The proposed Community Services and Infrastructure (CSI) Element contains goals, policies, and programs that require local planning and development decisions to consider infrastructure maintenance to reduce the risk and impact of wildfires. The following General Plan policy and programs would serve to minimize potential adverse impacts related to wildfire:

WILDFIRE

Goal CSI-4: Reliable, Efficiently Managed Infrastructure. Support reliable, cost-effective, well-maintained, safe and resilient infrastructure and utility services.

- Policy CSI-4.14: Utility Undergrounding. Continue to pursue undergrounding of overhead utility lines, and support maintenance and replacement programs to reduce wildfire hazards.
  - Program CSI-4.14A: Funding for Undergrounding. Explore funding opportunities and financing mechanisms to accelerate the undergrounding of utilities, including Rule 20A and B funds, private funding, and assessment districts.
  - Program CSI-4.14B: Prioritizing of Undergrounding Projects. Develop a process to prioritize utility undergrounding projects. Among the factors to be considered are aesthetics, visibility, fire hazards, and vulnerability to flooding and sea level rise.
  - Program CSI-4.8C: Water Pressure and Storage. Work with MMWD to ensure that water pressure and storage remains adequate for fire-fighting, and to implement standards for new development that ensure adequate water flow.

General Plan 2040 does not propose the installation of large infrastructure projects; however, several policies and programs encourage the City to pursue upgrades and maintenance of such infrastructure. New development would, however, require minor alterations of utility systems to connect water, natural gas, and sewer line piping to new buildings and facilities. Although General Plan 2040 does not anticipate such infrastructure being needed, such infrastructure, if necessary, would be required to comply with the adopted State and local regulations to mitigate the impact of infrastructure on the environment. Furthermore, any development or redevelopment within a fire hazard severity zone and the WUI would be required to comply with building design standards in the California Building Code, Chapter 49 of the California Fire Code, the CPUC's fire regulations for electric utilities, and the San Rafael WPPAP, which would reduce the risk of wildfire due to installation and maintenance of infrastructure. Therefore, the impact would be *less than significant.*

Significance without Mitigation: Less than significant.

Downtown Precise Plan

The Downtown Precise Plan Area is designated as urban, built-up land, with Moderate and High Fire Hazard Severity Zones located to the north in the WUI. Potential future development in the Downtown Precise Plan Area would not require the installation of new roads, emergency water sources, or power lines, which already exist in the Downtown Precise Plan Area. Similar to development outside of the Downtown Precise Plan Area, new development would require minor alterations of utility systems to connect water, natural gas, and sewer line piping to new buildings and facilities. Such new development would be required to comply with the State regulations and the General Plan 2040 goals, policies, and programs related to the installation and maintenance of infrastructure, and the impact would be *less than significant.*

Significance without Mitigation: Less than significant.

FIRE-4 Implementation of the proposed project could expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, postfire slope instability, or drainage changes.

Catastrophic wildfire can create favorable conditions for other hazards, such as flooding and landslides during the rainy season. A project would result in a significant impact if—due to slopes, drainage patterns, or post-fire slope instability—it would expose people or structures to significant risks from landsides, debris flows, or flooding.

General Plan 2040

As discussed in Chapter 4.7, Geology and Soils, of this Draft EIR, the EIR Study Area contains areas susceptible to landslides and debris flows. The EIR Study Area varies, with rolling hills, valleys, and ridges that trend from the northwest to the southeast. Landslides have the potential to occur in the EIR Study Area, most notably on the steeper slopes on the western edge of the EIR Study Area, in addition to hilly areas surrounding China Camp State Park, Boyd Park, and Harry Barbier Memorial Park. There are both residential and commercial structures surrounding these landslide-prone areas in the EIR Study Area. With respect to flooding, and as described in Chapter 4.10, Hydrology and Water Quality, of this Draft EIR, there are several areas in the EIR Study Area that are within the 100-year and 500-year floodplain, primarily along the eastern edge and in the central area of the EIR Study Area. In the event that a catastrophic wildfire were to occur in these areas with existing landslide and flooding susceptibility, the risk of such a hazard could be exacerbated post-fire. In addition, areas without an existing risk of landslide or flooding hazards that abut areas with risk may become susceptible to such hazards in the wake of a catastrophic wildfire.

While potential future development as a result of the proposed project is primarily expected to occur in existing urban areas and would be concentrated on a limited number of vacant parcels and in the form of infill/intensification on sites already developed and/or underutilized and/or in close proximity to existing development, future projects could occur in areas either already prone to landslide or flooding hazards, or in areas which could be susceptible to landslide or flooding hazards post-fire. Therefore, potential future development in the EIR Study Area could contribute to postfire slope instability or drainage changes upstream. In the event that development is proposed downslope, the development proposal would have to comply with State and local regulations, such as the California Building Code and the SRMC building codes. For example, Section 1803 of the 2019 California Building Code requires a geotechnical investigation that must assess existing landslide susceptibility on a project site. Geotechnical review is also required as described in Section 4.18.1.1, Regulatory Framework, and as outlined in Appendix F, Geotechnical Review Matrix, of the proposed General Plan 2040. Recommendations of the geotechnical investigation, as they pertain to structural design and construction recommendations for earthwork, grading, slopes, foundations, pavements, and other necessary geologic considerations, must be incorporated into the design and construction of the development. Further, as identified in Impact Discussion FIRE-1, development in the EIR Study Area must also comply with best management practices regarding wildfire prevention, action, and recovery as outlined in the Marin ERP, the Marin EOP, the SRMC, the LHMP, and the WPPAP. All future development, regardless of the location, is required to comply with

adopted local, regional, and State plans and regulations addressing wildfire prevention which would minimize risks of potential wildfires and post-fire hazards.

In addition, the National Resource Conservation Service's Emergency Watershed Protection program from the United States Department of Agriculture, exists to provide emergency technical and financial assistance to help local communities relieve imminent threats to life and property caused by floods, fires, windstorms and other natural disasters that impair a watershed. Standard practices of the Emergency Watershed Protection program include undertaking post-disaster emergency measures for runoff retardation and soil erosion prevention to safeguard lives and property from floods and the products of erosion on any watershed whenever a wildfire causes or has caused a sudden impairment of the watershed. Emergency Watershed Protection program funds address erosion related watershed impairments by supporting activities such as removing debris from stream channels, road culverts, and bridges; reshaping and protecting eroded banks; correcting damaged drainage facilities; repairing levees and structures; and reseeding damaged areas to establish vegetative cover on critically eroding lands.[49]

The primary purpose of the wildfire hazard policies discussed in this chapter, prevailing regulatory requirements, and the National Resource Conservation Service's Emergency Watershed Protection program, is to minimize risks from downslope or downstream flooding or landslides as a result of postfire slope instability. As such, compliance with these policies and regulatory requirements would ensure impacts from postfire instability would be *less than significant*.

Significance without Mitigation: Less than significant.

Downtown Precise Plan

With respect to flooding, and as described in Chapter 4.10, Hydrology and Water Quality, of this Draft EIR, the majority of the Downtown Precise Plan Area is within the 100-year and 500-year floodplain, in the San Rafael Creek Watershed. This watershed begins in the surrounding mountain areas, which are within Moderate to High Fire Hazard Severity Zones, and drains down into the San Rafael Creek. The Downtown Precise Plan is not anticipated to create new slopes or be located downslope in such a manner that poses a risk to people or structures. Even though the Downtown Precise Plan Area does not have an existing risk of landslide hazards, it does abut areas with landslide risks (Boyd Memorial Park) that may become susceptible to such hazards in the wake of a catastrophic wildfire.

The proposed Downtown Precise Plan has no specific policies, and the Downtown Code has no specific regulations related to wildfires and post-wildfire hazards. Implementation of the Downtown Precise Plan is required to comply with prevailing regulatory requirements to minimize risks from downslope or downstream landslides or flooding as a result of postfire slope instability. Therefore, the impacts described for the proposed General Plan 2040 would also apply to Downtown Precise Plan and the impact from postfire instability would be *less than significant.*

Significance without Mitigation: Less than significant.

[49] Natural Resources Conservation Service, Disaster Recovery Assistance, https://www.nrcs.usda.gov/wps/portal/nrcs/detailfull/national/programs/?cid=nrcseprd1361073, accessed March 24, 2020.

FIRE-5 Implementation of the proposed project could result in a cumulatively considerable impact to wildfire impacts.

As discussed in Chapter 4, Environmental Analysis, of this Draft EIR, the cumulative setting includes growth within the EIR Study Area in combination with projected growth in the rest of Marin County and the surrounding region. Future development under the proposed project would not interfere with implementation of emergency response plans or result in significant wildfire-related impacts. Potential impacts associated with wildfires would be reduced through compliance with proposed policies and existing local, regional, and State regulations. Cumulative development in adjacent jurisdictions and unincorporated Marin County would be subject to the same State and regional regulations, as well as regional safety plans, such as the Marin CWPP and FireSafe Marin's Local Wildfire Prevention and Mitigation Initiative.

With respect to the implementation of the proposed project, wildfire hazards and the WUI are addressed in the goals, policies, and programs detailed in Impact Discussion FIRE-1, FIRE-2, and FIRE-3. Future development in the WUI would be required to incorporate fuel breaks, fire-resistant landscaping, adequate vegetation clearances around structures, and other vegetation management measures in the EIR Study Area. Additionally, development review would occur for each proposed project. Cumulative projects would be required to comply with the requirements of the California Building Code Chapter 7A, California Fire Code Chapter 49, PRC Sections 4291 et seq., and the SRA Fire Safe regulations for areas in the SRA. Furthermore, overhead power lines would be required to comply with the CPUC fire safety regulations. Although not required by CEQA, the proposed project includes policies and programs, detailed below, that would enhance public education programs to train the community in the EIR Study Area to prepare for and respond to emergency situations such as wildfire, which would increase regional education and, therefore, cumulative preparedness.

Goal S-6: Emergency Preparedness. Improve disaster preparedness, resiliency, response, and recovery.

- Policy S-6.2: Neighborhood Disaster Preparedness Programs. Encourage educational outreach to promote awareness and readiness among residents regarding disaster preparedness. Outreach and education should be targeted for each hazard type and risk area, including climate-related incidents. Community involvement is an essential part of resilience and recovery, and residents play an important role in disaster response.
  - Program S-6.2A: Educational and Training Programs. Support educational and training programs through the Police and Fire Departments and community-based organizations. These Programs include Community Emergency Response Teams (CERT), Citizens Police Academy, Neighborhood Response Groups (NRGs), and Voluntary Organizations Active in Disaster (VOAD) among others. Neighborhood teams should supplement City resources during emergency situations and can assist in disaster preparedness and mitigation efforts.
  - Program S-6.2E: Disaster Management Drills. Conduct emergency response drills to test the effectiveness of local procedures, including evacuation and emergency shelter drills in neighborhoods prone to flooding and wildfire.

WILDFIRE

Compliance with these requirements would reduce cumulative impacts related to wildfire hazards and emergency response. Accordingly, the proposed project would not cumulatively contribute to a cumulatively significant impact to wildfire impacts. The proposed project would not contribute to a cumulative increase in wildland fire hazards in the immediate vicinity of the Downtown Precise Plan Area or greater EIR Study Area, and the potential for cumulative impacts associated with wildfire hazards would be *less than significant*.

Significance without Mitigation: Less than significant.

5. Alternatives to the Proposed Project

The following discussion is intended to inform the public and decision makers of feasible alternatives to the proposed project that would avoid or substantially lessen any of the significant effects of the proposed project. The California Environmental Quality Act (CEQA) Guidelines set forth the intent and extent of alternatives analysis to be provided in an environmental impact report (EIR). Section 15126.6(a) of the CEQA Guidelines states that:

> *An EIR shall describe a range of reasonable alternatives to the project, or the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation. An EIR is not required to consider alternatives, which are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason*.

5.1 PURPOSE

The alternatives evaluated in this Draft EIR were developed consistent with Section 15126.6(b) of the CEQA Guidelines, which states that:

> *Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.*

5.2 PROJECT OBJECTIVES

As stated above, the range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the proposed project. As listed in Chapter 3, Project Description, of this Draft EIR, the primary purposes of the proposed project are to plan for the growth and conservation of San Rafael over a 20-year time horizon and to achieve a more equitable, sustainable, and prosperous future for all residents. Objectives related specifically to growth include focusing growth in the Downtown Precise Plan Area, capitalizing on transit opportunities in and around Priority Development Areas (PDAs), and streamlining future development that is consistent with the proposed project. This

requires extending the buildout horizon to year 2040 and updating goals, policies, and programs so that they meet current State requirements and community priorities. As part of this process, the City drafted 2040 Guiding Principles, which build upon the framework of the vision, guiding principles, and goals of the current General Plan 2020 and reflect the community's desires for San Rafael's future. The draft 2040 Guiding Principles will serve as the project objectives for the EIR. The Guiding Principles are organized in six distinct categories, as listed here and shown on Figure 3-4 in Chapter 3, Project Description, of this Draft EIR.

- Adapting to the Future. These principles include preparing for climate change, living green and sustainably, restoring natural systems, being prepared for disasters, embracing innovation, adapting to economic shifts, creating great public spaces, and accommodating change.
- Economic Vitality. These principles include investing in education, creating a positive business climate, promoting a thriving downtown, supporting entrepreneurship, encouraging diverse job growth, sustaining a healthy tax base, improving transportation and infrastructure, and nurturing arts and entertainment.
- Opportunity for All. These principles include reducing income inequality, ending homelessness, integrating diverse cultures, improving health and wellness, supporting educational excellence, and ensuring environmental justice.
- Housing Our Growing Community. These principles include conserving and modernizing existing housing, building more housing, increasing housing choices for the local workforce, meeting special housing needs, encouraging aging in community, improving housing affordability, and treating all residents fairly.
- Mobility. These principles include effectively managing congestion, improving bicycle and pedestrian modes, enhancing public transit, reducing neighborhood conflicts, improving safety for all modes of transportation, and using technology to improve efficiency.
- Building on Our Foundation. These principles recognize the City's strengths and its legacy of conserving open space, sustaining great neighborhoods, revitalizing Downtown, maintaining a strong sense of place, preserving its history, and providing quality public services.

5.3 SELECTION OF A REASONABLE RANGE OF ALTERNATIVES

Section 15126.6(c) of the CEQA Guidelines states:

> *The range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of the significant effects. The EIR should briefly describe the rationale for selecting the alternatives to be discussed. The EIR should also identify any alternatives that were considered by the lead agency but were rejected as infeasible during the scoping process and briefly explain the reasons underlying the lead agency's determination. Additional information explaining the choice of alternatives may be included in the administrative record. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts.*

5.3.1 ALTERNATIVES ANALYSIS

Three project alternatives and the comparative merits of the alternatives are discussed in this section in accordance with the CEQA Guidelines. All the potential environmental impacts associated with adoption and implementation of the proposed project were found to be either less than significant without mitigation or less than significant with mitigation, except for impacts to air quality, greenhouse gas emissions, cultural resources (historic buildings), and transportation, which were found to be significant and unavoidable with mitigation measures at the program level. These significant and unavoidable impacts include the following:

- Impact AIR-2.2: Operational activities associated with potential future development could cumulatively contribute to the non-attainment designations of the San Francisco Bay Area Air Basin.
- Impact AIR-3.2. Operational activities associated with potential future development could expose sensitive receptors to substantial toxic air contaminant concentrations from nonpermitted sources.
- Impact CULT-1. Future development in San Rafael on sites that contain a historic resource may cause the demolition, destruction, or alteration of a historic resource such that the significance of the resource is "materially impaired." Such adverse changes or potential adverse changes in the significance of a CEQA-defined historic resource would constitute a significant impact.
- Impact GHG-1: Implementation of the proposed project may not meet the long-term GHG reduction goal under Executive Order S-03-05.
- Impact TRAN-1a Implementation of the proposed project would result in a significant land use VMT impact for Total VMT and Work VMT due to forecast land use growth through 2040, based on a comparison of the VMT rate increment for Total VMT Per Service Population and Work VMT Per Employee to the corresponding average baseline rates for the full nine-county Bay Area.
- Impact TRAN-1b: Implementation of the proposed project would result in a significant road network VMT impact due to the planned capacity of the roadway system.
- Impact TRAN-6: Implementation of the proposed project would cumulatively contribute to regional VMT.

The alternatives were selected because of their potential to further reduce and avoid these impacts. The alternatives to be analyzed in comparison to the proposed project include:

- Alternative A: No Project Alternative (Current General Plan)
- Alternative B: Greater Residential Growth
- Alternative C: Lower Residential Growth

The first alternative is the CEQA-required “No Project” Alternative, which assumes the current General Plan 2020 is carried through instead of the proposed project. Alternative B assumes more households, housing units, and population, and slightly fewer jobs, when compared to the proposed project. Alternative C assumes fewer households, housing units, and population, and a slightly greater number of jobs when compared to the proposed project.

5.3.2 ASSUMPTIONS AND METHODOLOGY

The alternatives analysis is presented as a comparative analysis to the proposed project. The development intensity for the alternatives varies from the proposed project. The estimated growth under each alternative, as well as the proposed project, is provided in Table 5-1.

TABLE 5-1 FORECASTED ADDITIONAL GROWTH FOR THE PROPOSED PROJECT AND ALTERNATIVES TO THE PROPOSED PROJECT

Category	Proposed Project	Alternative A: No Project	Alternative B: Greater Residential Growth	Alternative C: Lower Residential Growth
DOWNTOWN PRECISE PLAN AREA				
Households	2,100	340	2,550	1,535
Residential Units	2,200	360	2,690	1,615
Population	3,570	800	4,335	2,610
Jobs	2,020	435	2,000	2,050
REMAINDER OF EIR STUDY AREA				
Households	2,150	1,375	3,280	1,325
Residential Units	2,260	1,455	3,440	1,390
Population	5,340	2,615	8,165	3,215
Jobs	2,095	5,310	1,915	2,190
TOTAL EIR STUDY AREA				
Households	**4,250**	**1,715**	**5,830**	**2,860**
Residential Units	**4,460**	**1,815**	**6,130**	**3,005**
Population	**8,910**	**3,415**	**12,500**	**5,825**
Jobs	**4,115**	**5,745** [a]	**3,915**	**4,240**

Note:
[a] This figure represents the increment of job growth shown in the Transportation Authority of Marin's traffic model which is based on regional forecasts that will be outdated as soon as *Plan Bay Area* 2050 is adopted. This figure is not the increment of job growth assumed in General Plan 2020. Most of the job growth assumed in General Plan 2020 has already occurred. Therefore, this is a reasonable assumption about what would occur in the No Project conditions (CEQA Guidelines Section 15126.6(e)(3)(C)).
Source: City of San Rafael, 2020.

The alternatives analysis assumes that all applicable mitigation measures recommended for the proposed project and the proposed General Plan 2040 goals, policies, and programs would apply to Alternatives B and C, but would not apply to Alternative A. The following discussion compares the environmental impacts of the alternatives with those of the proposed project for each of the environmental topics analyzed in detail in Chapter 4, Environmental Analysis, of this Draft EIR. The impacts of each alternative are classified as fewer, similar to (or comparable to), or greater than the level of impacts associated with the proposed project. Table 5-2 summarizes the relative impacts of each of the alternatives compared to the proposed project.

TABLE 5-2 COMPARISON OF IMPACTS OF THE PROJECT ALTERNATIVES AND THE PROPOSED PROJECT

Topic	Proposed Project [a]	Alternative A: No Project	Alternative B: Greater Residential Growth	Alternative C: Lower Residential Growth
Aesthetics	LTS	<	=	<
Agriculture and Forestry Resources	LTS	=	=	=
Air Quality	SU	>	<	>
Biological Resources	LTS/M	>	=	=
Cultural and Tribal Cultural Resources	SU	>	>	<
Energy	LTS	>	=	>
Geology and Soils	LTS	=	=	=
Greenhouse Gas Emissions	SU	>	<	>
Hazards and Hazardous Materials	LTS/M	=	=	=
Hydrology and Water Quality	LTS	=	=	=
Land Use and Planning	LTS	=	=	=
Mineral Resources	LTS	=	=	=
Noise	SU	>	<	=
Population and Housing	LTS	=	=	=
Public Services and Recreation	LTS	<	>	<
Transportation	SU	>	<	>
Utilities and Service Systems	LTS	<	>	<
Wildfire	LTS	=	=	=

Notes:
[a] The impacts listed in this column represent the highest significance determination for each respective standard of significance.

LTS	Less Than Significant	<	Less impacts in comparison to the proposed project
LTS/M	Less Than Significant with Mitigation	=	Similar impacts in comparison to the proposed project
SU	Significant and Unavoidable	>	Greater impact in comparison to the proposed project

5.4 ALTERNATIVE A: NO PROJECT (CURRENT GENERAL PLAN)

5.4.1 DESCRIPTION

Pursuant to CEQA Guidelines Section 15126.6(e)(1), the No Project Alternative is required as part of the "reasonable range of alternatives" to allow decision makers to compare the impacts of approving the proposed project with the impacts of taking no action or not approving the proposed project. Consistent with CEQA Guidelines Section 15126.6(e)(3)(A), when the project is the revision of a plan, as in this case, the no project alternative will be the continuation of the existing plan. Under Alternative A, potential future development in San Rafael would continue to be subject to existing policies, regulations, development standards, and land use designations of the existing General Plan 2020 and Zoning Code.

As described in Chapter 3, Project Description, of this Draft EIR, the existing General Plan 2020 involved a major overhaul and modernization of the prior General Plan 2000 that was adopted in 1988. The City determined that General Plan 2020 provided a good foundation for the proposed General Plan 2040. General Plan 2020 went through a comprehensive review process, resulting in a broad range of community goals and policies. Many of the community issues vetted in General Plan 2020 are still relevant, well addressed, and do not require major changes. Therefore, while the proposed General Plan

2040 is not a major departure from General Plan 2020 in terms of its underlying vision and fundamental growth concepts, Alternative A would not incorporate the topics that are now required by State law and would not revise relevant policies and programs to meet those requirements.

Pursuant to CEQA Guidelines Section 15126.6(e)(3)(C), the City of San Rafael, acting as the lead agency, should analyze the impacts of the No Project Alternative by projecting what would reasonably be expected to occur in the foreseeable future if the proposed project were not approved, based on current plans and consistent with available infrastructure and community services. Implementation of the No Project Alternative assumes that development growth throughout the city would remain unchanged until the buildout horizon year 2040, which is consistent with other regional plans, including *Plan Bay Area* 2040.

Future development permitted under the No Project Alternative would not increase development potential in San Rafael beyond what was considered in the existing General Plan 2020 and analyzed in the associated EIR (State Clearinghouse No. 2003052031), but rather assumes the remaining development growth shown in Table 5-1 would occur through 2040. No General Plan land use designations or Zoning District changes would be required to accommodate these uses. Table 5-3 shows the difference between 2020 to 2040 growth of the proposed project compared to Alternative A. As shown in Table 5-3, Alternative A would result in less residential growth and more job growth when compared to the proposed project.

TABLE 5-3 2020 TO 2040 GROWTH UNDER THE PROPOSED PROJECT AND ALTERNATIVE A

Category	Proposed Project	Alternative A: No Project	Change between the Proposed Project and Alternative A
Downtown Precise Plan Area			
Households	2,100	340	1,760 fewer households
Residential Units	2,200	360	1,840 fewer residential units
Population	3,570	800	2,770 fewer population
Jobs	2,020	435	1,585 fewer jobs
Remainder of EIR Study Area			
Households	2,150	1,375	775 fewer households
Residential Units	2,260	1,455	805 fewer residential units
Population	5,340	2,615	2,725 fewer population
Jobs	2,095	5,310	3,215 more jobs
Total EIR Study Area			
Households	**4,250**	**1,715**	**2,535 fewer households**
Residential Units	**4,460**	**1,815**	**2,645 fewer residential units**
Population	**8,910**	**3,415**	**5,495 fewer population**
Jobs	**4,115**	**5,745 [a]**	**1,630 more jobs**

Note:
[a] This figure represents the increment of job growth shown in the Transportation Authority of Marin's traffic model, which is based on regional forecasts that will be outdated as soon as *Plan Bay Area* 2050 is adopted. This figure is not the increment of job growth assumed in General Plan 2020. Most of the job growth assumed in General Plan 2020 has already occurred. Therefore, this is a reasonable assumption about what would occur in the No Project conditions (CEQA Guidelines Section 15126.6(e)(3)(C)).
Source: City of San Rafael, 2020.

Alternative A would not include the Downtown Precise Plan, which updates the 1993 *Our Vision of Downtown San Rafael and Our Implementation Strategy* (1993 Downtown Vision) and incorporates key

recommendations of the 2012 *San Rafael Downtown Station Area Plan*, as well as the 2017 *Downtown Parking and Wayfinding Study*, and other more focused projects, such as the 2019 *Third Street Rehabilitation Project* and the 2018 *Third and Hetherton Intersection Improvements*. The urban design, placemaking, historic preservation, transportation, parking, economic development, affordable housing, and antidisplacement strategies included in the Downtown Precise Plan would not be realized in Alternative A.

The alternatives analysis assumes that none of the applicable mitigation measures recommended for the proposed project would apply to Alternative A.

5.4.2 IMPACT DISCUSSION

The potential environmental impacts associated with Alternative A when compared to the proposed project are described herein.

5.4.2.1 AESTHETICS

As described in Chapter 4.1, Aesthetics, of this Draft EIR, the proposed project would not result in any significant impacts related to aesthetics and no mitigation measures are required.

Like the proposed project, potential future development in the EIR Study Area under Alternative A is anticipated to occur in the form of infill/intensification on sites either already developed and/or underutilized, and/or in close proximity to existing development, where future development would have a lesser impact on scenic vistas. The proposed General Plan 2040 does not include any new land use changes that would increase building height beyond what is previously accounted for under the current General Plan 2020, but would increase maximum height limits in the Downtown Precise Plan Area as part of the proposed Downtown Code. These changes would not be realized under Alternative A. While the areas of potential change under the proposed project are developed with a mix of buildings that range from 1 to 10 stories in height and views would continue to be visible between elements of the existing built environment and over lower-intensity areas, less development potentially obstructing views would occur and impacts to views of the existing scenic resources would be *less* when compared to the proposed project.

There are no State-designated scenic highways within, or in the vicinity of, the EIR Study Area. Therefore, implementation of either scenario would not damage existing scenic resources within a state scenic highway and impacts would be *similar.*

Applicable future projects under both scenarios would be subject to design review prior to project approval pursuant to San Rafael Municipal Code (SRMC) Chapter 14.25, Major Environmental and Design Review Permits, and comply with the various planning documents that govern scenic quality in the city, as described in Section 4.1.1, Regulatory Framework, in Chapter 4.1. However, Alternative A would not realize the proposed Community Design and Preservation Element that was reorganized as part of the proposed General Plan 2040 update to address five primary goals: a beautiful city, a sense of place, an improved public realm, quality construction and design, and protected cultural heritage. The policies emphasize protection of natural features, views, and the waterfront; improvements to gateways and

corridors; and upgrades to plazas, public spaces, and streetscapes. This element also covers street trees, landscaping, and wayfinding signage more comprehensively than General Plan 2020. Furthermore, principles of good design have been incorporated into the proposed project. Thus, unlike the proposed project, which includes these new policies, development under this alternative would not provide the same level of design consideration related to the visual character or quality of a project site and its surrounding; thus, aesthetic impacts related to these topics would be *greater* than those of the proposed project.

Similar to the proposed project, Alternative A would result in new lighting sources that could result in sources of glare. Potential future development under both scenarios would be required to comply with best management practices in CALGreen and SRMC provisions that ensure new land uses do not generate excessive light levels and reduce light and glare spillover from future development to surrounding land uses. Because Alternative A would result in less development than the proposed project, fewer impacts related to light or glare would occur and impacts would be *less* when compared to the proposed project.

Overall, development in the EIR Study Area under Alternative A would be less and would be guided by the current policies and regulations that guide development in San Rafael, and impacts related to aesthetics would be ***less*** when compared to the proposed project.

5.4.2.2 AGRICULTURE AND FORESTRY RESOURCES

As determined in Chapter 4.2, Agriculture and Forestry Resources, the proposed project would result in less-than-significant impacts to agricultural resources and no impacts to forest resources. No mitigation measures are required.

The EIR Study Area does not have any land designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, nor are there any lands under an active Williamson Act Contract or zoned for forestry, timberland, or timberland production. The California Department of Conservation has designated approximately 2,000 acres of land as Farmland of Local Importance in the EIR Study Area, specifically used as grazing, in the northern unincorporated portion of the EIR Study Area.

The proposed project includes Policy LU-1.5, Development Beyond the Urban Service Area, which serves to retain areas outside of San Rafael's Urban Service Area boundary, but within the Planning Area, as agricultural or open space uses. Policy LU-1.5 would ensure that potential future development under implementation of the proposed project would not result in the conversion of Farmland of Local Importance in the EIR Study Area. Alternative A would continue to allow development under the existing General Plan 2020, which does not contain any goals, policies, or programs that address agricultural land in the EIR Study Area. However, the existing General Plan 2020 encourages development to occur in existing urbanized areas, which would reduce the likelihood that future development under Alternative A would occur in a location that would adversely impact agricultural land. Therefore, impacts would be ***similar*** under Alternative A when compared to the proposed project.

5.4.2.3 AIR QUALITY

As described in Chapter 4.3, Air Quality, of this Draft EIR, the proposed project would result in significant and unavoidable impacts during the operational phase even with implementation of Mitigation Measures AIR-2.2 and AIR-3.2. Implementation of Mitigation Measure AIR-2.1 3.1a, and AIR-3.1b, would reduce significant impact from construction to a less-than-significant level.

As described in Chapter 4.3, Air Quality, of this Draft EIR, implementation of the proposed project would not conflict with the 2017 *Clean Air Plan*, would pose no operational community risks or hazards, and would not generate any substantial odors. However, at a program level, implementation of the proposed project would result in significant and unavoidable impacts related to construction and operation of potential future development, as well as the cumulative contribution to the non-attainment designations of the San Francisco Bay Area Air Basin.

Alternative A would continue development as allowed under the existing General Plan 2020, which would result in less redevelopment in the EIR Study Area. Development under both scenarios would be subject to the Bay Area Air Quality Management District's (BAAQMD's) basic control measures for fugitive dust control and screening sizes. Additionally, future development under both scenarios could result in construction activities within 1,000 feet of residential and other sensitive land uses, thus, temporarily elevating concentrations of toxic air contaminants and diesel-$PM_{2.5}$ in the vicinity of sensitive land uses. While the regulatory setting mitigating construction impacts is the same, less development would occur under Alternative A; therefore, construction impacts would be *less* when compared to the proposed project.

Under Alternative A, reduced development would occur; therefore, less direct and indirect criteria air pollutant emissions from energy (e.g., natural gas use), and area sources (e.g., aerosols and landscaping equipment) would occur. Under both scenarios, subsequent environmental review of applicable development projects would be required to assess potential impacts under BAAQMD's project-level thresholds. As demonstrated in Chapter 4.16, Transportation, the Total Vehicle Miles Traveled (VMT) Per Service Population and Work VMT Per Employee would be *greater* under Alternative A than the proposed project (29.5 Total VMT Per Capita compared to 28.1 Total VMT Per Capita and 17.5 Work VMT Per Employee compared to 16.9 Work VMT Per Employee). This is because the proposed project includes greater infill development in the PDAs and Transit Priority Areas (TPA), which would reduce VMT from automobiles. Alternative A would not include the goals, policies, and programs in the proposed project, which would concentrate development in existing urban areas and therefore could lessen the net benefit gained from siting future development near public transit and existing services. Therefore, as a result of reducing development, Alternative A would not necessarily reduce trips, which are the major source of criteria air pollutants from the proposed project. Therefore, while Alternative A would result in less overall development than the proposed project, air quality impacts from the operation of these uses would be considered *greater* when compared to the proposed project.

Same as the proposed project, Alternative A is not the type of project that would result in significant impacts from odor and impacts would be *similar* under both scenarios.

Overall, because Alternative A would result in less infill development that would create a higher VMT per capita, air quality impacts under Alternative A would be ***greater*** when compared to the proposed project.

5.4.2.4 BIOLOGICAL RESOURCES

As described in Chapter 4.4, Biological Resources, of this Draft EIR, the proposed project would result in less-than-significant impacts to biological resources with implementation of Mitigation Measures BIO-1 through BIO-4.

The EIR Study Area is not within any local, regional, or State habitat conservation plan areas. Therefore, neither scenario would conflict with the conservation strategy in any Habitat Conservation Plan or Natural Community Conservation Plan and impacts would be *similar*.

The City of San Rafael General Plan is the primary planning document for the City of San Rafael. The existing General Plan 2020 and the proposed revisions to policies and programs under the Conservation and Climate Change (C) Element are intended to ensure consistency between the General Plan and Zoning Ordinance and would not conflict with local policies and ordinances protecting biological resources because the General Plan is the overriding planning document for San Rafael. Accordingly, impacts to biological resources under Alternative A would be *similar* when compared to the proposed project.

Although potential future development under the proposed project could potentially affect animal and plant species identified as candidate, sensitive, or special-status species, proposed goals, policies, and programs; proposed mitigation measures; and adherence to all federal, State, and local regulations relating to biological resources would fully mitigate any potential impacts. The proposed project would also have a less-than-significant impact on riparian habitats, wetlands, and wildlife movement corridors because compliance with proposed goals, policies, and programs; proposed mitigation measures; and adherence to all federal, State, and local regulations relating to biological resources would fully mitigate any potential impacts. Further, potential future development under the proposed project would primarily occur as infill/intensification on sites either already developed and/or underutilized, and/or in close proximity to existing development, which reduces the likelihood that special-status plant and animal species could be impacted. Infill development also reduces the likelihood that the riparian habitats, wetlands, and wildlife movement corridors could be impacted.

The existing General Plan 2020 encourages development to occur in existing urbanized areas, which would mean that Alternative A would also reduce the likelihood of development in areas of the EIR Study Area that are more likely to cause an adverse impact to a sensitive riparian habitat, wetland, or wildlife movement corridor. Mitigation Measure BIO-1 requires that as part of the discretionary review process for development projects in the EIR Study Area, the City shall require all project applicants to prepare and submit project-specific baseline biological resources assessments (BRA) if the project site(s) contain natural habitat with features that could support special-status species and other sensitive biological resources, as well as active nests of birds protected under the Migratory Bird Treaty Act and California Fish and Game Code. No similar requirement currently exists in the General Plan 2020 conditions and these standards would not be realized under the Alternative A scenario; therefore, impacts would be *greater* when compared to the proposed project.

The proposed project could introduce taller buildings in the Downtown Precise Plan Area, which would increase impacts to birds resulting from colliding into buildings when compared to Alternative A. However, tall buildings subjecting birds to collision would occur under either scenario. The proposed project's potential bird collision impacts would be fully mitigated with implementation of Mitigation Measure BIO-4b, which would set standards for potential future development involving buildings exceeding 5,000 square feet or structures taller than 30 feet tall. These standards would not be realized under the Alternative A scenario; therefore, impacts would be *greater* when compared to the proposed project.

In summary, impacts to biological resources from potential future development as allowed under Alternative A would be ***greater*** when compared to the proposed project.

5.4.2.5 CULTURAL AND TRIBAL CULTURAL RESOURCES

As described in Chapter 4.5, Cultural and Tribal Cultural Resources, of this Draft EIR, the proposed project would result in less-than-significant impacts to cultural and tribal cultural resources with implementation of Mitigation Measures CULT-2 through CULT-4 and would result in a significant and unavoidable impact with implementation of Mitigation Measure CULT-1.

Under Alternative A, new development would continue throughout the city under existing plans and regulations. As explained in Chapter 4.5, there are existing prehistoric, architectural, historical, or archaeological resources in the EIR Study Area that could all be impacted by new demolition, inappropriate modification, or inappropriate new construction under the proposed project or Alternative A. Like the proposed project, Alternative A would be subject to the procedures of conduct following the discovery of human remains set forth in California Health and Safety Code, Public Resources Code and the California Code of Regulations. Because less development would occur under the Alternative A scenario, the potential to impact these resources would be *less* when compared to the proposed project. However, the proposed project includes Mitigation Measures which require the proposed General Plan 2040 to adopt additional programs that would further protect historic resources in the EIR Study Area. Under Alternative A, these programs would not be adopted. Therefore, Alternative A would have ***greater*** impacts to cultural resources as compared to the proposed project when following common protocols.

5.4.2.6 ENERGY

As described in Chapter 4.6, Energy, of this Draft EIR, the proposed project would not result in any significant impacts related to energy and no mitigation measures are required.

All development that occurs in the State is required to comply with best management practices regulated in the 2019 California Green Building Code and 2019 Building and Energy Efficiency Standards, which ensure new development would not result in the wasteful or inefficient use of energy. Further, new development would automatically be enrolled in renewable energy supplied by Marin Clean Energy. Such requirements and enrollment in MCE would be required under both the proposed project and under Alternative A. Additionally, neither the proposed project nor Alternative A would introduce a level of development and population growth that would be anticipated to necessitate the construction of new energy supply facilities or transmission infrastructure.

Less development would occur under the Alternative A scenario, so energy consumption from construction would be *less* when compared to the proposed project. However, newer buildings would be more energy efficient, thus energy impacts from buildings would be less energy efficient under Alternative A when compared to the proposed project. Ultimately, as described in the air quality discussion, energy use from VMT would be greater under Alternative A because less infill development in PDAs and TPAs would occur when compared to the proposed project. Therefore, overall energy demand and consumption would be ***greater*** under Alternative A when compared to the proposed project.

5.4.2.7 GEOLOGY AND SOILS

As described in Chapter 4.7, Geology and Soils, of this Draft EIR, the proposed project would result in less-than-significant impacts related to geology and soils with implementation of Mitigation Measure GEO-6.

Future development under both Alternative A and the proposed project would be subject to the same federal, State, and local regulations that address and prevent hazards associated with geology, soils, and seismicity. Both General Plan 2020 and proposed General Plan 2040 encourage development in urbanized settings where there is less likelihood for impacts from geologic hazards to occur. Although Alternative A would result in less overall development, compliance with existing regulations related to geologic and seismic safety would apply similarly to both future development under Alternative A and the proposed project; therefore, Alternative A would result in ***similar*** impacts when compared to the proposed project.

5.4.2.8 GREENHOUSE GAS EMISSIONS

As described in Chapter 4.8, Greenhouse Gas Emissions, of this Draft EIR, the proposed project would result in two significant and unavoidable impacts despite implementation of Mitigation Measures GHG-1.

Implementation of the proposed project would result in significant and unavoidable greenhouse gas (GHG) emissions impacts when applying program-level thresholds for the forecast year 2040. With respect to GHG emissions from construction, new buildings constructed would be subject to the triennial updates to California's Building and Energy Efficiency Standards, which would presumably improve over time. While new buildings would be more energy efficient, there would be an overall increase in energy usage under the proposed project from construction due to the amount of proposed growth. Even with implementation of the 2017 Scoping Plan, the 2050 target identified under Executive Order S-03-05, is estimated to not be achievable without major advances in technology. The identification of these program-level impacts does not preclude the finding of less-than-significant impacts for subsequent projects that comply with BAAQMD screening criteria or meet applicable thresholds of significance.

Alternative A would not necessarily result in a concentration of development and redevelopment in the Downtown Precise Plan and other urban portions of the EIR Study Area. Reducing development in the Downtown Precise Plan Area specifically could lessen the net benefit gained from siting more intense infill near public transit and result in a higher percentage of transit users that may rely on automobiles (as opposed to walking or biking). Therefore, as a result of reducing infill development near transit, Alternative A would not necessarily reduce trips, which are the major source of criteria GHG emissions from the proposed project. As described in the air quality discussion, the transportation sector is the greatest emitter of air pollutants, which also include GHG emissions. Therefore, because greater Total

VMT Per Capita and Work VMT Per Employee would occur under Alternative A, impacts related to GHG emissions would be *greater* when compared to the proposed project.

Overall, impacts from GHG emissions under Alternative A would be ***greater*** when compared to the proposed project.

5.4.2.9 HAZARDS AND HAZARDOUS MATERIALS

As described in Chapter 4.9, Hazards and Hazardous Materials, of this Draft EIR, the proposed project would result in less-than-significant impacts related to hazards and hazardous materials with implementation of Mitigation Measure HAZ-4.

As discussed in Chapter 4.9, Hazards and Hazardous Materials, of this Draft EIR, there are sites within the EIR Study Area and the Downtown Precise Plan Area that are included on a list of hazardous materials sites. Impact Discussion HAZ-4 of this Draft EIR concluded that implementation of the proposed project could result in construction and operation activities on sites with known hazardous materials and, as a result, create a significant hazard to the public or the environment. However, such impacts were deemed less-than-significant with the adoption of mitigation measures. Alternative A would occur as projected in the existing General Plan 2020. General Plan 2020 includes policies that were evaluated in the General Plan 2020 EIR as reducing the impact of locating future development on sites with known hazardous materials as less than significant. Policies of General Plan 2020 require potential future development abide by federal and State law and follow best management practices related to hazards and hazardous materials. Accordingly, Alternative A would have a *similar* impact when compared to the proposed project.

The proposed project was found to have a less-than-significant impact related to the routine transport, use, or disposal of hazardous waste, the release of hazardous waste, or the emitting of hazardous emissions or handling of hazardous materials in the proximity of an existing or proposed school. As further discussed in Chapter 4.9, Hazards and Hazardous Materials, the EIR Study Area is not located within an airport land use plan area for which potential future development could conflict, and implementation of the proposed project would not conflict with an adopted emergency response plan or emergency evacuation plan. Potential future development that could occur in the EIR Study Area from implementation of the proposed project would be required to comply with all federal, State, and local regulations pertaining to hazards and hazardous materials, and the proposed project includes goals, policies, and programs that would further reduce impacts related to hazardous materials. Development that would occur under Alternative A would be required to comply with the same federal and State regulations and would be required to comply with policies in the existing General Plan 2020, which reduce impacts related to hazardous materials. Therefore, Alternative A would have a ***similar*** impact when compared to the proposed project.

5.4.2.10 HYDROLOGY AND WATER QUALITY

As described in Chapter 4.10, Hydrology and Water Quality, of this Draft EIR, the proposed project would not result in any significant impacts related to hydrology and water quality and no mitigation measures are required. Compliance with existing State and local regulations and procedures would ensure that pre-

and post-construction impacts to water quality would be less than significant. These regulations and procedures would be maintained under Alternative A.

Although Alternative A would result in less development overall, future development would likely occur within previously urbanized areas and would connect to existing drainage systems already in place and be subject to the same existing federal, State, and local regulations relating to hydrology and water quality, similar to the proposed project. Compliance with existing regulations would ensure that pre- and post-construction impacts to water quality be minimized as future development occurs. While the proposed project has updated and expanded the General Plan 2020 goals, policies, and programs related to hydrology and water quality, impacts to hydrology and water quality were found to be less-than-significant in the General Plan 2020 EIR, which suggests that existing General Plan 2020 policies would ensure future development would not have a hydrology or water quality impact on the environment. Because Alternative A involves continuing implementation of General Plan 2020, and because implementation of General Plan 2020 was found to have less-than-significant impacts on hydrology and water quality, Alternative A would have *similar* impacts to hydrology and water quality when compared to the proposed project.

5.4.2.11 LAND USE AND PLANNING

As described in Chapter 4.11, Land Use and Planning, of this Draft EIR, the proposed project would not result in any significant impacts related to land use and planning and no mitigation measures are required.

The existing General Plan 2020 was adopted with the purpose of harmonizing changes to existing developed areas in order to better serve community needs. While the proposed project would aim to improve connectivity and would not create physical barriers within existing communities, Alternative A would also support the integration of infill development and does not propose physical features that could divide a community. Accordingly, impacts would be *similar* under both scenarios.

Under Alternative A, development would continue to occur throughout the EIR Study Area under the existing General Plan 2020 and Zoning Code and would not conflict with these already approved standards. However, Alternative A would not result in implementation of the Downtown Precise Plan which would establish a detailed vision for the Downtown Precise Plan Area to guide future development. As discussed in Chapter 3, Project Description, of this Draft EIR, implementation of the Downtown Precise Plan would result in the adoption of a Downtown Code, which would amend the existing SRMC Zoning Code. The Downtown Code would be form-based, which means that the physical design of development would be heavily regulated while the land uses within the Downtown Precise Plan Area are not specifically regulated and are instead driven by market forces. Nonetheless, implementation of either development scenarios would not conflict with any applicable land use plan adopted for the purpose of avoiding or mitigating an environmental effect and impacts would be *similar*.

5.4.2.12 MINERAL RESOURCES

As described in Chapter 4.12, Mineral Resources, of this Draft EIR, the proposed project would not result in any significant impacts related to mineral resources and no mitigation measures are required.

As discussed in Chapter 4.12, Mineral Resources, of this Draft EIR, the San Rafael Rock Quarry and McNear Brickworks are the only designated mineral resource sites with local, regional, or State significance within the EIR Study Area. The site is located outside of the San Rafael city limits, but within the EIR Study Area. The proposed project was found to have a less-than-significant impact on the San Rafael Rock Quarry and McNear Brickworks because potential future development under the proposed project would occur in existing urbanized areas not located near the mineral resource site. Future development under Alternative A would occur in the locations discussed in the existing General Plan 2020, which include already urbanized portions of the EIR Study Area that would not result in an impact to the mineral resource site. Therefore, impacts to mineral resources would be ***similar*** to the proposed project under Alternative A.

5.4.2.13 NOISE AND VIBRATION

As described in Chapter 4.13, Noise and Vibration, of this Draft EIR, the proposed project would result in a less-than-significant impact with implementation of Mitigation Measures NOISE-1, NOISE-2a, and NOISE-2b.

Future development allowed under the proposed project would be subject to the standards of the SRMC and existing General Plan 2020, including those relating to the interface between residential and non-residential land uses. As specific uses are proposed for particular sites, project-level design, permitting, and/or environmental review would serve to ensure that individual uses would comply with the noise regulations. Future development under Alternative A would also be subject to these applicable standards. Because less construction would occur, noise and vibration from construction would be less under Alternative A when compared to the proposed project.

Alternative A would result in less development but would generate more Total VMT Per Capita and Work VMT Per Employee, which potentially generate more mobile sources of noise. Because construction is temporary, the increased noise impacts from the operational phase would result in ***greater*** noise impacts under Alternative A when compared to the proposed project.

5.4.2.14 POPULATION AND HOUSING

As described in Chapter 4.14, Population and Housing, of this Draft EIR, the proposed project would not result in any significant impacts related to population and housing, and no mitigation measures are required.

As described in Chapter 4.14, Population and Housing, of this Draft EIR, implementation of the proposed project would slightly exceed current regional projections. However, implementation of the proposed project was found to have a less-than-significant impact due to the focus on infill development in PDAs and TPAs, which is in alignment with the regional planning framework of *Plan Bay Area.* Further, the proposed project is the overriding policy document in the EIR Study Area, which plans for population growth that is reasonably foreseeable through 2040.

Alternative A would result in less population and housing; thus, the regional projections would not be exceeded under this scenario. However, Alternative A would not include the updated policy framework of

the proposed project that ensure adequate planning occurs to accommodate the future population increase and future development to extended buildout year through 2040. Therefore, impacts under Alternative A would be *greater* when compared to those under the proposed project.

Although less than the proposed project, Alternative A would allow a net increase of residential and non-residential uses in the EIR Study Area through 2040. Since implementation of Alternative A would result in a net increase in housing, like the proposed project, it would not require replacement housing outside the EIR Study Area. Therefore, impacts under Alternative A would be *similar* when compared to those of the proposed project.

In summary, while Alternative A would result in a different growth potential, impacts related to population and housing would be ***similar*** when compared to the proposed project.

5.4.2.15 PUBLIC SERVICES AND RECREATION

As described in Chapter 4.15, Public Services and Recreation, of this Draft EIR, impacts under the proposed project to fire protection services, police services, parks, schools, and libraries were found to be less than significant. No mitigation measures are required.

Alternative A would result in fewer new residents and jobs to the EIR Study Area, and therefore, would result in less demand on the public service providers that serve the EIR Study Area. Potential future development under Alternative A would be required to comply with all existing City regulations adopted to ensure that development pays its fair share of the cost of delivering services, providing park space and libraries, while payment of property taxes would ensure that future development pays its fair share towards schools. Overall, impacts under Alternative A would be ***less*** than those of the proposed project.

5.4.2.16 TRANSPORTATION

As described in Chapter 4.16, Transportation, of this Draft EIR, the proposed project would result in two significant and unavoidable impacts related to transportation despite implementation of Mitigation Measures TRAN-1a TRAN-1b. These significant and unavoidable impacts are related to the inability of the proposed project to achieve the VMT reduction by 2040 of 15 percent below the baseline (2019) regional average. While the proposed General Plan 2040 results in a reduction in VMT Per Service Population by 2040, the VMT threshold of 15 percent below the current regional average would not be met.

As discussed in Chapter 4.16, Transportation, of this Draft EIR, the proposed project would result in a significant VMT impact for Total VMT and Work VMT and would not result in a significant Home VMT impact. The proposed project would focus potential future development in existing urban areas, half of which would occur specifically in the Downtown Precise Plan Area, which is located in a TPA and is therefore served by public transportation. As such, the VMT generated by potential future development would be lower than if development were proposed in areas not served by public transportation. The proposed project also includes goals, policies, and programs that expand upon General Plan 2020 and to ensure the transportation system in the EIR Study Area is multi-modal and designed to increase bicycle and pedestrian access and safety. Impacts related to hazards from design features, emergency access, and conflicting with adopted plans or decrease performance standards, were found to be less than significant.

Alternative A would be implemented under the existing General Plan 2020, which does not include the proposed Downtown Precise Plan, which would concentrate roughly half of the development in the EIR Study Area through 2040 in a TPA in the Downtown Precise Plan Area. While the General Plan 2020 focuses on development in urbanized portions of the EIR Study Area, it does not concentrate development in the Downtown Precise Plan Area, and therefore VMT as a result of implementation of Alternative A would have be higher than under the proposed project. As demonstrated in Chapter 4.16, Transportation, the Total VMT Per Service Population and Work VMT Per Employee would be greater under Alternative A than the proposed project (29.5 Total VMT Per Capita compared to 28.1 Total VMT Per Capita and 17.5 Work VMT Per Employee compared to 16.9 Work VMT Per Employee). Therefore, Alternative A would result *greater* VMT impacts when compared to the proposed project.

Impacts to bicycles and pedestrians would be *greater* under Alternative A when compared to the proposed project since the proposed project's improvements to bicycle and pedestrian facilities, particularly in the Downtown Precise Plan Area, would not be implemented.

Alternative A would not include the multi-modal circulation improvements that are included in the proposed project and the less intense development would result in higher VMT per capita. Overall, transportation impacts in the EIR Study Area under Alternative A would be ***greater*** when compared to the proposed project.

5.4.2.17 UTILITIES AND SERVICE SYSTEMS

As described in Chapter 4.17, Utilities and Service Systems, of this Draft EIR, impacts to sanitary wastewater, solid waste and stormwater infrastructure, and solid waste, under the proposed project, were found to be less than significant with the compliance of all applicable regulations. No mitigation measures are required.

Demand and consumption trends generally demonstrate that advances in recycling and solid waste reduction requirements, water-efficient regulations in building and landscaping, and stricter stormwater retention requirements, would reduce impact from existing conditions. However, it is assumed that because Alternative A would result in less overall development than the proposed project, less overall water demand, and less wastewater and solid waste generation, impacts under Alternative A would be ***less*** than those of the proposed project.

5.4.2.18 WILDFIRE

As described in Chapter 4.18, Wildfire, of this Draft EIR, the proposed project would not result in any significant impacts related to wildfire and no mitigation measures are required.

Chapter 4.18, Wildfire, of this Draft EIR determined that, due to compliance with applicable local, regional, and State regulations, the proposed project would not impair the implementation of an emergency response or emergency evacuation plan. Additionally, potential future development as a result of the proposed project would not be located in an area that would expose persons to wildfire or wildfire pollutants, nor would the project expose people or structures to significant risks, including downslope or

downstream flooding or landslides. Finally, the proposed project would not result in the installation or maintenance of any infrastructure that could exacerbate fire risk or result in impacts to the environment.

Alternative A would continue implementation of the existing General Plan 2020, which focuses development in urbanized areas similar to the proposed project. The existing General Plan 2020 also does not include any infrastructure-related projects and would not conflict with an emergency response or emergency evacuation plan. Therefore, implementation of Alternative A would have ***similar*** impacts when compared to the proposed project.

5.4.3 RELATIONSHIP OF THE ALTERNATIVES TO THE OBJECTIVES

Under Alternative A, the proposed project would not be implemented and therefore, this alternative would not accomplish any of the project objectives.

5.5 ALTERNATIVE B: GREATER RESIDENTIAL GROWTH

5.5.1 DESCRIPTION

Table 5-4 shows the difference between the growth projections of the proposed project compared to Alternative B. As shown in Table 5-4, Alternative B would result in an increase in the number of households, housing units, and population while slightly reducing the number of jobs in the EIR Study Area when compared to the proposed project.

TABLE 5-4 2020 TO 2040 GROWTH UNDER THE PROPOSED PROJECT AND ALTERNATIVE B

Category	Proposed Project	Alternative B: Greater Residential Growth	Change between the Proposed Project and Alternative B
Downtown Precise Plan Area			
Households	2,100	2,550	450 more households
Residential Units	2,200	2,690	490 more residential units
Population	3,570	4,335	765 more residents
Jobs	2,020	2,000	20 fewer jobs
Remainder of EIR Study Area			
Households	2,150	3,280	1,130 more households
Residential Units	2,260	3,440	1,180 more residential units
Population	5,340	8,165	2,825 more residents
Jobs	2,095	1,915	180 fewer jobs
Total EIR Study Area			
Households	**4,250**	**5,830**	**1,580 more households**
Residential Units	**4,460**	**6,130**	**1,670 more residential units**
Population	**8,910**	**12,500**	**3,590 more residents**
Jobs	**4,115**	**3,915**	**200 fewer jobs**

Source: City of San Rafael, 2020.

Because Alternative B would include more aggressive housing production, a potential loss of light industrial, office, and retail jobs is presumed. Alternative B includes all the 2015–2023 Housing Element sites, all of the residential sites evaluated in General Plan 2020, all of the potential housing and mixed-use sites identified in the Downtown Precise Plan, and residential development at various locations throughout the EIR Study Area. Alternative B presumes the same General Plan land use designations as the proposed project, except that two sites, one undeveloped and one industrial, would be re-designated as residential. Further, Alternative B would result in a high-density land use designation change on one site that is currently designated Hillside Resource Residential.

The alternatives analysis assumes that all applicable mitigation measures recommended for the proposed project and the proposed General Plan 2040 goals, policies, and programs would apply to Alternative B.

5.5.2 IMPACT DISCUSSION

The potential environmental impacts associated with Alternative B when compared to the proposed project are described herein.

5.5.2.1 AESTHETICS

As described in Chapter 4.1, Aesthetics, of this Draft EIR, the proposed project would not result in any significant impacts related to aesthetics and no mitigation measures are required.

Alternative B does not propose changes that would result in substantial differences from the proposed growth potential of the proposed project. Like the proposed project, potential future development under Alternative B would still be anticipated to occur in the form of infill/intensification on sites either already developed and/or underutilized, and/or in close proximity to existing development, where future development would have a lesser impact on scenic vistas. Under Alternative B, the proposed increases in maximum height in the Downtown Precise Plan Area would occur. As shown in Table 5-4, Alternative B would result in 490 additional residential units in the Downtown Precise Plan Area and 1,180 additional units in the remainder of the city, compared to the proposed project. This increase in development and height, regardless of the location of the development, would result in higher overall impacts to scenic vistas under Alternative B, therefore, impacts would be *greater* when compared to the proposed project.

Alternative B would, however, benefit from the updated and expanded goals, policies, and programs, as well as the proposed Downtown Precise Plan and the associated Downtown Code. Alternative B would be required to comply with best management practices and SRMC provisions that ensure new land uses do not generate excessive light levels and reduce light and glare spillover from future development to surrounding land uses. Therefore, impacts from light and glare under Alternative B would be *similar* when compared to the proposed project.

Overall, the addition of 1,670 new units in the EIR Study Area under this alternative that would be guided by the same regulations as the proposed project and would occur in the same development pattern, would result in ***similar*** aesthetics impacts when compared to the proposed project.

5.5.2.2 AGRICULTURE AND FORESTRY RESOURCES

As determined in Chapter 4.2, Agriculture and Forestry Resources, the proposed project would result in less-than-significant impacts to agricultural resources and no impacts to forestry resources. The addition of 1,670 new units in the EIR Study Area under this alternative that would be guided by the same regulations and in the same development pattern as the proposed project, would result in ***similar*** impacts to agricultural and forestry resources when compared to the proposed project.

5.5.2.3 AIR QUALITY

As described in Chapter 4.3, Air Quality, of this Draft EIR, the proposed project would result in significant and unavoidable impacts during the operational phase even with implementation of Mitigation Measures AIR-2.2 and AIR-3.2. Implementation of Mitigation Measure AIR-2.1 3.1a, and AIR-3.1b, would reduce significant impact from construction to a less-than-significant level.

As described in Chapter 4.3, Air Quality, of this Draft EIR, implementation of the proposed project would not conflict with the 2017 *Clean Air Plan*, would pose no operational community risks or hazards, and would not generate any substantial odors. However, at a program level, implementation of the proposed project would result in significant and unavoidable impacts related to construction and operation of potential future development, as well as the cumulative contribution to the non-attainment designations of the San Francisco Bay Area Air Basin. These impacts were not determined based on the number of units, but due to the program-level nature of the project, which would be the same under each scenario. Nonetheless, the increased amount of construction from Alternative B would have *greater* air quality impacts from fugitive dust when compared to the proposed project.

Under Alternative B, increased development would occur; therefore, more direct and indirect criteria air pollutant emissions from energy (e.g., natural gas use), and area sources (e.g., aerosols and landscaping equipment) would occur. Similar to the proposed project, development that would occur under Alternative B would be infill/intensification on sites either already developed and/or underutilized, and/or in close proximity to existing development. Alternative B would benefit from the updated and expanded goals, policies, and programs in the proposed project aimed at reducing air pollutants and would concentrate development in existing urban areas and therefore Alternative B maintains the net benefit gained from siting future development near public transit and existing services. As described in the transportation discussion for this alternative (Section 5.5.2.16), the Total VMT Per Service Population and Work VMT Per Employee would be less under Alternative B than the proposed project (27.3 Total VMT Per Capita compared to 28.1 Total VMT Per Capita and 16.1 Work VMT Per Employee compared to 16.9 Work VMT Per Employee). The addition of housing does slightly increase the Home VMT Per Resident when compared to the proposed project (11.9 Home VMT Per Resident compared to 11.3 Home VMT Per Resident), but the reduction in Total VMT Per Capita would still reduce emissions when compared to the proposed project. Therefore, as a result of increasing housing and concentrating redevelopment in existing urban areas, Alternative B would reduce VMT, which are the major source of criteria air pollutants from the proposed project.

Overall, while Alternative B would result in more residential development than the proposed project, air quality impacts from the operation of these uses would be considered ***less*** when compared to the proposed project.

5.5.2.4 BIOLOGICAL RESOURCES

As discussed in Chapter 4.4, Biological Resources, of this Draft EIR, the impacts to biological resources from the proposed project are fully mitigable with implementation of Mitigation Measures BIO-1 through BIO-4. Alternative B does not propose any changes that would result in substantial differences from the proposed growth potential of the proposed project. The 490 additional residential units in the Downtown Precise Plan Area and the 1,180 additional units in the remainder of the city would still be anticipated to occur in the form of infill/intensification on sites either already developed and/or underutilized, and/or in close proximity to existing development, where future development would have a lesser impact on biological resources. Under Alternative B, Mitigation Measure BIO-1, which requires project-specific baseline biological resources assessments for projects on sites that contain natural habitat with features that could support special-status species and other sensitive biological resources, as well as active nests of birds protected under the Migratory Bird Treaty Act and California Fish and Game Code, and Mitigation Measure BIO-4b, which would set standards certain development with the greater likelihood of causing bird collisions would be implemented. Therefore, while development would be more intensive under Alternative B, development would be concentrated in the same urban areas, and additional measures to protect biological resources would be realized, thus potential future development under Alternative B would result in ***similar*** impacts when compared to the proposed project.

5.5.2.5 CULTURAL AND TRIBAL CULTURAL RESOURCES

As described in Chapter 4.5, Cultural and Tribal Cultural Resources, of this Draft EIR, the proposed project would result in less-than-significant impacts to cultural and tribal cultural resources with implementation of Mitigation Measures CULT-2 through CULT-4 and would result in a significant and unavoidable impact with implementation of Mitigation Measure CULT-1.

Under Alternative B, new development would continue throughout the city under existing plans and regulations, and would be guided by the Downtown Precise Plan and Downtown Code, which would establish new standards in the Downtown Precise Plan Area to further protect historic buildings. As explained in Chapter 4.5, there are existing prehistoric, architectural, historical, or archaeological resources in the EIR Study Area that could all be impacted by new demolition, inappropriate modification, or inappropriate new construction under the proposed project or Alternative B. Like the proposed project, Alternative B would be subject to the procedures of conduct following the discovery of human remains set forth in California Health and Safety Code, Public Resources Code and the California Code of Regulations. Alternative B would also include all mitigating policies and programs that the proposed project includes to further ensure the protection of historic resources, particularly in the Downtown Precise Plan Area. However, because more development would occur under the Alternative B scenario, the potential to impact these resources would be *greater* when compared to the proposed project. Overall, Alternative B would have a ***greater*** impact to cultural resources when compared to the proposed project.

5.5.2.6 ENERGY

As described in Chapter 4.6, Energy, of this Draft EIR, the proposed project would not result in any significant impacts related to energy and no mitigation measures are required.

All development that occurs in the State is required to comply with best management practices regulated in the 2019 California Green Building Code and 2019 Building and Energy Efficiency Standards, which would be subject to the triennial updates that would presumably improve over time. Compliance with these regulations ensure new development would not result in the wasteful or inefficient use of energy. Further, new development would automatically be enrolled in renewable energy supplied by Marin Clean Energy. Such requirements and enrollment in MCE would be required under both the proposed project and under Alternative B. Additionally, neither the proposed project nor Alternative B would introduce a level of development and population growth that would be anticipated to necessitate the construction of new energy supply facilities or transmission infrastructure.

More development would occur under the Alternative B scenario, so energy consumption from construction would be *greater* when compared to the proposed project. However, newer buildings would be more energy efficient, thus energy impacts from older buildings would be less efficient when compared to the proposed project. This assumes that the increased development potential for the additional housing would possibly involve demolition of older, less energy-efficient buildings than under the proposed project. Ultimately, as described in the air quality discussion and transportation section, energy use from VMT would be less under Alternative B because more infill development in PDAs and TPAs would occur when compared to the proposed project. Therefore, overall energy efficiency would be *similar* under Alternative B when compared to the proposed project.

5.5.2.7 GEOLOGY AND SOILS

As described in Chapter 4.7, Geology and Soils, of this Draft EIR, the proposed project would have less-than-significant impacts related to geology and soils in the EIR Study Area. The impacts related to unknown unique paleontological resources are fully mitigable with implementation of Mitigation Measure GEO-6.

Future development under both Alternative B and the proposed project would occur in the same urban areas and would be subject to the same federal, State, and local regulations that address and prevent hazards associated with geology, soils, and seismicity. Although Alternative B would result in less overall development, compliance with existing regulations related to geologic and seismic safety would apply similarly to both future development under Alternative B and the proposed project; therefore, Alternative B would result in *similar* impacts when compared to the proposed project.

5.5.2.8 GREENHOUSE GAS EMISSIONS

As described in Chapter 4.8, Greenhouse Gas Emissions, of this Draft EIR, the proposed project would result in significant and unavoidable impacts despite implementation of Mitigation Measures GHG-1.

Implementation of the proposed project would result in significant and unavoidable GHG emissions impacts when applying program-level thresholds for the forecast year 2040. With respect to GHG emissions from construction, new buildings constructed would be subject to the triennial updates to California's Building and Energy Efficiency Standards, which would presumably improve over time. While new buildings would be more energy efficient, there would be an overall increase in energy usage under the Alternative B from construction due to the amount of proposed growth. Even with implementation of the 2017 Scoping Plan, the 2050 target identified under Executive Order S-03-05, is estimated to not be achievable without major advances in technology. The identification of these program-level impacts does not preclude the finding of less-than-significant impacts for subsequent projects that comply with BAAQMD screening criteria or meet applicable thresholds of significance.

Development that could occur under Alternative B would occur similar to the proposed project in the Downtown Precise Plan and other urban portions of the EIR Study Area. Alternative B would result in a higher concentration of development in these areas, which would result in the same net benefit gained from siting more intense infill near public transit and result in a higher percentage of transit users that may rely on automobiles (as opposed to walking or biking). Therefore, as a result of placing development in these urban areas, Alternative B would result in less VMT (27.3 Total VMT Per Capita compared to 28.1 Total VMT Per Capita and 16.1 Work VMT Per Employee compared to 16.9 Work VMT Per Employee), which are the major source of criteria GHG emissions from the proposed project. Therefore, while Alternative B would result in the same type of urban development with additional housing, GHG emissions impacts from operation would be considered *less* when compared to the proposed project due to the higher concentration of development.

Under Alternative B, future development in the EIR Study Area would continue to occur under the proposed General Plan 2040 and would result in infill development in PDAs and TPAs near transit as approximately half of the proposed project's development would. Accordingly, impacts related to consistency with the 2017 Scoping Plan, *Plan Bay Area,* and the City's *Climate Change Action Plan* as integrated into the General Plan, would be *similar* under both scenarios.

Overall, because Alternative B would result in more infill development and less VMT, impacts from GHG emissions under Alternative B would be ***less*** when compared to the proposed project.

5.5.2.9 HAZARDS AND HAZARDOUS MATERIALS

As described in Chapter 4.9, Hazards and Hazardous Materials, of this Draft EIR, the proposed project would result in less-than-significant impacts related to hazards and hazardous materials with implementation of Mitigation Measure HAZ-4.

As discussed in Chapter 4.9, Hazards and Hazardous Materials, of this Draft EIR, there are sites within the EIR Study Area and the Downtown Precise Plan Area that are included on a list of hazardous materials sites. Impact Discussion HAZ-4 of this Draft EIR concluded that implementation of the proposed project could result in construction and operation activities on sites with known hazardous materials and, as a result, create a significant hazard to the public or the environment. However, such impacts were deemed less-than-significant with the adoption of mitigation measures. Implementation of Alternative B would occur in approximately the same locations as the proposed project, but would result in a higher intensity

of development. Alternative B would comply with the same federal and State regulations as the proposed project and would still result in the adoption of the same goals, policies, and programs related to hazardous materials as the proposed project. Therefore, Alternative B would have a *similar* impact when compared to the proposed project.

The proposed project was found to have a less-than-significant impact related to the routine transport, use, or disposal of hazardous waste, the release of hazardous waste, or the emitting of hazardous emissions or handling of hazardous materials in the proximity of an existing or proposed school. As further discussed in Chapter 4.9, Hazards and Hazardous Materials, the EIR Study Area is not located within an airport land use plan area for which potential future development could conflict, and implementation of the proposed project would not conflict with an adopted emergency response plan or emergency evacuation plan. Potential future development that could occur in the EIR Study Area from implementation of the proposed project would be required to comply with all federal, State, and local regulations pertaining to hazards and hazardous materials, and the proposed project includes goals, policies, and programs which would further reduce impacts related to hazardous materials. Development that would occur under Alternative B would be required to comply with the same federal and State regulations and would be required to comply with the same goals, policies, and programs that reduce impacts related to hazardous materials. Therefore, Alternative B would have a ***similar*** impact when compared to the proposed project.

5.5.2.10 HYDROLOGY AND WATER QUALITY

As described in Chapter 4.10, Hydrology and Water Quality, of this Draft EIR, the proposed project would not result in any significant impacts related to hydrology and water quality and no mitigation measures are required. Compliance with existing State and local regulations and procedures would ensure that pre- and post-construction impacts to water quality would be less than significant. These regulations and procedures would be maintained under Alternative B.

Although Alternative B would result in more development overall, future development would largely occur within previously urbanized areas similar to the proposed project and would connect to existing drainage systems already in place and be subject to the same existing federal, State, and local regulations relating to hydrology and water quality. Compliance with existing regulations would ensure that pre- and post-construction impacts to water quality be minimized as future development occurs. Overall, potential future development under Alternative B and the proposed project would be in the same urbanized environments and would be subject to the same existing regulations that address hydrology and water quality impacts. Future development under each scenario would benefit from the updated and expanded General Plan 2040 goals, policies, and programs related to hydrology and water quality and impacts would be considered ***similar*** when compared to the proposed project.

5.5.2.11 LAND USE AND PLANNING

As described in Chapter 4.11, Land Use and Planning, of this Draft EIR, implementation of the proposed project would result in less-than-significant impacts related to land use and planning.

The proposed project would aim to improve connectivity and would not create physical barriers within existing communities. While implementation of Alternative B would result in higher intensity of development, the integration of such development would be *similar* to that of the proposed project and does not propose physical features that could divide a community. Accordingly, impacts would be *similar* under both scenarios.

Under Alternative B, development would occur throughout the EIR Study Area under the proposed General Plan 2040 and Zoning Code while development in the Downtown Precise Plan Area would occur under the Downtown Precise Plan and associated Downtown Code. Such development would be the same as under the proposed project and therefore implementation of either development scenario would not conflict with any applicable land use plan adopted for the purpose of avoiding or mitigating an environmental effect and impacts would be ***similar*** when compared to the proposed project.

5.5.2.12 MINERAL RESOURCES

As discussed in Chapter 4.12, Mineral Resources, of this Draft EIR, the San Rafael Rock Quarry and McNear Brickworks are the only designated mineral resource sites with local, regional, or State significance within the EIR Study Area. The site is located outside of the San Rafael city limits, but within the EIR Study Area. The proposed project was found to have a less-than-significant impact on the San Rafael Rock Quarry and McNear Brickworks because potential future development under the proposed project would occur in existing urbanized areas not located near the mineral resource site. Future development under Alternative B would occur in the locations discussed in the existing General Plan 2020, which include already urbanized portions of the EIR Study Area that would not result in an impact to the mineral resource site. Therefore, impacts to mineral resources would be ***similar*** to the proposed project under Alternative B.

5.5.2.13 NOISE AND VIBRATION

As described in Chapter 4.13, Noise and Vibration, of this Draft EIR, the proposed project would result in a less-than-significant impact with implementation of Mitigation Measures NOISE-1, NOISE-2a, and NOISE-2b.

Future development allowed under the proposed project would be subject to the standards of the SRMC as well as goals, policies, and programs proposed in General Plan 2040, including those relating to the interface between residential and non-residential land uses. As specific uses are proposed for particular sites, project-level design, permitting, and/or environmental review would serve to ensure that individual uses would comply with the noise regulations. Future development under Alternative B would also be subject to these applicable standards. Impacts would be *similar* under both scenarios in this regard.

Alternative B would result in higher-intensity development, which would result in more construction but less VMT. Because construction is temporary, the reduced noise from the operational phase, would result in ***less*** noise impacts under Alternative B when compared to the proposed project.

5.5.2.14 POPULATION AND HOUSING

As described in Chapter 4.14, Population and Housing, of this Draft EIR, the proposed project would not result in any significant impacts related to population and housing, and no mitigation measures are required.

As described in Chapter 4.14, Population and Housing, of this Draft EIR, implementation of the proposed project would slightly exceed current regional projections. However, implementation of the proposed project was found to have a less-than-significant impact due to the focus on infill development in PDAs and TPAs, which is in alignment with the regional planning framework of *Plan Bay Area*. Further, the proposed project is the overriding policy document in the EIR Study Area which plans for population growth that is reasonably foreseeable through 2040.

Alternative B would result in more population and housing than the proposed project; thus, the regional projections would be exceeded more than the proposed project under this scenario, but would still be in alignment with the regional planning framework of *Plan Bay Area*. Alternative B would include the updated policy framework of the proposed project, which ensures adequate planning occurs to accommodate the future population increase and future development. Therefore, impacts under Alternative B would be *similar* to those under the proposed project.

Alternative B would allow for a higher net increase of residential and non-residential development in the EIR Study Area through 2040. Alternative B would result in more housing than the proposed project and therefore it would not require replacement housing outside the EIR Study Area. Therefore, impacts under Alternative B would be *similar* to those of the proposed project.

In summary, while Alternative B would result in a different growth potential, impacts related to population and housing would be ***similar*** when compared to the proposed project.

5.5.2.15 PUBLIC SERVICES AND RECREATION

As described in Chapter 4.15, Public Services and Recreation, of this Draft EIR, impacts under the proposed project to fire protection services, police services, parks, schools, and libraries, were found to be less than significant. No mitigation measures are required.

Alternative B would result in more new residents in the EIR Study Area than the proposed project, and therefore, would result in more demand on the public service providers that serve the EIR Study Area. Potential future development under Alternative B would be required to comply with all existing and proposed new City regulations adopted to ensure that development pays its fair share of the cost of delivering services, providing park space, and libraries. As discussed in Chapter 4.15, the City has recently upgraded critical public service facilities and exceeds the existing parkland standard in General Plan 2020. However, because Alternative B would increase overall development which would result in an increase in demand. Therefore, impacts under Alternative B would be ***greater*** when compared to the proposed project.

5.5.2.16 TRANSPORTATION

As described in Chapter 4.16, Transportation, of this Draft EIR, the proposed project would result in two significant and unavoidable impacts related to transportation despite implementation of Mitigation Measures TRAN-1a and TRAN-1b. These significant and unavoidable impacts are related to the inability of the proposed project to achieve the VMT reduction by 2040 of 15 percent below the baseline (2019) regional average. While the proposed General Plan 2040 results in a reduction in VMT Per Service Population by 2040, the VMT threshold of 15 percent below the current regional average would not be met.

As discussed in Chapter 4.16, Transportation, of this Draft EIR, the proposed project would result in a significant VMT impact for Total VMT and Work VMT and would not result in a significant Home VMT impact. Both scenarios would result in similar development patterns, but Alternative B would yield more residential units. Therefore, the Total VMT Per Service Population and Work VMT Per Employee would be *less* under Alternative B than the proposed project (27.3 Total VMT Per Capita compared to 28.1 Total VMT Per Capita and 16.1 Work VMT Per Employee compared to 16.9 Work VMT Per Employee).

Both Alternative B and the proposed project would include the improvements recognized in the Downtown Precise Plan and updated goals, policies, and programs that expand upon General Plan 2020 and to ensure the transportation system in the EIR Study Area is multi-modal and designed to increase bicycle and pedestrian access and safety. Impacts related to hazards from design features, emergency access, and conflicting with adopted plans or decrease performance standards, were found to be less than significant.

Overall, transportation impacts in the EIR Study Area under Alternative B would be ***less*** when compared to the proposed project.

5.5.2.17 UTILITIES AND SERVICE SYSTEMS

As described in Chapter 4.17, Utilities and Service Systems, of this Draft EIR, impacts to sanitary wastewater, solid waste and stormwater infrastructure, and solid waste, under the proposed project, were found to be less than significant with the compliance of all applicable regulations. No mitigation measures are required.

Since Alternative B would result in greater development, and thus, more water demand, wastewater, and solid waste generation, impacts under the Alternative B would be ***greater*** when compared to the proposed project.

5.5.2.18 WILDFIRE

Chapter 4.18, Wildfire, of this Draft EIR determined that, due to compliance with applicable local, regional, and State regulations, the proposed project would not impair the implementation of an emergency response or emergency evacuation plan. Additionally, potential future development as a result of the proposed project would not be located in an area that would expose persons to wildfire or wildfire pollutants, nor would the project expose people or structures to significant risks, including downslope or

downstream flooding or landslides. Finally, the proposed project would not result in the installation or maintenance of any infrastructure that could exacerbate fire risk or result in impacts to the environment.

Alternative B would result in higher-density development that would be located in the same locations as in the proposed project; would adopt the same goals, policies, and programs to reduce the risk of wildfire; and would not include the installation or maintenance of any infrastructure projects. Therefore, implementation of Alternative B would have ***similar*** impacts to the proposed project.

5.5.3 RELATIONSHIP OF THE ALTERNATIVES TO THE OBJECTIVES

As listed in Section 5.2, the primary purposes of the proposed project are to plan for the growth and conservation of San Rafael over a 20-year time horizon and to achieve a more equitable, sustainable, and prosperous future for all residents. This requires extending the buildout horizon to year 2040 and updating goals, policies, and programs so that they meet current State requirements and community priorities. As part of this process, the City drafted 2040 Guiding Principles, which build upon the framework of the vision, guiding principles, and goals of the current General Plan 2020 and reflect the community's desires for San Rafael's future. Big-picture objectives related specifically to growth include focusing growth in the Downtown Precise Plan Area, capitalizing on transit opportunities in and around PDAs, and streamlining future development that is consistent with the proposed project.

Alternative B would result in more housing and population growth in the EIR Study Area when compared to the proposed project. However, such growth would generally occur in the same locations as included in the proposed project, which were chosen based on their appropriateness in fulfilling the City's goals of focusing infill development in existing urban areas near public transportation. Therefore, Alternative B would meet the project objectives.

5.6 ALTERNATIVE C: LOWER RESIDENTIAL GROWTH

5.6.1 DESCRIPTION

Table 5-5 shows the difference between the 2020 to 2040 growth projections of the proposed project compared to Alternative C. As shown in Table 5-5, Alternative C would reduce the number of households, housing units, and population while slightly increasing the number of jobs in the EIR Study Area when compared to the proposed project.

TABLE 5-5 2020 TO 2040 GROWTH UNDER THE PROPOSED PROJECT AND ALTERNATIVE C

Category	Proposed Project	Alternative C: Lower Residential Growth	Change between the Proposed Project and Alternative C
Downtown Precise Plan Area			
Households	2,100	1,535	565 fewer households
Residential Units	2,200	1,615	585 fewer residential units
Population	3,570	2,610	960 fewer residents
Jobs	2,020	2,050	30 more jobs
Remainder of EIR Study Area			

Households	2,150	1,325	865 fewer households
Residential Units	2,260	1,390	870 fewer residential units
Population	5,340	3,215	2,125 fewer residents
Jobs	2,095	2,190	95 more jobs
Total EIR Study Area			
Households	**4,250**	**2,860**	**1,390 fewer households**
Residential Units	**4,460**	**3,005**	**1,455 fewer residential units**
Population	**8,910**	**5,825**	**3,085 fewer residents**
Jobs	**4,115**	**4,240**	**125 more jobs**

Source: City of San Rafael, 2020.

Alternative C presumes the same General Plan land use designations as the proposed project and differs only in the presumed rate of growth. Alternative C excludes several 2015–2023 Housing Element sites and Downtown Precise Plan sites included in the proposed project. This alternative would convert less commercial acreage to housing, which results in a slightly higher total of jobs anticipated by 2040.

The alternatives analysis assumes that all applicable mitigation measures recommended for the proposed project and the proposed General Plan 2040 goals, policies, and programs would apply to Alternative C.

5.6.2 IMPACT DISCUSSION

The potential environmental impacts associated with Alternative C when compared to the proposed project are described herein.

5.6.2.1 AESTHETICS

As described in Chapter 4.1, Aesthetics, of this Draft EIR, the proposed project would not result in any significant impacts related to aesthetics and no mitigation measures are required.

Alternative C does not propose any changes that would result in substantial differences from the proposed growth potential of the proposed project. Potential future development would still be anticipated to occur in the form of infill/intensification on sites either already developed and/or underutilized, and/or in close proximity to existing development, where future development would have a lesser impact on scenic vistas. Under Alternative C, the proposed increases in maximum height in the Downtown Precise Plan Area would still occur. However, Alternative C would result in 585 fewer residential units in the Downtown Precise Plan Area and the 870 fewer units in the remainder of the city, compared to the proposed project, and therefore, overall impacts to scenic vistas under Alternative C would be *less* when compared to the proposed project.

Alternative C would benefit from the updated and expanded goals, policies, and programs, as well as the proposed Downtown Precise Plan and the associated Downtown Code. Alternative C would be required to comply with best management practices and SRMC provisions that ensure new land uses do not generate excessive light levels and reduce light and glare spillover from future development to surrounding land uses. Therefore, impacts from light and glare under Alternative C would be *similar* when compared to the proposed project.

Overall, the reduction of 1,390 new units and addition of 125 more jobs in the EIR Study Area under this alternative that would be guided by the same regulations as the proposed project and would occur in the same development pattern, and would result in ***less*** aesthetics impacts when compared to the proposed project.

5.6.2.2 AGRICULTURE AND FORESTRY RESOURCES

As determined in Chapter 4.2, Agriculture and Forestry Resources, the proposed project would result in less-than-significant impacts to agricultural resources and no impacts to forestry resources. The reduction of 1,390 new units and addition of 125 more jobs in the EIR Study Area under this alternative that would be guided by the same regulations and in the same development pattern as the proposed project, would result in ***similar*** impacts to agricultural and forestry resources when compared to the proposed project.

5.6.2.3 AIR QUALITY

As described in Chapter 4.3, Air Quality, of this Draft EIR, the proposed project would result in significant and unavoidable impacts during the operational phase even with implementation of Mitigation Measures AIR-2.2 and AIR-3.2. Implementation of Mitigation Measure AIR-2.1 3.1a, and AIR-3.1b, would reduce significant impact from construction to a less-than-significant level.

As described in Chapter 4.3, Air Quality, of this Draft EIR, implementation of the proposed project would not conflict with the 2017 *Clean Air Plan*, would pose no operational community risks or hazards, and would not generate any substantial odors. However, at a program level, implementation of the proposed project would result in significant and unavoidable impacts related to construction and operation of potential future development, as well as the cumulative contribution to the non-attainment designations of the San Francisco Bay Area Air Basin. The increased amount of construction from Alternative C would have *greater* air quality impacts from fugitive dust when compared to the proposed project.

Under Alternative C, less development would occur; therefore, less direct and indirect criteria air pollutant emissions from energy (e.g., natural gas use), and area sources (e.g., aerosols and landscaping equipment) would occur. Similar to the proposed project, development that would occur under Alternative C would be infill/intensification on sites either already developed and/or underutilized, and/or in close proximity to existing development. Alternative C would benefit from the updated and expanded goals, policies, and programs in the proposed project aimed at reducing air pollutants and would concentrate development in existing urban areas and therefore Alternative C maintains the net benefit gained from siting future development near public transit and existing services. As described in the transportation discussion for this alternative (Section 5.6.2.16), the Total VMT Per Service Population and Work VMT Per Employee would be *slightly greater* under Alternative C than the proposed project (28.3 Total VMT Per Capita compared to 28.1 Total VMT Per Capita and 17.3 Work VMT Per Employee compared to 16.9 Work VMT Per Employee). The reduction of 1,390 new units and addition of 125 more jobs does slightly decrease the Home VMT Per Resident when compared to the proposed project (11.2 Home VMT Per Resident compared to 11.3 Home VMT Per Resident). Therefore, this combination of reduced housing and increased jobs in Alternative C would result in increased but similar VMT, which are the major source of criteria air pollutants from the proposed project.

Overall, while Alternative C would result in less housing and more employment than the proposed project, air quality impacts from the operation of these uses would be considered ***greater*** due to increased VMT when compared to the proposed project.

5.6.2.4 BIOLOGICAL RESOURCES

As discussed in Chapter 4.4, Biological Resources, of this Draft EIR, the impacts to biological resources from the proposed project are fully mitigable with implementation of Mitigation Measures BIO-1 through BIO-4. Alternative C does not propose any changes that would result in substantial differences from the proposed growth potential of the proposed project. The 585 fewer residential units and 30 more jobs in the Downtown Precise Plan Area and the 870 fewer units and 95 more jobs in the remainder of the city would still be anticipated to occur in the form of infill/intensification on sites either already developed and/or underutilized, and/or in close proximity to existing development, where future development would have a lesser impact on biological resources. Under Alternative C, Mitigation Measure BIO-1, which requires project-specific baseline biological resources assessments for projects on sites that contain natural habitat with features that could support special-status species and other sensitive biological resources, as well as active nests of birds protected under the Migratory Bird Treaty Act and California Fish and Game Code, and Mitigation Measure BIO-4b, which would set standards certain development with the greater likelihood of causing bird collisions would be implemented. Therefore, while development would be more intensive under Alternative C, development would be concentrated in the same urban areas, and additional measures to protect biological resources would be realized, thus potential future development under Alternative C would result in ***similar*** impacts when compared to the proposed project.

5.6.2.5 CULTURAL AND TRIBAL CULTURAL RESOURCES

As described in Chapter 4.5, Cultural and Tribal Cultural Resources, of this Draft EIR, the proposed project would result in less-than-significant impacts to cultural and tribal cultural resources with implementation of Mitigation Measures CULT-2 through CULT-4 and would result in a significant and unavoidable impact with implementation of Mitigation Measure CULT-1.

Under Alternative C, new development would continue throughout the city under existing plans and regulations, and would be guided by the Downtown Precise Plan and Downtown Code, which would establish new standards in the Downtown Precise Plan Area to further protect historic buildings. As explained in Chapter 4.5, there are existing prehistoric, architectural, historical, or archaeological resources in the EIR Study Area that could all be impacted by new demolition, inappropriate modification, or inappropriate new construction under the proposed project or Alternative C. Like the proposed project, Alternative C would be subject to the procedures of conduct following the discovery of human remains set forth in California Health and Safety Code, Public Resources Code and the California Code of Regulations. Alternative C would also include all mitigating policies and programs that the proposed project includes to further ensure the protection of historic resources, particularly in the Downtown Precise Plan Area. However, because less development would occur under the Alternative C scenario, the potential to impact these resources would be *less* when compared to the proposed project. Overall, Alternative C would have ***fewer*** impacts to cultural resources when compared to the proposed project.

5.6.2.6 ENERGY

As described in Chapter 4.6, Energy, of this Draft EIR, the proposed project would not result in any significant impacts related to energy and no mitigation measures are required.

All development that occurs in the State is required to comply with best management practices regulated in the 2019 California Green Building Code and 2019 Building and Energy Efficiency Standards, which would be subject to the triennial updates that would presumably improve over time. Compliance with these regulations ensure new development would not result in the wasteful or inefficient use of energy. Further, new development would automatically be enrolled in renewable energy supplied by Marin Clean Energy. Such requirements and enrollment in MCE would be required under both the proposed project and under Alternative C. Additionally, neither the proposed project nor Alternative C would introduce a level of development and population growth that would be anticipated to necessitate the construction of new energy supply facilities or transmission infrastructure.

Less development would occur under the Alternative C scenario, so energy consumption from construction would be *less* when compared to the proposed project. However, newer buildings would be more energy efficient, thus energy impacts from older buildings would be less energy efficient when compared to the proposed project. This assumes that the increased development potential for the additional housing and jobs under the proposed project would possibly involve the demolition of older, less energy-efficient buildings than the proposed project. Ultimately, as described in the air quality discussion and transportation section for this alternative, energy use from VMT would be increased and therefore, while Alternative C would result in less housing and more employment than the proposed project, energy impacts would be considered ***greater*** due to increased VMT when compared to the proposed project.

5.6.2.7 GEOLOGY AND SOILS

As described in Chapter 4.7, Geology and Soils, of this Draft EIR, the proposed project would have less-than-significant impacts related to geology and soils in the EIR Study Area. The impacts related to unknown unique paleontological resources are fully mitigable with implementation of Mitigation Measure GEO-6.

Future development under both Alternative C and the proposed project would occur in the same urban areas and would be subject to the same federal, State, and local regulations that address and prevent hazards associated with geology, soils, and seismicity. Although Alternative C would result in *less* overall development, compliance with existing regulations related to geologic and seismic safety would apply similarly to both future development under Alternative C and the proposed project; therefore, Alternative C would result in ***similar*** impacts when compared to the proposed project.

5.6.2.8 GREENHOUSE GAS EMISSIONS

As described in Chapter 4.8, Greenhouse Gas Emissions, of this Draft EIR, the proposed project would result in two significant and unavoidable impacts despite implementation of Mitigation Measures GHG-1.

Implementation of the proposed project would result in significant and unavoidable GHG emissions impacts when applying program-level thresholds for the forecast year 2040. With respect to GHG emissions from construction, new buildings constructed would be subject to the triennial updates to California's Building and Energy Efficiency Standards, which would presumably improve over time. New buildings would be more energy efficient and there would be an overall decrease in energy usage under the Alternative C from construction due to the reductions of proposed growth. Even with implementation of the 2017 Scoping Plan, the 2050 target identified under Executive Order S-03-05, is estimated to not be achievable without major advances in technology. The identification of these program-level impacts does not preclude the finding of less-than-significant impacts for subsequent projects that comply with BAAQMD screening criteria or meet applicable thresholds of significance.

Development that could occur under Alternative C would occur similar to the proposed project in the Downtown Precise Plan and other urban portions of the EIR Study Area. Alternative C would result in a higher concentration of development in these areas, which would result in the same net benefit gained from siting more intense infill near public transit and result in a higher percentage of transit users that may rely on automobiles (as opposed to walking or biking). Therefore, as a result of placing development in these urban areas, Alternative C would result in slightly increased VMT (28.3 Total VMT Per Capita compared to 28.1 Total VMT Per Capita and 16.1 Work VMT Per Employee compared to 17.3 Work VMT Per Employee), which are the major source of criteria GHG emissions from the proposed project. While the Work VMT Per Employee is greater than the proposed project, the Total VMT Per Capita is essentially the same. Therefore, while Alternative C would result in the same type of urban development with fewer housing and more jobs, GHG emissions impacts from operation would be considered *similar* when compared to the proposed project due to the higher concentration of development.

Under Alternative C, future development in the EIR Study Area would continue to occur under the proposed General Plan 2040 and would result in infill development in PDAs and TPAs near transit as approximately half of the proposed project's development would. Accordingly, impacts related to consistency with the 2017 Scoping Plan, *Plan Bay Area,* and the City's *Climate Change Action Plan* as integrated into the General Plan, would be *similar* under both scenarios.

Overall, because Alternative C would result in less infill development but slightly greater VMT, impacts from GHG emissions under Alternative C would be ***greater*** when compared to the proposed project.

5.6.2.9 HAZARDS AND HAZARDOUS MATERIALS

As described in Chapter 4.9, Hazards and Hazardous Materials, of this Draft EIR, the proposed project would result in less-than-significant impacts related to hazards and hazardous materials with implementation of Mitigation Measure HAZ-4.

As discussed in Chapter 4.9, Hazards and Hazardous Materials, of this Draft EIR, there are sites within the EIR Study Area and the Downtown Precise Plan Area that are included on a State recognized list of hazardous materials sites. Impact Discussion HAZ-4 of this Draft EIR concluded that implementation of the proposed project could result in construction and operation activities on sites with known hazardous materials and, as a result, create a significant hazard to the public or the environment. However, such impacts were deemed less-than-significant with the adoption of mitigation measures. Implementation of

Alternative C would occur in approximately the same locations as the proposed project but would result in a different mix of development (less residential and more jobs). Therefore, development under Alternative C would have a *similar* probability of being located on active hazardous materials sites. Alternative C would comply with the same federal and State regulations as the proposed project and would still result in the adoption of the same goals, policies, and programs related to hazardous materials as the proposed project. Therefore, Alternative C would have a *similar* impact when compared to the proposed project.

The proposed project was found to have a less-than-significant impact related to the routine transport, use, or disposal of hazardous waste, the release of hazardous waste, or the emitting of hazardous emissions or handling of hazardous materials in the proximity of an existing or proposed school. As further discussed in Chapter 4.9, Hazards and Hazardous Materials, the EIR Study Area is not located within an airport land use plan area for which potential future development could conflict, and implementation of the proposed project would not conflict with an adopted emergency response plan or emergency evacuation plan. Potential future development which could occur in the EIR Study Area from implementation of the proposed project would be required to comply with all federal, State, and local regulations pertaining to hazards and hazardous materials, and the proposed project includes goals, policies, and programs which would further reduce impacts related to hazardous materials. Development that would occur under Alternative C would be required to comply with the same federal and State regulations, and would be required to comply with the updated and expanded General Plan 2040 goals, policies, and programs that reduce impacts related to hazardous materials. Therefore, Alternative C would have a ***similar*** impact when compared to the proposed project.

5.6.2.10 HYDROLOGY AND WATER QUALITY

As described in Chapter 4.10, Hydrology and Water Quality, of this Draft EIR, the proposed project would not result in any significant impacts related to hydrology and water quality and no mitigation measures are required. Compliance with existing State and local regulations and procedures would ensure that pre- and post-construction impacts to water quality would be less than significant. These regulations and procedures would be maintained under Alternative C.

Alternative C would result in less development overall and future development would occur within the same previously urbanized areas as the proposed project that would connect to existing drainage systems already in place and be subject to the same existing federal, State, and local regulations relating to hydrology and water quality. Compliance with existing regulations would ensure that pre- and post-construction impacts to water quality be minimized as future development occurs. Overall, potential future development under Alternative C and the proposed project would be in the same urbanized environments and would be subject to the same existing regulations that address hydrology and water quality impacts. Future development under each scenario would benefit from the updated and expanded General Plan 2040 goals, policies, and programs related to hydrology and water quality and impacts would be considered ***similar*** when compared to the proposed project.

5.6.2.11 LAND USE AND PLANNING

As described in Chapter 4.11, Land Use and Planning, of this Draft EIR, implementation of the proposed project would result in less-than-significant impacts related to land use and planning.

The proposed project would aim to improve connectivity and would not create physical barriers within existing communities. While implementation of Alternative C would result in a lower intensity of development, the integration of such development would be *similar* to that of the proposed project and does not propose physical features that could divide a community. Accordingly, impacts would be *similar* under both scenarios.

Under Alternative C, development would occur throughout the EIR Study Area under the proposed General Plan 2040 and Zoning Code while development in the Downtown Precise Plan Area would occur under the Downtown Precise Plan and associated Downtown Code. Such development would be the same as under the proposed project and therefore implementation of either development scenario would not conflict with any applicable land use plan adopted for the purpose of avoiding or mitigating an environmental effect and impacts would be ***similar*** when compared to the proposed project.

5.6.2.12 MINERAL RESOURCES

As discussed in Chapter 4.12, Mineral Resources, of this Draft EIR, the San Rafael Rock Quarry and McNear Brickworks are the only designated mineral resource sites with local, regional, or State significance within the EIR Study Area. The site is located outside of the San Rafael city limits, but within the EIR Study Area. The proposed project was found to have a less-than-significant impact on the San Rafael Rock Quarry and McNear Brickworks because potential future development under the proposed project would occur in existing urbanized areas not located near the mineral resource site. Future development under Alternative C would occur in the locations discussed in the existing General Plan 2020, which include already urbanized portions of the EIR Study Area that would not result in an impact to the mineral resource site. Therefore, impacts to mineral resources would be ***similar*** to the proposed project under Alternative C.

5.6.2.13 NOISE AND VIBRATION

As described in Chapter 4.13, Noise and Vibration, of this Draft EIR, the proposed project would result in a less-than-significant impact with implementation of Mitigation Measures NOISE-1, NOISE-2a, and NOISE-2b.

Future development allowed under the proposed project would be subject to the standards of the SRMC as well as goals, policies, and programs proposed in General Plan 2040, including those relating to the interface between residential and non-residential land uses. As specific uses are proposed for particular sites, project-level design, permitting, and/or environmental review would serve to ensure that individual uses would comply with the noise regulations. Future development under Alternative C would also be subject to these applicable standards. Impacts would be *similar* under both scenarios in this regard.

Alternative C would result in less intense development, which would result in more construction and increased but *similar* VMT. Because construction is temporary, the slightly greater but *similar* noise from the operational phase would result in ***similar*** noise impacts under Alternative C when compared to the proposed project.

5.6.2.14 POPULATION AND HOUSING

As described in Chapter 4.14, Population and Housing, of this Draft EIR, the proposed project would not result in any significant impacts related to population and housing, and no mitigation measures are required.

As described in Chapter 4.14, Population and Housing, of this Draft EIR, implementation of the proposed project would slightly exceed current regional projections. However, implementation of the proposed project was found to have a less-than-significant impact due to the focus on infill development in PDAs and TPAs, which is in alignment with the regional planning framework of *Plan Bay Area*. Further, the proposed project is the overriding policy document in the EIR Study Area which plans for population growth that is reasonably foreseeable through 2040.

Alternative C would result in less population and housing, and more jobs than the proposed project; thus, the regional projections would be closer to the 2040 regional forecasts for San Rafael under Plan Bay Area 2040. Alternative C would include the updated policy framework of the proposed project, which ensures adequate planning occurs to accommodate the future population increase and future development. Therefore, impacts under Alternative C would be *similar* to those under the proposed project.

Alternative C would allow for a lower increase of residential and higher non-residential development in the EIR Study Area through 2040. Alternative C would result in less housing than the proposed project but would still not require replacement housing outside the EIR Study Area. Therefore, impacts under Alternative C would be *similar* to those of the proposed project.

In summary, while Alternative C would result in a different growth potential, impacts related to population and housing would be ***similar*** when compared to the proposed project.

5.6.2.15 PUBLIC SERVICES AND RECREATION

As described in Chapter 4.15, Public Services and Recreation, of this Draft EIR, impacts under the proposed project to fire protection services, police services, parks, schools, and libraries, were found to be less than significant. No mitigation measures are required.

Alternative C would result in fewer new residents and more jobs in the EIR Study Area than the proposed project, and therefore, would result in *less* demand on the public service providers that serve the EIR Study Area. However, potential future development under Alternative C would be required to comply with all existing and proposed new City regulations adopted to ensure that development pays its fair share of the cost of delivering services, providing park space, and libraries. As discussed in Chapter 4.15, the City has recently upgraded critical public service facilities and exceeds the existing parkland standard in General Plan 2020; therefore, Alternative C would not result in an increase in demand, which would be anticipated to result in a significant impact. Further, the payment of property taxes and development fees that would ensure that future development pays its fair share towards schools as dictated by Senate Bill 50 while City regulations would ensure future development pays its fair share towards potential increases in demand on library services. Overall, impacts under Alternative C would be ***less*** than those of the proposed project.

5.6.2.16 TRANSPORTATION

As described in Chapter 4.16, Transportation, of this Draft EIR, the proposed project would result in two significant and unavoidable impacts related to transportation despite implementation of Mitigation Measures TRAN-1a and TRAN-1b. Both significant and unavoidable impacts are related to the inability of the proposed project to achieve the VMT reduction by 2040 of 15 percent below the baseline (2019) regional average. While the proposed General Plan 2040 results in a reduction in VMT Per Service Population by 2040, the VMT threshold of 15 percent below the current regional average would not be met.

As discussed in Chapter 4.16, Transportation, of this Draft EIR, the proposed project would result in a significant VMT impact for Total VMT Per Capita and Work VMT Per Employee and would not result in a significant Home VMT Per Resident impact. Both scenarios would result in similar development patterns, but Alternative C would yield fewer residential units and more jobs. Therefore, the Total VMT Per Service Population and Work VMT Per Employee would be *slightly* greater under Alternative C than the proposed project (28.3 Total VMT Per Capita compared to 28.1 Total VMT Per Capita and 16.1 Work VMT Per Employee compared to 17.3 Work VMT Per Employee).

Both Alternative C and the proposed project would include the improvements recognized in the Downtown Precise Plan and updated goals, policies, and programs that expand upon General Plan 2020 and to ensure the transportation system in the EIR Study Area is multi-modal and designed to increase bicycle and pedestrian access and safety. Impacts related to hazards from design features, emergency access, and conflicting with adopted plans or decrease performance standards, were found to be less than significant.

Overall, transportation impacts in the EIR Study Area under Alternative C would be ***greater*** when compared to the proposed project.

5.6.2.17 UTILITIES AND SERVICE SYSTEMS

As described in Chapter 4.17, Utilities and Service Systems, of this Draft EIR, impacts to sanitary wastewater, solid waste and stormwater infrastructure, and solid waste, under the proposed project, were found to be less than significant with the compliance of all applicable regulations. No mitigation measures are required.

Since Alternative C would result in less residential development, and thus, less water demand, wastewater and solid waste generation, impacts under the Alternative C would be ***less*** when compared to the proposed project.

5.6.2.18 WILDFIRE

Chapter 4.18, Wildfire, of this Draft EIR determined that, due to compliance with applicable local, regional, and State regulations, the proposed project would not impair the implementation of an emergency response or emergency evacuation plan. Additionally, potential future development as a result of the proposed project would not be located in an area that would expose persons to wildfire or wildfire

pollutants, nor would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides. Finally, the proposed project would not result in the installation or maintenance of any infrastructure that could exacerbate fire risk or result in impacts to the environment.

Alternative C would result in lower-density development that would be located in the same locations as in the proposed project; would adopt the same goals, policies, and programs to reduce the risk of wildfire; and would not include the installation or maintenance of any infrastructure projects. Therefore, implementation of Alternative C would have *similar* impacts to the proposed project.

5.6.3 RELATIONSHIP OF THE ALTERNATIVES TO THE OBJECTIVES

As listed in Section 5.2, the primary purposes of the proposed project are to plan for the growth and conservation of San Rafael over a 20-year time horizon and to achieve a more equitable, sustainable, and prosperous future for all residents. This requires extending the buildout horizon to year 2040 and updating goals, policies, and programs so that they meet current State requirements and community priorities. As part of this process, the City drafted 2040 Guiding Principles, which build upon the framework of the vision, guiding principles, and goals of the current General Plan 2020 and reflect the community's desires for San Rafael's future. Big-picture objectives related specifically to growth include focusing growth in the Downtown Precise Plan Area, capitalizing on transit opportunities in and around PDAs, and streamlining future development that is consistent with the proposed project.

Alternative C would result in less housing and population growth in the EIR Study Area when compared to the proposed project. As discussed in Chapter 3, Project Description, of this Draft EIR, the proposed project specifically plans for infill development in existing urban areas near public transportation to meet the goals of the City. While the growth in Alternative C would occur in the same locations as included in the proposed project, Alternative C would result in less overall development, which would mean that the City would not meet their goal of providing adequate development to accommodate the growing population in the EIR Study Area. Therefore, Alternative C does not meet all the project objectives as outlined in the proposed project.

5.7 ENVIRONMENTALLY SUPERIOR ALTERNATIVE

In addition to the discussion and comparison of impacts of the proposed project and the alternatives, Section 15126.6 of the CEQA Guidelines requires that an "environmentally superior" alternative be selected and the reasons for such a selection be disclosed. In general, the environmentally superior alternative is the alternative to the proposed project that would be expected to generate the least number of significant impacts. Identification of the environmentally superior alternative is an informational procedure and the alternative to the proposed project selected may not be the alternative to the proposed project that best meets the goals or needs of San Rafael. Because CEQA Guidelines Section 15126.6(c) requires an evaluation of a reasonable range of alternatives to the proposed project, the proposed project under consideration cannot be identified as the environmentally superior alternative. Additionally, in accordance with CEQA Guidelines Section 15126.6(e)(2), if the

environmentally superior alternative is the "No Project" alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.

A summary of the impacts shown in Table 5-2 for each alternative is as follows:

- Alternative A would, in comparison to the project, result in *reduced* environmental impacts related to aesthetics, and utilities and service systems, but would ultimately result in *greater* impacts related to air quality, biological resources, cultural resources (historic buildings), energy, GHG emissions, noise (operational), and transportation.
- Alternative B would, in comparison to the project, result in reduced environmental impacts related to air quality, energy, GHG emissions, noise (operational), and transportation, but would result in *greater* impacts to cultural resources (historic buildings) and utilities and service systems.
- Alternative C would, in comparison to the project, would result in reduced environmental impacts related to aesthetics, cultural resources (historic buildings), and utilities and service systems, but would have greater impacts to related to air quality, energy, GHG emissions, noise (operational), and transportation.

Therefore, as shown in Table 5-2, Alternative B would be the environmentally superior alternative.

This page intentionally left blank.

6. CEQA-Required Conclusions and Findings

This chapter provides an overview of the impacts of the proposed project based on the analyses presented in Chapters 4.1 through 4.18 of this Draft Environmental Impact Report (EIR). The topics covered in this chapter include growth-inducing impacts and significant irreversible changes to the environment. A more detailed analysis of the effects that the proposed project would have on the environment, and proposed mitigation measures to minimize significant impacts, are provided in Chapter 4, Environmental Analysis, of this Draft EIR.

6.1 SIGNIFICANT AND UNAVOIDABLE IMPACTS

Section 15126.2(b) of the California Environmental Quality Act (CEQA) Guidelines requires that "direct and indirect significant effects of the project on the environment shall be clearly identified and described, giving due consideration to both the short- and long-term effects." Chapter 2, Executive Summary, contains Table 2-1, which summarizes the significant impacts, mitigation measures, and levels of significance with and without mitigation. While actions from the proposed project and mitigation measures, where feasible, would reduce the level of impact to less than significant, the following impacts would remain significant and unavoidable after mitigation measures are applied. As detailed in Chapters 4.3, Air Quality, Chapter 4.8, Greenhouse Gas Emissions, and Chapter 4.16, Transportation, of this Draft EIR, environmental impacts associated with the proposed project were found to be significant and unavoidable, as listed:

- Impact AIR-2.2: Operational activities associated with potential future development could cumulatively contribute to the non-attainment designations of the San Francisco Bay Area Air Basin.
- Impact AIR-3.2. Operational activities associated with potential future development could expose sensitive receptors to substantial toxic air contaminant concentrations from nonpermitted sources.
- Impact CULT-1. Future development in San Rafael on sites that contain a historic resource may cause the demolition, destruction, or alteration of a historic resource such that the significance of the resource is "materially impaired." Such adverse changes or potential adverse changes in the significance of a CEQA-defined historic resource would constitute a significant impact.
- Impact GHG-1: Implementation of the proposed project may not meet the long-term GHG reduction goal under Executive Order S-03-05. (This is a cumulative impact).
- Impact TRAN-1a Implementation of the proposed project would result in a significant land use VMT impact for Total VMT and Work VMT due to forecast land use growth through 2040, based on a comparison of the VMT rate increment for Total VMT Per Service Population and Work VMT Per Employee to the corresponding average baseline rates for the full nine-county Bay Area.

- Impact TRAN-1b: Implementation of the proposed project would result in a significant road network VMT impact due to the planned capacity of the roadway system.
- Impact TRAN-6: Implementation of the proposed project would cumulatively contribute to regional VMT.

6.2 GROWTH-INDUCEMENT

Section 15126.2(d) of the CEQA Guidelines requires that an EIR discuss the ways in which a proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Typical growth-inducing factors might be the extension of urban services or transportation infrastructure to a previously unserved or under-served area, or the removal of major barriers to development.

This section evaluates the proposed project's potential to create such growth inducements. As CEQA Guidelines Section 15126.2(d) requires, "[it] must not be assumed that growth in an area is necessarily beneficial, detrimental, or of little significance to the environment." In other words, negative impacts associated with growth inducement occur only where the projected growth would cause significant adverse environmental impacts.

Growth-inducing impacts fall into two general categories: direct or indirect. Direct growth-inducing impacts are generally associated with providing urban services to an undeveloped area. Indirect, or secondary growth-inducing impacts consist of growth induced in the region by additional demands for housing, goods, and services associated with the population increase caused by, or attracted to, a new project.

Further, while implementation of the proposed project would induce growth, as discussed in detail in Chapter 4.14, Population and Housing, of this Draft EIR, the proposed project would be consistent with the regional planning objectives established for the Bay Area. While the project itself implements goals, policies, and programs to accommodate the project's projected growth, it would exceed the current population and household forecasts as projected by the Association of Bay Area Governments (ABAG). However, ABAG prepares forecasts of the region's population and employment every two to four years. Amongst other sources, ABAG's projections take into account local planning documents for the nine-county region, such as the City of San Rafael's General Plan. As such, while the proposed project exceeds the regional projections, both the General Plan and regional forecasts are long-range planning tools that assist local governments to identify policies that address changing environments. Accordingly, following adoption of the proposed project, the regional forecasts would take into account the new growth potential for San Rafael; thus, bringing the two long-range planning tools into better alignment. Additionally, this additional growth would come incrementally over a period of approximately 20 years and a policy framework is in place to ensure adequate planning occurs to accommodate it. The proposed project results in mixed-use development near transportation facilities and employment centers and implements energy and water conservation requirements related to existing and new development, thereby minimizing consumption of non-renewable resources to the extent practicable.

6.2.1 DIRECT IMPACTS

The proposed project is a plan-level document and does not propose any specific development; however, implementation of the proposed project would induce growth by increasing the development potential in the EIR Study Area, as shown in Tables 3-6 and 3-7 in Chapter 3, Project Description, of this Draft EIR.

As shown in Table 3-6, the 2040 forecast for the EIR Study Area is 32,382 households; 33,989 residential units; 84,661 total population, and 48,315 employees. As shown in Table 3-7, the forecast for the Downtown Precise Plan Area is 3,596 households; 3,771 residential units; 5,885 total population, and 13,020 employees.

State law requires the City to promote the production of housing to meet its fair share of the regional housing needs distribution made by ABAG. While the City provides adequate sites to meet its fair-share housing obligations, the additional housing capacity provided by the project would meet the additional demand generated by new job growth.

In addition, as shown on Figure 4-1 (see Chapter 4, Environmental Analysis), the EIR Study Area has three PDAs and three TPAs. The proposed General Plan 2040 is anticipating that these areas will absorb most of the City's future growth. The growth envisioned under the proposed project would result in regional benefits by promoting growth that encourages less automobile dependence and supports regional transit systems, which could have associated air quality and GHG benefits. Encouraging infill growth in designated areas would help to reduce development pressures on lands outside the city boundary.

6.2.2 INDIRECT IMPACTS

The proposed project is considered growth inducing because it encourages new growth in the urbanized areas of San Rafael. Development in these areas would consist of infill development on underutilized sites, sites that have been previously developed, and that are vacant and have been determined to be suitable for development. However, infrastructure is largely in place and growth would be required to comply with the City's General Plan, zoning regulations, and standards for public services and utilities; secondary effects associated with this growth do not represent a new significant environmental impact which has not already been addressed in the individual resource chapters of this EIR.

Additional population and employment growth would occur incrementally over a period of approximately 20 years and would be consistent with the regional planning objectives established for the Bay Area.

