NOP & Public Comments

City of Rancho Cucamonga

Notice of Preparation of a Draft EIR

And Notice of Public Scoping Meeting

Date: November 18, 2019

To: Responsible and Trustee Agents/Interested Organizations and Individuals

Subject: **Notice of Preparation of a Draft Environmental Report and Notice of a Public Scoping Meeting**

9th & Vineyard Development Project

Lead Agency:

City of Rancho Cucamonga
Planning Department
10500 Civic Center Drive
Rancho Cucamonga, CA 91730

Consulting Firm

KIMLEY-HORN AND ASSOCIATES, INC.
3880 Lemon Street, Suite 420
Riverside, CA 92501
Candyce Burnett

This NOP includes a project description and a list of the environmental issues to be examined in the environmental impact report (EIR).

Due to the time limits mandated by State law, your response must be sent at the earliest possible date, but no later than 30 days after receipt of this notice.

Please send your response to David F. Eoff IV, Senior Planner, at the City of Rancho Cucamonga address shown above. Please include the name, phone number, email, and address of a contact person in your response.

Project Title: 9th & Vineyard Development Project

Location: The Project site is located south of E. 9th Street, directly west of Vineyard Avenue, directly north of the Burlington Northern Santa Fe (BNSF) Railway, and directly east of Baker Avenue in the City of Rancho Cucamonga in San Bernardino County, California. The 47.07-acre site is located approximately 1.4 miles north of the I-10 Freeway/Vineyard Avenue on/off ramp, approximately 2.9 miles south of the SR-210 Freeway/Carnelian Street on/off ramp, and 2.3 miles east of State Route 83.

A. Project Overview CP Logistics Vineyard LLC (CPL) is proposing to develop a site configuration that would include the construction of three warehouse buildings to include approximately 13,000 sf of office space and 1,024,467 sf of warehouse space for a total of 1,037,467 sf. The proposed 9th & Vineyard development Project (proposed Project) is comprised of three warehouse buildings with ancillary office space and associated parking and landscaping on approximately 47.07 acres. **Exhibit 3: Building Site Configuration.**

City of Rancho Cucamonga

Notice of Preparation of a Draft EIR

And Notice of Public Scoping Meeting

The Project site is located on the following nine (9) Assessor Parcel Numbers (APN Nos.):

1. 0207-271-25
2. 0207-271-27
3. 0207-271-39
4. 0207-271-40
5. 0207-271-89
6. 0207-271-93
7. 0207-271-94
8. 0207-271-96
9. 0207-271-97

The Project would require a total of 370 automobile parking spaces and would provide a total of 415 automobile parking spaces. The Project would require 141 total trailer parking stalls and would provide 195 total trailer parking spaces. Refer to Table 1 for further breakdown regarding individual parking provided for each building.

Table 1: Three Building Site Summary

Building	Warehouse (sf)	Office 1st Floor (sf)	Office 2nd Floor (sf)	Total Building (sf)	Automobile Parking Stalls		Trailer Parking Stalls	
					Required	Provided	Required	Provided
Building 1	632,580	4,000	0	636,580	195	195	100	148
Building 2	126,531	2,000	2,000	130,531	68	73	13	13
Building 3	265,356	2,500	2,500	270,356	107	147	28	34

The warehouse distribution buildings are currently planned as “speculative buildings.” Consequently, the future tenants or buyers of the buildings are not currently known. Without knowing the future tenants or buyers, an exact number of future employees or hours of operation cannot be determined. Therefore, the Environmental Impact Report (EIR) and associated technical reports will use approximate potential on-site employees, hours of operation, and vehicular traffic generation based on the Project’s proposed square footage and use as warehouse distribution facilities. A more in-depth analysis in addition to full evaluation of the historic building located near the western project boundary will be provided in the forthcoming Draft EIR.

Landscaping

Proposed landscaping would cover approximately 11.9% or 243,585 sf of the site. Landscaping would be

installed in all areas not devoted to buildings, parking, traffic and specific user requirements, in accordance with the City's Municipal Code Section 17.36.040 which specifies landscape design guidelines for industrial districts. Building setbacks would be 35 feet along Vineyard Avenue (Secondary Highway) and 25 feet along both 9th Street (Collector Street) and Baker Avenue (Collector Street).

Construction

Construction would include the demolition of existing structures with the exception of the ±1,260 SF building located at 8803 Baker Avenue, which was deemed historically significant by the City, and the existing cell tower located approximately 300 linear feet west of Vineyard Avenue that is compliant with the City of Rancho Cucamonga's Construction and Demolition Diversion Program. CPL will pay the demolition permit and administration fee for cleanup purposes provided by Burrtec Waste Industries. Construction of the proposed Project is expected to commence in August 2020 (est.) with a construction duration of approximately 15 months (including required demolition) and would be completed in one (1) phase with buildout in November 2021 (est.). Total excavation and fill of soils for the proposed Project is anticipated to balance, with no required soil import or export.

B. Project Setting

Adjacent properties to the north are zoned for Industrial Park (IP), General Industrial (GI), Medium Density Residential (M), and General Commercial (GC) uses. Properties to the west are zoned Low Density Residential (L). The BNSF railway and properties zoned for industrial uses directly south of the site are located within the City of Ontario. The site is bordered to the east by Vineyard Avenue and the Cucamonga Creek, a concrete-lined stormwater drainage channel. Cucamonga Creek originates in the San Gabriel Mountains to the north of the site and flows roughly north to south into the Santa Ana River at the Prado Dam.

C. Requested Project Approvals

Project entitlement will include the following applications:

- **Design Review (DR)(DRC2019-00742)**: The application includes the proposed review of three (3) industrial buildings totaling approximately 1,037,467 square feet that range in size from 130,531 to 636,580 square feet on approximately 47.07 acres.
- **Tentative Parcel Map (TPM)(SUBTPM20173)**: The application includes the proposed review of a collapse of the nine (9) existing parcels into three (3) proposed parcels, along with the required land dedications, vacations and easements.
- **General Plan Amendment (GPA)(DRC2019-00851)**: The application includes the review of a proposed amendment of the land use designation of approximately 7.06 acres located at the southwest corner of the site fronting Baker Avenue, between APN No. 0207-271-89 to the north and the BNSF Railway to the south, from General Industrial to Industrial Park.

RANCHO CUCAMONGA

City of Rancho Cucamonga

Notice of Preparation of a Draft EIR

And Notice of Public Scoping Meeting

- **Zoning Map Amendment (ZMA)(DRC2019-00852)**: The application includes the review of a proposed amendment of the zoning designation of approximately 7.06 acres located at the southwest corner of the site fronting Baker Avenue, between APN No. 0207-271-89 to the north and the BNSF Railway to the south, from General Industrial (GI) to Industrial Park (IP).
- **Uniform Sign Program (USP)(DRC2019-00855):** The application includes the review of a Uniform Sign Program which governs the design and construction of all planned and future signage at the proposed Project.
- **Tree Removal Permit (DRC2019-00853):** The application includes the review of the proposed removal of approximately one hundred ninety seven (197) trees on the site, of which seventy one (71) are considered "heritage trees" by the City. These trees will be replaced by approximately five hundred and one (501) new trees as part of the proposed Project.
- **Certificate of Appropriateness (DRC2019-00854)**: The application includes the review of the proposed rehabilitation of the historically significant ±1,260 square foot building located at 8803 Baker Avenue.
- **Notice of Filing Sign Permit (DRC2019-00756):** The application includes the request to install signs on the site in order to properly notice the public of upcoming public hearings for the Project.

