Samples were analyzed by the Air Resources Board's Method 435, Determination of Asbestos Content of Serpentine Aggregate. Samples were ground to 200 particle size in the laboratory. Approximately 1 pint was retained for analysis. Samples were prepared for observation according to the guidelines of Exception I and Exception II as defined by the 435 Method. Samples which contained less than 10% asbestos were prepared for observation according to the point count technique as defined by the 435 Method. This analysis was performed with a standard cross-hair reticle.

Sample ID	Lab Number	Layer Description
SB-10-1.5-F	12045840	**Brown Soil**

Visual Estimation Results:

Matrix percentage of entire 100
Visual estimation percentage: **None Detected**
Asbestos type(s) detected: None Detected

Comment: This result meets the requirements of Exception I as defined by the 435 Method.

Sample ID	Lab Number	Layer Description
SB-11-1.5-F	12045841	**Brown Soil**

Visual Estimation Results:

Matrix percentage of entire 100
Visual estimation percentage: **None Detected**
Asbestos type(s) detected: None Detected

Comment: This result meets the requirements of Exception I as defined by the 435 Method.

Sample ID	Lab Number	Layer Description
SB-12-1.5-F	12045842	**Brown Soil**

Visual Estimation Results:

Matrix percentage of entire 100
Visual estimation percentage: **None Detected**
Asbestos type(s) detected: None Detected

Comment: This result meets the requirements of Exception I as defined by the 435 Method.

Sample ID	Lab Number	Layer Description
SB-13-1.5-F	12045843	**Brown Soil**

Visual Estimation Results:

Matrix percentage of entire 100
Visual estimation percentage: **None Detected**
Asbestos type(s) detected: None Detected

Comment: This result meets the requirements of Exception I as defined by the 435 Method.

CASE NARRATIVE

Laboratory number:	**300574**
Client:	**Terraphase Engineering**
Project:	**0098.003.001**
Location:	**DUSD Promenade**
Request Date:	**06/18/18**
Samples Received:	**05/30/18**

This data package contains sample and QC results for fifteen soil samples, requested for the above referenced project on 06/18/18. The samples were received cold and intact.

Pesticides (EPA 8081A):
All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. All samples underwent florisil cleanup using EPA Method 3620C. Matrix spikes QC935601,QC935602 (batch 260424) were not reported because the parent sample required a dilution that would have diluted out the spikes. No other analytical problems were encountered.

Metals (EPA 6010B):
No analytical problems were encountered.

Hi Tracy,

We would like to proceed with analyzing the extracts for all the samples presented in the login below (300574) for the following analyte:

- OCPs by 8081

We would also like to analyze this same list of samples for the following:

- Arsenic by 6010

We would like these analyzed on a standard turn around time.

Thanks,

Daren

ENTHALPY ANALYTICAL

CASE NARRATIVE

Laboratory number:	**300213**
Client:	**Terraphase Engineering**
Project:	**0098.003.001**
Location:	**DUSD Promenade**
Request Date:	**05/30/18**
Samples Received:	**05/30/18**

This data package contains sample and QC results for seven four-point soil composites, one soil sample, and one three-point soil composite, requested for the above referenced project on 05/30/18. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B):
COMP-13-16-F (lab # 300213-036) and COMP-9-12-F (lab # 300213-038) were diluted due to the dark and viscous nature of the sample extracts. No other analytical problems were encountered.

Semivolatile Organics by GC/MS (EPA 8270C):
High recovery was observed for 4-chloro-3-methylphenol in the MSD for batch 260145; the parent sample was not a project sample, the LCS was within limits, the associated RPD was within limits, and this analyte was not detected at or above the RL in the associated samples. High surrogate recovery was observed for 2-fluorophenol in COMP-2-4-F (lab # 300213-042); no target analytes were detected in the sample. High surrogate recovery was observed for phenol-d5 in COMP-2-4-F (lab # 300213-042); no target analytes were detected in the sample. A number of samples were diluted due to the dark and viscous nature of the sample extracts. No other analytical problems were encountered.

Pesticides (EPA 8081A):
All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. All samples underwent florisil cleanup using EPA Method 3620C. High responses were observed for many analytes in the CCV analyzed 06/04/18 15:19; affected data was qualified with "b". Matrix spikes QC934355,QC934356 (batch 260118) were not reported because the parent sample required a dilution that would have diluted out the spikes. COMP-13-16-F (lab # 300213-036) and COMP-5-8-F (lab # 300213-040) were diluted due to the color of the sample extracts. No other analytical problems were encountered.

PCBs (EPA 8082):
All samples underwent sulfuric acid cleanup using EPA Method 3665A. All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. No analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Zinc was detected above the RL in the method blank for batch 260140; this analyte was detected in samples at a level at least 10 times that of the blank. Arsenic, chromium, and nickel were detected between the MDL and the RL

Request Date:	**05/30/18**
Samples Received:	**05/30/18**

Metals (EPA 6010B and EPA 7471A):
in the method blank for batch 260140; these analytes were detected in samples at a level at least 10 times that of the blank. No other analytical problems were encountered.

CARB 435 Asbestos (CARB 435):
Forensic Analytical in Hayward, CA performed the analysis (not NELAP certified). Please see the Forensic Analytical case narrative.

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 300213 Client: Terraphase

Date Received: 5-30-18 Project: DUSD Promenade

Section 2: Samples received in a cooler? ☑ Yes, how many? 4 ☐ No (**skip Section 3 below**)

If no cooler Sample Temp (°C): _____ using IR Gun # ☐ A, or ☐ B

☐ Samples received on ice directly from the field. Cooling process had begun

If in cooler: Date Opened 5-30-18 By (print) kp (sign) kp

Shipping info (if applicable) _____

Are custody seals present? ☑ No, or ☐ Yes. If yes, where? ☐ on cooler, ☐ on samples, ☐ on package

☐ Date: _____ How many _____ ☐ Signature, ☐ Initials, ☐ None

Were custody seals intact upon arrival? ☐ Yes ☐ No ☐ N/A

Section 3: ***Important*: Notify PM if temperature exceeds 6°C or arrive frozen.**

Packing in cooler: (if other, describe) _____

☐ Bubble Wrap, ☐ Foam blocks, ☑ Bags, ☐ None, ☐ Cloth material, ☐ Cardboard, ☐ Styrofoam, ☐ Paper towels

☐ Samples received on ice directly from the field. Cooling process had begun

Type of ice used: ☐ Wet, ☐ Blue/Gel, ☐ None Temperature blank(s) included? ☑ Yes, ☐ No

Temperature measured using ☐ Thermometer ID: _____, or IR Gun # ☐ A ☑ B

Cooler Temp (°C): #1: 2.3, #2: 1.6, #3: 1.1, #4: 3.8, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable			
Were Method 5035 sampling containers present?		X	
If YES, what time were they transferred to freezer? _____			
Did all bottles arrive unbroken/unopened?	X		
Are there any missing / extra samples?		X	
Are samples in the appropriate containers for indicated tests?	X		
Are sample labels present, in good condition and complete?	X		
Does the container count match the COC?	X		
Do the sample labels agree with custody papers?		X	
Was sufficient amount of sample sent for tests requested?	X		
Did you change the hold time in LIMS for unpreserved VOAs?			X
Did you change the hold time in LIMS for preserved terracores?			X
Are bubbles > 6mm absent in VOA samples?			X
Was the client contacted concerning this sample delivery?			
If YES, who was called? _____ By _____ Date: _____			

Section 5:	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			X
Did you check preservatives for all bottles for each sample?			
Did you document your preservative check?			

pH strip lot# _____, pH strip lot# _____, pH strip lot# _____

Preservative added:

☐ H2SO4 lot# _____ added to samples _____ on/at _____

☐ HCL lot# _____ added to samples _____ on/at _____

☐ HNO3 lot# _____ added to samples _____ on/at _____

☐ NaOH lot# _____ added to samples _____ on/at _____

Section 6:

Explanations/Comments: Sample 2 - time (sample) doesn't match COC → ID & date matched

Sample 20 - sample time doesn't match COC → ID & date matched

Sample 24 & 25 - sample ID doesn't completely match COC, missing "-N"

Sample 30 & 34 - sample labels were wrong, called client to figure out which sample was ~~which~~ which since the 2 small jars had the same label & 2 large jars had same label instead of 1 large jar & 1 small jar per the rest of the job.

Date Logged in 5/31/18 **By (print)** VG **(sign)** VG

Date Labeled 5/31/18 **By (print)** VG kp **(sign)** VG kp

ENTHALPY ANALYTICAL

Bulk Asbestos Material Analysis

(Air Resources Board Method 435, June 6, 1991)

Enthalpy Analytical LLC
Tracy Babjar
2323 Fifth St.

Berkeley, CA 94710

Client ID: 1137
Report Number: N010635
Date Received: 06/01/18
Date Analyzed: 06/05/18
Date Printed: 06/05/18

Job ID/Site: 300213 - DUSD Promenade

PLM Report Number: N/A

FALI Job ID: 1137
Total Samples Submitted: 5
Total Samples Analyzed: 5

Sample Preparation and Analysis:

Samples were analyzed by the Air Resources Board's Method 435, Determination of Asbestos Content of Serpentine Aggregate. Samples were ground to 200 particle size in the laboratory. Approximately 1 pint was retained for analysis. Samples were prepared for observation according to the guidelines of Exception I and Exception II as defined by the 435 Method. Samples which contained less than 10% asbestos were prepared for observation according to the point count technique as defined by the 435 Method. This analysis was performed with a standard cross-hair reticle.

Sample ID	Lab Number	Layer Description
SB-1-1.5-N	12039182	**Brown Soil**

Visual Estimation Results:

Matrix percentage of entire 100
Visual estimation percentage: **None Detected**
Asbestos type(s) detected: None Detected

Comment: This result meets the requirements of Exception I as defined by the 435 Method.

COMP-13-16-F	12039183	**Brown Soil**

Visual Estimation Results:

Matrix percentage of entire 100
Visual estimation percentage: **None Detected**
Asbestos type(s) detected: None Detected

Comment: This result meets the requirements of Exception I as defined by the 435 Method.

COMP-9-12-F	12039184	**Brown Soil**

Visual Estimation Results:

Matrix percentage of entire 100
Visual estimation percentage: **None Detected**
Asbestos type(s) detected: None Detected

Comment: This result meets the requirements of Exception I as defined by the 435 Method.

COMP-5-8-F	12039185	**Brown Soil**

Visual Estimation Results:

Matrix percentage of entire 100
Visual estimation percentage: **None Detected**
Asbestos type(s) detected: None Detected

Comment: This result meets the requirements of Exception I as defined by the 435 Method.

Tad Thrower, Laboratory Supervisor, Hayward Laboratory

Note: Limit of Quantification (LOQ) = 0.25%. Trace denotes the presence of asbestos below the LOQ. ND = None Detected.

Analytical results and reports are generated by Forensic Analytical Laboratories Inc. (FALI) at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by FALI to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by FALI. The client is solely responsible for the use and interpretation of test results and reports requested from FALI. Forensic Analytical Laboratories Inc. is not able to assess the degree of hazard resulting from materials analyzed. FALI reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples received in acceptable condition unless otherwise noted.

CASE NARRATIVE

Laboratory number:	**300214**
Client:	**Terraphase Engineering**
Project:	**0098.003.001**
Location:	**DUSD Promenade**
Request Date:	**05/30/18**
Samples Received:	**05/30/18**

This data package contains sample and QC results for one soil sample, requested for the above referenced project on 05/30/18. The sample was received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
High recoveries were observed for 1,1-dichloroethene in the MS/MSD for batch 260115; the parent sample was not a project sample, the LCS was within limits, the associated RPD was within limits, and this analyte was not detected at or above the RL in the associated sample. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
High recovery was observed for barium in the MSD of WC-SOIL-053018 (lab # 300214-001); the BS/BSD were within limits, and the associated RPD was within limits. No other analytical problems were encountered.

SAMPLE RECEIPT CHECKLIST

Section 1: Login # 300214 Client: Terraphase

Date Received: 5.30.18 Project: 0098.003.001

Section 2: Samples received in a cooler? ☑ Yes, how many? 4 ☐ No (**skip Section 3 below**)

If no cooler Sample Temp (°C): _____ using IR Gun # ☐ A, or ☐ B

☐ Samples received on ice directly from the field. Cooling process had begun

If in cooler: Date Opened 5-30-18 By (print) KP (sign) KP

Shipping info (if applicable) _____

Are custody seals present? ☑ No, or ☐ Yes. If yes, where? ☐ on cooler, ☐ on samples, ☐ on package

☐ Date: _____ How many _____ ☐ Signature, ☐ Initials, ☐ None

Were custody seals intact upon arrival? ☐ Yes ☐ No ☐ N/A

Section 3: ***Important*** **: Notify PM if temperature exceeds 6°C or arrive frozen.**

Packing in cooler: (if other, describe) _____

☐ Bubble Wrap, ☐ Foam blocks, ☑ Bags, ☐ None, ☐ Cloth material, ☐ Cardboard, ☐ Styrofoam, ☐ Paper towels

☐ Samples received on ice directly from the field. Cooling process had begun

Type of ice used : ☐ Wet, ☐ Blue/Gel, ☐ None Temperature blank(s) included? ☑ Yes, ☐ No

Temperature measured using ☐ Thermometer ID: _____, or IR Gun # ☐ A ☑ B

Cooler Temp (°C): #1: 2.3, #2: 1.6, #3: 1.1, #4: 3.8, #5: _____, #6: _____, #7: _____

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	✓		
Were Method 5035 sampling containers present?		✓	
If YES, what time were they transferred to freezer? _____			
Did all bottles arrive unbroken/unopened?	✓		
Are there any missing / extra samples?		✓	
Are samples in the appropriate containers for indicated tests?	✓		
Are sample labels present, in good condition and complete?	✓		
Does the container count match the COC?	✓		
Do the sample labels agree with custody papers?	✓		
Was sufficient amount of sample sent for tests requested?	✓		
Did you change the hold time in LIMS for unpreserved VOAs?			✓
Did you change the hold time in LIMS for preserved terracores?			✓
Are bubbles > 6mm absent in VOA samples?			✓
Was the client contacted concerning this sample delivery?		✓	
If YES, who was called? _____ By _____ Date: _____			

Section 5:	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			✓
Did you check preservatives for all bottles for each sample?			
Did you document your preservative check?			

pH strip lot# _____, pH strip lot# _____, pH strip lot# _____

Preservative added:

☐ H2SO4 lot# _____ added to samples _____ on/at _____

☐ HCL lot# _____ added to samples _____ on/at _____

☐ HNO3 lot# _____ added to samples _____ on/at _____

☐ NaOH lot# _____ added to samples _____ on/at _____

Notes:
Bold text indicates detected concentrations above the laboratory reporting limit
mg/kg= milligrams per kilogram
- = Not analyzed or no screening criteria available
< = analyte not detected above laboratory reporting limit
bgs = below ground surface.
= sample result exceeds the cancer endpoint soil screening criteria
red font = sample result exceeds the non-cancer endpoint soil screening criteria
1. Samples were collected at the Site by other consultants at the Site. Results are reported for summary.
2. Arsenic was detected in soil above the risk-based screening levels, but below the background concentration typical of Bay Area soils.
2. Screening levels are derived from the following sources:
- Department of Toxic Substances Control Human and Ecological Risk Office Note 3 screening level for residential soil (updated June 2018)
- United States Environmental Protection Agency, Region 9 Regional Screening Level for residential soil (Nov 2018)

Table 6
Previous Soil Sample Results - Semi-Volatile Organic Compounds
Promenade Site
Dublin, California

EXECUTIVE SUMMARY

On behalf of the Dublin Unified School District ("the District"), Terraphase Engineering Inc. (Terraphase) has prepared this Preliminary Environmental Assessment (PEA) Report ("the PEA Report") for the property located at the intersection of Dublin Boulevard and Chancery Lane in Dublin, California ("the Site"; Figure 1). ~~The District is interested in acquiring the property for future development as a new high school.~~ The District is in the process of acquiring the property for future development as a new high school. The Site was previously named Promenade, but is now referred to by the District at the New 2nd Comprehensive High School.

Purpose and Objectives

The purpose of this PEA was to identify whether a release or threatened release of hazardous substances exists at the Site and to evaluate the potential risk to human health or the environment posed by exposure to identified site-related hazardous substances.

Site Background

The Site is six parcels, APNs 985-78-2 through 985-78-7, comprising approximately 24 acres of former agricultural land with underground utility improvements, bounded to the north by Central Parkway, bounded to the east by multi-tenant housing, to the south by Dublin Boulevard, and to the west by Chancery Lane in Dublin, Alameda County, California. The Site is owned by Grafton Station LLC. A Site location map is included as Figure 1.

The Site is surrounded by residential communities to the north (across Central Parkway), west (adjoining and across Chancery Lane), and east (adjoining), Devany Square park to the west, and vacant land to the southeast (across Dublin Boulevard). The Grafton Street retail center is located to the south-southwest of the Site (Figure 2).

The Site was historically used for agricultural purposes from approximately 1939 to the mid-1990s. Information indicates the area was likely used for livestock grazing and/or dry-farmed for hay or barley cultivation. From approximately 2005 to 2009, the Site appears to have been used for equipment and materials staging and for temporary trailers and offices in relation to the surrounding residential construction that occurred from 2005 to 2009. Utilities were installed (water, sewer, and storm water lines) and preliminary grading conducted as part of planned residential development at the Site, but the proposed development activities were ceased in 2009 and not completed. The investigative work conducted on the Site by Terraphase focused on these prior uses. No other use or development has occurred at the Site since 2009, with the exception of limited import of clean soil by the District.

In February 2020, the District imported approximately 600 cubic yards of soil from the nearby Dublin High School site and placed it on the southeastern corner of the Site. The soil was excavated from the footprint of the former auto/wood shop called Building EE, located at the nearby Dublin High School. Building EE received unrestricted clearance from DTSC after review of a PEA and subsequent addenda were prepared for that site. The soil excavation occurred as part of the construction of a new Science and Engineering Building at the former location of

Building EE. Building EE was demolished in 2017, but was included in a number of assessments historically completed at the Dublin High School site under the oversight of DTSC including a Phase I ESA, a PEA, and Supplemental Site Investigation (SSI), which were completed for the larger site from 2006 to 2008, and a Phase I ESA Addendum which was completed in 2017 for the construction of the new science and engineering building and focused specifically on Building EE (LFR 2006; LFR 2008a; LFR 2008b; Gibbs 2017). Based on the review of the available information compiled for Building EE, DTSC did not feel additional soil sampling was warranted for the imported soil when it was still located at the Dublin High School site. Based on our review of those files, and DTSC's recommendation, Terraphase did not collect additional samples of that soil.

Based on the review of historical information for the Site, the following list of contaminants of potential concern (COPCs) were identified at the Site:

- The Site was formerly used for agricultural purposes. Therefore, there was a potential for agricultural chemicals (i.e., organochlorine pesticides [OCPs] and arsenic) to be present in shallow soil at the Site.

- Fill material was previously imported to the Site. Based on information reviewed, it appears the soil may have been imported from the surrounding area as part of development activities that occurred prior to 2005. While Berlogar Geotechnical Consultants (BGC) conducted sampling of the fill material brought to the Site, the majority of the soil samples were composited prior to analysis. Additionally, BGC did not collect samples of the fill for asbestos analysis in previous investigations.

Investigation Activities and Results

Terraphase completed Phase I and Phase II due diligence investigations at the Site on behalf of the District in 2018 and 2019. A Phase II Report was prepared by Terraphase for submittal to DTSC as part two of a PEA Equivalent. Part one of the PEA equivalent, a Phase I ESA Report, was submitted to DTSC with an Environmental Oversight Program Application Agreement application on April 29, 2019.

During the Phase II investigation, conducted in May 2018, soil sampling was performed by Terraphase based on the Recognized Environmental Conditions (RECs) identified in the Phase I ESA (Terraphase 2019). These RECs were developed after review of extensive soil sampling conducted at the Site on behalf of the former owner by BGC and was intended to supplement and confirm their sampling results. The soil sampling included collection of discrete samples from 16 soil borings spaced evenly across the site. At each of the 16 locations, one sample was collected from the import fill, and one from the underlying shallow native soil. The samples were composited by the analytical laboratory prior to analysis into four-point composites, according to soil type (fill or native; and detailed in Section 6.1). The fill samples were analyzed for OCPs, metals, polyaromatic hydrocarbons (PAH), semi-volatile organic compounds (SVOCs), PCBs, TPH as diesel (TPH-d), TPH as motor oil (TPH-mo), and asbestos. The native soil samples were analyzed for OCPs and metals.

COPCs were not detected in native soil or imported fill at levels exceeding conservative risk-based screening values for residential land use, with the exception of arsenic. However, the detections of arsenic in native soil and imported fill were below the established background concentration for arsenic in Bay Area soils of 11 mg/kg (Duverge 2011).

In a scoping meeting held with Terraphase on March 16, 2020, DTSC concurred that Terraphase's Phase II investigation was considered satisfactory, and that no further environmental sampling is required at the Site.

Human Health Screening Evaluation

A human health screening evaluation was performed in general accordance with DTSC's PEA Guidance Manual (DTSC 2015). In accordance with the PEA Guidance Manual, the risk/hazard characterization assumed potential human exposure under an unrestricted residential use scenario. Based on the results of the PEA investigation and associated preliminary human health screening, the estimated upper-bound cumulative cancer risk for exposure to COPCs in soil at the Site is 7.5×10^{-7}, below the cumulative cancer risk management goal of 1.0×10^{-6}. The estimated upper-bound noncancer hazard index (HI) for exposure to COPCs in soil is 1, which is equal to the noncancer HI risk management goal of 1. Therefore, the upper-bound risk and HI estimates for residential exposure to soil would not pose an unacceptable risk to human health a the new school, especially since residential exposure time frame assumptions (24 hours per day; 350 days per year; for 26 years) are far more conservative than typical school occupancy time frames, even for staff.

Conclusions and Recommendations

Based on the results of the Phase II investigation, COPCs have not been detected in soil at the Site at levels exceeding conservative risk-based screening values for residential land use. Based on the results of previous investigations performed by BGC and the May 2018 Phase II investigation performed by Terraphase, and associated human health screening, the calculated upper-bound risk and HI estimates for residential exposure to soil would not pose an unacceptable risk to human health. In addition, based on the information reviewed for the Dublin High School site, the small amount of soil imported to the Site from there poses no significant risk to human health or the environment. Therefore, Terraphase recommends that DTSC issue a "No Further Action" determination for the Site.

THIS PAGE LEFT INTENTIONALLY BLANK

1.0 INTRODUCTION

On behalf of Dublin Unified School District ("the District"), Terraphase Engineering Inc. (Terraphase) has prepared this Preliminary Environmental Assessment (PEA) Report ("the PEA Report") for the former Promenade site located at the intersection of Dublin Boulevard and Chancery Lane in Dublin, California ("the Site"). The Site was previously named Promenade but is now referred to by the District at the New 2nd Comprehensive High School. ~~The District is interested in acquiring the property for future development as a new high school.~~ The District is in the process of acquiring the property for future development as a new high school.

The Site consists of vacant parcels located in Dublin, Alameda County, California. The property is approximately 24-acres and is identified with Assessor's Parcel Numbers (APNs): 985-78-2, 985-78-3, 985-78-4, 985-78-5, 985-78-6, and 985-78-7 by the Alameda County Assessor's Office. A Site Location Map is included as Figure 1, and the assessor's parcel map is included as Appendix A. The Site is bounded to the north by Central Parkway, bounded to the east by multi-tenant housing, to the south by Dublin Boulevard, and to the west by Chancery Lane (Figure 2).

This PEA Report was prepared by Terraphase for submittal to the California Environmental Protection Agency, Department of Toxic Substances Control (DTSC). This PEA Report was prepared in general accordance with the guidelines of the DTSC, as detailed in the PEA Guidance Manual (DTSC 2015).

1.1 Purpose and Objectives

The PEA is intended to identify whether a release or threatened release of hazardous substances exists at the Site and to evaluate the potential risk to human health or the environment.

The overall objectives of the PEA include the following:

- Evaluate historical information regarding the past use, storage, disposal, or release of hazardous wastes/substances at the Site;
- Conduct an additional field sampling and analysis program to characterize the nature, concentration, and extent of any hazardous wastes/substances present at the Site; and
- Estimate the potential threat to public health and/or the environment posed by identified hazardous constituents at the Site using a residential land use scenario.

Using information developed during the PEA and the conservative human risk evaluation, conducted in accordance with DTSC's PEA Guidance Manual (DTSC 2015), the DTSC can make an informed decision regarding potential risks, if any, posed by the Site. Possible outcomes of the PEA decision include the following:

- The requirement for further assessment through the remedial investigation/feasibility study process if the Site is found to be significantly affected by hazardous substances;

- The need to perform a removal action for areas where localized impacts by hazardous substance(s) release(s) are found; or

- Issuance of a "No Further Action" finding if the Site is found not to be affected or if risks to human health and the environment are found to be within acceptable levels based on the conservative screening-level risk assessment.