6.3 SIGNIFICANT AND IRREVERSIBLE CHANGES

Section 15126.2(c) of the CEQA Guidelines requires an EIR to discuss the extent to which the proposed project would commit nonrenewable resources to uses that future generations would probably be unable to reverse. The three CEQA-required categories of irreversible changes are discussed herein.

6.3.1 CHANGES IN LAND USE THAT COMMIT FUTURE GENERATIONS

As described in detail in Chapter 3, Project Description, of this Draft EIR, the proposed project generally maintains the land use pattern of the existing General Plan. While new land uses are not introduced in the proposed project, development is encouraged in existing urban areas, particularly in the Downtown Precise Plan Area. The current General Plan provided development allocations for buildout of the city through the year 2020. The proposed project includes increased density and heights in the Downtown Precise Plan Area, but such future development under the proposed project would be located on land that is generally urbanized or on infill sites and sites in developed areas that are underutilized. However, some potential future development may occur on vacant non-urban sites which are already designated for development. Once future development under the proposed project occurs, it would not be feasible to return the developed land to its existing (pre-project) condition. Therefore, there is potential that some of the development allowed under the proposed project would most likely lead to irreversible changes in land use.

6.3.2 IRREVERSIBLE DAMAGE FROM ENVIRONMENTAL ACCIDENTS

Irreversible changes to the physical environment could occur from accidental release of hazardous materials associated with development activities; however, compliance with the applicable regulations and General Plan goals, policies, and programs and implementation of Mitigation Measures HAZ-4a and HAZ-4b, and HAZ-8, as discussed in Chapter 4.9, Hazards and Hazardous Materials, would reduce this potential impact to a less-than-significant level. Therefore, irreversible damage is not expected to result from the adoption and implementation of the proposed project.

6.3.3 LARGE COMMITMENT OF NONRENEWABLE RESOURCES

Implementation of development allowed under the proposed project would result in the commitment of limited, renewable resources such as lumber and water. In addition, development allowed by the proposed project would irretrievably commit nonrenewable resources for the construction of buildings, infrastructure, and roadway improvements. These nonrenewable resources include mined minerals such as sand, gravel, steel, lead, copper, and other metals. Future buildout under implementation of the proposed project also represents a long-term commitment to the consumption of fossil fuels, natural gas, and gasoline. Increased energy demands would be used for construction, lighting, heating, and cooling of residences, and transportation of people within, to, and from San Rafael. However, as shown in Chapter 4.5, Energy, and in Section 4.17.1, Water, and Section 4.17.4, Solid Waste, of Chapter 4.17, Utilities and Service Systems, of this Draft EIR, several regulatory measures and General Plan policies and strategies encourage energy and water conservation, alternative energy use, waste reduction, alternatives to automotive transportation, and green building. Future development, as a result of increased development allocation under the proposed project, would be required to comply with all applicable building and design requirements, including those set forth in Title 24 relating to energy conservation. In compliance with CALGreen, the State's Green Building Standards Code, future development would be

required to reduce water consumption by 20 percent, divert 50 percent of construction waste from landfills, and install low pollutant-emitting materials. Therefore, while the construction and operation of future development, as a result of increased development allocations under the proposed project, would involve the use of nonrenewable resources, compliance with applicable standards and regulations and implementation of General Plan policies would reduce the use of nonrenewable resources to the maximum extent practicable; therefore, the proposed project would not represent a large commitment of nonrenewable resources in comparison to a business-as-usual situation.

8. Common Acronyms and Abbreviations

ACRONYM/ABBREVIATION	MEANING
°C	degrees Celsius
°F	degrees Fahrenheit
AAQS	ambient air quality standards
AB	Assembly Bill
ABAG	Association of Bay Area Governments
afy	acre-feet per year
BAAQMD	Bay Area Air Quality Management District
BAM	best available maps
BASMAA	Bay Area Stormwater Management Agencies Association
BCDC	Bay Conservation and Development Commission
BFE	base flood elevation
BMP	best management practice
CalARP	California Accidental Release Prevention
CalEPA	California Environmental Protection Agency
CAL FIRE	California Department of Forestry and Fire Protection
CALGreen	California Green Building Standards Code
Cal OES	California Office of Emergency Services
CalRecycle	California Department of Resources, Recycling, and Recovery
Caltrans	California Department of Transportation
CALVEG	Classification and Assessment with Landsat of Visible Ecological Groupings
CARB	California Air Resources Board
CBC	California Building Code
CCAP	climate change action plan
CCR	California Code of Regulations
CDC	California Department of Conservation
CDFW	California Department of Fish and Wildlife
CEQA	California Environmental Quality Act
CERCLA	Comprehensive Environmental Response, Compensation, and Liability Act
CERCLIS	Comprehensive Environmental Response, Compensation, and Liability Information System
CESA	California Endangered Species Act
CFGC	California Fish and Game Code
CGP	Construction General Permit
CH_4	methane
CHP	California Highway Patrol
CIP	capital improvements program

COMMON ACRONYMS AND ABBREVIATIONS

ACRONYM/ABBREVIATION	MEANING
CMP	congestion management program
CMSA	Central Marin Sanitation Agency
CNDDB	California Natural Diversity Database
CNEL	community noise equivalent level
CNPS	California Native Plant Society
CO_2	carbon dioxide
CO_2e	carbon dioxide-equivalent
CUPA	Certified Unified Program Agency
CWA	federal Clean Water Act
dB	decibel
dBA	A-weighted decibel
DOI	Department of the Interior
DOT	United States Department of Transportation
DPM	diesel particulate matter
DPW	San Rafael Department of Public Works
DTSC	Department of Toxic Substances Control
DWR	California Department of Water Resources
EIR	Environmental Impact Report
EMS	emergency medical services
EOP	emergency operations plan
EPCRA	Emergency Planning Community Right-to-Know Act
EPSFSP	*San Rafael Essential Public Safety Facilities Strategic Plan*
ERP	emergency recovery plan
ESC	Emergency Services Coordinator
ESCP	erosion and sediment control plan
FAR	floor area ratio
FEMA	Federal Emergency Management Agency
FESA	federal Endangered Species Act
FHWA	Federal Highway Administration
FIRM	flood insurance rate map
FTA	Federal Transit Administration
FOG	fats, oils, and grease
GDP	gross domestic product
GHG	greenhouse gas
GIS	geographic information system
gpcd	gallons per capita per day
GWP	global warming potential
HCP	habitat conservation plan
Hz	herz
I-	Interstate
IPCC	Intergovernmental Panel on Climate Change
ISO	Insurance Services Office
JPA	joint powers authority

COMMON ACRONYMS AND ABBREVIATIONS

ACRONYM/ABBREVIATION	MEANING
kBTU	thousand British thermal units
kW	kilowatt
kWh	kilowatt-hours
LAFCo	Local Agency Formation Commission
LGVSD	Las Gallinas Valley Sanitary District
LHMP	local hazard mitigation plan
LUST	leaking underground storage tank
µg/m^3	micrograms per cubic meter
M	earthquake magnitude

APPENDIX A:
NOTICE OF PREPARATION AND SCOPING COMMENTS

Notice of Preparation
Environmental Impact Report
City of San Rafael

Date: **March 29, 2019**

To: State Clearinghouse
State Responsible Agencies
State Trustee Agencies
Other Public Agencies
Interested Organizations

From: Barry Miller, Consulting Project Manager
City of San Rafael
Community Development Department
1400 Fifth Street
San Rafael, CA 94901

Subject: Notice of Preparation (NOP) of the Draft Environmental Impact Report (EIR) for the General Plan 2040 and Downtown Precise Plan
Lead Agency: City of San Rafael Community Development Department
Project Title: General Plan 2040 and Downtown Precise Plan
Project Area: City of San Rafael and unincorporated San Rafael Planning Area

Notice is hereby given that the City of San Rafael (City) will prepare an EIR for the San Rafael General Plan 2040 and Downtown Precise Plan (proposed project) and will hold a public meeting to receive comments on the scope of the EIR, as detailed below. Pursuant to the California Environmental Quality Act (CEQA) Guidelines Section 15206, the proposed project is considered a project of statewide, regional, or areawide significance. The City, acting as the Lead Agency, determined that the proposed project could result in potentially significant environmental impacts and that an EIR is required.

The City will prepare an EIR to address the potential environmental impacts associated with the project at a programmatic level consistent with CEQA Guidelines Section 15168. The program-level EIR will evaluate the proposed project for potential impacts on the environment and analyze the proposed policies to determine the potential environmental consequences of future change. An evaluation of project alternatives that could reduce significant impacts will be included in the EIR. The proposed project, its location, and potential environmental effects are described below.

The City is requesting comments and guidance on the scope and content of the EIR from interested public agencies, organizations, and individuals. With respect to the views of Responsible and Trustee Agencies as to significant environmental issues, the City needs to know the reasonable alternatives and mitigation measures that are germane to each agency's statutory responsibilities in connection with the proposed project.

Due to the time limits mandated by State law, your response must be sent at the earliest possible date, but no later than the close of the 30-day NOP review period at **5:00 p.m. on Monday, April 29, 2019** If you submit comments on the scope of the EIR, you will automatically be added to the City's distribution list for future notices and information about the environmental review process for proposed project. If you do not wish to submit comments on the scope of the EIR, but would like to be added to the City's mailing list, you can submit your contact information, including email address with a request to be added to the mailing list.

Please send your written comments to Barry Miller, at the address shown above or email to Barry.Miller@cityofsanrafael.org with "*General Plan 2040 and Downtown Precise Plan EIR*" as the subject. Public agencies providing comments are asked to include a contact person for the agency.

A Scoping Meeting to accept oral comments will be held before the San Rafael Planning Commission on **Tuesday April 23, 2019 at 7:00 pm**. at City Hall in the Council Chambers (1400 Fifth Street, San Rafael, CA 94901)

PROJECT LOCATION, DESCRIPTION, AND OBJECTIVES

This section describes the location, project description, and overall objective of the proposed project. A copy of this NOP, information about the project, including relevant documents, information on upcoming meetings, and ways you can provide feedback can be viewed: 1) on line at **http://www.sanrafael2040.org**, or 2) City Hall (1400 Fifth Avenue - Planning Division counter, 3rd Floor). The Planning Division counter is open Mondays, Tuesdays and Thursdays from 8:30 a.m. to 4:30 p.m. and, Wednesdays and Fridays from 8:30 a.m. to 1:30 p.m.

Project Location

The project encompasses the San Rafael Planning Area, which includes all land within the city limits, adjacent land in the Sphere of Influence (SOI) boundary, and land beyond the SOI that is commonly perceived as greater San Rafael. Unincorporated areas within the SOI include California Park, Country Club, Bayside Acres, and Los Ranchitos; China Camp State Park; the Santa Venetia area; and the San Rafael Rock Quarry. The Planning Area also includes Marinwood and Lucas Valley (developed and undeveloped portions), although these areas are outside the SOI. The Downtown Precise Plan area encompasses 265 acres located in downtown San Rafael. See Figures 1, 2, and 3 for regional and study area maps.

Project Description and Objectives

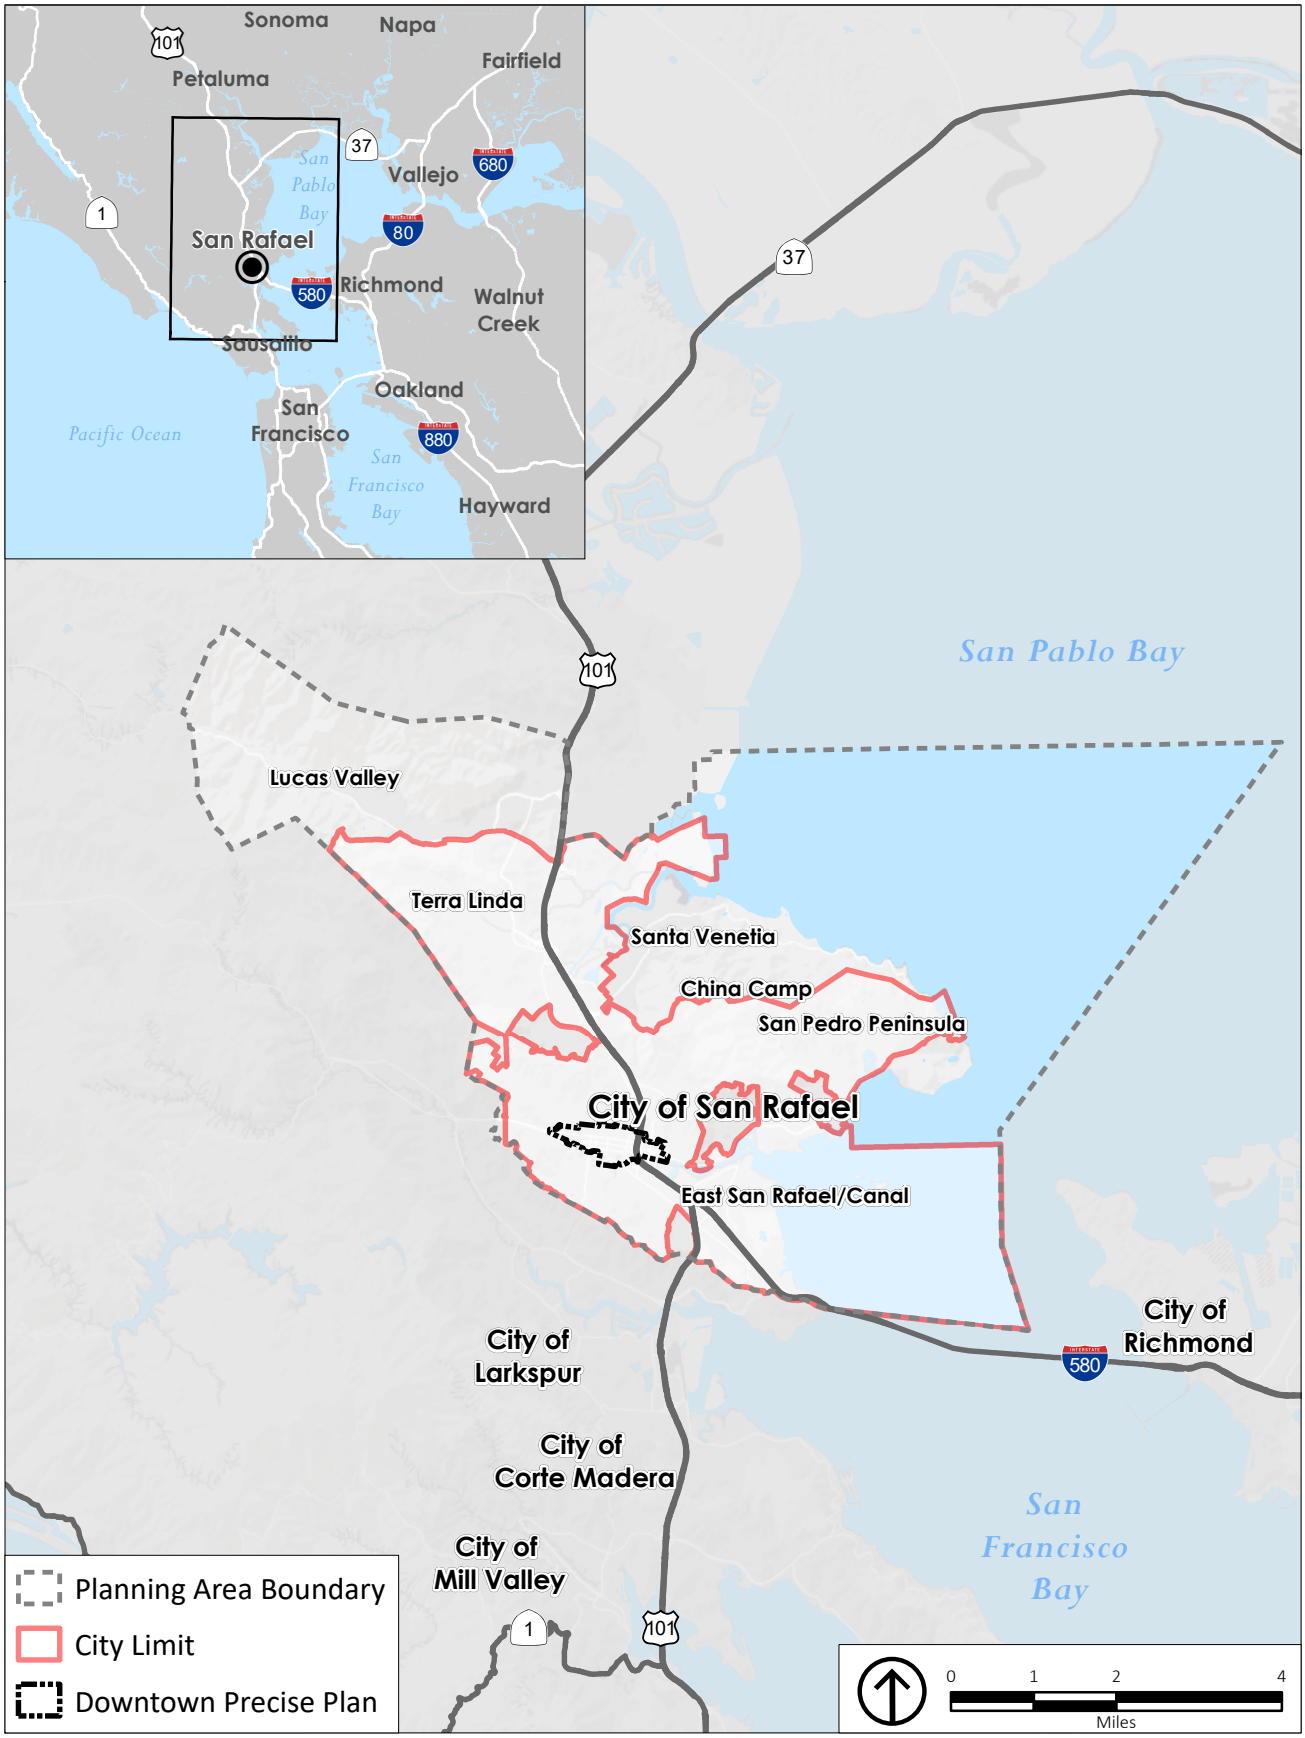
Often described as each city's "constitution," general plans are required by State law to guide land use and development, typically within a 20-year horizon. General plans must be periodically updated to respond to new state laws, changing conditions, and emerging issues and opportunities. San Rafael's existing General Plan was prepared in 1999-2003 and was adopted in 2004, with a horizon year of 2020. Since the horizon year is approaching, the City is now updating its plan to extend the planning period to 2040. The San Rafael General Plan 2040 (General Plan 2040) will build off the current General Plan 2020 and provide a framework for land use, transportation, and conservation decisions through the year 2040.

The City is also preparing a Downtown Precise Plan (Precise Plan) concurrently with the General Plan 2040. The Precise Plan is being funded by a grant from the Metropolitan Transportation Commission. The intent of the Precise Plan is to facilitate housing production, placemaking, economic vitality, innovative transportation solutions, and community engagement with an emphasis on sustainable, transit-oriented development.

Both the proposed General Plan 2040 and the Downtown Precise Plan will direct future growth within the study area and address the city's vulnerability to environmental challenges such as sea level rise, wildland fires, and other hazards identified in the City's Local Hazard Mitigation Plan and updated Climate Action Plan. Both plans are intended to respond to local and regional housing needs, foster economic growth and local job creation, enhance civic identity and placemaking, and protect sensitive natural resources.

Environmental Review

The San Rafael General Plan 2040 and Downtown Precise Plan program EIR will determine whether implementation of the proposed project may result in environmental impacts that require mitigation measures to offset potential impacts. By incorporating implementation provisions (goals, policies, and programs) that focus on reducing environmental impacts, the proposed project can be made largely "self-mitigating," which reduces the need for separate EIR mitigation measures, improves the efficiency of implementation, and increases the likelihood that development within the study area will be environmentally sustainable. In accordance with CEQA, the cumulative impacts discussion will be based on review of other plans shaping development outside of the study area. CEQA requires that an EIR evaluate alternatives to a project that could reasonably attain the project objectives while reducing any significant impact of the project, as well as considering the "No Project" Alternative (i.e., what could happen if the project were not approved).



Environmental Factors Potentially Affected

The EIR will address the proposed project's potential impacts to the following environmental topics:

- Aesthetics
- Agricultural and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources/Tribal Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Noise
- Population and Housing
- Public Services
- Parks and Recreation
- Transportation
- Utilities and Service Systems
- Wildfire

Verbal Comments from April 23, 2019 Scoping Meeting																								
Planning Commissioner Comments									•	•		•						•			•	•		Comments given by Planning Commissioners at the Scoping Meeting addressed concerns regarding sea level rise and its impact to eastern San Rafael. Commissioners also asked that the EIR look comprehensively at how land use and transportation tie together to potentially hinder evacuation plans for wildfires and commented that threat of wildfire means the circulation network is vital. Greenhouse gas emissions were mentioned in an effort to ensure the EIR will address reducing greenhouse gas emissions in accordance with the Climate Change Action Plan. Furthermore, three alternatives were mentioned specifically for the Northgate Mall area. Alternatives suggested include: 1) Keeping the status quo; 2) Developing high density residential; and 3) Developing retail that will generate higher sales taxes. There were no comments made by the general public, and no written comments received, at the Scoping Meeting.

5	Brandy Wilson 1114 Mission Avenue San Rafael, CA 94901 **[Barry: What is San Rafael's standard for redacting public information on comment letters?]** wilson.girazian@gmail.com (415) 314-3152 April 22, 2019									•												•		Requests that the boundary for the Downtown Precise Plan include the entirety of Boyd Park and the Falkirk Mansion. Adds that the National Climate Assessment estimates San Rafael will become 3.5 degrees Fahrenheit warmer by 2050, which will significantly impact these resources. Comment additionally mentions risk of wildfire.
6	William Carney and Linda Jackson Sustainable San Rafael Board of Directors 166 Greenwood Avenue San Rafael, CA 94901 (415) 457-7656 April 26, 2019		•												•			•			•	•		Requests the EIR address housing shortage and affordability, homelessness, shift to online retail, traffic congestion, climate change, diversity and equity challenges, and community character. The comment offers five alternatives for consideration: 1) No Plan; 2) Protection of existing development form sea level rise; 3) Relocation and consolidation of vulnerable development; 4) Continuing sea level rise; and 5) Comprehensive planning. Additionally, the comment suggests that several key metrics need to be established and mapped by the EIR, using expectations such as sea level rise and housing projections. Finally, the comment includes a list of key policies and programs that are recommended for consideration through the EIR process.

#	COMMENTOR NAME AND ADDRESSES	Project Description	Aesthetics	Agriculture and Forestry	Air Quality	Biological Resources	Cultural / Tribal Cultural Resources	Geology / Soils	Greenhouse Gas Emissions	Hazards / Hazardous Materials/ Wildfire	Hydrology / Water Quality	Land Use and Planning	Mineral Resources	Noise	Population / Housing	Public Services	Recreation	Transportation / Circulation	Utilities / Service Systems/ Energy	Construction Impacts	Alternatives	Other	Requests to be Notified	SUMMARY OF ENVIRONMENTAL COMMENT
9	Kate Powers April 29, 2019		•		•	•					•			•	•			•			•	•		Requests that the EIR address cumulative impacts thoroughly, as well as thoroughly conducts analysis of the No Project Alternative. Commenter lists major roadways that the EIR should include as part of a detailed analysis, and that should include new and updated traffic and congestion models. Additionally, the comment includes several policies and programs that should be thoroughly analyzed to understand the role they play in reducing congestion and increasing safety. The comment requests that the EIR adequately address impacts on air quality, greenhouse gas emissions, noise, and light, that the proposed Plan's may have, and requests the EIR compare these impacts thoroughly to cumulative impacts. The comment requests that the EIR heavily consider impacts to hydrology and water quality, including showing existing creeks and wetlands on all site maps, including BayWAVE data, identify policies that meet climate- safe infrastructure, describe anticipated rates and volumes of stormwater runoff, drainage capacity, filtrations, and possible soil erosion in watersheds, identify areas that would place housing and other structures within the Federal Emergency Management Agency 100- year flood hazard zone, and assess toxicity of soils and describe how sediment and any contaminants will be prevented from entering creek systems and the nearby estuary.

Re: General Plan 2040 and Downtown Precise Plan
SCH# 2019039167

Attached for your review and comment is the Notice of Preparation (NOP) for the General Plan 2040 and Downtown Precise Plan draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

Raffi Boloyan
San Rafael, City of
1400 Fifth Street
San Rafael, CA 94901

with a copy to the State Clearinghouse in the Office of Planning and Research at state.clearinghouse@opr.ca.gov . Please refer to the SCH number noted above in all correspondence concerning this project on our website: https://ceqanet.opr.ca.gov/2019039167/2.

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

Scott Morgan
Director, State Clearinghouse

Project Description: *(please use a separate page if necessary)*

The San Rafael General Plan 2020 (General Plan) is due for a comprehensive update, which will provide a framework for land use decisions through the year 2040. The City is preparing a Downtown Precise Plan concurrently with the General Plan to facilitate housing production, placemaking, economic vitality, innovative transportation solutions, and community engagement with an eye toward sustainable, transit-oriented development.

Note: The State Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g. Notice of Preparation or previous draft document) please fill in.

General Plan 2040 and Downtown Precise Plan – Notice of Preparation (NOP)

Dear Barry Miller:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above-referenced project. In tandem with the Metropolitan Transportation Commission's (MTC) Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS), Caltrans mission signals a modernization of our approach to evaluating and mitigating impacts to the State Transportation Network (STN). Caltrans' *Strategic Management Plan 2015-2020* aims to reduce Vehicle Miles Travelled (VMT) by tripling bicycle and doubling both pedestrian and transit travel by 2020. Our comments are based on the NOP.

Project Understanding

The City is preparing a *Downtown Precise Plan (Precise Plan)* concurrently with the *General Plan 2040*. The Precise Plan is being funded by a grant from the Metropolitan Transportation Commission. The intent of the Precise Plan is to facilitate housing production, placemaking, economic vitality, innovative transportation solutions, and community engagement with an emphasis on sustainable, transit-oriented development. Both the proposed *General Plan 2040* and the *Downtown Precise Plan* will direct future growth within the study area and address the city's vulnerability to environmental challenges such as sea level rise, wild land fires, and other hazards identified in the *City's Local Hazard Mitigation Plan* and updated *Climate Action Plan*. Both plans are intended to respond to local and regional housing needs, foster economic growth and local job creation, enhance civic identity and placemaking, and protect sensitive natural resources.

Lead Agency

As the Lead Agency, the City of San Rafael is responsible for all project mitigation, including any needed improvements to the STN. The project's financing, scheduling, implementation responsibilities and monitoring should be fully discussed for all proposed mitigation measures, prior to the submittal of an encroachment permit. Potential mitigation measures that include the requirements of other agencies—such as Caltrans—are fully enforceable through permit conditions, agreements, or other legally-binding instruments under the control of the Lead Agency.

Encroachment Permit

Please be advised that any work or traffic control that encroaches onto the State ROW requires an encroachment permit that is issued by Caltrans. To obtain an encroachment permit, a completed encroachment permit application, environmental documentation, and six (6) sets of plans clearly indicating the State ROW, and six (6) copies of signed and stamped traffic control plans must be submitted to: Office of Encroachment Permits, California DOT, District 4, P.O. Box 23660, Oakland, CA 94623-0660. To download the permit application and obtain more information, visit http://www.dot.ca.gov/hq/traffops/developserv/permits/.

Should you have any questions regarding this letter, please contact Michael McHenry at (510) 286-5562 or Michael.mchenry@dot.ca.gov.

Sincerely,

PATRICIA MAURICE

RE: Notice of Preparation of the Draft Environmental Impact Report for the General Plan 2040 and Downtown Precise Plan

Dear Mr. Miller:

Bay Area Air Quality Management District (Air District) staff reviewed the Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) for the General Plan 2040 and Downtown Precise Plan (Plan). As we understand, the City will prepare a programmatic level DEIR to evaluate proposed policies of the Plan to determine if any of the future changes will have potential impacts on the environment. Per the NOP, both the proposed General Plan 2040 and the Downtown Precise Plan will direct the City's future growth and are intended to respond to local and regional housing needs.

The Air District has the following specific comments on the environmental analysis that we encourage the City to include in the Plan DEIR:

1. Please provide a detailed analysis of the Plan's potential effects on local and regional air quality. We recommend the DEIR include a discussion on the Air District's attainment status for all criteria pollutants and the implications for the region if these standards are not attained or maintained by statutory deadlines; and a discussion of the health effects of air pollution. The Air District's *CEQA Air Quality Guidelines (May, 2017)* provide guidance on how to evaluate a Plan's construction, operational and cumulative air quality impacts. A copy may be downloaded from: http://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa

2. Include in the DEIR an assessment of the potential health risk to current and future sensitive populations within the Plan area from toxic air contaminants (TACs) and fine particulate matter (PM2.5) as a result of Plan build-out. Please include in the assessment an evaluation of potential cumulative health risks from the Plan including impacts from stationary sources, highways, major roadways, and rail lines in the Plan area.

3. The DEIR should also identify, evaluate and include measures to reduce criteria pollutants such as reactive organic gases (ROG), nitrogen oxides (NOx) and fine particulate matter (PM 2.5) and incorporate measures to reduce toxic air contaminants (TACs) to minimize any potential air quality impacts. The Air District's *CEQA Air Quality Guidelines* can assist in identifying and quantifying emission reduction measures.

4. We recommend the DEIR evaluate the Project's consistency with the Air District's *2017 Clean Air Plan, Spare the Air, Cool the Climate (2017 Plan).* The Air District's *2017 Plan* may be found on the Air District's website: http://www.baaqmd.gov/plans-and-climate/air-quality-plans/current-plans

5. To address air quality issues early in the planning process we suggest the City review the Air District's Planning Healthy Places guidance document for recommended best practices to reduce exposure and health risk to sensitive populations in local communities. Planning Healthy Places can be found on the the Air District's website: http://www.baaqmd.gov/plans-and-climate/planning-healthy-places

6. We recommend the DEIR include a discussion of greenhouse gas (GHG) emissions and the potential impacts based on an evaluation of the Plan's consistency with the California Air Resources Board's (CARB) 2017 Climate Change Scoping Plan and with the State's 2030 and 2050 climate stabilization goals. We also recommend aggressive, creative, climate policies and programs in the Plan.

7. Staff recommends all feasible emission reduction measures be implemented for potentially significant air quality impacts identified in the DEIR.

8. The DEIR should provide a map that clearly identifies the Plan's boundary; existing and future planned sensitive receptors (e.g., residences, schools, day cares, hospitals, and nursing care facilities), and all stationary sources, highways, major roadways, and rail lines within the Plan area.

9. Please discuss how the Plan will address Senate Bill 1000 the Planning for Healthy Communities Act (SB 1000). SB 1000 became effective January 1, 2018. With SB 1000, all California jurisdictions are now required to consider environmental justice issues in their General Plans. SB 1000 requires local jurisdictions that identify disadvantaged communities within the area covered by the city or county's general plan to adopt an Environmental Justice (EJ) element or incorporate EJ goals and policies into other elements of that city's general plans. The bill allows consideration to be given to low-income communities disproportionately affected by pollution and other EJ issues.

Please include in the DEIR all appendices or technical documents related to the air quality, toxic air contaminant, and GHG analyses, such as emission calculation and health risk assessment files. Without all the supporting air quality and GHG documentation, Air District staff and the public may be unable to review the air quality and GHG analysis in a timely manner.

The Air District's website contains a number of tools and resources to assist lead agencies in analyzing environmental impacts, including: previous CEQA comment letters; guidance on quantifying plan level GHG emissions; and risk and hazard screening tools and guidance. View and download available tools here: http://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa/ceqa-tools

We urge lead agencies to contact Air District staff with any questions and/or to requested assistance during the environmental analysis process. If you have any questions regarding these comments, please contact Andrea Gordon, Senior Environmental Planner at, agordon@baaqmd.gov or 415.749.4940.

Sincerely,

Greg Nudd
Deputy Air Pollution Control Officer

Subject: EIR for General Plan 2040

Message: Hi Barry, As the City and the planning commission contemplate the EIR for the General Plan 2040, please include the entirety or Boyd Park and the Falkirk Mansion with the boundary for the Precise Plan for Downtown San Rafael. The National Climate Assessment estimates between now and 2050, San Rafael will 3.5 degrees Fahrenheit warmer. That will dramatically increase the risk of a catastrophic fire that would most directly impact Downtown. As we have already witnessed the threat of the San Rafael Hill catching fire multiple times, the danger is very real and, with increased population density downtown, needs to resourced accordingly. Thank you, Brandy Wilson

Re: General Plan 2040 and Downtown Precise Plan EIR

Dear Mr. Miller,
Sustainable San Rafael offers the following comments on the scope and content of the proposed EIR on the City's draft General Plan 2040 and Downtown Precise Plan ("the Plans").

A. Anticipated Changes
The Plans are being developed to address a period of time during which unusually large changes are occurring. The EIR should thoroughly assess the efficacy of the proposed policies and programs to successfully meet these major areas of change:

1. Housing shortages, less affordability, more homelessness.
2. Retail moving online, employment decentralizing.
3. Traffic congestion, transportation innovations.
4. Climate Change and natural system stresses.
5. Diversity and equity challenges.
6. Community character evolving in response to these changes.

B. Basic Alternatives
We believe that five basic alternatives can be used to frame the relative success of the Plans in addressing these changes. Since climate change, and sea level rise in particular, is among the most intractable of the changes facing the city, it figures significantly in all alternatives.

1. No Plan scenario. For this EIR, this 'no project' scenario is likely to have the most impacts, since the purpose of the Plans is to reduce the negative impacts of inaction and 'business-as-usual.'

2. Protection of existing development from sea level rise. The EIR needs to assess the impacts and feasibility of engineered or 'living' levees (and floodgates, as needed) to preserve developed land along the shoreline, much of which was 'reclaimed' from the Bay by earlier levees. The assessment should include how high these levees would need to be, how long they would need to remain functional, their adaptability to be heightened further in the future, and their impact on the development they protect. The cost of the levees, value of assets protected, and financing and maintenance strategies also need to be assessed.

3. Relocation and consolidation of vulnerable development. Relocating a portion of the development in East San Rafael (existing and/or new) to safer infill sites further inland is another option. The EIR should assess how the resulting consolidation of development could help or hinder the city's overall housing goals, economic vitality, transportation and other infrastructure, diversity and equity, and physical character. Transition of the shoreline to water-oriented commercial, recreational, natural, and houseboat uses should also be assessed for all alternatives.

4. Continuing sea level rise scenario. Since there are credible projections that the climate change now underway could precipitate large-scale melting of polar ice caps, triggering ongoing sea level rise on an uncertain timeline, it may be prudent for the EIR to test the Plans' impacts on the City's abilities to deal with such continuing and cumulative change. An alternative assuming the gradual transformation of the largest public investment in the region, the 101 and 580 freeway rights-of-way, to serve as both an elevated transportation and infrastructure spine and a levee protecting inland areas, could provide valuable insight into the long-term viability of the Plans.

5. Comprehensive planning scenario (the draft Plans). This 'project alternative' represents how the city can comprehensively balance the opportunities and challenges inherent in the various changes underway, now and for the long-range future. We believe the EIR should pay particular attention to the degree of co-benefit and integration among the multiple policies and programs in the Plans, and suggest mitigations that increase such synergy. For example, transportation improvements like providing a shoreline bike path or raising a flood-prone portion of freeway could be combined with 'living levees' protecting inland areas from sea level rise, while enhancing habitat and recreation. Combining solutions to several issues at once could suggest cost-efficient mitigations addressing the complexity of the changes occurring.

C. Necessary Benchmarks

Several key metrics need to be established and mapped by the EIR to provide the basis for evaluating these alternatives.

1. Sea level rise expected by 2100. (Use *highest* current BCDC and Marin County projections.)(Alternatives 1 – 3 and Alt. 5.)
2. Sea level rise expected by *2140* if global temperature rise stays within 2 degrees Celsius. (Use *highest* IPCC projections.)(Alt. 4.)
3. Housing numbers, types and affordability levels to accommodate the city's current population and workforce.
4. Housing numbers, types and affordability levels to accommodate projected population and workforce by 2040.

D. Key Policies and Programs

A number of the policies and programs included in the draft Plans so far discussed will be particularly significant in meeting the anticipated changes and should be considered closely in the EIR analysis of the project and the alternatives.

1. Greater housing densities and heights in infill development, especially in Downtown, North San Rafael town center, and commercial districts along major arterials.

2. Mixed-use development, incorporating both housing and jobs.

3. Continued and enhanced affordable housing bonuses.

4. Accessory Dwelling Unit incentives.

5. Innovative and 'interim' building types, such as modular and movable building units, tiny homes, and houseboats.

6. Greater use of Transferable Development Rights (TDRs).

7.VMT and Transportation Management Plan standards.

8. Neighborhood commercial nodes and increased walkability.

9. Increased transit connectivity.

10. Sea level rise overlay zones.

10. Completing a community-based Climate Adaptation Plan.

11. Coordination with County BayWAVE and related efforts.

12. Integrating Local Hazard Mitigation Plan into Environmental Hazards, Transportation and other elements.

13. Integrating Wildfire Action Plan into Conservation element.

14. Continued reduction of greenhouse gases through integration of CCAP2030 measures throughout the Plans—including enhanced coordination, advocacy and funding of such measures at regional, state and federal levels.

15. Extending CCAP2030 objectives and measures on a straight-line basis to achieve 70% GHG reductions by 2040.

16. Refining and applying the zoning and other recommendations of the Downtown Station Area and Civic Center Station Area

Plans, and the findings of the Transit Center Relocation EIR.

17. Enhancing waterfront usage per the Canalfront Plan.

Approached in this manner, we believe that the General Plan 2040 and Downtown Precise Plan, and the associated EIR, can offer our community valuable guidance for a positive future. Thank you for your careful consideration.

Sincerely,

William Carney and Linda Jackson,
Sustainable San Rafael Board of Directors

Barry.Miller@cityofsanrafael.org

Subject: Scoping comments for SR GP 2040 EIR

The Gallinas Watershed Council is a private, volunteer group of residents in the 94903 area who love the Gallinas creek and want to see it restored. Our group was formed in June 2008 to help promote good watershed management, assist in keeping the creek free of trash, and to push for policies at the city and county level to support creek restoration. The headwaters and the San Pablo Bay marshland stretches of this creek are in county jurisdiction and maintain good ecological function. However, the middle stretch, in the City of San Rafael, does not.

Gallinas Creek was put into a concrete trapezoidal channel in the early 1960's when Terra Linda was being developed. This concrete is reaching the end of its life and will need replacement. Current thinking and planning for good watershed management is moving away from the 1950's era of speeding water off the landscape via a concrete ditches and now looking at integration of creeks and waterways as important community amenities as well as a source of other environmental benefits, such as improved water quality and wildlife habitat.

Towards that end, the US Army Corps of Engineers, The Bay Institute, MCSTOPPP and other partners hired Kamman Hydrology and Engineering to do a *Restoration Feasibility Study and Hydrology Report*[1] (Dec. 2004). This report validated the idea that restoration could proceed without losing important flood protection and laid out four alternative scenarios. Following that report, the Santa Margarita homeowners raised funds via their "Recreate the Creek" project, in conjunction with the city of San Rafael and other partners, to begin a restoration process on the Santa Margarita Creek branch of Gallinas Creek. These reports and projects were in alignment with the November, 2002 San Rafael convened community stakeholder group's plans for the 94903 area which developed the *2010 North San Rafael*

[1]https://www.gallinaswatershed.org/about/gallinas-creek-hydrology-report.htmlpH8TbU_RNQ%3D%3D&attredirects=0

Vision Promenade Conceptual Plan[2]. This group envisioned a safe, walkable and bikeable path from upper Terra Linda to the Civic Center to mitigate the split in the community caused by the widening of Highway 101. More recently the city of San Rafael, in conjunction with the Watershed Program of Marin County, produced a plan[3] that showed three alternatives for restoring the main stem of Gallinas Creek from Freitas Parkway at Las Gallinas Ave to the intersection at Del Ganado.

In line with all of these historic city, county and community projects and plans, we are asking for language in the EIR to support the restoration of Gallinas Creek. In particular, we ask the consultant to focus on:

- Consideration of the economic, social, environmental, health and safety, etc. benefits of restoring Gallinas Creek according to the Marin County report Upper Gallinas Creek Restoration Opportunities.

- Explore traffic analysis and options along Freitas parkway, including traffic studies at different times of day, to determine current traffic needs on Freitas Parkway above Las Gallinas Ave. Explore other options for traffic calming or traffic redirection in order to implement the Promenade Vision and full Gallinas Creek restoration in this stretch. Recognize that the four lanes of traffic along Freitas were put in assuming future development, including a highway over the hill into Sleepy Hollow, plans which are now obsolete and invalid.

- Explore a continuation of creek restoration/daylighting further up the corridor, along Freitas Parkway and including the Santa Margarita creek tributary along Los Gamos Ave.

- Enumerate other cities' funding structures, from new development and/or from state, federal and local grant programs that support creek restorations, parkland, and other community benefits.

- Align City policies with state, local, and federal policies protecting waters of the state and the endangered species act, recognizing that the Gallinas marsh is home to several threatened and endangered species, including the Black Rail, Ridgway's Rail and Salt Marsh Harvest Mouse.

In addition, the 94901 portion of the city of San Rafael hosts several other small watersheds that should be examined for restoration opportunities. These include Mahon Creek, San Rafael Creek, Erwin Creek, Black Canyon, Sister's, Glenwood and Peacock Gap creeks and their unnamed tributaries. In particular, certain

---

[2] https://www.cityofsanrafael.org/documents/north-san-rafael-vision-promenade-conceptual-plan/

[3] https://www.marinwatersheds.org/sites/default/files/2017-05/GWPUpperGallinasCreekRestorationOpportunities_FINAL_12.07.16.pdf

culverted sections may be failing and could be opened to daylighting, improving access to the public and better water quality.

- Develop full maps for all San Rafael city creeks, including ephemeral drainages, showing daylighted and culverted sections, connections to storm drains, as well as adjoining parklands and open space that currently exist.

- Consider funding opportunities for watershed restoration within city limits, including economic benefits realized by other communities from restored watersheds, daylighted creeks, urban setbacks to increase green parklands, tree planting for urban heat island mitigation and creek shading for water quality and wildlife protection, etc.

- Analyze the open creek area behind Second, Third and Fourth Street businesses at the west end (between D and H streets) and the upstream area in Sun Valley/West End to daylight creeks and develop floodplain support where possible to reduce impacts of downstream flooding and to protect water quality.

Through out all city elements of the 2040 General Plan:

- Include Green Streets policy information to complement Complete Streets and LID policies

- Consider latest scientific and policy benefits of increasing pervious landscapes around malls, industry parking lots and city properties for groundwater infiltration for protection against drought, wildfire and flooding. This would include rain gardens, biofiltration detention areas, etc.

- Look for opportunities to daylight creeks and create safe wildlife corridors as well as greenway parks for people to be in nature and away from the built environment/traffic. Studies have shown measurable results in improved health and longevity for people living in areas where they can interact in nature on a regular basis. This is in alignment with the PCA element of ABAG's planning and a vitally important design element where densities are increasing.

Sincerely,

Margaret Johnston
GWC representative to SR's 2040 General Plan

Judy Schriebman
GWC alternate representative to SR's 2040 General Plan

Please include in the draft EIR opportunities throughout all elements of the 2040 General Plan to:

- Include Green Streets policy to complement Complete Streets and LID policies

- Consider latest scientific and policy benefits of increasing pervious landscapes around malls, industry parking lots and city properties for groundwater infiltration for protection against drought, wildfire and flooding. This would include rain gardens, biofiltration detention areas, etc.

- Find opportunities to daylight creeks and create safe wildlife corridors as well as greenway parks for people to be in nature and away from the built environment/traffic. Studies have shown measurable results in improved health and longevity for people living in areas where they can interact in nature on a regular basis. This is in alignment with the PCA element of ABAG's planning and a vitally important design element where densities are increasing.

In addition, we were unable to find where the light pollution element exists in the 2040 plan but, like noise pollution, it needs to be included. Humans evolved to

the rhythms of the natural light-dark cycle of day and night. The spread of artificial lighting means most of us no longer experience truly dark nights.

Research suggests that artificial light at night can negatively affect human health, increasing risks for obesity, depression, sleep disorders, diabetes, breast cancer and more. The International Dark Skies Association[4] recognizes the impacts of light pollution on wildlife and human health. Protection of the night sky and avoidance of light pollution should be incorporated wherever lighting is proposed or changed, both for city structures and for individual homes. We ask that the EIR:

- Incorporate BMPs for reduction of light pollution, especially light spilling into marshes, parks and wildlife areas and upward into the sky in every aspect of the 2040 General Plan
- Develop a list of fixtures and bulbs that promote healthy, safe lighting while protecting our need for darkness
  Consult the Dark Skies Association website for up to date ordinance and policy language, fixture recommendations, and develop a plan for priority replacement

We appreciate this opportunity to add our scoping comments to the EIR.

Sincerely,

Margaret Johnston
GWC representative to SR's 2040 General Plan

Judy Schriebman
GWC alternate representative to SR's 2040 General Plan

RE: Scoping comments for San Rafael's General Plan 2040 and Downtown Precise Plan EIR

Dear Barry:

I am a member of the following committees and organizations: San Rafael's 2040 General Plan update steering committee, San Rafael's Bicycle Pedestrian Advisory Committee, Transportation Authority of Marin's Citizen Oversight Committee, and board member and past president of Marin Conservation League. My interests are in land use and transportation planning that supports and improves natural resource protection and watershed restoration. The following are my scoping comments for the preparation of the draft environmental impact report.

I request that the EIR analyze impacts from each alternative as described on page 2 of the Notice of Preparation, "CEQA requires that an EIR evaluate alternatives to a project that could reasonably attain the project objectives while reducing any significant impact of the project, as well as considering the 'No Project' Alternative", with an equal level of detail. I also request that the EIR analysis include anticipated impacts during periods of construction, for the expected life of possible projects, and cumulative impacts of implementation of policies and programs detailed in the General Plan Update. All alternatives and cumulative analysis should include description, impacts, and mitigations from projects currently under review by the City and/or under construction, including the SMART extension to Larkspur and the relocation of San Rafael's transit center, among others.

Transportation/Traffic

Transportation impacts should include new and updated traffic and congestion models and analysis of all major roadways, including measurements of existing traffic loads and road capacity, current and projected levels of service, as well as current and projected greenhouse gas emissions and air pollution due to motor vehicles and congestion. The EIR's analysis should include recent studies by San Rafael's Department of Public Works, the recent Kimley Horn study of the 3rd and Hetherton intersection, the Third Street Rehabilitation Project, and should include available congestion management analysis and traffic data from Marin County's Transportation Authority of Marin. Major roadways should include Lucas Valley/Smith Ranch Road, Freitas Parkway, Las Gallinas Avenue, Nova Albion, Los Ranchitos and Lincoln Avenue, North and Point San Pedro Roads, Irwin, Grand, and Hetherton, East and West Francisco Boulevards, Andersen and Bellam, Kerner, Canal Street and other major roadways in the Canal, and Second, Third, Fourth, Fifth and Mission in downtown among others.

The EIR should describe and analyze impacts from 2040 GP policies or programs on the following:

- Vehicle backups onto highway ramps and adjacent streets. Identify streets and neighborhoods that would experience increased traffic backups, at what times, along with proposed mitigations.
- Vehicle traffic and congestion along major east-west arteries, like 2nd and 3rd streets, as well as north-south arteries.
- Impacts to local roads and highways during emergencies and evacuations, such as during wildfire or flood.
- Sight distances for drivers especially at intersections.
- Identified parking for shoppers, office and hospital (Kaiser) visitors, as well as for transit users. What parking would be removed and what parking spaces would be added under alternative policies?
- Impacts to downtown businesses including the east segment of 4th Street.

Also:

- San Rafael has goals of reduced congestion and improved safe passage for pedestrians and bicyclists in all directions. To what extent will 2040 GP policies augment implementation of the updated Bicycle Pedestrian Masterplan?
- Describe how alternatives will increase public transportation ridership, providing efficient, safe and comfortable experiences for users. Increased ridership will help San Rafael, and other jurisdictions, meet greenhouse gas reduction goals in their climate action plans. The EIR should assess net impacts of San Rafael's General Plan update to greenhouse gas emissions by incentivizing ridership.
- Impacts from transition to electric vehicles, and other developing technologies such as autonomous vehicles, should also be described.
- Completion of the North-South Greenway multiuse path segment through San Rafael, from 2nd Street north to Mission Street along Tamalpais Avenue, is an important link in the pathway corridor. Describe the compatibility and impacts of GP planning on this planned route.
- A priority for San Rafael families is that students are able to walk and bike safely and comfortably through downtown to Davidson Middle School and San Rafael High School from residential neighborhoods on the opposite sides of the freeway. Describe how alternatives will positively or negatively impact safe, comfortable east-west circulation under the highway for students and all other users to access schools, shops and services.

<u>Air quality and greenhouse gas emissions</u>

The EIR should describe and analyze impacts of GP policies on air quality, including odors, as well as cumulative and net increases in air pollutants and greenhouse gas emissions from changes in land use as well as transportation.

<u>Noise and Light</u>

The EIR should assess the extent to which GP alternatives would contribute to light, glare and noise pollution and how these impacts can be mitigated.

Hydrology and water quality

The EIR should show existing creeks and wetlands on site maps, and state impacts or changes resulting from sea level rise scenarios as outlined in the County of Marin's Bay Waterfront Adaptation and Vulnerability Evaluation (BayWAVE). The report catalogs effects of three different water elevation projections for near, mid, and far term periods, with and without a 100-year storm. Projects should consider at minimum the projections for near and mid-term time periods, estimated to be about 10 and 30 years or less.

The EIR should identify General Plan policies that will meet the goals of "climate-safe infrastructure" as set forth in the California Natural Resource Agency's recent report "Paying it Forward: The Path Toward Climate-Safe Infrastructure in California" and describe adaptation strategies to flooding.

The EIR should describe cumulative anticipated rates and volumes of stormwater runoff, drainage capacity of stormwater management systems and any needed expansion, filtration into the Las Gallinas and San Rafael Creek watersheds and possible soil erosion and loss of topsoil due to anticipated large storm events and flooding. Include proposed mitigations, especially for alternatives that would alter existing creeks or flows. Watershed restoration and improvements to hydrologic function of natural systems should occur whenever possible in conjunction with transportation improvements.

Identify areas that would place housing and other structures within a 100-year flood hazard area and current and future areas where people and structures would suffer damage due to failure of dam, levee or flood control infrastructure.

Assess toxicity of soils and describe how sediment and any contaminants will be prevented from entering creek systems and the nearby estuary. Describe how stormwater will be filtered to meet the California State Water Quality Control Board's regulations for Phase II small municipal separate storm sewer systems (M4S). Describe how restoration of creeks, trees and riparian vegetation, and installing green infrastructure and permeable pavement as elements of the alternatives would help mitigate flooding.

Biological resources

The EIR should describe biological resources in the City limit and Sphere of Influence Planning Area. The EIR should analyze GP policy impacts to nearby riparian or wetland habitats and their biological resources, both resident and migratory, including invertebrates, aquatic species and vegetation. Describe current urban wildlife habitat value and migratory corridors and how they will be protected.

San Rafael is a "Tree City". Trees contribute to stormwater reduction, improve air quality and contribute to carbon sequestration and greenhouse gas reduction, lower ambient air temperatures and counteract urban heat island effects, buffer noise, wind, and odors. They provide beneficial visual impacts and provide needed habitat for urban and migrating birds, wildlife and insects (including pollinators). The EIR should identify the impacts from increasing the number of trees throughout the City especially as they grow and as their canopies spread over time.

Aesthetics

Describe the viewshed of the surrounding hills. Provide simulations of how scenic views from a variety of angles will be impacted from future growth.

Population and Housing

The EIR should assess impacts and the cumulative effects of alternative development scenarios on population growth and increases in housing production.

An alternative that should be evaluated is one in which San Rafael makes small investments in growth allowing every neighborhood to evolve gradually over a longer period of time throughout the City limits and that of its Sphere of Influence. San Rafael's success and failure in adapting to sea level rise and impacts from climate change will depend largely on identifying and addressing both San Rafael's unique challenges as well as how it fits into the larger landscape of Marin County and the Bay Area. A longer time frame for gradual growth will provide opportunities for greater adaptation.

The EIR should address the impacts of climate change on land use and development in existing communities and new ones. How will displacement due to environmental hazards be mitigated and those displaced absorbed into the existing community?

The EIR should address impacts of housing policies that not only address housing supply but also impacts of how they might support and improve neighborhood services and the infrastructure of the public realm including streets and pathways, creeks and watersheds, trees, urban parks and green spaces and management of city-owned open spaces.

The EIR should include anticipation of California's housing legislation under current debate and its potential impacts on San Rafael's desired height limits and density. The EIR should assess impacts of San Rafael's General Plan housing policies on renters and homelessness. Will growth and development policies incentivize affordable housing that is truly affordable?

Finally, the EIR should assess, to the extent possible, how the new General Plan's policies will increase San Rafael's resilience, flexibility for change, and financial vitality.

Thank you for the opportunity to provide comments on the scope of the upcoming 2040 General Plan draft EIR.

Sincerely,

Kate Powers

San Rafael, CA, 94901

Subject: General Plan 2040 and Downtown Precise Plan EIR

Dear Mr. Miller:

The Los Ranchitos Improvement Association (LRIA) represents over 160 homes in the 94903 area. We have the following three requests for the EIR on SR's 2040 GP update:

1. Consider impacts of removing Los Ranchitos from San Rafael's Sphere of Influence (SOI)
2. Consider impacts of Los Ranchitos being a designated Community Separator in the Marin County General Plan consistent with the 2008 Marin County Open Space District's Strategic Master Plan
3. Align San Rafael's General Plan Open Space policies with the 2008 Marin County Open Space District's Strategic Master Plan

Background for removal from SOI
Reasonably Foreseeable Conditions: The County General Plan Open Space Element and the MCOSD Strategic Master Plan

Since inception in 1949, Los Ranchitos has been zoned for rural agriculture / light farming, equestrian use, 1-acre minimum size parcels, as recognized in the Marin County Agricultural Lands map filed with the state (see attached). During San Rafael's piecemeal annexation of the Terra Linda area, *prior to the formation of LAFCO in 1963*, Los Ranchitos was bypassed. The County created CSA#19 and, in conjunction with San Rafael, Los Ranchitos was placed into SR's SOI ***solely*** to supply the area with paramedic and fire protection services from the city of San Rafael.

Los Ranchitos is not expected to be annexed to the City within the time frame of the plan due to:

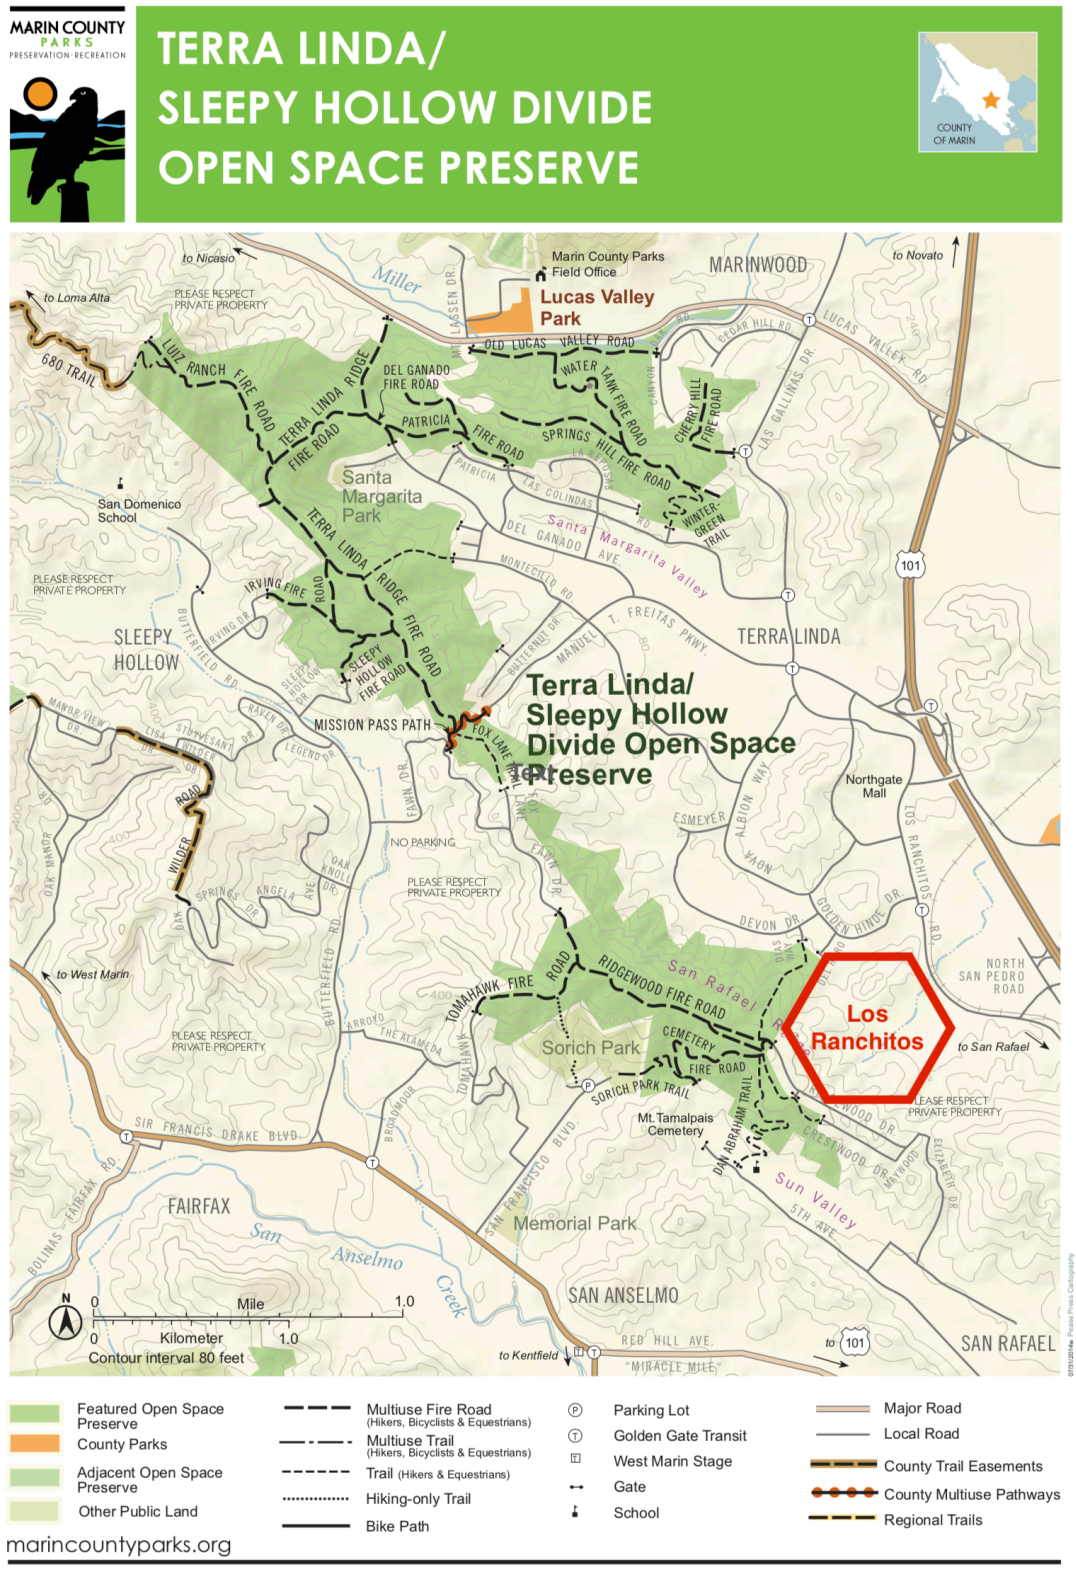
- Existing required services are adequately provided to Los Ranchitos, and *no reasonably foreseeable conditions indicate a future need for any additional urban services*
- Urban improvement upgrade costs associated with conversion of existing and satisfactory rural conditions (no sidewalks, no curbs, few streetlights) to urban standards
- Existing zoning and historical land uses supporting agricultural, light farming, and equestrian uses that are incompatible with urban usage
- *Any proposal for city annexation would pose a direct conflict with the County General Plan Open Space Element and the MCOSD Strategic Master Plan*
- Existing Ridge and Upland Greenbelt (RUG) designation over part of Los Ranchitos shows its role as community separator contiguous with priority MCOSD lands
- Strong landowner opposition precludes annexation

Background for Community Separator status and Open Space policies:
The MCOSD Open Space Strategic Master Plan

The MCOSD Strategic Master Plan was developed after San Rafael developed their 2020 General Plan. The 2040 GP will need to be consistent with the goals and priorities of this Master Plan.

The Land Conservation element of the 2008 MCOSD Strategic Plan targets preservation of lands within the Central Marin Ridgelands as a priority. From the MCOSD Plan, *"Targeted lands serve as community separators and greenbelts as defined in the Countywide Plan, as wildlife corridors, and as links to other public lands."* The Marin County General Plan Open Space element currently overlays the hilly terrain of Los Ranchitos with the Ridge and Upland Greenbelt (RUG) designation; is contiguous with MSOSD's priority Terra Linda/Sleepy Hollow divide lands; and serves as an important community separator between Terra Linda and San Rafael. The landowners of Los Ranchitos are actively working with Marin LAFCO, the MCOSD, and the Board of Supervisors to establish the entire Los Ranchitos area as a designated community separator in the update of the Marin County General Plan Open Space element, in order to be consistent with the MCOSD Open Space Strategic Master Plan and to remove the entire area from the City of San Rafael's sphere of influence.
Note: This conservation action is supported by the North Bay office of Greenbelt Alliance.

San Rafael's NOP and city planning maps only show the SOI city boundaries but do not break out this important Open Space/RUG distinction. LR is not an island but an extension, or peninsula, of the West Marin rural corridor. Our agricultural designation via zoning is part of the extension. Maps attached.



Sincerely,

Leyla R. Hill, President
Los Ranchitos Improvement Association (LRIA)
Preserving and Maintaining Los Ranchitos's unique way of life since 1952

APPENDIX B:
PROPOSED GENERAL PLAN GOALS, POLICIES, AND PROGRAMS

LAND USE

Goal LU-1: Well-Managed Growth and Change

Grow and change in a way that serves community needs, improves fiscal stability, and enhances the quality of life.

San Rafael values its natural setting, heritage, and cultural diversity, as well as its role as the economic, civic, and entertainment center of Marin County. The City will maintain and improve the features that make it a desirable place today, while adapting to change so that it may become an even better place in the future. This will require embracing creativity and innovation, and fully engaging residents in land use decisions.

Policy LU-1.1: Balancing Growth with Infrastructure

Plan local circulation and infrastructure systems to provide capacity for development expected by 2040. The City's plans should reflect the goal of more sustainable transportation and infrastructure.

> ***Program LU-1.1A: General Plan Evaluations.*** *Complete an evaluation of the General Plan at least once every five years. As part of this process, assess San Rafael's growth data and trends, population and employment forecasts, and progress toward meeting its housing, mobility, sustainability, and other goals. Recommend changes to policies, and adjustments to fees and capital improvement projects based on the findings.*

Policy LU-1.2: Development Timing

Allow new development only when adequate infrastructure is available, consistent with the following findings:

a) The project is consistent with adopted Vehicle Miles Traveled (VMT) standards, as well as the requirements for Level of Service (LOS) specified in the Mobility Element.
b) Planned circulation improvements necessary to meet City standards for the project have funding commitments and completed environmental review.
c) Sewer, water, and other infrastructure improvements needed to serve the proposed development have been evaluated and confirmed to be in place or to be available to serve the development by the time it is constructed.
d) The project has incorporated design and construction measures to adequately mitigate exposure to hazards, including flooding, sea level rise, and wildfire.

> ***Program LU-1.2A: Development Review.*** *Implement Policy LU-1.2 through the development review and environmental review processes. The City may modify the requirements associated with this policy if it determines that its application as stated would preclude all economically viable use of a subject property.*

Policy LU-1.3: Land Use and Climate Change

Focus future housing and commercial development in areas where alternatives to driving are most viable and shorter trip lengths are possible, especially around transit stations, near services, and on sites with frequent bus service. This can reduce the greenhouse gas emissions associated with motor vehicle trips and support the City's climate action goals.

See the Mobility Element for additional policies and programs to reduce dependence on fossil fuel vehicles and encourage more active travel modes such as walking and cycling.

> ***Program LU-1.3A: Benefits of Transit-Oriented Development.*** *Seek ways to objectively quantify, monitor, and promote the benefits of focusing new development around transit nodes and corridors and shifting trips from cars to active (non-car) transportation modes. Programmatic*

changes and recommendations should be supportable by objective data and quality of life measures. This should include data on modes of travel, trip origins and destinations, trip lengths, vehicle ownership, greenhouse gas emissions, and other metrics in areas that are well served by transit.

Policy LU-1.4: Reasonable Interim use of Property

Allow a landowner reasonable interim use of property in areas where development is presently constrained by factors such as circulation system capacity, infrastructure, and natural hazards such as flooding.

Program LU-1.4A: Reasonable Interim Uses. *Ensure that zoning regulations include provisions for reasonable interim uses for properties where the highest and best use allowed by zoning is not presently attainable due to traffic capacity, infrastructure, natural hazards (including sea level rise), and other factors. Examples of reasonable interim uses include contractor's yards, modular or mobile uses, new car storage, parking, and outdoor recreation.*

Policy LU-1.5: Development Beyond the Urban Service Area

Retain undeveloped areas outside of San Rafael's Urban Service Area boundary but within its Planning Area in agricultural or open space uses.

Policy LU-1.6: Annexation

Prior to urban development, unincorporated areas that can be reasonably served through extension of existing City services should first be annexed. Annexation of already developed unincorporated land in the San Rafael Planning Area should be dependent on neighborhood interest, the cost/revenue implications of providing services and assuming liabilities for the area, and the availability of City services.

Program LU-1.6A: LAFCO. *Encourage LAFCO to adopt Urban Service Area and annexation policies for the San Rafael Planning Area that are consistent with General Plan policies.*

Policy LU-1.7: Land Use Planning in Surrounding Jurisdictions

Continue to work with the County of Marin and the cities of Larkspur, Novato, Ross, and San Anselmo to ensure that land use changes outside the San Rafael city limits will positively affect San Rafael.

Program LU-1.7A: Development Adjacent to San Rafael. *Work with the County, other jurisdictions, neighborhood groups, and residents to review applications for development in areas adjacent to San Rafael's city limits or within the Sphere of Influence.*

Policy LU-1.8: Density of Residential Development

Use the density ranges in the Land Use Element to determine the number of housing units allowed on properties within the Planning Area.[1] The following provisions apply:

a) The density "range" includes a maximum and minimum. A given General Plan designation may have multiple corresponding zoning districts, including at least one district in which the maximum density may be achieved. Other zoning districts may have maximum densities that are less than the maximum indicated by the General Plan.
b) The number of units permitted on a given parcel may be affected by site resources and constraints, potentially hazardous conditions, climate-related factors (sea level rise, fire hazards, etc.), traffic and access (including wildfire evacuation constraints), the adequacy of infrastructure, City design policies, and prevailing densities in adjacent areas.
c) The maximum net density shown on the General Plan excludes density bonuses that may be provided for affordable housing or other community benefits, in accordance with State law and local policies.

[1] See page 3-6 for explanation of net density.

d) As required by State law, an accessory dwelling unit (ADU) or junior ADU shall not be counted as a dwelling unit for the purposes of calculating net density.
e) Areas in the "Downtown" General Plan category shall be exempt from the requirements of this policy and are instead subject to standards defined by the Downtown San Rafael Precise Plan.

Program LU-1.8A: Codifying Residential Density Limits. *Implement General Plan densities by setting allowable lot sizes and densities in the zoning ordinance and by including height limits and an area-wide dwelling unit "cap" in the Downtown Precise Plan (see text box).*

Program LU-1.8B: Minimum Densities. *The net density of new development shall be no less than the lower end of the density (or FAR) range specified by the General Plan for that property. Exceptions may be made on parcels smaller than 10,000 square feet, where the application of minimum densities may be infeasible.*

Program LU-1.8C: Small Multi-Family Lots. *Amend Section 14.16.300 of the Zoning Regulations to allow more than one housing unit per lot on lots that are smaller than 5,000 square feet, provided the density is consistent with the General Plan (these lots are currently limited to one unit each, unless located Downtown).*

Policy LU-1.9: Clustering

Allow clustering of development as a way to conserve environmentally sensitive or hazardous portions of a site (such as unstable slopes or flood plains). In such instances, the density calculation shall be made based on the area of the entire site (minus streets and easements), with the resulting number of units transferred to the less sensitive areas. The result would be a denser housing product on a portion of the site, with the balance conserved as open space.

Policy LU-1.10: Intensity of Non-Residential Development

Use the Floor Area Ratio limits on Figure # to determine the square footage of building space allowed on properties with non-residential General Plan designations. The following provisions apply:

a) As with density, FAR is calculated on a "net" basis, and is based on the area of each parcel excluding streets and easements.
b) The maximum FAR stated by the General Plan is not guaranteed. The square footage permitted on a given parcel may be affected by site resources and constraints, potentially hazardous conditions, climate-related factors (sea level rise, fire hazards, etc.), traffic and access (including wildfire evacuation constraints), the adequacy of infrastructure, and City design policies.
c) The maximum FARs shown in Figure # exclude any residential development on the property. In the event that residential uses or mixed use projects are proposed on these sites, the maximum area is the sum of the FAR allowance plus the residential density allowance for the property. This Clause does not apply to Downtown San Rafael, which is regulated by the Downtown Precise Plan.

Program LU-1.10A: Codifying General Plan Floor Area Ratio Limits. *Implement General Plan floor area ratio (FAR) limits by setting appropriate FAR limits in the zoning ordinance.*

Policy LU-1.11: Replacement of Uses in Non-conforming Buildings

Where an existing building is larger than the FAR limit and no intensification or change of use is proposed, allow the property to be reused or redeveloped at the same size as the existing building, provided that the parking and design review requirements in effect at the time of the new application can be met.

Policy LU-1.12: Transfer of Development Rights

Allow transfer of development rights (TDR) or density/ FAR from one property to another in cases where:

a) Special circumstances (e.g., historic preservation, wetlands protection, sea level rise) are found to exist, potentially causing significant environmental impacts if the transfer was not allowed; or
b) A significant public benefit would be provided as a result of the transfer.

In such cases, the TDR should be consistent with the goals and policies of General Plan 2040 and should comply with zoning and design parameters to the greatest extent feasible, except that maximum FARs, densities, or heights may be exceeded on the receiving property.

> ***Program LU-1.12A: Transfer of Development Rights (TDR) Program.*** *Evaluate opportunities for TDR as a response to issues such as sea level rise and wildfire hazards. This evaluation also should address how TDRs are conveyed and recorded.*

Policy LU-1.13: Increases in Floor Area Ratio

Consider allowing floor area ratios (FAR) bonuses that exceed the levels permitted by Figure # through the Planned Development (PD) zoning process for projects that meet all three of the following criteria:

a) The higher FAR is necessary to facilitate redevelopment with improved parking, access, landscaping, building design, and economically productive uses.
b) The project will provide significant community benefits, such as affordable housing.
c) The project is consistent with policies in the General Plan related to transportation capacity, infrastructure, sea level rise, greenhouse gas reduction, and other factors related to the safety of future occupants and quality of life in the City.

Policy LU-1.14: FAR Exemptions

Provide the following exemptions from FAR requirements:

a) Hotels and motels.
b) Any portion of a building or development project devoted to childcare or senior care may be subtracted from the total building area when calculating that building's FAR.

Policy LU-1.15: Planned Development Zoning

Encourage the use of Planned Development (PD) zoning for development on parcels greater than five acres when the application of traditional zoning standards would make it more difficult to achieve General Plan goals. The PD zoning designation allows flexible design standards that are more responsive to site conditions.

> ***Program LU1.15A: Planned Development Zoning.*** *Continue to maintain Planned Development (PD) zoning districts.*

Policy LU-1.16: School Site Reuse or Redevelopment

In the event a school site is made available for reuse, work with the School District and surrounding community to determine the desired uses. Given the public ownership of the land, uses that provide a public benefit should receive priority. This includes affordable housing, childcare facilities, neighborhood parkland, and facilities that accommodate public and quasi-public uses, such as adult day care, education, recreation, arts and cultural programs.

Program LU-1.16A: Zoning for School Sites. *Continue to implement school site reuse and redevelopment through zoning regulations and the development review process.*

See also Program PROS-1.3B on the retention of former school recreation areas

Policy LU-1.17: Building Heights

Use General Plan Figure LU-# as the basis for determining "baseline" maximum building heights in San Rafael. Maximum heights should continue to be codified through zoning and any applicable Specific Plans or Precise Plans. In addition, the following specific provisions related to building heights shall apply:

a) Height of buildings existing or approved as of January 1, 1987 shall be considered as conforming to zoning standards.
b) Hotels outside of the Downtown Precise Plan boundary have a 54-foot height limit. Within Downtown, the height provisions of the Downtown Precise Plan apply.
c) As provided for by Policy LU-18, "baseline" building heights are subject to height bonuses where specific community benefits are provided, where a Variance or zoning exception is granted, or where a Transfer of Development Rights (TDR) is being implemented.
d) Heights may be increased by up to six (6) feet above the baseline building heights as necessary to mitigate the exposure of properties to sea level rise and other flooding hazards (e.g., raising the first floor of habitable floor space above anticipated tidal flood elevations).

Policy LU-1.18: Height Bonuses

Allow the granting of height bonuses for development that provides one or more of the amenities listed in Table LU-1, provided that the building's design is consistent with applicable design guidelines and standards. No more than one height bonus may be granted on each site.

Use permit requirements for height bonuses are shown in Table LU-1. The bonuses are intended to support State and local affordable housing density bonus programs; in other words, State bonuses are included in these limits and are not intended to be added on top of them.

See also Policy CDP-1.5 on views

Goal LU-2: A Complete Community

San Rafael is a complete community, with balanced and diverse land uses. *San Rafael reflects a mosaic of land use patterns that have changed over time and will continue to evolve in the future. Our desire to maintain existing land use patterns must be balanced with the development necessary to provide jobs, meet housing needs, respond to the challenges of a changing economy, and sustain an evolving, vital community. We continue to value and cherish our diverse neighborhoods, while making them more resilient and adapting to changing conditions.*

Policy LU-2.1: Land Use Map and Categories

Use the General Plan Map as the framework for future land use decisions. The Map displays the distribution of different land use categories in the San Rafael Planning Area (see Figure #). Each category is associated with a particular set of uses and densities/ intensity standards. All proposed projects must meet these standards, as well as other applicable standards established by the City's zoning regulations. Some uses in each category are "conditional," meaning they are allowed only in limited areas or may be subject to specific conditions

Program LU-2.1A: Zoning Ordinance Amendments*. Revise the zoning ordinance, including the zoning map, to implement General Plan land use designations and policies, incorporate provisions from other recently adopted City plans and programs, and ensure that all provisions are consistent with state law. This should include creation of a new overlay district corresponding to areas expected to be affected by sea level rise (see Program S-3.1C).*

Program LU-2.1B: Subdivision Ordinance Amendments. *Revise the subdivision ordinance where necessary for conformance with General Plan land use designations and policies. Provisions for the enforcement of conditions of subdivision map approval should be included in the Ordinance.*

See also Program LU-2.4A on Industrial Zoning standards

Policy LU-2.2: Mixed Use Development

Encourage mixed-use development (combining housing and commercial uses) in Downtown San Rafael and on commercially designated properties elsewhere in the city. Mixed-use development should enhance its surroundings and be compatible with adjacent properties.

Program LU-2.2A: Development Review. *Use the development review process to evaluate the compatibility of residential uses in commercial areas.*

Program LU-2.2B: Innovation Districts. *Evaluate creation of an overlay zone or "innovation" district (see text box) to be applied to a limited number of Light Industrial-Office (LI-O) properties located near Downtown (including the existing Lindaro Mixed Use District) and/or Northgate Industrial Park, In addition to allowing a wide range of employment uses, multi-family residential and live-work uses could also be allowed in these areas, subject to performance standards, use permit requirements, and a finding that there will be no net loss of industrial floor space. The area covered by such a zone would be strictly limited in order to preserve the supply of land needed for local and region-serving businesses, minimize potential conflicts between adjacent uses, and avoid impediments to established businesses.*

Policy LU-2.3: Neighborhood-Serving Commercial Uses

Encourage the retention and improvement of neighborhood-serving retail stores and services. In the event such spaces become vacant, consider other activities that reinforce their role as neighborhood centers. Neighborhood-serving commercial areas should reinforce the city's goal of reducing greenhouse gas emissions and traffic congestion by providing walkable, bikeable services and shopping close to residents.

Program LU-2.3A: Neighborhood Centers. *Use the development review process to evaluate future proposals for existing neighborhood commercial centers, including the addition of new uses such as housing. Neighbors should be involved early in the development review process.*

Program LU-2.3B: Revitalization Incentives. *Develop zoning and economic development incentives that keep local neighborhood centers viable, such as allowing additional floor area and housing units when neighborhood-serving uses are included or retained.*

See the Neighborhoods Element for policies related to specific centers. See the Economic Vitality Element for policies on retail retention and incentives.

Policy LU-2.4: Production, Distribution, and Repair (PDR) Services

Maintain the availability of sites for PDR businesses and recognize the value of these businesses to San Rafael's economy and residents.

Program LU-2.4A: Industrial Zoning. *Periodically evaluate zoning standards for Light Industrial-Office and General Industrial areas in response to business and economic trends, market demand, changes in technology and the transportation sector, greenhouse gas reduction goals, and climate-related hazards such as sea level rise.*

Policy LU-2.5: Limited Retail and Service Uses in Industrial and Office Areas

Allow limited retail and service uses that cater to area businesses and workers within industrial/office and industrial areas. Such uses create amenities for the local workforce and reduce vehicle miles traveled.

> ***Program LU-2.5A: Industrial Zoning Standards for Ancillary Retail and Service Uses.*** *Continue to provide opportunities for small local-serving retail and service businesses in industrial zoning districts.*

Policy LU-2.6: Lot Consolidation

Encourage the consolidation of small (<6,000 SF) lots zoned for higher density residential, commercial, and mixed uses in order to create more viable development sites. Lot consolidation can provide greater flexibility in site planning, make it easier to meet parking and access requirements, and enable building sizes and dimensions that are more economically viable.

> ***Program LU-2.6A: Lot Consolidation Incentives.*** *Continue to encourage small lot consolidation through zoning regulations. Incentives such as height and floor area bonuses and reduced parking should be considered.*

Policy LU-2.7: Child Care Facilities

Encourage the development of new child care facilities and the retention of existing child care facilities to meet neighborhood and citywide needs. Work with the school districts to encourage child care and early childhood education programs at schools, recognizing their suitability for such uses and convenient locations in residential neighborhoods.

> ***Program LU-2.7A: Large and Small Family Child Care Regulations.*** *Ensure that regulations for large and small family child care facilities comply with all applicable State laws. To the extent permitted by law, the siting and operation of larger facilities in single family neighborhoods should mitigate the potential for off-site impacts (parking, noise, etc.).*
>
> ***Program LU-2.7B: Fees for Child Care Programs.*** *Where feasible, consider waiving application, permit, and traffic mitigation impact fees for child care uses.*
>
> *See also Policy LU-1.13 on FAR exemptions for child care. See Policy PROS-2.4 and Policy EDI-5.1 for additional guidance on child care.*

Policy LU-2.8: Senior and Disabled Care Facilities

Accommodate facilities and services to meet the needs of older and disabled residents, including senior housing, assisted living, and convalescent care facilities; and facilities providing adult day care and social services, and health care for older adults and people with disabilities.

> *See Goal EDI-6 for additional policies and programs addressing the needs of older adults*

Policy LU-2.9: Hotels, Motels, and Inns

Encourage redevelopment and upgrading of existing hotels and motels. These uses are desired because they are a source of jobs and tax revenue, help sustain local businesses, and provide lodging for visitors, tourists, and business travelers. Hotels, motels, and inns should be allowed with a Use Permit in most commercial, multi-family, and industrial zoning districts. Bed and breakfasts should be allowed with a Use Permit in High Density, Medium Density, and Large Lot Residential zoning districts. As noted in Policies LU-1.13 and 1.16, hotels are exempt from floor area ratio requirements and are subject to a 54-foot height limit outside of Downtown. The City Council may also grant Zoning Exceptions and Variances for projects that provide significant community benefits and are consistent with City design policies and guidelines.

Program LU-2.9A: Motel Conversions *In cases where an existing motel is no longer viable for that purpose, encourage conversion to multi-family residential use, including affordable housing.*

Program LU-2.10: Short-Term Rentals *Permit short-term rentals, subject to registration and licensing requirements, payment of transient occupancy taxes, and standards for eligibility, parking, number of guests, and other factors deemed necessary to ensure neighborhood compatibility and limit adverse impacts on the rental housing supply.*

Program LU-2.10A: Monitoring Program. *Monitor the effectiveness of short-term rental regulations and refine these regulations as needed to address issues and concerns.*

Policy LU-2.11: Mini-Storage Facilities

Allow mini-storage ("self-storage") in light industrial/ office and light industrial districts. For lots facing Highways 101 or 580 or the Bay, the mini-storage use may not be located along the street or bay frontages. New ministorage may be permitted with a Floor Area Ratio (FAR) of up to 1.0 if the following findings can be made:

a) The facility is needed in the community.
b) The project is compatible with surrounding uses.
c) The project is designed so that it cannot be converted to other, more intensive uses – or includes approval conditions which limit and mitigate off-site impacts in the of future event conversion.
d) The location is appropriate for this type of use.

Mini-storage is not permitted in other districts, except that it may be considered in existing commercial buildings if not located along the street frontage.

Policy LU-2.12: Innovative Housing Types

Encourage non-traditional and innovative forms of housing that respond to local housing needs, changing demographics, high housing costs, and sustainability goals.

Program LU-2.12A: Live-Work Regulations. *Revise zoning regulations for live/work uses to make this a more viable housing type and facilitate its development.*

Program LU-2.12B: Alternative Housing Types. *Explore regulatory and cost barriers and potential opportunities for innovative housing types such as co-housing, tiny homes, micro units, floating homes, modular and movable construction, mobile homes, and other forms of habitation which may be easier and less expensive to build than traditional housing. Consider zoning and building code changes to support the conversion of existing underutilized buildings to these uses in commercial and mixed use areas.*

Program LU-2.12C: Supportive and Transitional Housing. *Allow supportive and transitional housing in areas with Medium and High-Density Residential designations, and in Mixed Use zoning districts.*

Program LU-2.12D: Accessory Dwelling Units. *Continue to support the conversion of underutilized residential space into accessory dwelling units (ADUs) and Junior Accessory Dwelling Units (JADUs), as well as the development of new ADUs and JADUs in residential areas.*

Policy LU-2.13: Odor Impacts

Consider odor impacts when evaluating land uses and development projects near wastewater treatment plants, treatment plant expansion projects, waste transfer stations, and other odor potential sources.

Program LU-2.13A: Evaluation of Odor Impacts. Evaluate odor impacts as part of development review.

Goal LU-3: Distinctive Neighborhoods

Create and sustain neighborhoods of integrity and distinctive character. *San Rafael is Marin's hometown. It is a city of livable neighborhoods that support each other and provide a network of parks, natural amenities, gathering places and services. The unique identity, distinctive design, and upkeep of each neighborhood will continue to be a source of pride.*

Policy LU-3.1: Area Plans

Encourage the preparation of plans for areas of San Rafael with unique local issues or significant potential for future change. The purpose of such plans is to provide more specific and detailed direction on long-range planning, zoning, and site-specific development issues than can be provided by the General Plan.

Program LU-3.1A: Area Planning Process. *Engage neighborhood associations, community groups, residents, businesses, and service providers in the development of area plans, including neighborhood plans. A priority should be placed on plans for the North San Rafael "Town Center" area and the Canal neighborhood.*

See the Neighborhoods Element for additional policies and programs relating to area plans

Policy LU-3.2: New Development in Residential Neighborhoods

Preserve, enhance, and maintain the residential character of neighborhoods to keep them safe, desirable places to live. New development should:

- Enhance neighborhood image and design quality
- Incorporate sensitive transitions in height and setbacks from adjacent properties
- Preserve historic, unique, and architecturally significant structures
- Respect and enhance natural features and terrain
- Reduce exposure to hazards
- Include amenities such as sidewalks, pathways, trees, and other landscape improvements
- Maintain or enhance infrastructure service levels
- Meet expected parking demand
- Minimize reduction of views, privacy, and solar access

While these principles are fundamental, they do not preclude neighborhood change. Neighborhoods are dynamic places, and should adapt to changing tastes, styles, technology, and needs as they evolve.

Program LU-3.2A: Zoning Ordinance. *Periodically update the zoning ordinance to address neighborhood issues and concerns.*

Policy LU-3.3: Housing Mix

Encourage a diverse mix of housing choices in terms of affordability, unit type, and size, including opportunities for both renters and owners,.

Policy LU-3.4: Property Maintenance

Require owners to maintain their properties in good condition and appearance and to eliminate unsafe and unhealthy conditions.

Program LU-3.4A: Code Enforcement. *Maintain an effective Code Enforcement program that engages with neighborhoods and business groups and works in partnerships with appropriate City staff to address nuisances, mitigate problems with vacant and blighted properties, and correct zoning code violations.*

Program LU-3.4B: Conditions of Approval. *Use the development review process to establish conditions of approval, including maintenance of landscaping and other improvements. Use building inspection and code enforcement processes to ensure that these conditions and other mitigation or monitoring responsibilities are carried out.*

Program LU-3.4C: Community Appearance. *Continue and enhance programs to abate illegal dumping and remove graffiti.*

See also Policy EDI-4.2 on maintenance of streets and public space and Policy EDI-3.5 on property maintenance

Policy LU-3.5: Neighborhood Identity

Enhance neighborhood identity and sense of community by retaining and creating gateways, landscape features, and other improvements that help define neighborhood entries and focal points.

See the Community Design Element for additional policies on neighborhood gateways and landscaping

Policy LU-3.6: Transitions Between Uses

Maintain buffers between residential uses and adjacent commercial and institutional uses. Parking lots, loading areas, trash facilities, and similar activities associated with non-residential uses should be appropriately screened.

Program LU-3.6A: Parking Lot Design. *Maintain design guidelines for parking lots that address landscaping, buffering, environmental quality, and neighborhood compatibility. Parking lots should not be the dominant visual feature from the street frontage.*

Policy LU-3.7: On-Street Parking

Manage on-street parking in a way that meets resident and business needs, reduces nuisances, and minimizes potential conflicts with emergency vehicles.

Program LU-3.7A: Neighborhood Parking Measures*. In neighborhoods with excessive on-street parking demand:*

a) Work with property owners to add off-street parking and allow shared parking during off-peak hours.
b) Where feasible, require additional off-street parking as a condition of approval for expansion or remodels.
c) Update permit parking programs and on-street parking time limits to improve their effectiveness.

Program LU-3.7B: Parking Regulations. *Periodically evaluate and amend parking regulations to respond to new technologies and trends in car ownership and design, while still ensuring adequate on-site parking.*

See Goal M-7 (Mobility Element) for additional policies and programs on parking, including amendments to parking standards.

Policy LU-3.8: Nuisance Vehicles

Minimize the number of abandoned and non-functioning vehicles on City streets.

Program LU-3.8A: Abandoned Vehicle Program. *Continue the abandoned vehicle abatement program.*

Program LU-3.8B: Vehicles as Residences. *Continue the prohibition on the overnight residential use of vehicles in the public right of way.*

Policy LU-3.9: Neighborhood Centers

Support the vitality of attractive, viable neighborhood centers and assist these centers as they adapt to changing economic conditions and community needs. Existing neighborhood centers should be retained unless it can be clearly demonstrated that they are not economically viable or useful to the neighborhood. Where commercial uses are no longer feasible, other uses that are compatible with the neighborhood such as housing and local services should be accommodated.

Program LU-3.9A: Neighborhood Serving Uses. Prioritize neighborhood serving uses and places that support neighborhood interaction on small commercial sites in residential areas. Examples of such uses are cafes, neighborhood markets, restaurants, drug stores, local medical and health care services, farmers markets, child care facilities, public facilities, and similar activities that meet the day to day needs of local residents. Maintaining these uses near residents can potentially help reduce vehicle miles traveled (VMT) and encourage walkable neighborhoods.

Program LU-3.9B: Housing in Neighborhood Commercial Centers. *In the event housing is proposed on neighborhood commercial sites, encourage the integration of neighborhood-oriented commercial or service uses on the ground floor or a portion of the site.*

Policy LU-3.10: Relationships with Local Institutions

Support collaborations and partnerships among neighborhoods, schools, religious uses, and other institutions to enhance mutual understanding and resolve operational issues such as parking, noise, traffic, and privacy.

Program LU-3.10A: Community Partnerships. *Encourage the establishment of local committees to resolve conflicts and improve relationships between neighborhoods and local institutions. Public-private partnerships with local institutions should be encouraged as a way to generate community benefits and improvements.*

Policy LU-3.11: Neighborhood Pride

Promote events and activities that support neighborhood pride, create a sense of community, and build connections between residents. These events and activities could include block parties, festivals, parades, picnics, concerts, and similar activities that bring residents together. City parks should include areas where such activities can be hosted, in a manner respectful of nearby residents.

Program LU-3.11A: Neighborhood Websites. *Support the development of neighborhood websites and provide links to these sites on the City's website.*

NEIGHBORHOODS ELEMENT POLICIES

Downtown

Policy NH-1.1: A Thriving Downtown

Sustain and improve Downtown San Rafae l as a safe, attractive, convenient, well-maintained place to visit, shop, recreate, work, and live.

> ***Program NH-1.1A: Downtown Precise Plan and Form-Based Code.*** *Implement the Downtown Precise Plan and Form Based Code to strengthen the identity of Downtown districts and guide new development and investment.*
>
> ***Program NH-1.1B: Quality Downtown Services.*** *Support the Downtown BID, the Chamber of Commerce, and other organizations in efforts to maintain the quality of Downtown as a great place to do business. Encourage investment in services and amenities that project a positive image of Downtown and make it a destination of choice within Marin County.*
>
> ***Program NH-1.1C: Capital Improvements.*** *Incorporate projects and programs identified in the Downtown Precise Plan into the City's Capital Improvement Program and operating budget. Explore potential funding sources for capital projects, including grants that recognize the benefits of accommodating sustainable growth and responding to climate change. Maintain existing facilities, such as lighting and landscaping, so that Downtown remains an attractive place to visit.*
>
> ***Program NH-1.1D: Downtown Public Safety.*** *Continue public safety, maintenance, and social service initiatives that keep Downtown safe and address the needs of Downtown businesses, visitors, and residents of all incomes.*

Policy NH-1.2: Economic Success

Encourage the success of Downtown businesses by limiting regulatory barriers, encouraging private investment, and making Downtown an inviting place for new and established businesses, customers, and patrons. Local regulations and programs should recognize the importance of being responsive to market changes and should help business weather economic downturns.

> ***Program NH-1.2A: Adapting to Changes in Retail.*** *Work with the owners and tenants of ground floor spaces, especially along Fourth Street, to respond to changes in the demand for retail space. Ensure that zoning and building regulations are flexible so that these spaces remain usable and can support active uses.*
>
> *See the Economic Vitality Element for economic development programs and Chapter 8 of the Downtown Precise Plan for additional implementation measures.*

Policy NH-1.3: Downtown Housing

Support Downtown's continued growth as a mixed-use neighborhood and quality residential environment. New housing should include a mix of affordable and market-rate units, including expanded resources for unsheltered persons and extremely low-income households. Housing should take advantage of Downtown's amenities and views and contribute to its character as a dynamic neighborhood.

> ***Program NH-1.3A: Development Incentives.*** *Implement and expand incentives for the private sector to provide more affordable housing, community amenities and public space. These incentives should substantially increase the stock of units that are permanently affordable.*

Policy NH-1.4: Preventing Displacement

Existing housing should be preserved and upgraded while preventing the displacement of Downtown's lower income residents and persons with special housing needs.

> ***Program NH-1.4A: Supportive Housing.*** *Work with local social service and non-profit organizations to address the needs of unsheltered residents in Downtown, including the provision of additional permanent supportive housing.*
>
> *See the Downtown Precise Plan for Anti-displacement strategies, including measures to protect tenants.*

Policy NH-1.5: Downtown Employment

Continue to attract a diverse set of employers to create a more resilient and robust Downtown economy. Downtown San Rafael should be promoted as a convenient and attractive office and retail location, with a mix of large and small businesses. Retention of small and locally owned businesses is strongly encouraged to retain Downtown's character and legacy.

Policy NH-1.6: Public Realm

Improve the quality and usefulness of public space Downtown, including streets, sidewalks, alleys, plazas, parks, and other civic spaces. Public investments in these spaces should be directed in a way that supports Downtown development. Downtown public space should be safe, comfortable, and well-maintained.

> ***Program NH-1.6A: Court Street Plaza.*** *Enhance the Court Street Plaza and adjacent area of 4th Street as a public gathering space. Implement pilot programs that reimagine this part of Fourth Street as a "shared street" that functions as civic space and accommodates multiple travel modes.*
>
> ***Program NH-1.6B: Transit Gateway Improvements.*** *Create a new public space adjacent to the SMART station that would provide an amenity for Downtown residents, workers, visitors, and transit passengers. The space should create a welcoming "first impression" of Downtown. Provisions for ongoing programming, maintenance, and safety should be developed prior to construction.*
>
> ***Program NH-1.6C: Pocket Parks and Private Plazas.*** *Use incentives such as additional building height to create accessible outdoor spaces such as plazas and paseos in new development.*
>
> ***Program NH-1.6D: Downtown Alleys.*** *Activate key Downtown alleys as public spaces.*
>
> *See Downtown Precise Plan Chapter 8 for a list of proposed public realm improvements*

Policy NH-1.7: Context-Sensitive Design

Ensure that new construction and redevelopment is sensitive to Downtown's existing context, with thoughtful transitions to established neighborhoods and retention of important historic buildings and building elements. As Downtown grows, it should retain its sense of history and authenticity.

> ***Program NH-1.7A: Downtown Form Based Code.*** *Adopt and maintain a Form Based Code that provides greater predictability in what will be built and emphasizes pedestrian-friendly design. Development standards should reinforce the unique character of Downtown while allowing its built form to evolve and improve. The Code should allow for a streamlined permitting and approval process, increased certainty for developers, and more predictable outcomes for the community as new projects are proposed.*

See the Community Design and Preservation Element for additional policies and programs on designing buildings to complement and enhance Downtown's character and create a pedestrian-friendly environment.

Policy NH-1.8: Historic Resources

Enrich Downtown's identity by encouraging historic preservation and ensuring that development is sensitive to historic context. Renovation and adaptive reuse of historic buildings is strongly encouraged.

Program NH-1.8A: Context Sensitive Design. *Implement Form Based Code provisions to ensure that new development adjacent to historic resources or within historic districts is sympathetic to the scale and character of older buildings.*

Program NH-1.8B: Historic Districts. *Consider the use of historic districts to conserve the character of parts of Downtown with high concentrations of important older buildings. These districts should continue to accommodate infill development on vacant and underutilized sites, but should provide incentives for preservation and adaptive reuse, including tax benefits and transfer of development rights.*

Program NH-1.8C: Addressing Functional Obsolescence. *Work with property owners to modernize functionally obsolete spaces in older buildings. Seek solutions which allow updating and alteration of interior spaces without losing the historic integrity of the building exterior.*

Program NH-1.8D: Historic Inventory. *Regularly update the inventory of historic and cultural resources in Downtown.*

See Community Design and Preservation Element Goal 5 for additional guidance

Policy NH-1.9: Downtown Arts

Promote Downtown as the cultural and entertainment center of San Rafael and Marin County. Recognize the potential for the arts to be an economic engine and stimulate other Downtown business opportunities.

See the Arts and Culture Element for implementation programs, including maintaining Downtown's designation as a Cultural Arts District and promotion of special events and activities

Policy NH-1.10: Downtown Circulation

Provide a safe, well-connected transportation network that efficiently serves all modes of travel. This network should promote safety for all travelers and create a street network that is safer and more comfortable for pedestrians.

Program NH-1.10A: Multi-Modal Improvements. *Implement the improvements in the Downtown Precise Plan to improve the safety and comfort of all travel modes in Downtown, particularly pedestrians and bicycles. This includes additional bike routes and lanes; safer pedestrian crossings; wider sidewalks in some locations; street trees and landscaping; converting B, C, and D Streets to two-way traffic; and creating a "north/south greenway" for bicycles and pedestrians along the Tamalpais Avenue corridor.*

Program NH-1.10B: Evolving Mobility Needs. *Design Downtown streets so that they can adapt to changing transportation trends such as ride-hailing and micro-mobility (electric bikes and scooters), changing parking demand, and changes in technology, including autonomous vehicles. Technology should also be used to make Downtown safer and easier to navigate for all users, for example, with the use of pedestrian-activated crossing signals, timed traffic signals, and digital information on parking.*

Program NH-1.10C: Wayfinding. *Build upon ongoing efforts to implement a clear wayfinding strategy to orient transit passengers, motorists exiting Highway 101, and other visitors to Downtown. Use consistent signage and streetscape elements to enable visitors to navigate Downtown easily.*

Policy NH-1.11: Parking

Pursue creative solutions to meeting Downtown parking needs without losing the sense of the area as a pedestrian-oriented district. These solutions should include better management of the existing parking supply, additional private parking (including spaces available for public use) in high-demand areas such as the transit center vicinity, more efficiently designed parking structures, and improved signage and visibility of public parking facilities.

See the Mobility Element for programs to improve parking management and meet parking needs more efficiently, including programs tailored to Downtown San Rafael

Policy NH-1.12: Hazard Resilience

Develop Downtown development and adaptation strategies that improve resilience to sea level rise, wildfire, and other natural hazards.

Program NH-1.12A: Sea Level Rise Adaptation. *Develop a comprehensive set of sea level rise adaptation strategies for future development that draw from citywide and regional strategies. These strategies could include tidal gates, levee improvements, wetland restoration, and elevation requirements for new buildings.*

See the Safety and Resilience Element for additional flood protection and wildfire prevention measures

Central San Rafael Neighborhoods

Policy NH-2.1: Miracle Mile Land Uses

Retain the Miracle Mile as a vital neighborhood commercial district. Improve the area's appearance, parking, landscaping, and vehicular access from side streets. New development or redevelopment should be of a scale and intensity consistent with existing development.

Program NH-2.1A: Neighborhood Plan. *In the event that significant changes to currently allowable land uses or densities are proposed in the future, develop a neighborhood/ corridor plan for the Miracle Mile.*

Policy NH-2.2: Miracle Mile Circulation

Improve circulation, provisions for cross-traffic and "U-turn" movements, bicycle and pedestrian safety, and traffic controls along Fourth Street, especially at intersections with side-streets.

Program NH-2.2A: Ross Valley Intersection. *Consider reconfiguring the traffic signal at Ross Valley Drive and Fourth Street to incorporate Santa Margarita Drive, thereby improving safety.*

Policy NH-2.3: Noise Abatement

Consider the benefits and practicality of noise abatement techniques when designing or implementing capital improvements or approving new development along the Miracle Mile and adjacent Second/Third Street corridors.

Program NH-2.3A: Noise Improvements. *Use the capital improvement program and development review process to consider noise abatement techniques for the Miracle Mile and*

adjacent thoroughfares, including the use of attractive fencing, trees and landscaping, and sound-absorbing pavement.

Policy NH-2.4: Development of Remaining Vacant Residential Lots

Ensure adequate provisions for emergency vehicle access and water supply prior to constructing additional homes on vacant lots in the West End, especially on narrow and substandard streets and in hillside areas.

Policy NH-2.5: Sun Valley Neighborhood

Maintain the scale, diversity, and small-town character of Sun Valley, including its affordable housing stock and scenic open spaces. Housing shall continue to be the dominant land use in the neighborhood.

Program NH-2.5A: Neighborhood-Serving Commercial Uses. *Encourage retention of existing neighborhood commercial uses. Allow new commercial uses only if they benefit the neighborhood, will not impair its residential character or impact health and safety, and have been vetted through a community process.*

Policy NH-2.6: Neighborhood Sustainability

Adapt existing buildings, energy, and transportation systems to reduce the neighborhood's carbon footprint, improve energy self-sufficiency, phase out gas-powered utilities and vehicles, reduce overhead wires and service lines, increase awareness of natural systems, and improve environmental health.

Policy NH-2.7: Natural Features

Conserve Sun Valley's natural environment, including clean-up and maintenance of Mahon Creek.

Policy NH-2.8: Sun Valley Development

Ensure that new development and significant remodels retain neighborhood character, especially in areas of smaller or historic homes. Development shoul d support the City's sustainability and wildfire prevention goals.

Program NH-2.8A: Camgros/ Duca Properties. *Ensure that any future use on these properties supports and sustains neighborhood character. The neighborhood has expressed that it supports acquisition of these sites for a neighborhood/ community cultural center, or dedication of land for such a site in future development. Such a center could also provide for outdoor education, emergency response and training, community functions, and delivery of local services. The potential for housing on this site also must be recognized. In the event residential development is pursued, clustering of the allowable units should be encouraged to preserve open space areas. Development should comply with the City's Hillside Guidelines and should establish a wildlife corridor and protected riparian area along a restored Mahon Creek.*

Policy NH-2.9: Sun Valley Circulation

Improve circulation for all modes of travel in Sun Valley, with an emphasis on improvements for pedestrians, bicyclists, and transit users. This should include provisions for safer sidewalks and footpaths, new bike routes, public transit, and traffic flow improvements along Fifth Avenue.

Program NH-2.9A: Neighborhood Circulation Concepts. *Pursue the following circulation improvements in the Sun Valley Neighborhood:*

a) Potential roundabouts at Fifth/ California and Fifth at Happy Lane or River Oaks (would require additional right-of-way).
b) Removal of hazardous crosswalk at Fifth Avenue and I Street.
c) Completion of sidewalks along both sides of Fifth Avenue, and removal of sidewalk hazards.
d) Designation of alternate evacuation routes in the event Fifth Avenue is blocked.
e) Potential bike route along Center Avenue.

f) A new sidewalk on California Street from Fifth to Windsor.
g) New trails through neighborhood open spaces and connecting to the West End neighborhood.
h) Consideration of shuttle or jitney service from Downtown along Fifth Avenue.
i) Alternatives to meeting neighborhood parking needs.

Policy NH-2.10: Sun Valley Gathering Places

Sustain existing neighborhood gathering places in Sun Valley. Pursue opportunities to create new places where Sun Valley residents can meet, learn, play, and build a stronger sense of community.

Program NH-2.10A: Community Center. *Consider the feasibility of a community cultural and environmental center in the Sun Valley area. In addition, strengthen the function of Sun Valley School and Sun Valley Park as neighborhood gathering places. This includes continued agreements with the School for access to the school yard after hours as well as access to the Dan Abraham Trail. These agreements could be expanded to allow for community meetings, emergency response, and other activities on school property.*

Policy NH-2.11: Fairhills Neighborhood

Retain the character of Fairhills as a scenic hillside neighborhood. Development and remodeling should respect and enhance the character of the neighborhood and maintain those homes with historic value. Continued efforts should be made to reduce fire hazards and ensure adequate emergency access.

Program NH-2.11A: Hillside Construction. *Ensure that hillside areas are protected by continuing to apply the Hillside Design Guidelines for new construction and major remodels. The siting, height, and design of new or expanded structures should be carefully evaluated to ensure adequate emergency vehicle access, slope and foundation stability, adequate surface and sub-surface drainage, and erosion control. Buildings that are out of scale, damage the natural landscape, cause excessive tree loss or habitat destruction, or obstruct scenic vistas from public vantage points, should be discouraged.*

Policy NH-2.12: Lincoln/ San Rafael Hill

Maintain low-density development in the hillside areas above Lincoln Avenue, consistent with existing densities and with access, fire hazard, and environmental constraints. Ensure that residents of the areas above Lincoln Avenue are engaged in plans for development along Lincoln itself.

Policy NH-2.13: Lincoln Avenue Corridor

Allow higher density residential development along Lincoln Avenue between Hammondale Court and Mission Avenue, recognizing the availability of public transit along this corridor and the established pattern of development. Where development occurs, landscaped setbacks and tree planting should be required to visually reduce the "wall effect" along Lincoln Avenue. Underground parking should be encouraged to reduce overall building height and mass. Consolidation of smaller lots into larger parcels should be encouraged, in order to create more viable development sites, meet parking needs, and minimize the number of ingress/egress points to Lincoln Avenue.

Program NH-2.13A: Lincoln Avenue Development Standards. *Maintain development standards that preserve the character of Lincoln Avenue, including:*
a) 36-foot (three story) height limit[2]
b) 15' front yard setbacks
c) Continued allowances for multi-family residential and office uses. This includes continued a prohibition on the conversion of existing residential space to office use unless replacement residential units are provided.
d) Prohibition of most new retail uses (while allowing existing uses to continue)

[2] Subject to density bonuses for affordable housing

e) *Requirements to mitigate noise impacts from SMART, the freeway, and Lincoln Avenue traffic, where appropriate.*

Program NH-2.13B: Lincoln / San Rafael Hill Park. *Pursue opportunities to develop a small neighborhood park in the northern part of the Lincoln/ San Rafael neighborhood.*

Policy NH-2.14: Dominican University

Sustain Dominican University as a valued community institution and contributor to San Rafael's economy and culture. University operations and events should be compatible with surrounding residential areas, and the impacts of facilities, activities, and events on the neighborhood should be minimized. Continue to foster a cooperative relationship between the University's students, faculty, visitors, and residents.

Program NH-2.14A: University-Neighborhood Coordination. *Maintain on-going coordination between Dominican University, the Dominican-Black Canyon Neighborhood Association, the City of San Rafael, and campus neighbors to address concerns such as traffic, parking, noise, and vegetation management in the University area. In the event future development or campus expansion is proposed, amendments to the Master Use Permit shall be required. Creation of neighborhood advisory committees to advise and collaborate on proposed development projects and address issues of concern is strongly encouraged.*

Program NH-2.14B: Dominican Hillside Parcels. *Work with Dominican University and neighborhood residents to plan for the undeveloped hillside parcels located east of Deer Park Avenue and south of Gold Hill Grade. Much of the property is steep and heavily wooded. Other portions have the potential for housing, including student housing and faculty/ staff housing, which is a significant local and community need. In the event housing is pursued, the permitted density should reflect site constraints. Development should conform to the City's Hillside Design Guidelines and include provisions for substantial open space. The neighborhood should be involved in the planning and review process, which would include an amendment to the Master Use Permit and the PD-district zoning.*

Policy NH-2.15: Dominican/Black Canyon Area Resources and Hazards

Proactively work to conserve and restore natural resources and reduce environmental hazards in the Dominican/ Black Canyon area, including wildfire, landslide, and noise hazards.

Program NH-2.15A: Emergency Preparedness. *Continue collaborative efforts to improve emergency preparedness, including vegetation management on public open space and private property, evacuation and emergency response, and community awareness and training.*

Program NH-2.15B: Noise Reduction. *Continue to work with Caltrans to reduce freeway noise in the Dominican-Black Canyon area. This should include maintenance of landscaping along the freeway sound wall, noise-reducing pavement, and other sound absorption technologies.*

Program NH-2.15C: Open Space Dedication. *Consider offers to dedicate vacant sites, including the 17.9-acre parcel at the end of Dominican Drive (also with frontage on Glen Park Avenue), as public open space. If City ownership is infeasible, consider dedication to Marin County Parks.*

Policy NH-2.16: Montecito Residential Densities

Preserve the existing mix of single family, duplex, medium-, and high-density housing in Montecito-Happy Valley's residential areas.

Policy NH-2.17: High School Campus Plans

Facilitate communication between San Rafael City Schools and the neighborhood on issues related to traffic, parking, noise, operations, and development on the high school campus.

Program NH-2.17A: Corporation Yard Reuse. *Encourage relocation of the bus/ maintenance yard located on the northwest corner of the high school campus (Union and Mission), thereby allowing for development of:*

a) Affordable multi-family housing. To the extent feasible, housing on the site should serve older adults and/or School District staff. Any development on this site should maintain, enhance, and protect the view corridor down Fourth Street to the High School's west portico.

b) Montecito Neighborhood Park. A small neighborhood park and children's playground should be included in any plans to repurpose school property. In the event a park is infeasible on the Union and Mission site, consider other locations on the campus where such a facility is possible, including a joint use park on the field east of the corporation yard.

If any part of the high school campus is closed or sold before the horizon of the General Plan, a priority should be placed on developing affordable housing or neighborhood parkland.

Program NH-2.17B: Joint Use. *Work with San Rafael City Schools to accommodate greater public access to open space and athletic fields at the High School during hours when school is not in session.*

Program NH-2.17C: School-Related Traffic. *Work with San Rafael City Schools to improve the safety and effectiveness of drop-off areas at San Rafael High School. Encourage continued communication and cooperation to address access and scheduling improvements.*

Policy NH-2.18: Architecture

Maintain a mix of architecture styles in the Montecito/ Happy Valley Neighborhood, compatible with the character of the area's attractive older buildings. Newer buildings should be well designed, blend well with existing homes and provide a pedestrian-friendly street front.

See also Program CDP-5.2B (Community Design and Preservation Element) identifying Montecito/ Happy Valley as one of several priority areas for a historic resource inventory update.

Policy NH-2.19: Traffic Circulation

Continue to develop solutions to neighborhood traffic congestion and safety. Local residential streets should be designed for low volumes with appropriate traffic control. Continued efforts should be made to improve circulation on streets in the adjacent commercial area and to improve pedestrian and bicycle safety through this area.

