This Phase I Environmental Site Assessment Report for the Veterans Memorial Park site located at 6364 Zindell Avenue in Commerce, California, dated October 28, 2019, was prepared by Justin Rauzon and reviewed by Ray Huff and Julio Nuno.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. The resumes for the individuals below are included in **Appendix G**. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Technical Advisor
SCS ENGINEERS

EXECUTIVE SUMMARY

SCS Engineers (SCS) was retained by Comstock Gage, LLC to prepare a Phase I Environmental Site Assessment (Phase I ESA) of the Veterans Memorial Park site located at 6364 Zindell Avenue, Commerce, California (the "Property"). This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-13.

The Property is located at the southern terminus of Zindell Avenue, immediately to the north of the Rio Hondo bike path and a portion of the Rio Hondo Percolation Basin. It covers approximately 9.4 acres that are developed as Veterans Memorial Park (Park). The Park comprises a Class-A baseball stadium with seating for roughly 2,000 spectators; tennis, basketball, and handball courts; a recreational water feature; landscaped picnic and barbecue areas; a children's playground; a community center building; two mobile community center buildings; and asphalt-paved parking areas.

The Property was undeveloped or agricultural land from at least 1896 through 1940. Between 1941 and 1954, at least four entities conducted landfilling operations on the Property. By 1963, the landfills were capped with a layer of fill soil and a vegetative cover. The Property was redeveloped into its current configuration (a City Park with a baseball field, parking areas, and a recreation center) by 1972. The past presence of a landfill(s) on the Property constitutes a recognized environmental condition (REC).

With the exception of common janitorial cleaning supplies inside the closed community center building, hazardous substances and wastes were not observed at the Property during the site inspection. Significant cracks in asphalt parking lots indicated differential settlement from underlying landfilled materials. No distressed, discolored, or stained vegetation was observed. Groundwater monitoring wells and gas monitoring probes associated with investigation of the former landfill(s) were noted on and near the Property.

Several previous investigations have been conducted at the Property and immediately surrounding area. A 1963 foundation investigation conducted prior to the development of Veterans Memorial Park identified landfilled waste to a maximum depth of 28 feet. Fill consisted of uncompacted soil, municipal trash, organic materials, wood, concrete, tire casings, metal, rubber gaskets, glass, brick, wire, tile, etc. Landfilled material was removed from an approximately 1 acre area at the northwestern portion of the Property, where the community center building was constructed. Solid Waste Assessment Test (SWAT) investigations of groundwater and air conducted in the early 1990s documented the multiple landfill operators that took waste onto the Property between 1941 and 1954. While they were generally permitted to receive only non-hazardous municipal solid waste or inert wastes, regulatory records from the period of landfilling noted that operators were cited for receiving oil sludge and other suspected hazardous substances. Record reviews indicate that construction activities at the adjoining Rio Hondo Percolation Basin slope immediately to the south of the Property noted stained soils (beneath what would now include the Rio Hondo bike path).

The air SWAT investigation identified landfill gas (LFG) methane and volatile organic compounds (VOCs), including chlorinated solvents, in soil gas within the landfilled material and, to a lesser extent, at gas probes located around the perimeter of the Property. Given the presence of landfills on adjoining sites as well, the presence of these compounds cannot be exclusively attributed to the Property. The groundwater SWAT reportedly did not identify halogenated or aromatic hydrocarbons in groundwater samples collected at the Property. Metals concentrations in groundwater were reportedly below California drinking water Maximum Contaminant Levels (MCLs). SCS was not able

to compare the raw data from the groundwater SWAT to current standards because the copy of the report provided did not include tabulated data, figures, or laboratory reports. Sampling of soil pore water from one lysimeter location had detections of VOCs. More recent sampling has identified methane and VOCs in soil gas, as well as total petroleum hydrocarbons (TPH), lead, and semi-volatile organic compounds (SVOCs) in soil/waste at the Property. As noted above, the historical landfills that operated on the Property are considered a REC. The extent of landfill impacts to soil, groundwater, and soil gas have not been defined.

A shooting range operated in the basement of the community center building from the 1970s until 2009. That shooting range closed in 2009 due to reported testing that indicated the presence of lead dust nearby, originating from the range's HVAC system. City contacts recalled that lead testing had been done in the backyards of residences adjoining the Property to the west. According to a 2016 request for proposal to conduct abatement work, in addition to the shooting range itself, approximately 1,300 square feet of side yard at the west side of the community center and other interior areas of the building would require abatement of lead dust.

The abatement work was reportedly completed in 2017. SCS requested that the City of Commerce provide copies of any reports related to lead testing at the Property or adjoining sites as well as a final abatement clearance report, but these have not been provided to date. The inability to obtain these reports is considered a data gap. The potential for aerially distributed lead from the HVAC system is considered a REC.

With the exception of the onsite and nearby landfills, regulatory database information identified few known and suspected contamination sites in the area surrounding the Property. The case status for a few leaking underground storage tank (LUST) case files on adjoining and nearby sites were all listed as closed. Based on the available information, including both their relative location and case status, these LUST cases are not anticipated to have negatively affected the environmental condition of the Property. The nearby landfills are also considered RECs because of the likelihood that they have contributed to regional environmental conditions affecting the Property.

Conclusions

In summary, SCS performed a Phase I Environmental Site Assessment of the Veterans Memorial Park site located at 6364 Zindell Avenue in Commerce, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-13. Any exceptions to, or deletions from, this practice are described in Section 5 of this report.

In the opinion of the Environmental Professionals conducting this assessment, this assessment has revealed recognized environmental conditions in connection with the Property, as discussed above.

Data Gaps

The following data gaps were identified:

As noted above, SCS requested that the City of Commerce provide previous investigations and abatement documents related to the former shooting range located in the basement of the closed community center building. Site contacts reported that soil sampling was conducted around 2010 in the backyards of residences west of the community center building, in the direction where the emissions from the shooting range's HVAC system was directed. Abatement work was reportedly conducted in 2017. While the site inspection indicated that abatement work was performed, copies of these reports were not provided. This constitutes a significant data gap.

Copies of the reports provided to SCS were incomplete. In some cases, they did not include figures, tables, laboratory reports, or other appendices. The available information was sufficient to evaluate potential releases at the Property, but was not sufficient, in some cases, to compare to current regulatory standards. In general, this is not considered a significant data gap.

1 INTRODUCTION

SCS Engineers (SCS) was retained by Comstock Gage, LLC (the "User") to prepare a Phase I Environmental Site Assessment (Phase I ESA) of the Veterans Memorial Park site located at 6364 Zindell Avenue, Commerce, California (the "Property"). A location map for the Property is presented as **Figure 1** in **Appendix A**. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries (AAI), and in general conformance with ASTM E1527-13.

2 PURPOSE

This Phase I ESA is intended to constitute appropriate inquiry into the previous ownership and uses of the Property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively the landowner liability protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

The purpose of this investigation was to identify conditions indicative of releases or threatened releases of hazardous substances as defined in CERCLA Section 101, and petroleum products, on, at, in, or to the Property.

If known or suspected contamination is identified, Users seeking to maintain LLPs have responsibilities in addition to completion of an AAI-compliant Phase I ESA. These "continuing obligations" include taking "appropriate care" and "reasonable steps" with respect to known or suspected releases of hazardous substances during the term of property ownership. In addition to these requirements under federal law, there are different requirements under state law with respect to liability protections. On request, SCS can provide support for clients with continuing obligations, as appropriate.

3 SCOPE OF SERVICES

This Phase I ESA is based on:

- Interviews with past and/or present owners, operators, and/or occupants of the Property.
- Reviews of federal, tribal, state, and local government records.
- Visual inspections of the Property and adjoining properties performed on September 19, 2019.
- Review of historical Property use information (topographic maps, aerial photographs, fire insurance maps, existing reports, etc.).
- Commonly known or reasonably ascertainable information about the Property (e.g., interviews with appropriate regulatory agency personnel and review of agency files review of available documents, interviews with other knowledgeable persons).
- Degree of obviousness of the presence or likely presence of contamination at the Property, and the ability to detect the contamination by appropriate investigation.
- Information provided as a result of the additional inquiries conducted by the User.

4 SPECIAL TERMS AND CONDITIONS

This Phase I ESA for the Veterans Memorial Park site, located in Commerce, California, has been prepared specifically for Comstock Gage, LLC. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein.

No other party, known or unknown to SCS, is intended as a beneficiary of this work product, its content, or information embedded therein. Third parties use this report at their own risk. Third party reliance letters may be issued on request to SCS subject to approval of Comstock Realty Partners and payment to SCS of a fee for such letters.

5 LIMITATIONS AND ASSUMPTIONS

The investigation focuses on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition (REC) and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by the federal or state government) or due to the potential for contaminant migration through exposure pathways (e.g., soil vapor migration or groundwater ingestion). Materials that may contain substances which are not currently deemed hazardous by the United States Environmental Protection Agency (EPA) or California Environmental Protection Agency (CalEPA) were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials, lead-based paints, fire safety, vapor intrusion, indoor air quality, mold, and similar matters were not part of this assessment. The Property was not evaluated for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, or radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt, etc.) is not considered to be of concern unless observations suggest that hazardous substances are likely to be present in significant concentrations.

Sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Positive identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

SCS Engineers assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, such as regulatory agency listings. Unless obviously inaccurate or if information exists to the contrary, SCS Engineers assumes that information collected during this environmental site assessment is accurate and correct. Unless warranted, information collected has not been independently validated as part of this assessment.

The following information is the responsibility of the User (40 CFR 312.22) and is not included in this Phase I ESA:

- Specialized knowledge or experience of the User.

- The relationship of the purchase price to the fair market value of the Property. The purchaser of a Property is required to consider whether any differential between the purchase price and the fair market value of the Property is due to the presence of releases or potential releases of hazardous substances at the Property.

Certain other limitations could affect the accuracy and completeness of this report, as follows:

- Site Access Limitations – None.
- Physical Obstructions to Observations – None.
- Outstanding Information Requests – SCS requested that the City of Commerce provide previous investigations and abatement documents related to the former shooting range located in the basement of the closed community center building. Site contacts reported that soil sampling was conducted around 2010 in the backyards of residences west of the community center building, in the direction where the emissions from the shooting range's HVAC system was directed. Abatement work was reportedly conducted in 2017. While the site inspection indicated that abatement work was performed, copies of these reports were not provided.
- Historical Data Sources Failure – Copies of some of the reports provided to SCS were incomplete. In some cases, they did not include figures, tables, laboratory reports, or other appendices.
- Other Limitations – None.

6 GENERAL SITE CHARACTERISTICS

SITE LOCATION

The Property is located at the southern terminus of Zindell Avenue, immediately to the north of the Rio Hondo bike path and a Rio Hondo flood control basin. It has been assigned assessor's parcel numbers (APNs) 6357-018-900 and 6357-019-904. An APN map is provided as **Figure 2** in **Appendix A**.

GENERAL SITE DESCRIPTION

The Property covers approximately 9.4 acres that are developed with the Veterans Memorial Park. The Park comprises a Class-A baseball stadium with seating for roughly 2,000 spectators; tennis, basketball, and handball courts; a recreational water feature; landscaped picnic and barbecue areas; a children's playground; a closed community center building; two mobile community center buildings; and asphalt-paved parking areas.

ADJOINING PROPERTY USE

- North – Single-family residences (6355 to 6359 Zindell Avenue and 7168 to 7182 Kuhl Drive) adjoin the western side of the Property to the north. Escon Corporation, a residential door wholesale business, adjoins the eastern side of the Property to the north (7222 East Gage Avenue).
- South – The Rio Hondo Bike Path and a portion of the Rio Hondo Percolation Basin adjoin the Property immediately to the south. The concrete channelized Rio Hondo is located further to the south, with single-family residences beyond the river.

- East – Undeveloped land and remnants of a rail spur adjoin the Property to the east (7316 East Gage Avenue). The former Gage Avenue Landfill operated on the Property and this site to the east between 1950 and 1954.
- West – A City of Commerce-owned easement with a landfill gas (LFG) monitoring and control system adjoins the Property immediately to the west. Single-family residences in the Vista del Rio residential community are located just beyond the easement (6347 to 6359 Avenida Aguascalientes).

7 PHYSICAL SETTING

PHYSIOGRAPHIC SETTING

According to the U.S. Geological Survey (USGS), South Gate, California 7.5-minute topographic maps, the Property is located at the southern edge of the Montebello Plain physiographic feature within the Los Angeles Basin's Coastal Plain. It is situated at an elevation of approximately 150 feet above mean sea level. There is a slight regional slope to the southwest. Site topography slopes from the east to the west, with the western end approximately 5 to 6 feet lower in elevation than the eastern edge. The Property is situated to the north of the Rio Hondo and one of its percolation basins.

GEOLOGY AND SOILS

The Property overlies late Pleistocene-age sediments of the Lakewood Formation. The Lakewood Formation is described as being sedimentary in origin and consists of marine and continental gravel, sand, silty sand, silt, and clays. According to the Dibblee Geologic Map of the Los Angeles Quadrangle (1989), the Property is underlain by Quaternary alluvium consisting of unconsolidated floodplain deposits of silt, sand, and gravel. The alluvium is composed of alternating beds of medium-dense to dense sand, clay, and silt (DWR, 1961).

According to soil boring logs from a 2004 geotechnical investigation by Sladden Engineering at the adjoining site to the east, the soil (up to 80.5 feet bgs) underlying the eastern parcel of the Gage Dump consists of silty sand, sandy silt, and fine-to coarse-grained alluvial sand with gravel (Sladden 2004). Groundwater was not encountered during the Sladden Engineering investigation. Borings drilled at the Property (LeRoy Crandall & Assoc., 1963) found predominantly fine-grained sand with some silty sand, clayey silt, silty clay, and clay layers below the waste. Borings were drilled to a maximum depth of 80.5 feet below ground surface (bgs) and did not encounter groundwater.

GROUNDWATER

According to information reviewed on the State Water Resources Control Board (SWRCB) GeoTracker website for nearby sites, the Property is located in the Central Basin of the Water Replenishment District of Southern California. The Property overlies the Bellflower aquiclude, the Exposition aquifer, and the Gage aquifer within the Lakewood formation. The Rio Hondo Spreading Grounds are located approximately 1.1 miles to the north-northeast of the Property and are a source of regional groundwater recharge. Past investigations at the nearby Mobil Service Station (7724 Telegraph Road, GeoTracker ID: T0603700984) showed the depth to groundwater to be between 87 and 112 feet bgs. Based on proximity, groundwater at the Property likely occurs at a similar depth. Based on surface topography and a review of previous investigations for nearby sites, typical groundwater flow is likely to the west. Flow direction and velocity may be influenced by groundwater recharge from the Rio Hondo.

RADON

According to the California Department of Public Health's February 2016 Radon Program report, screening in the area of the Property (90040 [and nearby 90201] zip codes) found no locations (out of 6) where buildings had radon levels greater than or equal to 4 picocuries per liter (pCi/L), the EPA action level. Radon was not detected in one sample at the Property's zip code. The maximum radon result for the adjoining 90201 zip code was 1.1 pCi/L. The alluvial geology of the Commerce area is not normally associated with elevated radon levels. Note that elevated radon levels may also be attributed to other sources such as leaking natural gas or numerous building products such as drywall, cinderblock, concrete floors, brick, or stone products. Based on the available information, elevated radon gas is not expected in the area of the Property.

8 SITE INSPECTION

Justin Rauzon of SCS conducted an inspection of the Property and surrounding area on September 19, 2019. An aerial photo of the Property identifying photo locations and photographs of the Property are provided in **Appendix B**.

Access to the Property was provided by Mr. Joseph Palombi, the Acting Deputy Director of Development Services for the City of Commerce and Ms. Sonia Griego, an Associate Planner with the City of Commerce Public Works & Development Services Department.

The site inspection began with a tour of the closed community center building located at the northwestern portion of the Property. This recreation building is formally associated with the address 6364 Zindell Avenue. According to Mr. Palombi and Ms. Griego this building was closed to the public in 2010 due to structural issues related to the building foundation. The main level of the building contains an indoor basketball court, racquetball/handball courts, restrooms, and offices. Former office space and a small machine room that previously housed air conditioning and water heater equipment was also located upstairs at the northern part of the building.

The building has two underground levels. The first housed a dance room, additional community center meeting rooms, storage cages, and a kitchen. A small emergency generator (no associated fuel tank) was observed inside one of the storage areas. The basement level formerly housed a shooting range. The interior of the shooting range had largely been gutted at the time of the site visit. The area had concrete floors and walls. Two air extraction vents were observed on the western wall of the shooting range. At least eight patched 4-inch concrete cores were noted on the floor of the shooting range along with one capped floor drain. A sump and related pumps were located inside a room at the eastern side of the basement level. Two tennis/basketball courts and handball courts were observed outside the southern side of the community center building.

Park operations are currently managed out of two mobile trailers located near the entrance at the north-central portion of the Property. Asphalt-paved parking lots and a paved driveway are located on the Property's northern side. A canopy-covered playground, non-operating splash park, and grassy areas with picnic tables and barbecue areas are located on the southwestern portion of the Property. A restroom/snack bar building is situated at the center of this outdoor recreation area.

The baseball field is located at the southeastern portion of the Property. Small locker rooms, each with hot water tanks and showers, were noted behind the two dugouts. A small maintenance building is located to the north of the baseball field. Lawnmowers and other equipment used in baseball field maintenance are stored in an outdoor cage next to this building. One small room of

the building could not be accessed at the time of the visit, but the site representatives stated that it had a maintenance office.

HAZARDOUS SUBSTANCES

With the exception of common janitorial cleaning supplies inside the closed community center building, hazardous substances and wastes were not observed at the Property. No obvious indications of fuel storage was noted at the baseball equipment maintenance area.

Waste fluorescent light bulbs (a universal waste) were observed inside a cage on the first underground floor of the recreation building.

NATURAL DRAINAGE

Natural waterways are not currently located on the Property. Runoff from the Property infiltrates into the ground at unpaved park areas or flows overland to the adjoining streets to the north and west. A few stormwater drains were located in the parking areas.

DISTURBED AREAS

Significant cracks in asphalt parking lots indicated differential settling in underlying landfilled materials. No distressed, discolored, or stained vegetation was observed on the Property. Patched asphalt indicative of former borings were noted at a few locations in the northern parking lot areas.

ELEVATORS AND OTHER HYDRAULIC EQUIPMENT

One hydraulic elevator is located inside the closed community center building. The reservoir oil tank associated with the elevator is located in a room in the basement level of the building and was observed to be in good condition (no evidence of spills or leaks from hoses).

WELLS

Groundwater monitoring wells and gas monitoring probes associated with the closed Gage Avenue Landfill were noted on and near the Property. Five raised well monuments were identified, one near the entrance on the north-central portion of the Property and four along its southern edge. Two flush-mounted gas monitoring probe locations were observed, one in the Zindell Avenue cul-de-sac just outside the Property entrance and one on the southern side of the maintenance building at the northeastern portion of the Property. Additional monitoring wells and gas probes are located on adjoining and nearby sites.

ELECTRICAL EQUIPMENT

An enclosed Southern California Edison (SCE) outbuilding is located on the north-central portion of the building. Although the structure was locked, it had signs indicating high voltage, implying the likely presence of electrical transformer equipment inside. SCE has stated that they have never specified the purchase of distribution transformers utilizing polychlorinated biphenyls (PCBs) as the insulating/cooling fluid. SCE transformers utilize mineral oil exclusively. In a statistically valid test of over 20,000 SCE distribution transformers, SCE determined that the concentrations of PCBs in the mineral oils was less than 50 parts per million (ppm) in over 96 percent of the units. Based on the available information, no significant environmental impact to the Property is anticipated from the on-site SCS equipment.

WASTEWATER

Industrial wastewaters are not generated at the Property. Sanitary wastewater is discharged to the municipal sanitary sewer.

DRINKING WATER

Drinking water is supplied to the Property by the California Water Service Company. All large public water suppliers in California have been required to test their water and comply with federal and state drinking water standards since the mid-1980s. Consequently, lead and other contaminants of concern are not expected to be present above applicable primary and secondary drinking water standards.

STORAGE TANKS

No evidence (fill ports, vent lines, or dispensers) of underground storage tanks (USTs) was observed on the Property. No aboveground storage tanks (ASTs) were observed on the Property.

VISUAL INSPECTION OF ADJOINING SITES

With the exception of the known former landfill on the adjoining site to the east, no obvious evidence of a REC or indications of contamination (e.g. remediation equipment, staining, USTs, etc.), were observed on adjoining sites during the site inspection.

9 INTERVIEWS

SCS interviewed Mr. Palombi and Ms. Griego of the City of Commerce during the site inspection. They provided general information about current and historical operations at the Property. Information they provided is discussed in the appropriate section of this report.

10 SITE HISTORY

Site history was evaluated from the following sources:

- Historical U.S. Geological Survey (USGS) topographic maps provided by Environmental Data Resources (EDR) (September 9, 2019).
- Historical aerial photographs provided by EDR (September 9, 2019).
- A search was made of EDR-Sanborn collection and no maps of the Property were found (September 9, 2019).
- A City Directory review report provided by EDR (September 9, 2019).
- Previous environmental reports (discussed further in Section 11).

Copies of topographic maps, historical aerial photographs, and city directories are included in Appendix C.

Year	Description	Source
1896 to 1902	The Property was undeveloped land located immediately to the north of the Rio Hondo. Roads and an intersection adjoined the Property immediately to the east and one small structure was located to the north of the Property.	Topographic maps
1923	The Property was undeveloped land to the north of the Rio Hondo and south and approximately 600 feet south-southeast of Gage Road. The future Zindell Avenue existed as a dirt road north of the Property. A few small structures bordered the western side of the Property to the north. The areas to the west, east, and south of the adjoining river were undeveloped.	Topographic map
1925	No significant changes from the 1923 topographic map were noted on the Property or adjoining sites.	Topographic map
1928	The western side of the Property was cultivated agricultural land and the eastern side was undeveloped and covered with native vegetation, with the exception of a small bare patch and a pathway leading east. Agricultural land adjoined the Property to the north, west, and across the river to the south. Undeveloped land was located to the east.	Aerial photo
1936	No significant changes from the 1925 topographic map were noted on the Property. The small structures previously shown to the north were no longer depicted.	Topographic map
1938	With the exception of some trees in the center and along the northern edge, the Property was agricultural land. The southern edge of the Property appeared to include a portion of the unchannelized Rio Hondo. The area to the east was also agricultural. Otherwise, no significant changes from the 1928 aerial photo were noted on the adjoining sites.	Aerial photo
1941 to 1948	The western half of the Property operated as the Fletcher Dump from 1941 to 1944, then as the Doris Haney Johnes Dump from 1945 to 1948.	Previous environmental reports

Year	Description	Source
1942 and 1943	The Property remained undeveloped land. Three structures and new roads appeared to the northwest of the Property. High-tension electrical lines and dirt roads appeared to be located across the river to the south.	Topographic map
1947	The eastern side was agricultural land. The western side of the Property was no longer agricultural and the surface was disturbed, possibly with waste disposal activities associated with historical on-site landfills. There may have been sand and gravel mining operations in the Rio Hondo to the south, with a road extending up onto the western side of the Property. New residences were developed to the north of the western side of the Property. Agricultural areas still adjoined the Property to the northeast, east, and across the river to the south; the area immediately to the west was also disturbed, likely due to landfilling operations.	Aerial photo and Topographic map
1949	No significant changes were noted on the Property from the 1947 topographic map. A levee was constructed on the southern side of the Rio Hondo and areas to the northwest and northeast were depicted as part of the general urban footprint.	Topographic map
1950 to 1954	The eastern half of the Property and the adjoining site to the east operated as the Gage Avenue Landfill. The western half of the Property (previously the Fletcher and Doris Haney Johnes Dumps) operated as extensions of the Salvage Corp. landfill (principally located to the west of the Property).	Previous environmental reports
1952	The western half of the Property was undeveloped. Active landfill operations were visible on the eastern side of the Property and adjoining area to the east. Former agricultural areas to the north-northeast and west were undeveloped. The area immediately beyond the river levee to the south was still agricultural, with residential development further to the south.	Aerial photo and Topographic map

Year	Description	Source
1960	International Paper Co. was listed as the occupant of the industrial building east of the Property (7316 East Gage Avenue).	City directories
1963	The landfill on the Property was no longer active and it had a vegetative cover. The vegetative cover appearance showed that landfilling extended onto the western side of the Property. The Rio Hondo was channelized with concrete to the south, leaving a flood control basin between the Property and the channelized river. The area immediately to the west was developed with a single building and exterior truck parking areas (6370 Greenwood Avenue). A new building was also developed atop the landfill on the adjoining site to the east, along with a rail spur. New industrial buildings were under construction to the north of the eastern side of the Property. There were no longer agricultural areas to the south.	Aerial photo
1964	No significant changes were noted on the Property. The new river channel/flood control basin and adjoining buildings described above were depicted on the adjoining sites not already depicted as urban footprint. Aloha Luau, Jan-U-Wine Foods Inc., and Oriental Foods Inc. were listed at 7272 East Gage Avenue, north of the Property.	City directories and Topographic map
1972	The Property was developed in its current configuration with a ballpark and stadium seating, recreation and parking areas, and a community center building (northwestern corner). The industrial building to the west was expanded and construction on the adjoining buildings to the north was completed (7222 East Gage Avenue).	Aerial photo and Topographic map
1976	Alleluia Cushion Co. Inc. was listed as the occupant of the industrial building to the east (7316 Gage Avenue).	City directories
1977	No significant changes were noted on the Property. Additional outdoor parking and equipment was present on the adjoining industrial site to the east.	Aerial photo
1981	No significant changes from the 1977 topographic map were noted on the Property or adjoining sites.	Topographic map

Year	Description	Source
1983	No significant changes from the 1977 aerial photo were noted on the Property or adjoining sites.	Aerial photo
1989	No significant changes from the 1983 aerial photo were noted on the Property. The industrial buildings to the west and east no longer appeared to be occupied (no exterior vehicle or equipment parking). Some industrial buildings to the north were removed and replaced with a V-shaped hotel building and a restaurant (7268 and 7272 East Gage Avenue).	Aerial photo
1990	Langendorf-Barbara Ann Bakeries was listed at 7222 East Gage Avenue, north of the Property.	City directories
1994	No significant changes from the 1989 aerial photo were noted on the Property. The industrial building and rail spur were removed from the adjoining site to the east. The industrial building and associated parking areas were also removed from the site to the west.	Aerial photo
1999	Escon Corp and BHS Incorporated were listed at 7222 East Gage Avenue, north of the Property. Alexander's Restaurant and the Ramada Inn were listed at 7272 East Gage Avenue.	City directories
2000	Private individuals and a church were listed at addresses along Kuhl Drive to the north of the Property.	City directories
2002	No significant changes from the 1994 aerial photo were noted on the Property. New single-family residences were developed to the west. Otherwise, no changes were noted on adjoining sites.	Aerial photo
2005	No significant changes from the 2002 aerial photo were noted on the Property or adjoining sites.	Aerial photo
2006	Private individuals were listed at residences along Avenida Aguascalientes, adjoining the Property to the west. Denny's Restaurant occupied 7268 East Gage Avenue, north of the Property.	City directories
2009	No significant changes from the 2005 aerial photo were noted on the Property or adjoining sites.	Aerial photo

Year	Description	Source
2010	City of Commerce was listed as the occupant of the Property (6364 Zindell Avenue).	City directories
2012	The 2012 topographic map does not include site-specific details. No significant changes from the 1981 topographic map or 2009 aerial photo were noted on the Property or adjoining sites.	Aerial photo and Topographic map
2014	City of Commerce was listed as the occupant of the Property (6364 Zindell Avenue).	City directories
2016	No significant changes from the 2012 aerial photo were noted on the Property or adjoining sites.	Aerial photo

HISTORICAL USE SUMMARY

The Property was undeveloped or agricultural land from at least 1896 through 1940. Between 1941 and 1954, at least four entities (plus a possible fifth unpermitted one) conducted landfilling operations on the Property. By 1963, the landfills were capped with a layer of fill soil and a vegetative cover. The Property was redeveloped into its current configuration with a baseball field, City Park, parking areas, and a recreation center by 1972.

The past presence of the landfill operations at the Property constitutes a REC.

The existence of past agricultural activities on the Property and in adjacent areas indicates a potential for pesticide and/or heavy metal (associated with dusting powders) contamination. In SCS's experience, it is not uncommon to find trace levels of pesticides in soils at former agricultural areas in Southern California. However, these trace concentrations are rarely cause for environmental concern. It is our opinion that, without specific evidence of pesticide storage or mismanagement on the Property, past use for agricultural purposes is considered a *de minimis* condition and collection and analysis of soil samples for pesticides is unwarranted.

HISTORICAL USE OF ADJOINING SITES

The Rio Hondo and associated flood control basins adjoin the Property immediately to the south. With the exception of a few small, rural structures, the surrounding area was also largely undeveloped or agricultural land from at least 1896 to 1940. A high-tension electrical line was installed to the south of the Rio Hondo around 1942. Single-family residences were developed to the northwest in the mid-1940s. A levee and residences were developed on the south side of the Rio Hondo in the late 1940s and early 1950s.

Salvage Corp. operated a landfill to the west of the Property between 1948 and 1954. After 1948, this landfill operator assumed operations of the landfill on the western side of the Property. The former Gage Avenue Landfill operated (on the Property) and on the adjoining site to the east between 1950 and 1954. Industrial buildings were constructed to the east over landfilled material (International Paper Co.), to the west (a freight business), and to the north in the 1960s. Additional restaurants and commercial stores were added to the north in the mid-1960s. The freight business was expanded to the west in the 1970s. Alleluia Cushion Co. occupied the industrial building to the

east in 1976. This building was serviced by a rail spur located near the edge of the Property. Some smaller buildings were replaced by a hotel and a restaurant around 1989. The industrial building to the east was condemned and demolished in the early 1990s. A bakery occupied the industrial building to the north in 1990. The bakery was replaced by a wholesale residential door company by 1999. New residences were developed to the west of the Property, replacing the former freight business in the mid-2000s. Additional information about the adjoining landfills is provided in Section 11.

11 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

In order to identify commonly known or reasonably ascertainable information about the Property, SCS attempted to review previous environmental reports and various regulatory agency files and interviewed regulatory agency personnel. The following information was identified.

PREVIOUS ENVIRONMENTAL REPORTS

The following previous environmental reports related to the Property were reviewed:

- LeRoy Crandall & Associates, November 29, 1963. *Report of Foundation Investigation: Proposed Southeast Park Recreational Facilities, Zindell Street, Commerce, California*.
- Converse Environmental West (Converse), March 15, 1990. *Final Report for Solid Waste Air Quality Assessment Testing at the City of Commerce's Veterans Park, 7316 Gage Avenue, City of Commerce, CA 90040*.
- Converse, February 27, 1991. *Results of SWAT Groundwater Quality Testing: Veterans Memorial Park, 6364 Zindell Avenue, Commerce, California*.
- Converse, April 12, 1991. *Presentation of Document Assessment: Watkins Truck Terminal, 6370 Greenwood Avenue, Bell Gardens, California*.
- Ninyo & Moore, August 21, 2015. *Landfill Gas Investigation: Gage Avenue Dump and Vicinity, 7316 Gage Avenue and 6364 Zindell Avenue, SWIS No. 19-AA-5543, and Other Waste Disposal Sites, Commerce and Bell Gardens, California*.
- City of Commerce, October 5, 2016. *City of Commerce Request for Proposal (RFP): Industrial Hygienist Abatement Oversight Professional Services for C.I.P. No. 2016-12, Veterans Park Building, Shooting Range Lead Abatement/Demolition*.

LeRoy Crandall & Associates

This 1963 foundation investigation report was prepared on behalf of the City of Commerce prior to the development of Veterans Memorial Park. Thirteen borings were drilled to a maximum depth of 50 feet bgs on the Property, 11 on the western side of the Property and two borings on the eastern side. The report indicated the presence of fill between 11 and 28 feet in depth. Fill consisted of uncompacted soil with large amounts of trash and debris, including organic materials, wood, concrete, tire casings, metal, rubber gaskets, glass, brick, wire, tile, etc. The report concluded that the most satisfactory means of supporting proposed park structures (pavilions, bleachers, community building, etc.) would be to remove and replace the existing fill with properly compacted earth fill, but that drilled pipings could be another option. Landfilled material was removed from an approximately 1 acre area at the northwestern portion of the Property, where the community center building was constructed.

Converse

Converse prepared the Solid Waste Assessment Test (SWAT) for air and groundwater on behalf of the City of Commerce. At least four permitted waste disposal sites and possibly one unpermitted disposal site operated at and immediately adjacent to the Property (Veterans Memorial Park) between 1941 and 1954. These disposal sites were contiguous and/or overlapping. The earliest landfill site was the Fletcher Dump (1941 to 1944), which occupied the western half of what is now Veterans Memorial Park. Doris Haney Johnes reportedly purchased the Fletcher Dump and continued its operation from 1945 to 1948. The Gage Avenue Dump operated from 1950 to 1954 on the eastern side of the Property (the Gage Avenue Dump Western Parcel) and adjoining site to the east (7316 East Gage Avenue – Gage Avenue Dump Eastern Parcel), what is now the Comstock site. A possible fifth (unpermitted and undocumented) waste disposal site may also have been located in the area of the Gage Avenue Dump Western Parcel. The Salvage Corp. operated a disposal site to the west of the Property, beneath what is now the Vista del Rio residential area, from 1948 to 1954. This area was "clean closed" in 1993 and 1994.

For the air SWAT, Converse installed five landfill gas (LFG) sampling probes in the interior of the Property to a depth of 11 feet, approximately 6 feet below the bottom of the landfill cover. Seven probes were also installed and monitored around the perimeter of the Property. Benzene, 1,2-dichloroethane (1,2-DCA), carbon tetrachloride, tetrachloroethene (PCE), trichloroethene (TCE) and vinyl chloride were detected in LFG samples. Benzene was detected at concentrations ranging from 180 to 2,800 parts per billion (ppb), vinyl chloride between 170 and 4,300 ppb, PCE between 0.7 and 27 ppb, and TCE between 8 and 73 ppb. PCE, 1,2-DCA, TCE, and methylene chloride were also detected in ambient air samples. Methane was detected between 2.6% and 12% by volume in LFG and was not detected in ambient air. It was noted that the offsite migration of LFG might be associated with the Gage Avenue Dump to the east of the Property. When compared to current regulatory guidance, the VOC and methane present in soil gas at the Property represents a risk of vapor intrusion and constitute a REC.

The groundwater SWAT was conducted to determine whether leachate originating from the landfill beneath the Property had affected subsurface soils and/or groundwater. The document notes that the landfills at the Property were permitted to receive municipal waste and rubbish, but that Los Angeles County Health Department records indicated they had received oil field sludge and other materials that did not meet the permitted categories. Los Angeles County Health Department file memorandums noted the Fletcher Rubbish Dump had been cited in early 1943 because "considerable amounts of redwood sawdust and several thousands of gallons of acid oil sludge had been dumped into the Rio Hondo River bed. Additionally, surface pools of oil sludge were present." After the Fletcher Dump was sold, Ms. Johnes was also found to be in violation of her dump permit for accepting oil sludge and dumping in the Rio Hondo Channel right-of-way.

Converse advanced four soil borings to depths between 42 and 90 feet bgs. During the SWAT, groundwater was encountered at a depth of approximately 72 feet below grade with groundwater flow to the west-southwest. Landfilled materials reportedly included asphalt chunks, glass, brick fragments, wood, etc. Three groundwater monitoring wells (MW-1 through MW-3) and one lysimeter (LY-1) were installed. It is possible that some of the well monuments observed at the Property during the site inspection correspond to these wells (and lysimeter) installed as part of the SWAT, but the figures (and summary data tables) showing the locations were not included with the report. Halogenated and aromatic hydrocarbons were not detected in groundwater samples from the onsite wells. Metals were detected in groundwater at concentrations below the California drinking water Maximum Contaminant Levels (MCLs) – the actual results were not discussed in the report and the tables and appendices were not provided. Lysimeter sampling of soil pore water had detections of

1,1,1-trichloroethane (1,1,1-TCA), benzene, and toluene. Additional findings noted that offsite groundwater samples from wells to the west and within one mile of the Property had detections of PCE and TCE.

The Converse reports indicate that the Salvage Corp. landfill located to the west of the Property assumed dump operations from Doris Haney Johnes and this expanded landfill operated until 1953. Converse also reported that the Rio Hondo Flood Control area south of the Property (at the time described as a spreading ground) was to be used for groundwater replenishment beginning in early 1991. During sloping of earthen sidewalls along the northern portion of the flood control basin (immediately south of the Property), discolored fill soils were observed.

The April 12, 1991 Converse document primarily addresses environmental issues associated with the former Watkins Terminal area to the west of the Property, which was "clean closed" and redeveloped into the Vista del Rio residential area. It describes the presence of petroleum hydrocarbons at concentrations up to 39,100 ppm and metals (primarily copper and zinc) in test pits at the Watkins Terminal. It further indicated that "the same hydrocarbon and metals were detected in landfill material beneath the adjacent City of Commerce's Veterans Park." Converse stated that extensive testing of soils at Veterans Park had detected aromatic hydrocarbons, pesticides, and polynuclear aromatic hydrocarbons (PAHs) in landfill material. This document concluded that TCE in groundwater to the west (the Bell Gardens side) originated at the Watkins Terminal.

Ninyo & Moore

The 2015 Ninyo & Moore investigation contains a thorough summary of the historical landfills located at the Property and at nearby landfill sites, including the Converse reports discussed above. It was conducted on behalf of the California Department of Resources, Recycling, and Recovery (CalRecycle) as part of its program to investigate Closed, Illegal, and Abandoned (CIA) solid waste disposal sites.

Ninyo & Moore installed one LFG monitoring well (WLFG-1) in waste on the eastern side of the Property (immediately to the south of the baseball field maintenance building) and one LFG monitoring well (LFG-12) in the park area at the southwestern portion of the Property (yellow above-grade monument observed during the site inspection). Three additional LFG monitoring wells were located just outside the northern edge of the Property (LFG-3, LFG-4, and LFG-5). Two hand auger borings (HA-1 and HA-2) were advanced to a depth of 5 feet in centerfield of the baseball field to evaluate cover thickness.

Soil samples collected during the drilling of LFG-12 reported concentrations of total lead at 80 and 270 mg/kg, with corresponding Soluble Threshold Limit Concentrations (STLC) of 6.4 and 9.4 milligrams per liter (mg/l), respectively. These levels of soluble lead would classify the material tested as California hazardous waste for purposes of disposal.

Semi-volatile organic compounds (SVOCs) were detected in soil samples from HA-1 and HA-2 at concentrations above their respective EPA Regional Screening Levels (RSLs), including benzo(a)pyrene, dibenz(a,h)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, and indeno(1,2,3-cd)pyrene. SVOC concentrations in samples from WLFG-1 and LFG-12 were detected below their respective RSLs.

Total petroleum hydrocarbons (TPH) were also detected in samples from on the Property. Diesel-range TPH (TPH-d) and motor oil-range TPH (TPH-o) were detected in samples from HA-1 at 51 and 680 mg/kg, respectively. TPH-d and TPH-o were detected in waste samples from LFG-12 at

maximum concentrations of 210 and 1,800 mg/kg, respectively. Ninyo & Moore noted that the Salvage Corp. had reported receiving wastes from aircraft and several oil derrick companies.

One waste sample from LFG-12 was analyzed for organochlorine pesticides (OCPs), with one detection of 4,4'-DDD at a concentration of 0.16 mg/kg, below its respective residential and industrial RSLs. Volatile organic compounds (VOCs) and polychlorinated biphenyls (PCBs) were not detected in this same sample from LFG-12.

Methane was detected at WLFG-1 at concentrations of 4.3 and 3.6 percent by volume in February and April 2015. VOCs detected in soil gas at the Property included acetone, methyl ethyl ketone (MEK), tetrahydrofuran, carbon disulfide, chlorobenzene, ethanol, ethylbenzene, heptane, isopropyl alcohol, propylene, toluene, and xylenes.

City of Commerce

The 2016 City of Commerce RFP was issued for lead and asbestos abatement and demolition work at a former shooting range located at the basement level of the community center building at the northwestern corner of the Property. That shooting range closed in 2009 due to reported testing that indicated the presence of lead dust nearby, originating from the range's HVAC system. Mr. Palombi recalled that lead testing had been done in the backyards of residences adjoining the Property to the west. The RFP indicated that, in addition to the shooting range itself, approximately 1,300 square feet of side yard at the west side of the community center and other interior areas of the building required abatement of lead dust.

The abatement work was reportedly completed in 2017. SCS requested that the City of Commerce provide copies of any reports related to lead testing at the Property or adjoining sites as well as a final abatement clearance report, but these have not been provided to date. The inability to obtain these reports is considered a data gap. The potential for aerially distributed lead from the HVAC system, both at the Property and surrounding sites, is considered a REC.