D. Project Characteristics

General Plan Designation: The majority of the Project site is designated as General Industrial with the exception of approximately 5.71 acres at the northwest corner of the site fronting Baker Avenue (APN No. 0207-271-89) which is designated as Industrial Park.

Zoning: The majority of the Project site is zoned as General Industrial (GI) with the exception of approximately 5.71 acres at the northwest corner of the site fronting Baker Avenue (APN No. 0207-271-89) which is zoned as Industrial Park (IP). The site is not currently governed by a Specific Plan.

E. Circulation and Parking

Vehicular access to the proposed Project would consist of six project driveways, one on 9th Street, two on Vineyard Avenue, and three on Baker Avenue. All entrances to the site would be unsignalized. Street improvements would also be provided along Vineyard Ave, E. 9th Street, and Baker Ave at the Project frontage to include improvements which may consist of the following: sidewalk, parkway landscaping, curb & gutter, dry utility undergrounding, street lights, fire hydrants, traffic signal equipment (offsite intersections), rehabilitation of existing asphalt pavement, offsite utility connections, and signing and striping as required. As shown in **Exhibit 3 – Building Site Configuration** and **Table 1 – Three Building Site Summary** (shown above), the proposed Project would meet the parking requirements for all proposed

buildings.

Environmental Issues to be Evaluated in the EIR

Pursuant to Section 21165 of the California Public Resources Code and Section 15050 of the California Environmental Quality Act (CEQA) Guidelines, the City of Rancho Cucamonga will be the lead agency for an environmental impact report (EIR) that will be prepared to address potential impacts associated with the proposed 9th and Vineyard Development Project. CEQA Guidelines §15063 provide that if a lead agency determines that an EIR will clearly be required for a project, an Initial Study is not required. In this case, the City has already determined that an EIR will need to be prepared based on the Project's potential to create short-term, long-term and cumulative impacts associated with other developments. Therefore, an EIR will be prepared to fully evaluate the potential impacts of the proposed Project. The EIR will be comprehensive in nature evaluating all identified issues from the 2019 CEQA Initial Study Checklist.

The following issues are anticipated to be addressed in the EIR:

• Aesthetics • Agriculture and Forestry Resources • Air Quality • Biological Resources • Cultural Resources • Energy • Geology and Soils • Greenhouse Gas Emissions • Hazards and Hazardous Materials • Hydrology and Water Quality • Land Use and Planning • Mineral Resources • Noise • Population and Housing • Public Services • Recreation • Transportation • Tribal Cultural Resources • Utilities and Service Systems • Wildfire

The EIR will address the short- and long-term effects of the Project on the environment, including the impacts of any off-site improvements. It will also evaluate the potential for the Project to cause direct and indirect growth-inducing impacts, as well as cumulative impacts. Alternatives to the proposed Project will be evaluated that may reduce impacts that are determined to be significant in the EIR. Mitigation may be proposed for those impacts that are determined to be significant. A mitigation monitoring program will also be developed as required by §15097 of the CEQA Guidelines. The environmental determination in this Notice of Preparation is subject to a 30-day public review period per Public Resources §21080.4 and CEQA Guidelines §15082. Public agencies, interested organizations, and individuals have the opportunity to comment on the proposed Project, to identify those environmental issues potentially affected by the Project which should be addressed further by the City of Rancho Cucamonga in the EIR.

As they are completed and distributed, the EIR/Environmental Documentation for the Project will be made available to download from the City's website: www.cityofrc.us

City of Rancho Cucamonga

Notice of Preparation of a Draft EIR

And Notice of Public Scoping Meeting

The EIR/Environmental Documentation will be made available for review Monday through Thursday, between 7:00 AM and 6:00 PM at the following location:

City of Rancho Cucamonga
Planning Department
10500 Civic Center Drive
Rancho Cucamonga, CA 91730

Public Review Period

CEQA requires a 30-day public review period for an NOP. In accordance with CEQA, should you have any comments, please provide a written response to this NOP within the 30-day NOP period between **November 19, 2019 through December 18, 2019**.

The City is requesting comments and guidance on the scope and content of the EIR from Responsible and Trustee agencies, interested public agencies, organizations, and the general public (pursuant to CEQA Guidelines §15082). All parties that have submitted their names and mailing addresses will be notified as part of the Project's CEQA review process. If you wish to be placed on the mailing list or have any questions or need additional information, please contact the lead agency contact noted below.

Agencies: The City requests each Responsible and Trustee agency's views on the scope and content of environmental issues relevant to your agency's statutory responsibilities in connection with the proposed Project, in a manner consistent with California Code of Regulations, Title 14, Section 15082(b). Your agency may use the EIR prepared by the City when considering any permits that your agency must issue, or other approvals for the Project.

Public Comments

The City requests your careful review and consideration of this notice, and invites ***written comments*** from interested agencies, persons, and organizations regarding the preparation of the EIR. Please indicate a contact person for your agency or organization. Please send your written comments to:

Attn: David F. Eoff IV, Senior Planner
City of Rancho Cucamonga
Planning Department
10500 Civic Center Drive
Rancho Cucamonga, CA 91730
Phone: (909) 774-4312
Email: david.eoff@cityofrc.us

City of Rancho Cucamonga

Notice of Preparation of a Draft EIR

And Notice of Public Scoping Meeting

Please include the name, phone number, email, and address of a contact person in your response.

You may also provide oral or written comments in person at the ***Scoping Meeting*** noted below. Comments in response to this notice must be submitted to the City through close of business (5:00 PM) on December 19, 2019.

Public Scoping Meeting

The City will have a Scoping Meeting to present updates to the Project and the CEQA process, and to receive public comments and suggestions regarding the scope and content of the EIR. The meeting will be held at the following location, date and time:

Date: December 12, 2019

Location: City of Rancho Cucamonga
Rancho Cucamonga Civic Center, Tri-Communities Room
10500 Civic Center Drive
Rancho Cucamonga, CA 91730

Time: 6:30 PM

Special Accommodations. Should you require special accommodations at the public scoping meeting, such as for the hearing impaired or an English translator, please contact the City of Rancho Cucamonga no later than December 2, 2019 (see contact information above).

NOTICE OF PUBLIC SCOPING MEETING AND PREPARTION OF AN ENVIRONMENTAL IMPACT REPORT

Notice is Hereby Given that a public scoping meeting will be held on December 12, 2019 at 6:30 PM at 10500 Civic Center Drive, Rancho Cucamonga, CA 91730 in The Rains conference room inside City Hall.

The Planning Department has received an application to construct 1,037,467 square feet of industrial warehouse space. The development is comprised of three warehouse buildings with ancillary office space, associated parking and landscaping on roughly 47.07 acres of land. The project site is located south of 9th Street, directly west of Vineyard Avenue, directly north of the Burlington Northern Santa Fe (BNSF) Railway, and directly east of Baker Avenue.

In compliance with the California Environmental Quality Act (CEQA), the City (as the Lead Agency) has determined that an Environmental Impact Report (EIR) will need to be prepared to fully evaluate the potential impacts of the proposed project. The EIR will be comprehensive in nature evaluating all identified issues from the 2019 CEQA Initial Study Checklist. The City of Rancho Cucamonga invites you to submit your written views regarding the scope of environmental issues recommended to be addressed in the EIR, and to seek your comments on what environmental effects and alternatives the EIR should study. Oral or written comments may be provided in person at the Scoping Meeting noted above. Written comments may also be provide by mail to:

City of Rancho Cucamonga Planning Department
Attn: David F. Eoff IV, Senior Planner
10500 Civic Center Drive
Rancho Cucamonga, CA 91730

Or by email to David.Eoff@cityofrc.us.

