposes of the ordinance codified in this chapter and is not inconsistent with other goals and policies of the city.

    d. Determining Factors. In determining whether to designate a historic preservation district, the following factors shall be considered:

        1. District should have integrity of design, setting, materials, workmanship, and association.

        2. The collective value of the buildings and structures in a district taken together may be greater than the value of each individual building or structure.

3. Contributing Resources.

    Contributing resources may be included in a historic preservation district if the city council finds, after a hearing(s) that all of the following requirements are satisfied:

a. The nominated resource is within a historic preservation district;

b. The nominated resource either embodies the significant features and characteristics of the district or adds to the historical associations. architectural qualities or archaeological values identified for the district;

c. The nominated resource was present during the period of historical significance of the district and relates to the documented historical significance of the district;

d. The nominated resource possesses historic integrity or is capable of yielding important information about the period of historical significance or the district; and

e. The nominated resource has important historic or architectural worth, and its designation as a contributing resource is reasonable, appropriate and necessary to protect, promote and further the goals and purposes of the ordinance codified in this chapter.

BACKGROUND RESEARCH

CHRIS Records Search

On January 10, 2018, Dudek requested a California Historical Resources Information System (CHRIS) records search of the proposed project site and a 1.0 mile (1,609 m) records search buffer (study area), from the Eastern Information Center (EIC), which houses cultural resources records for Riverside County. The search included their collections of mapped prehistoric, historic, and built environment resources, Department of Parks and Recreation Site Records, technical reports, and ethnographic references. Additional consulted sources included historical maps of the study area, the NRHP, the CRHR, the California Historic Property Data File, the lists of California State Historical Landmarks, California Points of Historical Interest, and the Archaeological Determinations of Eligibility. The results of the confidential EIC records search are also provided in Confidential Appendix B.

Previously Conducted Cultural Resources Studies

The EIC records indicate that 60 previous cultural resources technical investigations have been conducted within 1.0-mile (1,609 m) of the proposed project site between 1948 and 2016. Of these, two previous studies overlap with the proposed project site while the remaining 58 are within the records search buffer. Table 1, below, summarizes all 60 previous cultural resource studies followed by a brief summary of each overlapping study.

RI-07049

Jones & Stokes was contracted by the California Department of Transportation to prepare an archaeological survey report in support of the proposed Clinton Keith Road/Interstate 215 (I-215) Interchange Improvement Project. An archaeological survey of the area did not identify any archaeological resources and the potential for undiscovered archaeological resources was determined to be low. The project was determined to have no potential adverse impacts to cultural resources.

RI-08673

Jean A. Keller was contracted by CK-17, LLP, to provide cultural resource services in support of the proposed development of residential subdivisions on approximately 2.5 acres of land in Murrieta. Services included archaeological monitoring and the preparation of a Phase IV Monitoring Report. No cultural resources were observed within the boundaries of the subject property during construction activities. No further mitigation or research was recommended at the culmination of the project.

Previously Recorded Cultural Resources

The EIC records indicate that 46 resources have been recorded within 1.0-mile (1,609 m) of the proposed project site, none of which intersect or overlap the proposed project site. Six of the 46 resources are historic period resources including three refuse scatters, two residences, and one concrete foundation with an associated refuse scatter. The remaining 40 resources are prehistoric resources including 16 bedrock milling features, nine lithic scatters, 12 prehistoric lithic or groundstone isolates, one habitation site, and two processing sites with bedrock milling features and associated lithic scatters. Table 2, below, summarizes all 46 cultural resources identified.

Table 2.
Previously Recorded Cultural Resources Within 1.0-Mile of the Proposed Project Site

Primary Number (P-33-)	Trinomial (CA-RIV-)	Period	NRHP Eligibility	Year and Record By	Descriptions	Proximity To Proposed Project Site
000629	000629	Prehistoric	Not evaluated	1973 (J. Humbert, S. Hammond, C.E.F.U.)	Lithic scatter with associated bedrock mortars	Outside

Native American Coordination

Dudek contacted the NAHC on January 12, 2018 and requested a review of the SLF. A response letter was received via email from the NAHC on February 20, 2018. The results of the Sacred Lands File search indicated the presence of Native American cultural resources within the proposed project site and stated that the Pechanga Band of Luiseño Indians should be contacted for additional information on the resources identified within the proposed project site. The NAHC suggested contacting 25 Native American individuals and/or tribal organizations who may have direct knowledge of cultural resources in or near the proposed project (Table 3; Appendix C). Dudek contacted all groups and/or individuals identified by the NAHC. To date, four response have been received (see Confidential Appendix D). This outreach was conducted for informational purposes

only and does not necessarily constitute formal government-to-government consultation as specified by AB 52. A discussion of the AB 52 consultation is included in the Tribal Cultural Resources section of the Environmental Impact Report (EIR) for the project.

Historic Topographic Map and Aerial Photography Review

Dudek consulted historic topographic maps and aerial photographs to understand development of the proposed project site and surrounding properties. Topographic maps are available from 1943, 1955, 1962, 1971, 1975, 1979, 1986, 2012, and 2015 (NETR 2018a). Historic aerials are available for the years 1938, 1967, 1978, 1996, 2002, 2005, 2009, 210, 2012, 2014, and 2016 (NETR 2018b).

The topographic map from 1943 shows that there was a road where the I-215 now runs, just west of the proposed project site. By 1955, the I-215 had been built; however, no significant development within the area is apparent based on this map. Topographic maps from 1962 to present show an increase in roads throughout the area though general development history is difficult to gauge from these maps.

Aerial images depicting the proposed project site show that in 1938 the only development within the area was a north-south running road, which became the I-215 freeway sometime in the 1950s. Aerial images from 1967 show no development within the proposed project site. There are a few roads to the east of the I-215 at this time and some possible residential development to the north; however, the overall proposed project site and general vicinity is completely undeveloped. The aerials from 1978 show the apparent construction of the Clinton Keith Road on ramp and off

ramp. By 1996, there are several small developments to the north and east of the proposed project site, though there is no developments within the proposed project site. Clinton Keith Road, which runs south of the proposed project site, appears to be a dirt road in 1996; though it appears to be paved west of the freeway. Between 2002 and 2005, a large amount of development took place just east of the proposed project site, where a large residential subdivision and a high school were built. Additionally, the North Country Sand and Gravel, immediately east of the proposed project site, is shown in the 2002 aerial. There were also several residential subdivisions built to the southwest and northwest of the proposed project site and a minor increase in residential development to the east and south of the proposed project site since 2005. Presently, the proposed project site remains undeveloped vacant land.

FIELD METHODOLOGY

Dudek archaeologists conducted an intensive-level pedestrian survey of the proposed project site on February 13, 2018. The survey was conducted to identify and record any unknown cultural resources within the proposed project site. The survey was conducted using standard archaeological procedures and techniques that meet the Secretary of Interior's standards and guidelines for cultural resources inventory. Survey transects were spaced no more than 15 meters wide and oriented south–north across accessible areas of the proposed project site. Where transects were not feasible, a mixed approach (opportunistic survey) was utilized, selectively examining open ground surface where possible. The archaeologists examined the ground surface for the presence of prehistoric artifacts (e.g., flaked stone tools, tool-making debris, stone milling tools), historical artifacts (e.g., metal, glass, ceramics), sediment discolorations that might indicate the presence of a cultural midden, and depressions and other features that might indicate the former presence of structures or buildings.

All fieldwork was documented using field notes and iPad technology with close-scale field maps, and aerial photographs. Location-specific photographs were taken using an Apple 3rd Generation IPad equipped with 8 mega-pixel resolution and georeferenced PDF maps of the proposed project site. All field notes, photographs, and records related to the current study are on file at Dudek's Pasadena, California office.

SURVEY RESULTS

No archaeological or historic built environment resources were identified during the intensive-level survey of the proposed project site. Ground visibility within the proposed project site was poor (approximately 15%) due to dense grasses and weeds covering the majority of the proposed project site (Appendix A: Figures 2 and 3). Disturbances that have affected the proposed project

site include the construction, maintenance, and upgrades to Antelope Road, an associated access road along the eastern side of the proposed project site, the construction of I-215 and an associated on ramp to the west, the construction of Clinton Keith Road to the south, and the continued excavation associated with the North County Sand & Gravel lot, located immediately east of the proposed project site. Additionally, several all-terrain vehicle tracks are present throughout the proposed project site and evidence of modern refuse as a result of opportunistic road-side dumping was observed.

SUMMARY AND MANAGEMENT RECOMMENDATIONS

No cultural resources were identified within the proposed project site or the immediate vicinity through the EIC records search or during the intensive-level pedestrian survey. However, the NAHC SLF review indicated that Native American sites have been identified within the proposed project site that may be impacted by the proposed project and to contact the Pechanga Band Luiseño Indians for more information about these sites. Furthermore, several prehistoric archaeological sites have been recorded within 1.0-mile (1,608 m) of the proposed project site.

In consideration of the known sensitivity of the surrounding area for prehistoric resources, it is recommended that formal Native American consultation with the Pechanga Band of Luiseño Indians and periodic archaeological and Native American monitoring be conducted. A qualified archaeologist, meeting the Secretary of the Interior's Professional Qualification Standards, should oversee and adjust monitoring efforts as needed (increase, decrease, or discontinue monitoring frequency) based on the observed potential for construction activities to encounter cultural deposits or material and as approved by the City. Following completion of construction, the qualified archaeologist should provide an archaeological monitoring report to the City and EIC with the results of the cultural monitoring program. Furthermore, prior to any ground-disturbing work, Dudek recommends that all construction personnel undergo workers education awareness program (WEAP) training to ensure that any unanticipated archaeological discoveries are treated appropriately in addition to the standard protection measures for unanticipated discoveries for archaeological resources and human remains during ground-disturbing activities that are provided below. All activities would be conducted in accordance with regulatory requirements. With the implementation of these measures, the proposed project will have a less than significant impact on cultural resources.

Unanticipated Discovery of Archaeological Resources

In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities for the proposed project, all construction work occurring within 100 feet of

the find shall immediately stop until a qualified archaeologist, meeting the Secretary of the Interior's Professional Qualification Standards, can evaluate the significance of the find and determine whether or not additional study is warranted. Depending upon the significance of the find, the archaeologist may simply record the find and allow work to continue. If the discovery proves significant under CEQA, additional work such as preparation of an archaeological treatment plan, testing, or data recovery may be warranted.

Unanticipated Discovery of Human Remains

In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the Los Angeles County Coroner shall be notified within 24 hours of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the County Coroner has determined, within two working days of notification of the discovery, the appropriate treatment and disposition of the human remains. If the County Coroner determines that the remains are, or are believed to be, Native American, s/he shall notify the NAHC in Sacramento within 48 hours. In accordance with California Public Resources Code, Section 5097.98, the NAHC must immediately notify those persons it believes to be the most likely descended (MLD) from the deceased Native American. The MLD shall complete their inspection within 48 hours of being granted access to the site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.

Please do not hesitate to contact me if you have any questions about this report, please contact me by email at lkry@dudek.com or phone at (626) 590-1739 or Micah J. Hale by email at mhale@dudek.com or phone at (760) 479-4276.

Sincerely,

RE: Proposed Curci Murrieta Project, City of Murrieta; Murrieta USGS Quadrangle, Riverside County, California

Dear Ms. Denniston:

Attached is a list of tribes that have cultural and traditional affiliation to the areas of potential project effect (APE) referenced above. I suggest you contact all of those listed, if they cannot supply information, they might recommend others with specific knowledge. The list should provide a starting place to locate areas of potential adverse impact within the APE. By contacting all those on the list, your organization will be better able to respond to claims of failure to consult, as may be required under particular state statutes. If a response has not been received within two weeks of notification, the Native American Heritage Commission (NAHC) requests that you follow-up with a telephone call to ensure that the project information has been received.

THIS INFORMATION IS CONFIDENTIAL! PLEASE DO NOT INCLUDE IN PUBLIC DOCUMENTS.
A record search of the Native American Heritage Commission (NAHC) *Sacred Lands File* (SLF) was completed for the area of potential project effect (APE) for the above referenced project. Sites have been located within the APE you provided that may be impacted by the project. Please immediately contact the Pechanga Band of Luiseño Indians at (951) 770-6300 for more information about these sites.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance, we are able to assure that our lists contain current information. If you have any questions, please contact me at my email address: gayle.totton@nahc.ca.gov.

Sincerely,

Gayle Totton

Subject: Report of Preliminary Geotechnical Investigation
Proposed Vineyard/Val Vista Center
NEC Clinton Keith Road and 215 Freeway
Murrieta, California
GPI Project No. 2833.I

Dear Mr. Davis:

Transmitted herewith is our report of preliminary geotechnical investigation for the subject project. The report presents our evaluation of the foundation conditions at the site and recommendations for design and construction.

We are providing this report in an electronic format. Further copies of the report can be provided if required for City submittal upon request.

We appreciate the opportunity of offering our services on this project and look forward to seeing the project through its successful completion. Feel free to call us if you have any questions regarding our report or need further assistance.

Very truly yours,
Geotechnical Professionals Inc.

Paul R. Schade, G.E.
Principal

1.0 INTRODUCTION

1.1 GENERAL

This report presents the results of a preliminary geotechnical investigation performed by Geotechnical Professionals Inc. (GPI) for the proposed Vineyard/Val Vista Center development to be located near the northeast corner of Clinton Keith Road and the 215 Freeway in Murrieta, California. The geographical site location is shown on the Site Location Map, Figure 1.

1.2 PROJECT DESCRIPTION

The Vineyard project will be a mixed-use development extending from the northbound I-215 on-ramp to an existing residential development east of the newly planned Warm Springs Parkway alignment on the north side of Clinton Keith Road. The subject site is approximately 46 acres in size. Based on a conceptual site plan provided by CK-17, the proposed development will consist of a 4-story hotel, a Costco warehouse, numerous 1-story retail pads, and associated surface parking. The Costco parcel is being investigated by others and will not be included in our studies. The hotel building will be approximately 91,000 square feet in plan area while the 1-story retail buildings will vary from about 3,500 to 34,000 square feet in plan area. The proposed site configuration and limits of the development covered by this preliminary report are shown on the Site Plan, Figure 2.

Structural loads for the hotel building and retail pads were not available at the time of this preliminary report but are anticipated to be up to 300 kips and 50 kips, respectively. The grades at the site are currently being lowered or are planned to be lowered during the ongoing mining and exporting activities. Within an area covered by this preliminary investigation (between the northbound I-215 on-ramp and the new Warm Springs Parkway), the existing grades appear to be up to about 20 feet above the planned finished site grades. These cuts are planned to be performed prior to the completion of the project design. It is our understanding that select areas of the site have already been overexcavated to allow engineered fill to be placed to reach finished grade.

Based on the provided site plan, the proposed development will also likely include a storm water retention/infiltration system located along the southern and/or western property lines. Details of the infiltration system were not available at the time of this preliminary report but are anticipated to consist of near-surface infiltration via bio-swales or shallow retention basins.

Our preliminary recommendations are based on the above structural and grading information. We should be notified if the project plans change significantly from the above. GPI should review the project plans prior to finalizing the project design.

1.3 PURPOSE OF INVESTIGATION

The primary purpose of this investigation and report is to provide a preliminary evaluation of the existing geotechnical and geologic conditions at the site as they relate to the design and construction of the proposed development. More specifically, this investigation was aimed at providing preliminary geotechnical recommendations for earthwork, and design of foundations, floor slabs, retaining walls, infiltration systems, and pavements.

1.4 PRIOR SITE WORK

Several prior geotechnical investigations have been performed by GPI and others on portions of the subject site. The scope of work for the subject preliminary investigation included a review of these investigations.

GPI previously performed geotechnical investigations at the subject site for the new Warm Springs Parkway (to replace the vacated section of old Antelope Road) and a proposed commercial/retail development located to the east of the new road (GPI, 2009). Although not developed, the previously proposed project is similar to the type of development that is the subject of this report. The findings from our prior investigations were used in our current evaluation. The explorations performed for the prior investigations, as well as the lab testing on samples obtained from these explorations, have been incorporated into this report.

As part of our past work at the site, we were provided with prior investigations performed by others. These investigations included a preliminary geotechnical investigation for a proposed commercial development (EcoTech, 2004), a rock hardness/rippability study of the onsite materials to evaluate the site as a proposed borrow source (GeoSoils, 2005), and another preliminary geotechnical investigation for a proposed commercial/retail development and realignment of Antelope Road (T.H.E. Soils Co., 2008). The pertinent information within these reports was considered in preparing our preliminary report.

2.0 SCOPE OF WORK

Our scope of work for this investigation consisted of a review of existing data, field exploration, limited field infiltration testing, laboratory testing, engineering analysis, and the preparation of this report.

As part of a prior geotechnical investigation at the subject site, we performed 17 hollow-stem auger borings (B-1 to B-17) located along the new Warm Springs Parkway and within the portion of the site between the Warm Springs Parkway alignment and the existing residential developments to the east (GPI, 2009). These exploratory borings were performed to depths ranging from 11 to 26 feet below the site grades at the time of the investigation. Refusal in the dense, less weathered bedrock occurred in two of the borings prior to reaching their planned depths, likely due to the presence of cobbles and boulders.

The new fieldwork performed for this investigation included three hollow-stem auger borings (B-101 to B-103) performed to depths of 31 to 38 feet below existing grades before refusing in the dense, less weathered bedrock. A description of field procedures and logs of the current and prior explorations are presented in Appendix A. The locations of the subsurface explorations are shown on the Site Plan, Figure 2.

Laboratory tests were performed on selected representative samples as an aid in soil classification and to evaluate the engineering properties of the soils. The geotechnical laboratory testing program included determinations of moisture content and dry density, gradation, fines content, Atterberg Limits, direct shear, maximum dry density and optimum moisture content, R-value, and soil corrosivity.

R-value and soil corrosivity testing was performed by GeoLogic, Inc. and Schiff Associates (currently HDR), respectively, under subcontract to GPI. Laboratory testing procedures and results are summarized in Appendix B.

Engineering evaluations were performed to provide preliminary earthwork criteria, foundation and slab design parameters, preliminary pavement sections and assessments of seismic hazards. The results of our evaluations are presented in the remainder of the report.

3.0 SITE CONDITIONS

3.1 SITE HISTORY

Our understanding of the site history is based on a review of the prior investigations by GPI and others and a review of historical aerial photographs (Historic Aerials) dating back to 1938. Up to 1967, the site and surrounding area appears to be largely undeveloped except for a highway (known then as US 395) located west of the subject site area. In 1978, the highway (I-215) is shown being widened and the northbound on-ramp and Antelope Road appear to be under construction. The remaining majority of the site remains undeveloped. Between 1978 and 2002, the site appears to remain unchanged. In 2005, the residential developments to the east of the subject site are now in-place. Sometime between early 2007 and mid-2009, mining and exporting operations began on the northern half of the subject site and the portion of Antelope Road located along the west side of the subject site was closed. Since 2009, the site has remained relatively unchanged apart from the continued mining operations.

3.2 SURFACE CONDITIONS

The site is approximately 46 acres of vacant land and bounded by Clinton Keith Road to the south, the on-ramp to the northbound I-215 freeway to the west, vacant land followed by Cape Aire Way to the north, and a residential development to the east. Excluding the Costco Warehouse parcel, which is being evaluated by others, the portion of the site covered by our evaluation is approximately 28 acres in size.

Ground surface elevations across the site vary from about +1505 feet in the southeast corner to an approximate peak of +1610 feet in the northern middle portion of the site. Due to the ongoing mining and exporting activities, the grades are continuing to be lowered across a majority of the site. Existing slopes are highly variable, with localized areas exhibiting grades as steep as 2.5:1 (horizontal to vertical).

The existing alignment of Antelope Road, located in the western portion of the site, is currently abandoned. Ground surface elevations for Antelope Road vary from approximately +1546 in the north to +1526 in the south at the intersection with Clinton Keith Road. Pavement sections for the road were not determined.

3.3 SUBSURFACE SOILS

Our field investigations disclosed a subsurface profile consisting of topsoil and weathered organic bedrock over less weathered organic bedrock. It should be noted that these descriptions reflect the subsurface profiles at the location and time our explorations were performed. Borings B-1 through B-17 were performed in 2009 and were limited to the eastern half of the subject site. Borings B-101 through B-103 were performed as part of the current investigation and are located along the existing vacated portion of Antelope Road. Since 2009, the ongoing mining/exporting operations have resulted in significant cuts and the potential for significant fills throughout the site. Detailed descriptions of the conditions encountered are shown on the Logs of Borings in Appendix A.

The near-surface soil materials consisted primarily of weathered granitic bedrock (silty sands, sands, and sandy silts) with varying amounts of gravel. Drilling was performed with small diameter equipment, making it difficult to identify potential cobbles and boulders. However, based on our experience (cobbles and boulders were noted within the excavation being performed by others to the northwest of the site) and our observation of surficial conditions, localized boulders and cobbles should be anticipated. During our 2009 investigation, we observed exposed outcrops of boulders on the site that included material greater than 5 feet in diameter. However, the majority of the oversized material exposed in adjacent excavations at the time appeared to be between 2 and 3 feet in diameter. Based on information provided by the site developer, some onsite boulders are as large as 15 feet in diameter.

Based on blowcounts, the native soils generally range from very loose to very dense, with density increasing abruptly with depth and reduction in weathering of the granitic materials. The soils encountered within select 2009 explorations (Borings B-8, 12, 13, 15, 16, and 17) appeared to encounter the loose topsoil to deeper extents than other areas of the site. The moisture contents ranged from dry to moist, generally decreasing in content with depth.

As part of the ongoing mining activities at the site, some fill has been placed in select areas of the site for stockpiling purposes. Based on discussions with the site developer, decomposed granitic bedrock (planned for sale and export) has been placed in two separate stockpiles up to 10 feet in height. The complete extent of stockpile generation as a result of the mining activities is expected to vary with the export operations.

We did not note fill in our explorations performed as part of the current field investigation.

3.4 GROUNDWATER AND CAVING

Groundwater was not encountered in our borings to the maximum explored depth of 38 feet below existing ground surface. State historical records for groundwater were not available in the area of the subject site.

Caving was not noted within the relatively small-diameter hollow-stem auger borings. Localized caving may be encountered in the upper loose and dry sandy deposits; however, the general increase in density and cementation of the granular materials with depth make caving of the deeper materials unlikely if the excavation guidelines presented herein are followed.

4.0 CONCLUSIONS AND RECOMMENDATIONS

4.1 GENERAL

Based on the results of our investigation, it is our opinion that from a geotechnical viewpoint it is feasible to develop the site as proposed. The proposed structures can be supported on shallow foundations following remedial grading to mitigate the geotechnical constraints discussed below. The most significant geotechnical issues that will affect the design and construction of the proposed structures are as follows:

- The site contains topsoil/weathered bedrock over very dense granitic bedrock. The topsoil and upper portions weathered bedrock within the upper 2 to 7 feet below existing site grades is generally loose and not considered suitable for subsequent fill placement or uniform support of footings, slab-on-grade floors, and pavements. We recommend that the topsoil and low density weathered bedrock be removed prior to subsequent fill placement to design grades.

- To provide uniform support for the planned buildings in fill areas, the soils should be removed to a depth of at least 5 feet below the planned finished pad grade or 2 feet below the base of foundations, whichever is greater. Foundations for minor structures, such as site walls, may be supported in the undisturbed bedrock or be underlain by at least 2 feet of properly compacted fill. Deeper overexcavation in the area of deep cuts into the bedrock may be desirable in utility corridors to aid in excavating with conventional equipment.

- The undisturbed bedrock is suitable for direct support of building foundations but may be undesirable for future excavations of footings or utility trenches. To aid in excavation with conventional equipment, we recommend the removals for building pads established entirely in bedrock materials extend to a depth of at least 3 feet below the finished pad grade.

- Based on the variable depths to bedrock across the site, select building footprints may span bedrock and compacted fill. Such buildings will have an increased potential for differential settlement. For these transition pads, we recommend removal depths of at least 3 feet beneath the base of footings across the entire bedrock portion of the pad.

- The required grading will involve excavation into very dense granitic bedrock materials. Heavy ripping and relatively slow earthwork operations are anticipated in most of the deeper cuts. Some difficulty will be encountered in ripping the granitic materials and drilling and shooting or blasting may aid in grading production rates. Large floating boulders will be encountered during grading. Earthwork subcontractor should discuss the subsurface conditions with the site owner and personnel performing the recent mining operations to better understand the excavation issues anticipated.

- Because of the nature of the site bedrock and likely presence of boulders and cobbles, oversize material (greater than 12-inches in maximum dimension) should be anticipated to be generated from site cuts. Special handling and/or crushing of oversize material will be required in order to use the material as compacted fill. On-site placement of the boulders in compacted fills will depend on the final site grades.

- Bedding sand can be generated at the site for use in utility trenches and under slabs.

- Class II Aggregate Base, for use as backfill in onsite and offsite street work and other paved areas, may be generated from onsite crushed materials. Prior to the use of these materials, they should be properly graded and pass the necessary hardness tests in accordance with the Greenbook requirements.

Our recommendations related to the geotechnical aspects of the development of the site are presented in the subsequent sections of this report.

4.2 SEISMIC CONSIDERATIONS

4.2.1 General

The site is located in a seismically active area typical of Southern California and is likely to be subjected to strong ground shaking due to earthquakes on nearby faults.

We assume that seismic design of the proposed development will be in accordance with 2016 California Building Code (CBC) criteria. For the 2016 CBC, Site Class C may be used. The seismic code values can be obtained directly from the tables in the building code using the above value and appropriate United States Geological Survey web site (earthquake.usgs.gov). The Project Structural Engineer should determine the seismic design method.

4.2.2 Strong Ground Motion Potential

Based on published information (geohazards.usgs.gov), the most significant fault in the proximity of the site is the Elsinore Fault, which is located about 3.4 miles to the southwest.

During the life of the project, the site will likely be subject to strong ground motions due to earthquakes on nearby faults. Based on the USGS website (earthquake.usgs.gov), we computed that the site could be subjected to a peak ground acceleration (PGA_M) of 0.70g for a magnitude 7.0 earthquake. This acceleration has been computed using the mapped Maximum Considered Geometric Mean peak ground acceleration from ASCE 7-10 (ASCE, 2010) and a site coefficient (F_{PGA}) based on site class. The predominant earthquake magnitude was determined using a 2-percent probability of exceedance in a 50-year period, or an average return period of 2,475 years. The structural design will need to

incorporate measures to mitigate the effects of strong ground motion.

4.2.3 Potential for Ground Rupture

The site is not located within an Alquist-Priolo Special Studies Zone and there are no known faults crossing or projecting toward the site. Therefore, ground rupture due to faulting is considered unlikely at this site.

4.2.4 Liquefaction and Dynamic Settlement

Liquefaction is a phenomenon in which saturated cohesionless soils undergo a temporary loss of strength during severe ground shaking and acquire a degree of mobility sufficient to permit ground deformation. In extreme cases, the soil particles can become suspended in groundwater, resulting in the soil deposit becoming mobile and fluid-like. Liquefaction is generally considered to occur primarily in loose to medium dense deposits of saturated sandy soils. Thus, three conditions are required for liquefaction to occur: (1) a sandy soil of loose to medium density; (2) saturated conditions; and (3) rapid, large strain, cyclic loading, normally provided by earthquake motions.

The site is not located within an area mapped by the State of California as having a potential for soil liquefaction, in accordance with the Seismic Hazards Mapping Act as shown in the Murrieta Quadrangle (CGS, 2007). Groundwater was not encountered in our borings to a depth of 38 feet. Historical high groundwater data is not available in the vicinity of the site (CGS, 2007). Excluding the site from a potential liquefaction zone appears to have been based primarily on the depth to groundwater and the dense to very dense subsurface soils and the presence of weathered granitic bedrock.

Based on our findings, the potential for soil liquefaction to adversely affect the planned project is considered to be very low

4.2.5 Seismic Ground Subsidence

Seismic ground subsidence (not related to liquefaction induced settlements), occurs when loose, granular (sandy) soils above the groundwater are densified during strong earthquake shaking. Earthquake-induced seismic subsidence during a strong earthquake is not anticipated to adversely affect the planned project because of the dense to very dense nature of the near surface sandy soils and the presence of bedrock materials underlying those soils. Based on our analysis, potential earthquake-induced seismic subsidence during a strong earthquake is estimated to be less than ¼-inch.

4.3 EARTHWORK

The earthwork at the subject site is anticipated to consist of clearing and grubbing, significant cuts (up to 20 feet) to finished grade, overexcavation of disturbed soils under buildings, in utility corridors, and under settlement sensitive hardscape, subgrade preparation, and the placement and compaction of fills.

Significant ripping, oversized materials, and slow earthwork operations should be anticipated. Based on our explorations and observations of grading operations at nearby project sites, the upper weathered granite will break down under the ripping and compaction equipment to the consistency of a granular soil with some cemented larger particles. Localized clusters of less weathered rock are exposed at the ground surface, were encountered at depth in our explorations, and have been encountered in the adjacent on-going excavations. Some large boulders encountered on-site may be used in landscaping. The remaining oversized materials can be placed on-site in the compacted fill as recommended in a following section, if access is available.

4.3.1 Clearing and Grubbing

Prior to grading, the areas to be developed should be stripped of vegetation and cleared of debris. Buried obstructions, such as footings, utilities and tree roots, should be removed. Deleterious material generated during the clearing operation should be removed from the site. Although not anticipated in great extent because the site is undeveloped, and if acceptable to the regulatory agencies, on-site inert demolition debris, such as concrete and asphalt, may be crushed for re-use in engineered fills in accordance with criteria presented in the "Material for Fill" section of this report.

Although not encountered during our investigations, cesspools or septic systems encountered within building areas during grading should be removed in their entirety. The resulting excavation should be backfilled as recommended in the "Subgrade Preparation" and "Placement and Compaction of Fill" sections of this report. As an alternative, cesspools can be backfilled with lean sand-cement slurry. At the conclusion of the clearing operations, a representative of the personnel from GPI should observe and accept the site prior to further grading.

Two wells were observed on-site during our 2009 investigation. Details regarding the wells in regards to their current status and/or operation were not available. If the wells are still in place and are not planned to be used for production, they should be properly abandoned in accordance with City and County guidelines.

4.3.2 Excavations

Excavations at this site will include cut of existing materials to design grades, removals of loose topsoil and portions of the weathered bedrock, footing excavations, and trenching for proposed utility lines.

Prior to placing fills or the construction of the proposed buildings or other foundation supported improvements, the loose or disturbed upper soils within the proposed building

areas should be removed and replaced as properly compacted fill. Although not encountered in our explorations, existing undocumented fills should also be removed below building pads or foundation supported improvements.

Based on our explorations, the depth of topsoil and low density highly weathered bedrock ranges from about 2 to 7 feet below existing site grades, with an average depth of about 4 feet below existing site grades. Where not removed by planned cuts, these materials should be removed and replaced with properly compacted fill.

The recommended earthwork will depend on the area of the site (bedrock or topsoil) as well as the planned improvement and cut/fill conditions. The actual depths of removal should be determined in the field during grading by a representative of GPI. For planning purposes, we recommend the following overexcavation depths:

- At least 2 feet below the existing ground surface in areas to receive fill to remove and recompact the near-surface disturbed natural soils.

- At least 5 feet below the planned finish pad grade or 2 feet below the base of foundations, whichever is greater, for buildings and other major foundation supported improvements in fill areas.

- At least 3 feet beneath the base of footings for buildings spanning across bedrock and compacted fill (transition pad).

- At least 2 feet below the base of foundations for minor foundation supported improvements such as short retaining walls or screen walls, unless the foundations will be established in the undisturbed bedrock.

- At least 2 feet below the existing grade within planned drives and parking areas (may be replaced with scarification, moisture-conditioning, and compaction in areas of cut greater than 2 feet).

The undisturbed bedrock is suitable for direct support of building foundations. Conventional excavating equipment (e.g. backhoe) may have difficulty excavating footings or pad utility trenches in the undisturbed bedrock. As such, we recommend the removals for building pads established entirely in bedrock materials extend to a depth of at least 3 feet below the finished pad grade. Deeper removals may be beneficial if deep footings or pad utilities are planned. Also, overexcavation and recompaction for site utility corridors may be beneficial in areas of deep cut where less weathered bedrock is anticipated so that conventional installation of utilities is possible.

The Project Surveyor should accurately stake the corners of the areas to be overexcavated in the field. The base of the excavations should extend laterally at least 10 feet beyond the outside edge of the foundations or a minimum distance equal to the depth of overexcavation/compaction below finish grade (i.e., a 1:1 projection below the top edge of footings), whichever is greater. This includes the footprint of the building, hardscape along the building, and other foundation supported improvements, such as site walls, canopies,

equipment pads, and enclosures.

Where not removed by the aforementioned excavations, existing utility trench backfill within building areas should be removed and replaced as properly compacted fill. This is especially important for deeper fills such as existing sewers and storm drains. For planning purposes, removals over the utilities should extend to within 1-foot of the top of the pipe. For utilities that are 3 feet or shallower, the removal should extend laterally 1-foot beyond both sides of the pipe. For deeper utilities, the removals should include a zone defined by a 1:1 projection upward (and away from the pipe) from each side of the pipe. The actual limits of removal will be confirmed in the field. We recommend that known utilities be shown on the grading plan. It is our understanding that existing utilities under the vacated portion of Antelope Road will be left-in-place and should not be disturbed.

Temporary construction excavations may be made vertically without shoring to a depth of 5 feet below adjacent grade. For deeper cuts up to 20 feet, the slopes should be properly shored or sloped back at least 1:1 or flatter in the moderately to highly weathered bedrock and ¾:1 (horizontal:vertical) in the less weathered granitic bedrock. The allowable temporary slope inclination is measured from the toe to top of slope. As such, if a vertical cut is incorporated into the slope, the remaining portion must be flattened to achieve the recommended inclination. Some raveling should be anticipated at the slope inclinations recommended if sandy deposits are exposed. If raveling cannot be tolerated, flatter slope inclinations should be considered. The exposed slope face should be kept moist (but not saturated) during construction to reduce local sloughing.

In areas where removals are performed adjacent to property lines, existing streets, or other improvements where temporary slopes are not feasible, temporary shoring or “ABC” slot cuts should be utilized. The slots should be no wider than 8 feet and no deeper than 8 feet, and should be backfilled immediately to finish grade prior to excavation of the adjacent two slots. If localized dry, clean sand deposits are encountered, narrower slots may be required. We should review the plans for excavation adjacent to property lines and existing improvements when they are developed.

Surcharge loads should not be permitted within a horizontal distance equal to the height of cut from the top of the excavation or 5 feet from the top of the slopes, whichever is greater, unless the cut is properly shored. Excavations that extend below an imaginary plane inclined at 45 degrees below the edge of any adjacent existing site facilities should be properly shored to maintain support of adjacent elements. Excavations and shoring systems should meet the minimum requirements given in the most current State of California Occupational Safety and Health Standards. If cuts greater than 20 feet are required, we should be contacted to provide an allowable slope inclination.

In general, the excavations will extend into both loose topsoil/weathered bedrock and very dense bedrock material. Conventional soil excavation equipment such as backhoes, loaders, scrapers, or dozers is being used for the on-going excavations on the adjacent site, but may have difficulty excavating into the dense bedrock. Relatively slow earthwork operations should be anticipated in most of the deeper cuts. Some difficulty will be encountered in ripping the dense granitic materials and drilling and shooting or blasting may aid in increasing earthwork production in deep cut areas.

4.3.3 Subgrade Preparation

Prior to placing fills or construction of the proposed structures, the subgrade soils should be scarified to a depth of 8 inches, moisture-conditioned, and compacted to at least 90 percent of the maximum dry density in accordance with ASTM D 1557. Subgrade processing should be omitted where the exposed soils are well over the optimum moisture content or if moist, undisturbed bedrock is exposed.

4.3.4 Material for Fill

The on-site soils are, in general, suitable for use as compacted fill within the building pad and pavement areas. Particles larger than 12 inches in diameter should be placed at least 2 feet below the finished subgrade in parking and landscape area fills. The location selected for the rock placement should avoid future underground work, such as utility installation. The larger rock should be placed to avoid “nesting.” Cobbles less than 12 inches in diameter may be placed in building pad fills, with the exception of the upper 3 to 4 feet (at least 1-foot below the planned footing depths), which should consist of cleaner sandy soils (particles sizes of less than 3-inch in diameter and not more than 25 percent of the material larger than 1-inch in diameter) to facilitate footing excavations.

Although not encountered in our explorations, clayey soils should not be placed within 2 feet of the building pads or within retaining wall backfill. Soils used as retaining wall backfill should be predominately granular (contain no more than 40 percent fines - portion passing No. 200 sieve) and non-expansive (E.I. less than 20). Such materials are anticipated to be available on-site.

If required, imported fill material should be predominately granular (contain no more than 40 percent fines - portion passing No. 200 sieve) and non-expansive (E.I. less than 20). The import should also exhibit an R-value of at least 50 if used in proposed paved areas. GPI should be provided with a sample (at least 50 pounds) and notified of the location of soils proposed for import at least 72 hours in prior to importing. Each proposed import source should be sampled, tested and accepted for use prior to delivery of the soils to the site. Soils imported prior to acceptance by GPI may be rejected if not suitable. Imported materials larger than 6 inches in diameter should not be used in the compacted fills.

Although not anticipated in significant quantities and if acceptable to the City and the owner, the on-site inert debris, such as concrete, asphalt, or brick, can be used in planned fills if it is adequately crushed and mixed with the on-site soils. For general fills, the material should be crushed to the consistency of aggregate base (3-inch minus) and mixed with at least three parts soil. Such material should not be placed in proposed landscape areas or beneath planned buildings.

4.3.5 Placement and Compaction of Fills

Fill soils should be placed in horizontal lifts, moisture-conditioned, and mechanically compacted to at least 90 percent of the maximum dry density in accordance with ASTM D 1557. Fill soils placed within 12 inches of the finished pavement subgrade or deeper than 5 feet below finished grade should be compacted to at least 95 percent. The optimum lift thickness will depend on the compaction equipment used and can best be determined in the field. The following uncompacted lift thickness can be used as preliminary guidelines.

Plate compactors	4-6 inches
Small vibratory or static rollers (5-ton)	6-8 inches
Scrapers, heavy loaders, and large vibratory rollers	8-12 inches

The maximum lift thickness should not be greater than 12 inches and each lift should be thoroughly compacted and accepted prior to subsequent lifts. Earthwork contractors should consider additional equipment utilizing a sheepsfoot compactor to readily breakdown oversized bedrock material from the cut during compactions.

The moisture contents of the on-site soils are widely variable (dry to moist), such that mixing and moisture conditioning during grading will be required. The earthwork contractors should allow for the variable conditions in their bids. The moisture content of the on-site materials should be between 1 to 3 percent over the optimum moisture conditions at the time of compaction. Care should be taken by the Contractor to maintain the moisture content of the soils exposed at finished grade in slab, hardscape, and pavement areas until the soils are covered. If the soils are allowed to dry out, additional processing will be required.

During backfill of excavations, the fill should be properly benched into the construction slopes as it is placed in lifts.

If the boulders encountered in the on-site cuts are to be placed in the parking lot or landscape area fills, the materials should be disposed of in windrows or pits to reduce the potential for voids. Boulders up to 36 inches in diameter should be disposed of in windrows. The windrows should be constructed in a trench condition (engineered fill brought up at a higher elevation on both sides) to allow for the voids between the boulders to be filled with sands and flooded or jetted. The particles should be placed far enough apart to prevent nesting and to permit placement and flooding/jetting of sand around each particle to avoid permanent voids. The sands used for the jetting should consist of the on-site sands or imported materials with no more than 35 percent by weight retained on the No. 200 sieve and no particles larger than 1-inch in diameter. Upon jetting, the windrows can be covered with one lift of soil before mechanically compacting with a vibratory compactor (minimum 40,000 pounds dynamic force) or large static compaction equipment (Caterpillar 824 or equivalent). A horizontal spacing of at least 20 feet should be provided between windrows. Vertically, the bottom of a new windrow should be spaced at least 5 feet from the top of the old windrow and should be offset such that the windrows are not constructed directly over the underlying windrow. The windrows should be constructed parallel with any existing permanent fill slopes and should be maintained at a horizontal distance of at least 15 feet from the face of slopes.

Boulders larger than 36 inches in diameter should be broken to achieve smaller sizes (less than 36 inches). A less desirable but acceptable alternative would be to dispose of larger boulders in pits. The pits should be constructed similarly to the windrows discussed above but only one boulder should be placed in each pit. The pit should be backfilled with sand to a distance of 36 inches from the base of the pit and flooded or jetted. Above 36 inches, the backfill should be mechanically compacted in lifts.

The locations of the windrows or pits should be coordinated by the contractor to avoid conflicts with other planned improvements, such as utilities or parking lot light standards. Alternative methods for disposal of oversized materials proposed by the contractor can be evaluated.

4.3.6 Shrinkage and Subsidence

Shrinkage is the loss of soil volume caused by compaction of fills to a higher density than before grading. Subsidence is the settlement of in-place subgrade soils caused by loads generated by large earthmoving equipment. For earthwork volume estimating purposes, an average shrinkage value of 5 to 10 percent for the surficial soils (generally in the upper 2 to 5 feet) and a bulking value of 0 to 5 percent in the deeper materials (cut) may be assumed. A subsidence of 0.1 feet may be assumed for the surficial natural soils in planned pavement areas where the surficial soils will be scarified and compacted in place. These values are estimates only and exclude losses due to removal of vegetation or debris. Actual shrinkage and subsidence will depend on the types of earthmoving equipment used and should be determined during grading.

4.3.7 Trench/Wall Backfill

Utility trench and wall backfill consisting of the on-site material or imported sand should be mechanically compacted in lifts. Soils placed as retaining wall backfill should be granular and relatively non-expansive, as previously defined. Lift thickness should not exceed those values given in the "Placement and Compaction of Fills" section of this report. Moisture conditioning of the on-site soils will be required prior to re-use as backfill. Jetting or flooding of backfill materials should not be permitted with the exception of disposing oversized materials. A representative of GPI should observe and test trench and wall backfills as they are placed.

In backfill areas where mechanical compaction of soil backfill is impractical due to space constraints, sand-cement slurry may be substituted for compacted backfill. The slurry should contain 1½ sacks of cement per cubic yard and have a maximum slump of 5 inches. When set, such a mix typically has the consistency of compacted soil.

4.3.8 Observation and Testing

A representative of GPI should observe excavations, subgrade preparation, and fill placement activities. Sufficient in-place field density tests should be performed during fill placement and in-place compaction to evaluate the overall compaction of the soils. Soils

that do not meet minimum compaction requirements should be reworked and retested prior to placement of additional fill.

4.4 FOUNDATIONS

4.4.1 General

The proposed structures may be supported on conventional isolated and/or continuous shallow footings, provided the subsurface soils are prepared in accordance with the recommendations given in this report. Footings should be supported on properly compacted fill.

The onsite sandy soils will dry out relatively quickly if left exposed. Immediately prior to placing reinforcing steel and concrete, we recommend the base of the footings be wetted and surficially compacted using a hand compactor.

4.4.2 Allowable Bearing Pressures

Based on the shear strength and elastic settlement characteristics of the recompacted on-site soils, a static allowable bearing pressure of 4,000 pounds per square foot (psf) may be used for both continuous footings and isolated column footings. These bearing pressures are for dead-plus-live-loads, and may be increased one-third for short-term, transient, wind and seismic loading. The actual bearing pressure used may be less than the value presented above and can be based on economics and structural loads to determine the minimum width for footings as discussed below. The maximum edge pressures induced by eccentric loading or overturning moments should not be allowed to exceed these recommended values.

4.4.3 Minimum Footing Width and Embedment

The following minimum footing widths and embedments are recommended for the corresponding allowable bearing pressure.

STATIC BEARING PRESSURE (psf)	MINIMUM FOOTING WIDTH (inches)	MINIMUM FOOTING* EMBEDMENT (inches)
4,000	48	24
3,000	24	24
2,500	18	24
2,000	18	18

* Refers to minimum depth below lowest adjacent grade.

A minimum footing width of 18 inches should be used even if the actual bearing pressure is less than 2,000 psf.

4.4.4 Estimated Settlements

Maximum total static settlement of the more heavily loaded column footings (assumed to 300 kips) is expected to be less than 1-inch. Maximum total static settlement of the moderately loaded column footings (assumed to be 50 to 100 kips) is expected to be less than ½-inch. Maximum differential settlements between similarly loaded adjacent footings are expected to be less than ½-inch and ¼-inch for heavily loaded and moderately loaded column footings, respectively.

The above estimates are based on the assumption that the recommended earthwork will be performed and the footings will be sized in accordance with our recommendations.

4.4.5 Lateral Load Resistance

Soil resistance to lateral loads will be provided by a combination of frictional resistance between the bottom of footings and underlying soils and by passive soil pressures acting against the embedded sides of the footings. For frictional resistance, a coefficient of friction of 0.35 may be used for design. In addition, an allowable lateral bearing pressure equal to an equivalent fluid weighing of 300 pounds per cubic foot, may be used, provided the footings are poured tight against compacted fill soils. These values may be used in combination without reduction.

4.4.6 Foundation Concrete

Laboratory testing by Schiff and Associates (currently HDR, Appendix B) indicates a soluble sulfate content of 8 mg/kg (less than 0.01 percent by weight). For the 2016 CBC, Foundation concrete should conform to the requirements outlined in ACI 318, Section 4.3, for negligible levels of soluble sulfate exposure from the on-site soil.

4.4.7 Foundation Observation

Prior to placement of concrete and steel, a representative of GPI should observe and approve foundation excavation.

4.4.8 Light Standard Bases

The design of light standard bases is generally governed by lateral force considerations. For design by the simplified pole formula presented in Section 1807A.3.2.1 of the 2016 California Building Code, a unit passive resistance of 300 pounds per square foot per foot (to a maximum of 3,000 pounds per square foot) may be used for the piles with level ground in lieu of the presumptive lateral bearing values presented in Table 1806A.2. As stated in the code, a passive resistance of 600 pounds per square foot per foot (to a maximum of 6,000 pounds per square foot) may be used for isolated piles as determined by the Project Structural Engineer. This value incorporates the allowable increase stated in Section 1806A.3.4 of the code for single poles that can tolerate ½-inch of deflection under short-term loads.

A pile designed for adequate embedment to resist the anticipated lateral loads should have adequate axial capacity to support the anticipated vertical loads. The net allowable vertical compressive capacity can be conservatively calculated based on a unit side friction of 500 pounds per square foot, neglecting any end bearing contribution. We recommend that the upper 1-foot of the subgrade soils be ignored in determining the required depth of embedment to allow for future surface disturbance adjacent to the pile.

4.5 BUILDING FLOOR SLABS

Slab-on-grade floors should be supported on granular (sandy), non-expansive, compacted soils as discussed in the “Material for Fill” section. The on-site sands and silty sands encountered are anticipated to be suitable for direct support of the slabs.

A vapor/moisture retarder should be placed under slabs that are to be covered with moisture-sensitive floor coverings (parquet, vinyl, tile, etc.). Polyolefin in 15-mil thickness should be covered by a layer of clean sand (less than 5 percent by weight passing the No. 200 sieve) having a minimum thickness of 2 inches. Based on our explorations and laboratory testing, the soils at the site are not suitable for this purpose. The function of the sand layer is to protect the vapor retarder during construction and to aid in the uniform curing of the concrete. This layer should be nominally compacted using light equipment. The sand placed over the vapor retarder should only be slightly moist. If the sand gets wet (for example because of rainfall or excessive moistening) it must be allowed to dry prior to placing concrete. Care should be taken to avoid infiltration of water into the sand layer after placement of the concrete slab, such as at slab cut-outs and other exposures. Placement of the sand over the retarder is a construction related issue. If the Contractor desires to omit the sand layer and takes the necessary steps to protect the vapor retarder and properly cure the concrete slab (prevent curling), we take no exception.

It should be noted that the material used as a vapor retarder is only one of several factors affecting the prevention of moisture accumulation under floor coverings. Other factors include maintaining a low water-cement ratio for the concrete used for the floor slab, effective sealing of joints and edges (particularly at pipe penetrations) as well as excess moisture in the concrete. The manufacturer of the floor coverings should be consulted for establishing acceptable criteria for the condition of the floor surface prior to placing moisture-sensitive floor coverings.

For the elastic design of slabs supporting sustained concentrated loads, a modulus of subgrade reaction (k) of 200 pounds per cubic inch (pounds per square inch per inch of deflection) may be used. This value is for a 1-foot by 1-foot square loaded area and should be adjusted by the structural designer for the area of the proposed building slab using appropriate elastic theory.

For lateral resistance design, a coefficient of friction value of 0.35 between aggregate base or select fill and concrete may be used. For a slab on a visqueen moisture barrier, a coefficient of 0.1 should be used.

4.6 LATERAL EARTH PRESSURES

Based on information available to us at the time this report was prepared, no major retaining walls are planned for the project. The following recommendations are provided for walls less than 8 feet high at the project site. We recommend that retaining walls be backfilled with on-site or imported non-expansive granular soils.

Active earth pressures can be used for designing walls that can yield at least ½-inch laterally in 10 feet of wall height under the imposed loads. For level backfill comprised of on-site or imported granular soils (non-expansive with no more than 40 percent passing No. 200 sieve), the magnitude of active pressures are equivalent to the pressures imposed by a fluid weighing 35 pounds per cubic foot (pcf). This pressure may also be used for the design of temporary excavation support.

At-rest pressures should be used for restrained walls that remain rigid enough to be essentially non-yielding. At-rest pressures imposed by a fluid weighing 52 pounds per cubic foot should be used for drained granular backfill.

Walls subject to surcharge loads should be designed for an additional uniform lateral pressure equal to one-third and one-half the anticipated surcharge pressure for unrestrained and restrained walls, respectively.

The wall backfill should be well-drained to relieve possible hydrostatic pressure or designed to withstand these pressures. A drain consisting of perforated pipe and gravel wrapped in filter fabric should be used. One cubic foot of rock should be used for each lineal foot of pipe. The fabric (non-woven filter fabric, Mirafi 140N or equivalent) should be lapped at the top. We prefer pipe and gravel drains to weep holes to avoid potential for constant flow of surface water in front of the wall.

The Structural Engineer should specify the use of select, granular wall backfill on the plans. Wall footings should be designed as discussed in the "Foundations" section.

4.7 CORROSIVITY

Based on results of laboratory testing (Appendix B), the on-site soils are moderately corrosive to ferrous metals. GPI does not practice corrosion engineering. Should the use of buried pipe be proposed, a corrosion engineer such as HDR should be contacted to provide recommendations to protect these elements from corrosion.

4.8 DRAINAGE

Positive surface gradients should be provided adjacent to structures so as to direct surface water run-off and roof drainage away from foundations and slabs toward suitable discharge facilities. The introduction of water into uncompacted natural soils can result in subsidence due to densification of the collapsible soils. Long-term ponding of surface water should not be allowed on pavements or adjacent to buildings. We recommend that landscape planters be avoided immediately adjacent to the building. If planters are required, they should be provided with surface drains and planted with drought tolerant plants to reduce the

potential for the infiltration of surface water beneath the building foundations and floor slabs.

4.9 EXTERIOR CONCRETE AND MASONRY FLATWORK

Exterior concrete and masonry flatwork should be supported on granular, non-expansive (EI not greater than 20) compacted fill. Prior to placement of concrete, the subgrade should be prepared as recommended in "Subgrade Preparation" section. It should be noted that the sidewalk in front of the buildings should be considered as part of the building pad for earthwork purposes.

4.10 PAVED AREAS

R-value test results indicate that the subgrade soils have an R-value of 63. Preliminary pavement design has been based on an R-value of 50. The California Division of Highways Design Method was used for design of the recommended preliminary asphalt concrete pavement sections. These recommendations are based on the assumption that the pavement subgrades will consist of existing near surface soils. Final pavement design should be based on R-value testing performed near the conclusion of rough grading. The following pavement sections are recommended for planning purposes only.

PAVEMENT SECTIONS

PAVEMENT AREA	TRAFFIC INDEX	SECTION THICKNESS (inches)	
		ASPHALT/PORTLAND CONCRETE	AGGREGATE BASE COURSE
Asphalt Concrete			
Automobile Parking	4.0	3.0	4.0
Automobile Drives	5.0	3.0	5.0
Truck/Bus Drives	6.0	3.5	5.0
Portland Cement Concrete			
Automobile Parking	4.0	6.0	4.0
Automobile Drives	5.0	6.0	4.0
Truck/Bus Drives	6.0	6.5	4.0

The pavement subgrade underlying the aggregate base should be properly prepared and compacted in accordance with the recommendations outlined under "Subgrade Preparation" or “Placement and Compaction of Fills”.

The pavement base course should be compacted to at least 95 percent of maximum density (ASTM D 1557). Aggregate base should conform to the requirements of Section 26 of the California Department of Transportation Standard Specifications for Class II aggregate base (three-quarter inch maximum) or Section 200-2 of the Standard Specifications for Public Works Construction (Green Book) for untreated base materials (except processed miscellaneous base).

The concrete used for paving should have a modulus of rupture of at least 550 psi (equivalent to an approximate compressive strength of 3,700 psi at the time the pavement is subjected to traffic). The upper 12 inches of the subgrade soils should be compacted to at least 95 percent of the maximum dry density (ASTM D 1557).

The above recommendations are based on the assumption that the base course and compacted subgrade will be properly drained. The design of paved areas should incorporate measures to prevent moisture build-up within the base course, which can otherwise lead to premature pavement failure. For example, curbing adjacent to landscaped areas should be deep enough to act as a barrier to infiltration of irrigation water into the adjacent base course.

4.11 SLOPES

New slopes or modifications to existing slopes up to 15 feet in height may be constructed at inclinations of 2:1 (horizontal:vertical) or flatter. For higher slopes, GPI should be provided with the details to evaluate the recommended inclination.

Achieving good compaction at the face of the slope is important in reducing the potential for erosion. Modifications to the existing slopes should be overbuilt by at least 3 feet during rough grading and trimmed back to a hard and unyielding surface. The fill should be properly benched into the existing slopes as it is placed in lifts. Slope rolling to achieve a finished compacted surface should not be used if surficial erosion is not tolerable.

Slopes should be seeded or planted as soon as possible to reduce the erosion potential. Other protective measures, such as installing drains and grading the top of the slope to drain should be performed. We recommend that the condition of the existing slopes on-site be periodically reviewed to confirm that the erosion protection measures are in good repair.

Setbacks of structures from the top and toe of the existing and planned slopes should be maintained in accordance with the County of Riverside standards.

4.12 SUBSURFACE INFILTRATION

To provide a preliminary evaluation of the infiltration characteristics for a proposed stormwater bio-infiltration system, we performed two near-surface field infiltration tests. Details of the infiltration system have not been established, but based on the request of the Project Team, we have performed infiltration tests along Clinton Keith Road at the existing alignment of Antelope Road and along Antelope Road between our borings B-101 and B-102. Both tests were performed at approximate depths of 1-foot below the current ground surface. The tests were performed in general accordance with the County of Riverside methods (County of Riverside, 2011).

The tests were performed in shallow borings drilled with an 8-inch hollow stem auger. The test wells were filled with approximately 1-foot of water at the initiation of the test. During the initial soak, the wells exhibited two consecutive measurements of greater than 6 inches of water surface drop in less than 25 minutes, meeting the criteria for Sandy Soils as detailed in the County guidelines. As such, we performed the subsequent infiltration tests over 10-minute intervals. The tests were repeated until 8 readings were obtained. The pre-adjusted infiltration rate was calculated as the depth of water drained over the associated

time interval.

Once the pre-adjusted infiltration rate was determined, we corrected the results using the Porchet Method as outlined by the County. We determined the following stabilized and corrected rates:

- P-101 – 2.2 inches per hour
- P-102 – 2.1 inches per hour

Significantly lower infiltration rates, approaching zero, are anticipated in the less weathered bedrock materials. Additional testing should be performed when finished grades are established. Additional factors of safety in computing the design infiltration rate of the proposed infiltration BMP should be determined by the project Civil Engineer. The results of the infiltration tests are presented in Table 1, Borehole Infiltration Test Results.

It should be noted that the volume of water applied during our test was relatively low compared to the planned system. Due to the dense nature of the near surface and subsurface soils and the presence of shallow weathered bedrock, infiltration of large volumes of water into the near surface soils may result in limited percolation rates and the potential for long-term mounding or perched conditions. The Civil Engineer should evaluate the feasibility of subsurface infiltration using the rates provided.

The testing was performed with clean, clear water, and the results do not include effects of sediments, fines, dissolved solids, or other debris, as these will significantly reduce the percolation rates of the subsurface soils. The infiltration system should include processes to clean the inflow of sediments or other deleterious materials to reduce the potential for clogging and reduced infiltration rates.

4.13 GEOTECHNICAL OBSERVATION AND TESTING

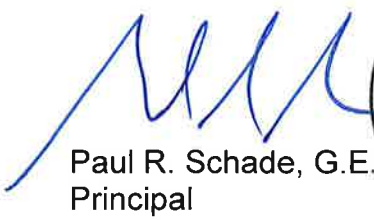
We recommend that a representative of GPI observe earthwork during construction to confirm that the recommendations provided in our report are applicable during construction. The earthwork activities include grading, compaction of fills, subgrade preparation, backfill of utility trenches and retaining walls, pavement construction and foundation excavations. If conditions are different than expected, we should be afforded the opportunity to provide an alternative recommendation based on the actual conditions encountered.

5.0 LIMITATIONS

The report, exploration logs, and other materials resulting from GPI's efforts were prepared exclusively for use by CK 17 LP, Felicita Inc., and their consultants in designing the proposed development. If relying on this report, those entities besides CK 17 LP are bound by the terms and conditions in our contract with CK 17 LP (a copy can be provided upon request). The report is not intended to be suitable for reuse on extensions or modifications of the project or for use on any project other than the currently proposed development, as it may not contain sufficient or appropriate information for such uses. If this report or portions of this report are provided to contractors or included in specifications, it should be understood that they are provided for information only. This report cannot be utilized by another entity without the express written permission of GPI. This report is an instrument of our services and remains the property of GPI.

Soil deposits may vary in type, strength, and many other important properties between points of exploration due to non-uniformity of the geologic formations or to man-made cut and fill operations. While we cannot evaluate the consistency of the properties of materials in areas not explored, the conclusions drawn in this report are based on the assumption that the data obtained in the field and laboratory are reasonably representative of field conditions and are conducive to interpolation and extrapolation.

Furthermore, our recommendations were developed with the assumption that a proper level of field observation and construction review will be provided during grading, excavation, and foundation construction by GPI. If field conditions during construction appear to be different than is indicated in this report, we should be notified immediately so that we may assess the impact of such conditions on our recommendations. If construction phase services are performed by others they must accept full responsibility (as Project Geotechnical Engineer) for the geotechnical aspects of the project, including this report.



Our investigation and evaluations were performed using generally accepted engineering approaches and principles available at this time and the degree of care and skill ordinarily exercised under similar circumstances by reputable Geotechnical Engineers practicing in this area. No other representation, either expressed or implied, is included or intended in our report.

Respectfully submitted,
Geotechnical Professionals Inc.

Dylan J. Boyle, P.E.
Project Engineer

Paul R. Schade, G.E.
Principal

APPENDIX A

APPENDIX A

EXPLORATORY BORINGS

The subsurface conditions at the site were investigated by drilling and sampling 20 exploratory borings over two separate field investigations at the subject site. A total of 17 borings (B-1 through B-17), located on the eastern half of the site, were performed in January 2009. Three borings (B-101 through B-103) were performed as part of the current investigation. The borings were advanced to depths ranging from 11 to 39 feet below the existing ground surface (at the time of drilling). Several explorations were terminated prior to the planned depths after meeting practical refusal on dense native soils or possible due to the presence of cobbles or boulders. The locations of the explorations from both investigations are shown on the Site Plan, Figure 2.

The exploratory boring was drilled using truck-mounted hollow-stem auger drill equipment. Relatively undisturbed samples were obtained using a brass ring lined sampler (ASTM D 3550). The brass rings have an inside diameter of 2.42 inches. The ring samples were driven into the soil by a 140-pound hammer dropping 30 inches. The number of blows needed to drive the sampler into the soil was recorded as the penetration resistance.

At selected locations, disturbed samples were obtained using a split-spoon sampler by means of the Standard Penetration Test (SPT, ASTM D 6066). The spoon sampler was driven into the soil by a 140-pound hammer dropping 30 inches, employing the “free-fall” hammer described above. After an initial seating drive of 6 inches, the number of blows needed to drive the sampler into the soil a depth of 12 inches was recorded as the penetration resistance. These values are the raw uncorrected blowcounts.

The field explorations for the investigation were performed under the continuous technical supervision of GPI's representative, who visually inspected the site, maintained detailed logs of the borings, classified the soils encountered, and obtained relatively undisturbed samples for examination and laboratory testing. The site contains topsoil/weathered bedrock over bedrock materials. However, the materials encountered in the borings were classified in the field and through further examination in the laboratory in accordance with the Unified Soils Classification System. Detailed logs of the borings are presented in Figures A-1 to A-20 in this appendix.

The boring locations were laid out in the field based on the available site plans, topographic information, and by measuring from existing site features. Ground surface elevations for the explorations from our 2009 investigation were obtained from a topographic map. Elevations for explorations from the current investigation were estimated from internet sources. In both cases, the ground surface elevations should be considered approximate.

APPENDIX B

APPENDIX B

LABORATORY TESTS

INTRODUCTION

Representative undisturbed soil samples and bulk samples were carefully packaged in the field and sealed to prevent moisture loss. The samples were then transported to our Cypress office for examination and testing assignments. Laboratory tests were performed on selected representative samples as an aid in classifying the soils and to evaluate the physical properties of the soils affecting foundation design and construction procedures. Detailed descriptions of the laboratory tests are presented below under the appropriate test headings. Test results are presented in the figures that follow.

MOISTURE CONTENT AND DRY DENSITY

Moisture content and dry density were determined from a number of the samples. The samples were first trimmed to obtain volume, weighed to determined the wet weight, and then were dried in accordance with ASTM D 2216. After drying, the weight of each sample was measured, and moisture content and dry density were calculated. Moisture content and dry density values are presented on the boring logs in Appendix A.

GRAIN SIZE DISTRIBUTION

Multiple soil samples were dried, weighed, soaked in water until individual soil particles were separated, and then washed on the No. 200 sieve. That portion of the material retained on the No. 200 sieve was oven-dried and weighed to determine the percentage of the material passing the No. 200 sieve. For select samples, the retained material was then run through a standard set of sieves in accordance with ASTM D 422 to classify the coarse fraction of representative sample. A summary of the percentages passing the No. 200 sieve is presented below. The grain size distribution data obtained from the full sieve analyses are presented in Figures B-1 to B-3.

BORING NO.	DEPTH (ft)	SOIL DESCRIPTION	PERCENT PASSING No. 200 SIEVE
B-2	2	Silty Sand (SM)	25
B-6	5	Sand with Silt (SP-SM)	8
B-8	5	Silty Sand (SM)	27
B-11	7	Sand with Silt (SP-SM)	10
B-12	5	Silty Sand (SM)	21
B-14	0 – 5	Silty Sand (SM)	38
B-15	0 – 5	Silty Sand (SM)	32
B-15	2	Silty Sand (SM)	30

BORING NO.	DEPTH (ft)	SOIL DESCRIPTION	PERCENT PASSING No. 200 SIEVE
B-15	5	Silty Sand (SM)	28
B-15	10	Sand with Silt (SP-SM)	11
B-16	2	Silty Sand (SM)	27
B-16	5	Silty Sand (SM)	31
B-16	7	Silty Sand (SM)	17
B-16	10	Silty Sand (SM)	13
B-17	0 – 5	Silty Sand (SM)	35
B-17	2	Sandy Silt (ML)	53
B-17	10	Silty Sand (SM)	16
B-101	2	Sandy Silt (ML)	53
B-101	7	Silty Sand (SM)	17
B-102	5	Sand with Silt (SP-SM)	11
B-102	10	Silty Sand (SM)	21
B-103	5	Silty Sand (SM)	16
B-103	10	Silty Sand (SM)	13

ATTERBERG LIMITS

Liquid and plastic limits were determined for select samples of cohesive material in accordance with ASTM D 4318. Results of the Atterberg Limits tests are summarized on Figure B-4.

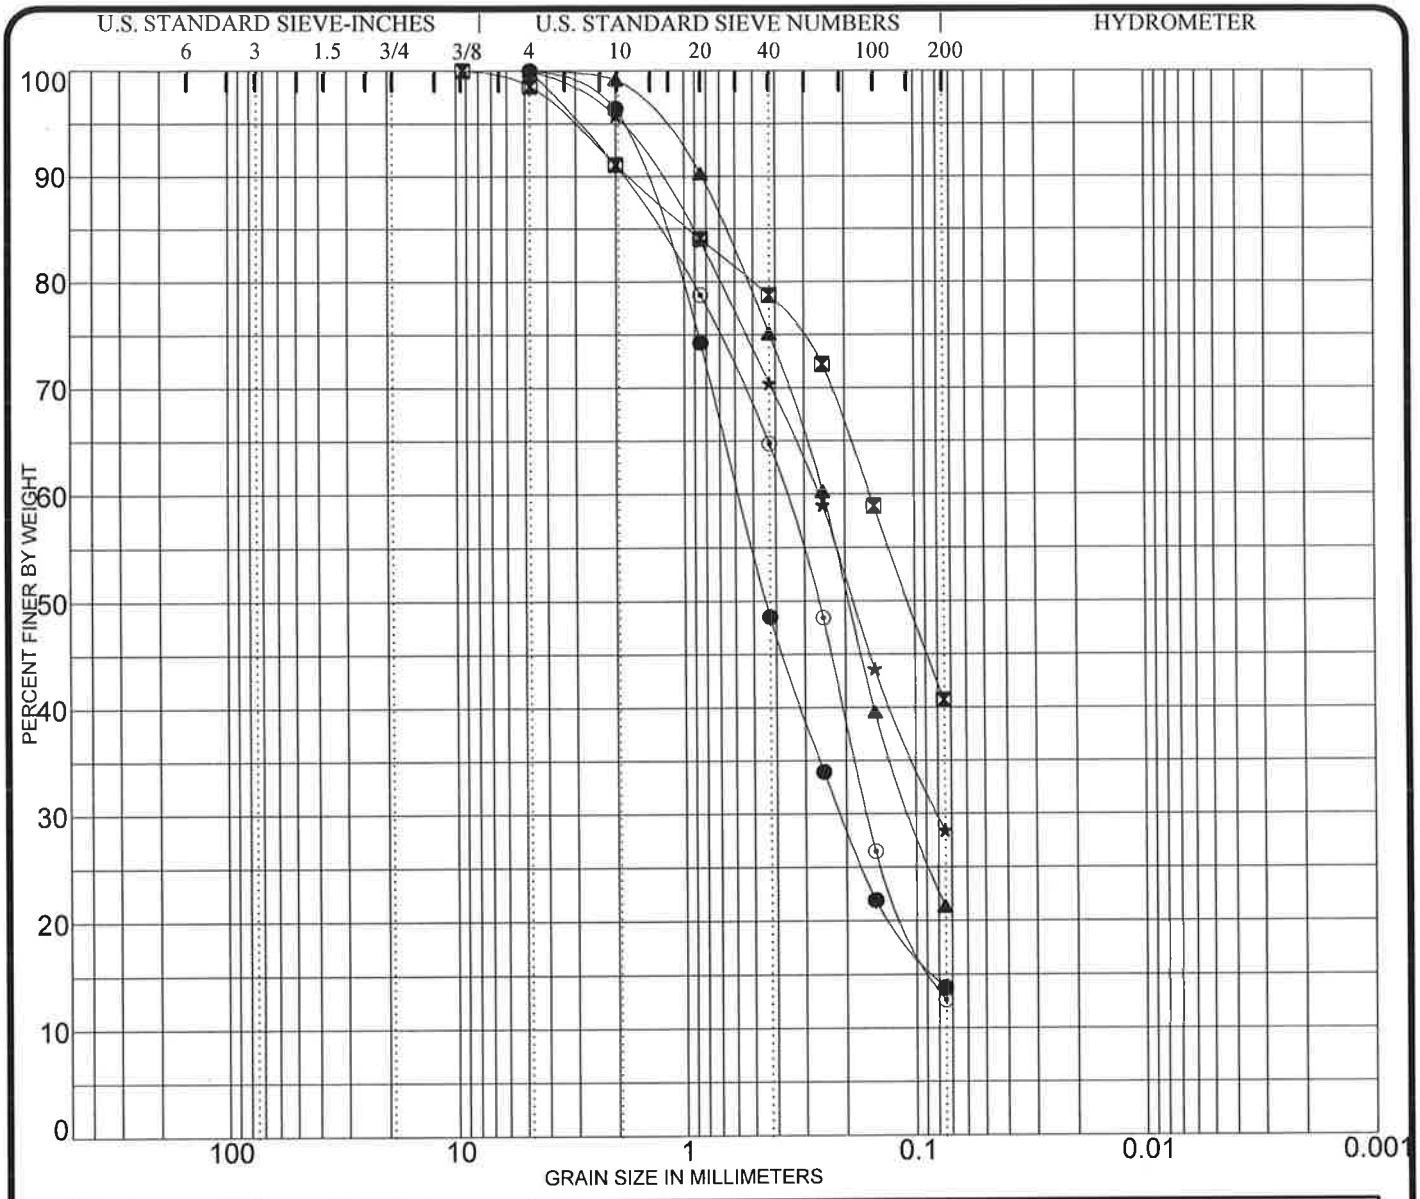
DIRECT SHEAR

Direct shear tests were performed on undisturbed and remolded bulk samples in accordance with ASTM D 3080. The bulk sample was remolded to approximately 90 percent of maximum density (ASTM D1557). The samples were placed in the shear machine, and a normal load comparable to the in-situ overburden stress was applied. The samples were inundated, allowed to consolidate, and then were sheared to failure. The tests were repeated on additional test specimens under increased normal loads. Shear stress and sample deformation were monitored throughout the test. The results of the direct shear tests are presented in Figures B-5 to B-7.