REGULATORY AGENCY RECORDS

Local regulatory agencies and other sources were contacted in an effort to identify any known or suspected contamination sites or incidents of hazardous waste storage or disposal which might have resulted in soil and/or groundwater contamination, or VOC (volatile organic compound) vapor migration to the Property. Generally, this includes records for the Property and adjacent parcels, although relevant information for other sites of possible interest in the area (up to one mile) may also be included. Within the City of Commerce, the Los Angeles County Department of Public Works (LACDPW) generally acts as the lead enforcement agency for underground storage tank compliance. If a tank has leaked and groundwater contamination is suspected, the Los Angeles Regional Water Quality Control Board (LARWQCB) generally becomes the lead agency in supervising contaminant characterization and cleanup.

California Environmental Protection Agency Files

The Property is not a listed site on the California Environmental Protection Agency (CalEPA) Regulated Site Portal website (**Appendix E**).

Los Angeles Regional Water Quality Control Board Files

The Property itself does not appear as a listed site on the RWQCB's GeoTracker website (**Appendix E**). The Gage Avenue Disposal Site – Eastern Parcel (T10000005526) does appear on the GeoTracker website. This listing is associated with the address 7316 East Gage Avenue and the status is listed as "Open – Remediation as of 6/18/2019). The listing mentions "part of the landfill extends offsite under the adjacent Veteran's Park," but nearly all of the documents pertain for this case file pertain exclusively to the adjoining Comstock site.

Several 1950s documents from the County of Los Angeles Regional Planning Commission in the file indicated that Los Angeles By-Products Co. applied for a cut and cover disposal dump and land improvements at a 13.55-acre site, which would have encompassed the entirety of the former Gage Landfill, including the eastern half of the Property. The permit for the landfill was initially denied, but it was approved on appeal. The final permit allowed for clean earth, rock, sand, gravel, concrete, brick, asphalt paving fragments, black top paving, plaster, and other solid materials not subject to the leaching action of water to be disposed of at the landfill (Industrial Waste Permit No. 80).

Department of Toxic Substances Control Files

The Property does not appear in the California Department of Toxic Substances Control (DTSC) EnviroStor website. Recent DTSC case files, if any, would be listed on this website (**Appendix E**).

South Coast Air Quality Management District Files

SCS reviewed South Coast Air Quality Management District (AQMD) files through the online Facility INformation Detail (FIND) website.

Gage Ave Sump/Veterans Park/City of Commerce (Facility IDs: 131599 and 133535) appears on the FIND website. The status for Facility ID 131599 is described as a "duplicate" and no air emissions equipment is listed. On October 29, 2009, the AQMD issued a Notice to Comply requiring that the city submit an application for a permit to operate air pollution control equipment for exhaust from the firing range (under Rule 203). No permits appear to have been granted prior to the shutting down of the shooting range in 2010.

Los Angeles County Department of Public Works

SCS searched the LACDPW Online File Review website for industrial waste, USTs, and/or stormwater permits associated with the Property and found none (**Appendix E**).

SCS also searched for the Property on the LACDPW Solid Waste Information Management System (SWIMS) online database. The Gage Avenue Dump appears on the SWIMS website under Site ID: 1939, with alternate names L.A. By Products, Sloto Golf, and Veterans Park; with alternate addresses 7326 Gage Avenue, 7272 Gage Avenue, and 7840 Telegraph Road. This landfill reportedly received inert and residential waste, with a maximum depth of fill of 29 feet bgs. The SWIMS database fact sheet for this facility references CalRecycle Permit 19-AA-5543.

The SWIMS database maps the Salvage Corp. landfill (Site ID: 2223) at a point along Kulh Drive, approximately 400 feet west of the intersection with Zindell Avenue. The Salvage Corp. landfill was described to have the alternate names Doris Haney Johnes Dump and Fletcher Dump, and to be associated with the addresses 7100 East Gage Avenue, Bell Gardens; 6370 Greenwood Avenue, Commerce; and 6361 Zindell Avenue, Commerce. The SWIMS database fact sheet for this facility

references CalRecycle Permits 19-AA-5339, 19-AA-5551, and 19-AA-5552, which do not appear as facilities in CalRecycle's SWIS database. The Salvage Corp. landfill reportedly received inert and hazardous wastes and had a maximum depth of fill of 50 feet bgs. The previous investigations conducted by Converse only identified landfilled material to depths of 28 feet bgs, which is considered more precise. The present use of the Salvage Corp. landfill is described as "residential," referring to the use of the area to the west of the Property.

CalRecycle

SCS interviewed Mr. Jeff Hacket of CalRecycle by telephone regarding potential records related to the three SWIS ID numbers for the Salvage Corp. landfill identified on the SWIMS database. He stated that CalRecycle had no records related to these sites and that all Gage Landfill records were available online through the CalRecycle website.

12 REVIEW OF FEDERAL, STATE, TRIBAL, AND LOCAL GOVERNMENT DATABASES

A database search for sites listed on various federal, state, tribal, and local databases in the area around the Property was obtained from EDR (September 9, 2019). A description of each of the databases searched is included in the report, which is attached as **Appendix F**. Among the databases included in the EDR report are NPL (federal, tribal, and state-equivalent), proposed and delisted NPL, CORRACTS (RCRA facilities subject to corrective actions), hazardous waste sites identified for investigation or remediation (SEMS [Superfund Enterprise Management System, formerly known as CERCLIS], State CERCLIS, VCP, Brownfields Calsites, etc.), LUST, sites with engineering controls, former CERCLIS (NFRAP), RCRA and state hazardous waste generators, ERNS, SWLF, USTs, and Toxic Pits.

Review of these records satisfies all requirements as set forth in 40 CFR Section 312.26 (b) and (c) with regard to the review of federal, tribal, and state government records of databases of such government records and local government records and databases of such records pertaining to both the Property and the nearby or adjoining properties. Further, the search distances for each particular database are as specified in 40 CFR 312.26 and ASTM E1527-13.

Any known or suspected contaminated sites included on these lists within 0.25 miles of the Property are discussed in the following text. As a general rule, sites beyond 0.25 miles are not anticipated to impact a site significantly. Any sites beyond 0.25 miles with a high potential to impact the Property are also discussed. (Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.)

Sites such as TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with permitting requirements - into the air, water, or land as reported under SARA Title III) use or store hazardous materials and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites, there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Property.

Please refer to **Appendix F** for further information on these sites.

PROPERTY LISTINGS

The City of Commerce Veterans Park (6364 Zindell Avenue) appears in the HAZNET and RCRA NonGen/NLR databases as a facility that generated asbestos containing waste, unspecified aqueous solution, and other inorganic solids between 2008 and 2017. This database listing contains no indications of chemical releases or violations. The Park also appears in the FINDS and ECHO databases, with no records of RCRA compliance violations (**Appendix F**).

Alley Way Abatements (6364 Zindell Avenue) also appears in the HAZNET database as a generator of other organic solid waste in 2010.

ADJACENT SITE LISTINGS

The following adjoining sites located adjacent to the Property were listed in the EDR database report:

Slotkin Properties/Gage Avenue Dump, 7316 and 7326 East Gage Avenue (adjacent to the east) – CPS-SLIC, Los Angeles Co. HMS, CERS, SWF/LF, LUST, SWEEPS UST, ENF, HIST CORTESE, NPDES, CIWQS, LOS ANGELES CO LF METHANE, and WMUDS/SWAT – As discussed above, the former Gage Avenue Landfill was primarily located on this site to the east, but also extended onto the Property. Comstock currently owns this undeveloped site, which is expected to be part of the larger redevelopment that includes the Property. Based on a review of information on GeoTracker (T0603704219), a leaking UST (LUST) case at this site was opened in August 1997 and closed on March 10, 1998. The LUST case involved a release of waste oil that affected soil only. Based on the regulatory status, the LUST is not anticipated to affect the environmental condition of the Property. The adjoining landfill does constitute a REC.

Watkins Terminals, Inc./Freight Terminals, Inc./Gage and Greenwood, 6371 Greenwood Avenue or Gage Avenue and Greenwood Avenue (adjacent to the west) – SWEEPS UST, HIST UST, CA FID UST, CPS-SLIC, CERS, HIST CORTESE, WMUDS/SWAT, and LUST – The Watkins Terminals address is now physically located approximately 700 feet west of the Property, but it refers to the historical freight business located at the Salvage Corp. landfill site to the west of the Property, which reportedly had 15 USTs. According to the information on GeoTracker (SL184051388), a diesel petroleum hydrocarbon leak at this site was discovered in October 1987. The case status is listed as closed as of February 2, 1997. Based on its location downgradient relative to the Property and its case status, this LUST case is not anticipated to have negatively affected the environmental condition of the Property. As discussed earlier, the waste from the former Salvage Corp. landfill was reportedly excavated and it was clean closed prior to redevelopment with the adjoining residential homes. Past investigations identified TPH and VOCs in both soil and groundwater. This area may still be considered a REC with respect to possible vapor migration onto the Property.

Jan-U-Wine Foods, 7272 East Gage Avenue (adjacent to the north) – SWEEPS USTand LOS ANGELES CO. HMS – This LUST site is located upgradient to the north of the Property. There are no reported leaks from the UST. An industrial wastewater permit associated with the facility has been closed and the facility status is described as "removed." Based on the available information, this site is not anticipated to affect the environmental condition of the Property.

Good Stuff Food Co., Inc., 7222 East Gage Avenue (adjacent to the north) – HIST CORTESE, LUST, CERS HAZ WASTE, EMI, LOS ANGELES CO. HMS, and CERS – According to this listing, a leak from a UST of non-petroleum hydrocarbon solvent was reported in July 1997. The case was closed on August 26, 1997. Based on the case status, this site is not anticipated to have negatively affected the environmental condition of the Property.

Langendorf Bakery, 7222 East Gage Avenue (adjacent to the north) – RCRA-SQG, FINDS, and ECHO – These listings are not associated with past releases. The bakery formerly located to the north does not represent a significant environmental risk to the Property.

Escon Corp, 7222 East Gage Avenue (adjacent to the north) – RCRA-LQG – The business currently located at the industrial building north of the Property reports generation of oxygenated solvents (acetone, butanol, ethyl acetate, etc.), other organic solids, and ignitable waste. No violations were reported in the database listing. This business is not expected to have negatively affected the environmental condition of the Property.

OTHER DATABASE SITES

The EDR report provides a summary table of regulatory database sites within specified distances of the Property, including standard environmental records, additional environmental records, high risk historical records, and recovered governmental records. This summary table is provided beginning on Page 4 of the EDR report (**Appendix F**).

Other sites located within 0.25 miles of the Property with known or anticipated releases of hazardous substances such as LUST, ENVIROSTOR, LA Co. Site MitigationSWF/LF, and LDS cases are located cross- or downgradient, or based on case status and/or distance, are not anticipated to have negatively affected the environmental condition of the Property.

Several sites located within 0.25 miles appear in databases not typically associated with documented releases, such as RCRA NonGen/NLR, RCRA-SQG, RCR-LQG, FINDS, ECHO, SWEEPS UST, HIST UST, TRIS, EMI, LOS ANGELES CO. HMS, NPDES, WDS, CIWQS, CERS, CERS HAZ WASTE, HIST CORTESE, LDS, CERS TANKS, and UST. Based on a review of the database information, none of these sites are known to have any contamination at this time; therefore, none are anticipated to have negatively affected the environmental condition of the Property. Similarly, none of the sites situated beyond 0.25 miles are anticipated to have impacted the Property.

UNMAPPABLE OR ORPHAN SITES

Four unmappable sites were identified in the EDR report. Unmappable sites cannot be plotted due to inaccurate or incomplete addresses. The Slavage Corp. and LA By-Products landfills adjoining the Property to the west and east are among the listed orphan sites. No additional information than what was discussed above about these sites was available on these database reports. Based on review of the provided data, including the estimated locations of the other two unmappable sites in relation to the Property, it appears unlikely that they have adversely affected the environmental condition of the Property.

LANDFILLS

A review of the SWIMS database was conducted to locate any landfills or transfer stations within a one-mile radius of the Property. The SWIMS listings for landfills historically on the Property and immediately adjoining sites are discussed in Section 11 of this report. In addition to those landfills, a Caltrans Dump (State of CA Highway Road Maintenance; SWIMS Site ID: 2029) that received mixed municipal residential and inert wastes between 1956 and 1974 is located across the Interstate 5 Freeway to the east of the Property at 7810 and 7840 East Telegraph Road, Montebello. This area is currently a Super 8 Motel. It is approximately 685 feet east of the Property boundary. No other landfills were identified within 1,000 feet of the Property.

According to the EDR-provided review of the CalRecycle Solid Waste Information System, two additional solid waste facilities are located between 0.35 and 0.5 miles of the Property. One appears to be an active transfer station only and the other is the former Chapin Road Landfill that ended operations in 1950. Based on the available information, it is unlikely that these two sites have adversely affected the environmental condition of the Property.

OIL AND GAS WELLS

Available oil and gas well maps from the California Department of Conservation, Division of Oil, Gas and Geothermal Resources (DOGGR) were reviewed to identify oil and gas wells on the Property or in the nearby area. According to the DOGGR Well Finder online database, the property is not located within the boundaries of a delineated oil and gas field.

A map showing the location of the Property relative to nearby oil and gas wells is provided in Appendix E. No oil and gas wells are located on the Property or within 1,100 feet of the Property. Based on the available information, no significant environmental impacts to the Property are anticipated from oil and gas wells.

NATIONAL PIPELINE MAPPING SYSTEM

SCS reviewed the National Pipeline Mapping System (NPMS) website for the Property and surrounding area to identify any hazardous materials pipelines. The NPMS is a geographic information system (GIS) created by the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration (PHMSA), and Office of Pipeline Safety (OPS) in cooperation with other federal and state governmental agencies and the pipeline industry. The NPMS consists of geospatial data, attribute data, public contact information, and metadata pertaining to the interstate and intrastate hazardous liquid trunklines and hazardous liquid low-stress lines as well as gas transmission pipelines, liquefied natural gas (LNG) plants, and hazardous liquid breakout tanks (tanks that receive and store liquids transported by pipeline) jurisdictional to PHMSA. The nominal accuracy of geospatial data in the NPMS is +/-500 feet. The NPMS does not contain information on interconnects, pump and compressor stations, valves, direction of flow, capacity, throughput, or operating pressure. In addition, distribution and gathering pipelines are not included in the NPMS.

The NPMS is built from data submitted by pipeline, LNG plant, and breakout tank facility operators. Since 2002, transmission pipeline and LNG plant facility operators are required to submit mapping information to the NPMS and to update their submissions annually. Breakout tank operators are able to submit data to the NPMS on a voluntary basis.

Based on review of the NPMS website, there are no hazardous materials pipelines within 0.1 miles of the Property. The nearest NPMS-listed pipelines are located across the Interstate 5 Freeway to the east-northeast of the Property.

13 USER PROVIDED INFORMATION

A User Questionnaire was not returned to SCS for inclusion in the report. Comstock Realty Partners provided no information beyond what is discussed above.

TITLE RECORDS

Comstock provided a preliminary title report prepared by Stewart Title (June 5, 2019) that covered the western parcel of the Property (APN: 6357-019-904). SCS reviewed the report and did not

identify any indications of environmental liens or other environmental land use restrictions. A copy of the report is included in Appendix C.

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

No information regarding environmental liens or activity and use limitations was provided to SCS. No environmental liens or activity/use limitations were identified by SCS during the course of this assessment.

SPECIALIZED KNOWLEDGE

No specialized knowledge regarding the Property was provided to SCS by the User.

VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

No property valuation information was provided to SCS.

14 DEGREE OF OBVIOUSNESS OF THE PRESENCE/LIKELY PRESENCE OF CONTAMINATION ON THE PROPERTY

As discussed above, between 1941 and 1954, at least four entities (plus a possible fifth unpermitted one) conducted landfilling operations on the Property. By 1963, The Property was redeveloped into its current configuration with a baseball field, City Park, parking areas, and a recreation center by 1972. The past presence of the landfill operations at the Property constitutes a REC.

15 DATA GAPS

A data gap represents an inability on the part of the environmental professional to obtain information required by the standards and practices of 40 CFR 312 to fully identify conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the Property.

The following data gaps were identified:

SCS requested that the City of Commerce provide previous investigations and abatement documents related to the former shooting range located in the basement of the closed community center building. Site contacts reported that soil sampling was conducted around 2010 in the backyards of residences west of the community center building, in the direction where the emissions from the shooting range's HVAC system was directed. Abatement work was reportedly conducted in 2017. While the site inspection indicated that abatement work was performed, copies of these reports were not provided. This constitutes a significant data gap.

Copies of the reports provided to SCS were incomplete. Some did not include figures, tables, laboratory reports, or other appendices. The available information was sufficient to evaluate potential releases at the Property, but was not sufficient, in some cases, to compare to current regulatory standards. In general, this is not considered a significant data gap.

16 FINDINGS AND OPINIONS

Based on the scope of work performed, SCS finds the following:

The Property is located at the southern terminus of Zindell Avenue, immediately to the north of the Rio Hondo bike path and a portion of the Rio Hondo Percolation Basin. It covers approximately 9.4 acres that are developed as Veterans Memorial Park (Park). The Park comprises a Class-A baseball stadium with seating for roughly 2,000 spectators; tennis, basketball, and handball courts; a recreational water feature; landscaped picnic and barbecue areas; a children's playground; a community center building; two mobile community center buildings; and asphalt-paved parking areas.

The Property was undeveloped or agricultural land from at least 1896 through 1940. Between 1941 and 1954, at least four entities conducted landfilling operations on the Property. By 1963, the landfills were capped with a layer of fill soil and a vegetative cover. The Property was redeveloped into its current configuration (a City Park with a baseball field, parking areas, and a recreation center) by 1972. The past presence of a landfill(s) on the Property constitutes a recognized environmental condition (REC).

With the exception of common janitorial cleaning supplies inside the closed community center building, hazardous substances and wastes were not observed at the Property during the site inspection. Significant cracks in asphalt parking lots indicated differential settlement from underlying landfilled materials. No distressed, discolored, or stained vegetation was observed. Groundwater monitoring wells and gas monitoring probes associated with investigation of the former landfill(s) were noted on and near the Property.

Several previous investigations have been conducted at the Property and immediately surrounding area. A 1963 foundation investigation conducted prior to the development of Veterans Memorial Park identified landfilled waste to a maximum depth of 28 feet. Fill consisted of uncompacted soil, municipal trash, organic materials, wood, concrete, tire casings, metal, rubber gaskets, glass, brick, wire, tile, etc. Landfilled material was removed from an approximately 1 acre area at the northwestern portion of the Property, where the community center building was constructed. Solid Waste Assessment Test (SWAT) investigations of groundwater and air conducted in the early 1990s documented the multiple landfill operators that took waste onto the Property between 1941 and 1954. While they were generally permitted to receive only non-hazardous municipal solid waste or inert wastes, regulatory records from the period of landfilling noted that operators were cited for receiving oil sludge and other suspected hazardous substances. Record reviews indicate that construction activities at the adjoining Rio Hondo Percolation Basin slope immediately to the south of the Property noted stained soils (beneath what would now include the Rio Hondo bike path).

The air SWAT investigation identified landfill gas (LFG) methane and volatile organic compounds (VOCs), including chlorinated solvents, in soil gas within the landfilled material and, to a lesser extent, at gas probes located around the perimeter of the Property. Given the presence of landfills on adjoining sites as well, the presence of these compounds cannot be exclusively attributed to the Property. The groundwater SWAT reportedly did not identify halogenated or aromatic hydrocarbons in groundwater samples collected at the Property. Metals concentrations in groundwater were reportedly below California drinking water Maximum Contaminant Levels (MCLs). SCS was not able to compare the raw data from the groundwater SWAT to current standards because the copy of the report provided did not include tabulated data, figures, or laboratory reports. Sampling of soil pore water from one lysimeter location had detections of VOCs. More recent sampling has identified methane and VOCs in soil gas, as well as total petroleum hydrocarbons (TPH), lead, and semi-volatile organic compounds (SVOCs) in soil/waste at the Property. As noted above, the historical landfills that operated on the Property are considered a REC. The extent of landfill impacts to soil, groundwater, and soil gas have not been defined.

With the exception of the onsite and nearby landfills, regulatory database information identified few known and suspected contamination sites in the area surrounding the Property. The case status for a few leaking underground storage tank (LUST) case files on adjoining and nearby sites were all listed as closed. Based on the available information, including both their relative location and case status, these LUST cases are not anticipated to have negatively affected the environmental condition of the Property. The nearby landfills are also considered RECs because of the likelihood that they have contributed to regional environmental conditions affecting the Property.

In summary, SCS performed a Phase I Environmental Site Assessment of the Veterans Memorial Park site located at 6364 Zindell Avenue in Commerce, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-13. Any exceptions to, or deletions from, this practice are described in Section 5 of this report.

In the opinion of the Environmental Professionals, this assessment has revealed evidence of conditions indicative of recognized environmental conditions in connection with the Property, as discussed above.

18 GLOSSARY/DEFINITIONS

AAI -- All Appropriate Inquiry

AUL -- Activity and Use Limitations

BTEX -- Benzene, toluene, ethylbenzene, and total xylenes

CERCLA -- Comprehensive, Environmental Response, Compensation, and Liability Act

CERCLIS -- Comprehensive Environmental Response, Compensation, and Liability Information System

CFR -- Code of Federal Regulations

CORRACTS -- Corrective Action Against Responsible Parties at a RCRA site

CREC -- A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, AULs, or institutional or engineering controls).

DOGGR -- Department of Oil, Gas, and Geothermal Resources

De Minimis Condition -- A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not RECs or CRECs.

DTSC -- California EPA Department of Toxic Substances Control

EDR -- Environmental Data Resources, Inc.

EPA -- Environmental Protection Agency

ERNS -- Emergency Response Notification System

ESA -- Environmental Site Assessment

FINDS -- Facility Index System

HAZNET -- California EPA Hazardous Waste Facility and Manifest Data

HREC -- Historical Recognized Environmental Condition: A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls

LQG -- Large Quantity Hazardous Waste Generator

LUST -- Leaking Underground Storage Tank

MCL -- Maximum contaminant level

MTBE -- Methyl-tert-butyl-ether

NFA -- No Further Action determination

NFRAP -- No Further Remedial Action Planned

NPL -- National Priority List (Superfund)

PAHs -- Polynuclear aromatic hydrocarbons

PCBs -- Polychlorinated biphenyls

RCRA -- Resource Conservation and Recovery Act

RCRIS -- Resource Conservation and Recovery Information System

REC -- R*ecognized environmental condition* is defined by ASTM E 1527-13 as: "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis conditions* are not *recognized environmental conditions*."

ROD -- Record of Decision

RBSLs -- Risk-based Screening Levels

RSLs – Regional Screening Levels

RWQCB -- Regional Water Quality Control Board

SARA -- Superfund Amendments and Reauthorization Act

SLIC -- Spills, Leaks, Investigations, and Cleanups database

SQG -- Small Quantity Hazardous Waste Generator

SWIS -- Solid Waste Information System

SWLF -- Solid Waste Facility/Landfills

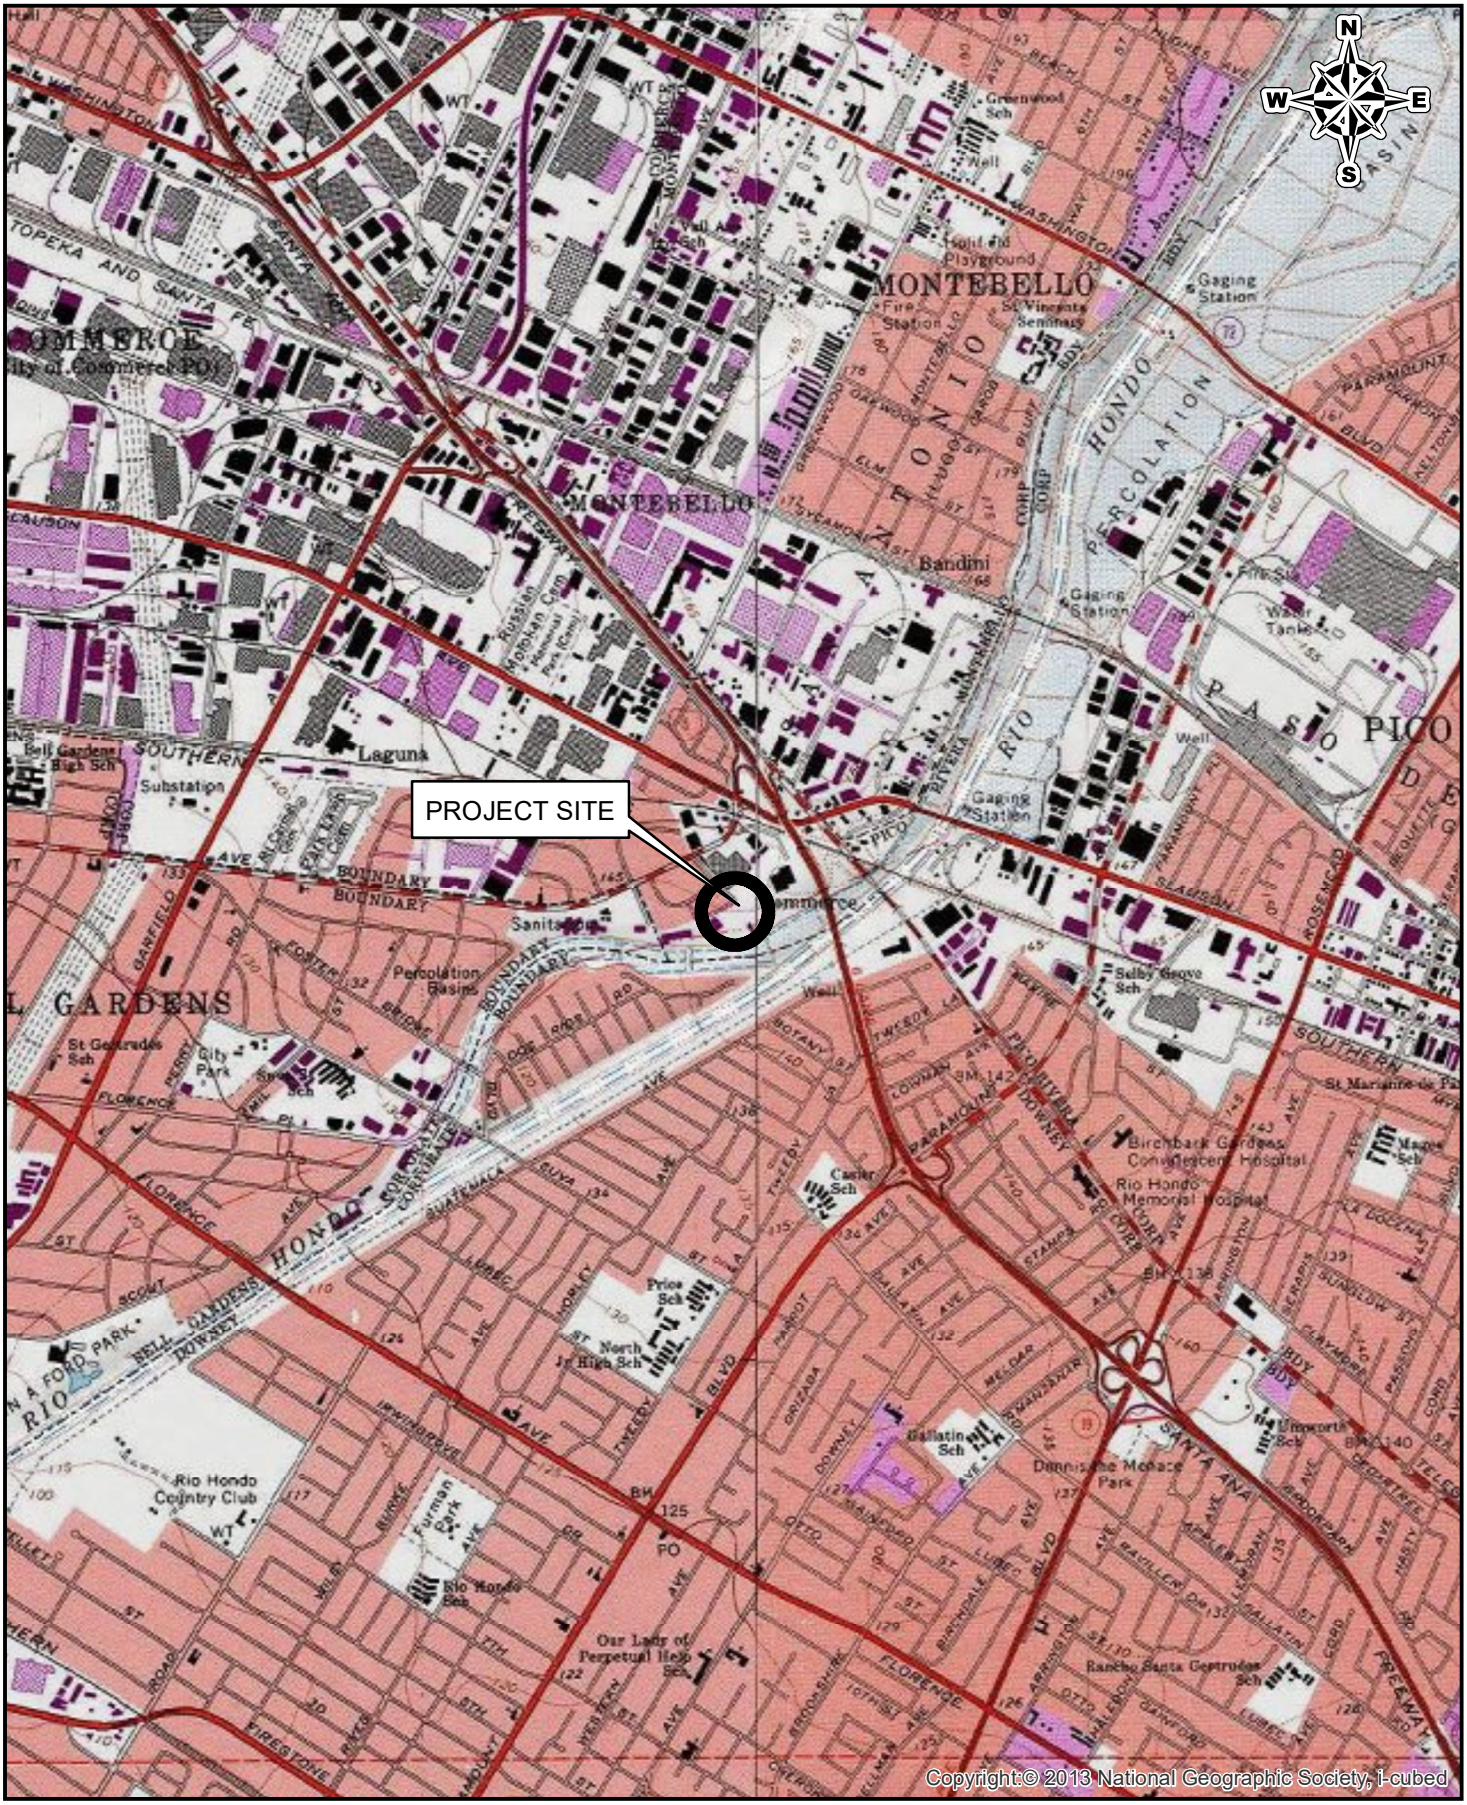
TPH -- Total Petroleum Hydrocarbons

TRIS -- Toxic Release Inventory System

TSD -- Treatment, Storage, and/or Disposal Facility

User -- The person or persons seeking to establish the innocent landowner defense, bona fide prospective purchaser liability protection, and/or contiguous property owner liability protection pursuant to CERCLA sections 101 and 107.

USGS -- United States Geologic Survey



UST -- Underground Storage Tank

VCP -- Voluntary Cleanup Program

VOCs -- Volatile organic compounds

Photo 1 – View from the southern terminus of Zindell Avenue to the south, across the central portion of the Property.

Photo 2 – Industrial site located to the north of the eastern side of the Property.

Photo 3 – Residences to the north of the western side of the Property.

Photo 4 – Gas well installed outside the north-central portion of the Property, in the Zindell Avenue right-of-way.

Photo 5 – Southern California Edison (SCE) outbuilding located at the north-central portion of the Property.

Photo 6 – Cracks in asphalt at parking area on the northeastern portion of the Property indicated differential settling of underlying waste.

Photo 7 – Evidence of a former boring and cracks in asphalt at northwestern parking area (near the community center building).

Photo 8 – Entrance to the community center recreation building at the northwestern portion of the Property.

Photo 9 – Gymnasium inside the recreation center building.

Photo 10 – Handball/Racquet ball courts inside the recreation center building.

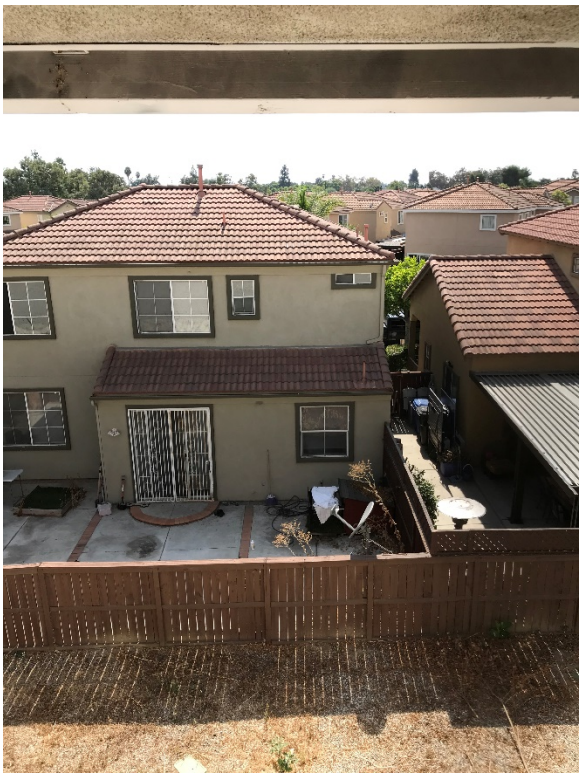

Photo 11 – Residences beyond a City-owned easement to the west of the Property.

Photo 12 – View of the former shooting range inside the basement of the community center building.

Photo 13 – A patched concrete core in the floor of the former shooting range. At least eight such patches were observed.

Photo 14 – One of two HVAC extraction points in the western wall of the former shooting range.

Photo 15 – Access road on the northwestern portion of the Property.

Photo 16 – Outdoor courts to the south of the closed community center building.

Photo 17 – Playground on the northwestern portion of the Property.

Photo 18 – Recreation area on the western side of the Property.

Photo 19 – Closed water recreation feature on the western side of the Property.

Photo 20 – Two possible groundwater well or gas probe monuments at the southwestern corner of the Property.

Photo 21 – View showing an aboveground monument of a landfill gas probe installed at the southwestern portion of the Property in 2015.

Photo 22 – View to the north from the southwestern edge of the Property.

Photo 23 – The Rio Hondo bike path and flood control basin to the south of the Property.

Photo 24 – Snack bar building on the western side of the Property.

Photo 25 – View from the bleacher area of the ballfield on the southeastern portion of the Property.

Photo 26 – Baseball field.

Photo 27 – Locker room inside a dugout of the baseball field.

Photo 28 – Water heater for the shower room in one of the dugouts.

Photo 29 – Another aboveground monument for either a groundwater well or gas probe located at the southeastern portion of the Property, to the south of the ballfield.

Photo 30 – View to the north from the southeastern edge of the Property.

Photo 31 – Undeveloped land east of the Property (also former landfill).

Photo 32 – Maintenance building at the northeastern portion of the Property.

Photo 33 – Landfill gas probe monitoring location situated to the south of the maintenance building shown in Photo 32.

Photo 34 – Maintenance equipment stored in a caged area north of the maintenance structure.

Photo 35 – Northeastern parking area.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

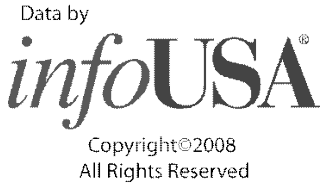
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

Long Beach, CA 90806
Contact: Justin Rauzon

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 7006-4D9B-BCA4

PO # NA

Project 01219180.00 T3

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 7006-4D9B-BCA4

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

PRELIMINARY REPORT

Order No.	:	19000330959
Title Unit No.	:	11
Your File No.	:	
Buyer/Borrower Name	:	T/F
Seller Name	:	Commerce City and BHS Inc.

Property Address: 6357-019 - 905 Waste Disposal, Commerce, CA 90040
6357-019 - 904, Commerce, CA 90040
7222 E Gage Ave., Commerce, CA 90040

In response to the above referenced application for a Policy of Title Insurance, Stewart Title Guaranty Company Commercial Services (Los Angeles) hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a Stewart Title Guaranty Company Policy or Policies of Title Insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referenced to as an Exception on Schedule B or not excluded from coverage pursuant to the printed Schedules, Conditions, and Stipulations of said Policy forms.

The printed Exceptions and Exclusions from the coverage and Limitations on covered Risks of said policy or policies are set forth in Exhibit A attached. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limits of Liability for certain coverages are also set forth in Exhibit A. Copies of the policy forms should be read. They are available from the office which issued this report.

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit A of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters, which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report, (and any supplements or amendments thereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance a binder or commitment should be requested.

Dated as of June 05, 2019 at 7:30 a.m.

☐ 2006 ALTA Owner's Policy

☒ 2006 ALTA Loan Policy

☐ ALTA Short Form Residential Loan Policy

☐

SCHEDULE A

The estate or interest in the land hereinafter described or referred to covered by this report is:

A Fee

Title to said estate or interest at the date hereof is vested in:

BHS, Inc., a California corporation, as to Parcels 1 and 2

City of Commerce, a municipal corporation, as to Parcels 3 and 4

LEGAL DESCRIPTION

The land referred to herein is situated in the State of California, County of Los Angeles, City of Commerce and described as follows:

APN: 6357-019-905, 6357-019-904, and 6357-018-006

That portion of Rancho San Antonio, in the City of Commerce, County of Los Angeles, State of California, described as follows:

PARCEL 1:

Beginning at the intersection of the Southeasterly line of Gage Avenue as described in the deed recorded on May 27, 1942 as Instrument No. 1364, in Book 19381, Page 57 of Official Records of said County, with the Northeasterly line of Tract No. 11591, as per map recorded in Book 212, Pages 39 and 40 of Maps, in the office of the County Recorder of said County; thence along said Northeasterly line South 42° 06' 25" East 595.67 feet to an angle point in the boundary line of the land described in the deed to Los Angeles By-Products Company, recorded on June 24, 1948 as Instrument No. 1189, in Book 27555, Page 233 of Official Records; thence along said boundary line South 87° 05' 25" East, 25.00 feet to an angle point therein; thence continuing along said boundary line North 38° 47' 26" East 407.45 feet; thence North 42° 06' 25" West 422.16 feet to a point in said Southerly line of Gage Avenue, distant North 64° 41' 00" East 438.70 feet from the point of beginning; thence South 64° 41' 00" West 438.70 feet along said Gage Avenue to the point of beginning.

PARCEL 2:

All that real property, situate in the City of Commerce, County of Los Angeles, State of California, being all that portion of that certain parcel of land described in deed to Pacific Electric Railway Company, recorded on December 23, 1957 in Book 56295 Page 373, Official Records, in the office of the County Recorder of said County, described as follows:

Beginning at the most Westerly corner of said land; thence along the boundary of said land South 87° 06' 25" East 25.00 feet and North 38° 47' 26" East 483.00 feet to the Northeasterly boundary of said land; thence along said Northeasterly boundary South 26° 11' 28" East, 55.18 feet to a line parallel with and 50 feet Southeasterly, measured at right angles, from that course in said boundary which has a bearing of North 38° 47' 26" East; thence along said parallel line and its Southwesterly prolongation South 38° 47' 26" West 485.58 feet to the Southwesterly boundary of said land; thence along said Southwesterly boundary North 42° 06' 25" West 71.15 feet to the point of beginning.

Except the title and exclusive right to all of the minerals and mineral ores of every kind and character, occurring 500 feet beneath the surface thereof, now known to exist or hereafter discovered upon, within or underlying said land or that may be produced therefrom, including without limiting the generality of the foregoing, all petroleum, oil, natural gas and other hydrocarbon substances and products derived therefrom, together with the exclusive and perpetual right of said grantor, its successors and assigns, of ingress and egress beneath the surface of said land to explore for, extract, mine and remove the same, and to make such use of said land beneath the surface as is necessary or useful in connection therewith; and other use thereof, which uses may include lateral or slant drilling, digging, boring or sinking of wells, shafts or tunnels to other lands not subject to those reservations and easements provided, however, that said grantor, its successors and assigns, shall not use the surface of said land in the exercise of any of said rights and shall not disturb the surface of said land or any improvements thereon or remove or impair the lateral or subjacent support of said land or any improvements thereon, and shall conduct no operations within 500 feet of the surface of said land, as excepted and reserved in the deed from Pacific Electric Railway Company, a corporation, recorded December 20, 1960.