1.2 Scope of Work

To meet the PEA objectives, Terraphase completed a Phase I Environmental Site Assessment (ESA) and a Phase II subsurface investigation at the Site on behalf of the District in 2018 and 2019. Together the Phase I ESA and the Phase II investigation findings have been combined into this PEA document.

The Phase I ESA was completed in accordance with the methodology of American Society for Testing and Materials (ASTM) Standard Practice E 1527-13 (ASTM 2013). The site reconnaissance was conducted by Ms. Laurie Israel, Associate Scientist with Terraphase. Ms. Israel also conducted interviews with representatives of the previous and current landowner and the information is included in Section 3.9 of this report. The following recognized environmental conditions (RECs) were identified in the Phase I ESA:

- Fill material was previously imported to the Site. Based on information reviewed (and presented in Section 2.0), it appears that the soil may have been imported from the surrounding area as part of development activities in the area that occurred prior to 2005. While Berlogar Geotechnical Consultants (BGC) and Berlogar Stevens (herein referred to as BGC) conducted sampling of the fill material brought to the Site, most of the soil samples were composited prior to analysis. Additionally, BGC did not collect samples of the fill for asbestos analysis.

- According to the Site owner's representative, the Site was historically used for hay or barley cultivation and livestock grazing. Historical aerial photos also suggest evidence of either disking or row crops at the Site between the late 1970s and late 1990s. Since the Site was historically used for dryland farming, there is a potential for agricultural chemicals to be present in shallow soil at the Site, beneath the layer of fill material imported to the Site. It is unlikely that the Site was ever irrigated. The underlying native soils were not assessed for organochlorine pesticides (OCPs) by Berlogar Geotechnical Consultants (BGC) in previous environmental investigations.

Based on the findings of the Phase I ESA, additional investigation of the Site was recommended to address the above RECs, as follows:

- Per DTSC Interim Guidance for Sampling Agricultural Properties, Third Revision (DTSC 2008), for sites that were dryland farmed, one soil sample should be collected from each quadrant of the Site within the native soil. The samples should be analyzed for OCPs and arsenic. Sampling of the native soil for lead was also recommended.

- Soil samples of the import fill should be further assessed for total petroleum hydrocarbons (TPH), metals, semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and asbestos.

To meet the above objectives and address the RECs identified in the Phase I, Terraphase performed soil sampling investigation activities at the Site. The soil sampling included collection of discrete samples from 16 soil borings spaced evenly across the site. At each of the 16 locations, one sample was collected from the import fill, and one from the underlying shallow native soil. The samples were composited by the analytical laboratory prior to analysis into four-point composites, according to soil type (fill or native; and detailed in Section 6.1). The fill samples were analyzed for OCPs, metals, polyaromatic hydrocarbons (PAH), SVOCs, PCBs, TPH as diesel (TPH-d), TPH as motor oil (TPH-mo), and asbestos. The native soil samples were analyzed for OCPs and metals. After receipt of initial four-point composite results, which did not show chemical problems in either the fill or native soils, which might cause the District to reject the site, the discrete fill and native soil samples were analyzed to satisfy DTSC frequency requirements. Each of the discrete samples was therefore analyzed within hold times for the same analytical suite as the composites were. The analytical suite and composite groupings are described in detail in Section 6.1.

1.3 Significant Assumptions

This report provides appropriate inquiry into the previous ownership and use of the Site consistent with good commercial and customary practice. Terraphase also assumes that the information provided by the District, previous landowners, the regulatory database provider, and regulatory agencies is true and reliable.

1.4 Modifications or Deviations

No significant deviations from ASTM 1527-13 guidelines occurred.

1.5 Information Provided by the Current Owner Representative

Mr. James Tong with Grafton Street, LLC, the current owner's representative, was interviewed by Terraphase on March 14, 2019. Mr. Tong stated that he owned the property for 17 years. Historically, the property has been used for agricultural purposes, including hay production and grazing. Mr. Tong noted that no corrals, barns, or other structures related to agriculture were located on the property during his ownership. Mr. Tong reported that from 2005 to 2009, Toll Brothers set up a temporary sales office and construction trailers in the southern and northwestern portions of the Site for onsite and adjacent residential construction projects. No fueling or maintenance activities were conducted onsite. Clearance soil sampling, which was performed by BGC on behalf of the Toll Brothers, was conducted after the office trailers were

removed from the property and is detailed in Section 3.2. Completed copies of the Phase I ESA Owner Questionnaire are included in Appendix B.

1.6 Other Site Information

Several investigations were conducted at the Site from 2008 to 2016 by BGC on behalf of the Toll Brothers. The results of previous analytical testing performed by BGC on samples of imported fill material were detailed in the Phase I ESA (Terraphase 2019) and are summarized below. Appendix C contains a Site Map showing the locations of the previous soil sampling locations. Analytical results from the previous Site assessments were compared to screening levels identified as the DTSC's Human and Ecological Risk Office (HERO) Modified Screening Levels (DTSC-SLs) provided in the DTSC HERO Note 3 (2018) for residential soil screening levels. This data was reviewed again, as described in Section 7.0 using 2019 screening levels. Although arsenic was detected above screening levels, the detected concentration was within a range of background concentrations typically detected in Bay Area soil (Duverge 2011).

On July 3, 2008, BGC collected soil samples from four locations at a depth of 0.5 to 1 feet bgs. The samples were collected in an area north of Dublin Road within parcel APN 985-78-6. The four soil samples were composited and submitted for analysis of benzene, toluene, ethylbenzene and xylenes (BTEX) and total petroleum hydrocarbons as gasoline (TPH-g) using United State Environmental Protection Agency (EPA) Method 8260; TPH-d and TPH-mo using EPA Method 8015; OCPs using EPA Method 8081, PCBs using EPA Method 8082, and CAM 17 metals using EPA Method 6010/7470/7471 (Appendix D). With the exception of arsenic, analytes were not detected above applicable screening levels. Although arsenic was detected above screening levels, the detected concentration was within a range of background concentrations typically detected in Bay Area soil (Duverge 2011).

In September and October 2009, BGC collected numerous soil/fill samples at several locations within a portion of the Site that included the 17-acre area between Central Parkway and Dublin Boulevard at the intersection with Grafton Street (Appendix C and Appendix D). In September 2009, soil samples were collected from 32 locations (6, 7, 8, 9, 2D2, 1A-1F, 2A-2F, 3A-3C, 4A-4F, and 5A-5F) from 0 to 1-foot bgs. Discrete samples 6, 7, 8, 9, 2D2, 1A-1F, 2A-2F, 3A-3C, 4A-4F, and 5A-5F were submitted for laboratory analysis of VOCs using EPA Method 8260 and SVOCs using EPA Method 8270. Discrete sample 2D2 was also submitted for laboratory analysis of TPH-g using EPA Method 8260, TPH-d and TPH-mo using EPA Method 8015, and metals using EPA Method 6010/7470/7471. In addition, several composite samples (C1 through C7[1]) were submitted for analysis of BTEX and TPH-g using EPA Method 8260, TPH-d and TPH-mo using EPA Method 8015, OCPs using EPA Method 8081, PCBs using EPA Method 8082, and CAM 17 metals using EPA Method 6010/7470/7471. With the exception of arsenic, analytes were not detected above the screening levels defined above. In general, the detection limits were below the

[1] C1 was formed by compositing soil from sample locations 5A and 5B; C2 was formed by compositing soil from sample locations 5C, 5D, 5E, and 5F; C3 was formed by compositing soil from sample locations 3C, 4A, 4B, 4C, 4E, and 4F; C4 was formed by compositing soil from sample locations 2C, 3A, and 3B; C5 was formed by compositing soil from sample locations 2A, 2B, and 4D; C6 was formed by compositing soil from sample locations 1C, 1F, and 2F; and C7 was formed by compositing soil from sample locations 1A, 1B, 1D, and 1E.

screening levels, with the exception of several SVOCs, which are detailed on Table 6 of the Phase I ESA (Terraphase 2019) and included herein as Appendix D. Low levels of TPH-d and TPH-mo were detected in the composite soil samples (Table 2 of the Phase I ESA; Terraphase 2019), which BGC attributed to asphalt being present in the samples submitted for analysis. In October 2009, discrete samples were collected from select locations where higher concentrations of TPH-d and TPH-mo were detected during the September 2009 sampling and analyzed for TPH-d and TPH-mo.[2] TPH-d and TPH-mo were not detected in the discrete soil samples above the screening levels defined above (Table 2 of the Phase I ESA; Terraphase 2019).

In December 2016, BGC completed a Phase I ESA for the Site, and as part of the Phase I, soil sampling and analysis for general soil quality was performed. Four discrete samples were collected along the eastern side of the Site in areas that were not previously sampled (S1 through S4) and submitted for analysis of VOCs using EPA Method 8260, TPH-d and TPH-mo using EPA Method 8015, OCPs using EPA Method 8081, PCBs using EPA Method 8082, metals using EPA Method 6010/7470/7471, and SVOCs using EPA Method 8270 (Appendix D). In addition, discrete samples S5 through S32 were collected from areas of previous sample locations (collected in 2008 and 2009) and submitted for analysis of TPH-d using EPA Method 8015 (Appendix D). With the exception of arsenic, analytical results were consistent with previous investigations and were not detected above the screening levels defined above. Although arsenic was detected above screening levels, the detected concentration was within a range of background concentrations typically detected in Bay Area soil (Duverge 2011). In general, the detection limits were below the screening levels defined above, with the exception of several SVOCs, which are detailed on Table 6 of the Phase I ESA (Terraphase 2019) and included herein in Appendix D.

The BGC Phase I and Terraphase's 2019 Phase I ESA and 2018 Phase II Investigationdid not identify any RECs or other indications of hazardous material contamination at the Site, and no further investigation was recommended.

In February 2020, the District imported approximately 600 cubic yards of soil from the nearby Dublin High School site and placed it on the southeastern corner of the Site. The soil was excavated from the footprint of the former auto/wood shop called Building EE, located at the nearby Dublin High School, which had received unrestricted clearance from DTSC after review of a PEA and subsequent addenda were prepared for that site. The soil excavation occurred as part of the construction of a new Science and Engineering Building at the former location of Building EE. Building EE was demolished in 2017, but was included in a number of assessments historically completed at the Dublin High School site under the oversight of the DTSC including a Phase I ESA, a PEA, and Supplemental Site Investigation (SSI), which were completed for the larger site from 2006 to 2008, and a Phase I ESA Addendum which was completed in 2017 for the construction of the new science and engineering building and focused specifically on

[2] W1 through W6 were discrete samples that were re-collected from locations that made up the soil composite sample C3; Y1 through Y4 were discrete samples that were re-collected from locations that made up the soil composite sample C4; and X1 through X4 were discrete samples that were re-collected from locations that made up the soil composite sample C7.

Building EE (LFR 2006; LFR 2008a; LFR 2008b; Gibbs 2017). Based on the review of the available information compiled for Building EE, DTSC did not feel additional soil sampling was warranted for the imported soil when it was still located at the Dublin High School site. Based on our review of those files, and DTSC's recommendation, Terraphase did not collect additional samples of that soil.

2.0 SITE DESCRIPTION

This section describes the location and ownership of the Site.

2.1 Site Identification

The Site consists of six parcels, APNs 985-78-2 through 985-78-7, comprising approximately 24-acres of former agricultural land with underground utility improvements. The Site is located in Dublin, Alameda County, California. The average elevation of the Site is approximately 356 feet above mean sea level (amsl) and the topography slopes gently to the southwest. No EPA Identification numbers were identified for the Site. Mailing addresses and other Site names are provided in Sections 2.1.2 and 2.1.1. The approximate latitude and longitude (North American Datum of 1983) of the Site are identified as:

Latitude (North) 37° 42' 25.79"
Longitude (West) 121° 51' 53.17"

2.1.1 Site Name and History

The Site was previously named Promenade but is now referred to by the District at the New 2nd Comprehensive High School.

The Site was mostly undeveloped and used for agricultural purposes from approximately 1939 to the mid-1990s. Information indicates the area was likely used for livestock grazing and/or dry-farmed for hay or barley cultivation. From approximately 2005 to 2009, the Site appears to have been used for equipment and materials staging and for temporary trailers and offices in relation to the surrounding residential construction that occurred from 2005 to 2009. Utilities were installed (water, sewer, and storm water lines) and preliminary grading conducted as part of planned residential development at the Site, but the proposed development activities were ceased in 2009 and not completed. No other use or development appears to have occurred at the Site since 2009.

The Site is currently vacant land and is owned by Grafton Street, LLC. Previous use codes indicate that the parcels were once part of a housing development project. Per the City of Dublin Zoning Land Use, the Site is zoned as a planned development and general land use as neighborhood commercial.

2.1.2 Contact People

The contact person for the current site owner is:

Joe Sorrera
~~Assistant~~ Associate Superintendent Business Services~~/CBO~~
Dublin Unified School District

7471 Larkdale Avenue, Dublin, CA 94568
Office: (925) 828-2551

2.1.3 Site Description

The Site currently consists of six vacant parcels (APNs 985-78-2 through 985-78-7) comprising approximately 24-acres, on the corner of Dublin Boulevard and Chancery Lane in Dublin, California in Alameda County. A Site Map is included as Figure 2. The Site is surrounded by residential communities to the north (across Central Parkway), west (adjoining and across Chancery Lane), and east (adjoining), Devany Square park to the west, and vacant land to the southeast (across Dublin Boulevard). The Grafton Street retail center is located to the south-southwest of the Site (Figure 2). The Site is proposed for development as a school containing approximately 94 classrooms with a capacity for 2,585 students.

~~The District is interested in acquiring the property for future development as a new high school.~~ The District is in the process of acquiring the property for future development as a new high school.

2.2 Site Geology and Hydrogeology

The Site is located within the San Ramon Valley, a northwest-trending depression extending north from the western terminus of the Amador Valley structural basin which nearly bisects the Diablo Range of the Coast Range Geomorphic Province. The local topography consists of northwest-trending ridges and valleys dominated by the San Andreas Fault System where the ridges are typically composed of resistant sandstones or marine volcanics, and the valley areas are relatively deep alluvial deposits.

During Terraphase's Phase II investigation, fill material generally consisting of gravelly sand with debris was encountered from the ground surface to depths ranging between approximately 0.5 and 3.5 feet bgs. Shallow native soils consisting of brown to black clayey sand and clays with organic material were encountered below the fill materials at depths of up to 9.5 feet bgs. According to information provided in a PEA conducted for the nearby Dublin High School Campus, located approximately 3.4 miles to the northwest of the Site, the Site is underlain by alluvium deposited from the surrounding highlands during the Holocene (5,000 to 7,000 years before the present) to late Pleistocene (11,000 to 70,000 years before the present). The alluvium underlying the site consists of unconsolidated, permeable sand and silt generally extending 20 to 30 feet deep deposited over older, weakly-consolidated irregularly interbedded clay, silt, sand, and gravel. Permeability decreases in the older, more consolidated sediments compared to the surficial site soil (LFR 2008a).

Per the California Geological Survey's Fault Activity Map of California, the northwest-trending Calaveras Fault, which lies at the western edge of the San Ramon and Amador Valleys, is the nearest active fault and located approximately 3.5 miles west of the Site (CGS 2010). The Site does not lie within an Alquist-Priolo Special Studies Zone for known active faulting.

The nearest significant surface-water body is Tassajara Creek which is located approximately 0.8 mile west of the Site. The Site is located outside the 100- and 500-year flood plain areas.

According to LFR's 2008 PEA investigation report prepared for the nearby Dublin High School, groundwater may vary in depth as a result of seasonal variations and municipal withdrawal (LFR 2008a). In an updated conceptual site model (CSM) prepared by ENGEO for a site approximately 0.2 mile northeast from the site, groundwater was present in thin, perched, laterally discontinuous lenses (ENGEO 2013). BGC reported that groundwater was present between 16.5 and 18 feet bgs on the Site at the time of their geotechnical investigation (BGC 2008). According to ENGEO's 2013 CSM, regional groundwater is expected to flow south-southwest considering the surface topography for the region, as interpreted from the Livermore Quadrangle map (ENGEO 2013).

3.0 BACKGROUND

3.1 Site Status/Historical Site Information

The Site was mostly undeveloped and used for agricultural purposes from approximately 1939 to the mid-1990s. Information indicates the area was likely used for livestock grazing and/or dry-farmed for hay or barley cultivation. From approximately 2005 to 2009, the Site appears to have been used for equipment and materials staging and for temporary trailers and offices in relation to the surrounding residential construction that occurred from 2005 to 2009. Utilities were installed (water, sewer, and storm water lines) and preliminary grading conducted as part of planned residential development at the Site, but the proposed development activities ceased in 2009 and were not completed. No other use or development appears to have occurred at the Site since 2009, except for the import of fill material from the nearby Dublin High School as discussed in Section 3.2.7.

According to Terraphase's Phase I ESA, fill material has reportedly been imported and placed at the Site as part of past development plans for the Site. As reported in the Phase I ESA, (Terraphase 2019), it appears the soil may have been imported from the surrounding area as part of development activities in the area that occurred prior to 2005. However, the source of the fill material was never confirmed.

3.2 Prior Site Assessments

Several investigations have previously been conducted at the Site from 2008 to 2016. The following sections briefly summarize the previous activities. Where analytical data was collected and the results are representative of soil remaining at the Site, the sample results were compared to applicable screening levels identified as the DTSC-SLs provided in the DTSC HERO Note 3 for residential soil (DTSC 2018) or the EPA's Regional Screening Levels (RSLs) for residential soil developed by the EPA for analytes that do not have a DTSC-SL developed (EPA 2018). In addition, the San Francisco Bay Regional Water Quality Control Board (SFRWQCB) Environmental Screening Levels Environmental Screening Levels (ESLs) for residential soil were used as screening levels for petroleum hydrocarbons (TPH-g, TPH-d, and TPH-mo; SFRWQCB 2019).

The results of previous analytical testing performed by BGC on samples of fill soil and are summarized in Tables 1 to 6 in the Phase I ESA (Appendix D), previous soil sample locations are shown on the Figure in Appendix C, and previous analytical laboratory reports are provided in Appendix E. In general, a review of the sample handling procedures and laboratory quality control results did not result in any of the data being rejected.

3.2.1 BGC Soil Stockpile Sampling - 2008

In June 2008, BGC collected 13 soil samples (A1-A3, B1-B2, C1-C2, D1-D2, and E1-E4) from the

northeastern corner of the Site that included a portion of parcels 986-78-3, 985-78-4, and 985-78-5 (BGC 2008a; see the Figure in Appendix C for sample locations). At the time of the sampling in 2008, soil from mass grading of the adjacent residential and commercial development had been stockpiled and graded relatively flat in the area of sampling. The stockpile averaged about 2 feet deep and ranged from about 1-foot thick at the southern end to about 4-feet thick in the northwest corner. The thirteen soil samples were obtained at random locations from the soil stockpile from depths of 0.5 to 2 feet bgs. The samples were analyzed for VOCs using EPA Method 8260, SVOCs using EPA Method 8270, TPH-d and TPH-mo using EPA Method 8015, OCPs using EPA Method 8081, polychlorinated biphenyls (PCBs) using EPA Method 8082, and CAM 17 metals using EPA Method 6010/7470/7471. The analytical results were reportedly below the ESLs for residential soil (BGC 2008a). BGC concluded that the stockpiled soil at this Site was not considered to be contaminated and could be utilized as fill at most sites provided the receiver of the soil confirmed final acceptance of the soil. The soil associated with this stockpile was later reportedly removed from the Site (BGC 2009). Since these samples were associated with fill that was removed from the Site, the results are not tabulated in this report.

3.2.2 BGC Soil Testing - 2008

On July 3, 2008, BGC collected soil samples from four locations at a depth of 0.5 to 1 feet bgs (BGC 2008b). The samples were collected in an area north of Dublin Road within parcel APN 985-78-6 of the Site; see the Figure in Appendix C for sample locations. The four soil samples were composited and submitted for analysis of benzene, toluene, ethylbenzene and xylenes (BTEX) and TPH-g using EPA Method 8260; TPH-d and TPH-mo using EPA Method 8015; OCPs using EPA Method 8081, PCBs using EPA Method 8082, and CAM 17 metals using EPA Method 6010/7470/7471. The composite sample results are reported on Table 1 (BTEX), Table 2 (TPH), Table 3 (OCPs), Table 4 (PCBs), and Table 5 (metals) in the Phase I ESA (Appendix D). Copies of the analytical reports are included in Appendix E. With the exception of arsenic, analytes were not detected above applicable screening levels. Although arsenic was detected above screening levels, the detected concentration was within a range of background concentrations typically detected in Bay Area soil.

3.2.3 BGC Geotechnical Investigation – December 2008

In December 2008, BGC completed a geotechnical investigation at Promenade Parcel 5 (BGC 2008c). Although the copy of the report reviewed did not include a full site map, it appears that Promenade Parcel 5 coincided with APN 985-78-7 of the Site (BGC 2008c). As part of BGC's geotechnical investigation, ten borings were advanced across Parcel 5 to depths ranging from 5.5 feet to 46.5 feet bgs. BGC's report identified that Parcel 5 was generally covered by about 1.5 to 6 feet of engineered fill that was previously placed on Parcel 5 under BGC's oversight and testing during the surrounding Dublin Ranch development. The engineered fill generally consisted of stiff to very stiff, silty and sandy clay. The engineered fill was reported to be underlain by native soils generally consisting of stiff to very stiff silty clay to depths ranging from about 9.5 to 12 feet bgs, followed by medium stiff clayey silt that extended to depths up to 19.5 feet bgs. The deepest boring depth was extended to a depth of 46.5 feet. At location B7, the native stiff to very stiff clay was underlain by interbedded layers of generally medium dense

clayey sand, medium stiff to stiff clayey silt and silty clay, and medium dense silty sand to a depth of approximately 29 feet bgs. The interbedded layers were in turn underlain by very stiff to hard silty clay and sandy clay to the maximum depth explored.

3.2.4 BGC Soil Testing – 2009

In September and October 2009, BGC collected soil samples using a hand auger or drilling rig at several locations within a portion of the Site that included the 17-acre area between Central Parkway and Dublin Boulevard at the intersection with Grafton Street (BGC 2009). The area sampled included APNs 985-78-2, 985-78-3, 985-78-4, 985-78-5, and 985-78-6 of the Site. At the time of the soil sampling, the Site was reported as undeveloped with remnants of demolished aggregate base and gravel surface treatment located in various parts of the Site. In addition, a portion of the southern end of the Site was covered with aggregate base and remnant asphalt concrete and was being used for material storage.

On September 15 and 22, 2009, soil samples were collected from 32 locations (6, 7, 8, 9, D2A2, 1A-1F, 2A-2F, 3A-3C, 4A-4F, and 5A-5F) using a drilling rig from 0 to 1 foot below grade within a 150-foot grid; see the Figure in Appendix C for sample locations. Discrete samples 6, 7, 8, 9, D2A2, 1A-1F, 2A-2F, 3A-3C, 4A-4F, and 5A-5F were submitted for laboratory analysis of VOCs using EPA Method 8260 and SVOCs using EPA Method 8270. In addition, several composite samples were submitted for analysis of BTEX and TPH-g using EPA Method 8260, TPH-d and TPH-mo using EPA Method 8015, OCPs using EPA Method 8081, PCBs using EPA Method 8082, and CAM 17 metals using EPA Method 6010/7470/7471. The sample results are reported on Table 1 (BTEX), Table 2 (TPH), Table 3 (OCPs), Table 4 (PCBs), Table 5 (metals), and Table 6 (SVOCs) included in the Phase I ESA (Appendix D). Copies of the analytical reports are included in Appendix E. With the exception of arsenic, analytes were not detected above applicable screening levels. Although arsenic was detected above screening levels, the detected concentration was within a range of background concentrations typically detected in Bay Area soil. In general, the detection limits were below the screening levels, with the exception of a few SVOCs.

Low levels of TPH-d and TPH-mo were detected in the soil samples which BGC attributed to asphalt being present in the samples submitted for analysis. In October 2009, select locations from the September 2009 sampling were resampled and analyzed for TPH-d and TPH-mo using EPA Method 8015. The results from the sampling are summarized in Table 2 in the Phase I ESA (Appendix D); see the Figure in Appendix C for sample locations. Copies of the analytical reports are included in Appendix E. TPH-d and TPH-mo were not detected in the soil samples above the screening levels.

3.2.5 Berlogar Stevens 2016 Phase I ESA

In December 2016, Berlogar Stevens completed a Phase I ESA for the Site (the Berlogar Phase I; Berlogar Stevens 2016). The Berlogar Phase I reported that some grading, soil stockpiling, and construction equipment staging had previously occurred on the property from approximately

2005 to 2009. The Site was undeveloped at the time of Berlogar Phase I site visit, with only vegetation and perimeter fencing.