Program NH-2.19A: Access to Downtown. *Provide safe access from the Montecito-Happy Valley area to Fourth Street, the Montecito Shopping Center, the Canal waterfront, and the transit center area. Streetscape improvements in the eastern end of Downtown should create an inviting, comfortable environment for walking.*

Program NH-2.19B: Pedestrian Improvements. *Improve the safety and condition of neighborhood sidewalks, including improvements to crosswalks, posting of speed limits, and improvements to pedestrian paths and rights-of-way. Work with the neighborhood to gather information on sidewalks and paths needing improvement.*

Policy NH-2.20: Parking

Provide street parking that is convenient and does not dominate the neighborhood. New residential development should provide attractive and adequate off-street parking.

Program NH-2.20A: Parking Improvements. *Continue to explore practical and cost-effective solutions to manage parking in the Montecito area. These measures could include residential permit parking, time limits on parking on specific high-demand streets, working with apartment owners to restore parking spaces being used for storage, working with property owners to add on-site parking where feasible, and posting no parking signs on narrow streets with access constraints for emergency vehicles.*

Policy NH-2.21: Downtown Transition Areas

Ensure that future development in the Montecito commercial area respects the context, scale, and character of development in the adjacent residential neighborhood. Building height and mass along the north and east edges of Downtown should step down in order to minimize impacts on neighborhood character and well-being.

Program NH-2.21A: Reuse of Commercial Properties. *Actively solicit input from Montecito-Happy Valley residents on plans for the reuse, redevelopment, and improvement of properties in the commercial area between US 101 and San Rafael High School, including the Montecito Shopping Center.*

Policy NH-2.22: Bret Harte Neighborhood

Maintain Bret Harte as a great neighborhood, with continued efforts to reduce hazards, preserve open space, enhance public facilities and infrastructure, and encourage reinvestment in the existing housing stock.

Program NH-2.22A: Bret Harte Neighborhood Priorities. *Recognize the following neighborhood priorities in planning and development decisions for the Bret Harte area:*

a) Maintain strict limits on hillside development. Existing hillside open spaces should be reinforced and proactively managed to prevent future landslides.
b) Encourage safety improvements to infrastructure, including undergrounding power lines and monitoring aging gas lines through residential yards.
c) Improve bicycle and pedestrian access along Woodland Avenue, providing safer routes to school, and better access to Downtown San Rafael.
d) Improve neighborhood aesthetics and landscaping, particularly at the neighborhood gateways at DuBois and Irwin Streets. Additional trees should be planted throughout the area, and existing trees should be maintained.
e) Continue improvements to Bret Harte Park, including hillside landscaping to prevent erosion, community art projects, shade tree maintenance, completion of restroom improvements, and replacement of the water tank while preserving the historic wooden structure that surrounds it.
f) Expand emergency preparedness activities, particularly for older adults.
g) Encourage renovation of the Bret Harte Shopping Center.
h) Monitor and discourage homeless encampments in the open space below Southern Heights Ridge.

Policy NH-2.23: Gerstle Park

Preserve and enhance the residential and historic character of the Gerstle Park neighborhood by:

a) Protecting the mixed-density residential area, strictly limiting rezoning to higher densities.
b) Prohibiting additional non-residential development in Gerstle Park except as already allowed in zoning regulations.
c) Protecting hillside ridges and the visual backdrop of the ridges on the edges of the neighborhood.
d) Preserving and enhancing the distinctive design character of the neighborhood, including historic design features. New development or significant remodels should enhance and respect the architectural character of the neighborhood.

e) Requiring that adjacent Downtown land use designations and developments are compatible with and do not negatively affect the neighborhood, and that sensitive transitions occur where Downtown development abuts neighborhood residences.

Program NH-2.23A: Short School. *Coordinate with San Rafael City Schools on the future of Short Elementary School. Uses should be compatible with the surrounding residential neighborhood and sensitive to potential impacts on parking, traffic, noise, and similar factors.*

See also Program CDP-5.2B (Community Design and Preservation) identifying Gerstle Park as one of several priority areas for a historic resource inventory update.

Policy NH-2.24: Natural Features

Protect and enhance important natural features in the Gerstle Park area, including Mahon/ San Rafael Creek, mature street trees, and community open spaces, hillsides, and woodlands.

Policy NH-2.25: Pedestrian Linkages and Landscaping

Improve bicycle and pedestrian linkages and landscape treatment of major gateways from Downtown.

Program NH-2.25A: Gateway Improvements. *Provide landscaping improvements along B, C, and D Streets.*

Southeast San Rafael/ Canal

Policy NH-3.1: Southeast San Rafael/ Canal

Strengthen Southeast San Rafael/ Canal as a local and regional employment center and a community of diverse, resilient neighborhoods.

Program NH-3.1A: Southeast San Rafael Community Plan. *Prepare a Plan for the Southeast San Rafael area, including its business districts and the Canal neighborhood. The Plan should be comprehensive in scope, covering land use, transportation, housing, public safety, conservation, sea level adaptation, and economic vitality issues. The Plan should be based on an inclusive public process that gives voice to Canal residents and Southeast San Rafael businesses. The type of Plan to be prepared (Precise Plan, Specific Plan, etc.) will be determined based on available resources and project objectives.*

Policy NH-3.2: San Rafael Canal

Promote the San Rafael Canal as a community-wide asset for public and marine-related uses. Public access and views of the water should be improved, and sensitive wildlife habitat should be protected.

Program NH-3.2A: Design Plan and Vision for the Canalfront. *Continue implementation of the Canalfront Conceptual Design Plan, including circulation and access improvements and development of a waterfront paseo. (see text box on page 3).*

Policy NH-3.3: Canal Maintenance

Ensure the long-term maintenance of the Canal as a navigable waterway, including regular dredging. Encourage the maintenance of docks, along with litter removal and water quality improvements.

Program NH-3.3A: Canal Dredging. *Support efforts to dredge the San Rafael Canal to ensure its continued navigability, effectiveness for flood control and sea level rise resilience, and value as natural habitat and a recreational resource. Pursue a reliable ongoing funding source for dredging*

and channel maintenance, potentially including a maintenance assessment district and federal funding.

See also Policy CSI-1.11 in the Community Services and Infrastructure Element

Policy NH-3.4: Canal Waterfront Land Uses

Promote and protect water-oriented uses between Grand Avenue and Harbor Street, including uses that serve the recreational and live-aboard boating community. Other commercial uses that encourage pedestrian traffic such as restaurant and retail uses should be permitted. Residential and office uses are allowed in this area, subject to conditions to ensure they are compatible with nearby uses. Opportunities for innovative water-dependent housing types such as floating homes and houseboats also should be considered. East of Harbor Street, residential uses should be retained on both sides of the channel.

Program NH-3.4A: Zoning. *Maintain zoning provisions to protect and incentivize water-oriented uses. Amend zoning as needed to permit floating homes and other water-dependent housing.*

Program NH-3.4B: State Lands Commission Title Claims. *To assist in redevelopment, resolve public trust title land claims that enable the City to convey or exchange certain filled lands which are found to be no longer necessary for use as harbors, commerce, navigation, fisheries, or appurtenances, consistent with State law.*

Policy NH-3.5: Waterfront Design

Require new buildings along the Canal waterfront to provide public views of the water and accommodate public access to the shoreline. Design factors important in reviewing specific development proposals include pedestrian access, waterfront setbacks, view protection and enhancement, habitat protection, architectural design quality, and landscaping.

Program NH-3.5A: Canalfront Design Guidelines. *Use the development review process to implement the 2009 Design Guidelines for the Canal Waterfront, including requirements for a 25' waterside setback for new buildings and a 10' paseo along the waterfront. Amenities such as seating, lighting, and bike racks should be provided along the shoreline. The Design Guidelines include provisions for building materials, architecture, lighting, signage, views, public open space, landscaping, street furniture, streets and sidewalks, and sustainability.*

Policy NH-3.6: Public Access

Increase and improve public access to the Canal through the creation of waterfront promenades, a potential new pedestrian bridge east of Grand Avenue, additional access points within new development, and waterside access for boats.

Program NH-3.6A: Circulation Improvements. *Continue to seek funding opportunities for pedestrian and bicycle enhancements along the Canal and include such projects in the Capital Improvement Program as funding becomes available. In addition, explore the feasibility of future water taxi service between the Downtown/ Transit Center area and points along the Canal and shoreline.*

Program NH-3.6B: Water Access. *As outlined in the Canalfront Design Guidelines, provide public access for boat docks and kayak launches in new development where feasible. Waterside access for boats should be encouraged in new commercial development along the Canal.*

Policy NH-3.7: Recreational Boat Facilities

Maintain existing recreational boat launch facilities along the Canal unless the demand for such facilities no longer exists or adequate substitute space can be provided. Encourage the addition of boat launch facilities, boat trailer parking, and sewage pump out facilities where appropriate.

Program NH-3.7A: Public Boat Launching Facilities. *Promote the addition of public boat launching facilities for small non-motorized watercraft such as kayaks at Beach Park and the Montecito Shopping Center.*

Program NH-3.7B: Boating Sanitation and Dock Safety. *Implement the Vessel Sanitation and Dock Safety provisions of the San Rafael Municipal Code (Chapter 17.40) to protect water quality, ensure adequate equipment for boat sanitation and sewage pump-out facilities.*

See also Conservation/ Climate Change Element Policy C-3.6 and Programs C-3.6A, -B, and C-3.6B on canal water quality, sanitation, and sewage pump out facilities.

Policy NH-3.8: Flood Control Improvements

Coordinate development and redevelopment of uses along the Canal with a comprehensive strategy to reduce flood hazards, adapt to sea level rise and create a more resilient shoreline. This should include improvements to levees and sea walls, pump stations, and storm drainage infrastructure.

Program NH-3.8A: Pump Station Improvements. *Improve the appearance or relocate the City's Pump Station at 569 East Francisco Boulevard (near the San Rafael Yacht Harbor).*

See also Policies S-3.1 through S-3.9 in the Safety and Resilience Element on Sea Level Rise.

Policy NH-3.9: Near Southeast Land Uses

Protect industrial and commercial uses located in the Near Southeast area due to the area's central location and the lack of alternate locations for these uses. Sites for industries that are important to San Rafael's economy and needed for the convenience of its residents and businesses (such as those serving the building and construction trades) should be protected and maintained.

Program NH-3.9A: Consideration of General Plan Amendments. *Retain the existing Industrial and Light Industrial zoning in the Andersen-Woodland corridor in order to preserve the much-needed industrial base serving both San Rafael and Marin County. In the event General Plan amendments and rezoning are proposed, a comprehensive assessment of impacts on local businesses, relocation options, land use compatibility, and fiscal conditions should be required.*

Program NH-3.9B: Industrial Area Design Improvements. *Upgrade the condition and appearance of properties as redevelopment or remodeling occurs. When new development and remodels are proposed, consider visual and view impacts on the Bret Harte and Picnic Valley neighborhoods, Highway 101, and adjacent transportation routes. As necessary, apply requirements to screen outdoor storage areas and rooftop mechanical equipment.*

Program NH-3.9C: Woodland Avenue. *Create a more compatible transition between industrial and residential properties along Woodland Avenue. New or redeveloping industrial properties should minimize the potential for adverse impacts to nearby residential uses. Similarly, new housing on residentially zoned sites should minimize the potential for negative impacts on industrial uses and business operations.*

Program NH-3.9D: Andersen Drive. *Continue to minimize vehicular access points onto Andersen Drive to maintain maximum traffic flow.*

Policy NH-3.10: Highway 101 Frontage

Encourage the use of properties facing Highway 101 with uses that take advantage of their freeway visibility. Appropriate uses include automobile sales, bulk retail sales, region-serving retail uses, hotels, and similar uses. Other uses that generate economic and sales tax benefits should also be permitted, particularly as market conditions evolve. Heavier manufacturing and storage uses should be discouraged

along the freeway. Offices are an acceptable land use and are particularly encouraged on parcels within ½ mile of the SMART station.

Program NH-3.10A: Francisco Boulevard West Zoning. *Maintain zoning regulations for the Francisco Boulevard West corridor that capitalize on the area's freeway frontage. Zoning should be periodically updated to respond to economic and market changes. As the retail environment changes, other uses with positive fiscal benefits should be permitted and encouraged.*

Program NH-3.10B: Property Assembly*. For properties along Francisco Boulevard West and adjacent side streets where significant redevelopment and upgrading is needed, facilitate cooperative efforts among property owners to assemble and redevelop individual parcels.*

Program NH-3.10C: Andersen/ Francisco Boulevard West. *Facilitate improvement of the older commercial centers around the intersection of Andersen Drive, Francisco Blvd. West, and the southbound Highway 101 on- and off-ramps (Graham and Rice Centers). This could include assistance with lot assembly, substantial upgrading of the properties, and redevelopment with desired uses.*

Policy NH-3.11: Lindaro Mixed Use

Encourage improvements to the industrial area around Davidson Middle School, including Jordan and Lindaro Streets and Lovell Avenue. Live-work uses should be permitted in this area.

Program NH-3.11A: Lindaro Mixed Use Zoning. Maintain the Lindaro Mixed Use Zoning district. Consider potential expansion of this district to the north side of Andersen and west of Irwin Street, extending to Mahon Creek, along with its rebranding as an "Innovation District" that capitalizes on its proximity to Downtown San Rafael and the transit center area.

Policy NH-3.12: Canal Housing Needs

Recognize the urgent need for more affordable housing, greater housing stability, and effective anti-displacement measures in the Canal neighborhood. Support the acquisition, rehabilitation, and conversion of existing market-rate housing to affordable housing, as well as the development of new affordable housing projects on underutilized sites within the community. New housing should be designed and constructed to respond to anticipated sea level rise and other environmental hazards.

Program NH-3.12A: Increasing the Affordable Housing Supply. *Use the upcoming San Rafael Housing Element and Southeast San Rafael Precise Plan processes to identify specific programs addressing local housing needs.*

Policy NH-3.13: Canal Public Safety

Work with the Canal community to identify and respond to public safety needs. This should include capital improvements such as improved street lighting, repaired sidewalks, a police sub-station, and better relationships between residents, businesses, and law enforcement.

Program NH-3.13A: Police Substation. *Pursue development of a police substation to provide faster, more effective service to the Canal area and Southeast San Rafael.*

Policy NH-3.14: Public Facilities

Prioritize citywide public facility investment in the Canal neighborhood, recognizing the greater needs for parks, child care, libraries, public safety, schools, employment development, and social services in the community; its vulnerability to hazards, public health emergencies, and economic stress; and its high concentration of children and very low income and immigrant households.

Program NH-3.14A: Bellam/Windward Park. *Pursue development of a neighborhood park on publicly owned land at the southeast corner of Bellam Boulevard and Windward Way, or on an equivalent publicly-owned property in this area.*

Program NH-3.14B: Community Meeting Space. *Meet the need for affordable meeting and activity space, both at the Albert Boro Community Center and through the development of additional community facilities in new development. Incentives and density bonuses should be provided for private/non-profit development that sets aside space for neighborhood-based activities such as child care, education, and job training.*

See the Equity and Inclusion Element for programs on public facility and infrastructure investment in the Canal. The Precise Plan for Southeast San Rafael should further address these needs.

Policy NH-3.15: Parking and Transportation

Improve parking and transportation management in the Canal area. Access improvements are needed, given the limited capacity of Bellam Boulevard and Francisco Boulevard East, their vulnerability to flooding, and the configuration of the I-580/ US 101 interchange.

Program NH-3.15A: Canal Parking Management. *Continue to implement measures to manage parking in the Canal, including time-limited parking and enforcement of parking rules. Consider additional measures to balance supply and demand, including shared parking with private businesses, increasing supply, and improving other transportation modes, such as transit and bicycling.*

Program NH-3.15B: Community Based Transportation Plan (CBTP) Update. *Update the Canal CBTP to reflect progress made since completion of the 2006 Plan and address current transportation issues.*

See also Policy NH-3.22 on the I-580/US 101 interchange.

Policy NH-3.16: Local Business Support

Create additional opportunities for local entrepreneurs and neighborhood-serving businesses in the commercial and industrial districts adjacent to the Canal neighborhood.

Program NH-3.16A: Core Canal Industrial-Office (CCI/O) District. *Amend the Core Canal Industrial-Office zoning district to provide more flexibility for neighborhood businesses that are compatible with the existing mix of commercial and industrial activities in this zone. Housing should not be permitted in the CCI/O district.*

Policy NH-3.17: Medway Commercial District

Improve the Medway-Vivian Commercial District so that it functions as a town center for the Canal area, including:

a) Additional community gathering places and civic space.
b) Street trees, landscaping, and better pedestrian connections through the Medway/Vivian block.
c) Broader shopping choices and services for the Canal neighborhood.
d) Additional social services, such as childcare and health care.
e) Housing, especially affordable units for families.
f) Upgrading of existing business areas.
g) Additional off-street parking.

Program NH-3.17A: Public Plaza. *Encourage the creation of a public plaza to serve the Canal community. If a site cannot be identified in the Medway-Vivian area, pursue acquisition and improvement of another site nearby. The plaza should be planned and programmed by and for the Canal community, using the Precise Plan process as a starting point.*

Policy NH-3.18: Education

Support efforts of the School District to provide all Canal children with access to quality education, including access to safe, modern school facilities. Work with San Rafael City Schools to address the transportation needs of students traveling to and from school.

Policy NH-3.19: Libraries and Community Programs

Continue to invest in and expand library facilities at the Albert J Boro Community Center. Support continuing programs at this facility and at other facilities serving the Canal community, including bilingual and ESL classes, pre-school, and after school programs.

Program NH-3.19A: Youth and Family Services. *Prioritize additional programs for youth and families in the Canal area, including child care and more activities for young people.*

Policy NH-3.20: Neighborhood Appearance

Improve the physical appearance of the Canal neighborhood, including the addition of greenery and green space, street trees and landscaping, maintenance of buildings and property, enforcement of illegal dumping regulations, abatement of code violations, and more regular street cleaning.

Policy NH-3.21: Spinnaker Point/ Baypoint Lagoons

Maintain the safety, security, and appeal of Spinnaker Point/Baypoint Lagoons. Plans for Southeast San Rafael and the Canal area should acknowledge and conserve the unique characteristics of this area.

Program NH-3.21A: Sea Level Rise Adaptation. *Engage the Spinnaker Point/ Baypoint Lagoons community in sea level rise adaptation, odor mitigation, and flood control efforts.*

Program NH-3.21B: Parking Spillover. *Continue efforts to manage parking on neighborhood streets. Ensure that new development in the vicinity of Spinnaker/Baypoint includes provisions to meet parking demand without worsening existing shortages (see also Program SE-15A).*

Policy NH-3.22: Highway 101/ I-580 Interchange

Improve the US 101/ I-580 interchange to alleviate freeway and local street congestion and improve local access to and from Southeast San Rafael.

Program NH-3.22A: Interchange Improvement Process. *Ensure local participation and advocacy in planning, design, and environmental review for the 101/580 interchange. The project should include mitigation measures that facilitate local access and circulation in Southeast San Rafael, and benefit all modes of travel, including bicycles, pedestrians, and transit. Expansion of the project scope should be considered so it includes the segment of I-580 between US 101 and the Richmond-San Rafael Bridge as well as safety and functional requirements to improve access to Bellam Boulevard and other major thoroughfares in Southeast San Rafael.*

Policy NH-3.23: Marin Square/ Gary Place

Encourage reinvestment in the Marin Square/ Gary Place area, either through redevelopment of the 13-acre area or improvement of existing uses so they function cohesively. Redevelopment of the site should permit retail, high-density residential, hotel, office, and other compatible uses.

Policy NH-3.24: Canalways (see also text box, page 4-49)

Recognize the potential for the Canalways site to achieve multiple goals, including habitat conservation, wetland restoration, sea level rise adaptation, and provision of affordable housing, along with creation of additional jobs, economic activity, and tax revenue. The City supports a plan for the site that balances conservation and development objectives. Development should be economically viable for the site's owners, beneficial for the surrounding community, and responsive to the site's environmental resources and hazards. In general, development should be located in upland areas that are not critical habitat for endangered species.

> ***Program NH-3.24A: Canalways Conservation and Development Plan.*** *Encourage preparation of a Canalways Conservation and Development Plan by the landowners. Such a Plan could become the basis for a future General Plan Amendment to allow a larger development footprint than is shown on the General Plan 2040 Land Use Map, and to permit additional land uses. The first step of this process should be a biological assessment and updated delineation of wetlands. This can shape the development plan and provide the basis for mitigation measures in the event these resources will be impacted by the site's development.*

Policy NH-3.25: Windward Way

Encourage medium-density residential uses on the privately-owned 2.3-acre parcel located on the east side of Windward Way (APN 009-330-01). Development may be clustered on the site to retain views and respond to site constraints, including transmission lines. Compatible office or light industrial uses are permitted on the west side of Windward Way, consistent with zoning.

Policy NH-3.26: Shoreline Center

Support development of the few vacant and underutilized sites remaining in the Shoreline Center with light industrial/office, specialty retail, region-serving retail, hotel, R&D, biotech, and similar uses that generate jobs and revenue. Land use changes to permit other uses, including housing, could be considered through a future planning process, subject to environmental analysis and a program to mitigate potential conflicts or constraints.

Policy NH-3.27: San Quentin Ridge

Preserve San Quentin Ridge as open space due to its visual significance, importance as a community separator, slope stability problems, and habitat value. Any development permitted in this area should be on the lower, less steep portion of the hillside.

Policy NH-3.28: Adaptation

Prioritize the southeast waterfront (including the Canal shoreline) for sea level rise adaptation programs, including repair and replacement of levees, and measures to improve natural resilience such as horizontal levees and restored coastal features. Public shoreline access should be maintained throughout this area.

> *See the Safety and Resilience Element for a discussion of sea level rise adaptation programs*

North San Rafael

Policy NH-4.1: North San Rafael

Maintain North San Rafael's character as an attractive, suburban community with a strong sense of community identity and easy access to well-managed open space and parks, convenient shopping and services, and excellent schools. The City is committed to protecting and restoring North San Rafael's natural environment, investing in multi-modal transportation improvements that make it easier to get around, creating new gathering places and activity centers, sustaining business vitality, and creating new housing options that respond to diverse community needs. Plans for North San Rafael should recognize that this is a distinct and unique part of San Rafael. Standards for density, design, traffic, and parking

should be tailored to reflect local context. North San Rafael residents should have a voice at the citywide level and be directly involved in shaping decisions about the future of their community.

Policy NH-4.2: North San Rafael Town Center

Strengthen the role of the North San Rafael Town Center as an attractive, thriving heart for the North San Rafael community: an economically viable centerpiece of commerce and activity with diverse activities for persons of all ages. This should include revitalizing Northgate Mall and surrounding business areas by encouraging:

a) A distinctive and vibrant mix of uses, consistent with the area's characteristics
b) A variety of high-quality stores, entertainment uses, and services to foster local patronage and adapt to the ongoing evolution of retail and commercial activities
c) Upgrading of anchor and specialty stores, including an additional high-quality retail anchor if needed for economic vitality, consistent with traffic circulation standards
d) Nightlife activities, such as a late-night restaurant or coffee shops that harmonize with existing activities
e) Expanding the Mall, including improving the mix of activities and upgrading the appearance of the buildings and landscaping
f) Additional outdoor public places that support public gatherings and public art
g) Continued community services, which may include an expanded public library
h) Completion of the North San Rafael Promenade through the site
i) Allowing the addition of housing, including maximizing the potential for affordable housing
j) Preserving and strengthening Northgate Mall as a significant tax revenue generator for the City.

The scale of any improvements should be compatible with the surrounding community and should not exceed infrastructure capacity. New or expanded structures should demonstrate how views, sightlines, visual integrity, and character will be impacted and addressed. Promenade improvements described in the *North San Rafael Promenade Conceptual Plan (2002)* should be included in any substantial rehabilitation or expansion of the Mall. Opportunities to include green infrastructure and low impact development (LID) methods also should be pursued.

> ***Program NH-4.2A: North San Rafael Town Center Plan.*** *Pursue funding to prepare a more detailed plan for the North San Rafael Town Center area (such as a precise plan or a specific plan), including Northgate Mall and commercial properties in the vicinity. The plan should include a community-driven process that fully engages property owners, business owners, community residents, and government agencies. It should update the 1997 vision and identify strategies to strengthen the Town Center as a community gathering place, while recognizing market conditions, retail and office trends, housing needs, transportation and infrastructure capacity, and the potential for off-site impacts.*
>
> *See also Program LU-3.1A on the North San Rafael Town Center Community Plan, as well as policies in the Land Use, Community Design, and Noise Elements on land use compatibility.*
>
> ***Program NH-4.2B: Outdoor Gathering Places.*** *Include outdoor public places that support community activities and entertainment such as a public plaza for periodic arts and cultural events, outdoor cafes with music, restaurants with sidewalk or patio dining, children's play areas, teen-centered spaces, and other uses that provide outdoor seating. Design of retail spaces should be flexible enough to support these types of activities in the future.*
>
> ***Program NH-4.2C: Incentives.*** *Provide development incentives to attract desired uses to the Town Center, including retail, office, housing, and community services. Allow a height bonus of two stories (24 feet) for affordable housing. Percentage targets for housing affordability should be set during the Town Center planning process and should be the focus of a community discussion about new approaches to meeting the housing needs for persons of all incomes.*

Program NH-4.2D: Farmers Market. *Consider a partnership with the Agricultural Institute of Marin (AIM) to bring the Farmers Market to the Town Center as a permanent feature, as feasible.*

Policy NH-4.3: Design Excellence

Encourage harmonious and aesthetically pleasing design for new and existing development in the Town Center area, including upgrading of landscaping, signage, lighting. and building design. Uses on the perimeter of the area should "step down" in height and intensity along edges where the Town Center adjoins lower-density residential uses.

Program NH-4.3A. Pedestrian-Friendly Design. *Provide design guidance through the Town Center planning process. One of the objectives of this process should be to give the area a stronger pedestrian feel and improve its walkability, including landscaped walkways and improved connectivity to surrounding neighborhoods.*

Policy NH-4.4: Transportation Safety and Accessibility

Improve access and bicycle/pedestrian connections between Northgate One, the Mall at Northgate, Northgate Three, the Civic Center SMART station, the Civic Center, and surrounding neighborhoods.

Program NH-4.4A: Promenade and Other Improvements*. Use the development review and capital improvement program process to complete the North San Rafael Promenade through the Town Center. Considerations include:*

a) Routing of the Promenade to include safer crossings from the Civic Center and along Freitas Parkway. Consistent with the 2013 Station Area Plan and more recent community input, this also includes long-term improvements along Merrydale (on the east side of Mt. Olivet Cemetery) and through the Northgate III site in the event that site is redeveloped.

b) Implementing Bicycle and Pedestrian Master Plan (2018) improvements through the Town Center area, including increased availability of bicycle racks

c) Increasing public transit to and from the Town Center and making it safer and easier to access bus stops. This includes possible shuttle service to Civic Center station.

d) Implementing traffic calming on parking lot access roads, and redesigning traffic flow to minimize conflict between vehicles, bicycles, and pedestrians

e) Designing any new parking structures to provide safe pedestrian access and reduced traffic conflicts.

Program NH-4.4B: Improved Entrance to the Mall*. Support redesign of intersections along Las Gallinas, Northgate Drive, Del Presidio, and Merrydale to improve traffic flow and improve safety for pedestrians and bicyclists. Support realignment of driveways along Las Gallinas to form safer intersections and pedestrian crossings.*

See also Mobility Element Policy M-2.5 on Level of Service standards for road segments and intersections in the North San Rafael Town Center vicinity, including requirements for traffic studies. The standards reflect anticipated future traffic volumes and will provide the basis for future improvements to ensure safe and adequate access.

Policy NH-4.5: Eichler and Alliance Homes.

Preserve the design character of the neighborhood's iconic Eichler, Alliance, Kenney, and other single-story mid-century modern homes.

Program NH-4.5A: Eichler-Alliance Overlay*. Continue to enforce provisions of the Eichler-Alliance Overlay District, including height limits and design review requirements for most roof modifications. Consider preparation of design guidelines to preserve the characteristic features of these homes, and possible expansion of the Overlay District to include additional homes with similar features*

Policy NH-4.6: Terra Linda Shopping Center

Encourage improvements to Terra Linda Shopping Center. Incorporate improvements for the North San Rafael Promenade into shopping center upgrade.

Program NH-4.6A: Shopping Center Improvements. *Work with the property owners, tenants, and neighborhood residents to achieve the following objectives:*

a) Retention of popular local businesses, such as Scotty's Market
b) A pedestrian-oriented plaza with shade trees, outdoor seating, and outdoor dining
c) Coordinated, refreshed entry signage at Freitas and Del Ganado
d) A limited amount of housing, including smaller and affordable units that would provide opportunities for seniors and local employees while not intruding on the surrounding lower density neighborhood.

Policy NH-4.7: Terra Linda Community Improvements

Invest in upgraded community facilities in Terra Linda, including places for youth, families, and older adults to gather and explore their interests.

Program NH-4.7A: Community Improvements. *Consider the following improvements in the Terra Linda area:*

a) Modernization of the Terra Linda Community Center to meet current and future needs
b) Additional recreation facilities for youth, such as a teen center or skate park
c) Upgraded pocket parks along Freitas Parkway (Arbor, Munson, and Hillview), linked to a broader effort to restore Gallinas Creek (see next policy)
d) Retention of the Kaiser Permanente Medical Center, including improvements to address traffic and parking
e) Implementation of North San Rafael Promenade improvements, especially between the Community Center and Freitas Parkway to encourage access by foot and bike
f) Improved pedestrian walkways connecting Terra Linda streets.

See also Policy NSR-2 on the Northgate Branch Library

Policy NH-4.8: Community Beautification and Environmental Restoration

Continue efforts to beautify Terra Linda and restore its natural environment.

Program NH-4.8A: Beautification and Restoration Projects. *Pursue the following beautification and restoration projects in Terra Linda:*

a) Undergrounding of utilities along Freitas Parkway
b) Additional landscaping and street trees
c) Improvements to the Santa Margarita Creek in the Del Ganado Road median, including tree planting to lower water temperatures and protect water quality
d) Restoration of Las Gallinas Creek
e) Daylighting of creeks and drainageways in other locations wherever feasible.

Creek restoration projects should be designed to restore a more natural hydrologic flow, stabilize creek beds, increase stormwater absorption, improve riparian habitat and water quality, maintain storm drainage capabilities, and avoid flooding. Opportunities to combine creek restoration, utility, and promenade projects for funding purposes are strongly encouraged, and will make projects more competitive in the grant application process.

Policy NH-4.9: Neighborhood Character

Strengthen Rafael Meadows and Redwood Village as attractive low to moderate density neighborhoods. Improve connectivity between these neighborhoods and nearby amenities, such as the Civic Center SMART station, the Marin Civic Center, and the North San Rafael Town Center, particularly for local pedestrians and cyclists.

Policy NH-4.10: Merrydale Area

Encourage attractive, productive land uses along Merrydale Road and Redwood Highway, including housing, commercial, and office uses near the Civic Center SMART station. Any development in this area should have a cohesive and positive impact on North San Rafael, maintain local quality of life, and be compatible with adjacent lower density residential uses.

Program NH-4.10A: Station Area Plan Implementation. *Consider additional development opportunities along Merrydale Road consistent with the land use recommendations of the Civic Center Station Area Plan (2012). Existing height limits should be maintained at currently allowed levels. Any project in this vicinity should reflect traffic, water, and sewer capacity and emergency vehicle access constraints and be compatible with neighborhood character.*

Program NH-4.10B: Pedestrian and Bicycle Access to the Station. *Develop an ADA compatible path on the south side of the SMART rail line to connect Merrydale Road with Civic Center Drive (east of 101). Implement other access and circulation recommendations as called for by the Civic Center Station Area Plan (2013) to improve pedestrian and bicycle access to the station and nearby destinations, including a safe pedestrian/bicycle crossing of the tracks between the north and south segments of Merrydale.*

Program NH-4.10C: Merrydale / Southbound 101 Improvements*. Consistent with the Station Area Plan, pursue improvements to the Southbound 101 on and off ramps at Merrydale.*

Policy NH-4.11: Northgate Business Park

Protect and maintain existing industrial uses and industrial sites that are important to San Rafael's economy and needed for the convenience of its residents and businesses. Allow uses such as delis and copy shops that serve businesses and employees in the area.

Program NH-4.11A: Zoning. *Ensure that zoning for the Northgate Business/Industrial Park area protects the viability of industrial uses while adapting to new uses and trends in production, distribution, repair, and sales. Parcels with "Office" zoning along Redwood Highway may be considered for other uses, including live-work and multi-family housing, provided these uses are compatible with adjacent activities.*

Program NH-4.11B: Access to Civic Center Station. *Improve access to the Civic Center SMART station from this area, potentially including shuttle service along Redwood Highway and additional pathways as recommended by the 2013 Station Area Plan.*

See also Program NH-4.18A on Gallinas Creek and marsh protection in this area

Policy NH-4.12: Redwood Highway Improvements

Upgrade and unify the architecture, signage, and landscaping along Redwood Highway between Freitas Parkway and Smith Ranch Road.

Program NH-4.12A: Design and Landscaping. *Upgrade building design and landscaping through new construction and remodeling projects, particularly along Redwood Highway. Evaluate the design of projects, including views from Highway 101, with particular attention paid to rooftop equipment and screening of mechanical equipment.*

Program NH-4.12B: Pedestrian Safety. *Improve pedestrian and bicycle safety along Redwood Highway with improved sidewalks, bike amenities, and landscaping.*

Policy NH-4.13: West of Los Gamos Drive

Require any development on the steep, highly visible parcels south and west of the YMCA to be clustered to retain community-wide visible hillside resources.

Policy NH-4.14: Design Considerations for the Civic Center Vicinity

Maintain the Marin County Civic Center as a significant visual and cultural resource. Modernization and any additional development in the vicinity should enhance this resource, be consistent with the Marin County Civic Center Master Design Guidelines (2005), and adhere to the following principles:

a) Implement those recommendations in the Civic Center Station Area Plan (2013) that were formally adopted by the City
b) Require urban design analysis to ensure compatibility of materials, color and building masses with the Civic Center
c) Require functional inter-connection with the Civic Center
d) Design should complement Civic Center architecture rather than compete with it
e) Site design should retain vistas to Mt. Tamalpais and screen the maintenance yard from view from Highway 101.
f) Historic structures should be retained
g) Any changes in low-lying areas should consider risks associated with sea level rise, and evaluate opportunities to improve environmental quality, including restoration of the South Fork of Gallinas Creek and restoration of surface water quality in the Civic Center Lagoon
h) Enhance the Civic Center Drive area with safe and pleasant walkways, including completion of a sidewalk on the west side of Civic Center Drive
i) Support renovations and additions to cultural and entertainment facilities

> ***Program NH-4.14A: Civic Center Design.*** *Monitor, review and comment on County development at and around the Civic Center. Encourage the County to go through a design review process and involve the North San Rafael community in the evaluation and review of proposed changes at the Civic Center. Request that the County provide sufficient opportunity for review of major development proposals at the Civic Center by the Design Review Board, Planning Commission and City Council.*

Policy NH-4.15: Civic Center SMART Station

Continue to improve connections from the SMART station to surrounding neighborhoods and workplaces, manage impacts of the station on parking and circulation, and consider opportunities for transit-oriented development in the station vicinity.

> ***Program NH-4.15B: Station Area Plan.*** *Implement the recommendations prescribed in the Civic Center Station Area Plan (See text box). Continue to evaluate parking needs and develop plans to avoid adverse effects of parking on neighborhoods.*

Policy NH-4.16: Pedestrian, Bicycle, and Transit Connections

Provide pedestrian, bicycle, and transit improvements that better connect the Civic Center to the North San Rafael Town Center, the Northgate Business Park and McInnis Park areas, and Central San Rafael.

> ***Program NH-4.16A: Bicycle and Pedestrian Improvements.*** *Pursue improvements consistent with the Bicycle and Pedestrian Master Plan and the North San Rafael Vision Promenade Plan to improve pedestrian and bicycle safety, including:*
> *a) Completion of the southern segment of the North San Rafael Promenade to Civic Center Drive, consistent with community input*
> *b) Lighting and sidewalks on both sides of Civic Center Drive between the Civic Center and the Merrydale overcrossing*
> *c) Extension of the McInnis Parkway sidepath across the south fork of Gallinas Creek, providing a trail connection to McInnis Park in the SMART right-of-way while protecting creek and marsh habitat*
> *d) Bicycle and pedestrian safety improvements on North San Pedro Road between Los Ranchitos Road and Civic Center Drive*

e) *Working with Golden Gate Transit to provide for safer bus pad locations and design along Highway 101.*

Policy NH-4.17: San Rafael Airport

Retain an "Airport/Recreation" General Plan designation for the San Rafael Airport that is consistent with the land use covenant agreed to by the City, the County, and the property owner. Recognize the unique and valuable recreational and environmental characteristics of the site, as well as its vulnerability to sea level rise. The following uses are allowed:

- Uses consistent with the Master Use Permit as amended through the time of General Plan adoption, including the airport and ancillary airport services and light industrial uses.
- Private and public recreational uses, as specified in the 2014 Master Use Permit.
- Public utility uses as approved by the appropriate government agencies, including flood control, sanitary sewer, gas, and electric, and public safety facilities.
- Open space including restored wetlands.

Program NH-4.17A. San Rafael Airport*. As needed, require improvements consistent with this policy through the development review process.*

Policy NH-4.18: Habitat Enhancement.

Enhance the habitat values of the Smith Ranch area, including Smith Ranch Pond and McInnis Marsh.

Program NH-4.18A. Wetland Management. *Support efforts to:*

a) *Conserve and enhance the McInnis Marsh wetlands, including sea level rise adaptation projects*
b) *Maintain Smith Ranch Pond, including removal of exotic plants, habitat enhancement, and potentially adding a public observation area*
c) *Restore and enhance the North and South Forks of Gallinas Creek, including the marshland area south of Contempo Marin and east of Northgate Business Park.*
d) *Monitor for presence of Ridgway's Rail along the North Fork.*

San Pedro Peninsula

Policy NH-5.1: San Pedro Peninsula

Maintain the San Pedro Peninsula as an attractive, residential area with scenic waterfront and open space amenities, quality community services and facilities, protected environmental resources, and continued improvements to public safety and emergency preparedness. Work with Marin County to address issues of mutual concern to the City, County, and residents of incorporated and unincorporated areas, including flooding, speed enforcement, and sidewalk and median maintenance on Point San Pedro Road.

Program NH-5.1A: Hazard Mitigation. *Implement programs to improve the resilience of the San Pedro Peninsula to natural hazards, including:*

a) *Reinforcing the shoreline to reduce flooding and sea level rise hazards and explore other mitigations.*
b) *Managing wildfire hazards, particularly through vegetation management on hillside open space, replacement of hazardous trees with native species when possible, and coordination with the State and other open space stewards to reduce hazards in China Camp State Park and McNears Beach.*
c) *Working with utility operators to ensure a reliable power supply and telecommunication services at all times (i.e, before, during, and after an emergency).*
d) *Continuing emergency preparedness efforts, including evacuation procedures and identification of short-term and longer-term shelter locations, medical services, and supplies.*

e) *Identification of alternate emergency evacuation routes via China Camp and North San Pedro Road.*
f) *Support for micro-grids to improve the reliability and sustainability of electrical service and minimize the impacts of outages.*
g) *Innovative solutions to flooding and sea level rise, such as creation of artificial beaches, reworking rip rap to attenuate wave energy, and improving the promenade west of the McNear Brickyard, among others.*

***Program NH-5.1B: Community Center**. Explore opportunities to create a public community center that can serve as a location for programs, recreational services, community events, and emergency preparedness/response. This should include opportunities created at such time that the San Rafael Rock Quarry/McNear Brickyard ceases operations and is planned for reuse.*

***Program NH-5.1C: Wetlands.** Explore forward-thinking and sustainable ways to maintain and improve the vitality of the wetlands along the Peninsula shoreline. Work cooperatively with the County to manage wetlands in the unincorporated area.*

Policy NH-5.2: Point San Pedro Road

Maintain Point San Pedro Road as a safe, attractive, well-maintained transportation route serving San Pedro Peninsula neighborhoods.

***Program NH-5.2A: Point San Pedro Road Improvements.** Continue efforts to maintain Point San Pedro Road as a vital community lifeline. This should include long-term plans to raise the road elevation and increase the height of the rock wall along the shoreline. It should also include maintaining traffic capacity and flow, exploring opportunities for public transit, reducing vehicle noise through special pavement, providing safer conditions for bicyclists and pedestrians, ensuring emergency vehicle access, and maintaining the median and roadside areas.*

Policy NH-5.3: Maintenance of Public Facilities and Infrastructure

Maintain and enhance City infrastructure and public facilities serving the Peacock Gap neighborhood.

***Program NH-5.3A: Environmental Quality Improvements.** Ensure that City properties and infrastructure are maintained in a way th at protects environmental quality, reduces hazards, and protects the quality of life. This should include maintenance of stormwater pumps at Riviera Drive and Point San Pedro Road, implementing best practices for reducing siltation and improving water quality in the Peacock Gap Lagoon, renovating and maintaining Peacock and Riviera Parks, and continuing efforts to improve roads and other infrastructure.*

Policy NH-5.4: Loch Lomond Marina

Maintain and enhance the Loch Lomond Marina and adjacent properties as a community asset, new neighborhood and commercial center, and gathering place and recreational amenity for the San Pedro Peninsula. Conditions of approval and provisions of the amended Master Plan for the Village at Loch Lomond Marina shall be honored as work on the project continues.

***Program NH-5.4A: Completion of Village Improvements.** Pursue timely completion of the Village at Loch Lomond Marina project consistent with approved plans, as amended. This should include:*
a) *Completion of the remaining residential units and mixed-use building.*
b) *Construction of the Harbormasters office, boat repair facility, fuel storage and pumping facility/fuel dock, and reskinning of the yacht club building.*
c) *Completion of recreational improvements, including a kayak dock and launch ramp and public access improvements in the center plaza.*
d) *Flood-related repair work to previously completed areas and further measures to*

reduce flooding during peak storm events and king tides.
e) Completion of the pedestrian access path.
f) Off-site road and utility improvements along Point San Pedro Road.
g) Installation of a bird viewing area and interpretive signage.

Program NH-5.4B: Parking and Traffic Studies. *Consistent with the conditions of approval, monitor traffic and parking conditions at Loch Lomond Marina. A traffic and parking study should be done within one year of completion of the project as required under the permits to determine the need to retain areas currently reserved for future parking.*

Program NH-5.4C: Common Area Maintenance. *Continue to maintain publicly-accessible parks, shoreline areas, and a marina green through a community facilities (Mello-Roos) district.*

Program NH-5.4D: Community Engagement. *Continue to engage the community, including representatives of nearby homeowner and neighborhood associations, in the review of progress and resolution of issues related to the Village development and Marina operations.*

Program NH-5.4E: Coordination with Regulatory Agencies. *Continue coordination of project-related activities with natural resource agencies, including the Bay Conservation and Development Commission, the US Fish and Wildlife Service, and other agencies with responsibility for the Bay and wetland areas.*

Policy NH-5.5: Loch Lomond Area and Canal North Shore Neighborhoods

Sustain the Loch Lomond and Canal North Shore areas as safe and attractive parts of San Rafael featuring waterfront and hillside neighborhoods, accessible open space and shoreline areas, and well-managed roads, infrastructure and public facilities.

Program NH-5.5A: Disaster Preparedness. *Continue efforts to improve disaster preparedness and reduce hazards, including a fire break along the ridgeline above Loch Lomond Highlands, continued maintenance of storm drainage facilities, and adaptation to sea level rise along San Rafael Bay and the San Rafael Creek shoreline.*

Policy NH-5.6: San Rafael Rock Quarry Operations

Continue to work with the County of Marin, the Quarry operator, and area residents to address community concerns and minimize impacts of Quarry operations on surrounding residents, including noise, air quality, vibration, street maintenance, and truck traffic.

Program NH-5.6A: Quarry Impacts. *Seek ongoing input into County code enforcement activities, land use entitlements, and negotiations with Quarry operator that might reduce impacts on City infrastructure or properties in the City of San Rafael. The City will urge the County to require Best Management Practices for Quarry operations, including air quality testing, water quality monitoring and improvements, and runoff controls that reflect the latest technology and scientific methods. The City will further promote joint City-County and Quarry operator efforts to address flooding and sea level rise, pedestrian and bicycle safety, wetlands restoration, and noise mitigation.*

Program SPP-6B: Environmental Review. *If and when the Quarry applies for modifications to its existing Operating Permit, participate in discussions to ensure that:*
a) Potential environmental impacts and hazards are minimized.
b) Public health, safety and quality of life are protected.
c) Traffic and noise impacts are addressed, particularly impacts on Point San Pedro Road.
d) Future costs associated with reclamation, such as long-term environmental restoration and infrastructure repair, are objectively evaluated and considered in decisions about future Quarry operations.

e) *Collaborate with residents to ensure that any modifications to the existing Operating Permit remain within the restrictions imposed by existing and future court orders.*

Policy SPP-7: San Rafael Rock Quarry and McNear Brickworks Long-Term Plans

If operations cease during the timeframe of this Plan, consider annexation and redevelopment of the San Rafael Rock Quarry and McNear Brickworks, taking into account the following:

a) Consider the County's Amended Reclamation Plan, as it may be further amended in the future, in land use decisions. The current Reclamation Plan supports a mixture of single family residences, townhomes, and condominium units; a marina; commercial, recreational, hospitality, and other neighborhood-serving uses; and open space. A revised Reclamation Plan is anticipated during the timeframe of this General Plan and could alter the planned post-mining uses. Specific future uses would be determined through a separate entitlement process that would potentially include annexation into the City.
b) Consider redevelopment of the site to the extent that traffic capacity is available and the project can meet the City's transportation standards, including performance of intersections between the site and US 101. Alternative modes of transportation may be considered to facilitate compliance with City standards. Water transit (including water taxis and potential ferry service) should be considered in any phase of the project and factored into the transportation analysis.
c) If needed for traffic capacity and to the extent consistent with City traffic standards, Point San Pedro Road should be expanded to four lanes east of Riviera Drive, including traffic calming measures and bicycle lanes consistent with the Bicycle and Pedestrian Master Plan.
d) Create a public use park band along the existing shoreline averaging at least 100 feet in width linking McNears Beach with the public walkway along Point San Pedro Road, as approved by the Bay Conservation and Development Commission.
e) Consider opportunities for multi-use community facilities serving residents of the San Pedro Peninsula and beyond, such as a center for the arts, education, and the environment.
f) Protect and enhance the freshwater marsh and ponds, taking sea level rise impacts into consideration. Consider restoring the saltwater marsh to tidal action.
g) Preserve and gradually restore tree species native to the site's woodland areas.
h) Incorporate some of the historic brickworks into the project's design.
i) Consider redevelopment of the site in phases as reclamation is completed in specific areas. The McNear Brickyard would likely be the first phase and would require a site access road from Point San Pedro Road that is separate from the road accessing the mining and asphalt operations. Phased redevelopment would require amendments to the existing Quarry entitlements to be approved by the County in coordination with the property owner.

Program SPP-7A: Quarry Planning. *Participate, through the County of Marin, in any revisions to the San Rafael Rock Quarry Reclamation Plan, which should form the basis for decisions about future land uses and possible annexation.*

Program SPP-7B: Shoreline Use. *Use the development review process to establish a bay frontage linear park that connects McNear Beach to the existing shoreline walkway along Point San Pedro Road. The park should incorporate sea level rise adaptation measures.*

COMMUNITY DESIGN AND PRESERVATION ELEMENT

Goal CDP-1: A Beautiful City

Preserve and strengthen San Rafael's natural and built features to enhance the appearance and livability of the City. *The interplay between San Rafael's built environment and natural context contributes to the city's strong sense of place and identity. The hills, ridgelines, and bays, as well as views to Mount Tamalpais, imprint the natural environment into the image of the city. Looking forward, San Rafael will remain an attractive, interesting, and well-designed city. It respects its natural landscape and waterfront, preserves its legacy of historic buildings, and values its diverse design qualities. San Rafael's distinct features will be protected and enhanced, connecting residents to nature, history, and home.*

Policy CDP-1.1: City Image

Reinforce San Rafael's image by respecting the city's natural features, protecting its historic resources, and strengthening its focal points, gateways, corridors, and neighborhoods.

Policy CDP-1.2: Natural Features

Recognize and protect the key natural features that shape San Rafael's identity, including the Bay, local hills and ridgelines, creeks and wetlands, tree cover, and views of Mt. Tamalpais and other natural landmarks. Height limits and other building standards should respect San Rafael's natural topography and reinforce its sense of place, including the character and boundaries of individual neighborhoods.

Policy CDP-1.3: Hillside Protection

Protect the visual integrity and character of San Rafael's hillsides and ridgelines.

> ***Program CDP-1.3A: Hillside Design Guidelines****. Continue to implement hillside design guidelines through the design review process, as well as larger lot size requirements for hillside areas where there are access limitations or natural hazards. Update the design guidelines as needed.*

See the Conservation/ Climate; Safety; and Parks, Recreation, and Open Space Elements for additional policies on hillside management, landslide hazard reduction, wildfire prevention, and related topics.

Policy CDP-1.4: Waterfront Identity

Strengthen San Rafael's identity as a waterfront city, providing improved visual and physical access to San Pablo Bay, San Rafael Bay, and the San Rafael Canal.

> ***Program CDP-1.4A: Canalfront Design Plan.*** *Implement the Canalfront Conceptual Design Plan (2009) recommendations. Development near the shoreline should maximize views to the water and public access to the shoreline.*
>
> ***Program CDP-1.4B: Canal Promenade.*** *Pursue development of a continuous pathway or promenade along the Canal waterfront.*

See the Conservation/Climate Element for policies on shoreline access, creek and wetland setbacks, and climate adaptation.

Policy CDP-1.5: Views

Respect and enhance to the greatest extent possible, views to the Bay and its islands; wetlands, marinas, and canal waterfront; hillsides and ridgelines; Mt. Tamalpais; Marin Civic Center; and St. Raphael's bell tower; as seen from streets, parks, and public pathways.

Program CDP-1.5A: Evaluating View Impacts. *Consider the impact of proposed development on views, especially views of Mt Tamalpais and nearby ridgelines. Where feasible, new development should frame views of ridges and mountains and minimize reduction of views, privacy, and solar access.*

Program CDP-1.5B: Guidance on View Protection. *Establish clearer, more objective City guidelines and standards on view protection, privacy, and solar access for new development, additions, and alterations.*

Program CDP-1.5C: Downtown Height Profile. *Develop zoning and design tools that encourage both continuity and variation in building heights, along with improved solar access and interesting roof elements such as domes, cupolas, and corner towers. Views of Downtown should be accented by memorable building elements, rather than a flat profile of buildings of uniform height.*

See also Conservation/Climate Program C-4.5B on solar access

Policy CDP-1.6: Gateways

Provide distinctive, attractively designed gateways into the City and its major districts. Gateways should optimally convey a sense of arrival, reinforce a positive image of the City, and help define a unique identity for individual districts.

Program CDP-1.6A: Gateway Improvements. *Evaluate each gateway shown on Exhibit 5-2 to develop recommendations for architecture, landscape design, public art, and signage. Prioritize the recommendations and include appropriate improvements in the City's Capital Improvements Program.*

Program CDP-1.6B: Neighborhood and District Gateways. *Support landscaping, signage, and design improvements at neighborhood and business district entry points. Evaluate opportunities for gateway improvements in private development where appropriate.*

See the Arts and Culture Element for policies on public art

Goal CDP-2: A Sense of Place

Strengthen San Rafael's sense of place. *San Rafael is a collage of uniquely identifiable places—a walkable downtown bustling with shops and restaurants, active and connected neighborhoods, a regional mall, business parks, industrial areas, and more. These different places are stitched together by streets and open spaces, creating a citywide identity unlike anyplace else in Marin County. Design decisions should reinforce the city's identity, protecting qualities that are valued while recognizing opportunities for improvement and positive change.*

Policy CDP-2.1: Neighborhoods, Districts, and Centers

Strengthen San Rafael's identity as a community of unique centers, neighborhoods, corridors, and districts. Design decisions should maintain Downtown as a historic, walkable center; preserve the integrity and character of residential neighborhoods; and improve the appearance and function of, mixed usedistricts such as the North San Rafael Town Center.

Program CDP-2.1A: Place Types. *Identify "place types" in the City that establish defining characteristics and provide the basis for objective design standards. Design standards for each place type should support housing production and commercial development that is consistent and compatible with each neighborhood or employment district.*

Program CDP-2.1B: Design Guidance. *Use precise plans, specific plans, and similar tools to establish a design vision for different parts of the city, and to identify desired improvements.*

See also Policy NH-4.# on the vision for the North San Rafael Town Center

Policy CDP-2.2: Downtown Urban Design

Enhance the design qualities that make Downtown San Rafael a unique and special place, including its traditional street grid, street trees, walkable scale, historic building stock, and varied architecture.

Program CDP-2.2A: Downtown Precise Plan. *Implement the design recommendations and standards of the Downtown Precise Plan, including public improvements.*

Policy CDP-2.3: Neighborhood Identity and Character

Recognize, preserve, and enhance the positive qualities that shape neighborhood identity. Development standards should respect neighborhood context and scale and preserve design elements that contribute to neighborhood livability. Standards should also provide the flexibility for innovative design and new types of construction. Code enforcement and City programs should maintain community standards and the integrity of buildings and landscapes.

Program CDP-2.3A: Code Enforcement. *Maintain code enforcement and nuisance abatement programs to address litter, illegal dumping, unlawful storage, and property maintenance issues.*

Program CDP-2.3B: Educational Materials. *Continue to provide programs and educational materials to inform property owners about property maintenance requirements, and sanitation, health, and safety standards.*

See the Housing Element for policies on residential rehabilitation loans and other issues related to maintenance and repair of the housing stock. See also Program LU-2.12 and Policy H-16 on ADUs, including best practices for integrating ADUs into the fabric of existing homes and neighborhoods. See Policy EDI-3.5 on property maintenance.

Policy CDP-2.4: Corridors

Improve the function and appearance of San Rafael's major transportation corridors and enhance their role in shaping the city's character.

Program CDP-2.4A: Streetscape Guidelines. *Develop general streetscape guidelines for residential arterials, auto-oriented commercial streets, pedestrian streets, and other types of streets in the city. Include site-specific recommendations for individual corridors when needed. Streetscape guidelines should support climate change and "complete streets" goals as well as aesthetic goals.*

Program CDP-2.4B: Right-of-Way Landscaping*. Encourage Caltrans to install and maintain landscaping along Highway 101 and Interstate 580.*

Program CDP-2.4C: Highway 101 Crossings. *Promote public art, restoration of Irwin Creek, better lighting, and other improvements beneath the Downtown Highway 101 viaduct to better connect the east and west sides of the freeway and make the area more hospitable to pedestrians and cyclists. Consider similar improvements in North San Rafael as part of the future PDA planning process, including the Merrydale Promenade connector near the Civic Center Station.*

Policy CDP-2.5: Commercial and Industrial Districts

Recognize and preserve the design elements that contribute to the economic vitality, functionality, and visual quality of San Rafael's commercial and industrial districts. Where feasible, improve the appearance of these areas by making them more walkable, attractive, and visually compatible with the neighborhoods around them.

> ***Program CDP-2.5A: Commercial and Industrial Beautification.*** *Where feasible, develop and implement urban design improvements such as street trees, sidewalks, lighting, landscaping, and signage, in commercial and industrial areas through the development review process, capital improvement program, and similar means.*

Goal CDP-3: Attractive Streets and Public Spaces

Create streets, public spaces, and civic buildings that add value to private property, promote environmental sustainability, and contribute to San Rafael's visual quality and identity. *A well-designed public realm contributes to the city's vitality and helps achieve its sustainability, livability, and climate action goals. Streets, parks, plazas, and civic buildings are designed and maintained to convey civic pride. They provide common ground that connects and unites the community.*

Policy CDP-3.1: Plazas and Active Public Spaces

Encourage the integration of public space—or private space that is available for public use—in larger-scale commercial, civic, and mixed use development. Such spaces should be designed and operated so that they can be easily maintained, remain safe and attractive, and contribute positively to the community.

> ***Program CDP-3.1A: Activation of Public Space.*** *Encourage activities such as farmers markets and performances in public spaces to enhance their usefulness and role as community gathering space.*

> ***Program CDP-3.1.B: Solar Access for Public Space.*** *Explore potential sun and shading standards for select public and quasi-public spaces.*

> ***Program CDP-3.1C: Universal Design.*** *Incorporate the concept of universal design in the design of public space, so that persons of all physical abilities can safely and comfortably use city streets and civic places.*

> ***Program CDP-3.1D: Alleys.*** *Improve Downtown alleys so they become more functional, economically productive and activated public spaces.*

> ***Program CDP-3.1E: North San Rafael Improvements.*** *Encourage and incentivize the development of public art, publicly accessible plazas, and other activated spaces in new and redeveloped projects in North San Rafael, especially in the Northgate Mall/ North San Rafael Town Center area.*

Policy CDP-3.2: Street Furnishings

Use street furniture and pavement materials to create a more attractive city, particularly in commercial districts. Seating, trash receptacles, streetlights, art, and other street furnishings should be compatible with--and strengthen—the identity of San Rafael's business districts and neighborhoods while supporting "green streets" and low impact development principles.

> ***Program CDP-3.2A: Right-of-Way Encroachments.*** *Continue to refine City standards for encroachments into the public right of way for features such as sidewalk dining, parklets, awnings,and temporary signage.*

Program CDP-3.2B: Arts Partnerships. *Explore opportunities to engage the local arts community in the design of public realm improvements, including public art, painting of utility boxes, murals, and similar improvements.*

See the Arts and Culture Element for public art policies and the Community Services and Infrastructure Element for Green Streets policies

Policy CDP-3.3: Landscape Design in Public Rights-of-Way

Use landscape design in public rights-of-way to soften the built environment, showcase San Rafael's natural environment, and advance City goals related to walkability, climate change, conservation, and hazard reduction. Landscaping should control heat build-up from pavement, provide shade, reduce air pollution, and improve visual quality.

See the Community Services and Infrastructure Element for policies on Utility Undergrounding

Policy CDP-3.4: Landscape Maintenance

Prioritize landscape maintenance along the City's most heavily traveled roadways and gateways. Control costs by using low-maintenance materials, removing litter, and avoiding deferred maintenance. Operational practices should support the City's commitment to water conservation, fire prevention, and reduced use of toxic materials.

Program CDP-3.4A: Landscape Stewardship. *Encourage partnerships with neighborhoods and civic organizations to maintain and improve the City's landscaped areas.*

Policy CDP-3.5: Street Trees

Encourage the planting and maintenance of street trees to reduce urban heat island effects, sequester carbon, improve air quality, absorb runoff and wind, define neighborhoods, and improve the appearance and character of City streets.

Program CDP-3.5A: Street Tree Master Plan. *Develop a comprehensive citywide Street Tree Master Plan. The Plan should address street tree planting, species selection, maintenance, replacement, diversification, wood utilization, and tree waste recycling and should ensure that trees are appropriate for the planting areas where they are located.*

Program CDP-3.5B: Street Tree Inventory. *Create an inventory of City street trees, using volunteers to the greatest extent feasible.*

Program CDP-3.5C: Street Trees for New Development. *Require street trees in new developments and major property upgrades.*

See the Community Services and Infrastructure Element for policies and programs regarding coordination with PG&E on tree maintenance and safety and Policy C-1.16 on urban forestry.

Program CDP-3.5D: Street Tree Maintenance. *Support the long-term health of San Rafael's urban forest through timely, quality street tree maintenance. Seek diversified funding sources for maintenance and replacement.*

Policy CDP-3.6: Tree Replacement

Discourage the removal of healthy trees. Support replacement when trees are removed due to health, safety, or maintenance cost reasons.

Program CDP-3.6A: Mitigation for Tree Removal. *Continue to implement mitigation requirements for tree removal in new development. When necessary, this could include planting*

of trees in locations other than the project site. Tree replacement value should be based on mass rather than a numeric ratio score.

Program CDP-3.6B: Tree Replacement Due to Sidewalk Damage. *Consider replacing trees that have root systems that cause sustained damage to pavement and sidewalks.*

Policy CDP-3.7: Wayfinding and Directional Signage

Encourage the use of consistent graphic conventions and logos for City signs, including gateway signs and wayfinding signs.

Program CDP-3.7A: Downtown Wayfinding. *Implement the signage recommendations in the 2018 Downtown Parking and Wayfinding Study to direct people to cultural resources, public facilities, parks, shopping areas, parking, and key destinations. Consider wayfinding signage in other parts of the City, such as Northgate, the Point San Pedro area, and the Canal.*

Program CDP-3.7B: Interpretive Signage. *Encourage the use of interpretive signage to provide information about local history, the natural environment, and cultural resources.*

Policy CDP-3.8: Greenways

Encourage the development of "greenways" such as the North San Rafael Promenade and the Tamalpais Greenway that improve connectivity, link neighborhoods, restore creeks, and enhance the appearance of the city.

See the Community Services and Infrastructure Element for policies on the visual impacts of utility improvements and the Neighborhoods Element (North San Rafael section) for discussion of the Promenade.

Goal CDP-4: Quality Construction and Design

Encourage quality construction and design that enhances San Rafael's character and creates places of lasting value. *San Rafael has many examples of fine architecture and a few exceptionally memorable buildings. The City embraces creative and distinctive design, while ensuring that the scale, height, and massing of new development respects the surrounding context.*

Policy CDP-4.1: Design Guidelines and Standards

Use design guidelines and standards to strengthen the visual and functional qualities of San Rafael's neighborhoods, districts, and centers. Guidelines and standards should ensure that new construction, additions, and alterations are compatible with the surrounding neighborhoods while still allowing for innovative, affordable design.

Program CDP-4.1A: Design Guidelines. *Maintain design guidelines for residential, non-residential, and mixed use construction. Guidelines should define the elements of good design and encourage compatible building patterns, scale, mass, and transitions between areas. Design guidelines should be periodically updated to respond to construction trends, neighborhood feedback, and changes in the way people live, work, and travel.*

Program CDP-4.1B: Objective Design and Development Standards. *Develop and maintain objective (measurable) design standards for new higher density and mixed use housing that meet the requirements of State law and support new housing construction. These standards would be used in lieu of those referenced in Program CDP-4.1A and apply only to proposals for multi-family and mixed use housing meeting specific State-adopted criteria. (insert text box on SB 35)*

Program CDP-4.1C: Form-Based Codes. *Encourage the use of form-based codes (FBCs) as an alternative to design guidelines and zoning standards in specific districts of the City such as Downtown. The FBC integrates design and regulatory controls to improve design quality and enhance public space.*

See the Safety Element for policies on fire-safe design and construction

Policy CDP-4.2: Public Involvement in Design Review

Provide for public involvement in design review through effective noticing, adequate comment timelines, and clear project review opportunities while still achieving development streamlining objectives.

Program CDP-4.2A: *Improving Design Review Efficiency. Continue to improve the design review process by:*

- *Engaging stakeholders and the developer early so that issues can be worked out before initial submittal*
- *Clarifying requirements for initial submittals to improve their quality*
- *Adjusting notification procedures to encourage earlier and broader participation*
- *Changing the project review sequence so that Planning Commission feedback is solicited before the Design Review Board*
- *Periodically evaluating and updating the guidelines, including thresholds for design review.*

Program CDP-4.2B: Community Discussions of Good Design. *Continue to engage the community in discussions to define "good design" and strategies to improve architecture and public space.*

Policy CDP-4.3: Creative Architecture and Design

Encourage creative architecture while respecting the context of each site.

Program CDP-4.3A: Reinforcing Design Context. *Ensure that design guidelines recognize the distinct characteristics of San Rafael neighborhoods. Guidelines should ensure that new development respects the character-defining elements of neighborhoods, including height, scale, materials, and setbacks.*

Program CDP-4.3B: Successful Design Portfolio*. Establish a portfolio of existing buildings and projects illustrating successful design and make it available on the City's website.*

Program CDP-4.3C: Exceptions. *Allow variation from design guidelines and standards for exceptional buildings that contribute public benefits and make a significant contribution to their surroundings.*

See also Housing Policy H-2

Policy CDP-4.4: Single Family Home Design

Encourage the design of new homes, additions, and alterations that integrate well with their surroundings and support the livability of neighborhoods. Residential additions and alterations should respect the proportions, styles, and materials of the house and adjacent properties.

See also Housing Program H-2A

Policy CDP-4.5: Higher Density Design

Encourage high-quality architecture and landscape design in new higher-density housing and mixed use projects. Such projects should be designed to be compatible with nearby buildings and respect the character-defining features of the surrounding neighborhood or district.

See Programs CDP-4.1A through C on design guidelines and standards. See the Land Use and Mobility Elements for policies on parking in higher-density housing areas.

Policy CDP-4.6: Open Space in Multi-Family Housing

Require private outdoor areas such as decks and patios, as well as common open space areas, in new multi-family development and mixed use housing. Common open space may include recreation facilities, gathering places, and site amenities such as picnic and play areas.

> ***Program CDP-4.6A: On-Site Recreational Areas****. Continue requirements for on-site recreational areas as specified in the zoning ordinance.*

Policy CDP-4.7: Larger-Scale Buildings

Design larger scale buildings to reduce their perceived mass. Encourage the incorporation of architectural elements such as towers, arcades, courtyards, and awnings to create visual interest, provide protection from the elements, and enhance orientation.

> ***Program CDP-4.7A: Signature Buildings.*** *Allow for "signature" buildings that create a positive impression of San Rafael. Memorable, innovative architecture should be encouraged through the placement of building forms and features, selection of materials, and unique treatment of corner sites, and similar measures. Innovative climate-adaptive measures such as vertical gardens, roof-gardens, living building design and onsite water reuse also should be encouraged.*

Policy CDP-4.8: Scale Transitions

Require sensitive scale and height transitions between larger and smaller structures. In areas where taller buildings are allowed, they should be designed to minimize shadows, loss of privacy, and dramatic contrasts with adjacent low-scale structures. Exceptions may be made where taller buildings are also permitted on the adjoining site.

> ***Program CDP-4.8A: Building Stepbacks.*** *Use tools such as stepbacks and daylight planes to improve height transitions where taller buildings are constructed near lower-scale buildings. The perceived height and bulk of new buildings can be reduced through measures such as stepping back the upper floors, articulating the building elevation, and using varied exterior building materials and colors.*

Policy CDP-4.9: Parking and Driveways

Encourage parking and circulation design that supports pedestrian movement and ensures the safety of all travelers, including locating parking to the side or rear of buildings, limiting driveway cuts and widths, , and minimizing large expanses of pavement. Parking should be screened from the street by landscaping and should provide easy access to building entrances.

Policy CDP-4.10: Landscape Design

Encourage privately owned and maintained landscaping that contributes to neighborhood quality, complements building forms and materials, improves stormwater management and drainage, and enhances the streetscape. Natural elements such as plants should be an integral part of site development and should enhance the built environment.

> ***Program CDP-4.10A: Zoning Regulations.*** *Periodically evaluate the landscape provisions in the Zoning Ordinance to respond to climate change, hazards, water availability, shading needs, and other issues. Zoning should support the City's goal of having a strongly landscaped character.*
>
> *See the Conservation Element for additional policies on water-efficiency and the use of trees and native plants for urban cooling and habitat enhancement.*

Program CDP-4.10B: Industrial Landscape Design. *Ensure that landscape guidelines for new industrial and general commercial development provide effective buffering, while also supporting water conservation, water quality, and fire hazard reduction goals.*

Program CDP-4.10C: Parking Lot Landscaping Requirements. *Review City standards for parking lot landscaping to ensure that they adequately address visual screening, environmental quality, and climate-related issues.. Standards should allow for solar shade structures within parking areas.*

See the Conservation/Climate Element for landscape policies related to urban runoff and water quality

Policy CDP-4.11: Lighting

Encourage lighting for safety and security while preventing excessive light spillover and glare. Lighting should complement building and landscape design.

See Conservation/Climate Element Policy C-1.19 for additional guidance on dark skies.

Program CDP-4.11A: Lighting Plans. *Continue to require lighting plans for projects proposing exterior lighting. The design review process should be used to evaluate lighting for safety, consistency with dark sky objectives, and potential mitigation to reduce negative impacts on nearby properties.*

Policy CDP-4.12: Commercial Signage

Encourage commercial signage that provides the visual identification necessary for business success, while enhancing the building, streetscape, and surrounding area.

Program CDP-4.12A: Sign Regulations. *Periodically update the City's sign regulations to reflect new technologies, materials, and design trends, and to ensure that regulations comply with all applicable state and federal laws.*

Goal CDP-5: Protected Cultural Heritage

Protect and maintain San Rafael's historic and archaeological resources as visible reminders of the city's cultural heritage. *As a mission city established over 200 years ago, San Rafael values its history and the people, places, and buildings that have shaped it. Preservation can provide a strong sense of place and civic identity, bolster the City's economy, and support the City's sustainability goals.*

Policy CDP-5.1 Historic Buildings and Areas

Preserve buildings and areas with special and recognized historic, architectural or aesthetic value, including but not limited to those on the San Rafael Historical/ Architectural Survey. New development and redevelopment should respect architecturally and historically significant buildings and areas. [Add text box: Is it "historic" or just old?]

Program CDP-5.1A: Preservation Ordinance. *Continue to implement the City's Historic Preservation Ordinance. The Ordinance should be reviewed at least once every 10 years to ensure that its criteria, classifications, and procedures provide the most effective measures to assess proposed changes to historic properties and are consistent with Secretary of the Interior standards.*

Program CDP-5.1B: Oversight Responsibilities*. Create a more formal means of oversight for review of planning and building applications affecting historic resources. This could include a contract with an architectural historian, or an advisory committee convened as needed to advise the Planning Commission and Design Review Board on matters and policies related to*

preservation or the modification of historic structures. If an oversight body is created, it should represent diverse perspectives and interests.

Policy CDP-5.2 Inventorying Historic Resources

Maintain and periodically update inventories of local historic resources, using methods that are consistent with state and federal criteria, reflect local values, and do not unreasonably constrain property rights and interests. Historic resources may include sites associated with important historic events or people, archaeological resources, and landscape elements, in addition to older buildings.

***Program CDP-5.2A: Context Statement**. Prepare a citywide historic context statement to provide the framework for evaluating a property's historic significance and integrity.*

***Program CDP-5.2B: Inventory Update.** Continue to update the City's Historical/ Architecture Survey, which is an inventory of buildings of architectural value, historic buildings and/or districts and historic elements such as signs, monuments, and gates. A priority should be placed on neighborhoods with large concentrations of older structures, as well as areas most likely to experience development pressure in the future. [Inset: Historic Surveys Over the Years]*

***Program CDP-5.2C: Criteria for Designation.** Review and adjust the criteria for designation of historic resources so they align with those of state and federal preservation agencies.*

***Program CDP-5.2D: Additional Landmarking.** Based on updated historic preservation data, identify additional structures or sites for local and/or state landmark status and/or potential nomination to the National Register of Historic Places.*

Policy CDP-5.3: Districts

Encourage the formation of historic or architectural conservation districts in areas where important historic resources are concentrated and where there is property owner and community support for such designations. Such districts should provide for preservation, restoration, and greater awareness of the resources they contain, while providing financial and property tax incentives for property owners.

***Program CDP-5.3A: Downtown Districts.** Consider the designation of an additional historic district in Downtown San Rafael based on the 2019 Downtown Precise Plan field survey of Downtown properties.*

***Program CDP-5.3B: Conservation Districts**. Consider the use of Conservation Districts as an alternative to historic districts or the designation of individual landmarks (see text box).*

***Program CDP-5.3C: Eichler Neighborhoods.** Recognize the Eichler subdivisions of North San Rafael as a defining part of San Rafael's architectural heritage. Continue to take steps to preserve the characteristic features of Eichler homes and neighborhoods, including height and roofline modifications.*

Policy CDP-5.4: Preservation Incentives

Create innovative incentives that encourage stewardship of San Rafael's historic resources. Incentives should be enacted before (or concurrently with) placing additional restrictions on historic properties, to ensure that preservation makes economic sense.

***Program CDP-5.4A: Zoning and Development Incentives.** Support the use of transfer of development rights and façade easements to encourage preservation of historic buildings.*

***Program CDP-5.4B: Local Financial Incentives.** Pursue development of a local Mills Act program to allow contracts with the owners of historic properties meeting criteria to be defined by the City. The contracts allow for reduced property taxes in exchange for an agreement to*

maintain the historic integrity and visibility of the structure. In addition, enact reductions or waivers of local permitting fees for qualifying historic preservation projects.

Program CDP-5.4C: Non-Local Financial Incentives
Support financial assistance for preservation through state and federal grants and loans, tax credits, National Trust Preservation funds, the Federal Historic Preservation Tax Incentives Program, and similar programs.

Policy CDP-5.5: Adaptive Reuse

Encourage the adaptation and reuse of historic and older buildings as a way to preserve San Rafael's heritage, especially where the original use of the building is no longer viable.

Program CDP-5.5A: California Historic Building Code. *Use the State historic building code to relieve historic buildings from modern code requirements, thus making it easier to reuse the building. Explore other incentivizes or code changes that allow interior spaces in older buildings to be more easily and affordably updated.*

Program CDP-5.5B: Zoning. *Investigate zoning exceptions for historic structures, such as reduced on-site parking, setback, and driveway width requirements. The range of permitted or conditionally permitted uses in historic structures should be expanded to make them more viable for reuse.*

Policy CDP-5.6: Protecting the Integrity of Historic Properties

Ensure that modifications to designated historic properties, including additions, alterations, and new structures, are visually compatible with the property's contributing features, as defined by the San Rafael Municipal Code.

Program CD-5.6A: Certificates of Appropriateness. *Continue existing requirements for "Certificates of Appropriateness" (COA) for alterations to designated historic resources. Criteria for COAs should be consistent with State and federal standards.*

Program CDP-5.6B: Design Guidelines. *Address historic preservation in the City's design guidelines, including successful examples of (a) adaptive reuse, alterations, and other changes; and (b) new infill development in the context of an older neighborhood, including examples of contemporary architecture. Infill development in older areas does not need to mimic historic development but should acknowledge and respect its context.*

Program CDP-5.6C: Landscapes and Natural Features. *Consider landscapes, gardens, mature trees, and natural features as contextually relevant when defining historic value. Encourage the preservation of such features when they are determined to be significant.*

Policy CDP-5.7: Maintenance of Historic Properties

Strongly support the maintenance of historic properties and avoid their deterioration to the point where rehabilitation is no longer feasible (e.g., "demolition by neglect").

Program CDP-5.7A: Incentives. *Support property owner efforts to maintain and restore historic properties through fee reductions, tax credits, and Code exceptions.*

Policy CDP-5.8: Preservation Advocacy

Encourage local preservation efforts by community organizations. Provide technical support to such groups and encourage their participation in City-sponsored preservation activities.

Program CDP-5.8A: Public Recognition. *Support programs that publicly recognize property owners who have done an exceptional job preserving an historic property*

***Program CDP-5.8B: Volunteers**. Engage volunteers in historic surveys and similar activities to the greatest extent feasible, with professional assistance as needed.*

***Program CDP-5.8C: Public Events and Social Media.** Encourage organizations such as the Marin History Museum and San Rafael Heritage to produce events, publications, social media, and exhibits about the historic resources that exist in San Rafael.*

Policy CDP-5.9: Preservation Education

Encourage historic preservation activities and programs that heighten awareness of historic resources and the ways that architecture and landscape define the city's character.

***Program CDP-5.9A: Preservation Reference Materials.** Support the efforts of local organizations to maintain and expand collections of historic photographs, artifacts, books, media, oral histories, and other resources, and to make these materials available through on-line archives.*

***Program CDP-5.9B: Plaques and Markers.** Support efforts to install plaques and markers recognizing historic locations and the locations of important historic events in San Rafael.*

***Program CDP-5.9C: School Programs.** Support local school efforts to incorporate San Rafael history lessons, events, and field trips into their curriculum and programs.*

Policy CDP-5.10: Economic Benefits of Preservation

Leverage San Rafael's historic resources to create jobs, attract visitors, and generate local revenue. Recognize the value of preservation in placemaking, including branding and marketing areas such as Downtown San Rafael.

***Program CDP-5.10A: Walking Tours, Trails, and Historic Festivals.** Encourage walking tours, historic trails, mobile apps, and history fairs and programs that attract visitors. Partner with the Marin Convention and Visitors Bureau and other organizations to promote events celebrating San Rafael history.*

***Program CDP-5.10B: Marin County Civic Center.** Work with the County of Marin to encourage and support preservation of the Frank Lloyd Wright-designed Civic Center complex and grounds as a nationally important historic architectural site and major destination for regional, national, and international visitors.*

***Program CDP-5.10C: Mission San Rafael.** Promote San Rafael's historic origin as a "mission city," and Mission San Rafael Arcangel as a destination of historic interest. (insert text box on China Camp)*

Policy CDP-5.11: Sustainability

Recognize the potential sustainability benefits of historic preservation, including reduced resource consumption, reduced landfilled waste, reduced energy use, and the need for fewer raw materials.

***Program CDP-5.11A: Energy Retrofits.** Encourage the use of energy efficiency incentives to assist in the rehabilitation of older buildings.*

Policy CDP-5.12: Inclusive Approach to Preservation

Ensure that preservation efforts are culturally inclusive and recognize the contributions of all racial and ethnic communities to the City's history and development. Sites and structures that are culturally important to specific ethnic communities, including those associated with events and people, should be part of local preservation efforts.

Program CDP-5.12A: Community Heritage Programming. *Engage representatives of the different ethnic communities, as well as preservation organizations and San Rafael schools, universities, and colleges to document and preserve the history of each community in San Rafael, including sites and structures of historic importance. Support educational curriculum that raises awareness of the City's cultural heritage and includes non-Eurocentric perspectives.*

Policy CDP-5.13: Protection of Archaeological Resources.

Protect significant archaeological resources by:

a) Consulting the City's archaeological resource data base prior to issuing demolition or construction permits in known sensitive areas.
b) Providing information and direction to property owners to make them aware of these resources and the procedures to be followed if they are discovered on-site.
c) Identifying, when possible, archaeological resources and potential impacts on such resources.
d) Implementing measures to preserve and protect archaeological resources, including fines and penalties for violations.

Program CDP-5.13A: Archeological Resources Ordinance. *Continue to implement the existing Archeological Resources Ordinance and the City's Archaeological Resources data base.*

Policy CDP-5.14: Tribal Cultural Resources

Coordinate with representatives of the Native American community to protect historic Native American resources and raise awareness of San Rafael's Native American heritage .

Program CDP-5.14A: AB 52 Compliance. *Implement the requirements of Assembly Bill 52 by providing opportunities for meaningful input from Native American representatives in the development review process.*

Program CDP-5.14B: Protection of Tribal Resources. *Incorporate standard approval conditions in future development projects that ensure that Native American resources are protected during construction. In the event tribal resources are discovered, earth-disturbing work must be temporarily suspended pending evaluation by a qualified archaeologist and an appropriate Native American representative. Where appropriate, a mitigation plan shall be developed in accordance with state guidelines and tribal input.*

CONSERVATION AND CLIMATE CHANGE ELEMENT

Goal C-1: Supporting Our Natural Communities

Protect, restore, and enhance San Rafael's environment and natural communities. *San Rafael is defined by natural features such as hillsides, ridgelines, creeks, shorelines, and open water. It includes diverse ecosystems such as woodlands, grasslands, chaparral, wetlands, and riparian areas. These areas provide habitat for interconnected communities of plants and animals, some of which are threatened and endangered. The City is committed to the wellbeing and careful management of its environment. Natural communities must be protected, supported, and sustained into the future.*

Policy C-1.1: Wetlands Preservation

Require appropriate public and private wetlands preservation, restoration and/or rehabilitation through the regulatory process. Support and promote acquisition of fee title and/or easements from willing property owners.

> ***Program C-1.1A: Wetlands Overlay District.*** *Continue to implement wetlands policy through a Wetlands Overlay zoning district that is based on wetland delineations consistent with US Army Corps of Engineers criteria.*
>
> ***Program C-1.1B: Tiscornia Marsh Restoration.*** *Support restoration plans for Tiscornia Marsh adjacent to Pickleweed Park in the Canal neighborhood. The project will raise and improve a degraded levee to stabilize and potentially restore an eroding tidal marsh, reducing the community's vulnerability to rising tides and flooding.*
>
> ***Program C-1.1C: McInnis Marsh Restoration.*** *Support restoration plans for McInnis Marsh, providing improved habitat for protected species, flood protection for McInnis Park golf course, and improved trail connections along the San Pablo Bay Shoreline.*

Policy C-1.2: Wetlands and Sea Level Rise

Optimize the role of wetlands in buffering the San Rafael shoreline against the future impacts of sea level rise.

See also Program S-3.6A for a discussion of the sea level rise benefits of horizontal levees

Policy C-1.3: Wetland Protection and Mitigation

In order to protect and preserve valued wetlands, loss of wetlands due to filling shall be avoided, unless it is not possible or practical. Compensatory mitigation for the loss of wetlands shall be required in the event that preservation is not possible or practical due to conditions such as the location, configuration, and size of the wetland.

> ***Program C-1.3A: Compensatory Mitigation Requirements.*** *For permanently impacted wetlands, lost wetland area shall be replaced on-site and in-kind at a minimum ratio of 2:1 (e.g., 2 acres for each acre lost). If on-site mitigation is not possible or practical, off-site mitigation shall be required, preferably in the same drainage basin or a nearby Marin watershed if the same basin is not available, at a minimum replacement ratio of 3:1. Temporarily impacted wetlands may be restored and revegetated to pre-project conditions.*
>
> ***Program C-1.3B: Conditions for Mitigation Waivers****. The City may waive the compensatory mitigation requirement on a case by case basis for wetlands restoration projects and for fill of wetlands that are less than 0.1 acres in size, provided that all of the following conditions are met: (1) the wetland is isolated (e.g., it is not within, part of, or directly connected or hydrologically linked by natural flow to a creek, drainageway, wetland, or submerged tidelands); (2) it is*

demonstrated by an independent wetland expert that preservation would not result in a functioning, biological resource; (3) the City has determined that filling would result in a more appropriate and desirable site plan for the project; and (4) the City verifies that applicants have received all required permits and complied with all other mitigation requirements from resource agencies with wetland oversight.[3]

Program C-1.3C: Revision of Mitigation and Waiver Requirements. *Consider revisions to mitigation requirements and waiver conditions that reflect best practices, sea level rise adaptation needs, and consistency with the requirements used by state and federal agencies and other Bay Area jurisdictions.*

Policy C-1.4: Wetland Creation

Require that any wetlands created to mitigate losses as described in Policy C-1.3 are similar in habitat type and at least equal in functional quality to the wetlands being filled.

Program C-1.4A: Wetland Plans and Monitoring. *Wetland plans shall be prepared by a qualified wetland restoration ecologist in consultation with appropriate federal and state resource agencies. Such plans shall require annual monitoring for a specified period of time to determine mitigation success. Contingency measures to deal with the potential for lack of success should be included in the plan.*

Program C-1.4B: Timing of Wetlands Creation. *Restoration or creation of wetlands should be completed prior to construction of the development. Where construction activities would adversely impact wetland restoration or creation, the restoration or creation may be completed after construction of the development, as determined through development review.*

Program C-1.4C: Mitigation Banking. *Support the creation of wetland mitigation banking sites within the City. This would allow the collection of mitigation fees from multiple projects to be combined to construct or restore larger, more viable wetlands in designated locations rather than constructing small compensatory wetlands on or near each development site. This could include an inventory of priority restoration areas for future projects that may require compensatory off-site mitigation.*

Policy C-1.5: Wetland Setbacks

Maintain a minimum 50-foot development-free setback from wetlands, including, but not limited to, paving or structures. Setbacks of greater than 50 feet may be required on lots of two or more acres as determined through development review. The City may waive this requirement for minor encroachments if it can be demonstrated that the proposed setback adequately protects the functions of the wetland to the maximum extent feasible and will not cause cumulative impacts on functioning wetlands.

See Goal S-3 (and associated policies and programs) in the Safety Element regarding sea level rise

Policy C-1.6: Creek Protection

Protect and conserve creeks as an important part of San Rafael's identity, natural environment, and green infrastructure. Except for specific access points approved per Policy C-1.7 (Public Access to Creeks), development-free setbacks shall be required along designated creeks, drainageways, and watercourses (as shown on Exhibit C-2) to help maintain their function and habitat value. Appropriate erosion control and habitat restoration measures are encouraged within the setbacks, and roadway crossings are permitted.

[3] *US Army Corps of Engineers and the Regional Water Quality Control Board.*

Program C-1.6A: Creek and Drainageway Setbacks: *Maintain the following setback requirements in the Municipal Code:*

(a) A minimum 25-foot development-free setback shall be maintained from the top of creek banks for all new development (including but not limited to paving and structures), except for Miller Creek and its tributaries, where a minimum 50-foot setback shall be maintained. Setbacks up to 100 feet may be required in development projects where development review determines that a wider setback is needed to maintain habitat values, and in areas where high-quality riparian habitat exists. The City may waive the setback requirement for minor encroachments if it can be demonstrated that the proposed setback adequately protects the functions of the creek to the maximum extent feasible and the results are acceptable to appropriate regulatory agencies.

(b) Drainageway Setbacks: Drainageway setbacks shall be established through individual development review, taking into account existing habitat function and values.

EDITOR'S NOTE: Exhibit 37 in the 2020 General Plan has been amended to show Drainageways as well as Creeks, per the data available through MarinMaps (this was done in GP 2000 but not in GP 2020).

Program C-1.6B: Municipal Code Compliance. *Ensure that the San Rafael Municipal Code is consistent with local, state, and federal regulatory agency requirements for erosion control and natural resource management and is amended as needed when these regulations change. Local public works activities shall comply with the Municipal Code.*

Program C-1.6C: Creek and Drainageway Mapping. *Work collaboratively with local environmental organizations and institutions to prepare updated maps of creeks and drainageways and to evaluate the potential for restoration.*

[insert text box on creeks and drainageways similar to GP 2020]

Policy C-1.7: Public Access to Creeks

Provide pedestrian access to creeks and along creeks where such access will not adversely affect habitat values.

Program C-1.7A: Creek Access on Public Land. *Proactively identify and create access points to creeks on public lands.*

Program C-1.7B: Public Access in Development Along Creeks. *Use the development review process to identify and secure areas appropriate for creek access.*

Policy C-1.8: Creek Education and Awareness

Increase awareness of San Rafael's creeks and their role as green infrastructure supporting local climate resilience and flood protection initiatives.

Program C-1.8A: Publicity. *Use the City's website to publicize information about creek and waterway protection and access. Where appropriate, partner with local schools, conservation and environmental groups, business organizations, and others to increase awareness of the City's creeks and waterways.*

Program C-1.8B: Creek Signage. *Develop attractive signage and/or educational displays identifying local creeks, describing native habitat and history, and reminding visitors of what they can do to protect water quality.*

See also Policy PROS-3.10 on environmental education and Program C-3.6A on removal of plastics from creeks, marshes, and the Bay

Policy C-1.9: Enhancement of Creeks and Drainageways

Conserve or improve the habitat value and hydrologic function of creeks and drainageways so they may serve as wildlife corridors and green infrastructure to improve stormwater management, reduce flooding, and sequester carbon. Require creek enhancement and associated riparian habitat restoration/ creation for projects adjacent to creeks to reduce erosion, maintain storm flows, improve water quality, and improve habitat value where feasible.

> ***Program C-1.9A: Watercourse Protection Regulations.*** *Maintain watercourse protection regulations in the San Rafael Municipal Code. These regulations should be periodically revisited to ensure that they adequately protect creeks and drainageways. Consider specific measures or guidelines to mitigate the destruction or damage of riparian habitat from roads, development, and other encroachments.*
>
> ***Program C-1.9B: Creek Restoration.*** *Encourage and support efforts by neighborhood associations, environmental organizations, and other interested groups to fund creek enhancement, restoration, and daylighting projects, as well as creek clean-ups and ongoing maintenance programs.*
>
> ***Program C-1.9C: Upper Gallinas Watershed Restoration.*** *Support implementation of creek restoration projects in the Upper Gallinas Creek Watershed, consistent with the Restoration Opportunities Report prepared in December 2016. It remains a priority of the City to restore the creek by removing the concrete channel, creating a walkway/ bikeway alongside, and planting native trees to provide shade and filter runoff. Pursue grants and other funds, including capital improvement projects and general operating funds, to restore natural creek conditions and native vegetation.*
>
> ***Program C-1.9D: Restoration of San Rafael, Mahon, and Irwin Creeks.*** *Pursue opportunities for creek restoration and beautification along San Rafael, Mahon, and Irwin Creeks, building on past efforts supporting biological and ecological restoration, education, and water quality improvements along these waterways.*

See Goal C-3 for additional policies on water quality

Add text box on City's plastic bag and polystyrene foam bans and "ask first" campaign on plastic utensils

Policy C-1.10: Hillside Preservation

Encourage preservation of hillsides, ridgelines, and other open areas that serve as habitat and erosion protection as well as visual backdrops to urban areas.

See the Safety Element for policies addressing protection of steep slopes and wildfire prevention and protection actions on hillsides. See the Community Design Element for policies on hillside and ridgeline protection.

> ***Program C-1.10A: Hillside Management and Design Guidelines.*** *Continue to implement Hillside Design Guidelines as well as management practices that promote ecological health, hazard reduction, and climate change mitigation*.

Policy C-1.11: Wildlife Corridors

Preserve and protect areas that function as wildlife corridors, particularly those areas that provide connections permitting wildlife movement between larger natural areas.

Program C-1.11A: Mapping of Wildlife Corridors. *Support mapping of wildlife corridors in the Planning Area. Use this data to determine where conservation easements may be appropriate in the event properties within these corridors are subdivided, or when other opportunities arise for securing such easements.*

Policy C-1.12: Native or Sensitive Habitats

Protect habitats that are sensitive, rare, declining, unique, or represent a valuable biological resource. Potential impacts to such habitats should be minimized through compliance with applicable laws and regulations, including biological resource surveys, reduction of noise and light impacts, restricted use of toxic pesticides, pollution and trash control, and similar measures.

Program C-1.12A: Non-Native Predators. *Support efforts by non-profit conservation groups, state and federal agencies, the Marin Humane Society and other organizations to reduce conflicts between human settlement and native wildlife. This includes protecting the habitat of birds and small mammals from non-native predators and restricting the use of pesticides.*

Program C-1.12B: Oak Savanna and Oak Woodland Habitat Protection. *Require proposed developments with the potential to impact oak savanna/woodland habitat to either avoid, minimize, or compensate for the loss of such habitat. Avoidance is the preferred measure where feasible. If habitat loss is deemed unavoidable, require that direct and indirect impacts be mitigated through habitat restoration, creation, or enhancement. Mitigation requirements should be based on vegetative mass rather than the number of impacted trees.*

See also Policy C-3.6 on the conservation of nearshore waters, including the Canal and San Francisco Bay.

Policy C-1.13: Special Status Species

Conserve and protect special status plants and animals, including those listed by State or federal agencies as threatened and/or endangered, those considered to be candidate species for listing by state and federal agencies, and other species that have been assigned special status by the California Native Plant Society and the California Fish and Game Code.

Program C-1.13A: List of Species. *Maintain current California Natural Diversity Database digital (GIS) maps and data tables listing threatened, endangered, and special status species in the San Rafael Planning Area.*

Program C-1.13B: Surveys. *Require that sites be surveyed for the presence or absence of special status species prior to development approval. Such surveys must occur prior to development-related vegetation removal.*

Program C-1.13C: Mitigating Impacts on Special Status Species. *Require that potential unavoidable impacts to special status species are minimized through design, construction, and project operations. If such measures cannot adequately mitigate impacts, require measures such as on-site set asides, off-site acquisitions (conservation easements, deed restrictions, etc.), and specific restoration efforts that benefit the listed species being impacted.*

Program C-1.13D: Steelhead Habitat. *Support efforts to restore, preserve or enhance Central California Coast Steelhead habitat in Miller Creek and other creeks.*

Policy C-1.14: Control of Invasive Plants

Remove and control undesirable non-native plant species from City-owned open space and road rights-of-way and encourage the removal and control of these species from non-City owned ecologically sensitive or fire-prone areas.

Program C-1.14A: Identification of Desirable and Undesirable Species. *Use California Invasive Plant Council (Cal-IPC) guidance for desirable and invasive plants in the development review, design review, and public lands management processes. This guidance should ensure that noxious plants are not planted in new development, on rights of way, and on public land; help inform revegetation and replanting programs; and support the management of existing vegetation.*

Program C-1.14B: Integrated Pest Management Policy. *Maintain and periodically update an Integrated Pest Management Policy (IPMP) that minimizes the application of pesticides in the city and encourages non-toxic methods to control vegetation such as properly timed goat grazing. The IPMP should be modified as needed to reflect changes in regional stormwater control requirements, data on pesticide toxicity, and the feasibility of new and less toxic methods for controlling invasive plants. Changes to the IPMP should be made through a transparent public process and should ensure that the use of any chemicals of concern is publicly noticed.*

Program C-1.14C: Removal of Invasive Species. *Support partnerships and multi-jurisdictional efforts to remove invasive plant species, reduce fire hazards, and improve habitat on public properties. Use volunteers and non-profit organizations to assist in such efforts and consult with the California Native Plant Society and similar organizations to optimize results, avoid the removal of desirable plants, and replant with appropriate plants before invasive species return. Funding from sources such as Measure A, state and regional wildfire prevention funds, utility funds, and other conservation program funds should be pursued to support these efforts.*

[insert text box on Marin Wildfire Prevention Authority public education program on ecologically sound vegetation management—per Bill Carney comments]

Program C-1.14D: Wildfire Action Plan Implementation. *Implement the provisions of San Rafael's Wildfire Action Plan (2020) relating to the control of invasive plants, including further limiting the sale or planting of highly flammable non-native plants in the city, supporting volunteer activities to remove Scotch and French broom, revising standards for Eucalyptus, providing fuel breaks on public property, and educating the public on fire-safe landscaping.*

Policy C-1.15: Landscaping with Appropriate Naturalized Plant Species

Encourage landscaping with native and compatible non-native plant species that are appropriate for the dry summer climate of the Bay Area, with an emphasis on species determined to be drought-resistant. Diversity of plant species is a priority for habitat resilience.

Program C-1.15A: Education on Desirable Plant Species. *Leverage the educational and website materials on "water-wise" plants developed by the Marin Municipal Water District and fire-prone plants from FireSafe Marin as resources for San Rafael property owners. The City should also create Resilient Landscape Templates (RLTs) that offer suggestions for homeowners to achieve beautiful, fire-resistant, drought tolerant landscaping.*

Policy C-1.16: Urban Forestry

Protect, maintain, and expand San Rafael's tree canopy. Trees create shade, reduce energy costs, absorb runoff, support wildlife, create natural beauty, and absorb carbon, making them an essential and valued part of the city's landscape and strategy to address global climate change. Tree planting and preservation should be coordinated with programs to reduce fire hazards and ensure public safety, resulting in a community that is both green and fire-safe.

Program C-1.16A: Increasing the Tree Canopy. *Implement measures to increase the tree canopy, as outlined in the City's Climate Change Action Plan. These measures include:*

a) tree planting on city-owned land
b) reviewing parking lot landscaping standards to maximize tree cover
c) minimizing tree removal

d) controlling invasive species that threaten the health of the urban forest
e) integrating trees and natural features into the design of development projects
f) encouraging trees on private property
g) increasing the diversity of trees to increase habitat value and resilience.

Program C-1.16B: Tree City USA. *Maintain San Rafael's status as a "Tree City USA" community by following best practices in urban forestry management and regularly applying for recertification.*

Program C-1.16C: Tree Preservation. *Consider ordinances and standards that limit the removal of trees of a certain size and require replacement when trees must be removed.*

See Program CDP-3.5A for additional guidance on street trees, including a proposed Street Tree Master Plan

Policy C-1.17: Tree Management

Encourage the preservation of healthy, mature trees when development and/or construction is proposed. Site plans should indicate the location of existing trees and include measures to protect them where feasible.

Policy C-1.18: Mineral Resource Management

Work with the County of Marin to permit the continued use of property in the San Rafael sphere of influence for mineral resource extraction, subject to permitting procedures and mitigation requirements that reduce potential adverse impacts on the natural environment and surrounding uses.

See also Neighborhoods Element regarding the San Rafael Rock Quarry

Policy C-1.19: Light Pollution

Reduce light pollution and other adverse effects associated with night lighting from streets and urban uses.

Program C-1.19A: Dark Sky Ordinance. *Adopt a dark sky ordinance, including lighting standards and enforcement provisions that reduce light pollution. In the interim, refer to guidelines from the International Dark Sky Association during the review of major projects involving night lighting.*

See also Goal CDP-1 for additional policies on protecting natural features, hillsides, ridgelines, and bayfront areas, and the visual quality of San Rafael's environment and landscapes.

Goal C-2: Clean Air

Reduce air pollution to improve environmental quality and protect public health. *San Rafael will work collaboratively with jurisdictions throughout the Bay Area to achieve and maintain state and federal clean air standards. While air quality is a regional issue, the City will do its part to reduce air pollution at the local level and create a healthful environment for all San Rafael residents.*

Policy C-2.1: State and Federal Air Quality Standards

Continue to comply with state and federal air quality standards.

Program C-2.1A: Cooperation with Other Agencies. *Work with the Bay Area Air Quality Management District (BAAQMD) and other agencies to ensure compliance with air quality regulations and proactively address air quality issues.*

Policy C-2.2: Land Use Compatibility and Building Standards

Consider air quality conditions and the potential for adverse health impacts when making land use and development decisions. Buffering, landscaping, setback standards, filters, insulation and sealing, home HVAC measures, and similar measures should be used to minimize future health hazards.

Program C-2.2A: Protection of Sensitive Receptors. *Use the development review process to require adequate buffering when a sensitive receptor (a use with occupants sensitive to the effects of air pollutants, such as children and the elderly) is proposed near an existing source of toxic contaminants or odors. For proposed sensitive receptors within 500 feet of Highway 101 or Interstate 580, an analysis of mobile source toxic air contaminant health risks should be performed. The analysis should evaluate the adequacy of the setback from the highway and, if necessary, identify design mitigation measures and building standards to reduce health risks to acceptable levels. Mitigation standards and requirements should be periodically updated as air quality conditions and pollution control technology change.*

Program C-2.2B: New Sources of Air Pollution. *Use the development review process to ensure that potential new local sources of air pollution or odors provide adequate buffering and other measures necessary to comply with health standards.*

See also Goal EDI-2 for additional policies and programs on reducing exposure to air pollution within lower income and vulnerable populations. See the Noise Element for additional policies on reducing exposure to transportation noise sources.

Policy C-2.3: Improving Air Quality Through Land Use and Transportation Choices

Recognize the air quality benefits of reducing dependency on gasoline-powered vehicles. Implement land use and transportation policies, supportable by objective data, to reduce the number and length of car trips, improve alternatives to driving, and support the shift to electric and cleaner-fuel vehicles.

Program C-2.3A: Air Pollution Reduction Measures. *Implement air pollution reduction measures as recommended by BAAQMD's Clean Air Plan and supporting documents to address local sources of air pollution in community planning. This should include Transportation Control Measures (TCM) and Transportation Demand Management (TDM) programs to reduce emissions associated with diesel and gasoline-powered vehicles.*

See the Mobility Element for additional policies and programs to reduce GHG emissions from motor vehicles and diesel emissions from transit.

Policy C-2.4: Particulate Matter Pollution Reduction

Promote the reduction of particulate matter from roads, parking lots, construction sites, agricultural lands, wildfires, and other sources.

Program C-2.4A: Particulate Matter Exposure*. Through development review, require that Best Available Control Technology (BACT) measures (such as setbacks, landscaping, paving, soil and dust management, and parking lot street sweeping) are used to protect sensitive receptors from particulate matter. This should include control of construction-related dust and truck emissions as well as long-term impacts associated with project operations. Where appropriate, health risk assessments may be required to evaluate risks and determine appropriate mitigation measures.*

Program C-2.4B: Wildfire Smoke. *Support efforts to reduce health hazards from wildfire smoke, such as limits on outdoor activities, access to respirators and air filtration systems, access to clean air refuge centers, and public education.*

Program C-2.4C: Wood-Burning Stoves and Fireplaces. *Regulate wood-burning stoves and fireplaces to reduce particulate pollution.*

See also Policy C-1.16 regarding the role of trees and vegetation in enhancing air quality and promoting health.

Policy C-2.5: Indoor Air Pollutants

Reduce exposure to indoor air pollutants such as mold, lead, and asbestos through the application of state building standards, code enforcement activities, education, and remediation measures.

Policy C-2.6: Education and Outreach

Support public education regarding air pollution prevention and mitigation.

> ***Program C-2.6A: Air Quality Education Programs****. Actively participate in the air quality education programs of the BAAQMD. Use social media and other means of outreach to alert residents of Spare the Air days and associated recommendations.*
>
> ***Program C-2.6B: Equipment and Generators.*** *Encourage the use of non-gasoline powered leaf blowers and other yard maintenance equipment, as well as clean-powered generators.*

See also Policy LU-1.3 on transit-oriented development

Goal C-3: Clean Water

Improve water quality by reducing pollution from urban runoff and other sources, restoring creeks and natural hydrologic features, and conserving water resources. *Water is vital to sustain life. San Rafael will preserve the quality of its surface and groundwater resources by managing urban runoff, implementing pollution controls, supporting public education and awareness, and working with partner agencies to meet state and federal water quality standards. The City will also actively work to reduce overall water demand, particularly as the region is challenged by drought and the impacts of climate change.*

Text box on the "One Water" approach and the North Bay Watershed Association (MCL)

Policy C-3.1: Water Quality Standards

Continue to comply with local, state and federal water quality standards.

> ***Program C-3.2A: Interagency Coordination****. Coordinate with the local, state, and federal agencies responsible for permitting discharges to San Rafael's creeks and surface waters, monitoring water quality, and enforcing adopted water quality standards and laws.*
>
> *See also Policy CSI-4.9 on wastewater treatment*

Policy C-3.2: Reduce Pollution from Urban Runoff

Require Best Management Practices (BMPs) to reduce pollutants discharged to storm drains and waterways. Typical BMPs include reducing impervious surface coverage, requiring site plans that minimize grading and disturbance of creeks and natural drainage patterns, and using vegetation and bioswales to absorb and filter runoff.

> ***Program C-3.2A: Countywide Stormwater Program.*** *Continue to participate in the countywide stormwater pollution prevention program and comply with its performance standards.*
>
> ***Program C-3.2B: Reducing Pollutants in Runoff.*** *Continue to reduce the discharge of harmful materials to the storm drainage system through inspections, enforcement programs, reduced use of toxic materials, and public education.*

Program C-3.2C: Construction Impacts. *Continue to incorporate measures for stormwater runoff control, management, and inspections in construction projects and require contractors to comply with accepted pollution prevention planning practices. Provisions for post-construction stormwater management also should be included.*

Program C-3.2D: System Improvements. *Improve storm drainage performance through regular maintenance and clean-out of catch basins, a City street sweeping program, and prioritizing Trash Reduction Implementation Plan measures, including installation of trash capture devices, . When existing drainage lines are replaced, design changes should be made as needed to increase capacity to handle intensifying storms and expected sea level rise impacts.*

Program C-3.2E: Pesticide and Fertilizer Management*. On City property, reduce or eliminate the use of toxic pesticides and fertilizers. Ensure that the application of pesticides follows all applicable rules and regulations and is performed through a transparent process in which the public receives early notification.*

See also Program C-1.14B on Integrated Pest Management.

Program C-3.2F: Monitoring. *Support ongoing water quality testing in San Rafael's creeks and waterways to evaluate the effectiveness of existing programs and determine where additional pollution control measures may be needed.*

Policy C-3.3: Low Impact Development

Encourage construction and design methods that retain stormwater on-site and reduce runoff to storm drains and creeks.

Program C-3.3A: Development Review. *Provide guidance to developers, contractors and builders on the use of rain gardens, bioswales and bioretention facilities, permeable pavers, grass parking lots, and other measures to absorb stormwater and reduce runoff rates and volumes.*

Program C-3.3B: Non-Traditional Gardens. *Evaluate best practices in the use of roof gardens, vertical gardens/ green walls, pollinator gardens and other measures that increase the City's capacity to sequester carbon, plant trees, and enhance environmental quality. Encourage the incorporation of such features in new development.*

See also Safety Element Program S-1.9C on erosion control

Policy C-3.4: Green Streets

Design streets and infrastructure so they are more compatible with the natural environment, mitigate urban heat island effects, and have fewer negative impacts on air and water quality, flooding, climate, and natural habitat.

Program C-3.4A: Green Streets Planning. *Develop a Green Streets Plan that includes policy guidance, tools, analytics, and funding mechanisms to create more sustainably designed street and storm drainage systems. Street and drainage system improvements should support City conservation and climate change goals.*

Program C-3.4B: Funding. *Identify and apply for grants and federal, state, and regional funds to upgrade stormwater facilities, rehabilitate roads, and implement other Green Streets initiatives.*

See the Infrastructure Element for additional policies and programs on green infrastructure

Policy C-3.5: Groundwater Protection

Protect San Rafael's groundwater from the adverse effects of urban uses and impacts from sea level rise. Encourage opportunities for groundwater recharge to reduce subsidence and water loss, and support water-dependent ecosystems.

Program C-3.5A: Underground Tank Remediation
Continue efforts to remediate underground storage tanks and related groundwater hazards. Avoid siting new tanks in areas where they may pose hazards, including areas prone to sea level rise.

Policy C-3.6: Nearshore Waters

Ensure the protection of Canal and Bay water quality from the potential adverse effects of boats, live-aboards, harbors, and other marine facilities and activities.

Program C-3.6A: Water Quality Improvements. *Collaborate with the Bay Conservation and Development Commission, State and Regional Water Quality Control Boards, and other agencies to support water quality improvement efforts and the removal of plastics and other trash from the Canal and Bay. Seek funding from organizations such as the San Francisco Bay Restoration Authority for projects that reduce urban runoff.*

Program C-3.6B Boat Sanitation and Enforcement. *Require consistent enforcement and inspection of sanitation facilities in boats berthed in the San Rafael Canal and elsewhere in Bay waters within the City limits.*

Program C-3.6C: Sewage Pump Out Facilities*. Support marina owners in providing on-site sewage pump-out facilities. Require marinas to install such facilities when improvements are made.*

Program C-3.6D: Education of Boaters*. Educate boaters about good sanitation practices and measures to reduce invasive species with the potential to harm marine and freshwater life.*

Policy C-3.7: Education and Outreach

Promote greater public awareness of the causes and effects of water pollution and how to reduce it.

Program C-3.7A: Stenciling of Storm Drains*. Continue to stencil storm drains and use other forms of signage and art so that people understand the consequences of pollutant runoff and its impacts on the Bay.*

Program C-3.7B Outreach. *Support and participate in efforts by the Marin County Stormwater Pollution Prevention Program to raise awareness of the effects of water pollution and ways the public can help improve water quality.*

Program C-3.7C Car Wash Facilities*. Require the use of recycled water at new commercial car washing facilities.*

Policy C-3.8: Water Conservation

Encourage water conservation and increased use of recycled water in businesses, homes, and institutions. Local development and building standards shall require the efficient use of water.

Program C-3.8A: Water Conservation Programs. *Work with Marin Municipal Water District and other organizations to promote water conservation programs and incentives and ensure compliance with state and MMWD regulations, including the provisions of the Urban Water Management Plan (see Policy CSI-4.8 for additional guidance).*

Program C-3.8B: Public Education. *Continue and expand programs to educate residents and businesses about the benefits of water conservation and requirements for plumbing fixtures and landscaping.*

Program C-3.8C: Reclaimed Water Use. *Support the extension of recycled water distribution infrastructure by Las Gallinas Valley Sanitary and MMWD, along with programs to make the use of recycled water more feasible (see Policy CSI-4.12 for additional guidance).*

Program C-3.8D: Graywater and Rainwater. *Encourage the installation of graywater and rainwater collection systems. Explore revisions to building codes that would facilitate such projects where obstacles currently exist.*

Program C-3.8E: Reducing Municipal Water Use. *Reduce water use for municipal operations through water-efficient landscaping, maintenance of irrigation equipment, replacement of inefficient plumbing fixtures, and using recycled water where available and practical.*

Policy C-3.9: Water-Efficient Landscaping

Encourage the use of vegetation and water-efficient landscaping that is naturalized to the San Francisco Bay region and compatible with fire-prevention and climate resilience goals.

Program C-3.9A: Demonstration Gardens. *Maintain the Falkirk demonstration gardens illustrating xeriscaping principles and drought-tolerant plant materials.*

Goal 4: Sustainable Energy Management

Use energy in a way that protects the environment, addresses climate change, and conserves natural resources. *San Rafael will use energy resources sustainably by shifting to renewable energy sources and reducing demand. Energy will also be conserved through the ways we live, work, build, and travel.*

Policy C-4.1: Renewable Energy

Support increased use of renewable energy and remove obstacles to its use.

Program C-4.1A: Marin Clean Energy Targets. *Support Marin Clean Energy (MCE) efforts to reach the goal of providing energy that is 100 percent GHG free by 2025.*

Program C-4.1B: PACE Financing. *Participate in a Property Assessed Clean Energy (PACE) financing program to fund installation of renewable energy systems, energy efficiency upgrades to existing buildings, and other improvements such as electric vehicle chargers and battery storage. Consider other funding sources to improve local energy generation and storage.*

Program C-4.1C: Regulatory Barriers. *Continue efforts to remove regulatory barriers and provide creative incentives for solar energy installations, such as rooftop solar systems and parking lot canopies. The installation of renewable energy systems that are consistent with the Climate Change Action Plan should be encouraged and accelerated.*

Program C-4.1D: Reducing Natural Gas Use. *Promote electrification of building systems and appliances in new buildings and those that currently use natural gas.*

Program C-4.1E: Municipal Buildings. *Wherever feasible, incorporate renewable energy technology such as solar, cogeneration, and fuel cells, in the construction or retrofitting of City facilities. Continue use of MCE Deep Green (100% renewable) power.*

Policy C-4.2: Energy Conservation

Support construction methods, building materials, and home improvements that improve energy efficiency in existing and new construction.