Excepting Therefrom that portion as conveyed to the City of Commerce, a municipal corporation by Final Order & Judgment in Condemnation, recorded December 16, 1970 as Instrument No. 2705, Official

Records.

PARCEL 3:

That portion of the Rancho San Antonio, in the City of Commerce, County of Los Angeles, State of California, as per map recorded in Book 1 Page 389 of Patents, and of the Rancho Santa Gertrudes, in the County of Los Angeles, State of California, as per map recorded in Book 1 Pages 156 to 158 of Patents, in the office of the County Recorder of said County, described as a whole as follows:

Beginning at the intersection of the Southerly line of Tract No. 11591 as per Map recorded in Book 212, Pages 39 and 40 of Maps, records of said county, with the Westerly line of Meru Avenue, now Greenwood, as shown on said map of Tract No. 11591; thence Easterly and Northeasterly along said land mentioned Southerly line , the following courses and distance; South 89° 18' 26" East 385.77 feet, North 69° 19' East 208 feet to the true point of beginning; thence continuing North 69° 13' 19" East 162.18 feet; thence North 55° 05' East 244.45 feet to the Southerly terminus of Zindell Avenue, as shown on said map of Tract No. 11591; thence Easterly along said Southerly terminus, 33.92 feet to the most Easterly corner of said Tract No. 11591 and the Southwesterly line of the tract of land conveyed to John Sex by deed recorded in Book 13 Page 161 of Deeds; thence along said Southwesterly line, South 41° 54' East 595.81 feet to a point; thence South 81° 06' West 86 feet South 81° 03' West 411.07 feet, more or less, to a point bearing South 41° 54' East from the true point of beginning, said point being the Southeast corner of the parcel of land described in the deed to Rocky Mountain Service Inc., a Utah corporation, recorded October 3, 1956 as Instrument No. 568; thence alond the Easterly lien of said land in said deed, North 41° 54' West 422.99 feet to the true point of beginning.

Excepting that portion of said land with Parcel 35, as described in an action to condemn said parcel for flood control purposes, Superior Court Los Angeles County, Case No. 590754; a certified copy of the final decree of condemnation entered January 13, 1953 in said action, being recorded January 19, 1953 in Book 40766 Page 236 of Official Records.

Also except therefrom all oil, gas, and other minerals in or under said lands, as reserved by California Trust Company by deed recorded April 17, 1944 in Book 20838 Page 147 of Official Records.

PARCEL 4:

That portion of the Rancho San Antonio, in the City of Commerce, County of Los Angeles, State of California, as per map recorded in Book 1, Page 389 of Patents, in the office of the County Recorder of said county, described as a whole as follows:

Beginning at the most Easterly corner of Lot 11 of Tract No. 11591, as per sap recorded in Book 212, Pages 39 and 40 of Maps, records of said county; then South 69° 13' 19" west along the Southeasterly boundary of said Lot 11 distance of 21.30 feet to the true point of beginning. Thence continuing South 69° 13' 19" West 34.24 feet to a point in a curve concave to the North having a radius of 55.00 feet through which a radial line of said curve bears South 56° 37' 11" West; Thence Easterly along said curve 71.44 feet through an angle of 74° 25' 32" to a point in a line bearing South 41° 54' East from the true point of beginning, said point being in the Easterly line of the parcel of land described in the deed to Rocky Mountain Service Inc., a Utah corporation, recorded October 3, 1956 as Instrument No. 568; Thence North 41° 54' West thereon 46.02 feet to the true point of beginning.

Except therefrom all oil, gas, and other minerals in or under said lands, as reserved by California Trust Company by deed recorded April 17, 1944 in Book 20838 Page 147 of Official Records.

APN: 6357-019-905, 6357-019-904, and 6357-018-006
(End of Legal Description)

THE MAP ATTACHED THROUGH THE HYPERLINK ABOVE IS BEING PROVIDED AS A COURTESY AND FOR INFORMATION PURPOSES ONLY; THIS MAP SHOULD NOT BE RELIED UPON. FURTHERMORE, THE PARCELS SET OUT ON THIS MAP MAY NOT COMPLY WITH LOCAL

SUBDIVISION OR BUILDING ORDINANCES. THERE WILL BE NO LIABILITY, RESPONSIBILITY OR INDEMNIFICATION RELATED TO ANY MATTERS CONCERNING THE CONTENTS OR ACCURACY OF THE MAP.

SCHEDULE B

At the date hereof, exceptions to coverage in addition to the printed exceptions and exclusions contained in said policy or policies would be as follows:

Taxes:

A. Property taxes, which are a lien not yet due and payable, including any assessments collected with taxes, to be levied for the fiscal year 2019 – 2020.

B. General and special city and/or county taxes, bonds or assessments which may become due on said land, if an when title to said land is not longer vested in a government or quasi-governmental agency. Tax parcel(s) for said land are currently shown as APN: 6357-019-904.

   Said Matter Affects: Parcel 3

C. General and special city and/or county taxes, bonds or assessments which may become due on said land, if an when title to said land is not longer vested in a government or quasi-governmental agency. Tax parcel(s) for said land are currently shown as APN: 6357-019-905.

   Said Matter Affects: Parcel 4

D. The lien of supplemental taxes, if any, assessed pursuant to the provisions of chapter 3.5 (commencing with section 75) of the revenue and taxation code of the State of California and assessments, for community facility districts affecting said land which may exist by virtue of assessment maps or notices filed by said districts.

Exceptions:

1. Water rights, claims or title to water in or under said land, whether or not shown by the public records.

2. Minerals of whatsoever kind, subsurface and surface substances, including but not limited to coal, lignite, oil, gas, uranium, clay, rock, sand and gravel in, on, under and that may be produced from the Land, together with all rights, privileges, and immunities relating thereto, whether or not appearing in the Public Records or listed in Schedule B. The Company makes no representation as to the present ownership of any such interests. There may be leases, grants, exceptions or reservations of interests that are not listed.

   +++++++ The Following Matters Affect Parcels 1 and 2 ++++++

3. An easement for utilities, public and/or private and rights incidental thereto as set forth in a document recorded May 24, 1956 as Instrument No. 3717 of Official Records, affects as described therein.

   Said Matter Affects: Parcel 1

4. A agreement dated December 19, 1957 executed by and between Pacific Electric Railway Company, a corporation, and International Paper Company, a corporation, relating to the granting of easements over he Northwesterly 20 feet of said land to various Governmental Bodies and public utilities and to said paper company for the purposes and upon the terms, provisions and covenants therein contained, recorded January 27, 1958 in Book 56433 Page 334 of Official Records.

   Reference is made to said document for full particulars.

Said Matter Affects: Parcel 2

5. An easement for public utilities and rights incidental thereto in favor of Southern California Edison Company as set forth in a document recorded March 17, 1958 in Book D45 Page 407 of Official Records.

   Said matter affects a portion of said land as more particularly described in said document.

   Said Matter Affects: Portion of Parcel 2

6. The non-exclusive and perpetual right of way to lay, construct, maintain, operate, repair, renew, change the size of and remove one or more pipe lines and one or more service connections at any time and from time to time with metering , regulating and other equipment for the conveyance of water, with the right of ingress and egress and regress to and from the same in, over, under, though, along, across and upon any part or parts of a strip of land, 6 feet in width, situated in the County of Los Angeles, in the Rancho San Antonio, being that portion of the land described in deed to Pacific Electric Railway Company recorded in Book 56295 Page 373 of Official Records.

   Together with the right to lay, construct, maintain, repair, operate and remove one or more service connections and/or pipe lines through any part of the above described propety, as granted to Park Water Company, a corporation by deed recorded April 30, 1958 in Book D87 Page 12 of Official Records.

   Said Matter Affects: Parcel 2

7. An easement for right to construct, maintain, operate and use sanitary sewers and appurtenant structures in and across the real property and rights incidental thereto in favor of County of Los Angeles as set forth in a document recorded June 18, 1958 in Book D130 Page 276 of Official Records.

   Said matter affects a portion of said land as more particularly described in said document.

   Said Matter Affects: Parcel 2

8. An easement for roadway and rights incidental thereto as set forth in a document recorded December 20, 1960 as Instrument No. 1402 of Official Records, affects Southwesterly 30 feet of Parcel 2.

9. The right to drill and maintain well holes through the said land for the purpose of removing oil, gas and other hydrocarbon substances from other lands whether such other lands be adjacent, contiguous or distant from said lands, as reserved in the deed above mentioned.

10. The right to make connection with such sewer, gas and water lines as may now or hereafter exist on said property, provided, however, that in the event grantee or its successors or assigns pave or otherwise improve the surface over the area in which such sewer, gas and water lines are located, then grantor , its successors or assigns, in making such connection, shall return and restore said improvements to the conditions in which they existed at the time of making said connection, as reserved in the deed above mentioned.

11. An easement for street, public utility and municipal purposes and rights incidental thereto in favor of The City of Commerce, a municipal corporation as set forth in a document recorded May 25, 1965 as Instrument No. 3089 of Official Records.

    Said matter affects a portion of said land as more particularly described in said document.

    Said Matter Affects: Parcel 2

12. The fact that said land is included within a project area of the Project Area No. 1 Community Redevelopment Agency, and that proceedings for the redevelopment of said project have been

instituted under the Redevelopment Law (such redevelopment to proceed only after the adoption of the redevelopment plan) as disclosed by a document recorded July 26, 1974 as Instrument No. 4569 of Official Records.

And recorded July 25, 1974, as Instrument/File No. 2417, of Official Records.

13. A Deed of Trust to secure performance under an agreement referred to therein, and any other obligations secured thereby:

Trustor:	Good Stuff Food Company, Inc., a California corporation (formerly Langendorf United Bakeries, Inc., a Delaware Corporation)
Trustee:	Chicago Title Company, a California corporation
Beneficiary:	Credit Managers Association of California, as Trustee for the benefit of all unsecured creditors of Trustor and as agent for the informal committee of creditors holding unsecured claims against Trustor
Recorded:	August 2, 1991 as Instrument No. 91-1206455 of Official Records

14. A covenant and agreement upon the terms and conditions therein executed by BHS, Inc., in favor of City of Commerce and recorded December 5, 1997 as Instrument/File No. 97-1921925, of Official Records.

    Reference is made to said document for full particulars.

15. Deed of Trust to secure an indebtedness in the amount shown below, and any other obligations secured thereby:

Amount:	$4,000,000.00
Dated:	August 25, 2005
Trustor:	BHS, Inc., a California corporation
Trustee:	United Title Company
Beneficiary:	California Bank & Trust
Recorded:	September 2, 2005 as Instrument No. 05-2123824 of Official Records

16. An unrecorded lease with certain terms, covenants and provisions set forth therein

Lessor:	BHS, Inc.
Lessee:	Escon Corporation
Disclosed by:	Subordination Agreement-Lease
Recorded:	September 2, 2005
Instrument/File No.:	05-2123825, of Official Records

    The present ownership of the leasehold created by said lease and other matters affecting the interest of the lessee are not shown herein.

    Said lease was subordinated to the Deed of Trust referred to in exception no. 15 by an instrument recorded September 2, 2005 as Instrument No. 05-2123825, of Official Records.

    +++++++ The Following Matters Affect Parcels 3 and 4 ++++++

17. Covenants, conditions, and restrictions as set forth in instrument recorded April 17, 1944 in Book 20838 Page 147, Official Records, but omitted any covenant, condition or restriction, if any, based on race, color, religion, sex, handicap, familial status or national origin unless and only to the extent that the Covenant, condition or restriction; (a) is exempt under title 42 of the united states code; or (b) relates to handicap, but does not discriminate against handicapped persons.

    Note: section 12956.1 of the government code provides the following: if this document contains any restrictions based on race, color, religion, sex, familial status, marital status, disability, national

origin, or ancestry, that restriction violates state and federal fair housing laws and is void, and may be removed pursuant to section 12956.1 of the government code. Lawful restrictions under state and federal law on the age of occupants in senior housing or for older persons shall not be construed as restrictions based on familial status.

Said Covenants, Conditions, and Restrictions provide that a violation thereof shall not defeat or render invalid the lien of any mortgage or deed of trust made in good faith and for value.

Said Matter Affects: Parcel 3

18. The fact that said land is included within a project area of the Project Area No. 1 Community Redevelopment Agency, and that proceedings for the redevelopment of said project have been instituted under the Redevelopment Law (such redevelopment to proceed only after the adoption of the redevelopment plan) as disclosed by a document recorded September 25, 1974 as Instrument No. 2417 of Official Records.

    And recorded July 26, 1974, as Instrument/File No. 4569, of Official Records.

19. Title to, and easements in, any portion of the land lying within any highways, roads, streets, or other ways.

    +++++++ The Following Matters Affect All Parcels ++++++

20. Rights of tenants in possession of said land by reason of unrecorded leases. Kindly forward said lease, or a current certified tenant rent roll.

21. Matters which may be disclosed by an inspection or by a survey of said land satisfactory to this Company or by inquiry of the parties in possession thereof.

22. An inspection of said land has been ordered, upon its completion we will advise you of our findings.

    typist/ zd

(End of Exceptions)

E. The requirement that Stewart Title be informed of what type of Title Insurance coverage/policies are being requested, so that we may provide you with any additional requirements or exceptions that we may have or that apply.

F. This Company will require that a full copy of any unrecorded leases be submitted to us, together with all supplements, assignments and amendments, before issuing any policy of title insurance.

G. General requirements relating to entity formation and authority documentation:

A. Corporations:

a. Certificate of good standing of recent date issued by the secretary of state of corporation's state of domicile.
b. Certified copy of a resolution of the board of directors authorizing the contemplated transaction and designating which corporate officers shall have the power to execute on behalf of the corporation.
c. Requirements which the company may impose following its review of the above material and other information which the company may require.

B. California Limited Partnerships:

a. a certified copy of the certificate of limited partnership (form lp-1) and any amendments thereto (form lp-2) to be recorded in the public records;
b. a full copy of the partnership agreement and any amendments;
c. satisfactory evidence of the consent of a majority in interest of the limited partners to the contemplated transaction;
d. requirements which the company may impose following its review of the above material and other information which the company may require.

C. Foreign Limited Partnerships:

a. a certified copy of the application for registration, foreign limited partnership (form lp-5) and any amendments thereto (form lp-6) to be recorded in the public records;
b. a full copy of the partnership agreement and any amendment;
c. satisfactory evidence of the consent of a majority in interest of the limited partners to the contemplated transaction;
d. requirements which the company may impose following its review of the above material and other information which the company may require.

D. General Partnerships:

a. a certified copy of a statement of partnership authority pursuant to section 16303 of the California corporation code (form gp-1), executed by at least two partners, and a certified copy of any amendments to such statement (form gp-7), to be recorded in the public records;
b. a full copy of the partnership agreement and any amendments;
c. requirements which the company may impose following its review of the above material required herein and other |information which the company may require.

E. Limited Liability Companies:

a. a copy of its operating agreement and any amendments thereto;
b. if it is a California limited liability company, a certified copy of its articles of organization (llc-1) and any certificate of correction (llc-11), certificate of amendment (llc-2), or restatement of articles of organization (llc-10) to |be recorded in the public records;
c. if it is a foreign limited liability company, a certified copy of its application for registration (llc-5) to be recorded in the public records;
d. with respect to any deed, deed of trust, lease, subordination agreement or other document or instrument executed by such limited liability company and presented for recordation by the company or upon which the company is asked to rely, such document or instrument must be executed in accordance with one of the following, as appropriate:

i if the limited liability company properly operates through officers appointed or elected pursuant to the terms of a written operating agreement, such documents must be executed by at least two duly elected or appointed officers, as follows: the chairman of the board, the president or any vice president, and any secretary, assistant secretary, the chief financial officer or any assistant treasurer;

ii. if the limited liability company properly operates through a manager or managers identified in the articles of organization and/or duly elected pursuant to the terms of a written operating agreement, such document must be executed by at least two such managers or by one manager if the limited liability company properly operates with the existence of only one manager.

e. requirements which the company may impose following its review of the above material and other information which the company may require.

F. Trusts:

a. a certification pursuant to section 18500.5 of the California probate code in a form satisfactory to the company.
b. copies of those excerpts from the original trust documents and amendments thereto which designate the trustee and confer upon the trustee the power to act in the pending transaction.
c. other requirements which the company may impose following its review of the material require herein and other information which the company may require.

H. Provide release/reconveyance instruments for deeds of trust of record as follows:

A. If institutional lender we must be provided a demand for payment. if serviced by other than the beneficiary we must be provided a copy of the loan servicing agreement.

B. If an individual lender we must be provided demand for payment together with the original note. Deed of trust and signed request for full reconveyance, request for full reconveyance must

be signed by both spouses if beneficial interest is in one spouse alone.

C. If beneficiary is a trust, we must be provided a full copy of said trust, together with the original note, deed of trust and signed request for full reconveyance.

D. If the loan is for a revolving line of credit, the account must be closed, otherwise we will hold an amount equal to the available credit limit.

I. It is the policy of this Company to make all required payoffs.

The Company will require current, written payoff demands addressed to Stewart Title or our escrow customer. noncurrent and expired demands will normally not be acceptable but they may be accepted at the discretion of the Company if verbal updating can be obtained.

The Company will hold an amount equal to one monthly mortgage payment until acceptance by the lender of our payoff on any noncurrent or expired beneficiary demand, whether or not verbally updated.

The Company will also hold an amount equal to one monthly mortgage payment until acceptance by the lender of our payoff on any demand which includes a payment made within 14 days of closing unless the Company has been provided with satisfactory proof of payment (i.e. a cancelled check or written confirmation of check clearance.)

Please be advised that the Company will require that the beneficiary or beneficiaries sign an estimated closing cost.

J. It is the policy of Stewart Title to collect all title charges and deduct said charges upon recording when Stewart Title is doing the payoff.

K. This Company will require the following documents, in order to insure a conveyance or encumbrance by the corporation or unincorporated association named below:

Entity: BHS, Inc., a California corporation

a. A copy of the corporation By-Laws or Articles.

b. An original or certified copy of the Resolution authorizing the subject transaction.

c. If the Articles or By-Laws require approval by a "parent" organization, we will also require a copy of those By-Laws or Articles.

d. If an unincorporated association, a statement pursuant to applicable law (such as California Corporation Code Section 20002).

The right is reserved to add requirements or additional items after completion of such review.

CALIFORNIA "GOOD FUNDS" LAW

California Insurance Code Section 12413.1 regulates the disbursement of escrow and sub-escrow funds by title companies. The law requires that funds be deposited in the title company escrow account and available for withdrawal prior to disbursement. Funds received by Stewart Title Guaranty Company Commercial Services (Los Angeles) via wire transfer may be disbursed upon receipt. Funds received via cashier's checks or teller checks drawn on a California Bank may be disbursed on the next business day after the day of deposit. If funds are received by any other means, recording and/or disbursement may be delayed, and you should contact your title or escrow officer. All escrow and sub-escrow funds received will be deposited with other escrow funds in one or more non-interest bearing escrow accounts in a financial institution selected by Stewart Title Guaranty Company Commercial Services (Los Angeles). Stewart Title Guaranty Company Commercial Services (Los Angeles) may receive certain direct or indirect benefits from the financial institution by reason of the deposit of such funds or the maintenance of such accounts with the financial institution, and Stewart Title Guaranty Company Commercial Services (Los Angeles) shall have no obligation to account to the depositing party in any manner for the value of, or to pay to such party, any benefit received by Stewart Title Guaranty Company Commercial Services (Los Angeles). Such benefits shall be deemed additional compensation to Stewart Title Guaranty Company Commercial Services (Los Angeles) for its services in connection with the escrow or sub-escrow.

If any check submitted is dishonored upon presentation for payment, you are authorized to notify all principals and/or their respective agents of such nonpayment.

EXHIBIT "A"

LEGAL DESCRIPTION

Order No.: 19000330959
Escrow No.: 19000330959

The land referred to herein is situated in the State of California, County of Los Angeles, City of Commerce and described as follows:

APN: 6357-019-905, 6357-019-904, and 6357-018-006

That portion of Rancho San Antonio, in the City of Commerce, County of Los Angeles, State of California, described as follows:

PARCEL 1:

Beginning at the intersection of the Southeasterly line of Gage Avenue as described in the deed recorded on May 27, 1942 as Instrument No. 1364, in Book 19381, Page 57 of Official Records of said County, with the Northeasterly line of Tract No. 11591, as per map recorded in Book 212, Pages 39 and 40 of Maps, in the office of the County Recorder of said County; thence along said Northeasterly line South 42° 06' 25" East 595.67 feet to an angle point in the boundary line of the land described in the deed to Los Angeles By-Products Company, recorded on June 24, 1948 as Instrument No. 1189, in Book 27555, Page 233 of Official Records; thence along said boundary line South 87° 05' 25" East, 25.00 feet to an angle point therein; thence continuing along said boundary line North 38° 47' 26" East 407.45 feet; thence North 42° 06' 25" West 422.16 feet to a point in said Southerly line of Gage Avenue, distant North 64° 41' 00" East 438.70 feet from the point of beginning; thence South 64° 41' 00" West 438.70 feet along said Gage Avenue to the point of beginning.

PARCEL 2:

All that real property, situate in the City of Commerce, County of Los Angeles, State of California, being all that portion of that certain parcel of land described in deed to Pacific Electric Railway Company, recorded on December 23, 1957 in Book 56295 Page 373, Official Records, in the office of the County Recorder of said County, described as follows:

Beginning at the most Westerly corner of said land; thence along the boundary of said land South 87° 06' 25" East 25.00 feet and North 38° 47' 26" East 483.00 feet to the Northeasterly boundary of said land; thence along said Northeasterly boundary South 26° 11' 28" East, 55.18 feet to a line parallel with and 50 feet Southeasterly, measured at right angles, from that course in said boundary which has a bearing of North 38° 47' 26" East; thence along said parallel line and its Southwesterly prolongation South 38° 47' 26" West 485.58 feet to the Southwesterly boundary of said land; thence along said Southwesterly boundary North 42° 06' 25" West 71.15 feet to the point of beginning.

Except the title and exclusive right to all of the minerals and mineral ores of every kind and character, occurring 500 feet beneath the surface thereof, now known to exist or hereafter discovered upon, within or underlying said land or that may be produced therefrom, including without limiting the generality of the foregoing, all petroleum, oil, natural gas and other hydrocarbon substances and products derived therefrom, together with the exclusive and perpetual right of said grantor, its successors and assigns, of ingress and egress beneath the surface of said land to explore for, extract, mine and remove the same, and to make such use of said land beneath the surface as is necessary or useful in connection therewith; and other use thereof, which uses may include lateral or slant drilling, digging, boring or sinking of wells, shafts or tunnels to other lands not subject to those reservations and easements provided, however, that said grantor, its successors and assigns, shall not use the surface of said land in the exercise of any of said rights and shall not disturb the surface of said land or any improvements thereon or remove or impair

the lateral or subjacent support of said land or any improvements thereon, and shall conduct no operations within 500 feet of the surface of said land, as excepted and reserved in the deed from Pacific Electric Railway Company, a corporation, recorded December 20, 1960.

Excepting Therefrom that portion as conveyed to the City of Commerce, a municipal corporation by Final Order & Judgment in Condemnation, recorded December 16, 1970 as Instrument No. 2705, Official Records.

PARCEL 3:

That portion of the Rancho San Antonio, in the City of Commerce, County of Los Angeles, State of California, as per map recorded in Book 1 Page 389 of Patents, and of the Rancho Santa Gertrudes, in the County of Los Angeles, State of California, as per map recorded in Book 1 Pages 156 to 158 of Patents, in the office of the County Recorder of said County, described as a whole as follows:

Beginning at the intersection of the Southerly line of Tract No. 11591 as per Map recorded in Book 212, Pages 39 and 40 of Maps, records of said county, with the Westerly line of Meru Avenue, now Greenwood, as shown on said map of Tract No. 11591; thence Easterly and Northeasterly along said land mentioned Southerly line , the following courses and distance; South 89° 18' 26" East 385.77 feet, North 69° 19' East 208 feet to the true point of beginning; thence continuing North 69° 13' 19" East 162.18 feet; thence North 55° 05' East 244.45 feet to the Southerly terminus of Zindell Avenue, as shown on said map of Tract No. 11591; thence Easterly along said Southerly terminus, 33.92 feet to the most Easterly corner of said Tract No. 11591 and the Southwesterly line of the tract of land conveyed to John Sex by deed recorded in Book 13 Page 161 of Deeds; thence along said Southwesterly line, South 41° 54' East 595.81 feet to a point; thence South 81° 06' West 86 feet South 81° 03' West 411.07 feet, more or less, to a point bearing South 41° 54' East from the true point of beginning, said point being the Southeast corner of the parcel of land described in the deed to Rocky Mountain Service Inc., a Utah corporation, recorded October 3, 1956 as Instrument No. 568; thence alond the Easterly lien of said land in said deed, North 41° 54' West 422.99 feet to the true point of beginning.

Excepting that portion of said land with Parcel 35, as described in an action to condemn said parcel for flood control purposes, Superior Court Los Angeles County, Case No. 590754; a certified copy of the final decree of condemnation entered January 13, 1953 in said action, being recorded January 19, 1953 in Book 40766 Page 236 of Official Records.

Also except therefrom all oil, gas, and other minerals in or under said lands, as reserved by California Trust Company by deed recorded April 17, 1944 in Book 20838 Page 147 of Official Records.

PARCEL 4:

That portion of the Rancho San Antonio, in the City of Commerce, County of Los Angeles, State of California, as per map recorded in Book 1, Page 389 of Patents, in the office of the County Recorder of said county, described as a whole as follows:

Beginning at the most Easterly corner of Lot 11 of Tract No. 11591, as per sap recorded in Book 212, Pages 39 and 40 of Maps, records of said county; then South 69° 13' 19" west along the Southeasterly boundary of said Lot 11 distance of 21.30 feet to the true point of beginning. Thence continuing South 69° 13' 19" West 34.24 feet to a point in a curve concave to the North having a radius of 55.00 feet through which a radial line of said curve bears South 56° 37' 11" West; Thence Easterly along said curve 71.44 feet through an angle of 74° 25' 32" to a point in a line bearing South 41° 54' East from the true point of beginning, said point being in the Easterly line of the parcel of land described in the deed to Rocky Mountain Service Inc., a Utah corporation, recorded October 3, 1956 as Instrument No. 568; Thence North 41° 54' West thereon 46.02 feet to the true point of beginning.

Except therefrom all oil, gas, and other minerals in or under said lands, as reserved by California Trust Company by deed recorded April 17, 1944 in Book 20838 Page 147 of Official Records.

APN: 6357-019-905, 6357-019-904, and 6357-018-006

Exhibit A (Revised 06-03-11)

CALIFORNIA LAND TITLE ASSOCIATION STANDARD COVERAGE POLICY – 1990 EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.

3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.

4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.

5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.

6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.

2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.

3. Easements, liens or encumbrances, or claims thereof, which are not shown by the public records.

4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.

5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.

6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (02-03-10)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE
EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:

   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division;
   f. environmental protection.

This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.

2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.

3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.

4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they appear in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;
   c. that result in no loss to You; or
   d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.

6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.

This Exclusion does not limit the coverage described in Covered Risk 11 or 21.

7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:
* For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.
The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1% of Policy Amount or $2,500.00 (whichever is less)	$10,000.00
Covered Risk 18:	1% of Policy Amount or $5,000.00 (whichever is less)	$25,000.00
Covered Risk 19:	1% of Policy Amount or $5,000.00 (whichever is less)	$25,000.00
Covered Risk 21:	1% of Policy Amount or $2,500.00 (whichever is less)	$5,000.00

2006 ALTA LOAN POLICY (06-17-06)
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.

2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.

3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.

4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.

5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.

6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.

7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, which are not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

2006 ALTA OWNER'S POLICY (06-17-06)
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.

2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.

3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.

4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.

5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.

2. Any facts, rights, interests or claims which are not shown by the public records but which could be ascertained by an inspection of the land or by making inquiry of persons in possession thereof.

3. Easements, liens or encumbrances, or claims thereof, which are not shown by the public records.

4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and that are not shown by the Public Records.

5. (a) unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.

6. Any lien or right to a lien for services, labor or material not shown by the public records.

Stewart Title Companies

WHAT DO THE STEWART TITLE COMPANIES DO WITH YOUR PERSONAL INFORMATION?

Federal and applicable state law and regulations give consumers the right to limit some but not all sharing. Federal and applicable state law regulations also require us to tell you how we collect, share, and protect your personal information. Please read this notice carefully to understand how we use your personal information. This privacy notice is distributed on behalf of the Stewart Title Guaranty Company and its title affiliates (the Stewart Title Companies), pursuant to Title V of the Gramm-Leach-Bliley Act (GLBA).

The types of personal information we collect and share depend on the product or service that you have sought through us. This information can include social security numbers and driver's license number.

All financial companies, such as the Stewart Title Companies, need to share customers' personal information to run their everyday business—to process transactions and maintain customer accounts. In the section below, we list the reasons that we can share customers' personal information; the reasons that we choose to share; and whether you can limit this sharing.

Reasons we can share your personal information.	Do we share	Can you limit this sharing?
For our everyday business purposes— to process your transactions and maintain your account. This may include running the business and managing customer accounts, such as processing transactions, mailing, and auditing services, and responding to court orders and legal investigations.	Yes	No
For our marketing purposes— to offer our products and services to you.	Yes	No
For joint marketing with other financial companies	No	We don't share
For our affiliates' everyday business purposes— information about your transactions and experiences. Affiliates are companies related by common ownership or control. They can be financial and non-financial companies. *Our affiliates may include companies with a Stewart name; financial companies, such as Stewart Title Company*	Yes	No
For our affiliates' everyday business purposes— information about your creditworthiness.	No	We don't share
For our affiliates to market to you — For your convenience, Stewart has developed a means for you to opt out from its affiliates marketing even though such mechanism is not legally required.	Yes	Yes, send your first and last name, the email address used in your transaction, your Stewart file number and the Stewart office location that is handling your transaction by email to optout@stewart.com or fax to 1-800-335-9591.
For non-affiliates to market to you. Non-affiliates are companies not related by common ownership or control. They can be financial and non-financial companies.	No	We don't share

We may disclose your personal information to our affiliates or to non-affiliates as permitted by law. If you request a transaction with a non-affiliate, such as a third party insurance company, we will disclose your personal information to that non-affiliate. [We do not control their subsequent use of information, and suggest you refer to their privacy notices.]

SHARING PRACTICES

How often do the Stewart Title Companies notify me about their practices?	We must notify you about our sharing practices when you request a transaction.
How do the Stewart Title Companies protect my personal information?	To protect your personal information from unauthorized access and use, we use security measures that comply with federal law. These measures include computer, file, and building safeguards.
How do the Stewart Title Companies collect my personal information?	We collect your personal information, for example, when you ▪ request insurance-related services ▪ provide such information to us We also collect your personal information from others, such as the real estate agent or lender involved in your transaction, credit reporting agencies, affiliates or other companies.
What sharing can I limit?	Although federal and state law give you the right to limit sharing (e.g., opt out) in certain instances, we do not share your personal information in those instances.

(Our Job No. 63624)

Attention: Mr. Arnold Robles

Gentlemen:

Our "Report of Foundation Investigation, Proposed Southeast Park Recreation Facilities, Zindell Avenue, Commerce, California, for the City of Commerce" is herewith submitted.

The scope of the investigation was planned in collaboration with Mr. Arnold Robles and with the architectural firm of Anthony & Langford. We were advised of the general structural features of the proposed facilities by Anthony & Langford and by Russ Connors Associates, Structural Engineers. The results of our investigation and general recommendations for foundation design were discussed with Anthony & Langford and with Russ Connors Associates as the data were established.

The site is underlain by varying amount of existing fill up to 28 feet in depth. The fill consists of uncompacted soil with very large amounts of trash and debris including organic materials subject to decomposition. Such a fill will undergo very large settlements, not only under structural loadings but also under its own weight. The most satisfactory means of supporting the proposed structures would be the removal and replacing of the existing fill with properly compacted earth fill. Alternately, the community building and pavilions could be supported independently of the existing fill on drilled piling carried into the underlying natural soils. Because of the organic character of the fill, it must be expected that combustible and noxious gases will be given off from the fill. Differential settlements of utilities will also be a problem because of the poor characteristics of the existing fill. Recommendations for foundation support and for grading are presented in the report.

Respectfully submitted,

LeROY CRANDALL & ASSOCIATES

REPORT OF FOUNDATION INVESTIGATION
PROPOSED SOUTHEAST PARK RECREATIONAL FACILITIES
ZINDELL AVENUE
COMMERCE, CALIFORNIA
FOR THE
CITY OF COMMERCE

SCOPE

This report presents the results of a foundation investigation of the site of the subject facilities. The locations of the facilities and our exploration borings are shown on Plate 1, Plot Plan.

It was known that the site was a former dump area and was underlain by appreciable fill. The investigation was authorized to determine the depth and characteristics of existing fill, the characteristics of the underlying natural soils, and to provide recommendations for foundation design of the proposed facilities.

The results of the field explorations and laboratory tests, which form the basis of our recommendations, are presented in the attached Appendix.

STRUCTURAL CONSIDERATIONS

The picnic pavilions or shelters, concession pavilion, bleachers, community building, and swimming pool, which comprise the planned recreational facilities, are identified and shown in plan on Plate 1. The picnic and concession pavilions will be 40-foot diameter reinforced concrete roof structures supported on four reinforced concrete columns. Downward column loads will be on the order of 20 to 25 kips; lateral column loads will be on the order of 4 or 5 kips. The picnic pavilions will not have exterior

walls but will be open structures; the concession pavilion will be enclosed and will contain food preparation and restroom facilities. Both the picnic and concession pavilions will have concrete floor slabs.

The bleachers will be of concrete construction poured in place on compacted earth fill. Dugouts will be constructed beneath portions of the bleachers, in which case the overlying reinforced concrete bleacher seating will be structurally supported. Wall loads in the dugout areas will be on the order of 4 kips per lineal foot.

The structural features of the community building are not definitely established at the present time. However, the building will be one-story high plus a basement and possibly a subbasement. Basement walls will be of reinforced concrete construction. Exterior walls above grade will be of masonry construction; the roof will be of wood construction.

SITE CONDITIONS

It was known prior to our explorations that the site was once a public dump. The area is currently used as a City playground. Except for temporary trailer facilities, the site was clear of existing buildings at the time of our explorations; some areas are presently paved.

Based on the exploration borings, the site is underlain by fill ranging up to 28 feet deep. The depth of fill at each boring location is shown on Plate 1 adjacent to the boring numbers. The fill contains some silty soils but is largely debris consisting of concrete, metal, wood, rubber, and paper. The characteristics of the fill at the boring locations are described in more detail on the boring logs in the Appendix. The fill is generally loose and uncompacted, and caving and raveling of the boring walls occurred within the fill during drilling. The

fill contains large amounts of organic materials and the strong odor of marsh gas was noticed during drilling. Although significant variations in the depth and characteristics of the fill are not anticipated between borings, such variations are possible in such fill deposits.

The underlying natural soils are primarily fine sand and silty sand with lesser deposits of silt and clay. The natural soils are generally firm. Groundwater was not encountered within the 50-foot maximum depth explored.

RECOMMENDATIONS

GENERAL

The existing fill is uncompacted soil with very large amounts of trash and debris including organic materials subject to decomposition. The fill will not provide unyielding support of either foundations, building floor slabs, or the swimming pool. Settlement of areas underlain by existing fill should be anticipated due to continuing subsidence of the fill; the settlement would be increased if new fill were to be placed over the existing fill or if appreciable moisture infiltration of the fill were to occur.

The most desirable means of supporting the proposed facilities and the only feasible way of supporting the bleachers and swimming pool, would be the removal and replacing of the existing fill with properly compacted earth fill. Alternately, the community building and pavilion structures, including floor slabs, could be supported on drilled piling carried into the underlying natural soils. If ultimate settlements on the order of six inches to one foot are acceptable, the floor slabs of the pavilions could be supported on a blanket of compacted fill without removing the entire existing fill.

Because of the organic content and future decomposition of the fill, combustible and noxious gas will be given off. Accordingly, if the existing fill is left in place, provisions must be taken to provide proper venting of the gas so as to prevent accumulation of the gas beneath floor slabs. Differential settlements must be expected to occur between buildings supported on properly compacted fill or on piling and utilities supported in the existing fill. Accordingly, flexible joints will be required in all utilities to allow for such differential settlements.

Recommendations for excavation and compaction of earth fill for support of foundations and recommendations for design of drilled piling are presented in the following sections.

FOUNDATIONS AND COMPACTED FILL

Excavation of the existing fill and the placing of compacted earth fill is believed to be the only feasible means of supporting the community building, bleachers, and swimming pool. The existing fill beneath the structures and beyond in plan a distance equal to the depth of fill should be excavated and removed. The fill is largely trash and debris and will not be satisfactory for reuse in the compacted fills. Required imported fill materials should consist of non-expansive and predominantly granular soils such as a silty sand. After removal of the existing fill, the exposed natural soils should be scarified to a depth of six inches, brought to optimum moisture content, and rolled with heavy compaction equipment; at least six passes of a heavy 60-inch-diameter sheepsfoot roller are recommended. All required fill should be placed in loose lifts not more than eight inches in thickness, brought to optimum moisture content, and compacted to at least 90% of the maximum

density obtainable by the ASTM Designation D1557-58T method of compaction modified to use three layers instead of five. To assure adequate structural support, the excavation of all existing fill, the reworking of the natural soils, and the compaction of all fill should be controlled and certified by a competent foundation engineer. Imported fill material should be similarly approved.

The bearing value of the resulting compacted fill will depend on the characteristics of the material used. However, if suitable material is used, the bearing value will be at least 2,000 pounds per square foot at a depth of two feet below the adjacent final grade or floor level. The settlement of the structures, supported on compacted fill, will be well within acceptable limits. The settlement due to the weight of the compacted fill itself will occur rapidly during the placing of the fill. For resisting lateral loads, a coefficient of friction of at least 0.4 could be used between concrete footings and floor slabs and the compacted fill. The passive resistance of the compacted fill may be assumed to be equal to the pressure developed by a fluid with a density of 250 pounds per cubic foot.

Basement walls and dugout walls will probably be formed and then backfilled. For design of such walls, it may be assumed that the backfill will exert a pressure equal to that developed by a fluid with a density of 30 pounds per cubic foot. Backfill against such walls should be mechanically compacted to at least 90% of the maximum density; flooding of the backfill should not be permitted.

If the compacted fill consists of predominantly granular material, floor slabs could be supported directly on the compacted subgrade. Otherwise, we would suggest that slabs be supported on at least four inches of gravel to break the flow of capillary moisture.

If the existing fill is removed and replaced with compacted fill as recommended, the swimming pool may be constructed in a normal manner. If the pool is to be constructed by gunite methods, the fill material should be sufficiently cohesive so as to be stable when excavated. If underlain by properly compacted fill, adequate support will be assured for the decking around the pool. As recommended for floor slabs, the pool decking should be underlain by at least four inches of gravel unless the compacted fill consists of predominantly granular soils. All utilities should be carefully planned; we would suggest that utilities for the pool be placed in an open pipe gallery, especially where constructed within the existing fill.

DRILLED PILES

Drilled piles may be feasible for the support of the picnic and concession pavilions. As previously discussed, provisions must be taken to allow for differential settlements between utilities and the buildings. If the upper existing fill is excavated and replaced for support of a slab on grade as discussed below, provisions should be taken to allow the floor slabs to settle roughly six inches to one foot with respect to the pile-supported columns.

The downward capacities of 18-inch and 24-inch-diameter drilled piles are presented on Plate 2, Drilled Pile Capacities. The capacities are presented as a function of penetration into natural soils; the supporting capacity of the existing fill should be neglected. Dead plus live load capacities are shown; a one-third increase may be used when considering wind or seismic loads. Because of the poor characteristics of the existing fill, downward frictional forces may be developed on the

upper portion of the piles. Accordingly, the pile shaft within the existing fill should be cased with Sonotube liners, or the piles extended into the natural soils to support the resulting downdrag loads. A downdrag load of 20 kips will occur in areas of where the depth of existing fill is roughly 15 feet.

The elevation of the surface of the natural soils at each boring location is indicated on Plate 1. For estimating required pile lengths, the surface of the natural soils between boring locations may be interpolated. However, we recommend that the installation of all piles be inspected by a competent foundation engineer, to assure the required penetration into the natural soils.

Piles in groups, if required, should be spaced at least 2½ diameters on centers; if so spaced, there will be no reduction in the downward capacities of the piles due to group action. Closely spaced piling should be drilled and filled alternately with the concrete permitted to set at least eight hours before drilling an adjacent hole. Caving and raveling of the drilled holes should be anticipated within the existing fill deposits.

The maximum ultimate settlement of the proposed picnic and concession pavilions, supported on drilled piling, will be less than one-fourth inch.