No decision on the project will be made at this time. The purpose of the Scoping Meeting is to receive public comment regarding the preparation of the EIR only. Additional correspondence on future meetings and public hearings will be provided at a later date prior to any decisions being made on the project. Comments and responses provided by mail or email must be received no later than 5:00 PM on December 19, 2019.

If you have any questions or concerns regarding this project or this meeting, you may contact David F. Eoff IV, Senior Planner, at 909-774-4312 or by email at David.Eoff@cityofrc.us, Monday through Thursday, between the hours of 7:00 AM and 6:00 PM.

10500 Civic Center Drive
Rancho Cucamonga, CA 91730

RE: Notice of Preparation for the 9th & Vineyard Development Project (SCH # 2019110456)

Dear Mr. Eoff:

Thank you for the opportunity to provide comments on the City of Rancho Cucamonga's Notice of Preparation (NOP) for the 9th & Vineyard Development Project ("the Project"). The NOP indicates that the City seeks comments regarding environmental concerns from the implementation of this Project located on East 9th Street, west of Vineyard Avenue in the City of Rancho Cucamonga in San Bernardino County. The Project would allow the development of three warehouse buildings totaling more than 1 million square feet near homes, schools, and a park. Given the Project's setting in a community of color that already suffers some of the worst pollution in the State, we submit these comments for the City's consideration as it prepares the draft environmental impact report (EIR).[1]

I. THE PROJECT

The Project would allow the development of approximately 47 acres into more than 1 million square feet of warehouses, with 141 dock doors for trucks to load and unload. The Project is expected to have 415 parking spots for cars and 195 parking spots for truck trailers. While the NOP does not say, warehouse projects typically operate 24 hours a day, seven days a week. The NOP also does not disclose whether the facilities will include refrigerated uses. Cold storage warehouses require diesel trucks with transport refrigeration units (TRUs), which emit significantly higher levels of toxic diesel particulate matter (PM), nitrogen oxides (NO_x), and greenhouse gas emissions than trucks without TRUs. The Project site is zoned for industrial use and presently consists of a mixture of vacant land and older structures.

[1] The Attorney General submits these comments pursuant to his independent power and duty to protect the environment and natural resources of the State. (*See* Cal. Const., art. V, § 13; Gov. Code, §§ 12511, 12600–12; *D'Amico v. Bd. of Medical Examiners* (1974) 11 Cal.3d 1, 14–15.)

II. THE PROJECT SITE IS SURROUNDED BY SENSITIVE RECEPTORS ALREADY EXPOSED TO SIGNIFICANT POLLUTION BURDENS.

The Project would allow for the development of a large warehouse complex adjacent to hundreds of residential homes on three sides and within 500 feet of two elementary schools and a preschool that predominately serve low income students and students of color.[2] An additional four schools are located in the adjacent neighborhood, as well as a skate park. (See Appendix A.) While directly south of the Project site, there are some railroad tracks and a narrow strip of auto repair facilities, beyond those facilities is a large residential neighborhood in the City of Ontario. To the west and northwest of the Project are more homes and apartments. A drainage channel borders the Project site on the eastern boundary, beyond which are other industrial uses. According to the most recent data from the American Community Study, 1,972 people live within roughly 1,000 feet of the Project site.[3]

According to CalEnviroScreen 3.0, CalEPA's screening tool that ranks each census tract in the state for pollution and vulnerability, the residential area immediately south of the Project site, located in the City of Ontario, ranks worse than 90–95% of the state. About 86% of the residents of this community are people of color and 78% of them are Latinx. This community already faces considerable air quality pollution. It is in the 91st percentile for ozone pollution, 93rd percentile for PM2.5 pollution, 94th percentile for diesel pollution, and 80th percentile for toxic chemical releases.[4] This Project would further add to the environmental and health problems faced by the families that live in this region.

III. THE CITY MUST COMPREHENSIVELY EVALUATE THE PROJECT'S ENVIRONMENTAL IMPACTS, INCLUDING CUMULATIVE IMPACTS ON SENSITIVE RECEPTORS.

The purpose of CEQA is to ensure that a lead agency fully evaluates, discloses, and, whenever feasible, mitigates a project's significant environmental effects.[5] An EIR serves as an "informational document" that informs the public and decisionmakers of the significant

---

[2] San Antonio Christian School is a private elementary school that has 46 students, 91.3% of whom are people of color. National Center for Education Statistics, *available at* https://nces.ed.gov/ccd/schoolsearch/ (as of December 31, 2019). Los Amigos Elementary has 526 students, 94.87% of whom are people of color and 81.37% qualify for free or reduced price lunches. National Center for Education Statistics, *available at* https://nces.ed.gov/ccd/schoolsearch/ (as of December 31, 2019). Children's Montessori School is a school and daycare that educates children ages 2–12. *See* http://childrensmontessorica.com/ (as of January 3, 2020).

[3] *Environmental Protection Agency*, EJSCREEN, <https://ejscreen.epa.gov/mapper/demogreportpdf.aspx?report=acs2017> (as of Dec. 30, 2019).

[4] In CalEnviroScreen, a census tract with a high score is one that experiences a higher pollution burden than one with a low score.

[5] Pub. Resources Code, §§ 21000–21002.1.

environmental effects of a project and ways in which those effects can be minimized.[6] CEQA requires an EIR to include "enough detail 'to enable those who did not participate in its preparation to understand and to consider meaningfully the issues raised by the proposed project.' "[7] In the context of air quality analysis, an EIR must "make[] a reasonable effort to substantively connect a project's air quality impacts to likely health consequences."[8]

The City's EIR must analyze the full environmental impacts of the Project, which will add a considerable number of diesel truck trips, and their attendant air pollution, to this already overburdened area. That includes the Project's impact on the sensitive receptors that surround the Project to the north and south who already suffer the health impacts of environmental pollution.[9] The area is a non-attainment area for ozone and particulate matter and Project operations will likely increase emissions of those pollutants.

The City also must sufficiently relate pollutant data to specific adverse human health effects in the Project's EIR. The California Supreme Court recently found a project's air quality impact analysis to be inadequate under CEQA because its "general description of symptoms that are associated with exposure" "fail[ed] to indicate the concentrations at which such pollutants would trigger the identified symptoms" and did not provide the public with an "idea of the health consequences that result when more pollutants are added to a nonattainment basin."[10] The Project's EIR can avoid this problem by detailing the existing conditions and projecting the impact that additional pollution will have on the community.

For instance, studies have shown that increases in near-roadway air pollution are associated with reduced lung function in non-asthmatic children.[11] Exposure may be particularly harmful during the first year of life, resulting in decreased lung function into adolescence.[12]

---

[6] CEQA Guidelines, § 15121, subd. (a).
[7] *Sierra Club v. County of Fresno* [*Friant Ranch*] (2018) 6 Cal.5th 502, 516.
[8] *Ibid.* at p. 510.
[9] Because sensitive receptors are uniquely vulnerable to the health effects of environmental damage, CARB recommends 1,000 feet separation between sensitive receptors and distribution centers or other land uses that would generate more than 100 trucks per day. (California Air Resources Board, *Air Quality and Land Use Handbook: A Community Health Perspective* (April 2005) ("CARB Handbook"), p. 4.)
[10] *Friant Ranch, supra,* 6 Cal.5th at p. 519.

Increased NO_x emissions are also associated with an increased risk of developing asthma.[13] Human health is not the only potential impact from Project-generated air emissions. Chronic exposure to air pollution may negatively influence children's cognitive processing and memory.[14] Since the Project seeks to build near elementary schools, a preschool, and a park, the EIR should account for the Project's cumulative impacts on the community.

