State Clearinghouse
Office of Planning and Research
Attn: Sheila Brown
1400 Tenth Street, Room 212
Sacramento, CA 95814

Dear Ms. Brown:

Subject: State Clearinghouse Review of Proposed Negative Declaration for Initial Study
Application No. 7590 (County of Fresno)

Enclosed Please find the following documents:

1. Notice of Completion/Reviewing Agencies Checklist
2. Notice of Intent to Adopt a Negative Declaration
3. Fifteen (15) hard copies of Draft Initial Study, Draft Mitigated Negative Declaration, and Project Routing
4. One (1) electronic copy of the Draft Initial Study, Draft Mitigated Negative Declaration, and Project Routing

We request that you distribute the documents to appropriate state agencies for review as provided for in Section 15073 of the CEQA Guidelines, and that the review be completed within the normal 30-day review period. Please transmit any document to my attention at the below listed address or to TKobayashi@FresnoCountyCA.gov

Sincerely,

Thomas Kobayashi, Planner
Development Services and Capital Projects Division

For County Clerk's Stamp

NOTICE OF INTENT TO ADOPT A MITIGATED NEGATIVE DECLARATION

Notice is hereby given that the County of Fresno has prepared Initial Study Application (IS) No. 7590 pursuant to the requirements of the California Environmental Quality Act for the following proposed project:

INITIAL STUDY APPLICATION NO. 7590 filed by **MICHAEL ERVIN, DEPARTMENT OF PUBLIC WORKS AND PLANNING, DESIGN DIVISION ON BEHALF OF THE COUNTY OF FRESNO**, proposing to reconstruct an existing parking lot and remove underground storage tanks on a 0.43-acre parcel in the City of Fresno DTN (Downtown Neighborhood) Zone District. The project site is located on the northern corner of "L" Street and Merced Street within the city limits of the City of Fresno (SUP. DIST. 3) (APN 466-115-15). Adopt the Mitigated Negative Declaration prepared for Initial Study Application No. 7590 with Conditions.

(hereafter, the "Proposed Project")

The County of Fresno has determined that it is appropriate to adopt a Mitigated Negative Declaration for the Proposed Project. The purpose of this Notice is to (1) provide notice of the availability of IS Application No. 7590 and the draft Mitigated Negative Declaration, and request written comments thereon; and (2) provide notice of the public hearing regarding the Proposed Project.

Public Comment Period

The County of Fresno will receive written comments on the Proposed Project and Mitigated Negative Declaration from May 8, 2019 through June 8, 2019.

Email written comments to TKobayashi@FresnoCountyCA.gov, or mail comments to:

Fresno County Department of Public Works and Planning
Development Services and Capital Projects Division
Attn: Thomas Kobayashi
2220 Tulare Street, Suite A
Fresno, CA 93721

IS Application No. 7590 and the draft Mitigated Negative Declaration may be viewed at the above address Monday through Thursday, 9:00 a.m. to 5:00 p.m., and Friday, 8:30 a.m. to 12:30 p.m. (except holidays), or at www.co.fresno.ca.us/initialstudies. An electronic copy of the draft Mitigated Negative Declaration for the Proposed Project may be obtained from PLANNER at the addresses above.

Public Hearing

The item is anticipated to be heard by the Board of Supervisors on June 18, 2019. A separate notice will be sent confirming the Board of Supervisors' hearing date.

For questions please call Thomas Kobayashi (559) 600-4224.

INITIAL STUDY ENVIRONMENTAL CHECKLIST FORM

1. **Project title:**
Initial Study Application No. 7590 – Assessor Recorder's Office Parking Lot Improvements
2. **Lead agency name and address:**
County of Fresno
2220 Tulare St. 6th Floor
Fresno, CA 93721
3. **Contact person and phone number:**
Thomas Kobayashi, Planner
(559)600-4224
4. **Project location:**
The project site is located on the northern corner of "L" Street and Merced Street (APN: 466-115-15)
5. **Project sponsor's name and address:**
Michael Ervin, Department of Public Works and Planning, Design Division

On behalf of:

The County of Fresno
6. **General Plan designation:**
Downtown Neighborhood (City of Fresno)
7. **Zoning:**
DTN (Downtown Neighborhood) – City of Fresno Zoning
8. **Description of project: (Describe the whole action involved, including, but not limited to, later phases of the project, and any secondary, support, or off-site features necessary for its implementation. Attach additional sheets if necessary.)**
Reconstruct an existing parking lot and remove underground storage tanks on a 0.43-acre parcel in the DTN (Downtown Neighborhood) Zone District.
9. **Surrounding land uses and setting: Briefly describe the project's surroundings:**
The project site is located in the Downtown Fresno area with mixed uses of residential, commercial, office, and parking located throughout the area.
10. **Other public agencies whose approval is required (g., permits, financing approval, or participation agreement.)**
City of Fresno
Fresno Metropolitan Flood Control District
Department of Public Health, Environmental Health Division
Department of Public Works and Planning

County of Fresno

DEPARTMENT OF PUBLIC WORKS AND PLANNING
STEVEN E. WHITE, DIRECTOR

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

Per Assembly Bill 52 (AB52), participating California Native American Tribes were notified of the project and given the opportunity to enter into consultation with the County on the proposal. No participating California Native American Tribe expressed concerns with regard to the proposal and no request for consultation was received within the allotted thirty (30) day review period.

NOTE: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21080.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- | | |
|---|---|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Agriculture and Forestry Resources |
| <input type="checkbox"/> Air Quality | <input type="checkbox"/> Biological Resources |
| <input type="checkbox"/> Cultural Resources | <input type="checkbox"/> Energy |
| <input type="checkbox"/> Geology/Soils | <input type="checkbox"/> Greenhouse Gas Emissions |
| <input type="checkbox"/> Hazards & Hazardous Materials | <input type="checkbox"/> Hydrology/Water Quality |
| <input type="checkbox"/> Land Use/Planning | <input type="checkbox"/> Mineral Resources |
| <input type="checkbox"/> Noise | <input type="checkbox"/> Population/Housing |
| <input type="checkbox"/> Public Services | <input type="checkbox"/> Recreation |
| <input type="checkbox"/> Transportation | <input type="checkbox"/> Tribal Cultural Resources |
| <input type="checkbox"/> Utilities/Service Systems | <input type="checkbox"/> Wildfire |
| <input type="checkbox"/> Mandatory Findings of Significance | |

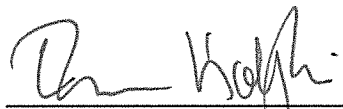

DETERMINATION OF REQUIRED ENVIRONMENTAL DOCUMENT:

On the basis of this initial evaluation:

- ☐ I find that the proposed project **COULD NOT** have a significant effect on the environment. **A NEGATIVE DECLARATION WILL BE PREPARED.**
- ☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because the Mitigation Measures described on the attached sheet have been added to the project. **A MITIGATED NEGATIVE DECLARATION WILL BE PREPARED.**
- ☐ I find the proposed project **MAY** have a significant effect on the environment, and an **ENVIRONMENTAL IMPACT REPORT** is required
- ☐ I find that as a result of the proposed project, no new effects could occur, or new Mitigation Measures would be required that have not been addressed within the scope of a previous Environmental Impact Report.

G:\4360Devs&Pin\PROJSEC\PROJDOCS\Environmental\Initial Studies - Environmental Assessments\7000-7999\IS 7590 Assessors-Recorder's Parking Lot Improvements\IS-CEQA\IS 7590 IS Checklist.docx

INITIAL STUDY ENVIRONMENTAL CHECKLIST FORM (Initial Study Application No. 7590)

The following checklist is used to determine if the proposed project could potentially have a significant effect on the environment. Explanations and information regarding each question follow the checklist.

1 = No Impact

2 = Less Than Significant Impact

3 = Less Than Significant Impact with Mitigation Incorporated

4 = Potentially Significant Impact

I. AESTHETICS

Except as provided in Public Resources Code Section 21099, would the project:

- 1 a) Have a substantial adverse effect on a scenic vista?
- 1 b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?
- 2 c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?
- 3 d) Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

II. AGRICULTURAL AND FORESTRY RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology in Forest Protocols adopted by the California Air Resources Board. Would the project:

- 1 a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?
- 1 b) Conflict with existing zoning for agricultural use, or a Williamson Act Contract?
- 1 c) Conflict with existing zoning for forest land, timberland or timberland zoned Timberland Production?
- 1 d) Result in the loss of forest land or conversion of forest land to non-forest use?
- 1 e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

III. AIR QUALITY

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:

- 1 a) Conflict with or obstruct implementation of the applicable Air Quality Plan?
- 2 b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?
- 2 c) Expose sensitive receptors to substantial pollutant concentrations?
- 2 d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

IV. BIOLOGICAL RESOURCES

Would the project:

- 1 a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?
- 1 b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?
- 1 c) Have a substantial adverse effect on state or federally-protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?
- 1 d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?
- 1 e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?
- 1 f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state Habitat Conservation Plan?

V. CULTURAL RESOURCES

Would the project:

- 3 a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?
- 3 b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?
- 3 c) Disturb any human remains, including those interred outside of formal cemeteries?

VI. ENERGY

Would the project:

- 3 a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?
- 3 b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

VII. GEOLOGY AND SOILS

Would the project:

- a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:
 - 1 i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?
 - 1 ii) Strong seismic ground shaking?
 - 1 iii) Seismic-related ground failure, including liquefaction?
 - 1 iv) Landslides?
- b) Result in substantial soil erosion or loss of topsoil? 1
- c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse? 1
- d) Be located on expansive soil as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property? 1
- e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water? 1
- f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? 1

VIII. GREENHOUSE GAS EMISSIONS

Would the project:

- 2 a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?
- 2 b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

IX. HAZARDS AND HAZARDOUS MATERIALS

Would the project:

- 2 a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?
- 2 b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?
- 2 c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?
- 2 d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?
- 2 e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?
- 1 f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?
- 1 g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

X. HYDROLOGY AND WATER QUALITY

Would the project:

- 2 a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?
- 1 b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?
- 1 c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on or off site?
 - 1 i) Result in substantial erosion or siltation on- or off-site;
 - 2 ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;
 - 2 iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or
 - 1 iv) Impede or redirect flood flows?
- 2 d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?
- 1 e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

XI. LAND USE AND PLANNING

Would the project:

- 1 a) Physically divide an established community?
- 2 b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

XII. MINERAL RESOURCES

Would the project:

- 1 a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?
- 1 b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local General Plan, Specific Plan or other land use plan?

XIII. NOISE

Would the project result in:

- 2 a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
- 2 b) Generation of excessive ground-borne vibration or ground-borne noise levels?
- 2 c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

XIV. POPULATION AND HOUSING

Would the project:

- 1 a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and

businesses) or indirectly (for example, through extension of roads or other infrastructure)?

- 1 b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

XV. PUBLIC SERVICES

Would the project:

- 1 a) Result in substantial adverse physical impacts associated with the provision of new or physically-altered governmental facilities, or the need for new or physically-altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:
- 1 i) Fire protection?
- 1 ii) Police protection?
- 1 iii) Schools?
- 1 iv) Parks?
- 1 v) Other public facilities?

XVI. RECREATION

Would the project:

- 1 a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?
- 1 b) Include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

XVII. TRANSPORTATION

Would the project:

- 1 a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?
- 2 b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?
- 1 c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?
- 1 d) Result in inadequate emergency access?

XVIII. TRIBAL CULTURAL RESOURCES

Would the project:

- 3 a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
- 3 i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or
- 3 ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public

Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

XIX. UTILITIES AND SERVICE SYSTEMS

Would the project:

- 1 a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?
- 1 b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?
- 1 c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?
- 2 d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?
- 2 e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

XX. WILDFIRE

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

- 1 a) Substantially impair an adopted emergency response plan or emergency evacuation plan?
- 1 b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?
- 1 c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?
- 1 d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

XXI. MANDATORY FINDINGS OF SIGNIFICANCE

Would the project:

- 1 a) Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?
- 2 b) Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)
- 1 c) Have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?

County of Fresno

DEPARTMENT OF PUBLIC WORKS AND PLANNING
STEVEN E. WHITE, DIRECTOR

EVALUATION OF ENVIRONMENTAL IMPACTS

APPLICANT: Michael Ervin, Department of Public Works and Planning, Design Division
on behalf of the County of Fresno.

APPLICATION NO: Initial Study Application No. 7590

DESCRIPTION: Reconstruct an existing parking lot and remove underground storage tanks on a 0.43-acre parcel in the DTN (Downtown Neighborhood) Zone District (City of Fresno Zoning).

LOCATION: The project site is located on the northern corner of L Street and Merced Street and is located within the City of Fresno (APN: 446-115-15).

I. AESTHETICS

Except as provided in Public Resources Code Section 21099, would the project:

- A. Have a substantial adverse effect on a scenic vista; or
- B. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

FINDING: NO IMPACT:

The project site is an existing parking lot and no new structures are proposed. The project site is located within the downtown district of the City of Fresno. The only elements of the project that could affect scenic vistas would be the installation of light poles and a 6-foot high fence. Considering the building heights of adjacent parcels, no scenic vista is visible from the project site, therefore no adverse effect on a scenic vista is seen. No scenic resources, historic buildings, or state scenic highways were identified on or near the project site.

- C. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

FINDING: LESS THAN SIGNIFICANT IMPACT:

According to the City of Fresno Zone Map, the project site is zoned DTN (Downtown Neighborhood). Per Chapter 15, Article 15, Section 15-1502 of the City of Fresno Ordinance Code, public or private parking is permitted subject to parking buffering and parking access and entrance design regulations.

- D. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

FINDING: LESS THAN SIGNIFICANT IMPACT WITH MITIGATION INCORPORATED:

The project proposes to install light poles throughout the parking lot. A Mitigation Measure will be incorporated with the project to minimize light and glare impacts from the proposed light installations. All outdoor lights shall be hooded and directed downward so as not to shine toward adjacent properties and public streets and roadways.

* **Mitigation Measure(s)**

1. *All outdoor lights shall be hooded and directed downward so as not to shine toward adjacent properties and public streets and roadways.*

II. AGRICULTURAL AND FORESTRY RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology in Forest Protocols adopted by the California Air Resources Board. Would the project:

- A. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use; or
- B. Conflict with existing zoning for agricultural use, or a Williamson Act Contract?

FINDING: NO IMPACT:

According to the 2014 Fresno County Important Farmlands Map, the project site is located in designated Urban and Built-up Land. The project is not located on agricultural land and is currently being utilized as a parking lot. The project will not conflict any agricultural use as no agricultural use is located in the vicinity of the project location.

- C. Conflict with existing zoning for forest land, timberland or timberland zoned Timberland Production; or

D. Result in the loss of forest land or conversion of forest land to non-forest use?

FINDING: NO IMPACT:

The project site is not located on or near forest land, timberland, or timberland zoned Timberland Production. The project will not result in the loss of forest land or conversion of forest land to non-forest use.

E. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

FINDING: NO IMPACT:

The project site is located within the City of Fresno and is not located near farmland or forest land. Based on the project's location, the project is not expected to result in converting farmland to non-agricultural use or convert forest land to non-forest use.

III. AIR QUALITY

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:

A. Conflict with or obstruct implementation of the applicable Air Quality Plan?

FINDING: NO IMPACT:

The San Joaquin Valley Air Pollution Control District (SJVAPCD) has reviewed the project proposal and did not express any concerns with regard to any applicable Air Quality Plan.

B. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard; or

FINDING: LESS THAN SIGNIFICANT IMPACT:

Temporary increases in criteria pollutants is expected during the construction of the project proposal. Once the underground storage tanks are removed, imported clean fill will replace the existing contaminated fill and then repaved. The redesign of the parking lot is expected to provide structure and optimize use of the existing space. The redesign will limit the amount of parking spaces to 48 stalls including ADA accessible stalls. Although the number of parking stalls on the existing lot is not known, aerial images suggest that parking spaces exceed the proposed capacity of 48 stalls. A less than significant impact is seen on criteria pollutants as a capacity limit is placed on automobile

stalls, the existing use is not changing, and that temporary increases of criteria pollutants may occur during construction of the project.

- C. Expose sensitive receptors to substantial pollutant concentrations; or
- D. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

FINDING: LESS THAN SIGNIFICANT IMPACT:

The project site is located within the downtown Fresno area which provides a mix of commercial, residential, and office uses. As the project site is an existing parking lot, sensitive receptors are already being exposed to pollutant concentrations and emissions from automobile traffic. Temporary increases of pollutants and emissions will occur during construction of the project, but the project will provide a limit to the amount of vehicles utilizing the lot once construction is completed. The proposal is to provide 48 parking stalls including ADA Accessible stalls. Aerial imaging of the project site from August 23, 2018 show that 32-34 automobiles utilize the site with plenty of space still available for parking, which suggests that the number of automobiles able to utilize the site will exceed what the redesign proposes. By comparing the potential of the existing site versus the proposed limit of 48 spaces, the proposal will reduce the amount of parking spaces from the existing lot thereby reducing potential pollutant concentrations and emissions to a less than significant impact.

IV. BIOLOGICAL RESOURCES

Would the project:

- A. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

FINDING: NO IMPACT:

The project site is located within the downtown Fresno which experiences human disturbance on a daily occurrence. The subject property is currently improved with a parking lot and underground storage tanks from the previous service station use. According to the California Natural Diversity Database (CNDDDB), there have been three reported occurrences of special status species. The identified species are the Swainson's Hawk, the California Tiger Salamander, and the California Jewelflower. The California Tiger Salamander and the California Jewelflower were listed as extirpated on the CNDDDB site and are therefore not seen as being affected by the project proposal. The last reported occurrence of the Swainson's Hawk is from 1956 and is presumed extant in the project site. According to the Five-Year Status Review of the Swainson's Hawk in California – 2016 by the California Department of Fish and Wildlife (CDFW), habitat for the Swainson's Hawk require large open areas of suitable foraging habitat with abundant and available prey base in association with suitable nesting habitat.

Suitable foraging habitat includes a variety of agricultural crops, grasslands, and pasture. Suitable nesting habitat includes trees within mature riparian forest or corridors, lone oak trees and oak groves, and mature roadside trees. CDFW Swainson's Hawk surveys in 2002-2009 indicated that nest sites are generally adjacent to, or within easy flying distance to suitable foraging habitat that provides available prey resources. As the project site is located in an urban area and a ways from preferred riparian or agricultural sites, impacts to Swainson's Hawk is not seen. Therefore there will be no impact on any special status species. Additionally, the California Department of Fish and Wildlife was given the opportunity to provide comments on the project proposal. No concerns were expressed by CDFW regarding any special status species.

- B. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service; or
- C. Have a substantial adverse effect on state or federally-protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means; or
- D. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

FINDING: NO IMPACT:

No riparian habitat or other sensitive natural community has been identified on or in the vicinity of the project site. According to the National Wetlands Inventory, no wetlands is identified on or near the project site. The project will not interfere with the movement of any native resident, migratory fish, wildlife species, established native resident or migratory wildlife corridor and will not impede the use of native wildlife nursery sites.

- E. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; or
- F. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state Habitat Conservation Plan?

FINDING: NO IMPACT:

The project will not conflict with any local policies or ordinances protecting biological resources and will not conflict with an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state Habitat Conservation Plan.

V. CULTURAL RESOURCES

Would the project:

- A. Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5; or
- B. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5; or
- C. Disturb any human remains, including those interred outside of formal cemeteries?

FINDING: LESS THAN SIGNIFICANT IMPACT WITH MITIGATION INCORPORATED:

The project site will experience ground disturbance with the removal of the existing underground storage tanks. Due to underground storage tanks being present on the site, ground disturbance has already occurred on the project site. The presence of cultural resources is minimal due to the existing disturbed nature of the site. In the event that cultural resources are found during ground disturbing activities, mitigation measures will be incorporated to minimize impacts to cultural resources.

* **Mitigation Measure(s)**

1. *In the event that cultural resources are unearthed during ground-disturbing activities, all work shall be halted in the area of the find. An Archeologist shall be called to evaluate the findings and make any necessary mitigation recommendations. If human remains are unearthed during ground-disturbing activities, no further disturbance is to occur until the Fresno County Sheriff-Coroner has made the necessary findings as to origin and disposition. All normal evidence procedures should be followed by photos, reports, video, etc. If such remains are determined to be Native American, the Sheriff-Coroner must notify the Native American Commission within 24 hours. Additional archaeological surveys will be needed if project limits are extended beyond the present survey limits.*

VI. ENERGY

Would the project:

- A. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation; or
- B. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

FINDING: LESS THAN SIGNIFICANT IMPACT WITH MITIGATION INCORPORATED:

The project will be built to the most current building code standards which account for energy efficiency. Mitigation Measures will be implemented to avoid wasteful, inefficient, or unnecessary consumption of energy resources during project demolition and construction.

* **Mitigation Measure(s)**

1. *The idling of onsite vehicles and equipment shall be avoided to the most possible extent to avoid wasteful or inefficient consumption of energy resources during project demolition and construction.*

VII. GEOLOGY AND SOILS

Would the project:

- A. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

1. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

FINDING: NO IMPACT:

According to the Earthquake Hazard Zone Application administered by the California Department of Conservation, the project site is not located on or near a rupture of a known earthquake fault.

2. Strong seismic ground shaking?
3. Seismic-related ground failure, including liquefaction?
4. Landslides?

FINDING: NO IMPACT:

According to the City of Fresno General Plan, Noise and Safety Element, the City of Fresno is not located near a known active earthquake fault zone. Seismic-related concerns including ground shaking and seismic-related ground failure are minimal. According to Figure 9-5 of the Fresno County General Plan Background Report (FCGPBR), the project site is not located on or near identified probabilistic seismic hazards. Additionally, per Figure 9-6 of the FCGPBR, the project site is not located near identified landslide hazards. The project site is located on very flat land and is not expected to be affected by landslide hazards.

- B. Result in substantial soil erosion or loss of topsoil?

FINDING: NO IMPACT:

According to the City of Fresno General Plan, Noise and Safety Element, the City of Fresno is not susceptible to soil erosion with the exception of land within 300 feet of the toe of the San Joaquin River bluffs, where steep slopes and soil composition predispose it to instability and erosion. The project site is not located near the San Joaquin River

and according to Figure 7-3 and 7-4 of the FCGPBR, the project is not located on identified Erosion Hazard areas.

- C. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

FINDING: NO IMPACT:

No geologic unit or unstable soils has been identified on the project site. The project proposal will consist of the removal of underground storage tanks, importing of clean fill and compacted to current standards to support the proposed use. Current building code standards will dictate the construction of the proposed parking lot minimizing risk of landslide, lateral spreading, subsidence, liquefaction or collapse.

- C. Be located on expansive soil as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

FINDING: NO IMPACT:

According to the City of Fresno General Plan, Noise and Safety Element, expansive soils are identified in the northern portion of the City of Fresno's Sphere of Influence. According to the FCGPBR, no expansive soils are identified near the project site.

- D. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water; or
- E. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

FINDING: NO IMPACT:

The project proposal will remove existing underground storage tanks and replace contaminated fill with clean imported fill. As the proposal is for a parking lot and is within the City of Fresno which provides sewer services, no septic tank or alternative wastewater disposal system is being proposed. No unique paleontological resource or geologic feature has been identified on the project site.

VIII. GREENHOUSE GAS EMISSIONS

Would the project:

- A. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or
- B. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

FINDING: LESS THAN SIGNIFICANT IMPACT:

The existing use of a parking lot for the project site will not change. A temporary increase of greenhouse gas emissions may occur during demolition and construction of the project proposal. Operation of the use will not generate greenhouse gases in excess of what is generated from the existing use. Although automobiles will be located onsite, throughout most of the business day, parked automobiles will be turned off and not producing emissions. The proposal will optimize the space and allow for 48 parking stalls. Aerial images of the existing site suggest that more than 48 spaces are available for parked automobiles. With the proposed design, a limit will be placed and reduce the number of potential spaces compared to existing site conditions.

VIII. HAZARDS AND HAZARDOUS MATERIALS

Would the project:

- A. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials; or
- B. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

FINDING: LESS THAN SIGNIFICANT IMPACT:

A Phase I Environmental Assessment conducted by RMA GeoScience on January 9, 2017 was prepared for the project as records indicate that the project site is located on underground storage tanks that pose environmental risks. The assessment concluded that petroleum hydrocarbons were detected in the area of former underground storage tanks. The former garage, hydraulic lift and sump constituted a recognized environmental condition. No records were identified for the removal of two 55 gallon underground storage tank, which leads to the conclusion that the underground storage tanks are still located onsite. A Phase II Site Assessment was then conducted to further assess soil conditions and present findings of a ground penetrating radar scan to locate any remaining underground storage tanks. The Phase II Site Assessment concludes that the contaminated soils could pose threats to human health and environment, but are limited to the underground storage tank excavation areas between depths of approximately 3.5 and 7.5 feet below ground. The report recommends that petroleum hydrocarbon impacted soil encountered in the excavation area be removed and replaced with clean, import fill material and remove existing waste oil tank and the identified underground storage tank which is presumed to be the unaccounted two 55-gallon underground storage tanks. The project proposal is to demolish the existing parking lot, remove underground storage tanks located on the project site, replace contaminated fill with clean imported fill, and repave and rebuild the parking lot to current standards. As the project will be removing underground storage tanks and replacing contaminated fill, the Department of Public Health, Environmental Health Division has reviewed the submitted application and provided comments to minimize hazardous materials and

hazardous waste impacts. The Applicant shall apply for and secure an Underground Storage Tank Removal Permit from the Fresno County Department of Public Health, Environmental Health Division. All hazardous waste shall be handled in accordance with requirements set forth in the California Code of Regulations (CCR), Title 22, Division 4.5. This Division discusses proper labeling, storage and handling of hazardous waste. As the project will be removing the underground storage tanks and removing contaminated fill, the project will have a beneficial impact on the site.

- C. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

FINDING: LESS THAN SIGNIFICANT IMPACT:

The project site is located within a one-quarter mile of an existing school. Although the project site is located near an existing school, the handling of hazardous materials and waste will be confined to the time that the underground storage tanks and contaminated fill are removed from the project site. Removal of the storage tanks and contaminated fill will follow strict compliance with local, state, and federal standards. As the project will not continuously handle hazardous materials or waste and will be held to strict standards of handling the hazardous materials and waste, a less than significant impact is seen.

- D. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

FINDING: LESS THAN SIGNIFICANT IMPACT:

According to the County of Fresno Environmental Health Certified Unified Program Agency (CUPA) which is responsible for implementing a unified hazardous materials and hazardous waste management regulatory program, lists the project site as a former contaminated site with the presence of underground storage tanks. The proposal for the project will be removing the underground storage tanks and replacing contaminated soil with clean imported fill. The project site will then be repaved for the proposed parking lot. As the project will be remediating the hazardous conditions by removal of underground storage tanks and contaminated fill, the project will not create a significant hazard to the public or environment, but will have a beneficial impact.

- E. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

FINDING: LESS THAN SIGNIFICANT IMPACT:

The project site is located within 2 miles of the Fresno Chandler Downtown Airport. Temporary increases to noise will occur during demolition and construction of the project. Automobiles utilizing the site during workdays will produce minor increases to noise. The rest of the time, the area will not produce noise. The project site is built at ground level and is not expected to result in a safety hazard for people residing or working in the

project area. Although noise will be produced, the amount of noise produced during project area utilization will not adversely impact people residing or working in the project area.

- F. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; or
- G. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

FINDING: NO IMPACT:

The project will not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. The project also will not expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires.

X. HYDROLOGY AND WATER QUALITY

Would the project:

- A. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

FINDING: LESS THAN SIGNIFICANT IMPACT:

The project proposes to remove underground storage tanks, replace contaminated fill, and repave the existing parking lot. The project will remove contaminated fill that was contaminated by the underground storage tanks which will improve ground water quality as there is no potential of the contaminated fill to come into contact with ground water. The Fresno Metropolitan Flood Control District has reviewed the subject application and has required that drainage from the site shall be directed to Merced and/or "L" Street and that no surface runoff shall be directed towards the alley. With the project following requirements set by the Fresno Metropolitan Flood Control District, the project will have a less than significant impact on surface water quality. The project will not violate any water quality standards or waste discharge requirements. Additionally, the Water and Natural Resources Division and the State Water Resources Control Board have reviewed the subject application and did not express any concerns with regard to the proposal.

- B. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

FINDING: NO IMPACT:

The project is an existing parking lot and will not decrease groundwater supplies. As the project site will be paved, it will not contribute to groundwater recharge. Although the

project will not contribute to groundwater recharge, the project will not impede sustainable groundwater management.

- C. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on or off site?

1. Result in substantial erosion or siltation on- or off-site?

FINDING: NO IMPACT:

The project site is already paved for a parking lot. The project will be designed to current standards to minimize risks of erosion and siltation.

2. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?
3. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

FINDING: LESS THAN SIGNIFICANT IMPACT:

The project has been designed to utilize existing drainage facilities more effectively than current conditions of the existing site. Proposed concrete valley gutters and proposed channels through the sidewalk will direct surface runoff to the existing drainage facilities. The Fresno Metropolitan Flood Control District (FMFCD) has reviewed the subject application and requires drainage from the site shall be directed to Merced and/or "L" Streets, and that no surface runoff shall be directed towards the alley. Design of the proposed parking lot show that gutters and channels direct water runoff towards L Street.

4. Impede or redirect flood flows?

FINDING: NO IMPACT:

The project site is not located in a flood zone and will not impede or redirect flood flows.

- D. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

FINDING: LESS THAN SIGNIFICANT IMPACT:

According to FEMA FIRM Panel C2110H, the project site is partially located in 0.2 percent Annual Chance Flood Hazard and Area of Minimal Flood Hazard which are classified as non-special flood hazard zones. According to Figure 9-8 of the Fresno County General Plan Background Report, the project site is located in or near identified Dam Failure Flood Inundation Areas. Although the project is located on or near the identified inundation areas, the project proposal of a parking lot is not a pollutant

generator that could increase risk of pollutant release. The project site is not located near any body of water that would pose tsunami or seiche risks.

- E. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

FINDING: NO IMPACT:

The project will not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan as the use will not utilize water facilities and does not propose facilities that could degrade water quality. Additionally, the project will have a beneficial impact to water quality as contaminated fill that were identified in the site assessment documents will be removed to improve soil quality and reduce risk of groundwater contamination.

XI. LAND USE AND PLANNING

Would the project:

- A. Physically divide an established community?

FINDING: NO IMPACT:

The project proposal will not physically divide an established community.

- B. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

FINDING: LESS THAN SIGNIFICANT IMPACT:

The Policy Planning Section of the Development Services and Capital Projects Division has reviewed the project and have provided comments related to the proposal. According to Policy HS-F.3, the County, through its Hazardous Materials Incident Response Plan, shall coordinate and cooperate with emergency response agencies to ensure adequate countywide response to hazardous materials incidents. According to Policy HS-F.4, for redevelopment or infill projects or where past site uses suggest environmental impairment, the County shall require that an investigation be performed to identify the potential for soil or groundwater contamination. In the event soil or groundwater contamination is identified or could be encountered during site development, the County shall require a plan that identified potential risks and actions to mitigate those risks prior to, during, and after construction. According to Policy HS-F.6, the County shall work cooperatively with the State Department of Toxic Substances Control and Regional Water Quality Control Board to promote the timely and efficient cleanup of contaminated sites under the regulatory oversight of these agencies.

In regard to Policy HS-F.3, the Department of Public Health, Environmental Health Division requires the Applicant to apply for and receive an Underground Storage Tank Removal Permit. Additionally, all hazardous waste shall be handled in accordance with

requirements set forth in the California Code of Regulations (CCR), Title 22, Division 4.5. The Fresno Fire Department has reviewed the subject application and expressed no concern with regard to responses to hazardous materials incidents.