COMPACTION TEST

Maximum dry density/optimum moisture tests were performed in accordance with ASTM D 1557 on select, representative bulk samples of the site soils. The test results are as follows:

BORING NO.	DEPTH (ft)	SOIL DESCRIPTION	OPIMUM MOISTURE (%)	MAXIMUM DRY DENSITY (pcf)
B-14	0 – 5	Silty Sand (SM)	9.0	133
B-16	0 – 5	Silty Sand (SM)	8.0	132



R-VALUE

Suitability of the near-surface soils for pavement was evaluated by conducting an R-value test. The test was performed in accordance with ASTM D 2844 by GeoLogic Associates (GLA) under subcontract to GPI. The result of the test is as follows:

BORING NO.	DEPTH (ft)	SOIL DESCRIPTION	R-VALUE BY EXPANSION
B-16	0 – 5	Silty Sand (SM)	63

CORROSIVITY

Soil corrosivity testing was performed by Schiff and Associates (currently HDR) on a soil samples provided by GPI. The test results are summarized in Table 1 of this Appendix.

Phase I Environmental Site Assessment
Val Vista, 8.23 Acres – Vacant Land
NEQ Clinton Keith Road and 215 Freeway
Murrieta, California

EXECUTIVE SUMMARY

IWS Environmental Services Inc. (IWS), conducted this Phase I Environmental Site Assessment for four contiguous parcels comprising 8.23 acres of vacant property located in the directly east of the 215 Freeway and north of Clinton Keith Road in the City of Murrieta California. This Phase I was conducted in conformance with the scope and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).

PROPERTY DESCRIPTION AND USE

The property is comprised of 4 contiguous parcels comprising 8.23 acres immediately east of the 215 Freeway and directly north of Clinton Keith Road. There are no buildings or structures on the subject site. (See: Figure 2).

The subject site is situated in the northeastern portion of the City of Murrieta, an area of the city comprised primarily of residential with a mix of scattered retail and commercial businesses. Major vehicle arteries in the area include the I-215 Freeway located directly west. Major lakes in the area include Skinner Lake located 5.75 miles east and Diamond Valley Lake located 8 miles northeast of the subject property.

Based upon historical data collected for this Phase I, for well over a century, possibly more, the subject site has remained vacant undeveloped land void of any development, buildings or structures (exclusive of a cell tower located on the northwest corner of the site). There has never been a recorded spill or release of hazardous substance on the subject site or any adjoining properties.

FINDINGS

Based on the standards set by ASTM Standard Practice E1527-13, a recognized environmental condition (REC) is the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. Conditions that are determined to be *de minimis*, which do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies, are not recognized environmental conditions.

The standard further identifies historical RECs and controlled RECs. An historical REC (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. A controlled REC (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

The following findings are differentiated below as *de minimis* conditions unlikely to be subject to government enforcement, HRECs, CRECs and RECs.

DE MINIMIS CONDITIONS

This assessment revealed no evidence of potential or *de minimis* conditions in connection with the subject property.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of HRECs in connection with the subject property.

CONTROLLED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of CRECs in connection with the subject property.

RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of RECs in connection with the subject property

CONCLUSIONS, OPINIONS AND RECOMMENDATIONS

IWS Environmental Inc. has performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-13, US-EPA AAI for 8.23 acres of vacant land located in the directly east of the 215 Freeway and north of Clinton Keith Road in the City of Murrieta, California. This assessment has revealed no evidence of any RECs in connection with the subject property. No additional assessments are recommended at this time.

Phase I Environmental Site Assessment
Val Vista, 8.23 Acres – Vacant Land
NEQ Clinton Keith Road and 215 Freeway
Murrieta, California

1.0. INTRODUCTION

IWS Environmental Inc. (IWS) was directed by Mr. Allan Davis of Retail Development Advisor, Corp to perform a Phase I Environmental Site Assessment (Phase I) on 4 parcels comprising approximately 8.23 acres of vacant, undeveloped land. The Phase I was performed in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the United States Environmental Protection Agency (USEPA) Standards and Practices for 'All Appropriate Inquiries (AAI)' (40 CFR Part 312). The Phase I is designed to provide the Client (user) with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

1.1. PURPOSE

The purpose of the Phase I is to identify and assess environmental characteristics of the subject property that could lead to liability in the event of ownership, that could have a potential impact on property value or that could impact the present or future use of the subject property.

The purpose of ASTM Standard Practice E1527-13 and USEPA AAI is to define good commercial and customary practice for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the *Comprehensive Environmental Response Compensation and Liability Act* (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35) (B). An evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that identified in this practice (based on ASTM Practice E1527-13).

The goal of ASTM Standard Practice E1527-13 is to identify *recognized environmental conditions* (RECs) in connection with the subject property. A REC is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. Conditions that are determined to be *de minimis*, which do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies, are not recognized environmental conditions.

The standard further identifies historical RECs and controlled RECs. An historical REC (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. A controlled REC (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

1.2. SITE DESCRIPTION

The subject property is located directly east of the 215 Freeway and north of Clinton Keith Road in the city of Murrieta, California for well over a century, possibly more. The subject site is located within an area of the city comprised of residential and retail use. Further property location descriptions, characteristics, improvements, and site vicinity characteristics are discussed below.

This Phase I was conducted in conformance with the scope and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).

1.2.1. Location and Legal Description

The subject property location can be identified as the following:

Site Addresses	No addresses attached to parcels
Assessor's Parcel Number (APN)	392-2700-30, 31, 32, 33
Property Owner	Val Vista Estates, Inc
Land Use Type	Vacant
Legal Description	See Attached PTR for Legal Descriptions of Parcels
Size of Property	8.23 Acres (includes total parcels)

1.2.2. Site and Vicinity General Characteristics

The subject site is located within an area of the city comprised of residential and retail use in the City of Murrieta, California. Figure 1 shows the setting of the subject property (7.5 Minute United

States Geological Survey [USGS] Topographic Series, Murrieta Quadrangle, California). Photographs of the subject property are provided in Appendix A.

1.2.3. Current Use of Property

The subject property is currently vacant, undeveloped land.

1.3. DETAILED SCOPE-OF-SERVICES

Except where identified in Section 7.1., the scope of work for this Phase I conforms to ASTM Standard Practice E1527-13 and the USEPA AAI (40 CFR Part 312). Any additional User requested scope of services is discussed in Section 6.0.

1.4. SIGNIFICANT ASSUMPTIONS

Our professional services were performed using that degree of care and skill ordinarily exercised by environmental consultants practicing in this or similar fields. Findings were based mainly upon examination of historical records, maps, aerial photographs and government agency lists, on a site reconnaissance visit, and on information obtained during personal interviews with persons of long term familiarity with the subject property as specified in ASTM E1527-13 and the USEPA AAI. Hazardous waste site lists presented in this report represents only a search of specific government records as listed below. IWS is aware additional government records may exist. It should be noted that government agencies often do not list all sites with environmental contamination or that the list could be inaccurate and/or incomplete.

Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites, are assumed based on geologic interpretations from available sources. IWS assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.5. LIMITATIONS AND EXCEPTIONS

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. IWS makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

Considerations identified as beyond the scope of an ASTM Phase I that may affect business environmental risks at a property include the following: asbestos-containing materials (ACMs); biological agents; cultural and historic resources; ecological resources; endangered species; health and safety; indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment; industrial hygiene; lead-based paint (LBP); lead in drinking water; mold; radon; regulatory compliance; and wetlands. These environmental issues may warrant assessment based on the type of property or transaction; however, they are considered non-scope issues under ASTM Practice E1527-13. Any addition of non-scope items must be agreed upon between the user and IWS prior to initiation of the Phase I.

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of investigation into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit.

1.6. SPECIAL TERMS AND CONDITIONS

There were no special terms or conditions, agreed upon by the environmental professional, beyond the initial agreed upon scope of work, used in preparation of this report.

1.7. USER RELIANCE

Conclusions and recommendations in this report are based on findings regarding historical use of the site, and on features noted during the site reconnaissance. The absence of any potential gross contamination sources, historic or present, does not necessarily imply that the site is free of any contamination. This report only represents a ‘due diligence’ effort as to the current environmental status of the site. No other warranty, expressed or implied, is made as to the professional recommendations contained in this report.

2.0. USER PROVIDED INFORMATION

According to the ASTM Standard E1527-13 and the USEPA AAI, in order to qualify for one of the Landowner Liability Protections (LLPs) to CERCLA liability offered by the *Small Business Liability Relief and Brownfields Revitalization Act of 2001*, the client (user) must provide to the environmental professional the following information (if available) in relation to the subject property:

Title Records	A review of Title Records was not requested by the user.
Environmental Liens or Activity and Use Limitations	A Preliminary Title Report (PTR) dated June 8, 2017 was provided to IWS. No environmental liens or land use restrictions were found on the PTR. The PTR is provided in Appendix F.
Specialized Knowledge	IWS was not provided any specialized knowledge by the user and does have not any specialized knowledge of this property outside of what is contained in this report. The property ownership and tenants as well as all individuals who were interviewed as part of this investigation, have not reported any specialized knowledge of this property outside of what is contained in this report.
Commonly Known or Reasonably Ascertainable Information	The user provided no commonly known or reasonably ascertainable information available within the local community about the subject property that is material to recognized environmental conditions in connection with the property.
Valuation Reduction for Environmental Issues	No property valuation reduction related to environmental issues or concerns was reported by the user.
Owner, Property Manager, and Occupant Information	No written or verbal communication with the property owner, manager and/or occupant revealed any information which suggested that there are currently or historically any recognized environmental conditions associated with the subject property not noted in this assessment.
Reason for Performing Phase I	Property sale.
Other	No modifications to the ASTM E1527-13 standard scope-of-services were requested by the user for special circumstances that might be encountered at the subject property. Any additional user requested scope of services is discussed in Section 6.0.

Failure to provide the above information could result in a determination that 'all appropriate inquiries' are not complete. Additional items should be collected, if available, and provided to IWS.

3.0. RECORDS REVIEW

The purpose of obtaining and reviewing subject property and site vicinity historical, physical setting, and regulatory records is to help identify *recognized environmental conditions* in connection with the subject property.

3.1. HISTORICAL USE INFORMATION

The objective of consulting historical sources for a Phase I is to develop a history of previous uses of the property and surrounding area to help identify the likelihood of past uses having led to recognized environmental conditions with respect to the property. All obvious uses shall be identified from the present to the property's first obvious developed use, or back to 1940, whichever is earlier. Review of standard sources at less than five year intervals is not required.

3.1.1. Historical Use Information on Subject Property

Subject property history was researched by reviewing historical Sanborn Fire Insurance Maps, aerial photographs, topographic maps, telephone directory information, Los Angeles County Assessor's Office records, and the City of Santa Fe Springs Building and Planning Division records.

Based on a review of historical documents, the subject property has remained vacant undeveloped land absent of any agricultural use and absent of any former buildings or structures. Antelope Road which extends through the property was constructed in the mid 1970's. The surrounding area were utilized for agricultural purposes from the 1920's (possibly sooner) and slowing ceasing in the 1960's to the mid 2000's. The type of crops grown on adjacent parcels was primarily oats. Chemicals associated with agricultural activities may have been used on adjacent properties, however, based upon the length of time agricultural activities have taken place on adjacent property, and a lack of a migration path, it is highly unlikely detectable levels of residual agricultural chemicals would be present on the subject site.

3.1.1.1. Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas but are now utilized as a valuable source of historical and environmental risk information. Environmental Data Resources (EDR) owns the largest collection of Sanborn Fire Insurance Maps. IWS requested EDR to provide any Sanborn Fire Insurance Maps that might cover the subject property. Sanborn Fire Insurance Map coverage is not available for the subject property.

3.1.1.2. Aerial Photographs

IWS reviewed aerial photographs of the subject property and surrounding area that were provided by EDR for the years 1927, 1938, 1947, 1952, 1963, 1972, 1977, 1987, 1990, 1994, 2005, 2009, 2010, and 2012 The following is a summary of our review of the aerial photographs:

Year(s)	Aerial Photo Summary
1938	The subject property was located in a rural area of Riverside County. The subject site was vacant, undeveloped land in this photograph absent of any use. Portions of the properties located east of the subject site appeared to be utilized for dry oat farming. A 2-land dirt road extended along the western portion of the site in what would currently be the path of the I-215 Freeway.
1949	No significant changes were noted on the subject site as compared to the 1938 photograph reviewed. Scattered portions of land located to the south and west that were vacant in the 1938 photograph reviewed were utilized for dry oat farming in this photograph.
1961, 1967	No significant changes were noted on the site and adjacent properties as compared to the 1949 photograph reviewed.
1978	Antelope Road was being graded through the eastern portion of the site, connecting to Clinton Keith Road from the north. The remaining portion of the subject site was vacant. A northbound on-ramp was present from Clinton Keith Road connecting to the I-215. Dry oat farming was still present on properties to the east.
1985, 1989	Antelope Road was present extending through the subject property as a completed 2-lane street. Scattered homes were present ½ mile north of the site. Dry oat farming was present directly east and south of the subject site.
1996	A graded area was present just north of the northern portion of the site adjacent to the north bound I-215 on-ramp. Unidentifiable equipment was present in that area. The subject site remained unchanged from the previous photograph reviewed. Dry oat farming, which was performed on properties to the east and south, was no longer present in this photograph.
2002	No changes to the subject site and adjacent properties from the previous photograph reviewed.
2005, 2006	No changes to the subject site from the previous photograph reviewed. Development of a residential community was present 1,300 feet east of the site. Directly adjacent to the east, portions of the land were being graded. Murrieta High School was present directly southeast. Orchard shopping center was under construction to the west.
2009, 2010, 2012	No changes to the subject site from the previous photograph reviewed. No significant environmental concerns were noted in any of the photograph reviewed.

A review of historical aerial photographs did not reveal any items of environmental concerns in connection with the subject property. It should be noted the red border of the subject site depicted on the later aerial photographs is an approximation of the property boundary and may not represent the actual site boundary. Copies of the historical aerial photographs can be found in Appendix B of this report.

3.1.1.3. Historical Topographic Maps

IWS reviewed historical topographic maps of the subject property and surrounding area that were supplied by EDR for the years 1901, 1942, 1943, 1947, 1953, 1973, 1979, and 2012. The following is a summary of our review of the topographic maps:

Year(s)	Historical Topographic Map Summary
1901	The subject property and surrounding area was depicted as being an undeveloped area void of any buildings or structures. Scattered dirt roads were depicted in the area. One of the roads was depicted directly west of the site (currently I-215) The only buildings visible were located approximately 4 miles southwest in an area identified as "Murrieta".
1942, 1943, 1947	Two farm houses were depicted directly west between the subject site and I-215 which is shown on the map as Antelope Road. The immediate area was depicted as rural, undeveloped land.
1953, 1973, 1979	The subject property and surrounding area was depicted as being an undeveloped area. The two farm houses shown in the 1947 map were not depicted on this map. I-215 was visible as a paved highway.
2012	The subject property and surrounding areas were depicted as being fully developed and indicative of current conditions.

A review of historical topographic maps did not reveal any items of environmental concern in connection with the subject property.

3.1.1.4. Street Directories

IWS requested that EDR provide a review of city and street directories to determine the occupancy history of the property. There were no findings for the subject property. The city directory search for adjacent properties did not find any that would represent and environmental concern to the subject site.

A copy of the city directory can be found in Appendix B of this report.

3.1.1.5. Murrieta Building and Planning Department

The Murrieta Building and Planning Department was contacted to review records pertaining to the site, including any building applications, permits, and any notices of code violations. The city has no records for any building permits for the subject parcels.

3.1.1.6 Riverside County Building and Planning Department

Prior to the City of Murrieta being incorporated, the County of Riverside, Building and Planning Department (CRBPD) oversaw all building permits in Murrieta. An email request was submitted to the CRBPD for any records they may have in their files for the subject parcels. On August 4, 2017, Kim from the Records and Information Management division responded to our request via email and indicated they have no records for the subject site in their files.

3.1.1.7. Assessor Records

IWS reviewed tax assessor records to determine the ownership of the property. Parcel numbers 392-270-030, 31, 32, and 33 indicates title to the properties Curci Turner Company Val Vista Estates Inc. dated January 11, 2006 for the subject parcels.

3.1.2. Historical Use Information on Adjoining Properties

Historical uses of immediately adjoining properties are summarized below.

North	Agricultural use to the early 1980's, vacant undeveloped land. An inspection of the area north of the subject site did not reveal any environmental concerns.
South	Agricultural use to the early 1990's, then vacant until 2015 when developed for residential use. An inspection of the area south of the subject site did not reveal any environmental concerns.
West	Agricultural use to the early 1960's, then vacant until 2006 when commercial development took place. An inspection of the area west of the subject site did not reveal any environmental concerns.
East	A combination of agricultural and vacant land use to 2009 when the site started to be utilized for mining of soils which currently is taking place on the site. An inspection of the area east of the subject site did not reveal any environmental concerns.

Historical uses of adjoining properties for over 50 years have been primarily utilized for industrial and commercial use. These industrial uses, especially prior environmental regulations taking

place in the late 1970's and early 1980's, may contribute to both soil and ground water contamination of adjoining properties. Several of which have been documented.

3.2. PHYSICAL SETTING SOURCES

Geology	Physiographically, the subject site is approximately 1530 feet above mean sea level {United States Geologic Survey [USGS], 1975). The dominant structural feature is the San Andreas Fault zone, which trends in a southeast-northwest direction at the base of the San Bernardino Mountains; motion along this fault has caused the uplift of the San Bernardino and San Gabriel mountain ranges. Additional major fault structures include the San Jacinto fault zone and the Elsinore Fault Zone. The San Jacinto Mountains are caused by motion from both the San Andreas and San Jacinto zones. The area between the San Jacinto zone and the Elsinore Zones is a down-dropped block, which is partly in-filled with sediments from the surrounding mountains. In addition, the southern end of the Wildomar Fault has been identified approximately one mile north of the project site. The predominant features are intrusive rocks of the southern California batholith (granitic and andesitic rocks) which have been uplifted/eroded to form the mountain ranges, alluvial/fluvial sediments, and semi-consolidated sedimentary units. Soil surface textures in the area of the project site is fine and very fine sandy loam, unweathered bedrock, and sandy loam. Shallow soils are more gravelly, intermixed with clays and fine sandy loam. Deeper soils are gravelly-sandy loam.
Hydrology	The regional flow of groundwater is to the west, toward the Pacific Ocean. Locally, water flow from the project site is to the west southwest, towards Lake Elsinore. The area has been assigned to the Class D Hydrologic group, as there is very slow water infiltration rate due to clayey soils, the high water table is between 30 inches and 18 feet below ground, and there is a shallow depth of an impervious layer, where the depth to bedrock is between 4 and 26 inches: The soil does not meet the requirements of a hydric soil. Soil drainage is somewhat excessive, as the soils have a high hydraulic conductivity and a low water-holding capacity. Soil pH ranges between 6.1 and 7.3. The direction of free-flowing ground water in the area of the site is inferred to be in a south, southeast direction. Information collected for this report indicates there are no known polluted ground water plumes under or near the subject property.
Topography	The property is located at an elevation of approximately 1,550 feet above mean sea level (MSL), in an area of low topographic relief. Regional slope of the area is toward the south-southwest.

Surface Soils	EDR provides a report listing dominant soil composition in the general area of the subject property based on information from the United States Department of Agriculture's Soil Conservation Service STATSGO (State Soil Geographic Database) soil maps. Soil surface texture is listed as Myford sandy loam. Myford series consists of deep, moderately well drained, very slowly to moderately slowly permeable soils that formed in alluvium derived from mixed sources. Slope range from 0.05 to 0.06 percent.
Surface Water Features	There are no surface water features on the subject property. The nearest surface water features in the vicinity of the subject property is Lake Skinner located 6 miles east.
Flood Zone	The EDR database report shows that the subject property is not located within either a 100-year or 500-year Flood Zone. This data, available in select counties across the country, was obtained by EDR from the Federal Emergency Management Agency (FEMA) which has maps depicting FEMA-defined 100-year and 500-year flood zones.
Wetlands	The EDR database report shows that the subject property is not located within the National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR from the U.S. Fish and Wildlife Service.

3.3. STANDARD ENVIRONMENTAL RECORD SOURCES

A computer search of federal, state and regional regulatory agency databases was performed by Environmental Data Resources Inc. (EDR), a data retrieval company, to identify and locate properties in areas of concern that have been reported as sites known or suspected to contain underground storage tanks, or to have been the scene of hazardous materials spills. Additionally, sites permitted to manufacture, utilize, generate, store, treat or dispose of hazardous materials and/or hazardous wastes are identified and located. A list and description of databases investigated, in compliance with ASTM E1527-13 and USEPA AAI, is included in EDR Report provided in Appendix C.

3.3.1. Subject Property Database Search

Subject property is not listed on the EDR Report.

3.3.2. Site Vicinity Database Search

Sites with recognized environmental conditions surrounding the subject property are typically of concern to the subject property when they are located in an up-gradient direction from the

property with respect to the ground water flow direction. Typically, groundwater would represent the migration medium for contaminants over significant distances. Sites located in equi-gradient or down-gradient directions from the subject property are less likely to impact the subject property.

Sites with permits to operate USTs, handle/store/transfer hazardous materials and generate hazardous waste are listed on the informational database reports; however, it does not necessarily imply that these sites have impacted the environment. Sites with permits within a ¼-mile search distance from the subject property are noted with emphasis on the immediately adjacent permitted sites.

3.3.2.1. High Risk Occurrences

Based on the EDR Report, IWS identified the following listings considered to be 'high risk.' High risk listings are sites with known contamination.

The following 'high risk' databases contained sites within the search radii:

DATABASE	< 1/8 mi	1/8 - 1/4 mi	1/4 - 1/2 mi	1/2 - 1 mi	Total
NPL	0	0	0	0	0
Proposed NPL	0	0	0	0	0
Delisted NPL	0	0	0	0	0
CERCLIS	0	0	0	--	0
RESPONSE	0	0	0	0	0
ENVIROSTOR	0	0	0	1	**1**
LUST	0	0	0	--	0
SLIC	0	0	0	--	0
VCP	0	0	0	--	0
BROWNFIELDS	0	0	0	--	0

The following sites were identified within the search radii on databases of ''

Site	Distance & Direction [1]	Database(s) & Summary	Environmental Concern [2]
Baxter Road Elementary School No. 10 Baxter Rd. and Meadowlark Land	½ -mile NNE.	Listed as an ENVIROSTOR SCH. Listings come from assessment for school construction.	No indication – Based on regulatory closure status and distance from subject site.

Notes:
1: distance and direction from subject property N: north NE: northeast

2: environmental concern based on the EDR report SP: subject property	S: south E: east W: west	SE: southeast NW: northwest SW: southwest

IWS carefully reviewed each of the listed EDR sites to determine if current or past business activities conducted at those sites is likely to have the potential to negatively impact the subject site. Additionally, each site identified as having impacted the soil or groundwater was evaluated to determine the media affected, and if there is a likely migration medium path present that could transfer the contaminates onto the subject site.

The EDR report indicated no sites within the search radius have had a release of hazardous materials or have received regulatory closure.

It should be noted that government agency records pertaining to sites may remain on file for years, and may not be representative of the current environmental status of the site. In addition, listings of the addresses and current occupants of a site provided by the regulatory agencies may not be accurate.

Information provided on the GeoTracker web site (http://geotracker.waterboards.ca.gov/) was utilized to validate information provided in the EDR report reviewed in the above section.

3.3.2.2. Close Proximity Listings

Based on the EDR Report of listed occurrences, IWS did not identify any sites of potential environmental concern immediately adjacent, up-gradient or in close proximity to the subject property not listed on 'high risk occurrence' databases above.

3.3.2.3. Orphan Site Listings

The orphan summary list consists of sites lacking sufficient information for EDR to map their locations. No sites were listed as 'orphan' in the EDR Report.

3.4. ADDITIONAL ENVIRONMENTAL AGENCY RECORD SOURCES

In addition to the EDR computer search of federal, state and regional regulatory agency databases, IWS contacted appropriate regulatory agencies to review records regarding the property and surrounding sites identified as having recognized environmental conditions that have the potential to impact the subject property based on ground water flow direction, distance from the subject property and nature of the releases causing the environmental condition.

3.4.1 Regional Water Quality Control Board

The Santa Ana Region of the Regional Water Quality Control Board (SA-RWQCB) is the enforcing agency for the oversight of assessments and remediation of unauthorized releases of hazardous substances in the soil and ground water. The Regional Board also maintains and online computer database, GeoTracker, that provides listings of closed and active sites related to unauthorized releases of hydrocarbons as well as solvents, metals, and other materials. For listed sites, online reports are commonly available. IWS reviewed the GeoTracker database for information that may be available for the subject property or surrounding sites. Additionally, an email request for records for the subject site was sent to the SA-RWQCB. There were no records available at the GeoTracker for the subject site.

3.4.2 Department of Toxic Substance Controls

The Department of Toxic Substances Control (DTSC) is the State of California agency responsible for oversight of contaminated sites that are not regulated by the RWQCB. A request for information from the Cypress office of the DTSC was made for the subject property on August 1, 2017. At of the date of this report IWS has not received a response form the DTSC for inclusions in this report. Based on other data gathered for this report, IWS believes it is unlikely the DTSC will have any records for the subject site.

The DTSC also maintains records for facilities that generate hazardous materials in the Hazardous Waste Tracking System (HWTS) which is available at an on-line database. http://hwts.dtsc.ca.gov/report_list.cfm No records were found for the subject site on site.

3.4.3 Murrieta Fire Department

IWS contacted the Murrieta Fire Department and spoke to Kay Riscol. Ms Riscol indicated her agency does not keep any records for any spills or illegal dumping of hazardous materials on city properties. Those records would be with the Riverside County, Department of Environmental Health.

3.4.4. County of Riverside Department of Environmental Health – Hazardous Materials Div.

The County of Riverside - Department of Environmental Health (CR-DEH), is the lead agency for enforcing environmental laws involving hazardous materials, hazardous waste, and underground storage tanks for the City of Murrieta. On August 3, 2017 IWS sent a written request to the CR-DEH Records Management division any records for the subject site. Since the agency does not maintain records for parcel numbers, IWS provided the physical address of 36755 Antelope Road, which is the address of the cell tower.

As of the drafting of this report the CR-DEH has not responded to our request. IWS believes it is highly unlikely the agency will have any records for that address. In the event pertinent records are found at their agency that would change the conclusions and opinions expressed in this report, IWS will submit an addendum to this report stating any such changes.

3.4.5. South Coast Air Quality Management District (AQMD)

The South Coast Air Quality Management District (AQMD) is the enforcing agency for oversight of air emissions for the City of Murrieta in which the subject site is located. The AQMD has an online database tool available to the public to search for records called Facility Information Detail (FIND). http://www3.aqmd.gov/webappl/fim/prog/search.aspx. No records were found for the subject site on AQMD FIND database site.

3.4.6. Oil and Gas Exploration

On August 2, 2017, the Munger Map Book of California Oil and Gas Fields (1994) was reviewed concerning the subject property and nearby properties. The Department of Oil and Gas (DOG), maps contain information regarding oil and gas development. According to the DOG maps, there are no current, or former oil wells located on the subject site.

3.4.7.1. Additional Site Vicinity Record Sources

The property address was not listed on the ENVIROFACTs database as a RCRA small or large quantity generator of hazardous materials.

3.5. PROVIDED SUBJECT PROPERTY RECORDS

No previous environmental reports for the subject site were provided to IWS for review.

3.6. VOLATILE ORGANIC COMPOUND VAPOR ENCROACHMENT

The encroachment of volatile organic compound (VOC) vapors into soil pore space occurs when organic chemicals migrate from contaminated groundwater or soil into the airspace between soil particles. Some typical organics involved are petroleum based or chlorinated solvents (e.g, BTEX and dry cleaning chemicals). They may have leaked into the groundwater and/or soil from underground storage tanks, or buried waste, or from disposal in septic systems.

In compliance with ASTM Standard E2600-10 (Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions), IWS evaluated the potential for a Vapor

Encroachment Condition (VEC) at the subject property. Based on a VEC screening, it was determined that a VEC does not exist on the subject site. A copy of the IWS-generated Tier 1 VEC screening form is provided within Appendix F.

4.0. SITE RECONNAISSANCE

A subject property site reconnaissance was conducted by Mr. Jim Bunck, of IWS on 3 August 2017. At the time of the site visit the weather was sunny and hot. Primary features of the property are shown in a site plan provided in Figure 2. Photographs of selected features of the subject site are included in Appendix A.

4.1. METHODOLOGY AND LIMITING CONDITIONS

The property was fully accessible during the site reconnaissance. No limiting conditions were noted.

4.2. GENERAL SITE SETTING

The following is a description of the primary features of the subject property observed at the time of the site visit:

The subject property is comprised of four contiguous parcels comprising 8.23 acres of vacant property located in the directly east of the 215 Freeway and north of Clinton Keith Road in the City of Murrieta, California. Native vegetation covers the entire site. There are no buildings or structures on the subject site. An asphalt paved road divides the property extending in a north south direction. This road is part of Antelope Road which, at one time, connected with Clinton Keith Road which forms the southern boundary of the site. (See: Figure 2).

The subject site is situated in the northeastern portion of the City of Murrieta, an area of the city comprised primarily of residential with a mix of scattered retail and commercial businesses. Residential areas are located approximately 1,300 feet east and 200 feet south of the subject site. Based on a review of historical documents, the subject property has remained vacant undeveloped land void of any agricultural use or buildings or structures.

Structures	No structures on site. A cell tower is located on a small section of land located on the northwest corner of the subject site.
Adjoining / Access / Egress Roads	Access to the site is via Antelope Road to the north.
Surface Types	Site covered with native vegetation.

Additional Features	None.
Surface Water	None.
Heating and Cooling	N/A
Sewage Discharge and Disposal	None

At the time of the site reconnaissance, current uses of adjacent properties included the following:

North	The property is bound on the north by vacant land and a continuation of Antelope Road. An inspection of this area via public access did not reveal any recognized environmental conditions.
South	The property is bound on the south by Clinton Keith Road. South of Clinton Keith Road is a residential area. An inspection of this area via public access did not reveal any recognized environmental conditions.
East	The property is bound on the east by vacant land currently being graded for soil and rock. An inspection of this area via public access did not reveal any recognized environmental conditions.
West	The property is bound on the west by the north bound on-ramp from Clinton Keith Road to the I-215 Freeway. West of the Freeway is the Orchard shopping center. An inspection of this area via public access did not reveal any recognized environmental conditions.

Current uses of the adjoining properties do not appear to be of potential environmental concern to the subject property.

4.3. EXTERIOR OBSERVATIONS

The following was observed at the time of the site reconnaissance:

YES	NO	CONDITION OBSERVED ON/NEAR SUBJECT PROPERTY
	x	**Vent pipes, fill pipes, or access that may indicate UST or underground vault**
	x	**Strong, pungent or noxious odors**
	x	**Obvious signs of possible asbestos-containing materials (ACM)**
	x	**Electrical or hydraulic equipment that could contain PCBs**
	x	**Drains and sumps**.

YES	NO	CONDITION OBSERVED ON/NEAR SUBJECT PROPERTY
	x	**Pits, ponds or lagoons with respect to waste treatment or disposal**
x		**Stained soil or pavement, patched pavement** *Several areas of patched pavement were present along Antelope Road which extends through the subject site. It is our understanding utility lines were recently installed beneath the asphalt on this road.*
	x	**Stressed vegetation (from causes other than insufficient water)**
	x	**Fill dirt from unknown source, or contaminated source**
	x	**Solid waste (mounds or depressions suggesting waste disposal)**
	x	**Waste water / storm water discharged into a drain, ditch or stream**
	x	**Wells (abandoned, irrigation, domestic, monitoring or oil and gas)**
	x	**Dry wells**
	x	**Septic systems or cesspools**
	x	**Movement of hazardous materials to adjacent properties**
	x	**Hazardous substances and/or petroleum products in connection with identified uses**
	x	**Above-ground storage tanks (ASTs) for storage of petroleum products and/or hazardous substances.**
	x	**Underground storage tanks (USTs) for storage of petroleum products and/or hazardous substances**
	x	**Pools of liquid (other than water)**
	x	**55-gallon drum or large sack storage**
	x	**Unidentified substance containers**
	x	**Oil-water separator/clarifier**

5.0. MATERIAL STORAGE

There are no current or historic containers, storage vessels, and containment systems (e.g., clarifiers, oil/water separators, vaults, frac ponds, storage lockers, silos) on this site.

6.0. INTERVIEWS

Interviews performed during the course of this Phase I are described below.

Interviewee	Interview Summary
Property Owner	Mr. Randy Weisser, part property owner of the subject site completed the Phase I Environmental questionnaire for this assessment. Mr. Weisser indicated he is not aware of any USTs, clarifiers, or sumps located on the subject site. Mr. Weisser indicated there are no pending or past litigations relevant to hazardous substances on the property and no environmental liens placed by any governmental regulatory agency. Mr. Weisser is not aware of any releases or spills of hazardous materials from on-site businesses or adjacent properties.
Site Manager	Mr. Allan Davis. Mr. Allan Davis is unaware of any environmental concerns pertaining to the subject property
Property Occupant(s)	No occupants
Local Government Officials	With the exception of file review requests, no local government officials were interviewed during the course of this Phase I.
Others	No additional interviews were performed during the course of this Phase I.

Environmental questionnaire can be found in Appendix D.

7.0. ADDITIONAL SERVICES

Additional environmental considerations beyond the scope of the standard ASTM practice are discussed below.

7.1. MOLD

Molds are part of the natural environment. Outdoors, molds play a part in nature by breaking down dead organic matter such as fallen leaves and dead trees, but indoors, mold growth should be avoided. Molds reproduce by means of tiny spores; the spores are invisible to the naked eye and float through outdoor and indoor air. Mold may begin growing indoors when mold spores land on surfaces that are wet. There are many types of mold, and none of them will grow without water or moisture.

Molds are usually not a problem indoors, unless mold spores land on a wet or damp spot and begin growing. Molds have the potential to cause health problems. Molds produce allergens (substances that can cause allergic reactions), irritants, and in some cases, potentially toxic substances (mycotoxins).

At the time of the property reconnaissance, IWS did not observe the presence of mold.

7.2. ASBESTOS CONTAINING BUILDING MATERIALS

Asbestos is a mineral fiber that has been used commonly in a variety of building construction materials for insulation and as a fire-retardant. Because of its fiber strength and heat resistant properties, asbestos has been used for a wide range of manufactured goods, mostly in building materials (roofing shingles, ceiling and floor tiles, paper products, and asbestos cement products), friction products (automobile clutch, brake, and transmission parts), heat-resistant fabrics, packaging, gaskets, and coatings.

Prior to the late 1970s, building products and insulation materials commonly contained asbestos. In 1989, the USEPA banned all new uses of asbestos; however, uses developed before 1989 are still allowed. When asbestos-containing materials are damaged or disturbed by repair, remodeling or demolition activities, microscopic fibers become airborne and can be inhaled into the lungs, where they can cause significant health problems.

There are no buildings or structures on the site.

7.3. LEAD-BASED PAINT

Lead is a toxic metal that was used for many years in products found in and around our homes. Lead-based paint (LBP) was used extensively in buildings constructed before 1950. In 1978, LBP was banned by the federal government. Lead may cause a range of health defects, from behavioral problems and learning disabilities, to seizures and death.

There are no buildings or structures on the site.

7.4. RADON

Radon is a naturally occurring, colorless, odorless gas that is soluble in water. It is produced through the radioactive decay of uranium and radium, which is naturally present in soil and in minerals in bedrock. Radon is radioactive, which means that it breaks down or decays to form other elements. Radon concentrations generally differ among different rock types and can vary considerably within the same geologic formation. Radon moves from its source in rocks and soils through voids and fractures. It can enter buildings as a gas through foundation cracks or it can dissolve in groundwater and be carried to buildings through the use of water-supply wells. Buildings with basements and concrete slab foundations are more susceptible to elevated levels of indoor radon gas. The inhalation of radon gas can cause damage to lung tissue.

A common unit of radioactivity measurement is picocuries per liter (pCi/L). The USEPA established the recommended safe radon level at 4 pCi/L. According to the USEPA, the subject property county, Riverside County, is located in a low radon potential area (Zone 2), defined as having a predicted average indoor radon screening level between 2.0 and 4.0 pCi/L.

7.5. WETLANDS

As reported in Section 3.2., according to the EDR Report (Appendix C) the subject property is not located within a National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR from the U.S. Fish and Wildlife Service.

7.6. REGULATORY COMPLIANCE

Since no physical address(s) are attached to the parcels which make the subject site, IWS could not search regulatory permitting or requirements/directives in connection with the property.

8.0. EVALUATION

Any deviations from the ASTM Standard Practice 1527E-13 and USEPA AAI are presented below, along with the findings, conclusions, and opinions identified during the course of this Phase I.

8.1. DATA GAPS AND LIMITATIONS

A data gap occurs when a lack of, or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance, and interviews. The following data gaps and/or limitations were identified during the course of this Phase I, which may deviate from the ASTM standard practice:

- The largest data gap in research was 37 years, between 1901 and 1938. Data gaps generally do not exceed five years between 1967 through the present. IWS does not believe any gaps in the data reviewed have affected the ability to identify recognized environmental concerns.

8.2. FINDINGS

Based on the standards set by ASTM Practice E1527-13, the following findings are differentiated below as *de minimis* conditions unlikely to be subject to government enforcement, HRECs, CRECs and RECs, as defined in Section 1.1. of this report.

8.2.1. *De Minimis* Conditions

This assessment revealed no evidence of potential or *de minimis* conditions in connection with the subject property.

8.2.2. Historical Recognized Environmental Conditions

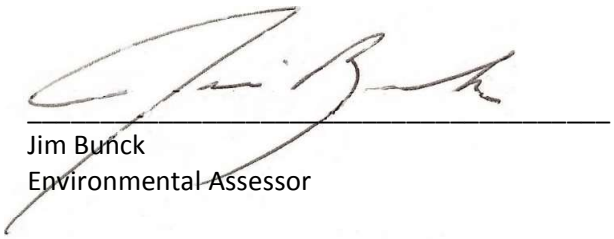
This assessment has revealed no evidence of HRECs in connection with the subject property.

8.2.3. Controlled Recognized Environmental Conditions

This assessment has revealed no evidence of CRECs in connection with the subject property.

8.2.4. Recognized Environmental Conditions

This assessment has revealed no evidence of RECs in connection with the subject property



8.3. CONCLUSIONS, OPINIONS, AND RECOMENDATIONS

IWS Environmental Inc. has performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-13, US-EPA AAI for 8.23 acres of vacant land located in the directly east of the 215 Freeway and north of Clinton Keith Road in the City of Murrieta, California. This assessment has revealed no evidence of any RECs in connection with the subject property. No additional assessments are recommended at this time.

8.4. SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR § 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all of the

appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Jim Bunck
Environmental Assessor

8.5. QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Qualifications of the environmental professionals involved in the preparation of this Phase I are included in Appendix H.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

CLINTON KEITH ROAD/ANTELOPE ROAD
MURRIETA, CA 92563

COORDINATES

Latitude (North):	33.5999020 - 33° 35' 59.64''
Longitude (West):	117.1722140 - 117° 10' 19.97''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	484021.9
UTM Y (Meters):	3717615.5
Elevation:	1538 ft. above sea level

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ---------- National Priority List

RGA LUST - Recovered Government Archive Leaking Underground Storage Tank

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
TARGET STORE T2499	27818 CLINTON KEITH	WSW 1/8 - 1/4 (0.220 mi.)	A3	17

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CVS PHARMACY #17545	***27818 CLINTON KEITH***	***WSW 1/8 - 1/4 (0.220 mi.)***	***A2***	***14***
WALGREENS #11475	27714 CLINTON KEITH	W 1/8 - 1/4 (0.240 mi.)	4	23

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2017 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

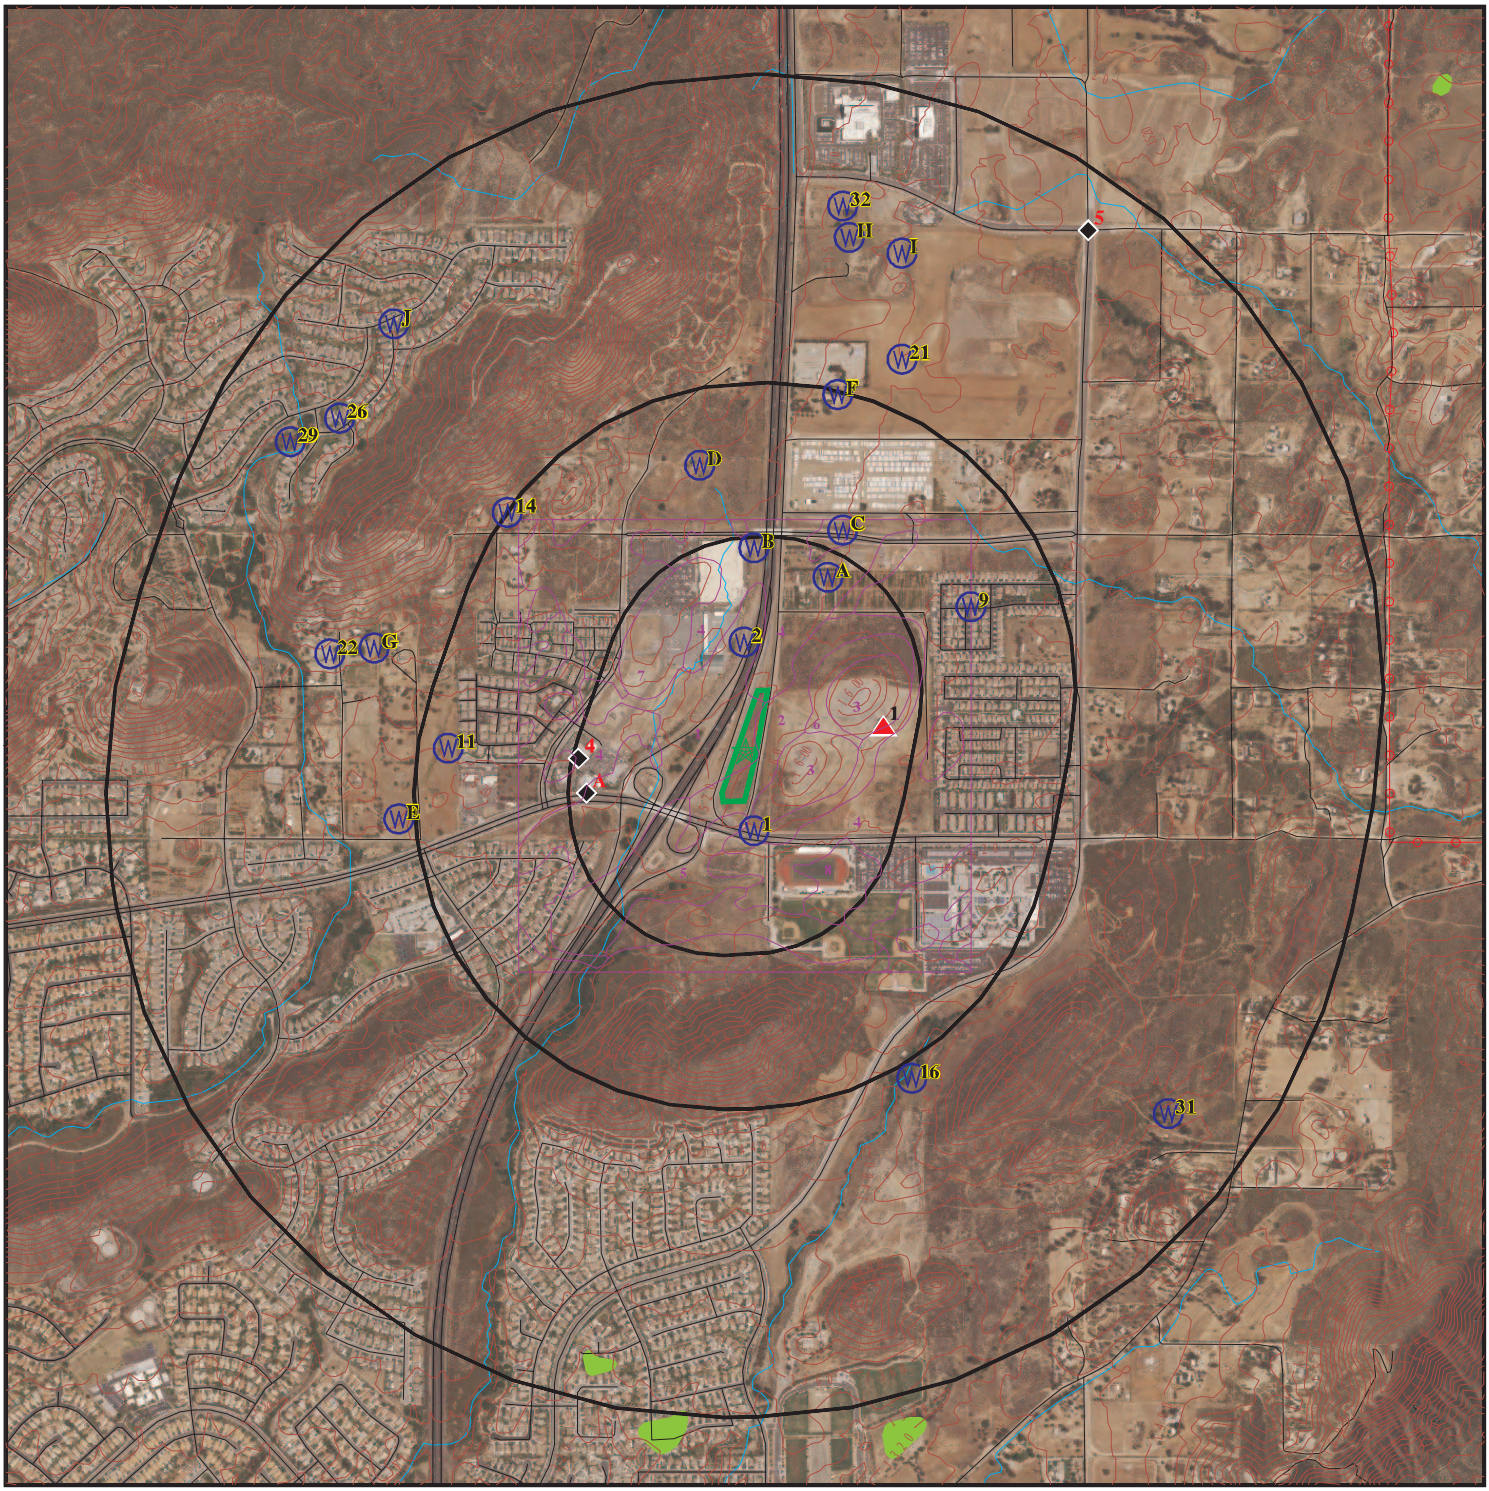
Lower Elevation	Address	Direction / Distance	Map ID	Page
BAXTER ROAD ELEMENTA	***BAXTER ROAD AND MEAD***	***NNE 1/2 - 1 (0.911 mi.)***	***5***	***25***
Facility Id: 70000071				

Status: No Action Required

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

US MINES: Mines Master Index File. The source of this database is the Dept. of Labor, Mine Safety and Health Administration.



A review of the US MINES list, as provided by EDR, has revealed that there is 1 US MINES site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NORTH COUNTY SAND &		ENE 1/8 - 1/4 (0.195 mi.)	1	8
Database: US MINES, Date of Government Version: 02/08/2017

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/05/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/05/2017

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

State and tribal Brownfields sites

BROWNFIELDS: Considered Brownfieds Sites Listing
A listing of sites the SWRCB considers to be Brownfields since these are sites have come to them through the MOA Process.

Date of Government Version: 01/03/2017
Date Data Arrived at EDR: 01/04/2017
Date Made Active in Reports: 03/02/2017
Number of Days to Update: 57
Source: State Water Resources Control Board
Telephone: 916-323-7905
Last EDR Contact: 06/28/2017
Next Scheduled EDR Contact: 10/09/2017
Data Release Frequency: Varies

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

CK-17 LP
CLINTON KEITH ROAD/ANTELOPE ROAD
MURRIETA, CA 92563

TARGET PROPERTY COORDINATES

Latitude (North):	33.599902 - 33° 35' 59.65''
Longitude (West):	117.172214 - 117° 10' 19.97''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	484021.9
UTM Y (Meters):	3717615.5
Elevation:	1538 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5641304 MURRIETA, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

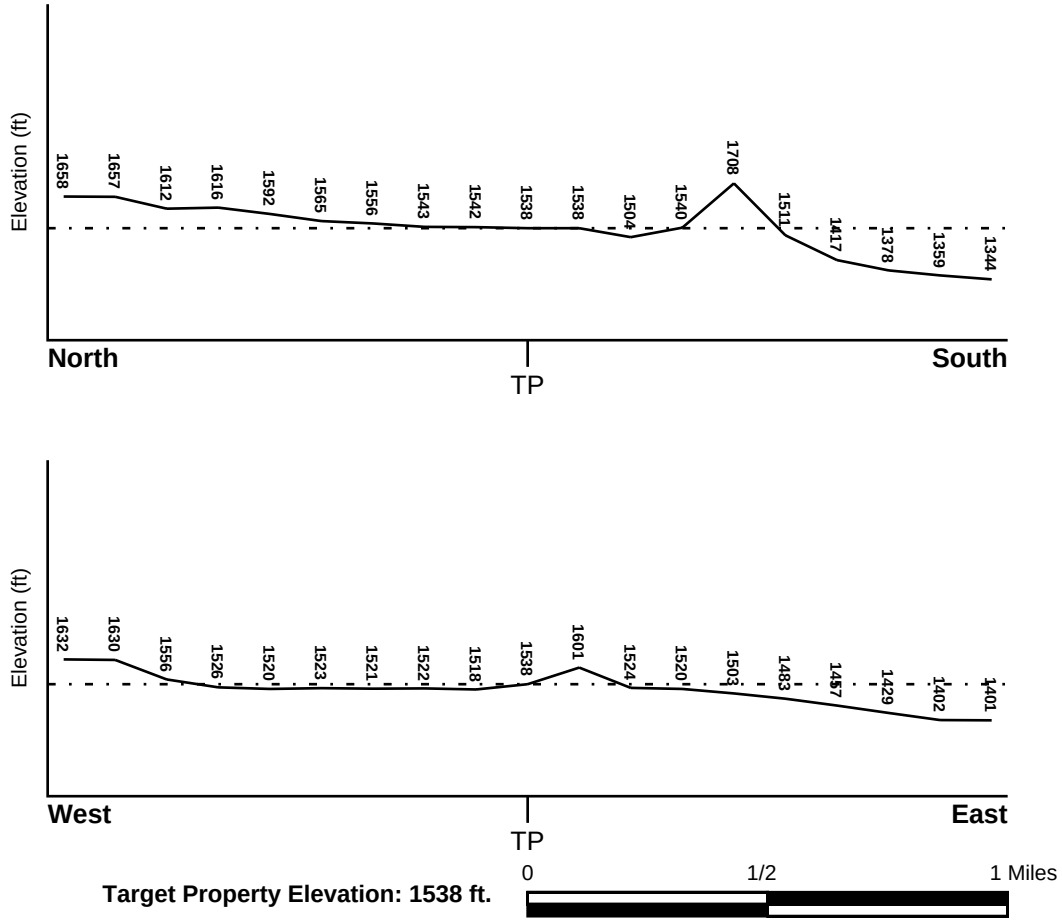
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 1538 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
0607510000A	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
06065C2705G	FEMA FIRM Flood data
0602452735A	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MURRIETA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CAJALCO

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	12 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.1
2	12 inches	22 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.3 Min: 6.6
3	22 inches	61 inches	weathered bedrock	Not reported	Not reported	Max: 0.42 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: LAS POSAS

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil

Basement	1.700 pCi/L	100%	0%	0%

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Appendix D

Phase I / TSA Environmental Site Assessment (ESA) User Requirements

PROJECT ADDRESS: APNs 392-27-30; 31, 32, 33

In conformance with ASTM Standard E1527-13 and in order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"),the user must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the environmental professional. **Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete**. Attach additional pages, if needed.

GENERAL INFORMATION TO ASSIST ENVIRONMENTAL PROFESSIONAL:

Purpose of ESA:

☐ :Sell ☒ :Purchase ☐ :Refinance ☐ :Foreclosure ☐ :Other, list-_____

Type of property:

☐ :Commercial ☐ :Industrial ☒ :Vacant ☐ :Other, list-_____

Property details, list-

Are Site Plans and/or any previous Environmental Site Assessment Reports/documents concerning the property and its environmental condition available?

☒ :No ☐ :Yes, list - _____

*Documents should be provided to the Environmental Professional

Desired Scope of Services:

☐ :Transaction Screen Analysis in accordance with ASTM E1528-14

☒ :Phase I ESA with no additional non-ASTM services

☐ :Phase I ESA with the following additional non-ASTM services, list-

_____

What parties will rely on the ESA (e.g., the user, financial institution, etc.)?

List: FINANCIAL INSTITUTIONS - PARTNERSHIP. CITY OF MURRIETA

Who is the site contact (to arrange a site visit) and how may the contact be reached?

Contact name: RANDY WEISSER

Relation to property: PART OWNER

Phone number/email: 760-897-0863

USER QUESTIONNAIRE:

(1.) Environmental liens that are filed or recorded against the property (40 CFR 312.25): Did a search of recorded land title records (or judicial records) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

☐ **Yes** (list):

☒ **No**

(2.) Activity and use limitations (AULs) that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)): Did a search of recorded land title records (or judicial records) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

☐ **Yes** (list):

☒ **No**

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28): Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐ **Yes** (list):

☒ **No**

(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29):

Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

☒ **Yes** ☐ **No**

If you conclude that there is a difference (answer **No**), have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

☒ **Yes** (list): NO KNOWN CONTAMINATE

☐ **No**

(5.) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30):

Do you know the past uses of this property?

☐ **Yes** (list):

☒ **No**

Do you know of specific chemicals that are present or once were present at the property?

☐ **Yes** (list):

☒ **No**

Do you know of Underground Storage Tanks that are present or once were present at the property?

☐ **Yes** (list):

☒ **No**

Do you know of spills or other chemical releases that have taken place at the property?

☐ **Yes** (list):

☒ **No**

Do you know of any environmental cleanups that have taken place at the property?

☐ **Yes** (list):

☒ **No**

(6.) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31): Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

☐ **Yes** (list):

☒ **No**

User Name (printed): RANDY WEISSER

Company (if applicable): _____

User Signature: _____ **Date:** 8-11-17

TRANSACTION SCREEN QUESTIONNAIRE (attach additional pages, if needed)

(1a.) Is the property *currently used*, or used in the *past*, for research, military and/or industrial use?

☐ Yes ☒ No ☐ Unknown -If yes, describe:

(1b.) Are any of the adjoining properties *currently used*, or have been used in the *past*, for research, military and/or industrial use? ☐ Yes ☒ No ☐ Unknown -If yes, describe:

(2a.) Is the property *currently used*, or used in the *past*, as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing lab, junkyard or landfill or as a waste treatment, storage, disposal, processing or recycling facility? ☐ Yes ☒ No ☐ Unknown

If yes, describe (and identify which):

(2a.) Are any of the adjoining properties *currently used*, or have been used in the *past*, as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing lab, junkyard or landfill or as a waste treatment, storage, disposal, processing or recycling facility?

☐ Yes ☒ No ☐ Unknown -If yes, describe (and identify which):

(3.) Are there *currently*, or have there been in the *past*, any damaged or discarded automotive or industrial batteries, pesticides, paints or other chemicals in individual containers larger than 5-gallon stored or used at the property or facility? ☐ Yes ☐ No ☒ Unknown -If yes, describe:

(4.) Are there *currently*, or have there been in the *past*, any industrial drums, typically 55-gallon, or sacks of chemicals located on the property or facility? ☐ Yes ☐ No ☒ Unknown -If yes, describe:

☐

(5.) Did you observe evidence or do you have prior knowledge that fill dirt has been brought onto the property that originated from a *contaminated site* or from an *unknown origin*?

☐ Yes ☒ No ☐ Unknown -If yes, describe:

(6.) Are there *currently*, or have there been in the *past*, any pits, ponds or lagoons located on the property in connection with waste treatment or waste disposal?

☐ Yes ☒ No ☐ Unknown -If yes, describe:

(7.) Is there *currently*, or has there been in the *past*, any stained soil on the property?

☐ Yes ☐ No ☒ Unknown -If yes, describe:

(8.) Are there *currently*, or has there been in the *past*, any registered or unregistered storage tanks (above or under-ground) located on the property? ☐ Yes ☐ No ☒ Unknown

If yes, where are they located? Number, Size, Content

(9.) Are there *currently*, or has there been in the *past*, any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property? ☐ Yes ☒ No ☐ Unknown -If yes, describe (include location):

(10.) Are there *currently*, or has there been in the *past*, any flooring, drains or walls located within the facility that are stained by substances other than water or are emitting foul odors?

☐ Yes ☒ No ☐ Unknown -If yes, describe:

(11a.) If the property is served by a private well or non-public water system, is there evidence or do you have prior knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system? ☐ Yes ☐ No ☒ Unknown Non-applicable
-If yes, describe:

(11b.) If the property is served by a private well or non-public water system, is there evidence or do you have prior knowledge that the well has been designated as contaminated by any government environmental/health agency? ☐ Yes ☒ No ☐ Unknown Non-applicable
-If yes, describe:

(12.) Does the owner or occupant of the property have any knowledge of environmental liens or governmental notification relating to *past* or *recurrent* violations of environmental laws with respect to the property or any facility located on the property? ☐ Yes ☒ No ☐ Unknown

-If yes, describe:

(13.) Has the owner or occupant of the property been informed of the *current* or *past* existence of hazardous substances or petroleum products with respect to the property or any facility located on the property? ☐ Yes ☐ No ☒ Unknown -If yes, describe:

(14.) Has the owner or occupant of the property been informed of the *current* or *past* existence of environmental violations with respect to the property or any facility located on the property?

☐ Yes ☐ No ☒ Unknown -If yes, describe:

(15.) Does the owner or occupant of the property have any knowledge of any past environmental site assessments of the property or facility. (Phase I, II, sampling etc.) ☐ Yes ☐ No ☒ Unknown

If Yes, did the assessment indicate the presence of hazardous substances or petroleum products on, or contamination of, the property or recommended further assessment of the property?

☐ Yes ☐ No ☒ Unknown

Can you provide IWS with a copy (or copies) of any previous environmental assessments and/or documents in relation to the property? ☐ Yes ☒ No

(16.) Does the owner or occupant of the property have any knowledge of any past, threatened or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substances or petroleum products involving the property by any owner or occupant of the property? ☐ Yes ☐ No ☒ Unknown -If yes, describe:

(17a.) Does the property discharge waste water, on or adjacent to the property, other than storm water, into a storm water sewer system? ☐ Yes ☒ No ☐ Unknown -If yes, describe:

(17b.) Does the property discharge waste water, on or adjacent to the property, other than storm water, into a sanitary sewer system? ☐ Yes ☒ No ☐ Unknown -If yes, describe:

(18.) Did you observe evidence or do you have any prior knowledge that any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials have been dumped above grade, buried and/or burned on the property?

☐ Yes ☒ No ☐ Unknown -If yes, describe

(19.) Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs? ☐ Yes ☐ No ☒ Unknown -If yes, describe:

(20.) Are there any additional items of possible environmental concern regarding the property that have not been discussed in this interview? ☐ Yes ☒ No -If yes, describe:

Note: Helpful subject property documents that should be transmitted to IWS include the following:

- Environmental Site Assessment Reports
- Environmental Compliance Audit Reports
- Environmental permits
- UST/AST registrations
- Underground injection system registrations
- Hazardous Materials Inventories and Hazardous Materials Management Plans
- Risk assessments
- Geotechnical studies
- Recorded AULs (Activity and Use Limitations)

ASTM Transaction Screen Questionnaire
for the Phase I Environmental Site Assessment (E1527-13) & Environmental Transaction Screen Processes (E1528-14) 06)

In accordance with ASTM Standard Process E1527-13, the objective of an interview/questionnaire is to obtain information indicating Recognized Environmental Conditions (RECs) in connection with the property. This questionnaire is to be completed by the current/past property owner, occupant or anyone with past knowledge concerning the property, either in written form or verbally, with questions asked by IWS or User (Client) designated parties. All questions should be answered to the best of the respondent's actual knowledge and must be answered in good faith. Explanations to any answers, especially "Yes" answers, should be made in the space following the question or on a separate sheet, noting the question number. Please be as complete as possible; if you do not know the answer to a question, please check unknown. Following the site visit, it may be necessary for IWS or the preparer to ask clarifying questions of the interviewee(s).

IWS Project Name & Number: APNs 392-27-30-31-32-33
Project Address: _____
Interview type: ☐ : Verbal ☒ :Written

Person Interviewed: **Date:** 8-12-17
Name: RAHOY WEISSER
Company: FELICITA FINANCIAL
Address: 41623 MARGARITA RD
Contact Info: 760-877-0863
Relationship to property:
- ☐ :current property owner
- ☐ :former property owner
- ☐ :property occupant
- ☐ :site manager

☐ This interview was performed by: *OR*
Name: _____
Title: _____
of *IWS* Environmental (IWS)
phone: 714-893-6140
email: jim@iwsenvironmental.com

User/Client Information:
Name: _____
Company: _____
Address: _____
Contact Info: _____
Relationship to property:

- ☒ :property buyer
- ☐ :financing entity
- ☐ :other, list ____ -

☐ This interview was performed/administered by:
Name: _____
Address: _____
Phone/fax: _____
Relationship to property, list: _____
Relationship to user (client), list: _____

The preparer represents that to the best of the preparer's knowledge the statements and facts made below are true and correct and to the best of the preparer's actual knowledge no material facts have been suppressed or misstated.

_____ Signature _____ Date (Preparer/Interviewer)

_____ Signature _____ Date (Interviewee, if available)

GENERAL HISTORY OF THE PROPERTY

When did you first obtain or begin managing this property? If you are not an owner, what is or was your relationship to the subject property? Are you still associated with the property?

PURCHASER

From whom did the current owner obtain the property? How long did the former owner hold the property?

UNKNOWN

What is the general history of the property? Please include what residential or business uses have been made of the property and when, and what structures were built or demolished and when. If it is agricultural, what general crops have been grown and when.

VACANT LAND

What is the general history and use of the adjacent properties and the general surrounding area?

North: VACANT

South: VACANT

East: VACANT

West: FREEWAY

PRESENCE OF ASBESTOS IN ON-SITE STRUCTURE(S)

Has an asbestos survey been performed on the property buildings? ☐ Yes ☒ No Unknown

If YES, assuming the survey included physical sampling by a qualified firm, was the property free of asbestos, or not free of asbestos? ☐ Free ☐ Not Free ☐ Unknown

Explain as appropriate; do you have a copy of the survey report? ☐ Yes ☐ No
*if a copy is available, please provide to IWS

Do you have any past or present knowledge of asbestos-containing materials (ACMs) on the property? ☐ Yes ☒ No Unknown

If yes, describe:

ADDITIONAL HAZARDS

Lead-based Paint (LBP): Are you aware of the presence of LBP-coated surfaces on the property structure(s)? ☐ Yes ☐ No ☒ Unknown

If yes, describe:

Is there any evidence on the subject property of illegal or dangerous on-site application, handling or storage of maintenance chemicals such as pesticides, rodenticides, fertilizers, cleaners, paint solvents, swimming pool cleaners, etc.? ☐ Yes ☐ No ☒ Unknown

If yes, describe:

Have there ever been any dry wells, sumps, separators (or clarifiers or grease traps) or in-ground hydraulic lifts on the property? ☐ Yes ☐ No ☒ Unknown

If yes, describe (include where, what use and size, if known):

SUBJECT PROPERTY UTILITY INFORMATION

Is water currently provided by: ☒ public water system ☐ well ☐ private company

List name of utility provider and/or location of well, connection date: ☐ none or list-
EMWD

Electrical utility provider and estimated connection date: ☒ none or list-

Natural gas utility provider and estimated connection date: ☒ none or list-

Does the property discharge waste water to a : ☐ municipal sewer sanitary system; ☐ on-site sewage treatment system; ☐ on-site septic system; or ☒ there is no sewer utility/septic on-site.

If the property is served by a septic system or systems, please list the location of the system (is a permit available?):
N/A

PRELIMINARY REPORT

In response to the above referenced application for a policy of title insurance, this company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a Policy or Policies of Title Insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an Exception below or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations of said Policy forms.

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Exhibit A attached. *The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties.* Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Exhibit A. Copies of the policy forms should be read. They are available from the office which issued this report.

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit A of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

Dated as of June 27, 2017 at 7:30 A.M.

The form of Policy of title insurance contemplated by this report is:

ALTA Extended Owner Policy - 2006 and ALTA Extended Loan Policy - 2006

A specific request should be made if another form or additional coverage is desired.

Title to said estate or interest at the date hereof is vested in:

Val Vista Estates, Inc., a California corporation, as to an undivided 2/3 interest and Curci-Turner Company, LLC, a California limited liability company, as to an undivided 1/3 interest

The estate or interest in the land hereinafter described or referred to covered by this Report is:

Fee Simple

The Land referred to herein is described as follows:

(See attached Legal Description)

At the date hereof exceptions to coverage in addition to the printed Exceptions and Exclusions in said policy form would be as follows:

1. General and special taxes and assessments for the fiscal year 2017-2018, a lien not yet due or payable.

2. This item has been intentionally deleted.

3. This item has been intentionally deleted.

4. This item has been intentionally deleted.

5. This item has been intentionally deleted.

6. The lien of supplemental taxes, if any, assessed pursuant to Chapter 3.5 commencing with Section 75 of the California Revenue and Taxation Code.

5. The property covered by this report is vacant land.

6. According to the public records, there has been no conveyance of the land within a period of twenty-four months prior to the date of this report, except as follows:

   None

7. This preliminary report/commitment was prepared based upon an application for a policy of title insurance that identified land by street address or assessor's parcel number only. It is the responsibility of the applicant to determine whether the land referred to herein is in fact the land that is to be described in the policy or policies to be issued.

8. Should this report be used to facilitate your transaction, we must be provided with the following prior to the issuance of the policy:

   A. WITH RESPECT TO A CORPORATION:
      1. A certificate of good standing of recent date issued by the Secretary of State of the corporation's state of domicile.
      2. A certificate copy of a resolution of the Board of Directors authorizing the contemplated transaction and designating which corporate officers shall have the power to execute on behalf of the corporation.
      3. Requirements which the Company may impose following its review of the above material and other information which the Company may require.

   B. WITH RESPECT TO A CALIFORNIA LIMITED PARTNERSHIP:
      1. A certified copy of the certificate of limited partnership (form LP-1) and any amendments thereto (form LP-2) to be recorded in the public records;
      2. A full copy of the partnership agreement and any amendments;
      3. Satisfactory evidence of the consent of a majority in interest of the limited partners to the contemplated transaction;
      4. Requirements which the Company may impose following its review of the above material and other information which the Company may require.