IV. THE CITY SHOULD CONSIDER ALL FEASIBLE MEASURES TO MITIGATE ANY POTENTIALLY SIGNIFICANT PROJECT IMPACTS

CEQA requires a lead agency to adopt all feasible mitigation measures that minimize the significant environmental impacts of a project.[15] The lead agency is expected to develop mitigation in an open public process,[16] and mitigation measures must be fully enforceable and nondeferrable.[17] To the extent the EIR determines the Project will have significant environmental impacts—especially any affecting sensitive receptors—the City should consider robust mitigation measures to avoid or limit those impacts.

For example, a non-exhaustive list of possible air quality mitigation measures[18] includes:

- Requiring buffer zones of at least 1,000 feet between warehouses and sensitive receptors;
- Ensuring that operations of diesel trucks or equipment on site are as far from sensitive receptors as possible;
- Limiting operation and construction days and times;
- Establishing and enforcing truck routes that avoid sensitive receptors;
- Requiring special consideration and mitigation for warehouses with cold storage capability, including requiring the use of zero-emission or all-electric, plug-in capable TRUs;
- Establishing fleet requirements for warehouse tenants and carriers serving tenants, such as requiring the exclusive use of zero-emission delivery trucks and vans and requiring

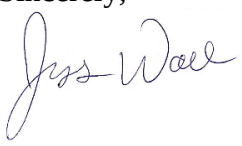
[17] CEQA Guidelines, § 15126.4

[18] For more in-depth information about potential air quality mitigation measures near high volume roadways, see CARB's Technical Advisory on the topic and, more generally, the CARB Handbook, which offers more mitigation ideas. Both are available at https://www.arb.ca.gov/ch/landuse.htm. The mitigation measures included here are focused on air quality; however, additional mitigation measures may be necessary for traffic, noise, or other significant impacts.

any Class 8 trucks entering the site use zero-emissions technology or meet CARB's lowest optional NO_x emissions standard;
- Requiring installation of indoor air filtration at nearby and residences;
- Requiring installation of indoor air filtration and climate control at the warehouse to reduce-impacts on workers;
- Requiring electric vehicle charging infrastructure for both cars and trucks necessary to support zero-emission vehicles and equipment on site;
- Requiring and enforcing no idling policies;
- Requiring the use of electric-powered yard equipment onsite;
- Requiring that all construction equipment meet Tier 4 emission standards;
- Constructing new or improved transit stops, sidewalks, bicycle lanes, crosswalks, and traffic control or traffic safety measures, such as speed bumps or speed limits;
- Improving vegetation and tree canopy for community members in and around the Project site;
- Requiring methods to reduce employee vehicle traffic, such as van shuttles, transit and carpool incentives, and bicycle parking and facilities for employees;
- Requiring installation of solar panels with backup energy storage on each building roof area with a capacity that matches the maximum allowed for distributed solar connections to the grid;
- Adhering to California green building standards; and
- Constructing the warehouse to meet Leadership in Energy and Environmental Design standards.