In regard to Policy HS-F.4, a Phase 1 Environmental Assessment and Phase 2 Site Investigation Report were conducted to review the project site for the presence of hazardous materials and or soil contamination. The Phase 1 Environmental Assessment concluded that past environmental reports conducted for the project site indicate that petroleum hydrocarbons were detected in the soil from the area of the former underground storage tanks, but was considered low priority due to no evidence of groundwater contamination. Based on research and findings, the former garage structure with hydraulic lift and sump constitutes a recognized environmental condition (REC). No records were identified for the removal of the two 55-gallon underground storage tanks installed at the site in 1953. The lack of documentation, shows the possibility that the underground storage tanks are still at the site. The Phase 2 Site Investigation Report was completed in accordance with findings and recommendations provided by the Phase 1 Environmental Site Assessment. The Phase 2 Site Investigation Report then concluded and recommended that petroleum hydrocarbon impacted soil encountered in the excavation area be removed and replaced with clean, import fill material. Removal and replacement of petroleum impacted soil in the underground storage tank excavation area will significantly reduce the potential threat to human health and the environment by mitigation the source of contamination currently impacting soil-gas conditions. Lastly, removing the existing waste oil tank and the identified underground storage tank located by the ground penetrating radar in accordance with the County of Fresno Environmental Health Certified Unified Program Agency (CUPA).

In regard to Policy HS-F.6, the State Department of Toxic Substances Control and the Regional Water Quality Control Board were given the opportunity to review the subject application. Both agencies did not express concerns with regard to the project proposal.

XII. MINERAL RESOURCES

Would the project:

- A. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state; or
- B. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local General Plan, Specific Plan or other land use plan?

FINDING: NO IMPACT:

According to Figure 7-7 of the FCGPBR, the project site is not located in identified Mineral Resource Locations. Therefore, the project will not result in the loss of availability of known mineral resources or the loss of availability of a locally-important mineral resource recovery site.

XIII. NOISE

Would the project result in:

- A. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

FINDING: LESS THAN SIGNIFICANT IMPACT:

The project site will generate a temporary increase in noise levels during the demolition and construction of the project. As the project is located within the City of Fresno, considerations to the City of Fresno Noise Ordinance will be made so that exceedance of noise thresholds within the City of Fresno does not occur. As the parking lot use will not change, increases in noise levels will not occur and will not exceed the City of Fresno Noise Ordinance thresholds.

- B. Generation of excessive ground-borne vibration or ground-borne noise levels?

FINDING: LESS THAN SIGNIFICANT:

Generation of ground-borne vibration could temporarily occur during demolition and construction of the project proposal. After construction is complete, ground-borne vibration is not expected to exceed what is already being produced from the existing parking lot use.

- C. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels; or

FINDING: LESS THAN SIGNIFICANT IMPACT:

The project site is located within two miles of the Fresno-Chandler Executive Airport. According to the Fresno County Airport Land Use Compatibility Plan (ALUCP), the project site is outside of elevated noise level areas of the Fresno-Chandler Executive Airport. Temporary increases in noise are expected during the demolition and construction of the project. Utilization of the parking lot will not produce elevated noise levels and is expected to match or lower noise levels compared to existing conditions.

XIV. POPULATION AND HOUSING

Would the project:

- A. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?; or

- B. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

FINDING: NO IMPACT:

The project proposal will not induce substantial unplanned population growth as most of the properties within the vicinity of the project site are already developed. As the existing use of the project site is a parking lot, the project proposal will not displace a substantial amount of people or housing necessitating construction of replacement housing elsewhere.

XV. PUBLIC SERVICES

Would the project:

- A. Result in substantial adverse physical impacts associated with the provision of new or physically-altered governmental facilities, or the need for new or physically-altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services?

1. Fire protection;

FINDING: NO IMPACT:

The Fresno Fire Department has reviewed the subject proposal and expressed no concerns with regard to the provision of new or physically-altered governmental facilities.

2. Police protection;

3. Schools;

4. Parks; or

5. Other public facilities?

FINDING: NO IMPACT:

No other reviewing agency expressed concerns with regard to the provision of new or physically-altered governmental facilities.

XVI. RECREATION

Would the project:

- A. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated; or

- B. Include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

FINDING: NO IMPACT:

The project will not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. The project will not include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment.

XVI. TRANSPORTATION

Would the project:

- A. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

FINDING: NO IMPACT:

The project proposal was designed with consideration of the City of Fresno's pedestrian facility design standards and also the Fresno Metropolitan Flood Control District's request for water drainage directed toward their facilities. Additionally, the City of Fresno was given the opportunity to provide comment on the project proposal, and no concerns were expressed. As those design standards and regulations were taken into account, the project will not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.

- B. Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

FINDING: LESS THAN SIGNIFICANT IMPACT:

As the existing use will not change, vehicle miles traveled are not expected to increase. Because the existing parking lot has minimal structure in regard to striping and defined spaces, the proposal will limit the amount of parking spaces which can be seen as decreasing the amount of potential automobiles parking onsite. By reducing the amount of automobiles utilizing the site, the total amount of vehicle miles traveled to this site are reduced.

- C. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?; or
- D. Result in inadequate emergency access?

FINDING: NO IMPACT:

No reviewing agency expressed concerns with regard to design features that could substantially increase hazards. Access to the site has been taken off "L" Street and Merced Street and is confined to access from the alleyway that is adjacent to the project site. The alleyway is accessed by Merced Street further away from the intersection which will reduce potential hazards for traffic. The Fresno Fire Department has reviewed the subject proposal for emergency access and did not express any concerns.

XVIII. TRIBAL CULTURAL RESOURCES

Would the project:

- A. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
1. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or
 2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

FINDING: LESS THAN SIGNIFICANT IMPACT WITH MITIGATION INCORPORATED:

Per Assembly Bill 52 (AB52), participating California Native American Tribes were given the opportunity to enter consultation with the County in regard to the project proposal. No concerns were expressed by participating California Native American Tribes. Additionally, records indicate that the project site has experienced ground disturbance with the presence of underground storage tanks which could have disturbed any tribal cultural resource that may have occurred previously. A mitigation measure discussed in Section V. Cultural Resources will be implemented to address cultural resources and tribal cultural resources in the event that they are uncovered during ground-disturbing activities.

* **Mitigation Measure(s)**

1. See Section V. Cultural Resources A., B., and C. Mitigation Measure #1

XIX. UTILITIES AND SERVICE SYSTEMS

Would the project:

- A. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

FINDING: NO IMPACT:

The project will not require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities. The City of Fresno and the Fresno Metropolitan Flood Control District did not express any concerns with regard to relocation or construction of new or expanded facilities.

- B. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

FINDING: NO IMPACT:

The project proposal is for a parking lot that is unmanned. No water facilities are being proposed and are not needed to support the use.

- C. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

FINDING: NO IMPACT:

The project proposes to remove underground storage tanks, remove contaminated fill, and repave and improve the parking lot. The parking lot will not require an employee to be onsite and is not proposing or being required to install or connect to a wastewater treatment system.

- D. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; or

- E. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

FINDING: LESS THAN SIGNIFICANT IMPACT:

As the project will be demolishing the existing parking lot, removing underground storage tanks, removing contaminated fill, and then repaving the parking lot, solid waste and hazardous waste will be generated and removed to certified facilities during construction. However, operation of the project will not generate solid waste in excess of state or local standards. The project will comply with federal, state and local management and reduction statutes and regulations related to solid waste.

XX. WILDFIRE

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

- A. Substantially impair an adopted emergency response plan or emergency evacuation plan, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects; or
- B. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire; or
- C. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment; or
- D. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

FINDING: NO IMPACT:

The project site is not located in or near state responsibility areas or lands classified as very high fire hazard severity zones. The project has been reviewed by the Fresno Fire Department and no concerns were expressed. Additionally, the Fresno Fire Department commented that additional review will occur during submittal for building plan reviews required by the California Building Code.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE

Would the project:

- A. Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

FINDING: NO IMPACT:

The project site is located in the Downtown Fresno area and will not substantially degrade the quality of the environment, nor will it substantially reduce the habitat of a fish or wildlife species or cause a population drop of fish or wildlife below self-sustaining levels. Additionally, the project will not threaten to eliminate a plant or animal community and will not reduce or restrict the range of a special-status species, and will not eliminate important examples of major periods of California History or prehistory.

- B. Have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

FINDING: LESS THAN SIGNIFICANT IMPACT:

Cumulative impacts identified in the analysis were related to Aesthetics, Cultural Resources, Energy, and Tribal Cultural Resources. These impacts are being reduced to a less than significant impact with incorporated Mitigation Measures Discussed in Section 1.D., Section V.A, B., and C., Section VI.A, and B., and Section XVIII.A.1., and 2.

- C. Have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?

FINDING: NO IMPACT:

No substantial impacts on human beings, either directly or indirectly, were identified in the project analysis.

CONCLUSION/SUMMARY

Based upon the Initial Study prepared for Initial Study Application No. 7590, staff has concluded that the project will not have a significant effect on the environment. It has been determined that there would be no impacts to Agricultural and Forestry Resources, Biological Resources, Geology and Soils, Mineral Resources, Population and Housing, Public Services, Recreation and Wildfire.

Potential impacts related to Air Quality, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land-Use Planning, Noise, Transportation, and Utilities and Service Systems have been determined to be less than significant. Potential impacts relating to Aesthetics, Cultural Resources, Energy, and Tribal Cultural Resources have determined to be less than significant with compliance with implemented Mitigation Measures.

A Mitigated Negative Declaration/Negative Declaration is recommended and is subject to approval by the decision-making body. The Initial Study is available for review at 2220 Tulare Street, Suite A, street level, located on the southwest corner of Tulare and “M” Street, Fresno, California.

Mitigation Monitoring and Reporting Program
Initial Study Application No. 7590
(Including Conditions of Approval and Project Notes)

Mitigation Measures					
Mitigation Measure No.*	Impact	Mitigation Measure Language	Implementation Responsibility	Monitoring Responsibility	Time Span
1.	Aesthetics	All outdoor lights shall be hooded and directed downward so as not to shine toward adjacent properties and public streets and roadways.	Applicant	Applicant/Public Works and Planning (PW&P)	Ongoing
2.	Cultural Resources/ Tribal Cultural Resources	In the event that cultural resources are unearthed during ground-disturbing activities, all work shall be halted in the area of the find. An Archeologist shall be called to evaluate the findings and make any necessary mitigation recommendations. If human remains are unearthed during ground-disturbing activities, no further disturbance is to occur until the Fresno County Sheriff-Coroner has made the necessary findings as to origin and disposition. All normal evidence procedures should be followed by photos, reports, video, etc. If such remains are determined to be Native American, the Sheriff-Coroner must notify the Native American Commission within 24 hours.	Applicant	Applicant/PW&P	During ground-disturbing activities.
3.	Energy	The idling of onsite vehicles and equipment shall be avoided to the most possible extent to avoid wasteful or inefficient consumption of energy resources during project demolition and construction.	Applicant	Applicant/PW&P	During demolition and construction
Conditions of Approval					
1.	The Applicant shall apply for and secure an Underground Storage Tank Removal Permit from the Fresno County Department of Public Health, Environmental Health Division.				
*MITIGATION MEASURE – Measure specifically applied to the project to mitigate potential adverse environmental effects identified in the environmental document. Conditions of Approval reference recommended Conditions for the project.					
Notes					
The following Notes reference mandatory requirements of Fresno County or other Agencies and are provided as information to the project Applicant.					
1.	All hazardous waste shall be handled in accordance with requirements set forth in the California Code of Regulations (CCR), Title 22, Division 4.5. This Division discusses proper labeling, storage, and handling of hazardous wastes.				
2.	The proposed project may result in significant short-term noise due to construction equipment use. Consideration should be given to the City of Fresno's municipal code.				
3.	In an effect to protect groundwater, any abandoned water wells and septic systems found during the project on the parcel shall be properly destroyed by an appropriately licensed contractor (permits required).				
	Prior to destruction of agricultural wells, a sample of the upper most fluid in the well column should be sampled for lubricating				

Notes	
	oil. The presence of oil staining around the well may indicate the use of lubricating oil to maintain the well pump. Should lubricating oil be found in the well, the oil should be removed from the well prior to placement of fill material for destruction. The "oily water" removed from the well must be handled in accordance with federal, state and local government requirements.
4.	Drainage from the site shall be directed to Merced and/or "L" Street.
5.	No surface runoff shall be directed towards the alley.

DRAFT NOTICE OF DETERMINATION

To: ☐ Office of Planning and Research
1400 Tenth Street, Room 121
Sacramento, CA 95814

☒ County Clerk, County of Fresno
2221 Kern Street
Fresno, CA 93721

From: Fresno County Department of Public Works and Planning, Development Services
and Capital Projects
2220 Tulare Street (corner of Tulare and "M") Suite "A", Fresno, CA 93721

Subject: Filing of Notice of Determination in compliance with Section 21152 of the Public
Resource Code

Project: Initial Study Application No. 7590 – Assessor-Recorder's Office Parking Lot
Improvements

Location: The subject parcel is located on the northern corner of "L" Street and Merced
Street (Sup. Dist. 3) (APN 466-115-15).

Sponsor: Michael Ervin, Department of Public Works and Planning, Design Division
On behalf of
The County of Fresno

Description: Reconstruct an existing parking lot and remove underground storage tanks on a
0.43-acre parcel in the DTN (Downtown Neighborhood) Zone District.

This is to advise that the County of Fresno (☒ Lead Agency ☐ Responsible Agency) has
approved the above described project on June 18, 2019 and has made the following
determination:

1. The project ☐ will ☒ will not have a significant effect on the environment.
2. ☒ An Environmental Impact Report (EIR) was not prepared for this project pursuant to the
provisions of CEQA. / ☒ A Mitigated Negative Declaration was prepared for this project
pursuant to the provisions of CEQA.
3. Mitigation Measures ☒ were ☐ were not made a condition of approval for the project.
4. A statement of Overriding Consideration ☐ was ☒ was not adopted for this project.

This is to certify that the Initial Study with comments and responses and record of project
approval is available to the General Public at Fresno County Department of Public Works and
Planning, 2220 Tulare Street, Suite A, Corner of Tulare and "M" Streets, Fresno, California.

SUBJECT: Initial Study Application No. 7590

APPLICANT: Fresno County Department of Public Works and Planning, Design Division

DUE DATE: March 4, 2019

The Department of Public Works and Planning, Development Services and Capital Projects Division is reviewing the subject application proposing to remove underground storage tanks and reconstruct an existing parking lot at the north corner of Merced Street and L Street. The subject property is approximately 0.43 acres, owned by the County of Fresno and located in the City of Fresno.

The Department is also reviewing for environmental effects, as mandated by the California Environmental Quality Act (CEQA) and for conformity with plans and policies of the County.

Based upon this review, a determination will be made regarding conditions to be imposed on the project.

We must have your comments by **March 4, 2019**. Any comments received after this date may not be used.

NOTE - THIS WILL BE OUR ONLY REQUEST FOR WRITTEN COMMENTS. If you do not have comments, please provide a "NO COMMENT" response to our office by the above deadline (e-mail is also acceptable; see email address below).

Please address any correspondence or questions related to environmental and/or policy/design issues to me, Thomas Kobayashi, Planner, Development Services and Capital Projects Division, Fresno County Department of Public Works and Planning, 2220 Tulare Street, Sixth Floor, Fresno, CA 93721, or call (559) 600-4224, or email TKobayashi@FresnoCountyCA.gov.

12. Will the project utilize Federal funds or require other Federal authorization subject to the provisions of the National Environmental Policy Act (NEPA) of 1969? _____ Yes x No

If so, please provide a copy of all related grant and/or funding documents, related information and environmental review requirements.

13. Existing Zone District¹: DTN - Downtown Neighborhood

14. Existing General Plan Land Use Designation¹: Parking

ENVIRONMENTAL INFORMATION

15. Present land use: Parking
Describe existing physical improvements including buildings, water (wells) and sewage facilities, roads, and lighting. Include a site plan or map showing these improvements:

Describe the major vegetative cover: None

Any perennial or intermittent water courses? If so, show on map: No

Is property in a flood-prone area? Describe:

16. Describe surrounding land uses (e.g., commercial, agricultural, residential, school, etc.):

North: Commercial Offices / Parking / Residential

South: Commercial Offices / Government Offices

East: Commercial Offices / Jail

West: Commercial Offices / Parking

17. What land use(s) in the area may be impacted by your Project?: None

18. What land use(s) in the area may impact your project?: None

19. Transportation:

NOTE: The information below will be used in determining traffic impacts from this project. The data may also show the need for a Traffic Impact Study (TIS) for the project.

A. Will additional driveways from the proposed project site be necessary to access public roads?
 Yes x No

B. Daily traffic generation:

I.	Residential - Number of Units	<u>N/A</u>
	Lot Size	<u>N/A</u>
	Single Family	<u>N/A</u>
	Apartments	<u>N/A</u>

II.	Commercial - Number of Employees	<u>N/A</u>
	Number of Salesmen	<u>N/A</u>
	Number of Delivery Trucks	<u>N/A</u>
	Total Square Footage of Building	<u>N/A</u>

III. Describe and quantify other traffic generation activities: None.

20. Describe any source(s) of noise from your project that may affect the surrounding area: _____

Temporary construction noise.

21. Describe any source(s) of noise in the area that may affect your project: _____

None.

22. Describe the probable source(s) of air pollution from your project: _____

Temporary dust from construction activities.

23. Proposed source of water:

☐ private well
☐ community system³--name: N/A

OVER.....

24. Anticipated volume of water to be used (gallons per day)²: N/A
25. Proposed method of liquid waste disposal:
() septic system/individual
() community system³-name N/A
26. Estimated volume of liquid waste (gallons per day)²: N/A
27. Anticipated type(s) of liquid waste: N/A
28. Anticipated type(s) of hazardous wastes²: Removed USTs
29. Anticipated volume of hazardous wastes²: 2-3 55Gal USTs
30. Proposed method of hazardous waste disposal²: _____
31. Anticipated type(s) of solid waste: N/A
32. Anticipated amount of solid waste (tons or cubic yards per day): N/A
33. Anticipated amount of waste that will be recycled (tons or cubic yards per day): N/A
34. Proposed method of solid waste disposal: N/A
35. Fire protection district(s) serving this area: N/A
36. Has a previous application been processed on this site? If so, list title and date: Unknown
37. Do you have any underground storage tanks (except septic tanks)? Yes X No _____
38. If yes, are they currently in use? Yes _____ No X

TO THE BEST OF MY KNOWLEDGE, THE FOREGOING INFORMATION IS TRUE.

NOTICE AND ACKNOWLEDGMENT

INDEMNIFICATION AND DEFENSE

The Board of Supervisors has adopted a policy that applicants should be made aware that they may be responsible for participating in the defense of the County in the event a lawsuit is filed resulting from the County's action on your project. You may be required to enter into an agreement to indemnify and defend the County if it appears likely that litigation could result from the County's action. The agreement would require that you deposit an appropriate security upon notice that a lawsuit has been filed. In the event that you fail to comply with the provisions of the agreement, the County may rescind its approval of the project.

STATE FISH AND WILDLIFE FEE

State law requires that specified fees (effective January 1, 2019: \$3,271.00 for an EIR; \$2,354.75 for a Mitigated/Negative Declaration) be paid to the California Department of Fish and Wildlife (CDFW) for projects which must be reviewed for potential adverse effect on wildlife resources. The County is required to collect the fees on behalf of CDFW. A \$50.00 handling fee will also be charged, as provided for in the legislation, to defray a portion of the County's costs for collecting the fees.

The following projects are exempt from the fees:

- 1. All projects statutorily exempt from the provisions of CEQA (California Environmental Quality Act).*
- 2. All projects categorically exempt by regulations of the Secretary of Resources (State of California) from the requirement to prepare environmental documents.*

A fee exemption may be issued by CDFW for eligible projects determined by that agency to have "no effect on wildlife." That determination must be provided in advance from CDFW to the County at the request of the applicant. You may wish to call the local office of CDFW at (559) 222-3761 if you need more information.

Upon completion of the Initial Study you will be notified of the applicable fee. Payment of the fee will be required before your project will be forwarded to the project analyst for scheduling of any required hearings and final processing. The fee will be refunded if the project should be denied by the County.

Project Description
Assessor-Recorder's Office Parking Lot Improvements

DEPARTMENT OF PUBLIC WORKS
AND PLANNING
DEVELOPMENT SERVICES DIVISION

The purpose of the proposed project is to reconstruct an existing parking lot and remove underground storage tanks at the corner of Merced Street and L Street. The scope of the proposed improvement is to remove about .43 ac. of existing parking lot asphalt concrete pavement. All existing improvements within the footprint are being demolished, including but not limited to the underground storage tanks, existing light poles, wheel stops, planters, trees, etc. These tasks will be implemented in multiple stages.

The subject property is a 0.43 ac. existing parking lot owned by the County of Fresno. It is located in the City of Fresno downtown area, on the northeast corner of L St. and Merced St. (see location Map). Based on the earliest available data, a gas station was built in 1940 on the south half of the site and remained in operation until it was demolished in 1981. The site has been used as a parking lot since. The County of Fresno Assessor-Recorder Office has obtained the property and is improving the lot to provide adequate parking for staff.

The subject property is on the Certified Unified Program Agency (CUPA) list with the County of Fresno Division of Environmental Health. According to City of Fresno permit records, the gas station was listed as having five underground storage tanks. The tanks consisted of two (2) 1,000 gallon, one (1) 550 gallon and two (2) 55 gallon tanks. The three larger tanks, which contained gasoline, were removed in December 1981. The two 55 gallons, which stored kerosene, still exist on site. Based on the latest survey by RMA GeoScience in 2017, there is also one (1) waste oil tank on site.

In 1985, 1986 and 2002, several investigations were conducted to assess the soil and groundwater in the area for contamination. The latest environmental site investigation was performed and prepared by RMA GeoScience in 2017. RMA examined soil samples from on-site borings and performed ground penetrating radar scanning to determine the approximate locations of the underground storage tanks. Based on their findings, RMA recommended that the hydrocarbon impacted soil encountered in the excavation area be removed and replaced with clean, imported fill material. RMA also recommended the removal of the tanks in accordance with CUPA guidelines.

The parking lot would be repaved with asphalt concrete over aggregate base, over clean imported soil and restriped for new parking configuration. Profile grades and existing drainage patterns would be modified to improve drainage in the parking lot. Other improvements will be incorporated as part of the project, including new light poles, fence, automated gates, planters, and valley gutters, and converting the existing driveway approach to concrete sidewalks as shown on plans.

Water drainage from the parking lot would continue to flow toward the City of Fresno drainage system along L Street and be captured at the curb inlets located at the northeast corner of L St. and Merced St. owned and operated by Fresno Metropolitan Flood Control District.

Right of way acquisition is not anticipated. PG&E utility lines and existing parking meter adjacent to the parking lot would remain in place.

Adverse noise impacts are not anticipated. Construction noise associated with this project would be short term and intermittent. All noise generating construction activities would be limited to Monday through Friday from 7:00 am to 6:00 pm. The Fresno County Noise Ordinance specifically exempts construction-related noise impacts associated with the maintenance of public utilities conducted between the hours of 6:00 a.m. and 9:00 p.m. In addition, construction would be conducted in accordance with Caltrans Standard Specifications Section 14-8.02.

Fresno, California

Pursuant to your request, a Phase I Environmental Site Assessment has been performed at the subject site in accordance with the current Standard of Practice for Phase I Environmental Site Assessments per the ASTM:E 1527-13 guidelines. This report is presented for the sole use of County of Fresno and their representatives and/or associates to use as an indication whether hazardous materials and or soil contamination may be present on the site. This report may not contain sufficient information for other uses.

If you have any questions regarding the information presented in this report, please do not hesitate to contact our office. We appreciate the opportunity to be of service to you.

Sincerely,
RMA GeoScience, Inc.

EXECUTIVE SUMMARY

A Phase I Environmental Site Assessment (ESA) has been performed for 1250 Van Ness Avenue and 2211 Merced Street in Fresno, California (Site). The purpose of the assessment was to identify to the extent feasible any recognized environmental conditions in connection with the aforementioned properties. Our work was performed in conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E:1527-13).

The site consists of two properties. The first property is located at the southeast corner of Merced Street and Van Ness Avenue and is identified as 1250 Van Ness Avenue, APN 46615211. The second property is located 250 feet northeast of the first property at the northeast corner of Merced Street and L Street, and is identified as 2211 Merced Street, APN 46611515. It is also identified by a second address of 1316 L Street. The site is located in Fresno, California as shown in Figure 1. The property at 2211 Merced Street is currently paved with asphalt and is used as a parking lot. The property at 1250 Van Ness is currently used commercially as a bank and associated parking.

The property at 1250 Van Ness Avenue was used historically as a Methodist church from the earliest available data from 1885 to the late 1800s. A boarding house and repository occupied the site in the early 1900s and gave way several years later to four commercial buildings that housed Marshall's Auto Companies, auto repair, trimming and oil storage. Automotive businesses occupied the site from 1922 to 1932. The commercial buildings remained at the site and were used as a hotel from the mid 1940s up until the mid 1970s when the existing commercial bank building and associated parking lot was constructed.

Based on the earliest available data from 1888 the property at 2211 Merced Street was used residentially and as the site of a church up until 1940 when a gas station was constructed at the south half of the site. The north half remained as a boarding house/apartment building until its demolition in the mid 1980s.

The gas station consisted of a dispenser island at the southwest corner of the site and a garage with partial basement, hydraulic lift and sump at the central portion of the site (Fig. 2). It reportedly had 5 underground storage tanks (USTs) consisting of two 1,000 gallon tanks, one 550 gallon tank and two 55 gallon tanks. Kerosene and solvents were reportedly stored in the 55 gallon tanks. The three larger tanks were removed in December, 1981. One of the tanks was determined to have been leaking. There is no information regarding the fate of the 55 gallon tanks whether they were removed or left in place.

An investigation conducted at the site by Twining Laboratories in 1985 focused on the area of the former USTs. Twining concluded that contamination from gasoline existed in the sub-soils to a depth of approximately 55 feet below ground surface (bgs) and in the groundwater encountered at 75 feet bgs. They recommended further investigation to determine the lateral extent of groundwater and soil contamination. The case was referred to the Central Valley Regional Water Quality Control Board (RWQCB) who provided regional oversight.

In response to input by the RWQCB a monitoring well was installed at the northeast corner of the site (Fig. 2). Based on findings from soil and groundwater testing Twining concluded that the soils in the area of the monitoring well were not contaminated with gasoline and that the groundwater in the monitoring well did not appear to contain gasoline constituents.

In 2002 an attempt was made by Kleinfelder, Inc. to locate and sample the groundwater in the monitoring well installed by Twining in 1986. The depth of the well measured 84.5 feet and was dry. They concluded that depth of groundwater had dropped since 1986 to between 97 to 118 feet.

An additional site investigation was conducted at the site by Kleinfelder in 2002 and consisted of advancing two borings in the area of the former dispenser island and USTs. Petroleum hydrocarbons were detected in soil samples from 21, 46 and 56 feet below ground surface (bgs) in the boring advanced in the area of the former UST and were not detected in samples from 71 and 81 feet bgs. Kleinfelder recommended site closure as a low priority, soil-only impacted site citing no evidence that groundwater had been affected. RWQCB issued a Case Closure letter, dated May, 2002 concluding that residual petroleum hydrocarbon in the soil will naturally degrade and was not anticipated to pose a threat to the anticipated use of groundwater.

There are no records that the area of the former garage with hydraulic lift and sump was ever investigated. Given the lack of records for removal or abandonment of the two 55 gallon USTs that were reportedly installed at the former gas station it is presumed that they are still in place. During our site reconnaissance on November 22, 2016 we observed a concrete patch at the southwest corner of the site which is presumably the location of the former USTs.

Based on our research no environmental liens or activity use limitations were found for either address. Based on our review of the database listings within the one mile radius of the site we conclude that there no sites that would be considered a recognized environmental condition (REC) with respect to the subject site.

This assessment has revealed the following recognized environmental conditions in connection with the property.

2211 Merced Street

- Petroleum hydrocarbons were detected in the soil from the area of the former USTs in soil samples from 21, 46, and 56 feet bgs (Kleinfelder, 2002). Kleinfelder recommended site closure as a low priority, soil-impacted site as there was no evidence of groundwater contamination. RWQCB closed the case in 2002 concluding that the residual petroleum hydrocarbon in the soil will naturally degrade and was not anticipated to pose a threat to the use of groundwater. The petroleum hydrocarbons impacted soil remaining in place constitutes a historical recognized environmental Condition (HREC).
- Based on our research and findings the former garage structure with partial basement (Fig.2) was never investigated for contaminants associated with past automotive related activities. It is likely that auto repairs and oil changes occurred in the past in the garage as evidenced by the hydraulic lift and sump identified by Twining Laboratories in 1985. We conclude that the former garage with hydraulic lift and sump constitutes a recognized environmental condition (REC)
- No records were identified for the removal of the two 55 gallon USTs installed at the site in 1953 and reportedly contained kerosene and cleaning solvent. The lack of documentation leads us to conclude that they may still be present at the site and is therefore a REC.

1250 Van Ness Avenue

- The site was used historically for automotive repair and oil storage in the early 1900s (Fig. 3) and automotive related business from 1922 to 1938. Petroleum hydrocarbons used and stored at the site in the past may be present in the site soil and therefore constitute a REC.

Our recommendations are as follows:

2211 Merced Street

- We recommend a human health risk assessment of the petroleum impacted soil remaining in the area of the former USTs. Specifically for risks associated with soil vapors and the possible need for site mitigation.
- Conduct a site screening to locate the two 55 gallon USTs that were unaccounted for using subsurface imaging such as Ground Penetrating Radar.
- Assess the area of the former garage, hydraulic lift and sump for the presence of petroleum hydrocarbons, VOCs, SVOCs, heavy metals and PCBs

1250 Van Ness Avenue

- The possibility that Petroleum hydrocarbons used and stored at the site in the past may be present in the site soil cannot be ruled out. Therefore we recommend a site investigation to assess the site for the presence of petroleum hydrocarbons in the soil with emphasis on the location of the apparent oil storage at the southwest corner of the property as shown on Figure 3.
- Given the age of the existing bank building it is likely that Asbestos-Containing Building Materials (ACBM) and lead paint may be present. If demolition of the existing building is planned we recommend a comprehensive Asbestos and lead survey be performed to confirm the presence or absence of ACBM and lead paint in the building.

1.0 INTRODUCTION

1.1 Purpose

A Phase I Environmental Site Assessment (ESA) has been performed for 1250 Van Ness Avenue and 2211 Merced Street in Fresno, California (Site). The purpose of the assessment was to identify to the extent feasible any recognized environmental conditions in connection with the aforementioned properties. The American Society for Testing and Materials (ASTM) E1527-13 defines recognized environmental conditions as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. De minimis conditions generally do not present a material risk of harm to public health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

1.2 Site Location and Description

The site that is the subject of this study consists of two properties. The first property is located at the southeast corner of Merced Street and Van Ness Avenue and is identified as 1250 Van Ness Avenue, APN 46615211. The second property is located 250 feet northeast of the first property at the northeast corner of Merced Street and L Street, and is identified as 2211 Merced Street, APN 46611515. It is also identified by a second address of 1316 L Street. The site is located in Fresno, California as shown in Figure 1.

A two-story commercial building that currently houses the Fresno County Federal Credit Union is situated at the northwest portion of 1250 Van Ness Avenue. The building is made up of steel and concrete with stucco finish. The architecture of the building is circa 1970s. The remainder of the property consists of asphalt parking lot. A drive-through window and overhang exist at the east side of the building. Ornamental trees line the east and south property boundaries.

The parcel at 2211 Merced Street consists of a paved parking lot. There are no structures on site. Palms and ornamental trees exist in unpaved areas at the northern and western portions of the property

The central geographic position between both properties is 34.7381° north latitude and -119.7916° west longitude.