As part of the Berlogar Phase I, soil sampling and analysis for general soil quality was performed. Four samples were collected along the eastern side of the Site in areas that were not previously sampled (S1 through S4) and submitted for analysis of VOCs using EPA Method 8260, TPH-d and TPH-mo using EPA Method 8015, OCPs using EPA Method 8081, PCBs using EPA Method 8082, metals using EPA Method 6010/7470/7471, and SVOCs using EPA Method 8270. The sample results are reported on Table 1 (VOCs), Table 2 (TPH), Table 3 (OCPs), Table 4 (PCBs), Table 5 (metals), and Table 6 (SVOCs) in the Phase I ESA (Appendix D); see the Figure in Appendix C for sample locations. Copies of the analytical reports are included in Appendix E. In addition, several samples (S5 through S32) were collected from areas of previous sample locations (collected in 2008 and 2009) and submitted for analysis of TPH-d using EPA Method 8015. The sample results are reported on Table 2 in the Phase I ESA (Appendix D); see the Figure in Appendix C for sample locations. Copies of the analytical reports are included in Appendix E. With the exception of arsenic, analytes were not detected above applicable screening levels. Although arsenic was detected above screening levels, the detected concentration was within a range of background concentrations typically detected in Bay Area soil. In general, the detection limits were below the screening levels, with the exception of a few SVOCs.

The Berlogar Phase I did not identify any RECs or other indications of hazardous material contamination were identified at the Site, and no further investigation was recommended.

3.2.6 Terraphase Phase I ESA

Terraphase completed a Phase I ESA for the Site in April 2019 (Terraphase 2019). Terraphase identified the following RECs in connection with the Site during the Phase I ESA:

- According to the Site owner's representative, the Site was historically used for hay or barley cultivation and livestock grazing. Historical aerial photos also suggest evidence of either disking or row crops at the Site between the late 1970s and late 1990s. Since the Site was historically used for dryland farming, there is a potential for agricultural chemicals to be present in shallow soil at the Site, beneath the layer of fill material imported to the Site. It is unlikely that the Site was ever irrigated. The underlying native soils were not assessed for OCPs by BGC in previous environmental investigations.

- Fill material was previously imported to the Site. Based on information reviewed, it appears the soil may have been imported from the surrounding area as part of development activities in the area that occurred prior to 2005. While BGC conducted sampling of the fill material brought to the Site, the majority of the soil samples were composited prior to analysis. Additionally, BGC did not collect samples of the fill for asbestos analysis in previous investigations.

3.2.7 Current Site Conditions and Imported Soils

As reported by Chris Stevens, DUSD ~~Director of Facilities~~ Chief Facilities Operations Officer, the District used the southeast corner of the Site to stockpile approximately 600 cubic yards of soil imported from the nearby Dublin High School site, located at 8151 Village Parkway, Dublin, California, in February 2020. The soil was excavated from the footprint of the former auto/wood shop called Building EE, located at the nearby Dublin High School. Trucking logs for the imported soils are included in Appendix F.

The soil excavation occurred as part of the construction of a new Science and Engineering Building at the former location of Building EE. Building EE was demolished in 2017, but was included in a number of assessments historically completed at the Dublin High School site including a Phase I ESA, a PEA, and Supplemental Site Investigation (SSI), which were completed for the larger site from 2006 to 2008, and a Phase I ESA Addendum which was completed in 2017 for the construction of the new science and engineering building and focused specifically on Building EE (LFR 2006; LFR 2008a; LFR 2008b; Gibbs 2017).

The previous environmental assessments, which were reviewed by DTSC, have identified that the Dublin High School site was historically used for dry-farming until it was developed as the High School in approximately 1969 (LFR 2006). Specific to Building EE, the prior assessments at the High School have identified that the former Building EE was: constructed in 1969; a structure of concrete tilt-up construction; placed on footings with a concrete slab-on-grade floor; surrounded by pavement since construction; and used as an auto and woodshop (LFR 2006).

As part of the environmental assessments conducted within the area of Building EE, soil samples were collected from within or in close proximity to the building footprint. The features investigated included: soil near the former drain of the sink in the wood shop and soil in the vicinity of a former hydraulic lift and associated hydraulic reservoir associated with the auto shop (LFR 2008a; 2008b). The results of previous soil investigations conducted in this area were summarized in a 2017 Phase I Addendum (Gibbs 2017). The 2017 Phase I Addendum reviewed the Site conditions, including proximity to ultramafic rock formations, and concluded that no further investigation of Building EE was warranted (Gibbs 2017). DTSC concurred with these findings in a letter dated December 28, 2017 (DTSC 2017). Based on our review of this information and because the 2017 Phase I Addendum concluded that no further investigation of the soil was warranted for Building EE, Terraphase did not collect additional samples of the imported soil at the Site.

3.3 Owner, Property Manager and Occupant Information

The Site is currently vacant land owned by Grafton Street, LLC. Previous use codes indicate that the parcels were once part of a housing development project. Per the City of Dublin Zoning Land Use, the Site is zoned as a planned development and general land use as neighborhood commercial.

According to the current site owner's representative, Mr. James Tong with Grafton Street, LLC, the Site was historically used for hay or barley cultivation and livestock grazing. Historical aerial

photos also suggest evidence of either disking or row crops at the Site between the late 1970s and late 1990s. Mr. Tong noted that no corrals, barns, or other structures related to agriculture were located on the property during his ownership. Mr. Tong reported that from 2005 to 2009, Toll Brothers set up a temporary sales office and construction trailers in the southern and northwestern portion of the Site for onsite and adjacent residential construction projects. Utilities were installed (water, sewer, and storm water lines) and preliminary grading conducted as part of planned residential development at the Site, but the proposed development activities were ceased in 2009 and not completed. No other use or development appears to have occurred at the Site since 2009. No fueling or maintenance activities were conducted on the Site. Clearance soil sampling was conducted by Toll Brothers after the office trailers were removed from the property. Mr. Tong indicated that current Site owner has owned the property for the past 17 years. Mr. Tong did not identify any other specialized knowledge or information regarding the Site.

3.4 Hazardous Material/Substance/Waste Management Information

No manufacturing activities were identified as having historically occurred at the Site. The Site is not currently, nor has it been in the past, subject to any federal, state, or local permits. Other than activities documented in this PEA Report, Terraphase found no evidence of prior assessments, sampling, or cleanup activities that have been conducted at the Site.

3.5 Current and Historical Uses of Surrounding Properties

The Site is in a densely populated residential area, and is surrounded to the north, west, and east by multi-family houses (apartments and/or condominiums). The Site is bound to the west by Devany Square park, to the south-southwest by Dublin Boulevard and a commercial shopping center, Grafton Station, and to the southeast by an undeveloped lot and a newly constructed hotel (Aloft Hotel).

Based on a review of historical aerial photographs (included in Appendix G), the properties located in the vicinity of the Site were predominantly used for agricultural purposes until the mid-1990s. In the early 2000s, the use of the surrounding properties shifted to predominantly residential purposes. During the reconnaissance, Terraphase observed the adjoining properties from public roadways and the Site. The purpose of these observations was to identify obvious uses or conditions at the adjoining properties likely indicative of a REC at the Site. No RECs were noted at the adjoining properties during the Site reconnaissance.

Of the databases searched in accordance with the ASTM Practice E1527-13, several nearby properties were found and listed within the ASTM-prescribed search radii. A list of the government records searched, including the definition of the acronyms used, is provided in the EDR Report and discussed in detail below in Section 3.7.5.2. No soil or groundwater conditions identified at the nearby properties in the regulatory records search pose an environmental concern to the Site.

3.6 All Appropriate Inquiries Information

3.6.1 Specialized Knowledge

As part of the Phase I ESA, a questionnaire was completed by the current owner's representative, Mr. James Tong, with Grafton Street, LLC (Appendix B). The questionnaire noted that Mr. Tong has been associated with the Site since 1995 and the current operations are as vacant land holding for future development. Mr. Tong did not identify any other specialized knowledge or information regarding the Site on the completed questionnaire.

3.6.2 Commonly Known or Reasonably Ascertainable Information

No additional commonly known or reasonably ascertainable information exists for the Site, beyond that which is available to the public through public agencies and freedom of information act requests.

3.6.3 Valuation Reduction for Environmental Liens

No information was provided to ascertain if the price of the property reasonably reflects the fair market value; however, no environmental liens have been found for the property.

3.7 Records Review Information

A report on previous uses of the Site and potential offsite sources of environmental concerns was prepared by EDR of Milford, Connecticut ("the EDR Report"; Appendix H). The EDR Report findings were presented in the Phase I ESA Report (Terraphase 2019) along with RECs, and are summarized in the following sections.

Although requested by Terraphase, no Certified Sanborn® fire insurance maps were available for the Site (EDR 2019a).

3.7.1 Land Records

The approximate latitude and longitude of the Site are identified to be:

3.7.1.1

Latitude (North) 37° 42' 25.79"
Longitude (West) 121° 51' 53.17"

Title Record

The Environmental Lien and Activity and Land Use Limitation (AUL) Search report provided by EDR (EDR 2019a) indicated that the last transfer of parcels with APNs 985-78-4, was recorded on May 7, 2013, when the property was transferred from James and Mei F. Tong to Grafton Station LLC, the current owner. Information obtained from the Alameda County Assessor's office concurred with the parcel information described above. Parcel maps are provided in Appendix I.

Environmental Liens and Activity and Use Limitations

It is unknown if the property owner has any knowledge of environmental liens or AULs associated with the Site. A review of the EDR Environmental Lien and AUL Search report did not indicate any environmental liens or AULs associated with the Site.

3.7.1.2 3.7.2 Aerial Photograph Review

Terraphase reviewed aerial photographs, provided by EDR, dated 1939, 1940, 1949, 1958, 1966, 1968, 1979, 1982, 1993, 1998, 2006, 2009, 2012, and 2016 (EDR 2019d). A copy of the historical aerial photographs are included in Appendix G.

1939 – 1968 Photographs: The Site appears to be undeveloped or agricultural land, with the adjoining area to the northwest showing a few smaller structures. A road in the approximate alignment as present-day Highway 580 is shown to the south of the Site (Highway 580 was constructed in 1947). Undeveloped or agricultural land surrounds the property to the north, south, west, and east. A ravine or stream appears to bisect the property (running north to southeast) in the 1939, 1940, 1949, 1966, and 1968 aerial photographs. In the 1949 photograph, a dense set of structures is located further to the northwest, possibly for agriculture. Hay baling appears to be taking place on the eastern side of the Site in the 1939 and 1940 aerial photographs. The remainder of the Site appears to be used for grazing. By 1949, the entire Site appears to be used for grazing and this use appears to continue in the 1966 and 1968 photographs.

1979 – 1998 Photographs: The Site appears to be either disked agricultural land or row crops. Residential development is present to the south of the Site (on the southern side of Highway 580)

beginning in 1979 with further development expanding south of the highway in 1993. By 1998, the structures to the northwest of the Site are gone, and Dublin Boulevard appears as an improved roadway bordering the southern end of the Site.

2006 Photograph: In 2006 the Site contains multiple trailers and asphalt pads and appears to have been graded for development; a front entry structure is shown along Dublin Boulevard within a landscaped parking area. Additional trailers are shown along the Central Parkway and Chancery Lane portion of the Site. Residential structures are developed on adjoining properties to the west and east; undeveloped land still exists to the north and south. Devany Square (to the west along Finnian Way and Chancery Lane) is being developed. Grading and development to the north along Central Parkway is visible with no development of property to the south across Dublin Boulevard.

2009 Photograph: In 2009, all trailers and equipment that were previously on the Site (visible in the 2006 aerial photograph) have been removed, and the Site appears to be vacant. Devany Square is completed (adjoining property to the west), new residential houses are visible across

Central Parkway to the north, and a commercial shopping center is shown to the south-southwest, across Dublin Boulevard (Grafton Station).

2012 – 2016 Photographs: The Site is in its current configuration and appears to be vacant, undeveloped land. The Site is surrounded to the east, north, and west by residential properties and a park (to the west), and to the south of Dublin Boulevard by a commercial shopping center (Grafton Station).

2019 Google Earth satellite image: The Site is vacant land with disturbed areas in the northwest portion and south-central portion near Dublin Boulevard. Surrounding the Site to the east, north, and west is residential properties and a park (to the west), and to the south of Dublin Boulevard is a commercial shopping center (Grafton Station).

3.7.3 Historical USGS Topographic Map

Terraphase reviewed topographic maps, United States Geological Survey (USGS) Pleasanton, California 15-Minute Quadrangle, dated 1906 and 1941; and USGS Livermore and West Dublin, California, 7.5-Minute Quadrangles, dated 1953, 1961, 1968, 1973, 1980, and 2012 (EDR 2019e). A copy of the topographic maps are included in Appendix J.

1906, 1941, and 1947 Historical Topographic Maps: The Site and the general vicinity is mostly undeveloped land in an area located east of Tassajara Creek, in Santa Rita. An unpaved access road is shown to traverse through the Site from Dublin Boulevard to the north. There is little development in the surrounding area.

1953, 1961, 1968, and 1973 Historical Topographic Maps: An unpaved access road is shown to traverse through the Site from Dublin Boulevard to the north. A creek is also identified traversing through the Site in a southeasterly direction. A general increase in urban development to the distant west and southwest of the Site was observed. The Parks Air Force Base, Santa Rita Rehabilitation Center, and main hospital are shown to the west of the Site (across Tassajara Road) in the topographic maps from 1953 to 1973. Highway 580 is labeled Highway 50 (two lanes each direction) until 1973, when it is shown with the current highway number.

1980 Historical Topographic Map: The unpaved access road is present along the western boundary of the Site. The creek is identified traversing through the Site in a southeasterly direction. Highway 580 is shown in its current configuration, and the Camp Parks Base is no longer identified. There is continued urban development south of Highway 580 and along Tassajara Road to the west.

2012 Historical Topographic Map: The creek is identified traversing through the Site in a southeasterly direction. The Site is surrounded by the current configuration of streets.

3.7.4 City Directories

Terraphase reviewed city directories, provided by EDR, dated 1975, 1980, 1985, 1989, 1994, 2001, 2006, 2010, and 2014 (EDR 2019f). A copy of the city directory report is included in Appendix K.

According to the the EDR-City Directory Image Report, the Site has several proposed addresses; however, it has never been developed. Onebaddress associated with the Site was identified as the following:

- 3501 Dublin Blvd: "Toll Brothers Inc" (2010)

Adjacent listings included individual residences on Grafton Street and Finnian Way and both residential and commercial properties on Dublin Boulevard.

3.7.5 Standard Environmental Record Sources

The regulatory agency database report discussed in this section, provided by EDR, was reviewed for information regarding reported releases of hazardous substances and petroleum products on or near the property. The EDR Report, including a description of all regulatory databases and associated acronyms, is included in Appendix H.

Terraphase reviewed applicable and reasonably ascertainable federal, state, and local environmental-related databases as part of the Phase I ESA. Specific records and search distances (measured from the approximate property boundary of the Site) for the environmental databases were reported by EDR to be consistent with ASTM Practice E 1527-13 and are discussed in the EDR Report, dated March 4, 2019. The EDR Radius Map™ Report is presented as Appendix H.

3.7.5.1

Site

One address associated with the Site was identified in one of databases searched by EDR as follows:

3553 Finnian Way
City West Structures Inc.
The Site is listed on the HAZNET database for two listings of off-site disposal of hazardous wastes in 2005. One listing was for 0.1 tons of an unspecified solvent mixture and the other listing was for 0.54 tons of hydrocarbon solvents. Both waste streams were disposed of at a transfer station. Based on the lack of information regarding a release to soil or groundwater, and cross gradient location, this site is not considered a REC or environmental concern for the Site.

Although the address is identified as associated with the Site, the listing is identified as approximately 52 feet west of Site in the EDR report. It is possible the waste disposal described in the database listing was associated with the construction and equipment materials storage

that occurred as part of the surrounding construction activities in 2005. No other listings were identified for the Site in the databases reviewed.

Nearby Listed Properties

Of the databases searched in accordance with the ASTM Practice E1527-13, the following additional listings were found within the ASTM-prescribed search radii. A list of the government records searched, including the definition of the acronyms used, is provided in the EDR Report.

3.7.5.2

Central Parkway and Grafton Street
Arrivare
Approximate Distance from the Property: 38 feet north-northeast of the Site
The site is listed on the California Integrated Water Quality System Project (CIWQS) and National Pollutant Discharge Elimination System (NPDES) databases for construction that was terminated on April 18, 2014. No violations were reported in the database listings. Given the listing is associated with a permit for stormwater runoff control related to construction activities and no violations were reported, this site is not considered a REC or environmental concern for the Site.

Central Parkway Grafton Street and Lee Thompson Street
Sorrento East Neighborhood 9
Approximate Distance from the Property: 54 feet north-northeast of the Site
The site is listed on the CIWQS database for a storm water construction permit related to a construction project that occurred from 2012 until 2015. No violations were reported in the database listing. Given the listing is associated with a permit for stormwater runoff control related to construction activities and no violations were reported, this site is not considered a REC or environmental concern for the Site.

3637 Dublin Blvd
Matthew Grimes
Approximate Distance from the Property: 104 feet southwest of the Site
The name and address are listed on the Pesticide Licensing database (PEST LIC database) as a Qualified Applicator Certificate (QAC), Category B meaning the license holder is permitted to apply or supervise the application of restricted and general use pesticides, substances, methods or devices to control pests in: natural or planted ornamental and turf landscaped areas and other outside areas around buildings; residential yards (including home gardens and orchards), recreation areas, schoolyards, vacant lots, storage yards, greenbelts, golf courses, cemeteries, parks, landscaped street medians, sidewalk areas and walkways, and parking lots directly related to landscaped areas; and landscaped areas in enclosed shopping malls and indoor plants. The listing identifies the license has an expiration date of December 31, 2018. Since the listing appears to be associated with a license for a business and/or person, this listing is not considered a REC or environmental concern for the Site.

3448 Finnian Way

Terraces Home Owner's Association

Approximate Distance from the Property: 187 feet east-southeast of the Site

The site is listed on the EMI and FINDS databases for the Bay Area Air Quality Management District (BAAQMD) in 2009-2016 for air emissions. Additional information obtained from the BAAQMD indicate this listing is associated with an emergency generator located at the property. Based on the lack of information regarding a release to soil or groundwater, this site is not considered a REC or environmental concern for the Site.

3448 Finnian Way

Toll Bros Inc.

Approximate Distance from the Property: 178 feet east-southeast of the Site

The site is listed on the HAZNET database for two listings of off-site disposal of hazardous wastes in 2005. One listing was for 0.68 tons of an unspecified organic liquid mixture disposed at a landfill. The other listing was for treatment of 0.07 tons of contaminated soil from site clean-up via incineration. Based on the downgradient location, this site is not considered a REC or environmental concern for the Site.

4405 Chancery Lane

Devany Square

Approximate Distance from the Property: 276 feet west of the Site

The site is listed on the CIWQS database for a storm water construction permit related to a construction project that occurred from 2007 until 2008. No violations were reported in the database listing. Given the listing is associated with a permit for stormwater runoff control related to construction activities and no violations were reported, this site is not considered a REC or environmental concern for the Site.

3750 Dublin Blvd

Lowe's #2273

Approximate Distance from the Property: 283 feet southwest of the Site

The site is listed on the Aboveground Storage Tank (AST), FINDS, ECHO, California Environmental Reporting System (CERS) Hazardous Waste (HAZ WASTE), CERS TANKS, CERS, HAZNET, and RCRA-Small Quantity Generator (SQG) databases. The listing in the AST Database is for a 1,500-gallon diesel-fuel AST associated with an emergency generator. Violations were noted in the CERS HAZ WASTE, CERS TANKS, and CERS databases listings for: failures in compliance associated with manifest/bill of lading retention in 2015 (returned to compliance in March 2015) and 2016 (returned to compliance in May 2018), Spill Prevention Control and Countermeasure (SPCC) Plan violations for not completing required 5-year reviews, failing to designate an accountable person for discharge prevention, and deficiencies in facility diagram and SPCC Plan information (returned to compliance in March 2015), failures for improper labeling of hazardous waste containers and portable tanks (returned to compliance in March 2015), failure to implement a Hazardous Materials Business Plan in 2015 and 2018 (returned to compliance in

May 2018), and failure to provide annual safety and hazmat training (returned to compliance in May 2018). Based on the lack of information regarding a release to soil or groundwater, this site is not considered a REC or environmental concern for the Site.

Southeast Corner of Grafton Street at Dublin Blvd
Grafton Plaza Residential
Approximate Distance from the Property: 306 feet south-southwest of the Site
The site is listed on the CIWQS database for a storm water construction permit related to a construction project dated 2017; the listing is identified as active. No violations were reported in the database listing. Given the listing is associated with a permit for stormwater runoff control related to construction activities and no violations were reported, this site is not considered a REC or environmental concern for the Site.

4162 Clarenbridge Circle
Approximate Distance from the Property: 53 feet west of the Site
The site is listed on the CHMIRS database for a 2010 release of mineral oil from a transformer. The oil release was confined to a vault. Based on the information provided, it does not appear this release impacted soil or groundwater. Therefore, this site is not considered a REC or environmental concern for the Site.

3309 Monaghan Street
Chenchu Gu
Approximate Distance from the Property: 573 feet east-northeast of the Site
The site is listed on the PEST LIC database as a QAC, Category B meaning the license holder is permitted to apply or supervise the application of restricted and general use pesticides, substances, methods or devices to control pests in: natural or planted ornamental and turf landscaped areas and other outside areas around buildings; residential yards (including home gardens and orchards), recreation areas, schoolyards, vacant lots, storage yards, greenbelts, golf courses, cemeteries, parks, landscaped street medians, sidewalk areas and walkways, and parking lots directly related to landscaped areas; and landscaped areas in enclosed shopping malls and indoor plants. The listing identifies the license has an expiration date of December 31, 2018. Since the listing appears to be associated with a license for a business and/or person, this listing is not considered a REC or environmental concern for the Site.

Palmero Way
Proposed Kolb Elementary School
Approximate Distance from the Property: 1,746 feet northeast of the Site
The site is listed on the Envirostor database as a school investigation site. In 2007, a Phase I ESA was prepared for the property and submitted to the DTSC (ENGEO 2007). The Phase I ESA identified that the property, as well as the general vicinity, had been historically dry farmed, likely for hay and barley cultivation. The property had also reportedly been used for livestock grazing (ENGEO 2007). Following their review and a site visit, the DTSC issued a letter of approval for the Phase I agreeing with the findings that no additional investigation of the

property was necessary (DTSC 2007). Based on the DTSC's findings of no further investigation required, this site is not considered a REC or environmental concern for the Site.

4460 Tassajara Road, Suite A
Petco #5318
Approximate Distance from the Property: 1,754 feet west-southwest of the Site
The site is listed on the CERS HAZ WASTE and CERS databases as a generator of hazardous waste. No violations were reported in the listings. Based on the lack of information regarding a release to soil or groundwater, this site is not considered a REC or environmental concern for the Site.

4440 Tassajara Road
Safeway #1932
Approximate Distance from the Property: 1,781 feet west-southwest of the Site
The site is listed on the CERS HAZ WASTE and CERS databases as a generator of hazardous waste. Violations were noted for: failures in compliance associated with manifest/bill of lading retention in 2015 (returned to compliance in August 2015), failures for improper labeling and storage of hazardous waste containers (returned to compliance in August 2015), failure to implement a Hazardous Materials Business Plan in 2015 (returned to compliance in August 2015), and failure to provide annual safety and hazmat training (returned to compliance in August 2015). Based on the lack of information regarding a release to soil or groundwater, this site is not considered a REC or environmental concern for the Site.

Parcel A-Tract 6960/Antone Way
E-2 Elementary School
Approximate Distance from the Property: 2,098 feet northeast of the Site
The site is listed on the Envirostor database as a school investigation site. In 2000, a Phase I ESA was prepared for the property and submitted to DTSC (MECA 2000). The Phase I ESA identified that the historical use of the property had been vacant land used for grazing. Following DTSC review and a site visit, the DTSC issued a letter of approval for the Phase I agreeing with the findings that no additional investigation of the property was necessary (DTSC 2001b). In 2002, a Phase I ESA update was prepared for the property and submitted to the DTSC (Krazan & Associates Inc. 2002) which also concluded no further investigation of the property was necessary. Based on the DTSC's findings of no further investigation required, this site is not considered a REC or environmental concern for the Site.

Parcel O-Tract 6725/South Dublin Ranch Drive
M-1 Middle School
Approximate Distance from the Property: 2,100 feet northeast of the Site
The site is listed on the Envirostor database as a school investigation site. In 2000, a Phase I ESA was prepared for the property and submitted to DTSC (MECA 2000). The Phase I ESA identified that the historical use of the property had been vacant land used for grazing. Following DTSC review and a site visit, the DTSC issued a letter of approval for the Phase I agreeing with the

findings that no additional investigation of the property was necessary (DTSC 2001c). Based on the DTSC's findings of no further investigation required, this site is not considered a REC or environmental concern for the Site.