To provide more uniform support for floor slabs in the picnic and concession pavilions, if the slabs are not structurally supported, we recommend that the existing fill soils be excavated to a depth of four feet. The excavated and removed existing fill should be replaced with imported fill. The fill should be placed in loose lifts not more than eight inches in thickness, brought to optimum moisture content, and compacted to 90%.

As previously discussed, it should be anticipated that settlements of six inches to one foot may occur where floor slabs are supported on a layer of compacted fill which in turn is supported on the existing fill. Provisions should be taken to allow the slabs to settle with respect to the pile-supported columns. Also, provisions should be taken to allow differential settlement of utilities.

NOTES: (1) The indicated values refer to the total of dead plus live loads; a one-third increase may be used when considering wind or seismic loads.

(2) Piles in groups should be spaced a minimum of 2½ diameters on centers, and should be drilled and filled alternately with the concrete permitted to set at least 8 hours before drilling an adjacent hole

(3) The pile shafts within the fill should be lined with "Sonotube" liners, or the piles should be designed to resist a downward load due to downdrag of 20 kips in addition to the design load.

DRILLED PILE CAPACITIES

APPENDIX

EXPLORATIONS

The site of the subject facilities was explored by drilling 13 borings to depths ranging from 15 to 50 feet below the existing ground surface. The borings were drilled utilizing bucket-type drilling equipment under the supervision of our field engineer.

The soils encountered were logged by our field engineer, and undisturbed samples of the soils were obtained for laboratory inspection and testing. The boring logs are presented on Plate A-1A through A-1M; the depths at which undisturbed samples were obtained are indicated to the left of the boring logs. The soils are classified in accordance with the Unified Soil Classification System described on Plate A-2.

Groundwater was not encountered within the 50-foot maximum depth of exploration. Caving and raveling occurred during drilling within the existing fill soils. Casing or drilling mud was not required however, to advance the borings to the desired depths.

LABORATORY TESTS

The field moisture content and dry density of the soils were determined by testing the undisturbed samples. The test results are shown to the left of the boring logs.

Direct shear tests were performed on numerous undisturbed samples to determine the strength of the underlying natural soils. The tests were performed at field moisture content and at different surcharge pressures. The shear test results are shown on Plate A-3, Direct Shear Test Data.

Confined consolidation tests were performed on four undisturbed samples to determine the compressibility of the underlying natural soils. The results of the tests, which were performed at field moisture content, are presented on Plates A-4A and A-4B, Consolidation Test Data.

This report has been prepared by CEW under the professional supervision of the persons whose seals and signatures appear hereon.

This report has been prepared for the exclusive use of the City of Commerce as it pertains to Veterans Park, located at 7316 Gage Avenue, City of Commerce, California. Our services have been performed in accordance with applicable County and State ordinances and generally accepted practices in the environmental sciences. No other warranty, either expressed or implied, is made. Converse Environmental West (CEW) is not responsible or liable for any claims or damages associated with interpretation of available information. This report should not be regarded as a guarantee that no further contamination, beyond that which was detected in our investigation, is present at the subject site. In the event that changes in the nature of the property occur or additional, relevant information about the property is brought to our attention, the conclusions and recommendations contained in this report may not be valid unless these changes and additional relevant information are reviewed and the conclusions of this report are modified or verified in writing.

1.0 INTRODUCTION

This report presents the results of Solid Waste Air Quality Assessment Testing (SWAQT) performed for the City of Commerce at Veteran's Park located at 7316 Gage Avenue in the City of Commerce (Figure 1). Air quality testing has been performed pursuant to written directive by the South Coast Air Quality Management District (SCAQMD) to evaluate whether or not local air quality has been adversely impacted by emissions of landfill gas as promulgated under Assembly Bill 3525 (Calderon).

Air monitoring and testing was conducted as specified in our work plan dated February 23, 1989. However, what was originally identified as a single landfill beneath Veterans Park was discovered to be portions of four independent landfills. The off-site gas migration sample points were relocated due to these new landfill boundaries. Our work plan was formulated and executed in accordance with the "Testing Guidelines for Active Solid Waste Disposal Sites" prepared by the California Air Resources Boards.

Work has included characterization of local meteorology, sampling of landfill gas and ambient air directly above the disposal site and testing to determine if landfill gas has migrated beyond the perimeter of the landfill.

2.0 SITE DESCRIPTION

Four permitted landfills as well as one unpermitted landfill operated inside or adjacent to Veterans Park property from the years 1941 to 1954 (figure 2). Fletcher Dump (1941-1944) occupied half of Veterans Park property and all of the property currently owned by Watkins Terminals Inc. Doris Haney Jones bought the same property from Fletcher and operated her landfill from 1945 to 1948. From 1948 to 1954 the Salvage Corporation operated on the property owned by Watkins Terminals Inc., but it did not include Veterans Park property. From 1950 to 1954 the Gage Avenue Dump occupied the eastern side of Veterans Park property and most of Slotkin property. Aerial photographs, from the Fairchild Collection at Whittier College Department of Geology, shows an undocumented landfill on Veterans Park property that operated from the early to mid-1950's.

Today, the subject site is Veteran's Memorial Park, which features a baseball field, a picnic/playground area, a parking lot and a multi-level recreation building (Figure 3). Both the International Paper Co. (Slotkin Property) and the Watkins Truck Terminal are vacant. Structures on both of these sites have exhibited signs of severe settlement distress.

3.0 METEOROLOGICAL MONITORING

A meteorological survey was conducted on the site over a three day period before sampling the ambient air. Prevailing winds were observed from the south to the southeast during daytime hours and drainage flow was observed from the north to the northwest during evening and early morning hours. The survey, which entails monitoring wind speed and direction, was also conducted one day before and during each sampling of ambient air. The wind monitor was located in the baseball field, away from all obstructions. The wind data, collected for eight separate days, is presented in Appendix A.

4.0 FIELD SAMPLING AND TESTING

Field sampling has involved three major tasks which include gas stream characterization, ambient air sampling and off-site landfill gas migration testing. Testing was conducted to determine the impact the subject landfill has on local air quality. The findings and scope of the three tasks are described separately below.

4.1 Gas Stream Characterization

Characterization of the landfill gas stream included collection of one integrated surface sample directly above the landfill cover and collection of five landfill gas samples within the interior of the landfill. The collection process and procedure for the integrated surface sampling and landfill gas sampling are described separately below in Sections 4.1.1 and 4.1.2.

Results of laboratory analysis for gas stream characterization are summarized in Table I and presented in Appendix B as laboratory analytical data. Refer to Appendix C for a description of sampling procedures and equipment specifications.

4.1.1 Interior Landfill Gas Testing

Five landfill gas sampling probes, points A through E, were installed in locations as shown in Figure 4 (see Appendix C for sampling procedure). Probes were installed to a depth of 11 feet, approximately 6 feet below the bottom of the landfill cover. Points B and D were sampled for analysis on October 25, 1989; points A, C and E were sampled for analysis on October 26, 1989. Prior to sampling, approximately 10 liters of soil gas were removed from each probe and monitored continuously with an Organic Vapor Analyzer (OVA) to facilitate determining when representative landfill gas was being removed.

4.1.2 Integrated Surface Sampling

One integrated surface sample was collected on December 11, 1989 in the areas shown in Figure 5. The sample was obtained using a backpack mounted, air collection unit during wind speeds of 3mph and less.

4.2 Ambient Air Sampling

Ambient air sampling was conducted over three separate 24-hour periods from December 6 to 16. Samplers were arranged in locations as shown in Figure 6. Sampling was performed under option 2 of the Testing Guidelines for Solid Waste Disposal Sites, which calls for placement of one 24-hour sampler both upwind and downwind of the prevailing wind direction (Samplers 24 N and 24 S, respectively), and three samplers on the downwind side during drainage wind flow (Samples COPW, COPE and P). Two of the drainage samplers (COPW and COPE) acted as a co-located pair. Wind velocity and direction were continuously monitored on the day before and during sampling, the results of which are shown in Appendix A with corresponding time intervals over which the samplers operated for the three separate 24-hour periods. By monitoring wind speed and direction, the eight-hour samplers could be programmed to sample during the predominant drainage flow. The results of laboratory analyses are summarized in Table II and discussed in the Analysis Section of this report. Appendix D presents air monitor calibration data and flow meter data.

4.3 Off-Site Gas Migration Testing

On January 16, 1990, seven probes were installed and monitored around the perimeter of the landfill, as shown in Figure 7, to facilitate detection of landfill gas migrating beyond the landfill perimeter. The probes were installed to a depth of 6 feet, approximately 3 feet below the bottom of the landfill cover. Installation of points on the east and west margins of Veterans Park were relocated to the north and south ends of the park. This relocation was done to avoid testing on top of preexisting landfills adjacent to Veterans Park (See Appendix C for testing procedures).

5.0 ANALYSIS

Sample analysis was performed by Brown and Caldwell Laboratories in Glendale, California. Results of gas stream characterization samples and ambient air samples are summarized in Tables I and II and discussed separately below in Section 5.1 and 5.2. Laboratory results, chain-of-custody forms, and laboratory procedures are presented in Appendix B.

5.1 Landfill Gas Stream Characterization Analysis

Landfill gas stream characterization comprises interior landfill gas testing and integrated surface sampling to identify compounds generated by or present within the landfill. Benzene and 1,2-Dichloroethane were detected in both the integrated surface sample and landfill gas. Carbon Tetrachloride, Tetrachloroethane (PCE), Trichlorethane (TCE) and Vinyl Chloride were detected in landfill gas only. Methylene Chloride and 1,1,1-Trichloroethane (TCA) were detected in the integrated surface sample only. Benzene and Vinyl Chloride were the predominant compounds detected in the landfill gas at concentrations ranging from 180 ppb - 2800 ppb and 170 ppb - 4300 ppb, respectively (see Table 1).

Methane, the primary gas generated in landfills, was detected from 2.6% to 12% in landfill gas but was not detected over the landfill surface. Other gases within the landfill, including carbon dioxide, nitrogen and oxygen had average levels of 9%, 77% and 8% respectively.

5.2 Ambient Air Sample Analysis

In analysis of ambient air samples, Benzene as well as four chlorinated hydrocarbon compounds including TCA, PCE, Methylene Chloride and 1,2-Dichloroethane were detected above the subject landfill site. Levels of these compounds ranged from 0.48 ppb to 10 ppb as shown in Table II.

For Benzene, the analytical values from the 24-hour samplers were generally greater or equal to the analytical values from the 8-hour drainage samplers. For Methylene Chloride, the analytical values from the 24-hour samplers were generally less than or equal to the analytical values from the 8-hour drainage samplers. The analytical values for 1,2-Dichloroethane, Tetrachloroethane and TCA were generally the same in both the 24-hour and 8-hour drainage samplers.

5.3 Off-Site Gas Migration Results

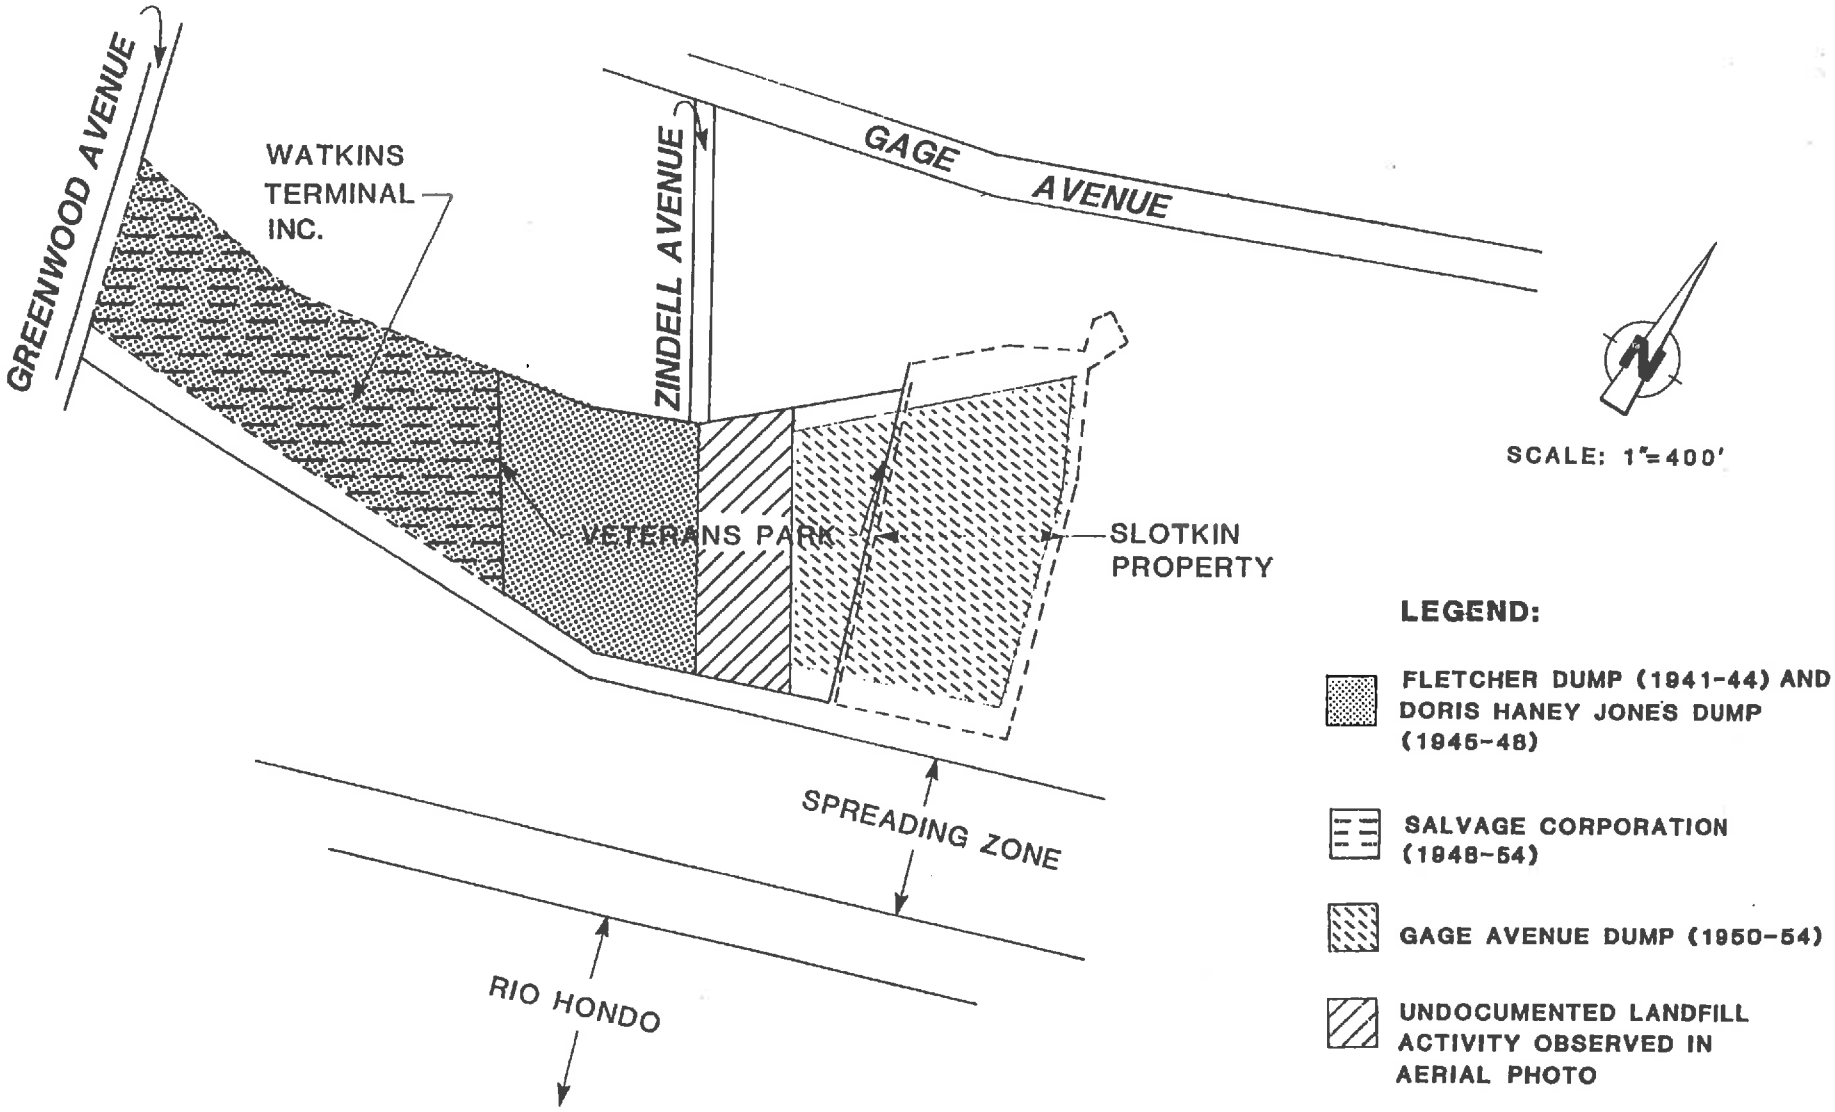
Testing points 6 and 7 measured 95,000 ppm and 100,000+ ppm respectively, using an OVA. The remainder of the sampling points, 1 through 5, did not detect organics in excess of 50 ppm.

6.0 DISCUSSION OF FINDINGS

Results of landfill gas characterization and ambient air monitoring indicate the inactive landfills beneath Veterans Park are not emitting significant quantities of contaminants into the ambient air. Benzene, detected at concentrations from 180 ppb to 2800 ppb in the landfill gas, was detected in the ambient air above the Park. In both the intregated surface sampling and ambient air monitoring portions of our study, concentrations of benzene in the ambient air monitoring study exhibited little variation between the 24-hour samples and the drainage samples indicating that at least a portion of the detected benzene is background for the general area. The drainage samples are collected during nocturnal drainage flow when detection of landfill gas emission is presumed to be greatest.

PCE and 1,2-Dichloroethane were detected in the landfill gas and in the ambient air above the park. The concentrations of these compounds was not significantly higher in the 8-hour drainage samplers, suggesting that the detected level of these two compounds in the ambient air may be background for the general area.

Methylene Chloride and TCA, which were non-detectable in the landfill gas, were detected in the ambient air and in the integrated surface sample, from 1 ppb to 28 ppb and 1 ppb to 4 ppb, respectively. The concentrations did not vary significantly between the drainage samplers and the 24-hour samplers during ambient air sampling, suggesting that the detected concentration of these compounds in the ambient air (as with other compounds discussed above) represent background level for the general area.



Vinyl Chloride, detected at concentrations from 170 ppb to 4300 ppb in the landfill gas, was non-detectable in the air above the landfill cover. Additionally, TCE and Carbon Tetrachloride, detected in the landfill gas at concentrations from 8 ppb to 73 ppb, were non-detectable in the air above the landfill cover.

Methane was measured at a concentration of 6.7% in the landfill gas, indicating on-going biological breakdown of refuse. Methane was detected beyond the perimeter of the subject site in the southeast corner of Veterans Park, however, the gas may be the result of migration from the Gage Avenue Dump the southern boundary of which is located approximately 30 feet to the north of this migration point (see Figure 7).

7.0 CONCLUSION

At least four independent landfills operated inside or adjacent to Veterans Park in the 1940's and 50's. It appears that past landfill activities have resulted in the presence of chlorinated and aromatics hydrocarbons (i.e. most notably benzene and vinyl chloride) in the landfill gas beneath the Veterans Park. Ambient air monitoring above Veterans Park suggest that of the Caldron compounds detected, only benzene is potentially being omitted from the landfill to the ambient air. All other detected compounds in the ambient air appear to be background levels for the general area.

Methane, although still being generated within the landfill, was not detected in the ambient air. The migration of methane offsite was detected southeast of the landfill in point 6.

APPENDIX C

SAMPLING PROCEDURE AND EQUIPMENT SPECIFICATIONS

APPENDIX C

SAMPLING PROCEDURE AND EQUIPMENT SPECIFICATIONS

Ambient Air Monitoring

Ambient air samples were collected with continuous air samplers. The samplers consist of:

- Pump with a diaphragm made of nonlubricated Viton rubber;
- Rotameter made of borosilicate glass with a flow range or 3 to 50 cubic centimeters per minute;
- Clock timer;
- Tedlar bag, 10 liter capacity;
- Fittings, valves, and tubing constructed of stainless steel or Teflon;
- 12 volt power source.

The inlet probe was located approximately 7 feet above the ground. The start/stop times were approximately 10:00am for the 24-hour samplers and 1:00am/ 9:00am for the eight hour drainage samplers.

Landfill Gas Stream Characterization on Off-Site Migration Testing

All testing for landfill gas and migration testing was conducted in accordance with our SWAQT monitoring work plan as approved by the SCAQMD. The sampling method consisted of inserting a stainless steel probe with a perforated tip to the desired sampling depth.

A teflon fitting and line was attached to the top of the probe and the probe was purged with an electric pump. During purging the vapor stream was monitored with an OVA capable of measuring up to 10% (100,000 ppm) organic vapors. For landfill gas characterization, sampling was conducted following the purging of approximately 10 liters of landfill gas. Samples were collected in 10 liter tedlar bags and placed in light sealed containers pending transport to the laboratory.

APPENDIX D

CALIBRATION PROCEDURES, CALIBRATION DATA

APPENDIX D

CALIBRATION PROCEDURES, CALIBRATION DATA

Calibration Procedures

Rotameters were calibrated by bubble meter and stopwatch at the beginning and at the end of each sampling period for ambient air sampling and integrated surface sampling. The initial flow was calibrated to within ±10% of a 8.3 cc/min or 25 cc/min (8.3 cc/min for 24 hour sampler, 25 cc/min for drainage sampler) flow rate for the ambient air sampler and a 333 cc/min flow rate for the integrated surface sampler. Final flows were averaged over the sampling period for a final flow as shown on attached field data sheet. Percent deviation was calculated and reflects the variance in flow rate for each air sampler.

Chemical analysis of groundwater samples revealed non-detectable concentrations of purgeable halocarbons and aromatic hydrocarbons. Metals concentrations were less than the Maximum Contaminant Levels (MCL's) as codified in the California Administrative Code, Title 22, Chapter 15, Article 4 and Article 8. Chemical analysis of soil pore moisture obtained via the lysimeter (at approximately 36 feet below grade) revealed low concentrations of 1,1,1 TCA, benzene, and toluene.

If you have any questions regarding the results of this hydrogeologic investigation, please do not hesitate to call.

Respectfully,

PROFESSIONAL CERTIFICATION

This report has been prepared for the exclusive use of the City of Commerce as it pertains to the facility known as Veterans Memorial Park, located at 6364 Zindell Avenue, Commerce, California. Our services have been performed in accordance with applicable State and Local ordinances, and generally accepted practices in the geosciences. No other warranty, either expressed or implied, is made.

Converse Environmental West (CEW) is not responsible or liable for any claims or damages associated with interpretation of available information. This report should not be regarded as a guarantee that no further contamination, beyond that which was detected in our investigation, is present beneath the property. In the event that changes in the nature of the property occur, or additional, relevant information about the property is brought to our attention, the conclusions and recommendations contained in this report may not be valid unless these changes and additional relevant information are reviewed and the conclusions of this report are modified or verified in writing.

EXECUTIVE SUMMARY

Solid Waste Water Quality Assessment Testing (SWAT) was recently implemented at Veterans Memorial Park in the City of Commerce, California, the location of several formerly active landfills. The investigation was completed utilizing guidelines as presented by the State Water Resources Control Board Technical Guidance Manual. The investigation consisted of documents research, field reconnaissance, the installation of groundwater monitoring wells and a lysimeter, and the subsequent analyzation of groundwater samples.

Document research revealed the following: 1) landfill permit requirements, permitting the disposal of household and municipal rubbish, were violated and the landfills accepted and disposed of oil field wastes in the 1940's, 2) groundwater samples collected from nearby (within 1 mile of the subject site) monitoring wells in water year 1988-1989 exhibited trichloroethylene and tetrachloroethylene contamination, 3) chemical analysis of groundwater samples collected from monitoring wells located at Watkins Truck Terminal exhibited contamination by chlorinated hydrocarbons.

Groundwater monitoring wells installed by Converse Environmental West, which are located in up and down gradient positions to permit the collection of representative groundwater samples, were sampled in December, 1990. The lysimeter, which was installed in soils which exhibited high saturation percentages conducive to permitting the extraction of soil pore moisture, was sampled in January, 1991.

Chemical analysis of groundwater samples obtained from the on-site monitoring wells revealed the absence of chlorinated and aromatic hydrocarbon compounds. Various metals were detected in the groundwater samples, however, concentrations were less than the Maximum Contaminant Levels established by the State of California. Chemical analysis of soil pore moisture obtained via the lysimeter (at approximately 36 feet below grade) revealed concentrations of 1,1,1 TCA, benzene, and toluene of 2.6 μg/l, 2.0 μg/l and 12.0 μg/l, respectively.

These analytical results appear to indicate leachate has migrated from the formerly active landfill(s) and impacted the vadose zone beneath a portion of the site. However, groundwater beneath the site does not appear to have been negatively impacted by leachate or contaminants originating from the landfill materials.

Printed on recycled paper

1.0 INTRODUCTION

Following the guidelines as set forth in the State Water Resources Control Board Technical Guidance Manual for Solid Waste Water Quality Assessment Testing (SWAT), Converse Environmental West (CEW) performed a subsurface investigation at Veterans Memorial Park (Figure 1), the location of several formerly active landfill sites, in the City of Commerce, California. The investigation was performed to determine whether leachate originating from the landfill(s) has impacted subsurface soils and/or groundwater beneath the landfill(s). The hydrogeologic investigation consisted of the following:

- A review of documents, permits, maps, county building plans, etc., to determine the extent and boundaries of individual landfills in the immediate vicinity of Veterans Park,
- Drilling, logging and sampling of four boreholes,
- Installation of three groundwater monitoring wells and one lysimeter,
- Analytical testing of groundwater and soil pore water from the vadose zone,
- Preparation of this report.

Supporting data in the form of Boring Logs and Well Completion Diagrams, Methods of Investigation, and Analytical Results are attached as Appendices A, B and C, respectively. Various figures, i.e. Site Plan, Location of Groundwater Monitoring Wells, etc., are also included.

2.0 PREVIOUS SITE INVESTIGATIONS

CEW completed an air quality assessment investigation at Veterans Park to determine whether the formerly active landfill located beneath the site was generating and releasing toxic substances and, subsequently, impacting air quality in the vicinity of Veterans Park. A brief summary of the findings of this investigation is included below.

CEW's report dated March 15, 1990 presented the results of Solid Waste Air Quality Testing (SWAQT) performed at Veterans Park. The investigation, implemented pursuant to a written directive from the South Coast Air Quality Management District (SCAQMD), consisted of local meteorological

Printed on recycled paper

characterization, sampling of landfill gas and ambient air directly above the subject site, and testing to determine if landfill gas has migrated beyond the perimeter of the landfill.

The investigation verified that four independent landfills operated inside or adjacent to Veterans Park in the 1940's and 1950's. Furthermore, the operation of these landfills appears to have resulted in the presence of chlorinated and aromatic hydrocarbons, most notably benzene, vinyl chloride, TCE, and carbon tetrachloride, in the landfill gas beneath Veterans Park. Concentrations of benzene in the landfill gas ranged from 180 to 2800 ppb, vinyl chloride was detected at concentrations ranging from 170 to 4300 ppb, and TCE and carbon tetrachloride were detected at concentrations ranging from 8 to 73 ppb. Additionally, ambient air monitoring above Veterans Park suggests that of the compounds detected, only benzene was potentially being emitted from the landfill to the ambient air. Methane was not detected in the ambient air, however, it was measured at a concentration of 6.7% in the landfill gas.

3.0 SITE HISTORY

Available sources from the City of Commerce City Hall, Los Angeles County Health Department and the Regional Water Quality Control Board indicate several permitted municipal waste landfills operated inside and adjacent to the subject site during the years 1941 to 1954 (Figure 2).

The Fletcher Dump, which operated from 1941 to 1944, was located on the western half of the present day Veterans Park. According to County Health Department file memorandums (Fletcher Rubbish Dump, March, 1988), in early 1943, considerable amounts of redwood sawdust and several thousands of gallons of acid oil sludge had been dumped into the Rio Hondo River bed. Additionally, surface pools of oil sludge were present. Subsequent to the expiration of the operation permit for the Fletcher Dump in 1944, Doris Haney Jones, in 1945, applied for a permit to operate a rubbish dump (solid fill and rubbish) at the same location as the Fletcher Dump. The permit was granted for a period of three years (1945 to 1948). During those three years, Mrs. Jones was found to be in violation (Los Angeles County Health Department file memorandums, March, 1988) of her dump permit on several occasions (accepting oil sludge and dumping in the Rio Hondo Channel right-of-way).

Apparently, in 1948, the Salvage Corporation assumed dump operations from Doris Haney Jones and extended the size of the dump facility to include the property at 7100 East Gage Avenue, to become Watkins Truck Terminal. The Salvage Corporation operated the dump until 1953. The property is currently owned by Watkins Terminals Incorporated.

Printed on recycled paper

The Gage Avenue Dump, which occupied the eastern one-third of the present day Veterans Park and extended eastward an additional 550 feet, apparently operated from 1950 to 1954 and accepted industrial wastes (Los Angeles County Health Department file memorandums, August 10, 1988). The landfill was operated by L.A. Byproducts. The property is now owned by Mr. Mark Slotkin.

In addition to these documented landfills, an undocumented, apparent disposal facility, as evidenced in the Fairchild Collection of Aerial Photographs, also operated between 1950 and 1954. The landfill was approximately located between the boundaries of the Doris Haney Jones and Gage Avenue dumps. This placed the landfill in the central portion of present day Veterans Park (Figure 2).

4.0 SITE CONDITIONS

The subject site, Veterans Memorial Park, is located at 6364 Zindell Avenue approximately .25 miles west of the Santa Ana Freeway and .25 miles south of Gage Avenue in Commerce, California (Figure 1). The subject site is situated in Township 2S, Range 12W, Section 27 and identified in County Assessor Book 6357, pages 18 and 19 as parcels 900 and 904.

Presently, Veterans Park contains several structures, including a multi-level recreational facilities building, a full-sized baseball field with a concrete grandstand for spectators, a relatively large parking area, tennis courts, a children's playground, open grass areas, and several small structures, i.e., restroom facilities, food concession.

The site is bordered to the north by single family residences and a bakery distributor, to the east and west by now vacant properties (formerly International Paper Company and Watkins Truck Terminal) and to the south by the Rio Hondo Channel and Rio Hondo Coastal Basin Spreading Grounds. The spreading grounds were first utilized to replenish and/or augment subsurface water supplies during the 1937-1938 season and, during the months of October, 1989 through May, 1990, approximately 3318 acre-feet of water was introduced into the western spreading basins (verbal communication with John Mitchell of the Los Angeles County Department of Public Works). The spreading grounds, which are currently being renovated, are supplied water from three sources. The sources are: 1) run-off, dam releases, etc., 2) water projects importing water from northern California and the Colorado River, and 3) reclaimed water supplied by the Whittier Narrows, San Jose Creek, and Pomona Water Reclamation Plants. The average surface elevation at the site is approximately 142 feet above mean sea level.

4.1 Geology

The site is underlain by artificial fill material and Holocene Age (0 to 10,000 years old) alluvium which was deposited on Pleistocene Age (10,000 to 2 million years

old) Lakewood Formation sediment (Figure 3). The artificial fill material varies in thickness from approximately 2 feet to 30 feet. Recent age alluvium, consisting predominantly of sand, gravel, clay and sandy clay, underlies the fill material and extends to a depth of approximately 100 feet below surface grade or 50 feet above mean sea level. The Lakewood Formation, which underlies the alluvium, consists of 140 feet of marine and non-marine gravel, sand, sandy silt, silt and clay and extends to an approximate depth of 240 feet below grade or 100 feet below mean sea level (California Department of Water Resources, Bulletin 104, 1961)

4.2 Hydrogeology

Veterans Park is situated in the Central Basin within the Montebello Forebay Area which extends southward from the Whittier Narrows to the city of Downey, westward approximately 2 miles west of the city of Montebello and eastward to approximately 1 mile west of the city of Whittier (Figure 4).

Available literature indicates several water bearing zones occur in the region of the site. In order of increasing depth, the potential water bearing zones are the Semiperched Aquifer, the Gaspur Aquifer, the Exposition Aquifer and the Gardena Aquifer (see Figure 3).

The Semiperched Aquifer is found within the Recent alluvium and consists of 20 to 60 feet of sand and gravel. The Bellflower Aquiclude, a leaky aquiclude ranging in thickness from a few feet to 60 feet, underlies the Semiperched Aquifer and consists of clay and sandy clay with a high percentage of sand and gravel. The base of the Bellflower Aquiclude occurs at a depth of approximately 25 feet below grade or 120 feet above mean sea level. The eastern arm of the Gaspur Aquifer, also found within the Recent alluvium, appears to extend beneath the southern portion of the site. The Gaspur Aquifer consists of coarse sand and gravel ranging in thickness from 40 to 100 feet.

Underlying the Gasper Aquifer are the Exposition and Gardena Aquifers of the Lakewood Formation. The Exposition Aquifer, which consists of 10 to 90 feet of sand and gravel with some clay , underlies the Gaspur Aquifer and is in hydraulic continuity with it. The Gardena Aquifer, which underlies the Exposition Aquifer, is comprised of coarse sand and gravel which range from 20 to 140 feet in thickness (California Department of Water Resources, 1961).

In the vicinity of Veterans Park, groundwater, encountered at a depth of approximately 72 feet below grade during this SWAT investigation, appears to be contained in the Gaspur Aquifer (Figure 3).

Printed on recycled paper

5.0 FIELD INVESTIGATION

5.1 Field Reconnaissance

CEW personnel visited Veterans Memorial Park, the surrounding properties, and a portion of the Rio Hondo Spreading Grounds as a part of this investigation. Field observations, i.e. surface conditions, evidence of subsurface investigation, evidence of landfill activity or materials, etc. were made and recorded.

5.2 Drilling and Logging of Boreholes

CEW field investigation entailed the drilling of 4 soil borings, BH-1, -2, -3, and -4; two of which were continuously cored to permit visual inspection of the soils and to aid in determining the appropriate depths to install lysimeters. Drilling operations were performed by a truck-mounted hollow-stem auger drill rig and supervised in the field by a staff geologist under the direction of a professional engineer. Two of the borings were advanced to a depth of 90 feet below grade, approximately 20 feet beyond first encountered groundwater, one of the borings was advanced to 80 feet below grade, 10 feet beyond first encountered groundwater, and the fourth boring was advanced to 42 feet below grade to permit the placement of a lysimeter. Recovered soils were screened in the field with an organic vapor analyzer (OVA) to determine volatile organic content (Appendix B, Methods of Investigation).

Subsequent to boring completion, 10-inch diameter augers were used to ream boreholes BH-1, BH-2 and BH-4 to permit the installation of 4-inch diameter monitoring-well casing. The groundwater monitoring wells were designated MW-1 through MW-3, respectively (see Appendix A for well completion diagrams and details). Boring BH-3 was utilized to place a lysimeter (Figure 5).

5.3 Lysimeter Placement

During the drilling of borings BH-1, BH-2, and BH-3, the soil cores were visually examined for moisture content in anticipation of installing a lysimeter to permit the extraction of pore moisture from the unsaturated zone. Soil horizons which appeared to exhibit relatively high moisture contents were tested in the field with a Quick Draw soilmoisture probe. Soil samples which contained high moisture content were collected and tested at Converse Consultants geotechnical testing laboratory for saturation percentage. Subsequent to laboratory testing, a lysimeter was installed in boring BH-3 at an approximate depth of 36 feet below grade in soil horizons determined to be between 92 and 100% saturated.

A second lysimeter was proposed to be installed at another location either toward the northern or eastern portion of the site (in the vicinity of borings BH-1 or BH-4), however, soils encountered during the drilling of these boreholes were predominantly sands to silty sands and did not appear to contain enough moisture to facilitate the collection of soil pore moisture samples.

5.4 Groundwater Sampling

Subsequent to the installation of the three groundwater monitoring wells (MW-1, MW-2, and MW-3) in borings BH-1, -2 and -4, respectively, the wells were developed, purged and sampled in the months of December, 1990 and January, 1991. The complete details of the well development, purging and sampling procedures are described in Appendix B, Methods of Investigation.

All groundwater monitoring wells were surveyed to mean sea level by a licensed surveyor. The survey network was tied into a certified Los Angeles County benchmark (CY 1573). This data, in conjunction with water level depths, was utilized to determine groundwater gradient and flow direction beneath the site. Survey data, depth to groundwater, and groundwater elevation calculations are included in Table 1.

Prior to obtaining groundwater samples, the depth to groundwater was measured in each of the three wells. The depths to groundwater ranged from approximately 74.58 to 77.23 feet below the top of the well casing. These depths correspond to groundwater elevations ranging from 68.51 to 73.16 feet above mean sea level (Table 1).

6.0 ANALYTICAL PROCEDURES

Groundwater samples were collected from the three on-site wells and a soil pore water sample was collected from the lysimeter for chemical analysis. Additionally, field blanks containing distilled water and a sample of water from an on-site spigot used to clean field equipment were collected to assure laboratory quality control. The groundwater samples were analyzed by EPA Test Methods 601 and 602 and for EPA Metals, chloride, molybdenum, nitrate, sulfate, and chemical oxygen demand. EPA Test Methods 601 and 602 are utilized to detect purgeable halogenated and aromatic hydrocarbons while EPA Metals analysis screens the sample for 21 metals.

The sample of soil pore water obtained from the lysimeter was analyzed by EPA Test Methods 601 and 602 for purgeable halogenated and aromatic hydrocarbons. Additional chemical analysis, i.e. EPA Metals, could not be performed on the soil pore water sample because the quantity of soil pore water and the ability of the lysimeter to "draw" this water from the soils was not sufficient to permit the collection of enough water to perform analysis for metals.

Detection limits for EPA Test Methods 601 and 602 was 0.5 ug/l, for chloride 0.02 mg/l, for nitrate 0.3 mg/l, for sulfate 0.05 mg/l, for chemical oxygen demand 3.0 mg/l, for molybdenum 0.10 mg/l and the detection limits for EPA Metals, which range from .001 to 0.2 mg/l, are summarized in Tables 2 and 3

Printed on recycled paper

and listed in their entirety in Appendix C.

7.0 ANALYTICAL RESULTS

Laboratory analyses of groundwater samples obtained from groundwater monitoring wells MW-1, -2, and -3 revealed the absence of halogenated and aromatic hydrocarbons. Additional analyses of groundwater samples for EPA Metals revealed various metals exist in the groundwater beneath the site, however, none of the metals concentrations exceeded the Maximum Contaminant Levels (MCL's) as codified in the California Administrative Code, Title 22, Chapter 15, Article 4 and Article 8.

Chemical analysis of soil pore water from the unsaturated zone obtained via lysimeter LY-1 at an approximate depth of 36 feet below grade revealed the presence of 2.6 ug/l of 1,1,1 TCA, 2.0 ug/l of benzene and 12.0 ug/l of toluene. As stated above, the soil pore water was not analyzed for EPA Metals.

Results of these analyses are summarized in Tables 2 and 3. Analytical Methods, and formal analytical results, are presented in Appendix C.

8.0 SUMMARY OF FINDINGS

8.1 Document Research Findings

Document research revealed 4 potential landfills occupied properties in or adjacent to present day Veterans Memorial Park. The landfills were permitted to accept municipal waste and rubbish, however, County of Los Angeles Health Department records indicate the landfills accepted and disposed oil field sludge and other materials not classified as municipal waste or rubbish. Potentially, Veterans Memorial Park overlies three formerly active landfills, the Gage Avenue Dump, the Fletcher/Doris Haney Jones Dumps, and an undocumented landfill.

Additional research revealed that groundwater samples collected from nearby (within 1 mile of the subject site, see Figure 6) monitoring wells 1562E, 1543J and 1583X in water year 1988-1989 exhibited trichloroethylene and tetrachloroethylene at concentrations ranging from non-detectable (less than 0.5 ug/l) to 6.0 ug/l (Bookman-Edmonston Report, April, 1990).

Furthermore, chemical analysis of groundwater samples collected from monitoring wells located at Watkins Truck Terminal exhibited contamination by chlorinated hydrocarbons (verbal communication with Ray Ramirez, City of Commerce Redevelopment Agency).

Printed on recycled paper

8.2 Field Investigation Findings

8.2.1 Field Reconnaissance

Field reconnaissance revealed the Watkins Truck Terminal and the Slotkin property (formerly used as landfills) are experiencing differential settlement. The resultant stress is causing structural failure of the asphalt/concrete covering much of the property, as well as the actual buildings/structures which are present on the sites.