1.3 Scope of Work

Our work was performed in conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E:1527-13). In order to complete this report the following scope of work was completed.

- a. A visual reconnaissance of the exterior and interior of the site and surrounding area to visually evaluate the potential for site contamination and to identify the current land use
- b. A review of the regional geologic maps and geologic references pertinent to the subject site

- c. A review of previous environmental and geotechnical reports for the site prepared by others
- d. A review of historical aerial photographs and topographic maps to assess the site's historical land use, and for indications of potential contamination or sources of contamination
- e. A database search of federal, state and local regulatory agencies obtained by Environmental Data Resource (EDR), which is included with this report
- f. Review of local governmental databases and files
- g. Identify key personnel, local officials, and current owners of the property to conduct interviews with persons knowledgeable of the site and surrounding areas
- h. Preparation of this report

1.4 General Limitations and Exceptions

This report was completed in substantial conformance with the scope and practice set forth by the ASTM Standard E 1527-13 with a level of care and skill ordinarily exercised by members of our profession currently practicing in southern California. No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions. This assessment is not, and should not be construed as, a warranty or guarantee concerning the presence or not of hazardous substances which may affect the property. All information presented in this report is based on visual observations, research of publicly available information, review of maps and literature, experience, and professional judgment. The ASTM standard defines reasonably ascertainable information as information that is publicly available with reasonable time and cost constraints and yields relevant information without the need for extraordinary analysis of irrelevant data.

The exterior of the site was accessible on foot. Most of the interior of the Credit Union building at 1250 Van Ness was accessible during our site reconnaissance with the exception of the bank vault which was off limits.

The following are considered non-scope items and are not included in the scope of this report:

- * Asbestos Containing Building Materials
- * Biological Agents
- * Cultural and Historical Resources
- * Mold
- * Radon
- * Lead-Based Paint
- * Lead in Drinking Water
- * Wetlands
- * Regulatory compliance
- * Industrial Hygiene
- * Health and Safety
- * High Voltage Power Lines

- * Ecological Resources
- * Indoor Air Quality

1.5 Special Terms and Conditions

This report documents a specific scope of work that RMA GeoScience developed in consultation with the County of Fresno based on their unique needs. In addition, the report is subject to specific contractual and technical limitations to which the County of Fresno has agreed. Not all of these limitations may be set forth in this report.

1.6 User Reliance

This report is intended for the sole use of the County of Fresno. Its contents are considered to be privileged and confidential. The contents should not be relied upon by any party other than the aforementioned without the express written consent of RMA Geosciences, Inc and County of Fresno.

1.7 User Provided Information

A User Questionnaire was sent to representatives at the County of Fresno to be forwarded to the person with knowledge of the project/transaction who could best answer the questions. The User Questionnaire serves to assist the environmental professional in gathering information from the user that may be material to identifying recognized environmental conditions. To date we have not received a response to our questionnaire.

2.0 SITE OVERVIEW

2.1 Current Site Use

The property at 2211 Merced Street is currently paved with asphalt and is used as a parking lot. The property at 1250 Van Ness is currently used commercially as a bank and associated parking.

2.2 Past Land Use and Site History

1250 Van Ness Avenue:

The property was used historically as the site of a Methodist church from the earliest available data from 1885 to the late 1800s. A boarding house and repository occupied the site in the early 1900s and gave way several years later to four commercial buildings that housed Marshall's Auto Companies, auto repair, trimming and oil storage. Automotive businesses such as auto repair and lubrication occupied the site from 1922 to 1932. The commercial buildings remained at the site and used as a hotel from the mid 1940s up until the mid 1970s when they were demolished and the existing commercial bank building and associated parking lot was constructed.

2211 Merced Street:

Based on the earliest available data from 1888 the property was used residentially up until 1906 when two of the residences were replaced by a church. By 1918 the church and residences had been replaced by two boarding houses. A small structure, possibly commercial in nature was located at the southwest corner of

the site. A gas station, labeled on Sanborn Maps as Interstate Oil was erected at the south half of the site in 1940. One of the two boarding houses remained at the north half of the site. The gas station remained in operation up until 1981 when it was demolished. The boarding house which was situated at the north half of the site was demolished sometime in the early to mid 1980s. The site has been and continues to be used as a parking lot since that time.

The gas station consisted of a dispenser island at the southwest corner of the site and a garage with partial basement at the central portion of the site (Fig. 2). A hydraulic lift and sump were also reported at the garage location. According to building permits on file with the City of Fresno the gas station is listed as having 5 underground storage tanks (USTs) at the site. The tanks consisted of two 1,000 gallon tanks, one 550 gallon tank and two 55 gallon tanks. Kerosene and solvents were reportedly stored in the 55 gallon tanks. The three larger tanks which contained gasoline were removed in December, 1981. One of the tanks was determined to have been leaking. There was no information regarding the fate of the 55 gallon tanks whether they were removed or left in place.

An investigation was conducted by Twining Laboratories in May, 1985 to assess the soil and groundwater in the area of the previous USTs for hydrocarbon contamination. Five borings were drilled to a maximum depth of 76 feet. Location of the borings is shown on Figure 2. Twining concluded that contamination from gasoline existed in the sub-soils to a depth of approximately 55 feet below ground surface (bgs) and in the groundwater encountered at 75 feet bgs. Twining recommended further investigation to determine the lateral extent of groundwater and soil contamination. They recommended action levels be determined by State Health Agency. The case was referred to the Central Valley Regional Water Quality Control Board (RWQCB) who provided regional oversight.

A subsequent investigation was conducted by Twining in April, 1986 in response to input by the RWQCB. The investigation consisted of installing a monitoring well to a depth of 95 feet bgs at the northeast corner of the site (Fig. 2). Soil and groundwater samples obtained in the monitoring well boring were analyzed for the presence of gasoline constituents. Twining concluded that the soils in the area of the monitoring well were not contaminated with gasoline and that the groundwater in the monitoring well did not appear to contain gasoline constituents. Twining recommended quarterly monitoring be conducted for one year.

In 2002 an attempt was made by Kleinfelder, Inc. to locate and sample the groundwater in the monitoring well installed by Twining in 1986. The depth of the well measured 84.5 feet and was dry. They concluded that depth of groundwater had dropped since 1986 to between 97 to 118 feet.

At the request of RWQCB an additional site investigation was conducted at the site by Kleinfelder in 2002. It consisted of advancing two borings: One, KB-1 was advanced to a depth of 80 feet in the area of the former USTs in close proximity to Boring B-1 advanced by Twining in 1985. The second boring, KB-2 was advanced to 20 feet in the area of the former dispenser island. The boring locations are shown on Figure 2. Petroleum hydrocarbons were detected in soil samples from 21, 46 and 56 feet bgs in KB-1. Petroleum hydrocarbon and constituents were not detected in samples from 71 and 81 feet bgs from KB-1. According to the report field screening results with a PID negated the need for laboratory testing of the soil samples from KB-2.

Kleinfelder concluded that residual hydrocarbon in the soil was old gasoline and recommended site closure as a low priority, soil-only impacted site citing no evidence that groundwater had been affected. RWQCB

issued a Case Closure letter, dated May, 2002 concluding that residual petroleum hydrocarbon in the soil will naturally degrade and was not anticipated to pose a threat to the anticipated use of groundwater.

2.3 Site Observations

Our visual site reconnaissance was conducted on November 22, 2016. The purpose of our reconnaissance was to visually assess the site and surrounding area for any recognized environmental conditions. Photographs of the site are included with this report.

2.3.1 Interior Observations

Interior observations of bank building located at 1250 Van Ness Avenue are summarized in the table below followed by a discussion of our observations:

Item	Observed or Suspected	Not Observed or Suspected
Hazardous Substances and Petroleum Products	Hydraulic Oil	
Storage Tanks		X
Odors		X
Pools of Liquids		X
Drums		X
Containers of Hazardous Substances and Petroleum Products	X	
Unidentified Substance Containers		X
Heating and Cooling	X	
Stains and Corrosion		X
Drains and Sumps		X
PCBs		
Possible Asbestos-Containing Building Materials	X	
Possible Lead-Based Paint	X	

Oil was observed on the outside of the elevator motor (Photograph 5). A plastic bucket was observed underneath the motor to catch oil leaking from the motor (Photograph 6). Oil was not observed on the floor beneath the motor. The aforementioned oil in the bucket and on the elevator motor is considered a de minimus condition as defined in Section 1.1 of this report.

Given the age of the building, circa 1970s it is likely that Asbestos-Containing Building Materials and lead-based paint are present in the building.

There are no structures located at the 2211 Merced Street property.

2.3.2 Exterior Observations

Exterior observation of both properties is summarized in the table below:

Item	Observed or Suspected	Not Observed or Suspected
Hazardous substances & Petroleum products	X	
Above Ground Storage tanks		X
Underground Storage Tanks	X	
Odors		X
Standing water or pools of liquids		X
Drums, hazardous substance or petroleum containers		X
Unidentified substance containers		X
Electrical or hydraulic equipment known or likely to contain PCBs	X	
Pits, ponds or lagoons		X
Stained soil or pavement	X	
Stresses vegetation (other than from insufficient water)		X
Solid waste, mounds or depressions suggesting trash or soil waste disposal		X
Waste water or storm water discharge into a drain, ditch, stream or adjacent property		X
Wells (active, inactive or abandoned)		X
Structures		X
Roads		X
Railroad lines and spurs		X
Potable water supply		X
Sewage disposal system		X

Since there are no records for removal or abandonment of the two 55 gallon USTs that were reportedly installed at the former gas station at 2211 Merced Street it is presumed that they are still in place. Given the prior existence of a hydraulic lift and sump located at the former garage building it is possible that PCBs may have been present in the hydraulic oil used for the lift. According to site reports detailed in Section 2.2 of this report petroleum hydrocarbons were detected in the soil in the location of the former USTs in 2002. Oils stains were noted on the surface of the asphalt in places in the parking lot at 2211 Merced Street (Photograph 4). The staining is surficial and is considered a de minimus condition as defined in Section 1.1 of this report.

2.4 Site Reconnaissance of Adjacent Properties

Properties immediately adjacent to the site consist of the following:

1250 Van Ness Avenue:

- To the north—Merced Street, commercial buildings that house service related and commercial businesses.
- To the west – Commercial building that house service related and commercial businesses and Van Ness Avenue.
- To the south— Asphalt parking lot and bank building
- To the east – Asphalt parking lot and office building

2211 Merced Street:

- To the north—Asphalt parking lot and office/commercial building
- To the west – L Street, parking lot and commercial building
- To the south— Merced Street, parking lot and administrative/office building
- To the east – Asphalt parking lot and administrative/office building

2.5 Potable Water Supply

The Fresno County Federal Credit Union building at 1250 Van Ness Avenue is served by a municipal water supply. A potable water supply was not apparent at the property of 2211 Merced Street.

3.0 GEOLOGY AND HYDROGEOLOGY

3.1 Geology

The subject site is located near the east side of the central San Joaquin Valley, which comprises the southern half of the Great Valley geomorphic province. The valley is a trough which forms a broad alluvial fan, approximately 250 miles long and 50 to 70 miles wide. Here, a thick sequence of marine and non-marine sediments, up to about 6 miles deep, has been deposited in the valley from the late Mesozoic through the Cenozoic. The Great Valley is bounded on the east by the Sierra Nevada geomorphic province and on the west by the Coast Range geomorphic province.

The Sierra Nevada Mountains are a northwest/southeast trending block, formed by exhumation of a felsic batholith. The Sierra Nevada's geomorphology differs from east to west; on the east flank, the peaks are jagged and hazardous, whereas the slopes of the west are more gently dipping.

According to Bartow (1991) the San Joaquin valley is a westward-tilting structural trough where the east flank is broad and gently inclined as opposed to the western flank which is relatively narrow. The sediments along the eastern side of the valley rest on the fault block of the Sierra Nevada pluton. The west side of the valley is thought to be underlain by mafic and ultramafic rocks (Page, 1986).

According to geotechnical reports prepared by Twining Laboratories, Inc. (1985, 1986) for the property at 2211 Merced Street the site soil consists of interbedded, medium to fine, silty sand and sandy silt to the maximum depth explored of 76 feet.

3.2 Hydrogeology

The site is located within the Kings Subbasin within the San Joaquin Valley Groundwater Basin. The Kings Subbasin aquifer system consists of older Tertiary and Quaternary age deposits. The Quaternary deposits are divided into older alluvium, lacustrine deposits, younger alluvium and flood basin deposits and yield more than 90 percent of the water pumped from wells. Groundwater recharge occurs from river and streams, percolation of irrigation water, canal seepage, and intentional recharge. Groundwater flow is generally to the southwest (Bulletin 118, 2003).

According to geotechnical reports prepared by Twining Laboratories, Inc. (1985, 1986) for the property at 2211 Merced Street groundwater was encountered at a depth of 75 feet below ground surface (bgs). A site investigation conducted by Kleinfelder in 2001 to locate and sample a monitoring well installed at the site by Twining Laboratories 1986 did not encounter groundwater to a maximum depth drilled of 84.5 feet below ground surface. Data from monitoring wells installed at the Univar site located approximately 2,000 feet to the southwest recorded groundwater in levels in 2016 of between 92 and 109 feet bgs. Groundwater was reported to flow in a west to southwest direction at a gradient of 0.00061 feet per foot.

The subject site is located within an area zoned by FEMA as an area inundated by 100 or 500 year flooding.

4.0 RECORDS REVIEW

4.1 Sanborn Map Review

The Sanborn Library collection was searched by EDR. Maps covering the site were identified for the years listed below.

1885 A structure labeled “Methodist Church” is centrally located at the property of 1250 Van Ness Avenue. There is no coverage for 2211 Merced Street.

1888 In addition to the church a shed and a dwelling are located at the south end of the property at 1250 Van Ness Avenue. An unnamed structure is mapped at the east side of 2211 Merced Street.

1898 The Methodist Church had been added on to and there is a dwelling at the northeast corner of the property at 1250 Van Ness along with a couple of outbuildings. Four dwellings are sited at the property at 2211 Merced Street.

1906 The church, absent on this map at 1250 Van Ness has been replaced by two contiguous buildings that are labeled “lodgings” and “repository”. Two of the dwellings at 2211 Merced Street have been replaced by a church.

1918 1250 Van Ness – The site is covered by four contiguous commercial buildings that are labeled “Marshalls Auto Companies Garage, Auto Repairing and Auto Trimming” An area labeled for oil storage was shown at the southwest corner of the property as shown on Figure 3.

2211 Merced Street – Two structures labeled as “lodgings” are shown on the property. A small structure labeled “photo” is shown at the southwest corner of the property.

1948 1250 Van Ness – The four commercial buildings at the property appear to have converted to hotels and lodging.

2211 Merced Street – The southernmost lodging building has been replaced by a gas station labeled as Interstate Oil located at the southwest corner of the site.

1950 There is no change to either address from the 1948 map.

1970 There is no change to either address from the previous map.

Copies of the Sanborn Maps are included with this report.

4.2 Aerial Photograph Review

1937 1250 Van Ness – Four contiguous commercial buildings occupy the property. A vacant portion appears at the southeast end of the property.

2211 Merced Street – One of the lodging structures that appears on the Sanborn Map from 1918 appears at the north half of the property. The south half appears to be vacant of structures.

Commercial buildings and a few dwellings occupy the adjacent properties.

1942 1250 Van Ness – The building configuration remains unchanged from the 1937 photograph.

2211 Merced Street – The gas station that appears on the Sanborn Map from 1948 is visible on this photograph. The lodging building seen in the previous photograph at the north half of the site is still visible.

There is no change to the surrounding properties from the 1937 photograph.

1946 1250 Van Ness – The building configuration remains unchanged from the previous photographs.

2211 Merced Street – The site remains unchanged from the previous photograph. Several rows of vehicles appear to be parked at the southeast end of the property.

The surrounding properties remain unchanged from previous photographs.

1950 1250 Van Ness – The property remains unchanged from the previous photographs.

2211 Merced Street – The site remains unchanged from the previous photograph with the exception of a few more vehicles parked on site.

The surrounding properties remain unchanged from previous photographs.

1957 There is no change to either property or adjacent properties from the 1950 photograph.

1967 There is no change to either property or adjacent properties from the previous photographs.

1973 There is no change to either property or adjacent properties from the previous photographs.

1979 1250 Van Ness – The four commercial buildings that existed at the site beginning in the early 1900s have been replaced the Credit Union building that presently exists at the site. Parking lots exist at the east of the building.

2211 Merced Street – The garage structure that was part of the gas station is absent from this photograph. The dispenser island is still visible at the southwest corner of the site. Most of the parked vehicles are absent. The boarding house located at the north half of the site is still visible.

The surrounding properties remain unchanged from previous photographs.

1984 1250 Van Ness – No change to the property from the previous photograph.

2211 Merced Street – The gas station is absent from this photograph and no cars remain at the site.

The surrounding properties remain unchanged from previous photographs.

1987 1250 Van Ness – No change to the property from the previous photograph.

2211 Merced Street – The lodging building located at the north end of the property is absent in this photograph. The property appears to be used as a parking lot.

Construction of a new building is visible on the property south of 2211 Merced Street.

1998 1250 Van Ness – No change to the property from the previous photograph.

2211 Merced Street – The site is as it was in the 1987 photograph. Trees left over from the boarding house dot the north half of the property.

A second commercial or administrative building has been constructed on the property adjacent to the south.

2002, 2006, 2009, 2010 and 2012 There is no change to either property and surrounding properties from the previous photograph.

Copies of the aerial photographs are included with this report.

4.3 Topographic Map Review

Topographic maps dating from 1923 to 2012 were reviewed for indications of past land use at the subject site and surrounding properties. The four commercial buildings visible at 1250 Van Ness since the early 1900s are shown on the map. No past uses other than that described in Section 2.10 of this report were identified for the subject property.

4.4 Property Tax Map

A search of available property tax maps for the site and neighboring properties including address, parcel identification numbers was conducted by EDR. No past uses were identified for the site.

4.5 Environmental Liens and Activity and Use Limitations (AULs)

A search of available current land title records for environmental cleanup liens and other activity and use limitations such as engineering and institutional control was conducted for RMA Geosciences, Inc. by EDR, an information retrieval service

No environmental liens or activity use limitations were found for either address. A Grant Deed was identified for Fresno County Credit Union recorded in 1983. A Corporation Grant Deed was identified for Fresno County Credit Union recorded in 1988.

4.6 Governmental Agency Database Review

A search of available government databases was conducted for RMA Geosciences, Inc. by EDR, an information retrieval service which identifies current and historical environmental risk management information for the site (Target Property) and surrounding area. The search included the area within a one mile radius of the site. The search radius used meets or exceeds the standard search distance adopted by ASTM-E:1527-13. Copies of the EDR reports are included with this report.

4.6.1 Target Property Search Results

The property at 2211 Merced Street shows up in a number of databases, as shown in the following table, pertaining to the leaking UST investigations at the site as discussed in Section 2.2 of this report. Two automotive related business listings were identified in the EDR Historic Auto database for the address of 1242 Van Ness Avenue which prior to 1970 was part of the parcel currently identified as 1250 Van Ness.

Entity	Address	Database
Fresno Co. Credit Union	2211 Merced	RGA LUST
Buck S Service Station	2211 Merced St	EDR HIST AUTO
Fresno County Credit Union	1250 Van Ness Ave	HAZNET

Fresno Co. Credit Union	2211 Merced	HIST CORTESE
Fresno County Credit Union	2211 Merced St	SEMS-ARCHIVE

Fresno County Credit Union	2211 Merced St	RGA LUST
Portable Brake Service	2211 Merced	EDR HIST AUTO
Fresno County Credit Union Property	2211 Merced St	LUST SWEEPS UST CA FID UST
Fresno County Employees Credit Union Site	2211 Merced Street	CA BOND EXP. PLAN
Lee Enterprises	1306 L St	HAZNET

4.6.2 Surrounding Sites Search Results

Based on our review of the database listings of sites located within a one mile radius of the subject site and the copious listings we have limited our discussion to those sites that are within a one third mile radius of the site and have or have had known releases of contaminants to the environment.

Department of Transportation, 1283 West Avenue N

This site, located 600 feet east of the subject site is listed in the Leaking Underground Storage Tank (LUST) database. According to the database listing a case file was opened in 1987. A Closure/No Further Action Letter was issued in 1990. There are no cleanup actions or regulatory activities listed. This site is not a recognized environmental condition (REC) with respect to the subject site based on distance.

Fresno County Courthouse Motor Pool, 1135 M Street

This site, located 750 feet east of the subject site is listed in the Leaking Underground Storage Tank (LUST) database. A leak from a UST was discovered in 1990. Site investigations including a soil vapor extraction (SVE) extraction test were carried out at the site. The testing revealed no extractable hydrocarbon vapors were present at the site. RWQCB called the release de minimus in nature and issued a No Further Action Letter. The case was closed in 2011. This site is not a REC with respect to the subject site based on distance and on the fact that hydrocarbon impacted soil was confined to a localized area around the former UST and that no extractable vapors were present.

Fresno Clinton, B.P., 2409 Fresno Street

This site, located 815 feet northeast and upgradient of the subject site operated as an auto repair shop. In March, 1994, 4 USTs were removed from the site. Petroleum hydrocarbons were detected in the soil taken from the dispenser island and the location of the USTs. A site investigation was conducted in 2006 characterize the site. The environmental consultant concluded that based on low concentrations of TPHd or diesel fuel along with the absence of TPHg (gasoline), BTEX or oxygenates the site should be considered for No Further Action status. RWQCB recommended a SVE extraction test be conducted at the site. Based on the results of the testing RWQCB issued a No Further Action and Case Closure letter in 2009. This site is not a REC with respect to the subject site based on distance and on the fact that hydrocarbon impacted soil was confined to a localized area around the former UST and that no extractable vapors were present.

A Place For You Foundation, 2201 Stanislaus Street

This site, located 850 feet northwest of the subject site is listed in the Leaking Underground Storage Tank (LUST) database. There are no cleanup actions or cleanup documents or reports listed for the site. The case was opened in February, 1996 and closed in August, 1996. This site is not a REC based on distance, lack of cleanup data and its cross gradient location relative to the subject site.

Chevron, 1506 Van Ness Avenue

This site, located 940 feet west of the subject site is listed in the Leaking Underground Storage Tank (LUST) database. There are no cleanup actions or cleanup documents or reports listed for the site. This site is not a REC based on distance, lack of cleanup data and its cross gradient location relative to the subject site.

Frontier Chevrolet, 1450 O Street

This site, located 1000 feet northeast and upgradient of the subject site is listed in the Leaking Underground Storage Tank (LUST) database. There are no cleanup actions or cleanup documents or reports listed for the site. The contaminant of concern listed is gasoline. The status of the site is listed as Case Closed as of August, 1995. This site is not a REC based on distance and lack of cleanup data and regulatory actions.

Fresno City Police Department, 2323 Mariposa Mall

This site, located 1084 feet southeast and cross gradient of the subject site is listed in the Leaking Underground Storage Tank (LUST) database. Based on site sampling and soil vapor extraction testing the environmental consultant recommended site closure. Case closure was granted by RWQCB in 2009. This site is not a REC with respect to the subject site based on distance, cross gradient location relative to the subject site and the impacted soil was confined to the affected site.

Twining Laboratories, 2527 Fresno Street

This site, located 0.25 miles southeast and cross gradient of the subject site is listed in the LUST database. A UST and associated piping were removed in 1987. Petroleum hydrocarbon contamination in the soil in the area of the UST was detected. Subsurface investigations from 1987 to 1990 showed the bulk of contamination was limited to the UST location and had limited lateral extent. RWQCB issued a No Further Action letter was issued in 2005. Based on distance and cross gradient location, this site is not a REC with respect to the subject site.

Department of General Services Fleet Adm, 2550 Mariposa Mall

This site, located 0.30 miles southeast and cross gradient of the subject site is listed in the LUST database for a diesel UST that was determined to have leaked in 1987. During removal of the UST the stockpiled soil was tested and found to be impacted with petroleum hydrocarbons. The soil at the base of the removal was not impacted. The impacted soil was hauled off site and RWQCB subsequently issued a No Further Action letter. The case was closed in 2000. This site is not a REC with respect to the subject site based on distance, cross gradient location relative to the subject site and the impacted soil was hauled off site.

Univar, 1152 G Street

Although this site is located 0.36 miles southwest of the site and is cross gradient with respect to the subject site it bears discussion due to the contaminant of concern which is PCE. The site historically was used for storage of bulk PCE from 1965 to 1986. PCE was store in an above ground storage tank (AST). Soil samples and soil vapor surveys conducted in 1996 indicated the presence of PCE in the soil and groundwater. A soil Vapor extraction system was installed in 1998. Based on site reports and documents on file with RWQCB Geotracker database, the impacted soil appears to be confined to the Univar site. Groundwater flow is to the southwest or down gradient from the subject site. The site status is listed as Open with assessment and remediation ongoing. Based on distance and down gradient location with this site is not a REC with respect to the subject site.

Based on our review of the database listings within the one mile radius of the site we conclude that there no sites that would be considered a REC with respect to the subject site.

The orphan sites listed in the EDR report either cannot be located or are a significant distance from the subject site to be of concern.

4.7 City Directory Review

A search of available city directories at five year intervals from 1922 to 2013 was conducted for RMA Geosciences, Inc. by EDR, an information retrieval service which identifies current and historical environmental risk management information for a specific site (Target Property) and surrounding area.

Listings for Ramona Apartments and various individuals identified from 1922 to 1980 for the address of 1316 L Street substantiates our findings from aerial photographs and Sanborn maps that a boarding house/apartment building existed at the north half of the Merced Street property. Directory listings for a Bucks Service Station were identified from 1942 to 1975 is further documentation of the existence of a gas station at the address of 2211 Merced Street.

Directory listings from 1975 to 2003 indicate the address of 1250 Van Ness Avenue was the site of various banks. Listings for the address of 1250 Van Ness prior to 1975 identify the following commercial businesses:

- 1927 to 1932 Reliable Auto Trimming
- 1937 Columbia Varnish Co.
- 1942 Fresno Sales Co.
- 1947 Wickersham RE Oil Well Supplies
- 1952 to 1965 Alexander Sam Commercial Refrig
- 1970 Ricco Tailor Shop

4.8 State and Local Agencies

California Department of Conservation Division of Oil and Gas and Geothermal Resources

We searched the online databases that are maintained by the California Department of Conservation - Division of Oil and Gas regarding any current or abandoned oil wells located on or near the subject site. There are no current or abandoned oil wells located on or in the vicinity of site.

City of Fresno

Research was performed by this office and by EDR for available building permits and pertinent documents for the site. Pertinent documents identified are as follows:

1250 Van Ness Avenue

- 1974 Permit for new building for Bank of California

2211 Merced Street

- 1981 Grading Permit for 32 cubic yards of tank backfill
Curb Service is listed as the contractor; no data as to number of tanks removed or sketch showing location of tanks
- 1981 Tank Backfill Report by BSK: Summary of compaction tests and laboratory data for backfill of tanks. There is no map showing test locations and how many tanks were removed.
- Application for the Installation of Storage Tanks for Enco Service Station at 2211 Merced St. to Kenneth Buck. Permit lists two 1,000 gallon tanks, one 550 gallon tank and two 55 gallon tanks. Date of the permit is not legible.

Fresno County Department of Public Health Environmental Health Division

Records were requested from this agency for the addresses of 2211 Merced Street, 1316 L Street and 1250 Van Ness Avenue.

2211 Merced Street

Reports for site investigations by Twining Laboratories and Kleinfelder, Inc. along with letters from RWQCB and the County of Fresno were provided. The site investigations and oversight by RWQCB are detailed in Section 2.2 of this report. The following documents of significance were also provided:

- State of California Underground Storage Tank Program Tank Permit Application Information forms for the following:
 - Two 550 gallon gasoline USTs; year installed is listed as 1940
 - One 1,000 gallon gasoline UST; year installed is listed as 1940
 - Two 55 gallon USTs for the storage of kerosene and cleaning solvent; year installed is listed as 1953
- Fresno County Department of Health Hazardous Materials and Underground Storage Tanks Telephone Call Record, dated August 20, 1991; phone conversation between Fresno County Employees Credit Union President Max Griggs and Fresno County Department of Health (FCDH) regarding the two 55 gallon USTs that were unaccounted for. Mr. Griggs was sure that all the tanks were removed and said he would check his files and send documentation to

FCDH. The aforementioned documentation was not included in the files sent to us by Fresno County Environmental Health.

We were informed that no files were available for the addresses of 1250 Van Ness Avenue and 1316 L Street. Copies of documents and reports obtained from Fresno County Department of Public Health Environmental Health Division are included with this report.

4.9 Data Gaps

The lack of response to the User Questionnaire as described in Section 1.7 of this report represents a data gap. Based on our research and findings of this study we conclude that the lack of response to the User Questionnaire does not affect our ability to identify recognized environmental conditions in connection with the site. No other significant data gaps were identified.

5.0 INTERVIEWS

5.1 Local Government Official

We spoke with Mr. Stuart Seiden, Capital Projects Division Manager County of Fresno Department of Public Works & Planning regarding his knowledge of the site. He told us that he had no knowledge about the site prior to the credit union being located there. He said that someone on the staff of the credit union indicated a gas station had previously been located on the site, prior to a bank being constructed there.

We also spoke with Mr. Mike Belman, Senior Engineering Technician with the County of Fresno. He told us he believed that the records for the site only went as far back as 1980.

5.2 Key Site Personnel

We spoke with Mr. Jeff Cadenhead, Facilities Manager with Fresno County Federal Credit Union. He was instrumental in providing us with site reports for the address of 2211 Merced Street. He told us he was aware of the past existence of the gas station at 2211 Merced Street but did not think that the tanks were removed from the site.

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 Conclusions

RMA Geosciences, Inc. has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E:1527-13 on 1250 Van Ness Avenue and 2211 Merced Street in Fresno, California. Any exceptions to or deletions from this practice are described in this report.

This assessment has revealed the following recognized environmental conditions in connection with the property.

2211 Merced Street

- Petroleum hydrocarbons were detected in the soil from the area of the former USTs in soil samples from 21, 46, and 56 feet bgs (Kleinfelder, 2002). Kleinfelder recommended site closure as a low priority, soil-impacted site as there was no evidence of groundwater contamination. RWQCB closed the case in 2002 concluding that the residual petroleum hydrocarbon in the soil will naturally degrade and was not anticipated to pose a threat to the use of groundwater. The petroleum hydrocarbons impacted soil remaining in place constitutes a historical recognized environmental Condition (HREC).
- Based on our research and findings the former garage structure with partial basement (Fig.2) was never investigated for contaminants associated with past automotive related activities. It is likely that auto repairs and oil changes occurred in the past in the garage as evidenced by the hydraulic lift and sump identified by Twining Laboratories in 1985. We conclude that the former garage with hydraulic lift and sump constitutes a recognized environmental condition (REC)
- No records were identified for the removal of the two 55 gallon USTs installed at the site in 1953 and reportedly contained kerosene and cleaning solvent. The lack of documentation leads us to conclude that they may still be present at the site and is therefore a REC.

1250 Van Ness Avenue

- The site was used historically for automotive repair and oil storage in the early 1900s (Fig. 3) and automotive related business from 1922 to 1938. Petroleum hydrocarbons used and stored at the site in the past may be present in the site soil and therefore constitute a REC.

6.2 Recommendations

2211 Merced Street

- We recommend a human health risk assessment of the petroleum impacted soil remaining in the area of the former USTs. Specifically for risks associated with soil vapors and the possible need for site mitigation.
- Conduct a site screening to locate the two 55 gallon USTs that were unaccounted for using subsurface imaging such as Ground Penetrating Radar.
- Assess the area of the former garage, hydraulic lift and sump for the presence of petroleum hydrocarbons, VOCs, SVOCs, heavy metals and PCBs

1250 Van Ness Avenue

- The possibility that Petroleum hydrocarbons used and stored at the site in the past may be present in the site soil cannot be ruled out. Therefore we recommend a site investigation to assess the site for the presence of petroleum hydrocarbons in the soil with emphasis on the location of the apparent oil storage at the southwest corner of the property as shown on Figure 3.