   C. WITH RESPECT TO A FOREIGN LIMITED PARTNERSHIP:
      1. A certified copy of the application for registration, foreign limited partnership (form LP-5) and any amendments thereto (form LP-6) to be recorded in the public records;
      2. A full copy of the partnership agreement and any amendment;
      3. Satisfactory evidence of the consent of a majority in interest of the limited partners to the contemplated transaction;
      4. Requirements which the Company may impose following its review of the above material and other information which the Company may require.

   D. WITH RESPECT TO A GENERAL PARTNERSHIP:
      1. A certified copy of a statement of partnership authority pursuant to Section 16303 of the California Corporation Code (form GP-I), executed by at least two partners, and a certified copy of any amendments to such statement (form GP-7), to be recorded in the public records;
      2. A full copy of the partnership agreement and any amendments;
      3. Requirements which the Company may impose following its review of the above material required herein and other information which the Company may require.

   E. WITH RESPECT TO A LIMITED LIABILITY COMPANY:
      1. A copy of its operating agreement and any amendments thereto;
      2. If it is a California limited liability company, a certified copy of its articles of organization (LLC-1) and any certificate of correction (LLC-11), certificate of amendment (LLC-2), or restatement of articles of organization (LLC-10) to be recorded in the public records;
      3. If it is a foreign limited liability company, a certified copy of its application for registration (LLC-5) to be recorded in the public records;
      4. With respect to any deed, deed of trust, lease, subordination agreement or other document or instrument executed by such limited liability company and presented for recordation by the Company or upon which the Company is asked to rely, such document or instrument must be executed in accordance with one of the following, as appropriate:

(i) If the limited liability company properly operates through officers appointed or elected pursuant to the terms of a written operating agreement, such documents must be executed by at least two duly elected or appointed officers, as follows: the chairman of the board, the president or any vice president, and any secretary, assistant secretary, the chief financial officer or any assistant treasurer;

(ii) If the limited liability company properly operates through a manager or managers identified in the articles of organization and/or duly elected pursuant to the terms of a written operating agreement, such document must be executed by at least two such managers or by one manager if the limited liability company properly operates with the existence of only one manager.

5. Requirements which the Company may impose following its review of the above material and other information which the Company may require.

F. WITH RESPECT TO A TRUST:

1. A certification pursuant to Section 18100.5 of the California Probate Code in a form satisfactory to the Company.
2. Copies of those excerpts from the original trust documents and amendments thereto which designate the trustee and confer upon the trustee the power to act in the pending transaction.
3. Other requirements which the Company may impose following its review of the material require herein and other information which the Company may require.

G. WITH RESPECT TO INDIVIDUALS:

1. A statement of information.

The map attached, if any, may or may not be a survey of the land depicted hereon. First American Title Insurance Company expressly disclaims any liability for loss or damage which may result from reliance on this map except to the extent coverage for such loss or damage is expressly provided by the terms and provisions of the title insurance policy, if any, to which this map is attached.

The First American Corporation
First American Title Company
Privacy Policy

We Are Committed to Safeguarding Customer Information

In order to better serve your needs now and in the future, we may ask you to provide us with certain information. We understand that you may be concerned about what we will do with such information - particularly any personal or financial information. We agree that you have a right to know how we will utilize the personal information you provide to us. Therefore, together with our parent company, The First American Corporation, we have adopted this Privacy Policy to govern the use and handling of your personal information.

Applicability

This Privacy Policy governs our use of the information which you provide to us. It does not govern the manner in which we may use information we have obtained from any other source, such as information obtained from a public record or from another person or entity. First American has also adopted broader guidelines that govern our use of personal information regardless of its source. First American calls these guidelines its Fair Information Values, a copy of which can be found on our website at www.firstam.com.

Types of Information

Depending upon which of our services you are utilizing, the types of nonpublic personal information that we may collect include:

- Information we receive from you on applications, forms and in other communications to us, whether in writing, in person, by telephone or any other means;
- Information about your transactions with us, our affiliated companies, or others; and
- Information we receive from a consumer reporting agency.

Use of Information

We request information from you for our own legitimate business purposes and not for the benefit of any nonaffiliated party. Therefore, we will not release your information to nonaffiliated parties except: (1) as necessary for us to provide the product or service you have requested of us; or (2) as permitted by law. We may, however, store such information indefinitely, including the period after which any customer relationship has ceased. Such information may be used for any internal purpose, such as quality control efforts or customer analysis. We may also provide all of the types of nonpublic personal information listed above to one or more of our affiliated companies. Such affiliated companies include financial service providers, such as title insurers, property and casualty insurers, and trust and investment advisory companies, or companies involved in real estate services, such as appraisal companies, home warranty companies, and escrow companies. Furthermore, we may also provide all the information we collect, as described above, to companies that perform marketing services on our behalf, on behalf of our affiliated companies, or to other financial institutions with whom we or our affiliated companies have joint marketing agreements.

Former Customers

Even if you are no longer our customer, our Privacy Policy will continue to apply to you.

Confidentiality and Security

We will use our best efforts to ensure that no unauthorized parties have access to any of your information. We restrict access to nonpublic personal information about you to those individuals and entities who need to know that information to provide products or services to you. We will use our best efforts to train and oversee our employees and agents to ensure that your information will be handled responsibly and in accordance with this Privacy Policy and First American's Fair Information Values. We currently maintain physical, electronic, and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

CLTA/ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE (02-03-10)

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   (a) building; (d) improvements on the Land;
   (b) zoning; (e) land division; and
   (c) land use; (f) environmental protection.

   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   (a) that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   (b) that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;
   (c) that result in no loss to You; or
   (d) that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.
5. Failure to pay value for Your Title.
6. Lack of a right:
   (a) to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   (b) in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows: For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

Your Deductible Amount	**Our Maximum Dollar Limit of Liability**
Covered Risk 16: 1% of Policy Amount or $2,500.00 (whichever is less)	$10,000.00
Covered Risk 18: 1% of Policy Amount or $5,000.00 (whichever is less)	$25,000.00
Covered Risk 19: 1% of Policy Amount or $5,000.00 (whichever is less)	$25,000.00
Covered Risk 21: 1% of Policy Amount or $2,500.00 (whichever is less)	$5,000.00

ALTA RESIDENTIAL TITLE INSURANCE POLICY (6-1-87)

EXCLUSIONS

In addition to the Exceptions in Schedule B, you are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of any law or government regulation. This includes building and zoning ordinances and also laws and regulations concerning:
   (a) and use
   (b) improvements on the land
   (c) and division
   (d) environmental protection

   This exclusion does not apply to violations or the enforcement of these matters which appear in the public records at Policy Date.
   This exclusion does not limit the zoning coverage described in Items 12 and 13 of Covered Title Risks.
2. The right to take the land by condemning it, unless:
   (a) a notice of exercising the right appears in the public records on the Policy Date
   (b) the taking happened prior to the Policy Date and is binding on you if you bought the land without knowing of the taking

3. Title Risks:
   (a) that are created, allowed, or agreed to by you
   (b) that are known to you, but not to us, on the Policy Date -- unless they appeared in the public records
   (c) that result in no loss to you
   (d) that first affect your title after the Policy Date -- this does not limit the labor and material lien coverage in Item 8 of Covered Title Risks
4. Failure to pay value for your title.
5. Lack of a right:
   (a) to any land outside the area specifically described and referred to in Item 3 of Schedule A OR
   (b) in streets, alleys, or waterways that touch your land
   This exclusion does not limit the access coverage in Item 5 of Covered Title Risks.

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
      i. the occupancy, use, or enjoyment of the Land;
      ii. the character, dimensions, or location of any improvement erected on the Land;
      iii. the subdivision of land; or
      iv. environmental protection;

      or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   b. Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   a. created, suffered, assumed, or agreed to by the Insured Claimant;
   b. not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   c. resulting in no loss or damage to the Insured Claimant;
   d. attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
   e. resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   a. a fraudulent conveyance or fraudulent transfer, or
   b. a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) that arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to

   i. the occupancy, use, or enjoyment of the Land;
   ii. the character, dimensions, or location of any improvement erected on the Land;
   iii. the subdivision of land; or
   iv. environmental protection;

   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

   b.Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   a. created, suffered, assumed, or agreed to by the Insured Claimant;
   b. not Known to the Company, not recorded in the Public Records at Date of Policy, but known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   c. resulting in no loss or damage to the Insured Claimant;
   d. attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
   e. resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   a. a fraudulent conveyance or fraudulent transfer, or
   b. a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

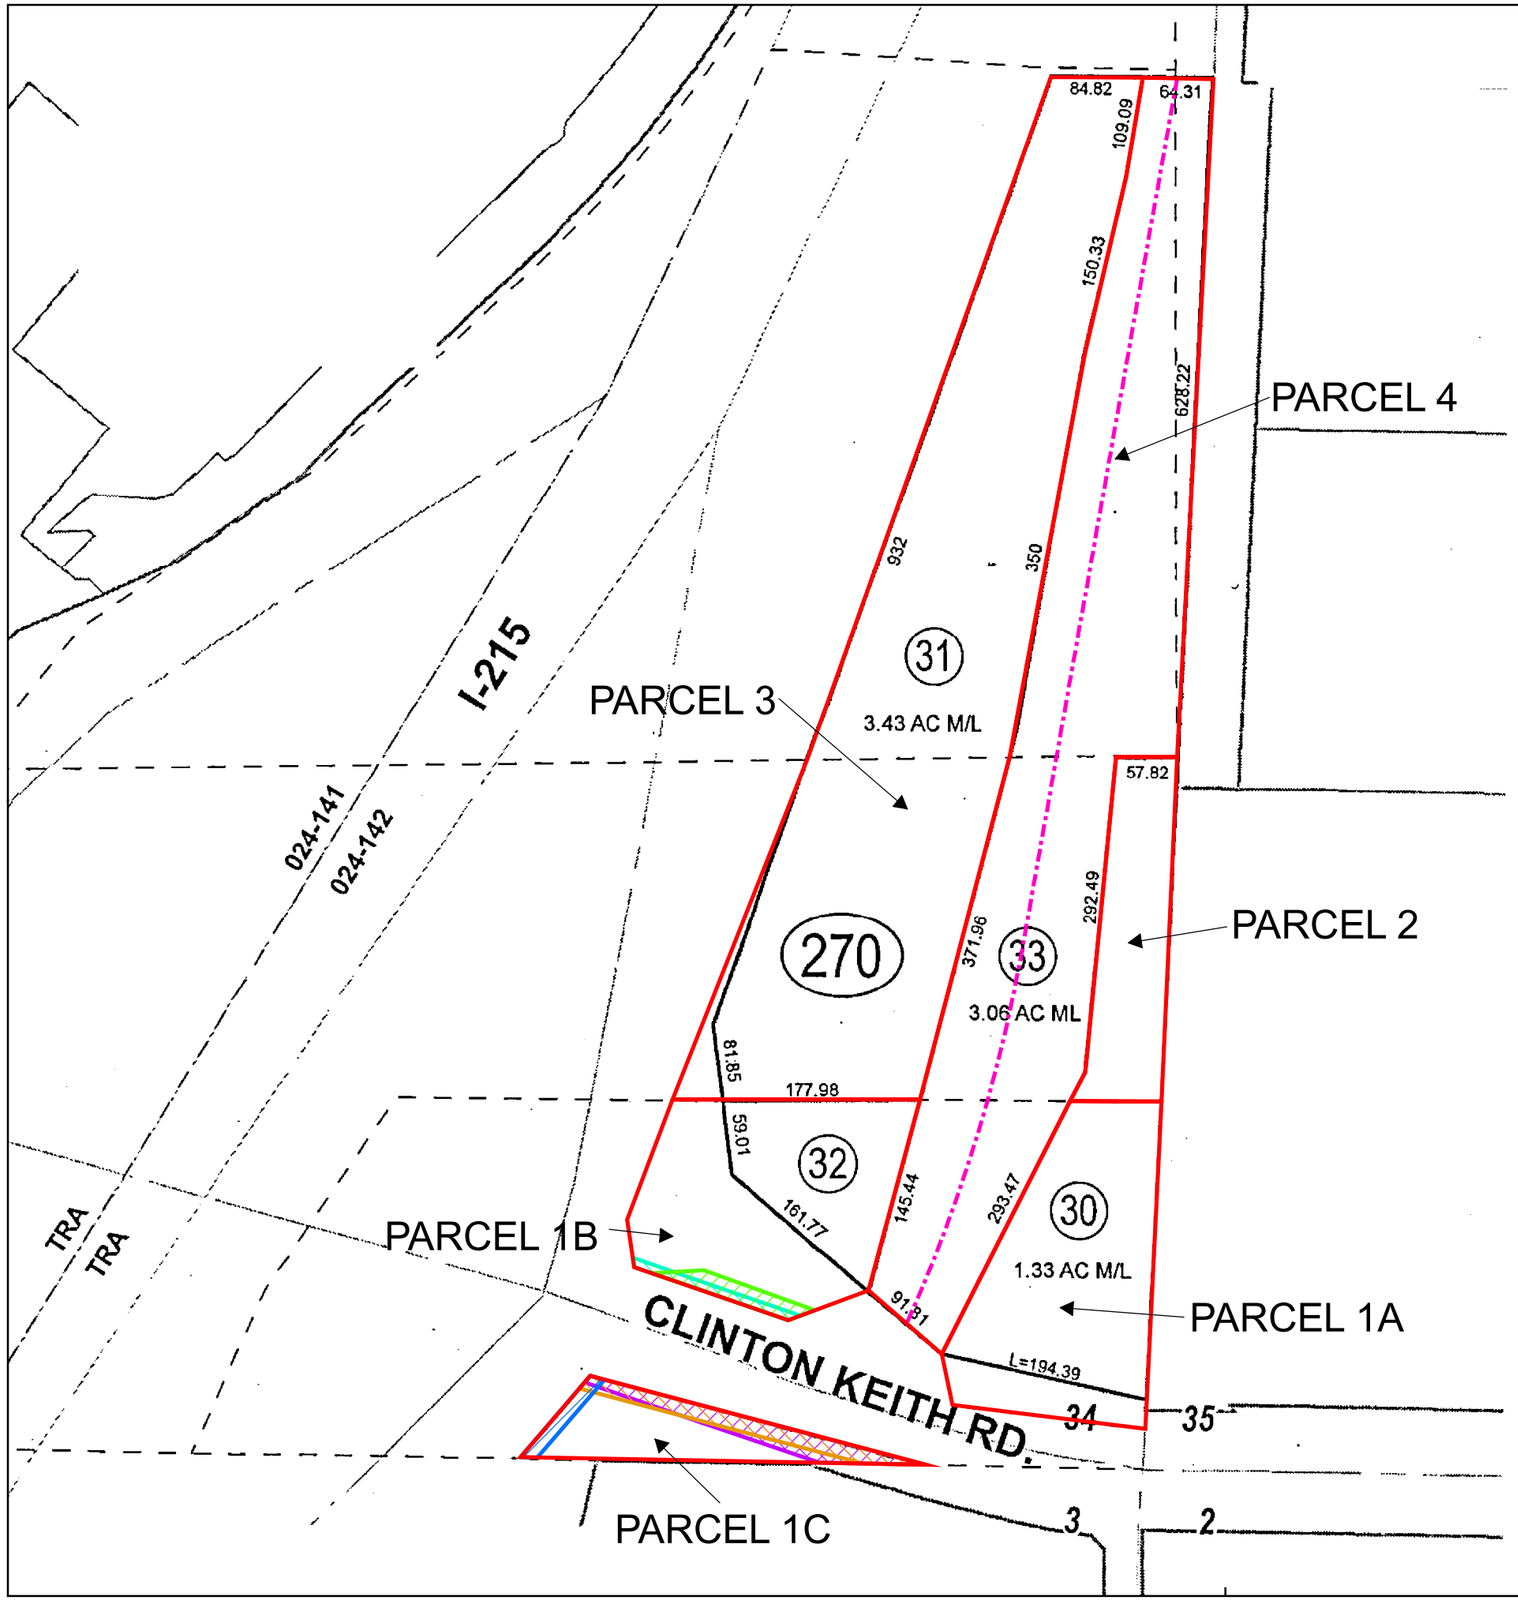
EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) that arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (07-26-10)

EXCLUSIONS FROM COVERAGE



The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   i. the occupancy, use, or enjoyment of the Land;
   ii. the character, dimensions, or location of any improvement erected on the Land;
   iii. the subdivision of land; or
   iv. environmental protection;

   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.

   b. Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters

   a. created, suffered, assumed, or agreed to by the Insured Claimant;
   b. not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   c. resulting in no loss or damage to the Insured Claimant;
   d. attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   e. resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   a. a fraudulent conveyance or fraudulent transfer, or
   b. a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.

Attn: Jim Bunck

Re: **36755 Antelope Rd.**
Murrieta, CA

We have received your request for records and a search of our files is being processed.

Once the research is completed, you will be contacted to schedule an appointment for a file review. If records are not found, you will be notified by mail.

Note: The files for Hazardous Materials Management Division began in 1986. Records for disclosure information of the cities of Corona 951-736-2220 and Riverside 951-826-5737 need to be directed to the City Fire Department.

Please direct any questions or correspondence to:

Riverside County Department of Environmental Health
Hazardous Materials Management Division
4065 County Circle Dr., Rm. 104
P.O. Box 7909
Riverside, CA 92513-7909
Attention: Records Management
Telephone: 951-358-5055 * Fax: 951-358-5017

You may visit our website at **www.rivcoeh.org**

Subject: RE: ARCHIVED RECORDS REQUEST

After a thorough search of our records, we are unable to locate any building records for these APNs:
392-270-030 (Old APN 392-270-018)
392-270-031 (Old APN 392-270-013)
392-270-032 (Old APN 392-270-014)
392-270-033 (Old APN 0)

Our records date back to 1963. All building permit records prior to 1963 have been destroyed.

Also, this address is now located in the City of Murrieta's jurisdiction. You may want to contact their Building Department at (951) 304-2489 to check for any permits they may have issued.

If you have any questions, please contact us @ (951) 955-2017 or with a reply email.

Thank you,

Kim

Subject: ARCHIVED RECORDS REQUEST

At 8/3/2017 1:35:10 PM the following 'ARCHIVED RECORDS REQUEST' was submitted via the website.

Requestor's Name: Jim Bunck
Company: IWS Environmental
Requestor's Phone Number: 714-893-6140
Current Mailing Address: 5211 Hartford Way
City: Westminster
State: CA
Zip: 92683
Email: jim@iwsenvironmental.com

Address to be researched:

Assessor's Parcel No.: APN 392270033
Year Built:

Requesting All Permits: Yes
If not, specify type of Permit(s):

Additional Comments:

Confidentiality Disclaimer

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name:	CAJALCO
Soil Surface Texture:	fine sandy loam
Hydrologic Group:	Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.
Soil Drainage Class:	Well drained
Hydric Status:	Not hydric
Corrosion Potential - Uncoated Steel:	Low
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	12 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.1

EXECUTIVE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	12 inches	22 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.3 Min: 6.6
3	22 inches	61 inches	weathered bedrock	Not reported	Not reported	Max: 0.42 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: LAS POSAS

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.3 Min: 6.1
2	11 inches	29 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 7.8 Min: 6.6

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
3	29 inches	53 inches	weathered bedrock	Not reported	Not reported	Max: 0.42 Min: 0	Max: Min:

Soil Map ID: 3

Soil Component Name: LAS POSAS

Soil Surface Texture: stony loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	stony loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 7.3 Min: 6.1
2	5 inches	20 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 7.8 Min: 6.6

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
3	20 inches	24 inches	weathered bedrock	Not reported	Not reported	Max: 0.42 Min: 0	Max: Min:

Soil Map ID: 4

Soil Component Name: CAJALCO

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

RECORD SOURCES AND CURRENCY

To maintain currency of the following databases, EDR contacts the appropriate agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

ENVIRONMENTAL RECORDS

PRP: Potentially Responsible Parties
Standard Environmental Record Source: Other Records
Search Distance: Property

A listing of verified Potentially Responsible Parties

Date of Government Version: 10/25/2013
Number of Days to Update: 3
Last EDR Contact :06/06/2017

Source: EPA
Telephone: 202-564-6023

RMP: Risk Management Plans
Standard Environmental Record Source: Other Records
Search Distance: Property

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 02/01/2017
Number of Days to Update: 57
Last EDR Contact :07/24/2017

Source: Environmental Protection Agency
Telephone: 202-564-8600

ALAMEDA CO. UST: Underground Tanks
Standard Environmental Record Source: State and tribal registered storage tank lists
Underground storage tank sites located in Alameda county.

Date of Government Version: 04/10/2017
Number of Days to Update: 21
Last EDR Contact :07/07/2017

Source: Alameda County Environmental Health Services
Telephone: 510-567-6700

AST: Aboveground Petroleum Storage Tank Facilities
Standard Environmental Record Source: State and tribal registered storage tank lists
Search Distance: Property

A listing of aboveground storage tank petroleum storage tank locations.

Date of Government Version: 07/06/2016
Number of Days to Update: 69
Last EDR Contact :06/21/2017

Source: California Environmental Protection Agency
Telephone: 916-327-5092

Alameda County CS: Contaminated Sites
Standard Environmental Record Source: State and tribal leaking storage tank lists
Search Distance: 0.333 Mile

A listing of contaminated sites overseen by the Toxic Release Program (oil and groundwater contamination from chemical releases and spills) and the Leaking Underground Storage Tank Program (soil and ground water contamination from leaking petroleum USTs).

Date of Government Version: 04/10/2017
Number of Days to Update: 31
Last EDR Contact :07/07/2017

Source: Alameda County Environmental Health Services
Telephone: 510-567-6700

BROWNFIELDS: Considered Brownfieds Sites Listing

Standard Environmental Record Source: State and tribal Brownfields sites
Search Distance: 0.333 Mile

A listing of sites the SWRCB considers to be Brownfields since these are sites have come to them through the MOA Process.

Date of Government Version: 01/03/2017
Number of Days to Update: 57
Last EDR Contact :06/28/2017

Source: State Water Resources Control Board
Telephone: 916-323-7905

CA BOND EXP. PLAN: Bond Expenditure Plan

Standard Environmental Record Source: Other Records
Search Distance: 0.333 Mile

Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

Date of Government Version: 01/01/1989
Number of Days to Update: 6
Last EDR Contact :05/31/1994

DEED: Deed Restriction Listing
Standard Environmental Record Source: Other Records
Search Distance: Property

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

ENF: Enforcement Action Listing

Standard Environmental Record Source: Other Records

Search Distance: Property

A listing of Water Board Enforcement Actions. Formal is everything except Oral/Verbal Communication, Notice of Violation, Expedited Payment Letter, and Staff Enforcement Letter.

Date of Government Version: 01/23/2017
Number of Days to Update: 118
Last EDR Contact :07/19/2017

Source: State Water Resoruces Control Board
Telephone: 916-445-9379

ENVIROSTOR: EnviroStor Database

Standard Environmental Record Source: State and tribal - equivalent CERCLIS

Search Distance: 0.333 Mile

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

HAULERS: Registered Waste Tire Haulers Listing

Standard Environmental Record Source: Other Records

Search Distance: Property

A listing of registered waste tire haulers.

Date of Government Version: 01/13/2017
Number of Days to Update: 134
Last EDR Contact :05/15/2017

Source: Integrated Waste Management Board
Telephone: 916-341-6422

HAZNET: Facility and Manifest Data

Standard Environmental Record Source: Other Records

Search Distance: Property

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2015

2020 COR ACTION: 2020 Corrective Action Program List
Standard Environmental Record Source: Other Records
Search Distance: Property

RECORD SOURCES AND CURRENCY

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 04/22/2013

ABANDONED MINES: Abandoned Mines

Standard Environmental Record Source: Other Records
Search Distance: Property

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EPA WATCH LIST: EPA WATCH LIST

Standard Environmental Record Source: Other Records

Search Distance: Property

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Source: Department of Energy
Telephone: 202-586-3559

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

Standard Environmental Record Source: Other Records

Search Distance: Property

RECORD SOURCES AND CURRENCY

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

Standard Environmental Record Source: Other Records

Search Distance: Property

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

SEMS: Superfund Enterprise Management System

Standard Environmental Record Source: Federal CERCLIS list

Search Distance: 0.333 Mile

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

Standard Environmental Record Source: Other Records

Search Distance: 0.333 Mile

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Standard Environmental Record Source: Other Records

Search Distance: 0.333 Mile

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

Standard Environmental Record Source: Historical Gas Stations

Search Distance: 0.125 Mile

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR MGP: EDR Proprietary Manufactured Gas Plants

Standard Environmental Record Source: Former Manufactured Gas Plants

Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5' minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW® Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services. The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

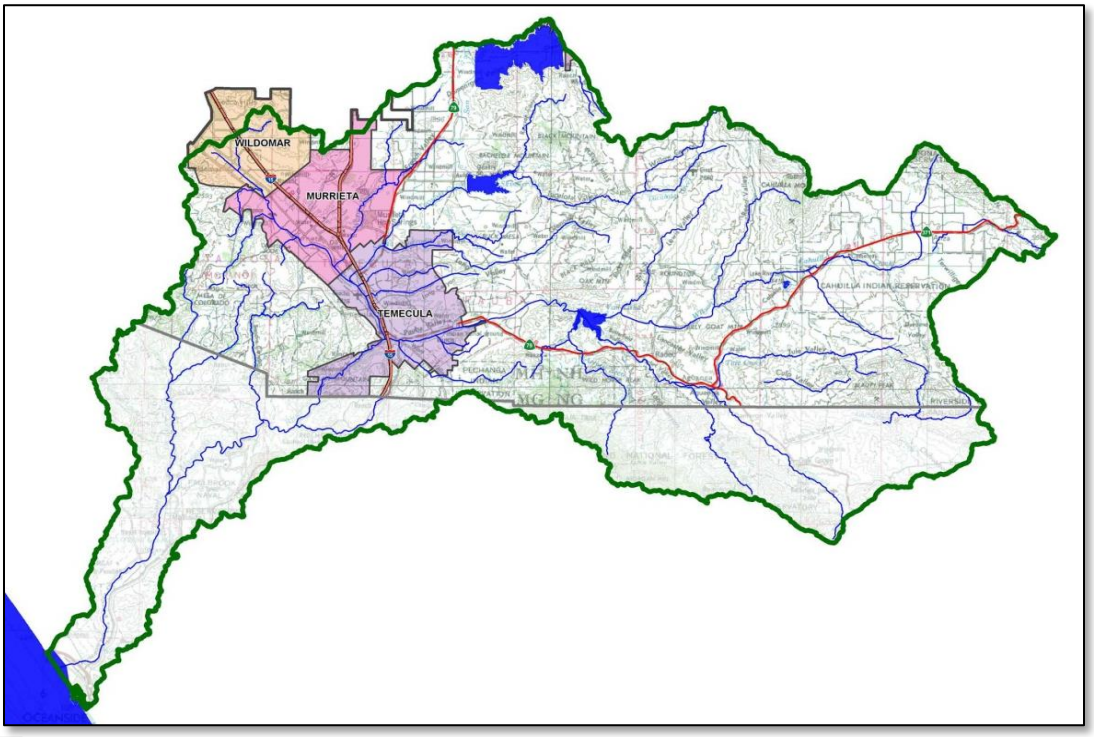
Project-Specific Water Quality Management Plan
TPM 37547

Project Specific Water Quality Management Plan

*A Template for preparing Project Specific WQMPs for Priority Development Projects located within the **Santa Margarita Region** of **Riverside County**. This template does not apply to projects in other watersheds within Riverside County. It does not apply to projects in San Diego or Orange County.*

Attention: This submittal package only applies to "Priority Development Projects" and does not apply to "Other Development Projects". Proceed only if the Applicabilty Checklist completed for your project categorizes project activities as a "Priority Development Project."



Project Title: TPM 37547

Development No: DP-2018-1691, TPM-2018-1702

Design Review/Case No: Insert text here

Prepared for: CURCI, LLC, A CALIFORNIA LTD PARTNERSHIP

Prepared by: EXCEL ENGINEERING
440 State Place
Escondido, CA 92029

☒ **Preliminary**
☐ **Final**

Original Date Prepared: June 7, 2018

Revision Date(s): January 9, 2019, August 5, 2019

Prepared for Compliance with Regional Board Order No. **R9-2013-0001** *as amended by Order No.* **R9-2015-0001** *and Order No.* **R9-2015-0100**

A Brief Introduction

The Regional Municipal Separate Stormwater Sewer System (MS4) Permit[1] requires that a Project-Specific WQMP be prepared for all development projects within the Santa Margarita Region (SMR) that meet the 'Priority Development Project' categories and thresholds listed in the SMR Water Quality Management Plan (WQPM). This Project-Specific WQMP Template for Development Projects in the **Santa Margarita Region** has been prepared to help document compliance and prepare a WQMP submittal. Below is a flowchart for the layout of this Template that will provide the steps required to document compliance.

[1] Order No. R9-2013-0001 as amended by Order Nos. R9-2015-0001 and R9-2015-0100, NPDES No. CAS0109266, National Pollutant Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Discharges from the MS4s Draining the Watersheds within the San Diego Region, California Regional Water Quality Control Board, May 8, 2013.

OWNER'S CERTIFICATION

This Project-Specific WQMP has been prepared for CURCI, LLC A California Partnership by EXCEL ENGINEERING for the TPM 37547 project.

This WQMP is intended to comply with the requirements of City of Murrieta Stormwater and Runoff Management and Discharge Controls Municipal Code Section 8.36.320, Water Quality Management Plan, which includes the requirement for the preparation and implementation of a Project-Specific WQMP.

The undersigned, while owning the property/project described in the preceding paragraph, shall be responsible for the implementation and funding of this WQMP and will ensure that this WQMP is amended as appropriate to reflect up-to-date conditions on the site. In addition, the property owner accepts responsibility for interim operation and maintenance of Stormwater Best Management Practices until such time as this responsibility is formally transferred to a subsequent owner. This WQMP will be reviewed with the facility operator, facility supervisors, employees, tenants, maintenance and service contractors, or any other party (or parties) having responsibility for implementing portions of this WQMP. At least one copy of this WQMP will be maintained at the project site or project office in perpetuity. The undersigned is authorized to certify and to approve implementation of this WQMP. The undersigned is aware that implementation of this WQMP is enforceable under the City of Murrieta Stormwater and Runoff Management and Discharge Controls (Municipal Code Section 8.36).

"I, the undersigned, certify under penalty of law that the provisions of this WQMP have been reviewed and accepted and that the WQMP will be transferred to future successors in interest."

Section A: Project and Site Information

Use the table below to compile and summarize basic site information that will be important for completing subsequent steps. Subsections A.1 through A.4 provide additional detail on documentation of additional project and site information.

PROJECT INFORMATION		
Type of PDP:	New Development	
Type of Project:	Commercial	
Planning Area:	Community Commercial	
Community Name:	Community Commercial	
Development Name:		
PROJECT LOCATION		
Latitude & Longitude (DMS):	$33^0 35'57.7"N\ 117^0 10'21.09"W$	
Project Watershed and Sub-Watershed:	Santa Margarita River, Murrieta (HSA 902.32)	
24-Hour 85th Percentile Storm Depth (inches):	Insert text here, refer to SMR WQMP Exhibit A	
Is project subject to Hydromodification requirements?	☐ Y ☐ N (Select based on Section A.3)	
APN(s):	392-270-030 through 033	
Map Book and Page No.:	Page 898 Grid C7	
PROJECT CHARACTERISTICS		
Proposed or Potential Land Use(s)		Commercial
Proposed or Potential SIC Code(s)		Division G & I
Existing Impervious Area of Project Footprint (SF)		Insert text here
Total area of proposed Impervious Surfaces within the Project Limits (SF)/or Replacement		236,388 SF
Total Project Area (ac)		6.665 ACRES
Does the project consist of offsite road improvements?		☒ Y ☐ N
Does the project propose to construct unpaved roads?		☐ Y ☒ N
Is the project part of a larger common plan of development (phased project)?		☐ Y ☒ N
Is the project exempt from Hydromodification Performance Standards?		☐ Y ☒ N
Does the project propose the use of Alternative Compliance to satisfy BMP requirements? (note, alternative compliance is not allowed for coarse sediment performance standards)		☐ Y ☒ N
Has preparation of Project-Specific WQMP included coordination with other site plans?		☒ Y ☐ N
EXISTING SITE CHARACTERISTICS		
Is the project located within any Multi-Species Habitat Conservation Plan area (MSHCP Criteria Cell?)		☐ Y ☒ N If "Y" insert Cell Number
Are there any natural hydrologic features on the project site?		☐ Y ☒ N
Is a Geotechnical Report attached?		☐ Y ☒ N
If no Geotech. Report, list the Natural Resources Conservation Service (NRCS) soils type(s) present on the site (A, B, C and/or D)		Type C and D

A.1 Maps and Site Plans

When completing your Project-Specific WQMP, include a map of the Project vicinity and existing site. In addition, include all grading, drainage, landscape/plant palette and other pertinent construction plans in Appendix 2. At a **minimum**, your WQMP Site Plan should include the following:

- Vicinity and location maps
- Parcel Boundary and Project Footprint
- Existing and Proposed Topography
- Drainage Management Areas (DMAs)
- Proposed Structural Best Management Practices (BMPs)
- Drainage Paths
- Drainage infrastructure, inlets, overflows
- Source Control BMPs
- Site Design BMPs
- Buildings, Roof Lines, Downspouts
- Impervious Surfaces
- Pervious Surfaces (i.e. Landscaping)
- Standard Labeling

Use your discretion on whether or not you may need to create multiple sheets or can appropriately accommodate these features on one or two sheets. Keep in mind that the Copermittee plan reviewer must be able to easily analyze your Project utilizing this template and its associated site plans and maps. Complete the checklists in Appendix 1 to verify that all exhibits and components are included.

A.2 Identify Receiving Waters

Using Table A-1 below, list in order of upstream to downstream, the Receiving Waters that the Project site is tributary to. Continue to fill each row with the Receiving Water's 303(d) listed impairments (if any), designated Beneficial Uses, and proximity, if any, to a RARE Beneficial Use. Include a map of the Receiving Waters in Appendix 1. This map should identify the path of the stormwater discharged from the site all the way to the outlet of the Santa Margarita River to the Pacific Ocean. Use the most recent 303(d) list available from the State Water Resources Control Board Website.
(http://www.waterboards.ca.gov/sandiego/water_issues/programs/basin_plan/)

Table A-1 Identification of Receiving Waters

Receiving Waters	USEPA Approved 303(d) List Impairments	Designated Beneficial Uses	Proximity to RARE Beneficial Use
Murrieta Creek 902.32	Chlorpyrifos, Escherichia coli (E. coli), Fecal Coliform, Iron, Manganese, Phosphorus, Total Nitrogen as N	Municipal & Domestic Supply, Agricultural, Industrial service, Industrial process, Ground Water Recharge, Noncontact water recreation, Warm Freshwater habitat, wildlife habitat	None

A.3 Drainage System Susceptibility to Hydromodification

Using Table A-2 below, list in order of the point of discharge at the project site down to the Santa Margarita River[2], each drainage system or receiving water that the project site is tributary to. Continue to fill each row with the material of the drainage system, and any exemption (if applicable). Based on the results, summarize the applicable hydromodification performance standards that will be documented in Section E. Exempted categories of receiving waters include:

[2] Refer to Exhibit G of the WQMP for a map of exempt and potentially exempt areas. These maps are from the Draft SMR WMAA as of January 5, 2018 and will be replaced upon acceptance of the SMR WMAA.

- Existing storm drains that discharge directly to water storage reservoirs, lakes, or enclosed embayments, or
- Conveyance channels whose bed and bank are concrete lined all the way from the point of discharge to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.
- Other water bodies identified in an approved WMAA (See Exhibit G to the WQMP)

Include a map exhibiting each drainage system and the associated susceptibility in Appendix 1.

Table A-2 Identification of Susceptibility to Hydromodification

Drainage System	Drainage System Material	Hydromodification Exemption	Hydromodification Exempt
38 Feet of 24" RCP Public storm drain	24" RCP storm drain	Low susceptibility	☐ Y ☒ N
400 ft of Public Stormdrain	Public 30" RCP	Low susceptibility	☐ Y ☒ N
4.64 miles of city storm drain	Natural Open Channel	High susceptibility	☐ Y ☒ N
Summary of Performance Standards			
☐ **Hydromodification Exempt** – Select if "Y" is selected in the Hydromodification Exempt column above, project is exempt from hydromodification requirements. ☒ **Not Exempt**-Select if "N" is selected in any row of the Hydromodification Exempt column above. Project is subject to hydrologic control requirements and may be subject to sediment supply requirements.			

A.4 Additional Permits/Approvals required for the Project:

Table A-3 Other Applicable Permits

Agency	Permit Required	
State Department of Fish and Game, 1602 Streambed Alteration Agreement	☐ Y	☒ N
State Water Resources Control Board, Clean Water Act Section 401 Water Quality Certification	☐ Y	☒ N
US Army Corps of Engineers, Clean Water Act Section 404 Permit	☐ Y	☒ N
US Fish and Wildlife, Endangered Species Act Section 7 Biological Opinion	☐ Y	☒ N
Statewide Construction General Permit Coverage	☒ Y	☐ N
Statewide Industrial General Permit Coverage	☐ Y	☒ N
Western Riverside MSHCP Consistency Approval (e.g., JPR, DBESP)	☒ Y	☐ N
Other *(please list in the space below as required)*	☐ Y	☒ N

If yes is answered to any of the questions above, the Copermittee may require proof of approval/coverage from those agencies as applicable including documentation of any associated requirements that may affect this Project-Specific WQMP.

Section B: Optimize Site Utilization (LID Principles)

Review of the information collected in Section 'A' will aid in identifying the principal constraints on site design and selection of LID BMPs as well as opportunities to reduce imperviousness and incorporate LID Principles into the site and landscape design. For example, **constraints** might include impermeable soils, high groundwater, groundwater pollution or contaminated soils, steep slopes, geotechnical instability, high-intensity land use, heavy pedestrian or vehicular traffic, utility locations or safety concerns. **Opportunities** might include existing natural areas, low areas, oddly configured or otherwise unbuildable parcels, easements and landscape amenities including open space and buffers (which can double as locations for LID Bioretention BMPs), and differences in elevation (which can provide hydraulic head). Prepare a brief narrative for each of the site optimization strategies described below. This narrative will help you as you proceed with your Low Impact Development (LID) design and explain your design decisions to others.

Apply the following LID Principles to the layout of the PDP to the extent they are applicable and feasible. Putting thought upfront about how best to organize the various elements of a site can help to significantly reduce the PDP's potential impact on the environment and reduce the number and size of Structural LID BMPs that must be implemented. Integrate opportunities to accommodate the following LID Principles within the preliminary PDP site layout to maximize implementation of LID Principles.

Site Optimization

Complete checklist below to determine applicable Site Design BMPs for your site.

Project- Specific WQMP Site Design BMP Checklist

The following questions below are based upon Section 3.2 of the SMR WQMP will help you determine how to best optimize your site and subsequently identify opportunities and/or constraints, and document compliance.

SITE DESIGN REQUIREMENTS

Answer the following questions below by indicating "Yes," "No," or "N/A" (Not Applicable). Justify all "No" and "N/A" answers by inserting a narrative at the end of the section. The narrative should include identification and justification of any constraints that would prevent the use of those categories of LID BMPs. Upon identifying Site Design BMP opportunities, include these on your WQMP Site plan in Appendix 1.

☒ Yes ☐ No ☐ N/A

Did you identify and preserve existing drainage patterns?

Integrating existing drainage patterns into the site plan helps to maintain the time of concentration and infiltration rates of runoff, decreasing peak flows, and may also help preserve the contribution of Critical Coarse Sediment (i.e., Bed Sediment Supply) from the PDP to the Receiving Water. Preserve existing drainage patterns by:

- Minimizing unnecessary site grading that would eliminate small depressions, where appropriate add additional "micro" storage throughout the site landscaping.
- Where possible conform the PDP site layout along natural landforms, avoid excessive grading and disturbance of vegetation and soils, preserve or replicate the sites natural drainage features and patterns.
- Set back PDP improvements from creeks, wetlands, riparian habitats and any other natural water bodies.
- Use existing and proposed site drainage patterns as a natural design element, rather than using expensive impervious conveyance systems. Use depressed landscaped areas, vegetated buffers, and bioretention areas as amenities and focal points within the site and landscape design.

Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer.
Depressed landscaping used to allow retention of the VBMP along with biofiltration

☐ Yes ☐ No ☒ N/A

Did you identify and protect existing vegetation?

Identify any areas containing dense native vegetation or well-established trees, and try to avoid disturbing these areas. Soils with thick, undisturbed vegetation have a much higher capacity to store and infiltrate runoff than do disturbed soils. Reestablishment of a mature vegetative community may take decades. Sensitive areas, such as streams and floodplains should also be avoided.

- Define the development envelope and protected areas, identifying areas that are most suitable for development and areas that should be left undisturbed.
- Establish setbacks and buffer zones surrounding sensitive areas.
- Preserve significant trees and other natural vegetation where possible.

Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *No native vegetation on site.*

Project- Specific WQMP Site Design BMP Checklist	
☐ Yes ☒ No ☐ N/A	**Did you identify and preserve natural infiltration capacity?** A key component of LID is taking advantage of a site's natural infiltration and storage capacity. A site survey and geotechnical investigation can help define areas with high potential for infiltration and surface storage. • Identify opportunities to locate LID Principles and Structural BMPs in highly pervious areas. Doing so will maximize infiltration and limit the amount of runoff generated. • Concentrate development on portions of the site with less permeable soils, and preserve areas that can promote infiltration.
Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *Insert discussion/justification here* At this preliminary stage in the development process, it would be infeasible to test the soils natural infiltration and storage capacity due to the existing ground being 30ft higher than finished grade will be. However, during final engineering, the proposed locations for structural BMPS will be thoroughly tested for potential infiltration which will be implemented when possible.	
☒ Yes ☐ No ☐ N/A	**Did you minimize impervious area?** Look for opportunities to limit impervious cover through identification of the smallest possible land area that can be practically impacted or disturbed during site development. • Limit overall coverage of paving and roofs. This can be accomplished by designing compact, taller structures, narrower and shorter streets and sidewalks, clustering buildings and sharing driveways, smaller parking lots (fewer stalls, smaller stalls, and more efficient lanes), and indoor or underground parking. • Inventory planned impervious areas on your preliminary site plan. Identify where permeable pavements, or other permeable materials, such as crushed aggregate, turf block, permeable modular blocks, pervious concrete or pervious asphalt could be substituted for impervious concrete or asphalt paving. This will help reduce the amount of Runoff that may need to be addressed through Structural BMPs. • Examine site layout and circulation patterns and identify areas where landscaping can be substituted for pavement, such as for overflow parking. • Consider green roofs. Green roofs are roofing systems that provide a layer of soil/vegetative cover over a waterproofing membrane. A green roof mimics pre-development conditions by filtering, absorbing, and evapotranspiring precipitation to help manage the effects of an otherwise impervious rooftop.
Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *Insert discussion/justification here* Driveways and sidewalks have been reduced to the minimum widths as well as only providing the minimum number of parking stalls require by the site use.	

Project- Specific WQMP Site Design BMP Checklist	
☒ Yes ☐ No ☐ N/A	**Did you identify and disperse runoff to adjacent pervious areas or small collection areas?** Look for opportunities to direct runoff from impervious areas to adjacent landscaping, other pervious areas, or small collection areas where such runoff may be retained. This is sometimes referred to as reducing Directly Connected Impervious Areas. • Direct roof runoff into landscaped areas such as medians, parking islands, planter boxes, etc., and/or areas of pervious paving. Instead of having landscaped areas raised above the surrounding impervious areas, design them as depressed areas that can receive Runoff from adjacent impervious pavement. For example, a lawn or garden depressed 3"-4" below surrounding walkways or driveways provides a simple but quite functional landscape design element. • Detain and retain runoff throughout the site. On flatter sites, smaller Structural BMPs may be interspersed in landscaped areas among the buildings and paving. • On hillside sites, drainage from upper areas may be collected in conventional catch basins and piped to landscaped areas and LID BMPs and/or Hydrologic Control BMPs in lower areas. Low retaining walls may also be used to create terraces that can accommodate LID BMPs. Wherever possible, direct drainage from landscaped slopes offsite and not to impervious surfaces like parking lots. • Reduce curb maintenance and provide for allowances for curb cuts. • Design landscaped areas or other pervious areas to receive and infiltrate runoff from nearby impervious areas. • Use Tree Wells to intercept, infiltrate, and evapotranspire precipitation and runoff before it reaches structural BMPs. Tree wells can be used to limit the size of Drainage Management Areas that must be treated by structural BMPs. Guidelines for Tree Wells are included in the Tree Well Fact Sheet in the LID BMP Design Handbook.
Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *Insert discussion/justification here*	
☒ Yes ☐ No ☐ N/A	**Did you utilize native or drought tolerant species in site landscaping?** Wherever possible, use native or drought tolerant species within site landscaping instead of alternatives. These plants are uniquely suited to local soils and climate and can reduce the overall demands for potable water use associated with irrigation.
Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *Insert discussion/justification here*	

Project- Specific WQMP Site Design BMP Checklist	
☐ Yes ☐ No ☒ N/A	**Did implement harvest and use of runoff?** Under the Regional MS4 Permit, Harvest and Use BMPs must be employed to reduce runoff on any site where they are applicable and feasible. However, Harvest and Use BMPs are effective for retention of stormwater runoff only when there is adequate demand for non-potable water during the wet season. If demand for non-potable water is not sufficiently large, the actual retention of stormwater runoff will be diminished during larger storms or during back-to-back storms. For the purposes of planning level Harvest and Use BMP feasibility screening, Harvest and Use is only considered to be a feasible if the total average wet season demand for non-potable water is sufficiently large to use the entire DCV within 72 hours. If the average wet season demand for non-potable water is not sufficiently large to use the entire DCV within 72 hours, then Harvest and Use is not considered to be feasible and need not be considered further. The general feasibility and applicability of Harvest and Use BMPs should consider: • Any downstream impacts related to water rights that could arise from capturing stormwater (not common). • Conflicts with recycled water used – where the project is conditioned to use recycled water for irrigation, this should be given priority over stormwater capture as it is a year-round supply of water. • Code Compliance - If a particular use of captured stormwater, and/or available methods for storage of captured stormwater would be contrary to building codes in effect at the time of approval of the preliminary Project-Specific WQMP, then an evaluation of harvesting and use for that use would not be required. • Wet season demand – the applicant shall demonstrate, to the acceptance of the [Insert Jurisdiction], that there is adequate demand for harvested water during the wet season to drain the system in a reasonable amount of time.
Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *Insert discussion/justification here*	
☒ Yes ☐ No ☐ N/A	**Did you keep the runoff from sediment producing pervious area hydrologically separate from developed areas that require treatment?** Pervious area that qualify as self-treating areas or off-site open space should be kept separate from drainage to structural BMPs whenever possible. This helps limit the required size of structural BMPs, helps avoid impacts to sediment supply, and helps reduce clogging risk to BMPs.
Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *Insert discussion/justification here*	

Section C: Delineate Drainage Management Areas (DMAs)

This section provides streamlined guidance and documentation of the DMA delineation and categorization process, for additional information refer to the procedure in Section 3.3 of the SMR WQMP which discusses the methods of delineating and mapping your project site into individual DMAs. Complete Steps 1 to 4 to successfully delineate and categorize DMAs.

Step 1: Identify Surface Types and Drainage Pathways

Carefully delineate pervious areas and impervious areas (including roofs) throughout site and identify overland flow paths and above ground and below ground conveyances. Also identify common points (such as BMPs) that these areas drain to.

Step 2: DMA Delineation

Use the information in Step 1 to divide the entire PDP site into individual, discrete DMAs. Typically, lines delineating DMAs follow grade breaks and roof ridge lines. Where possible, establish separate DMAs for each surface type (e.g., landscaping, pervious paving, or roofs). Assign each DMA a unique code and determine its size in square feet. The total area of your site should total the sum of all of your DMAs (unless water from outside the project limits comingles with water from inside the project limits, i.e. run-on). Complete Table C-1

Table C-1 DMA Identification

DMA Name or Identification	Surface Type(s)[1]	Area (Sq. Ft.)	DMA Type
A	Mixed	179,743	To be Determined in Step 3
B	Mixed	37,522	
C	Mixed	9,024	
D	Mixed	35,499	
E	Mixed	6,068	
F	Landscape	6,077	
G	Mixed	9,474	
H	Landscape	4,264	

Add Columns as Needed

Step 3: DMA Classification

Determine how drainage from each DMA will be handled by using information from Steps 1 and 2 and by completing Steps 3.A to 3.C. Each DMA will be classified as one of the following four types:

- Type 'A': Self-Treating Areas:
- Type 'B': Self-Retaining Areas
- Type 'C': Areas Draining to Self-Retaining Areas
- Type 'D': Areas Draining to BMPs

Step 3.A – Identify Type 'A' Self-Treating Area

Indicate if the DMAs meet the following criteria by answering "Yes" or "No".

☒ Yes ☐ No — Area is undisturbed from their natural condition OR restored with Native and/or California Friendly vegetative covers.

☒ Yes ☐ No	Area is irrigated, if at all, with appropriate low water use irrigation systems to prevent irrigation runoff.
☒ Yes ☐ No	Runoff from the area will not comingle with runoff from the developed portion of the site, or across other landscaped areas that do not meet the above criteria.

If all answers indicate "Yes," complete Table C-2 to document the DMAs that are classified as Self-Treating Areas.

Table C-2 Type 'A', Self-Treating Areas

DMA Name or Identification	Area (Sq. Ft.)	Stabilization Type	Irrigation Type (if any)
F	11,675	Native Low Water Use	Drip Irrigation
H	4,264	Native Low Water Use	Drip Irrigation

Step 3.B – Identify Type 'B' Self-Retaining Area and Type 'C' Areas Draining to Self-Retaining Areas

Type 'B' Self-Retaining Area: A Self-Retaining Area is shallowly depressed 'micro infiltration' areas designed to retain the Design Storm rainfall that reaches the area, without producing any Runoff.

Indicate if the DMAs meet the following criteria by answering "Yes," "No," or "N/A".

☐ Yes ☐ No ☒ N/A	Slopes will be graded toward the center of the pervious area.
☐ Yes ☐ No ☒ N/A	Soils will be freely draining to not create vector or nuisance conditions.
☐ Yes ☐ No ☒ N/A	Inlet elevations of area/overflow drains, if any, should be clearly specified to be three inches or more above the low point to promote ponding.
☐ Yes ☐ No ☒ N/A	Pervious pavements (e.g., crushed stone, porous asphalt, pervious concrete, or permeable pavers) can be self-retaining when constructed with a gravel base course four or more inches deep below any underdrain discharge elevation.

If all answers indicate "Yes," DMAs may be categorized as Type 'B', proceed to identify Type 'C' Areas Draining to Self-Retaining Areas.

Type 'C' Areas Draining to Self-Retaining Areas: Runoff from impervious or partially pervious areas can be managed by routing it to Self-Retaining Areas consistent with the LID Principle discussed in SMR WQMP Section 3.2.5 for 'Dispersing Runoff to Adjacent Pervious Areas'.
Indicate if the DMAs meet the following criteria by answering "Yes" or "No".

☒ Yes ☐ No	The drainage from the tributary area must be directed to and dispersed within the Self-Retaining Area.
☒ Yes ☐ No	Area must be designed to retain the entire Design Storm runoff without

flowing offsite.

If all answers indicate "Yes," DMAs may be categorized as Type 'C'.

Complete Table C-3 and Table C-4 to identify Type 'B' Self-Retaining Areas and Type 'C' Areas Draining to Self-Retaining Areas.

Table C-3 Type 'B', Self-Retaining Areas

Self-Retaining Area				Type 'C' DMAs that are draining to the Self-Retaining Area		
DMA Name/ ID	Post-project surface type	Area (square feet) [A]	Storm Depth (inches) [B]	DMA Name / ID	[C] from Table C-4= [C]	Required Retention Depth (inches) [D] = $[B] + \frac{[B]\cdot[C]}{[A]}$

Table C-4 Type 'C', Areas that Drain to Self-Retaining Areas

DMA					Receiving Self-Retaining DMA		
DMA Name/ ID	Area (square feet) [A]	Post-project surface type	Runoff factor [B]	Product [C] = [A] x [B]	DMA name /ID	Area (square feet) [D]	Ratio [C]/[D]
BMP-E	6,068	IMP	.66	4005	BMP-6	617.5	6.5

<u>Note:</u> (See Section 3.3 of SMR WQMP) Ensure that partially pervious areas draining to a Self-Retaining area do not exceed the following ratio:

$$\left(\frac{2}{\boldsymbol{Impervious\ Fraction}}\right) : 1$$

(Tributary Area: Self-Retaining Area)

Step 3.C – Identify Type 'D' Areas Draining to BMPs

Areas draining to BMPs are those that could not be fully managed through LID Principles (DMA Types A through C) and will instead drain to an LID BMP and/or a Conventional Treatment BMP designed to manage water quality impacts from that area, and Hydromodification where necessary.

Complete Table C-5 to document which DMAs are classified as Areas Draining to BMPs

Table C-5 Type 'D', Areas Draining to BMPs

DMA Name or ID	BMP Name or ID Receiving Runoff from DMA
DMA A	BMP-1
DMA B	BMP-2
DMA C	BMP-3
DMA D	BMP-4
DMA G	BMP-5

Note: More than one DMA may drain to a single LID BMP; however, one DMA may not drain to more than one BMP.

Section D: Implement LID BMPs

The Regional MS4 Permit requires the use of LID BMPs to provide retention or treatment of the DCV and includes a BMP hierarchy which requires Full Retention BMPs (Priority 1) to be considered before Biofiltration BMPs (Priority 2) and Flow-Through Treatment BMPs and Alternative Compliance BMPs (Priority 3). LID BMP selection must be based on technical feasibility and should be considered early in the site planning and design process. Use this section to document the selection of LID BMPs for each DMA. Note that feasibility is based on the DMA scale and may vary between DMAs based on site conditions.

D.1 Full Infiltration Applicability

An assessment of the feasibility of utilizing full infiltration BMPs is required for all projects, *except where it can be shown that site design LID principals fully retain the DCV (i.e., all DMAs are Type A, B, or C), or where Harvest and Use BMPs fully retain the DCV. Check the following box if applicable:*

☐ Site design LID principals fully retain the DCV (i.e., all DMAs are Type A, B, or C), (Proceed to Section E).

If the above box remains unchecked, perform a site-specific evaluation of the feasibility of Infiltration BMPs using each of the applicable criteria identified in Chapter 2.3.3 of the SMR WQMP and complete the remainder of Section D.1.

Geotechnical Report

A Geotechnical Report or Phase I Environmental Site Assessment may be required by the Copermittee to confirm present and past site characteristics that may affect the use of Infiltration BMPs. In addition, the Copermittee, at their discretion, may not require a geotechnical report for small projects as described in Chapter 2 of the SMR WQMP. If a geotechnical report has been prepared, include it in Appendix 3. In addition, if a Phase I Environmental Site Assessment has been prepared, include it in Appendix 4.

Infiltration Feasibility

Table D-1 below is meant to provide a simple means of assessing which DMAs on your site support Infiltration BMPs and is discussed in the SMR WQMP in Chapter 2.3.3. Check the appropriate box for each question and then list affected DMAs as applicable. If additional space is needed, add a row below the corresponding answer.

Table D-1 Infiltration Feasibility

Downstream Impacts (SMR WQMP Section 2.3.3.a)		
Does the project site…	**YES**	**NO**
…have any DMAs where infiltration would negatively impact downstream water rights or other Beneficial Uses[3]?		X
If Yes, list affected DMAs:		
Groundwater Protection (SMR WQMP Section 2.3.3.b)		
Does the project site…	**YES**	**NO**
…have any DMAs with industrial, and other land uses that pose a high threat to water quality, which cannot be treated by Bioretention BMPs? Or have DMAs with active industrial process areas?		X
If Yes, list affected DMAs:		
…have any DMAs with a seasonal high groundwater mark shallower than 10 feet?		X
If Yes, list affected DMAs:		
…have any DMAs located within 100 feet horizontally of a water supply well?		X
If Yes, list affected DMAs:		
…have any DMAs that would restrict BMP locations to within a 2:1 (horizontal: vertical) influence line extending from any septic leach line?		X
If Yes, list affected DMAs:		
…have any DMAs been evaluated by a licensed Geotechnical Engineer, Hydrogeologist, or Environmental Engineer, who has concluded that the soils do not have adequate physical and chemical characteristics for the protection of groundwater, and has treatment provided by amended media layers in Bioretention BMPs been considered in evaluating this factor?		X
If Yes, list affected DMAs:		
Public Safety and Offsite Improvements (SMR WQMP Section 2.3.3.c)		
Does the project site…	**YES**	**NO**
…have any areas identified by the geotechnical report as posing a public safety risk where infiltration of stormwater could have a negative impact?		X
If Yes, list affected DMAs:		
Infiltration Characteristics For LID BMPs (SMR WQMP Section 2.3.3.d)		
Does the project site…	**YES**	**NO**
…have factored infiltration rates of less than 0.8 inches / hour? (Note: on a case-by-case basis, the Local Jurisdiction may allow a factor of safety as low as 1.0 to support selection of full infiltration BMPs. Therefore, measured infiltration rates could be as low as 0.8 in/hr to support full infiltration. A higher factor of safety would be required for design in accordance with the LID BMP Deign Handbook).		X
If Yes, list affected DMAs:		
Cut/Fill Conditions (SMR WQMP Section 2.3.3.e)		
Does the project site…	**YES**	**NO**
…have significant cut and/or fill conditions that would preclude in-situ testing of infiltration rates at the final infiltration surface?		X
If Yes, list affected DMAs:		
Other Site-Specific Factors (SMR WQMP Section 2.3.3.f)		
Does the project site…	**YES**	**NO**
…have DMAs where the geotechnical investigation discovered other site-specific factors that would preclude effective and/or safe infiltration?		X
Describe here:		

If you answered "Yes" to any of the questions above for any DMA, Infiltration BMPs that rely solely on infiltration should not be used for those DMAs and you should proceed to the assessment for

[3] Such a condition must be substantiated by sufficient modeling to demonstrate an impact and would be subject to [Insert Jurisdiction] discretion. There is not a standardized method for assessing this criterion. Water rights evaluations should be site-specific.

Biofiltration BMPs below. Biofiltration BMPs that provide partial infiltration may still be feasible and should be assessed in Section D.2. Summarize concerns identified in the Geotechnical Report, if any, that resulted in a "YES" response above in the table below.

Table D-2 Geotechnical Concerns for Onsite Infiltration

Type of Geotechnical Concern	DMAs Feasible (By Name or ID)	DMAs Infeasible (By Name or ID)
Collapsible Soil		
Expansive Soil		
Slopes		
Liquefaction		
Other		

D.2 Biofiltration Applicability

This section should document the applicability of biofiltration BMPs for Type D DMAs that are not feasible for full infiltration BMPs. The key decisions to be documented in this section include:

1. Are biofiltration BMPs with partial infiltration feasible?
    a. Biofiltration BMPs must be designed to maximize incidental infiltration via a partial infiltration design unless it is demonstrated that this design is not feasible.
    b. These designs can be used at sites with low infiltration rates where other feasibility factors do not preclude incidental infiltration.

    Document summary in Table D-3.
2. If not, what are the factors that require the use of biofiltration with no infiltration? This may include:
    a. Geotechnical hazards
    b. Water rights issues
    c. Water balance issues
    d. Soil contamination or groundwater quality issues
    e. Very low infiltration rates (factored rates < 0.1 in/hr)
    f. Other factors, demonstrated to the acceptance of the local jurisdiction

    If this applies to any DMAs, then rationale must be documented in Table D-3.
3. Are biofiltration BMPs infeasible?
    a. If yes, then provide a site-specific analysis demonstrating the technical infeasibility of all LID BMPs has been performed and is included in Appendix 5. If you plan to submit an analysis demonstrating the technical infeasibility of LID BMPs, request a pre-submittal meeting with the Copermittee with jurisdiction over the Project site to discuss this option. Proceed to Section F to document your alternative compliance measures.

Table D-3 Evaluation of Biofiltration BMP Feasibility

DMA ID	Is Partial/ Incidental Infiltration Allowable? (Y/N)	Basis for Infeasibility of Partial Infiltration (provide summary and include supporting basis if partial infiltration not feasible)
DMA A		
DMA B		
DMA C		
DMA D		
DMA E		

Infiltration testing will be conducted at final engineering due to finished grade of site being 30ft below current existing surface.

Proprietary Biofiltration BMP Approval Criteria

If the project will use proprietary BMPs as biofiltration BMPs, then this section is completed to document that the proprietary BMPs are selected in accordance with Section 2.3.7 of the SMR WQMP. Proprietary Biofiltration BMPs must meet both of the following approval criteria:

1. Approval Criteria for All Proprietary BMPs, and
2. Acceptance Criteria for Proprietary Biofiltration BMPs.

When the use of proprietary biofiltration BMPs is proposed to meet the Pollutant Control performance standards, use Table D-4 to document that appropriate approval criteria have been met for the proposed BMPs. Add additional rows to document approval criteria are met for each type of BMP proposed.

Table D-4 Proprietary BMP Approval Requirement Summary

Proposed Proprietary Biofiltration BMP	Approval Criteria	Notes/Comments
Insert BMP Name and Manufacturer Here	☐ Proposed BMP has an active TAPE GULD Certification for the project pollutants of concern[4] or equivalent 3rd party demonstrated performance.	Insert text here
	☐ The BMP is used in a manner consistent with manufacturer guidelines and conditions of its third-party certification.	Insert text here
	☐ The BMP includes biological features including vegetation supported by engineered or other growing media.	Describe features here.
	☐ The BMP is designed to maximize infiltration, or supplemental infiltration is provided to achieve retention equivalent to Biofiltration with Partial Infiltration BMPs if factored infiltration rate is between 0.1 and 0.8 inches/hour.	Describe supplemental retention practices if applicable.
	☐ The BMP is sized using one of two Biofiltration LID sizing options in Section 2.3.2 of the SRM WQMP.	List sizing method used, resulting size (i.e. volume or flow), and provided size (for proposed unit)

[4] Use Table F-1 and F-2 to identify and document the pollutants of concern and include these tables in Appendix 5.

D.3 Feasibility Assessment Summaries

From the Infiltration, Biofiltration with Partial Infiltration and Biofiltration with No Infiltration Sections above, complete Table D-5 below to summarize which LID BMPs are technically feasible, and which are not, based upon the established hierarchy.

Table D-5 LID Prioritization Summary Matrix

DMA Name/ID	LID BMP Hierarchy			No LID (Alternative Compliance)
	1. Infiltration	2. Biofiltration with Partial Infiltration	3. Biofiltration with No Infiltration	
1	☐	☐	☒	☐
2	☐	☐	☒	☐
3	☐	☐	☒	☐
4	☐	☐	☒	☐
5	☐	☐	☒	☐

For those DMAs where LID BMPs are not feasible, provide a narrative in Table D-6 below summarizing why they are not feasible, include your technical infeasibility criteria in Appendix 5, and proceed to Section F below to document Alternative Compliance measures for those DMAs. Recall that each proposed DMA must pass through the LID BMP hierarchy before alternative compliance measures may be considered.

This is based on the clarification letter titled "San Diego Water Board's Expectations of Documentation to Support a Determination of Priority Development Project Infiltration Infeasibility" (April 28, 2017, Via email from San Diego Regional Water Quality Control Board to San Diego County Municipal Storm Water Copermittees[5]).

Table D-6 Summary of Infeasibility Documentation

Question	Narrative Summary (include reference to applicable appendix/attachment/report, as applicable)
a) When in the entitlement process did a geotechnical engineer analyze the site for infiltration feasibility?	Infiltration testing will be conducted at final engineering
b) When in the entitlement process were other investigations conducted (e.g., groundwater quality, water rights) to evaluate infiltration feasibility?	No Test at current time
c) What was the scope and results of testing, if conducted, or rationale for why testing was not needed to reach findings?	No Test at current time
d) What public health and safety requirements affected infiltration locations?	No Test at current time
e) What were the conclusions and recommendations of the geotechnical engineer	No Test at current time

[5] http://www.projectcleanwater.org/download/pdp-infiltration-infeasibility/

	and/or other professional responsible for other investigations?	
f)	What was the history of design discussions between the permittee and applicant for the proposed project, resulting in the final design determination related locations feasible for infiltration?	No Test at current time
g)	What site design alternatives were considered to achieve infiltration or partial infiltration on site?	No Test at current time
h)	What physical impairments (i.e., fire road egress, public safety considerations, utilities) and public safety concerns influenced site layout and infiltration feasibility?	No Test at current time
i)	What LID Principles (site design BMPs) were included in the project site design?	

D.4 LID BMP Sizing

Each LID BMP must be designed to ensure that the DCV will be captured by the selected BMPs with no discharge to the storm drain or surface waters during the DCV size storm. Infiltration BMPs must at minimum be sized to capture the DCV to achieve pollutant control requirements.

Biofiltration BMPs must at a minimum be sized to:

- Treat 1.5 times the DCV not reliably retained on site using a volume-base or flow-based sizing method, or
- Include static storage volume, including pore spaces and pre-filter detention volume, at least 0.75 times the portion of the DCV not reliably retained on site.

First, calculate the DCV for each LID BMP using the V_{BMP} worksheet in Appendix F of the LID BMP Design Handbook. Second, design the LID BMP to meet the required V_{BMP} using the methods included in Section 3 of the LID BMP Design Handbook. Utilize the worksheets found in the LID BMP Design Handbook or consult with the Copermittee to assist you in correctly sizing your LID BMPs. Use Table D-7 below to document the DCV each LID BMP. Provide the completed design procedure sheets for each LID BMP in Appendix 6. You may add additional rows to the table below as needed.

Table D-7 DCV Calculations for LID BMPs

DMA Type/ID	DMA (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*Enter BMP Name / Identifier Here* *BMP-1*		
	[A]		[B]	[C]	[A] x [C]			
A	*179,743*	*Mixed*	*0.85*	*0.66*	*118,156*	*Design Storm Depth (in)*	*DCV, V_{BMP} (cubic feet)*	*Proposed Volume on Plans (cubic feet)*
	$A_T = \Sigma[A]$				118,156	0.61	5,991	7,492

[B], [C] is obtained as described in Section 2.6.1.b of the SMR WQMP
[E] is obtained from Exhibit A in the SMR WQMP
[G] is obtained from a design procedure sheet, such as in LID BMP Design Handbook and placed in Appendix 6.

DMA Type/ID	DMA (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*Enter BMP Name / Identifier Here* *BMP-2*		
	[A]		[B]	[C]	[A] x [C]			
B	*37,522*	*Mixed*	*0.85*	*0.66*	*24,665*	*Design Storm Depth (in)*	*DCV, V_{BMP} (cubic feet)*	*Proposed Volume on Plans (cubic feet)*
	$A_T = \Sigma[A]$				24,665	0.61	1,251	5,676

DMA Type/ID	DMA (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*Enter BMP Name / Identifier Here* *BMP-3*		
	[A]		[B]	[C]	[A] x [C]			
C	*9,024*	*Mixed*	*0.85*	*0.66*	*5,932*	*Design Storm Depth (in)*	*DCV, V_{BMP} (cubic feet)*	*Proposed Volume on Plans (cubic feet)*
	$A_T = \Sigma[A]$				5,932	0.61	302	435

DMA Type/ID	DMA (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*Enter BMP Name / Identifier Here* *BMP-4*		
	[A]		[B]	[C]	[A] x [C]			
D	*35,499*	*Mixed*	*0.85*	*0.66*	*23,336*	*Design Storm Depth (in)*	*DCV, V_{BMP} (cubic feet)*	*Proposed Volume on Plans (cubic feet)*
	$A_T = \Sigma[A]$				23,336	0.61	1,186	1,328

DMA Type/ID	DMA (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*Enter BMP Name / Identifier Here* *BMP-5*		
	[A]		[B]	[C]	[A] x [C]			
G	*9,474*	*Mixed*	*0.85*	*0.66*	*6,228*	*Design Storm Depth (in)*	*DCV, V_{BMP} (cubic feet)*	*Proposed Volume on Plans (cubic feet)*
	$A_T = \Sigma[A]$				5,890	0.61	317	332

Complete Table D-8 below to document the Design Capture Volume and the Proposed Volume for each LID BMP. You can add rows to the table as needed. Alternatively, the Santa Margarita Hydrology Model (SMRHM) can be used to size LID BMPs to address the DCV and, if applicable, to size Hydrologic Control BMPs to meet the Hydrologic Performance Standard described in the SMR WQMP, as identified in Section E.