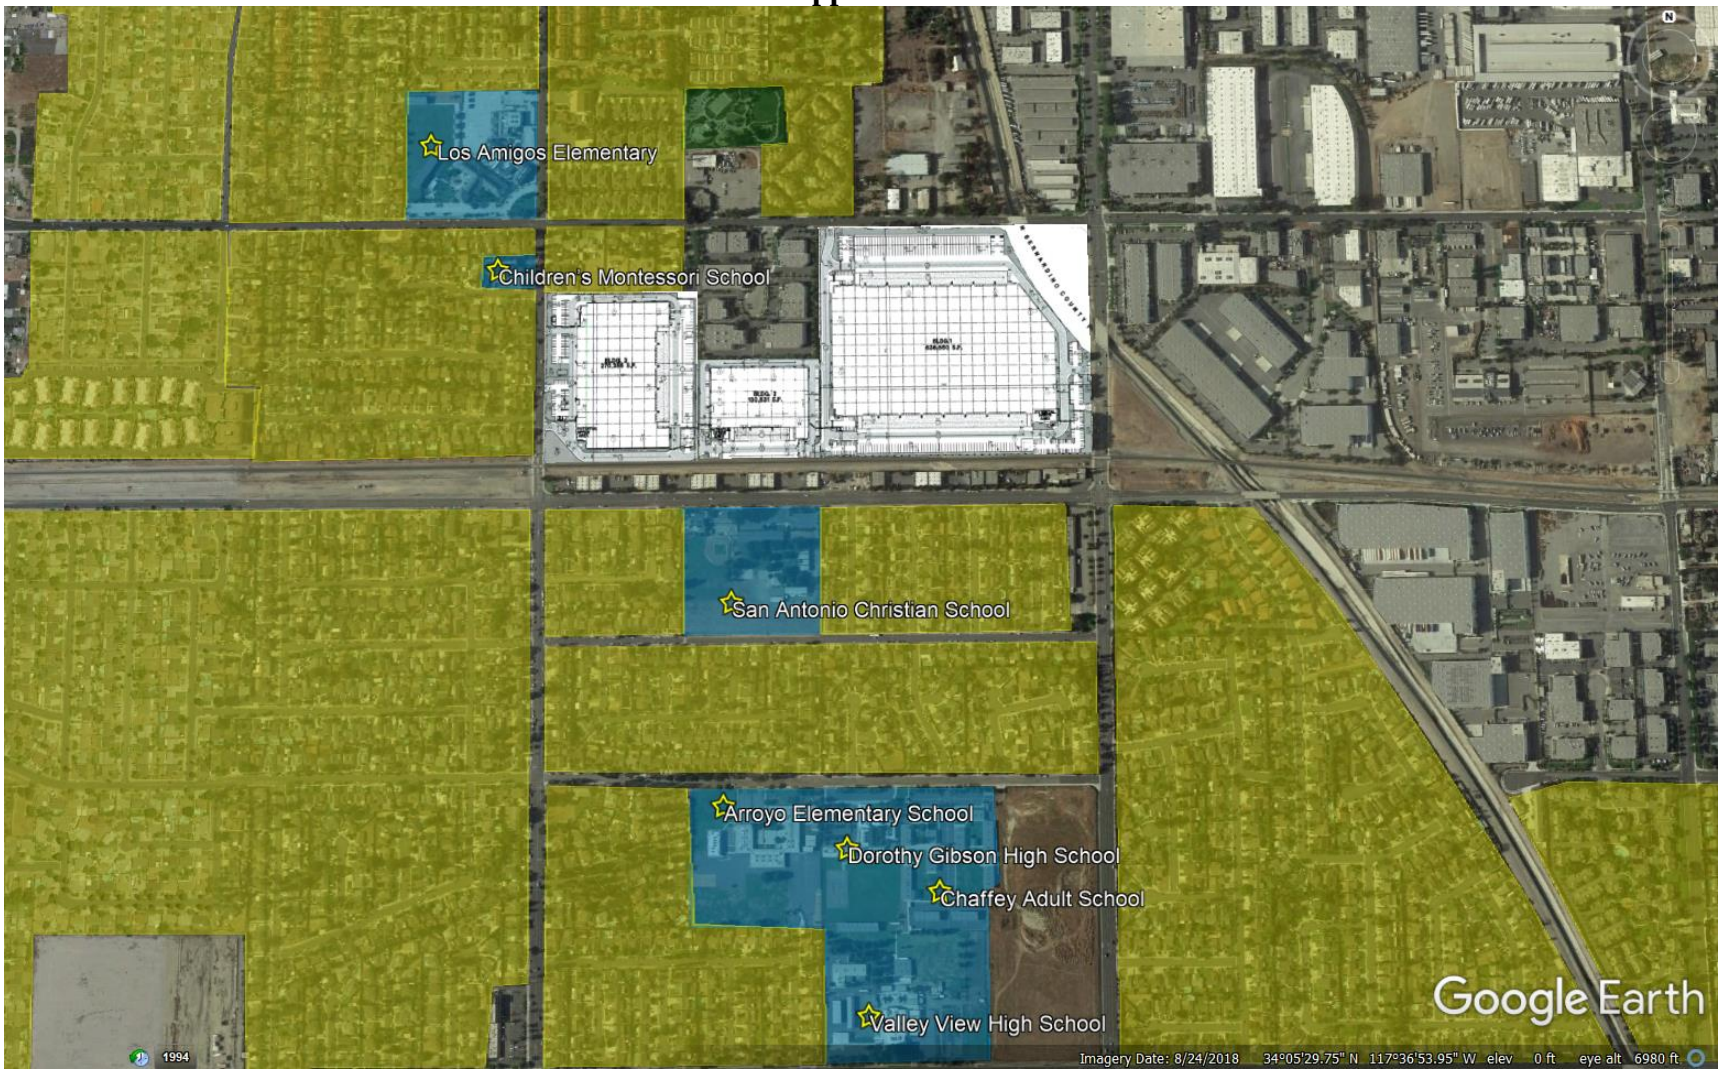


Mitigation measures like these have been adopted by similar projects throughout California. The Attorney General's Office would be happy to provide any assistance it can as the City considers how best to mitigate the Project's environmental impacts.

V. CONCLUSION

This Project's EIR affords the City the opportunity to serve its constituents by transparently evaluating, disclosing, and mitigating the environmental impacts of this proposed Project. When implemented well, CEQA builds public trust and promotes sustainable development that will serve the local community for years to come. The Project could result in a large expansion of industrial uses in Rancho Cucamonga, along with those uses' environmental impacts. The City is correct that a project of this size and potential impacts necessitates an EIR. In drafting the EIR, we urge the City to identify and evaluate the Project's impacts comprehensively, particularly those affecting the many nearby sensitive receptors. CEQA entitles this already-overburdened community to full disclosure and mitigation of the environmental impacts of the Project prior to its approval.

Please do not hesitate to contact me if you have any questions or would like to discuss these issues further.



Sincerely,

JESSICA WALL
Deputy Attorney General

For XAVIER BECERRA
Attorney General

CalEEMod Data Sheets

9th and Vineyard Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Site Preparation (2025) - Unmitigated

3.2. Site Preparation (2025) - Mitigated

3.3. Grading (2025) - Unmitigated

3.4. Grading (2025) - Mitigated

3.5. Building Construction (2025) - Unmitigated

3.6. Building Construction (2025) - Mitigated

3.7. Paving (2025) - Unmitigated

3.8. Paving (2025) - Mitigated

3.9. Architectural Coating (2025) - Unmitigated

3.10. Architectural Coating (2025) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	9th and Vineyard
Construction Start Date	1/1/2025
Operational Year	2026
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.80
Precipitation (days)	20.8
Location	34.09426837194951, -117.6154832632448
County	San Bernardino-South Coast
City	Rancho Cucamonga
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5277
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.22

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

Unrefrigerated Warehouse-No Rail	969	1000sqft	22.2	969,096	238,433	—	—	—
Parking Lot	180	1000sqft	4.13	0.00	0.00	—	—	—
Other Asphalt Surfaces	559	1000sqft	12.8	0.00	0.00	—	—	—
General Office Building	13.0	1000sqft	0.30	13,000	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	20.2	annual days of extreme heat

Extreme Precipitation	5.10	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	93.6
AQ-PM	98.3
AQ-DPM	74.5
Drinking Water	74.8
Lead Risk Housing	22.0
Pesticides	0.00

Toxic Releases	63.2
Traffic	27.3
Effect Indicators	—
CleanUp Sites	78.8
Groundwater	0.00
Haz Waste Facilities/Generators	86.9
Impaired Water Bodies	43.8
Solid Waste	0.00
Sensitive Population	—
Asthma	46.2
Cardio-vascular	87.7
Low Birth Weights	53.8
Socioeconomic Factor Indicators	—
Education	51.7
Housing	61.3
Linguistic	59.0
Poverty	59.2
Unemployment	71.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	42.05055819
Employed	29.83446683
Median HI	40.27973823
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	76.0
Healthy Places Index Score for Project Location (b)	29.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

1 Project Description

1.1 Introduction

The City of Rancho Cucamonga retained Rincon Consultants Inc. (Rincon) to conduct a Construction and Operational Health Risk Assessment (HRA) in support of the 9th and Vineyard Warehouse Project (project). This HRA analyzes the possible health effects associated with toxic air contaminant (TAC) emissions generated by the construction and operation of three warehouse located at the southwest corner of 9th Street and Vineyard Avenue in Rancho Cucamonga, California.

1.2 Executive Summary

The proposed project involves the construction and operation of three warehouse buildings with a total of 154 truck trips per day. Access to the project site by trucks would be provided via two ingress/egress driveways: one from 9th Street and one from Vineyard Avenue. The nearest sensitive receptors to the project site are residences located approximately 50 feet to the north and 80 feet to the west of the project site boundary. San Antonio Christian School is located approximately 130 feet to the south of the project site on 8th Street.

This HRA used site-specific air dispersion modeling to determine whether health risks presented to nearby residents by both construction and operation of the proposed project exceed the South Coast Air Quality Management District's (SCAQMD) health risk criteria. Potential health risks to nearby sensitive receptors from TAC emissions during project construction were analyzed in accordance with the SCAQMD *Risk Assessment Procedures for Rules 1401, 1401.1 and 212* (SCAQMD 2017) and the OEHHA *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments* (OEHHA 2015).

For operational health risk, the California Air Resources Board's (CARB) *Air Quality and Land Use Handbook: A Community Health Perspective* notes that warehouse facilities with over 100 trucks per day can be a source of TACs due to diesel particulate matter (DPM) emissions (CARB 2005). Exposure to TACs associated with warehouse facilities is dependent on a number of site-specific parameters, including site design and configuration, number of daily trucks, number of transportation refrigeration units (TRUs), location of parking and loading docks, and meteorological conditions.

SCAQMD has health risk criteria for cancer risk and non-cancer risk (i.e., chronic and acute). Cancer risk is expressed as the incremental excess cancer risk, or the maximum number of new cancer cases that could occur in a population of one million people due to exposure to a cancer-causing substance. For example, a cancer risk of one in one million means that in a population of one million people, not more than one additional person would be expected to develop cancer as the result of the exposure to the substance causing that risk.

Potential acute health risks include severe symptoms that develop rapidly and lead quickly to a health crisis due to exposure to a harmful substance, whereas chronic health risks include health crises, such as lung inflammation, immune suppression, and immune sensitization, which develop due to exposure to low levels of a harmful substance over a long period of time.

Typically, cancer risk is analyzed over a specific exposure duration, such as the average residency (50-percentile) of nine years or high-end residency (95-percentile) of 30 years (OEHHA 2015). Thirty years is the exposure duration scenario recommended by the SCAQMD for residential receptors in Risk Assessment Procedures for Rules 1401, 1401.1, and 212 (2017).