Evidence of subsurface investigation was identified at the Watkins Truck Terminal (presently contains two buildings, one of corrugated metal and the other a loading dock which has been destroyed by fire) in the form of surface excavation pit and the construction of groundwater monitoring wells.

Numerous excavation pits appeared to have been completed and subsequently backfilled while other excavations observed in the vicinity of the corrugated metal structure (possible a repair garage) remain open to a depth of approximately 10 feet below grade. Approximately 10 groundwater monitoring wells were identified on the Watkins property (Figure 7). Several of the groundwater monitoring well heads did not contain a protective cover and were "silted-in", however, most of the well heads were intact and appeared to be in good condition. The western portion of the Watkins property, a vacant, dirt lot without an asphalt or concrete cap, housed several 55 gallon drums with unknown contents. Surface staining by oil was evidenced.

The Rio Hondo Spreading Grounds, located along the entire southern property line of Veterans Park (see Figure 5), are scheduled to be re-utilized as groundwater replenishment areas in early 1991. The re-sloped, earthen sidewalls along the northern portion of the spreading grounds (approximately 25 feet south of Veterans Park property line) evidenced discolored fill soils.

8.2.2 Soil Conditions

In general, soils observed while drilling consisted of interbedded sands, sandy silts, and sandy clays. The sands were generally fine-grained with some medium- to coarse-grained sands and occasional fine to coarse gravels. Figure 8 is a diagrammatic cross-section (Figure 5 diagrams the location of cross-section line A-A') detailing subsurface soil conditions at Veterans Park. Soil moisture ranged from dry to wet with the majority of soils being moist. Landfill material, evidenced in the form of asphalt chunks, glass, brick fragments, wood, etc., was witnessed in three of the borings to depths of 12, 12 and 18 feet below grade. Headspace vapor concentrations, as determined by field screening of soil samples with an OVA, revealed total organic vapor concentrations ranging from 0 to 1200 parts per million (see OVA readings in boring logs, Appendix A).

Printed on recycled paper

8.2.3 Groundwater Conditions

Groundwater, encountered at depths of approximately 72 feet below grade in borings BH-1, BH-2 and BH-4, was evidenced in a silty, fine-to coarse grained sand unit which contained trace quantities of gravel (see Figure 8 and Boring Logs in Appendix A and Methods of Investigation in Appendix B).

Calculations of groundwater elevation indicate a gradient beneath the site of 0.01 feet/foot with a flow direction to the west-southwest (Figure 5).

The Rio Hondo Spreading Grounds, which are located along the entire southern property line, are scheduled to be re-utilized as groundwater replenishment areas in early 1991. Upon its introduction into the spreading basins, water may come into physical contact with landfill materials (discolored soils were evidenced in the northern sidewall of Spreading Basin 9W and document research indicates past landfill operators dumped wastes into the Rio Hondo River Basin) and potentially compromise the quality of subsurface waters. The addition of surface waters into the spreading basins has resulted in past groundwater mounding beneath the basins thus altering the groundwater flow direction and gradient and resulting in the raising of the water table by as much 30 feet, from approximately 70 feet below grade to 40 feet below grade (verbal communication with Don Nickels of the Hydraulic/Water Conservation Division, LACDPW).

9.0 CONCLUSIONS

Solid Waste Air Quality Assessment Testing revealed the presence of chlorinated and aromatic hydrocarbons, most notably vinyl chloride, TCE, carbon tetrachloride, and benzene, in the landfill gas beneath Veterans Park. Additionally, ambient air monitoring above Veterans Park suggested that of the compounds detected, only benzene was potentially being emitted from the landfill to the ambient air.

The City of Commerce's Veterans Park is situated upon four former landfills of which two, the Fletcher Dump and Doris Haney Jones Dump, appear to have accepted regulated oil field wastes during their operation. County records indicate disposal practices in several of the landfills were not as permitted and one of the landfills appears to be completely undocumented.

The vadose zone, as evidenced in soil pore moisture samples obtained via lysimeter LY-1 at a depth of approximately 36 feet below grade, appears to have been impacted by leachate originating from the landfill material. Specific contaminants identified in soil pore moisture obtained by lysimeter LY-1 are 1,1,1 TCA, benzene and toluene. The presence and extent, both vertical and

ISSUES OF CONCERN RELATING TO THE PURCHASE OF THE WATKINS TERMINAL

1. KNOWN CONTAMINANTS BENEATH COMMERCE SIDE OF WATKINS TERMINAL:
   - PETROLEUM HYDROCARBON
   - HEAVY METALS

   POTENTIAL CONTAMINANTS:
   - AROMATIC HYDROCARBONS
   - PESTICIDES
   - PNAs

2. FILL MATERIALS BENEATH WATKINS MAY FALL UNDER HAZARDOUS WASTE DESIGNATION.

3. A SOURCE OF TCE CONTAMINATION MAY BE FROM BELL GARDENS SIDE OF THE WATKINS TERMINAL.

4. WATER FROM THE INFILTRATION BASINS MAY BE IN CONTACT WITH FILL MATERIALS CREATING A GROUNDWATER CONTAMINATION PROBLEM.

5. THE CENTRAL GROUNDWATER BASIN AREA MAY BE LISTED IN THE FUTURE AS AN NPL SITE.

RECOMMENDATIONS

1. EVALUATE THE SOURCE AND EXTENT OF TCE CONTAMINATION IDENTIFIED IN GROUNDWATER BENEATH THE WATKINS TERMINAL. IF THE SOURCE OF CONTAMINATION IS FROM THE WATKINS TERMINAL CEW WOULD STRONGLY RECOMMEND THAT TOTAL CLEANUP OR FULL INDEMNIFICATION (IF POSSIBLE) BE GRANTED PRIOR TO PURCHASE OF THE PROPERTY.

2. IF THE SOURCE OF TCE GROUNDWATER CONTAMINATION IS DISCOVERED TO NOT BE FROM THE WATKINS TERMINAL, PERFORM FULL REMEDIAL INVESTIGATION AND FEASIBILITY STUDY (RI/FS) ON FILL SOILS BENEATH THE COMMERCE SIDE OF THE WATKINS TERMINAL. OUR RECOMMENDATIONS CONCERNING THE PURCHASE OF THE PROPERTY WOULD BE CONTINGENT UPON THE CLEANUP COST OF THE LANDFILL.

SUMMARY OF DOCUMENT REVIEW

Following our review of documents prepared by Nutech Enterprises and Jaykim Engineers relating to the environmental conditions of the Watkins terminal, CEW has developed the following conclusions:

- Petroleum hydrocarbons at concentrations up to 39,100 parts per million (ppm) and metals, primarily copper and zinc, were found in test pits on the Commerce side of Watkins Terminal. The media in which the contaminants were found was landfill material. The State of California will regulate this material as a hazardous or contaminated waste. The test pit locations and the concentrations of hydrocarbons and metals are shown in the attached figure and table.

- The same hydrocarbon and metals were detected in landfill material beneath the adjacent City of Commerce's Veterans Park. Historical data has revealed the unregulated disposal of oil field wastes on what may have been both properties (Veterans Park and Watkins Terminal) during the 1940's.

- Extensive testing of soils at Veterans Park has detected numerous other potentially hazardous compounds (including aromatic hydrocarbons, pesticides and polynuclear aromatic hydrocarbons) in the landfill material. Tests have not been conducted on fill material at the Watkins terminal for these compounds.

- Trichloroethylene (TCE) contamination was detected in groundwater on the Bell Gardens side of the Watkins terminal. The data is inconclusive as to the source of the contamination, however, there is a high likelihood of an on-site source (see attached figure). Ground water monitoring wells on the Veterans Park do not evidence TCE contamination suggesting the problem is localized and not regional.

- Los Angeles County groundwater infiltration basins abut the entire southern boundary of the Watkins Terminal. The county finished refurbishment of the basins in January 1991, presumably increasing the basins storage and infiltration capacity. The basins are currently full with rain water runoff from the storms that occurred in March 1991. Groundwater elevations measured in wells on the Watkins Terminal and the Veterans Park on March 2, 1991 evidenced a rise in the water table of 20 to 30 feet and groundwater gradient reversal to the north. The large influx of water into infiltration basins may be creating a situation where infiltration water is now in contact with landfill material. For example, basin water south of Veterans Park is in contact with fill material exposed along the basin walls.

If the source of TCE groundwater contamination is from the Watkins terminal, the filling of the basins could be increasing the plumes extent (both vertical and lateral).

♦ The Regional Water Quality Control Board is attempting to list the entire Los Angeles Central Ground Water Basin on the EPA's National Priorities List (NPL), otherwise known as Superfund, because of groundwater contamination by chemicals including TCE. The investigations and allocation of responsibility (joint and several) would likely proceed in the same manner as is currently proceeding in the San Gabriel and San Fernando Valley, both NPL sites.

PROPOSALS DUE: November 2nd by 12:00pm

Mandatory Pre-Bid Meeting: October 20th at 9:00 am

CITY OF COMMERCE
NOTICE INVITING PROPOSALS

Veterans Park Building Shooting Range Lead Abatement/Demolition

PROFESSIONAL SERVICES C.I.P. NO. 2016-12

PUBLIC NOTICE IS HEREBY GIVEN that the City of Commerce ("City"), invites proposals for the above stated project and will receive such proposals in the office of the Public Works & Development Services Department, 2535 Commerce Way, City of Commerce, California 90040, **UP TO THE HOUR OF 12:00PM on November 2, 2016.**

Copies of the Request for Proposal and related documents are available for download at the City's website: http://www.ci.commerce.ca.us/bids.aspx.

In order to be considered in the selection process, interested parties shall submit three (3) copies of their proposal in conformance with instructions provided. Proposals shall be submitted in a sealed envelope plainly marked on the outside: **"VETERANS PARK BUILDING SHOOTING RANGE LEAD ABATEMENT/DEMOLITION – PROFESSIONAL SERVICES CIP #2016-012"**.

The work to be performed includes furnishing all labor, services, materials, tools, equipment, and incidentals necessary to conduct lead and asbestos monitoring, clearance inspections, re-establishment of work area and systems, submittal review and project completion documentation with final report. For the following:

- Approximately 10,925 square foot basement level footprint of the shooting range is to remove all range HVAC system components, range equipment, non-load bearing walls, wallcoverings, ceilings, flooring, base and mastic. All surfaces of the basement level including, stairs, elevator pit and shaft are to be abated of lead containing dust / paint chips.

- Approximately 126 square foot mechanical room footprint that encloses the shooting range exhaust fan. The exhaust fan and all ductwork are to be removed and cleaned / abated of lead dust / paint chips. All interior and exterior surfaces of this equipment room are to be cleaned/ abated.

- Approximately 1300 square feet of side yard at the West side of the building will require abatement of lead dust / paint chips from top of the pavement and mechanical room stairs and storm drains. Approximately 250 lineal feet of CMU block wall's interior face and top of wall will require abatement of lead dust.

- Approximately 8510 square feet of mezzanine corridor and two mechanical rooms require lead dust cleaning / abatement of all surfaces including ductwork, lockers, utility panels, stairs, access ladder, handrails and mechanical roof area.

A **MANDITORY** pre-proposal meeting will be held on: **October 20, 2016 at 9:00 A.M.** at the **City of Commerce, Veteran's Park Multi-Purpose Room**, located at 6364 Zindell Avenue, Commerce, CA. 90040. Please RSVP in writing via e-mail to Paul Banuelos, Project Manager (Consultant) at pbanuelos@swinerton.com with a copy to Gina Nila, Deputy Director of Public Works - Operations at ginan@ci.commerce.ca.us. Please include company name, contact information and phone number.

All questions regarding this proposal shall be directed via email, no later than **October 25, 2016 at 10:00 am**, to Paul Banuelos, Project Manager (Consultant) at pbanuelos@swinerton.com with a copy to Gina Nila, Deputy Director of Public Works - Operations at ginan@ci.commerce.ca.us. ***It is the responsibility of the proposer to confirm transmission of correspondence.***

The City reserves the right to reject any or all proposals, to waive any irregularity, and to take all proposals under advisement for a period of thirty (30) days.

BY ORDER OF the City Council of the City of Commerce, California on **October 4, 2016.**

REQUEST FOR PROPOSALS (RFP)
INDUSTRIAL HYGIENIST ABATEMENT OVERSIGHT PROFESSIONAL SERVICES
FOR CITY OF COMMERCE

Veterans Park Building Shooting Range Lead Abatement/Demolition

PROFESSIONAL SERVICES C.I.P. NO. 2016-12

INTRODUCTION AND DESCRIPTION

The City of Commerce is soliciting Proposals (hereinafter referred to as RFP) from qualified firms to provide professional INDUSTRIAL HYGENTIST ABATEMENT OVERSIGHT PROFESSIONAL SERVICES for the **VETERANS PARK SHOOTING RANGE LEAD ABATEMENT/DEMO Project**. The Firing Range was in operation from approximately 1970 to 2009. Elevated lead-based paint and lead dust was detected on all surfaces and within the Shooting Range and the ventilation system. In addition, elevated lead dust was found on exterior surfaces immediately surrounding the Veteran's Park Recreational Building, located at 6364 Zindell Ave, Commerce, CA 90040. Lead dust, soil, paint and XRF sampling were performed. It is believed that the ventilation system used for the Range during weapons firing and trap cleaning actions are the primary source of lead dust contamination inside and immediately outside of the Range.

Project Location:

Veteran's Park
6364 Zindell Avenue
Commerce, CA. 90040

SCOPE OF WORK

Overview - The project involves conducting lead and asbestos abatement monitoring, clearance inspections, re-establishment of work area and systems, submittal review and project completion documentation with final report.

The abatement and demolition scope that is to be documented:

- Approximately 10,925 square foot basement level footprint of the shooting range is to remove all range HVAC system components, range equipment, non-load bearing walls, wallcoverings, ceilings, flooring, base and mastic. All surfaces of the basement level including, stairs, elevator pit and shaft are to be abated of lead containing dust / paint chips.

- Approximately 126 square foot mechanical room footprint that encloses the shooting range exhaust fan. The exhaust fan and all ductwork are to be removed and cleaned / abated of lead dust / paint chips. All interior and exterior surfaces of this equipment room are to be cleaned/ abated.

- Approximately 1300 square feet of side yard at the West side of the building will require abatement of lead dust / paint chips from top of the pavement and mechanical room stairs and storm drains. Approximately 250 lineal feet of CMU block wall's interior face and top of wall will require abatement of lead dust.

- Approximately 8510 square feet of mezzanine corridor and two mechanical rooms require lead dust cleaning / abatement of all surfaces including ductwork, lockers, utility panels, stairs, access ladder, handrails and mechanical roof area.

TIMELINE (milestones)

- **Pre-Proposal Meeting** — **10/20/2016 at 9:00 AM**
- **Pre-Proposal Inquires due** — **10/25/2016**
- **Proposals due** — **11/02/2016 by 12:00 PM**
- **Award Notification by** — **12/07/2016**
- **Abatement / Demo** — **30 working days max.**
- **Final Report due** — **10 working days after clearance issued**

GENERAL ADMINISTRATIVE INFORMATION

1. **SELECTED CONSULTANT:** The selected consultant will be required to sign a Professional Service Agreement with the City (sample is included as Attachment B) for this project. Each prospective consultant is expected to review the general terms and conditions and acknowledge their acceptance of the Attachment or their objections to specific parts as a mechanism to expedite the contract execution process.

2. **PRE-PROPOSAL SUBMITTAL MEETING:** A **MANDATORY** pre-proposal meeting which will be held at the **City of Commerce, Veteran's Park Multi-Purpose Room**, located at 6364 Zindell Avenue, Commerce, CA. 90040 on **October 20, 2016 at 9:00 am.** Please RSVP in writing via e-mail to Paul Banuelos, Project Manager (Consultant) at pbanuelos@swinerton.com with a copy to Gina Nila, Deputy Director of Public Works - Operations at ginan@ci.commerce.ca.us. Please include company name, contact information and phone number

3. **QUESTIONS:** All questions regarding this proposal shall be directed via email, no later than **October 25, 2016 at 10:00 am**, to Paul Banuelos, Project Manager (Consultant) at pbanuelos@swinerton.com with a copy to Gina Nila, Deputy Director of Public Works - Operations at ginan@ci.commerce.ca.us. Responses will be distributed to all interested parties.

3. **REPLY FORMAT**: Proposal must follow the format as set in this request. Proposals must be returned by the due date to the indicated address. Individuals/firms must submit three (3) copies of the proposal. Please minimize the bulk of your proposal by only submitting one (1) copy of standard brochures and materials. You are free to organize your proposal as you wish, so long as it includes the requested information, including all of the forms contained in this request. Firms are required to clearly identify any limitations or exceptions to the requirements defined in this request. Alternative approaches will be given consideration if the approach clearly offers increased benefits to the City.

4. **PROPOSAL ACKNOWLEDGMENT AND RECEIPT:** A Proposal Acknowledgment form must be completed and submitted with proposal (see attachment A).

5. **FIRM QUALIFICATIONS:** The individual / firm shall have been in business doing this type of work in California for at least five years.

6. **RESPONSIVENESS AND SELECTION PROCESS:** The decision for selection will be made on a combination of criteria and the City reserves the right to reject any and all proposals or to waive any minor errors, discrepancies or irregularities. The selection will be at the discretion of the City and may be made in any manner that best meets the needs of the City.

7. **SUBCONTRACTORS:** The City prefers a proposal with a single or primary individual / firm. If you propose a multi-firm (one firm must be identified as the lead entity) or subcontracted approach, clearly identify the responsibilities of each party and the assurances of performance that your proposal includes.

8. **PROPOSED CONTRACT:** Attachment B of this request is a sample Professional Services Agreement that the City intends to use in awarding this contract. The individual / firm should review the terms and conditions contained in the Agreement and must note any exceptions, additions or modifications they would propose for consideration by the City. Blanket substitution of the individual / firm's standard contract or the Standard AIA Agreement in lieu of the City Agreement will not be permitted.

9. **INSURANCE REQUIREMENTS:** As indicated in Section 12 of the Professional Services Agreement included as Attachment B, the selected individual/firm will be required to provide proof of insurance for each of the insurance categories so noted. The individual/firm will be required to name the City of Commerce as additional insured.

10. **PAYMENT TERMS:** The City payment terms are, at a minimum, Net 30 days after receipt of all goods and/or services and receipt of an accurate invoice and associated warranties. The City may, at its discretion, agree on a phased approach to invoicing and payment

based upon defined benchmarks agreed to by the City and the individual / firm.

11. **DELIVERY:** All goods and services shall be delivered to the City, F.O.B. Destination. The individual/firm shall deliver completely by the dates agreed to in this agreement. Failure to deliver in a timely fashion is cause for the City to terminate this agreement.

12. **FIRM PRICES:** All quotes shall be held firm for a minimum of sixty (60 days) after the proposal due date to allow adequate time for the City to consider each proposal and make an award. All blanks for unit price and total price shall be completed. Any discrepancy between the unit price and the extended or total price shall be determined by taking the lower price. Upon receipt of this proposal by the City, the individual/firm shall be presumed to be thoroughly familiar with all aspects of this work. The failure or omission to examine any location, equipment, form, instrument or document shall in no way relieve the individual/firm from any obligation with respect to this proposal.

13. **LITIGATION:** In the event of litigation between the parties concerning this Agreement, the prevailing party shall be entitled to reasonable attorney's fees and associated costs. The laws of the State of California shall govern this Agreement. If any provision of this Agreement becomes invalid or unenforceable, the remainder of the Agreement shall not be affected.

14. **ASSIGNMENT:** This Agreement, nor any part of this Agreement, may be assigned without the written consent of the other party.

15. **CANCELLATION CLAUSE:** The City may terminate and cancel any purchase order or contract that result from this project without obligation at any time prior to receipt of the goods or services.

16. **HOLD HARMLESS:** The individual/firm shall defend, indemnify and hold the City, its officers, employees and agents harmless from any liability for damage or claims of same, including, but not limited to, personal injury, property damage and death, which may arise from Firm or Firm's contractor, subcontractors, agents or employees operating under this Agreement, excepting suits and actions brought by Firm for default of this Agreement or to the extent the claim arises out of the sole negligent or willful misconduct of City. City shall cooperate reasonably in the defense of any action, and Firm shall employ competent counsel, reasonably acceptable to City Attorney.

17. **KICK-OFF MEETING AND PRESENTATIONS**: Kick-off Meeting – Individual / firm and project team shall meet with City personnel within five (5) business days of contract award to discuss project requirements, schedule, deliverables and expectations.

18. **PRESENTATIONS:** Individual / firm and project team must be available for a minimum of two (2) presentations of their proposal and or during the course of the project and upon the City's request for such a presentation.

CONSULTANT SELECTION

The City will evaluate the proposals submitted, and select the most qualified consultant for the project. The proposals will be evaluated based upon several factors. These factors include the format, organization, and presentation of the proposal, the qualification and experience of the project staff, and the experience in the processes and procedures of the involved regulations.

In evaluating the proposals, the City will consider the following factors:

- Completeness of the Proposals and compliance with the required format.

- Project understanding, scope and approach to complete the project efficiently.
- Knowledge in Public Agency Procedures and Requirements.
- Experience in managing similar projects.
- Experience and qualifications of the firm and the project team members.
- Experience in Public Contract Procedures, Requirements, Laws and Construction Claims.
- Experience in working as an extension of City staff and providing turn-key services in similar capacities with minimal direction from City staff.
- Experience of Construction Manager and Specialty Inspector.
- References and performance records on similar assignments.

Upon receipt of Proposals, City may select the most qualified consultant as a 1 step process or may conduct additional interviews with the top 3 ranked consultants. The City will negotiate final scope and fee with the most qualified consultant.

REQUIRED FORMAT FOR PROPOSAL SUBMITTAL

The City of Commerce requests that interested individuals and firms send a detailed proposal to provide the requested services mentioned above. Three (3) copies of the proposal shall be submitted. Submittals shall be limited to a cover letter and 30 pages (one-sided) or 15 pages (double-sided), 8-1/2" x 11" in size, with pages distributed into each section as noted below. Facsimile copies will not be accepted. Proposals must contain the information listed below:

1. A cover letter including the name and address of the firm or individual, the telephone number to be used for contact, along with the name of the individual(s) who will be authorized to make presentations for the firm, and a statement regarding your firm's or individual capacity to perform the specific tasks outlined in this request. Also include statements regarding your firm's stability in the industry.

2. A statement on the individual / firm's project understanding and approach including a scope of work for each phase. The statement shall include a detailed scope and understanding of the process to undertake project and complete work in compliance with all applicable rules, regulations, standards and requirements.

3. A statement on the principal individual(s) who will be responsible for the assignments, along with their experience and qualifications. Statement shall include an organizational chart showing the names and responsibilities of key personnel. The proposed Professional Staff shall be licensed in California and shall have experience working with Public Agencies in similar assignments. It is important that the key project team members have served public agencies in various capacities, and are accustomed to working with governmental agencies, and have good understanding of public agency issues, procedures, and policies. The City is looking for a qualified team that can provide turn-key services, and be the single Point of Responsible Party representing the City in all aspects of the project. Provide resumes of key personnel identified in the organizational chart.

4. Examples of firm's or individual's previous work, relevant experience with similar construction and explanation on how the firm have kept current in general practice. Please include the scope of work, budget, date of completion and the principal for the listed projects. (Limit to 5 pages).

5. A list of at least five (5) references for which you or your firm have performed similar services. Include the project name, contact name, and address and telephone number for each reference.

6. Fee structure for services shall include:
    a. A listing of standard hourly rates for assigned staff positions;
    b. A brief explanation on how fees are determined.

7. Proposal shall include a time schedule for the completion of services, including a current estimate for the duration of each phase including the demolition and abatement period for the project.

8. Additional information may be provided to highlight or expand upon experience applicable to this request. (Limit to 8 pages).

9. The scope of work provided in this RFP will be used as a guideline only. It will be the selected consultant's responsibility to identify all necessary tasks and costs associated with the requested services and to ensure that each phase of the project is completed efficiently and in full compliance as required by applicable regulations and permits.

PRE-CONTRACTUAL EXPENSES

All costs for the preparation of the proposal shall be borne by the proposing individual / firm. The City shall not be liable for any pre-contractual expenses incurred by any proposer or by any selected consultant. Each proposer shall protect, defend, indemnify, and hold harmless the City from any and all liability, claims, or expenses whosoever incurred by, or on behalf of, the entity participating in the preparation of its response to this RFP.

The City reserves the right to amend, withdraw and cancel this RFP. The City reserves the right to reject all responses to this request at any time prior to contract execution. The City reserves the right to request or obtain additional information about any and all proposals.

SAMPLE CITY AGREEMENT

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT ("Agreement") entered into this____day of_____, 2016, ("Effective Date") is by and between_____("Contractor") located at _____and the City of Commerce, a Municipal Corporation ("CITY") located at 2535 Commerce Way, Commerce CA 90040;

W I T N E S S E T H

This Agreement is made and entered into with respect to the following facts:

WHEREAS, the City has determined that it requires the services of a professional that can provide professional architectural, engineering, and construction management services for the City's Emergency Operations Center Project;

WHEREAS, the City desires to have a contract in place for these services prior to implementation and construction of said project;

WHEREAS, Contractor represents that it is fully qualified to perform such professional services by virtue of its experience and the training, education and expertise of its principals and employees;

WHEREAS, Contractor further represents that it is willing to accept responsibility for performing such services in accordance with the terms and conditions set forth in this Agreement.

1. Scope of Services and Schedule of Performance

Contractor shall provide City with such professional services as are set forth in Exhibit A, "Scope of Services," which is attached hereto and incorporated herein by this reference. NOTE: the Appendices that are prepared in response to the RFP and/or the Proposal by the successful bidder will be used as the Scope of Services attachment.

2. Warranty

Contractor warrants that the services provided under this Agreement will be performed with the degree of skill and judgment normally exercised by recognized professionals performing services of a similar nature at the time the services were rendered.

3. Term of Agreement

The term of this Agreement shall be for an initial one year period. The City shall have the option to extend the Agreement for two one-year terms. If the City desires to exercise such option(s), the City shall advise Contractor at least thirty (30) days prior to the expiration of the initial term or the initial option period.

4. Compensation and Payment

4.1. So long as Contractor is discharging Contractor's obligations in conformance with the terms of this Agreement, Contractor shall be paid such compensation rates as are set forth in Contractor's ***[insert Contractor's fee schedule date]*** fee schedule to City attached hereto as Exhibit B and incorporated herein by this reference. Contractor will not be eligible for any paid benefits for federal, social security, state workers' compensation, unemployment insurance, professional insurance, medical/dental, or fringe benefits offered by City.

4.2. Such fees shall be payable following receipt of an itemized invoice for services rendered submitted to City in a timely manner. Contractor shall send and address its bill for fees, expenses, and costs to City to the attention of the City Administrator upon completion of services invoiced to City on a monthly basis.

4.3. Payment by the City to Contractor shall be within 30-days of receipt of approved invoices. Payments will be based on approved invoices which include all required reports and detailed back-up information on all expenses. City shall pay the full amount of such invoice; provided, however, that if City or its City Administrator object to any portion of an invoice, City shall notify Contractor of City's objection and the grounds therefore within thirty (30) days of the date of receipt of the invoice, and the parties immediately shall make every effort to settle the disputed portion of the invoice.

5. Financial Records

Contractor shall maintain complete and accurate records with respect to fees and costs incurred under this Agreement. All such records shall be maintained on a generally accepted accounting basis and be clearly identified and readily accessible for audit or examination. Contractor shall keep, maintain and provide free access to such books and records to examine and audit the same, and to make transcripts thereof as necessary, and to allow inspection of all work data, documents, proceedings and activities related to this Agreement for a period of four (4) years from the date of final payments under this Agreement. All accounting records shall readily provide a breakdown of fees and costs charged to this Agreement.

6. Right of Termination

6.1. City may in its sole discretion terminate this Agreement by providing Contractor with a thirty (30) day written notice.

6.2. Contractor may terminate this Agreement by giving the City a 60-day advance written notice if such termination is necessary.

6.3. With the 60-day written notice of termination, Contractor shall give City a written explanation of the reason that the Contractor believes termination is necessary, and cooperate with the City in an effort to resolve the issue.

6.4. Termination by either party hereunder, shall not relieve Contractor from providing services required to be performed up to the effective date of such termination, nor relieve City of its duty to pay the approved costs, prorated as necessary, to the effective date of such termination, or any other reimbursements, fees or expenses to be paid to Contractor by the terms of this Agreement.

7. Independent Contractor

Contractor is and shall perform its services under this Agreement as a wholly independent contractor. Contractor shall not act nor be deemed an agent, employee, officer or legal representative of City. Except as otherwise expressly set forth herein, Contractor shall not at any time or in any manner represent that it or any of its agents, employees, officers or legal representatives are in any manner agents, employees, officers or legal representatives of City. Contractor has no authority to assume or create any commitment or obligations on behalf of City or bind City in any respect. This Agreement is not intended to and does not create the relationship of partnership, joint venture or association between City and Contractor. None of the foregoing shall affect any privilege or protection against disclosure which applies to the services Contractor undertakes under this Agreement.

8. Contractor to Provide Required Personnel; Subcontracting

Contractor shall provide and direct the necessary qualified personnel to perform the services required of and from it pursuant to the express and implied terms hereof, with the degree of skill and judgment normally exercised by recognized professional firms performing services of a similar nature at the time the services are rendered, and to the reasonable satisfaction of City. Contractor may not have a subcontractor perform any services required under this Agreement unless the subcontractor is first approved and authorized to perform such work by the City.

9. Responsible Principal and Project Manager

Contractor shall be required to identify a Project Manager for Contractor who shall be responsible for complying with Contractor's obligations under this Agreement and shall serve as principal liaison between City and Contractor. Designation of another responsible principal or project manager by Contractor shall not be made without the prior written consent of City.

10. City Liaison

Contractor shall direct all communications to the Director of Community Development of City or his designee. All communications, instructions and directions on the part of City shall be communicated exclusively through the Director of Community Development or the City Administrator of City or their designees.

11. Licenses

Contractor warrants that it and its employees have obtained all valid licenses and/or certifications generally required of professionals providing services such as the services required under this Agreement by all applicable regulating governmental agencies and are in good standing with such applicable regulating governmental agencies.

14. Compliance with Laws

Contractor shall, and shall ensure that its employees and sub-contractors comply with all applicable City, county, state, and federal laws and regulations (including occupational safety laws and regulations) in performing the services required under this Agreement, and shall comply with any directions of governmental agencies and City relating to safety, security, and

the like as they pertain to the performance of this Agreement.

15. Insurance

Contractor shall maintain insurance and provide evidence thereof as required by Exhibit C hereto (the "Required Insurance"). Contractor shall also require each of its subcontractors to maintain insurance coverage that meets all of the requirements of this Agreement.

16. Indemnification

16.1 Contractor shall indemnify and hold City and its respective officials, officers, agents and employees harmless from and against any and all liabilities, including but not limited to losses, damages, demands, claims, actions, fees, costs, and expenses City's respective officials, officers, agents and employees hereafter may suffer in connection with any claim, action, or right or action (at law or in equity) because of any injury (including death) or damage to person or property proximately caused by any negligent acts, errors, or omissions by Contractor, its employees, its subcontractors or its agents in the performance of Contractor's obligations under this Agreement. Contractor shall not be liable to the extent that any liability, loss, damage, cost, and expense is caused from an act of negligence or willful misconduct by City or its respective officials, officers, employees or agents. Upon demand, Contractor shall promptly provide a defense to such claims, actions or right of action (at law or equity) and shall promptly pay for all associated and resulting costs, damages, settlements, penalties, judgments, fees and expenses, including attorneys' fees and costs.

16.2. City shall have the right to offset against the amount of any compensation due Contractor under this Agreement any amount due City from Contractor as a result of Contractor's Contractor failure to pay City promptly any indemnification arising under this Section and related to Contractor's Contractor failure to either (i) pay taxes on amounts received pursuant to this Agreement or (ii) comply with applicable workers' compensation laws.

16.3. Contractor agrees to obtain executed indemnity agreements with provisions identical to those set forth here in this Section 16 from each and every subcontractor or any other person or entity involved by, for, with or on behalf of Contractor in the performance of this Agreement. Contractor agrees to be fully responsible and indemnify, hold harmless and defend City, its officers, agents, employees and volunteers from and against any and all claims and losses, costs or expenses for any damage due to death or injury to any person and injury to any property resulting from any alleged intentional, reckless, negligent, or otherwise wrongful acts, errors or omissions of Contractor's subcontractors or any other person or entity involved by, for, with or on behalf of Contractor in the performance of this Agreement. Such costs and expenses shall include reasonable attorneys' fees incurred by counsel of City's choice.

16.4. City does not, and shall not, waive any rights that it may possess against Contractor because of the acceptance by City, or the deposit with City, of any insurance policy or certificate required pursuant to this Agreement. This hold harmless and indemnification provision shall apply regardless of whether or not any insurance policies are determined to be applicable to the claim, demand, damage, liability, loss, cost or expense.

17. Confidentiality

Contractor shall maintain as confidential and not disclose to others, either before or after the termination of this Agreement, any data, documents, reports, or other information provided to Contractor by City, or employees or agents of City, or any data, documents, reports, or other information produced by Contractor during its performance hereunder, except as expressly authorized in writing by City, or to the extent required for: (1) compliance with professional standards of conduct for the preservation of the public safety, health, and welfare, but only after Contractor notifies City of such need for disclosure; and (2) compliance with any court order or other government directive or requirement, but only after Contractor notifies City of such an order, directive, or requirement. Contractor shall keep all "Confidential" materials received or generated under this Agreement in separate files marked "Confidential." Any non-compliance by Contractor with this part of the Agreement shall be deemed a material breach of this Agreement. The obligations of this paragraph shall survive the termination of this Agreement.

18. Ownership of Documents

All original documents, designs, drawings, methodological explanations, computer programs, reports, notes, data, materials, services and other products prepared in the course of providing the services under this Agreement (collectively, the “products”) shall become the sole property of City except as prohibited by law, and City shall have authority to publish, disclose, distribute, use, reuse or disposed of the Products in whole or in part, without the permission of Contractor except as prohibited by law. In the event that this Agreement is terminated by City or Contractor, Contractor shall provide City with any finished or unfinished Products. No documents, designs, drawings, methodological explanations, computer programs, reports, notes, data, materials, services and other products prepared in whole or in part under this Agreement shall be the subject of an application for copyright or submitted for publication by or on behalf of Contractor. Notwithstanding such ownership, Contractor shall be entitled to make and obtain copies or reproductions of such Products for its own files or internal reference.

19. Data and Services to be Furnished by City

All information, data, records, reports and maps as are in possession of City and necessary for the carrying out of this work shall be made available to Contractor without charge. City shall make available to Contractor members of its staff for consultation with Contractor in the performance of this Agreement. City does not warrant that the information data, records, reports and maps heretofore to be provided to Contractor are complete or accurate and Contractor shall satisfy itself as to such accuracy and completeness. City and Contractor agree that City shall have no liability should any of the information, data, records, reports, and maps be inaccurate, incomplete or misleading.

20. Covenant Against Contingent Fees

Contractor warrants that it has not employed or retained any company or person to solicit or secure this Agreement and that it has not paid or agreed to pay any company or person any fee, commission or percentage from the award or making of this Agreement. For breach or violation of this warranty, City shall have the right to terminate this Agreement without liability, or in its discretion, to deduct from the consideration payable to Contractor, or otherwise recover, the full amount of such fee, commission, percentage, brokerage fee, gift or contingent fee.

21. Conflict of Interest

Contractor covenants that neither it nor any officer or principal of its firm have any interests, nor shall they acquire any interest, directly or indirectly which will conflict in any manner or degree with the performance under this Agreement. Contractor further warrants its compliance with the Political Reform Act (Gov. Code § 81000, et seq.) and all other laws, if applicable, respecting this Agreement and that no services shall be performed by either an employee, agent, or a subcontractor of Contractor, who has a conflict relating to City or the performance of services on behalf of City.

22. Other Agreements

Contractor warrants that Contractor is not a party to any other existing agreement that would prevent Contractor from entering into this Agreement or that would adversely affect Contractor's ability to perform the services under this Agreement. During the term of this Agreement, Contractor shall not, without City's prior written consent, perform services for any person, firm, or corporation other than City if such services could lead to a conflict with Contractor's obligations under this Agreement.

23. Waiver of Breach

No waiver of any term, condition or covenant of this Agreement by City shall occur unless signed by the City Administrator of City and such writing identifies the provision which is waived and the circumstances or period of time for which it is waived. Such waiver shall be for the specified period of time only and shall not apply to any subsequent breach. In addition, such waiver shall not constitute a waiver of any other term, condition or covenant of this Agreement nor shall it eliminate any remedies available to City for any breaches of this Agreement which are not excused by such waiver. A delay in communicating a failure of Contractor to satisfy a term, condition or covenant in no way waives that term or any remedies available for its breach.

24. No Discrimination

In the performance of this Agreement, Contractor shall not discriminate against any employee, subcontractor, or applicant for employment because of race, color, creed, religion, sex, marital status, national origin, ancestry, age, physical or mental handicap, medical condition or sexual orientation. Contractor will take affirmative action to ensure that subcontractors and applicants are employed, and that employees are treated during employment, without regard to their race, color, creed, religion, sex, marital status, national origin, ancestry, age, physical or mental handicap, medical condition or sexual orientation.

25. Captions

The captions appearing at the commencement of the sections hereof, and in any paragraph thereof, are descriptive only and for convenience in reference to this Agreement. Should there be any conflict between such heading, and the section or paragraph thereof at the head of which it appears, the section or paragraph thereof, as the case may be, and not such heading, shall control and govern in the construction of this Agreement. Masculine or feminine pronouns shall be substituted for the neuter form and vice versa, and the plural shall be substituted for the singular form and vice versa, in any place or places herein in which the context requires such

substitution(s).

26. Waiver

The waiver by City or Contractor of any breach of any term, covenant or condition herein contained shall not be deemed to be a waiver of such term, covenant or condition or of any subsequent breach of the same or any other term, covenant or condition herein contained. No term, covenant or condition of this Agreement shall be deemed to have been waived by City or Contractor unless in writing.

27. Cumulative Remedies

Each right, power and remedy provided for herein or now or hereafter existing at law, in equity, by statute, or otherwise shall be cumulative and shall be in addition to every other right, power, or remedy provided for herein or now or hereafter existing at law, in equity, by statute, or otherwise. The exercise, the commencement of the exercise, or the forbearance of the exercise by any party of any one or more of such rights, powers or remedies shall not preclude the simultaneous or later exercise by such party of any of all of such other rights, powers or remedies. In the event legal action shall be necessary to enforce any term, covenant or condition herein contained, the party prevailing in such action, whether reduced to judgment or not, shall be entitled to its reasonable court costs, including accountants' fees, if any, and attorneys' fees expended in such action. The venue for any litigation shall be San Bernardino County, California.

28. Assignment

Neither this Agreement nor any rights or obligations hereunder may be assigned or otherwise transferred by Contractor. Any attempt to so assign or transfer this Agreement or any rights or obligations hereunder without such consent shall be void and of no effect.

29. Attorneys' Fees

In the event arbitration or a judicial proceeding is brought to enforce the terms of this Agreement, the prevailing party shall be entitled to recover from the other party its reasonable costs and attorneys' fees incurred in connection therewith.

30. Notices

Notices provided hereunder shall be delivered by certified First Class U.S. Mail, postage prepaid, or by personal service as required in judicial proceedings, directed to the address provided below:

For City:
City of Commerce
2535 Commerce Way
Commerce, California 90040
Attn: Gina Nila, Operations Deputy Director of Public Works & Development Services Department

For Contractor:

XXXXX
XXXXX
Attn: XXXXX

Notice shall be deemed received three (3) days after its mailing to the above address or upon actual receipt as indicated by return receipt, whichever is earlier. Personal service shall be deemed received the same day personal delivery is affected.

31. Governing Law

The validity, performance and construction of this Agreement shall be governed by and interpreted in accordance with the laws of the State of California applicable to contracts made to be performed therein. Any litigation commenced by either party to this Agreement shall be venued in Los Angeles County, California.

32. Severability

Should any part of this Agreement be declared by a final decision by a court or tribunal of competent jurisdiction to be unconstitutional, invalid, or beyond the authority of either party to enter into or carry out, such decision shall not affect the validity of the remainder of this Agreement, which shall continue in full force and effect, provided that the remainder of this Agreement, absent the unexercised portion, can be reasonably interpreted to give effect to the intentions of the parties.

33. No Construction of Agreement Against any Party

Each Party has cooperated in the drafting and preparation of this Agreement. Hence, in any construction to be made of this Agreement, it shall not be construed against any Party on the basis such Party drafted this Agreement or any provision thereof.

34. Entire Agreement and Amendments to Agreement

This Agreement contains the entire understanding and agreement between the parties hereto with respect to the subject matter hereof and supersedes all previous communications, negotiations, and agreements, whether oral or written, between the parties with respect to such subject matter, and no addition to or modification of this Agreement or waiver of any provisions of this Agreement shall be binding on either party unless made in writing and executed by Contractor and City.