5020 Tassajara Road
Castle Rand Property
Approximate Distance from the Property: 2,543 feet northwest of the Site
This property is on the Spills Leaks and Investigation Cleanup (SLIC), CERS and Alameda County CS databases for a cleanup of lead and diesel contaminated soil identified during a Phase II site assessment (BGC 1997). The Site was granted closure by the Alameda County Health Care Services (ACHCS) in 1998 (EDR 2019b). Based on the case closure status, this site is not considered a REC or environmental concern for the Site.

Three "unmappable" (or "orphan") listings were identified within the database report. Unmappable sites are listings that could not be plotted with confidence but are potentially in the general area of the property based on the partial street address, city, or zip code. These sites were ALCO East County Hall of Justice, an unnamed site at 660 Donlon Way, and Santa Rita Property, which are all too distant, not related to, or do not pose a concern to the Site.

3.7.6 Vapor Encroachment Screening

ASTM Standard E2600-10 Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions (ASTM 2010) was used as guidance for conducting a VES for the Site. The purpose of the screening is to determine whether a Vapor Encroachment Condition (VEC) exists from chemicals of concern that may migrate as vapors onto a property because of contaminated soil and groundwater on or near the Site.

Soil vapor is one of the pathways of contamination to the Site, along with groundwater and soil. ASTM E1527-13 requires that vapor migration be treated no differently than contaminated groundwater. The soil-vapor contaminant pathway needs to be considered in evaluation of RECs or other environmental concerns. The estimated groundwater flow direction is to the south, southwest. The two listed sites identified on the EDR VES, Arrivare and Sorrento East Neighborhood 9 are listed for construction stormwater discharge permits and do not appear to have the potential to cause a VEC at the Site.

In accordance with ASTM E2600-10 (Tier 1; Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions), there are no potential petroleum hydrocarbon sources (active leaking underground storage tank [LUST] cases) for vapor intrusion within 1/10 mile of the Site or volatile organic compounds (VOCs) sources (active SLIC cases) within ⅓ mile. There were no properties identified with the potential to cause a VEC at the Site (Appendix L, EDR 2019c).

3.7.7 Additional Environmental Record Sources

In addition to the EDR review, Terraphase contacted additional local, county, state, and federal environmental record sources, as described in the following subsections.

Property Tax Files

3.7.7.1 The EDR Property Tax Report indicated that the Site consists of six parcels comprising 25.37 acres, identified as APN 985-78-2 through 985-78-7 (EDR 2019h, Appendix I). The City of Dublin online GIS Portal parcel viewer (https://gis.dublin.ca.gov/Html5Viewer/) provided information on each parcel, including addresses, hazards, Federal Emergency Management Agency (FEMA) flood hazard, and land use. Addresses associated with the Site in the City of Dublin online GIS Portal parcel viewer were as follows:

- Parcel 985-78-2: Proposed alignment for private street. No associated addresses.
- Parcel 985-78-3: Proposed alignment for private street. No associated addresses.
- Parcel 985-78-4: 3553 Finnian Way, 3646 Central Parkway, 3644 Central Parkway, 4449 Chancery Lane, and 4451 Chancery Lane.
- Parcel 985-78-5: 3501 Finnian Way.
- Parcel 985-78-6: 3501 Dublin Boulevard.
- Parcel 985-78-7: 3448 Finnian Way, 3460 Finnian Way, 4205 Grafton Street, 4263 Grafton Street, 4255 Grafton Street, 4267 Grafton Street, 4243 Grafton Street, 4259 Grafton Street, 4239 Grafton Street, 4247 Grafton Street, 4251 Grafton Street.

All of the parcels were identified in Flood Zone X meaning the parcels are not identified within the 1 percent or 0.2 percent chance (100 year and 500 year, respectively) floodplains. All of the parcels were identified with the zoning land use of Planned Development. Per EDR's Environmental Lien and AUL Search Report, the Site is currently owned by Grafton Station LLC (Appendix M).

The County of Alameda Assessors and Recorders Office online search provided information on the history of the parcels for the Site, and is summarized below:

- **APNs # 985-78-2, 985-78-3, 985-78-4, 985-78-5, 985-78-6, and 985-78-7**: Grantor – James and Mei F. Tong and Grantee – Grafton Station LLC recorded May 7, 2013 (Grant Deed 2013160396). Six parcels associated with the Grafton Station LLC parcel: 985-78-2 through 985-78-7, and seven parcels associated with James and Mei F. Tong: 985-78-2 through 985-78-7, and 985-9-9-2, all listed as vacant commercial land use (3000). A Memorandum of Agreement was signed on February 20, 2012, between James Tong and Mei Fong Tong (Seller) and KB HOME South Bay Inc., a California corporation (buyer) recorded on February 24, 2012 (MA 2012061653). A Quitclaim Deed was recorded on May 2, 2013, between

James Tong and Mei Fong Tong and KB HOME South Bay Inc., a California corporation (Quitclaim Deed 2013153929).

Local Regulatory Records

City of Dublin Building and Planning Departments

3.7.7.2 Terraphase contacted the City of Dublin Building and Planning Departments on March 4, 2019, to review documents or records pertaining to the Site. Several addresses were found online from the City of Dublin Parcel Report, as described above in Section 3.7.7.1, for four of the six parcels that comprise the Site.

It is believed that these addresses were created for the temporary construction and sales office trailers previously located at the Site that were associated with the surrounding housing development. The addresses associated with the Site with information obtained from the Building Department files are discussed below.

- **3644 Central Pkwy** – a temporary power pole was installed at the Site in August and October 2005 and again in August 2006; building permits for installation of eight site signs for Toll Brothers in September 2006; all for residential construction under the ownership/developer Toll Brothers, Inc.

- **4449 Chancery Lane** – installation of kiosk sign at Dublin Boulevard and Tassajara Road for Dublin Ranch Villages in February 2003; applications for the installation of land use signs for Area G Dublin Ranch Villages were submitted in March 2003; building plans were submitted in July 2007 for Sorrento, Trevi Village 2, floor truss calculations and plans (this is not related to the Promenade, rather a residential development north of the Site); all for residential construction under the ownership/developer Toll Brothers Inc.

- **3448 Finnian Way** – the Terraces west parking structure shoring permit was filed in August 2004; in July 2004, the west building temporary shoring and earth retention plan review was prepared for the Toll Brothers; the west building super pad was checked for elevation on September 2004 (grading plans by MacKay & Somps dated July 2004); the shoring for the west parking garage was inspected by Construction Testing Services in September 2004; in April 2008, BGC provided an opinion on geotechnical aspects of construction of the West Terraces at Dublin Ranch per reports from April 1999 and October 2003; and a report from PB&A Structural Engineers Inc. was prepared and titled Engineering Calculations – Temporary Soil nailed Shoring System – Terraces at Dublin Ranch Villages in June 2004; drawings for the temporary soil nail wall shoring for the Terraces at Dublin Ranch was submitted in October 2004; all for residential construction under the ownership/developer Toll Brothers Inc.

- **3501 Dublin Blvd** – The Dublin Ranch Area G corporation/sales yards (sales trailers and locations) and sales office layout drawings were submitted to the building department for approval in December 2001 under the ownership of James Tong/DR Acquisition II (corner of Grafton and Dublin Blvd) for Toll Brothers Inc.; The Dublin Ranch Area G permit for a

modular building (modular temporary sales trailer with exterior pediment) was submitted to the building department in December 2001 for the Toll Brothers residential development; in October 2004 temporary shoring and earth retention system for H-2 (as built) Terraces at Dublin Ranch Villages Area G were prepared by PB&A Inc. for Toll Brothers; all for residential construction under the ownership/developer Toll Brothers Inc.

The files for the addresses researched indicated preliminary drawings and permits for temporary trailers and equipment were filed for the Site in 2006.

County Regulatory Records

Alameda County Environmental Health Hazardous Materials/CUPA

3.7.7.3 On March 4, 2019, Terraphase submitted a request to the Alameda County Department of Environmental Health (ACDEH) Certified Unified Program Agency (CUPA) for records pertaining to related to hazardous waste generators, Hazardous Materials Business Plans, underground storage tanks (USTs), tiered permitting (including Fire Department records), and AST programs for the Site APNs and addresses. No documents were identified in the system for the Site.

Alameda County Department of Environmental Health LOP/SLIC/LUST

On March 4, 2019, Terraphase researched the online ACDEH SLIC, Local Oversight Program (LOP), and leaking UST (LUST) regulatory database (http://www.co.alameda.ca.us/aceh/lop/index.htm), to review records pertaining to petroleum product storage, usage, release, USTs, ASTs, and/or leaking underground fuel tanks for the Site APNs and addresses. No documents were identified in the system for the Site.

3.7.7.4

State Regulatory Records

Department of Toxic Substances Control

On March 4, 2019, Terraphase reviewed the DTSC's EnviroStor database (DTSC 2019a), which houses information on permits and corrective action at hazardous waste facilities, as well as site cleanup projects, for relevant records related to the Site and/or adjoining properties. The Site and immediately adjacent properties were not identified in the database search results.

State Water Resources Control Board

On March 4, 2019, Terraphase reviewed the GeoTracker database (SWRCB 2019), the SWRCB data management system for sites that impact groundwater or have the potential to impact groundwater. The Site and adjacent properties were not identified in the database search results.

Division of Oil, Gas, and Geothermal Resources Files

Oil and gas wells were not observed within the Site during our reconnaissance on March 14, 2019. A review of the California Division of Oil, Gas, and Geothermal Resources website for oil and gas fields in California and Alaska (CDCDOGGR 2019) indicated that there are no oil or gas wells located on or within 0.5 mile of the Site (Section 4, Township 3 South, and Range 1 East).

Federal Regulatory Records

National Pipeline Mapping System

3.7.7.5 Terraphase reviewed the National Pipeline Mapping System (NPMS) public viewer website[3] for gas transmission pipelines and hazardous liquid trunk lines on or close to the Site. Per the information on the NPMS, a natural gas transmission pipeline operated by Pacific Gas & Electric (PG&E) Company is located approximately 1/3 mile south of the Site. No spills or incidents were reported by NPMS for the Site (NPMS 2019).

United States Environmental Protection Agency

On March 6, 2019, a review of the United States Environmental Protection Agency (EPA) Envirofacts website[4] revealed that the Site is not listed in the searched databases. These sources of information, as well as interviews conducted, previous environmental reports, and Site observations (discussed in Sections 3.9, 3.7, and 3.8, respectively) were found to be sufficient for Terraphase to evaluate for the existence of RECs, historical RECs (HRECs), controlled RECs (CRECs), and/or de minimis conditions as part of this Phase I ESA.

3.8 Site Reconnaissance

On March 14, 2019, Ms. Laurie Israel of Terraphase conducted a reconnaissance visit of the Site to assess current land-use activities and environmental conditions. On April 15, 2019, Mr. Ryan Glenn of Terraphase conducted a follow up reconnaissance visit to the Site to verify the PG&E transformer numbers, which are shown on Figure 2. The Site reconnaissance visit was documented with notes and photographs. Observations made during the reconnaissance visits are discussed below and a photograph log is provided in Appendix N. The purpose of the reconnaissance was to identify conditions that have the potential to cause adverse environmental impacts.

As part of the reconnaissance, Terraphase searched for evidence of the presence, use, or storage of hazardous substances, including but not limited to the following:

- areas of disturbed or discolored soil;
- suspect equipment and/or building materials which may contain hazardous substances;
- areas of distressed vegetation;
- wastewater discharge areas;
- evidence of storage tanks/septic systems;
- waste management/disposal areas;
- lagoons, pits, or sumps;
- surface water management areas; and
- stained surfaces, etc.

[4] http://www.epa.gov/envirofw/

3.8.1 Site Reconnaissance Observations

Current Use of the Property and General Observations

3.8.1.1 The Site is currently vacant land with utility improvements. The entrance to the Site is located at Grafton Street and Dublin Boulevard, and has barricades before the cyclone fence (Photographs 1 and 2). Views of the southwestern portion (Photo 3), western central portion (Photo 4), the northwestern portion (Photo 5), central northern portion (Photo 6), northeast portion (Photo 7), the central portion (Photo 8), and southeastern portion (Photo 9) show it to be predominantly vacant grassy land. Standing rainwater was observed along the southeastern boundary of the Site (Photo 10). A former electrical equipment concrete pad with polyvinyl chloride (PVC) caps and a wooden post was observed at the southwestern corner of the Site (Photo 11). Storm drain covers are present on the Site, one is in alignment with Grafton Street (Photo 12). Broken well boxes in concrete, utility vaults, and fenced areas were observed in the eastern portion of the Site (Photos 13 and 14). Concrete caps and recycled water vaults were observed in the western portion of the Site (Photos 15 and 16). A large concrete ring was observed near Devany Park in the western portion of the Site (Photo 17).

Two transformers (owned by PG&E), a gear box, and other electrical equipment were observed on or near the perimeter of the Site, as shown on Figure 2. The Site is bound to the east, north, and west with multi-family residential adjoining properties, and to the south by a commercial shopping center and undeveloped lot. The perimeter of the Site contains cyclone fencing, with additional fencing between the northern and southern extents of the Site.

The Site is located within the service areas of the following utility service and materials management providers:

Utility Service	**Service Provider**
Electricity	PG&E
Natural gas	PG&E
Sanitary wastewater disposal	Dublin San Ramon Services District (DSRSD)
Drinking water supply	DSRSD

3.8.1.2

Additional details regarding Terraphase's observations are provided below.

Site Interior and Exterior Observations

No buildings exist at the Site. Only exterior observations were made.

Element	Observation
Current or former USTs	None observed.
Current or former ASTs and silos	None observed.
PCB-containing equipment	None observed.
Hazardous materials and/or petroleum product use/storage	None observed.
Hazardous waste	None observed.
Drums or other containers	None observed.
Non-hazardous solid waste	Some trash and debris were observed, including a fire extinguisher, bicycle frame, and concrete rings.
Wastewater	None observed.
Floor drains, sumps, and drywells	None observed.
Odors	None observed.
Stains, pitting, or corrosion (interior areas)	None observed.
Stained or corroded exterior surfaces	None observed.
Pools of liquid	Pools of rainwater were observed along the south eastern boundary.
Pits, ponds, or lagoons	None observed.
Stressed vegetation	None observed.
Storm water	None observed. Storm water drains were observed on the Site.
Onsite water wells	None observed.
Septic systems	None observed.
Other petroleum product transmission/storage	None observed.

3.8.2 Adjoining Property Observations

During the reconnaissance, Terraphase observed the adjoining properties from public roadways and the Site. The purpose of these observations was to identify obvious uses or conditions at the adjoining properties likely indicative of a REC at the Site.

The Site is in a densely populated residential area, and is surrounded to the north, west, and east by multi-family houses (apartments and/or condominiums). The Site is bound to the west by Devany Square park, to the south-southwest by Dublin Boulevard and a commercial shopping center, Grafton Station, and to the southeast by an undeveloped lot and a newly constructed hotel (Aloft Hotel).

3.9 Interviews

3.9.1 Interview with Current Owner Representative

On March 14, 2019, an interview with the current owner's representative, Mr. James Tong with Grafton Street LLC. was conducted. Mr. Tong said that he owned the property for 17 years. Historically, the property has been used for agricultural purposes, including hay production and grazing. Mr. Tong noted that no corrals, barns, or other structures related to agriculture were located on the property during his ownership. Mr. Tong reported that from 2005 to 2009, Toll Brothers set up a temporary sales office and construction trailers in the southern and northwestern portion of the Site for onsite and adjacent residential construction projects. However, no fueling or maintenance activities were conducted on the Site. Clearance soil sampling was conducted by Toll Brothers after the office trailers were removed from the property. Mr. Tong also identified the existence of the Berlogar Stevens & Associates (Berlogar Stevens) Phase I ESA dated December 21, 2016 (See Section 3.2). No RECS or environmental concerns were identified. Mr. Tong indicated that he has no knowledge of the following:

- any environmental records or specialized knowledge associated with the Site
- environmental liens or AULs associated with the Site
- chemical uses or releases associated with the Site
- contamination and/or environmental cleanups associated with the Site.

A questionnaire completed by Mr. Tong on March 7, 2019 is provided in Appendix B. The questionnaire noted that Mr. Tong has been associated with the Site since 1995 and the current operations are as vacant land holding for future development.

3.9.2 Interview with Former Owner Representative

Interviews with the Site owners prior to Mr. Tong were not conducted.

3.9.3 Interviews with Regulatory Representatives

Terraphase contacted local, county, and state agencies via telephone, electronic mail, letter, or in person to inquire as to whether they possessed relevant records regarding the Site, as discussed in Section 3.9.

4.0 APPARENT PROBLEM

Based on the review of historical information, the following potential environmental concerns and COPCs were identified:

- OCPs and arsenic in shallow soil from historical agricultural use of the Site. Agricultural properties are lands where pesticides were uniformly applied for agricultural purposes consistent with normal application practices. Each field of the same crop is assumed to have been watered, fertilized, treated with agricultural chemicals, and tilled to the same degree across the field. Because of this homogeneous application and the stable nature of OCPs in soil, contaminant levels are expected to be similar across the field and limited to the shallow depth of tilling.

- Fill material has reportedly been imported and placed at the Site as part of past development plans for the Site. As reported in the Phase I ESA (Terraphase 2019), it appears the soil may have been imported from the surrounding area as part of development activities in the area that occurred prior to 2005. However, because the source of the fill material was not confirmed, the following COPCs are identified for the fill material at the Site: OCPs, CAM 17 metals, TPH, SVOCs, PCBs, and asbestos. VOCs were not detected above laboratory reporting limits in soil samples previously collected from the fill material by BGC.

In May 2018, Terraphase conducted a Phase II investigation to address the RECs identified in the Phase I ESA[5]. Based on the findings of the Phase I ESA, Terraphase performed additional investigation of the Site as follows:

- Per DTSC Interim Guidance for Sampling Agricultural Properties, Third Revision (DTSC 2008), for sites that were dryland farmed, one soil sample should be collected from each quadrant of the Site within the native soil. The samples should be analyzed for OCPs and arsenic. Sampling of the native soil for lead was also recommended.

- Soil samples of the import fill should be further assessed for total petroleum hydrocarbons (TPH), metals, semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and asbestos.

To meet the above objectives and address the RECs identified in the Phase I, Terraphase performed one phase of soil sampling work and two phases of sample analysis. The following section describes the investigation activities completed at the Site by Terraphase as part of the Phase II investigation conducted in May 2018.

As discussed further in Sections 5.0 and 7.0 and identified on Figure 3, the primary exposure pathways to the identified COPCs are dermal contact with Site soil and inhalation of airborne dust. The receptor population for the future use of the Site would include school children, staff,

[5] Terraphase conducted the initial Phase I ESA in March 2017, prior to conducting the Phase II investigation in May 2018, but did not submit the final Phase I ESA report until April 29, 2019.

and visitors but for the purposes of risk screening was assumed to be a hypothetical residential exposure.

5.0 ENVIRONMENTAL SETTING

5.1 Conceptual Site Model

A CSM depicting the potential sources of contamination, transport mechanisms, exposure routes, and receptors is depicted on Figure 3. The current CSM identifies the potential sources of contamination discussed in Section 3.0. Potential exposure routes to the identified receptors include ingestion, inhalation, and/or direct contact with affected soil.

5.2 Factors Related to Soil Pathways

The Site is relatively flat with a slight downward slope to the southwest. The elevation of the Site is approximately 356 feet above mean sea level.

As detailed in Section 2.2, the Site is located in the Coast Ranges Geomorphic Province of California, an area characterized by a series of northwestern trending ridges and valleys dominated by the San Andreas Fault System. The soil type identified in the EDR report is Clear Lake clay, which has very slow infiltration rates.

During Terraphase's Phase II investigation at the Site, fill material generally consisting of gravelly sand with debris was encountered from the ground surface to depths ranging between approximately 0.5 and 3.5 feet bgs. Shallow native soils consisting of brown to black clayey sand and clays with organic material were encountered below the fill materials at depths of up to 9.5 feet bgs. The soil type identified was Clear Lake clay, with very slow infiltration rates. The alluvium underlying the surficial soils at the Site consists of unconsolidated, permeable sand and silt generally extending 20 to 30 feet deep deposited over older, weakly-consolidated irregularly interbedded clay, silt, sand, and gravel.

The Site is currently fenced and vacant. The nearest current sensitive receptors to the Site are the local residences surrounding the Site. The possible routes of exposure for the surface soil pathway would be dermal contact and incidental soil ingestion.

5.3 Factors Related to Water Pathways

Currently, residual concentrations of COPCs are likely to be limited to shallow soil. Because the COPCs identified at the Site are related to surface soil releases, the potential for COPCs to impact groundwater at the Site is considered to be minimal. In addition, groundwater is not used as a drinking water source at the Site and no surface water features were identified at the Site. Therefore, no exposure pathways related to water were currently identified at the Site.

5.4 Factors Related to Air Pathways

Historical data regarding wind speed and direction for the Dublin area is available from Weather Spark (https://weatherspark.com/y/1074/Average-Weather-in-Dublin-California-United-States-Year-Round). The average wind direction varies seasonally, but is generally from the west from February to November and to the north from November to February; receptors to the west and

north of the Site are potentially downwind and could be exposed to dust containing COCs from the Site. As discussed in Section 3.5, the surrounding uses of the Site are primarily residential and the closest residential receptors are located immediately adjacent to the western boundary of the Site and eastern boundaries of the Site.

According to the U.S. Climate Data website (nearest reporting station in Livermore, California; https://www.usclimatedata.com/climate/livermore/california/united-states/usca0618), the mean annual precipitation is 15.23 inches, with most of the precipitation occurring during the months of November through March. The mean high temperature is listed at 73°F and the mean low temperature is listed at 48°F.

The COPCs identified at the Site are not likely to volatilize and become airborne. Inhalation of chemically impacted dust that is not covered by pavement or landscaping is a potential exposure pathway.

6.0 SAMPLING ACTIVITIES AND RESULTS

The following subsections describe the activities completed at the Site by Terraphase as part of the Phase II Investigation conducted in May 2018. The sampling locations are shown on Figures 4, 5, and 6. Soil samples collected as part of the Phase II investigation were submitted for laboratory analysis to Enthalpy Analytical (Enthalpy) in Berkeley, California, with the exception of soil samples analyzed for asbestos which were submitted to Forensic Analytical Laboratories (Forensic) located in Hayward, California.

6.1 Sampling Activities

A total of sixteen soil borings (SB-1 through SB-16) were advanced by Gregg Drilling, Inc., a California-licensed (C-57) driller under the supervision of Terraphase field personnel, for the collection of both imported fill samples and native soil samples. Borings SB-1 through SB-11 were advanced to a total depth of 5 feet bgs using a hand auger. SB-12 through SB-16 were advanced to 5 feet bgs using a hand auger and to total depths ranging from 6.5 feet bgs to 12 feet bgs using a direct-push rig equipped with a dual-tube sampling system.

Samples were collected from the 16 borings for both imported fill and native soil using a hand auger or dual-tube sampler. In addition to retaining discrete samples, the following discrete import fill and discrete native soil samples were composited for laboratory analysis (Figure 4):

<u>Import Fill Samples</u>

- Samples SB-2-0.5-F, SB-3-0.5-F and SB-4-1.5-F were composited as COMP-2-4-F;
- Samples SB-5-0.5-F, SB-6-1.5-F, SB-7-1.5-F and SB-8-1.5-F were composited as COMP-5-8-F;
- Samples SB-9-1.5-F, SB-10-1.5-F, SB-11-1.5-F and SB-12-1.5-F were composited as COMP-9-12-F; and
- Samples SB-13-1.5-F, SB-14-1.5-F, SB-15-1.5-F and SB-16-1.5-F were composited as COMP-13-16-F.

<u>Native Soil Samples</u>

- Samples SB-1-1.5-N, SB-2-1.5-N, SB-3-1.5-N and SB-4-5-N were composited as COMP-1-4-N;
- Samples SB-5-1.5-N, SB-6-5-N, SB-7-5-N and SB-8-5-N were composited as COMP-5-8-N;
- Samples SB-9-5-N, SB-10-5-N, SB-11-5-N and SB-12-5-N were composited as COMP-9-12-N; and
- Samples SB-13-5-N, SB-14-5-N, SB-15-5-N and SB-16-5-N were composited as COMP-13-16-N.

At each boring location, soils were described by a Terraphase field geologist under the supervision of a Terraphase California-licensed Professional Geologist, in general accordance

with the visual-manual procedures of the ASTM International Standard D2488 for guidance (ASTM International 2009) which is based on the Unified Soil Classification System (USCS). Borings logs are included in Appendix O. The soil samples were placed in laboratory-supplied glass jars.

6.1.1 Imported Fill Material Sampling

During the Phase II Investigation, the samples collected from the imported fill, from depths of approximately 0.5 to 1.5 feet bgs, were analyzed for the following:

- 4 four-point composite samples for analysis of OCPs by U.S. EPA Method 8081A; and
- 4 four-point composite samples and 15 discrete samples for analysis of metals by U.S. EPA Method 6010, PCBs by U.S. EPA Method 8082, TPH-d and TPH-mo by U.S. EPA Method 8015, SVOCs by U.S. EPA Method 8270, PAHs by U.S. EPA Method 8270C, and asbestos using the California Air Resources Board 435 polarized light microscopy 400 point count Method.