Table D-8 LID BMP Sizing

BMP Name / ID	DMA No.	BMP Type / Description	Design Capture Volume (ft^3)	Proposed Volume (ft^3)
1	A	Biofiltration	6,006	7,492
2	B	Biofiltration	1,254	5,676
3	C	Biofiltration	302	435
4	D	Biofiltration	1,186	1,328
5	G	Biofiltration	317	332

If bioretention will include a capped underdrain, then include sizing calculations demonstrating that the BMP will meet infiltration sizing requirements with the underdrain capped and also meet biofiltration sizing requirements if the underdrain is uncapped.

Section E: Implement Hydrologic Control BMPs and Sediment Supply BMPs

If a completed Table 1.2 demonstrates that the project is exempt from Hydromodification Performance Standards, specify N/A and proceed to Section G.

☐ N/A Project is Exempt from Hydromodification Performance Standards.

If a PDP is not exempt from hydromodification requirements than the PDP must satisfy the requirements of the performance standards for hydrologic control BMPs and Sediment Supply BMPs. The PDP may choose to satisfy hydrologic control requirements using onsite or offsite BMPs (i.e. Alternative Compliance). Sediment supply requirements cannot be met via alternative compliance. If N/A is not selected above, select one of the two options below and complete the applicable sections.

☒ Project is Not Hydromodification Exempt and chooses to implement Hydrologic Control and Sediment Supply BMPs Onsite (complete Section E).

☐ Project is Not Hydromodification Exempt and chooses to implement Hydrologic Control Requirements using Alternative Compliance (complete Section F). Selection of this option must be approved by the Copermittee.

E.1 Hydrologic Control BMP Selection

Capture of the DCV and achievement of the Hydrologic Performance Standard may be met by combined and/or separate structural BMPs. The user should consider the full suite of Hydrologic Control BMPs to manage runoff from the post-development condition and meet the Hydrologic Performance Standard identified in this section.

The Hydrologic Performance Standard consists of matching or reducing the flow duration curve of post-development conditions to that of pre-existing, naturally occurring conditions, for the range of geomorphically significant flows (10% of the 2-year runoff event up to the 10-year runoff event). Select each of the hydrologic control BMP types that are applied to meet the above performance standard on the site.

☒ LID principles as defined in Section 3.2 of the SMR WQMP.

☒ Structural LID BMPs that may be modified or enlarged, if necessary, beyond the DCV.

☒ Structural Hydrologic Control BMPs that are distinct from the LID BMPs above. The LID BMP Design Handbook provides information not only on Hydrologic Control BMP design, but also on BMP design to meet the combined LID requirement and Hydrologic Performance Standard. The Handbook specifies the type of BMPs that can be used to meet the Hydrologic Performance Standard.

E.2 Hydrologic Control BMP Sizing

Hydrologic Control BMPs must be designed to ensure that the flow duration curve of the post-development DMA will not exceed that of the pre-existing, naturally occurring, DMA for the range of geomorphically significant flows. Using SMRHM, (or another acceptable continuous simulation model if approved by the Copermittee) the applicant shall demonstrate that the performance of the Hydrologic Control BMPs complies with the Hydrologic Performance Standard. Complete Table E-1 below and identify, for each DMA, the type of Hydrologic Control BMP, if the SMRHM model confirmed the management (Identified as "passed" in SMRHM), the total volume capacity of the Hydrologic Control BMP, the Hydrologic Control BMP footprint at top floor elevation, and the drawdown time of the Hydrologic Control BMP. SMRHM summary reports should be documented in Appendix 7. Refer to the SMRHM Guidance Document for additional information on SMRHM. You can add rows to the table as needed.

Table E-1 Hydrologic Control BMP Sizing

BMP Name / ID	DMA No.	BMP Type / Description	SMRHM Passed	BMP Volume (ac-ft)	BMP Footprint (ac)	Drawdown time (hr)
1	A	Biofiltration	☒	0.1563	0.1564	22.5
2	B	Biofiltration	☒	0.0875	0.1167	22.2
3	C	Biofiltration	☒	0.0136	0.0091	1.1
4	D	Biofiltration	☒	0.0416	0.0277	3.4
5	G	Biofiltration	☒	0.0104	.0069	0.8

If a bioretention BMP with capped underdrain is used and hydromodification requirements apply, then sizing calculations must demonstrate that the BMP meets flow duration control criteria with the underdrain capped and uncapped. Both calculations must be included.

E.3 Implement Sediment Supply BMPs

The sediment supply performance standard applies to PDPs for which hydromodification applied that have the potential to impact Potential Critical Coarse Sediment Yield Areas. Refer to Exhibit G of the WQMP to determine if there are onsite Potential Critical Coarse Sediment Yield Areas or Potential Sediment Source Areas. Select one of the two options below and include the Potential Critical Coarse Sediment Yield Area Exhibit showing your project location in Appendix 7.

☒ There are no mapped Potential Critical Coarse Sediment Yield Areas or Potential Sediment Source Areas on the site. The Sediment Supply Performance Standard is met with no further action.

☐ There are mapped Potential Critical Coarse Sediment Yield Areas or Potential Sediment Source Areas on the site, the Sediment Supply Performance Standard will be met through Option 1 or Option 2 below.

The applicant may refer to Section 3.6.4 of the SMR WQMP for a description of the methodology to meet the Sediment Supply Performance Standard. Select the applicable compliance pathway and

complete the appropriate sections to demonstrate compliance with the Sediment Supply Performance Standard if the second box is selected above:

☐ Avoid impacts related to any PDP activities to Potential Critical Coarse Sediment Yield Areas. Proceed to Section E.3.1.

☐ Complete a Site-Specific Critical Coarse Sediment Analysis. Proceed to Section E.3.2.

E.3.1 Option 1: Avoid Potential Critical Coarse Sediment Yield Areas and Potential Sediment Source Areas

The simplest approach for complying with the Sediment Supply Performance Standard is to avoid impacts to areas identified as Potential Critical Coarse Sediment Yield Areas or Potential Sediment Supply Areas. If a portion of PDP is identified as a Potential Critical Coarse Sediment Yield Area or a Potential Sediment Source Area, that PDP may still achieve compliance with the Sediment Supply Performance Standards if Potential Critical Coarse Sediment Yield Areas and Potential Sediment Supply Areas are avoided, i.e. areas are not developed and thereby delivery of Critical Coarse Sediment to the receiving waters is not impeded by site developments.

Provide a narrative describing how the PDP has avoided impacts to Potential Critical Coarse Sediment Yield Areas and/or Potential Sediment Source Areas below.

No Potential Critical Coarse sediment Yeild areas identified...see Exhibit included.

If it is not feasible to avoid these areas, proceed to Option 2 to complete a Site-Specific Critical Coarse Sediment Analysis.

E.3.2 Option 2: Site-Specific Critical Coarse Sediment Analysis

Perform a stepwise assessment to ensure the maintenance of the pre-project source(s) of Critical Coarse Sediment (i.e., Bed Sediment Supply):

1. Determine whether the site or a portion of the site is a Significant Source of Bed Sediment Supply to the Receiving Channel (i.e., an actual verified Critical Coarse Sediment Yield Area);
2. Avoid areas identified as actual verified Critical Coarse Sediment Yield Areas in the PDP design and maintain pathways for discharge of Bed Sediment Supply from these areas to receiving waters.

Step 1: Identify if the site is an actual verified Critical Coarse Sediment Yield Area supplying Bed Sediment Supply to the receiving channel

☐ **Step 1.A** – Is the Bed Sediment of onsite streams similar to that of receiving streams?

Rate the similarity: ☐ High
☐ Medium
☐ Low

Results from the geotechnical and sieve analysis to be performed both onsite and in the receiving channel should be documented in Appendix 7. Of particular interest, the results of the sieve

analysis, the soil erodibility factor, a description of the topographic relief of the project area, and the lithology of onsite soils should be reported in Appendix 7.

☐ **Step 1.B** – Are onsite streams capable of delivering Bed Sediment Supply from the site, if any, to the receiving channel?

Rate the potential:
☐ High
☐ Medium
☐ Low

Results from the analyses of the sediment delivery potential to the receiving channel should be documented in Appendix 7 and identify, at a minimum, the Sediment Source, the distance to the receiving channel, the onsite channel density, the project watershed area, the slope, length, land use, and rainfall intensity.

☐ **Step 1.C** – Will the receiving channel adversely respond to a change in Bed Sediment Load?

Rate the need for bed sediment supply:
☐ High
☐ Medium
☐ Low

Results from the in-stream analysis to be performed both onsite should be documented in Appendix 7. The analysis should, at a minimum, quantify the bank stability and the degree of incision, provide a gradation of the Bed Sediment within the receiving channel, and identify if the channel is sediment supply-limited.

☐ **Step 1.D** – Summary of Step 1

Summarize in Table E.3 the findings of Step 1 and associate a score (in parenthesis) to each step. The sum of the three individual scores determines if a stream is a significant contributor to the receiving stream.

- Sum is equal to or greater than eight - Site is a significant source of sediment bed material – all on-site streams must be preserved or by-passed within the site plan. The applicant shall proceed to Step 2 for all onsite streams.
- Sum is greater than five but lower than eight. Site is a source of sediment bed material – some of the on-site streams must be preserved (with identified streams noted). The applicant shall proceed to Step 2 for the identified streams only.
- Sum is equal to or lower than five. Site is not a significant source of sediment bed material. The applicant may advance to Section F.

Table E-2 Triad Assessment Summary

Step	Rating			Total Score
1.A	☐ High (3)	☐ Medium (2)	☐ Low (1)	
1.B	☐ High (3)	☐ Medium (2)	☐ Low (1)	
1.C	☐ High (3)	☐ Medium (2)	☐ Low (1)	
Significant Source Rating of Bed Sediment to the receiving channel(s)				

Step 2: Avoid Development of Critical Coarse Sediment Yield Areas, Potential Sediment Sources Areas, and Preserve Pathways for Transport of Bed Sediment Supply to Receiving Waters

Onsite streams identified as a actual verified Critical Coarse Sediment Yield Areas should be avoided in the site design and transport pathways for Critical Coarse Sediment should be preserved

Check those that apply:

☐ The site design does avoid all onsite channels identified as actual verified Critical Coarse Sediment Yield Areas

AND

☐ The drainage design bypasses flow and sediment from onsite upstream drainages identified as actual verified Critical Coarse Sediment Yield Areas to maintain Critical Coarse Sediment supply to receiving waters

(If both are yes, the applicant may disregard subsequent steps of Section E.3 and directly advance directly to Section G).

- *Or* -

☐ The site design **does NOT avoid** all onsite channels identified as actual verified Critical Coarse Sediment Yield Areas

OR

☐ The project impacts transport pathways of Critical Coarse Sediment from onsite upstream drainages.

(If either of these are the case, the applicant may proceed with the subsequent steps of Section E.3).

Provide in Appendix 7 a site map that identifies all onsite channels and highlights those onsite channels that were identified as a Significant Source of Bed Sediment. The site map shall demonstrate, if feasible, that the site design avoids those onsite channels identified as a Significant Source of Bed Sediment. In addition, the applicant shall describe the characteristics of each onsite channel identified as a Significant Source of Bed Sediment. If the design plan cannot avoid the onsite channels, please provide a rationale for each channel individually.

The site map shall demonstrate that the drainage design bypasses those onsite channels that supply Critical Coarse Sediment to the receiving channel(s). In addition, the applicant shall describe the characteristics of each onsite channel identified as an actual verified Critical Coarse Sediment Yield Area.

Identified Channel #1 - Insert narrative description here

Identified Channel #2 - Insert narrative description here

Identified Channel #3 - Insert narrative description here

E.3.3 Sediment Supply BMPs to Result in No Net Impact to Downstream Receiving Waters

If impacts to Critical Coarse Sediment Yield Areas cannot be avoided, sediment supply BMPs must be implemented such there is no net impact to receiving waters. Sediment supply BMPs may consist of approaches that permit flux of bed sediment supply from Critical Coarse Sediment Yield Areas within the project boundary. This approach is subject to acceptance by the [Insert Jurisdiction]. It may require extensive documentation and analysis by qualified professionals to support this demonstration.

Appendix H of the San Diego Model BMP Design Manual provides additional information on site-specific investigation of Critical Coarse Sediment Supply areas.

http://www.projectcleanwater.org/download/2018-model-bmp-design-manual/

If applicable, insert narrative description here

Documentation of sediment supply BMPs should be detailed in Appendix 7.

Section F: Alternative Compliance

Alternative Compliance may be used to achieve compliance with pollutant control and/or hydromodification requirements for a given PDP. Alternative Compliance may be used under two scenarios, check the applicable box if the PDP is proposing to use Alternative Compliance to satisfy all or a portion of the Pollutant Control and/or Hydrologic Control requirements (but not sediment supply requirements)

☐ If it is not feasible to fully implement Infiltration or Biofiltration BMPs at a PDP site, Flow-Through Treatment Control BMPs may be used to treat pollutants contained in the portion of DCV not reliably retained on site and Alternative Compliance measures must also be implemented to mitigate for those pollutants in the DCV that are not retained or removed on site prior to discharging to a receiving water.

☐ Alternative Compliance is selected to comply with either pollutant control or hydromodification flow control requirements even if complying with these requirements is potentially feasible on-site. If such voluntary Alternative Compliance is implemented, Flow-Through Treatment Control BMPs must still be used to treat those pollutants in the portion of the DCV not reliably retained on site prior to discharging to a receiving water.

Refer to Section 2.7 of the SMR WQMP and consult the Local Jurisdiction for currently available Alternative Compliance pathways. Coordinate with the Copermittee if electing to participate in Alternative Compliance and complete the sections below to document implementation of the Flow-Through BMP component of the program.

F.1 Identify Pollutants of Concern

The purpose of this section is to help you appropriately plan for mitigating your Pollutants of Concern in lieu of implementing LID BMPs and to document compliance and.

Utilize Table A-1 from Section A, which noted your project's Receiving Waters, to identify impairments for Receiving Waters (including downstream receiving waters) by completing Table F-1. Table F-1 includes the watersheds identified as impaired in the Approved 2010 303(d) list; check box corresponding with the PDP's receiving water. The most recent 303(d) lists are available from the State Water Resources Control Board website: https://www.waterboards.ca.gov/water_issues/programs/tmdl/integrated2010.shtml).https://www.waterboards.ca.gov/water_issues/programs/tmdl/integrated2010.shtml.

Table F-1 Summary of Approved 2010 303(d) listed waterbodies and associated pollutants of concern for the Riverside County SMR Region and downstream waterbodies.

	Water Body	Nutrients[1]	Metals[2]	Toxicity	Bacteria and Pathogens	Pesticides and Herbicides	Sulfate	Total Dissolved Solids
☐	De Luz Creek	X	X				X	
☐	Long Canyon Creek		X		X	X		
☒	Murrieta Creek	X	X	X		X		
☐	Redhawk Channel	X	X		X	X		X
☐	Santa Gertudis Creek	X	X		X	X		
☐	Santa Margarita Estuary	X						
☒	Santa Margarita River (Lower)	X			X			
☒	Santa Margarita River (Upper)	X		X				
☐	Temecula Creek	X	X	X		X		X
☐	Warm Springs Creek	X	X		X	X		

[1] Nutrients include nitrogen, phosphorus and eutrophic conditions caused by excess nutrients.

[2] Metals includes copper, iron, and manganese.

Use Table F-2 to identify the pollutants identified with the project site. Indicate the applicable PDP Categories and/or Project Features by checking the boxes that apply. If the identified General Pollutant Categories are the same as those listed for your Receiving Waters, then these will be your Pollutants of Concern; check the appropriate box or boxes in the last row.

Table F-2 Potential Pollutants by Land Use Type

Priority Development Project Categories and/or Project Features (check those that apply)		General Pollutant Categories									
		Bacterial Indicators	Metals	Nutrients	Pesticides	Toxic Organic Compounds	Sediments	Trash & Debris	Oil & Grease	Total Dissolved Solids	Sulfate
☐	Detached Residential Development	P	N	P	P	N	P	P	P	N	N
☐	Attached Residential Development	P	N	P	P	N	P	P	P[(2)]	N	N
☒	Commercial/Industrial Development	P[(3)]	P[(7)]	P[(1)]	P[(1)]	P	P[(1)]	P	P	N	N
☒	Automotive Repair Shops	N	P	N	N	P[(4, 5)]	N	P	P	N	N
☒	Restaurants (>5,000 ft^2)	P	N	N	P[(1)]	N	N	P	P	N	N
☐	Hillside Development (>5,000 ft^2)	P	N	P	P	N	P	P	P	N	N
☒	Parking Lots (>5,000 ft^2)	P[(6)]	P[(7)]	P[(1)]	P[(1)]	P[(4)]	P	P	P	N	N
☐	Streets, Highways, and Freeways	P[(6)]	P[(7)]	P[(1)]	P[(1)]	P[(4)]	P	P	P	N	N
☐	Retail Gasoline Outlets	N	P[(7)]	N	N	P[(4)]	N	P	P	N	N
Project Priority Pollutant(s) of Concern		☒	☐	☒	☒	☒	☒	☒	☒	☐	☐

P = Potential

N = Not Potential

(1) A potential Pollutant if non-native landscaping exists or is proposed onsite; otherwise not expected

(2) A potential Pollutant if the project includes uncovered parking areas; otherwise not expected

(3) A potential Pollutant is land use involving animal waste products; otherwise not expected

(4) Including petroleum hydrocarbons

(5) Including solvents

(6) Bacterial indicators are routinely detected in pavement runoff

(7) A potential source of metals, primarily copper and zinc. Iron, magnesium, and aluminum are commonly found in the environment and are commonly associated with soils, but are not primarily of anthropogenic stormwater origin in the municipal environment.

F.2 Treatment Control BMP Selection

Treatment Control BMPs typically provide proprietary treatment mechanisms to treat potential Pollutants in runoff, but do not sustain significant biological processes. Treatment Control BMPs must be selected to address the Project Priority Pollutants of Concern (identified above) and meet the acceptance criteria described in Section 2.3.7 of the SMR WQMP. Documentation of acceptance criteria must be included in Appendix 6. In addition, ensure that proposed Treatment Control BMPs are properly identified on the WQMP Site Plan in Appendix 1.

Table F-3 Treatment Control BMP Selection

Selected Treatment Control BMP Name or ID[1]	Priority Pollutant(s) of Concern to Mitigate[2]	Removal Efficiency Percentage[3]
BMP-1	Bacterial, Metals, Organic, Sediment, trash debris and oil & grease	>80%
BMP-2	Bacterial, Metals, Organic, Sediment, trash debris and oil & grease	>80%
BMP-3	Bacterial, Metals, Organic, Sediment, trash debris and oil & grease	>80%
BMP-4	Bacterial, Metals, Organic, Sediment, trash debris and oil & grease	>80%
BMP-5	Bacterial, Metals, Organic, Sediment, trash debris and oil & grease	>80%

[1] Treatment Control BMPs must not be constructed within Receiving Waters. In addition, a proposed Treatment Control BMP may be listed more than once if they possess more than one qualifying pollutant removal efficiency.
[2] Cross Reference Table E.1 above to populate this column.
[3] As documented in a Copermittee Approved Study and provided in Appendix 6.

F.3 Sizing Criteria

Utilize Table F-4 below to appropriately size flow-through BMPs to the DCV, or Design Flow Rate, as applicable. Please reference Chapter 3.5.1 of the SMR WQMP for further information.

Table F-4 Treatment Control BMP Sizing

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*Enter BMP Name / Identifier Here*	
	[A]		[B]	[C]	[A] x [C]		
						Design Storm (in)	*Design Flow Rate (cfs)*
	A_T = Σ[A]				Σ= [D]	[E]	$[F] = \frac{[D]x[E]}{[G]}$

[B], [C] is obtained as described in Section 2.6.1.b from the SMR WQMP
[E] either 0.2 inches or 2 times the 85th percentile hourly rainfall intensity
[G] = 43,560,.

F.4 Hydrologic Performance Standard – Alternative Compliance Approach

Alternative compliance options are only available if the governing Copermittee has acknowledged the infeasibility of onsite Hydrologic Control BMPs and approved an alternative compliance approach. See Section 3.5 and 3.6 of the SMR WQMP.

Select the pursued alternative and describe the specifics of the alternative:

☐ Offsite Hydrologic Control Management within the same channel system

Insert narrative description here

☐ In-Stream Restoration Project

Insert narrative description here

For Offsite Hydrologic Control BMP Option

Each Hydrologic Control BMP must be designed to ensure that the flow duration curve of the post-development DMA will not exceed that of the pre-existing, naturally occurring, DMA by more than ten percent over a one-year period. Using SMRHM, the applicant shall demonstrate that the performance of each designed Hydrologic Control BMP is equivalent with the Hydrologic Performance Standard for onsite conditions. Complete Table F-5 below and identify, for each Hydrologic Control BMP, the equivalent DMA the Hydrologic Control BMP mitigates, that the SMRHM model passed, the total volume capacity of the BMP, the BMP footprint at top floor elevation, and the drawdown time of the BMP. SMRHM summary reports for the alternative approach should be documented in Appendix 7. Refer to the SMRHM Guidance Document for additional information on SMRHM. You can add rows to the table as needed.

Table F-5 Offsite Hydrologic Control BMP Sizing

BMP Name / Type	Equivalent DMA (ac)	SMRHM Passed	BMP Volume (ac-ft)	BMP Footprint (ac)	Drawdown time (hr)
		☐			
		☐			
		☐			
		☐			

For Instream Restoration Option

Attach to Appendix 7 the technical report detailing the condition of the receiving channel subject to the proposed hydrologic and sediment regimes. Provide the full design plans for the in-stream restoration project that have been approved by the Copermittee. Utilize the San Diego Regional Water Quality Equivalency Guidance Document.

Section G: Implement Trash Capture BMPs

The Local Jurisdiction may require full trash capture BMPs to be installed as part of the project. Consult with the Local Jurisdiction to determine applicability.

Trash Capture BMPs may be applicable to Type 'D' DMAs, as defined in Section 2.3.4 of the SMR WQMP. Trash Capture BMPs are designed to treat Q_{TRASH}, the runoff flow rate generated during the 1-year 1-hour precipitation depth. Utilize Table G-1 to size Trash Capture BMP. Refer to Table G-2 to determine the Trash Capture Design Storm Intensity (E).

Table G-1 Sizing Trash Capture BMPs

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*Enter BMP Name / Identifier Here*	
	[A]		[B]	[C]	[A] x [C]	*Trash Capture Design Storm Intensity (in)*	*Trash Capture Design Flow Rate (cubic feet or cfs)*
	$A_T = \Sigma[A]$				$\Sigma = [D]$	[E]	$[F] = \frac{[D]x[E]}{[G]}$

[B], [C] is obtained as described in Section 2.6.1.b from the SMR WQMP
[G] = 43,560

Table G-2 Approximate precipitation depth/intensity values for calculation of the Trash Capture Design Storm

City	1-year 1-hour Precipitation Depth/Intensity (inches/hr)
Murrieta	0.47
Temecula	0.50
Wildomar	0.37

Use Table G-3 to summarize and document the selection and sizing of Trash Capture BMPs.

Table G-3 Trash Capture BMPs

BMP Name / ID	DMA No(s)	BMP Type / Description	Required Trash Capture Flowrate (cfs)	Provided Trash Capture Flowrate (cfs)

Section H: Source Control BMPs

Source Control BMPs include permanent, structural features that may be required in your Project plans, such as roofs over and berms around trash and recycling areas, and Operational BMPs, such as regular sweeping and "housekeeping," that must be implemented by the site's occupant or user. The Maximum Extent Practicable (MEP) standard typically requires both types of BMPs. In general, Operational Source Control BMPs cannot be substituted for a feasible and effective Structural Source Control BMP. Complete checklist below to determine applicable Source Control BMPs for your site.

Project-Specific WQMP Source Control BMP Checklist

All development projects must implement Source Control BMPs. Source Control BMPs are used to minimize pollutants that may discharge to the MS4. Refer to Chapter 3 (Section 3.8) of the SMR WQMP for additional information. Complete Steps 1 and 2 below to identify Source Control BMPs for the project site.

Step 1: Identify Pollutant Sources

Review project site plans and identify the applicable pollutant sources. "Yes" indicates that the pollutant source is applicable to project site. "No" indicates that the pollutant source is not applicable to project site.

☒ Yes ☐ No	Storm Drain Inlets		☐ Yes ☒ No	Outdoor storage areas	
☐ Yes ☒ No	Floor Drains		☐ Yes ☒ No	Material storage areas	
☐ Yes ☒ No	Sump Pumps		☐ Yes ☒ No	Fueling areas	
☐ Yes ☒ No	Pest Control/Herbicide Application		☐ Yes ☒ No	Loading Docks	
☒ Yes ☐ No	Food Service Areas		☐ Yes ☒ No	Fire Sprinkler Test/Maintenance water	
☒ Yes ☐ No	Trash Storage Areas		☒ Yes ☐ No	Plazas, Sidewalks and Parking Lots	
☐ Yes ☒ No	Industrial Processes		☐ Yes ☒ No	Pools, Spas, Fountains and other water features	
☐ Yes ☒ No	Vehicle and Equipment Cleaning and Maintenance/Repair Areas				

Step 2: Required Source Control BMPs

List each Pollutant source identified above in column 1 and fill in the corresponding Structural Source Control BMPs and Operational Control BMPs by referring to the Stormwater Pollutant Sources/Source Control Checklist included in Appendix 8. The resulting list of structural and operational source control BMPs must be implemented as long as the associated sources are present on the project site. Add additional rows as needed.

Pollutant Source	Structural Source Control BMP	Operational Source Control BMP
Trash and debris	Trash Storage Area	Insert text here
Insert text here	Insert text here	Insert text here
Insert text here	Insert text here	Insert text here
Insert text here	Insert text here	Insert text here
Insert text here	Insert text here	Insert text here
Insert text here	Insert text here	Insert text here
Insert text here	Insert text here	Insert text here
Insert text here	Insert text here	Insert text here

Section I: Coordinate Submittal with Other Site Plans

Populate Table I-1 below to assist the plan checker in an expeditious review of your project. During construction and at completion, [Insert Jurisdiction] inspectors will verify the installation of BMPs against the approved plans. The first two columns will contain information that was prepared in previous steps, while the last column will be populated with the corresponding plan sheets. This table is to be completed with the submittal of your final Project-Specific WQMP.

Table I-1 Construction Plan Cross-reference

BMP No. or ID	BMP Identifier and Description	Corresponding Plan Sheet(s)
BMP-1	Biofiltration	Insert text here
BMP-2	Biofiltration	Insert text here
BMP-3	Biofiltration	Insert text here
BMP-4	Biofiltration	Insert text here
BMP-5	Biofiltration	Insert text here

Note that the updated table — or Construction Plan WQMP Checklist — is **only a reference tool** to facilitate an easy comparison of the construction plans to your Project-Specific WQMP. The Copermittee with jurisdiction over the Project site can advise you regarding the process required to propose changes to the approved Project-Specific WQMP.

Use Table I-2 to identify other applicable permits that may impact design of the site. If yes is answered to any of the items below, the Copermittee may require proof of approval/coverage from those agencies as applicable including documentation of any associated requirements that may affect this Project-Specific WQMP.

Table I-2 Other Applicable Permits

Agency	Permit Required	
State Department of Fish and Game, 1602 Streambed Alteration Agreement	☐ Y	☒ N
State Water Resources Control Board, Clean Water Act Section 401 Water Quality Certification	☐ Y	☒ N
US Army Corps of Engineers, Clean Water Act Section 404 Permit	☐ Y	☒ N
US Fish and Wildlife, Endangered Species Act Section 7 Biological Opinion	☐ Y	☒ N
Statewide Construction General Permit Coverage	☒ Y	☐ N
Statewide Industrial General Permit Coverage	☐ Y	☒ N
Western Riverside MSHCP Consistency Approval (e.g., JPR, DBESP)	☐ Y	☒ N
Other *(please list in the space below as required)*	☐ Y	☐ N

Section J: Operation, Maintenance and Funding

The Copermittee with jurisdiction over the Project site will periodically verify that BMPs on your Project are maintained and continue to operate as designed. To make this possible, the Copermittee will require that you include in Appendix 9 of this Project-Specific WQMP:

1. A means to finance and implement maintenance of BMPs in perpetuity, including replacement cost.
2. Acceptance of responsibility for maintenance from the time the BMPs are constructed until responsibility for operation and maintenance is legally transferred. A warranty covering a period following construction may also be required.
3. An outline of general maintenance requirements for the Stormwater BMPs you have selected.
4. Figures delineating and designating pervious and impervious areas, location, and type of Stormwater BMP, and tables of pervious and impervious areas served by each facility. Geo-locating the BMPs using a coordinate system of latitude and longitude is recommended to help facilitate a future statewide database system.
5. A separate list and location of self-retaining areas or areas addressed by LID Principles that do not require specialized Operations and Maintenance or inspections but will require typical landscape maintenance as noted in Chapter 5, in the SMR WQMP. Include a brief description of typical landscape maintenance for these areas.

The Copermittee with jurisdiction over the Project site will also require that you prepare and submit a detailed BMP Operation and Maintenance Plan that sets forth a maintenance schedule for each of the BMPs built on your site. An agreement assigning responsibility for maintenance and providing for inspections and certification may also be required.

Details of these requirements and instructions for preparing a BMP Operation and Maintenance Plan are in Chapter 5 of the SMR WQMP.

Maintenance Mechanism: A maintenance agreement

Will the proposed BMPs be maintained by a Homeowners' Association (HOA) or Property Owners Association (POA)?

☐ Y ☒ N

Include your Operation and Maintenance Plan and Maintenance Mechanism in Appendix 9. Additionally, include all pertinent forms of educational materials for those personnel that will be maintaining the proposed BMPs within this Project-Specific WQMP in Appendix 10.

Section K: Acronyms, Abbreviations and Definitions

Regional MS4 Permit	Order No. R9-2013-0001 as amended by Order No. R9-2015-0001 and Order No. R9-2015-0100 an NPDES Permit issued by the San Diego Regional Water Quality Control Board.
Applicant	Public or private entity seeking the discretionary approval of new or replaced improvements from the Copermittee with jurisdiction over the project site. The Applicant has overall responsibility for the implementation and the approval of a Priority Development Project. The WQMP uses consistently the term "user" to refer to the applicant such as developer or project proponent. The WQMP employs also the designation "user" to identify the Registered Professional Civil Engineer responsible for submitting the Project-Specific WQMP, and designing the required BMPs.
Best Management Practice (BMP)	Defined in 40 CFR 122.2 as schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the United States. BMPs also include treatment requirements, operating procedures and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage. In the case of municipal storm water permits, BMPs are typically used in place of numeric effluent limits.
BMP Fact Sheets	BMP Fact Sheets are available in the LID BMP Design Handbook. Individual BMP Fact Sheets include sitting considerations, and design and sizing guidelines for seven types of structural BMPs (infiltration basin, infiltration trench, permeable pavement, harvest-and-use, bioretention, extended detention basin, and sand filter).
California Stormwater Quality Association (CASQA)	Publisher of the California Stormwater Best Management Practices Handbooks, available at www.cabmphandbooks.com.
Conventional Treatment Control BMP	A type of BMP that provides treatment of stormwater runoff. Conventional treatment control BMPs, while designed to treat particular Pollutants, typically do not provide the same level of volume reduction as LID BMPs, and commonly require more specialized maintenance than LID BMPs. As such, the Regional MS4 Permit and this WQMP require the use of LID BMPs wherever feasible, before Conventional Treatment BMPs can be considered or implemented.
Copermittees	The Regional MS4 Permit identifies the Cities of Murrieta, Temecula, and Wildomar, the County, and the District, as Copermittees for the SMR.
County	The abbreviation refers to the County of Riverside in this document.

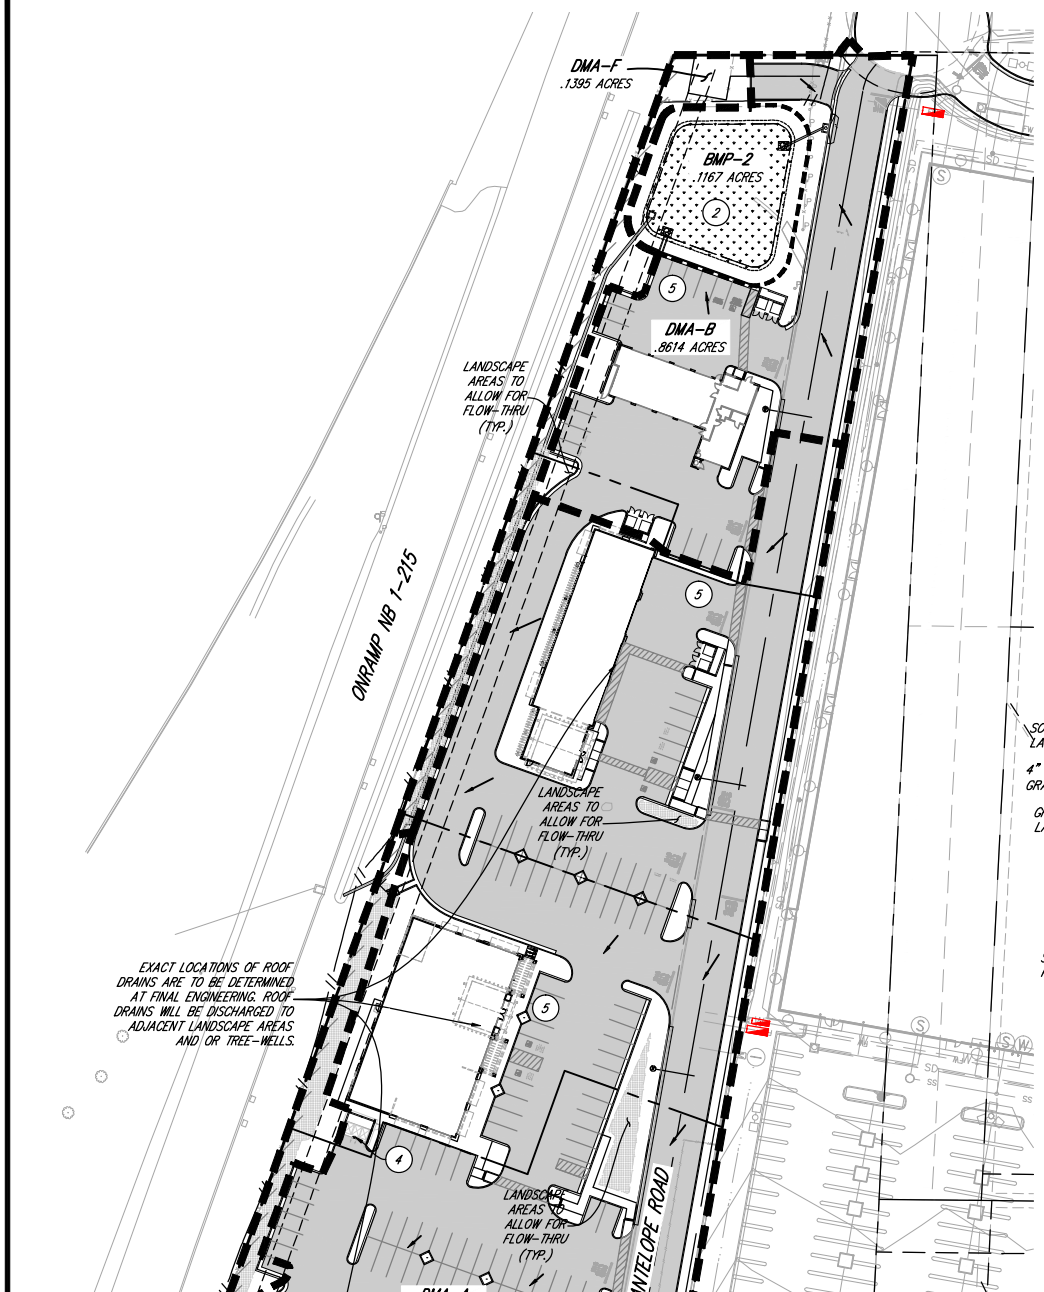
CEQA	California Environmental Quality Act - a statute that requires state and local agencies to identify the significant environmental impacts of their actions and to avoid or mitigate those impacts, if feasible.
CIMIS	California Irrigation Management Information System - an integrated network of 118 automated active weather stations all over California managed by the California Department of Water Resources.
CWA	Clean Water Act - is the primary federal law governing water pollution. Passed in 1972, the CWA established the goals of eliminating releases of high amounts of toxic substances into water, eliminating additional water pollution by 1985, and ensuring that surface waters would meet standards necessary for human sports and recreation by 1983. CWA Section 402(p) is the federal statute requiring NPDES permits for discharges from MS4s.
CWA Section 303(d) Waterbody	Impaired water in which water quality does not meet applicable water quality standards and/or is not expected to meet water quality standards, even after the application of technology based pollution controls required by the CWA. The discharge of urban runoff to these water bodies by the Copermittees is significant because these discharges can cause or contribute to violations of applicable water quality standards.
Design Storm	The Regional MS4 Permit has established the 85th percentile, 24-hour storm event as the "Design Storm". The applicant may refer to Exhibit A to identify the applicable Design Storm Depth (D85) to the project.
DCV	Design Capture Volume (DCV) is the volume of runoff produced from the Design Storm to be mitigated through LID Retention BMPs, Other LID BMPs and Volume Based Conventional Treatment BMPs, as appropriate.
Design Flow Rate	The design flow rate represents the minimum flow rate capacity that flow-based conventional treatment control BMPs should treat to the MEP, when considered.
DCIA	Directly Connected Impervious Areas - those impervious areas that are hydraulically connected to the MS4 (i.e. street curbs, catch basins, storm drains, etc.) and thence to the structural BMP without flowing over pervious areas.
Discretionary Approval	A decision in which a Copermittee uses its judgment in deciding whether and how to carry out or approve a project.
District	Riverside County Flood Control and Water Conservation District.
DMA	A Drainage Management Area - a delineated portion of a project site that is hydraulically connected to a common structural BMP or conveyance point. The Applicant may refer to Section 3.3 for further guidelines on how to delineate DMAs.

Drawdown Time	Refers to the amount of time the design volume takes to pass through the BMP. The specified or incorporated drawdown times are to ensure that adequate contact or detention time has occurred for treatment, while not creating vector or other nuisance issues. It is important to abide by the drawdown time requirements stated in the fact sheet for each specific BMP.
Effective Area	Area which 1) is suitable for a BMP (for example, if infiltration is potentially feasible for the site based on infeasibility criteria, infiltration must be allowed over this area) and 2) receives runoff from impervious areas.
ESA	An Environmental Sensitive Area (ESA) designates an area "in which plants or animals life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which would be easily disturbed or degraded by human activities and developments". (Reference: California Public Resources Code § 30107.5).
ET	Evapotranspiration (ET) is the loss of water to the atmosphere by the combined processes of evaporation (from soil and plant surfaces) and transpiration (from plant tissues). It is also an indicator of how much water crops, lawn, garden, and trees need for healthy growth and productivity
FAR	The Floor Area Ratio (FAR) is the total square feet of a building divided by the total square feet of the lot the building is located on.
Flow-Based BMP	Flow-based BMPs are conventional treatment control BMPs that are sized to treat the design flow rate.
FPPP	Facility Pollution Prevention Plan
HCOC	Hydrologic Condition of Concern - Exists when the alteration of a site's hydrologic regime caused by development would cause significant impacts on downstream channels and aquatic habitats, alone or in conjunction with impacts of other projects.
HMP	Hydromodification Management Plan – Plan defining Performance Standards for PDPs to manage increases in runoff discharge rates and durations.
Hydrologic Control BMP	BMP to mitigate the increases in runoff discharge rates and durations and meet the Performance Standards set forth in the HMP.
HSG	Hydrologic Soil Groups – soil classification to indicate the minimum rate of infiltration obtained for bare soil after prolonged wetting. The HSGs are A (very low runoff potential/high infiltration rate), B, C, and D (high runoff potential/very low infiltration rate)
Hydromodification	The Regional MS4 Permit identifies that increased volume, velocity, frequency and discharge duration of storm water runoff from developed areas has the potential to greatly accelerate downstream erosion, impair stream habitat in natural drainages, and negatively impact beneficial uses.

JRMP	A separate Jurisdictional Runoff Management Plan (JRMP) has been developed by each Copermittee and identifies the local programs and activities that the Copermittee is implementing to meet the Regional MS4 Permit requirements.
LID	Low Impact Development (LID) is a site design strategy with a goal of maintaining or replicating the pre-development hydrologic regime through the use of design techniques. LID site design BMPs help preserve and restore the natural hydrologic cycle of the site, allowing for filtration and infiltration which can greatly reduce the volume, peak flow rate, velocity, and pollutant loads of storm water runoff.
LID BMP	A type of stormwater BMP that is based upon Low Impact Development concepts. LID BMPs not only provide highly effective treatment of stormwater runoff, but also yield potentially significant reductions in runoff volume – helping to mimic the pre-project hydrologic regime, and also require less ongoing maintenance than Treatment Control BMPs. The applicant may refer to Chapter 2.
LID BMP Design Handbook	The LID BMP Design Handbook was developed by the Copermittees to provide guidance for the planning, design and maintenance of LID BMPs which may be used to mitigate the water quality impacts of PDPs within the County.
LID Bioretention BMP	LID Bioretention BMPs are bioretention areas are vegetated (i.e., landscaped) shallow depressions that provide storage, infiltration, and evapotranspiration, and provide for pollutant removal (e.g., filtration, adsorption, nutrient uptake) by filtering stormwater through the vegetation and soils. In bioretention areas, pore spaces and organic material in the soils help to retain water in the form of soil moisture and to promote the adsorption of pollutants (e.g., dissolved metals and petroleum hydrocarbons) into the soil matrix. Plants use soil moisture and promote the drying of the soil through transpiration. The Regional MS4 Permit defines "retain" as to keep or hold in a particular place, condition, or position without discharge to surface waters.
LID Biofiltration BMP	BMPs that reduce stormwater pollutant discharges by intercepting rainfall on vegetative canopy, and through incidental infiltration and/or evapotranspiration, and filtration, and other biological and chemical processes. As stormwater passes down through the planting soil, pollutants are filtered, adsorbed, biodegraded, and sequestered by the soil and plants, and collected through an underdrain.
LID Harvest and Reuse BMP	BMPs used to facilitate capturing Stormwater Runoff for later use without negatively impacting downstream water rights or other Beneficial Uses.

LID Infiltration BMP	BMPs to reduce stormwater runoff by capturing and infiltrating the runoff into in-situ soils or amended onsite soils. Typical LID Infiltration BMPs include infiltration basins, infiltration trenches and pervious pavements.
LID Retention BMP	BMPs to ensure full onsite retention without runoff of the DCV such as infiltration basins, bioretention, chambers, trenches, permeable pavement and pavers, harvest and reuse.
LID Principles	Site design concepts that prevent or minimize the causes (or drivers) of post-construction impacts, and help mimic the pre-development hydrologic regime.
MEP	Maximum Extent Practicable - standard established by the 1987 amendments to the CWA for the reduction of Pollutant discharges from MS4s. Refer to Attachment C of the Regional MS4 Permit for a complete definition of MEP.
MF	Multi-family – zoning classification for parcels having 2 or more living residential units.
MS4	Municipal Separate Storm Sewer System (MS4) is a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains): (i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or designated and approved management agency under section 208 of the CWA that discharges to waters of the United States; (ii) Designated or used for collecting or conveying storm water; (iii) Which is not a combined sewer; (iv) Which is not part of the Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.26.
New Development Project	Defined by the Regional MS4 Permit as 'Priority Development Projects' if the project, or a component of the project meets the categories and thresholds described in Section 1.1.1.
NPDES	National Pollution Discharge Elimination System - Federal program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under Sections 307, 318, 402, and 405 of the CWA.
NRCS	Natural Resources Conservation Service
PDP	Priority Development Project - Includes New Development and Redevelopment project categories listed in Provision E.3.b of the Regional MS4 Permit.

Priority Pollutants of Concern	Pollutants expected to be present on the project site and for which a downstream water body is also listed as Impaired under the CWA Section 303(d) list or by a TMDL.
Project-Specific WQMP	A plan specifying and documenting permanent LID Principles and Stormwater BMPs to control post-construction Pollutants and stormwater runoff for the life of the PDP, and the plans for operation and maintenance of those BMPs for the life of the project.
Receiving Waters	Waters of the United States.
Redevelopment Project	The creation, addition, and or replacement of impervious surface on an already developed site. Examples include the expansion of a building footprint, road widening, the addition to or replacement of a structure, and creation or addition of impervious surfaces. Replacement of impervious surfaces includes any activity that is not part of a routine maintenance activity where impervious material(s) are removed, exposing underlying soil during construction. Redevelopment does not include trenching and resurfacing associated with utility work; resurfacing existing roadways; new sidewalk construction, pedestrian ramps, or bike lane on existing roads; and routine replacement of damaged pavement, such as pothole repair. Project that meets the criteria described in Section 1.
Runoff Fund	Runoff Funds have not been established by the Copermittees and are not available to the Applicant. If established, a Runoff Fund will develop regional mitigation projects where PDPs will be able to buy mitigation credits if it is determined that implementing onsite controls is infeasible.
San Diego Regional Board	San Diego Regional Water Quality Control Board - The term "Regional Board", as defined in Water Code section 13050(b), is intended to refer to the California Regional Water Quality Control Board for the San Diego Region as specified in Water Code Section 13200. State agency responsible for managing and regulating water quality in the SMR.
SCCWRP	Southern California Coastal Water Research Project
Site Design BMP	Site design BMPs prevent or minimize the causes (or drivers) of post-construction impacts, and help mimic the pre-development hydrologic regime.
SF	Parcels with a zoning classification for a single residential unit.
SMC	Southern California Stormwater Monitoring Coalition
SMR	The Santa Margarita Region (SMR) represents the portion of the Santa Margarita Watershed that is included within the County of Riverside.



Source Control BMP	Source Control BMPs land use or site planning practices, or structural or nonstructural measures that aim to prevent runoff pollution by reducing the potential for contamination at the source of pollution. Source control BMPs minimize the contact between Pollutants and runoff.
Structural BMP	Structures designed to remove pollutants from stormwater runoff and mitigate hydromodification impacts.
SWPPP	Storm Water Pollution Prevention Plan
Tentative Tract Map	Tentative Tract Maps are required for all subdivision creating five (5) or more parcels, five (5) or more condominiums as defined in Section 783 of the California Civil Code, a community apartment project containing five (5) or more parcels, or for the conversion of a dwelling to a stock cooperative containing five (5) or more dwelling units.
TMDL	Total Maximum Daily Load - the maximum amount of a Pollutant that can be discharged into a waterbody from all sources (point and non-point) and still maintain Water Quality Standards. Under CWA Section 303(d), TMDLs must be developed for all waterbodies that do not meet Water Quality Standards after application of technology-based controls.
USEPA	United States Environmental Protection Agency
Volume-Based BMP	Volume-Based BMPs applies to BMPs where the primary mode of pollutant removal depends upon the volumetric capacity such as detention, retention, and infiltration systems.
WQMP	Water Quality Management Plan
Wet Season	The Regional MS4 Permit defines the wet season from October 1 through April 30.

Appendix 1: Maps and Site Plans

Location Map, WQMP Site Plan and Receiving Waters Map

Complete the checklist below to verify all exhibits and components are included in the Project-Specific WQMP. Refer Section 4 of the SMR WQMP and Section D of this Template.

Map and Site Plan Checklist
Indicate all Maps and Site Plans are included in your Project-Specific WQMP by checking the boxes below.
☒ Vicinity and Location Map
☒ Existing Site Map (unless exiting conditions are included in WQMP Site Plan)
☒ WQMP Site Plan
☒ Parcel Boundary and Project Footprint
☒ Existing and Proposed Topography
☒ Drainage Management Areas (DMAs)
☒ Proposed Structural Best Management Practices (BMPs)
☒ Drainage Paths
☒ Drainage infrastructure, inlets, overflows
☒ Source Control BMPs
☒ Site Design BMPs
☒ Buildings, Roof Lines, Downspouts
☒ Impervious Surfaces
☒ Pervious Surfaces (i.e. Landscaping)
☒ Standard Labeling

Appendix 2: Construction Plans

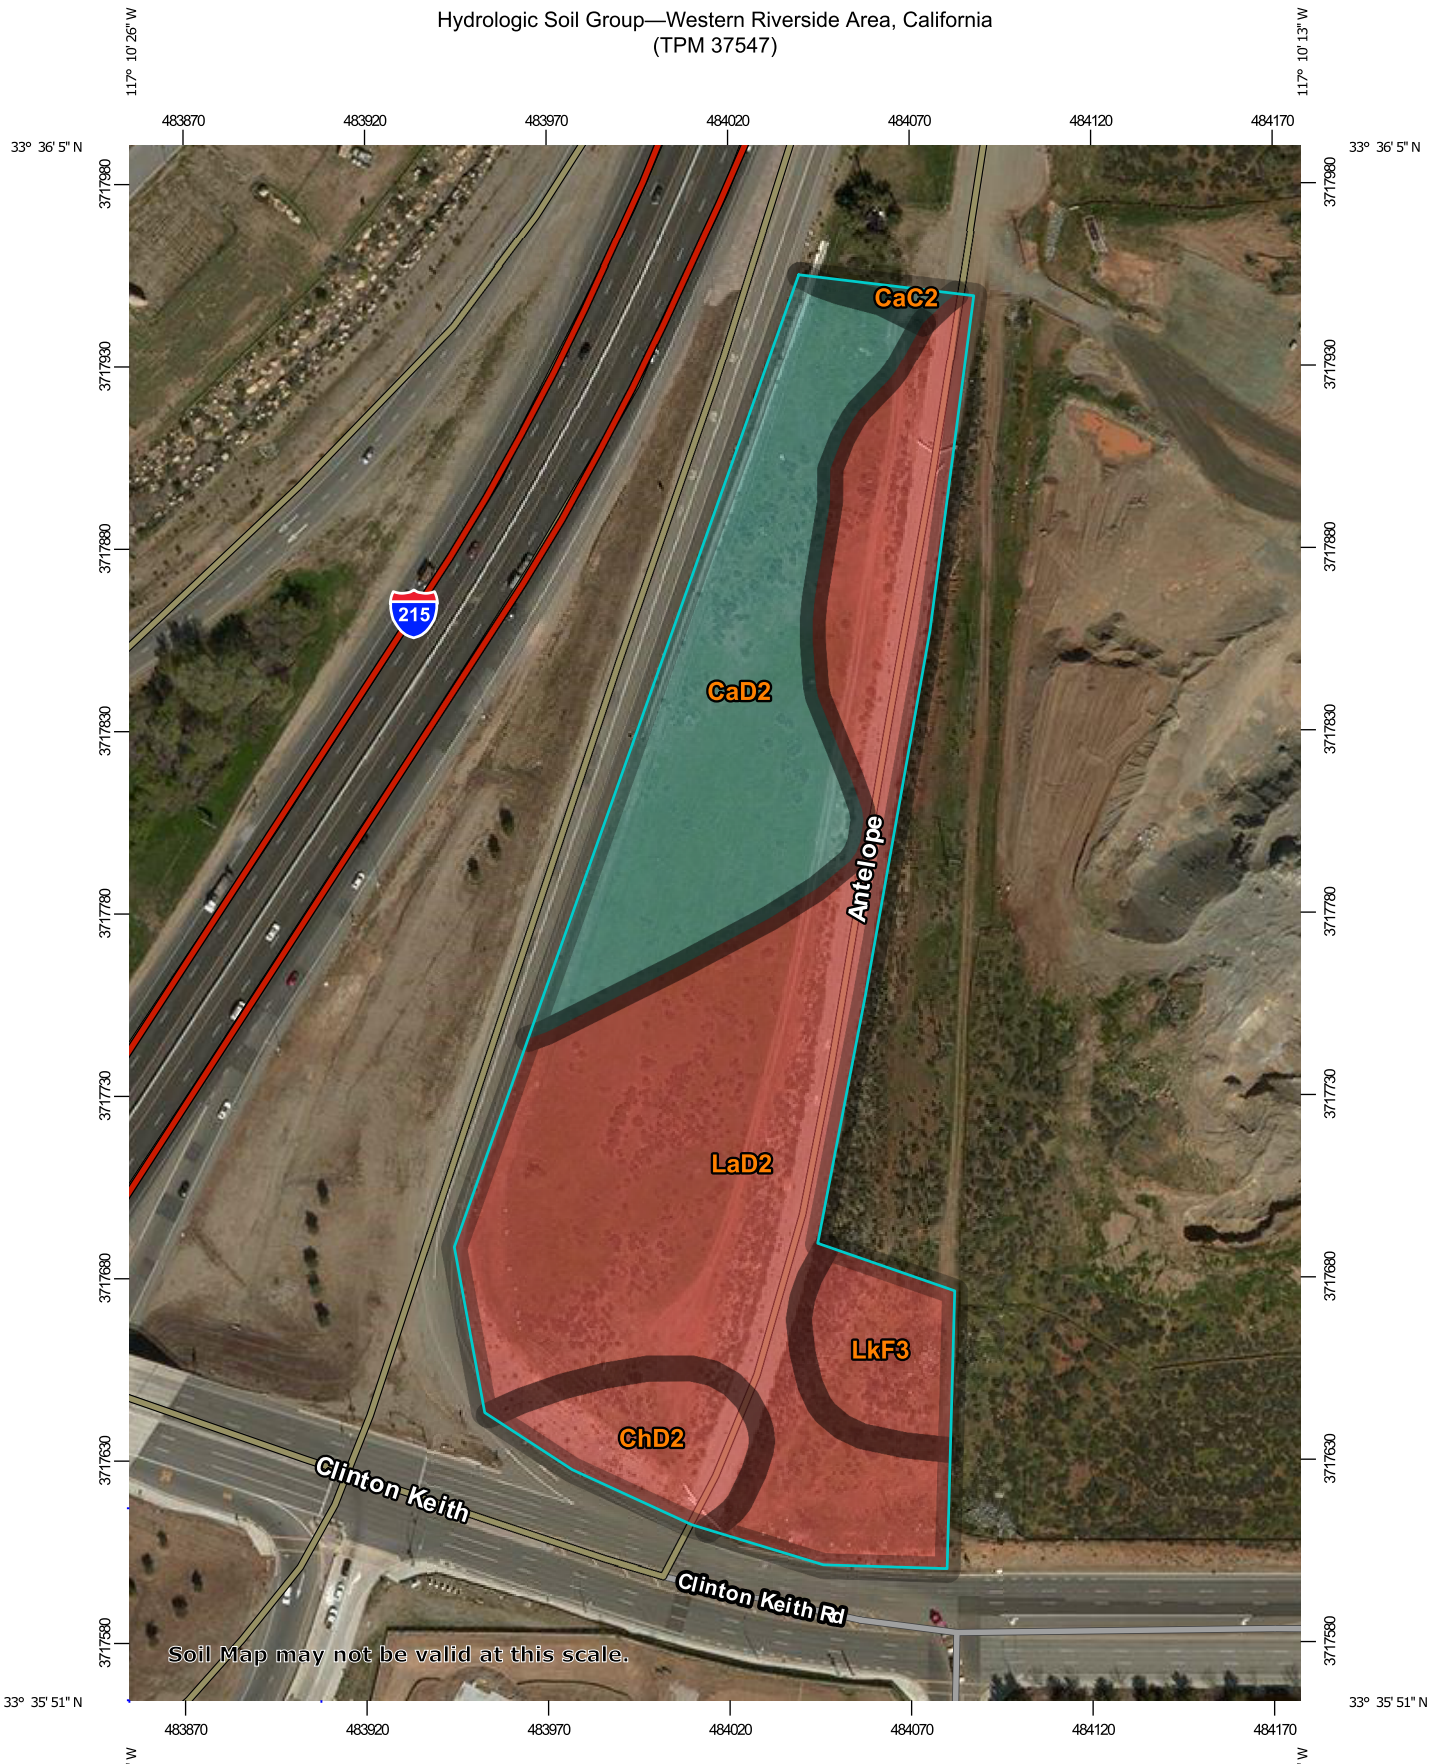
Grading and Drainage Plans

Examples of material to provide in Appendix 2 may include but are not limited to the following:

- Site grading plans from the Project's Civil Plan Set,
- Drainage plans showing the exiting condition and proposed drainage system from the project's drainage report,
- Other plan sheets containing elements that impact site grading and drainage.

Refer to Section 4 of the SMR WQMP and Section I of this Template.

Appendix 3: Soils Information



Geotechnical Study, Other Infiltration Testing Data, and/or Other Documentation

Examples of material to provide in Appendix 3 may include but are not limited to the following:

- Geotechnical Study/Report prepared for the project,
- Additional soils testing data (if not included in the Geotechnical Study),
- Exhibits/Maps/Other Documentation of the Hydrologic Soils Groups (HSG)s at the project site.

This information should support the Full Infiltration Applicability, and Biofiltration Applicability sections of this Template. Refer to Section 2.3 of the SMR WQMP and Sections A and D of this Template.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Western Riverside Area, California
Survey Area Data: Version 10, Sep 12, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 24, 2015—Feb 26, 2015

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
CaC2	Cajalco fine sandy loam, 2 to 8 percent slopes, eroded	C	0.0	0.6%
CaD2	Cajalco fine sandy loam, 8 to 15 percent slopes, eroded	C	2.1	28.7%
ChD2	Cieneba sandy loam, 8 to 15 percent slopes, eroded	D	0.5	6.8%
LaD2	Las Posas loam, 8 to 15 percent slopes, eroded	D	4.3	57.7%
LkF3	Las Posas rocky loam, 15 to 50 percent slopes, severely eroded	D	0.5	6.2%
Totals for Area of Interest			**7.4**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition

Component Percent Cutoff: None Specified

Tie-break Rule: Higher

Appendix 4: Historical Site Conditions

Phase I Environmental Site Assessment or Other Information on Past Site Use

Examples of material to provide in Appendix 4 may include but are not limited to the following:

- Environmental Site Assessments conducted for the project,
- Other information on Past Site Use that impacts the feasibility of LID BMP implementation on the site.

This information should support the Full Infiltration Applicability, and Biofiltration Applicability sections of this Template. Refer to Section 2.3 of the SMR WQMP and Sections D of this Template.

Appendix 5: LID Feasibility Supplemental Information

Information that supports or supplements the determination of LID technical feasibility documented in Section D

Examples of material to provide in Appendix 5 may include but are not limited to the following:

- Technical feasibility criteria for DMAs
- Site specific analysis of technical infeasibility of all LID BMPs (if Alternative Compliance is needed)
- Documentation of Approval criteria for Proprietary Biofiltration BMPs

This information should support the Full Infiltration Applicability, and Biofiltration Applicability sections of this Template. Refer to Section 2.3 of the SMR WQMP and Sections D of this Template.

Appendix 6: LID BMP Design Details

BMP Sizing, Design Details and other Supporting Documentation to supplement Section D

Examples of material to provide in Appendix 6 may include but are not limited to the following:

- DCV calculations,
- LID BMP sizing calculations from Exhibit C of the SMR WQMP
- Design details/drawings from manufacturers for proprietary BMPs

This information should support the Full Infiltration Applicability, and Biofiltration Applicability sections of this Template. Refer to Section 3.4 of the SMR WQMP and Sections D.4 of this Template.

Determine the Effective Impervious Fraction

Type of post-development surface cover (use pull down menu): Mixed Surface Types

Effective Impervious Fraction I_f = 0.85

Calculate the composite Runoff Coefficient, C for the BMP Tributary Area

Use the following equation based on the WEF/ASCE Method

$C = 0.858I_f^3 - 0.78I_f^2 + 0.774I_f + 0.04$

C = 0.66

Determine Design Storage Volume, V_{BMP}

Calculate V_U, the 85% Unit Storage Volume $V_U = D_{85} \times C$

V_u = 0.40 (in*ac)/ac

Calculate the design storage volume of the BMP, V_{BMP}.

$$V_{BMP}\ (ft^3) = \frac{V_U\ (in\text{-}ac/ac) \times A_T\ (ac) \times 43{,}560\ (ft^2/ac)}{12\ (in/ft)}$$

V_{BMP} = 1,186 ft^3

Notes:

Santa Margarita Watershed

BMP Design Volume, V_{BMP} (Rev. 03-2012)

Legend: Required Entries / Calculated Cells

(Note this worksheet shall **only** be used in conjunction with BMP designs from the **LID BMP Design Handbook**)

Company Name	EXCEL ENGINEERING	Date	5/29/2018
Designed by	Ian Z	County/City Case No	
Company Project Number/Name	17-053		
Drainage Area Number/Name	DMA-G		

Enter the Area Tributary to this Feature A_T = 0.218 acres

85th Percentile, 24-hour Rainfall Depth, from the Isohyetal Map in Handbook Appendix E

Site Location	Township	07S
	Range	03W
	Section	35
Enter the 85th Percentile, 24-hour Rainfall Depth	D_{85} =	0.61

Determine the Effective Impervious Fraction

Type of post-development surface cover (use pull down menu)		Mixed Surface Types
Effective Impervious Fraction	I_f =	0.85

Calculate the composite Runoff Coefficient, C for the BMP Tributary Area

Use the following equation based on the WEF/ASCE Method

$C = 0.858I_f^3 - 0.78I_f^2 + 0.774I_f + 0.04$ C = 0.66

Determine Design Storage Volume, V_{BMP}

Calculate V_U, the 85% Unit Storage Volume $V_U = D_{85} \times C$ V_u = 0.40 (in*ac)/ac

Calculate the design storage volume of the BMP, V_{BMP}.

$$V_{BMP}\ (ft^3) = \frac{V_U\ (in\text{-}ac/ac) \times A_T\ (ac) \times 43{,}560\ (ft^2/ac)}{12\ (in/ft)}$$

V_{BMP} = 317 ft^3

Biofiltration with No Infiltration Facility - Design Procedure	BMP ID: BMP-1	Legend:	Required Entries / Calculated Cells

Company Name: EXCEL ENGINEERING Date: 8/2/2018

Designed by: Kevin A County/City Case No.:

Design Volume

Enter the area tributary to this feature	A_T =	4.1263	acres
Enter V_{BMP} determined from Section 2.1 of this Handbook *	V_{BMP} =	6,006	ft^3
Enter initial estimate of footprint of BMP, $Area_{BMP}$ (Guidance: A reasonable starting point is 3% of the tributary impervious area)**	$Area_{BMP}$ =	6,811	ft^2

Note: This area shall be measured at the mid-ponding depth of the BMP. For systems with side-slopes, this should be the countour that is midway between the floor of the basin and the maximum water quality ponding elevation of the basin. The underlying gravel layer (infiltration storage layer) should extend to the contour. For systems with vertical walls the effective area is the full footprint.

Biofiltration with Partial Retention Facility Surface Area

Depth of Surface Ponding Layer (6" minimum, 12" maximum)	d_p =	6	inches
Depth of Engineered Soil Media (24" to 36"; 18" if vertically constrained)	d_s =	24	inches
Design Media Filtration Rate (2.5in/hr)	I_{design} =	2.5	in/hr
Allowable Routing Period, $T_{routing}$ (5 hrs)	$T_{routing}$ =	5	hr
Effective Biofiltration Depth, d_{E_bio}			
d_{E_bio} (ft) = (d_p + (0.3 x d_s) + (I_{design} * $T_{routing}$)) (ft)	d_{E_bio} =	2.14	ft
Effective Static Depth, $d_{E_bio_static}$			
$d_{E_bio_static}$ = (d_p + (0.3 * d_s)) (ft)	$d_{E_bio_static}$ =	1.10	ft
$V_{biofiltered}$ = d_{E_bio} * $Area_{BMP}$	$V_{biofiltered}$ =	14,587	ft^3
$V_{biofiltered_static}$ = $d_{E_bio_static}$ * $Area_{BMP}$	$V_{biofiltered_static}$ =	7,492	ft^3

Sizing Option 1 Result

Criteria 1: $V_{biofiltered\ (with\ routing)}$ > 150% of V_{BMP} Results: PASS

Sizing Option 1 Result

Criteria 2: $V_{biofiltered_static}$ > 0.75 x V_{BMP} Results: PASS

Note

If neither of these criteria are met, increase the footprint and rerun the calculations. This calculation is inherently iterative.