35. No Representations Except as Expressly Stated in this Agreement

Except as expressly stated in this Agreement, no Party, nor its employees, agents or attorneys have made any statement or representation to any other Party or its employees, agents or attorneys regarding any fact relied upon in entering into this Agreement, and each Party does not rely upon any statement, representation and/or promise of any other Party, its respective employees, agents or attorneys in executing this Agreement.

36. Counterpart Signatures

This Agreement may be executed in one or more counterparts. When this Agreement has been properly signed by an authorized representative of each of the Parties hereto, it shall constitute a valid Agreement, though each of the signatories may have executed separate counterparts hereof.

IN WITNESS WHEREOF, the parties hereto have each executed or caused to be executed this Agreement as of the Effective Date.

EXHIBIT B

REQUIRED INSURANCE

On or before beginning any of the services called for by any term of this Agreement, Contractor, at its own cost and expense, shall carry, maintain for the duration of this Agreement, and provide proof thereof that is acceptable to City of its procurement of the insurance specified below from insurers and under forms of insurance satisfactory in all respects to City. Such insurance shall not be in derogation of Contractor's obligations to provide indemnity under Section 18 of this Agreement.

1. Comprehensive General Liability And Automobile Liability Insurance Coverage

Contractor shall carry and maintain Comprehensive General Liability and Automobile Liability Insurance which provides the following:

Minimum coverage: Bodily injury limits of $2,000,000 for each person and $2,000,000 for each occurrence; property damage limits of $2,000,000 for each occurrence, $2,000,000 aggregate.

If a Commercial General Liability Insurance form or other form with a general aggregate limit is used, either the general aggregate limit shall apply separately to the work to be performed under this Agreement or the general aggregate limit shall be at least twice the required occurrence limit. Such coverage shall include but shall not be limited to, protection against claims arising from bodily and personal injury, including death resulting therefrom, and damage to property resulting from activities contemplated under this Agreement, including the use of owned and non-owned real property and automobiles. Insurance coverage shall not be subject to any type of pollution exclusion or owned property exclusions.

2. Errors And Omissions Insurance Coverage

Contractor shall carry and maintain Errors and Omissions Coverage Insurance which provides a minimum coverage of at least $2,000,000 for each occurrence, $2,000,000 aggregate, triggered by manifestation of injury.

3. Worker's Compensation

Before execution of the Agreement, Contractor shall file with the City the following signed certification:

> "I am aware of the provisions of Section 3700 Labor Code which require every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and I will comply with such provisions before commencing the performance of the work of this Service Agreement".

Contractor shall carry and maintain worker's compensation as required by the California Labor Code for all persons employed directly or indirectly in connection with this Agreement by Contractor or any subcontractor.

4. Additional Insureds

The City of Commerce, their officers, agents and employees must be named as additional insureds or as additional loss payees in all insurance policies required by this Agreement. An endorsement to this effect shall be delivered to City prior to the commencement of any work. Satisfaction of any deductible requirement shall be the responsibility of Contractor. Such insurance shall be primary, and noncontributory with any other insurance by the City of Commerce.

5. Cancellation Clause

Each of the policies of insurance shall contain a clause substantially as follows:

> It is hereby understood and agreed that this policy may not be canceled nor the amount of the coverage thereof be reduced until 30 days after receipt by the City Administrator of the City of Commerce of the written notice of such cancellation or reduction of coverage, as evidenced by receipt of a certified letter.

6. Severability Clause

Each of the policies of insurance shall contain a clause substantially as follows:

> The insurance afforded by this policy applies separately to each insured against whom a claim or suit is made or suit is brought, except with respect to the limit of the insurer's liability.

7. Qualifications of Insurer

All policies of insurance shall be issued by an insurance company acceptable to City and authorized to issue said policy in the State of California.

8. Approval of Insurer

The insurance carrier providing the insurance shall be chosen by Contractor subject to approval by City, provided that such approval shall not be unreasonably withheld.

9. Payment of Premiums

All premiums on insurance policies shall be paid by Contractor making payment, when due, directly to the insurance carrier, or in a manner agreed to by City.

10. Evidence of Insurance and Claims

City shall have the right to hold the policies and policy renewals, and Contractor shall promptly furnish to City all renewal notices and all receipts of paid premiums. In the event of loss, Contractor shall give prompt notice to the insurance carrier and City. City may make proof of loss if not made promptly by Contractor.

Industrial Waste / Underground Storage Tanks / Stormwater

Back

You searched the following address:

Street Number: 6364 Street Name: Zindell

Our office does not have any records (related to industrial waste/underground storage tanks/stormwater) for the requested site address.

Please double check the spelling of the street name or search a different address. Both street number and street name must be exact and spelled correctly as they appear for the facility on file. Do not include street direction prefix (i.e. N, S, E, W, etc...) or suffix (i.e. ST, AVE, RD, BLVD, etc...) unless they appear in the street name (i.e. AVENUE K, AVENIDA CESAR CHAVEZ, 10TH ST EAST, CROSSROADS PKWY N, etc...). Do not include any extra spaces after the street number or after the street name.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SOUTHERN CALIFORNIA EPA ID:: CAT000625137	***8101 S. ROSEMEAD BLV***	***ESE 1/2 - 1 (0.938 mi.)***	***P98***	***487***

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent NPL

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there are 4 RESPONSE sites within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which

there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/29/2019 has revealed that there are 22 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 4 SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 16 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 6 CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 5 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 11 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

LOS ANGELES CO LF METHANE: This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

A review of the LOS ANGELES CO LF METHANE list, as provided by EDR, and dated 04/30/2012 has revealed that there are 2 LOS ANGELES CO LF METHANE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SO CAL GAS/PICO RIVE	8101 SOUTH ROSEMEAD	ESE 1/2 - 1 (0.938 mi.)	P102	544

EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 4 records.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Sediments, Soil, Soil Vapor, Surface water, Under Investigation
Potential Contaminants of Concern:	Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride, Polychlorinated biphenyls (PCBs), DDD / DDE / DDT, Endrin, Arsenic, Lead, Naphthalene, Polynuclear aromatic hydrocarbons (PAHs), Total Petroleum Hydrocarbons (TPH), Waste Oil / Motor / Hydraulic / Lubricating
Site History:	The site contains a closed landfill that operated from approximately August 1950 through March 1954 under County of Los Angeles Industrial Permit No. 80. Part of the landfill extends offsite under the adjacent Veteran's Park. Several other closed landfills from the same era are present in the site area. The dump is reported to have accepted primarily construction debris and inert fill materials.

Violations:
Site ID: 28652
Site Name: ESCON CORPORATION
Violation Date: 03-07-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 05/17/2019. OBSERVATION: The business failed to complete and electronically submit chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. a) The new Federal Hazard Categories on reported chemicals are not applied in the facility's Hazardous Materials Inventory. b) The Hazardous Materials Inventory is missing the following hazardous materials, observed on site: - 1 x 55 gallon drum of acetone waste (l) - 4 x 55 gallon drum of solids contaminated with flammable liquids (s) CORRECTIVE ACTION: Complete and electronically submit the chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. CORRECTIVE ACTION: Complete and electronically submit the chemical inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 28652
Site Name: ESCON CORPORATION
Violation Date: 05-15-2015
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 08/05/2015. OBSERVATION: All hazardous waste containers shall be marked with the following information: 1) the words ?Hazardous Waste?; 2) name and address of generator; 3)

GOOD STUFF FOOD CO INC (Continued) **U003057853**

hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Observed 2 x 55 gallon drums containing rags and stain waste, one adjacent to spray booth and one in outside hazardous waste storage area, unlabeled. Also observed 2 x 5 gallon satellite waste accumulation (rags), 4 x 5 gallon rinse solution (cleaning of paint guns) bearing no labels. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS Description: Industrial Facility Storm Water

Violations:
Site ID: 532643
Site Name: GCP Applied Technologies Inc
Violation Date: 03-03-2016
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SWPPP
Violation Notes: The SWPPP and MRP document was incomplete.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-03-2016
Violations Found: Yes
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Staff conducted a compliance inspection at the site after staff visited the site in response to a NOT request from former company owner. At the site staff met with Mr. John D. Evelyn, Operations Manager- West Grace Construction Products of GCP Applied Technology, (562) 927-8513. The SWPPP and MRP document was reviewed. The document was incomplete. Certification was missing, the quantity of chemicals used at the site was not included and site map was missing information. Also, a description of sampling and analytical method was incomplete. A Notice to Comply was given for violation of section X of the IGP. The site was clean and organized. Totes with chemicals and empty totes were placed in containment areas outdoors. Staff recommended to keep them indoors. A review of laboratory results of storm water samples collected on January 5, 2016 storm event show exceedance of iron benchmark. A routine compliance inspection is recommended. Photos are attached.

Violation Date: 05-01-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,?2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October?1,?2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 05/13/2019.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

SHELL SERVICE STATION (Continued) **1006805324**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

DIVISION 4-DOWNEY (Continued) **U001562875**

dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date:	09-24-2018
Citation:	23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)
Violation Description:	Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(f)(2).
Violation Notes:	Returned to compliance on 05/23/2019.

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	11-06-2018
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	HMRRP inspection conducted by HMS L. Kirby. Inspection consent granted by maintenance operations manager Alan Tang and Equipment Supervisor Jason Barker. Good fire access, no obstructions. Good safety culture in practice. I found the portable fire extinguishers throughout the facility to be serviced, and even the chemical storage shed?s fire protection system was actively being inspected and tested at time of site visit. Good chemical handling practices were in-place. I observed no spills. I did issue a verbal warning to simply segretate storage of oxidizing and flammable gases (e.g. Oxygen and Acetylene) [CA Fire Code ?5003.9.8; 5303.7.1]. Pertaining to CERS compliance, the submittal is in good order with a minor issue of incomplete hazmat inventory. Need to report the Class II Combusitble Liquid - Diesel Fuel in the generator day tank at 200-gallons [HSC 25507(a)(A)(1)]. Instructed business to amend and upload new hazmat inventory to CERS.

Registry ID: 110002693862

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002647191

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Date: 02-18-2016
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 02/18/2016. OBSERVATION: Observed missing hazardous waste label on a 240 gallon used oil tank containing used oil. All hazardous waste containers shall be marked with the following information: 1) the words ?Hazardous Waste?; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. Observed manager provided hazardous waste label to a 240 gallon used oil tank at the

Violations:

Site ID: 147707
Site Name: RICH DOSS INC
Violation Date: 09-12-2016
Citation: 40 CFR 1 265.201(c)(3) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.201(c)(3)
Violation Description: Failure to inspect hazardous waste tanks at least once each operating day for the following, when present: (1) Discharge control equipment (e.g., waste feed cutoff systems, by-pass systems, and drainage systems) to ensure that it is in good working order; (2) Data gathered from monitoring equipment (e.g., pressure and temperature gauges) to ensure that the tank is being operated according to its design; (3) The level of waste in the tank.
Violation Notes: Returned to compliance on 08/16/2017. OBSERVATION: OIL SATURATED ABSORBENT ACCUMULATION ON THE FLOOR AT WASTE OIL STORAGE AREA. Facilities shall be maintained and operated to minimize the possibility of a fire, explosion, or release of hazardous waste to air, soil, or surface water. CORRECTIVE ACTION: Immediately CLEAN OILY ABSORBENT and manage according to Title 22 hazardous waste regulations.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 147707
Site Name: RICH DOSS INC
Violation Date: 09-12-2016
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Description: Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.
Violation Notes: Returned to compliance on 08/16/2017. OBSERVATION: At the time of inspection, it could not be demonstrated that employees who handle hazardous waste were properly trained. The generator must ensure that all employees who handle hazardous waste are thoroughly familiar with proper waste handling and emergency procedures. CORRECTIVE ACTION: Immediately provide training to all employees who handle hazardous waste and submit a copy of the training documentation, including (employee names, date of training, and training topics) to the CUPA.

Hazardous Waste Summary:

E.P.S D/B/A VALSPA (Continued) **1000293388**

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 135
. Waste name: Unspecified aqueous solution

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 212
. Waste name: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 461
. Waste name: Degreasing sludge

. Waste code: 591
. Waste name: Baghouse waste

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT

E.P.S D/B/A VALSPA (Continued) **1000293388**

MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F035
. Waste name: WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESSES GENERATED AT PLANTS THAT USE INORGANIC PRESERVATIVES CONTAINING ARSENIC OR CHROMIUM. THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.

Potential Media Affected:	Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern:	Not reported
Site History:	The Site is a 13-acre property located at the southwest corner of Greenwood Avenue and Slauson Avenue in the City of Commerce, California. The Site was formerly occupied by Baker Oil Tools (BOT) who manufactured oil field equipment at the Site between approximately 1950 until 1982 when the property was acquired by Gehr Industries, Inc. (Gehr). In 1987, BOT merged with Hughes Tools Company and formed Baker Hughes, Inc. BOTs operations at the Site included the use of clarifiers, sumps, underground storage tanks, degreasers, paint spray booths and machine shops. Three dry wells were also located at the Site. The Site is currently owned and occupied by Gehr whose operations include packaging and distribution of insulated wire products. Gehr also leases portions of the site to other business tenants whose operations include importing and distribution, furniture making and storage, and repair of commercial trucks.

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of

SUNSHINE PLASTICS CORP (Continued) **1000380301**

the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FINDS:

Registry ID: 110002661290

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 12/13/1999
Comments: Voluntary Cleanup Agreement was signed for DTSC to provide oversight of a remedial investigation/feasibilty study and removal action. This site is located adjacent to Chrome Crankshaft (where an Imminent and/or Substantial Endangerment Order was issued). The Suva Intermediate School is also adjacent to this site. The extent of chromium contamination is to be investigated.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Cost Recovery Closeout Memo
Completed Date: 09/16/2011
Comments: Close-out Memo sent to CRU.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/30/2003
Comments: Soil sampling was conducted at the site for metals. Sample results for the primary chemical of concern, Chrome VI, were all below 6 mg/kg. Other metals were below action levels. HERD reviewed risk calculations and determined that at these levels, the site was safe for unrestricted use.

Background Info: J & S Chrome Plating operated a chrome plating facility from 1953 to 1999. The manufacturing process consisted of chrome, zinc, and cadmium plating of metal. Solvent degreasing operations were also performed using napthylene, methyl ethyl ketone, trichloroethylene, tetrachloroethylene, & 1,1,1-trichloroethane. The two-acre site is divided into two parcels; North Parcel and South Parcel. All plating operations were reportedly performed on the South Parcel. The North Parcel is undeveloped land. Some soil remediation at the South Parcel was carried-out under the Los Angeles Regional Water Quality Control Board in 1995. Realizing that subsequent cleanup at the site is needed, the site owner applied to the Cal/EPA Site Designation Committee requesting that the Department of Toxic Substances Control (DTSC) oversee further investigation and cleanup. Cal/EPA designated DTSC the overseeing agency for remaining investigation & cleanup on February 24, 1999.
Not reported
Groundwater at the site is approximately 70 feet below ground surface. A Remedial Action Plan to treat contaminated groundwater was approved by RWQCB but not implemented. In March 1999, the unpaved north lot was sampled and hexavalent chromium was detected in shallow soils ranging from 0.122-67 mg/kg at the surface and decreasing to less than 2 mg/kg for samples collected from one- to five-feet below ground surface.
Not reported
Following DTSC's requirement that the unpaved north lot be covered, a contractor for J&S Chrome Plating submitted a Removal Action Work Plan (RAW) for paving north lot. Also, a draft Investigation Report was submitted to DTSC with a recommendation for future areas of investigation. DTSC provided comments on both the draft RAW and Investigation Report. DTSC forwarded additional comments for a revised RAW and Health and Safety Plan in December 1999 and also forwarded final comments on the Investigation Report with a request for an RI/FS Work Plan in September 1999. In September 2001, soil sampling was done on the North Parcel and an RI report is due in December 2001.
Not reported
A state funding prioritization package was developed in June 2000 and $350,000 in Orphan Sites funds was allocated for the site. DTSC activated a task order with a State Contractor to investigate the site soil and to cover the north unpaved lot with asphalt. A CEQA Notice of Exemption through Title 14 Section 15061(b)(3) (No possibility of a significant effect) was approved for this activity.

Description: J & S Chrome Plating operated a chrome plating facility from 1953 to 1999. The manufacturing process consisted of chrome, zinc and cadmium plating of metal. Solvent degreasing operations were also performed using napthylene, methyl ethyl ketone, trichloroethylene,

J&S CHROME PLATING (Continued) **S103971219**

tetrachloroethylene, & 1,1,1-trichloroethane. The two-acre site is divided into two parcels; the North Parcel and the South Parcel. All plating operations were reportedly performed on the South Parcel. The North Parcel is undeveloped land. Some soil remediation at the South Parcel was carried-out under the Los Angeles Regional Water Quality Control Board in 1995. Realizing that subsequent cleanup at the site is needed, the site owner applied to the Cal/EPA Site Designation Committee requesting that the Department of Toxic Substances Control (DTSC) oversee further investigation and cleanup. Cal/EPA designated DTSC the overseeing agency for remaining investigation & cleanup on February 24, 1999. Groundwater at the site is approximately 70 feet below ground surface. A Remedial Action Plan to treat contaminated ground- water was approved by RWQCB but not implemented. In March 1999, the unpaved north lot was sampled and hexavalent chromium was detected in shallow soils ranging from 0.122-67 mg/kg at the surface and decreasing to less than 2 mg/kg for samples collected from one to five feet below ground surface. Following DTSC's requirement that the unpaved north lot be covered, a contractor for J&S Chrome Plating submitted a Removal Action Work Plan (RAW) for paving north lot. Also, a draft Investigation Report was submitted to DTSC with a recommendation for future areas of investigation. DTSC provided comments on both the draft RAW and Investigation Report. DTSC forwarded additional comments for a revised RAW and Health and Safety Plan in December 1999 and also forwarded final comments on the Investigation Report with a request for an RI/FS Work Plan in September 1999. In September 2001, soil sampling was done on the North Parcel and an RI report is due in December 2001. A state funding prioritization package was developed in June 2000 and $350,000 in Orphan Sites funds was allocated for the site. DTSC activated a task order with a State Contractor to investigate the site soil and to cover the north unpaved lot with asphalt. A CEQA Notice of Exemption through Title 14 Section 15061(b)(3) (No possibility of a significant effect) was approved for this activity.The remedial construction activities were initiated on February 8, 2010, with construction of the on-site wells. All elements of the remedial construction were complete on June 25, 2010. Completion of minor construction and housekeeping activities were performed during July and August 2010. Preliminary startup and shakedown of the on-site hydraulic containment system (Element 2b) occurred in conjunction with the RA at OU-1 and was completed on June 17, 2010. Full-time operation of the system started in October 2010. On December 24, 2015, In exchange for release of all liability for both all past and future costs, Respondent J&S Chrome Plating Company (Isola Law Group, LLP for J&S Chrome Company a California Corporation), agreed to pay DTSC $1,000,000.00. The Consent Decree stipulated that DTSC will continue to hold a lien against the subject property in the amount of $5,237,334.05 and shall receive a payment from Respondents upon the sale of the property. At such time payment from the proceeds of the property sale is remitted to DTSC, in accordance with the terms of Section V., 27, c., DTSC will release the lien. The payment received as a result of the sale should be applied to fund 0294 to continue the operation and maintenance required at the site. Respondent James Mancuso, in exchange for release of all liability for both all past and future costs, agreed to pay DTSC $65,000.00.

CHROME CRANKSHAFT, COMPANY (Continued) **S105689595**

Background Info: Chrome Crankshaft has operated a chrome plating facility at the site since 1963. They chrome plate parts, such as crankshafts, for internal combustion and diesel engines. Chromium contamination was first detected in soils and groundwater during a site investigation conducted in 1989. Historically, eight chromium solution-containing plating tanks were used at the Facility. Plating waste was directed to an underground process tank located on the eastern side of the Facility. A 400-gallon transfer sump was located in the vacinity of the process tank. The transfer tank held plating waste. Soil and groundwater contamination resulted from releases from these tanks. A potential for complete exposure pathways exists through the ingestion, inhalation, and dermal contact exposure pathways. In 1997, at the request of USEPA, DTSC conducted a Site Prioritization (SP) which was approved by USEPA on 9/11/97. The SP revealed that the site was being overseen by the Regional Water Quality Control Board. Based on the SP, USEPA gave the site high priority status. Past site investigation activities conducted by the Facility with RWQCB's oversight included installation of five groundwater monitoring wells and limited soil investigation. On November 25, 1998, DTSC issued Chrome Crankshaft, Inc. an Imminent and Substantial Endangerment Determination and Remedial Action Order, Docket No. I&\\SE 98\\99-007. A temporary cap was constructed over exposed soils in the Facilty's backyard.
Not reported
Depth of groundwater at the site is approximately 70-feet below ground surface. The groundwater is contaminated with hexavalent chromium, TCE and PCE. Site soils contain chromium, hexavalent chromium, and lead. In an effort to gather data for defense against citizen and other party lawsuits, Chrome Crankshaft's consultant performed limited soil sampling from two deep borings, and installed and sampled six additional groundwater wells in March 2000.
Not reported
The community and adjacent schools are very sensitive to field activities at the site and require prior notification to field events, and DTSC has made great efforts to inform them of all developments.
Not reported
DTSC completed its review of the Work Plan and the associated Scoping Document in July 2000 prepared by McLaren-Hart. Significant comments were generated and issued to the RP on August 3, 2000. Due to the identified deficiencies, DTSC required substantial revision and re-submittal of these planning documents. There was no response by the RP to the DTSC comments, until early December 2000.
Not reported
DTSC issued a Notice of Proposed Determination of Non-Compliance on November 29, 2000 in an effort to motivate Chrome Crankshaft to proceed on the site cleanup. In response to the notice,Chrome Crankshaft met with DTSC on December 5, 2000 to introduce its new consultant, Clayton Associates, and to develop a revised cleanup strategy. Also, Chrome Crankshaft submitted a revised project schedule, which DTSC approved on December 14. 2000.
Not reported
Chrome Crankshaft has agreed to submit an RI/FS Workplan by

CHROME CRANKSHAFT, COMPANY (Continued) **S105689595**

December 2001.
Chrome Crankshift submitted a RAW Workplan for the demolition of the building and paving of the site. DTSC approved the RAW on 12/05/2003. Removal activities were completed on 1/16/2004.

Environmental Interest/Information System
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination

CHROME CRANKSHAFT CO (Continued) **1000334618**

or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Document Type: OPEA Consultation
Completed Date: 11/02/2017
Comments: OPEA Consultation was done for analysis of preliminary consultation topics that may be relevant during the CEQA process will start. At this consultation meeting, primary environmental areas of concern for the implementation of the anticipated remedies at the Site was discussed, including, but restrict to it, historical and current land use, project intent, site characterization results, anticipated remedies, and special conditions (air quality; biological, cultural and tribal resources, hazardous, noise, traffic, etc). It was informed that depending of the anticipated costs of the selected remedy (> $ 1,000,000), an Environmental Impact Report (EIR) may be applicable. Also, a Notice of Determination as the formal noticed filed with the State Clearinghouse will be necessary. This Notice of Determination will be a Negative Declaration or Mitigated Negative Declaration depending on which remedy(s) will be selected for the Site.

Completed Date: 06/14/2001
Comments: DTSC completes its review of the PEA Report and issues "No Further Action" letter for Lot 1 only of the former CAMEO site located at 6840 E. Slauson Avenue.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 12/08/1993
Comments: The site is identified by the RP. From 1911 to 1990 the site was used for manufacturing porcelain enamel signs for streets and highways. In 1990 the company ceased its' operations at the site and started demolition activities. The site is comprised of approximately 4.87 acres. The main contaminant at the site is hexavalent chromium. Other contaminants at the site are lead, total chromium, cadmium, zinc, nickel, copper and asbestos. A kerosene tank was removed from the site 30 years ago. Due to the evidence of onsite contamination, DTSC recommeded a PEA. DTSC notified the RP that a PEA needs to be conducted.

Completed Document Type: OPEA Consultation
Completed Date: 11/02/2017
Comments: OPEA Consultation was done for analysis of preliminary consultation topics that may be relevant during the CEQA process will start. At this consultation meeting, primary environmental areas of concern for the implementation of the anticipated remedies at the Site was discussed, including, but restrict to it, historical and current land use, project intent, site characterization results, anticipated remedies, and special conditions (air quality; biological, cultural and tribal resources, hazardous, noise, traffic, etc). It was informed that depending of the anticipated costs of the selected remedy (> $ 1,000,000), an Environmental Impact Report (EIR) may be applicable. Also, a Notice of Determination as the formal noticed filed with the State Clearinghouse will be necessary. This Notice of Determination will be a Negative Declaration or Mitigated Negative Declaration depending on which remedy(s) will be selected for the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 12/08/1993
Comments: The site is identified by the RP. From 1911 to 1990 the site was used

CAMEO (Continued) **S105557554**

for manufacturing porcelain enamel signs for streets and highways. In 1990 the company ceased its' operations at the site and started demolition activities. The site is comprised of approximately 4.87 acres. The main contaminant at the site is hexavalent chromium. Other contaminants at the site are lead, total chromium, cadmium, zinc, nickel, copper and asbestos. A kerosene tank was removed from the site 30 years ago. Due to the evidence of onsite contamination, DTSC recommeded a PEA. DTSC notified the RP that a PEA needs to be conducted.

Contact email: NLEE2@SEMPRAUTILITIES.COM
EPA Region: 09
Land type: Private
Classification: TSDF
Description: Handler is engaged in the treatment, storage or disposal of hazardous waste
Classification: Large Quantity Generator
Description: Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

Owner/Operator Summary:
Owner/operator name: SOUTHERN CALIFORNIA GAS COMPANY

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: Yes
Treater, storer or disposer of HW: Yes
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: Yes
Used oil transporter: Yes

Universal Waste Summary:
Waste type: C
Accumulated waste on-site: No
Generated waste on-site: Yes

Waste type: Batteries
Accumulated waste on-site: Yes
Generated waste on-site: Not reported

Waste type: Thermostats
Accumulated waste on-site: Yes
Generated waste on-site: Not reported

Waste type: Lamps
Accumulated waste on-site: Yes
Generated waste on-site: Not reported

Waste type: E
Accumulated waste on-site: No
Generated waste on-site: Yes

Hazardous Waste Summary:

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 123
. Waste name: Unspecified alkaline solution

. Waste code: 132
. Waste name: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

. Waste code: 133
. Waste name: Aqueous solution with 10% or more total organic residues

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 135
. Waste name: Unspecified aqueous solution

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 151
. Waste name: Asbestos-containing waste

. Waste code: 162
. Waste name: Other spent catalyst

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 212
. Waste name: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

. Waste code: 213
. Waste name: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 221
. Waste name: Waste oil and mixed oil

. Waste code: 223
. Waste name: Unspecified oil-containing waste

. Waste code: 241
. Waste name: Tank bottom waste

. Waste code: 261
. Waste name: Polychlorinated biphenyls and material containing PCB’s

SOUTHERN CALIFORNIA GAS CO (Continued) **1015730699**

. Waste code: 271
. Waste name: Organic monomer waste (includes unreacted resins)

. Waste code: 272
. Waste name: Polymeric resin waste

. Waste code: 291
. Waste name: Latex waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 341
. Waste name: Organic liquids (nonsolvents) with halogens

. Waste code: 342
. Waste name: Organic liquids with metals (see 121)

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 461
. Waste name: Degreasing sludge

. Waste code: 491
. Waste name: Unspecified sludge waste

. Waste code: 512
. Waste name: Other empty containers 30 gallons or more

. Waste code: 513
. Waste name: Empty containers less than 30 gallons

. Waste code: 541
. Waste name: Photochemicals / photo processing waste

. Waste code: 551
. Waste name: Laboratory waste chemicals

. Waste code: 581
. Waste name: Gas scrubber waste

. Waste code: 611
. Waste name: Contaminated soil from site clean-ups

. Waste code: 722
. Waste name: Liquids with cadmium > 100 mg/l

. Waste code: 723
. Waste name: Liquids with chromium (VI) > 500 mg/l

. Waste code: 724
. Waste name: Liquids with lead > 500 mg/l

SOUTHERN CALIFORNIA GAS CO (Continued) **1015730699**

. Waste code: 725
. Waste name: Liquids with mercury > 20 mg/l

. Waste code: 741
. Waste name: Liquids with halogenated organic compounds > 1000 mg/l

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: 792
. Waste name: Liquids with pH < 2 with metals

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D003
. Waste name: REACTIVE WASTE

. Waste code: D004
. Waste name: ARSENIC

. Waste code: D005
. Waste name: BARIUM

. Waste code: D006
. Waste name: CADMIUM

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: D009
. Waste name: MERCURY

. Waste code: D010
. Waste name: SELENIUM

. Waste code: D011
. Waste name: SILVER

. Waste code: D016
. Waste name: 2,4-D (2,4-DICHLOROPHENOXYACETIC ACID)

. Waste code: D018
. Waste name: BENZENE

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: D037
. Waste name: PENTACHLOROPHENOL

SOUTHERN CALIFORNIA GAS CO (Continued) **1015730699**

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F004
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: U008
. Waste name: 2-PROPENOIC ACID (I) (OR) ACRYLIC ACID (I)

SOUTHERN CALIFORNIA GAS CO (Continued) **1015730699**

. Waste code: U151
. Waste name: MERCURY

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 4259.9

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 5427.5

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 850

Waste code: D004
Waste name: ARSENIC
Amount (Lbs): 1350

Waste code: D006
Waste name: CADMIUM
Amount (Lbs): 325

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 30365

Waste code: D008
Waste name: LEAD
Amount (Lbs): 48813

Waste code: D009
Waste name: MERCURY
Amount (Lbs): 2650

Waste code: D011
Waste name: SILVER

SOUTHERN CALIFORNIA GAS CO (Continued) **1015730699**

Amount (Lbs): 13

Waste code: D018
Waste name: BENZENE
Amount (Lbs): 4318.4

RCRA-LQG:
Date form received by agency: 08/02/2018
Facility name: SOUTHERN CALIFORNIA GAS CO
Facility address: 8101 S. ROSEMEAD BLVD.
PICO RIVERA, CA 90660
EPA ID: CAT000625137
Mailing address: S. ROSEMEAD BOULEVARD
ATTN: NANCY LEE, SC721A
PICO RIVERA, CA 90660
Contact: NANCY B LEE
Contact address: S. ROSEMEAD BLVD.
PICO RIVERA, CA 90660
Contact country: US
Contact telephone: 562-806-4419
Contact email: NLEE2@SEMPRAUTILITIES.COM
EPA Region: 09
Land type: Private
Classification: TSDF
Description: Handler is engaged in the treatment, storage or disposal of hazardous waste
Classification: Large Quantity Generator
Description: Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

Hazardous Waste Summary:

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 123
. Waste name: Unspecified alkaline solution

. Waste code: 132
. Waste name: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

. Waste code: 133
. Waste name: Aqueous solution with 10% or more total organic residues

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 135
. Waste name: Unspecified aqueous solution

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 151
. Waste name: Asbestos-containing waste

. Waste code: 162
. Waste name: Other spent catalyst

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 212
. Waste name: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

. Waste code: 213
. Waste name: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

. Waste code: 214
. Waste name: Unspecified solvent mixture

SOUTHERN CALIFORNIA GAS CO (Continued) **1015730699**

. Waste code: 221
. Waste name: Waste oil and mixed oil

. Waste code: 223
. Waste name: Unspecified oil-containing waste

. Waste code: 241
. Waste name: Tank bottom waste

. Waste code: 261
. Waste name: Polychlorinated biphenyls and material containing PCB's

. Waste code: 271
. Waste name: Organic monomer waste (includes unreacted resins)

. Waste code: 272
. Waste name: Polymeric resin waste

. Waste code: 291
. Waste name: Latex waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 341
. Waste name: Organic liquids (nonsolvents) with halogens

. Waste code: 342
. Waste name: Organic liquids with metals (see 121)

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 461
. Waste name: Degreasing sludge

. Waste code: 491
. Waste name: Unspecified sludge waste

. Waste code: 512
. Waste name: Other empty containers 30 gallons or more

. Waste code: 513
. Waste name: Empty containers less than 30 gallons

. Waste code: 541
. Waste name: Photochemicals / photo processing waste

. Waste code: 551
. Waste name: Laboratory waste chemicals

. Waste code: 581
. Waste name: Gas scrubber waste

SOUTHERN CALIFORNIA GAS CO (Continued) **1015730699**

. Waste code: 611
. Waste name: Contaminated soil from site clean-ups

. Waste code: 722
. Waste name: Liquids with cadmium > 100 mg/l

. Waste code: 723
. Waste name: Liquids with chromium (VI) > 500 mg/l

. Waste code: 724
. Waste name: Liquids with lead > 500 mg/l

. Waste code: 725
. Waste name: Liquids with mercury > 20 mg/l

. Waste code: 741
. Waste name: Liquids with halogenated organic compounds > 1000 mg/l

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: 792
. Waste name: Liquids with pH < 2 with metals

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

SOUTHERN CALIFORNIA GAS CO (Continued) **1015730699**

. Waste code: D016
. Waste name: 2,4-D (2,4-DICHLOROPHENOXYACETIC ACID)

. Waste code: D018
. Waste name: BENZENE

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: D037
. Waste name: PENTACHLOROPHENOL

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F004
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

SOUTHERN CALIFORNIA GAS CO (Continued) **1015730699**

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: U008
. Waste name: 2-PROPENOIC ACID (I) (OR) ACRYLIC ACID (I)

. Waste code: U151
. Waste name: MERCURY

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 4259.9

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 5427.5

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 850

Waste code: D004
Waste name: ARSENIC
Amount (Lbs): 1350

Waste code: D006
Waste name: CADMIUM
Amount (Lbs): 325

Waste code: D007
Waste name: CHROMIUM

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007
Date Made Active in Reports: 04/10/2007
Number of Days to Update: 40

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/14/2019

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

Southeast Map:	5633777 WHITTIER, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

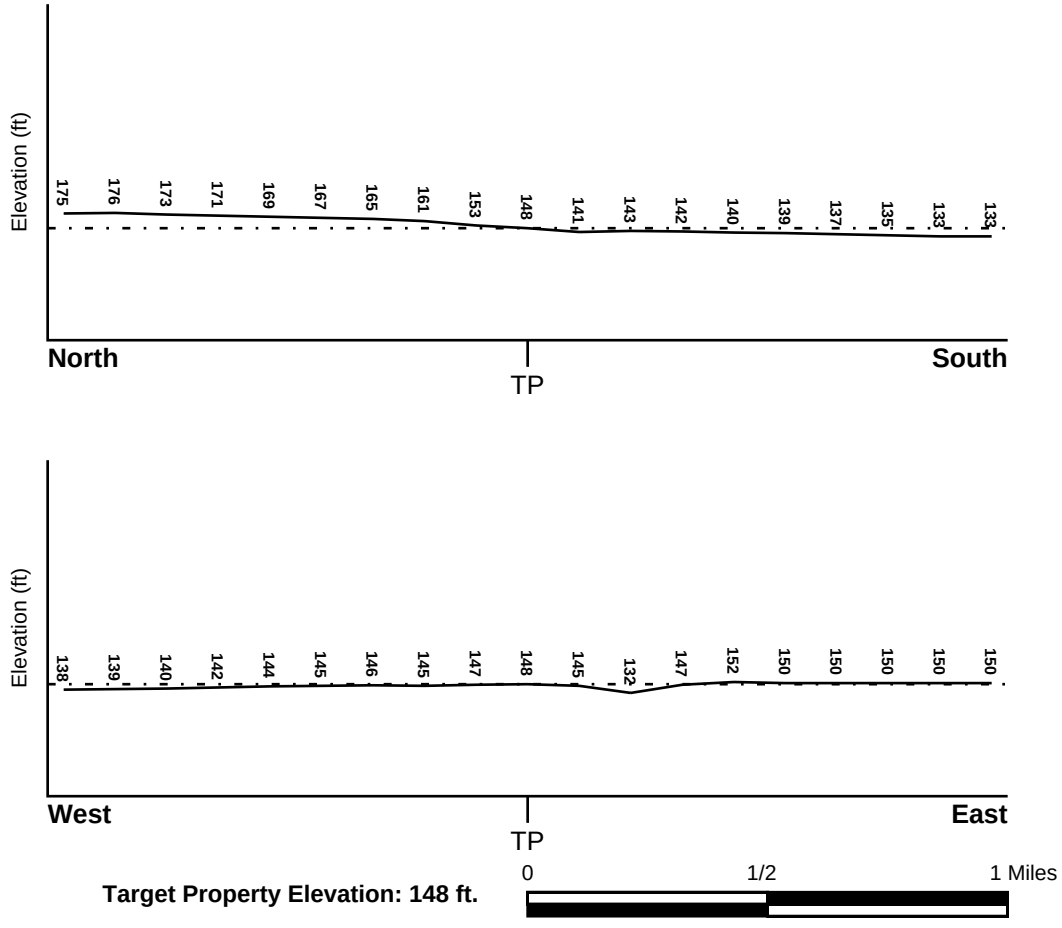
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 148 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1810F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1830F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
WHITTIER	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles WSW
Site Name:	J&S Chrome Plating
Site EPA ID Number:	CAD982400343
Groundwater Flow Direction:	WSW ON A REGIONAL BASIS.
Inferred Depth to Water:	less than 20 feet.
Hydraulic Connection:	Aquifers underlying the site are hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Demographic Profile

EJSCREEN EJ Indexes

Eleven primary environmental justice (EJ) indexes of EJSCREEN, EPA's screening tool for EJ concerns. EPA uses these indexes to identify geographic areas that may warrant further consideration or analysis for potential EJ concerns. Note that use of these indexes does not designate an area as an "EJ community" or "EJ facility." EJSCREEN provides screening level indicators, not a determination of the existence or absence of EJ concerns. For more information, see the EJSCREEN home page.

No Valid Spatial Coordinate is available for this facility

Demographic Profile of Surrounding Area (3 Miles)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2010 US Census and American Community Survey data, and are accurate to the extent that the facility latitude and longitude listed below are correct. The latitude and longitude are obtained from the EPA Locational Reference Table (LRT) when available.

TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of federal, state and local environmental databases. The report is divided into three sections:

Section 1: Facility Summary . . . . . Page 3

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports . . . . . Page 4

All available detailed information from databases where sites are identified.

Section 3: Databases and Update Information. . . . . Page 6

Name, source, update dates, contact phone number and description of each of the databases for this report.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SECTION 1: FACILITY SUMMARY

FACILITY AREA	FACILITY 1 **CITY OF COMMERCE VETERANS PARK** 6364 ZINDELL AVE COMMERCE, CA 90040 - 3831 EDR ID #S113152327
WASTE MANAGEMENT Facility generates hazardous waste (RCRA)	NO
Facility treats, stores, or disposes of hazardous waste on-site (RCRA/TSDF)	NO
Facility has received Notices of Violations (RCRA/VIOL)	NO
Facility has been subject to RCRA administrative actions (RAATS)	NO
Facility has been subject to corrective actions (CORRACTS)	NO
Facility handles PCBs (PADS)	NO
Facility uses radioactive materials (MLTS)	NO
Facility is a FUSRAP Site	NO
Facility is a UXO Site	NO
Facility is a FUELS Site	NO
Facility is an DockHWC/ECHO Site	NO
Facility manages registered aboveground storage tanks (AST)	NO
Facility manages registered underground storage tanks (UST)	NO
Facility has reported leaking underground storage tank incidents (LUST)	NO
Facility has reported emergency releases to the soil (ERNS)	NO
Facility has reported hazardous material incidents to DOT (HMIRS)	NO
WASTE DISPOSAL Facility is a Superfund Site (NPL)	NO
Facility is a Record of Decision Site (ROD)	NO
Facility has a known or suspect abandoned, inactive or uncontrolled hazardous waste site (SEMS)	NO
Facility has a reported Superfund Lien on it (LIENS)	NO
Facility is listed as a state hazardous waste site (SHWS)	NO
Facility has disposed of solid waste on-site (SWF/LF)	NO
MULTIMEDIA Facility uses toxic chemicals and has notified EPA under SARA Title III, Section 313 (TRIS)	NO
Facility produces pesticides and has notified EPA under Section 7 of FIFRA (SSTS)	NO
Facility manufactures or imports toxic chemicals on the TSCA list (TSCA)	NO
Facility has inspections under FIFRA, TSCA or EPCRA (FTTS)	NO
Facility is listed in EPA's index system (FINDS)	NO
Facility is listed in other database records (OTHER)	**YES - p4**
POTENTIAL SUPERFUND LIABILITY Facility has a list of potentially responsible parties PRP	NO
Facility is named in a CERCLA-related Consent Decree	NO
TOTAL (YES)	1

SECTION 3: DATABASES AND UPDATE DATES

To maintain currency of the following federal, state and local databases, EDR contacts the appropriate government agency on a monthly or quarterly basis as required.