6.1.2 Native Soil Sampling

During the Phase II Investigation, the samples collected from the native soil, from depths of approximately 1.5 to 5 feet bgs, were analyzed for the following:

- 4 four-point composite soil samples for analysis of OCPs by U.S. EPA Method 8081A and metals by U.S. EPA Method 6010;
- 16 discrete samples for analysis of OCPs by U.S. EPA Method 8081A, lead and arsenic by U.S. EPA Method 6010; and
- 1 discrete sample for analysis of metals by U.S. EPA Method 6010, PCBs by U.S. EPA Method 8082, TPH-d and TPH-mo by U.S. EPA Method 8015, SVOCs by U.S. EPA Method 8270, PAHs by U.S. EPA Method 8270C, and asbestos using the California Air Resources Board 435 polarized light microscopy 400 point count Method.

6.1.3 Surveying

Terraphase located each sampling location using a Trimble GeoX handheld global positioning system unit which has an approximate horizontal accuracy of +/- 30 centimeters during the field activities. Sampling locations are shown in Figures 5 and 6.

6.1.4 Decontamination Procedures

Equipment that came in contact with potentially contaminated soil was decontaminated and rinsed with distilled water before and between use at each sampling location. Disposable equipment intended for one-time use was packaged for appropriate disposal and was not decontaminated or reused. Non-disposable sampling devices used were decontaminated using the following procedures:

- Laboratory-grade detergent and tap water wash, in a 5-gallon plastic bucket, using a brush;
- Initial tap water rinse, in a 5-gallon plastic bucket; and
- Final deionized water rinse, in a 5-gallon plastic bucket.

At the completion of sampling activities, the rinse water was containerized in a Department of Transportation-approved 55-gallon steel drum with the drilling cuttings. The rinse water consisted of water, non-phosphate detergent, and a small amount of surface soil.

6.1.5 Screening Levels

The applicable screening levels used to evaluate the Terraphase Phase II data include DTSC-SLs provided in DTSC's HERO Note 3 for residential soil (DTSC 2019b) or the EPA's RSLs for residential soil developed by the EPA for analytes that do not have a DTSC-SL developed (EPA 2019). Consistent with the PEA Guidance Manual, the SFRWQCB ESLs for residential soil were used as screening levels for TPH-d and TPH-mo (SFRWQCB 2019).

The residential DTSC-SL of 0.11 milligrams per kilogram (mg/kg) for arsenic is below generally accepted background concentrations of arsenic naturally occurring in soil in northern California. Metals are naturally occurring and ubiquitous in soils and other geological materials of the San Francisco Bay Area. Multiple studies have been conducted to document background concentrations of arsenic in Bay Area soils.

The background concentration for Bay Area soils has been established as 11 mg/kg, which is the proposed upper estimate for background arsenic (99th percentile) within undifferentiated flatland soils of the Bay Area, in accordance with the 2011 *Establishing Background Arsenic in Soil of the Urbanized San Francisco Bay Region* (Duverge 2011). The Terraphase Phase II soil data were evaluated using this accepted value for arsenic.

6.2 Discussion of Soil Sampling Results

The following sections describe the results of both the historical investigations conducted at the Site and the Phase II investigation activities performed by Terraphase in May 2018. Certified analytical laboratory reports and COC documentation for the May 2018 Phase II are provided in Appendix P. Analytical data for samples collected by BGC are presented in Appendix D, and data for samples collected by Terraphase are provided in Tables 1 through 16. Screening levels used in the discussion below of BGC and Terraphase data were previously presented in Sections 3.2 and 6.1.5, respectively.

6.2.1 Imported Fill Material Sampling Results

The analytical results for the imported fill material soil samples are summarized below and compared to their respective screening levels. The screening levels are presented in detail in the corresponding tables.

OCPs

Four 4-point composite samples from imported fill were analyzed for OCPs (Table 8). No OCPs were detected above their respective reporting limits. The reporting limits were at/or below the screening levels discussed in Section 6.1.5.

6.2.1.1 ### *Metals*

Discrete samples from 15 locations, and four 4-point composite samples of imported fill were analyzed for metals (Tables 2 and 9). Antimony, barium, beryllium, cadmium, cobalt, copper,
6.2.1.2 lead, mercury, molybdenum, nickel, selenium, vanadium, and/or zinc were detected above laboratory reporting limits at concentrations below the applicable screening levels. Although total chromium concentrations were detected above the screening level of 0.3 mg/kg for hexavalent chromium, hexavalent chromium is not a COPC, as wood treatment has never been conducted at the Site.

Arsenic

6.2.1.3 Each of the 15 discrete samples and 4 composite samples analyzed for arsenic had concentrations above the reporting limit, ranging from 4.7 mg/kg to 6.5 mg/kg (Tables 2 and 9). However, all concentrations of arsenic in the discrete and composite fill samples were less than the established background concentration in Bay Area soils of 11 mg/kg (Duverge 2011).

6.2.1.4 ### *PCBs*

Discrete samples from 15 locations, and four 4-point composite samples of imported fill were analyzed for PCBs (Tables 3 and 10). Aroclor 1260 was detected in three of the discrete samples at concentrations ranging from 0.00078 mg/kg to 0.0012 mg/kg (Table 3), which are below the applicable screening level. No other PCBs were detected in the discrete or composite soil
6.2.1.5 samples collected.

TPH

Discrete samples from 15 locations, and four 4-point composite samples of imported fill were analyzed for TPH-d and TPH-mo (Tables 4 and 11). Although concentrations of TPH-d (ranging
6.2.1.6 from 3.3 mg/kg to 17 mg/kg) and TPH-mo (ranging from 22 mg/kg to 210 mg/kg) were detected in all soil samples, no concentrations detected were above the applicable ESLs of 260 mg/kg and 12,000 mg/kg, respectively.

PAHs

Discrete samples from 15 locations, and four 4-point composite samples of imported fill were analyzed for PAHs (Tables 6 and 13). No concentrations of PAHs were detected above laboratory reporting limits in any of the samples analyzed. However, the reporting limits for the following PAHs were higher than their respective screening levels, as shown on Tables 6 and 13.

- Benz(a)anthracene;
- Benzo(a)pyrene;
- Benzo(b)fluoranthene;
- Dibenz(a,h)anthracene; and
- Indeno(1,2,3-c,d)pyrene.

SVOCs

6.2.1.7 Discrete samples from 15 locations, and four 4-point composite samples of imported fill were analyzed for SVOCs (Tables 5 and 12). Bis(2-ethylhexyl)phthalate and 4-methylphenol were each detected in one discrete sample at concentrations of 0.015 mg/kg and 0.02 mg/kg, respectively, which are below the applicable screening criteria. No other SVOCs were detected at or above their respective reporting limits. However, the reporting limits for the following SVOCs were higher than their respective screening levels, as shown on Tables 5 and 12.

- 2,4-Dinitrotoluene;
- 2,6-Dinitrotoluene;
- 3,3-Dichlorobenzidine;
- 4,6-Dinitro-2-methylphenol;
- 4-Chloroaniline
- Bis(2-chloroethyl)ether;
- Hexachlorobenzene;
- Hexachlorocyclopentadiene;
- Hexachloroethane
- Nitrobenzene
- N-Nitrosodimethylamine;
- N-Nitrosodi-n-propylamine; and

6.2.1.8
- Pentachlorophenol.

Asbestos

6.2.1.9 Discrete samples from 15 locations, and four 4-point composite samples of imported fill were analyzed for asbestos. As shown on Tables 7 and 14 asbestos was not detected at or above the reporting limit of 0.25% in the fill samples.

Historic Imported Fill Sampling Results Summary

Based on review of the analytical data, the imported fill material at the Site contains low concentrations of TPH-d, TPH-mo, metals, PCBs, and SVOCs. However, the detected COPC concentrations are below applicable screening levels, indicating that previous uses of the Site and/or the fill material have not resulted in impacts that adversely affect current site conditions.

6.2.2 Native Soil Sampling Results

The analytical results for the native soil samples are summarized below and compared to their respective screening levels. The screening levels are presented in detail in the corresponding tables.

OCPs

6.2.2.1 Discrete samples of native soil from 16 locations and four 4-point composite samples of native soil were analyzed for OCPs (Tables 1 and 8). Of the 16 discrete samples, there was one detection of chlordane (trans) (gamma) at a concentration of 0.00014 mg/kg, and six detections of endrin aldehyde at concentrations ranging from 0.00042 to 0.0012 mg/kg, all of which are below their respective screening levels. No other OCPs were detected at or above their respective reporting limits or screening levels in the discrete or composite samples.

Metals

6.2.2.2 Discrete samples of native soil from 16 locations were analyzed for lead, as well as four 4-point composite samples (Tables 2 and 9). Additionally, one discrete sample and four 4-point composite samples were analyzed for metals. Each of the 16 discrete samples and 4 composite samples analyzed for lead had concentrations above the reporting limit, ranging from 7.5 mg/kg to 11 mg/kg. However, all concentrations of lead in the discrete native soil samples were less than the screening level of 80 mg/kg.

6.2.2.3 In the one discrete native soil sample and four composite samples analyzed for additional metals, antimony, barium, beryllium, cadmium, chromium, cobalt, copper, mercury, molybdenum, nickel, vanadium, and/or zinc were detected above laboratory reporting limits. However, no metal concentrations were above the applicable screening levels, with the exception of total chromium (Tables 2 and 9). Although total chromium concentrations were detected above the screening level of 0.3 mg/kg for hexavalent chromium, hexavalent chromium is not a COPC, as wood treatment has never been conducted at the Site.

Arsenic

6.2.2.4 Each of the 16 discrete samples and 4 composite samples analyzed for arsenic had concentrations above the reporting limit, ranging from 2.3 mg/kg to 7.1 mg/kg. However, all concentrations of arsenic in the discrete native soil samples were less than the established background concentration for Bay Area soils of 11 mg/kg (Duverge 2011; Table 2).

PCBs

One discrete native soil sample was analyzed for PCBs. No concentrations of PCBs were detected above laboratory reporting limits in the sample (Table 3).

TPH

One discrete native soil sample was analyzed for TPH-d and TPH-mo (Table 4). TPH-d and TPH-mo were detected above the laboratory reporting limits at concentrations of 1.6 mg/kg and 12 mg/kg, respectively. Both concentrations are below SFRWQCB ESLs for TPH-d and TPH-mo of

6.2.2.5 260 mg/kg and 12,000 mg/kg, respectively.

PAHs

One discrete native soil sample was analyzed for PAHs. No concentrations of PAHs were detected above laboratory reporting limits in the sample (Table 6). However, the reporting limit

6.2.2.6 for dibenz(a,h)-anthracene was higher than the respective screening level, as shown on Table 6.

SVOCs

6.2.2.7 One discrete native soil sample was analyzed for SVOCs. No concentrations of SVOCs were detected above laboratory reporting limits in the sample (Table 5). However, the reporting limits for the following SVOCs were higher than their respective screening levels, as shown on Table 5.

- 3,3-Dichlorobenzidine;
- Bis(2-chloroethyl)ether;
- Hexachlorobenzene;
- N-nitrosodi-n-propylamine; and
- N-nitrosodimethylamine.

6.2.2.8

Asbestos

One discrete native soil sample was analyzed for asbestos. As shown on Table 7 asbestos was

6.2.2.9 not detected at or above the reporting limit of 0.25% in the native soil samples.

Native Soil Sampling Results Summary

Based on a review of the data collected, the native soil at the Site does not contain COPCs at concentrations exceeding risk-based screening criteria. OCPs were not detected above screening criteria, and arsenic concentrations were consistent with background concentrations for Bay Area soils, suggesting that previous agricultural activities at the Site did not significantly impact the Site soils.

6.3 Investigation Derived Waste

The investigation-derived waste was transported by American Integrated Services Inc. to the Potrero Hills Landfill located in Suisun, California, and disposed of as non-hazardous waste.

6.4 Quality Assurance/Quality Control

A QA/QC Program was implemented as part of the PEA process. The primary QC feature of the program included the validation of analytical data. Enthalpy provided the required chemical analyses for soil samples collected at the Site. Enthalpy is certified (No. 2896) by the State of

California Environmental Laboratory Accreditation Program Branch to provide the required chemical analyses.

6.4.1 Sample Handling

Following sample collection, sample labels with unique identifiers were affixed to each sample container. Each sample was placed in a resealable plastic bag to keep the sample container and the label dry. All glass sample containers were protected with foam cushioning material and bubble wrap to prevent breakage.

Samples were packed securely in a cooler with a laboratory-supplied temperature blank. Wet ice (double-bagged in resealable bags) was added to the cooler in sufficient quantity to keep the samples cooled to at least 4 degrees Celsius, for the duration of the shipment to the laboratory.

A chain-of-custody (COC) record accompanied the sample shipment for laboratory analysis. The COCs recorded the contents of each shipment and maintained the custodial integrity of the samples. Information contained on the COC record included the sampler's name; date and project number of the sampling event; sample number; date and time of sample collection; sample type; number of containers associated with each sample; analyses requested; and the names, dates, and times of custody.

Completed COCs were provided with the samples and copies were included in the final analytical reports (Appendix P). No discrepancies were noted by the analytical laboratory.

Samples were received within the acceptable temperature range upon arrival at the laboratory. Samples were received in good condition and were analyzed within the proper holding times for the analyses requested.

6.4.2 Reporting Limits

Method detection limits were generally met by the analytical laboratory. However, the reporting limits for the following PAHs and SVOCs were higher than their respective screening levels, as shown on Tables 5, 6, 12, and 13:

<u>PAHs</u>

- Benz(a)anthracene;
- Benzo(a)pyrene;
- Benzo(b)fluoranthene;
- Dibenz(a,h)anthracene; and
- Indeno(1,2,3-c,d)pyrene.

SVOCs

- 2,4-Dinitrotoluene;
- 2,6-Dinitrotoluene;
- 3,3-Dichlorobenzidine;
- 4,6-Dinitro-2-methylphenol;
- 4-Chloroaniline
- Bis(2-chloroethyl)ether;
- Hexachlorobenzene;
- Hexachlorocyclopentadiene;
- Hexachloroethane
- Nitrobenzene
- N-Nitrosodimethylamine;
- N-Nitrosodi-n-propylamine; and
- Pentachlorophenol.

6.4.3 Data Qualifiers

Approximately 3% of the data were qualified by the laboratory as “estimated” and flagged as estimated concentrations (”J-flag”). Results with J-flags are indicated on the data tables (Tables 1 through 14). Data qualified as detected and estimated in the chemical dataset are useable at their reported estimated values for the risk screening.

6.4.4 Precision

Precision measures the reproducibility of repetitive measurements. It is strictly defined as the degree of mutual agreement among independent measurements as the result of repeated application of the sample process under similar conditions.

Analytical precision is a measurement of the variability associated with duplicate or replicate analyses of the same sample in the laboratory and is determined by analysis of laboratory quality control samples such as duplicate control samples, matrix spike duplicates (MSDs), or sample duplicates. If the recoveries of analytes in the specified control samples are comparable within established control limits, then precision is within limits.

Total precision is a measurement of the variability associated with the entire sampling and analytical process. It is determined by analysis of duplicate or replicate field samples, and measures variability introduced by other than laboratory and field operations. Field duplicate samples are analyzed to assess field and analytical precision.

Duplicate results are assessed using the relative percent difference (RPD) between duplicate measurements. RPDs were calculated for duplicate sample pairs using the following formula:

$$\text{RPD } = 100\% \times \frac{|\text{X2} - \text{X1}|}{(\text{X2} + \text{X1})/2}$$

Where X2 is the duplicate sample result, and X1 is the primary sample result.

Laboratory analytical precision is evaluated by laboratory QC sample RPD calculations using the matrix spike/matrix spike duplicate (MS/MSD), blank spike/blank spike duplicate (BS/BSD), or laboratory duplicate sample results. The results of RPD calculations for MS/MSD, BS/BSD, and laboratory duplicate sample pairs were within the laboratory's acceptable range.

6.4.5 Accuracy

For SVOCs and pesticides, the surrogates were diluted out of many samples and percent recovery could not be calculated for the following samples:

- SB-8-1.5-F; SVOCs
- SB-11-1.5-F; SVOCs
- SB-13-1.5-F; SVOCs
- SB-14-1.5-F; SVOCs
- SB-15-1.5-F; SVOCs
- COMP-13-16-F; SVOCs
- COMP-9-12-F; SVOCs
- COMP-13-16-F; Pesticides

High surrogate recovery was observed for phenol-d5 in samples SB-5-0.5-F and COMP-2-4-F; terphenyl-d14 in samples SB-3-0.5-F and SB-5-0.5-F; and 2-fluorophenol in sample COMP-2-4-F, but target analytes were not detected in the samples. All other percent recovery values for surrogate compounds were within acceptable ranges.

The recoveries for BS/BSD and MS/MSD samples were within acceptable ranges except for the following:

- High recovery for 4-chloro-3-methylphenol observed in the MSD of for laboratory batch 260145, however the parent sample was not a project sample, the LCS was within limits, the associated RPD was within limits, and this analyte was not detected at or above the reporting limit in the associated sample.

- High recoveries were observed for 1,1-dichloroethene in the MS/MSD for laboratory batch 260115, however the parent sample was not a project sample, the LCS was within limits, the associated RPD was within limits, and this analyte was not detected at or above the reporting limit in the associated sample.

It should be noted that matrix spikes were not reported for some sample batches for SVOCs (QC935647 and QC935648 in laboratory batch 260436), PCBs (QC935535 and QC935536 in laboratory batch 260410), and pesticides (QC935601, QC935602 [in laboratory batch 260424], QC934355, and QC934356 [in laboratory batch 260118]) because the parent sample required a

dilution that could have diluted out the spikes. All other RPDs were within acceptable range limits, and this does not impact the usability of the analytical results.

6.4.6 Representativeness

Representativeness is the degree to which data accurately and precisely represent selected characteristics of the media sampled. Representativeness of data collection is addressed by the preparation of sampling and analyses programs. The Phase II investigation had a sufficient number of sample locations, incorporated the proper sampling methodologies, utilized the proper sample collection techniques and decontamination procedures, utilized the proper laboratory methods to prepare and analyze soil and water samples, and performed proper field and laboratory QA/QC protocols.

6.4.7 Completeness

Completeness is the amount of valid data obtained compared to the amount that was expected under ideal conditions. The number of valid results divided by the number of possible results, expressed as a percentage, determines the completeness of the data set. The objective for completeness is to recover at least 90 percent of the planned data to support field efforts. No data were rejected as a result of the data validation conducted; therefore, the analytical data for the samples is 100% complete.

6.4.8 Comparability

Comparability is an expression of confidence with which one data set can be compared to another data set. The objective of comparability is to ensure that data developed during the Phase II investigation are comparable to site knowledge and adequately address applicable criteria or standards established by DTSC or the EPA. The laboratory methods that were utilized during this Phase II investigation are consistent with the current standards of practice as approved by the DTSC and the EPA.

7.0 HUMAN HEALTH SCREENING EVALUATION

Terraphase completed a human health risk screening evaluation for the COPCs detected in soil at the Site. The methods used in the evaluation are in accordance with the PEA Guidance Manual (DTSC 2015) and current guidance issued by the DTSC HERO (DTSC 2019c). The purpose of the risk screening evaluation was to determine whether present site conditions pose a potential health risk to future site users. The following subsections discuss the four components of the human health screening evaluation described in the PEA Guidance Manual: the exposure pathways identified for the Site and on Figure 3; exposure concentrations of COPCs which conservatively included any chemical detected in at least one soil sample collected from the Site during previous investigations and/or this Phase II Investigation, with the exception of arsenic; a discussion of toxicity values (the screening levels described in Section 6.1.5 were utilized to perform the human health screening evaluation and risk/hazard characterization for COPCs; therefore, the selection and compilation of specific toxicity values was not necessary); and the risk/hazard characterization. The screening values and the cumulative risk screening summary, as well as the uncertainty in the risk screening, are also presented.

7.1 Soil Exposure Pathways

As discussed in the preceding sections, the Site is proposed for development of a school. The receptor population for this future use would include school children, staff, and visitors. However, potential future land use of the Site was assumed to be residential which, given the exposure time frame assumption (24 hours per day; 350 days per year; for 26 years) is a significantly more conservative assumption than 4-year occupancy during high school years use. It should be noted that the Site is not currently used for residential purposes, and the District does not intend at any time for the property to be used for residential purposes.

COPCs detected in soil at the Site during previous investigations and/or the Phase II conducted in 2018 include metals, OCPs, PCBs, TPH, VOCs, and SVOCs. Under the hypothetical future unrestricted use scenario, the potential exposure scenarios for these chemicals in soil are through direct contact (i.e., incidental ingestion of and dermal contact with surface soil) and inhalation of soil-derived windborne particulates.

7.2 Exposure Concentrations and Chemicals in Soil

The COPCs in soil considered for the human health screening evaluation and risk/hazard characterization conservatively included any chemical detected in at least one soil sample collected from the Site during previous investigations and/or this Phase II Investigation, with the exception of arsenic. Although arsenic was detected above screening levels, the detected concentration was within a range of background concentrations typically detected in Bay Area soil (Duverge 2011). Results from previous investigations are included in Appendix D.

Table 15 presents the list of chemicals detected in onsite fill and/or native soil and identifies which of those chemicals were included as COPCs for the human health screening evaluation and risk/hazard characterization. As indicated in the table, the risk screening was completed

using the discrete sampling results, not the composite sample results. The maximum detected concentration of each COPC was conservatively used as the exposure point concentration (EPC).

7.3 Screening Levels

As discussed in Section 6.1.5, the screening levels in soil were generally identified as the DTSC-SLs provided in DTSC's HERO Note 3 for residential soil (DTSC 2019b) or the EPA's RSLs for residential soil developed by the EPA for COPCs that do not have a DTSC-SL developed (EPA 2019). The SFRWQCB ESLs for residential soil were used as screening levels for TPH-d, and TPH-mo (SFRWQCB 2019). Human health risks from lead in soil at the Site were evaluated using default residential soil screening level of 80 mg/kg derived by DTSC using DTSC's Lead Risk Assessment Spreadsheet.

7.4 Toxicity Values

The screening levels described in Section 6.1.5 were utilized to perform the human health screening evaluation and risk/hazard characterization for COPCs; therefore, the selection and compilation of specific toxicity values was not necessary.

7.5 Soil Risk/Hazard Characterization

A risk/hazard screening evaluation was performed for the Site. In doing so, estimated cumulative cancer risks associated with potential human exposure to COPCs in soil at the Site were compared to the cumulative risk management goal of 1 in 1 million (i.e., 1 x 10-6) for supporting decisions regarding the Site. Similarly, the estimated noncancer hazard index (HI) associated with potential human exposure to COPCs in soil at the Site was compared to the noncancer HI risk management goal of 1.0. In order to evaluate potential human exposures to lead in soil, concentrations detected were compared to DTSC's generic residential screening level of 80 mg/kg.

Overall, the risks from COPCs were evaluated and then combined to obtain an upper-bound estimate of cumulative cancer risk and noncancer HI for the Site. To streamline the risk calculations, single-chemical cancer risks and noncancer hazard quotients (HQs) were calculated by comparing the EPC to the carcinogenic and non-carcinogenic-based screening levels for each COPC as follows:

For a carcinogenic chemical:

$$\frac{EPC}{Screening\ Level\ Cancer\ Endpoint} x\ 10^{-6} = Chemical\ Cancer\ Risk$$

For a non-carcinogenic chemical:

$$\frac{EPC}{Screening\ Level\ NonCancer\ Endpoint} = Hazard\ Quotient$$

The single-chemical cancer risks and noncancer HQs were then summed to obtain cumulative cancer risks and noncancer HIs, respectively.

Lead in soil was evaluated separately by comparing to DTSC's generic default screening level as discussed below.

7.6 Cumulative Risk Screening Summary

As shown on Table 16, the estimated upper-bound cumulative cancer risk for exposure to COPCs in soil at the Site is 7.5×10^{-7}, which is below the cumulative cancer risk management goal of 1.0×10^{-6}. The estimated upper-bound noncancer HI for exposure to COPCs in soil is 1 which is equal to the noncancer HI risk management goal of 1.

7.6.1 Lead in Soil Risk Screening Summary

The EPC for lead was conservatively defined as the maximum detected concentrations in the Phase II soil samples, or 11 mg/kg. This EPC is below the screening level of 80 mg/kg.

7.7 Uncertainty Analysis

Potential future land use of the Site was assumed to be residential regardless of the actual proposed use. Because the planned future use of the Site as a school, the assumption of an unrestricted land use likely overestimates the risks for the intended future use of the Site.