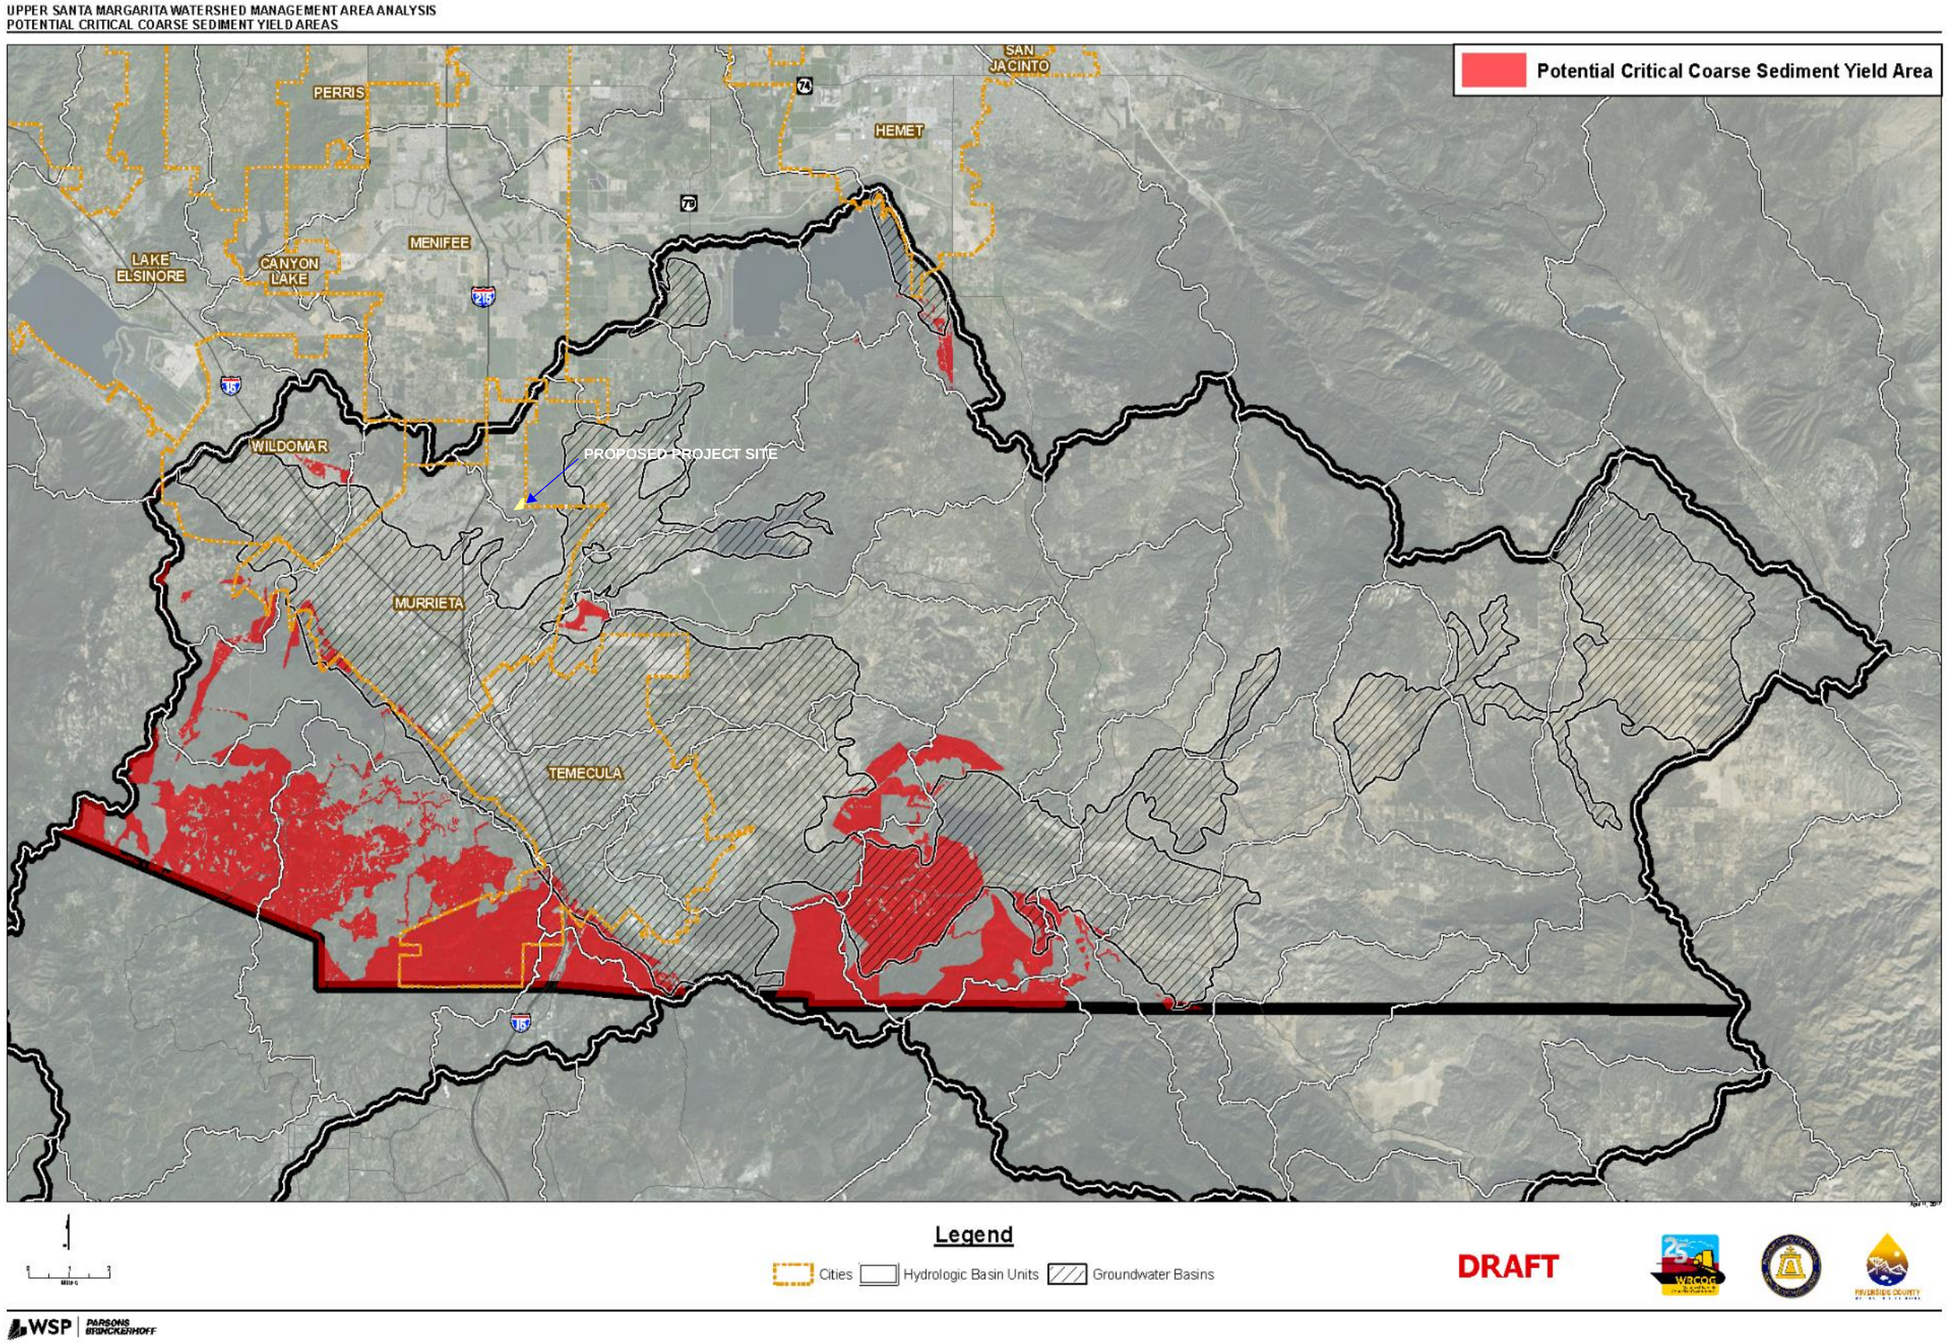
Appendix 7: Hydromodification



Supporting Detail Relating to compliance with the Hydromodification Performance Standards

Examples of material to provide in Appendix 7 may include but are not limited to the following:

- Hydromodification Exemption Exhibit,
- Potential Critical Coarse Sediment Yield Area Mapping
- Hydromodification BMP sizing calculations,
- SMRHM report files,
- Site-Specific Critical Coarse Sediment Analysis,
- Design details/drawings from manufacturers for proprietary BMPs

This information should support the hydromodification exemption (if applicable) and hydrologic control BMP and Sediment Supply BMP sections of this Template. Refer to Section 2.4 and 3.6 of the SMR WQMP and Sections E of this Template.

Potential Critical Coarse Sediment Yield Areas

SECTION I - **Introduction**

This report provides Hydromodification analysis for a project located on the northeast corner of Clinton Keith Road and Antelope Road, Murrieta, California. The project proposes a business center with retail buildings such as stores, gas stations, a hotel, and restaurants. The current grading plans calls for three parcels to be graded to final pads and parking lots to subgrade. The remainder of the site is mass graded approximate final grades. However, this report provides analysis for a complete site buildout for future development based on the approved site plan.

Hydromodification calculations are performed utilizing continuous simulation analysis to determine the flow duration for the flow rates that fall within the geomorphologically significant flows[1]. Storm Water Management Model (SWMM) version 5.1 distributed by USEPA is the basis of all calculations within this report. SWMM generates peak flow recurrence frequencies and flow duration series statistics based on an assigned rain gauge for pre-development, unmitigated and mitigated flows to determine compliance with the Santa Margarita Region Hydromodification Management Plan (SMR HMP) in response to Provision F.1.h of the 2010 SMR Municipal Separate Storm Sewer System (MS4) Permit (order R9-2010-0016). The rain gauge station 048844 in Temecula California is utilized for this project to determine the historical rain data for continuous simulation in SWMM.

The analysis of this project requires only one Point-Of-Compliance (POC) and is referred to as POC-1 for both pre-development and mitigated post-development conditions. Tributary areas to POC-1 are labeled Basins in the pre-developed conditions and as DMA (Drainage Management Area) in the post-developed conditions. A distinction is made between private and public tributary areas in the post-development conditions. DMAs that are within privately owned areas of the project are labeled with numbers while DMAs within the public right-of-way are labeled with letters.

Pre-development conditions contain 10 Basins labeled A to H while the post-development conditions contain 8 DMAs labeled A to H. The total tributary within the project is approximately 6.71 acres.

The Hydromodification and Water Quality systems proposed for this project is bioretention basin located throughout the project development. Detention pipe with flow control orifices are utilized as hydromodification tool. The systems are designed to capture and detain storm runoff on the surface and filter through a soil mix to a gravel storage area below the surface. The runoff is then conveyed through an underground pipe network to an existing open channel which currently collects the sites storm flows. The resulting mitigated outflows are shown to be equal to, less than the pre-developed outflows or within the 10% tolerance.

Low Flow Threshold

A low flow threshold of 10% of 2-year storm event (0.1Q2) was used for this analysis. This low flow threshold will be used to meet peak flow frequency and flow duration controls. No downstream channel assessment was done.

[1] Geomorphically significant flows are defined as the rate of storm water runoff flow causes erosive conditions. For this study, these flows occur during the 10% of 2-year, 2-year, 5-year and 10-year flows.

SECTION II - **SWMM MODEL SETUP**

SWMM provides continuous precipitation based on historical rain gauge data onto a sub-catchment. A model for both pre-developed and post-developed conditions is then developed to analyze the amount and frequency of runoff due to surface conditions. The resulting data for both the pre-developed and post-developed conditions are then compared to determine the impact of runoff to the project due to the development of the site.

Pre-development Model Setup
The pre-development areas are divided into five basins delineated based on the soil types and hydrology features. Site delineation can be found in Figure-2 on the next page.

For the purpose of this study, the site is assumed to have 0% of impervious surface area. The site is a natural vacant land. Viewing historical aerials of the site, it is determined that the site had land coverage of a rough bare packed soil. Giving the site characteristics, a manning's value of 0.038 is used.

Post-Development Model Setup
The post-development areas are divided into 6 DMAs (Drainage Management Areas) based on topography, soil type and hydraulic systems. Figure 3 (on the next page) shows the delineation of each DMA.

Bioretention sections are similar in configuration as seen in figure-1 below. The bottom elevation for each is assumed at 0 ft within the LID editor. The variations of the two systems consist of the minimum width that each is constructed to. Figure-1 below demonstrates a 6' minimum width for bioretention basins. The bioretention basins utilize the BMP manual's default value of 5 in/hr for surface infiltration rates follow SWMM's default values listed in the help file under "Soil Characteristics".

The assumed manning's number for the post-developed conditions is based off of well-maintained landscape areas with medium trees and shrubs. Thus, an N-value of 0.1 is used for this analysis.

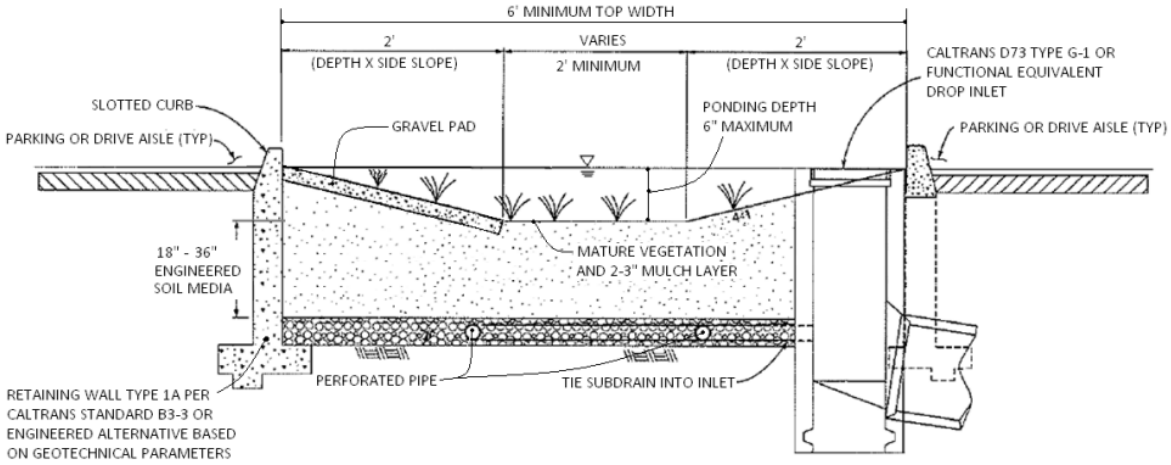


Figure-1. Bioretention (BMP-1~15) Section

(See Attachment I for more detail)

Pre-Development Basin Areas & Post-Development (DMAs)

Basin areas and DMAs provide an important framework for feasibility screening, BMP prioritization and storm water management system configuration. Both Basin Areas and DMAs are defined based on drainage patterns of the site and the BMPs to which they drain. Below is a summarization of Basins and DMAs within this study, excluding any LID area that resides within its boundary:

PRE-DEVELOPMENT SUBCATCHMENT

[SUBCATCHMENTS]				
Name	Outlet	Area	%Imperv	Width
DMA-A	POC-1	2.1863	0	372
DMA-B	POC-1	0.2729	52.8	620
DMA-C	POC-1	0.1505	100	384
DMA-D	POC-1	1.5673	0	416
DMA-E	POC-1	0.8824	31	1040
DMA-F	POC-1	0.5648	49	1297
DMA-G	POC-1	0.8416	0	546
DMA-H	POC-1	0.2428	0	620
	Total	6.7086		

POST-DEVELOPMENT SUBCATCHMENT

[SUBCATCHMENTS]					
Name	Outlet	Area (ac.)	%Imperv	Width	%Slope
BMP-1	POC-1	0.1564	0	159	0.5
BMP-2	POC-1	0.11669	0	127	0.5
BMP-3	POC-1	0.0091	0	32	0.5
DMA-A	BMP-1	3.9699	85	430.5	2.18
DMA-B	BMP-2	0.7447	85	224	1.4
DMA-C	BMP-3	0.1981	85	368	2.75
DMA-D	BMP-4	0.7872	85	190	3.5
DMA-E	POC-1	0.2425	85	209	2.5
DMA-F	POC-1	0.1395	0	57	13

DMA-G	BMP-5	0.2175	85	50	0.5
DMA-H	POC-1	0.0979	0	150	0.5
	Total	6.71409			

SECTION III - **SYSTEM REPRESENTATION**

SWMM is a distributed model, which means that a study area can be subdivided into any number of irregular sub-catchments to best capture the effect that spatial variability in topography, drainage pathways, land cover, and soil characteristics have on runoff generation. For modeling of Hydromodification calculations, there are four main system representations: Rain gage, Sub-catchment (contributing basin or LID area), Nodes and Links.

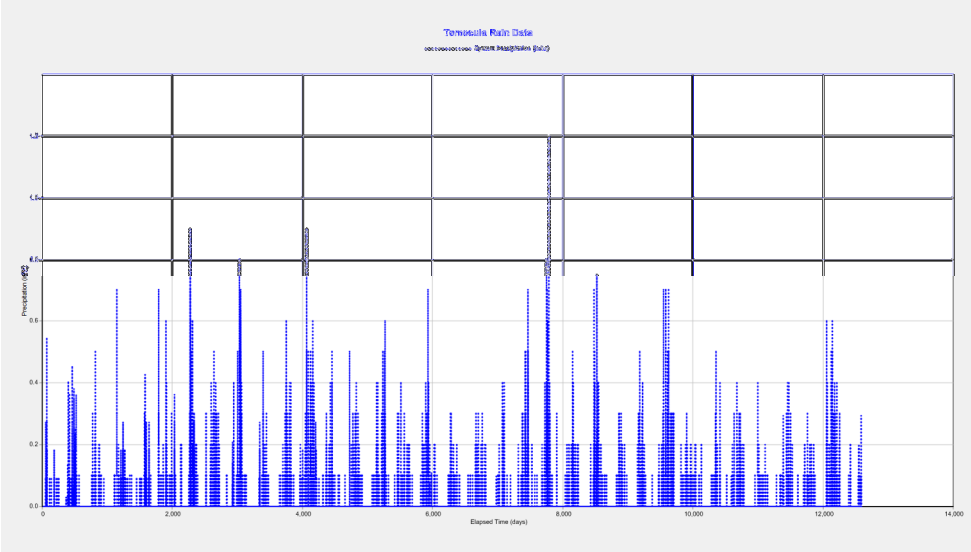

Fig. 4 – Time series rain data, which corresponds to runoff estimates for each of the 10,219 time of the 35-year simulation period. (Inches/hour vs. elapsed time)

Rain Gage

The properties of a rain gage describe the source and format of the precipitation data that are applied to the study area. For this project, the rainfall data used is from rain gauge station 048844 in Temecula California. This rain gauge data was obtain via the EPA program "EPA Storm water Calculator".

The Temecula rain data has 35 years of hourly precipitation data from 10/16/1971 to 03/29/2006 and generates 35 years of hourly runoff estimates, which corresponds to runoff estimates for each of the 10,219 time steps of the 35 year simulation period. See figure 4 for hourly precipitation intensity graph for the 35-year dataset.

Sub-catchment (contributing basin or LID area)

A basin is modeled using a sub-catchment object, which contains some of the following properties:

Rain Gage

The rate of storm water runoff and volume depends directly on the precipitation magnitude and its spatial and temporal distribution over the catchment. Each sub-catchment in SWMM is linked to a rain gage object that describes the format and source of the rainfall input for the sub-catchment.

Area
This area is bounded by the sub-catchment boundary. Its value is determined directly from maps or field surveys of the site or by using SWMM's Auto-length tool when the sub-catchment is drawn to scale on SWMM's study area map. This Project is divided into several sub-catchments based on drainage patterns and its outfall.

Width
The width for each sub-catchment is determined by conceptually creating an idealized representation of the irregular shaped sub-catchment. The idealization is done by utilizing the method found in SWMM Reference Manual, Volume 1, section 3.8.4, equations 3-10 & 3-12.

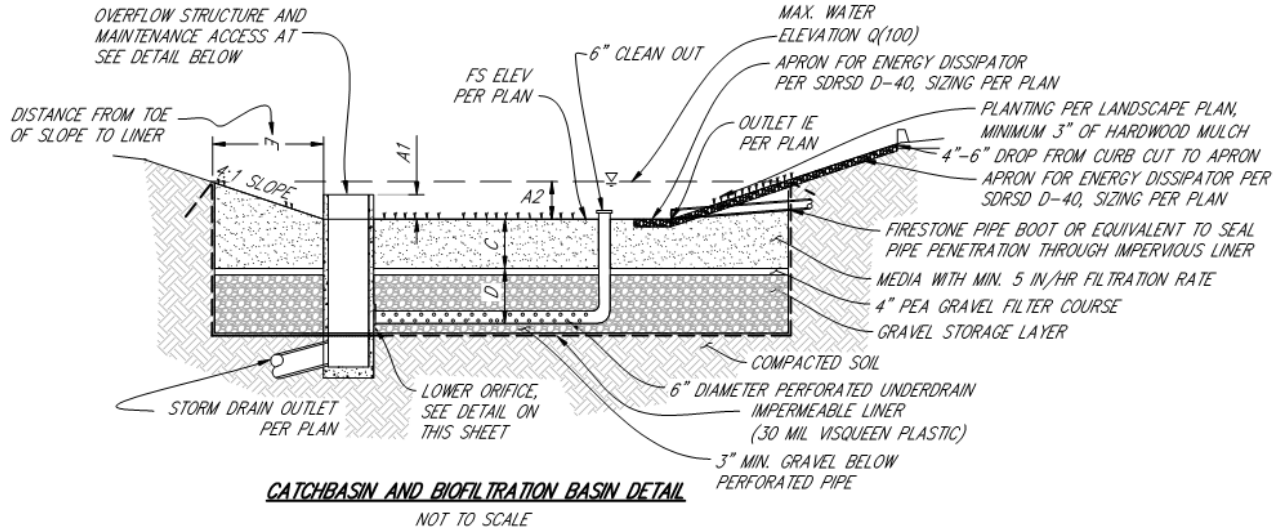
In brief, the idealized width for a sub-catchment is defined by dividing the sub-catchment into two sections. The dividing line for a sub-catchment is the longest overland flow path for the storm water runoff within the sub-catchment (also known as the main drainage channel). The larger of the two determined sections is divided by the total area to ascertain the skew factor for the idealized shape, per Equation 3-10. The shape factor for the actual water shed is then determined by dividing the total area of the sub-catchment and dividing by the square of the main drainage channel length. The idealized shape factor is then determined by using the derived skew factor and watershed shape factor in Equation 3-12. Lastly, the idealized shape factor is multiplied by the length of the main drainage channel to determine the width used for the sub-catchment. Provided below are the equations found in the SWMM Reference Manual, Volume 1:

$\boldsymbol{Z = A_m/A}$	Skew Factor (Eq. 3-10)
$\boldsymbol{X = A/L^2}$	Watershed Shape Factor
$\boldsymbol{Y = 2X(1.5 - Z)(2K^2 - X)/(2K - 1)}$	Idealized Shape Factor (Eq. 3-12)
$\boldsymbol{W = Y * L}$	Sub-catchment Width

Slope
This is the area-weighted average of slopes within a sub-catchment.

Imperviousness
This is the percentage of sub-catchment area covered by impervious surfaces such as sidewalks and roadways or wherever rainfall cannot infiltrate into the surfaces.

Roughness Coefficient
The roughness coefficient reflects the amount of resistance that overland flow encounters as it runs off of the sub-catchment surface. This is determined from the HEC RAS User Manuel Table 3-1.



Infiltration Model
The infiltration model used for the proposed project is based on the Green-Ampt infiltration model. Using the results from the web-soil survey the default values for soil types D and C were used.

[2] A default value of 4 is used for 'K', the upper limit on the watershed shape factor

LID controls

LID controls are established to model storm water runoff collection, detention and/or treatment. This project proposes to use bio-retention module, for storm water treatment and runoff collection. This LID type contains an engineered soil mixture placed above a gravel drainage bed. Further discussion can be found in Section IV of this report. Below is a chart denoting each LID used within a sub-catchment:

BIO–BASIN SUMMARY TABLE									
BASIN	TYPE OF BASIN	EFFECTIVE AREA	A1 (INCH) RISER	A2 (INCH) TOP OF BASIN	C (INCH) MEDIA	D (INCH) GRAVEL	E (FEET)	BOX RISER / OVERFLOW STRUCTURE SIZE (INCHES)	ORIFICE DIAMETER (INCHES)
BMP–1	BIOFILTRATION	6811	6	12	24	12	2	36X36	0.938

CATCHBASIN AND BIOFILTRATION BASIN DETAIL

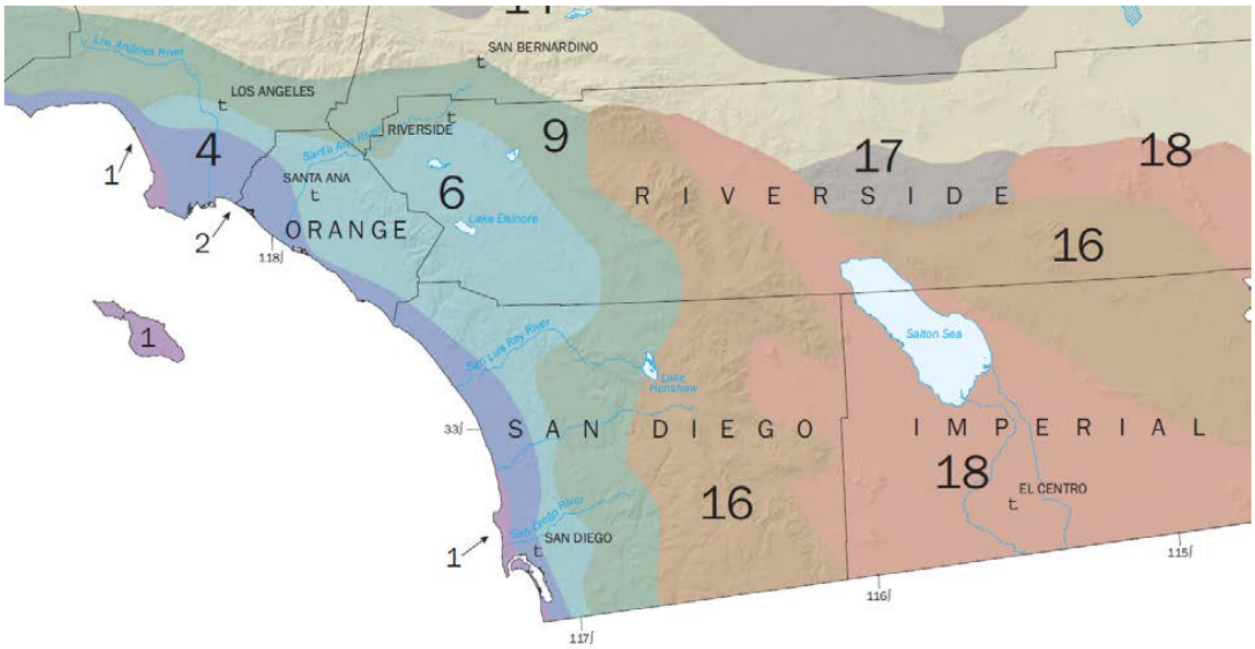
NOT TO SCALE

SECTION IV - **CONTINUOUS SIMULATION OPTIONS**

Kinematic Wave Routing Model
This routing method solves the continuity equation along with a simplified form of the momentum equation in each conduit. The latter requires that the slope of the water surface be equal to the slope of the conduit.

The maximum flow that can be conveyed through a conduit is the full normal flow value. Any flow in excess of this value, entering the inlet node, is either lost from the system or can pond atop the inlet node and be re-introduced into the conduit as capacity becomes available.

Kinematic wave routing allows flow and area to vary both spatially and temporally within a conduit. This can result in attenuated and delayed outflow hydrographs as inflow is routed through the channel. However this form of routing cannot account for backwater effects, entrance/exit losses, flow reversal, or pressurized flow, and is also restricted to dendritic network layouts. For this reason, the model does not contain any conduits and utilizes storage nodes for runoff capture and release.



Simulation Dates
These dates determine the starting and ending dates/times of a simulation and are chosen based on the rain data availability within the selected rain gauge.
Start analysis on 10/16/1971
Start Reporting on 10/16/1971
End Analysis on 03/29/2006

Time Steps
Simulation dates are divided into intervals (time steps) at which computations will be analyzed. At each time step SWMM performs runoff computation, routing computation and results reporting. Time steps are specified in days and hours: minutes: seconds, except for flow routing which is entered as decimal seconds.

Climatology
-*Evaporation Data*
The available monthly evaporation data for the project area is obtained from the California Irrigation Management Information System "Reference Evapotranspiration Zones" brochure and map (CIMIS ETo Zone Map), prepared by California Department of Water Resources, dated January 2012. Project site falls in "Zone 6" Upland Central Coast and Los Angeles Basins based on CIMIS ETo Zone map.

Table 2 – Zone 6 Monthly Evaporation data (in/day)

January	February	March	April	May	June
0.060	0.080	0.110	0.160	0.180	0.210
July	August	September	October	November	December
0.210	0.200	0.160	0.120	0.080	0.060

SECTION V - **BIORETENTION LID CONTROL PARAMETERS**

LID controls are represented by a combination of vertical layers whose properties are defined on a per-unit-area basis. This allows an LID of the same design but differing coverage area to easily be placed within different sub-catchments of a study area. During a simulation, SWMM performs a moisture balance that keeps track of how much water moves between and is stored within each LID layer. If the bioretention basin is full and water is leaving the upper weir, the flow is divided in two flows: the lower flow discharging from the bottom orifice directly draining to the point of compliance and the upper flow is routed at the top of the bio-retention basin and after routing, discharged to the point of compliance.

1. Surface

The Surface tab within the LID Control Editor establishes the constraints of the Bioretention LID at the surface. The parameters and default values are described below:

Storage Depth
When confining walls or berms are present, this is the maximum depth to which water can pond above the surface of the unit before overflow occurs (in inches). The surface storage depth for this project is set to the first outlet of the overflow riser. Any additional storage capacity of the Bioretention unit above the berm is modeled as a storage unit to ensure that the full storage depth is routed through the pond and does not contribute to overland flow.

Vegetation Volume Fraction
Vegetation Volume Fraction is the fraction of the volume within the storage depth that is filled with vegetation. This is the volume occupied by stems and leaves, not the surface area

coverage provided by the vegetation. BMPs for this project propose minimal use of vegetation. Therefore, the value of 0 for the vegetation volume fraction is used.

Surface Roughness
Surface roughness is assigned to all DMAs using Manning's n value. LIDs are assigned to a DMA and do not require the addition of a Manning's n value. Therefore, Manning's n value for overland flow over the surface of a vegetative pond is 0 (n=0).

Surface Slope
Bioretentions are designed to detain storm runoff and contain no slope. Thus, surface slope is considered 0 percent.

2. Soil

The Soil tab within the LID Control Editor describes the properties of the engineered soil mixture used within the Bioretention LID. The parameters and default values are described below:

Thickness
The thickness of the soil layer (inches). A typical thickness of a bioretention is 18".

Porosity
The volume of pore spaces relative to the total volume of soil (as a fraction). A maximum porosity value of 0.40 is used for the soil mix to reach an efficient percolation rate.

Field Capacity
The volume of pore water relative to total volume after the soil has been allowed to drain fully (as a fraction). A value of 0.2 is used as no vertical drainage occurs through the soil layer below this value.

Wilting Point
Soil moisture content at which plants cannot survive below this value (as a fraction). We assumed the minimum moisture content within the bioretention soil is 0.1.

Conductivity
Hydraulic conductivity for fully saturated soil. The minimum value for percolation requires a design rate of 5 inches/hour.

Conductivity Slope
Rate at which conductivity decreases with decreasing soil moisture. Typical values range from 5 for sands to 15 for silty clay. The conductivity slope for this project is set to 5 due to the soil mixture design having a very good percolation rate.

Suction Head
The average value of soil capillary suction along the wetting front (inches). This is designed as the suction head for a soil mix after several years of bioretention life span. Utilizing San Diego County's BMP Design Manual, Appendix G.1.5.3.4, Table G.1-7 design parameters for guidance, a suction head value of 1.5 inches was selected.

3. *Storage*

The Storage tab within the LID Control Editor describes the properties of the crushed stone or gravel layer used in bioretention cells as a bottom storage/drainage layer. The parameters and default values are described below:

Height
This parameter is the thickness of the gravel layer (inches). Gravel layer includes gravel and filter course below the engineered soil mixture.

Void Ratio
The volume of void space relative to the volume of solids in the layer (as a fraction). Note, void ratio = porosity / (1 + porosity). Riverside County's design requirement for the gravel storage layer sets the value for porosity at 0.40. Using the void ratio equation, a value of 0.67 is used.

Seepage Rate
The rate at which water infiltrates into the native soil below the layer (in/hour). This is the saturated hydraulic conductivity of the surrounding sub-catchment. Based on percolation test conducted by the soils engineer, the soil type is C and D and the value will be set to zero.

Clogging Factor
Total volume of treated runoff it takes to completely clog the bottom of the layer divided by the void volume of the storage layer. Clogging is ignored due to insignificant seepage rate and is set to zero.

4. *Drain*

The Drain tab within the LID Control Editor describes the properties of an optional undrain system within the storage layer of the LID unit. The parameters presented in this tab are used to determine the rate of flow through the underdrain. The parameter's default values are described below:

Flow Coefficient - C
Determines the restriction of flow on the underdrain orifice. To derive this value see explanation below:

Per SWMM "Drain Advisor":
"The user specifies… volumetric flow rate (per unit area)":

$$\boldsymbol{q = \frac{Q}{A_{lid}}} \qquad \text{Eq. 4.1}$$

Where: q = volumetric flow, $\frac{ft}{sec}$
Q = flow, cfs

A_{lid}= surface area of LID

Per SWMM "LID Control Editor – Drain system":
"The drain coefficient C and exponent n determines the rate of flow through a drain as a function of the height of stored water above the drain's offset. The following equation is used to compute this flow rate (per unit area of the LID unit)":

$$q = C_d h^n \qquad \text{Eq. 4.2}$$

Where:
q = volumetric flow, $\frac{ft}{sec}$
C_d= drain coefficient, unitless
h = ponding height above orifice, in
n = typical value for n is 0.5 (makes drain act like an orifice)

Standard orifice equation:

$$Q = C_o A_o \sqrt{2gh} \qquad \text{Eq. 4.3}$$

Where:
Q = flow, cfs
C_o= orifice coefficient, unitless
A_o= cross-sectional area of orifice, in
h = ponding height above orifice, in
g = gavity, 32.2 $\frac{ft}{sec^2}$

Converting orifice equation into volumetric flow per unit area of LID element:

$$\frac{Q}{A_{lid}} = \frac{C_o A_o \sqrt{2gh}}{A_{lid}} = q \qquad \text{Eq. 4.4}$$

Equations 4.2 and 4.3 are now in similar terms and can be compared:

$$C_d h^{0.5} = \frac{C_o A_o \sqrt{2gh}}{A_{lid}} \qquad \text{Eq. 4.5}$$

The height on both sides of the equation are similar and can be factored out:

$$C_d = C_o \sqrt{2g} \frac{A_o}{A_{lid}} \qquad \text{Eq. 4.6}$$

With an orifice coefficient of 0.6, equation 4.6 yields:

$$C_d = 60046 * \frac{A_o}{A_{lid}} \qquad \text{Eq. 4.7}$$

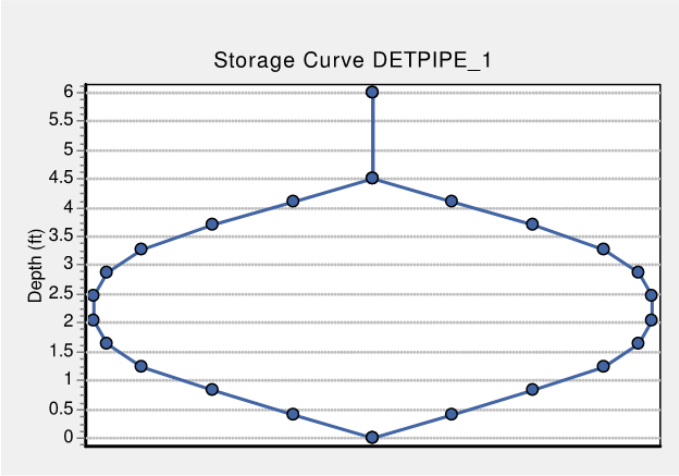
An example for use of Equation 4.7 can be found in the slotted drain example within the SWMM Drain Advisor (EPA SWMM 5.1 Help/Contents/Reference/Special Dialog Forms/LID

Editors/LID Control Editor/LID Drain System/Drain Advisor). The underdrain coefficient used for each LID within this project is listed below:

Flow Exponent - n
Establishes the underdrain characteristics. The outlets for each bioretention LID are designed to function as an orifice. Thus, the value is set to 0.5, per SWMM Help file.

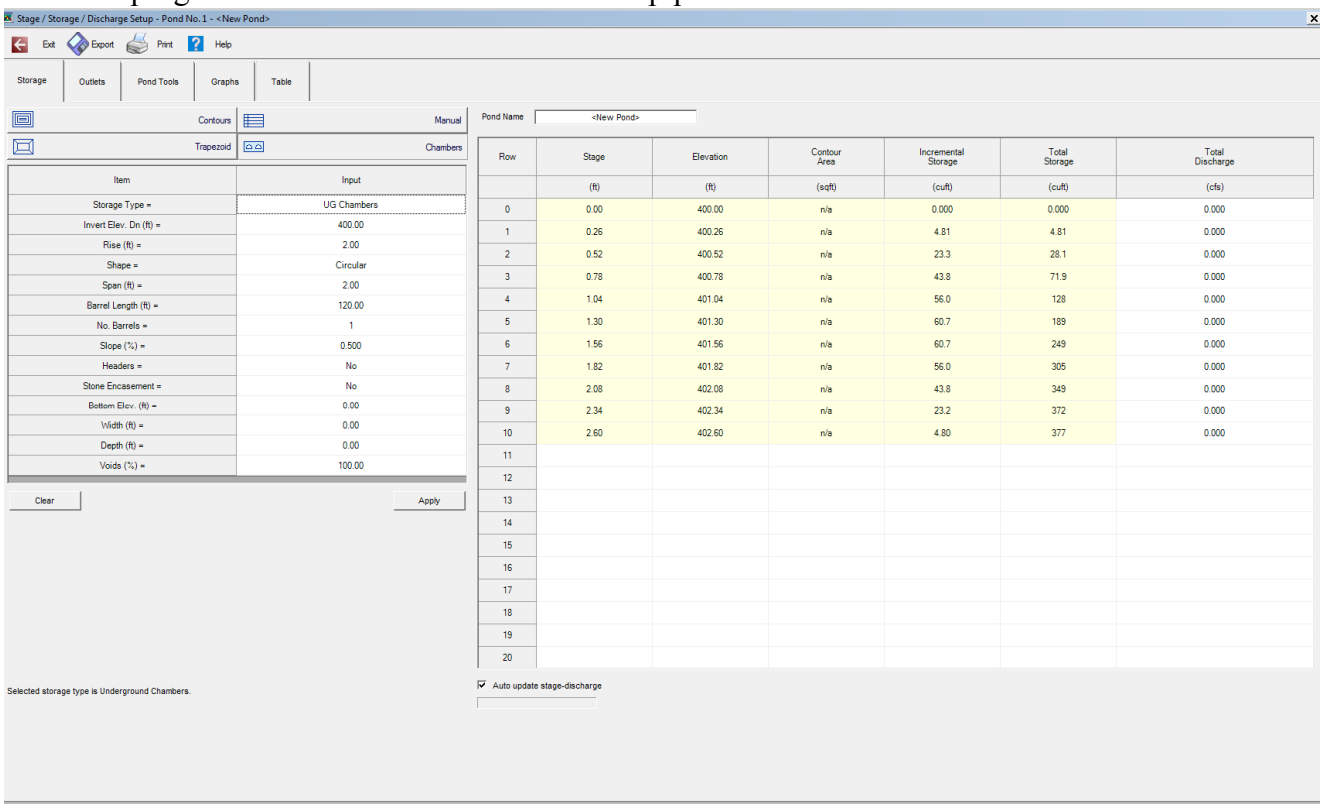
Offset Height - H_d
Distance from the bottom of the Storage layer to the invert of the drain outlet (inches). For this project, the offset value is set to 3 inches.

SECTION VI - **SWMM Hydraulic Components**



SWMM contains a flexible set of hydraulic modeling capabilities used to route runoff and external inflows through a storm drain network, channels, storage and diversion structures. The components used within this model are described below:

1. Storage Nodes

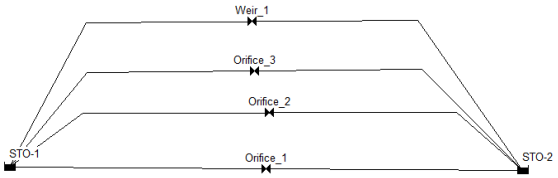


Storage nodes provide a storage unit within SWMM which provides storage of storm water runoff. Physically, the node represents storage facilities as small as a catch basin or surface storage up anything as large as a lake. The volumetric properties of the storage node is described in a table of surface area versus height.

Storage nodes are used to model the surface storage capacity of the bioretention LID above the berm height. In addition, storage nodes are used to represent two detention pipes to ensure the amount and duration of peak flow are below the pre-developed conditions. The storage nodes are each linked with a storage curve table which describes how the surface area of a storage unit node varies with water depth. An important note to make is that the storage curve table and cross-sectional view is greatly impacted by the longitudinal slope of the detention pipe. The steepness of the pipe will produce different phases or shape: parabolic, trapezoidal or ellipse.

The detention pipes in this study are designed with a 0.5% longitudinal slope and produce the resulting cross-sectional view and storage tables shown below:

Hydrograph Hydraflow Hydrographs Extension Version 10.4 by Autodesk, Inc. was used to determine the volume of the storage pipe up to the proposed weir. The following diagram below depicts a simple scenario where a pipe was constructed and then the volume and depth were extracted. An Excel Spreadsheet was then used to determine the area versus the depth of the detention pipe. These to values were then able to be placed in a storage curve of swmm to allow the program to determine the volume of the pipe.



2. *Orifice Links*

An orifice link provides a connection type between two nodes within SWMM. The orifice can either be circular or rectangular shaped. For this study, the orifice link is used to represent the opening along the side or bottom of the storage node that serves as an outlet. The orifice link connects the upstream storage node to another storage node or to the outfall.

Rectangular shaped orifice was selected to drain the surface storage in each bioretention LID and two detention pipes in this study.

3. ***Weir Links***

A weir link, much like an orifice link, provides a connection between two nodes within SWMM and provides an option to model outlet and diversion of flows within the drainage system. Detention pipes are modeled with storage nodes and connected with weir or orifice links.

SECTION VII - **RUNNING THE SIMULATION**

In general, the Run time will depend on the complexity of the watershed being modeled, the routing method used, and the size of the routing time step used. The larger the time steps, the faster the simulation, but the less detailed the results.

Model Results

SWMM's Status Report summarizes overall results for the 35-yr simulation. After the simulation run completes successfully, the mass continuity errors for runoff, flow routing, and pollutant routing is displayed in the Run Status window. These errors represent the percent difference between initial storage + total inflow and final storage + total outflow for the entire drainage system. If the values exceed some reasonable level, such as 10 percent, then the validity of the analysis results must be questioned. This simulation produced a runoff continuity error -6.56% and the flow routing continuity error 0.0018 and is within reasonable error to determine this study to be valid.

In addition to the system continuity error, the Status Report produced by a run lists those nodes of the drainage network that have the largest flow continuity errors. If the error for a node is excessive, then one should first consider if the node in question is of importance to the purpose of the simulation. If it is, then further study is warranted to determine how the error might be reduced. For this study all node errors were within range of what is reasonable.

SECTION VIII - **RESULT ANALYSIS**

Development of the Flow Duration Statistics

The flow duration statistics are also developed directly from the SWMM binary output file. It should be noted right from the start that the "durations" that we are talking about in this section have nothing to do with the "storm durations" presented in the peak flow statistics section. Other than using the same sequence of letters for the word, the two concepts have nothing to do with each other and the reader is cautioned not to confuse the two. The goal of the flow duration statistics is to determine, for the flow rates that fall within the geomorphologicaly significant range, the length of time that each of those flow rates occur. Since the amount of sediment transported by a river or stream is proportional to the velocity of the water flowing and the length of time that velocity of flow acts on the sediment, knowing the velocity and length of time for each flow rate is very useful.

Methodology

The methodology for determining the flow duration curves comes from a document developed by the U.S. Geological Survey (USGS). The first stop on the journey to find this document was a link to the USGS water site (http://www.usgs.gov/water/). This link is found in Appendix E (SDHMP Continuous Simulation Modeling Primer), found in the County Hydromodification Management Plan[3]. On this web site a search for "Flow Duration Curves" leads to USGS Publication 1542-A, Flow-duration curves, by James K. Searcy 1959 (http://pubs.er.usgs.gov/publication/wsp1542A). In this publication the development of the flow duration curves is discussed in detail.
In Pub 1542-A, beginning on page 7 an example problem is used to illustrate the compilation of data used to create the flow duration plots. On page 8 a completed form 9-217-c form shows the monthly tabulation of flow rates for Bowie Creek near Hattiesburg, Miss. For each flow range the number of readings is tabulated and then the total number of each flow rate is totaled for the year. It should be noted that while this example is for a stream with a minimum flow rate of 100cfs, for the purposes of run-off studies in Southern California the minimum flow rate of zero (0) cfs is the common low flow value. Once each of the year's data has been compiled the summary numbers from each year are transferred to form 9-217-d. On this form the total number of each flow rate is again totaled and the percentage of time exceeded calculated (as will be explained later under the discussion of our calculations). Once the data has been compiled a graph of Discharge Rate vs. Percent Time Exceeded is developed. As will be explained in the next section, the use of these curves leads to the amount of time each particular flow can be expected to occur (based on historical data).

How to Read the Graphs[4]

Figure 1 shows a flow duration curve for a hypothetical development. The three curves show what percentage of the time a range of flow rates are exceeded for three different conditions: pre-project, post-project and post-project with storm water mitigation. Under pre-project conditions the minimum geomorphically significant flow rate is 0.10 cfs (assumed) and as read from the graph, flows would equal or exceed this value about 0.14% of the time (or about 12 hours per year) (0.0014 x 365 days x 24 hour/day). For post-project conditions, this flow rate would occur more often – about 0.38% of the time (or about 33 hours per year) (0.0038 x 365 days x 24 hour/day). This increase in the duration of

[3] FINAL HYDROMODIFICATION MANAGEMENT PLAN, Prepared for County of San Diego, California, March 2011, by Brown and Caldwell Engineering of San Diego.
(http://www.projectcleanwater.org/images/stories/Docs/LDS/HMP/0311_SD_HMP_wAppendices.pdf)
[4] The graph and the explanation were taken directly from Appendix E of the Hydromodification Plan

the geomorphically significant flow after development illustrates why duration control is closely linked to protecting creeks from accelerated erosion.

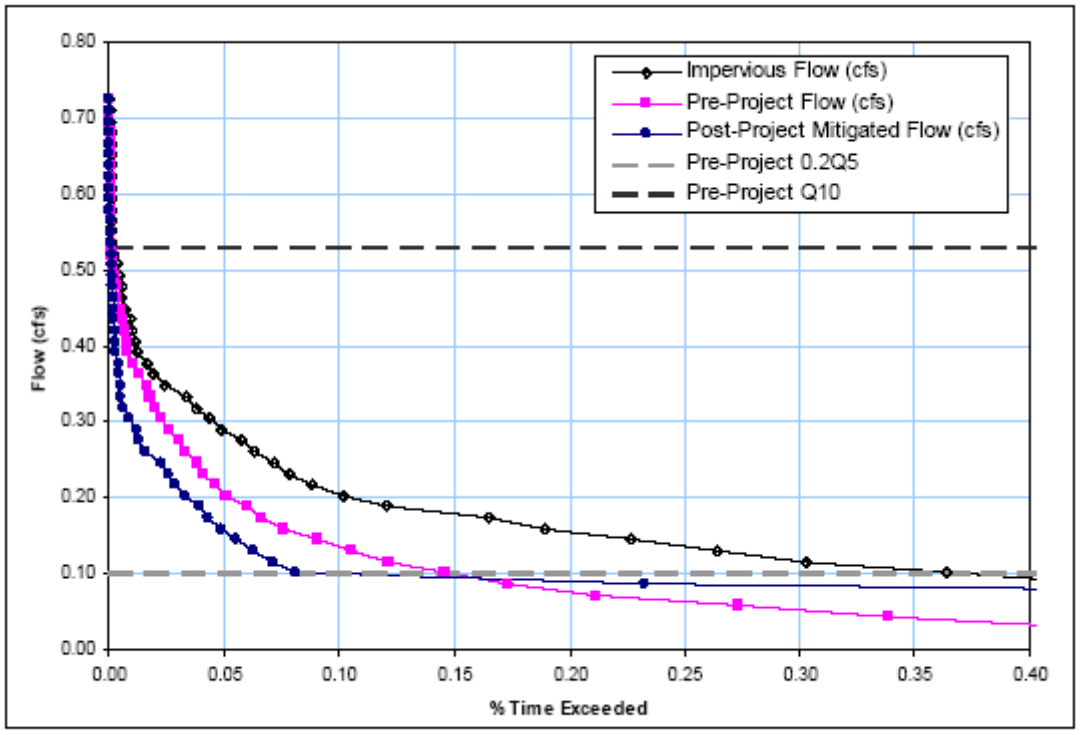


Figure 1. Flow Duration Series Statistics for a Hypothetical Development Scenario

Development of Flow Duration Curves

The first step in developing the flow duration curves is to count the number of occurrences of each flow rate. This is done by first rounding every non-zero flow value to an appropriate number of decimal places (say two places). This in effect groups each flow into closely related values or "bins" as they are referred to in publication 9-217d. Then the entire runoff record is queried for each value and the number of each value counted. The next step is to enter the results of the query into a grid patterned after form 9-217d. The data is entered in ascending order starting with the lowest flow first. The grid is composed of four columns. They are (from left to right) Discharge Rate, Number of Periods (count), Total Periods Exceeding (the total number of periods equal to or exceeding this value), and Percent Time Exceeded. Starting at the top row (row 1), the flow rate (which is often times zero) is entered with the corresponding number of times that value was found. The next column is the total number of values greater than or equal to that flow rate. For the first flow rate point, by definition all flow rate values are greater than or equal to this value, therefore the total number of runoff records of the rainfall record is entered here. The final column which is the percent of time exceeded is calculated by dividing the total periods exceeded by the total number of periods in the study. For the first row this number should be 100%

For the next row (row 2), the flow rate, and the flow rate count are entered. The total number of periods exceeding for row 2 is calculated by subtracting Number of Periods of row 1 from the Total Periods Exceeding of line 1. This result is entered in the Total Periods Exceeding on row 2. As was the case for line 1, the final column is calculated by dividing the total periods exceeded by the total

number of periods in the study. For the second row this number should be something less than 100% and continually decrease as we move down the chart. If all the calculations are correct, then everything should zero out on the last line of the calculations.
The final step in developing the flow duration curves is to make a plot of the Discharge Rate vs. the Percent Time Exceeded. For the purposes of this report, the first value corresponding to the zero flow rate is not plotted allowing the graph to be focused on the actual flow rate values.

The Flow Duration Analysis

The Peak Flow Statistics analysis is composed of the following series of files:

1. The Flow Duration Plot
2. Comparison of the Un-Mitigated Flow Duration Curve to the Pre-Development Curve (Pass/Fail)
3. Comparison of the Mitigated Flow Duration Curve to the Pre-Development Curve (Pass/Fail)
4. The calculations for the Pre-Development flow duration curve development (USGS9217d)
5. The calculations for the Post-Development flow duration curve development (USGS9217d)
6. The calculations for the Mitigated flow duration curve development (USGS9217d)

The Flow Duration Plot

The Flow Duration Curves Plot is the plotting of all three (pre, un-mitigated and mitigated) sets of Discharge Rate vs. the Percent Time Exceeded data point pair lists. In addition to these curves horizontal lines are plotted corresponding to the Q_{10} and Q_{lf} (low flow threshold) values. Within the geomorphically significant range ($Q_{10} - Q_{lf}$) one can see a visual representation of the relative positions of the flow duration curves. The flow duration curves are compared in an East/West (horizontal) direction to compare post development Discharge Rates to pre-development Discharge Rates. The pre-development curve is plotted in blue, the unmitigated curve is plotted in red, and the mitigated curve is plotted in green. As long as the post development curve lies to the left of the pre-development curve (mostly[5]), the project meets the peak flow hydromodification requirements.

Pass/Fail comparison of the curves

The next two sets of data are the point by point comparison of the post-development curve(s) and the pre-development curve. The Pass/Fail table is helpful in determining compliance since the plotted lines can be difficult to see at the scales suitable for use in a report. Each point on the post-development curve has a corresponding "Y" value (Flow Rate), and "X" value (% Time Exceeded). For each point on the post development curve, the "Y" value is used to interpolate the corresponding Percent Time Exceeded (X) value from the pre-development curve. Then the Post-development Percent Time Exceeded value is compared to the pre-development Percent Time Exceeded value. Based on the relative values of each point, pass/fail criteria are determined point by point.
For each set of data, the upper right hand header value shows the name of the file being displayed (ex. flowDurationPassFailMitigated.TXT). The first line of the file shows the name of the SWMM output file (*.out). The next line shows the time stamp of the SWMM file that is being analyzed. The time stamps of all of the report files should be within a minute or two of each other, otherwise there may

[5] See hydromodification limits for exceedance of pre-development values

have been tampering with the files. Each report run creates and prints all of the files and reports at one time so all the time stamps should be very close.
The first column is the zero based number of the point. The next two columns show the post development "X" and "Y" values. The next column shows the value interpolated between the two bounding points on the pre-development curve. The next three columns show the true or false values of the comparison of the two "X" values. The last column shows the resultant pass or fail status of the point. There are three ways a point can pass. They are:

1. Q_{post} being outside of the geomorphically significant range Q_{lf} to Q_{10}
2. Q_{post} being less than Q_{pre}
3. Q_{post} being less than 110% of the value of Q_{pre} if the point is between Q_{lf} and Q_{10}

There are two ways that a point can fail. They are:

1. Q_{post} being greater than 110% of Q_{pre} if the point is between Q_{lf} and Q_{10}
2. If more than 10% of the points are between 100% and 110% of Q_{pre} for the points between Q_{lf} and Q_{10}

A quick scan down the last column will quickly tell if there are any points that fail.
At the bottom of each set of data are the date stamp of the report to the left, and to the right is the page number/number of pages for the specific set of data (not the pages of the report!). Each new set of data has its own page numbering. Between the file name in the header row and the page numbering in the footer row, the engineer can readily scan the document for the data of interest.

As was described under the peak flow section, is the responsibility of the reviewing agency to confirm that the data sets presented are valid results from consistent calculations, and that any and all results can be duplicated by manual methods and achieve the same results. In light of these goals, the plan checker is invited to consider the following tasks as part of the plan check process.

Compare the Data Stamps for Each of the Statistics Files Used In This Analysis.
As was described in the Peak Flows section, all report files should have time stamps that are nearly identical. If the time values are more than a few minutes apart then the potential for inconsistent results files should be investigated.

Verifying the Flow Rate Counts
For each of the pre, un-mitigate and mitigated flow duration tables, a few randomly selected flow value counts should be checked against the values taken directly from the SWMM file. This can be done by opening the corresponding SWMM file, selecting the outfall node, selecting Report>Table>By Object, Setting the time format to Date/Time, selecting the appropriate node value, and clicking the OK button to generate a table of the date/time/Total Inflow values. Next step is to click in the left most header row of the SWMM table which will select the entire table. Now from the main menu select Edit>Copy To>Clipboard. Now open a new blank sheet in MS Excel (or suitable spread sheet program) select cell A1 and paste the results from the clipboard into the spread sheet. Now sort the values based on the Total Inflow column. This will group all the flow values together enabling the number of occurrences of each value to be counted. At this point the a few (or all) of the counts on the various USGS9217d.txt files can be verified.
Manually Verify That the Percent Exceeded Values (form USGS9217d) are Correctly Calculated
The discharge rates and counts are confirmed as was described above. The top row should be the smallest runoff value (0.00 cfs usually). Total Periods Exceeding of the first line should be the total number of rainfall records in the study. The percentage of Time Exceeding should be the total periods

Exceeding divided by the total number of rainfall records in the study (100% for the first line). For each successive discharge rate, the total periods exceeding for the current line should be the total periods exceeding from the line above minus the number of periods from the line above. The number of periods and the number of periods exceeding should zero out at the last line.

Compare Plotted Curves to Table Data

Randomly check a few of the plotted points against the values verified above.

Verify by Observation that the plotted values of $Q_{10\ a}$nd Q_{lf} are reasonable.

Verify that the correct values for each of these return periods are plotted correctly on the graph.

Development of the Peak Flow Statistics

The peak flow statistics are developed directly from the binary output file produced by the SWMM program. The site is modeled three ways, Pre-Development, Post-Development-Unmitigated, and Post-Development-Mitigated. For each of these files a specific time period differentiating distinct storms is chosen. The SWMM results are extracted and each flow value is queried. The majority of the values for Southern California sites are zero flow. As each successive record is read, as soon as a non-zero value is read the time and flow value of that record are recorded as the beginning of an event. The first record is automatically recorded as the "tentative" peak value. As each successive non-zero value is read and the successive flow value is compared to the peak value and the greater value is retained as the peak value of the storm. As soon as a successive number of zero values equal to the predetermined storm separation value, then the time value of the last non-zero value is recorded as the end of the storm, the duration of the storm is the difference between the end time and the start time, and the peak value is recorded as the highest flow value between the start and end times.

Once the entire SWMM output file is read all of the distinct storm events will have been recorded in a special list. The storms will be in the order of their occurrence. To develop the peak flow statistics table the first step is to sort the storms in descending order of the peak flow value. Once the list is sorted then the relative rank of each storm is assigned with the highest ranking storm being the storm with the highest peak flow. There are several methods that can be used to determine which storm should be ranked above another equally valued storm. For the purposes of these studies an Ordinal ranking is used so that each storm has a unique rank number. Where two or more storms have equal flow values, the earlier storm is assigned the higher rank. This is done consistently throughout the storm record. Since we are only looking at peak flow statistics, it is assumed that the relative ranking of individual (but equal) storms is irrelevant to the calculations.

The exceedance frequency and return period are both computed using the Weibull formula for plotting position. Therefore, for a specific event the exceedance frequency F and the return period in years T are calculated using the following equations[6]:

$F=m/(n_R+1)$ and $T=n+1/m$

Where m is the event's rank, n_R is the total number of events and n is the number of years under analysis.

Once the Peak flow statistics table is complete, a plot of Return Frequency vs. peak flow is created. All three conditions (pre, post and mitigated) are plotted on the same plot.

The Peak Flow Statistics Analysis

The Peak Flow Statistics analysis is composed of the following series of files:

1. The Peak Flow Frequency Plot

[6] Pg 169-170 STORM WATER MANAGEMENT MODEL APPLICATIONS MANUAL, EPA/600/R-09/000 July 2009

2. The Comparison of the Un-Mitigated Peak Flow Curve to the Pre-Development Curve (Pass/Fail)
3. The Comparison of the Mitigated Conditions Curve to the Pre-Development Curve (Pass/Fail)
4. The Peak Flow Statistics Calculation for the Pre-Development Curve.
5. The Peak Flow Statistics Calculation for the Un-Mitigated Curve.
6. The Peak Flow Statistics Calculation for the Mitigated Curve.

The Peak Flow Frequency Plot

The Peak Flow Frequency Curves are the plotting of all three (Pre, Un-Mitigated and Mitigated) sets of return Period vs peak flow data point pair lists. In addition to these curves horizontal lines are plotted corresponding to the Q_{10}, Q_5, Q_2 and Q_{lf} (low flow threshold) values. Within the geomorphically significant range ($Q_{10} - Q_{lf}$) one can see a visual representation of the relative positions of the peak flow curves. The peak flow curves are compared in a North/South (vertical) direction to compare post development peak flows to pre-development flows. The Pre-Development curve is plotted in blue, the unmitigated curve is plotted in red, and the mitigated curve is plotted in green. As long as the post development curve lies below the pre-development curve (mostly[7]), the project meets the peak flow hydromodification requirements.

Pass/Fail comparison of the curves

The next two sets of data are the point by point comparison of the post-development curve(s) and the pre-development curve. The Pass/Fail table is helpful in determining compliance since the plotted lines can be difficult to see at the scales suitable for use in a report. Each point on the post-development curve has a corresponding "X" value (Recurrence Interval), and "Y" value (Peak Flow). For each point on the post development curve, the "X" value is used to interpolate the corresponding peak flow value from the pre-development curve. Then the Post-development peak flow value is compared to the pre-development peak flow value. Based on the relative values of each point, pass/fail criteria are determined point by point.

For each set of data, the upper right hand header value shows the name of the file being displayed (ex. peakFlowPassFailMitigated.TXT). The first line of the file also shows this value. The next line shows the time stamp of the file that is being analyzed. The time stamps of all of the report files should be within a minute or two of each other, otherwise there may have been tampering with the files. Each report run creates and prints all of the files and reports at one time so all the time stamps should be very close. It should be noted that the SWMM.out files will not have related time stamps since each file is developed independently.

The first column is the zero based number of the point. The next two columns show the post development "X" and "Y" values. The next column shows the value interpolated between the two bounding points on the pre-development curve. The next three columns show the true or false values of the comparison of the two "Y" values. The last column shows the resultant pass or fail status of the point. There are three ways a point can pass. They are:

1. Point is outside of the geomorphically significant range $Q_{10} - Q_{lf}$
2. Q_{post} being less than Q_{pre}
3. Q_{post} being less than 110% of the value of Q_{pre} if the point is between Q_5 and Q_{10}[8]

[7] See hydromodification limits for exceedance of pre-development values

[8] See section on how a point can fail point number 3 hereon

There are four ways that a point can fail. They are:

1. Q_{post} being greater than Q_{pre} if the point is between Q_{lf} and Q_5
2. Q_{post} being greater than 110% of Q_{pre} if the point is between Q_{lf} and Q_{10}
3. If more than 10% of the points are between 100% and 110% of Q_{pre} for the points between Q_5 and Q_{10}
4. If the frequency interval for points > 100% of Q_{pre} is greater than 1 year for the points between Q_5 and Q_{10}

A quick scan down the last column will quickly tell if there are any points that fail.
At the bottom of each set of data are the date stamp of the report to the left, and to the right is the page number/number of pages for the specific set of data (not the pages of the report!). Each new set of data has its own page numbering. Between the file name in the header row and the page numbering in the footer row, the engineer can readily scan the document for the data of interest.

The Peak Flow Statistics Calculations

There are three sets of data for the Peak Flow Statistics calculations (Pre-Development, Un-Mitigated, and Mitigated). As was the case for the pass/fail data, the upper right hand corner of each sheet has the file name. The first row of the data is the SWMM file name. The second row is the SWMM file time stamp of the file being analyzed. The 4^{th}, 5^{th}, and 6^{th} rows are the calculated values for Q_{10}, Q_5, and Q_2. These values are derived by linear interpolation between the nearest bounding points in the listing. While the relationship between the points in the peak flow analysis is not technically a linear relationship, the error introduced in using linear interpolation between such relatively close data points is assumed to be irrelevant. Finally, the footer row shows the report time and the page/number of pages of the data set.

As was previously discussed, each storm listed was determined by reading the flow values directly from the binary output file from the SWMM program. The storms were then sorted in descending order of peak flow values. Then each storm was assigned a unique rank, then the Frequency and Return Period were calculated using Weibull formulas. Every discharge value for the entire rainfall record is listed in each of these lists. It should be noted that the derivation of these peak flow statistics values use full precision (i.e. no rounding off) of the SWMM output values. Since the precision of the calculations may not be the same as the SWMM program uses, and also the assignment of rank to values of equal peak flow value may differ slightly from the way SWMM calculates the tables, minor variances in the data values and/or the order of storms can be expected.
Finally, as was previously stated, the values of the Return Period were plotted vs. the peak flow values to develop the peak flow frequency curves.

Verifying A Few Random Storm Statistics

For each of the Pre- and Mitigated peak flow statics tables, a few randomly selected storms should be checked against the values taken directly from the SWMM file. This can be done by opening the corresponding SWMM file, selecting the outfall node, selecting Report>Table>By Object, Setting the time format to Date/Time, selecting the appropriate node value, and clicking the OK button to generate a table of the date/time/Total Inflow values. Now scroll down the list to the start date and time of the randomly selected storm. Verify that the start date, end date, and the highest flow value between the start and end date correspond to the values shown in the statistics table. Do this for a few storm to verify that the data corresponds to the SWMM output file. Verify by hand a few of the frequency and return period values.

Compare Plotted Curves to Table Data
Randomly check a few of the plotted points against the values found in the Peak Flow Frequency Tables.

Verify by Observation that the values of Q_{10}, Q_5, Q_2 and Q_{lf} are reasonable.
For each value shown on the reports, verify that the value shown for say Q10 is in between the next higher return period and the next lower period. Also verify that the correct values for each of these return periods are plotted correctly on the peak flow frequency graph.
Manually Verify That the Pass Fail Table Is Correctly Calculated
Select at random several points on each of the pass/fail tables to verify that the values for post X/Y and interpolated Y look reasonable. Also check that the various test results are shown accurately in the chart and also the final pass/fail result looks accurate.

Drawdown Time of Bioretention Surface Ponding
The general equation used for drawdown time for surface ponding is derived by utilizing SWMM's underdrain coefficient (C factor). To derive the equation, the change in water volume with respect to time is set equal to the standard orifice equation found in the County Hydraulics manual:

$$q = \frac{dh}{dt} nA_p = C_o A_o \sqrt{2gh} \qquad \text{Eq. 6.1}$$

Where: q = flow, cfs
dh = change in ponding height above orifice, in
dt = change in time to drain, hr
n = porosity (set to 1 for surface layer)
A_o= cross-sectional area of orifice, in
C_o= orifice coefficient, unitless
A_o= cross-sectional area of orifice, in
g = gravity, 32.2 $\frac{ft}{sec^2}$

Substituting 1 for porosity and rearranging Eq. 6.1 we get:

$$\frac{dh}{dt} = \frac{C_o A_o \sqrt{2gh}}{A_p} \qquad \text{Eq. 6.2}$$

Solving the definite integral height from h_1 to h_2 and drain time from zero to an ultimate time (T):

$$\int_{h=h1}^{h=h2} h^{-0.5} dh = \int_{t=0}^{t=T} \frac{CoAo\sqrt{2g}}{Ap} \, dt$$

$$\int_{h=h1}^{h=h2} h^{-0.5}dh = \int_{t=0}^{t=T} \frac{CoAo\sqrt{2g}}{Ap}\ dt$$

$$2(\sqrt{h2} - \sqrt{h1}) = \frac{CoAo\sqrt{2g}}{Ap}\ (T)$$

$$Per\ Eq\ 4.6\text{: } C = \frac{CoAo\sqrt{2g}}{Ap}\ \left(\frac{in^{0.5}}{hr}\right)$$

$$2n\left(\sqrt{h2} - \sqrt{h1}\right) = C\ (T)$$

$$T = \frac{2n\left(\sqrt{h2} - \sqrt{h1}\right)}{C}\ (hr) \qquad \text{Eq. 6.3}$$

Where: T = Ultimate time to drain change in head, hr
C = SWMM underdrain coefficient
h_1 = head above the underdrain orifice at bottom of surface, in
h_2 = beginning head above the underdrain orifice at surface, in

Underdrain and Drawdown Results

The following table summarizes the underdrain coefficients used for each of the BMP units and translates the C factor coefficient to an equivalent round orifice diameter based on 1/16th inch increments. The drawdown equations are based on standard falling head drawdown theory. The primary drawdown number of interest is the surface drawdown based on vector concerns. The various soil and gravel storage layer calculations consider the void ratio and porosity of the respective layer. It should be noted that these drawdown calculations only consider the volume of water within the bioretention units. If the bioretention unit utilizes any storage above the berm height, then that storage drawdown is in addition to the values shown in the table below. Those calculations, if present, are shown elsewhere in the report. The derivation and explanation of the equations used to determine the values displayed in the chart are discussed in the following two sections of this portion of the report.

Sub Cat Name*	LID Process*	LID Area (sf)*	Orifice D (1/16in)	Orifice D (in)	UD C factor*	T surf (in)*	T soil (in)*	T store (in)*	n (soil)*	e (store)*	Drawdown surface (hr)	Drawdown Soil (hr)	Drawdown Storage (hr)	Drawdown total (hr)
BMP-1	BMP-1	6812.78	15	0.9375	0.042954777	6	24	12	0.4	0.67	22.4	47.2	64.7	134.3
BMP-2	BMP-2	5083.02	14	0.875	0.050151921	6	18	12	0.4	0.67	20.8	32.1	55.4	108.4
BMP-3	BMP-3	396.4	16	1	0.839961994	6	24	18	0.4	0.67	1.1	2.1	4.1	7.2
BMP-4	BMP-4	1206.61	16	1	0.275947435	6	24	18	0.4	0.75	3.2	6.5	12.3	22.1
BMP-5	BMP-5	300.56	16	1	1.107801885	6	24	18	0.4	0.75	0.8	1.6	3.1	5.5

The character * in the column heading indicates that the values was read directly from the SWMM inp file.
Assume: orifice coefficient C_o = 0.60, void ratio for surface = 1.0, centroid of underdrain orifice is located at h=0

Underdrain C Factor Equations

Based on the slotted drain example in the SWMM Drain Advisor (EPA SWMM 5.1 Help/Contents/Reference/Special Dialog Forms/LID Editors/LID Control Editor/LID Drain System/Drain Advisor) the underdrain coefficient C is the ratio of the orifice area (total slot area) to the LID area times a constant (60,000).

SWMM Ex: If the drain consists of slotted pipes where the slots act as orifices, then the drain exponent would be 0.5 and the drain coefficient would be 60,000 times the ratio of total slot area to LID area. For example, drain pipe with five 1/4" diameter holes per foot spaced 50 feet apart would have an area ratio of 0.000035 and a drain coefficient of 2.

The 60,000 constant in the above example corresponds to the combined constants in the standard orifice equation:

(Standard Orifice Equation)

$$q = C_o A_o \sqrt{2g}\sqrt{h}\ (cfs)$$

and

(SWMM Underdrain Equation (per unit area))

$$q = q/A_{LID}$$

or

$$q = C_o A_o / A_{LID} \sqrt{2g}\sqrt{h}\ (cfs/sf)$$

With a Co=0.6 and converting $\sqrt{2g}$ to units of inches and hours the constant becomes 60,046.

So the underdrain C factor per unit area of the LID becomes:

$$C = 60{,}046\ A_o/A_{LID}\ (in^{\wedge 1/2}/hr)$$

and

$$q = C^* h^{1/2}$$

Drawdown Equations

The drawdown equations presented in the chart are the drawdown times for the respective layers within the bioretention unit (only). If the bioretention unit includes storage ponding above the berm height, then the drawdown time for the storage portion is in addition to the values shown in the chart. Those calculations (if present) are shown elsewhere in the report. For most cases the storage drawdown time will be comparatively short as compared to the bioretention drawdown times.

To derive a general formula that relates drawdown time for each layer of the bioretention unit in terms of the SWMM C factor, we set the change in water volume with respect to time equal to the standard orifice equation (found in the County Hydraulics manual):

$$q = \frac{dh}{dt} nAp = CoAo\sqrt{2gh}$$

Where n = porosity of the layer, A_P = area of the BMP unit, Co = orifice coefficient, Ao = area of the orifice, and g = gravity constant. The porosity n for the surface layer is 1.0, and the values for the soil and storage layers read from the SWMM LID definitions.

Solving the definite integral from h1 to h2

$$\int_{h=h1}^{h=h2} h^{-0.5} dh = \int_{t=0}^{t=T} \frac{CoAo\sqrt{2g}}{nAp}\ dt$$

$$2(\sqrt{h2} - \sqrt{h1}) = \frac{CoAo\sqrt{2g}}{nAp}\ (T)$$

$$Or$$

$$2n\left(\sqrt{h2} - \sqrt{h1}\right) = C\ (T)$$

$$where: C = \frac{CoAo\sqrt{2g}}{Ap}\ \ (in^{\wedge 1/2}/hr)$$

Solving for T:

$$T = \frac{2n\left(\sqrt{h2} - \sqrt{h1}\right)}{C}\ \ (hr)$$

Where h2(in) is the total beginning head above the underdrain orifice at t=0 and h1(in) is the total ending head above the orifice at t=T. Ex: h2 for surface = depth of gravel storage plus depth of soil layer plus berm height, and h1 for surface = depth of gravel storage plus depth of soil layer.

MITIGATED CONDITIONS RESULTS

For the Mitigated Conditions:

Peak Flow Conditions PASS
Flow Duration Conditions PASS

The Mitigated Conditions peak flow frequency curve is composed of 510 points. Of the points, 2 point(s) are above the flow control upper limit (Q10), 345 point(s) are below the low flow threshold value (Qlf). Of the points within the flow control range (Qlf to Q10), 163 point(s) have a lower peak flow rate than pre-development conditions. These points all pass. There are no points that failed, therefore the unmitigated conditions peak flow requirements have been met.

The Mitigated Conditions flow duration curve is composed of 100 flow bins (points) between the upper flow threshold (cfs) and lower flow threshold (cfs). Each point represents the number of hours where the discharge was equal to or greater than the discharge value, but less than the next greater flow value. Comparing the post-development flow duration curve to the pre-development curve, 99 point(s) have a lower duration than pre-development conditions. These points all pass. There are no points that failed, therefore the unmitigated conditions flow duration requirements have been met.

Appendix 8: Source Control

Pollutant Sources/Source Control Checklist

Include a copy of the completed Pollutant Sources/Source Control Checklist used to document Source Control BMPs in Section H of this Template.

Appendix 8

STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST

How to use this worksheet (also see instructions in Section G of the 2014 SMR WQMP Template):

1. Review Column 1 and identify which of these potential sources of stormwater pollutants apply to your site. Check each box that applies.
2. Review Column 2 and incorporate all of the corresponding applicable BMPs in your WQMP Exhibit.
3. Review Columns 3 and 4 and incorporate all of the corresponding applicable permanent controls and operational BMPs in your WQMP. Use the format shown in Table G.1on page 31 of this WQMP Template. Describe your specific BMPs in an accompanying narrative, and explain any special conditions or situations that required omitting BMPs or substituting alternative BMPs for those shown here.

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☒ A. **On-site storm drain inlets**	☒ **Locations of inlets.**	☒ **Mark all inlets with the words "Only Rain Down the Storm Drain" or similar. Catch Basin Markers may be available from the Riverside County Flood Control and Water Conservation District, call 951.955.1200 to verify.**	☒ **Maintain and periodically repaint or replace inlet markings.** ☒ **Provide stormwater pollution prevention information to new site owners, lessees, or operators.** ☒ **See applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com** ☒ **Include the following in lease agreements: "Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains."**
☐ B. **Interior floor drains and elevator shaft sump pumps**		☐ **State that interior floor drains and elevator shaft sump pumps will be plumbed to sanitary sewer.**	☐ **Inspect and maintain drains to prevent blockages and overflow.**
☐ C. **Interior parking garages**		☐ **State that parking garage floor drains will be plumbed to the sanitary sewer.**	☐ **Inspect and maintain drains to prevent blockages and overflow.**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ D1. **Need for future indoor & structural pest control**		❑ **Note building design features that discourage entry of pests.**	❑ **Provide Integrated Pest Management information to owners, lessees, and operators.**
☒ D2. **Landscape/ Outdoor Pesticide Use**	❑ **Show locations of native trees or areas of shrubs and ground cover to be undisturbed and retained.** ❑ **Show self-retaining landscape areas, if any.** ☒ **Show stormwater treatment and hydrograph modification management BMPs. (See instructions in Chapter 3, Step 5 and guidance in Chapter 5.)**	**State that final landscape plans will accomplish all of the following.** ☒ **Preserve existing native trees, shrubs, and ground cover to the maximum extent possible.** ☒ **Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution.** ☒ **Where landscaped areas are used to retain or detain stormwater, specify plants that are tolerant of saturated soil conditions.** ☒ **Consider using pest-resistant plants, especially adjacent to hardscape. To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.**	☒ **Maintain landscaping using minimum or no pesticides.** ❑ **See applicable operational BMPs in "What you should know for…..Landscape and Gardening"** at http://www.rcflood.org/stormwater/Downloads/LandscapeGardenBrochure.pdf ☒ **Provide IPM information to new owners, lessees and operators.**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ E. **Pools, spas, ponds, decorative fountains, and other water features.**	❑ **Show location of water feature and a sanitary sewer cleanout in an accessible area within 10 feet. (Exception: Public pools must be plumbed according to County Department of Environmental Health Guidelines.)**	**If the Co-Permittee requires pools to be plumbed to the sanitary sewer, place a note on the plans and state in the narrative that this connection will be made according to local requirements.**	❑ **See applicable operational BMPs in "Guidelines for Maintaining Your Swimming Pool, Jacuzzi and Garden Fountain" at http://www.rcflood.org/stormwater/Downloads/poolsandspas.pdf**
☒ F. **Food service**	☒ **For restaurants, grocery stores, and other food service operations, show location (indoors or in a covered area outdoors) of a floor sink or other area for cleaning floor mats, containers, and equipment.** ☒ **On the drawing, show a note that this drain will be connected to a grease interceptor before discharging to the sanitary sewer.**	❑ **Describe the location and features of the designated cleaning area.** ❑ **Describe the items to be cleaned in this facility and how it has been sized to insure that the largest items can be accommodated.**	☒ **See the brochure, "The Food Service Industry Best Management Practices for: Restaurants, Grocery Stores, Delicatessens and Bakeries" at http://www.rcflood.org/stormwater/downloads/FoodServ.pdf** **Provide this brochure to new site owners, lessees, and operators.**
☒ G. **Refuse areas**	☒ **Show where site refuse and recycled materials will be handled and stored for pickup. See local municipal requirements for sizes and other details of refuse areas.** ☒ **If dumpsters or other receptacles are outdoors, show how the designated area will be covered, graded, and paved to prevent run-on and show locations of berms to prevent runoff from the area.** ❑ **Any drains from dumpsters, compactors, and tallow bin areas shall be connected to a grease removal device before discharge to sanitary sewer.**	☒ **State how site refuse will be handled and provide supporting detail to what is shown on plans.** ☒ **State that signs will be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar.**	☒ **State how the following will be implemented:** **Provide adequate number of receptacles. Inspect receptacles regularly; repair or replace leaky receptacles. Keep receptacles covered. Prohibit/prevent dumping of liquid or hazardous wastes. Post "no hazardous materials" signs. Inspect and pick up litter daily and clean up spills immediately. Keep spill control materials available on-site. See Fact Sheet SC-34, "Waste Handling and Disposal" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ H. **Industrial processes.**	❑ **Show process area.**	❑ **If industrial processes are to be located on site, state: "All process activities to be performed indoors. No processes to drain to exterior or to storm drain system."**	❑ **See Fact Sheet SC-10, "Non-Stormwater Discharges" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com** See the brochure "Industrial & Commercial Facilities Best Management Practices for: Industrial, Commercial Facilities" at http://www.rcflood.org/stormwater/Downloads/IndustrialCommercialFacilities.pdf
❑ I. **Outdoor storage of equipment or materials. (See rows J and K for source control measures for vehicle cleaning, repair, and maintenance.)**	❑ **Show any outdoor storage areas, including how materials will be covered. Show how areas will be graded and bermed to prevent run-on or run-off from area.** ❑ **Storage of non-hazardous liquids shall be covered by a roof and/or drain to the sanitary sewer system, and be contained by berms, dikes, liners, or vaults.** ❑ **Storage of hazardous materials and wastes must be in compliance with the local hazardous materials ordinance and a Hazardous Materials Management Plan for the site.**	❑ **Include a detailed description of materials to be stored, storage areas, and structural features to prevent pollutants from entering storm drains.** **Where appropriate, reference documentation of compliance with the requirements of Hazardous Materials Programs for:** ▪ **Hazardous Waste Generation** ▪ **Hazardous Materials Release Response and Inventory** ▪ **California Accidental Release (CalARP)** ▪ **Aboveground Storage Tank** ▪ **Uniform Fire Code Article 80 Section 103(b) & (c) 1991** ▪ **Underground Storage Tank** www.cchealth.org/groups/hazmat/	❑ **See the Fact Sheets SC-31, "Outdoor Liquid Container Storage" and SC-33, "Outdoor Storage of Raw Materials " in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ J. **Vehicle and Equipment Cleaning**	❑ **Show on drawings as appropriate:** **(1) Commercial/industrial facilities having vehicle/equipment cleaning needs shall either provide a covered, bermed area for washing activities or discourage vehicle/equipment washing by removing hose bibs and installing signs prohibiting such uses.** **(2) Multi-dwelling complexes shall have a paved, bermed, and covered car wash area (unless car washing is prohibited on-site and hoses are provided with an automatic shut-off to discourage such use).** **(3) Washing areas for cars, vehicles, and equipment shall be paved, designed to prevent run-on to or runoff from the area, and plumbed to drain to the sanitary sewer.** **(4) Commercial car wash facilities shall be designed such that no runoff from the facility is discharged to the storm drain system. Wastewater from the facility shall discharge to the sanitary sewer, or a wastewater reclamation system shall be installed.**	❑ **If a car wash area is not provided, describe any measures taken to discourage on-site car washing and explain how these will be enforced.**	**Describe operational measures to implement the following (if applicable):** ❑ **Washwater from vehicle and equipment washing operations shall not be discharged to the storm drain system. Refer to "Outdoor Cleaning Activities and Professional Mobile Service Providers" for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://www.rcflood.org/stormwater/downloads/OutdoorCleaningActivities.pdf** ❑ **Car dealerships and similar may rinse cars with water only.**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ K. **Vehicle/Equipment Repair and Maintenance**	❑ **Accommodate all vehicle equipment repair and maintenance indoors. Or designate an outdoor work area and design the area to prevent run-on and runoff of stormwater.** ❑ **Show secondary containment for exterior work areas where motor oil, brake fluid, gasoline, diesel fuel, radiator fluid, acid-containing batteries or other hazardous materials or hazardous wastes are used or stored. Drains shall not be installed within the secondary containment areas.** ❑ **Add a note on the plans that states either (1) there are no floor drains, or (2) floor drains are connected to wastewater pretreatment systems prior to discharge to the sanitary sewer and an industrial waste discharge permit will be obtained.**	❑ **State that no vehicle repair or maintenance will be done outdoors, or else describe the required features of the outdoor work area.** ❑ **State that there are no floor drains or if there are floor drains, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.** ❑ **State that there are no tanks, containers or sinks to be used for parts cleaning or rinsing or, if there are, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.**	**In the Stormwater Control Plan, note that all of the following restrictions apply to use the site:** ❑ **No person shall dispose of, nor permit the disposal, directly or indirectly of vehicle fluids, hazardous materials, or rinsewater from parts cleaning into storm drains.** ❑ **No vehicle fluid removal shall be performed outside a building, nor on asphalt or ground surfaces, whether inside or outside a building, except in such a manner as to ensure that any spilled fluid will be in an area of secondary containment. Leaking vehicle fluids shall be contained or drained from the vehicle immediately.** ❑ **No person shall leave unattended drip parts or other open containers containing vehicle fluid, unless such containers are in use or in an area of secondary containment.** **Refer to "Automotive Maintenance & Car Care Best Management Practices for Auto Body Shops, Auto Repair Shops, Car Dealerships, Gas Stations and Fleet Service Operations". Brochure can be found at** http://rcflood.org/stormwater/ **Refer to Outdoor Cleaning Activities and Professional Mobile Service Providers for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at** http://rcflood.org/stormwater/

IF THESE SOURCES WILL BE ON THE PROJECT SITE …	… THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ L. **Fuel Dispensing Areas**	❑ **Fueling areas[6] shall have impermeable floors (i.e., portland cement concrete or equivalent smooth impervious surface) that are: a) graded at the minimum slope necessary to prevent ponding; and b) separated from the rest of the site by a grade break that prevents run-on of stormwater to the maximum extent practicable.** ❑ **Fueling areas shall be covered by a canopy that extends a minimum of ten feet in each direction from each pump. [Alternative: The fueling area must be covered and the cover's minimum dimensions must be equal to or greater than the area within the grade break or fuel dispensing area[1].] The canopy [or cover] shall not drain onto the fueling area.**		❑ **The property owner shall dry sweep the fueling area routinely.** ❑ **See the Fact Sheet SD-30 , "Fueling Areas" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

[6] **The fueling area shall be defined as the area extending a minimum of 6.5 feet from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus a minimum of one foot, whichever is greater.**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ M. **Loading Docks**	❑ **Show a preliminary design for the loading dock area, including roofing and drainage. Loading docks shall be covered and/or graded to minimize run-on to and runoff from the loading area. Roof downspouts shall be positioned to direct stormwater away from the loading area. Water from loading dock areas shall be drained to the sanitary sewer, or diverted and collected for ultimate discharge to the sanitary sewer.** ❑ **Loading dock areas draining directly to the sanitary sewer shall be equipped with a spill control valve or equivalent device, which shall be kept closed during periods of operation.** ❑ **Provide a roof overhang over the loading area or install door skirts (cowling) at each bay that enclose the end of the trailer.**		❑ **Move loaded and unloaded items indoors as soon as possible.** ❑ **See Fact Sheet SC-30, "Outdoor Loading and Unloading," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ N. **Fire Sprinkler Test Water**		❑ **Provide a means to drain fire sprinkler test water to the sanitary sewer.**	❑ **See the note in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**
O. **Miscellaneous Drain or Wash Water or Other Sources** ❑ **Boiler drain lines** ❑ **Condensate drain lines** ❑ **Rooftop equipment** ❑ **Drainage sumps** ☒ **Roofing, gutters, and trim.** ❑ **Other sources**		❑ **Boiler drain lines shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain system.** ❑ **Condensate drain lines may discharge to landscaped areas if the flow is small enough that runoff will not occur. Condensate drain lines may not discharge to the storm drain system.** ❑ **Rooftop equipment with potential to produce pollutants shall be roofed and/or have secondary containment.** ❑ **Any drainage sumps on-site shall feature a sediment sump to reduce the quantity of sediment in pumped water.** ☒ **Avoid roofing, gutters, and trim made of copper or other unprotected metals that may leach into runoff.** ❑ **Include controls for other sources as specified by local reviewer.**	

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☒ P. **Plazas, sidewalks, and parking lots.**			☒ **Sweep plazas, sidewalks, and parking lots regularly to prevent accumulation of litter and debris. Collect debris from pressure washing to prevent entry into the storm drain system. Collect washwater containing any cleaning agent or degreaser and discharge to the sanitary sewer not to a storm drain.**

Appendix 9: O&M

Operation and Maintenance Plan and Documentation of Finance, Maintenance and Recording Mechanisms

Include the completed Operation and Maintenance Plan in this Appendix along with additional documentation of Finance and Maintenance Recording Mechanisms for the site. Refer to Sections 3.10 and 5 of the SMR WQMP and Section J of this Template.

1. INSPECTION AND MAINTENANCE CHECKLIST

BMP Name:_____ Location:_____

Date of Inspection: _____ Time: _____AM/PM (circle)

Inspected by: _____ _____

Print Name Print Name

Signature: _____ _____

The designated Site Inspector shall use the following guidelines, Section VI of the WQMP and sheets in Appendix D for maintenance, inspection, and repair of BMPs identified in the WQMP. Include any comments in the box to the right, including reparations made or needed. If preparations are needed, please provide a follow up date. The completed checklist shall be filed in order to keep a record of what was inspected and maintained.

Best Management Practices	Inspection Frequency	Maintenance Frequency	Observations/Comments
Educate Operators, Tenants, Contractors or Employees	Annually in September (before rainy season)	N/A	_____ _____ _____
Activity Restrictions	Annually in September (before rainy season)	N/A	_____ _____ _____
Irrigation System and Landscape Maintenance	Monthly	As-needed based on Maintenance Indicators	_____ _____ _____
Common Area Litter Control	N/A	Routine Litter pick-up	_____ _____ _____
Street Sweeping of Parking	N/A	Bi-monthly (coordinate with the city street sweeping)	_____ _____ _____ _____
Drainage Facility Inspection and Maintenance	Before and after the rainy season	As-needed based on Maintenance Indicators	_____ _____ _____
Protect slopes and Channels	Annually in September (before rainy season)	As-needed planting of vegetation in eroded	_____ _____ _____ _____ _____ _____ _____

Trash Storage Areas	Weekly as-needed	N/A	_____ _____ _____ _____ _____
Media Filter/inlet inserts	Semi-annually (before and after rainy season) and after major storms	Clean four times a year, Debris removal as necessary, and prior to and following rainy season and major storm	_____ _____ _____ _____ _____ _____ _____

Notes:

1. Do not blow lawn clippings or any waste into the Porous Landscape Detention Basin
2. Completed copies must be kept onsite to provide prove that the WQMP is being maintained and operated and must be available to the City and Regional Board upon request.
3. Runoff to the street caused by irrigation is prohibited and may result in monetary penalties. Adjust station timing and times per day as weather changes.
4. Keep lids closed.

Bioretention

Property Address of BMP:	Responsible Party Address:	

INSPECTION AND MAINTENANCE CHECKLIST FOR BIORETENTION PAGE 1 of 5			
Threshold/Indicator	**Maintenance Recommendation**	**Date**	**Description of Maintenance Conducted**
Accumulation of sediment, litter, or debris Maintenance Needed? ☐ YES ☐ NO ☐ N/A	☐ Remove and properly dispose of accumulated materials, without damage to the vegetation ☐ If sediment, litter, or debris accumulation exceeds 25% of the surface ponding volume within one month (25% full*), add a forebay or other pre-treatment measures within the tributary area draining to the BMP to intercept the materials. ☐ Other / Comments:		
Poor vegetation establishment Maintenance Needed? ☐ YES ☐ NO ☐ N/A	☐ Re-seed, re-plant, or re-establish vegetation per original plans ☐ Other / Comments:		

*"25% full" is defined as ¼ of the depth from the design bottom elevation to the crest of the outflow structure (e.g., if the height to the outflow opening is 12 inches from the bottom elevation, then the materials must be removed when there is 3 inches of accumulation – this should be marked on the outflow structure).

Bioretention

Date:	Inspector:	BMP ID No.:

Permit No.:	APN(s):	

INSPECTION AND MAINTENANCE CHECKLIST FOR BIORETENTION PAGE 3 of 5			
Threshold/Indicator	**Maintenance Recommendation**	**Date**	**Description of Maintenance Conducted**
Erosion due to concentrated irrigation flow Maintenance Needed? ☐ YES ☐ NO ☐ N/A	☐ Repair/re-seed/re-plant eroded areas and adjust the irrigation system ☐ Other / Comments:		
Erosion due to concentrated storm water runoff flow Maintenance Needed? ☐ YES ☐ NO ☐ N/A	☐ Repair/re-seed/re-plant eroded areas, and make appropriate corrective measures such as adding erosion control blankets, adding stone at flow entry points, or minor re-grading to restore proper drainage according to the original plan ☐ If the issue is not corrected by restoring the BMP to the original plan and grade, the [City Engineer] shall be contacted prior to any additional repairs or reconstruction ☐ Other / Comments:		

Bioretention

Date:	Inspector:	BMP ID No.:
Permit No.:	APN(s):	

INSPECTION AND MAINTENANCE CHECKLIST FOR BIORETENTION PAGE 4 of 5			
Threshold/Indicator	**Maintenance Recommendation**	**Date**	**Description of Maintenance Conducted**
Obstructed inlet or outlet structure Maintenance Needed? ☐ YES ☐ NO ☐ N/A	☐ Clear blockage ☐ Other / Comments:		
Underdrain clogged (inspect underdrain if standing water is observed for longer than 24-96 hours following a storm event) Maintenance Needed? ☐ YES ☐ NO ☐ N/A	☐ Clear blockage ☐ Other / Comments:		
Damage to structural components such as weirs, inlet or outlet structures Maintenance Needed? ☐ YES ☐ NO ☐ N/A	☐ Repair or replace as applicable ☐ Other / Comments:		

Detention Pipe

Date:	Inspector:	BMP ID No.:
Permit No.:	APN(s):	

INSPECTION AND MAINTENANCE CHECKLIST FOR DETENTION PIPE PAGE 1 of 1			
Threshold/Indicator	**Maintenance Recommendation**	**Date**	**Description of Maintenance Conducted**
Standing water in BMP for longer than 24-96 hours following a storm event* Draining time in the detention pipe longer than 96 hours following a storm event may be growth for mosquito breeding. Maintenance Needed? ☐ YES ☐ NO ☐ N/A	☐ Make appropriate corrective measures such as checking the flow control orifices and weir inside the manholes. clearing underdrains, or repairing/ replacing clogged orifices. ☐ Other / Comments:		
Underdrain clogged (inspect underdrain if standing water is observed for longer than 24-96 hours following a storm event) Maintenance Needed? ☐ YES ☐ NO ☐ N/A	☐ Clear blockage ☐ Other / Comments:		

*Surface ponding longer than approximately 24 hours following a storm event may be detrimental to vegetation health, and surface ponding longer than approximately 96 hours following a storm event poses a risk of vector (mosquito) breeding. Poor drainage can result from clogging of the media layer, filter course, aggregate storage layer, underdrain, or outlet structure. The specific cause of the drainage issue must be determined and corrected.

**If mosquitos persist following corrective measures to remove standing water, or if the BMP design does not meet the 96-hour drawdown criteria due to release rates controlled by an orifice installed on the underdrain, the [City Engineer] shall be contacted to determine a solution. A different BMP type, or a Vector Management Plan prepared with concurrence from the County of San Diego Department of Environmental Health, may be required.

2. INTRODUCTION

The project proposes to create 16 separate legal parcels with 13 buildings, occupied with varying shops such as specialty stores, fast food, casual dining, gas stations, a convenience store, and a hotel. There will be 19 users in total. At 100 percent buildout, the site will be more than 80 percent impervious. All impervious areas will drain to water quality basins, then to detention pipes onsite, then into a storm drain system, and finally draining to the existing drainage ditch along the east side of the project.

3. RESPONSIBILITY FOR MAINTENANCE

A. General

It shall be the responsibility of the owner to train all employees for the maintenance and operation of all BMPs, to achieve the maximum pollutant reduction, as addressed in the approved Project's WQMP. The following schedule of (O&M's) must be followed to satisfy the Conditions of Concern and the Pollutants of Concern as addressed in the approved Project's SWQMP and the City's SUSMP. This schedule shall include periodic inspections of all Source Control and Treatment Control BMP's. All maintenance records for training, inspection and maintenance shall be retained and provided to the city upon request.

All BMPs shall be inspected 30 days prior to October lst each year and certified to the City Engineering Department as to their readiness to receive runoff from the annual rainfall season.

The owner will also provide to the City, as part of the maintenance and operation agreement, an executed maintenance and access easement that shall be binding on the land throughout the life of the project. The DMA Exhibit in Attachment A of this report shall serve as a map showing the locations of BMPs to be maintained.

Responsible Party for O&M and For Training- Property Owner

Curci, LLC, A California Limited Partnership
Contact: Allan Davis
27890 Clinton Keith Road D-490
Murrieta, Ca 92562
Phone: (760)518-0660

B. Training

Training of Operation and Maintenance personnel is of primary importance to provide knowledge of the operation and maintenance of BMPs. Proper training shall provide information that will enable employees to have in place an effective preventive maintenance program as described in this O & M manual. The responsible party mentioned above should take the course provided by the "BULDING INDUSTRIES ASSOCIATION of San Diego COUNTY" to be trained in the purpose and use of BMPs and the maintenance thereof. Proper preventive maintenance will prevent environmental incidents that may be a health and safety hazard.

New employees should be trained as to the purpose and proper maintenance within the first week of their employment. Employee training shall include receiving a copy of this O & M manual; a discussion on the location and purpose of site specific BMPs, such as Source Control and Treatment Control BMPs; training on how to inspect and report maintenance problems and to whom they report to. Employees shall be trained in site specific Pollutants of Concern so that they can evaluate the functioning of all on-site BMPs. These Pollutants are identified in section F of the WQMP Report.

A log of all training and reported inspections and maintenance problems along with what was done to correct the problem shall be kept on the premises at all times.

Employees shall be periodically trained, at a minimum of once a year, to refresh their abilities to operate and maintain all on-site BMPs.

C. Records

BMP TRAINING LOG			
Date Mo/Day/Yr	**Type of Training**	**Personnel Trained**	**Trainer**

4. Summary of DMA's and BMP's

The project specific DMA & Source Control Exhibit is located in Attachment A of this report. This exhibit shows the location and type of each DMA and BMP on site

5. BMP Design Documentation

The As-built plans can be found in Attachement B of this report. The plans will specify elevations and details of all Structural BMP's onsite. All field changes will be documented on the As-built plans and will be included in this report for reference.

6. Maintenance Guidelines & Schedule

The following section will detail out project specific maintenance procedures.

Inspection Frequency

The facility will be inspected and inspection visits will be completely documented:

- Once a month at a minimum.
- After every large storm (after every storm monitored or these storms with more than 0.50 inch of precipitation.)
- On a weekly basis during extended periods of wet weather.

Inspect for proper irrigation and fertilizer use, and ensure that all landscaped areas have minimum of 80% coverage.

Aesthetic Maintenance

The following activities will be included in the aesthetic maintenance program:

Grass Trimming: Trimming of grass will be done on all landscaped areas, around fences, at the inlet and outlet structures, and sampling structures.
Weed Control. Weeds will be removed through mechanical means. Herbicide will not be used because these chemicals may impact the water quality monitoring.

Functional Maintenance

Functional maintenance has two components:

- Preventive maintenance
- Corrective maintenance

Preventive Maintenance

Preventive maintenance activities to be instituted for landscaped areas are:

- Grass Mowing: Vegetation seed, mix within the landscaped areas, are to be designed to be kept short to maintain adequate hydraulic functioning and to limit the development of faunal habitats.

- Trash and Debris: During each inspection and maintenance visit to the site, debris and trash removal will be conducted to reduce the potential for inlet and outlet structures and other components from becoming clogged and inoperable during storm events.
- Sediment Removal: Sediment accumulation, as part of the operation and maintenance program at of landscaped areas, will be monitored once a month during the dry season, after every large storm (0.50 inch), and monthly during the wet season. Specifically, if sediment reaches a level at or near plant height, or could interfere with flow or operation, the sediment shall be removed. If accumulation of debris or sediment is determined to be the cause of decline in design performance, prompt action (i.e., within ten working days) will be taken to restore the landscaped areas to design performance standards. Actions will include using additional vegetation and/or removing accumulated sediment to correct channeling or ponding. Characterization and Appropriate disposal of sediment will comply with applicable local, county, state, or federal requirements.
- Landscaped areas will be re-graded, if the flow gradient has been altered. This should be a sign that the BMP is failing and the soil matrix may need to be replaced.
- Removal of Standing Water: Standing water must be removed if it contributes to the development of aquatic plant communities or mosquito breeding areas.
- Fertilization and Irrigation: fertilization and irrigation is to be keep at a minimum.
- Elimination of Mosquito Breeding Habitats. The most effective mosquito control program is one that eliminates standing water over a period less than 96 hours.

Corrective Maintenance

Corrective maintenance is required on an emergency or non-routine basis to correct problems and to restore the intended operation and safe function of all landscaped areas.

Corrective maintenance activities include:

- Removal of Debris and Sediment: Sediment, debris, and trash, which impede the hydraulic functioning of landscaping and prevent vegetative growth, will be removed and properly disposed. Temporary arrangements will be made for handling the sediments until a permanent arrangement is made. Vegetation will be re-established after sediment removal.
- Structural Repairs: Once deemed necessary, repairs to structural components of landscaping will be done within l0 working days. Qualified individuals (i.e., the designers or contractors) will conduct repairs where structural damage has occurred.
- Embankment and Slope Repairs: Once deemed necessary, damage to the embankments and slopes of landscaped areas will be repaired within l0 working days.
- Erosion Repair: Where a reseeding program has been ineffective, or where other factors have created erosive conditions (i.e., pedestrian traffic, concentrated flow, etc.), corrective steps will be taken to prevent loss of soil and any subsequent danger to the performance and use of landscaped areas as BMPs. There are a number of corrective actions than can be taken.
- These include erosion control blankets, riprap, or reducing flow velocity.
- Consult with an engineer and contractor to address frequently occurring erosion problems.
- Elimination of Animal Burrows: animal burrows will be filled and steps taken to remove the animals if burrowing problems continue to occur (filling and compacting). If the problem persists, vector control specialists will be consulted regarding removal steps. This consulting is necessary as the threat of rabies in some areas may necessitate the animals being destroyed rather than relocated. If the BMP performance is affected, abatement will begin. Otherwise, abatement will be performed annually in September.
- General Facility Maintenance: In addition to the above elements of corrective maintenance,

general corrective maintenance will address the overall facility and its associated components. If corrective maintenance is being done to one component, other components will be inspected to see if maintenance is needed.

Maintenance Frequency

The maintenance indicators for selected BMPs are included on page 10 of this report.

Debris and Sediment Disposal

Waste generated onsite is ultimately the responsibility of the Owner. Disposal of sediments, debris, and trash will comply with applicable local, county, state, and federal waste control programs.

Hazardous Waste

Suspected hazardous wastes will be analyzed to determine disposal options. Hazardous wastes generated onsite will be handled and disposed of according to applicable local, state, and federal regulations. A solid or liquid waste is considered a hazardous waste if it exceeds the criteria listed in the CCR, Title 22, Article 1l.

a. Landscaping

Operational and maintenance needs include:

- Vegetation management to maintain adequate hydraulic functioning and to limit habitat for disease-carrying animals.
- Animal and vector control.
- Periodic sediment removal to optimize performance.
- Trash, debris, grass trimmings, tree pruning, dead vegetation collection and removal.
- Removal of standing water, which may contribute to the development of aquatic plant communities or mosquito breeding areas.
- Erosion and structural maintenance to prevent the loss of soil and maintain the performance of all landscaping.

b. **Irrigation System**

Inspection Frequency and Procedure

The Irrigation system shall be checked each week as a minimum. The following items shall be checked to insure that they are functioning properly:

- Shut-off devices.
- All piping and sprinkler heads to insure there are no leaks and that proper water spread is maintained.
- All flow reducers.
- Check for overspray/runoff

c. **Roof Drains**

All roof drains shall be inspected 30 days prior to October lst of each year to insure that they are clean

and free from trash and in good repair. They shall be flushed and any leaks or damages piping shall be either replaced or repaired. Where roof drains flow onto grass areas splash structures and or rock rip-rap shall be maintained so the flow from the roof drains do not cause erosion or damage to the grass area. During the rain season roof drains shall be inspected weekly and after each rain storm to insure that there is no trash and or silt build up that will restrict the run-off flow from the roof. All trash and/or silt build up shall be removed immediately.

d. **Trash Storage Areas**

- All trash storage areas shall be inspected daily to insure that they are clean from trash. Also the following shall be inspected annually 30 days prior to October lst of each year.
- Pavement is in good repair.
- Drainage will not run-off onto adjacent areas.
- That they remain screened or walled to prevent off-site transport of trash.
- That all lids are closed and/or awnings are in good repair to minimize direct recipitation.

e. **Storm Water Conveyance System Stenciling and Signing**

- Signage/stenciling are to be inspected for legibility and visual obstruction and shall be Repaired and cleared of any obstruction within 5 working day of inspection.
- Inspection Frequency: Semi-annually, 30 days prior to October lst each year, and monthly during rainy season.

f. **Bioretention**

Operational and maintenance needs include:

- Vegetation management to maintain adequate hydraulic functioning and to limit habitat for disease-carrying animals.
- Animal and vector control.
- Periodic sediment removal to optimize performance.
- Trash, debris, grass trimmings, tree pruning, dead vegetation collection and removal.
- Foot traffic or heavy equipment on the media surface should be avoided to minimize compaction.
- Removal of standing water, which may contribute to the development of aquatic plant communities or mosquito breeding areas.
- Erosion and structural maintenance to prevent the loss of soil and maintain the performance of all landscaping.
- Outlet maintenance: maintain trash free; remove silt; clear clogged outlets and standing Water after 96 hours.
- Typically maintenance can be performed with equipment normally carried by landscape maintenance crews.
- Access to all bioretention basins can be gained through parking lots adjacent the facilities.

g. Tree Wells

Tree Wells			
When	**Maintenance Task**	**Frequency**	**Time of the Year**
Initial maintenance during establishment period (First three years)	Inspect tree for health and establishment and report any changes to County	Three times during establishment; Every five years for life of tree	Spring lst Season Fall lst Season Fall 2nd Season
	Remove stakes and wires.	One time	One year after planting
	Water tree – first year	25 gallons Weekly via slow release device	April-October
	Water tree – second & third year	25 gallons Bi-Monthly via slow release device	April-October
Routine Maintenance	Remove weeds and trash	Quarterly inspection at minimum and maintenance as needed.	March-November
	Remove sediment and trash from any inlets and slot drains	Annually or as needed.	
As-Needed Maintenance	Mulch with 3 inches double ground shredded hardwood mulch. Place mulch in a ring to capture rain water. Mulch shall not be mounded around tree.	Annually or as needed.	Feb-April
	Inspect tree for damage, disease, or interference with utilities. Contact City if pruning is required.	Annually or as needed.	Broken branches should be pruned at any time. Most trees should be pruned in the winter or fall.

h. Outlet Structures

All outlet structures shall be kept functional at all times. Routine inspection and corrective maintenance shall include removal of trash sediment and debris and repair of any structural damage or clogging of orifice outlets. The minimum maintenance frequency shall be 30 days prior to October 1st each year, weekly during rainy season or within 24 hours prior to forecasts.

To clean lower orifice in the event of clogging

- This activity will require workers to open catch basin grates to remove debris from the lower orifice plate.
- Remove grate and visually inspect lower orifice plate and blockage
- Remove debris from inside of catch basin and around orifice plate
- Replace grate when orifice plate and inside of catch basin are free of debris
- Typically maintenance can be performed with equipment normally carried by landscape maintenance crews.
- Access to all bioretention basins can be gained though parking lots adjacent all facilities.

i. **Vector Management Control Requirements**

Due to Clean Water Act requirements and mandates imposed by the Water Quality Control Board, large quantities of stormwater will be detained onsite in above ground and underground storage facilities for treatment and storage. These storage facilities are required to dewater or discharge at a very small flow rate in order to comply with these requirements. The outlet structure for the underground storage and biofiltration facility had to be sized to a fraction of an inch in order to maintain the maximum allowed discharge flow. The facility was designed for the surface to dewater in less than 24 hours. However, due to its small size and if not properly maintained regularly, it is anticipated that the outlet might have a tendency to clog frequently. Consequently, the surface of the facility may not drain within 24 hours and possibly take substantially longer time. This creates an increased risk for onsite Vector Issues and bringing their potential for severe harm to human health. Any water that may remain within the gravel storage layer of the facility after 96 hours does not have a direct access to the surface and therefore does not pose any Vector Issues.

In order to implement vector controls including minimizing the risk for mosquito-borne disease transmission, **It is the responsibility of the Owner to regularly maintain the outlet structures and monitor the site after every storm event to ensure that the system (comprising of above ground storage facilities) is dewatered in less than 96 hours**. Otherwise the owner will be required to implement a vector control plan in accordance with California Department of Public Health.

j. FLoGard Catch Basin Insert Filter

Catch basin inlet filter helps prevent dirt and debris from clogging the drainage system. Adding a filter is a simple solution to keep water flowing through a drainage system and a cost-effective alternative to expensive repair or replacement. During the rainy season all inlets shall be inspected weekly and after each rain storm to insure that there is no trash and or silt build up that will restrict the run-off flow from the roof. All trash and/or silt build up shall be removed immediately.

PREVENTATIVE MAINTENANCE AND ROUTINE INSPECTION					
TYPE BMP	Routine Action	Maintenance Indicator	Maintenance Frequency	MAINTENANCE ACTIVITY	SITE-SPECIFIC REQUIREMENTS
Landscaping & irrigation	Proper irrigation & Fertilizer tablets use not granules.	Less than 80% coverage	30 days prior to October 1st each year and Monthly	Re-seed or Re-plant. Repair Irrigation system with-in 5-days.	All slopes and landscaped areas are to have a minimum coverage of 80%
Trash storage areas	Trash free and removal of silt	Visual Inspection	Daily inspection	Remove trash and silt Daily.	All trash storage areas to be free from trash and silt at all times
Roof drain	Trash free and removal of silt, sedimentation & Debris	Silt build-up of more than 1" no trash	30 days prior to October 1st each year and weekly during rainy season	Remove all trash and silt and repair any damage to roof drains,	All Roof to be free from trash and silt and in good repair
Bioretention	Trash free and removal of silt. Clear Clogged outlets and Standing Water.	Silt build-up of more than 2" no trash, Exposed soils, dead vegetation, ponded water, and excessive vegetation (see TC-32)	30 days prior to October 1st each year, monthly during rainy season, and after Storm Event	Remove trash and silt –repair and reseed exposed areas, maintain grass height so as not be shorter than 2" or higher than 5" remove all ponded water weekly inspections, (See TC-32)	All bio-filters to be free from trash and silt at all times, grass area to be free from exposed soil and maintained to proper height, ponding of water for more than 72 hours maintenance will be required

DECLARATION OF WATER QUALITY MANAGEMENT PLAN RESTRICTIVE COVENANT

This Declaration of Water Quality Management Plan Restrictive Covenant (this "Covenant") is made this _____ day of _____, 2018 by CK 17, LP, A California Limited Partnership ("Owner")

A. The Owner of that certain real property (the "Property") located in the City of Murrieta, California ("City"), more particularly described in Exhibit "A" attached hereto and incorporated herein by this reference and has proposed that the Property be developed by Owner in accordance with the governmental approvals issued by the City and other governmental or quasi-governmental agencies having jurisdiction over the Property.

B. In accordance with the Murrieta Municipal Code, applicable State of California statutes, and other ordinances and regulations (collectively, the "Stormwater Laws") of City and the State of California which regulate land development and urban runoff, the Owners have prepared and submitted to the City a Final Water Quality Management Plan ("WQMP"), which is on file with City's Engineering Department and a copy of which is required to be kept on the Property. The WQMP proposes that stormwater runoff from the Property be managed by the use of the stormwater management facilities, which are identified in the WQMP as "Best Management Practices" or "BMP's." The precise location(s) and extent of the BMP's are indicated within the WQMP. The WQMP specifies the manner and standards by which the BMP's must be repaired and maintained in order to retain their effectiveness.

C. The purpose of this Covenant is to assure that the BMP's are adequately maintained by creating obligations which are enforceable against the Owner and its successors in interest in the Property. The Owner intends that these obligations be enforceable notwithstanding other provisions related to BMP maintenance which are provided by law.

COVENANT TERMS, CONDITIONS, AND RESTRICTIONS

In consideration of the above recitals and the mutual covenants, terms, conditions and restrictions contained herein, and pursuant to the laws of the United States, the State of California and the City of Murrieta Municipal Code, Owner hereby declares the Property shall be held, transferred, conveyed, leased, occupied or otherwise disposed of and used subject to the following restrictive covenants (and incorporating the above recitals herein by reference), which shall run with the land and be binding on the Owner's heirs, successors in interest, administrators, assigns, lessees or other occupiers and users (collectively "Successors") of the Property or any portion thereof.

1. Maintenance of Stormwater Management Facilities.

1.1. Owner agrees, for themselves and their successors in interest to all or any portion of the Property, to comply in all respects with the requirements of the Stormwater Laws and the WQMP with regards to the construction and maintenance of BMP's designated in the WQMP. The Owner and its Successors, in particular agree to perform, at its sole cost, expense and liability, all inspections, cleaning, repairs, servicing, and maintenance with respect to all of the BMP's listed in Exhibit "B" attached hereto and incorporated herein by this reference (the "Maintenance Activities"). The Owner and its Successors shall initiate, perform and complete all Maintenance Activities at the required time, without request or demand from the City, or any other agency. Owner and its Successors shall keep a report of any inspections and/or maintenance of the BMP's for review at any time by City or the Water Quality Board for the region. The Owner and its Successors further agree that Maintenance Activities shall include replacement or modification of the BMP's in the event of failure. Replacement shall be with an identical type, size and model of BMP subject to applicable Stormwater Laws, except that:

A. The City Engineer may authorize substitution of an alternative BMP if he or she determines that it will function as well as the failed BMP; or

B. If the failure of the BMP, in the reasonable judgment of the City Engineer indicates that the BMP in use is inappropriate or inadequate to the circumstances, the BMP must be modified or replaced with an upgraded BMP to prevent future failure.

1.2. The Owner and its Successors shall, at all times, be subject to the Stormwater Laws with respect to the City's right of entry, inspection and maintenance or abatement.

2. Covenant Binds Successors and Runs with the Property. It is understood and agreed that the terms, covenants and conditions herein contained shall constitute covenants running with the land and shall be binding upon the heirs, executors, administrators, successors and assigns of the Owner and its Successors, and shall be deemed to be for the benefit of all persons owning any interest in the Property. It is the intent of the Owner that this Covenant may be recorded and shall be binding upon all persons purchasing or otherwise

acquiring all or any lot, unit or other portion of the Property who shall be deemed to have consented to and become bound by all the provisions hereof.

3. Amendment and Release. The terms of this Covenant may be modified only by a written amendment approved and signed by City and by the Owner or its Successors in interest. This Covenant may be terminated and Owner and its Successors released from the covenants set forth herein by a written release which City may execute if it determines that another mechanism will assure the ongoing maintenance of the BMP's and transfers of ownership, or that it is no longer necessary to assure such maintenance and transfers of ownership.

4. Governing Law and Severability. This Covenant shall be governed by the laws of the State of California. Venue in any action related to this Covenant shall be in the Superior Court of the State of California, County of Riverside. In the event that any of the provisions of this Covenant are held to be unenforceable or invalid by any court of competent jurisdiction, the validity, and enforceability of the remaining provisions shall not be affected thereby.

[SIGNATURES FOLLOW ON NEXT PAGE]

IN WITNESS WHEREOF, the Owner has executed this Covenant on the day and year first written above.

Appendix 10: Educational Materials

BMP Fact Sheets, Maintenance Guidelines and Other End-User BMP Information

Examples of material to provide in Appendix 10 may include but are not limited to the following:

- BMP Fact Sheets for proposed BMPs form Exhibit C: LID BMP Design Handbook of the SMR WQMP,
- Source control information and training material for site owners and operators,
- O&M training material,
- Other educational/training material related to site drainage and BMPs.

Spill Prevention, Control & Cleanup SC-11

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Description

Spills and leaks, if not properly controlled, can adversely impact the storm drain system and receiving waters. Due to the type of work or the materials involved, many activities that occur either at a municipal facility or as a part of municipal field programs have the potential for accidental spills and leaks. Proper spill response planning and preparation can enable municipal employees to effectively respond to problems when they occur and minimize the discharge of pollutants to the environment.

Targeted Constituents

Sediment	
Nutrients	☑
Trash	
Metals	☑
Bacteria	
Oil and Grease	☑
Organics	☑
Oxygen Demanding	☑

Approach

- An effective spill response and control plan should include:
  - Spill/leak prevention measures;
  - Spill response procedures;
  - Spill cleanup procedures;
  - Reporting; and
  - Training
- A well thought out and implemented plan can prevent pollutants from entering the storm drainage system and can be used as a tool for training personnel to prevent and control future spills as well.

Pollution Prevention

- Develop and implement a Spill Prevention Control and Response Plan. The plan should include:

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- A description of the facility, the address, activities and materials involved
- Identification of key spill response personnel
- Identification of the potential spill areas or operations prone to spills/leaks
- Identification of which areas should be or are bermed to contain spills/leaks
- Facility map identifying the key locations of areas, activities, materials, structural BMPs, etc.
- Material handling procedures
- Spill response procedures including:
    - Assessment of the site and potential impacts
    - Containment of the material
    - Notification of the proper personnel and evacuation procedures
    - Clean up of the site
    - Disposal of the waste material and
    - Proper record keeping

- Product substitution – use less toxic materials (i.e. use water based paints instead of oil based paints)
- Recycle, reclaim, or reuse materials whenever possible. This will reduce the amount of materials that are brought into the facility or into the field.

Suggested Protocols

Spill/Leak Prevention Measures

- If possible, move material handling indoors, under cover, or away from storm drains or sensitive water bodies.
- Properly label all containers so that the contents are easily identifiable.
- Berm storage areas so that if a spill or leak occurs, the material is contained.
- Cover outside storage areas either with a permanent structure or with a seasonal one such as a tarp so that rain can not come into contact with the materials.
- Check containers (and any containment sumps) often for leaks and spills. Replace containers that are leaking, corroded, or otherwise deteriorating with containers in good condition. Collect all spilled liquids and properly dispose of them.

- Store, contain and transfer liquid materials in such a manner that if the container is ruptured or the contents spilled, they will not discharge, flow or be washed into the storm drainage system, surface waters, or groundwater.

- Place drip pans or absorbent materials beneath all mounted taps and at all potential drip and spill locations during the filling and unloading of containers. Any collected liquids or soiled absorbent materials should be reused/recycled or properly disposed of.

- For field programs, only transport the minimum amount of material needed for the daily activities and transfer materials between containers at a municipal yard where leaks and spill are easier to control.

- If paved, sweep and clean storage areas monthly, do not use water to hose down the area unless all of the water will be collected and disposed of properly.

- Install a spill control device (such as a tee section) in any catch basins that collect runoff from any storage areas if the materials stored are oil, gas, or other materials that separate from and float on water. This will allow for easier cleanup if a spill occurs.

- If necessary, protect catch basins while conducting field activities so that if a spill occurs, the material will be contained.

Training

- Educate employees about spill prevention, spill response and cleanup on a routine basis.

- Well-trained employees can reduce human errors that lead to accidental releases or spills:

  - The employees should have the tools and knowledge to immediately begin cleaning up a spill if one should occur.

  - Employees should be familiar with the Spill Prevention Control and Countermeasure Plan if one is available.

- Training of staff from all municipal departments should focus on recognizing and reporting potential or current spills/leaks and who they should contact.

- Employees responsible for aboveground storage tanks and liquid transfers for large bulk containers should be thoroughly familiar with the Spill Prevention Control and Countermeasure Plan and the plan should be readily available.

Spill Response and Prevention

- Identify key spill response personnel and train employees on who they are.

- Store and maintain appropriate spill cleanup materials in a clearly marked location near storage areas; and train employees to ensure familiarity with the site's spill control plan and/or proper spill cleanup procedures.

- Locate spill cleanup materials, such as absorbents, where they will be readily accessible (e.g. near storage and maintenance areas, on field trucks).

SC-11 Spill Prevention, Control & Cleanup

- Follow the Spill Prevention Control and Countermeasure Plan if one is available.
- If a spill occurs, notify the key spill response personnel immediately. If the material is unknown or hazardous, the local fire department may also need to be contacted.
- If safe to do so, attempt to contain the material and block the nearby storm drains so that the area impacted is minimized. If the material is unknown or hazardous wait for properly trained personnel to contain the materials.
- Perform an assessment of the area where the spill occurred and the downstream area that it could impact. Relay this information to the key spill response and clean up personnel.

Spill Cleanup Procedures

- Small non-hazardous spills
  - Use a rag, damp cloth or absorbent materials for general clean up of liquids
  - Use brooms or shovels for the general clean up of dry materials
  - If water is used, it must be collected and properly disposed of. The wash water can not be allowed to enter the storm drain.
  - Dispose of any waste materials properly
  - Clean or dispose of any equipment used to clean up the spill properly
- Large non-hazardous spills
  - Use absorbent materials for general clean up of liquids
  - Use brooms, shovels or street sweepers for the general clean up of dry materials
  - If water is used, it must be collected and properly disposed of. The wash water can not be allowed to enter the storm drain.
  - Dispose of any waste materials properly
  - Clean or dispose of any equipment used to clean up the spill properly
- For hazardous or very large spills, a private cleanup company or Hazmat team may need to be contacted to assess the situation and conduct the cleanup and disposal of the materials.
- Chemical cleanups of material can be achieved with the use of absorbents, gels, and foams. Remove the adsorbent materials promptly and dispose of according to regulations.
- If the spilled material is hazardous, then the used cleanup materials are also hazardous and must be sent to a certified laundry (rags) or disposed of as hazardous waste.

Reporting

- Report any spills immediately to the identified key municipal spill response personnel.

- Report spills in accordance with applicable reporting laws. Spills that pose an immediate threat to human health or the environment must be reported immediately to the Office of Emergency Service (OES)

- Spills that pose an immediate threat to human health or the environment may also need to be reported within 24 hours to the Regional Water Quality Control Board.

- Federal regulations require that any oil spill into a water body or onto an adjoining shoreline be reported to the National Response Center (NRC) at 800-424-8802 (24 hour)

- After the spill has been contained and cleaned up, a detailed report about the incident should be generated and kept on file (see the section on Reporting below). The incident may also be used in briefing staff about proper procedures

Other Considerations

- State regulations exist for facilities with a storage capacity of 10,000 gallons or more of petroleum to prepare a Spill Prevention Control and Countermeasure Plan (SPCC) Plan (Health & Safety Code Chapter 6.67).

- State regulations also exist for storage of hazardous materials (Health & Safety Code Chapter 6.95), including the preparation of area and business plans for emergency response to the releases or threatened releases.

- Consider requiring smaller secondary containment areas (less than 200 sq. ft.) to be connected to the sanitary sewer, if permitted to do so, prohibiting any hard connections to the storm drain.

Requirements

Costs

- Will vary depending on the size of the facility and the necessary controls.

- Prevention of leaks and spills is inexpensive. Treatment and/or disposal of wastes, contaminated soil and water is very expensive

Maintenance

- This BMP has no major administrative or staffing requirements. However, extra time is needed to properly handle and dispose of spills, which results in increased labor costs

Supplemental Information

Further Detail of the BMP

Reporting

Record keeping and internal reporting represent good operating practices because they can increase the efficiency of the response and containment of a spill. A good record keeping system helps the municipality minimize incident recurrence, correctly respond with appropriate containment and cleanup activities, and comply with legal requirements.

A record keeping and reporting system should be set up for documenting spills, leaks, and other discharges, including discharges of hazardous substances in reportable quantities. Incident records describe the quality and quantity of non-stormwater discharges to the storm drain.

These records should contain the following information:

- Date and time of the incident
- Weather conditions
- Duration of the spill/leak/discharge
- Cause of the spill/leak/discharge
- Response procedures implemented
- Persons notified
- Environmental problems associated with the spill/leak/discharge

Separate record keeping systems should be established to document housekeeping and preventive maintenance inspections, and training activities. All housekeeping and preventive maintenance inspections should be documented. Inspection documentation should contain the following information:

- The date and time the inspection was performed
- Name of the inspector
- Items inspected
- Problems noted
- Corrective action required
- Date corrective action was taken

Other means to document and record inspection results are field notes, timed and dated photographs, videotapes, and drawings and maps.

Examples

The City of Palo Alto includes spill prevention and control as a major element of its highly effective program for municipal vehicle maintenance shops.

Vehicle and Equipment Fueling SC-20

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize

Targeted Constituents

Sediment	
Nutrients	
Trash	☑
Metals	☑
Bacteria	
Oil and Grease	☑
Organics	☑
Oxygen Demanding	

Description

Spills and leaks that occur during vehicle and equipment fueling can contribute hydrocarbons, oil and grease, as well as heavy metals to stormwater runoff. Implementing the following management practices can help prevent fuel spills and leaks.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

Pollution Prevention

- Use properly maintained offsite fueling stations whenever possible. These businesses are better equipped to handle fuel and spills properly.
- Educate employees about pollution prevention measures and goals
- Focus pollution prevention activities on containment of spills and leaks, most of which may occur during liquid transfers.

Suggested Protocols

General

- "Spot clean" leaks and drips routinely. Leaks are not cleaned up until the absorbent is picked up and disposed of properly.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Label drains within the facility boundary, by paint/stencil (or equivalent), to indicate whether they flow to an oil/water separator, directly to the sewer, or to a storm drain. Labels are not necessary for plumbing fixtures directly connected to the sanitary sewer but may be useful to help eliminate confusion about where the drain leads.
- Post signs to remind employees not to top off the fuel tank when filling and signs that ban employees from changing engine oil or other fluids at that location.
- Report leaking vehicles to fleet maintenance.
- Install inlet catch basin equipped with a small sedimentation basin or grit chamber to remove large particles from stormwater in highly impervious areas. Proper maintenance of these devices is necessary.
- Accumulated non-contaminated stormwater (e.g., in a secondary containment) should be released prior to next storm.
- Ensure the following safeguards are in place:
  - Overflow protection devices on tank systems to warn the operator to automatically shutdown transfer pumps when the tank reaches full capacity.
  - Protective guards around tanks and piping to prevent vehicle or forklift damage.
  - Clearly tagging or labeling all valves to reduce human error.
  - Automatic shut off for severed fuel hoses.

Fuel Dispensing Areas

- Maintain clean fuel-dispensing areas using dry cleanup methods such as sweeping for removal of litter and debris, or use of rags and absorbents for leaks and spills. Do not wash down areas with water.
- Fit underground storage tanks with spill containment and overfill prevention systems meeting the requirements of Section 2635(b) of Title 23 of the California Code of Regulations.
- Fit fuel dispensing nozzles with "hold-open latches" (automatic shutoffs) except where prohibited by local fire departments.
- Post signs at the fuel dispenser or fuel island warning vehicle owners/operators against "topping off" of vehicle fuel tanks.
- Design fueling area to prevent stormwater runoff and spills.
- Cover fueling area with an overhanging roof structure or canopy so that precipitation cannot come in contact with the fueling area and if possible use a perimeter drain or slope pavement inward with drainage to a blind sump (must be properly maintained and water properly disposed of); pave area with concrete rather than asphalt.

- Apply a suitable sealant that protects the asphalt from spilled fuels in areas where covering is infeasible and the fuel island is surrounded by pavement.
- Install vapor recovery nozzles to help control drips as well as air pollution.
- Use secondary containment when transferring fuel from the tank truck to the fuel tank.
- Cover storm drains in the vicinity during transfer.

Outdoor Waste Receptacle Area

- Spot clean leaks and drips routinely to prevent runoff of spillage.
- Minimize the possibility of stormwater pollution from outside waste receptacles by using an effective combination of the following:
  - use only watertight waste receptacle(s) and keep the lid(s) closed, or
  - grade and pave the waste receptacle area to prevent runon of stormwater, or
  - install a roof over the waste receptacle area, or
  - install a low containment berm around the waste receptacle area, or
  - use and maintain drip pans under waste receptacles. Containment areas and drip pans must be properly maintained and collected water disposed of properly (e.g., to sanitary sewer). Several drip pans should be stored in a covered location near outdoor waste receptacle area so that they are always available, yet protected from precipitation when not in use.
- Post "no littering" signs.

Air/Water Supply Area

- Minimize the possibility of stormwater pollution from air/water supply areas by implementing an effective combination of the following:
  - spot clean leaks and drips routinely to prevent runoff of spillage, or
  - grade and pave the air/water supply area to prevent runon of stormwater, or
  - install a roof over the air/water supply area, or
  - install a low containment berm around the air/water supply area. Maintain containment areas and dispose of contaminated water properly (e.g., to sanitary sewer).

Inspection

- Aboveground Tank Leak and Spill Control:
  - Check for external corrosion and structural failure.

- Check for spills and overfills due to operator error.
- Check for failure of piping system.
- Check for leaks or spills during pumping of liquids or gases from truck or rail car to a storage facility or vice versa.
- Visually inspect new tank or container installation for loose fittings, poor welding, and improper or poorly fitted gaskets.
- Inspect tank foundations, connections, coatings, and tank walls and piping system. Look for corrosion, leaks, cracks, scratches, and other physical damage that may weaken the tank or container system.
- Periodically, integrity testing should be conducted by a qualified professional.

- Inspect and clean, if necessary, storm drain inlets and catch basins within the facility boundary before October 1 each year.

Training

- Train all employees upon hiring and annually thereafter on proper methods for handling and disposing of waste. Make sure that all employees understand stormwater discharge prohibitions, wastewater discharge requirements, and these best management practices.
- Train employees on proper fueling and cleanup procedures.
- Use a training log or similar method to document training.
- Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.

Spill Response and Prevention

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Place stockpiles of spill cleanup materials where they are readily accessible.
- Use adsorbent materials on small spills and general cleaning rather than hosing down the area. Remove the adsorbent materials promptly and dispose properly.
- Store portable absorbent booms (long flexible shafts or barriers made of absorbent material) in unbermed fueling areas.
- Report spills promptly.
- Install an oil/water separator and connect to the sanitary sewer (if allowed), if a dead-end sump is not used to collect spills.

Other Considerations

- Carry out all federal and state requirements regarding underground storage tanks, or install above ground tanks.

Requirements

Costs

- The retrofitting of existing fueling areas to minimize stormwater exposure or spill runoff can be expensive. Good design must occur during the initial installation.
- Extruded curb along the "upstream" side of the fueling area to prevent stormwater runon is of modest cost.

Maintenance

- Clean oil/water separators at appropriate intervals.
- Keep ample supplies of spill cleanup materials onsite.
- Inspect fueling areas, storage tanks, catch basin inserts, containment areas, and drip pans on a regular schedule.

Supplemental Information

Design Considerations

Designing New Installations

The elements listed below should be included in the design and construction of new or substantially remodeled facilities.

Fuel Dispensing Areas

- Fuel dispensing areas must be paved with Portland cement concrete (or, equivalent smooth impervious surface), with a 2% to 4% slope to prevent ponding, and must be separated from the rest of the site by a grade break that prevents runon of stormwater to the extent practicable. The fuel dispensing area is defined as extending 6.5 feet from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus 1 foot, whichever is less. The paving around the fuel dispensing area may exceed the minimum dimensions of the "fuel dispensing area" stated above.
- The fuel dispensing area must be covered, and the cover's minimum dimensions must be equal to or greater than the area within the grade break or the fuel dispensing area, as defined above. The cover must not drain onto the fuel dispensing area.
- If necessary install and maintain an oil control device in the appropriate catch basin(s) to treat runoff from the fueling area.

Outdoor Waste Receptacle Area

- Grade and pave the outdoor waste receptacle area to prevent runon of stormwater to the extent practicable.

Air/Water Supply Area

- Grade and pave the air/water supply area to prevent runon of stormwater to the extent practicable.

Designated Fueling Area

- If your facility has large numbers of mobile equipment working throughout the site and you currently fuel them with a mobile fuel truck, consider establishing a designated fueling area. With the exception of tracked equipment such as bulldozers and perhaps small forklifts, most vehicles should be able to travel to a designated area with little lost time. Place temporary "caps" over nearby catch basins or manhole covers so that if a spill occurs it is prevented from entering the storm drain.

Examples

The Spill Prevention Control and Countermeasure (SPCC) Plan, which is required by law for some facilities, is an effective program to reduce the number of accidental spills and minimize contamination of stormwater runoff.

The City of Palo Alto has an effective program for commercial vehicle service facilities. Many of the program's elements, including specific BMP guidance and lists of equipment suppliers, are also applicable to industrial facilities.

Plaza and Sidewalk Cleaning SC-71

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	☑
Nutrients	☑
Trash	☑
Metals	☑
Bacteria	☑
Oil and Grease	☑
Organics	☑
Oxygen Demanding	☑

Description

Pollutants on sidewalks and other pedestrian traffic areas and plazas are typically due to littering and vehicle use. This fact sheet describes good housekeeping practices that can be incorporated into the municipality's existing cleaning and maintenance program.

Approach

Pollution Prevention

- Use dry cleaning methods whenever practical for surface cleaning activities.
- Use the least toxic materials available (e.g. water based paints, gels or sprays for graffiti removal).

Suggested Protocols

Surface Cleaning

- Regularly broom (dry) sweep sidewalk, plaza and parking lot areas to minimize cleaning with water.
- Dry cleanup first (sweep, collect, and dispose of debris and trash) when cleaning sidewalks or plazas, then wash with or without soap.
- Block the storm drain or contain runoff when cleaning with water. Discharge wash water to landscaping or collect water and pump to a tank or discharge to sanitary sewer if allowed. (Permission may be required from local sanitation district.)

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Block the storm drain or contain runoff when washing parking areas, driveways or drive-throughs. Use absorbents to pick up oil; then dry sweep. Clean with or without soap. Collect water and pump to a tank or discharge to sanitary sewer if allowed. Street Repair and Maintenance.

Graffiti Removal

- Avoid graffiti abatement activities during rain events.
- Implement the procedures under Painting and Paint Removal in SC-70 Roads, Streets, and Highway Operation and Maintenance fact sheet when graffiti is removed by painting over.
- Direct runoff from sand blasting and high pressure washing (with no cleaning agents) into a dirt or landscaped area after treating with an appropriate filtering device.
- Plug nearby storm drain inlets and vacuum/pump wash water to the sanitary sewer if authorized to do so if a graffiti abatement method generates wash water containing a cleaning compound (such as high pressure washing with a cleaning compound). Ensure that a non-hazardous cleaning compound is used or dispose as hazardous waste, as appropriate.

Surface Removal and Repair

- Schedule surface removal activities for dry weather if possible.
- Avoid creating excess dust when breaking asphalt or concrete.
- Take measures to protect nearby storm drain inlets prior to breaking up asphalt or concrete (e.g. place hay bales or sand bags around inlets). Clean afterwards by sweeping up as much material as possible.
- Designate an area for clean up and proper disposal of excess materials.
- Remove and recycle as much of the broken pavement as possible to avoid contact with rainfall and stormwater runoff.
- When making saw cuts in pavement, use as little water as possible. Cover each storm drain inlet completely with filter fabric during the sawing operation and contain the slurry by placing straw bales, sandbags, or gravel dams around the inlets. After the liquid drains or evaporates, shovel or vacuum the slurry residue from the pavement or gutter and remove from site.
- Always dry sweep first to clean up tracked dirt. Use a street sweeper or vacuum truck. Do not dump vacuumed liquid in storm drains. Once dry sweeping is complete, the area may be hosed down if needed. Wash water should be directed to landscaping or collected and pumped to the sanitary sewer if allowed.

Concrete Installation and Repair

- Schedule asphalt and concrete activities for dry weather.

- Take measures to protect any nearby storm drain inlets and adjacent watercourses, prior to breaking up asphalt or concrete (e.g. place san bags around inlets or work areas).
- Limit the amount of fresh concrete or cement mortar mixed, mix only what is needed for the job.
- Store concrete materials under cover, away from drainage areas. Secure bags of cement after they are open. Be sure to keep wind-blown cement powder away from streets, gutters, storm drains, rainfall, and runoff.
- Return leftover materials to the transit mixer. Dispose of small amounts of hardened excess concrete, grout, and mortar in the trash.
- Do not wash sweepings from exposed aggregate concrete into the street or storm drain. Collect and return sweepings to aggregate base stockpile, or dispose in the trash.
- Protect applications of fresh concrete from rainfall and runoff until the material has dried.
- Do not allow excess concrete to be dumped onsite, except in designated areas.
- Wash concrete trucks off site or in designated areas on site designed to preclude discharge of wash water to drainage system.

Controlling Litter

- Post "No Littering" signs and enforce anti-litter laws.
- Provide litter receptacles in busy, high pedestrian traffic areas of the community, at recreational facilities, and at community events.
- Cover litter receptacles and clean out frequently to prevent leaking/spillage or overflow.
- Clean parking lots on a regular basis with a street sweeper.

Training

- Provide regular training to field employees and/or contractors regarding surface cleaning and proper operation of equipment.
- Train employee and contractors in proper techniques for spill containment and cleanup.
- Use a training log or similar method to document training.

Spill Response and Prevention

- Refer to SC-11, Spill Prevention, Control & Cleanup.
- Have spill cleanup materials readily available and in a known location.
- Cleanup spills immediately and use dry methods if possible.
- Properly dispose of spill cleanup material.

Other Considerations

- Limitations related to sweeping activities at large parking facilities may include current sweeper technology to remove oil and grease.
- Surface cleaning activities that require discharges to the local sewering agency will require coordination with the agency.
- Arrangements for disposal of the swept material collected must be made, as well as accurate tracking of the areas swept and the frequency of sweeping.

Requirements

Costs

- The largest expenditures for sweeping and cleaning of sidewalks, plazas, and parking lots are in staffing and equipment. Sweeping of these areas should be incorporated into street sweeping programs to reduce costs.

Maintenance

Not applicable

Supplemental Information

Further Detail of the BMP

Community education, such as informing residents about their options for recycling and waste disposal, as well as the consequences of littering, can instill a sense of citizen responsibility and potentially reduce the amount of maintenance required by the municipality.

Additional BMPs that should be considered for parking lot areas include:

- Allow sheet runoff to flow into biofilters (vegetated strip and swale) and infiltration devices.
- Utilize sand filters or oleophilic collectors for oily waste in low concentrations.
- Arrange rooftop drains to prevent drainage directly onto paved surfaces.
- Design lot to include semi-permeable hardscape.
- Structural BMPs such as storm drain inlet filters can be very effective in reducing the amount of pollutants discharged from parking facilities during periods of rain.

Water & Sewer Utility Maintenance SC-76

Objectives

- Contain
- Educate
- Reduce/Minimize

Description

Although the operation and maintenance of public utilities are not considered chronic sources of stormwater pollution, some activities and accidents can result in the discharge of pollutants that can pose a threat to both human health and the quality of receiving waters if they enter the storm drain system. Sewage incident response and investigation may involve a coordinated effort between staff from a number of different departments/agencies. Cities that do not provide maintenance of water and sewer utilities must coordinate with the contracting agency responsible for these activities and ensure that these model procedures are followed.

Targeted Constituents

Sediment	☑
Nutrients	☑
Trash	
Metals	
Bacteria	☑
Oil and Grease	☑
Organics	☑
Oxygen Demanding	☑

Approach

Pollution Prevention

Inspect potential non-stormwater discharge flow paths and clear/cleanup any debris or pollutants found (i.e. remove trash, leaves, sediment, and wipe up liquids, including oil spills).

Suggested Protocols

Water Line Maintenance and Cleaning

Procedures can be employed to reduce pollutants from discharges associated with water utility operation and maintenance activities. Planned discharges may include fire hydrant testing, flushing water supply mains after new construction, flushing lines due to complaints of taste and odor, dewatering mains for maintenance work. Unplanned discharges from treated, recycled water, raw water, and groundwater systems operation and maintenance activities can occur from water main

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

breaks, sheared fire hydrants, equipment malfunction, and operator error.

Planned discharges

- Identify a suitable discharge option in the following order of preference:
  - Apply to the land.
  - Reuse water for dust suppression, irrigation, or construction compaction.
  - Discharge to a sanitary sewer system with approval.
  - Discharge to the storm drain system using applicable pollution control measures. (Only available to clean water discharges such as water main/ water storage tank/water hydrant flushing).
- If water is discharged to a storm drain, control measures must be put in place to control potential pollutants (i.e. sediment, chlorine, etc.). Examples of some storm drain protection options include:
  - Silt fence – appropriate where the inlet drains a relatively flat area.
  - Gravel and wire mesh sediment filter – Appropriate where concentrated flows are expected.
  - Wooden weir and fabric – use at curb inlets where a compact installation is desired.
- Prior to discharge, inspect discharge flow path and clear/cleanup any debris or pollutants found (i.e. remove trash, leaves, sediment, and wipe up liquids, including oil spills).
- General Design considerations for inlet protection devices include the following:
  - The device should be constructed such that cleaning and disposal of trapped sediment is made easy, while minimizing interference with discharge activities.
  - Devices should be constructed so that any standing water resulting from the discharge will not cause excessive inconvenience or flooding/damage to adjacent land or structures.
- The effectiveness of control devices must be monitored during the discharge period and any necessary repairs or modifications made.

Unplanned Discharges

- Stop the discharge as quickly as possible.
- Inspect flow path of the discharged water:
  - Identify erodible areas which may need to be repaired or protected during subsequent repairs or corrective actions

- Identify the potential for pollutants to be washed into the waterway

- If repairs or corrective action will cause additional discharges of water, select the appropriate procedures for erosion control, chlorine residual, turbidity, and chemical additives. Prevent potential pollutants from entering the flow path.

Sanitary Sewer Maintenance

Applicable to municipalities who own and operated a sewage collection system. Facilities that are covered under this program include sanitary sewer pipes and pump stations owned and operated by a municipality. The owner of the sanitary sewer facilities is the entity responsible for carrying out this prevention and response program.