The maximum exposed individual receptor (MEIR) near the project site would be exposed to a 30-year excess cancer risk of approximately 3.06 in one million, which does not exceed SCAQMD's recommended cancer risk criteria of ten excess cases of cancer in one million individuals (SCAQMD 2019). Chronic health risk is 0.0033, which does not exceed SCAQMD's hazard index (HI) threshold of 1 (SCAQMD 2019). Acute health risk was not quantified as there is no acute exposure risk associated with DPM exposure.

1.3 Project Site and Description

The proposed project is located south of East 9th Street, directly west of Vineyard Avenue, directly north of the Burlington Northern Santa Fe (BNSF) Railway, and directly east of Baker Avenue in the southwestern area of the City of Rancho Cucamonga. The project site is denoted by nine Assessor Parcel Numbers (APNs): 0207-271-25, 0207-271-27, 0207-271-39, 0207-271-40, 0207-271-89, 0207-271-93, 0207-271-94, 0207-271-96, and 0207-271-97. The project site has been previously developed but is currently vacant, with the exception of an abandoned home on the west side of the site at 8803 Baker Avenue which would not be disturbed as a result of project construction. Adjacent properties to the north are zoned for Industrial Park, Industrial Employment, Neo-Industrial, and Medium Density Residential. Properties to the west are zoned Low Density Residential. The BNSF railway and properties zoned for Industrial uses are directly south of the site. Figure 1 shows the location of the site in the region and Figure 2 shows the project site in its neighborhood context. Figure 3 shows the project layout.

Figure 3 Project Site Plan

2 Air Quality Background

2.1 Local Climate and Meteorology

The project site is in the South Coast Air Basin (SCAB), which is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east, and includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties, in addition to the San Gorgonio Pass area in Riverside County. The regional climate in the SCAB is semi-arid and is characterized by warm summers, mild winters, infrequent seasonal rainfall, moderate daytime onshore breezes, and moderate humidity. Air quality in the SCAB is primarily influenced by meteorology and a wide range of emissions sources, such as dense population centers, substantial vehicular traffic, and industry.

2.2 Toxic Air Contaminants

A TAC is an air pollutant that may cause or contribute to an increase in mortality or serious illness or which may pose a present or potential hazard to human health. TACs may result in long-term health effects such as cancer, birth defects, neurological damage, asthma, or genetic damage, or short-term acute effects such as eye watering, respiratory irritation, runny nose, throat pain, and headaches. TACs are considered either carcinogenic or non-carcinogenic based on the nature of the health effects associated with exposure. For carcinogenic TACs, potential health impacts are evaluated in terms of overall relative risk expressed as excess cancer cases per one million exposed individuals. Non-carcinogenic TACs differ in that there is generally assumed to be a safe level of exposure below which no negative health impact is believed to occur. These levels are determined on a pollutant-by-pollutant basis.

TACs include both organic and inorganic chemical substances. One of the main sources of TACs in California is diesel engines that emit exhaust containing solid material known as diesel particulate matter; however, TACs may be emitted from a variety of common sources, including gasoline stations, motor vehicles, dry cleaners, industrial operations, painting operations, and research and teaching facilities.

2.3 Air Quality Regulation

Federal and state governments have established ambient air quality standards for the protection of public health. The United States Environmental Protection Agency is the federal agency designated to administer air quality regulation, while the CARB is the state equivalent in the California Environmental Protection Agency (CalEPA). County-level Air Quality Management Districts (AQMDs) provide local management of air quality. The CARB has established air quality standards and is responsible for the control of mobile emission sources, while the local AQMDs are responsible for enforcing standards and regulating stationary sources. The SCAQMD is the designated air quality control agency in the SCAB.

2.3.1 Toxic Air Contaminants

In 1983, the California Legislature enacted a program to identify the health effects of TACs and to reduce exposure to these contaminants to protect the public health (Assembly Bill [AB] 1807: Health and Safety Code Sections 39650–39674). The Legislature established a two-step process to address the potential health effects from TACs. The first step is the risk assessment (or identification) phase. The second step is the risk management (or control) phase of the process.

The California Air Toxics Program establishes the process for the identification and control of TACs and includes provisions to make the public aware of significant toxic exposures and for reducing risk. Additionally, the Air Toxics "Hot Spots" Information and Assessment Act (AB 2588, 1987, Connelly Bill) was enacted in 1987 and requires stationary sources to report the types and quantities of certain substances routinely released into the air. The goals of the Air Toxics "Hot Spots" Act are to collect emission data, identify facilities having localized impacts, ascertain health risks, notify nearby residents of significant risks, and reduce those significant risks to acceptable levels. The Children's Environmental Health Protection Act, California Senate Bill 25 (Chapter 731, Escutia, Statutes of 1999), focuses on children's exposure to air pollutants. The act requires CARB to review its air quality standards from a children's health perspective, evaluate the statewide air quality monitoring network, and develop any additional air toxic control measures needed to protect children's health.

2.4 Sensitive Receptors

SCAQMD Risk Assessment Procedures define receptors as any location outside the boundaries of a facility at which a person could experience repeated, continuous exposure. The procedures further note that sensitive receptors include any residence (e.g., private homes, condominiums, apartments, and living quarters), schools (including preschools and daycare centers), health facilities (e.g., hospitals, retirement and nursing homes, long-term care hospitals, hospices), as well as prisons, dormitories, or similar live-in housing where children, chronically ill individuals, or other sensitive persons could be exposed to TACs (OEHHA 2015). Sensitive receptors in the project vicinity include single-family residences located north, east, and south of the project site, ranging from 50 to 300 feet from the project site boundary. Other identified sensitive receptors within 1,000 feet of project site include single-family homes, Children’s Montessori School located 150 feet northwest of the project site, San Antonio Christian School located 300 feet south of the project site, and Los Amigos Elementary School located 500 feet northwest of the project site.

3 Impact Analysis

3.1 Methodology

To evaluate the potential impacts of TACs emitted during construction and operation of the warehouses, two stand-alone spreadsheets were used to quantify risk. Potential health risks to nearby sensitive receptors from the emission of TACs during construction and operations at the proposed warehouse were analyzed in accordance with the SCAQMD's *Risk Assessment Procedures for Rules 1401, 1401.1 and 212* (SCAQMD 2017) and the OEHHA *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments* (OEHHA 2015). The modeling assumptions, emissions, and model inputs are available in Appendix A.

3.1.1 Air Dispersion Modeling

Dispersion modeling was performed using the United States Environmental Protection Agency - approved AERMOD with meteorological data from the representative SCAQMD monitoring station located in Upland. SCAQMD specifically recommends that projects use the nearest representative meteorological station for modeling, which is usually the nearest station; however, an interfering terrain feature may dictate the use of an alternate station.

Construction

Emissions from each area of construction activity were calculated using values from the CalEEMod outputs provided in the 9th and Vineyard Warehouse Project Environmental Impact Report prepared by Rincon Consultants (2024). As detailed in that report, construction characteristics such as start and end dates for each phase, grading and paving area, and building square footage were provided by the project applicant. The proposed project would not include import or export of demolished material or soil. Therefore, material hauling would not occur, and construction haul routes were excluded from modeling.

AERMOD includes a variety of source types, including point, volume, and volume line sources. In order to accurately characterize the emissions generated by construction activities at the Program site, volume line sources[1] were used to represent both mobile and stationary construction emissions sources. Construction emissions would occur during daytime hours. Therefore, the dispersion modeling allocates the emissions during the daytime construction hours.