Due to limitation of available scientific data and in the amount and type of site investigation data collected, every risk assessment will have some degree of uncertainty. Uncertainties in exposure parameter assumptions are related to the general lack of quantitative studies describing important aspects of human behavior such as incidental soil ingestion rates (particularly adults), length of time spent at one residence, time spent outdoors, etc. In general, this uncertainty has been dealt with by erring on the conservative side and using upper-bound exposure assumptions that will tend to overestimate the exposure occurring to most individuals.

Incorporating slightly less conservative exposure parameters into the assessment would reduce the predicted carcinogenic risk considerably. In addition, the predicted risks and hazards are based on the maximum COPC concentrations detected in the soil samples that were collected during this Phase II. This significantly conservative assumption results in an overestimation of health risks.

Important uncertainties in toxicity criteria include: 1) the complete absence of reference doses or colony-stimulating factors for some chemicals, 2) the lack of an adequate toxicological basis for some toxicity criteria, 3) the uncertainty associated with applying oral route toxicity criteria to the inhalation route or dermal route, and 4) the complete lack of toxicity criteria for the dermal route. The general lack of toxicity criteria based on a solid database of underlying toxicological data results in a reduced ability to accurately quantify both non-cancer and cancer risks. This may result in both under- and over-estimation of health risks.

In addition, although PAHs and SVOCs (except for one detection each of bis-[2-ethylhexylphthalate and 4-methylphenol) were not detected in soil samples above the reporting limits, the reporting limits for several SVOCs and PAHs exceeded the screening criteria as summarized in Section 6.2. Given that PAHs and SVOCs were not detected in the majority of soil samples collected from the Site at concentrations exceeding the reporting limits, and the reporting limits were below the screening criteria in those samples, it is unlikely that PAHs and/or SVOCs are present in soil at the Site at concentrations exceeding screening criteria; therefore, PAHs and SVOCs were not included in the risk estimate calculations, except for bis(2-ethylhexyl)phthalate and 4-methylphenol.

8.0 ECOLOGICAL SCREENING EVALUATION

The Site will be developed into a high school. Proposed redevelopment activities would not maintain any potential wildlife habitat on the Site. Therefore, an ecological screening evaluation was not completed for the Site given its intended future use.

8.1 Biological Characterization

The Site is currently vacant and undeveloped and is proposed for development for use as a high school. The existing conditions and proposed development activities would not maintain any potential wildlife habitat on the Site.

8.2 Ecological Pathway Assessment

Because the Site would not have significant numbers of wildlife based on proposed development activities, no assessment of potential exposure to sensitive ecological receptors is necessary.

8.3 Ecological Screening Evaluation Summary

An ecological screening evaluation was not conducted for the Site given its current condition and intended future use.

9.0 COMMUNITY PROFILE

According to the City of Dublin's 2019 Community Profile, the population of the City of Dublin is 63,659. The average household income is $192,947 and the median age of residents is 35. The profile sheet indicates the following ethnic composition: 42.3% White; 36.8% Asian; 8.0% Black/African American; 7.2% two or more races; 4.6% some other race. In addition, the median home value was $957,106 (https://dublin.ca.gov/238/Community-and-Economic-Profile).

In accordance with Education Code§ 17213.1, subd. (a)(6)(A) the District will post a notice in the local newspaper providing details on the 30-day public comment period for this PEA report, the public hearing, and the locations of repositories for site documents. The DTSC will review the PEA Report concurrently with the public comment period.

10.0 OPINION OF ENVIRONMENTAL PROFESSIONAL

Terraphase conducted the assessment for the Site according to the scope and limitations of ASTM Practice E1527-13 for a Phase I Environmental Site Assessment. Because RECs were identified early on, the findings of the background investigation were incorporated into this PEA. The environmental professionals who prepared this PEA Report, Laurie Israel and Andrew Lojo, are of the opinion that this PEA sufficiently identifies environmental conditions at the Site.

11.0 CONCLUSIONS AND RECOMMENDATIONS

11.1 Summary and Conclusions

During the Terraphase Phase II investigation, soil sampling was performed based on RECs identified in the Phase I ESA (Terraphase 2019). These RECs were developed after review of extensive soil sampling conduct at the Site on behalf of the former owner by BGC, and was intended to supplement and confirm their results. Shallow native soil samples and import fill samples were collected from approximately evenly spaced areas across the Site and analyzed for OCPs, metals, PCBs, TPH, SVOCs, PAHs, and asbestos. As summarized in Tables 1 through 14, COPCs were not detected in native soil or imported fill at levels exceeding conservative risk-based screening values for residential land use, with the exception of arsenic. However, the detections of arsenic in native soil and imported fill were below the established background concentration for arsenic in Bay Area soils of 11 mg/kg (Duverge 2011). Based on Terraphase's review of investigation results conducted on the Dublin High School site where the recent imported soil originated, which was conducted under DTSC review, no sampling of the recently imported soil was warranted.

The risk/hazard characterization assumes potential human exposure under the very conservative residential use scenario. Based on the results of previous and Phase II investigations, and associated preliminary human health screening, the estimated upper-bound cumulative cancer risk for exposure to COPCs in soil at the Site is 7.5×10^{-7}, which is below the cumulative cancer risk management goal of 1.0×10^{-6}. The estimated upper-bound noncancer HI for exposure to COPCs in soil is 1 which is equal to the noncancer HI risk management goal of 1. Therefore, the upper-bound risk and HI estimates for residential exposure to soil would not pose an unacceptable risk to human health, especially given the significantly lower exposure time frame assumptions used in the residential exposure evaluation (24 hours per day; 350 days per year; for 26 years).

11.2 Recommendations

Based on the results of previous investigations as well as the Phase II investigation, no further action is recommended for the Site. Terraphase recommends that the DTSC issue a "No Further Action" determination for the Site.

11.3 Data Gaps

A data gap is a lack or inability to obtain information required despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required. No significant data gaps were identified.

13.0 SIGNATURES AND ENVIRONMENTAL PROFESSIONALS STATEMENT

Information, conclusions, and recommendations in this document have been prepared by a California Professional Engineer. The environmental assessment described herein was conducted by the undersigned employees of Terraphase. The assessment consisted solely of the activities described in the Introduction of this report, and was performed in accordance with the ASTM Designation E 1527-13 guidelines for Phase I ESAs and the Terms and Conditions of the Standard Consulting Services Agreement signed prior to initiation of the assessment, as applicable. The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by professional engineers, professional geologists and environmental scientists.

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312, and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Table 1
Summary of Analytical Results for Organochlorine Pesticides (OCPs)
Discrete Soil Samples [1]
Phase II Investigation Report
The New 2nd Comprehensive High School, Dublin, California

Notes:

1. Detected results shown in **bold**.
2. Analytical results are screened against the United States Environmental Protection Agency's (U.S. EPA) May 2019 Regional Screening Levels for Residential Soil. The most conservative regional screening levels of both carcinogenic and noncarcinogenic scenarios are presented in this table.
3. Analytical results are also screened against the California EPA Department of Toxic Substances Control's (DTSC) April 2019 HERO HHRA Note 3 Screening Levels for Residential Soil. The most conservative screening levels of both cancer and noncancer endpoint scenarios are presented in this table.

Abbreviations and Data Qualifiers:

- = Not analyzed or sampled (or not applicable)
< = Analytical result is less than laboratory reporting limit.
J = The analyte was postively identified, but the associated numerical value is the approximate concentration of the analyte in the sample.
= The continuing calibration verification (CCV) drift was outside limits, but the average CCV drift was within limits per method requirements.
HERO = Human and Ecological Risk Office
HHRA = Human Health Risk Assessment
ft bgs = Feet below ground surface

Table 2

Summary of Analytical Results for Metals

Discrete Soil Samples [1]

Phase II Investigation Report

The New 2nd Comprehensive High School, Dublin, California

Notes:

1. Detected results shown in **bold**. Results greater than applicable screening levels are shaded.
2. Analytical results are screened against the United States Environmental Protection Agency's (U.S. EPA) May 2019 Regional Screening Levels for Residential Soil. The most conservative regional screening levels of both carcinogenic and noncarcinogenic scenarios are presented in this table.
3. Analytical results are also screened against the California EPA Department of Toxic Substances Control's (DTSC) April 2019 HERO HHRA Note 3 Screening Levels for Residential Soil. The most conservative screening levels of both cancer and noncancer endpoint scenarios are presented in this table.

Abbreviations and Data Qualifiers:

- = Not analyzed or sampled (or not applicable)
< = Analytical result is less than laboratory reporting limit.
J = The analyte was postively identified, but the associated numerical value is the approximate concentration of the analyte in the sample.
HERO = Human and Ecological Risk Office
HHRA = Human Health Risk Assessment
ft bgs = Feet below ground surface

Table 5

Summary of Analytical Results for Semi-Volatile Organic Compounds (SVOCs)

Discrete Soil Samples [1]

Phase II Investigation Report

The New 2nd Comprehensive High School, Dublin, California

Notes:

1. Detected results shown in **bold**.
2. Analytical results are screened against the United States Environmental Protection Agency's (U.S. EPA) May 2019 Regional Screening Levels for Residential Soil. The most conservative regional screening levels of both carcinogenic and noncarcinogenic scenarios are presented in this table.
3. Analytical results are also screened against the California EPA Department of Toxic Substances Control's (DTSC) April 2019 HERO HHRA Note 3 Screening Levels for Residential Soil. The most conservative screening levels of both cancer and noncancer endpoint scenarios are presented in this table.

Abbreviations and Data Qualifiers:

- = Not analyzed or sampled (or not applicable)
< = Analytical result is less than laboratory reporting limit.
J = The analyte was postively identified, but the associated numerical value is the approximate concentration of the analyte in the sample.
HERO = Human and Ecological Risk Office
HHRA = Human Health Risk Assessment
ft bgs = Feet below ground surface

Table 6
Summary of Analytical Results for Polycyclic Aromatic Hydrocarbons (PAHs)
Discrete Soil Samples
Phase II Investigation Report
The New 2nd Comprehensive High School, Dublin, California

Notes:

1. Analytical results are screened against the United States Environmental Protection Agency's (U.S. EPA) May 2019 Regional Screening Levels for Residential Soil. The most conservative regional screening levels of both carcinogenic and noncarcinogenic scenarios are presented in this table.
2. Analytical results are also screened against the California EPA Department of Toxic Substances Control's (DTSC) April 2019 HERO HHRA Note 3 Screening Levels for Residential Soil. The most conservative screening levels of both cancer and noncancer endpoint scenarios are presented in this table.

Abbreviations and Data Qualifiers:

- = Not analyzed or sampled (or not applicable)
< = Analytical result is less than laboratory reporting limit.
HERO = Human and Ecological Risk Office
HHRA = Human Health Risk Assessment
ft bgs = Feet below ground surface

Table 7
Summary of Analytical Results for Asbestos
Discrete Soil Samples
Phase II Investigation Report
The New 2nd Comprehensive High School, Dublin, California

Notes:

1. The analytical results are reported in percent asbestos fibers which is the percent number of asbestos fibers contained in 400 randomly chosen particles of a bulk sample. Note: Limit of Quantitation (LOQ) = 0.25%. Trace denotes the presence of asbestos below the LOQ.
2. Analytical results are screened against the United States Environmental Protection Agency's (U.S. EPA) May 2019 Regional Screening Levels for Residential Soil. The most conservative regional screening levels of both carcinogenic and noncarcinogenic scenarios are presented in this table.
3. Analytical results are also screened against the California EPA Department of Toxic Substances Control's (DTSC) April 2019 HERO HHRA Note 3 Screening Levels for Residential Soil. The most conservative screening levels of both cancer and noncancer endpoint scenarios are presented in this table.

Abbreviations and Data Qualifiers:

- = Not analyzed or sampled (or not applicable)
< = Analytical result is less than laboratory reporting limit.
HERO = Human and Ecological Risk Office
HHRA = Human Health Risk Assessment
ft bgs = Feet below ground surface

Notes:

1. Analytical results are screened against the United States Environmental Protection Agency's (U.S. EPA) May 2019 Regional Screening Levels for Residential Soil. The most conservative regional screening levels of both carcinogenic and noncarcinogenic scenarios are presented in this table.
2. Analytical results are also screened against the California EPA Department of Toxic Substances Control's (DTSC) April 2019 HERO HHRA Note 3 Screening Levels for Residential Soil. The most conservative screening levels of both cancer and noncancer endpoint scenarios are presented in this table.

Abbreviations and Data Qualifiers:

- = Not analyzed or sampled (or not applicable)
< = Analytical result is less than laboratory reporting limit.
HERO = Human and Ecological Risk Office
HHRA = Human Health Risk Assessment
COMP = Composite sample

Table 11

Summary of Analytical Results for Total Petroleum Hydrocarbons (TPH)

Composite Soil Samples [1]

Phase II Investigation Report

The New 2nd Comprehensive High School, Dublin, California

Analytical results reported in milligrams per kilogram (mg/kg)

Location Name	Field ID	Sample Date	TPH as Diesel	TPH as Motor Oil
SFRWQCB ESLs for Soil [2]			**260**	**12,000**
SB-13, SB-14, SB-15, SB-16	COMP-13-16-F	5/30/2018	**8YZ**	**79**
	COMP-13-16-N	5/30/2018	-	-
SB-01, SB-02, SB-03, SB-04	COMP-1-4-N	5/30/2018	**4.6YZ**	**45**
SB-02, SB-03, SB-04	COMP-2-4-F	5/30/2018	-	-
SB-05, SB-06, SB-07, SB-08	COMP-5-8-F	5/30/2018	**3.8YZ**	**46**
	COMP-5-8-N	5/30/2018	-	-
SB-09, SB-10, SB-11, SB-12	COMP-9-12-F	5/30/2018	**5.6YZ**	**64**
	COMP-9-12-N	5/30/2018	-	-

Notes:

1. Detected results shown in **bold**.
2. Analytical results are screened against the San Francisco Regional Water Quality Control Board's (SFRWQCB) January 2019 Direct Exposure Human Health Risk Level ESLs for residential soil. Screening levels of noncarcinogenic scenarios are presented in this table.

Abbreviations and Data Qualifiers:

- = Not analyzed or sampled (or not applicable)

Y = The sample exhibits a chromatographic pattern which does not resemble the standard.

Z = The sample exhibits an unknown single peak or peaks in the chromatogram.

COMP = Composite sample

Table 13
Summary of Analytical Results for Polycyclic Aromatic Hydrocarbons (PAHs)
Composite Soil Samples
Phase II Investigation Report
The New 2nd Comprehensive High School, Dublin, California

Notes:

1. Analytical results are screened against the United States Environmental Protection Agency's (U.S. EPA) May 2019 Regional Screening Levels for Residential Soil. The most conservative regional screening levels of both carcinogenic and noncarcinogenic scenarios are presented in this table.
2. Analytical results are also screened against the California EPA Department of Toxic Substances Control's (DTSC) April 2019 HERO HHRA Note 3 Screening Levels for Residential Soil. The most conservative screening levels of both cancer and noncancer endpoint scenarios are presented in this table.

Abbreviations and Data Qualifiers:

- = Not analyzed or sampled (or not applicable)
< = Analytical result is less than laboratory reporting limit.
HERO = Human and Ecological Risk Office
HHRA = Human Health Risk Assessment
COMP = Composite sample

Table 14
Summary of Analytical Results for Asbestos
Composite Soil Samples
Phase II Investigation Report
The New 2nd Comprehensive High School, Dublin, California

Location Name	Field ID	Sample Date	Asbestos by CARB Method 435 [1]
U.S. EPA Regional Screening Levels for Residential Soil [2]			-
DTSC HERO HHRA Note 3 Screening Levels for Residential Soil [3]			-
SB-13, SB-14, SB-15, SB-16	COMP-13-16-F	5/30/2018	<0.25
	COMP-13-16-N	5/30/2018	-
SB-01, SB-02, SB-03, SB-04	COMP-1-4-N	5/30/2018	-
SB-02, SB-03, SB-04	COMP-2-4-F	5/30/2018	<0.25
SB-05, SB-06, SB-07, SB-08	COMP-5-8-F	5/30/2018	<0.25
	COMP-5-8-N	5/30/2018	-
SB-09, SB-10, SB-11, SB-12	COMP-9-12-F	5/30/2018	<0.25
	COMP-9-12-N	5/30/2018	-

Notes:

1. The analytical results are reported in percent asbestos fibers which is the percent number of asbestos fibers contained in 400 randomly chosen particles of a bulk sample. Note: Limit of Quantitation (LOQ) = 0.25%. Trace denotes the presence of asbestos below the LOQ.
2. Analytical results are screened against the United States Environmental Protection Agency's (U.S. EPA) May 2019 Regional Screening Levels for Residential Soil. The most conservative regional screening levels of both carcinogenic and noncarcinogenic scenarios are presented in this table.
3. Analytical results are also screened against the California EPA Department of Toxic Substances Control's (DTSC) April 2019 HERO HHRA Note 3 Screening Levels for Residential Soil. The most conservative screening levels of both cancer and noncancer endpoint scenarios are presented in this table.

Abbreviations and Data Qualifiers:

- = Not analyzed or sampled (or not applicable)
< = Analytical result is less than laboratory reporting limit.
HERO = Human and Ecological Risk Office
HHRA = Human Health Risk Assessment
COMP = Composite sample

Soil Sample Results Summary

Phase II Investigation Report

The New 2nd Comprehensive High School, Dublin, California

Analyte	Number of Analyses	Number of Detections	Minimum Detected Concentration (mg/kg)	Maximum Detected Concentration (mg/kg)	Exposure Point Concentration (mg/kg)	Contaminant of Concern for Site?
Dichloromethane	36	1	0.01	0.01	0.01	Yes
4-methylphenol	51	1	0.02	0.02	0.02	Yes
Bis(2-ethylhexyl)phthalate	51	1	0.015	0.015	0.015	Yes
TPH-d	63	57	1.1	110	110	Yes
TPH-mo	35	22	12	640	640	Yes
Chlordane (cis) (alpha)	20	1	0.0054	0.0054	0.0054	Yes
Chordane (trans)(gamma)	20	2	0.00014	0.0054	0.0054	Yes
Dieldrin	20	1	0.024	0.024	0.024	Yes
Endrin Aldehyde	20	6	0.00042	0.0012	0.0012	Yes
Antimony	21	1	0.54	0.54	0.54	Yes
Arsenic	36	36	2.9	12	- [1]	No
Barium	21	21	160	390	390	Yes
Beryllium	21	18	0.32	0.73	0.73	Yes
Cadmium	21	16	0.14	0.34	0.34	Yes
Chromium	21	21	26	48	48	Yes
Cobalt	21	21	7.2	13	13	Yes
Copper	21	21	14	26	26	Yes
Lead	36	36	4.7	11	- [1]	No
Mercury	21	20	0.013	0.043	0.043	Yes
Molybdenum	21	16	0.083	0.37	0.37	Yes
Nickel	21	21	29	46	46	Yes
Selenium	21	15	0.41	0.73	0.73	Yes
Vanadium	21	21	30	56	56	Yes
Zinc	21	21	31	61	61	Yes
Aroclor 1260	20	3	0.00078	0.0012	0.0012	Yes

Notes:

1. Arsenic is not included in the risk screening because the maximum detected concentration for arsenic was below the background concentration established for the Bay Area. Additionally, lead is not included in the risk screening because it was evaluated separately.
2. Risk screening includes discrete sample results only, not composite sample results, per the Department of Toxic Substances Control Human and Ecological Risk Office Note Number 4 issued on May 14, 2019.

Abbreviations:

mg/kg = Milligrams per kilogram

- = Not applicable

PHASE I ESA OWNER QUESTIONNAIRE

terraphase engineering

Owner, Occupant, and/or Operator Questionnaire

Please provide the following information, if available. If additional pages for response are necessary, please attach them to this form.

Your Contact Information		
Your Name & Title: JAMES TOHN MANAGER	Company: GRAFTON STATION LLC	
Address: 4080 GRAFTON ST 200	City: DUBLIN	State & Zip: CA 94568
Phone: (925) 463-1666	Date Completed: MARCH 7 2019	
Cell phone:	Email: JIM@CHARTER-PROPERTIES.COM	
How are you associated with the property? ***(Check all that apply.)*** Owner ☐ Occupant ☐ Operator ☐		
What is the length of time you have been associated with the property? From 1995 to NOW		

Subject Property Information		
Property Name: Promenade	Property Identification (e.g. Block & Lot or Parcel ID #): Alameda County APNs 985-0078-002, -003, -004, -005, -006, -007	
Address: Dublin Blvd	City: Dublin	State & Zip: CA 94568

Current Operations

Is the property currently used for any of the following operations? ***(Check all that apply.)***

☐ Manufacturing operations ☐ Gasoline service station ☐ Automobile repair ☐ Printing facility ☐ Dry cleaning*
☐ Photo-development ☐ Junkyard or landfill ☐ Waste treatment, transfer, storage, disposal, processing, or recycling

Describe current operations: VACANT LAND HOLDING FOR FUTURE DEVELOPMENT

terraphase engineering

Past Operations & Owners

Has the property ever been used for any of the following operations? ***(Check all that apply.)***

☐ Manufacturing operations ☐ Gasoline service station ☐ Automobile repair ☐ Printing facility ☐ Dry cleaning
☐ Photo-development ☐ Junkyard or landfill ☐ Waste treatment, transfer, storage, disposal, processing, or recycling

Please describe below. VACANT LAND.

Describe property use/operations prior to the construction of buildings currently at the property:

VACANT LAND

Provide previous property owners, occupants, and/or operators. Attach pages as necessary.

Company	Owner/ Occupant/ Operator	Dates of occupancy	Operations	Contact name & number
		N/A		

Neighboring Operations

Check any operations which occur, or have occurred in the past, at adjoining properties.

☐ Manufacturing operations ☐ Gasoline service station ☐ Automobile repair ☐ Printing facility ☐ Dry cleaning*
☐ Photo-development ☐ Junkyard or landfill ☐ Waste treatment, transfer, storage, disposal, processing, or recycling

Existing Documentation

Does the following documentation exist? If yes, please provide copies.

Yes	No	Do not know	
☐	☐	☐	ESA Reports
☐	☐	☐	Env. Compliance Audit Reports
☐	☐	☐	Environmental Permits
☐	☐	☐	UST/AST registrations

Notes:
Bold text indicates detected concentrations above the laboratory reporting limit
mg/kg= milligrams per kilogram
- = Not analyzed or no screening criteria available
< = analyte not detected above laboratory reporting limit
bgs = below ground surface.
= sample result exceeds the cancer endpoint soil screening criteria
red font = sample result exceeds the non-cancer endpoint soil screening criteria
1. Samples were collected at the Site by other consultants at the Site. Results are reported for summary.
2. Arsenic was detected in soil above the risk-based screening levels, but below the background concentration typical of Bay Area soils.
2. Screening levels are derived from the following sources:
- Department of Toxic Substances Control Human and Ecological Risk Office Note 3 screening level for residential soil (updated June 2018)
- United States Environmental Protection Agency, Region 9 Regional Screening Level for residential soil (Nov 2018)

San Ramon, California 94583

Subject: Analytical Soil Sampling and Testing
Promenade, Area G of Dublin Ranch
Grafton Street and Central Parkway
Dublin, California

Dear Mr. Argyris:

Berlogar Geotechnical Consultants has completed analytical testing of soil samples obtained from the subject Promenade site. It is our understanding that Toll Brothers used this area during construction of the nearby residential developments. Our soil sampling and testing has been performed to determine if the site has been contaminated from construction activities.

ENVIRONMENTAL PROTOCOL

Sampling was performed with either a hand sampler or a drill rig equipped with a solid flight auger. The hand auger or solid flight auger tips were cleaned with distilled water and TSP prior to sampling and between sampling locations. The samples were placed in sterile glass jars provided by the analytical laboratory and soil completely filled the jars to minimize air space. The samples were then placed in a chilled cooler with crushed ice, and transported the same day to TestAmerica, a California State Certified analytical laboratory, in Pleasanton, California. Appropriate Chain-of-Custody procedures were followed and accompanied all samples to the laboratory. The following provides standard acronyms that are referenced in this report.

AB	Aggregate Base, a mixture of gravel, sand, and some fines.
AC	Asphalt Concrete.
ESL	Environmental Screening Level, lower level of contaminant concentrations requiring some type of remediation as specified by an agency. The ESL utilized in our analysis is from the SFRWQCB, Table A-2, Shallow Soil Screening Levels, Commercial/Industrial Land Use (groundwater is potential drinking water resource), November 2007, Revised May 2008.
ND	Not Detected, test result is below the reporting limit of the test method.
PCB	Polychlorinated Biphenyls.
PPM	Parts per million, by weight for soil and volume for water.

RAC	Remnant Asphalt Concrete, particles of AC remaining from pavement demolition.
SFRWQCB	San Francisco Regional Water Quality Control Board.
SVOC	Semi-Volatile Organic Compounds.
VOC	Volatile Organic Compounds.
TPH	Total Petroleum Hydrocarbon.
TSP	Trisodium Phosphate, typical equipment cleaning detergent.