Elapsed ASTM days: Provides confirmation that this report meets or exceeds the 90-day updating requirement of the ASTM standard.

DATABASES FOUND IN THIS REPORT

CA HAZNET: Facility and Manifest Data
Source: California Environmental Protection Agency
Telephone: 916-255-1136
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2017
Database Release Frequency: Annually

TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of federal, state and local environmental databases. The report is divided into three sections:

Section 1: Facility Summary . . . . . Page 3

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports . . . . . Page 4

All available detailed information from databases where sites are identified.

Section 3: Databases and Update Information. . . . . Page 6

Name, source, update dates, contact phone number and description of each of the databases for this report.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This report contains information obtained from a variety of public and other sources reasonably available to Environmental Data Resources , Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANYSUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. SECTION 1: FACILITY SUMMARY

FACILITY AREA	FACILITY 1 **LA BY-PRODUCTS - SLAUSON AVENUE PIT** 7140 SLAUSON AVENUE BELL GARDENS, CA EDR ID #S111075970
WASTE MANAGEMENT Facility generates hazardous waste (RCRA)	NO
Facility treats, stores, or disposes of hazardous waste on-site (RCRA/TSDF)	NO
Facility has received Notices of Violations (RCRA/VIOL)	NO
Facility has been subject to RCRA administrative actions (RAATS)	NO
Facility has been subject to corrective actions (CORRACTS)	NO
Facility handles PCBs (PADS)	NO
Facility uses radioactive materials (MLTS)	NO
Facility is a FUSRAP Site	NO
Facility is a UXO Site	NO
Facility is a FUELS Site	NO
Facility is an DockHWC/ECHO Site	NO
Facility manages registered aboveground storage tanks (AST)	NO
Facility manages registered underground storage tanks (UST)	NO
Facility has reported leaking underground storage tank incidents (LUST)	NO
Facility has reported emergency releases to the soil (ERNS)	NO
Facility has reported hazardous material incidents to DOT (HMIRS)	NO
WASTE DISPOSAL Facility is a Superfund Site (NPL)	NO
Facility is a Record of Decision Site (ROD)	NO
Facility has a known or suspect abandoned, inactive or uncontrolled hazardous waste site (SEMS)	NO
Facility has a reported Superfund Lien on it (LIENS)	NO
Facility is listed as a state hazardous waste site (SHWS)	NO
Facility has disposed of solid waste on-site (SWF/LF)	**YES - p4**
MULTIMEDIA Facility uses toxic chemicals and has notified EPA under SARA Title III, Section 313 (TRIS)	NO
Facility produces pesticides and has notified EPA under Section 7 of FIFRA (SSTS)	NO
Facility manufactures or imports toxic chemicals on the TSCA list (TSCA)	NO
Facility has inspections under FIFRA, TSCA or EPCRA (FTTS)	NO
Facility is listed in EPA's index system (FINDS)	NO
Facility is listed in other database records (OTHER)	**YES - p5**
POTENTIAL SUPERFUND LIABILITY Facility has a list of potentially responsible parties PRP	NO
Facility is named in a CERCLA-related Consent Decree	NO
TOTAL (YES)	2

SECTION 2: FACILITY DETAIL REPORTS

WASTE DISPOSAL

Facility has disposed of solid waste on-site

DATABASE: Permitted Solid Waste Facilities (SWF/LF)

CA LOS ANGELES CO LF METHANE: Methane Producing Landfills
Source: Los Angeles County Department of Public Works
Telephone: 626-458-6973
This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

Date of Government Version: 04/30/2012
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 07/19/2019
Date of Next Scheduled Update: 10/28/2019

Appendix G

Resumes of Project Personnel

J. JUSTIN RAUZON, REPA

Justin Rauzon, REPA

Education

MEM – Environmental Management, Duke University, 2014
BS – Zoology (Double Emphasis: Human and Marine Biology), Brigham Young University, 2004

Professional Licenses

Registered Environmental Property Assessor (REPA), National Registry of Environmental Professionals (No. 485639)

Specialty Certifications

OSHA 40-Hour Health and Safety Training for Hazardous Waste Workers
8-Hour Annual Refresher Training for Hazardous Waste Site Activities
OSHA 16-Hour Initial Asbestos Operations and Maintenance Training
Thermo Scientific Niton XRF Analyzer Operator's Training
First-Aid and CPR Training

Professional Affiliations

National Ground Water Association, Member (2015 to Present)

Professional Experience

Mr. Rauzon has more than 13 years of environmental services experience, all with SCS. Fluent in Spanish, Mr. Rauzon is an SCS Project Manager with a diverse background in biological and environmental sciences, and regularly performs environmental assessments and compliance audits at sites in the U.S. and in Latin America. He has technical and management experience with soil, soil vapor, and groundwater investigations at industrial, commercial, landfill, greenfield, and residential properties. He has extensive experience with environmental laws and regulations in both the U.S. and Mexico. His work experience includes all project phases, from development of cost estimates for various site assessment and cleanup programs to implementing remediation programs and interfacing with regulatory agencies.

Selected projects in which he has participated are described below.

Environmental Management

Due diligence assessments of properties prior to real estate transfer of properties in California, Arizona, New Jersey, Mexico, Puerto Rico, and the Dominican Republic. Mr. Rauzon has completed numerous due diligence assessments of properties prior to acquisition, disposition, or loan financing by investment banks, insurance companies, corporations, non-profit entities, real estate developers, and private parties. Projects have included Phase I assessments that meet federal All Appropriate Investigation (AAI) regulations, American Society for Testing and Materials

(ASTM) standards, and client-specific guidelines; inspections for asbestos and lead-based paint; Phase II investigations; preparation of abatement and remediation cost estimates; and regulatory agency coordination. These projects frequently involve review of previous environmental reports and investigation of current and past on-site operations, regulatory agency records searches, evaluation of historical property use information, identification of nearby potentially contaminated sites, and development of appropriate conclusions about environmental risks. Investigations involve preparation of work plans, soil boring and subsequent sampling, groundwater well installation and sampling, soil gas probe installation and sampling, precision mapping, evaluation of contaminants in accordance with regulatory requirements or generally accepted guidelines, preparation of investigation report, and analysis of applicable remedial alternatives. Mr. Rauzon has served as the Project Manager for sites that have received regulatory closure from various regulatory agencies.

Planning, coordinating, and supervising remedial actions that included excavation, transport, and disposal of contaminated soils and water. Investigations involve preparation of Remedial Action Plans (RAPs), direction of fieldwork, oversight of confirmatory sampling, and interfacing with regulatory agencies.

The characterization of hazardous waste materials. These projects include collection of soil and/or liquid samples to profile the waste materials, interpretation of laboratory results, and evaluation of disposal/recycling options to minimize the costs and liabilities to clients associated with the removal of wastes.

Assessment and certification of hazardous waste tank systems. These investigations involve working with a Professional Engineer to complete field inspections of hazardous waste tanks, associated ancillary equipment, leak-detection systems, and secondary containment devices, as well as interfacing with regulatory agencies.

Project Management

Project Manager for due diligence investigation of a portfolio with more than 300 industrial sites throughout Mexico. SCS services included conducting Phase I and Phase II environmental assessments within the strict timeline of the $1.2 billion industrial real estate transaction. Subsequent to the closing of the deal, SCS provided ongoing consulting services to facilitate integration and management of various facilities with ongoing environmental issues.

Project Manager for hazardous materials consulting services in support of the State Route 91 Corridor Improvement Project in Orange and Riverside Counties, CA. SCS services included sampling and inventory of potentially hazardous materials associated with more than 25 bridges along the SR-91 and I-15 freeways; environmental assessments on properties within the proposed freeway expansion area; and soil testing for herbicides, pesticides, and fungicides on several land parcels.

Project Manager for investigation and remediation of industrial facility located in Fontana, CA. SCS conducted a series of environmental assessments, investigations, and remedial activities that provided sufficient information to identify environmental issues and business risks, and facilitate the client's successful purchase of property. A number of recognized environmental conditions, including releases of coal tar, solvents, heavy metals, and total petroleum hydrocarbons, were identified. Project activities conducted during the acquisition and redevelopment of the property included shallow and deep soil and soil vapor investigations; installation of groundwater monitoring wells and subsequent groundwater sampling; subsequent remedial excavation under San Bernardino County Fire Department (SBCFD) oversight to obtain closure; and excavation and off-site disposition of contaminated soil.

Health and Safety

Mr. Rauzon has participated in a certified health and safety program in compliance with OSHA Standard 29 CFR 1910.120. He is knowledgeable in incident response operations, team functions, personnel safety, and field equipment. He is able to recognize and evaluate potential chemical and physical hazards and associated risks in field operations; discuss and use personal protective equipment (PPE), such as respiratory protection and protective clothing; use and interpret direct-reading instruments; and examine and establish Standard Operating Safety Guidelines to ensure safe and effective response operations.

Publications

Rauzon, J. J., "Mexico: Environmental Due Diligence and the Mexican Waste Law," EHS Journal, November 13, 2010.

RAYMOND H. HUFF, REPA

Education

BA – Philosophy (Minor in Geology), Whittier College, 1991
MBA – Information Systems Emphasis, Keller Graduate School of Management, 1999

Professional Licenses

Accredited Lead Verifier under California Air Resources Board (CARB) with Transactions, Oil and Gas Systems, and Process Emissions Specializations
Registered Environmental Property Assessor (REPA) (No. 106984), National Registry of Environmental Professionals

Specialty Certifications

40-Hour OSHA Hazardous Waste Site Operations (HAZWOPER) Health and Safety Certification
8-Hour OSHA HAZWOPER Supervisor Certification

Professional Affiliations

Board of Directors, Southern California Waste Management Forum
Landfill Gas Technical Advisory Group; California Department of Recycling and Recovery (CalRecycle)
Solid Waste Association of North America (SWANA)
Air & Waste Management Association (AWMA)

Professional Experience

Mr. Huff, a Vice President with SCS Engineers, has over 27 years of experience in environmental consulting, specializing in landfill regulatory compliance, assessment, remediation, post-closure care, and air quality/compliance issues, including greenhouse gas (GHG) emissions quantification. He is the closed landfill regulatory compliance and GHG emissions quantification Project Lead within SCS's offices throughout the western U.S., responsible for technical expertise on landfill post-closure care and redevelopment, landfill reactions (chemical and oxidation-based), GHG emissions quantification and verification, landfill regulatory compliance, and emissions quantification procedures.

Mr. Huff is also the National Lead for compliance with the federal Greenhouse Gas Reporting Program (GHGRP) within SCS, responsible for quantifying and reporting for more than 600 of the 900 landfills subject to the GHGRP. Because of this expertise, Mr. Huff has assisted the U.S. Environmental Protection Agency (EPA) with investigation and solution of errors identified in the electronic Greenhouse Gas Reporting Tool (e-GGRT).

Through his expertise, Mr. Huff has been the Project and Task Manager on a variety of projects related to landfill investigations, risk assessments, solid waste management, GHG/air regulatory compliance, hazardous waste management, hazardous substance site investigation and remediation, as well as other environmental issues.

Landfill

Environmental Monitoring and Post-Closure Care for Cal-Compact Landfill, Carson, CA (SWIS # 19-AQ-0012). This 157-acre site was a former hazardous waste landfill, currently being considered for redevelopment, and currently is under the oversight of the Department of Toxic Substances Control (DTSC). Project tasks included overall site management, including regulatory liaison on behalf of site owners, landfill gas (LFG) monitoring and assessment, LFG system operation and maintenance (O&M), groundwater sampling and analysis, cover maintenance and repair, site security, storm water sampling/analysis and inspections, LFG engineering, design of methane protection systems, and site development assistance.

CalRecycle, LFG Monitoring Well Functionality for 20 Landfills, CA. Under contract with CalRecycle (formerly CIWMB), Mr. Huff developed the approach and implemented a functionality assessment of 200 LFG monitoring probes at 20 landfills located throughout California. The functionality assessment entailed an initial condition assessment, gas monitoring, vacuum testing, video borescope inspection, and lithologic evaluation of each probe included in the study. The results of this study were presented to the CIWMB and utilized to develop the CIWMB's probe construction best management practices (BMPs).

LFG Engineering and O&M for Confidential Landfill, MO. The site was a former rock quarry located in Eastern Missouri, which at the time was undergoing an elevated temperature reaction within the waste mass. The scope of work included ongoing O&M of the existing gas collection and control system (GCCS), as well as data analysis and reporting to state and federal regulatory agencies. Mr. Huff was the SCS Team Lead for the project, coordinating activities between state, federal, and local regulatory agencies and public interest groups, and preparing high-level reports for site owners to better understand the extent and financial impact of the reaction.

LFG Assessment, Cover Maintenance, and Monitoring for Cogen Kramer Landfill, Los Angeles, CA (SWIS # 19-AA-0581). The site is located adjacent to residential development and two Los Angeles County correctional facilities. Project tasks included an assessment and emergency cover repair associated with a subsurface combustion event, LFG migration assessment, and preparation of an LFG and cover assessment work plan for installation of LFG migration probes and ongoing cover maintenance. The project included regulatory liaison with the Los Angeles County Law Enforcement Agency (LEA), CalRecycle, EPA, and South Coast Air Quality Management District (SCAQMD). In addition, methane monitoring was conducted associated with the use of one of the closed jail facilities for TV and movie productions.

Investigation and Remediation for Former Landfill, Long Beach, CA (SWIS # 19-AK-5018). Mr. Huff was Project Manager for the investigation of potential contamination derived from the landfill site adjacent to the Long Beach Memorial Medical Center. The area was the site of an expansion of the hospital and included oil field wastes and municipal waste disposal. Investigations included soil and soil vapor analyses in addition to an evaluation of the lateral and vertical extent of waste disposal. Project activities also included the excavation and removal of contaminated material and California Environmental Quality Act (CEQA) support during development of the hospital expansion.

Landfill Investigation, LFG Engineering, Human Health Risk Evaluation and Impact Assessment, Proposed Residential Developments for Site Adjacent to the Otay Landfill, Chula Vista, CA (SWIS # 37-AA-0010). Project activities at the site included an evaluation of LFG migration, LFG engineering and testing, air quality permitting and compliance, soil and LFG sampling and analysis, human health risk assessment (HHRA) and nuisance/odor evaluation, CEQA assistance, O&M of the LFG collection and control system, and other landfill engineering and construction services. The risk

assessment and odor/nuisance analysis was completed to support residential development adjacent to the landfill.

HHRA Evaluation and Impact Assessment for Proposed Commercial Developments for Site Adjacent to BKK Landfill, West Covina, California (SWIS # 19-AF-0001). The BKK site included two landfills: one municipal solid waste landfill and one hazardous waste site, which were under the oversight of the DTSC. Mr. Huff completed various investigations and data reviews/analyses of soil, surface water, groundwater, LFG, and air quality. The data were used for the completion of an HHRA in support of the CEQA process for a proposed golf course and business park development on the Class III landfill.

Investigation, Risk Assessment, and Remediation Feasibility Study for Mission Bay Landfill, San Diego, CA (SWIS # 37-AA-0026). Mr. Huff developed the LFG sampling portion of the site assessment work plan for the former landfill site, which is located next to a river, bay, and amusement park and is used heavily for recreational purposes. The field investigations were followed by a risk assessment, and, given the highly visible and public nature of the landfill project, focus on risk communication was the primary importance. Ultimately, several candidate risk-based remediation methods applicable to the site were identified with typical costs associated with each method. The project included interface with the San Diego County Air Pollution Control District (SDAPCD), Regional Water Quality Control Board (RWQCB), Solid Waste Local Enforcement Agency (LEA), and DTSC.

County of Monterey, Salinas Valley Solid Waste Authority (SVSWA) Air Quality Impact Assessment (AQIA), HHRA, and CEQA Assistance for Regional Landfill Project, CA. Regional air quality impacts, including an HHRA, were evaluated as part of an EIR for 4 different combinations of the expansion of 3 regional landfills and the placement of 10 regional transfer stations throughout the Salinas Valley. One of the landfills contained hazardous waste, including burn ash, which had to be evaluated for potential health risks. The risk assessments included an evaluation of risks from diesel exhaust from mobile equipment and vehicles.

Landfill Investigation, Regulatory Compliance, and LFG Engineering Activities for Upland Sanitary Landfill, Upland, CA (SWIS # 36-AA-0005). Project activities at the site included design and installation of a perimeter probe migration monitoring system, LFG collection and control system evaluation and engineering, air emissions sampling and analysis, and development of alternative regulatory compliance plans under SCAQMD Rule 1150.1, including regulatory liaison with California Integrated Waste Management Board (CIWMB) closed, illegal, and abandoned (CIA) staff.

Landfill Gas Assessment, Cover Maintenance, and Monitoring for Lane Road Disposal, Irvine, CA (SWIS # 30-CR-0063). The site is located adjacent to residential development and had been redeveloped into a golf course. Project tasks included LFG assessment, methane testing in nearby homes, installation of LFG migration probes, cover repair and ongoing cover maintenance, preparation of LFG assessment and cover maintenance plan, design and installation of LFG collection and control system to prevent migration onto residential properties, and regulatory liaison with the Orange County LEA, Santa Ana Regional Water Quality Control Board (SARWQCB), Orange County Integrated Waste Management Department (OCIWMD), CIWMB, and SCAQMD.

Environmental Investigations and Risk Assessment for Former BKK Main Street Landfill, West Covina, CA (SWIS # 19-AQ-0014). The landfill was a closed site that received both hazardous and nonhazardous wastes; at the time, it was occupied by two golf courses and additional commercial and residential developments and was considered for redevelopment. The project work at the facility had included completion of soil vapor extraction (SVE) surveys, installation and monitoring of LFG migration probes, LFG sampling/analysis, oversight of cover and subsurface soil and groundwater

sampling, completion of an HHRA, CEQA assistance, and negotiations with regulatory agencies. The site was considered for listing on the National Priorities List (NPL) as a potential Superfund site. Oversight of the landfill was provided by EPA Region IX, DTSC, and the Los Angeles County landfill LEA.

Landfill Investigation and Human Health Risk Evaluation/Impact Assessment for Proposed Residential Development Adjacent to a Landfill, Union City, CA. The project included completion of various soil, LFG, and groundwater investigations, and development of two risk assessments to support the development of residences adjacent to the landfill, as well as clean closure of a portion of the site for additional residential development on site. SCS also provided CEQA assistance for the proposed developments.

New Source Performance Standard (NSPS) LFG Sampling and Analysis for Multiple Landfills, Kern County, CA. For this project, Mr. Huff conducted NSPS Tier 2 LFG sampling and analysis in accordance with federal NSPS regulations at four landfills in Kern County. He performed field investigations in 1998 and resampled three of the four landfills in 2003 in accordance with federal resampling procedures set forth in NSPS regulations. In addition to conducting the field investigations, Mr. Huff completed statistical analyses of raw analytical data, and authored the final data reports submitted to the EPA.

HHRA

HHRA for Proposed Residential Development at Former Crude Oil Tank Farm, Norwalk, CA. For this project, Mr. Huff performed an assessment that included an HHRA and an evaluation of the potential human health impacts associated with a neighboring crude oil storage facility to support residential redevelopment of the site. The risk assessment included evaluation of a disposal area for oil field wastes, and was performed as part of the CEQA process for site redevelopment.

Environmental Investigations and Risk Assessment for Former Landfill, Los Angeles County, CA. This landfill was a closed site that received both hazardous and nonhazardous wastes; at the time, it was occupied by two golf courses and additional commercial and residential developments and was considered for redevelopment. Project work included completion of SVE surveys, installation and monitoring of LFG migration probes, LFG sampling/analysis, oversight of cover and subsurface soil and groundwater sampling, completion of an HHRA, CEQA assistance, and negotiations with regulatory agencies. The site was considered for listing on the NPL as a potential Superfund site. Oversight of the landfill was provided by EPA Region IX, DTSC, and the Los Angeles County landfill LEA.

Creation of Baseline HHRA and Ecological Risk Assessment for Former Rocket Manufacturing Facility, Van Nuys, CA. The facility was undergoing site mitigation under RCRA. Contaminants at the site included heavy metals, pesticides, PCBs, hydrazine, and VOCs. The ecological risk assessment included terrestrial ecosystems.

Investigation of Former Oil Refinery, Central CA. As Key Field Geologist, Mr. Huff conducted remedial excavations of lead-impacted soils, in addition to planning, scheduling, and coordinating quarterly sampling of 73 multi-aquifer groundwater monitoring wells located in and around the site. He also designed and installed 16 groundwater monitoring wells located in 3 different aquifers for contaminant plume tracking and remediation, and compiled data and prepared reports for submittal to the regulatory agency.

Creation of Baseline HHRA and Ecological Risk Assessment for Former Electronics Manufacturing Facility, Los Angeles, CA. Contaminants at the site included chlorinated solvents. The ecological risk assessment included terrestrial ecosystems.

HHRA and Impact Assessment for Proposed Commercial Developments Adjacent to Former Hazardous Waste Landfill, Southern CA. The site contained two landfills, one municipal solid waste landfill and one hazardous waste site, which were under the oversight of the DTSC. Mr. Huff completed various investigations and data reviews/analyses of soil, surface water, groundwater, LFG, and air quality. The data were used for the completion of an HHRA in support of the CEQA process for a proposed golf course and business park development on the Class III landfill.

Remedial Oversight for Cleanup of Former Petroleum Refinery and State Superfund Site, Southern CA. As Key Field Geologist, Mr. Huff provided remedial oversight for cleanup of more than 1,000,000 cubic yards of contaminated soils excavated for on-site treatment using bioremediation and vapor extraction.

Investigation, Risk Assessment, and Remediation Feasibility Study for Former Landfill, San Diego County, CA. Mr. Huff developed the LFG sampling portion of the site assessment work plan for the former landfill site, which was located next to a river, bay, and amusement park and was used heavily for recreational purposes. The field investigations were followed by a risk assessment, and, given the highly visible and public nature of the landfill project, focus on risk communication was the primary importance. Ultimately, several candidate risk-based remediation methods applicable to the site were identified with typical costs associated with each method. The project included interface with multiple regulatory agencies. Site investigative activities included preparation of work plans, conducting soil gas surveys, installation of soil borings and subsequent sampling, evaluation of applicable remedial alternatives, and assessment of hydrocarbon contaminant plumes from a variety of sources, including leaking underground storage tanks (USTs), aerospace facilities, and former petroleum refineries.

Kern County Waste Management Department, GHG Emissions Inventory of Creditable GHG Reductions. Mr. Huff performed GHG emission inventory services of creditable GHG reductions.

City of Fresno Wastewater Treatment Plant (WWTP), AB32 Mandatory Reporting, Fresno, CA. Mr. Huff assisted in the completion of AB32 Mandatory reporting for the WWTP, and six active landfills for Waste Management, Inc.

GHG Inventory and CAR Reporting, CA. Mr. Huff completed GHG inventory for Los Angeles County, City of Carlsbad, CA, and Republic Services, Inc.

Specialized GHG Inventory Calculations. Mr. Huff assisted in the completion of multi-year specialized GHG inventory calculations for landfill emissions (carbon dioxide and methane) for Waste Management.

GHG Inventory Consulting. Mr. Huff provided GHG inventory consulting for the Los Angeles County and City of Carlsbad GHG Inventory Consulting.

S**oftware Testing and Evaluation.** Mr. Huff provided software testing and evaluation of the Climate Action Reserve emissions tracking and trading software.

Expert Testimony

2013 – Mr. Huff was an expert witness in regard to GHG credit dispute for confidential client. His work included rebuttal of plaintiff expert opinions, including deposition, arbitration testimony, and open-court testimony.

2015 – Mr. Huff was an expert witness in regard to LFG monitoring data interpretation for confidential client within state court. His work included preparation of exhibits and affidavits used for rebuttal of plaintiff expert witnesses.

Storm Water

Mr. Huff has been involved in numerous projects related to compliance with water and wastewater discharge limitations, including storm water and wastewater compliance sampling and discharge monitoring. His expertise allowed him to be the Lead Staff personnel on a variety of projects related to water quality, storm water, and wastewater, as well as additional environmental issues. He has participated in the following projects and studies:

- Engineering design, design review, and construction management for industrial wastewater pretreatment systems at industrial and commercial facilities.
- Pollutant loading and flow rate assessments for wastewater conveyance systems at industrial facilities.
- Development of wastewater sampling manuals and training of industrial facility personnel in proper sampling techniques.
- Installation, monitoring, and sampling of well systems to determine surface infiltration rates and the presence and nature of subsurface contaminants in groundwater.
- Performance of regulatory compliance audits, facility permitting, and interface with local, state, and federal agencies to ensure compliance with all applicable rules and environmental regulations.

Groundwater

Mr. Huff has a background in geology and paleontology. Since joining SCS, he has been involved in numerous projects related to investigation of sites with contaminated soil and groundwater.

His participation includes:

- Key Field Geologist in remedial oversight for cleanup of a state Superfund site located in Southern California. More than 1,000,000 cubic yards of contaminated soils were excavated for on-site treatment using bioremediation and vapor extraction.

- Planning and direction of field investigations of hazardous waste sites to identify and characterize contaminants in soil and groundwater.

- Assessment of hydrocarbon contaminant plumes from a variety of sources, including leaking underground storage tanks (LUSTs) and former petroleum refineries.

- Site investigative activities, including preparation of work plans, conducting soil gas surveys, installation of soil borings and subsequent sampling, and evaluation of applicable remedial alternatives.

- Installation, monitoring, and sampling of well systems to determine the presence and nature of subsurface contaminants in groundwater.

- In-field design and installation of vapor extraction systems for the remediation of volatile contaminants in subsurface soils.

- Preparation of health and safety (H&S) plans submitted for regulatory approval. This includes hazardous waste characterizations, emergency response planning, establishing site operating procedures, and field implementation of H&S plans.

- Preconveyance environmental assessments of properties prior to real estate transfer. The projects consist of evaluating past on-site operations, identifying potentially contaminated sites, record searches of files maintained by regulatory agencies, and collection and analysis of groundwater quality information, where applicable.

Additional Project Experience

- In-field design and installation of SVE systems for the remediation of volatile contaminants in subsurface soils.

- Planning and direction of field investigations of numerous hazardous waste sites to identify and characterize contaminants in soil and groundwater.

- Preparation of H&S plans submitted for regulatory approval. This includes hazardous waste characterizations, emergency response planning, establishing site operating procedures, and field implementation of health and safety plans.

- Preconveyance environmental assessments of properties prior to real estate transfer. The projects consist of evaluating past on-site operations, identifying potentially contaminated sites, record searches of files maintained by regulatory agencies, and collection and analysis of groundwater quality information, where applicable.

Mr. Huff is skilled in management information systems (MIS), database design, programming, and computer modeling. He is responsible for the collection, conversion, manipulation, and management of data used in risk assessments, groundwater and vadose zone migration, and water fate and transport modeling, and for designing and developing maps, cross-sections, and 3-D visualizations of surface and subsurface environments.

He also has performed project and financial management for internal and external projects using business practices and project management skills acquired during completion of his Master's degree in Business Administration.

Prior to joining SCS, Mr. Huff was affiliated with Green & Associates, an environmental consulting firm that provided services such as Phase I environmental site assessments (ESAs), asbestos assessments, and evaluation of core samples for paleontological purposes for major oil companies.

RE: LIMITED ENVIRONMENTAL SITE ASSESSMENT
FORMER GAGE AVENUE LANDFILL
7316 EAST GAGE AVENUE
COMMERCE, CALIFORNIA

Dear Mr. Comstock:

TRC is pleased to submit this report summarizing the findings of a limited environmental site assessment for the Former Gage Avenue Landfill property located at 7316 East Gage Avenue in Commerce, California.

If you have any questions regarding this report, please call me at (949) 341-7458.

Sincerely,

TRC

David Lennon
Principal Consultant

C Official Laboratory Reports and Chain of Custody Records

1.0 INTRODUCTION AND OBJECTIVE

This report presents the results of limited environmental site assessment activities conducted at 7316 East Gage Avenue, Commerce, California (the Site [see Figure 1]). The objective of these activities was to excavate five test trenches to verify the landfill material floor depth and collect soil samples for environmental testing. Figure 2 shows the five test trench locations.

This scope of work was conducted in accordance with TRC's Cost Estimate for Phase II Environmental Site Assessment dated April 25, 2013.

2.0 SITE DESCRIPTION

The Site consists of approximately 7.92 acres of vacant land with no structures in a mixed commercial/industrial area and is identified by the Los Angeles County Office of the Assessor as Parcel Number 6357-018-005. The property is bounded to the north by the Southern Pacific Railroad main line and right-of-way, to the east by Interstate 5 freeway, to the south by the Rio Hondo percolation basin/flood control channel and to the west by the Veteran's Memorial Park.

3.0 SITE HISTORY

From approximately 1950 to 1954, the Site was reportedly operating as the Gage Avenue Landfill, accepting municipal solid wastes, construction debris and inert fill materials. The Gage Avenue Landfill is identified in the California Solid Waste Information System (SWIS) database as facility No. 19-AA-5543. In 1958, an approximately 52,160 square-foot rectangular commercial building and railroad spur was constructed over the landfill material at the Site. The commercial building was declared unsafe by the County of Los Angeles Fire Department in February 1991 due to settling of the ground surface beneath the pile supported building structure and was demolished in 1992. The Site is currently vacant undeveloped land partially covered with asphalt.

4.0 GEOLOGY AND HYDROGEOLOGY

The Site situated at an elevation of approximately 151 feet relative to mean sea level (msl) with the surface elevation sloping gently towards the south. Depth to groundwater at the Site is estimated to be approximately 90 feet below grade (fbg) based on historical groundwater monitoring events conducted at 7825 Telegraph Road (GeoTracker, 2013). The Site is centrally situated at the southern edge of the Montebello Plain physiographic feature within the Coastal Plain of the Los Angeles Basin. According to published geologic maps and cross sections (CDWR, 1961), the Site overlies late Pleistocene-age sediments of the Lakewood formation. The Lakewood formation is described as being sedimentary in origin and consists of marine and continental gravel, sand, silty sand, silt, and clays. The Site lies within the Central Groundwater Basin, a subdivision of the Coastal Plain of Los Angeles County east and northeast of the Newport-Inglewood uplift. Local hydrostratigraphic features (from shallowest to deepest) include the Bellflower aquiclude, Exposition aquifer and Gage aquifer within the Lakewood

formation. Deeper hydrostratigraphic features of the underlying San Pedro formation include the Hollydale aquifer, Lynwood aquifer, Silverado aquifer, and Sunnyside aquifer. The aquifers of the Central Groundwater Basin are generally separated by low-permeability aquitards that limit vertical groundwater conductance between aquifers (CDWR, 1961).

5.0 PREVIOUS ENVIRONMENTAL ACTIVITIES

An 8,000 gallon diesel underground storage tank (UST) was installed at the Site in 1975 and removed in 1989. During UST removal, petroleum hydrocarbon contaminated soil was discovered in soil samples collected from within the former tank cavity. The California Regional Water Quality Control Board, Los Angeles Region, issued a regulatory case closure letter for this case on March 10, 1998.

A geotechnical investigation for Dynamics Builders was conducted in 2004. Ten soil borings were advanced to a maximum depth of 80.5 fbg indicating landfill cell debris up to 29 feet in depth. The 2004 effort subsequently advanced 173 supplemental borings, using a 40-foot grid pattern to further evaluate landfill cell thickness across the Site. During the supplemental investigation, an "oil contamination smell" was observed in Soil Boring 79. A copy of the 2004 Geotechnical Investigation Report is included in Appendix A.

6.0 ASSESSMENT ACTIVITIES

6.1 PRE-FIELD

Prior to conducting assessment activities:

- A site health and safety plan was prepared.
- The proposed trenching locations were staked and the property boundaries marked with white spray paint prior to Underground Service Alert (USA) notification. The owners of underground utilities in the area were notified by USA, and the utilities present at the property boundaries were marked.

6.2 TRENCH INVESTIGATION

On May 8, 2013, five trench locations (T1 through T5) were excavated throughout the Site to estimate the landfill cell floor depth, estimate the quantity of landfilled material in relation to soil within the cell, and to obtain soil samples for environmental testing. Figure 2 shows the approximate locations of the five test trenches. The surface dimensions of the five trenches were approximately 5 feet by 20 feet. The depth of the trenches ranged from approximately 19 to 23 fbg. Gray, fine-grained sand was encountered in the underlying soil at the bottom of each test trench. Groundwater was not encountered in any of the test trenches. A copy of the trench logs is provided in Appendix B.

6.3 SOIL SAMPLING AND ANAYSIS

Field-composited, landfill-derived soil samples were collected from the following depth intervals:

- 0 to 5 fbg (1, 2, 3, 4 & 5 foot depth intervals);
- 5 to 10 fbg (6, 7, 8, 9 & 10 foot intervals from the excavator bucket);
- 10 to 15 fbg (11, 12, 13, 14 & 15 foot intervals from the excavator bucket); and
- 15 to 20+ fbg (1 foot intervals starting at 16 fbg).

Two non-composited soil samples were collected of the material underlying the landfill cell floor at 18 and 23 fbg, approximately 1 foot below the cell floor. Soil samples T4-18 and T2-23 were collected from gray, fine-grained sand underlying the landfilled materials.

Soil gas was measured prior to and during trench excavation. A four-gas meter was utilized to measure methane, hydrogen sulfide, carbon dioxide and percentage of oxygen. A photoionization detector (PID) was used to measure volatile organic compounds (VOCs). Soil gases in ambient air were not detected prior to trench excavation. Methane concentrations up to 590 parts per million (ppm) and carbon dioxide up to 1,000 ppm were measured in the stockpiled material following excavation. VOCs were measured in Trench T1 at 4 fbg, up to 52 ppm.

A total of 22 soil samples were submitted to BC Laboratories, Inc. in Bakersfield, California for chemical analysis. Twenty soil samples (four samples per trench) were analyzed for total petroleum hydrocarbons as gasoline (TPH-G) by California LUFT, and TPH carbon chain (TPH-cc) by EPA Method 8015, VOCs by EPA Method 8260B, semi-volatile organic compounds (SVOCs) by EPA Method 8270C, organo-chlorine pesticides and polychlorinated biphenyls (PCBs) by EPA Method 8080 and Title 17 metals by EPA Methods 6010B/7000.

6.4 BACKFILLING

Excavated materials were placed back into the respective trench and tamped into place with the excavator bucket.

7.0 FINDINGS

A select summary of the results of laboratory analysis of soil samples collected is presented below. For all analyzed chemicals, refer to the Official Laboratory Report in Appendix C.

- Total petroleum hydrocarbons (C8 to C44) were detected in 19 of the 20 soil samples ranging from 440 to 8,500 milligrams per kilogram (mg/kg). Composited soil samples T1-5 and T4-15 reported TPH concentrations of 8,500 and 8,000 mg/kg, respectively. The majority of the hydrocarbons detected were within the oil range (C21 to C43).

- TPH-G (C4-C12) was detected in 15 of the 20 soil samples at concentrations ranging from 0.24J mg/kg to 39 mg/kg. Soil sample T1-5 collected from Trench 1 was reported with the highest concentration of 39 mg/kg.

- VOCs were detected at concentrations less than 1.0 mg/kg in 17 of the 20 soil samples. No detectable concentrations of tetrachloroethylene (PCE) or trichloroethylene (TCE) were detected in any of the soil samples. See Table 2.

VOCs were detected at concentrations less than 1.0 mg/kg in 17 of the 20 soil samples. No detectable concentrations of tetrachloroethylene (PCE) or trichloroethylene (TCE) were detected in any of the soil samples. See Table 2.

- SVOCs were detected in 6 of the 20 samples. Concentrations of bis(2-ethylhexyl)phthalate up to 11 mg/kg were detected in sample T1-5. Concentrations of fluorene, 2-methylnaphthalene, naphthalene, phenanthrene and pyrene were detected in soil sample T4-18. No detectable concentrations of polycyclic aromatic hydrocarbons (PAHs) were detected in the 19 other soil samples.

- Pesticides were detected in 13 of 20 soil samples. The compounds and their maximum concentrations are as follows: 4,4´-DDD (28 mg/kg), 4,4´-DDE (1.1 mg/kg), 4,4´-DDT (7.8 mg/kg), dieldrin (9.6 mg/kg), and endrin (0.59 mg/kg). The regional screening levels (RSLs) for pesticides in industrial soil were exceeded for 4,4´-DDD, 4,4´-DDT and dieldrin. See Table 4 the Summary of Organo-Chlorine Pesticides in Soil.

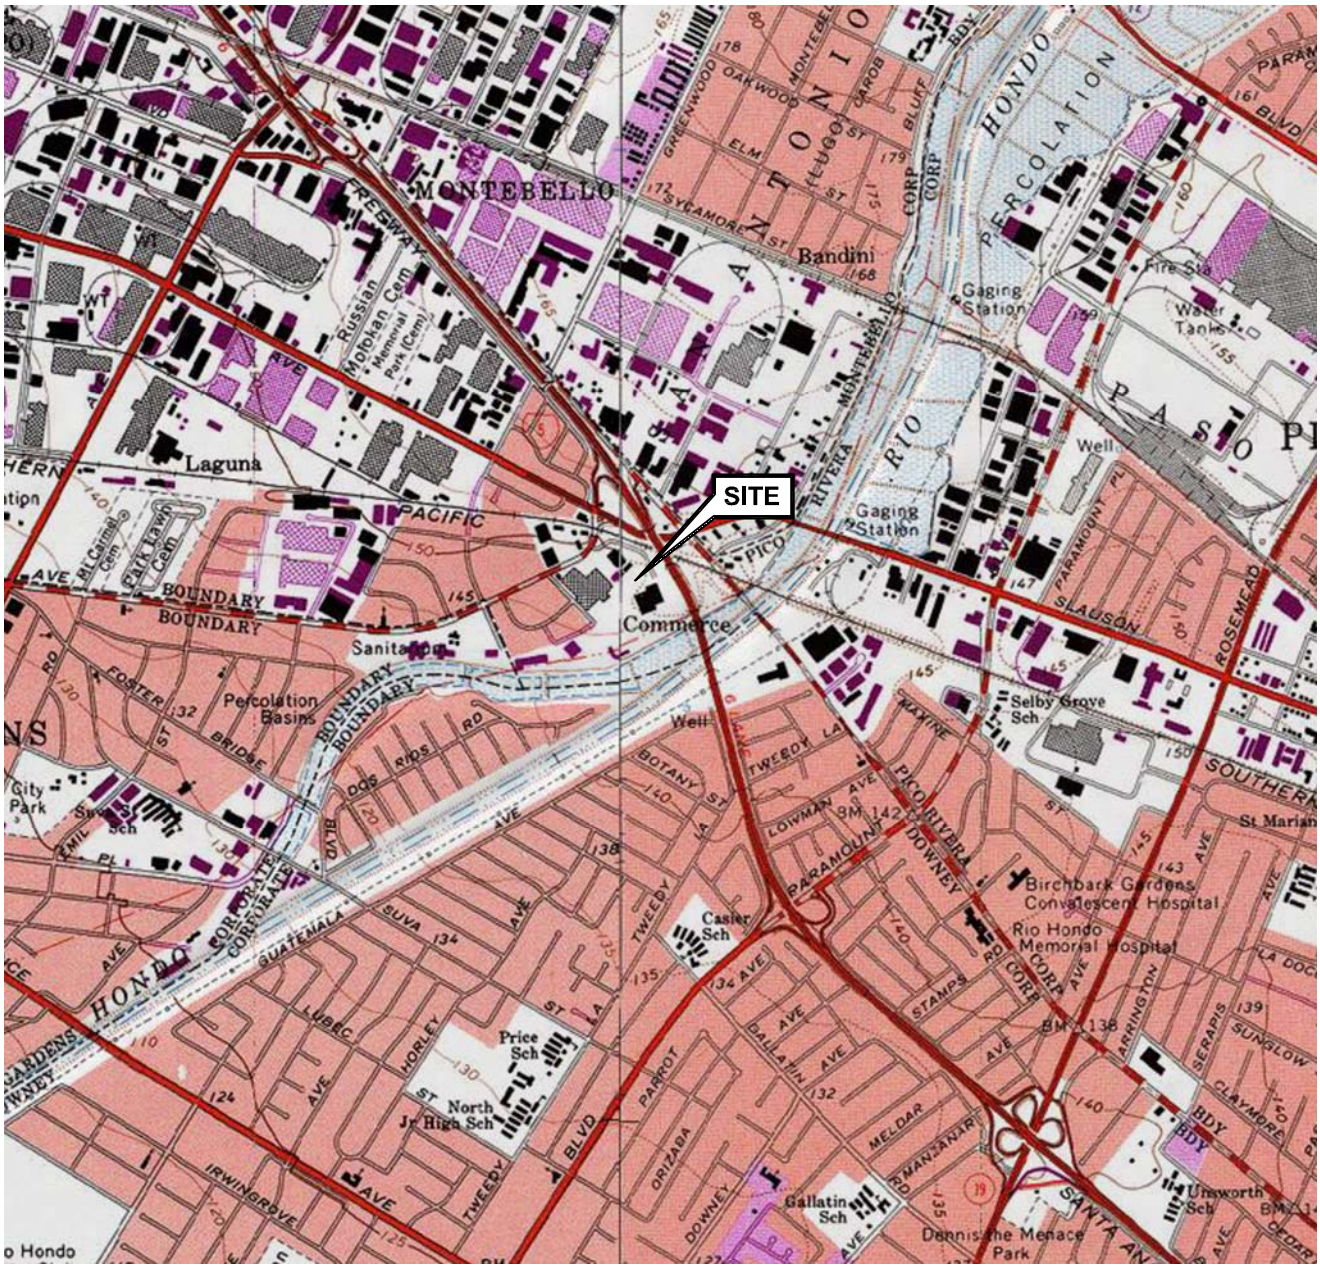
- PCBs were detected in 1 of the 20 soil samples. Soil sample T2-5 had a PCB-1260 concentration of 0.47 mg/kg.
- Total lead was detected in each of the 20 soil samples collected at concentrations ranging from 1.8J to 1,400 mg/kg. The RSL for lead in industrial soil (800 mg/kg) was exceeded in 6 of the 20 soil samples. See Table 5 for a summary of laboratory results.
- Total arsenic was detected in each of the 20 soil samples collected at concentrations ranging from 1.6 to 23 mg/kg. The RSL for arsenic in industrial soil (1.6 mg/kg) was exceeded in each of the 20 soil samples. These arsenic concentrations appear to be consistent with typical background concentrations for soils. See Table 5 for a summary of laboratory results.