Program C-4.2A: Energy Efficiency Outreach. *Continue to inform businesses and residents of programs and rebates to conserve energy and weatherize their homes.*

Program C-4.2B: Green Building Standards. *Implement State green building and energy efficiency standards for remodeling projects and new construction. Consider additional measures to incentivize green building practices, low carbon concrete, and sustainable design.*

Program C-4.2C: Energy Efficiency Incentives. *Provide financial incentives, technical assistance, streamlined permitting processes, and partnerships to encourage energy-efficiency upgrades in new and existing buildings. Typical improvements include the use of energy-efficient windows, lighting, and appliances, induction and convection cooking, insulation of roofs and exterior walls, higher-efficiency heating and air conditioning (including electrical heat pump systems), and other projects that lower electricity and natural gas consumption.*

Program C-4.2D: Time-of-Sale Energy Audits. *Consider requiring energy audits for residential and commercial buildings prior to property sales, including identification of cost savings from energy efficiency measures and potential rebates and financing options. An energy audit is a property inspection that identifies opportunities to improve energy efficiency.*

Program C-4.2E: Cool Roofs and Pavement. *Encourage the use of materials that minimize heat gain on outdoor surfaces such as parking lots, roadways, roofs and sidewalks.*

Policy C-4.3: Managing Energy Demand

Reduce peak demands on the electric power grid through development of local sources, use of battery storage, deployment of "smart" energy and grid systems that use technology to manage energy more efficiently, and public education.

Program C-4.3A: Innovative Technologies*. Apply innovative technologies such as micro-grids, battery storage, and demand response programs that improve the electric grid's resilience and meet demand during high use periods. Encourage emergency battery back-up for power outages in lieu of generators.*

See also Policy CSI-4.13 on energy infrastructure

Policy C-4.4: Sustainable Building Materials

Encourage the use of building materials that reduce environmental impacts and the consumption of non-renewable resources.

Program C-4.4A: Use of Alternative Building Materials. *Evaluate opportunities to amend the City's building codes and zoning ordinances to allow the use of acceptable resource-efficient alternative building materials and methods.*

Policy C-4.5: Resource Efficiency in Site Development

Encourage site planning and development practices that reduce energy demand and incorporate resource- and energy-efficient infrastructure.

Program C-4.5A: Solar Site Planning. *Use the development review process to:*

a) Encourage opportunities for passive solar building design and the use of photo-voltaic materials and devices.

b) *Review proposed site design for energy efficiency, such as shading of parking lots and summertime shading of south-facing windows.*

Program C-4.5B: Solar Access Ordinance. *Consider developing a solar access ordinance to protect solar access rights and prevent restrictions on solar energy systems. The ordinance should address potential impacts related to development or modification of existing structures on neighboring properties.*

Goal C-5: Reduced Greenhouse Gas Emissions

Achieve a 40 percent reduction in 1990 greenhouse gas emission levels by 2030 and a 60 percent reduction by 2040. *The City of San Rafael will implement the measures outlined in this General Plan and in its Climate Change Action Plan to reduce greenhouse gas (GHG) emissions, which are the leading cause of global climate change. The City will also work to achieve the longer-term State goal of achieving an 80 percent reduction in 1990 GHGs by 2050, pursuing more aggressive measures as they become technologically and financially viable.*

Policy C-5.1: Climate Change Action Plan

Maintain and periodically update a Climate Change Action Plan that includes programs to reduce greenhouse gas emissions and metrics for monitoring success.

Program C-5.1A: Progress Reports. *Prepare annual Climate Change Action Plan progress reports, including a list of priority actions. Local climate goals should align with regional goals, including those set through Drawdown Marin.*

Program C-5.1B: Quarterly Forum. *Continue to hold the Climate Change Action Plan (CCAP) Quarterly Forum, which provides oversight on the implementation progress of sustainability and GHG reduction programs.*

Program C-5.1C: Funding*. Identify funding sources for recommended actions, and pursue local, regional, state, and federal grants. Investigate creation of a local carbon fund or other permanent source of revenue.*

Policy C-5.2: Consider Climate Change Impacts

Ensure that decisions regarding future development, capital projects, and resource management are consistent with San Rafael's Climate Change Action Plan and other climate goals, including greenhouse gas reduction and adaptation.

Policy C-5.3: Advocacy

Support and advocate for state and federal legislation and initiatives to reduce GHG emissions.

Program C-5.3A: Local Government Agency Involvement. *Continue to provide a leadership role with other local governmental agencies to share best practices and successes.*

Program C-5.3B: State and Federal Action. *Recommend and support State and federal actions to update renewable energy portfolio standards, amend state building codes, and modify motor vehicle standards to reduce GHG emissions and achieve climate goals.*

Program C-5.3C: Regional Collaboration. *Participate in regional collaborations among public agencies to enact and support new programs or shared improvements which promote or utilize renewable energy sources or reduce energy demand.*

Policy C-5.4: Municipal Programs

Implement and publicize municipal programs to demonstrate the City's commitment to sustainability efforts and reducing greenhouse gases.

> ***Program C-5.4A: Low Carbon Municipal Vehicles.*** *As finances allow, continue to shift the City's vehicle fleet to zero emission vehicles and use low carbon fuels as an interim measure until gasoline-powered vehicles are replaced.*
>
> ***Program C-5.4B: Advancing GHG and Sustainability Efforts.*** *Monitor best practices in sustainability and the transition to GHG-free energy sources and evaluate the feasibility of applying such measures at the local level.*

Policy C-5.5: Carbon Sequestration

Enhance the ability of the City's natural and built environment to sequester (absorb and store) carbon emissions.

See Policy C-1.16 on urban forestry and Policies C-4.2 and C-4.4 (green building) for programs

Policy C-5.6: Unintended Consequences

Ensure that climate action measures minimize the potential for unintended consequences, particularly impacts that disproportionately impact lower income communities or drive up the cost of doing business in San Rafael. The City should ensure that the social and financial cost of its regulations are in balance with the benefits, and also consider the ultimate costs of failing to act.

The City is committed to balancing climate-related goals with the goal of being an equitable, just city that strives for a more prosperous future for all residents. It is committed to measures that do not deter innovation or place a disproportionate burden on small local businesses. Finally, it is committed to solutions which maximize GHG reduction benefits relative to cost, and decision-making informed by a careful analysis of financial feasibility.

See the EDI Element for additional policy guidance on achieving equitable outcomes as policies and programs are implemented

Policy C-5.7: Climate Change Education

Continue community education and engagement in climate and sustainability efforts.

> ***Program C-5.7A: Public Outreach Campaign****. As recommended by the Climate Change Action Plan, implement a communitywide public outreach and behavior change campaign to engage residents, businesses, and consumers around the impacts of climate change and the ways individuals and organizations can reduce their GHG emissions and create a more sustainable, resilient, and healthier community.*
>
> ***Program C-5.7B: Resilient Neighborhoods.*** *Continue participating in the Resilient Neighborhoods program and expand the program to include local businesses (see text box).*
>
> *TEXT BOX on Resilient Neighborhoods: The purpose of the Resilient Neighborhoods program is to motivate community members to live more sustainably and prepare for climate impacts. The program helps residents reduce greenhouse gas emissions in their homes, businesses, travel modes, and other activities.*
>
> ***Program C-5.7C: Financial Incentives.*** *Continue to raise awareness of savings, rebates and other financial incentives to conserve and recycle.*

Program C-5.7D: Promote Sustainability Efforts. *Promote sustainability and climate change awareness through education, publications, the City's website, community organizations, and special events such as Earth Day and an annual Green Festival.*

PARKS, RECREATION, AND OPEN SPACE ELEMENT

Goal PROS-1: Quality Parks for All to Enjoy

Sustain high quality parks that meet the recreational needs of all those who live and work in San Rafael. *San Rafael recognizes the essential nature of parks and recreation to its residents. Parks support health and wellness, protect the environment, add beauty to San Rafael neighborhoods, and are integral to life in the city. They should be maintained for all to enjoy.*

Policy PROS-1.1: Park Classification

Maintain a system of community, neighborhood, pocket, and special use parks (see text). These parks should be complemented by larger region-serving parks and open spaces, and by school recreation areas.

> ***Program PROS-1.1A: Parks and Recreation Master Plan.*** *Prepare a Parks and Recreation Master Plan, including citywide recommendations for park management, operations, facility development, potential acquisition, and recreation service delivery, as well as recommendations for each City-owned park.*
>
> ***Program PROS 1.1B: Capital Improvement Program.*** *Use the Capital Improvement Program to identify funding sources and timing of parks and recreation capital projects.*
>
> *See also Action PROS-3.3A on an Open Space Management Plan*

Policy PROS-1.2: Per Capita Acreage Standard

Maintain a citywide standard of 4.5 acres of improved park and recreation land per 1,000 residents.

> ***Program PROS-1.2A: Municipal Code Amendment.*** *Modify Chapter 15.09 of the Municipal Code to establish a general standard of 4.5 acres of improved parkland per 1,000. Adjust the formulas for dedication of land to reflect this standard.*
>
> ***Program PROS-1.2B: Park In Lieu Fees.*** *Periodically adjust park in-lieu fees to reflect the prevailing costs of land and facilities. Any increases to existing fees should be developed through a public process in which potential cost impacts on development feasibility are disclosed and measures to offset impacts are considered.*
>
> ***Program PROS-1.2C: Exemptions.*** *To reduce further increases in housing costs, exempt accessory dwelling units and affordable housing units from park in-lieu and dedication requirements. Consider eliminating the existing exemption for market-rate rental housing, or adopting a modified fee schedule which considers factors such as unit size and total project size.*

Policy PROS 1.3: Distribution of Parks

Strive for a balanced distribution of neighborhood and community parks across the city. When planning new parks, prioritize areas that lack existing parkland or outdoor space, and have higher needs due to higher housing densities and social and economic conditions.

> ***Program PROS-1.3A: New Parks.*** *Develop additional parks and playgrounds in areas with unmet needs and in areas experiencing growth. Opportunities to create new parks within new development and on underutilized public land should be pursued.*
>
> ***Program PROS-1.3B: Parks on Former School Sites.*** *Work with San Rafael City Schools and the Miller Creek School District to identify ways to acquire on-site recreational facilities in the event that school properties are closed, leased, or offered for sale. (see also Policy LU-1.16 on school site reuse)*

Program PROS-1.3C: Adaptation Projects. *Incorporate shoreline access and new recreational amenities in sea level rise adaptation and flood risk reduction projects where feasible.*

Policy PROS 1.4 Park Design

Design parks so that they are comfortable, attractive, inviting, and easily maintained. Park design should balance recreation, environmental, safety, and aesthetic considerations while avoiding conflicts with surrounding neighborhoods.

Program PROS 1.4A: Park Plan Review*. Work with qualified landscape architects, the Design Review Board, the Park and Recreation Commission, and the Planning Commission when preparing and reviewing park master plans and designing park improvements.*

Program PROS 1.4B: Community Engagement. *Engage the community in park planning and facility development, including all groups and individuals who would be affected by such improvements.*

Policy PROS-1.5: Park Image and Identity

Create a positive image of the City's park and open space system.

Program PROS-1.5A: Branding and Signage. *Develop and implement consistent branding, wayfinding, and interpretive signage for San Rafael's parks that identify park and open space properties and help the public locate, navigate, and understand them. Park signage should be attractive, durable, and contribute to civic pride and identity.*

Policy PROS-1.6: Park Improvements

Regularly upgrade and modernize San Rafael's parks to meet the recreational needs of the community and replace aging or deficient facilities.

Program PROS-1.6A: Needs Assessment. *Conduct a needs assessment as part of a Parks and Recreation Master Plan. Recreational facility needs should be periodically reevaluated in response to trends, demographics, and changing conditions.*

Program PROS-1.6B Park Improvements*. As part of the Parks and Recreation Master Plan, prepare plans to improve neighborhood and community park facilities. Seek funding to implement these plans.*

Policy PROS-1.7: Athletic Field Design

Encourage athletic field design which maximizes versatility, cost-efficiency, and the ability to use fields year-round.

Program PROS-1.7A: Field Improvements. *Evaluate local athletic fields as part of a Parks and Recreation Master Plan. Develop design and capital facility recommendations for athletic fields based on the findings.*

Policy PROS-1.8: Linear Parks and Trails

Encourage linear parks and trails along the Bay shoreline, the San Rafael Canal, local creeks, and transportation corridors such as the SMART right-of-way. Where feasible, spur trails should connect linear parks to nearby neighborhoods, parks, and open spaces.

See Action PROS-3.8A on a Trails Master Plan

Policy PROS-1.9: Role of Open Space

Recognize San Rafael's open space network as an essential component of the park system, including its potential to provide for hiking, picnicking, wildlife observation, environmental education, and enjoyment of nature. Passive recreational activities such as hiking, birdwatching, and picnicking, should be encouraged in these areas where consistent with habitat protection and hazard reduction goals.

See Action PROS-3.3A on an Open Space Management Plan and Action PROS-3.7 on coordinated open space planning.

Policy PROS-1.10: Historic Preservation and Parks

Incorporate historic and cultural resources into the City park system, including publicly-owned historic homes and the grounds around them. Where public operation of such properties is infeasible, encourage their management, operation, and programming by non-profit organizations.

Policy PROS-1.11: Urban Parks and Plazas

Encourage the creation of small gathering places open to the public in Downtown San Rafael and other business districts, including plazas, green spaces, activated alleys, and similar features.

Program PROS-1.11A: Design for All Users. *Engage park users, businesses, residents, and social service providers in the design and management of urban parks to safely accommodate all users, provide universal access, and minimize conflicts.*

Program PROS-1.11B: Activating Public Space. *Work with cafes, restaurants, and other businesses to activate and maintain urban parks and plazas. This can provide 'eyes on the space,' create a sense of ownership, and facilitate economic vitality by providing space for outdoor dining and vending.*

Policy PROS-1.12: Joint Use

Encourage formal agreements with the School Districts that allow for the joint development, maintenance and use of school facilities for recreational use when schools are not in session. Agreements should also address access to school parking lots for sporting events and other measures to minimize the impacts of joint use on nearby neighborhoods.

Program PROS-1.12A: Joint Use Agreements. *Work with San Rafael City Schools and the Miller Creek School District to formalize joint use agreements for parks, playgrounds, sports fields, and other school facilities.*

See also Program CSI-2.A on joint use agreements

Policy PROS-1.13: Recreational Facilities in Development Projects

Encourage, and where appropriate require, the construction of on-site recreational facilities in multi-family, mixed use, and office projects to supplement the facilities available in City parks.

Program PROS-1.13A: Onsite Recreation Facilities*. Continue to implement zoning regulations that require appropriate recreational facilities for residents in new development.*

Program PROS-1.13B: Rooftop Open Space. *Encourage the development of rooftop open space in higher density residential, mixed use, and commercial projects. Such spaces should be designed to minimize the potential for noise, privacy, and light impacts on nearby properties.*

Policy PROS-1.14: Commercial Recreation

Encourage private sector development of complementary recreational facilities to serve community needs, such as commercial recreation and athletic field facilities, swim clubs, tennis clubs, marinas, and gyms and health clubs.

> ***Program PROS-1.14A: Commercial Recreation****. Consider amending the zoning ordinance to allow a floor area ratio exemption for on-site recreational facilities open to the public.*

Policy PROS-1.15: Park Maintenance

Provide a high level of maintenance that allows San Rafael's parks and open spaces to fully meet recreational needs and serve as valued community assets.

> ***Program PROS-1.15A: Cost Considerations in New Projects.*** *Consider maintenance and long-term operating costs when developing any new facility or modernizing an existing facility. Funding mechanisms for maintenance should be identified for every capital project.*

> ***Program PROS-1.15B: Park Stewardship.*** *Encourage "adopt a park" programs and other stewardship initiatives that engage volunteers in park clean-up, maintenance, invasive plant removal, and other improvements. Explore agreements with the Downtown Streets Team and similar organizations to maintain park and open space areas.*

Policy PROS-1.16: Funding

Pursue diverse funding sources for park improvement and maintenance.

> ***Program PROS-1.16A: Park Funding Strategy.*** *Seek new and ongoing sources of funds for park development and maintenance, including grants, foundations, bonds, taxes and assessment districts, impact fees, contributions from "Friends" organizations, renewal of Measure A, private donations and land dedications, public/private joint ventures, the Capital Improvement Program, and all other available means.*

> ***Program PROS-1.16B: Naming Rights and Sponsorships.*** *Explore opportunities to generate revenue through naming rights, sponsorships, and charitable giving.*

> ***Program PROS-1.6C: Sale, Lease, or Contractual Agreements****. In the event City-owned park or open space land is sold or leased in the future, require that the proceeds are appropriately used to support park improvements, maintenance, or operating costs.*

Policy PROS-1.17: Public-Private Partnerships

Consider the use of public-private partnerships to rehabilitate, activate, and expand parks and community facility space. Where appropriate and consistent with the community's vision, this could include more intensive and varied uses of parkland, provided that the integrity of the open space is retained.

Policy PROS-1.18 Sustainable Park Operations

Encourage sustainable park management and operations that enhance the role of parks as green infrastructure and part of the City's climate resilience strategy. Parks should be managed to enhance their value as biological resources, natural habitat, and part of San Rafael's urban forest.

> ***Program PROS-1.18A: Sustainable Design.*** *Incorporate sustainability principles such as reduced water and energy, use of recycled and non-toxic materials, stormwater capture, and carbon sequestration, in the design and construction of park facilities and grounds. Where feasible, parks should also support the City's wildfire prevention and sea level rise adaptation strategies, and be designed to maximize accessibility by pedestrians, bicyclists, and transit users.*

See the Safety Element for policies on incorporating parks into the City's sea level rise adaptation plans. See the Conservation/ Climate Change Element for policies on landscaping and habitat restoration in parks and open spaces.

Goal PROS-2: Excellence in Recreation Programming

Provide accessible, affordable recreation programming that is responsive to public needs, activates parks for safe and inclusive community use, and promotes fitness, health, knowledge, and cultural understanding. *San Rafael provides quality programming for residents of all ages, building a sense of community and providing opportunities for sports, leisure, and personal growth.*

Policy PROS-2.1: Meeting Diverse Needs.

Ensure that recreational programs and facilities meet the needs of all San Rafael residents, but most particularly young children, youth, and older adults.

> ***Program PROS-2.1A: Age-Specific Programs.*** *Provide facilities and programs that are specifically designed to meet the needs of children, teens, and older adults, as well as those designed for intergenerational participants.*
>
> ***Program PROS-2.1B: Cultural Competency.*** *Provide culturally competent and inclusive programming that reflects the diversity of San Rafael's population.*

Policy PROS-2.2: Responding to Changing Community Needs.

Continually adapt recreational programs to meet changing community needs and interests.

> ***Program PROS-2.2A: Program Evaluations****. Monitor and evaluate participation in the City's recreational programs and use this information when developing new programs.*
>
> ***Program PROS-2.2B: Surveys.*** *Conduct periodic surveys in multiple languages to evaluate recreational needs in neighborhoods and the City as a whole (see also Program EDI-1.3B on multi-lingual, culturally competent surveys).*

Policy PROS-2.3: Coordinated Programming

Work with local public schools, the County of Marin, sports leagues and athletic associations, community service organizations, and other agencies to provide complementary and mutually supportive programming. Joint ventures with other service providers should be encouraged where appropriate.

> ***Program PROS-2.3A: Summer Programs.*** *Provide increased programming during periods when children are out of school, including summer youth programs at locations convenient to each neighborhood.*

Policy PROS-2.4: Social Services

Enhance, and where feasible expand, child care and social services for older adults through the City's parks, schools, and community centers.

> ***Program PROS-2.4A: Operating Hours.*** *Maintain operating hours that meet public needs and accommodate activities such as child care and after school care.*

Policy PROS-2.5: Recreation and Health

Provide programs and activities that contribute to physical and mental health, personal growth, and the leisure time needs of San Rafael residents.

Policy PROS-2.6: Local Partners

Engage local artists, athletes, craftspeople, health and fitness workers, creative professionals, and others in the delivery of recreational classes and programs.

> ***Program PROS-2.6A: User Fees.*** *Recover a portion of recreational program costs through user fees, facility rentals, and other direct charges for public use. Provisions to reduce fees for non-profit organizations and low income and special needs patrons should be included.*

Policy PROS-2.7: Community Events

Encourage special events, festivals, street fairs, and community programs that build civic unity and bring residents of different backgrounds together

See also Policies LU-3.11 and AC-1.7 and Program EV-2.5C on special events

Policy PROS-2.8: Community Gardens

Continue to support and maintain community gardens and look for ways to sustain such gardens such as providing recycled water, compost, tools, and storage sheds.

Policy PROS-2.9: Environmental Education

Pursue opportunities for environmental education in parks and open spaces, including classes and programs, interpretive trails and boardwalks, and plaques and markers that raise awareness of nature and climate change.

See also Conservation Element Policies 1.8, 2.6, 3.7, and 5.7 for additional guidance on environmental education

Policy PROS-2.10: Community Centers

Recognize the role of parks and community centers in supporting community resilience and emergency preparedness.

> ***Program PROS-2.10A: Back-Up Power.*** *Maintain back-up power sources at the City's community centers so they remain operational during power outages. Community centers should serve as community gathering places in the event of an emergency or disaster.*
>
> *See also Policies S-6.4 and CSI-4.13 on emergency preparedness and energy reliability*

Goal PROS-3: Protected, Well-Managed Open Space

Manage San Rafael's open spaces for all to enjoy. *Preservation of open space and the natural environment have been priorities for San Rafael residents for many years. Open space should be carefully managed to conserve and enhance its intrinsic value for recreation, habitat, hazard mitigation, climate change resilience, scenic beauty, and community character. Whenever possible, the natural terrain and vegetation of the community should be preserved, maintained, and enhanced.*

Policy PROS-3.1: Open Space Frame

Retain and protect San Rafael's open space frame, including open space on the city's perimeter and the network of open spaces that define and connect the City's neighborhoods. Open space should be recognized as essential to wildlife, environmental and human health, psychological well-being, and as a natural means of separating communities, preventing sprawl, and providing visual relief.

Program PROS-3.1A: Criteria for Open Space Protection. *Use the following criteria for identifying and prioritizing open space parcels for future protection (the criteria are not listed in any particular order):*

a) Environmental health and safety issues and potential geologic and seismic hazards.
b) Aesthetics (visual backdrop or edge, unique site features, shoreline, ridgelines).
c) Wildlife resource value (wetlands, creeks and riparian areas, wildlife habitat and movement corridors, and habitat for special status species).
d) Ability to sequester carbon and mitigate potential climate-related impacts, including reduction of wildfire hazard, drought resilience, protection from sea-level rise.
e) Importance to the community as a whole and/or adjoining neighborhoods.
f) Merits of alternative uses.
g) Ability to connect existing open spaces.
h) Potential for recreational uses and/or environmental education, especially for economically disadvantaged communities.
i) Availability of outside (non-City) financial assistance.
j) Potential maintenance and management costs and liability exposure for the City.
k) Feasibility of protection through zoning, easements, development agreements, and other tools rather than through acquisition.

Program PROS-3.1B: Open Space Opportunities in New Development. *Pursue opportunities to expand the City's open space network when new development is proposed. This can be achieved through such strategies as clustering development, providing buffers and fuel breaks along site perimeters, dedicating on-site parkland, and mitigating project impacts through wetlands restoration or other measures. When potential open space is not contiguous to existing public open space, the preference is to retain it in private ownership. Maintenance agreements for such areas should include a permanent funding mechanism for maintenance and rehabilitation, follow sound ecological principles, and be enforcable by the City in the future.*

Program PROS-3.1C: Priority Conservation Areas. *Explore the feasibility of Priority Conservation Areas (PCA) designations for large areas of contiguous private open space in the San Rafael Planning Area. The PCA designation recognizes the significance of these areas as open space and provides support for their long-term conservation. Owner consent shall be obtained before an application for a PCA is submitted to ABAG. [include text box on PCAs]*

Program PROS-3.1D: Aquatic Open Space. *Consider formal designation of a San Rafael Bay Aquatic Open Space in the waters off the city's shoreline. Compatible conservation and recreational uses such as fishing, kayaking, and paddle boarding should be encouraged in this area.*

Policy PROS-3.2: Balancing the Uses of Open Space

Protect and preserve the natural resource value of open space while permitting compatible recreational and educational uses. Open space areas should be maintained in a natural state and regarded as a resource for enjoyment by all residents of San Rafael. Recreational and educational uses, where permitted, should be limited to activities with minimal impacts on the environment and locations where such activities will not create hazards or have adverse effects on sensitive natural resources.

Program PROS-3.2A: Management Prescriptions. *Develop management prescriptions for different types of open space that recognize their capacity for improvements, access limitations, natural hazard levels, biological resources, and other physical characteristics (Note: this should be done as part of Program PROS-3.3A, listed below).*

Policy PROS-3.3: Open Space Management

Maintain and manage City-owned open space lands to reduce natural hazards and wildfire risks, enhance recreational opportunities, maximize ecological value, support climate resilience, and preserve aesthetics. Work with other public open space owners to support similar objectives on their properties within the San Rafael Planning Area. It is recognized that these objectives may conflict as management decisions are made; solutions should strive for balance and reflect objective data, wildfire science, and community input.

Program PROS-3.3A: Open Space Management Plan. *Work collaboratively with residents, environmental organizations, fire departments, and land management agencies such as Marin Municipal Water District, Marin County Parks and Open Space District, and California State Parks to develop an Open Space Management Plan. The Plan should address appropriate uses of open space in the Planning Area, along with provisions for ongoing maintenance and improvement. It should include six areas of focus:*

(1) Recreation, including appropriate access points, parking and staging areas, wayfinding and interpretive signage, existing and future trail alignments, and guidelines for the location of amenities such as picnic tables and benches.
(2) Habitat Protection, including enhancing natural habitats, mitigating the impacts of human activities and climate change on plant and animal life, and preserving natural ecological functions.
(3) Hazard reduction, in accordance with ecologically sound practices and wildfire science, including removal of highly flammable invasive species, emergency access, and erosion control. This should be closely coordinated with ongoing efforts by the San Rafael and Marin County Fire Departments, Marin Wildfire Prevention Authority, CalFIRE, and non-profit organizations such as FireSafe Marin.
(4) Green infrastructure, including the capacity of open space areas to sequester carbon, absorb runoff, maintain water quality, mitigate climate change impacts, protect and enhance native biodiversity, and improve resilience.
(5) Public education, including interpretive facilities
(6) Funding, including operating costs and capital projects, and options for covering those costs such as assessment districts, interagency agreements, volunteer programs, and private funding, in addition to City funds.

Policy PROS-3.4: Open Space Impediments

Address activities that impair the value of open space or create hazardous conditions on open space, including illegal camping and campfires, erosion and landslides, plant pathogens or diseases, invasive plants and animals, disruption of special status species, and unauthorized activities that can cause environmental harm.

Program PROS-3.4A: Diseased Vegetation. *Work with resource agency experts to address tree pathogens and to remove hazardous vegetation and harmful invasive plants.*

Program PROS-3.4B: Illegal Encampments. *Continue to work with private and public property owners to identify and remove illegal encampments in open space areas. Provide a clear method for the public to report encampments when they are observed and work with Marin County Health and Human Services to help those in encampments find housing.*

Policy PROS-3.5: Private Open Space

Ensure the long-term stewardship of privately-owned open space in a manner that conserves natural resource and aesthetic values, sustains wildlife, and reduces hazards to life and property. Opportunities to better integrate common open space in private development with public open space space (via trails, etc.) should be encouraged.

Program PROS-3.5A: Appropriate Use of Private Open Space. *When land is set aside as permanent open space in a private development or is dedicated to a public agency as open space, specify enforceable use limitations such as restrictions on structures, plant materials, and fences.*

Policy PROS-3.6: Access to Open Space

Encourage public access to open space areas in the design of development on adjacent sites and in existing developed areas. Access should be secured as part of subdivision approval and through coordination with affected property owners. Access paths should be designed to minimize neighborhood and user conflicts and avoid conflicts with sensitive wildlife habitat.

Program PROS-3.6A: Access Points. *Use the development review process to identify open space access points and required features such as signage, trailheads, and parking.*

Policy PROS-3.7: Coordinated Open Space Planning

Coordinate the planning and management of San Rafael's open space system with adjacent cities, Marin County, the State of California, and regional and private open space systems.

Program PROS-3.7A: Coordination with Other Jurisdictions. *Continue to work with the public agencies managing open space within the San Rafael Planning Area to coordinate and implement City and County wildfire action plans, habitat conservation programs, and recreation improvements.*

Policy PROS-3.8: Trails

Encourage the development and maintenance of trails within and between open space areas. Trails should be designed and maintained in an environmentally sensitive manner and should provide safe and secure routes for a variety of users.

Program PROS-3.8A: Citywide Trails Map. *Develop—or assist volunteers with developing—a citywide trail map, building on work that has already been done by local advocacy groups.*

Program PROS-3.8B: Trails Master Plan. *Pursue grant funding and develop a Trails Master Plan, including provisions to improve access and signage to park and open space areas from San Rafael neighborhoods and balance the needs of different trail user groups. The Master Plan should include recommendations for new and enhanced trails, minimizing wildlife and habitat impacts, use guidelines for a variety of users, signage, surface materials, maintenance, compliance with trail rules, and staging areas. The Plan should incorporate the "greenway" improvements from the Bicycle and Pedestrian Master Plan, as well as plans for the Bay Trail, Canal walkway, North San Rafael promenade, and "water" trails for kayaks in San Francisco Bay. San Rafael's network of neighborhood paths, stairways, and mid-block walkways also should be included.*

Policy PROS-3.9: Utilities in Open Space

Discourage large-scale utility infrastructure such as electric transmission lines, large wind turbines, and cellular phone towers in local open space areas. Where such facilities already exist, or where there are no other siting options, utilities should be located and designed to minimize harm to avian life and the area's environmental and visual quality.

Policy PROS-3.10: Public Education

Provide education programs to residents about the importance of open space to wildlife, wildfire prevention, watershed protection and water quality, climate resilience and carbon sequestration, habitat conservation, and human well-being.

Program PROS-3.10A: Public Education. *Continue outreach and public education on open space management, including wildfire prevention, stormwater management requirements, predatory animal control, climate change, and coordination between public and private property owners*. Also, conduct periodic user surveys to better understand the needs and interests of open space visitors and determine which areas may require further attention.

Program PROS-3.10B: Interpretive Facilities. *Encourage the development of interpretive trails, nature centers, signage, and similar features that educate San Rafael youth and adults about the natural environment, best practices in conservation, and the value of open space. This should include information about the historic value of open space, including past uses of individual sites (such as mining, logging, military defense, farming, and hunting).*

SAFETY AND RESILIENCE ELEMENT

Goal S-1: A Safer, More Resilient City

Minimize San Rafael's vulnerability to the impacts of environmental hazards and public health emergencies. *San Rafael is susceptible to earthquakes, wildfires, landslides, floods, extreme heat, and other hazards, many of them intensified by a changing climate. The City will reduce the potential for damage and losses to property, health and human life, the economy, and the environment. It will also effectively respond to public health emergencies by minimizing disruption of critical services and providing effective communication and response.*

Policy S-1.1: Local Hazard Mitigation Plan (LHMP)

The San Rafael LHMP is adopted by reference into the General Plan.[4] Policies and actions throughout the General Plan shall be consistent with the LHMP and support its goals and objectives.

> ***Program S-1.1A: LHMP Mitigation Action Plan.*** *Implement the Mitigation Action Plan in the LHMP. The City will consider opportunities to advance each action through operating procedures, development approvals, budgets, public education, and capital improvement projects.*
>
> ***Program S-1.1B: Mitigation Program Funding.*** *Develop an overall funding strategy to prioritize and pursue mitigation projects, including identification and tracking of grants and regular coordination with FEMA and State hazard mitigation agencies.*
>
> ***Program S-1.1C: LHMP Updates.*** *Periodically update the Local Hazard Mitigation Plan to reflect new data, technology, available resources, partnership opportunities, and state and federal requirements.*

Policy S-1.2: Location of Future Development

Permit development only in those areas where potential danger to the health, safety, and welfare of the community can be adequately mitigated. Land uses and densities should take environmental hazards such as earthquakes, flooding, sea level rise, and wildfires into consideration.

> ***Program S-1.2A: Entitlement Process.*** *Use the entitlement process to evaluate the potential for hazards and to require appropriate mitigation measures and approval conditions.*
>
> ***Program S-1.2B: Use of Hazard Maps in Development Review***
> *Review slope stability, seismic, flood hazard, sea level rise, wildfire, and other environmental hazard maps when development is proposed. Require appropriate studies and actions to ensure that hazards are identified and mitigated.*

See also Policy LU-1.8 on clustering. See the Conservation Element for policies relating to air quality and development suitability.

Policy S-1.3: Location of Public Improvements

Avoid locating public improvements and utilities in areas with high hazard levels. When there are no feasible alternatives, require effective mitigation measures to reduce the potential for damage.

> ***Program S-1.3A: Critical Facilities in Vulnerable Areas.*** *Prepare a Public Facility Vulnerability Assessment to identify City buildings and other infrastructure that are susceptible to environmental hazards. Measures should be taken to avoid extraordinary maintenance and*

[4] *The LHMP was adopted on November 20, 2017. This policy applies to that document, including any subsequent amendments.*

operating expenses associated with hazardous conditions and minimize damage potential and interruption of service following a disaster.

Policy S-1.4: Public Health Emergencies

Minimize the impact of public health emergencies, including pandemics, through effective planning, response, and recovery. The City will work with the County of Marin and other public and private partners to contain and control disease outbreaks, limit the number of illnesses and deaths, preserve the continuity of critical government functions, minimize social disruption, and reduce economic loss.

Program S-1.4A: LHMP Amendments. *Amend local emergency preparedness documents as needed to address public health emergencies, including communication protocol, emergency operating procedures, and provisions for sheltering-in-place.*

Program S-1.4B: Pandemic Response and Recovery. *Monitor and update data to support response and recovery to the 2020 COVID-19 pandemic. Such data should consider immediate and long-term impacts on housing, jobs, equity, local retail, parks and open spaces, health care, social services, the environment, demand for City services, and other variables that shape the safety and well-being of San Rafael residents and employers. As needed, amend policies and ordinances to address pandemic impacts and facilitate recovery and resilience to future public health emergencies.*

Goal S-2: Resilience to Geologic Hazards

Minimize potential risks associated with geologic hazards, including earthquake-induced ground shaking and liquefaction, landslides, erosion, sedimentation, and settlement*. Development proposed within geologic hazard areas shall not be endangered by, nor contribute to, hazardous conditions on- or off-site. New development should only be approved in areas of identified geologic hazard if the hazard can be appropriately mitigated.*

Policy S-2.1: Seismic Safety of New Buildings

Design and construct all new buildings to resist stresses produced by earthquakes. The minimum level of seismic design shall be in accordance with the most recently adopted building code as required by State law.

Program S-2.1A: Seismic Design. *Adopt and enforce State building codes which ensure that new or altered structures meet the minimum seismic standards set by State law. State codes may be amended as needed to reflect local conditions.*

Program S-2.1B: Geotechnical Review. *Continue to require geotechnical studies and peer review for proposed development as set forth in the City's Geotechnical Review Matrix (Appendix F). Such studies should determine the extent of geotechnical hazards, optimum design for structures and the suitability of proposed development for its location, the need for special structural requirements, and measures to mitigate any identified hazards. Periodically review and update the Geotechnical Review Matrix to ensure that it supports and implements the Local Hazard Mitigation Plan.*

Program S-2.1C: Earthquake Hazard Study. *As recommended by the Local Hazard Mitigation Plan, complete an Earthquake Hazard Study that examines geologic hazards in the city.*

Policy S-2.2: Minimize the Potential Effects of Landslides.

Development proposed in areas with existing or potential landslides (as identified by a registered geologist or geotechnical engineer) shall not be endangered by, or contribute to, hazardous conditions on a site or adjoining properties. The City will only approve new development in areas of identified landslide

hazard if the hazard can be appropriately mitigated, including erosion control and replacement of vegetation.

Program S-2.2A: Landslide Mitigation and Repair Projects. *Undertake landslide hazard mitigation and repair projects, as outlined in the LHMP. These projects include a landslide identification and management program, repair of the Fairhills Drive landslide, and repair of the Bret Harte sewer easement.*

Policy S-2.3: Seismic Safety of Existing Buildings

Encourage the rehabilitation or elimination of structures susceptible to collapse or failure in an earthquake. Historic buildings shall be treated in accordance with the Historic Preservation Ordinance and Historic Building Code (*see also Program CDP-5.5A*).

Program S-2.3A: Seismic Safety Building Reinforcement. *Enforce State and local requirements for reinforcement of existing buildings, including the City's remaining unreinforced masonry (URM) buildings.*

Program S-2.3B: Soft-Story Building Mitigation Plan. *Complete a citywide assessment of soft-story buildings and develop a mitigation strategy and cost-benefit analysis to modify these structures to reduce their potential to collapse during an earthquake.*

Policy S-2.4: Post-Earthquake Inspections

Require post-earthquake inspections of critical facilities and other impacted buildings and restrict entry into compromised structures as appropriate. Following a major earthquake, inspections shall be conducted as necessary in conjunction with other non-city public agencies and private parties to ensure the structural integrity of water storage facilities, storm drainage structures, sewer lines and treatment facilities, transmission and telecommunication facilities, major roadways, bridges, elevated freeways, levees, canal banks, and other important utilities and essential facilities.

Program S-2.4A: Inspection List. *Develop and maintain a list of facilities that would be inspected after a major earthquake, including City-owned essential or hazardous facilities. Facilities on the list should be prioritized for inspection-scheduling purposes.*

Policy S-2.5: Erosion Control

Require appropriate control measures in areas susceptible to erosion, in conjunction with proposed development. Erosion control measures should incorporate best management practices (BMPs) and should be coordinated with requirements for on-site water retention, water quality improvements, and runoff control.

Program S-2.5A: Erosion and Sediment Control Plans*. Require Erosion and Sediment Control Plans (ESCPs) for projects meeting the criteria defined by the Marin County Stormwater Pollution Prevention Program, including those requiring grading permits and those with the potential for significant erosion and sediment discharges. Projects that disturb more than one acre of soil must prepare a Stormwater Pollution Prevention Plan, pursuant to State law.*

Program S-2.5B: Grading During the Wet Season*. Avoid grading during the wet season due to soil instability and sedimentation risks. Require that development projects implement erosion and/or sediment control measures and runoff discharge measures based on their potential to impact storm drains, drainageways, and creeks.*

Program S-2.5C: Sediment Use. E

xplore the use of sediment from human activities such as dredging and natural processes such as erosion for wetlands restoration and shoreline resiliency projects.

Policy S-2.6: Septic Systems

Discourage the use of septic systems within San Rafael's Planning Area. If no other alternatives exist, then soil tests shall be required to determine if soils are suitable for a septic system or other innovative means of onsite wastewater disposal. In hillside areas, an evaluation of the impact of additional water from a septic system on hillside stability shall be required. New or improved septic systems shall be designed by a registered civil engineer that specializes in septic design.

Goal S-3: Resilience to Flooding and Sea Level Rise

Recognize, plan for, and successfully adapt to the anticipated effects of increased flooding and sea level rise. *San Rafael's land use patterns, transportation system, and infrastructure should be planned to anticipate the impacts of extreme weather events and global climate change, including sea level rise, rising groundwater, and potential flooding. A range of measures will be used to mitigate flood hazards along drainageways and creeks and improve resilience and flood protection in low-lying areas,*

Policies to reduce the greenhouse gas emissions that contribute to global climate change are included in other parts of the General Plan, especially the Conservation/ Climate Change Element and the Mobility Element.

Policy S-3.1: Sea Level Rise Prediction Map

Utilize Figure S-2 (Sea Level Rise Prediction Map) to address flooding and sea level rise hazards. The figure should be used to:

a) maximize public awareness and disclosure to property owners and the public.
b) assess and address impacts to future development.
c) establish a zoning "overlay zone" and building code requirements for future planning and adaptation.
d) plan opportunity areas for adaptation.
e) inform funding and financing decisions about short-term and long-term adaptation projects.

> ***Program S-3.1A: Incorporate into City GIS.*** *Incorporate the Sea Level Rise Prediction Map into the City's Geographic Information System (GIS) map and utilize GIS as a publicly accessible tool for tracking flooding and sea level rise hazards.*
>
> ***Program S-3.1B: Periodic Update of Sea Level Rise Prediction Map.*** *Review sea level rise data at least once every five (5) years to determine the need for Map updates.*
>
> ***Program S-3.1C: Sea Level Rise Overlay Zone****. Adopt an "overlay zone" on the City Zoning Map incorporating the Sea Level Rise Projection Map. The "overlay zone" shall include land use regulations for site planning and a minimum construction elevation that reflects flooding and sea level rise data.*

Policy S-3.2: Data Consistency

Ensure that the information and data related to increased flooding and sea level rise is current and consistent with the information and data utilized by the County of Marin.

> ***Program S-3.2A: Coordination with County of Marin.*** *Coordinate with the County of Marin on updating data related to increased flooding and sea level rise. Utilize the County of Marin Bay Waterfront Adaptation & Vulnerability Evaluation (BayWAVE) as the basis for all City-prepared documents and plans addressing and adapting to increased flooding and sea level rise.*

Policy S-3.3: Awareness and Disclosure

Maximize awareness and disclosure by providing information to property owners and the public on areas subject to increased flooding and sea level rise vulnerability.

> ***Program S-3.3A. Residential Building Resale (RBR) Reports****. Revise the RBR Report template to include a disclosure of potential property risk due to increased tidal flooding and sea level rise. Utilize the Sea Level Rise Prediction Map for confirming property vulnerability. Work with realtors and property owners to implement this requirement.*

Policy S-3.4: Mitigating Flooding and Sea Level Rise Impacts

Consider and address increased flooding and sea level rise impacts in vulnerable areas (see Figure S-2) in development and capital projects, including resiliency planning for transportation and infrastructure systems.

> ***Program S-3.4A: Development Projects****. Where appropriate, require new development, redevelopment projects, and substantial additions to existing development to consider and address increased flooding and sea level rise impact, and to integrate resilience and adaptation measures into project design.*
>
> ***Program S-3.4B: Capital Projects and Roadways****. Prepare a guidance document to address increased flooding, sea level rise impacts, and adaptation measures into the City's capital projects and planning process. This should include strategies to identify and evaluate the costs, benefits and potential revenue sources for elevating or redesigning low-lying roadways and critical infrastructure. If the life of a public improvement in a vulnerable area extends beyond 2050, adaptation measures should be incorporated.*
>
> ***Program S-3.4C. Coordination with Utilities and Services.*** *Coordinate with the utilities and services that have infrastructure and facilities in vulnerable areas (for example: wastewater treatment plants) to ensure that sea level rise information and goals are consistent with the City's goals, and that infrastructure/utilities projects address and plan for increased flooding and sea level rise.*
>
> *See also Policies CSI-4.6 and M-2.11 addressing sea level rise impacts on infrastructure and transportation*

Policy S-3.5: Minimum Elevations.

For properties in vulnerable areas, ensure that new development, redevelopment, and substantial additions to existing development meets a minimum required construction elevation. Minimum elevations and other architectural design strategies should provide protection from the potential impacts of a 100-year flood (a flood with a one percent chance of occurring in any given year), the potential for increased flooding due to sea level rise, and the ultimate settlement of the site due to consolidation of bay mud from existing and new loads and other causes.

> ***Program S-3.5A: Code Amendments for Floor Elevation****. Update and adopt zoning, building and public works code requirements to establish and mandate a minimum finished floor elevation for new development, redevelopment and substantial additions to existing development. Consider adopting a minimum, finished floor elevation requirement of +3 feet above the FEMA 100-year flood elevation requirement.*[5]
>
> ***Program S-3.5B: Ground Elevation Surveys.*** *Perform periodic ground elevation surveys in the Sea Level Rise vulnerability zone. The result of the surveys should be considered when developing projects to reduce coastal flooding potential.*

[5] *The + 3 feet requirement has been used in several other bayfront communities.*

Program S-3.5B: Title 18 Flood Protection Standards. *Evaluate and revise Title 18 of the Municipal Code (Protection of Flood Hazard Areas) to address anticipated sea level rise, increases in rainfall intensities, and any changes related to Federal or regional flood reduction criteria.*

Program S-3.5C: National Flood Insurance Program (NFIP). *Continue to comply with the federal NFIP by maintaining a flood management program and flood plain management regulations. In addition, develop and periodically update a Community Rating System (CRS) to notify residents of the hazards of living in a flood area, thereby reducing local flood insurance rates.*

Policy S-3.6: Resilience to Tidal Flooding

Improve San Rafael's resilience to coastal flooding and sea level rise through a combination of structural measures and adaptation strategies.

Program S-3.6A: Sea Level Rise Adaptation Plan*. Prepare and adopt an adaptation plan addressing increased flooding and sea level rise. The adaptation plan shall include the following components:*

a) Sea Level Rise Projection Map, to be used as the basis for adaptation planning.
b) Coordination with local, county, state, regional and federal agencies with bay and shoreline oversight, major property owners, and owners of critical infrastructure and facilities in the preparation of the adaptation plan.
c) An outreach plan to major stakeholders and all property owners within the vulnerable areas.
d) An inventory of potential areas and sites suitable for mid- to large-scale adaptation projects (see Appendix #: Sea Level Rise Adaptation Report for more information)
e) A menu of adaptation measures and approaches that could include but not be limited to:
    - *Managed retreat, especially on low-lying, undeveloped and underdeveloped sites; in areas that are permanent open space; and in areas that are environmentally constrained. Transfer of development rights from such areas should be encouraged.*
    - *Innovative green shoreline protection and nature-based adaptation measures such as wetlands and habitat restoration, and horizontal levees where most practical and feasible.*
    - *Hard line armoring measures (sea walls, levees, breakwater, locks, etc.) in densely developed areas to minimize the potential for displacement of permanent residents and businesses.*
    - *Elevating areas, structures, and infrastructure to reduce risks.*
f) The appropriate timing and "phasing" of adaptation planning and implementation.
g) Potential financing tools and opportunities.
h) Coordination or incorporation into the San Rafael Local Hazard Mitigation Plan.

Program S-3.6B: Partnerships*. Foster, facilitate and coordinate partnerships with the County of Marin, other effected agencies and utilities, property owners, and neighborhood groups/organizations on planning for and implementing adaptation projects.*

Program S-3.6C: Countywide Agency/Joint Powers Authority*. Work with the County of Marin to facilitate the formation of a centralized countywide agency or joint powers authority to oversee adaptation planning, financing and implementation.*

Policy S-3.7: Shoreline Levees

Improve and expand San Rafael's shoreline levee system. When private properties are developed or redeveloped, require levee upgrading as appropriate, based on anticipated high tide and flood conditions.

Program S-3.7A: Levee Improvement Plans*. Assess existing levees, berms, and flood control systems to identify reaches with the greatest vulnerability. Develop improvement plans based on*

existing conditions and projected needs, as documented in adaptation plans. This should include improvement studies for the Spinnaker Point levee, as recommended by the LHMP, and the Canalways levee along San Rafael Bay.

Program S-3.7B: Financing Levee Improvements. *Coordinate with property owners; residents and businesses; federal, state, and regional agencies; utilities; and other stakeholders to evaluate potential methods of improving levees and funding ongoing levee maintenance, including assessment or maintenance districts. The cost and fiscal impacts of levee improvements should be evaluated against potential benefits andcosts and consequences of inaction.*

Policy S-3.8: Storm Drainage Improvements

Require new development to mitigate potential increases in runoff through a combination of measures, including improvement of local storm drainage facilities. Other measures, such as the use of porous pavement, bioswales, and "green infrastructure" should be encouraged.

Program S-3.8A: Storm Drainage Improvements. *Consistent with Countywide and regional stormwater management programs, require new development with the potential to impact storm drainage facilities to complete hydrologic studies that evaluate storm drainage capacity, identify improvements needed to handle a 100-year storm, and determine the funding needed to complete those improvements.*

Program S-3.8B: Green Infrastructure Guidelines. *Evaluate potential measures to more sustainably manage stormwater, erosion, and improve water quality associated with urban runoff. This includes improvements such as rain gardens and permeable pavement, which attenuate flooding downstream and provide ecological benefits.*

See also Goal C-3 and Policy CSI-4.10 for related policies and programs on water quality and storm drainage

Policy S-3.9: Flood Control Improvements Funding

Pursue financing and funding opportunities to fund short-term and long-term flood control and adaptation projects. Funding tools and opportunities would include, among others tax or bond measures, assessment districts, geologic hazard abatement districts and grants. The City will also support legislation that provides regional, state, and federal funding for these projects, and will pursue such funding as it becomes available.

Program S-3.9A: Incremental Flood Control Improvements*. Where needed and possible, new development/ redevelopment projects shall include measures to improve area flood protection. Such measures would be identified and required through the development review process.*

Program S-3.9B: Flood Hazard Mitigation Projects. *Undertake flood hazard mitigation projects as outlined in the Local Hazard Mitigation Plan, including sewer relocation and replacement, pump station rehabilitation, corrugated metal pipe replacement, and improvements to flood-prone streets such as Beach Drive.*

Program S-3.9C: Restoration and Dredging Projects. *Implement restoration and dredging projects that will increase stormwater drainage capacity and reduce flood hazards. As noted in the LHMP, this could include restoration of the Freitas Parkway flood channel and dredging of Gallinas Creek and the San Rafael Canal.*

See also Policy CSI-4.11 on canal dredging and Program S-2.5C on sediment use.

Goal S-4: A Fire-Safe Community

Minimize injury, loss of life, and damage to property resulting from wildland fire hazards.

The City will continue to implement fire prevention and preparedness measures that reduce fuel loads and require development to be located, designed and constructed to minimize fire-related risks.

Policy S-4.1: Wildfire Hazards

Continue vegetation management and maintenance programs to reduce the destructive potential of wildfires.

Program S-4.1A: Wildfire Prevention and Protection Action Plan. *Implement the Wildfire Prevention and Protection Action Plan (August 2020) in a manner consistent with the direction provided by the San Rafael City Council.*

Program S-4.1B: Fire Hazard Maps. *Maintain maps identifying potential fire hazard areas in San Rafael. Use these maps for vegetation management and planning purposes.*

Program S-4.1C: Fire Protection Ordinance*. Continue to implement Municipal Code standards to reduce fire hazards in areas, including vegetation management requirements and the designation of a Wildland-Urban Interface (WUI) Zone. Periodically update these standards and the WUI map to implement Wildfire Action Plan measures and other programs to further reduce wildfire risks.*

Program S-4.1D: Wildfire Fuel Breaks. *Where necessary, create new fuel interruption zones in Wildland Urban Interface areas and maintain and expand zones that are already in place. Highly flammable exotic vegetation should be strategically removed in these areas to slow the spread of wildfire and reduce threats to homes.*

Program S-4.1E: Goat Grazing. Continue the use of goat grazing on lands where native vegetation will not be harmed through cooperative relationships with contractors and public agencies.

Program S-4.1F: Encampment-Related Hazards. *Work collaboratively with service providers for homeless residents and other partners to reduce fire hazards associated with illegal encampments and campfires. Consider partnerships to employ unsheltered residents in vegetation management work.*

Program 4.1G: Open Space and Forestry Management. *Develop science-based open space and forest management plans to reduce fuel loads, maintain fuel breaks, replace highly flammable species with native species, and increase the health and carbon sequestration potential of open space lands.*

See the Parks, Recreation, and Open Space Element for additional policies and programs on open space management.

Policy S-4.2: Fire Resilience in Developed Areas

Improve the resilience of neighborhoods and business districts to wildfire hazards.

Program S-4.2A: Reduction of Structure Hazards. *Implement measures to reduce wildfire hazards to existing structures, including fire-resistant landscaping and building materials, protected vents and gutters, phasing out wood shake roofs, vegetation management around structures, limits on highly flammable plant materials, restricted parking on narrow streets, and enforcement and abatement programs. Focus on measures that provide the greatest fire safety benefits relative to their costs to the City and private sector.*

Program S-4.2B: Tree Maintenance. *Undertake a tree safety maintenance program to maintain the health and safety of trees along public roadways and minimize safety impacts from trees falling in road rights of way.*

See the Conservation Element and Community Design Element for additional policies on trees

Program S-4.2C: Public Education on Fire Resilience and Response. *Improve public education and awareness about fire-safe structures and landscaping. This should include demonstration projects that help property owners understand what species to remove and what to plant, and how to make their homes more fire-resistant. Education programs also should address actions to be taken in the event a fire is approaching, including warnings, evacuation routes, shelters, and provisions for "go bags" and personal safety.*

Policy S-4.3: New Development in Fire Hazard Areas

Design new development to minimize fire hazards. Densities, land uses, and site plans should reflect the level of wildfire risk and evacuation capacity at a given location.

Program S-4.3A: Fire Hazard Mitigation in New Development. *Through the development review process, require appropriate mitigation measures such as fire preventive site design, landscaping and building materials, and the use of fire suppression techniques such as interior and exterior sprinklers. Before adopting new Code standards and requirements, consider and disclose their potential costs to applicants relative to the benefits they may provide. .*

Program S-4.3B: Development Review for Emergency Response. *Review development applications in fire prone areas to ensure adequate emergency vehicle access, and adequate water pressure and supply for fire-fighting purposes (see also Goal CSI-4).*

Program S-4.3C: Wildfire Prevention Funding. *Develop new partnerships, revenue opportunities, and funding avenues for wildfire prevention and hazard abatement.*

Goal S-5: Protection from Hazardous Materials

Protect those who live, work, and visit San Rafael from risks associated with hazardous materials. *Threats to human health will be minimized through proper hazardous materials use, storage, transport, disposal, and planning.*

Policy S-5.1: Hazardous Waste Management

Support State, regional, countywide and local programs to responsibly manage hazardous waste consistent with protection of public health, welfare, safety and the environment.

Policy S-5.2: Hazardous Materials Storage, Use and Disposal

Enforce regulations regarding proper storage, labeling, use and disposal of hazardous materials to prevent leakage, potential explosions, fires, or the escape of harmful gases, and to prevent individually innocuous materials from combining to form hazardous substances, especially at the time of disposal.

Program S-5.2A: CUPA Program. *Continue to participate in the Certified Unified Program Agency (CUPA) program. The CUPA's responsibilities shall include overseeing the investigation and closure of contaminated underground storage tank sites.*

Policy S-5.3: Protection of Sensitive Uses

Provide safe distances between areas where hazardous materials are handled or stored and sensitive land uses such as schools, public facilities, and residences. When the location of public improvements in such areas cannot feasibly be avoided, effective mitigation measures will be implemented.

> ***Program S-5.3A: Inventory of Existing Hazards.*** *Work with State and County GIS data to identify existing hazardous materials permit holders near schools, evaluate relative risk levels, and determine actions in the event of an accidental release. This data should be used to evaluate risk levels and develop measures to ensure the safety of students and school staff where necessary.*
>
> ***Program S-5.3B: Reducing Hazards Near Schools.*** *Consistent with CEQA and the California Public Resource Code 21151.4, limit activities with the potential to release hazardous materials within one-quarter mile of schools.*

Policy S-5.4: Development on Formerly Contaminated Sites

Ensure that the necessary steps are taken to clean up residual hazardous materials on any contaminated sites proposed for redevelopment or reuse. Properties that were previously used for auto service, industrial operations, agriculture, or other land uses that may have involved hazardous materials should be evaluated for the presence of toxic or hazardous materials in the event they are proposed for redevelopment with a sensitive land use.

> ***Program S-5.4A: Use of Environmental Databases in Development Review.*** *When development is proposed, use environmental and hazardous materials data bases (such as the State GeoTracker data base) to determine whether the site is contaminated as a result of past activity. As appropriate, require studies and measures to identify and mitigate identified hazards.*
>
> ***Program S-5.4B: Hazardous Soils Clean-Up.*** *Work with appropriate agencies to require remediation and clean-up prior to development of sites where hazardous materials have impacted soil or groundwater. The required level of remediation and clean-up shall be determined by the Certified Unified Program Agency (see Program S-3.2A) based on the intended use of the site and health risk to the public*.

Policy S-5.5: Transportation of Hazardous Materials

Enforce Federal, State and Local requirements and standards regarding the transportation of hazardous materials. As appropriate, support legislation that strengthens these requirements.

> ***Program S-5.5A: Safe Transport of Hazardous Materials.*** *Support California Highway Patrol's efforts to ensure the safe transport of hazardous materials.*
>
> ***Program S-5.5B: Pipeline Safety.*** *Coordinate with regulatory agencies and utilities to ensure the safety of all fuel pipelines and ensure that maintenance and operating conditions are fully compliant with all state and federal safety regulations*

Policy S-5.6: Hazardous Building Materials

Reduce the presence of hazardous building materials by implementing programs to mitigate lead, friable asbestos, and other hazardous materials where they exist today and by limiting the use of hazardous building materials in new construction. If such materials are disturbed during building renovation or demolition, they must be handled and disposed in a manner that protects human health and the environment.

Policy S-5.7: Household Hazardous Waste

Promote education about the safe disposal of household hazardous waste, such as motor oil and batteries, including the location of designated household hazardous waste disposal sites.

Goal S-6: Emergency Preparedness

Improve disaster preparedness, resiliency, response, and recovery. *The City should enhance public outreach, awareness, education, and preparedness for all hazards to minimize losses.*

Policy S-6.1: Disaster Preparedness Planning

Conduct disaster prevention and preparedness planning in cooperation with other public agencies and public interest organizations.

Program S-6.1A: Mutual Aid Agreements. *Continue, and where feasible expand, mutual aid agreements that augment public safety personnel in times of emergency.*

Program S-6.1B: Standardized Emergency Management System (SEMS)*. Maintain a SEMS-based emergency plan that provides direction and identifies responsibilities after a disaster. Continue to train all City employees and officials in SEMS procedures.*

Program S-6.1.C: Emergency Preparedness Plan. *Update and publicize the City's emergency preparedness plan in conformance with State guidelines, including information on evacuation routes and shelter locations. The City's Emergency Operations Center Handbook also should be updated.*

Program S-6.1D: Urban Search and Rescue Techniques*. Continue to ensure that Urban Search and Rescue techniques remain current. Provide opportunities for trained volunteers to participate as appropriate.*

Policy S-6.2: Neighborhood Disaster Preparedness Programs

Encourage educational outreach to promote awareness and readiness among residents regarding disaster preparedness. Outreach and education should be targeted for each hazard type and risk area, including climate-related incidents. Community involvement is an essential part of resilience and recovery, and residents play an important role in disaster response.

Program S-6.2A: Educational and Training Programs*. Support educational and training programs through the Police and Fire Departments and community-based organizations. These Programs include Community Emergency Response Teams (CERT), Citizens Police Academy, Neighborhood Response Groups (NRGs), and Voluntary Organizations Active in Disaster (VOAD) among others. Neighborhood teams should supplement City resources during emergency situations and can assist in disaster preparedness and mitigation efforts.*

Program S-6.2B: Neighborhood Disaster Plans. *Provide technical assistance as needed to develop and update neighborhood disaster plans*.

Program S-6.2C: Website Improvements. *Regularly update the Fire Department's website and social media presence to provide information on disaster preparedness, resources, and links to other sites. Include printed information in City publications such as the Recreation Activities guide.*

Program S-6.2D: Outreach to Vulnerable Populations. *Identify vulnerable populations (such as non-English speaking residents, frail older adults, young children, and persons with disabilities) that may need assistance in times of disaster. Develop outreach programs that are geared toward these populations, including multi-lingual communications.*

Program S-6.2E: Disaster Management Drills. *Conduct emergency response drills to test the effectiveness of local procedures, including evacuation and emergency shelter drills in neighborhoods prone to flooding and wildfire.*

See also Policies EDI-2.10 and EDI-6.5 on increasing resilience among disadvantaged communities and older adults. See Program EV-1.10A on the role of the business community in emergency preparedness.

Policy S-6.3: Improving Evacuation Capacity

Improve local evacuation capacity by identifying and improving escape routes for areas with unique hazards or at- risk populations and identifying safe assembly locations for evacuees.

> ***Program S-6.3A: Evacuation-Related Capital Projects.*** Identify key capital improvements needed to facilitate the orderly evacuation of at-risk areas and the ability of designated assembly points to handle evacuees.

Policy S-6.4: Emergency Operations Centers.

Maintain a centralized Emergency Operation Center to coordinate emergency responses to emergencies, complemented by other locations in the city that provide for emergency evacuation and service delivery following a major disaster.

> ***Program S-6.4A: Evacuation Shelters.*** *Identify locations of evacuation shelters and provide the necessary training and supplies so that these centers can function effectively during and after a disaster. This should include refuge centers for extreme heat events, power failures, and air quality emergencies.*

Policy S-6.5: Post-Disaster Recovery Planning

Incorporate post-disaster recovery planning in the City's emergency management programs. Recovery planning should include measures to mitigate the potential for further damage.

> ***Program S-6.5A: Essential Services Following Disasters.*** *Make provisions to continue essential emergency public services during and after natural disasters and other catastrophes.*
>
> ***Program S-6.5B: Employee Transportation.*** *To ensure adequate safety personnel in an emergency, explore ways to transport first responders from outlying areas when damaged infrastructure prevents them from driving to San Rafael.*
>
> ***Program S-6.5C: Incentives for Disaster Response and Essential Worker Personnel.*** *Support state legislation and City initiatives that would provide incentives for staff with roles in disaster response to live in San Rafael, so they may be readily available if a disaster should occur.*
>
> ***Program S-6.5D: Rapid Reconstruction Ordinances****. Explore model ordinances and best practices to facilitate rapid reconstruction and recovery, including issues such as temporary housing and modular construction. Reconstruction should achieve code compliance, while advancing green building practices where feasible.*

Policy S-6.6: Effective Communication Systems

Ensure that all City agencies with a role in emergency response are provided with effective, reliable and robust emergency communications systems and equipment. The systems and equipment should have adequate capacity and redundancy to ensure these agencies can accomplish their missions. Consideration should also be given to the communications needs of the County of Marin and other agencies that may be required to supply mutual aid to or from other jurisdictions.

> ***Program S-6.6A: Involvement with Marin Emergency Radio Authority.*** *Maintain active involvement with Marin Emergency Radio Authority (MERA) and pursue installation and activation of the MERA radio system.*

Program S-6.6B: Emergency Alert Systems. *Use emergency alerts, electronic message boards, and other notification systems to warn resident of an active threat such as a flood or wildfire. The use of emergency warning sirens and other types of mass notification alerts also should be considered.*

Policy S-6.7: Emergency Connectors

Pursue the development of road connections for emergency vehicles only to improve access within San Rafael and between San Rafael and adjacent communities.

Program S-6.7A: Emergency Connectors. *Maintain the following existing access routes for emergency vehicles:*

a) the existing connection between Freitas Parkway and Fawn Drive.
b) the all-weather connections between Freitas and Fawn and between Ridgewood and Fawn.
c) The connection between Del Ganado and Butterfield Road in Sleepy Hollow.
d) The private portion of Sienna Way in the Dominican area.
e) The access drive between Peacock and Biscayne.

Consider the need for additional emergency connectors, including the costs, effectiveness, impacts, and potential to use such routes for evacuation in the event of a wildfire.

Program S-6.7B: Obstruction of Evacuation Routes. *Reduce obstacles for emergency vehicles and evacuation routes, including parked cars that constrict emergency vehicle passage.*

Program S-6.7C: SMART Crossing. *Work with SMART to explore the feasibility of an emergency vehicle rail and pedestrian/bicycle crossing at Merrydale Drive. See also Policy NH-4.10*

See the Mobility Element for policies to limit constriction of emergency access routes in future road design.

Policy S-6.8: Design of Public Safety Facilities and Utilities

Ensure that public safety facilities, critical utilities, and telecommunication facilities are designed and constructed to deliver necessary services with minimal interruption in times of disaster.

Program S-4.9A: Facility Evaluations. *Regularly evaluate the need to upgrade essential public safety facilities, equipment, and technology, and identify funding mechanisms to meet these needs.*

Program S-4.9B: Energy Storage Plan. *Develop an Energy Storage Plan, including microgrids and expanded battery capacity, to improve reliability of the power system following a major disaster (see also Policy CSI-4.13 on energy reliability).*

Policy S-6.9: Use of Technology

Leverage new technologies to reduce losses and save lives following a disaster. Implement improvements such as traffic signal pre-emption for first responders to facilitate response and recovery time.

NOISE ELEMENT

Goal N-1: Acceptable Noise Levels

Protect the public from excessive, unnecessary, and unreasonable noise. *Excessive noise is a concern for many residents of San Rafael. This concern can be addressed through the implementation of standards to protect public health and reduce noise conflicts in the community, including the Noise Ordinance.*

Policy N-1: Land Use Compatibility Standards for Noise

Protect people from excessive noise by applying noise standards in land use decisions. The Land Use Compatibility standards in Table N-1 are adopted by reference as part of this General Plan and shall be applied in the determination of appropriate land uses in different ambient noise environments.[6]

> ***Program N-1A: Residential Noise Standards.*** *As shown in Table N-1, maintain a maximum noise standard for backyards, decks, and common / usable outdoor areas of 60 Ldn dB for single family homes and 65 Ldn dB for multi-family and mixed use areas. As required by Title 24 insulation requirements, interior noise levels shall not exceed 45 Ldn in all habitable rooms in residential units.*

Policy N-2: Maintaining Acceptable Noise Levels

Use the following performance standards to maintain an acceptable noise environment in San Rafael:

a) New development shall not increase noise levels by more than 3 dB Ldn in a residential area, or by more than 5 dB Ldn in a non-residential area.
b) New development shall not cause noise levels to increase above the "normally acceptable" levels shown in Table N-1.
c) For larger projects, the noise levels in (a) and (b) should include any noise that would be generated by additional traffic associated with the new development.
d) Projects that exceed the thresholds above may be permitted if an acoustical study determines that there are mitigating circumstances (such as higher existing noise levels) and nearby uses will not be adversely affected.

> ***Program N-2A: Acoustical Study Requirements.*** *Require acoustical studies for new single family residential projects within the projected 60 dB Ldn noise contour and for multi-family or mixed use projects within the projected 65 dB Ldn contour (see Figure #). The studies should include projected noise from additional traffic, noise associated with the project itself, and cumulative noise resulting from other approved projects. Mitigation measures should be identified to ensure that noise levels remain at acceptable levels.*

> ***Program N-2B: Approval Conditions.*** *Establish conditions of approval for activities with the potential to create significant noise conflicts and enforce these conditions once projects become operational.*

Policy N-3: Reducing Noise Through Planning and Design

Use a range of design, construction, site planning, and operational measures to reduce potential noise impacts.

> ***Program N-3A: Site Planning.*** *Where appropriate, require site planning methods that minimize potential noise impacts. By taking advantage of terrain and site dimensions, it may be possible to arrange buildings, parking, and other uses to reduce and possibly eliminate noise conflicts. Site planning techniques include:*

[6] *The standards are derived from the 2017 General Plan Guidelines prepared by the State Office of Planning and Research (OPR).*

(a) *Maximizing the distance between potential noise sources and the receiver.*
(b) *Placing non-sensitive uses such as parking lots, maintenance facilities, and utility areas between the source and receiver.*
(c) *Using non-sensitive uses such as garages to shield noise sensitive areas.*
(d) *Orienting buildings to shield outdoor spaces from noise sources.*
(e) *Incorporating landscaping and berms to absorb sound.*

Program N-3B: Architectural Design. *Where appropriate, reduce the potential for noise conflicts through the location of noise-sensitive spaces. Bedrooms, for example, should be placed away from freeways. Mechanical and motorized equipment (such as air conditioning units) should be located away from noise-sensitive rooms. Interior courtyards with water features can mask ambient noise and provide more comfortable outdoor spaces.*

Program N-3C: Noise Barriers. *Where appropriate, use absorptive noise barriers to reduce noise levels from ground transportation and industrial noise sources. A barrier should provide at least Ldn 5 dB of noise reduction to achieve a noticeable change in noise levels.*

Program N-3D: Noise Reduction through Construction Materials. *Where appropriate, reduce noise in interior spaces through insulation and the choice of materials for walls, roofs, ceilings, doors, windows, and other construction materials.*

Policy N-4: Sound Walls

Discourage the use of sound walls when other effective noise reduction measures are available. Vegetation, berms, and the mitigation measures in Policy N-3 are the preferred methods of absorbing sound along roads, rail, and other transportation features. Where there are no other feasible options (for example, along many sections of US Highway 101), the City will review and comment on sound wall design. Sound walls should be aesthetically pleasing, regularly maintained, and designed to minimize the potential displacement of sound.

Policy N-5: Mixed Use

Mitigate the potential for noise-related conflicts in mixed use development combining residential and non-residential uses.

Program N-5A: Disclosure Agreements. *Where appropriate, require disclosure agreements for residents in mixed use projects advising of potential noise impacts from nearby commercial enterprises, such as restaurants and entertainment venues.*

Policy N-6: Traffic Noise

Minimize traffic noise through land use policies, law enforcement, street design and improvements, and site planning and landscaping.

Program N-6A: Interagency Coordination. *Work with Caltrans, Marin County, the Transportation Authority of Marin, and other agencies to achieve noise reduction along freeways and major arterials in San Rafael. This shall include noise mitigation measures in any redesign plan for the I-580/US 101 interchange.*

Program N-6B: California Vehicle Code. *Enforce applicable sections of the California Vehicle Code relating to noise.*

Program N-6C: Paving and Transit Improvements. *Pursue cost-effective paving technologies to minimize traffic noise and support the use of quieter buses and other mass transit vehicles. Noise reduction should be considered an important benefit as the City and its transit service providers transition to electric vehicles.*

Policy N-7: Aviation-Related Noise

To the extent allowed by federal and state law, ensure that the noise impacts of any changes in facilities or operations are considered when granting or modifying use permits at the San Rafael Airport in North San Rafael and the heliport in East San Rafael (see Noise Contours for San Rafael Airport and Heliport in Appendix I). (*See also Program M-1.4B on drones*).

Policy N-8: Train Noise

Work with Sonoma Marin Area Rail Transit (SMART) to minimize noise and vibration associated with train service and to reduce the potential for impacts on nearby residences.

> ***Program N-8A: Quiet Zones.*** *Maintain the Marin County designated "Quiet Zone" along the rail line. The Zone ensures that train horns are not sounded except when trains are leaving the station, or if there is an emergency.*

Policy N-9: Maintaining Peace and Quiet

Minimize noise conflicts resulting from everyday activities such as construction, sirens, yard equipment, business operations, night-time sporting events, and domestic activities.

> ***Program N-9A: Noise Ordinance.*** *Maintain and enforce the noise ordinance, which addresses common noise sources such as amplified music, mechanical equipment use, and construction. Updates to the ordinance should be periodically considered in response to new issues (for example, allowing portable generators during power outages).*
>
> ***Program N-9B: Construction Noise.*** *Use the environmental review process to identify measures to reduce the exposure of neighboring properties to excessive noise levels from construction activity.*
>
> ***Program N-9C: Noise Specifications.*** *Include noise specifications in requests for equipment information and bids for new City equipment and consider this information as part of evaluation of the bids.*

Policy N-10: City-County Coordination

Coordinate with the County of Marin to consider and mitigate noise impacts when activities in one jurisdiction may affect the other.

> ***Program N-10E: San Rafael Rock Quarry****. Seek to minimize noise impacts of the quarry and brickyard operations through cooperative efforts with the County of Marin through its code enforcement and land use entitlement processes.*

Policy N-11: Vibration

Ensure that the potential for vibration is addressed when transportation, construction, and non-residential projects are proposed, and that measures are taken to mitigate potential impacts.

> ***Program N-11A: Vibration-Related Conditions of Approval.*** *Adopt Standard conditions of approval to reduce the potential for vibration-related construction impacts for development projects near sensitive uses such as housing and schools. Vibration impacts shall be considered as part of project level environmental evaluation and approval for individual future projects.*

Table N-1: Proposed Noise Compatibility Guidelines for San Rafael

Land Uses	Interior CNEL or L_{dn} (dBA)	Exterior Noise Exposure, CNEL or L_{dn} (dBA) 55 60 65 70 75 80
Residential-Low Density Single-Family, Duplex, Mobile Homes	45*	
Residential-Multiple Family	45*	
Transient Lodging, Motels, Hotels	45*	
Schools, Libraries, Churches, Hospitals, Nursing Homes	45*	
Auditoriums, Concert Halls, Amphitheaters	--	
Sports Arena, Outdoor Spectator Sports	--	
Playgrounds, Neighborhood Parks	--	
Golf Courses, Riding Stables, Water Recreation, Cemeteries	--	
Office Buildings, Businesses, Commercial and Professional	50	
Industrial, Manufacturing, Utilities, Agricultural	--	

Normally Acceptable:
Specified land use is satisfactory based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.

Conditionally Acceptable:
New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and the needed noise insulation features are included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.

Normally Unacceptable:
New construction or development should generally be discouraged. If new construction does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

Clearly Unacceptable:
New construction or development generally should not be undertaken.

* Noise level requirement with closed windows, mechanical ventilation, or other means of ventilation shall be provided per Chapter 12 Section 1205 of the Building Code.

Source: State of California General Plan Guidelines, 2017.

MOBILITY ELEMENT

Goal M-1: Regional Leadership in Mobility

Take a leadership role in developing regional transportation solutions. *San Rafael is proud of the leadership role it has taken in planning and securing funding for regional transportation projects. By working closely with regional transportation agencies and service providers, the City plays an important role in managing congestion, reducing greenhouse gas emissions, and expanding travel choices in the Bay Area. The City will continue to advocate for local benefits when regional projects are proposed, including improvements that enhance local access, resilience, economic and fiscal health, social equity, and environmental quality. Project selection and design should be informed by rigorous cost-benefit analysis, objective data, consideration of emerging trends and technologies, and a transparent public process.*

Policy M-1.1: Regional Transportation Planning

Actively coordinate with other jurisdictions, agencies, and service providers to improve the local and regional transportation system and advocate for the City's interests. Work cooperatively to improve transit and paratransit services, achieve needed highway improvements, and improve the regional bicycle and pedestrian networks.

> ***Program M-1.1A: Participation in Countywide and Regional Transportation Planning.*** *Actively participate in the planning activities of the Transportation Authority of Marin, the Metropolitan Transportation Commission, SMART, and other transportation agencies and support implementation of cost-effective regional plans and programs.*
>
> ***Program M-1.1B: Public Information About Transportation.*** *Provide timely information and opportunities for public input on transportation issues and projects through workshops, neighborhood meetings, social media, staff reports, and other means.*

Policy M-1.2: Regional Funding

Support a regional approach to the funding of transit, highway, bicycle, and pedestrian improvements by seeking a broad range of federal, State, and County funds. Use local funds to leverage and match outside funding sources.

> ***Program M-1.2A: Transportation Project Grants.*** *Work with governmental agencies, non-profits and community groups to secure grants for appropriate transportation projects.*

Policy M-1.3: Regional Transportation Improvements

Actively participate in regional transportation improvements that facilitate mobility in San Rafael.

> ***Program M-1.3A: US 101/ I-580 Connector.*** *Continue to collaborate with TAM, Caltrans, the City of Larkspur, and impacted stakeholders on improvements to the US 101/ I-580 interchange and Richmond-San Rafael Bridge, including advocacy for local access improvements to East San Rafael.*

Policy M-1.4: Transportation Innovation

Take a leadership role in delivering innovative transportation services and improvements.

> ***Program M-1.4A: Transportation Technology****. Use the most cost-effective proven technologies available when managing congestion and parking, including transportation information systems and "smart city" improvements.*
>
> ***Program M-1.4B: Delivery Services.*** *Prepare for the potential impacts of emerging delivery service technology, including drones, on local roads, infrastructure, parking systems, and noise.*

Program M-1.4C: Autonomous Vehicles. *Monitor and manage the effects of autonomous vehicles, personal air vehicles, and connected vehicle technology on transportation needs, road design, and travel behavior. Adjust local transportation programs, infrastructure, and design standards as needed.*

Policy M-1.5: Travel Data and Modeling.

Support the collection and analysis of data on travel behavior in San Rafael, particularly related to commute patterns and the effectiveness of City programs. Use this data when considering public expenditures and programs.

Goal M-2: Improved Transportation Efficiency and Access

Sustain an efficient, cost-effective transportation network that continuously improves mobility and accessibility for all users. *The transportation system will remain safe and responsive to the needs of San Rafael residents, businesses, workers, and visitors. Emerging technologies will help improve the operational efficiency of streets and highways. Persons of all ages and physical capabilities will be able to get around the city. San Rafael will continue to manage local congestion while making it easier to get around without a car.*

Policy M-2.1: Road Hierarchy

Maintain a network of arterial, collector, and local streets that efficiently moves traffic through the city. Engineering and design standards should reflect road type and function, the characteristics of adjacent uses, and the need to accommodate motorized and non-motorized travel.

Program M-2.1A: Complete Streets. *Consistent with State "Complete Streets" requirements, maintain street design and engineering standards that plan for the needs of all travelers and minimize conflicts between competing modes. [TEXT BOX ON COMPLETE STREETS]*

Policy M-2.2: Safety

Design a transportation system that is safe and serves people using all modes of travel. Higher levels of congestion may be accepted at particular intersections if necessary to ensure the safety of all travelers, including pedestrians, bicycles, motorists, and transit users.

Program M-2.2A: Collision Data. *Collect and analyze data on traffic collisions and use such data to inform decisions about capital improvements, enforcement, and traffic safety programs.*

Program M-2.2B: Street Pattern and Traffic Flow. *Support efforts by the City Traffic Engineer to configure or re-configure street patterns to improve traffic flow and turning movements while prioritizing safety.*

Policy M-2.3: Cost-Benefit Considerations

Consider the relative costs and benefits of transportation improvement projects, including the amount and source of funding, the potential number of people who will benefit, the expected impact on vehicle miles traveled and climate goals, the cost and time impacts on all travelers, the social and equity impacts, the effects on the environment and public safety, and similar factors.

Program M-2.3A: Cost-Benefit Analysis. *Conduct cost-benefit analyses as part of the design process for proposed transportation projects, including the criteria listed above and other factors that may be relevant (see also Policy CSI-5.1 on cost-benefit analysis).*

Policy M-2.4: Transportation Efficiency

Undertake improvements that manage lane capacity, traffic flow, and intersections more efficiently.

> ***Program M-2.4A: Intelligent Transportation Systems.*** *Support the use of intelligent transportation systems to improve traffic flow and provide real-time data on traffic conditions so that motorists may travel through the city as efficiently as possible.*
>
> ***Program M-2.4B: Reducing Vehicle Idling.*** *Support transportation network improvements to reduce vehicle idling, including synchronized signal timing.*
>
> ***Program M-2.4C: Roundabouts.*** *Consider the use of roundabouts as an alternative to traffic signals and stops signs. Roundabouts can improve the flow of traffic when they are properly designed and located on streets with low to moderate volumes.*

Policy M-2.5: Traffic Level of Service

Maintain traffic Level of Service (LOS) standards that ensure an efficient roadway network and provide a consistent basis for evaluating the transportation effects of proposed development projects on local roadways. These standards shall generally be based on the performance of signalized intersections during the AM and PM peak hours. Arterial LOS standards may be used in lieu of (or in addition to) intersection LOS standards in cases where intersection spacing and road design characteristics make arterial LOS a more reliable and effective tool for predicting future impacts.

a) Intersection Standards. LOS "D" shall be the citywide standard for intersections, except as noted below:
   1) Intersections within the Downtown Precise Plan boundary are subject to the provisions of Section (c) below.
   2) Signalized intersections at Highway 101 and I-580 on-ramps and off-ramps are exempt because these locations are affected by regional traffic and are not significantly impacted by local measures.
   3) LOS "E" shall be acceptable at the following intersections:
      - Andersen and Bellam
      - Bellam and Francisco Blvd East (AM peak only)
      - Freitas at Civic Center/ Redwood Highway
      - Merrydale at Las Gallinas Avenue (PM peak only)
      - Freitas Parkway and Northgate Drive (PM peak only)
   4) LOS "F" shall be acceptable at the following intersections:
      - Andersen and Francisco Blvd West (AM peak only)
      - Bellam and Francisco Blvd East (PM peak only)
      - Merrydale at Civic Center Drive (AM peak only)

b) Arterial Standards. LOS "D" shall be the citywide standard for arterials, except as noted below:
   1) Arterials within the Downtown Precise Plan boundary are subject to the provisions of Section (c) below.
   2) LOS "E" shall be acceptable on the following arterial segments:
      - Freitas Parkway from Las Gallinas to Del Presidio
      - Lucas Valley from Las Gallinas to 101 S/B ramps (PM peak only)
      - Los Ranchitos from North San Pedro to Lincoln
      - Francisco Blvd East from Bellam to Main (Richmond Bridge) (PM peak only)
   3) LOS "F" shall be acceptable on the following segments:
      - Francisco Blvd East from Grand Avenue to Bellam
      - Lincoln from 101 SB/ Hammondale to Mission
      - Del Presidio from Las Gallinas to Freitas

c) Downtown Standards. Intersections and arterials within the boundaries of the Downtown San Rafael Precise Plan are not subject to LOS standards, recognizing their unique context, operation, and physical constraints, as well as their multi-modal character. Proactive measures shall be taken to address and manage Downtown congestion, evaluate and reduce the impacts of new development on the transportation network, and ensure the long-term functionality of streets and intersections. Traffic shall be monitored and evaluated to identify the need for improvements to ensure that Downtown streets adequate serve both local and regional traffic.

d) Additional Provisions for Roads Operating at LOS "E" or "F." Where the adopted standard is LOS "E" or "F," measures should be taken to avoid further degradation of traffic conditions. Projects impacting roads operating at LOS "F" may still be subject to requirements to offset those impacts as a condition of approval.

Program M-2.5A: Traffic Circulation Studies. *Traffic impact studies will be required for projects with the potential to increase congestion, create safety hazards, or otherwise impact local circulation conditions. Unless covered by the exemptions in Policy M-2.5, such studies should include projections of future LOS, an assessment of the contribution of the proposed project to increases in congestion, an assessment of projected increases in congestion on greenhouse gas emissions, and an assessment of traffic impact fees related to the project. Measures to maintain adopted service levels may be required as a condition of approval.*

Projects that are exempt from LOS and/or VMT standards may still be required to perform limited scope traffic and circulation studies to evaluate impacts on traffic conditions or traffic control devices in the immediate area of the proposed project. For projects in Downtown San Rafael, local traffic assessments (LTAs) should evaluate the potential for additional delay or safety hazards at nearby intersections. LTAs should identify necessary road or operational improvements, ingress and egress requirements, and potential site plan changes that reduce delays, conflicts between travel modes, and potential safety hazards.

Guidelines for traffic impact studies and Local Traffic Assessments should be developed within one year after General Plan adoption. The guidelines should include metrics for evaluating impacts to the road network where LOS does not apply or where the acceptable LOS is below the "D" standard.

Program M-2.5B: Level of Service (LOS) Exceptions

Exceptions to LOS planning thresholds may be granted where both of the following circumstances apply:

a) The improvements necessary to attain the standards would conflict with other land use, environmental, community character, emission reduction, safety, housing, or economic development priorities.

b) Based on substantial evidence, the City Council finds that:

(i) The specific economic, social, technological, and/or other benefits of the project to the community substantially outweigh the project's impacts on circulation.

(ii) All feasible mitigation measures have been required of the project including measures to reduce vehicle delay and measures to reduce Vehicle Miles Traveled (VMT); and

(iii) The project is consistent with and advances the Guiding Principles of General Plan 2040, including foundational principles such as maintaining great neighborhoods and a sense of community, and aspirational principles such as improving housing affordability, preparing for climate change, and sustaining a healthy tax base.

Program M-2.5C: Traffic Monitoring. *Monitor and evaluate traffic conditions throughout San Rafael on an ongoing basis. Based on such evaluations, the City Traffic Engineer may develop recommendations to improve operations, address safety concerns, or modify thresholds. New traffic monitoring technology should be implemented as it becomes available.*

Policy M-2.6: Traffic Mitigation Fees

Collect impact fees for new development based on the expected number of trips a project will generate. Fees should be used to implement transportation improvements as directed by City Council resolution.

> ***Program M-2.6A: Traffic Mitigation Fee Updates.*** *Continue to implement and periodically update local traffic mitigation fees and other requirements to cover development-related traffic and transportation improvements.*

Policy M-2.7: Proposed Mobility Improvements

Use Exhibit M-1 (Proposed Mobility Improvements) as the basis for transportation network improvements over the next 20 years. The improvements shown are intended to balance the City's goals of managing congestion, reducing vehicle miles traveled, and enhancing mobility and safety. Specific improvements will be implemented as conditions require and will be refined during the design phase. Exhibit M-1 may be amended as needed to reflect other design solutions and priorities, subject to City Council approval.

Improvements will be implemented through the Capital Improvements Program using a variety of funding sources and may be subject to further environmental review.

> ***Program M-2.7A: Update Proposed Circulation Improvements.*** *Regularly update the list of proposed circulation improvements based on traffic data, available funding, and evolving issues and priorities. Incorporate projects into the Capital Improvements Program as appropriate.*

> ***Program M-2.7B: Circulation Improvement Funding.*** *Advocate for Federal, State, and County funding for the transportation projects shown on Exhibit M-1, as well as other projects that improve mobility in San Rafael.*

Policy M-2.8: Emergency Access

Identify alternate ingress and egress routes (and modes of travel) for areas with the potential to be cut off during a flood, earthquake, wildfire, or similar disaster.

> ***Program M-2.8A: Highway Closures.*** *Develop and update contingency plans for highway closures as part of the City's disaster preparedness and emergency response plans.*

See the Safety Element for additional policies on evacuation and emergency response.

Policy M-2.9: Narrow Streets

In new subdivisions, allow narrower streets to reduce travel speeds and accommodate multiple modes of travel, while still providing for emergency and service access.

See also Goal EDI-6 for policies and actions on the transportation needs of older adults.

Policy M-2.10: Sea Level Rise

Actively plan for the impacts of sea level rise on the transportation system, including the need to elevate roadways, and potentially redesign or relocate roads to reduce flood hazards and meet evacuation needs.

See Goal S-3 for additional policy and program guidance on sea level rise, including transportation impacts

Policy M-2.11: Environmental Benefits

Look for opportunities to create environmental benefits such as stormwater capture and treatment when reconstructing or improving roads and other transportation facilities,

Goal M-3: Cleaner Transportation

Coordinate transportation, land use, community design, and economic development decisions in a way that reduces greenhouse gas emissions, air and water pollution, noise, and other environmental impacts related to transportation. *Transportation has many direct and indirect environmental impacts. It is the source of 62% of San Rafael's greenhouse gas emissions and the primary source of local air pollution. The City will reduce transportation impacts by supporting cleaner fuel vehicles and higher vehicle efficiency standards,, improving transit and non-vehicular travel modes, and reducing the vehicle miles traveled (VMT) by San Rafael residents and workers. Cost-effective VMT reduction is an essential part of the City's climate action strategy, and a fundamental part of its mobility programs.*

[include narrative text in the Plan that explains why VMT is a clean transportation issue and not a congestion issue.]

Policy M-3.1: VMT Reduction

Achieve State-mandated reductions in Vehicle Miles Traveled by requiring development and transportation projects to meet specific VMT metrics. In the event a proposed project does not meet these metrics, require measures to reduce the additional VMT associated with the project, consistent with thresholds approved by the City Council..

> ***Program M-3.1A: VMT Analysis Guidelines.*** *Develop local guidelines for calculating the projected VMT associated with future development projects and transportation improvements. The guidelines also should cover administration, screening criteria, and appropriate Transportation Demand Management measures and monitoring procedures. All VMT metrics should be reassessed at least once every four years and revised as needed to reflect changing conditions.*

Policy M-3.2: Using VMT in Environmental Review

Require an analysis of projected Vehicle Miles Traveled (VMT) as part of the environmental review process for projects with the potential to significantly increase VMT. As appropriate, this shall include transportation projects and land use/ policy plans as well as proposed development projects.

> ***Program M-3.2A: Screening Criteria for VMT Analysis.*** *Adopt and maintain screening criteria for different land uses and project types to determine when a VMT analysis is required as part of the environmental review process. Screening criteria should be revisited over time to ensure that they are appropriate. The criteria should include exemptions for projects with substantial VMT benefits, such as mixed use and infill development in Downtown San Rafael.*
>
> ***Program M-3.2B: Thresholds for Determining a Significant VMT Impact.*** *Adopt and maintain thresholds to determine if a VMT impact may be considered "significant" under the California Environmental Quality Act (CEQA).*
>
> ***Program M-3.2C: Mitigation Measures for VMT Impacts.*** *Develop and implement mitigation measures that can be applied to projects with potentially significant VMT impacts in order to reduce those impacts to less than significant levels (see Policy M-3.3 and Program M-3.3A).*
>
> ***Program M-3.2D: Overriding Considerations for Projects with Unavoidable VMT Impacts.*** *Require the adoption of specific overriding consideration findings before approving a project that would result in significant unavoidable impacts on VMT.*

Policy M-3.3: Transportation Demand Management

Encourage, and where appropriate require, transportation demand measures that reduce VMT and peak period travel demand. These measures include, but are not limited to, transit passes and flextime, work schedules, ridesharing, pedestrian and bicycle improvements, and changes to project design to reduce trip lengths and encourage cleaner modes of travel.

Program M-3.3A: Develop TDM Program Guidelines. *Develop TDM Program Guidelines – or work in partnership with other local governments to develop Guidelines -- than can be used to mitigate potential VMT increases in new development and encourage reductions in existing development.*

Program M-3.3B: Support for TDM. *Work cooperatively with governmental agencies, non-profits, businesses, institutions, schools, and neighborhoods to provide and support TDM programs.*

Program M-3.3C: City TDM Program. *Implement a TDM program for City employees, potentially in partnership with other local governments, public agencies, and transit providers. Promote the program as a model for other local employers.*

Program M-3.3D: Shifting Peak Hour Trips. *Support efforts to limit traffic congestion by shifting peak hour trips to non-peak hour, modifying school hours to stagger start and end times, and encouraging flexible work schedules.*

Policy M-3.4: Reducing Commute Lengths

Support reduced commute lengths and frequency by encouraging:

(a) hiring of local residents by San Rafael employers.
(b) opportunities for persons who work in San Rafael to live in San Rafael.
(c) telecommuting and flexible work arrangements.
(d) local-serving shopping, restaurants, and services that reduce the need to drive elsewhere.

Program M-3.4A: Telecommuting. *Encourage San Rafael employers to implement telecommuting and work-from-home programs that reduce daily peak hour commutes. Also encourage co-working spaces, home offices, improved internet access, and opportunities for residents employed elsewhere to work productively within San Rafael. Consider "lessons learned" during the 2020 COVID-19 pandemic when evaluating policy approaches to telecommuting.*

Program M-3.4B: Housing Services*. Support and facilitate roommate matching programs, connections between local property managers and major employers, employer housing programs, and other initiatives aimed at helping local workers find housing in San Rafael.*

See the Economic Vitality Element and EDI Element for policies on workforce development so that residents may gain the skills needed to find employment in San Rafael

Policy M-3.5: Alternative Transportation Modes

Support efforts to create convenient, cost-effective alternatives to single passenger auto travel. Ensure that public health, sanitation, and user safety is addressed in the design and operation of alternative travel modes.

Program M-3.5A: Carpooling and Vanpooling. *Support car and vanpooling in San Rafael through local and regional programs and on-line apps that match interested drivers and passengers.*

Program M-3.5B: Shared Mobility. *Support efforts to establish and operate car-sharing, bike-sharing, and other services that provide alternatives to driving, particularly in Downtown San Rafael and other transit-served areas.*

Program M-3.5C: Micro-Mobility. *Coordinate with "micro-mobility" companies such as shared electric scooter and electric bicycle vendors who seek to provide services in San Rafael.*

Program M-3.5D: Transportation Network Companies (TNCs). *Work with TNCs (Uber, Lyft, etc.) to address issues such as curbside management and maximize the potential benefits of such services.*

Policy M-3.6: Low-Carbon Transportation

Encourage electric and other low-carbon emission vehicles, as well as the infrastructure needed to support these vehicles.

Program M-3.6A: ZEV Plan. *Consistent with the San Rafael CCAP, develop a Zero Emission Vehicle (ZEV) Plan with a goal of 25% of the passenger vehicles in San Rafael being ZEVs by 2030. The Plan should provide for additional charging stations, preferential parking for ZEVs, other programs that incentivize ZEV use by San Rafael residents.*

Program M-3.6B: Zero Emission Municipal Vehicles. *As finances allow, shift the municipal vehicle fleet to ZEVs. Use low-carbon fuels as an interim measure until gasoline-powered City vehicles are replaced.*

See also Program M-7.9B on electric charging station requirements

Policy M-3.7: Design Features that Support Transit

For projects located in or near transit hubs such as Downtown San Rafael, incorporate design features that facilitate walking, cycling, and easy access to transit.

Policy M-3.8: Land Use and VMT

Encourage higher-density employment and residential uses near major transit hubs such as Downtown San Rafael, recognizing the potential for VMT reduction in areas where there are attractive alternatives to driving, concentrations of complementary activities, and opportunities for shorter trips between different uses.

See the Downtown Precise Plan for programs implementing Policies M-3.7 and 3.8. See also Land Use Element Policy LU-1.3

GOAL M-4: High-Quality Affordable Transit

Support accessible, reliable, cost-effective transit services that provide a convenient, affordable, efficient alternative to driving. *The City of San Rafael is served by several transit agencies, operating buses, trains, ferries, and shuttles. Service improvements by these agencies will be supported so that transit becomes a more competitive alternative to driving, both for trips within San Rafael and for trips to and from other destinations. A safe, convenient, affordable transit system is important to San Rafael's quality of life. Transit has the potential to reduce greenhouse gases, alleviate traffic congestion, and provide mobility to those who are unable to drive or do not own a car.*

Policy M-4.1: Sustaining Public Transportation

Support a level of transit service frequency and routing that promotes transit usage, avoids overcrowding, and makes transit an attractive alternative to driving.

Program M-4.1A: Transit Advocacy. *Support State, County, and regional efforts to sustain and expand Marin County's transit network. Work with neighborhoods, employers, transit providers, transportation planning agencies and funding agencies to improve and expand transit and paratransit services.*

Program M-4.1B: Evaluating Transit Needs. *Support efforts to track, forecast, survey, and respond to changing transit and paratransit needs in order to meet the requirements of specific population groups. Advocate for meaningful public participation in meetings and discussions with transit providers and ensure that the needs of those in the community who are transit-dependent are well represented. Encourage the use of performance measures and regular reporting by transit agencies to ensure services are being delivered as efficiently as possible.*

Program M-4.1C: Partnerships. *Encourage partnerships between local transit service providers to avoid redundancy, maximize coverage and efficiency, and improve transfers between transit systems.*

Program M-4.1D: Transit for Tourism. *Support efforts to provide effective transit options for visitors to West Marin and other County tourist destinations, in order to reduce regional traffic flow through San Rafael.*

Program M-4.1E: Transit Information. *Encourage the development and dissemination of information to facilitate transit use. This includes real-time, multi-lingual information on bus arrivals, departures, transfers, and routes. In addition, the City should include information on transit access on notices of City meetings and provide links to transit websites from its own website*

Program M-4.1F: Public Health. *Work with transit service providers to effectively respond to service and design challenges associated with rider safety during and after public health emergencies.*

Policy M-4.2: Regional Transit Options

Encourage expansion of regional transit connecting Marin with adjacent counties, including basic and express bus service, rail, and ferry service.

Program M-4.2A: Regional Bus Service. *Support expansion of regional bus service to and from other Bay Area counties, including expanded express bus service along the 101 and 580 corridors, and continued bus and shuttle service to the region's airports.*

Program M-4.2B: Rail Service. *Advocate for reliable long-term funding sources to sustain and enhance North Bay rail service.*

Program M-4.2C: Ferry and Water Taxi Service. *Work with the Golden Gate Bridge Highway and Transportation District and other regional agencies to support improved ferry service, additional ferry terminals, efficient connections between ferries and other transportation modes, new ferry routes (to Vallejo, the East Bay, San Francisco, and points south), autonomous buses, and other improvements that would increase ferry use and regional transit ridership. Consider the viability of water taxi service to supplement the ferry system and improve local connections.*

Policy M-4.3: SMART Improvements

Maximize the potential benefits of Sonoma Marin Area Rail Transit (SMART) while minimizing potential conflicts between SMART trains, adjacent land uses, bicycle and pedestrian movement, and vehicle traffic circulation. City plans and programs related to SMART should be periodically evaluated based on changes in funding, operating costs, ridership, and other factors impacting service levels.

Program M-4.3A: Rail Safety. *Work with SMART to improve safety measures along the SMART tracks, reduce train noise, and avoid the blockage of intersections by trains.*

Program M-4.3B: Passenger Pickup and Drop-Off. *Work with SMART on plans to improve passenger pick-up and drop-off, connectivity between trains and buses, and provisions for passenger parking (see also Policy M-7.9 on parking for transit users).*

Program M-4.3C: Arrival Experience. *Create a welcoming experience for passengers arriving at the Downtown San Rafael and Civic Center stations, including wayfinding signage, easy transfers, and clearly marked, well lit pathways to nearby destinations.*

Program M-4.3D: Service Reliability. *Work with SMART to avoid disruptions of service during power outages and provide backup power to sustain operations during and after emergencies.*

Program M-4.3E: Downtown Crossings. *Continue to work with SMART to reduce congestion related to grade-level train crossings in Downtown San Rafael. Encourage SMART to assess the potential cost, as well potential funding sources, to elevate the tracks through Downtown.*

See the Land Use Element for policies on encouraging transit-oriented development in the station areas.

Policy M-4.4: Local Transit Options

Encourage local transit systems that connect San Rafael neighborhoods, employment centers, and other destinations.

Program M-4.4A: Local Bus Service. *Support Marin Transit and Golden Gate Transit efforts to improve bus routing, frequency, and equipment, and to keep bus fares affordable.*

Program M-4.4B: Improved Bus Stops. *Support efforts to improve bus stops and shelters to provide a safe and pleasant experience for riders. Allow commercial advertising to fund bus shelter upgrades and maintenance.*

Program M-4.4C: Local Shuttle Programs. *Support efforts to create financially feasible shuttle, jitney, and circulator bus services to connect passengers arriving at the San Rafael Transit Center and SMART stations to their destinations.*

Policy M-4.5: Transit and the Environment

Encourage a less carbon-intensive transit system with reduced environmental impacts. This could include electrification of buses and trains, and the use of smaller vehicles in areas of lower demand. Environmental costs and benefits should be a critical factor when evaluating transit service improvements over the long- and short-term.

Policy M-4.6: Paratransit Options

Encourage expansion of paratransit and flexible route services as needed to serve specialized populations including seniors, students, and persons with disabilities.

Program M-4.6A: Other Local Transit. *Support Dial-A-Ride, taxi, and transportation network company (TNC) services serving San Rafael.*

Program M-4.6B: Paratransit Service. *Support continued Whistlestop Wheels service and expanded regional paratransit services where needed.*

Policy M-4.7: Intermodal Transit Hubs

Support efforts to develop intermodal transit hubs in Downtown and North San Rafael to provide safe, convenient connections for all travelers. Such hubs should include secure bicycle parking, EV charging

stations, and efficient drop-off and pick-up areas and create a positive experience for those arriving in San Rafael.

Program M-4.7A: Transit Center Relocation. *Complete the relocation process for the San Rafael Transit Center. Design of the facility should consider the effects on local street congestion and the safety of those walking or bicycling to and from the facility. Continue to work with transit service providers to coordinate schedules, transfers, and routing in a manner that is convenient for San Rafael travelers.*

Program M-4.7B: First Mile/ Last Mile Trips. *Work with TAM, transit agencies, neighborhood groups, and the local business community to improve options for "first mile/ last mile" trips connecting regional transit hubs to nearby destinations.*

Program M-4.7C: Implementation of Other Plans*. Implement the recommendations of the Downtown Precise Plan, the Downtown Station Area Plan, and the Civic Center Station Area Plan for coordination of transit services and improvement of connections between travel modes.*

Goal M-5: Safe, Attractive Streets that Connect the Community

Provide a transportation system that minimizes negative impacts on neighborhoods while maximizing access and connectivity in the community. *Local streets should be safe, attractive, and provide easy access to homes and businesses. Neighborhoods should be protected from the impacts of cut-through traffic, regional congestion, and overflow parking. Business districts should be conveniently connected to the neighborhoods around them. Residents should be able to comfortably travel to schools, parks, shopping, and workplaces without driving.*

Policy M-5.1: Traffic Calming

Protect residential areas from the effects of speeding traffic or traffic from outside the neighborhood through appropriate traffic "calming" solutions such as speed humps, bulb-outs, speed limits, stop signs, and chicanes. Traffic calming measures shall not conflict with emergency response capabilities.

Program M-5.1A: Traffic Calming Program. *Maintain a neighborhood traffic calming program under the direction of the City Traffic Engineer and seek funding for its implementation. Ensure neighborhood participation in the development and evaluation of potential traffic calming solutions.*

Program M-5.1B: Emergency Access Considerations. *Ensure that road redesign projects, including bicycle and pedestrian improvements, maintain evacuation capacity and emergency vehicle response time, particularly along designated evacuation routes.*

Policy M-5.2: Attractive Roadway Design

Design roadway projects to be attractive and, where possible, to include trees, landscape buffer areas, public art, public space, and other visual enhancements. Emphasize tree planting and landscaping along all streets.

Program M-5.2A: Landscape Maintenance. *Continue to regularly maintain landscaping along roadways, and to encourage attractive drought-tolerant and native plantings.*

See also Policy CDP-3.3 and 3.4 on landscaping and maintenance of City streets and Policy CSI-4.7 on street maintenance.

Policy M-5.3: Connected Neighborhoods

Identify opportunities to better connect San Rafael neighborhoods to one another and to improve access to local destinations such as schools, shopping, and workplaces. . Consider such connections as part of emergency response and evacuation planning.

> ***Program M-5.3A: East San Rafael Improvements.*** *Consider the potential for new or relocated roads in East San Rafael that would relieve local street congestion, increase efficiency, and improve access between the north and south sides of Interstate 580.*
>
> *See Program M-6.3A for a description of pathway improvements. Improvements are also addressed in the Neighborhoods Element.*

Policy M-5.4: Meeting Local Circulation Needs Around Highway Interchanges

Ensure that regional transportation projects located in San Rafael provide local benefits, address the safety of all travelers, and improve circulation between neighborhoods.

> ***Program M-5.4A: Interchange Improvements.*** *Work with Caltrans and TAM to ensure that the design of freeway interchange improvements includes measures to relieve local congestion, provide commuter parking, improve pick-up/ drop-off parking at bus stops, and enhance pedestrian and bicycle access and safety. This could include safe and separated underpass or overpass pedestrian and bike path crossings where needed.*

Policy M-5.5: School-Related Traffic

Actively encourage public and private schools to reduce congestion caused by commuting students and staff through improved provisions for pick-up and drop-off, parking management, staggered start and end times, and trip reduction.

> ***Program M-5.5A: School Transportation.*** *Implement measures to improve the safety and enjoyment of students walking, bicycling, or taking the bus to school. Examples include pedestrian crossing enhancements, transit passes or reduced rates for students, locating transit stops near school campuses, supporting increased funding for school buses and crossing guards, and staggering school hours.*
>
> *See also Policy CS-1.5 on coordination with schools*

Policy M-5.6: Truck Impacts

Manage truck traffic and deliveries in residential areas to avoid conflicts with local auto traffic, pedestrian and bicycle safety, parking, and adjacent uses.

> ***Program M-5.6A: Trucking Routes and Transportation Permits.*** *Continue to designate specific streets as trucking routes and maintain permit requirements for vehicles that exceed weight limits on non-designated routes.*
>
> ***Program M-5.6B: Quarry Traffic.*** *Continue, and periodically update, measures to mitigate the impacts of quarry-related truck traffic on Point San Pedro Road.*

Goal M-6: Safe Walking and Cycling

Encourage walking and bicycling as safe, pleasurable, healthful ways to travel. *Walking is an integral part of daily life and provides benefits to our health, the environment, and the character of our neighborhoods. Cycling is both a recreational activity and a practical way to complete short trips for many residents. Looking to 2040, walking and cycling will be supported by an expanded network of sidewalks, paths, crosswalks, bike lanes, and bike parking.*

Policy M-6.1: Encouraging Walking and Cycling

Wherever feasible, encourage walking and cycling as the travel mode of choice for short trips, such as trips to school, parks, transit stops, and neighborhood services. Safe, walkable neighborhoods with pleasant, attractive streets, bike lanes, and sidewalks should be part of San Rafael's identity.

Program M-6.1A: Bicycle and Pedestrian Master Plan Implementation. *Maintain San Rafael's Bicycle and Pedestrian Master Plan (BPMP) and update the Plan as required to ensure eligibility for grant funding. The BPMP should be a guide for investment in pedestrian and bicycle infrastructure, and for programs to make walking and cycling a safer, more convenient way to travel.*

Program M-6.1B: Station Area Plans. *Implement the pedestrian and bicycle improvements in the 2012 Downtown Station Area Plan and the 2012 Civic Center Station Area Plan.*

Program M-6.1C: Canal Community Based Transportation Plan (CBTP). *Update the CBTP for the Canal neighborhood, including provisions to improve walking and cycling within the Canal and East San Rafael communities, and better connect the Canal area to Downtown, the waterfront, and the rest of the community.*

Program M-6.1D: Funding. *Seek grant funding for implementation of the BPMP and other plans proposing bicycle and pedestrian improvements.*

Policy M-6.2: Pedestrian and Bicycle Safety

Identify, prioritize, and implement pedestrian and bicycle safety improvements in order to reduce collisions and injuries, and eliminate fatalities.

Program M-6.2A: Implementation of Safety Measures: *Implement pedestrian and bicycle safety measures as described in the 2018 BPMP, including ADA compliant curb ramps, curb extensions in business districts, median refuge islands, active warning beacons, painted bike "boxes" at intersections, and signal phasing adjustments in areas with high bicycle volumes.*

Program M-6.2B: Vision Zero. *Consistent with the BPMP, support a "Vision Zero" approach to safety among pedestrians and cyclists, with the goal of eliminating severe injuries and fatalities.*

Program M-6.2C: Enforcement. *Conduct enforcement activities to improve compliance with traffic safety laws, especially around intersections with frequent collisions.*

Program M-6.2D: Safe Routes Programs. *Work collaboratively with local schools to implement Safe Routes to School programs. Explore similar programs to promote safe routes to parks, work, services, and transit, as well as safe routes for seniors. (safe routes text box)*

Policy M-6.3: Connectivity.

Develop pedestrian and bicycle networks that connect residents and visitors to major activity and shopping centers, existing and planned transit, and schools. Work to close gaps between existing facilities. Funding and prioritization for projects should consider relative costs and benefits, including such factors as safety, number of potential users, and impacts on parking.

Program M-6.3A: Implementation of Pathway Improvements.: *Implement the major pedestrian and bicycle pathway, intersection, and lane improvements included in adopted City plans, including:*

- *Restoration of pedestrian paths, stairways, and rights-of-way, particularly in the "inner ring" neighborhoods around Downtown*
- *An east-west bikeway across Downtown San Rafael*

- *A north-south greenway and separated bicycle and pedestrian facilities along West Tamalpais Avenue*
- *Improved crossings of the San Rafael Canal, including a potential new crossing east of Grand Avenue*
- *Additional Class I, II, and IV lanes, as identified in the BPMP*
- *Improved signage, pavement markings and sidewalk widening*
- *Closing gaps in the Bay Trail*
- *Bike lane improvements to Point San Pedro Road (Cross-Marin Bikeway)*
- *Pedestrian/ bicycle "promenades" along the San Rafael Canal and in North San Rafael (Civic Center Station to Terra Linda Community Center, including Freitas Parkway and North San Pedro Road)*
- *Potential pedestrian crossing over 101 (in association with the I-580/101 reconstruction) and east-west pedestrian improvements under the 101 viaduct through Downtown.*

See the Neighborhoods Element for further descriptions of some of these improvements

Program M-6.3B: Improvements in the Unincorporated Area. *Integrate the recommendations of the Unincorporated Marin County Bicycle and Pedestrian Master Plan to create a seamlessly connected system that allows for easy bicycle travel between City and County neighborhoods. This includes improvements along Miller Creek Road and Las Gallinas Avenue in Marinwood.*

Program M-6.3C: Bicycle Parking. *Create additional bicycle parking and storage capacity at the SMART stations and in Downtown San Rafael.*

Program M-6.3D: Electric Bicycles: *Monitor and support the use of electric bicycles and periodically evaluate the need for standards, programs, and facilities that support their use.*

Policy M-6.4: Urban Trails Network

Identify, renovate, improve, and maintain an urban trails network to encourage walking and appreciation of historical and new pathways.

Program M-6.4A: Urban Trails Master Plan. *As part of a citywide Trails Master Plan, include an "urban trails" component with maps and descriptions of existing and potential urban trails in San Rafael. Urban trails to be identified include, but are not limited to, historic neighborhood stairways and walkways, Downtown alleyways, park pathways, and creekside paths. Identify potential funding sources for projects identified in the Plan projects and include the projects in the Capital Improvements Program.*

Policy M-6.5: Pilot Projects

Support pilot projects that install removable pedestrian and bicycle improvements on a short-term basis to test their effectiveness and public reception before investing in permanent improvements.

Policy M-6.6: Coordination

Work with other jurisdictions, transit agencies, and stakeholders to implement projects that reflect bicycle and pedestrian needs at the local and regional levels.

Program M-6.6A: Bikeshare Program. *Partner with the Transportation Authority of Marin (TAM) in implementation of a bikeshare program in Downtown San Rafael and at the Civic Center station. Consider possible locations for bike sharing "pods" at destinations throughout San Rafael, especially Downtown.*

Program M-6.6B: Monitoring. *Maintain data on the effectiveness of pedestrian and bicycle improvements and use this data to adjust programs as needed.*

Policy M-6.7: Universal Design

Design and construct bicycle and pedestrian facilities to serve people of all ages and abilities, including children, seniors, families, and people with limited mobility.

> ***Program M-6.7A: ADA Compliance.*** *Continue efforts to improve access for those with disabilities, including compliance with Federal and State accessibility requirements.*
>
> ***Program M-6.7B: Best Practices.*** *Continue to construct bicycle and pedestrian facilities according to the most up-to-date local, state, and national best practices and design guidelines.*

Policy M-6.8: Pedestrian and Bicycle Programming

Continue programs and activities to encourage walking and cycling.