- Clean sewer lines on a regular basis to remove grease, grit, and other debris that may lead to sewer backups.

- Establish routine maintenance program. Cleaning should be conducted at an established minimum frequency and more frequently for problem areas such as restaurants that are identified

- Cleaning activities may require removal of tree roots and other identified obstructions.

- During routine maintenance and inspection note the condition of sanitary sewer structures and identify areas that need repair or maintenance. Items to note may include the following:

  - Cracked/deteriorating pipes

  - Leaking joints/seals at manhole

  - Frequent line plugs

  - Line generally flows at or near capacity

  - Suspected infiltration or exfiltration.

- Prioritize repairs based on the nature and severity of the problem. Immediate clearing of blockage or repair is required where an overflow is currently occurring or for urgent problems that may cause an imminent overflow (e.g. pump station failures, sewer line ruptures, sewer line blockages). These repairs may be temporary until scheduled or capital improvements can be completed.

- Review previous sewer maintenance records to help identify “hot spots” or areas with frequent maintenance problems and locations of potential system failure.

Spills and Overflows

- Identify and track sanitary sewer discharges. Identify dry weather infiltration and inflow first. Wet weather overflow connections are very difficult to locate.

- Locate wet weather overflows and leaking sanitary sewers using conventional source identification techniques such as monitoring and field screening. Techniques used to identify other illicit connection sources can also be used for sewer system evaluation surveys (see SC74 Drainage System Operation and Maintenance).

- Implement community awareness programs for monitoring sanitary sewer wet weather overflows. A citizen's hotline for reporting observed overflow conditions should be established to supplement field screening efforts.

- Establish lead department/agency responsible for spill response and containment. Provide coordination within departments.

- When a spill, leak, and/or overflow occurs and when disinfecting a sewage contaminated area, take every effort to ensure that the sewage, disinfectant and/or sewage treated with the disinfectant is not discharged to the storm drain system or receiving waters. Methods may include:

  - Blocking storm drain inlets and catch basins

  - Containing and diverting sewage and disinfectant away from open channels and other storm drain fixtures (using sandbags, inflatable dams, etc.)

  - Removing the material with vacuum equipment

- Record required information at the spill site.

- Perform field tests as necessary to determine the source of the spill.

- Develop notification procedures regarding spill reporting.

Septic Systems

- Ensure that homeowners, installers, and inspectors are educated in proper maintenance of septic systems. This may require coordination with staff from other departments. Outreach to homeowners should include inspection reminders informing then that inspection and perhaps maintenance is due for their systems. Recommend that the system be inspected annually and pumped-out regularly.

- Programs which seek to address failing septic systems should consider using field screening to pinpoint areas where more detailed onsite inspection surveys are warranted.

Training

- Conduct annual training of water utility personnel and service contractors. (field screening, sampling, smoke/dye testing, TV inspection).

- OSHA-required Health and Safety Training 29 CFR 1910.120 plus annual Refresher Training (as needed).

- OSHA Confined Space Entry training (Cal-OSHA Confined Space, Title 8 and federal OSHA 29 CFR 1910.146).

Spill Response and Prevention

- See previous section regarding spills and overflows.
- Refer to SC-11, Spill Prevention, Control & Cleanup.
- Have spill cleanup materials readily available and in a known location.
- Cleanup spills immediately and use dry methods if possible.
- Properly dispose of spill cleanup material.

Other Considerations

- Enact ordinance granting "right-of-entry" to locate potentially responsible parties for sewer overflows.
- Reliance on individual onsite inspection to detect failed septic systems can be a major limitation. The individual onsite inspection is very labor-intensive and requires access to private property to pinpoint the exact location of the failing system.
- A significant limitation to correcting failing septic systems is the lack of techniques available for detecting individual failed septic systems.

Requirements

Costs

- Departmental cooperation recommended for sharing or borrowing staff resources and equipment from municipal wastewater department.
- Infiltration, inflow, and wet weather overflows from sanitary sewers are very labor and equipment intensive to locate.
- The costs associated with detecting and correcting septic system failures are subject to a number of factors, including availability of trained personnel, cost of materials, and the level of follow-up required to fix the system problems.

Maintenance

- Minimum 2-person teams to perform field screening and associated sampling.
- Larger teams required for implementing other techniques (i.e. zinc chloride smoke testing, fluorometric dye testing, television camera inspection and physical inspection with confined space entry) to identify sewer system leaks.
- Program coordination required for handling emergencies, record keeping, etc.
- Many of the problems associated with improper use of septic systems may be attributed to lack of user knowledge on operation and maintenance. Educational materials for homeowners and training courses for installers and inspectors can reduce the incidence of pollution from these widespread and commonly used pollution control devices.

SC-76 Water & Sewer Utility Maintenance

Supplemental Information

Further Detail of the BMP

Onsite Sewage Disposal Systems

New onsite sewage disposal systems should be designed, located, and installed away from open waterbodies and sensitive resources such as wetlands and floodplains. A protective separation between the OSDS and groundwater should also be established. OSDSs should be operated and maintained to prevent surface water discharges and reduce pollutant loadings to groundwater. Inspection of OSDSs should occur regularly and repairs made immediately. New or replacement plumbing fixtures should be of the high efficiency type.

Typical Sanitary Sewer Problems

- Old and deteriorated main and lateral pipes - Sewers range in age from 30 to 100 years with an average age of 50 years.
- Cracked sewer pipes - Existing sewers are mostly clay pipes which can crack as they deteriorate with age and also by earth movement.
- Misaligned and open pipe joints - Most of the mortar used to seal the joints between sections of clay pipe has deteriorated.
- Undersized sewer pipe - The existing sewer system is overloaded due to new sewer hook-ups, underground water infiltration, and illegal roof and/or yard drain connections.
- Defective manholes - Old manholes are made of bricks. Typical problems associated with brick manholes are loose bricks, missing bricks, and misaligned manholes.
- Missing and/or unrecorded sewer pipes and manholes - This problem is typical in the easement/backline sewer. Sewer pipe locations shown on the sewer record map are different from the actual sewer location.
- Sewer main under houses and other improvements - Complaints of sewer main alignment crossing the house and other improvements. A solution to this problem requires an agreement with the property owner for a new sewer easement at a relocated line.

Causes of Sanitary Sewer Backups

- Root infiltration - Tree roots are a major cause of backups.
- Water inflow/infiltration - Rain water entering the sewer pipe causes overflows.
- Solids - Typical solids that buildup in the pipe and cause backups are grease, dirt, bones, tampons, paper towels, diapers, broken dishware, garbage, concrete, and debris.
- Structural defects in pipes and manholes - Sags in the line, cracks, holes, protruding laterals, misaligned pipe, offset joints are all possible causes of backups.

Design Considerations

Sanitary sewer overflows can often be reduced or eliminated by a number of practices, in addition to sewer system cleaning and maintenance, including the following:

- Reducing infiltration and inflow through rehabilitation and repair of broken or leaking sewer lines.
- Enlarging or upgrading the capacity of sewer lines, pump stations, or sewage treatment plants.
- Constructing wet weather storage and treatment facilities to treat excess flows.
- Addressing SSOs during sewer system master planning and facilities planning.

Septic Systems

Two field screening techniques that have been used with success at identifying possible locations of failing septic systems are the brightener test and color infrared (CIR) aerial photography. The first involves the use of specific phosphorus-based elements found in many laundry products, often called brighteners, as an indicator of the presence of failing onsite wastewater systems. The second technique uses color infrared (CIR) aerial photography to characterize the performance of septic systems. This method has been found to be a quick and cost-effective method for assessing the potential impacts of failing systems and uses variations in vegetative growth or stress patterns over septic system field lines to identify those systems that may potentially be malfunctioning. Then a more detailed onsite visual and physical inspection will confirm whether the system has truly failed and the extent of the repairs needed. These inspections may be carried out by county health departments or other authorized personnel.

1.0 PURPOSE OF STUDY

The purpose of this study is to support the development of a commercial project. Calculations presented here establish pre-development and post development storm runoff, and assist in the sizing of proposed drainage improvements. Calculations will demonstrate that post developed peak runoff will not exceed pre-developed peak runoff, therefore insuring no negative impacts to downstream storm drain systems and adjacent properties. Runoff from both private and public improvements will be addressed by this report.

2.0 PROJECT DESCRIPTION

The project proposes to create 6 separate legal parcels with 6 buildings, occupied with varying shops and convenience stores. The site improvements include parking, private drive isles, wet and dry utilities, storm drain, and water quality improvements.

3.0 VICINITY MAP

The project site is located in the City of Murrieta, northeast of Clinton Keith and Antelope Road as shown on the Vicinity Map. Please see Attachment A- Vicinity map.

4.0 SITE MAP

See Attachment B – Site map

5.0 DESCRIPTION OF WATERSHED

5.1 Existing Conditions Topography

There is an active mining/ grading operation on the project site and the operation has altered the surface topography and drainage patterns. For the purpose of this study, we will use the original topography of the site before the mining operation altered the scenery. This insures that no diversion of flow will happen.

There are three distinct basins on site. Basin 1 is a hilly area that runoff is intercepted by Antelope road and drains to south to an existing public stormdrain that was built as part of the improvement Track No.08-327804. Basin 2 sheet flows to I-215 NB On-ramp, and intercepted by a concrete ditch and directed to an existing open channel adjacent to I-215.

Please note that there are active projects directly east. The mentioned active projects are known as “The Vineyard” PM 36493 and “Costco” TPM 37511.

Attachment D, found later in this report, contains the natural condition Watershed Topographic Map.

5.2 Post-Development Project Topography

At 100 percent buildout, the site will be more than 80 percent impervious. When brought to grade the site will become much flatter than its natural condition. At 100 percent buildout, all impervious areas will drain to onsite bioretention basins before eventually existing the project site. The proposed grades & improvements are such that the drainage patterns to the 1 POC are maintained. There are three distinct basins on site. Basin 1 (Parcel 2, 3, 4 and 5) drains to BMP-1 from the 2/3 of the site draining north to the south. Basin 2 (Parcel 1) drains to BMP-2 to the north of the site, Basin 3 (Parcel 6) located on southeast of the site drains to BMP-3. All the impervious area are directed to BMPs and directed to an existing public stormdrain that was built as part of the improvement Track No.08-327804.

6.0 METHODOLOGY

This study complies with the April 1978 Riverside County Flood Control & Water Conservation District Hydrology

6.1 Hydrology Software

The "Rational" module of the CIVILCADD/CIVIL DESIGN engineering software version 9.0 was use hereon. See Attachment H.

6.2 Hydraulics Software

Hydroflow Storm Sewers Extension for Autodesk/Autocad./Civil3D will be used to analyze and size private storm drain pipes.

8.0 CALCULATIONS

8.1 Analyze 100 Year 1 Hour Storm using The Rational Method

Peaks flows for both the pre-developed and post developed conditions using Civil and the rational method. Peak flows were established at POC 1. Soil type D was used based on USDA Natural Water Resource Conservation Service website. Intensity-Duration data was taken for Plate D-4.1 and the post developed land use assumes commercial development. Table 4 below summarizes the results. Detailed CivilD input-output data can be found in Attachment F of this report.

SUMMARY OF THE 100 YEAR 1 HOUR STORM @ POC 1 - AMC=2			
	PRE-DEVPT PEAK RUNOFF	POST-DEVPT PEAK RUNOFF	UNITS
Q	29.64	27.42	CFS
A	13.64	13.96	ACRES
T_C	15.60	16	MINUTES

9 SUMMARY

The hydrologic analysis indicated that post developed runoff will not exceed pre-developed runoff, even with the big increase in impervious areas. This will insure no negative impacts to downstream drainage systems, or properties as a result of this development.

11.0 DECLARATION OF RESPONSIBLE CHARGE

I hereby declare that I am the engineer of work for this project. That I have exercised responsible charge over the design of the project as defined in section 6703 of the business and professions codes, and that the design is consistent with current design.

I understand that the check of the project drawings and specifications by the Riverside County is confined to a review only and does not relieve me, as engineer of work, of my responsibilities for project design.

	Good	63	75	83	87
Vineyard		See Note 4			

Notes:

1. All runoff index (RI) numbers are for Antecedent Moisture Condition (AMC) II.

2. Quality of cover definitions:
   Poor-Heavily grazed or regularly burned areas. Less than 50 percent of the ground surface is protected by plant cover or brush and tree canopy.
   Fair-Moderate cover with 50 percent to 75 percent of the ground surface protected.
   Good-Heavy or dense cover with more than 75 percent of the ground surface protected.

3. See Plate C-2 for a detailed description of cover types.

4. Use runoff index numbers based on ground cover type. See discussion under "Cover Type Descriptions" on Plate C-2.

5. Reference Bibliography item 17.

ACTUAL IMPERVIOUS COVER

Land Use (1)	Range-Percent	Recommended Value For Average Conditions-Percent(2)
Natural or Agriculture	0 - 10	0
Single Family Residential: (3)		
40,000 S. F. (1 Acre) Lots	10 - 25	20
20,000 S. F. (½ Acre) Lots	30 - 45	40
7,200 - 10,000 S. F. Lots	45 - 55	50
Multiple Family Residential:		
Condominiums	45 - 70	65
Apartments	65 - 90	80
Mobile Home Park	60 - 85	75
Commercial, Downtown Business or Industrial	80 -100	90

Notes:

1. Land use should be based on ultimate development of the watershed. Long range master plans for the County and incorporated cities should be reviewed to insure reasonable land use assumptions.

2. Recommended values are based on average conditions which may not apply to a particular study area. The percentage impervious may vary greatly even on comparable sized lots due to differences in dwelling size, improvements, etc. Landscape practices should also be considered as it is common in some areas to use ornamental gravels underlain by impervious plastic materials in place of lawns and shrubs. A field investigation of a study area should always be made, and a review of aerial photos, where available may assist in estimating the percentage of impervious cover in developed areas.

3. For typical horse ranch subdivisions increase impervious area 5 percent over the values recommended in the table above.

IMPERVIOUS COVER FOR DEVELOPED AREAS

PLATE D-5.6

RUNOFF COEFFICIENT CURVE DATA

The data in the following tables may be used to develop runoff coefficient (C) curves for any combination of runoff index (RI) number and antecedent mositure condition (AMC). For an RI number with an AMC of II (from Plate D-5.5) enter the tables on the following pages and plot the "C" curve data directly on Plate D-5.8. "C" curve data is given for even RI numbers only, but values may easily be interpolated for odd RI numbers.

For an AMC of I or III enter the tabulation on this page with the RI for AMC II, and read the appropriate RI for AMC I or III. Use this revised RI to enter the tables on the following pages to determine "C". For example if RI = 40 for AMC II, then RI = 22 for AMC I and RI = 60 for AMC III.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Western Riverside Area, California
Survey Area Data: Version 10, Sep 12, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 24, 2015—Feb 26, 2015

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
CaC2	Cajalco fine sandy loam, 2 to 8 percent slopes, eroded	C	0.0	0.6%
CaD2	Cajalco fine sandy loam, 8 to 15 percent slopes, eroded	C	2.1	28.7%
ChD2	Cieneba sandy loam, 8 to 15 percent slopes, eroded	D	0.5	6.8%
LaD2	Las Posas loam, 8 to 15 percent slopes, eroded	D	4.3	57.7%
LkF3	Las Posas rocky loam, 15 to 50 percent slopes, severely eroded	D	0.5	6.2%
Totals for Area of Interest			**7.4**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

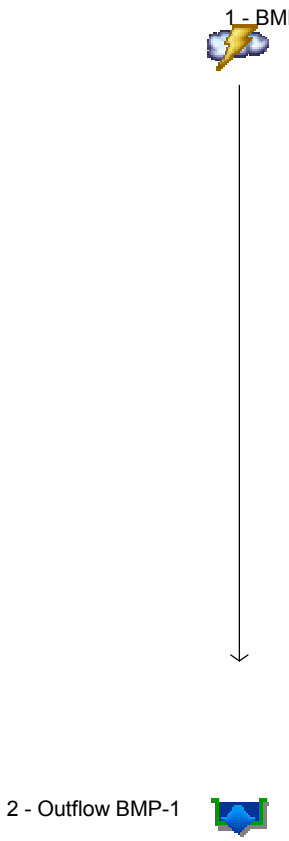
Time of concentration =    9.58 min.
Rainfall intensity =     3.565(In/Hr)
Summary of stream data:

Stream   Flow rate      TC            Rainfall Intensity
 No.       (CFS)       (min)                 (In/Hr)



1        8.432      7.69                4.025
2        3.315      7.80                3.993
3        3.095      9.58                3.565
Largest stream flow has longer or shorter time of concentration
Qp =      8.432 + sum of
          Qa          Tb/Ta
           3.315 *    0.986 =      3.268
          Qa          Tb/Ta
           3.095 *    0.802 =      2.482
Qp =     14.182

Total of 3 streams to confluence:
Flow rates before confluence point:
       8.432       3.315       3.095
Area of streams before confluence:
        2.287       0.834       0.910
Results of confluence:
Total flow rate =     14.182(CFS)
Time of concentration =     7.688 min.
Effective stream area after confluence =      4.031(Ac.)
End of computations, total study area =            4.03 (Ac.)
The following figures may
be used for a unit hydrograph study of the same area.