- Given the age of the existing bank building it is likely that Asbestos-Containing Building Materials (ACBM) and lead paint may be present. If demolition of the existing building is planned we recommend a comprehensive Asbestos and lead survey be performed to confirm the presence or absence of ACBM and lead paint in the building.

7.0 QUALIFICATIONS

The following statements are provided as specified by ASTM E 1527-13 and 40 CFE 312.21(d):

“We declare that, to the best of my professional knowledge and belief, we meet the definition of Environmental professional as defined by §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.”

8.0 LIMITATIONS

This Phase I Environmental Site Assessment was completed in accordance with generally accepted industry practice for determining the likelihood of the presence of hazardous substances at or beneath the site. Information presented in this report is based on visual observations, limited research, review of maps and literature, experience, and professional judgment. This assessment is not, and should not be construed as, a warranty or guarantee concerning the presence or not of hazardous substances which may affect the property. All discovered information has been disclosed and a good faith effort has been made to consult pertinent sources.

This study and report have been prepared on behalf and for the exclusive use of County of Fresno, and solely for use in an environmental evaluation of the subject site. This report and its findings shall not, in whole or in part, be disseminated or conveyed to any other party, nor used by any other party in whole or in part, without prior written consent of RMA Geosciences, Inc. and County of Fresno. However, RMA Geosciences, Inc. acknowledges and agrees that the report may be conveyed to the Buyer, Seller and Lender associated with the financing of the property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 03/07/2016 has revealed that there are 3 SEMS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

WILSHIRE PAINT CO	701 & 712 FULTON ST	SSE 1/4 - 1/2 (0.429 mi.)	AG178	221

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/21/2016 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/21/2016 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/21/2016 has revealed that there are 12 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/21/2016 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/01/2016 has revealed that there are

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 42 CUPA Listings sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Facility Id: FA0169720

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2014 has revealed that there is 1 HAZNET site within approximately 0.001 miles of the target property.

LEE ENTERPRISES GEPAID: CAC002652749	1306 L ST	0 - 1/8 (0.000 mi.)	A13	15

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 25 HIST CORTESE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

PG AND E MANUFACTURE	BLOCK OF F,G, FRESNO	SSW 1/4 - 1/2 (0.423 mi.)	AI176	219

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 31 EDR Hist Auto sites within approximately 0.125 miles of the target property.

CA BOND EXP. PLAN:

Responsible Party:	BACKLOG SITE CLEANUP PLANNING REPORT
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	This site is projected to be remediated by the responsible parties with reimbursement to DHS for its oversight costs. If the RPs are unable to fund site investigation and remediation, another source of funds will need to be identified.
Site Description:	The site is presently owned by the Fresno County Credit Union and was previously a gasoline station. Five underground tanks were installed at the gas station by 1953. In December, 1981, a construction firm removed three tanks and the tanks were pressure tested. One tank failed to hold pressure and was disposed of as scrap metal. It is not known what became of the other two tanks.
Hazardous Waste Desc:	Soil samples taken indicate that the soils were contaminated with constituents, typically found in gasoline, down to a depth of 55 feet. Ground water was encountered at a depth of 75 feet. Soil borings from the site contained benzene, toluene, ethylbenzene, xylene, organic lead, and EDB. Water samples contained all these same contaminants with the exception of organic lead.
Threat To Public Health & Env:	Ground water beneath the site shows signs of contamination by constituents of gasoline. The ground water in this area, according to the Central Valley RWQCB, is of excellent quality and is used as the main source of drinking water.
Site Activity Status:	Twining Laboratories, Inc., prepared a report for Fresno County Employees Credit Union entitled "Preliminary Geotechnical Investigation, Gasoline Contamination Assessment, Proposed Credit Union Building". The report was dated May 28, 1985 and describes the field and laboratory investigation.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Recipient name: Fresno Redevelopment Agency
Grant type: Assessment
Property name: PARCEL 466-206-50T
Property #: 466-206-50T
Parcel size: 1.5
Property Description:

Actual:
288 ft.

Based on review of historical documents, the subject property appears to have been located in an area of downtown urban development dating back to 1888 when the first developments on the site were single-family residential dwellings and a boarding house. During the late 1890s and early 1900s the subject property was developed commercially with retail businesses on the southeast end and the northwest end with the Fresno County Free Library built mid-parcel about 1906. Commercial development of the subject property was

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US BROWNFIELDS:

Recipient name: Fresno Redevelopment Agency
Grant type: Assessment
Property name: PARCEL 466-214-17T
Property #: 466-214-17T
Parcel size: 1.36
Property Description:

Actual:
288 ft.

Based on review of historical documents, the subject property appears to have been located in an area of downtown urban development dating back to 1885 when the first developments on the site were single-family residential dwellings, two paint shops; a livery stable and a hay shed. During the late 1890s and early 1900s the subject property was developed commercially with retail businesses including two blacksmith shops. Commercial development of the subject property was predominate through the 1950s and into the early 1960s including an auto garage and storage facilities; two gasoline service stations; and a bus depot. By 1970 all structures had been removed from the subject property and it had been converted to a commercial parking

lot similar to the present-day configuration and activities. This assessment identified no Recognized Environmental Conditions (RECs) in connection with the subject property. For the reasons discussed in Section 8.2 of the ESA, it is URS opinion that there is a low likelihood that significant environmental liability exists regulated to the historical activities of auto repair shops, gasoline service stations, blacksmith shops and other potentially hazardous activities on the subject property parcel and no further investigations appear warranted

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency: Not reported
RB Case Number: SL185704255
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply
Potential Contaminants of Concern: Tetrachloroethylene (PCE)
Site History:

Actual:
288 ft.

The Site is located at 1152 G Street in Fresno. The Site was historically used, from 1965 to 1986, to store bulk tetrachloroethene (PCE) in an aboveground storage tank at the northern section of the property. Soil and soil vapor surveys in 1996 indicated the presence of PCE. Several monitoring wells were installed in 1996 and showed PCE in the underlying groundwater. In 1998 a vapor extraction system was installed and ran until 2004. The extracted soil vapor is treated using two 2500-pound activated carbon vessels to remove the VOCs. Through subsequent testing a series of groundwater monitoring wells have been installed and continue to be monitored quarterly. Four new offsite SVE wells were installed during late 2008. An SVE system is currently extracting soil vapors from five vapor extraction wells located near the highest concentrations of PCE in groundwater and soil. This is located just downgradient of the site. Investigation to assess the lateral and vertical extent of

Status: Open - Site Assessment
Status Date: 07/16/2012
Lead Agency: CENTRAL VALLEY RWQCB (REGION 5F)
Case Worker: KDJ
Local Agency: Not reported
RB Case Number: 5T10000907
LOC Case Number: FA0169677
File Location: Regional Board
Potential Media Affect: Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern: Diesel
Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. The Fresno County Department of Health referred the case to CVRWQCB in May 2010. CVRWQCB has directed a site investigation for this case. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

Property Description:

Actual:
291 ft.

Based on review of historical documents, the subject property appears to have been located in an area of downtown Fresno urban development dating back to 1885. The first developments occurred in the forms of private residences in about 1888. The subject property was occupied by single-family residences and boarding houses with stables through the early 1900s giving way to retail and commercial development during the mid-1900s. By the mid-1960s, all the structures had been

removed and the site was developed as a paved parking facility similar to present-day configuration. This assessment identified no Recognized Environmental Conditions (RECs) in connection with the subject property. For the reasons discussed in Section 8.2 of the ESA, it is URS opinion that there is a low likelihood that significant environmental liability exists regulated to the New York Hatters Hat Cleaners and Blockers, or Victor Kuljian, clothes cleaner; and additionally it is URS opinion that there is a low likelihood that significant environmental liability exists regulated to the presence of lead-based paint on the subject property parcel as a result of sloughing from neighboring site structure and no further investigations appear warranted.

Potential Contaminants of Concern: Heating Oil / Fuel Oil
Site History: Sample results from beneath the underground storage tank indicate that an unauthorized release of fuel oil petroleum hydrocarbons occurred. Jurisdiction for clean up oversight belongs to the Regional Water Quality Control Board, Central Valley Region, Fresno office. The case will be referred to the Board as soon as possible for further action.

RB Case Number: 5T10000177
LOC Case Number: FA0266637
File Location: Regional Board
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Heating Oil / Fuel Oil
Site History: On 4 September 2015, two underground storage tanks (USTs) were removed from the subject address (Site). Analytical results of soil samples collected from beneath the USTs detected concentrations of petroleum hydrocarbon constituents. Considered evidence of a release of petroleum products from the USTs, the Fresno County Environmental Health Division (FCEHD) issued an Underground Storage Tank Unauthorized Release (Leak) / Contaminated Site Report on 20 June 2016. On 21 June 2016, the FCEHD referred the Site to the Central Valley Regional Water Quality Control Board (Central Valley Water Board) for regulatory oversight.

WDS:

Facility ID: 5F 10I004511
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 0
Facility Telephone: 5594954281

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Potential Media Affect: Soil, Under Investigation
Potential Contaminants of Concern: Diesel, Waste Oil / Motor / Hydraulic / Lubricating
Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

File Location: Regional Board
Potential Media Affect: Under Investigation
Potential Contaminants of Concern: Diesel
Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. The case was referred to CVRWQCB by Fresno County Environmental Health Division on 2/22/2008. CVRWQCB has directed a preliminary site investigation. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted

Recipient name: Fresno Redevelopment Agency
Grant type: Assessment
Property name: PARCELS 467-04-20ST, -22ST, -23ST
Property #: 467-04-20ST, -22ST, -23ST
Parcel size: 5.5
Property Description: Based on a review of historical documents, parcel APN -20ST has been developed as a parking lot for commercial use since the late 1990s. Between the late 1980s and the late 1990s the parcel was vacant. Prior to the 1980s the parcel consisted of several railroad spur lines used to service lumber, paper, and produce warehouses located on parcels APN -22ST and -23ST. Parcel -22ST consisted of warehouses and commercial development until the early 1980s. The parcel was vacant in the 1980s and developed into a parking lot in the late 1990s. The warehouse currently occupying parcel APN -23ST is visible in aerial photographs back to at least 1946 and other historical documents back to at least 1885.

US BROWNFIELDS:
Recipient name: Fresno Redevelopment Agency
Grant type: Assessment
Property name: COMMERCIAL BUILDING
Property #: 468-286-05T
Parcel size: .26
Property Description: In 1918, the subject property parcel contained Zibbells Auto Exchange Garage in the general configuration as the present day structure. In 1948, the subject property parcel contained a wholesale beer distributorship, apparently part of the Richter Bottling Company located to the southeast. In 1950, the subject property parcel contained an auto brake shop. The subject property was identified with several different auto parts stores up to 2008, when the Fresno RDA took possession and the current tenant, Pool Tables R Us, occupied the site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016	Source: EPA

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016	Source: EPA

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 09/14/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 10/04/2016	Telephone: 703-603-8704

	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: 800-424-9346

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 03/07/2016	Source: EPA

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/21/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/30/2016	Telephone: (415) 495-8895

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/21/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/30/2016	Telephone: (415) 495-8895

Number of Days to Update: 64	Next Scheduled EDR Contact: 01/09/2017
	Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Hazardous Materials Management Division Database

The database includes: HE58 - This report contains the business name, site address, business phone number, establishment 'H' permit number, type of permit, and the business status. HE17 - In addition to providing the same information provided in the HE58 listing, HE17 provides inspection dates, violations received by the establishment, hazardous waste generated, the quantity, method of storage, treatment/disposal of waste and the hauler, and information on underground storage tanks. Unauthorized Release List - Includes a summary of environmental contamination cases in San Diego County (underground tank cases, non-tank cases, groundwater contamination, and soil contamination are included.)

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK® - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

FRESNO COUNTY
1250 VAN NESS AVE, 2211 MERCED ST & 1316 L STREET
FRESNO, CA 93721

TARGET PROPERTY COORDINATES

Latitude (North):	36.738167 - 36° 44' 17.40"
Longitude (West):	119.791641 - 119° 47' 29.91"
Universal Transverse Mercator:	Zone 11
UTM X (Meters):	250727.3
UTM Y (Meters):	4069258.8
Elevation:	291 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5603172 FRESNO SOUTH, CA
Version Date:	2012
North Map:	5603170 FRESNO NORTH, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06019C2110H	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06019C1570H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
FRESNO SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HANFORD

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	16 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.1
2	16 inches	72 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: DELHI

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 6.1
2	7 inches	25 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 6.1
3	25 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 6.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by RMA Geoscience were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by RMA Geoscience were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

Fresno, CA 93721

Inquiry Number: 4794960.7
December 06, 2016

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquiries (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of RMA Geoscience on Dec 02, 2016.

TARGET PROPERTY

1250 Van Ness Ave, 2211 Merced St & 1316 L Street
Fresno, CA 93721

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeyman:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other common reasons for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: \$1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

A. This covers everything necessary for and incidental to the execution and completion of vinyl asbestos floor coverings work as shown on the drawings and specified herein.

2. GENERAL:

- A. Install resilient flooring at locations indicated in finish schedule and shown on drawings.
- B. Deliver all materials to job in their original sealed containers.
- C. All materials: best quality, free from cracks, dents, spalls or other defects.
- D. Maintain temperature of not less than 70 degrees F. during laying and for a period of at least 48 hours before and after installation.
- E. Carefully lay out work to align tile joints with building module with joints on module line and to give straight joints and to avoid small cuts of tile.

3. MATERIALS:

- A. Vinyl asbestos tile: 12 x 12 x 3/32 inch standard brand conforming to Federal Specification SS-T-312, Type IV. Colors: as selected by Architect.
- B. Adhesive: waterproof cement as recommended by tile manufacturer for product and for sub-floor upon which it is to be installed and conforming to Federal Specification MMM-A-110a.
- C. Provide tile edge strip (E.S.) where vinyl asbestos tile abuts other floor finishes or other

APPLICATION FOR INSTALLATION OF STORAGE TANKS

To the Fire Marshal
City of Fresno, California

Application is hereby made to the Fire Prevention Bureau of the City of Fresno for permission to install a storage tank or tanks for the storage of flammable liquids in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the applicant and which shall be deemed conditions entering into the exercise of this permit.

FIRST: That the permit does not grant any right or privilege to install any storage tank, pump or piping upon any street, alley or other public place or portion thereof without a permit from the Department of Public Works.

SECOND: That the permit does not grant any right or privilege to install any storage tank, pump or piping in any building or premises where such installation may be prohibited by laws of the State of California or Ordinances of the City of Fresno.

Dear Harry:

Enclosed is a copy of the letter which we received today from James B. Wolfson.

It was our understanding that you and Lonnie Wass had been developing acceptable clean-up levels for the contaminated soil. If this is not factual, will you please advise me what steps we should take in order to comply with Mr. Wolfson's directive.

Very truly yours,

Max E. Griggs
President

Attention: Mr. Max Griggs

RE: Preliminary Geotechnical Investigation
Gasoline Contamination Assessment
Proposed Credit Union Building
Fresno, California

Gentlemen:

In accordance with your request and authorization, we have completed a preliminary investigation to determine the presence and general extent of gasoline contamination in the subsoils and groundwater at the proposed Credit Union Building to be located to the north of Merced and "L" Streets in Fresno, California.

During the course of our investigation, five test borings were drilled to depths of between 21 and 76 feet. A total of 30 soil samples and one water sample were retrieved and analyzed for the presence of gasoline components. Based on the results of our field investigation and chemical analysis of the subsoils and the groundwater, we have concluded that contamination due to gasoline presently exists in the subsoils to a depth of approximately 55 foot and in the underlying groundwater. In addition, several chlorinated hydrocarbons were detected in the groundwater sample.

PRELIMINARY GEOTECHNICAL ENGINEERING REPORT

GASOLINE CONTAMINATION ASSESSMENT

PROPOSED CREDIT UNION BUILDING

FRESNO, CALIFORNIA

INTRODUCTION

This report presents the results of our field and laboratory investigations for the evaluation of gasoline contamination of subsoils and groundwater in the area of the proposed Credit Union Building to be located to the north of Merced and "L" Streets in Fresno, California.

In general, the area of concern regarding the subject property is the extent of contamination of soils from the discharge of gasoline and the possibility of groundwater contamination. The actual cause of the discharge of gasoline contamination is unknown. However, a gasoline service station had previously occupied the site and the area of contamination is located where three underground storage tanks were buried. It is suspected that the contamination is related to the underground storage tanks.

We previously performed a geotechnical engineering investigation for the proposed Credit Union Building and submitted our reported to you on October 22, 1984 (our reference

ENGINEERING AND ANALYTICAL SERVICES FOR CONSTRUCTION, TESTING, CONTROL, AND RESEARCH

Soil Foundation and Geological Investigations, Construction Materials Inspection and Testing, Chemical and Physical Analyses of Concrete, Steel, Alloys, Soils, Plant Tissue, Fertilizers, Feeds, Waters, Minerals, Insecticides, Food Products, Alcoholic Beverages, Gases, Paints, Petroleum Products, Crop Damage Investigation, Expert Witness Court Testimony. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved, pending our written approval.

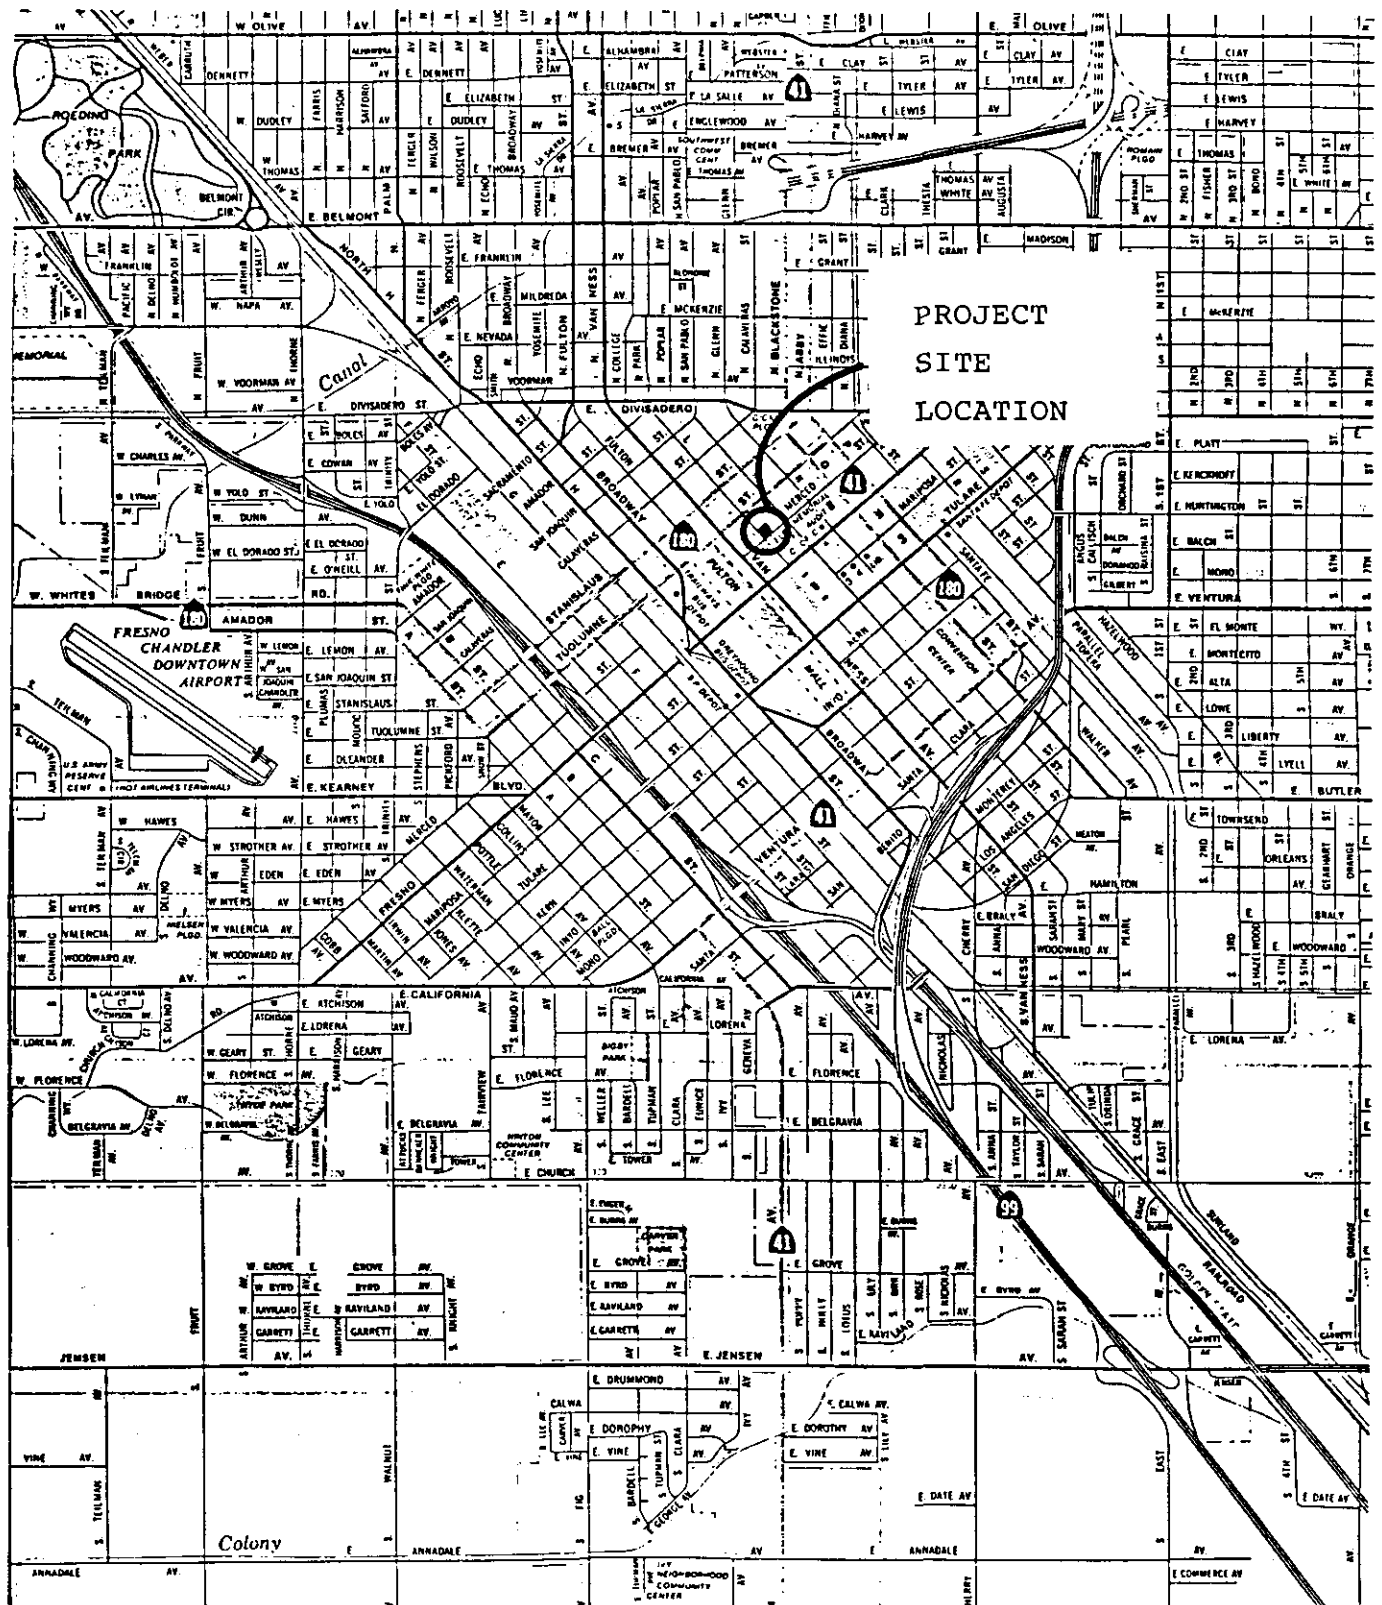

TL 384-214-00). During the course of our field investigations, a strong gasoline odor was noted in the soil samples from the borings in the area of the underground tanks. These tanks were removed in December, 1981.

The purpose of this investigation was to determine the presence and general extent of gasoline contamination of subsoils and groundwater in the area of the underground tanks. The technical approach followed is outlined in our proposal dated December 7, 1984.

SITE DESCRIPTION

The site is located on the northeast corner of Merced and "L" Streets in Fresno, California. Figure 1 is a vicinity map which shows the general location of the project site.

The site is relatively level. Portions of the site are covered with asphaltic concrete. It had been the site of an gasoline station. The foundations and concrete slabs still exist. There was an asphaltic concrete patched area east of the gas island concrete slab which is where the underground tanks were located. The tanks have been removed. We understand a building with a partial basement existed in the western portion of the site. This building had been removed and the basement backfilled. No evidence of building foundations or floor slabs were noted in this area. The hydraulic lift from the garage was still in place. There was also a sump located adjacent to the hydraulic lift.

		DRAWING No.	1 of 3

The Twining
Laboratories, Inc.

FRESNO/MODESTO/VISALIA/BAKERSFIELD

The site is currently used as a parking lot for adjacent businesses. A few large trees were located in the western portion of the site. Portions of the site were also subdivided by chain link fences. In addition, it is understood that there may be buried sewer lines in the area.

PROJECT HISTORY

The following information was obtained from various documents on file with the City of Fresno. The first recorded gasoline station was constructed at the site in June, 1940. Construction of the site included the installation of two-1,000 gallon tanks and one-550 gallon tank. The owner of the site at this time was a W.B. Holland. Signal Oil Company gained control of the site in February, 1948. Two-55 gallon tanks were added in December, 1953 to hold No. 2 Cleaning Solvent and No. 2 Kerosene. In June, 1967, Humble Oil Company gained control of the site and changed it to an Enco Service Station. Exxon Oil Company gained control of the site in April, 1978. In December 1981, Curb Service of Fresno removed two-1,000 gallon tanks and one-550 gallon tanks from the site. The owner of record at that time was Kay Moorsteen of San Diego, California. Representatives of Curb Service indicated that prior to removal, the tanks had been filled with water at the request of the Fresno Fire Department. After the three tanks were removed, a subsequent pressure testing revealed that one of the 1,000 gallon tanks failed to hold

The Juvinig Laboratories, Inc.

Fresno Modesto Visalia Bakersfield

pressure, thus indicting the presence of at least one hole. This tank was disposed of as scrap metal.

RATIONALE FOR CONTAMINATION ASSESSMENT

Selection Criteria for Substances Analyzed: Based on our research, a gasoline service station existed on this site until about 1981. This information agrees with our observation during the field investigation. The foundations that remain at the site are similar to the general layout of a gasoline service station. In addition, during our previous foundation study, a strong odor of gasoline was noticed in one of the borings. Our investigation assumed that the contamination was limited to gasoline. Therefore, the contaminants to be determined in the soils and groundwater are those volatile organic compounds that are easily identifiable as being components of gasoline. These were Benzene, Toluene, Xylene, and Ethylbenzene. In addition, at the request of the California Department of Health Services, organic lead, Ethylene Dibromide, and volatile organics listed in EPA Method 602 were added to the list of possible contaminants. The analytical methods used are generally discussed in the "Analytical Procedures" section of this report.

Selection Rationale for Sample Locations: As a result of our previous geotechnical engineering investigation, gasoline was discovered in the soil in the area where the underground storage tanks were located. The events surrounding the leakage of

The Twining Laboratories, Inc.
Fresno Modesto Visalia Bakersfield

gasoline is unknown at this time, however, one of several explanations could account for the presence of gasoline in the soils. These are: 1) surface spillage during daily operations of the facility, 2) leakage from the underground tanks or associated piping, or 3) release of gasoline from the tanks as they were being removed from the ground, either accidental or intentional. Any one of these explanations could account for the presence of gasoline in the soils.

The first boring was placed in the center of the asphalt patch area where the existence of gasoline in the subsoils is known. The placement of this boring would give an indication of contamination as a function of depth. Additionally, this boring was advanced to groundwater bearing strata in order to characterize the groundwater beneath the area where the underground tanks were located.

The remaining four borings were placed on the perimeter of the area where the underground tanks were located. The placement of these four borings would give an indication of the horizontal extent of contamination with depth.

In our opinion, the placement of these five borings would give a general indication of the horizontal and vertical extent of soil contamination, and if any contaminants were present in the groundwater beneath the site.

FIELD INVESTIGATIONS

General: A site reconnaissance was conducted during our field investigation. The approximate location where the underground storage tanks had been placed was assumed to be underneath the asphaltic concrete patch. After drilling through the asphaltic concrete, the underlying soil was probed to a maximum depth of four feet to determine the presence of any underground utility lines. A portable combustible gas meter was used to sniff the samples and auger cuttings for the presence of combustible vapors and to determine the explosive potential inside each boring.

Sampling Locations: In order to evaluate the soils in the area for possible contamination, five test borings were advanced. Boring No. 1 was advanced to a depth of 76 feet and Boring Nos. 2 through 5 were advanced to depths of 21 feet. The boring locations are outlined on Figure 3 in Appendix A. Soil samples were obtained at 5 foot intervals in all borings and analyzed for the previously outlined list of contaminants. Figure 2 shows an elevation view of the sampling intervals.

In order to evaluate the groundwater beneath the site for possible contamination, Boring No. 1 was advanced until groundwater bearing strata was encountered (approximately 75 feet below existing surface elevation). A representative groundwater sample was obtained and analyzed for the previously outlined list of contaminants.

FIGURE NO. 2

— DENOTES SAMPLE LOCATIONS

PROPOSED CREDIT UNION BUILDING
FRESNO, CALIFORNIA

SCALE:	NTS	DATE:	6-13-85
DRAWN BY:	JP	APPROVED BY:	<i>[Signature]</i>

The sampling procedures and analytical methodology for the soils and groundwater are discussed in the following sections.

Sampling Procedures: On April 10 and 11, 1985, five test borings were advanced to depths of between 21 and 76 feet at locations shown on Figure 3 presented in Appendix A.

The borings were drilled and all samples were retrieved under the direction of a professional engineer. A detailed boring log was kept at all times noting: 1) material types encountered with depth (Unified Soils Classification System), 2) moisture conditions, and 3) drilling penetration rates or standard penetration blow counts. The location, depth, and time of collection for each sample were also carefully noted.

The borings were drilled using a Mobile B-61 drill rig equipped with 8-inch, continuous flight hollow stem augers. Each soil sample was obtained by either pushing or driving a thin-walled steel sampler approximately 18 inches into the soil.

Groundwater samples were obtained by using a teflon bailer. This bailer was lowered through the auger casing into the groundwater. After the bailer had filled with water, it was raised to the surface and the sample collected.

All soil and groundwater samples were retained in pre-cleaned glass containers with teflon-lined lids and immediately cooled to 4°C for shipment to the laboratory.

The soil samplers and teflon bailer were thoroughly cleaned using a hot water washer between each sampling interval. The hot

water washer had a pressure of 1,000 psi and a water temperature of 200°F. The lead auger was also washed between borings in order to prevent any cross-contamination between samples and borings.

After all samples had been obtained, each boring was backfilled with a bentonite slurry and capped with concrete. All excess soil removed from the borings was placed into 55-gallon drums, the drums sealed, and stored at the project site.

In addition, samples for analysis were carefully marked and chain-of-custody procedures, described in "Test Methods of Evaluating Solid Waste", U.S. EPA, were followed. The chain-of-custody forms are presented in Appendix E. All samples of soil and water retrieved in the field were brought to our facility in Fresno, California for analysis.