> ***Program M-6.8A: Public Information.*** *Maintain public information on pedestrian and bicycle projects, routes, data, and information on the City's website.*
>
> ***Program M-6.8B: Bike to Work Day.*** *Encourage City employees, other San Rafael workers and residents to participate in Bike to Work Days and similar programs that encourage cycling as a viable commute alternative.*
>
> ***Program M-6.8C: Maintenance of Pedestrian and Bicycle Facilities.*** *Develop a program for prioritizing and funding the maintenance of existing pedestrian and bicycle facilities based on use, connectivity, and facility conditions.*

Goal M-7: Well-Managed Parking

Manage parking in a way that meets resident, business, and visitor needs while supporting the City's goal of a more sustainable transportation system. *Parking will be managed to support local businesses and enhance the quality of life in residential areas. In areas of high demand, a range of strategies will be used to balance supply and demand, including pricing, shared parking, on-site parking requirements, public-private partnerships, and similar measures that support mobility and economic vitality. Demand will be monitored over time to respond to trends and ensure appropriate design standards. Parking policies should support the goal of a walkable, transit-friendly environment while still recognizing the needs of motorists.*

Policy M-7.1: Optimizing Existing Supply

Optimize the use of the existing parking supply. Expand the supply where needed through innovative programs, public/private partnerships, and land use policies.

> ***Program M-7.1A: Shared Parking.*** *Encourage shared parking arrangements that serve private and public users (for example, private office parking lots that are available for nighttime public use).*

Policy M-7.2: Parking Districts

Encourage parking districts in areas of high demand. Such districts reduce the burden of providing off-street parking facilities on individual business owners and encourage shared facilities that meet the parking needs of multiple users.

Policy M-7.3: Parking Technology

Use technology to improve parking efficiency and reduce the land area required to meet parking needs.

Program M-7.3A: Downtown Parking and Wayfinding Study Recommendations. *Implement the technology recommendations of the 2017 Downtown Parking and Wayfinding Study and consider the application of these recommendations to other parts of San Rafael.*

Policy M-7.4: Downtown Parking

Maintain a sufficient number of Downtown parking spaces to meet demand and support local businesses.

Program M-7.4A: Monitoring Demand. *Monitor demand for parking around the Downtown SMART station and San Rafael Transit Center to determine the need to adjust parking time limits and costs, and the need to increase supply.*

Program M-7.4B: Assessment District Expansion. *Modify the Downtown Parking Assessment District boundaries to include the areas east to Hetherton and west to E Street. Pursue parking and other transportation-related services and improvements in the expanded area.*

Program M-7.4C: Private Garages. *When new private parking structures are constructed Downtown, encourage the inclusion of spaces that are available for public use (at rates to be set by the owner). Consider development agreements and public private partnerships that support such set-asides.*

Program M-7.4D: Wayfinding Signage. *Improve wayfinding signage for Downtown parking. Undertake marketing programs to make drivers and pedestrians more aware of the location of parking and convenience of Downtown parking lots and garages.*

Program M-7.4E: Design Standards for Parking Garages. *Develop design standards for parking garages to ensure that they maintain architectural integrity, are easy to use, align pedestrians toward their destinations, and can support ancillary activities where they front pedestrian-oriented streets.*

Policy M-7.5: Dynamic Pricing

Consider dynamic pricing options (e.g., varying prices at different times of the day) to manage parking in high-demand locations such as Downtown. Parking rates should distribute demand more evenly and achieve the most efficient use of space. Rates should be periodically adjusted to reflect demand, operating costs, and changes in technology.

Program M-7.5A: Adjustments to Parking Rates. *Establish a formal system for setting and periodically re-evaluating parking rates based on performance, costs, best practices, and similar factors. Rates should be based on occupancy data and designed to support fiscal health, as well as the needs of residents, businesses, workers, and visitors. As needed, the City Code should be modified to establish principles for parking management as well as a process for rates to be reviewed based on specified metrics.*

Policy M-7.6: Off-Street Parking Standards

Maintain off-street parking standards that adequately respond to demand, minimize adverse effects on neighborhoods, and sustain local businesses.

Program M-7.6A: Adjustments to Parking Standards*. Periodically adjust off-street parking requirements to respond to data on parking needs, and trends in vehicle design, car ownership, and travel behavior.*

Program M-7.6B: Parking Reductions. *Allow reduced parking subject to findings that a project will have lower vehicle ownership rates (for example, for senior housing or housing adjacent to a SMART station).*

Policy M-7.7: Parking Management

Proactively manage street parking in areas of heavy demand and areas where parking affects neighborhood character, convenience, and safety.

> ***Program M-7.7A: Residential Permit Parking.*** *Re-evaluate provisions for residential permit parking to make it easier and less costly to implement such programs.*
>
> ***Program M-7.7B: Parking Studies.*** *Periodically conduct neighborhood and business district parking studies. Use these studies as the basis for parking management strategies.*
>
> *See also Policy LU-3.7 on on-street parking in neighborhoods*

Policy M-7.8: Parking for Alternative Modes of Transportation

Designate parking spaces to incentivize and encourage carpooling, electric vehicles, and other more sustainable modes of travel.

> ***Program M-7.8A: Charging Stations.*** *Install additional electric vehicle chargers in public parking lots and garages. Consider expanding electric charging requirements for private parking lots and structures.*
>
> ***Program M-7.8B: Parking Standards.*** *Periodically revisit off-street parking standards to include incentives or additional standards for clean air vehicles, bicycles, shared vehicles, and other low-emission travel modes.*

Policy M-7.9: Parking for Transit Users

Support regional efforts to fund and construct commuter parking along transit routes, near commuter bus pads, and near inter-modal commuter hubs in order to support use of transit. Parking areas should include secure parking for carpools, bicycles and other alternative modes and should minimize neighborhood impacts.

> ***Program M-7.9A: Commuter Parking.*** *Regularly evaluate the need for parking around the SMART stations and San Rafael Transit Center, as well as ways to meet that need.*
>
> *See also Program M-7.5D on wayfinding signage*

Policy M-7.10: Curbside Management

Plan for on-street parking in a way that considers broader curbside needs associated with loading, deliveries, passenger pick-up and drop-off, cycling, and other activities. Curb space should be managed to recognize changing needs throughout the day and night.

COMMUNITY SERVICES AND INFRASTRUCTURE ELEMENT

Goal CSI-1: Educational Excellence

Promote excellent schools and high-quality, equitable education. *The City will support school district and County Office of Education efforts to ensure access to quality education for everyone. San Rafael's schools will provide a safe, supportive, and collaborative learning environment that engages all students. Lifelong learning will be supported through adult education, literacy tutoring, career development, and technology courses.*

Policy CSI-1.1: Educational Programs

Collaborate with schools to foster educational programs and opportunities that benefit the community.

> ***Program CSI-1.1A: Communication.*** *Maintain regular communications with the School Districts, including periodic joint City Council/ School Board meetings, to foster collaboration and address issues of mutual interest.*
>
> ***Program CSI-1.1B: Partnerships with Schools.*** *Participate in school initiatives to educate students about local issues and City government.*
>
> ***Program CSI-1.1C: Higher Education.*** *Expand partnerships with Dominican University, the College of Marin, and other nearby colleges and universities to support local education and lifelong learning.*
>
> *See Goal EDI-5 for additional guidance on educational programming. See Policy LU-2.7 and Policy EDI-5.1 for guidance on child care.*

Policy CSI-1.2: Schools as Community Hubs

Collaborate with schools to provide greater public access to school facilities for neighborhood and community activities.

> ***Program CSI-1.2A: Joint Use Agreements.*** *Develop joint use agreements with the School Districts and other local academic institutions to improve community access to facilities for recreation, child care, and/or community events.*
>
> *See Policy PROS-1.12 for additional guidance on joint use agreements*

Policy CSI-1.3: Relationship to Business Community

Strengthen the relationships between businesses, non-profits, and schools to enhance the quality of education and support workforce development. This should include a better understanding of local business needs, as well as opportunities to meet those needs through academic partnerships.

> ***Program CSI-1.3A: Internships.*** *Provide City-sponsored internships for working-age students and assist with publicity about other internship opportunities through partnerships with the Marin County Office of Education and others. Encourage and facilitate local businesses and non-profits to provide internships, apprenticeships, mentoring, and vocational programs.*

See Policies EV-1.8 and EDI-5.4 for additional guidance on job training, mentoring, and workforce development

Policy CSI-1.4: Lifelong Learning

Offer programs and classes that provide the whole community with opportunities for lifelong learning (i.e., opportunities to continue learning beyond formal education and job training).

***Program CSI-1.4A: City Programs and Classes**. Continue to offer a variety of City-sponsored leisure, recreation, education, and personal enhancement courses and programs for all age groups. Regularly assess participation and public opinion to determine interest and support.*

Policy CSI-1.5: Campus Land Use and Transportation Issues

Work with San Rafael City Schools, the Miller Creek School District, local private schools, and neighborhood organizations to address traffic, parking, and land use issues on and around school campuses.

***Program CSI-1.5A: School Construction Projects.** Coordinate with school personnel on campus construction, modernization, and improvement projects.*

***Program CSI-1.5B: Long-Range Planning and Development Review.** Collaborate with schools on long range planning and development review, including collection of appropriate fees, enrollment projections, and planning for future improvements.*

See Mobility Element Program M-3.3D and Policy M-5.5 on staggering school start and end times to reduce peak hour congestion. See Program M-6.2D for Safe Routes to School Programs

Policy CSI-1.6: Private Schools

Recognize the role of private (e.g., independent) schools in San Rafael's education system and their potential as community partners and resources.

Goal CSI-2: Modern, Welcoming Libraries that Meet Community Needs

Enhance library services and facilities to meet the informational and recreational needs of the community. *San Rafael's public library system will provide an expanded collection of materials, increased access to services and programs, and attractive, comfortable facilities for patrons. New and improved facilities will enable the City's libraries to fulfill their role as places to learn, explore, discover, and grow.*

Policy CSI-2.1: Library Facilities

Improve library facilities to meet current and future needs and recognize the changing role of libraries in community life.

***Program CSI-2.1A: New Main Library.** Fund, develop, and construct a new Main Library designed to provide adequate space for collection materials, City programs, public meeting rooms and technology, seating for visitors, and services for special user groups such as children and teens. Develop adaptive reuse plans for the historic Carnegie Library as part of library planning.*

Policy CSI-2.2: Branch Libraries

Expand community-based library services in East and North San Rafael to ensure that library services are accessible to everyone in the community.

***Program CSI-2.2A: Pickleweed and Northgate Libraries**. Modernize and expand the Pickleweed and Northgate Libraries so they are adequately equipped to deliver the services needed in the surrounding communities.*

***Program CSI-2.2B: School Libraries.** Consider partnerships with the school district to make high school libraries available to the public.*

Policy CSI-2.3: Library Collections

Expand and adapt library collections to meet the changing needs of the community and respond to technological change, while preserving a core collection of materials of continuing value. This should include Spanish language materials.

Policy CSI-2.4: Libraries as Community Centers

Promote programs and events that affirm the role of the City's libraries as community gathering places and a setting for the open exchange of ideas and information.

> ***Program CSI-2.4A: Focused Services.*** *Provide dedicated library programs for children, youth, older adults, and Spanish-speaking residents. Provide other services, such as free internet access and electrical power during an emergency.*
>
> ***Program CSI-2.4B: Literacy Programs.*** *Continue to offer literacy and tutoring programs for English learners, as well as support and training for volunteer tutors.*

Goal CSI-3: Exceptional Public Safety Services

Provide and maintain exceptional fire, public safety, and paramedic services. *San Rafael's Police Department engages with the community to provide professional, fair, compassionate and dedicated law enforcement services with integrity and respect. San Rafael's Fire Department strives to provide quality public fire services, and to deliver fire and emergency medical services with skill, strength, and dedication. In its delivery of public safety services, the City will be a countywide and regional leader in addressing issues related to equity and social justice.*

Policy CSI-3.1: Investment in Public Safety Services

Maintain cost-effective police, fire protection, and paramedic facilities, equipment, and services. Manage increases in costs through effective preventative measures, such as fire prevention and community policing.

> ***Program CSI-3.1A: Police Department Strategic Plan.*** *Develop a Strategic Plan for police services to evaluate trends, establish goals, prioritize future actions, determine budget needs, and align services with other City departments. The Plan should include a proactive response to issues relating to social justice and compassionate law enforcement. Engage the community, including local businesses, in this process.*
>
> ***Program CSI-3.1B: Capital Facilities.*** *Complete improvements to essential public safety facilities made possible by voter-approved measures. Conduct periodic evaluations of facility and technology needs in the future to ensure that the Police and Fire Departments are equipped to respond to emergencies and deliver quality services.*
>
> ***Program CSI-3.1C: Public Safety Training****. Provide and encourage ongoing employee training to ensure public safety staff skills remain current and innovative. Continue to provide training in de-escalation and least harm techniques, as well as mental health and racial bias training.*
>
> ***Program CSI-3.1D: Vehicle and Equipment Maintenance.*** *Maintain and upgrade vehicles and equipment as necessary*.

Policy CSI-3.2: Mitigating Development Impacts

Engage the Police and Fire Departments in the review of proposed development and building applications to ensure that public safety, fire prevention, and emergency access and response needs are considered and effectively addressed.

Program CSI-3.2A: Crime Prevention through Environmental Design. *Design new public and private development to achieve "eyes on the street," including site planning, lighting, landscaping, and architectural design features that reduce the potential for crime.*

Program CSI-3.2B: Emergency Response Time. *Use the development review process to identify appropriate measures to reduce fire hazards and ensure adequate emergency response capacity.*

See Safety Element Programs S-4.2A, S-4.3A and S-4.3B for guidance on landscaping and building design measures to reduce fire hazards and maintain defensible space, and to ensure adequate emergency access and water supply for fire-fighting.

Policy CSI-3.3: Community-Based Public Safety

Actively promote a community-based approach to public safety services. This approach should emphasize a high degree of communication and interaction between officers, residents, neighborhood groups, schools, and businesses.

Program CSI-3.3A: Community Safety Programs*. Implement community public safety programs such as National Night Out and the Citizens Police Academy to support a safer community and promote positive relationships between law enforcement officials and residents. Implement similar programs promoting fire prevention and preparedness.*

Program CSI-3.3B: Business Outreach. *Engage the business community in public safety program development and implementation. This should include increasing awareness of existing programs and developing new initiatives and partnerships to address property crime and other public safety issues affecting local businesses.*

See the Safety Element for a discussion of emergency preparedness and wildfire prevention programs

Policy CSI-3.4: Quality of Life Programming

Maintain programs to proactively address quality of life issues, such as peace disturbances, loitering, littering, and vandalism. Focus on personal contact with residents and businesses and build positive relationships with all segments of the community.

Program CSI-3.4A: Foot Patrol Services. *Maintain and potentially expand foot patrol services. Continue to work with homeless service organizations, mental health professionals, and the business community to create a safe, welcoming environment in Downtown San Rafael and other parts of the city.*

Policy CSI-3.5: Traffic Safety

Maintain traffic enforcement programs to ensure the safety of pedestrians, bicycles, and motorists on San Rafael streets, sidewalks, paths, and bikeways. Evaluate and mitigate potential traffic hazards as changes to the circulation system are proposed, and as new modes of travel are introduced.

See Mobility Policy M-6.2 for additional guidance on traffic safety.

Policy CSI-3.6: Mutual Aid

Maintain mutual aid agreements for police and fire service with other jurisdictions and community service districts to ensure that the capacity exists to adequately respond to local emergencies.

See the Safety Element for policies on communication systems improvements

Goal CSI-4: Reliable, Efficiently Managed Infrastructure

Support reliable, cost-effective, well-maintained, safe and resilient infrastructure and utility services. *Streets, water, sewer, storm drainage, energy and telecommunication systems will be managed by the City and allied agencies to sustain high-quality service delivery, while protecting the environment and responding to the challenges of a changing climate. Advances in technology will improve service quality, efficiency, security, and sustainability. A high level of communication and coordination will take place between service providers, ensuring that assets are prudently managed and funding is provided for capital, operating, and maintenance costs.*

Policy CSI-4.1: Capital Investment

Provide for ongoing, preventative maintenance of infrastructure and timely replacement, repair, and upgrading of City equipment.

> ***Program CSI-4.1A: Capital Improvement Programming.*** *Maintain and regularly update a multi-year Capital Improvement Plan (CIP) covering City owned and operated infrastructure and public facilities. Seek the input of other local service providers (MMWD, LGVSD, etc.) when preparing the City's CIP and encourage these agencies to seek City input as they prepare their own CIPs.*
>
> ***Program CSI-4.1B: Funding for Maintenance and Capital Costs.*** *Consider ways to improve the reliability of maintenance funding, such as establishing a reserve fund or voter-approved parcel taxes and special assessments. Identify potential funding sources for unmet and anticipated future capital project needs, such as grants, bond measures, and impact fees.*
>
> ***Program CSI-4.1C: Community-Supported Services.*** *Consider community-supported (e.g., cooperative) services as an alternative to bring fundamental service upgrades to neighborhoods and managing capital costs.*

Policy CSI-4.2: Adequacy of City Infrastructure and Services

As part of the development review process, require applicants to demonstrate that their projects can be adequately served by the City's infrastructure. All new infrastructure shall be planned and designed to meet the engineering standards of the City and various local service and utility providers.

See also Policy LU-1.2 requiring adequate infrastructure as a condition of development approval

> ***Program CSI-4.2A: Long-Term Planning.*** *Continue to use the CIP to analyze and respond to local capital facility needs.*
>
> ***Program CSI-4.2B: Engineering Standards.*** *Require new development to comply with the subdivision standards in the San Rafael Municipal Code, as well as relevant Marin County and utility district engineering standards. Where feasible, encourage development to reach beyond current standards and collaborate with the community to innovate and define new best practices.*
>
> ***Program CSI-4.2C: Impact Fees.*** *Continue to collect impact fees and use other funding mechanisms to ensure that new development pays its fair share of providing/ upgrading services associated with that development.*

Policy CSI-4.3: Public Involvement in Infrastructure Planning

Encourage public participation in the planning and design of City infrastructure projects. As resources allow, this could include advisory committees, task forces, and similar community consultation efforts.

> ***Program CSI-4.3A: Design Review.*** *Require design review for City projects. Provide complementary design review for major projects proposed by other public agencies.*

Program CSI-4.3B: CIP Process. *Continue to make the City's CIP easily available and to solicit public input in the CIP process, including web-based and social media applications that facilitate community feedback.*

Policy CSI-4.4: Sustainable Design

Plan, design, and operate infrastructure to minimize non-renewable energy and resource consumption, improve environmental quality, promote social equity, and reduce greenhouse gas emissions. An evaluation of costs and benefits must be a factor in all improvements. This includes the potential costs of inaction and potential for "avoided costs," particularly with respect to climate change.

Program CSI-4.4A: Public Space and Infrastructure. *Seek opportunities to improve environmental quality in the design of streets, infrastructure, and public spaces. For example, public space improvements provide an opportunity to retain and treat stormwater through groundwater infiltration and subsurface water storage.*

Program CSI-4.4B: Reducing Impervious Surfaces. *Pursue porous pavement, rain catchment areas, and similar elements that reduce runoff.*

See also Green Streets policies and programs in the Conservation/ Climate Change Element

Policy CSI-4.5: Infrastructure Technology

Encourage the use of technology to improve service efficiency and environmental quality.

Policy CSI-4.6: Climate Change Impacts

Incorporate sea level rise and increased storm intensity forecasts in the planning and design of local infrastructure projects.

See also Policy S-2.3 on Infrastructure Resilience and Program S-1.3A on Critical Public Facilities

Program CSI-4.6A: Guidance Document. *Prepare a guidance document for incorporating sea level rise into the City's capital planning process.*

Program CSI-4.6B: Coordination with Service Providers. *Coordinate with water, sewer, energy, solid waste, and telecommunication service providers to prepare a plan for retrofitting critical infrastructure for rising sea levels, more intense storms, and other climate-related impacts.*

Policy CSI-4.7: Street Maintenance

Provide efficient, effective street maintenance, sweeping, and lighting programs. Safe, well-maintained neighborhood streets are an important part of the public realm and the local transportation network.

Program CSI-4.7A: Pavement Management*. Continue participation in the Pavement Management Program to assist in prioritizing street resurfacing projects. Adjust prioritization criteria as needed to ensure that pavement condition, traffic safety, equity, and community input are addressed.*

Program CSI-4.7B: Street Sweeping. *Continue to maintain a street sweeping program. Work with neighborhoods on ways to improve street sweeping efficiency and to publicize street sweeping programs. Investigate alternative funding sources for street sweeping.*

Program CSI-4.7C: Sidewalk Repair. *Continue to implement a cost-sharing program for Sidewalk Repair with residential property owners that is consistent with the State Streets and Highway Code, property owner interest, and funding availability. The success of the program, as well as sidewalk conditions and repair priorities, should be monitored. Potential funding sources and other cost-sharing approaches should be considered to address equity.*

Program CSI-4.7D: Street Lighting Program. *Continue efforts to improve street lighting, staying mindful of the need to balance financial, public safety, and environmental objectives.*

See also Policy C-1.19 and Program C-1.19A on night lighting and dark skies. See Policy C-1.16 on urban forestry and Policy CD-5 on street trees. See Policy EDI-4.2 on equitable maintenance.

Policy CSI-4.8: Potable Water Supply and Delivery

Work with Marin Municipal Water District (MMWD) to meet projected water demand, encourage water conservation, and ensure the reliability and safety of the water supply and distribution system.

Program CSI-4.8A: Urban Water Management Plan. *Support MMWD's efforts to regularly update and implement an Urban Water Management Plan.*

Program CSI-4.8B: Water Supplies. *Monitor efforts by the MMWD to implement conservation standards and expand the local water supply to meet long-term needs and potential future drought conditions. If desalination facilities are proposed along the bayfront in the future, ensure adequate review of environmental, design, and economic issues.*

Program CSI-4.8C: Water Pressure and Storage. *Work with MMWD to ensure that water pressure and storage remains adequate for fire-fighting, and to implement standards for new development that ensure adequate water flow.*

See also Policy C-3.8 on water conservation

Policy CSI-4.9: Wastewater Facilities

Ensure that wastewater collection, treatment and disposal infrastructure is regularly maintained and meets projected needs. Improvements should be programmed to meet state and federal standards, respond to sea level rise and seismic hazards, repair and replace aging or leaking pipes, and protect environmental quality.

Program CSI-4.9A: Coordination of Services. *Support efforts by the Las Gallinas Sanitary District, Central Marin Sanitation Agency and San Rafael Sanitation District to maintain high-quality wastewater collection and treatment facilities.*

Policy CSI-4.10: Storm Drainage Facilities

Continue to monitor and pursue improvements to the storm drainage system, including programs to reduce flooding, improve water quality, remove trash, and respond to climate-related changes. Evaluate the potential for restoration of the natural hydrologic function of creeks and drainageways where possible.

Program CSI-4.10A: Replacement of Aging Facilities. *Pursue the replacement of older or failing drainage facilities such as metal pipes and stormwater pumping stations with more durable and resilient materials, or with new structures and pumps.*

Program CSI-4.10B: Silt Removal. *Continue to remove accumulated silt from City maintained drainageways, ponds, and creeks subject to tidal siltation such as Mahon and Irwin Creeks. Sediment from stream flow and deposition should be considered a potential resource.*

Program CSI-4.10C: Sustainable Stormwater Management. *Seek funding for projects that restore the natural characteristics and functions of stormwater systems, such as bioswales and conversion of concrete ditches to natural creeks. Such projects should mitigate the effects of urban runoff, reduce flood hazards, and improve water quality and habitat value*

See Conservation / Climate Change Element Policies C-3.3 and C-3.4 for additional guidance on "green Infrastructure"

Policy CSI-4.11: Canal Dredging

Periodically dredge the San Rafael Canal to reduce flood risks, maintain environmental health, and keep the canal viable as a commercial and recreational waterway. Dredge spoils should be disposed in an environmentally sensitive manner.

Program CSI-4.11A: Funding. *Utilize federal Army Corps of Engineers funds to survey and plan for Canal dredging. Pursue additional funding for dredging and maintenance, and for levee repair and sea level rise adaptation improvements.*

Policy CSI-4.12: Recycled Water

Encourage additional wastewater recycling by the Las Gallinas Valley Sanitary District, initiation of wastewater recycling by the Central Marin Sanitation Agency, additional recycled water distribution by MMWD, and additional use of reclaimed water where supply ("purple pipe") is available.

Program CSI-4.12A: CMSA Capacity Expansion. *Support implementation of the CMSA/ MMWD Recycled Water Study recommendations, enabling increased use of recycled water and reduced potable water demand.*

Program CSI-4.12B: Las Gallinas Expansion Project. *Support completion of the Recycled Water Expansion Project and continued expansion of recycled water capacity.*

Program CSI-4.12C: Sewer Line Replacement. *Replace low-lying sewer pipes as needed to reduce saltwater intrusion, thereby reducing the cost of producing reclaimed water.*

Policy CSI-4.13: Energy Reliability

Support efforts by local energy service providers and other public agencies to improve the safety and resilience of the local power grid.

Program CSI-4.13A: Backup Energy Provision. *Evaluate backup energy provisions for critical public facilities, mass transit (including rail crossings), and wireless infrastructure and upgrade as needed. Encourage the use of fuel cell, battery storage, and solar generator backups, rather than gasoline-powered generators.*

Program CSI-4.13B: Microgrids. *Encourage further exploration of microgrids, allowing locally-generated renewable energy networks to supplement the electrical distribution system and provide back-up power in the event of an emergency,*

Program CSI-4.13C: Emergency Power and Communication. *Use public facilities as emergency centers for electricity, communication, and cooling in the event of a disaster, extreme heat event, or extended power outage.*

Policy CSI-4.14: Utility Undergrounding

Continue to pursue undergrounding of overhead utility lines, and support maintenance and replacement programs to reduce wildfire hazards.

Program CSI-4.14A: Funding for Undergrounding. *Explore funding opportunities and financing mechanisms to accelerate the undergrounding of utilities, including Rule 20A and B funds, private funding, and assessment districts.*

Program CSI-4.14B: Prioritizing of Undergrounding Projects. *Develop a process to prioritize utility undergrounding projects. Among the factors to be considered are aesthetics, visibility, fire hazards, and vulnerability to flooding and sea level rise.*

Program CSI-4.14C: Public Information. *Provide information to the public on the costs of undergrounding projects, and the options for funding.*

See the Safety Element for additional policies and programs on fire safety and power lines

Policy CSI-4.15: Technology Infrastructure

Upgrade the City's technology infrastructure to improve public access to City services.

Program CSI-4.15A: Technology Improvement Plan. *Develop and maintain a multi-year plan for funding and prioritizing major City technology projects.*

Policy CSI-4.16: Telecommunication Improvements

Ensure that residents, schools, businesses and organizations have access to reliable, modern and cost-effective telecommunications. A variety of network options, including fiber optics and wireless, should be encouraged and expanded throughout the city.

Program CSI-4.16A: Fiber Optic Infrastructure*. Continue to encourage and permit the expansion of fiber optics infrastructure from existing "backbone" conduits to potential "last mile" customers.*

Program CSI-4.16B: Service Providers. *Work with telecommunication service providers to improve access to state-of-the-art systems and services.*

Program CSI-4.16C: Reliability. *Support efforts to "harden" mobile communication infrastructure so it is operational or can be quickly restored during a power outage or emergency,*

See the Community Design Element for policies to mitigate the visual effects of antennae and collocate new telecommunication facilities

Policy CSI-4.17: Reducing Landfilled Waste Disposal

Reduce landfilled waste disposal and related greenhouse gas emissions by reducing material consumption; requiring curbside collection and composting of organic materials; increasing recycling, re-use, and resource recovery; and encouraging the use of recyclable goods and materials.

Program CSI-4.17A: Waste Reduction. Implement waste reduction programs consistent with the San Rafael Climate Change Action Plan and Zero Waste Goal. These include partnerships with Zero Waste Marin, Marin Sanitary Service, and other organizations; requirements for construction and demolition debris recycling; increased monitoring of waste diversion targets; waste audits; and additional infrastructure for removal of recoverable materials from the waste stream.

Program CSI-4.17B: Recycling*. Continue recycling programs and expand these programs to increase waste diversion rates for homes, apartments and workplaces. .*

Program CSI-4.17C: Construction and Demolition Waste. *Continue to implement programs requiring recycling of construction and demolition debris. Encourage the reuse of recycled building materials in future projects.*

Program CSI-4.17D: Waste Reduction Programs. *Continue efforts to reduce electronic waste, refrigerants, and single use plastics; and ensure proper disposal of household hazardous waste. This should include enforcement of City bans on plastic bags and polystyrene foam and potential new programs to reduce microplastics from waterways,*

Program CSI-4.17E: Community Composting. *Consider a mandatory community-scale program for curbside collection and composting of food and green waste, as well as vegetation cleared through fire prevention efforts.*

Program CSI-4.17F: Food to Energy. *Support the Central Marin Sanitation/ Marin Sanitary Food to Energy Program.*

Program CSI-4.17G: Recyclable Waste Receptacles. *Support efforts by Marin Sanitary to install waste receptacles for recyclables in areas of heavy pedestrian traffic.*

Policy CSI-4.18: Waste Reduction Advocacy and Education

Work with other cities and the County of Marin to advocate for programs and legislation to reduce waste and share waste reduction responsibilities with the manufacturers of consumer products.

Program CSI-4.18A: Recycling Education. *Encourage Marin Sanitary to continue its recycling education programs and to expand awareness of "reduce, reuse, and recycle" principles among all residents and employees. Programs to promote reuse and repair of consumer goods rather than landfill disposal should also be supported.*

Goal CSI-5: Sound Municipal Financial Practices

Maintain sound financial practices and sufficient revenue sources to provide high quality City services. *San Rafael provides a broad range of services to meet diverse community needs. Maintaining and enhancing the City's revenue base is essential to providing desired services. The City continues to implement sound financial practices to maintain and improve services while minimizing the cost burden to residents and businesses.*

Policy CSI-5.1: Cost-Benefit Analysis

Incorporate cost-benefit analysis to better understand the costs and impacts of City projects and programs relative to the revenues they may generate and benefits they may provide.

Program CSI-5.1A: Cost-Benefit Methodology. *Develop guidelines and procedures to more formally incorporate cost-benefit and fiscal impact analysis in the evaluation of new projects and programs.*

See also Policy M-2.3 on cost-benefit analysis for transportation improvements

Policy CSI-5.2: Transparent Budgeting

Maintain an open dialogue with the public during the budget process to evaluate and prioritize City services.

Program CSI-5.2A: Public Involvement.

Continue to involve residents and businesses in the budget process to the extent feasible, through community meetings, focus groups, social media, and other outreach methods. Issues associated with rising pension costs also should be reported in a transparent manner.

Policy CSI-5.3: Program Assessments

Evaluate the performance of City programs and services in achieving their stated goals as part of the City's budget process. Retain, adjust or eliminate programs or services as appropriate.

Program CSI-5.3A: Program Assessment. *Continue to provide budget and finance progress reports to the City Council. Continue to use benchmarks and quantifiable metrics, as well as qualitative evaluations, to monitor performance and determine progress in achieving program goals and objectives.*

Program CSI-5.3B: Surveys. *Regularly survey residents on their satisfaction with specific City services and programs (see also Program EDI-1.3B).*

Policy CSI-5.4: Diversifying Funding Sources

As an alternative to increased taxation, pursue methods to diversify funding sources for public services, including grants, public-private partnerships, user fees for specific services, and development fees. As appropriate, the City should also consider streamlined services that cost less to deliver.

Program CSI-5.4A: Revenue Monitoring. *Continue to maintain a revenue monitoring system to assist in trend analysis and revenue forecasting.*

Program CSI-5.4B: Grants. *Actively seek grants and encourage interdepartmental cooperation in preparing grant applications.*

Program CSI-5.4C: Cost of Services. *Periodically evaluate the cost of providing services and adjust revenue sources accordingly.*

Program CSI-5.4D: New Revenue Sources. *Consider establishing new revenue sources to adequately fund services and respond to changing conditions, including sources that require voter approval.*

Policy CSI-5.5: Local Government Partnerships

Partner with other local governments and organizations to provide community services and resolve shared problems cost-effectively.

Program CSI-5.5A: Funding Strategies for Infrastructure and Services. *In cooperation with other jurisdictions, develop funding strategies and joint powers agreements for infrastructure and services that create economies of scale for the contributing parties.*

Policy CSI-5.6: Public-Private Partnerships

Explore public-private partnerships as a way to develop community facilities or achieve other community benefits (for example, public parking, affordable housing, and child care in new development projects).

ARTS AND CULTURE ELEMENT

Goal AC-1: Arts and Culture that Enrich Community Life

Recognize the potential for the arts to enrich and inspire residents, build a sense of community, bridge differences and forge unity, attract visitors, revitalize the city, and provide economic benefit. *Arts and culture are integral parts of San Rafael's quality of life and civic identity. Art connects us, expands our awareness of the world, and makes us stronger as a community. San Rafael has a thriving arts, cultural, and literary scene, with programs, performances, events and venues that serve a diverse and engaged population.*

Policy AC-1.1: Cultural Center of Marin

Continue to promote San Rafael as the hub of arts and culture in Marin County.

> ***Program AC-1.1B: Arts Facilities.*** *Support and encourage efforts to improve and sustain local arts facilities, including those operated by government, non-profits, and other organizations, and recognize their role in making San Rafael a regional arts hub.*
>
> ***Program AC-1.2A: Falkirk Cultural Center.*** *Promote the Falkirk Cultural Center as a venue to support and foster the arts and celebrate local culture. Seek funding to rehabilitate and improve the mansion and sustain programs through income-producing activities.*
>
> ***Program AC-1.1C: Arts and Culture Master Plan.*** *Build on the work done by the County of Marin and San Rafael-based arts organizations to create a San Rafael Arts and Culture Master Plan. All segments of the community, including residents and workers, should be encouraged to participate in this process. The Plan should promote participation of the arts community in civic life, enhance arts programming, promote cultural inclusion, and maximize opportunities for arts events. Potential funding sources for a Master Plan and its implementation should be explored. As part of this process, options for ongoing leadership and arts advocacy should be considered, potentially including an Arts Council or similar organization.*

Policy AC-1.2: Arts Programming

Encourage and support an array of cultural arts programs and activities addressing the needs and interests of the whole community.

> ***Program AC-1.2A: City Activities.*** *Continue to provide City-sponsored arts classes and cultural activities, including arts programs at San Rafael's community centers. Programs should be equitably distributed around the City so that they can be accessed by all residents.*
>
> ***Program AC-1.2B: Programs for Diverse Populations.*** *Encourage additional inclusive arts programming for the general public, including persons of all socio-economic means, ages, ethnicities, genders, and abilities. Special emphasis should be placed on programs for youth, children, and older adults.*
>
> ***Program AC-1.2C: Advocacy for Arts Programming****. Advocate for continued arts programming in public schools and other venues.*
>
> ***Program AC-1.2D: Public Information.*** *Work with local arts organizations to improve public awareness of local venues, galleries, exhibits, events, performances, and opportunities to participate in arts and cultural events in the city. Provide links to such information on the City's website and strengthen the website as a resource for the arts community.*

Policy AC-1.3: Partnerships

Promote and strengthen partnerships and collaborative arts programming with local artists, schools and institutions of higher learning, community-based organizations, the County of Marin, the private sector, and non-profit arts organizations.

> ***Program AC-1.3A: Venues.*** *Encourage arts groups, schools, and businesses to conduct programs in City venues. Seek opportunities for the City to use County, institutional, and private space for its arts activities.*

Policy AC-1.4: Inclusive Activities

Encourage activities, entertainment and events that reflect San Rafael's diverse cultural heritage and population. Programming should be inclusive of all ages, ethnicities, genders, abilities, and socio-economic groups. Participation in the arts should be supported as a way to promote intercultural understanding, and to bridge differences and forge unity. All residents should have access to arts and cultural activities.

> ***Program AC-1.4A: Equitable Programming.*** *Improve cultural equity and access to arts programming among lower income and non-English speaking residents (for example, through new partnerships, training, outreach strategies, multi-lingual initiatives, and reduced fees for qualifying residents).*

Policy AC-1.5: Public Art

Promote a stimulating and engaging environment through the greater display of public art, including both temporary and permanent works. Locations throughout the city should be considered.

> ***Program AC-1.5A: Art in Public Places.*** *Evaluate the feasibility of an Art in Public Places Ordinance (or "percent for art" program) that would establish a funding source and/or mechanism for increasing public art. Strive for solutions that maximize flexibility in the way funds are collected and used.*

> ***Program AC-1.5B: Community-Based Outdoor Art Installations****. Support participatory public art projects that engage the community, such as murals, 3D art, and street painting. Such projects should foster a greater understanding of local cultures, arts, and history and provide an opportunity to express neighborhood identity.*

Policy AC-1.6: Space for the Arts

Encourage and promote the creation of public and private arts and cultural space in the city, such as galleries, theaters, indoor and outdoor performance spaces, music venues, and cultural centers.

> ***Program AC-1.6A: Art as a Community Benefit.*** *Recognize space for the arts as a community benefit in municipal code and density bonus programs. Expand incentives for incorporating arts space and arts features in new projects and in vacant and underutilized space.*

> ***Program AC-1.6B: Reducing Barriers.*** *Amend municipal codes or adopt new policies as needed to facilitate the temporary or interim use of vacant commercial or lobby space for art exhibits, display space, and "pop up" arts and cultural activities.*

> ***Program AC-1.6C: Central Performance Spaces.*** *Prioritize creation of central outdoor spaces suitable for community-wide events and performances in Downtown San Rafael and in the North San Rafael Town Center (for example, at Northgate Mall).*

Policy AC-1.7: Event Participation

Encourage public and private participation in support of arts and cultural events, including neighborhood fairs and gatherings.

Program AC-1.7A: Sponsorship of Events. *Support special events that provide quality arts, cultural, and enrichment activities in locations throughout the community. .*

Program AC-1.7B: Art and Technology. *Support an expanded and more vibrant arts and cultural presence through technology, including the potential for "virtual" events and media that reach larger, more diverse audiences.*

See also Policy LU-3.11 and Program EV-2.5C on special events

Policy AC-1.8: Arts and the Local Economy

Recognize the value of the arts to the economy of the city, and the role of the arts in community revitalization.

Program AC-1.8A: Arts District. *Leverage the Downtown San Rafael Arts District designation to encourage, promote, and support arts activities, attract visitors and business patrons, promote equity and inclusivity, and create a more welcoming and exciting Downtown environment. Encourage multi-disciplinary art activities and events that showcase local talent and provide opportunities for all residents to experience the arts. Regularly renew the Arts District designation to sustain arts and cultural opportunities.*

Program AC-1.8B: Cultural Tourism. *Promote cultural tourism (for example, visits to the Frank Lloyd Wright-designed Civic Center or the Mission San Rafael Arcangel) as a way to support and sustain the local arts community and hospitality industry. Partnerships with the Marin Convention and Visitors Bureau should be encouraged.*

Policy AC-1.9: Arts-Supportive Environment

Create an environment that is supportive to arts professionals.

Program AC-1.9A: Communication. *Support ongoing communication with and among local arts organizations to address and resolve issues of concern, including pandemic recovery.*

Program AC-1.9B. Engagement in Community Actions. *Recognize the arts community as important stakeholders in local community actions and economic development strategies. Support artist engagement in planning and governance.*

Program AC-1.9C: Showcasing Local Artists. *Consider artist in residence programs, poet laureates, City-sponsored lunch concerts and similar events showcasing the work of local artists and performers.*

Program AC-1.9D: Reducing Costs. *Explore opportunities to create more affordable space for artistic production, including live-work and studio spaces, public cultural facilities, and affordable performance space. Remove barriers to reusing vacant or underutilized commercial space for this purpose.*

Program AC-1.9E: Volunteers. *Provide opportunities for volunteers in art, cultural, and literary events.*

Policy AC-1.10: Funding

Establish a broad range of public and private funding sources to support arts and cultural programs and activities.

Program AC-1.10A: Non-Profit, Private and Community Efforts. *Support the efforts of non-profit, private, and community organizations to apply for grants, raise funds, develop arts endowments, and promote community and business investment in art, cultural, and literary activities. This support could include funding, volunteers, staffing, coordination, providing space and materials, and similar collaborative efforts.*

Program AC-1.10B: New Funding Sources. *Explore potential new funding sources or funding relief mechanisms such as set-asides from transient occupancy taxes, sales taxes, or parking revenues; tax credits and property tax abatements; and corporate and foundation support.*

ECONOMIC VITALITY ELEMENT

Goal EV-1: A Healthy and Resilient Economy

Maintain a healthy and resilient local economy that attracts investment, creates jobs, and provides services for residents and visitors. *San Rafael will strive for an economy that adapts to changes in the business environment and remains productive over time. A diverse range of local businesses should provide the tax base and revenue needed to sustain City services and infrastructure. City policies will help local employers provide jobs and services to the community, meet new challenges as they arise, and ensure long-term business success.*

Policy EV-1.1: Quality of Life

Recognize the importance of a healthy economy to the quality of life, especially the ability to provide excellent schools, public safety services, public works, recreation, and other government services.

> ***Program EV-1.1A: Education About the Local Economy.*** *Continue to promote a business-friendly climate by educating decision-makers and the public about the inter-relationship of community life and economic vitality. This should include data on the local economy, including indicators of San Rafael's economic health, disseminated through the City newsletter, City website, social media, staff reports, and other means.*
>
> ***Program EV-1.1B: Economic and Fiscal Impacts.*** *Continue to evaluate economic and fiscal impacts in reports to the Planning Commission and City Council.*
>
> ***Program EV-1.1C: 2020 Pandemic Recovery.*** *Develop and implement an Economic Recovery Strategic Plan to address business and fiscal impacts created by the 2020 COVID-19 pandemic and develop measures to recover losses in City revenue.*

Policy EV-1.2: Relationship Building

Strengthen positive working relationships between the business community, neighborhoods, surrounding communities, and City government. Local businesses should be directly engaged in the design and evaluation of City economic development programs, recognizing their first-hand knowledge of economic conditions and trends.

> ***Program EV-1.2A: Chamber of Commerce and Business Improvement District.*** *Sustain partnerships with the Chamber of Commerce, the Downtown Business Improvement District, and other business organizations to improve the business climate and support local businesses.*
>
> ***Program EV-1.2B: Relationships with the Real Estate Community.*** *Engage the local commercial and residential real estate brokerage and development community in identifying and resolving barriers to doing business in San Rafael and keeping City staff informed of business trends and changes. This engagement should occur on a sustained basis, through regular communication and events.*
>
> ***Program EV-1.2C: Marin County Economic Forum.*** *Work with the Marin County Economic Forum to analyze business trends, improve the economic health of the region, and encourage businesses success in San Rafael.*
>
> ***Program EV-1.2D: Communications with Residents.*** *Regularly communicate with residents on economic issues. Maintain consistent and accessible contact through, for example, meetings with neighborhood associations, the City website, and the Citizens Advisory Committee.*

Program EV-1.2E: Minority Business Outreach. *Work with local minority-owned businesses, business organizations, and non-profits to encourage business success and support job training and career advancement opportunities.*

Program EV-1.2F: Housing Production Partnerships
Continue to foster strong working relationships with Marin Builders Association, the Marin Association of Realtors, and local non-profit housing developers to reinforce the development of workforce housing and housing for lower-income residents (see also Policies EV-1.7 and EV-1.8)

See Goal EDI-5 for additional policies and programs on increasing economic opportunities for lower income residents

Policy EV-1.3: Business Retention and Support

Create a favorable environment for business in San Rafael. Maintain ongoing communication with the business community and respond to needs and concerns as they arise.

Program EV-1.3A: Economic Development Strategy. *Develop and periodically update an Economic Development Strategy that provides guidance for maintaining economic health, fostering business success, responding to economic trends, and measuring the effectiveness of local programs*.

Program EV-1.3B: Development Opportunities. *Provide site location assistance to the real estate community and prospective businesses by maintaining an inventory of vacant and underutilized sites in the City, including vacant buildings. Inventory data should include allowable uses and intensity, site availability, and potential issues.*

Program EV-1.3C: Permit and Technical Assistance. *Provide advocacy services to assist local businesses in the permitting and development processes. Seek opportunities to innovate with technology to help improve service delivery. Simplify and streamline the permit process wherever feasible.*

Program EV-1.3D: Small Business Support. *Partner with the Marin Small Business Development Center and other organizations to provide small business advisory and training opportunities including business plan development, marketing and social media, human resources strategies, and access to capital/investment.*

Program EV-1.3E: Business Incubation*. Encourage business mentoring, education, and incubation programs that could be undertaken in cooperation with public, institutional and/or private sector partners (for example, Marin Builder's Exchange, College of Marin Career Education, etc.).*

Program EV-1.3F: Business Recognition. *Support recognition programs for exemplary businesses, such as annual awards programs.*

Policy EV-1.4: Business Attraction

Build on San Rafael's strengths, including its location, housing diversity, transportation system, weather, scenery, history, culture, and people, to attract business and private investment. The City will work with local partners to enhance and diversify the City's economy.

Program EV-1.4A: Industry Clusters and Supply Chains. *Identify desired industries and develop economic development programs to attract these types of businesses. Encourage supply chains for such industries and encourage business-to-business relationships.*

Policy EV-1.5: Monitoring

Regularly monitor the success and effectiveness of local economic development programs. This should include evaluating the impacts of City regulations and standards on businesses and considering changes that help businesses succeed. Local programs should be adjusted as needed based on measurable outcomes and feedback from the business community.

Policy EV-1.6: Marketing and Branding

Encourage and support marketing and branding efforts to promote San Rafael.

> ***Program EV-1.6A: Media Relations.*** *Generate media coverage that communicates a positive image of San Rafael and increases recognition of the city as a great place to do business. Implement social media strategies that reinforce this message.*
>
> ***Program EV-1.6B: Competitive Edge.*** *Market San Rafael's competitive edge relative to other Marin cities and mid-sized Bay Area cities. San Rafael's branding should highlight the City's reputation as the business, civic, cultural, dining, and entertainment hub of Marin County.*

See also Policy CDP 5-10 on historic preservation as an economic development strategy

Policy EV-1.7: Workforce Housing

Aggressively encourage creation and retention of housing that is affordable to low and moderate-income workers, especially those providing necessary local services, such as public safety, health care, elder care, and education.

> ***Program EV-1.7A: Benefits of Workforce Housing.*** *Work with local partners to educate residents on the benefits of workforce housing to the community.*
>
> ***Program EV-1.7B: Public Agency Partnerships****. Work with local school districts and other agencies to explore opportunities to build housing for teachers, public safety employees, and other essential service employees on public land.*

Policy EV-1.8: Workforce Development

Support workforce development programs that provide skilled labor for San Rafael businesses as well as jobs and career advancement opportunities for San Rafael residents.

> ***Program EV-1.8A. Workforce Development Programs.*** *Support the efforts of businesses, labor organizations, non-profits, schools, and the public sector to provide job training and placement services. Consider opportunities for these initiatives to support other City goals, such as reducing homelessness (e.g., Downtown Streets Team.), building housing (e.g., Education to Career Construction Program) and improving wildlife habitat (e.g., California Conservation Corps, etc.).*
>
> ***Program EV-1.8B. Mentoring Programs.*** *Continue to participate in mentoring, apprenticeship, and internship programs, including participation in programs run by other agencies and organizations.*
>
> ***Program EV-1.8C: English as a Second Language****. Continue to support community wide efforts to provide English as a Second Language (ESL) training, citizenship, and other educational programs for the San Rafael workforce.*
>
> *See Goal EDI-5 for additional policies and actions on workforce development*

Policy EV-1.9: Sustainable Business Practices

Promote sustainable business practices that reduce the consumption of non-renewable resources and support the City's climate action goals.

> ***Program EV-1.9A: Green Economy.*** *Support the creation of environmentally beneficial jobs and businesses.*
>
> ***Program EV-1.9B: Green Business Practices****. Coordinate with Marin County, environmental organizations and the Chamber of Commerce to promote greener business practices and participation in the County's Green Business Program.*
>
> ***Program EV-1.9C: CCAP Implementation.*** *Work with local business to help achieve the goals of the 2030 Climate Change Action Plan (CCAP), including a shift toward renewable energy, reduced waste, increased composting, and low-carbon transportation. The potential costs, as well as the potential savings or other benefits, of CCAP measures on businesses should be important considerations as programs are implemented.*

Policy EV-1.10: Economic Resilience

Encourage economic resilience and improved ability to function during and after disasters and other emergencies. The City should also support resilience in the face of disruptive economic events and longer-term economic change.

> ***Program EV-1.10A: Business Engagement.*** *Actively engage the business community in disaster preparedness planning and recovery.*
>
> ***Program EV-1.10B: Education on State Regulations.*** *Provide information and outreach to businesses on new (and potential) State mandates and regulations, particularly those related to climate change. Explore ways to mitigate cost impacts based on consultation with local businesses and organizations.*
>
> *See the Community Services Element for policies and programs on microgrids and electrical reliability, and the Safety Element for policies on resilience to climate change and sea level rise.*

Policy EV-1.11: Innovation

Ensure that City policies, regulations, and programs are responsive to business trends and best practices in economic development and support innovation.

> ***Program EV-1.11A: Innovation Working Group.*** *Convene an economic development and innovation working group to identify new business opportunities and prospects for innovation and diversification.*

Goal EV-2: A Diverse and Balanced Business Mix

Sustain a diverse and balanced local economy that provides a wide range of goods, services, and opportunities. *San Rafael is widely recognized as Marin's "go to" city for shopping, dining, entertainment, and an array of day-to-day and specialized services. The city is home to major education, health care, cultural, and government facilities. It provides a full spectrum of commercial and industrial districts that meet the needs of many types of businesses. Economic diversity is part of San Rafael's heritage and should be part of its future. This will require foresight and action, particularly to recover from the devastating impacts of the 2020 pandemic and respond to declining demand for "brick and mortar" retail space.*

Policy EV-2.1: Retail Sector

Respond to changes in the retail sector so that San Rafael's commercial areas can adapt and remain an integral part of the City's economy. The City should support owners of vacant retail space in efforts to transition to new uses where retail is no longer viable, and work proactively to avoid potential net losses in tax revenues.

> ***Program EV-2.1A: Retail Evaluations.*** *Periodically evaluate the performance of the City's retailers. Use the data to help improve retail performance or assist centers with attracting other compatible uses.*
>
> *See the Land Use Element for additional policies and programs on neighborhood shopping centers and retailing.*

Policy EV-2.2: Promoting Local Purchasing

Encourage purchasing of San Rafael goods and services by residents, workers, businesses and City government in order to cycle dollars back into the San Rafael economy, support local businesses, and generate revenue for the City.

> ***Program EV-2.2A: Local Shopping Campaigns.*** *Support campaigns to "Shop Locally" and raise awareness about the benefits of supporting local businesses rather than purchasing on-line.*
>
> ***Program EV-2.2B: Event Promotion.*** *Continue to promote events that bring people to Downtown, Northgate and other community commercial centers to support local businesses.*
>
> ***Program EV-2.2C: Local Preference.*** *Where other factors (such as price) are equal, the City should give preference to purchasing goods and services from both local vendors and minority-owned businesses.*
>
> ***Program EV-2.2D: Day and Evening Visitors.*** *In the Downtown and North San Rafael Town Center areas, attract a variety of retail businesses to encourage patronage during both day and evening hours.*

Policy EV-2.3: Industrial Land Supply

Preserve the City's supply of industrial land.

> ***Program EV-2.3A: Industrial Zoning****. Maintain zoning for industrial areas to prevent a loss of industrial businesses (see also Program LU-2.4A on industrial zoning).*

Policy EV-2.4: Office and Technology Market

Maintain San Rafael's position as a regional office center, providing space for a diverse range of businesses as well as a source of revenue and local job opportunities. Encourage opportunities for new office development in transit-served locations such as the Downtown Transit Center area.

> ***Program EV-2.4A: Responding to Workplace Trends.*** *Work with local office building owners, managers and tenants to respond to changing workplace design requirements (including those related to public health) and to adapt to trends such as increased telecommuting and co-working,*

Policy EV-2.5: Tourism and Hospitality

Recognize and support tourism and hospitality as a significant contributor to San Rafael's economy.

> ***Program EV-2.5A: Tourism Strategies.*** *Explore strategies to enhance local tourism, improve hotel and conference facilities, attract destination restaurants and stores, and support tourism*

programs of the Chamber, Downtown Business Improvement District, and Marin County Visitors Bureau.

Program EV-2.5B: Downtown Arts District. *Support the Downtown Cultural Arts District through marketing, programs, and partnerships (see also Program AC-1.8A).*

Program EV-2.5C: Special Events. *Encourage special events and festivals that draw visitors to San Rafael, showcase its vibrant arts and cultural scene, and have net positive effects on local businesses and City revenues. Work with local retailers to ensure they can remain open and easily accessible when these events take place (see also Policies AC-1.7 and LU-3.11).*

Program EV-2.5D: Transient Occupancy Taxes (TOT). *Explore ways to increase economic development program funding through TOT revenues.*

See the Land Use Element for policies on home occupations. See the Mobility Element for policies on telecommuting, flextime, and other strategies to reduce peak hour commuting. See the Arts and Culture Element for additional discussion of the arts and entertainment sector.

Policy EV-2.6: Health Care

Expand the health care sector to meet the growing needs of an aging population, ensure access to health services for all residents, and improve readiness in the event of future public health emergencies.

See Goal EDI-2 for additional policies and programs on access to health care and medical facilities.

Policy EV-2.7: Government and Education

Sustain San Rafael's role as a countywide government and education center.

Program EV-2.7A: Civic Center Modernization. *Support County efforts to update the Marin County Civic Center and expand its capacity to host conferences and special events.*

Program EV-2.7B: Higher Education Partnerships*. Cultivate relationships with Dominican University and other Bay Area institutions of higher learning to facilitate local economic development. Consider opportunities for Dominican to increase its visibility in the community, including occupying underutilized space in Downtown or Northgate Town Center buildings.*

Goal EV-3: Distinctive Business Areas

Sustain vital, attractive business areas, each with a distinctive character and emphasis. *Downtown, Northgate, West Francisco, East San Rafael, and the Miracle Mile each play a unique role in the City's economy and maintain the community's position as a full-service city. These districts are complemented by attractive, convenient neighborhood centers that provide local services and gathering places.*

Policy EV-3.1: Business Areas

Strengthen the positive qualities of each business area in San Rafael to create a stronger sense of place and brand identity.

Program EV-3.1A: Zoning Regulations. *Ensure that zoning and development regulations for each business area support their success and contribution to the City's economy.*

Program EV-3.1B: Quality of Life Programs. *Implement and support programs to improve the safety, security, cleanliness, and convenience of San Rafael's business districts so that they are places where customers want to shop, dine, and visit. Providing a comfortable, enjoyable experience for residents, workers, and visitors is an important part of remaining competitive.*

Policy EV-3.2: Revitalization

Support and encourage redevelopment and upgrading of commercial and industrial properties while retaining economic and business diversity. The City should work with property owners, businesses, and business organizations to address issues such as parking, beautification and landscaping, streetscape improvements, and circulation and access.

Program EV-3.2A: Business Improvement Districts. *Support the use of BIDs to improve services to business districts and provide a funding source for localized improvements.*

Program EV-3.2B: Public Private Partnerships*. Encourage public/private partnerships as one means of revitalizing deteriorated and underdeveloped area (see also Policy CSI-5.6).*

Program EV-3.2C: Business Assistance Programs. *Explore the feasibility of programs to assist local businesses with property improvements, such as landscaping, signage, façade improvements, and design assistance.*

Policy EV-3.3: Economically Productive Use of Land

Encourage the use of the City's commercial and industrial land supply in a way that creates positive fiscal impacts, economic opportunities for local businesses and property owners, employment growth, and services for San Rafael residents.

Policy EV-3.4: Water-Dependent Businesses

Ensure that commercial properties along San Rafael's shoreline, including the San Rafael Creek/ Canal, leverage their waterfront locations, The City supports the continued of these sites for water-dependent activities such as boat sales, boat repair, marinas, and water-oriented restaurants.

See the Mobility Element for policies on water transportation, including water taxis. See the Conservation and Climate Change Element for policies on boating and water quality. See also Policy CSI-4.11 on canal dredging.

Policy EV-3.5: Business Infrastructure

Support investment in telecommunications infrastructure so that San Rafael's business districts remain economically competitive and can meet changing business needs and technology requirements.

See the Infrastructure Element for policies on fiber optics communication and similar services

Policy EV-3.6: Mutual Support Between Business Areas and Adjacent Neighborhoods

Promote productive relationships between residential neighborhoods and adjoining business areas.

Program EV-3.6A: Business/Neighbor Collaboration*. Seek innovative ways for businesses and their residential neighbors to collaboratively solve mutual concerns. Encourage conflict resolution between business and neighbors.*

Policy EV-3.7: Business Access

Improve access to and from the East San Rafael business district, including freeway and ramp improvements, local thoroughfare improvements, improved transit service and access to Downtown, and safer bicycle and pedestrian routes.

See the Neighborhoods Element for additional policies and programs on East San Rafael.

Policy EV-3.8: Creative Infill

Encourage creative infill development and redevelopment that maximizes existing resources and makes the best use of limited available space. Expedite the development review process by establishing clear expectations for design, and effectively involving the community.

> ***Program EV-3.8C: Pre-Submittal Process****. Improve the efficiency and speed of the development review process by revisiting neighborhood notification and meeting procedures and updating the pre-submittal process to identify initial concerns and encourage higher quality applications.*

EQUITY, DIVERSITY, AND INCLUSION ELEMENT

Goal EDI-1: Authentic and Inclusive Public Participation

Provide for the meaningful involvement of all residents in local governance and policy making, regardless of their income, language, ethnicity, age, or family status. *Active, authentic, and inclusive public participation is essential to becoming a more just and equitable city. The City of San Rafael strives for clarity and transparency in city planning processes and promotes opportunities for effective public participation. It partners with residents and community-based organizations to develop, implement, and evaluate engagement strategies that meet the needs of each community. It promotes shared leadership and decision-making to empower communities that have historically been under-represented in public processes. All residents are invited and enabled to participate in government in a meaningful way.*

Policy EDI-1.1: Leadership in Equity and Inclusion

Provide countywide and regional leadership in the incorporation of equity and inclusion into local decision-making.

> ***Program EDI-1.1A: Training and Education.*** *Provide training and education on issues of equity and inclusion for City staff, Boards and Commissions, and advisory groups. This should include information about best practices in inclusive civic leadership.*
>
> ***Program EDI-1.1B: Equity Plan.*** *Prepare a citywide Equity Strategic Plan or similar document that provides guidance on ways to incorporate equity into City practices and procedures. Metrics to measure progress, including goals for public participation, should be developed and monitored after Plan adoption.*

Policy EDI-1.2: Broad-Based Involvement

Partner with community-based organizations to engage populations whose voices have been under-represented in public processes because of language, mobility, age, citizenship, economic, and other barriers. Engagement should support self-determination and empowerment, as well as input on projects and plans.

> ***Program EDI-1.2A: Community Stakeholders.*** *Actively provide engagement opportunities for all residents through outreach programs specifically aimed at those who are under-represented in public processes, such as immigrant communities, people of color, youth, and younger families. Use creative and community-driven methods for reaching under-represented groups, such as markets, churches, home visits, school events, cultural activities, and informal social networks.*
>
> ***Program EDI-1.2B: San Rafael Website.*** *Use the City's website and social media presence to improve participation in City government and increase access to City information and documents.*
>
> ***Program EDI-1.2C: Scheduling of Meetings.*** *Schedule public meetings and workshops at times and locations convenient to community members. Where feasible, provide child care, food, and other services to make meeting attendance easier.*
>
> ***Program EDI-1.2D: District Elections.*** *Optimize the opportunity for district-based elections to increase resident participation in local government, particularly among Latino residents (for example, by considering Commission appointments by District).*
>
> ***Program EDI-1.2E: CEAP Update.*** *Update the 2015 San Rafael Community Engagement Action Plan (CEAP) to implement General Plan 2040 EDI policies and programs.*

Policy EDI-1.3: Effective and Equitable Communication

Emphasize effective two-way communication between City Hall and the community at large, including multilingual and culturally appropriate messaging, and engagement formats that reach all segments of the community.

Program EDI-1.3A: Removing Language Barriers. *Ensure that Latino and other non-English-speaking populations may actively participate in local decision-making through such methods as bilingual notices, translation of meeting materials, the use of accessible (non-jargon) and culturally competent language, Spanish language meetings, new platforms for commenting (such as Facebook and Zoom), and having interpreters at public meetings.*

Program EDI-1.3B: Surveys. *Regularly use multilingual, culturally appropriate surveys, focus groups, and other outreach methods to solicit input from under-represented communities. When funding is available, outsource survey work to community organizations with engagement grants or stipends for participation (see also Program CSI-5.3B and PROS-2.2B on surveys).*

Program EDI-1.3C: Regularly Scheduled Community Meetings. *Convene regularly scheduled meetings with businesses and residents in lower income areas to address local priorities, report out on program implementation, and support shared leadership and decision-making.*

Policy EDI-1.4: Supporting Community-Based Organizations

Support community-based organizations and advocacy groups in their efforts to communicate effectively with the City and other public agencies. At the same time, enhance the City's capacity to improve listening, accountability, and reporting back to these organizations, and to the community at large.

Program EDI-1.4A: Advocacy Programs. *Support training, education, and advocacy programs by local institutions and social service providers to address the issues facing San Rafael's lower income, immigrant, and older adult populations.*

Program EDI-1.4B: Collaborations. *Collaborate with local community-based organizations to develop and implement strategies to engage under-represented groups, reduce community disparities, and address critical issues.*

Policy EDI-1.5: Advisory Committees

Use boards, commissions, task forces, and committees to assist City staff and the City Council in decision-making processes. Such groups should reflect San Rafael's demographics and be representative of all segments of the community.

Program EDI-1.5A: Board and Commission Diversity. *Monitor the composition of City Boards and Commissions, making efforts to provide representation that mirrors the City. When filling vacancies, focus recruitment and outreach efforts on under-represented populations.*

Program EDI-1.5B: Public Input. *Encourage public input at Board, Commission, and Committee meetings. Clearly identify issues, actions, and ways to comment, and provide information early enough to allow meaningful participation.*

Policy EDI-1.6: Youth in Government

Encourage and support the engagement of youth and young adults in government, particularly on issues that directly affect them such as youth services, education, mobility, and climate change.

Program EDI-1.6A: Youth-Focused Outreach. *Work with local school districts, schools, youth and student groups, colleges, universities, and community-based organizations to increase youth involvement in local government and public processes. This could include school "clubs" organized around topics of interest. Youth engagement should be inclusive and reflective of San Rafael's demographics (see also Program EDI-5.2A on "Buddy" programs).*

Goal EDI-2: Healthy Communities and Environmental Justice

Support public health and wellness through community design in all parts of the city. *San Rafael's development pattern and transportation system should support the fitness of its residents. Physical activity such as walking and cycling can reduce rates of obesity, heart disease, diabetes, and other chronic ailments. Land use decisions should avoid further compounding health risks in disadvantaged communities, and should reduce exposure to unhealthy air, high levels of noise, contaminated soil, smoke, and odors. San Rafael will promote a safe environment for all residents and ensure that people in every part of the city can lead healthy, active lives.*

Policy EDI-2.1: Neighborhood Design for Active Living

Improve the design of San Rafael's neighborhoods to promote physical activity for all residents, including opportunities for safe walking and cycling, and walkable access to goods and services.

Program EDI-2.1A: Pedestrian and Bicycle Improvements. *Implement pedestrian and bicycle improvements, as described in the General Plan Land Use and Mobility Elements and the San Rafael Bicycle and Pedestrian Master Plan. This should include improved safety features, streetscape and landscape improvements, and other improvements that make it safer, easier, and more comfortable to be physically active in San Rafael, particularly in neighborhoods with less access to these features today.*

Program EDI-2.1B: Public Health as an Evaluation Metric. *Consider public health data such as rates of asthma, heart disease, and obesity when prioritizing capital improvements such as bike lanes, new parks, and sidewalk improvements.*

See also Goals M-5 and M-6 on connected, pedestrian-friendly streets

Policy EDI-2.2: Safe Space for Physical Activity

Provide safe physical spaces for children and families to play and be physically active in all neighborhoods, particularly in the Canal area and other neighborhoods where many homes lack outdoor living space.

Program EDI-2.2A: Increasing Usable Public Space. *Pursue opportunities for additional programmed public outdoor space, with a priority on higher density neighborhoods. Consider the use of City-owned vacant lots or rights-of-way as improved open space.*

See also policies under Goal PROS-1 on park improvements

Policy EDI-2.3: Community Health

Increase community awareness about best practices for maintaining physical and mental health. Incorporate such practices in City-sponsored activities and programs (see also Policy PROS-2.5).

Program EDI-2.3A: HEAL Campaign. *Participate in the Marin Countywide Healthy Eating Active Living (HEAL) campaign, supporting actions that transform the physical environment to improve health, well-being, and physical activity. (text box on HEAL?)*

Program EDI-2.3B: Health Fairs. *Encourage multilingual community health fairs and other events that raise awareness of public health among all residents. Demonstrate best practices for public health and wellness at City-sponsored activities, such as serving healthy foods and encouraging walking and bicycling to the event.*

Program EDI-2.3C: Municipal Code Review*. Periodically evaluate City codes and ordinances for their impact on health, including provisions for tobacco, vaping, and smoke-free multi-family housing; standards for indoor air quality; and HVAC systems able to sustain safe living conditions during wildfires, power outages, and extreme weather events.*

Policy EDI-2.4: Access to Health Care

Promote access to health care for all residents to safeguard individual and community well-being.

Program EDI-2.4A: Local Health Care Facilities. *Support the development of easily accessed health care and medical facilities in the City.*

Policy EDI-2.5: Environmental Justice

Ensure that land use and transportation decisions do not create disparate environmental health conditions, such as air pollution and exposure to hazardous materials, for lower income residents and other vulnerable populations. Work to reduce or eliminate such hazards where they currently exist.

Program EDI-2.5A: Reducing Exposure to Hazards. *As appropriate, utilize conditional use permit requirements for businesses adjacent to residential neighborhoods to reduce resident exposure to noise, odor, smoke, vibration, and other potentially harmful impacts. Work with business owners to encourage responsiveness when these issues arise.*

Program EDI-2.5B: Reducing Indoor Air Pollution. *Support the distribution of bilingual information on indoor air pollution hazards to vulnerable populations, including lower income renters. Respond to complaints about smoke and odors in multi-family projects and facilitate remediation.*

Program EDI-2.5C: Environmental Hazard Data. *Maintain data on environmental hazards, such as soil and groundwater contamination and the vulnerability of the population to such hazards, using sources such as Cal Enviroscreen.*

See the Safety Element for policies and programs to (a) require health risk assessments for new development near freeways and (b) reduce exposure to hazardous materials, including contaminated sites and new uses handling hazardous substances. See the Conservation and Climate Change Element for policies to improve air quality, and the Mobility Element for policies to encourage cleaner fuel vehicles.

Policy EDI-2.6: Neighborhood Greening

Encourage the greening of San Rafael's multi-family districts, including tree planting, landscaping, and other improvements that enhance aesthetics, reduce pollutants, and improve climate resilience.

Program EDI-2.6A: Greening Priorities. *Prioritize City-sponsored urban greening and tree planting projects in residential areas that currently have lower rates of tree cover, higher residential densities, and limited access to open space (for example, the Canal area and Montecito).*

Policy EDI-2.7: Responsible Retailing

Encourage responsible retailing of products with the potential to have adverse health impacts, such as tobacco, vaping, and alcohol. Enforce laws that prohibit the sale or provision of such products to minors. Avoid their overconcentration in areas with large numbers of K-12 students.

See the Economic Vitality Element for policies and programs on neighborhood business attraction and retention

Policy EDI-2.8: Food Access

Expand access to healthy food and nutritional choices in San Rafael through conveniently located grocery stores, small markets, farmers markets, and community gardens, particularly in lower income areas where existing fresh food options are limited.

> ***Program EDI-.8A: Incentives.*** *Explore incentives for small local markets to offer healthier food options for nearby residents. [text box on Canal Community Garden]*

Policy EDI-2.9: Urban Agriculture

Promote and support small-scale, neighborhood-based, food production, urban agriculture, and reliable food supply lines from regional growers.

> ***Program EDI-2.9A: Obstacles to Food Production.*** *Review, and revise as needed, San Rafael's zoning regulations and codes to identify and remove barriers to urban gardening and small-scale food production in residential neighborhoods.*

Policy EDI-2.10: Resiliency Planning

Improve resiliency planning for climate change, public health emergencies, and other community stressors among non-English speaking and lower-income populations. Increase awareness of sea level rise and flooding risks in the Canal area and in other vulnerable areas, as well as the importance of adaptation measures.

Goal EDI-3: Housing Stability

Improve housing stability for all San Rafael residents, particularly those with low or very low incomes. *Residents should live without fear of being displaced by high rents and a shortage of affordable housing options. The City will work to reduce overcrowded and substandard living conditions and provide additional housing choices for people of all incomes. It will also work with landlords and rental property owners to develop fair, workable solutions.*

Policy EDI-3.1: Preventing Displacement

Prevent the displacement of lower income residents from their homes due to rising costs, evictions without cause, and other economic factors that make it difficult for people to stay in San Rafael.

> ***Program EDI-3.1A: Anti-Displacement Strategies.*** *Evaluate anti-displacement strategies in future plans or programs that could result in the direct removal of affordable housing units, the displacement of tenants, or economic hardships due to rapid rent increases.*

> ***Program EDI-3.1B: Renter Protection Measures.*** *Continue to explore and promote measures to protect San Rafael renters and facilitate positive communication between landlords and tenants.*

Program EDI-3.1C: Climate-Related Displacement. *Consider measures to address the potential for loss or displacement of affordable or lower cost housing in the city's climate change adaptation planning.*

Policy EDI-3.2: Affordable Housing Development

Encourage the development of affordable rental housing to meet the needs of all San Rafael households.

See also Housing Element H-6, H-14, H-15, H-17, and H-18 for additional policies and programs supporting affordable housing development, including Program H-17c on fee reductions and H-17d on streamlined review.

Policy EDI-3.3: Acquisition and Rehabilitation

Support efforts by local community-based organizations and other housing organizations to acquire private market rate apartment complexes and convert them to affordable housing using state and federal tax credit programs or create community land trusts to purchase existing housing in order to maintain it as affordable .

See the San Rafael Housing Element for program recommendations to facilitate implementation of Policies 3.2 and 3.3.

Policy EDI-3.4: Healthy Homes

Promote and ensure safe and sanitary housing and healthy living conditions for all residents, particularly lower income renters.

Program EDI-3.4A: Healthy Homes. *Support programs and regulations that support healthier homes, including the abatement of toxic hazards such as lead and mold, the use of non-toxic materials and finishes, and design features that improve ventilation and indoor air quality.*

Policy EDI-3.5: Property Maintenance

Improve property maintenance and housing conditions in all parts of the city and encourage corrective rehabilitation of housing that is substandard or poses a hazard to its occupants.

Program EDI-3.5A: Code Enforcement. *Provide effective code enforcement efforts in all neighborhoods to abate unsafe or unsanitary conditions. Ensure that the abatement of violations does not increase housing cost burdens or result in displacement of lower-income households.*

Program EDI-3.5B: Rental Inspections. *Continue the Periodic Housing Inspection Program and Residential Building Record (RBR) inspections to ensure the safety and habitability of all housing units.*

Policy EDI-3.6: Reducing Overcrowding

Work with local advocacy groups to evaluate the housing circumstances of immigrant and refugee populations in San Rafael, including overcrowding. Determine appropriate implementation measures to reduce overcrowding without displacement.

Program EDI-3.6A: Incentives for Family Housing. *Consider density bonuses and other incentives for three-bedroom affordable rental units in new construction to meet the need for housing suitable for larger families and extended households.*

Policy EDI-3.7: Emergency Housing Services

Support agencies and organizations that provide emergency shelter, housing, and other services related to the needs of vulnerable communities, including temporary housing for displaced persons and persons experiencing homelessness.

> ***Program EDI-3.7A: Temporary Housing for At Risk Groups.*** *Work with community-based organizations to develop and support temporary housing solutions for lower-income immigrants, older adults, and other at-risk groups during and after an emergency.*

Goal EDI-4: Equitable Service Delivery

Improve self-sufficiency and empowerment among lower income and immigrant communities through equitable access to education, health care, public safety, transportation, and social services. *The City supports the equitable distribution of City facilities and delivery of City services and prioritizes improvements in communities with the greatest needs.*

Policy EDI-4.1: Prioritizing Public Investment in Disadvantaged Communities

Prioritize public investment in capital projects and public facilities that meet the needs of disadvantaged communities.

> ***Program EDI-4.1A: Equity Metrics.*** *Use benchmarks and indicators such as household income, the presence of children and older adults, and past investment patterns, to inform decisions about the location of future public investments.*

Policy EDI-4.2: Equitable Maintenance of Streets and Public Space

Ensure that street cleaning, litter removal, abatement of illegal dumping, and the repair of roads, sidewalks, streetlights and public facilities, is performed equitably across the city. Responses to reports of nuisances and violations should be performed without regard to income or tenure.

> ***Program EDI-4.2A: Nuisance Reporting Systems.*** *Support programs that allow residents and businesses to easily report incidences of illegal dumping, roadside garbage and litter, vandalism, graffiti, noise, smoke and fumes, and other nuisances. Maintain data on calls, responses, and follow-up activities.*

> ***Program EDI-4.2B: Security and Safety Improvements.*** *Pursue public safety improvements, including street lighting, security cameras, better wayfinding signage, and improved sidewalk conditions, with a focus on neighborhoods with higher levels of need and fewer available resources.*

Policy EDI-4.3: Public Safety in Disadvantaged Communities

Build positive relationships between law enforcement, residents, and businesses in the Canal and other disadvantaged communities to create a stronger sense of trust and confidence. Ensure that the safety concerns of disadvantaged communities and persons experiencing homelessness are heard and recognized by law enforcement, with a focus on serious crimes rather than minor infractions.

> ***Program EDI-4.3A: Neighborhood Safety Partnerships.*** *Encourage partnerships between lower-income residents and local police to address law enforcement concerns, including organized events such as neighborhood walks and police "walking the beat" to create personal relationships and learn about community issues.*

Policy EDI-4.4: Public Health Equity

Promote community health services, programs, and partnerships that improve outcomes for economically disadvantaged residents, including better access to medical, mental health, and social services.

> ***Program EDI-4.4A: Mobile Health Care.*** *Facilitate the use of public buildings such as libraries and community centersfor "pop up" health services and other activities that promote wellness.*

Policy EDI-4.5: Food Security

Improve food security and nutrition, particularly among lower income and frail elderly residents.

> ***Program EDI-4.5A: Food Assistance Programs.*** *Support resident access to food assistance programs, including local food banks and food stamp programs. Encourage the acceptance of food subsidy vouchers at retail food outlets throughout San Rafael.*

> ***Program EDI-4.5B: Reduced Cost Meals.*** *Encourage free and reduced cost meal programs for those with the greatest needs, including low income children, seniors, and persons experiencing homelessness.*

Policy EDI-4.6: A Compassionate City

Support organizations and service providers that help those in need in San Rafael. Non-profit and public entities providing housing, transportation, health care, and other social services to lower income clients and older adults are valued community partners and should remain an essential part of San Rafael's "safety net."

> ***Program EDI-4.6A: Connecting Social Service Providers.*** *Increase awareness of social service programs by improving communication between residents and service providers, facilitating communication among the service providers themselves, and providing more opportunity for interaction between residents and City leaders.*

> ***Program EDI-4.6B: Collaborative Service Model.*** *Encourage and support collaborative efforts to address local health care and social service needs, including partnerships with community-based organizations and service providers, partnerships with the County of Marin and other Marin cities, and interdepartmental efforts within the City of San Rafael.*

Policy EDI-4.7: Transportation Improvements

Integrate equity into San Rafael's transportation planning and operations. Work with Caltrans, TAM, and local transit agencies to ensure that their services and improvements recognize the needs of households with more limited travel options and focus on increasing mobility for all residents.

> ***Program EDI-4.7A: Transit Improvements.*** *Work with Marin Transit, SMART, and GGBHTD to collect and analyze data on the workplace location of San Rafael's transit-dependent population so that transit routes and schedules are responsive to needs, and optimally serve those without cars.*

> ***Program EDI-4.7B: Bicycle and Pedestrian Improvements.*** *Prioritize pedestrian and bicycle improvements in areas where the concentration of pedestrians and bicycles is highest, and where residents have fewer resources and options to travel. Improve access to bicycles, helmets, and related equipment for lower income families.*

See the Mobility Element for additional guidance on this topic. See Program NH-3.15A on parking management in the Canal.

Policy EDI-4.8: Community Benefits

Support community benefit programs in which new projects receive development bonuses in exchange for providing facilities and amenities that benefit underserved communities, such as affordable housing, childcare, and recreation facilities *(see also Policy LU-1.14 and LI-1.18 on bonuses for projects incorporating community benefits).*

Goal EDI-5: Access to Education and Economic Opportunity

Reduce barriers to education and economic mobility for all San Rafael residents. *The City collaborates with private, non-profit, and other public partners to support quality education, affordable childcare and after school programming, vocational training and career advancement, and programs to help residents overcome barriers to employment and economic stability. Every San Rafael resident should have the chance to learn, grow, prosper, and succeed.*

Policy EDI-5.1: Child Care and Early Childhood Development

Support expanded capacity for affordable childcare and early childhood development centers in San Rafael, including City-sponsored programs (see also Policy PROS 2-4).

> ***Program EDI-5.1A: Business Partnerships.*** *Support partnerships with local employers to make child care more affordable and accessible for low-wage workers. Quantify the potential benefits to employers to help make these services available.*

Policy EDI-5.2: After School Activities

Provide safe, affordable after-school opportunities for children and teens, along with information on programs for members of the community who may be unaware of these opportunities. Work with the community to identify gaps and unmet needs, such as extended hours and weekend activities, and to increase access to services.

> ***Program EDI-5.2A: Buddy Programs.*** *Collaborate with the school districts to develop "buddy" or "host" programs enabling San Rafael families to provide social, cultural, and academic support to English learners and new students from other countries.*

> ***Program EDI-5.2B: Cultural Competency.*** *Ensure that the City uses culturally appropriate strategies and messaging when providing information to students and parents regarding extra-curricular activities.*

Policy EDI-5.3: Reducing Academic Achievement Gaps

Support local schools in their commitment to equity among students from different socio-economic groups. Encourage programs and initiatives to assist students with special educational needs or household circumstances that create barriers to learning.

> ***Program EDI-5.3A: Financial Aid.*** *Raise student and family awareness of opportunities for grants, scholarships, internships, and programs that provide financial assistance for education and career development.*

Policy EDI-5.4: Employment Readiness

Create strong partnerships between schools, community-based organizations, and the business community so that San Rafael students and adults are prepared for jobs in the local and regional economy and can access career resources in a variety of fields. (text box on MCOE School to career partnership; potentially add Downtown Streets Team employment program)

Program EDI-5.4A: Youth Employment. *Encourage youth training and employment programs, partnerships with the private sector and community-based organizations, and similar measures to improve career opportunities for younger San Rafael residents.*

See also Policy EV-1.8 on workforce development

Policy EDI-5.5: Career Ladders

Support investment in programs and services that create career ladders for lower income workers and support advancement to better paying jobs and greater financial stability. Encourage local employers to coach and mentor students and young professionals seeking career advancement.

See the Economic Vitality Element for relevant programs

Policy EDI-5.6: Local Workforce Retention

Recognize the economic contribution of San Rafael's low- and moderate-income workforce to the local and regional economies, and to providing essential services in times of crisis. Preserve existing jobs and ensure that the City continues to provide pathways to employment for persons with a variety of skill and education levels.

Program 5.6A: Measuring Workforce Contributions*. Develop data to quantify the contribution of San Rafael's low- and moderate-income workforce to the local and regional economies. Use this data to develop responsive economic development policies and programs and increase the safety net for critical low-income workers.*

See the Economic Vitality Element for Workforce Development and Workforce Housing policies and programs

Policy EDI-5.7: Small Business Support

Create a supportive environment for small businesses in San Rafael. Effectively respond to small business concerns related to crime, infrastructure, litter, parking, loitering, and similar issues.

Program EDI-5.7A: Business Assistance. *Explore opportunities to assist San Rafael's small businesses and entrepreneurs, including minority-owned businesses. This should include partnerships with the Hispanic Chamber of Commerce and similar organizations.*

Program EDI-5.7B: Hiring Incentives. *Support incentives for contractors and builders to hire local workers, with a focus on increasing business opportunities for lower-income tradespersons.*

See also Program EV-2.2A on "shop local" campaigns and EV-2.2C on local purchasing preferences

Policy EDI-5.8: State and Federal Programs

Identify areas in San Rafael that are eligible for state and federal funding or other financial benefits due to demographic and economic conditions. Pursue grants and participate in programs that address these conditions and improve economic opportunity for local residents and businesses.

Program EDI-5.8A: Opportunity Zone. *Continue to evaluate the potential benefits of the designation of the Core Canal Census Tract as an "opportunity zone" by the State of California, including possible funding for transit, affordable housing, and capital improvements. Activities related to the Opportunity Zone designation should include specific provisions to minimize the displacement of residents and businesses.*

Policy EDI-5.9: Affordable Commercial Space

Encourage below market rent space for community-based organizations , supportive service providers, and organizations that assist disadvantaged populations. Avoid the displacement of these businesses due to rising rents.

> ***Program EDI-5.9A: Cooperatives.*** *Encourage cooperate ownership of assets such as housing, vacant land, local energy systems, and incubator business space as a way to reduce business operating costs.*
>
> ***Program EDI-5.9B: Community Benefit.*** *Recognize below market space for community-based organizations as a community benefit that triggers eligibility for density or height bonuses in new development,*

Policy EDI-5.10: Bridging the Digital Divide

Encourage future advances in technology and new technology infrastructure to be equitably distributed so that households of all incomes may benefit. Implement strategies to make technology resources more affordable and accessible to lower income households.

See also Policy CSI-4.16 on technology infrastructure

> ***Program EDI-5.10A: Access to On-Line Learning and Work.*** *Support efforts to provide all students with access to on-line learning and the capacity to work remotely. Work with local service providers to improve access for lower income households, especially households with children. [text box on digital divide in Canal]*

Goal EDI-6: An Age-Friendly Community

Enhance the quality of life for older adults in San Rafael. *As an inclusive community, San Rafael is a city that works for everyone, regardless of age or ability. The City provides access to services and resources that make it easier for older adults to stay active and connected. It plans and provides appropriately for older adults who need assistance.*

Policy EDI-6.1: Planning for an Aging Population

Proactively address the needs of San Rafael's aging population through collaboration, planning, and programs. Monitor trends and data so that services are responsive to needs.

> ***Program EDI-6.1A: Age Friendly Plan***. *Prepare an Age-Friendly Strategic Plan for San Rafael that identifies specific and culturally responsive actions to ensure that older adults may thrive in the community. Periodically monitor progress on Plan implementation, consistent with WHO Age-Friendly Global Network guidelines.*

Policy EDI-6.2: Aging in Community

Improve opportunities for older adults to age in place and continue living independently in their San Rafael homes. This should include recognition of the importance of in-home support services and caregivers, At the same time, provide more options for those seeking to "age in community" and relocate to suitable housing in the city that includes supportive services, smaller units, and access for persons with mobility limitations. This includes support services and facilities for those suffering from dementia-related illnesses and those who have become homeless due to medical or mental health conditions,

> ***Program EDI-6.2A: Aging in Place.*** *Continue to support programs and services that assist older adults with home modifications that facilitate aging in place. Support home sharing programs that pair empty nesters with rental seekers.*

Program EDI-6.2B: Affordable Housing Options for Older Adults. *Encourage the construction of affordable senior housing, and accessory dwelling units that provide more affordable alternatives for older adults. Also, support programs that provide direct and indirect assistance for older renters.*

Policy EDI-6.3: Mobility for Older Adults

Maintain mobility options for San Rafael's older adults by providing safe streets and flexible, responsive public and private transportation services, including services specifically designed for those with mobility limitations.

Program EDI-6.3A: On-Demand Transportation Services. *Improve on-demand transportation options for older adults, including volunteer driver programs and programs pairing new student drivers with seniors.*

Program EDI-6.3B: Universal Access. *Incorporate principles of universal access in the design of public facilities, sidewalks, and outdoor spaces and buildings. Reduce risks associated with falling and improve lighting and sidewalk conditions in areas where hazards may exist.*

Policy EDI-6.4: Accessible Community Services

Provide a range of convenient and accessible services for San Rafael's older adults, including health and wellness, caregiving, recreation and fitness activities, age-friendly technology, and social services.

Program EDI-6.4A: Access to Resources. *Improve access to community programs and resources for older adults, including increased on-line services and technology training and partnerships with Marin County In-Home Supportive Services.*

Policy EDI-6.5: Disaster Preparedness

Ensure that the needs of older San Rafael residents are specifically considered in disaster preparedness planning, and that barriers and challenges are effectively addressed.

Program EDI-6.5A: Outreach and Education. *Engage older adults in focused disaster preparedness outreach and education, emergency and shelter-in-place drills, wildfire prevention programs, and evacuation plans. Focus on older adults with the greatest needs, including in-home support.*

See also Goal S-6 on emergency preparedness

Policy EDI-6.6: Social Connections

Strengthen social connections for older adults living alone by providing accessible community activities, programs that avoid loneliness and social isolation, and demonstrating respect and value for each individual.

Program EDI-6.6A: Inclusion and Participation Initiatives. *Provide opportunities for social connections, including discounted or free community events, intergenerational programs (for example, pairings of students and older adults), mental health services, multicultural programs, and working with organizations such as Marin Villages to engage and empower older adults.*

APPENDIX C:
STAFF RECOMMENDED LAND USE MAP CHANGES

PROPOSED GENERAL PLAN 2040 LAND USE MAP AMENDMENTS RECOMMENDED BY STAFF

Location	2020 General Plan	2040 General Plan	Discussion
Correcting Scrivener's Errors			
999 Las Pavadas (APN 175-171-01)	Park	Low Density Residential	Hillview Park was digitized on wrong parcel
40 Elena Circle (APN 175-311-24)	Park	Low Density Residential	Arbor Park was digitized on wrong parcel
Vacant lot end of Meadow Drive in unincorporated Santa Venetia (APN 180-131-10)	High Density Residential	Park, Recreation, and Open Space	Unimproved lot at the entrance to Santa Margarita Island preserve. Publicly owned open space and part of the park.
15 Harbor Street (APN 014-182-10)	2nd/3rd Mixed Use	Marine-Related Mixed Use	This is a waterfront restaurant and bar (Pier 15) in the Canal Area that was incorrectly digitized with one of the downtown land use designations.
635 Adrian Way (APN 180-053-23)	Park	Public/Quasi-Public	The parcel contains the Korean Presbyterian Church and is incorrectly shown as "Park" (the site is between two mini-parks in Santa Venetia)
Cresta Drive (Deer Valley) APN 155-280-09	Undesignated	High Density Residential	This is a small parcel in the Deer Valley area developed with multi-family housing that has no designation.
Expanding Mapping of Public/Quasi-Public Land Uses			
All San Rafael City Schools All Miller Creek Schools	Mostly Low Density Residential	Public/Quasi Public	Properties owned by San Rafael City Schools and the Miller Creek School District are being mapped as Public/Quasi-Public to reflect their ownership and use.
Marin County Sheriff's Office 1600 Los Gamos (APN 165-220-11 and -10)	Office	Public/Quasi Public	The 1600 Los Gamos building is owned and operated by the County of Marin for law enforcement, fire protection, and public safety services.
San Rafael Public Works Center 111 Morphew (APN 009-430-01)	Light Industrial/Office	Public/Quasi Public	Property is owned and operated by the City of San Rafael as the Public Works Center.
Fire Station 53 30 Joseph Ct (APN 151-081-088)	Light Industrial/Office	Public/Quasi Public	Other fire stations are similarly designated Public/Quasi-Public.
Marin Academy 1618 Fifth Avenue (APN 011-154-01)	Medium Density Residential	Public/Quasi Public	Other Marin Academy parcels are designated Public/Quasi-Public. This parcel was acquired and developed with academic facilities.
Marin Tennis Club 925 Belle Avenue (APN 015-101-10)	Low Density Residential	Public/Quasi Public	Similar facilities (such as the San Rafael Raquet Club and Peacock Gap Golf Course) have a Public/Quasi-Public designation.
Smith Ranch Rd Park and Ride Lot (APN 155-121-01)	Undesignated	Public/Quasi Public	Large surface park and ride lot, separate and distinct from the Highway corridor properties
15 Caltrans-owned parcels; east side of Brookdale Avenue (APNs 011-075-05 to -08 and 011-094-01 to -11)	Medium Density Residential	Public/Quasi Public	This strip of formerly residentially-designated lots facing Brookdale Avenue is now owned by Caltrans. It is separated from US 101 by the SMART right-of-way.
Northwest corner of Lucas Valley Road and US 101 (APN 164-270-04)	Hillside Residential	Public/Quasi Public	9.36 acre parcel created when the Daphne property was subdivided. This portion was deeded to Caltrans.

PROPOSED GENERAL PLAN 2040 LAND USE MAP AMENDMENTS RECOMMENDED BY STAFF

Location	2020 General Plan	2040 General Plan	Discussion
Water tank and adjacent public open space at Ridgewood Drive and Oakwood Drive (Sun Valley) (APNs 010-011-02, 010-081-07, 010-081-25, 010-081-26)	Hillside Residential	Public/Quasi Public	Four parcels owned by Marin Municipal Water District, including a large water storage tank.
Expanding Mapping of Park and Open Space Land Uses			
Lagoon Park (APN 179-270-12) – Civic Center area	Public/Quasi-Public	Park, Recreation, and Open Space	This 10-acre area at the Civic Center, including the lake, island, lawns, paths, playground, fishing pier, and picnic areas, is classified as a park by Marin County Parks.
Upper elevations of the Falkirk Mansion tract (APN 011-131-05) – Fairhills area	Public/Quasi-Public	Park, Recreation, and Open Space	The Mansion and grounds retain their Public/Quasi Public designation, However, the undeveloped upper portion of the site is re-designated as Parks and Open Space, similar to Boyd Park.
End of Limestone Grade (Marinwood) (APN 164-211-04)	Hillside Resource Residential	Park, Recreation, and Open Space	12.85 acre parcel in the northern part of Marinwood; now owned by Marinwood Community Services District and managed as open space.
Former Daphne Property (APN 164-270-04) (Marinwood)	Hillside Residential	Park, Recreation, and Open Space	69.9 acre parcel, formerly part of the Daphne property northwest of the 101/Lucas Valley interchange in unincorporated Marinwood. Now dedicated as open space.
Heron Hill (APN 180-231-05, -06, -07, -09, and 180-291-04) – east of Santa Venetia	Hillside Residential	Park, Recreation, and Open Space	This 16-acre area on North San Pedro Road was recently acquired by Marin County Parks.
Bucks Landing (APN 180-171011, 186-010-20) – east of Santa Venetia	Hillside Resource Residential	Parks and Open Space	This 32.1-acre area at the gateway to China Camp State Park was recently acquired by Marin County Parks.
Sterling Way (155-050-53) – end of Professional Center Parkway	Public/Quasi-Public	Park, Recreation, and Open Space	When Professional Center Parkway was extended (as Sterling Way), this parcel had a Public/Quasi Public designation. The portion of the parcel not occupied by the street is now permanent open space.
Loch Lomond Highlands Open Space (APN 186-520-19)	Hillside Resource Residential	Park, Recreation, and Open Space	This is a 45.73-acre open space preserve owned and managed by the Loch Lomond Highlands Homeowners Association.
Loch Lomond "Marina Green" (fragment of APNs 016-070-09 and 016-070-018)	Marine Related Commercial	Park, Recreation, and Open Space	This designation applies only to the portions of the Loch Lomond Marina development that have been developed as parkland, including the Marina Green and playground areas.
Oakwood Unit 2 (APN 012-320-09 and -10) – end of Greenwood Ave (Gerstle Park)	Hillside Residential	Park, Recreation, and Open Space	Reflects recent dedication of two parcels as open space
Mt Olivet Cemetery (APN 175-250-15)	Public/Quasi-Public	Park, Recreation, and Open Space	Cemeteries function as an extension of the open space network
Mt Tam Cemetery (APN 177-240-03)	Public/Quasi-Public	Park, Recreation, and Open Space	Cemeteries function as an extension of the open space network
Westside Las Gallinas just north of Montevideo (APN 165-010-66)	Hillside Residential	Park, Recreation, and Open Space	2.94 acres acquired by Marin County Open Space District in Terra Linda Open Space Preserve

PROPOSED GENERAL PLAN 2040 LAND USE MAP AMENDMENTS RECOMMENDED BY STAFF

Location	2020 General Plan	2040 General Plan	Discussion
Parcel 180-281-09 (behind Jehovah Witnesses parcel on North San Pedro)	Low Density Residential	Park, Recreation, and Open Space	0.97 acres acquired by Marin County Open Space District in San Pedro Mountain Open Space Preserve
Parcel 180-341-34 (end of Bayhills Drive)	Hillside Residential	Park, Recreation, and Open Space	3.17 acres acquired by State of California (part of China Camp State Park)
Adjusting to Reflect Actual Uses and Densities			
"33 North" (APN 179-511-01) apartments at 33 San Pablo Av (Civic Center area)	Office	High Density Residential	This is a multi-family apartment building on a former office building site. Although the use is permitted under the Office designation, High Density Residential is a better fit.
Anise Turina House Apartments (APN 180-1467-31) – 28 apartments on a 0.85 acre site on N. San Pedro Road at LaBrea in unincorporated Santa Venetia	Low Density Residential	High Density Residential	Although the County Plan showed this as a multi-family site, the City's plan shows it as a low density site. It has been developed with apartments and is being corrected here.
Adrian Terrace (APNs 180-530-01 through -22, and 180-530-24 through -33) – 32 small lot single family homes	High Density Residential	Medium Density Residential	The actual use of the site is a small lot single family home development at 11 units per acre. This is located in unincorporated Santa Venetia on North San Pedro Road.
Maria B Freitas Senior Housing (APN 175-181-28) at 455 Freitas Parkway	Low Density Residential	High Density Residential	Change reflects existing use, which is a high-density apartment complex serving lower income seniors
Partridge Drive/Partridge Court subdivision in the Peacock Gap area (APNs 186-540-01 to -51)	Hillside Residential	Low Density Residential	Change reflects existing density, which is 6 units per net acre. The current designation allows a maximum density of 2 units per acre. The common area is designated as Open Space.
Vista Marin Drive (APN 180-540-01 to -21 and 180-550-01 to -28) - single family homes	Hillside Residential	Medium Density Residential	Change reflects existing density, which is 8.4 units per net acre. The current designation allows a maximum density of 2 units per acre. The common area is designated as Open Space.
The Oaks (APN 164-270-05) - Approved 126 unit assisted living facility in unincorporated Marinwood	Hillside Residential	High Density Residential	Site approved for assisted living by the County of Marin. The designation only applies to the parcel where the facility will be built—the adjacent land is re-designated open space (see #20).
Homeward Bound/190 Mill Street (APN 014-192-12 and -13) in the Canal area	Light Industrial-Office	High Density Residential	Change accommodates the proposed development of 32 units of supportive housing and counseling/admin services
Adjusting to Reflect Zoning and Parcel Patterns			
257 Glen Park (APN 015-021-34) in Dominican Area Zoned duplex residential.	Low Density Residential	Medium Density Residential	Fine tunes the boundary between Low and Medium Density Residential to acknowledge existing multi-unit RD zoned bldg.
235 Union (APN 014-024-15) in Montecito – rear portion of lot only	Medium Density Residential	Medium Density Residential	Splits the GP designation on a through-lot between Union and Ridge so that the Ridge frontage stays Low Density, consistent with the other lots on Ridge Avenue. Matches existing zoning.
Toyota of Marin; 445 Francisco Boulevard East (APN 014-133-12 and 014-152-18)	Marine-Related Commercial	General Commercial	Change reflects existing use and longer-term opportunity for a broader range of uses of this site

PROPOSED GENERAL PLAN 2040 LAND USE MAP AMENDMENTS RECOMMENDED BY STAFF

Location	2020 General Plan	2040 General Plan	Discussion
#20, 30, 34, 44 Roberts Avenue; #10 Glen Av, #211 Picnic in the Picnic Valley area (APNs 013-101-09, 013-122-07 to -10, and -02)	Medium Density Residential	Low Density Residential	Splits the GP designation on the block to match existing zoning and land uses and retain the Roberts Av frontage as Low Density Residential. Multi-family uses on Picnic Avenue are not impacted.
Changing Density to Reflect Site Constraints			
54 Elda Drive (APN 175-082-21) in Terra Linda	Low Density Residential	Hillside Residential	Constrained 5.05-acre hillside parcel developed with a single family home, currently zoned R-20, with average slope of 40%. Better suited as Hillside Residential.
28 Sirard Lane (APN 010-052-01) in Sun Valley	Low Density Residential	Hillside Residential	Constrained 1.41-acre hillside parcel with a single family home, zoned PD, with average slope of 30%. Suited as Hillside Residential.
Changing for Consistency with 2013 Civic Center Station Area Plan			
380 Merrydale and 401 Merrydale, near Civic Center SMART Station (APNs 179-041-05, -22, and -26)	Light Industrial-Office	Office Mixed Use	Public Storage (1.95 net acres) and Northgate Security Storage (0.9 net acres) self-storage facilities; identified as office/potential residential sites in the *Civic Center Station Area Plan* (amended in September 2013; Resolution 13618).
Formalizing Prior Council Resolutions.			
Resolution 11682 (2004) changed 1540 Fifth Avenue (APN 011-195-03) to reflect Marin Academy ownership	Fifth/Mission Residential Office	Public/Quasi Public	Parcel no longer exists and is now part of APN 011-195-06. This change already appears on the City's official Map.
Resolution 12331 (2007) shows the approved General Plan designations for the Loch Lomond Marina development	Neighborhood Com, Marine Com, Conservation	Neighborhood Commercial, Marine Commercial, Conservation	No change. This merely formalizes the previously approved designations.
Resolution 12557 (2008) – 226 Magnolia Avenue (Dominican Admissions Office)	Large Lot Residential	Public/Quasi Public	No change. This formalizes the previously approved designation.
Resolution 14242 (2016) –Portions of SMART Right of Way and several City/County owned properties	Miscellaneous	Public/Quasi Public and Park, Recreation, and Open Space	This 2016 Resolution acknowledged SMART's ownership of several properties along the rail line, and noted several City and County owned properties as PQP or Open Space.
Resolution 14242 (2016) – 1820 Point San Pedro Road	Open Space	Low Density Residential	Change approved by Council in 2016 to acknowledge that a privately held parcel that had been designated open space.

APPENDIX D:
AIR QUALITY AND GREENHOUSE GAS EMISSIONS DATA

EXISTING STATE GHG REGULATIONS

State Regulations

Current State of California guidance and goals for reductions in GHG emissions are generally embodied in Executive Order S-03-05), Assembly Bill 32 (AB 32), Senate Bill 32 (SB 32), Executive Order B-30-15, and Senate Bill 375 (SB 375. These are summarized as follows:

EXECUTIVE ORDER S-03-05

Executive Order S-03-05, signed June 1, 2005, set the following GHG reduction targets for the state:

- 2000 levels by 2010.
- 1990 levels by 2020.
- 80 percent below 1990 levels by 2050.

ASSEMBLY BILL 32

Also known as the Global Warming Solutions Act (2006), AB 32 was signed August 31, 2006, in order to reduce California's contribution of GHG emissions. AB 32 follows the 2020 tier of emissions reduction targets established in Executive Order S-03-05. Under AB 32, California Air Resources Board (CARB) prepared the 2008 Climate Change Scoping Plan, the 2014 Climate Change Scoping Plan, and the 2017 Climate Change Scoping Plan, which is discussed below.

CARB 2008 Scoping Plan

The 2008 Scoping Plan, adopted by CARB on December 11, 2008, identified that GHG emissions in California are anticipated to be approximately 596 MMTCO2e in 2020. In December 2007, CARB approved a 2020 emissions limit of 427 MMTCO2e (471 million tons) for the state. In order to effectively implement the emissions cap, AB 32 directed CARB to establish a mandatory reporting system to track and monitor GHG emissions levels for large stationary sources that generate more than 25,000 MTCO2e per year, prepare a plan demonstrating how the 2020 deadline can be met, and develop appropriate regulations and programs to implement the plan by 2012.

First Update to the Scoping Plan

CARB completed a five-year update to the 2008 Scoping Plan, as required by AB 32. The First Update to the Scoping Plan, adopted at the May 22, 2014, board hearing, highlights California's progress toward meeting the near-term 2020 GHG emission reduction goals defined in the 2008 Scoping Plan. As part of the update, CARB recalculated the 1990 GHG emission levels with the updated AR4 GWPs, and the 427 MMTCO2e

1990 emissions level and 2020 GHG emissions limit, established in response to AB 32, are slightly higher at 431 MMTCO2e.1

As identified in the Update to the Scoping Plan, California is on track to meeting the goals of AB 32. However, the update also addresses the State's longer-term GHG goals in a post-2020 element. The post-2020 element provides a high-level view of a long-term strategy for meeting the 2050 GHG goals, including a recommendation for the State to adopt a midterm target. According to the Update to the Scoping Plan, local government reduction targets should chart a reduction trajectory that is consistent with or exceeds the trajectory created by statewide goals.2 CARB identified that reducing emissions to 80 percent below 1990 levels will require a fundamental shift to efficient, clean energy in every sector of the economy. Progressing toward California's 2050 climate targets will require significant acceleration of GHG reduction rates. Emissions from 2020 to 2050 will have to decline several times faster than the rate needed to reach the 2020 emissions limit.3

EXECUTIVE ORDER B-30-15

Executive Order B-30-15, signed April 29, 2015, sets a goal of reducing GHG emissions within the State to 40 percent of 1990 levels by year 2030. Executive Order B-30-15 also directs CARB to update the Scoping Plan to quantify the 2030 GHG reduction goal for the State and requires State agencies to implement measures to meet the interim 2030 goal as well as the long-term goal for 2050 in Executive Order S-03-05. It also requires the Natural Resources Agency to conduct triennial updates of the California adaption strategy, Safeguarding California, in order to ensure climate change is accounted for in State planning and investment decisions.

SENATE BILL 32 AND ASSEMBLY BILL 197

In September 2016, SB 32 and AB 197 were signed into law, making the Executive Order goal for year 2030 into a statewide mandated legislative target. AB 197 established a joint legislative committee on climate change policies and requires the CARB to prioritize direct emissions reductions rather than the market-based cap-and-trade program for large stationary, mobile, and other sources.

2017 Climate Change Scoping Plan Update

Executive Order B-30-15 and SB 32 required CARB to prepare another update to the Scoping Plan to address the 2030 target for the state. On December 14, 2017, CARB adopted the 2017 Climate Change Scoping Plan Update (2017 Scoping Plan) to address the 2030 target for the State. The 2017 Scoping Plan establishes a new emissions limit of 260 MMTCO2e for the year 2030, which corresponds to a 40 percent decrease in 1990 levels by 2030.4

California's climate strategy will require contributions from all sectors of the economy, including enhanced focus on zero- and near-zero emission vehicle technologies; continued investment in renewables, such as

[3] California Air Resources Board, 2014, May 15. First Update to the Climate Change Scoping Plan: Building on the Framework, Pursuant to AB 32, The California Global Warming Solutions Act of 2006.
[4] California Air Resources Board, 2017, California's 2017 Climate Change Scoping Plan: The Strategy for Achieving California's 2030 Greenhouse Gas Target, https://www.arb.ca.gov/cc/scopingplan/2030sp_pp_final.pdf, accessed on March 18, 2019.

solar roofs, wind, and other types of distributed generation; greater use of low carbon fuels; integrated land conservation and development strategies; coordinated efforts to reduce emissions of short-lived climate pollutants (i.e., methane, black carbon, and fluorinated gases); and an increased focus on integrated land use planning to support livable, transit-connected communities and conservation of agricultural and other lands. Requirements for GHG reductions at stationary sources complement local air pollution control efforts by the local air districts to tighten criteria air pollutants and toxic air contaminants (TACs) emissions limits on a broad spectrum of industrial sources. Major elements of the 2017 Scoping Plan framework include:

- Implementing and/or increasing the standards of the Mobile Source Strategy, which include increasing zero emission vehicle buses and trucks.
- Low Carbon Fuel Standards, with an increased stringency (18 percent by 2030).
- Implementation of SB 350, which expands the Renewables Portfolio Standard (RPS) to 50 percent RPS and doubles energy efficiency savings by 2030.
- California Sustainable Freight Action Plan, which improves freight system efficiency, utilizes near-zero emissions technology, and deployment of zero emission vehicle trucks.
- Implementing the proposed Short-Lived Climate Pollutant Strategy, which focuses on reducing methane and hydrofluorocarbon emissions by 40 percent and anthropogenic black carbon emissions by 50 percent by year 2030.
- Continued implementation of SB 375.
- Post-2020 Cap-and-Trade Program that includes declining caps.
- Development of a Natural and Working Lands Action Plan to secure California's land base as a net carbon sink.

In addition to the statewide strategies listed above, the 2017 Scoping Plan also identified local governments as essential partners in achieving the State's long-term GHG reduction goals and identified local actions to reduce GHG emissions. As part of the recommended actions, CARB recommends statewide targets of no more than 6 MTCO2e or less per capita by 2030 and 2 MTCO2e or less per capita by 2050. CARB recommends that local governments evaluate and adopt robust and quantitative locally-appropriate goals that align with the statewide per capita targets and the State's sustainable development objectives and develop plans to achieve the local goals. The statewide per capita goals were developed by applying the percent reductions necessary to reach the 2030 and 2050 climate goals (i.e., 40 percent and 80 percent, respectively) to the State's 1990 emissions limit established under AB 32. For CEQA projects, CARB states that lead agencies have the discretion to develop evidenced-based numeric thresholds (mass emissions, per capita, or per service population)—consistent with the Scoping Plan and the State's long-term GHG goals. To the degree a project relies on GHG mitigation measures, CARB recommends that lead agencies prioritize on-site design features that reduce emissions, especially from vehicle miles travelled (VMT), and direct investments in GHG reductions within the project's region that contribute potential air quality, health, and economic co-benefits. Where further project design or regional investments are infeasible or not proven to be effective, CARB recommends mitigating potential GHG impacts through purchasing and retiring carbon credits.

The Scoping Plan scenario is set against what is called the business-as-usual (BAU) yardstick—that is, what the GHG emissions would look like if the State did nothing at all beyond the existing policies that are required and already in place to achieve the 2020 limit, as shown in Table 1. It includes the existing renewables requirements, advanced clean cars, the "10 percent" Low Carbon Fuel Standard, and the SB 375 program for more vibrant communities, among others. However, it does not include a range of new

policies or measures that have been developed or put into statute over the past two years. Also shown in the table, the known commitments are expected to result in emissions that are 60 MMTCO2e above the target in 2030. If the estimated GHG reductions from the known commitments are not realized due to delays in implementation or technology deployment, the post-2020 Cap-and-Trade Program would deliver the additional GHG reductions in the sectors it covers to ensure the 2030 target is achieved.

TABLE 1 2017 CLIMATE CHANGE SCOPING PLAN EMISSIONS REDUCTIONS GAP TO ACHIEVE THE 2030 GHG TARGET

Modeling Scenario	2030 GHG Emissions $MMTCO_2e$
Reference Scenario (Business-as-Usual)	389
With Known Commitments	320
2030 GHG Target	**260**
Gap to 2030 Target with Known Commitments	**60**

SENATE BILL 375

In 2008, SB 375, the Sustainable Communities and Climate Protection Act, was adopted to connect the GHG emissions reductions targets established in the 2008 Scoping Plan for the transportation sector to local land use decisions that affect travel behavior. Its intent is to reduce GHG emissions from light-duty trucks and automobiles (excludes emissions associated with goods movement) by aligning regional long-range transportation plans, investments, and housing allocations to local land use planning to reduce VMT and vehicle trips. Specifically, SB 375 required CARB to establish GHG emissions reduction targets for each of the 18 metropolitan planning organizations (MPOs). The Metropolitan Transportation Commission (MTC) is the MPO for the nine-county San Francisco Bay Area region. Pursuant to the recommendations of the Regional Transportation Advisory Committee (RTAC), CARB adopted per capita reduction targets for each of the MPOs rather than a total magnitude reduction target.

2017 Update to the SB 375 Targets

CARB is required to update the targets for the MPOs every eight years. CARB adopted revised SB 375 targets for the MPOs in March 2018.5 The updated targets become effective on October 1, 2018. The targets consider the need to further reduce VMT, as identified in the 2017 Scoping Plan Update (for SB 32), while balancing the need for additional and more flexible revenue sources to incentivize positive planning and action toward sustainable communities. Like the 2010 targets, the updated SB 375 targets are in units of percent per capita reduction in GHG emissions from automobiles and light trucks relative to 2005; this excludes reductions anticipated from implementation of state technology and fuels strategies, and any potential future state strategies, such as statewide road user pricing.

The proposed targets call for greater per-capita GHG emission reductions from SB 375 than are currently in place, which for 2035 translate into proposed targets that either match or exceed the emission reduction levels in the MPOs' currently adopted SCS to achieve the SB 375 targets. For next SCS update, CARB's updated targets for the MTC/ABAG region are a 10 percent per capita GHG reduction in 2020 from 2005 levels (compared to 7 percent under the 2010 target) and a 19 percent per capita GHG reduction in 2035 from 2005 levels (compared to the 2010 target of 15 percent). CARB foresees that the additional GHG emissions reductions in 2035 may be achieved from land use changes, transportation investment, and technology strategies. 6

OTHER STATE REGULATIONS THAT AFFECT GHGS

Transportation Sector

Assembly Bill 1493

Also known as Pavley I, AB 1493 is a clean-car standard that reduces GHG emissions from new passenger vehicles (light-duty auto to medium-duty vehicles) from 2009 through 2016. It reduced GHG emissions from new passenger vehicles by 30 percent by 2016. California implemented the Pavley I standards through a waiver granted to California by the EPA. In 2012, the EPA issued a Final Rulemaking that sets even more stringent fuel economy and GHG emissions standards for model year 2017 through 2025 light-duty vehicles (see also the discussion on the update to the CAFE standards under the heading for Federal Regulations, above). In January 2012, CARB approved the Advanced Clean Cars program (formerly known

[5] California Air Resources Board, 2018, Updated Final Staff Report: Proposed Update to the SB 375 Greenhouse Gas Emissions Reduction Targets.

[6] California Air Resources Board, 2018, Updated Final Staff Report: Proposed Update to the SB 375 Greenhouse Gas Emissions Reduction Targets.

as Pavley II) for model years 2017 through 2025. This program combines the control of smog, soot, and global warming gases and requirements for greater numbers of zero-emission vehicles into a single package of standards. Under California's Advanced Clean Car program, by 2025, new automobiles will emit 34 percent fewer global warming gases and 75 percent fewer smog-forming emissions.[7]

Executive Order S-01-07

On January 18, 2007, the State set a new Low Carbon Fuel Standard for transportation fuels sold in California. Executive Order S-01-07 sets a declining standard for GHG emissions measured in carbon dioxide equivalent gram per unit of fuel energy sold in California. The Low Carbon Fuel Standard required a reduction of 2.5 percent in the carbon intensity of California's transportation fuels by 2015 and a reduction of at least 10 percent by 2020. The Low Carbon Fuel Standard applies to refiners, blenders, producers, and importers of transportation fuels and would use market-based mechanisms to allow these providers to choose how they reduce emissions during the "fuel cycle," using the most economically feasible methods.

Executive Order B-16-2012

Signed on March 23, 2012, the State directed that CARB, the California Energy Commission, the Public Utilities Commission, and other relevant agencies work with the Plug-in Electric Vehicle Collaborative and the California Fuel Cell Partnership to establish benchmarks to accommodate zero-emissions vehicles in major metropolitan areas, including infrastructure to support them (e.g., electric vehicle charging stations). The executive order also directs the number of zero-emission vehicles in California's state vehicle fleet to increase through the normal course of fleet replacement so that at least 10 percent of fleet purchases of light-duty vehicles are zero-emission by 2015 and at least 25 percent by 2020. Finally, the executive order sets a target of reducing GHG emissions from the transportation sector 80 percent below 1990 levels.

Energy and Renewable Energy

Senate Bills 1078, 107, and X1-2, and Executive Order S-14-08

A major component of California's Renewable Energy Program is the renewable portfolio standard established under Senate Bill 1078 and 107. Executive Order S-14-08 was signed in November 2008, which expanded the State's Renewable Energy Standard to 33 percent renewable power by 2020. This standard was adopted by the legislature in 2011 (SB X1-2). The increase in renewable sources for electricity production will decrease indirect GHG emissions from development projects because electricity production from renewable sources is generally considered carbon neutral.

Senate Bill 350

Signed in September 2015, SB 350 establishes tiered increases to the renewable portfolio standard of 40 percent by 2024, 45 percent by 2027, and 50 percent by 2030. SB 350 seeks to double the energy efficiency savings in electricity and natural gas through energy efficiency and conservation measures.

Executive Order B-55-18 and SB 100

SB 100 and Executive Order B-55-18 were signed into law on September 10, 2018. Under the existing RPS, 25 percent of retail sales are required to be from renewable sources by December 31, 2016, 33 percent by December 31, 2020, 40 percent by December 31, 2024, 45 percent by December 31, 2027, and 50 percent

[7] See also the discussion on the update to the CAFE standards under Federal Laws, above. In January 2012, CARB approved the Advanced Clean Cars program (formerly known as Pavley II) for model years 2017 through 2025. The program combines the control of smog, soot and global warming gases and requirements for greater numbers of zero-emission vehicles into a single package of standards. Under California's Advanced Clean Car program, by 2025, new automobiles will emit 34 percent fewer global warming gases and 75 percent fewer smog-forming emissions.

by December 31, 2030. SB 100 raises California's RPS requirement to 50 percent renewable resources target by December 31, 2026, and to achieve a 60 percent target by December 31, 2030. SB 100 also requires that retail sellers and local publicly owned electric utilities procure a minimum quantity of electricity products from eligible renewable energy resources so that the total kilowatt hours of those products sold to their retail end-use customers achieve 44 percent of retail sales by December 31, 2024, 52 percent by December 31, 2027, and 60 percent by December 31, 2030.

In addition to targets under AB 32 and SB32, Executive Order B-55-18 establishes a carbon neutrality goal for the state of California by 2045; and sets a goal to maintain net negative emissions thereafter. The Executive Order directs the California Natural Resources Agency, CalEPA, the Department of Food and Agriculture, and CARB to include sequestration targets in the Natural and Working Lands Climate Change Implementation Plan consistent with the carbon neutrality goal.

California Building Code: Building Energy Efficiency Standards

Energy conservation standards for new residential and non-residential buildings were adopted in June 1977 and most recently revised in 2016 (Title 24, Part 6, of the California Code of Regulations). Title 24 requires the design of building shells and building components to conserve energy. The standards are updated periodically to allow for consideration and possible incorporation of new energy efficiency technologies and methods. The 2019 Building Energy Efficiency Standards, which were adopted on May 9, 2018, went into effect January 1, 2020.[8] The 2019 standards move toward cutting energy use in new homes by more than 50 percent and will require installation of solar photovoltaic systems for single-family homes and multifamily buildings of three stories and less. Four key areas the 2019 standards focus on are 1) smart residential photovoltaic systems; 2) updated thermal envelope standards (preventing heat transfer from the interior to exterior and vice versa); 3) residential and nonresidential ventilation requirements; and 4) nonresidential lighting requirements.[9] Under the 2019 standards, nonresidential buildings will be 30 percent more energy efficient compared to the 2016 standards, and single-family homes will be 7 percent more energy efficient. When accounting for the electricity generated by the solar photovoltaic system, single-family homes would use 53 percent less energy than homes built to the 2016 standards.[10]

California Building Code: CALGreen

On July 17, 2008, California Green Building Standards Code (24 California Code of Regulations, Part 11, known as "CALGreen") were adopted as part of the California Building Standards Code. CALGreen established planning and design standards for sustainable site development, energy efficiency (in excess of the California Energy Code requirements), water conservation, material conservation, and internal air contaminants.11 The mandatory provisions of the 2016 CalGreen building standards became effective on January 1, 2017. The CEC adopted the 2019 CALGreen on May 9, 2018, and it becomes effective January 1, 2020.

[11] The green building standards became mandatory in the 2010 edition of the code.

2006 Appliance Efficiency Regulations

Adopted by the California Energy Commission on October 11, 2006, the 2006 Appliance Efficiency Regulations (Title 20, California Code of Regulations, Sections 1601 through 1608) were approved by the California Office of Administrative Law on December 14, 2006. The regulations include standards for both federally regulated appliances and non–federally regulated appliances. Though these regulations are now often viewed as "business-as-usual," they exceed the standards imposed by all other states and they reduce GHG emissions by reducing energy demand.

Solid Waste Regulations

AB 939

Management of solid waste processing would contribute to reducing GHG emissions. Through operations such as source reduction, recycling, and composting, less waste would be produced and less energy would be consumed to process waste materials, thereby reducing GHG emissions. California's Integrated Waste Management Act of 1989 (AB 939, Public Resources Code 40050 et seq.) set a requirement for cities and counties throughout the state to divert 50 percent of all solid waste from landfills by January 1, 2000, through source reduction, recycling, and composting. In 2008, the requirements were modified to reflect a per capita requirement rather than tonnage. To help achieve this, the act requires that each city and county prepare and submit a source reduction and recycling element. AB 939 also established the goal for all California counties to provide at least 15 years of ongoing landfill capacity.

AB 341

AB 341 (Chapter 476, Statutes of 2011) increased the statewide goal for waste diversion to 75 percent by 2020 and requires recycling of waste from commercial and multifamily residential land uses.

AB 1327

The California Solid Waste Reuse and Recycling Access Act (AB 1327, California Public Resources Code Sections 42900 et seq.) requires areas to be set aside for collecting and loading recyclable materials in development projects. The act required the California Integrated Waste Management Board to develop a model ordinance for adoption by any local agency requiring adequate areas for collection and loading of recyclable materials as part of development projects. Local agencies are required to adopt the model or an ordinance of their own. Section 5.408 of the CALGreen also requires that at least 50 percent of the nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse.

AB 1826

AB 1826, signed on October of 2014, requires businesses to recycle their organic waste on and after April 1, 2016, depending on the amount of waste they generate per week. This law also requires that on and after January 1, 2016, local jurisdictions implement an organic waste recycling program to divert organic waste generated by businesses, including multifamily residential dwellings that consist of five or more units. Organic waste means food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste.

Water Efficiency Regulations

SBX7-7

Water conservation would indirectly contribute to reducing greenhouse gases. As less water is used, fewer resources will be used to source, distribute, and treat the water. The 20x2020 Water Conservation Plan

was issued by the Department of Water Resources (DWR) in 2010 pursuant to Senate Bill 7, which was adopted during the 7th Extraordinary Session of 2009 to 2010 and therefore dubbed "SBX7-7." SBX7-7 mandated urban water conservation and authorized the DWR to prepare a plan implementing urban water conservation requirements (20x2020 Water Conservation Plan). In addition, it required agricultural water providers to prepare agricultural water management plans, measure water deliveries to customers, and implement other efficiency measures. SBX7-7 requires urban water providers to adopt a water conservation target of 20 percent reduction in urban per capita water use by 2020 compared to 2005 baseline use.

AB 1881

The Water Conservation in Landscaping Act of 2006 (AB 1881) requires local agencies to adopt the updated DWR model ordinance or equivalent. AB 1881 also requires the Energy Commission, in consultation with the department, to adopt, by regulation, performance standards and labeling requirements for landscape irrigation equipment, including irrigation controllers, moisture sensors, emission devices, and valves to reduce the wasteful, uneconomic, inefficient, or unnecessary consumption of energy or water.

Short-Lived Climate Pollutants

Senate Bill 1383

On September 19, 2016, SB 1383 was signed into law to supplement the GHG reduction strategies in the Scoping Plan to consider short-lived climate pollutants, including black carbon and CH4. Black carbon is the light-absorbing component of fine particulate matter produced during incomplete combustion of fuels. SB 1383 required the State board, to approve and begin implementing the comprehensive strategy to reduce emissions of short-lived climate pollutants to achieve a reduction in methane by 40 percent, hydrofluorocarbon gases by 40 percent, and anthropogenic black carbon by 50 percent below 2013 levels by 2030. The bill also established targets for reducing organic waste in landfills. On March 14, 2017, CARB adopted the Final Proposed Short-Lived Climate Pollutant Strategy, which identifies the State's approach to reducing anthropogenic and biogenic sources of short-lived climate pollutants. Anthropogenic sources of black carbon include on- and off-road transportation, residential wood burning, fuel combustion (charbroiling), and industrial processes. According to CARB, ambient levels of black carbon in California are 90 percent lower than in the early 1960s, despite the tripling of diesel fuel use.12 In-use on-road rules are expected to reduce black carbon emissions from on-road sources by 80 percent between 2000 and 2020.

Notes: Emissions may not total to 100 percent due to rounding. Based on GWPs in the IPCC Fifth Assessment Report (AR5).

The emissions inventory and forecast is based on activity data for the City. This emissions inventory methodology identifies GHG emissions produced within a jurisdiction and captures direct and indirect emissions generated by land uses in a community. The activity data methodology allows a direct comparison between a community's GHG emissions and that identified by CARB in the AB 32 and SB 32 inventory and forecast prepared for the scoping plan. Unlike a "consumption-based" GHG emissions inventory, an activity-based emissions inventory does not capture lifecycle emissions associated with consumptions of goods. While a consumption-based emissions inventory approach may document GHG emissions associated with the final demand (regardless of where the were generated), a consumption-based emissions inventory excludes emissions associated with products produced within the juridiction but consumed elsewhere. For these reasons, an activity-based emissions inventory was determined to be most applicable for determining significant impacts under CEQA.

Solid Waste Disposal

Solid Waste Disposal

Source: CalRecycle Disposal By Facility - Marin County Hazardous and Solid Waste Management (Disposal Reporting System)

T**he Marin County Hazardous and Solid Waste Management Joint Powers Authority** is an agency consisting of all 11 incorporated cities within Marin (Belvedere, Corte Madera, Fairfax, Larkspur, Mill Valley, Novato, Ross, San Anselmo, San Rafael, Sausalito, and Tiburon) and the County. Because of this, Calrecycle does not report solid waste disposal for San Rafael separte from the County. Solid Waste Disposal is estimated based on Service Population for the County of Marin v. San Rafael

Service Population of Marin County	
Employment[1]	112,468
Population[2]	258,826
Service Population	371,294

Service Population of San Rafael	City	SOI	TOTAL	% of Total
2019 Service Population	103,280	16,671	119,951	32%
As a % of Total	86%	14%		% Increase in SP
2040 Service Population	115,340	17,636	132,976	11%
As a % of Total	87%	13%

Waste. Landfill Emissions Tool Version 1.3 and CalRecycle. Biogenic CO_2 emissions are not included.

Notes

LFG capture Efficiency	0.75	AR5 CH_4 GWP	28	Tons to metric Tons	0.9071847

Waste generation based on three year average waste commitment for the County of Marin obtained from CalRecycle.

Significant CH_4 production typically begins one or two years after waste disposal in a landfill and continues for 10 to 60 years or longer. Consequently, the highest CH_4 emissions from waste disposal in a given year are reported.

Decomposition based on an average annual rainfall of 25 inches per year average (anaerobic decomposition factor (k) of 0.038) for the Redwood Landfill [WORST CASE] and an average annual rainfall of 17 inches per year average (anaerobic decomposition factor (k) of 0.02) for the Potrero Hills Landfill (WRCC 2020).

The Landfill Gas Estimator only includes the landfill gas (LFG) capture in the landfill gas heat output and therefore the reduction and emissions from landfill gas capture are calculated separately. Assumes 75 percent of fugitive GHG emissions are captured within the landfill's Landfill Gas Capture System with a landfill gas capture efficiency of 75%. The Landfill gas capture efficiency is based on the California Air Resources Board's (CARB) Local Government Operations Protocol (LGOP), Version 1.3.

Biogenic CO_2 emissions are not included.

WASTEWATER PERCENTAGE	70%

[1] Modeling conservatively assumes that 70 percent of water use is indoor water use (30% outdoor) and would require wastewater treatment. Source: Marin Municipal Water District, 2016. Urban Water Management Plan, 2015 Update. Prepared by RMC Water and Environment

Water and Wastewater

Fugitive Emissions - Process Emissions from WWTP with Nitrification/Denitrification

CH_4 - Microorganisms can biodegrade soluble organic material in wastewater under aerobic (presence of oxygen) or anaerobic (absence of oxygen) conditions. Anaerobic conditions result in the production of CH_4.

N_2O - Treatment of domestic wastewater during both nitrification and denitrification of the nitrogen present leads to the formation of N_2O, usually in the form of urea, ammonia, and proteins. These compounds are converted to nitrate through the aerobic process of nitrification. Denitrification occurs under anoxic conditions (without free oxygen), and involves the biological conversion of nitrate into dinitrogen. N_2O can be an intermediate product of both processes, but more often is associated with denitrification.

Notes: Waste discharge facilities in compliance with the United States Environmental Protection Agency's Clean Water Standards do not typically result in CH_4 emissions. However, poorly-operated aerobic wastewater treatment systems can result in the generation of CH_4. Because wastewater treatment systems are assumed to operate in compliance with state and federal laws pertaining to water quality, CH_4 emissions from centralized aerobic treatments are not included in the inventory.

Fugitive Emissions - Process Emissions from WWTP with Nitrification/Denitrification

Year 2019 GHG Emissions

Based on EMFAC2017, Webdata - Project Level Analysis, https://arb.ca.gov/emfac/project-analysis. Marin County - San Francisco Bay Area Air Basin (SFBAAB).

Uses 40 mph running exhaust emissions rates based on statewide average, as cited in the CalEEMod 2016 User's Guide.

N2O emissions were calculated using an off-model adjustment provided by CARB in the 2014 Scoping Plan Update. The off-model adjustment uses a linear regression correlating N2O with NOx. (N2O = 0.0416 x NOx)

VMT Adjustments to adjust Daily to Annual			
	Daily	Annual	Percentage
City	3,214,988	1,115,600,831	89%
SOI	399,338	138,570,291	11%
TOTAL	3,614,326	1,254,171,122	100%

[1.] Based on data provided Fehr & Peers.

[2.] Adjusted Daily vehicles miles traveled (VMT) multiplied by 347 days/year to account for reduced traffic on weekends and holidays. This assumption is consistent with the California Air Resources Board's (CARB) methodology within the 2008 Climate Change Scoping Plan Measure Documentation Supplement.

					N_2O	CO_2 (Pavley)	CH_4

Year 2019 GHG Emissions

Based on EMFAC2017, Webdata - Project Level Analysis, https://arb.ca.gov/emfac/project-analysis. Marin County - San Franciso Bay Area Air Basin (SFBAAB).

Uses 40 mph running exhaust emissions rates based on statewide average, as cited in the CalEEMod 2016 User's Guide.

N2O emissions were calculated using an off-model adjustment provided by CARB in the 2014 Scoping Plan Update. The off-model adjustment uses a linear regression correlating N2O with NOx. (N2O = 0.0416 x NOx)

VMT Adjustments to adjust Daily to Annual			
	Daily	Annual	Percentage
City	3,214,988	1,115,600,831	89%
SOI	399,338	138,570,291	11%
TOTAL	3,614,326	1,254,171,122	100%

[1.] Based on data provided Fehr & Peers.

[2.] Adjusted Daily vehicles miles traveled (VMT) multiplied by 347 days/year to account for reduced traffic on weekends and holidays. This assumption is consistent with the California Air Resources Board's (CARB) methodology within the 2008 Climate Change Scoping Plan Measure Documentation Supplement.

					N_2O	CO_2 (Pavley)	CH_4

Existing with Year 2040 Rates: Criteria Air Pollutants

Based on EMFAC2017, Webdata - Project Level Analysis, https://arb.ca.gov/emfac/project-analysis. Marin County - San Franciso Bay Area Air Basin (SFBAAB).

Uses 40 mph running exhaust emissions rates based on statewide average, as cited in the CalEEMod 2016 User's Guide.

2040 Rates GHG Emissions: Existing

Based on EMFAC2017, Webdata - Project Level Analysis, https://arb.ca.gov/emfac/project-analysis. Marin County - San Franciso Bay Area Air Basin (SFBAAB).

Uses 40 mph running exhaust emissions rates based on statewide average, as cited in the CalEEMod 2016 User's Guide.

N2O emissions were calculated using an off-model adjustment provided by CARB in the 2014 Scoping Plan Update. The off-model adjustment uses a linear regression correlating N2O with NOx. (N2O = 0.0416 x NOx

VMT Adjustments to adjust Daily to Annual			
	Daily	Annual	Percentage
City	3,214,988	1,115,600,831	89%
SOI	399,338	138,570,291	11%
TOTAL	3,614,326	1,254,171,122	100%

[1.] Based on data provided Fehr & Peers.

[2.] Adjusted Daily vehicles miles traveled (VMT) multiplied by 347 days/year to account for reduced traffic on weekends and holidays. This assumption is consistent with the California Air Resources Board's (CARB) methodology within the 2008 Climate Change Scoping Plan Measure Documentation Supplement.

Year 2040 GHG Emissions: Project

Based on EMFAC2017, Webdata - Project Level Analysis, https://arb.ca.gov/emfac/project-analysis. Marin County - San Franciso Bay Area Air Basin (SFBAAB).

Uses 40 mph running exhaust emissions rates based on statewide average, as cited in the CalEEMod 2016 User's Guide.

N2O emissions were calculated using an off-model adjustment provided by CARB in the 2014 Scoping Plan Update. The off-model adjustment uses a linear regression correlating N2O with NOx. (N2O = 0.0416 x NC

VMT Adjustments to adjust Daily to Annual			
	Daily	Annual	Percentage
City	3,352,369	1,163,272,201	90%
SOI	385,521	133,775,629	10%
TOTAL	3,737,890	1,297,047,830	100%

[1.] Based on data provided Fehr & Peers.

[2.] Adjusted Daily vehicles miles traveled (VMT) multiplied by 347 days/year to account for reduced traffic on weekends and holidays. This assumption is consistent with the California Air Resources Board's (CARB) methodology within the 2008 Climate Change Scoping Plan Measure Documentation Supplement.

BIOLOGICAL RESOURCES

This Background Report has been prepared as part of the General Plan 2040 and Downtown Precise Plan being undertaken by the City of San Rafael. It provides a general description of the biological and wetland resources in and around the City of San Rafael and a summary of the regulatory framework that provides for protection of sensitive resources and habitat. It consists of the following sections: (1) a description of the methods used in preparing this Background Report; (2) descriptions of the vegetation and wildlife habitat types, special-status species, and sensitive habitats within the City Limits, Sphere of Influence (SOI), and Planning Area for the General Plan Update; (3) an overview of the existing federal and State regulations pertaining to biological and wetland resources; and (4) a listing of applicable existing San Rafael General Plan policies; and (5) a summary of planning considerations for use in updating the General Plan.

Biological Resources – Existing Conditions

METHODS

This Background Report was prepared by reviewing available information on biological and wetland resources in the San Rafael vicinity. This included: the *City of San Rafael General Plan 2020* and Environmental Impact Report (EIR, the Biological Resources section of the *Marin Countywide Plan Update Draft EIR,*[1] the California Native Plant Species (CNPS) *Inventory of Rare and Endangered Plants,*[2] and available Geographic Information System (GIS) data. The GIS data was used to map the existing vegetation and wildlife habitat, the known distribution of special-status species and sensitive natural communities, and the known distribution of wetlands in the Planning Area. GIS data on vegetation and wildlife habitat was obtained from the CALVEG mapping program maintained by the U.S. Department of Agricultural (USDA) Forest Service. GIS data on special-status species and sensitive natural communities was obtained from the California Natural Diversity Data Base (CNDDB) of the California Department of Fish and Wildlife (CDFW). GIS data on wetlands was obtained from the National Wetland Inventory (NWI) mapping program maintained by the U.S. Fish and Wildlife Service (USFWS). This data was used in preparing maps contained in this report, consisting of the following:

- **Figure 1** shows the various vegetation cover types in the Planning Area vicinity according to the CALVEG mapping program.

- **Figure 2** shows the distribution of known occurrences of special-status plant and sensitive natural communities in the Planning Area vicinity as reported by the CNDDB.

2 California Native Plant Society, 2019. *Inventory of rare and endangered plants in California* (online edition). Website: www.cnps.org/inventory (accessed February 10).

- **Figure 3** shows the distribution of known occurrences of special-status animals reported by the CNDDB and designated critical habitat as mapped by the USFWS in the Planning Area vicinity.

- **Figure 4** shows the extent of wetlands mapped as part of the NWI program as well as the occurrences of sensitive natural communities in the Planning Area according to records of the USFWS.

BIOLOGICAL RESOURCES WITHIN THE PLANNING AREA

The following section provides a description of vegetation types and associated wildlife, known distribution of special-status species, and sensitive habitats.

Habitat Types

The San Rafael Planning Area is largely developed, with urban uses occupying most of the valley floors and former marshlands that once bordered the San Francisco Bay. The valley floors are bordered by the remaining undeveloped woodlands, forests, grasslands, scrub and chaparral of the surrounding hillsides and ridges, traversed by bands of riparian woodland along the remaining unchannelized creeks and drainages. Marshlands remain along the shoreline of San Pablo Bay and the lower reaches of San Rafael, Gallinas, and Miller Creeks.

Figure 1 shows the extent of urbanization and various vegetative cover types in the Planning Area, based on the CALVEG GIS mapping data of the USDA Forest Service. Estimates of various vegetation cover types within the SOI and Planning Area are summarized in **Table 1**, based on the CALVEG GIS mapping data.

Although native vegetation within much of the Planning Area has been substantially altered, the presence of large areas of undeveloped lands to the west, the remaining marshlands and open water habitat along the shoreline of San Pablo Bay, and the freshwater marsh and riparian habitat along unchannelized creeks and drainages, contribute to a relatively diverse assemblage of resident and migrant wildlife species. In general, each habitat differs in its relative value to specific species and can be characterized by both vegetation and associated animal species that are dependent on that habitat, although some wildlife species may utilize more than one habitat type. The characteristic plant and wildlife species typically associated with each of these habitat types is summarized below.

Urban Development/Ornamental Landscaping

Urban development, ornamental landscaping and barren areas occupy most of the valley floors in the Planning Area. As indicated in **Figure 1**, an estimated 7,548.4 acres or roughly 38 percent of the land cover types in the Planning Area is mapped as urban development or barren, which includes impervious surfaces, structures, ornamental landscaping and areas of remnant native vegetation, and locations with no vegetative cover. Most plant species used in landscaping are non-native ornamentals, consisting of a wide variety of tree, shrub, groundcover, and turf species. Native trees are scattered throughout the established residential neighborhoods and urbanized areas, including specimen coast live oaks (*Quercus agrifolia*), valley oaks (*Q. lobata*), California bay laurel (*Umbellularia californica*), California buckeye (*Aesculus californica*), coast redwood (*Sequoia sempervirens*), madrone (*Arbutus*

menziesii), and black oak (*Quercus kelloggii*), among others. Larger ornamental and non-indigenous native species include: Monterey pine (*Pinus radiata*), Monterey cypress (*Cupressus macrocarpa*), incense cedar (*Calocedrus decurrens*), deodar cedar (*Cedrus deodara*), American elm (*Ulmus americana*), Mexican fan palm (*Washingtonia robusta*) and Tasmanian blue gum (*Eucalyptus globulus*), among many others.

Blue gum occurs as scattered individuals and several groves in the southwestern portion of the Planning Area. Blue gum is relatively invasive and has formed dense forests on some of the hillsides in the Planning Area. As indicated in **Figure 1**, larger groves of blue gum occur on the southern slopes of San Pedro Mountain and Peacock Gap, collectively occupying an estimated 230.8 acres of the Planning Area.

Table 1
Estimates of Vegetation Cover/Habitat Type in Planning Area*

Vegetation Cover/Habitat Type	***SOI (acres)***	***Planning Area (acres)***
Annual grassland	1,323.9	2,773.2
Coastal scrub	195.5	195.5
Mixed chaparral	0.0	232.9
Oak woodland	4,462.8	5,302.4
Hardwood-conifer forest	268.0	2,295.6
Riparian woodland	12.3	107.1
Lacustrine	0.5	0.5
Freshwater marsh	0.0	5.1
Saline marsh	1,060.3	1,196.5
Eucalyptus	230.8	230.8
Cropland	12.4	40.2
Urban/Barren	7,078.8	7,548.4
TOTAL	14,645.3	19,928.3

- - Landcover types occupy an estimated 14,645.3 acres of the 26,193 acres of the SOI and 19,928 acres of the 34,586 acres of the Planning Area, with the remaining acreages being unvegetated open waters of the bay.

Source: CALVEG GIS data, USDA Forest Service, 2019.

Some non-native ornamental species are considered highly invasive because of their ability to spread and eventually dominate natural areas if unmanaged. Many of these are common in the Planning Area in urbanized areas, along riparian corridors, and in hillside open space and remaining undeveloped private lands. These include: silver wattle (*Acacia dealbata*), blackwood acacia (*Acacia melanoxylon*), several species of broom (*Genista monspessulana*; *G. juncea*; and *Cytisus scoparius*), pampasgrass (*Cortaderia selloana*), cotoneaster

(*Cotoneaster* spp.), bermudagrass (*Cynodon dactylon*), Germany ivy (*Delairea odorata*), English ivy (*Hedera helix*), bermuda buttercup (*Oxalis pes-caprae*), Himalaya blackberry (*Rubus armeniacus*), periwinkle (*Vinca major*), and Tasmanian blue gum. The California Invasive Plant Council (Cal-IPC) has developed a comprehensive data base, the *Invasive Plant Inventory*, which ranks invasive species based on the threat they pose to natural habitat. All of the above species and others known to exist in the vicinity of San Rafael, are considered to have a high to moderate ranking by Cal-IPC because of their invasive properties and the threat they pose to natural areas.

In general, urbanized areas tend to have low to poor wildlife habitat values due to replacement of natural communities, fragmentation of remaining open space areas and parks, and intensive human disturbance. The diversity of urban wildlife depends on the extent and type of landscaping and remaining open space, as well as the proximity to natural habitat. Trees and shrubs used for landscaping provide nest sites and cover for wildlife adapted to developed areas. Typical native bird species include: mourning dove, scrub jay, northern mockingbird, American robin, northern flicker, California towhee, and American kestrel. Introduced species include: rock dove, European starling, house finch, and house sparrow. Urban areas also provide habitat for several species of native mammals such as black-tailed deer, California ground squirrel, raccoon, gray fox, striped skunk, and coyote, as well as the introduced eastern fox squirrel and eastern red fox. Introduced pest species such as Norway rat, house mouse, and Virginia opossum are also abundant in developed areas.

Forest and Woodlands

Forest and woodlands occupy an estimated 7,598 acres or roughly 38 percent of the land cover types in the Planning Area, forming the dominant cover on San Pedro Mountain, along Southern Heights Ridge, and the upper Lucas Valley watershed. As summarized in **Table 1** and mapped in **Figure 1**, this includes areas of oak woodland dominated by coast live oak and other oak species, coniferous forest dominated by conifers, and montane forest dominated by a mixture of hardwoods and conifers. Oak woodlands form the dominant native cover in the largely developed hillside area in the northwestern portion of the Planning Area, with forest cover extending over much of the southwestern portion of the Planning Area. Dominant tree species varies and include: coast live oak, California bay laurel, coast redwood, Douglas fir (*Pseudotsuga menziesii*), tan oak (*Lithocarpus densiflorus*), and black oak. Other tree and shrub species found in the forest and woodland habitats include: madrone, valley oak, California buckeye, toyon (*Heteromeles arbutifolia*), poison oak (*Toxicodendron diversilobum*), and hazelnut (*Corylus cornuta* ssp. *californica*), among others. Understory cover varies depending on the amount of available sunlight and other factors. Where dense canopy is present, understory species in areas of forest cover are generally sparse, but do include sword fern (*Polystichum munitum*), redwood sorrel (*Oxalis oregano*), and creeping snowberry (*Symphoricarpos mollis*). In areas with higher light levels, the understory consists of non-native grassland species, miner's lettuce (*Claytonia perfoliata*), bedstraw (*Galium aparine*) and other herbaceous species. Highly invasive broom has spread through much of the understory of the forest and woodlands in the Planning Area, inhibiting foraging opportunities for wildlife and displacing native shrub and groundcover plant species. Much of the areas mapped as forest and woodland in the Planning Area have been developed with residential uses, preserving a broken canopy of mature trees interspersed with structures and ornamental landscaping.

The existing mature forests and woodlands provide nesting and foraging opportunities for numerous species of birds, including raptors. They also provide essential food resources for

eastern fox squirrels, native grey squirrels, acorn woodpeckers, scrub jay, and other birds. Wildlife commonly associated with well-developed forest and woodland habitats include: dusky-footed woodrat, deer mouse, western flycatcher, chestnut-backed chickadee, plain titmouse, Hutton vireo, orange-crowned kinglet, rufous-sided towhee, fox sparrow, bushtit, ringneck snake, California newt, and California slender salamander. Wildlife in the understory of the remaining forest and woodland varies depending on cover type and extent of development. In developed areas, the understory has typically been replaced by structures or landscaping, and supports wildlife common in urbanized habitats.

While most forests and woodlands are not considered to have a high priority for mapping and protection as a sensitive natural community type by the CNDDB, they should be recognized as an important habitat type due to their relatively high wildlife habitat value, continued threats due to further tree removal associated with development, and their vulnerability to the effects of Sudden Oak Death (SOD). Tanoaks and coast live oaks are dying in large numbers in Marin County, and black oaks, California buckeye, California bay, madrone, huckleberry, and rhododendron are suspected hosts or potential carriers of the fungus suspected to cause oak mortality. This fungus, a species of *Phytophthora*, and several beetle species are consistently associated with the dying oaks. SOD is contributing to significant changes in vegetative cover over large parts of Marin County, altering habitat for woodland-dependent species and exacerbating hazardous fire conditions where wildlands interface with developed areas.

Grasslands

Grasslands occupy parts of Big Rock Ridge in Lucas Valley, the margins of Santa Margarita Valley, the undeveloped valley floor around St. Vincent's School for Boys in the lower Gallinas Valley, and other hillside slopes in the Planning Area. The grasslands are generally composed of introduced grasses and broadleaf species. In locations where the ground surface has been disturbed, ruderal (weedy) species, which quickly recolonize disturbed areas, tend to dominate. As indicated in **Table 1**, an estimated 2,773.2 acres of the Planning Area supports grassland cover, according to the CALVEG mapping program. Intensive grazing and other disturbance factors have eliminated most of the native grasslands throughout California over the past 100 years, including the historic rangelands of the San Rafael vicinity. Common species in the grasslands today include: wild oat (*Avena fatua*), ripgut brome (*Bromus diandrus*), soft chess (*Bromus mollis*), foxtail barley (*Hordeum leporinum*), field mustard (*Brassica campestris*), wild radish (*Rhaphanus sativus*), bindweed (*Convolvulus arvensis*), cheeseweed (*Malva parviflora*), bur clover (*Medicago polymorpha*), and yellow-star thistle (*Centaurea solstitialis*). The remaining native species are common perennials, such as California poppy (*Eschscholzia californica*), Douglas' lupine (*Lupinus nanus*), and soap plant (*Chlorogalum pomeridianum*).

Remnant native grasslands may still occur in some locations mapped as annual grassland, forming stands of needlegrass grassland. This natural community is characterized by several species of native grasses such as purple needlegrass (*Stipa pulchra*), California melic (*Melica californica*), blue wildrye (*Elymus glaucus*), and beardless wildrye (*Elymus triticoides*), together with common wildflowers such as California poppy, lupines, soap plant, and wild hyacinth (*Dichelostemma pulchellum*), and other native forbs. Most of the native grasslands throughout the state have been eliminated, which has led the CNDDB to now recognize native grasslands as a sensitive resource with a high inventory priority. The CNDDB typically considers grasslands containing ten percent or greater cover by native grass species to represent a natural grassland community. This ten percent threshold is a

loosely applied standard that has been used by the state for many years. As most of the remaining native grassland communities have been highly modified by past and on-going disturbance, the remaining native grassland communities generally form a mosaic of different cover classes, sometimes interspersed with areas dominated by non-native species.

Nonnative and native grasslands support a variety of mammals, birds, and reptiles, and provide foraging habitat for raptors. Many species use the grassland for only part of their habitat requirements, foraging in the grassland and seeking cover in the limited tree and scrub cover. Grassland cover provides foraging, nesting, and denning opportunities for resident species such as western fence lizard, northern alligator lizard, gopher snake, western meadowlark, goldfinch, ring-necked pheasant, red-winged blackbird, California ground squirrel, California vole, Bottae pocket gopher, black-tailed jackrabbit, and black-tailed deer. The rodent, bird, and reptile populations offer foraging opportunities for avian predators such as black-shouldered kite, northern harrier, American kestrel, red-tailed hawk, golden eagle, barn owl, and great horned owl, as well as mammalian predators such as striped skunk, grey fox, and coyote.

Riparian Woodland and Scrub

Riparian vegetation occurs along Miller Creek and segments of Gallinas Creek and other drainages in the Planning Area, with trees and shrubs often forming stands characteristic of riparian forest and willow scrub natural communities, occupying an estimated 107.1 acres in the Planning Area as indicated in **Table 1**. Dominant cover includes willows (*Salix* spp.), valley oak, coast live oak, California bay laurel, and California buckeye, together with shrub and vine species such as California blackberry (*Rubus ursinus*) and wild rose (*Rosa californica*). Stands of highly invasive non-native species such as Himalaya blackberry, ivy, arundo (*Arundo donax*), periwinkle, and broom have become particularly problematic in some reaches of the riparian corridors in the Planning Area, outcompeting and replacing native shrub and groundcover species, and severely limiting wildlife habitat values.

Surface water along riparian corridors is available for aquatic-dependent organisms, and as a source of drinking water for terrestrial mammals and birds. The creek channels serve as movement corridors for aquatic and terrestrial species which use the protective cover found along the creeks. Wildlife dependent on the cover provided by the riparian woodland and scrub include black-tailed deer, black-tailed jackrabbit, brush rabbit, red and grey fox, rufous-sided towhee, scrub jay, flycathers, and warblers. Mammals and birds typically found in the remaining adjacent grasslands most likely use areas of dense riparian growth as protective cover and refuge from summer heat and drought.

Freshwater/Brackish Marsh

Freshwater and brackish marsh habitat is also associated with the creeks and drainage channels, ponds and other waterbodies, and the fringe of tidally influenced reaches of San Rafael Creek, Gallinas Creek, Miller Creek and tributary drainages as indicated in **Figure 1**. As salinity levels increase, the marshlands transition into coastal salt marsh at the mouth of creeks and fringe of the Bay. Open water lakes and the larger unvegetated creek corridor are mapped as lacustrine in the CALVEG mapping program. Lacustrine features are typically defined as freshwater lakes and other open water bodies. Where salinity levels are relatively low, marshlands are typically dominated by emergent monocots such as narrow-leaf cattail (*Typha angustifolia*), but as salinity levels increase brackish and salt water hydrophytes tend to dominate, including bulrush (*Scirpus* spp.), pickleweed (*Salicornia*

pacifica) and saltgrass (*Distichlis spicata*) . Wetland indicator species characteristic of poorly developed freshwater marsh habitat include: curly dock (*Rumex crispus*), bristly ox-tongue (*Picris echioides*), and wild celery (*Apium graveolens*). Segments of the larger creeks in the Planning Area that do not support a canopy of woody riparian vegetation generally support some type of freshwater or brackish marsh cover along the margins of the active channel. Freshwater marsh species also dominate the ground cover at the remaining freshwater seeps and springs in the Planning Area.

Freshwater and brackish aquatic habitats and the associated marsh vegetation are of high value to wildlife, providing a source of drinking water, protective cover, nesting substrate, and serving as movement corridors. Species found in fresh and brackish marsh habitats include Virginia rail, sora, Wilson's snipe, marsh wren, Samuel's song sparrow, and red-winged blackbird, among others. Linear channels supporting marsh vegetation within the Planning Area provide foraging habitat for egrets and great blue herons, as well as mammalian predators such as northern raccoon, striped skunk, and coyote. Aquatic species found in freshwater ponds and waterbodies include: Pacific chorus frog, western toad, western pond turtle, western mosquito fish, green sunfish, blue gill, and largemouth bass.

Coastal Salt Marsh, Mudflats and Open Water

Tidal marsh is a highly productive community consisting of salt- tolerant, hydrophytic plants that form moderate to dense cover. **Figure 1** shows the extent of coastal salt marsh along the shoreline of San Francisco Bay and the associated lacustrine open water habitat in the lower reaches of San Rafael and Gallinas creeks according to the CALVEG mapping program. Plants are usually segregated vertically depending on their tolerance of inundation and saline soils. This habitat type is typically associated with and occurs adjacent to intertidal mudflats that are devoid of vegetation; during an ebb tide, the bottom is bare mud, cobble, or rock. Within the Planning Area, this habitat type occurs along the tidal sloughs and shorelines of the Bay, with large marshlands remaining near the mouth of Gallinas Creek, and smaller pockets at the mouth of San Rafael Creek and the Pickleweed Park area.

Tidal marsh habitats within the Planning Area are similar in vertical structure, starting at the low elevation mud flat to the upland vegetation on adjacent levees and remaining natural habitat. The lowest elevation vegetation strata contain pickleweed co-dominated in places by saltgrass, interspersed with areas of open water (or mudflat at low tide). Pickleweed and saltgrass are still dominant components on the elevated benches of the tidal marsh where patches of alkali heath (*Frankenia salina*), gumplant (*Grindelia stricta* ssp. *angustifolia*), and cordgrass (*Spartina* spp.) occur. The upland vegetation on the surrounding banks and levees is dominated by non-native grasses and ruderal herbaceous species such as mustard (*Brassica* sp.), iceplant (*Carpobrotus* sp.), English plantain (*Plantago lanceolata*), sweet fennel, and perennial pepperweed (*Lepidium latifolium*).

Tidal marsh, mudflat and open water habitats support a variety of wildlife species specifically adapted to the salt-tolerant vegetation, microhabitats (e.g., channels and sloughs), and tidal regimes that characterize these areas. Along with open water, these habitat types support the greatest diversity of wildlife within the Planning Area, as well as the majority of special-status species known or suspected to occur in the region, such as California Ridgway's rail, California black rail, and salt marsh harvest mouse. Tidal marshes also provide foraging habitat for special-status raptors such as white-tailed kite and marsh hawk. The mudflats support a diverse assemblage of benthic macro-invertebrates which in turn attracts large

numbers of migrating and wintering shorebirds such as willet, long-billed curlew, marbled godwit, dowitchers, and sandpipers. These species forage on mudflats as they are exposed by receding tides, often concentrating at the water's edge where worms, crustaceans, and bivalves are closer to the mud's surface. Vegetated portions of tidal marshes are not heavily used by shorebirds, although willets tend to forage next to pools created on the marsh plain during extremely high tides. Wading birds such as snowy egret, great egret, and great blue heron forage along the margins of tidal channels and marsh edges. Dabbling (i.e., surface-feeding) ducks, such as mallard, forage over inundated mudflats and tidal channels. When inundated by high tides, tidal channels and mudflats provide important foraging habitat for a variety of estuarine species, including bat ray, leopard shark, and various fish species.

Open water habitats within the Planning Area include the tidally influenced lower reaches of the larger creeks and the Bay. In addition to providing foraging and roosting habitat for wintering and migrating shorebirds and waterfowl, these areas provide habitat for American avocet, black-necked stilt, California gull, western gull, Caspian tern, and Forster's tern. Diving ducks such as canvas- back, greater scaup, lesser scaup, bufflehead, and ruddy duck, winter in large numbers in the open waters connected to the San Francisco Bay. Other waterbird species expected to use open water habitats within the Planning Area include: American coot, Canada goose, pied-billed grebe, horned grebe, eared grebe, American white pelican, California brown pelican, great egret, snowy egret, and great blue heron, among others.

Open water habitat in the Planning Area supports a variety of both native and introduced fish species. Native fish species known to occur disperse through open waters of the Bay include: steelhead, Chinook salmon, California roach, Sacramento pike minnow, Sacramento sucker, three spine stickleback, long jaw mudsucker, stag horn sculpin, prickly sculpin, riffle sculpin, starry flounder and possibly Pacific lamprey.[3] Introduced species commonly found in urbanized streams include common carp, rainwater killifish, western mosquito fish, and possibly black crappie.[4] Coho salmon, tule perch, and tide water goby are considered extirpated in the east Marin watersheds.[5]

Other Cover Types and Wildlife Habitat Features

A number of native and non-native vegetative cover types occur along the margins or just outside the Planning Area, such as mixed chaparral, coastal scrub, and stands of eucalyptus. Areas of chaparral and scrub are dominated by woody shrubs such as coyote brush (*Baccharis pilularis*), yerba santa (*Eriodictyon californicum*), toyon (*Heteromeles arbutifolia*), chamise (*Adonostoma fasciculatum*), poison oak, buckbrush (*Ceanothus cuneatus*), chaparral pea (*Pickeringia montana*), and California sagebrush (*Artemisia californica*). Chaparral occupies an estimated 232.9 acres of the Planning Area according to the CALVEG Mapping program, primarily along Big Rock Ridge in the upper Lucas Valley watershed. Coyote brush and other indicator species of coastal scrub occupy an estimated 195.5 acres of the Planning Area according to the CALVEG mapping program. Stands of non-native

3 Leidy, R.A., 2007, *Ecology, Assemblage Structure, Distribution, and Status of Fishes in Streams Tributary to the San Francisco Estuary, California*, San Francisco Estuary Institute Contribution No. 530, San Francisco Estuary Institute, Oakland, California .

4 Ibid.

5 Ibid.

eucalyptus, occupying an estimated 230.8 acres of the Planning Area are dominated by blue gum, typical with a sparse understory of non-native grasses, weedy species, and poison oak.

Several other landforms and cover types provide habitat for wildlife, such as rock outcrops and groves of non-native blue gum eucalyptus. Rock outcrops occur in the remaining grassland, woodland, chaparral and scrub habitats at the fringes of the Planning Area, which provide a unique habitat for wildlife. These landforms provide perches for raptors, while ledges may also serve as nests in more isolated locations. Crevices provide abundant hiding places for numerous lizards and snakes, and larger cavities may be used as shelter locations by mammals. Although eucalyptus is native to Australia, this naturalized species can provide important nesting habitat for raptors and other bird species, and cover for larger mammals. Colonies of Monarch butterfly (*Danaus plexippus*) are known to overwinter in some larger groves of eucalyptus in Marin County with appropriate habitat conditions, with at least two colonies reported from China Camp State Park in the Planning Area. The presence of eucalyptus in areas of open grasslands, where protective cover and perching habitat is scarce, emphasizes the importance of the dense tree stands to birds and larger mammals. However, eucalyptus is moderately invasive and can eventually replace grassland, scrub, and other natural habitats.

Special-Status Species

This section outlines special-status species and sensitive habitats within the Planning Area. Special-status species are plants and animals that are legally protected under the State and/or federal Endangered Species Acts or other regulations, as well as other species that are considered rare enough by the scientific community and trustee agencies to warrant special consideration, particularly with regard to protection of isolated populations, nesting or denning locations, communal roosts, and other essential habitat (see Regulatory Setting discussion below). Species with legal protection under the federal and State Endangered Species Acts often represent major constraints to development, particularly when they are wide-ranging or highly sensitive to habitat disturbance and where proposed development would result in a "take" of these species.[6]

The primary information source on the distribution of special-status species in California is the CNDDB inventory, which is maintained by the Biogeographic Data Branch of the CDFW. The CNDDB inventory provides the most comprehensive statewide information on the location and distribution of special-status species and sensitive natural communities. Occurrence data is obtained from a variety of scientific, academic, and professional organizations, private consulting firms, and knowledgeable individuals, and entered into the inventory as expeditiously as possible. The occurrence of a species of concern in a particular region is an indication that an additional population may occur at another location if habitat conditions are suitable. However, the absence of an occurrence in a particular location does not necessarily mean that special-status species are absent from the area in question; only that no data has been entered into the CNDDB inventory. Detailed field surveys are generally

[6] "Take" as defined by the federal Endangered Species Act (ESA) means "to harass, harm, pursue, hunt, shoot, would, kill, trap, capture, or collect" a threatened or endangered species. "Harm" is further defined by the USFWS to include the killing or harming of wildlife due to significant obstruction of essential behavior patterns (i.e. breeding, feeding, or sheltering) through significant habitat modifications or degradation. The CDFW also considers the loss of listed species habitat as "take", although this policy lacks statutory authority and case law support under the California Endangered Species Act (CESA).

required to provide a conclusive determination on presence or absence of sensitive resources from a particular location, where there is evidence of potential occurrence.

For the purposes of this Background Report, special-status species are defined as follows:

- Species that are listed, formally proposed, or designated as candidates for listing as threatened or endangered under the federal Endangered Species Act (ESA);
- Species that are listed, or designated as candidates for listing, as rare, threatened, or endangered under the California Endangered Species Act (CESA);
- Plant species with a Rank of 1A, 1B and 2 in the CNPS *Inventory of Rare and Endangered Plants*;
- Animal species designated as "Species of Special Concern" or "Fully Protected" by the CDFW;
- Species that meet the definition of rare, threatened, or endangered under Section 15380 of the CEQA guidelines; or
- Species considered to be a taxon of special concern by the relevant local agencies.

Special-Status Plants

Review of the CNDDB and CNPS occurrence records indicate a total of 43 special-status plant species that have been reported from or in the vicinity of the Planning Area. These special-status plant species are listed in **Table 2**, together with information on their typical habitat characteristics, normal flowering season, and conclusion regarding potential for occurrence in the Planning Area based on distribution and presence or absence of suitable habitat.

The CNDDB records show occurrences of nine special-status plant species extending over portions of the Planning Area – congested-headed hayfield tarplant (*Hemizonia congesta* ssp. *congesta*), Marin knotweed (*Polygonum marinense*), Mt. Tamalpais bristly jewelflower (*Streptanthus glandulosus* ssp. *pulchellus*), Marin western flax (*Hesperolinon congestum*), Napa false indigo (*Amorpha californica* var. *napensis*), Point Reyes salty bird's-beak (*Chloropyron maritimum* ssp. *palustre*), Tiburon buckwheat (*Eriogonum luteolum* var. *caninum*), and white-rayed pentachaeta (*Pentachaeta bellidiflora*). The exact locations of most of these occurrences are unknown because of the vague descriptions and date of the historic records, so these are mapped as relatively broad occurrences on **Figure 2**. White-rayed pentachaeta is assumed to be extirpated from the Planning Area as a result of development in areas of grassland and woodland habitats that once supported the species, and displacement by non-native grasses and other invasive species. The occurrence of Marin knotweed from China Camp is from a much more specific location observed in 2006, and this species is still assumed to be present. Details on the location of most of the other special-status plant species are based on general occurrence records that are decades old, and their presence in the Planning Area today is uncertain.

Existing development limits the likelihood of continued occurrences of any populations of special-status plant species on the valley floors of the Planning Area, with the exception of brackish and saltmarsh associated species that could occur along the shorelines of San Francisco Bay, such as Point Reyes salty bird's-beak. Many of the special-status plant

species occurrences in the protected open space areas and undeveloped lands at the fringe of the Planning Area most like remain today, but are vulnerable to changes such as fire, competition with invasive species, and other threats. There remains a possibility that additional populations of one or more species occurs on the remaining undeveloped lands and the remaining coastal marshlands in the Planning Area. Detailed surveys would be required to provide confirmation on presence or absence from undeveloped portions of the Planning Area where thorough studies have not been conducted.

Special-Status Animals

Based on a review of the CNDDB and other sources, a total of 35 special-status animal species are known to occur or are considered to potentially occur in the vicinity of San Rafael, which are listed in **Table 3**. As indicated in **Figure 3**, a total of 15 occurrences of special-status animal species have been reported by the CNDDB within the Planning Area. These include: California black rail (*Laterallus jamaicensis*), California giant salamander (*Dicamptodon ensatus*), California red-legged frog (*Rana draytonii*), California Ridgeway's rail (*Rallus longirostris obsoletus*), monarch butterfly, mimic tryonia (*Tryonia imitator*), northern spotted owl (*Strix occidentalis caurina*), Opler's longhorn moth (*Adela oplerella*), pallid bat (*Antrozous pallidus*), salt marsh harvest mouse (*Reithrodontomys raviventris*), San Pablo song sparrow (*Melospiza melodia samuelis*), western bumble bee (*Bombus occidentalis*), and western pond turtle (*Emys marmorata*). Nest activity centers of northern spotted owl are considered highly sensitive data, and are therefore not shared with the public. In addition, roosting colonies of more common great blue heron (*Ardea herodias*), snowy egret (*Egretta thula*), which are monitored by the CNDDB as sensitive habitat areas, are also reported from the Planning Area

Most of the special-status species in the San Rafael vicinity are bird species known or suspected to utilize suitable habitat in marsh and open water habitats, together with fish species that utilize the Miller Creek corridor and San Francisco Bay. Most of the species listed in **Table 3** that are not State and/or federally-listed species are not closely monitored by the CNDDB and therefore occurrence records are not generally included in the data base. These include species identified as "Species of Special Concern" by the CDFW. As indicated in **Figure 3**, no areas designated as Critical Habitat by the USFWS extend into the Planning Area.

Many of the special-status animal species listed in **Table 3** may occasionally pass through or forage within the Planning Area, but are not known or likely to breed in the Planning Area: Chinook salmon (*Oncorhynchus tshawytscha*), green sturgeon (*Acipenser medirostris*), redhead (*Aythya americana*), bald eagle (*Haliaeetus leucocephalus*), golden eagle (*Aquila chrysaetos*), American peregrine falcon (*Falco peregrinus anatum*), long-eared owl (*Asio otus*), olive-sided fly catcher (*Contopus cooperi*), purple martin (*Prognes ubis*), grasshopper sparrow (*Ammodramus savannarum*), tricolored blackbird (*Agelaius tricolor*), western red bat (*Lasiurus blossevillii*), and American badger (*Taxidea taxus*). American white pelican and California brown pelican are known to regularly forage over the open water and shoreline of San Francisco Bay, but do not breed in the San Francisco Bay Area. Coho salmon (*Oncorhynchus kisutch*) and tidewater goby are now considered extirpated from East Marin, including the Planning Area. Special-status animal species known from the Planning Area and of greatest concern from a planning standpoint because of their status or distribution are discussed in further detail below.

Steelhead–Central California Coast ESU (Federally Threatened). Steelhead is the anadromous form of rainbow trout, migrating from the ocean to freshwater streams to spawn. Juveniles spend one to three years in their natal streams before going to sea as smolts. Most steelhead return to freshwater streams after spending two to three years at sea. Important factors associated with preferred stream channel conditions include temperature, velocity, depth, gravel substrate, and water quality. Shaded banks with overhanging riparian vegetation (termed "shaded riverine aquatic cover" by the USFWS) are also beneficial to salmonids, providing foraging habitat and cover from predators. High water temperatures, low rates of streamflow, low levels of dissolved oxygen, low sediment input, and stream obstructions can be detrimental to steelhead populations.

Miller Creek through the Gallinas Valley in the northern portion of the Planning Area is known to support a resident steelhead population.[7] Fish were electrofished from Miller Creek as recently as 1997, and have been observed in previous studies but very little historic survey information is available for the watershed. Miller Creek is not designated critical habitat for the Central California Coast ESU of steelhead (see **Figure 3**), but likely constitutes a small but important production of steelhead to the regional fishery.

California Red-Legged Frog (Federally Threatened). California red-legged frog has been extirpated or nearly extirpated from 70 percent of its former range. Population declines of this species have been attributed to a variety of factors, with habitat loss and predation by non-native Aquatic predators (e.g., bullfrogs, crayfish, other non-native fishes) typically implicated as the primary factors. California red-legged frogs occur in and along freshwater marshes, streams, ponds, and other semi-permanent water sources. Optimal habitat contains dense emergent or shoreline riparian vegetation closely associated with deep (i.e., greater than 2.3 feet), still, or slowmoving water. Cattails, bulrushes, and willows provide the habitat structure that seems to be most suitable for California red-legged frogs. Although the species can occur in intermittent streams and ponds, they are unlikely to persist in streams in which all surface water disappears. Suitable breeding ponds and pools usually have a minimum depth of 20 inches, but California red-legged frogs do sometimes breed successfully in pools as shallow as 10 inches.[8] Regardless of water depth, suitable breeding habitat must contain water during the entire development period for eggs and tadpoles. Reproduction for red-legged frogs is also sensitive to salinity levels in the water.

According to the CNDDB records (see **Figure 3**), occurrences of California red-legged frogs have been reported from the Peacock Gap and San Rafael Point in the eastern portion of the Planning Area. Suitable habitat remains in other locations with freshwater bodies where salinity levels are low enough and in the upper watersheds if suitable breeding habitat is present.

Western Pond Turtle (California Species of Special Concern). Western pond turtles occur in a wide variety of aquatic habitats, including ponds, lakes, marshes, rivers, streams, and canals that typically have a rocky or muddy bottom and contain stands of aquatic vegetation. The presence or absence of pond turtles at a given aquatic site is largely dependent on the availability of suitable basking sites and adjacent upland habitat for egg-laying (e.g., sandy banks or grassy open fields) and over-wintering. Nests are typically dug in dry substrate with

---

8 Fellers, G.M., 2005. *California red-legged frog*. *In* M. Lannoo, editor. Amphibian Declines: The Conservation Status of Unites States Species.

a high clay or silt fraction since the female moistens the site where she will excavate the nest prior to egg-laying. Hatchlings require shallow water habitat with relatively dense submergent or short emergent vegetation in which to forage.

Western pond turtles have been recorded at John F McInnis Park in the northeastern portion of the Planning Area. Other freshwater bodies and streams with deep pools may provide suitable habitat for this species. Lower reaches of drainages under tidal influence are unlikely habitat for this species due to salinity levels, and the extent of adjacent development which limits the availability of upland locations for egg-laying.

Northern Spotted Owl (Federally and State Threatened). Northern spotted owl typically occurs in forest and dense woodland habitat along the Pacific coast from southern British Columbia to Marin County. It typically nests on platforms in large trees and will use abandoned stick nests of other bird species. In the southern part of its range through Marin County, dusky-footed woodrat tends to serve as the primary prey base for northern spotted owl.

The Spotted Owl Observations Database maintained by the CNDDB indicates a number of nest activity centers within and to the north and west of the Planning Area on San Pedro Mountain, in Marinwood Open Space along Big Rock Ridge, and along Southern Heights Ridge. However, this information is not shared with the public because of the vulnerability of nests to human disturbance. As indicated in **Figure 3**, designated critical habitat for northern spotted owl occurs about a mile and a half southwest of the Planning Area, where the majority of known activity centers have been reported within Marin County. Activity centers are locations where concentrated owl activity indicates a high likelihood of nesting, and where human disturbance during the nesting season could result in disruption and possible loss of the nesting young unless appropriate restrictions are implemented. Given the threatened federal and State status of northern spotted owl, disturbance in the vicinity of an activity center during the nesting season could be considered an incidental take in violation of the Endangered Species Acts (see Regulatory Framework below).

White-tailed Kite (California Fully Protected Species). Most white-tailed kites in California occur west of the Sierra Nevada in low lands and foothills, where they are often seen year-round. This species tends to nest in solitary trees and large shrubs located near suitable foraging habitat such as grasslands, marshes, and agricultural fields. Preferred prey items include California voles and mice.

The grasslands and tidal marsh habitats in the Planning Area provide foraging habitat for white- tailed kites, where scattered trees and large shrubs are present in the vicinity to provide suitable nesting locations. Nests of white-tailed kite in active use are fully-protected by the CDFW from any disturbance. Nests of native birds, including raptors such as white-tailed kite, are protected under the federal Migratory Bird Treaty Act and State Fish and Game code (see Regulatory Framework below).

Northern Harrier (California Species of Special Concern). Northern harriers are widespread in California, although they have become uncommon in the southern part of the State. Their preferred habitats are freshwater wetlands and saltmarshes, although they are also commonly found over grasslands and agricultural fields. Harriers breed from mid-March to September, building their nests on the ground and in low vegetation.

Suitable foraging habitat for northern harriers are present in the remaining grasslands and the tidal marsh habitats in the Planning Area, although nesting opportunities are limited because of the presence of human and dogs along the fringe of the marshland areas where most potential nesting habitat occurs.

California Black Rail (Federally Threatened; California Fully Protected Species). Around the San Francisco Bay Estuary, California black rails primarily inhabit tidal salt marsh dominated by pickleweed, but also occupy brackish marshes dominated by bulrush. California black rails prefer tidal marshes but will use high marshland zones during "wet" years.[9] Black rails build nests in tall grasses or marsh vegetation during the spring, with most nests constructed of pickleweed and placed on or slightly above the ground.

As indicated in **Figure 3**, California black rails have been detected along Gallinas Creek and the coastal salt marsh habitat in the northeastern portion of the Planning Area. This species may occupy or frequent the tidal marsh habitat at the mouth of San Rafael Creek and other shoreline areas of the Bay supporting tidal marsh habitat within the Planning Area.

California Ridgway's Rail (Federally and State Endangered; California Fully Protected Species). This secretive species prefers tidal salt marshes dominated by pickleweed and cordgrass with adjacent areas of high marsh cover dominated by pickleweed, gumplant, saltgrass, alkali heath, and/or fleshy jaumea (*Jaumea carnosa*). California Ridgway's rails also occupy tidal brackish marshes dominated by bulrush. The California subspecies is now restricted to the tidal marshlands around the San Francisco, San Pablo, and Suisun Bays. A Bay-wide survey in the early 1970s estimated a total population of between 4,000 and 6,000 birds.[10] Recent population estimates for California Ridgway's rails was approximately 1,040 to 1,264 individuals in San Francisco Bay.[11] Although habitat loss is implicated in population declines, predation of rails by the introduced red fox is also thought to be a major factor in the status of this species.

California Ridgway's rails have been detected in the tidal marsh along the mouths of Gallinas Creek and San Rafael Creek in the Planning Area, as indicated in **Figure 3**. This species may also occupy or frequent the tidal marsh habitat along the shoreline of the Bay were suitable coastal salt marsh is present within the Planning Area.

Samuels (San Pablo) Song Sparrow (California Species of Special Concern). This subspecies of the widely distributed song sparrow is restricted to the tidal marshes and adjacent uplands around the San Pablo Bay portion of San Francisco Bay. They occur primarily in tidal salt marshes, but may also nest or forage in other shoreline habitats such as

seasonal wetlands, intertidal mudflats, and adjacent uplands.[12] Favored nesting substrate includes gumplant and cordgrass adjacent to tidal sloughs, although they also occur in stands of perennial pepperweed and bulrush. Suitable habitat for this species in the Planning Area includes the coastal salt marsh habitats near the mouths of Gallinas and San Rafael Creeks, other stands of suitable tidal marsh and adjacent uplands where natural habitat remains (see **Figure 3**).

Salt Marsh Harvest Mouse (Federally and State Endangered; California Fully Protected Species). Salt marsh harvest mouse are endemic to the tidal salt marshes of the San Francisco Bay Estuary. This species occurs primarily in marshes dominated by pickleweed, but also uses adjacent upland habitats during high tides. The presence of adequate peripheral halophyte plant cover adjacent to the pickleweed-dominated marsh plain is an important habitat component for this species, which depends on such cover for refuge from terrestrial predators during extremely high tides.

As indicated in **Figure 3**, salt marsh harvest mice have been reported from the salt marsh harvest mouse has been detected from the coastal salt marsh habitat near the mouth of San Rafael Creek, along the mouth of Gallinas Creek, and from the large area of coastal salt marsh habitat in the northeastern portion of the Planning Area.

Sensitive Habitats

Sensitive natural communities and jurisdictional waters are described below.

Sensitive Natural Communities

The CDFW tracks the occurrences of "special" plant communities that are either known or believed to be of high priority for inventory in the CNDDB. These plant communities are listed in the CDFW publication *List of California Terrestrial Natural Communities Recognized by the California Natural Diversity Database*.[13] These communities are sometimes addressed by lead or trustee agencies in CEQA documents, but generally are not afforded the same protection as CNPS Rank 1B and 2 plant species. Many sensitive natural community types support special-status plants and animals and are addressed under CEQA as essential habitat for those species.

As indicated in **Figure 2**, the CNDDB records indicate a large expanse of northern coastal salt marsh, a sensitive natural community type along the fringe of San Pablo Bay through the northeastern portion of the Planning Area. This sensitive natural community type occurs in other locations within the Planning Area along the fringe of the bay, including marshlands such as Pickleweed Park near the mouth of San Rafael Creek.

A number of other more widespread, but still sensitive natural community types are also known from the San Rafael vicinity but have not been mapped in the CNDDB inventory.

13 California Department of Fish and Game, 2003. *List of California Terrestrial Natural Communities Recognized by the California Natural Diversity Data Base*. Wildlife and Habitat Data Analysis Branch, Vegetation Classification and Mapping Program, California Department of Fish and Game, Sacramento.

Based on the *Manual of California Vegetation*[14] classification system and latest list of terrestrial natural communities prepared by CDFW, these include several associations of Black Oak Forests and Woodlands, Coastal and Montane Redwood Forests, several alliances and associations of Douglas Fir Forests, California Bay Forests and Woodlands, California Buckeye Woodlands, several associations of Coyote Brush Scrub, freshwater marsh, freshwater seeps and springs, and numerous alliances of native grasslands. Occurrences of these sensitive natural community types are most likely present within the remaining woodland, forest and grasslands in the Planning Area, but they have not been mapped as part of the CALVEG or CNDDB mapping programs. Detailed surveys would be required to provide confirmation on presence or absence from undeveloped portions of the Planning Area where thorough studies have not been conducted.

Jurisdictional Waters.

Although definitions vary to some degree, in general, wetlands are considered areas that are periodically or permanently inundated by surface or ground water, and support vegetation adapted to life in saturated soil. Wetlands are recognized as important features on a regional and national level due to their high inherent value to fish and wildlife, use as storage areas for storm and floodwaters, and water recharge, filtration, and purification functions. The U.S. Army Corps of Engineers (Corps) and the USFWS developed technical standards for delineating wetlands that generally define wetlands through consideration of three criteria: hydrology, soils, and vegetation.

A formal jurisdictional delineation of wetlands and other waters of the U.S. and State was not conducted for the Planning Area as part of this Background Report. However, based on information available from the NWI and familiarity with the Planning Area, numerous features can be assumed to fall under jurisdiction of the Corps and the Regional Water Quality Control Board (RWQCB) jurisdiction pursuant to Sections 401 and 404 of the federal Clean Water Act and as state waters regulated by the RWQCB under the Porter-Cologne Water Quality Control Act. Creeks and lakes are also regulated by the CDFW pursuant to Section 1600 of the California Fish and Wildlife Code, with jurisdiction extending to the top of bank or the outer dripline of riparian vegetation along these features, whichever is greater.

As indicated in **Figure 4**, features within the Planning Area that would likely be considered wetlands or other waters of the U.S. by the Corps include: the marshlands along the fringe of the Bay, mapped as estuarine and marine wetlands, freshwater wetlands, scattered waterbodies mapped as ponds or lakes, and riverine habitats along Miller Creek, Gallinas Creek, San Rafael Creek and the extensive network of tributary drainages in the upper watersheds. Additional jurisdictional other waters of the U.S. and wetlands maybe be present elsewhere in the Planning Area, but detailed site-specific assessments would be required to confirm presence or absence from undeveloped lands. As discussed under the Regulatory Setting below, the Corps, RWQCB and CDFW generally exercise authority over these various wetland habitat types.

A detailed wetland delineation and verification by the Corps would be required to determine the extent of jurisdictional wetlands on sites where modifications are proposed. Federally regulated waters along the numerous tributary drainages in the Planning Area (see **Figure 4**) are generally defined by the "Ordinary High Water Mark" rather than the band of adjacent

[14] Sawyer, J.O. and T. Keeler-Wolf. 1995. *A Manual of California Vegetation*. California Native Plant Society, Sacramento.

riparian vegetation, limiting Corps jurisdiction where dense willow riparian scrub and forest extend a considerable distance from the channel bank. However, the limits of State waters regulated by CDFW and RWQCB typically encompass both the bed and bank of a drainageway, as well as the limits of the associated riparian vegetation where it extends beyond the top of bank, and both agencies typically request that an adequate setback be provided to avoid both direct and indirect impacts on riparian corridors as part of environmental review for specific development plans.

Biological Resources – Regulatory Setting

Biological resources within the Planning Area are subject to agency jurisdiction and regulations, as described below.

STATE AND FEDERAL REGULATIONS

Endangered Species Act

The USFWS has jurisdiction over federally listed threatened and endangered plant and animal species. The federal Endangered Species Act (ESA) and its implementing regulations prohibit the take of any fish or wildlife species that is federally listed as threatened or endangered without prior approval pursuant to either Section7 or Section 10 of the ESA. ESA defines "take" as "*harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct*." Federal regulation 50CFR17.3 defines the term "harass" as an intentional or negligent act that creates the likelihood of injuring wildlife by annoying it to such an extent as to significantly disrupt normal behavior patterns such as breeding, feeding, or sheltering (50CFR§17.3). Furthermore, federal regulation 50CFR17.3 defines "harm" as an act that either kills or injures a listed species. By definition, "harm" includes habitat modification or degradation that actually kills or injures a listed species by significantly impairing essential behavior patterns such as breeding, spawning, rearing, migrating, feeding, or sheltering (50CFR217.12).

Section10(a) of the ESA establishes a process for obtaining an incidental take permit that authorizes nonfederal entities to incidentally take federally listed wildlife or fish. Incidental take is defined by ESA as take that is *"incidental to, and not the purpose of, the carrying out of another wise lawful activity*." Preparation of a habitat conservation plan, generally referred to as an HCP, is required for all Section 10(a) permit applications. The USFWS and National Oceanic and Atmospheric Administration's National Marine Fisheries Service (NOAA Fisheries Service) have joint authority under the ESA for administering the incidental take program. NOAA Fisheries Service has jurisdiction over anadromous fish species and USFWS has jurisdiction over all other fish and wildlife species.

Section 7 of the ESA requires all federal agencies to ensure that any action they authorize, fund, or carry out is not likely to jeopardize the continued existence of any species listed under the ESA, or result in the destruction or adverse modification of its habitat. Federal agencies are also required to minimize impacts to all listed species resulting from their actions, including issuance or permits or funding. Section 7 requires consideration of the indirect effects of a project, effects on federally listed plants, and effects on critical habitat (ESA requires that the USFWS identify critical habitat to the maximum extent that it is prudent and determinable when a species is listed as threatened or endangered). This consultation results in a Biological Opinion prepared by the USFWS stating whether implementation of the HCP will result in jeopardy to any HCP Covered Species or will adversely modify critical habitat and the measures necessary to avoid or minimize effects to listed species.

Although federally listed animals are legally protected from harm no matter where they occur, the Section 9 of the ESA provides protection for endangered plants by prohibiting the malicious destruction on federal land and other "take" that violates State law. Protection for plants not living on federal lands is provided by the California Endangered Species Act.

Clean Water Act

The Corps is responsible under Section 404 of the Clean Water Act to regulate the discharge of fill material into waters of the U.S. These waters, and their lateral limit, are defined in 33 CFR Part 328.3(a) and include streams that are tributaries to navigable waters and their adjacent wetlands. The lateral limits of jurisdiction for a non-tidal stream are measured at the line of the Ordinary High Water Mark (33 CFR Part 328.3[e]) or the limit of adjacent wetlands (33 CFR Part 328.3[b]). Any permanent extension of the limits of an existing water of the U.S., whether natural or man-made, results in a similar extension of Corps jurisdiction (33 CFR Part 328.5).

Waters of the U.S. fall into two broad categories: wetlands and other waters. Other waters include waterbodies and watercourses generally lacking plant cover such as rivers, streams, lakes, springs, ponds, coastal waters, and estuaries. Wetlands are aquatic habitats that support hydrophytic wetland plants and include marshes, wet meadows, seeps, floodplains, basins, and other areas experiencing extended seasonal soil saturation. Seasonally or intermittently inundated features, such as seasonal ponds, ephemeral streams, and tidal marshes, are categorized as wetlands if they have hydric soils and support wetland plant communities. Seasonally inundated waterbodies or watercourses that do not exhibit wetland characteristics are classified as other waters of the U.S.

Waters and wetlands that cannot trace a continuous hydrologic connection to a navigable water of the U.S. are not tributary to waters of the U.S. These are termed "isolated wetlands." Isolated wetlands are jurisdictional when their destruction or degradation can affect interstate or foreign commerce (33 CFR Part 328.3[a]). The Corps may or may not take jurisdiction over isolated wetlands depending on the specific circumstances.

In general, a project proponent must obtain a Section 404 permit from the Corps before placing fill or grading in wetlands or other waters of the U.S. Prior to issuing the permit, the Corps is required to consult with the USFWS under Section 7 of the ESA if the project may affect federally listed species.

All Corps permits require water quality certification under Section 401 of the Clean Water Act. In the San Francisco Bay Area, this regulatory program is administered by the San Francisco Bay RWQCB. Project proponents who propose to fill wetlands or other waters of the U.S. must apply for water quality certification from the RWQCB. The RWQCB has adopted a policy requiring mitigation for any loss of wetland, streambed, or other jurisdictional area.

Migratory Bird Treaty Act

The federal Migratory Bird Treaty Act (MBTA) prohibits the taking, hunting, killing, selling, purchasing, etc. of migratory birds, parts of migratory birds, or their eggs and nests. As used in the MBTA, the term "take" is defined as "to pursue, hunt, shoot, capture, collect, kill, or attempt to pursue, hunt, shoot, capture, collect, or kill, unless the context otherwise requires." Most bird species native to North America are covered by this act. In December 2017, the Department of the Interior (DOI) issued a memorandum reversing the incidental take

interpretation of the MBTA. Under the latest determination of the DOI, the take of a migratory bird or its active nest (i.e., with eggs or young) that is incidental to a lawful activity does not violate the MBTA. However, this opinion from the DOI is only the latest interpretation from the current Administration of the MBTA. This legal opinion is contrary to the long-standing interpretation for over 40 years that held the MBTA strictly prohibits the intentional or incidental killing of birds or destruction of their nests when in active use.

California Endangered Species Act

The CDFW has jurisdiction over State-listed endangered, threatened, and rare plant and animal species under the California Endangered Species Act (CESA). CESA is similar to the federal ESA both in process and substance; it is intended to provide additional protection to threatened and endangered species in California. Species may be listed as threatened or endangered under both acts (in which case the provisions of both State and federal laws apply) or under only one act. A candidate species is one that the Fish and Game Commission has formally noticed as being under review by CDFW for addition to the State list. Candidate species are protected by the provisions of CESA.

California Environmental Quality Act

The California Environmental Quality Act (CEQA) applies to "projects" proposed to be undertaken or requiring approval by State and local government agencies. Projects are defined as having the potential to have physical impact on the environment. Under Section 15380 of CEQA, a species not included on any formal list "shall nevertheless be considered rare or endangered if the species can be shown by a local agency to meet the criteria" for listing. With sufficient documentation, a species could be shown to meet the definition of rare or endangered under CEQA and be considered a "de facto" rare or endangered species.

California Fish and Game Code

The CDFW is also responsible for enforcing the California Fish and Game Code, which contains several provisions potentially relevant to construction projects. For example, Section 1602 of the Fish and Game Code governs the issuance of Lake and Streambed Alteration Agreements by the CDFW. Lake or Streambed Alteration Agreements are required whenever project activities substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake designated as such by the CDFW.

The Fish and Game Code also lists animal species designated as Fully Protected or Protected, which may not be taken or possessed at any time. The CDFW does not issue licenses or permits for take of these species except for necessary scientific research, habitat restoration/species recovery actions, or live capture and relocation pursuant to a permit for the protection of livestock. Fully protected species are listed in Sections 3511 (birds), 4700 (mammals), 5050 (reptiles and amphibians), and 5515 (fish) of the Fish and Game Code, while Protected amphibians and reptiles are listed in Chapter 5, Sections 41 and 42.

Several provisions in the California Fish and Game code provide for the protection of birds and bird nests in active use. Unless the Fish and Game Code (FGC) or its implementing regulations provide otherwise, under California law it is unlawful to:

- Take a bird, mammal, fish, reptile, or amphibian (FGC Section2000);

- Take, possess, or needlessly destroy the nest or eggs of any bird (FGC Section3503);

- Take, possess, or destroy any bird of prey in the orders Strigiformes (owls) and Falconiformes (such as falcons, hawks and eagles) or the nests or eggs of such bird (FGC Section3503.5);

- Take or possess any of the thirteen fully protected bird species listed in FGC Section3511;

- Take any non-game bird (i.e., bird that is naturally occurring in California that is not a gamebird, migratory game bird, or fully protected bird) (FGC Section3800);

- Take or possess any migratory non-game bird as designated in the MBTA or any part of such bird, except as provided by rules or regulations adopted by the DOI under the MBTA (FGC Section3513);

- Take, import, export, possess, purchase, or sell any bird (or products of a bird), listed as an endangered or threatened species under the CESA unless the person or entity possesses an Incidental Take Permit or equivalent authorization from CDFW (FGC Section2050 et seq.).

Non-native species, including European starling, house sparrow, and rock pigeon, are not afforded any protection under the MBTA or California Fish and Game Code.

Porter-Cologne Water Quality Control Act

Under this Act (California Water Code Sections 13000–14920), the RWQCB is authorized to regulate the discharge of waste that could affect the quality of the State's waters. The RWQCB asserts jurisdiction over isolated waters and wetlands, as well as waters and wetlands that are regulated by the Corps. Therefore, even if a project does not require a federal permit, it still requires review and approval by the RWQCB. When reviewing applications, the RWQCB focuses on ensuring that projects do not adversely affect the "beneficial uses" associated with waters of the State. In most cases, the RWQCB seeks to protect these beneficial uses by requiring the integration of waste discharge requirements (WDRs) into projects that will require discharge into waters of the State. For most construction projects, the RWQCB requires the use of construction and post-construction Best Management Practices (BMPs).

McAteer-Petris Act

The McAteer-Petris Act and Suisun Marsh Preservation Act were adopted to protect San Francisco Bay and Suisun Marsh as great natural resources for the benefit of the public and to encourage development compatible with this protection. The San Francisco Bay Conservation and Development Commission (BCDC) was established to carry out this Act. The two primary goals of the BCDC are (1) to prevent the unnecessary filling of San Francisco Bay, and (2) to increase public access to and along the Bay shoreline. BCDC approval is required for all projects within 100 feet of the Bay shoreline, as well as projects that propose any filling or dredging within Bay waters.

Other Statutes, Codes, and Policies Affording Species Protection

The CDFW maintains an administrative list of Species of Special Concern (SSC), defined as a "species, subspecies, or distinct population of an animal native to California that currently satisfies one or more of the following (not necessarily mutually exclusive) criteria:

- Is extirpated from the State, or, in the case of birds, in its primary seasonal or breeding role;
- Is listed as federally, but not State-, threatened or endangered;
- Meets the State definition of threatened or endangered but has not formally been listed;
- Is experiencing, or formerly experienced, serious (noncyclical) population declines or range retractions (not reversed) that, if continued or resumed, could qualify it for State threatened or endangered status;
- Has naturally small populations exhibiting high susceptibility to risk from any factor(s) that, if realized, could lead to declines that would qualify it for State threatened or endangered status."

The CDFW's Nongame Wildlife Program is responsible for producing and updating SSC publications for mammals, birds, and reptiles and amphibians. Section 15380 of the *CEQA Guidelines* clearly indicates that SSC should be included in an analysis of project impacts if they can be shown to meet the criteria of sensitivity outline therein. In contrast to species listed under the federal ESA or CESA, however, SSC have no formal legal status.

The CNPS is a non-profit conservation organization dedicated to the preservation of native flora in California. The CNPS has been involved in assembling, evaluating, and distributing information on special-status plant species in the state, as listed in the *Inventory of Rare and Endangered Plants of California*. CNPS has recently updated their rating system for the rarity of special-status plants, and now include both a California Rare Plant Rank and a Threat Rank. CEQA requires government agencies to consider environmental impacts of discretionary projects and to avoid or mitigate them where possible. Under Section 15380, CEQA provides protection for both State-listed species and for any other species which can be shown to meet the criteria for State listing. The CDFW recognizes that special-status plants with a California Rare Plant Rank of 1A (Presumed extinct in California), 1B (Rare, threatened, or endangered in California and elsewhere), and 2 (Rare and endangered in California, but are more common elsewhere) in the CNPS Inventory consist of plants that, in a majority of cases, would qualify for listing and these species should be addressed under CEQA review. In addition, the CDFW recommends, and local governments may require, protection of species which are regionally significant, such as locally rare species, disjunct populations, essential nesting and roosting habitat for more common wildlife species, or plants with a CNPS California Rare Plant Rank of 3 (Plant species for which additional data is needed – a review list) and 4 (Plant species of limited distribution - a watch list).

SAN RAFAEL GENERAL PLAN POLICIES

The Open Space and Conservation Elements of the City of San Rafael General Plan 2020 contain goals and policies related to biological resources. These are listed below by Element.

Open Space Element

GOAL 32: PROTECTED OPEN SPACE

It is the goal of San Rafael to preserve and protect open space and the natural environment for all to enjoy. *Preservation of open space and the natural environment have been a priority for San Rafael residents for many years. Whenever possible, the natural terrain and vegetation of the community should be preserved and maintained.*

OS-1. Open Space Preservation.

Preserve, through a variety of methods, the open space areas identified in the Inventory of Potential Open Space Sites (See Appendix I). Retain and protect open space areas that serve as delineators between neighborhoods and between adjacent communities, as wildlife habitat, and as visual assets for the community. Open space areas can also function as connections between neighborhoods, for example with the creation of pathways in environmentally appropriate areas.

OS-1a. Open Space Inventory. Update the Inventory of Potential Open Space Sites. Identify and prioritize open space parcels for future protection. Maximize the use of available resources when assessing City involvement in securing open space by applying the following non-prioritized evaluation criteria:

a. Environmental health and safety issues (specifically geology and hydrology), and potential geoseismic hazards.

b. Resource Areas and Aesthetics (visual backdrop or edge, unique site features, shorelines/ridgelines, wetlands, wildlife habitat including wildlife movement corridors and habitat for endangered species).

c. Importance to the community as a whole or adjoining neighborhoods.

d. Merits of alternative uses.

e. Proximity to other open space areas.

f. Recreation potential.

g. Accessibility.

h. Availability of outside financial assistance.

i. Potential maintenance and management costs and liability exposure for the City.

OS-1b. Preservation Opportunities. Through the development review process, preserve open space areas identified on the Open Space Inventory. Encourage the dedication of open space areas that are adjacent to public open space. Possibilities also include acquisition of fee title or acquiring easements for preserving open space. When potential open space is not contiguous to existing public open space, the preference is to retain the open space in private ownership. When portions of a site are retained as private open space, ensure the preservation and management of that open space through appropriate means, including required maintenance, as determined though development review. Work with other public and non-profit agencies to identify sources for acquisition and maintenance of open space.

OS-1c. Cluster Development. As part of the development review process, encourage the clustering of development to preserve desired open space.

OS-2. Open Space Management.

Maintain and manage City Open Space lands. Designate appropriate uses to specific sites. Determine maintenance needs to address uses and the preservation of natural amenities. Address illegal camping and campfires, disease control, erosion control, urban/wildlife interface, recreation and other activities harmful to open space environment, as well as vegetation management and wildlife habitat protection issues.

OS-2a. Open Space Management Plan(s). Establish a committee with representatives from neighborhood associations, environmental organizations, user groups and other stakeholders to prepare an Open Space Management Plan(s). The plan should address use and ongoing maintenance of open space areas. The management plan should address appropriate access points, parking areas, public information signage, trail extensions, restoration of erosion and other degraded areas, and guidelines for the location of amenities such as picnic tables and benches. Amend zoning provisions as needed. Funding options should be explored and identified for open space management such as open space maintenance assessment districts, agreements with other public agencies for maintenance, neighborhood "adoption," volunteer programs, private funding and other means.

OS-2b. Removal of Invasive Species. Use volunteer and other types of work crews to remove selected invasive vegetation from open space areas.

OS-2c. Diseased Vegetation. Work with County and regional experts in finding solutions for the prevention and disposal of diseased vegetation, such as vegetation affected by Sudden Oak Death Syndrome.

OS-2d. Illegal Encampments. Continue to work with private and public property owners to identify and remove illegal encampments in open space areas.

OS-3. Open Space Use.

Protect and preserve the natural value of open space and wildlife habitat areas while permitting educational and recreational uses compatible with these resources. Specific use objectives include:

a. Open space areas should be maintained in a natural state.

b. Open space areas are a community resource for use and enjoyment by the residents of San Rafael.

c. Uses of open space areas shall be secondary to open space preservation, and limited to those uses with a minimal impact on the environment.

OS-3a. Management of Private Open Space. In designating open space as part of a development project or with the dedication of land for open space, identify limitations to uses in those areas, such as restrictions on ornamental landscaping, structures and fences.

OS-4. Access to Open Space.

Encourage provision of access to open space areas in the design of adjacent development. Secure access paths shown on Exhibit 34 as part of subdivision approvals and design access paths to avoid or minimize neighborhood and user conflicts with sensitive wildlife habitat areas.

OS-4a. Access Points. Through the development review process, identify access points and parking areas to be retained and required improvements.

OS-5. Coordination with Other Jurisdictions.

Coordinate San Rafael's open space system with adjacent cities, Marin County, the State, and regional and private open space systems.

OS-5a. Coordination with Other Jurisdictions. Continue to work with public agencies managing open space within the San Rafael Planning Area to ensure a coordinated system.

OS-6. Utilities in Open Space.

Discourage utilities in open space areas. Necessary utilities in open space should be located and designed to minimize harm to the area's environmental and visual quality.

OS-6a. Utilities in Open Space. Use zoning ordinance provisions and the design and environmental review processes to evaluate the location and design of public utilities.

OS-7. Public Education.

Provide education programs to residents about wildlife, fire hazard, watershed protection and open space habitat.

OS-7a. Public Education. Continue outreach and public education. Examples include the dissemination of educational materials and programs related to wildland fire prevention, feral cats, and Marin County Stormwater Pollution Prevention Program (MCSTOPPP) requirements.

Conservation Element

GOAL 33: PROTECTED HABITAT
It is the goal of San Rafael to have enhanced habitat for native plants and animals, and special protection for species that are listed as threatened or endangered. *San Rafael is rich in wildlife and native plant habitats, such as wetlands, creeks, shorelines, oak woodlands and riparian areas, as well as wildlife corridors between them, and these habitats are being protected or restored as necessary.*

CON-1. Protection of Environmental Resources.
Protect or enhance environmental resources, such as ridgelines, wetlands, diked baylands, creeks and drainageways, shorelines and habitat for threatened and endangered species.

CON-1a. Plans for Environmental Protection. Complete the implementation of Mahon Creek Final Conceptual Plan and the Shoreline Park Master Plan.

CON-2. Wetlands Preservation.
Require appropriate public and private wetlands preservation, restoration and/or rehabilitation through compensatory mitigation in the development process for unavoidable impacts. Support and promote acquisition of fee title and/or easements from willing property owners.

CON-2a. Wetlands Overlay District. Continue to implement wetlands policy through the Wetlands Overlay zoning district and development review.

CON-3. Wetland Protection and Mitigation.
In order to protect and preserve valued wetlands, loss of wetlands due to filling shall be avoided, unless it is not possible or practical. When it is demonstrated that it is not possible or practical to avoid filling a wetland because of site constraints and conditions such as the geographic location of the wetlands, site configuration and size, require that the wetland be replaced on-site, and in-kind at a minimum ratio of 2:1 (e.g., 2 acres for each acre lost). If it is determined that on-site mitigation is not possible or practical, off-site mitigation shall be required at a minimum replacement ratio of 3:1. As assessed and determined on a case-by-case basis, the City may waive this policy for fill of small wetlands (0.1 acre or less in size), provided that: (1) the wetland is isolated meaning that it is not within, a part of, directly connected with or hydrologically-linked by natural flow to a creek, drainageway, wetland or submerged tidelands; (2) it is demonstrated by a wetland expert that the preservation of the wetland is not practical as it would not result in a functioning, biological resource because of its isolation; (3) the City has determined that filling would result in a more appropriate and desirable site plan for the project; and (4) the City consults with and considers comments received from the appropriate resource agencies with wetland oversight (State of California Department of Fish and Game and/or the California Regional Water Quality Control Board).

a. **Creation of Wetlands**. The creation of wetlands shall be (1) of a similar habitat type to that of the existing wetlands and (2) of at least equal functional quality. The wetlands should be created or restored on or adjacent to the site, where possible. If on-site creation is infeasible due to technical constraints, compensatory habitat may be created off-site, preferably in the same drainage basin. Restoration of former filled, drained or diked wetland habitat is preferred over creation of wetlands on lands that were historically uplands. Plans for this habitat shall be prepared by a qualified wetland restoration ecologist in consultation with appropriate federal and state resource agencies. Mitigation plans shall require an annual monitoring for a period of time as specified by a qualified biologist to determine mitigation success. Contingency measures to deal with the potential for a lack of success should also be included in the plan.

b. **Timing of Restoration or Creation**. Restoration or creation of wetlands should be completed prior to construction of the development. Where construction activities would adversely impact wetland restoration or creation, wetlands restoration or creation may completed after construction of the development, as determined through development review.

> **CON-3a. Project Mitigation.** Continue the City's practice of requiring mitigation for projects that would affect wetlands, in conjunction with recommendations of State and Federal agencies.
>
> Maintain a minimum 50-foot development-free setback from wetlands, including, but not limited to, paving or structures. Setbacks of greater than 50 feet may be required on lots of two or more acres as determined through development review. The City may waive this requirement for minor encroachments if it can be demonstrated that the proposed setback adequately protects the functions of the wetland to the maximum extent feasible and resulting values to the satisfaction of the City after review by the appropriate regulatory agencies.

CON-5. Diked Baylands.
Protect seasonal wetlands and associated upland habitat contained within undeveloped diked baylands, or restore to tidal action. Support and promote acquisition from willing property owners.

CON-6. Creek and Drainageway Setbacks.
Require development-free setbacks, except for specific access points as approved per policy CON-7 (Public Access to Creeks), from existing creeks and drainageways that will maintain the functions and resulting values of these habitats. Appropriate erosion control and roadway crossings may encroach into the development setback. In the absence of vegetation, promote new growth of natural habitat.

a. **Creek Setback.** Maintain a minimum 25-foot development-free setback from the top of creek banks for all new development (including, but not limited to, paving and structures), except for Miller Creek and its tributaries, where a minimum 50-foot setback shall be maintained. Setbacks up to 100 feet may be required on lots or development projects two or more acres in size where development review determines a wider setback is needed to maintain functions and resulting habitat values and in areas where high quality riparian habitat exists.

The City may waive this requirement for minor encroachments if it can be demonstrated that the proposed setback adequately protects the functions of the creek to the maximum extent feasible and resulting values to the satisfaction of the City after review by the appropriate regulatory agencies.

b. **Drainageway Setbacks**. Drainageway setbacks shall be established through individual development review, taking into account existing habitat functions and resulting values.

CON-6a. Municipal Code Compliance. Ensure that the San Rafael Municipal Code complies with local, state, and federal regulatory agencies requirements for erosion control.

CON-7. Public Access to Creeks.
Provide pedestrian access to points along creeks throughout the City where such access will not adversely affect habitat values.

CON-7a. Creek Access Points. Proactively identify and create desirable access points to creeks on public lands.

CON-7b. Public Access. Through the development review process, identify and secure areas appropriate for access points to creeks.

CON-7c. Website Publicity. Use the City's website to publicize information about protecting and accessing San Rafael's creeks and waterways.

CON-7d. Creek Signage. Develop a program to provide attractive signage identifying creeks.

CON-8. Enhancement of Creeks and Drainageways.
Explore enhancement of, and support continuous upgrades to, drainageways to serve as wildlife habitat corridors for wildlife movement and to serve as flood control facilities to accommodate storm drainage. Require creek enhancement and associated riparian habitat restoration/creation for projects adjacent to creeks to maintain storm flows, reduce erosion and maintenance and improve habitat values, where feasible.

CON-8a. Creek Restoration. Encourage and support efforts by neighborhood associations, environmental organizations and other interested groups to fund creek enhancement, restoration and maintenance programs.

CON-8b. Tree Retention. Retain trees along creeks, where possible, for preservation of riparian habitat and to inhibit growth of algae.

CON-9. Native and/or Sensitive Habitats.
Protect habitats that are sensitive, rare, declining, unique or represent a valuable biological resource.

CON-9a. Steelhead Habitat. Support efforts to restore, preserve or enhance Central California Coast Steelhead habitat in Miller Creek and other creeks.

CON-9b. Feral Cats. To protect habitats, especially for birds and small animals, continue to fund programs of the Marin Humane Society including those to reduce the population of feral cats.

CON-10. Impacts to Sensitive Habitats.
Minimize impacts to sensitive natural habitats through careful planning. Require compliance with applicable laws and regulations.

CON-10a. Oak Savanna/Woodland Habitat Protection. Require that proposed developments with potential impacts to oak savanna/woodland habitat to either avoid, minimize, or compensate for the loss of oak savanna/woodland habitat. Avoidance would be the preferred measure where feasible. If it is deemed that an impact is unavoidable, minimization of direct and indirect impacts or compensation through habitat restoration, creation, or enhancement would be required.

CON-11. Wildlife Corridors.
Preserve and protect areas that function as wildlife corridors, particularly those areas that provide natural connections permitting wildlife movement between designated sensitive habitats.

CON-12. Preservation of Hillsides.
Encourage preservation of hillsides, ridgelines and other open areas that serve as habitat and erosion protection as well as visual backdrops to urban areas.

CON-12a. Hillside Design Guidelines. Continue to implement the Hillside Design Guidelines.

CON-13. Threatened and Endangered Species.
Preserve and protect threatened and endangered species of plants and animals formally listed consistent with the state and federal endangered species acts including protection of their habitat.

CON-13a. List of Species. Maintain a current list of threatened and endangered and special status species.

CON-14. Special Status Species.
Preserve and protect special status plants and animals, including candidate species for listing under the state and federal endangered species acts, California species of special concern, California Native Plant Society List 1B plants, and other species protected under provisions of California Fish and Game Code.

CON-14a. Surveys. Require that vacant sites be surveyed for the presence or absence of relevant special status species prior to development approval. Responsibility: Community Development,

CON-14b. Minimization. Require that where impacts to special status species are deemed unavoidable, potential impacts to the identified species are minimized through design, construction, and operation of the project. Compensation measures could include on-site set asides or off-site acquisitions (e.g. conservation easements, deed restrictions, etc.) that would be required if project

impacts result in direct loss or indirect impacts that cannot be mitigated in other ways. This might also involve species-specific enhancement restoration efforts for the mitigation lands.

CON-15. Invasive Non-Native Plant Species.
Remove and control selected undesirable invasive non-native plant species from City-owned open space and road right of ways, and encourage the removal and control of these invasive plant species from non-City owned ecologically-sensitive areas.

CON-15a. Invasive Plant Ordinance. Consider the legality, feasibility and enforceability of an Invasive Plant Ordinance addressing the removal of invasive species on private and public properties. As part of the ordinance, evaluate the benefits and impacts of using herbicide on invasive species where there are no other feasible controls.

CON-15b. Removal of Invasive Species on Public Property. Institute a program to remove invasive plant species on public properties. Consider the use of volunteers and private organizations to assist in this effort.

CON-16. Landscape with Native Plant Species.
Encourage landscaping with native and compatible non-native plant species, especially drought-resistant species.

CON-16a. Distribution of Information. Distribute Marin Municipal Water District and other organizations' educational materials about native plant landscaping.

Biological Resources – Summary of Key Issues and Opportunities

The current San Rafael General Plan 2020 serves as the principal planning document regulating development and providing for conservation of important resources on a local level. As listed above, the Open Space and Conservation Elements of the current General Plan contain numbered policies addressing the protection of sensitive biological and wetland resources. The Community Development Department is responsible for reviewing individual development applications to ensure compliance with CEQA and the National Environmental Policy Act (NEPA).

The San Rafael General Plan 2040 update process provides an opportunity to reevaluate the appropriateness and deficiencies of current policies and associated programs and determine any additional goals and policies necessary to provide a framework to adequately identify, protect, and manage natural resources within the Planning Area. Based on a review of the above policies from the Open Space and Conservation Elements of the current General Plan, this could include additional policies and programs related to:

- Protection of mature trees and other native vegetation, particularly along riparian corridors and in stands of native woodlands.
- Further control and eradication of non-native invasive species where they compromise native habitat values

- Participation in regional habitat restoration efforts such as the wetland restoration occurring around San Pablo Bay, and
- Conformance with State and federal regulations related to special-status species, wetlands, and other jurisdictional waters.

Table 2: Special-Status Plant Species Known or Suspected to Possibly Occur in San Rafael Vicinity

Species	Status[a]	Habitat/Blooming Period	Potential for Occurrence in Planning Area
Amorpha californica var. napensis Napa false indigo	1B.2	Openings in broadleafed upland forest, chaparral, cismontane woodland. April-July	Moderate. CNDDB general occurrence from south San Rafael.
Amsinckia lunaris Bent-flowered fiddleneck	1B.2	Coastal bluff scrub, cismontane woodland, valley and foothill grassland. March-June	Moderate. CNDDB general occurrence from west end of Lucas Valley.
Arctostaphylos montana ssp. montana Mt. Tamalpais manzanita	1B.3	Chaparral, valley and foothill grassland/serpentinite, rocky. February-April	Low. No known occurrences reported by CNDDB in Planning Area.
Arctostaphylos virgate Marin manzanita	1B.2	Broadleafed upland forest, closed-cone coniferous forest, chaparral, North Coast coniferous forest on sandstone, or granitic substrates. January-March	Low. No known occurrences reported by CNDDB in Planning Area.
Amorpha californica var. napensis Napa false indigo	1B.2	Broadleafed upland forest (openings); chaparral; cismontane woodland. April-July	Moderate. CNDDB general occurrences from San Rafael.
Calochortus tiburonensis Tiburon mariposa-lily	FT/ST/1B.1	Open, rocky slopes in serpentine grassland. March-June	Low. No known occurrences reported by CNDDB in Planning Area.
Calamagrostis crassiglumis Thurber's reed grass	2B.1	Coastal scrub (mesic); marshes and swamps (freshwater). May-August	Low. No known occurrences reported by CNDDB in Planning Area.
Castilleja affinis ssp. neglecta Tiburon paintbrush	FE/ST/1B.2	Rocky serpentine sites in grasslands. April-June	Low. No known occurrences reported by CNDDB in Planning Area.
Ceanothus masonii Mason's ceanothus	1B.2	Chaparral with serpentine affinity. March-April	Low. No known occurrences reported by CNDDB in Planning Area.
Chloropyron maritimum ssp. palustre Point Reyes salty bird's-beak	1B.2	Marshes and swamps (coastal salt), usually in coastal salt marsh with *Salicornia*, *Distichlis*, *Jaumea* and *Spartina*; 0-10 meters. June-October	Moderate. CNDDB general occurrence from San Rafael and Santa Venetia shoreline of Planning Area.
Chorizanthe cuspidata var. cuspidate San Francisco Bay spineflower	1B.2	Sandy soil on terraces and slopes in coastal bluff, coastal dunes, coastal scrub, and coastal prairie habitat. April-July (August rarely)	Low. No known occurrences reported by CNDDB in Planning Area..
Cirsium hydrophilum var. vaseyi Mt. Tamalpais thistle	1B.2	Serpentine seeps and streams in chaparral and woodland. May-August	Low. No known occurrences reported by CNDDB in Planning Area.
Dirca occidentalis Western leatherwood	1B.2	Broadleafed upland forest; closed-cone coniferous forest; chaparral; cismontane woodland, North Coast coniferous forest; riparian forest; riparian woodland. January-April	Low. No known occurrences reported by CNDDB in Planning Area.
Eriogonum luteolum var. caninum Tiburon buckwheat	1B.2	Serpentine soils; sandy to gravelly sites. May-September	Moderate. CNDDB general occurrence from Santa Margarita Valley.
Fissidens pauperculus Minute pocket moss	1B.2	Moss growing on damp soil in coniferous forests along the coast; in dry streambeds and stream banks.	Low. No known occurrences reported by CNDDB in Planning Area.
Fritillaria lanceolate var. tristulis Marin checker lily	1B.1	Coastal scrub, valley and foothill grassland, and coastal prairie; often on serpentine; various soils reported though usually clay. February-April	Low. No known occurrences reported by CNDDB in Planning Area.
Fritillaria liliacea Fragrant fritillary	1B.2	Often serpentinite; cismontane woodland, coastal prairie, coastal scrub; valley and foothill grassland. February-April	Low. No known occurrences reported by CNDDB in Planning Area.

Species	Status[a]	Habitat/Blooming Period	Potential for Occurrence in Planning Area
Gilia millefoliata Dark-eyed gilia	1B.2	Coastal dunes. April-June	Low. No known occurrences reported by CNDDB in Planning Area.
Helianthella castanea Diablo helianthella	1B.2	Broadleafed upland forest, chaparral, cismontane woodland, coastal scrub, riparian woodland, valley and foothill grassland. March-June	Low. No known occurrences reported by CNDDB in Planning Area.
Hemizonia congesta ssp. congesta Congested-headed hayfield tarplant	1B.2	Valley and foothill grassland, sometimes roadsides. April-November	Moderate. CNDDB general occurrence from Santa Margarita Valley.
Hesperolinon congestum Marin western flax	FT/ST/1B.1	Serpentine barrens and serpentine grassland and chaparral. April-July	Moderate. CNDDB general occurrence from San Rafael and west end of Lucas Valley.
Holocarpha macradenia Santa Cruz tarplant	FT/SE/1B.1	Light, sandy soil or sandy clay, often with non-natives in coastal prairie and grasslands. June-October	Low. No known occurrences reported by CNDDB in Planning Area.
Horkelia tenuiloba Thin-lobed horkelia	1B.2	Broadleafed upland forest, chaparral, valley and foothill grassland on sandy soils, mesic openings. May-July	Low. No known occurrences reported by CNDDB in Planning Area.
Kopsiopsis hookeri Small groundcone	2B.3	Open woods, shrubby places, generally on *Gaultheria shallon*. April-August	Low. No known occurrences reported by CNDDB in Planning Area.
Lessingia micradenia var. micradenia Tamalpais lessingia	1B.2	Usually on serpentine, in serpentine grassland or chaparral, often on roadsides. (June rarely) July-October	Low. No known occurrences reported by CNDDB in Planning Area.
Microseris paludosa Marsh microseris	1B.2	Closed-cone coniferous forest, cismontane woodland, coastal scrub, valley and foothill grassland. April-June	Low. No known occurrences reported by CNDDB in Planning Area.
Navarretia rosulata Marin County navarretia	1B.2	Closed-cone coniferous forest and chaparral on serpentinite. May-July	Low. No known occurrences reported by CNDDB in Planning Area.
Pentachaeta bellidiflora White-rayed pentachaeta	FE/SE/1B.1	Cismontane woodland, valley and foothill grassland on open, dry rocky slopes and grassy areas, often on serpentinite. March-May	Moderate. CNDDB general occurrences from south San Rafael.
Plagiobothrys glaber Hairless popcorn-flower	1A	Coastal salt marshes, alkaline meadows, and seeps. March-May	Low. No known occurrences reported by CNDDB in Planning Area.
Pleuropogon hooverianus North Coast semaphore grass	1B.1	Wet grassy, usually shady areas, sometimes in freshwater marsh, associated with forest environments. April-June	Low. No known occurrences reported by CNDDB in Planning Area.
Polypogon marinense Marin knotweed	3.1	Coastal salt marshes, brackish water marsh, and riparian wetlands. May-August	Moderate. CNDDB occurrence reported from Santa Venetia shoreline.
Quercus parvula var. tamalpaisensis Tamalpais oak	1B.3	Lower montane coniferous forest. March-April	Low. No known occurrences reported by CNDDB in Planning Area.
Sidalcea calycosa ssp. rhizomata Point Reyes checkerbloom	1B.2	Freshwater marshes near the coast. April-September	Low. No known occurrences reported by CNDDB in Planning Area.
Sidalcea hickmanii ssp. viridis Marin checkerbloom	1B.1	Chaparral, cismontane woodland; lower montane coniferous forest. May-August	Low. No known occurrences reported by CNDDB in Planning Area.
Spergularia macrotheca var. longistyla Long-styled sand-spurrey	1B.2	Meadows and seeps; marshes and swamps. February-June	Low. No known occurrences reported by CNDDB in Planning Area.

Species	Status[a]	Habitat/Blooming Period	Potential for Occurrence in Planning Area
Stebbinsoseris decipiens Santa Cruz microseris	1B.2	Broadleafed upland forest, closed-cone coniferous forest, chaparral, coastal prairie, coastal scrub, valley and foothill grassland in open areas, sometimes on serpentinite. April-May	Low. No known occurrences reported by CNDDB in Planning Area.
Streptanthus batrachopus Tamalpais jewel-flower	1B.3	Closed-cone coniferous forest, chaparral, Talus serpentine outcrops. April-June	Low. No known occurrences reported by CNDDB in Planning Area.
Streptanthus glandulosus ssp. Niger Tiburon jewel-flower	FE/SE/1B.1	Shallow, rocky serpentine slopes in grasslands. May- June	Low. No known occurrences reported by CNDDB in Planning Area.
Streptanthus glandulosus ssp. pulchellus Mount Tamalpais bristly jewel-flower	1B.2	Serpentine slopes. May-July (August rarely)	Moderate. CNDDB general occurrence from west end of Lucas Valley.
Symphyotrichum lentum Suisun Marsh aster	1B.2	Marshes and swamps (brackish and freshwater); most often seen along sloughs with *Phragmites*, *Scirpus*, blackberry, *Typha*, etc. May-November	Low. No known occurrences reported by CNDDB in Planning Area.
Trifolium amoenum Two-fork clover	FE/1B.1	Coastal bluff scrub, valley and foothill grassland, sometimes on serpentinite. April-June	Low. No known occurrences reported by CNDDB in Planning Area..
Trifolium hydrophilum Saline clover	1B.1	Marshes and swamps; valley and foothill grassland (mesic, alkaline); vernal pools. April-June	Low. No known occurrences reported by CNDDB in Planning Area..
Triquetrella californica Coastal triquetrella	1B.2	Grows within 30 miles from the coast in coastal scrub, grasslands, and in open gravels on roadsides, hillsides, rocky slopes	Low. No known occurrences reported by CNDDB in Planning Area..

[a] Status: FE = federally endangered
SE = State endangered
FT = federally threatened
ST = State threatened
CNPS Ranking:
1A = Presumed extinct in California
1B = Rare, threatened or endangered in California and elsewhere
2 = Rare, threatened, or endangered in California, but more common elsewhere
3 = A review list

Source: Records based on California Native Plant Society's on-line *Inventory of Rare and Endangered Plants* and CNDDB occurrence data.

Table 3: Special-Status Animal Species Known or Suspected to Possibly Occur in San Rafael Vicinity

Species	Status[a]	Habitat	Potential for Occurrence in Planning Area
Fish			
Coho salmon (Central California Coast ESU[b]) *Oncorhynchus kisutch*	FE, SE	Coastal streams from Punta Gorda in northern California down to and including the San Lorenzo River in central California, as well as some tributaries to San Francisco Bay	Moderate. Species historically occurred in larger drainages of east Marin County.[1] Species last recorded from San Francisco Bay tributary during early-to-mid 1980s.[2] Corte Madera Creek designated as critical habitat and essential fish habitat for this species.
Chinook salmon (Central Valley Spring-run ESU) *Oncorhynchus tshawytscha*	FT, ST	Requires clear, cool streams with pools and riffles, with coarse gravel beds for spawning. Sacramento River and its tributaries	Moderate. Known to occasionally occur in Corte Madera Creek and other drainages of east Marin County, but fish may be of hatchery origin.[3]
Steelhead (Central California Coast ESU) *Oncorhynchus mykiss*	FT	Coastal streams from Russian River south to Aptos Creek (Santa Cruz Co.), including streams tributary to San Francisco and San Pablo Bays	Moderate. Species historically occurred in larger drainages of east Marin County.[4] Corte Madera Creek and major tributaries are designated as critical habitat.
Green sturgeon *Acipenser medirostris*	FT, SSC	Oceanic waters, bays, and estuaries; spawns in deep pools in large, turbulent freshwater river mainstems; known to forage in estuaries and bays from San Francisco Bay to British Columbia	Moderate. Known from San Pablo Bay and may occur in lower reaches of major drainages.
Tidewater goby *Eucyclogobius newberryi*	FE, SSC	Brackish shallow lagoons and lower stream reaches where water is fairly still but not stagnant	Low. CNDDB record is of an extirpated population recorded in 1961 near the mouth of Corte Madera Creek. Species generally considered extirpated in the region.
Delta smelt *Hypomesus transpacificus*	FT	Found in the Sacramento-San Joaquin estuary in saltwater, brackish and freshwater habitats	Moderate. Known from San Pablo Bay.
Tomales roach *Lavinia symmetricus*	SSC	Known only from Walker Creek and Lagunitas Creek watersheds, in a variety of habitat conditions.	Low. No known occurrences reported by CNDDB in Planning Area.
Longfin smelt *Spirinchus thaleichthys*	FC, ST, SSC	Open water estuaries and bays, both in saltwater and freshwater areas	Moderate. Known from San Pablo Bay.

[4] Ibid.

Species	Status[a]	Habitat	Potential for Occurrence in Planning Area
Eulachon (southern DPS[b]) *Thaleichthys pacificus*	FT	Open water estuaries and bays, both in saltwater and freshwater areas	Moderate. Known from San Pablo Bay.
Amphibians and Reptiles			
Foothill yellow-legged frog *Rana boylii*	SSC	Perennial streams and drainages with cobble substrate.	Moderate. CNDDB occurrences to the west and north of Lucas Valley.
California red-legged frog *Rana draytonii*	FT, SSC	Ponds, streams, drainages and associated uplands; requires areas of deep, still, and/or slow-moving water for breeding.	High. CNDDB occurrences from China Camp State Park vicinity in Planning Area.
California giant salamander *Dicampton ensatus*	SSC	Ponds, streams, drainages and associated uplands; prefers fast moving water in coastal forests and valley-foothill riparian habitats with cover.	High. CNDDB occurrence from Lucas Valley in Planning Area.
Western pond turtle *Actinemys marmorata*	SSC	Ponds, streams with deep pools, drainages and associated uplands for egg laying	High. CNDDB occurrence from John F McInnis Park in Planning Area.
Invertebrates			
Opler's longhorn moth *Adela oplerella*	none	Typically found on serperntine grasslands where larval host plant, *Platystemon californicus*, is present.	Moderate. CNDDB occurrence from Big Rock Ridge vicinity.
Obscure bumble bee *Bombus caliginosus*	none	Coastal areas from Santa Barbara County to Washington.	Low. No known occurrences reported by CNDDB from Planning Area.
Western bumble bee *Bombus occidentalis*	none	Found in a variety of habitats. Once common and widespread. Species has declined precipitously, perhaps from disease	High. CNDDB occurrences from San Rafael vicinity, and likely remains in a variety of habitats.
San Bruno elfin butterfly *Callophyrys mossil bayensis*	FE	Colonies are located on steep, north-facing slopes where larval host plant, *Sedum spathulifolium*, is present	Low. No known occurrences reported by CNDDB from Planning Area.
Monarch butterfly *Danaus plexippus*	none	Relatively common species in decline throughout its range. Overwintering colonies found in eucalyptus groves and conifer forests along coastal California. Overwintering colonies are of concern to CDFW	High. CNDDB occurrences from China Camp State Park vicinity.
Mission blue butterfly *Plebujus icarioides missionensis*	FE	Found in coastal chaparral, scrub and grassland habitat where larval host plant, *Lupinus* spp., are present	Low. No known occurrences reported by CNDDB from Planning Area.
Robust walker *Pomatiopsis binneyi*	none	Amphibious snail living in humid habitat along the Coast Range, on marshy ground and periodically flooded soil. Typically associated with perennial seeps and rivulets.	Low. No known occurrences reported by CNDDB from Planning Area.
Myrtle's silverspot butterfly *Speyeria zerene myrtleae*	FE	Found in coastal prairie, coastal scrub and sand dunes where larval host plant, *Viola adunca*, is present	Low. No known occurrences reported by CNDDB from Planning Area.
San Francisco Bay Area leaf-cutter bee *Trachusa gummifera*	none	A pollen-collecting bee known from grassland habitat and areas with suitable nectaring plants	Low. No known occurrences reported by CNDDB from Planning Area.

Species	Status[a]	Habitat	Potential for Occurrence in Planning Area
Mimic tryonia (California brackishwater snail) *Tryonia imitator*	none	Inhabits coastal lagoons, estuaries and salt marshes from Sonoma County to San Diego County, typically found in permanently submerged areas	High. CNDDB occurrence from shoreline north of San Rafael Creek in Planning Area.
Marin Hesperian *Vespericola marinensis*	none	Found in moist areas in coastal brushfields and chaparral, in riparian and mixed forest habitats	Low. No known occurrences reported by CNDDB from Planning Area.
Birds			
Redhead *Aythya americana*	SSC	Large, deep bodies of water; nests in freshwater emergent wetlands	Moderate. May winter in small numbers on open water habitats along major drainages and San Pablo Bay.
American white pelican *Pelecanus erythrorhynchos*	SSC	Forages over shallow inland waters and coastal marine habitats, nests on isolated islands or peninsulas	Moderate. May forage and roost in the open water habitat in San Pablo Bay from late summer through spring but does not breed in San Francisco Bay Area.
California brown pelican *Pelecanus occidentalis californicus*	FE, SE, CFP	Coastal shorelines and bays; rarely found on fresh water	Moderate. May forage and roost in the open water habitat in San Pablo Bay from late summer through spring but does not breed in San Francisco Bay Area.
California least tern (nesting colony) *Sterna antillarum browni*	FE, CE, CFP	Found along the Pacific coast, foraging in shallow estuaries and lagoons, and nesting on open beaches	Low. Not reported from eastern Marin County by CNDDB.
Western snowy plover *Charadrius alexandrines nivosus*	FT, SSC	Found along the Pacific coast and nests in barren to sparsely vegetated beaches and other shoreline areas	Low. No known occurrences reported by CNDDB from Planning Area.
Great egret (nesting colony) *Ardea alba*	none	Relatively common species, found foraging in a variety of aquatic habitats including shorelines of lakes, ponds, and drainages. Colonial nesting areas are of concern to CDFW	High. Observed in Marin County where suitable habitat is present.
Great blue heron (nesting colony) *Ardea herodias*	none	Relatively common species, found foraging in a variety of aquatic habitats including shorelines of lakes, ponds, and drainages. Colonial nesting areas are of concern to CDFW	High. Observed in Marin County where suitable habitat is present.
Snowy egret (nesting colony) *Egretta thula*	none	Relatively common species, found foraging in a variety of aquatic habitats including shorelines of lakes, ponds, and drainages. Colonial nesting areas are of concern to CDFW	High. Observed in Marin County where suitable habitat is present.
Black-crowned night heron (nesting colony) *Nycticorax nycticorax*	none	Relatively common species, found foraging in a variety of aquatic habitats including shorelines of lakes, ponds, and drainages. Colonial nesting areas are of concern to CDFW	High. Observed in Marin County where suitable habitat is present.
Marbled murrelet *Brachyramphus marmoratus*	FT, CE	Forages at sea and utilizes mature conifer forest for nesting	Low. Suitable nesting and foraging habitat is absent from Planning Area.
White-tailed kite *Elanus leucurus*	CFP	Open grasslands, meadows, or marshes; require dense-topped trees or shrubs for nesting and perching	High. Observed in Marin County where suitable habitat is present.
Bald eagle *Haliaeetus leucocephalus*	SE	Ocean shorelines, lake margins, and rivers for both nesting and wintering; nests in large trees with open branches	High. Known to occasionally forage along lower reaches of major drainages and shoreline of San Pablo Bay during winter, but not likely to remain for long periods or breed in Planning Area.

Species	Status[a]	Habitat	Potential for Occurrence in Planning Area
Northern harrier *Circus cyaneus*	SSC	Nests in wet meadows and marshes, forages over open grasslands and agricultural fields	High. Observed in Marin County where suitable habitat is present.
Golden eagle *Aquila chrysaetos*	SSC, CFP	Rolling foothills and mountain areas. Nests in cliff-walled canyons or large trees in open areas	High. Known to forage and nest in Planning Area.
American peregrine falcon *Falco peregrinus*	SE, CFP	A variety of open habitats including coastlines, mountains, marshes, bay shorelines, and urban areas. Nest on cliffs, bridges, and tall buildings	Low. May occasionally forage in Planning Area, but not likely to breed due to the lack of suitable nesting habitat.
California black rail *Laterallus jamaicensis coturniculus*	FT, CFP	Salt marshes bordering larger bays, also found in brackish and freshwater marshes	High. Reported by CNDDB from John F. McInnis Park in Planning Area.
Ridgway's rail/California clapper rail *Rallus longirostris obsoletus*	FE, SE, CFP	Tidal salt marshes with sloughs and substantial cordgrass (*Spartina* sp.) cover	High. Reported by CNDDB from shoreline of San Rafael and John F. McInnis Park in Planning Area.
Burrowing owl *Athene cunicularia*	SSC	Open, dry grasslands that contain abundant ground squirrel burrows	Moderate. Observed in Marin County where suitable habitat is present.
Short-eared owl *Asio flammeus*	SSC	Found in open country and grasslands.	Moderate. Observed in Marin County where suitable habitat is present.
Long-eared owl *Asio otus*	SSC	Conifer, oak, riparian, pinyon-juniper, and desert woodlands adjacent to grasslands, meadows, or shrublands	Moderate. Observed in Marin County where suitable habitat is present.
Northern spotted owl *Strix occidentalis caurina*	FT, SC, SSC	Dense forest and woodland, with suitable prey	High. CNDDB occurrences from China Camp State Park, Harry A Barber Memorial Park and Southern Heights Ridge in Planning Area.
Olive-sided flycatcher *Contopus cooperi*	SSC	Coniferous forests with open canopies	Moderate. Observed in Marin County where suitable habitat is present.
Loggerhead shrike *Lanius ludovicianus*	SSC	Open grasslands and woodlands with scattered shrubs, fence posts, utility lines, or other perches; nests in dense shrubs and lower branches of trees	Moderate. Observed in Marin County where suitable habitat is present.
Purple martin *Progne subis*	SSC	Woodlands; nests in tree snags and abandoned woodpecker cavities and human-made structures	Moderate. Observed in Marin County where suitable habitat is present.
Double-crested cormorant (nesting colony) *Phalacrocorax auritus*	none	Relatively common species, found foraging in a variety of aquatic habitats including open water and shorelines of San Pablo Bay. Colonial roosting areas are of concern to CDFW	High. Observed in Marin County where suitable habitat is present.
San Francisco (salt marsh) common yellowthroat *Geothlypis trichas sinuosa*	SSC	Salt, brackish, and freshwater marshes; and riparian woodlands; nests on or near ground in low vegetation	Moderate. Observed in Marin County where suitable habitat is present.
Bryant's savannah sparrow *Passerculus sandwichensis alaudinus*	SSC	Tidal marshes and adjacent ruderal habitat, moist grasslands in the coastal fog belt, and infrequently, drier grasslands further inland; in South Bay, nests primarily on levee tops overgrown with annual grasses and levee banks dominated by pickleweed	Moderate. Observed in in Marin County where suitable habitat is present.
Grasshopper sparrow *Ammodramus savannarum*	SSC	Grasslands with scattered shrubs.	Moderate. Observed in Marin County where suitable habitat is present.

Species	Status[a]	Habitat	Potential for Occurrence in Planning Area
San Pablo (Samuels) song sparrow *Melospiza melodia samuelis*	SSC	Tidal salt marshes dominated by pickleweed; nests primarily in pickleweed and marsh gumplant	High. CNDDB occurrences from shoreline of San Rafael, China Camp State Park, and John F. McInnis Park in Planning Area.
Tricolored blackbird *Agelaius tricolor*	SSC	Nests in dense vegetation near open water; forages in grasslands and agricultural fields.	Low. No known occurrences reported by CNDDB from Planning Area.
Mammals			
Salt marsh harvest mouse *Reithrodontomys raviventris*	FE, SE, CFP	Tidal salt marshes of San Francisco Bay and its tributaries. Requires tall, dense pickleweed for cover	High. CNDDB occurrences from shoreline of San Rafael and John F. McInnis Park in Planning Area.
Pallid bat *Antrozous pallidus*	SSC	A variety of open arid habitats (e.g., chaparral, open woodland, deserts); primary roost sites include bridges, old buildings, and in tree hollows and/or bark; sometimes roost in caves and rock crevices	High. Suitable habitat present and general occurrence reported by CNDDB from San Rafael in Planning Area.
Townsend's big-eared bat *Corynorhinus townsendii*	SC, SSC	Roots in the open in a variety of habitats, including tree cavities, caves and old buildings. Extremely sensitive to human disturbance.	Low. Suitable habitat present but no known occurrences reported by CNDDB from Planning Area.
Western red bat *Lasiurus blossevillii*	SSC	Forested canyons and riparian woodlands for roosting, a variety of open habitats for foraging; typically roosts in snags and trees with moderately dense canopies	Low. Suitable habitat present but no known occurrences reported by CNDDB from Planning Area.
Hoary bat *Lasiurus cinereus*	none	Prefers open habitats with access to trees for cover, roosting in dense foliage.	Low. Suitable habitat present but no known occurrences reported by CNDDB from Planning Area.
American badger *Taxidea taxus*	SSC	Open habitats with friable soils	Moderate. Suitable habitat present but no known occurrences reported by CNDDB from Planning Area.

[a] Status:
FE = federally endangered
FT = federally threatened
FC = federal candidate
ST = State endangered
SC = State candidate
SSC = California Species of Special Concern
CFP = California Fully Protected Species

[b] ESU = Evolutionarily Significant Unit
DPS = Distinct Population Segment

Source: Based on CNDDB occurrence records and common distribution knowledge unless otherwise noted.

APPENDIX F:
CULTURAL RESOURCES DATA

REGULATORY FRAMEWORK

Federal Regulations

National Historic Preservation Act

Most regulations at the federal level stem from the National Environmental Policy Act (NEPA) and historic preservation legislation such as the National Historic Preservation Act (NHPA) of 1966, as amended. NHPA established guidelines to "preserve important historic, cultural, and natural aspects of our national heritage, and to maintain, wherever possible, an environment that supports diversity and a variety of individual choice." The NHPA includes regulations specifically for federal land-holding agencies, but also includes regulations (Section 106) which pertain to all projects that are funded, permitted, or approved by any federal agency, and have the potential to affect cultural resources. All projects that are subject to NEPA are also subject to compliance with Section 106 of the NHPA and NEPA requirements concerning cultural resources. Provisions of NHPA establish a National Register of Historic Places (The National Register) maintained by the National Park Service, the Advisory Councils on Historic Preservation, State Historic Preservation Offices, and grants-in-aid programs.

American Indian Religious Freedom Act

The American Indian Religious Freedom Act recognizes that Native American religious practices, sacred sites, and sacred objects have not been properly protected under other statutes. It establishes as national policy that traditional practices and beliefs, sites (including right of access), and the use of sacred objects shall be protected and preserved. This law does not include provisions for compliance.

Native American Graves and Repatriation Act

Native American remains are protected by the Native American Graves and Repatriation Act of 1990 (NAGPRA). NAGPRA protects Native American graves on federal and tribal lands, and recognizes tribal authority over the treatment of unmarked graves. It also prohibits the selling of Native American remains. The law provides guidelines for the return of Native American human remains and cultural objects from any collection (museum, university, government) that receives federal funding. Civil and criminal penalties can be imposed for noncompliance and illegal trafficking (such as knowingly selling or purchasing sacred objects stolen from graves).

State Regulations

California Environmental Quality Act

The California Environmental Quality Act (CEQA) is codified as Public Resources Code (PRC) Section 21000 *et seq.*, and CEQA Guidelines are codified at Title 14 California Code of Regulations (CCR) Section 15000 *et seq*. As amended in September 2014, CEQA requires that lead agencies determine whether projects may have significant effects on archaeological, historical, and tribal cultural resources. This determination applies to those resources which meet significance criteria qualifying them as "unique," "important," listed on the California Register of Historical Resources (CRHR), or eligible for listing on the CRHR. The importance of a resource is measured in terms of criteria for inclusion on the CRHR (Title 14 CCR, §4852(a)) as listed below.

If the agency determines that a project may have a significant effect on a resource considered to be significant, the project is determined to have a significant effect on the environment, and these effects must be addressed. If a cultural resource is found not to be significant under the qualifying criteria, it need not be considered further in the planning process.

CEQA Guidelines (PRC §15064.5) specify the procedures to be followed in case of the discovery of human remains on non-federal land. The disposition of Native American burials falls within the jurisdiction of the NAHC.

CEQA also affords protection to paleontological resources. Appendix G of the CEQA Guidelines requires consideration of impacts to paleontological resources, stating that, "a project will normally result in a significant impact on the environment if it will...disrupt or adversely affect a paleontological resource or site or unique geologic feature except as part of a scientific study."

California Register of Historical Resources

California State law provides for the protection of cultural resources by requiring evaluations of the significance of archaeological, historic, and Tribal cultural resources identified in documents prepared pursuant to the CEQA. Under CEQA, a cultural resource is considered an important historical resource if it meets any of the criteria found in Section 15064.5(a) of the CEQA Guidelines. Criteria identified in the CEQA Guidelines are similar to those described under the NHPA. The State Historic Preservation Office (SHPO) maintains the CRHR. Historic properties listed, or formally designated for eligibility to be listed, on The National Register are automatically listed on the CRHR. State Landmarks and Points of Interest are also automatically listed. The CRHR can also include properties designated under local preservation ordinances or identified through local historical resource surveys.

A resource may be important if it meets any one of the criteria below, or if it is already listed on the CRHR or a local register of historical resources.
An important archaeological, historical, or tribal cultural resource is one which:

- Is associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States.
- Is associated with the lives of persons important to local, California, or national history.
- It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master or possesses high artistic values.
- It has yielded, or may be likely to yield, information important to the pre-history or history of the local area, California, or the nation.

In addition to meeting one or more of the above criteria, eligibility for the California Register requires that a resource retain sufficient integrity to convey a sense of its significance or importance. Seven elements are considered key in considering a property's integrity: location, design, setting, materials, workmanship, feeling, and association.

2013 California Historical Building Code, California Code of Regulations, Title 24, Part 8

The California Historical Building Code is defined in Sections 18950 to 18961 of Division 13, Part 2.7 of the Health and Safety Code, and is subject to rules and regulations set forth in 24 CCR Part 8. This code provides alternative building regulations for permitting repairs, alterations and additions necessary for the preservation, rehabilitation, relocation, related construction, change of use, or continued use of a building or structure considered a qualified historical building or structure at any level of government.

California Health and Safety Code

Section 7050.5 of the California Health and Safety Code requires that construction or excavation be stopped in the vicinity of discovered human remains until the county coroner can determine whether the remains are those of a Native American. If the remains are determined to be Native American, the coroner must contact the California Native American Heritage Commission.

Senate Bill 18

Senate Bill 18 (SB 18) (Burton, Chapter 905, Statutes 2004), authored by Senator John Burton and signed into law by Governor Arnold Schwarzenegger in September 2004, requires local (city and county) governments to consult with California Native American tribes to aid in the protection of traditional tribal cultural places ("cultural places") through local land use planning. This legislation, which amended §65040.2, §65092, §65351, §65352, and §65560, and added §65352.3, §653524, and §65562.5 of the Government Code; also requires the Governor's Office of Planning and Research to include in the General Plan Guidelines advice to local governments for how to conduct these consultations. The intent of SB 18 is to provide California Native American tribes an opportunity to participate in local land use decisions at an early planning stage, for the purpose of protecting, or mitigating impacts to, cultural places. These consultation and notice requirements apply to adoption and amendment of both general plans (defined in Government Code §65300 *et seq*.) and specific plans (defined in Government Code §65450 *et seq*.).

Assembly Bill 52

The Native American Historic Resource Protection Act (Assembly Bill [AB] 52) requires lead agencies to provide notice to tribes that are traditionally and culturally affiliated with a project's geographic area if they have requested to be notified. AB 52 is intended to reduce the potential for delay and conflicts between Native American and developers. The goal of AB 52 is to include California Tribes in determining whether a project may result in a significant impact to tribal cultural resources (TCRs) that may be undocumented or known only to the Tribe and its members. AB 52 stipulates that a project that may cause a substantial adverse change in the significance of a TCR is a project that may have a significant effect on the environment.

Under AB 52, a TCR is defined as a site, feature, place, cultural landscape (must be geographically defined in terms of size and scope), sacred place, and object with cultural value to a California Native American tribe that is either included or eligible for inclusion in the California Register or included in a local register of historical resources. Alternatively, the lead agency, supported by substantial evidence, chooses at its discretion to treat the resource as TCR. When a lead agency chooses to treat a resource as a TCR, that determination shall be supported with substantial evidence, applying the criteria in the historical register, and considering the significance of the resource to a California Tribe (PRC § 5024.1, PRC§ 21074).

Consultation includes, but is not limited to, discussing the type of environmental review necessary, the significance of TCRs, the significance of the project impacts on the TCRs, and alternatives and mitigation measures recommended by the tribe. Consultation is considered concluded when (1) the parties agree to measures to avoid or reduce a significant impact on a TCR, if such a significant impact exists, or (2) when a party concludes that mutual agreement cannot be reached (PRC § 21080.3.2 (b)(l) and (2). Mitigation measures agreed upon during consultation must be included in the environmental document and, if no formal agreement on the appropriate mitigation has been established, mitigation measures that avoid or substantially lessen potential significant impacts should be implemented.

Public Resources Code

Section 5097.5(a) of the Public Resources Code specifies that a person shall not knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over the lands. As used in this section, "public lands" means lands owned by, or under the jurisdiction of, the state, or any city, county, district, authority, or public corporation, or any agency thereof.

California Code of Regulations

The California Code of Regulations (Title 14, Division 3, Chapter 1) addresses paleontological and archaeological resources on lands administered by the California Department of Parks and Recreation.

1. Section 4307: Geological Features - No person shall destroy, disturb, mutilate, or remove earth, sand, gravel, oil, minerals, rocks, paleontological features, or features of caves.
2. Section 4308: Archaeological Features - No person shall remove, injure, disfigure, deface, or destroy any object of archaeological or historical interest or value.

Local Regulations

City of San Rafael regulations regarding cultural resources are codified in Chapters 2.18 and 2.19 of the Municipal Code.

Chapter 2.18 - Historic Preservation

2.18.010 - Purpose. The city council of San Rafael finds that structures, sites and areas of special character or special historical, architectural or aesthetic interest or value have been and continue to be unnecessarily destroyed or impaired, despite the feasibility of preserving them. It is further found that the prevention of such needless destruction and impairment is essential to the health, safety, economy and general welfare of the public. The purpose of this chapter is to promote the health, safety, economy and general welfare of the public through:

a. The protection, enhancement, perpetuation and use of structures, sites and areas that are reminders of past eras, events and persons important in local, state or national history, or which provide significant examples of architectural styles of the past or are landmarks in the history of architecture, or which are unique and irreplaceable assets to the city and its neighborhoods, or which provide for this and future generations examples of the physical surroundings in which past generations lived;
b. The development and maintenance of appropriate settings and environment for such structures, and in such sites and areas;
c. The stabilization and enhancement of property values, the stabilization of neighborhoods and areas of the city, the increase of economic and financial benefits to the city and its inhabitants, and the promotion of visitor trade and interest in the city of San Rafael;
d. The preservation and encouragement of a city of varied architectural styles, reflecting the distinct phases of its history: cultural, social, economic, political and architectural;
e. The enrichment of human life in its educational and cultural dimensions in order to serve spiritual as well as material needs, by fostering knowledge of and civic pride in the living heritage of the past; and

f. Tax reductions to owners of designated historic buildings and sites through appropriate state and federal laws.

Chapter 2.19 - Archeological Resources Protection

2.19.010 – Purpose. Certain lands and geographic areas within the city of San Rafael contain significant archeological resources, which include deposits and remains of the local Native Americans and other early inhabitants. These deposits and remains represent an important part of the early history of San Rafael and the culture of the Native American community. Without proper regulations and monitoring, continued excavation and grading activities within the city council significantly impact these resources.

In recognizing the importance of protecting significant archeological resources, the city of San Rafael has determined to:

a. Establish a procedure for identifying, when possible, archeological resources and potential impacts to such resources prior to authorizing excavation and grading activities;
b. Provide valuable information and direction to property owners in the community in order to make them aware of these resources;
c. Implement measures that would preserve and protect valuable archeological resources, when there is a potential for encountering such resources;
d. Establish a procedure which would ensure that appropriate advisory agencies and organizations are contacted and consulted, when there is a probability that archeological resources could be encountered during an activity involving grading, excavation, and/or construction;
E. Establish and implement specific protection and preservation measure in the event archeological resources are encountered during grading, excavation and/or construction.

CULTURAL RESOURCES

This section contains information about cultural and paleontological resources within the San Rafael General Plan Area. Information contained in this section was obtained from the California Historical Resources Information System's Northwest Information Center in Rohnert Park and the files of the City of San Rafael.

Cultural resources are classified by the State Office of Historic Preservation (OHP) as sites, buildings, structures, objects and districts, and each is described by OHP (1995) as follows.

- **Site.** A “site” is the location of a significant event, a prehistoric or historic occupation or activity, or a building or structure, whether standing, ruined, or vanished, where the location itself possesses historic, cultural, or archaeological value regardless of the value of any existing structure.
- **Building.** A “building,” such as a house, barn, church, hotel, or similar construction, is created principally to shelter any form of human activity. "Building" may also be used to refer to a historically and functionally related unit, such as a courthouse and jail, or a house and barn.
- **Structure.** The term "structure" is used to distinguish from buildings those functional constructions made usually for purposes other than creating human shelter.

- **Object.** The term "object" is used to distinguish from buildings and structures those constructions that are primarily artistic in nature or are relatively small in scale and simply constructed. Although it may be, by nature or design, movable, an object is associated with a specific setting or environment.
- **District.** A “district” possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development.

For San Rafael and its Sphere of Influence, the California Historic Resources Information System has 164 documented resources on file that are generally sorted as:

Sites	108
Buildings	38
Structures	15
Districts	2
Other	1

Prehistoric Resources

Efforts to document the City's cultural resources began more than a century ago with archaeological inventories conducted by Nels Nelson in the San Francisco Bay area. Between 1906 and 1908, Nelson found some 425 sites; 67 are within the General Plan Area. Mandated cultural resources surveys led to the identification of additional archaeological resources following passage of the NHPA of 1966 and the CEQA of 1970. While there has been no systematic survey for archaeological resources in the city to date, there are 86 documented prehistoric sites within the General Plan Area. Records for these sites are on file at the Northwest Information Center of the California Historic Resources Information System.

As part of environmental review conducted for development projects, approximately 20 percent of the land within the city limits and Sphere of Influence has been surveyed for cultural resources; there is the potential that additional, not-yet-identified archaeological resources are present.

Historic Resources

The City's historic-period resources include archaeological deposits associated with Euroamerican settlement and exploration, and historic buildings and structures. These resources have also been addressed primarily through mandated cultural resources surveys. There are 12 known historical archaeological sites within the General Plan Area, and an additional ten that have both prehistoric and historical components (Table 1).

The City last conducted an architectural and historical survey of San Rafael structures in 1986. The 1986 architectural/historical survey completed for San Rafael included nearly 320 properties, primarily built environment resources. The master list prepared for the City as part of the General Plan 2040 and Downtown Precise Plan EIR (Appendix A), includes resources that have been evaluated for inclusion on the NRHP and the CRHR, and properties that are listed as California Historic Landmarks or Points of Historical Interest. Additionally, the list includes resources that were deemed potentially important but have not been fully evaluated to determine their eligibility or were found ineligible. The inventory shows the State Resources Code assigned to each property, which are defined later in Appendix A.

Of the nearly 320 historic resources tabulated in the 1986 survey, the City of San Rafael recognizes 16 City landmarks and three historic districts (Table 2), four are California Historical Landmarks (Table 3), and ten resources within the General Plan Area are listed on the National Register (Table 4).

CULTURAL SETTING

Prehistoric Setting

The concept of prehistory refers to the period before events were recorded in writing, a period which varies worldwide. Because there is no written record, our understanding of California prehistory relies on archaeological materials and oral histories passed down through generations. Early archaeological research in this area began with the work of Max Uhle and Nels Nelson. Uhle is credited with the first scientific excavation in California with his work at the Emeryville Shellmound in 1902, while Nelson spent several years (1906 to 1908) surveying the San Francisco Bay margins and California coast for archaeological sites.

In the 1930s, archaeologists from Sacramento Junior College and the University of California began piecing together a sequence of cultures primarily based on burial patterns and ornamental artifacts from sites in the lower Sacramento Valley (Lillard, Heizer, and Fenenga 1939; Heizer and Fenega 1939). Their cultural sequence became known as the Central California Taxonomic System (CCTS), which identified three culture periods termed the Early, Middle, and Late Horizons, none of which offered date ranges. Refinement of the CCTS became a chief concern of archaeologists as the century progressed with publications by Richard Beardsley (1948, 1954) and Clement Meighan (1955) based on materials excavated by the University of California Archaeological Survey.

In 1973, David Fredrickson synthesized prior work, and in combination with his own research, he developed a regional chronology that is used to this day, albeit modified for locality-specific circumstances. Note that while Fredrickson's chronology was adopted by many archaeologists, Beardsley's cultural sequence was adopted by others, creating a roughly North Bay-South Bay division in usage. Fredrickson’s scheme, outlined below, shows that native peoples have occupied the region for over 11,000 years (which is supported by Erlandson *et al.* 2007), and during that time, shifts took place in their social, political, and ideological regimes (Fredrickson 1973).

Emergent Period (ca. 200 – 1,000 years ago)

Upper Emergent Period characteristics include the appearance of the clam shell disk bead money economy. Increasingly more goods were moved farther. Local specialization of production and exchange of goods grew. South and central exchange systems were interpenetrated.

Lower Emergent Period characteristics included the introduction of the bow and arrow, which largely replaced the dart and atlatl. South coast marine adaptations flourished. Territorial boundaries became well established, and regularized exchange between groups continued with increased goods being exchanged. Increasing evidence has been found of distinctions in social status linked to wealth.

Archaic Period (ca. 1,000 – 8,000 years ago)

Upper Archaic Period characteristics include the growth of social-political complexity with status distinctions based on wealth. Shell beads gain importance and they appear to serve as indicators of both exchange and wealth. Group-oriented religious organizations emerge with possible origin of the Kuksu religious system. Exchange systems become more complex with regularized and sustained exchanges occurring between groups. Territorial boundaries were fluid.

Middle Archaic Period characteristics include a change in the climate, which became more benign. Economy became more diverse. Acorn use introduced as suggested by mortars and

pestles. Hunting was important as evidence by the abundance of dart tips. Sedentism began along with increased population and expansion.

Lower Archaic Period characteristics include lakes drying due to climatic changes. Abundant milling stones suggest emphasis on plants/small seeds for food, and little hunting occurred. Limited exchange took place, and there was a reliance on the use of local materials. Wealth not emphasized, and the dominant social unit appears to be the extended family.

Paleoindian Period (ca. 8,000 – 12,000+ years ago)

The Paleoindian period is the time when humans first entered California. Lakeside sites established with probable emphasis on hunting. Milling technology is lacking. Exchange of goods on a one to one basis and not regularized. Social units consisted of extended families that was largely self-reliant, and moved to resources as they became available and were needed.

Ethnographic Setting

At the time of European settlement in the Bay Area, San Rafael was part of the Coast Miwok territory (Kelly 1978:414). The Coast Miwok were hunter-gatherers who lived in rich environments that allowed for dense populations with complex social structures (Barrett 1908; Kroeber 1925). They settled in large, permanent villages about which were distributed seasonal camps and task-specific sites. Primary village sites were occupied throughout the year, and other sites were visited to procure resources that were especially abundant or available only during certain seasons. Sites often were situated near fresh water sources and in ecotones where plant life and animal life were diverse and abundant.

It is believed that members of the Coast Miwok were the Native Americans who met with both Sir Francis Drake and Sebastian Rodriquez Cermeño during their voyages to California. After those two contacts, the Coast Miwok were left alone for nearly 200 years until the construction of the San Francisco Presidio and Mission Dolores in 1776 (Kelly 1978:414). Even then, Coast Miwok did not enter Mission Dolores in significant numbers until 1800 (Milliken 1995:176).

Historic Setting

Euroamerican settlement in what would become the City of San Rafael began with the founding of an *asistencia*, or outpost of the Mission San Francisco de Assis in 1817. The *asistencia* served as a hospital for Native Americans who had been Christianized, and as a ranch in support of the San Francisco mission. In 1822, the *asistencia* became the Mission San Rafael Arcangel. The mission at San Rafael was the 20th of 21 missions established in California between 1769 and 1823. The chain of missions reached from San Diego to present-day Sonoma, and all but the last was founded under Spanish rule. The Mission San Francisco de Solano in Sonoma was erected in 1823, two years after Mexico gained independence from Spain.

Under Mexican rule, land grants were made more frequently and resulted in the unique pattern of land ownership in California. In 1834, Mexico ended the mission system in California freeing additional lands for distribution. Mission San Rafael Arcangel was the first of the secularized missions. San Rafael lies within the Mexican land grant of Rancho San Pedro, Santa Margarita y Las Gallinas made to Timothy Murphy in 1844; the General Plan Area includes a small portion of Rancho Punta de Quentin, an 1840 grant to John B.R. Cooper.

NATIVE AMERICAN CONSULTATION

In keeping with Senate Bill 18 and Assembly Bill 52, requests were made to the Native American Heritage Commission for a search of the Sacred Lands File and a Tribal Consultation List. Letters were then sent to Greg Sarris and Gene Buvelot, the listed representatives for the Federated Indians of Graton Rancheria. Documents pertaining to Senate Bill 18 and Assembly Bill 52 are attached.

RE: Native American Consultation, Pursuant to Senate Bill 18, Government Code §65352.3 and §65352.4, City of San Rafael General Plan 2040 and Downtown Precise Plan EIR Project, Marin County

Dear Ms. Beard:

Attached is a consultation list of tribes with traditional lands or cultural places located within the boundaries of the above referenced counties.

Government Code §65352.3 and §65352.4 require local governments to consult with California Native American tribes identified by the Native American Heritage Commission (NAHC) for the purpose of avoiding, protecting, and/or mitigating impacts to cultural places when creating or amending General Plans, Specific Plans and Community Plans.

The law does not preclude initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction. The NAHC believes that this is the best practice to ensure that tribes are consulted commensurate with the intent of the law.

The NAHC also believes that agencies should also include with their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

   - A listing of any and all known cultural resources that have already been recorded or are adjacent to the APE, such as known archaeological sites;

   - Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;

   - Whether the records search indicates a low, moderate or high probability that unrecorded cultural resources are located in the APE; and

   - If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

- Any report that may contain site forms, site significance, and suggested mitigation measures.

  All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code §6254.10.

3. The result of the Sacred Lands File (SLF) check conducted through the NAHC was positive. Please contact the Federated Indians of Graton Rancheria on the attached list for more information.

4. Any ethnographic studies conducted for any area including all or part of the APE; and

5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event, that they do, having the information beforehand will help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we are able to assure that our consultation list remains current.

If you have any questions or need additional information, please contact me at my email address: steven.quinn@nahc.ca.gov.

Sincerely,

Steven Quinn
Associate Governmental Program Analyst

Rohnert Park, CA 94928

Dear Mr. Buvelot:

Our firm is assisting the City of San Rafael in preparing an Environmental Impact Report (EIR) for the San Rafael General Plan 2040 and Downtown Precise Plan. The EIR will address potential environmental impacts at a programmatic level. A check of the Sacred Lands File by the Native American Heritage Commission was "positive," and they advised contacting you. We understand that the City has initiated SB 18 consultation, and this letter is simply to advise you of our participation in the EIR preparation. A generalized map of the General Plan Area is enclosed.

Please contact me if you have any questions or need additional information.

Sincerely,

Vicki Beard

SUBJECT: Project notification pursuant to Assembly Bill (AB) 52 and Senate Bill (SB) 18 for the San Rafael General Plan 2040 and Downtown Precise Plan

Dear Mr. Sarris:

Your name and address were provided to us by the Native American Heritage Commission as an affiliated California Native American tribal representative. We are sending this letter to advise you that the City of San Rafael has initiated an update of its General Plan, as well as a Precise Plan for Downtown San Rafael. A single Program Environmental Impact Report (EIR) will be prepared for both projects. The letter serves as the initial consultation on the project.

Pursuant to AB 52, the City of San Rafael is requesting that you provide any information you may have regarding tribal cultural resources (as defined by Public Resources Code 21074) within the San Rafael Planning Area so that this information can be reflected as we undertake both the General Plan Update and the Downtown Precise Plan. A map of the Planning Area is attached to this letter. The City, as the lead agency, is requesting this input within 30 days of the date of this letter—or by December 15, 2018.

In addition, pursuant to SB 18, please notify us of any issues of concern that you would like to see addressed in either the General Plan or Precise Plan within 90 days (February 13, 2019).

We are providing this letter both by email and via the US Postal Service. The letter provides an overview of both projects and includes links to a website where additional information is available.

San Rafael 2040 General Plan Update

The existing San Rafael General Plan was adopted in 2004 and had a horizon year of 2020. The proposed General Plan Update will move the horizon year forward to 2040. The General Plan Update will add new policies about sustainability, climate change, sea level rise, transit-oriented development, transportation technology, environmental justice, residential and commercial land uses, and other topics. The new Plan will also provide updated language for geographic areas within the City where future land use

Gary O. Phillips, **Mayor** • John Gamblin, **Vice Mayor** • Maribeth Bushey, **Councilmember** • Kate Colin, **Councilmember** • Andrew Cuyugan McCullough, **Councilmember**

changes are envisioned. The Plan's focus is on infill development on land that is already zoned for urban and suburban uses.

The General Plan Update was initiated in 2017 and is expected to take three years to complete. Major steps taken to date include creation of a 24-member Steering Committee, development of a project website, an "audit" of the existing Plan, development of guiding principles and a Plan outline, and preparation of a demographic profile of the city. The City also developed a detailed work program for the project, including a community engagement strategy. An interactive project website, including a platform for on-line engagement, has been created, and three community workshops took place in October 2018. Interviews with stakeholders and presentations to City commissions and other organizations are ongoing.

The City does not anticipate major changes in policy direction through the General Plan Update. The Plan's forecasts will generally follow ABAG projections, which anticipate a 12% increase in the number of households (roughly 2,800 households) and a 13% increase in the number of jobs (roughly 5,500 jobs) between 2010 and 2040. Much of this growth is expected to occur in Downtown San Rafael, where other travel modes are more readily available and densities are more conducive to walking and bicycling. Other opportunity sites include underutilized commercial and industrial properties located throughout the city.

Completion of the General Plan is projected for mid-2020. The City has set up a website to provide information about the project at www.sanrafael2040.org. This site includes a library of relevant documents, information on past and future meetings (including agenda packets and presentations), and draft documents. In addition, the City has established a platform for on-line engagement at www.cityofsanrafael.org/2040. This site allows residents to weigh in on planning issues such as sea level rise and mobility.

Downtown Precise Plan

In March 2018, the City of San Rafael applied for and received a $500,000 planning grant from the Metropolitan Transportation Commission to prepare a Downtown Precise Plan. The Plan will update the 1993 Downtown Vision Plan, which has been the guiding document for downtown planning for the last 25 years. The new Plan will incorporate recent planning efforts for Downtown, including a Station Area Plan (2012), a Parking and Wayfinding Study (2017), the Third Street Rehabilitation Project (underway), and the Transit Center Relocation Plan (underway).

The City is in the process of retaining a consulting firm to complete the Precise Plan and will initiate the project in January 2019. The scope of work includes a detailed profile of the area, which has been designated as a "Priority Development Area" (PDA) by ABAG/MTC, and a vision for its long-term future. The scope also includes new development standards, placemaking and design guidelines, a multi-modal transportation strategy, and an inventory of historic resources. The planning process includes consideration of land use and circulation alternatives, selection of a preferred plan, and development of the Precise Plan document itself. A robust community engagement program also is planned.

The area covered by the Downtown Precise Plan will include the areas covered by the 1993 Vision Plan, plus additional properties near the new Downtown San Rafael SMART station. The latter area includes offices and other commercial properties immediately east of US 101, and potentially a limited number of light industrial properties immediately south of Second Street near the station. It is anticipated that the Precise Plan will result in specific land use and zoning recommendations that facilitate new housing construction, transit-oriented development, and the restoration of historic properties. The Plan also may propose modifications to the street system, parking, and public realm that make Downtown safer and more accessible for pedestrians, bicycles, and transit users.

We Welcome Your Participation

The City welcomes the participation of Native American groups in the Plan update process. Early communication with the City on issues of concern is strongly encouraged so that the City's policies and programs can be appropriately drafted or edited.

We will provide additional correspondence to this address when the Draft General Plan, Draft Precise Plan, and Draft Environmental Impact Report are published in 2020. Your organization will be provided with at least 45 days to comment on both documents, as well as the accompanying Draft Environmental Impact Report. Public hearing dates will be included in future correspondence.

If you have questions or comments, please do not hesitate to contact me at 415-485-3423 or at the email address below.

Sincerely,

Barry Miller

RE: Formal Request for Tribal Consultation Pursuant to the California Environmental Quality Act (CEQA), Public Resources Code section 21080.3.1, subds. (b), (d) and (e) for the San Rafael General Plan 2040 and Downtown Precise Plan.

Dear Agency Representative:

This letter constitutes a formal request for tribal consultation under the provisions of the California Environmental Quality Act (CEQA) (Public Resources Code section 21080.3.1 subdivisions (b), (d) and (e) for the mitigation of potential project impacts to tribal cultural resource for a project within the Federated Indians of Graton Rancheria's ancestral lands.

Receiving this letter sets forth the Tribe's formal request for consultation on the following topics checked below, which shall be included in consultation if requested (Public Resources Code section 21080.3.2, subd. (a):

___x__ Alternatives to the project
___x__ Recommended mitigation measures
___x__ Significant effects of the project

The Tribe also requests consultation on the following discretionary topics checked below (Public Resources Code section 21080.3.2, subd. (a):

___x__ Type of environmental review necessary
___x__ Significance of tribal cultural resources, including any regulations, policies or standards used by your agency to determine significance of tribal cultural resources
___x__ Significance of the project's impacts on tribal cultural resources
___x__ Project alternatives and/or appropriate measures for preservation or mitigation that we may recommend, including, but not limited to:

(1) Avoidance and preservation of the resources in place, pursuant to Public Resources Code section 21084.3, including, but not limited to, planning and construction to avoid the resources and protect the cultural and natural context, or planning greenspace, parks or other open space, to incorporate the resources with culturally appropriate protection and management criteria;
(2) Treating the resources with culturally appropriate dignity taking into account the tribal cultural values and meaning of the resources, including but not limited to the following:

a. Protecting the cultural character and integrity of the resource;
b. Protection the traditional use of the resource; and
c. Protecting the confidentiality of the resource.

(3) Permanent conservation easements or other interests in real property, with culturally Appropriate management criteria for the purposes of preserving or utilizing the resources or places.

(4) Protecting the resource.

Additionally, the Tribe would like to receive any cultural resources assessments or other assessments that have been completed on all or part of the project's potential "area of project effect" (APE), including, but not limited to:

1).The results of any record search(es) conducted at an archaeological information center of the California Historical Resources Information System (CHRIS), including, but not limited to:

(a) Any known cultural resources that have already been recorded on or adjacent to the potential APE;
(b) Whether the probability is low, moderate or high that cultural resources are located in the potential APE; and
(c) If a survey is required to determine whether previously unrecorded cultural resources are present in the potential APE.

2). The results of any archaeological inventory survey that was conducted of all or part of the potential APE, including, but not limited to:

(a) Any report that may contain site forms, site significance, and suggested mitigation measures.

3). The results of any Sacred Lands File searches conducted through the Native American Heritage Commission for all or part of the potential APE;

4). Any ethnographic studies conducted for any area including all or part of the potential APE; and

5) Any geotechnical reports regarding all or part of the potential APE.

We would like to remind your agency that CEQA Guidelines section 15126.4, subdivision (b)(3) states that preservation in place is the preferred manner of mitigating impacts to archaeological sites. Section 15126.4, subd. (b)(3) of the CEQA Guidelines has been interpreted by the California Court of Appeal to mean that "feasible preservation in place must be adopted to mitigate impacts to historical resources of an archaeological nature unless the lead agency determines that another form of mitigation is available and provides superior mitigation of impacts." *Madera Oversight Coalition v. County of Madera* (2011) 199 Cal.App.4th 48,

FEDERATED INDIANS OF

DRAFT

DRAFT

1. Introduction

This report summarizes the findings of an inventory of historic resources completed as part of the San Rafael Downtown Precise Plan. The inventory builds on an historic inventory completed in 1977 (and administratively updated in 1986), as well as research by individuals and organizations completed since the 1986 update. The principal findings are based on field surveys and archival research completed in 2019 and 2020, including the completion of Department of Parks and Recreation (DPR) 523 Forms for approximately 40 eligible historic properties. Survey work was completed by a team that included City staff, consultants, and volunteers from San Rafael Heritage.

Background

As the oldest city in Marin County, San Rafael has many older buildings that contribute to its character and provide a tangible connection to the City's history. In 1977, the San Rafael City Council adopted a citywide survey of older, architecturally interesting buildings and structures known as the Historical/Architectural Survey. The survey was administratively updated in 1986 and includes 305 sites throughout the City. As of 2020, sixteen of these sites have been listed as local landmarks, and three have been designated as historic districts comprised of multiple structures. The remaining properties listed in the 1977/86 Survey are considered potential historic resources but are not formally landmarked.

About one-third of the buildings listed in the City's historic resources inventory are located in Downtown San Rafael. Downtown is where Mission San Rafael Arcangel was founded in 1817. San Rafael's heritage is rooted in this area, which represented the extent of the city's development for most of its first century. Downtown contains numerous buildings dating to the late 1800s and a large inventory of early 20th Century residential, commercial, and civic buildings. It also includes numerous mid-20th Century buildings that are eligible for consideration as historic resources today but were not when the survey was last updated in 1986.

During the next 20 years, much of San Rafael's growth is expected to occur Downtown. The area is well served by transit and public facilities, is relatively flat and centrally located, and includes a number of vacant and underutilized sites. As the center of commerce, culture, and civic life in San Rafael, it is also a logical place for compact, walkable development. Growth can reinforce the character of Downtown, help sustain local businesses, and relieve pressure for change in surrounding neighborhoods and open space areas. However, growth has the potentially to adversely impact historic resources, making it important to have an up to date resource inventory, along with measures to mitigate potential impacts.

Establishing a comprehensive inventory of historic properties allows the City to develop regulations and standards that are tailored to Downtown's unique context. A current inventory can expedite the environmental review process and provide a clearer path forward for future

DRAFT

development. A historic property inventory can also provide an economic development tool, showcasing Downtown's unique assets, attracting visitors, and potentially providing access to state and federal funds, tax credits, and economic incentives for adaptive reuse. It also provides a way to "tell the story" of San Rafael for educational, cultural, and tourism purposes.

The Survey and the Downtown Precise Plan

In 2018, the City of San Rafael applied for and received a $500,000 "One Bay Area Grant" (OBAG grant) to prepare a Downtown Precise Plan. The OBAG grant program was created by the Metropolitan Transportation Commission (MTC) to align MTC's investments in transportation infrastructure with support for focused growth. Established in 2012, OBAG taps federal funds to advance the Bay Area's land use and housing goals and target capital investments in "Priority Development Areas" (PDAs) around the region. Downtown San Rafael is designated as both a PDA and a Transit Priority Area (TPA) and was a logical recipient of an OBAG grant during the program's second funding cycle in 2017-18.

The OBAG grant provided an opportunity to update "Our Vision for Downtown San Rafael," a planning document that has served as Downtown's Master Plan since 1993. "Our Vision" provided the framework for Downtown zoning, public space improvements, and circulation improvements and guided Downtown development for most of the 1990s and early 2000s. In 2012, the City prepared a Station Area Plan for the SMART station vicinity, but that Plan covers only those areas within ½ mile of the SMART rail station. It was also conceptual in nature and not covered by an Environmental Impact Report.

The Downtown Precise Plan process provided as a vehicle for applying best practices in transit-oriented development (TOD) to San Rafael. Among its components are new height maps and height bonus opportunities, proposed public realm upgrades such as plazas and open spaces, new bicycle and pedestrian improvements, and affordable housing and anti-displacement strategies. The Plan includes a new Form Based Code that will replace existing Downtown zoning.

Updating the 1977/ 1986 historic resources inventory was a priority from the outset. When the City applied for the OBAG grant, it indicated its intent to use a portion of the funds for an updated survey. The task of updating the historic resources inventory was included in the City's Request for Proposals (RFP) in 2018. Because a complete overhaul of the inventory would have been cost-prohibitive, a more limited scope of services was sought. Roughly 20 percent of the grant was set aside for preservation activities. The remaining 80 percent was required for visioning, planning and design concepts, economic and housing studies, transportation planning, land use and design standards, preparation of the Form Based Code, and community engagement.

In January 2019, the City Council approved a contract with Opticos Design to lead the Precise Plan effort. The Opticos Team included Garavaglia Associates, a San Francisco-based architecture firm specializing in historic preservation and resource assessment. The focus of the historic survey work was two-fold:

- **Field Surveys.** This included verifying the historic integrity of previously inventoried structures, gathering data on structures that were not previously eligible but now met Secretary of the Interior Standards, and identifying properties with no visible historic resources.
- **DPR Forms.** Garavgalia prepared DPR forms for those properties that were newly identified as being eligible as historic resources. Their scope of work did not include updating the DPR forms initially developed in 1977/1986.

The original 1977 survey did not cover structures built in the 1940s, 50s, and 60s, as those buildings would not yet have reached the 50-year "look back" period generally used in such surveys. The 2019 survey did include these buildings, as they are now all at least 50 years old. In addition, the 2019 survey determined that several buildings from the pre-war era also warranted DPR forms, including some that were not deemed historic resources at the time of the 1986 survey.

Because of resource limitations, the 2019 survey further focused on those parts of Downtown where changes were most likely to occur during the Precise Plan's 20-year horizon. Locations like Latham Street and Fifth Avenue (west of E Street) were not surveyed, as the Precise Plan does not propose land use changes in these areas. Most of the changes envisioned by the Precise Plan are in the vicinity of the San Rafael Transit Center and SMART station and along the Fourth Street corridor. These areas were comprehensively surveyed.

Organization of this Report

Following this introduction, this report provides a Historic Context Statement for Downtown San Rafael. The context statement describes the history of Downtown, including important events and periods in its development. It also describes the characteristic architectural styles of older Downtown buildings. The Context Statement provides a tool for determining whether individual buildings may be important or unique resources.

Chapter 3 describes the methodology and survey in greater detail. It includes the criteria for evaluating buildings and determining their eligibility as historic resources.

Chapter 4 presents the findings of the survey, classifying each parcel in San Rafael into one of the following categories:

- Existing historic landmarks
- Existing historic districts

DRAFT

- Eligible historic districts, including the individual resources and contributing resources in each district. This includes resources deemed eligible in 1977/86 and resources deemed eligible on 2019-20 that were not previously inventoried.
- Eligible individual resources (outside of districts), including those listed in 1977/86 and those newly eligible
- Older buildings that are not eligible (generally properties listed in 1977/86 that have since been compromised)
- Properties without historic resources

Chapter 5 provides "fact sheets" for approximately 160 properties that were surveyed in the 2019 field survey. Each fact sheet includes a photo and a template with background information on the property. The fact sheets include all properties Downtown that were designated as historic resources, or determined to be eligible, along with a number of properties determined to be ineligible based on the survey.

This report has three Appendices:

Appendix A contains spreadsheets that were generated through the survey work. These spreadsheets were prepared using Excel and cover all 572 parcels in the study area. Addresses and Assessor Parcel Numbers (APNs) are provided for each record. As noted above (Chapter 5), 160 of these parcels were further documented on "Fact Sheets" while the remainder were outside the surveyed areas or determined to not have eligible resources.

Appendix B provides DPR forms for two eligible historic districts and approximately 40 eligible historic resources. All of these forms were prepared in 2020.

Appendix C provides DPR forms for properties surveyed in 1977/1986 but not resurveyed in 2019. Most of these forms were prepared more than 30 years ago and some may not meet current State standards. As a result, the City will be working on modernizing and updating these forms in the coming years so they become a more useful tool for evaluating for planning and building applications. Applicants seeking to alter such properties may be required to update these forms as a condition of approval, in the event they have not been updated by the City at the time of application.

Figure 1-1 shows the Downtown Precise Plan Boundary. Figure 1-2 shows the areas that were excluded from the 2019-2020 field survey. Some of the excluded areas contain historic resources but are not expected to experience significant changes during the time horizon of the Precise Plan. Resources located in the excluded areas that were catalogued in 1977/1986 are listed in this report. However, there may be additional resources in these areas. In the event alterations are proposed in an excluded area, additional research may be needed to determine if the structure is a historic resource.

2. Historic Context Statement

Preface

The historical and architectural development of San Rafael's Downtown forms a context from which existing and potential historic resources can be evaluated and preserved. The Downtown has evolved dramatically over several centuries, reinforcing San Rafael's prominence as the cultural, civic, and economic center of Marin County.

Historic Context Summary

The area that is now the City of San Rafael was once the site of several Coast Miwok villages, including the village of Nanaguani along San Rafael Creek inhabited by the Aguasto tribe.[1] In 1817, Mission San Rafael Arcángel was founded as the 20th of a total 21 Spanish missions in the Spanish colonial province of Alta California, and gained full mission status in 1822.[2]

San Rafael grew gradually after California statehood in 1850, entering an accelerated period of commercial and residential growth over the next several decades. Spurred by advances in transportation and train service to San Rafael, hotels and saloons were constructed to host a modest hospitality industry of summer and weekend visitors.[3] By 1900, Fourth Street had developed into a premier commercial corridor in Marin County and the greater Bay Area.

An influx of new residents came to San Rafael following the 1906 San Francisco earthquake and fire, triggering new residential development surrounding the Downtown core. The expansion of these neighborhoods created a foundation for the mixed residential/commercial areas in San Rafael, and the need for additional civic services.

The opening of the Golden Gate Bridge in 1937 and the increasing popularity of the automobile created a new connectivity between Marin County and San Francisco, stimulating a period of prosperity with the San Rafael's first "highrise" buildings.[4] By this time San Rafael was also home to several theaters and venues to entertain the growing and diversifying population.

During World War II the Bay Area became a major hub for wartime industry, bringing waves of migration to San Rafael. Following WWII, there was a stark increase in population which necessitated a new type of suburban housing development, resulting in the construction of housing tracts and subdivisions outside of Downtown and into the eastern and northern portions of San Rafael. These events refocused downtown development to provide locally oriented goods

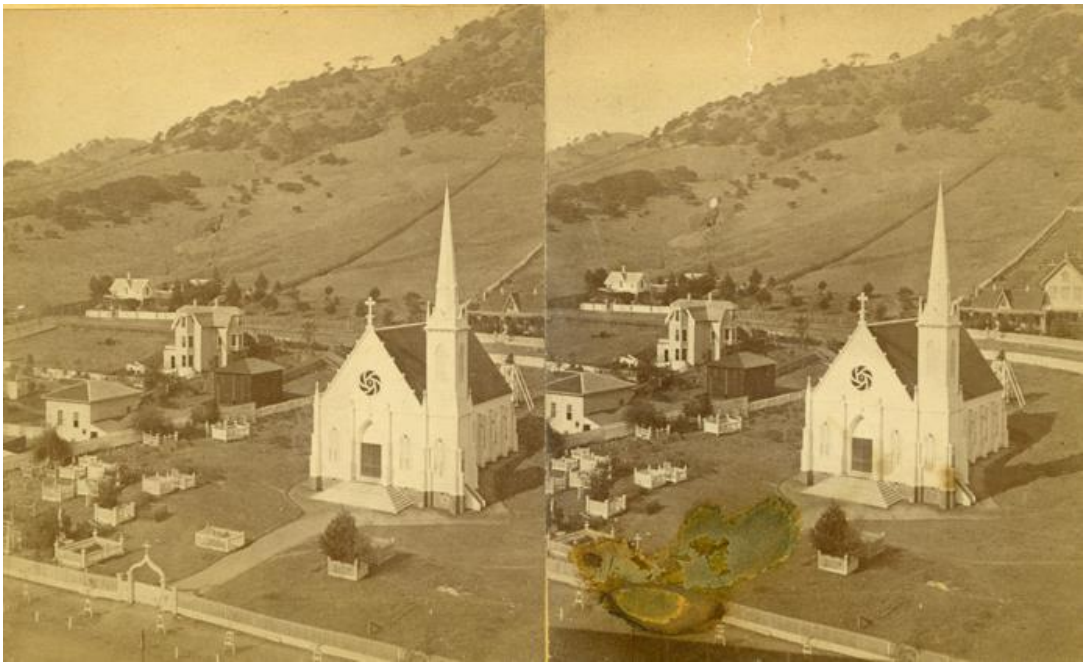
[4] Known as the Albert Building, the significance will be covered as an example of neo-classical architecture in the following sections.

and services to many working families now residing in San Rafael. In the years immediately after the war, San Rafael's Downtown continued to prosper, as department stores, restaurants, civic buildings, medical services, and institutions emerged. During this time, Downtown retail included JCPenney's and Albert's Department Store.

From the mid-twentieth century to the present, San Rafael's downtown has continued to be centered on the Fourth Street and B Street commercial corridors. Initially centered on the Mission and maritime routes to San Francisco, San Rafael became, in turn, a railroad depot, a regional wartime economic center, an auto-oriented county seat, and the commercial, employment, and cultural center of Marin County and the greater Bay Area.

Native American and Spanish (Mission) Era



For thousands of years prior to the arrival of settlers from Spain and Mexico, the land that is now known as San Rafael contained several Coast Miwok villages. The earliest recorded account of the Coast Miwok people comes from a diary kept by a chaplain who was aboard Sir Francis Drake's ship that landed in Marin County in 1579.[5] The Aguasto tribe of the Coast Miwok valued the location within the valley and adjacent to the Bay and built a village along San Rafael Creek which they called Nanaguani.[6]

When the Spanish arrived in the early 19th century they took advantage of the land that the Aguasto and Coast Miwok had cultivated, seeing opportunity in the sunny weather and access to fresh water.[7] The Nanaguani village was taken as the site to establish an asistencia (hospital) for Mission Dolores in present day San Francisco.[8] The fertile land and ideal climate proved fruitful for cultivating crops and raising livestock. The population of the site grew and the asistencia was raised to full mission status in the fall of 1822.[9]

Following the secularization of the missions in 1834, Mission San Rafael Arcángel was placed under the control of the administrators. After this period the Miwok people were kept in servitude by the Mexican land grant owners and were eventually granted land north of San Rafael.[10] In 1837, Timothy Murphy was appointed as administrator, and by 1844, was granted three contiguous parcels that were eventually divided into smaller tracts that would shape the boundaries of San Rafael.[11] The Mission declined rapidly as an economic and political force and was largely abandoned by 1840. The ruins of the adobe building at the Mission site were removed in 1870, and what stands on the site now are reconstructions from 1919 and 1949.[12]

Early Growth of the Town

The early shape of San Rafael formed around the original Spanish mission in the early 1840s, when immigrants first came to the area during the gold rush.[13] No gold was found in San Rafael, but a thriving cattle farming business developed for the production and supply of beef to the San Francisco market and areas of the Gold Country.[14] When California became a state in 1850, local land grants were divided into farms and city blocks, and former grants' owners made up the early population of San Rafael.[15] San Rafael was later incorporated as a city in 1874.[16]

Expansion of the Railroad

The streetscape of San Rafael's commercial downtown developed along a typical pattern of regional growth from the late 1860s to the 1890s, when advances in transportation technologies and expansion in services determined the location for housing and businesses. In 1870, the San Rafael and San Quentin Railroad was established, offering a regular train service to Point San Quentin.[17]

Views of San Rafael looking northeast (left), and northwest (right), circa 1858-1906 (Stereographs of the West from The Bancroft Library Pictorial Collection, ca. 1858-1906, UC Berkeley, Bancroft Library)

When the transcontinental railroad was completed in 1869, many unemployed Chinese immigrants came to San Francisco and the surrounding cities. In San Rafael a community was formed along the east side of C Street with shops, laundries, and gambling establishments.[18] A Chinese community simultaneously formed a few miles east along San Pablo Bay, where nearly 500 people originally from Canton China lived and worked in a shrimp-fishing village.[19]

The incorporation of the North Pacific Coast Railroad (NPC) followed in 1871, which provided San Rafael with a spur track that connected San Anselmo to the station at B Street. A new depot was constructed in Tamalpais Avenue between Third and Fourth Streets in 1884, and passenger ferry services were provided with the extension of the San Francisco and North Pacific Railroad (SF&NP) in 1879. A faster and more reliable electric train service was ultimately introduced in 1903.[20]

The railroad encouraged a modest hospitality industry of summer and weekend visitors that contributed to the growth of the town, with the opening of several hotels, saloons, and specialty shops.[21] By 1900, Fourth Street had become a premier shopping area in Marin County.[22]

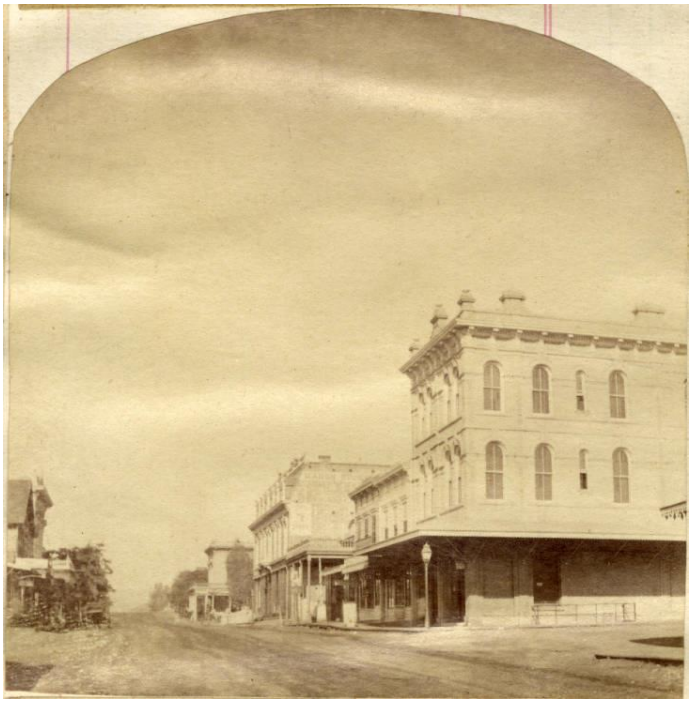
The NPC and SF&NP railroads are clearly marked in the 1877 Sanborn Fire Insurance Map. (Sanborn Map & Publishing Co., May 1877)



Commercial Development

Early commercial development in the downtown area started to take place in the mid-1860s. John A. Davis and Daniel T. Taylor were credited for opening the first store that sold general merchandise, which was immediately followed by a meat market.[23] By 1866, the town had acquired three stores, two hotels, two boarding houses, one restaurant, two stables, three boot makers, two blacksmith shops, a butcher shop, a clock maker, a barber, three lawyers, and a physician.[24]

This period saw Fourth Street become San Rafael's "Main Street" with retail and commerce centered on the east-west thoroughfare. The rail station at B and Second streets also became a hub of activity with a smaller commercial district beginning to grow on the north-south axis connecting the rail junction to Fourth Street.

Much of the commercial development pattern in San Rafael was influenced by the rail lines. Most notably this can be seen in the design and construction of the Flatiron Building. Built in 1883, the structure originally functioned as a saloon and boarding house for nearby railroad workers.[25] By 1935 the building had been covered with stucco, but circa 1980 the stucco was removed and the second story was rebuilt to include more ornate detailing.

By the 1890's San Rafael was a commercial and cultural center and was taking on a shape we can recognize today. Fourth Street was a premier shopping area, attracting the largest department store in Marin County (owned by Jacob Albert and located at 1216 Fourth Street).[26] At this time, numerous businesses opened on A and B Street in the blocks below Fourth Street.

Commercial streets developed during this period, featuring a mixture of one-story single-business establishments and multi-story mixed-use buildings (typically residential, hotel rooms, or offices above ground-floor storefronts). Commercial buildings and storefronts aligned with turn-of-the century regional trends, and increasingly featured multiple, narrow storefronts. Stylistically, the design of commercial buildings from this period was closely aligned with Victorian-period residential architectural styles.[27]

In San Rafael, examples from this Victorian period include Italianate, Second Empire, and Queen-Anne elements applied to commercial construction. Elements of these styles can also be seen in buildings best described as vernacular in style, as well examples of Colonial Revival.

Italianate

The most common distinguishable style of this era in San Rafael is the Italianate Style. Italianate Style buildings were constructed in the United States between 1840 and1885. The Italianate style, along with the gothic revival, began in England as part of the Picturesque

[26] *In 1895 Jacob Albert opened "The Wonder" at the southwest corner of B and Fourth Streets. This building stood as the first of what would become a chain of stores across the county, later known as Albert's Emporium. Images of America: Early San Rafael, 59.*

movement, a reaction of the formal classical ideals in art and architecture that had been fashionable for about two hundred years.[28] The movement emphasized rambling, informal Italian farmhouses and town squares as models for Italian style villa architecture. More formal Italian models from the renaissance or ancient Rome had led to the formation of the previous era of classicism and remained a principal artistic source during the reaction against earlier ideals. Italianate houses in the United States follow the informal rural model of the picturesque movement, and were modified, adapted and embellished. The initial Italianate houses in the United States were popularized by the influential pattern book of Andrew Jackson Downing published in the 1840s and 850s. Other books for Italianate designs were Samuel Sloan's The Model Architect. Two chronological phases were distinguished in the development of the Italianate style in the United States, which include an earlier phase spanning the 1840s and 1850s with relatively simple detailing, and a later highly decorated phase from the 1860s through the 1870s (High Victorian Italianate).

The Italianate style was particularly common in the design of buildings in the expanding towns and cities of the Midwest and for the earlier towns near San Francisco. The style is generally characterized by "two or three story, low pitched roof with moderate to widely overhanging eaves having decorative brackets beneath, tall, narrow windows, commonly arched or curved above windows, frequently with elaborated crowns, often of inverted U shape; many examples with square cupola or tower." Six subtypes of the style exist, with a multitude of variants and details."[29] The principal subtypes can be distinguished in simple hipped roof, centered gable, asymmetrical, towered, front-gabled roof, and town house. The principal areas of elaboration in Italianate houses are windows, cornices, porches, and doorways. Most examples comprise an intermixing of details derived from both informal rural models as well as formal Renaissance town homes.[30]

The oldest standing example of a commercial Italianate structure in San Rafael is at 1321 Fourth Street. Originally built in 1871 to house a business for local banker Upton Gordon, the building continued to be used for banking purposes through the early decades of the 20th century.[31] The building has gone through several renovations but retains Italianate detailing in the pedimented arched windows and decorative quoins.

[30] Ibid
[31] Department of Parks and Recreation Historic Resources Inventory form for 1321 Fourth Street, San Rafael. Recorded by Niki Simons (Charles Hall Page & Associates, Inc.), 1977.

Another prominent example of Italianate commercial architecture is the Landmark building at the corner of Fourth and B Street. The property was purchased by Patrick McDermott from William Coleman in 1883, and was built soon after as the "Mulberry House."[32] Although detail has been lost at the first story commercial storefront, the second story remains articulated with tall segmented windows with triangular pediments and brackets.

Second Empire

Second Empire was a popular style in the United States between 1855 and 1885. The style dominated residential homes in other regions between 1860 and 1880 but was rare on the West Coast. The Second Empire style was used for American civic buildings between 1869 and 1877 but fell out of fashion with an economic decline.[33]

The identifying features of the Second Empire style include a mansard roof, dormer windows, molded cornices, and decorative brackets.[34]

Originally known as the Mahon House, the building at 1330 Fourth Street first appears on the 1879 Sanborn Fire Insurance Map of San Rafael. The first floor of the building has continuously been occupied with commercial space, with apartments or hotel rooms on the second floor.[35]

Queen Anne

Elements of the Queen Anne style can be seen in a variety housing and commercial types over the turn of the twentieth century. Although there are several subtypes, Queen Anne style architecture is most identifiable through: steeply pitched roof or irregular shapes, often with a front-facing gable; articulated facades with details such as patterned shingles and cutaway bay windows; and asymmetrical facades.[36]

The most notable example of Queen Anne commercial style can be seen at 844-48 B Street (1890), and at 1240 Fourth Street (1893). Both buildings feature corner towers, cantilevered bay windows, and decorative cornices.

French-born tailor and local proprietor Louis Peter built 1240 Fourth Street to operate his dry goods business, opened in 1893. As a prominent commercial anchor on Fourth Street.

Residential Growth

Although most of the residential growth during this period occurred in surrounding residential neighborhoods, several large residences and clusters of smaller residences were constructed in the Downtown area that are still present today.[37]

The largest residence, and possibly the oldest standing building in San Rafael, is the Coleman House at 1330 Mission Avenue. The original wood frame portion of the house was believed to have been constructed circa 1849-1852, by pioneer and Marin County district attorney Walter Skidmore.[38] In 1866 the house was purchased by William Tell Coleman as a summer home, and oversaw additions designed by architect John M. Curtis.[39]

Other early residences in the Downtown area include 823-825 Mission Avenue (1881, designed Heatherton and Pelton), and the Falkirk Mansion (1888, designed by Clinton Day). From the late 1800s well into the 20th century, most of the residences that were developed in Downtown were multi-family units built above ground-floor retail space. Residential hotels were also constructed, such as the "Butchart Hotel," now known as the La Casa Grande Apartments at 1330-1336 Fourth Street (see Mahon House above).

[37] *Images of America: Early San Rafael*
[38] *Ibid.*
[39] *Ibid.*

Increase in Civic Development

As the population of San Rafael increased, the needs of the residents began to change. San Rafael was being cemented as the central city in the County, providing varied resources to the local community. As residences were constructed at the edges of Downtown and in the surrounding neighborhoods, civic needs were centralized Downtown. Several individuals who had immigrated to California during the gold rush played a fundamental role in the civic development of San Rafael. William Tell Coleman, for example, who had moved to San Rafael in 1871, was one of the most influential personalities in the construction of the Marin County Courthouse, development of the water system, promotion of the railroad, and construction of the Hotel Rafael.[40]

View of early San Rafael, looking southwest from the Marin County Courthouse steps, undated (California History Section Picture Catalog, California State Library)

Civic pride was also gaining during this time, and many residents participated in a show of pride at the Grand Carnival Parade in 1908 (California History Section Picture Catalog, California State Library)

[40] *Ibid.*

Institutions

The first local school was built by pioneer James Miller in 1849 at the corner of Fourth and A Streets. Following in the direction of the increased residential development, private schools and academies were built outside of the Downtown core.[41] However, a push for more substantial public school options led to the completion of the first public schoolhouse in 1862.[42] The B Street School followed in 1870 and the Fourth Street Grammar School opened in 1886. In 1888 San Rafael High School opened, marking the construction of the first high school in Marin County.[43]

Along with schools and civic structures, religious institutions began to take shape where the Mission San Rafael Arcángel once stood. In 1869 St. Paul's Episcopal Church was constructed in the Victorian Gothic style, designed by architect W.A. Boyd. In 1923 the church was moved to its' current location at 1123 Court Street, at which time the gothic spire was removed and the shingles were covered with stucco.[44]

San Rafael Becomes a Recreation Destination

Although permanent residency increased in the late 19th century, the idyllic weather and rolling hills continued to attract vacationers and weekend visitors. Several hotels were constructed at this time, including the Central Hotel at 1222 Fourth Street (1859), and the Delmonico House Hotel at the southwest corner of B and Second Streets (1876).[45]

The most prominent fixture of the vacation industry was the San Rafael Hotel, which was located northeast of Downtown near Dominican University. Developed by the San Rafael Hotel Company in 1887, the hotel attracted visitors from around the Bay Area until it was lost to a catastrophic fire in 1928.[46] (Marin County Free Library. Anne T. Kent California Room)

[45] *Department of Parks and Recreation Historic Resources Inventory form for 1222 Fourth Street, San Rafael. Recorded by Ann Batman (Charles Hall Page & Associates, Inc.), 1977.*
[46] *Marin: A History, 134*

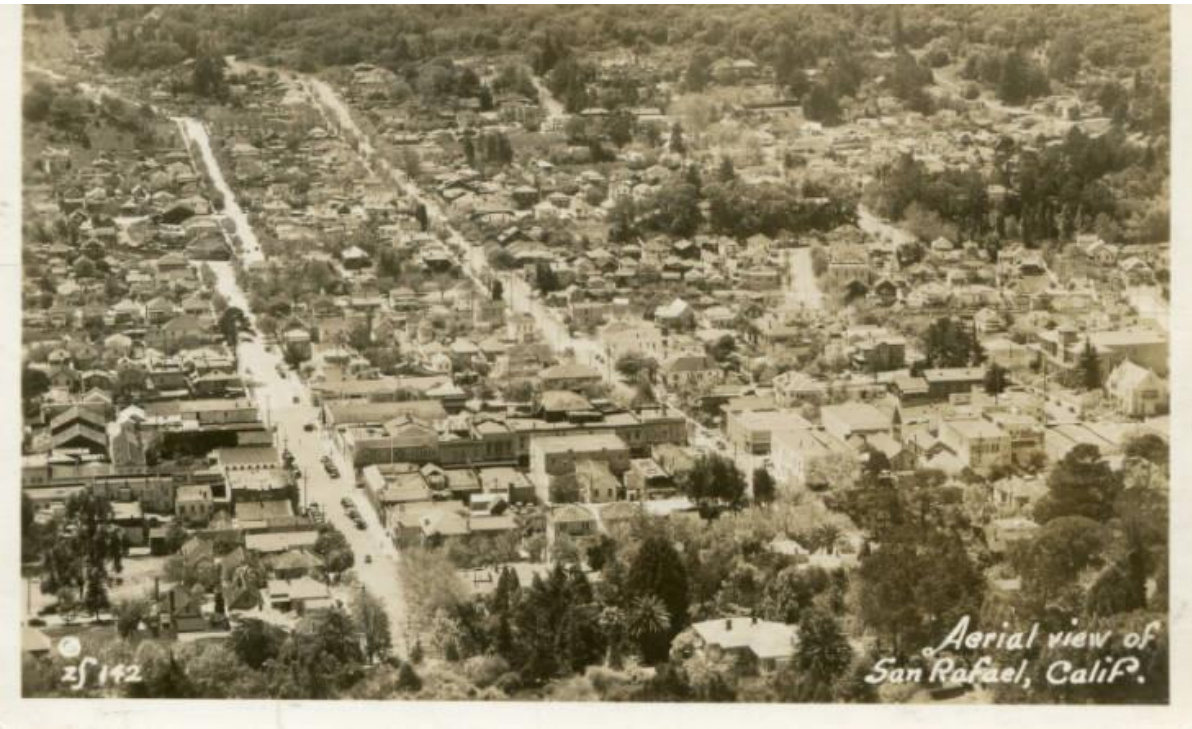
To entertain the residents and visitors in San Rafael, a need for local entertainment grew. Known for many years as Gordon's Opera House, the building at 1333 Fourth Street was constructed for Upton Gordon. The first floor served as space for commercial business, while the open upper floor held a variety of shows and entertainment and provided a venue for community gatherings.

Evolution in the 20th Century

In the later years of the 19th century San Rafael had begun to be seen by some San Franciscans as a desirable escape from city life. Wealthy San Franciscans such as AP Hotaling, John H. Reddington, and Robert Dollar began to relocate to San Rafael, after regular ferry services became available travel between the two cities. There was an influx of new residents following the San Francisco earthquake and fire in 1906.[47] The increase in population triggered new development in the residential neighborhoods on the borders of the new downtown. The expansion of these neighborhoods created a foundation for the mixed residential/commercial areas in what is now the West End as well as the residential neighborhoods immediately north of downtown. The early twentieth century also saw an increased interest in the civic life of San Rafael, with the establishment of a Marin County Board of Supervisors, a local National Guard company, and construction of new civic buildings.[48]

These changes were accelerated by the Japanese bombing of Pearl Harbor in December of 1941 and the entry of the United States into World War II. The Bay Area became a major hub for wartime industry, mainly shipping and arms production, bringing waves of migration and development to San Rafael. San Rafael's proximity to Point Richmond, the Mare Island shipyards and Marinship in Sausalito caused a severe housing shortage and the construction of many new homes, including the subdivision of existing housing. These events refocused new development to provide locally oriented goods and services to many working families now residing in San Rafael. The growth of nearby military installations such as Hamilton Army Air Base would also result in considerable impacts on downtown growth and commerce and set the stage for post-war suburban growth.

Even as the automobile became more ubiquitous, neighborhoods like the West End developed a "village" like character of small shops and residences.



Opening of the Golden Gate Bridge and Bay Area Transportation

The early 20th century saw a transformation of transportation infrastructure in San Rafael, beginning with the relocation of passenger ferry service from Tiburon to Sausalito and the construction of the Northwestern Pacific electric interurban railway system from the Sausalito ferry terminal. The interurban system was soon providing commuter service from southern Marin, the Ross Valley and San Rafael to San Francisco.

[47] *In the early morning hours of April 18, 1906, a massive earthquake rattled the Bay Area, and ignited a catastrophic fire in San Francisco. Destruction from the fire displaced thousands of San Francisco residents, forcing relocation to surrounding cities such as San Rafael.*
[48] *Images of America: Early San Rafael*, 37.

As late as 1903, automobiles were banned from many Marin County roads, prohibited from night use, and limited to a 15 mile-per-hour speed. In 1909, a winding series of roads leading from Sausalito through the other towns of Marin County was designated a California state highway, an early step in the transformation of California's built environment around the personal automobile. Entering San Rafael from the west, the highway traveled along Fourth Street before turning north and leaving San Rafael via Lincoln Avenue. In 1915 the San Rafael-Richmond Ferry was constructed, offering automobile access from the east. In 1915 the railroad was still running, necessitating a new Northwestern Pacific Railroad Station.

The federal government had authorized the construction of US 101 in 1925, and by 1929 its Marin County route was under development. By the mid-1930s, US 101 was handling 1.5 million cars annually. Population growth and ever-increasing reliance on automobile transportation created demand for additional infrastructure, and federal funding made available by the New Deal allowed construction on the Golden Gate Bridge to begin in 1933.[49]

Aerial view of San Rafael looking west, 1934. (Marin County Free Library. Anne T. Kent California Room)

The opening of the Golden Gate Bridge in 1937, and the increasing popularity of the automobile, improved connectivity between Marin County and San Francisco, effectively ending the rail era. The last commuter train departed from San Rafael in 1941, the same year a viaduct for Highway 101 was completed over San Rafael Creek.[50] This raised freeway through the heart of the city created a visual and physical barrier between east and central San Rafael.

---

[49] Jim Wood, History of a Highway, Marin Magazine, April 17, 2009, https://marinmagazine.com/community/history/history-of-a-highway/, accessed July 20, 2020.
[50] Marin County History Museum, Images of America: Modern San Rafael: 1940-2000, (Charleston, SC: Arcadia Publishing, 2008), 14.

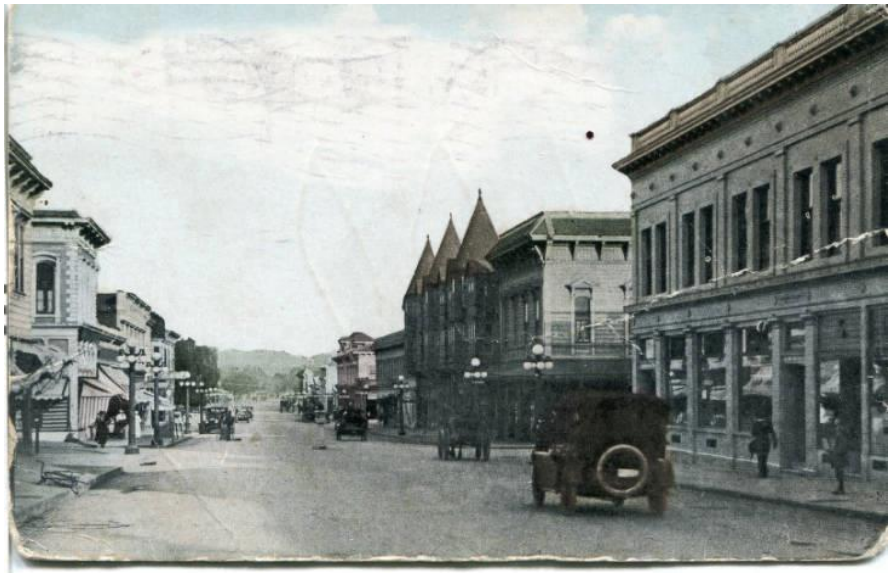
While means of transportation were rapidly changing in the early 20th century, the need for rail stations persisted. The Spanish Colonial/Mission Revival "B Street Station" was constructed to replace an older structure in 1928. This era also saw the replacement of the 1890 railroad shed structure at Tamalpais Avenue with a Spanish Colonial/Mission Revival station in 1929. The station was designed by architect Frederick H. Meyer, who is credited with designing many "Mission Revival" stations throughout Marin County. The station has been significantly altered, but still stands in its original location.

The station originally stood behind the Flatiron building at Second and B Street, but was moved to its current location at A Street in 1930 (720 [728] A Street).

Changing Civic Needs

Examples of this period in San Rafael's urban development can be seen in the Classical Revival San Rafael Improvement Club which was built for the 1915 Panama-Pacific exhibition and floated across the bay from San Francisco. The building became the staging area for mosquito eradication programs and other projects. The Public Library, which still stands at the corner of Fifth and E Streets, is another prime example of civic architecture of the period.

Marin County Courthouse at Fourth and A Street, circa 1930 (Marin County Free Library. Anne T. Kent California Room)



In 1905 Andrew Carnegie donated $25,000 to construct the San Rafael Public Library. This library was the first Carnegie Library in Marin and was dedicated in 1909.[51]

Institutions adapted to the changing needs of the San Rafael residents, and several new buildings were constructed into the early 1920s. The First Church of Christ Scientist, designed in the Neo-Classical style, was constructed in 1910; and St. Paul's Church was moved to E Street in 1924. Also, in 1924, the E Street School was constructed at the northwest corner of Second and E Streets.

Continuing Commercial Development

As the population of San Rafael grew in the early 20th century, so did Fourth Street as a commercial shopping, dining, and recreational center. Construction during this time continued to follow greater patterns of commercial storefront design, notably in examples of revival-style buildings.

Spanish Colonial Revival

In the Bay Area, the Spanish Colonial revival style gained popularity after being introduced during the 1915 Pan-Pacific International Exposition. Often also referred to as Mediterranean or Mission Revival, this style is characterized by tiled roof, parapets or coping; pent roof forms; exterior stucco cladding; arched windows and transoms; and decorative moldings.[52]

A primary example of Spanish Colonial Revival in San Rafael is 1200-26 Fourth Street/1009 B Street. Known also as the Aileen Apartments, this property was purchased in 1915 by Herzog and Rake and developed in 1917. An existing small brick building was incorporated into the structure to form a first floor of commercial shops and an upper story of apartment spaces.[53]

Another prominent example of this style is the corner building at 1447 Fourth Street. The property was developed in 1916 for the Pacific Gas & Electric Company and remained the company headquarters until 1963. The building was later used as the main branch for Redwood Bank.[54]

A principal example of Spanish Colonial Revival architecture in San Rafael is the Church of Saint Raphael / Mission San Rafael Arcángel. The buildings standing today were designed from research and findings by the Marin County Historical society to replicate the original Mission buildings as closely as possible. With financing from the Hearst Foundation, the structures were completed by 1949.[55] (California Historical Society Collection, 1860-1960, University of Southern California Digital Library)

Neoclassical

The Albert Building at 1010 B Street is the most prominent example of Neoclassical commercial architecture in Downtown San Rafael. Built for local merchant Jacob Henry Albert in 1920, the building is credited as being the first building classified as a skyscraper in Marin County. The building housed what was to be a chain of small goods stores, and was outfitted with modern conveniences of the time, including an elevator.[56]

[56] *Department of Parks and Recreation Historic Resources Inventory form for 1447 Fourth Street, San Rafael. Recorded by Patricia P. Meyer (Charles Hall Page & Associates, Inc.), 1977.*

Theatres

In 1912 the California Motion Picture Corporation brought its studio to San Rafael, and with it a growing movie-going culture. Small nickelodeon theaters opened in existing storefront spaces in town, followed by larger movie palaces. The Orpheus Theatre on Fourth Street was built in 1920, marking the first building constructed specifically to show movies, specifically silent movies. The Orpheus Theatre burned in 1937 and was replaced by the Rafael Theatre which still stands today.[57]

The El Camino Theater was built in 1928, designed and constructed as an opulent movie palace. The El Camino Theater fell to the fate of similar movie palaces when the attention of the American viewer turned to television. Eventually the theater was stripped and converted to a JC Penney store in 1953.

Change in a Post-War World

As the country changed following the profound impacts of World War II, so did the City of San Rafael. Supporting industries for the war ceased function, and workers sought alternate opportunities. This period saw the beginnings of larger auto-focused developments, like those seen east of the freeway in Montecito Plaza.[58] Following the war, housing needs started to increase, and the Sun Valley, Terra Linda, Glenwood, Peacock Gap and Marinwood neighborhoods were developed on former ranch lands from 1953 through the 1970s. Industries around San Rafael Canal also continued well into the 1950's including petroleum sales for other local industries.

Suburban Migration

During the postwar years, especially between 1953 and 1955, the construction of San Rafael's housing stock rapidly increased. The development of the Terra Linda and Marinwood neighborhoods on former ranch lands are just one example of San Rafael's expansion at this time. Ferry strikes beginning in the late 1940s led to construction of the Richmond-San Rafael Bridge in 1956, and the demise of ferry service between San Rafael and Richmond.

Rapid construction of many inexpensive commercial buildings took place on recently drained lands that had been the marshy floor of the San Rafael Valley, expanding the town's footprint into previously open space. Other notable examples of construction during this period can be found in the Eichler homes in the Terra Linda and Marinwood neighborhoods.

New Commercial Opportunities Downtown

In the years immediately after the war, Fourth Street remained the commercial and cultural center of Marin County. San Rafael's downtown continued to prosper, as department stores, restaurants, the County Courthouse, City Hall and even the first Kaiser Permanente clinic in town, combined with churches, nearby residences, and emerging postwar industries to define the modern city. The explosive growth occurring in San Rafael at the time can be seen in shifts of building materials, techniques and location during the post war period. Auto repair shops and auto showrooms also flourished, and a reliance on auto-oriented transportation dominated the region.

New opportunities also brought many changes to Downtown, as standing business transitioned to new industry and existing buildings were replaced. For example, Albert's Emporium became a Macy's in 1952, and the El Camino Theater was replaced with JC Penney's and was later razed.

[58] *Images of America: Early San Rafael, 37; and, Images of America: Modern San Rafael: 1940-2000, 9.*

In July of 1957 a massive fire destroyed the buildings on the block of Fourth Street between D and E Streets. The block was redeveloped soon after, beginning a new era of mid-century modern commercial development in Downtown.

On the site where “The Wonder” once stood, the Wells Fargo Bank at 1203 Fourth Street was constructed in 1964. An impressive example of mid-century bank architecture, the building stands in stark contrast to the surrounding buildings representing the late-19th and early-20th century development.

A Postmodern Plan to Move Forward

Development of large department stores anchored new regional shopping centers at Northgate in Terra Linda and the Village in Corte Madera in the 1960s and 1970s, and eroded Downtown San Rafael's dominance as the County's retail destination. In 1962, completion of the Marin County Civic Center several miles to the north negated the need for a Downtown County building. The 1872 courthouse was destroyed by an arsonist in 1971.[59]

Major changes in Downtown continued into the 1970s, provoking a desire for historic preservation. In 1975 the City Council approved Chapter 2.18 – Historic Preservation in the San Rafael Municipal Code and established the Cultural Affairs Commission. In 1978 (updated 1986) the first survey of historic resources in San Rafael was completed and a number of landmark properties were identified Downtown. At this same time the San Rafael Redevelopment Agency formed, spearheading a campaign to restore and revitalize the aging buildings of Downtown.

Historic preservation efforts have continued in recent decades and are reflected in the Downtown Vision Plan adopted in 1993 and the General Plan 2020 adopted in 2004. This context has been developed in conjunction with the General Plan 2040, which will continue to advance efforts to preserve the built heritage of San Rafael.

Downtown Economic Decline and the Formation of the San Rafael Redevelopment Agency

By the late 1960's, Downtown experienced an economic decline in its retail businesses. This decline was largely attributed to the growing consumer draw of suburban shopping centers. Northgate Mall opened in 1964-1965 with the original anchor tenants being the Emporium and Sears.[60] Northgate represented the typical "everywhere suburbia" experience offering shopping in an open mall setting with acres of free and ample parking. The Downtown setting and smaller home-grown businesses could not complete with the larger department and chain stores that were drawn to the shopping centers.

During this time, many cities were taking advantage of the new State laws promoting redevelopment. These laws allowed cities like San Rafael to form a "Redevelopment Agency" to boost and finance urban renewal projects in areas experiencing decline or blight. The formation of a Redevelopment Agency provided a tool to issue tax allocation bonds, which are payable from property taxes that are collected from within a "project area." Promoting redevelopment within a "project area" results in an increased assessed valuation of properties within this area, further stimulating investment.

In June 1972, the City formed the "San Rafael Redevelopment Agency" (RDA). The "project area" for the RDA covered 1,770 acres (1,945 parcels), including Downtown (Central Business District), extending southeastward to the Canal neighborhood, the retail and industrial areas of Francisco Boulevard East and Francisco Boulevard West to the Richmond/San Rafael Bridge.

[60] *Northgate Mall has also been named Northgate Fashion Mall, the Mall at Northgate*

Central San Rafael Redevelopment Plan Area, 1972

By November 1972, the Redevelopment Plan was completed and adopted (Ordinance 1079). The Redevelopment Plan introduced a land use map and four Redevelopment Activity Areas, which focused on recommendations for areas and properties suitable for: a) redevelopment and new development; b) rehabilitation and infill; c) conservation; and d) open space. For Downtown, the Redevelopment Plan presented a series of actions including, among others, investing in public realm improvements (street tree planting, pedestrian pavement and street corner improvements, and new parking facilities). The "New Commercial" Action focused on development sites such as the 15.5-acre PG&E property south of Second Street (now the San Rafael Corporate Center, BioMarin campus) and redevelopment of underdeveloped or blighted sites. The Redevelopment Plan included a Financial Program, which estimated project costs and sources of funding.

Following adoption of the Redevelopment Plan, the RDA was instrumental in molding many changes to Downtown San Rafael without significantly changing its historic "bones." The RDA used resources such as State and Federal funds, grants, and loan programs coupled with bond proceeds to implement the Development Plan over the next 45 years. One example is the pedestrian and streetscape improvement program, which resulted in bulb-outs with tree planting at intersections and brick sidewalk pavers along Fourth Street. This initial program was installed along Fourth Street from Grand Avenue to E Street as well as some selected side streets (see below).

Illustrative of Fourth/Court St Improvements, Redevelopment Plan, 1972

Current, built improvements at Fourth and Court Streets

A subsequent Fourth Street tree planting program was funded and implemented through the RDA in the 1990's, which resulted in the development of the current, regimented tree canopy. To replicate the pedestrian and streetscape program of landscape bulb-outs and brick sidewalk pavement along Fourth Street, in the early 2000's funding was secured to extend this program on Fourth Street from E Street to the Miracle Mile.

In the early 1980's, the RDA administered a very informal incentive program that offered advice to property owners and businesses on storefront improvements. The primary goal of the program was to seek business compliance with the City's sign ordinance but to also offer design advice on storefront design and restoration. While most of storefront improvements that were implemented involved new signage, awning additions and painting, some property owners opted to restore their storefronts to near original design. One example is 919 Fourth Street.

919 Fourth Street with restored transom and glass/upper storefront

Common tools such as property purchase and assemblage fostered redevelopment of key properties in Downtown from the late 1970's until the RDA was dissolved in 2012. Once property was negotiated and assembled, the RDA would employ measures such as a developer request for proposal or a direct partnership with a single developer. The following are key redevelopment projects that were built from the early 1980's through the early 2000's.

The May Building located at the southeast corner of Fourth and A Streets was destroyed by fire in 1979. The RDA coordinated a site redevelopment. This being a key intersection in Downtown, developers participated in a design competition for the rights to develop the site.

The initially preferred concept design called for placing a seven-story building stepping back from Fourth & A Streets but it was deemed too imposing (schematic below). Ultimately, the City opted to approve a more conventional building design with the building offering two levels of retail below two levels of office (built project below). The two levels of retail offered by this design was an attractive incentive, but the split-level storefront has been marginally successful.

Original Redevelopment Proposal – Fourth and A Streets

Built project at Fourth and A Streets

As recommended by the Redevelopment Plan, the RDA invested in the development of a new, multi-level parking garage located at the corner of 3rd and B Streets. Like the Fourth and A Street project, the parking garage design was selected as part of a developer competition. Although the parking structure design would win no design awards, this developer was selected because the project included a street level storefront of retail space along the A Street frontage. This retail space is the home of Il Davide Restaurant and Duxiana Mattress and Bedding (see storefront photo).

A Street retail and 3rd & B Street parking garage

Until the mid-1990's, Pacific Gas & Electric (PG &E) Company had a prominent presence in the southeast portion of Downtown San Rafael. Occupying 15-20 acres south of 3rd Street, PG &E utilized the area for service operations (including gas processing in the early 20th century). Most of the operations were moved to PG &E property on Andersen Drive or phased-out, which freed-up this land for redevelopment. The Redevelopment Plan called for an office and parking uses, then subsequently changed to a retail shopping center. In the mid-1990's the RDA worked with PG &E to negotiate a sale of the holdings south of 2nd Street. Fair Isaac Corporation obtained approval to build a 400,000 square foot office campus. The office campus has been built is and now owned and occupied by BioMarin Phamecuitcal, a biotechnology company.

BioMarin Campus – San Rafael Corporate Center

By the mid-1980's, Macy's closed its doors and became the last casualty of the department stores that once occupied and thrived in Downtown. However, the RDA was swift in negotiating purchase of the property with the owner, and ultimately the site sold to a local developer. The Rafael Town Center, a six-story mixed use development was constructed, and Court Street was redeveloped as a pedestrian plaza.

Macy's at Fourth and Court Streets, 1972

Fourth and Court Streets, 2020

Rafael Town Center, 2020

Due to major changes and cuts in the State budget, all Redevelopment Agencies were dissolved by 2012. Most of the roles and responsibilities of the San Rafael RDA were taken over by a newly formed Successor Agency (City Council), but much of the funding and grant programs that were linked to redevelopment were no longer available.

Mission Revival
California was the birthplace of the Mission style. The earliest examples were built in the 1890s, and the style spread westward in the 1900s. The style appears in house plan books such as

those of Sears Roebuck and Co. that sold plans for Mission style called the Alhambra (1910). Identifying features of the Mission style include: "Mission-shaped dormer or roof parapet; commonly red tile roof covering, widely overhanging eaves, usually open porch roofs supported by large, square piers, commonly arched above, wall surface usually smooth stucco."[61] Principal subtypes are distinguishable in the symmetrical and asymmetrical. Variants and details include shaped dormers and parapets mimicking those found on Spanish Colonial Mission buildings, prominent one-story porches, and arched roof supports to simulate the arcades of Hispanic buildings. Occasionally Mission-like bell towers occurred on some examples. Windows are usually double-hung and grouped together. Some examples have visor roofs that most commonly occur beneath the parapets of flat roofs.[62]

3. Methodology

Overview

This section of the Historic Resources Report describes the methodology used to complete the 2019-2020 Survey. It includes the criteria used to evaluate properties and describes the field surveys completed through this effort.

Evaluation Criteria

The criteria used to evaluate Downtown resources align with the Criteria for Designation established by the California Register of Historic Resources (CRHR). These include:

- Criterion 1: Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
- Criterion 2: Associated with the lives of persons important to local, California or national history
- Criterion 3: Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values.
- Criterion 4: Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

The survey focus was on Criterion 3 since the field work was structured to document visual conditions. Where archival records and research documents were available on Criteria 1, 2, and 4, these factors also were considered.

The Survey

The starting point for the historic resources survey was the *San Rafael Historical/Architectural Survey* published in 1986. That report updated a 1977 inventory and identified 305 properties throughout the City, including the street address, the common name of the property or building, and a classification of the resource as good, excellent, or exceptional. Ninety-two of the 305 properties in the Survey are within the boundary of the Downtown Precise Plan Area.

There are 14 properties in the Precise Plan area that currently have landmark status.[1] Of this total, six properties are listed as individual local historic landmarks, seven fall within two

[1] There is a discrepancy in the roster of local landmarks, as the Chisolm House and Schlosser-Cole House are identified (with different addresses) as being on the same parcel. The Chisolm House is noted as 1505 Fifth Avenue and the Schlosser-Cole House as 1023 E Street. 1505 Fifth Avenue was formally re-addressed as 1099 E Street (corner of 5th and E) and was landmarked in December 1979. It is the Schlosser-Cole House. Christopher Chisolm resided at 1517 Fifth Avenue, which has never been formally landmarked.

designated historic districts (French Quarter and Victorian Village), and one (Mission San Rafael Arcangel) is a California Historical Landmark that is not on the local or national registers. Two of the individual local landmarks are also on the National Register of Historic Places (Boyd House and San Rafael Improvement Club). It is worth noting that a number of National Register landmarks and several locally designated landmarks fall just outside the Precise Plan boundary, including the Falkirk Mansion.

Properties that currently have landmark status were excluded from the survey, as they already have protected status. As noted in Chapter 1 and illustrated in Figure 1-2, several geographic areas were excluded from the survey due to limited resources and the fact that changes in these areas are unlikely in the next 20 years. In the event future projects are proposed in these areas, further evaluation of historic resources may be required.

These exclusions left a balance of 572 properties within the Precise Plan boundary, including:

- 79 properties already listed in the San Rafael Historical/Architectural Survey (Survey), 41 of which were determined to need re-evaluation
- 344 properties with listed construction dates of 1969 or earlier
- 149 properties without listed construction dates, for which additional research was required

A field assessment was made for each property, documenting its apparent build date, condition and level of integrity. Of the 572 properties surveyed, 97 were identified as vacant lots or recent construction and were eliminated from further consideration. This left 475 properties for further evaluation.

Archival research was performed by City staff for roughly 400 of the 475 properties. The focus of this research was to determine the date of construction where this information was unavailable, and to review building permit records and other property records. These records indicate the extent to which buildings have been altered over time, including historic photos, blueprints and plans, and staff reports prepared over the past several decades. Information was recorded in Excel spreadsheets. This work generally took place in December 2019.

At approximately the same time, field survey work took place under the leadership of Garavglia Associates. The consultant provided training to several volunteers from San Rafael Heritage and accompanied the volunteers on walking surveys of Downtown blocks. All survey work was done on foot and considered the exterior of the building only. Notes and digital photographs were taken as needed for each property.

Using both the archival records and the field survey, a shortlist of 160 properties was created for further assessment. These properties were identified as having some degree of historic integrity, and the potential to be historic landmarks or district contributors. Limited research was provided for each structure.

Notable concentrations of historic resources in geographic proximity to each other were evaluated for their eligibility as historic "districts." Where a potential district was identified, properties within that district were identified as individual resources, contributing resources, or non-contributing resources. Contributing resources fall within the period(s) of significance identified for the district, and present character-defining features unique to the property and district.

A project professional reviewed the survey forms and accompanying digital photographs, evaluating each property for its significance and integrity. The project professional also assessed whether each resource appears to potentially contribute to a historic district nomination or multiple resource nomination to the California Register of Historic Places, or appears to be potentially eligible individually under one of the California Register criterion. She assigned each resource an internal classification as follows:

"A" was assigned to structures that were deemed individually eligible as resources
"B" was assigned to structures deemed to be contributors (within an area eligible for listing as a district)
"C" was assigned to properties where additional research was needed
"D" was assigned to properties that appeared not to meet eligibility criteria
"E" was assigned to properties determined to be ineligible as historic resources

Many of the structures given "D" and "E" ratings date to the late 19th Century. However, these structures have diminished historic integrity due to unsympathetic additions and alterations. They generally fail to meet Secretary of the Interior criteria.

The findings of this evaluation are reported in Chapter 4. A total of 48 new resources (i.e., resources not currently listed on the 1977/1986 inventory) were identified as eligible. In addition, two areas with concentrations of multiple historic resources were identified as eligible historic districts. Properties within each district were further identified as individual resources, contributors, or non-contributors.

A "fact sheet" was developed for each of the 160 properties on the shortlist. The fact sheets are presented as Chapter 5 of this report. It is important to note that the fact sheets include properties determined to be eligible (e.g., the "A"s and "B"s), and properties found to need more research (the "C"s) or ineligible (the "D"s, and "E"s). About 57 percent of the properties in the fact sheets were found eligible as either individual resources or contributing resources.

Garavaglia Associates prepared California Department of Parks and Recreation Primary Records and Building Records (DPR523A and DPR523B forms) for selected properties in the surveyed area, including a written evaluation of potential individual and district eligibility. Of the properties for which DPR forms were prepared, 28 are in the Transit Station area, 31 are in the Downtown Core, 10 are in the West End Village and none are in the Montecito Commercial area.

The DPR forms are included as Appendix “B” to this report. As noted in Chapter 1, forms were primarily prepared for resources that had not been catalogued as eligible in the 1977/1986 surveys, although a few of these properties were resurveyed.

4. Survey Findings

Overview

This section of the Historic Resources Report presents the findings of the Historic Resources Survey, including tabular listings of the properties in several different resource categories and in different geographic areas. Figures 4-2 through 4-5 show the information spatially for the four subareas that comprise the Plan Area.[1] Accurate and consistent tallies of the number of resources are complicated by the fact that some parcels contain multiple structures. Some parcels contain more than one eligible historic resource and others contain a combination of eligible and non-eligible resources. Parcel lines have also been adjusted over time, and numerous properties have been re-addressed.

Categories

The Survey Findings are presented using the following categories:

a. Previously Designated Historic Landmarks (7 structures, 9 parcels)
b. Previously Designated Historic Districts (7 structures, 2 parcels)
c. Eligible New Historic Districts (2 districts)
    i. Individual Resources (28 structures, 28 parcels)
    ii. Contributing Resources (20 structures, 19 parcels)
d. Individual Resources Outside of Potential Historic Districts (38 structures, 38 parcels)
e. Resources Requiring Additional Research
f. Structures Removed from 1977/1986 Inventory
g. Parcels With no Historic Resources

The properties in categories "c" and "d" above are further divided into those that were identified as historic resources in 1977/1986 and those that were newly added in 2019-2020.

Previously Designated Historic Landmarks

Table 4-1 indicates previously designated historic landmarks in Downtown San Rafael. There are two properties on the National Register of Historic Places: the Boyd House (1125 B Street) and the San Rafael Improvement Club (1800 5th Ave).[2] There is one property that is a designated California Historic Landmark—Mission San Rafael Arcangel (1104 5th Ave). The Boyd House and San Rafael Improvement Club are also locally listed—the Mission is not.

[1] As noted in Chapter 3, a few small areas of Downtown were not surveyed (see Figure 1-2). Resources identified in the 1986 Survey are shown in these areas, but additional resources may be present in these areas. Projects in these areas may be subject to requirements to provide additional documentation on historic resources.
[2] The Bradford House and Falkirk Mansion/ Robert Dollar Estate are just outside the Plan Area boundary.

Four other Downtown properties were listed by the City of San Rafael in the 1970s and 1980s but are not formally listed at the state or national levels. These are the Mulberry House/ McDermott Building at 1149 Fourth Street/938 B Street (listed 1984); the Chisolm Residence (see footnote at bottom of page); the Cole-Schlosser Residence (originally shown to be 1023 E Street but re-addressed as 1099 E Street, listed 1979), and the Flatiron Building (724 B Street, listed 1982).

Table 4-1: Previously Designated Historic Landmarks in Downtown San Rafael([3])

	APN	Address	Common Name	National Register	California Landmark	San Rafael Landmark

7	013-011-05	724 B St	Flatiron Building			Listed 1982

Previously Designated Historic Districts

There are two locally-designated historic districts in the Plan Area. Each of these districts consists of a single tax assessor parcel with multiple structures:

- French Quarter consists of five listed structures (901, 903, 905, 907-09, 911 Irwin Street) on a single parcel (APN 014-122-14). Structures were observed as being in good condition.

- Victorian Village consists of two listed structures (originally addressed as 1623 and 1627 Fifth Avenue but subsequently re-addressed as 1623, Units 1-4 through a condominium map filing). Structures were observed as being in excellent condition.

Eligible Historic District: West Downtown Core

Through the 2019-20 survey, a concentrated area of historic resources was identified in an irregularly shaped area of San Rafael's Downtown Core roughly extending from 2nd and B Street

[3] *There are conflicting records for Item 6 on this list. The 1977/86 inventory identifies the Chisolm Residence as being at 1505 Fifth Ave. That property was subsequently readdressed as 1099 E Street, which is the Schlosser-Cole Residence. The Chisolm property is potentially 1517 5th Avenue (APN 011-202-04), former home of Christopher Chisolm. However, the 1977/86 survey rated that property as "Good" rather than "Excellent" or "Exceptional" which would have made it ineligible for landmark status.*

to 5th and E Street. This area is shown in Figure 4-1. The District includes 87 parcels. Of this total:

- 4 parcels contain existing landmarked buildings
- 18 contain individually eligible resources
    - 13 of these resources were initially identified in the 1977/1986 survey
    - 5 of these resources were newly identified as eligible in the 2019 survey
- 16 contain contributing resources
    - 7 of these resources were initially identified in the 1977/1986 survey
    - 9 of these resources were newly identified as eligible in the 2019 survey[4]
- 8 contain resources that were identified as good or excellent in 1977/1986 but no longer meet eligibility criteria
- 42 contain non-contributing resources or are undeveloped

The area was determined to be eligible as a Commercial/ Civic Historic District under Secretary of the Interior Criterion 1/A for its historical associations and under Criterion C/3 for its architecture. Its "Period of Significance" spans a period of seven decades beginning in the mid-1880s, when construction began on its Victorian-era commercial buildings as well as substantial nearby residences. These buildings were frequently architect-designed and were both larger and more impressive than San Rafael's earliest stores and houses. Commercial buildings were usually designed with two stories and features like corner towers and main facade parapets to make them appear taller. Decorative elements such as cornices with elaborate brackets and dentil molding and expensive materials like brick conveyed San Rafael's regional importance. The area's buildings reinforced the city's position as the county seat to residents who traveled there from all over Marin County to shop and conduct official business. San Rafael's predominance among other nearby towns created wealth, allowing merchants, hoteliers, and saloon-keepers to construct large, architecturally significant residences on the edges of Downtown.

San Rafael retained a position of regional importance in the early 20th Century. Architectural styles changed, while the City's growth accelerated after an influx of refugees from the San Francisco Earthquake of 1906. Important early twentieth-century commercial buildings include the four-story Classical Revival Albert Department Store, the first high-rise in San Rafael. Substantial residential buildings from the period are as carefully designed as their Victorian-period counterparts while exhibiting new residential styles such as Craftsman.

San Rafael became more automobile-oriented and connected to San Francisco with the opening of the Golden Gate Bridge in 1937. Notable buildings from the post-bridge era include the Art Deco Rafael Theater. Modernist commercial buildings of the early postwar era convey Downtown San Rafael's transition to a more localized center as its residential neighborhoods expanded and the County Courthouse and administrative functions moved to North San Rafael.

Table 4-2 indicates the status the parcels within the boundaries. Where appropriate, the table notes where a DPR 523 form has been prepared as part of the 2019-2020 survey.

[4] Two of the contributing resources are individual buildings on parcels with more than one structure.

Eligible Historic District: East Downtown Core

Through the 2019-20 survey, a second concentrated area of historic resources was identified in a rectangular shaped area of San Rafael's Downtown Core roughly extending from Court Street to Lincoln Avenue along both sides of Fourth Street. This area is shown in Figure 4-3. The District includes 26 parcels. Of this total:

- 10 contain individually eligible resources
  - 6 of these resources were initially identified in the 1977/1986 survey
  - 4 of these resources were newly identified as eligible in the 2019 survey
- 4 contain contributing resources
  - 1 of these resources was initially identified in the 1977/1986 survey
  - 3 of these resources were newly identified as eligible in the 2019 survey[5]
- 1 contains resources that were identified in 1977/1986 but no longer meet eligibility criteria
- 11 contain non-contributing resources

[5] *Two of the contributing resources are individual buildings on parcels with more than one structure.*

Table 4-3 indicates the status the parcels within the boundaries. Where appropriate, the table indicates where a DPR 523 form has been prepared as part of the 2019-2020 survey.

The East Downtown Core area is eligible under Secretary of the Interior Criterion 1/A for its historical associations and under Criterion C/3 for its architecture. Its "Period of Significance"—1898 to 1930—reflects the gradual expansion of San Rafael as commercial activity radiated outward from the Mission and Courthouse areas. Commercial buildings in this area were frequently architect-designed; they are one or two stories and occupy their entire lots. Several late Victorian-era storefront buildings are interspersed with more numerous examples of early twentieth century styles, predominantly Mission and Art Deco. Some of the later buildings feature built-in garage doors reflecting San Rafael's shift toward the automobile after 1920.

Individual Resources Outside of Eligible Historic Districts

For analysis purposes, the remaining areas of Downtown are discussed in three geographic areas: West End Village, Downtown Core (outside Districts), and the Transit Gateway area (particularly 5th Avenue, Mission Avenue, and cross-streets in the SMART rail station area).

West End Village

As noted earlier, West End Village includes a National Register Historic Landmark (the San Rafael Improvement Club at 1800 Fifth Avenue) and a designated local historic district (Victorian Village at 1623-1627 Fifth Avenue). The 2019-20 historic survey identified 13 additional individually eligible historic resources in this area. Of this total, four had been previously identified in the 1977/1986 survey and nine are newly identified. This subarea also includes four properties that were listed in the 1977/1986 survey that are in excluded from the survey.

Table 4-4 summarizes historic resource in the West End Village, including properties for which DPR forms were prepared in 2019. Figure 4-3 below shows the location of these resources.

Table 4-4: West End Village Historic Resources (excluding landmarks listed in Table 4-1)*

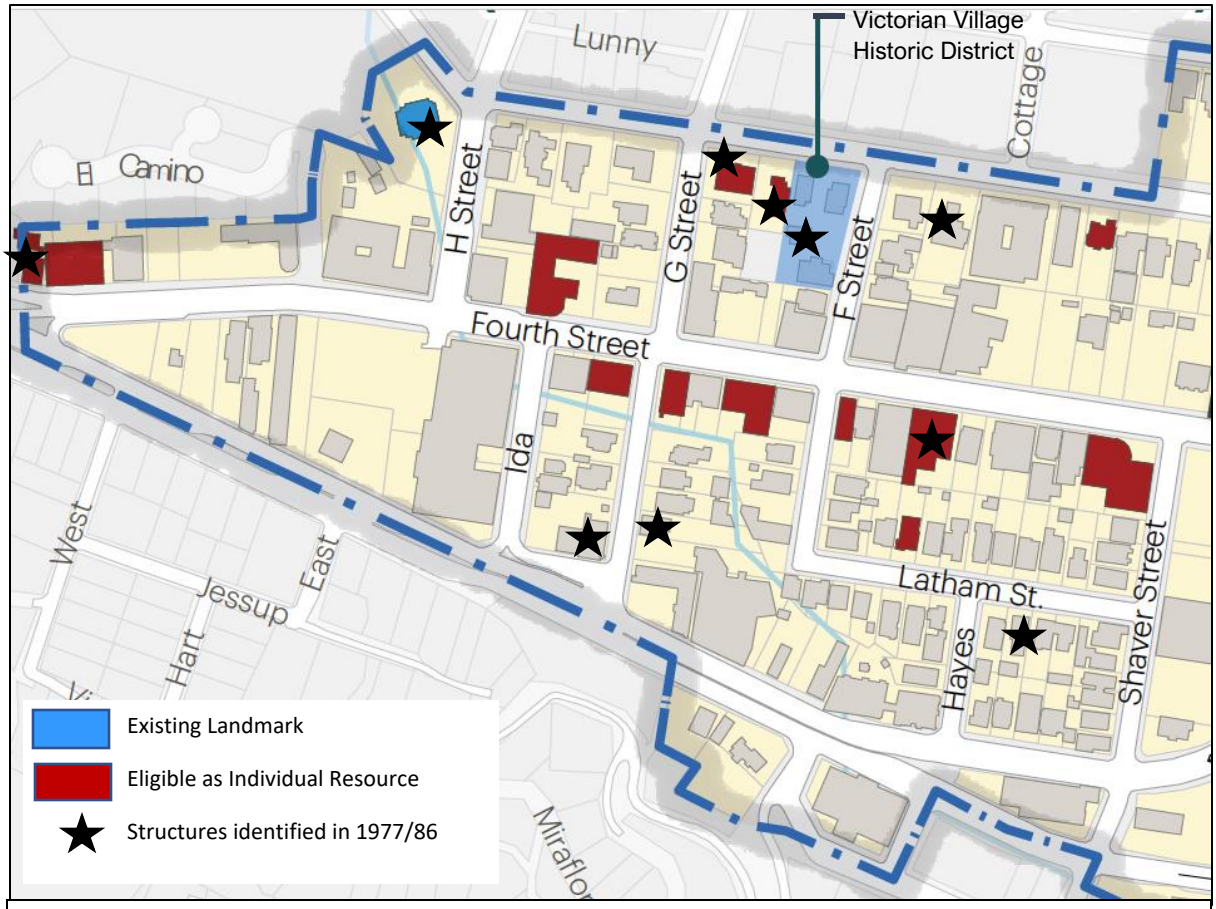

Figure 4-3:

Historic Resources in West End Village

Downtown Core, Outside Districts

The historic resources survey identified ten (10) individually eligible resources in the Downtown Core area outside of the eligible historic districts described earlier. These properties are all located between E Street on the West, A Street on the east, 4th Street on the North, and 1st Street on the South. Resources in this area are shown in Figure 4-4 and are listed in Table 4-5. Most of these properties are residences; a few are commercial buildings.

Two of the 10 properties in this area were initially identified in the 1977/1986 survey and eight are newly eligible. Figure 4-4 and Table 4-5 also include four properties that had been included in the 1977/1986 survey but were determined to be ineligible during the 2019/20 survey.

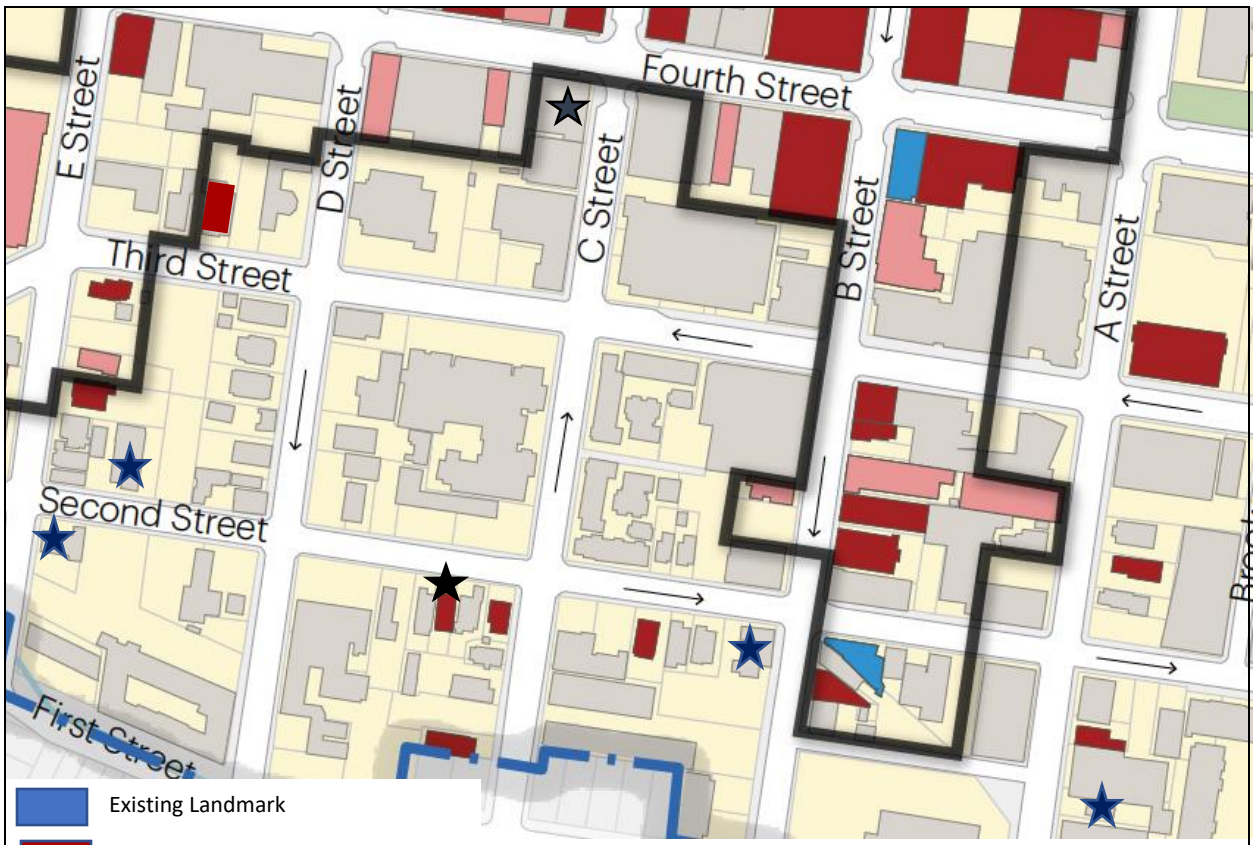

Figure 4-4
Historic Resources in Southern Downtown Core

Gateway Area

The historic resources survey identified 15 individually eligible resources in the Gateway area of Downtown, generally located along Fifth Avenue and Mission Avenue east of the Mission San Rafael Arcangel, and in the area around the SMART Rail station. This area is shown in Figure 4-5. Individual historic resources within this area are listed in Table 4-6. Twelve of the resources in this area were also identified in the 1977/86 survey. Three structures were newly added through the 2019-2020 survey and are covered by DPR Forms in Appendix B.

Additionally, four structures in this area were listed in the 1977/86 survey but were not carried forward or were not re-surveyed. These include the Whistlestop Building, which was deemed ineligible (see Chapter 5 fact sheet).

Resources Requiring Additional Research

The 2019-2020 survey provides a comprehensive inventory for about 80 percent of the Precise Plan area. A number of resources may require additional research:

- **Chisolm and Schlosser-Cole Residences.** As noted on Page 4-3, changes in property addresses have created confusion around the landmark status of two properties in the 5th and E vicinity. The Schlosser-Cole Residence (1099 E Street, at the southwest corner of 5th and E) was landmarked in 1979; the Chisolm Residence is noted as being landmarked, but its location is given at 1023 E Street, which does not exist. Archived City files from the 1970s for this address contain photos of Schlosser-Cole Residence. City files indicate the residence at 1517 Fifth Avenue was built by Christopher Chisolm. This structure was deemed ineligible in the 1977 survey (rated "good" but not "excellent or exceptional"). The 2019/20 survey found it was eligible as an individual resource.

- ***930 Tamalpais (Northwestern Railroad Depot, aka "Whistlestop").*** The Depot played a role in the development of transportation in Marin County and is regarded as a potential opportunity for adaptive reuse and restoration. The current owner (Vivalon) uses the building as a senior center but will be relocating to a new facility a few blocks away. Past studies of the building's historic importance have reached different conclusions; the 2019-2020 Precise Plan Historic Resources Survey found that the building's integrity had been compromised by prior alterations and additions, making it ineligible for landmark status.

- ***Unsurveyed Areas***. As noted earlier, the Latham Street area was excluded from the 2019-2020 Historic Resources Survey since it is not being rezoned and has limited potential for land use change and development. Parts of the Fifth Avenue area were excluded from the 2019-2020 survey, as this area has limited potential for land use change and development. Given the limited resources available for the Downtown survey, the focus was on areas with the potential for more significant infill development and redevelopment. To get a fuller picture of historic resources, a survey of Latham Street (including Hayes Street, and the unit blocks of F Street, G Street, and Ida Street) should be conducted as funding allows. More comprehensive study of historic resources along Fifth Avenue also may be warranted. Finally, additional effort may be needed to survey the portion of Downtown east of Irwin Street, particularly along Fourth Street.

- ***Events and Individuals.*** Additional research is recommended to identify eligible historic resources associated with past events and important individuals; the 2019-2020 survey included archival research on these topics but was principally focused on architecture.

- ***District Designations***. The boundaries of the areas eligible for historic districts as displayed in this report are intended for California Environmental Quality Act (CEQA) analysis. The City does not intend to formally designate "historic districts" at this time. In the event formal designations are proposed, the boundaries indicated in this report may be refined and

potentially contracted (or expanded, as appropriate) based on consultation with property owners, businesses, and others.

- ***Mid-Century Buildings.*** A number of mid-20th Century buildings (such as 711 D Street) were identified in the survey as warranting further consideration as the 50-year "look back" period increases in length. These structures may not be eligible based on their architectural qualities now, but they may become more important as they age.

- ***Structures with "C" ratings in Chapter 5.*** The 2019-20 survey identified several structures as needing additional research (noted with a "C" in the Chapter 5 inventory). These buildings span a variety of ages and styles; subsequent research may result in some of these structures moving to the "eligible" list and others being removed.

- ***Additional DPR Forms.*** Because of funding limitations, the 2019-2020 survey focused on DPR 523 forms for newly identified historic resources, rather than those identified in 1977/1986. While a few of the new DPR forms cover previously inventoried buildings, the focus was on those for which no prior data existed. Many of the resources initially identified in the 1977/1986 survey already had DPR forms available. However, these forms are old, with photos that do not reflect current conditions and information that may be difficult to read. As resources allow, DPR forms should be updated for the approximately 50 properties that were previously surveyed in the 1970s and 80s, and confirmed in 2019/20 to still be eligible landmarks.

Structures Removed From the 1977/1986 Inventory

At least four structures were removed from the 1977/1986 survey due to demolition. These include:

- 1203 Lincoln (former El Camino Hotel), which is now planned for assisted living
- 1212 Second Street (now under construction with a 41-unit multi-family housing project)
- 1313 Fifth Avenue (on the site of the San Rafael Public Safety Center)
- 706 Third Street (former Salute site, now used as a parking lot for Whistlestop)

In addition, about a dozen structures rated as "Good", "Excellent," or "Exceptional" in 1977/1986 were revisited in 2019/20 and determined to have diminished integrity based on field observations. Over the past 40 years, these structures have either deteriorated in quality or have had unsympathetic alterations or additions that have reduced their eligibility as historic resources. These properties were generally rated as "E" in the 2019/20 resource survey; they are highlighted in Tables 4-2 through 4-6 of this chapter. More detail on these structures, including the rationale for their "E" ratings, may be found in Chapter 5 of this report.

Parcels with No Historic Resources

Approximately 400 parcels in the Downtown Precise Plan Area boundary were found not to contain historic resources or were not included in the survey. These are listed in Appendix A.

5. Preliminary Assessment of Architectural Significance

Chapter 5 provides field survey forms for approximately 160 properties in Downtown San Rafael that were determined to warrant further study based on the initial screening of historic properties in 2019. The field survey preceded the preparation of DPR forms and was used to determine which properties were potentially eligible as landmarks and which were likely ineligible based on Secretary of the Interior standards. The Fact Sheets represent an intermediate product in the work effort and do not necessarily represent the final determination for each property. A number of properties (such as Mission San Rafael Arcangel) were excluded from the Fact Sheets because their significance had already been established.

Each of the 160 properties was given a letter rating of A through E as follows:

Eligible (Landmark)	Eligible (Contributor, not Landmark)	May be eligible, needs research	Probably ineligible	Ineligible
A	B	C	D	E

These ratings do not specifically apply to the quality or "letter grade" of the resource, but rather are an indicator of eligibility as a historic resource. Buildings with "A" ratings are eligible for consideration as historic landmarks. Buildings with "B" ratings would likely not be eligible individually but could be considered eligible as contributing resources in a historic district. Buildings with "C" ratings require additional research. Buildings with "D" ratings were deemed probably ineligible, but not definitively. Buildings with "E" ratings were determined to be ineligible as landmarks. The survey forms provide an explanation as to why. As appropriate, buildings were also assigned California Historic Resource Status Codes, which is a classification system used to further identify the status of individual resources. A key to these status codes is included at the end of this chapter.

Each survey form includes basic locational information (Address, Assessor Parcel Number, etc), structural information (architectural style, year of construction, use), a description of defining qualities, an assessment of historic integrity, and a conclusion regarding historic significance. Structures are listed alphabetically by street.

A summary of all properties and their letter grades is included in Table 5-1. In total, there were 37 "A" properties (including three A-minus), 55 "B" properties (including four "B-plus"), 15 "C" properties, 10 "D" properties, and 60 "E" properties.

Table 5-1: Properties Covered by Chapter 5 Fact Sheets

ID#	Assessor Parcel	Street Address	Common Name/ Use	Classification

Address/code	**720 A Street (728 A Street)**	7N	**A**
APN	013-012-05		
Building Name	Northwestern Pacific Railroad Station		
Year Built	1929 (https://annetkent.kontribune.com/articles/5656), c1960 moved		
Original Use	Railroad station		
Architectural Style	Spanish Revival		
Architect/Builder			
Description	The diminutive one-story rectangular plan building is set back on its parcel in a neighborhood of taller buildings sited immediately adjacent to the sidewalk. It has a cross-gabled Tile roof with exposed purlins and rafter tails. Cladding is smooth plaster stucco. Large arched windows are fitted with multi-light steel sash. There is a decorative medallion with the railroad logo at the gable end.		
Integrity	Retains integrity despite being moved		
Significance	Individually eligible under A and C, also local contributor		
Notes	*This is not the original Depot location, building appears to have been moved to site from original B St location when Safeway was developed early 1960s*		

Address/code	740 A Street		B
APN	013-012-20		
Building Name	A Drummer's Tradition (drum store)		
Year Built	1948		
Original Use	Retail		
Architectural Style	Midcentury Modern		
Architect/Builder			
Description	The one-story commercial building is rectangular in plan with its main façade immediately adjacent to the sidewalk. It has a simple stepped parapet and two storefronts with entrances left of display windows. Storefronts slant outward from recessed doors creating a zig-zag façade. The building has glass block bulkheads and metal window and door trim. Cladding is stucco. There is a small wood-clad volume at the rear of the main building with a shed roof.		
Integrity	Appears to retain integrity, may have been altered 1950s		
Significance	Potential local district contributor if a sufficient concentration of postwar commercial resources is present, not individually eligible at any level		
Notes	*Bulkhead and trim match the adjacent building to the north (742-744 A), probably both were remodeled in the 1950s as other details differ. Both buildings should probably be included or not included in potential district*		

Address/code	**808 A Street**		**B**
APN	011-264-07		
Building Name			
Year Built	C1890 (Sanborn Maps)		
Original Use	Residence		
Architectural Style	Queen Anne Cottage		
Architect/Builder			
Description	The 1.5 story house has a roughly rectangular plan and a raised basement. It has a steeply pitched front-gabled roof. It is clad in drop wood siding and has a combination of double-hung wood sash and replacement windows. Decorative features include ornamental scrolls at the main façade gable end and a paneled frieze. Porch supports and balustrade are wrought iron.		
Integrity	Retains integrity despite replacement of some windows and original wood porch details		
Significance	Local district contributor, not individually eligible for architecture due to alterations		
Notes			

Address/code	**812 A Street**		**E**
APN	011-264-08		
Building Name			
Year Built	Before 1887 (Sanborn Maps)		
Original Use	Multi-family Residence		
Architectural Style	Folk Victorian Duplex		
Architect/Builder			
Description	The one story duplex has a rectangular plan and a slightly raised basement. Its front wing has a steeply pyramidal roof; the rear of the building has a lower shed roof. Front doors are side by side in the symmetrical main façade. The building is clad in drop wood siding with vertical groove plywood at the basement level and has vinyl replacement windows. A partial width projecting porch has a low pitch gabled roof, concrete steps with open risers, and a balustrade are wrought iron. The building lacks decorative features		
Integrity	Lacks integrity due to replacement of windows and original full-width porch, basement siding, and installation of inappropriate porch steps and balustrade		
Significance	Not eligible under any criterion due to loss of integrity		
Notes			

Address/code	**813 A Street**		**B**
APN	011-262-06		
Building Name	Foam Store		
Year Built	1951 (Sanborn Maps, aerials)		
Original Use	Commercial		
Architectural Style	Midcentury Modern		
Architect/Builder			
Description	The two story commercial building has a rectangular plan with storefronts on the ground floor and offices above. It has a flat roof with a heavy soffit on the upper floor. It is clad in brick with small areas of stucco. Upstairs windows are three-part steel casement. Decorative grooved moulding separates upper and lower stories. The storefront in the south third of the building is adjacent to the sidewalk, while the north end storefront and entrances are recessed behind heavy brick pillars and are fitted with contemporary replacement aluminum frame doors and windows.		
Integrity	Retains integrity despite storefront replacement.		
Significance	Potential local district contributor if a sufficient concentration of postwar commercial resources is present, not individually eligible at any level		
Notes			

Address/code	**720 B Street**		**C**
APN	013-011-02		
Building Name	Saigon Village Restaurant, Historic San Rafael House restaurant/saloon/lodging		
Year Built	Before 1887 (Sanborn Maps)		
Original Use	Saloon/restaurant with hotel upstairs		
Architectural Style	American Foursquare		
Architect/Builder			
Description	The two story residential-style building has a triangular plan to conform to the railroad tracks to its northeast. It features a medium pitch hipped roof in front with a flat-roofed addition at the rear. Cladding is stucco, windows are a combination of double-hung wood sash and fixed multi-light. The entrance is fitted with a fully-glazed aluminum frame commercial-style door. There are commercial buildings immediately adjacent to its side elevations.		
Integrity	Current appearance probably c1905, door modern, requires more study		
Significance	Potential local district contributor as extant nineteenth century restaurant/hotel. Not eligible for its architecture.		
Notes			

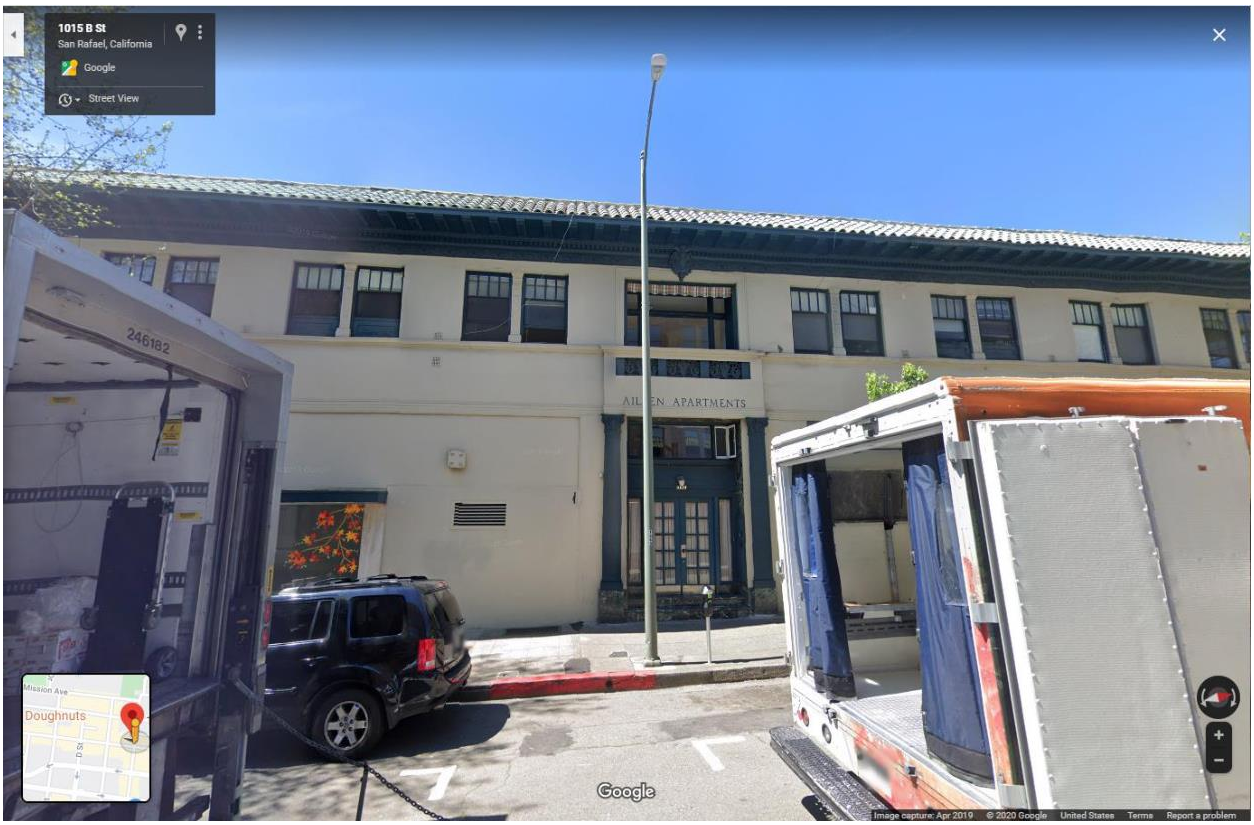
Address/code	724 B Street	7N	A
APN	013-011-05		
Building Name	Flatiron Building		
Year Built	1883		
Original Use	Saloon/residential		
Architectural Style	Queen Anne Commercial		
Architect/Builder			
Description	The two story commercial building has a triangular plan with a bar and grill on the ground floor and apartments above. It has a flat roof and cornice elaborated with ornamental brackets and frieze. It is clad in drop wood siding and has double-hung wood sash windows. Its northwest corner features a highly decorative projecting bay above the main entrance which features decorative spandrel panels above multi-light stained-glass windows. Windows and doorways on the north elevation feature pedimented hoods. Entrances are fitted with wood-frame French doors, and there is a historic painted beer sign.		
Integrity	Retains integrity, only doors appear to have been altered		
Significance	Individually NRHP eligible under C and potentially A, also local contributor		
Notes	*Designated as Local Landmark in 1982, decorative features may have been added during the nineteenth century based on historic photographs*		

Address/code	**747 B Street (1201 Second Street)**	**N/A**	**D**
APN	013-011-056		
Building Name	Cosmopolitan Hotel		
Year Built	Before 1887 (Sanborn Maps)		
Original Use	Hotel		
Architectural Style			
Architect/Builder			
Description	The two story hotel building has an irregular plan with moderate pitch hipped roof and ornamental brackets at the cornice. Cladding is stucco and the building has vinyl replacement windows. There is a small wood frame storefront at its northwest corner. The balance of the lower north elevation lacks fenestration.		
Integrity	Does not appear to retain integrity, more study needed but stucco, windows, storefront, blank wall all appear to be alterations		
Significance	Unlikely to be eligible, lack of integrity		
Notes			

Address/code	810-814 B Street	3S	A
APN	01011-262-14		
Building Name	World Wide Antiques/Victory Grocery		
Year Built	Before 1894 (Sanborn Maps)		
Original Use	Retail storefront		
Architectural Style			
Architect/Builder			
Description	The two story commercial building has a rectangular plan with flat roof and parapet. Cladding is brick with ornamental features including dentil moulding, upper floor pilasters, and window hoods also executed in brick. Two projecting wood upstairs bays have decorative frieze and window hoods. Window openings are arched and fitted with wood sash. Ground floor pilasters have Corinthian capitals flanking multiple light transoms above storefronts. A metal awning projects from the façade just below the capitals. Bulkheads and pilasters have been stuccoed below the awning. Ground floor doors are residential-type paneled wood doors on the north and a contemporary aluminum frame glazed door on the south.		
Integrity	Retains integrity despite ground floor alterations		
Significance	Individually NRHP eligible under C, also local contributor		
Notes			

Address/code	826 B Street (830 B St)	5S2	C
APN	01011-262-16		
Building Name	Albion House, Hotel Carmel		
Year Built	1887 Albion Hotel, 2 story, smaller footprint; 1894 Cypress Villa Hotel, expanded footprint; 1907/1924 unchanged; 1950 Hotel Carmel current footprint (Sanborn Maps) c1930 current façade (spreadsheet)		
Original Use	Retail storefront/hotel		
Architectural Style			
Architect/Builder			
Description	The three story building is rectangular in plan with a lower-height volumes at the rear. Its main façade is immediately adjacent to the sidewalk. The roof is flat with a shaped parapet. Four slanted bays project from the upper stories; each is topped with a tile roof. Fenestration consists of vinyl replacement windows. There is a fire escape with exits at the center of the façade. A metal awning below multiple-light transoms shades the ground floor storefronts. Upper floors are stuccoed while the ground floor is clad in tile. Storefront entrances, one of which is recessed, are fitted with partially glazed paneled wood doors.		
Integrity	May retain integrity to c1930 façade, more research needed		
Significance	Potential local contributor, not individually eligible		
Notes			

Address/code	834-840 B Street	3S	A
APN	01011-262-22		
Building Name	Players Guitars		
Year Built	1885 per DPR, c1895 (between 1894 and 1907 Sanborn Maps)		
Original Use	Retail storefront (shoe and boot store)		
Architectural Style	Stick Eastlake		
Architect/Builder			
Description	The two story commercial building is rectangular in plan with a mansard roof. The façade is asymmetrical with has one projecting square bay on the upper floor. Cladding is drop siding. Tall vertical windows separated by stylized pilasters are fitted with vinyl replacement sash. Ornamental features include cornice with decorative brackets and elaborate paneled frieze as well as bird's eye moulding above windows. Rare original storefronts have multiple-light display windows and transoms. There is a set of original double wooden doors flanked by decorative round columns. Doors at the south end of the storefront have been replaced or boarded up.		
Integrity	Retains integrity despite windows and door replacement, extraordinarily well-preserved Victorian-era storefront (see following page for 1970s photo)		
Significance	Eligible under Criterion C as an individual landmark and as contributor		
Notes			



Address/code	844-848 B Street	3S	A
APN	011-262-01		
Building Name	Milani Building		
Year Built	Between 1887 and 1894 (Sanborn Maps)		
Original Use	Retail storefront grocery/saloon, residential upstairs		
Architectural Style	Queen Anne Commercial		
Description	The two story building is rectangular in plan with facades on B and Third Street and a mansard roof with metal tiles. Its focal point is a projecting bay at the corner with peaked hexagonal roof. There are three projecting upper floor bays on the B Street façade and two on Third Street, all are capped with diminutive hipped roofs and feature a cornice with scrolled brackets. Cladding is drop siding with vertical-groove plywood above and below windows. Windows are double-hung wood sash. There are two original storefronts at the south end of the west façade similar to those on 834-840, with multi-light stained glass transoms. The northernmost storefront has been boarded up except for a hexagonal window. An entrance facing the corner is fitted with double partially glazed doors. Storefront bays on Third Street have been modernized with large panes of glass.		
Integrity	Retains integrity despite storefront and cladding alterations, well-preserved Victorian-era storefronts (1970s photo above)		
Significance	Eligible as an individual landmark and as contributor		
Notes	*Alterations to north storefront are likely to have been performed between 1930 and 1950 and may be historic.*		

Address/code	926-930 B Street	7N	D
APN	011-261-13		
Building Name	Garatti Grocery		
Year Built	1912 (spreadsheet)		
Original Use	Retail storefront grocery		
Architectural Style	Mission		
Architect/Builder			
Description	The one story commercial building is rectangular in plan with a decorative shaped parapet and entablature with dentil moulding above the storefront level. Replacement storefronts are divided by heavy wooden moulding. Cladding is stucco. The entrance is fitted with a paneled wooden door.		
Integrity	Lacks integrity, major alterations since 1970s survey (see above)		
Significance	not eligible, combination of modest architecture and integrity problems		
Notes			

Address/code	**1009 B Street (1200-1212 4th)**	5S2	**A**
APN	011-212-05		
Building Name	Aileen Apartments		
Year Built	c1930? (architecture)		
Original Use	Retail storefront /apartment		
Architectural Style	Spanish Revival		
Architect/Builder			
Description	The two story commercial/apartment building is square in plan with a tiled mansard roof and cornice with decorative rafter tails, dentil moulding, cartouche, and floral frieze. There are facades on B and Fourth streets. Cladding is stucco. Upper floor windows are paired double-hung 4-over-1 wood sash separated by pilasters elaborated with floral motifs. An upstairs balcony feature decorative plaster in floral patterns. The ground floor apartment entrance is flanked by Corinthian columns, topped by a transom, and has double French doors with sidelights. Storefront windows on the ground floor have been somewhat altered		
Integrity	Retains integrity despite storefront replacement		
Significance	Eligible as individual landmark and contributor		
Notes			

Address/code	1010 B Street (1138-1146 Fourth)	1S	A
APN	011-215-01		
Building Name	Albert Building		
Year Built	c1920 (DPR), 1930 (Patch Article)		
Original Use	Retail storefront /apartment		
Architectural Style	Chicago/Commercial		
Architect/Builder			
Description	The four story commercial/apartment building has an L-shaped plan with a flat roof and heavy decorative cornice. There are facades on B and Fourth streets. Cladding is brick with terra cotta decorative features and granite bulkheads. Upper floor windows are paired double-hung fitted with replacement windows. An upstairs balcony feature decorative plaster in floral patterns. The ground floor apartment entrance is flanked by Corinthian pilasters elaborated with decorative urns and inscribed with the building name. The door is deeply recessed and fitted with an original bronze door/sidelight/transom assemblage. Storefronts are separated by brick pilasters with terra cotta capitals. Most have original fully glazed wood doors and transoms. Contemporary awnings have been installed on storefronts		
Integrity	Retains integrity despite window replacement and some storefront alterations		
Significance	Eligible as individual landmark and contributor		
Notes			

Address/code	**938 B Street (1143 Fourth St)**	**6X**	**B+**
APN	011-261-01		
Building Name	McDermott Building		
Year Built	Prior to 1887 (Sanborn Maps)		
Original Use	Retail storefront (grocery)/apartment		
Architectural Style	Italianate/Second Empire		
Architect/Builder			
Description	The two story commercial/apartment building has a rectangular plan with a flat roof and minimal cornice. There are facades on B and Fourth streets. Cladding is drop wood siding. Upper floor windows are tall double-hung wood sash with decorative pedimented hoods elaborated with brackets and diamond shingles. . The ground floor storefronts have paneled frieze bulkheads.		
Integrity	Appears to retain integrity despite some storefront alterations, spreadsheet says cornice removed		
Significance	Eligible as contributor and possibly as individual landmark		
Notes			

Address/code	707 C Street		A-
APN	012-073-11		
Building Name			
Year Built	1952 (spreadsheet)		
Original Use			
Architectural Style	Midcentury Modern		
Architect/Builder			
Description	The one story commercial building is recessed behind a parking area. It has a rectangular plan with a flat roof that projects over its deeply recessed entry, which is at the south end of its main (east) façade. The building is clad in brick with stucco accents and features clerestory windows on its main façade. There are built-in brick planters in front of the building and along the south property line.		
Integrity	Retains integrity, low visibility because of shrubbery		
Significance	Eligible as contributor and possibly as individual landmark for its Modern architecture		
Notes			

Address/code	**710-714 C Street**		**E**
APN	012-075-17		
Building Name			
Year Built	1954 (spreadsheet)		
Original Use	Apartment		
Architectural Style	Midcentury Modern		
Architect/Builder			
Description	The two story apartment building (now used for offices) has two rectangular-plan flat-roofed buildings facing a central courtyard. Cladding is board and batten on the ground floor and stucco above. Windows are narrow frame metal casement. The overhanging second story on the courtyard-facing elevations is supported by plain metal poles and forms a sort of loggia sheltering apartment entrances. There are brick planters along the street-facing (west) elevations.		
Integrity	Retains integrity		
Significance	Not eligible individually or as district contributor		
Notes	*Common example of inexpensive midcentury architecture*		

Address/code	**917 C Street**		**E**
APN	011-253-06		
Building Name	Youth in Arts		
Year Built	1880 (spreadsheet) /c1950		
Original Use			
Architectural Style			
Architect/Builder			
Description	The two story commercial building has a rectangular plan and sawtooth roof disguised by a parapet on the main (east) façade. The main façade upper story is stuccoed and lacks fenestration. There is a projecting v-shaped bay centered on the main façade. The ground floor has large aluminum frame storefront windows and split-face rock columns and bulkheads. The entrance has fully glazed aluminum frame double doors with transom and sidelights. Sides and rear elevations have steel sash windows in vertical openings.		
Integrity	Lacks integrity to 1880 construction, not a good example of a 1950s building		
Significance	Not eligible individually or as district contributor		
Notes	*19th century industrial origins of buildings displayed by roof form and side/rear elevations. Partial c1950 façade remodel created an oddly hybrid building that is not a good example of either era. 917 C St (adjacent south) is a better example of a midcentury commercial building*		

Address/code	**1123 Court Street**		**D**
APN	011-213-18		
Building Name	St Paul's Episcopal Church		
Year Built	1927 (church website), 1920 (DIJ 1949, Sanborn Maps)		
Original Use	Religious		
Architectural Style	Gothic Revival / Classical Revival		
Architect/Builder			
Description	The church sanctuary building is rectangular in plan with a steeply pitched gabled roof. It is connected to other church buildings to form a U-shaped compound building. The sanctuary has a rose window on the south elevation and pointed arch stained glass on the sides. It is clad in smooth stucco (may be reinforced concrete construction) with decorative buttresses. The main entrance is in a projecting volume near the east corner of the north elevation and features a pointed arch doorway under a pedimented gable.		
Integrity	unknown		
Significance	Unlikely to be eligible, requires more study, entrance apparently altered		
Notes	*Sources vary but building footprint dates from c1920. Main façade may have been on Mission St (north), entrance is on north but obscured from view by additions (1952-1964)*		

Address/code	**711 D Street**		**C**
APN	012-071-17		
Building Name	Marin Medical Center		
Year Built	Before 1952 (aerials)		
Original Use	Commercial		
Architectural Style	Mid-century Modern		
Architect/Builder			
Description	The commercial building is trapezoidal in plan with an interior courtyard and main facades on the east (D Street) and north (parking lot) elevations. The primary roof is flat with a low pitch gable over the courtyard entrance on D Street, which features large expanses of glass and brick cladding. The east façade has wood cladding and clerestory windows. A large second story addition on the east side of the building has low pitch roof and metal casement windows.		
Integrity	Research required to determine date of second story		
Significance	May be district contributor, not individually eligible		
Notes	*Second story may have been added within the historic period but does not fit Modernist aesthetic of other building elements. May be important as an early example of auto-oriented commercial architecture*		

Address/code	812 D Street		E
APN	011-254-22		
Building Name			
Year Built	1930s (spreadsheet) 1908-1923 (Sanborn Maps) 1906 (real estate ads)		
Original Use	Residential		
Architectural Style	Hip roof cottage (Foursquare)		
Architect/Builder			
Description	The rectangular plan residence is 1.5 stories and exhibits a hybrid appearance with a pyramidal roof, large dormers, and double-hung dormer windows dating from the building's original construction the first decade of the twentieth century. Arched window and door openings, flagstone door surround, and stucco cladding appear to date from a later addition.		
Integrity	Lacks integrity due to stucco, arched windows, etc.		
Significance	Not eligible individually or as contributor		
Notes			

Address/code	**813 D Street**		**C**
APN	011-252-06		
Building Name			
Year Built	1882 (spreadsheet)		
Original Use	Residential		
Architectural Style	Folk Victorian		
Architect/Builder			
Description	The rectangular plan residence is single story with a hipped roof. It has a plain cornice with boxed eaves and full-width porch with simple balustrade. A canvas awning, likely a replacement for an original porch roof, shelters the porch. Windows are double hung wood sash and cladding is drop siding. The ground floor sits above a raised basement and is accessed via a wide set of wooden steps.		
Integrity	More research required, porch roof appears to have been removed and there may be additional alterations.		
Significance	Potentially eligible as contributor		
Notes	*Good example of a folk house if integrity is present*		

Address/code	**817 D Street**		**C**
APN	011-252-05		
Building Name			
Year Built	1884 (spreadsheet)		
Original Use	Residential		
Architectural Style	Folk Victorian		
Architect/Builder			
Description	The rectangular plan residence is single story with a hipped roof. It has a cornice with boxed eaves, ornamental brackets, and paneled frieze. Its full-width porch has a replacement balustrade and an unusual mansard roof. Windows are double hung wood sash with a projecting bay on the main (east) façade. Cladding is drop siding. The ground floor sits above a raised basement and is accessed via a wide set of wooden steps. The front of the house at the basement level is clad in lattice.		
Integrity	More research required, porch appears altered, porch roof may not be original		
Significance	Potentially eligible as contributor		
Notes	*Good example of a folk house, appears related to 813 D next door*		

Address/code	910 D Street		E
APN	011-253-09		
Building Name	San Rafael Post Office		
Year Built	1936		
Original Use	Post office		
Architectural Style			
Architect/Builder			
Description			
Integrity	Lacks integrity		
Significance	Not eligible		
Notes	*City should contact USPS, Tetra Tech looked at it in 2013 and recommended it lacked integrity due to Modernist addition*		

Address/code	**809-11 E Street**		**C**
APN	011-246-08		
Building Name			
Year Built	1885 (spreadsheet)		
Original Use	Residence (duplex)		
Architectural Style	Italianate		
Architect/Builder			
Description	The rectangular plan residence is two story with a hipped roof from which two decorative brick chimneys project. It has a cornice with boxed eaves, ornamental brackets, and paneled frieze. Its partial-width porch has a shed roof and square supports elaborated by scrolled brackets. Replacement windows of different types have been fitted into window openings, some of which have been altered. Cladding drop siding. Side-by-side original partially glazed doors with octagonal panels topped with transoms are accessed via a wide set of wooden steps. A low concrete wall enclosing the property is adorned with abalone shells.		
Integrity	Appears to retain sufficient integrity for district contributor status, more study needed.		
Significance	Good example of Italianate/vernacular duplex, potentially eligible as district Contributor		
Notes	*Appears related to 817 and 813 D, all built around the same time*		

Address/code	**810 E Street**		**A**
APN	011-252-14		
Building Name			
Year Built	1910 (spreadsheet)		
Original Use	Residence		
Architectural Style	Hipped roof cottage		
Architect/Builder			
Description	The rectangular plan residence is single story with a hipped roof from with a large gable over the partial-width porch. The gable end has a louvered vent in an arched opening and is clad in shingles. Boxed eaves have decorative shaped rafter tails. Porch supports are Tuscan columns a top a balustrade of narrowly spaced turned balusters. The front door is fitted with a paneled partially glazed wood door and accessed via a set of wooden steps. Windows are double-hung wood with at least one decorative cottage window on the main (east) façade. The main floor sits atop a raised basement		
Integrity	Retains integrity despite possible replacement of balustrade.		
Significance	Excellent example of vernacular hipped roof cottage, eligible landmark and contributor		
Notes	*Transitional Victorian/craftsman features*		

Address/code	901 E Street		C
APN	011-245-27		
Building Name	E Street Grammar School		
Year Built	1932-1946 (aerials)		
Original Use	School		
Architectural Style	Classical/Mediterranean Revival		
Architect/Builder			
Description	The single story building is roughly rectangular in plan with a hipped roof main volume and a smaller gable roof volume at the south. Large windows are fitted with multiple light windows. The main entrance on E Street has an assemblage of wood multiple light doors, sidelights and transoms. There are decorative quoins flanking the entrance. Cladding is spray-on stucco. There is a basement at the south end of the building.		
Integrity	May retain integrity despite modern stucco, more research needed.		
Significance	Good example of a 1930s school building, appears eligible as a contributor, lacks the distinction of an architectural landmark.		
Notes			

Address/code	1022 E Street		A-
APN	011-204-01		
Building Name	Keaton's funeral Home		
Year Built	1924 (spreadsheet)		
Original Use	Residence		
Architectural Style	Mediterranean Revival with Classical details		
Architect/Builder			
Description	The two story house is roughly rectangular in plan with a tiled mansard roof roof main volume and a smaller gable roof volume at the south. There are similar diminutive roof forms on the projecting porte cochere and partial width front porch, both of which are supported by decorative columns. The recessed entrance is fitted with a wood panel partially glazed door with matching transom and side lights. Porch landing and wide steps are granite. The porte cochere is partially infilled. Cladding is smooth stucco. Windows are double hung wood sash with various sizes and configurations.		
Integrity	Retains integrity despite porte cochere alterations (see 1970s photo)		
Significance	Good example of a Mediterranean Revival house, eligible as a contributor and may also qualify as an individual landmark.		

Address/code	**105 F Street**		**E**

Architectural Style			
Architect/Builder			
Description	The single story building has a roughly rectangular plan and steeply pitched gabled roof with shed dormers. It is clad cement shingle and has replacement windows in vertical openings. The north elevation has been remodeled into apartments with an exterior staircase to the second floor		
Integrity	Lacks integrity		
Significance	Not eligible as landmark or contributor		
Notes			

Address/Code	505 Fourth Street		E
APN	014-123-09		
Building Name	Residence		
Year Built	1924/1930 (spreadsheet),		
Original Use	residential		
Architectural Style	Craftsman		
Architect/Builder			
Description	The single story house has a roughly rectangular plan and medium pitched multi-gabled roof with shed dormers. It is wood clapboard with stucco on the main (north) façade. There is a projecting partial-width porch with battered supports and shaped opening adjacent to a projecting window bay. A shed roof carport projects from the west side of the house.		
Integrity	Lacks integrity, replacement windows, carport, probably stucco over original wood, large neighboring building affects setting		
Significance	Not eligible as landmark or contributor due to marginal significance and lack of integrity		
Notes			

Address/code	**532 Fourth Street**		**E**
APN	014-086-26		
Building Name			
Year Built	1965 (spreadsheet),		
Original Use			
Architectural Style	Midcentury Modern		
Architect/Builder			
Description	The two story storefront commercial building is rectangular in plan with flat roof, ground floor retail, and second floor office space. The two storefronts are separated by a driveway that leads under the second floor to the rear parking lot. Cladding is stucco with manufactured stone on the east storefront. Fixed windows are vertical with aluminum frames and doors are fully glazed aluminum frame.		
Integrity	Probably lacks integrity, stone facing, upstairs balustrade, windows appear to be replacements		
Significance	Not eligible as landmark or contributor due to marginal significance and lack of integrity		
Notes			

Address/code	705 Fourth Street		E
APN	011-275-03		
Building Name			
Year Built	1898/1991/2008 (spreadsheet)		
Original Use			
Architectural Style	Queen Anne		
Architect/Builder			
Description	The two story house is roughly rectangular in plan with a gable on hip roof and projecting bays at the north, east, and corner. It is clad in stucco and upper floor windows have been replaced. East and north elevations have been converted to storefront on the ground floor.		
Integrity	Lacks integrity, roof form and decorative window casings are only remnants of original		
Significance	Not eligible as landmark or contributor due to lack of integrity		
Notes			

Address/code	**710 Fourth Street**		**E**
APN	011-227-04		
Building Name	Marin Center for Independent Living		
Year Built	1950s? (spreadsheet), c1930 (aerials)		
Original Use	residential		
Architectural Style	Minimal Traditional/Commercial		
Architect/Builder			
Description	Historic aerials suggest that the southwest portion of the building with cross-gabled roof was originally a small house constructed about 1930. Additions were constructed over the decades, resulting in a hybrid building with multiple roof forms and both horizontal and vertical window shapes. Brick cladding is unlikely to be original		
Integrity	Lacks integrity to 1930		
Significance	Not eligible as landmark or contributor, not a recognizable example of a historic style		
Notes			

Address/code	709-711 Fourth Street	7N	A
APN	011-275-02		
Building Name			
Year Built	1898 (spreadsheet)		
Original Use	Storefront/residential		
Architectural Style	Italianate		
Architect/Builder			
Description	The two story building is rectangular in plan with ground floor retail and upper floor residential. Its mansard roof has a cornice with elaborate shaped brackets. Upper floor windows are tall two over two double hung wood sash and elaborated with decorative hoods and casings. There is a projecting square bay. Cladding is drop siding. A decorative frieze separates the storefront from the upper floor. An original partially glazed wood panel door at the east end of the main (north) façade leads to a staircase to the second floor. Storefronts and storefront entrance are contemporary.		
Integrity	Retains integrity despite modernization of storefront		
Significance	Excellent example of Italianate commercial/residential architecture, eligible as landmark and contributor.		
Notes

Year Built	1920/1950/1971 (spreadsheet)		
Original Use	Commercial		
Architectural Style	Mission		
Architect/Builder			
Description	The one story storefront commercial building is rectangular in plan with arched roof and shaped parapet. Its recessed main entrance has an arched door flanked by arched multiple light wood windows. Divided storefront windows are contemporary.		
Integrity	Appears to retain integrity, more research needed		
Significance	Good if modest example of Mission commercial architecture, not a landmark, potentially a district contributor		
Notes	*Adjacent building to the east (806) apparent district contributor does not appear on any spreadsheet tab is not in exclusion area*		

Address/code	827-831 Fourth Street	3S	A
APN	011-273-02		
Building Name	Rafael Florist/Gold Rush Jewelers		
Year Built	Before 1924 (Sanborn Maps)		
Original Use	Commercial (auto showroom)		
Architectural Style	Mission		
Architect/Builder			
Description	The one story storefront commercial building is rectangular in plan with gabled roof concealed by a parapet. The building is stucco with terracotta ornament including cartouche and arch motif at parapet corners. Storefront windows are topped by floral frieze and large multiple light transoms with decorative turned posts and scrolled moulding. The partially glazed wood door is topped by a transom and set in an elaborately shaped arch. A cartouche with ornate floral and candle motifs tops the door. 827 Fourth originally had a vehicle door leading to a repair area behind the showroom and retains scrolled moulding and parapet that matches the primary building.		
Integrity	Retains integrity		
Significance	Excellent example of Mission architecture, eligible as landmark and district contributor		
Notes

Architectural Style	Mission		
Architect/Builder			
Description	The single story commercial building is rectangular in plan with a gabled roof hidden by a shaped parapet. The main (south) façade is occupied by large contemporary storefront windows and centered entrance. Cladding is brick with stuccoed areas. Decorative corbelling is also executed in brick.		
Integrity	Retains integrity		
Significance	Good simple example of Mission architecture, potential district contributor		
Notes	*Similar to 831 Fifth but better example of the style*		

Address/code	**846 Fourth Street**		B
APN	011-224-14		
Building Name			
Year Built	1908-1924 (Sanborn Maps)		
Original Use	Storefront Commercial		
Architectural Style			
Architect/Builder			
Description	The two story commercial building is rectangular in plan with a flat roof and parapet and decorative tiled shed roof with shaped rafter tails. The main (south) façade is occupied by large contemporary storefront windows and centered entrance. Cladding is glazed brick with decorative tile bulkhead. Decorative frieze separating ground and second stories is also executed in brick. Tripartate upstairs windows are fitted with replacements. The recessed entrance is flanked by slanted storefronts and fitted with a fully glazed wood panel door. There are divided light transoms above the storefront. The entrance to the upstairs is fitted with a replacement door.		
Integrity	Retains integrity		
Significance	Good example early twentieth century commercial storefront, potential district contributor		
Notes	*Same parcel as 842 Fourth*		

Address/code	**842 Fourth Street**		**B**
APN	011-224-14		
Building Name			
Year Built	1929 (spreadsheet)		
Original Use	Commercial		
Architectural Style	Mission		
Architect/Builder			
Description	The single story commercial building is L-shaped in plan with a flat roof and stepped parapet. The main (south) façade is occupied by small windows above a paneled bulkhead and two entrances at its west end. A metal awning with a small marquee projects from the façade above the storefront level. Transoms above the awning appear to have been partially covered. There is a cornice between transoms and parapet. The building is clad in brick with columns articulated in contrasting color brick and tile column bases		
Integrity	Retains integrity, probable alterations to storefront level are sympathetic		
Significance	Good example of Mission architecture, potential district contributor		
Notes	*Same parcel as 842 Fourth*		

Address/code	866 Fourth Street	5S2	E

APN	011-271-02		
Building Name			
Year Built	1910/1975 (spreadsheet)		
Original Use	Storefront Commercial		
Architectural Style			
Architect/Builder			
Description	The commercial building is two story and rectangular in plan with a flat roof. It has a stepped parapet and heavy wood cornice with decorative rafter tails. Tripartite upstairs windows have been fitted with fairly sympathetic replacement windows. The building is clad in brick with mouldings and windows sills also executed in brick. Original obscure transom has been retained above the door to the upstairs. Replacement storefront and doors are sympathetic.		
Integrity	Retains integrity despite replacement window and storefront, appearance similar to 1970s photo		
Significance	Eligible as landmark and contributor		
Notes			

Address/code	889-891 Fourth Street		**E**
APN	011-271-01		
Building Name			
Year Built	1908/1956 (spreadsheet)		
Original Use	Storefront Commercial		
Architectural Style			
Architect/Builder			
Description	The commercial building is two story and rectangular in plan with a flat roof and heavy plain cornice. There is a rounded upper bay at the corner and a slanted bay on Lootens. Cladding is stucco. Some upper windows have been replaced and some are double hung wood sash. Terrazzo flooring and storefront configuration suggest it was installed in 1956		
Integrity	Lacks integrity		
Significance	Not a good example of any historic building type, not eligible for listing		
Notes			

Address/code	900 Fourth Street		**E**
APN	011-222-05		
Building Name	El Camino Theatre		
Year Built	1925-30 (Sanborns/aerials)		
Original Use	Cinema		
Architectural Style	Art Deco?		
Architect/Builder			
Description	The large commercial building is two story and rectangular in plan with a flat roof. It is clad in stucco with continuous windows along upper and ground floors on Fourth Street. Some remnants of Art Deco details can be discerned at sides and rear but building is missing ornate tower, marquee, and other character-defining elements		
Integrity	Lacks integrity, does not convey significance		
Significance	Not eligible because of lack of integrity		
Notes			

Address/code	917 Fourth Street	7N	A
APN	011-263-08		
Building Name	California Bakery		
Year Built	c1920 (spreadsheet)		
Original Use	Storefront Commercial		
Architectural Style			
Architect/Builder			
Description	The commercial building is one story and rectangular in plan with a flat roof. It is clad in stucco and has ornate terracotta decorative cornice and moulding on its tall parapet. It has a paneled frieze and shell, Grecian urn, and botanical motifs. The transom has shaped openings divided by diminutive turned posts and fitted with multiple-light windows. There is a small marquee on the upper façade. The storefront is contemporary		
Integrity	Retains sufficient integrity to qualify as district contributor and landmark		
Significance	Excellent example of 1920s commercial architecture, eligible as district contributor and landmark		
Notes			

Address/code	925 Fourth Street		B
APN	011-263-07

Year Built	1928 (spreadsheet)		
Original Use	Storefront Commercial		
Architectural Style			
Architect/Builder			
Description	The commercial building is two story and rectangular in plan with a flat roof. It is clad in stucco and has ornate terracotta decorative surrounds on vertical upstairs windows, which are fitted with vinyl replacement sash. A decorative balconet at the mezzanine level has a shaped opening and is flanked by transom divided by diminutive turned posts. The storefront is contemporary		
Integrity	Retains sufficient integrity to qualify as district contributor but not as landmark		
Significance	Good example of 1920s commercial architecture, eligible as district contributor		
Notes			

Address/code	1118 Fourth Street	3S	**A**
APN	011-215-04		
Building Name	Orpheus/Rafael Theatre		
Year Built	1920/1938 (spreadsheet/Cinema Treasures)		
Original Use	Cinema		
Architectural Style	Streamline Moderne		
Architect/Builder			
Description	The small theater building occupies a single parcel. Its façade is dominated by a tall pylon marquee with neon letters spelling “Rafael” and the curved horizontal motif that characterizes Streamline Moderne architecture. The building’s parapet is stepped up to the pylon sign. There is a marquee with streamline neon atop a curved awning with the same motif. The original entrance and ticket booth have been removed and replaced with a recessed contemporary entrance. Original terrazzo sidewalks have been preserved.		
Integrity	Retains integrity despite entrance replacement		
Significance	Good example of 1930s cinema architecture, eligible as landmark and district contributor		
Notes			

Address/code	**1122-1132 Fourth St**		**E**
APN	011-215-02		
Building Name			
Year Built	1916 (spreadsheet)		
Original Use	Storefront Commercial/apartments		
Architectural Style	Art Deco		
Architect/Builder			
Description	The five story building is rectangular in plan with a flat roof. Upper floor windows are paired and have been fitted with a combination of hung replacement windows and horizontal sliding sash. They are separated by restrained pilasters that reference Art Deco architecture, as does the minimalist decoration at the cornice. Panels between floors have grooved moulding. There are pilasters with stylized Corinthian capitals at the storefront level; other elements of the ground floor are unsympathetic replacements including a projecting storefront		
Integrity	Lacks integrity, windows, projecting storefront		
Significance	Not eligible for listing		
Notes	*Closely related to Albert building next door at 1010 B Street (1138-1146 Fourth)* NOT INCLUDED IN GROUP OF 160 BUT WAS LOOKED AT BECAUSE IT WAS PART OF PHOTO SET		

Address/code	**1125-1139 Fourth St**		**C**
APN	011-261-31		
Building Name			
Year Built	1892/1893/1920 (spreadsheet)		
Original Use	Storefront Commercial/apartments		
Architectural Style			
Architect/Builder			
Description	The two story building is rectangular in plan with a flat roof and parapet with decorative tiled shed roof. It is clad in stucco with nine bays divided by stylized pilasters. Upper floor windows are paired and have been fitted with vinyl replacement windows. There is a decorative frieze with building/sunrise/tree motif above each window. Historic storefronts at the center of the building have wooden doors and divided transoms. Storefronts at either end are contemporary		
Integrity	Probably retains integrity despite window/storefront replacement, more research needed		
Significance	Appears eligible as landmark and district contributor, unusually detailed frieze		
Notes			

Address/code	**1219-1223 Fourth St**		**E**
	1225 Fourth St	**5S2**	**A**
APN	011-255-28		
Building Name	Grosjean & Co.		
Year Built	Prior to 1887 (Sanborns)		
Original Use	Storefront Commercial		
Architectural Style			
Architect/Builder			
Description	The parcel has three single-story rectangular plan storefront commercial buildings. The two buildings at the east are clad in stucco and have terracotta ornament with large ceramic tile at the bulkhead. 1225 Fourth Street at the west end of the parcel has a wooden cornice elaborated with ornate brackets, paneled frieze, dentil moulding and decorative pediment above Wood siding on the upper façade is rusticated and there are divided light transoms above the storefront. Storefront is contemporary		
Integrity	East end does not retain integrity (upper photo). West end retains integrity (lower photo).		
Significance	eligible as landmark and district contributor, unusual example of nineteenth century wood commercial facade		
Notes			

Address/code	1222-1230 Fourth Street	5S2	**E**
APN	011-212-06		

Building Name	Central Hotel
Year Built	1864 (spreadsheet)
Original Use	Hotel
Architectural Style	
Architect/Builder	
Description	The three story rectangular plan storefront commercial building has a flat roof with simple cornice. It is clad in smooth plaster stucco with steel casement windows. Storefronts are contemporary.
Integrity	Lacks integrity, building does not resemble historic Central Hotel
Significance	Not eligible as landmark or district contributor, nothing is left of the Central Hotel building and its c1930 current appearance is undistinguished.
Notes	

Address/code	1242-1244 Fourth Street		**A**
APN	011-212-14		
Building Name	Peter Building		
Year Built	1893 (spreadsheet)		
Original Use	Commercial		
Architectural Style			
Architect/Builder			
Description	The two story rectangular plan storefront commercial building has a flat roof with decorative cornice and peaked roof on projecting corner bay. The building is brick with projecting bays on both C and Fourth Street facades executed in wood. Window openings are vertical and fitted with unsympathetic replacements. Window bays have their own cornices with dentil moulding and paneled frieze, and one is topped with an ornamental pediment. A single arched window near the west end of the south façade has a decorative blind transom. Storefronts are separated by round brick pilasters which appear originally to have been plastered and are topped with obscured glass transoms. Storefronts are contemporary.		
Integrity	Retains integrity despite window replacement		
Significance	eligible as landmark and district contributor, excellent example of nineteenth century commerical building		
Notes

Description	The building is L-shaped in plan in plan with a single story volume near the street and a two story volume recessed behind a parking lot. It has flat roof and is constructed of concrete masonry units. It lacks decorative features. Upper floor windows are rectangular. Aluminum frame doors and storefronts appear original. A heavy soffit/awning has been installed above one of the storefronts.		
Integrity			
Significance	Undistinguished midcentury building, Not Eligible, lack of significance		
Notes	*1408 Fourth not included, better example of modernism than 1400 or 1414*		

Address/code	**1444- 1446 Fourth Street**		**E**
APN	011-204-15		
Building Name			
Year Built	1915/1965 (spreadsheet)		
Original Use	Storefront		
Architectural Style			
Architect/Builder			
Description	Two adjacent storefront buildings on the parcel are nearly identical in form, style and plan. They feature tall parapets, stucco cladding, brick bulkheads, and contemporary storefronts. They exhibit the typical plan and form of an early twentieth century storefront building but no architectural details associated with that era. Nor are they good examples of midcentury architecture.		
Integrity			
Significance	Undistinguished buildings not eligible as landmarks or contributors.		
Notes			

Address/code	1447 Fourth Street	7N	A
APN	011-251-01		
Building Name			
Year Built	c1916 (DPR)		
Original Use			
Architectural Style	Spanish Revival		
Architect/Builder			
Description	The tall single story building is rectangular in plan with a mansard tile roof and exposed rafter tails. It is clad in stucco with terracotta ornament including paneled frieze with floral motif and turned posts. Storefront bays are separated by wide pilasters with granite bases. Their tall rectangular windows are topped with arched transoms with wood frame divided lights and decorative brackets. Two recessed entrances have been created at the original corner entrance.		
Integrity	Retains integrity (see 1970s photo above)		
Significance	Excellent example of Spanish Revival Commercial architecture, eligible as landmark and contributor.		
Notes			

Address/code	**1504-1512 Fourth St**		**B**
APN	011-202-14		
Building Name			
Year Built	1929 (spreadsheet)		
Original Use			
Architectural Style	Art Deco/Spanish Revival		
Architect/Builder			
Description	The large single story building is rectangular in plan with flat roof. It is clad in stucco with terracotta ornament including ornate floral frieze and lions' heads flanking the main entrance. Storefront bays are separated by minimalist pilasters with granite bases. Original transoms have been covered. Bulkhead is tile, and storefronts are contemporary.		
Integrity	Retains sufficient integrity for district contributor status because of well-preserved ornate frieze		
Significance	eligible as contributor, lacks integrity required for landmark		
Notes			

Address/code	**1508-1522 Fourth Street**		**E**
APN	011-202-11		
Building Name

Architectural Style			
Architect/Builder			
Description	The single story storefront commercial building is rectangular in plan with stepped parapet. It is clad in stucco and has aluminum frame storefronts and glazed doors. It exhibits no characteristics of historic architecture		
Integrity			
Significance	Not eligible as contributor or landmark		
Notes			

Address/code	**1531 Fourth Street**		**B+**
APN	011-242-11		
Building Name			
Year Built	1931 (spreadsheet)		
Original Use			
Architectural Style			
Architect/Builder			
Description	The single story auto-oriented commercial building is rectangular in plan with a rounded volume projecting from its main (north) facade. It is clad in stucco and has industrial sash windows on its east elevation. There are three large vehicle openings at the north and east of the rectangular volume. The rounded volume is almost completely glazed, with a fully glazed double door near its junction with the main building.		
Integrity	Retains integrity		
Significance	Eligible as contributor and possibly landmark, good example of early auto-oriented building		
Notes			

Address/code	**1533 Fourth Street**		**B**
APN	011-242-10		
Building Name			
Year Built	1925 (spreadsheet)		
Original Use			
Architectural Style	Spanish Revival		
Architect/Builder			
Description	The two story commercial building is rectangular in plan with decorative shed roof at the main (north) façade. The building is clad in stucco and has terracotta ornament with floral and shield motif. Upper story windows are fitted with multiple light wood sash and topped with ornamental hoods. The central entrance had a large arched surround with Romanesque moulding. Vertical wood cladding and small windows have replaced what were likely originally storefronts.		
Integrity	Retains integrity despite storefront alterations, highly decorative features have been retained.		
Significance	Eligible as contributor and possibly landmark, good example of Spanish/Mediterranean architecture		
Notes			

Address/code	**1539 Fourth Street**		**E**

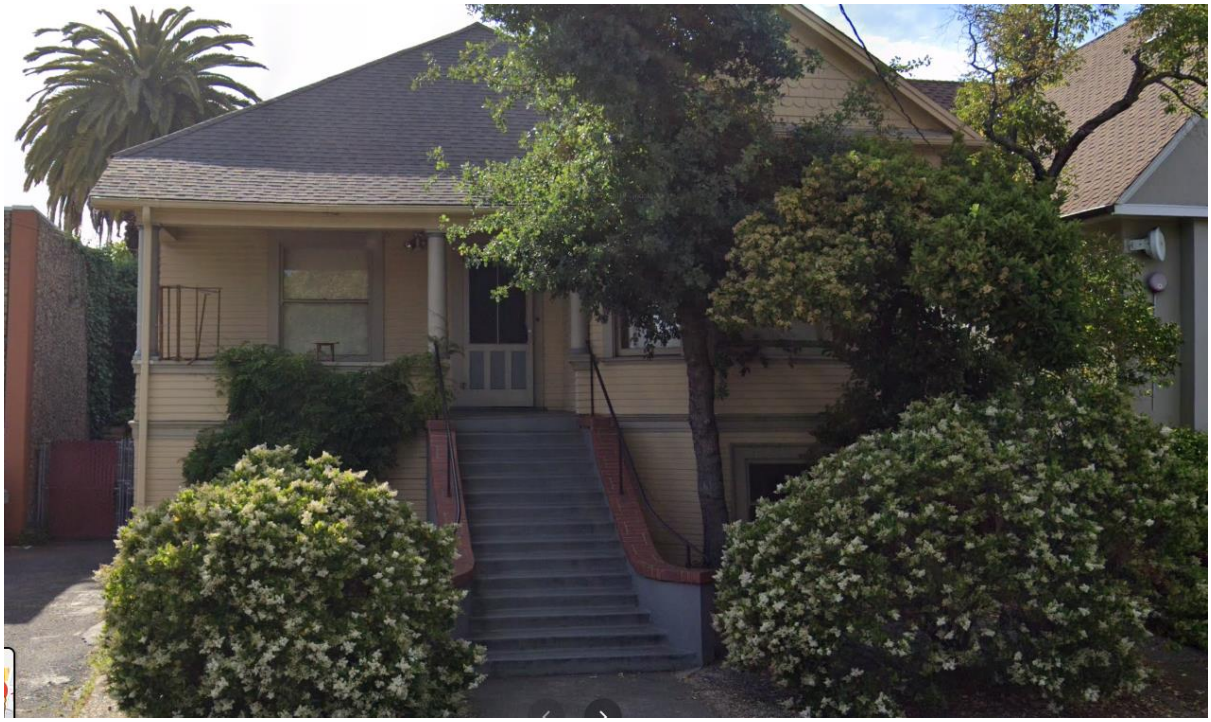
Year Built	1925 (spreadsheet)		
Original Use			
Architectural Style			
Architect/Builder			
Description	The single story storefront building is rectangular in plan with flat roof and stepped parapet with decorative cornice on the main (north) facade. It clad is stucco. There is a simple paneled frieze above the transoms, which have shaped openings and divided lights. The three storefront bays are contemporary		
Integrity	May retain integrity, more study needed, stucco may not be original		
Significance	Possibly eligible as district contributor, not distinguished enough for landmark status		
Notes			

Address/code	**1714 Fourth Street**		**C**
APN	011-192-08		
Building Name			
Year Built	1951 (spreadsheet)		
Original Use	Service station		
Architectural Style	Midcentury Modern		
Architect/Builder			
Description	The single story storefront building has a roughly rectangular-plan front volume with flat roof and projecting porte cochere at the east. The front (south) end has a curved corner is fully glazed on the south and east. A heavy awning, also rounded at the corner, projects below the parapet. A second story adjacent to the porte cochere has flat roof and industrial sash windows. There is an L-shaped wing at the rear (north) with open bays for vehicles.		
Integrity	May retain integrity, more study needed, glass not original		
Significance	Possibly eligible as district contributor, not distinguished enough for landmark status		
Notes			

Address/code	**1848 Fourth Street**		B
APN	010-291-35		
Building Name			
Year Built	1947 (spreadsheet)		
Original Use	Commercial		
Architectural Style	Streamline Moderne/Stripped Classicism		
Architect/Builder			
Description	The single story storefront building has a rectangular plan and flat roof with stepped parapet. It is constructed of board form concrete with a decorative door surround featuring stylized fluted columns and dentil moulding. Transoms are covered with metal panels but may be extant. Storefronts and doors are contemporary		
Integrity	Retains integrity despite storefront and door replacement		
Significance	eligible as district contributor, rare example of stripped classical detailing, not distinguished enough for landmark status		
Notes			

Address/code	1850-1852 Fourth St	7N	A
APN	010-291-57		
Building Name			
Year Built	1922 (spreadsheet)		
Original Use	Commercial		
Architectural Style	Art Deco/Spanish Revival		
Architect/Builder			
Description	The two story storefront building has a rectangular plan and flat roof with clay tile parapet. It is clad in stucco with terracotta ornament including an elaborate frieze at the cornice, diminutive balconet at the center of the upper façade, and detailing between stories. Paired upper story windows are fitted with double hung multiple light wood sash. Transoms are also multiple light wood. Original glazed wood doors are at the center and west end of the building. Storefronts and bulkheads are contemporary		
Integrity	Retains integrity despite storefront replacement		
Significance	eligible as district contributor and landmark		
Notes			

Address/code	**963-977 Grand Av**		**D**
APN	014-123-10		
Building Name			
Year Built	1956		
Original Use			
Architectural Style			
Architect/Builder			
Description	The one-story building has a flat roof and long, narrow U-shaped plan. The building is an early example of a strip shopping center with parking in front of the building. There is a slit-face rock bulkhead, as well as vertical strips at both ends of the long recessed volume. Elsewhere, the building is clad in smooth stucco. Large storefronts line the main façade. The projecting volumes at either end have higher roofs than the rest of the building and flat awnings above the storefront windows. Heavy soffits above storefronts on the recessed volume are canted.		
Integrity	Appears to retain integrity		
Significance	Lacks architectural distinction, not eligible as landmark or contributor		
Notes			



Address/code	**1 H Street** **1820 4th**		**D**
APN	010-291-69		
Building Name			
Year Built	c1950		
Original Use			
Architectural Style			
Architect/Builder			
Description	The parcel encompasses three adjoining buildings with three façades that face onto streets and a parking lot alongside the back. It has a flat roof. The three-story portion, which forms a roughly T-shaped layout, is clad in a combination of brick and smooth stucco, with dentil molding at the roof and molding between the first and second stories. Windows on the main first floor, the main façade of which runs along an entire block, are large storefronts and have cloth awnings. There are railings outside of some of the third-floor windows. On either side of the building are one-story additions, both of which are entirely clad in smooth stucco.		
Integrity	Nineteenth century building at corner lacks integrity		
Significance	Not significant at any level		
Notes	*Current footprint dates from the early 1950s, original building at corner and midcentury additions have all been altered*		

Address/code	914 Irwin Street		E
APN	014-123-21		
Building Name			
Year Built	1907		
Original Use			
Architectural Style			
Architect/Builder			
Description	The two-story building has a rectangular plan and flat roof. There is brick at the corners, down the center, and at the main façade bulkhead, and the building is otherwise clad in textured stucco; the second-floor parapet of the main façade is concrete with a pattern of large squares. There are two storefronts with partially glazed doors and large windows. A small, flat wooden awning with exposed rafters and decorative knee braces shelters the first floor.		
Integrity	Integrity appears impaired		
Significance	Not significant at any level, hybrid 1905/1960s building		

Notes

Architect/Builder			
Description	The building has a flat roof and roughly rectangular plan. It is two stories at the front with a one-story portion and a lower one-story addition at the back. It is clad in brick, with stucco on the main façade and addition. There is dentil molding above the first floor on the main façade. There is brick trim around the roof of the two-story volume as well as brick sills on the second-floor windows. Windows are varied and feature rounded cloth awnings on the sides of the building, as does a door into the lower volume. There are also two garage doors towards the back of the building, and the addition has an entrance as well.		
Integrity	Lacks Integrity		
Significance	Not eligible, nineteenth century commercial heavily altered on main facade

APN	012-075-03		
Building Name			
Year Built	1916 (spreadsheet)		
Original Use	Residential		
Architectural Style	Hipped roof cottage		
Architect/Builder			
Description	The two-story building has rectangular plan and composition shingle hipped roof and has a parking lot behind it. The second-story main entrance is sheltered under a partial-width integral porch, with a bay window on one side. The building is clad in multiple widths of horizontal board siding. It has original double hung wood sash and partially glazed wood paneled door.		
Integrity	Retains Integrity		
Significance	Potential local district contributor, not individually eligible at any level		
Notes			

Address	**1301 Second Street**		**B+**
APN	012-073-07		
Building Name			
Year Built	1907 (spreadsheet)		
Original Use	Residential		
Architectural Style	Hipped roof cottage		
Architect/Builder			
Description	The one-story building has a raised foundation, a roughly rectangular plan, and a composition shingle hipped roof. A volume at the rear of the building is lower than the main roof. The main entrance is centered on the main façade and sheltered under a full-width projecting porch, screened on both sides with decorative turned posts. The building is clad in wood shingle. It has original double hung wood sash and partially glazed wood paneled door.		
Integrity	Appears to retain integrity		
Significance	Contributor and potentially landmark eligible, very good example of hipped roof cottage with excellent integrity		
Notes			

Address	**1305 Second Street**		**E**
APN	012-073-06		
Building Name			
Year Built	1887 (spreadsheet)		
Original Use	Residential		
Architectural Style	Folk Victorian		
Architect/Builder			
Description	The original building has a roughly square plan and a notably distinct addition projects forward on the main façade. The original volume is three stories tall with a gabled composition shingle roof. The main entrance is sheltered under a partial-width projecting porch with a flat roof. The volume is clad in horizontal channel board siding. On the first floor is a vertical board wooden garage door. The addition is one story; it rises to about halfway up the original volume's second floor, running next to the front staircase, under one of the porch supports, which is abbreviated to make space for it, and up to one side of the original volume's main entrance. The addition has its own entrance and large plate glass window on its main façade. It is clad in smooth stucco.		
Integrity	lacks integrity due to addition		
Significance	Not eligible, lacks integrity		
Notes

APN	011-275-04		
Building Name	Barrel House		
Year Built	c1925 (spreadsheet)		
Original Use			
Architectural Style			
Architect/Builder			
Description	The narrow rectangular building is one story at the front and two stories toward the back. It has a flat roof and is clad in brick with some vertical board siding on the second story. The brick is unpainted on the main façade. The main façade also features a slanted tile roof on either side of the partial-width parapet that		
	shelters the arched main entrance. There are large decorative tiles over the small storefront windows.		
Integrity	Retains integrity, see 1970s photo above		
Significance	Eligible as district contributor, lacks significance for landmark status		
Notes			

Address	930 Tamalpais Av	3S	E
APN	011-277-01		
Building Name	Northwest Pacific Railroad Depot		
Year Built	c1929 (spreadsheet)		
Original Use	Railroad Depot		
Architectural Style	Spanish?		
Architect/Builder			
Description	The two-story linear building runs along the railroad tracks next to Tamalpais Avenue. It is clad in smooth stucco and has a gabled tile roof. Windows are varied, but all have multiple small lights; most are wide vertical eight-over-eight light windows. A series of arches in shallow relief along the main façade have windows or doors in them. There are a number of entrances on the main façade, but the main entrance is located under a cloth awning and large decorative arch.		
Integrity	Appears to retain integrity, more study needed, 2nd story addition		
Significance	Likely significant, currently being separately evaluated for individual NRHP nomination		
Notes			

Address	610 Third Street		E
APN	014-122-14		
Building Name	French Quarter		
Year Built	[spreadsheet gives implausible date of 1970]		
Original Use	Residential		
Architectural Style	Queen Anne		
Architect/Builder			
Description	The two-story rectangular building has a gabled composition shingle roof. There are two entrances located on the main façade. An entrance on the first floor under a bay window is sheltered by a cloth awning. The other entrance, located on the second floor, is accessed by a wooden staircase and sheltered under a partial-width integral porch. The building is clad in a combination of horizontal board and fishscale shingle siding. Appears to have been raised, shed roof addition		
Integrity	Integrity impaired by windows, staircase, enclosed porch, shed addition		
Significance	Not eligible, lacks integrity		
Notes

Description	The three-story building has a roughly rectangular plan and steeply pitched composition shingle gable-on-hip roof. It is clad in wood shingle. There is an integral porch on the main façade and several other entrances around the building. The building has wide double-hung wood sash windows. There is a small tower with a pointed roof at the corner of the building above the porch.		
Integrity	Appears to retain integrity		
Significance	Potential district contributor, not individually eligible at any level		
Notes	Registered local landmark		

Address	**1100 E Street**	**3S**	**A**
APN	011-203-01		
Building Name	San Rafael Public Library		
Year Built			
Original Use	Library		
Architectural Style			
Architect/Builder			
Description	The large T-shaped building occupies the entire west end of the block it sits on, surrounded by landscaping and parking lots as well as streets on three sides. The building is composed of multiple volumes of different sizes and eras. The taller older volume is clad in brick and stucco and has large windows. This volume features a number of decorative details, including dentil molding, quoins flanking the windows as well as at the corners, and large keystones on the windows. The newer volume is longer and shorter. It is clad in stucco and brick. On its main façade, the automatic sliding glass door entrance is located in a corner; the upper half of the façade is clad in brick, and the lower features subtle dentil molding in a more subdued echo of the older volume. The rear façade is clad almost entirely in brick. On the volume's other façades, windows alternate with brick-and-stucco patterns that mimic the older volume's quoins.		
Integrity	60s addition in notably different style, but sympathetic and both the addition and original building look to have good integrity		
Significance	Eligible as landmark and contributor

Description	The two-story rectangular plan building shares a parking lot with several other buildings. It has a gable-on-hip composition shingle roof. The building features an integral wrap-around porch, with the main façade facing the parking lot rather than the street. It is clad in horizontal channel board siding with fishscale shingle on the gable faces. Windows are tall, two-over-two light double-hung wood sash.		
Integrity	Appears to retain integrity		
Significance	Potential local district contributor, not individually eligible at any level		
Notes			

California Historical Resource Status Codes

1	**Properties listed in the National Register (NR) or the California Register (CR)**
1D	Contributor to a district or multiple resource property listed in NR by the Keeper. Listed in the CR.
1S	Individual property listed in NR by the Keeper. Listed in the CR.
1CD	Listed in the CR as a contributor to a district or multiple resource property by the SHRC
1CS	Listed in the CR as individual property by the SHRC.
1CL	Automatically listed in the California Register – Includes State Historical Landmarks 770 and above and Points of Historical Interest nominated after December 1997 and recommended for listing by the SHRC.
2	**Properties determined eligible for listing in the National Register (NR) or the California Register (CR)**
2B	Determined eligible for NR as an individual property and as a contributor to an eligible district in a federal regulatory process. Listed in the CR.
2D	Contributor to a district determined eligible for NR by the Keeper. Listed in the CR.
2D2	Contributor to a district determined eligible for NR by consensus through Section 106 process. Listed in the CR.
2D3	Contributor to a district determined eligible for NR by Part I Tax Certification. Listed in the CR.
2D4	Contributor to a district determined eligible for NR pursuant to Section 106 without review by SHPO. Listed in the CR.
2S	Individual property determined eligible for NR by the Keeper. Listed in the CR.
2S2	Individual property determined eligible for NR by a consensus through Section 106 process. Listed in the CR.
2S3	Individual property determined eligible for NR by Part I Tax Certification. Listed in the CR.
2S4	Individual property determined eligible for NR pursuant to Section 106 without review by SHPO. Listed in the CR.
2CB	Determined eligible for CR as an individual property and as a contributor to an eligible district by the SHRC.
2CD	Contributor to a district determined eligible for listing in the CR by the SHRC.
2CS	Individual property determined eligible for listing in the CR by the SHRC.
3	**Appears eligible for National Register (NR) or California Register (CR) through Survey Evaluation**
3B	Appears eligible for NR both individually and as a contributor to a NR eligible district through survey evaluation.
3D	Appears eligible for NR as a contributor to a NR eligible district through survey evaluation.
3S	Appears eligible for NR as an individual property through survey evaluation.
3CB	Appears eligible for CR both individually and as a contributor to a CR eligible district through a survey evaluation.
3CD	Appears eligible for CR as a contributor to a CR eligible district through a survey evaluation.
3CS	Appears eligible for CR as an individual property through survey evaluation.
4	**Appears eligible for National Register (NR) or California Register (CR) through other evaluation**
4CM	Master List - State Owned Properties – PRC §5024.
5	**Properties Recognized as Historically Significant by Local Government**
5D1	Contributor to a district that is listed or designated locally.
5D2	Contributor to a district that is eligible for local listing or designation.
5D3	Appears to be a contributor to a district that appears eligible for local listing or designation through survey evaluation.
5S1	Individual property that is listed or designated locally.
5S2	Individual property that is eligible for local listing or designation.
5S3	Appears to be individually eligible for local listing or designation through survey evaluation.
5B	Locally significant both individually (listed, eligible, or appears eligible) and as a contributor to a district that is locally listed, designated, determined eligible or appears eligible through survey evaluation.
6	**Not Eligible for Listing or Designation as specified**
6C	Determined ineligible for or removed from California Register by SHRC.
6J	Landmarks or Points of Interest found ineligible for designation by SHRC.
6L	Determined ineligible for local listing or designation through local government review process; may warrant special consideration in local planning.
6T	Determined ineligible for NR through Part I Tax Certification process.
6U	Determined ineligible for NR pursuant to Section 106 without review by SHPO.
6W	Removed from NR by the Keeper.
6X	Determined ineligible for the NR by SHRC or Keeper.
6Y	Determined ineligible for NR by consensus through Section 106 process – Not evaluated for CR or Local Listing.
6Z	Found ineligible for NR, CR or Local designation through survey evaluation.
7	**Not Evaluated for National Register (NR) or California Register (CR) or Needs Revaluation**
7J	Received by OHP for evaluation or action but not yet evaluated.
7K	Resubmitted to OHP for action but not reevaluated.
7L	State Historical Landmarks 1-769 and Points of Historical Interest designated prior to January 1998 – Needs to be reevaluated using current standards.
7M	Submitted to OHP but not evaluated - referred to NPS.
7N	Needs to be reevaluated (Formerly NR Status Code 4)
7N1	Needs to be reevaluated (Formerly NR SC4) – may become eligible for NR w/restoration or when meets other specific conditions.
7R	Identified in Reconnaissance Level Survey: Not evaluated.
7W	Submitted to OHP for action – withdrawn.

APPENDIX H:
NOISE DATA

LOCAL REGULATIONS AND STANDARDS

Chapter 8.13 - NOISE

Sections:

8.13.010 - Declaration of policy.

It is hereby declared to be the policy of the City of San Rafael, in the exercise of its police power, to protect the peace, health, safety and general welfare of the citizens of San Rafael from excessive, unnecessary and unreasonable noises from any and all sources in the community. It is the intention of the city council to control the adverse effect of such noise sources on the citizens by prescribing standards prohibiting detrimental levels of noise and by providing a remedy for violations. The provisions of this chapter and the remedies contained in this code shall be cumulative and are not intended to replace any otherwise available remedies for public or private nuisances, nor any other civil or criminal remedies otherwise available. In addition, the regulations contained herein are not intended to substitute for any noise analysis conducted as a part of the city's environmental review process for discretionary permit approvals, nor is it intended to limit more strict noise control requirements for discretionary permit approvals should more strict measures be found to be necessary in order to maintain noise levels that are not detrimental to the health and welfare of the citizens of the city.

(Ord. 1789 § 3 (part), 2002).

8.13.020 - Definitions.

For the purposes of this chapter, certain terms are defined as follows:

A. " 'A'-Weighted Sound Level (dBA)" means a decibel scale that approximates the way the human ear responds to various acoustic frequencies.

B. "Commercial property" means property zoned for commercial, office, marine, marine commercial, or water uses, as provided in the City of San Rafael Zoning Ordinance, San Rafael Municipal Code Title 14, or properties zoned as planned development where the principal use is commercial, marine, marine commercial, or water use.

C. "Constant" noise means a continuous noise produced where there is no noticeable change in the level of the noise source. Examples would include such noises as those associated with air conditioners and pool equipment.

D. "Daytime" for purposes of this chapter means the period between seven a.m. (7:00 a.m.) and nine p.m. (9:00 p.m.) Sunday through Thursday and between seven a.m. (7:00 a.m.) and ten p.m. (10:00 p.m.) on Friday and Saturday.

E. "Decibel" means the measurement unit used for the level of sound/noise.

F. "Holidays" mean those holidays designated as federal holidays and the day after Thanksgiving.

G. "Industrial property" means property zoned for industrial or light industrial use as provided in the City of San Rafael Zoning Ordinance, San Rafael Municipal Code Title 14, or properties zoned as planned development where the principal use is industrial or light industrial.

H. "Intermittent" noise means repetitive noises where there is a distinction between the onset and decay of the sound. Examples would include hammering and dog barking.

I. "Mixed use property" means property zoned for both residential and for office and/or commercial use as provided in the City of San Rafael Zoning Ordinance, San Rafael Municipal Code Title 14.

J. "Multi-family residential structure" means any dwelling structure where two or more dwellings are separated by a common wall, floor, or ceiling, including but not limited to apartments, condominiums and townhouses.

K. "Nighttime" for purposes of this chapter means the period between nine p.m. (9:00 p.m.) and seven a.m. (7:00 a.m.) Sunday through Thursday and between ten p.m. (10:00 p.m.) and seven a.m. (7:00 a.m.) on Friday and Saturday.

L. "Noise level" means the maximum constant or intermittent sound level produced by a source or group of sources as measured with a sound level meter using fast response and "A"-weighting. In order to measure a noise level, the controls of the sound level meter should be arranged to the setting appropriate to the type of noise being measured.

M. "Sound level meter" means a device for measuring sound level in decibel units within the performance specifications in the American National Standards Institute Standard S1.4, "Specification for Sound Level Meters."

N. "Property plane" means a vertical plane including the property line that determines the property boundaries in space.

O. "Public property" means property zoned for public/quasi-public or parks/open space use as provided in the City of San Rafael Zoning Ordinance, San Rafael Municipal Code Title 14, or the San Rafael City Plaza, or any public street, right-of-way, or easement.

P. "Residential power equipment" means any mechanically powered saw, sander, drill, grinder, leaf blower, lawnmower, hedge trimmer, edger, or any other similar tool or device, when used in or on any residential property.

Q. "Residential property" means property zoned for residential use as provided in the City of San Rafael Zoning Ordinance, San Rafael Municipal Code Title 14, or properties zoned for mixed use or as planned development where the principal use is residential.

(Ord. 1789 § 3 (part), 2002).

8.13.030 - Loud or unusual noises prohibited.

No person shall maintain, emit or make, or cause, suffer or permit to be maintained, emitted or made, any noise or sound produced by human, animal, mechanical or other means, which by reason of its raucous or nerve-wracking nature, shall disturb the peace or comfort or be injurious to the health of any person or persons; and such a noise or sound may be deemed in violation of this section regardless whether it is found to be within the noise limits established elsewhere in this chapter for the location or type of noise or sound.

(Ord. 1789 § 3 (part), 2002).

8.13.040 - General noise limits.

Subject to the exceptions and exemptions set forth in Sections 8.13.050 and 8.13.060 of this chapter, the general noise limits set forth in this section shall apply. A summary of the general noise limits set forth in this section is set forth in Table 8.13-1. Where two or more noise limits may apply, the more restrictive noise limit shall govern. For purposes of determining sound levels from any source of sound, a sound level measurement shall be made at any point on any receiving private or public property. Notwithstanding the foregoing, in multi-family structures, the microphone shall be placed no closer than 3-½ feet from a wall through which the source of sound at issue is transmitting, and shall also be placed five (5) feet above the floor regardless of whether the source of sound at issue transmits through the floor, ceiling or wall. Sound level measurements shall be made with a sound level meter (Type 1 or 2) set to A-weighting, and "fast" response for intermittent sound. Slow or fast response may be used for constant noise sources. For intermittent sound, the one second rms maximum level (Lmax) shall be used. For constant sound, the average level (Leq) shall be used.

A. Residential property noise limits.

1. No person shall produce, suffer or allow to be produced by any machine, animal or device, or by any other means, a noise level greater than the following, when measured on any residential property:

a.	Daytime:	60 dBA intermittent

		50 dBA constant
b.	Nighttime:	50 dBA intermittent
		40 dBA constant

2. No person shall produce, suffer or allow to be produced by any machine, animal, or device, or by any other means, a noise level greater than the following, when measured on any mixed use property:

a.	Daytime:	65 dBA intermittent
		55 dBA constant
b.	Nighttime:	55 dBA intermittent
		45 dBA constant

3. No person shall produce, suffer or allow to be produced by any machine, animal or device, or by any other means, within the interior of a multi-family residential structure, a noise level greater than the following, when measured through a common interior partition (wall, floor or ceiling) from any other interior location:

a.	Daytime:	40 dBA intermittent
		35 dBA constant
b.	Nighttime:	35 dBA intermittent
		30 dBA constant

B. Commercial property noise limits.

No person shall produce, suffer or allow to be produced by any machine, animal, or device, or by any other means, a noise level greater than sixty-five (65) dBA intermittent or fifty-five (55) dBA constant, when measured on any commercial property.

C. Industrial property noise limits.

No person shall produce, suffer or allow to be produced by any machine, animal or device, or by any other means, a noise level greater than seventy (70) dBA intermittent or sixty (60) dBA constant, when measured on any industrial property.

D. Public property noise limits.

No person shall produce, suffer or allow to be produced by any machine, animal or device, or by any other means, a noise level, when measured on any public property, that is greater than the most restrictive noise standard applicable under this chapter to any private property adjoining the receiving public property.

TABLE 8.13-1—GENERAL NOISE LIMITS

Property type or zone	Daytime limits	Nighttime limits
Residential	60 dBA Intermittent 50 dBA Constant	50 dBA Intermittent 40 dBA Constant
Mixed-use	65 dBA Intermittent 55 dBA Constant	55 dBA Intermittent 45 dBA Constant
Multifamily residential (interior sound source)	40 dBA Intermittent 35 dBA Constant	35 dBA Intermittent 30 dBA Constant

Commercial	65 dBA Intermittent 55 dBA Constant	65 dBA Intermittent 55 dBA Constant
Industrial	70 dBA Intermittent ;lt;60 dBA ConstantTc>70 dBA Intermittent 60 dBA Constant	
Public Property	Most restrictive noise limit applicable to adjoining private property	Most restrictive noise limit applicable to adjoining private property

(Ord. 1789 § 3 (part), 2002).

8.13.050 - Standard exceptions to general noise limits.

The following standard exceptions to the provisions of Section 8.13.040 shall be allowed as of right, to the extent and during the hours specified. A summary of the standard exceptions provided in this section is set forth in Table 8.13-2.

A. Construction. Except as otherwise provided in subsection B of this section, or by the planning commission or city council as part of the development review for the project, on any construction project on property within the city, construction, alteration, demolition, maintenance of construction equipment, deliveries of materials or equipment, or repair activities otherwise allowed under applicable law shall be allowed between the hours of seven a.m. (7:00 a.m.) and six p.m. (6:00 p.m.), Monday through Friday, and nine a.m. (9:00 a.m.) and six p.m. (6:00 p.m.) on Saturdays, provided that the noise level at any point outside of the property plane of the project shall not exceed ninety (90) dBA. All such activities shall be precluded on Sundays and holidays. Violation of the foregoing may subject the permittee to suspension of work by the chief building official for up to two (2) days per violation.

For any construction project involving the construction of one or more new buildings or residences within the city, or when required by the planning commission or city council as part of their development review for the property, the property owner or occupant shall post a sign at all

entrances to the construction site upon commencement of construction, for the purpose of informing all contractors and subcontractors, their employees, agents, materialmen and all other persons at the construction site, of the basic requirements of this chapter.

1. Said sign(s) shall be posted in a conspicuous place visible from the public right-of-way near the entrance to the job site, at least five feet (5') above ground level, and shall be of a white background, with legible black lettering, which lettering shall be a minimum of one and one-half inches (1 1/2") in height.
2. Said sign shall read as follows (or as consistent with other hours approved by the planning commission or city council):

CONSTRUCTION HOURS

(includes any and all deliveries)

MONDAY—FRIDAY	7:00 a.m. to 6:00 p.m.
SATURDAY	9:00 a.m. to 6:00 p.m.
SUNDAY/HOLIDAYS	Prohibited

NOISE LIMITS

Noise level at any point outside of the construction property plane shall not exceed ninety (90) dBA.

Violation of the construction hours and noise limits may be enforced as either an infraction or a misdemeanor punishable by fines or jail time or both, or by an administrative citation with a fine, or by a civil action with a monetary penalty, injunction and/or other remedies, as provided in Chapter 1.42 of this code. In addition, the chief building official may issue a stop work order requiring suspension of work for up to two (2) days per violation.

B. Residential Power Equipment and Construction Activities by Residential Property Owners. Residential power equipment, and construction activities undertaken by residential property owners to maintain or improve their property, shall be allowed between the hours of eight a.m. (8:00 a.m.) and eight p.m. (8:00 p.m.), Monday through Friday, and nine a.m. (9:00 a.m.) and six p.m. (6:00 p.m.) on Saturdays, Sundays and holidays, providing such equipment and/or activities do not produce a

noise level that exceeds ninety (90) dBA beyond the property plane of the property on which the equipment is being used or the activity is occurring. For purposes of this subsection, "construction activities undertaken by the residential property owner" shall include work personally done by the property owner(s) and by a family member, friend or other persons assisting the property owner(s).

C. Sound Performances; Sound-Generating Devices. Notwithstanding anything in this chapter to the contrary, on public property or any other open area to which the public has access, whether publicly or privately owned, sound-generating devices or instruments used for any indoor or outdoor sound performances, athletic events, and special events shall be permitted, provided they do not exceed a noise level of eighty (80) dBA measured at a distance of not less than fifty feet (50') from the property plane or such other limit as may be established by any required approvals and permits therefor obtained from the appropriate governmental entity. Except pursuant to an approved special event, street closure or parade permit, the use of any sound-generating device or instrument for such performances or events between the hours of ten p.m. (10:00 p.m.) and ten a.m. (10:00 a.m.) is unlawful.

D. Refuse Collection. Refuse collection activities shall be permitted as specified in this section, provided they do not produce a noise level in excess of ninety-five (95) dBA measured at a distance of twenty-five feet (25') from the activity:

1. Residential or mixed-use property: between the hours of six a.m. (6:00 a.m.) and nine p.m. (9:00 p.m.), Monday through Saturday;
2. Industrial or commercial property: between the hours of four a.m. (4:00 a.m.) and nine p.m. (9:00 p.m.) daily.

TABLE 8.13-2 - STANDARD EXCEPTIONS TO GENERAL NOISE LIMITS

Type of Activity	Maximum Noise Level	Days/Hours Permitted
Construction	90 dBA	Mon-Fri 7:00 a.m.—6:00 p.m. Sat 9:00 a.m.—6:00 p.m. Sun, Hol.—prohibited or as otherwise set by city approval

Residential Power Equipment and Construction Activities Undertaken by Residential Property Owners	90 dBA	Mon-Fri 8:00 a.m.—8:00 p.m. Sat, Sun, Hol. 9:00 a.m.—6:00 p.m.
Sound performances	80 dBA measured fifty (50) feet or more from property plane, or as excepted by permit approval	Every day 10:00 a.m.—10:00 p.m., or as excepted by permit approval
Refuse Collection	95 dBA	Residential or mixed-use property: Mon-Sat 6:00 a.m.—9:00 p.m. Industrial or commercial property: Daily 4:00 a.m.—9:00 p.m.

(Ord. 1838 § 7, 2005; Ord. 1789 § 3 (part), 2002).

8.13.060 - Exceptions allowed with permit.

A. In addition to the standard exceptions permitted pursuant to Section 8.13.050 of this chapter, the director of community development or his designee may grant a permit allowing an exception from any or all provisions of this chapter where the applicant can show that a diligent investigation of available noise abatement techniques indicates that immediate compliance with the requirements of this chapter would be impractical or unreasonable, or that no public detriment will result from the proposed exception. Any such permit shall be issued with appropriate conditions to minimize the public detriment caused by the permitted exceptions. Any such permit shall be of such duration, as approved by the director of community development or his designee, up to a maximum period of six (6) months, but shall be renewable upon a showing of good cause, and shall be conditioned by a schedule for compliance and details of methods therefor in appropriate cases. At the discretion of the director of community development or his

designee, an exception permit may be issued and reissued for successive short periods of time in order to allow monitoring of the adverse noise impacts of the excepted activity, and additional conditions may be imposed upon reissuance of the permit, if the director of community development or his designee determines that such additional conditions are necessary to mitigate noise impacts from the excepted activity to a level he deems acceptable under all the circumstances.

B. Any application for an exception permit under this section shall be accompanied by a fee to be set by resolution of the city council.

C. Prior to granting any permit under this section, the director of community development or his designee shall provide at least ten (10) calendar days' written notice to all property owners within three hundred feet (300') of the property for which the application is made, and shall consider any objections to the granting of such permit received before issuance of the permit.

D. Any person aggrieved with the decision of the director of community development or his designee may appeal to the city council, by writing filed with the city clerk within five (5) business days after the date of such decision; however, such decision shall not stay the effective date of the permit.

(Ord. 1838 § 8, 2005; Ord. 1789 § 3 (part), 2002).

8.13.070 - Exemptions.

The following shall be exempt from the provisions of this chapter:

A. Aerial warning devices which are required by law to protect the health, safety and welfare of the community;

B. Emergency vehicle responses and all necessary equipment utilized for the purpose of responding to an emergency, or necessary to restore, preserve, protect or save lives or property from imminent danger of loss or harm;

C. Aviation, railroad, and public transit operations;

D. The operation of any municipal or public utility vehicles;

E. Public safety training exercises conducted between the hours of eight a.m. (8:00 a.m.) and eight p.m. (8:00 p.m.);

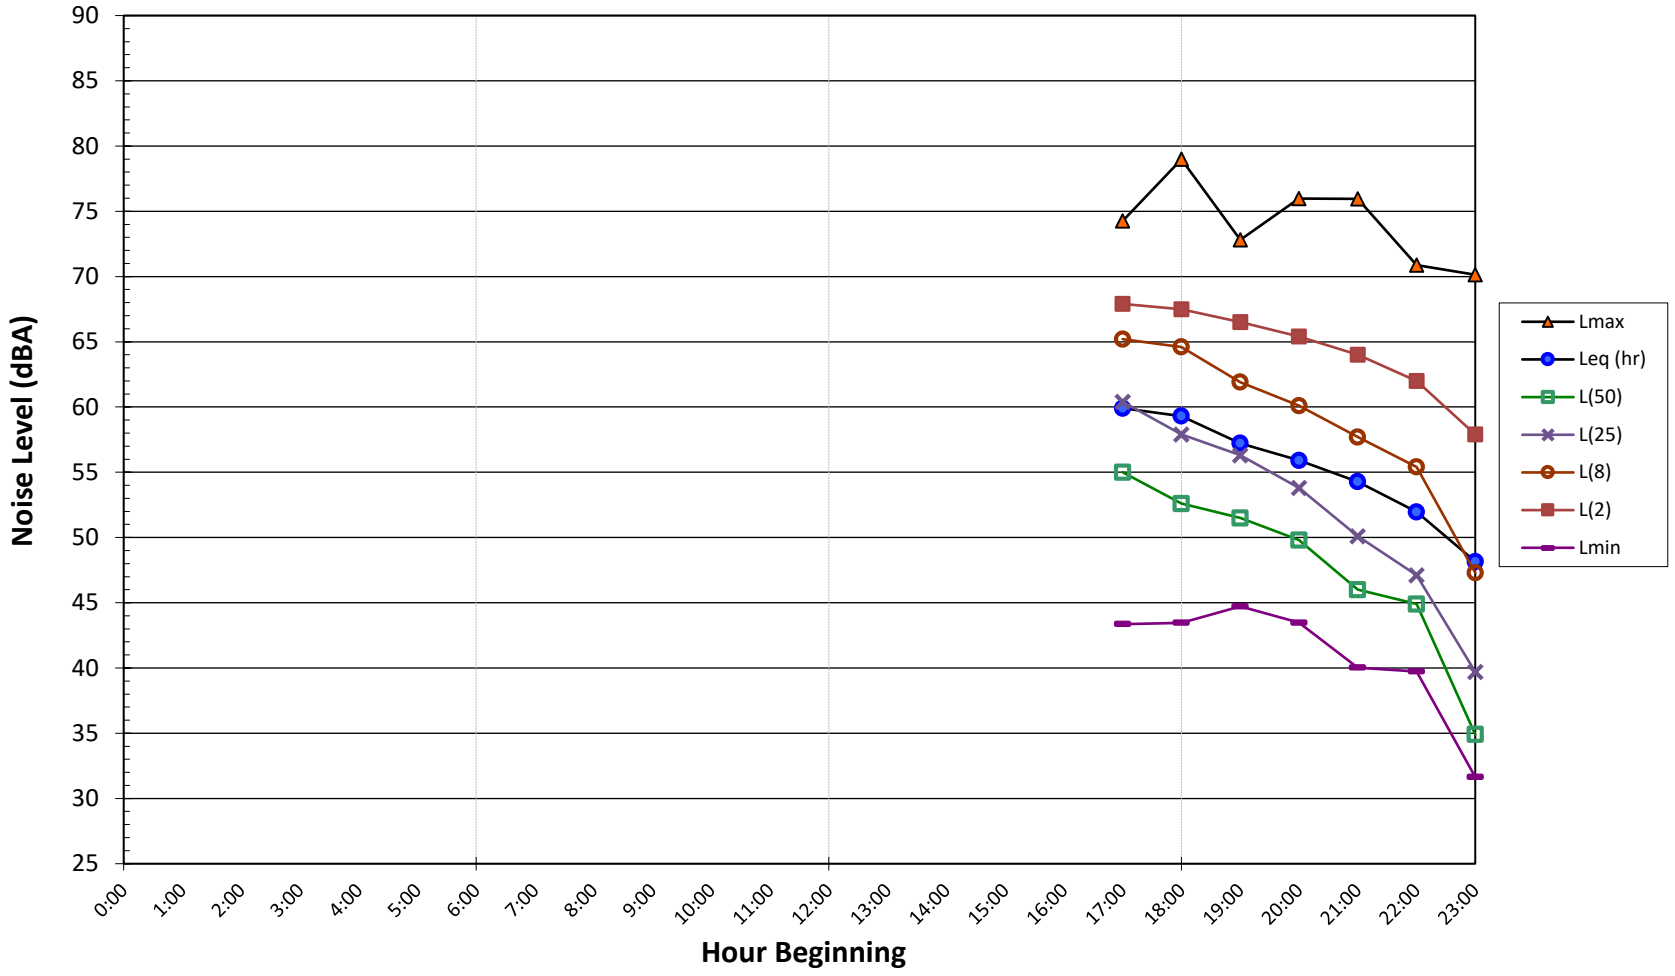
F. Uses established through any applicable discretionary review process containing specific noise conditions of approval and/or mitigation measures;

G. Work on capital improvements, or repairs on public property by employees or contractors of the city;

H. Vehicle noise subject to regulation under the California Vehicle Code;

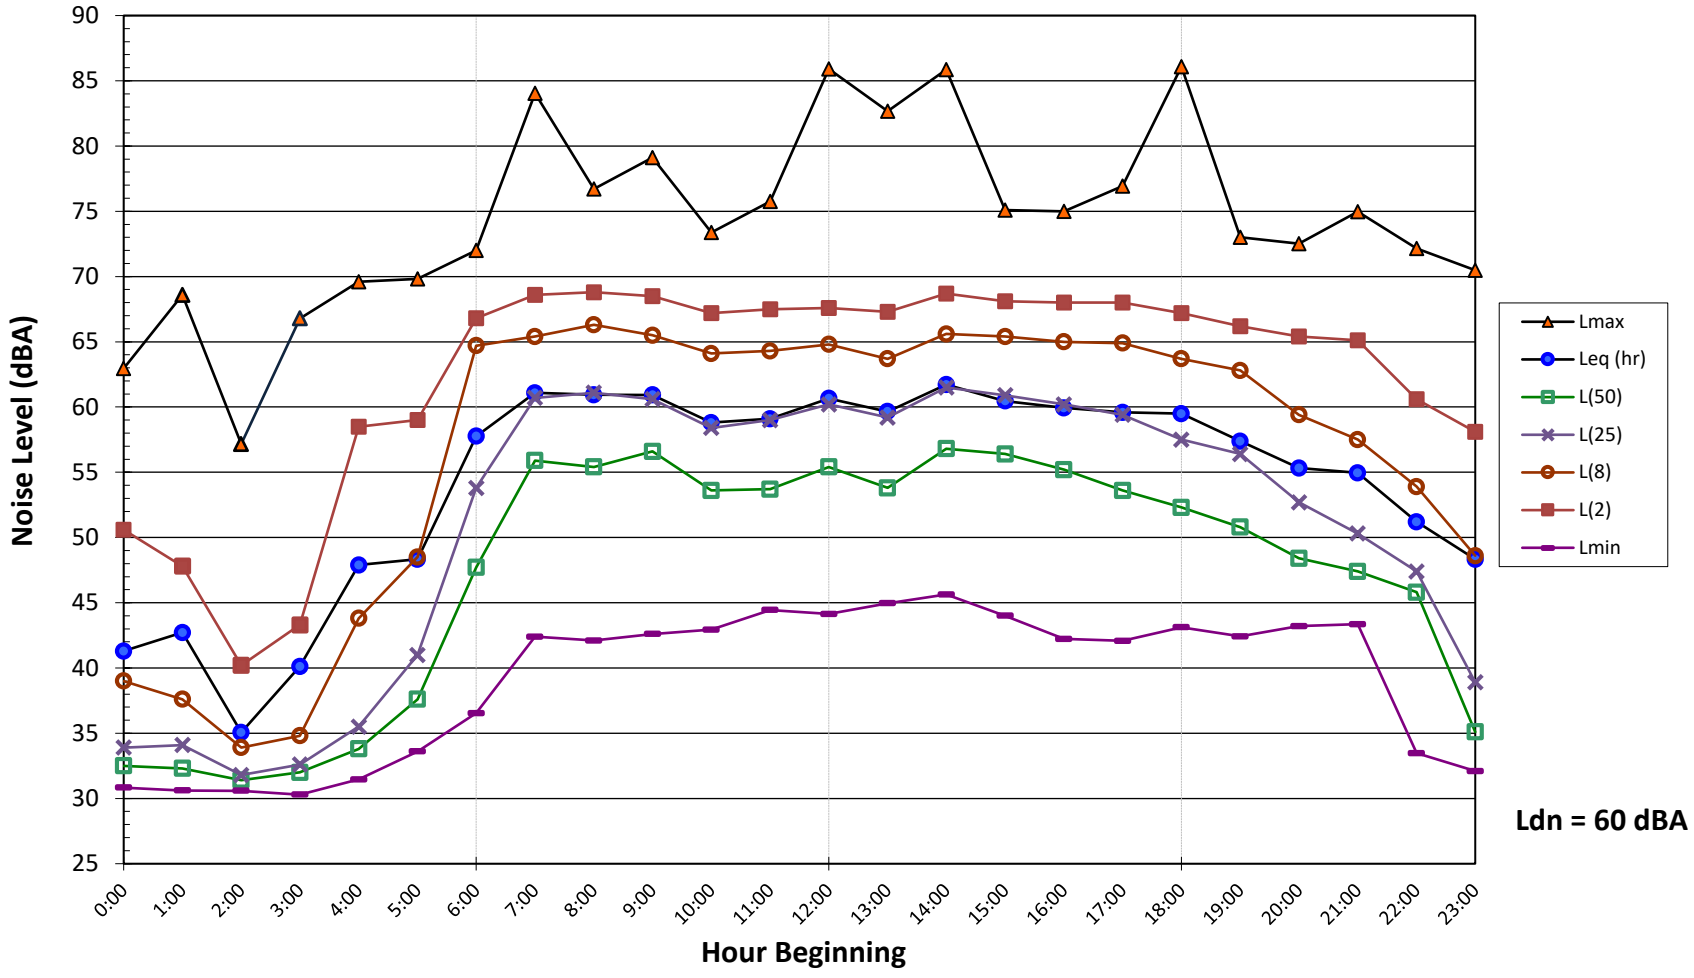
I. Emergency repair work performed by, or at the request of, a property owner on his or her private property, where the delay required to obtain an exception permit under this chapter would result in substantial damage, personal injuries, or property loss to the owner, provided that such emergency work shall be subject to such reasonable conditions as may be imposed by authorized city employees to mitigate the noise level of the activity.

(Ord. 1789 § 3 (part), 2002).



8.13.080 - Violations, penalties.

Any violation of this chapter may be enforced either as an infraction or as a misdemeanor, or by any remedy available to the city under this code, or under state law.



(Ord. 1789 § 3 (part), 2002).

FHWA Vehicle Classification	
Class 1 - Motorcycles	Class 8 - Four or Fewer Axle Single-Trailer Trucks
Class 2 - Passenger Cars	Class 9 - Five-Axle Single-Trailer Trucks
Class 3 - Other Two-Axle, Four-Tire Single Unit Vehicles	Class 10 - Six or More Axle Single-Trailer Trucks
Class 4 - Buses	Class 11 - Five or fewer Axle Multi-Trailer Trucks
Class 5 - Two-Axle, Six-Tire, Single-Unit Trucks	Class 12 - Six-Axle Multi-Trailer Trucks
Class 6 - Three-Axle Single-Unit Trucks	Class 13 - Seven or More Axle Multi-Trailer Trucks
Class 7 - Four or More Axle Single-Unit Trucks

FHWA Vehicle Classification	
Class 1 - Motorcycles	Class 8 - Four or Fewer Axle Single-Trailer Trucks
Class 2 - Passenger Cars	Class 9 - Five-Axle Single-Trailer Trucks
Class 3 - Other Two-Axle, Four-Tire Single Unit Vehicles	Class 10 - Six or More Axle Single-Trailer Trucks
Class 4 - Buses	Class 11 - Five or fewer Axle Multi-Trailer Trucks
Class 5 - Two-Axle, Six-Tire, Single-Unit Trucks	Class 12 - Six-Axle Multi-Trailer Trucks
Class 6 - Three-Axle Single-Unit Trucks	Class 13 - Seven or More Axle Multi-Trailer Trucks
Class 7 - Four or More Axle Single-Unit Trucks

FHWA Vehicle Classification	
Class 1 - Motorcycles	Class 8 - Four or Fewer Axle Single-Trailer Trucks
Class 2 - Passenger Cars	Class 9 - Five-Axle Single-Trailer Trucks
Class 3 - Other Two-Axle, Four-Tire Single Unit Vehicles	Class 10 - Six or More Axle Single-Trailer Trucks
Class 4 - Buses	Class 11 - Five or fewer Axle Multi-Trailer Trucks
Class 5 - Two-Axle, Six-Tire, Single-Unit Trucks	Class 12 - Six-Axle Multi-Trailer Trucks
Class 6 - Three-Axle Single-Unit Trucks	Class 13 - Seven or More Axle Multi-Trailer Trucks
Class 7 - Four or More Axle Single-Unit Trucks

FHWA Vehicle Classification	
Class 1 - Motorcycles	Class 8 - Four or Fewer Axle Single-Trailer Trucks
Class 2 - Passenger Cars	Class 9 - Five-Axle Single-Trailer Trucks
Class 3 - Other Two-Axle, Four-Tire Single Unit Vehicles	Class 10 - Six or More Axle Single-Trailer Trucks
Class 4 - Buses	Class 11 - Five or fewer Axle Multi-Trailer Trucks
Class 5 - Two-Axle, Six-Tire, Single-Unit Trucks	Class 12 - Six-Axle Multi-Trailer Trucks
Class 6 - Three-Axle Single-Unit Trucks	Class 13 - Seven or More Axle Multi-Trailer Trucks
Class 7 - Four or More Axle Single-Unit Trucks	

Location: Francisco Blvd W, B/W 2nd & Andersen
Date Range: 4/25/2019 to 4/25/2019
Site Code: 17

FHWA Vehicle Classification	
Class 1 - Motorcycles	Class 8 - Four or Fewer Axle Single-Trailer Trucks
Class 2 - Passenger Cars	Class 9 - Five-Axle Single-Trailer Trucks
Class 3 - Other Two-Axle, Four-Tire Single Unit Vehicles	Class 10 - Six or More Axle Single-Trailer Trucks
Class 4 - Buses	Class 11 - Five or fewer Axle Multi-Trailer Trucks
Class 5 - Two-Axle, Six-Tire, Single-Unit Trucks	Class 12 - Six-Axle Multi-Trailer Trucks
Class 6 - Three-Axle Single-Unit Trucks	Class 13 - Seven or More Axle Multi-Trailer Trucks
Class 7 - Four or More Axle Single-Unit Trucks

FHWA Vehicle Classification	
Class 1 - Motorcycles	Class 8 - Four or Fewer Axle Single-Trailer Trucks
Class 2 - Passenger Cars	Class 9 - Five-Axle Single-Trailer Trucks
Class 3 - Other Two-Axle, Four-Tire Single Unit Vehicles	Class 10 - Six or More Axle Single-Trailer Trucks
Class 4 - Buses	Class 11 - Five or fewer Axle Multi-Trailer Trucks
Class 5 - Two-Axle, Six-Tire, Single-Unit Trucks	Class 12 - Six-Axle Multi-Trailer Trucks
Class 6 - Three-Axle Single-Unit Trucks	Class 13 - Seven or More Axle Multi-Trailer Trucks
Class 7 - Four or More Axle Single-Unit Trucks

FHWA Vehicle Classification	
Class 1 - Motorcycles	Class 8 - Four or Fewer Axle Single-Trailer Trucks
Class 2 - Passenger Cars	Class 9 - Five-Axle Single-Trailer Trucks
Class 3 - Other Two-Axle, Four-Tire Single Unit Vehicles	Class 10 - Six or More Axle Single-Trailer Trucks
Class 4 - Buses	Class 11 - Five or fewer Axle Multi-Trailer Trucks
Class 5 - Two-Axle, Six-Tire, Single-Unit Trucks	Class 12 - Six-Axle Multi-Trailer Trucks
Class 6 - Three-Axle Single-Unit Trucks	Class 13 - Seven or More Axle Multi-Trailer Trucks
Class 7 - Four or More Axle Single-Unit Trucks