Area averaged pervious area fraction(Ap) = 0.100
Area averaged RI index number =  75.0
```

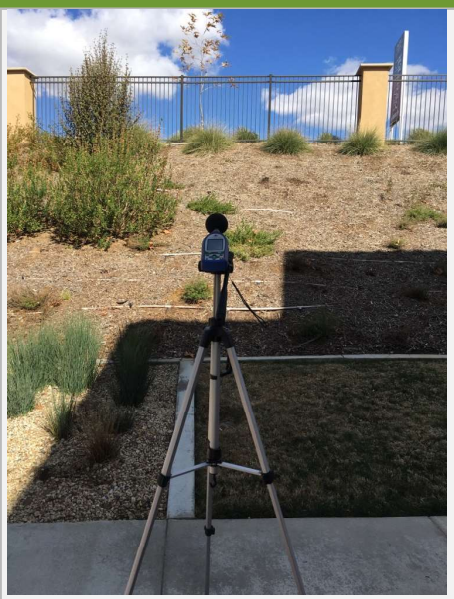
Begin (Time)	10:56:00
End (Time)	11:06:00
Leq	55.6
Lmax	71.3
Lmin	46.3
Other Lx?	L90, L50, L10
L90	48.9
L50	52
L10	55.4
Other Lx (Specify Metric)	L
Primary Noise Source	Traffic
Other Noise Sources (Background)	Birds, Distant Traffic, Rustling Leaves
Other Noise Sources Additional Description	Siren. Hvac
Is the same instrument and calibrator being used as previously noted?	Yes
Are the meteorological conditions the same as previously noted?	Yes



Source Info and Traffic Counts	
Number of Lanes	0
Lane Width (feet)	10
Roadway Width (feet)	0
Roadway Width (m)	0
Distance to Roadway (feet)	50
Distance to Roadway (m)	50
Distance Measured to Centerline or Edge of Pavement?	Centerline
Estimated Vehicle Speed (MPH)	40
Count Duration (Min)	10

Traffic Counts	
Vehicle Count Summary	Autos 0, MT 0, HT 0, Buses 0, MC 0
Count Duration (minutes)	0
Counting Both Directions?	Yes
Vehicle Count Tally	
Select Method for Vehicle Counts	Enter Manually
Autos	0
Number of Vehicles - Autos	123
Medium Trucks	0
Number of Vehicles - Medium Trucks	3
Heavy Trucks	0
Number of Vehicles - Heavy Trucks	2
Buses	0
Motorcycles	0

FIELD DATA REPORT

Field Noise Measurement Data

Record: 1181	
Project Name	*Costco Murietta*
Observer(s)	*Connor Burke*
Date	*2019-08-13*

Meteorological Conditions	
Temp (F)	*89*
Humidity % (R.H.)	*28*
Wind	*Light*
Wind Speed (MPH)	*2*
Wind Direction	*East*
Sky	*Sunny*

Instrument and Calibrator Information	
Instrument Name List	*(ENC) Rion NL-52*
Instrument Name	*(ENC) Rion NL-52*
Instrument Name Lookup Key	*(ENC) Rion NL-52*
Manufacturer	*Rion*
Model	*NL-52*
Serial Number	*553896*
Calibrator Name	*(ENC) LD CAL150*
Calibrator Name	*(ENC) LD CAL150*
Calibrator Name Lookup Key	*(ENC) LD CAL150*
Calibrator Manufacturer	*Larson Davis*
Calibrator Model	*LD CAL150*
Calibrator Serial #	*5152*
Pre-Test (dBA SPL)	*94*
Post-Test (dBA SPL)	*94*
Windscreen	*Yes*
Weighting?	*A-WTD*
Slow/Fast?	*Slow*
ANSI?	*Yes*

Monitoring	
Record #	*1*
Site ID	*ST5*
Site Location Lat/Long	*33.601058, -117.166876*
Begin (Time)	*10:34:00*
End (Time)	*10:49:00*
Leq	*40.6*
Lmax	*49.7*
Lmin	*37.5*
Other Lx?	*L90, L50, L10*
L90	*38.7*
L50	*40.1*
L10	*42.1*
Other Lx (Specify Metric)	*L*
Primary Noise Source	*Construction on project site.*
Other Noise Sources (Background)	*Birds, Distant Aircraft, Distant Traffic*
Is the same instrument and calibrator being used as previously noted?	*Yes*
Are the meteorological conditions the same as previously noted?	*Yes*

1.0 INTRODUCTION AND SUMMARY

A. Purpose of the TIA and Study Objectives

The purpose of this traffic impact analysis (TIA) is to evaluate the traffic impact of the proposed Curci Property development. The project is to be developed with approximately 33,650 square feet (sf) of retail/commercial uses (4,000 sf auto related service, 5,000 sf tire store, 11,650 sf retail, 3,000 sf sit down restaurant, 5,000 sf fast food restaurant, and 5,000 sf bank). The project is located north of Clinton Keith Road, east of I-215 freeway in the City of Murrieta. Figure 1-A illustrates the site location and the traffic analysis study area.

Study objectives include the following:

Existing Traffic. Existing traffic was counted to determine current conditions. This constitutes the environmental setting for a CEQA analysis at the time that the hearing body reviews the project. Traffic count data shall be new or recent. In some cases, data up to one year old may be acceptable with the approval of the City of Murrieta Engineering Department. Any exception to this must be requested prior to approval of the scoping agreement

Existing + Ambient + Project (EAP 2021). Traffic conditions prior to the time that the proposed development is completed will be estimated by increasing the existing traffic counts by an appropriate growth rate (2%), projected to the year that the project is estimated to be completed (2021). This will be the basis for determining near-term no project-conditions.

Existing + Ambient + Project + Cumulative (EAPC 2021). Traffic generated by the proposed project shall be identified and added to the EAP traffic conditions. This scenario will be analyzed, and a determination made if improvements funded through an approved funding mechanism (TUMF, DIF, CFD, RBBD etc.) can accommodate the cumulative traffic at the target Level of Service (LOS) identified in the General Plan. If the “funded” improvements can provide the target LOS, payment into the fee program will be considered as cumulative mitigation through the conditions of approval. Other improvements needed beyond the “funded” improvements (such as localized improvements to non-TUMF facilities) should be identified as such.

B. Study Area

The project site is generally located north of Clinton Keith Road and east of I-215 Freeway in the City of Murrieta. Figure 1-A illustrates the site location and the traffic analysis study area. The study area is based on the approved scoping agreement included in Appendix A.

Study Area Intersections
1. McElwain Rd. / Clinton Keith Rd.
2. I-215 SB Ramps / Clinton Keith Rd.
3. I-215 NB Ramps / Clinton Keith Rd.
4. Creighton Ave. / Clinton Keith Rd.
5. Whitewood Rd. / Clinton Keith Rd.
6. Vista Murrieta HS W. Dwy. / Clinton Keith Rd.
7. Bronco Wy. / Clinton Keith Rd.
8. Antelope Rd. / Baxter Rd.

Roadway Segment Locations
1. Clinton Keith Road, west of Creighton Ave.
8. Clinton Keith Road, east of Creighton Ave.

C. Development Project Identification

1. Project Size and Description

The Curci Property Site is proposed to be developed with approximately 33,650 square feet (sf) of retail/commercial uses (4,000 sf auto related service, 5,000 sf tire store, 11,650 sf retail, 3,000 sf sit down restaurant, 5,000 sf fast food restaurant, and 5,000 sf bank). The project is located north of Clinton Keith Road and east of I-215 Freeway in the City of Murrieta.

2. Existing Land Use

The project site is currently vacant. Adjacent uses include the following:

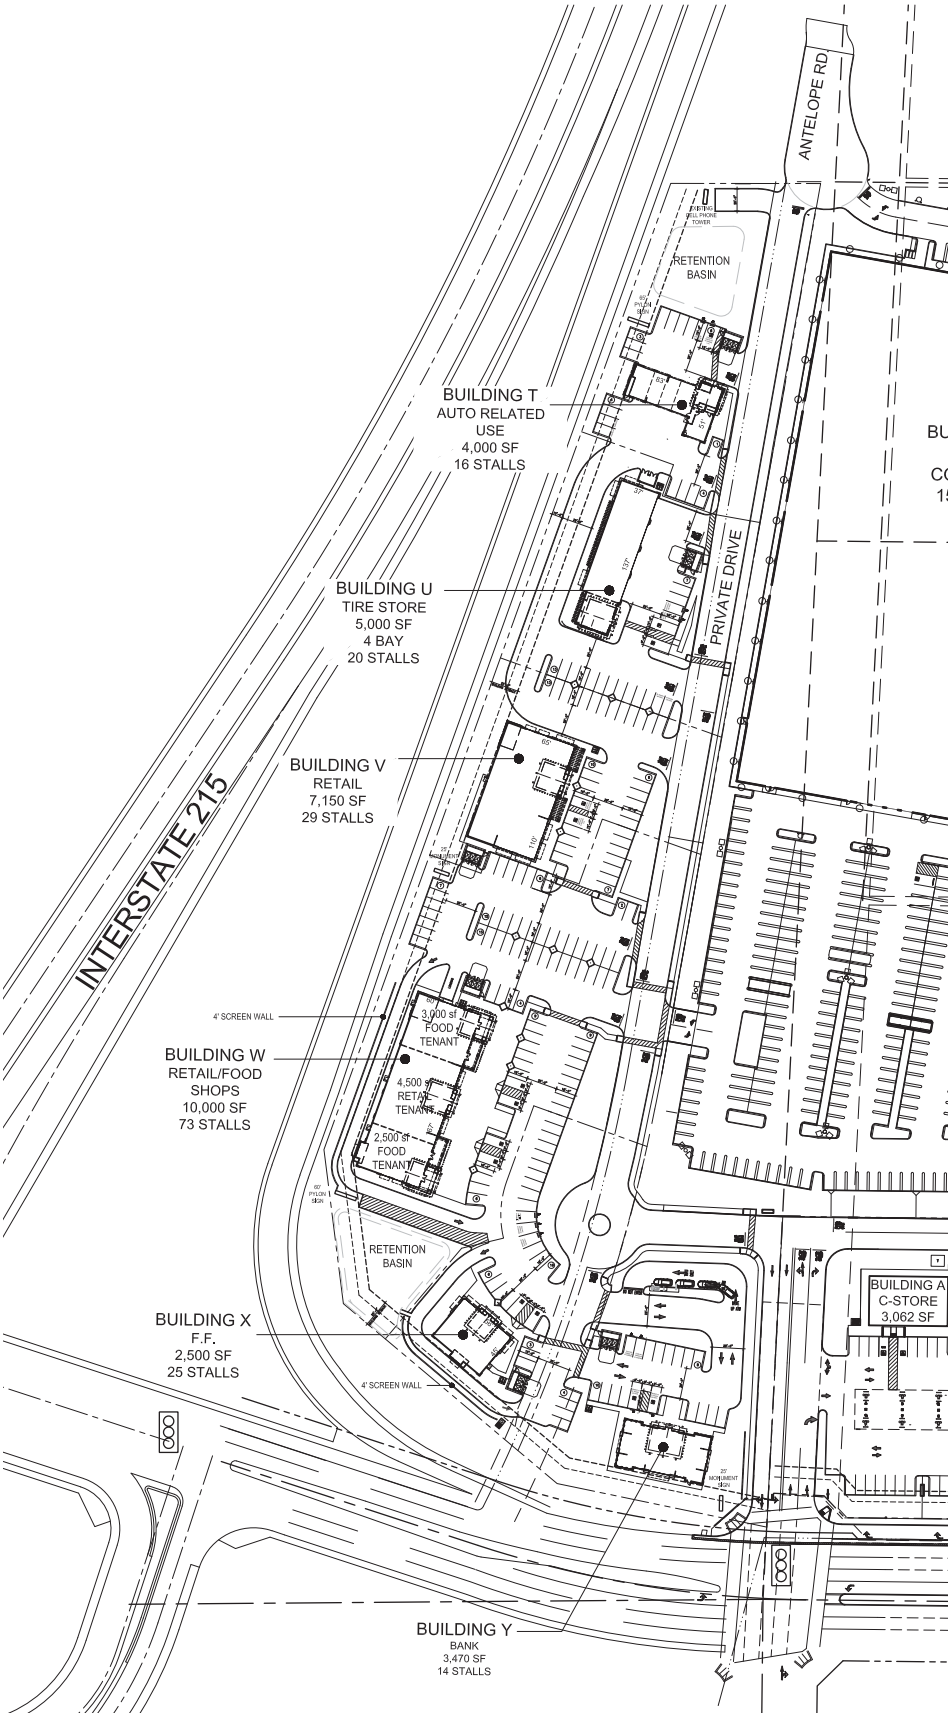
- North – Vacant/Residential
- South –Residential
- East – Vacant
- West – I-215 Freeway

3. Proposed Land Use

The project will consist of retail/commercial uses.

4. Site Plan of Proposed Project

Figure 1-B illustrates the conceptual land use plan. As shown on Figure 1-B access to the project site is provided via Antelope Road and future northerly extension of Creighton Avenue.



5. Proposed Project Opening Year

The proposed project is anticipated to be completed in 2021. Future traffic analysis has been based upon a 2% annual background (ambient) growth along with traffic generated by other future developments in the surrounding area.

6. Proposed Project Phasing

The project is expected to be completed in a single phase. Therefore, traffic recommendations included in this report have not been separated into different development phases.

FIGURE 1-B
SITE PLAN

THIS PAGE LEFT INTENTIONALLY BLANK

2.0 TRAFFIC ANALYSIS METHODOLOGIES

Traffic operations are quantified through the determination of "Level of Service" (LOS). Level of Service is a qualitative measure of traffic operating conditions, whereby a letter grade "A" through "F" is assigned to an infrastructure facility (intersection) representing progressively worsening traffic conditions. This section presents the LOS definition, LOS criteria and methodologies for the Intersection Operations.

A. Level of Service Definition

The definitions of Level of Service for uninterrupted flow (flow unrestrained by the existence of traffic control devices) are:

- LOS "A": Completely free-flow conditions. The operation of vehicles is virtually unaffected by the presence of other vehicles, and operations are constrained only by the geometric features of the highway and by driver preferences. Maneuverability within the traffic stream is good. Minor disruptions to flow are easily absorbed without a change in travel speed.

- LOS "B": Free flow conditions, although the presence of other vehicles becomes noticeable. Average travel speeds are the same as in LOS "A", but drivers have slightly less freedom to maneuver. Minor disruptions are still easily absorbed, although local deterioration in LOS will be more obvious.

- LOS "C": The influence of traffic density on operations becomes marked. The ability to maneuver within the traffic stream is clearly affected by other vehicles. Minor disruptions can cause serious local deterioration in service, and queues will form behind any significant traffic disruption.

- LOS "D": The ability to maneuver is restricted due to traffic congestion. Travel speed is reduced by the increasing volume. Only minor disruptions can be absorbed without extensive queues forming and the service deteriorating.

- LOS "E": Operations at or near capacity, an unstable level. Vehicles are operating with the minimum spacing for maintaining uniform flow.

- LOS "F": Forced or breakdown flow. It occurs either when vehicles arrive at a rate greater than the rate at which they are discharged or when the forecast demand exceeds the computed capacity of a planned facility. Although operations at these points – and on sections immediately downstream – appear to be at capacity, queues form behind these breakdowns. Operations within queues are highly unstable, with vehicles experiencing brief periods of movement followed by stoppages.

B. Level of Service Criteria

The City of Murrieta has established Level of Service (LOS) "D" as the maximum allowable threshold for the intersection operations. Therefore, LOS "E" or "F" is considered unacceptable and requires improvements measures. For roadway segments, LOS C is deemed acceptable. However, the City's General Plan indicates that LOS D is allowed in certain areas, including the North Murrieta Business Corridor and Multiple use focus area, which include the Project site and study area roadways. Therefore, LOS D is deemed acceptable for roadway segments along Clinton Keith Road.

C. Intersection Operations Analysis Methodology

Caltrans requires the use of the Transportation Research Board - Highway Capacity Manual (HCM). The HCM defines level of service as a qualitative measure, which describes operational conditions within a traffic stream, generally in terms of such factors as speed and travel time, freedom to maneuver, traffic interruptions, comfort and convenience, and safety. The criteria used to evaluate Level of Service (LOS) conditions vary based on the type of roadway and whether the traffic flow is considered interrupted or uninterrupted. The HCM methodology expresses the level of service at an intersection in terms of delay time for the various intersection approaches. The HCM uses different procedures depending on the type of intersection control.

The level of service is typically dependent on the quality of traffic flow at the intersections along a roadway. The HCM methodology expresses the level of service at an intersection in terms of delay time for the various intersection approaches. The HCM uses different procedures depending on the type of intersection control. The Levels of Service results in this study are determined using the HCM methodology.

For signalized intersections, average total delay per vehicle for the overall intersection is used to determine level of service. The study area intersections which are stop sign controlled with stop control on the minor street only has been analyzed using the unsignalized intersection methodology of the HCM. For these intersections, the calculation of level of service is dependent on the occurrence of gaps occurring in the traffic flow of the main street. Using data collected describing the intersection configuration and traffic volumes at the study area locations; the level of service has been calculated. The level of service criteria for this type of intersection analysis is based on average total delay per vehicle for the worst minor street movement(s).

For all way stop (AWS) controlled intersections, the ability of vehicles to enter the intersection is not controlled by the occurrence of gaps in the flow of the main street. The AWS controlled intersections have been evaluated using the HCM methodology for this type of multi-way stop controlled intersection configuration. The level of service criteria for this type of intersection analysis is based on average total delay per vehicle.

The levels of service are defined for the various analysis methodologies as follows:

LEVEL OF SERVICE	AVERAGE TOTAL DELAY PER VEHICLE (SECONDS)	
	SIGNALIZED	UNSIGNALIZED
A	0 to 10.00	0 to 10.00
B	10.01 to 20.00	10.01 to 15.00
C	20.01 to 35.00	15.01 to 25.00
D	35.01 to 55.00	25.01 to 35.00
E	55.01 to 80.00	35.01 to 50.00
F	80.01 and up	50.01 and up

Levels of service at the study area intersections have been evaluated using the following HCM intersection analysis program: Synchro 10.0. The signal timing for the intersections have been provided by City of Murrieta and Caltrans staff.

Peak hour factors (PHF), where known from existing traffic counts, have been used to assess intersection operations. Truck percentages along Winchester Road have been included in the analysis.

D. Roadway Segment Analysis Methodology

Roadway Segment analysis has been evaluated based on the Link Volume Capacities/Level of Service for the City of Murrieta Roadways. Roadway segment analysis has been assessed based on average daily traffic (ADT) volumes shown in this report for each analysis scenario. For the purpose of this report, letter grades for each study area roadway segments have been assigned for each analysis scenario based on the following roadway segment capacities for each of the City of Murrieta roadway classifications are summarized below:

LEVEL OF SERVICE	V/C Ratio
A	0.00 to 0.60
B	0.61 to 0.70
C	0.71 to 0.80
D	0.81 to 0.90
E	0.91 to 1.00
F	> 1.00

Roadway segment analysis is suitable for planning purposes and not a precise measure of capacity. The ultimate capacity of a roadway is based upon several factors such as the relationships between peak hour and daily traffic volumes, intersection spacing, configuration, and control features, vehicle mix, and pedestrian/bicycle traffic. Furthermore, where the roadway segment analysis indicates a deficiency (LOS "D" or worse unless this segment is within the zone where LOS "D" is allowed, per GP section 5.6 (CIR-1.3)) a review of the more detailed peak hour intersection analysis is typically undertaken. The intersection analysis explicitly accounts for factors that affect roadway capacity. Therefore, roadway segment widening is typically recommended if the peak hour intersection analysis indicates the need for additional through lanes.

E. Freeway Ramp Analysis

For the purpose of this report, merge/diverge operations analysis methods have been used to evaluate freeway on-ramps and off-ramps. The density and level of service at the I-215/Clinton Keith Road on and off-ramps have been evaluated using the HCS2010 Ramps Version 6.65 software. The measure of effectiveness (reported in passenger car/mile/lane) are calculated based on the existing number of travel lanes, number of lanes at the on and off ramps both at the analysis junction and at upstream and downstream locations (if applicable) and acceleration/deceleration lengths at each merge/diverge point. The merge/diverge area LOS thresholds for each density range utilized in this report is presented as follows:

LEVEL OF SERVICE	DENSITY RANGE (pc/mi/ln)[1]
A	0.0 – 10.0
B	10.1 – 20.0
C	20.1 – 28.0
D	28.1 – 35.0
E	>35.0
F	Demand Exceeds Capacity

[1] pc/mi/ln = passenger cars per mile per lane.

F. Turn Pocket Queuing Evaluation

A queuing deficiency is identified in the no-Project condition if the calculated 95th -percentile queue length exceeds the storage length by more than 25 feet (the average storage length for one additional vehicle) since the bay taper can typically store at least one vehicle. A significant queuing impact is determined if the Project causes the calculated 95th -percentile queue length to exceed the existing or planned storage capacity at a signalized intersection by more than 25 feet. In storage lanes that are already deficient without the Project, a significant queuing impact is determined if the Project increases the calculated 95th -percentile queue length by at least 25 feet. Where left-turn lanes connect to two-way left-turn lanes, although the calculated queue may exceed the length of the painted left-turn pocket, the presence of the two-way left-turn lane provides additional storage and allows the queue to avoid spilling into through lanes. Therefore, queues exceeding the painted storage length in these situations are not highlighted as existing deficiencies because they do not contribute to operational problems.

THIS PAGE LEFT INTENTIONALLY BLANK

3.0 AREA CONDITIONS

A. Study Area and Intersections

In general, the study area is based on the projects' trip generation and distribution assumptions. Intersections where the project is likely to add 50 or more peak hour trips have been included for analysis purposes. See Table 1-1, Section 1.B.

B. Area Roadway System

Figure 3-A identifies the existing roadway conditions for study area roadways. The existing intersection traffic controls and geometrics are identified.

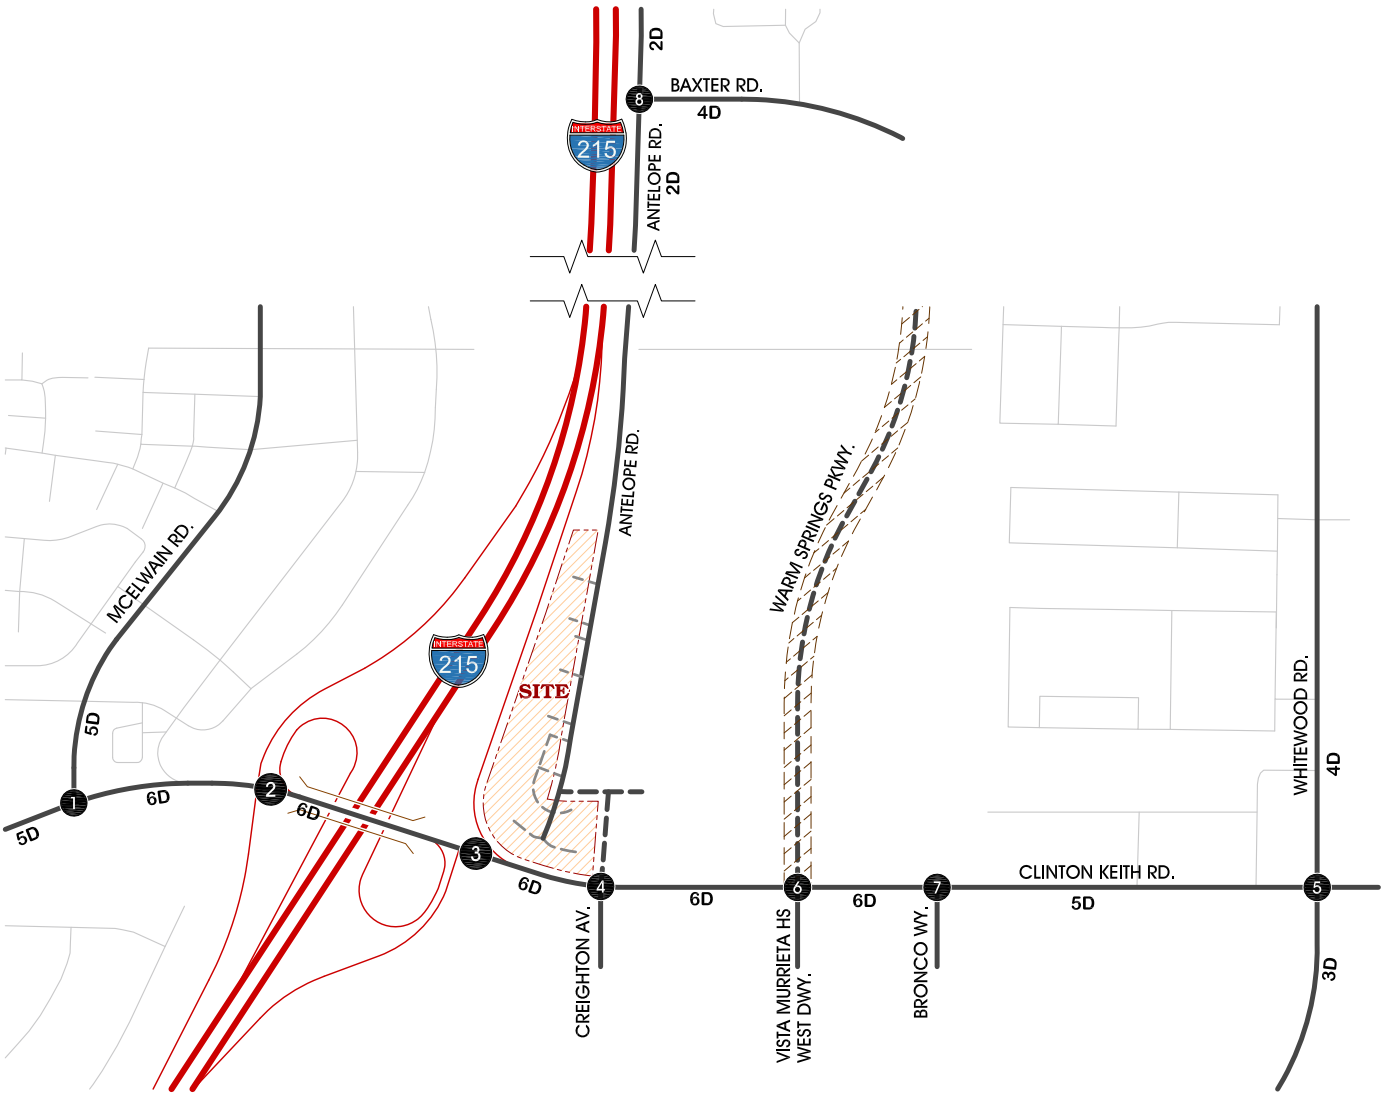
The City of Murrieta Circulation Element and Roadway Cross-Sections are depicted on Figure 3-B.

C. Existing Traffic Volumes

Existing intersection level of service calculations are based upon manual AM and PM peak hour turning movement counts made in November/December 2017 and May 2018. Saturday traffic volumes were obtained from the Murrieta Costco and Vineyard II TIA, prepared by Kittleson & Associates (November 2019). Existing AM, PM, and Saturday peak hour intersection turning movement volumes are shown on Figures 3-C through Figure 3-E, respectively.

In addition, existing traffic volumes utilized for future traffic conditions have been adjusted to reflect the future connection of Clinton Keith Road and French Valley Parkway.

The traffic count worksheets are included in Appendix "B".



D. Existing Delay and Level of Service

The results of the existing conditions intersection analysis are summarized in Table 3-1.1. The existing condition operations analysis worksheets are provided in Appendix "C". As shown in Table 3-1.1, the study area intersections are currently operating at acceptable level of service (LOS "D" or better) during the peak hours with the existing geometry and traffic controls. The 95th percentile queueing analysis results for existing traffic conditions are presented in Table 3-1.2. The queuing analysis worksheets are also included in Appendix "C".

Table 3-2 provides a summary of the Existing conditions roadway segment capacity analysis. As shown on Table 3-2, the roadway segments are operating at acceptable levels of service (at or better than LOS "C" capacity thresholds) with existing geometry.

	east of Creighton Av.	Urban Arterial	6	43,100	53,900	25,264	0.47	A	20,276	0.38	A

[1] 1 = Existing number of through lanes; 1 = Improvement

[2] Source: City of Murrieta Daily Roadway Capacity Values

[3] V/C = ADT / LOS E Roadway Capacity

[4] Source: For the purpose of this analysis, ADT counts from the Costco Warehouse Murrieta TIA, prepared by Kittelson & Associates (April 2019), have been utilized.

The Existing freeway ramp and basic freeway segment analysis results are summarized in Tables 3-3 and 3-4. As shown on Tables 3-3 and 3-4, the freeway ramps and basic freeway segments analyzed for this study were found to operate at an acceptable LOS (LOS “D” or better) during the peak hours. The existing conditions ramp analysis worksheets are provided in Appendix "D". The basic freeway segment analysis worksheets for existing conditions are included in Appendix “E”.

E. Transit Service

Riverside Transit Agency (RTA) Routes 23 and 61 currently provide service to the roadways within the study area.

F. City of Murrieta Planned Roadway Improvements within the study area

Warm Springs Parkway and Clinton Keith Road

The proposed alignment of the Warm Springs Parkway will be constructed as a four (4) leg intersection at Clinton Keith Road, directly across from the existing High School West (Stadium) Driveway.

4.0 PROJECTED FUTURE TRAFFIC

This section of the report quantifies the number of trips generated by the proposed project and other known developments in the area.

A. Project Traffic

1. Ambient Growth Rate

Some traffic volume increases on roadways can be attributed to vehicles originating outside of the study area. These types of trips either end up within the study area or pass-through onto an outside destination. Therefore, to account for these trips (termed "ambient growth"), a growth rate can be applied to existing traffic volumes.

A 2% ambient growth rate that has been used in this study to account for traffic not attributed to the project or other planned developments within the study area.

2. Project Trip Generation

Trip generation represents the amount of traffic which is attracted and produced by a development. The trip generation for the project is based upon the specific land use which has been planned for this development. For the purpose of this analysis, the following land use assumption is evaluated:

- 4,000 sf Automobile Parts and Service Center
- 5,000 sf Tire Store
- 11,650 sf Shopping Center
- 3,000 sf High Turnover (Sit-Down) Restaurant
- 5,000 sf Fast Food restaurant with Drive Through
- 5,000 sf Drive-in Bank

Trip generation rates for the proposed development are shown in Table 4-1. The trip generation rates are based upon data collected by the Institute of Transportation Engineers (ITE).

The daily and peak hour trip generations for the proposed project are shown on Table 4-2. The proposed development is projected to generate a total of approximately 4,433 trip-ends per day with 311 vehicles per hour during the AM peak hour, 395 vehicles per hour during the PM peak hour, and 692 during the Saturday peak hour.

TABLE 4-1

[1] TSF = Thousand Square Feet

3. Project Trip Distribution and Assignment

Trip distribution represents the directional orientation of traffic to and from the project site. The project's trip distribution patterns are based on the proximity of the specific uses to the surrounding trip attractors (employment bases, schools, recreation centers, etc.), and the regional freeway interchanges. The trip distribution pattern for the project is illustrated on Figure 4-A.

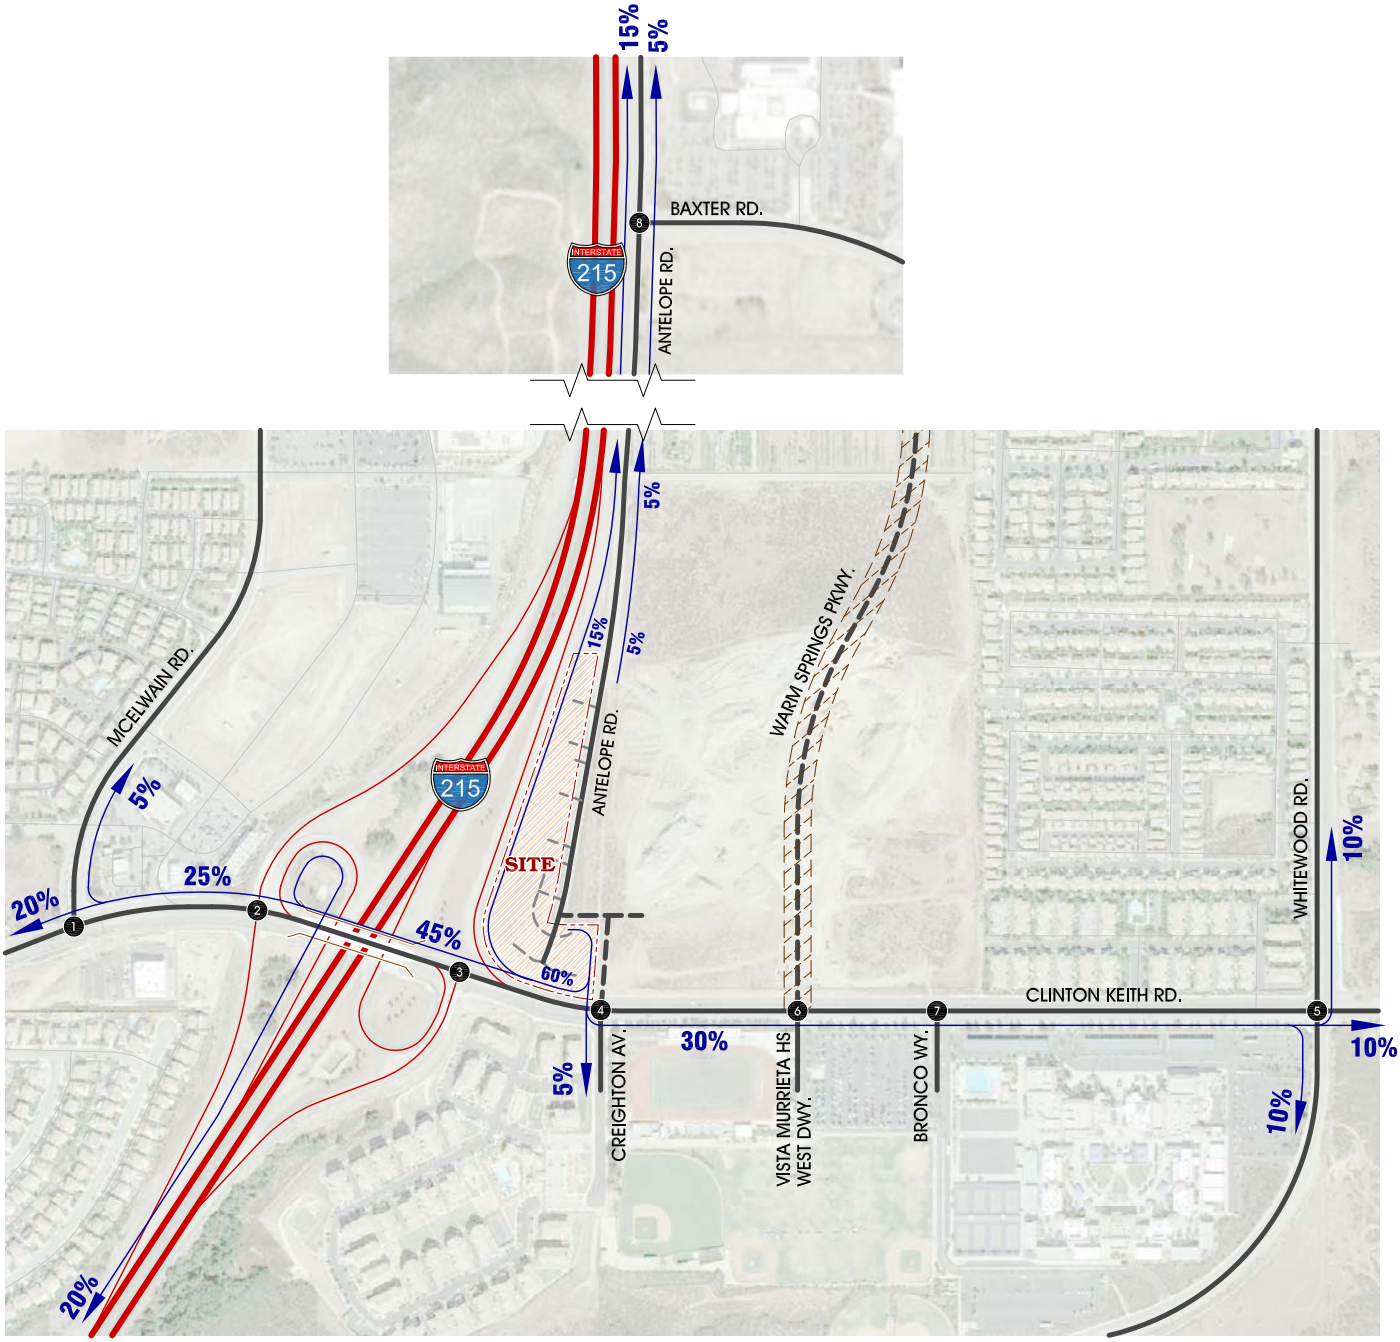
4. Other Trip Generation Factors

The project land uses are comprised mainly of primary traffic. Primary traffic refers to trips that are intending to go to the project as their primary destination. Therefore, no reduction has been assumed for pass-by traffic.

5. Project Peak Hour Turning Movement Traffic

The assignment of traffic from the site to the adjoining roadway system has been based upon the site's trip generation, trip distribution, proposed arterial highway and local street systems, which would be in place by the time of initial occupancy of the site. Based on the identified project traffic generation and distribution, Project AM, PM, and Saturday peak hour intersection traffic volumes are shown on Figures 4-B through 4-D.

B. Cumulative Traffic (Background)



1. Method of Projection

To assess Existing Plus Ambient Plus Project Plus Cumulative traffic conditions, project traffic is combined with existing traffic, area-wide growth and other future developments which are approved or being processed concurrently in the study area. Developments which are being processed concurrently in the study area have been provided by City staff.

2. Other Approved or Proposed Development Projects

The cumulative developments have been included along with the land use associated with each project. The location of the cumulative projects provided by the City are shown on Figure 4-E.

3. Other Approved Projects Trip Generation

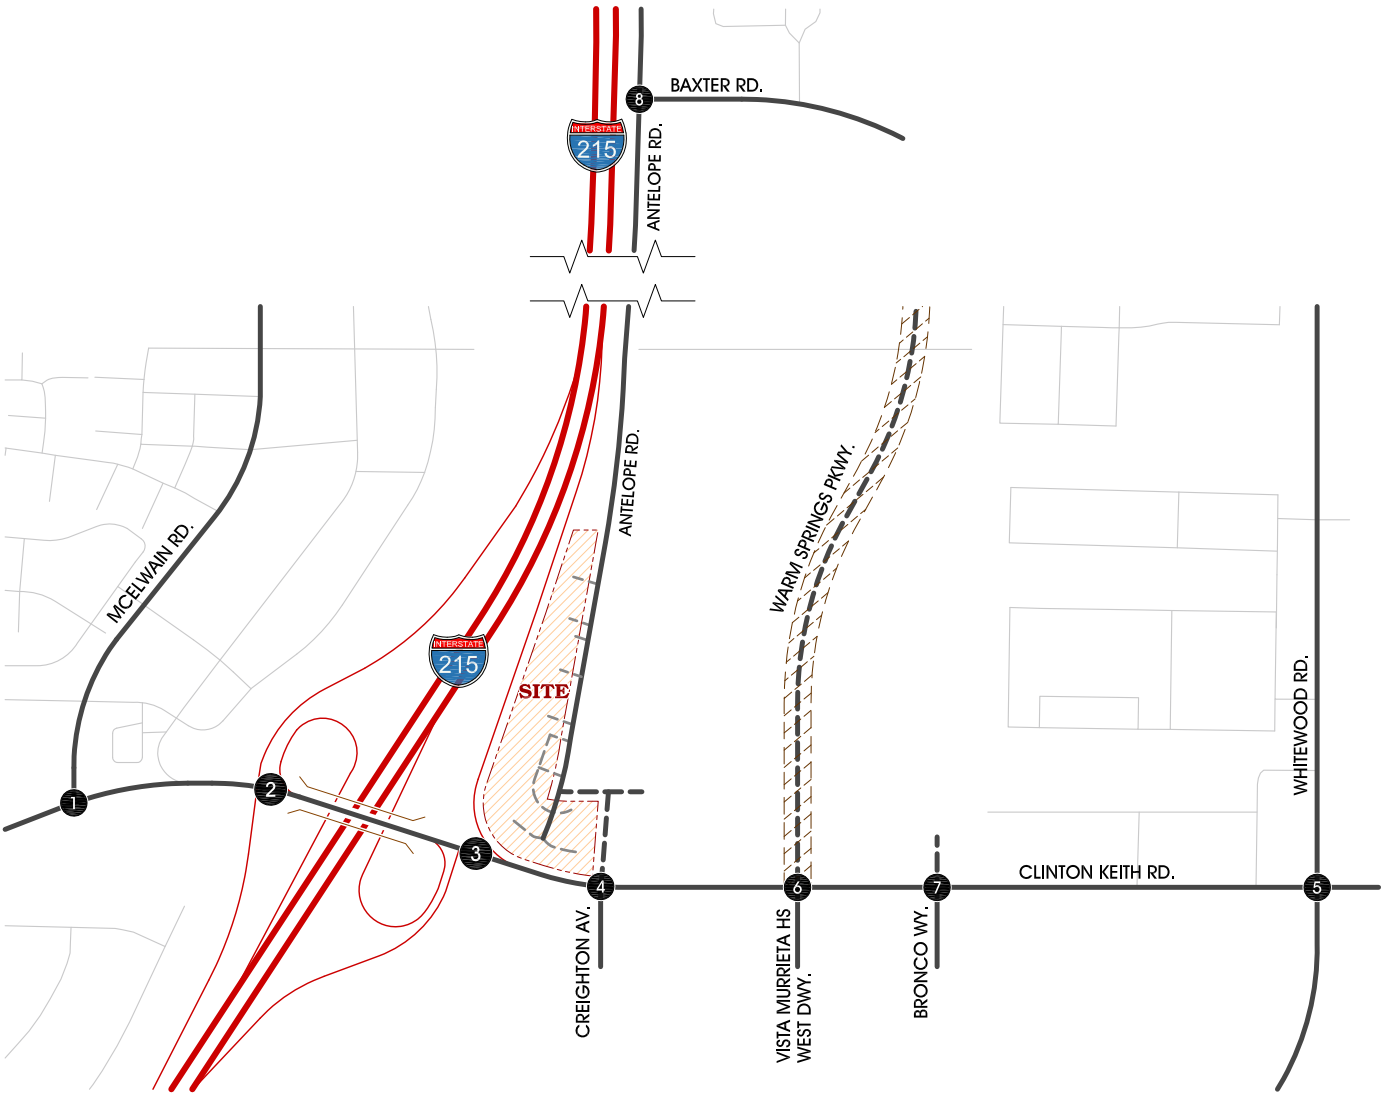
Table 4-3 presents the cumulative development land uses and trip generation summary. As presented in Table 4-3, the cumulative developments are projected to generate a total of approximately 79,536 trip-ends per day with 4,216 vehicles per hour during the AM peak hour, 7,476 vehicles per hour during the PM peak hour, and 3,743 during the Saturday peak hour. Cumulative development information is provided in Appendix "F".

4. Total Background Peak Hour Turning Movement Volumes

Based on the identified trip distribution for the cumulative development on arterial highways throughout the study area, cumulative development only AM and PM peak hour intersection turning movement volumes are shown on Figures 4-F and 4-G.

Existing plus Ambient plus Project (E+A+P) (2021) AM, PM, and Saturday peak hour intersection turning movement volumes are shown on Figures 4-H through 4-J, respectively.

Existing plus Ambient plus Cumulative (E+A+C) (2021) AM, PM, and Saturday peak hour intersection turning movement volumes are shown on Figures 4-K through 4-M, respectively.



Existing Plus Ambient Plus Project Plus Cumulative (E+A+P+C) (2021) AM, PM, and Saturday peak hour intersection turning movement volumes are shown on Figures 4-N through 4-P, respectively.

5.0 TRAFFIC ANALYSIS

Peak hour intersection analysis has been performed at the study area intersections for each of the project scenarios and for projected future conditions. Improvements are recommended to satisfy the level of service requirements of the City of Murrieta and if the following impacts are identified:

1) When existing traffic conditions (Analysis Scenario 1) exceed the General Plan target LOS.

2) When project traffic, when added to existing traffic (Analysis Scenario 2), will deteriorate the LOS to below the target LOS, and impacts cannot be mitigated through project conditions of approval.

3) When cumulative traffic (Analysis Scenario 3) exceeds the target LOS, and impacts cannot be mitigated through existing infrastructure funding mechanisms.

A. Existing plus Ambient plus Project (E+A+P) (2021) Conditions

The results of the E+A+P (2021) conditions intersection analysis are summarized in Table 5-1.1. The E+A+P (2021) condition operations analysis worksheets are provided in Appendix "G".

For EAP conditions, the study area intersections are anticipated to operate at an acceptable level of service (LOS “D” or better) during the peak hours with the following planned improvements:

Creighton Avenue / Clinton Keith Road (#4)

- Modify existing northbound (NB) right turn lane to a shared through right lane.
- Construct one southbound (SB) left turn lane and one SB shared through right lane.
- Construct one westbound (WB) right turn lane.
- Install a “no right turn on red” signage for the SB approach.

In addition, improvements at the Whitewood Road / Clinton Keith Road were recently constructed. Therefore, the following configuration is shown as built for future conditions:

Whitewood Road / Clinton Keith Road (#5)

- NB Approach: one left turn lane, one through lane, and one shared through/right lane.
- SB Approach: one left turn lane, one through lane, and one shared through/right lane.
- EB approach: two left turn lanes, two through lanes, and one right turn lane.

TABLE 5-1.1

INTERSECTION ANALYSIS FOR EXISTING PLUS AMBIENT PLUS PROJECT (2021) CONDITIONS

ID	Intersection	Traffic Control [1]	Intersection Approach Lanes [2]												Delay [3] (secs.)			Level of Service [3]		
			Northbound			Southbound			Eastbound			Westbound			Weekday		Sat	Weekday		Sat
			L	T	R	L	T	R	L	T	R	L	T	R	AM	PM	MD	AM	PM	MD

3	I-215 NB Ramps / Clinton Keith Rd.	TS	1	0	1	0	0	0	0	3	1>>	0	3	1>>	33.8	23.4	21.1	C	C	C
4	Creighton Ave. / Clinton Keith Rd.	TS	1	1	0	1	1	0	1	3	1	1	3	1	39.8	33.9	43.5	D	C	D
5	Whitewood Rd. / Clinton Keith Rd.	TS	1	*2*	0	1	2	0	2	*2*	1	*2*	*3*	*1*	36.0	45.5	26.5	D	D	C
6	Vista Murrieta HS W. Dwy. / Clinton Keith Rd.	CSS	0	0	1	0	0	0	0	3	0	0	3	0	16.3	16.2	0.0	C	C	A
7	Bronco Wy. / Clinton Keith Rd.	TS	2	0	1	0	0	0	1U	3	d	1	3	0	19.2	12.0	4.1	B	B	A
8	Antelope Rd. / Baxter Rd.	TS	0	1	1	1	1	0	0	0	0	1	0	1	26.1	27.4	-	C	C	-

[1] TS = Traffic Signal; CSS = Cross Street Stop

[2] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; 1! = Shared Left-Through-Right Lane; 0.5 = Shared Lane ; d = Defacto right turn lane; > = Right Turn Overlap; >> = Free Right Turn Lane

1 = Recently built in 2018 after counts were taken; 1 = Lane Improvement

[3] Delay and level of service calculated using the following analysis software: Synchro Software

- WB approach: two left turn lanes, three through lanes, and right turn lane.

The 95th percentile queueing analysis results for E+A+P (2021) traffic conditions are presented in Table 5-1.2. Based on the analysis, it appears that the Whitewood/Clinton Keith intersection will have excessive queuing on the northbound and southbound left turn movements. The project will be responsible for designing, furnishing and installing the proposed lengthening of the turn pockets. Since the lengthening of the turn pockets will not accommodate the forecasted queues, a statement of overriding considerations will be required. The queuing analysis worksheets are included in Appendix "G".

Table 5-2 provides a summary of the EAP (2021) conditions roadway segment capacity analysis. As shown on Table 5-2, the study area roadway segments are anticipated to continue to operate within LOS "C" capacity thresholds.

Tables 5-3 and 5-4 summarize the freeway ramp analysis for I-215 at the Clinton Keith Road Interchange. As shown on Tables 5-3 and 5-4, the freeway ramps and basic freeway segments analyzed for this study were found to operate at an acceptable LOS (LOS "D" or better) during the peak hours. The EAP ramp analysis worksheets are provided in Appendix "H". The basic freeway segment analysis worksheets for EAP conditions are included in Appendix "I".

B. Existing plus Ambient plus Cumulative (E+A+C) (2021) Conditions

The results of the E+A+C (2021) conditions intersection analysis are summarized in Table 5-5.1. The E+A+C (2021) condition operations analysis worksheets are provided in Appendix "J".

For EAC conditions, the intersection of Whitewood Road / Clinton Keith Road is anticipated to operate at LOS E during the PM peak hour conditions. It should be noted however that the City's General Plan has projected this intersection to be deficient and accepts LOS E as an acceptable performance for Whitewood / Clinton Keith Road (#5) intersection. The remaining study area intersections are anticipated to operate at an acceptable level of service (LOS "D" or better) during the peak hours with the following planned improvements, in addition to the improvements identified under EAP conditions:

Warm Springs Parkway – Vista Murrieta HS W. Driveway / Clinton Keith Road (#6)

- Install Traffic Signal
- Provide a SB right turn overlap phase
- Restrict eastbound U-Turns
- NB Approach: provide two left turn lanes, one through lane, and maintain existing right turn lane.

TABLE 5-1.2

		WBL	520	64	69	-
		WBR	520	39	45	-
		NBR	50	25	8	-
		SBL	150	169 [3]	86	-

[1] Queue length calculated using Synchro 8
BOLD = exceeds storage lane

[2] Existing/Proposed pocket length storage (for turning movements) or link distance (for through movements). 100 = Existing; **100** = Proposed
100 = Recommended

[3] 95th percentile queue is anticipated to exceed available storage length. However, the excess queue length can be accommodated within the transition lane.

[4] It should be noted that a school access located along Whitewood Road is approximately 480 ft. south of Clinton Keith Road and extending the NBL turn lane at Clinton Keith Road over 420 ft. is not feasible. Therefore, the 95th percentile queue for the NBL is is anticipated to continue to exceed available storage length.

[1] TS = Traffic Signal; CSS = Cross Street Stop

[2] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.
L = Left; T = Through; R = Right; 1! = Shared Left-Through-Right Lane; 0.5 = Shared Lane ; d = Defacto right turn lane; > = Right Turn Overlap; >> = Free Right Turn Lane
1 = Recently built in 2018 after counts were taken; 1 = Lane Improvement

[3] Delay and level of service calculated using the following analysis software: Synchro Software

[4] The City's General Plan has identified this intersection to be deficient and accepts LOS E as an acceptable performance criteria.

- SB Approach: construct two left turn lanes, one through lane, and two right turn lanes.
- EB Approach: provide two left turn lanes, and maintain existing 3 through lanes.
- WB Approach: provide one left turn lane, one right turn lane, and maintain existing 3 through lanes.

Bronco Way / Clinton Keith Road (#7)

- Modify existing NB right turn lane to provide one shared through/right lane.
- Construct one SB left turn lane and one SB shared through/right lane.
- Provide one WB right turn lane.

It should be noted that both improvements are anticipated to be constructed in conjunction with the development of nearby cumulative projects (Costco & Vineyard Shopping Center). The 95th percentile queueing analysis results for E+A+C (2021) traffic conditions are presented in Table 5-5.2. Based on the analysis, it appears that the Whitewood/Clinton Keith intersection will have excessive queuing on the northbound and southbound left turn movements. The queuing analysis worksheets are also included in Appendix "J".

Table 5-6 provides a summary of the EAC (2021) conditions roadway segment capacity analysis. As shown on Table 5-6, the study area roadway segments are anticipated to continue to operate within LOS "C" capacity thresholds.

Tables 5-7 and 5-8 summarize the freeway ramp analysis for I-215 at the Clinton Keith Road Interchange. As shown on Tables 5-7 and 5-8, the freeway ramps and basic freeway segments analyzed for this study were found to operate at an acceptable LOS (LOS "D" or better) during the peak hours. The EAC ramp analysis worksheets are provided in Appendix "K". The basic freeway segment analysis worksheets for EAP conditions are included in Appendix "L".

C. Existing Plus Ambient Plus Project Plus Cumulative (E+A+P+C) (2021) Conditions

The results of the E+A+P+C (2021) conditions intersection analysis are summarized in Table 5-9.1. The E+A+P+C (2021) condition operations analysis worksheets are provided in Appendix "M".

For EAPC conditions, the intersection of Whitewood Road / Clinton Keith Road is anticipated to continue to operate at LOS E during the PM peak hour conditions. As mentioned previously, the City's General Plan accepts LOS E as an acceptable performance for Whitewood / Clinton Keith Road (#5) intersection. The remaining study area intersections are anticipated to continue to operate at an acceptable level of service (LOS "D" or better) during the peak hours with the planned improvements identified previously under EAC conditions. However, the following additional improvements are

[3] 95th percentile queue is anticipated to exceed available storage length. However, the excess queue length can be accommodated within the transition lane.

[4] Staggered dual left turns (300 ft. & 600 ft.)

[5] It should be noted that a school access located along Whitewood Road is approximately 480 ft. south of Clinton Keith Road and extending the NBL turn lane at Clinton Keith Road over 420 ft. is not feasible. Therefore, the 95th percentile queue for the NBL is is anticipated to continue to exceed available storage length.

[1] TS = Traffic Signal; CSS = Cross Street Stop

[2] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; 1! = Shared Left-Through-Right Lane; 0.5 = Shared Lane ; d = Defacto right turn lane; > = Right Turn Overlap; >> = Free Right Turn Lane

1 = Recently built in 2018 after counts were taken; **1** = Lane Improvement; **1** = With additional improvement in comparison to EAC conditions to provide adequate queueing storage

[3] Delay and level of service calculated using the following analysis software: Synchro Software

[4] The City's General Plan has identified this intersection to be deficient and accepts LOS E as an acceptable performance criteria.

needed to mitigate potential queuing issues at Creighton Avenue / Clinton Keith Road (#4) and Bronco Way / Clinton Keith Road (#7):

Creighton Ave. / Clinton Keith Road (#4)

- Lengthen the EB left turn pocket by 50 feet to provide 300 feet of stacking distance.

Bronco Way / Clinton Keith Road (#7)

- Provide a 2nd WB left turn lane.

Warm Springs Pkwy./Clinton Keith Rd. (#6) – The eastbound left turn pocket is anticipated to experience during the Saturday peak conditions with the proposed improvement measures.

Signal coordination and detailed queuing evaluation has also been included in this traffic study report for all intersections under EAPC (2021) conditions. Table 5-10 summarizes the 95th percentile for the EAPC (2021) with intersection improvements queuing analysis. The queuing analysis worksheets are also included in Appendix "M".

As indicated in the queueing analysis, the eastbound left turn volumes at the intersection of Creighton/Clinton Keith Road is anticipated to exceed the stacking length on a Saturday peak hour. A 2nd eastbound left turn lane (300') would accommodate the anticipated queuing and fully mitigate the stacking impacts of the Curci project since it would provide 600 feet of queuing. A supplemental sensitivity analysis has been performed to determine what measures would be required to accommodate the anticipated queuing of a single eastbound left turn lane. The restriction of the Costco traffic through the Creighton intersection along with the following project land uses can be developed to allow this intersection to accommodate the single eastbound left turn lane:

- 5,000 sf Tire Store
- 3,000 sf High Turnover (Sit-Down) Restaurant
- 5,000 sf Drive-in Bank

Furthermore, based on the analysis, it appears that the Whitewood/Clinton Keith intersection will have excessive queuing on the northbound and southbound left turn movements. The project will be responsible for designing, furnishing and installing the proposed lengthening of the turn pockets. Since the lengthening of the turn pockets will not accommodate the forecasted queues, a statement of overriding considerations will be required.

Table 5-11 provides a summary of the EAPC (2021) conditions roadway segment

[1] Queue length calculated using Synchro 8
BOLD = exceeds storage lane

[2] Existing/Proposed pocket length storage (for turning movements) or link distance (for through movements). 100 = Existing; **100** = Proposed
100 = Recommended

[3] 95th percentile queue is anticipated to exceed available storage length. However, the excess queue length can be accommodated within the transition lane.

[4] It should be noted that a school access located along Whitewood Road is approximately 480 ft. south of Clinton Keith Road and extending the NBL turn lane at Clinton Keith Road over 420 ft. is not feasible. Therefore, the 95th percentile queue for the NBL is is anticipated to continue to exceed available storage length.

capacity analysis. As shown on Table 5-11, the study area roadway segments are anticipated to continue to operate within LOS “C” capacity thresholds.

Tables 5-12 and 5-13 summarize the freeway ramp analysis for I-215 at the Clinton Keith Road Interchange. As shown on Tables 5-12 and 5-13, the freeway ramps and basic freeway segments analyzed for this study were found to operate at an acceptable LOS (LOS “D” or better) during the peak hours. The EAPC ramp analysis worksheets are provided in Appendix "N". The basic freeway segment analysis worksheets for EAPC conditions are included in Appendix “O”.

THIS PAGE LEFT INTENTIONALLY BLANK

6.0 FINDINGS AND RECOMMENDATIONS

This section of the report summarizes the project impacts for each scenario analyzed. Physical and funding recommendations are provided to address the project-related impacts. The scenarios evaluated include:

- **Existing Conditions**
- **Existing + Ambient + Project (2021)**
- **Existing + Ambient + Cumulative (2021)**
- **Existing + Ambient + Project + Cumulative (2021)**

A. Traffic Impacts and Level of Service Analysis

1. Existing Conditions

For Existing traffic conditions, the study area intersections, roadway segments, freeway ramps, and freeway segments are currently operating at an acceptable level of service during the peak hours with the existing geometry and traffic controls.

2. Existing + Ambient + Project (2021) Conditions

For EAP traffic conditions, the study area intersections, roadway segments, freeway ramps, and freeway segments are operating at an acceptable level of service during the peak hours with the following planned improvements:

Creighton Avenue / Clinton Keith Road (#4)

- Modify existing northbound (NB) right turn lane to a shared through right lane.
- Construct one southbound (SB) left turn lane and one SB shared through right lane.
- Construct one westbound (WB) right turn lane.
- Install a "no right turn on red" signage for the SB approach.

In addition, improvements at the Whitewood Road / Clinton Keith Road were recently constructed. Therefore, the following configuration is shown as built for future conditions:

Whitewood Road / Clinton Keith Road (#5)

- NB Approach: one left turn lane, one through lane, and one shared through/right lane.
- SB Approach: one left turn lane, one through lane, and one shared through/right lane.

- EB approach: two left turn lanes, two through lanes, and one right turn lane.
- WB approach: two left turn lanes, three through lanes, and right turn lane.

3. Existing + Ambient + Cumulative (2021) Conditions

For EAC conditions, the intersection of Whitewood Road / Clinton Keith Road is anticipated to operate at LOS E during the PM peak hour conditions. It should be noted however that the City's General Plan has projected this intersection to be deficient and accepts LOS E as an acceptable performance for Whitewood / Clinton Keith Road (#5) intersection. The remaining study area intersections are operating at an acceptable of level of service (LOS "D" or better) during the peak hours with the following planned improvements, in addition to the improvements identified under EAP conditions:

Warm Springs Parkway – Vista Murrieta HS W. Driveway / Clinton Keith Road (#6)

- Install Traffic Signal
- Provide a SB right turn overlap phase
- Restrict eastbound U-Turns
- NB Approach: provide two left turn lanes, one through lane, and maintain existing right turn lane.
- SB Approach: construct two left turn lanes, one through lane, and two right turn lanes.
- EB Approach: provide two left turn lanes, and maintain existing 3 through lanes.
- WB Approach: provide one left turn lane, one right turn lane, and maintain existing 3 through lanes.

It should be noted that under these conditions, the eastbound left turn pocket will experience excessive queues during the Saturday peak period.

Bronco Way / Clinton Keith Road (#7)

- Modify existing NB right turn lane to provide one shared through/right lane.
- Construct one SB left turn lane and one SB shared through/right lane.
- Provide one WB right turn lane.

It should be noted that both improvements are anticipated to be constructed in conjunction with the development of nearby cumulative projects (Costco & Vineyard Shopping Center).

The EAC conditions, for the roadway segments, freeway ramps, and freeway segments are anticipated to continue to operate at an acceptable level of service during the peak hours.

4. Existing Plus Ambient Plus Project Plus Cumulative (E+A+P+C) (2021) Conditions

For EAPC conditions, the intersection of Whitewood Road / Clinton Keith Road is anticipated to continue to operate at LOS E during the PM peak hour conditions. As mentioned previously, the City's General Plan accepts LOS E as an acceptable performance for Whitewood / Clinton Keith Road (#5) intersection. The remaining study area intersections are operating at an acceptable of level of service (LOS "D" or better) during the peak hours with the planned improvements identified previously under EAC conditions. However, the following additional improvements are needed to mitigate potential queuing issues:

Bronco Way / Clinton Keith Road (#7)

- Provide a 2nd WB left turn lane.

It should be noted that excessive queues are anticipated to occur on-site for the southbound approach. However, since the queues are on private property, no improvements have been recommended.

Queueing analysis results for EAPC conditions indicate that the following turn movements are anticipated to exceed available storage lane capacities:

Whitewood Road / Clinton Keith Rd. (#5)

- NB left turn *(AM & PM peak hours)*
- SB left turn *(AM & PM peak hours)*

Warm Springs Pkwy./Clinton Keith Rd. (#6)

- EB left turn (Sat peak hour)

It should be noted that the City Council has adopted overriding considerations in the current General Plan for the intersection of Whitewood Road/Clinton Keith Road. Based on the queuing analysis, it appears that the Whitewood/Clinton Keith intersection will have excessive queuing on the northbound and southbound left turn movements. The project will be responsible for designing, furnishing and installing the proposed lengthening of the turn pockets. Since the lengthening of the turn pockets will not accommodate the forecasts queues, a statement of overriding considerations will be required. The project will be required to contribute a fair share amount to the City's CIP 8389 for the improvements to this intersection.

For the intersection of Creighton Avenue/Clinton Keith Road (#4), the eastbound left turn volumes are anticipated to exceed the stacking length on a Saturday peak hour. A 2nd eastbound left turn lane (300') would accommodate the anticipated queuing and fully mitigate the stacking impacts of the Curci project since it would provide 600 feet of queuing. A supplemental sensitivity analysis has been performed to determine what measures would be required to accommodate the anticipated queuing of a single eastbound left turn lane. The restriction of the Costco traffic through the Creighton intersection along with the following project land uses can be developed to allow this intersection to accommodate the single eastbound left turn lane:

- 5,000 sf Tire Store
- 3,000 sf High Turnover (Sit-Down) Restaurant
- 5,000 sf Drive-in Bank

Based on the supplemental analysis, lengthening the EB left turn pocket by 50 feet to provide 300 feet of stacking distance at the intersection of Creighton Ave. / Clinton Keith Road (#5) is anticipated to provide adequate storage length during Weekday and Saturday conditions. The Project will be responsible to design, fund, and install the second eastbound left turn lane at this intersection and a fair share cost to be paid by adjacent development (Murrieta Costco) towards this improvement if/when they are granted access through this intersection.

It should be noted that excessive queues are anticipated to occur on-site for the southbound approach. However, since the queues are on private property, no improvements have been recommended.

The EAPC conditions, for the roadway segments, freeway ramps, and freeway segments are anticipated to continue to operate at an acceptable level of service during the peak hours.

B. Circulation Recommendations

1. On-Site

Construction of on-site improvements shall occur in conjunction with adjacent project development activity or as needed for project access purposes. The recommended on-site roadway improvements are described below.

- On-site traffic signing and striping should be implemented in conjunction with detailed construction plans for the project.
- Verify that minimum sight distance is provided at the project access points.

Appendix J1

Master Sewer Study

Technical Memorandum

Master Sewer Capacity Study for:

The Vineyard, Curci, Costco, and Candee Commercial Developments

Prepared For

Randy Weisser
CK-17, LP, A California Limited Partnership
27890 Clinton Keith Road
Murrieta, CA 92562

Prepared By:
Excel Engineering

Revised: 4/02/2020

Prepared Under My Supervision

Robert D. Dentino

Purpose of Study

The purpose of this study is to determine the effect the new commercial developments in Sewer Tributary Area B and south to Clinton Keith Road, on the existing sewer infrastructure in Clinton Keith Road, Murrieta California. Four new commercial developments identified as Costco, Candee, Curci, and The Vineyard, are proposed on the north side of Clinton Keith Road just east of Interstate I-215. The study calculates total sewage generation from existing developments in Sewer Tributary Area B and south to Clinton Keith Road. Total sewage generation is calculated to an existing 15-in sewer main in Whitewood Road south of Clinton Keith Road. This study builds on calculations performed by Albert A. Webb Associates, to analyze sewer generation, in Sewer Tributary Area B. This study will supersede a study of The Vineyard site prepared by Excel Engineer dated 10/24/2017. The proposed development areas addressed by this study are depicted in the Sewer Tributary Map, Area B and south to Clinton Keith Road included in this study.

This study also examines the effect these commercial developments will have on the existing sewer improvements in Clinton Keith Road. A hydraulic analysis of the existing sewer in Clinton Keith Road from Creighton Road to Whitewood is reported here.

Finally, these commercial developments are proposing the construction of Warm Springs Parkway from Clinton Keith Road to the north property line on Costco and Candee developments. The proposed improvements include public sewer to serve these developments. This study supports the design of the proposed public sewer facilities in Warm Springs Parkway.

Webb Study

On May 20, 2014, Albert A. Webb Associates, herein after referred to in this report as the Webb Study, prepared calculations to analyze sewer generation for current and future development in Sewer Tributary B. A map, prepared by the Webb Study, shows the tributary area, acreage, boundaries, and land use designations. All references, areas and land use designations used for this study are taken from the map in the Webb Study. The Webb Study is included as an attachment to this study.

The Webb Study assumes 3 phases of development and summarizes sewer generation in three separate tables. Table 1 shows sewer generation by the existing developments present at the time of study. Table 1 concludes the capacity of the existing 15-in sewer in Whitewood exceeds predicted sewer flows. Table 2 shows sewer generation from the existing development and some future developments. While Table 2 included some future developments, The Vineyard and the multi-family developments on the south side of Clinton Keith Road, west of the school property, are not included in the calculations. Table 2 concludes the capacity of the existing 15-in sewer in Whitewood exceeds sewer flows. Table 3 includes all the development shown in table 2, and adds the remaining properties, to build-out of the tributary area. Table 3 includes The Vineyards and the other commercially zoned properties in the area. Table 3 concludes that at, build-out, sewer capacity of the 15-in main is exceeded and a parallel main is required.

This study adds to Table 2. The Vineyard, Costco, the Curci development the Candee development and the multi-family residential development to the southwest of CK-17 identified as property number 25 are now included in calculations.

Methodology

This study follows similar methodology used for the Webb Study. Sewer generation is based on guidelines provided Eastern Municipal Water District 2006 Master Plan Update. Land use designations, areas, and boundaries are taken from the tributary map provided in the Webb Study. A foot note on tables 1, 2, and 3 establishes that the existing 15-in sewer main in Whitewood Road has a capacity, D/d=0.75 of 2.392 cfs.

The hydraulic analysis uses Manning's equation to determine normal depths based on flows generated in Table 2.1.

It should be noted that the invert for manhole number 1 at the intersection of Clinton Keith Road appears with differ from sub-table to the next in Table 2.1. The differing inverts reflects the difference a from as-builts and fielded topo performed by Excel Engineering. This difference will not affect the flow analysis results which is the purpose of Table 2.1.

Results and Conclusions

Data from Table 2 from the Webb Study, plus The Vineyards the additional commercial developments, and the multi-family development, are shown in Table 2.1. Total sewage generation at the connection point in Whitewood Road is calculated to be 2.212 cfs. With the capacity of the existing 15-in sewer in Whitewood Road known to be 2.392 cfs, the addition of four commercial developments to the tributary area will not require additional downstream sewer capacity.

The results of the hydraulic analysis of the sewer in Clinton Keith Road and the proposed sewer in Warm Springs Parkway, indicate that the existing and proposed improvements have enough capacity. Results from the analysis are shown in Table 2.2. The Sewer Capacity Exhibit, prepared for this study, is a graphic representation of the data analyzed in Table 2.2. The exhibit depicts sewer reaches, manholes and overall sewer layout for the sewer in Clinton Keith Road and proposed sewer in Warm Springs Parkway and can be found as an attachment to this report. The hydraulic analysis for the proposed sewer includes all future upstream development and confirms the proposed 8" pipe in Warms Springs Parkway is sufficient.

It should be noted that the system was analyzed assuming a worst-case condition. All effluent from area 22A-2 is assumed to drain to Warm Springs Parkway, when in fact some properties sewer through the east driveway, tying to a proposed 8" sewer main in Clinton Keith Road. This study also assumes that effluent for area 22B sewers to the east by a private system in the Vineyard development. Both developments are controlled by the same entity and property agreements will be in place prior to construction.

The proposed sewer in Warm Springs Parkway was analyzed to serve the entire commercial area draining to Clinton Keith Road, identified on the Sewer Tributary Map as areas 22A-1, 22A-2, 22B, 22C, and 22D. The high point or northerly limits of the tributary area was established by a master alignment and profile study, of Warm Springs Parkway, adopted by the City of Murrieta. The hydraulic analysis confirms that an 8" sewer main will provide sufficient capacity for this tributary area.

Note: information used to produce this table was obtained from Technical Memorandum- Analysis of Whitewood Sewer Southerly of Clinton Keith Road. Prepared by Albert A. Webb Associates, May 20,2014; Eastern Municpal Water District 2006 Mater Plan Update; and calulations performed by Excel Engineering.

Existing 15-in sewer line at the intersection of Clinton Keith Road and Whitewood Road has a capacity of 2.392 cfs, based on a slope of 0.0022 ft./ft., n=0.015, d/D=0.75.

ALBERT A. WEBB ASSOCIATES

Technical Memorandum

Analysis of Whitewood Sewer Southerly of Clinton Keith Road

Prepared for Fred Azimie
Civil Engineering Associate II
New Business Development
Eastern Municipal Water District

May 20, 2014

1.0 INTRODUCTION

Webb Associates prepared a plan of service for Tract 28532-2, -3, -4 and -5. The plan of service contemplated a proposed 12-inch diameter sewer in Whitewood Road, south of Clinton Keith Road paralleling an existing 15-in diameter sewer for approximately 1,400 l.f. to convey the sewage generated by existing and proposed development. This was based on an analysis previously prepared by EMWD staff. Based on discussions regarding the proposed parallel sewer, capacity may be available in the existing 15-in sewer gravity main to serve Tracts 28532-2 and -4. Webb was asked to analyze the existing, interim and ultimate condition for this portion of sewer.

2.0 AREA OF BENEFIT

The attached map shows the tributary area for the existing 15-in sewer in Whitewood Road south of Clinton Keith Road.

Area 24 is generally down grade from Whitewood Road. Therefore, we assumed that all sewage flows from all of area 24 would be pumped by a future lift station. This is the most conservative assumption for downstream sewer capacity. Area 17 is assumed to have zero sewer generation based on open space and grades which make it difficult to sewer via gravity southerly to Whitewood Road.

3.0 SEWER GENERATION

Sewage generation from each planning area was determined. Based on our understanding of the development status and future land use of the tributary area, the following additional conditions were analyzed

- Existing Condition (Table 1)
- Interim Condition w/ future MOB's, Tract 28532-1 and Tracts 28532-2 and -4 (Table 2)
- Ultimate Condition (Table 3)

3.1 Existing Condition

The existing condition is based on EMWD's sewer altas maps and aerial photographs of the existing development. The capacity of the existing 15-inch sewer is estimated at 2.392 cfs based on a slope= 0.0022, n=0.015 and a maximum allowable of d/D ratio = 0.75. The existing condition has a peak flow of 0.958 cfs, well within the capacity of the existing 15-inch sewer.

3.2 Interim Condition w/ future MOB's, Tract 28532-1 and Tracts 28532-2 and -4

This interim condition is based on the existing condition plus flows from future MOB's, approved Tract 28532-1 and proposed Tracts 28532-2 and -4 via the Baxter Road Lift Station. This condition has a peak flow of 1.57 cfs, well within the capacity of the existing 15-inch sewer.

3.3 Ultimate Condition

The ultimate condition is based on the all flows from the areas as shown in the tributary area. This condition has a peak flow of 4.945 cfs, well above the capacity of the 15-inch sewer. No analysis was done downstream of this point. The ultimate condition is based on the City of Murrieta's land use and is subject to change when specific projects are submitted.

4.0 CONCLUSION

The capacity of the existing 15-inch sewer gravity main can handle the additional peak sewage flows from Tract 28532-2 and 28532-4 pumped by the Baxter Road Lift Station. The condition of requiring a parallel or up-sized sewer gravity main in Whitewood Road south of Clinton Keith Road can be deferred to later development.

Sincerely,

Bradley Sackett, P.E.
Senior Engineer

(1) Based on EMWD Sanytary Sewer System Planning & Design (Revised 09-01-06) as follows:
Medium Density Residential (3.5 Pop/EDU) = 100 gpd/capita
High Density Residential (2.5 Pop/EDU) = 80 gpd/capita

(2) Rounded to the Nearest Fraction

(3) Sewer Tributary Area (See Attached Figure)

*: the sewer generation was provided by others and based on 195 fixture units

**: Increased by 1.2 times for discharge rate per Lift Station design standard

Existing 15-in sewer line has a capacity of 2.392 cfs based on slope = 0.0022, n = 0.015 and d/D = 0.75.

At 2.659 cfs, d/D= 0.84 in existing 15-in sewer.

PUBLIC WATER & SEWER PLANS FOR:
THE VINEYARD (TMP NO. 36493)
CITY OF MURRIETA

EMWD WATER NOTES

USE ONLY THOSE NOTES AND STANDARDS DETERMINED APPROPRIATE BY EMWD.

DETAILED REQUIREMENTS:

(LIST ON WATERLINE LAYOUT FOR SUBDIVISION IMPROVEMENTS AND ON FRONT SHEET OF THE CONSTRUCTION PLANS WHERE THEY ARE NOT THE SAME).

1. WATER PIPELINE AND APPURTENANT CONSTRUCTION SHALL BE IN ACCORDANCE WITH EMWD STANDARDS AND SPECIFICATIONS.

2. PRIOR TO CONSTRUCTION OF PIPELINE, CONTRACTOR SHALL EXPOSE EXISTING WATER SYSTEM AND VERIFY ITS EXISTING ELEVATION AND LOCATION.

3. WHERE SEWERS HAVE BEEN CONSTRUCTED BY AGENCIES OTHER THAT EMWD, CONTRACTOR SHALL VERIFY SEWER LATERAL LOCATIONS PRIOR TO EXCAVATION FOR WATER PIPELINE. IN THE EVENT SEWER LATERALS ARE FOUND TO BE AT A DEPTH LESS THAN IN ACCORDANCE WITH EMWD SEWER STANDARDS, (FOR CITY OF HEMET, REFER TO CITY OF HEMET STD. NO. 201) WATER PIPELINE CONTRACTOR SHALL ADJUST WATER PIPELINE DEPTH AS DIRECTED BY THE ENGINEER TO CROSS OVER THE SEWER LATERAL IF POSSIBLE, TO PROVIDE 36" MINIMUM COVER TO FINISH ROAD GRADE; OTHERWISE, CROSS UNDER THE LATERAL, WHICH REQUIRES SPECIAL CONSTRUCTION.

4. ALL SERVICE CONNECTIONS SHALL BE 1" SERVICES X 1" METERS, UNLESS OTHERWISE NOTED; AND SHALL BE LOCATED AS SHOWN ON THE PLANS AND ADJUSTED AS NECESSARY TO MISS DRIVEWAYS. WATER SERVICE ASSEMBLIES SHALL BE INSTALLED IN ACCORDANCE WITH STD. DWG. B-590A, TYPE (A,B,C) ADJOINING LOT METER BOXES SHALL BE PLACED TOGETHER AT PROPERTY LINE.

5. AIR VALVE ASSEMBLIES SHALL BE INSTALLED IN ACCORDANCE WITH STD. DWG. B- 598 TYPE B, UNLESS OTHERWISE NOTED.

6. WATER SYSTEM PROFILE ELEVATIONS ARE TO CENTERLINE (CENTER GRADE) OF PIPE.

7. APPROVED REDUCTION PRESSURE BACKFLOW PREVENTION DEVICE (B-587, TYPE A, B, C) REQUIRED FOR ALL INDUSTRIAL, COMMERCIAL, APARTMENT COMPLEXES AND LANDSCAPE SERVICES.

8. INSTALL LOCATOR WIRE OVER WATER MAIN PER STD. DWG. B-656.

9. FIRE HYDRANT ASSEMBLIES SHALL BE INSTALLED IN ACCORDANCE WITH STD. DWG. B-517.

10. BLOW -OFF ASSEMBLIES SHALL BE INSTALLED IN ACCORDANCE WITH STD. DWG. B-357.

11. TEMPORARY BLOW-OFF ASSEMBLIES SHALL BE INSTALLED IN ACCORDANCE WITH STD. DWG. B-568.

12. ALL PVC PIPE THROUGH 12 INCH SHALL BE TYPE C-900, DR 18, EXCEPT WHERE NOTED OTHERWISE. PIPE SHALL CONFORM TO AWWA SPECIFICATIONS. 18 INCH AND LARGER SHOULD BE C-905, CLASS 235.

13. FITTINGS FOR PVC PIPE SHALL BE DUCTILE OR GRAY IRON. FITTINGS SHALL BE FLANGED, BOLTED MECHANICAL JOINTS, OR PUSH-ON JOINTS, AND SHALL BE CEMENT MORTAR LINED AND TAR (SEAL) COATED PER EMWD STANDARDS AND SPECIFICATIONS.

14. ALL DUCTILE OR GRAY IRON FITTINGS SHALL BE POLYETHYLENE ENCASED AT THE TIME OF INSTALLATION PER EMWD STANDARDS AND SPECIFICATIONS.

15. A JOINT RESTRAINT DEVICE SHALL BE USED ON ALL MAIN LINE PIPE JOINTS WITHIN SPECIFIED LIMITS AND ALL JOINTS OR WATER APPURTENANCE LATERALS OFF MAIN LINE, PER EMWD STD. DWG. B-663.

EMWD SEWER NOTES

1. SEWER SYSTEM CONSTRUCTION AND MATERIALS SHALL BE IN ACCORDANCE WITH EMWD'S STANDARDS AND SPECIFICATIONS.

2. GRAVITY SEWER PROFILE ELEVATIONS ARE TO FLOW LINE (CONDUIT INVERT). FORCE MAIN PROFILE ELEVATIONS ARE TO CENTIGRADE (C.G.).

3. CONTRACTOR HAS THE OPTION TO INSTALL PLASTIC OR VCP SEWERS EXCEPT WHERE SPECIFICALLY DESIGNATED ON PLANS PER EMWD STANDARDS AND SPECIFICATIONS.

4. MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH STANDARD DRAWINGS SB- 53, SB-58 AND SB-61, AS APPLICABLE. SEWER MAINS MAY BE LAID THROUGH THE MANHOLES AND USED AS A FORM FOR THE INVERT.

5. MANHOLES OF DEPTHS LESS THAN FIVE FEET FROM FINISH STREET GRADE TO SEWER PIPE SHELF ARE TO BE CONSTRUCTED IN ACCORDANCE WITH STANDARD DRAWING SB- 30.

6. ALL PRIVATE LATERALS SHALL HAVE A PRIVATE ON-SITE CLEANOUT IN ACCORDANCE WITH STANDARD DRAWINGS SB-52. IN ADDITION, FOR PRIVATE LATERALS SERVING INDUSTRIAL AND/OR COMMERCIAL DEVELOPMENTS, THE REQUIREMENTS FOR SAMPLING AND/OR PRETREATMENT FACILITIES SHALL BE DETERMINED BY CONTACTING EMWD'S SOURCE SOURCE CONTROL DIVISION AT (951) 928-3777, EXT. 6203.

EMWD SEWER NOTES CONT.

7. MAINLINE CLEANOUTS, WHERE CALLED FOR ON THE PLANS, SHALL BE CONSTRUCTED IN ACCORDANCE WITH STANDARD DRAWING SB-52.

8. PRIOR TO CONSTRUCTION OF SEWER, CONTRACTOR SHALL EXPOSE EXISTING SEWER AND VERIFY ITS EXISTING ELEVATION AND LOCATION. WHERE CONNECTING TO EXISTING MANHOLES AND INLET STUB OF PROPER SIZE EXISTS, NO ALTERATIONS SHALL BE MADE TO EXISTING MANHOLE BASE OR STUB EXCEPT AS SPECIFICALLY AUTHORIZED BY EMWD.

9. ALL SEWER INLETS AT THE MANHOLE SHALL BE SUCH THAT ITS CROWN SHALL BE LEVEL WITH THE CROWN OF THE OUTLET PIPE, AT THEIR PROJECTIONS TO THE MANHOLE CENTERLINE.

10. RECONSTRUCTION OF EXISTING MANHOLES SHALL BE SCHEDULED AT THE CONVENIENCE OF EMWD AND SHALL BE COMPLETED WITHIN FIVE WORKING DAYS FOLLOWING ITS COMMENCEMENT.

11. PRIVATE SEWER LATERALS SHALL BE CONSTRUCTED IN ACCORDANCE WITH SB-177. LOCATIONS OF WYES AND PRIVATE LATERALS, WHERE NOT SHOWN ON THE PLANS, ARE TO BE DETERMINED IN THE FIELD PRIOR TO CONSTRUCTION TO MISS DRIVEWAYS. ALL PRIVATE LATERALS ARE TO BE 4" IN DIAMETER UNLESS OTHERWISE SHOWN ON PLANS. CONNECTIONS OF NEW PRIVATE LATERALS TO EXISTING SEWER ARE TO BE PER STANDARD DRAWING SB-176.

12. THE CONTRACTOR IS ADVISED THAT THE WORK ON THIS PROJECT MAY INVOLVE WORKING IN A CONFINED AIR SPACE. CONTRACTOR SHALL BE RESPONSIBLE FOR "CONFINED AIR SPACE", ARTICLE 108, TITLE 8, CALIFORNIA ADMINISTRATIVE CODE.

13. WHERE GROUNDWATER IS ENCOUNTERED, ALL VCP PIPE SHALL BE TREATED FOR ABSORPTION RESISTANCE PER EMWD'S SPECIFICATIONS.

14. BACKWATER VALVES SHALL BE INSTALLED PER SECTION 710.1 OF THE UNIFORM PLUMBING CODE.

15. ALL PIPE ZONE BEDDING & TRENCH BACKFILL ARE TO BE PER STANDARD DRAWING SB-157, SB-158 AND SB-159.

LEGAL DESCRIPTION

THE LAND REFERRED TO IN THIS SURVEY IS IN THE STATE OF CALIFORNIA, COUNTY OF RIVERSIDE, CITY OF MURRIETA AND IS DESCRIBED AS FOLLOWS:

PARCEL 3 OF PARCEL MAP NO. 8231, AS SHOWN BY PARCEL MAP ON FILE IN BOOK 55, PAGE 53, OF PARCEL MAPS, RECORDS OF RIVERSIDE COUNTY, CALIFORNIA;

EXCEPTING THEREFROM THAT PORTION AS CONVEYED TO THE COUNTY OF RIVERSIDE BY GRANT DEED RECORDED JULY 17, 2007 AS INSTRUMENT NO. 2007-0463772 OF OFFICIAL RECORDS.

ASSESSOR'S PARCEL NUMBER

392-290-051

ZONING

EXISTING: COMMUNITY COMMERCIAL (CC)
PROPOSED: COMMUNITY COMMERCIAL (CC)
GENERAL PLAN DESIGNATION: COMMUNITY COMMERCIAL (CC)

BOUNDARY

DIMENSIONS SHOWN HEREON ARE BASED ON FIELD SURVEY PERFORMED BY EXCEL ENGINEERING ON JULY 14, 2006.

SCHOOL DISTRICT

MENIFEE UNION SCHOOL DISTRICT – (951) 672-1851

UTILITIES

ELECTRIC – SOUTHERN CALIFORNIA EDISON – (951) 928-8272
GAS – SOUTHERN CALIFORNIA GAS – (951) 304-0093
TELEPHONE – VERIZON – (951) 929-9490
WATER & SEWER – EASTERN MUNICIPAL WATER DISTRICT – (800) 426-3693

SOURCE OF TOPOGRAPHY

EXISTING TOPOGRAPHY SHOWN HEREON IS A COMBINATION OF AERIAL TOPOGRAPHY PROVIDED BY ANALYTICAL PHOTOGRAMMETRIC SURVEYS, INC. (FLOWN ON AUGUST 28, 2008) AND SUPPLEMENTAL FIELD DATA SURVEYS CONDUCTED BY EXCEL ENGINEERING.

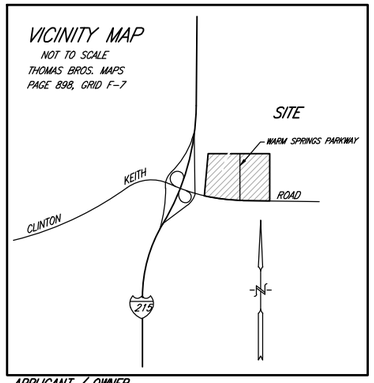
BASIS OF BEARINGS

THE BASIS OF BEARINGS FOR THIS SURVEY IS THE RIVERSIDE COUNTY REAL TIME NETWORK USING CALIFORNIA COORDINATE SYSTEM 83, ZONE 6, NAD 83, EPOCH 2010, AS DETERMINED LOCALLY BY A LINE BETWEEN CONTINUOUS OPERATING REFERENCE STATIONS (CORS) BILL AND P474, BEING: S35°10'15.13"W AS DERIVED FROM GEODETIC VALUES PUBLISHED BY THE CALIFORNIA SPATIAL REFERENCE CENTER (CSRC) AND NATIONAL GEODETIC SURVEY (NGS), RESPECTIVELY AND MEETS ALL THE REQUIREMENTS OF THE CALIFORNIA PUBLIC RESOURCES CODE.

BENCHMARK

THE BENCHMARK FOR THIS SITE IS A RIVERSIDE COUNTY DESIGNATION 600-20-68. A BRASS DISK, STAMPED 600-20-68 IN CONCRETE POST. 0.2 MILES SOUTH ON WASHINGTON AVE FROM THE POST OFFICE IN MURRIETA, 2.4 MILES EAST ON LOS ALAMOS ROAD, 4.8 MILES NORTH ON HWY. 395, 0.1 MILES WEST ON SCOTT ROAD, 78 FEET SOUTHEAST OF POWER POLE #312098-S, 60 FEET SOUTH OF SCOTT ROAD, 4 FEET NORTHWEST OF THE NORTHEAST CORNER OF A PUMP HOUSE, 2 FEET WEST OF A MARKER POST.

SEWER CERTIFICATION



I CERTIFY THAT THE DESIGN OF THE SEWER SYSTEM IN TPM NO. 36493 IS IN ACCORDANCE WITH THE EASTERN MUNICIPAL WATER DISTRICT'S SEWER SYSTEM MASTER PLAN, AND THE DISTRICT HAS PROGRAMMED ADEQUATE CAPACITY TO TREAT WASTES FROM THE PROPOSED TRACT.

CIVIL ENGINEER OF SUBDIVISION DATE:

TIME LIMITATIONS

THE TIME LIMIT ON DRAWING(S) APPROVAL SHALL BE SIX (6) MONTHS FROM THE DATE ON THE CERTIFICATION. IF CONSTRUCTION HAS NOT COMMENCED WITHIN STATED TIME, EMWD REQUIRES DRAWING(S) TO BE REVIEWED BY THE DEVELOPER/DESIGN ENGINEER AND RESUBMITTED TO EMWD FOR POSSIBLE CHANGES IN MASTER PLANNED SIZING AND CHANGES IN SPECIFICATIONS AND STANDARDS.

DECLARATION OF RESPONSIBLE CHARGE

I HEREBY DECLARE THAT I AM THE ENGINEER OF WORK FOR THIS PROJECT, THAT I HAVE EXERCISED RESPONSIBLE CHARGE OVER THE DESIGN OF THE PROJECT AS DEFINED IN SECTION 6703 OF THE BUSINESS AND PROFESSIONS CODE. AND THAT THE DESIGN IS CONSISTENT WITH CURRENT STANDARDS.

I UNDERSTAND THAT THE CHECK OF PROJECT DRAWINGS AND SPECIFICATION BY THE EASTERN MUNICIPAL WATER DISTRICT IS CONFINED TO A REVIEW ONLY AND DOES NOT RELIEVE ME, AS ENGINEER OF WORK, OF MY RESPONSIBILITIES FOR PROJECT DESIGN.

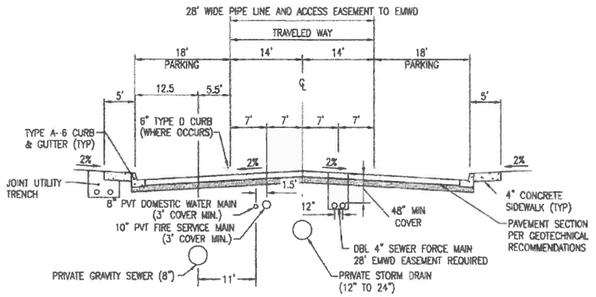
GENERAL NOTES

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE CLEARING OF THE PROPOSED WORK AREA, AND RELOCATION COST OF ALL EXISTING UTILITIES. PERMITTEE MUST INFORM THE CITY OF CONSTRUCTION SCHEDULE AT LEAST 48 HOURS PRIOR TO BEGINNING OF CONSTRUCTION PHONE: (951)304-2489
2. ALL WORK SHALL CONFORM TO THE REQUIREMENTS OF THE CITY OF MURRIETA PUBLIC WORKS DEPARTMENT IMPROVEMENT STANDARDS AND THE LATEST EDITION OF STANDARD SPECIFICATION FOR PUBLIC WORKS CONSTRUCTION (GREEN BOOK).
3. THE DEVELOPER WILL INSTALL STREET NAME SIGNS CONFORMING TO CITY STANDARD NO. 601.
4. CURB DEPRESSIONS AND DRIVEWAY APPROACHES WILL BE INSTALLED AND CONSTRUCTED ACCORDING TO CITY STANDARD NO. 308, 309, OR 310, AS DIRECTED IN THE FIELD.
5. BLUE RAISED REFLECTIVE PAVEMENT MARKERS SHALL BE PLACED TO MARK FIRE HYDRANT AND/OR WATER SUPPLY LOCATIONS AT THE DIRECTION OF THE CITY INSPECTOR FOLLOWING FINAL SEALANT AND STRIPING.
6. WORK MAY NOT START UNTIL PERMITS HAVE BEEN OBTAINED.
7. THE CONTRACTOR SHALL VERIFY ALL UTILITY LOCATIONS WITH UNDERGROUND SERVICE ALERT AT 1-800-422-4133 AT LEAST TWO (2) WORKING DAYS PRIOR TO ANY EXCAVATION.
8. ALL PAVEMENT SECTIONS ARE AT MINIMUM REQUIREMENTS. ADDITIONAL SOIL TEST SHALL BE TAKEN AFTER ROUGH GRADING TO DETERMINE THE EXACT STRUCTURAL SECTION REQUIREMENTS. USE STANDARD NO. 320 IF EXPANSIVE SOIL ARE ENCOUNTERED.
9. DUST CONTROL SHALL BE MAINTAINED AT ALL TIMES BY WATER OR OTHER APPROVED METHODS.
10. EQUIPMENT AND MATERIALS SHALL BE STORED IN A NEAT AND PROTECTED MANNER.
11. THE CONTRACTOR WILL CONDUCT HIS OPERATIONS AS TO OFFER THE LEAST POSSIBLE OBSTRUCTION AND INCONVENIENCE TO PUBLIC TRAFFIC, AND HE SHALL HAVE UNDER CONSTRUCTION NO GREATER LENGTH OR AMOUNT OF WORK THAN HE CAN EXECUTE PROPERLY. ON EXISTING ROADS, TRAFFIC SHALL BE PERMITTED TO PASS THROUGH THE WORK AREA WITH AS LITTLE INCONVENIENCE AND DELAY AS POSSIBLE.
12. EXISTING TRAFFIC SIGNALS AND LIGHTING SYSTEMS SHALL BE KEPT IN OPERATION FOR THE BENEFIT OF THE TRAVELING PUBLIC, AND TO MINIMIZE ANY INTERFERENCE WITH ROUTINE MAINTENANCE OF EXISTING SYSTEMS DURING WORK PROGRESS.
13. WHENEVER THE CONTRACTOR'S OPERATION CREATES A HAZARDOUS CONDITION TO TRAFFIC OR TO THE PUBLIC, HE SHALL FURNISH AT HIS OWN EXPENSE, SUCH FLAGMEN AND GUARDS AS ARE NECESSARY TO GIVE ADEQUATE WARNING TO THE PUBLIC OF ANY DANGEROUS CONDITIONS. HE SHALL ALSO FURNISH, ERECT AND MAINTAIN SUCH FENCES BARRICADES, LIGHTS, SIGNS, AND OTHER DEVICES NECESSARY TO PREVENT ACCIDENTS AND INJURY TO THE PUBLIC.
14. WHERE SURVEY MONUMENTS EXIST, SUCH MONUMENTS WILL BE PROTECTED OR SHALL BE REFERENCED AND RESET, PURSUANT TO BUSINESS AND PROFESSIONS CODE, SECTION 8700 TO 8805 (LAND SURVEYOR'S ACT).
15. WHERE NEW A.C. PAVEMENT JOIN EXISTING PAVEMENT, SAWCUT TO A NEAT EDGE. THE SAWCUTS MUST BE PERPENDICULAR, PARALLEL OR RADIAL TO THE ROADWAY CENTERLINE. OVERLAY AND FEATHER NEW A.C. PAVEMENT TO PROVIDE SMOOTH TRANSITION.
16. ALL EXISTING STREET SIGNS, ROADSIDE MARKERS ETC., SHALL BE PROTECTED AND/OR REPLACED IN KIND TO THE CURRENT CITY STANDARD PLANS AND CURRENT TRAFFIC MANUAL, AT NO COST TO THE CITY.
17. ASPHALTIC EMULSION (FOG SEAL)SHALL BE APPLIED NOT LESS THAN FOURTEEN (14) DAYS FOLLOWING PLACEMENT OF THE ASPHALT SURFACING AND SHALL BE APPLIED AT A MIN. RATE OF 0.05 GALLON PER SQUARE YARD. ASPHALTIC EMULSION SHALL CONFORM TO SECTION 37, 39, AND 94 OF THE STATE STANDARD SPECIFICATIONS.
18. ALL UNDERGROUND FACILITIES, WITH LATERALS SHALL BE IN PLACE PRIOR TO PAVING THE STREET SECTION INCLUDING, BUT NOT LIMITED TO, THE FOLLOWING: WATER, SEWER, GAS, ELECTRIC, CABLE T.V., TELEPHONE, AND DRAINAGE.
19. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. TO THE BEST OF OUR KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT AS SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTIONARY MEASURES TO PROTECT ALL UTILITY LINES, INCLUDING ANY OTHER LINES NOT SHOWN ON THESE PLANS OR NOT OF RECORD.
20. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO APPLY TO THE CITY OF MURRIETA ENGINEERING DEPARTMENT, FOR AN ENCROACHMENT PERMIT FOR ALL WORK ON EXISTING CITY MAINTAINED ROADS, AND FOR UTILITY WORK WITHIN OFFERS OF DEDICATION FOR PUBLIC USE.
21. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO NOTIFY THE ENGINEER TO INSTALL STREET CENTERLINE MONUMENTS AS REQUIRED BY CITY STANDARD DRAWINGS NO. 616, 617, AND 618.
22. STREET LIGHTS SHALL BE INSTALLED IN ACCORDANCE WITH THE CITY OF MURRIETA STANDARD NO. 619 OR 620.
23. APPROVAL OF THESE PLANS BY THE CITY OR ITS AGENTS DOES NOT RELIEVE THE APPLICANT AND HIS ENGINEER FROM THE RESPONSIBILITY FOR THE CORRECTION OF ERRORS OR OMISSIONS DISCOVERED DURING CONSTRUCTION. UPON REQUEST, THE APPROPRIATE PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE CITY ENGINEER FOR REVIEW AND APPROVAL.
24. ALL GTE, SCE AND SCG FACILITIES WILL BE RELOCATED OR MODIFIED BY THE RESPECTIVE UTILITIES OR THEIR APPOINTED REPRESENTATIVES.
25. ALL WATER RELATED WORK SHALL BE DONE IN ACCORDANCE WITH THE SERVICING WATER DISTRICT STANDARDS AND SPECIFICATIONS.
26. ALL SEWER RELATED WORK SHALL BE DONE IN ACCORDANCE WITH THE SERVICING WATER DISTRICT STANDARDS AND SPECIFICATIONS.
27. ANY SERVICE SHUT DOWN SHALL BE DONE AT NIGHT, PRIOR TO ANY SHUT DOWN, THE CONTRACTOR SHALL NOTIFY THE DIRECTOR, ENGINEER, CUSTOMER, FIRE DEPARTMENT, SERVICING WATER DISTRICT, AND ALL OTHERS AFFECTED BY THE SHUT DOWN A MINIMUM OF TWO (2) WEEKS IN ADVANCE.
28. IT SHALL BE THE RESPONSIBILITY OF THE DEVELOPER OR CONTRACTOR TO APPLY TO CALIFORNIA DEPARTMENT OF TRANSPORTATION (CALTRANS) FOR AN ENCROACHMENT PERMIT FOR ALL WORK PERFORMED WITHIN THE STATE RIGHT-OF-WAY.
29. 24 HOUR EMERGENCY CONTACT: ALEX LASTRA
CELL: 305-867-2245

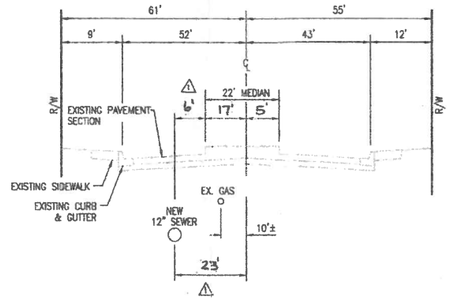
EMWD SEWER NOTES

1. SEWER SYSTEM CONSTRUCTION AND MATERIALS SHALL BE IN ACCORDANCE WITH EMWD'S STANDARDS AND SPECIFICATIONS.
2. GRAVITY SEWER PROFILE ELEVATIONS ARE TO FLOW LINE (CONDUIT INVERT). FORCE MAIN PROFILE ELEVATIONS ARE TO CENTIGRADE (C.G.).
3. FOR GRAVITY SEWER CONTRACTOR HAS THE OPTION TO INSTALL PLASTIC OR VCP SEWERS EXCEPT WHERE SPECIFICALLY DESIGNATED ON PLANS PER EMWD STANDARDS AND SPECIFICATIONS. FORCE MAIN SHALL BE TYPE C-900, DR-18 EXCEPT WHERE NOTED, OTHERWISE PIPE SHALL CONFORM TO AWWA SPECIFICATIONS.
4. MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH STANDARD DRAWINGS SB-53, SB-58 AND SB-61, AS APPLICABLE. SEWER MAINS MAY BE LAID THROUGH THE MANHOLES AND USED AS A FORM FOR THE INVERT.
5. PRIOR TO CONSTRUCTION OF SEWER, CONTRACTOR SHALL EXPOSE EXISTING SEWER AND VERIFY ITS EXISTING ELEVATION AND LOCATION. WHERE CONNECTING TO EXISTING MANHOLES AND INLET STUB OF PROPER SIZE EXISTS, NO ALTERATIONS SHALL BE MADE TO EXISTING MANHOLE BASE OR STUB EXCEPT AS SPECIFICALLY AUTHORIZED BY EMWD.
6. ALL SEWER INLETS AT THE MANHOLE SHALL BE SUCH THAT ITS CROWN SHALL BE LEVEL WITH THE CROWN OF THE OUTLET PIPE, AT THEIR PROJECTIONS TO THE MANHOLE CENTERLINE.
7. RECONSTRUCTION OF EXISTING MANHOLES SHALL BE SCHEDULED AT THE CONVENIENCE OF EMWD AND SHALL BE COMPLETED WITHIN FIVE WORKING DAYS FOLLOWING ITS COMMENCEMENT.
8. THE CONTRACTOR IS ADVISED THAT THE WORK ON THIS PROJECT MAY INVOLVE WORKING IN A CONFINED AIR SPACE. CONTRACTOR SHALL BE RESPONSIBLE FOR "CONFINED AIR SPACE" ARTICLE 108, TITLE 8, CALIFORNIA ADMINISTRATIVE CODE.
9. WHERE GROUNDWATER IS ENCOUNTERED, ALL VCP PIPE SHALL BE TREATED FOR ABSORPTION RESISTANCE PER EMWD'S SPECIFICATIONS.
10. ALL PIPE ZONE BEDDING & TRENCH BACKFILL ARE TO BE PER STANDARD DRAWING SB-157, SB-158 AND SB-159.
11. SEWER FORCE MAIN PROFILE ELEVATIONS ARE TO CENTERLINE (CENTER GRADE) OF PIPE.
12. INSTALL LOCATOR WIRE OVER SEWER FORCE MAIN PER STANDARD B-858.
13. JOINT RESTRAINERS SHALL BE USED ON ALL MAINLINE (SEWER FORCE MAIN) PIPE JOINTS WITHIN SPECIFIED LIMITS PER EMWD STANDARD B-663.



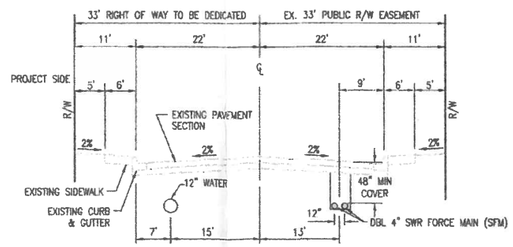
EMWD WATER NOTES

1. WATER PIPELINE AND APPURTENANT CONSTRUCTION SHALL BE IN ACCORDANCE WITH EMWD STANDARDS AND SPECIFICATIONS
2. PRIOR TO CONSTRUCTION OF PIPELINE, CONTRACTOR SHALL EXPOSE EXISTING WATER SYSTEM AND VERIFY ITS EXISTING ELEVATION AND LOCATION.
3. WHERE SEWERS HAVE BEEN CONSTRUCTED BY AGENCIES OTHER THAT EMWD, CONTRACTOR SHALL VERIFY SEWER LATERAL LOCATIONS PRIOR TO EXCAVATION FOR WATER PIPELINE. IN THE EVENT SEWER LATERALS ARE FOUND TO BE AT A DEPTH LESS THAN IN ACCORDANCE WITH EMWD SEWER STANDARDS, WATER PIPELINE CONTRACTOR SHALL ADJUST WATER PIPELINE DEPTH AS DIRECTED BY THE ENGINEER TO CROSS OVER THE SEWER LATERAL IF POSSIBLE, TO PROVIDE 36" MINIMUM COVER TO FINISH ROAD GRADE; OTHERWISE, CROSS UNDER THE LATERAL, WHICH REQUIRES SPECIAL CONSTRUCTION.
4. AIR VALVE ASSEMBLIES SHALL BE INSTALLED IN ACCORDANCE WITH STD. DWG. B 598 TYPE "B".
5. WATER SYSTEM PROFILE ELEVATIONS ARE TO CENTERLINE (CENTER GRADE) OF PIPE.
6. APPROVED REDUCTION PRESSURE BACKFLOW PREVENTION DEVICE (B-597) REQUIRED FOR ALL INDUSTRIAL, COMMERCIAL, APARTMENT COMPLEXES AND LANDSCAPE SERVICES.
7. INSTALL LOCATOR WIRE OVER WATER MAIN PER STD DWG B-656.
8. FIRE HYDRANT ASSEMBLIES SHALL BE INSTALLED IN ACCORDANCE WITH STD. DWG. B-362 WITH LIGHT BLUE COLOR CODING.
9. BLOW -OFF ASSEMBLIES SHALL BE INSTALLED IN ACCORDANCE WITH STD. DWG. B-357.
10. ALL PVC PIPE THROUGH 12 INCH SHALL BE TYPE C-900, DR 18, EXCEPT WHERE NOTED OTHERWISE.
11. FITTINGS FOR PVC PIPE SHALL BE DUCTILE OR GRAY IRON. FITTINGS SHALL BE FLANGED, BOLTED MECHANICAL JOINTS, OR PUSH-ON JOINTS, AND SHALL BE CEMENT MORTAR LINED AND TAR (SEAL) COATED PER EMWD STANDARDS AND SPECIFICATIONS.
12. ALL DUCTILE OR GRAY IRON FITTINGS SHALL BE POLYETHYLENE ENCASED AT THE TIME OF INSTALLATION PER EMWD STANDARDS AND SPECIFICATIONS.
13. A JOINT RESTRAINT DEVICE SHALL BE USED ON ALL MAIN LINE PIPE JOINTS WITHIN SPECIFIED LIMITS AND ALL JOINTS OR WATER APPURTENANCE LATERALS OFF MAIN LINE, PER EMWD STD. DWG. B-663.



NOTIFICATIONS

AT LEAST 48 HOURS PRIOR TO COMMENCING CONSTRUCTION, CONTRACTOR SHALL NOTIFY:



1. EASTERN MUNICIPAL WATER DISTRICT, FIELD ENGINEERING DEPARTMENT (951) 928-3777 EXT 4830
2. CITY OF MURRIETA (951) 698-1040
3. UNDERGROUND SERVICE ALERT 1-800-227-2600 OR 811

WATER CERTIFICATION

I CERTIFY THAT THE DESIGN OF THE WATER SYSTEM IN PCL 4 OF PM 27379 IS IN ACCORDANCE WITH THE WATER SYSTEM EXPANSION PLANS OF THE EASTERN MUNICIPAL WATER DISTRICT, AND THAT THE WATER SERVICE, STORAGE AND DISTRIBUTION SYSTEM WILL BE ADEQUATE TO PROVIDE WATER TO SUCH TRACT. THIS CERTIFICATION DOES NOT CONSTITUTE A GUARANTEE THAT IT WILL SUPPLY WATER TO SUCH TRACT AT ANY SPECIFIC QUANTITIES, FLOWS OR PRESSURE FOR FIRE PROTECTION OR ANY OTHER PURPOSE.

EASTERN MUNICIPAL WATER DISTRICT
BY Richard A. Valdez 2/25/14
CIVIL ENGINEER OF SUBDIVISIONS DATE

SEWER CERTIFICATION

I CERTIFY THAT THE DESIGN OF THE SEWER SYSTEM IN PCL 4 OF PM 27379 IS IN ACCORDANCE WITH THE EASTERN MUNICIPAL WATER DISTRICT'S SEWER SYSTEM MASTER PLAN, AND THE DISTRICT HAS PROGRAMMED ADEQUATE CAPACITY TO TREAT WASTES FROM THE PROPOSED TRACT.

EASTERN MUNICIPAL WATER DISTRICT
BY Richard A. Valdez 2/25/14
CIVIL ENGINEER OF SUBDIVISIONS DATE

TIME LIMITATIONS

THE TIME LIMIT ON DRAWING(S) APPROVAL SHALL BE SIX (6) MONTHS FROM THE DATE ON THE CERTIFICATION. IF CONSTRUCTION HAS NOT COMMENCED WITHIN STATED TIME, EMWD REQUIRES DRAWING(S) TO BE REVIEWED BY THE DEVELOPER/DESIGN ENGINEER AND RESUBMITTED TO EMWD FOR POSSIBLE CHANGES IN MASTER PLANNED SIZING AND CHANGES IN SPECIFICATIONS AND STANDARDS.

Water System Analysis for: The Vineyard, Curci, Costco, & Candee Properties

The following is a water system analysis for four commercial projects located on the north side of Clinton Keith Road just east of I-215 in Murrieta California. Proposed water facilities for the four developments consist of a 12" public line located in Warm Springs Parkway. Warms Springs Parkway is a public road proposed as an offsite improvement conditioned for three of the projects listed in the title line above. Additional fire and domestic services are also taken from the existing 18" public water line in Clinton Keith Road and an existing 24" line running north and south parallel to and adjacent east of I-215. This analysis consists of water demand calculations and a hydraulics analysis of proposed public facilities. Water demand calculations were completed in accordance with Eastern Municipal Water District, 2015 WFMP. Figure 1- Water Systems Analysis for The Vineyards, Curci, Costco & Candee Projects, included with this analysis, show existing and proposed water facilities for the four developments. Fire flow simulations were conducted by Eastern Municipal Water District, (EMWD). For The Vineyard, Curci and Candee projects, EMWD model assumed simultaneous flows of 1500 GPM a two locations or a total fire flow of 3000 GPM. The model shows that the existing public water system can deliver 3000 GPM at a residual pressure of 61.56 GPM. For the Costco site, a separate fire flow simulation was conducted based on a required fire flow of 4000 GPM. Both simulation summaries are attached. From calculations below it is found that the greatest demand occurs when maximum daily demand and fire flows are combined. Four separate scenarios are examined. Each scenario is described below.

Scenario 1: Referring to Figure 1, this scenario assumes domestic use by The Vineyard, Curci, Costco and Candee and a fire in The Vineyard, requiring 3000 GPM fire flow plus domestic demand. A hydraulic analysis is performed at Point F on the new 12" pipe and the fire service at Point A. Fire flow is provided at 2 points, Point A and B for the west side and Points D and E on the east side

Scenario 2: Referring to Figure 1, this scenario assumes domestic use by The Vineyard, Curci, Costco, and Candee, and a fire in property Candee, requiring 3000 GPM fire flow plus domestic demand. The analysis is again performed at Points F and I.

Scenario 3: Referring to Figure 1, this scenario assumes domestic use by Curci, and a fire in Curci, requiring 3000 GPM fire flow. The improvements are the two 8" fire services connected to the existing 24" waterline, indentified as Points G & H. Both the fire services and domestic services are fed from an existing 24" public line. Only the fire service is analyzed.

Scenario 4: Referring to Figure 1, this scenario assumes a fire at the Costco property. Two 10" fire services are proposed for the development. One fire service is proposed at the northwest corner of the project with the second service proposed on the east side at Warm Springs Parkway. The west side connection, identified as point J in Figure 1, ties an existing 24" waterline described above. The east side fire service, identified as point K in Figure 1, connects to a proposed 12 water line in Warm Springs Parkway. Scenario 4 assumes a fire flow of 2000 GPM at point J, 2000 GPM at point K, and domestic flows for all four developments.

Water Demand Calculations

Average Day Demand, ADD	**Commercial: 2,200 GPD/ GR. AC.**						
The Vineyard	11.75 AC	x	2,200	GPD/GR. AC.	=	25,850	GPD
Costco	16.42 AC	x	2,200	GPD/GR. AC.	=	36,124	GPD

Candee	84,304	GPD	÷	1,440	Min/Day	=	59	GPM
TOTAL	332,200	GPD	÷	1,440	Min/Day	=	230.69	GPM
			+	3000	GPM		**3,230.69**	**GPM**

Hydraulic Calculations

Velocities and pressure loss in water pipes were calculated by Hazen-Williams Formula. The Hazen Williams formula is shown below. All three scenarios were analyzed and detailed below.

$V=1.318C(D/4)^{0.63}S^{0.54}$, Where $S=h_f/L$ and $Q=V\ \pi^2 D/4$

V=Flow Velocity (FPS)
C=Hazen Williams Coefficient, Use C=150
D=Diameter of Pipe
Q=Rate of Flow (GPM)

Maximum Flow	Pipe Diameter	Flow Velocity (FPS)	Unit Pressure Loss (psi)	Total Pressure Loss (psi)
Scenario 1:				
Points A & B or D & E Fire flow only, 3000 GPM fire flow is delivered to the site, distributed at two locations.				
3000/2 = 1500 GPM	8"	9.57	0.0128	0.77 (L=60')
At Point F: Total Demand = Fire flow of 1500 GPM plus domestic demand for The Vineyard, Costco, & Candee. Fire at the Vineyard.				
1500 GPM + 230.69 GPM = 1,730.69 GPM	12"	4.91	0.0025	2.96 (L=1,250')
Scenario 2:				
At Point F: Total Demand = Fire flow of 1500 GPM plus domestic demand for The Vineyard, Costco, & Candee. Fire at Candee.				
3000 GPM + 230.69 GPM = 3,230.69 GPM				
3,289.54 GPM	12"	9.16	0.0074	9.19 (L=1,250')
Scenario 3:				
Points G & H: Total demand = a fire flow of 3000 GPM divided by 2				
3000 /2 = 1500 GPM	8"	9.57	0.0128	0.77 (L=60')
Scenario 4:				
Points J & K: Total demand = a fire flow of 4000 GPM divided by 2				
4000 /2 = 2000 GPM	10"	8.17	0.0074	0.48 (L=66')
Point F: Total demand = a fire flow of 4000 GPM divided by 2 plus domestic for The Vineyard East & West, Candee and Costco				
2000 GPM + 230.69 GPM = 2,230.69 GPM	12"	6.33	0.0037	4.63(L=1250')

Summary

Calculations were performed under 4 scenarios assumed to be points where maximum flow would occur. Referring to Figure 1 and calculations on previous pages, Scenario 2, flow at Point F was found to be the greatest. With a fire flow of 3000 GPM and domestic demand of 230.69 gpm, or a total flow of 3,230.69 GPM, maximum velocities we found to be 9.33 FPS. Calculations indicate a pressure drop at point I to be 9.19 psi. From fire flow tests, assuming a residual pressure of 60 psi at point F and a pressure drop of 9.19 psi residual pressure at the very north end of the proposed 12" water line is calculated to be 50.8 psi. Scenarios 1, 3, & 4 examined fire flows only. With 8" laterals proposed, maximum flows of 1500 GPM yielded velocities of 9.57 FPS. While maximum velocities at relatively high, 9.57 FPS is well within acceptable levels for materials proposed. Scenario 4 analyzed flows in 10" laterals. Resulting calculations showed that with fire flows of 2000 GPM per service velocities of 8.17 FPS are anticipated. With a minimum requirement of 20 psi residual, the proposed 12" water main and 8" and 10" fire services will convey maximum day demand combined with fire flows.

Comments: The water system is capable of providing 3,023 GPM for 3 hours at a minimum of 20 psi, as shown in the attached map. These Fire Flow test results may need to be complemented by a Plan of Service and do not include all facility conditioning that may be required for this project. Fire Flow Requirements or COA's were not provided, if any Fire Flow changes occur in the COA, you may need to resubmit another Fire Flow test at the requester's expense.

The above results are not a guarantee the District's system will supply water to the project at any specific flows or pressures. These results were determined from a computer simulation of the District's water system and/or from hydraulic calculations pertaining to distribution pipelines: The capacity of the service laterals, meters, backflow assemblies, on-site fire system, and other appurtenances were not considered in these results. The design and sizing of service laterals and downstream facilities shall be the responsibility of the Project Sponsor.

EMWD's Fire Flow test results are valid for 12 months from the date of testing.

	Modeling Scenario (12)	Operational Conditions:	Project Demands[2][3][11] (gpm): Project's Domestic Water Demands[2][3][11] (gpm)	Project Demands[2][3][11] (gpm): Fire Flow Demand[4] (gpm)	Existing system (With No Improvements): HGL (ft)	Existing system (With No Improvements): Pressure (psi)	Existing system (With Improvements)[1]: HGL (ft)	Existing system (With Improvements)[1]: Pressure (psi)
Operational Demand	EPS, MDD, Pumps On (8)	MDD	23		1,683	76		
Operational Demand	EPS, MDD, Pumps On (8)	PHD	45		1,643	59		
Operational Demand	EPS, ADD, Pumps On (8)	MHD						
Fire Flow Demand		FFD + MDD						
Fire Flow Demand	EPS, MDD, Pumps On (8)	FFD + MDD	No FF at this location					

Footnotes (see page 2 for additional footnotes):
(1) If improvements are required, please describe the improvements here:

Minimum Pressure Criteria:

50 PSI	...under PHD, MDD, and MHD
20 PSI	...under MDD + FFD

Minimum Criteria, Velocities in Pipelines:
Equal to or less than 5 fps: ...for MDD
Equal to or less than 10 fps: ...for PHD
Equal to or less than 15 fps: ...for FF + MDD

	Adequate?	Comments:
Available Firm Pumping Capacity:	YES	
Available Firm Pumping Capacity, w/ Electrical Outage :	YES	
Available Storage Capacity:	YES

Hydraulic Boundary Conditions, In The Main Water Pipeline[6][7], Based on Hydraulic Model Results

Project Name: THE VINYARD WS2017-1142	**ADD (GPM):**	11
Pressure Zone: 1698K	**FFD (GPM):**	1,500
Model Version (12)POS 20170321_POS FF Diurnal_v1	**Duration (Hours):**	3

Acronyms:

ADD: Average Day Demand, in GPM
EPS: Extended Period Simulation
FFD[3]: Fire Flow Demand, in GPM
FPS: Feet per second
GPM: Gallons Per Minute
HGL: Hydraulic Grade-Line, in feet
MDD: Maximum Day Demand, in GPM
MHD: Minimum Hour Demand, in GPM
PHD: Peak-Hour Demand, in GPM
POC: Point Of Connection
PSI: Pounds Per Inch
SSS: Steady State Simulation

Footnotes (Ct'd):

(2) Project Demands include ADD of the proposed project, peaked for each test scenario, in accordance with the latest EMWD Water Master Plan Design Criteria

(3) Domestic water demands from existing services are already included in the Model

(4) This is NOT a Fire Flow Test Report: The customer shall verify with the Fire Marshall if a separate Fire Flow Test Report/Letter is required for Jurisdictional Project approval.

(5) All required storage and pumping shall be evaluated in a POS report, per the latest EMWD Master Plan Design Criteria

(6) Applicants, or their designees, shall design service laterals, commencing from the point of connection(s) in EMWD's main pipeline(s), including main extension(s), lateral(s), meter(s), and all post-meter appurtenances, taking into consideration resulting head losses, pad elevations, and building height, such that the pressure delivered to each floor level and service is adequate to meet jurisdictional requirements.

(7) In addition to design requirements, operational minimum and maximum pressures are used to identify and record Service Agreements for Low and High pressure conditions in Residential use. Commercial, Institutional, and Industrial uses do not require low and high pressure recordation.

(8) Storage tanks: Initial levels set at 75% full in EPS

(9) Storage tanks: Initial levels set at 50% full in SSS, Pumps Off

(10) Storage tanks: Initial levels set at 50% full in SSS, Pumps On

(11) Existing demands are based on COINS data, calendar-year 2013

(12) For EPS modeling, use file name: ***NBD_EPS_EMWD_POTABLE_2308_WYA20151019.mxd***

Comments: The water system is capable of providing 4012 GPM for 4 hours at a minimum of 20 psi, as shown in the attached map. These Fire Flow test results may need to be complemented by a Plan of Service and do not include all facility conditioning that may be required for this project. Fire Agency Conditions were provided (dated 05/24/19), if any Fire Flow changes occur in the Fire Agency Conditions, you may need to resubmit another Fire Flow test at the requester's expense.

The above results are not a guarantee the District's system will supply water to the project at any specific flows or pressures. These results were determined from a computer simulation of the District's water system and/or from hydraulic calculations pertaining to distribution pipelines: The capacity of the service laterals, meters, backflow assemblies, on-site fire system, and other appurtenances were not considered in these results. The design and sizing of service laterals and downstream facilities shall be the responsibility of the Project Sponsor.

EMWD's Fire Flow test results are valid for twelve months from the date of testing.