The logs of the exploratory borings are presented in Appendix B along with a detailed description of the sampling procedures. An explanation of the abbreviations used in the preparation of the logs is also provided.

SOIL PROFILE AND SUBSURFACE CONDITIONS

The soil profile at the site consisted of interbedded silty sands and sandy silts underlain by silty sands to the depths explored. The soils are generally loose to very dense with standard penetration resistance (N-values) ranging from 5 to more than 100 blows per foot. Natural moisture content ranged from

The Twining Laboratories, Inc.
Fresno Modesto Visalia Bakersfield

slightly moist conditions at the surface to saturated conditions at groundwater. The subsoils are described in detail on the boring logs in Appendix B.

The stratification lines shown on the boring logs in Appendix B represent the approximate boundary between soil types; the actual in-situ transition may be gradual.

Groundwater was encountered in the deep boring at a depth of 75.0 feet at the time of our field investigation (April 10 and 11, 1985). However, numerous factors influence groundwater fluctuations and evaluation of such factors is beyond the scope of this report.

LABORATORY PROCEDURES

Analytical tests were performed to determine concentrations of the previously referenced compounds in the soil and water samples.

The analytical methods used for analysis of samples from the site were those approved by EPA, State of California, or methods developed by The Twining Laboratories, Inc., staff when no analytical methods exist. A list of methods used is summarized below:

<u>Type of Analysis</u>	<u>Method</u>
Volatile Organics	
Soils	EPA SW-846 (Methods 5020, 5030, and 8020)(1)
Water	EPA 602 (See Appendix D for summary of analytical method for gasoline)
Organic Lead	Varian, "Analytical Methods for Flame Spectroscopy", Publication No. 85-10009-00, July, 1979, p. 81, Organic Metallic Salts

(1) U.S. EPA SW-846: Test Methods for Evaluating Solid Wastes, U.S. EPA, Office of Solid Waste and Emergency Response, July, 1984, 2nd Edition.

The test results of all of the substances analyzed are presented in Appendix C and are summarized in the "Summary of Test Results" section of this report. A list of laboratory equipment and instrumentation used during this study is presented in Appendix D.

SUMMARY OF TEST RESULTS

Analysis of the soil samples in the center of the area where the underground tanks were located revealed the presence of the various contaminants to a depth of approximately 55 feet. The highest levels of the four volatile aromatic organic compounds (Benzene, Toluene, Ethylbenzene and Xylene) occurred at a depth of about 30 feet. The concentrations of the four volatile

The Twining Laboratories, Inc.
Fresno Modesto Visalia Bakersfield

aromatic organic compounds at the depth of 55 feet ranged from 16 ug/g (ppm) of Benzene to 320 ug/g (ppm) of Xylene. Detectable concentrations of Ethylbenzene Dibromide (EDB) and Organic Lead were also found in this area. EDB was detected at a depth of 55 feet and organic lead was detected at a depth of 60 feet.

Analysis of the soil samples from the borings placed in the perimeter of the area where the underground tanks were located revealed non-detectable concentrations of the various contaminants in Boring No. 2, 3, and 5. Boring No. 4 revealed the presence of all contaminants at a depth of 20 feet only. The soil samples analyzed at the 5 foot, 10 foot, and 15 foot depths in this boring revealed non-detectable concentrations of the various contaminants.

Analysis of the groundwater sample revealed detectable concentrations of all compounds analyzed with the exception of organic lead. Of these compounds that were detected, Benzene, Toluene, Xylene, Ethylbenzene, and 1,2-Dichloroethane were found in levels which exceed current maximum drinking water standards.

DISCUSSION

General: The purpose of this investigation was to assess the general extent of contamination of soils and groundwater in the area where the underground tanks were located.

Based on the observations of our previous investigation and on the analytical results of this investigation, it is apparent

that gasoline has, at one time, been discharged into the soils in the area where the underground tank was located. However, the details concerning the leakage of gasoline and the amount of gasoline that entered the soils is unknown at this time. Regardless of the actual event, the depth of gasoline migration and the existing concentrations of the gasoline components would suggest that either a substantial amount of gasoline was lost at one time, or that the leakage occurred over a long period of time.

Soil Contamination: Based on the analytical testing of soil samples, contamination due to the discharge of gasoline currently exists in the soils at a depth of about 55 feet in the area where the underground storage tanks were located. In addition, the results of the analysis of soil samples taken from the perimeter borings indicates that the contamination is generally confined to the underground tanks location with the exception of some horizontal migration in a southwest direction at a depth of 20 feet. The soil profile at this depth indicates the existence of a dense sandy silt layer. Our findings indicates that this dense soil zone may have inhibited the vertical migration of gasoline, thus promoting the horizontal movement of gasoline. The depth of contamination determined by the analysis of the soil samples from the boring in the middle of the underground tanks location indicates a soil zone of about 20 feet with non-detectable

concentrations of the various contaminants is situated between the contaminated soil and groundwater.

Groundwater Contamination: Analysis of the groundwater sample revealed the existence of several compounds in excess of the current maximum drinking water standards. Based on the existence of a 20 foot zone of soil with non-detectable levels of the various compounds lying between the groundwater and the deepest contamination found during this study, the origin of the contaminants in the groundwater and the deepest contamination found during this study. The origin of the contaminants in the groundwater may not be from this site. However, since only one boring was advanced to groundwater, insufficient information exists at this time to make a determination as to the source of the groundwater contamination. In addition, only one grab sample of groundwater was obtained, therefore more information would be needed in order to define the lateral extent of groundwater contamination. Development of this information would require a hydrogeologic study which was beyond the scope of this investigation.

The aquifer in the Fresno Metropolitan area has been designated as a "Sole Source Aquifer" by the Environmental Protection Agency. The groundwater in this area, according to the Central Valley Regional Water Quality Control Board (CVRWQCB), is of excellent quality as is used as the main source of drinking water. The groundwater flow direction, owing to

The Twining Laboratories, Inc.

Fresno Modesto Visalia Bakersfield

pumping-induced gradients from City of Fresno water wells, is shifted from its natural southwest direction to the northwest. It is this change in the groundwater flow direction, resulting from the pumping of city wells, which would make it very difficult to identify the origin of the groundwater contamination.

CONCLUSIONS

Based on the rationale presented for contaminant selection, frequency and location of samples, and analytical results, it is our opinion that contamination due to the discharge of gasoline currently exists in the soils to a depth of about 55 feet and is generally confined to the area in which the underground storage tanks were located. In addition, some horizontal migration of gasoline components has occurred in a southwest direction at a depth of 20 feet. Our findings also indicates the existence of several compounds in the groundwater in excess of current maximum drinking water standards. However, insufficient information is available at this time to determine the origin and lateral extent of contamination in the groundwater.

In our opinion, further investigations are required to determine the horizontal extent of soil contamination and the lateral extent and severity of the groundwater contamination.

RECOMMENDATIONS

The following recommendations are presented for your consideration:

1. Initiate an investigation to determine the horizontal extent of soil contamination. Before remedial actions for soil clean-up can be developed, recommended soil clean-up levels (RSCL) should be received from the State Health Agency.
2. Initiate a sampling program of surrounding City of Fresno water wells to determine if the city's water supply has been impacted.
3. Conduct a hydrogeologic investigation of the groundwater aquifer to determine the lateral extent and severity of the groundwater contamination.
4. Develop and evaluate remedial actions to mitigate groundwater contamination.

LIMITATIONS

The findings presented in this report are based on the information provided regarding the subject study area and analytical testing of soil and groundwater samples, as well as subsurface conditions encountered at the test boring locations.

The Twining Laboratories, Inc.

Fresno Modesto Visalia Bakersfield

The nature and extent of variations between the test boring locations may not become evident until further investigations of the site are implemented. Also, the passage of time may result in the change of soil conditions and contaminant concentrations at the various locations.

The analytical and geotechnical data presented herewith are based upon professional interpretation utilizing the "state of the art" and a degree of conservatism deemed proper as of the report date. It is not warranted that such data cannot be superseded by future analytical and geotechnical developments.

APPENDIX BFIELD INVESTIGATION

The field investigation consisted of a subsurface exploratory program. On April 10 and 11, 1985, five exploratory borings were advanced. The boring locations are shown on Figure 3 presented in Appendix A.

Field exploration was performed using a truck-mounted rotary drilling machine equipped with continuous flight hollow augers. Standard penetration testing and sampling was performed during our drilling program. The soils were continuously logged by an engineer and classified by visual examination in accordance with the Unified Soils Classification System.

Samples were obtained by driving or pushing a thin-wall steel sampler into the soil layer. The lower 6-inch portion of the sample was retained in pre-cleaned glass containers with teflon lined lids for shipment to the laboratory. Samples were carefully marked. The sampler was thoroughly cleaned between each sampling interval using a hot water washer. The hot water washer had a pressure of 1,000 psi and a water temperature of 200°F. The lead auger was also washed with the hot water washer between borings in order to prevent cross-contamination between samples and borings. The method of drilling and sampling was to advance the auger to the desired depth. The sampler was lowered through the hollow auger and the soil sample collected. The hollow auger forms a temporary casing, assuring the sampling of discrete vertical intervals. Liquid samples were retrieved with a teflon bailer. The bailer was lowered through the auger casing into the water, the sample collected, and the bailer was raised to the surface and the water sample transferred to a pre-cleaned glass jar with a teflon-lined lid. All samples retrieved from the site were immediately cooled to 4°C, and then shipped to the laboratory. The test borings were backfilled with a bentonite slurry and capped with concrete immediately after sampling was completed. All samples were returned to our Fresno laboratory for evaluation.

APPENDIX DGASOLINE ANALYSIS PROCEDURESGENERAL

The soil samples were frozen when received by the laboratory. The following day, when the analysis was performed, the samples were removed from the freezer and allowed to partially thaw. They were not, however, allowed to come to room temperature. After analysis, all samples were returned to the freezer. The water sample was refrigerated until analyzed.

Analysis of the soil samples for gasoline was performed according to the Environmental Protection Agency's document SW-846; Test Methods for Evaluating Solid Waste, Physical/Chemical Methods. Specifically, the analyses were conducted using techniques found in Methods 5020 and 8020. The water samples were analyzed for gasoline using EPA Method 602. These methods are briefly summarized below.

SOIL

A 10 gram soil sample was weighed into a 125 milliliter septum seal vial. The vial was then placed into a 90°C water bath for a specified length of time. At the end of this time period, a gas tight syringe was used to withdraw 2 milliliters of the gas in the headspace over the sample. The gas was then injected into a gas chromatograph equipped as stated in the instrument section presented in Appendix D. A standard was prepared by adding a known amount of Benzene, Toluene, Ethylbenzene, and Xylene to a second 10 gram sample of soil weighed into another vial. This fortified sample was then treated in the same way as the original sample. This method of standard preparation allows for variations in volatility which might occur in each sample.

WATER

The water sample was analyzed according to EPA Method 602. This involves placing an aliquot of water into a purging chamber and then stripping the volatile components from it with a stream of compressed Helium. The volatile compounds are carried via heated lines to an absorptive material where they are trapped and concentrated. After the purging has taken place for a preset time, the accumulated volatile compounds are removed from the absorptive material by rapid heating. They are transferred to a gas chromatograph where they are separated and quantified. Fortified water samples treated in a similar manner were used as standards.

ADDITIONAL INVESTIGATION
GROUNDWATER CONTAMINATION ASSESSMENT
PROPOSED CREDIT UNION BUILDING
FRESNO, CALIFORNIA

1.0 INTRODUCTION

This report presents the results of an investigation to evaluate the groundwater beneath the site of the proposed Credit Union Building in Fresno, California. This investigation was authorized by Mr. Max Griggs of the Fresno County Employees Credit Union.

The contents of this report include the objectives of the investigation and scope of services provided. Background information regarding existing site features, site history, previous investigations, and nature of the problem are presented. In addition, a description of the investigative procedures used and subsequent findings obtained are presented. The appendices of this report contain the final logs of the boring, construction details of the monitoring well, and copies of the chain-of-custody documentation.

The investigation was performed during the latter part of 1985 and the first part of 1986 by the Environmental Engineering

ENGINEERING AND ANALYTICAL SERVICES FOR CONSTRUCTION, TESTING, CONTROL, AND RESEARCH

Soil Foundation and Geological Investigations, Construction Materials Inspection and Testing, Chemical and Physical Analyses of Concrete, Steel, Alloys, Soils, Plant Tissue, Fertilizers, Feeds, Waters, Minerals, Insecticides, Food Products, Alcoholic Beverages, Gases, Paints, Petroleum Products, Crop Damage Investigation, Expert Witness Court Testimony. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved, pending our written approval.

and Analytical Chemistry Division of Twining Laboratories, Inc., located in Fresno, California.

2.0 OBJECTIVE OF INVESTIGATION

The objective of our investigation was to obtain and analyze a representative groundwater sample in order to evaluate the groundwater quality beneath the project site. Also, based on the resulting data, present our conclusions and related recommendations.

A summary of the actions taken during our investigation is outlined as follows:

1. The information developed from the previous investigation (our reference TL 384-214-01, dated May 28, 1985) was reviewed.
2. Input was received from the Central Valley Regional Water Quality Control Board concerning the location and construction details of the proposed groundwater monitoring well.
3. Field explorations were conducted to obtain representative soil and groundwater samples.
4. Laboratory tests were conducted to determine the presence and concentration of selected substances in the soil and groundwater samples.
5. The data obtained from the investigation were evaluated to determine if any of the substances detected exceed applicable maximum allowable levels for this site.

The Twining Laboratories, Inc.

Fresno Modesto Visalia Bakersfield

3.0 BACKGROUND INFORMATION

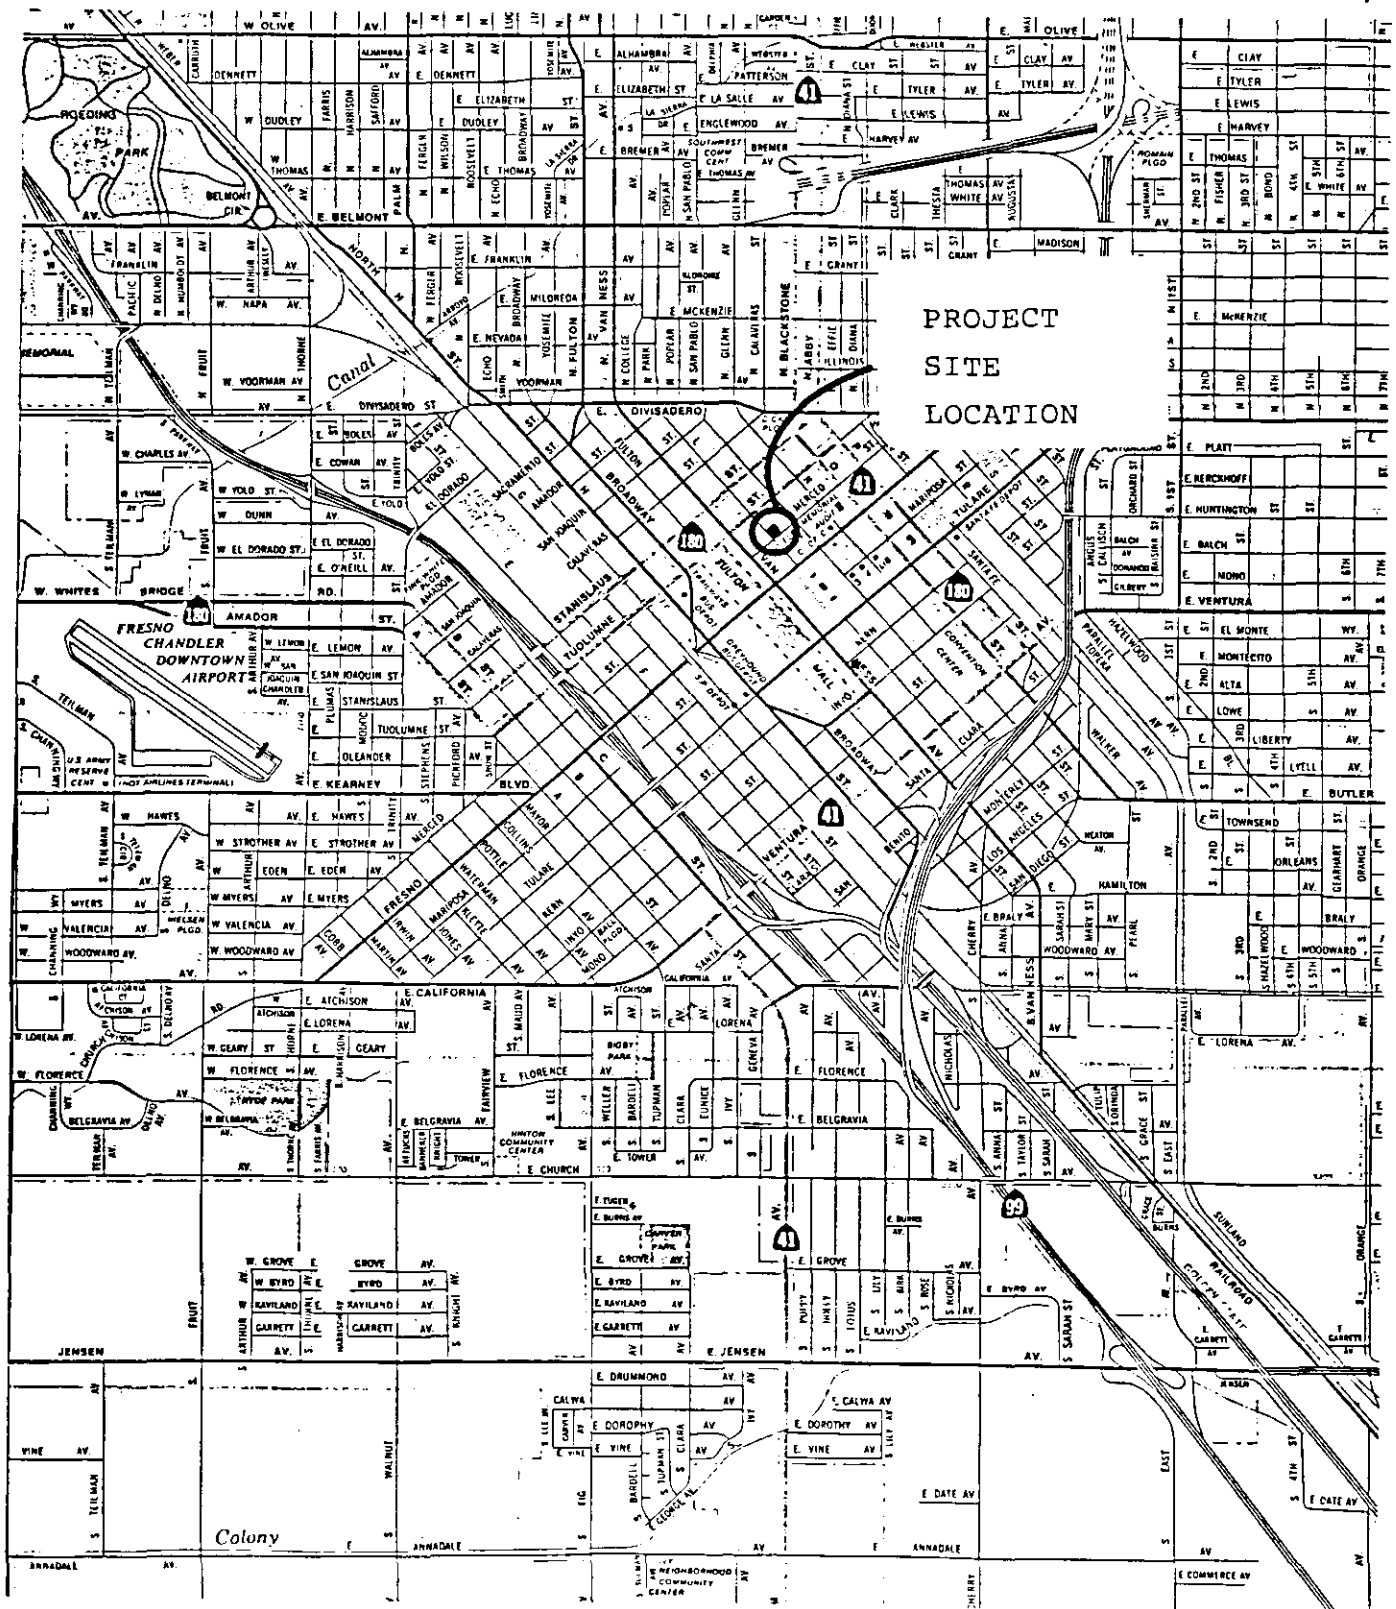

The following section contains a description of existing site features, a brief history of the project site, and a statement of the problem.

3.1 Site Description: The site is located on the northeast corner of Merced and "L" Streets in Fresno, California. Figure No. 1 is a vicinity map which shows the general location of the project site. The site is relatively level. Portions of the site are covered with asphaltic concrete. It had been the site of a gasoline station. The foundations and concrete slabs still exist. There was an asphaltic concrete patched area east of the gas island concrete slab which is where the underground tanks appear to have been located. The tanks have been removed. We understand a building with a partial basement existed in the western portion of the site. This building had been removed and the basement backfilled. No evidence of building foundations or floor slabs were noted in this area. A hydraulic lift was still in place. There was also a sump located adjacent to the hydraulic lift.

The site is currently used as a parking lot for adjacent businesses. A few large trees were located in the western portion of the site. Portions of the site were also subdivided by chain link fences.

3.2 Site History: The following information was obtained from various documents on file with the City of Fresno. The

The Twining Laboratories, Inc.
Fresno Modesto Visalia Bakersfield

Laboratories, Inc.

FRESNO/MODESTO/VISALIA/BAKERSFIELD

first recorded gasoline station was constructed at the site in June, 1940. Construction of the site included the installation of two 1,000 gallon tanks and one 550 gallon tank. The owner of the site at this time was W.B. Holland. Signal Oil Company gained control of the site in February, 1948. Two 55 gallon tanks were added in December, 1953 to store No. 2 Cleaning Solvent and No. 2 Kerosene. In June, 1967, Humble Oil Company gained control of the site and changed it to an Enco Service Station. Exxon Oil Company gained control of the site in April, 1978. In December, 1981, Curb Service of Fresno removed two 1,000 gallon tanks and one 550 gallon tank from the site. The owner of record at that time was Kay Moorsten of San Diego, California. Representatives of Curb Service indicated that prior to removal, the tanks had been filled with water at the request of the Fresno Fire Department. After the three tanks were removed, a subsequent pressure testing revealed that one of the 1,000 gallon tanks failed to hold pressure, thus indicating the presence of at least one hole. This tank was disposed of as scrap metal.

3.3 Statement of the Problem: In general, the area of concern regarding the subject property is the extent of gasoline contamination of soils and groundwater in the vicinity of where underground storage tanks has been located. We recently conducted a preliminary contamination assessment of the project site and submitted our report to you (our reference TL 384-214-01,

The Twining Laboratories, Inc.

Fresno Modesto Visalia Bakersfield

dated May 28, 1985)). The results of this preliminary investigation indicated the presence of gasoline components in the soils to a depth of about 55 feet and in the groundwater beneath the site.

In a letter dated July 30, 1985, the Central Valley Regional Water Quality Control Board requested plans and time schedules for: 1) further defining the extent of soils contamination, 2) develop remedial actions to clean up the soils, and 3) implement verification groundwater monitoring. The objective of this investigation was to address Item No. 3 listed above.

4.0 INVESTIGATIVE PROCEDURES

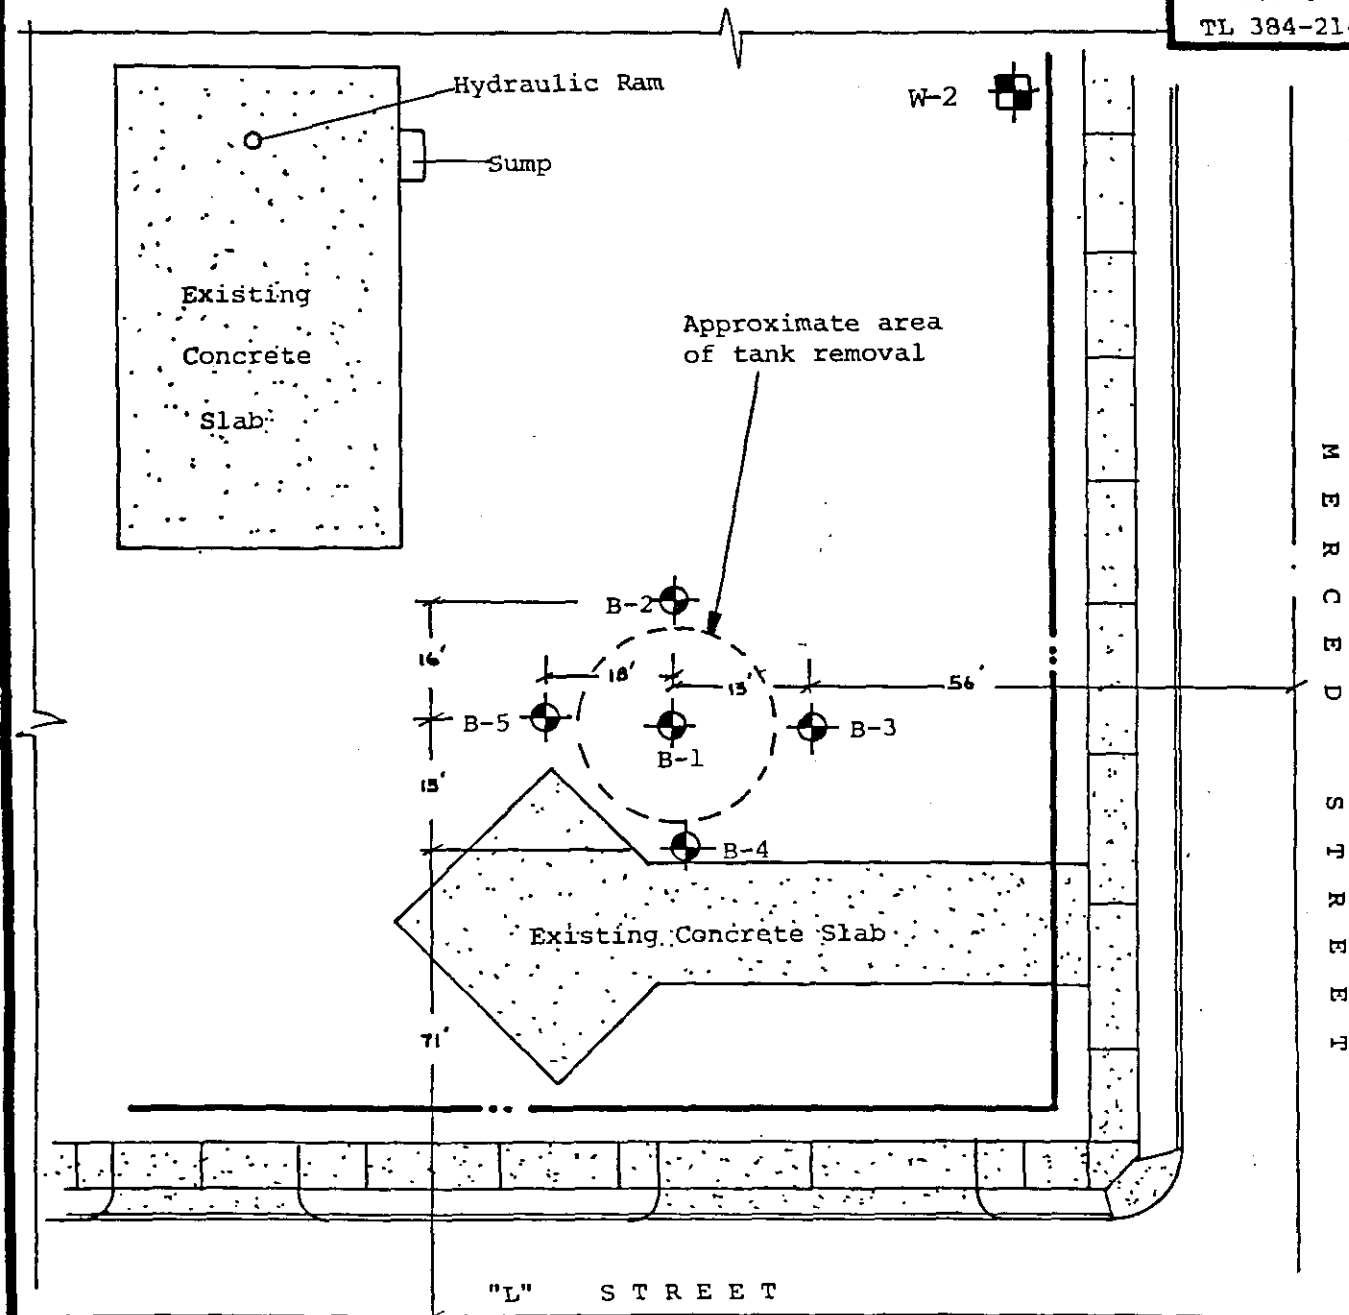

Our investigation consisted of a field exploration and laboratory testing program. The details of the exploration and testing are presented in the following sections.

4.1 Field Investigation: The field exploration consisted of a subsurface exploratory program. During the course of this investigation, one monitoring well was installed to a depth of 95 feet and a total of seven soil and two groundwater samples were obtained from the test boring and monitoring well.

4.1.1 Selection Rationale for Sample Locations: Based on the results of the initial investigation, the horizontal extent of gasoline contaminated soils appears to be confined to the area within the boundary formed by Test Boring Nos. 2 through 5 (See Figure No. 2) with the exception of slight lateral

Laboratories, Inc.
FRESNO / MODESTO / VISALIA / BAKERSFIELD

migration at a depth of 20 feet in Test Boring No. 4. Therefore, it was decided the monitoring well would be placed at a location that would not be affected by possible clean-up actions of the contaminated soil. In addition, the monitoring well would be placed outside the proposed construction area of the Credit Union Building and towards the City of Fresno Municipal Water Well No. 21A. This water well is located on "O" Street between Fresno Street and Merced Street and is the closest municipal water well to the project site. Soil samples would be obtained from the monitoring well boring at 10-foot intervals and analyzed to insure that no gasoline contamination exists at that location.

4.1.2 Soil Sampling Procedures: On November 30 and December 1, 1985, one exploratory boring was drilled at the location shown on Figure No. 2. Soil samples were obtained at 10 foot intervals starting at a depth of 10 feet and terminating at the depth at which first groundwater was encountered.

The boring was drilled and all samples retrieved under the direction of a professional engineer. A detailed boring log was kept at all times noting: 1) material types encountered with depth (Unified Soils Classification System), and 2) moisture conditions. The location, depth, and time of collection for each sample was also carefully noted.

The boring was drilled using a Mobile B-61 drill rig equipped with 10-inch diameter continuous flight hollow stem

augers. Each soil sample was obtained by pushing or driving a thin-wall steel sampler approximately 18-inches into the soil.

The log of the exploratory boring is presented in Appendix A along with a detailed description of the sampling procedures. An explanation of the abbreviations used in the preparation of the log is also presented.

4.1.3 Decontamination Procedures: The thin wall steel sampler was thoroughly cleaned using a hot water washer between sampling intervals. The hot water washer had a pressure of 1,000 psi and a water temperature of 200°F. The lead auger was also washed prior to the drilling of the test borings.

4.1.4 Monitoring Well Installation Procedures: One groundwater monitoring well was installed at the project site. After the soil samples had been collected, the test boring was drilled into the groundwater bearing strata to a depth of approximately 95 feet. Four-inch diameter PVC pipe was used to construct the monitoring well.