8.0 CONCLUSIONS AND RECOMMENDATIONS

The soil and/or fine grained material samples collected from the five trench excavations identified petroleum hydrocarbons, lead, and other organic chemical impacts at the Site. The chemicals identified in the samples were consistent with the anticipated impacts to the Site soil

and with the proposed closure plan for the Site. The landfill debris identified in each of the five trench excavation locations consisted primarily of wood, asphaltic building material, tire rubber, plastic, paper, green waste and metal. The debris profile is also consistent with the proposed closure plan for the Site. It is anticipated that a majority of the site soil will meet the site cleanup goals and will be available for reuse as backfill material for the Site.

Some concentrations of the detected chemical constituents exceed the EPA Region IX, Remedial Screening Levels for industrial sites. Therefore, it is anticipated that a limited amount of the chemical impacted soil will require offsite disposal. This soil will be either directly disposed of offsite in a Class III landfill or treated onsite prior to offsite disposal at Class III landfill. The offsite disposal of a limited amount of chemically impacted soil is consistent with the proposed landfill closure plan.



TRC recommends the land fill closure work plan submittal process commence. The work plan process is administered by the State of California Water Resources Control Board (SWRCB) and includes specific regulatory required steps to complete the closure of the landfill in accordance to California Code of Regulations, Title 27. The first step in the work plan process is to determine the future use of the site and identify the limits of the landfill that will be closed. The timeline for preparing and submitting the work plan is 15 business days after the completion of the field investigation, and the expected work plan approval by the SWRCB occurs approximately 60 - 90 days thereafter.

APPENDIX A

2004 GEOTECHNICAL INVESTIGATION REPORT

GEOTECHNICAL INVESTIGATION

PROPOSED INDUSTRIAL DEVELOPMENT

7316 EAST GAGE AVENUE

CITY OF COMMERCE, CALIFORNIA

Presented herewith is the report of our Geotechnical Investigation conducted at the site of the proposed industrial development located at 7316 East Gage Avenue in the City of Commerce, California. The investigation was performed in order to provide recommendations for site preparation and to assist in building foundation design.

This report presents the results of our field investigation and laboratory testing along with conclusions and recommendations for foundation design and site preparation. This report completes our agreed upon scope of services as understood in our proposal dated August 25, 2004.

We appreciate the opportunity to provide service to you on this project. If you have any questions regarding this report, our the recommendations provided herein, please contact the undersigned

INTRODUCTION

This report presents the results of our Geotechnical Investigation performed in order to provide recommendations for remedial site grading and to assist in the design and construction of the foundations for the proposed industrial buildings and the associated site improvements. The project site is located at 7316 East Gage Avenue in the City of Los Angeles, California. The proposed project consists of one or more industrial buildings along with various related site improvements. The associated site improvements will include paved parking areas and driveways, various underground utilities, and landscape areas.

SCOPE OF WORK

The purpose of our investigation was to determine certain engineering characteristics of the near surface soils on the site in order to develop recommendations for foundation design and site preparation. Our investigation included field exploration, laboratory testing, engineering analysis and the preparation of this report. Evaluation of environmental issues or hazardous wastes was not within the scope of services provided. Our investigation was performed in accordance with contemporary geotechnical engineering principles and practice. We make no other warranty, either express or implied.

PROJECT DESCRIPTION

The project site is located at 7316 East Gage Avenue in the City of Commerce, California. The preliminary plans indicate that the proposed development will include one or more industrial buildings along with various associated site improvements. It is our assumption that the proposed buildings will be of relatively lightweight concrete tilt-up, steel-frame or reinforced masonry construction and will be supported by conventional shallow spread footings and concrete slabs on grade. The associated site improvements will include paved parking areas and driveways along with various underground utilities.

At the time of our investigation, the project site was vacant and the ground surface was either paved or covered with base material. The site is identified as the former Gage landfill in several previous reports provided for our review. A review of previous geotechnical reports confirms the existence of extensive buried debris and artificial fills consistent with the previous landfill use.

The current surface of the site is relatively level overall and the property is near the elevation of the adjacent properties and streets. The Santa Ana Freeway corridor forms the eastern edge of the property. There is an existing ballfield directly west of the site and a hotel just north of the subject site

It is our assumption that the proposed industrial buildings will be of relatively lightweight steel-frame, concrete tilt-up or reinforced masonry construction and will be supported by conventional shallow spread footings and concrete slabs on grade. Based upon our previous experience with similar structures, we assume that the column loads will be less than 80 kips and wall loading will be less than 5.0 kips per linear foot. If the actual design loads exceed these assumed loads, the recommendations included in this report should be reviewed with respect to the increased loading and the adequacy should be verified.

SOIL CONDITIONS

The site is underlain primarily by extensive amounts of buried debris and artificial fill material overlying native silty sands, sandy silts and fine to coarse-grained alluvial sands with gravel. Artificial fill depths of up to 30 feet below existing grade were encountered within the areas of our exploratory borings dependent upon location. The artificial fill soils were comprised primarily of various types of debris consistent with the previous landfill use. The artificial fill soils and debris appeared very loose and highly compressible within each of our borings. The underlying native soils also appeared somewhat loose within the upper 5 to 10 feet within several of our borings but appeared firm below a depth of 10 feet.

The deeper native soils consisted primarily of sandy silts, silty sands and fine to coarse-grained alluvial sands with gravel. In general, the deeper native soils appear quite firm and sampler penetration resistance (as measured by field blowcounts) suggests that density within the native soils generally increases with depth. The near surface artificial fill soils and the underlying native soils were found to be moist throughout the depth of our exploratory borings. Laboratory testing indicated moisture content varying from 2 to 30 percent.

Laboratory classification testing indicates that the near surface artificial fills and native soils consist primarily of silty sands and sandy silts. Expansion testing indicates that the near surface soils are moderately expansive and fall within the "low" expansion category in accordance with the Uniform Building Code (UBC) classification system. Consolidation testing indicates that the deeper native soils are susceptible to only minor consolidation or compression related settlements as a result of the increased loading associated with engineered fills as well as the new building foundations.

Groundwater was not encountered within our exploratory borings that extended to a maximum depth of approximately 80 feet below the existing ground surface. Groundwater should not be a factor in foundation design or construction.

CONCLUSIONS AND RECOMMENDATIONS

Based upon our field and laboratory investigation, it is our opinion that the proposed industrial development is feasible from a soil mechanic's standpoint provided that the recommendations included in this report are considered in building foundation design and site preparation. Due to the presence of extensive amounts of artificial fill soils and debris throughout the site, extensive remedial grading is recommended for the proposed building areas. We recommend that remedial grading within the proposed building areas include complete removal and recompaction of the artificial fill soils, debris and any loose native soils encountered in order to provide uniform compacted soils beneath the building foundations. Specific recommendations for site preparation are presented in the Site Grading section of this report.

Groundwater was not encountered within our borings that extended to a maximum depth of 51 feet below the existing ground surface. Due to the depth to groundwater, specific liquefaction analyses were not performed. Based upon the depth to groundwater, the potential for liquefaction and the related surficial affects of liquefaction impacting the site are considered negligible.

The site is located within a seismically active area of Southern California and strong ground shaking resulting from seismic events on prominent faults in the region will likely impact the site during the expected lifetime of the project. As a minimum, the building addition should be designed in accordance with Uniform Building Code criteria for Seismic Zone 4. Pertinent seismic design criteria as described in the 1997 UBC are summarized in Appendix C.

Caving did occur within each of our borings and the site soils may be susceptible to caving within deeper excavations. All excavations should be constructed in accordance with the normal CalOSHA excavation criteria.

The surface soils encountered during our investigation were found to be moderately expansive. Laboratory testing indicated Expansion Indices of 21 and 32 for the near surface soils which correspond with the "low" expansion category in accordance with 1997 UBC Table 18-I-B.

The following recommendations present more detailed design criteria that have been developed on the basis of our field investigation and laboratory testing.

Foundation Design: The results of our investigation indicate that either conventional shallow continuous footings or isolated pad footings, that are supported upon properly compacted fill soils, may be expected to provide satisfactory support for the proposed new structure foundations. Proper demolition along with complete artificial fill removal and recompaction should be performed as recommended in the Site Preparation section of this report.

Exterior footings should extend at least 18 inches beneath lowest adjacent grade and interior footings should extend at least 12 inches below slab subgrade. Isolated square or rectangular footings at least 2 feet square and continuous footings at least 12 inches wide may be designed using an allowable bearing pressure of 2000 pounds per square foot. The allowable bearing pressure may be increased by approximately 250 psf for each additional 1 foot of width and 250 psf for each additional 6 inches of depth. The maximum allowable bearing pressure should be limited to 3000 psf unless confirmed subsequent to performing specific settlement calculations. The allowable bearing pressures are for dead and frequently applied live loads and may be increased by 1/3 to resist wind, seismic or other transient loading.

The recommendations made in the preceding paragraph are based on the assumption that all footings will be supported upon properly compacted fill soils. All demolition and foundation area preparation should be performed under the testing and inspection of the Soils Engineer or his representative. Prior to the placement of concrete, we recommend that the footing excavations be inspected in order to verify that they extend into compacted soil and are free of loose and disturbed materials.

Because the site soils may be susceptible to settlement due to the introduction of excessive amounts of water, care should be taken to see that bearing soils are not allowed to become saturated from the introduction of storm water runoff or irrigation. Drainage from the building areas should be rapid and complete.

Settlements: Settlements may result from the anticipated foundation loads. These estimated ultimate settlements are calculated to be a maximum of 1 inch when using the recommended bearing values. As a practical matter, differential settlements between footings can be assumed as one-half of the total settlement.

Lateral Design: Resistance to lateral loads can be provided by a combination of friction acting at the base of the slabs or foundations and passive earth pressure along the sides of the foundations. A coefficient of friction of 0.40 between soil and concrete may be used for dead load forces only. A passive earth pressure of 275 pounds per square foot, per foot of depth, may be used for the sides of footings that are poured against properly compacted native soils. Passive earth pressure should be ignored within the upper 1 foot except where confined (such as beneath a floor slab or pavement).

Retaining Walls: Cantilever retaining walls may be designed utilizing "active" soil pressures. The "active" pressures may be estimated utilizing an equivalent fluid weight of 35 pounds per cubic foot (pcf) for drained level native backfill soils. For restrained walls "at rest" pressures should be utilized in design. The equivalent fluid weight should be increased to 55 pcf for restrained walls with level free-draining native backfill soils. The lateral pressures provided above should be applicable for use in temporary shoring system design.

Expansive Soils: Due to the prominence of "low" expansion category soils near the surface, expansive soil design criteria should not be a factor in the design of foundations and concrete slabs-on-grade. Final slab design should be based upon post grading expansion test results in accordance with design criteria outlined within applicable portions of the Uniform Building Code and should be determined by the Structural Engineer.

Concrete Slabs-on-Grade: All surfaces to receive concrete slabs-on-grade should be underlain by compacted fill soils as described in the Site Preparation section of this report. Where slabs are to receive moisture sensitive floor coverings or where dampness of the floor slab is not desired, we recommend the use of an appropriate vapor barrier or an adequate capillary break. Vapor barriers should be protected by sand in order to reduce the possibility of puncture and to aid in obtaining uniform concrete curing. If preferred, a capillary break consisting of a minimum 4 inch thick layer of crushed rock may be utilized.

Reinforcement of slabs-on-grade in order to resist expansive soil pressures may be necessary dependent upon post grading expansion test results and the quality of the possible import soils. Reinforcement will also have a beneficial affect in containing cracking due to concrete shrinkage. Temperature and shrinkage related cracking should be anticipated in all concrete slabs-on-grade. Floor slab reinforcement and the spacing of control joints, should be determined by the Structural Engineer.

Soluble Sulfates: The soluble sulfate concentrations of the surface soils were determined to be 82, 897, and 66 parts per million (ppm). The sulfate content determined suggests that the site soils are generally considered non-corrosive with respect to concrete. The use of Type 5 cement and/or special sulfate resistant concrete mix designs should not be necessary.

Tentative Pavement Design: Although R-Value of the surface soils was not specifically determined, based upon the generally sandy nature of the surface soils encountered throughout the site, we expect that the R-Value will be in excess of 50. The following preliminary pavement sections are based upon a design R-Value of 50.

Parking areas and areas limited to auto and light truck traffic (Traffic Index = 5.0)
Use 3.0 inches of asphalt on 4.0 inches of Class 2 base material

Drive lanes and areas of intermittent truck traffic (Traffic Index = 6.5)
Use 4.0 inches of asphalt on 6.0 inches of Class 2 base material

The recommended pavement sections should be provided with a uniformly compacted subgrade and precise control of thickness and elevations during placement. Drainage from paved areas should be rapid and complete.

If concrete pavement is preferred, a standard section of 6 inches of Portland Cement Concrete (PCC) on 4 inches of aggregate base material should be adequate for most traffic conditions. The section should be increased to 8 inches of PCC on aggregate base material in areas where regular heavy truck traffic is expected.

Pavement and slab designs should be confirmed at the completion of site grading when the subgrade soils are in-place. This should include sampling and R-Value testing of the actual subgrade soils and an analysis based upon the anticipated traffic loading.

Shrinkage and Subsidence: Volumetric shrinkage of the material that is excavated and replaced as controlled compacted fill should be anticipated. We estimate that this shrinkage may vary from 10 to 15 percent within the near surface native soils. Subsidence of the surfaces that are scarified and compacted is expected to vary from one-tenth to two tenths of a foot. This will vary depending upon the type of equipment used, the moisture content of the soil at the time of grading and the actual degree of compaction attained. These values for shrinkage and subsidence are exclusive of losses that will occur due to the removal of unsuitable materials and other subsurface obstructions.

General Site Preparation: All grading should be performed in accordance with the grading ordinance of the City of Los Angeles, California. The following recommendations have been developed on the basis of our field and laboratory testing:

1. **Clearing and Demolition:** Proper demolition of any existing structure components, slabs, footings, pavements and underground utilities will be very important. Soils that are disturbed due to the removal of the previous improvements or structure foundations should be removed and replaced as controlled compacted fill under the direction of the Soils Engineer. Debris an dother unsuitable material should be removed from the site.

2. **Preparation of Building and Foundation Areas:** All artificial fill soils and debris should be removed from the site. Removals should extend to competent native soils or a minimum depth of 3 feet below the bottom of the footings, whichever is deeper. The exposed surface should be scarified, moisture conditioned and recompacted to at least 90 percent relative compaction. Once unsuitable materials are removed, the excavated soils may be replaced as controlled compacted fill. Removals should be observed and compaction should be verified by testing.

   Removals should extend to the property lines, shoring may be required to accomplish the recommended artificial fill and debris removal in areas where fill depths exceed 10 feet.

3. **Preparation of Exterior Slab and Pavement Areas:** Disturbed native soil or unsuitable fill material should be removed from pavement areas and replaced as compacted fill material. The underlying native soils should be scarified, brought to near optimum moisture content, and compacted to a minimum of 90 percent relative compaction prior to replacing the fill material. As a minimum, slabs and pavements should be supported by a minimum of 12 inches of compacted soil.

4. **Placement of Compacted Fill:** Fill materials consisting of on-site soils or approved imported granular soils, should be spread in thin lifts, and compacted at near optimum moisture content to a minimum of 90 percent relative compaction.

   Imported material should have an Expansion Index not exceeding 20. The contractor shall notify the Soils Engineer at least 48 hours in advance of importing soils in order to provide sufficient time for the evaluation of the proposed import materials. The contractor shall be responsible for delivering material to the site that complies with the project specifications. Approval by the Soils Engineer will be based upon material delivered to the site and not the preliminary evaluation of import sources.

   Our observations of the material encountered during our investigation indicate that compaction will be most readily obtained by means of heavy rubber-wheeled equipment and/or sheepsfoot compactors. At the time of our investigation, the moisture content of the site soils was found to be very inconsistent. A more uniform and near optimum moisture content should be maintained during fill placement and compaction.

5. **Testing and Inspection:** During grading tests and observations should be performed by the Soils Engineer or his representative in order to verify that the grading is being performed in accordance with the project specifications and applicable ordinances. Field density testing shall be performed in accordance with acceptable ASTM methods.

   The minimum acceptable degree of compaction should be 90 percent of the maximum dry density as obtained by the ASTM D1557-91 test method. Where testing indicates insufficient density, additional compactive effort shall be applied until retesting indicates satisfactory compaction.

GENERAL

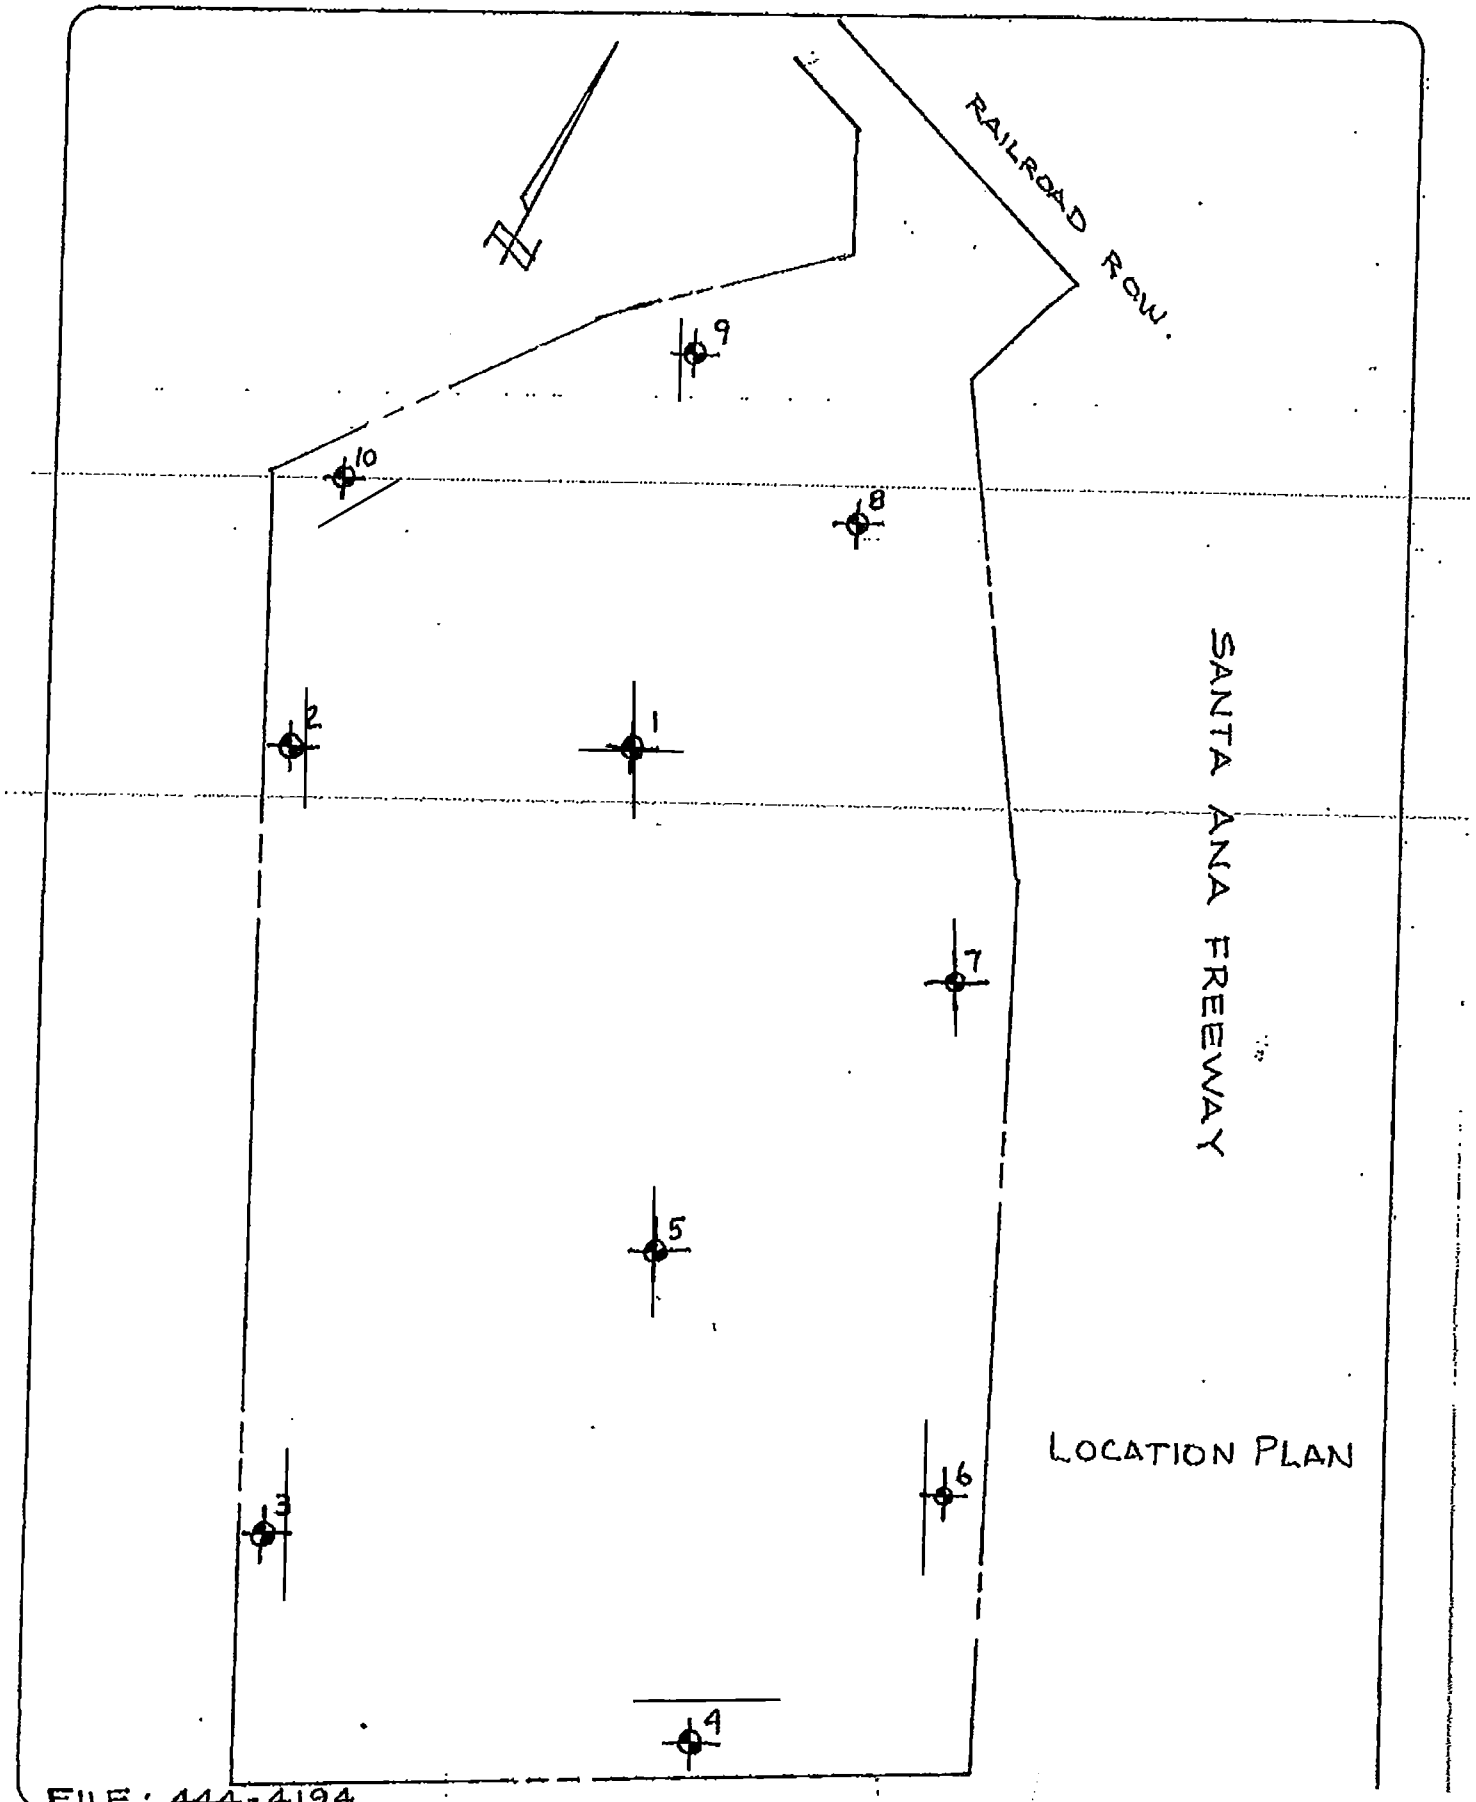
The findings and recommendations presented in this report are based upon an interpolation of the soil conditions between boring locations and extrapolation of these conditions throughout the proposed building addition area. Should conditions encountered during grading (or demolition) appear different than those indicated in this report, this office should be notified.

This report is considered to be applicable for use by [redacted] for the specific site and project described herein. The use of this report by other parties or for other projects is not authorized. The recommendations of this report are contingent upon monitoring of the grading operation by a representative of [redacted] All recommendations are considered to be tentative pending our review of the grading operations and additional testing, if indicated. If others are employed to perform any soil testing, this office should be notified prior to such testing in order to coordinate any required site visits by our representative and to assure indemnification of Sladden Engineering.

Our investigation was conducted prior to the completion of plans for the project. We recommend that a pre-job conference be held on the site prior to the initiation of site grading. The purpose of this meeting will be to assure a complete understanding of the recommendations presented in this report as they apply to the actual grading performed.

APPENDIX A

Site Plan
Boring Logs



APPENDIX A

FIELD EXPLORATION

For the initial phase of our field investigation 10 exploratory borings were excavated on September 22, 2004 using a truck mounted Mobile B-61 drilling rig and hollow-stem augers. The approximate exploratory boring locations are indicated on the site plan included in this appendix. Boring logs are included in this appendix. Additional borings to further evaluate artificial fill depths are currently underway.

Representative undisturbed samples were obtained within our borings by driving a thin-walled steel penetration sampler (California split spoon sampler) or a Standard Penetration Test (SPT) sampler with a 140-pound hammer dropping approximately 30 inches (ASTM D1586). The number of blows required to drive the samplers 18 inches was recorded in 6-inch increments and blowcounts are indicated on the boring logs.

The California samplers are 3.0 inches in diameter, carrying brass sample rings having inner diameters of 2.5 inches. The standard penetration samplers are 2.0 inches in diameter with an inner diameter of 1.5 inches. Undisturbed samples were removed from the sampler and placed in moisture sealed containers in order to preserve the natural soil moisture content. Bulk samples were obtained from the excavation spoils and samples were then transported to our laboratory for further observations and testing.

1997 UNIFORM BUILDING CODE SEISMIC DESIGN INFORMATION

The International Conference of Building Officials (ICBO) 1997 Uniform Building Code contains substantial revisions and additions to the earthquake engineering section in Chapter 16. New concepts contained in the updated code that will likely be relevant to construction of the proposed structures are summarized below.

Ground shaking is expected to be the primary hazard most likely to affect the site, based upon proximity to significant faults capable of generating large earthquakes. Major fault zones considered to be most likely to create strong ground shaking at the site are listed below.

Fault Zone	Approximate Distance From Site	Fault Type (1997 UBC)
Newport/Inglewood	11 km	B
Hollywood/Raymond	9 km	B

Based on our field observations and understanding of local geologic conditions, the soil profile type judged applicable to this site is S_D, generally described as stiff or dense soil. The site is located within UBC Seismic Zone 4. The following table presents additional coefficients and factors relevant to seismic mitigation for new construction upon adoption of the 1997 code.

Seismic Source	Near-Source Acceleration Factor, N_a	Near-Source Velocity Factor, N_v	Seismic Coefficient C_a	Seismic Coefficient C_v
Newport/Inglewood	1.0	1.0	$0.44N_a$	$0.64N_v$
Hollywood/Raymond	1.0	1.0	$0.44N_a$	$0.64N_v$

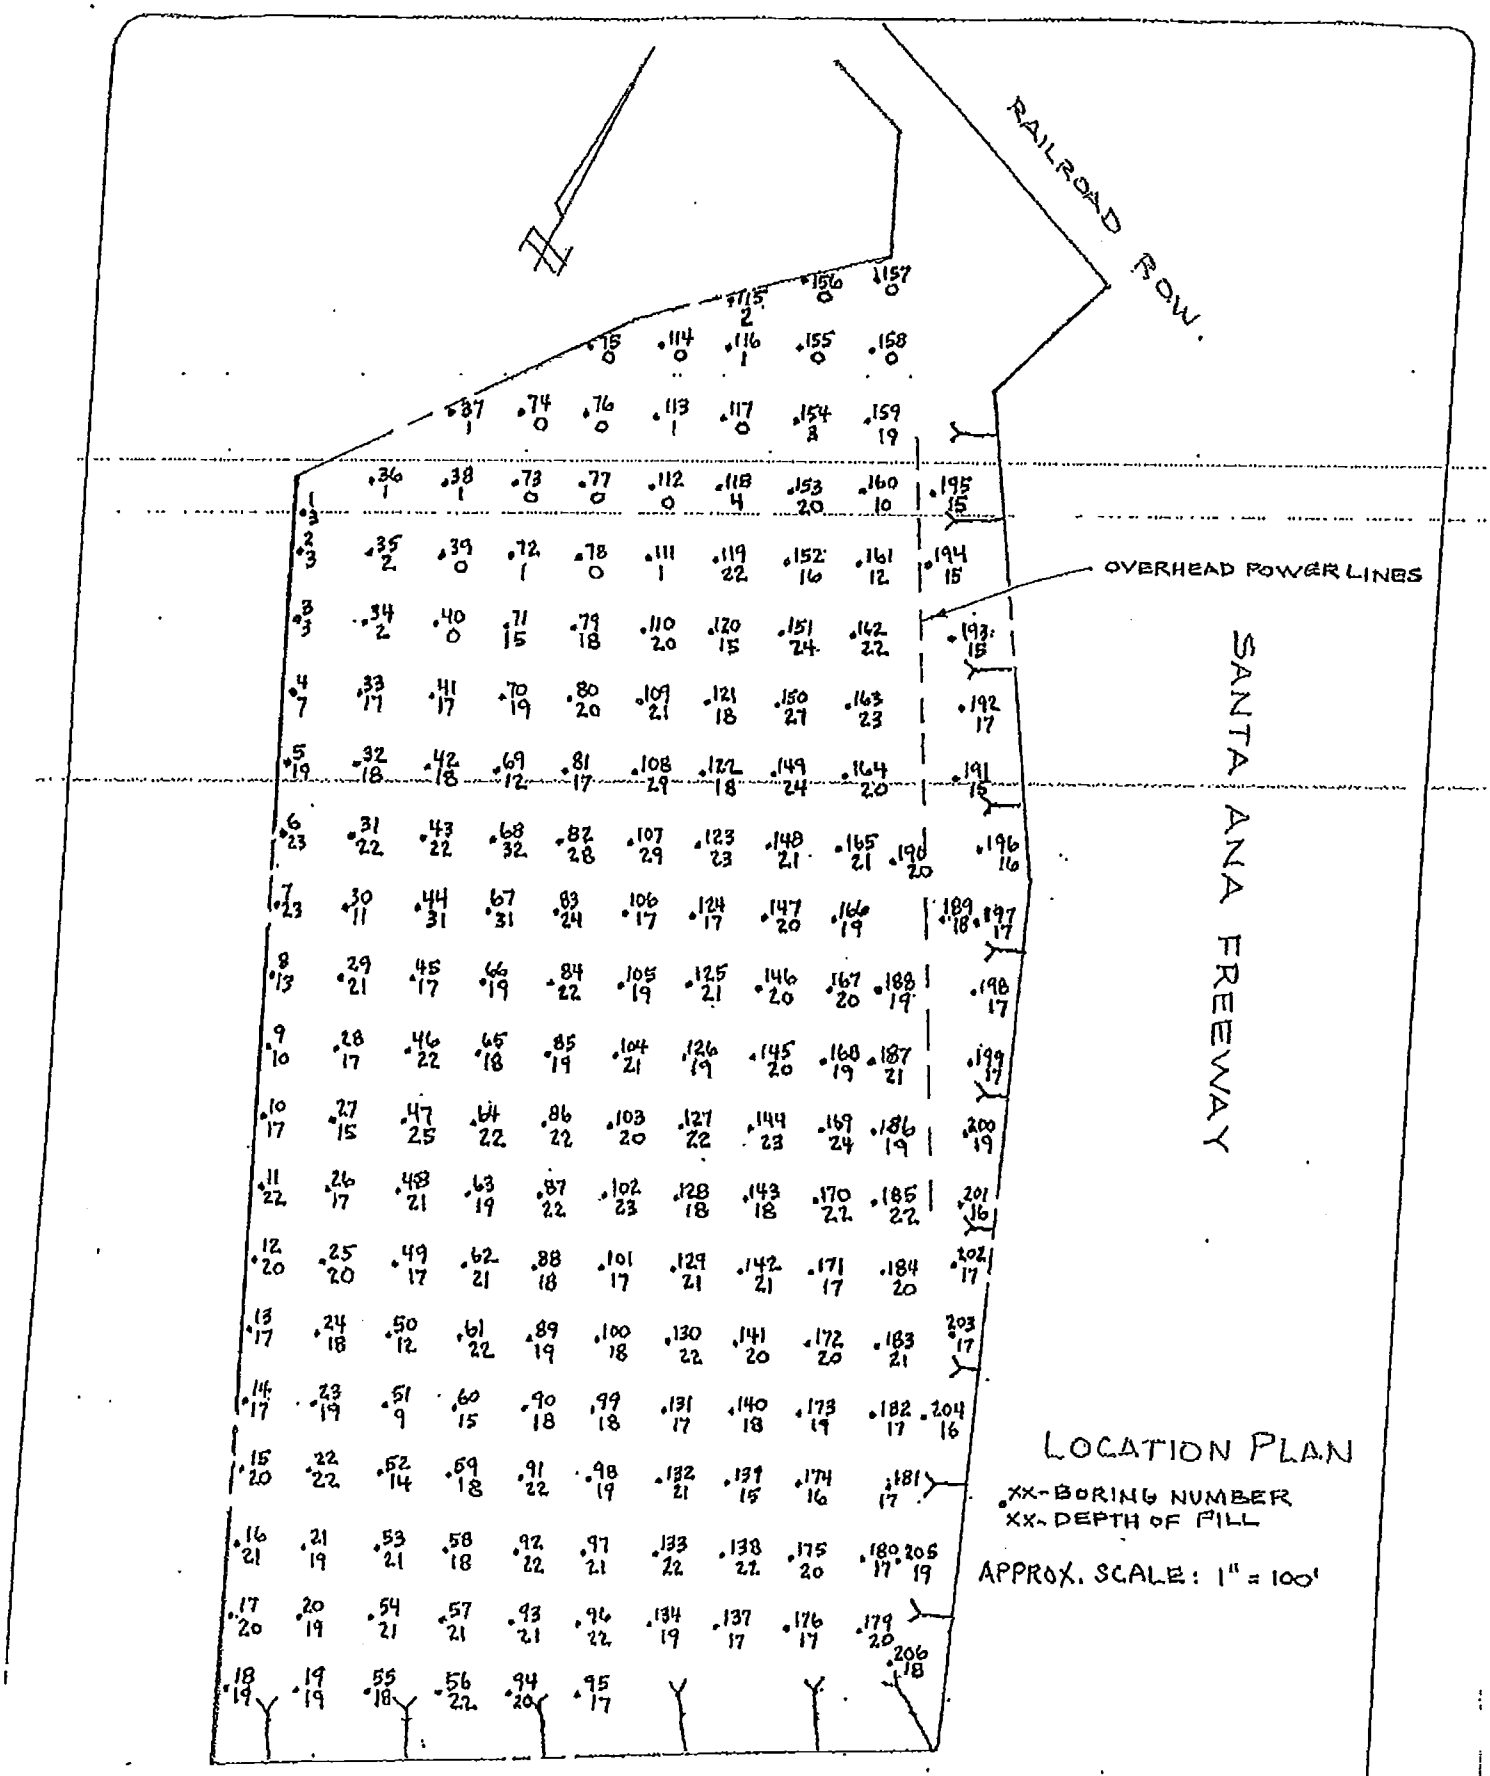
-END OF SEARCH- 69 FAULTS FOUND WITHIN THE SPECIFIED SEARCH RADIUS.



THE ELYSIAN PARK THRUST FAULT IS CLOSEST TO THE SITE.
IT IS ABOUT 0.0 MILES (0.0 km) AWAY.

LARGEST MAXIMUM-EARTHQUAKE SITE ACCELERATION: 0.5910 g

Summarized herein are the results of our supplemental exploratory boring program performed on the site to further evaluate the depth of artificial fill and debris on the subject property. The borings were excavated on an approximately 40 foot grid pattern across the site. The approximate depth of artificial fill and debris is indicated on the attached table and the approximate boring location are indicated on the attached plan.

If you have any questions regarding this memo or the referenced reports, please contact the undersigned.

Respectfully submitted,

OFFICIAL LABORATORY REPORT AND CHAIN OF CUSTODY RECORDS

BC Laboratories, Inc.
Environmental Testing Laboratory Since 1949

Date of Report: 05/17/2013

James Ferrara

TRC
123 Technology Drive
Irvine, CA 92618

Project:	Gage Ave Landfill
BC Work Order:	1309783
Invoice ID:	B146426

Enclosed are the results of analyses for samples received by the laboratory on 5/9/2013. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Molly Meyers

Sample Results

1309783-01 - T4-5

Organochlorine Pesticides and PCB's (EPA Method 8080) 19
Volatile Organic Analysis (EPA Method 8260) 20
Base Neutral and Acid Extractables Organic Analysis (EPA Method 8270C) 23
Purgeable Aromatics and Total Petroleum Hydrocarbons 26
Total Concentrations (TTLC) 27

1309783-02 - T4-10

Organochlorine Pesticides and PCB's (EPA Method 8080) 28
Volatile Organic Analysis (EPA Method 8260) 29
Base Neutral and Acid Extractables Organic Analysis (EPA Method 8270C) 32
Purgeable Aromatics and Total Petroleum Hydrocarbons 35
Total Concentrations (TTLC) 36

1309783-03 - T4-15

Organochlorine Pesticides and PCB's (EPA Method 8080) 37
Volatile Organic Analysis (EPA Method 8260) 38
Base Neutral and Acid Extractables Organic Analysis (EPA Method 8270C) 41
Purgeable Aromatics and Total Petroleum Hydrocarbons 44
Total Concentrations (TTLC) 45

1309783-04 - T4-18

Organochlorine Pesticides and PCB's (EPA Method 8080) 46
Volatile Organic Analysis (EPA Method 8260) 47
Base Neutral and Acid Extractables Organic Analysis (EPA Method 8270C) 50
Purgeable Aromatics and Total Petroleum Hydrocarbons 53
Total Concentrations (TTLC) 54

1309783-05 - T5-5

Organochlorine Pesticides and PCB's (EPA Method 8080) 55
Volatile Organic Analysis (EPA Method 8260) 56
Base Neutral and Acid Extractables Organic Analysis (EPA Method 8270C) 59
Purgeable Aromatics and Total Petroleum Hydrocarbons 62
Total Concentrations (TTLC) 63

1309783-06 - T5-10

Organochlorine Pesticides and PCB's (EPA Method 8080) 64