Operation

Emissions sources (truck routes, and idling locations such as truck parking and loading docks) were located on the project site corresponding to the location of the loading docks as well as the truck parking to estimate concentrations from idling. The site would have up to 344 trucks accessing the site per day with three possible haul routes. In order to determine truck trip emissions, the fleet mixes from the original CalEEMod output were adjusted to exclude passenger vehicle trips. The adjusted CalEEMod output is included as Appendix B. As it is unknown exactly which percentage of

[1] The volume line source type within AERMOD allows the user to input linear-type sources using start and end points of the line and width of the line, as compared to the area source type, which is more appropriate for rectangular sources. Volume line sources are appropriate to use to represent construction emissions because construction equipment would largely be mobile and such activities would occur at several points within the Program site rather than a single point.

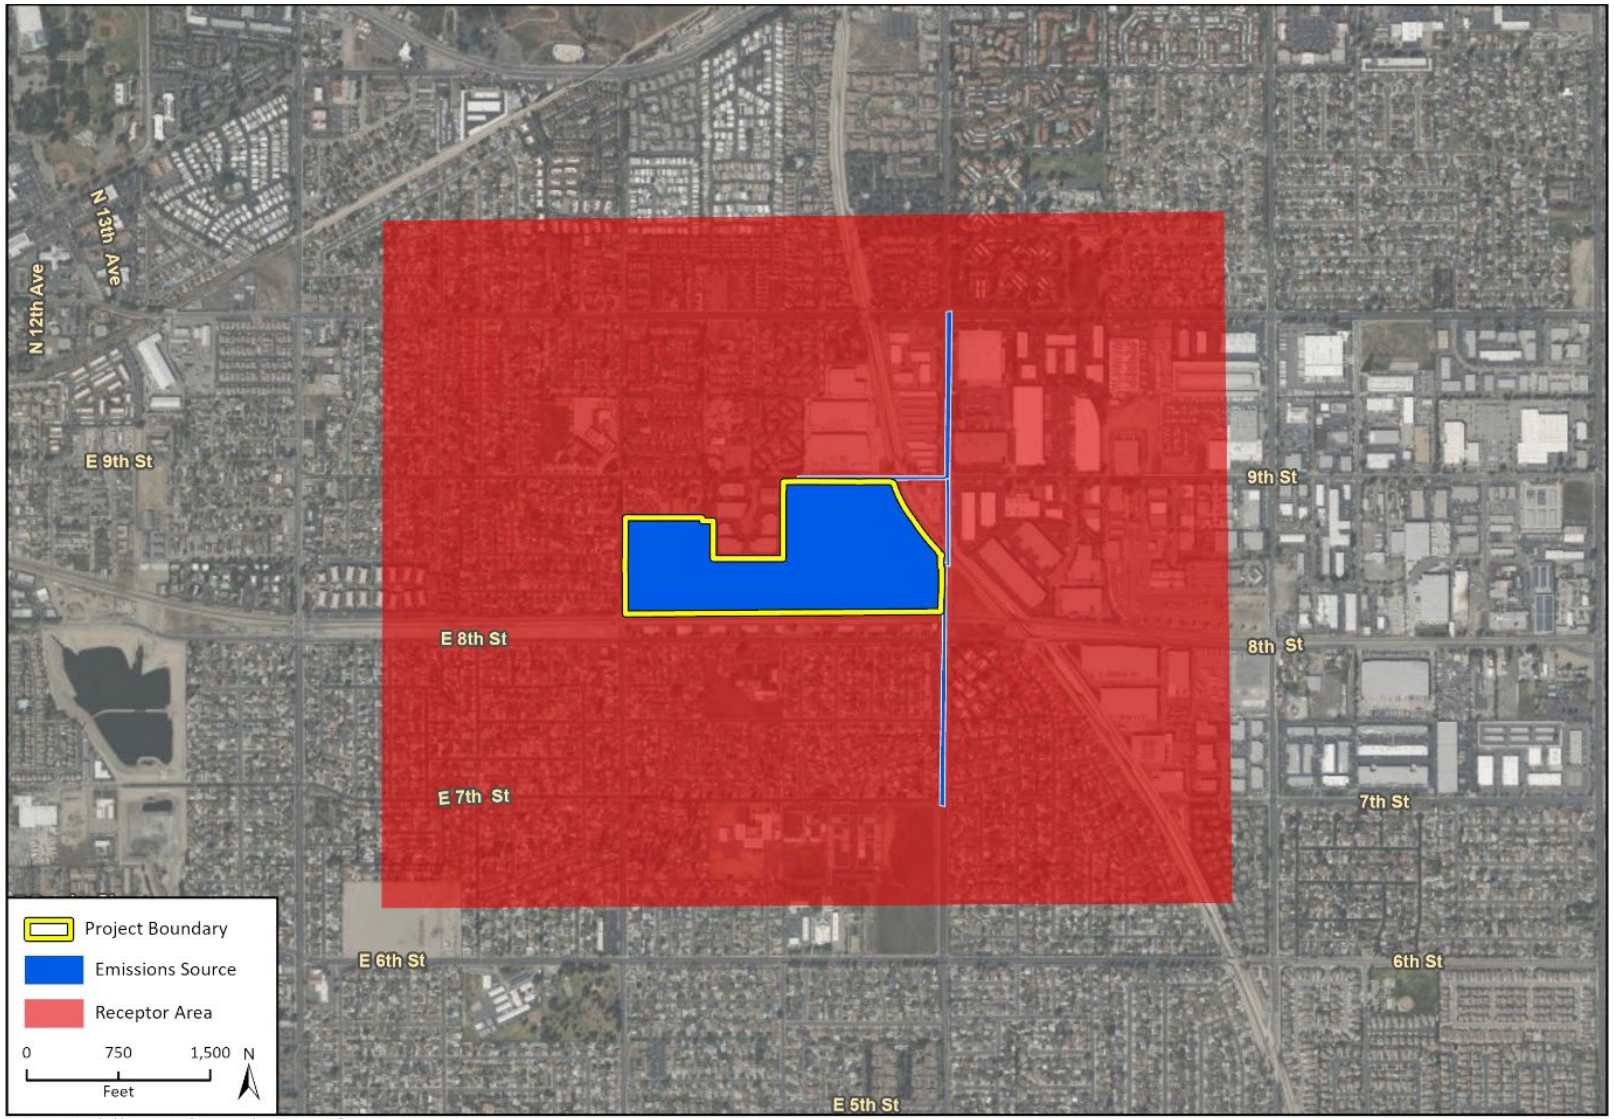
trucks would use which haul route, each of the three haul routes were modeled as 100 percent truck traffic, and as a conservative estimate of emissions, the highest risk was used to determine potential project risk.

Concentrations from running emissions for the haul trucks were determined using one of the three potential haul routes. Haul Route 1 has all trucks entering/exiting the site at the ingress on 9th Street and traveling north on Vineyard Avenue. Haul Route 2 and Haul route 3 have all trucks entering/exiting the site at the ingress on Vineyard Avenue, with Haul Route 2 traveling north and Haul Route 3 traveling south on Vineyard Avenue. Volume line sources were used to represent the haul and idling emissions. The warehouse was assumed to operate 24 hours per day, 7 days a week, for 52 weeks per year; therefore, the dispersion modeling allocates the emissions during all active operational hours.

Sensitive Receptors

Sensitive receptors identified for modeling were placed at the location of nearby residential land uses within 1,000 feet of the project site. Those sites not specifically modeled would result in risk that would be less than the risk modeled for those receptors included in the analysis due to increased dispersion of pollutants at distances greater than the 1,000-foot radius. Receptor spacing of 50 meters was used for receptors within 500 feet of the project site. Receptor spacing of 100 meters was used for all other modeled receptors.