SITE DESCRIPTION

The approximate 17-acre site is located between Central Parkway and Dublin Boulevard at the intersection with Grafton Street. Plate 1, Vicinity Map, shows the location of the site and Plate 2, Site Plan shows the site configuration. The site is bounded by Central Parkway to the north, an undeveloped parcel in the northeast corner, residential dwelling units on the west, a graded pad to the southeast, Dublin Boulevard to the south, and Chancery Lane, residential structures, and a park along the west side. The site has been graded relatively flat. Underground storm drain and sanitary sewer lines constructed as part of the residential development in the area bisect the site.

The site is essentially undeveloped, with remnants of demolished AC and gravel surface treatment located in some parts of the site as shown on Plate 2, Site Plan. An approximate 200-foot square area lay down area is currently being utilized for material storage in the southern end of the site. This area is covered with AB and RAC; boring X4 encountered 1 foot of AB/RAC over 1 foot of sand underlain by clayey soil. An approximate 25-foot wide swath running east-west at the Finnian Way alignment is covered with AB and RAC. A small section of AC pavement remains near the west side of the site near Finnian Way.

Gravel, RAC, and concrete pieces are scattered on the ground in an approximate 350-foot by 250-foot area on the east side, near the center of the site. Crushed rock covers the ground in front of the south entry gate, presumably for winter access to the site. A layer of gravel is located in two locations, one just north of the existing lay down area and another small area in the center portion of the site. We did not observe signs of soil staining during our site reconnaissance.

SAMPLING AND TESTING HISTORY

The following summarizes the sampling and testing performed by BGC in 2008 and 2009 at the site. More detailed discussion of the results of the analytical testing is provided later.

1) **Grafton North, June 20, 2008 (Samples A1-A3, B1-B2, C1-C2, D1-D2, and E1-E4)** – Sampling and testing was requested by Toll Brothers to determine if the stockpile of fill at this location was suitable for use as fill. The fill stockpile averaged about 2 feet in

thickness, and ranged from 1 foot thick in the southern end to about 4 feet thick in the northwest corner. We obtained 13 samples from 11 locations with a hand auger from the upper 2 feet in the northeast corner of the site as shown on the Site Plan. The fill stockpile has subsequently been removed from this portion of the site. The samples were tested for various constituents and the tested soil was not found to be contaminated. The test results are contained in Appendix A.

2) **Grafton South, July 3, 2008 (Samples 1-4)** – Toll Brothers requested the soil in this area be tested to determine the constituents in the native soil. Four hand auger samples were obtained in the upper foot from the southwest corner of the Promenade site as shown on the Site Plan. The analytical tests did not indicate the soil was contaminated (Appendix B).

3) **Promenade, September 15, 2009 (Samples 6, 7, 8, and 9) and September 22, 2009 (Samples 1A-1F, 2A-2F, 3A-3C, 4A-4F and 5A-5F)** – Thirty-two samples were obtained from the site in an approximate 150-foot grid from the upper foot. A drill rig with solid flight augers was utilized to obtain the samples. The analytical test results indicated three individual samples contained potential VOC above the ESL and three composite samples contained potential diesel and motor oil above the ESL. The locations of these samples are shown on the Site Plan and the test results are contained in appendices C, D, and E.

4) **Promenade, October 9 and 12, 2009 (Samples W1-W6, X1-X4, Y1-Y4, and Z1-Z3)** – Isolated samples were obtained from the same sample locations that contained potential VOC, diesel, and motor oil above the ESL from the third sampling event (September 2009). Samples X1, X2, and X3 were obtained with a hand auger in the upper foot. Sample X4 was obtained at a depth of 2 feet, below the 1-foot thick AB/RAC and 1-foot thick layer of sand in this area. The sample locations are shown on the Site Plan and the test results are contained in Appendix F.

The following is a list of analytical tests that were performed and Tables 1 though 5 summarize the test results on the soil samples. Test results from the four sampling events described above are contained in these tables.

Table 1 8260B, Volatile Organic Compounds.

Table 2 8270C, Semi-Volatile Organic Compounds.

Table 3 8081A, Organochlorine Pesticides.
8151A, Chlorinated Herbicides.
8141A, Organophosporous Pesticides.

Table 4 6010B, CAM 17 Metals, Inductively Coupled Plasma, Atomic Emission Spectrometry.
7471A, CAM 17 Metals, Mercury in Solid or Semisolid Waste.

Table 5 8082, PCB by Gas Chromatography.
8260B, TPH gas.
8015B, Nonhalogenated Organics, TPH diesel and motor oil.

Please see the laboratory analytical reports in the appendices for complete results and analysis detection limits.

CONCLUSIONS

The test results indicate that most constituents were not detectable. The constituents reported in Table 2, SVOC, and Table 3, herbicides and pesticides, were all not detected. PCB and TPH gas was also not detected (Table 5). Hence, it is our opinion that SVOC, herbicide, pesticide, PCB, and TPH gas contamination is not present at this site.

VOC test results on Table 1 indicate most constituents as not detectable. However, sample 1F (13 ppm) and 5E (16 ppm) showed measurable amounts of acetone, and sample 8 contained 10 ppm methylene chloride. Additional soil samples were obtained from these three sample locations (Z1 through Z3) in the fourth sampling event in October and tested for VOC, and the test results were not detectable. Acetone and methylene chloride are highly volatile and readily disperses into the atmosphere. It is our opinion that the acetone and methylene chloride detected in the 3 soil samples in the third sampling event may be due to laboratory quality control procedures, and not indicative of acetone or methylene chloride constituents in the soil.

CAM 17 heavy metal test results are contained in Table 4. Arsenic was detected between 3.5 to 12 ppm, which is above the ESL of 1.5 ppm, in every sample from the first three sampling events. It is documented that the Bay Area soil and bedrock contain naturally occurring arsenic from minerals in the bedrock. Hence, it is our opinion that the site is not contaminated with arsenic from construction activities; rather, the arsenic concentrations detected in the soil are background concentrations.

TPH diesel range organics and motor oil range organics were detected in some of the samples obtained from the site in the four sampling events. Most of the diesel and motor oil test results were below the ESL. Sample C3 (composite of 6 soil samples) had 30 ppm diesel. Since a single sample could have contributed to the test result, these six locations were resampled (W1 through W6) in sampling event number four. The test results for samples W1 through W5 were either not detectable or below the ESL. Sample W6 had 110 ppm diesel, which is above the 83 ppm ESL for diesel, and 640 ppm motor oil, which is below the 2,500 ppm ESL for motor oil.

Sample C4 (composite of 3 soil samples) contained 57 ppm diesel. Again, if a single soil sample contributed the detected diesel in the composite sample, there is a possibility that the soil contained diesel above the ESL. Three more samples were obtained from these locations, Y1 through Y3, from the fourth sampling event. We also collected a fourth sample, Y4, to provide better coverage of the area. Samples Y1 through Y4 did not have concentrations of diesel and motor oil above the ESL or were not detectable.

Sample C7 (composite of 4 samples) had diesel (190 ppm) concentrations above the ESL. Four additional samples were obtained from this location, X1 through X4, in the fourth sampling event. This is the area covered with AB mixed with RAC, hence, the high concentration of diesel and motor oil from C7 is likely due to the RAC. X1, X2, and X3 were obtained in the upper foot outside the AB/RAC lay down area. The test results show that diesel and motor oil was either below the ESL or not detectable. Sample X4 was obtained 2-feet in depth, below the surface layer of AB/RAC and sand in this location. Diesel and motor oil was not detected for the X4 sample of the underlying clayey soil.

In summary, it is our opinion that the surficial soil at the Promenade site is not contaminated with VOC's, SVOC's, herbicides, pesticides, PCB's, and gasoline range organics. The surface soil contains isolated areas with minor concentrations of diesel and motor oil range organics. It is our opinion that the origin of the diesel and motor oil is from the demolition and subsequent spreading of asphalt concrete and from possible oil leaks from vehicles and construction equipment. The isolated areas with minor concentrations of diesel and motor oil range organics can be diluted by mixing the soil with construction equipment. The RAC is relatively inert, and can be used as commercial or industrial fill. The onsite soil and the RAC do not need to be treated as contaminated material, and no special handling is required. If suspect oil stains are observed during future site work, soil sampling and analysis should be performed to verify concentrations.

LIMITATIONS

This report has been prepared specifically for Promenade Area G of Dublin Ranch property located at Grafton Street and Central Parkway in Dublin, California, and was performed according to the current state and local agency suggested guidance documents for these investigations. The interpretations, conclusions and recommendations made herein are based on the data and analysis for the specific soil samples collected on-site. Conditions of the property can change over time and the use of this report by third parties is entirely at their own risk.

This report has been prepared for use solely by Toll Brothers, Inc., our Client. This report shall not be relied upon by or transferred to any other party, or used for any other purpose, without the express written authorization of our Client, Toll Brothers, Inc. We are not responsible for errors in laboratory analysis and reporting, or for information not available, nor unreported or unknown sources of site contamination during the course of the study, and no warranty or guarantee is expressed or implied therein.

We trust that this letter provides the necessary information you require at this time. If you have any questions, please contact Bill Stevens at (925) 484-0220 or bstevens@berlogar.com.

Respectfully,

July 3, 2008
Job No. 3080.900

Mr. Steve Herndon
Toll Brothers, Inc.
100 Park Place
San Ramon, California 94583

Subject: Analytical Testing of Soil Stockpile
Grafton Center
Grafton Street and Central Parkway
Dublin, California

Dear Mr. Herndon:

Berlogar Geotechnical Consultants has completed analytical testing of a stockpile of soil from the subject project site. The site is located south of the intersection of Grafton Street and Central Parkway as shown on the attached Plates 1 and 2. The site is an approximate rectangle measuring about 550 feet by 650 feet (about 8 acres). Soil from mass grading of the adjacent residential and commercial development was stockpiled and graded relatively flat at this site. Fill thickness averages about 2 feet, and ranges between about 1 foot thick at the southern end to about 4 feet thick in the northwest corner. The area was open range land before development.

Thirteen bulk samples were obtained at random locations from the site between depths of 0.5 to 2 feet on June 20, 2008, placed in glass jars, and placed in a chilled cooler. The samples were transported to TestAmerica, a California State Certified analytical laboratory, in Pleasanton, California. The following laboratory tests were performed on composite samples:

1. 8260B, BTEX/MTBE (samples E1-E4);

2. 8015B, Nonhalogenated Organics using GC/FID-Modified (Diesel Range Organics); 1 middle distillate (diesel) and 1 residual fuel (motor oil) petroleum constituents (samples E1-E4);

3. 8081A, Organochlorine Pesticides by Gas Chromatography, 22 pesticide constituents (samples A1-A3, B1-B2, C1-C2, and D1-D2);

4. 6010B, CAM 17 Metals, no Mercury (samples E1-E4);

5. 7471A, Mercury in Solid or Semisolid Waste (samples E1-E4);

6. 8082, PCB by Gas Chromatography (samples E1-E4);

7. 8270C, Semivolatile Compounds by Gas Chromatograph/Mass Spectrometry (samples E1-E4).

The results of the testing are attached in the TestAmerica Analytical Report. The test results indicate that most of the constituents tested were nondetectable. The following table summarizes the constituents that were detected with several agency preliminary remediation goals.

Composite of E1-E4	USEPA, ppm	CHHSL, ppm	SFRWQCB, ppm	Test Results, ppm
Diesel Range Organics, EPA 8015B				1.5
CAM 17, EPA 6010B				
Antimony and compounds	31	30	6.1	
Arsenic	0.39	0.07	0.38	3.8
Barium and compounds	5,400	5,200	750	240
Beryllium and compounds	150	150	4	0.52
Cadmium and compounds	37	1.7	1.7	ND
Chromium, total	210			41
Chromium III	10,0000	10,0000	750	ND
Chromium VI	30	17	8	ND
Cobalt	900	660	40	10
Copper and compound	3,100	3000	230	21
Lead and lead compounds	400	150	200	7.8
Molybdenum	390	380	40	48
Nickel and compounds	1,600	1600	150	ND
Selenium	390	380	10	ND
Silver and compound	390	380	20	ND
Thallium and compounds+++	5.2	5	1.2	ND
Vanadium and compounds	78	530	15	37
Zinc	23,000	23,000	600	41
Mercury, EPA 7471A	230	18	1	ND

Notes:

a) US EPA, Preliminary Remediation Goals, Region 9 PRG Table, Residential Land Use, October 2004.

b) California Human Health Screening Level for Soil, Table 1, Residential Land Use, January 2005.

c) San Francisco Bay Regional Water Quality Control Board, Table A, Environmental Screening Levels, Shallow Soils (< 3m bgs), Groundwater is Potable, Residential Land Use, November 2007.

The test results indicate that the detectable constituents were below the screening levels for the USEPA, CHHSL, and SFRWQCB. However, Arsenic was above the 3 agency screening levels, and Vanadium was above the SFRWQCB remediation goals. The CHHSL and SFRWQCB do not have total Chromium level goals, and the testing was not performed for Chromium III and IV. However, it is our experience that the levels of Arsenic, Chromium, and Vanadium are typical of soils in the Bay Area. Hence, it is our opinion that the stockpiled soil at this site is not considered to be contaminated, and can be utilized at most sites. The receiver of the soil should make the final determination as to the acceptance of this soil.

We trust that this letter provides the necessary information you require at this time. If you have any questions, please contact Bill Stevens at (925) 484-0220 or bstevens@berlogar.com.

Respectfully,

BERLOGAR GEOTECHNICAL CONSULTANTS

Job Narrative
720-J14865-1

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC/MS Semi VOA
Method 8270C: A full list spike was utilized for this method. Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for three (03) analytes to recover outside criteria for this method when a full list spike is utilized. The LCS associated with batch #37572 had one analyte outside control limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

No other analytical or quality issues were noted.

GC VOA
No analytical or quality issues were noted.

GC Semi VOA
No analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

NELAC REPORTING:

At the time of analysis the laboratory was in compliance with the current NELAC standards and held accreditation for all analyses performed unless noted by a qualifier. The labs accreditation numbers are listed below. The format and contents of the report meets all applicable NELAC standards except as noted in the narrative and shall not be reproduced except in full, without the written approval of the laboratory. The table below presents a summary of the certifications held by TestAmerica Pittsburgh. Our primary accreditation authority for the Non-potable water and Solid & Hazardous waste programs is Pennsylvania DEP. A more detailed parameter list is available upon request. Please ask your project manager for this information when required.

Certifying State/Program	Certificate #	Program Types	TestAmerica
NFESC	NA	NAVY	X
US Dept of Agriculture	(#P330-07-00101)	Foreign Soil Import Permit	X
Arkansas	(#03-022-1)	WW	X
		HW	X
California – NELAC	04224CA	WW	X
		HW	X
Connecticut	(#PH-0688)	WW	X
		HW	X
Florida – NELAC	(#E87660)	WW	X
		HW	X
Illinois – NELAC	(#200005)	WW	X
		HW	X
Kansas – NELAC	(#E-10350)	WW	X
		HW	X
Louisiana – NELAC	(#93200)	WW	X
		HW	X
New Hampshire – NELAC	(#203002)	WW	X
		–	–
New Jersey – NELAC	(PA-005)	WW	X
		HW	X
New York – NELAC	(#11182)	WW	X
		HW	X
North Carolina	(#434)	WW	X
		HW	X
Pennsylvania - NELAC	(#02-00416)	WW	X
		HW	X
South Carolina	(#89014001)	WW	X
		HW	X
Utah – NELAC	(STLP)	WW	X
		HW	X
West Virginia	(#142)	WW	X
		HW	X
Wisconsin	998027800	WW	X
		HW	X

The codes utilized for program types are described below:

HW Hazardous Waste certification
WW Non-potable Water and/or Wastewater certification
X Laboratory has some form of certification under the specific program. Many states certify laboratories for specific parameters or tests within a category. The information in the table indicates the lab is certified in a general category of testing. Please contact the laboratory if parameter specific certification information is required.

Updated: 12/28/07 C:\Documents and Settings\derubeisn\My Documents\NELAC NARRATIVE Pttsburgh.doc

CASE NARRATIVE

TestAmerica

Lot # C8F240204

Shipment:
TestAmerica's Pittsburgh laboratory received samples on June 24, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

Herbicides:
There were no problems associated with the analysis.

Organophosphorus Pesticides:
LCS recovered above the control limits for Parathion. This is due to co-elution with another compound. The analyte was not detected in any of the samples. Data reported as is. In this case the positive bias is not believed to have impacted data quality.

SAMPLE SUMMARY

C8F240204

WO #	SAMPLE#	CLIENT SAMPLE ID	SAMPLED DATE	SAMP TIME
KQG2X	001	720-14865-4	06/20/08	
KQG24	002	720-14865-7	06/20/08	
KQG25	003	720-14865-10	06/20/08	
KQG26	004	720-14865-13	06/20/08	

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

BERLOGAR
GEOTECHNICAL
CONSULTANTS

Mr. Steve Herndon
Toll Brothers, Inc.
100 Park Place
San Ramon, California 94583

Subject: Analytical Testing of Existing Surface Soil
Grafton Center
Dublin Boulevard East of Landsdowne Street
Dublin, California

Dear Mr. Herndon:

Berlogar Geotechnical Consultants has completed analytical testing of soil located on the north side of Dublin Boulevard, east of Landsdowne Street. This area is located within the Grafton Center project area as shown on Plate 1, Vicinity Map and Plate 2, Site Plan. This location is considered "undisturbed," indicative of the native soil in the area that was utilized for fill for the Grafton Center project. Four soil samples were obtained at depths of 0.5 to 1.0 feet below the existing ground surface in the locations shown on Plate 2. The samples were transported to TestAmerica, a California State Certified analytical laboratory, in Pleasanton, California. The 4 samples were composited into a single sample for testing, and the following laboratory tests were performed:

1. 8260B, Volatile Organic Compounds by GC/MS;
2. CA_LUFTMS, Total Petroleum Hydrocarbons by GC/MS;
3. 8015B, Nonhalogenated Organics using GC/FID-Modified (Diesel Range Organics);
4. 8081A, Organochlorine Pesticides by Gas Chromatography;
5. 8082, PCB by Gas Chromatography;
6. 6010B, (CAM 17 Metals) Inductively Coupled Plasma – Atomic Emission Spectrometry;
7. 7471A, CAM 17 Metals) Mercury in Solid or Semisolid Waste;

The results of the testing are attached in the TestAmerica Analytical Report. The test results indicate that most of the constituents tested were nondetectable. The following table summarizes the constituents that were detected with several agency preliminary remediation or screening level goals.

Composite Sample	USEPA, ppm	CHHSL, ppm	SFRWQCB, ppm	Test Results, ppm
Diesel Range Organics (C10-C28)	--	--	83	13
Motor Oil Range Organics (C24-C36)	--	--	410	77
CAM 17, EPA 6010B				
Antimony and compounds	31	30	6.1	ND
Arsenic	0.39	0.07	0.38	4.8
Barium and compounds	5,400	5,200	750	230
Beryllium and compounds	150	150	4	ND
Cadmium and compounds	37	1.7	1.7	ND
Chromium, total	210	--	--	36
Chromium III	10,0000	10,0000	750	--
Chromium VI	30	17	8	--
Cobalt	900	660	40	11
Copper and compound	3,100	3000	230	21
Lead and lead compounds	400	150	200	7.0
Molybdenum	390	380	40	1.2
Nickel and compounds	1,600	1600	150	42
Selenium	390	380	10	ND
Silver and compound	390	380	20	ND
Thallium and compounds	5.2	5	1.2	ND
Vanadium and compounds	78	530	15	38
Zinc	23,000	23,000	600	44
Mercury, EPA 7471A	230	18	1	ND

Notes:

a) US EPA, Preliminary Remediation Goals, Region 9 PRG Table, Residential Land Use, October 2004.

b) California Human Health Screening Level for Soil, Table 1, Residential Land Use, January 2005.

c) San Francisco Bay Regional Water Quality Control Board, Table A, Environmental Screening Levels, Shallow Soils (< 3m bgs), Groundwater is Potable, Residential Land Use, November 2007.

Arsenic was detected above the 3 agency screening levels, and Vanadium was above the SFRWQCB remediation goals. The CHHSL and SFRWQCB do not have total Chromium level goals, and the testing was not performed for Chromium III and IV. However, it is our experience that the levels of Arsenic, Chromium, and Vanadium are typical of soils in the Bay Area. Hence, it is our opinion that the existing soil at this site is not considered to be contaminated, and can be utilized at most sites. The receiver of the soil should make the final determination as to the acceptance of this soil.

We trust that this letter provides the necessary information you require at this time. If you have any questions, please contact Bill Stevens at (925) 484-0220 or bstevens@berlogar.com.

Respectfully,

BERLOGAR GEOTECHNICAL CONSULTANTS

William R. Stevens
Principal Geotechnical Engineer

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC VOA
No analytical or quality issues were noted.

GC Semi VOA
No analytical or quality issues were noted.

Metals
Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 37783 were outside control limits. The associated laboratory control standard (LCS) met acceptance criteria.

No other analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Designee for
Melissa Brewer
Project Manager I
melissa.brewer@testamericainc.com
09/23/2009

CA ELAP Certification # 2496
The Chain(s) of Custody are included and are an integral part of this report.
The report shall not be reproduced except in full, without the written approval of the laboratory. The client, by accepting this report, also agrees not to alter any reports whether in the hard copy or electronic format and to use reasonable efforts to preserve the reports in the form and substance originally provided by TestAmerica.
A trip blank is required to be provided for volatile analyses. If trip blank results are not included in the report, either the trip blank was not submitted or requested to be analyzed.

Comments
No additional comments.

Receipt
No project name or TAT specified on COC.

All other samples were received in good condition within temperature requirements.

GC/MS VOA
Method(s) 8260B: Surrogate recovery for the following sample(s) was outside the upper control limit: 6 (720-22576-1), 7 (720-22576-2). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8260B: Internal standard responses were outside of acceptance limits for the following sample(s): 8 (720-22576-3), 9 (720-22576-4). The sample(s) shows evidence of matrix interference. Re-analysis of samples were done and confirmed low internal standard responses.

No other analytical or quality issues were noted.

GC/MS Semi VOA
Method(s) 8270C: Surrogate recovery for the following sample(s) was outside the upper control limit: 8 (720-22576-3). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

No other analytical or quality issues were noted.

GC VOA
No analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC/MS Semi VOA
Method(s) 8270C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch #58296 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method(s) 8270C: The matrix spike / matrix spike duplicate (MS/MSD) precision for batch #58296 was outside control limits. Non-homogeneity of the sample matrix is suspected. The associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision met acceptance ciriteria.

Method(s) 8270C: The following sample(s) was diluted due to the abundance of non-target analytes: 1C1 (720-22752-5), 3A1 (720-22752-25), 3B1 (720-22752-27), 3C1 (720-22752-29), 4C1 (720-22752-35). Elevated reporting limits (RLs) are provided.

Method(s) 8270C: The following sample(s) was diluted due to the abundance of non-target analytes: 1B1 (720-22752-3), 1E1 (720-22752-9), 2C1 (720-22752-17), 2F1 (720-22752-23), 4B1 (720-22752-33). Elevated reporting limits (RLs) are provided.

Method(s) 8270C: Due to the level of dilution required for the following sample(s), surrogate recoveries are not applicable: 1B1 (720-22752-3), 1E1 (720-22752-9), 2C1 (720-22752-17), 2F1 (720-22752-23).

Method(s) 8270C: The matrix spike / matrix spike duplicate (MS/MSD) precision for batch #58348 was outside control limits. Non-homogeneity of the sample matrix is suspected. The associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision met acceptance ciriteria.

Method(s) 8270C: A full list spike was utilized for this method. Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for three analytes to recover outside criteria for this method when a full list spike is utilized. The LCS/LCSD/MS/MSD associated with batch #58348 had two(Bis-[2-ethylhexyl]phthalate, Di-n-octyl phthalate) analytes outside control limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

No other analytical or quality issues were noted.

GC VOA
No analytical or quality issues were noted.

GC Semi VOA
Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: C4 (720-22752-58).

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: C7 (720-22752-61).

No other analytical or quality issues were noted.

Organic Prep
Method(s) 9071B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 58515 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

No other analytical or quality issues were noted.

EXECUTIVE SUMMARY - Detections

Client: Berlogar Geotechnical

Job Number: 720-22752-1

Lab Sample ID / Analyte	Client Sample ID	Result / Qualifier	Reporting Limit	Units	Method
720-22752-55	**C1**				
Diesel Range Organics [C10-C28]		2.1	0.99	mg/Kg	8015B
720-22752-57	**C3**				
Diesel Range Organics [C10-C28]		30	0.99	mg/Kg	8015B
Motor Oil Range Organics [C24-C36]		270	50	mg/Kg	8015B
720-22752-58	**C4**				
Diesel Range Organics [C10-C28]		57	5.0	mg/Kg	8015B

DATA REPORTING QUALIFIERS

Client: Berlogar Geotechnical Job Number: 720-22752-1

Lab Section	Qualifier	Description
GC/MS Semi VOA		
	*	LCS or LCSD exceeds the control limits
	F	MS or MSD exceeds the control limits
	X	Surrogate exceeds the control limits
GC Semi VOA		
	F	MS or MSD exceeds the control limits
	F	RPD of the MS and MSD exceeds the control limits
	D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.