The groundwater monitoring well consisted of a bottom plug followed by 4-inch diameter, Schedule 40 solid PVC pipe to the surface. Pre-washed pea-gravel was placed as filter-pack material around the slotted pipe and extending a minimum of two feet above the slotted pipe. Approximately 2 feet of 1/4-inch bentonite pellets were used to seal the top of the pea-gravel. The remainder of the well was backfilled with a bentonite slurry followed by a concrete surface seal. A locking brass and cast-

The Twining Laboratories, Inc.

Fresno Modesto Visalia Bakersfield

iron cap was placed on top of the monitoring well. A concrete cristy box with cast-iron lid was placed on top of the monitoring well and concreted into place. The installation log for the monitoring well is presented in Appendix A.

4.1.5 Groundwater Sampling Procedures: A groundwater sample was obtained from the monitoring well after it had been installed and sufficient time has passed to allow the well to stabilize. After the first groundwater sample was collected, approximately four well volumes of water was removed using a nitrogen-gas operated bladder-pump, and a second groundwater sample was collected.

Each groundwater sample was obtained using a pre-cleaned teflon bailer and new section of rope. The teflon bailer was washed with soap, rinsed with clean water, thoroughly rinsed with hexane, and allowed to air-dry for approximately 5 minutes. The bailer was lowered down the monitoring well into the groundwater. After the bailer had filled with water, it was raised to the surface, and the water sample immediately transferred to a pre-cleaned glass container with a teflon lined lid.

4.1.6 Sample Handling and Chain-of-Custody Procedures:
All soil samples obtained from the site were retained in the pre-cleaned brass sleeves used to obtain the samples. The ends were covered with aluminum foil and sealed with tight fitting plastic caps and tape. All water samples obtained from the site were retained in pre-cleaned glass containers with teflon-lined

lids. The samples were immediately cooled to 4°C for shipment to the laboratory. Each sample was clearly identified and banded with shipping seals. Chain-of-custody procedures, described in Test Methods for Evaluating Solid Waste, SW-846, U.S. EPA, Second Edition, 1982, were followed. All samples retrieved in the field were brought to our facility in Fresno, California.

The engineer in charge of the field investigation carried both the samples and chain-of-custody sheets back to the laboratory where he presented them to the laboratory director. The director or an authorized analyst signed these custody sheets, presented a duplicate copy to the engineer, and transferred the samples to the appropriate laboratory analyst to conduct the required analytical tests. The laboratory director retained possession of the custody sheets during the sample analysis. The director's responsibility included monitoring the progress of the samples and insuring the sample's integrity within the laboratory. This involves assigning each sample an unambiguous laboratory number and maintaining cross-references between the sample's field identification information and its laboratory identification. The analyst's responsibilities included maintaining accurate records of the samples analyzed along with analytical data produced. This involved labeling chromatograms and maintaining the laboratory number throughout all steps of the analysis, such as recording laboratory numbers on all subsamples taken from the samples submitted, labeling all

The Twining Laboratories, Inc.

Fresno Modesto Visalia Bakersfield

glassware used in the analysis, and properly labeling sample extract containers with the sample's laboratory number.

After the analysis was complete, the sample was transferred to a limited access storage room. In addition, the chain-of-custody forms, chromatograms, and other pertinent information were maintained for future reference.

4.1.7 Safety Work Plan: Due to the possibility of health hazards associated with exposure to various chemicals, all field and laboratory personnel who could possibly come in contact with the samples obtained from the site were issued adequate safety gear. The gear included disposable clothing, disposable rubber gloves, rubber boots, safety glasses and hardhats.

4.2 Laboratory Investigation: Analytical tests were performed to determine the presence and concentration of selected substances in the soil and groundwater samples.

The rationale concerning the selection of the substances analyzed for is presented in the following section.

4.2.1 Contaminant Characterization: Based on available information concerning the history of the project site, the only material stored in the underground storage tanks had been gasoline. Also, our previous investigation revealed the presence of substances which are recognized as being indicators of the presence of gasoline. Therefore, our investigation was confined to analyzing each soil sample for Benzene, Toluene,

Ethylbenzene, and Xylenes and each water sample for lead and the constituents listed in EPA Method 602.

The analytical methods used for analysis of samples from the site were those approved by EPA. A list of the methods used is summarized below:

<u>Type of Analysis</u>	<u>Method</u>
Water: Volatile Organics	EPA SW-846: Method 602
Lead	EPA SW-846: Method 7421
Soil: Benzene, Toluene Xylenes, Ethylbenzene	EPA SW-846: Method 5020 for extraction and Method 8020 for analysis of extract

5.0 RESULTS AND FINDINGS

The results of our field and laboratory investigations are summarized in the following sections.

5.1 Subsurface Profile: The subsurface profile at the site consisted of interbedded silts and sands underlain by silty sands to the depths explored. The soils were generally dense to very dense in nature. Natural moisture content ranged from slightly moist conditions at the surface to saturated conditions at groundwater.

The following is a general summary of the subsurface conditions encountered in the boring drilled for this investigation. Detailed descriptions of the conditions encountered in this boring are presented on the logs of borings in Appendix A. The stratification lines shown on the logs

The Juving Laboratories, Inc.

Fresno Modesto Visalia Bakersfield

present the approximate boundary between soil types; the actual in-situ transition may be gradual.

5.2 Groundwater Conditions: Groundwater was encountered in the test boring at a depth of approximately 76 feet below existing ground surface at the time of our field investigation (November 30, and December 1, 1985). Numerous factors, such as artificially induced gradients caused by high volume pumping of city wells, influence groundwater level fluctuations and the direction of groundwater movement in the Fresno area. However, evaluation of such factors is beyond the scope of this report.

5.3 Results of Chemical Analysis: The results of the laboratory testing are presented in Tables I and II, and are further explained in the "Analysis" section of this report.

6.0 ANALYSIS

The following sections present our analysis of the analytical data obtained during this investigation. The preliminary determination of the significance of contamination is based on a comparison of the concentrations detected with the applicable maximum allowable levels.

6.1 Soil Contamination: Analysis of the soil samples obtained from the test boring revealed non-detectable concentrations of Benzene, Ethylbenzene, and Xylenes at the seven depths evaluated. Small concentrations of Toluene (equal to the method detection limit of 0.05 ppm) were detected in the soil

The Twining Laboratories, Inc.

MDL - Method Detection Limit.

ND - Constituent not detected at or above Method Detection Limit stated.

samples from depths 60 and 70 feet. However, the lack of detectable concentrations of the other gasoline components indicates that the origin of the Toluene in these two soil samples may not gasoline related.

6.2 Groundwater Contamination: Analysis of the groundwater sample obtained prior to development of the monitoring well revealed detectable concentrations of Benzene (3.6 ppb) and total lead (7 ppb), and non-detectable concentrations of the remaining organics analyzed for. Analysis of the groundwater sample obtained after four well volumes of the water had been removed from the monitoring well revealed non-detectable concentrations of the substances analyzed for. These results indicate that the groundwater drawn into the monitoring well at the time of sampling does not contain any gasoline components at concentrations above the method detection limits used during this investigation. The existence of small levels of Benzene and Lead in the well prior to development can not be explained at this time.

7.0 CONCLUSIONS

On the basis of our findings presented in this report, we present the following conclusions:

7.1 The soils in the area where the monitoring well was installed have not been contaminated by gasoline.

The Twining Laboratories, Inc.
Fresno Modesto Visalia Bakersfield

7.2 The groundwater in the area of the monitoring well does not appear to contain concentrations of the gasoline components above the method detection limit used during this investigation.

8.0 RECOMMENDATIONS

The following recommendations are submitted for your consideration:

8.1 This report should be submitted to all concerned regulatory agencies for review.

8.2 The groundwater in the area of the monitoring well should be sampled and analyzed on a quarterly basis for a period of not less than one year. At the end of the initial one year period, the analytical results of the sampling program should be reviewed in order to determine if further sampling of the groundwater is warranted, and at what time intervals.

9.0 LIMITATIONS

The analyses, findings, and conclusions contained in our report are based on site conditions as they exist at the time of our investigation, and further assume that probes, such as exploratory borings, are representative of the subsurface and groundwater conditions at the site, i.e. the subsurface

The Twining Laboratories, Inc.

Fresno Modesto Visalia Bakersfield

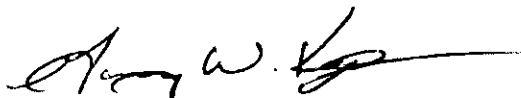

conditions everywhere are not significantly different from those disclosed by the probes.

If different subsurface conditions from those encountered during our explorations are observed or appear to be present, we must be advised promptly so that we can review these conditions and reconsider our conclusions where necessary.

If there is a substantial lapse of time between the submission of our report and the start of additional work at the site, or if conditions have changed due to natural causes at or adjacent to the site, we urge that our report be reviewed to determine the applicability of the conclusions considering the changed conditions and time lapse.

Our professional services were performed, our findings obtained, and our recommendations prepared in accordance with generally accepted geotechnical engineering principles and practices. This warranty is in lieu of all other warranties, either expressed or implied.

APPENDIX A-1FIELD INVESTIGATION

The field investigation consisted of a subsurface exploratory program. On November 30, and December 1, 1985, one exploratory hole was advanced. The boring location is shown on Figure No. 2.

The field exploration was performed using a truck-mounted rotary drilling machine equipped with continuous flight hollow stem augers. The soils were continuously logged by an engineer and classified by visual examination in accordance with the Unified Soils Classification System.

Samples from the site were obtained by pushing or driving a thin-wall steel sampler approximately 18 inches into the soil layer. The lower 6-inch portion of the sample was retained in a pre-cleaned glass container with a teflon lined lid for shipment to the laboratory. All samples were carefully marked. Prior to retrieving each sample, the sample tool was thoroughly washed using a hot water washer. The hot water washer had a pressure of 1,000 psi and a water temperature of 200°F. The lead auger was also washed with the hot water washer. The method of drilling was also washed with the hot water washer. The method of drilling and sampling was to advance the auger to the desired depth. The sampler was lowered through the hollow auger and the sample collected. The hollow auger forms a temporary casing, assuring the sampling of discrete vertical intervals. All samples obtained from the site were cooled to 4°C, and then shipped to the laboratory. All samples were returned to our laboratory for evaluation.

- - - - -

The log of the exploratory boring is presented in this Appendix. The explanation of abbreviations used in the preparation of the log is also provided.

***CASE CLOSURE - LEAKING UNDERGROUND STORAGE TANK SITE, FRESNO COUNTY
CREDIT UNION PROPERTY, 2211 MERCED ST., FRESNO, FRESNO COUNTY***

This letter confirms the completion of a site investigation and remedial action for the underground storage tank site referenced by Regional Board Case No. 5T10000029 and formerly located at the above described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the case are greatly appreciated.

Based on the information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank site is in compliance with the requirements of subdivisions (a) and (b) of Section 25299.37 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.77 of the Health and Safety Code and that no further action related to the petroleum release at the site is required. A summary of the information in the above-referenced file is included in the enclosed *Case Closure Summary*.

The groundwater monitoring well is no longer required. Accordingly, unless you choose to maintain the well for further use, it must be properly destroyed in accordance with City of Fresno and Fresno County Environmental Health System requirements.

This notice is issued pursuant to subdivision (h) of Section 25299.37 of the Health and Safety Code. If you have any questions regarding this matter, please contact Mr. Dane A. Mathis at (559) 488-4287.

Sincerely,

BERT E. VAN VORIS

**SUBJECT: CASE CLOSURE SUMMARY FOR LEAKING UNDERGROUND STORAGE
TANK SITE, REGIONAL BOARD CASE NO. 5T10000029, FRESNO COUNTY
CREDIT UNION PROPERTY, 2211 MERCED ST., FRESNO, FRESNO COUNTY**

Background

The subject site operated as a gasoline service station from approximately 1940 to 1981. In December 1981, three underground storage tanks (USTs) were removed from the site (two 1,000-gallon and one 550-gallon). One of the 1,000-gallon USTs failed pressure testing conducted after removal. No soil sampling was apparently conducted at the time of the removal activities. Records indicate that the former service station also handled cleaning solvent and kerosene.

A geotechnical investigation was conducted at the site in 1984 for a proposed Fresno County Credit Union building. At the time of the field investigation, hydrocarbon odors were noted in soil samples collected from borings advanced in the area of the former USTs.

In April 1985, five soil borings (B-1 through B-5) were advanced through and near the area of the former USTs. Boring B-1 was advanced to a total depth of 76 feet below ground surface (bgs) through the central location of the former USTs. Groundwater was encountered at a depth of 75 feet at the time of drilling. Borings B-2 through B-5 were advanced to depths of 21 feet bgs, and at lateral distances of 13 to 18 feet from B-1. Soil samples were collected from each of the borings for logging purposes and chemical analysis. Selected soil samples were submitted for analysis of benzene, toluene, ethylbenzene, and xylenes (BTEX), ethylene dibromide (EDB), and lead. For boring B-1, gasoline constituents were detected to a depth of 56 feet. Maximum benzene and EDB constituents were detected in the 31-foot sample at 51 milligrams per kilogram (mg/kg or ppm) and 3.22 mg/kg, respectively. Petroleum hydrocarbon constituents were not detected in deeper samples collected at depths of 61, 66, and 71 feet bgs. The 21-foot sample from B-4 contained low concentrations of BTEX and EDB. Each of the samples collected from borings B-2, B-3, and B-5 returned no detectable concentrations of the analytes. Lead was detected in some of the samples analyzed at a maximum concentration of 2.9 mg/kg. At the time of drilling, a groundwater grab sample was collected from B-1 and submitted for analysis of volatile

California Environmental Protection Agency

organic compounds. The sample returned benzene and EDB concentrations of 790 micrograms per liter ($\mu\text{g/L}$ or ppb) and $0.34 \mu\text{g/L}$, respectively. The sample also returned detectable concentrations of chloroform, trichloroethene (TCE), tetrachloroethene (PCE), 1,2-dichloroethane (1,2-DCA), 1,1,1-trichloroethane, 1,1,2-trichloroethane, and trichlorofluoromethane.

In November and December 1985, one monitoring well (MW-1) was drilled and installed in the eastern portion of the site to a depth of 96 feet bgs. The well was installed approximately 40 feet east of the former USTs. Groundwater was encountered at a depth of 76 feet at the time of drilling. Soil samples were collected from the boring for logging purposes and submitted for chemical analysis of BTEX. Only low concentrations of toluene (0.05 mg/kg) were detected in the bottom two samples analyzed at depths of 60 and 70 feet bgs. The monitoring well was reported to be constructed with a screened interval from 56 to 96 feet bgs. Water samples were collected from the well prior to and after development and submitted for analysis of volatile organic compounds and lead. The sample collected prior to development returned benzene and lead concentrations of $3.6 \mu\text{g/L}$ and $7 \mu\text{g/L}$, respectively. The sample collected after development returned no detectable concentrations of the analytes.

In November 2001, an attempt was made to sample the onsite groundwater monitoring well (MW-1). The depth of the well was measured at 84.5 feet bgs and reported to be dry; therefore, a groundwater sample could not be collected from the well. The depth to groundwater in the vicinity of the site was expected to range between 97 to 118 feet bgs (City of Fresno, 2001).

In February 2002, one soil boring (KB-1) was advanced near previous boring B-1 to depth of 80 feet bgs. A second soil boring (KB-2) was advanced through the former dispenser island to a depth of 20 feet bgs. Soil samples were collected from each boring for logging purposes, field-screened for hydrocarbons, and retained for potential chemical analysis. Soil samples collected from depths of 21, 46, 56, 71, and 81 feet bgs from KB-1, and the 21-foot sample collected from KB-2, were analyzed for total petroleum hydrocarbons as gasoline (TPHg), BTEX, methyl tertiary butyl ether (MTBE), tertiary amyl methyl ether (TAME), di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary butyl alcohol (TBA), 1,2-DCA, EDB, and lead. For KB-1, elevated concentrations of petroleum constituents were detected to a depth of 56 feet bgs. TPHg was detected as high as $16,000 \text{ mg/kg}$ in the sample collected at 56 feet bgs. The 71-foot sample only contained 0.011 mg/kg of xylenes; the sample collected from 81 feet bgs contained no detectable concentrations of petroleum constituents. The 21-foot sample collected from KB-2 returned no detectable concentrations of petroleum constituents. None of the samples returned detectable concentrations of benzene, MTBE, TAME, DIPE, ETBE, TBA, 1,2-DCA, or EDB. Lead was detected in each of the samples at concentrations less than 35 mg/kg .

Summary and Conclusions

A former release of petroleum hydrocarbons at the site resulted in the degradation of the underlying soils. The bulk of impacted soils appear to be limited to within the immediate area of the former USTs and approximately 35 feet above the current water table. Initial groundwater sampling results suggested the presence of hydrocarbons in the groundwater. Subsequent groundwater sampling confirmed the absence of significant impacts to the underlying groundwater at the site. The residual petroleum hydrocarbons in the underlying soils will naturally degrade and are not anticipated to pose a threat to the anticipated use of groundwater in the area.

Recommendation

I recommend the site be closed.

Well Destruction

We do not require that the monitoring well used for site investigation be maintained for future use. Unless the property owner demonstrates an intention to use this well again, and the well is properly maintained, it must be destroyed. Prior to well destruction, the City of Fresno and the Fresno County Environmental Health System should be contacted concerning well destruction permitting requirements. The well destruction must be in accordance with appropriate state and local requirements.

1 INTRODUCTION

The Fresno County Credit Union (site) located at 2211 Merced Street in Fresno, California (Plate 1) was operated as a gasoline service station from around 1940 to 1981. In December 1981, three USTs were removed from the site. No sampling or analysis was required at the time of the UST removal. In 1984, a geotechnical investigation was conducted for construction of the Fresno Credit Union building, and during the investigation hydrocarbons odors were noted in areas of the former USTs. As a result in April 1985, five soil borings were advanced through and around the area of the former USTs to assess subsurface conditions. Two of the borings reported concentrations of petroleum hydrocarbons, and in December 1985 a monitoring well was drilled and installed approximately 40 feet east of the former USTs. A groundwater sample collected from the developed monitoring well did not report detectable concentrations of the analyzed constituents.

No further assessment has been conducted at the site since December 1985, and in February 2001, the Regional Water Quality Control Board requested additional investigation at the site prior to considering site closure. This report describes the results of the additional subsurface investigation and presents our evaluation for the future course of action at this site.

2 SITE BACKGROUND

In December 1981, two 1,000 gallon tanks and one 555 gallon tank were removed from the site. In April 1985, five soil borings (B-1 through B-5) were drilled (by others) in the area of the former USTs to evaluate the subsurface soils and collect a grab groundwater sample (Plate 2). B-1 was drilled through the expected center of the USTs to groundwater, which was at a depth of 76 feet below the surface at that time. Soil samples and the grab groundwater sample collected (by others) and analyzed beneath the former tank location is summarized on Table 1. The grab groundwater sample contained volatile organic compounds (VOCs), however, Kleinfelder suspects that the VOCs detected in the grab groundwater sample were the results of soil contamination carried to depth and not actual groundwater conditions. When the investigation was conducted in 1985, petroleum hydrocarbons were not detected in the borings between 59 feet and 71 feet below the surface. Therefore, we have assumed that groundwater was not impacted at the time.

In December 1985, one monitoring well was drilled to a depth of 96 feet below the surface, 40 feet east of the former USTs. Again groundwater was encountered at 76 feet below the surface. Soil samples collected and analyzed at 10 foot intervals only reported toluene in soil at 60 and 70 feet below the surface at 0.05 ug/g (which was at the detection limit). A groundwater sample was collected and analyzed prior to the monitoring well being developed and purged, and benzene (3.6 ug/l) and lead (7 ug/l) were detected. In Kleinfelder's opinion, the analytical results reported from a groundwater sample collected in this fashion are not valid or reliable, because the well was not properly developed. The groundwater sample collected after development did not detect the constituents analyzed.

On November 1, 2001, Kleinfelder attempted to locate and sample the existing monitoring well to assess current conditions prior to developing an assessment workplan. Kleinfelder measured the depth to the bottom of the monitoring well at 84.5 feet below the surface. The well was dry, and could not be sampled. Site-specific groundwater depth and gradient data are not available.

Kleinfelder contacted the City of Fresno for depth to water measurements from City monitoring wells in the area. The City provided us with four wells in the vicinity of the site with the closest well located at 1270 O Street (between Fresno Street and Merced Street). Depths to water measurements taken from the well in 2001 are as follows:

January	97.1
April	106.1
July	116.7
October	118.0

The 2001 depth to water measurements indicate that groundwater has dropped such that the bottom of the monitoring well would be above the current groundwater elevation.

The workplan for additional assessment at the site was approved by the RWQCB in their December 18, 2001 letter to FCFCU. The workplan consisted of advancing two soil borings to verify subsurface soil conditions at the former dispenser and in the vicinity of B-1, because no further assessment had been conducted at the site since December 1985.

3 SITE INVESTIGATION

On February 14, 2002, Kleinfelder conducted the additional subsurface assessment at the site. The findings of this investigation are summarized below. Field activities were performed in general accordance with Kleinfelder's standard protocols attached (Appendix B).

3.1 Soil Borings and Soil Sampling

Kleinfelder drilled one boring (KB-1) in close proximity to B-1 to a depth of 80 feet. A second boring (KB-2) was drilled to a depth of 20 feet, and was located at the approximate center of the former dispenser location (asphalt patch in the existing concrete slab near the corner of the property). Their locations are shown on Plate 2, in Appendix A.

Soil borings were drilled using the hollow stem auger method. Soil samples were collected at 5-foot intervals, examined for preparing lithologic logs, and field screened using a PID. Table 2 is a summary of the soil samples collected, soil type, and PID field screen readings.

Table 2
Field Sampling Summary

Boring #	Soil Type	Depth (ft)	FID (ppm)
KB-1	SP	6	53
	SP	11	50
	SW	16	280
	ML	21	6325
	ML	26	3058
	SP	31	4221
	ML/SP	36	3201
	ML	41	455
	SM	46	4907
	SP	51	1918
	ML	56	4710
	ML	61	418
	SM	66	118
	ML	71	40
	ML	76	180
	SP	81	35

**Table 2 (cont.)
Field Sampling Summary**

Boring #	Soil Type	Depth (ft)	FID (ppm)
KB-2	SM	6	0
	SP	11	0
	SW	16	0
	ML	21	0

Soils encountered during the investigation consisted of silts, sands, silty sand, and clayey sandy silts. The boring logs for are included in Appendix A.

Soil samples collected from KB-1 from the 21', 46', 56', 71' and 81' depths were submitted to the analytical laboratory for analysis. Soil samples were selected based on the PID readings and soil type (ie 21 feet-high PID, fine grained soil; 46 feet-high PID, sand; 56 feet-high PID, fine grained soil; 71 feet-low PID, fine grained soil; 81 feet- bottom of boring, sand).

Soil samples collected from KB-2 did not have PID detection's so the 20 foot depth was submitted to the analytical laboratory.

The soil samples were analyzed for total lead by EPA Method 6010B, BTEX, Oxygenates, 1,2-Dichloroethane (DCA) and 1,2-Ethylene Dibromide (EDB) by EPA Method 8260B, and TPH as gasoline by EPA Method 8015.

3.2 Soil Sampling Results

DCA, EDB, MTBE, and benzene were not detected in the soil samples submitted to the analytical laboratory. Table 3 is a summary of the detected petroleum hydrocarbons analyzed. Copies of the analytical laboratory results are included in Appendix C.

Table 3
Summary of Detected
Volatile Organic Compounds (mg/kg)

Boring	Depth(ft)	Toluene	Ethylbenzene	Xylene	TPHg	Org. Lead
KB-1	21	64	49	440	2200	34.8
	46	4.6	ND	66	3500	12.5
	56	320	110	980	16,000	6.7
	71	ND	ND	0.011	ND	5.8
	81	ND	ND	ND	ND	1.7
KB-2	21	ND	ND	ND	ND	4.8

4 CONCLUSION AND RECOMMENDATION

4.1 CONCLUSIONS

The new data collected indicates similar results from the initial investigations conducted in 1985. However, benzene concentrations that were detected in 1985 were not detected in this sampling episode (likely due to natural attenuation and biodegradation). This information plus the lack of MTBE suggests that the residual hydrocarbon remaining in soils is likely old gasoline. The lateral extent was characterized in 1985, and this additional assessment seems to confirm the earlier findings, since petroleum hydrocarbons were not detected in KB-2 (former dispenser island). The vertical extent appears to be similar to the 1985 investigation where at 59 feet below the surface VOCs were no longer detected. Kleinfelder's new data is consistent with this finding, with no detection for samples collected and analyzed from depths of 71 feet and 81 feet.

It's Kleinfelder's opinion that the groundwater beneath the site was not impacted in 1985, and there is little evidence to suspect groundwater being impacted at this site currently. The concentrations of chemical concern will continue to decline as natural attenuation takes place as shown from the data above. In addition, the depth to water between the last detected residual hydrocarbons and the water surface has increased substantially, creating a thicker buffer zone between the two.

4.2 RECOMMENDATIONS

Kleinfelder recommends site closure as a low priority, soil only impacted site as there is no evidence that ground water has been affected.

5 LIMITATIONS

Kleinfelder performed its services in a manner consistent with the standards of care and skill ordinarily exercised by members of the profession practicing under similar conditions in the geographic vicinity and at the time the services will be performed. No warranty or guarantee, express or implied, is intended.

EDF data for this investigation will be submitted over the Internet to the State Water Board Geographic Environmental Information Management System (GeoTracker) in accordance with California Code of Regulations, Title 23, Chapter 16, Article 12, Sections 2729 and 2729.1.

PROTOCOL

DRILLING AND SOIL SAMPLING PROCEDURES

1 INTRODUCTION

This protocol presents the procedures used by Kleinfelder to obtain consistent, reliable data during the drilling, sampling, and sealing of boreholes. The procedures described herein are intended to be of general use. As work progresses, appropriate revisions may be made at the discretion of the project manager.

2 PROCEDURES FOR DRILLING AND SOIL SAMPLING

2.1 Permitting

Kleinfelder will prepare applications for appropriate permits, unless otherwise instructed by the client. Copies of signed permits will be on site during drilling operations, and will be available for inspection by appropriate agencies.

2.2 Equipment Cleaning

Drilling equipment will be thoroughly steam-cleaned prior to arriving on site to prevent the introduction of contamination from off site. Clean equipment will be stored in a clean location when not in use. Hydrocarbon based lubricants will not be used on drilling equipment. Kleinfelder recommends that food grade-solid, vegetable shortening, or a Teflon™ based lubricant be used. Equipment will be steam-cleaned on site, and will be cleaned only in designated areas, prior to reuse.

2.3 Sampler Cleaning

Soil samplers will be disassembled, washed with a solution containing TSP or non-phosphate detergent, or steam-cleaned, rinsed with steam distilled water, and air-dried immediately prior to use. Samples will be lined with similarly cleaned and dried brass tubes, and reassembled for use.

2.4 Drilling

The drilling method used will be determined based upon the material to be drilled, depth and diameter of the boring, sampling requirements, site access, and other site-specific conditions. A drilling method which frequently will be used is the hollow-stem auger method, which employs the use of a 6-inch hollow-stem auger advanced by a truck mounted drill rig.

The subsurface stratigraphy will be interpreted by observing the materials recovered during drilling, and by sampling undisturbed soils. Soils will generally be sampled at a minimum of once per each 5 feet drilled, or at noticeable changes in lithology, until ground water is encountered. Sampling intervals may vary depending upon project requirements. Soils will be sampled using a California-modified sampler containing cleaned brass liners, or a standard penetration sampler. Lithologic logging of the boring is discussed in Section 2.5, and sampling is discussed further in Section 3.1.

Boring depths will be based upon the nature and extent of the materials encountered, and upon project requirements.

2.5 Preparation of Boring Logs

The Kleinfelder field geologist will lithologically log the borings during drilling. The geologist and the drilling operator will discuss changes in material penetrated by the drill, changes in drilling conditions, hydraulic pressure, drilling action, and drilling fluid circulation rate, and the geologist will record such changes by time and depth. The geologist will evaluate the relative moisture content of the samples and note zones that produce water.

2.6 Sealing of Boring

Boreholes will be abandoned by backfilling to the surface with soil cuttings, or with a bentonite cement grout.

3 SOIL SAMPLING

3.1 Sampling Interval in Borings

Soil samples will be taken at 5-foot intervals, or as necessary, based upon project-specific requirements. Soils will be sampled by driving a California-modified sampler 18 inches beyond the bottom of the drill bit. The sampler will be driven using a 140-pound slide hammer. The number of blows necessary to drive the sampler each 6 inches will be recorded to help evaluate soil consistency.

The sampler will contain three brass liners. Soils collected in the bottom liner may be labeled, sealed, and preserved in an ice-cooled container for potential laboratory analyses. Selected soil samples may be delivered under a chain-of-custody record to a State-certified laboratory for chemical analyses. Soils which are collected in the upper and middle liners from the sampler may be extruded in the field, and examined by Kleinfelder's geologist to help provide detailed lithologic information.

3.2 Qualitative Field Screening

A photoionization detector (PID) was used to provide a qualitative screening of each soil sample collected during drilling. The MiniRAE 2000 with extended range from 0 to 10,000 ppm was used. The field screening procedure consists of sealing a soil sample in a clean glass jar, allowing the sample to equilibrate for 5 to 15 minutes, and scanning the headspace in the jar for vapors. The screening readings will be noted on the boring log and/or on the daily field log.

3.4 Sample Preservation

The sample(s) selected for chemical or physical testing will be sealed in the brass liner in the field. Teflon™ sheeting covers will be placed on the ends of the liner directly on the exposed soils, and held in place by clean plastic caps. Sealed soil samples will be labeled and placed in a covered ice-cooled container.

4 SAMPLE HANDLING

Sample containers will not be opened, except by laboratory personnel who will perform the chemical analyses. Soil samples will be analyzed by a laboratory certified by the State of California, Department of Health Services. Requests for sample analyses will be made in writing and will be included as part of the chain-of-custody record.

4.1 Custody Seal

If it is necessary for samples or sample chests to leave the immediate control of the sampler prior to being delivered to the laboratory, a custody seal will be placed on each sample container and/or sample chest to discourage tampering during transportation. The custody seal will contain the sampler's signature, and the date and time seal was emplaced.

4.2 Chain of Custody Procedures

In order to document and trace sample possession from time of collection to time of analysis, a chain-of-custody record will be filled out by the sampler, and will accompany the sample through the laboratory analyses. The completed chain-of-custody record will accompany the final laboratory analytical report.

Information contained on the duplicate, carbonless chain-of-custody form will include:

- ☐ date and time the sample was taken;
- ☐ sample number and the number of sample containers;
- ☐ analyses required;
- ☐ remarks, including preservatives added and any special conditions; and
- ☐ container number in which sample has been packaged.

Blank space on the chain-of-custody record between last sample number listed and signatures at the bottom of the sheet will be lined out.

RECEIVED
MAR 18 2002
KLEINFELDER, INC.
FRESNO, CA

Attn: Barbara Brandl

Subject: Report of data: Case 37629

Results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Dear Ms. Brandl:

Six soil samples for Project "C21353101-B00 Fresno County Federal Credit Union" were received February 15, 2002, in good condition. Written results are being provided on this March 12, 2002, for the requested analyses. All holding times were met.

For the EPA 8260B analysis, the samples were extracted according to EPA method 5035 and purged according to EPA method 5030B.

For the EPA 8015B TPH-Gas analysis, the samples were extracted according to EPA method 5035 and purged according to EPA method 5030B.

For the EPA 6010B Lead analysis, the samples were digested according to EPA method 3050B.

No unusual problems or complications were encountered with this sample set.

If you have any questions or require further information, please contact us at your convenience. Thank you for choosing APPL, Inc.

Sincerely,

Paula Young, Laboratory Director

WORK PLAN REVIEW AND COMMENT, FRESNO COUNTY CREDIT UNION PROPERTY, 2211 MERCED ST., FRESNO, FRESNO COUNTY

You submitted a 26 November 2001 *Work Plan for Site Investigation Report* prepared on your behalf by Kleinfelder, Inc. Background information regarding the site, a summary of the submittal, and our comments are provided below.

Background

The subject site operated as a gasoline service station from approximately 1940 to 1981. In December 1981, three underground storage tanks (USTs) were removed from the site (two 1,000-gallon and one 550-gallon). One of the 1,000-gallon USTs failed pressure testing conducted after removal. No soil sampling was apparently conducted at the time of the removal activities. Records indicate that the former service station also handled cleaning solvent and kerosene.

A geotechnical investigation was conducted at the site in 1984 for a proposed Fresno County Credit Union building. At the time of the field investigation, hydrocarbon odors were noted in soil samples collected from borings advanced in the area of the former USTs.

In April 1985, five soil borings (B-1 through B-5) were advanced through and near the area of the former USTs to evaluate the condition of the underlying soils and groundwater. Boring B-1 was advanced to a total depth of 76 feet below ground surface (bgs) through the expected central location of the former USTs. Groundwater was encountered at a depth of 75 feet at the time of drilling. Borings B-2 through B-5 were advanced to depths of 21 feet bgs, and at lateral distances of 13 to 18 feet from B-1. Soil samples were collected at five-foot intervals from each of the borings for logging purposes and potential chemical analysis. Selected soil samples were submitted for analysis of benzene, toluene, ethylbenzene, and xylenes (BTEX), ethylene dibromide (EDB), and lead. For boring B-1, gasoline constituents were detected to a depth of 56 feet. Maximum benzene and EDB constituents were detected in the 31-foot sample at 51 milligrams per kilogram (mg/kg or ppm) and 3.22 mg/kg, respectively. Petroleum hydrocarbon constituents were not detected in deeper samples collected at depths of 61, 66, and 71 feet bgs. The sample collected from a depth of 21 feet from B-4 contained low concentrations of BTEX and EDB. Each of the samples collected from borings B-2, B-3, and B-5 returned no detectable concentrations of the analytes. Lead was detected in some of the samples analyzed at a maximum

California Environmental Protection Agency

concentration of 2.9 mg/kg. A groundwater grab sample was collected from B-1 and submitted for analysis of volatile organic compounds. The sample returned benzene and EDB concentrations of 790 micrograms per liter ($\mu\text{g/L}$ or ppb) and 0.34 $\mu\text{g/L}$, respectively. The sample also returned detectable concentrations of chloroform at 0.02 $\mu\text{g/L}$, trichloroethene (TCE) at 0.03 $\mu\text{g/L}$, tetrachloroethene (PCE) at 0.08 $\mu\text{g/L}$, 1,2-dichloroethane (1,2-DCA) at 63 $\mu\text{g/L}$, 1,1,1-trichloroethane at 2.7 $\mu\text{g/L}$, 1,1,2-trichloroethane at 0.13 $\mu\text{g/L}$, and trichlorofluoromethane at 0.10 $\mu\text{g/L}$.

In November and December 1985, one monitoring well (MW-1) was drilled and installed in the eastern portion of the site to a depth of 96 feet bgs. The well was installed approximately 40 feet east of the former USTs. Groundwater was encountered at a depth of 76 feet at the time of drilling. Soil samples were collected at 10-foot intervals for logging purposes and submitted for chemical analysis of BTEX. Only low concentrations of toluene (0.05 mg/kg) were detected in the bottom two samples analyzed at depths of 60 and 70 feet bgs. The monitoring well was constructed with four-inch diameter PVC casing with a screened interval from 56 to 96 feet bgs. Water samples were collected from the well prior to and after development and submitted for analysis of volatile organic compounds and lead. The sample collected prior to development returned benzene and lead concentrations of 3.6 $\mu\text{g/L}$ and 7 $\mu\text{g/L}$, respectively. The sample collected after development returned no detectable concentrations of the analytes.

Summary of Submittal

In November 2001, Kleinfelder attempted to locate and sample the onsite groundwater monitoring well. The depth of the well was measured at 84.5 feet bgs and noted to be dry; no other details were provided. The water table in the vicinity of the site was expected to be 95 feet bgs (City of Fresno, October 2001).

Kleinfelder proposes to advance one soil boring (KB-1) near previous boring B-1 to depth of 80 feet bgs. A second soil boring (KB-2) will be advanced through the former dispenser island to a depth of 20 feet bgs. Soil samples will be collected from the borings for logging purposes, field-screened for hydrocarbons, and retained for potential chemical analysis. Soils which exhibit elevated field-screening results will be submitted for analysis. At a minimum, soil samples collected at depths of 40, 60, and 80 feet from KB-1, and the 20-foot sample collected from KB-2, will be analyzed for TPHg, BTEX, fuel oxygenates, 1,2-DCA, EDB, and total lead. A report of findings will be prepared that will include the sampling data, analytical results, and include recommendations for remedial action, monitoring, or closure. Kleinfelder expects to complete the field work within 30 days of work plan approval. The report of findings will be submitted to the Regional Board within three weeks of receiving the analytical data.

Comments

The monitoring well was reported to be constructed with a screened interval from 56 to 96 feet bgs. Kleinfelder recently sounded the well at a total depth of 84.5 feet. The well may contain sediment or debris. The water table in the area is expected to be within the screened interval of the well. Provided the well was completed to the depth reported (96 feet bgs) and the water table intersects the screened portion of the well, the well should be redeveloped and sampled to evaluate the current conditions of groundwater beneath the site. If the well can not be redeveloped and sampled, other alternatives may be needed for evaluating the groundwater conditions.

The Regional Board approves the scope of work to complete the proposed investigation provided the following modifications to the scope of work are incorporated:

1. In addition to the proposed analyses, samples shall be analyzed for halogenated volatile organics using appropriate analytical methods.
2. The existing monitoring well shall be redeveloped using appropriate methods. After development, the well shall be sampled for the same constituents as the soil samples (i.e. TPHg, BTEX, fuel oxygenates, 1,2-DCA, EDB, total lead, and halogenated volatile organics).

Please contact Regional Board staff one week prior to conducting the proposed drilling and well development activities. **Prior to 29 March 2002**, submit the technical report documenting the results of the investigation. Based on the findings of the investigation, further work may be required. All submittals should contain the signature and seal of the California registered engineer, certified engineering geologist, or registered geologist who is responsible for the content of the submittal.

You have not responded to our previous request for landowner information for the site. **Prior to 31 January 2002**, submit the requested landowner information.

Please be aware that Sections 2729 and 2729.1 for Underground Storage Tanks were added to the California Code of Regulations requiring you to submit analytical and site data electronically. Enclosed is our letter (*Required Electronic Deliverable Format for Laboratory and Site Data Submittals to Regulating Agencies*) explaining how to obtain information to implement the requirements.

Should you have any questions regarding this matter, please contact me at (559) 488-4287.

CASE CLOSURE - LEAKING UNDERGROUND STORAGE TANK SITE, FRESNO COUNTY CREDIT UNION PROPERTY, 2211 MERCED ST., FRESNO, FRESNO COUNTY

This letter confirms the completion of a site investigation and remedial action for the underground storage tank site referenced by Regional Board Case No. 5T10000029 and formerly located at the above described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the case are greatly appreciated.

Based on the information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank site is in compliance with the requirements of subdivisions (a) and (b) of Section 25299.37 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.77 of the Health and Safety Code and that no further action related to the petroleum release at the site is required. A summary of the information in the above-referenced file is included in the enclosed *Case Closure Summary*.

The groundwater monitoring well is no longer required. Accordingly, unless you choose to maintain the well for further use, it must be properly destroyed in accordance with City of Fresno and Fresno County Environmental Health System requirements.

This notice is issued pursuant to subdivision (h) of Section 25299.37 of the Health and Safety Code. If you have any questions regarding this matter, please contact Mr. Dane A. Mathis at (559) 488-4287.

Sincerely,

BERT E. VAN VORIS
Supervising Engineer

**SUBJECT: CASE CLOSURE SUMMARY FOR LEAKING UNDERGROUND STORAGE
TANK SITE, REGIONAL BOARD CASE NO. 5T10000029, FRESNO COUNTY
CREDIT UNION PROPERTY, 2211 MERCED ST., FRESNO, FRESNO COUNTY**

Background

The subject site operated as a gasoline service station from approximately 1940 to 1981. In December 1981, three underground storage tanks (USTs) were removed from the site (two 1,000-gallon and one 550-gallon). One of the 1,000-gallon USTs failed pressure testing conducted after removal. No soil sampling was apparently conducted at the time of the removal activities. Records indicate that the former service station also handled cleaning solvent and kerosene.

A geotechnical investigation was conducted at the site in 1984 for a proposed Fresno County Credit Union building. At the time of the field investigation, hydrocarbon odors were noted in soil samples collected from borings advanced in the area of the former USTs.

In April 1985, five soil borings (B-1 through B-5) were advanced through and near the area of the former USTs. Boring B-1 was advanced to a total depth of 76 feet below ground surface (bgs) through the central location of the former USTs. Groundwater was encountered at a depth of 75 feet at the time of drilling. Borings B-2 through B-5 were advanced to depths of 21 feet bgs, and at lateral distances of 13 to 18 feet from B-1. Soil samples were collected from each of the borings for logging purposes and chemical analysis. Selected soil samples were submitted for analysis of benzene, toluene, ethylbenzene, and xylenes (BTEX), ethylene dibromide (EDB), and lead. For boring B-1, gasoline constituents were detected to a depth of 56 feet. Maximum benzene and EDB constituents were detected in the 31-foot sample at 51 milligrams per kilogram (mg/kg or ppm) and 3.22 mg/kg, respectively. Petroleum hydrocarbon constituents were not detected in deeper samples collected at depths of 61, 66, and 71 feet bgs. The 21-foot sample from B-4 contained low concentrations of BTEX and EDB. Each of the samples collected from borings B-2, B-3, and B-5 returned no detectable concentrations of the analytes. Lead was detected in some of the samples analyzed at a maximum concentration of 2.9 mg/kg. At the time of drilling, a groundwater grab sample was collected from B-1 and submitted for analysis of

California Environmental Protection Agency

volatile organic compounds. The sample returned benzene and EDB concentrations of 790 micrograms per liter ($\mu\text{g/L}$ or ppb) and $0.34 \mu\text{g/L}$, respectively. The sample also returned detectable concentrations of chloroform, trichloroethene (TCE), tetrachloroethene (PCE), 1,2-dichloroethane (1,2-DCA), 1,1,1-trichloroethane, 1,1,2-trichloroethane, and trichlorofluoromethane.

In November and December 1985, one monitoring well (MW-1) was drilled and installed in the eastern portion of the site to a depth of 96 feet bgs. The well was installed approximately 40 feet east of the former USTs. Groundwater was encountered at a depth of 76 feet at the time of drilling. Soil samples were collected from the boring for logging purposes and submitted for chemical analysis of BTEX. Only low concentrations of toluene (0.05 mg/kg) were detected in the bottom two samples analyzed at depths of 60 and 70 feet bgs. The monitoring well was reported to be constructed with a screened interval from 56 to 96 feet bgs. Water samples were collected from the well prior to and after development and submitted for analysis of volatile organic compounds and lead. The sample collected prior to development returned benzene and lead concentrations of $3.6 \mu\text{g/L}$ and $7 \mu\text{g/L}$, respectively. The sample collected after development returned no detectable concentrations of the analytes.

In November 2001, an attempt was made to sample the onsite groundwater monitoring well (MW-1). The depth of the well was measured at 84.5 feet bgs and reported to be dry; therefore, a groundwater sample could not be collected from the well. The depth to groundwater in the vicinity of the site was expected to range between 97 to 118 feet bgs (City of Fresno, 2001).

In February 2002, one soil boring (KB-1) was advanced near previous boring B-1 to depth of 80 feet bgs. A second soil boring (KB-2) was advanced through the former dispenser island to a depth of 20 feet bgs. Soil samples were collected from each boring for logging purposes, field-screened for hydrocarbons, and retained for potential chemical analysis. Soil samples collected from depths of 21, 46, 56, 71, and 81 feet bgs from KB-1, and the 21-foot sample collected from KB-2, were analyzed for total petroleum hydrocarbons as gasoline (TPHg), BTEX, methyl tertiary butyl ether (MTBE), tertiary amyl methyl ether (TAME), di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary butyl alcohol (TBA), 1,2-DCA, EDB, and lead. For KB-1, elevated concentrations of petroleum constituents were detected to a depth of 56 feet bgs. TPHg was detected as high as $16,000 \text{ mg/kg}$ in the sample collected at 56 feet bgs. The 71-foot sample only contained 0.011 mg/kg of xylenes; the sample collected from 81 feet bgs contained no detectable concentrations of petroleum constituents. The 21-foot sample collected from KB-2 returned no detectable concentrations of petroleum constituents. None of the samples returned detectable concentrations of benzene, MTBE, TAME, DIPE, ETBE, TBA, 1,2-DCA, or EDB. Lead was detected in each of the samples at concentrations less than 35 mg/kg .

Summary and Conclusions

A former release of petroleum hydrocarbons at the site resulted in the degradation of the underlying soils. The bulk of impacted soils appear to be limited to within the immediate area of the former USTs and approximately 35 feet above the current water table. Initial groundwater sampling results suggested the presence of hydrocarbons in the groundwater. Subsequent groundwater sampling confirmed the absence of significant impacts to the underlying groundwater at the site. The residual petroleum hydrocarbons in the underlying soils will naturally degrade and are not anticipated to pose a threat to the anticipated use of groundwater in the area.

Recommendation

I recommend the site be closed.

Well Destruction

We do not require that the monitoring well used for site investigation be maintained for future use. Unless the property owner demonstrates an intention to use this well again, and the well is properly maintained, it must be destroyed. Prior to well destruction, the City of Fresno and the Fresno County Environmental Health System should be contacted concerning well destruction permitting requirements. The well destruction must be in accordance with appropriate state and local requirements.

In a letter dated 7 February 2001, the Regional Board requested that you submit a work plan to assess petroleum hydrocarbon impacts to soil and groundwater beneath the site. The work plan was due by 6 April 2001. We also requested that you provide information regarding site ownership by 6 April 2001. We have not received the requested work plan or landowner information.

As the party responsible for investigating and remediating the identified release in accordance with our directives, you must ensure that the project progresses in an effective manner. Failure to move this project forward in an effective manner may result in enforcement action and potential loss of funding from the UST Cleanup Fund. If you cannot meet a submittal due date, we advise you to contact us to explain the reason why the date cannot be met.

We have established a new date for submittal of the requested information. **Prior to 13 July 2001**, submit the requested work plan and landowner information.

Should you have any questions regarding this matter, please contact me at (559) 445-6192.

UNDERGROUND STORAGE TANK RELEASE, FRESNO COUNTY CREDIT UNION PROPERTY, 2211 MERCED ST., FRESNO, FRESNO COUNTY

The Regional Board recently conducted a review of the above-referenced case file. The subject case may be suitable for closure provided some additional information is submitted for our review. The most recent submittal included in the case file is an 8 April 1986 *Additional Investigation, Groundwater Contamination Assessment*, prepared on your behalf by The Twining Laboratories, Inc. (Twining). In a latter dated 19 September 1986, the Regional Board requested that further investigation be conducted for the site. No other information has been submitted for our review. Considering current regulations, it will be necessary for you to conduct additional investigation at the site prior to our office considering the site for closure. Background information regarding the site, a summary of the available information, and our comments regarding the subject case are provided below.

Background

The subject site operated as a gasoline service station from approximately 1940 to 1981. In December 1981, three underground storage tanks (USTs) were removed from the site. The USTs included two 1,000-gallon tanks and one 550-gallon tank. One of the 1,000-gallon USTs failed pressure testing conducted after removal. No soil sampling was apparently conducted at the time of the removal activities. Records indicate that the former service station also handled cleaning solvent and kerosene.

A geotechnical investigation was conducted at the site in 1984 for a proposed Fresno County Credit Union building. At the time of the field investigation, hydrocarbon odors were noted in soil samples collected from borings advanced in the area of the former USTs.

In April 1985, five soil borings (B-1 through B-5) were advanced through and near the area of the former USTs to evaluate the condition of the underlying soils and groundwater. Boring B-1 was advanced to a total depth of 76 feet below ground surface (bgs) through the expected central location of the former USTs. Groundwater was encountered at a depth of 75 feet at the time of drilling. Borings B-2 through B-5 were advanced to depths of 21 feet bgs, and at lateral distances of 13 to 18 feet from B-1. Soil samples were collected at five-foot intervals from each of the borings for logging purposes and potential chemical analysis. Selected soil samples were submitted for analysis of benzene, toluene, ethylbenzene,

California Environmental Protection Agency

The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption. For a list of simple ways you can reduce demand and cut your energy costs, see our Web-site at <http://www.swrcb.ca.gov/rwqcb5>

and xylenes (BTEX), ethylene dibromide (EDB), and lead. For boring B-1, gasoline constituents were detected to a depth of 56 feet. Maximum BTEX and EDB constituents were detected in the 31-foot sample at 51 milligrams per kilogram (mg/kg or ppm), 580 mg/kg, 150 mg/kg, 1,300 mg/kg, and 3.22 mg/kg, respectively. Petroleum hydrocarbon constituents were not detected in deeper samples collected at depths of 61, 66, and 71 feet bgs. The sample collected from a depth of 21 feet from B-4 contained low concentrations of BTEX and EDB. Each of the samples collected from borings B-2, B-3, and B-5 returned non-detectable concentrations of the analytes. Lead was detected in some of the samples analyzed at a maximum concentration of 2.9 mg/kg. A groundwater grab sample was collected from B-1 and submitted for analysis of volatile organic compounds. The sample returned BTEX and EDB concentrations of 790 micrograms per liter ($\mu\text{g/L}$ or ppb), 4,040 $\mu\text{g/L}$, 650 $\mu\text{g/L}$, 5,350 $\mu\text{g/L}$, and 0.34 $\mu\text{g/L}$, respectively. The sample also returned detectable concentrations of chloroform at 0.02 $\mu\text{g/L}$, trichloroethene (TCE) at 0.03 $\mu\text{g/L}$, tetrachloroethene (PCE) at 0.08 $\mu\text{g/L}$, 1,2-dichloroethane (1,2-DCA) at 63 $\mu\text{g/L}$, 1,1,1-trichloroethane at 2.7 $\mu\text{g/L}$, 1,1,2-trichloroethane at 0.13 $\mu\text{g/L}$, and trichlorofluoromethane at 0.10 $\mu\text{g/L}$.

In November and December 1985, one monitoring well (MW-1) was drilled and installed in the eastern portion of the site to a depth of 96 feet bgs. The well was installed approximately 40 feet east of the former USTs. Groundwater was encountered at a depth of 76 feet at the time of drilling. Soil samples were collected at 10-foot intervals for logging purposes and submitted for chemical analysis of BTEX. Only low concentrations of toluene at 0.05 mg/kg were detected in the bottom two samples analyzed at depths of 60 and 70 feet bgs. The monitoring well was constructed with four-inch diameter PVC casing with a screened interval from 56 to 96 feet bgs. Water samples were collected from the well prior to, and after, development and submitted for analysis of volatile organic compounds and lead. The sample collected prior to development returned benzene and lead concentrations of 3.6 $\mu\text{g/L}$ and 7 $\mu\text{g/L}$, respectively. No detectable concentrations of the analyzed constituents were reported for the sample collected after the well had been developed.

Comments

For the former UST area, the extent of impacted soils appears to be limited to a depth of 60 feet bgs within a 15-foot radius from boring B-1. The condition of soils beneath the former dispensers is not known. According to the Fresno Irrigation District map entitled *Depth to Groundwater, January 1998*, the water table beneath the site is likely at a depth of approximately 95 feet.

Work Plan Request

Prior to 6 April 2001, submit a work plan to (1) evaluate the current concentrations of hydrocarbons in soils beneath the former USTs, (2) evaluate the condition of soils beneath the former dispensers, and (3) evaluate the current conditions of groundwater beneath the site. The work plan, in general, should comply with the enclosed *Tri-Regional Board Staff Recommendations for Preliminary Evaluation and Investigation of Underground Storage Tank Sites* and *Appendix A-Reports Tri-Regional Board Staff Recommendations for Preliminary Evaluation and Investigation of Underground Storage Tank Sites*. At a minimum, the work plan should include the advancement of one soil boring near B-1 to a minimum depth of 80 feet, the advancement of soil borings at the former dispensers, and the inspection and sampling of well MW-1. The work plan shall also include a sampling and analysis plan for both soil and groundwater. The sampling and analysis plan is to include, at a minimum, rationale for sampling and analysis frequency, sample preservation methods, laboratory quality assurance/quality control procedures, proposed detection limits, analytical methods, and a list of analytes for those methods. The

initial analysis of soil and groundwater will be used to establish constituents of concern (COCs) for the site. All potential COCs will be included in the initial analysis. The potential COCs for soil and groundwater are to initially include, at a minimum, TPHg, BTEX, 1,2-dichloroethane (1,2-DCA), ethylene dibromide (EDB), total lead, MTBE, TAME, DIPE, ETBE, TBA, and halogenated volatile organics. The sampling frequency does not necessarily need to include analysis of all samples for all COCs. However, the sampling and analysis frequency must be adequate to define the vertical and lateral extent of the COCs beneath the site such that remedial options can be assessed. In addition, the sampling plan may propose that future analyses for the COCs be performed by different methods than the initial analyses, once the presence or absence of potential COCs have been confirmed. The initial sampling is to include analytical methods that clearly demonstrate the presence or absence of potential COCs.

The work plan should include a time schedule to implement the plan and submit reports. All submittals should contain the signature and seal of the California registered engineer, certified engineering geologist, or registered geologist who is responsible for the content of the submittal.

Identification of Other Responsible Party

If you have evidence to support identification of other potentially responsible parties for degradation at this site, we request that you identify them now by providing such evidence so they may be notified of the potential responsibility. Evidence should include the beginning and ending dates and type of involvement, the names and current addresses of all potentially responsible parties, and copies of any documents that would verify the terms and conditions of involvement.

Cleanup Fund Notice

You should be aware of legislation to assist owners and operators of underground tanks. Senator Keene's Senate Bill 2004 (Cleanup Fund Program) offers several forms of assistance for investigation and cleanup of underground tank discharges. You may want to contact the State Water Resources Control Board at (800) 813-3863 about the Cleanup Fund Program. An application for and information on the Cleanup Fund Program is enclosed. In addition, I have enclosed a copy of the Petroleum Underground Storage Tank Cleanup Fund's *Successful Corrective Action, A Tank Owner's Guide*. The guide contains information on choosing a consultant and obtaining a good bid (three bids are required to be eligible for reimbursement under the Cleanup Fund Program). Also, staff administering the Cleanup Fund Program have indicated that all costs for corrective action must meet the requirements of Article 11, Chapter 16, Underground Storage Tank Regulations (Article 11). For your convenience, a copy of Article 11 is enclosed.

Landowner Notification

Our records indicate that you are the "primary or active" responsible party for the subject site. Under the new "landowner notification" of Health and Safety Code, Section 25299.37.2 (copy enclosed), all current record owners of fee title to the site are required to be notified of your proposed actions relating to investigation, cleanup, and closure of this site.

Prior to 6 April 2001, provide us with a complete mailing list of all record fee title owners. You are to certify in writing that the list is complete and contains the names and addresses of all record fee title owners. If you are the only record fee title owner, please so state in your certified list of record fee title owners. You shall copy all future correspondence to us regarding this site to the record fee title owners.

7 February 2001

and they shall be encouraged to comment on your proposed actions to cleanup and close this site. Also, if ownership of fee title to the site changes prior to closure, you shall within 30 days of recording a change in ownership provide us with a complete mailing list of all new record fee title owners and certify that it is complete.

Should you have any questions regarding this matter, please contact me at (559) 445-6192.

Summary of Discussion

Mr. Griggs was informed that two 55 gallon tanks (USTs)
are "unaccounted for" according to file. ~~That~~ He
was somewhat sure that all tanks were removed
approximately 11 years ago. He said he would
check his files for information and then
send it here for our records.

I asked him to send something in writing
and a plot plan or sketch showing tank
locations for files.

XXXXX HAZARDOUS MATERIAL RELEASE

Immediate Notification of Board of Supervisors Required

DATE: July 11, 1988

XXXXX New Incident

TIME: 4:00 PM

Update

ISSUE: PETROLEUM SOIL CONTAMINATION

LOCATION: Merced & L Streets

Community: Fresno

NAME, ADDRESS, PHONE: Fresno County Employee's C.U. 4979 E. University, 252-5000

HEALTH DEPT. PROGRAM: Waste Management

ISSUE DESCRIPTION: Analysis of groundwater showed contamination from Benzene, a constituent of gasoline.

POTENTIAL RISKS AND HEALTH EFFECTS: Chemicals are currently on Prop. 65 list as known carcinogens.

COMMUNITY AFFECTED: N/A

Date Index Case Diagnosed: N/A

Number of People Involved: N/A

Additional Information: N/A

TIME LINE: 9/19/86 -- Notified of contamination of groundwater. Continued monitoring required.

PLANNED INTERVENTION AND DEPARTMENT ACTIVITIES: Regional Water Quality Control Board is handling the investigation of this site.

OTHER PERTINENT INFORMATION: Because of contamination to groundwater, the Regional Water Quality Control Board is lead agency.

OTHER DEPARTMENTS OR AGENCIES INVOLVED: Regional Water Quality Control Board.

CLEANUP ASSESSMENT OF CREDIT UNION BUILDING SITE, FRESNO COUNTY

We have reviewed the geotechnical report recently submitted regarding the subject site. Attached is a memorandum concerning our review. As indicated in the memorandum, soils underlying the location where gasoline tanks were previously located are contaminated with constituents typically found in gasoline. The attached memorandum includes soil cleanup levels for your use in further assessment of the site and development of plans for corrective actions.

By 16 August 1985, please provide us with your plans and time schedule for (1) further defining the extent of the soils contamination, (2) developing remedial actions to cleanup the soils and (3) implementing verification ground water monitoring.

Should you have any questions concerning this matter, please contact Lonnie Wass at 445-5455.

SUBJECT: FRESNO COUNTY EMPLOYEES CREDIT UNION SITE, FRESNO COUNTY

The Fresno County Employees Credit Union owns a site at 2211 Merced Street in the City of Fresno. The site was previously a gasoline station. The Credit Union retained the services of a geotechnical engineering firm to conduct an investigation to ascertain whether or not there are any contaminant problems at the site. We recently received a copy of a report detailing the findings of the investigation.

The report indicates that three underground tanks were installed at the site in 1940. In 1953, two additional tanks were added. In December 1981, a construction firm removed three tanks and the tanks were pressure tested. One tank failed to hold pressure and was disposed of as scrap metal. The report does not indicate what became of the other two tanks.

Five borings were conducted in the area where the three tanks were located. Four of the borings were made to a depth of around 21 feet. The fifth was made to a depth of 76 feet. The soils were sampled at 5-foot intervals and analyzed for Benzene, Toluene, Xylene, Ethylbenzene, organic lead, and Ethylene Dibromide (EDB).

Ground water was encountered at a depth of 75 feet and a sample was collected and analyzed for Benzene, Toluene, Ethylbenzene, Xylene, EDB, organic lead, and purgeable halocarbons.

The deepest boring was made in the center of the area where the tanks were located. The samples indicated that the soils were contaminated with constituents typically found in gasoline down to around 55 feet. The other borings were 13 to 18 feet from the center boring and 90 degrees apart. Only one of the four shallow borings indicated any constituents. The constituents were found at a depth of 20 feet and the report indicates this probably resulted from horizontal movement along a dense zone of silt.

Below 55 feet, none of the constituents tested for were encountered in the soils. Concentrations of constituents in excess of drinking water levels were found in a grab sample collected through the auger. The constituents included Benzene, Toluene, Ethylbenzene, Xylene, EDB, and 1,2-Dichloroethane.

The soils underlying the site are layers of silty sands and sandy silts with varying densities. At about 21 feet, a dense sandy silt is encountered.

29 July 1985

The ground water in the area is of excellent mineral quality. The EPA has defined the aquifer as a sole source aquifer. The ground water in the area is extensively used for municipal and industrial supply and six city wells were within about 1 mile of the site. The heavy usage has depressed the aquifer in the area making it difficult to define a direction.

The constituents found in the soil borings at the site and there drinking water levels are as follow:

<u>Constituent</u>	<u>Drinking Water Level (DWL)</u>	<u>Source</u>
Benzene	0.7 ug/l	DOHS
Toluene	100 ug/l	DOHS
Ethylbenzene	1.4 mg/l	EPA-NAEL
Xylene	620 ug/l	DOHS
EDB	Limit of Quantification	DOHS
Lead	0.05 mg/l	EPA-MCL

DOHS-California Department of Health Services "Acceptable Level in Drinking Water", 1977-84

EPA-NAEL-Environmental Protection Agency, "No Adverse Effect Level", 1980

EPA-MCL-Environmental Protection Agency, "Maximum Contaminant Level", 1975

Based on the site conditions found during the preliminary investigation, the relative depth to ground water below the effected soils (about 20 feet), and high use of the aquifer for municipal supply, I believe a soil attenuation factor of 10 should be used at the site.

The Soil Cleanup Levels (SCL) for the constituents can be found as follows:

$$SCL = \frac{DWL \times \text{Attenuation Factor}}{10}$$

The division by 10 is necessary because of the dilution factor inherent in the new waste extraction test procedures. The SCL is expressed as the amount of substance per liter of extract, the nomenclature now recognized by the Department of Health Services.

Using the above formula, the soil cleanup levels for the individual constituents are as follows:

FRESNO COUNTY EMPLOYEES
CREDIT UNION SITE, FRESNO
COUNTY

-3-

29 July 1985

<u>Constituent</u>	<u>SCL</u>
Benzene	0.7 ug/l
Toluene	100 ug/l
Ethylbenzene	1.4 mg/l
Xylene	620 ug/l
EDB	0.02 ug/l (Detection Limit)
Lead	0.05 mg/l

Any contaminated soils with Soluble Threshold Limit Concentrations in excess of the above cleanup levels should be cleaned up to these levels.

I have coordinated my review with the Board's Toxics Unit in Sacramento and discussed our planned actions with the Department of Health Services, Toxic Substances Control Division.

I recommend we request the property owner to provide us with his plans and time schedule for (1) further defining the extent of the soils contamination, (2) developing remedial actions to cleanup the soils, and (3) for implementing a verification ground water monitoring program. The property owner should also be requested to report the fate of the two tanks which are yet to be accounted for.

We have reviewed the geotechnical reports submitted to date. Enclosed is a memorandum regarding our review. The memorandum identifies some additional work to be accomplished.

By 21 October 1986, please submit your plans and time schedule for:

1. Developing remedial actions to cleanup contaminated soils, and
2. Implementing an adequate verification ground water monitoring program.

Should you have any questions, please call Lonnie Wass at 445-5455.

SUBJECT: FRESNO COUNTY EMPLOYEES CREDIT UNION SITE

I have reviewed the geotechnical reports submitted to date regarding the subject site. The site is now owned by the Fresno County Employees Credit Union, but in the past was the location of a gas station.

Six soil borings have been completed. A ground water monitoring well was installed in one of the borings. Soil samples were collected at 5-foot intervals for five of the borings and at 10-foot intervals for the monitoring well location. The samples were analyzed for benzene, toluene, xylenes, ethylbenzene, ethylene dibromide, and organic lead. The soil samples indicate the presence of a zone of contamination small in area, but extending about 55 feet deep.

Historically, the unconfined ground water flowed from the northeast to the southwest. In recent years, the heavy pumping northeast of the site has influenced the direction of ground water flow and under this site the direction may have reversed. The well was sampled after development and constituents found in gasoline were not detected. The consultants concluded that "the ground water drawn into the monitoring well at the time of sampling does not contain any gasoline components at concentrations above the method detection limits used during this investigation". The consultants made no conclusion regarding the appropriateness of the monitoring well location, and in fact indicated that an evaluation of the ground water conditions were beyond the scope of the report. The consultants did recommend that the well be sampled quarterly for one year.

CONCLUSION:

We requested the Credit Union to (1) define the extent of the soils contamination, (2) develop remedial actions to cleanup the soils and (3) implement verification ground water monitoring. Item 1 has been accomplished. Item 2 has not been addressed. Item 3 has not been adequately addressed.

We should request the Credit Union to submit their plans and time schedule for (1) developing remedial actions to cleanup the contaminated soils and (2) implementing an adequate verification ground water monitoring program.

QUALIFICATIONS

Mark A. Swiatek, R.G., C.E.G.

PRESIDENT

Mr. Swiatek is currently President of RMA GeoScience. He oversees all aspects of every project. He is responsible for our quality assurance program and reviews all aspects of quality control for our clients. Mr. Swiatek also serves as the Principal Engineering Geologist providing geologic input and analysis for grading and site development. His experience includes work within the San Andreas Fault Zone where active faulting and large landslide complexes needed to be clearly understood in order to plan the land use for development. Mr. Swiatek has worked with municipalities, developers, engineers, architects, contractors, lawyers and homeowners within Los Angeles, Orange, San Diego, Riverside, San Bernadino and Ventura Counties.

EXPERIENCE

1994 - 2012

PRINCIPAL GEOLOGIST AGI GEOTECHNICAL INC. VAN NUYS, CA

During this period, Mr. Swiatek's managed a group of 45 employees with a professional staff of engineers and geologist. In 1994, hundreds of projects were performed evaluating damages from the Northridge Hills Earthquake. All time record rainfalls occurred during this era in Southern California providing an opportunity to evaluate and better understand hillside stability and property damage, with emphasis on densely populated areas within the Santa Monica Mountains. Experience included management of all geotechnical issues during mass grading of large subdivisions involving over 100 million cubic yards of earthwork. Mr. Swiatek has worked directly with various governmental agencies tracking projects and as a consultant for improvement projects. Mr. Swiatek has also served as an expert witness with courtroom experience.

1985 - 1994

PROJECT GEOLOGIST GEOSOILS INC. VAN NUYS, CA

Mr. Swiatek was a project geologist in charge of the technical and administrative needs of assigned projects. He performed geotechnical engineering explorations, analysis of geologic conditions and preliminary environmental site assessments on a wide range of projects including residential sub-divisions, commercial and industrial projects, and public works projects.

1983 - 1985

WESTERN LABORATORIES GARDENA, CA

Worked as a soils technician and staff geologist right out of college. Worked in the area of the Palos Verdes Peninsula on projects within a complex soils and geology environment.

Martha P. Sgriccia, R.G., C.E.G.

PROJECT GEOLOGIST

Ms. Martha Sgriccia is currently a Project Geologist at RMA GeoScience. Ms. Sgriccia has practiced engineering geology in Southern California for over 17 years. Her Masters Degree in Geological Sciences combined with her professional experience has resulted in a diversified background that includes project planning, field investigations, Phase I Environmental Site Assessments, and managing all phases of a project in both the public and private sectors. She has worked with engineers, architects, contractors, realtors and homeowners within Los Angeles, Orange, San Bernardino, and Ventura Counties.

EXPERIENCE

PROJECT GEOLOGIST, A.G.I. GEOTECHNICAL, INC. 2000 - 2012

Ms. Sgriccia's career as a certified engineering geologist has provided her with a broad range of experiences. She is experienced in evaluating geologic and geotechnical conditions potentially impacting developments in Southern California. Her professional experience includes hillside residential developments, landslide investigations and remediation, fault studies, due diligence geotechnical reviews, private septic disposal system, geologic evaluations on properties during escrow, distressed structure investigation and remediation, liquefaction potential, Phase I Environmental Site Assessments and limited Phase II Investigations. Ms. Sgriccia's experience also includes projects within Alquist-Priolo/ Earthquake Special Studies Zones.

ACCOMPLISHMENTS

Ms. Sgriccia wrote a grant proposal and received grant monies in 2007 from Southern California Earthquake Center for study of the slip rate on the San Andreas Fault in the Ritter Ranch area of Palmdale, California. She co-authored an abstract of the study which was presented at the 50th Annual Meeting of the Association of Engineering Geologists.

1.0 INTRODUCTION

1.1 Purpose

In accordance with the findings and recommendations provided in our Phase I Environmental Site Assessment for 1250 Van Ness Avenue and 2211 Merced Street in Fresno, California (Site), this report outlines the investigation activities performed to; assess the subsurface soil and soil-gas conditions and evaluate potential impact to soil and soil-gas by total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs) and PCBs at 2211 Merced Street, Fresno, California, and; to assess the subsurface soil for potential impact to soil by total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs) at 1250 Van Ness Avenue, Fresno, California.

Additionally, this report presents the findings of the ground penetrating radar (GPR) scan that was conducted at the portion of 2211 Merced Street that was the site of a former gas station, in an attempt to locate any remaining underground storage tanks (USTs). The GPR scan was performed by SiteScan.

Our work was carried out in collaboration with representatives from Sharp Environmental Technologies, Inc. The location of the site is shown in Figure 1. Figures 2 and 3 present site plans for 2211 Merced St and 1250 Van Ness, respectively, illustrating the site boundaries, important features and soil boring locations.

1.2 Site Summary and Background

1250 Van Ness Avenue:

The property was used historically as the site of a Methodist church from the earliest available data from 1885 to the late 1800s. A boarding house and repository occupied the site in the early 1900s and gave way several years later to four commercial buildings that housed Marshall's Auto Companies, auto repair, trimming and oil storage. Automotive businesses such as auto repair and lubrication occupied the site from 1922 to 1932. The commercial buildings remained at the site and used as a hotel from the mid 1940s up until the mid 1970s when they were demolished and the existing commercial bank building and associated parking lot was constructed.

Because the site was used historically for automotive repair and oil storage in the early 1900s (Fig. 3) we concluded in our Phase I ESA that petroleum hydrocarbons used and stored at the site in the past may be present in the site soil and therefore constitute a recognized environmental condition (REC).

2211 Merced Street:

Based on the earliest available data from 1888 the property was used residentially commercially by a church. A gas station, labeled on Sanborn Maps as Interstate Oil was erected at the south half of the site in 1940. The gas station remained in operation up until 1981 when it was demolished. The site has been and continues to be used as a parking lot since that time.

The gas station consisted of a dispenser island at the southwest corner of the site and a garage with partial basement at the central portion of the site (Fig. 2). A hydraulic lift and sump were also reported at the garage location. According to building permits on file with the City of Fresno the gas station is listed as

having 5 underground storage tanks (USTs) at the site. The tanks consisted of two 1,000 gallon tanks, one 550 gallon tank and two 55 gallon tanks. Kerosene and solvents were reportedly stored in the 55 gallon tanks. The three larger tanks which contained gasoline were removed in December, 1981. One of the tanks was determined to have been leaking. There was no information regarding the fate of the two 55 gallon tanks whether they were removed or left in place.

An investigation was conducted by Twining Laboratories in May, 1985 to assess the soil and groundwater in the area of the previous fuel USTs for hydrocarbon contamination. Five borings were drilled to a maximum depth of 76 feet. Location of the borings is shown on Figure 2. Twining concluded that contamination from gasoline existed in the sub-soils to a depth of approximately 55 feet below ground surface (bgs) and in the groundwater encountered at 75 feet bgs. Twinings recommended further investigation to determine the lateral extent of groundwater and soil contamination. They recommended action levels be determined by State Health Agency. The case was referred to the Central Valley Regional Water Quality Control Board (RWQCB) who provided regional oversight.

A subsequent investigation was conducted by Twining in April, 1986 in response to input by the RWQCB. The investigation consisted of installing a monitoring well to a depth of 95 feet bgs at the northeast corner of the site (Fig. 2). Soil and groundwater samples obtained in the monitoring well boring were analyzed for the presence of gasoline constituents. Twining concluded that the soils in the area of the monitoring well were not contaminated with gasoline and that the groundwater in the monitoring well did not appear to contain gasoline constituents. Twining recommended quarterly monitoring be conducted for one year.

In 2002 an attempt was made by Kleinfelder, Inc. to locate and sample the groundwater in the monitoring well installed by Twining in 1986. The depth of the well measured 84.5 feet and was dry. They concluded that depth of groundwater had dropped since 1986 to between 97 to 118 feet.

At the request of RWQCB an additional site investigation was conducted at the site by Kleinfelder in 2002. It consisted of advancing two borings: One, KB-1 was advanced to a depth of 80 feet in the area of the former USTs in close proximity to Boring B-1 advanced by Twining in 1985. The second boring, KB-2 was advanced to 20 feet in the area of the former dispenser island. The boring locations are shown on Figure 2. Petroleum hydrocarbons were detected in soil samples from 21, 46 and 56 feet bgs in KB-1. Petroleum hydrocarbon and constituents were not detected in samples from 71 and 81 feet bgs from KB-1. According to the report field screening results with a PID negated the need for laboratory testing of the soil samples from KB-2.

Kleinfelder concluded that residual hydrocarbon in the soil was old gasoline and recommended site closure as a low priority, soil-only impacted site citing no evidence that groundwater had been affected. RWQCB issued a Case Closure letter, dated May, 2002 concluding that residual petroleum hydrocarbon in the soil will naturally degrade and was not anticipated to pose a threat to the anticipated use of groundwater.

Based on the findings of the Phase I ESA we concluded that the petroleum hydrocarbon impacted soil remaining in place constitutes a historical recognized environmental Condition (HREC). We further concluded that the former garage structure with partial basement which was never investigated for contaminants associated with past automotive related activities constituted a recognized environmental condition (REC).

The lack of documentation for the removal of the two 55 gallon USTs installed at the gas station in 1953 and reportedly contained kerosene and solvents was determined to be a REC as we concluded that they may still be present at the site.

1.3 Scope of Work

The following scope of work was performed to accomplish the project objectives:

- Notify Underground Service Alert (USA) to mark the work area for utilities;
- Advance a total of nine (9) soil borings with a track mounted, hydraulic direct push, limited access drill rig to approximate depths of between 15 and 20-feet below ground surface (bgs) and collect soil samples at approximately five foot intervals at locations shown on Figures 2 and 3;
- Collection of soil samples;
- Log soil samples and note characteristics such as odor, staining, etc.;
- Completion, by Sharp Environmental, of four (4) of the soil borings as soil gas monitoring probes at depths of 5- and 15-feet bgs;
- Collection of soil gas samples;
- Analyze select soil samples for the following:
 - Total petroleum hydrocarbon characterization by EPA Method 8015; and
 - VOCs by EPA Method 8260B;
 - Polychlorinated biphenyls (PCBs) by EPA Method 8082
- Analyze soil gas samples for the following:
 - VOCs by EPA Methods 8260B.
- Conduct site scan of former gas station at 2211 Merced St. using Ground Penetrating Radar
- Prepare and submit a site investigation report documenting our findings including conclusions and recommendations.

1.4 Statement of Limitations

This Report was prepared in a manner consistent with the agreement between RMA GeoScience and the client, and in accordance with generally accepted professional consulting principles and practices.

Opinions and recommendations contained in this report apply to conditions existing at certain locations when services were performed and are intended only for the specific purposes, locations, time frames, and project parameters indicated. RMA GeoScience cannot be responsible for the impact of any changes in environmental standards, practices, or regulations after performance of services.

Any use of this report by a third party is expressly prohibited without a written, specific authorization from the client and RMA GeoScience. Such authorization will require a signed waiver and release agreement.

This Report is issued with the understanding that the client, the property owner, or its representative is responsible for ensuring that the information, conclusions, and recommendations contained herein are brought to the attention of the appropriate regulatory agencies, as required.

1.5 Local and Regional Geology and Hydrogeology

The subject site is located near the east side of the central San Joaquin Valley, which comprises the southern half of the Great Valley geomorphic province. The valley is a trough which forms a broad alluvial fan, approximately 250 miles long and 50 to 70 miles wide. Here, a thick sequence of marine and non-marine sediments, up to about 6 miles deep, has been deposited in the valley from the late Mesozoic through the Cenozoic. The Great Valley is bounded on the east by the Sierra Nevada geomorphic province and on the west by the Coast Range geomorphic province.

The Sierra Nevada Mountains are a northwest/southeast trending block, formed by exhumation of a felsic batholith. The Sierra Nevada's geomorphology differs from east to west; on the east flank, the peaks are jagged and hazardous, whereas the slopes of the west are more gently dipping.

According to Bartow (1991) the San Joaquin valley is a westward-tilting structural trough where the east flank is broad and gently inclined as opposed to the western flank, which is relatively narrow. The sediments along the eastern side of the valley rest on the fault block of the Sierra Nevada pluton. The west side of the valley is thought to be underlain by mafic and ultramafic rocks (Page, 1986).

The site is located within the Kings Subbasin within the San Joaquin Valley Groundwater Basin. The Kings Subbasin aquifer system consists of older Tertiary and Quaternary age deposits. The Quaternary deposits are divided into older alluvium, lacustrine deposits, younger alluvium and flood basin deposits and yield more than 90 percent of the water pumped from wells. Groundwater recharge occurs from river and streams, percolation of irrigation water, canal seepage, and intentional recharge. Groundwater flow is generally to the southwest (Bulletin 118, 2003).

According to geotechnical reports prepared by Twining Laboratories, Inc. (1985, 1986) for the property at 2211 Merced Street groundwater was encountered at a depth of 75 feet below ground surface (bgs). A site investigation conducted by Kleinfelder in 2001 to locate and sample a monitoring well installed at the site by Twining Laboratories 1986 did not encounter groundwater to a maximum depth drilled of 84.5 feet below ground surface. Data from monitoring wells installed at the Univar site located approximately 2,000 feet to the southwest recorded groundwater in levels in 2016 of between 92 and 109 feet bgs. Groundwater was reported to flow in a west to southwest direction at a gradient of 0.00061 feet per foot.

The subject site is located within an area zoned by FEMA as an area inundated by 100 or 500 year flooding.

2.0 FIELD INVESTIGATION

2.1 Health and Safety Plan

A site-specific health and safety plan (SHSP) was prepared for the site, which was implemented per OSHA requirements (29 Code of Federal Regulations [CFR] 1910.120) and Title 8 California Code of Regulations [CCR] to address the proposed scope of work. Requirements and guidelines for worker safety and hazard identification during all phases of the investigation were included in the SHSP. The onsite health and safety officer was responsible for implementation of the SHSP. A health and safety meeting was conducted at the beginning of each day of fieldwork. Field personnel were required to review and sign the SHSP before beginning any fieldwork.

2.2 Underground Utility Location

Underground Service Alert (USA) was notified of subsurface investigation at least 48 hours prior to initiation of fieldwork, as required by USA. USA contacted utility owners of record, who clearly marked the position of the utilities on the ground surface at the property boundaries throughout the investigation area.

2.3 Permitting, Access and Agency Notification

No permits were required to perform the proposed sampling activities. The proposed sampling locations are onsite; therefore, no access agreements were required to perform the soil sampling actions. No agency notification was required as part of this assessment.

2.4 Soil Sampling Locations

2211 Merced St.

Soil sampling locations were selected to assess subsurface conditions in the vicinity of the former locations of the fuel dispenser, USTs, hydraulic hoists, area of the former garage and general conditions throughout the site at 2211 Merced Street.

A total of 21 soil samples were collected from six (6) borings for characterization of TPH and VOCs in soil at the project area. Three of the samples from a boring advance adjacent to the old hoist were tested for PCBs. Laboratory analysis was completed on a total of 18 soil samples collected during this investigation.

The approximate locations where soil borings were advanced at the site are illustrated on Figure 2.

1250 Van Ness Avenue

For the address of 1250 Van Ness Avenue soil sampling locations were selected to assess subsurface conditions in the vicinity of the Oil Storage area as identified on Sanborn Maps and at the north end of the site in the vicinity of the identified former Marshalls Auto Companies. Existing utilities limited advancing borings adjacent to the existing bank building.

A total of 12 soil samples were collected from three (3) borings for characterization of TPH and VOCs in soil at the project area. Laboratory analysis was completed on a total of 6 soil samples collected during this investigation.

The approximate locations where soil borings were advanced at the site are illustrated on Figure 3.

2.5 Soil Sampling Procedures

2.5.1 Drilling and Sampling

On March 24 and 25, 2017, nine soil borings (B1 through B9) were advanced using a DPT rig; four soil borings (B1 through B4) were converted to soil-gas monitoring probes at 5- and 15-feet below ground surface (bgs).

Soil samples were collected between 5 and 20 feet bgs and at any change in lithology or change in observed contamination. Soil samples were collected in 1-inch-diameter acetate liners protected by an outer steel sampler housing, hydraulically driven into the soil using the direct-push method. Upon retrieval, a portion of the liner was cut and sealed with Teflon lined caps. Borings were drilled with a DPT rig provided and operated by Cascade Drilling of Sacramento, California.

A California Professional Geologist recovered the soil samples for lithologic identification and cut portions of recovered samples for headspace analysis and laboratory analysis. Soil was described in accordance with the Unified Soil Classification System (USCS). In addition, the samples were observed for color, texture, moisture content, plasticity, evidence of soil contamination (i.e., odor, discoloration), and any other characteristics and recorded on the boring log.

Soil samples collected during drilling were screened for VOCs by headspace analysis, using a photo ionization detector (PID) calibrated to 100 ppm isobutylene. For each sampling interval, approximately 200-grams of soil were placed in a plastic bag and sealed. After the soil and the atmosphere in the sealed plastic bag were allowed to equilibrate, the probe tip of the PID was inserted into the plastic bag, and VOCs (in ppm) were recorded on the boring logs. The boring number, sample depth, lithologic description, and PID readings were noted on the boring logs, which are provided in Appendix A.

Samples were labeled, placed in a zipper-lock bag, stored in a cooler maintained to approximately 4°C, and transported to a state-certified analytical laboratory under chain-of-custody documentation.

2.5.2 Soil Description

Soil lithology observed in soil samples collected from the soil borings consisted primarily of brown to yellowish brown to reddish brown, medium-dense to dense, medium- to coarse sand, silty sand and sandy silt. Minor amounts of sandy clay and silt were encountered in B8 and B9. A minor amount of hardpan was encountered at approximately 19 feet in B5. Fine- to coarse-grained, well-graded sand with cobble-sized asphalt and concrete fragments were encountered in soil boring B2 advanced through the former location of the two 1,000-gallon USTs. Two approximately 6-inch thick intervals of crushed, red, brick material were encountered in boring B2 at depths of approximately 3.5-and 7.5-feet bgs and appear to bound the upper and lower extent of impacted soil that was encountered during the UST removal activities that was placed in the open excavation as fill material.

Red brick-colored sand encountered at a depth of 5 and 8 feet in boring B8 may be evidence of artificial fill in B8.

Groundwater was not encountered during the site investigation activities with the deepest boring advanced to a maximum depth of approximately 20 feet bgs.

With the exception of soil sample B2-5 collected within the fill material placed in former location of the two 1,000-gallon USTs no unusual odors, soil discoloration, or elevated PID readings were observed in soil samples during drilling.

A detailed description of the soil types encountered, sample depths, and PID readings were noted on the boring logs which are provided in Appendix A. Logs of borings B1 to B6 were completed by Sharp Environmental. Boring logs B7 to B9 were completed by this office.

2.5.3 Decontamination

All reusable sampling equipment in contact with potentially contaminated soil was decontaminated before and after each use to assure the quality of samples collected. Decontamination was performed using the following procedure:

- Washing in non-phosphate detergent and tap water wash, using a brush as necessary;
- Rinsing in clean tap water; and
- Final rinse in deionized/distilled water.

2.6 Sample Handling Procedures

To identify and manage samples obtained in the field, a sample label was affixed to each sample container. The sample labels included the following information:

- Project number;
- Site name;
- Sample identification (sample location number and depth); and
- Date and time of collection.

Following collection and labeling, samples were stored in a cooler packed with ice for immediately delivery to the off-site laboratories for analysis.

2.7 Soil Analytical Procedures

All soil and quality assurance/quality control (QA/QC) samples were analyzed by Jones Environmental, Inc. of Santa Fe Springs, California (state-certified, environmental laboratory) using chain-of-custody documentation during the sampling activities. Select soil samples were analyzed for the following parameters:

- Total petroleum hydrocarbon (TPH) characterization by EPA Method 8015
- VOCs by EPA Method 8260B.
- PCBs by EPA Method 8082

2.8 Soil Analytical Results

Laboratory analysis indicated that no VOCs or PCBs were present in the soil samples at concentrations exceeding the laboratory practical quantitation limits (PQLs). Soil sampling analytical results are summarized in Table 1.

Total petroleum hydrocarbons (TPH) in the oil range, C24 through C43, were reported in soil sample B2-5 at a concentration of 102 milligrams per kilogram (mg/kg). Soil sample B2-5 was collected from material used

to backfill the UST excavation at a depth of approximately 5-feet bgs from soil boring B2 advanced through the backfilled UST excavation area. Deeper soil samples collected below the former excavation area did not contain TPH at concentrations exceeding the laboratory PQLs. The detected analyte is below California Regional Water Quality Control Board (CRWQCB) Screening Levels for Site Assessments and Cleanup Guidebook (May, 1996) for Total Petroleum Hydrocarbon for carbon chain range of C23-C32 of 1,000 mg/kg and the more conservative CRWQCB for the San Francisco Bay Region (2007) of 450 mg/kg for commercial industrial land use and 110 mg/kg for residential use.

No TPH at concentrations exceeding the laboratory PQLs was reported in other soil samples collected during this assessment. Laboratory-certified analytical reports for soil samples are provided in Appendix B.

TABLE 1 – Soil Sampling Analytical Results

2.9 Soil-gas Probe Installation

A DPT rig was used to advance drill rods to the desired sampling depth. The rods were then removed from the borehole. Approximately 6 inches of clean, graded, kiln-dried Lonestar Monterey sand was placed at the bottom of the borehole, and then a length of the 0.25-inch-diameter Nylaflow® sampling tube was inserted into the borehole. The bottom of the tubing was fitted with a vapor inlet filter to allow flow of soil gas from the formation, through the tubing, and to the surface where samples were subsequently obtained. Once the tubing was in place, approximately 6 inches of clean sand was poured around and on top of the vapor inlet filter of the tubing. The annulus was filled with 1 foot of dry bentonite chips and then filled with hydrated bentonite chips. Soil-gas probes were installed at depths of 5- and 15-feet bgs in each of the six soil borings completed with the DPT rig. The soil-gas probe construction details for all probes are included with the borings logs in Appendix A.

2.10 Soil-gas Sampling and Analysis

2.10.1 Soil-gas Sampling Locations

The approximate locations where soil-gas probes were installed at the site are illustrated on Figures 2 and 3. All soil-gas probes coincide with the soil boring locations. Temporary soil-gas probes were installed at depths of 5- and 15-feet bgs in soil borings B1 through B4. The temporary soil-gas probes were removed from the borings and the borings were properly abandoned upon the completion of soil-gas sampling.

2.10.2 Soil-gas Sample Collection Procedures

On March 24, 2017, Sharp Environmental conducted the on-site soil-gas sampling in accordance with the Advisory – Active Soil Gas Investigations (Cal/EPA, 2015). A description of the sample collection procedures is provided below.

2.10.2 Soil-gas Sample Collection and Analysis

Soil-gas samples were collected after the required waiting period for installation with a DPT rig after the probes were installed, using a vacuum pump and passivated, stainless steel, Summa canister prepared by Jones Environmental Laboratories of Santa Fe Springs, California. Upon completion of purging using a vacuum pump, a Summa canister was connected to each of the soil-gas probes and soil-gas was drawn into the canister. The sample withdrawal rate was approximately 200 milliliters per minute.

After collection, soil-gas samples were transferred to Jones Environmental Laboratory for direct injection into a gas chromatograph for analysis of VOCs by EPA Method 8260B.

Soil-gas samples were analyzed for VOCs and oxygenates at all probe locations. Two duplicate field samples for VOCs and oxygenate analysis were collected and analyzed for VOCs during the sampling event. The duplicate sample “DUP1” coincides with the sample collected from soil gas probe B4-5 and sample “DUP2” coincides with the sample collected from soil gas probe B4-15. All QA/QC for the soil-gas analysis was performed by the laboratory.

2.11 Soil-gas Analytical Results

Soil gas analytical results are summarized in Table 2. Laboratory-certified analytical reports, including QA samples, for soil-gas samples are provided in Appendix B. A summary of the analytical data from the soil-gas sampling is discussed below.

Tetrachloroethene (PCE) was reported in four of the ten soil-gas samples at concentrations ranging from 0.010 micrograms per liter ($\mu\text{g/L}$) in samples B2-15 and DUP2 to 0.034 $\mu\text{g/L}$ in sample B1-15. The reported PCE concentrations do not exceed the California Office of Environmental Health Hazard Assessment, California Human Health Screening Levels (CHHSLs) for PCE in soil gas at commercial or residential settings.

Benzene was reported in six of the 10 soil-gas samples at concentrations ranging from 0.025 $\mu\text{g/L}$ in sample B4-5 to 0.243 $\mu\text{g/L}$ in sample B2-5. The reported benzene concentration in sample B2-5 exceeds the residential CHHSLs for buildings constructed with or without engineered fill below sub-slab gravel. The benzene concentration of 0.243 $\mu\text{g/L}$ also exceeds the commercial CHHSL for buildings constructed without engineered fill below sub-slab gravel. The concentration of benzene reported in sample B2-5 does not exceed the commercial CHHSL for buildings constructed with engineered fill below sub-slab gravel.

Toluene, ethylbenzene, m,p-xylenes, and o-xylenes were also reported in a minimum of one of the ten soil gas samples. Concentrations of these fuel constituents did not exceed their respective residential or commercial CHHSL for buildings constructed with or without engineered fill below sub-slab gravel.

Dichlorodifluoromethane, 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, n-Propylbenzene, and Chloroform were also reported in a minimum of one soil-gas sample. CHHSLs have not been established for these compounds. No other VOCs were reported in soil-gas samples submitted for analysis.

TABLE 2 – Soil Gas Analytical Results

Screening levels (SL) based on OEHHA, California Human Health Screening Level, soil-gas screening numbers for volatile chemicals below buildings with and without engineered fill below sub-slab gravel at commercial and residential settings (Sept. 2010).

Values in *ITALICS* exceed residential screening levels for buildings constructed without engineered fill below sub-slab gravel.

Values in **BOLD** exceed residential screening levels for buildings constructed with engineered fill below sub-slab gravel.

Values UNDERLINED exceed commercial screening levels for buildings constructed without engineered fill below sub-slab gravel.

Values in **LARGE FONT** exceed commercial screening levels for buildings constructed with engineered fill below sub-slab gravel.

No other VOC's reported at or above laboratory MDLs.

2.12 Disposal of Investigation-Derived Wastes

No investigation-derived waste was generated during this assessment.

2.13 Ground Penetrating Radar Scan

A ground penetrating radar (GPR) scan was conducted at the location of the former gas station at 2211 Merced St. The purpose of the scan was to detect and delineate any underground storage tanks that may still be present at the site.

2.13.1 Field Method

The site was scanned on March 25, 2017 using a GSSI SIE 4000, three-wheeled cart. At the time of the scan the parking lot or site was mostly free of obstacles with the exception of a couple of parked cars located in the center of the lot and at the southwestern end of the lot (Photographs 1 and 2). Coverage was not possible in these areas.

GPR works by beaming energy into the ground from the instrument in the form of electromagnetic waves. A portion of the energy is reflected back to the unit. The instrument produces a continuous record of the reflected energy as the instrument is traversed across the surface of the ground. The greater the electrical contrast the higher the amplitude of reflected energy relative to the reflected energy of the surrounding earth materials. The instrument records the variations in real time allowing the technician to detect buried objects in the subsurface.

During the scanning of the site the technician continuously and methodically walked all portions of the site with the exception of the location of the parked cars. Detected USTs were delineated in white marking paint at the time of the site scan.

2.13.2 Findings

A UST was detected at the west side of the existing concrete patch, the site of the former fueling island located at the west side of the parking lot (Photograph 1). The tank is presumed to be a waste oil tank as evidenced by markings on a small manhole cover located within the delineated area of the tank.

An anomalous feature identified by the technician as a UST was located in the area of the former garage (Photograph 2). The detected tank is presumably the two 55 gallon UST that were unaccounted for. The locations of the USTs are illustrated on Figure 2. Reports of the GPR scan provided by SiteScan are included in Appendix C.

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 Conclusions

Laboratory analysis indicated that no VOCs, TPH, or PCBs were present in the soil samples at concentrations exceeding the laboratory PQLs with the exception of soil sample B2-5 where TPH in the oil range, C24 through C43, was reported at a concentration of 102 mg/kg. Soil sample B2-5 was collected from material used to backfill the UST excavation at a depth of approximately 5-feet bgs from soil boring B2 advanced

through the backfilled UST excavation area. Deeper soil samples collected below the former excavation area did not contain TPH at concentrations exceeding the laboratory PQLs.

VOCs associated with chlorinated solvents and/or fuel products were detected in soil-gas samples collected each of the four soil-gas probes installed and sampled at the former gas station site. With the exception of benzene, the concentrations reported did not exceed their respective residential or commercial CHHSL for buildings constructed with or without engineered fill below sub-slab gravel.

The reported benzene concentration of 0.243 µg/L in soil-gas sample B2-5 exceeds the residential CHHSLs for buildings constructed with or without engineered fill below sub-slab gravel and the commercial CHHSL for buildings constructed without engineered fill below sub-slab gravel (OEHHA, 2010).

Based on the findings of this assessment, it appears that petroleum hydrocarbon impacted soil was used as fill material to backfill the UST excavation area where boring B2 was advanced. The upper and lower extent of impacted soil that was encountered is well bound by the presence of two approximately 6-inch thick intervals of crushed, red, brick material encountered in boring B2 at depths of approximately 3.5- and 7.5-feet bgs.

The impacted soil present in the UST excavation area has impacted soil-gas conditions resulting in a benzene concentration in soil-gas that exceeds both residential CHHSLs and one of the two commercial CHHSLs.

6.2 Recommendations

As the sole area of contamination established that presents a potential threat to human health and the environment is limited to the UST excavation area between depths of approximately 3.5- and 7.5-feet bgs, Sharp Environmental and RMA GeoScience recommends that the petroleum hydrocarbon impacted soil encountered in the excavation area be removed and replaced with clean, import fill material. Removal and replacement of the petroleum impacted soil in the UST excavation area will significantly reduce the potential threat to human health and the environment by mitigating the source of contamination currently impacting soil-gas conditions.

We recommend removing the existing waste oil tank identified at the west side of the former fuel island and the identified UST, presumably the unaccounted for two 55 gallon USTs, located in the area of the former garage. The USTs should be removed in accordance with the County of Fresno Environmental Health Certified Unified Program Agency (CUPA).

LABORATORY RESULTS**

Client: Sharp Environmental
Client Address: 839 S. Beacon St. #1967
San Pedro, CA 90733

Report date: 3/30/2017
JEL Ref. No.: ST-10401

Attn: Jeff Sharp

Date Sampled: 3/24/2017
Date Received: 3/28/2017

Project Name: Fresno Co. Federal Credit Union
Project Address: 2211 Merced St.
Fresno, CA

Date Analyzed: 3/30/2017
Physical State: Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Analytical – Soil Gas samples were analyzed using EPA Method 8260B that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity.

Approval:

Work Inspected

Arrived onsite at 8:00 am and met with RMA GeoScience to walk area needing to be scanned. I located two underground tanks. One located at west side of site next to a small manhole. The other underground tank found was on the north end of site where a service shop use to be. All scanning was done using the GSSI SIR 4000 three wheel cart. Left site at 10:00 am.