Meteorology and Topography



AERMOD requires meteorological and topographic data. Pre-processed meteorological data was obtained from SCAQMD's Upland station approximately 1 mile northwest of the project site. The dataset was developed by SCAQMD for use in AERMOD and includes five years of meteorological data between 2012 and 2016. AERMOD's Urban Dispersion option was applied based on an estimated population of 2,035,210 for San Bernardino County. This application is consistent with SCAQMD's Modeling Guidance for AERMOD (SCAQMD 2023). The NED 1/3 arc-second topographic model from the project area was used. Figure 4 shows the area of emissions sources and receptor locations.

3.1.2 Risk Analysis

Health risk impacts are assessed using the health risk calculation methodology that is consistent with the 2015 OEHHA Guidance. Health impacts address operational DPM emissions and the effects on nearby sensitive uses.

Health impacts are evaluated using a dose-response assessment, which describes the relationship between the level of exposure to a substance (i.e., the dose) and the incidence or occurrence of injury (i.e., the response). In order to determine the total dose to off-site sensitive receptors, the applicable pathways of exposure should be identified. The applicable exposure pathways (e.g., inhalation) are identified for the emitted substances, and the receptor locations are identified. The applicable exposure pathways determine the exposure algorithms that are used to estimate dose. After the exposure pathways are identified, the applicable fate and transport algorithms are used to estimate concentrations in the applicable exposure media (e.g., air) and the exposure algorithms are used to determine the substance-specific dose. In accordance with the OEHHA Guidance, the inhalation pathway was evaluated for operational-related DPM. For the inhalation pathway, the dose

Figure 4 Emissions Sources and Receptors

is directly proportional to the breathing rate. As a conservative (i.e., health protective) approach, maximum breathing rates were used in this analysis.

Once dose is calculated, cancer risk is calculated by accounting for cancer potency of the specific pollutant, age sensitivity, exposure duration, averaging time for lifetime cancer risk, and fraction of time spent at home (sensitive receptor). The cancer potency factor (CPF) is specific for each pollutant and is determined through peer-reviewed scientific studies. For example, the Scientific Review Panel recommends a CPF for DPM of 3.0×10-4 (µg/m^3)-1 and a slope factor of 1.1 (ppm-day)-1.[2] The ASFs account for greater susceptibility in early life as compared to adult exposure, starting from the third trimester of pregnancy to 16 years. The fraction of time at home (FAH) takes into account the time actually residing at the sensitive receptor location. FAH also takes into account time spent at home for various age groups. For example, newborns are expected to reside at home for longer periods of time compared to school-age children, and the elderly (retirees) are expected to spend more time at home compared to people of working age. School sites were analyzed as residential receptors. This represents a conservative approach because residential receptors have a longer exposure than school receptors (30 years rath than up to 9 years). Construction of the proposed project would occur over less than one year. Therefore, only the birth to 2-year age bin was used. This represents a conservative analysis because the birth to 2-year age bin has the highest DBR. For project operation, an FAH of 0.85 was used for 3rd trimester and birth to 2-year age bins; 0.72 was used for the 3-to-16-year age bin; and 0.73 was used for the 17- to 30-year age bin consistent with OEHHA guidelines. Risk from construction and operation were then combined in order to determine the maximum risk for receptors.

Each age group has different exposure parameters which require cancer risk to be calculated separately for each age group. The estimation of cancer risk uses the following algorithms:

Risk = Dose inhalation × Inhalation CPF × ASF (Equation 1)

Where:

Dose inhalation = CAIR × DBR × A × EF × ED × FAH/AT (Equation 2)

Inhalation CPF = inhalation cancer potency factor

ASF = age-sensitivity factor

Where:

CAIR = concentration of compound in air in micrograms per cubic meter (µg/m^3)

DBR = breathing rate in liter per kilogram of body weight per day (L/kg-body weighty/day)

A = inhalation absorption factor (1 for DPM)

EF = exposure frequency in days per year (day/year)

ED = exposure duration in years (year)

FAH = fraction of time at home

AT = averaging time period over which exposure is averaged in days (day)

[2] CPF and slope factors are built into the HARP2 model used for quantifying risk.

The OEHHA recommended values for the equations described, as well as the daily breathing rates (DBF) above were used in the HRA. Specific modeling details are included in Appendices A and B.

The incremental increase in cancer risk is the result of multiplying the dose by the pollutant-specific CPF values. Cancer risk is calculated by multiplying the inhalation dose by the inhalation CPF to yield the potential inhalation excess cancer risk. Cancer risk was evaluated for sensitive receptors in the surrounding area. Only the risk from the maximally exposed receptor is reported/analyzed herein. Risk for all receptors is included as part of Appendix A. Assumptions and Modeling outputs are included as Appendices A and B, respectively.

Non Cancer Risk

Non-cancer chronic impacts were assessed based on the HI. The evaluation of chronic impacts is based on the maximum annual emissions over a 30-year period of operational activity. The chronic HI is calculated by dividing the maximum modeled annual average concentration at the maximum impacted sensitive receptor by the recommended exposure limit (REL). The REL is the concentration at or below which no adverse health effects are anticipated. For example, OEHHA has recommended an ambient concentration of 5 $\mu g/m^3$ as the chronic inhalation REL for DPM exhaust. Therefore, a sensitive receptor exposed to an annual average DPM concentration of 5 $\mu g/m^3$ or less would not result in a chronic impact. Non-cancer chronic impacts affect specific target organ systems (also called toxicological endpoints), such as the eye, nervous system, reproductive system, and respiratory system. The chronic health impact with the maximum HI for the same target organ system is used for impact determination.

3.2 Significance Thresholds

SCAQMD has developed significance thresholds for the emissions of TACs based on health risks associated with elevated exposure to such compounds. For carcinogenic compounds, cancer risk is assessed in terms of incremental excess cancer risk. A project would result in a potentially significant impact if it would generate an incremental excess cancer risk of 10 in one million (1×10^{-6}). Additionally, non-carcinogenic health risks are assessed in terms of a hazard index. A project would result in a potentially significant impact if it would result in a chronic and acute hazard index greater than 1.0 (SCAQMD 2019).

3.3 Results

The project would operate a warehouse with up to 344 truck trips per day within the SCAQMD's jurisdiction. The incremental excess cancer risk is an estimate of the added risk a person exposed to a specific source of a TAC may have of developing cancer from that exposure, with all other conditions held constant. To provide a perspective on risk, the American Cancer Society (2018) reports that in the United States, men have about a 40 in 100 chance (0.40 probability) and women about a 38 in 100 chance (0.38) of developing cancer during a lifetime. Based on this background cancer risk level in the general population, application of a 1.0×10^{-5} excess risk limit means that the contribution from a toxic hazard should not cause the resultant cancer risk for the exposed population to exceed 0.40001 for men or 0.38001 for women.

The MEIR is the modeled residential receptor experiencing the highest incremental excess cancer risk under 30-year residential exposure duration during operation in addition to the duration of construction. The MEIR near the project site would be exposed to a 30-year excess cancer risk of

approximately 3.06 in one million, which does not exceed SCAQMD's recommended cancer risk criteria of ten excess cases of cancer in one million individuals (SCAQMD 2019). The MEIR is located nearest to the residence 8692 East 9th Street, approximately 100 feet north of the project site near the northern ingress. The maximum Chronic health risk is approximately 0.0033, which does not exceed SCAQMD's HI threshold of one (SCAQMD 2019). Acute health risk was not quantified as there is no acute exposure risk associated with DPM exposure.

Appendix A summarizes the incremental excess cancer risk at each of the modeled receptors for the 30-year operational exposure duration plus construction duration. None of these risks exceed the SCAQMD threshold of 10 in one million. Modeling outputs are provided in Appendix C.