List Source: TestAmerica San Francisco

Creator: Mullen, Joan

List Number: 1

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified	True

Project: 720-22752

Sampled: 09/22/09
Received: 09/25/09
Issued: 10/06/09 16:00

NELAP #01108CA California ELAP#2706 CSDLAC #10256 AZ #AZ0671 NV #CA01531

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain(s) of Custody, 4 pages, are included and are an integral part of this report.
This entire report was reviewed and approved for release.

DATA QUALIFIERS AND DEFINITIONS

I	Internal Standard recovery was outside of method limits. Matrix interference was confirmed.
L	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
M1	The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M2	The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M7	The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
R-3	The RPD exceeded the acceptance limit due to sample matrix effects.
Z	Due to sample matrix effects, the surrogate recovery was below the acceptance limits.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

ADDITIONAL COMMENTS

For 8260 analyses:

Due to the high water solubility of alcohols and ketones, the calibration criteria for these compounds is <30% RSD. The average % RSD of all compounds in the calibration is 15%, in accordance with EPA methods.

NELAC REPORTING:

At the time of analysis the laboratory was in compliance with the current NELAC standards and held accreditation for all analyses performed unless noted by a qualifier. The labs accreditation numbers are listed below. The format and contents of the report meets all applicable NELAC standards except as noted in the narrative and shall not be reproduced except in full, without the written approval of the laboratory. The table below presents a summary of the certifications held by TestAmerica Pittsburgh. Our primary accreditation authority for the Non-potable water and Solid & Hazardous waste programs is Pennsylvania DEP. A more detailed parameter list is available upon request. Please ask your project manager for this information when required.

Certifying State/Program	Certificate #	Program Types	TestAmerica
NFESC	NA	NAVY	X
US Dept of Agriculture	(#P330-07-00101)	Foreign Soil Import Permit	X
Arkansas	(#88-0690)	WW	X
		HW	X
California – NELAC	04224CA	WW	X
		HW	X
Connecticut	(#PH-0688)	WW	X
		HW	X
Florida – NELAC	(#E871008-04)	WW	X
		HW	X
Illinois – NELAC	(#002064)	WW	X
		HW	X
Kansas – NELAC	(#E-10350)	WW	X
		HW	X
Louisiana – NELAC	(#04041)	WW	X
		HW	X
New Hampshire – NELAC	(#203008)	WW	X
		--	--
New Jersey – NELAC	(PA-005)	WW	X
		HW	X
New York – NELAC	(#11182)	WW	X
		HW	X
North Carolina	(#434)	WW	X
		HW	X
Pennsylvania - NELAC	(#02-00416)	WW	X
		HW	X
South Carolina	(#89014002)	WW	X
		HW	X
Utah – NELAC	(STLP)	WW	X
		HW	X
West Virginia	(#142)	WW	X
		HW	X
Wisconsin	998027800	WW	X
		HW	X

The codes utilized for program types are described below:

HW Hazardous Waste certification
WW Non-potable Water and/or Wastewater certification
X Laboratory has some form of certification under the specific program. Many states certify laboratories for specific parameters or tests within a category. The information in the table indicates the lab is certified in a general category of testing. Please contact the laboratory if parameter specific certification information is required.

Updated: 2/5/2009 C:\Documents and Settings\derubeisn\My Documents\NELAC NARRATIVE Pttsburgh.doc

CASE NARRATIVE

TestAmerica San Francisco

Lot # C9I250302

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on September 25, 2009. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

Organophosphorus Pesticides;
All compounds <20% RSD will use an average response factor curve if no visible improvement is accomplished using a curve. A curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The laboratory control sample recovered slightly above control limits for parathion. This compound was not detected in the associated samples. In this case, the positive bias is not believed to have impacted data quality. All results were reported.

The matrix spike and matrix spike duplicate of sample C6 (720-22752-60) also recovered above control limits for parathion.

Herbicides:
TestAmerica's North Canton laboratory performed the herbicides.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

CA ELAP Certification # 2496
The Chain(s) of Custody are included and are an integral part of this report.
The report shall not be reproduced except in full, without the written approval of the laboratory. The client, by accepting this report, also agrees not to alter any reports whether in the hard copy or electronic format and to use reasonable efforts to preserve the reports in the form and substance originally provided by TestAmerica.
A trip blank is required to be provided for volatile analyses. If trip blank results are not included in the report, either the trip blank was not submitted or requested to be analyzed.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC Semi VOA
Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: W-6 (720-23151-6).

No other analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

EXECUTIVE SUMMARY - Detections

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified	True

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified	True

CA ELAP Certification # 2496
The Chain(s) of Custody are included and are an integral part of this report.
The report shall not be reproduced except in full, without the written approval of the laboratory. The client, by accepting this report, also agrees not to alter any reports whether in the hard copy or electronic format and to use reasonable efforts to preserve the reports in the form and substance originally provided by TestAmerica.
A trip blank is required to be provided for volatile analyses. If trip blank results are not included in the report, either the trip blank was not submitted or requested to be analyzed.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC VOA
No analytical or quality issues were noted.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified	True

CA ELAP Certification # 2496
The Chain(s) of Custody are included and are an integral part of this report.
The report shall not be reproduced except in full, without the written approval of the laboratory. The client, by accepting this report, also agrees not to alter any reports whether in the hard copy or electronic format and to use reasonable efforts to preserve the reports in the form and substance originally provided by TestAmerica.
A trip blank is required to be provided for volatile analyses. If trip blank results are not included in the report, either the trip blank was not submitted or requested to be analyzed.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
Method(s) 8260B: The laboratory control sample (LCS) for preparation batch #59302 exceeded control limits for the following analytes: 1,2-Dichloroethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The continuing calibration verification (CCV) for 1,1,2,2-Tetrachloroethane and 1,2,3-Trichloropropane recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No other analytical or quality issues were noted.

GC VOA
No analytical or quality issues were noted.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
X	Surrogate is outside control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 720-76174-1

Laboratory: TestAmerica Pleasanton

Narrative

Job Narrative
720-76174-1

Comments
No additional comments.

Receipt
The samples were received on 12/6/2016 8:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.3º C.

Receipt Exceptions
Two of the jars received were cracked upon arrival. After the volatiles departmet received their aliquot, the sample was transfered into another jar.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270C: The following analytes 2,4-Dinitrophenol and 2-Methyl-4,6-dinitrophenol recovered outside control limits for the LCS associated with preparation batch 720-214477 and analytical batch 720-214508: This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8270C: The following sample was diluted due to the abundance of non-target analytes: S-3@6-12" (720-76174-3). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8082: The following sample required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: (LCS 720-214323/2-A), (MB 720-214323/1-A), S-1@6-12" (720-76174-1), S-2@6-12" (720-76174-2), S-3@6-12" (720-76174-3) and S-4@6-12" (720-76174-4).

Method 8081A: The following sample has clear evidence of the presence of chlordane based on the presence of alpha and gamma chlordane; however, the chlordane peaks in the sample do not closely match the laboratory's Technical Chlordane standard: S-3@6-12" (720-76174-3). As a result, there is increased quantitative uncertainty associated with this result.

Method 8081A: The %RPD between the primary and confirmation column exceeded 40% for alpha-Chlordane for the following sample: S-3@6-12" (720-76174-3). The lower value(s) has been reported and qualified in accordance with the laboratory's SOP.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 6010B: The method blank for preparation batch 720-214285 and analytical batch 720-214443 contained Cu above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Job ID: 720-76174-1 (Continued)

Laboratory: TestAmerica Pleasanton (Continued)

Method 8151A: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 180-196722.

Method 3541: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 180-196776.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: Berlogar Geotechnical
Project/Site: PM9717

Subject: Re: TestAmerica Sample Login Confirmation files from 720-76174 PM9717

Afsaneh,

Can you please verify if the testing order for samples S-1 through S-4 includes testing for TPHD AND TPHMO? And if not, can you please add that? Please confirm.

Thank you,

Stefanie Parman-Bettencourt

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative
720-76209-1

Comments
No additional comments.

Receipt
The samples were received on 12/7/2016 2:40 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.1º C.

Receipt Exceptions

One or more containers for the following sample was received broken or leaking: Client sent in 1 broken 8 oz for sample: S-13 @ 6-12. Broken container received in a 16oz soil jar.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Contact: Laurie Israel

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-SQG site within approximately 0.375 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/29/2018 has revealed that there are 7 ENVIROSTOR sites within approximately 1.125 miles of the target property.

EMI: Toxics and criteria pollutant emissions data collected by the ARB and local air pollution agencies

A review of the EMI list, as provided by EDR, and dated 12/31/2017 has revealed that there is 1 EMI site within approximately 0.125 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
TERRACES HOME OWNER' Facility Id: 18054	3448 FINNIAN WAY	ESE 0 - 1/8 (0.034 mi.)	C6	12

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2017 has revealed that there are 3 HAZNET sites within approximately 0.125 miles of the target property.

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 352
. Waste name: Other organic solids

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D005
. Waste name: BARIUM

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS HAZ WASTE:
Site ID: 396790
CERS ID: 10189239
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 396790
Site Name: LOWE'S #2273
Violation Date: 03-10-2015
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to perform a five-year review of the SPCC plan.
Violation Notes: Returned to compliance on 03/26/2015. OBSERVATION:5 year was due 2013, but most recent signed date on SPCC Plan was on 11/4/2014 approving that plan has been implemented. Does not prove that a 5-year review was completed. Failure to perform and/or document the five-year review of the SPCC plan. CORRECTIVE ACTION: Complete and document the 5 year review and submit verification of proper completion.

Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 05/23/2018. OBSERVATION: Designated facility to generator copies were not found on site for uniform hazardous waste manifest #001433103PSC on 12/7/2016, and for #001775377PSC on 2/14/2018. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility on site for three years and have them readily available for review. CORRECTIVE ACTION: Immediately locate a copy of the uniform manifests listed above, maintain them on site, and submit copies to Alameda County Dept. of Environmental Health (ACDEH).

Violation Date:	04-24-2018
Citation:	HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description:	Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 05/23/2018. OBSERVATION: Deficiencies noted in the facility's implementation of the Hazardous Materials Business Plan (HMBP) by means of proper labeling of containers: 1. "Diesel" aboveground storage tank not labeled as to the hazard. Include label for diesel "Fill Port". 2. Three 55 gallon containers were not labeled "empty"; one metal, and two poly containers missing "date emptied". CORRECTIVE ACTION: Properly label the above containers, and provide evidence of correction to Alameda County Dept. of Environmental Health (ACDEH) such as photo.

Violation Description:	APSA Program - Administration/Documentation - General
Violation Notes:	Returned to compliance on 03/26/2015. OBSERVATION: SPCC does not contain a prediction of direction, rate of flow, and total quantity of oil potentially discharged from the facility as a result of each type of major equipment failure where experience indicates a reasonable potential (i.e.: loading or unloading equipment, tank overflow, rupture, or leakage). Plan says in Appendix A that "Site Plan showing locations of Diesel AST, Electric Transformer and predicted flow diretions." No site plan attached to the SPCC Plan. CORRECTIVE ACTION: Amend the SPCC to include a prediction of direction, rate of flow, and total quantity of oil potentially discharged from the facility as a result of each type of major equipment failure where experience indicates a reasonable potential (i.e.: loading or unloading equipment, tank overflow, rupture, or leakage).

Violation Date:	04-24-2018
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit a site map with all required content.
Violation Notes:	Returned to compliance on 06/18/2018. OBSERVATION: The following deficiencies noted in the annotated site map submitted to the CUPA: 1. Does not include emergency equipment (two eyewash stations, spill control materials location). 2. Changes in storage for forklift propane (and extra retail sales Blue Rhino in bull pen), and retail sale location in front of store. 3. Emergency assembly area has changed. (Ensure consistent with part E. of the emergency response/contingency plan) 4. Changes in storage of fertilizer location, no storage by door to garden center, and no roof coating/masonry bagged goods in location that is now the appliances section. 5. Add Dublin Blvd. orientation. 6. Hazardous waste accumulation area has moved to outdoor bull pen area. CORRECTIVE ACTION: Revise the annotated Site Map to include all required content and submit electronically in the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov/ within 30 days..

Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for three years.
Violation Notes:	Returned to compliance on 03/10/2015. OBSERVATION: Copies of hazardous waste disposal records for 2012 to 2015 are missing the signed copy of manifests from the designated facility. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site, and submit copies to the CUPA by 4/9/2015.

Site ID: 63983
CERS ID: 10156511
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 63983
Site Name: Safeway 1932
Violation Date: 07-27-2015
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 08/27/2015. OBSERVATION: MULTIPLE STRONG PAK HAZARDOUS WASTE BINS CONTAINING HAZARDOUS WASTE IS MISSING HAZARDOUS WASTE LABELS. All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all containers are marked with all the required information.

Violation Date:	03-25-2014
Citation:	HSC 6.95 25505(a) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)
Violation Description:	Owner/Operator failed to complete and/or submit a Hazardous Materials Business Plan when storing hazardous materials at or above the thresholds quantities of 55 gallons/500 lbs/200 cubic feet.
Violation Notes:	Returned to compliance on 04/04/2014.
Violation Division:	Alameda County Environmental Health
Violation Program:	HMRRP

SAFEWAY 1932 (Continued) **S121789599**

Violation Source: CERS

Site ID: 63983
Site Name: Safeway 1932
Violation Date: 07-27-2015
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for three years.
Violation Notes: Returned to compliance on 08/27/2015. OBSERVATION: The facility is missing 2014 TSDF copies of hazardous waste manifests for 006215811FLE, 006230430FLE, and 006444827FLE. LDR copies missing for 006215811FLE. 2013 LDR missing for manifest 005801657FLE, and TSDF copy for manifest 006324294FLE. CORRECTIVE ACTION: Facility is to locate missing TSDF and LDR copies of hazardous waste manifests/documents listed above, and provide copy of these to ACDEH for review.
Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 63983
Site Name: Safeway 1932
Violation Date: 07-27-2015
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description: Failure to inspect hazardous waste storage areas at least weekly.
Violation Notes: Returned to compliance on 08/27/2015. OBSERVATION: FACILITY REPRESENTATIVE STATES SHE PROCESSES RETAIL HAZARDOUS REGULARLY. BASED ON ACDEH'S OBSERVATION OF OPEN HAZARDOUS WASTE CONTAINERS, MULTIPLE HAZARDOUS WASTE CONTAINERS NOT PROPERLY LABELED AND MISSING HAZARDOUS WASTE LABELS THAT WEEKLY INSPECTIONS FOR HAZARDOUS WASTE MANAGEMENT ARE NOT BEING CONDUCTED. CORRECTIVE ACTION: FACILITY IS TO CONDUCT WEEKLY INSPECTIONS OF THE HAZARDOUS WASTE AREA. ACDEH PROVIDED EXAMPLE HAZARDOUS WASTE AREA WEEKLY INSPECTION FORM TO FACILITY REPRESENTATIVE. FACILITY IS TO ENSURE WEEKLY INSPECTIONS OF HAZARDOUS WASTE AREA(S).
Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 63983
Site Name: Safeway 1932
Violation Date: 07-27-2015
Citation: HSC 6.5 25186.2 - California Health and Safety Code, Chapter 6.5, Section(s) 25186.2
Violation Description: Failure to properly handle, store, or treat hazardous waste or provided false information submitted on the permit application and other documents.
Violation Notes: Returned to compliance on 08/27/2015. OBSERVATION: TWO CARDBOARD BOXES CONTAINING MULTIPLE RETAIL SIZED OF DAMAGED CONSUMER GOODS / INCOMPATIBLE HAZARDOUS WASTE IN UNLINED INCOMPATIBLE CONTAINERS. VARIOUS RETAIL HAZARDOUS WASTE CONTAINERS PLACED ON TOP OF FILLED STRONG PAK HAZARDOUS WASTE CONTAINERS REQUIRES PROPER PROCESSING AND CONTAINMENT. CORRECTIVE ACTION: FACILITY IS TO IMMEDIATELY PROCESS AND TRANSFER THESE CONTAINERS OF RETAIL HAZARDOUS WASTE DAILY INTO LINED COMPATIBLE CONTAINERS. PROVIDE PHOTO EVIDENCE THAT THE EXCESS

SAFEWAY 1932 (Continued) **S121789599**

HAZARDOUS WASTE HAS BEEN PROCESSED AND PLACED IN APPROPRIATE HAZARDOUS WASTE CONTAINERS. SINCE THERE ARE NOT SUFFICIENT AVAILABLE STRONG PAK CONTAINERS TO PROCESS THE EXCESS OF RETAIL HAZARDOUS WASTE, FACILITY IS TO IMMEDIATELY CALL HAZARDOUS WASTE VENDOR AND SCHEDULE A HAZARDOUS WASTE PICK. PROVIDE DOCUMENTATION EVIDENCE OF HAZARDOUS WASTE PICK UP. IT IS HIGHLY RECOMMENDED THAT FACILITY INCREASE FREQUENCY OF HAZARDOUS WASTE PICK-UPS AND/OR HAVE INFRASTRUCTURE IN PLACE FOR STORE [Truncated]

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

STATE MASTER

Registry ID: 110002933666

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/12/2018
Date Data Arrived at EDR: 12/28/2018

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/12/2018
Date Data Arrived at EDR: 12/28/2018

Last EDR Contact: 02/15/2019
Next Scheduled EDR Contact: 04/15/2019
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

Data Release Frequency: No Update Planned

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/12/2018
Date Data Arrived at EDR: 12/28/2018
Date Made Active in Reports: 01/11/2019

Telephone: N/A
Last EDR Contact: 02/15/2019
Next Scheduled EDR Contact: 04/15/2019
Data Release Frequency: Quarterly

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016
Date Data Arrived at EDR: 01/05/2017
Date Made Active in Reports: 04/07/2017
Number of Days to Update: 92

Source: Environmental Protection Agency
Telephone: 703-603-8704
Last EDR Contact: 01/04/2019
Next Scheduled EDR Contact: 04/15/2019
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/12/2018
Date Data Arrived at EDR: 12/28/2018

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

West Map:	5640384 DUBLIN, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

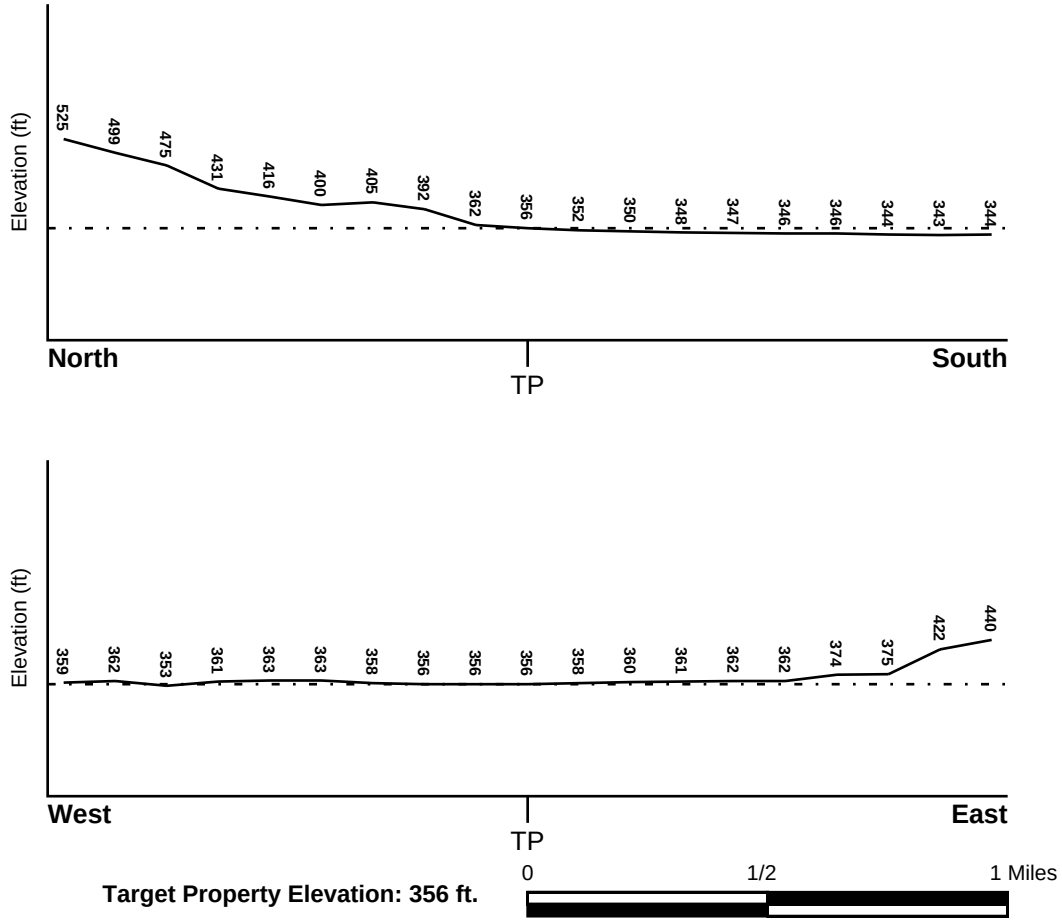
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type

06001C0309G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LIVERMORE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Clear Lake

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	35 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9
2	35 inches	64 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: Rincon

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
2	16 inches	51 inches	sandy clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
3	51 inches	59 inches	stratified sandy loam to clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9

Soil Map ID: 3

Soil Component Name: Linne

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

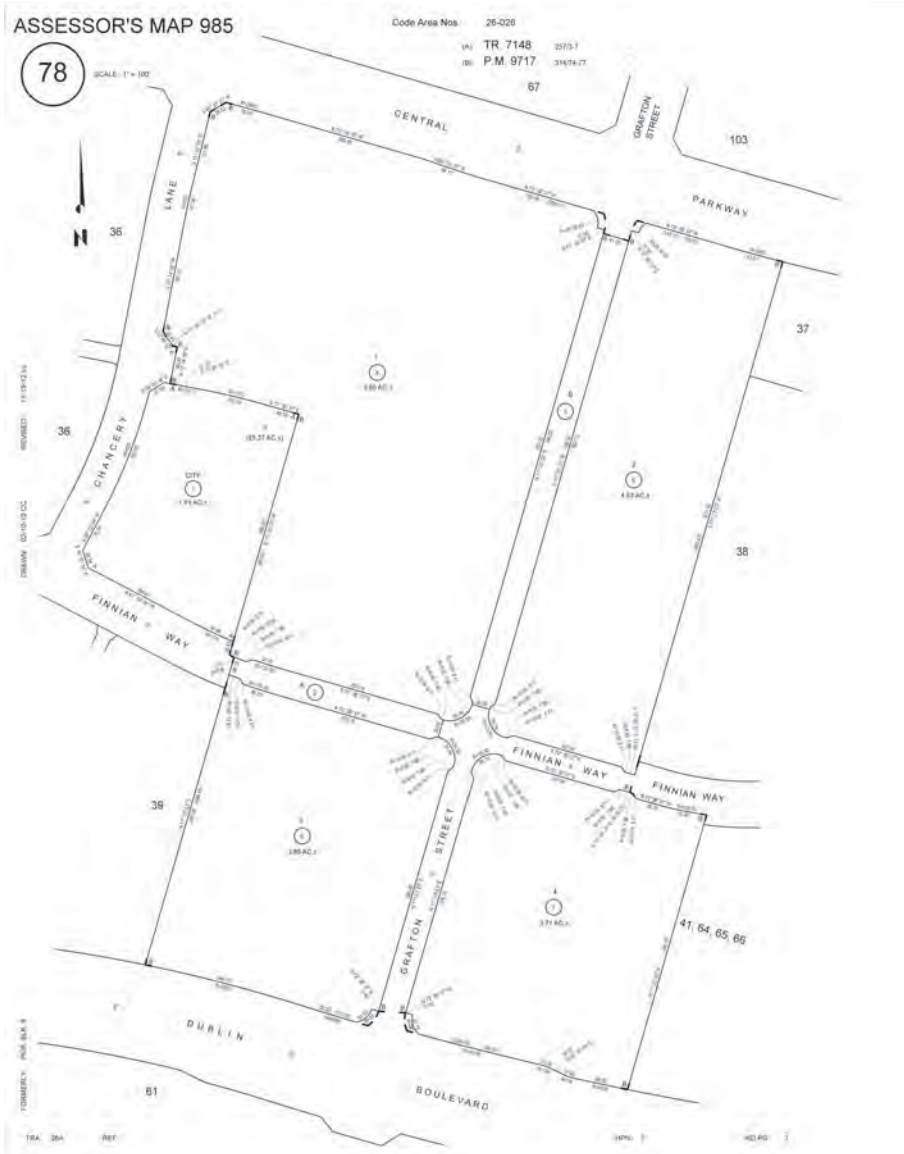
EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.



Thank you for your business.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Terraphase Engineering Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:
