CHAPTER ES.0 EXECUTIVE SUMMARY

ES.1 Introduction

The California Environmental Quality Act (CEQA), Public Resources Code Section 21000, et seq. requires that before a public agency makes a decision to approve a project that could have one or more adverse effects on the physical environment, the agency must inform itself about the project's potential environmental impacts, give the public an opportunity to comment on the environmental issues, and take feasible measures to avoid or reduce potentially harm to the physical environment.

This Draft Environmental Impact Report (DEIR), California State Clearinghouse (SCH) Number 2020089012 was prepared in accordance with CEQA Guidelines Article 9, Section 15120 to 15132, to evaluate the potential environmental impacts associated with planning, constructing, and operating the proposed CarMax Auto Superstore Project (hereafter, "Project"). This EIR does not recommend approval, approval with modification, or denial of the Project; rather, this EIR is a source of factual information regarding potential impacts that the Project may cause to the physical environment. The DEIR will be available for public review for a minimum period of 45 days. After consideration of public comment, the City of Oceanside will consider certifying the Final EIR and adopting the required findings in conjunction with Project approval. In the case that there are any adverse environmental impacts that cannot be mitigated to below a level of significance, the City of Oceanside must adopt a Statement of Overriding Considerations, stating why the City is taking action to approve the Project with or without modification despite its unavoidable impacts.

This Executive Summary complies with CEQA Guidelines Section 15123 "Summary". This DEIR document includes a description of the Project and evaluates the physical environmental effects that could result from Project implementation. This EIR evaluates all subject areas listed in Appendix G of the CEQA Guidelines, which include the following: Aesthetics, Agriculture and Forestry Resources, Air Quality, Biological Resources, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Mineral Resources, Noise, Population and Housing, Public Services, Recreation, Transportation, Tribal Cultural Resources, Utilities and Service Systems and Wildfire. The scope of the Project was determined through the consideration of public comment received in response to the DEIR's Notice of Preparation (NOP). The NOP and comments received in response to the NOP are attached to this DEIR as **Appendix A**. Based on preliminary evaluation of the probable effects of the Project and a thorough review of the comments on the NOP, the EIR analyzes effects having potentially significant impacts related to the following:

- Biological Resources
- Cultural Resources
- Geology and Soils
- Hydrology and Water Quality
- Land Use and Planning
- Tribal Cultural Resources

Refer to DEIR Chapter 4.0 *Environmental Analysis,* for a full account and analysis of the subject matters listed above. During the scoping process, it was determined that there would be no impact or less than significant impacts to: Aesthetics, Agricultural and Forestry Resources, Air Quality, Energy, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Mineral Resources, Population and Housing, Public Services, Recreation, Transportation, Utilities and Service Systems and Wildfire. Although the

environmental issue areas above were determined to have a less than significant impact or no impact, an analysis of each of these issue areas was provided for informational purposes. These topics are described in Chapter 4.0, *Environmental Analysis*, of this EIR and supported by analysis contained in the Project technical reports.

For each of the subject environmental topics analyzed in detail in Chapter 4.0, this DEIR describes the following:

- Environmental Setting
- Regulatory Setting
- Thresholds of Significance
- Project Impact Analysis
- Mitigation Implementation and Monitoring
- Level of Significance after Mitigation

A summary of the Project's environmental impacts and the mitigation measures required by the City of Oceanside in order to reduce or avoid these impacts is included in this Executive Summary as **Table ES-2** *Summary of Impacts, Mitigation Measures and Conclusions.* The City of Oceanside applies mitigation measures which it determines: 1) are feasible and practical for project applicants to implement; 2) are feasible and practical for the City to monitor and inforce; 3) are legal for the City to impose; 4) have an essential nexus to the Project's impacts; and 4) would result in a benefit to the physical environment. CEQA does not require the Lead Agency to analyze an exhaustive list of every imaginable mitigation measure, or measures that are duplicative of mandatory regulatory requirements.

This EIR also discusses alternatives to the Project. Alternatives are described and analyzed that would attain most of the Project's objectives while avoiding or substantially reducing the Project's significant adverse environmental effects. A summary of the Project alternatives analysis is provided below in in Section ES.4 *Project Alternatives* and a full discussion of the Project alternatives is provided in Chapter 7.0 *Alternatives.*

ES.2 Project Synopsis

ES.2.1 Location and Regional Setting

The Project Site consists of approximately 10.54 acres located in the southeastern portion of the City of Oceanside, San Diego County, California. Refer to **Figure 1** *Regional Location.* The City is bound by the Pacific Ocean to the west, Camp Pendleton to the north, the City of Vista and unincorporated portions of the County to the east, and the City of Carlsbad to the south. Major features of the area include the beaches, Buena Vista Lagoon, the San Luis Rey River, and the open areas of Camp Pendleton. Regional access is provided from State Route (SR-78), College Boulevard and Plaza Drive. The Project Site is located approximately seven (7) miles east of downtown Oceanside, south of SR-78, east of College Boulevard, and west of Thunder Drive. Refer to **Figure 2** *Vicinity Map* and **Figure 3** *USGS Topographic Map* in Section 2.0 *Environmental Setting.*

The Project boundary encompasses approximately 10.54 acres on APNs 168-012-42-00 and 168-012-43-00. The Project Site is situated on two (2) vacant and undeveloped parcels. The northern parcel is approximately 1.12 acres and is bounded to the north by the east-bound lanes of SR-78 and to the south by Plaza Drive. An existing billboard is located on the eastern portion of this parcel. The southern parcel

is approximately 9.42 acres and is located south of Plaza Drive and west of Thunder Drive. Direct access to the Project Site would be provided from two (2) access points on Thunder Drive. The proposed driveway off of Plaza Drive would be for test drives only and would not be accessible to the public.

The Project Site has a zoning and land use designation of Community Commercial (CC) as identified in the City of Oceanside Zoning Ordinance (Zoning Ordinance) and City of Oceanside General Plan (General Plan). No change to the Zoning Ordinance or General Plan is required.

ES.2.2 Project Objectives

The underlying purpose of the Project is to develop an underutilized site with a CarMax pre-owned automobile dealership that would have positive impacts on the City and local economies. The Project would be achieved through a Conditional Use Permit (CUP), Development Plan, Variance and Sewer Easement Vacation that would allow for the use of a CarMax facility on the Project Site under its existing General Plan land use and zoning designations. The primary objectives of the Project are as follows:

1. Construct and operate a retail commercial facility providing local residents with convenient access to an automobile sales center and related services.

2. Develop a thoughtfully designed, visually appealing automobile sales facility that is aesthetically compatible with surrounding development.

3. Positively impact local economy by creating employment opportunities and generating tax revenue.

ES.2.3 Project Summary Description

The Project proposes the construction of a CarMax pre-owned automobile dealership on a vacant, approximately 10.54-acre site, situated on two (2) parcels (APNs 168-012-42-00 and 168-012-43-00). Phase I of the Project would consist of a sales and administrative building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area, sales display area, and a customer and employee parking lot on the southern parcel. The northern parcel would be used as an additional sales display area with a security gate and control island and would be developed as part of Phase II of the Project.

All vehicle service work is to be performed inside fully-conditioned buildings equipped with rollup doors. Retail service vehicles and vehicles awaiting disposition off-site are stored in the secured non-public staging area located southwest of the building on a temporary basis. Vehicular access to that area would be strictly controlled through the use of embassy-style security gates. Parking spaces are not designated in this area on the plan due to the change of staging and storage of vehicles within this area on a daily basis. The non-public carwash is located in the secured staging area. An aboveground fuel storage tank with a capacity of 4,000 gallons would be located south of the sales building with a non-public fuel pump adjacent to the carwash within the secured staging area to fuel inventory vehicles as needed.

Prior to issuance of occupancy permits, the following roadway improvements would be completed as part of the Project to the satisfaction of the City Engineer:

- Widen Thunder Drive along the Project frontage into the Project Site. Parking shall be restricted along the Project frontage side of Thunder Drive between the two Project driveways.
- Widen Plaza Drive along the Project frontage to the General Plan classification of a Secondary Collector. The Applicant shall stripe this segment with three (3) travel lanes (two eastbound lanes and one westbound lane).
- Provide a center two-way left turn lane on Plaza Drive in order to match the existing westbound single travel lane configuration adjacent to the DMV.
- Install sidewalks on both sides of Plaza Drive along the Project frontage.
- Include striping for bike lanes on both sides of Plaza Drive along the Project frontage.

The principal discretionary actions required of the City of Oceanside to implement the Project would include a CUP, Development Plan, Variance, Sewer Easement Vacation and certification of this EIR. All development approvals required for the Project are provided in Section 3.5 *Project Approvals* of this EIR.

ES.3 Areas of Controversy

CEQA Guidelines Section 15123(b)(2) requires that areas of controversy known to the Lead Agency (City of Oceanside) be identified in the Executive Summary.

On August 11, 2020 the City posted a Notice of Preparation (NOP) with the San Diego County (County) Clerk in accordance with Section 15082 of the CEQA Guidelines. The NOP was mailed to public agencies, organizations, and other interested individuals to solicit their comments on the scope and content of the environmental analysis. The NOP provided a general description of the proposed actions, a description of the Project area, and a preliminary list of potential environmental impacts. The NOP and comments received during the NOP comment period are included as **Appendix A** of this EIR and were considered as part of the preparation of this EIR. Comments received covered numerous topics including aesthetics, air quality, biological resources, Buena Vista Creek, energy, greenhouse gas emissions, CAP, hazardous materials, land use and planning, noise, public services, transportation and traffic, parking, tribal cultural resources, mosquito breeding and vector control. The initial 30-day public scoping period concluded on September 10, 2020.

Regarding issues to be resolved, this EIR addresses the environmental issues that are known by the City and identified during the public scoping meeting. The EIR also addresses issues that were identified in the comment letters that the City received on NOP for the Project (refer to **Appendix A**).

Besides the topics that were discussed during the NOP and scoping period, there are no identified areas of controversy associated with the Project identified by the City.

ES.4 Project Alternatives

In compliance with CEQA Guidelines Section 15126.6, an EIR must describe a range of reasonable alternatives to the Project or to the location of the Project. Each alternative must be able to feasibly attain most of the Project's objectives and avoid or substantially lessen the Project's significant effects on the environment. A detailed description of each alternative evaluated in this EIR, as well as an analysis of the potential environmental impacts associated with each alternative, is provided in Section 7.0 *Alternatives.* Also described in Section 7.0 is a list of alternatives that were considered but rejected

from further analysis. The alternatives that were considered and further analyzed are provided in the sections below. **Table ES-1** below provides a summary of the effects of each alternative for each of the environmental impact areas addressed.

Table ES-1
Comparison of Project and Alternatives Impacts

Environmental Issue Area	Project Impact	Alternative 1: No Project Alternative	Alternative 2: Reduced Project Alternative	Alternative 3: Alternative Site Location	Alternative 4: Neighborhood Commercial Center Alternative
Aesthetics	Less Than Significant	No Impact	Less Than Significant (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Less Than Significant (Greater Impact than Project)
Agriculture and Forestry Resources	No Impact	No Impact	No Impact (Similar Impact as Project)	No Impact (Similar Impact as Project)	No Impact (Similar Impact as Project)
Air Quality	Less Than Significant	No Impact	Less Than Significant (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Less Than Significant (Greater Impact than Project)

Population and Housing	No Impact	No Impact	No Impact (Similar Impact as Project)	No Impact (Similar Impact as Project)	No Impact (Similar Impact as Project)
Public Services	Less Than Significant	No Impact	Less Than Significant (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Less Than Significant (Greater Impact than Project)
Recreation	Less Than Significant	No Impact	Less Than Significant (Similar Impact as Project)	No Impact (Similar Impact as Project)	Less Than Significant (Similar Impact as Project)
Transportation	Less Than Significant	No Impact (No roadway, sidewalk or bicycle lane improvements would occur)	Less Than Significant (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Potentially Significant Impact (Greater Impact than Project)
Tribal Cultural Resources	Less Than Significant with Mitigation Incorporated	No Impact	Less Than Significant with Mitigation Incorporated (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Less Than Significant with Mitigation Incorporated (Similar Impact as Project)
Utilities and Service Systems	Less Than Significant	No Impact	Less Than Significant	Less Than Significant	Less Than Significant

Environmental Issue Area	Project Impact	Alternative 1: No Project Alternative	Alternative 2: Reduced Project Alternative	Alternative 3: Alternative Site Location	Alternative 4: Neighborhood Commercial Center Alternative
			(Less Impact than Project)	(Less Impact than Project)	(Greater Impact than Project)
Wildfire	Less Than Significant	No Impact	Less Than Significant (Similar Impact as Project)	Less Than Significant (Similar Impact as Project)	Less Than Significant (Similar Impact as Project)
Meets the Project Objectives?	Yes	No	Partially	Partially	No

ES.4.1 No Project Alternative

The No Project Alternative assumes that the 10.54-acre Project Site would not be developed and that the Project Site would remain vacant, as in its present condition. Under the No Project Alternative no improvements would be made to the Project Site or its immediate surroundings including onsite and off-site utility and infrastructure improvements. The purpose of the No Project Alternative analysis is to allow a lead agency to compare the impacts of approving the proposed project with the impacts of not approving the Project.

Under implementation of the No Project Alternative, potentially significant project impacts associated with biological resources, cultural resources, geology and soils, hydrology and water quality, land use and planning, and tribal cultural resources would not occur. The No Project Alternative would maintain the existing undeveloped condition of the Project Site and would avoid all potentially significant impacts. However, benefits of the Project such as roadway widening improvements, improved traffic conditions on Plaza Drive along the Project frontage, enhancement of pedestrian and bicyclist infrastructure and fencing for creek protection would not be realized under the No Project Alternative. None of the Project objectives would be achieved as a result of the No Project Alternative.

ES.4.2 Reduced Project Footprint Alternative

The Reduced Project Footprint Alternative would construct a reduced size CarMax facility. For the purposes of this analysis, it is assumed that all buildings for sales and service would not change and the Project total building square footage would remain as 11,447 SF. Under this alternative, it is assumed that the vehicle sales display, sales and staging area, and customer and employee parking areas are reduced. Under this alternative an increased biological and planning buffer of 150 feet would be implemented. This increased buffer would provide a greater buffer between sensitive riparian areas of the Buena Vista Creek and the proposed CarMax operations. Under the Reduced Project Footprint Alternative, the proposed sewer re-alignment would not be required and the Project would utilize the existing sewer mains in their existing locations. The area of disturbance by grading and earthwork would also be reduced under this alternative, further reducing impacts to unknown cultural, tribal cultural and paleontological resources.

The Reduced Project Footprint Alternative would have minor reductions to Project impacts related to aesthetics, air quality, biological resources, cultural resources, energy, geology and soils, GHG, hydrology and water quality, noise, public services, transportation, tribal cultural resources and utilities and service systems. The Project under this alternative would still require all Project mitigation measures in order to reduce potentially significant impacts to a level below significant. All other impacts would be the same under the Reduced Project Footprint Alternative and the Project. Project objectives under this alternative would be partially met.

ES.4.3 Alternative Site Location

Table 7.4-1 provides a list of alternative site locations that were evaluated under this alternative analysis. As shown in **Table 7.4-1**, none of the alternative site locations would have met the basic operational requirements for a CarMax facility. The alternative sites were determined to be either financially infeasible, have land use or other site restrictions, or were not located within the intended market area. However, for the purpose of this alternatives analysis, the alternative site located at 1302 Encinitas Boulevard is used to analyze potential impacts related to the construction and operation of the CarMax Project at this location as it is the most feasible of the alternative site locations. The alternative site located at 1302 Encinitas Boulevard currently operates as a BMW dealership and any construction or demolition related to the current site is considered in this alternative analysis.

Development of the Project under the Alternative Site Location alternative would result in reduced impacts to aesthetics, air quality, biological resources, energy, geology and soils, GHG emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, public services, transportation, tribal cultural resources and utilities and service systems. The Project under this alternative would still require mitigation measures related to geology and soils and hydrology and water quality for compliance with all geotechnical recommendations and provision of storm water BMPs in order to reduce potential impacts to a level below significant. All other impacts under this alternative would be the same under the Alternative Site Location alternative and the Project. Project objectives under this alternative would be met to an extent, as the alternative site location would not provide the same development area as the proposed Project Site.

ES.4.4 Neighborhood Commercial Center Alternative

The Neighborhood Commercial Center Alternative would replace the proposed CarMax Project with another commercial use such as a neighborhood shopping center on the Project Site. Under the CC zone, uses such as retail sales, food and beverage, full service restaurants and restaurants with drive-thru services are permitted, some requiring a use permit. For the purposes of this EIR alternative analysis, it is assumed that the proposed retail center would develop the entire 10.54-acre Project Site, both the northern and southern parcels, and buildings would be a maximum of 55,000 SF total. This estimated building square footage is based on other commercial retail centers in the surrounding area. Uses within the shopping center could consist of retail ranging from grocery stores, drugstores, cleaners, beauty and barber shops and fast food services.

A neighborhood commercial center with a maximum building size of 55,000 SF would generate approximately 6,600 ADT based on the SANDAG *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region* (based on the generation rate of 120 trips/1,000 SF). This alternative would result in an intensity of approximately 13 times more vehicular trips compared to the Project.

The Neighborhood Commercial Center Alternative would have increased environmental impacts related to air quality, energy, GHG emissions, noise, public services, transportation and utilities and service systems due to an increase in building size with a maximum of 55,000 SF and increase in vehicle trips of 6,600 ADT compared to 475 ADT generated by the Project. Impacts to aesthetics, agriculture, biological resources, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, population and housing, recreation, tribal cultural resources and wildfire would be similar to that of the Project. All required mitigation measures under the Project would also be required under this alternative and would reduce potentially significant impacts to a level below significant. It is anticipated that transportation mitigation measures would be warranted as a result of such increases to traffic generated from the Project Site under this alternative. This alternative would not meet any of the Project objectives.

ES.5 Summary of Impacts, Mitigation Measures and Conclusions

Table ES-2 summarizes the Project's environmental impacts, as required by CEQA Guidelines Section 15123(a). This table also provides the mitigation measures required to reduce potentially significant impacts to a level below significance. After implementation of all mitigation measures, all Project impacts would be reduced to a level below significance. The Project would not result in any significant and unavoidable impacts.

Table ES.5-1
Summary of Impacts, Mitigation Measures and Conclusions

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
Aesthetics (See Section 4.2 for the complete analysis of Aesthetics)		
Threshold a: The Project would be located in an already urbanized area and would be of similar massing and appearance to the existing commercial center to the west, the Project would not degrade views from a visual open space area. Further, the Project would not have an effect on public viewpoint locations that may include views of the Pacific Ocean due to the distance, topography and intervening developments. In its present condition, the Project Site does not provide an expansive view of a highly valued landscape or scenic vista and it would not interfere with views of an existing scenic vista. The development of the Project would not contrast with surrounding land uses or with the existing visual landscape. Impacts to scenic vistas would be **less than significant**	No mitigation required.	Less than significant impact.
Threshold b: The Project Site is located over 30 miles from the State Scenic Highway sections designated by Caltrans within the County. Caltrans has listed I-5 and SR-76 as eligible for scenic designations; however, the Project Site is located approximately 3.3 miles east of I-5 and 3.5 miles south of SR-76. Further, no scenic resources, including trees, rock outcroppings, or historic buildings within a state scenic highway are present on or adjacent to the Project Site. **No impact** to scenic resources within a state scenic highway would occur.	No mitigation required.	No impact.
Threshold c: The Project is located in a primarily urbanized area and would be consistent with the existing CC zoning and General Plan designation of the Project Site. The existing visual character of the surrounding area is characterized by development; primarily containing commercial buildings and various residential developments including both medium- and high-density developments and a senior living facility. Overall, the Project area would remain developed similar to current conditions. Although the visual character of the Project Site would change with the addition of the CarMax Project, the development would not substantially degrade the existing visual character of the surrounding area and would appear as a continuation of existing development in Project vicinity. The Project is located in an urbanized area and would not conflict with applicable zoning and other regulations governing scenic quality, and impacts will be **less than significant**.	No mitigation required	Less than significant impact.
Threshold d: The Project would contain lighting in the parking lot areas and along the Project Site boundary. The Project would employ LED lamp technologies in lighting fixtures that would be full cut off with a flat lens, and downcast to reduce light spill onto adjacent properties. Proper shielding of lighting in parking areas would further prevent glare to adjacent properties. Light poles and associated pedestals would not exceed 25 feet per Section 3117 of the City of Oceanside Zoning Ordinance and exterior	No mitigation required.	Less than significant impact.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
lighting onsite would be reduced after operating hours. All outdoor lighting would comply with the standards of the Zoning Ordinance, Article 30, Section 3024 and Article 31 for parking lot lighting requirements. The Project would not create a new source of light or glare which would adversely affect day or nighttime views in the area, and impacts will be **less than significant.**		
Agriculture and Forestry Resources (See Section 4.3 for the complete analysis of Agriculture and Forestry Resources)		
Threshold a: An FMMP map was prepared for the project site and is classified as Urban and Built-Up Land (**Figure 10**). No prime farmland or unique farmland exist onsite. No prime farmland or unique farmland exist onsite. In addition, the Project Site is not located in an area rated "good" or "fair" for farming or in a general area of existing agriculture use as depicted in Figure ERM-7 in the Environmental Resource Management Element of the General Plan. The Project would not convert Prime Farmland, Unique Farmland or Farmland of Statewide Importance to non-agricultural use, and therefore, **no impact** will occur.	No mitigation required.	No impact.
Threshold b: The Project Site is zoned as CC, which allows limited agricultural use with approval of an Administrative Use Permit. The Project does not require a zone change as part of the Project approvals. There are no areas designated as Williamson Act Contract lands located within the Project Site. The Project would not conflict with existing zoning for agricultural use or a Williamson Act Contract and, therefore, **no impact** will occur.	No mitigation required.	No impact.
Threshold c: The Project Site is zoned as CC and does not contain lands designated as forest land, timberland or timberland zoned Timberland Production as defined in the Public Resources Code Sections. Therefore, **no impact** to forest land or timberland will occur.	No mitigation required.	No impact.
Threshold d: The Project Site is vacant and located in a developed area surrounded by residential uses, commercial uses, and transportation corridors. The property is covered in non-native ruderal, iceplant, and ornamental vegetation with some native coastal sage scrub plants interspersed. The Project would not result in the loss of forest land or conversion of forest land to non-forest uses, and therefore, **no impact** will occur.	No mitigation required.	No impact.
Threshold e: The Project Site is vacant and located in a developed area surrounded by residential uses, commercial uses, and transportation corridors. No farmland or forest land exists onsite or in the surrounding area.	No mitigation required.	No impact.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
The Project would not result in the conversion of Farmland to non-agricultural use or forest land to non-forest uses, and therefore, **no impact** will occur.		
Air Quality (See Section 4.4 for the complete analysis of Air Quality)		
Threshold a: The Project Site is located in the CC zone pursuant to the Zoning Ordinance and corresponding General Plan land use designation. No change in the Zoning Ordinance or General Plan is required. A CUP is proposed to allow for the CarMax Project. Thus, the Project is consistent with the zoning and land use designations and meets the use that is anticipated in the local plan and SANDAG's growth projections and will not conflict with the SIP or RAAQS. As provided in the Air Quality Assessment, and further provided in **Table 4.4-6**, **Table 4.4-7** and **Table 4.4-8**, the Project will not exceed SDAPCD thresholds for any pollutant during construction or operation of the Project. The Project will not conflict with or obstruct implementation of the applicable air quality plan, and therefore, impacts will be **less than significant**.	No mitigation required.	Less than significant impact.
Threshold b: As displayed in **Table 4.4-6**, Project construction emissions would not exceed SDAPCD thresholds and therefore, no direct construction impacts related to air quality are expected. The Applicant has indicated that as a design feature all diesel equipment would be Tier 4, meaning that equipment would comply with the latest emission milestone established by the U.S. EPA and CARB, and that the grading contractor would follow BMPs for grading as it relates to minimizing air quality emissions and will comply with all SDAPCD rules and regulations. Project construction emissions will not exceed SDAPCD thresholds for any pollutant, and will not result in considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard (PM_{10}, $PM_{2.5}$ or O_3). Impacts from Project construction emissions are **less than significant**. As shown in **Table 4.4-7** and **Table 4.4-8**, the Project operational emissions would not exceed SDAPCD thresholds for any pollutant, for which the project region is non-attainment under an applicable federal or state ambient air quality standard (PM_{10}, $PM_{2.5}$ or O_3). Impacts from operational emissions are **less than significant**. Project operational air quality emissions would not exceed SDAPCD's area, mobile or energy thresholds and therefore, the Project would have a less than significant cumulative operational impact. The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under applicable federal and state ambient air quality standards, and therefore impacts to air quality will be **less than significant**.	No mitigation required.	Less than significant impact.
Threshold c: As shown in **Figure 11,** sensitive receptors include residences and senior residences. The nearest sensitive receptors are the medium density residences directly to the east across Thunder Drive, the	No mitigation required.	Less than significant impact.

Summary of Impact	Mitigation Measure		Level of Significance After Mitigation
Brookdale senior living facility located directly south of Buena Vista Creek, an apartment complex located approximately 0.15 mile southwest of the Project Site and the Lil Jackson Senior Community located 0.19 mile southwest of the Project Site. The evaluation of air quality impacts to sensitive receptors is based on the potential to result in physical health issues. Worst case PM_{10} from exhaust emissions would cumulatively produce 0.00589 tons (over the total construction duration of 391 days) or an average of 0.000158 grams/second. The average emission rate over the grading area is $3.55x10^{-9}$ grams/m^2/second. The inhalation cancer risk for the closest residential receptor was found to be 7.97 which would not exceed SDAPCD 10 per one million exposed significance threshold. Based on the uses expected on the Project Site, potential long-term operational impacts associated with the release of TACs will be minimal and would not be expected to exceed the SDAPCD thresholds of significance presented in **Table 4.4-7** and **Tale 4.4-8.** The annual concentration yields a Health Hazard Index of 0.0072, which is less than one. Therefore, a less than significant health risk impact will occur. The Project would not expose sensitive receptors to substantial pollutant concentrations, and therefore impacts are **less than significant.**			
<u>Threshold d:</u> Construction odors would be considered short-term and would not affect a substantial number of people. The Project would be required to comply with the City's Public Nuisance Law, the SDAPCD Rule 51 and the California Health and Safety Code. Construction of the Project will not result in other emissions (such as those leading to odors) affecting a substantial number of people, and impacts are **less than significant.** The operation of the Project would not be expected to cause long-term odor impacts. The Project does not contain any active manufacturing activities and would not convert agricultural land to commercial land uses. Objectionable odors would not be emitted by the commercial use. Operation of the Project will not result in other emissions (such as those leading to odors) affecting a substantial number of people, and impacts are **less than significant.**	No mitigation required.		Less than significant impact.
Biological Resources (See Section 4.5 for the complete analysis of Biological Resources)			
<u>Threshold a:</u> The Project has the potential to impact the following sensitive species: **San Diego Sagewort** Sensitive plant species such as the San Diego sagewort have the potential to occur onsite, and therefore, a **significant impact** will occur (**Impact BIO-1a).** **Sensitive *Brodiaea* Species**	**MM-BIO-1a**	**Pre-Construction Mitigation Measures** **Pre-Construction Meeting:** Prior to construction, a qualified biological monitor will attend the preconstruction meeting, discuss the Project's biological monitoring program with construction contractors, and arrange to perform any follow up mitigation measures and reporting for the proposed Project. **Resource Delineation and Protection Measures**: Prior to construction activities, a qualified biological monitor will supervise the placement of orange construction fencing or equivalent along the limits of disturbance adjacent to sensitive biological habitats and verify compliance with any other Project mitigation measures. This pre-	Mitigated below a level of significance.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
Project construction is anticipated to begin in November 2021 and therefore, the presence of sensitive *Brodiaea* species has the potential to occur within the Project area and represents a **significant impact** (**Impact BIO-2**). **Fairy Shrimp** Construction of the Project is anticipated to begin in November 2021, however, if Project construction has not been initiated prior to the 2022/2023 wet season, there is a potential for a **significant impact (Impact BIO-3)** to Fairy Shrimp**.** **Coastal California Gnatcatcher** Project construction is anticipated to begin in November 2021 and therefore construction will not be initiated prior to the 2021 breeding season, and there is a potential for a **significant impact (Impact BIO-4)** to Coastal California Gnatcatcher. **Least Bell's Vireo** Project construction is anticipated to begin in November 2021 and therefore construction will not be initiated prior to the 2021 breeding season, and there is a potential for a **significant impact (Impact BIO-5)** to Least Bell's vireo**.** **Migratory Bird Treaty Act-Covered Species** The Project would result in direct and indirect impacts to Cooper's hawk, yellow warbler and other MBTA-covered bird species that occur within and adjacent to the Project footprint, and therefore a **significant impact (Impact BIO-6)** will occur**.** Impacts to sensitive mammal species are **less than significant.** The Project will have a substantial adverse effect, either directly or through habitat modifications, on a wildlife species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by CDFW or USFWS.	construction phase will include flagging sensitive plant species and delineating buffers to protect sensitive biological resources (e.g., habitats, flora and fauna species, nesting birds) during construction activities. In addition, appropriate BMPs will be installed as applicable to provide fugitive dust control, minimize lighting and noise in adjacent habitats, and avoid the introduction of exotic and invasive plant and animal species into the area. Responsible construction practices as well as storm water and runoff management will also be included as part of the BMPs. **Contractor Environmental Awareness Training:** Prior to commencement of construction activities, a qualified biological monitor will meet with all construction contractors to conduct an on-site contractor environmental awareness training to discuss the need to avoid impacts outside of the approved construction area and to protect sensitive flora and fauna (e.g., explain construction limits flagging, discuss sensitive resource flagging, review wetland buffers, clarify acceptable access routes/methods and staging areas). **Sensitive *Brodiaea* Species (Impact BIO-2)** **MM-BIO-2** Prior to construction of the Project, focused sensitive plant species surveys of the Project Site shall include general rare plant surveys in addition to focused *Brodiaea* species surveys by a qualified biologist. Rare plant surveys shall be conducted twice, including one in early spring and one in late spring/early summer prior to Project construction in order to document any sensitive plant species that occur within the Project area. Six (6) focused *Brodiaea* species surveys shall be conducted in spring prior to construction with the timing based on the emergence of the species documented during reference site checks. If no sensitive plant species are documented within the Project survey area during focused surveys, no additional avoidance, minimization measures or mitigation measures would be required. If sensitive plant species are documented within the Project survey area, impacts to these species shall be avoided to the extent feasible. Unavoidable impacts shall be minimized and/or mitigated through compensatory measures (e.g., restoration, transplantation, habitat preservation) that will be determined based on the species present, population estimate and significance of the impacts. All significant unavoidable impacts shall require additional mitigation measures to reduce impacts to below a level of significance. **Fairy Shrimp (Impact BIO-3)** **MM-BIO-3** Prior to construction of the Project, if construction has not been initiated prior to the first rain event of the 2022/2023 rainy season, additional pre-construction surveys shall be conducted prior to construction initiation in order to update the status of the fairy shrimp species within the Project survey area. Pre-construction fairy shrimp surveys shall be conducted by a qualified biologist in accordance with current USFWS survey	

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
	guidelines. If sensitive fairy shrimp species are documented within the survey area, impacts to listed fairy shrimp shall be avoided to the extent feasible. Unavoidable impacts to these species would be considered significant and would require consultation with the USFWS under Section 10(a)(1)(B) of the ESA to develop project-specific minimization and mitigation measures to reduce these impacts to below a level of significance. **Coastal California Gnatcatcher (Impact BIO-4)** **MM-BIO-4** Prior to construction of the Project, if construction has not been initiated prior to the 2021 breeding season (February 1), additional pre-construction surveys shall be conducted prior to construction initiation to determine if coastal California gnatcatcher is present in the Project survey area. Focused coastal California gnatcatcher surveys shall be conducted by a qualified biologist in accordance with current USFWS survey guidelines. Impacts to coastal California gnatcatcher shall be avoided to the extent feasible. Unavoidable impacts to this species would be considered significant and would require consultation with the USFWS under Section 10(a)(1)(B) of the ESA to develop project-specific minimization and mitigation measures (e.g., construction outside of breeding season, habitat protection, noise attenuation) in order to reduce impacts to a level below significance. **Least Bell's Vireo (Impact BIO-5)** **MM-BIO-5** Prior to construction of the Project, if construction has not been initiation prior to the 2021 breeding season (February 1), additional pre-construction surveys shall be conducted prior to construction initiation to determine if least Bell's vireo is present in the Project survey area. Pre-construction focused least Bell's vireo surveys shall be conducted by a qualified biologist in accordance with current USFWS survey guidelines. Impacts to least Bell's vireo shall be avoided to the extent feasible. Unavoidable impacts to this species would be considered significant and would require consultation with the USFWS under Section 10(a)(1)(B) of the ESA to develop project-specific minimization and mitigation measures (e.g., construction outside of breeding season, habitat protection, noise attenuation) to reduce these impacts to below a level of significance. **MBTA-Covered Bird Species (Impact BIO-6)** **MM-BIO-6** During construction, all vegetation clearing will occur outside of the breeding season (February 1 to September 15) to avoid impacts to sensitive avian species (e.g., any species identified as a listed, candidate, sensitive, or special status species; any species covered by the MBTA). If vegetation clearing must occur during the breeding season, a qualified biological monitor will conduct a pre-construction survey to determine the presence or absence of nesting birds on the proposed area of disturbance. The pre-	

Summary of Impact	Mitigation Measure		Level of Significance After Mitigation
		construction survey will be conducted no more than four (4) calendar days prior to the start of construction activities (including removal of vegetation). The results of the pre-construction nesting bird survey will be submitted to the City of Oceanside for review and approval prior to initiating any construction activities. If nesting birds are detected, a letter report or mitigation plan will be prepared and will include proposed measures to be implemented to ensure that take of birds or eggs or disturbance of breeding activities is avoided. The report or mitigation plan will be submitted to the City of Oceanside for review and approval and will be implemented to the satisfaction of the City of Oceanside. The qualified biological monitor will verify and approve that all measures identified in the report or mitigation plan are in place prior to and/or during construction.	
<u>Threshold b:</u> Unavoidable direct impacts to approximately 0.408 acre of disturbed Diegan coastal sage scrub will occur as a result of the Project and a **significant impact (Impact BIO-7)** will occur**.** The Project would encroach temporarily, approximately six (6) feet, into the 50-foot planning buffer during the proposed sewer realignment. As a result, temporary direct impacts will occur to approximately 0.008 acre (334 SF) of disturbed habitat within the planning buffer. These impacts are considered temporary as they would recover on their own within one growing season. Additionally, because these impacts are minimal and because they are located at least 94 feet from the riparian habitat, no direct impacts to riparian habitat will occur. The Project would result in temporary and permanent impacts to 0.007 acre of developed land. The Project would result in temporary and permanent impacts to disturbed land, iceplant, ornamental and ruderal land cover/vegetation communities. These land cover types are designated as habitat Group F which consists of lands that do not support natural vegetation. Impacts to this habitat group are not considered significant and do not require mitigation. Indirect impacts, including fugitive dust accumulation from adjacent construction activities could occur to a small patch of disturbed Diegan coastal sage scrub located approximately 15 feet south of the proposed sewer realignment footprint which has the potential to interfere with photosynthesis and germination of sensitive vegetation communities, and therefore a **significant impact** will occur (**Impact BIO-1b). N**o indirect impacts to riparian habitat would result from Project construction. No impacts to critical habitat are anticipated to occur from the Project. Critical habitat for the coastal California gnatcatcher has been designated within the Buena Vista Creek Mitigation Area. The Project, however, has been designed to include the 100-foot buffer on the riparian vegetation associated with Buena Vista Creek, which equates to an approximately 80- to 140-foot buffer on the designated coastal California gnatcatcher critical habitat. Impacts to critical habitat will be **less than significant.**	**Disturbed Diegan Coastal Sage Scrub (Impact BIO-7)** **MM-BIO-7** Prior to issuance of a building permit, the Project shall mitigate impacts to disturbed Diegan coastal sage scrub within the WCPZ or within a PAMA at a 3:1 ratio. As such, the Project shall preserve 1.224 acres of Diegan coastal sage scrub at an existing mitigation bank or within a PAMA which shall be determined and approved by the City of Oceanside Planning Department. **MM-BIO-1b** **Construction Measures** **Biological Monitoring:** During construction, all construction activities, including access and staging, will be restricted to areas previously identified and depicted on the approved Project plans. A qualified biological monitor will monitor construction activities as needed to verify that construction activities do not encroach into biologically sensitive areas and that, if applicable, the mitigation measures developed to accommodate any sensitive species located during the pre-construction surveys are being implemented. The qualified biological monitor will complete a Daily Biological Monitoring Form to document all construction and monitoring activities. **Subsequent Resource Identification:** During construction, the qualified biological monitor will note/act to prevent any new disturbances to habitat, flora, and/or fauna on-site (e.g., flag newly identified sensitive resources for avoidance during access). If active nests or other previously unknown sensitive resources are detected, all Project activities that directly impact the resource will be delayed until species-specific local, state, or federal regulations have been determined and applied by the qualified biological monitor.	Mitigated below a level of significance.
<u>Threshold c:</u> No impacts to potentially jurisdictional resources are expected to occur from implementation of the Project. The Project has been designed to include the mandatory 100-foot buffer from the riparian habitat boundary. This buffer includes a 50-foot biological buffer as well as a mandatory 50-foot planning buffer. Project design and implementation would include the 100-foot buffer and therefore	**MM-BIO-1c**	**Post-Construction Measures** Upon completion of Project construction, a post-construction report that summarizes the construction activities, actual Project impacts, and Project design/mitigation measures implemented before and during construction will be prepared for the Project. If Project impacts exceed the approved totals, additional impacts will be mitigated in	Mitigated below a level of significance.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
no impacts to riparian habitat will occur. However, due to the Project's close proximity to Buena Vista Creek, the Project has the potential to have a substantial adverse effect on state or federally protected wetlands and a **significant impact** (**Impact BIO-1c)** will occur.	accordance with the Subarea Plan and other applicable local, state, and federal laws. The qualified biological monitor will submit the post-construction report to the City of Oceanside within 30 days of construction completion.	
Threshold d: Due to the high level of disturbance within the Project Site, no impacts to wildlife corridors or native wildlife nursery sites are expected to occur from implementation of the Project. The Project is not located within the WCPZ, however, Buena Vista Creek and the associated riparian area along the southern boundary of the Project Site provides sufficient connectivity to be considered part of both a local and regional wildlife corridor. The Project would not substantially interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites, and impacts will be **less than significant.**	No mitigation required.	Less than significant impact.
Threshold e: The Project is in compliance with Land Use Element of the General Plan Policy 3.11A and 3.11C and would not conflict with policies 11B, 3.11D and 3.11E. The Project would comply with all applicable City regulations and requirements related to Landscaping including Section 3019 of the Zoning Ordinance, Landscape Development Manual and City of Oceanside Municipal Code. The Project has been designed to include the requisite 100-foot wetland buffer, which includes the required 50-foot biological buffer on the jurisdictional resources as well as the requisite 50-foot planning buffer. The planning buffer serves as an area of transition between the biological buffer and specified land uses on adjoining uplands. The riparian area and associated natural habitats within the 100-foot buffer will be designated as biological open space and incorporated into the Preserve per Section 5 of the Oceanside Subarea Plan. The Project will not conflict with any local policies or ordinances protecting biological resources, and impacts will be **less than significant.**	No mitigation required.	Less than significant impact.
Threshold f: Although the Project was designed to comply with the measures outlined in the MHCP and the Subarea Plan, the Project has the potential to result in significant impacts to sensitive plant species and vegetation communities (**Impact BIO-1a and Impact BIO-1b**), jurisdictional resources (**Impact BIO-1c**), *Brodiaea* species (**Impact BIO-2**), fairy shrimp (**Impact BIO-3**), coastal California gnatcatcher (**Impact BIO-4**), least Bell's vireo (**Impact BIO-5**), and other MBTA-covered species (**Impact BIO-6**). The Project would result in unavoidable direct impacts to disturbed Diegan coastal sage scrub (**Impact BIO-7**) and therefore, a **significant impact** will occur.	See mitigation measures MM-BIO-1a, MM-BIO-1b, MM-BIO-1c, MM-BIO-2, MM-BIO-3, MM-BIO-4, MM-BIO-5, MM-BIO-6 and MM-BIO-7 above.	Less than significant impact.
Cultural Resources (See Section 4.6 for the complete analysis of Cultural Resources)		
Threshold a: No historic or prehistoric cultural resources were noted during the survey or resurvey of the Project area. A records search was performed at the SCIC and found that 75 cultural resource studies have previously addressed the one-mile record search radius surrounding the Project area. Of these reports, none were recorded within the Project area. The SCIC records search also identified 26	No mitigation required.	Less than significant impact.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
cultural resources that were previously recorded within the one-mile record search radius. Of these resources, none were recorded within the Project area. No historical resources, as defined in Public Resources Code Section 15064.5 have been identified on the Project Site, nor have any cultural resources been previously recorded within the Project Site area. Based on these findings, there is a low potential for impacts to historical resources associated with the implementation of the Project. The Project would not cause a substantial adverse change in the significance of a historical resource pursuant to Public Resources Code Section 15064.5, and therefore, impacts are **less than significant.**		
<u>Threshold b:</u> No significant archaeological resources have been identified within the Project area and there is a low potential for impacts to archaeological resources. However, given the site's close proximity to Buena Vista Creek, there is potential for buried cultural resources within the alluvial deposits along the creek, and therefore a **significant impact** will occur (**Impact CUL-1**).	**Archaeological Resources (Impact CUL-1)** **MM-CUL-1a** Prior to issuance of a Grading Permit, the Applicant/Owner shall enter into a pre-excavation agreement, otherwise known as a Tribal Cultural Resources Treatment and Tribal Monitoring Agreement with the "Traditionally and Culturally Affiliated (TCA) Native American Monitor associated with a TCA Luiseño Tribe". A copy of the agreement shall be included in the Grading Plan Submittals for the Grading Permit. The purpose of this agreement shall be to formalize protocols and procedures between the Applicant/Owner and the "TCA Native American Monitor associated with a TCA Luiseño Tribe" for the protection and treatment of, including but not limited to, Native American human remains, funerary objects, cultural and religious landscapes, ceremonial items, traditional gathering areas and tribal cultural resources, located and/or discovered through a monitoring program in conjunction with the construction of the proposed Project, including additional archaeological surveys and/or studies, excavations, geotechnical investigations, grading, and all other ground disturbing activities. At the discretion of the Luiseño Native American Monitor, artifacts may be made available for #D scanning/printing, with scanned/printed materials to be curated at a local repository meeting the federal standards of 36CFR79. **MM-CUL-1b** Prior to the issuance of a Grading Permit, the Applicant/Owner or Grading Contractor shall provide a written and signed letter to the City of Oceanside Planning Division stating that a Qualified Archaeologist and Luiseño Native American Monitor have been retained at the Applicant/Owner or Grading Contractor's expense to implement the monitoring program, as described in the pre-excavation agreement. **MM-CUL-1c** The Qualified Archaeologist shall maintain ongoing collaborative consultation with the Luiseño Native American monitor during all ground disturbing activities. The requirement for the monitoring program shall be noted on all applicable construction documents, including Demolition Plans, Grading Plans, etc. The Applicant/Owner or Grading Contractor shall notify the City of Oceanside Planning Division of the start and end of all ground disturbing activities. **MM-CUL-1d** The Qualified Archaeologist and Luiseño Native American Monitor shall attend all applicable pre-construction meetings with the General Contractor and/or associated Subcontractors to present the archaeological monitoring program. The Qualified Archaeologist and Luiseño Native American Monitor shall be present onsite full-time	Mitigated below a level of significance.

Summary of Impact	Mitigation Measure		Level of Significance After Mitigation
		during grubbing, grading and/or other ground altering activities, including the placement of imported fill materials or fill used from other areas of the Project Site, to identify any evidence of potential archaeological or tribal cultural resources. All fill materials shall be absent of any and all tribal cultural resources.	
	MM-CUL-1e	In order for potentially significant archaeological artifact deposits and/or cultural resources to be readily detected during mitigation monitoring, a written "Controlled Grade Procedure" shall be prepared by a Qualified Archaeologist, in consultation with the Luiseño Native American monitor, other TCA Luiseño Tribes that have participated in the state-prescribed process for this Project, and the Applicant/Owner, subject to the approval of City representatives. The Controlled Grade Procedure shall establish requirements for any ground disturbing work with machinery occurring in and around areas the Qualified Archaeologist and Luiseño Native American monitor determine to be sensitive through the cultural resource mitigation monitoring process. The Controlled Grade Procedure shall include, but not be limited to, appropriate operating pace, increments of removal, weight and other characteristics of the earth disturbing equipment. A copy of the Controlled Grade Procedure shall be included in the Grading Plan Submittals for the Grading Permit.	
	MM-CUL-1f	The Qualified Archaeologist or the Luiseño Native American monitor may halt ground disturbing activities if unknown tribal cultural resources, archaeological artifact deposits or cultural features are discovered. Ground disturbing activities shall be directed away from these deposits to allow a determination of potential importance. Isolates and clearly non-significant deposits will be minimally documented in the field, and before grading proceeds these items shall be secured until they can be repatriated. If items cannot be securely stored on the Project Site, they may be stored in off-site facilities located in San Diego County. If the Qualified Archaeologist and Luiseño Native American monitor determine that the unearthed tribal cultural resource, artifact deposits or cultural features are considered potentially significant TCA Luiseño Tribes that have participated in the state-prescribed consultation process for this project shall be notified and consulted regarding the respectful and dignified treatment of those resources. The avoidance and protection of the significant tribal cultural resource and/or unique archaeological resource is the preferable mitigation. If, however, it is determined by the City that avoidance of the resource is infeasible, and it is determined that a data recovery plan is necessary by the City as the Lead Agency under CEQA, TCA Luiseño Tribes that have participated in the state-prescribed consultation process for this Project shall be notified and consulted regarding the drafting and finalization of any such recovery plan. For significant tribal cultural resources, artifact deposits or cultural features that are part of a data recovery plan, an adequate artifact sample to address research avenues previously identified for sites in the area will be collected using professional archaeological collection methods. The data recovery plan shall also incorporate and reflect the tribal values of the TCA Luiseño Tribes that have participated in the state-prescribed consultation process for this Project. If the Qualified Archaeologist collects such resources, the Luiseño Native American monitor must be present during any testing or cataloging of those resources. Moreover, if the Qualified Archaeologist does not collect the tribal cultural resources that are unearthed during	

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
	the ground disturbing activities, the Luiseño Native American monitor, may at their discretion, collect said resources and provide them to the appropriate TCA Luiseño Tribe, as determined through the appropriate process, for respectful and dignified treatment in accordance with the Tribe's cultural and spiritual traditions. Ground disturbing activities shall not resume until the Qualified Archaeologist, in consultation with the Luiseño Native American Monitor, deems the cultural resource or feature has been appropriately documented and/or protected. **MM-CUL-1g** The landowner shall relinquish ownership of all tribal cultural resources unearthed during the cultural resource mitigation monitoring conducted during all ground disturbing activities, and from any previous archaeological studies or excavations on the Project Site to the appropriate TCA Luiseño Tribe, as determined through the appropriate process, for respectful and dignified treatment and disposition, including reburial at a protected location onsite, in accordance with the Tribe's cultural and spiritual traditions. All cultural materials that are associated with burial and/or funerary goods will be repatriated to the Most Likely Descendant (MLD) as determined by the Native American Heritage Commission per California Public Resources Code Section 5097.98. No tribal cultural resources shall be subject to curation. **MM-CUL-1h** Prior to the release of the grading bond, a monitoring report and/or evaluation report, if appropriate, which describes the results, analysis and conclusions of the archaeological monitoring program (e.g., data recovery plan) shall be submitted by the Qualified Archaeologist, along with the Luiseño Native American monitor's notes and comments, to the City of Oceanside Planning Division for approval.	
Threshold c: No human remains were identified within the Project area during the pedestrian survey and resurvey of the Project Site. The Project Site has been graded in the past and therefore, the possibility of discovering human remains during construction is considered low. However, due to the fact that the Project involves ground disturbance, construction activities have the potential to disturb human remains, including those located outside of formal cemeteries, and therefore a **significant impact** will occur (**Impact CUL-2)**.	**Human Remains (Impact CUL-2)** **MM-CUL-2** As specified by California Health and Safety Code Section 7050.5, if human remains are found on the Project Site during construction or during archaeological work, the person responsible for the excavation, or his or her authorized representative, shall immediately notify the San Diego County Office of the Medical Examiner by telephone. No further excavation or disturbance of the Project Site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the Medical Examiner has made the necessary findings as to origin and disposition pursuant to Public Resources Code 5097.98. If such a discovery occurs, a temporary construction exclusion zone shall be established surrounding the area of the discovery so that the area would be protected, and consultation and treatment could occur as prescribed by law. If suspected Native American remains are discovered, the remains shall be kept in-situ, or in a secure location in close proximity to where they were found, and the analysis of the remains shall only occur onsite in the presence of a Luiseño Native American monitor. By law, the Medical Examiner will determine within two (2) working days of being notified if the remains are subject to his or her authority. If the Medical Examiner identifies the remains to be of Native American ancestry, he or she shall contact the Native American Heritage Commission (NAHC) within 24 hours. The NAHC shall make a determination as to the MLD.	Mitigated below a level of significance.
Energy (See Section 4.7 for the complete analysis of Energy)		
Threshold a:	No mitigation required.	Less than significant impact.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
Heavy-duty construction equipment associated with construction activities would rely on diesel fuel to power off-road construction vehicles and equipment as well as construction worker vehicles and delivery and haul trucks. Electricity associated with the conveyance of water would be used during Project construction for dust control and electricity used to power lighting, electronic equipment, or other construction activities necessitating electrical power. The Project would also result in electricity used in the production of construction materials such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass. Construction of the Project would not typically involve the consumption of natural gas. The Project is not expected to result in a significant use of transportation related energy resources. The Project would not result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resources during Project construction, and impacts are **less than significant**. Existing electrical services are provided in the Project vicinity. The Project would consume electricity similarly to that of the existing commercial developments to the west and northwest and would comply with all applicable 2019 Title 24 Part 6 Building Efficiency Standards. The Project would be designed and built to minimize electricity use so that existing and planned electricity capacity and supplies would be enough to support the Project's electricity demand. Operation of the Project would result in an increased consumption of natural gas compared to existing conditions. Project operation would not result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, and impacts are **less than significant.**		
Threshold b: The City CAP and ECAE of the General Plan provide goals, policies and measures to meet State GHG reduction goals and reduce energy consumption. **Table 4.7-2** displays the Project's consistency with applicable CAP policies. **Table 4.7-3** displays the Project's consistency with ECAE policies. Additionally, Project construction and operation would generate 308.36 metric tons of carbon dioxide (MT CO_2E) each year and would not exceed the City's screening threshold for GHG emissions and therefore would not conflict with the goals of the State. As provided in **Table 4.7-2** and **Table 4.7-3**, the Project would not conflict with or obstruct local plans for renewable energy or energy efficiency. Project-related impacts are **less than significant.**	No mitigation required.	Less than significant impact.
Geology and Soils (See Section 4.8 for the complete analysis of Geology and Soils)		
Threshold a: The Project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving the rupture of a known earthquake fault, and impacts are **less than significant.** The Project Site is likely to be subjected to strong ground motion from seismic activity similar to that of the rest of the County and Southern California, due to seismic activity of the region as a whole and a **significant impact** (**Impact GEO-1a**) will occur. The Project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving seismic-related ground failure including liquefaction and impacts are **less than significant**. The Project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving landslides, and therefore impacts are **less than significant.**	**Strong Seismic Groundshaking (Impact GEO-1a)** **MM-GEO-1** Prior to and during construction, the construction contractor shall ensure that Project construction complies with all recommendations identified on pages 9 – 20 in the Geotechnical Evaluation prepared by EEI Engineering Solutions (2019). The construction contractor shall follow the specific guidelines within the Geotechnical Evaluation for Site preparation, earthwork and onsite improvements.	Mitigated below a level of significance.
Threshold b:	**MM-HYDRO-1** The Project shall incorporate permanent source control BMPS as identified in the Project SWQMP such as the following:	Mitigated below a level of significance.

<table>
<tr><th>Summary of Impact</th><th>Mitigation Measure</th><th>Level of Significance After Mitigation</th></tr>
<tr>
<td>The potential for soil erosion would increase during construction activities, including grading and demolition, as a result of vehicles and heavy equipment exposing soil surfaces to wind or water, and a significant impact (Impact GEO-2) will occur. However, prior to obtaining a grading permit the Project would be required to prepare a Storm Water Pollution Prevention Plan (SWPPP), which would describe and depict in detail the various grading and construction-related BMPs to be implemented onsite. The SWPPP would be prepared in conformance with City regulations and the NPDES SWRCB Construction General Permit. Sediment and erosion control BMPs described in the SWPPP may include, but are not limited to, straw mulch, soil binders, silt fencing, gravel bags, street sweeping and vacuuming and storm drain inlet protection.</td>
<td>
<table>
<tr><th>BMP Type</th><th>Inspection Frequency</th><th>Summary of Maintenance Activity</th></tr>
<tr><td>Prevention of Illicit Discharges Into MS4</td><td>Continuous</td><td>A grease trap has been incorporated into the Utility Plan and dumping of grease down the storm drain is prohibited. Other good housekeeping practices would be implemented to discourage discharges of non-storm water pollutants, including cleaning up food and grease with absorbents, discarding trash, and routine maintenance of grease trap.</td></tr>
<tr><td>Storm Drain Signage</td><td>Continuous</td><td>Labeling shall be provided for all storm water conveyance system inlets and catch basins within the Project area. Storm drain placards shall be used for signage (stenciling is prohibited by the City). Inspect and maintain placards as needed.</td></tr>
<tr><td>Protect Trash Storage Areas From Rainfall, Run-On, Runoff and Wind Dispersal</td><td>Regularly</td><td>Ensure trash enclosure areas are fully contained (three walls, door and roof) and are provide with attached lids. Keep containers away from storm drain vicinity. Post signs on all enclosures and/or dumpsters informing users to keep lid closed and not to dispose of liquid or hazardous materials. Inspect trash storage areas to ensure integrity of containers and that area is kept clean. Replace leaking bins. Clean trash storage areas regularly.</td></tr>
<tr><td rowspan="4">Additional BMPS Based on Potential Sources of Runoff Pollutants</td><td rowspan="4">Regularly as Determined Necessary</td><td><u>OnSite Storm Drain Inlets:</u> Onsite inlets shall be protected from any illicit discharges and debris. Inlets shall have prohibitive signs where all inlets are marked with the words “NO DUMPING! DISCHARGES TO BAY” or similar. Inlet markings shall be maintained and periodically repainted on a regular basis to remove pollutants. Clean inlets regularly and remove sediments and debris, especially before start and end of wet season. Keep record of cleaning and disposal activities.</td></tr>
<tr><td><u>Need for Future Indoor and Structural Pest Control:</u> Building includes doors and windows with sealing that discourages entry of pests. Any pesticides shall be applied minimally in accordance with manufacturer’s specifications and City and State requirements.</td></tr>
<tr><td><u>Landscape/Outdoor Pesticide Use:</u> Final Landscape Plans shall preserve existing drought tolerant trees, shrubs, and ground cover to the maximum extent possible, and include landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to storm water pollution.</td></tr>
<tr><td><u>Fire Sprinkler Test Water:</u> Fire sprinkler test water shall be drained to sanitary sewer system. During a fire sprinkler</td></tr>
</table>
</td>
<td></td>
</tr>
</table>

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
	test, the fire riser discharge shall be connected by a hose to the sewer cleanout. Miscellaneous Drain or Washwater: Boiler drains shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain. Plazas, Sidewalks, and Parking Lots: Sweep regularly to prevent accumulation of litter and debris, debris from pressure washing must be collected to prevent entry into the storm drain system. **MM-HYDRO-2** An onsite private underground proprietary BMP in the form of an underground detention system shall be designed and constructed per the Project SWQMP in accordance with the San Diego Water Board and City of Oceanside BMP Design Manual. Storm water shall be conveyed via underground pipes from various parts of the Site through water quality measures and into the underground detention system. **MM-HYDRO-3** Low Impact Development (LID) and Site Design BMPs shall be incorporated into the Project design to reduce impacts to water quality. The contractor shall construct the LID BMPs in accordance with the Project SWQMP and the engineer of work shall inspect that all LID BMPs have been constructed in compliance with the approved plans and all applicable specifications and permits. The widening of Plaza Drive shall be treated via a green streets approach with the construction of swales behind sidewalks to treat runoff for water quality and hydromodification purposes.	
Threshold c: The Project would not be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse, and impacts are **less than significant**.	No mitigation required.	Less than significant impact.
Threshold d: The Project would be located on moderately expansive soil with areas of highly expansive soils, as defined in Table 18-I-B of the 1994 Uniform Building Code (International Conference of Building Officials, 1994), and a **significant impact** (**Impact GEO-1b**) will occur.	**Expansive Soils (Impact GEO-1b)** **MM-GEO-1** Prior to and during construction, the construction contractor shall ensure that Project construction complies with all recommendations identified on pages 9 – 20 in the Geotechnical Evaluation prepared by EEI Engineering Solutions (2019). The construction contractor shall follow the specific guidelines within the Geotechnical Evaluation for Site preparation, earthwork and onsite improvements.	Mitigated below a level of significance.
Threshold e: The Project would not have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal system, and therefore, **no impact** will occur.	No mitigation required.	Less than significant impact.
Threshold f: Although the Project Site has been previously graded, Project grading would include 12,500 CY of cut. Due to the high sensitivity of the Santiago Formation underlying the Site, the Project would have the potential to disturb a paleontological resource and a **significant impact** (**Impact GEO-3**) will occur.	**Paleontological Resources (Impact GEO-3)** **MM-GEO-3a** Prior to the issuance of a grading permit, the applicant shall submit a letter to the City from a qualified professional paleontologist or a California Registered Professional Geologist with appropriate paleontological expertise, as defined by the Society of Vertebrate Paleontology's guidelines, indicating that they have been retained by the	Mitigated below a level of significance.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
	applicant to prepare and implement a Paleontological Resources Impact Mitigation Program (PRIMP). The qualified paleontologist shall be available "on-call" to the City and the applicant throughout the duration of ground-disturbing activities. The PRIMP shall include preconstruction coordination; construction monitoring; emergency discovery procedures; sampling and data recovery, if needed; preparation, identification and analysis of the significance of fossil specimens salvaged, if any; museum storage of any specimens and data recovered; and reporting. Earth-moving construction activities shall be monitored wherever these activities will disturb previously undisturbed sediment. Monitoring will not need to be conducted in areas where sediments have been previously disturbed or in areas where exposed sediments will be buried but not otherwise disturbed. In such cases, spot-checking of the excavation Site is sufficient. This mitigation measure shall apply to all excavation activities within the Santiago Formation with high sensitivity and for any construction activities that involve excavation greater than three feet in depth within geologic units with low paleontological sensitivity (Qya). **MM-GEO-3b** Prior to the issuance of a grading permit, the City shall confirm the following measure is identified on the grading plan and will be implemented: Grading activities are subject to a Paleontological Resource Impact Mitigation Program (PRIMP). If potential fossils are discovered by construction crews or during monitoring by a qualified paleontologist, all earthwork or other types of ground disturbance within 50 feet of the discovery shall stop immediately until the qualified professional paleontologist can assess the nature and importance of the discovery. If a fossil of scientific value or uniqueness is identified by the paleontologist, the paleontologist shall record the find and allow work to continue or recommend salvage and recovery of the fossil. If treatment and salvage is required, recommendations shall be consistent with Society of Vertebrate Paleontology guidelines and currently accepted scientific practice and shall be subject to review and approval by the City. Work in the affected area may resume once the fossil has been assessed and/or salvaged and the City, in consultation with the professional paleontologist, has provided written approval to resume work.	
Greenhouse Gas Emissions (See Section 4.9 for the complete analysis of Greenhouse Gas Emissions)		
Threshold a: Construction of the Project would result in GHG emissions primarily associated with the use of off-road construction equipment, on-road hauling and vendor trucks and worker vehicles. Construction of the Project would entail site preparation, grading, paving, building construction and architectural coatings. Based on the results of **Table 4.9-3**, the 30-year average emissions would be 18.52 MT CO_2E. The Project would generate 308.26 MT CO_2E each year during a typical operational year. This includes the combined operational and construction GHG emissions over a 30-year period. The Project would serve up to approximately 237 customers per day, which would be considered the service population for the Project. Given this, the Project would generate approximately 1.3 MT CO_2E/SP, which is less than the 3.5 MT CO_2E/SP CAP threshold for projects that will be implemented prior to year 2025. Thus, the Project will not generate GHG emissions, either directly or indirectly, that	No mitigation required.	Less than significant impact.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
may have a significant impact on the environment and impacts are **less than significant.**		
Threshold b: The Project would be consistent with the policies set forth in the City General Plan Land Use Element and ECAE as provided in Section 4.9.2 that are designed to reduce the emissions of GHG, promote alternative transportation and other methods of efficiency. The Project would promote energy efficiency within buildings including energy efficient appliances. In accordance with the ECAE, the Project would be an infill Project surrounded by other commercial development to the west and northwest and residential developments to the east and south. Seven (7) EV charging spaces would be provided in the customer and employee parking lot in accordance with the California Green Building Standards. Project construction would comply with all construction waste diversion requirements. The Project would not conflict with the General Plan applicable goals and policies related to GHG emissions. The Project would not exceed the City's 900 MT CO_2E screening threshold for Projects that must assess Project-induced emissions against CAP-aligned thresholds of significance. Further, the Project would generate approximately 1.3 MT CO_2E/SP, which is less than the 3.5 MT CO_2E/SP CAP threshold for projects that will be implemented prior to year 2025. Therefore, the Project would be incompliance with the City's CAP and the Project would not generate a significant impact to GHG emissions. The Project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHG, and impacts are **less than significant**.	No mitigation required.	Less than significant impact.
Hazards and Hazardous Materials (See Section 4.10 for the complete analysis of Hazards and Hazardous Materials)		
Threshold a: Construction of the Project would entail routine transport of typical construction materials potentially hazardous to humans, wildlife, and sensitive environments. These materials could include gasoline, diesel fuel, used oil, solvents, cleaners, lead paint debris, lubricants, and other petroleum-based products used for the operation and maintenance of construction equipment and vehicles. Handling of these hazardous materials would be temporary in nature, and limited to quantities and concentrations consistent with a typical infill commercial use of this size. Thus, Project construction would not create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials, and impacts are **less than significant.** Only minor vehicle servicing will occur including routine maintenance, oil changes, tire rotations diagnostic and mileage services. No major mechanical work, body work or painting will occur within the service building. Operational activities including vehicle servicing, carwash, fueling and fuel storage, and other service related activities would comply with all applicable federal, state and local laws and regulations, would obtain all required DEH HMD permits and would prepare a Hazardous Materials Business Plan which would reduce potential impacts related to hazardous materials to a level below significance. Operational impacts related to the routine transport, use or disposal of hazardous materials will be	No mitigation required.	Less than significant impact.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
less than significant.		
Threshold b: Compliance with applicable state, local, and federal laws and preparation of a Hazardous Materials Business Plan would ensure all operational activities involving potentially hazardous materials would not result in the release of such materials into the environment. The Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and therefore, impacts are **less than significant**.	No mitigation required.	Less than significant impact.
Threshold c: The Project Site is not located within 0.25 mile of an existing or proposed school. Compliance with applicable state, local, and federal laws and preparation of a Hazardous Materials Business Plan would ensure all construction and operational activities involving potentially hazardous materials would not result in a significant hazard to the public or the environment. The Project would not exceed SDAPCD thresholds for any pollutant during construction and operation phases of the Project. There are no schools located within one-quarter mile of the Project area. Therefore, the Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter-mile of an existing or proposed school, and impacts are **less than significant.**	No mitigation required.	Less than significant impact.
Threshold d: A Cortese List Verification (**Appendix Q**) pursuant to Government Code Section 65962.5 was prepared and the Project Site. The Project is not located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and as a result, would not create a significant hazard to the public or environment, and therefore, **no impact** will occur.	No mitigation required.	Less than significant impact.
Threshold e: The Oceanside Municipal Airport is located approximately 4.2 miles northwest of the Project Site. The Project Site is not located within the Oceanside Municipal Airport Influence Area or any of the safety zones as displayed in the Oceanside ALUCP. Therefore, the Project would not result in a safety hazard or excessive noise for people residing or working in the Project area, and impacts are **less than significant impact.**	No mitigation required.	Less than significant impact.
Threshold f: The adopted emergency plans applicable to the Project area consist of the Multi-Jurisdictional Hazard Mitigation Plan for San Diego County, the San Diego County Emergency Operations Plan, and City Emergency Plan. Compliance of all Fire Department requirements would ensure the Project would not impair an adopted emergency response plan or emergency evacuation plan, and impacts are **less than significant**.	No mitigation required.	Less than significant impact.
Threshold g: The Project Site is not located in a SRA as recognized by the Board of Forestry and Fire Protection as areas where California Department of Forestry and Fire Protection (CAL FIRE) is the primary emergency response agency responsible for fire suppression and prevention. The Project is not	No mitigation required.	Less than significant impact.

<table>
<tr><th>Summary of Impact</th><th>Mitigation Measure</th><th>Level of Significance After Mitigation</th></tr>
<tr><td>located adjacent to wildland areas and therefore, would not exacerbate wildfire risks and thereby expose people or structures to a significant risk of loss, injury or death involving wildland fires and impacts are less than significant.</td><td></td><td></td></tr>
<tr><td colspan="3">Hydrology and Water Quality (See Section 4.11 for the complete analysis of Hydrology and Water Quality)</td></tr>
<tr><td><u>Threshold a:</u>

The project would violate a water quality standard or waste discharge requirement or otherwise substantially degrade surface or groundwater quality, and a significant impact (Impact HYDRO-1a) will occur. The potential for erosion and pollutant discharge would increase during construction as a result of vehicles, heavy equipment and general earth work accelerating the erosion process. Wind erosion has the potential to occur on bare soils or where vehicles and equipment cause dust. Fuels, oils, lubricants, or other hazardous substances and waste used and/or generated during construction have the potential to be released and further impact water quality. The Project would be required to prepare and implement a SWPPP to employ numerous erosion control, sediment control, tracking control, materials and waste management, and inspection and maintenance BMPs to minimize the potential for erosion, sedimentation and water quality impacts related to the grading and construction process. During construction the Project has the potential to violate a water quality standard or waste discharge requirement, and will have a significant impact (Impact HYDRO-1b).

Post-construction, the Project would introduce impervious surfaces and new sources of pollutants from urban runoff. Impervious site features consist of sales and administrative building, service building, private carwash, associated access drives, presentation area, staging area, sales display area, and a customer and employee parking lot. During operation the Project has the potential to violate a water quality standard or waste discharge requirement, and will have a significant impact (Impact HYDRO-1c).</td><td>Water Quality Standards (Impact HYDRO-1a, 1b, and 1c) and Potential for Erosion (Impact HYDRO-2)

MM-HYDRO-1 The Project shall incorporate permanent source control BMPs as identified in the Project SWQMP such as the following:

<table>
<tr><th>BMP Type</th><th>Inspection Frequency</th><th>Summary of Maintenance Activity</th></tr>
<tr><td>Prevention of Illicit Discharges Into MS4</td><td>Continuous</td><td>A grease trap has been incorporated into the Utility Plan and dumping of grease down the storm drain is prohibited. Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
	ground cover to the maximum extent possible, and include landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to storm water pollution. Fire Sprinkler Test Water: Fire sprinkler test water shall be drained to sanitary sewer system. During a fire sprinkler test, the fire riser discharge shall be connected by a hose to the sewer cleanout. Miscellaneous Drain or Washwater: Boiler drains shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain. Plazas, Sidewalks, and Parking Lots: Sweep regularly to prevent accumulation of litter and debris, debris from pressure washing must be collected to prevent entry into the storm drain system. **MM-HYDRO-2** An onsite private underground proprietary BMP in the form of an underground detention system shall be designed and constructed per the Project SWQMP in accordance with the RWQCB and City of Oceanside BMP Design Manual. Storm water shall be conveyed via underground pipes from various parts of the Project Site through water quality measures and into the underground detention system. **MM-HYDRO-3** Low Impact Development (LID) and Site Design BMPs shall be incorporated into the Project design to reduce impacts to water quality. The contractor shall construct the LID BMPs in accordance with the Project SWQMP and the engineer of work shall inspect that all LID BMPs have been constructed in compliance with the approved plans and all applicable specifications and permits. The widening of Plaza Drive shall be treated via a green streets approach with the construction of swales behind sidewalks to treat runoff for water quality and hydromodification purposes.	
Threshold b: Due to the depth of groundwater and the proposed use and development of the Project, the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge, such that the Project may impede sustainable groundwater management of the basin, and impacts are **less than significant impact.**	No mitigation required.	Less than significant impact.
Threshold c: The Project has the potential to result in exposed soils or changes in runoff that could result in erosion or siltation during the construction phase of the Project, and will have a **significant impact (Impact HYDRO-2)**. The Project would not alter existing drainage patterns onsite or increase net runoff after development. The Project would not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site, and impacts are **less than significant.** Additionally, the ultimate discharge points would remain the same. The Project would comply with all recommendations set forth in the Project SWQMP and Drainage Study which are designed in	See mitigation measures MM-HYDRO-1, MM-HYDRO-2, and MM-HYDRO-3 above.	Mitigated below a level of significance.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
compliance with the San Diego Water Board and City BMP Design Manual. The Project would not create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff, and impacts are **less than significant.** The total net reduction of peak flows to Buena Vista Creek from pre- to post-development conditions would be approximately 2.60 cfs. Therefore, the Project would not substantially alter the existing drainage pattern of the Project Site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces in a manner which would impede or redirect flood flows, and impacts are **less than significant.**		
Threshold d: The southern portion of the Project Site lies within Zone X of the FEMA 500-year floodplain and Zone AE of the 100-year floodplain (FEMA FIRM Panel 06073C0758G effective 5/16/19). The Project Site is not located immediately adjacent to any lakes or confined bodies of water and therefore, the potential for a seiche to affect the Project Site is considered low. In flood hazard, tsunami, or seiche zones, the Project would not risk release of pollutants due to Project inundation, and impacts are **less than significant.**	No mitigation required.	Less than significant impact.
Threshold e: The Project Site is not located within a basin that requires a designated groundwater sustainability plan. Thus, the Project would not conflict with a sustainable groundwater management plan. The Project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan, and impacts are **less than significant.**	No mitigation required.	Less than significant impact.
Land Use and Planning (See Section 4.12 for the complete analysis of Land Use and Planning)		
Threshold a: The Project Site is located in a primarily developed, urbanized area. The Project proposes a concrete sidewalk along the Project frontage on both sides of Plaza Drive, where currently a dirt path is being used to cross the Project frontage from the existing commercial center to the west to the DMV to the east. The proposed sidewalk, associated landscaping, and proposed pedestrian ramps would assist in the safe movement connection for the existing established community. The Project would also provide bicycle lanes on both sides of Plaza Drive along the Project frontage to further allow for connections to the surrounding community. The Project would not physically divide an established community, and therefore **no impact** will occur.	No mitigation required.	No impact.
Threshold b: The Project does not require a change to the CC zoning designation. The Project will require issuance of a CUP in compliance with Section 1120 of the Zoning Ordinance in order to allow for the use of vehicle sales, service stations and automobile washing under the CC zone. The Project would not conflict with the City of Oceanside Zoning Ordinance.	See mitigation measures MM-BIO-1a through MM-BIO-7, above.	Mitigated below a level of significance.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
Table 4.12-1 provides the City's applicable General Plan Land Use Element objectives and policies followed by a land use consistency analysis with regard to each policy. The Project would not conflict with a General Plan Land Use Element Policy. Although the Project was designed to comply with the measures outlined in the MHCP and the Subarea Plan, the Project has the potential to result in significant impacts to sensitive plant species and vegetative communities, jurisdictional resources, *Brodiaea* species, fairy shrimp, coastal California gnatcatcher, least Bell's vireo, and other MBTA-covered species. The Project would result in unavoidable direct impacts to disturbed Diegan coastal sage scrub which will be considered a **significant impact** (**Impact LU-1)**. As shown in **Table 4.12-2**, the Project would not conflict with the applicable policy objectives of the Regional Plan. No significant impacts to air quality have been identified and no mitigation is required, and impacts related to a regional air quality plan will be **less than significant.**		
Noise (See Section 4.13 for the complete analysis of Noise)		
<u>Threshold a:</u> As displayed in **Table 14.4-3**, if all equipment were working in the same area, at a distance as close as 330 feet, at worst case scenario, Project construction would result in an eight-hour average of 66 dBA at the property line. Construction equipment for the Project would not operate any construction equipment at a level in excess of 85 dBA at 100 feet from the source in accordance with the City standard. In absence of a City standard for property line construction noise the City relies on the County of San Diego standard of 75 dBA L_{eq}. The Project would also meet the County's standard for construction activities at or beyond a property line not to exceed 75 dBA. Project construction would not generate a substantial temporary increase in ambient noise levels in excess of local standards, and impacts are **less than significant**. Based on the information in **Table 4.14-4**, property line noise levels would result in 41.3 dBA and would not exceed the City's property line noise standards for both commercial and residential uses. The Project would not generate substantial permanent increase in ambient noise levels in the vicinity of the Project in excess of local standards, and impacts related to operational noise are **less than significant.** The Project would result in an increase in the noise levels by less than 0.5 dBA. Therefore, the anticipated traffic volumes as a result of the Project would increase, but not in the amount resulting in an increase of 3 dBA or greater. Impacts related to off-site transportation impacts are **less than significant.** The Project would not generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the General Plan or Noise Ordinance, or applicable standards of other agencies. Impacts are **less than significant.**	No mitigation required.	Less than significant impact.
<u>Threshold b:</u> Using the methodology prescribed by Caltrans, the ground vibration produced by a large bulldozer at the property line of the site to the nearest residence (330 feet) would produce a peak particle velocity	No mitigation required.	Less than significant impact.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
of 0.0019 ips PPV. Caltrans recommends a vibration velocity threshold of 0.2 ips PPV for assessing vibration impacts to occupants of residential structures. Therefore, the Project would not generate excessive groundborne vibration during construction activities. The Project would not generate excessive groundborne vibration or groundborne noise during construction, and impacts are **less than significant.** Once operational, the Project would include vibration and noise associated with used car sales, vehicle service work including a car wash, truck deliveries of vehicles parts and supplies and customer vehicle trips including customer test drives. Project operation would also include rooftop HVAC systems on the sales and service buildings. Operation activities related to the sales and service buildings and carwash are not uses typically associated with excessive groundborne vibrations. Impacts related to operational groundborne vibration and noise will be **less than significant.**		
Threshold c: No private airstrips are located within the vicinity of the Project Site. The Project is located approximately 4.2 miles southeast of the Oceanside Municipal Airport; however, the Project Site is not located within the Oceanside Municipal Airport Influence Area or any of the safety zones displayed in the Oceanside Municipal ALUCP. The Project is not located within the vicinity of a private airstrip or an airport land use plan and therefore would not expose people residing or working in the project area to excessive noise levels, and therefore, **no impact** will occur.	No mitigation required.	No impact.
Population and Housing (See Section 4.15 for the complete analysis of Population and Housing)		
Threshold a: The Project does not include the construction of any new residential development. The Project would serve existing residences in the region and is unlikely to cause significant growth due to the nature of the development. Therefore, implementation of the Project would not directly or indirectly induce substantial unplanned population growth in the area, and **no impact** will occur.	No mitigation required.	No impact.
Threshold b: The Project would construct a CarMax pre-owned automobile facility on a vacant parcel located in a developed area surrounded primarily by residential and commercial developments. The Project would not displace substantial numbers of existing housing or people necessitating the construction of replacement housing elsewhere, and **no impact** will occur.	No mitigation required.	No impact.
Public Services (See Section 4.16 for the complete analysis of Public Services)		
Threshold a: *Fire Protection* The Project would contribute to all required development impact fees in accordance with the City's current requirements, a portion of which would go towards funding fire protection services in the City. The Project will be reviewed by OFD to ensure that the Project meets all requirements related to access, fire hydrants and setbacks and would comply with all conditions set forth for Project approval. Existing fire protection services are adequate to serve the Project and the need for new or altered fire protection facilities is not expected. The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the	No mitigation required.	Less than significant impact.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
construction of which could cause significant environmental impacts, and impacts are **less than significant impact**. *Police Protection* OPD has existing staff levels adequate to meet current demands for police protection in this area and does not foresee any unique law enforcement problems associated with this Project, and OPD does not anticipate the need to hire additional officers in order to provide services for the Project (Armijo, 2020). Additionally, OPD anticipates that the Project would not have an impact on response times (Armijo, 2020). The Project is not anticipated to negatively impact OPD's ability to provide adequate services or OPD response time goals. Additionally, the Project would contribute to all required development impact fees in accordance with the City's current requirements, a portion of which go towards funding police services in the City. Existing police protection is adequate to serve the proposed automobile retail facility and the need for new or altered police protection facilities is not expected. The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, and impacts are **less than significant impact**. *Schools* The Project is a commercial development for a pre-owned automobile dealership and would not construct housing that is expected to result in the generation of additional school aged children which would require the provision of new or physically altered school facilities. Additionally, the Project would contribute to all required development impact fees for schools in accordance with the City's current requirements, which go towards funding school facilities in the City. The current impact fee for schools required for a commercial Project in the Carlsbad School District is $0.61 per square foot. The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, and **no impact** will occur. *Parks* The Project is a commercial development for a pre-owned automobile dealership and would not result in the addition of any residents that require the use of existing neighborhood or regional parks or other recreational facilities, nor would it require construction of new or physically altered park facilities. Therefore, the Project would not be subject to the payment of park land dedication fees. The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, and **no impact** will occur. *Other* There are no other public services, facilities, or infrastructure anticipated to be required or impacted due to the construction and operation of the Project, and **no impact** will occur.		
Recreation (See Section 4.17 for the complete analysis of Recreation)		
Threshold a:	No mitigation required.	Less than significant impact.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
The Project is a commercial facility and although the number of people visiting the site would increase compared to existing conditions, due to the nature of the development, and the fact it does not encourage population growth, the Project would not increase the use of existing neighborhood and regional parks or other recreational facilities. It is typically residential projects that result in an increase in demand on parks and recreation facilities. Additionally, the Project would pay all appropriate development fees, a portion of which would go towards funding of park and recreation facilities in the City. Therefore, the Project would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility will occur or be accelerated, and the impacts are **less than significant.**		
Threshold b: The Project Site is currently vacant and does not include recreational facilities. The Project does not include residential development that would increase long-term populations in the Project vicinity leading to an increased use of recreational facilities. The development of the CarMax Project would not require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment, and **no impact** will occur as a result.	No mitigation required.	No impact.
Transportation (See Section 4.18 for the complete analysis of Transportation)		
Threshold a: Prior to issuance of occupancy permits, the following roadway improvements would be completed as part of the Project to the satisfaction of the City Engineer: • Widen Thunder Drive along the Project frontage into the Project Site. Parking shall be restricted along the Project frontage side of Thunder Drive between the two Project driveways. • Widen Plaza Drive along the Project frontage to the General Plan classification of a Secondary Collector. The Applicant shall stripe this segment with three (3) travel lanes (two eastbound lanes and one westbound lane). • Provide a center two-way left turn lane on Plaza Drive in order to match the existing westbound single travel lane configuration adjacent to the DMV. • Install sidewalks on both sides of Plaza Drive along the Project frontage. • Include striping for bike lanes on both sides of Plaza Drive along the Project frontage. **General Plan Consistency** **Table 4.18-2** provides the Project's consistency with applicable policies and implementation strategies provided in the Circulation Element Master Transportation Roadway Plan. The Project would not conflict with any applicable policies of the Circulation Element and impacts are **less than significant.** **Multi Modal Transportation** Existing pedestrian infrastructure from College Boulevard to Thunder Drive were analyzed and deficiencies were found on the north side of Plaza Drive from the Project Site east to Thunder Drive where the north side is missing sidewalk infrastructure. The Project would include widening	No mitigation required.	Less than significant.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
improvements along Plaza Drive and would include installation of sidewalks on both sides of Plaza Drive along the Project frontage, where sidewalks did not previously exist. The LTS bicycle analysis included the assessment of bicycle facilities in the vicinity of the Project. The Project would include widening improvements along Plaza Drive which would include bicycle lanes on both sides of the street along the Project frontage, where bicycle lanes did not previously exist. No transit improvements are required as part of the Project. Bus service operations and frequency are provided in **Table 4.18-5.** The Project would not conflict with the City's General Plan Circulation Element or other plans related to multi-modal transportation systems. The Project would not conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, bicycle and pedestrian facilities and therefore will have a **less than significant impact.**		
Threshold b: The project will generate 475 ADT (18 AM peak hour trips (11 inbound and 7 outbound) and 50 PM peak hour trips (31 inbound and 19 outbound). The Project is designated as CC by the General Plan and no change to the General Plan designation is required. In accordance with screened out project type #20 provided in **Table 4.18-3**, the Project is consistent with the adopted General Plan and will generate less than 1,000 ADT, and is therefore screened out from a transportation VMT analysis. The Project would not conflict or be inconsistent with CEQA Guidelines Section 15064.3 subdivision (b), and therefore impacts are **less than significant.**	No mitigation required.	Less than significant impact.
Threshold c: Driveways proposed along Plaza Drive and Thunder Drive would be consistent with the City's Engineers Design and Processing Manual which includes driveway standards to provide safe geometric designs and line of sight for drivers, pedestrians and bicyclists. OFD has reviewed the Site Plan details to ensure that fire truck access roadways meet City standards. Fire lanes within the customer and employee and sales display parking lots have been designed and reviewed by OFD and provide adequate width, turn-around radius and access to the building. The Project would not substantially increase hazards due to a geometric design feature or incompatible use, and impacts will be **less than significant.**	No mitigation required.	Less than significant impact.
Threshold d: Emergency access to the Project Site would be provided by the two (2) driveways located off of Thunder Drive and the driveway off Plaza Drive. A Knox Box would be provided at the Plaza Drive security gate and control island as well as in the building lobby and would provide access to all gates and doors onsite. The Phase II sales display area would also have a Knox Box located at the security gate and control island. The OFD has reviewed the proposed Site Plan details to ensure that fire truck access roadways meet City standards and that access would be provided to all sides of the structure. The Project would comply with the CFC and the OMC requirements which are intended to ensure adequate emergency access. Project roadway improvements along Plaza Drive and Thunder Drive would improve circulation along the surrounding roadways of the Project Site and therefore would improve emergency access in the surrounding areas of the Project Site. The Project would meet or exceed such requirements and therefore, the Project would not result in inadequate emergency	No mitigation required.	Less than significant impact.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
access, and impacts will be **less than significant.**		
Tribal Cultural Resources (See Section 4.19 for the complete analysis of Tribal Cultural Resources)		
Threshold a: No cultural resources were identified in the Project area during the pedestrian survey and no cultural resources have been previously recorded within the Project area. The record search of the Sacred Lands File held by the NAHC had negative results. Based on the data and information obtained, there is a low potential for impacts to cultural resources associated with implementation of the Project. However, due to the Project's proximity to Buena Vista Creek the potential for buried cultural resources within alluvial deposits along the creek exists. Therefore, the Project will result in a **significant impact (Impact TCR-1a)**.	Mitigation measure MM-CUL-1a through MM-CUL-1h, identified above in this table, will reduce this impact to below a level of significance.	Mitigated below a level of significance.
Threshold b: Consultation and coordination has been initiated with the culturally-affiliated tribes to identify any potential tribal cultural resources located onsite or in the Project vicinity. Consultation coordination indicated that the Project is located in the territory of the Rincon Band of Luiseño Indians and is within the Bands specific Area of Historic Interest (AHI) and is therefore traditionally and culturally affiliated to the Project area. Embedded in the Luiseño territory are Rincon's history, culture and identity. Considering this information, there is potential for the discovery of unknown tribal cultural resources during Project grading activities, and therefore a **significant impact** will occur (**Impact TCR-1b**).	See mitigation measures MM-CUL-1a through MM-CUL-1h identified above in this table.	Mitigated below a level of significance.
Utilities and Service Systems (See Section 4.20 for the complete analysis of Utilities and Service Systems)		
Threshold a: **Water** As part of the proposed off-site improvements, the Project would connect to existing water infrastructure in the vicinity and the construction of onsite and off-site water infrastructure would be required to serve the Project. A new 2-inch domestic water service line would run east to west along the middle of the southern parcel of the Project Site. The Project would also include a 1-inch irrigation meter and 1-inch backflow on the south side of Plaza Drive, west of the test drive-only driveway and security gate. A ¾-inch irrigation meter and ¾-inch backflow would be provided on the north side of Plaza Drive east of the driveway and security gate. These onsite water infrastructure improvements are considered within the Project footprint, as described in the Project Description (Section 3.0 of this EIR). These onsite water infrastructure improvements do not result in any new Project-footprint related impacts beyond those already disclosed in this document. Off-site Project improvements would include the extension of the existing 10-inch water line west of the Project Site and would provide a 12-inch PVC water main along Plaza Drive that would run across the Project frontage and the DMV and would be looped to Thunder Drive. The construction related activities to install this infrastructure was included in the air quality, GHG and noise analysis of this EIR (see Section 4.4, Section 4.8 and Section 4.14) and construction related air quality and GHG emissions are less than significant. Similarly, construction related noise impacts are less than significant. These off-site improvements would be located within already disturbed/developed areas and would not result in impacts to sensitive resources. Impacts related to construction of these off-site water improvements are **less than significant.**	No mitigation required.	Less than significant impact.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
Further, as part of the entitlement application review process, the City of Oceanside Water Utilities Department has reviewed the Project and has provided a letter stating that: "As part of this [entitlement] process, any off-site improvements to the City's water and sewer systems that are necessary to accommodate the proposed Project must be identified and included as part of the development. Once the entitlement process is complete, the flow and capacity allowances will be set aside for the approved project." **Wastewater Treatment** The Project would connect to existing sewer infrastructure in the vicinity. The Project would realign the existing sewer mains and would construct a new 12-inch and new 21-inch PVC sewer main that would run along the southern portion of the site, south of the sales and staging and customer and employee parking lots, and would connect to existing sewer to the west and to the east in Thunder Drive. The existing 12-inch and 21-inch sewer mains located directly north of the proposed sewer mains would be abandoned. An existing sewer easement for the City runs east to west along the southern portion of the Project Site is to be relocated in line with the proposed sewer realignment. The existing sewer easement that runs north to south on the eastern portion of the site is to be vacated. The sewer realignment would encroach approximately six (6) feet into a small portion of the 50-foot planning buffer. This is a temporary impact and was analyzed in Chapter 4.5 *Biological Resources.* As detailed in Section 4.5.4, temporary direct impacts will occur to approximately 0.008 acre (334 SF) of disturbed habitat within the planning buffer. These impacts are considered temporary as they would recover on their own within one growing season. Additionally, because these impacts are minimal and occur to disturbed habitat, and because they are located at least 94 feet from the riparian habitat, no direct significant impacts will occur. As part of the Project review process, the City of Oceanside Wastewater Division of the Water Utilities Department reviewed the Project and has provided a letter stating that: "As part of this [entitlement] process, any off-site improvements to the City's water and sewer systems that are necessary to accommodate the proposed project must be identified and included as part of the development. Once the entitlement process is complete, the flow and capacity allowances will be set aside for the approved project." Impacts related to the construction or relocation of new or expanded wastewater facilities will be **less than significant.** **Storm Water Drainage** As discussed in Chapter 4.11 *Hydrology and Water Quality,* storm water drainage facilities would be located entirely onsite. The northern parcel would be constructed solely of permeable material and runoff from the southern parcel would be treated via an underground proprietary BMP. The Project would not create or contribute runoff which would exceed the capacity of an existing or planned storm water drainage system. The construction related activities to install this infrastructure was included in the air quality, GHG and noise analysis of this EIR (see Section 4.4, Section 4.8 and Section 4.14) and construction related air		

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
quality and GHG emissions are less than significant. Similarly, construction related noise impacts are less than significant. The environmental effects of installing these facilities have been evaluated within this EIR and these improvements are included within the Project development footprint. These onsite storm water infrastructure improvements are considered within the Project footprint, as described in the Project Description (Section 3.0 of this EIR). These onsite storm water infrastructure improvements do not result in any new project-footprint related impacts beyond those already disclosed in this document. Impacts related to the construction or relocation of new or expanded storm water drainage facilities will be **less than significant.** **Gas, Electric Power, and Telecommunication Facilities** The 8-inch fire water supply and gas and water services would run south of the sales and administration building through the customer and employee parking lot. New electrical services and telephone lines would run east to west through the customer and employee parking lot. The construction related activities to install this infrastructure was included in the air quality, GHG and noise analysis of this EIR (see Section 4.4, Section 4.8 and Section 4.14) and construction related air quality and GHG emissions are less than significant. Similarly, constriction related noise impacts are less than significant. The environmental effects of installing these facilities have been evaluated within this EIR and these improvements are included within the Project development footprint. These onsite gas, electric and telecommunications infrastructure improvements are considered within the Project footprint, as described in the Project Description (Section 3.0 of this EIR). These onsite energy and telecommunications infrastructure improvements do not result in any new Project-footprint related impacts beyond those already disclosed in this document. Impacts related to the construction or relocation of new or expanded gas, electric power, or telecommunication facilities will be **less than significant**.		
Threshold b: The anticipated water demand for the Project is 200,000 to 300,000 gallons per year based on the water usage of existing CarMax facilities in the region of similar size. A Water Supply Assessment pursuant to SB 610 is not required for the Project as it does not propose the construction of 500 residential units, or development with an equivalent water demand. The UWMP considered the City's planning documents (e.g., General Plan), regional planning documents, and the SANDAG Series 13 Growth Forecast in determining future water demand. Water demand assumptions for the Project Site in the 2015 UWMP would have been based on a commercial land use, since that was the land use designation at the time the UWMP was prepared. The Project Site still has a commercial land use designation and no change in land use or zoning is required as part of the Project. The Project would be in compliance with the Zoning Code and General Plan designations and therefore water demand for the Project has been planned for in the City and regional water supply documents that are based on the buildout of the City. There would be sufficient water supplies available from the City Water Utilities Department to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. Impacts will be **less than significant**.	No mitigation required.	Less than significant impact.
Threshold c:	No mitigation required.	Less than significant impact.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
The Project would be anticipated to generate approximately 11,700 gpd of wastewater. The 2015 SMP considers existing flow conditions as well as future growth projected by a number of specific near-term development projects and SANDAG's long-term (2050) regional growth projections. Wastewater demand assumptions for the Project Site in the SMP would have been based on a commercial land use, since that was the land use designation at the time the SMP was prepared. The Project Site still has a commercial land use designation, and no change in the land use or zoning is required as part of the Project. The Project is in compliance with the General Plan and Zoning Ordinance and therefore the Project's wastewater demand has been planned for in the City's wastewater system plans which are based on buildout of the City, as discussed above. Impacts related to adequate wastewater treatment capacity would be **less than significant**.		
<u>Threshold d:</u> The Project is estimated to generate a total of 37,603 pounds of solid waste annually. This estimate, however, does not account for landfill diversion that would result from recycling and waste reduction activities. Given the remaining lifespan of the El Sobrante Landfill and the Project's waste generation, the landfill would have sufficient permitted capacity remaining to serve the Project. Additionally, the Project would participate in the City's recycling programs which would further reduce solid waste being sent to the landfill. The Project would provide three (3) separate trash enclosures each properly labeled for solid waste, recyclable waste and organic waste as required by the City. The trash enclosures would contain a metal roof and would be placed behind corrugated metal panel gates. The Project is not expected to generate solid waste in excess of the capacity of local infrastructure or state or local standards, nor is it expected to impair the attainment of solid waste reduction goals, and impacts will **be less than significant**.	No mitigation required.	Less than significant impact.
<u>Threshold e:</u> In accordance with the City's adoption of the CALGreen Building Standards Code, a Waste Management Plan would be submitted to the City prior to the issuance of building permits. This Waste Management Plan would provide detail of how non-hazardous construction waste generated during the course of the Project would be recycled or salvaged for re-use at a minimum rate of 65%. Compliance with the City waste requirements would ensure compliance with all federal, state and local management and reduction statutes and regulations for solid waste, and impacts will be **less than significant**.	No mitigation required.	Less than significant impact.
Wildfire (See Section 4.21 for the complete analysis of Wildfire)		
<u>Threshold a:</u> The Project Site is not located in a very high fire hazard severity zone within the Oceanside Local Responsibility Area as mapped by CAL FIRE, and is not located within a SRA where CAL FIRE is the	No mitigation required.	Less than significant impact.

Summary of Impact	Mitigation Measure	Level of Significance After Mitigation
primary emergency response agency responsible for fire suppression and prevention. The Project would provide all required setbacks, fire truck access, fire hydrants, address numbers, sprinklers and an OPTICOM system on all gates in accordance with the OFD requirements. As provided in the Public Safety Element of the General Plan (Figure PS-11), SR-78 to the north, College Boulevard located to the west of the Project Site and Lake Boulevard to the south are the nearest evacuation routes. El Camino High School would be the nearest refuge center as provided in the Public Safety Element of the General Plan. With compliance of all Fire Department requirements, the Project would not impair an adopted emergency response plan or emergency evacuation plan, and impacts are **less than significant**.		
Threshold b: The Project Site is relatively flat and slopes gently south toward Buena Vista Creek. Elevations range from approximately 180 to 220 feet amsl. The Project Site is not located in a very high fire hazard severity zone within the Oceanside Local Responsibility Area as mapped by CAL FIRE, nor is the site located within a SRA where CAL FIRE is the primary emergency response agency responsible for fire suppression and prevention. Therefore, the Project would not exacerbate wildfire risks due to slope, prevailing winds and other factors and thereby expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire, and impacts are **less than significant**.	No mitigation required.	Less than significant impact.
Threshold c: No installation or maintenance of associated infrastructure such as roads, fuel breaks or emergency water sources, power lines or other utilities would be required for the Project that would exacerbate fire risk or that would result in temporary or ongoing impacts to the environment, and impacts are **less than significant**.	No mitigation required.	Less than significant impact.
Threshold d: FEMA Flood Insurance Rate Map (FIRM) panel 06073C0766G was also reviewed to determine if the site was located within an area designated as a Flood Hazard Zone. The southern portion of the Project Site lies within Zone X of the FEMA 500-year floodplain and Zone AE of the 100-year floodplain. Therefore, the Project would not expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability or drainage changes, and impacts are **less than significant**.	No mitigation required.	Less than significant impact.

CHAPTER 1.0 INTRODUCTION

1.1 Project Overview

This Draft Environmental Impact Report (EIR) is an informational document intended to inform public agency decision-makers and the general public of the significant environmental effects of implementation of the CarMax Auto Superstore project (Project), identify possible ways to minimize the significant impacts, and describe reasonable alternatives to the Project. The public agency decision-makers shall consider the information in the EIR, along with other information, which may be presented to the agency as part of the administrative record for informational purposes.

The Project would construct a CarMax pre-owned automobile dealership facility on an approximately 10.54-acre site located on two vacant parcels within the City of Oceanside, in San Diego County (Project Site). The northern parcel is bounded to the north by the east-bound lanes of State Route (SR) 78 and to the south by Plaza Drive on Assessor's Parcel Number (APN) 168-012-42-00. The southern parcel is located south of Plaza Drive and west of Thunder Drive on APN 168-012-43-00. The Project would include a sales building, service building, non-public carwash, presentation area, staging area, sales display area, customer and employee parking lot, landscaped areas, and associated access drives. The northern parcel would be used as an additional sales display area.

1.2 Purpose of the California Environmental Quality Act and the Environmental Impact Report

The California Environmental Quality Act of 1970 (Public Resources Code [PRC] Sections 1500 *et seq.) (*CEQA) was enacted by the California Legislature in 1970. As noted under State CEQA Guidelines Section 15002[1], CEQA has four basic purposes.

1. Inform governmental decision-makers and the public about the potential, significant environmental effects of proposed activities.
2. Identify the ways that environmental damage can be avoided or significantly reduced.
3. Prevent significant, avoidable damage to the environment by requiring changes in projects through the use of alternatives or mitigation measures when the governmental agency finds the changes to be feasible.
4. Disclose to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved.

The purpose of this EIR is to publicly disclose the significant effects of the proposed CarMax Project on the environment, to identify alternatives that would avoid or substantially lessen a significant effect, and to indicate the manner in which those significant effects can be mitigated or avoided, pursuant to CEQA Guidelines Section 15021, which requires a public agency to avoid or mitigate significant environmental impacts of projects it carries out or approves whenever it is feasible to do so. In instances where significant impacts cannot be avoided or mitigated, a project may nonetheless be carried out or approved if the approving agency finds, through a Statement of Overriding Considerations, that

[1] All references to CEQA Guidelines herein shall mean California Code of Regulations, Title 14, sections 1 5000 *et seq*.

economic, legal, social, technical, or other benefits outweigh the unavoidable significant environmental impacts.

1.3 Intended Uses of the Environmental Impact Report

This EIR has been prepared in conformance with the requirements of the CEQA Guidelines; and the rules, regulations, and procedures adopted by the City of Oceanside (City). As stated above, the purpose of the EIR is to evaluate potential environmental impacts associated with the development of the proposed CarMax Project. The City, in its role as Lead Agency, as defined by CEQA Guidelines Section 15051, has determined that an EIR is the appropriate environmental document for the proposed CarMax Project.

This EIR has been prepared as a "Project EIR", as defined in Section 15161 of the CEQA Guidelines. In accordance with CEQA, this EIR examines the environmental impacts of a specific development project, the proposed Project, and focuses on the physical changes in the environment that would result from the development of the Project. The EIR examines all phases of the Project including planning, construction, and operation.

In the event that any future Project-related actions require discretionary review, in accordance with CEQA Guidelines Sections 15162 through 15164, those actions would be examined in light of this EIR using a written checklist or similar device to determine whether the action is within the scope of the EIR, requiring no subsequent environmental documentation, or whether preparation of an additional CEQA document is required.

1.4 Scope and Content of the Environmental Impact Report

As the Lead Agency, the City is responsible for determining the scope and content of this EIR, a process referred to as "scoping." As part of the scoping process, the City considered the environmental resources present on the Project Site and in the surrounding area and identified the probable environmental effects of the proposed CarMax Project. On August 11, 2020 the City posted a Notice of Preparation (NOP) with the San Diego County (County) Clerk in accordance with Section 15082 of the CEQA Guidelines. The NOP was mailed to public agencies, organizations, and other interested individuals to solicit their comments on the scope and content of the environmental analysis. The NOP provided a general description of the proposed actions, a description of the Project area, and a preliminary list of potential environmental impacts.

In accordance with State-mandated pandemic regulations, a virtual public scoping meeting was held on August 26, 2020 at 6:00 p.m. to gather additional public input. The purpose of the meeting was to present the Project to the public through use of display maps, diagrams, and a presentation describing the Project components and potential environmental impacts. City staff and members of the local community attended the scoping meeting and/or submitted written comment during the public comment period. Scoping meeting attendees were provided an opportunity to voice comments or concerns regarding the potential effects of the Project. The NOP and comments received during the NOP comment period are included as **Appendix A** of this EIR and were considered as part of the preparation of this EIR. Comments received covered numerous topics including aesthetics, air quality, biological resources, energy, greenhouse gas emissions, hazardous materials, land use and planning, noise, public services, transportation and traffic, tribal cultural resources and vector control. The initial 30-day public scoping period concluded on September 10, 2020.

This EIR evaluates all subject areas listed in Appendix G of the CEQA Guidelines, which include the following: Aesthetics, Agriculture and Forestry Resources, Air Quality, Biological Resources, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Mineral Resources, Noise, Population and Housing, Public Services, Recreation, Transportation, Tribal Cultural Resources, Utilities and Service Systems and Wildfire.

Based on preliminary evaluation of the probable effects of the Project and a thorough review of the comments on the NOP, the EIR analyzes effects having potentially significant impacts related to the following:

- Biological Resources
- Cultural Resources
- Geology and Soils
- Hydrology and Water Quality
- Land Use and Planning
- Tribal Cultural Resources

During the scoping process, it was determined that there would be no impact or less than significant impacts to: Aesthetics, Agricultural and Forestry Resources, Air Quality, Energy, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Mineral Resources, Population and Housing, Public Services, Recreation, Transportation, Utilities and Service Systems and Wildfire. Although the environmental issue areas above were determined to have a less than significant impact or no impact, an analysis of each of these issue areas was provided for informational purposes. These topics are described in Chapter 4.0, *Environmental Analysis*, of this EIR and supported by analysis contained in the Project technical reports.

1.4.1 Draft EIR and Public Review

This Draft EIR was prepared under the direction and supervision of the City, as the Lead Agency. This draft EIR will be made available to members of the public, responsible agencies and interested parties for a 45-day public review period in accordance with CEQA Guidelines Section 15105.

Public review of the draft EIR is intended to focus on the sufficiency of the document in identifying and analyzing the possible impacts on the environment and ways in which the significant effects of the Project might be avoided or mitigated. The Notice of Completion (NOC) of the draft EIR will be filed with the State Clearinghouse as required by CEQA Guidelines Section 15085. In addition, the Notice of Availability of the draft EIR will be distributed pursuant to CEQA Guidelines Section 15087. Interested parties may provide comments on the EIR in written form. This EIR and related technical appendices are available for review during the 45-day public review period at the following locations:

City of Oceanside Planning Division Counter
Civic Center at 300 North Coast Highway, Oceanside, CA 92054

City of Oceanside website: https://www.ci.oceanside.ca.us/gov/dev/planning/ceqa/default.asp

Interested agencies and members of the public may submit written comments on the adequacy of the EIR to the City's Development Services Department at 300 North Coast Highway, Oceanside, California 92054, addressed to Richard Greenbauer, Principal Planner, or emailed to RGreenbauer@oceansideca.org. Comments on the Draft EIR must be received by the close of business on the last day of the 45-day public review period unless the City grants an extension.

1.4.2 Mitigation Monitoring and Reporting Program

CEQA requires that a lead agency adopt a reporting and mitigation monitoring program for changes to the project which it has adopted or made a condition of project approval in order to mitigate or avoid significant effects on the environment. The City, as the Lead Agency, is responsible for enforcing and verifying that each mitigation measure is implemented as required by the Mitigation Monitoring and Reporting Program (MMRP).

1.5 Organization of Draft Environmental Impact Report

The content and format of this Draft EIR are designed to meet the requirements of CEQA and CEQA Guidelines Article 9. **Table 1.5-1** summarizes the organization and content of the EIR.

Table 1.5-1
Document Organization and CEQA Requirements

Draft EIR Chapter	Contents
Chapter ES Executive Summary	Includes a brief summary of the proposed Project; identifies each significant effect, including proposed mitigation measures and alternatives to reduce or avoid the effect; identifies the areas of controversy known to the Lead Agency, including issues raised by agencies and the public; and summarizes the issues to be resolved, including the choice among alternatives and whether or how to mitigate the significant effects (CEQA Guidelines Section 15123).
Chapter 1 Introduction	Discusses the purpose of CEQA and this EIR, the scope and content of this Draft EIR, the organization of this EIR, and the intended uses for this EIR (CEQA Guidelines Section 15124 (d)).
Chapter 2 Environmental Setting	Describes the overall existing physical conditions in the vicinity of the Project when the analysis was initiated. In addition, the specific existing conditions for each resource area are described in the applicable resource section in Chapter 4.0, *Environmental Analysis* (CEQA Guidelines Section 15124 (a), (b), and (c)).
Chapter 3 Project Description	Contains both a map of the precise location and boundaries of the Project and its location relative to the region, lists the Project's central objectives and underlying purpose, and provides a detailed description of the proposed project's characteristics (CEQA Guidelines Section 15124 (a), (b), and (c)).

Draft EIR Chapter	Contents
Chapter 4 Environmental Analysis	Describes the existing physical conditions for each resource category, lists the applicable laws and regulations relative to the specific resource, describes the impact assessment methodology, lists the criteria for determining whether an impact is significant, identifies the direct and indirect significant impacts that would result from implementation of the Project, and lists feasible mitigation measures that would eliminate or reduce the identified significant impacts.
Chapter 5 Cumulative Impacts	Describes the potential cumulative effects of the Project, defines the cumulative study area for each resource category, determines the effects of past, present, and reasonably foreseeable future projects within each study area if the cumulative study area is cumulatively significant, and evaluates the contribution of the proposed CarMax Project to contribute to a cumulatively significant impact (CEQA Guidelines Sections 15125-15126.4 and 15130). Cumulative impact refers to two or more individual effects that, when considered together, are considerable or that compound or increase other environmental impacts.
Chapter 6 Other CEQA Considerations	Addresses the Project's potential growth-inducing impacts, which could foster economic or population growth or the construction of additional housing, either directly or indirectly, in the surrounding environment; describes the significant irreversible changes associated with the Project's implementation; and addresses potential significant and unavoidable impacts associated with the Project.
Chapter 7 Alternatives to the Proposed Project	Describes a reasonable range of alternatives to the Project including the No Project Alternative, compares and contrasts the significant environmental impacts of alternatives to the Project, and identifies the environmentally superior alternative (CEQA Guidelines Section 15126.6).
Chapter 8 List of Preparers and Agencies Consulted	Lists the individuals and agencies involved in preparing the EIR (CEQA Guidelines Section 15129).
Chapter 9 References	Provides a comprehensive listing of all references cited in the EIR (CEQA Guidelines Section 15129).
Appendices	Presents additional background information and technical detail for several of the resource categories.
Figures and Tables	Displays important project information; figures include the precise location and boundaries of the proposed project along with the regional location. The Figures and Tables are located throughout the EIR.
List of Abbreviated Terms	A list of acronyms and abbreviations provided for the reader's reference,

Draft EIR Chapter	Contents
	provided in the Table of Contents of the EIR.

CHAPTER 2.0 ENVIRONMENTAL SETTING

2.1 Introduction

As required by Section 15125 of the CEQA Guidelines, this chapter of the EIR provides a description of the overall physical environmental conditions in the vicinity of the Project Site from both a local and regional perspective, as they existed at the time the NOP was published. This section also discusses the cumulative condition baseline consistent with Section 15130(b)(1)(B) of the CEQA Guidelines. Resource-specific existing conditions are provided within each individual resource section of Chapter 4.0 *Environmental Analysis* and Chapter 5.0 *Cumulative Analysis.* Chapters 4.0 and 5.0 also contain a Project consistency analysis with all applicable plans and policies.

2.2 Project Setting

2.2.1 Regional Setting

The Project is located within the City, which is located in the coastal zone of the northern portion of the County (**Figure 1**). The City is bound by the Pacific Ocean to the west, Camp Pendleton to the north, the City of Vista and unincorporated portions of the County to the east, and the City of Carlsbad to the south. Unlike the growing urban County region to the south, northern County has remained suburban and semi-rural over the years. Major features of the area include the beaches, Buena Vista Lagoon, the San Luis Rey River, and the open areas of Camp Pendleton. Regional access is provided from SR-78, College Boulevard and Plaza Drive.

T:\Project_Data\Carmax_Oceanside_1492\Final_Maps\EIR_Oct2020\CO_Fig-01_RegionalMap_100920.mxd

Regional Location

Miles 0 3 6

FIGURE 1

R·E·C Consultants, Inc. | CARMAX AUTO SUPERSTORE OCEANSIDE EIR

Source: SANGIS GIS Data, 2019. | October 2020

Climate

The local climate within the Project area is characterized as semi-arid with consistently mild, warmer temperatures throughout the year. The average summertime high temperature in the region is approximately 69 degrees Fahrenheit (˚F), with highs reaching 71˚F during the months of July through September. The average wintertime low temperature is approximately 46˚F, reaching as low as 45˚F during November through January. Average precipitation in the local area is approximately 10.28 inches per year with the majority of the precipitation falling December through March[2].

Air Basin

The Project Site is located within the San Diego Air Basin (SDAB) and is subject to San Diego Air Pollution Control District (APCD) guidelines and regulations. The SDAB is one of 15 air basins that geographically divide California. The SDAB lies in the southwest corner of California, comprises the entire San Diego region and covers approximately 4,260 square miles.

The climate of the County, as in most of Southern California, is influenced by the strength and position of the semi-permanent high-pressure system over the Pacific Ocean, known as the Pacific High. This high-pressure ridge over the West Coast often creates a pattern of late-night and early-morning low clouds, hazy afternoon sunshine, daytime onshore breezes, and little temperature variation year-round. The SDAB is characterized as a Mediterranean climate with dry, warm summers and mild, occasionally wet winters. Average temperature ranges (in ˚F) from the mid-40s to the high 90s, with an average of 201 days of warmer than 70˚F. The SDAB experiences 9 to 13 inches of rainfall annually, with most of the region's precipitation falling from November through March, with infrequent (approximately 10%) precipitation during the summer. El Niño and La Niña patterns have larger effects on the annual rainfall received in the County, where the County receives less than normal rainfall during La Niña years.

Air quality standards have been set pursuant to the federal and state Clean Air Acts, which are referred to as the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS). The favorable climate of the County also works to create air pollution problems. The SDAB has been determined to be in non-attainment of the federal and state ozone (O_3) air quality standards. In the fall months, the SDAB is often impacted by Santa Ana winds, which can transport air pollution from the South Coast Air Basin and increase O_3 concentrations in the County. Under certain conditions, atmospheric oscillation results in the offshore transport of air from the Los Angeles region to the County that also raises the O_3 concentrations within the SDAB. Due to this condition and the associated Clean Air Act requirements, Regional Air Quality Strategies have been developed to address the reduction of O_3 in the SDAB. Refer to Section 4.4 *Air Quality* for additional information regarding air quality in the SDAB.

[2] Western Regional Climate Center (WRCC). 2020. "Historical Climate Information". Accessed February 2020. https://wrcc.dri.edu/

2.2.2 Project Location

The Project Site is located in the southeastern portion of the City of Oceanside approximately seven (7) miles east of downtown Oceanside, south of SR-78, east of College Boulevard, and west of Thunder Drive (**Figure 2 and Figure 3**). The Project boundary encompasses approximately 10.54 acres on APNs 168-012-42-00 and 168-012-43-00. The Project Site is situated on two (2) vacant and undeveloped parcels. The northern parcel is approximately 1.12 acres and is bounded to the north by the east-bound lanes of SR-78 and to the south by Plaza Drive. An existing billboard is located on the eastern portion of this parcel. The southern parcel is approximately 9.42 acres and is located south of Plaza Drive and west of Thunder Drive. Direct access to the Project Site would be provided from two (2) access points on Thunder Drive. The proposed driveway off of Plaza Drive would be for test drives only and would not be accessible to the public.

The Project Site has been previously graded but no structures, roads or other improvements are located onsite. The southern parcel has occasionally been used for temporary seasonal purposes such as Christmas tree sales lot, Halloween pumpkin patch, dairy product sales and kids play land. Two (2) rectangular-shaped mounds of fill soil appear to have been placed on the eastern portion of the Project Site adjacent to Thunder Drive.

October 2020

2.2.3 Existing Conditions

Aerial Photographs

A Phase I Environmental Site Assessment was prepared by EnviroApplications, Inc. and is provided in **Appendix B**. As part of the site assessment, aerial photographs of the subject property and surrounding area were analyzed from 1928 to 2016. Photographs from 1928 to 1953 show the Project Site and surrounding areas appear to be open, hilly land in a rural ranching setting. The currently existing roadways are not yet present and appear to be covered with brush. Buena Vista Creek is clearly visible to the south in its natural channel. From 1964 to 1970 the subject property still appears to be open, brush-covered land. During this timeframe SR-78 has been constructed to the north. Further to the north beyond the freeway are what appear to be a hospital campus and a drive-in movie theater. Thunder Drive is present along the eastern boundary of the site and is unpaved. By 1967, the Project Site and properties to the east appear to have been graded. From 1979 to 1985 the Project Site appears to be vacant, graded with several trails crossing the Project Site. The homes in the residential neighborhood to the east across Thunder Drive have been constructed. Land along Buena Vista Creek to the south appears to have been graded to control flooding. The land to the west is still vacant and by 1985 the existing California Department of Motor Vehicles (DMV) facility is present. Aerial photographs from 1989 to 2016 show that the subject property and surrounding areas appear to be similar to the way they did during the site visit conducted by EnviroApplications, Inc. on July 29, 2019.

Topography

The topography of the subject property area is hilly. The land to the north of the Project Site is higher in elevation while the land to the south slopes downward toward Buena Vista Creek. Land to the east and west are similar in elevation. The Project Site has an approximate surface elevation of 194 feet above mean sea level (amsl) with elevations ranging from 180 feet to 220 feet amsl.

Surrounding Land Uses

The Project Site is located in a primarily developed area and is surrounded by commercial uses to the west, including the Tri-City Crossroads shopping center and auto services and part shops. To the east are medium density residential uses as well as a DMV facility at the corner of Plaza Drive and Thunder Drive. To the north is SR-78 and further north are professional commercial uses. To the south are Buena Vista Creek, high density and residential estate uses including a senior living facility, and commercial and public/semipublic uses including a City of Oceanside Fire Department (OFD) station.

Biological Resources

As stated in the Biological Technical Report prepared by Busby Biological Services (**Appendix D**), vegetation can primarily be categorized as Disturbed Land, characterized by maintaining a soil substrate but physically disturbed by human activity with little vegetation present. Small patches of disturbed Diegan coastal sage scrub are dispersed around the southern parcel of the Project Site, containing native plant species such as California sagebrush, black sage, and California buckwheat, but also a high proportion of non-native plant species such as black mustard, sweet fennel, and Russian thistle. Southern riparian forest vegetation, containing arroyo willow, mulefat, cattail, and various non-native species occurs along Buena Vista Creek in the southern portion of the Project Site. San Diego sagewort, a

sensitive plant species, was found adjacent to the site on the southern stream bank of Buena Vista Creek. Iceplant, ornamental trees, and ruderal vegetation are also found onsite. **Table 2.2-1** provides the existing vegetation communities and land cover types within the Project Site.

Table 2.2-1
Existing Vegetation Communities and Land Cover Types within the Project Area

Vegetation Community/ Land Cover Type	Subarea Plan Habitat Group	Within Parcels (acres*)	Within 50-foot Survey Buffer (acres*)	Total (acres*)
Disturbed Diegan Coastal Sage Scrub	C	0.448	0.003	0.451
Southern Riparian Forest	A	0.518	0.868	1.386
Open Water	A	0.018	0.035	0.054
Developed Land	-	0.455	2.184	2.639
Disturbed Land	F	8.109	0.542	8.650
Iceplant	F	0.454	--	0.454
Ornamental	F	0.138	0.302	0.440
Ruderal	F	0.841	--	0.841
TOTAL		**10.981***	**3.935****	**14.915****

*Acreages are approximate and rounded to the nearest thousandth of an acre.
** Total acreages represent the actual acreages without the rounded error.
Source: Biological Technical Report (Appendix D)

A total of 17 wildlife species were detected within the area surveyed during the biological resources survey conducted on July 22, 2019. Species detected are representative of the habitats within and adjacent to the survey area, and include cabbage white butterfly (*Pieris rapae*), western fence lizard (*Sceloporus occidentalis*), Anna's hummingbird (*Calypte anna*), western scrub-jay (*Aphelocoma californica*), spotted towhee (*Pipilo macalatus)*, house finch (*Carpodacus mexicanus frontalis*) and California ground squirrel (*Spermophilus beecheyi*). A list of wildlife species detected within the survey area is provided in the Biological Constraints Report (**Appendix E**).

Geology and Soils

The property lies within the Peninsular Ranges Geomorphic Province of Southern California. This province consists of a series of ranges separated by northwest trending valleys, subparallel to branches of the San Andreas Fault. The Peninsular Ranges geomorphic province, one of the largest geomorphic units in western North America, extends from the Transverse Ranges geomorphic province and the Los Angeles Basin, south to Baja California. It is bound to the west by the Pacific Ocean, to the south by the Gulf of California and on the east by the Colorado Desert Province. Regional geologic maps of the Project Site and vicinity indicate that the Project Site is underlain by late Pleistocene to Holocene Young Alluvial Flood Plain deposits. These deposits consist of poorly sorted sands, gravels, silts and clay that were deposited by the San Luis Rey River.

Subsurface materials encountered during a subsurface investigation conducted by EEI in September 2019 included artificial fill, Quaternary-aged alluvium, and Eocene-aged Santiago formation as discussed in the Geotechnical Evaluation prepared by EEI and provided as **Appendix H** of this document.

The Project Site is located within the coastal plain of Southern California. The Project vicinity is underlain by two intermixed formations, the Tujunga, consisting of old lacustrine beach and estuarine deposits of fine-grained silt, sand and clay and Tertiary age Terrace Escarpments consisting primarily of sandstone and conglomerate. Both formations are overlain with recent alluvium (sand, silt and clay) and deposited by Buena Vista Creek.

Drainage and Hydrology

Existing runoff from the northern parcel drains via overland flow to the southwest corner of the Project Site where it sheet flows over the existing berm and onto Plaza Drive. Runoff from the southern parcel drains south towards Buena Vista Creek with a small portion draining east over the sidewalk and curb and onto Thunder Drive. The Drainage Study prepared by REC Consultants, Inc. (**Appendix J**) analyzes existing and developed conditions for 100-year flowrates from the development to the existing points of discharge. The southern portion of the Project Site lies within Zone X of the Federal Emergency Management Agency (FEMA) 100-year floodplain (FEMA FIRM Panel 06073C0758G effective 5/16/19).

Buena Vista Creek runs along the southern portion of the Project Site from east to west, eventually connecting to Buena Vista Lagoon and the Pacific Ocean approximately four (4) miles west of the Project Site. Buena Vista Creek is classified as a freshwater forested/shrub wetland by the U.S. Fish and Wildlife Service's (USFWS) National Wetlands Inventory[3]. It is located within the Carlsbad Hydrologic Unit as identified by the San Diego Regional Water Quality Control Board (San Diego Water Board).

Storm water onsite appears to soak into the surface of the Project Site. No ditches or swales were observed onsite.

Groundwater was not encountered in any trenches at the time of a subsurface exploration to a depth of 15.5 feet below-ground-surface conducted by EEI in September 2019 (**Appendix H**).

Utilities

The City's Water Utilities Department provides sewer services the surrounding Project area. However, no laterals have been installed onsite. The Water Utilities Department also provides water supply services to the Project area. However, no landscaping or sprinklers were observed onsite. San Diego Gas and Electric (SDG&E) provides gas and electric services to the surrounding Project area but no utilities were observed onsite. Both the City and City of Vista sewer manholes and sewer mains are located at the southern portion of the Project Site.

2.3 Cumulative Project Setting

The study area for the cumulative impact analysis is based on existing projects under review, recently approved projects, and projects under construction and within an approximate two-mile radius from the Project Site. Due to the location of the Project Site at the southeast portion of the City, cumulative projects within the jurisdictions of the City of Carlsbad and City of Vista are also included. The cumulative projects analyzed are within the following geographic limits:

[3] U.S. Fish and Wildlife Service. October 2019. *National Wetlands Inventory Mapper.*

- Northern Boundary: Mesa Drive (between El Camino Real and College Boulevard)
- Eastern Boundary: Melrose Avenue (from Olive Lane to Cannon Road)
- Southern Boundary: Cannon Road (from El Camino Real to S Melrose Avenue)
- Western Boundary: S El Camino Real (from Mesa Drive to SR-78)

Pursuant to CEQA Guidelines Section 15130(b)(1)(A), and based on information provided by the City of Oceanside, City of Vista and the City of Carlsbad, a list of cumulative projects under consideration for this analysis is presented in **Table 2.3-1** and displayed in **Figure 4**. For the purposes of this Project cumulative analysis, projects which have been approved through the discretionary or building permit process, projects currently under City review and projects currently under construction are considered and are provided below.

Table 2.3-1
Cumulative Projects

#	Project Name	Location	Description	Status
City of Oceanside				
1	Arroyo Verde Commercial Center	North of Oceanside Boulevard and east of Rancho Del Oro Road	A 27,200-square foot commercial retail center	Under Construction
2	Coastal Academy	South of Oceanside Boulevard between El Camino Real and Rancho Del Oro Road	Development of a Junior and Senior High School Campus on a 9.68-acre site formerly occupied by the Evergreen Nursery	Under Review
3	Dolphin Carwash	East of El Camino Real and north of Via Las Rosas	Development plan for carwash and smog check facility on a 1.2-acre site	Under Review
4	El Corazon Mixed Use	North of Oceanside Boulevard between El Camino Real and Rancho Del Oro Road	Development Plan for 268 residential units and 4,756 SF of commercial space.	Under Review
5	El Corazon Specific Plan	North of Oceanside Boulevard between El Camino Real and Rancho Del Oro Road	Subdivision of the property into four lots including a Zone Amendment and Specific Plan Amendment.	Approved*
6	Arena Califino at El Corazon	North of Oceanside Boulevard between El Camino Real and Rancho Del Oro Road	A 170,000 SF multi-purpose sports arena, event facility within the El Corazon Specific Plan Area.	Under Review
7	Emerald Ridge	Southeast corner of Sky Haven Lane and Sunset Drive within the City of Oceanside; Emerald Drive and Sunset Drive located within the City of Vista	A 48-unit condominium project on a 7.78-acre site. The project would include nine townhome buildings, open space recreation areas and a sewer lift station. The project would install a storm drain in Sunset Drive/Emerald Drive within the City of	Approved*

#	Project Name	Location	Description	Status
			Vista jurisdiction.	
8	Home 2 Suites by Hilton	Rancho Del Oro Drive and El Corazon Drive	Development Plan for a four story, 137-unit hotel facility	Approved*
9	La Paloma Nursing Facility Expansion	East of Thunder Drive and south of Waring Road	A 1,780-square foot addition to the La Paloma Nursing Facility	Approved*
10	Left Coast LLC	Southwest corner of Oceanside Boulevard and Ord Way	A Conditional Use Permit for the operation of a medical cannabis manufacturing facility	Approved
11	Lot 15 Office Building	North of Ocean Ranch Boulevard off of Maritime Way	Development Plan for a 99,800-square foot office building with site improvements on a 4.22-acre site	Approved *
12	Pacific Coast Business Park Phase II	West of College Boulevard, south of Old Grove Road and east of Avenida Del Oro	Construction of three industrial buildings totaling 278,127 square feet on 17.57 acres	Under Construction
13	Seagate Shell Service Station	North of Oceanside Boulevard and east of Rancho Del Oro Road	A proposed gas station with convenience store, manager's office and carwash	Under Review
14	Tri-City Medical Office Building and Parking Structure	North of Vista Way and west of Thunder Drive	A three-story parking structure within the existing Tri-City Hospital property. The project includes a 60,000 SF medical office building. As provided in the Local Transportation Study (**Appendix O**), the building construction is completed however; the building was not occupied during the traffic data collection period. Therefore, it is included as a cumulative project.	Approved*
15	Pacific Ridge at Old Grove	Northwest corner of College Boulevard and Old Grove Road	Development of 320 residential units on a 28.2-acre site.	Under Construction
City of Vista				
16	Assi Retail	North of West Drive West of Emerald Drive	Site Development Plan for a 9,790 square foot commercial building	Under Review
17	Cedar Road Townhomes	206 Cedar Road	35 attached residential condominiums on a 2-acre site	Under Review
18	Classic Chariots Service Center	129 Grapevine Road	14,522-square foot automobile service center and expansion of existing used car dealership on a 1.45-acre site.	Approved
19	Hacienda Retail	Southwest corner of Hacienda Drive and La Tortuga Drive	Site Development Plan for a 3,200-square foot retail building	Under Construction
20	Laurel Creek	North of Date Street,	68 detached condominium units on	Under

#	Project Name	Location	Description	Status
	Condominiums	east of Grapevine Road, and west of Durian Street	9.2 acres	Construction
21	Olive Avenue Annexation	1435 Olive Avenue	Annexation and Tentative Subdivision Map for 15 lots	Approved
22	Shell Gas Station Renovations	145 N. Emerald Drive	Building additions and renovations and for new services (smog check and car detail)	Under Review
23	Vista Emerald	729 N Emerald Road	27 detached single-family residences on 6.89 acres	Under Construction
City of Carlsbad				
24	Marja Acres	4901 El Camino real	State Density Bonus Residential for the development of 248 townhomes, 46 affordable units for seniors, and 10,000 SF of retail and restaurants with community recreation areas on 20.65 acres	Under Review
25	Quarry Creek Master Plan	South of Haymar Drive and west of College Boulevard	A master plan community with up 656 homes	Under Construction
26	The Shops at Robertson Ranch	El Camino Real and Cannon Road	Includes six retail buildings subdivided into five lots and would include banks, restaurants a private educational facility/ day care	Under Review
*Projects designated as Approved are approved through either the discretionary or building permit process.				

The cumulative setting is specific to each environmental resource because spatial boundaries and temporal timeframes can often vary by resource or issue area. For example, the cumulative impact analysis area for air quality would include the larger air basin, while environmental resources like biological and cultural resources tend to have localized cumulative impact analysis areas. A summary of cumulative setting related to each environmental resource is presented within the specific resource section in Chapter 4.0 *Environmental Analysis.*

December 2020

2.4 Cumulative Methodology

According to Section 15130(b) of the State CEQA Guidelines, a cumulative impact analysis may be conducted using one of two methods. The List Method, which includes "a list of past, present, and probable activities producing related or cumulative impacts"; or the Summary-of-Projections Method, which uses "a summary of projections contained in an adopted general plan or related planning document, or in a prior environmental document which has been adopted or certified, which described or evaluated regional or area wide conditions contributing to the cumulative impact." The cumulative analysis for the Project will utilize the List Method. Cumulative Impacts are further analyzed and discussed in Chapter 5.0 *Cumulative Analysis*.

CHAPTER 3.0 PROJECT DESCRIPTION

3.1 Introduction

The Project proposes the construction of a CarMax pre-owned automobile dealership on a vacant, approximately 10.54-acre site, situated on two (2) parcels (APNs 168-012-42-00 and 168-012-43-00). Phase I of the Project would consist of a sales and administrative building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area, sales display area, and a customer and employee parking lot on the southern parcel. The northern parcel would be used as an additional sales display area with a security gate and control island and would be developed as part of Phase II of the Project. **Table 3.1-1** below displays all proposed building areas and square footages.

Table 3.1-1
Proposed Building Areas

Building Area	Square Footage (SF)
Sales and Administration	5,005 SF
Presentation	1,197 SF
Service	4,309 SF
Carwash	936 SF
Total	**11,447 SF**

This chapter provides the project background, objectives, and characteristics and necessary Project approvals.

3.2 Project Site Characteristics

Based on reviews of historical records and aerial photographs beginning in 1938 conducted by ASM Affiliates as part of the Archaeological Survey Report **(Appendix G**), the property was left undisturbed besides a road running along its western portion until 1964, at which time a road running east-west appeared along the southern portion of the Project Site parallel to Buena Vista Creek. A 1967 photograph shows the Project Site was graded in conjunction with the construction of SR-78. The 1990 photograph shows the Project Site in a similar condition as it is currently.

Both parcels that comprise the Project Site are vacant and undeveloped. The northern parcel contains an existing billboard located at the eastern corner of the parcel, which will remain in place during construction and operation of the Project. No existing structures or roads are located onsite. The Project Site is located in a primarily developed area and is surrounded by commercial uses to the west, including a shopping center and auto repair shops. To the east are medium density residential uses as well as a DMV facility at the corner of Plaza Drive and Thunder Drive. To the north is SR-78 and further north are professional commercial uses. To the south are Buena Vista Creek, high density and residential estate uses including a senior living facility, and commercial and public/semipublic uses including an OFD station.

As stated in the Biological Resources and Constraints Report prepared by Busby Biological Services and included in this EIR as **Appendix E,** vegetation can primarily be categorized as disturbed land, characterized by maintaining a soil substrate but physically disturbed by human activity with little

vegetation present. Small patches of disturbed Diegan coastal sage scrub are dispersed around the southern parcel of the Project Site, containing native plant species such as California sagebrush, black sage, and California buckwheat, but also a high proportion of non-native plant species such as black mustard, sweet fennel, and Russian thistle. Southern riparian forest vegetation, containing arroyo willow, mulefat, cattail, and various non-native species occurs along Buena Vista Creek in the southern portion of the Project Site. San Diego sagewort, a sensitive plant species, was found adjacent to the site on the southern stream bank of Buena Vista Creek. Iceplant, ornamental trees, and ruderal vegetation are also found onsite.

The southern portion of the Project Site lies within Zone X of the FEMA 500-year floodplain and Zone AE of the 100-year floodplain (FEMA FIRM Panel 06073C0758G effective 5/16/19). A 100-foot riparian buffer runs east to west along the southern portion of the Project Site and includes a 50-foot biological buffer as well as a mandatory 50-foot planning buffer.

The Project is anticipated to encroach approximately six feet into a small portion of the 50-foot planning buffer for the sewer realignment. Temporary impacts will occur to approximately 0.0008 acre (344 SF) of disturbed habitat within the planning buffer. Due to the small size of the impacts and the distance from the riparian habitat (94 feet), no direct impact to riparian habitat is anticipated.

The Project Site has a zoning and land use designation of Community Commercial (CC) as identified in the City of Oceanside Zoning Ordinance (Zoning Ordinance) and City of Oceanside General Plan (General Plan). No change to the Zoning Ordinance or General Plan is required.

3.3 Project Objectives

CEQA Guidelines (Section 15124 (b)) require that the project description shall contain a statement of the objectives sought by the project and should include the underlying purpose of the project.

The primary objectives of the Project are as follows:

4. Construct and operate a retail commercial facility providing local residents with convenient access to an automobile sales center and related services.

5. Develop a thoughtfully designed, visually appealing automobile sales facility that is aesthetically compatible with surrounding development.

6. Positively impact local economy by creating employment opportunities and generating tax revenue.

3.4 Project Characteristics

Project Overview

The Project requires approval of a Development Plan and Conditional Use Permit (CUP) to allow for the proposed CarMax Auto Superstore Project. The proposed development consists of the construction of a CarMax pre-owned automobile dealership, including a sales and administration building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area,

sales display area and a customer and employee parking lot on the southern parcel. An additional sales display area would be provided on the northern parcel with a security gate and control island.

Deliveries of vehicles, parts and supplies would be made onsite. Vehicle carriers would enter the Project Site through the main access on Thunder Drive and load and unload vehicles in the designated area on the southeast side of the customer and employee parking lot. Unloaded vehicles would be driven by employees from the parking lot into the staging area to await preparation for resale or potentially for disposition through the wholesale auction process.

The Project is projected to have a total of 60 to 80 employees with approximately 30 to 40 employees present per shift. Anticipated hours of operation for the sales building are Monday through Friday from 10:00 a.m. to 9:00 p.m., Saturday from 9:00 a.m. to 9:00 p.m. and Sunday from 11:00 a.m. to 7:00 p.m. The anticipated hours of the vehicle service operations are Monday through Friday from 7:30 a.m. to 6:00 p.m. Service operations are not open on Saturday and Sunday. CarMax associates would be present at the store several hours before and after the public operating hours.

All vehicle service work is to be performed inside fully-conditioned buildings equipped with rollup doors. Retail service vehicles and vehicles awaiting disposition off-site are stored in the secured non-public staging area located southwest of the building on a temporary basis. Vehicular access to that area would be strictly controlled through the use of embassy-style security gates. Parking spaces are not designated in this area on the plan due to the change of staging and storage of vehicles within this area on a daily basis. The non-public carwash is located in the secured staging area. An aboveground fuel storage tank with a capacity of 4,000 gallons would be located south of the sales building with a non-public fuel pump adjacent to the carwash within the secured staging area to fuel inventory vehicles as needed.

Project Site Layout

The sales inventory display area would be located at the front of the property along Plaza Drive and would be secured by highway guardrail on the west, north and eastern edges with an embassy-style security gate on the northern side providing access to Plaza Drive for test drives. The sales inventory display area would be physically separated from the DMV parking lot by ornamental fencing and guardrail. The sales display area is fully secured and can only be accessed by customers through the sales building and out the sales vestibule located on the north side of the building. This area is considered a pedestrian display area where customers can walk around to browse through the inventory vehicles.

The sales and presentation buildings would be located south of the sales display area with customer access from the parking lot to the east. The main sales staging area would be located south of the service building and surrounded by chain link fencing with privacy slats and a highway guardrail for security purposes. The private carwash would be located within the staging area. The staging area would also be secured with embassy-style security gates and a man gate. Customer and employee parking would be located east of the sales building and access would be provided from Thunder Drive. The northern parcel would consist of an additional sales display area and would contain a security gate and control island and would be developed as part of Phase II of the Project.

A 100-foot riparian buffer would run east to west on the southern portion of the Project Site. This 100-foot buffer would include a 50-foot biological buffer as well as a mandatory 50-foot planning buffer. **Figure 5** displays the layout of the Project Site area.

Floor Plan

The sales area floor plan would include a front vestibule and a sales vestibule, waiting area, main sales area, work center, operational support area, chat room, cash room, office, data room, janitor room, electrical room and restrooms. A door at the west end of the sales building would lead into the service building. The service building would include a break room, file closet, restroom, a room for parts, valve room, electrical room, tool area and a main service area. The proposed Floor Plans are provided as **Figure 6**.

FIRE DEPARTMENT NOTES:
1) KNOX BOX TO BE LOCATED PER THE FIRE MARSHALL DIRECTION.
2) FIRE EXTINGUISHERS SIZE AND LOCATION TO BE DETERMINED BY THE FIRE MARSHALL DURING BUILDING PERMIT APPLICATION.
3) AN APPLICATION FOR THE FUEL TANK PERMIT WILL BE APPLIED FOR DURING BUILDING PERMIT.
FIRE FLOW SHALL BE DETERMINED AT BUILDING PERMIT.

FIGURE 6

October 2020

Open Space

The Project Site would include 1.50 acres of open space on the southern portion of the Project Site which includes the 100-foot riparian buffer. The buffer includes a 50-foot biological buffer as well as a mandatory 50-foot planning buffer. In accordance with the Oceanside Subarea Plan, a minimum 50-foot biological buffer plus a minimum 50-foot planning buffer (total width of both equals 100 feet) shall be established for upland habitats, beginning at the outer edge of riparian vegetation. The planning buffer serves as an area of transition between the biological buffer and specified land uses on adjoining uplands. Foot paths, bikeways, and passing recreational uses may be incorporated into the planning buffer, but buildings, roads and other intensive uses are prohibited. The following uses are prohibited in the 50-foot biological buffer: new development, foot paths, bikeways, passive recreational uses not already planned, and fuel modification activities for new development.

As discussed in the Biological Technical Report prepared by Busby Biological Services and included in this EIR as **Appendix D**, for proposed projects that include development or other discretionary actions that are proposed in or adjacent to riparian habitats, the riparian area and other wetland habitats shall be designated as biological open space. As discussed above, the Project is anticipated to encroach approximately six feet into the 50-foot planning buffer for the sewer realignment. Temporary impacts will occur to approximately 0.0008 acre (344 SF) within the planning buffer. Due to the small size of the impacts, the limited duration, and the distance from the riparian habitat (94 feet), no direct impacts to riparian habitat are anticipated.

Transportation

Access and Parking

The Project Site includes two (2) main access points off Thunder Drive and would include the necessary striping for the proposed improvements on Plaza Drive. An access point would be located off Plaza Drive for test drives only and would not be accessible to the public. The customer and employee parking lot would contain approximately 148 parking spaces (9’ x 20’), the sales display area would provide approximately 285 spaces (9’ x 17’), the sales and staging area would provide approximately 93 spaces, however, parking spaces are not designated in this area on the plan due to the change of staging and storage of vehicles within this area on a daily basis. Parking within the sales display area is fully secured and provides a pedestrian display area where customers can walk around to browse through the inventory vehicles. The additional sales display area on the northern parcel would provide 69 spaces (9’ x 17’). Customer access to the sales and presentation buildings would be from the parking lot on the east. Six (6) handicap spaces would be provided in the customer and employee lot adjacent to the sales building. In accordance with the California Green Building Standards Code Table 5.106.5.3.3, seven (7) electric vehicle (EV) charging spaces would be provided.

Project Trip Generation

A Local Transportation Study (LTS) has been prepared for the Project to determine if there are any traffic effects caused by Project traffic that would result in the need for roadway improvements or fair share participation. The LTS is provided as **Appendix O** of this EIR. The LTS analyzes the level of service (LOS) of nearby roadway segments and intersections for six (6) scenarios as a result of Project traffic. Based on the City’s new requirements for vehicle miles traveled (VMT), LOS discussions have been omitted from this EIR.

Project traffic generation was calculated using a trip generation rate based on a survey of three (3) open and operating CarMax locations of similar size. The data from these CarMax locations was collected by placing tube counters across all site driveways which recorded all vehicles entering the site, including employees, customers, test drives, mail carriers, garbage trucks, maintenance vehicles and any other vehicle that entered the facility. This data documented a trip rate of 41.48 average daily trips (ADT) per 1,000 SF of buildings (ADT/ksf). Using this trip generation rate, the Project is forecasted to generate 475 ADT, 18 AM peak hour trips (11 inbound and 7 outbound) and 50 PM peak hour trips (31 inbound and 19 outbound), as shown in **Table 3.4-1**, below.

Table 3.4-1
Project Trip Generation

Proposed Land Use	Rate & Size (/ksf)	ADT	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
CarMax Used Auto Sales	Rate: 41.48 Size: 11,447	475	0.91 11	0.65 7	1.56 18	2.74 31	1.63 19	4.37 50
KSF: 1,000 SF Source: Local Transportation Study prepared by LOS Engineering, Inc. (Appendix O)								

Roadway Improvements

Prior to issuance of occupancy permits, the following roadway improvements would be completed as part of the Project to the satisfaction of the City Engineer:

- Widen Thunder Drive along the Project frontage into the Project Site. Parking shall be restricted along the Project frontage side of Thunder Drive between the two Project driveways.
- Widen Plaza Drive along the Project frontage to the General Plan classification of a Secondary Collector. The Applicant shall stripe this segment with three (3) travel lanes (two eastbound lanes and one westbound lane).
- Provide a center two-way left turn lane on Plaza Drive in order to match the existing westbound single travel lane configuration adjacent to the DMV.
- Install sidewalks on both sides of Plaza Drive along the Project frontage.
- Include striping for bike lanes on both sides of Plaza Drive along the Project frontage.

Test Drives

The Project would include vehicle test drives for customers interested in purchasing a vehicle. The proposed test drive route is approximately 1.6 miles round trip and lasts approximately five (5) minutes. Designated routes for all test drives will not include residential streets. The proposed test drive route is as follows:

- Customers would turn left on Plaza Drive out of the test drive-only driveway, to enter the SR-78 freeway entrance;
- Customers would make a right to gain access to SR-78 freeway;

- Customers would take the SR-78 exit for Emerald Drive and make a right on Emerald Drive and an immediate right on Hacienda Drive;
- Hacienda Drive becomes Plaza Drive, which would take customers back to the store location;
- Customers would enter the Site through the test drive-only driveway by making a left from Plaza Drive into the Site.

Retaining Walls and Fencing

Guard rail would be provided along the western and northern boundaries of the site as well as the eastern boundary between the sales display area and DMV parking area. A 4-foot ornamental picket fence would be provided at the eastern boundary of the sales display area between the DMV parking area and guard rail. A 6-foot chain link fence would be provided along the western and southern boundaries of the sales and staging area located at the southwest portion of the Project Site. This fence would include vision slats which provide additional privacy and security elements. A retaining wall would also be located at the southwestern portion of the Project Site from the western boundary of the sales and staging area extending to the dumpster pad. This area would also be enclosed with a man gate. The retaining wall height varies from approximately 13 to 15 feet in vertical height from the finished grade with an additional 6-foot chain link fence along top of the retaining wall. Retaining wall and structural specifications will be determined on the Project Grading Plans. Climbing vines and a split face wall would be provided to soften the look of the retaining wall. The Conceptual Landscape Plan provides details of the retaining wall with climbing vines. The intent is to merge the pattern of the planted wall with views of the creek from the south. Views of the retaining wall from neighboring properties to the south of the Project site would not be visible due to existing vegetation of the creek, intervening topography, and site design of existing properties.

Utilities

Water and sewer service would be provided by the City of Oceanside and the Project would connect to existing infrastructure in the vicinity of the Project Site. For sewer service, the Project would realign the existing sewer mains and would construct a new 12-inch and new 21-inch polyvinyl chloride (PVC) sewer main that would run along the southern portion of the Project Site, south of the sales and staging and customer and employee parking lots, and would connect to existing sewer to the west and to the east in Thunder Drive. The existing 12-inch and 21-inch sewer mains located directly north of the proposed sewer mains will be abandoned.

An existing sewer easement for the City of Oceanside runs east to west along the southern portion of the Project Site then runs north to south on the eastern portion of the Project Site. The existing sewer easement along the southern portion of the Project Site is not located within the 100-foot riparian buffer. The existing sewer easement along the southern portion of the Project Site from east to west is to be relocated in line with the proposed sewer realignment. As discussed above, the Project is anticipated to encroach approximately six feet into the 50-foot planning buffer for the sewer realignment. However, the proposed sewer easement associated with the sewer realignment would not encroach into the 100-foot riparian buffer. The sewer easement running north to south is to be vacated.

For water service the project would construct a 2-inch domestic water service line as well as off-site improvements that are further described in the next section.

The 8-inch fire supply and gas and water services would run south of the sales and service buildings through the customer and employee parking lot. New electrical services and telephone lines would run east to west through the customer and employee parking lot.

Off-Site Improvements

Additional off-site improvements would be required by the City and would include the extension of the 12-inch PVC water main along Plaza Drive across the Project frontage and the DMV to be looped to Thunder Drive.

Full width improvements on Plaza Drive would construct an 80-foot curb to curb width across the Project frontage. This would include curb, gutter, 5-foot sidewalks and 8-foot bicycle lanes on both sides of Plaza Drive. Striping would include two (2) eastbound lanes and one (1) westbound lane with a center two-way left turn lane. Improvements to the north side of Plaza Drive would occur at the time the northern parcel is developed. On Thunder Drive, a 10-foot street widening would occur between the two (2) proposed driveways and would be striped with "No Parking".

Drainage and Hydrology

A Drainage Study was prepared by REC Consultants, Inc. and is included in this EIR as **Appendix J**. Once fully developed, the Project Site will have an impervious footprint of approximately 6.28 acres. As stated in the Drainage Study, pre-and post-development runoff would remain constant on the northern parcel as the Project Site would be constructed solely of permeable pavement. Runoff from the southern parcel would drain to an underground detention system near the southeast corner of the Project Site, within the customer and employee parking lot. Mitigated peak flows would then drain from the detention facility by a 24-inch PVC storm drain to Point of Compliance (POC) 3 at the southwest corner of the Project Site where it drains to the same point as in existing conditions. Runoff from surrounding landscape areas to the north will be intercepted by a concrete brow ditch and released at POC-4, effectively bypassing detention. Prior to discharging from the Project Site, first flush runoff would be treated via an underground proprietary Best Management Practice (BMP) in accordance with standards set forth by the San Diego Water Board and the County of San Diego's BMP Design Manual. Runoff from the developed Project Site would drain to a single onsite underground detention system. Peak flows would be mitigated via this facility prior to discharging to the proprietary underground water quality system. Once through the proprietary underground water quality system, runoff will discharge to POC-1, or the existing point of discharge from the Project Site.

Developed and existing condition drainage areas and 100-year peak flow rates were analyzed at the receiving discharge location from the Project Site. The Project would reduce peak flows for the majority of the Project Site. Discharge locations POC-1 and POC-2 at Plaza Drive would increase slightly due to the widening and expansion of Plaza Drive. Runoff discharging at these locations would move west toward the intersection of SR-78 and Plaza Drive where said runoff would enter curb inlets on the north and south sides of Plaza Drive respectively. Flows at discharge location POC-3 would be reduced and POC-4 peak flows would increase slightly, however, POC-3 and POC-4 confluence at POC-3 in Buena Vista Creek therefore reducing total net peak flows to Buena Vista Creek from pre-development to post-development conditions. The Project would not alter existing drainage patters onsite or increase net runoff after development.

A Storm Water Quality Management Plan (SWQMP), prepared by REC Consultants, Inc. and included in this EIR as **Appendix K**, and describes the treatment of storm water for the proposed Project. As stated in the SWQMP the northern parcel would be constructed solely of permeable materials and therefore, no storm water mitigation or water quality treatment is necessary. Storm water from the southern parcel would be conveyed via underground pipe from various parts of the Project Site through proprietary water quality measures and into an underground detention system, where storm water would then be released to discharge location POC-2. The underground detention system has been designed to drain within 72 hours in order to avoid standing water and mosquito breeding.

Architectural Details

The CarMax Project would consist of an aluminum storefront framing system, windows with blue tinted glazing and an entrance which would be accented by a blue standing seam metal roof. The conceptual CarMax sign would sit below this roof feature. Below the roof line a metal roof top unit screen would be painted in dark earth tones. The sides of the building would consist of split face concrete masonry units (CMU) painted in dark earth tones with accents of smooth face CMU in light earth tones. Onsite signage would be processed under a separate permit. Conceptual onsite signage would include the following: A 6-foot monument sign would be placed at the Thunder Drive frontage between the two (2) driveways and a 20-foot pylon sign would be placed at the northeast corner of the Project Site, south of Plaza Drive and west of the DMV. Project signage would not be illuminated. The proposed building height would be 28 feet, 8 inches and would comply with the 50-foot maximum allowable height for buildings in the CC zone as stated in the City Zoning Ordinance Section 1130. Conceptual elevations of the proposed buildings are displayed in **Figure 7**.

October 2020

Landscape

Landscaping would be provided along the Project frontage at Plaza Drive and would contain Blended Fescue Sod ground cover and deciduous trees such as Imperial Honeylocust and Oregon Ash. Native seed ground cover would also be provided on the northern parcel sales display area along the western edge and northern edge adjacent to SR-78. Rock mulch and native seed would be planted along the eastern edge of the southern parcel adjacent to the DMV parking lot. The customer and employee parking lot islands would consist of deciduous trees, palm trees, evergreen shrubs and grasses. Landscaping would be designed to minimize irrigation and runoff and would be designed with native and/or drought tolerant species. Landscaping would be in compliance with the City of Oceanside Zoning Ordinance Section 1130 for minimum landscaping requirements and Section 3019 – Landscaping, Irrigation, and Hydroseeding for parking lot requirements and street tree and parking lot tree requirements. Landscaping would cover approximately 13.6% of the Project Site. The Conceptual Landscape Plan is provided as **Figure 8** and **Figure 9**.

The proposed retaining wall located at the southwest portion of the Project Site is subject to Section 3040 of the Zoning Ordinance requiring retaining walls in excess of four (4) feet and visible from a residential district to be irrigated and plantable. Due to Project Site constraints of the creek buffer and proposed sewer line, the retaining wall is unable to be plantable. Therefore, the Project requests a Variance to provide climbing vines and a split face wall to soften the look of retaining wall. The Conceptual Landscape Plan provides details of the retaining wall with climbing vines.

CARMAX AUTO SUPERSTORE OCEANSIDE EIR

NOT TO SCALE

Source: Howard Associates (08/06/2020)

FIGURE 9

October 2020

Lighting

Light-emitting diode (LED) lamp technologies in lighting fixtures are to be full cut off with a flat lens and downcast to reduce light spill onto adjacent properties are proposed onsite. Exterior lighting would be reduced after operation hours to reduce light spill onto neighboring properties. The lighting within the sales display area would be reduced after the store closes to the public and is further reduced after employees exit the facility to the minimum level that still allows security cameras to operate. Lighting in the customer and employee parking lot is reduced to the maximum extent possible while maintaining safety for customers and employees to reach their cars safely.

Light poles would have a 26-foot total mounting height with 24-foot poles mounted on concrete pedestals, two (2) feet above grade. All proposed lighting including light pole heights, shielding and glare reduction measures would be in compliance with the Zoning Ordinance Article 30, Section 3024 and Article 31 for parking lot lighting requirements.

Safety Features

The Project would utilize interior and exterior surveillance cameras that are monitored 24 hours a day, seven (7) days a week for safety and loss prevention purposes. The sales display and staging area entrances are secured by embassy style gates which are designed to be impenetrable and are used to secure and prevent vehicle theft. Guardrail is also used around the perimeter of the sales lot to further prevent vehicle theft.

A Knox Box will be provided at the security gate and control island on the northern parcel sales display area as well as at the security gate and control island located at the test drive-only driveway. A Knox Box is a small, wall-mounted safe that holds building keys in order for fire departments, emergency medical services and police to gain access into buildings in emergency situations.

Demolition and Grading

No demolition would be required as part of Project construction as no existing structures are located on the vacant parcels. The Project grading quantities include 12,500 cubic yards (CY) of cut and 12,500 CY of fill and no import or export would be required.

Phase II

Phase II of the Project has the potential to develop the northern parcel as an additional sales display area for the Phase I CarMax facilities. The sales display area would be guarded with a security gate and control island. This area would hold approximately 69 vehicles. Phase II of the Project would also include landscaping and sidewalk improvements along the northerly side of Plaza Drive.

Construction Phasing

Table 3.4-2 below lists the tentative construction schedule for the proposed Project.

Table 3.4-2
Tentative Project Construction Schedule

Phase Number	Phase Name	Phase Type	Start Date	End Date	Number Days
1	Site Preparation	Site Preparation	11/9/2021	11/23/2021	10
2	Grading	Grading	11/24/2021	12/23/2021	20
3	Paving	Paving	12/24/2021	1/25/2022	20
4	Building Construction	Building Construction	1/26/2022	12/27/2022	230
5	Architectural Coating	Architectural Coating	12/28/2022	1/26/2023	20

3.5 Project Approvals

This EIR is intended to provide documentation pursuant to CEQA to cover the discretionary approvals that are required to implement the CarMax Project. The City, as the Lead Agency under CEQA, is responsible for permitting and carrying out the Project. The following discretionary permits and approvals would be required to implement the Project as analyzed in this EIR:

1. **Conditional Use Permit (CUP19-00029).** Pursuant to Zoning Ordinance Section 1120, vehicle sales, automobile washing and service stations are allowed in the CC zone with the approval of a CUP.

2. **Development Plan (D19-00021).** Development plans are required for development projects to ensure that new development complies with all applicable requirements of the Zoning Ordinance.

3. **Variance (V20-00005).** A variance is required to allow for climbing vines to be provided on the proposed retaining wall as opposed to a plantable retaining wall required by Section 3040 of the Zoning Ordinance.

4. **Sewer Easement Vacation.** The Project would vacate the existing City sewer easement which runs north to south on the eastern portion of the Project Site.

The following ministerial permits and approvals would be required to implement the Project as analyzed in this EIR:

1. **Grading Permit.** The Project involves grading, clearing and removal of natural vegetation and therefore requires a grading permit. Proposed grading activities must meet requirements of the City of Oceanside Grading Regulations Manual.

2. **Building Permits.** The building of structures would require a building permit. Although this is a ministerial permit, the applicant must adhere to all applicable regulations.

3. **Sign Permit.** All onsite signage would require a permit from the City of Oceanside and would adhere to all applicable requirements and regulations.

4. **Aboveground Storage Tank.** The onsite aboveground storage tank would require a permit and approval from the County of San Diego Department of Environmental Health Hazardous Materials Division.

CHAPTER 4.0 ENVIRONMENTAL ANALYSIS

This Chapter provides information on the existing environmental conditions, evaluates the potential environmental consequences of the Project, and recommends mitigation measures for each environmental category, if necessary. Based on preliminary evaluation of the probable effects of the project and thorough review of the comments submitted in response to the NOP and testimony received at the public scoping meeting, each of which are included in this EIR as **Appendix A,** it is determined that the Project could result in significant impacts to the following resource categories:

- Biological Resources
- Cultural Resources
- Geology and Soils
- Hydrology and Water Quality
- Land Use and Planning
- Tribal Cultural Resources

Therefore, this EIR evaluates the potential impacts for these resource categories from construction and operation of the Project. The potential cumulative impacts for the resource categories are addressed in Chapter 5.0 *Cumulative Impacts.*

Chapter 4.1 ENVIRONMENTAL ANALYSIS INTRODUCTION

The following Chapters provide information on the existing environmental conditions, analyzes the potential environmental impacts that may occur as a result of Project construction and operation, and recommends mitigation measures for each environmental category if the Project would result in a significant impact. The assessment of each environmental resource category analyzed herein includes the following:

- Environmental Setting
- Regulatory Setting
- Thresholds of Significance
- Project Impact Analysis
- Mitigation Implementation and Monitoring
- Level of Significance after Mitigation

Chapter 4.2 AESTHETICS

4.2.1 Environmental Setting

Regional Setting

San Diego County encompasses 4,261 square miles and is characterized by varied topography including ocean, lagoons, mountains and desert. The western side of the County is bordered by the Pacific Ocean and is primarily urban while the eastern side of the County is composed of mountains, desert and undeveloped backcountry.

The City of Oceanside is located in coastal northern portion of the County. The City encompasses approximately 42 square miles and is bound by Camp Pendleton to the north, the City of Carlsbad to the south, the Pacific Ocean to the West, and the City of Vista and unincorporated portions of the County to the east. In contrast to urban growth in the southern part of the County, northern portions of the County have remained suburban and semi-rural over the years. Major features of the area include the beaches, the San Luis Rey River, Buena Vista Lagoon, and the open areas of Camp Pendleton. The City has approximately four (4) miles of shoreline, including a public marina, a 2,000-foot pier, and public beaches. Most of the City is developed, with the eastern portion of the City characterized by single-family houses on curving streets and cul-de-sacs, intermixed with canyon and hillside open spaces. Park, commercial and institutional uses occur within and around the residential uses. The western portion of the City along the coast is characterized by a grid pattern of streets with single-family houses adjacent to major commercial and mixed-use areas.

Existing Character

The Project Site contains mainly disturbed land, ornamental trees, iceplant, and ruderal vegetation. Small patches of native vegetation are interspersed around the Project Site. Several native trees and shrubs as well as non-native species line the southern portion of the Project Site adjacent to the Buena Vista Creek. The elevation of the property ranges from approximately 180 to 220 feet amsl.

The Project area is primarily developed and surrounding land uses consist of residential and commercial development. The Project Site is visible from adjacent residential developments, commercial developments, as well as adjacent roadways from Plaza Drive, Thunder Drive and SR-78. To viewers from adjacent properties and roadways, the Project Site appears as a set of vacant, disturbed lots dominated by non-native plant species with a few introduced tree species along the Project Site boundary. Long-distance views are generally constrained by intervening development and urban landscaping. From within the southern parcel, Plaza Drive and SR-78 are visible to the north, residential development and Thunder Drive are visible to the east, the Tri-City Crossroads commercial center is visible to the west, and Buena Vista Creek and residential development are visible to the south. From within the northern parcel, SR-78 and the medical facilities on the other side of the highway are visible to the north, Plaza Drive, Buena Vista Creek and residential development are visible to the south, the Tri-City Crossroads commercial center is visible to the west, and Plaza Drive and the peaks of the San Luis Rey valley are visible to the east. There are no parks or scenic highways in the vicinity of the Project Site.

Scenic Resources

Currently there is no Citywide inventory of scenic views. However, the City's Local Coastal Program (LCP) states that the City's important aesthetic resources include views of the Pacific Ocean, San Luis Rey River, Buena Vista Lagoon, Oceanside Harbor and Oceanside Pier. The Project is located 3.5 miles east of Buena Vista Lagoon, over four (4) miles east of the Pacific Ocean, 5.5 miles southeast of Oceanside Pier and over six (6) miles southeast of Oceanside Harbor, and is therefore not in close proximity to these aesthetic resources.

Scenic Highways

Currently the California Department of Transportation (Caltrans) has officially designated six (6) State Scenic Highway sections within the County: (i) Highway 52 in the City of Santee; (ii) Highway 75 along the Silver Strand in the City of Coronado; (iii) Highway 75 along the San Diego-Coronado Bridge; (iv) Highway 78 in Anza Borrego Desert State Park; (v) Highway 125 in the City of La Mesa; and (vi) Highway 163 in Balboa Park (Caltrans, 2017). All of these highways are over 30 miles from the Project Site. Caltrans has also listed Interstate 5 (I-5) and SR-76 as eligible for scenic designations. The Project Site is located approximately 3.3 miles east of I-5 and 3.5 miles south of SR-76.

Light and Glare

Light introduction can be a nuisance to adjacent residential areas, diminish the view of the clear night sky and if uncontrolled, can cause disturbances for motorists traveling in the area. Light spill is typically defined as the presence of unwanted light on properties adjacent to a property being illuminated. Existing sources of light are present in the Project area including lights and illuminated signs from the commercial center to the west and the DMV to the east, highway lights and vehicle headlights from SR-78 to north and street lighting on Thunder Drive and Plaza Drive.

Glare is caused by the reflection of sunlight or artificial light by highly polished surfaces such as window glass or reflective materials and from broad expanses of light-colored surfaces or vehicle headlights. Perceived glare is the unwanted and potentially objectionable sensation experienced by a person looking directly or indirectly into the light source of a luminaire. Existing sources of glare in the Project area include reflective building materials (e.g., windows) and passing cars along SR-78 and the adjacent Plaza Drive and Thunder Drive roadways.

<u>Palomar Observatory</u>

The Palomar Observatory, located atop Palomar Mountain, is located approximately 27 miles north east of the Project Site. The Observatory is a center of astronomical research and is home to three (3) active research telescopes. Light pollution is an increasing problem for Palomar Observatory as rapid urbanization has resulted in a significant increase in the amount of sky glow and directly impacting the effectiveness of the Palomar Observatory. The Palomar Observatory has extensively worked with the surrounding communities to minimize the impacts of light pollution and continue to work with City, County and Tribal governments to mitigate the effects of local light pollution. The Project Site is not located within a 15-mile radius of Palomar Mountain, as identified in the County of San Diego Outdoor Light Control Ordinance Zone Map.

4.2.2 Regulatory Setting

City of Oceanside Municipal Code

Chapter 39 of the City of Oceanside Municipal Code (OMC) establishes light pollution regulations to restrict the use of certain light fixtures that could emit undesirable light rays into the night sky, having a detrimental effect on regional astronomical observation and research. OMC Chapter 39 identifies lighting-related standards including lamp types allowed, shielding requirements and hours of operation for certain lighting types. The requirements for lamp source and shielding of light emissions for outdoor light fixtures are included in **Table 4.2-1** below.

Table 4.2-1
City of Oceanside Lighting Standards

Class I – Color Rendition Important	
Lamp Type	***Requirement***
Low pressure sodium	Permitted
Other lights above 4050 lumens	Permitted
Other lights 4050 lumens or less	Permitted
Class II – Parking Lots, Roadways, Security	
Low pressure sodium	Permitted
Other lights above 4050 lumens	Prohibited
Other lights 4050 lumens or less	Permitted
Class III – Decorative	
Low pressure sodium	Permitted
Other lights above 4050 lumens	Prohibited
Other lights 4050 lumens or less	Permitted

City of Oceanside General Plan

The General Plan serves as a policy guide for determining the appropriate physical development and character of the City.

Land Use Element

The objectives and policies in the Land Use Element of the General Plan provide guidance for the protection of visual resources within the City. The following goals and policies of the Land Use Element are relevant to the Project:

1.11 Balanced Land Use

Objective: To develop and use lands for the long-term provision of a balanced, self-sufficient and efficient community.

Policy A: The City shall establish and enforce a balanced distribution of land uses to organize the City in a hierarchy of activity centers and land use so as to foster a sense of neighborhood, community and regional identity.

Policy B: The City shall analyze proposed land uses for assurance that the land use will contribute to the proper balance of land uses within the community or provide a significant benefit to the community.

1.12 Land Use Compatibility

Objective: To minimize conflicts with adjacent or related land uses.

Policy A: Adequate setbacks, buffering, and/or innovative site design shall be required for land uses that are contiguous to and incompatible with existing land uses.

Policy B: The use of land shall not create negative visual impacts to surrounding land uses.

Policy C: The use of land shall not subject people to potential sources of objectionable noise, light, odors, and other emissions nor the exposure of toxic, radioactive, or other dangerous materials.

1.2 Site Design

Objective: To provide high-quality site design, all proposed land development projects shall take advantage of natural or manmade environments to maximize energy conservation, natural air circulation, public safety, visual aesthetics, private and common open spaces, privacy and land use compatibility.

Policy A: The Placement of proposed structural components, landscaping, access ways, etc. shall be oriented on the site in such a manner to maximize:

- The quality of view and vistas from the site to the surrounding environment;
- The quality of views and vistas of the site from surrounding land uses.

1.23 Architecture

Objective: The architectural quality of all proposed projects shall enhance neighborhood and community values and City image.

Policy A: Architectural form, treatments and materials shall serve to significantly improve on the visual image of the surrounding neighborhood.

Policy B: Structures shall work in harmony with landscaping and adjacent urban and/or topographic form to create an attractive line, dimension, scale and/or pattern.

2.27 Commercial Design

Policy A: Commercial architecture shall emphasize establishing prominence and identity to businesses while presenting tasteful, dignified, and visually appealing designs compatible with their surroundings.

3.21 Scenic Open Areas

Policy A: The City shall encourage the preservation of significant visual open areas.

Environmental Resource Management Element

The Environmental Resource Management Element of the General Plan outlines recommended action programs to implement and achieve long-range planning objectives. The City Implementation Program actions related to visual resources and scenic areas include:

Objectives: Recreation and Scenic Areas – Encourage the preservation of significant visual open spaces when such preservation is in the best interest of the public health, safety and welfare.

The City will:

1. Plan readily accessible recreation facilities close to population centers and education facilities utilizing public open space while protecting natural sites of significant scenic or ecological value.

4.2.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Have a substantial adverse effect on a scenic vista;
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway;
c. Substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from public accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality;
d. Create a new source of light or glare which would adversely affect day or nighttime views in the area?

4.2.4 Project Impact Analysis

This section provides an assessment of potential aesthetics impacts related to Project implementation. Potential impacts addressed in this section include substantial adverse effects on scenic vistas, damage to scenic resources within a state scenic highway, degradation of existing visual character and creation of adverse sources of light or glare. Would the Project:

a. Have a substantial adverse effect on a scenic vista?

The Project is located in a primarily developed area surrounded by the Tri-City Crossroads commercial center to the west, the DMV and medium-density residential to the east, SR-78 directly north and Buena Vista Creek, high density residential, a senior living facility and OFD station to the south of the Project Site.

The CarMax Project would consist of an aluminum storefront framing system, windows with blue tinted glazing and an entrance which would be accented by a blue standing seam metal roof. The CarMax sign would sit below this roof feature. This sign is not illuminated and would not present additional light or glare to the Project area. Below the roof line a metal roof top unit screen would be painted in dark earth tones. The sides of the building would consist of split face CMU painted in dark earth tones with accents of smooth face CMU in light earth tones. A six-foot monument sign would be placed at the Thunder Drive frontage between the two (2) driveways and a 20-foot pylon sign would be placed at the northeast corner of the Project Site, south of Plaza Drive and west of the DMV. The proposed building height would be 28 feet, 8 inches measured from the top of the standing seam roof. Conceptual elevations of the proposed buildings are displayed in **Figure 7**.

The Project is not located in close proximity to important aesthetic resources as identified in the City's LCP including views of the Pacific Ocean, San Luis Rey River, Buena Vista Lagoon, Oceanside Harbor and Oceanside Pier. The Project is located 3.5 miles east of Buena Vista Lagoon, over four (4) miles east of the Pacific Ocean, 5.5 miles southeast of Oceanside Pier and over six (6) miles southeast of Oceanside Harbor. Buena Vista Creek is not identified as an aesthetic resource in the City's LCP, and therefore, the Project is not in close proximity to any identified aesthetic resources.

The Environmental Resource Management Element of the General Plan identifies existing open space areas including areas of visual open space. The nearest identified existing visual open space areas include Mira Costa College and a utility easement. The Project is located approximately one (1) mile southeast of both areas. Due to its location, the Project would not block any views of the resources described above. As the Project would be located in an already urbanized area and would be of similar massing and appearance to the existing commercial center to the west, the Project would not degrade views from a visual open space area. Further, the Project would not have an effect on public viewpoint locations that may include views of the Pacific Ocean due to the distance, topography and intervening developments.

The Project is consistent with the existing CC zoning and General Plan designations for the Project Site. In its present condition, the Project Site does not provide an expansive view of a highly valued landscape or scenic vista and it would not interfere with views of an existing scenic vista. The development of the Project would not contrast with surrounding land uses or with the existing visual landscape.

Therefore, the Project would not have a substantial adverse effect on a scenic vista, and related impacts will be **less than significant**.

b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

The Project Site is located directly south of SR-78. There are six (6) State Scenic Highway sections as designated by Caltrans within the County, as discussed above, the Project Site is located over 30 miles

from these designated highways. Caltrans has listed I-5 and SR-76 as eligible for scenic designations; however, the Project Site is located approximately 3.3 miles east of I-5 and 3.5 miles south of SR-76. Further, no scenic resources, including trees, rock outcroppings, or historic buildings within a state scenic highway are present on or adjacent to the Project Site.

Therefore, the Project would not damage a scenic resource within a state scenic highway, and **no impact** will occur**.**

c. *In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from public accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*

The Project is located in a primarily urbanized area surrounded by a commercial center to the west, the DMV and medium-density residential to the east, SR-78 directly north and Buena Vista Creek, high density residential, a senior living facility and OFD station to the south.

The Project would be consistent with the existing CC zoning and General Plan designation of the Project Site. Development of the Project Site would construct a pre-owned automobile facility consisting of a sales and administration building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area, sales display area, and a customer and employee parking lot.

Landscaping would be provided along the Project frontage at Plaza Drive and would contain Blended Fescue Sod ground cover and deciduous trees such as Imperial Honeylocust and Oregon Ash. Native seed ground cover would also be provided on the northern sales display area along the western edge and northern edge adjacent to SR-78. Rock mulch and native seed would be planted along the eastern edge of the southern parcel adjacent to the DMV parking lot. The customer and employee parking lot islands would consist of deciduous trees, palm trees, evergreen shrubs and grasses. The Conceptual Landscape Plan is provided as **Figure 8** and **Figure 9**.

The CarMax Project would consist of an aluminum storefront framing system, windows with blue tinted glazing and an entrance which would be accented by a blue standing seam metal roof. The CarMax sign would sit below this roof feature. This sign is not illuminated and would not present additional light or glare to the Project area. Below the roof line a metal roof top unit screen would be painted in dark earth tones. The sides of the building would consist of split face CMU painted in dark earth tones with accents of smooth face CMU in light earth tones. Conceptual elevations of the proposed building and materials are shown in **Figure 7**.

The existing visual character of the surrounding area is characterized by development; primarily containing commercial buildings and various residential developments including both medium- and high-density developments and a senior living facility. Overall, the Project area would remain developed similar to current conditions. Although the visual character of the Project Site would change with the addition of the CarMax Project, the development would not substantially degrade the existing visual character of the surrounding area and would appear as a continuation of existing development in Project vicinity.

In addition, the Project would comply with the OMC and General Plan policies pertaining to visual character. The Project would also comply with the Zoning Ordinance for requirements related to

building height, scale, setbacks, landscaping and parking to further reduce potential impacts related to visual character. The proposed height of the building would be 28 feet, 8 inches from the top of the standing seam roof and would comply with the 50-foot maximum allowable height for buildings in the CC zone as stated in the Zoning Ordinance Section 1130. Additionally, the existing commercial buildings to the west have similar height and massing as they are also located in the CC zone.

The Project is located in an urbanized area and would not conflict with applicable zoning and other regulations governing scenic quality, and impacts will be **less than significant**.

d. Create a new source of light or glare which would adversely affect day or nighttime views in the area?

The Project would contain lighting in the parking lot areas and along the Project Site boundary. The Project would employ LED lamp technologies in lighting fixtures that would be full cut off with a flat lens, and downcast to reduce light spill onto adjacent properties. Proper shielding of lighting in parking areas would further prevent glare to adjacent properties. Light poles and associated pedestals would not exceed 25 feet per Section 3117 of the City of Oceanside Zoning Ordinance and exterior lighting onsite would be reduced after operating hours. The lighting within the sales display area would be reduced after the store closes to the public and is further reduced after employees exit the facility to the minimum level that still allows security cameras to operate. Lighting in the customer and employee parking lot is reduced to the maximum extent possible while maintaining safety for customers and employees to reach their cars safely.

The CarMax sign would sit below the blue standing seam metal roof and is not illuminated. The sign will not present additional light or glare to the Project area. All outdoor lighting would comply with the standards of the Zoning Ordinance, Article 30, Section 3024 and Article 31 for parking lot lighting requirements.

Existing sources of light and glare in the surrounding area of the Project Site include cars, streetlights, signs and reflective building materials. Development of the Project would not substantially add to the amount of light and glare present in the area. The proposed building siding would consist of split face CMU painted in dark earth tones with accents of smooth face CMU in light earth tones. The building would also have an aluminum storefront framing system, windows with blue tinted glazing and an entrance which would be accented by a blue standing seam metal roof. Blue tinted glazing is typically used to reduce glare and all other proposed building materials would not contain highly reflective materials. Compliance with Chapter 39 of the OMC for light pollution regulations and Article 30 of the Zoning Ordinance, in addition to the placement of fixtures and reduction of lighting after operating hours, potential impacts relating to new sources of light and glare would be reduced to less than significant levels.

The Palomar Observatory, located atop Palomar Mountain, is located approximately 27 miles north east of the Project Site. Light pollution is an increasing problem for Palomar Observatory as rapid urbanization has resulted in a significant increase in the amount of sky glow and directly impacting the effectiveness of the Palomar Observatory. The Project Site is not located within a 15-mile radius of Palomar Mountain, as identified in the County Outdoor Light Control Ordinance Zone Map. Additionally, the Project would comply with Chapter 39 of the Municipal Code related to light pollution regulations. Therefore, the Project would not have a significant increase in the amount of light pollution in the area and would not directly impact the effectiveness of the Palomar Observatory.

The Project would not create a new source of light or glare which would adversely affect day or nighttime views in the area, and impacts will be **less than significant.**

4.2.5 Mitigation Implementation and Monitoring

No significant impacts to aesthetics have been identified and therefore, no mitigation measures are required.

4.2.6 Level of Significance After Mitigation

Impacts related to aesthetics from the implementation of the Project will be less than significant.

Chapter 4.3 AGRICULTURE AND FORESTRY RESOURCES

The following document was used in the preparation of this section and is included in its entirety in **Appendix B**:

EnviroApplications, Inc. September 11, 2019. *Phase I Environmental Site Assessment for Proposed Oceanside CarMax Facility*.

4.3.1 Environmental Setting

Regional Setting

The County is the only county in California that qualifies as both a major urban county and is ranked among the top ten agricultural counties in the state in terms of agricultural value. It is estimated that of the County's approximately 2.73 million acres, 305,573 acres (2013) are in agriculture. The County is the southwestern most county in the State, enjoying a Mediterranean climate that optimizes production of a variety of crops that may be more difficult to produce elsewhere in the state. A variety of agricultural commodities make up the County's agriculture. In terms of total value, nursery and flower crops account for 62%; fruits and nuts account for 22%; field crops account for <1%; vegetables account for 9%; and livestock and poultry products (i.e. milk and eggs), livestock and poultry (i.e. cattle, chickens, hogs, rabbits, sheep), specialty crops and apiary products account for approximately 1% each.

The agriculture industry in the City is valued at approximately $12 million annually. This accounts for approximately 10% of the County's agriculture output. Major crops include avocados, tomatoes, citrus and nursery stock.

There are two (2) primary areas of significant agricultural production in the City as described in the Environmental Resource Management Element of the General Plan. The first, Morro Hills agricultural area, is located generally north of Mission Avenue and east of Vandegrift Boulevard. Avocados are the primary crop and production contributes to the northern portion of the County output of over 90% of all avocados in California. The second area is the Rancho del Oro property between Mission Avenue and Oceanside Boulevard. Rancho del Oro contains the largest lime grove in California, plus significant numbers of lemons, oranges, tangelos and avocados.

Prime Agricultural Land, Prime Farmland and Soils of Statewide Importance

Soils in the County region are generally considered poor, with only six percent of the region's soils considered prime agricultural land, as defined by Government Code Section 51201(c). In the County, prime agricultural land is sparsely scattered throughout the region and is often constrained by protected biological resources such as wetlands, restricting the feasibility of their use.

The California Department of Conservation's Farmland Mapping and Monitoring Program's (FMMP) farmland categories are based on local soil characteristics and irrigation status, with the best quality land identified as "Prime Farmland and Farmland of Statewide Importance". In the County, 44 local soils qualify for the Prime Farmland designation and 65 soils qualify for the Farmland of Statewide Importance designation.

According to the FMMP map prepared for the Project, the Project Site is designated as Urban and Built-Up Land. **Figure 10** provides the FMMP designation of the Project Site and its surroundings.

Onsite Agriculture

The approximately 10.54-acre Project Site is currently undeveloped, is relatively flat land and has been previously graded. The Project Site is covered in non-native ruderal, iceplant, and ornamental vegetation with some native coastal sage scrub plants interspersed. The southern parcel has occasionally been used for temporary seasonal purposes such as a Christmas tree sales lot, Halloween pumpkin patch and for dairy product sales. There are no current agricultural uses on the Project Site. Historical research for the subject property as described in the Phase I Environmental Site Assessment prepared by EnviroApplications, Inc. (**Appendix B**) does not indicate that it was ever used for agricultural purposes. Based on a review of California Land Conservation Act of 1965 (Williamson Act) data, there are no Williamson Act contract lands located within the Project Site, its zone of influence or its surrounding area[4].

Surrounding Agricultural Uses

The land surrounding the Project Site is also designated as "Urban" and "Built-Up Land" by the FMMP (**Figure 10**). There are no designated agricultural land uses or zones in the surrounding vicinity of the Project Site as demonstrated by the General Plan land use and City zoning map.

4.3.2 Regulatory Setting

State

Farmland Mapping and Monitoring Program (FMMP)

The California Department of Conservation (CDC), FMMP was established in 1982 to provide consistent, timely, and accurate data for identifying California's agricultural land resources. Agricultural land is rated according to soil quality and irrigation status; the best quality land is identified as Prime Farmland. FMMP is used by both CEQA and the Right to Farm disclosure law as the official source for agricultural land data.

California Land Conservation Act of 1965 (Williamson Act)

The California Land Conservation Act of 1965, also known as the Williamson Act, gave the authority to local governments to sign contracts with private landowners for the purpose of restricting specific parcels of land to agricultural or related open space use. In return, landowners would receive tax relief for agreeing not to change the use of their open space or agricultural lands for a contract period of ten years.

California Code, Public Resources Code Section 12220(g), Section 4526 and Section 51104(g)

Public Resources Code Section 12220(g) defines forest land as land that can support 10% of native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation and other public benefits.

Public Resources Code Section 4526 defines timberland as land, other than land owned by the federal government and land designated by the board as experiment forest land, which is available for, and capable of, growing a crop of trees of a commercial species used to produce lumber and other forest products, including Christmas trees.

Public Resources Code Section 51104(g) defines a timberland production zone (TPZ) as an area which has been zoned pursuant to Section 51112 or 5113 and is devoted to and used for growing and harvesting timber, or for growing and harvesting timber and compatible uses.

Local

City of Oceanside General Plan

The General Plan Land Use Element has a goal for the continual long-term enhancement of the community through the development and use of land which is appropriate and orderly with respect to type, location, timing and intensity. The following objectives and policies provide guidance for the protection of agricultural resources within the City and are relevant to the Project:

2.03 Agricultural Subdivision

Policy A: The City shall assure in all actions that the legal parcels or interests in agricultural lands are of sufficient size to viably conduct agricultural practices.

2.5 Agricultural

Objective: To identify, conserve and enhance Oceanside's agricultural areas.

Policy A: Agricultural areas are characterized by their primary function that is to farm, graze, or conduct animal husbandry. Agricultural areas typically involve continuous tracts of agricultural land uses with only a very minor intrusion of non-agricultural land uses. These non-agricultural land uses are only of the type and size to service the special needs of the agricultural area.

Policy C: The City, in all proposed actions converting agricultural lands to other land uses, consider the loss of those lands to the potential agricultural productivity to the community; and shall assure that land use compatibility to agricultural lands is fully defined and assured.

Policy D: Land use compatibility is of primary importance to agricultural areas, since land use conflicts between agricultural and non-agricultural uses can force the economic non-viability of agricultural areas.

3.19 Agricultural Resources

Policy A: The City shall apply agricultural land use designations and zoning classifications to areas of significant productive agricultural use.

Policy B: Extension of City services to agricultural areas will be limited.

Policy C: The City shall encourage participation of agricultural property owners in Williamson Act contracts.

The Environmental Resource Management Element of the General Plan describes the main agricultural areas within the City and provides a map of areas rated "good" or "fair" for farming and general areas of existing agriculture use in Figure ERM-7 (Agricultural Land).

4.3.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use;
b. Conflict with existing zoning for agricultural use, or a Williamson Act Contract;
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g));

d. Result in the loss of forest land or conversion of forest land to non-forest use;
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use.

4.3.4 Project Impact Analysis

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) (LESA) prepared by the CDC as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board (CARB).

Would the Project:

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

The approximately 10.54-acre Project Site is currently undeveloped and relatively flat land. Historical research for the subject property as described in the Phase I Environmental Site Assessment prepared by EnviroApplications, Inc. (**Appendix B**) does not indicate that it was ever used for agricultural purposes. An FMMP map was prepared for the project site and is classified as Urban and Built-Up Land (**Figure 10**). No prime farmland or unique farmland exist onsite. In addition, the Project Site is not located in an area rated "good" or "fair" for farming or in a general area of existing agriculture use as depicted in Figure ERM-7 in the Environmental Resource Management Element of the General Plan.

The Project would not convert Prime Farmland, Unique Farmland or Farmland of Statewide Importance to non-agricultural use, and therefore, **no impact** will occur.

b. Conflict with existing zoning for agricultural use, or a Williamson Act Contract?

The Project Site is zoned as CC, which allows limited agricultural use with approval of an Administrative Use Permit. The Project does not require a zone change as part of the Project approvals. There are no areas designated as Williamson Act Contract lands located within the Project Site.

The Project would not conflict with existing zoning for agricultural use or a Williamson Act Contract and, therefore, **no impact** will occur.

c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

The Project Site is zoned as CC and does not contain lands designated as forest land, timberland or timberland zoned Timberland Production as defined in the Public Resources Code Sections. Therefore, **no impact** will occur.

d. Result in the loss of forest land or conversion of forest land to non-forest use?

The Project Site is vacant and located in a developed area surrounded by residential uses, commercial uses, and transportation corridors. The property is covered in non-native ruderal, iceplant, and ornamental vegetation with some native coastal sage scrub plants interspersed.

The Project would not result in the loss of forest land or conversion of forest land to non-forest uses, and therefore, **no impact** will occur.

e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

The Project Site is vacant and located in a developed area surrounded by residential uses, commercial uses, and transportation corridors. No farmland or forest land exists onsite or in the surrounding area.

The Project would not result in the conversion of Farmland to non-agricultural use or forest land to non-forest uses, and therefore, **no impact** will occur.

4.3.5 Mitigation Implementation and Monitoring

No impacts to agriculture and forestry resources have been identified, and therefore no mitigation measures are required.

4.3.6 Level of Significance After Mitigation

No impact related to agriculture and forestry resources will occur as a result of the Project.

Chapter 4.4 AIR QUALITY

The following document was used in the preparation of this section and is included in its entirety in **Appendix C**:

Ldn Consulting, Inc. October 1, 2020. *Air Quality Assessment CarMax Auto Store City of Oceanside, CA*.

4.4.1 Environmental Setting

The Project Site lies within the SDAB and is subject to the SDAPCD guidelines and regulations. The SDAB is one of 15 air basins that geographically divide California. The SDAB lies in the southwest corner of California and comprises the entire San Diego region and covers approximately 4,260 square miles, contiguous with the political boundaries of the County.

The primary factors that determine air quality are the locations of air pollutant sources and the amount of pollutants emitted. Meteorological and topographical conditions are also important factors. Factors such as wind speed and direction, air temperature gradients and sunlight, and precipitation and humidity interact with physical landscape features to determine the movement and dispersal of air pollutants. Meteorological and topographical factors that affect air quality in the SDAB are described below.

Climate and Meteorology

Climate within the SDAB area often varies dramatically over short geographical distances with cooler temperatures on the western coast gradually warming to the east as prevailing winds from the west heats up. Most of southern California is dominated by high-pressure systems for much of the year, which keeps the County mostly sunny and warm. Typically, during the winter months, the high pressure system drops to the south and brings cooler, moister weather from the north. It is common for inversion layers to develop within high-pressure areas, which mostly define pressure patterns over the SDAB. These inversions are caused when a thin layer of atmosphere increases in temperature with height. An inversion acts like a lid preventing vertical mixing of air through convective overturning. As the pollutants become more concentrated in the atmosphere, photochemical reactions occur that produce O_3, commonly known as smog.

Meteorological trends within the City produce daytime highs typically ranging between 65˚F in the winter to approximately 78˚F in the summer with August usually being the hottest month. Median temperatures range from approximately 55˚F in the winter to approximately 70˚F in the summer. The average humidity is approximately 64% in the winter and approximately 72% in the summer.

Air Pollution Climatology

Pursuant to the 1990 federal Clean Air Act amendments, the United States Environmental Protection Agency (U.S. EPA) classifies air basins (or portions thereof) as “attainment” or “nonattainment” for each criteria pollutant, based on whether the NAAQS have been achieved. Generally, if the recorded concentrations of a pollutant are lower than the standard, the area is classified as “attainment” for that pollutant. If an area exceeds the standard, the area is classified as “nonattainment” for the pollutant. If there is not enough data available to determine whether the standard is exceeded in an area, the area is designated as “unclassified” or “unclassifiable”.

Areas that achieve the standards after a nonattainment designation are re-designated as maintenance areas and must have approved Maintenance Plans to ensure continued attainment of the standards. The California Clean Air Act, like its federal counterpart, called for the designation of areas as "attainment" or "nonattainment" but based on CAAQS rather than the NAAQS.

During the fall and winter, air quality problems are created due to carbon monoxide (CO) and oxides of nitrogen (NO_x) emissions. CO concentrations are generally higher in the morning and late evening. In the morning, CO levels are elevated due to cold temperatures and the large number of motor vehicles traveling. Higher CO levels during the late evenings are a result of stagnant atmospheric conditions trapping CO in the area. Since CO is produced almost entirely from automobiles, the highest CO concentrations in the basin are associated with heavy traffic. Nitrogen dioxide (NO_2) levels are also generally higher during fall and winter days.

Under certain conditions, atmospheric oscillation results in the offshore transport of air from the Los Angeles region to the County. This often produces high O_3 concentrations, as measured at air pollutant monitoring stations within the County. The transport of air pollutants from Los Angeles to the County has also occurred within the stable layer of the elevated subsidence inversion, where high levels of O_3 are transported.

SDAB Attainment Designation

An area is designated in attainment when it is in compliance with the NAAQS and/or CAAQS. These standards are set by the EPA or CARB for the maximum level of a given air pollutant that can exist in the outdoor air without unacceptable effects on human health or public welfare.

The criteria pollutants of primary concern that are considered in this analysis are O_3, NO_2, CO_2, SO_2, PM_{10} and $PM_{2.5}$. Although there are no ambient standards for volatile organic compounds (VOCs) or nitrogen oxide (NOx), they are important as precursors to O_3. The portion of the SDAB where the proposed Project is located is designated as nonattainment for federal and state ozone (O_3), and for state particulate matter (PM_{10} and $PM_{2.5}$).

Local Air Quality

Criteria pollutants are measured continuously throughout the SDAB. This data is used to track ambient air quality patterns throughout the County and to determine attainment status when compared to the NAAQS and CAAQS. The SDAPCD is responsible for monitoring and reporting data. As of 2018, the district operated eight (8) monitoring sites, which collect data on criteria pollutants[5].

The closest monitoring locations to the Project Site are the Camp Pendleton monitoring location roughly nine (9) miles to the north, and the Camp Pendleton monitoring station roughly 12.9 miles to the east. **Table 4.4-1** identifies the criteria pollutants monitored at the aforementioned stations since 2015.

Table 4.4-1
Three-Year Ambient Air Quality Summary Near the Project Site

[5] San Diego Air Pollution Control District (SDAPCD). 2018. *Annual Air Quality Monitoring Network Plan 2018.*

Pollutant	Closest Recorded Ambient Monitoring Site	Averaging Time	CAAQS	NAAQS	2015	2016	2017	Days Exceeded over 3 years
O_3	Camp Pendleton or Escondido Monitoring Station	1 Hour	0.09 ppm	No Standard	0.09	0.08	0.09	0
		8 Hour	0.070 ppm	0.070 ppm	0.08	0.07	0.08	10
* PM_{10} ($\mu g/m^3$)		24 Hour	50 $\mu g/m^3$	150 $\mu g/m^3$	30	-	-	N/A
		Annual Arithmetic Mean	20 $\mu g/m^3$	No Standard	19.4	-	-	N/A
* $PM_{2.5}$ ($\mu g/m^3$)		24 Hour	No Standard	35 $\mu g/m^3$	29.4	-	-	N/A
		Annual Arithmetic Mean	12 $\mu g/m^3$	15 $\mu g/m^3$	8.6	-	-	N/A
NO_2 (ppm)		Annual Arithmetic Mean	0.030 ppm	0.053 ppm	0.006	0.006	0.006	N/A
		1 Hour	0.18 ppm	0.100 ppm	0.060	0.072	0.0063	N/A
* CO (ppm)		1 Hour	20 ppm	35 ppm	3.1	-	-	N/A
		8 Hour	9 ppm	9 ppm	2.0	-	-	N/A

Notes:

1. Yearly maximums marked with "-" indicated data was not available for either monitoring station.
2. Days exceeded marked with "N/A" indicate no data available
3. * Data was selected from the Escondido Monitoring Station. All other data presented was collected at the Camp Pendleton Monitoring Station.
4. SO_2 is only monitored at the El Cajon Monitoring Station. Within the entire County of San Diego, SO_2 emissions within the County are essentially Zero for all metrics including the Average, Maximum 24 hour and 1-hour standards. The Highest 1-hr measurement identified is .004 ppm and the most restrictive standard (CAAQS for SO_2) is 0.25 ppm.

Source: Air Quality Assessment Prepared by Ldn Consulting, Inc. (Appendix C)

4.4.2 Regulatory Setting

Federal

Federal Standards and Definitions

The Federal Air Quality Standards were developed per the requirements of the Federal Clean Air Act, a federal law passed in 1970 and further amended in 1990. This law provides the basis for the national air pollution control effort. An important part of the Federal Clean Air Act was the development of NAAQS for major air pollutants.

The Federal Clean Air Act established two types of air quality standards otherwise known as primary and secondary standards. ***Primary Standards*** set limits for the intention of protecting public health, which includes sensitive populations such as people with asthma, children and elderly. ***Secondary Standards*** set limits to protect public welfare to include the protection against decreased visibility, damage to animals, crops, vegetation and buildings.

The EPA Office of Air Quality Planning and Standards (OAQPS) has set NAAQS for principal "criteria" pollutants. These criteria pollutants are defined as:

1. Carbon Monoxide (CO) is a colorless, odorless gas that is produced from the partial combustion of carbon-containing compounds, usually in internal-combustion engines. Common sources of CO to outdoor air are cars, trucks, and other vehicles or machinery that burn fossil fuels. Breathing air with a high concentration of CO reduces the amount of oxygen that can be transported in the blood stream to the heart and brain, and can cause dizziness, confusion, and unconsciousness.
2. Lead (Pb) is a neurotoxin that distributes throughout the body in the blood and accumulates in the bones. It can adversely affect the nervous system, kidney function, immune system, reproductive and developmental systems, and the cardiovascular system. Elevated lead in the environment can result in decreased growth and reproductive rates in plants and animals. At the national level, major sources of lead in the air include ore and metals processing, piston-engine aircraft operation on leaded aviation fuel, waste incinerators, utilities, and lead-acid battery manufacturers.
3. Nitrogen Dioxide (NO_2) is a reactive, oxidizing gas that can irritate airways in the human respiratory system. Exposure can aggravate or develop respiratory diseases, particularly asthma. NO_2 and other nitrogen oxides interact with water, oxygen, and other chemicals in the atmosphere to form acid rain, harming sensitive ecosystems such as lakes and forests. Nitrogen oxides make the air hazy, affecting public views, and also contribute to nutrient pollution in coastal waters. NO_2 primarily enters the air from the burning of fuel from cars, trucks, buses, and power plants.
4. Particulate Matter (PM_{10} or $PM_{2.5}$) is a complex mixture of solid particles and liquid droplets found in the air. These particles vary in shape, size, and chemical composition, and can be made of metal, soot, soil, and dust. Some are emitted directly from a source, such as construction sites, unpaved roads, fields, or smokestacks, but most form in the atmosphere as a result of reactions of chemicals such as sulfur dioxide and nitrogen oxides – pollutants emitted from power plants, industries, and automobiles. These particles contribute significantly to regional haze and visibility reduction in California, and can also be inhaled and cause health problems.
5. Ozone (O_3) is a highly oxidative unstable gas that can trigger a variety of health problems when breathed, such as chest pain, coughing, throat irritation, and airway inflammation. It can reduce lung function and worsen bronchitis, emphysema, and asthma. This pollutant forms in the atmosphere through reactions between chemicals directly emitted from vehicles, industrial plants, and many other sources.
6. Sulfur Dioxide (SO_2) is a gaseous compound of sulfur and oxygen that forms when sulfur-containing fuel is burned in locomotives, ships, and off-road diesel equipment. It is also emitted from industrial processes. Short-term exposures to sulfur dioxide can harm the respiratory system and make breathing difficult. People with asthma, children, and the elderly are sensitive to these effects. SO_2 can contribute to acid rain.

The EPA is responsible for implementing most aspects of the Federal Clean Air Act, including setting NAAQS for major pollutants; setting hazardous air pollutant (HAP) standards; approving state attainment plans; setting motor vehicle emission standards; issuing stationary source emission standards and permits; and establishing acid rain control measures, atmospheric O_3 protection measures, and enforcement provisions.

The Federal Clean Air Act requires the EPA to reassess the NAAQS at least every five (5) years to determine whether adopted standards are adequate to protect public health based on current scientific

evidence. States with areas that exceed the NAAQS must prepare a (State Implementation Plan (SIP) that demonstrates how those areas will attain the standards within mandated time frames.

Federal Energy Policy and Conservation Act

In 1975, Congress enacted the Federal Energy Policy and Conservation Act to serve the nation's energy demands and promote feasibly attainable conservation methods. This act established the first fuel economy standards for on-road motor vehicles in the United States. Pursuant to the act, the National Highway Traffic Safety Administration (NHTSA) is responsible for establishing additional vehicle standards. The Corporate Average Fuel Economy (CAFE) standards reduce energy consumption by increasing the fuel economy of cars and light trucks. The NHTSA and U.S. EPA jointly administer the CAFE standards. Congress has specified that CAFE standards must be set at the "maximum feasible level" with consideration given for: (1) technological feasibility; (2) economic practicality; (3) effect of other standards on fuel economy; and (4) need for the nation to conserve energy.

In response to *Massachusetts v. Environmental Protection Agency*,[6] the George W. Bush administration issued Executive Order 13432 in 2007, directing USEPA, the U.S. Department of Transportation (USDOT), and the U.S. Department of Energy (USDOE) to establish regulations that reduce emissions from motor vehicles, non-road vehicles, and non-road engines by 2008.[7] In 2009, the NHTSA issued a final rule regulating fuel efficiency for and GHG emissions from cars and light-duty trucks for model year 2011; in 2010, the U.S. EPA and NHTSA issued a final rule regulating cars and light-duty trucks for model years 2012–2016.[8]

In 2010, President Obama issued a memorandum directing the U.S. EPA, USDOT, USDOE, and NHTSA to establish additional standards regarding fuel efficiency and emission reduction, clean fuels, and advanced vehicle infrastructure. In response to this directive, the U.S. EPA and NHTSA proposed stringent, coordinated federal emission and fuel economy standards for model years 2017–2025 light-duty vehicles.[9] The final rule was adopted in 2012 for model years 2017–2021, and the U.S. EPA issued augural standards for model year 2022 through 2025 following direction from the Obama Administration.[10]

In August 2018, the Trump Administration released a notice of proposed rulemaking, the *Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021-2026 Passenger Cars and Light Trucks* (SAFE Vehicles Rule), which proposed freezing fuel-efficiency requirements and lock in model

10 U.S. EPA, *Final Rule for Model Year 2017 and Later Light-Duty Vehicle Greenhouse Gas Emissions and Corporate Average Fuel Economy Standards*, Accessed May 2020, https://www.gpo.gov/fdsys/pkg/FR-2012-10-15/pdf/2012-21972.pdf.

year 2020 standards through 2026.[11] In March 2020, the Trump Administration issued the SAFE Vehicles Rule, which sets fuel economy and carbon dioxide standards that increase 1.5 percent in stringency each year from model year 2021-2026 for both passenger cars and light trucks.[12]

In addition to the regulations applicable to cars and light-duty trucks described above, in 2016, the U.S. EPA and NHTSA announced fuel economy and emissions standards for medium- and heavy-duty trucks for model years 2018–2027 (for certain trailers) and 2021–2027 (for semi-trucks, large pickup trucks, vans, and all types and sizes of buses and work trucks). The final standards are expected to lower CO_2 emissions by approximately 1.1 billion metric tons, save vehicle owners fuels costs of about $170 billion, and reduce oil consumption by up to 2 billion barrels over the lifetime of the vehicles sold under the program.[13]

Hazardous Air Pollutants

The 1997 federal Clean Air Act amendments required the EPA to identify National Emission Standards for Hazardous Air Pollutants to protect public health and welfare. Hazardous air pollutant include certain volatile organic chemicals, pesticides, herbicides, and radionuclides that present a tangible hazard, based on scientific studies of exposure to humans and other mammals. Under the 1990 Clean Air Act amendments, which expanded the control program for hazardous air pollutants, 187 substances and chemical families were identified as hazardous air pollutants.

State

State Standards and Definitions

CARB sets the laws and regulations for air quality on the state level. Subsidiary responsibilities are assigned to air quality management districts and air pollution control districts at the regional and county levels. CARB is responsible for ensuring implementation of the California Clean Air Act of 1988, responding to the Federal Clean Air Act, and regulating emissions from motor vehicles and consumer products.

CARB established CAAQS, which are generally the same as or more restrictive than the NAAQS and also limit four additional contaminants. **Table 4.4-2** identifies both the NAAQS and CAAQS, and the additional contaminants are defined below:

1. Visibility Reducing particles are particles in the air that obstruct visibility. Some are directly emitted to the air such as windblown dust and soot, while others form from the chemical transformation of gaseous pollutants emitted largely by fuel combustion.

11 U.S. EPA, *The Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021–2026 Passenger Cars and Light Trucks*, Accessed May 2020, https://www.gpo.gov/fdsys/pkg/FR-2018-08-24/pdf/2018-16820.pdf.

2. Sulfates are salts of Sulfuric Acid which occur as microscopic particles (aerosols) resulting from fossil fuel and biomass combustion. They increase the acidity of the atmosphere and can form acid rain.
3. Hydrogen Sulfide (H_2S) is a colorless gas with the odor of rotten eggs or flatulence. It can induce irritation of the eyes and headache, nausea, or vomiting. The most common sources of H_2S emissions are oil and natural gas extraction and processing. It also forms from bacterial breakdown of organic matter.
4. Vinyl Chloride, a chlorinated hydrocarbon, is a toxic, colorless gas with a sweet odor. It is an industrial chemical used in the production of its polymer, polyvinyl chloride. It may be emitted from industrial processes, but today is mainly found near landfills, sewage treatment plants, and hazardous waste sites due to microbial breakdown of chlorinated solvents.

Table 4.4-2
Ambient Air Quality Standards

Ambient Air Quality Standards						
Pollutant	**Average Time**	**California Standards[1]**		**Federal Standards[2]**		
		Concentration[3]	**Method[4]**	**Primary[3,5]**	**Secondary[3,6]**	**Method[7]**
Ozone (O_3)[8]	1 hour	0.09 ppm (180 µg/m^3)	Ultraviolet Photometry	-	Same as Primary Standard	Ultraviolet Photometry
	8 hour	0.070 ppm (137 µg/m^3)		0.070 ppm (137 µg/m^3)		
Respirable Particulate Matter (PM_{10})[9]	24 hour	50 µg/m^3	Gravimetric or Beta Attenuation	150 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m^3		-		
Fine Particulate Matter ($PM_{2.5}$)[9]	24 Hour	-	-	35 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m^3	Gravimetric or Beta Attenuation	12.0 µg/m^3	15 µg/m^3	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m^3)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m^3)	-	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m^3)		9.0 ppm (10 mg/m^3)	-	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m^3)		-	-

Ambient Air Quality Standards						
Pollutant	**Average Time**	**California Standards[1]**		**Federal Standards[2]**		
		Concentration[3]	**Method[4]**	**Primary[3,5]**	**Secondary[3,6]**	**Method[7]**
	Average					
Visibility Reducing Particles[14]	8 Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	**No National Standards**		
Sulfates	24 Hour	25 µg/m^3	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m^3)	Ultraviolet Fluorescence			
Vinyl Chloride	24 Hour	0.01 ppm (26 µg/m^3)	Gas Chromatography			

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, suspended particulate matter—PM10, PM2.5, and visibility reducing articles are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
2. National standards (other than ozone, particulate matter, and those based on annual averages or annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest eight hour concentration in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m3 is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact U.S. EPA for further clarification and current federal policies.
3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.
4. Any equivalent procedure which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.
5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.
6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.
7. Reference method as described by the EPA. An “equivalent method” of measurement may be used but must have a “consistent relationship to the reference method” and must be approved by the EPA.
8 On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.
9. On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 µg/m^3 to 12.0 µg/m^3. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 µg/m^3, as was the annual secondary standard of 15 µg/m^3. The existing 24-hour PM10 standards (primary and secondary) of 150 µg/m^3 were also retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.
10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.
11. On June 2, 2010, a new 1-hour SO2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved. Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.
12. The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.
13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 µg/m3 as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.
14. In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and

Toxic Air Contaminants

The State Air Toxics Program was established in 1983 under Assembly Bill (AB) 1807. The California toxic air contaminants (TAC) list identifies more than 700 pollutants, of which carcinogenic and non-carcinogenic toxicity criteria have been established for a subset of these pollutants pursuant to the California Health and Safety Code. In accordance with AB 2728, the state TAC list includes the (federal) hazardous air pollutants (HAPs). The Air Toxics "Hot Spots" Information and Assessment Act of 1987 (AB 2588) seeks to identify and evaluate risk from air toxics sources. However, AB 2588 does not regulate air toxics emissions. TAC emissions from individual facilities are quantified and prioritized. "High priority" facilities are required to perform a health risk assessment (HRA), and if specific thresholds are exceeded, are required to communicate the results to the public in the form of notices and public meetings.

Diesel particulate matter (DPM) is part of a complex mixture that makes up diesel exhaust. CARB classified "particulate emissions from diesel-fueled engines" as a TAC in August 1998. DPM is emitted from a broad range of diesel engines: on-road diesel engines of trucks, buses, and cars, and off-road diesel engines including locomotives, marine vessels, and heavy-duty construction equipment, among others.

California Health and Safety Code Section 41700

Section 41700 of the Health and Safety Code states that a person shall not discharge from any source whatsoever quantities of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public; or that endanger the comfort, repose, health, or safety of any of those persons or the public; or that cause, or have a natural tendency to cause, injury or damage to business or property. This section also applies to sources of objectionable odors.

Air Quality and Land Use Handbook

CARB published the *Air Quality and Land Use Handbook*[14] on April 28, 2005 to serve as a general guide for considering health effects associated with siting sensitive receptors proximate to sources of TAC emissions. The recommendations provided therein are voluntary and do not constitute a requirement or mandate for either land use agencies or local air districts. The goal of the guidance document is to protect sensitive receptors, such as children, the elderly, acutely ill, and chronically ill persons, from exposure to TAC emissions. Some examples of CARB's siting recommendations include the following: (1) avoid siting sensitive receptors within 500 feet of a freeway, urban road with 100,000 vehicles per day, or rural roads with 50,000 vehicles per day; (2) avoid siting sensitive receptors within 1,000 feet of a distribution center (that accommodates more than 100 trucks per day, more than 40 trucks with operating transport refrigeration units per day, or where transport refrigeration unit operations exceed 300 hours per week); and (3) avoid siting sensitive receptors within 300 feet of any dry cleaning

[14] CARB, Air Quality and Land Use Handbook: A Community Perspective (April 2005), https://www.arb.ca.gov/ch/handbook.pdf.

operation using perchloroethylene and within 500 feet of operations with two (2) or more machines.

California Code of Regulations

The California Code of Regulations (CCR) is the official compilation and publication of regulations adopted, amended, or repealed by State agencies pursuant to the Administrative Procedure Act (APA). The CCR includes regulations that pertain to air quality emissions. Specifically, Section 2485 in Title 13 of the CCR, states that the idling of all diesel-fueled commercial vehicles (weighing over 10,000 pounds) during construction shall be limited to five (5) minutes at any location. In addition, Section 93115 in Title 17 of the CCR states that operation of any stationary, diesel-fueled, compression-ignition engines shall meet specified fuel and fuel additive requirements and emission standards.

Sierra Club v. County of Fresno

The California Supreme Court, in *Sierra Club v. County of Fresno* (2018) 6 Cal. 5th 502 ("*Friant Ranch*"), determined the air quality analysis in the EIR was inadequate for the significant and unavoidable impacts because it did not make "a reasonable effort to substantively connect the project's air quality impacts to likely health consequences." The State Supreme Court determined that, as it relates to significant and unavoidable impacts, "The EIR should be revised to relate the expected adverse air quality impacts to likely health consequences or explain in meaningful detail why it is not feasible at the time of drafting to provide such an analysis."

In April 2019, the Sacramento Metropolitan Air Quality Management District (SMAQMD) published an Interim Recommendation on implementing the *Friant Ranch* decision in the review and analysis of proposed projects under CEQA in Sacramento County.[15] To date, the SMAQMD is the only California air district to formally release, as guidance, an "Interim Recommendation" for lead agencies and practitioners preparing CEQA documents for projects within Sacramento County to comply with the *Friant Ranch* decision. Consistent with the expert opinions submitted to the Court in *Friant Ranch* by the San Joaquin Valley Air Pollution Control District (SJVAPCD) and the South Coast Air Quality Management District (SCAQMD), the SMAQMD guidance confirms the absence of an acceptable or reliable quantitative methodology that would correlate the expected criteria air pollutant emissions of projects to the likely health consequences to people of project-generated criteria air pollutant emissions. The SMAQMD guidance explains that while it is in the process of developing a methodology to assess these impacts, lead agencies should follow the advice in *Friant Ranch* to explain in meaningful detail why this analysis is not yet feasible. As such, it is currently not scientifically feasible to provide a reliable quantitative analysis directly correlating a project's significant pollutant emissions and human health.

Regional

The State of California has 35 air districts, which each hold responsibility for ensuring that the criteria pollutant levels are below the NAAQS and CAAQS. Air basins that exceed either the NAAQS or the CAAQS for any criteria pollutants are designated as "non-attainment" areas for that pollutant. Currently, there are 16 non-attainment areas for the federal ozone standard and four non-attainment areas for the $PM_{2.5}$ standard (CARB, 2018). The state therefore created the California SIP, which is designed to provide measures needed for California air basins to attain ambient air quality standards.

[15] SMAQMD, "*Friant Ranch* Interim Recommendation," April 25, 2019.

The SDAPCD is the government agency which regulates air pollution within the County. To try to achieve attainment status within the SDAB, the SDAPCD developed a Regional Air Quality Strategy (RAQS) outlining control measures. As noted above, the City is currently in "non-attainment" status for federal and state O_3 standards, and for state particulate matter (PM_{10} and $PM_{2.5}$) standards. However, an attainment plan is only available for O_3. The RAQS was adopted in 1992 and is revised periodically with the latest revision having occurred in 2016.

The 2016 update mostly summarizes how the 2009 update has lowered NO_X and VOCs emissions which reduces O_3 and clarifies and enhances emission reductions by introducing for discussion three (3) new VOC and four (4) new NO_X reduction measures. NO_X and VOCs are precursors to the formation of O_3 in the atmosphere. The criteria pollutant standards are generally attained when each monitor within the region has no exceedances during the previous three calendar years. A complete listing of the current attainment status for criteria pollutants with respect to both federal and state nonattainment status by pollutants for the County is shown in **Table 4.4-3** (SDAPCD, 2018).

SDAPCD reviews projects to ensure that they would not: (1) cause or contribute to any new violation of any air quality standard; (2) increase the frequency or severity of any existing violation of any air quality standard; or (3) delay the timely attainment of any air quality standard or any required interim emission reductions or other milestones of any federal attainment plan.

The RAQS is largely based on population predictions by the San Diego Association of Governments (SANDAG). Projects that produce less growth than predicted by SANDAG would generally conform to the RAQS. Projects that create more growth than projected by SANDAG may create a significant impact if the project produces unmitigable air quality emissions or if the project produces cumulative impacts.

Table 4.4-3
San Diego County Air Basin Attainment Status by Pollutant

Criteria Pollutant	Federal Designation	State Designation
Ozone (8-hour)	Nonattainment	Nonattainment
Ozone (1-hour)	Attainment*	Nonattainment
Carbon Monoxide	Attainment	Attainment
PM_{10}	Unclassifiable **	Nonattainment
$PM_{2.5}$	Attainment	Nonattainment
Nitrogen Dioxide	Attainment	Attainment

SDAPCD Rules and Regulations

As stated above, the SDAPCD is responsible for planning, implementing, and enforcing federal and state ambient standards in the SDAB. The following rules and regulations apply to all sources in the jurisdiction of SDAPCD and would apply to the proposed project.

Rule 20.2 – Air Quality Impact Assessment Screening Thresholds

The SDAPCD established screening level thresholds in Rule 20.2 for new or modified stationary sources of air pollutants. The County's Guidelines for Determining Significance and Report Format and Content Requirements incorporate screening level thresholds from Rule 20.2 for use in all County-related Air Quality Impact Assessments and for determining CEQA air quality impacts. These screening criteria can be used to demonstrate that a project's total emissions would not result in a significant impact as defined by CEQA. As provided in the Air Quality Assessment prepared by Ldn Consulting, Inc. and provided in this EIR as **Appendix C**, since the SDAPCD does not have air quality impact thresholds for VOCs, it is acceptable to use the SCAQMD thresholds, which generally has stricter emissions thresholds than the SDAPCD.

Rule 50 – Visible Emissions

This rule prohibits discharge into the atmosphere from any single source of emissions whatsoever of any air contaminant for a period or periods aggregating more than three minutes in any period of 60 consecutive minutes that is darker in shade than that designated as Number 1 Ringelmann Chart, as published by the United States Bureau of Mines, or of such opacity as to obscure an observer's view to a degree greater than does smoke of a shade designated as Number 1 on the Ringelmann Chart (SDAPCD 1997).

Rule 51 – Nuisance

This rule prohibits the discharge, from any source, of such quantities or air contaminants or other materials that cause or have a tendency to cause injury, detriment, nuisance, annoyance to people and/or the public, or damage to any business or property (SDAPCD 1976).

Rule 55 – Fugitive Dust

Rule 55 regulates fugitive dust emissions from any commercial construction or demolition activity capable of generating fugitive dust emissions, including active operations, open storage piles, and inactive disturbed areas, as well as track-out and carry-out onto paved roads beyond a project site (SDAPCD 2009b).

Rule 67.01 – Architectural Coatings

This rule requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce VOC emissions from the use of these coatings, primarily by placing limits on the VOC content of various coating categories (SDAPCD 2015a).

Rule 1200 – Toxic Air Contaminants (New Source Review)

This rule requires each stationary source that is required to prepare a public risk assessment to provide written public notice of risks at or above the following levels: maximum incremental cancer risks equal to or greater than 10 in 1 million, or cancer burden equal to or greater than 1.0, or total acute non-

cancer health hazard index equal to or greater than 1.0, or total chronic non-cancer, health hazard index equal to or greater than 1.0 (SDAPCD 2017b).

San Diego Association of Governments (SANDAG)

SANDAG is the regional planning agency for the County and serves as a forum for regional issues relating to transportation, the economy, community development and the environment. SANDAG serves as the federally-designated metropolitan planning organization for the County. SANDAG has prepared *San Diego Forward: The Regional Plan* (Regional Plan) for the San Diego region. The Regional Plan, including its Sustainable Communities Strategy (SCS), is built on an integrated set of public policies, strategies, and investments to maintain, mange, and improve the transportation system so that it meets the diverse needs of the San Diego region through 2050.

In regard to air quality, the Regional Plan sets the policy context in which SANDAG participates in and responds to the air district's air quality plans and builds off the air district's air quality plan processes that are designed to meet health-based criteria pollutant standards in several ways. First, it complements air quality plans by providing guidance and incentives for public agencies to consider best practices that support the technology-based control measures in air quality plans. Second, the Regional Plan emphasizes the need for better coordination of land use and transportation planning, which heavily influences the emissions inventory from the transportation sectors of the economy.

Local

City of Oceanside General Plan

Environmental Resource Management Element

The Environmental Resource Management Element of the General Plan outlines recommended action programs to implement and achieve long-range planning objectives. The City Implementation Program actions related to air quality include:

Objectives: Air Quality

1. Cooperate with County, State, and federal agencies in continuing programs of air quality improvement

Land Use Element

The Land Use Element of the General Plan provides guidance for protection of air quality. The following policies of the Land Use Element are relevant to the proposed project:

> **3.18 Air Quality**
>
> **Policy A:** The City shall cooperate with the San Diego County Air Pollution Control Board, and participate in the Regional Air Quality Control Strategy (RAQS).

4.4.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the project would:

a. Conflict with or obstruct implementation of the applicable air quality plan;
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard;
c. Expose sensitive receptors to substantial pollutant concentrations;
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

Appendix G of the CEQA Guidelines indicates that, where available, the significance criteria established by the applicable air quality management district or pollution control district may be relied upon to determine whether the proposed project would have a significant impact on air quality.

As part of its air quality permitting process, the SDAPCD and the County has established thresholds for permitted stationary sources. The SDAPCD sets forth quantitative emission thresholds below which a stationary source would not have a significant impact on ambient air quality. These levels may be used to evaluate the increased emissions which would be discharged to the SDAB from proposed land development projects. Project-related air quality impacts estimated in this environmental analysis would be considered significant if any of the applicable significance thresholds presented in **Table 4.4-4** below, are exceeded.

Table 4.4-4
Screening Thresholds for Criteria Pollutants

Pollutant	Total Emissions (Pounds per Day)
Construction Emissions	
Respirable Particulate Matter (PM_{10} and $PM_{2.5}$)	100 and 55

Methodology

Air quality impacts related to construction and daily operations of the CarMax Project were calculated using the latest CalEEMod Version 2016.3.2 air quality model, which was developed by BREEZE Software for the SCAQMD in 2017. The construction model in CalEEMod is used to calculate the emissions associated with the construction of the Project and uses methodologies presented in the U.S. EPA AP-42 document with emphases on Chapter 11.9. The CalEEMod input/output model is provided in

Attachment A of the Air Quality Assessment prepared by Ldn Consulting, Inc. and is included in this EIR as **Appendix C**.

The AERMOD dispersion model was used to determine the concentration for air pollutants at any location near the pollutant generator. Additionally, the model can predict the maximum exposure distance and concentrations. The notable TAC from constriction is diesel exhaust since exposure to diesel exhaust is known to cause cancer and acute and chronic health effects. Diesel exhaust emissions were estimated using the annual PM_{10} exhaust emissions from onsite construction operations obtained from the annual CalEEMod model output by summing each onsite source for the construction duration. The AERMOD files for the Project are provided in Attachment B of the Air Quality Assessment which is included in this EIR as **Appendix C**, which utilizes Tier 4 diesel equipment as a Project design feature.

Once the dispersed concentrations of diesel particulates are estimated in the surrounding air, they are used to evaluate estimated exposure to people. Exposure was evaluated by calculating the dose in milligrams per kilogram body weight per day (mg/kg/d). For residential exposure, the breathing rates are determined for specific age groups, so inhalation dose (Dose-air) is calculated for each of these age groups: 0<2, 2<9, 2<16, 16<30 and 16<70 years. The Air Quality Assessment (**Appendix C)** provides the in depth algorithms to calculate the dose for exposure and the worst-case cancer risk dose calculation.

Health risk calculations, in its entirety, are provided in Attachment C of the Air Quality Assessment which is included in this EIR as **Appendix C**. The sensitive receptors in close proximity to the Project Site are displayed in **Figure 11.**

4.4.4 Project Impact Analysis

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the Project:

a. Conflict with or obstruct implementation of the applicable air quality plan?

The Federal Clean Air Act forms the basis for the national air pollution control effort. Pursuant to the Clean Air Act the U.S. EPA classifies air basins as "attainment" or "nonattainment" for each criteria air pollutant, based on whether the NAAQS have been achieved. The EPA set NAAQS for six (6) pollutants based on parts per million, parts per billion and micrograms per cubic meter. States with areas that exceed the NAAQS must prepare a SIP that demonstrates how those areas would attain the NAAQS within mandated timeframes. In addition, the 2016 RAQS were adopted on the local level to demonstrate how the region would comply with the federal standards.

The State of California has 35 air districts, which each hold responsibility for ensuring that the criteria pollutant levels are below the NAAQS and CAAQS. Air basins that exceed either the NAAQS or the CAAQS for any criteria pollutants are designated as "non-attainment" areas for that pollutant. Currently, there are 16 non-attainment areas for the federal O_3 standard and four (4) non-attainment areas for the $PM_{2.5}$ standard (CARB, 2018). The state therefore created the California SIP, which is designed to provide measures needed for California air basins to attain ambient air quality standards. Due to the SDAB nonattainment of the federal O_3 standard, RAQS have been established for O_3 and O_3 precursors (NO_x and VOCs).

If a project involves development that is greater than that anticipated in the local plan (Zoning Ordinance or General Plan) and SANDAG's growth projections, the project has the potential to be in conflict with the SIP and RAQS and may contribute to a potentially significant cumulative impact on air quality.

The Project Site is located in the CC zone pursuant to the Zoning Ordinance and corresponding General Plan land use designation. No change in the Zoning Ordinance or General Plan is required. A CUP is proposed to allow for the CarMax Project. Thus, the Project is consistent with the zoning and land use designations and meets the use that is anticipated in the local plan and SANDAG's growth projections and will not conflict with the SIP or RAAQS.

An Air Quality Assessment was prepared for the Project and is included as **Appendix C** of this EIR. As provided in the Air Quality Assessment, and further provided in **Table 4.4-6**, **Table 4.4-7** and **Table 4.4-8** below, the Project will not exceed SDAPCD thresholds for any pollutant during construction or operation of the Project. Compliance with SDAPCD thresholds for air pollutant emissions will assure protection of public health. Health risk as a result of air pollutants is further discussed in Section 4.4.4.c below.

The Project will not conflict with or obstruct implementation of the applicable air quality plan, and therefore, impacts will be **less than significant**.

b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

As discussed above, the SDAB is in nonattainment of the federal O_3 standard, as well as the state particulate matter (PM_{10} and $PM_{2.5}$) standard. Below is an analysis of the criteria pollutants, including O_3, O_3 precursors, and particulate matter.

Construction Emissions

Construction of the Project would result in the temporary addition of pollutants to the SDAB from onsite sources such as off-road construction equipment, soil disturbance, and VOC off-gassing and off-site sources including on-road haul trucks, vendor trucks and worker vehicle trips. The Project construction emissions were estimated using California Emissions Estimator Model (CalEEMod) Version 2016.3.2 for construction calculations. **Table 4.4-5** displays the expected timeframes for the construction processes for the entire Project including utility infrastructure, facilities, improvements and structures at the Site as well as the expected number of equipment required.

Table 4.4-5
Expected Construction Timing and Construction Equipment

Equipment Identification	Proposed Start	Proposed Completion	Quantity
Site Preparation	11/9/2021	11/23/2021	-
Rubber Tired Dozers			3
Tractors/Loaders/Backhoes			4
Grading	11/24/2021	12/23/2021	-

This equipment list is based upon equipment inventory within CalEEMod 2016.3.2. The quantity and types are based upon assumptions from projects of similar size and scopein the County of San Diego and the City of Oceanside.
Source: Air Quality Assessment Prepared by Ldn Consulting, Inc. (Appendix C)

Construction of the Project is expected to start in late 2021. The Project would be constructed in two (2) phases. Site preparation, remedial grading, and paving would last for approximately three (3) months and construction-related activities would last for approximately ten (10) months. Grading activities would have a net surplus of soil and would require an export of roughly 10,700 CY off-site. The Project's construction emissions as based on these assumptions are shown in **Table 4.4-6** below.

Table 4.4-6
Expected Construction Emissions Summary – Pounds per Day

Year	ROG	NOx	CO	SO_2	PM_{10} (Dust)	PM_{10} (Exhaust)	PM_{10} (Total)	$PM_{2.5}$ (Dust)	$PM_{2.5}$ (Exhaust)	$PM_{2.5}$ (Total)
2022	8.76	18.76	22.83	0.08	18.21	0.10	18.28	9.97	0.10	10.03

Source: Air Quality Assessment Prepared by Ldn Consulting, Inc. (Appendix C)

As displayed in **Table 4.4-6**, Project construction emissions would not exceed SDAPCD thresholds and therefore, no direct construction impacts related to air quality are expected. The Applicant has indicated that as a design feature all diesel equipment would be Tier 4, meaning that equipment would comply with the latest emission milestone established by the U.S. EPA and CARB, and that the grading contractor would follow BMPs for grading as it relates to minimizing air quality emissions and will comply with all SDAPCD rules and regulations.

Project construction emissions will not exceed SDAPCD thresholds for any pollutant, and will not result in considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard (PM_{10}, $PM_{2.5}$ or O_3). Impacts from Project construction emissions are **less than significant**.

Operational Emissions

Once construction is completed, the Project would generate emissions from daily operations which would include sources such as area, energy, waste and water uses, which were also calculated within CalEEMod. Area sources include consumer products, landscaping and architectural coatings as part of regular maintenance. It was assumed that an average of 10% of the structural surface area will be re-painted with coatings compliant with SDAPCD Rule 67. Energy sources would be emitted from uses such as onsite natural gas use and electricity.

The Project would also generate emissions through the use of vehicles for transportation. The Project was estimated to generate 475 average daily trips (ADT) as identified within the Project Vehicle Miles Traveled Analysis prepared by LOS Engineering, Inc. (**Appendix N**). These daily trips were utilized within the CalEEMod analysis. The model was run on the assumption that the first full year of operations would be in 2024. Additionally, the model was run for the winter and summer scenarios to determine maximum daily operational impacts for operation. **Table 4.4-7** and **Table 4.4-8** below display the expected operational emissions for summer and winter scenarios.

As shown in **Table 4.4-7** and **Table 4.4-8**, the Project operational emissions would not exceed SDAPCD thresholds for any pollutant, for which the project region is non-attainment under an applicable federal or state ambient air quality standard (PM_{10}, $PM_{2.5}$ or O_3). Impacts from operational emissions are **less than significant**.

Cumulative Impacts

Air quality is largely a cumulative impact and is cumulatively evaluated based on the air basin. The nonattainment status of regional pollutants is a result of past and present development and SDAPCD develops and implements plans for future attainment of ambient air quality standards. Based on these considerations, project-level thresholds of significance for criteria pollutants are relevant in the determination of whether a project's individual emissions would have a cumulatively significant impact on air quality.

According to the SDAPCD, individual construction projects that exceed the SDAPCD's recommended daily thresholds for project-specific impacts would cause a cumulatively considerable increase in emissions for those pollutants for which the SDAB is in nonattainment.

As discussed above, the Project would not exceed SDAPCD's daily significance thresholds during construction or operation. Furthermore, the Project would not cause significant traffic impacts or add a significant number of vehicle trips to the off-site roadway network. The nearest cumulative construction projects would be two (2) housing projects located over 0.5 mile away and the Tri City Hospital located approximately 0.15 mile north, which is mostly constructed and operational. Therefore, the Project is expected to generate less than significant cumulative construction air quality impact.

Project operational air quality emissions would not exceed SDAPCD's area, mobile or energy thresholds, as displayed in **Table 4.4-7** and **Table 4.4-8** and therefore, the Project would have a less than significant cumulative operational impact. The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under applicable federal and state ambient air quality standards, and therefore impacts to air quality will be **less than significant**.

c. Expose sensitive receptors to substantial pollutant concentrations?

Some receptors to air quality are considered more sensitive to air pollutants than others, because of pre-existing health problems, proximity to the emissions source, or duration of exposure to air pollution. Land uses such as primary and secondary schools, hospitals, and convalescent homes are considered to be relatively sensitive to poor air quality because they contain people who are very young, old, and in the infirm are more susceptible to respiratory infections and other air quality-related health problems than the general public.

Residential areas are also considered sensitive to poor air quality because people in residential areas are often at home for extended periods of time. Recreational land uses are moderately sensitive to air pollution because of the vigorous exercise associated with recreational land uses having a high demand on respiratory system functions. CARB has identified the following people as most likely to be affected by air pollution: children less than 14 years of age, the elderly over 65 years of age, athletes, and those with cardiovascular and chronic respiratory diseases. These groups are classified as sensitive population groups.

Sensitive receptors relative to the Project Site are shown in **Figure 11**. As shown in **Figure 11,** sensitive receptors include residences and senior residences. The nearest sensitive receptors are the medium density residences directly to the east across Thunder Drive, the Brookdale senior living facility located directly south of Buena Vista Creek, an apartment complex located approximately 0.15 mile southwest of the Project Site and the Lil Jackson Senior Community located 0.19 mile southwest of the Project Site. The evaluation of air quality impacts to sensitive receptors is based on the potential to result in physical health issues.

Based on the annual air quality modeling results provided in the Air Quality Assessment **(Appendix C**), worst case PM_{10} from exhaust emissions would cumulatively produce 0.00589 tons (over the total construction duration of 391 days) or an average of 0.000158 grams/second. The average emission rate over the grading area is $3.55x10^{-9}$ grams/m^2/second. The inhalation cancer risk for the closest residential receptor was found to be 7.97 which would not exceed SDAPCD 10 per one million exposed significance threshold.

Based on the uses expected on the Project Site, potential long-term operational impacts associated with the release of TACs will be minimal and would not be expected to exceed the SDAPCD thresholds of significance presented in **Table 4.4-7** and **Tale 4.4-8.**

There are known chronic health risks associated with diesel exhaust which are considered non-cancer risks. As provided in the Air Quality Assessment, included in this EIR as **Appendix C** the annual concentration yields a Health Hazard Index of 0.0072, which is less than one. Additionally, the Project would utilize Tier 4 diesel constriction equipment and the grading contractor would follow BMPs for grading as it relates to minimizing air quality emissions and would comply with all SDAPCD rules and regulations. Therefore, a less than significant health risk impact will occur. As discussed above, the Project would not exceed SDAPCD's daily significance thresholds during construction or operation.

The Project would not expose sensitive receptors to substantial pollutant concentrations, and therefore impacts are **less than significant.**

d. Result in other emissions (such as those leading to odors) affecting a substantial number of people?

The California Health and Safety Code, Division 26, Part 4, Chapter 3, Section 41700, SDAPCD Rule 51, and the OMC Section 13.16 (commonly referred to as the Public Nuisance Law) prohibits emissions from any source whatsoever in such quantities of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to the public health or damage to property. SDAPCD Rule 51 also regulates odor emissions.

Construction

Potential odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment, architectural coatings, and asphalt pavement application, which would disperse rapidly from the Project Site and generally occur at magnitudes that would not affect substantial numbers of people. Construction odors would be considered short-term and would not affect a substantial number of people. The Project would be required to comply with the City's Public Nuisance Law, the SDAPCD Rule 51 and the California Health and Safety Code.

Construction of the Project will not result in other emissions (such as those leading to odors) affecting a substantial number of people, and impacts are **less than significant.**

Operation

The Project would operate as a CarMax pre-owned automobile dealership consisting of a sales and administration building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area, sales display area, and a customer and employee parking lot. The operation of the Project would not be expected to cause long-term odor impacts.

While almost any source may emit objectionable odors, some land uses are more likely to produce odors because of their operation. Land uses more likely to produce odors include agriculture, chemical plants, composting operations, dairies, fiberglass molding manufacturing, landfills, refineries, rendering plants, rail yards, and wastewater treatment plants. The Project does not contain any active manufacturing activities and would not convert agricultural land to commercial land uses. Objectionable odors would not be emitted by the commercial use.

Any unforeseen odors generated by the Project will be controlled in accordance with SDAPCD Rule 51 and the Public Nuisance Law, which would prohibit the discharge of air contaminants that harm, endanger, or annoy individuals or the public; endanger the comfort, health or safety of individuals or the public; or cause injury or damage to business or property. Failure to comply with these rules could subject the offending facility to possible fines and/or operational limitations in an approved odor control or odor abatement plan.

Operation of the Project will not result in other emissions (such as those leading to odors) affecting a substantial number of people, and impacts are **less than significant.**

4.4.5 Mitigation Implementation and Monitoring

No significant impacts to air quality have been identified and therefore no mitigation measures are required.

4.4.6 Level of Significance After Mitigation

Project impacts to air quality will be less than significant.

Chapter 4.5 BIOLOGICAL RESOURCES

The following documents were used in the preparation of this section and are included in its entirety in **Appendix D**, **Appendix E**, and **Appendix F**:

Busby Biological Services. September 29, 2020. *Biological Technical Report for Proposed CarMax Auto Superstore Project City of Oceanside, San Diego County, California.* **(Appendix D)**

Busby Biological Services. August 8, 2019. *Biological Constraints for the Proposed CarMax Auto Superstore on Assessor's Parcel Numbers 168-012-42 and 168-012-43 in the City of Oceanside, California.* **(Appendix E)**

Busby Biological Services. September 27, 2019. *Jurisdictional Delineation Report.* **(Appendix F)**

4.5.1 Environmental Setting

Regional Planning Context

The 10.54-acre Project Site is located in the southeastern portion of the City of Oceanside approximately seven miles east of downtown Oceanside, directly south of SR-78, east of College Boulevard, and west of Thunder Drive. The Project is subject to the North County Multiple Habitat Conservation Program (MHCP) and the draft Oceanside Subarea Plan (Subarea Plan) regional planning documents and regulations. These regulations guide the assessment of biological resources and therefore are discussed further below to provide regional planning context.

The MHCP is a long-term regional conservation plan established to protect sensitive species and habitats in northern San Diego County. The MHCP is divided into seven subarea plans – one for each jurisdiction within the MHCP – that are permitted and implemented separately from one another. The MHCP encompasses the cities of Carlsbad, Encinitas, Escondido, Oceanside, San Marcos, Solana Beach and Vista. Each of the cities must adopt its own subarea plan that identifies city-specific regulations and policies pertaining to the sensitive resources found within that jurisdiction.

The Subarea Plan is a citywide conservation program which addresses how the City will conserve the biodiversity and ecosystem function in the City and surrounding areas while also allowing for continued economic development within its jurisdiction. While not formally, adopted or approved, this plan is used to provide guidance and policy direction regarding biological resources. Other local ordinances, codes and documents incorporating biological conservation programs and preservation of open spaces include the City's General Plan and Zoning Ordinances. The Subarea Plan is the overarching conservation document used by the City to incorporate all aspects of these documents. Within the Subarea Plan the Project Site is classified as disturbed land and is not located within a preserve area.

The Project is not located within the Coastal Zone and is not subject to the Local Coastal Program (LCP). The Project Site is not located within an area designated for preservation or designated as a Pre-Approved Mitigation Area (PAMA), Wildlife Corridor Planning Zone (WCPZ) or Ag Exclusion Zone as depicted in Figure 4-1 of the Subarea Plan.

Existing Biological Resources

An initial biological survey was conducted by Busby Biological Services, Inc., which included 14.91 acres of land, approximately 10.54 acres of which was within the two undeveloped parcels of the Project Site, and approximately 4.39 acres of a 50-foot survey buffer surrounding those parcels. Buena Vista Creek runs along the southern portion of the Project Site from east to west, eventually connecting to Buena Vista Lagoon and the Pacific Ocean approximately four miles west of the Project Site.

Topography and Soils

The site is relatively flat, dropping slightly in elevation to the south towards Buena Vista Creek, with elevations ranging from approximately 180 to 220 feet amsl.

The following soil types occur on the property: (1) Las Flores loamy fine sand, five to nine percent slopes, eroded, and (2) Visalia sandy loam, two to five percent slopes. Las Flores loamy fine sand covers the vast majority of the Project Site. These soils are derived from weathered marine sandstone and are moderately well-drained, have slow to medium runoff, and a slight to moderate erosion hazard. Visalia sandy loam occurs in and adjacent to Buena Vista Creek, in the southern portion of the Project Site. Visalia sandy loams are derived from granitic parent material and are rich in organic matter, are well-drained, and have a slight to moderate erosion hazard. Visalia sandy loams are listed as a hydric soil on the United States Department of Agriculture (USDA) Hydric Soils list.

Vegetation Communities and Land Cover Types

A total of 63 plant species were observed during the biological surveys of the site, including the general and focused surveys conducted between July 22, 2019 and July 29, 2020. Of these 63 species, 37 are considered non-native and or naturalized into the area, and 26 are considered native. One of the species, San Diego sagewort, found adjacent to and south of the survey area, is considered sensitive. A complete list of plant species observed onsite is included in within the Biological Technical Report **(Appendix D)**.

Eight vegetation communities and land cover types were found within the survey area and are displayed in **Table 4.5-1** below and are described in the following paragraphs. **Figure 12** displays the existing biological resources onsite. The majority of the survey area is dominated by disturbed land. Southern riparian forest within and adjacent to Buena Vista Creek and small scattered patches of disturbed Diegan coastal sage scrub in the southern half of the survey area are the only native vegetation communities that occur within the survey area. **Table 4.5-1** includes the designated habitat group for each vegetation community located onsite. These designations are established in the North County MHCP and further governed by the Subarea Plan to provide a sensitivity ranking. The habitat groups are ranked in order of sensitivity from highest (Group A) to lowest (Group E). Group F includes lands that do not support natural vegetation. Impacts to this habitat group do not require mitigation.

Disturbed Diegan Coastal Sage Scrub

Diegan coastal sage scrub is a vegetation community that consists mainly of low, soft-woody sub-shrubs that are most actively growing in winter and early spring. Many taxa of this community are facultatively drought-deciduous. Stem- and leaf-succulents are also often present but are usually not conspicuously dominant species. Diegan coastal sage scrub is typically found on dry sites, such as steep, south-facing slopes or clay-rich soils ranging from coastal Los Angeles County into northern Baja California, Mexico.

Disturbed Diegan coastal sage scrub is similar to Diegan coastal sage scrub, but it was classified as disturbed where mechanical or natural disturbance has reduced the overall cover of the community resulting in large areas colonized by herbaceous weedy species and/or bare ground. Types of disturbance include grading, clearing, scraping, off-road vehicle damage, or illegal trash disposal. Disturbed Diegan coastal sage scrub is designated as habitat group C due to the importance of this vegetation community to sensitive species including the California gnatcatcher and impacts to this habitat should be minimized as much as possible.

Diegan coastal sage scrub occurs in three small patches within the survey area. It is dominated by native plant species such as California sagebrush (*Artemisia californica)*, California buckwheat (*Eriogonum fasciculatum*), black sage (*Salvia mellifera*), but also contains a high proportion of non-native plant species, such as crown daisy (*Glebionis coronaria*), black mustard (*Brassica nigra*), short-pod mustard (*Hirschfeldia incana*), sweet fennel (*Foeniculum vulgare*), Russian thistle (*Salsola tragus*), and chess (*Bromus* spp.).

Southern Riparian Forest

Southern riparian forest is composed of winter-deciduous, broad-leaved tree species that require water near the soil surface and is most often found along stream courses. Typically this community contains a dense canopy of trees located within moist canyons and drainage bottoms.

This vegetation community is designated as Group A due to its association with wetland and riparian areas. Consistent with existing federal and state regulations, communities within Group A are subject to

the goal of no net loss in acreage, function and value. It is assumed that the highest priority would be given to impact avoidance and minimization and that replacement of habitat subject to unavoidable impact would occur through restoration or creation of substitute habitat areas, generally of the same kind and in the vicinity of the impacted habitat.

Southern riparian forest occurs along Buena Vista Creek in the southern portion of the area surveyed and within the 50-foot survey buffer. The community onsite contains a moderately dense canopy, ranging in height from 15 to 20 feet, and is dominated by native plant species such as various narrow-leaf willow (*Salix exigua*), arroyo willow (*Salix lasiolepis*), mulefat, cattail (*Typha* sp.), and wild grape, but also contains non-native species such as Brazilian pepper tree (*Schinus terebinthifolius*), giant reed (*Arundo donax*), and castor bean (*Ricinus communis*).

Open Water

Open Water is comprised of year-round bodies of fresh water with extremely low salinity that typically takes the form of lakes, streams, ponds, or rivers. Open water includes portions of water bodies that are usually covered by water and contain less than ten percent vegetative cover. Open water on the Project Site is associated with areas on the southeast corner of the Project Site as displayed in **Figure 12** which displays the existing biological resources onsite**.**

This land cover type is designated as Group A under the North County MHCP as it may be associated with wetland and riparian habitats.

Developed Land

Developed land is described as land that has been constructed upon or otherwise physically altered to the extent that native vegetation is no longer supported. Developed land contains permanent or semi-permanent structures, pavement, or hardscape, and landscaped areas. Within the survey area, developed land occurs as sidewalks, roadways, parking lots, and commercial buildings.

Disturbed Land

Disturbed land includes areas that retain a soil substrate but have been physically disturbed by previous human activity. These areas are no longer recognizable as a native or naturalized vegetation community. Vegetation, if present, is typically composed of predominately non-native species introduced and established through human action. These areas are not typically artificially irrigated but receive water from precipitation and runoff. Examples of disturbed land include areas that have been graded, cleared for fuel management purposes, graded construction pads, staging areas, off-road vehicle trails, and old home sites.

Disturbed land is designated as Group F under the North County MHCP as it does not support natural vegetation. Group F is also used to describe agricultural lands and are not typically subject to compensatory mitigation.

The majority of the site can be characterized as disturbed land. This land is within or adjacent to areas that appear to have been altered by regular human mechanical disturbance activities, such as grading or brush management. The disturbed land is dominated by bare ground and non-native plant species such as black mustard, tocalote (*Centaurea melitensis*), spotted spurge (*Chamaesyce maculate*), bur-clover (*Medicago polymorpha*), and chess, but also contains scattered native plant species, such as spreading

goldenbush (*Isocoma menziesii* var. *menziesii*), tarweed (*Deinandra fasciculate*), coyote brush (*Baccharis pilularis*), and dove weed (*Croton setigerus*).

Iceplant

Iceplant was designated as a land cover in the biological report to indicate areas of the Project Site that are dominated by iceplant (*Carpobrotus* ssp.), which has been introduced and established through human action. Areas mapped as iceplant are no longer recognizable as a native or naturalized vegetation community. These areas are not typically artificially irrigated but receive water from precipitation and runoff.

Iceplant is designated as Group F under the MHCP as it does not support natural vegetation and is not subject to compensatory mitigation.

Five small patches of iceplant occur within the survey area, all of which occur on the southeastern parcel boundaries. In addition to non-native iceplant, this land-cover type contains non-native grasses such as wild oat (*Avena fatua*) and chess.

Ornamental

Ornamental vegetation was designated as a land cover in the biological report to indicate areas consisting of non-native landscape and/or garden plantings that have been planted in association with buildings, roads, or other development. San Diego County supports more than 250 different types of ornamental trees and numerous other shrubs and herbs that decorate urban areas.

Ornamental land cover types are designated as Group F under the MHCP as it does not support natural vegetation and is not subject to compensatory mitigation. Group F is typically associated with disturbed land and eucalyptus.

Ornamental vegetation occurs in small, scattered patches along the perimeter of the survey area. It is composed of various non-native plant species used for landscaping such as Brazilian pepper tree, red gum (*Eucalyptus camaldulensis*), natal plum (*Carissa macrocarpa*), and Mexican fan palm (*Washingtonia robusta*).

Ruderal

Ruderal was designated as a land cover in the biological report to indicate areas dominated by non-native, weedy species that are no longer recognizable as a native or naturalized vegetation community. These areas are not typically artificially irrigated but receive water from precipitation and runoff. The species composition in ruderal areas can be similar to the species composition in disturbed areas; however, ruderal areas do not typically receive the frequent mechanical disturbance that occurs in disturbed areas.

Ruderal land cover type is designated as Group F under MHCP as it is associated with disturbed lands and is not subject to compensatory mitigation.

Ruderal vegetation occurs within four small patches in the area surveyed. These areas are dominated by non-native plant species, such as black mustard, short-pod mustard, tocalote, wild oat, and chess, but also contain scattered native plant species such as spreading goldenbush, tarweed, and coyote brush.

Zoological Resources

A total of 17 wildlife species were detected within the area surveyed during the biological resources survey conducted on July 22, 2019. Species detected are representative of the habitats within and adjacent to the survey area, and include cabbage white butterfly (*Pieris rapae*), western fence lizard (*Sceloporus occidentalis*), Anna's hummingbird (*Calypte anna*), western scrub-jay (*Aphelocoma californica*), spotted towhee (*Pipilo macalatus)*, house finch (*Carpodacus mexicanus frontalis*) and California ground squirrel (*Spermophilus beecheyi*). A list of wildlife species detected within the survey area is provided in the Biological Constraints Report (**Appendix E**).

Sensitive Biological Resources

Sensitive biological resources include sensitive vegetation communities, sensitive plant and wildlife species, wildlife movement corridors and nursery sites, and jurisdictional resources. For purposes of this EIR, sensitive species are defined as Subarea Plan-covered species; species considered rare, threatened, endangered, endemic, and/or sensitive by United States Fish and Wildlife Service (USFWS), California Native Plant Society (CNPS), and/or California Department of Fish and Wildlife (CDFW); and avian species covered by the Migratory Bird Treaty Act (MBTA) and/or California Fish and Game Code (CFGC) Section 3503.5.

Sensitive Vegetation Communities

Sensitive vegetation communities are vegetation assemblages, associations, or sub-associations that have cumulative losses throughout the region, have relatively limited distribution, support or potentially support sensitive species, or have particular value to other wildlife. Typically, sensitive vegetation communities are considered sensitive whether or not they have been disturbed. Sensitive vegetation communities are regulated by various local, state and federal resource agencies.

The sensitive vegetation communities that occur onsite include the following:

- Approximately 0.451 acres of disturbed Diegan coastal sage scrub
- Approximately 1.386 acres of southern riparian forest
- Approximately 0.054 acres of open water

Sensitive Plant Species

A sensitive plant species is one that is 1) listed as threatened or endangered or proposed for listing by federal or state agencies; 2) California Rare Plant Ranks (CRPR) List 1 or List 2; or 3) considered rare, endangered, or threatened by CDFW or other local conservation organizations or specialists. Noteworthy plant species are considered to be those that are CRPR List 3 or List 4.

Approximately 44 individual San Diego sagewort, a CRPR List 4.2 sensitive plant, were found adjacent to the survey area, on the stream bank just south of Buena Vista Creek.

Additionally, a literature review and database search resulted in a list of 56 sensitive plant species that have historically occurred within three miles of the survey area. Only one sensitive plant species – San

Diego sagewort – was observed onsite during the general and focused surveys conducted for the Project.

Focused sensitive plant species surveys were conducted for the Project. The results of these sensitive plant species surveys are summarized below. The fill sensitive plant species survey summary reports are included in the Biological Technical Report **(Appendix D).**

Focused Sensitive Plant Species Surveys

The focused sensitive plant species survey was conducted on May 15, 2020. A second survey was not conducted on the second survey date of June 8, 2020 as the site had been mowed. The results of the sensitive plant species surveys and focused *Brodiaea* species surveys were used to re-evaluate the potential for occurrence of the initial 56 sensitive plant species with potential for occurrence within the Project survey area. Of the 56 species, 52 are not expected to occur onsite based on the existing site conditions and the results of the May 2020 sensitive plant survey. Of the remaining for, only one – San Diego sagewort – was observed onsite. The other three – southern tarplant (*Centromadia parryi* ssp. *australis*), smooth tarplant (*Centromadia pungens* ssp. *laevis)*, and Del Mar Mesa sand aster (*Corethrogyne filaginifolia* var. *linifolia*) – were not observed during the May 2020 sensitive plant survey. However, the Site was mowed before the June 2020 sensitive plant survey could be completed, when these species would have been observable if onsite. Therefore, there is still a low to moderate potential for occurrence for each of these species to occur onsite.

San Diego Sagewort

San Diego sagewort is a CRPR 4.2 species designated as limited distribution and moderately threatened in California. It is a deciduous shrub in the Asteraceae family that typically blooms from May to September. This species is found in mesic, sandy soils along drainages in chaparral, coastal sage scrub, and riparian habitats. This species is threatened by development, flood control projects, and possibly by non-native plant species.

San Diego sagewort is present adjacent to and south of the survey area. It was observed along the southern bank of Buena Vista Creek during the 2019 general biological survey, 2019 jurisdictional delineation, and 2020 focused sensitive plant surveys. It is within the Project survey area, but located well outside the Project footprint.

Southern Tarplant

Southern tarplant is a CRPR 1B.1 species designated as rare, threatened, or endangered in California and elsewhere. It is an annual herb in the Asteraceae family that typically blooms from May to November. This species is found in vernal pools, along the margins of marshes, and in vernally mesic areas within grasslands. This species is threatened by habitat disturbance, population fragmentation, urbanization, development, illegal vehicle activity, foot traffic, grazing and competition from non-native plants.

Southern tarplant has a low to moderate potential to occur within the Project survey area. While no historical species occurrence records for southern tarplant exist within three miles of the survey area, marginally suitable habitat exists within the survey area. The survey area was mowed before the planned June 2020 survey, which would have been used to determine the species' presence onsite.

Smooth Tarplant

Smooth tarplant is a CRPR species 1B.1 designated as rare, threatened, or endangered in California and elsewhere. It is an annual herb in the Asteraceae family that typically blooms from April to September. This species is found in alkaline soils associated with chenopod scrub, meadows, and seeps, playas, riparian woodland, and grasslands. This species is threatened by foot traffic, agriculture, road maintenance, disking, urbanization, hydrological alterations, and flood control projects.

Smooth tarplant has a low to moderate potential to occur within the Project survey area. Historical species occurrence records for smooth tarplant exist within three miles of the survey area, but only marginally suitable habitat exists within the survey area. The survey area was mowed before the planned June 2020 survey, which would have been used to determine if this species is present onsite.

Del Mar Mesa Sand Aster

Del Mar Mesa sand aster is a CRPR 1B.1 species designated as rare, threatened, or endangered in California and elsewhere and a proposed Subarea Plan Narrow Endemic species. It is a perennial herb in the Asteraceae family that typically blooms from Map to September. This species is found in sandy soils in coastal bluff scrub, coastal sage scrub, and opening s in maritime chaparral. Del Mar Mesa sand aster is threatened by development, trampling, non-native plan species and road maintenance.

Del Mar Mesa sand aster has a low to moderate potential to occur within the Project survey area. Historical species occurrence records for this species exists within three miles of the survey area, but only marginally suitable habitat exists within the survey area. *Corethrogyne filaginifolia* was observed during the May 2020 sensitive plant survey, however, the survey area was mowed before the planned June 2020 survey, which would have been used to determine if the *Corethrogyne filaginifolia* present onsite is this variety or another more common variety.

Focused Brodiaea Species Surveys

Focused surveys for thread-leaved *Brodiaea* and Orcutt's *Brodiaea* were conducted and included site checks within suitable habitat identified within the Project survey area to document early emergent *Brodiaea* vegetation. Site checks occurred from February 14, 2020 to March 19, 2020. To determine when to initiate focused surveys Busby Biological Services, Inc. biologists coordinated with regional biologists monitoring reference sites during the 2020 survey window in order to determine when other *Brodiaea* populations within the vicinity of the Project had emerged and were observable.

Following observation of thread-leaved *Brodiaea* at the nearby reference population, focused, presence/absence surveys within the Project survey area began. Six surveys were conducted between May 14, 2020 and June 15, 2020. No thread-leaved *Brodiaea* or Orcutt's *Brodiaea* were observed during the first four focused species surveys conducted between May 14, 2020 and June 4, 2020. Between June 4, 2020 and June 8, 2020 the Project survey area was mowed. Busby Biological Services, Inc. biologists continued to survey the Project area for any sign of potential *Brodiaea* species, including two additional surveys on June 12, 2020 and June 15, 2020. No potential *Brodiaea* species were documented during these two visits.

The results of the 2020 *Brodiaea* species surveys are valid until spring 2021.

Sensitive Wildlife Species

A sensitive wildlife species is one that is 1) listed as threatened or endangered or proposed for listing by USFWS or CDFW; 2) designated as "fully protected" by CDFW, 3) considered "species of special concern" by CDFW, and/or 4) considered "taxa to watch" by CDFW. Species that are covered by the federal MBTA were also considered.

Additionally, a literature review and database search resulted in a list of 46 sensitive wildlife species that have historically occurred within three miles of the survey area. All 46 species along with their current status, habitat association, and potential for occurrence are included in the Biological Technical Report **(Appendix D)**.

Focused fairy shrimp, coastal California gnatcatcher, and least Bell's vireo surveys were conducted for the Project. The results of these sensitive wildlife species surveys are summarized below. Four sensitive wildlife species – Cooper's hawk (*Accipiter cooperii*), coastal California gnatcatcher, least Bell's vireo, and yellow warbler (*Setophaga petchia*) – were detected during the general and focused surveys conducted for the Project.

Focused Fairy Shrimp Surveys

Focused protocol-level fairy shrimp surveys were conducted in 2019 and 2020 for the Project and included both the wet and dry season fairy shrimp surveys. The 2019/2020 wet season surveys were initiated on December 3, 2019 following the first significant rain event in November/December 2019, and consisted of a total of seven sampling visits by USFWS-permitted biologist. Wet season surveys continued until March 19, 2020.

During the 2019/2020 wet season surveys, 12 basins within the Project area were identified and surveyed. Basins surveyed included road ruts, ditches, detention basins, and other depressions that became inundated at some point during the 2019/2020 wet season. The majority of the basins in the Project area appear to be continually impacted by foot traffic and vehicle activity. Fairy shrimp were not detected in any basins during the seven surveys that were conducted during the 2019/2020 wet season survey. Additionally, no other aquatic species were observed during these surveys.

The dry season survey consisted of soil sample collection and soil sample processing and analysis. Soil sample collection was performed by USFWS-permitted biologist on August 11, 2020. An appropriate amount of soil was collected from each of the basins identified during the wet season survey and was transferred to Alden Environmental, Inc. for processing and analysis.

Following the appropriate methods to separate fairy shrimp cysts from soil samples, it was determined that no cysts were present in the collected soil samples. Water fleas and seed shrimp, both common, non-sensitive invertebrate species that occur in ephemeral basins, were identified in two of the basins. No fairy shrimp cysts were extracted from any of the soil samples collected from the basins, and therefore fairy shrimp hydration, rearing, hatching, and identification were not necessary and were not performed.

The results of the focused fairy shrimp surveys are valid for three years, or until the beginning of the 2022/2023 rainy season.

Focused Coastal California Gnatcatcher Surveys

Focused protocol-level coastal California gnatcatcher surveys were conducted for the Project according to current USFWS survey protocol for this species. A habitat assessment was conducted on July 22, 2019. A total of 0.57 acre of potentially suitable coastal California gnatcatcher habitat was identified within the Project footprint and 300-foot survey buffer during this assessment.

Six focused protocol-level surveys were conducted between May 7, 2020 and June 12, 2020. All surveys were conducted during appropriate weather conditions. Although a gnatcatcher pair was detected by Busby Biological Services, Inc. biologist during the wetland delineation survey on August 10, 2019, coastal California gnatcatcher was not detected during the 2020 focused protocol-level surveys.

The results of the 2020 focused coastal California gnatcatcher surveys are valid until the beginning of breeding season 2021.

Focused Least Bell's Vireo Surveys

Focused protocol-level least Bell's vireo surveys were conducted for the Project according to current USFWS survey protocol for the species. A habitat assessment was conducted on July 22, 2019. A total of approximately 2.83 acres of potentially suitable least Bell's vireo habitat was identified within the Project footprint and 500-foot survey buffer during the assessment.

Eight focused protocol-level least Bell's vireo surveys were conducted between May 7, 2020 and July 29, 2020. All surveys were conducted during appropriate weather conditions. Although no breeding least Bell's vireo pairs were detected in the Project area, a single least Bell's vireo was detected during the eighth and final survey on July 29, 2020. The least Bell's vireo was detected within the 500-foot survey buffer area southwest of the Project area. After a relatively short observation time, the individual species disappeared downstream towards the west and was not detected again during the survey.

The results of the 2020 focused least Bell's vireo surveys are valid until the beginning of breeding season 2021 (February 2021).

Critical Habitat

Under the Endangered Species Act, USFWS designates certain areas as "critical habitat" if they determined that these geographic areas are essential for the conservation and/or recovery of a federally listed threatened or endangered species, whether or not the species currently occupies the area. Critical habitat areas often require special management and protection to assure they will remain suitable for the federally listed species for which they have been designated. Projects proposed within or adjacent to critical habitat must demonstrate that project implementation would not significantly impact or destroy the functions and values of the critical habitat.

Critical habitat for the coastal California gnatcatcher has been designated within the Buena Vista Creek Mitigation Area, located along the southern boundary of the Project survey area. No other critical habitat has been designated within the vicinity of the Project.

Wildlife Movement Corridors

Wildlife corridors are essential to maintain populations of healthy and genetically diverse plant and wildlife species. Wildlife corridors are considered sensitive by municipal, state, and federal resource conservation agencies. These corridors are undeveloped geographical linkages, that allow wildlife to

move between adjoining open space areas that are becoming increasingly isolated due to habitat fragmentation urbanization, rugged terrain, and/or changes in vegetation.

The Project Site is dominated by disturbed land and completely surrounded by commercial and residential development with the exception of Buena Vista Creek running along the southern boundary. Despite being surrounded by urban development, noise, and lighting, the riparian corridor provides a vital swath of undeveloped open space that appears to provide limited yet sufficient connectivity to be considered part of both a local and regional wildlife corridor. The Project Site, however, is outside of the City's WCPZ.

Jurisdictional Resources

A Jurisdictional Delineation Report was prepared by Busby Biological Services, Inc. and is provided as **Appendix F**. Jurisdictional resources are considered sensitive biological resources and are regulated by the United States Army Corps of Engineers (USACE), CDFW, Regional Water Quality Control Board (RWQCB), and/or the City of Oceanside pursuant to federal, state, and local regulation and are outlined in Section 4.5.2 Regulatory Setting, below.

The wetlands and riparian area within and adjacent to Buena Vista Creek in the southern portion of the survey area were the only potential jurisdictional resources identified within the survey area. The southern riparian forest along Buena Vista Creek is a potentially jurisdictional USACE and RWQCB Wetland Water of the U.S. (WoUS) and Water of the State (WoS) and potentially jurisdictional CDFW Riparian. The open water in Buena Vista Creek is a potentially jurisdictional USACE and RWQCB Non-Wetland WoUS and WoS, and potentially jurisdictional CDFW Streambed. A portion of the disturbed land, developed land, and iceplant adjacent to Buena Vista Creek is a potentially jurisdictional CDFW Streambed. **Table 4.5-2** below displays the potentially jurisdictional resources within the survey area and **Figure 13** displays the jurisdictional resources onsite.

Table 4.5-2
Potentially Jurisdictional Resources within Survey Area

Regulatory Agency	Linear Feet	Acres*	Square Feet	Width Range (feet)
USACE/RWQCB				
Wetland WoUS/WoS	760	0.646	28,121	20-55
Non-Wetland WoUS/WoS	41	0.054	2,349	15-45
Total	**801**	**0.700**	**30,470**	**15-55**
CDFW				
Riparian	760	1.386	60,371	70-105
Streambed	212	0.122	5,270	82-90
Total	**972**	**1.508****	**65,640**	**70-105**

*Acreages are approximate and rounded to the nearest thousandth of an acre.
**Total acreages represent the actual acreages without the rounding error.

October 2020

4.5.2 Regulatory Setting

Federal

Endangered Species Act

The federal Endangered Species Act (ESA) provides the legal framework for the listing of species that are threatened and/or endangered with extinction as well as for the protection of listed species (threatened or endangered species) and their habitats. The ESA is administered by the USFWS. Project activities that jeopardize threatened or endangered species and the habitats upon which they relay are considered a "take" under the ESA. The ESA defines "take" as "to harass, harm, pursue, hunt shoot, wound, kill, trap, capture, or collect, or attempt to engage in any such conduct."

Clean Water Act

The Clean Water Act (CWA) provides guidance for the protection, restoration, and maintenance of the chemical, physical, and biological integrity of the nation's waters. Section 401 of the CWA requires that an applicant for a federal license or permit allowing activities that result in a discharge to jurisdictional WoUS obtain a state water quality certification that the discharge complies with other provisions of the CWA. The RWQCB administer the certification program in California.

Section 402 of the CWA is regulated by the U.S. Environmental Protection Agency (USEPA) and establishes a permitting system for the discharge of any pollutant (except dredge or fill material) into WoUS. It establishes a framework for regulating municipal and industrial storm water discharges under the National Pollutant Discharge Elimination System (NPDES) program. The RWQCB also administers the NPDES permits for construction activities and operations with oversight provided by the State Water Resources Control Board (SWRCB) and the USEPA.

Section 404 of the CWA establishes a permit program administered by the USACE regulating the discharge of dredge of fill material into navigable waters. Navigable waters are WoUS including territorial seas, which include navigable waters; perennial and intermittent streams, lakes, rivers, and ponds; and wetlands, marshes and wet meadows.

Migratory Bird Treaty Act

All migratory bird species that are native to the U.S. or its territories are protected under the federal MBTA, as amended under the Migratory Bird Treaty Reform Act of 2004. The MBTA permits the killing or transport of native migratory birds or any part, nest, or egg of any such bird unless allowed by another regulation adopted in accordance with the MBTA. No permit is issued under the MBTA, and the MBTA does not mandate specific protection measures. However, typical pre-construction requirements include nesting bird surveys during the avian breeding season and avoidance measures if nesting birds are discovered within or adjacent to a project. In addition, the USFWS commonly places restrictions on disturbances allowed near active raptor nests.

State

California Endangered Species Act

The California Endangered Species Act (CESA) generally parallels the main principles and provisions of the federal ESA and is administered by CDFW. The CESA allows the "take" of listed plant and wildlife species either by concurring with a federal Incidental Take Permit under CFGC Section 2080.1 or, for species that are state-listed but not federally listed, issuing an Incidental Take Permit under CFGC Section 2081 if specific criteria are met. The Oceanside Subarea Plan is considered an Incidental Take Permit pursuant to CFGC Section 2081.

California Fish and Game Code

The California Fish and Game Code (CFGC) provides protection for several types of sensitive biological resources. CFGC Section 3503 and 3513 protects avian species, their nests, and their eggs from being "taken" unless authorized by CDFW through implementation of appropriate avoidance, minimization, and/or mitigation measures. CFGC Section 1600 through 1603 regulates project activities within rivers, streams, lakes, wetlands, and riparian habitat. CDFW can issue and Lake or Streambed Alteration (LSA) Agreement for projects affecting these jurisdictional resources. If the activity will not substantially affect any CDFW jurisdictional resources, the activity may be commenced without an LSA agreement.

Native Plant Protection Act

The Native Plant Protection Act (NPPA), under CFGC Sections 1900 through 1913, regulates collection, transport, and commerce in plants that are listed as rare or endangered.

Natural Community Conservation Planning Act

CDFW's Natural Community Conservation Planning (NCCP) Act is a combined effort by the State of California and both public and private partners to take an ecosystem approach to protecting and preserving biological diversity. CDFW and USFWS provide support, direction, and guidance to local agencies to develop an NCCP that identifies economic activity that is compatible with the long-term, regional protection of plants, wildlife, and their habitats.

The applicable NCCP for the proposed Project – the Subarea within the MHCP – is discussed in local Regulatory Setting, below.

Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act regulates water quality for project activities in California/ Pursuant to the Porter-Cologne Act, under Section 13000 et seq. of the California Water Code (CWC), the RWQCB issues Water Quality Certifications for project activities that fill or dredge within Wetland and Non-Wetland WoUS and WoS, including isolated waters such as vernal pools, and other waters showing lack of connectivity to a Traditional Navigable Water (TNW).

Local

North County Multiple Habitat Conservation Program

The MHCP is a comprehensive conservation planning process that was developed to create, manage, and monitor an ecosystem preserve in northwestern San Diego County. It is one of three sub-regional plans that will contribute to a regional preserve system in County. The MHCP is intended to conserve

not only habitat that is already in public ownership, but also other areas that will offer protection to rare, threatened, and endangered plants and wildlife.

The MHCP was adopted and certified by the San Diego Association of Governments (SANDAG) Board of Directors on March 28, 2003 and encompasses the cities of Carlsbad, Encinitas, Escondido, Oceanside, San Marcos, Solana Beach and Vista. Each of these cities must adopt its own Subarea Plan that identifies city-specific regulations and policies pertaining to the sensitive resources found within the jurisdiction. The MHCP allows local jurisdictions to maintain land use control and development flexibility by planning a regional preserve system that can meet future public and private project mitigation needs.

Draft Oceanside Subarea Plan

The Subarea Plan is a draft Habitat Conservation Plan/Natural Community Conservation Plan (HCP/NCCP) prepared pursuant to the ESA and the NCCP Act, which are described above. The Subarea Plan forms a part of the MHCP and addresses how the City will allow for continued economic development within its jurisdiction while conserving the biodiversity and ecosystem function of the area.

Approval and adoption of the Subarea Plan is intended to result in issuance of federal and state authorizations for the take of certain listed rare, threatened, or endangered species. These authorizations would be granted to the City by the USFWS and CDFW. The City, in turn, would then authorize the taking of natural habitats or associated species by projects within its jurisdiction, as long as those biological resources are adequately conserved by the Subarea Plan and the proposed projects are consistent with and covered by the provisions of the Subarea Plan. The draft Oceanside Subarea Plan has yet to be adopted by City Council, and implementing agreements with CDFW and USFWS have yet to be signed. Therefore, incidental take permits currently cannot be issued under the plan. However, the document provides guidance for project applicants to determine potential impacts to biological resources and to develop appropriate mitigation, avoidance, and minimization measures.

The Subarea Plan assigns all land within the City into one of four Preserve Planning Zones: Wildlife Corridor Planning Zone, Off-site Mitigation Zone, Coastal Zone, and Ag Exclusion Zone. Each of these has varying policies and standards that are applicable in addition to the City-wide standards.

City of Oceanside General Plan

Land Use Element

The Land Use Element of the General Plan contains environmental resource management objectives and policies pertaining to biological resources. Applicable objectives and policies include the following:

> **3.11 Vegetation and Wildlife Habitats Objective:** Recognition and preservation of significant areas with regard to vegetation and wildlife habitats.
>
> **Policies:**
>
> A. A biological survey report, including a field survey, shall be required for a proposed project site if the site is largely or totally in a natural state or if high interest species of plants or animals have been found on nearby properties.

B. Where appropriate, the City shall apply open space land use designations and open space zoning to areas of significant scenic, ecological, or recreational value.

C. In areas where vegetation or wildlife habitat modification is inevitable, mitigation and/or compensatory measures such as native plant restoration, land reclamation, habitat replacement, or land interest donation will be considered.

D. Areas containing unique vegetation or wildlife habitats shall receive a high priority for preservation.

E. Specific plans shall be developed in conjunction with regional and county agencies where appropriate, for areas where there is occurrence of endangered or threatened species.

Environmental Resource Management Element

The Environmental Resource Management Element of the General Plan contains long-range policy goals and objectives to evaluate and manage these biological resources including the following:

Vegetation and Wildlife Habitats Objective: Conserve and enhance vegetation and wildlife habitats, especially areas of rare, endangered, or threatened species.

4.5.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS);
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or USFWS;
c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance;
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

4.5.4 Project Impact Analysis

For the purposes of biological resources impact analysis, direct, indirect, permanent and temporary impacts are defined as the following:

Direct Impacts: Defined as any disturbance, alteration, or destruction of biological resources that could result from project related activities. Examples of direct impacts would include diverting surface water flows, encroaching into wetlands, clearing vegetation, and taking an individual species and/or its associated plan communities.

Indirect Impacts: Defined as any disturbance, alteration, or destruction of biological resources that could result from project related activities. Examples of indirect impacts include increased human activity, elevated noise and dust levels, decreased water quality, soil compaction, and the introduction of invasive wildlife and plants.

Permanent Impacts: Defined as those that result in the irreversible removal or destruction of biological resources. Examples of permanent impacts include constructing a building or permanent road on an area containing biological resources.

Temporary Impacts: Those impacts considered to have reversible effects on biological resources. Examples of temporary impacts include the removal of vegetation for construction activities and subsequently allowing the natural vegetation to recolonize the impact area, the accumulation of dust on adjacent vegetation during construction, or the increased noise levels that may interfere with the breeding behaviors of wildlife species.

Cumulative Impacts: Incremental impacts from two or more past, present, or probable future projects whose individual impacts can be individually minor but when combined are considerable.

Would the Project:

a. *Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS)?*

The Project has the potential to result in potentially significant impacts to sensitive plant and wildlife species that may occur within and/or adjacent to the Project development footprint, including proposed off-site improvements.

The Project has been designed to include the requisite 100-foot wetland buffer, which includes the required 50-foot biological buffer on the jurisdictional resources as well as the requisite 50-foot planning buffer. The planning buffer serves as an area of transition between the biological buffer and specified land uses on adjoining uplands. Foot paths, bikeways, and passing recreational uses may be incorporated into the planning buffer, but buildings, roads and other intensive uses are prohibited. The following uses are prohibited in the 50-foot biological buffer: new development, foot paths, bikeways, passive recreational uses not already planned, and fuel modification activities for new development. The riparian area and associated natural habitats within the 100-foot buffer will be designated as biological open space and incorporated into the Preserve per Section 5 of the Oceanside Subarea Plan.

Sensitive Plant Species

Focused sensitive plant surveys were conducted for the Project by Busby Biological Services, Inc. including four (4) rounds of focused *Brodiaea* species surveys and one (1) round of focused sensitive plant surveys. Based on the data collected during the *Brodiaea* species surveys and focused sensitive

plant surveys, the potential for occurrence of the 56 sensitive plant species that were evaluated for their potential to occur within the survey area was determined. One (1) sensitive plant species, San Diego sagewort, was observed within the survey area. Of the remaining 55 species, 52 species are not expected to occur within the Project survey area, and three (3) species, southern tarplant, smooth tarplant, and Del Mar Mesa sand aster, have a low to moderate potential to occur within the Project survey area. Sensitive plant species such as the San Diego sagewort have the potential to occur onsite, and therefore, a **significant impact** will occur (**Impact BIO-1a).**

As provided in the Biological Technical Report (**Appendix D**), the results of the 2020 *Brodiaea* species surveys are valid until spring 2021 and the sensitive plant surveys were incomplete. Project construction is anticipated to begin in November 2021 and therefore, the presence of sensitive *Brodiaea* species has the potential to occur within the Project area and represents a **significant impact** (**Impact BIO-2**).

Therefore, the Project will have a substantial adverse effect, either directly or through habitat modifications, on a plant species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations or by CDFW or USFWS.

Sensitive Wildlife Species

Focused sensitive wildlife species surveys were conducted for fairy shrimp, coastal California gnatcatcher, least Bell's vireo and other MBTA-covered species.

Impacts to Sensitive Invertebrate Species

No fairy shrimp or other sensitive invertebrate species were documented during the general and focused wildlife species surveys conducted for the Project. The results of the 2019/2020 wet season fairy shrimp surveys combined with the 2020 dry season surveys are valid until the 2022/2023 rainy season. Construction of the Project is anticipated to begin in November 2021, however, if Project construction has not been initiated prior to the 2022/2023 wet season, a **significant impact (Impact BIO-3)** will occur**.**

Impacts to Sensitive Bird Species

No coastal California gnatcatchers were detected during the 2020 focused surveys; however, a pair of coastal California gnatcatchers was detected within the survey area, incidentally during the jurisdictional delineation prior to the 2020 focused survey. It is assumed that the pair was foraging but not breeding within the Project survey area. The presence of coastal California gnatcatcher has the potential to occur within the Project area. The results of the 2020 focused coastal California gnatcatcher surveys are valid until the beginning of breeding season of 2021 (February 2021). Project construction is anticipated to begin in November 2021 and therefore construction will not be initiated prior to the 2021 breeding season, and a **significant impact (Impact BIO-4)** will occur.

A single foraging least Bell's vireo was detected during the 2020 focused surveys within the 500-foot survey buffer area southwest of the Project Site. The results of the 2020 focused least Bell's vireo surveys are valid until the beginning of the breeding season 2021 (February 2021). Project construction is anticipated to begin in November 2021 and therefore construction will not be initiated prior to the 2021 breeding season, and a **significant impact (Impact BIO-5)** will occur**.**

Two other sensitive bird species, Cooper's hawk and yellow warbler, were detected during the general and focused surveys conducted for the Project. In addition, other sensitive MBTA-covered bird species have potential to occur onsite and within the Buena Vista Creek area. The Project would result in direct and indirect impacts to Cooper's hawk, yellow warbler and other MBTA-covered bird species that occur within and adjacent to the Project footprint, and therefore a **significant impact (Impact BIO-6)** will occur**.**

Impacts to Sensitive Mammal Species

No direct or indirect impacts to sensitive mammal species are expected to occur from implementation of the Project since no sensitive mammal species were located onsite. Therefore, no mitigation measures would be required for impacts to sensitive mammals. Impacts to sensitive mammal species are **less than significant.**

The Project will have a substantial adverse effect, either directly or through habitat modifications, on a wildlife species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by CDFW or USFWS.

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or USFWS?

Eight vegetation communities occur onsite, three (3) of which are sensitive vegetation communities designated by the MHCP and Subarea Plan. Disturbed Diegan coastal sage scrub is designated as habitat Group C, southern riparian forest and open water are designated as Group A. Impacts to vegetation under Groups A and C would be considered significant and would require mitigation under the MHCP and Subarea Plan. The Project has the potential to result in significant impacts to sensitive vegetation communities that occur within and adjacent to the Project footprint.

Direct Impacts to Sensitive Vegetation Communities

The Project has the potential to result in direct impacts to approximately 7.041 acres of vegetation communities and land covers identified within the Project footprint including approximately 6.695 acres of permanent direct impacts and approximately 0.346 acre of temporary impacts within the proposed sewer realignment footprint. These direct impacts are summarized in **Table 4.5-3** below. Project impacts to biological resources are displayed in **Figure 14**.

October 2020

Table 4.5-3
Impacts to Vegetation Communities/ Land Cover Types

Vegetation Community/ Land Cover Type	Subarea Plan Habitat Group	Permanent Direct Impacts (acres*)	Temporary Direct Impacts (acres*)	Total Direct Impacts (acres*)
Disturbed Diegan Coastal Sage Scrub	C	0.408	--	0.408
Southern Riparian Forest	A	--	--	--
Open Water	A	--	--	--
Developed Land	-	0.007	0.001	0.007
Disturbed Land	F	5.425	0.209	5.63
Iceplant	F	0.228	0.042	0.270
Ornamental	F	0.124	0.004	0.128
Ruderal	F	0.502	0.090	0.592
	TOTAL**	**6.695**	**0.346**	**7.041**

*Acreages are approximate and rounded to the nearest thousandths of an acre.
**Total acreages represent the actual acreages without the rounding error.
Source: Biological Technical Report (Appendix D)

Impacts to approximately 6.633 acres of non-sensitive habitats designated as Group F, including developed land, disturbed land, iceplant, ornamental and ruderal, would not be considered significant and would not require mitigation under the MHCP and Subarea Plan. Habitats under Group F are considered lands that do not support natural vegetation. Disturbed Diegan coastal sage scrub is designated as habitat group C due to the importance of this vegetation community to sensitive species including the California gnatcatcher. Unavoidable direct impacts to approximately 0.408 acre of disturbed Diegan coastal sage scrub will occur as a result of the Project and a **significant impact (Impact BIO-7)** will occur**.**

No direct impacts to riparian habitat would result from the Project. The Project has been designed to include the requisite 100-foot wetland buffer, which includes the required 50-foot biological buffer on the jurisdictional resources as well as the requisite 50-foot planning buffer. The Project would encroach temporarily, approximately six (6) feet, into the 50-foot planning buffer during the proposed sewer realignment. As a result, temporary direct impacts will occur to approximately 0.008 acre (334 SF) of disturbed habitat within the planning buffer. These impacts are considered temporary as they would recover on their own within one growing season. Additionally, because these impacts are minimal and because they are located at least 94 feet from the riparian habitat, no direct impacts to riparian habitat will occur.

The Project would result in temporary and permanent impacts to 0.007 acre of developed land. Developed land does not have a habitat group designation under the MHCP and Subarea Plan as it has been physically altered to the extent that native vegetation is no longer supported. Impacts to developed land are not significant and do not require mitigation. The Project would result in temporary and permanent impacts to disturbed land, iceplant, ornamental and ruderal land cover/vegetation communities. These land cover types are designated as habitat Group F which consists of lands that do not support natural vegetation. Impacts to this habitat group are not considered significant and do not require mitigation.

The Project will have a substantial adverse effect on a sensitive habitat community identified in local or regional plans, policies, regulations, or by CDFW or USFWS.

Indirect Impacts to Sensitive Vegetation Communities

Indirect impacts to sensitive vegetation (i.e. disturbed Diegan coastal sage scrub) will occur during Project construction. Indirect impacts, including fugitive dust accumulation from adjacent construction activities could occur to a small patch of disturbed Diegan coastal sage scrub located approximately 15 feet south of the proposed sewer realignment footprint which has the potential to interfere with photosynthesis and germination of sensitive vegetation communities, and therefore a **significant impact** will occur (**Impact BIO-1b).**

No indirect impacts to riparian habitat would result from Project construction. The Project has been designed to include the requisite 100-foot wetland buffer, which includes the required 50-foot biological buffer on the jurisdictional resources as well as the requisite 50-foot planning buffer. Presence of the 100-foot buffer ensures no indirect impacts to riparian habitat will occur.

The Project will have a substantial adverse effect on a sensitive natural communities identified in local or regional plans, policies, regulations, or by CDFW or USFWS.

Critical Habitat

No impacts to critical habitat are anticipated to occur from the Project. Critical habitat for the coastal California gnatcatcher has been designated within the Buena Vista Creek Mitigation Area. The Project, however, has been designed to include the 100-foot buffer on the riparian vegetation associated with Buena Vista Creek, which equates to an approximately 80- to 140-foot buffer on the designated coastal California gnatcatcher critical habitat. Impacts to critical habitat will be **less than significant.**

c. *Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*

No impacts to potentially jurisdictional resources are expected to occur from implementation of the Project. The Project has been designed to include the mandatory 100-foot buffer from the riparian habitat boundary, as mapped during the formal Jurisdictional Delineation Report **(Appendix F)**. This buffer includes a 50-foot biological buffer as well as a mandatory 50-foot planning buffer. Project design and implementation would include the 100-foot buffer and therefore no impacts to riparian habitat will occur. However, due to the Project's close proximity to Buena Vista Creek, the Project has the potential to have a substantial adverse effect on state or federally protected wetlands and a **significant impact** (**Impact BIO-1c)** will occur.

d. *Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?*

Due to the high level of disturbance within the Project Site, no impacts to wildlife corridors or native wildlife nursery sites are expected to occur from implementation of the Project. The Project is not located within the WCPZ, however, Buena Vista Creek and the associated riparian area along the southern boundary of the Project Site provides sufficient connectivity to be considered part of both a local and regional wildlife corridor. The Project has been designed to include the 100-foot buffer on the riparian vegetation associated with Buena Vista Creek, and therefore no impacts to wildlife corridors are anticipated. The Project would not substantially interfere with the movement of any native resident or

migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites, and impacts will be **less than significant.**

e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

The City's General Plan policies related to vegetation and wildlife are provided in Section 4.5.2 Regulatory Setting, above.

In accordance with the Land Use Element of the General Plan Policy 3.11A, a Biological Technical Report (**Appendices D)**, Biological Constraints Report (**Appendix E)**, Jurisdictional Delineation Report (**Appendix F**) and associated focused species surveys as discussed above were completed for the Project by Busby Biological Services, Inc., and the results have been incorporated into this EIR. The biological reports include field surveys, focused surveys, jurisdictional delineation and literature review to assess potential impacts to sensitive biological resources that would result from implementation of the Project. The surveys conducted to identify biological resources were performed in accordance with applicable plans, policies and ordinances set forth by the federal and state wildlife agencies, and the City, as well as current industry and agency standards. Thus, the Project is in compliance with Land Use Element of the General Plan Policy 3.11A.

Land Use Element Policy 3.11C requires the preservation of biological resources, or where vegetation and habitat modification is inevitable, appropriate mitigation for potential impacts shall be incorporated. The Project would result in potentially significant impacts to sensitive biological resources including sensitive plant species and vegetation communities, jurisdictional resources, *Brodiaea* species, fairy shrimp, coastal California gnatcatcher, least Bell's vireo, other MBTA-covered species and disturbed Diegan coastal sage scrub. Appropriate mitigation measures in compliance with the Oceanside Subarea Plan and applicable federal, state, and local codes are required and are provided in Section 4.5.5 Mitigation Implementation and Monitoring of this EIR. Thus, the Project is in compliance with Land Use Element of the General Plan Policy 3.11C.

The Project Site does not constitute unique vegetation or wildlife habitats; or significant scenic, ecological or recreational value; or contain endangered or threatened species that are addressed in the Land Use Element of the General Plan Policies 3.11B, 3.11D and 3.11E. Thus, the Project will not conflict with these policies.

The Project would comply with all applicable City regulations and requirements related to Landscaping including Section 3019 of the Zoning Ordinance, Landscape Development Manual and City of Oceanside Municipal Code.

The Project has been designed to include the requisite 100-foot wetland buffer, which includes the required 50-foot biological buffer on the jurisdictional resources as well as the requisite 50-foot planning buffer. The planning buffer serves as an area of transition between the biological buffer and specified land uses on adjoining uplands. Foot paths, bikeways, and passing recreational uses may be incorporated into the planning buffer, but buildings, roads and other intensive uses are prohibited. The following uses are prohibited in the 50-foot biological buffer: new development, foot paths, bikeways, passive recreational uses not already planned, and fuel modification activities for new development. The riparian area and associated natural habitats within the 100-foot buffer will be designated as biological open space and incorporated into the Preserve per Section 5 of the Oceanside Subarea Plan.

The Project will not conflict with any local policies or ordinances protecting biological resources, and impacts will be **less than significant.**

f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

The Project Site is located in the North County MHCP, which was adopted by SANDAG on March 28, 2003. The North County MHCP covers the City in addition to the cities of Carlsbad, Encinitas, Escondido, San Marcos, Solana Beach, and Vista. Each of these cities must adopt its own Subarea Plan that identifies city-specific regulations and policies pertaining to the sensitive resources found within the jurisdiction. The MHCP allows local jurisdictions to maintain land use control and development flexibility by planning a regional preserve system that can meet future public and private project mitigation needs.

The Project is located within the draft Oceanside Subarea Plan which is the Habitat Conservation Plan (HCP) utilized by the City to guide protection of biological resources. The Subarea Plan has yet to be adopted by City Council, and implementing agreements with CDFW and USFWS have yet to be signed. Therefore, incidental take permits currently cannot be issued under the plan. However, the document provides guidance for project applicants to determine potential impacts to biological resources and to develop appropriate mitigation, avoidance, and minimization measures.

Although the Project was designed to comply with the measures outlined in the MHCP and the Subarea Plan, the Project has the potential to result in significant impacts to sensitive plant species and vegetation communities (**Impact BIO-1a and Impact BIO-1b**), jurisdictional resources (**Impact BIO-1c**), *Brodiaea* species (**Impact BIO-2**), fairy shrimp (**Impact BIO-3**), coastal California gnatcatcher (**Impact BIO-4**), least Bell's vireo (**Impact BIO-5**), and other MBTA-covered species (**Impact BIO-6**). The Project would result in unavoidable direct impacts to disturbed Diegan coastal sage scrub (**Impact BIO-7**) and therefore, a **significant impact** will occur.

The Project has been designed to include the requisite 100-foot wetland buffer, which includes the required 50-foot biological buffer on the jurisdictional resources as well as the requisite 50-foot planning buffer. The riparian area and associated natural habitats within the 100-foot buffer will be designated as biological open space and incorporated into the Preserve per Section 5 of the Oceanside Subarea Plan. The Project would include mitigation measures consistent with the Subarea Plan to address potential direct, significant and unavoidable impacts to sensitive biological resources.

The Project would conflict with the provisions of an adopted HCP, Natural Community Conservation Plan, or other approved local, regional, or state HCP.

4.5.5 Mitigation Implementation and Monitoring

Sensitive Plant Species and Vegetation Communities and Jurisdictional Resources (Impact BIO-1a, Impact BIO-1b, and Impact BIO-1c)

MM-BIO-1a Pre-Construction Mitigation Measures

Pre-Construction Meeting: Prior to construction, a qualified biological monitor will attend the preconstruction meeting, discuss the Project's biological monitoring program

with construction contractors, and arrange to perform any follow up mitigation measures and reporting for the proposed Project.

Resource Delineation and Protection Measures: Prior to construction activities, a qualified biological monitor will supervise the placement of orange construction fencing or equivalent along the limits of disturbance adjacent to sensitive biological habitats and verify compliance with any other Project mitigation measures. This pre-construction phase will include flagging sensitive plant species and delineating buffers to protect sensitive biological resources (e.g., habitats, flora and fauna species, nesting birds) during construction activities. In addition, appropriate BMPs will be installed as applicable to provide fugitive dust control, minimize lighting and noise in adjacent habitats, and avoid the introduction of exotic and invasive plant and animal species into the area. Responsible construction practices as well as storm water and runoff management will also be included as part of the BMPs.

Contractor Environmental Awareness Training: Prior to commencement of construction activities, a qualified biological monitor will meet with all construction contractors to conduct an on-site contractor environmental awareness training to discuss the need to avoid impacts outside of the approved construction area and to protect sensitive flora and fauna (e.g., explain construction limits flagging, discuss sensitive resource flagging, review wetland buffers, clarify acceptable access routes/methods and staging areas).

MM-BIO-1b Construction Measures

Biological Monitoring: During construction, all construction activities, including access and staging, will be restricted to areas previously identified and depicted on the approved Project plans. A qualified biological monitor will monitor construction activities as needed to verify that construction activities do not encroach into biologically sensitive areas and that, if applicable, the mitigation measures developed to accommodate any sensitive species located during the pre-construction surveys are being implemented. The qualified biological monitor will complete a Daily Biological Monitoring Form to document all construction and monitoring activities.

Subsequent Resource Identification: During construction, the qualified biological monitor will note/act to prevent any new disturbances to habitat, flora, and/or fauna on-site (e.g., flag newly identified sensitive resources for avoidance during access). If active nests or other previously unknown sensitive resources are detected, all Project activities that directly impact the resource will be delayed until species-specific local, state, or federal regulations have been determined and applied by the qualified biological monitor.

MM-BIO-1c Post-Construction Measures

Upon completion of Project construction, a post-construction report that summarizes the construction activities, actual Project impacts, and Project design/mitigation measures implemented before and during construction will be prepared for the Project. If Project impacts exceed the approved totals, additional impacts will be mitigated in accordance with the Subarea Plan and other applicable local, state, and federal laws.

The qualified biological monitor will submit the post-construction report to the City of Oceanside within 30 days of construction completion.

Sensitive *Brodiaea* Species (Impact BIO-2)

MM-BIO-2 Prior to construction of the Project, focused sensitive plant species surveys of the Project Site shall include general rare plant surveys in addition to focused *Brodiaea* species surveys by a qualified biologist. Rare plant surveys shall be conducted twice, including one in early spring and one in late spring/early summer prior to Project construction in order to document any sensitive plant species that occur within the Project area. Six (6) focused *Brodiaea* species surveys shall be conducted in spring prior to construction with the timing based on the emergence of the species documented during reference site checks.

If no sensitive plant species are documented within the Project survey area during focused surveys, no additional avoidance, minimization measures or mitigation measures would be required.

If sensitive plant species are documented within the Project survey area, impacts to these species shall be avoided to the extent feasible. Unavoidable impacts shall be minimized and/or mitigated through compensatory measures (e.g., restoration, transplantation, habitat preservation) that will be determined based on the species present, population estimate and significance of the impacts. All significant unavoidable impacts shall require additional mitigation measures to reduce impacts to below a level of significance.

Fairy Shrimp (Impact BIO-3)

MM-BIO-3 Prior to construction of the Project, if construction has not been initiated prior to the first rain event of the 2022/2023 rainy season, additional pre-construction surveys shall be conducted prior to construction initiation in order to update the status of the fairy shrimp species within the Project survey area. Pre-construction fairy shrimp surveys shall be conducted by a qualified biologist in accordance with current USFWS survey guidelines.

If sensitive fairy shrimp species are documented within the survey area, impacts to listed fairy shrimp shall be avoided to the extent feasible. Unavoidable impacts to these species would be considered significant and would require consultation with the USFWS under Section 10(a)(1)(B) of the ESA to develop project-specific minimization and mitigation measures to reduce these impacts to below a level of significance.

Coastal California Gnatcatcher (Impact BIO-4)

MM-BIO-4 Prior to construction of the Project, if construction has not been initiated prior to the 2021 breeding season (February 1), additional pre-construction surveys shall be conducted prior to construction initiation to determine if coastal California gnatcatcher is present in the Project survey area. Focused coastal California gnatcatcher surveys shall be conducted by a qualified biologist in accordance with current USFWS survey guidelines.

Impacts to coastal California gnatcatcher shall be avoided to the extent feasible. Unavoidable impacts to this species would be considered significant and would require consultation with the USFWS under Section 10(a)(1)(B) of the ESA to develop project-specific minimization and mitigation measures (e.g., construction outside of breeding season, habitat protection, noise attenuation) in order to reduce impacts to a level below significance.

Least Bell's Vireo (Impact BIO-5)

MM-BIO-5 Prior to construction of the Project, if construction has not been initiation prior to the 2021 breeding season (February 1), additional pre-construction surveys shall be conducted prior to construction initiation to determine if least Bell's vireo is present in the Project survey area. Pre-construction focused least Bell's vireo surveys shall be conducted by a qualified biologist in accordance with current USFWS survey guidelines.

Impacts to least Bell's vireo shall be avoided to the extent feasible. Unavoidable impacts to this species would be considered significant and would require consultation with the USFWS under Section 10(a)(1)(B) of the ESA to develop project-specific minimization and mitigation measures (e.g., construction outside of breeding season, habitat protection, noise attenuation) to reduce these impacts to below a level of significance.

MBTA-Covered Bird Species (Impact BIO-6)

MM-BIO-6 During construction, all vegetation clearing will occur outside of the breeding season (February 1 to September 15) to avoid impacts to sensitive avian species (e.g., any species identified as a listed, candidate, sensitive, or special status species; any species covered by the MBTA). If vegetation clearing must occur during the breeding season, a qualified biological monitor will conduct a pre-construction survey to determine the presence or absence of nesting birds on the proposed area of disturbance. The pre-construction survey will be conducted no more than four (4) calendar days prior to the start of construction activities (including removal of vegetation). The results of the pre-construction nesting bird survey will be submitted to the City of Oceanside for review and approval prior to initiating any construction activities. If nesting birds are detected, a letter report or mitigation plan will be prepared and will include proposed measures to be implemented to ensure that take of birds or eggs or disturbance of breeding activities is avoided. The report or mitigation plan will be submitted to the City of Oceanside for review and approval and will be implemented to the satisfaction of the City of Oceanside. The qualified biological monitor will verify and approve that all measures identified in the report or mitigation plan are in place prior to and/or during construction.

Disturbed Diegan Coastal Sage Scrub (Impact BIO-7)

MM-BIO-7 Prior to issuance of a building permit, the Project shall mitigate impacts to disturbed Diegan coastal sage scrub within the WCPZ or within a PAMA at a 3:1 ratio. As such, the Project shall preserve 1.224 acres of Diegan coastal sage scrub at an existing mitigation bank or within a PAMA which shall be determined and approved by the City of Oceanside Planning Department.

4.5.6 Level of Significance After Mitigation

The analysis provided in Section 4.5.4 identified the potential for significant impacts related to sensitive plant species and vegetation communities, jurisdictional resources, *Brodiaea* species, fairy shrimp, coastal California gnatcatcher, least Bell's vireo, other MBTA-covered species and disturbed Diegan coastal sage scrub. Implementation of mitigation measure MM-BIO-1a through MM-BIO-1c requires specific pre-construction, construction and post-construction requirements for the provision of pre-construction meeting, resource delineation and protection measures, awareness training, biological monitoring, resource identification and post-construction reporting. Compliance with these mitigation measures would provide onsite construction personnel with further information and protocol in the event that sensitive biological resources are identified. Flagging of resources will provide a physical and visual barrier to these sensitive resources, and the presence of a biological monitor will further protect sensitive biological resources. Compliance with mitigation measure MM-BIO-1a through MM-BIO-1c will reduce impacts to sensitive plant species and vegetation communities and jurisdictional resources to level below significance.

Implementation of mitigation measure MM-BIO-2 would ensure focused sensitive plant species surveys, including *Brodiaea* species surveys are conducted prior to construction, once the 2020 focused surveys are no longer valid. Additional focused surveys will ensure that no new species are located onsite, reducing potential impacts to a less than significant level.

Implementation of mitigation measure MM-BIO-3 will require focused fairy shrimp surveys prior to construction of the Project upon expiration of the 2019/2020 surveys. Pre-construction surveys will ensure that no fairy shrimp species are present onsite before commencement of construction activities. With implementation of MM-BIO-2, impacts related to fairy shrimp will be reduced to levels below significance.

Implementation of mitigation measure MM-BIO-4 will require coastal California gnatcatcher surveys prior to construction, upon expiration of the 2020 focused surveys. Additional pre-construction surveys will ensure that coastal California gnatcatcher species are not present or have the likelihood to be present onsite during construction activities. With implementation of MM-BIO-3, impacts related to coastal California gnatcatcher would be reduced to less than significant levels.

Implementation of mitigation measure MM-BIO-5 will require least Bell's vireo surveys prior to construction of the Project, upon expiration of the 2020 focused surveys. Pre-construction least Bell's vireo surveys will ensure species are not present onsite or have the likelihood to be present onsite during construction activities. With implementation of MM-BIO-4, impacts related to least Bell's vireo would be reduced to a level below significance.

Implementation of mitigation measure MM-BIO-6 will require avoidance of vegetation clearing during the avian breeding season, in order to reduce impacts to sensitive avian species and MBTA-covered species such as Cooper's hawk and yellow warbler. Avoidance of clearing during the breeding season will reduce any impacts to sensitive avian and MBTA-covered species to a level below significance.

Implementation of mitigation measure MM-BIO-7 will require preservation of 1.224 acres of Diegan coastal sage scrub at an existing mitigation bank or Pre-Approved Mitigation Area. Off-site mitigation will offset impacts associated with the unavoidable direct impacts to Diegan coastal sage scrub in

accordance with the Subarea Plan. With implementation of mitigation measure MM-BIO-7, impacts to Diegan coastal sage scrub will be reduced to a level below significance.

Therefore, impacts to all biological resources impacts will be reduced to below a level of significance.

Chapter 4.6 CULTURAL RESOURCES

The following document was used in the preparation of this section and is included in its entirety in **Appendix G**:

ASM Affiliates. August 9, 2019. *Archaeological Survey Report for the CarMax Project, Oceanside, California.*

4.6.1 Environmental Setting

Regional Prehistoric and Historic Context

Prehistory

Archaeological study along the coast of southern California has documented a diverse range of human occupation extending from the early Holocene into the Ethnohistoric period. The prehistory of San Diego County is generally divided into three (3) major periods: Paleo-Indian, Archaic, and Late Prehistoric. These time periods are characterized by patterns in material culture that represent distinct regional trends in the economic/social organization of prehistoric groups.

Paleo-Indian Period

The most widely accepted model of antiquity of human occupation in the New World posits that humans first entered the western hemisphere between 12,000 and 15,000 years before present (B.P.) While there is no firm evidence of human occupation in coastal southern California prior to 12,000 B.P., dates as early as 23,000 B.P and even 48,000 B.P. have been reported. As in most of North America, the earliest recognized period of California prehistory is termed Paleo-Indian. In southern California, this period is usually considered to date from at least 10,000 B.P. until 8500 to 7200 B.P., and is represented by what is known as the San Dieguito complex. Within the local classificatory system, San Dieguito assemblages are composed almost entirely of flaked stone tools, including scrapers, choppers, and large projectile points.

Archaic Period

The Archaic period (also referred to as the Early Milling period) extends back at least 7,200 years, possibly as early as 9000 B.P. Archaic subsistence is generally considered to have differed from Paleo-Indian subsistence in two major ways. First, gathering activities were emphasized over hunting, with shellfish and seed collecting having a high importance. Second, milling technology, frequently employing portable ground stone slabs, was developed. Early archaic occupations in the County are most apparent along the coast and the major drainage systems that extend inland from the coastal plains. Coastal Archaic sites are characterized by cobble tools, basin metates, manos, discoidals, a small number of "Pinto" and "Elko" series dart points, and flexed burials. Together, these elements typify what is termed the La Jolla complex in the County, which appears as the early coastal manifestation of a more diversified way of life.

Late Prehistoric Period

Assemblages derived from the Late Prehistoric sites in the County differ in many ways from those in the Archaic tradition. The occurrence of small, pressure-flaked projectile points, the replacement of flexed inhumations with cremations, the introduction of ceramics and an emphasis on inland plant food collection, processing, and storage are cultural patterns that were well established by the second millennium Anno Domini (A.D.) Inland villages appeared along major watercourses in the foothills and in montane valleys where seasonal exploitation of acorns and piñon nuts was common, resulting in milling stations on bedrock outcrops. Mortars for acorn processing increased in frequency relative to seed-grinding basins.

Ethnohistoric Period

The Ethnohistoric period is that following the Late Prehistoric and is characterized by Luiseño occupation of the region surrounding the Project. In Ethnohistoric times, two main cultural groups occupied the County: the Uto-Aztecan speaking Luiseño in the north and the Kumeyaay, Ipai/Tipai or Diegueño in the south. Luiseño territory encompassed an area from roughly Batiquitos Lagoon on the coast, east to Lake Henshaw, north into Riverside County and west through San Juan Capistrano to the coast. The region inhabited by various groups of the Kumeyaay was much larger and extended from Batiquitos Lagoon eastward into the Imperial Valley and southward through much of northern Baja California. This period is characterized in greater detail in Chapter 4.19 *Tribal Cultural Resources*. Economic activities took place in the community and extended household levels, and varied significantly between coastal and inland areas. Community-wide efforts included fire management for game drives and systematic use of fire to facilitate grasslands and increase yields of key plants and animals. Acorns gathered in upland areas were considered the most important food source. Houses were dispersed throughout villages. Lowland village houses were conical structures covered with tule bundles, and other structures included sweathouses, ceremonial enclosures, ramadas, and acorn granaries. Domestic implements included wooden utensils, baskets, ceramic cooking and storage vessels, and milling tools.

Historic Period

The Historic Period began in the 1700's, when the Spanish began missionizing the indigenous peoples of California and includes the Spanish Colonial (1769-1821) and Mexican Republic (1821-1846) periods. The Mission San Luis Rey de Francia was constructed in the Oceanside area in 1798, and become known as the "King of Missions" due to its large scale and success. The effects of missionization and the introduction of Old World diseases greatly reduced the Native American population of Southern California.

Mexico won independence from Spain in 1821, and this began the Mexican Republic period of the area, a period in which the missions were secularized. The subsequent American period began in 1846 and witnessed the rapid dominance over Californio culture by Anglo-Victorian culture and the rise of urban centers and rural communities.

The region transformed from a feudal-like society to a capitalistic economy in which American entrepreneurs gained control of most large ranchos and transformed San Diego into a merchant-dominated market town. Between 1870 and 1930, urban development established many of the County's larger cities, including the City. The Army and Navy took an increased interest in the San Diego harbor between 1900 and 1940. The 1920s brought a land boom that stimulated development throughout the City and the County. Development stalled during the depression years of the 1930s, but World War II ushered in a period of growth based on expanding defense industries.

City of Oceanside Historic Context

In the late 1860s and 1870s, settlers began to arrive in the San Luis Rey Valley and a small townsite began to grow adjacent to the San Luis Rey Mission. The City experienced several booms and busts during its development linked to the proximity of railroad routes, land speculation, and the efforts of local businessmen. The Oceanside Pier and Palomar Theater were constructed in the 1920s and brought about a renaissance for Oceanside, drawing in residents. Following economic decline during the Great Depression, Camp Pendleton, the largest Marine Corps Base in the nation, was established just north of the City. This was the catalyst that transformed a small town into a modern city. Tourism also played an important role in the City's economy following the war years. In the 1980s, the City's downtown experienced a decline due to much of the development taking place in the suburban areas of the City. The City began a redevelopment program which has successfully revitalized the area. A new transit center was constructed in 1983, the pier, beachfront and parks were refurbished, and a new Civic Center was completed in the late 1980s.

City of Oceanside Historical Resources

The City of Oceanside's General Plan's Environmental Resource Management Element identifies several sites as being of particular historical significance within the City: the Mission San Luis Rey de Francia and the Rancho Guajome Adobe. Mission San Luis Rey de Francia is located in the north-central part of the City along Mission Avenue. The Rancho Guajome Adobe is a handsome 19th-century hacienda building built in 1852-1853, and is a well-preserved example of Spanish-Mexican colonial architecture. It is located off North Santa Fe Road just outside the eastern limit of the City. These sites are located 5.4 miles and 6.4 miles away from the Project Site, respectively.

Onsite Historical Resources

Based on reviews of available historical records and aerial photographs gathered by ASM Affiliates, Inc., the Project Site was left undisturbed with the exception of a road running along the western portion of the site until 1964, at which time an east-west oriented road running along Buena Vista Creek appeared. Around 1967, the Project Site was further disturbed by grading in conjunction with the construction of SR-78 to the north. Since this time, no improvements have been made to the site and it has remained vacant with the exception of seasonal uses (kid's playland, pumpkin patches, and Christmas tree patches). Starting in 1907, USGS Topographic maps show a building that was possibly within the Project area.

No historic resources were found onsite during a survey of the Project area. A records search of the South Coastal Information Center (SCIC) revealed that 75 cultural resource studies have previously addressed the one-mile record search radius surrounding the Project area. The records search identified that 26 cultural resources were previously recorded within the record search radius. None of these were recorded within the Project area. Six (6) previously recorded historic addresses were found within the record search radius.

4.6.2 Regulatory Setting

Federal

National Historic Preservation Act

The National Historic Preservation Act (NHPA) establishes the federal policy for preservation of historical resources, including archaeological sites, and sets in place a program for the preservation of historic properties by requiring federal agencies to consider effects to significant cultural resources prior to undertakings. Section 106 of the NHPA requires federal agencies to take into account the effects of projects on historic properties. It also gives the Advisory Council on Historic Preservation and the state historic preservation offices an opportunity to consult.

Executive Order 11593

Executive Order 11593 provides the following: (1) orders the protection and enhancement of the cultural environment through requiring federal agencies to administer the cultural properties under their control in a spirit of stewardship and trusteeship for future generations; (2) initiates measures necessary to direct their policies, plans, and programs in such a way that federally owned sites, structures, and objects of historical, architectural, or archaeological significance are preserved, restored, and maintained for the inspiration and benefit of the people; and (3) in consultation with the Advisory Council on Historic Preservation, institutes procedures to assure that federal plans and programs contribute to the preservation and enhancement of non-federally owned sites, structures, and objects of historical, architectural, or archaeological significance.

National Register of Historic Places

The National Register of Historic Places (NRHP) is the nation's official list of historic places. The register is overseen by the National Park Service and requires that a property or resource eligible for listing in the register meet one or more of the following four criteria at the national, state or local level to ensure integrity and obtain official designation:

- The property must be associated with events that have made a significant contribution to the broad patterns of our history.
- The property must be associated with the lives of persons significant in our past.
- The property must embody the distinctive characteristics of a type, period, or method of construction, represent the work of a master, possess high artistic values, or represent a significant and distinguishable entity whose components may lack individual distinction.
- The property must show, or may be likely to yield, information important to history or prehistory.

Properties are nominated to the register by the state historic preservation officer of the state in which the property is located, by the federal preservation officer for properties under federal ownership or control, or by the tribal preservation officer if on tribal lands. Listing in the NRHP provides formal recognition of a property's historic, architectural, or archaeological significance based on the national standards used by every state. Once a property is listed in the NRHP, it becomes searchable in the NRHP database of research information.

State

California Code of Regulations Section 15064.5

CCR Section 15064.5 defines the term "historical resource" as including the following:

1. A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (CRHR).
2. A resource included in a local register of historical resources, as defined in section 5020.1(k) of the Public Resources Code or identified as significant on a historical resource survey meeting the requirements section 5024.1(g) of the Public Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
3. Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be a historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the CRHR (Public Resources Code Section 5024.1, Title 14, CCR, Section 4852) including the following:

    a. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
    b. Is associated with the lives of persons important to our past;
    c. Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of an important creative individual, or possesses high artistic values; or
    d. Has yielded, or may be likely to yield, information important in prehistory or history.

California Public Resources Code Section 5097

California Public Resources Code Section 5097 (Native American Historic Resources Protection Act) identifies the unauthorized disturbance or removal of archaeological or historical resources located on public land as a misdemeanor. It prohibits the knowing destruction of objects of antiquity without a permit on public lands, and it provides for criminal sanctions. This section was further amended in 1987 to require consultation with the Native American Heritage Commission (NAHC) whenever Native American graves are found. California Public Resources Code Section 5097.5 states that "no person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historic feature situated on public lands, except with the express permission of the public agency having jurisdiction over the lands."

Assembly Bill 52

AB 52, in effect as of July 1, 2015, introduces the tribal cultural resource as a class of cultural resource and provides additional considerations relating to Native American consultation into CEQA. A tribal cultural resource is described as any of the following:

1. Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:

a. Included or determined to be eligible for inclusion in the CRHR.

b. Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.

2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

3. A cultural landscape that meets the criteria of subdivision (a) is a tribal cultural resource to the extent that the landscape is geographically defined in terms of the size and scope of the landscape.

4. A historical resource described in Section 21084.1, a unique archaeological resource as defined in subdivision (g) of Section 21083.2, or a "nonunique archaeological resource" as defined in subdivision (h) of Section 21083.2 may also be a tribal cultural resource if it conforms with the criteria of subdivision (a).

Tribal Cultural Resources are further analyzed in Chapter 4.19 of this EIR.

California Health and Safety Code

California law protects Native American burials, skeletal remains, and associated grave goods, regardless of their antiquity, and provides for the sensitive treatment and disposition of those remains. California Health and Safety Code (CHSC) Section 7050.5 requires that if human remains are discovered in any place other than a dedicated cemetery, no further disturbance or excavation of the site or nearby area reasonably suspected to contain human remains can occur until the County coroner has examined the remains. If the coroner determines or has reason to believe that the remains are those of a Native American, the coroner must contact the NAHC within 24 hours. The NAHC will notify the most likely descendent (MLD). With the permission of the landowner, the MLD may inspect the site of discovery. The inspection must be completed within 48 hours of the MLD being granted access to the site. The MLD may recommend means of treating or disposing of, with appropriate dignity, the human remains and items associated with Native Americans.

Local

City of Oceanside Municipal Code

Chapter 14 of the OMC, referred to as the Historic Preservation Ordinance, (Ordinance No. 82-14, Section 1, 9-8-82) established the criteria for which a property is eligible as an Oceanside Historical Site:

a. It exemplifies or reflects special elements of the City's cultural, social, economic, political, aesthetic, engineering, or architectural history; or
b. It is identified with persons or events significant in local, state, or national history; or
c. It embodies distinctive characteristics of a style, type, period, or method of construction, or is a valuable example of the use of indigenous materials or craftsmanship; or
d. It is representative of the notable work of a builder, designer, or architect; or

e. It is found by the council to have significant characteristics which should come under the protection of this chapter.

City of Oceanside General Plan

Environmental Resource Management Element

The Environmental Resource Management Element of the General Plan outlines recommended action programs to implement and achieve long-range planning objectives. The City of Oceanside Implementation Program actions related to cultural resources include:

> **Objective: Cultural Sites** – Encourage the conservation and protection of significant cultural resources for future scientific, historic, and educational purposes
>
> In order to achieve this objective, the City will:
>
> 1. Encourage the use of "o" zoning and open space easements for the preservation of cultural sites.
>
> 2. Encourage private organizations to acquire, restore, and maintain significant historical sites.
>
> 3. Encourage investigation by the appropriate groups (i.e. museums, university students, etc.) to explore and record the significant archaeological sites in the area and to forward this information to appropriate County agencies for inclusion in the San Diego County Natural Resources Inventory (Section 2, Special Factors).

Land Use Element

The Land Use Element of the General Plan provides guidance for protection of cultural resources. The following policies of the Land Use Element are relevant to the Project:

> **3.2 Cultural Resources**
>
> **Policies:**
>
> A. The City shall encourage open space land use designations and open space zoning or open space easements for the preservation of cultural resources.
>
> B. The City shall encourage the acquisition, restoration, and/or maintenance of significant cultural resources by private organizations.
>
> C. Cultural resources that must remain in-site to preserve their significance shall be preserved intact and interpretive signage and protection shall be provided by project developers.
>
> D. An archaeological survey report shall be prepared by a SOPA (Society of Professional Archaeologists) certified archaeologist for a project proposed for grading or development if any of the following conditions are met:

1. The site is completely or largely in a natural state;
2. There are recorded sites on nearby properties;
3. The project site is near or overlooks a water body (creek, stream, lake, freshwater lagoon);
4. The project site includes large boulders and/or oak trees; or
5. The project site is located within a half-mile of Mission San Luis Rey.

E. The presence of agriculture on a potential project site shall not preclude the requirement for an archaeological survey report if any of the above listed conditions are established.

4.6.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5;
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5;
c. Disturb any human remains, including those interred outside of formal cemeteries.

4.6.4 Project Impact Analysis

Would the Project:

a. Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

As stated in the Archaeological Survey Report (**Appendix G**), the Project Site was surveyed on January 12, 2018 and was resurveyed on July 29, 2019. No historic or prehistoric cultural resources were noted during the survey or resurvey of the Project area. A records search was performed at the SCIC and found that 75 cultural resource studies have previously addressed the one-mile record search radius surrounding the Project area. Of these reports, none were recorded within the Project area. The SCIC records search also identified 26 cultural resources that were previously recorded within the one-mile record search radius. Of these resources, none were recorded within the Project area. A search of the historic addresses on file at the SCIC identified six (6) previously recorded historic addresses within the one-mile record search radius. A record search of the Sacred Lands File held by the NAHC was requested. A response was received on January 10, 2018 with negative results.

No historical resources, as defined in Public Resources Code Section 15064.5 have been identified on the Project Site, nor have any cultural resources been previously recorded within the Project Site area. Based on these findings, there is a low potential for impacts to historical resources associated with the implementation of the Project.

The Project would not cause a substantial adverse change in the significance of a historical resource pursuant to Public Resources Code Section 15064.5, and therefore, impacts are **less than significant.**

b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

As stated above, no historical resources have been previously recorded within the Project area and no archaeological resources were identified during the pedestrian archaeological survey and resurvey of the Project area. The records search of the Sacred Lands File also resulted in negative results. No significant archaeological resources have been identified within the Project area and there is a low potential for impacts to archaeological resources.

However, given the site's close proximity to Buena Vista Creek, there is potential for buried cultural resources within the alluvial deposits along the creek, and therefore a **significant impact** will occur (**Impact CUL-1**).

c. Disturb any human remains, including those interred outside of formal cemeteries?

No human remains were identified within the Project area during the pedestrian survey and resurvey of the Project Site. The Project Site has been graded in the past and therefore, the possibility of discovering human remains during construction is considered low. However, due to the fact that the Project involves ground disturbance, construction activities have the potential to disturb human remains, including those located outside of formal cemeteries, and therefore a **significant impact** will occur (**Impact CUL-2)**.

4.6.5 Mitigation Implementation and Monitoring

Archaeological Resources (Impact CUL-1)

MM-CUL-1a Prior to issuance of a Grading Permit, the Applicant/Owner shall enter into a pre-excavation agreement, otherwise known as a Tribal Cultural Resources Treatment and Tribal Monitoring Agreement with the "Traditionally and Culturally Affiliated (TCA) Native American Monitor associated with a TCA Luiseño Tribe". A copy of the agreement shall be included in the Grading Plan Submittals for the Grading Permit. The purpose of this agreement shall be to formalize protocols and procedures between the Applicant/Owner and the "TCA Native American Monitor associated with a TCA Luiseño Tribe" for the protection and treatment of, including but not limited to, Native American human remains, funerary objects, cultural and religious landscapes, ceremonial items, traditional gathering areas and tribal cultural resources, located and/or discovered through a monitoring program in conjunction with the construction of the proposed Project, including additional archaeological surveys and/or studies, excavations, geotechnical investigations, grading, and all other ground disturbing activities. At the discretion of the Luiseño Native American Monitor, artifacts may be made available for #D scanning/printing, with scanned/printed materials to be curated at a local repository meeting the federal standards of 36CFR79.

MM-CUL-1b Prior to the issuance of a Grading Permit, the Applicant/Owner or Grading Contractor shall provide a written and signed letter to the City of Oceanside Planning Division stating that a Qualified Archaeologist and Luiseño Native American Monitor have been retained at the Applicant/Owner or Grading Contractor's expense to implement the monitoring program, as described in the pre-excavation agreement.

MM-CUL-1c The Qualified Archaeologist shall maintain ongoing collaborative consultation with the Luiseño Native American monitor during all ground disturbing activities. The requirement for the monitoring program shall be noted on all applicable construction documents, including Demolition Plans, Grading Plans, etc. The Applicant/Owner or Grading Contractor shall notify the City of Oceanside Planning Division of the start and end of all ground disturbing activities.

MM-CUL-1d The Qualified Archaeologist and Luiseño Native American Monitor shall attend all applicable pre-construction meetings with the General Contractor and/or associated Subcontractors to present the archaeological monitoring program. The Qualified Archaeologist and Luiseño Native American Monitor shall be present onsite full-time during grubbing, grading and/or other ground altering activities, including the placement of imported fill materials or fill used from other areas of the Project Site, to identify any evidence of potential archaeological or tribal cultural resources. All fill materials shall be absent of any and all tribal cultural resources.

MM-CUL-1e In order for potentially significant archaeological artifact deposits and/or cultural resources to be readily detected during mitigation monitoring, a written "Controlled Grade Procedure" shall be prepared by a Qualified Archaeologist, in consultation with the Luiseño Native American monitor, other TCA Luiseño Tribes that have participated in the state-prescribed process for this Project, and the Applicant/Owner, subject to the approval of City representatives. The Controlled Grade Procedure shall establish requirements for any ground disturbing work with machinery occurring in and around areas the Qualified Archaeologist and Luiseño Native American monitor determine to be sensitive through the cultural resource mitigation monitoring process. The Controlled Grade Procedure shall include, but not be limited to, appropriate operating pace, increments of removal, weight and other characteristics of the earth disturbing equipment. A copy of the Controlled Grade Procedure shall be included in the Grading Plan Submittals for the Grading Permit.

MM-CUL-1f The Qualified Archaeologist or the Luiseño Native American monitor may halt ground disturbing activities if unknown tribal cultural resources, archaeological artifact deposits or cultural features are discovered. Ground disturbing activities shall be directed away from these deposits to allow a determination of potential importance. Isolates and clearly non-significant deposits will be minimally documented in the field, and before grading proceeds these items shall be secured until they can be repatriated. If items cannot be securely stored on the Project Site, they may be stored in off-site facilities located in San Diego County. If the Qualified Archaeologist and Luiseño Native American monitor determine that the unearthed tribal cultural resource, artifact deposits or cultural features are considered potentially significant TCA Luiseño Tribes that have participated in the state-prescribed consultation process for this project shall be notified and consulted regarding the respectful and dignified treatment of those resources. The avoidance and protection of the significant tribal cultural resource and/or unique archaeological resource is the preferable mitigation. If, however, it is determined by the City that avoidance of the resource is infeasible, and it is determined that a data recovery plan is necessary by the City as the Lead Agency under CEQA, TCA Luiseño Tribes that have participated in the state-prescribed consultation process for this Project shall be notified and consulted regarding the drafting and finalization of any such recovery plan. For significant tribal cultural resources, artifact deposits or cultural

features that are part of a data recovery plan, an adequate artifact sample to address research avenues previously identified for sites in the area will be collected using professional archaeological collection methods. The data recovery plan shall also incorporate and reflect the tribal values of the TCA Luiseño Tribes that have participated in the state-prescribed consultation process for this Project. If the Qualified Archaeologist collects such resources, the Luiseño Native American monitor must be present during any testing or cataloging of those resources. Moreover, if the Qualified Archaeologist does not collect the tribal cultural resources that are unearthed during the ground disturbing activities, the Luiseño Native American monitor, may at their discretion, collect said resources and provide them to the appropriate TCA Luiseño Tribe, as determined through the appropriate process, for respectful and dignified treatment in accordance with the Tribe's cultural and spiritual traditions. Ground disturbing activities shall not resume until the Qualified Archaeologist, in consultation with the Luiseño Native American Monitor, deems the cultural resource or feature has been appropriately documented and/or protected.

MM-CUL-1g The landowner shall relinquish ownership of all tribal cultural resources unearthed during the cultural resource mitigation monitoring conducted during all ground disturbing activities, and from any previous archaeological studies or excavations on the Project Site to the appropriate TCA Luiseño Tribe, as determined through the appropriate process, for respectful and dignified treatment and disposition, including reburial at a protected location onsite, in accordance with the Tribe's cultural and spiritual traditions. All cultural materials that are associated with burial and/or funerary goods will be repatriated to the Most Likely Descendant (MLD) as determined by the Native American Heritage Commission per California Public Resources Code Section 5097.98. No tribal cultural resources shall be subject to curation.

MM-CUL-1h Prior to the release of the grading bond, a monitoring report and/or evaluation report, if appropriate, which describes the results, analysis and conclusions of the archaeological monitoring program (e.g., data recovery plan) shall be submitted by the Qualified Archaeologist, along with the Luiseño Native American monitor's notes and comments, to the City of Oceanside Planning Division for approval.

Human Remains (Impact CUL-2)

MM-CUL-2 As specified by California Health and Safety Code Section 7050.5, if human remains are found on the Project Site during construction or during archaeological work, the person responsible for the excavation, or his or her authorized representative, shall immediately notify the San Diego County Office of the Medical Examiner by telephone. No further excavation or disturbance of the Project Site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the Medical Examiner has made the necessary findings as to origin and disposition pursuant to Public Resources Code 5097.98. If such a discovery occurs, a temporary construction exclusion zone shall be established surrounding the area of the discovery so that the area would be protected, and consultation and treatment could occur as prescribed by law. If suspected Native American remains are discovered, the remains shall be kept in-situ, or in a secure location in close proximity to where they were found, and the analysis of the remains shall only occur onsite in the presence of a Luiseño Native American monitor. By law, the Medical Examiner will determine within two (2) working days of being notified if the

remains are subject to his or her authority. If the Medical Examiner identifies the remains to be of Native American ancestry, he or she shall contact the Native American Heritage Commission (NAHC) within 24 hours. The NAHC shall make a determination as to the MLD.

4.6.6 Level of Significance After Mitigation

The analysis in Section 4.6.4 identified the potential for significant impacts related to archaeological resources and human remains. Implementation of mitigation measure MM-CUL-1a through MM-CUL-1h requires construction monitoring by a Qualified Archaeologist and Native American monitor and specific protocols for pre-construction, construction and post-construction activities, requirements for discovery of cultural resources and reporting of monitoring activities and evaluation of results. With implementation of mitigation measure MM-CUL-1a through MM-CUL-1h, Impact CUL-1 related to archaeological resources would be reduced to below a level of significance by requiring specific monitoring program protocols during construction which would allow for proper care of resources in the event of a discovery.

Mitigation measure MM-CUL-2 would reduce potential impacts related to the discovery of human remains by implementing specific protocol and methods for evaluation in the event that remains are discovered during construction, reducing potential for further disturbance. Therefore, impacts to cultural resources are reduced to less than significant.

Chapter 4.7 ENERGY

The following document was used in the preparation of this section and is included in its entirety in **Appendix I**:

Ldn Consulting, Inc. October 1, 2020. *CarMax Auto Store Development Greenhouse Gas Screening Letter – City of Oceanside*.

4.7.1 Environmental Setting

The section of the EIR addresses the energy implications of the Project and represents a summary of the Project's anticipated energy needs, impacts and conservation measures.

Local Service and Energy Use

Electricity

San Diego Gas & Electric (SDG&E) is the utility company which provides electric services in Southern Orange County and the County, including the City and the Project Site. Within its 4,100 square-mile service area are 3.6 million customers, 1.4 million electric meters, and 873,000 natural gas meters. According to the California Energy Commission (CEC), SDG&E consumed approximately 18,767 gigawatt hours of electricity in total in 2018 (CEC, 2018a). SDG&E produces electric power from a variety of sources, with 44% coming from renewable energy sources such as geothermal, solar, wind, and biomass/waste as of August 2019 (CPUC, 2019). As of 2018, approximately 19,749 gigawatt hours of electricity were consumed in the County, with 12,807 gigawatt hours consumed in the non-residential sector and 6,942 gigawatt hours consumed in the residential sector (CEC, 2018c).

Natural Gas

Most of the natural gas used in California comes from out-of-state basins located in the Southwest, Canada, and the Rocky Mountains. Less than one-tenth of state demand is produced in-state (EIA, 2018). Most of the gas transported from out-of-state, as well as some of what is produced in-state is delivered to regional transmission systems for Pacific Gas and Electric (PG&E) and SoCalGas natural gas transmission pipeline systems. SDG&E is a customer of SoCalGas and receives all of its natural gas from the SoCalGas system. The California Public Utilities Commission (CPUC) regulates natural gas utility service for customers that receive natural gas from various utilities throughout the state including SDG&E (CPUC, 2019). In 2019 (assumes January 2019 to December 2019), approximately 534 million British thermal units (Btu) of natural gas were consumed in the County, with the residential sector accounting for approximately 304 million Btu of consumption and non-residential accounting for approximately 230 million Btu of consumption (CEC, 2019d).

Petroleum

California has the fourth-largest share of the nation's crude oil reserves, and as such, is the nation's fourth-largest producer – accounting for about five percent of total U.S. production in 2017. Overall, crude oil production has declined in California over the past three (3) decades and more than half of crude oil refined in California is imported from foreign suppliers. California is the second largest consumer of petroleum products in the nation and the largest consumer of motor gasoline. The vast

majority of petroleum consumed in the stated is used in the transportation sector (EIA, 2018). As of 2015, there were 27.8 million light-duty vehicles in California. The annual gasoline consumption in 2017 was estimated to be 15.8 billion gallons (CEC, 2017). Gasoline and other vehicle fuels are a commercially provided commodity, and would be available to the Project and its users at nearby outlets.

4.7.2 Regulatory Setting

Federal

Federal Energy Policy and Conservation Act and Amendments

In 1975, minimum energy efficiency standards for many major appliances were established by the U.S. Congress with the Federal Energy Policy and Conservation Act. These standards have been amended in subsequent legislation, including the federal Energy Policy Act of 2005. The Department of Energy is required to set efficiency standards that achieve the maximum energy efficiency improvement that is still economically and technologically feasible.

Energy Independence and Security Act of 2007

The Energy Independence and Security Act of 2007 is an energy policy law adopted by Congress which established energy efficiency standards for several equipment types and appliances which were not already subject to a standard, and updated some existing standards. It established significant new standards for lightbulbs, requiring that by 2020, light bulbs must consume 60% less than the light bulbs of the time – effectively phasing out the incandescent light bulb.

State

Global Warming Solutions Act

AB 32, also known as the California Global Warming Solutions Act of 2006 enacted Sections 38500-38599 of the California Health and Safety Code. AB 32 establishes regulatory, reporting and market procedures to achieve quantifiable reductions in greenhouse gas (GHG) emissions and a cap on statewide GHG emissions. AB 32 requires reduction of statewide GHG emissions to 1990 levels by 2020. The procedures for reducing GHG emissions will relate to the generation and efficient use of energy. The California Air Resources Board (CARB) adopted the Climate Change Scoping Plan in 2008, with subsequent updates in 2014 and 2017, which is the state's plan to achieve the statewide GHG reductions required by AB 32. The most significant proposed GHG reductions are recommended through improving emission standards for light-duty vehicles, implementation of the Low-Carbon Fuel Standard, energy efficiency measures in buildings and appliances, and a Renewable Portfolio Standard (RPS) for electricity production.

Renewable Portfolio Standards

Executive Order S-14-08 was signed by Governor Arnold Schwarzenegger and is known as the RPS. It requires all retail sellers of electricity to serve 33% of their load with renewable energy by 2020. State government agencies were directed to take all appropriate actions to implement this target in all regulatory proceedings, including siting, permitting, and procurement for renewable energy power plants and transmission lines.

More recently, California Senate Bill (SB) 350 amends the RPS to require an annual increase in renewable energy generation by utility providers, equivalent to at least 50% by 2030.

California Energy Commission

The California Energy Commission's (CEC) Integrated Energy Policy Report set forth policies that would enable the state to meet its energy needs under the carbon constraints established in the 2006 Global Warming Solutions Act. The Integrated Energy Policy Report also provides a set of recommended actions to achieve these policies.

California Energy Storage Law

California's Energy Storage Law (AB 2514) requires the governing board of each publicly owned utility to "determine appropriate targets" if any, for the utility to procure viable and cost-effective energy storage systems (California Public Utilities Code Section 2836(b)(1)). AB 2514 also requires that "all procurement of energy storage systems" by a publicly owned utility "shall be cost-effective" (California Public Utilities Code Section 2836.6).

Title 24 Standards Code

Title 24, Part 6 of the CCR is also titled the Energy Efficiency Standards. The CEC has adopted changes to the Building Energy Efficiency Standards in order to accomplish the following:

- Respond to California's energy crisis to reduce energy bills, increase energy delivery system reliability, and contribute to an improved economic condition for the state.
- Respond to the AB 970 (Statutes of 2000) urgency legislation to adopt and implement updated and cost-effective building energy efficiency standards.
- Respond to various statues of 2001, which included urgency legislation to adopt energy efficiency building standards for outdoor lighting.
- Emphasize energy efficiency measures that save energy at peak periods and seasons, improve the quality of installation of energy efficiency measures, incorporate recent publicly funded building science research, and collaborate with California utilities to incorporate results of appropriate market incentives programs for specific technologies.

The 2019 Title 24 standards were approved and adopted by the California Building Standards Commission and became effective on January 1, 2020. These standards will further reduce energy used and associated GHG emissions. Nonresidential buildings built to the latest standards will use an estimated 30% less energy than those built to the previous standards.

In addition to these efforts, in 2008, the California Building Standards Commission adopted the nation's first green building standards. The California Green Building Standards Code (Part 11 of Title 24) is commonly known as CALGreen, and establishes minimum mandatory standards as well as voluntary standards for the planning and design of sustainable site planning and development, water efficiency and conservation, material conservation, and resource use efficiency. The CALGreen 2019 standards will become effective on January 1, 2020. The mandatory standards require the following:

- 20% mandatory reduction in indoor water use.

- Diversion of 50% of construction and demolition waste from landfills.
- Mandatory inspections of energy systems to ensure optimal working efficiency.

Local

SDG&E Long-Term Resource Plan

In 2004, SDG&E filed a long-term resource plan (LTRP) with the CPUC, identifying how it would meet the needs of customers in SDG&E's service area. The plan identifies energy demand reduction targets, goals for increasing renewable energy supplies and transmission capacity.

The LTRP set a standard for acquiring 33 percent of SDG&E's energy mix from renewables by 2020. SDG&E is currently ahead of schedule to achieve that target, procuring 44% of its energy mix from renewables as of August 2019 (CPUC, 2019).The plan calls for an increased usage of energy supplies from within the region, aiming to achieve and maintain the capacity to generate 75% of peak summer demand within County generation by 2020.

City of Oceanside Climate Action Plan

The City adopted a Climate Action Plan (CAP) in May of 2019. The purpose of the CAP is to align the City with state efforts to reduce GHG emissions while balancing a variety of community interests such as quality of life, economic development and social equity. It contains measures and strategies to reduce GHG emissions resulting from energy and buildings, water and wastewater, solid waste, transportation and land use, and agriculture and forestry. Electricity consumption and natural gas usage account for 26% and 16%t of community GHG emissions in the City, respectively. Measures and strategies developed to reduce GHG emissions produced from the energy use sector which are relevant to the Project include:

Measure W1: Implementation of the Water Conservation Plan

Strategies:

- Rotating Sprinkler Nozzle Rebates
- Commercial, Industrial and Institutional Rebates to Replace Inefficient Equipment
- Model Water Efficient Landscape Ordinance

Measure TL2: Electric Vehicle Promotion

Strategies:

- Consistent with state requirements for pre-wiring for level 2 charging circuits in commercial and industrial developments, require charging stations to be installed at half of all pre-wired spaces.

Measure TL3: Preferential Parking Spaces of Clean Air Vehicles

Strategies:

- Require commercial and industrial developments to incorporate 12% designated parking for clean air vehicles.

Measure TL4: Expand Complete Streets Programs

Strategies:

- Require new developments to provide connections and/or extensions of the bicycle and pedestrian networks where applicable.

Measure AF1: Urban Forestry Program

Strategies:

- Adopt a Green Streets Ordinance that requires all new development Projects to incorporate shade trees. Establish criteria for the number of shade trees. Criteria may be reasonably linked to metrics such as the number of residences, building area, or impervious area.

Energy Climate Action Element of the General Plan

The Energy Climate Action Element (ECAE) of the General Plan addresses energy consumption and other activities within the City that may contribute to adverse environmental impacts, with particular emphasis on those activities associated with human-induced climate change. The ECAE outlines goals and policies meant to incorporate the concept of sustainability into the City's decision-making process including development review protocols. The major themes and goals of the ECAE are related to energy efficiency and renewable energy, smart growth and multimodal transportation, zero waste, water conservation, urban greening, local agriculture, and sustainable consumption.

4.7.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Result in potentially significant environmental impact due to wasteful, inefficient, unnecessary consumption of energy resources, during Project construction or operation;
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

4.7.4 Project Impact Analysis

Would the Project:

a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during Project construction or operation?

Construction Energy Use

During construction, the Project would result in an increase in energy consumption during the anticipated 13-month construction period. Construction phases anticipated to occur are site preparation, grading, paving, building construction, and architectural coating. Heavy-duty construction

equipment associated with construction activities would rely on diesel fuel to power off-road construction vehicles and equipment as well as construction worker vehicles and delivery and haul trucks. Electricity associated with the conveyance of water would be used during Project construction for dust control and electricity used to power lighting, electronic equipment, or other construction activities necessitating electrical power. The Project would also result in electricity used in the production of construction materials such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Construction Related Electricity

During construction of the Project electricity would be consumed to construct the proposed CarMax Project. Electricity would be supplied to the Project Site by SDG&E and would be obtained from the existing electrical lines in the vicinity of the Project Site. Electricity consumed during construction would vary throughout the construction phases based on the activities being performed. Construction activities include electricity associated with the conveyance of water that would be used for dust control and electricity to power necessary lighting, electronic equipment, and other construction activities necessitating electrical power.

The electricity used for such activities would be less than that required during operation of the Project, would be temporary and would have a minimal contribution to the Project's overall energy consumption. Construction activities associated with the development of the CarMax Project would require electricity consumption that would not be expected to have an adverse impact on available electricity supplies and infrastructure. Therefore, the use of electricity during Project construction would not be wasteful, inefficient, or unnecessary.

The Project proposes new infrastructure for electrical services that would run east to west through the customer and employee parking lot. Electrical services would be provided by SDG&E and would connect to existing service infrastructure in Thunder Drive. It is anticipated that the construction of the Project would require nominal improvements to existing SDG&E distribution lines and facilities. Where feasible, all new service installations and connections would be scheduled and implemented in a manner that would not result in electrical services interruptions to surrounding properties.

Project compliance with the Zoning Ordinance Section 3023 – Underground Utilities for guidelines and requirements related to installation of electrical lines would ensure that the Project fulfills its responsibilities related to infrastructure installation, coordination of any electrical infrastructure removals or relocations, and would limit impacts associated with grading, construction and development. Construction of the Project's electrical infrastructure is not anticipated to adversely affect the electrical infrastructure serving the surrounding uses or utility system capacity.

Project construction would not result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of electricity resources, and impacts are **less than significant.**

Construction Related Natural Gas

Construction of the Project would not typically involve the consumption of natural gas. Therefore, natural gas would not be supplied to support construction activities and there would be no demand generated by Project construction.

The Project proposes a gas service line that would run east to west through the customer and employee parking lot and would connect to existing services in Thunder Drive. Gas services would be provided by SDG&E. It is anticipated that the construction of the Project would require nominal improvements to existing SDG&E natural gas distribution lines and facilities. Construction related energy impacts associated with the installation of natural gas services and connections are expected to be confined to trenching to place the lines below the surface. The developer would be responsible for notifying and coordinating with SDG&E to identify proper locations and depth of all gas lines and connections to avoid disruption of services to the neighboring properties.

Project construction would not result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of natural gas resources, and impacts are **less than significant.**

Construction Related Transportation Energy

Petroleum-based fuel usage represents the highest amount of transportation energy to be consumed during construction, which would be utilized by off-road equipment, on-road automobiles transporting workers to and from the Project Site and on-road trucks transporting equipment and supplies to the construction site. Equipment proposed for Project construction would include rubber tired dozers, tractors, loaders, backhoes, excavators, graders, pavers, other paving equipment, rollers, cranes, forklifts, generator sets, welders and air compressors. The number of each type of equipment and the number of days per construction phase is displayed in **Table 4.7-1** below. These variables were input into CalEEMod to generate construction emissions and energy usage. The Project would generate approximately 149 worker trips overall all construction phases of the Project, spanning approximately 13 months (Greenhouse Gas Screening Letter, **Appendix I**). Worker trips would generate approximately 1,609 vehicle miles traveled (VMT). During the building construction phase the Project is expected to generate 33 vendor trips. Vendor trips are expected to generate approximately 241 VMT.

Table 4.7-1
Expected Construction Equipment

Equipment Identification	Number of Equipment
Site Preparation (10 Days)	
Rubber Tired Dozers	3
Tractors/Loaders/Backhoes	4
Grading (20 Days)	
Excavators	1
Graders	1
Rubber Tired Dozers	1
Tractors/Loaders/Backhoes	3
Paving (20 Days)	
Pavers	2
Paving Equipment	2
Rollers	2
Building Construction (230 Days)	
Cranes	1
Forklifts	3
Generator Sets	1
Tractors/Loaders/Backhoes	3
Welders	1
Architectural Coating (20 Days)	

Air Compressors	1
Source: Greenhouse Gas Screening Letter Prepared by Ldn Consulting, Inc. (Appendix I)	

The Project is not expected to result in a significant use of transportation related energy resources. The Project would adhere to all State and SDAPCD regulations for off-road equipment and on-road trucks related to clean engines to provided fuel efficiency.

Title 13 of the CCR Section 2485 regulates limitations for idling of vehicles and equipment. Idling requirements are for on-road and off-road diesel-powered equipment and is enforced by CARB. Section 2485 also regulates proper maintenance of equipment to result in fuel savings. Given the high cost of fuel, contractors and developers have a financial incentive to avoid wasteful, inefficient and unnecessary consumption of energy during construction.

The Project would not result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resources during Project construction, and impacts are **less than significant**.

Operational Energy Use

The Project would consist of a sale's and administrative building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area, sales display area, and a customer and employee parking lot. The long-term operation of the Project would require the use of electrical and natural gas energy sources for heating, ventilation, air conditioning (HVAC), lighting, appliances, electronics, office equipment, electric vehicle charging spaces, operation of the carwash and tools associated with automobile servicing. Energy would be consumed during operations related to water usage, solid waste disposal and vehicle trips.

Operational Related Electricity

Electricity associated with operation of the Project Site was calculated using CalEEMod Version2016.3.2. According to the CalEEMod model results provided in the Greenhouse Gas Screening Letter **(Appendix I)** prepared by Ldn Consulting, Inc., the Project would use approximately 161,790 kilowatt hours of electricity per year (kWh/year).

Electric services would be provided by SDG&E electric transmission and distribution lines and new electric services lines would connect to existing services in Thunder Drive. The Project is located in a developed area surrounded by commercial development to the west and northwest, and DMV facility and residential development to the east, and high density residential to the south. Existing electrical services are provided in the Project vicinity. The Project would consume electricity similarly to that of the existing commercial developments to the west and northwest and would comply with all applicable 2019 Title 24 Part 6 Building Efficiency Standards.

Conservation strategies to be used include the use of irrigation heads that provide maximum coverage of the landscaped areas. All landscaping would be native and drought tolerant and would comply with the Water Efficient Landscape Ordinance. The Project would incorporate low-flow plumbing fixtures throughout the restroom and break room areas of the sales and service buildings. The Project would be designed and built to minimize electricity use so that existing and planned electricity capacity and supplies would be enough to support the Project's electricity demand.

Project operation would not result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of electricity resources, and impacts are **less than significant.**

Operational Related Natural Gas

Operation of the Project would result in an increased consumption of natural gas compared to existing conditions. According to the CalEEMod model results provided in the Greenhouse Gas Screening Letter **(Appendix I)**, the Project would use 132,362 kilo British thermal units per year (kBTU/year) of natural gas. The Project would comply with the 2019 Title 24 Part 6 Building Efficiency Standards including enhanced insulation and the use of efficient natural gas appliances and HVAC units. It is anticipated that the Project would be designed and built to minimize natural gas use and that existing and planned natural gas facilities and supplies would be sufficient to support the Project's natural gas demand.

Project operation would not result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of natural gas resources, and impacts are **less than significant.**

Operational Related Transportation Energy

Operation of the Project would result in increased consumption of petroleum-based fuels related to vehicular travel to and from the Project Site. According to the Vehicle Miles Traveled Analysis prepared by LOS Engineering, Inc. **(Appendix N)**, the Project would generate 475 ADT and 473,135 VMT per year.

The Project would comply with the California Green Building Standards Code (Table 5.106.5.3.3) and would provide seven electric vehicle (EV) charging spaces within the customer and employee parking lot. The Project would be designed and constructed in accordance with all applicable and current City of Oceanside Building codes related to energy and transportation. Additionally, the Project would have a less than significant transportation impact.

Project operation would not result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, and impacts are **less than significant.**

b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

The City CAP and ECAE of the General Plan provide goals, policies and measures to meet State GHG reduction goals and reduce energy consumption. **Table 4.7-2** displays the Project's consistency with applicable CAP policies. **Table 4.7-3** displays the Project's consistency with ECAE policies.

Table 4.7-2
Project Consistency with CAP Measures

CAP Measure	CAP Strategy	Project Consistency
Measure W1: Implementation of the Water Conservation Plan	• Rotating Sprinkler Nozzle Rebates • Commercial, Industrial and Institutional Rebates to Replace Inefficient Equipment • Model Water Efficient Landscape Ordinance	The Project would implement irrigation systems with respect to water conservation. Irrigation heads would be chosen to provide maximum coverage of the landscaped areas. All landscaping would be native and drought tolerant and would comply

		with the Water Efficient Landscape Ordinance.
Measure TL2: Electric Vehicle Promotion	• Consistent with state requirements for pre-wiring for level 2 charging circuits in commercial and industrial developments, require charging stations to be installed at half of all pre-wired spaces.	Seven (7) EV charging spaces would be provided in the customer and employee parking lot in the amount required by CALGreen.
Measure TL3: Preferential Parking Spaces of Clean Air Vehicles	• Require commercial and industrial developments to incorporate 12% designated parking for clean air vehicles.	Designated clean air vehicle parking would be provided within the customer and employee parking lot.
Measure TL4: Expand Complete Streets Programs	• Require new developments to provide connections and/or extensions of the bicycle and pedestrian networks where applicable.	Project improvements on Plaza Drive along the Project frontage would include an 8-foot bicycle lane and a 5-foot sidewalk that would connect to the existing sidewalks to the east and west.
Measure AF1: Urban Forestry Program	• Adopt a Green Streets Ordinance that requires all new development projects to incorporate shade trees. Establish criteria for the number of shade trees. Criteria may be reasonably linked to metrics such as the number of residences, building area, or impervious area.	Shade trees would be provided within the customer and employee parking lot a lot the parking lot boundaries and within the parking islands. Shade trees have a minimum 24-inch box.

Table 4.7-3
Project Consistency with ECAE Policies

ECAE Policy	ECAE Policy Description	Project Consistency
Policy ECAE-1d-3	Encourage the use of locally-produced construction materials, including salvaged lumber.	The Project would use locally-produced construction materials to the extent feasible.
Policy ECAE-2a-2	In the City's commercial corridors, promote a mix of land uses that contributes to a sense of place, creates synergies between local businesses and affords residents the opportunity to live, work, and play within a walkable radius.	The Project site is located in an area surrounded by a commercial center and residential uses and would provide job opportunities within in walking distance of once another.
Policy ECAE-2b-2	In conjunction with infill and redevelopment projects, pursue opportunities to integrate public open space into the City's urbanized corridors.	Buena Vista Creek is located along the southern boundary of the Project site. The Project would provide a 100-foot riparian buffer which includes a 50-foot biological buffer and a 50-foot planning buffer. Restoration of this portion of Buena Vista Creek would be provided through the Urban Streams Restoration Grant Program, with the City of Oceanside and the Buena Vista Audubon Society. The Applicant would

		take part in coordination efforts as necessary. Restoration efforts would include stream and habitat improvements as well as providing trails, public access and signage.
Policy ECAE-2c-4	Ensure that capital improvements are consistent with the City's Complete Streets policies, as articulated in the Circulation Element.	Improvements along Plaza Drive would include widening of Plaza Drive to the classification designated in the Circulation Element as well as an 8-foot bicycle lane and a 5-foot sidewalk.
Policy ECAE-2f-1	Promote the installation of public electric vehicle charging facilities at convenient locations throughout the City.	EV charging parking spaces would be provided in the customer and employee parking lot in the amount required by CALGreen.
Policy ECAE-3a-2	Continue to enhance organics waste recycling opportunities for both the commercial and residential sector in accordance with the City's Zero Waste goals and State Organics mandates.	Trash enclosures would be located south of the sales and service building and would include separate enclosures labeled for recyclables, organic waste and solid waste.
Policy ECAE-3a-13	Improve monitoring and enforcement of the City's construction waste diversion requirements.	The Construction Contractor would ensure that construction waste would is properly diverted in accordance with the City's construction waste diversion requirements.
Policy ECAE-5b-3	In coordination with adjacent private property owners, identify hardscaped spaces within the public right-of-way that can be rendered permeable and plantable.	Plaza Drive and Thunder Drive along the Project frontages would include hedges and shrubs and street trees behind the proposed sidewalks.

Additionally, Project construction and operation would generate 308.36 metric tons of carbon dioxide (MT CO_2E) each year and would not exceed the City's screening threshold for GHG emissions and therefore would not conflict with the goals of the State. As provided in **Table 4.7-2** and **Table 4.7-3**, the Project would not conflict with or obstruct local plans for renewable energy or energy efficiency. Project-related impacts are **less than significant.**

4.7.5 Mitigation Implementation and Monitoring

No significant impacts to energy have been identified and therefore no mitigation measures are required.

4.7.6 Level of Significance After Mitigation

Based upon the analysis presented in Section 4.7.4, Project impacts to energy will be less than significant.

Chapter 4.8 GEOLOGY AND SOILS

The following documents were used in the preparation of this section and are included in their entirety in **Appendix G, Appendix H** and **Appendix J:**

ASM Affiliates. August 9, 2019. *Archaeological Survey Report for the CarMax Project, Oceanside, California.* **(Appendix G)**

EEI Engineering Solutions. September 6, 2019. *Geotechnical Evaluation for Proposed "CarMax" Commercial Development Plaza Drive and Hacienda Drive, City of Oceanside, County of San Diego, California.* **(Appendix H)**

REC Consultants, Inc. December 16, 2019. *Drainage Study for CarMax Oceanside.* **(Appendix J)**

4.8.1 Environmental Setting

Regional Geologic Setting

The Project Site lies within the Peninsular Ranges Geomorphic Province of Southern California, which consists of a series of ranges separated by northwest trending valleys; sub parallel to branches of the San Andreas Fault. The Peninsular Ranges Geomorphic Province, one of the largest geomorphic units in western North America, extends from the Transverse Ranges geomorphic province and the Los Angeles Basin south to Baja California. It is bound on the west by the Pacific Ocean, on the south by the Gulf of California and on the east by the Colorado Desert Province. The Peninsular Ranges are essentially a series of northwest-southeast oriented fault blocks. Major fault zones and subordinate fault zones found in the Peninsular Ranges Province typically trend in a northwest-southeast direction.

Site Geology

Regional geologic maps of the property and vicinity show that the property is underlain by late Pleistocene to Holocene Young Alluvial Flood Plain deposits which consist of poorly sorted sands, gravels, silts, and clay deposited by the San Luis Rey River.

Topography

The center of the Project Site is situated at approximately 33.1821˚ north latitude and 117.2890˚ west longitude. The Project Site is located in the 7.5-minute San Luis Rey Topographic Quadrangle. The elevation of the property ranges from approximately 180 to 220 feet amsl. The Project Site is relatively flat, sloping gently downwards south towards Buena Vista Creek, the nearest surface water to the property. Buena Vista Creek connects to Buena Vista Lagoon and eventually the Pacific Ocean approximately four (4) miles west of the Project Site.

Subsurface Conditions

Subsurface materials encountered during subsurface investigation determined that the Project Site is underlain by Artificial Fill, Quaternary Alluvial Flood Plain Deposits and Eocene Santiago Formation.

Artificial Fill

The surface of the Project Site is covered by artificial fill. The fill consists of silty to sandy clay, clayey sand, and clayey silt. Brick fragments and other detritus are common in the fill. The fill varies in depth across the property from two to 12 feet below ground surface (bgs), being shallowest in the northern part of the Project Site and increasing in thickness towards the south. The thickest deposits occur along the north-south trending channel cutting the central part of the Project Site, where mounds of fill were placed on either side.

Quaternary Alluvial Flood Plain Deposits

Quaternary-aged older alluvium was encountered in almost all of the trenches underlying the fill and consists of sandy clay. Caliche stringers are common and the alluvium also contains traces of fine-grained sand. The thickness varies from one to at least 11.5 feet bgs, with the thickest sections of alluvium being located in the central parts of the Project Site.

Eocene Santiago Formation

Eocene-aged Santiago Formation was encountered in 13 of the 21 trenches explored underlying the fill and alluvium. The Eocene Santiago Formation consists of clayey sandstone. The sandstone encountered was massive and friable and was found at depths of three to 11 feet bgs.

Soil Conditions

A Soil Type Map was generated as part of the Drainage Study **(Appendix J)**. The Area of Interest (AOI) of the Soil Type Map included the Project Site in addition to areas further south of the Project Site for a total AOI of 12.4 acres. The following soil types occur on the Project Site.

Las Flores Loamy Fine Sand, 5 to 9% Slopes, Eroded

This soil type covers 10.9 acres of the 12.4-acre AOI. These soils are derived from weathered marine sandstone and are moderately well-drained; have slow to medium runoff, and a slight to moderate erosion hazard.

Visalia Sandy Loam, 2 to 5% Slopes

This soil type covers 1.5 acres of the 12.4-acre AOI and occurs in and adjacent to Buena Vista Creek, in the southern portion of the Project Site. Visalia sandy loams are derived from granitic parent material and are rich in organic matter, well-drained, and have a slight to moderate erosion hazard.

Groundwater

Groundwater was not encountered in any trenches at the time of a subsurface exploration to a depth of 15.5 feet bgs conducted by EEI in September 2019. Nor was groundwater encountered in a separate geotechnical investigation conducted by Norcal Engineering in 2007 to a depth of 50 feet bgs (NorCal Engineering, 2007). In general, groundwater is often expected to follow the direction of surface topography. Based on Site topography, local groundwater flow is expected to be in a westerly direction.

Geologic Hazards

Seismic Hazards

The property is located within an area of California known to contain a number of active and potentially active faults. However, there are no known active faults crossing the property and the Project Site is not within a State of California Earthquake Fault Zone. The closest known active fault is the Newport-Inglewood Fault Zone located offshore approximately 8.34 miles west of the Project Site. The nearest active faults are displayed in **Table 4.8-1**.

Table 4.8-1
Nearby Active Faults

Fault	Distance in Miles (kilometers)[1]	Maximum Magnitude
Newport-Inglewood (offshore)	8.34 (13.42)	7.5
Rose Canyon	8.38 (13.49)	6.9
Elsinore	19.58 (31.51)	7.8
1 = USGS Online Fault Search (2008) Source: Geotechnical Evaluation (Appendix H)		

Landslides and Slope Stability

Susceptibility of slopes to landslides and other forms of slope failure depend on several factors usually present in combination and include, but are not limited to, steep slopes, condition of rock and soil materials, presence of water, formational contacts, geologic shear zones, and seismic activity. There are no published reports of landslides occurring within the City, nor is there evidence of any found in reconnaissance or aerial photographs. Minor slope movements are occurring throughout the City primarily as soils creep, slumping and sloughing along road cuts and where soils have accumulated on steep slopes. The Project Site and surrounding areas are generally relatively flat. Thus, the potential for landslides and slope instabilities to occur at the Site is negligible.

Liquefaction and Lateral Spreading

Liquefaction occurs when loose, saturated, generally cohesion-less fine sands and non-plastic silts are subjected to strong ground shaking. The soils lose shear strength and become liquid; potentially resulting in large total and differential ground surface settlements as well as possible lateral spreading during an earthquake. Seismically induced settlement can occur in response to liquefaction of saturated loose granular soils, as well as the reorientation of soil particles during strong shaking of loose, unsaturated sands.

Due to the lack of shallow groundwater at the Site, and the presence of bedrock at depths of three to 11 feet bgs, the probability of liquefaction, seismically induced settlement and lateral spreading at the Project Site is considered to be low.

Tsunamis, Flooding and Seiches

The Project Site is not located within a Tsunami Evacuation Area. Impacts due to tsunamis are considered low.

The southern portion of the Project Site lies within Zone X of the Federal Emergency Management Agency (FEMA) 500-year floodplain and Zone AE of the 100-year floodplain (FEMA FIRM Panel 06073C0758G effective 5/16/19). Zone X is an area that is outside of the 0.2% annual chance flood zone, whereas Zone AE is the area of one percent annual chance flood.

Seiches are periodic oscillations in large bodies of water such as lakes, harbors, bays or reservoirs generated by ground motion during an earthquake. The Project Site is not located immediately adjacent to any lakes or confined bodies of water and therefore, the potential for a seiche to affect the Site is considered low.

Paleontological Resource Setting

The City is located within the Coastal Plain Region which is an area characterized by interbedded marine and non-marine sedimentary rock units deposited over the last 75 million years. The sedimentary rocks overlie a buried topography of plutonic crystalline rocks composed of granite and granodiorite. Many of the level surfaces in the coastal region are elevated marine terraces and are characteristic features of the Coastal Plain Region.

The Project Site is underlain by late Pleistocene to Holocene Young Alluvial Flood Plain deposits (Qya) and Santiago Formation. These deposits consist of poorly sorted sands, gravels, silts and clay that were deposited by the San Luis Rey River. Pleistocene-age fossils in the northern portion of the Coastal Plain Region occur in marine and river terrace deposits. The former consist of well-preserved shells of estuarine and marine invertebrates such as mollusks (e.g., clams, oysters, scallops, snails, and scaphopods), crustaceans (e.g., ostracods, crabs, and barnacles) and echinoderms (e.g., sea urchins and sand dollars). Qya are considered to have a low sensitivity for paleontological resources due to the young age and loosely consolidated nature of these deposits. The Santiago Formation contains a diverse fossil record consisting of marine, estuarine and terrestrial fossils and fossil assemblages and has produced some of the best preserved assemblages of middle Eocene terrestrial mammals in California. The Santiago Formation is considered to have high paleontological sensitivity.

4.8.2 Regulatory Setting

Federal

International Building Code

The International Building Code (IBC) is a model building code developed by the International Code Council that provides the basis for the California Building Code (CBC). The purpose of the IBC is to provide minimum standards for building construction to ensure public safety, health and welfare. The IBC is updated every three (3) years.

Occupational Safety and Health Administration Regulations

Excavation and trenching are among the most hazardous construction activities. The Occupational Safety and Health Administration (OSHA) Excavation and Trenching Standard, Title 29 of the Code of Federal Regulations Part 1926.650, covers requirements for excavation and trenching operations. OSHA requires that excavations in which employees could potentially be exposed to cave-ins be protected by

sloping or benching the sides of the excavation, supporting the sides of the excavation, or placing a shield between the side of the excavation and the work area.

National Pollutant Discharge Elimination System Permits

In California, the State Water Resources Control Board (SWRCB) administers the Federal EPA regulations (55 CFR 47900) requiring the permitting of storm water generated pollution under the National Pollutant Discharge Elimination System (NPDES). Pursuant to these Federal regulations, two (2) separate NPDES permits must be complied with for all Projects. The SWRCB has oversight of the first, the General Permit which governs activities at construction sites of one acre or greater to eliminate soil erosion from leaving the Project Site and entering local waterways. The San Diego Water Board governs the second, the Municipal Storm Water permit, which governs all storm water related activities within the local jurisdiction. Both permits require the implementation of BMPs, both temporary and permanent, to reduce/eliminate pollutant loads, including eroded soils, into waters of the U.S. or waters of the State.

State

California Geologic Survey

The California Geologic Survey provides guidance with regard to seismic hazards. The California Geologic Survey's Special Publication 117A, Guidelines for Evaluating and Mitigating Seismic Hazards in California, provides guidance for evaluation and mitigation of earthquake-related hazards for Projects within designated zones of required investigation.

State of California Division of Occupational Safety and Health, California Department of Industrial Relations

The State of California Division of Occupational Safety and Health Administration (CalOSHA) Excavations Standard (Subchapter 4, Article 6) provides detailed requirements for excavation operations. CalOSHA requires that all excavations in which employees could potentially be exposed to cave-ins be protected by sloping or benching the sides of the excavation, supporting the sides of the excavation, or placing a shield between the side of the excavation and the work area.

California Building Code

The CBC is codified in the CCR as Title 24, Part 2 and is largely based on the IBC. The purpose of the CBC is to establish minimum standards to safeguard the public health, safety and general welfare through structural strength, means of egress facilities, and general stability by regulating and controlling the design, construction, quality of materials, use, occupancy, location and maintenance of all building and structures within its jurisdiction. The CBC describes requirements for engineering geologic reports, supplemental ground-response reports, and geotechnical reports. It also contains specific provisions for structures located in seismic zones. Compliance with the CBC requires that structures be constructed to resist the effects of earthquake motions.

Alquist-Priolo Earthquake Fault Zoning Act

The Alquist-Priolo Earthquake Fault Zoning Act (Alquist-Priolo Act) was passed in 1972 to mitigate the hazard of surface faulting and occupied structures. The main purpose of the Alquist-Priolo Act is to prevent the construction of buildings used for human occupancy on the surface of traces of active faults.

Before a Project can be permitted, cities and counties must require a geologic investigation to demonstrate that potential buildings will not be constructed across active faults. A state registered geologist must prepare the geologic evaluation and written report for the specific Project Site. If an active fault is found, a structure for human occupancy must be set back from the fault trace. The Project Site is not identified on an Alquist-Priolo Earthquake Fault Zone Map.

Seismic Hazards Mapping Act

The 1990 Seismic Hazards Mapping Act (California Public Resources Code Chapter 7.8) (Seismic Mapping Act) and related regulations established a statewide minimum public safety standard for mitigation of earthquake hazards. The purpose of the Seismic Mapping Act is to protect public safety from the effects of strong ground shaking, liquefaction, landslides or other ground failure, and other hazards caused by earthquakes. It accomplishes this by specifying the minimum level of mitigation a Project must provide to reduce the risk of ground failure during an earthquake to a level that prevents collapse of buildings used for human occupancy. Under the Seismic Mapping Act, the Lead Agency can withhold permits until geologic investigations are conducted and mitigation measures are incorporated. The Seismic Mapping Act addresses not only seismically induced hazards but also expansive soils, settlement, and slope stability. The program and actions mandated by the Seismic Mapping Act closely resemble those of the Alquist-Priolo Act.

Local

City of Oceanside General Plan

Public Safety Element

The General Plan Public Safety Element specifically addresses seismic hazards and geologic conditions and includes the following objectives:

Seismic and Geologic Hazard Objectives

1. Consider seismic and geologic hazards when making land use decisions particularly in regard to critical structures.

2. Minimize the risk of occupancy of all structures from seismic and geologic occurrences.

3. Provide to the public all available information about existing seismic and geologic conditions.

The General Plan Public Safety Element includes the Public Safety Plan which includes definitions, maps and mitigation information for seismic and geologic hazards that exist within the City.

Environmental Resource Management Element

The Environmental Resource Management Element includes the following objective for Soil, Erosion and Drainage:

Soil, Erosion and Drainage Objective

1. Consider appropriate engineering and land use planning techniques to mitigate rapid weathering of the rocks, soil erosion, and the siltation of the lagoons.

The Environmental Resource Management Element also provides a general map of soil types within the City (Figure ERM-3 Soils and Land Forms).

Land Use Element

The General Plan Land Use Element contains the following objectives and policies regarding geology and soils:

1.152 Seismic and Geologic Hazards

A. The City shall consider seismic and geologic hazards when making land use decisions, particularly in regards to risk sensitive land uses as defined in the Public Safety Element.

B. High Risk land uses, as defined in the Public Safety Element, should be prohibited from areas of high seismic or geologic hazard.

C. The City shall regulate land uses within areas highly susceptible to seismic and geologic hazards.

D. The City shall require expanded soils and geologic testing and necessary engineering precautions when deemed necessary to reduce risks to acceptable levels. Wave action, erosion, and geotechnical reports shall be required as determined necessary.

3.14 Grading and Excavations

Objective: To provide mitigation recommendations for grading and excavations in the City.

Policies: Investigation and evaluation of currently affected areas will indicate the measures to be included, such as the following measures:

1. Keep grading to a minimum, leave vegetation and soils undisturbed wherever possible.

2. Plant bare slopes and cleared areas with appropriate vegetation immediately after grading.

3. Chemically treat soils to increase stability and resistance to erosion.

4. Install retaining structures where appropriate.

5. Construct drainage systems to direct and control rate of surface runoff.

6. Construct silt traps and settling basins in drainage systems.

7. Construct weirs and check dams on streams.

3.23 Paleontological Resources

Objective: Recovery, retention and evaluation of paleontological resources.

A. Paleontological survey reports shall be prepared by a qualified paleontologist approved by the City for all proposed projects that are located in the area designated as having a high potential for fossils on the City's natural resource management data base system.

City of Oceanside Building Code

Chapter 6 of the OMC, Building Construction Regulations outlines the regulations and requirements for construction of buildings within the City's jurisdiction, including seismic and geologic safety design standards. The City adopts the most recent CBC as the local building code and amends as needed.

City of Oceanside Grading Ordinance

The City of Oceanside Grading Ordinance (Ordinance No. 92-15), which provides the Grading Regulations Manual, requires that all grading, clearing, brushing or grubbing on natural or existing grade must have a grading permit from the City Engineer. A Landscape and Irrigation Plan is required for developments such as, but not limited to, commercial, grading permits, grading slopes, industrial, parking lots, planned residential developments, remodeling which requires a permit, and subdivisions. Section 1501(d) of the City's Grading Ordinance details the requirements and practices of the Erosion Control System to lessen the potential for sediment runoff and erosion.

4.8.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: (1) rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault; (2) strong seismic ground shaking; (3) seismic-related ground failure, including liquefaction; (4) landslides;
b. Result in substantial soil erosion or the loss of topsoil;
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse;
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property;
e. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water;
f. Directly or indirectly destroy a unique paleontological resource or site or unique geological feature.

4.8.4 Project Impact Analysis

Would the Project:

a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

The Project Site is located within an area of California known to contain a number of active and potentially active faults. However, there are no known active faults crossing the property and the Project Site is not within a State of California Earthquake Fault Zone or an Alquist-Priolo Earthquake Fault Zone (CDC, 2020). The potential for rupture is considered low. Therefore, the Project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving the rupture of a known earthquake fault, and impacts are **less than significant.**

ii) Strong seismic ground shaking?

The nearest active faults in the vicinity of the Project Site are the active Newport-Inglewood offshore fault and the Rose Canyon fault; each located approximately 8.34 and 8.38 miles from the Project Site respectively. As provided in the Geotechnical Evaluation (EEI, 2019) the next nearest fault is the Elsinore fault, at a distance of 19.58 miles from the Project Site. The Project Site is likely to be subjected to strong ground motion from seismic activity similar to that of the rest of the County and Southern California, due to seismic activity of the region as a whole and a **significant impact** (**Impact GEO-1a**) will occur.

iii) Seismic-related ground failure, including liquefaction?

Liquefaction occurs when loose, saturated, generally cohesion-less fine sands and non-plastic silts are subjected to strong ground shaking. The majority of the soils onsite are Las Flores loamy fine sand, five to nine percent slopes, eroded soils. These soils are moderately well-drained; have slow to medium runoff, and a slight to moderate erosion hazard. Free groundwater was not encountered during separate subsurface investigations. Due to the lack of shallow groundwater onsite and the presence of firm bedrock at depths of three (3) to 11 feet bgs, the probability of liquefaction, seismically induced settlement and lateral spreading onsite is considered to be low as determined in the Geotechnical Evaluation (EEI, 2019). Therefore, the Project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving seismic-related ground failure including liquefaction and impacts are **less than significant**.

iv) Landslides?

Susceptibility of slopes to landslides and other forms of slope failure depend on several factors usually present in combination and include, but are not limited to, steep slopes, condition of rock and soil materials, presence of water, formational contacts, geologic shear zones, and seismic activity. The Project Site is relatively flat, sloping gently downwards south towards Buena Vista Creek, the nearest surface water to the Project Site. As stated in the Geotechnical Evaluation which is provided as **Appendix H** of this EIR, the potential for landslides to occur onsite is negligible. Therefore, the Project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving landslides, and therefore impacts are **less than significant.**

b. Result in substantial soil erosion or the loss of topsoil?

The potential for soil erosion would increase during construction activities, including grading and demolition, as a result of vehicles and heavy equipment exposing soil surfaces to wind or water, and a **significant impact** (**Impact GEO-2**) will occur. However, prior to obtaining a grading permit the Project would be required to prepare a Storm Water Pollution Prevention Plan (SWPPP), which would describe and depict in detail the various grading and construction-related BMPs to be implemented onsite. The SWPPP would be prepared in conformance with City regulations and the NPDES SWRCB Construction General Permit. Sediment and erosion control BMPs described in the SWPPP may include, but are not limited to, straw mulch, soil binders, silt fencing, gravel bags, street sweeping and vacuuming and storm drain inlet protection.

c. *Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?*

As detailed above, soils onsite are moderately well-drained, have slow to medium runoff, and a slight to moderate erosion hazard. Free groundwater was not encountered during separate subsurface investigations. The Project Site is relatively flat and the potential for landslides or slope instabilities to occur onsite are negligible. Due to the lack of shallow groundwater onsite and the presence of firm bedrock at depths of three (3) to 11 feet bgs, the probability of liquefaction, seismically induced settlement and lateral spreading onsite is considered to be low.

The Project would not be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse, and impacts are **less than significant**.

d. *Be located on expansive soil, as defined in **Table 18-I-B** of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?*

In general, soils onsite possess moderate expansive characteristics. However, there are localized areas of highly expansive soils present onsite. Expansive soil influence is considered to pose the greatest potential risk to the proposed improvements. The Project would be located on moderately expansive soil with areas of highly expansive soils, as defined in Table 18-I-B of the 1994 Uniform Building Code (International Conference of Building Officials, 1994), and a **significant impact** (**Impact GEO-1b**) will occur.

e. *Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?*

The Project does not propose the use of septic tanks or alternative waste water disposal systems. Water and sewer service would be provided by the City and the Project would connect to existing infrastructure in the Project vicinity. For sewer service, the Project would realign the existing sewer mains and would construct a new 12-inch and new 21-inch PVC sewer main that would run along the southern portion of the Project Site, south of the sales and staging and customer and employee parking lots, and would connect to existing sewer to the west and to the east in Thunder Drive. The existing 12-inch and 21-inch sewer mains located directly north of the proposed sewer mains would be abandoned.

The Project would not have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal system, and therefore, **no impact** will occur.

f. Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?

The City is located within the Coastal Plain Region which is an area characterized by interbedded marine and non-marine sedimentary rock units deposited over the last 75 million years. The sedimentary rocks overlie a buried topography of plutonic crystalline rocks composed of granite and granodiorite. Many of the level surfaces in the coastal region are elevated marine terraces and are characteristic features of the Coastal Plain Region. The Project Site is underlain by artificial fill, late Pleistocene to Holocene Young Alluvial Flood Plain deposits (Qya) and Eocene Santiago Formation.

Artificial fill may contain fossils, but these fossils have been removed from their original locations and are thus out of stratigraphic context. Therefore, they are not considered important for scientific study and have no paleontological sensitivity. Alluvial Flood Plan Deposits (Qya) have a low sensitivity for paleontological resources due to the young age and loosely consolidated nature of these deposits. Any biological remains found are likely to be modern to sub-fossil. The Santiago Formation contains a diverse fossil record consisting of marine, estuarine and terrestrial fossils and fossil assemblages and has produced some of the best-preserved assemblages of middle Eocene terrestrial mammals in California. Due to the fact that the Santiago Formation is known to contain scientifically significant paleontological resources, this formation is considered to have high paleontological sensitivity. There are no unique geological features onsite.

Although the Project Site has been previously graded, Project grading would include 12,500 CY of cut. Due to the high sensitivity of the Santiago Formation underlying the Site, the Project would have the potential to disturb a paleontological resource and a **significant impact** (**Impact GEO-3**) will occur.

4.8.5 Mitigation Implementation and Monitoring

Strong Seismic Groundshaking (Impact GEO-1a) and Expansive Soils (Impact GEO-1b)

MM-GEO-1 Prior to and during construction, the construction contractor shall ensure that Project construction complies with all recommendations identified on pages 9 – 20 in the Geotechnical Evaluation prepared by EEI Engineering Solutions (2019). The construction contractor shall follow the specific guidelines within the Geotechnical Evaluation for Site preparation, earthwork and onsite improvements.

Soil Erosion (Impact GEO-2)

Mitigation measures MM-HYDRO-1, MM-HYDRO-2, and MM-HYDRO-3, which are presented in Section 4.11.5, will reduce this impact to below a level of significance.

MM-HYDRO-1 The Project shall incorporate permanent source control BMPS as identified in the Project SWQMP such as the following:

BMP Type	Inspection Frequency	Summary of Maintenance Activity
Prevention of Illicit Discharges Into MS4	Continuous	A grease trap has been incorporated into the Utility Plan and dumping of grease down the storm drain is prohibited. Other good housekeeping practices would be implemented to discourage discharges of non-storm water pollutants, including cleaning up food and grease with absorbents, discarding trash, and routine

BMP Type	Inspection Frequency	Summary of Maintenance Activity
		maintenance of grease trap.
Storm Drain Signage	Continuous	Labeling shall be provided for all storm water conveyance system inlets and catch basins within the Project area. Storm drain placards shall be used for signage (stenciling is prohibited by the City). Inspect and maintain placards as needed.
Protect Trash Storage Areas From Rainfall, Run-On, Runoff and Wind Dispersal	Regularly	Ensure trash enclosure areas are fully contained (three walls, door and roof) and are provide with attached lids. Keep containers away from storm drain vicinity. Post signs on all enclosures and/or dumpsters informing users to keep lid closed and not to dispose of liquid or hazardous materials. Inspect trash storage areas to ensure integrity of containers and that area is kept clean. Replace leaking bins. Clean trash storage areas regularly.
Additional BMPS Based on Potential Sources of Runoff Pollutants	Regularly as Determined Necessary	OnSite Storm Drain Inlets: Onsite inlets shall be protected from any illicit discharges and debris. Inlets shall have prohibitive signs where all inlets are marked with the words "NO DUMPING! DISCHARGES TO BAY" or similar. Inlet markings shall be maintained and periodically repainted on a regular basis to remove pollutants. Clean inlets regularly and remove sediments and debris, especially before start and end of wet season. Keep record of cleaning and disposal activities.
		Need for Future Indoor and Structural Pest Control: Building includes doors and windows with sealing that discourages entry of pests. Any pesticides shall be applied minimally in accordance with manufacturer's specifications and City and State requirements.
		Landscape/Outdoor Pesticide Use: Final Landscape Plans shall preserve existing drought tolerant trees, shrubs, and ground cover to the maximum extent possible, and include landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to storm water pollution.
		Fire Sprinkler Test Water: Fire sprinkler test water shall be drained to sanitary sewer system. During a fire sprinkler test, the fire riser discharge shall be connected by a hose to the sewer cleanout.
		Miscellaneous Drain or Washwater: Boiler drains shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain.
		Plazas, Sidewalks, and Parking Lots: Sweep regularly to prevent accumulation of litter and debris, debris from pressure washing must be collected to prevent entry into the storm drain system.

MM-HYDRO-2 An onsite private underground proprietary BMP in the form of an underground detention system shall be designed and constructed per the Project SWQMP in accordance with the San Diego Water Board and City of Oceanside BMP Design Manual. Storm water shall be conveyed via underground pipes from various parts of the Site through water quality measures and into the underground detention system.

MM-HYDRO-3 Low Impact Development (LID) and Site Design BMPs shall be incorporated into the Project design to reduce impacts to water quality. The contractor shall construct the LID BMPs in accordance with the Project SWQMP and the engineer of work shall inspect that all LID BMPs have been constructed in compliance with the approved plans and all applicable specifications and permits. The widening of Plaza Drive shall be treated via a green streets approach with the construction of swales behind sidewalks to treat runoff for water quality and hydromodification purposes.

Paleontological Resources (Impact GEO-3)

MM-GEO-3a Prior to the issuance of a grading permit, the applicant shall submit a letter to the City from a qualified professional paleontologist or a California Registered Professional Geologist with appropriate paleontological expertise, as defined by the Society of Vertebrate Paleontology's guidelines, indicating that they have been retained by the applicant to prepare and implement a Paleontological Resources Impact Mitigation Program (PRIMP). The qualified paleontologist shall be available "on-call" to the City and the applicant throughout the duration of ground-disturbing activities. The PRIMP shall include preconstruction coordination; construction monitoring; emergency discovery procedures; sampling and data recovery, if needed; preparation, identification and analysis of the significance of fossil specimens salvaged, if any; museum storage of any specimens and data recovered; and reporting. Earth-moving construction activities shall be monitored wherever these activities will disturb previously undisturbed sediment. Monitoring will not need to be conducted in areas where sediments have been previously disturbed or in areas where exposed sediments will be buried but not otherwise disturbed. In such cases, spot-checking of the excavation Site is sufficient. This mitigation measure shall apply to all excavation activities within the Santiago Formation with high sensitivity and for any construction activities that involve excavation greater than three feet in depth within geologic units with low paleontological sensitivity (Qya).

MM-GEO-3b Prior to the issuance of a grading permit, the City shall confirm the following measure is identified on the grading plan and will be implemented:

Grading activities are subject to a Paleontological Resource Impact Mitigation Program (PRIMP). If potential fossils are discovered by construction crews or during monitoring by a qualified paleontologist, all earthwork or other types of ground disturbance within 50 feet of the discovery shall stop immediately until the qualified professional paleontologist can assess the nature and importance of the discovery. If a fossil of scientific value or uniqueness is identified by the paleontologist, the paleontologist shall record the find and allow work to continue or recommend salvage and recovery of the fossil. If treatment and salvage is required, recommendations shall be consistent with Society of Vertebrate Paleontology guidelines and currently accepted scientific practice and shall be subject to review and approval by the City. Work in the affected area may resume once the fossil has been assessed and/or salvaged and the City, in consultation with the professional paleontologist, has provided written approval to resume work.

4.8.6 Level of Significance After Mitigation

The analysis in Section 4.8.4 identified the potential for significant impacts related to strong seismic ground shaking, soil erosion, expansive soils and paleontological resources. Implementation of mitigation measure MM-GEO-1 requires implementation of all recommendations identified in the Geotechnical Evaluation (EEI, 2019). The recommendations detailed in the Geotechnical Evaluation include specific recommendations for Site preparation and grading, earthwork, fill material and placement, temporary Site excavations, yielding subgrade conditions, and shrinkage and bulking. Proper compliance with each of the detailed recommendations set forth in the Geotechnical Evaluation will minimize geotechnical hazards related to seismic ground shaking and expansive soils. With mitigation

measure MM-GEO-1, Impact GEO-1a and Impact GEO-1b related to seismic ground shaking and expansive soils will be less than significant.

Implementation of mitigation measures MM-HYDRO-1 through MM-HYDRO-3 require permanent source control BMPS, an onsite underground proprietary BMP in the form of an underground detention system and Low Impact Development (LID) and Site design BMPs. Following construction, disturbed soils would be built upon with hardscape or stabilized with vegetation and landscaping which would further reduce erosion potential. Implementation of mitigation measures MM-HYDRO-1 through MM-HYDRO-3 will reduce Impact GEO-2 related to soil erosion to below a level of significance.

Implementation of mitigation measures MM-GEO-3a and MM-GEO-3b require a qualified professional paleontologist to be retained to prepare and implement a PRIMP, and provide construction monitoring during ground-disturbing activities in order to assess and provide recommendations in the event that paleontological resources are discovered. MM-GEO-3b requires specific notes to be identified on the grading plan to ensure the PRIMP is properly implemented. With implementation of mitigation measures MM-GEO-3a and MM-GEO-3b, Impact GEO-3 related to paleontological resources will be reduced to less than significant considering any fossils discovered would be properly excavated and the associated paleontological research information would be preserved to the extent feasible. In summary, all geology and soils impacts will be reduced to below a level of significance.

Chapter 4.9 GREENHOUSE GAS EMISSIONS

The following document was used in the preparation of this section and is included in its entirety in **Appendix I, Appendix N** and **Appendix O**:

Ldn Consulting, Inc. March 23, 2020. *CarMax Auto Store Development Greenhouse Gas Screening Letter – City of Oceanside*. (**Appendix I**)

LOS Engineering, Inc. December 4, 2020. *CarMax Auto Dealership (D19-00021) 4000 Block of Plaza Drive City of Oceanside, October 1, 2020, Vehicle Miles Traveled Analysis.* (**Appendix N**)

LOS Engineering, Inc. October 1, 2020. *CarMax Auto Dealership (D19-00021) 4000 Block of Plaza Drive City of Oceanside, December 4, 2020, Local Transportation Study.* (**Appendix O**)

4.9.1 Environmental Setting

The Project Site is located in the southeastern portion of the City, within the SDAB. The Project Site is relatively flat, gently sloping southward towards Buena Vista Creek. Elevations range from 180 feet amsl to 220 feet amsl. The Project Site is located in a primarily developed area and is surrounded by commercial uses to the west, including a shopping center and auto repair shops. To the east are medium density residential uses as well as a DMV facility at the corner of Plaza Drive and Thunder Drive. To the north is SR-78 and further north are professional commercial uses. To the south are Buena Vista Creek, high density and residential estate uses including a senior living facility, and commercial and public/semipublic uses including an OFD station.

Climate within the SDAB can vary dramatically over short distances, with cooler temperatures in the western part of the basin along the coastline and gradually warming to the east. The high-pressure system that dominates the climate of southern California keeps the City sunny and warm for much of the year. In the winter, the high pressure drops to the south, bringing cool, moist weather from the north.

The Greenhouse Effect

Climate change refers to any substantial change in measures of climate, such as temperature, precipitation, or wind, lasting for an extended period (decades or longer). Gases that trap heat in the atmosphere are often called GHGs. The “greenhouse effect” is the trapping and build-up of heat in the atmosphere near the earth’s surface. The greenhouse effect traps heat in the atmosphere through the following process: short-wave radiation emitted as light from the sun is absorbed by the earth, a portion of this energy is reflected back towards space in the form of long-wave radiation, and GHGs in the upper atmosphere absorb this long-wave radiation and emit it back toward the earth – trapping heat in the atmosphere. The greenhouse effect is a natural process which regulates the earth’s ambient temperature. Global climate change concerns are focused on whether human activities are leading to an enhancement of the greenhouse effect.

Greenhouse Gases

Principal GHGs include carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), O_3, and water vapor. Some GHGs such as CO_2, CH_4, and N_2O occur naturally and are emitted to the atmosphere through natural processes and human activities. Emissions of CO_2 are largely byproducts of fossil fuel combustion, whereas CH_4 results mostly from off-gassing associated with agricultural practices and landfills. Man-made GHGs, which have a much larger heat-absorption potential than CO_2, include fluorinated gases such as hydrofluorocarbons (HFCs), perfluorocarbons (PFCs) and sulfur hexafluoride (SF_6) and nitrogen trifluoride (NF_3), which are associated with certain industrial products and processes.

Gases in the atmosphere can contribute to climate change both directly and indirectly. Direct effects occur when the gas itself absorbs radiation. Indirect radiative forcing occurs when chemical transformations of the substance produce other GHGs, when a gas influences the atmospheric lifetimes of other gases, and/or when a gas affects atmospheric processes that alter the radiative balance of the earth.

The Intergovernmental Panel on Climate Change (IPCC) developed the global warming potential (GWP) concept to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. The GWP of a GHG is defined as the ratio of the time-integrated radiative forcing from the instantaneous release of 1 kilogram of a trace substance relative to that of 1 kilogram of a reference gas. The reference gas used is CO_2 therefore GWP-weighted emissions are measured in metric tons of CO_2 equivalent (MT CO_2E).

Contributions to Greenhouse Gas Emissions

According to the EPA Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990-2018, the total gross GHG emissions in 2018 in the U.S. was 6,676.6 million metric tons of CO_2E. Total U.S. emissions have increased by 3.7 percent from 1990 to 2018. The primary GHG emitted by human activities in the United States was CO2, representing approximately 81.3 percent of total GHG emissions. The largest source of CO_2 and of overall GHG emissions was fossil fuel combustion.

The CARB Emissions Trends Report for 2000 to 2017 indicates that statewide GHG emissions in 2017 were 424 million MT CO_2E which is 5 million MT CO_2E lower than 2016 levels. **Table 4.9-1** displays the 2017 GHG emissions by source for California.

Table 4.9-1
2017 California GHG Emissions by Source

Source Category	Percent of Total
Transportation	40.1%
Industrial	21.1%
Electricity	14.7%
Residential and Commercial	9.7%
Agriculture	7.6%
High GWP	4.7%
Waste	2.1%
Source: CARB Emissions Trends Report for 2000 to 2017	

The City Climate Action Plan (CAP) contains the 2013 community inventory of GHG emissions which is displayed in **Table 4.9-2** below.

Table 4.9-2
Community GHG Emissions by Source

Source Category	Percent of Total
Transportation	48%
Electricity	26%
Natural gas	17%
Solid Waste	4%
Water	3%
Municipal	3%

4.9.2 Regulatory Setting

Federal

Federal Clean Air Act

In the past, the U.S. EPA has not regulated GHGs because it asserted that the Clean Air Act (CAA) did not authorize it to issue mandatory regulations to address global climate change. However, in 2007 the U.S. Supreme Court held that the U.S. EPA must consider regulation of motor-vehicle GHG emissions.[16] The Court did not mandate that the U.S. EPA enact regulations to reduce GHG emissions but found that the only instances in which the U.S. EPA could avoid taking action were if it found that GHGs do not contribute to climate change or if it offered a "reasonable explanation" for not determining that GHGs contribute to climate change. In December 2009, the U.S. EPA issued an endangerment finding for GHGs under the CAA, concluding that GHGs threaten the public health and welfare of current and future generations and that motor vehicles contribute to GHG pollution.[17] This is the first step in regulating GHGs under the provisions of the CAA. These findings provide the basis for adopting new national regulations to mandate GHG emission reductions under the Federal CAA. The EPA's endangerment finding paves the way for Federal regulation of GHGs.

Under the Consolidated Appropriations Act of 2008 (HR 2764), Congress established mandatory GHG reporting requirements for some emitters of GHGs. In addition, on September 22, 2009, the U.S. EPA issued the Final Mandatory Reporting of Greenhouse Gases Rule. The rule requires annual reporting to the U.S. EPA of GHG emissions from large sources and suppliers of GHGs, including facilities that emit 25,000 MT or more a year of GHGs.

Executive Order 13432

In response to the Massachusetts v. Environmental Protection Agency ruling, President George W. Bush signed Executive Order 13432 on May 14, 2007, directing the U.S. EPA, along with the Departments of Transportation, and Energy to initiate a regulatory process that responds to the Supreme Court's decision. Executive Order 13432 was codified into law by the 2009 Omnibus Appropriations Law signed

[16] *Massachusetts v. Environmental Protection Agency et al. (127 S. Ct. 1438 (2007))*

[17] *United States Environmental Protection Agency, Endangerment, and Cause or Contribute Findings for Greenhouse Gases under Section 202(a) of the Clean Air Act, website: https://www.epa.gov/ghgemissions/endangerment-and-cause-or-contribute-findings-greenhouse-gases-under-section-202a-clean, accessed February 2020.*

on February 17, 2009. The order sets goals in the areas of energy efficiency, acquisition, renewable energy, toxics reductions, recycling, sustainable buildings, electronics stewardship, fleets, and water conservation.

Light-Duty Vehicle Greenhouse Gas and Corporate Average Fuel Economy Standards

On May 19, 2009, President Barack Obama announced a national policy for fuel efficiency and emissions standards in the United States auto industry. The adopted federal standard applies to passenger cars and light-duty trucks for model years 2012 through 2016. The rule surpasses the prior Corporate Average Fuel Economy standards (CAFE)[18] and requires an average fuel economy standard of 35.5 miles per gallon (mpg) and 250 grams of CO_2 per mile by model year 2016, based on U.S. EPA calculation methods. These standards were formally adopted on April 1, 2010. In August 2012, standards were adopted for model year 2017 through 2025 for passenger cars and light-duty trucks. By 2025, vehicles are required to achieve 54.5 mpg (if GHG reductions are achieved exclusively through fuel economy improvements) and 163 grams of CO_2 per mile. According to the U.S. EPA, a model year 2025 vehicle would emit one-half of the GHG emissions from a model year 2010 vehicle.[19] In 2017, the U.S. EPA recommended no change to the GHG standards for light-duty vehicles for model years 2022-2025.

In March 2020, the U.S. EPA and National Highway Traffic Safety Administration (NHTSA) adopted the Safer Affordable Fuel-Efficient Vehicles Rule that maintains the CAFE and CO_2 standards applicable in model year 2020 for model years 2021 through 2026. The estimated CAFE and CO_2 standards for model year 2020 are 43.7 mpg and 204 grams of CO_2 per mile for passenger cars and 31.3 mpg and 284 grams of CO_2 per mile for light trucks, projecting an overall industry average of 37 mpg, as compared to 46.7 mpg under the standards issued in 2012. The final Safer Affordable Fuel-Efficient Vehicles Rule also excludes CO_2e emission improvements associated with air conditioning refrigerants and leakage (and, optionally, offsets for nitrous oxide and methane emissions) after model year 2020.[20]

Heavy-Duty Engines and Vehicles Fuel Efficiency Standards

In addition to the regulations applicable to cars and light-duty trucks, on August 9, 2011, the U.S. EPA and the NHTSA announced Phase I fuel economy and GHG standards for medium- and heavy-duty trucks, which apply to vehicles from model years 2014 through 2018.[21] The U.S. EPA and the NHTSA adopted standards for CO_2 emissions and fuel consumption, respectively, tailored to each of three (3) main vehicle categories: (1) combination tractors, (2) heavy-duty pickup trucks and vans, and (3)

[18] *The Corporate Average Fuel Economy standards are regulations in the United States, first enacted by Congress in 1975, to improve the average fuel economy of cars and light trucks. The U.S. Department of Transportation has delegated the National Highway Traffic Safety Administration as the regulatory agency for the Corporate Average Fuel Economy standards.*

[19] *United States Environmental Protection Agency, EPA and NHTSA Set Standards to Reduce Greenhouse Gases and Improve Fuel Economy for Model Years 2017-2025 Cars and Light Trucks, August 2012, https://nepis.epa.gov/ Exe/ZyPDF.cgi/P100EZ7C.PDF?Dockey=P100EZ7C.PDF.*

[20] *National Highway Traffic Safety Administration (NHTSA) and U.S. Environmental Protection Agency (USEPA),2018. Federal Register / Vol. 83, No. 165 / Friday, August 24, 2018 / Proposed Rules, The Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021–2026 Passenger Cars and Light Trucks 2018. Available at:https://www.gpo.gov/fdsys/pkg/FR-2018-08-24/pdf/2018-16820.pdf.*

[21] *United States Environmental Protection Agency, Office of Transportation and Air Quality. EPA and NHTSA Adopt First-Ever Program to Reduce Greenhouse Gas Emissions and Improve Fuel Efficiency of Medium-and Heavy-Duty Vehicles, August 2011.*

vocational vehicles. According to the U.S. EPA, this program will reduce GHG emissions and fuel consumption for affected vehicles by 6% to 23%.

Building on the Phase I standards, in August 2016, U.S. EPA and NHTSA jointly finalized Phase II standards for medium- and heavy-duty vehicles through model year 2027 that will improve fuel efficiency and cut carbon pollution to reduce the impacts of climate change. The final standards are expected to lower CO_2 emissions by approximately 1.1 billion MT; save vehicle owners fuel costs of about $170 billion; and reduce oil consumption by up to two (2) billion barrels over the lifetime of the vehicles sold under the program.[22]

Energy Independence and Security Act of 2007

The Energy Independence and Security Act of 2007 is an energy policy which would aid in the reduction of national GHG emissions by the following measures:

1. Increase the supply of alternative fuel sources by setting a mandatory Renewable Fuel Standard requiring fuel producers to use at least 36 billion gallons of biofuel in 2022.

2. Set a target of 35 miles per gallon for the combined fleet of cars and light trucks by model year 2020 and direct National Highway Traffic Safety Administration (NHTSA) to establish a fuel economy program for medium- and heavy-duty trucks and create a separate fuel economy standard for work trucks.

3. Prescribe or revise standards affecting regional efficiency for heating and cooling products and procedures for new or amended standards, energy conservation, energy efficiency labeling for consumer electronic products, residential boiler efficiency, electric motor efficiency, and home appliances.

State

Assembly Bill 939 and Assembly Bill 341

In 1989, AB 939, known as the Integrated Waste Management Act (California Public Resources Code, Section 40000 *et seq*.), was passed in response to the increase in waste stream and the decrease in landfill capacity. The statute established the California Integrated Waste Management Board, which oversees a disposal reporting system. AB 939 mandated a reduction of waste being disposed where jurisdictions were required to meet diversion goals of all solid waste through source reduction, recycling, and composting activities of 50% by year 2000. AB 341 amended the California Integrated Waste Management Act of 1989 to include a provision declaring that it is the policy goal of the state that not less than 75% of solid waste be source-reduced, recycled, or composted by the year 2020 and annually thereafter. In addition, AB 341 required the California Department of Resources Recycling and Recovery (CalRecycle) to develop strategies to achieve the state's policy goal.

Assembly Bill 1493

[22] *Regulations for Greenhouse Gas Emission from Commercial Trucks & Buses, November 16, 2016, website: https://19january2017snapshot.epa.gov/regulations-emissions-vehicles-and-engines/regulations-greenhouse-gas-emissions-commercial-trucks_.html.*

AB 1493 was enacted in July 2002 in response to the transportation sector accounting for more than half of California's CO_2 emissions. It required CARB to set GHG emission standards for passenger vehicles, light-duty trucks, and other vehicles determined by the board that are used primarily for personal transportation in the state. The AB 1493 required that CARB set GHG emission standards for vehicles manufactured in 2009 and all subsequent model years. CARB adopted the standards in September 2004.

Executive Order S-3-05

Executive Order S-3-05, signed in June 2005, established the following statewide goals: GHG emissions should be reduced to 2000 levels by 2010, 1990 levels by 2020, and 80 percent below 1990 levels by 2050. Under this Executive Order, the California Environmental Protection Agency (CalEPA) is directed to report biannually on progress made toward meeting the GHG targets and the impacts to California due to global warming, including impacts to water supply.

Assembly Bill 32

AB 32, also known as the California Global Warming Solutions Act of 2006, requires California to reduce its GHG emissions to 1990 levels by 2020, representing a reduction of approximately 15% below emissions expected under a "business-as-usual" scenario.

Under AB 32, CARB is responsible for carrying out and developing the programs and requirements necessary to achieve the GHG emissions reduction mandate of AB 32 and to monitor compliance with any rule, regulation, order, emission limitation, or emission reduction measure adopted. The full implementation of AB 32 will help mitigate risks associated with climate change, while improving energy efficiency, expanding the use of renewable energy sources, achieving cleaner transportation, and reducing waste.

AB 32 requires CARB to develop a Scoping Plan that lays out California's strategy for meeting the goals and must be updated every five (5) years. In December 2008, CARB approved the initial Scoping Plan, which included a suite of measures to sharply cut GHG emissions. In May 2014, CARB approved the first update to the Scoping Plan which builds upon the initial Scoping Plan with new strategies and recommendations. In December 2017 CARB adopted the *2017 Climate Change Scoping Plan Update* (2030 Scoping Plan). The 2030 Scoping Plan builds on the successful framework established in the initial Scoping Plan and First Update, while identifying new, technologically feasible, and cost effective strategies that will serve as the framework to achieve the 2030 GHG target and define the state's climate change priorities to 2030 and beyond.

For local governments, the 2030 Scoping Plan replaced the initial Scoping Plans 15% reduction goal with a recommendation to aim for a community-wide goal of no more than 6 MT CO_2E per capita by 2030 and no more than 2 MT CO_2E per capita by 2050, which are consistent with the state's long-term goals. The 2030 Scoping Plan recommends strategies for implementation at the statewide level to meet the goals of AB 32, SB 32, and Executive Order S-3-05 and establishes an overall framework for the measures that will be adopted to reduce California's GHG emissions. A Project is considered consistent with the statues and executive orders if it meets the general policies in reducing GHG emissions in order to facilitate the achievement of the state's goals and does not impede attainment of those goals. A given Project need not be in perfect conformity with every planning policy or goal to be consistent, rather, a Project would be consistent if it furthers the objectives and does not obstruct their attainment.

Executive Order B-30-15

On April 29, 2015, California Governor Jerry Brown issued Executive Order B-30-15. Therein, Governor Brown:

- Established a new interim statewide reduction target to reduce GHG emissions to 40 percent below 1990 levels by 2030;[23]
- Ordered all state agencies with jurisdiction over sources of GHG emissions to implement measures to achieve reductions of GHG emissions to meet the 2030 and 2050 reduction targets;
- Directed CARB to update the Climate Change Scoping Plan to express the 2030 target in terms of $MMTCO_2E$.

Senate Bill 32

SB 32 was passed on September 8, 2016 and is known as the California Global Warming Solutions Act of 2006: Emissions Limit. SB 32 added Section 38566 to the Health and Safety Code which states that in adopting rules and regulations to achieve maximum technologically feasible and cost-effective GHG emissions reductions, the state board shall ensure that statewide GHG emissions are reduced to at least 40% below the statewide GHG emissions limit no later than December 31, 2030.

Senate Bill 97

SB 97 directs the Governor's Office of Planning and Research (OPR) to develop guidelines under the CEQA for the mitigation of GHG emissions. OPR was responsible for developing proposed guidelines by July 1, 2009, and the California Natural Resources Agency (CNRA) was directed to adopt guidelines by January 10, 2010.

In 2008 OPR issued a technical advisory as interim guidance regarding the analysis of GHG emissions, including those associated with vehicular traffic, energy consumption, water usage, and construction activities should be identified and estimated. On April 13, 2009, OPR submitted to the CNRA the proposed amendments to the CEQA Guidelines relating to GHG emissions. The CNRA adopted the CEQA Guidelines Amendments on December 30, 2009 and the amendments became effective on March 18, 2010.

The adopted amendments do not establish a GHG emission threshold; instead they allow a lead agency to develop, adopt, and apply its own thresholds of significance or those developed by other agencies or experts. CNRA also acknowledges that a lead agency may consider compliance with regulations or requirements implementing AB 32 in determining the significance of a Project's GHG emissions.

Senate Bill 350

The Clean Energy and Pollution Reduction Act of 2015, SB 350 (Chapter 547, Statutes of 2015) was approved by Governor Jerry Brown on October 7, 2015. SB 350 will: (1) increase the standards of the California RPS program by requiring that the amount of electricity generated and sold to retail customers per year from eligible renewable energy resources be increased to 50 percent by December 31, 2030; (2) require the State Energy Resources Conservation and Development Commission to establish annual targets for statewide energy efficiency savings and demand reduction that will achieve a cumulative doubling of statewide energy efficiency savings in electricity and natural gas final end uses

[23] *In response to EO-B-30-15, this target was adopted by the California Senate under SB 32 on September 8, 2015.*

of retail customers by January 1, 2030; (3) provide for the evolution of the Independent System Operator (ISO) into a regional organization; and (4) require the state to reimburse local agencies and school districts for certain costs mandated by the state through procedures established by statutory provisions. Among other objectives, the Legislature intends to double the energy efficiency savings in electricity and natural gas final end uses of retail customers through energy efficiency and conservation. In other words, SB 350 essentially requires the energy efficiency of existing buildings to be doubled by 2030.

Senate Bill 100

On September 10, 2018, Governor Jerry Brown signed SB 100, which further increased California's Renewables Portfolio Standard and requires retail sellers and local publicly owned electric utilities to procure eligible renewable electricity for 44 percent of retail sales by December 31, 2024, 52% by December 31, 2027, and 60% by December 31, 2030, and that CARB should plan for 100% eligible renewable energy resources and zero-carbon resources by December 31, 2045.

Senate Bill 1368

California SB 1368, a companion bill to AB 32, requires the California Public Utilities Commission (CPUC) and the California Energy Commission CEC to establish GHG emission performance standards for the generation of electricity. These standards also generally apply to power that is generated outside of California and imported into the State. SB 1368 provides a mechanism for reducing the emissions of electricity providers, thereby assisting CARB to meet its mandate under AB 32. On January 25, 2007, the CPUC adopted an interim GHG Emissions Performance Standard, which is a facility-based emissions standard requiring that all new long-term commitments for baseload generation to serve California consumers be with power plants that have GHG emissions no greater than a combined cycle gas turbine plant. That level is established at 1,100 pounds of CO_2 per megawatt-hour. Further, on May 23, 2007, the CEC adopted regulations that establish and implement an identical Emissions Performance Standard of 1,100 pounds of CO_2 per megawatt-hour (see CEC Order No. 07-523-7).

Sustainable Communities and Climate Protection Act (SB 375)

California's Sustainable Communities and Climate Protection Act, also referred to as SB 375 became effective January 1, 2009. The goal of SB 375 is to help achieve AB 32's GHG emissions reduction goals by aligning the planning processes for regional transportation, housing, and land use.
Among other things, SB 375 requires the regional governing bodies in each of the State's major metropolitan areas to adopt, as part of their regional transportation plan, "sustainable community strategies" that will meet the region's target for reducing GHG emissions. SB 375 creates incentives for implementing the sustainable community strategies by allocating Federal transportation funds only to projects that are consistent with the emissions reductions.

Local governments would then devise strategies for housing development, road-building and other land uses to shorten travel distances, reduce vehicular travel time and meet the new targets. If regions develop these integrated land use, housing, and transportation plans, residential projects that conform to the sustainable community strategy (and therefore contribute to GHG reduction) can have a more streamlined environmental review process.

SB 375 requires CARB to develop regional reduction targets for GHGs, and prompts the creation of regional plans to reduce emissions from vehicle use throughout the state. California's 18 Metropolitan

Planning Organizations (MPOs) have been tasked with creating "Sustainable Community Strategies" (SCS) in an effort to reduce the region's VMT in order to help meet AB 32 targets through integrated transportation, land use, housing and environmental planning. Pursuant to SB 375, CARB set per-capita GHG emissions reduction targets from passenger vehicles for each of the State's 18 MPOs. For the SCAG region, the targets are set at eight percent below 2005 per capita emissions levels by 2020 and 13% below 2005 per capita emissions levels by 2035. Beginning October 1, 2018, the target changed to 19% for 2035.

Center for Biological Diversity v. California Department of Fish and Wildlife and Newhall Land and Farming

The California Supreme Court took on the challenging CEQA issue of GHG emissions in the *Center for Biological Diversity v. California Department of Fish and Wildlife and Newhall Land and Farming* case, 2015) 224 Cal.App.4th 1105 (*CBD vs. CDFW*), also known as the "Newhall Ranch" case. The justices evaluated for compliance with CEQA one of the most common approaches to GHG analyses for development projects (i.e., evaluating the efficiency of a project's emissions in the context of the AB 32's 2020 reduction goal, as presented in the statewide CARB Scoping Plan, using a comparison to an unregulated, "business as usual (BAU)" emissions scenario.

As discussed in the *Newhall Ranch* decision, determining consistency with local GHG reduction plans or Climate Action Plans that qualify under Section 15183.5 of the CEQA Guidelines may be the most effective strategy for local governments to assess the significance of GHG emissions from proposed land use developments. Qualified CAPs also provide a workable option for addressing post-2020 GHG emissions and resolving issues that arise out of project-level GHG analyses raised in the Court's decision.

Title 24 of the California Code of Regulations

Title 24 of the CCR, serves to enhance and regulate California's building standards. Part 6 of Title 24 specifically establishes Building Energy Efficiency Standards that are designed to ensure that new and existing buildings in the State of California achieve energy efficiency and preserve environmental quality.

The 2019 Title 24 building energy standards are the most recent, and became effective on January 1, 2020. Title 24, Part 11 known as CALGreen, instituted mandatory minimum environmental performance standards for all ground-up, new construction of commercial, residential, state-owned buildings, schools and hospitals. The CALGreen 2019 standards became effective on January 1, 2020. These standards focus on building energy efficiency. The mandatory standards require the following:

- 20% mandatory reduction in indoor water use;
- Diversion of 50% of construction and demolition waste from landfills;
- Mandatory inspections of energy systems to ensure optimal working efficiency;
- Low pollutant emitting exterior and interior finish materials, such as paints, carpets, vinyl flooring, and particle board.

Voluntary efficiency measures are provided at two separate tiers and are implemented at the discretion of local agencies and applicants.

California Air Pollution Control Officers Association

The California Air Pollution Control Officers Association is the association of air pollution control officers representing all 35 air quality agencies throughout California. The California Air Pollution Control Officers Association is not a regulatory body, but has been an active organization in providing guidance in addressing the CEQA significance of GHG emissions and climate change as well as other air quality issues.

Local

San Diego Forward: The Regional Plan

SANDAG is the regional planning agency for San Diego County and serves as a forum for regional issues related to the economy, community development and the environment. SANDAG has prepared the Regional Plan, which includes a SCS that is built on an integrated set of public policies, strategies, and investments to maintain, manage, and improve the transportation system. The Regional Plan also participates in the district's air quality plans that are designed to meet health-based criteria pollutant standards.

City of Oceanside Climate Action Plan

The City adopted a CAP in May of 2019. The purpose of the CAP is to align the City with statewide efforts to reduce GHG emissions by expanding local renewable energy generation, reducing energy use, promoting recycling and reuse, facilitating active transportation, and encouraging other sustainable practices. The CAP is built on a variety of reduction measures that promote energy efficiency, increased renewable energy use, water conservation, and solid waste reduction. The City has established efficiency metric thresholds, for which Projects are to use to evaluate impacts from GHG emissions, in order to help the City meet state reduction targets for 2020 and 2030. Projects that generate mass GHG emissions exceeding 900 MT CO_2E must assess Project-induced emissions against CAP-aligned thresholds of significance. Under the CAP thresholds, Projects are required to meet an efficiency metric threshold of 4.0 MT CO_2E per service population (MT CO_2E/SP) per year for Projects that will be implemented prior to year 2020 and an efficiency metric threshold of 3.5 MT CO_2E/SP for projects that will not be implemented prior to 2020. Projects that meet these thresholds would be considered consistent with the City's CAP.

City of Oceanside General Plan

Land Use Element

The following policies of the Land Use Element regulate GHG emissions.

2.7121 Bicycle Facilities

> Policy A: Development shall provide Class II Bikeways on all secondary, major and prime arterials.

2.7122 Pedestrian

> Policy A: The construction of five foot wide sidewalks adjacent to the curb shall be required in all new developments and street improvements.

2.725 Energy

Policy B: The City shall encourage the use of energy efficient design, structures, materials, and equipment in all land development or uses.

Policy C: The City shall encourage the use of long-term lower cost energy sources.

Energy and Climate Action Element

Policy ECAE-1d-3: Encourage the use of locally-produced construction materials, including salvaged lumber.

Policy ECAE-2a-2: In the City's commercial corridors, promote a mix of land uses that contributes to a sense of place, creates synergies between local businesses and affords residents the opportunity to live, work, and play within a walkable radius.

Policy ECAE-2b-2: In conjunction with infill and redevelopment Projects, pursue opportunities to integrate public open space into the City's urbanized corridors.

Policy ECAE-2c-4: Ensure that capital improvements are consistent with the City's Complete Streets policies, as articulated in the Circulation Element.

Policy ECAE-2f-1: Promote the installation of public electric vehicle charging facilities at convenient locations throughout the City.

Policy ECAE-3a-2: Continue to enhance organics waste recycling opportunities for both the commercial and residential sector in accordance with the City's Zero Waste goals and State Organics mandates.

Policy ECAE-3a-13: Improve monitoring and enforcement of the City's construction waste diversion requirements.

Policy ECAE-5b-3: In coordination with adjacent private property owners, identify hardscaped spaces within the public right-of-way that can be rendered permeable and plantable.

4.9.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment;
b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

Local Thresholds

The City Planning Division Policy Directive 2018-01 (Revised) – CEQA GHG Impact Analysis: Thresholds of Significance dated November 6, 2019 provides direction on CEQA-compliant analysis of GHG emissions

impacts associated with new development. While many Projects may otherwise be categorically exempt from CEQA review, those that generate mass GHG emissions exceeding 900 MT CO_2E (the generally accepted "bright line" threshold of significance for GHG emissions) must assess Project-induced emissions against CAP-aligned thresholds of significance. Therefore, if the Project does not exceed 900 MT CO_2E, it would demonstrate compliance with the City's CAP.

Projects that generate emissions exceeding 900 MT CO_2E must comply with the following thresholds of significance for new development. Projects within the City that are to be implemented prior to 2020 are required to meet an efficiency metric threshold of 4.0 MT CO_2E/SP and efficiency metric threshold of 3.5 MT CO_2E/SP for Projects being implemented by year 2025. Projects that cannot comply with these thresholds of significance require an EIR and an associated Statement of Overriding Considerations.

4.9.4 Project Impact Analysis

Would the Project:

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Construction Impacts

Construction of the Project would result in GHG emissions primarily associated with the use of off-road construction equipment, on-road hauling and vendor trucks and worker vehicles. Construction of the Project would entail site preparation, grading, paving, building construction and architectural coatings. Equipment to be used during construction includes rubber tire dozers, tractors, loaders, backhoes, excavators, graders, pavers and other paving equipment, rollers, cranes, forklifts, generator sets, welders, and air compressors.

GHG emissions were calculated using the latest CalEEMod Version2016.3.2 air quality model. For the purpose of estimating the Project's emissions, it was assumed that construction of the Project would begin in November 2021 with completion in January 2023 and includes construction of the entire Project including utility infrastructure, facilities, improvements and structures. The expected annual construction emissions are provided in **Table 4.9-3** below.

Table 4.9-3
Expected Annual Construction Emissions (MT CO_2E)

Year	Bio-CO_2	NBio-CO_2	Total CO_2	CH_4	N_2O	CO_2E
2021	0.00	514.14	514.14	0.09	0.00	516.46
2022	0.00	39.03	39.03	0.01	0.00	39.19
Total						555.65
Yearly Average Construction Emissions (MT CO_2E / year over 30 years)						**18.52**
Source: Greenhouse Gas Screening Letter Prepared by Ldn Consulting, Inc. (Appendix I)						

Total cumulative or combined construction emissions are generated prior to operations and will ultimately contribute to yearly GHG emission levels of the Project as a whole. Therefore, it is acceptable to average the total construction emissions over a 30-year period which represents an average lifecycle of a Project (South Coast Air Quality Management District, 2014). Based on the results of **Table 4.9-3** above, the 30-year average emissions would be 18.52 MT CO_2E.

Operation Impacts

Emissions from daily operations would include sources such as area, energy, mobile, solid waste and water uses. The Project is expected to be fully operational in 2023 and would generate the first complete year of GHG emissions in 2024. As identified in the Vehicle Miles Traveled Analysis prepared by LOS Engineering, Inc. **(Appendix N)**, the Project is estimated to generate 475 ADT. As with construction emissions, operation emissions were calculated using the latest CalEEMod Version 2016.3.2 model. Operation emissions from the Project would also include amortized construction emissions from **Table 4.9-3** above. The expected operational emissions are provided in **Table 4.9-4.**

Table 4.9-4
Expected Annual Operational Emissions (MT CO_2E)

Source	Bio-CO_2	NBio-CO_2	Total CO_2	CH_4	N_2O	CO_2E
Area	0.00	0.01	0.01	0.00	0.00	0.01
Energy	0.00	59.94	59.94	0.00	0.00	60.16
Mobile	0.00	198.90	198.90	0.01	0.00	199.20
Waste	8.88	0.00	8.88	0.52	0.00	22.00
Water	0.34	6.98	7.32	0.04	0.00	8.47
Total Operations						289.84
Total Construction Emissions (Amortized over 30 years from **Table 4.9-3** above)						18.52
Total Cumulative Operations (Construction + Operation)						**308.36**
CarMax Customers Per Day						**237**
Emissions per Service Population (SP)						**1.30**
Source: Greenhouse Gas Screening Letter Prepared by Ldn Consulting, Inc. (Appendix I)						

Based on the results provided in **Table 4.9-4,** the Project would generate 308.26 MT CO_2E each year during a typical operational year. This includes the combined operational and construction GHG emissions over a 30-year period.

The Project would not exceed the City's 900 MT CO_2E screening threshold for Projects that must assess Project-induced emissions against CAP-aligned thresholds of significance and therefore would be in compliance with the City's CAP. Furthermore, the Project would serve up to approximately 237 customers per day, which would be considered the service population for the Project. Given this, the Project would generate approximately 1.3 MT CO_2E/SP, which is less than the 3.5 MT CO_2E/SP CAP threshold for projects that will be implemented prior to year 2025. Thus, the Project will not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment and impacts are **less than significant.**

b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Consistency with City of Oceanside General Plan

The Project would be consistent with the policies set forth in the City General Plan Land Use Element and ECAE as provided in Section 4.9.2 that are designed to reduce the emissions of GHG, promote alternative transportation and other methods of efficiency. The Project would provide improvements along Plaza Drive including a 5-foot sidewalk and pedestrian ramps on both sides of the street, to

connect to existing sidewalks to the east and west of the Project site. Improvements along Plaza Drive would also include a designated 8-foot bicycle lanes on both sides of the street, in accordance with the Land Use Element policies related to Bicycle and Pedestrian Facilities. The Project would promote energy efficiency within buildings including energy efficient appliances.

In accordance with the ECAE, the Project would be an infill Project surrounded by other commercial development to the west and northwest and residential developments to the east and south. Seven (7) EV charging spaces would be provided in the customer and employee parking lot in accordance with the California Green Building Standards. Project construction would comply with all construction waste diversion requirements.

The Project would not conflict with the General Plan applicable goals and policies related to GHG emissions.

Consistency with City of Oceanside Climate Action Plan

The CAP was developed to align with state efforts to reduce GHG emissions and meet the State of California's 2050 GHG reduction goal. As provided in **Table 4.9-4**, the Project would generate 308.36 MT CO_2E each year during a typical operational year. This includes the combined operational and construction GHG emissions over a 30-year period. The Project would not exceed the City's 900 MT CO_2E screening threshold for Projects that must assess Project-induced emissions against CAP-aligned thresholds of significance. Further, the Project would generate approximately 1.3 MT CO_2E/SP, which is less than the 3.5 MT CO_2E/SP CAP threshold for projects that will be implemented prior to year 2025.

Therefore, the Project would be incompliance with the City's CAP and the Project would not generate a significant impact to GHG emissions.

Consistency with SB 32, EO S-3-05

Executive Order S-3-05 establishes the following goals: GHG emissions should be reduced to 2000 levels by 2010, 1990 levels by 2020, and 80% below 1990 levels by 2050. SB 32 establishes a GHG emissions reduction target whereby CARB, in adopting rules and regulations to achieve the maximum technologically feasible and cost-effective GHG emissions reductions, shall ensure that statewide GHG emissions are reduced to at least 40% below 1990 levels by December 31, 2030. The Project would generate 308.36 MT CO_2E each year during a typical operational year. This includes the combined operational and construction GHG emissions over a 30-year period. The Project would not exceed the City's 900 MT CO_2E screening threshold for Projects that must assess Project-induced emissions against CAP-aligned thresholds of significance. Further, the Project would generate approximately 1.3 MT CO_2E/SP, which is less than the 3.5 MT CO_2E/SP CAP threshold for projects that will be implemented prior to year 2025 and therefore would be in compliance with the City's CAP.

The Project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHG, and impacts are **less than significant**.

4.9.5 Mitigation Implementation and Monitoring

No significant impacts to GHG emissions have been identified and therefore no mitigation measures are required.

4.9.6 Level of Significance After Mitigation

Project impacts to GHG emissions will be less than significant.

Chapter 4.10 HAZARDS AND HAZARDOUS MATERIALS

The following documents were used in the preparation of this section and are included in their entirety in **Appendix B, Appendix H, Appendix P,** and **Appendix Q**:

EnviroApplications, Inc. September 11, 2019. *Phase I Environmental Site Assessment Report for Proposed Oceanside CarMax Facility*. **(Appendix B)**

EEI Engineering Solutions. September 6, 2019. *Geotechnical Evaluation for Proposed "CarMax" Commercial Development Plaza Drive and Hacienda Drive, City of Oceanside, County of San Diego, California.* **(Appendix H)**

EnviroApplications, Inc. November 6, 2019. *Summary of Berm Soil Sampling.* **(Appendix P)**

REC Consultants, Inc. March 2020. *Cortese List Verification.* **(Appendix Q)**

4.10.1 Environmental Setting

The Project Site consists primarily of disturbed and vacant land. The topography of the Project Site is relatively flat, and slopes gently south towards Buena Vista Creek. Elevations range from 180 feet amsl to 220 feet amsl. The Project Site has been previously graded and crushed rock is present along the western boundary of the Project Site. No structures or roads exist onsite. The Project Site boundaries are bisected by Plaza Drive, bounded on the north by SR-78, to the east by the DMV facility and Thunder Drive, to the south by Buena Vista Creek and to the west by a shopping center. The Project Site is surrounded primarily by commercial and residential uses.

The Project would be constructed in two (2) phases. The southern parcel, developed as Phase I, would provide a sales and administrative building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area, sales display area, and a customer and employee parking lot. The northern parcel would be developed as part of Phase II and would provide an additional sales display area.

Site History

Aerial Photographs and Historic Topographic Maps

Historical uses of the Project Site were observed through aerial photographs of the Phase I Environmental Site Assessment (ESA) Report prepared by EnviroApplications, Inc. **(Appendix B). Table 4.10-1** summarizes the series of photographs observed:

Table 4.10-1
Aerial Photographs and Historic Uses

Year	Observations and Use
1928 1939 1946 1953	The subject property and surrounding area appear to be open, hilly land in a rural, ranching setting. The currently existing roadways are not yet present. The subject property appears to be covered with brush and Buena Vista Creek is clearly visible to the south in its natural channel.

1964 1967 1970	The subject property still appears to be open, brush-covered land. State Route 78 has been constructed through the area to the north. Beyond the freeway further to the north are what appear to be a hospital campus and a drive-in movie theater. Thunder Drive (unpaved) is present along the eastern boundary of the subject property. By the time of the 1967 photo, the subject property and properties to the east appear to have been graded.
1979 1985	The subject property appears to be vacant, graded land crossed by several trails. The homes in the residential neighborhood across Thunder Drive to the east have been constructed. Land along Buena Vista Creek to the south appears to have been graded to control flooding. The land to the west of the subject property is still vacant. By the 1985 photo the currently existing CA DMV facility is present to the east of the subject property.
1989 1990 1994 2005 2009 2012 2016	The subject and surrounding properties appear similar to the way they did during the reconnaissance visit for this ESA.
Source: Phase I Environmental Site Assessment (Appendix B)	

Historic topographic U.S. Geological Survey (USGS) maps of the Project Site and surrounding area were analyzed and summarized in **Table 4.10-2** below. No indicators of historic or current American Society of Testing and Materials (ASTM) recognized environmental conditions (RECs) were found.

Table 4.10-2
Historic USGS Topographic Map Review

Years	Observations
1996 2012	The subject property is depicted as vacant hillside land with SR-78 present to the north and Marron Canyon and Buena Vista Creek to the south. The surrounding area on the 1996 map is shaded pink, an indication of fully-developed land, with no features depicted.
Source: Phase I Environmental Site Assessment (Appendix B)	

Table 4.10-3 below summarizes the historical uses of the properties surrounding the Project Site.

Table 4.10-3
Historical Adjacent Property Uses

Direction	Summary of Historical Use
North	Originally open hillside land that became developed with the east-bound lanes of SR-78.
East	Originally open hillside land that became developed with, from north to south: the Oceanside DMV facility at 4005 Plaza Drive then Thunder Drive, followed by a residential neighborhood.
South	Always occupied by Buena Vista Creek, whose banks have undergone grading for flood control purposes.
West	Originally open hillside land that became developed with a large, multi-tenant shopping center with nearest address being 3841 Plaza Drive (a vacant shop for lease).
Source: Phase I Environmental Site Assessment (Appendix B)	

Site Reconnaissance

Site Reconnaissance Methodology

A reconnaissance visit to the Project Site was conducted by EnviroApplications, Inc. on July 29, 2019 and the results are provided in the Phase Environmental Site Assessment Report **(Appendix B).** Methodology used to observe the subject property included the following:

- Traverse the central area of the subject property lots.
- Walk the reasonable accessible boundary areas of the subject property.
- Observe adjacent property areas from public thoroughfares.

Hazardous Substances and Petroleum Products

No hazardous substances or petroleum products; drums; strong pungent or noxious odors; pools of liquid, unidentified substance containers; or other observed evidence of hazardous substances or petroleum products were observed.

Additionally, no underground storage tanks or aboveground storage tanks were observed.

Exterior Observations

No pits, ponds, or lagoons; stained soil or pavement; stressed vegetation; waste streams or waste collection areas; or solid waste disposal areas were observed onsite. No sources of wastewater; indication of storm water discharge; wells; septic systems; electrical power transmissions lines or other sources of elevated electromagnetic radiation were observed onsite.

Two (2) mounds of fill soil located on the eastern portion of the property adjacent to Thunder Drive appear to consist of several hundred cubic yards of soil. While not qualifying as an ASTM REC, the mounds of fill soil were recommended for Phase II soil sampling and analysis to determine the source of the soil and its contents. The Summary of Berm Soil Sampling prepared by EnviroApplications, Inc. is provided as **Appendix P**. The results of the soil sampling are discussed below.

No potential adverse environmental conditions were observed and no evidence of an ASTM REC or Historic REC (HREC) was observed on the Project Site based on the reconnaissance visit.

Soil Sampling Results

Following the initial reconnaissance visit, EnviroApllications, Inc. conducted a visit to collect soil samples from the mounds of fill soil located on the eastern portion of the property. Approximately 30 soil samples were collected from 10 locations at depths of approximately 1.5-, 3-, and 5-feet below the surface of the mounds. The 10 samples collected from the three-foot depth interval were submitted for laboratory analysis which screened for VOCs identified by U.S. EPA Method 8260B, including: Total Petroleum HydroCarbons (TPH) Extended Range by EPA Method 8015B, California Administrative Manual (CAM) 17 Metals by EPA Method 6010B, mercury by EPA Method 7471A, and organochlorine pesticides by EPA Method 8081A. Based on the results from these samples, the remaining 20 samples were not analyzed.

VOCs, TPH in the gasoline fuel range (TPHg), and organochlorine pesticides were not detected in any of the soil samples collected.

TPH in the diesel fuel range (TPHd) was detected in four of the samples collected, with detected concentrations ranging from 4.9 to 217.4 milligrams per kilogram (mg/kg). Total TPH was detected in eight of the soil samples collected, with concentrations detected ranging from 5.1 to 220 mg/kg.

Concentrations of 12 of the 17 CAM metals were detected in the samples collected.

Based on the results obtained, it was concluded that the mounds of fill soil are not considered a health risk for a commercial property with comparisons to the Department of Toxic Substances Control (DTSC) Screening Levels, and that the metal concentrations detected are within the range of typical elemental metal concentrations in soils of the western United States.

Environmental Records Review

A government agency database search report was obtained from Environmental Data Resources, Inc. (EDR) and found that the Project Site is not listed in the EDR Report nor do listings for nearby sites have the potential to impact the Project Site. The EDR Report did not indicate any oil or gas well sites located near the site and there are no existing or abandoned oil or gas wells or dry holes present on, or within a one-mile radius of the Project Site. A local and regional environmental records search was obtained for the Project Site and no records associated with the Project Site were found by the following agencies: DEH, OFD, Oceanside Building Department, Department of Toxic Substance Control, San Diego Water Board, SDAPCD and the Oceanside Water Utilities Department. The environmental records review did not result in an indication of a potential ASTM HREC or REC for the Project Site.

Other Environmental Hazards

Other environmental risks screened for in the search included lead-based paint, asbestos, flood zones, vapor encroachment, radon, dry cleaning operations, mold, and pesticides and other agricultural chemicals. There are no existing structures located onsite and therefore the presences of lead-based paint, asbestos, and mold were considered negligible. The Project Site is located within the 100-year and 500-year flood plain as depicted in the FEMA flood insurance rate map (FEMA Panel 06073C0766G). No VOC release sites located hydrogeologically up-gradient, or immediately side-gradient of the Project Site that could act as a source of contamination to oil gas underlying the Project Site. The potential for subsurface contaminant vapor reaching the site is low. Based on the Federal EPA Radon Zone rating and California Department of Health Services (CDHS) survey results radon gas is not expected to represent an environmental impact risk at the Project Site. No dry cleaning operations were reported or observed to be at or near the Project Site. Lastly, the historical research for the Project Site does not indicate that it was ever used for agricultural purposes, and therefore there are no concerns regarding residual pesticides or other agricultural chemicals presenting environmental impacts to the Project Site.

Cortese List

Below are the data resources that provide information regarding the facilities or sites identified as meeting the “Cortese List” requirements pursuant to Government Code Section 65962.5. The Project was not listed under the following data resources:

- List of hazardous waste and substances from the DTSC EnviroStor database;

- List of leaking underground storage tank sites form the State Water Board's GeoTracker database;
- List of solid waste disposal sites identified by Water Board with waste constituents above hazardous waste levels outside the waste management unit;
- List of "active" Cease and Desist Orders (CDO) and Cleanup Abatement Orders (CAO) from Water Board; and
- List of hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code, identified by DTSC.

Wildfire Setting and History

The threat of brushfire is endemic to the Southern California coastal area, and the probability of fire occurring in the City is higher than for any other natural hazard. The City's climate, topography, and wildland urban interface, when fueled by shrub overgrowth, Santa Ana winds, and high temperatures, creates an ever-present threat of wildland fire.

Brush fire hazards exist to some degree throughout the City; however, it is "high" only in areas in proximity to residential development. The hazard is rated "extreme" in those areas where the vegetation changes from grass and sage to the denser and more flammable chaparral; an even higher risk occurs where residential development is scattered on large lots, where more of the natural vegetation is preserved, than in the standard single-family development. The Project Site is not located in an area of "high" or "extreme" fire hazard as depicted in Figure PS-5 in the General Plan Public Safety Element.

While there are some patches of native vegetation onsite, the Project Site vegetation can largely be characterized as disturbed land with patches of ruderal, ice plant, and ornamental vegetation. The Project Site is characterized by Urban and Built-up land by the FMMP as displayed in **Figure 10**. Additionally, the Project Site is not located in a State Responsibility Area (SRA) recognized by the Board of Forestry and Fire Protection.

Airport Hazards

The Oceanside Municipal Airport is located approximately 4.2 miles northwest of the Project Site. The Project Site is not located within the Oceanside Municipal Airport Influence Area or any of the safety zones as displayed in the Oceanside Municipal Airport Land Use Compatibility Plan (ALUCP).

4.10.2 Regulatory Setting

Federal

Federal Toxic Substances Control Act and Resource Conservation and Recovery Act

The Federal Toxic Substances Control Act of 1976 and the Resource Conservation and Recovery Act (RCRA) of 1976 established a program administered by the U.S. EPA for regulation of the generation, transportation, treatment, storage and disposal of hazardous waste. The RCRA was amended in 1984 by the Hazardous Solid Waste Act which affirmed and extended the "cradle-to-grave" system of regulating hazardous wastes. Any business, institution, or other entity that generates hazardous waste is required to identify and track the waste from the point of generation until it is recycled, reused, or disposed.

Under the authority of the RCRA, the regulatory framework for managing hazardous waste, including requirements for entities that generate, store, transport, treat and dispose of hazardous waste is found in Title 40, Part 260-299, of the Code of Federal Regulations (CFR).

Hazardous Materials Transportation Act

The U.S. Department of Transportation regulates hazardous materials transportation under Title 49 of the CFR. State agencies with primary responsibility for enforcing federal and state regulations and responding to hazardous materials transportation emergencies are the California Highway Patrol (CHP) and Caltrans. These agencies also govern permitting for hazardous materials transportation.

Comprehensive Environmental Response, Compensation, and Liability Act

The Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), commonly known as "Superfund", was enacted by Congress on December 11, 1980. This law provided broad federal authority to respond directly to releases or threatened releases of hazardous substances that may endanger public health or the environment. CERLA established requirements concerning closed and abandoned hazardous waste sites, provided for liability of persons responsible for releases of hazardous waste at these sites, and established a trust fund to provide for cleanup when no responsible party could be identified. CERCLA also enabled the revision of the National Contingency Plan which provided the guidelines and procedures needed to respond to releases and threatened releases of hazardous substances, pollutants, or contaminants.

Occupational Safety and Health Administration

The Occupational Safety and Health Administration (OSHA) is the federal agency responsible for ensuring worker safety. These regulations provide standards for a safe workplace and work practices, including those relating to hazardous materials handling and infection prevention during the Coronavirus Disease 2019 (COVID-19) pandemic. Under OSHA, contractors are required to comply with hazardous materials management and handling requirements to reduce the possibility of hazardous spills. OSHA provides guidance for construction employers and workers, such as those engaged in carpentry, ironworking, plumbing, electrical, heating/ventilation/air conditioning, masonry and concrete work, utility construction work, and earthmoving activities.

Resources Conservation and Recovery Act

The Resources Conservation and Recovery Act (RCRA) is the principal law governing the management and disposal of hazardous materials. RCRA is considered a "cradle-to-grave" statute for hazardous wastes in that it addresses all aspects of hazardous materials from creation to disposal. RCRA applies to the Project because RCRA is used to define hazardous materials and provide requirements for their storage, use and disposal; off-site disposal facilities and the wastes each may accept are regulated under the RCRA.

International Fire Code

The International Fire Code (IFC), created by the International Code Council (ICC), is the primary means for authorizing and enforcing procedures and mechanisms to ensure the safe handling and storage of any substance that may pose a threat to public health and safety. The IFC regulates the use, handling, and storage requirements for hazardous materials at fixed facilities. The IFC and the International

Building Code (IBC) use a hazard classification system to determine what protective measures are required to protect life safety in relation to fire. These measures may include construction standards, separations from property lines, and specialized equipment. To ensure that these safety measures are met, the IFC employs a permit system based on hazard classification.

Federal Aviation Administration

The Federal Aviation Administration (FAA) has primary responsibility for the safety of civil aviation. The FAA's major functions regarding hazards include the following: 1) developing and operating a common system of air traffic control and navigation for both civil and military aircraft, 2) developing and implementing programs to control aircraft noise and other environmental effects of civil aviation, 3) regulating U.S. commercial space transportation, and 4) conducting reviews to determine that the safety of persons and property on the ground are protected.

Federal Response Plan

The FEMA Federal Response Plan (FRP) published April of 1999, is a signed agreement amongst 27 Federal departments and agencies, including the American Red Cross and provides the following: mechanisms for coordinating delivery of Federal assistance and resources to augment efforts of State and local governments overwhelmed by a major disaster or emergency; supports implementation of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, as amended (United States Code, Title 42, 5121 et seq.) as well as individual agency statutory authorities; and supplements other Federal emergency operations plans developed to address specific hazards. The FRP is implemented in anticipation of a significant event likely to result in a need for Federal assistance and in response to an actual event requiring Federal assistance under a Presidential declaration of a major disaster or emergency.

State

California Occupational Safety and Health Administration

CalOSHA is the primary agency responsible for worker safety in the handling and use of chemicals in the workplace. CalOSHA standards are generally more stringent than federal regulations. The employer is required to monitor worker exposure to listed hazardous substances and notify workers of exposure. The regulations specify requirements for employee training, availability of safety equipment, accident prevention programs, and hazardous substance exposure warnings. CalOSHA also provides workplace safety and health guidelines for employers to take steps to protect workers during COVID-19 including specific guidelines for employers and workers in the construction industry.

California Hazardous Waste Control Act

DTSC is responsible for the enforcement of the Hazardous Waste Control Act (California Health and Safety Code, Section 25100 *et seq*.), which creates the framework under which hazardous wastes are managed in California. The law provides for the development of a state hazardous waste program that administers and implements the provisions of the federal RCRA cradle-to-grave waste management system in California. While the Hazardous Waste Control Act is generally more stringent than RCRA, until the EPA approves the California hazardous waste control program (which is charged with regulating the generation, treatment, storage, and disposal of hazardous waste), both the state and federal laws apply in California. The Hazardous Waste Control Act lists 791 chemicals and approximately 300 common

materials that may be hazardous; establishes criteria for identifying, packaging, and labeling hazardous wastes; prescribes management controls; establishes permit requirements for treatment, storage, disposal, and transportation; and identifies some wastes that cannot be disposed of in landfills.

According to Title 22 of the CCR, Sections 66001 *et seq*., substances having a characteristic of toxicity, ignitability, corrosivity, or reactivity are considered hazardous waste. Hazardous wastes are hazardous substances that no longer have a practical use, such as material that has been abandoned, discarded, spilled, or contaminated or stored prior to proper disposal. Toxic substances may cause short-term or long-lasting health effects ranging from temporary effects to permanent disability or death.

Other types of hazardous materials include radioactive and biohazardous materials. Radioactive materials and wastes contain radioisotopes, which are atoms with unstable nuclei that emit ionizing radiation to increase their stability. Biohazardous materials and wastes include anything derived from living organisms. They may be contaminated with disease-causing agents, such as bacteria or viruses.

Government Code Section 65962.5 (a), Cortese List

California Government Code, Section 65962.5, commonly referred to as the Cortese List, was originally enacted in 1985. Government Code Section 65962.5 requires the CalEPA to develop, at least annually, an updated Cortese List. The DTSC is responsible for compiling and updating a list of the following:

- List of hazardous waste and substances from the DTSC EnviroStor database;
- List of leaking underground storage tank sites form the State Water Board's GeoTracker database;
- List of solid waste disposal sites identified by Water Board with waste constituents above hazardous waste levels outside the waste management unit;
- List of "active" Cease and Desist Orders (CDO) and Cleanup Abatement Orders (CAO) from Water Board; and
- List of hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code, identified by DTSC.

California Accidental Release Prevention Program

The California Accidental Release Prevention (CalARP) Program CCR, Title 19, Division 2, Chapter 4.5 regulates facilities that use or store regulated substances, such as toxic or flammable chemicals, in quantities that exceed established thresholds. The overall purpose of CalARP is to prevent accidental release of regulated substances and reduce the severity of releases that may occur.

California Aboveground Petroleum Storage Act

The Aboveground Petroleum Storage Act (APSA) was originally adopted in 1989 and administered by the State Water Resources Control Board Regional Water Quality Control Boards. AB 1130 transferred the responsibility for the implementation, enforcement and administration of aboveground storage of petroleum to Unified Program Agencies (UPA). APSA regulates non-transportation related facilities with aggregate aboveground petroleum storage capacities of 1,320 gallons or more stored in aboveground storage containers, tanks, or oil-filled equipment. Unless exempted, a facility in the APSA Program must prepare and implement a Spill Prevention, Control and Countermeasures (SPCC) Plan, submit facility information in the California Environmental Reporting System (CERS), and pay a fee to the UPA. The

intent of the SPCC Plan is prevention of, preparedness for, and response to petroleum discharges by describing procedures, methods, and equipment at the facility to prevent such discharges.

California Health and Safety Code

In California, the handling and storage of hazardous materials is regulated by Division 20, Chapter 6.95, of the California Health and Safety Code (Section 25500 *et seq*.). Under this Section, facilities handling hazardous materials are required to prepare a hazardous materials business plan. Hazardous materials business plans contain basic information about the location, type, quantity, and health risks of hazardous materials stored, used, or disposed of in the state.

Chapter 6.95, Section 25507, of the California Health and Safety Code establishes minimum statewide standards including the minimum quantities for which businesses shall prepare a Hazardous Materials Business Plan. Additionally, in the event that a facility stores quantities of specific acutely hazardous materials above the thresholds set forth by the California Health and Safety Code, facilities are also required to prepare a risk management plan and California accidental release prevention plan.

California Emergency Services Act

Under the Emergency Services Act (California Government Code Section 8558 *et seq.),* the State of California developed an emergency response plan to coordinate emergency services provided by federal, state, and local agencies. The Governor's Office of Emergency Services administers the emergency response plans and coordinates the responses of other agencies, including the EPA, CHP, Regional Water Quality Control Boards (RWQCBs), air quality management districts, and county disaster response offices.

California Fire Code

The California Fire Code (CFC) is Chapter 9 of Title 24 of the CCR. It was created by the California Building Standards Commission and is based on the IFC created by the ICC. The CFC is the primary means for authorizing and enforcing procedures and mechanisms to ensure the safe handling and storage of any substance that may pose a threat to public health and safety. The CFC regulates the use, handling, and storage requirements for hazardous materials at fixed facilities. The CFC and the CBC use a hazard classification system to determine what protective measures are required to protect fire and life safety.

Local

County of San Diego Department of Environmental Health

The County DEH Hazardous Materials Division (HMD) is responsible for the protection of public health and the environment by ensuring hazardous materials, hazardous waste, medical waste, aboveground tanks and underground storage tanks are properly managed. The HMD has the authority pursuant to state law and County Code to regulate facilities that handle or store hazardous materials, and/or generate or treat hazardous waste.

San Diego County Emergency Operations Plan

The Emergency Operations Plan is for use by the County and all of the cities within the County to respond to major emergencies and disasters. It describes the roles and responsibilities of all County

departments and the relationship between the County and all its departments and the jurisdictions within the County. The plan also identifies the sources of outside support that may be provided, through mutual aid and specific statutory authorities, by other jurisdictions, state and federal agencies, and the private sector.

San Diego County Multi-Jurisdiction Hazard Mitigation Plan

The Multi-Jurisdictional Hazard Mitigation Plan was prepared in 2010 and was revised in October 2017 and was prepared to meet FEMA requirements thus, making the County and all participating jurisdictions and special districts eligible for funding and technical assistance from the state and federal hazard mitigation programs. The plan includes a risk assessment to enable local jurisdictions to identify and prioritize appropriate mitigation actions that will reduce losses from potential hazards, including flooding, earthquakes, fires and artificial hazards. To address potential hazards, the plan incorporates mitigation goals and objectives, mitigation actions and priorities, an implementation plan, and documentation of the mitigation planning process for each of the 21 participating jurisdictions, including the City.

California Disaster and Civil Defense Master Mutual Aid Agreement

As provided for in the California Emergency Services Act, the California Disaster and Civil Defense Master Mutual Aid Agreement was developed in 1950 and adopted by all 58 counties in California. This statewide mutual aid system is designed to ensure that adequate resources prove to be inadequate to cope with a give situation. The County is located in Mutual Aid Region 6 of the state system, which also includes Imperial, Riverside, San Bernardino, Inyo, and Mono counties.

Oceanside Municipal Airport Land Use Compatibility Plan

The County Regional Airport Authority develops and adopts ALUCPs for each public use and military airport within its jurisdiction. The Oceanside Municipal ALUCP provides policies to ensure compatibility with the airport and surrounding land uses. Policies range from noise, overflight zones, and safety zones.

City of Oceanside Emergency Operations Plan

In 2017, the City adopted an Emergency Operations Plan. The purpose of the plan is to define the actions and roles necessary to provide a coordinated response, in order to ensure the most effective use of all resources for the maximum benefit, protection, and resiliency of the community in times of emergency. It includes an assessment of hazards the City faces, and establishes a system for coordinating the prevention, preparedness, response, recovery, and mitigation phases of emergency management. The plan defines responsibilities, establishes an emergency organization, and defines lines of communication.

City of Oceanside General Plan

The General Plan serves as a policy guide for determining the appropriate physical development and character of the City.

Hazard Waste Management Element of the General Plan

The Hazardous Waste Management Element of the City's General Plan provides measures necessary for the protection of the citizens of Oceanside during the siting of hazardous waste facilities in coordination with the San Diego County Hazardous Waste Management Plan, and measures to reduce the need for such facilities through the minimization of hazardous materials and wastes.

Public Safety Element of the General Plan

The Public Safety Element of the General Plan identifies and addresses features or characteristics existing in or near the City that represent a potential hazard to the community's citizens, sites and structures, public facilities and infrastructure. It establishes policies to minimize the danger to residents, workers, and visitors while identifying actions needed to manage crisis situations such as earthquakes, fires, and floods. This element also provides a Public Safety Plan which includes maps indicating areas that have increased susceptibility to these hazards and relocation routes during emergency evacuations. The following roadway relocation routes identified in the Public Safety Element are in proximity to the Project Site:

- College Boulevard between Oceanside Boulevard and Lake Boulevard
- SR- 78 (throughout the entire City)
- Lake Boulevard from College Boulevard to Cannon Road

4.10.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials;
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment;
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment;
e. For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard or excessive noise for people residing or working in the Project area;
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan;
g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires.

4.10.4 Project Impact Analysis

Would the Project:

a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Construction

Construction of the Project would entail routine transport of typical construction materials potentially hazardous to humans, wildlife, and sensitive environments. These materials could include gasoline, diesel fuel, used oil, solvents, cleaners, lead paint debris, lubricants, and other petroleum-based products used for the operation and maintenance of construction equipment and vehicles. Handling of these hazardous materials would be temporary in nature, and limited to quantities and concentrations consistent with a typical infill commercial use of this size. Proper BMPs such as proper and clear labeling of chemicals, storage in approved containers, preparation of an accidental release plan, and compliance with hazardous materials handling protocols would be prepared and implemented to ensure safe storage, handling, transport, use and disposal of all hazardous materials during the construction phase of the Project, in compliance with all applicable laws, ordinances, rules, regulations, and orders. The Contractor would ensure hazardous waste generated is properly disposed by a California registered hazardous waste hauler.

Project construction would also adhere to all local standards set forth by the City, as well as state and federal health and safety requirements that are intended to minimize hazardous materials risk to the public, such as CalOSHA requirements, Hazardous Waste Control Act CalARP, and the California Health and Safety Code.

Thus, Project construction would not create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials, and impacts are **less than significant.**

Operation

Operation of the proposed CarMax Project would consist of a sales and administrative building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area, sales display area, and a customer and employee parking lot, and additional sales display area. Typical daily operations include deliveries of vehicles, parts and supplies to the site, vehicle sales and test drives, preparation of vehicles for sales, and vehicle service work which is to be performed inside fully-conditioned buildings equipped with rollup doors. Only minor vehicle servicing will occur including routine maintenance, oil changes, tire rotations diagnostic and mileage services. No major mechanical work, body work or painting will occur within the service building.

The Project would be expected to handle small quantities, at a time, of commonly used hazardous substances such as cleaning solvents, diesel, gasoline, and oil as part of daily operations. The servicing operations would require the storage, transport, use and disposal of such potentially hazardous materials. Gasoline would be transported to the site by fuel trucks, which is a routine, permitted use. Given the quantities of potentially hazardous materials and the characteristics of use (e.g., routine maintenance and cleaning) the Project would not be considered a potential risk to human health or the environment. Fuel transportation would be subject to federal tank, placard, and shipment documentation and reporting requirements. The amount of hazardous materials stored and used is expected to be limited and would be required to comply with applicable local, state and federal regulations.

The Project would comply with the County DEH HMD for submitting a Hazardous Materials Questionnaire to complete a Hazardous Materials Plan Check application to obtain a Unified Program

Facility Permit (UPFP). The UPFP regulates handling and storage of hazardous materials, facilities that generate hazardous waste, and facilities that store over 1,320 gallons of above ground petroleum.

A private aboveground fuel storage tank with a capacity of 4,000 gallons would be located to the south of the sales building with a non-public fuel pump within the secured staging area to fuel inventory vehicles as needed. The aboveground storage tank would have a triple-wall design in order to provide an additional level of containment protection. The Project will comply with the following County DEH HMD regulations and will obtain the required permits for operation of the aboveground fuel storage tank.

Operation of aboveground fuel storage tanks with a total storage capacity of 1,320 gallons or more of petroleum are subject to the Aboveground Petroleum Storage Act (APSA). The County DEH, HMD is the Certified Unified Program Agency (CUPA) responsible for the regulatory inspections of all tank facilities subject to the APSA in the County. In accordance with the APSA program, the Project would prepare and implement a Spill Prevention, Control and Countermeasure (SPCC) Plan in order to prevent discharge of petroleum and to allow for the preparedness and proper response of petroleum discharges. The SPCC Plan is to be kept onsite for HMD inspections.

The Project would also be required to submit a Hazardous Material Business Plan to the County of San Diego DEH HMD that details the onsite use and storage of fuels in order to prevent damage to public health, safety, and the environment. The Hazardous Materials Business Plan also provides emergency response personnel with adequate information to help better prepare and respond to incidents at regulated facilities. The aboveground storage tank and associated facilities would undergo yearly inspections by the County DEH including inspections of any installations, repairs or required updates.

Anticipated chemicals used in the carwash are as follows: presoak Hi pH 366, carwash detergent Blue Coral hi pH3600, Rain X Protectant, and Cold Wax (or similar). These chemicals would be stored and labeled in closed containers inside the carwash and used in only the small amounts necessary. Carwash wastewater would go into an oil water separator, the water would be reused in the carwash and the separated chemicals and oil would be taken off-site to be treated by a certified waste vendor.

Operational activities including vehicle servicing, carwash, fueling and fuel storage, and other service related activities would comply with all applicable federal, state and local laws and regulations, would obtain all required DEH HMD permits and would prepare a Hazardous Materials Business Plan which would reduce potential impacts related to hazardous materials to a level below significance.

Operational impacts related to the routine transport, use or disposal of hazardous materials will be **less than significant**.

b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

The Phase I Environmental Site Assessment (**Appendix B**) revealed no evidence of potential ASTM RECs, controlled RECs, or historical RECs associated with the existing Project Site. Furthermore, soil sampling and analysis of the two fill mounds located on the eastern portion of the Project Site, provided in the Summary of Berm Soil Samples prepared by EnviroApplications, Inc. (**Appendix P**), determined that the soil was not considered a health risk for a commercial property when compared to DTSC Screening Levels. Thus, the likelihood of release of hazardous materials into the environment from upset and accident conditions during grading and earth-moving activities onsite is minimal.

As discussed above in Section 4.10.4a, handling of potentially hazardous materials during Project construction would be temporary in nature, and limited to quantities and concentrations consistent with a typical infill commercial use of this size. Proper BMPs such as proper and clear labeling of chemicals, storage in approved containers, preparation of an accidental release plan, and compliance with hazardous materials handling protocols would be prepared and implemented to reduce significant hazards to the public or the environment.

During Project operations, the Project would be expected to handle small quantities of commonly used hazardous substances such as cleaning solvents, diesel, gasoline, and oil as part of daily operations. Fuel transportation would be subject to federal tank, placard, and shipment documentation and reporting requirements. A private aboveground fuel storage tank with a capacity of 4,000 gallons would be located to the south of the sales building with a non-public fuel pump within the secured staging area to fuel inventory vehicles as needed. The aboveground storage tank would have a triple-wall design in order to provide an additional level of containment protection. The Project will comply with the following County DEH HMD regulations and will obtain the required permits for operation of the aboveground fuel storage tank.

The Project would be required to submit a Hazardous Material Business Plan to the County DEH HMD that details the onsite use and storage of fuels in order to prevent damage to public health, safety, and the environment involving the release of hazardous materials. Chemicals used in the carwash would be stored in closed containers and used in small amounts. Wastewater from the carwash would go into an oil water separator, the water would be reused in the carwash and the separated chemicals and oil would be taken off-site to be treated by a certified waste vendor.

Compliance with applicable state, local, and federal laws and preparation of a Hazardous Materials Business Plan would ensure all operational activities involving potentially hazardous materials would not result in the release of such materials into the environment.

The Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and therefore, impacts are **less than significant**.

c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

The Project Site is not located within 0.25 mile of an existing or proposed school. Calavera Hills Elementary School and Calavera Hills Middle School, within the City of Carlsbad are located approximately 0.7 mile southwest of the Project Site. Hope Elementary School, also within the City of Carlsbad, is located approximately 1.2 miles southwest of the Project Site and Tri-City Christian School is located approximately 0.8 mile northeast of the Project Site.

As discussed in Section 4.10.4a and 4.10.4b, compliance with applicable state, local, and federal laws and preparation of a Hazardous Materials Business Plan would ensure all construction and operational activities involving potentially hazardous materials would not result in a significant hazard to the public or the environment.

As discussed in Section 4.4 *Air Quality*, the Project would not exceed SDAPCD thresholds for any pollutant during construction and operation phases of the Project.

There are no schools located within one-quarter mile of the Project area. Therefore, the Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter-mile of an existing or proposed school, and impacts are **less than significant.**

d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

As part of the Phase I ESA (**Appendix B**) prepared for the Project Site, a government agency database search report was obtained from Environmental Data Resources, Inc. (EDR) and found that the Project Site is not listed in the EDR Report, and there are no listings for nearby sites have the potential to impact the Project Site. The environmental records review did not result in an indication of a potential ASTM HREC or REC for the Project Site.

Additionally, a Cortese List Verification (**Appendix Q**) pursuant to Government Code Section 65962.5 was prepared and the Project Site was not listed under the following data resources:

- List of hazardous waste and substances from the DTSC EnviroStor database;
- List of leaking underground storage tank sites form the State Water Board's GeoTracker database;
- List of solid waste disposal sites identified by Water Board with waste constituents above hazardous waste levels outside the waste management unit;
- List of "active" CDO and CAO from Water Board; and
- List of hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code, identified by DTSC.

Therefore, the Project is not located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and as a result, would not create a significant hazard to the public or environment, and therefore, **no impact** will occur.

e. For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard or excessive noise for people residing or working in the Project area?

The Oceanside Municipal Airport is located approximately 4.2 miles northwest of the Project Site. The Project Site is not located within the Oceanside Municipal Airport Influence Area or any of the safety zones as displayed in the Oceanside ALUCP. Due to the distance from the Oceanside Municipal Airport, the Project would not expose workers or patrons to safety hazards associated with the airport. Therefore, the Project would not result in a safety hazard or excessive noise for people residing or working in the Project area, and impacts are **less than significant impact.**

f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

The Project Site would be accessed from Thunder Drive at two main access points into the customer and employee parking lot area. Plaza Drive separates the north and south parcels and would provide access to the northern parcel sales display area that would be constructed as part of Phase II. The southern

parcel would have access off of Plaza Drive for test drives only and would not be accessible to the public. A Knox Box will be provided at the security gate and control island on the northern parcel sales display area as well as at the security gate and control island located at the test drive-only driveway. A Knox Box is a small, wall-mounted safe that holds building keys in order for fire departments, emergency medical services and police to gain access into buildings in emergency situations. The Project would provide all required setbacks, fire truck access and turnarounds, fire hydrants, address numbers, sprinklers and an OPTICOM system in accordance with the City Fire Department requirements. The OPTICOM system is a traffic control system that provides a green light and intersection right-of-way to emergency vehicles.

As provided in the Public Safety Element of the General Plan, SR-78 to the north, College Boulevard located to the west, and Lake Boulevard to the south of the Project Site are the nearest evacuation routes. As part of the development process, the Project has been reviewed by the OFD to ensure it does not impair any emergency response or evacuation plans.

The adopted emergency plans applicable to the Project area consist of the Multi-Jurisdictional Hazard Mitigation Plan for San Diego County, the San Diego County Emergency Operations Plan, and City Emergency Plan. Compliance of all Fire Department requirements would ensure the Project would not impair an adopted emergency response plan or emergency evacuation plan, and impacts are **less than significant**.

g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

The Project Site is not located in a SRA as recognized by the Board of Forestry and Fire Protection as areas where California Department of Forestry and Fire Protection (CAL FIRE) is the primary emergency response agency responsible for fire suppression and prevention. Additionally, the Project Site is not located in an area of “high” or “extreme” fire hazard as depicted in Figure PS-5 in the General Plan Public Safety Element.

The Project Site is relatively flat and slopes gently south toward Buena Vista Creek. Elevations range from approximately 180 to 220 feet amsl. The Project is located in a developed area and is surrounded by commercial uses to the west, medium density residential uses and a DMV facility to the east and SR-78 to the north. Located to the south are Buena Vista Creek, high density and residential estate uses, commercial and public/semipublic uses including an OFD station. The Project is not located adjacent to wildland areas and therefore, would not exacerbate wildfire risks and thereby expose people or structures to a significant risk of loss, injury or death involving wildland fires and impacts are **less than significant**.

4.10.5 Mitigation Implementation and Monitoring

No significant impacts related to hazards and hazardous materials have been identified and therefore, no mitigation measures are required.

4.10.6 Level of Significance After Mitigation

Impacts related to hazards and hazardous materials from the implementation of the Project will be less than significant.

Chapter 4.11 HYDROLOGY AND WATER QUALITY

The following documents were used in the preparation of this section and are included in their entirety in **Appendix H, Appendix J, Appendix K** and **Appendix L**:

EEI Engineering Solutions. September 2019. *Geotechnical Evaluation, for Proposed "CarMax" Commercial Development Plaza Drive and Hacienda Drive, City of Oceanside, County of San Diego, California.* **(Appendix H)**

REC Consultants, Inc. December 16, 2019. *Drainage Study for CarMax Oceanside.* **(Appendix J)**

REC Consultants, Inc. February 28, 2020. *Priority Development Project Storm Water Quality Management Plan for CarMax Oceanside.* **(Appendix K)**

REC Consultants, Inc. December 17, 2019. *Technical Memorandum: SWMM Modeling for Hydromodification Compliance of: CarMax Oceanside.* **(Appendix L)**

4.11.1 Environmental Setting

In its existing conditions, the Project Site is vacant, but has been previously graded. The Project Site contains a north and south parcel separated by Plaza Drive. Development of the southern parcel, which will occur as Phase I, will include a sales and administrative building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area, sales display area, and a customer and employee parking lot. Development of the northern parcel, which will occur as Phase II, will include an additional sales display area with a security gate and control island.

While there are some patches of native vegetation onsite, it can largely be characterized as disturbed land with patches of ruderal, ice plant, and ornamental vegetation. The overall topography of the Project Site is relatively flat, sloping gently toward Buena Vista Creek in the southern portion of the Project Site. Elevations range from approximately 180 feet amsl to 220 feet amsl, with the highest elevations being in the northern parcel and the lowest elevations in the southern portion of the Project Site along the creek.

Hydrologic Setting

The Project Site is located within the Vista Hydrologic Sub-Area 904.22 of the Buena Vista Creek Hydrologic Area (HA) 904.20 of the Carlsbad Hydrologic Unit (HU). Buena Vista Creek runs along the southern portion of the Project Site from east to west, eventually connecting to Buena Vista Lagoon and the Pacific Ocean approximately four (4) miles west of the Project Site. Buena Vista Creek is classified as a freshwater forested/shrub wetland by the USFWS's National Wetlands Inventory (USFWS, 2019). The southern portion of the Project Site lies within Zone X of the FEMA 500-year floodplain and Zone AE of the 100-year floodplain (FEMA FIRM Panel 06073C0758G effective 5/16/19).

Existing runoff from the northern parcel drains via overland flow to the southwest corner of the Project Site where it sheet flows over the existing berm and onto Plaza Drive. Plaza Drive drainage flows west towards the intersection of SR-78 and Plaza Drive where it enters a curb inlet. Runoff from the southern parcel drains south towards Buena Vista Creek with a small portion draining east over the sidewalk and

curb onto Thunder Drive. The Drainage Study prepared by REC Consultants, Inc. **(Appendix J)** analyzes existing and developed conditions for 100-year flowrates from the development to the existing points of discharge. Per County of San Diego drainage criteria, the Modified Rational Method is used to determine peak design flowrates when the contributing drainage area is less than one (1) square mile. Since the total watershed area discharging from the Project Site is less than one (1) square mile, Advanced Engineering Software (AES) was used to model pre-and post-developed condition runoff response per the Modified Rational Method. **Table 4.11-1** below displays the existing conditions 100-year peak flows from the Project Site.

Table 4.11-1
Existing Conditions Peak Flow

Discharge Location	Drainage Area (Acre)	Runoff Coefficient (C)	100-Year Peak Flow (cubic feet/sec (cfs))
POC-1	1.43	0.66	5.42
POC-2	0.21	0.66	0.82
POC-3	6.89	0.66	23.75
POC-4	0.28	0.66	1.07
TOTAL	**8.81**		
Source: Drainage Study for CarMax Oceanside Prepared by REC Consultants, Inc. (Appendix J)			

Water Quality Setting

Treatment of storm water runoff from the site is addressed in the SWQMP prepared by REC Consultants, Inc. **(Appendix K).** Hydromodification Management Plan (HMP) analysis is addressed in the Technical Memorandum: SWMM Modeling for Hydromodification prepared by REC Consultants, Inc. **(Appendix L).** Runoff from the Project Site flows into Buena Vista Creek, which flows west and ultimately contributes to Buena Vista Lagoon, then discharges into the Pacific Ocean. According to Section 303(d) of the Clean Water Act (CWA), Buena Vista Creek, Buena Vista Lagoon and the Pacific Ocean are identified as impaired water bodies within the path of storm water from the Project Site. This means that storm water runoff from the Project Site has the potential to impact any of the three (3) water bodies listed above.

Groundwater Resources

Groundwater was not encountered in any trenches at the time of a subsurface exploration to a depth of 15.5 feet below-ground-surface conducted by EEI in September 2019. Nor was groundwater encountered in a separate geotechnical investigation conducted by Norcal Engineering in 2007 to a depth of 50 feet below-ground-surface (NorCal Engineering, 2007). In general, groundwater is often expected to follow the direction of surface topography. Based on Project Site topography, local groundwater flow is expected to be in a westerly direction.

4.11.2 Regulatory Setting

Federal

Clean Water Act

The CWA was adopted in 1972 and is the principal federal law for the regulation of water quality. The CWA includes water quality standards, discharge limitations, and permits to protect the designated beneficial uses of water resources.

Section 303 of the CWA requires states to adopt water quality standards for all surface waters of the United States. The standards are based on the designated beneficial uses of the water body and must protect the most sensitive use where multiple uses exist.

Section 401 of the CWA requires any person applying for a federal permit or license that may result in pollutant discharge into waters of the United States to obtain a state certification. In California, the SWRCB administers certifications through the nine (9) RWQCBs. It must be demonstrated that the activity complies with all applicable water quality standards, restrictions, and limitations in order to acquire certification. Section 401 certifications require applicants for federal permits relating to the construction or operation of a facility that may result in the discharge of a pollutant to obtain certification of those activities from the state in which the discharge originates. Section 404 establishes a permitting program to regulate the discharge of dredged or filled material into waters of the United States, which is administered by the United States Army Corp of Engineers (USACE).

Section 402 of the CWA places restrictions on certain types of construction, prohibiting discharges of pollutants contained in storm water runoff, except in compliance with a NPDES permit.

National Pollutant Discharge Elimination System

The NPDES program was established in 1987 in an amendment to the CWA, authorized by Section 402. In California, the NPDES program is implemented by the SWRCB. The program addresses non-agricultural sources of storm water runoff that could negatively impact the water quality of Waters of the United States. Under the program, entities that are regulated must obtain an NPDES storm water permit and implement a SWQMP and a SWPPP. The SWPPP must identify best management practices (BMPs) to reduce or prevent the discharge of pollutants into receiving waters. The regulations generally cover the following classes of storm water dischargers: operators of construction activities that disturb one or more acre of land, operators of municipal separate storm sewer systems (MS4), and owners and operators of certain industrial facilities. The SWPPP must also include description of BMPs to reduce pollutants in storm water discharges after construction phases are completed (post-construction BMPs). Implementation of the Project requires conformance with the NPDES Storm Water Program's Construction General Permit and the Regional MS4 Permit, as further defined and described below.

Federal Emergency Management Agency (FEMA)

FEMA is the primary federal agency responsible for coordination with communities to establish effective floodplain management standards. FEMA prepares Federal Insurance Rate Maps, which delineate the areas of special flood hazards and applicable risk premium zones. State and local agencies are responsible for implementing regulations, ordinances and policies in compliance with FEMA requirements to address floodplain management issues.

National Flood Insurance Act

FEMA administers the National Flood Insurance Program adopted under the National Flood Insurance Act of 1968. This program makes federally subsidized flood insurance available to homeowners, business owners, and renters within communities who participate in the program. Areas of special flood hazard

(subject to inundation by a 100-year flood) are identified through regulatory flood maps called Flood Insurance Rate Maps (FIRM). Restrictions are imposed on development within the regulatory floodplain. Development is not allowed within the floodplain if it results in more than a one-foot increase in flood elevation, and is not allowed within the delineated floodways of floodplains.

State

Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act (Porter-Cologne Act) establishes the responsibilities and authorities of the California SWRCB and its nine (9) RWQCBs, which include identifying water quality objectives, preparing water quality plans for the region, and issuing NPDES permits. In California, all surface waters and groundwater are considered to be "Waters of the State" under this the Porter-Cologne Act. Under the Porter-Cologne Act, a Water Quality Control Plan for the San Diego Basin was prepared (San Diego Basin – Region 9), designating beneficial uses for water bodies in the San Diego region and establishing water quality objectives and implementation plans to protect those uses.

Sustainable Groundwater Management Act of 2014

On September 16, 2014, Governor Jerry Brown signed into law a three-bill legislative package (AB 1739, SB 1168 and SB 1319) known as the Sustainable Groundwater Management Act of 2014. The legislation provides a framework for sustainable management of groundwater supplies by local authorities in high- and medium-priority alluvial basins, as designated by the California Water Resources Control Board. The groundwater sustainability agency, which can be a County, City or water district, must be formed by June 30, 2017 and would be required to prepare a groundwater sustainability plan by January 31, 2022. Each plan requires implementation measures to bring each basin into sustainability within 20 years of implementation of the plan. In the County, the following four (4) basins have been designated to require plans: San Diego River Valley Basin, San Pasqual Basin, San Luis Rey River Basin and Borrego Valley Basin (all medium-priority basins). The Project Site is not located within a basin that requires a designated groundwater sustainability plan.

Local

San Diego Basin Plan

The San Diego Basin Plan, most recently amended on May 17, 2016, sets forth water quality objectives for Region 9. Specifically, the Basin Plan is designed to accomplish the following: (1) designate beneficial uses for surface and ground water; (2) set the narrative and numerical objectives that must be attained or maintained to protect the designated beneficial uses and conform to the state's anti-degradation policy; (3) describe mitigation measures to protect the beneficial uses of all waters within the region; and (4) describe surveillance and monitoring activities to evaluate the effectiveness of the Basin Plan. The San Diego Basin Plan incorporates by reference all applicable SWRCB and the San Diego Water Board plans and policies.

Regional MS4 Permit (Order No. R9-2015-0100)

The San Diego Water Board regulates discharges from Phase I MS4s in the San Diego Region under the Regional MS4 Permit. The Regional MS4 Permit covers 39 municipalities. These include the City, the County and special district entities located in the County, Southern Orange County, and southwest

Riverside County who own and operate large MS4s that discharge storm water runoff (from rainfall events) and non-storm water runoff (e.g., dry weather runoff from irrigation overspray) to surface waters throughout the San Diego Region. The Regional MS4 Permit requires development of Water Quality Improvement Plans (WQIPs) that will allow the City to prioritize and address pollutants through an appropriate suite of BMPs in each watershed.

Pursuant to the CWA, the Regional MS4 Permit includes requirements that prohibit non-storm water discharges into MS4s and requires controls to reduce the discharge of pollutants in storm water to the maximum extent practicable. The Regional MS4 Permit regulates pollutants, including suspended solids, sediment, pathogens, heavy metals, petroleum products and polynuclear aromatic hydrocarbons, synthetic organics, nutrients, oxygen demanding substances, detergents, and trash from sources associated with various forms of land development including car emissions and maintenance, sewage, pesticides, household hazards, pet waste and debris/litter.

The Regional MS4 Permit establishes water quality standards and requires the application of pollution prevention, source control and treatment control BMPs to effectively prevent and remove pollutants from runoff. The Regional MS4 Permit requires that BMP design and implementation occur at every phase of development including the planning, construction and operational phases.

County of San Diego Code of Regulatory Ordinances

The County of San Diego Code of Regulatory Ordinances, Title 6, Division 4, Chapter 2 addresses vector control and grants the County DEH Vector Control Program (VCP) the authority to exercise the powers of vector control.

The County of San Diego Code of Regulatory Ordinances, Title 6, Division 7, Chapter 8 provides the Watershed Protection, Stormwater Management and Discharge Control Ordinance which sets forth storm water management requirements. This ordinance requires the use of structural BMPs to detain or infiltrate storm water for land development Projects and specifies that these BMPs must be designed to drain within 72 hours to preclude mosquito breeding.

City of Oceanside BMP Design Manual for Permanent Site Design, Storm Water Treatment and Hydromodification Management

In response to requirements mandated by the Regional MS4 Permit, the City has prepared the BMP Design Manual for Permanent Site Design, Storm Water Treatment and Hydromodification Management (BMP Design Manual). The BMP Design Manual addresses updated onsite post-construction storm water requirements for Standard Projects and Priority Development Projects and provides updated procedures for planning, preliminary design, selection and design of permanent storm water BMPs based on the performance standards presented in the Regional MS4 Permit. The intended users of the BMP Design Manual include applicants, for both private and public developments, their representatives responsible for preparation of SWQMPs, and City personnel responsible for review of these plans. The BMP Design Manual requires implementation of appropriate BMPs to achieve water quality goals through inclusion in a Project-specific SWQMP for Priority Development Projects (PDPs).

Projects are determined a PDP if it creates or replaces 5,000 SF or more of impervious surface or 2,500 SF of impervious surface near Environmentally Sensitive Areas (ESA). A PDP SWQMP shall address implementation of source control BMPs and Low Impact Development (LID) practices such as conservation of natural topographic features, provision of development setbacks from natural water

bodies and conveyances, minimization of site imperviousness, maximization of infiltration and retention and slowing of runoff.

City of Oceanside Municipal Code

Chapter 40 of the OMC is known as the Urban Runoff Management and Discharge Control Ordinance. The overall intent of this ordinance is to "protect the health, safety and general welfare of Oceanside residents; to protect water resources and to improve water quality; to cause the use of management practices by the City and its citizens that will reduce the adverse effects of polluted runoff discharges on waters of the state; to secure benefits from the use of storm water as a resource; and to ensure the City is compliant with applicable state and federal law" (Oceanside 2019). General provisions of the Urban Runoff Management and Discharge Control Ordinance include the following:

- Prohibiting polluted or non-storm water discharges from entering the storm water conveyance system;
- Establishing minimum requirements for urban runoff management, including source control requirements, to prevent and reduce pollution;
- Establishing requirements for development Project site design, to reduce urban runoff pollution and erosion;
- Establishing requirements for the management of flows from development Projects, both to prevent erosion and to protect and enhance existing water-dependent habitats;
- Establishing standards for the use of off-site facilities for urban runoff management to supplement onsite practices at new development sites; and
- Establishing notice to procedures and standards for adjusting urban runoff management requirements where necessary.

City of Oceanside General Plan

Environmental Resource Management Element

The General Plan establishes goals and implementing policies associated with hydrology and water quality in its Environmental Resource Management Element. The following objectives are relevant to this analysis:

Objectives: Water

1. Plan for an adequate water system based on the projected needs of the City.
2. Investigate sources of local water supplies to reduce dependence on imported water.
3. Minimize pollution of water supplies, including lakes, rivers, streams, lagoons, and ground water.
4. Minimize loss of life and property in flood prone areas.

Objectives: Soil, Erosion and Drainage

1. Consider appropriate engineering and land use planning techniques to mitigate rapid weathering of the rocks, soil erosion, and the siltation of the lagoons.

Land Use Element

The Land Use Element of the General Plan also contains policies associated with hydrology and water quality which are relevant to this analysis:

3.13 Erosion and Siltation Controls

Objective: To preserve the Buena Vista Lagoon's Critical Habitats by a comprehensive program of erosion and siltation control.

Policy A: The City shall continue to participate in the Buena Vista Lagoon Joint powers Committee and to implement recommendations made by the Committee.

Community Facilities Element

The Community Facilities Element of the General Plan includes the following policies related to the storm water management system:

Objective: To provide adequate storm water management facilities and services for the entire community in a timely and cost effective manner, while mitigating the environmental impacts of construction of the storm drain system as well as storm water runoff.

Policies:

6.1 The Master Drainage Plan for the City of Oceanside shall establish standards for citywide drainage. Within each major watercourse addressed by the Plan, the City and/or developers shall assure that adequate drainage improvements and facilities are provided to handle runoff when the drainage basin is fully developed to the intensity proposed by the Land Use Element of the General Plan.

6.2 All new development in the City of Oceanside shall pay drainage impact fees to defray that development's proportionate share of drainage facilities serving the basin where the new development is located.

6.3 The City shall continue to participate in the National Flood Insurance Program. Any development application for construction within the 100-year floodplain shall be reviewed to ensure that the Project complies with flood protection measures required by the National Flood Insurance Program. For existing developed areas within the 100-year floodplain, these same measures and standards shall be applied if City approval of substantial improvements or upgrades is sought.

6.4 To the degree that is economically feasible and consistent with sound engineering practices and maintenance criteria, the City shall discourage disruption of the natural landform and encourage the maximum use of natural drainage ways in new development. Non-structural flood protection methods, which avoid major construction programs such as channels and favor vegetative measures to protect and stabilize land areas, should be considered as an alternative to constructing concrete channels where feasible.

6.5 The City shall locate and/or design new critical facilities to minimize potential flood damage from the 100-year flood. Such facilities include those that provide emergency response (hospitals, fire stations, police stations, civil defense headquarters, utility lines, ambulance services, and sewage treatment plants). Such facilities also include those that do not provide emergency response but attract large numbers of people, such as schools, theaters, and other public assembly facilities.

6.6 The City shall maintain public flood control channels and storm drains through dredging, repair, desilting, and clearing as needed to prevent any loss in effective use.

6.7 The City shall require appropriate and sufficient screening, fencing, landscaping, open space setbacks, or other permanent mitigation or buffering measures between drainage way corridors and adjacent and surrounding land uses. The employed measures shall be of sufficient scope to minimize, to the maximum extent possible, negative impacts to adjacent surrounding land uses from the particular drainage way corridor.

6.8 The City of Oceanside shall integrate required drainage planning efforts with linear open space amenities and trail corridors throughout the community, while addressing the issues of life safety, attractive nuisances, and long-term maintenance responsibility costs.

6.9 The City shall comply with the sections of the Federal Clean Water Act in regard to storm water drainage.

4.11.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality;
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin;
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: (1) result in substantial erosion or siltation on- or off-site; (2) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site; (3) create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff; or (4) impede or redirect flood flows;
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to Project inundation;
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

4.11.4 Project Impact Analysis

Would the Project:

a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?

The Project Site is located within the Vista Hydrologic Sub-Area 904.22 of the Buena Vista Creek Hydrologic Area (HA) 904.20 of the Carlsbad Hydrologic Unit (HU). Within this Hydrologic Sub-Area, downstream impaired 303(d) listed water bodies include the Pacific Ocean Shoreline, Buena Vista Creek HA at Buena Vista Lagoon Outlet, Buena Vista Lagoon, and Buena Vista Creek. This means that storm water runoff from the Project Site has the potential to impact any of the three (3) water bodies listed above.

Total Maximum Daily Loads (TMDLs) are developed to establish the maximum amount of a pollutant allowed in a waterbody. TMDLs have not been established to address pollutants for these impaired water bodies. Considering the downstream waters are impaired, the potential pollutants of concern that may be generated by the Project are sediment, nutrients, heavy metals, trash and debris, oxygen demanding substances, oil and grease, bacteria and viruses and pesticides.

The project would violate a water quality standard or waste discharge requirement or otherwise substantially degrade surface or groundwater quality, and a **significant impact** (**Impact HYDRO-1a**) will occur.

In accordance with all applicable regulations, a SWQMP (**Appendix K)** has been prepared for the Project to address the construction and operational impacts to water quality and the potential pollutants of concern. Impacts related to the potential for pollutants to impact an impaired 303(d) listed water body is further described below.

Construction

The potential for erosion and pollutant discharge would increase during construction as a result of vehicles, heavy equipment and general earth work accelerating the erosion process. Wind erosion has the potential to occur on bare soils or where vehicles and equipment cause dust. Fuels, oils, lubricants, or other hazardous substances and waste used and/or generated during construction have the potential to be released and further impact water quality.

Pollutants associated with grading and construction would degrade water quality if they are washed into surface waters, ultimately flowing to the Pacific Ocean, Buena Vista Creek and/or Buena Vista Lagoon. Sediment is often the most common pollutant associated with construction sites because of the associated earth-moving activities and areas of exposed soil. As required by the SWRCB's Construction General Permit, the Project would be required to prepare and implement a SWPPP to employ numerous erosion control, sediment control, tracking control, materials and waste management, and inspection and maintenance BMPs to minimize the potential for erosion, sedimentation and water quality impacts related to the grading and construction process. Preparation and implementation of the SWPPP practices would reduce the potential for pollutant discharge into the Buena Vista Creek, ultimately reducing impacts to the Buena Vista Lagoon and Pacific Ocean.

Prior to obtaining a grading permit, the Project would be required to prepare a SWPPP, which would describe and depict in detail the various grading and construction-related BMPs necessary to minimize the Project's impacts to Buena Vista Creek, Buena Vista Lagoon and the Pacific Ocean, and to obtain a Waste Discharge Identification Number from the San Diego Water Board. This process includes completing a risk assessment for the Project's potential water quality risk. Sediment and erosion control

BMPs described in the SWPPP may include, but are not limited to, straw mulch, soil binders, silt fencing, gravel bags, street sweeping and vacuuming and storm drain inlet protection. The City's Urban Runoff Management and Discharge Control Ordinance also require compliance with the SWRCB's Construction General Permit and for the SWPPP to be available at the construction site at all times.

The City requires that land disturbance activities (such as grading and construction) install, implement, and maintain BMPs to reduce pollutant discharges in urban runoff from the Project Site to the maximum extent practicable. BMPs must be site-specific, seasonally appropriate and construction phase appropriate, and implemented at the site-year round. BMPs are not limited to and must be implemented in the following categories: (1) Project planning; (2) good site management, including waste management; (3) non-storm water management; (4) erosion control; (5) sediment control, including but not limited to dust control and off-site tracking; (6) run-on and runoff control; and (7) active/passive sediment treatment systems, where applicable.

Additionally, as discussed in Section 4.4 *Air Quality,* the Project would be required to comply with San Diego Air Pollution Control District (SDAPCD) Rule 55, Fugitive Dust Control, which would prevent erosion potential through the watering of active construction sites throughout the day.

During construction the Project has the potential to violate a water quality standard or waste discharge requirement, and will have a **significant impact (Impact HYDRO-1b).**

Operation

Post-construction, the Project would introduce impervious surfaces and new sources of pollutants from urban runoff. Impervious site features consist of sales and administrative building, service building, private carwash, associated access drives, presentation area, staging area, sales display area, and a customer and employee parking lot. Off-site impervious features consist of Plaza Drive road widening, curb, gutter and sidewalk improvements. The Project would have 3.56 acres of pavement or impervious surfaces and 0.26 acre of buildings. The northern parcel would be constructed solely of permeable material. The southern parcel pervious features besides landscaping and open space, include landscape islands within the parking lots and vehicle display areas. The Project would include 0.49 acre of pervious concrete, 1.5 acres of open space and 1.5 acres of landscape/grassed area.

A SWQMP (**Appendix K)** has been prepared for the Project and was prepared consistent with the requirements of the City's BMP Design Manual. As discussed in the Project SWQMP, prior to discharging from the Project Site, first flush runoff would be treated via an underground proprietary BMP that is designed and constructed in accordance with standards set forth by the San Diego Water Board and City's BMP Design Manual. Storm water from the southern parcel would be conveyed via underground pipes from various parts of the Project Site through proprietary water quality measures and into an underground detention system located at the southeast corner of the site. Storm water would then be released to POC-3. The underground detention system would be responsible for handling hydromodification requirements for the Project and would have a footprint of 6,090 SF and a depth of four (4) feet. The underground detention system has been designed to drain within 72 hours in order to avoid standing water and mosquito breeding in accordance with the County Storm Water and Discharge Control Ordinance.

During operation the Project has the potential to violate a water quality standard or waste discharge requirement, and will have a **significant impact (Impact HYDRO-1c)**.

b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin?

The Project would not use groundwater during construction or operation of the Project. As stated in the Geotechnical Evaluation prepared by EEI **(Appendix H),** groundwater was not encountered in any of the subsurface explorations with a maximum depth of exploration of 15.5 feet, nor was groundwater encountered during earlier explorations in 2007 with a maximum depth of exploration of 50 feet. Although the Project would result in an increase in the amount of impervious groundcover, the Project would contain pervious features such as landscaping, including landscape islands within the parking lots and vehicle display areas and open space.

Due to the depth of groundwater and the proposed use and development of the Project, the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge, such that the Project may impede sustainable groundwater management of the basin, and impacts are **less than significant impact.**

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i. Result in substantial erosion or siltation on- or off-site?

The Project has the potential to result in exposed soils or changes in runoff that could result in erosion or siltation during the construction phase of the Project, and will have a **significant impact (Impact HYDRO-2)**.

Prior to obtaining a grading permit, the Project would be required to prepare a SWPPP, which would describe and depict in detail the various grading and construction-related BMPs. The SWPPP would be prepared in conformance with City regulations and the NPDES SWRCB Construction General Permit. Sediment and erosion control BMPs described in the SWPPP may include, but are not limited to, straw mulch, soil binders, silt fencing, gravel bags, street sweeping and vacuuming and storm drain inlet protection.

ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

Pre-Development Conditions

Existing runoff surface flows to four (4) points of discharge, two (2) of them located on Plaza Drive, one (1) on Thunder Drive and one (1) to Buena Vista Creek. Existing runoff from the northern parcel drains via overland flow to the southwest corner of the Project Site where it sheet flows over the existing berm and on to Plaza Drive. Existing runoff from the southern parcel drains south toward Buena Vista Creek with a small portion draining east over the sidewalk and curb and on to Thunder Drive. Existing conditions peak flows are displayed in **Table 4.11-1**. **Figure 15** displays the existing drainage conditions.

FIGURE 15

October 2020

Post-Development Conditions

The northern parcel, to be developed as Phase II of the Project, would be constructed solely of permeable pavement and therefore, pre- and post-development runoff would remain constant.

On the southern parcel, prior to discharging from the Project Site, first flush runoff would be treated via an underground proprietary BMP in accordance with standards set forth by the San Diego Water Board and City BMP Design Manual. Runoff from the developed site would drain to a single onsite underground detention system near the southeast corner of the site. Mitigated peak flows would then drain from the detention facility via a 24" PVC storm drain to POC-3 at the southwest corner of the Project Site, where runoff would ultimately meet with existing Buena Vista Creek. **Table 4.11-2** below displays the summary of peak flows. **Figure 16** displays the proposed drainage conditions.

Table 4.11-2
Summary of Peak Flows

Discharge Location	Area (acre)			100-Year Peak Flow (cubic feet/sec (cfs))		
	Existing	Developed	Difference	Existing	Developed	Difference
POC-1	1.43	1.43	0.00	5.42	5.59	0.17
POC-2	0.22	0.35	0.14	0.82	2.15	1.33
POC-3	6.88	6.89	0.00	23.75	21.20	-2.55
POC-4	0.28	0.14	-0.14	1.07	1.05	-0.02
Source: Drainage Study for CarMax Oceanside Prepared by REC Consultants, Inc. (Appendix J)						

As summarized in **Table 4.11-2**, the Project would have reduced peak flows for the majority of the Project Site. POC-1 and POC-2 at Plaza Drive would increase slightly due to the widening and expansion of Plaza Drive. Runoff discharging at these locations would make its way west towards the intersection of SR-78 and Plaza Drive where said runoff enters curb inlets on the north and south sides of Plaza Drive respectively. POC-3 and POC-4 would both have a decrease in peak flows and would ultimately confluence at POC-3 in Buena Vista Creek. The Project would not alter existing drainage patterns onsite or increase net runoff after development.

The Project would not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site, and impacts are **less than significant.**

iii. Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff?

As discussed above and displayed in **Table 4.11-2,** peak flows from POC-3 and POC-4 would decrease and peak flows at POC-1 and POC-2 would increase slightly due to the widening and expansion of Plaza Drive. The Project would not alter existing drainage patterns onsite or increase net runoff after development. The proposed storm drain system is designed to safely convey the 100-year peak flows of the existing system. There would be no adverse impact from the proposed development on the existing facilities as there would be an overall reduction in peak flow rates. The total net reduction of peak flows to Buena Vista Creek from pre- to post-development conditions is approximately 2.60 cubic feet per second (cfs). Additionally, the ultimate discharge points would remain the same. The Project would comply with all recommendations set forth in the Project SWQMP and Drainage Study which are designed in compliance with the San Diego Water Board and City BMP Design Manual.

The Project would not create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff, and impacts are **less than significant.**

iv. Impede or redirect flood flows?

The northern parcel would be constructed solely of permeable pavement and therefore, pre- and post-development runoff would remain constant. The Project would not impede or redirect flood flows on the northern parcel.

On the southern parcel, prior to discharging from the Project Site, first flush runoff would be treated via an underground proprietary BMP in accordance with standards set forth by the San Diego Water Board and City BMP Design Manual. Runoff from the developed site would drain to a single onsite underground detention system near the southeast corner of the Project Site. Mitigated peak flows would then drain from the detention facility via a 24-inch PVC storm drain to POC-3 at the southwest corner of the Project Site, where runoff would ultimately meet with existing Buena Vista Creek. POC-3 is the existing point of discharge from the Project Site.

The southern portion of the Project Site lies within Zone X of the FEMA 500-year floodplain and Zone AE of the 100-year floodplain (FEMA FIRM Panel 06073C0758G effective 5/16/19). Peak flows from POC-3 and POC-4 would decrease and peak flows at POC-1 and POC-2 would increase slightly due to the widening and expansion of Plaza Drive. However, the total net reduction of peak flows to Buena Vista Creek from pre- to post-development conditions would be approximately 2.60 cfs.

Therefore, the Project would not substantially alter the existing drainage pattern of the Project Site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces in a manner which would impede or redirect flood flows, and impacts are **less than significant.**

d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to Project inundation?

The southern portion of the Project Site lies within Zone X of the FEMA 500-year floodplain and Zone AE of the 100-year floodplain (FEMA FIRM Panel 06073C0758G effective 5/16/19). As discussed previously, the total net reduction of peak flows to Buena Vista Creek from pre- to post-development conditions is approximately 2.60 cfs. The Project would not encroach into either of the flood zones or the 100-foot

riparian buffer. The Project is located approximately four (4) miles east of the Pacific Ocean and is not located within a Tsunami Evacuation Area as provided in the Geotechnical Evaluation (**Appendix H)**. The Project would not be at risk due to a tsunami as damage due to tsunami risk is considered low. A seiche is an oscillating wave in an enclosed or restricted body of water generated by ground motion during an earthquake and can cause overflow of a lake, reservoir, or lagoon. The Project is located 3.5 miles east of Buena Vista Lagoon and approximately 0.9 mile north of Calavera Lake. As discussed in the Geotechnical Evaluation, the Project Site is not located immediately adjacent to any lakes or confined bodies of water and therefore, the potential for a seiche to affect the Project Site is considered low.

In flood hazard, tsunami, or seiche zones, the Project would not risk release of pollutants due to Project inundation, and impacts are **less than significant.**

e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

The San Diego Basin Plan, most recently amended on May 17, 2016, sets forth water quality objectives for Region 9. Specifically, the Basin Plan is designed to accomplish the following: (1) designate beneficial uses for surface and ground water; (2) set the narrative and numerical objectives that must be attained or maintained to protect the designated beneficial uses and conform to the state's anti-degradation policy; (3) describe mitigation measures to protect the beneficial uses of all waters within the region; and (4) describe surveillance and monitoring activities to evaluate the effectiveness of the Basin Plan. The Basin Plan incorporates by reference all applicable SWRCB and the San Diego Water Board plans and policies.

The Regional MS4 Permit establishes water quality standards and requires the application of pollution prevention, source control and treatment control BMPs to effectively prevent and remove pollutants from runoff. The Regional MS4 Permit requires that BMP design and implementation occur at every phase of development including the planning, construction and operational phases. A SWQMP was prepared for the Project in compliance with RWQCB NPDES MS4 Permit and addresses onsite treatment of storm water runoff. Onsite storm water quality design was prepared in accordance with the City of Oceanside's BMP Design Manual. Prior to obtaining a grading permit, the Project would be required to prepare a SWPPP which would satisfy requirements set forth in the NPDES Construction General Permit.

The Sustainable Groundwater Management Act provides a framework for sustainable management of groundwater supplies by local authorities in high- and medium-priority alluvial basins, as designated by the SWRCB. In the County, the following four (4) basins have been designated to require plans: San Diego River Valley Basin, San Pasqual Basin, San Luis Rey River Basin and Borrego Valley Basin (all medium-priority basins). The Project Site is not located within a basin that requires a designated groundwater sustainability plan. Thus, the Project would not conflict with a sustainable groundwater management plan.

The Project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan, and impacts are **less than significant.**

4.11.5 Mitigation Implementation and Monitoring

Based on the analysis above, the Project would comply with the following mitigation measures.

Water Quality Standards (Impact HYDRO-1a, 1b, and 1c) and Potential for Erosion (Impact HYDRO-2)

MM-HYDRO-1 The Project shall incorporate permanent source control BMPs as identified in the Project SWQMP such as the following:

BMP Type	Inspection Frequency	Summary of Maintenance Activity
Prevention of Illicit Discharges Into MS4	Continuous	A grease trap has been incorporated into the Utility Plan and dumping of grease down the storm drain is prohibited. Other good housekeeping practices would be implemented to discourage discharges of non-storm water pollutants, including cleaning up food and grease with absorbents, discarding trash, and routine maintenance of grease trap.
Storm Drain Signage	Continuous	Labeling shall be provided for all storm water conveyance system inlets and catch basins within the Project area. Storm drain placards shall be used for signage (stenciling is prohibited by City). Inspect and maintain placards as needed.
Protect Trash Storage Areas From Rainfall, Run-On, Runoff and Wind Dispersal	Regularly	Ensure trash enclosure areas are fully contained (three walls, door and roof) and are provide with attached lids. Keep containers away from storm drain vicinity. Post signs on all enclosures and/or dumpsters informing users to keep lid closed and not to dispose of liquid or hazardous materials. Inspect trash storage areas to ensure integrity of containers and that area is kept clean. Replace leaking bins. Clean trash storage areas regularly.
Additional BMPS Based on Potential Sources of Runoff Pollutants	Regularly as Determined Necessary	On-Site Storm Drain Inlets: On-site inlets shall be protected from any illicit discharges and debris. Inlets shall have prohibitive signs where all inlets are marked with the words "NO DUMPING! DISCHARGES TO BAY" or similar. Inlet markings shall be maintained and periodically repainted on a regular basis to remove pollutants. Clean inlets regularly and remove sediments and debris, especially before start and end of wet season. Keep record of cleaning and disposal activities.
		Need for Future Indoor and Structural Pest Control: Building includes doors and windows with sealing that discourages entry of pests. Any pesticides shall be applied minimally in accordance with manufacturer's specifications and City and State requirements.
		Landscape/Outdoor Pesticide Use: Final Landscape Plans shall preserve existing drought tolerant trees, shrubs, and ground cover to the maximum extent possible, and include landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to storm water pollution.
		Fire Sprinkler Test Water: Fire sprinkler test water shall be drained to sanitary sewer system. During a fire sprinkler test, the fire riser discharge shall be connected by a hose to the sewer cleanout.
		Miscellaneous Drain or Washwater: Boiler drains shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain.
		Plazas, Sidewalks, and Parking Lots: Sweep regularly to prevent accumulation of litter and debris, debris from pressure washing must be collected to prevent entry into the storm drain system.

MM-HYDRO-2 An onsite private underground proprietary BMP in the form of an underground detention system shall be designed and constructed per the Project SWQMP in accordance with the RWQCB and City of Oceanside BMP Design Manual. Storm water shall be conveyed via underground pipes from various parts of the Project Site through water quality measures and into the underground detention system.

MM-HYDRO-3 Low Impact Development (LID) and Site Design BMPs shall be incorporated into the Project design to reduce impacts to water quality. The contractor shall construct the LID BMPs in accordance with the Project SWQMP and the engineer of work shall inspect that all LID BMPs have been constructed in compliance with the approved plans and all applicable specifications and permits. The widening of Plaza Drive shall be treated via a green streets approach with the construction of swales behind sidewalks to treat runoff for water quality and hydromodification purposes.

4.11.6 Level of Significance After Mitigation

The analysis presented in Section 4.11.4, identified the potential for significant impacts related to water quality standards and erosion. Implementation of mitigation measure MM-HYDRO-1 requires the Project to incorporate permanent source control BMPs such as practices to prevent illicit discharge into the MS4, storm drain signage, trash storage protection prohibitive signage at storm drain inlets, pest control practices, use of drought tolerant landscaping, fire sprinkler water tests and sweeping of parking lots and sidewalks in order to prevent polluted runoff from entering the storm drain system. Ongoing compliance with and maintenance of the source control BMPs will prevent storm water pollution, reducing impacts to water quality standards and erosion.

Implementation of mitigation measure MM-HYDRO-2 requires construction of an underground detention system to convey and treat storm water from the Project Site. Construction and operation of the underground detention system would reduce water quality impacts by properly treating storm water before it enters the storm drain system.

Implementation of mitigation measure MM-HYDRO-3 would provide LID and Site Design BMPs which would treat storm water runoff using the green streets approach and swales, incorporating vegetation and soil to slow and filter storm water runoff and further reduce water quality and the potential for erosion.

Mitigation measures MM-HYDRO-1, MM-HYDRO-2 and MM-HYDRO-3 would reduce impacts to water quality standards (Impact HYDRO-1a, 1b and 1c) and erosion (Impact HYDRO-2) to below a level of significance.

Chapters 4.12 LAND USE AND PLANNING

4.12.1 Environmental Setting

The City encompasses approximately 42 square miles, and is bound by the Pacific Ocean to the west, Camp Pendleton to the north, the City of Vista and unincorporated portions of the County to the east and the City of Carlsbad to the south. The City of Oceanside is largely developed and predominately has the attributes of a coastal community. The City's primary coastal resources include approximately 3.5 miles of public beaches, a public marina, an approximately 2,000-foot pier, three (3) coastal watersheds and the extension of Lawrence Canyon and the Buena Vista Nature Center.

Development along the coast of the City is organized by grid pattern of streets and generally consists of single-family homes along the southern portion of the City's coastline, medium- to higher-density residential uses within the central and northern portions, hospitality and other visitor-serving uses in the downtown district and within the harbor, and community-serving commercial uses along the length of Coast Highway.

Within the City, major commercial corridors extend from the coastal zone to inland and include Oceanside Boulevard, Mission Avenue, College Boulevard, and Vista Way. Regional shopping areas are located along the SR-78 corridor and industrial development is largely located in industrial districts along Oceanside Boulevard.

The Project is located in the southeastern portion of the City (**Figure 1**). Plaza Drive separates the north and south parcels within the Project area and Thunder Drive borders the Project Site to the east (**Figure 2 and Figure 3**). The Project Site is relatively flat with a drop in elevation to the south towards Buena Vista Creek. Onsite elevations range from approximately 180 feet to 220 feet amsl. The Project Site is located in a primarily developed area and is surrounded by commercial uses to the west, including a shopping center and auto repair shops. To the east are medium density residential uses as well as a DMV facility at the corner of Plaza Drive and Thunder Drive. To the north is SR-78 and further north are professional commercial uses. To the south are Buena Vista Creek, high density, residential estate, uses including a senior living facility, and commercial and public/semipublic uses including an OFFD station. The area surrounding the Project is entirely developed with exception of the areas located to the south and southwest which include portions of Buena Vista Creek.

The Project Site is designated CC by the General Plan and CC by the Zoning Ordinance.

4.12.2 Regulatory Setting

Regional

San Diego Forward: The Regional Plan

The 2015 San Diego Forward: The Regional Plan prepared by the SANDAG, combines the region's two (2) most important planning documents – the Regional Comprehensive Plan (RCP) and the Regional Transportation Plan and its Sustainable Communities Strategy (RTP/SCS). The Regional Plan serves as the blueprint for how the San Diego region will grow, how SANDAG will invest in transportation infrastructure that will in return provide more choices, strengthen the economy, promote healthy

environment and support thriving communities. SANDAG's Regional Growth Forecast uses the most recent land use planning assumptions from all 18 cities of the region and the County. These planning assumptions are used to develop the supporting transportation network, water agencies use for water planning purposes, and utility providers use for long range planning. The Regional Plan contains both near-term actions and continuing actions that are designed to support the longer-term implementation of projects and programs.

Local

City of Oceanside General Plan

The Land Use Element of the General Plan and the associated Land Use Maps are guides to land use planning within the City and identify the type and location of future land uses within the City. As a guide to future growth and development, the Land Use Element identifies the general distribution, location, mix, and extent of desired land uses, including residential, commercial, industrial, public facilities and open space uses. The following are goals and policies of the Land Use Element of the General Plan that relate to the Project:

1.0 General Plan Consistency

Objective: To ensure all projects are consistent with the General Plan.

Policy A: Tentative Maps, Development Plans and Conditional Use Permits approved prior to the adoption of this Element and exercised thereafter without modification, revision, amendment, or extension shall be considered consistent with this Element.

1.12 Land Use Compatibility

Objective: To minimize conflicts with adjacent or related land uses.

Policy A: Adequate setbacks, buffering, and/or innovative site design shall be required for land uses that are contiguous to and incompatible with existing land uses

Policy B: The use of land shall not create negative visual impacts to surrounding land uses.

Policy C: The use of land shall not subject people to potential sources of objectionable noise, light, odors, and other emissions nor the exposure of toxic, radioactive, or other dangerous materials

2.21 Community Commercial

Policy A: This designation shall provide the community with commercial centers containing a wide variety of commercial establishments. Major tenants shall provide larger, low volume, higher cost items, such as home furnishings, apparel, durable goods, and specialty items and generally have citywide market areas. Support facilities such as entertainment establishments and restaurants shall be encouraged.

2.26 Commercial Enhancement

Policy A: The City shall encourage the establishment of specialized districts, centers, and developments for unique commercial uses which contribute positively to the City's revenue and employment generating abilities and cultural enhancement.

Policy B: The City shall not permit the proliferation and/or over-concentration of commercial uses that generate adverse impacts to the social structure, visual quality, economy, public safety, or well-being of the community.

City of Oceanside Zoning Ordinance

The Zoning Ordinance is the primary implementation tool for the Land Use Element. Together, the Zoning Ordinance and Zoning Map identify specific types of land use, intensity of land use, and development and performance standards applicable to specific areas and parcels of land within the City. Article 11 of the Zoning Ordinance provides development and land use regulations for commercial districts.

Oceanside Subarea Habitat Conservation Plan

As set forth by the state and federal Endangered Species Acts and the State of California Natural Community Conservation Planning (NCCP) Act, the Oceanside Subarea Habitat Conservation Plan/Natural Community Conservation Plan (Subarea Plan) comprehensively addresses how the City will conserve natural biotic communities and sensitive plant and wildlife species. This Subarea Plan provides regulatory certainty to landowners within the City and will aid considerably in conserving the region's biodiversity and enhancing the overall quality of life for residents of the southern coastal region of California. The Subarea Plan has not been adopted by City Council, and therefore incidental take permits currently cannot be issued under the Subarea Plan. However, the Subarea Plan provides guidance for project proponents to determine potential impacts to biological resources that may result from implementation of a project and to develop appropriate avoidance, minimization, and mitigation measures to reduce project impacts to below a level of significance.

4.12.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Physically divide an established community;
b. Cause significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

4.12.4 Project Impact Analysis

Would the Project:

a. Physically divide an established community?

The Project Site is located in a primarily developed, urbanized area and is surrounded by commercial uses to the west, including a shopping center and auto repair shops. To the east are medium density residential uses as well as a DMV facility at the corner of Plaza Drive and Thunder Drive. To the north is

SR-78 and further north are professional commercial uses. To the south are Buena Vista Creek, high density, residential estate, uses including a senior living facility, and commercial and public/semipublic uses including an OFD station. The area surrounding the Project is entirely developed with exception of the areas located to the south and southwest which include portions of Buena Vista Creek.

The Project proposes the construction of a CarMax pre-owned automobile facility consisting of a sales and administration building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area, sales display area, and a customer and employee parking lot, on a vacant parcel located in a developed area. The Project Site is designated CC by the General Plan and CC by the Zoning Ordinance. The Project does not require a change to the zoning or land use designation.

Additionally, the Project proposes a concrete sidewalk along the Project frontage on both sides of Plaza Drive, where currently a dirt path is being used to cross the Project frontage from the existing commercial center to the west to the DMV to the east. The proposed sidewalk, associated landscaping, and proposed pedestrian ramps would assist in the safe movement connection for the existing established community. The Project would also provide bicycle lanes on both sides of Plaza Drive along the Project frontage to further allow for connections to the surrounding community.

The Project would not physically divide an established community, and therefore **no impact** will occur.

b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Consistent with the CEQA Guidelines Section 15125(d), an EIR shall discuss any inconsistencies between a Project and applicable general plan and regional plans. The following analysis addresses this requirement, as it pertains to land use.

The Project is subject to several local and regional plans intended to avoid environmental effects. Such applicable local plans include the Zoning Ordinance, General Plan, and the Subarea Plan of the North County MHCP. The applicable regional plans include San Diego Forward: The Regional Plan and SDAPCD Rules and Regulations. The analysis below provides the consistency determination information.

Local Plans

<u>City of Oceanside Zoning Ordinance</u>

The Project does not require a change to the CC zoning designation. The Project will require issuance of a CUP in compliance with Section 1120 of the Zoning Ordinance in order to allow for the use of vehicle sales, service stations and automobile washing under the CC zone.

The Zoning Ordinance Article 11, Section 1110 outlines the purpose of each of the commercial districts. The purpose of CC Community Commercial District is as follows:

- To provide sites for commercial centers containing a wide variety of commercial establishments, including businesses selling home furnishings, apparel, durable goods, and specialty items and generally having a citywide market area. Support facilities such as entertainment and restaurants are permitted, subject to certain limitations to avoid adverse effects on adjacent land uses.

The Project meets this goal by providing a commercial use that varies from the existing commercial establishments located directly to the west and northwest and is compatible with the existing uses. Additionally, the CarMax Project would not only provide a citywide market area but also a regional-wide market area. The Project would not conflict with the City of Oceanside Zoning Ordinance.

City of Oceanside General Plan

The Project would construct a CarMax pre-owned automobile facility on a vacant parcel located in a developed area surrounded primarily by commercial and residential developments. The Project does not require an amendment to the General Plan in order to change the CC land use designation. The Project would be consistent with the City's General Plan designations and would be consistent with the City's General Plan Land Use Element objectives and policies as further described below.

Land Use Element

The General Plan Land Use Element provides several objectives and policies related to general plan consistency, land use compatibility, community commercial districts, commercial enhancement and natural resource management. **Table 4.12-1** below provides the City's applicable General Plan Land Use Element objectives and policies followed by a land use consistency analysis with regard to each policy. The Project would not conflict with a General Plan Land Use Element Policy.

Table 4.12-1
General Plan Land Use Element Consistency Evaluation

Policy Number	Policy	Consistency Analysis	Consistent/ Inconsistent
City of Oceanside General Plan			
Land Use Element			
1.01 General Plan Consistency Objective	To ensure all projects are consistent with the General Plan.	The Project would not change the land use designation of the Project Site and therefore would be consistent with the land use designation provided by the General Plan.	Consistent
1.12 Land Use Compatibility Objective	To minimize conflicts with adjacent or related land uses.	Land use designations immediately surrounding the Project Site include CC uses directly north, Professional Commercial (PC) further north, CC to the west, south and north east, Urban High Density Residential (UHD-R) to the southwest, Private Institutional (PI) further south, Medium Density-B Residential (MDB-R) to the east. The Project would provide a commercial use in an area of existing development consisting of primarily commercial uses. A commercial center (Tri-City Crossroads shopping center) is located directly west of the Project Site, automobile services and part stores are located northeast, and a DMV facility is located east of the Project Site. The Project would be compatible with the surrounding land uses and therefore, would not create any conflicts with adjacent land uses.	Consistent
1.12A	Adequate setbacks, buffering, and/or innovative site design shall be required for land uses that are contiguous to and	The Project would be compatible with the surrounding land uses. However, residential land uses are located to the east. The Project would provide all setbacks in compliance with City standards, would provide adequate	Consistent

Policy Number	Policy	Consistency Analysis	Consistent/ Inconsistent
	incompatible with existing land uses.	parking, and site design features that would further enhance compatibility between land uses.	
1.12B	The use of land shall not create negative visual impacts to surrounding land uses.	Due to the fact that the Project would provide a use similar to the surrounding existing developments, and the existing character of the surrounding area is characterized by development; the Project would not create a negative visual impact to surrounding land uses. The Project would provide all required landscaping along the Project frontage and surrounding the parking lot areas of the Project and would comply with all City policies related to visual character, building heights, scale, setbacks, landscaping and parking.	Consistent
1.12C	The use of land shall not subject people to potential sources of objectionable noise, light, odors, and other emissions nor the exposure of toxic, radioactive, or other dangerous materials	The Project Site is surrounded by existing commercial uses including a commercial center to the west, several automobile services and part stores are located northeast, and a DMV facility is located east of the Project Site. The Project would not emit construction or operational noise which exceeds City or other local standards. The Project would provide light fixtures that contain proper shielding and downcast in order to prevent glare on to adjacent properties. Light poles would not exceed 25 feet in compliance with the City Municipal Code and all lighting would be reduced after operating hours. All Project lighting would meet the requirements of Chapter 39 of the OMC. The Project would not exceed the SDAPCD's daily significance thresholds for air quality during construction or operation. The Project would comply with SDAPCD Rule 51 in order to reduced potential impacts related to construction odor.	Consistent
2.2 Commercial Development Objective	To promote and preserve a balance of successful markets and services in aesthetic, people-oriented associations that are compatible and organized to surrounding land uses.	The Project would provide a CarMax facility in an area with existing commercial developments with a variety and balance of markets and service types including restaurants, drug stores, specialty stores, thrift store, and automobile services and part stores. The Project would further promote this balance of successful markets and would be compatible with the surrounding uses. Additionally, the Project would provide improvements along Plaza Drive including a sidewalk which would connect to the sidewalks from the west along the shopping center and to the east along the DMV. The Project would also provide a bicycle lane on Plaza Drive that would further allow for better access between developments and to enhance the "people-oriented" area.	Consistent
2.21A	This designation shall provide	The existing commercial developments provide a wide	Consistent

Policy Number	Policy	Consistency Analysis	Consistent/ Inconsistent
	the community with commercial centers containing a wide variety of commercial establishments. Major tenants shall provide larger, low volume, higher cost items, such as home furnishings, apparel, durable goods, and specialty items and generally have citywide market areas. Support facilities such as entertainment establishments and restaurants shall be encouraged.	variety of establishments including restaurants, drug stores, specialty stores, thrift store, and automobile services and part stores. The Project would provide a CarMax pre-owned automobile facility that would provide larger, low volume, higher cost items. The CarMax Project would also provide not only a Citywide market area, but also a regional-wide market area.	
2.26A	The City shall encourage the establishment of specialized districts, centers, and developments for unique commercial uses which contribute positively to the City's revenue and employment generating abilities and cultural enhancement.	The Project would provide a specialized development within the City by providing a CarMax pre-owned automobile facility. The Project would positively contribute to the City's economy and would generate employment opportunities.	Consistent
2.26B	The City shall not permit the proliferation and/or over-concentration of commercial uses that generate adverse impacts to the social structure, visual quality, economy, public safety, or well-being of the community.	The Project would not over-concentrate the existing area as it has a zoning and land use designation for CC which has been established by the Zoning Ordinance and General Plan. Additionally, the Project would be adjacent to other uses such as residential uses and a fire station. The Project would not degrade the existing visual quality as it would provide similar characteristics as the existing commercial developments. The Project would positively contribute to the local economy and would promote public safety by providing sidewalks along Plaza Drive and by discouraging encampments located within the creek area.	Consistent
3.11 Vegetation and Wildlife Habitats Objective	Recognition and preservation of significant areas with regard to vegetation and wildlife habitats	The Project is within the Oceanside Subarea Plan, a draft plan used as a guidance document for projects within the City. The Project is consistent with the requirements of the Subarea Plan and has been designed to comply with the measures outlined in the plan.	Consistent
3.11A	A biological survey report, including a field survey, shall be required for a proposed project site if the site is largely or totally in a natural state or if high interest species of plants or animals have been found on nearby properties.	A Biological Technical Report (**Appendix D**), Biological Constraints Report (**Appendix E**) and Jurisdictional Delineation (**Appendix F**) were prepared for the Project and were used in this EIR analysis Chapter 4.5 *Biological Resources*. The preparation of these technical reports included field surveys, focused surveys, jurisdictional delineation and literature review to assess potential impacts to sensitive biological resources. All surveys were conducted in accordance with applicable plans, policies and ordinances set forth by the federal and state wildlife agencies, the City and current industry and agency standards.	Consistent

Policy Number	Policy	Consistency Analysis	Consistent/ Inconsistent
3.11C	In areas where vegetation or wildlife habitat modification is inevitable, mitigation and/or compensatory measures such as native plant restoration, land reclamation, habitat replacement, or land interest donation will be considered.	The Project would result in potentially significant impacts to sensitive biological resources including sensitive plant species and vegetation communities, jurisdictional resources, *Brodiaea* species, fairy shrimp, coastal California gnatcatcher, least Bell's vireo, other MBTA-covered species and disturbed Diegan coastal sage scrub. Appropriate mitigation measures in compliance with the Oceanside Subarea Plan and applicable federal, state, and local codes are required and are provided in Section 4.5.5 Mitigation Implementation and Monitoring of this EIR.	Consistent
3.12A	Construction is prohibited within the floodway and restricted in the floodplain by requiring flood-proofing measures for all structures.	The southern portion of the site lies within Zone X of the FEMA 500-year floodplain and Zone AE of the 100-year floodplain. Peak flows from POC-3 and POC-4 would decrease and peak flows at POC-1 and POC-2 would increase slightly due to the widening and expansion of Plaza Drive. However, the total net reduction of peak flows to Buena Vista Creek from pre- to post-development conditions would be approximately 2.60 cfs. . Temporary impacts will occur to approximately 0.0008 acre (344 SF) of disturbed habitat within the planning buffer during the sewer realignment. Due to the small size of the impacts and the distance from the riparian habitat (94 feet), no direct impact to riparian habitat is anticipated.	Consistent
3.12B	The City shall require property owners with land adjacent to the floodway to make reasonable channel improvements concurrent with development of their land or to contribute to a fund for future improvement of the length of the channel by the City.	On the southern parcel, prior to discharging from the Project Site, first flush runoff would be treated via an underground proprietary BMP in accordance with standards set forth by the San Diego Water Board and BMP Design Manual. Runoff from the developed Project Site would drain to a single onsite underground detention system near the southeast corner of the site. Mitigated peak flows would then drain from the detention facility via a 24-inch PVC storm drain to POC-3 at the southwest corner of the Project Site, where runoff would ultimately meet with existing Buena Vista Creek. The Project would have reduced peak flows for the majority of the Project Site. POC-1 and POC-2 at Plaza Drive would increase slightly due to the widening and expansion of Plaza Drive. Runoff discharging at these locations would make its way west towards the intersection of SR-78 and Plaza Drive where said runoff enters curb inlets on the north and south sides of Plaza Drive respectively. POC-3 and POC-4 would both have a decrease in peak flows and would ultimately confluence at POC-3 in Buena Vista Creek. The owner/tenant would be responsible for implementation and maintenance of all drainage and flood control facilities.	Consistent
3.14 Grading and Excavations	To provide mitigation recommendations for grading	Construction of the Project would include grading of the development area which has the potential to result in	Consistent

Policy Number	Policy	Consistency Analysis	Consistent/ Inconsistent
Objective	and excavations in the City of Oceanside.	exposed soils or changes in runoff that could result in erosion. Prior to obtaining a grading permit, the Project would prepare a SWPPP which would include sediment and erosion control BMPs such as placement of straw mulch, soil binders, silt fencing, and gravel bags. The Project would also comply with the City Grading Regulations Manual.	
3.14A	Investigation and evaluation of currently affected areas will indicate the measures to be included, such as the following measures: 1) Keep grading to a minimum, leave vegetation and soils undisturbed wherever possible. 2) Plant bare slopes and cleared areas with appropriate vegetation immediately after grading. 3) Chemically treat soils to increase stability and resistance to erosion. 4) Install retaining structures where appropriate. 5) Construct drainage systems to direct and control rate of surface runoff. 6) Construct silt traps and settling basins in drainage systems. 7) Construct weirs and check dams on streams.	Erosion control measures as included in the Project SWPPP would include placement of straw mulch, soil binders, silt fencing, and gravel bags. Placement of landscaping will occur as soon as possible after grading activities. The Project would have reduced peak flows for the majority of the site. POC-1 and POC-2 at Plaza Drive would increase slightly due to the widening and expansion of Plaza Drive. Runoff discharging at these locations would make its way west towards the intersection of SR-78 and Plaza Drive where said runoff enters curb inlets on the north and south sides of Plaza Drive respectively. POC-3 and POC-4 would both have a decrease in peak flows and would ultimately confluence at POC-3 in Buena Vista Creek. The owner/tenant would be responsible for implementation and maintenance of all drainage and flood control facilities. The Project would also comply with the City Grading Regulations Manual.	Consistent
3.18A	The City shall cooperate with the San Diego County Air Pollution Control Board, and participate in the Regional Air Quality Control Strategy (RAQS).	The Project would not exceed the SDAPCD's daily significance thresholds for air quality during construction or operation. The Project is zoned CC and has a corresponding land use designation and would be consistent with the growth assumptions in the General Plan and SANDAG's growth projections and would not conflict with the RAQS.	Consistent
3.2B	The City shall encourage the acquisition, restoration and/or maintenance of significant cultural resources by private organizations.	As discussed in Chapter 4.6 *Cultural Resources*, due to the Project's close proximity to Buena Vista Creek, there is potential for buried cultural resources within the alluvial deposits along the creek. The Project would incorporate mitigation measure MM-CUL-1a through MM-CUL-1h. These measures would require a qualified archaeologist and Native American monitor to be present during ground disturbing activities and the protocol in the event of a discovery.	Consistent
3.2C	Cultural resources that must remain in-situ to preserve their significance shall be preserved intact and interpretive signage and protection shall be provided by project developers.	As discussed in Chapter 4.6 *Cultural Resources*, due to the Project's close proximity to Buena Vista Creek, there is potential for buried cultural resources within the alluvial deposits along the creek. The Project would incorporate mitigation measure MM-CUL-1a through MM-CUL-1h. If cultural resources are found, ground-	Consistent

Policy Number	Policy	Consistency Analysis	Consistent/ Inconsistent
		disturbing activities would temporarily halt in order to assess the find. If the resources must remain in-situ, proper protection and signage would be implemented in accordance with the direction of the onsite archaeological monitor and/or Native American monitor.	
3.2D	An archaeological survey report shall be prepared by a SOPA (Society of Professional Archaeologists) certified archaeologist for a project proposed for grading or development if any of the following conditions are met: 1) The site is completely or largely in a natural state; 2) There are recorded sites on nearby properties; 3) The project site is near or overlooks a water body (creek, stream, lake, freshwater lagoon); 4) The project site includes large boulders and/or oak trees; or 5) The project site is located within a half-mile of Mission San Luis Rey.	An Archaeological Survey Report (**Appendix G**) was prepared for the Project in accordance with City standards. The report recommended incorporation of mitigation measure MM-CUL-1a through MM-CUL-1h in order to reduce potentially significant impacts to cultural resources to less than significant levels.	Consistent
3.21A	The City shall encourage the preservation of significant visual open areas.	The Project is not located in close proximity to important aesthetic resources including views of the Pacific Ocean, San Luis Rey River, Buena Vista Lagoon, Oceanside Harbor and Oceanside Pier. The nearest designated open space area included as visual open space by the Environmental Resource Management Element, is located approximately one mile northwest. Due to the Project location, the Project would not block views of visual open space areas.	Consistent
3.23 Paleontological Resources Objective	Recover, retention and evaluation of paleontological resources.	Due to the high sensitivity of the Santiago Formation underlying the site, the Project would have the potential to disturb a paleontological resource and would implement mitigation measures MM-GEO-3a and MM-GEO-3b as discussed in Chapter 4.8 *Geology and Soils*.	Consistent
3.23A	Paleontological survey reports shall be prepared by a qualified paleontologist approved by the City for all Projects that are located in the area designated as having a high potential for fossils on the City's natural resource management data base system.	As stated in mitigation measure MM-GEO-3a, a qualified professional paleontologist or California Registered Professional Geologist with appropriate paleontological expertise, would prepare and implement a PRIMP.	Consistent

Oceanside Subarea Plan of the North County Multiple Habitat Conservation Plan (MHCP)

The Subarea Plan is the only applicable local, regional or state habitat conservation plan that applies to the Project. While the Subarea Plan has not been formally adopted, the Project has been designed to comply with the measures outlined in the MHCP and Subarea Plan. Although the Project was designed to comply with the measures outlined in the MHCP and the Subarea Plan, the Project has the potential to result in significant impacts to sensitive plant species and vegetative communities, jurisdictional resources, *Brodiaea* species, fairy shrimp, coastal California gnatcatcher, least Bell's vireo, and other MBTA-covered species. The Project would result in unavoidable direct impacts to disturbed Diegan coastal sage scrub which will be considered a **significant impact** (**Impact LU-1)**.

The Project would include mitigation measures consistent with the Subarea Plan to address potential direct, significant and unavoidable impacts to sensitive biological resources.

Regional Plans

San Diego Forward: The Regional Plan

The 2015 San Diego Forward: The Regional Plan prepared by SANDAG, includes a set of policy objectives related to habitat and open space preservation, regional economic prosperity, environmental stewardship, mobility choices, partnerships/collaboration and health and complete communities. The Project's consistency with applicable policy objectives is presented in **Table 4.12-2**. As shown in **Table 4.12-2**, the Project would not conflict with the applicable policy objectives of the Regional Plan.

Table 4.12-2
Consistency with SANDAG San Diego Forward – The Regional Plan

Policy Objectives	Consistency
Habitat and Open Space Preservation: Focus growth in areas that are already urbanized, allowing the regional to set aside and restore more open space in our less developed areas. Protect and restore our region's urban canyons, coastlines, beaches, and water resources.	***Consistent:*** The Project would development a CarMax automobile facility on a vacant site located in a primarily developed area surrounded by commercial and residential uses. The Project would be consistent with the zoning and land use designations for the Project Site. Therefore, the Project would provide growth in an already urbanized area. The Project is not located near canyons, coastline, or beaches. The Project would provide a 100-foot riparian buffer on the southern portion of the site. This would include a 50-foot biological buffer as well as a 50-foot planning buffer. This would ensure protection of the Buena Vista Creek.
Environmental Stewardship: Support energy programs that promote sustainability.	***Consistent:*** In accordance with the California Green Building Standards Code Table 5.106.5.3.3, seven (7) EV charging spaces would be provided onsite. The Project would comply with all applicable state and local energy programs and regulations. Designated clean air vehicle parking would be provided within the customer and employee parking lot. Project improvements on Plaza Drive along the Project frontage would include an 8-foot bicycle lane and a 5-foot sidewalk that would connect to the existing sidewalks to the east and west to promote pedestrian and bicycle uses and to provide these connections along the Project Site. The Project would implement irrigation systems with respect to water conservation.

Policy Objectives	Consistency
	Shade trees would be provided within the customer and employee parking lot a lot the parking lot boundaries and within the parking islands. Shade trees have a minimum 24-inch box.
Healthy and Complete Communities: Create great places for everyone to live, work and play.	***Consistent:*** The Project would positively contribute to the City's economy and would generate employment opportunities. The Project would be located near several types of residential uses including medium density residential, high density residential and a senior living facility. The Project would contribute to the complete community of the existing area.

San Diego Air Pollution Control District Rules and Regulations

The Project is located within the SDAPCD. Impacts related to air quality are analyzed in Chapter 4.4 *Air Quality*. The SDAPCD is responsible for enforcing standards and regulating stationary sources of pollution. The Project is subject to the rules and regulations set forth by the SDAPCD. Land use assumptions utilized to prepare the RAQS take into account local land use plans. The Project is consistent with the City land use designation of the Project Site, and therefore the Project emissions are not expected to exceed SDAPCD thresholds.

No significant impacts to air quality have been identified and no mitigation is required, and impacts related to a regional air quality plan will be less than significant.

4.12.5 Mitigation Implementation and Monitoring

Land Use Plan (Impact LU-1)

Mitigation measures MM-BIO-1a through MM-BIO-1c, MM-BIO-2, MM-BIO-3, MM-BIO-4 and MM-BIO-5, MM-BIO-6 and MM-BIO-7 which are presented in Section 4.5.5, will reduce this impact to below a level of significance.

Sensitive Plant Species and Vegetation Communities and Jurisdictional Resources (Impact BIO-1a, Impact BIO-1b, and Impact BIO-1c)

MM-BIO-1a Pre-Construction Mitigation Measures

Pre-Construction Meeting: Prior to construction, a qualified biological monitor will attend the preconstruction meeting, discuss the Project's biological monitoring program with construction contractors, and arrange to perform any follow up mitigation measures and reporting for the proposed Project.

Resource Delineation and Protection Measures: Prior to construction activities, a qualified biological monitor will supervise the placement of orange construction fencing or equivalent along the limits of disturbance adjacent to sensitive biological habitats and verify compliance with any other Project mitigation measures. This pre-construction phase will include flagging sensitive plant species and delineating buffers to protect sensitive biological resources (e.g., habitats, flora and fauna species, nesting birds) during construction activities. In addition, appropriate BMPs will be installed as

applicable to provide fugitive dust control, minimize lighting and noise in adjacent habitats, and avoid the introduction of exotic and invasive plant and animal species into the area. Responsible construction practices as well as storm water and runoff management will also be included as part of the BMPs.

Contractor Environmental Awareness Training: Prior to commencement of construction activities, a qualified biological monitor will meet with all construction contractors to conduct an on-site contractor environmental awareness training to discuss the need to avoid impacts outside of the approved construction area and to protect sensitive flora and fauna (e.g., explain construction limits flagging, discuss sensitive resource flagging, review wetland buffers, clarify acceptable access routes/methods and staging areas).

MM-BIO-1b Construction Measures

Biological Monitoring: During construction, all construction activities, including access and staging, will be restricted to areas previously identified and depicted on the approved Project plans. A qualified biological monitor will monitor construction activities as needed to verify that construction activities do not encroach into biologically sensitive areas and that, if applicable, the mitigation measures developed to accommodate any sensitive species located during the pre-construction surveys are being implemented. The qualified biological monitor will complete a Daily Biological Monitoring Form to document all construction and monitoring activities.

Subsequent Resource Identification: During construction, the qualified biological monitor will note/act to prevent any new disturbances to habitat, flora, and/or fauna on-site (e.g., flag newly identified sensitive resources for avoidance during access). If active nests or other previously unknown sensitive resources are detected, all Project activities that directly impact the resource will be delayed until species-specific local, state, or federal regulations have been determined and applied by the qualified biological monitor.

MM-BIO-1c Post-Construction Measures

Upon completion of Project construction, a post-construction report that summarizes the construction activities, actual Project impacts, and Project design/mitigation measures implemented before and during construction will be prepared for the Project. If Project impacts exceed the approved totals, additional impacts will be mitigated in accordance with the Subarea Plan and other applicable local, state, and federal laws. The qualified biological monitor will submit the post-construction report to the City of Oceanside within 30 days of construction completion.

Sensitive *Brodiaea* Species (Impact BIO-2)

MM-BIO-2 Prior to construction of the Project, focused sensitive plant species surveys of the Project Site shall include general rare plant surveys in addition to focused *Brodiaea* species surveys by a qualified biologist. Rare plant surveys shall be conducted twice, including one in early spring and one in late spring/early summer prior to Project construction in order to document any sensitive plant species that occur within the

Project area. Six (6) focused *Brodiaea* species surveys shall be conducted in spring prior to construction with the timing based on the emergence of the species documented during reference site checks.

If not sensitive plant species are documented within the Project survey area during focused surveys, no additional avoidance, minimization measures or mitigation measures would be required.

If sensitive plant species are documented within the Project survey area, impacts to these species shall be avoided to the extent feasible. Unavoidable impacts shall be minimized and/or mitigated through compensatory measures (e.g., restoration, transplantation, habitat preservation) that will be determined based on the species present, population estimate and significance of the impacts. All significant unavoidable impacts shall require additional mitigation measures to reduce impacts to below a level of significance.

Fairy Shrimp (Impact BIO-3)

MM-BIO-3 Prior to construction of the Project, if construction has not been initiated prior to the 2022/2023 rainy season, additional pre-construction surveys shall be conducted prior to construction initiation in order to update the status of the fairy shrimp species within the Project survey area. Pre-construction fairy shrimp surveys shall be conducted by a qualified biologist in accordance with current USFWS survey guidelines.

If sensitive fairy shrimp species are documented within the survey area, impacts to listed fairy shrimp shall be avoided to the extent feasible. Unavoidable impacts to these species would be considered significant and would require consultation with the USFWS under Section 10(a)(1)(B) of the ESA to develop project-specific minimization and mitigation measures to reduce these impacts to below a level of significance.

Coastal California Gnatcatcher (Impact BIO-4)

MM-BIO-4 Prior to construction of the Project, if construction has not been initiated prior to the 2021 survey season, additional pre-construction surveys shall be conducted prior to construction initiation to determine if coastal California gnatcatcher is present in the Project survey area. Focused coastal California gnatcatcher surveys shall be conducted by a qualified biologist in accordance with current USFWS survey guidelines.

Impacts to coastal California gnatcatcher shall be avoided to the extent feasible. Unavoidable impacts to this species would be considered significant and would require consultation with the USFWS under Section 10(a)(1)(B) of the ESA to develop project-specific minimization and mitigation measures (e.g., construction outside of breeding season, habitat protection, noise attenuation) in order to reduce impacts to a level below significance.

Least Bell's Vireo (Impact BIO-5)

MM-BIO-5 Prior to construction of the Project, if construction has not been initiation prior to the 2021 survey season, additional pre-construction surveys shall be conducted prior to

construction initiation to determine if least Bell's vireo is present in the Project survey area. Pre-construction focused least Bell's vireo surveys shall be conducted by a qualified biologist in accordance with current USFWS survey guidelines.

Impacts to least Bell's vireo shall be avoided to the extent feasible. Unavoidable impacts to this species would be considered significant and would require consultation with the USFWS under Section 10(a)(1)(B) of the ESA to develop project-specific minimization and mitigation measures (e.g., construction outside of breeding season, habitat protection, noise attenuation) to reduce these impacts to below a level of significance.

MBTA-Covered Bird Species (Impact BIO-6)

MM-BIO-6 During construction, all vegetation clearing will occur outside of the breeding season (February 1 to September 15) to avoid impacts to sensitive avian species (e.g., any species identified as a listed, candidate, sensitive, or special status species; any species covered by the MBTA). If vegetation clearing must occur during the breeding season, a qualified biological monitor will conduct a pre-construction survey to determine the presence or absence of nesting birds on the proposed area of disturbance. The pre-construction survey will be conducted no more than four (4) calendar days prior to the start of construction activities (including removal of vegetation). The results of the pre-construction nesting bird survey will be submitted to the City of Oceanside for review and approval prior to initiating any construction activities. If nesting birds are detected, a letter report or mitigation plan will be prepared and will include proposed measures to be implemented to ensure that take of birds or eggs or disturbance of breeding activities is avoided. The report or mitigation plan will be submitted to the City of Oceanside for review and approval and will be implemented to the satisfaction of the City of Oceanside. The qualified biological monitor will verify and approve that all measures identified in the report or mitigation plan are in place prior to and/or during construction.

Disturbed Diegan Coastal Sage Scrub (Impact BIO-7)

MM-BIO-7 Prior to issuance of a building permit, the Project shall mitigate impacts to disturbed Diegan coastal sage scrub within the WCPZ or within a PAMA at a 3:1 ratio. As such, the Project shall preserve 1.224 acres of Diegan coastal sage scrub at an existing mitigation bank or within a PAMA which shall be determined and approved by the City of Oceanside Planning Department.

4.12.6 Level of Significance After Mitigation

The analysis in Section 4.12.4 identified the potential for significant impacts related to compliance with a land use plan. Implementation of mitigation measure MM-BIO-1a through MM-BIO-1c requires specific pre-construction, construction and post-construction requirements for the provision of pre-construction meeting, resource delineation and protection measures, awareness training, biological monitoring, resource identification and post-construction reporting. Compliance with these mitigation measures would provide onsite construction personnel with further information and protocol in the event that sensitive biological resources are identified. Flagging of resources will provide a physical and visual barrier to these sensitive resources, and the presence of a biological monitor will further protect

sensitive biological resources. Compliance with mitigation measure MM-BIO-1a through MM-BIO-1c will reduce impacts to sensitive plant species and vegetation communities and jurisdictional resources to level below significance.

Implementation of mitigation measure MM-BIO-2 would ensure focused sensitive plant species surveys, including *Brodiaea* species surveys are conducted prior to construction, once the 2020 focused surveys are no longer valid. Additional focused surveys will ensure that no new species are located onsite, reducing potential impacts to a less than significant level.

Implementation of mitigation measure MM-BIO-3 will require focused fairy shrimp surveys prior to construction of the Project upon expiration of the 2019/2020 surveys. Pre-construction surveys will ensure that no fairy shrimp species are present onsite before commencement of construction activities. With implementation of MM-BIO-2, impacts related to fairy shrimp will be reduced to levels below significance.

Implementation of mitigation measure MM-BIO-4 will require coastal California gnatcatcher surveys prior to construction, upon expiration of the 2020 focused surveys. Additional pre-construction surveys will ensure that coastal California gnatcatcher species are not present or have the likelihood to be present onsite during construction activities. With implementation of MM-BIO-3, impacts related to coastal California gnatcatcher would be reduced to less than significant levels.

Implementation of mitigation measure MM-BIO-5 will require least Bell's vireo surveys prior to construction of the Project, upon expiration of the 2020 focused surveys. Pre-construction least Bell's vireo surveys will ensure species are not present onsite or have the likelihood to be present onsite during construction activities. With implementation of MM-BIO-4, impacts related to least Bell's vireo would be reduced to a level below significance.

Implementation of mitigation measure MM-BIO-6 will require avoidance of vegetation clearing during the avian breeding season, in order to reduce impacts to sensitive avian species and MBTA-covered species such as Cooper's hawk and yellow warbler. Avoidance of clearing during the breeding season will reduce any impacts to sensitive avian and MBTA-covered species to a level below significance.

Implementation of mitigation measure MM-BIO-7 will require preservation of 1.224 acres of Diegan coastal sage scrub at an existing mitigation bank or Pre-Approved Mitigation Area. Off-site mitigation will offset impacts associated with the unavoidable direct impacts to Diegan coastal sage scrub in accordance with the Subarea Plan. With implementation of mitigation measure MM-BIO-7, impacts to Diegan coastal sage scrub will be reduced to a level below significance. Impacts to biological resources and impacts related to compliance with a land use plan will be less than significant after mitigation incorporated.

Chapter 4.13 MINERAL RESOURCES

4.13.1 Environmental Setting

Mineral resources can be divided into three general categories of which are important to the County. Construction materials such as sand, gravel and crushed rock resources are the most important category of mineral resources economically. Industrial and chemical mineral materials include limestone, dolomite, and marble (except where used as construction aggregate); specialty sands, clays, phosphate, borates and gypsum, feldspar, talc, building stone and dimension stone. Metallic and rare minerals are the third category which includes precious metals (gold, silver and platinum), iron and other ferro-alloy metals, copper, lead, zinc, gemstones and semi-precious materials, and optical-grade calcite.

There are two (2) major areas of mineral deposits within the City located along the northern portion of the City as shown in Figure ERM-5 of the Environmental Resource Management Element of the General Plan. One of these areas, the San Luis Rey River Basin, contains landfill, beach sand (non-construction quality) and construction quality sand suitable for concrete and plaster. The other significant deposits consist of silica sand, primarily used in glass manufacturing.

The County has undertaken a River Sand Resource Study (June 1974). In its report, the sand deposits in the San Luis Rey River Basin comprise of 73.5% of total available deposits accessible to sand procedures. In the City, as part of the North County Market Area, there is one sand producer operating in the floodplain. However, most of the sand deposits are found in the urbanized area within the City and these deposits are classified as “unavailable”. Currently, the more significant mineral extraction operation is found along El Camino Real north of Oceanside Boulevard where silica sand is being extracted by the Crystal Silica Company. The Project Site is not located within an area of mineral deposits within the City as displayed in Figure ERM-5 of the Environmental Resource Management Element or in a mineral resource area as depicted in Figure LU-22 of the Land Use Element.

The California Surface Mining and Reclamation Act (SMARA) of 1975 required the classification of land into Mineral Resource Zones (MRZs), according to the land’s known or inferred mineral resource potential. The City contains land designated in three categories: MRZ-2, MRZ-3 and MRZ-4. MRZ-2 designates areas where adequate information exists to indicate that significant mineral deposits are present or where it was determined that a high likelihood for their presence exists. MRZ-3 areas are those containing mineral deposits whose significance cannot be evaluated from available data. This classification also includes area where both acceptable and unacceptable quality materials are intermixed, usually in layers. MRZ-4 areas are those for which available information is inadequate for assignment to any other MRZ zone. The Project Site currently holds an MRZ-3 designation, which indicates that there are no known mineral resources present on the Project Site.

4.13.2 Regulatory Setting

State

Surface Mining and Reclamation Act of 1975

Urban preemption of prime mineral deposits and conflicts between mining and other uses throughout California led to passage of SMARA, which establishes policies for the conservation, development, and reclamation of mineral lands and contains specific provisions for the classification of mineral lands by

the State Geologist. The SMARA requires all cities and counties to incorporate in their general plans the mapped designations approved by the Division of Mines and Geology. These designations are to include lands categorized as MRZs. MRZ classifications are used to communicate information concerning the existence of mineral resources.

Local

City of Oceanside General Plan

The General Plan Environmental Resource Management Element is designed to conserve natural resources and is founded on the principles of conservation, preservation, planned management and wise utilization of natural resources. An objective of the Environmental Resource Management Element is to regulate mineral extraction activities to minimize hazards and conflicts with other land uses as well as to preserve and enhance the appearance of the area.

The Land Use Element of the General Plan contains the following policies related to Mineral Resources:

3.31 Mineral Resource Areas

Objective: To provide for the conservation and development of mineral deposits of local and regional significance and to allow the environmentally sensitive extraction of said deposits while minimizing land use conflicts.

Policy A: Mining operations shall be restricted to the following areas which contain mineral deposits determined to be of regional significance by the State Mining and Geology Board pursuant to the California Surface Mining and Reclamation Act of 1975 and those found to be essential to the economic well-being of the City (see Figure LU-22).

Policy B: Mineral Resource Areas shall remain in effect until the resource has been depleted or no longer exists in sufficient quantity or quality to be of benefit to the City and/or the region.

Policy C: The City shall not approve, extend, or amend any permit for mining operations that are not located within designated mineral resource areas.

4.13.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state;
b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

4.13.4 Project Impact Analysis

Would the Project:

a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

The Project is located in a primarily developed, urbanized area surrounded by a commercial center to the west, the DMV and medium-density residential to the east, SR-78 directly north and Buena Vista Creek, high density residential uses for a senior living facility and OFD station to the south. The City has land designated in the MRZ-2, MRZ-3 and MRZ-4 categories as depicted in the County of San Diego Guidelines for Determining Significance – Mineral Resources, Figure 2 (County of San Diego, 2007). The Project Site has an MRZ-3 designation, which indicates that there are no known mineral resources present on the Project Site. Additionally, the Project Site is not located in an area having probable construction quality sand, non-construction quality sand or silica sand as mapped in the Environmental Resource Management Element of the General Plan. Furthermore, the Project Site is not located in a Mineral Resource Area as depicted in the Land Use Element of the General Plan.

The Project would not result in the loss of availability of a known mineral resource that would be of value to the region and residents of the state and therefore **no impact** will occur.

b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

The Project Site is designated as MRZ-3 designation which indicates that there are no known mineral resources present as depicted in the County of San Diego Guidelines for Determining Significance – Mineral Resources, Figure 2 (County of San Diego, 2007). The Project Site is not a mineral resource recovery site and it is located outside of the major areas identified as having mineral deposits by the City of Oceanside General Plan Environmental Resource Management Element and Land Use Element.

The Project would not result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan, and therefore **no impact** will occur.

4.13.5 Mitigation Implementation and Monitoring

No significant impacts to mineral resources have been identified and therefore no mitigation measures are required.

4.13.6 Level of Significance After Mitigation

Project impacts to mineral resources will be less than significant.

Chapter 4.14 NOISE

The following document was used in the preparation of this section and is included in its entirety in **Appendix M:**

Ldn Consulting, Inc. March 25, 2020. *Noise Study CarMax Auto Store City of Oceanside, CA.*

4.14.1 Environmental Setting

Noise Characteristics and Descriptors

Sound is mechanical energy transmitted by pressure waves in a compressible medium, such as air. Noise is defined as unwanted sound which interferes with or disrupts normal daily activities. Sound levels are measured in units called decibels (dB). Sounds heard by humans generally consist of multiple frequencies. The A-weighted decibel scale is (dBA) is used to evaluate sounds, which reflects how the human ear responds to different sound levels at different frequencies.

Several descriptors of noise exist to help predict average community reactions to the adverse effects of environmental noise, including traffic-generated noise. To evaluate the long-term characteristics of sound, accounting for the variability in sound levels over time, a mathematical average is taken for a given time interval. This time-averaged sound level over a specific period of time is called a noise equivalent level (L_{eq}). Maximum sound level (L_{max}) is the greatest sound level measured during a designated time interval or event. The minimum sound level (L_{min}) is the minimum sound level and is often called the floor of a measurement period.

The day-night average noise level (L_{dn}) and community noise equivalent level (CNEL) represent 24-hour periods that apply a time-weighted factor designed to emphasize noise events that occur during the non-daytime hours. CNEL penalizes noise that occurs during certain sensitive periods. Noise occurring during the daytime (7:00 a.m. to 7:00 p.m.) receives no penalty. Noise during the evening (7:00 pm to 10:00 pm) is penalized by added 5 dB and nighttime (10:00 p.m. to 7:00 a.m.) noise is penalized by adding 10 dB. L_{dn} differs from CNEL in that the daytime period is longer (7:00 a.m. to 10:00 p.m.). L_{dn} and CNEL are the predominant criteria used to measure roadway noise affecting residential and sensitive receptors.

Vibration Fundamentals

Vibration is oscillatory movement of mass over time. It is described in terms of frequency and amplitude and, unlike sound, can be expressed as displacement, velocity or acceleration. For environmental studies, vibration is often studied as a velocity that, akin to the discussion of sound pressure levels, can also be expressed in dB as a way to cast a large range of quantities into a more convenient scale. Vibration impacts to buildings are generally discussed in terms of inches per second (ips) peak particle velocity (PPV). Common sources of vibration within communities include construction activities and railroads.

Groundborne vibration generated by construction projects is usually highest during pile driving, rock blasting, soil compacting, jack hammering, and demolition-related activities where sudden releases of subterranean energy or powerful impacts of tools on hard materials occur. Depending on their distances to a sensitive receptor, operation of large bulldozers, graders, loaded dump trucks, or other heavy

construction equipment and vehicles on a construction site also have the potential to cause high vibration amplitudes.

Project Site Noise

Noise measurements were taken on January 13, 2020 by Ldn Consulting, Inc. in the afternoon hours using a Larson-David Model LxT Type 1 precision sound level meter. The sound level meter and microphone were mounted to a tripod, five (5) feet above the ground and equipped with a windscreen during all measurements. Ambient noise consisted of primarily of traffic noise along the adjacent roadway. **Table 4.14-1** displays the ambient noise levels for the Project Site. The ambient L_{eq} noise levels measured in the area for the Project during the early afternoon were found to be between 57 and 73 dBA L_{eq}.

Table 4.14-1
Ambient Noise Levels

Measurement Identification	Primary Noise Source	Time	Noise Levels (dBA)					
			L_{eq}	L_{max}	L_{min}	L10	L50	L90
M1	State Route 78	3:00 – 3:15 pm	61.8	73.1	57.4	63.1	60.5	59.3
Source: Noise Study Prepared by Ldn Consulting, Inc. (Appendix M)								

4.14.2 Regulatory Setting

Federal

Noise Control Act

In 1972, Congress enacted the Noise Control Act. The Act authorized the U.S. EPA to establish a means for effective coordination of federal research and activities in noise control, establish federal noise emission standards for products distributed in commerce, and provide information to the public about the noise reduction characteristics of such products.

Federal Transit Administration

In its Transit Noise and Vibration Impact Assessment Manual, the Federal Transit Administration (FTA) recommends a daytime construction noise level threshold of 80 dBA L_{eq} over an eight-hour period when detailed construction noise assessments are performed to evaluate potential impacts to community residences surrounding a project (FTA 2018). Although the FTA guidance is not a regulation, it can serve as a quantified standard in the absence of such limits at the state and local jurisdictional levels.

State

California Code of Regulations, Title 24

According to Title 24 (Part 2, Volume 1, Chapter 12 – Interior Environment, Section 1206.4), interior noise levels attributed to exterior noise sources are not to exceed 45 dBA CNEL for any habitable room. . The "State Noise Insulation Standard", as it is referred to, requires buildings to meet performance

standards through design and/or building materials that would help to reasonably offset any significant noise source in the receptor's vicinity.

California Department of Transportation

In its Transportation and Construction Vibration Guidance Manual, Caltrans recommends a vibration velocity threshold of 0.2 ips PPV for assessing vibration impacts to occupants of residential structures. Although this Caltrans guidance is not a regulation, it can serve as a quantified standard in the absence of such limits at the local jurisdictional level.

Local

County of San Diego Noise Ordinance Code

The County of San Diego Noise Ordinance Code states that with the exception of an emergency, it should be unlawful to conduct any construction activity so as to cause, at or beyond the property lines, an average sound level greater than 75 dB between the hours of 7:00 am and 7:00 pm. The City relies on this standard in absence of a City property line noise standard for construction, as provided in the Noise Study prepared by Ldn Consulting, Inc. (**Appendix M**).

City of Oceanside Noise Control Ordinance

The OMC Chapter 38 includes a Noise Control Ordinance which identifies acceptable noise levels within the community. Section 38.12 of the Noise Control Ordinance establishes general sound level limits for various zoning districts and shown in **Table 4.14-2**. For commercial zones, noise levels are not to exceed 65 dBA from the hours of 7:00 a.m. to 9:59 p.m. and 60 dBA from 10:00 p.m. to 6:59 a.m.

Table 4.14-2
Noise Level Limits by Base District Zone

Base District Zone	Applicable Limit (dB)	Time Period
RE (Residential Estate)	50 45	7:00 a.m.to 9:59 p.m. 10:00 p.m. to 6:59 a.m.
RS (Single-Family)	50 45	7:00 a.m. to 9:59 p.m. 10:00 p.m. to 6:59 a.m.
RM (Medium Density)	50 45	7:00 a.m. to 9:59 p.m. 10:00 p.m. to 6:59 a.m.
RH (High Density)	55 50	7:00 a.m. to 9:59 p.m. 10:00 p.m. to 6:59 a.m.
RT (Residential Tourist)	55 50	7:00 a.m. to 9:59 p.m. 10:00 p.m. to 6:59 a.m.
C (Commercial)	65 60	7:00 a.m. to 9:59 p.m. 10:00 p.m. to 6:59 a.m.
I (Industrial)	70 65	7:00 a.m. to 9:59 p.m. 10:00 p.m. to 6:59 a.m.
D (Downtown)	65 55	7:00 a.m. to 9:59 p.m. 10:00 p.m. to 6:59 a.m.
A (Agricultural)	50 45	7:00 a.m. to 9:59 p.m. 10:00 p.m. to 6:59 a.m.
OS (Open Space)	50	7:00 a.m. to 9:59 p.m.

	45	10:00 p.m. to 6:59 a.m.
Source: City of Oceanside Municipal Code Section 38.12		

Construction activities are subject to Section 38.17 of the Noise Control Ordinance, which specifically prohibits the operation of any pneumatic or air hammer, pile driver, steam shovel, derrick, steam, or electric hoist, parking lot cleaning equipment, or other appliance, the use of which is attended by loud or unusual noise, between the hours of 10:00 p.m. and 7:00 a.m..

Section 38.16 of the Noise Control Ordinance prohibits nuisance noise as recommended in the City's General Plan Noise Element. It is unlawful for any person to make, continue, or cause to be made or continued within the limits of the City any disturbing, excessive, or offensive noise that causes discomfort or annoyance to reasonable persons of normal sensitivity. The Noise Control Ordinance Section 35.15 provides that construction maintenance or other public improvement activities by government agencies or public utilities may be exempt from the noise level limits upon the City manager determination that the authorization furthers the public interest.

The Noise Ordinance is the City's principal tool in in implementing the goals and policies of the General Plan's Noise Element.

City of Oceanside General Plan

The General Plan Noise Element contains policies for minimizing unnecessary noises and establishing standards for maximum noise levels in the City. The Noise Element provides the following limitations on construction noise:

1. It should be unlawful for any person within any residential zone of 500 feet there from to operate any pile driver, power shovel, pneumatic, power hoist, or other construction equipment between 8:00 p.m. and 7:00 a.m. generating an ambient noise level of 50 dBA at any property line unless an emergency exists.

2. It should be unlawful for any person to operate any construction equipment at a level in excess of 85 dBA at 100 feet from the source.

3. It should be unlawful for any person to engage in construction activities between 6:00 p.m. and 7:00 a.m. when such activities exceed the ambient noise level by 5dBA. A special permit may be granted by the Director of Public Works if extenuating circumstances exist.

In addition, the Noise Element addresses nuisance noise and states that it should be unlawful for any person to make or continue any loud, unnecessary noise that causes annoyance to any reasonable person of normal sensitivity.

Further, the General Plan Noise Element outlines goals, objectives, and noise policies as follows:

Goal: To minimize the effects of excessive noise in the City of Oceanside

Objective: To protect the residents and visits to Oceanside from noise pollution. To improve the quality of Oceanside's environment.

Policies:

- Noise levels shall not be so loud as to cause danger to public health in all zones except manufacturing zones where noise levels may be greater.

- Noise shall be controlled at the source where possible.

- Noise shall be intercepted by barriers or dissipated by space where the source cannot be controlled.

- Noise shall be reduced from structures by the use of soundproofing where other controls fail or are impractical.

- Noise levels shall be considered in the approval of any projects or activities, public or private, which require a permit or other approval from the City.

- Noise levels shall be considered in any changes to the Land Use and Circulation Elements of the General Plan.

- Noise levels of City vehicles, construction equipment, and garbage trucks shall be reduced to acceptable levels.

4.14.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would result in:

a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
b. Generation of excessive groundborne vibration or groundborne noise levels;
c. For a project located within the vicinity of a private airstrip or an airport land use plan, or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

4.14.4 Project Impact Analysis

Would the Project result in:

a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Construction Noise

Construction noise is short-term in nature and varies from hour to hour and day to day, depending on the equipment in use, the operations performed, and the distance between the source and receptor. Equipment that would be in use during construction for site preparation and grading would include dozers, tractors, loaders, backhoes, water truck, excavators, graders, pavers, rollers, cranes, forklifts,

generators, welders and air compressors. Grading activities typically represent one of the highest sources of noise impacts. Site preparation and grading is estimated to occur over approximately six (6) weeks. Due to normal site preparation operations, most of the equipment will be spread out over the Project Site. All residential uses within the Project vicinity are located more than 330 feet from all site preparation activities. **Figure 17** displays the locations to the nearest sensitive noise receptors.

Construction for the entire Project includes utility infrastructure, facilities, improvements and structures and estimated construction noise levels are provided in **Table 4.14-3.** As shown in **Table 4.14-3**, if all construction equipment was working in the same area, at a distance as close as 330 feet, the point source noise attenuation from the construction activities and the nearest property line is -16 dBA.

Table 4.14-3
Construction Noise Levels

Equipment Type	Quantity Used	Source @ 50 Feet (dBA)	Cumulative Noise Level @ 50 Feet (dBA)
Tractor/Backhoe/Loader	3	72	77
Grader	1	73	73
Roller	1	74	74
Water Truck	1	70	70
Dozer	1	74	74
		Cumulative Level (dBA)	**82**
		Distance to Separation (Feet)	**330**
		Noise Reduction due to Distance (dBA)	**-16**
		Property Line Noise Level (dBA)	**66**
Source: Noise Study Prepared by Ldn Consulting, Inc. (Appendix M)			

As displayed in **Table 14.4-3**, if all equipment were working in the same area, at a distance as close as 330 feet, at worst case scenario, Project construction would result in an eight-hour average of 66 dBA at the property line. Construction equipment for the Project would not operate any construction equipment at a level in excess of 85 dBA at 100 feet from the source in accordance with the City standard. In absence of a City standard for property line construction noise the City relies on the County of San Diego standard of 75 dBA L_{eq}. The Project would also meet the County's standard for construction activities at or beyond a property line not to exceed 75 dBA.

Project construction would not generate a substantial temporary increase in ambient noise levels in excess of local standards, and impacts are **less than significant**.

R·E·C Consultants, Inc.

Noise Sources

NOT TO SCALE

FIGURE 17

CARMAX AUTO SUPERSTORE OCEANSIDE EIR

Source: Ldn Consulting Inc, (03/25/2020)

October 2020

Operation Noise

Operation of the Project includes used car sales, vehicle service work including a car wash, truck deliveries of vehicles parts and supplies and customer vehicle trips including customer test drives. The Project would also include rooftop mechanical heating, ventilation and air conditioning units (HVAC) which would be installed within the proposed buildings. The proposed HVAC units would be screened by a prefinished metal rooftop unit screen. Reference noise levels for the proposed carwash and HVAC unit were utilized in calculating the operational noise levels. **Table 4.14-4** displays the operational noise levels at the southern property line located approximately 330 to 410 feet from sensitive receptors.

The Project Site is zoned commercial which allows an equivalent one-hour sound level of 65 dBA L_{eq} between the hours of 7:00 a.m. and 9:59 p.m. and 60 dBA from 10:00 p.m. to 6:59 a.m. at the property line. To the west and east of the Project Site are commercial uses with residential uses to the east and south. Residential uses allow an equivalent one-hour sound level of 50 dBA L_{eq} between 7:00 a.m. and 9:59 p.m. and 45 dBA from 10:00 p.m. to 6:59 a.m. at the property line. Since the Project Site is surrounded by residential and commercial zones, the arithmetic mean of the sound level standards is used. The hours of operation of the Project facility would be between the daytime hours and therefore the arithmetic mean of the daytime standards was used (57.5 L_{eq}).

Table 4.14-4
Operational Noise Levels – Southern Property Line

Source	Distance from Source (Feet)	Measured Noise Level (dBA)	Distance to Nearest Property Line (Feet)	Noise Reduction due to Distance (dBA)	Resultant Noise Level @ Property Line (dBA)
Vacuum Equipment	3	81.8	330	-40.8	16.5
Carwash Entrance	9	84.3		-31.3	38.1
Carwash Exit (Blowers)	9	84.5		-31.3	38.3
HVAC West Building	6	65.9		-34.8	12.7
HVAC East Building	6	65.9		-34.8	12.7
Cumulative Noise Level @ Property Line (dBA)					**41.3**
Source: Noise Study Prepared By Ldn Consulting, Inc. (Appendix M)					

Based on the information in **Table 4.14-4**, property line noise levels would result in 41.3 dBA and would not exceed the City's property line noise standards for both commercial and residential uses.

The Project would not generate substantial permanent increase in ambient noise levels in the vicinity of the Project in excess of local standards, and impacts related to operational noise are **less than significant.**

Off-Site Transportation Noise Levels

The Project is located south of SR-78 and therefore, impacts related to noise levels from the existing freeway were analyzed. For the purpose of this analysis, a direct roadway impact would be considered significant if the Project increases noise levels for a noise sensitive land use by 3 dBA CNEL and if the Project increases noise levels above an unacceptable noise level per the City's General Plan in the area adjacent to the roadway segment. To determine if direct cumulative off-site noise level increases

associated with the development of the Project would create noise impacts, the traffic volumes for the existing conditions were compared to the traffic volumes increase of the existing plus Project.

A Vehicle Miles Traveled Analysis (**Appendix N**) was prepared for the Project by LOS Engineering, Inc. estimated that the Project would generate 475 ADT which includes customer test drives of inventory vehicles. The existing ADT volumes along Thunder Drive between Plaza Drive and Tiberon Drive are 9,100 ADT and 7,631 ADT between Tiberon Drive to Lake Boulevard. The Project would result in the traffic volumes to increase to 10,255 ADT and 7,796 ADT along those two (2) segments, respectively. As stated in the Noise Study (**Appendix M**), in order for traffic volumes to have a direct impact of 3 dBA CNEL or be a major contributor to cumulative traffic volumes, a project would have to double the traffic existing volumes. The Project would result in an increase in the noise levels by less than 0.5 dBA. Therefore, the anticipated traffic volumes as a result of the Project would increase, but not in the amount resulting in an increase of 3 dBA or greater.

Impacts related to off-site transportation impacts are **less than significant.** The Project would not generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the General Plan or Noise Ordinance, or applicable standards of other agencies. Impacts are **less than significant.**

b. Generation of excessive groundborne vibration or groundborne noise levels?

Construction Groundborne Vibration and Noise

Common sources of groundborne vibration are trains, buses on rough roads, and construction activities. Construction activities have the potential to expose people to excessive groundborne vibration or groundborne noise during site preparation and grading. Vibration impacts from construction activities would typically be created from the operation of heavy duty off-road equipment. Construction activity would result in varying degrees of ground vibration, depending on the equipment used on the site. Operation of construction equipment causes groundborne vibrations that spread through the ground and diminish in strength with distance. Due to normal site preparation operations, most of the equipment will be spread out over the Project Site. All residential uses within the Project vicinity are located more than 330 feet from all site preparation activities, as described in the Noise Study (**Appendix M**).

Using the methodology prescribed by Caltrans, the ground vibration produced by a large bulldozer at the property line of the site to the nearest residence (330 feet) would produce a peak particle velocity of 0.0019 ips PPV. Caltrans recommends a vibration velocity threshold of 0.2 ips PPV for assessing vibration impacts to occupants of residential structures. Therefore, the Project would not generate excessive groundborne vibration during construction activities.

Additionally, in accordance with City regulations, construction activities would be limited to the hours of 7:00 a.m. to 6:00 p.m. Monday through Friday and 7:00 a.m. to 6:00 p.m. on Saturday for work that is not inherently noise-producing and that would not disrupt normal hours of sleep. Compliance with City construction hour regulations would further reduce vibration impacts to nearby sources. As discussed above, construction noise levels would reach 66 dBA and would not exceed City standards for construction and operational noise levels or County standards for property line noise during construction activities.

The Project would not generate excessive groundborne vibration or groundborne noise during construction, and impacts are **less than significant.**

Operational Groundborne Vibration and Noise

Once operational, the Project would include vibration and noise associated with used car sales, vehicle service work including a car wash, truck deliveries of vehicles parts and supplies and customer vehicle trips including customer test drives. Project operation would also include rooftop HVAC systems on the sales and service buildings. Anticipated HVAC systems would be designed and manufactured to feature rotating and reciprocating components that are well-balanced with isolated vibration within or external to the equipment casings to reduce vibration. As stated above, common sources of groundborne vibration include trains, buses on rough roads, and construction activities. Operation activities related to the sales and service buildings and carwash are not uses typically associated with excessive groundborne vibrations.

Impacts related to operational groundborne vibration and noise will be **less than significant.**

c. For a project located within the vicinity of a private airstrip or an airport land use plan, or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?

No private airstrips are located within the vicinity of the Project Site. The Project is located approximately 4.2 miles southeast of the Oceanside Municipal Airport; however, the Project Site is not located within the Oceanside Municipal Airport Influence Area or any of the safety zones displayed in the Oceanside Municipal ALUCP.

The Project is not located within the vicinity of a private airstrip or an airport land use plan and therefore would not expose people residing or working in the project area to excessive noise levels, and therefore, **no impact** will occur.

4.14.5 Mitigation Implementation and Monitoring

No significant impacts to noise have been identified and therefore, no mitigation measures are required.

4.14.6 Level of Significance After Mitigation

Impacts related to noise from the implementation of the Project will be less than significant.

Chapter 4.15 POPULATION AND HOUSING

4.15.1 Environmental Setting

City of Oceanside

Population

The City is located in the northwestern most part of the County, which includes a total of 18 cities and unincorporated land and has a total population of 3,343,364 persons (USCB 2018) within the County. The City occupies approximately 42 square miles and has a population of 176,080 (USCB 2018) and comprises approximately 5% of the population of the County.

During the 15-year period from 2000 to 2015, population growth occurred at a slower rate in the City (9.1%) than the County (17.3%). SANDAG contains projections that population growth will increase the greatest in 2020, but will then slowly decrease back to the relatively low population growth that has been typical within the City in the last 20 years. Based on the Series 13 Regional Growth Forecast for the City, provided by SANDAG, the anticipated total population by 2050 is 190,129. This is a 13.6% increase from 2010 to 2050.

Housing

According to the California Department of Finance, the City had 65,117 housing units in May 2016. A majority of the total housing units are single-family which comprises approximately 64.5% of the total housing units, reflecting the City's family-oriented population and suburban neighborhoods character. Multi-family units make up approximately 31% of the total units, while mobile homes account for the remaining 5% of total housing units.

Project Area

The Project Site is located in the southeastern portion of the City, south of SR-78, east of College Boulevard, and west of Thunder Drive. The Project Site is located in a primarily developed, urbanized area and is surrounded by commercial uses to the west, including the Tri-City Crossroads shopping center and auto repair shops. To the east are medium density residential uses as well as a DMV facility at the corner of Plaza Drive and Thunder Drive. To the north is SR-78 and further north are professional commercial uses. To the south are Buena Vista Creek, high density and residential estate uses including a senior living facility, and commercial and public/semipublic uses including an OFD station.

4.15.2 Regulatory Setting

Regional

San Diego Association of Governments Regional Comprehensive Plan

SANDAG's RCP serves as the long-term planning framework for the San Diego region. The primary goals of the RCP are to improve the standard of living, enhance the quality of life, promote social and economic equity, improve the region's sustainability and encourage "smart growth". Issues addressed in

the RCP include urban form, transportation, housing, healthy environment, economic prosperity, public facilities and border issues.

Regional Housing Needs Assessment

Each regional government in California receives a Regional Housing Needs Assessment (RHNA) approximately every eight (8) years and consists of the projected housing needs for the entire region over the eight (8) year period. SANDAG is responsible for distributing the total RHNA throughout the region by adopting methodology and RHNA Plan for the projection period pursuant to Government Code Section 65584(d).

Local

City of Oceanside General Plan Land Use Element

The Land Use Element of the General Plan and associated land use maps identify the type and location of future land uses within the City. The specific land uses in turn affect the remaining General Plan elements. The following objectives and policies guide population and housing within the City:

1.01 General Plan Consistency

Objective: To ensure all projects are consistent with the General Plan

Policy A: Tentative Maps, Development Plans and Conditional Use Permits approved prior to the adoption of this Element and exercised thereafter without modification, revision, amendment, or extension shall be considered consistent with this Element.

1.16 Housing

Objective: To ensure that decent, safe and sanitary housing is available to all current and future residents of the community at a cost that is within reach of the diverse economic segments of Oceanside.

Policy A: The City shall strive to maintain a reasonable balance between rental and ownership housing opportunities, between senior and family housing and encourage a variety of individual choices of tenure, type, and location of housing throughout Oceanside.

Policy B: The City shall strive to produce opportunities for decent and affordable housing in a pleasant environment for all of Oceanside's citizens.

Policy C: The City shall ensure that housing is developed in areas with adequate access to employment opportunities, community facilities, and public services.

Policy D: The City shall encourage development of a variety of housing opportunities, with special emphasis on providing:

1. A broad range of housing types, with varied levels of amenities and number of bedrooms;

2. Sufficient rental stock for all segments of the community, including families with children; and
3. Housing which meets the special needs of the elderly and the handicapped.

Policy E: The City shall protect, encourage, and where feasible, provide housing opportunities for persons of low and moderate income.

Revision Housing 1.16: The City of Oceanside 2000 Housing Element contains more specific policy statements and programs for the implementation of these overall policies.

2.3 Residential Development

Objective: To direct and encourage the proper type, location, timing, and design of housing to benefit the community consistent with the enhancement and establishment of neighborhoods and a well-balanced and organized City.

2.32 Potential Range of Residential Densities

Policy A: The base density shall be considered the appropriate density for development within each residential land use designation.

Policy B: Residential projects that possess an excellence of design features shall be granted the ability to achieve densities above the base density. Project characteristics that exceed standards established by City policy and those established by existing or approved developments in the surrounding area will be favorably considered in the review of acceptable density within the range. Such characteristics include, but are not limited to the following:

1. Infrastructure improvements beyond what is necessary to serve the Project and its population.
2. Lot standards (i.e. lot area, width, depth, etc.) which exceed the minimum standards established by City policy.
3. Development standards (i.e. parking, setbacks, lot coverage, etc.) which exceed the standards established by City policy.
4. Superior architectural design and materials.
5. Superior landscape/hardscape design and materials
6. Superior recreation facilities or other amenities.
7. Superior private and/or semi-private open space areas.
8. Floor areas that exceed the norm established by existing or approved development in the surrounding area.
9. Consolidation of existing legal lots to provide unified site design.
10. Initiation of residential development in areas where nonconforming commercial or industrial uses are still predominant.
11. Participation in the City's Redevelopment, Housing or Historical Preservation programs.
12. Innovative design and/or construction methods that further the goals of the General Plan.

Policy C: Residential projects with densities below the base shall be considered to be consistent with the land use designation.

City of Oceanside General Plan Housing Element

State law recognizes the vital role local governments play in the supply and affordability of housing. Each local government in California is required to adopt a comprehensive, long-term General Plan for the physical development of the city or county. The Housing Element is one of seven mandated elements of the General Plan. As mandated by state law, the planning period for the current Housing Element extends from April 30, 2013 to April 30, 2021. This element identifies strategies and programs that focus on the following major goals:

- Facilitate the development of a variety of housing types for all income levels to meet the existing and future needs of residents, including the homeless and persons with special needs;
- Address, and where appropriate and legally possible, remove governmental constraints to the maintenance, improvement and development of housing;
- Maintain and enhance the quality of existing residential neighborhoods;
- Promote equal housing opportunities for all persons regardless of race, color, national origin, ancestry, religion, sex, marital status, or familial status;
- Encourage new housing growth patterns that conform to local, regional and state policies for sustainable development and energy use.

4.15.3 Thresholds of Significance

Based on Appendix G of the CEQA guidelines, impacts would be considered significant if the Project would:

a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure);
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere.

4.15.4 Project Impact Analysis

Would the Project:

a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

The Project proposes the construction of a CarMax pre-owned automobile facility on a vacant parcel located in a developed area. The Project Site is designated and zoned CC by the General Plan and by the Zoning Ordinance and the proposed CarMax facility is an allowable use under these designations.

The Project does not include the construction of any new residential development. The Project would serve existing residences in the region and is unlikely to cause significant growth due to the nature of the development.

Therefore, implementation of the Project would not directly or indirectly induce substantial unplanned population growth in the area, and **no impact** will occur.

b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

The Project would construct a CarMax pre-owned automobile facility on a vacant parcel located in a developed area surrounded primarily by residential and commercial developments. The Project would comply with the land use and zoning designations for the site. The site is vacant and is categorized as disturbed land.

The Project would not displace substantial numbers of existing housing or people necessitating the construction of replacement housing elsewhere, and **no impact** will occur.

4.15.5 Mitigation Implementation and Monitoring

No significant impacts to population and housing have been identified and therefore, no mitigation measures are required.

4.15.6 Level of Significance After Mitigation

No impact to population and housing will occur as a result of the Project.

Chapter 4.16 PUBLIC SERVICES

The following document was used in the preparation of this section and is included in **Appendix R**:

Armijo, F. 2020. Email from F. Armijo (City of Oceanside Fire Department) to R. Del Rosario (REC Consultants, Inc.). March 19, 2020.

4.16.1 Environmental Setting

Fire Protection

The Project Site is within the boundary of the City and under the jurisdiction of the Oceanside Fire Department (OFD). The City currently has eight (8) operational fire stations. The Project would be served by Fire Station 4 located at 3990 Lake Boulevard, approximately 0.1 mile south of the Project Site. The OFD's response times vary within the City, with the current goal being to provide an average maximum initial response time of no more than six minutes (6) and twenty (20) seconds in accordance with the National Fire Protection Association's National Standard (1710) (TriData, 2012). The average response time for OFD was six (6) minutes and thirty-eight (38) seconds in 2015, according to a 2015 Annual Report issued by the Department (Oceanside, 2015). The City benefits from the boundary-drop system in the northern portion of the County where the closest emergency unit responds to a call regardless of political jurisdiction. However, given the close proximity from the Project Site to Fire Station 4, response times in the event of an emergency are anticipated to be short. Discussions regarding wildfire and potential impacts as a result of the Project are addressed in Chapter 4.21 *Wildfire.*

Police Protection

Police protection is provided by the City of Oceanside Police Department (OPD) which operates out of their station located at 3855 Mission Ave, approximately five (5) miles northwest of the Project Site. The Department's current goal is to provide a maximum response time of five (5) minutes for all Priority I and II emergency service calls. The following are the approximate response times for emergency and non-emergency calls in the Project area (Armijo, 2020):

- 5.47 minutes for Priority I – Emergency
- 8.43 minutes for Priority II – Timing Critical/Felony Just Occurred
- 25.84 minutes for Priority III – Non-Violent/Misdemeanor Just Occurred
- 38.24 minutes for Priority IV – Routine Calls for Service

OPD has 228 sworn and 84 professional staff members. The City's 2018 estimated population is 176,080 and therefore, the City currently has an officer-to-citizen ratio of one to 564.7.

Schools

The Project Site is located within the boundaries of the Carlsbad Unified School District. It is located within the attendance boundaries of Calavera Hills Elementary School, Calavera Hills Middle School, Carlsbad High School and Sage Creek High School.

Calavera Hills Elementary School, serving grades K-5, is located at 4100 Tamarack Avenue. In 2018, student enrollment was 472 students, the operational capacity was 621 students and the maximum capacity was 729 students (WLC, 2018).

Calavera Hills Middle School, serving grades 5-8, is located at 4104 Tamarack Avenue. In 2018, student enrollment was slightly above capacity with 574 students enrolled at an operational capacity of 567 students. Maximum capacity was 702 students. Student enrollment is projected to increase over the next five (5) years, and then decrease to return to current enrollment numbers (WLC, 2018).

Carlsbad High School, serving grades 9-12, is located at 3557 Monroe Avenue. In 2018, student enrollment was 2,336 students. The operational capacity was 2,430 students and the maximum capacity as 2,700 students. Over the next 10 years, enrollment is expected to increase, and then decrease to slightly below current numbers (WLC, 2018).

Sage Creek High School, serving grades 9-12, is located at 3900 Cannon Road. In 2018, student enrollment was 1,258 students. The operational capacity was 1,431 students and maximum capacity was 1,539 students. Enrollment is expected to stay more or less the same, and slightly decline by 2027 (WLC, 2018).

Parks

There are no existing designated parks or other recreational facilities within the Project Site area. The nearest existing designated park or other recreation facilities are John Landes Recreation Center, located approximately one (1) mile north of the Project Site and Calavera Hills Community Park, located approximately two (2) miles southwest of the Project Site.

Library

The Project is located approximately 5.3 miles southeast of the Oceanside Public Library, located at 330 North Coast Highway. The Mission Branch of the Oceanside Public Library is located at 3861-B Mission Avenue, approximately 3.7 miles northwest of the Project Site. The Library also operates the READS Literacy Center located at 321 N. Nevada Street, approximately 5.3 miles northwest of the Project Site. The Library offers Bookmobile services at Libby Lake Park, John Landes Park, Rancho Del Oro Park, Balderrama Recreation Center, Crown Heights Resource Center and Libby Lake Community Center.

4.16.2 Regulatory Setting

State

California Health and Safety Code, Section 13000, Division 12

The California Health and Safety Code Section 13000, Division 12 – Fires and Fire Protection sets forth state fire regulations concerning building standards, fire protection devices such as extinguishers and smoke alarms, fire notification and protection systems, and standards for high-rise buildings and childcare facilities.

California Code of Regulations Title 24, Part 2 and Part 9

The California Code of Regulations, Title 24, Part 2 provides the California Building Code, which contains general construction building standards including fire, life safety, and field inspection provisions. Part 9 is the California Fire Code, which includes fire safety-related building standards.

Local

City of Oceanside General Plan

General Plan Community Facilities Element provides direction for the provision of adequate public facilities necessary to serve the existing and future developed areas of the City in a coordinated and cost effective manner. Within the Community Facilities Element are subsections on Fire Department Facilities, Police Facilities, and Park and Recreation Facilities. These subsections outline specific policies and objectives to ensure acceptable service levels and adequate provision of these facilities. Specific services standards include:

- A five (5) minute response time from fire stations to all developed areas within the City of Oceanside;
- A maximum response time for paramedic units of eight minutes in urban areas and 15 minutes in rural areas, 85% of the time;
- A maximum police response time of five minutes for all Priority I and II emergency service calls.

City of Oceanside Municipal Code Chapters 32 B, C and D

The OMC Chapter 32B stipulates that as a condition of approval of development projects, impact fees shall be imposed to offset impacts to public facilities. The term "public facilities" includes all governmental facilities specified in the adopted elements of the City's General Plan, including the Community Facilities Element. This includes fire, police, library, and administrative facilities.

The OMC Chapter 32C requires as a condition of new development that developers of projects in the City contribute funds to insure adequate provision of public facilities and improvements within the City, including: libraries; administrative space/civic center; police records/management; corporation yard; and fire protection to meet new development's share of costs for facilities needed to meet the level of service standard as identified in the City's long range capital improvements program.

The OMC Chapter 32D, Park Land Dedication and Payment of Fees, states that the provisions of this municipal code chapter shall apply to all development within the City by which additional residential lots and/or dwelling units are created. Every owner, developer or subdivide who crates such lots and/or units shall dedicate a portion of land, pay a fee, or do both as set forth in Chapter 32D for the purposes of providing open space, park and recreational facilities. Thus, the Project would not be subject to the payment of park land dedication fees.

City of Oceanside Impact Fees for New Development

The City Impact Fees for New Development provides a fee schedule for all associated impact fee categories. The current impact fee (revised 7/9/2019) for Public Facilities required for a commercial project is $0.902 per square foot. The current impact fee for schools required for a commercial project in the Carlsbad School District is $0.61 per square foot.

4.16.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services: (1) fire protection; (2) police protection; (3) schools; (4) parks; (5) other public facilities.

4.16.4 Project Impact Analysis

a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:

Fire protection?

As stated above, OFD currently has eight (8) operational fire stations. The closest station to the Project Site is Fire Station 4 located at 3990 Lake Boulevard, approximately 0.1 mile south of the Project Site. OFD utilizes a dynamic distribution system that chooses units based on which OFD unit is the closest at the time the alarm is received. It is anticipated that Fire Station 4 would respond to the majority of future emergency calls for the CarMax facility, and when Station 4 is unavailable, units identified for response to the site could come from multiple stations.

Emergency Medical Service (EMS) vehicles would utilize an OPTICOM system which is a traffic control system that provides a green light and intersection right-of-way to emergency vehicles. A Knox Box will be provided at the security gate and control island on the northern parcel sales display area as well as at the security gate and control island located at the test drive-only driveway. A Knox Box is a small, wall-mounted safe that holds building keys in order for fire departments, emergency medical services and police to gain access into buildings in emergency situations. The Project would provide all required setbacks, fire truck access and turnarounds, fire hydrants, address numbers, and sprinklers in accordance with the City Fire Department requirements. Fire extinguishers sizes and locations will be determined by the Fire Marshal during the building permit application.

Off-site improvements as part of the Project would construct an 80-foot curb to curb width across the Project frontage on Plaza Drive. Striping would include two (2) eastbound lanes and one (1) westbound lane with a center two-way left turn lane. On Thunder Drive, a 10-foot street widening will occur between two (2) proposed driveways and would be striped with “No Parking”. The Project improvements would improve traffic and further improve emergency access in the surrounding area of the Project Site.

The Project would develop a commercial facility and would have a corresponding increase in demand for fire protection services. However, the Project would comply with the existing zoning and land use designations and the increase in demand would have already been accounted for. Additionally, the Project would contribute to all required development impact fees in accordance with the City’s current requirements, a portion of which would go towards funding fire protection services in the City. The

Project will be reviewed by OFD to ensure that the Project meets all requirements related to access, fire hydrants and setbacks and would comply with all conditions set forth for Project approval.

Existing fire protection services are adequate to serve the Project and the need for new or altered fire protection facilities is not expected.

The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, and impacts are **less than significant impact**.

Police protection?

Police protection is provided by OPD which operates out of their centralized station located at 3855 Mission Ave, approximately five (5) miles northwest of the Project Site. The Project would construct a CarMax pre-owned automobile dealership and is consistent with the existing zoning and land use designations for the site. OPD has existing staff levels adequate to meet current demands for police protection in this area and does not foresee any unique law enforcement problems associated with this Project, and OPD does not anticipate the need to hire additional officers in order to provide services for the Project (Armijo, 2020). Additionally, OPD anticipates that the Project would have a *de minimis* impact on response times (Armijo, 2020).

OPD recommendations to ensure a less than significant impact on police services include utilization of inventory control measures to prevent loss, including driveway barriers after hours and strict control of keys and access to vehicles. Other recommendations include onsite security and video surveillance cameras (Armijo, 2020). The Project would utilize interior and exterior surveillance cameras that are monitored 24 hours a day, seven (7) days a week for safety and loss prevention purposes. The sales display and staging area entrances are secured by embassy style gates which are designed to be impenetrable and are used to secure and prevent vehicle theft. Guardrail is also used around the perimeter of the sales lot to further prevent vehicle theft.

The Project is not anticipated to negatively impact OPD's ability to provide adequate services or OPD response time goals. Additionally, the Project would contribute to all required development impact fees in accordance with the City's current requirements, a portion of which go towards funding police services in the City.

Existing police protection is adequate to serve the proposed automobile retail facility and the need for new or altered police protection facilities is not expected. The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, and impacts are **less than significant impact**.

Schools?

The Project is a commercial development for a pre-owned automobile dealership and would not construct housing that is expected to result in the generation of additional school aged children which would require the provision of new or physically altered school facilities. Additionally, the Project would contribute to all required development impact fees for schools in accordance with the City's current requirements, which go towards funding school facilities in the City. The current impact fee for schools

required for a commercial Project in the Carlsbad School District is $0.61 per square foot. The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, and **no impact** will occur.

Parks?

The Project is a commercial development for a pre-owned automobile dealership and would not result in the addition of any residents that require the use of existing neighborhood or regional parks or other recreational facilities, nor would it require construction of new or physically altered park facilities. As stated in the Regulatory Setting section above, the payment of park land fees is only required for projects which propose the addition of residential lots and/or dwelling units. Therefore, the Project would not be subject to the payment of park land dedication fees. The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, and **no impact** will occur.

Other Public Facilities?

There are no other public services, facilities, or infrastructure anticipated to be required or impacted due to the construction and operation of the Project, and **no impact** will occur.

4.16.5 Mitigation Implementation and Monitoring

No significant impacts to public services have been identified and therefore no mitigation measures are required.

4.16.6 Level of Significance After Mitigation

Impacts to public services will be less than significant.

Chapter 4.17 RECREATION

4.17.1 Environmental Setting

Site Location and Surroundings

The Project Site is located in the southeastern portion of the City, south of SR-78, east of College Boulevard, and west of Thunder Drive. The Project boundary encompasses approximately 10.54 acres on APNs 168-012-42-00 and 168-012-43-00. The Project Site is situated on two (2) vacant and undeveloped parcels. The northern parcel is bounded on the north by the east-bound lanes of SR-78 and on the south by Plaza Drive. An existing billboard is located on the eastern portion of this parcel. The southern parcel is located south of Plaza Drive and west of Thunder Drive.

The Project Site is surrounded by commercial uses to the west, including the Tri-City Crossroads shopping center and auto repair shops. To the east are medium density residential uses as well as a DMV facility at the corner of Plaza Drive and Thunder Drive. To the north is SR-78 and further north are professional commercial uses. To the south are Buena Vista Creek, high density and residential estate zones which include a senior living facility, and commercial and public/semipublic uses including an OFD station.

County Recreational Facilities

The County park system contains more than 100 locations across approximately 50,000 acres, including 36 local day-use parks, 19 regional parks, nine camping parks, a number of open space preserves, several registered historic sites, fishing lakes, community centers, special use facilities, and preserves located within the unincorporated County. The County has approximately 350 miles of trails that take visitors through multiple climates and habitats. The nearest County Park is Guajome Regional Park located approximately 4.4 miles northeast of the Project Site.

City Parks

The City parks and recreation facility inventory indicates there is a broad range of passive and active opportunities, well dispersed throughout the City. Currently the City has approximately 642 acres of park land. This includes 269 acres of community parks and centers, 74 acres of neighborhood parks, and two (2) aquatic facilities. Residents can also enjoy 115 acres of school recreation areas. A major recreation resource for the community is the coastline. The City has approximately 35 acres of usable beaches under their control. The City also owns Oceanside Harbor which offers marine boating facilities and services.

Parks and Recreational Facilities near the Project

The City of Oceanside Parks and Recreation Master Plan 2019 displays existing parks and recreation facilities within the City. These include community centers, neighborhood parks, community parks, school facilities, special use parks, regional parks and golf courses. Facilities nearest to the Project Site include Mira Costa College, John Landes Recreation Center, John Landes Park, Palisades Park, Joseph Sepulveda Park and Oak Riparian Park. Mira Costa College is the nearest dedicated recreation facility which is located approximately 0.90 mile northwest of the Project Site. Mira Costa College is designated

as a school with a Memorandum of Understanding (MOU) in place for public use and provides a baseball field, soccer field, tennis courts, Pedley Park, fountain and clock tower. The nearest trails to the Project Site are the San Luis Rey River Trail easternmost access point located approximately four (4) miles north, the southwestern portion of the San Luis Rey River Trail located 4.3 miles west, and the trail adjacent to the Buena Vista Lagoon Nature Center located four (4) miles west.

4.17.2 Regulatory Setting

State

Landscaping and Lighting Act

The Landscaping and Lighting Act (California Streets and Highways Code, Section 22500 *et seq*.) enables cities, counties, and special districts to acquire land for parks, recreation, and open space. A local government may also use the assessments to pay for improvements and maintenance to these areas. In addition to being provided by local government agencies (i.e., counties and cities), park and recreation facilities may be provided by other public agencies such as a community service district, park and recreation district, etc.

Quimby Act

The 1975 Quimby Act (California Government Code, Section 66477) was enacted to promote the availability of park and open space areas in California. The Quimby Act authorizes cities and counties to pass ordinances requiring the dedication of land, donation of conservation easements or the payment of fees for park and/or recreational facilities and improvements. The Quimby Act outlines a number of items that must be contained in the local ordinance, including standards from which calculations can be made for the amount of land or fee that must be given for recreation purposes. Revenues generated through the Quimby Act can only be used for creating or rehabilitating recreational facilities, not for the operation and maintenance.

Local

City of Oceanside General Plan

The State of California requires that each city draft and adopt a comprehensive general plan that provides long-term guidance for development within the city's jurisdiction. The General Plan sections that address goals and policies related to parks and recreation include the Land Use Element, Community Facilities Element, Recreational Trails Element and Environmental Resource Management Element. Each of these elements is described in detail below as they relate to parks and recreation.

Land Use Element

The General Plan Land Use Element provides policies, definitions, and zoning designations for land use types within the City. It establishes guiding policies for each type of land use, including open space, recreation, and community facilities. As it relates to parks and recreation, the Land Use Element gives overall direction for encouraging, preserving, and developing adequate open space, park areas, and recreation facilities for community use. The element also establishes the general development impact

fee policy to provide for expanding public facilities to meet the demand of any new development. The General Plan Land Use Element identifies the following objectives and policies relating to recreation:

2.74 Public Recreation Facilities Objective: To enhance the well-being of City residents by providing opportunities for relaxation, rest, activity, and education through a well-balanced system of private and public parks and recreational facilities distributed to serve the entire community.

Policies:

A. Enrich the quality of life for all citizens of Oceanside while providing constructive and creative leisure opportunities.

B. Provide recreational experiences and programs that contribute to the total health of the individual while meeting the desires of the community as a whole.

C. Provide adequate parkland acreage in both location and size to meet the recreation needs of existing and future residents and to preserve natural resources within the City.

D. Develop park sites to provide diverse recreational facilities to meet the active and passive recreational needs of Oceanside residents.

E. Provide for the optimum functional and aesthetic integration of all recreational, environmental, cultural, and social elements into Oceanside parks.

F. Improve and modernize Oceanside parks to overcome both design deficiencies and any deterioration of existing facilities.

G. Distribute future park sites to equitably serve a greater number of Oceanside residents while reducing annual maintenance and operation costs.

H. Maintain the presence of parklands and open space as a fundamental element to conserve and enhance the natural environment thereby improving the quality and livability of the City of Oceanside.

I. Emphasize trail linkage opportunities between community, County, and State open space systems and recreation facilities and throughout those private developments where deemed both suitable and appropriate.

J. Foster cooperative use of existing land resources and recreational facilities between other public and quasi-public agencies.

K. Operate and maintain Oceanside park and recreation facilities through programs that are designed for the most effective use and enhancement of the park site at the least cost possible.

L. Define basic objectives, financing, and alternative/nontraditional means for timely and balanced development of park and recreation facilities in Oceanside.

Community Facilities Element

The General Plan Community Facilities Element guides the development of community facilities. The Community Facilities Element intends to ensure that sufficient and adequate public facilities and services, including park land, are provided to the City. This element of the General Plan establishes a park land goal of five (5) acres of park space per 1,000 residents within the City. Community Facilities Financing Policy 14.1 states that all new development shall pay its proportionate share of the costs of the public facilities necessitated by that development through payment of impact fees for roads, parks and recreation, stormwater management, police service, fire protection and emergency services, City administrative space and City corporation yard, and library services, and payment of connection fees for water and wastewater service. The following objectives and policies relate to parks and recreation:

Parks and Recreation Facilities Objective: To enrich the quality of life for all residents of Oceanside by providing adequate and accessible public park and recreation facilities, by providing constructive leisure opportunities, and by providing recreational experiences and programs that contribute to the total health of the individual while meeting the overall needs and desires of the community.

Policies:

1.1 The objectives and policies of the Park and Recreation Master Plan (1987) for the City of Oceanside shall guide the acquisition and development of parks and recreation facilities in the City of Oceanside and shall be supplemented and modified by the following policies.

1.2 The City of Oceanside shall assist in the coordinated planning, development and maintenance of unique regional amenities within and adjacent to the community. These amenities include: Guajome Regional Park; the Oceanside Public Beach Area; the proposed greenway and bikeway along the San Luis Rey Corridor; and the Buena Vista Lagoon. This regional recreational and open space amenity system shall be planned, developed and implemented in coordination with the existing system of parks throughout the City of Oceanside.

1.3 The City of Oceanside shall combine its park designation categories of Neighborhood, Community, and Special Use Parks into a single “Community Park” designation and shall strive to provide five acres of developed “Community Parks” per 1,000 residents within the City.

1.4 The City of Oceanside shall undertake a systematic annual park development program and shall strive to correct existing deficiencies in the system by Fiscal Year 1998-99. The average annual rate of development needed to achieve this policy is estimated at six acres of developed parkland per year.

1.5 The City of Oceanside shall also undertake a parks acquisition and improvement program to accommodate future growth needs and shall strive to acquire and develop an average

annual program of approximately 14.0 acres per year through Fiscal Year 2009-10 to serve new development.

1.6 Sites being considered for development as new active "Community" parks should meet all of the following standards:

a. The topography and land configuration should be suitable to accommodate the park's proposed uses. A minimum of 65% of the park land area should be useable for active recreation;
b. Sites should have or be able to achieve safe pedestrian and bicycle access;
c. Sites should be visible from the street in order to enhance enjoyment of the park by people driving by and to facilitate security surveillance;
d. Noise generated by park use should be mitigated to avoid disturbing adjacent residents;
e. Lighting should be designed to limit impacts on adjacent residents;
f. Parks should be buffered from adjacent residences through the use of fences, landscaping, berms, or other treatments, in order to prohibit undesired access to private property; and
g. "Community Parks" located in residential neighborhoods should have at least one access point on a Collector road. Whenever possible, these facilities should be located adjacent to public schools.

Community Facilities Financing Objective: To provide financing for the orderly and planned construction of adequate public facilities to serve existing and future development in the City of Oceanside.

Policy 14.1 All new development shall pay its proportionate share of the costs of the public facilities necessitated by that development through payment of impact fees for roads, parks and recreation, storm water management, police service, fire protection and emergency services, City administrative space and City corporation yard, and library services, and payment of connection fees for water and wastewater service.

Recreational Trails Element

The General Plan Recreational Trails Element, a sub-element to the Circulation Element, provides policies and guidance for the City's bicycle, pedestrian, and equestrian trail system. This element defines adequacy standards and goals for maintaining recreational trails, such as hiking trails, multi-use trails, equestrian trails and bicycle trails throughout the City. The following are related objectives and policies within the Recreational Trails Element:

Goal 1: Encourage safe multiple use trails within the City that provide a variety of experiences.

Goal 2: A safe, interconnected network of bicycle facilities within Oceanside

Goal 3: A safe transition from Oceanside to the Camp Pendleton bike trail.

Goal 4: Safe bicycle use within the City for recreational and commuter users.

Goal 8: An interconnected network of pedestrian facilities within the City, linking recreational and other destinations.

Environmental Resource Management Element

The General Plan Environmental Resource Management Element provides guidance for conserving and preserving natural resources and open space as the City develops. As related to recreation, this element encourages the preservation of open space for public health and welfare. The Environmental Resource Management Element identifies the following objective related to recreation:

Recreation and Scenic Areas Objective:

1. Plan adequate recreation facilities based on existing recreation standards and criteria established by the appropriate agencies as contained in the other elements of the General Plan.

City of Oceanside Parks and Recreation Master Plan

Adopted in January 1996, the Parks and Recreation Master Plan provides guidance for the development of future park, recreation, and open space facilities in order to meet the needs of the community. The Parks and Recreation Master Plan identifies existing facilities, provides a needs assessment, proposes implementation strategies, and includes overall goals and policies for the development, renovation, use, acquisition, and maintenance of park facilities. The City Parks and Recreation Master Plan Report was updated in 2019.

4.17.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated;
b. Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

4.17.4 Project Impact Analysis

a. Would the Project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

The Project Site is situated on two (2) vacant parcels and development would consist of the construction of a CarMax pre-owned automobile dealership, including a sales and administrative building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area, sales display area, and a customer and employee parking lot on the southern parcel. An additional sales display area would be provided on the northern parcel with a security gate and control island. The

Project Site is zoned CC and has a corresponding land use designation in the General Plan. The Project does not require a zoning change or General Plan amendment.

The Project is a commercial facility and although the number of people visiting the site would increase compared to existing conditions, due to the nature of the development, and the fact it does not encourage population growth, the Project would not increase the use of existing neighborhood and regional parks or other recreational facilities. It is typically residential projects that result in an increase in demand on parks and recreation facilities. Additionally, the Project would pay all appropriate development fees, a portion of which would go towards funding of park and recreation facilities in the City.

Therefore, the Project would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility will occur or be accelerated, and the impacts are **less than significant.**

b. Does the Project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

The Project Site is currently vacant and does not include recreational facilities. The Project does not include residential development that would increase long-term populations in the Project vicinity leading to an increased use of recreational facilities.

The development of the CarMax Project would not require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment, and **no impact** will occur as a result.

4.17.5 Mitigation Implementation and Monitoring

The proposed Project would result in less than significant impacts. Therefore, no mitigation is required.

4.17.6 Level of Significance After Mitigation

Project impacts related to recreation will be less than significant.

Chapter 4.18 TRANSPORTATION

The following document was used in the preparation of this section and is included in its entirety in **Appendix N** and **Appendix O**:

LOS Engineering, Inc. December 4, 2020. *CarMax Auto Dealership 4000 Block of Plaza Drive City of Oceanside October 1, 2020. Vehicle Miles Traveled Analysis.* **(Appendix N)**

LOS Engineering, Inc. December 4, 2020. *CarMax Auto Dealership 4000 Block of Plaza Drive City of Oceanside October 1, 2020. Local Transportation Study.* **(Appendix O)**

4.18.1 Environmental Setting

The Project is located in the southeastern portion of the City approximately seven (7) miles east of downtown Oceanside, south of SR-78, east of College Boulevard, and west of Thunder Drive. The northern parcel is bounded to the north by the east-bound lanes of SR-78 and to the south by Plaza Drive. The southern parcel is located south of Plaza Drive and west of Thunder Drive. Regional access is provided from SR-78, College Boulevard and Plaza Drive. The Project Site has been previously graded but no structures, roads or other improvements are located onsite.

A Local Transportation Study (LTS) was prepared for the Project to determine if there are any traffic effects caused by Project traffic that would result in the need for roadway improvements or fair share participation. The LTS is provided as **Appendix O** of this EIR. The LTS analyzes the level of service (LOS) of nearby roadway segments and intersections for six (6) scenarios as a result of Project traffic. Based on the City's new requirements for vehicle miles traveled (VMT), LOS discussions have been omitted from this EIR.

As required by CEQA, a VMT analysis is required which utilizes VMT as the measure of effectiveness for determining transportation impacts. A VMT Analysis was prepared for the Project and is provided as **Appendix N** of this EIR and is utilized as the bases for this transportation analysis.

4.18.2 Existing Conditions

4.18.2.1 Existing Transportation System

Existing Street System

The following roadways are located in the vicinity of the Project and are described below. The roadway classifications were obtained from the General Plan Circulation Element.

College Boulevard

College Boulevard is classified as a Major Arterial from Vista Way to Plaza Drive. This segment of College Boulevard is generally constructed as a six-lane roadway with three (3) lanes in each direction along with Class II bike lanes in each direction. The road has either a painted median (double-double yellow) or a raised median just south of Vista Way.

Plaza Drive

Plaza Drive is classified as a Secondary Collector from College Boulevard to Thunder Drive. Plaza Drive from College Boulevard to approximately 300 feet past SR-78 ramps is constructed as a four-lane roadway with two (2) lanes in each direction. Along the Project frontage, Plaza Drive is constructed as a two-lane undivided roadway. East of the Project Site and along the DMV frontage, Plaza Drive is generally constructed as a three-lane roadway (2 EB lanes and 1 WB lane) along with a center two-way left turn lane (TWLTL). The posted speed limit is 35 miles per hour (mph).

Thunder Drive

Thunder Drive is classified as a Collector Road from Plaza Drive to Lake Boulevard. This segment of Thunder Drive is constructed as a two-lane roadway with one (1) travel lane in each direction. The posted speed limit is 25 mph.

Pedestrian Facilities

The Local Transportation Study (LTS) prepared by LOS Engineering, Inc. (**Appendix O**) included a pedestrian analysis which consists of documenting pedestrian infrastructure available including any opportunities or deficiencies such as path obstructions or missing sidewalk from the Project access points extending to the nearest intersection with a classified roadway or to a connection with a Class I path. The following pedestrian facilities have been analyzed:

Plaza Drive

Plaza Drive from College Boulevard, the nearest intersection with a classified roadway, east of the Project Site, there are either non-contiguous or contiguous sidewalks on both sides of the street. There are no sidewalks along the Project frontage on Plaza Drive. From east of the Project Site to Thunder Drive, the nearest intersection with a classified roadway, there are contiguous sidewalks on the south side of the street and no sidewalk on the north side of the street. There are no major sidewalk obstructions observed along the roadway segments that had sidewalks.

Thunder Drive

Thunder Drive from Plaza Drive to Lake Boulevard, the nearest intersection with a classified roadway, has either non-contiguous or contiguous sidewalks on both sides of the street. There are no major sidewalk obstructions observed along this segment.

Bicycle Facilities

The LTS prepared by LOS Engineering, Inc. (**Appendix O**) included a bicycle analysis which consists of documenting bicycle infrastructure available including any opportunities or deficiencies such as bike lanes, bike buffers, or bike boxes from the Project access points extending in each direction to the nearest intersection with a classified roadway or connection with a Class 1 path. The following bicycle facilities have been analyzed:

Plaza Drive

Plaza Drive from College Boulevard to Thunder Drive, which are the study limits identified by the nearest intersection with a classified roadway, has a recommended Class 3 bike route identified in the City Bicycle Master Plan 2017 Update. This segment of Plaza Drive did not have any observed bike lane or bike route signs.

Thunder Drive

Thunder Drive from Plaza Drive to Lake Boulevard, which are the study limits identified by the nearest intersection with a classified roadway, has a recommended Class 3 bike route identified in the Bicycle Master Plan 2017 Update. This segment of Thunder Drive did not have any observed bike lane or bike route signs.

Transit Facilities

The LTS prepared by LOS Engineering, Inc. (**Appendix O**) included a transit analysis which includes identification of the closest transit routes and stops to the Project. If the stops are within 0.5 mile walking distance of the Project access, the condition of the closest transit stop amenities are described. The North County Transit District (NCTD) lists Bus Route 323 within 0.5 mile walking distance from the Project access points or driveways. The closes bus stops to the Project Site are located on Lake Boulevard just west of Thunder Drive.

The bus stop for westbound travel on Lake Boulevard is located a walking distance of approximately 710 feet from the Project access on Thunder Drive. The bus stop includes a bench and trash receptacle and the bus stop is in good condition. The bus stop for eastbound travel on Lake Boulevard is located walking distance of approximately 940 feet from the Project access on Thunder Drive. The bus stop includes only a trash receptacle and the bus stop is in good condition. The bus service times are provided in **Table 4.18-1.**

Table 4.18-1
Bus Service Operations and Frequency

Bus Route	Weekday (Monday-Friday)			Weekends (Saturday and Sunday)	
	Weekday Service Operations (Off-Peak Service Frequency Range)	7:00 AM-9:00 AM Peak Hour Service Frequency	4:00 PM-6:00 PM Peak Hour Service Frequency	Saturday Service Operations (Service Frequency Range)	Sunday Service Operations (Service Frequency Range)
Route 323	≈6:00 AM to ≈6:00 PM (≈60 minutes)	60 minutes	60 minutes	No Scheduled Service	No Scheduled Service

Note: Service times are summaries, thus please refer to Appendix E of the Local Transportation Study for exact service details.
Source: Local Transportation Study prepared by LOS Engineering, Inc. (Appendix O)

4.18.3 Regulatory Setting

State

Senate Bill 743

In 2013, SB 743 was signed into law and requires new metrics for analyzing transportation impacts under CEQA to provide an alternative to LOS. Measurements of transportation impacts may include

vehicle miles traveled (VMT), vehicle miles traveled per capita, automobile trip generation rates, or automobile trips generated. In most cases, a project's effect on automobile delay will no longer constitute a significant environmental impact. Proposed changes to the CEQA Guidelines, Section 15064.3, were promulgated by the Office of Planning and Research (OPR) in November 2017. Per the updated 2019 CEQA Guidelines, measurements of transportation impacts will include VMT for analyses completed after July 1, 2020.

Local

SANDAG Regional Transportation Plan and Sustainable Communities Strategy

SANDAG's *San Diego Forward: The Regional Plan* (Regional Plan) combines the region's two (2) most important existing planning documents – the RCP and the Regional Transportation Plan and its Sustainable Communities Strategy (RTP/SCS). The RCP, adopted in 2004 laid out key principles for managing the region's growth while preserving natural resources and limiting urban sprawl. The plan covered eight (8) policy areas including urban form, transportation, housing, healthy environment, economic prosperity, public facilities, our borders, and social equity. These policy areas were addressed in the 2050 Regional Transportation Plan and its Sustainable Communities Strategy (2050 RTP/SCS) and are now fully integrated into the Regional Plan.

City of Oceanside *Traffic Impact Analysis Guidelines for Vehicle Miles Traveled (VMT) and Level of Service Assessment*

The purpose of the *Traffic Impact Analysis Guidelines for Vehicle Miles Traveled (VMT) and Level of Service Assessment* prepared by the City is to provide general instructions for analyzing the potential transportation impacts of proposed development projects. The guidelines provide transportation analysis significance criteria, screening criteria and thresholds of significance for environmental clearance for development projects. It also provides appropriate methodologies, procedures, and process for the preparation of a transportation analysis report within the context of CEQA.

City of Oceanside General Plan

Circulation Element – Master Transportation Roadway Plan

The City has adopted a Master Transportation Roadway Plan as part of the General Plan Circulation Element. In conjunction with the other elements of the General Plan, and the Circulation Element, the Master Transportation Roadway Plan chapter focuses on the guidelines to provide a network of roadways throughout the City which form the transportation network. The Circulation Element and the Master Transportation Roadway Plan chapter are designed to effectively promote policies and guidelines that support the various forms of transportation available in the City. Select applicable General Plan goals and their corresponding policies are listed below:

> **Objective i:** Implement a circulation system that provides a high level of mobility, efficiency, access, safety, and environmental consideration that accommodates all modes of travel such as vehicular, truck, transit, bicycle, pedestrian, and rail.
>
> > **Policy 2.4**: The City's circulation system shall promote efficient intra- and inter-city travel with minimum disruption to established and planned residential neighborhoods.

Policy 2.5: The City will strive to incorporate complete streets throughout the Oceanside transportation network which are designed and constructed to serve all users of streets, roads and highways, regardless of their age or ability, or whether they are driving, walking, bicycling, or using transit.

Objective i: Aim for an acceptable Level of Service (LOS) D or better on all Circulation Element roadways on an average daily basis and at intersections during the AM and PM peak periods.

Objective ii: Ensure that all streets within the City achieve the City's mobility goals and design standards as highlighted throughout this chapter.

Policy 3.3: All streets within the City shall be designed in accordance with the adopted City of Oceanside design standards. Typical cross-sections and design criteria for the various street classifications are shown in the City Engineers Design and Processing Manual.

Objective iii: Construct the roadway network in phases consistent with the needs and growth of the community.

Policy 3.12: The City shall require or provide adequate traffic safety measures on all new and existing roadways. These measures may include, but are not limited to, appropriate levels of maintenance, proper street design, traffic control devices (signs, signals, and striping), street lighting, and coordination with the school districts to provide school crossing signs and protection.

Policy 3.18: The City shall:

- Require new developments to dedicate necessary right-of-way when the subdivision or development of property adjacent to Circulation Element streets is proposed.
- Require new developments to provide all necessary grading, installation of curbs, gutters, sidewalks, parkway tree planting, and street lights, unless these improvements are provided through other means.
- Require new developments to provide half-street improvements plus 12 feet beyond the centerline in accordance with City standards.

Land Use Element

The following policies of the Land Use Element regulate transportation:

2.711 Master Street Plan

Objective: To provide a balanced circulation system to serve the rowing transportation demands within and through the community.

Policy C: The City shall approve and build streets as per City of Oceanside Engineering Manual Specifications.

Policy E: The City shall:

1. Require development to provide collector and local street improvements according to standards of the City Engineering Department.

3. Require development to provide all necessary grading, installation of curbs, gutters, and parkway tree planting, unless these improvements are provided through other means.

6. The development will install all sidewalks and curbs as required in their permanent location to provide for maximum design development.

2.7121 Bicycle Facilities

Policy A: Development shall provide Class II Bikeways on all secondary, major and prime arterials.

2.7122 Pedestrian

Policy A: The construction of five foot wide sidewalks adjacent to the curb shall be required in all new developments and street improvements.

2.7131 Transit System

Policy A: The City shall coordinate and encourage the existing bus system to serve newly developed areas.

4.18.4 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would:

a. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities;
b. Be inconsistent with CEQA Guidelines section 15064.3, subdivision (b);
c. Substantially increase hazards due to a geometric design feature (e.g. sharp curves or dangerous intersections) or incompatible uses (e.g. farm equipment);
d. Result in inadequate emergency access.

In accordance with the above significance criteria, this analysis uses the following standards to evaluate transportation impacts.

Vehicle Miles Traveled

The City's *Traffic Impact Analysis Guidelines for Vehicle Miles Traveled (VMT) and Level of Service Assessment* lists several project types that screen out of the VMT Analysis. One criterion is for projects that generate less than 1,000 daily vehicle trips, if consistent with the adopted General Plan would be screened out from a VMT Analysis. The City of Oceanside has developed a Project Information Form (PIF) to facilitate the screening of project requirements. A completed PIF for the Project is provided in Appendix C of the VMT Analysis which is provided as **Appendix N** of this EIR.

Multi-Modal Plan Consistency

The multi-modal consistency analysis shall be based on consistency with the Circulation Element, including the Bicycle Master Plan and Pedestrian Master Plan. The Circulation Element goals and policies are aimed at incorporating complete streets throughout the City transportation network that serve all users of streets, roads, and highways, regardless of their age or ability, or whether they are driving, walking, bicycling, or using transit. If the Project does not comply with an aspect of these, then further review would be necessary to determine if a potential physical significant impact would result.

Geometric Design and Emergency Access

To determine impacts related to hazards due to a geometric design feature and emergency access adequacy, a review of compliance with the City's roadway standards is utilized. City roadway and emergency access requirements are considered to provide for roadway and safety and adequate emergency access. If a feature does not comply with the standards, then further review is necessary to determine if a potential hazard or inadequate emergency access will occur.

4.18.5 Project Impact Analysis

Would the Project:

a. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Access

The Project would have a total of four (4) driveways for access. One driveway is located on the northern parcel for the additional sales display area. One driveway on the south side of Plaza Drive for is for sales personnel and test drive vehicles only. Arriving customers, employees, vehicle carriers and other visitors and deliveries would use the two (2) Thunder Drive access points. Once vehicles are unloaded from the vehicle car carriers employees would drive the vehicles to the main lot using Plaza Drive. There is no internal vehicular connection between the sales display areas adjacent to Plaza Drive and the customer and employee lot adjacent to Thunder Drive. Customers can walk between the main sales display area and customer parking lot.

Test Drive Route

The Project would include vehicle test drives for customers interested in purchasing a vehicle. The proposed test drive route is approximately 1.6 miles round trip and lasts approximately five (5) minutes. Designated routes for all test drives will not include residential streets. The proposed test drive route is as follows:

- Customers would turn left on Plaza Drive out of the test drive-only driveway, to enter the SR-78 freeway entrance;
- Customers would make a right to gain access to SR-78 freeway;
- Customers would take the SR-78 exit for Emerald Drive and make a right on Emerald Drive and an immediate right on Hacienda Drive;

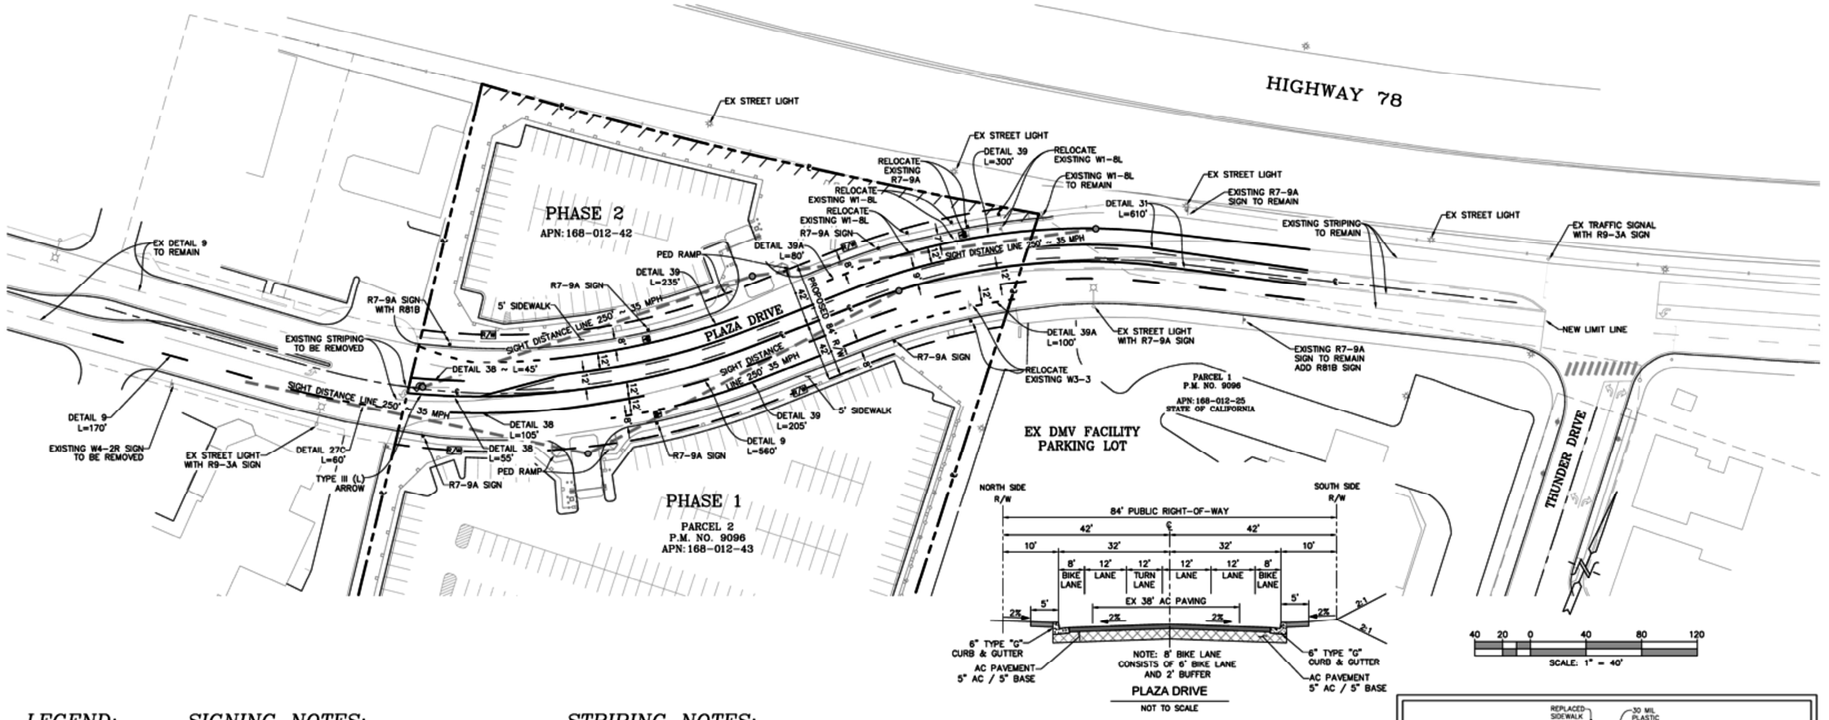
- Hacienda Drive becomes Plaza Drive, which would take customers back to the store location;
- Customers would enter the Site through the test drive-only driveway by making a left from Plaza Drive into the Site.

Project Roadway Improvements

Prior to issuance of occupancy permits, the following roadway improvements would be completed as part of the Project to the satisfaction of the City Engineer:

- Widen Thunder Drive along the Project frontage into the Project Site. Parking shall be restricted along the Project frontage side of Thunder Drive between the two Project driveways.
- Widen Plaza Drive along the Project frontage to the General Plan classification of a Secondary Collector. The Applicant shall stripe this segment with three (3) travel lanes (two eastbound lanes and one westbound lane).
- Provide a center two-way left turn lane on Plaza Drive in order to match the existing westbound single travel lane configuration adjacent to the DMV.
- Install sidewalks on both sides of Plaza Drive along the Project frontage.
- Include striping for bike lanes on both sides of Plaza Drive along the Project frontage.

Project roadway improvements are displayed in **Figure 18.**



LEGEND:

SIGN	●
R7-9A	R7-9A
R2-1	SPEED LIMIT 35
W3-3	W3-3
W1-8L	W1-8L
R9-3a	R9-3a
R81B	END

SIGNING NOTES:

ALL SIGNS SHALL BE MADE WITH ALUMINUM SIGN PANELS WITH TYPE IV OR BETTER (AT LEAST HIGH INTENSITY PRISMATIC) RETROREFLECTIVE SHEETING IN CONFORMANCE WITH SECTION 82, "SIGNS AND MARKINGS" OF THE MOST CURRENT CALTRANS STANDARD SPECIFICATIONS WITH THE EXCEPTION OF SECTION 82-2.02A, PART 1.

UNLESS SPECIFICALLY NOTED ON THE PLAN, ALL SIGNS SHALL BE MOUNTED SO THAT THE BOTTOM OF THE SIGN IS 7' ABOVE THE SURROUNDING GROUND SURFACE. ROADSIDE SIGNS SHALL NOT HANG OVER THE ROADWAY. SIGN PLACEMENT SHALL COMPLY WITH RSI OF THE MOST CURRENT CALTRANS STANDARD PLANS AND SHALL BE INSTALLED IN ACCORDANCE WITH STATE AND LOCAL ADA REQUIREMENTS.

SIGN POSTS SHALL BE 4"x 4" TREATED WOOD PER SECTION 82-3, "ROADSIDE SIGNS" OF THE MOST CURRENT CALTRANS STANDARD SPECIFICATIONS. SIGN POSTS SHALL BE PLACED SO THAT THEY COMPLY WITH ADA (FACILITY ACCESSIBILITY) REQUIREMENTS. SIGN POSTS SHALL BE PLACED IN COMPACTED NATIVE SOIL PER RSI OF THE MOST CURRENT CALTRANS STANDARD PLANS. IT IS PREFERRED THAT SIGNS BE INSTALLED BEHIND SIDEWALKS, BUT IF SIGN POSTS ARE TO BE INSTALLED IN CONCRETE SIDEWALKS, THEN A 1'x 1' SQUARE, 1/2-INCH DEEP JOINT OR SAWCUT SHALL BE PLACED AROUND THE SIGN POST IN THE SIDEWALK. SIGNS SHALL BE MOUNTED ON SIGN POSTS USING SIGN PANEL FASTENING HARDWARE PER RS2 OF THE MOST CURRENT CALTRANS STANDARD PLANS, SECTION 82-3, "ROADSIDE SIGNS" OF THE MOST CURRENT CALTRANS STANDARD SPECIFICATIONS, AND AS SPECIFIED BY THE SIGN FILM MANUFACTURER.

SIGNS TO BE INSTALLED ON COUNTY OF SAN DIEGO – MAINTAINED STREET LIGHT POLES, TRAFFIC SIGNAL POLES, AND FLASHERS SHALL BE INSTALLED AS APPROVED BY THE RESIDENT ENGINEER PER THE PLAN OR WITH APPROVED STAINLESS STEEL BAND CLAMPS OR OTHER APPROVED HARDWARE THAT IS APPROPRIATE FOR THE WIND LOADING.

STREET NAME SIGNS SHALL BE INSTALLED PER THE MOST CURRENT COUNTY OF SAN DIEGO DESIGN STANDARD DRAWINGS DS-13A THROUGH DS-13G.

THE RESIDENT ENGINEER SHALL APPROVE ALL SIGN INSTALLATION LOCATIONS PRIOR TO THE CONTRACTOR INSTALLING THE SIGNS. ALL TRAFFIC SIGNS SHALL BE READILY VISIBLE TO ALL MOTORISTS DRIVING AT THE PREVAILING SPEED AS WELL AS ALL OTHER ROADWAY USERS (BICYCLISTS, EQUESTRIANS, AND PEDESTRIANS). IF THE VISIBILITY OF THE TRAFFIC SIGN IS BLOCKED, THEN THE CONTRACTOR WITH THE RESIDENT ENGINEER'S APPROVAL SHALL EITHER RELOCATE THE SIGN OR REMOVE THE OBSTRUCTIONS (SUCH AS VEGETATION, ROCKS, PRIVATE SIGNS, AND MINOR EMBANKMENTS THROUGH MINOR GRADING) THAT BLOCK THE VISIBILITY OF THE SIGN.

STRIPING NOTES:

TRAFFIC STRIPES, THERMOPLASTIC PAVEMENT MARKINGS, AND PAVEMENT MARKERS

CONTRACTOR SHALL BE RESPONSIBLE FOR THE REPLACEMENT OF ALL STRIPING, PAVEMENT MARKERS, AND LEGENDS (PAVEMENT MARKINGS) OBLITERATED BY THE CONSTRUCTION OF THIS PROJECT. CONTRACTOR SHALL BE RESPONSIBLE FOR THE INSTALLATION OF ALL NEW STRIPING, PAVEMENT MARKERS, AND LEGENDS REQUIRED FOR THIS PROJECT. CONTRACTOR SHALL BE RESPONSIBLE FOR THE REMOVAL OF ALL CONFLICTING AND REDUNDANT STRIPING, PAVEMENT MARKERS, AND LEGENDS IN THIS PROJECT.

INSTALLATION OF TRAFFIC STRIPES (TRAFFIC LINES) AND THERMOPLASTIC PAVEMENT MARKINGS SHALL CONFORM TO SECTION 84-1, "GENERAL" AND 84-2, "TRAFFIC STRIPES AND PAVEMENT MARKINGS", OF THE CALTRANS STANDARD SPECIFICATIONS AND THE FOLLOWING:

CONTROL OF THE ALIGNMENT AND LAYOUT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AND SUBJECT TO APPROVAL BY THE ENGINEER. ALL NEW STRIPING AND REMOVAL OF REDUNDANT STRIPING SHALL BE DONE BY CONTRACTOR. STRIPING SHALL BE REMOVED BY SANDBLASTING / GRINDING AND THEN SAND SEALED PER THE ENGINEER. CONTRACTOR TO PROVIDE AND INSTALL PAVEMENT MARKERS.

SECTION 84-2.02, "MATERIALS", OF THE STANDARD SPECIFICATIONS IS AMENDED TO READ:

PAINT FOR TRAFFIC STRIPING SHALL BE LEAD FREE AND CONFORM TO THE LATEST STATE SPECIFICATIONS FOR RAPID DRY WATER BORNE, WHITE & YELLOW PAINT.

THERMOPLASTIC MATERIAL SHALL BE FREE OF LEAD AND CHROMIUM, AND SHALL CONFIRM TO THE REQUIREMENTS IN STATE SPECIFICATION PTH-02SPRAY, PTH-02HYDRO, OR PTH-02ALKYD.

FOR EACH BATCH OF THERMOPLASTIC MATERIAL FOR PAVEMENT MARKINGS, THE CONTRACTOR SHALL SUBMIT TO THE ENGINEER:

1. CERTIFICATE OF COMPLIANCE UNDER SECTION 6-1.07, "CERTIFICATES OF COMPLIANCE," OF THE STANDARD SPECIFICATIONS
2. DEPARTMENT'S MATERIALS ENGINEERING AND TESTING SERVICES NOTIFICATION LETTER STATING THAT THE MATERIAL IS APPROVED FOR USE
3. MATERIAL SAFETY DATA SHEET

PRIMER MUST COMPLY WITH THE THERMOPLASTIC MANUFACTURER'S RECOMMENDATIONS. DO NOT THIN THE PRIMER.

GLASS BEADS SHALL CONFORM TO STATE SPECIFICATIONS NO. 8010-004 (TYPE II).

COPIES OF STATE SPECIFICATIONS FOR TRAFFIC PAINT AND GLASS BEADS MAY BE OBTAINED FROM THE TRANSPORTATION LABORATORY, P.O. BOX 19128, SACRAMENTO, CALIFORNIA, 95812, TEL. (916) 227-7000.

THERMOPLASTIC PAVEMENT MARKINGS WITH ENHANCED WET-NIGHT VISIBILITY MUST CONSIST OF A SINGLE UNIFORM LAYER OF THERMOPLASTIC AND 2 LAYERS OF GLASS BEADS AS FOLLOWS:

1. THE 1ST LAYER OF GLASS BEADS MUST BE ON THE AUTHORIZED MATERIAL LIST UNDER HIGH-PERFORMANCE RETROREFLECTIVE GLASS BEADS FOR USE IN THERMOPLASTIC PAVEMENT MARKINGS. THE COLOR OF THE GLASS BEADS MUST MATCH THE COLOR OF THE STRIPE OR MARKING TO WHICH THEY ARE BEING APPLIED.
2. THE 2ND LAYER OF GLASS BEADS MUST COMPLY WITH AASHTO M 247, TYPE 2.

BOTH TYPES OF GLASS BEADS MUST BE SURFACE TREATED FOR USE WITH THERMOPLASTIC UNDER THE BEAD MANUFACTURER'S INSTRUCTIONS.

GLASS BEADS MAYBE APPLIED BY HAND ON THERMOPLASTIC PAVEMENT MARKINGS.

WITHIN 14 DAYS OF APPLYING A THERMOPLASTIC PAVEMENT MARKING WITH ENHANCED WET-NIGHT VISIBILITY, THE RETROREFLECTIVITY MUST BE A MINIMUM OF 700 MCD/SQ M/LX FOR WHITE STRIPES AND MARKINGS AND 500 MCD/SQ M/LX FOR YELLOW STRIPES AND MARKINGS. TEST THE RETROREFLECTIVITY USING A REFLECTOMETER UNDER ASTM E 1710.

WHERE STRIPING JOINS EXISTING STRIPING, AS SHOWN ON THE PLANS, THE CONTRACTOR SHALL BEGIN AND END THE TRANSITION FROM THE EXISTING STRIPING PATTERN INTO OR FROM THE NEW STRIPING PATTERN A SUFFICIENT DISTANCE TO ENSURE CONTINUITY OF THE STRIPING PATTERN.

APPLY EXTRUDED THERMOPLASTIC AT A TEMPERATURE FROM 400 TO 425 DEGREES F, UNLESS A DIFFERENT TEMPERATURE IS INSTRUCTED BY THE MANUFACTURER.

APPLY THERMOPLASTIC PAVEMENT MARKING AT A RATE OF AT LEAST 1.06 LB/SQ FT. THE APPLIED THERMOPLASTIC PAVEMENT MARKING MUST BE AT LEAST 0.125 INCH THICK.

DISTRIBUTE GLASS BEADS UNIFORMLY ON PAVEMENT MARKINGS. APPLY HIGH-PERFORMANCE GLASS BEADS AT A RATE OF AT LEAST 6 LB/100 SQ FT OF MARKING. APPLY AASHTO M 247, TYPE 2, GLASS BEADS AT A RATE OF AT LEAST 8 LB/100 SQ FT OF MARKING. THE COMBINED WEIGHT OF THE 2 TYPES OF GLASS BEADS MUST BE GREATER THAN 14 LB/100 SQ FT OF MARKING.

THERMOPLASTIC PAVEMENT MARKINGS SHALL BE FREE OF RUNS, BUBBLES, CRATERS, DRAG MARKS, STRETCH MARKS, AND DEBRIS.

THE SURFACE OF THE THERMOPLASTIC MATERIAL UPON APPLICATION SHALL PROVIDE A MINIMUM SKID RESISTANCE VALUE OF 60 BPN WHEN TESTED ACCORDING TO ASTM E 303. DOCUMENTATION DETAILING MANUFACTURE'S MINIMUM SKID RESISTANCE FOR PERFORMED THERMOPLASTIC MATERIAL SHALL BE PROVIDED TO THE ENGINEER PRIOR TO COMMENCEMENT OF PAVEMENT MARKING OPERATIONS.

PAVEMENT MARKER SHALL CONFORM TO SECTION 81-3, "PAVEMENT MARKERS," OF THE MOST CURRENT CALTRANS STANDARD SPECIFICATIONS, AND THE FOLLOWING PROVISIONS:

PAVEMENT MARKER HEIGHT SHALL BE 0.70-INCH MINIMUM. "LOW PROFILE" TYPE MARKERS WILL NOT BE ACCEPTABLE.

General Plan Circulation Element Consistency

Chapter 3 of the Circulation Element discusses the Master Transportation Roadway Plan which provides the guidelines for providing a network of roadways throughout the City. The Circulation Element and the Master Transportation Roadway Plan are designed to effectively promote policies and guidelines that support the various forms of transportation available in the City. **Table 4.18-2** provides the Project's consistency with applicable policies and implementation strategies provided in the Circulation Element Master Transportation Roadway Plan. The Project would not conflict with any applicable policies of the Circulation Element and impacts are **less than significant.**

Table 4.18-2
Project Consistency with Circulation Element Master Transportation Roadway Plan Policies

Policy Number	Policy	Consistency Analysis	Consistent/ Inconsistent
3.3	All streets within the City shall be designed in accordance with the adopted City of Oceanside design standards (shown in Table 3-1, page 24 of the Circulation Element). Typical cross-sections and design criteria for the various street classifications are shown in the City Engineers Design and Processing Manual.	The Project would provide roadway improvements along Plaza Drive and Thunder Drive that would be designed in accordance with the City's design standards. Typical cross-sections would be provided on Project Grading Plans and would be shown in accordance with the City's Engineers Design and Processing Manual.	Consistent
3.10	The City shall require dedication and improvement of necessary rights-of-way along Master Transportation Roadway Plan streets. This usually will occur in fulfillment of a condition of approval for a tentative map or as a condition of approval for a building permit, whichever occurs first.	As part of the Project roadway improvements along Plaza Drive and Thunder Drive would be constructed prior to issuance of occupancy permits for the Project and would be required as a condition of approval for the Development Plan, CUP, and Variance.	Consistent
3.12	The City shall require adequate traffic safety measures on all new and existing roadways. These measures may include, but are not limited to, appropriate levels of maintenance, proper street design, traffic control devices (signs, signals, and striping), street lighting, and coordination with the school districts to provide school crossing signs and protection.	The Project would provide striping along Plaza Drive for the three (3) travel lanes (two eastbound lanes and one westbound lane) in coordination with the widening improvements along the Project frontage. Five-foot sidewalks would be provided on both sides of Plaza Drive and would include pedestrian ramps. Striping for the 8-foot bicycle lanes on both sides of Plaza Drive would be provided and would include the required 6-foot bike lane and 2-foot buffer. Street lighting would be provided along Plaza and Thunder Drive along the Project Site boundaries.	Consistent

3.17	The City shall require additional right-of-way width and additional improvements of major arterials where required for turning movements or to provide access to adjacent properties whenever access is not feasible from a lower classification street system.	The Project would provide roadway improvements which include widening of Plaza Drive and Thunder Drive. A center two-way left turn lane on Plaza Drive would be provided in order to match the existing westbound single travel lane configuration adjacent to the DMV. This would provide for better turning movements into the Project Site for test drive vehicles.	Consistent
3.21	The City shall require that those responsible for street improvements replant, replace, or install new landscaping pursuant to existing City policy along all new roadways or on those that have been redesigned and reconstructed.	Landscaping would be provided along the Project frontage along Plaza Drive and along Thunder Drive along the Project Site boundary. Landscaping would contain various trees, shrubs and groundcover types. The customer and employee parking lot would contain additional landscaping and parking lot islands would consist of deciduous trees, palm trees, evergreen shrubs and grasses. The Conceptual Landscape Plan is provided as **Figure 8** and **Figure 9**.	Consistent

Multi-Modal Transportation

The overall goal of the General Plan Circulation Element is to provide complete streets and multi-modal transportation systems within the City. The General Plan aims to enhance the City's corridors, increasing bicycle and pedestrian routes, and improving existing facilities. A LTS was prepared by LOS Engineering, Inc. and is provided as **Appendix O** of this EIR. The LTS includes the analysis of pedestrian, bicycle, and transit facilities to evaluate their opportunities or deficiencies.

Pedestrian

The LTS pedestrian analysis included the assessment of pedestrian facilities in the vicinity of the Project. Existing pedestrian infrastructure from College Boulevard to Thunder Drive were analyzed and deficiencies were found on the north side of Plaza Drive from the Project Site east to Thunder Drive where the north side is missing sidewalk infrastructure. The Project would include widening improvements along Plaza Drive and would include installation of sidewalks on both sides of Plaza Drive along the Project frontage, where sidewalks did not previously exist.

Bicycle

The LTS bicycle analysis included the assessment of bicycle facilities in the vicinity of the Project. The Project would include widening improvements along Plaza Drive which would include bicycle lanes on both sides of the street along the Project frontage, where bicycle lanes did not previously exist. The 8-foot bicycle lanes include the required 6-foot bicycle lane and the 2-foot buffer in accordance with City requirements.

Transit

The LTS transit analysis included the assessment of transit facilities in the vicinity of the Project Site. NCTD Bus Route 323 is located at Thunder Drive and Lake Boulevard and is within 0.5 mile walking distance of the Project Site. The bus stop for westbound travel on Lake Boulevard is located a walking distance of approximately 710 feet from the Project access off of Thunder Drive. This bus stop contains a bench and trash receptacle that is in good condition. The bus stop for eastbound travel on Lake Boulevard is located a walking distance of approximately 940 feet from the Project access off of Thunder Drive. This bus stop contains a trash receptacle that is in good condition. No transit improvements are required as part of the Project. Bus service operations and frequency are provided in **Table 4.18-1.**

The Project Site is located approximately five (5) miles southeast of the Oceanside Transportation Center which provides access to the Coaster, Sprinter, Metrolink and Amtrak trains.

The overall goal of the General Plan Circulation Element is to obtain complete streets and multi-modal transportation systems. The Project would not conflict with the City's General Plan Circulation Element or other plans related to multi-modal transportation systems. The Project would not conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, bicycle and pedestrian facilities and therefore will have a **less than significant impact.**

b. Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Per CEQA Guidelines Section 15064.3(b) Criteria for Analyzing Transportation Impacts, for land use projects, VMT exceeding an applicable threshold of significance may indicate a significant transportation impact. The OPR Technical Advisory developed guidance on implementing SB 743 that shifts the transportation impact measure of effectiveness from LOS to VMT. In accordance with OPR Guidelines, lead agencies have the discretion to set or apply their own thresholds of significance. The City of Oceanside *Traffic Impact Analysis Guidelines for Vehicle Miles Traveled (VMT) and Level of Service Assessment* adopted by City Council in August 2020 identified project types that are presumed to be considered VMT reducing projects. A list of "screened out" projects is provided in the City VMT Guidelines and is provided below as **Table 4.18-3.**

Table 4.18-3
City of Oceanside VMT "Screened Out" Projects

#	Project Type
1	Projects located in a Transit Priority Areas (TPA) or Smart Growth Opportunity Area as identified in the most recent SANDAG San Diego Forward Regional Plan and is consistent with the General Plan at the time of project application. (1)(2)
2	Projects located in a low-VMT generating area identified on the most recent SANDAG SB 743 VMT Screening map
3	Locally serving K-12 schools
4	Day care centers
5	Local parks
6	Locally serving retail uses less than 50,000 square feet, including: gas stations, banks, restaurants, grocery stores, and shopping centers
7	Community institutions (Public libraries, fire stations, local government)
8	Locally serving hotels (e.g. non-destination hotels, non-regionally serving)
9	Student housing projects on or adjacent to college campuses
10	Local serving community colleges that are consistent with the assumptions noted in the most recent SANDAG Regional Transportation Plan/Sustainable Communities Strategy
11	Affordable housing projects (3)

12	Assisted living facilities
13	Senior housing (as defined by HUD)
14	Transit projects
15	Bike projects
16	Pedestrian projects
17	Safety improvement projects (e.g. RRFBs and high visibility crosswalks at uncontrolled locations, pedestrian count down timers, additionally projects identified through the Highway Safety Improvement Program)
18	Safe Routes to School
19	Projects generating less than 500 daily vehicle trips (if inconsistent with adopted General Plan)
20	Projects generating less than 1,000 daily vehicle trips (if consistent with adopted General Plan)

(1) Projects located in a TPA must be able to access the transit station within a ½ mile walking distance or 6 minute walk continuously without discontinuity of sidewalk or obstructions to the route. Qualifying transit stops means a site containing an existing rail transit station served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods (OPR, 2017). A high-quality transit corridor may also be considered if a corridor with fixed route bus service has service intervals no longer than 15 minutes during peak commute hours (OPR, 2017). (2) Smart Growth Opportunity Area Map is provided in Appendix B. The most recent version available shall be used. (3) If a project is a mix of affordable housing and market rate housing or unscreened use, only the affordable housing component would qualify as screened out. Additionally, any removal of affordable housing automatically requires CEQA VMT analysis.
Source: City of Oceanside Traffic Impact Analysis Guidelines for Vehicle Miles Traveled (VMT) and Level of Service Assessment

A VMT Analysis and LTS were prepared by LOS Engineering, Inc. and are provided as **Appendix N** and **Appendix O** of this EIR. As provided in the LTS (**Appendix O)**, the project will generate 475 ADT (18 AM peak hour trips (11 inbound and 7 outbound) and 50 PM peak hour trips (31 inbound and 19 outbound). The Project is designated as CC by the General Plan and no change to the General Plan designation is required. In accordance with screened out project type #20 above, the Project is consistent with the adopted General Plan and will generate less than 1,000 ADT, and is therefore screened out from a transportation VMT analysis.

The Project would not conflict or be inconsistent with CEQA Guidelines Section 15064.3 subdivision (b), and therefore impacts are **less than significant.**

c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

The Project is located on Plaza Drive east of College Boulevard, west of Thunder Drive and south of SR-78. Both parcels are vacant and undeveloped. The Project Site is located in a primarily developed, urbanized area and is surrounded by commercial uses to the west, medium density residential uses and the DMV to the east and SR-78 to the north. To the south are Buena Vista Creek, high density residential and residential estate uses including a senior living facility and an OFD station. The Project would not introduce incompatible uses. The Project does not require a change the zoning or land use designation of the Project Site.

The Project would consist of sales and administration building, service, building, private carwash, associated access drives, presentation area, staging area, sales display area and a customer and employee parking lot. No new roads or streets would be provided as part of the Project. Project improvements include the widening of Plaza Drive to a secondary collector with three travel lanes (two eastbound lanes and one westbound lane) and a center two-way left turn lane in order to match the existing westbound single travel lane configuration adjacent to the DMV. All associated striping would be provided along Plaza Drive.

Driveways proposed along Plaza Drive and Thunder Drive would be consistent with the City's Engineers Design and Processing Manual which includes driveway standards to provide safe geometric designs and line of sight for drivers, pedestrians and bicyclists. The Project would provide an 8-foot bike lane on both sides of Plaza Drive which includes the required 6-foot bike lane and 2-foot buffer. The Project would provide a 5-foot sidewalk and pedestrian ramps along the Project frontage on Plaza Drive which would promote pedestrian access consistent with the General Plan.

Additionally, OFD has reviewed the Site Plan details to ensure that fire truck access roadways meet City standards. Fire lanes within the customer and employee and sales display parking lots have been designed and reviewed by OFD and provide adequate width, turn-around radius and access to the building. The Project would not substantially increase hazards due to a geometric design feature or incompatible use, and impacts will be **less than significant.**

d. Result in inadequate emergency access?

Emergency access to the Project Site would be provided by the two (2) driveways located off of Thunder Drive and the driveway off Plaza Drive. A Knox Box would be provided at the Plaza Drive security gate and control island as well as in the building lobby and would provide access to all gates and doors onsite. The Phase II sales display area would also have a Knox Box located at the security gate and control island.

The OFD has reviewed the proposed Site Plan details to ensure that fire truck access roadways meet City standards and that access would be provided to all sides of the structure. Further, the Project is designed to provide adequate width, turn-around radius and access to the building in accordance with the CFC, Title 24 Park 9 and the OMC Chapter 11 – Fire Protection. Specifically, the Project would provide a minimum 28-foot width for access through the proposed drive aisles within the customer and employee, sales display and sales and staging areas. The Project would comply with the CFC and the OMC requirements which are intended to ensure adequate emergency access. Project roadway improvements along Plaza Drive and Thunder Drive would improve circulation along the surrounding roadways of the Project Site and therefore would improve emergency access in the surrounding areas of the Project Site. The Project would meet or exceed such requirements and therefore, the Project would not result in inadequate emergency access, and impacts will be **less than significant.**

4.18.6 Mitigation Implementation and Monitoring

No significant impacts to transportation have been identified, and therefore no mitigation measures are required.

4.18.7 Level of Significance after Mitigation

Impacts related to transportation will be less than significant.

Chapter 4.19 TRIBAL CULTURAL RESOURCES

The following document was used in the preparation of this section and is included in its entirety in **Appendix G**:

ASM Affiliates. August 9, 2019. *Archaeological Survey Report for the CarMax Project, Oceanside, California.*

4.19.1 Environmental Setting

Regional Setting

Two (2) main cultural groups have occupied the County: the Uto-Aztecan-speaking Luiseño in the north and the Kumeyaay, Ipai/Tipai or Diegueño in the south. Traditionally, Luiseño territory encompassed an area from roughly Batiquitos Lagoon on the coast, east to Lake Henshaw, north into Riverside County, and west through San Juan Capistrano to the coast. The region inhabited by various groups of the Kumeyaay was much larger and extended from Batiquitos Lagoon eastward into the Imperial Valley and southward through much of northern Baja California.

The term Luiseño is derived from association with the San Luis Rey Mission, on the San Luis Rey River. The Luiseño people had a moderately high population density and a fairly rigid social structure. It is estimated that the Luiseño had approximately 50 villages of 200 individuals each. The Luiseño were divided into several autonomous lineages or kin groups based on patrilineal descent groups. Each Luiseño lineage was based around an autonomous village that held ownership over a well-defined territory for hunting and gathering. Village territories may have ranged from as small as ten square kilometers near the coast and major drainages such as the San Luis Rey River, to as large as 100 square kilometers elsewhere.

Leadership included hereditary chiefs and council members who had knowledge and authority over specific religious, warfare, and economic issues, and conducted elaborate ceremonies. Ritual and ceremonial specialists maintained ceremonial knowledge in secrecy and passed on the knowledge to only one heir. These leaders and specialists also made use of fenced-in ceremonial structures, typically located in the village center. Economic activities took place on a community and extended household level, and varied significantly between coastal and inland areas. Community-wide efforts included fire management for game drives, and systematic use of fire to facilitate grasslands and increase yields of plants and animals.

Acorns were the most important food source and were gathered in upland areas. Seeds from gasses, manzanita, sage, sunflowers, lemonade berry, chia, and other plants were also used, along with various wild greens and fruits. Deer, antelope, small game, birds, and coastal marine animals were also exploited. Some coastal communities exploited local shellfish in the winter and during times of stress, the interior Luiseño would travel to the coast to obtain shellfish, fish, and even some land mammals. Rigid gender division did not exist, however, women generally collected plant resources and men hunted. Houses were dispersed throughout villages. Lowland village houses were conical structures covered with tule bundles and other structures included sweathouses, ceremonial enclosures, ramadas, and acorn granaries. Domestic implements included wooden utensils, baskets, ceramic cooking, and milling tools. Hunting implements included bow and arrow, nets, snares, and curved throwing sticks.

Nets and hooks of bone and shell were used to fish. The Project Site is within the traditional territory of the Luiseño people.

Tribal Coordination and Consultation

Sacred Lands File Search

A record search of the Sacred Lands File (SLF) held by the Native American Heritage Commission (NAHC) was requested on January 9, 2018. On January 10, 2018 the NAHC responded the record search had negative results. The NAHC provided a list of 35 tribal entities and individuals to contact for additional information. All correspondence pertaining to the NAHC is included in the Archaeological Survey Report prepared by ASM Affiliates (**Appendix G**). Results of the consultation efforts from the City and tribal entities during the AB 52 process are detailed below.

Consultation

To date, the City has received one request for consultation pursuant to AB 52. This request was formally made by the Rincon Band of Luiseño Indians on October 24, 2020 and the City responded to the tribe's request by providing additional technical information.

(Information to be provided upon additional responses: name of tribes contacted, dates contacted, details of response, details of requests or mitigation required by each tribe)

Onsite Tribal Cultural Resources

No tribal cultural resources were found onsite during a survey of the Project area. A records search of the SCIC revealed that 75 cultural resource studies have previously addressed the one-mile record search radius surrounding the Project area. The records search identified approximately 26 cultural resources that were previously recorded within the one-mile record search radius. None of these were recorded within the Project area.

4.19.2 Regulatory Setting

State

California Register of Historical Resources and the California Environmental Quality Act

CEQA requires that all private and public activities not specifically exempt be evaluated against the potential for environmental damage, including effects to historical and tribal cultural resources. Lead agencies have a responsibility to evaluate historical resources against the CRHR criteria prior to making a finding as to a Project's impacts to historical or tribal cultural resources. Mitigation of adverse impacts is required if the Project would cause substantial adverse change to a resource. Substantial adverse change includes demolition, destruction, relocation, or alteration such that the significance of a historical resource would be impaired. The CRHR is used in the consideration of historical resources relative to significance for purposes of CEQA. The CRHR includes resources listed in or formally determined eligible for listing in the NRHP and come California State Landmarks and Points of Historical Interest. Properties of local significance that have been designated under a local preservation ordinance or that have been identified in a local historical resources inventory may be eligible for listing in the

CRHR, and are presumed to be significant resources for purposes of CEQA unless a preponderance of evidence indicates otherwise.

Senate Bill 18

In 2004, SB 18 was enacted, requiring local governments to consult with California Native American tribes prior to making certain planning decisions. The purpose of the consultation is to protect the identity of traditional tribal cultural places "cultural places" through local land use planning. As required by Government Code Sections 65352.3 and 655762.5, the NAHC maintains a list of tribes with whom local agencies must consult. The intent of SB 18 is to provide all California Native American tribes an opportunity to consult with local governments for the purpose of preserving and protecting their cultural places.

Assembly Bill 52

AB 52 took effect on July 1, 2015 and established a consultation process between California Native American tribes and lead agencies in order to address tribal concerns regarding Project impacts and mitigation to tribal cultural resource. Public Resources Code Section 21074(a) defines tribal cultural resources and states that a Project that has the potential to cause a substantial adverse change to a tribal cultural resource is a Project that may have an adverse effect on the environment. A tribal cultural resource is described as a site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native American tribe that is either (1) listed or eligible for listing in the CRHR or a local register of historic resources, or (2) determined by a lead agency to be a tribal cultural resource.

Public Resources Code Section 21074

Section 21074 of the Public Resources Code defines "tribal cultural resources" as any of the following:

5. Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that is either:

    a. Included or determined to be eligible for inclusion in the California Register of Historical Resources;

    b. Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.

6. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

7. A cultural landscape that meets the criteria of subdivision (a) is a tribal cultural resource to the extent that the landscape is geographically defined in terms of the size and scope of the landscape.

8. A historical resource described in Section 21084.1, a unique archaeological resource as defined in subdivision (g) of Section 21083.2, or a "nonunique archaeological resource" as

defined in subdivision (h) of Section 21083.2 may also be a tribal cultural resource if it conforms with the criteria of subdivision (a).

California Public Resources Code Section 5097

California Public Resources Code Section 5097, also referred to as the Native American Historic Resources Protection Act, identifies that the unauthorized disturbance or removal of archaeological or historical resources located on public land us a misdemeanor. It prohibits the knowing destruction of objects of antiquity without a permit on public lands, and it provides for criminal sanctions. The Native American Historic Resource Protection Act establishes procedures to be implemented if Native American skeletal remains are discovered during construction of a project and establishes the NAHC to resolve disputes regarding the disposition of such remains.

California Native American Graves Protection and Repatriation Act

The California Native American Graves Protection and Repatriation Act, enacted in 2001, requires all state agencies and museums that receive state funding and that have possession or control over collections of humans remains or cultural items, to complete an inventory and summary of these remains and items on or before January 1, 2003. This California Native American Graves Protection Act also provides a process for the identification and repatriation of these items to the appropriate tribes.

California Health and Safety Code

California law protects Native American burials, skeletal remains, and associated grave goods, regardless of their antiquity, and provides for the sensitive treatment and disposition of those remains. California Health and Safety Code Section 7050.5 requires that if human remains are discovered in any place other than a dedicated cemetery, no further disturbance or excavation of the site or nearby area reasonably suspected to contain human remains can occur until the County Coroner has examined the remains. If the coroner determines or has reason to believe that the remains are those of a Native American, the coroner must contact the NAHC within 24 hours. The NAHC will notify the most likely descendent (MLD). With the permission of the landowner, the MLD may inspect the site of discovery. The inspection must be completed within 48 hours of the MLD being granted access to the site. The MLD may recommend means of treating or disposing of, with appropriate dignity, the human remains and items associated with Native Americans.

Local

City of Oceanside Municipal Code

The OMC Section 14A.6 states that a historical area or site may be designated as such by resolution of the City Council it if meets the following criteria:

a. It exemplifies or reflects special elements of the City's cultural, social, economic, political, aesthetic, engineering, or architectural history; or
b. It is identified with persons or events significant in local, state, or national history; or
c. It embodies distinctive characteristics of a style, type, period, or method of construction, or is a valuable example of the use of indigenous materials or craftsmanship; or
d. It is representative of the notable work of a builder, designer, or architect;

e. It is found by the council to have significant characteristics which should come under the protection of this chapter.

4.19.3.1 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project would cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

4.19.3.2 Project Impact Analysis

Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place or object with cultural value to a California Native American tribe, and that is:

a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

No cultural resources were identified in the Project area during the pedestrian survey and no cultural resources have been previously recorded within the Project area. The record search of the Sacred Lands File held by the NAHC had negative results. Based on the data and information obtained, there is a low potential for impacts to cultural resources associated with implementation of the Project. However, due to the Project's proximity to Buena Vista Creek the potential for buried cultural resources within alluvial deposits along the creek exists.

Therefore, the Project will result in a **significant impact (Impact TCR-1a)**.

b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? (In applying the criteria set forth in subdivision(c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe)?

Consultation and coordination has been initiated with the culturally-affiliated tribes to identify any potential tribal cultural resources located onsite or in the Project vicinity. Consultation coordination indicated that the Project is located in the territory of the Rincon Band of Luiseño Indians and is within the Bands specific Area of Historic Interest (AHI) and is therefore traditionally and culturally affiliated to the Project area. Embedded in the Luiseño territory are Rincon's history, culture and identity.

Considering this information, there is potential for the discovery of unknown tribal cultural resources during Project grading activities, and therefore a **significant impact** will occur (**Impact TCR-1b**).

4.19.5 Mitigation Implementation and Monitoring

Eligible or Listed Tribal Cultural Resource and Resource to a California Native American Tribe (Impact TCR-1a and Impact TCR-1b)

Mitigation measure MM-CUL-1a through MM-CUL-1h which is presented in Section 4.6.5, will reduce this impact to below a level of significance.

MM-CUL-1a Prior to issuance of a Grading Permit, the Applicant/Owner shall enter into a pre-excavation agreement, otherwise known as a Tribal Cultural Resources Treatment and Tribal Monitoring Agreement with the "Traditionally and Culturally Affiliated (TCA) Native American Monitor associated with a TCA Luiseño Tribe". A copy of the agreement shall be included in the Grading Plan Submittals for the Grading Permit. The purpose of this agreement shall be to formalize protocols and procedures between the Applicant/Owner and the "TCA Native American Monitor associated with a TCA Luiseño Tribe" for the protection and treatment of, including but not limited to, Native American human remains, funerary objects, cultural and religious landscapes, ceremonial items, traditional gathering areas and tribal cultural resources, located and/or discovered through a monitoring program in conjunction with the construction of the proposed Project, including additional archaeological surveys and/or studies, excavations, geotechnical investigations, grading, and all other ground disturbing activities. At the discretion of the Luiseño Native American Monitor, artifacts may be made available for #D scanning/printing, with scanned/printed materials to be curated at a local repository meeting the federal standards of 36CFR79.

MM-CUL-1b Prior to the issuance of a Grading Permit, the Applicant/Owner or Grading Contractor shall provide a written and signed letter to the City of Oceanside Planning Division stating that a Qualified Archaeologist and Luiseño Native American Monitor have been retained at the Applicant/Owner or Grading Contractor's expense to implement the monitoring program, as described in the pre-excavation agreement.

MM-CUL-1c The Qualified Archaeologist shall maintain ongoing collaborative consultation with the Luiseño Native American monitor during all ground disturbing activities. The requirement for the monitoring program shall be noted on all applicable construction documents, including Demolition Plans, Grading Plans, etc. The Applicant/Owner or Grading Contractor shall notify the City of Oceanside Planning Division of the start and end of all ground disturbing activities.

MM-CUL-1d The Qualified Archaeologist and Luiseño Native American Monitor shall attend all applicable pre-construction meetings with the General Contractor and/or associated Subcontractors to present the archaeological monitoring program. The Qualified Archaeologist and Luiseño Native American Monitor shall be present onsite full-time during grubbing, grading and/or other ground altering activities, including the placement of imported fill materials or fill used from other areas of the Project Site, to

identify any evidence of potential archaeological or tribal cultural resources. All fill materials shall be absent of any and all tribal cultural resources.

MM-CUL-1e In order for potentially significant archaeological artifact deposits and/or cultural resources to be readily detected during mitigation monitoring, a written "Controlled Grade Procedure" shall be prepared by a Qualified Archaeologist, in consultation with the Luiseño Native American monitor, other TCA Luiseño Tribes that have participated in the state-prescribed process for this Project, and the Applicant/Owner, subject to the approval of City representatives. The Controlled Grade Procedure shall establish requirements for any ground disturbing work with machinery occurring in and around areas the Qualified Archaeologist and Luiseño Native American monitor determine to be sensitive through the cultural resource mitigation monitoring process. The Controlled Grade Procedure shall include, but not be limited to, appropriate operating pace, increments of removal, weight and other characteristics of the earth disturbing equipment. A copy of the Controlled Grade Procedure shall be included in the Grading Plan Submittals for the Grading Permit.

MM-CUL-1f The Qualified Archaeologist or the Luiseño Native American monitor may halt ground disturbing activities if unknown tribal cultural resources, archaeological artifact deposits or cultural features are discovered. Ground disturbing activities shall be directed away from these deposits to allow a determination of potential importance. Isolates and clearly non-significant deposits will be minimally documented in the field, and before grading proceeds these items shall be secured until they can be repatriated. If items cannot be securely stored on the Project Site, they may be stored in off-site facilities located in San Diego County. If the Qualified Archaeologist and Luiseño Native American monitor determine that the unearthed tribal cultural resource, artifact deposits or cultural features are considered potentially significant TCA Luiseño Tribes that have participated in the state-prescribed consultation process for this project shall be notified and consulted regarding the respectful and dignified treatment of those resources. The avoidance and protection of the significant tribal cultural resource and/or unique archaeological resource is the preferable mitigation. If, however, it is determined by the City that avoidance of the resource is infeasible, and it is determined that a data recovery plan is necessary by the City as the Lead Agency under CEQA, TCA Luiseño Tribes that have participated in the state-prescribed consultation process for this Project shall be notified and consulted regarding the drafting and finalization of any such recovery plan. For significant tribal cultural resources, artifact deposits or cultural features that are part of a data recovery plan, an adequate artifact sample to address research avenues previously identified for sites in the area will be collected using professional archaeological collection methods. The data recovery plan shall also incorporate and reflect the tribal values of the TCA Luiseño Tribes that have participated in the state-prescribed consultation process for this Project. If the Qualified Archaeologist collects such resources, the Luiseño Native American monitor must be present during any testing or cataloging of those resources. Moreover, if the Qualified Archaeologist does not collect the tribal cultural resources that are unearthed during the ground disturbing activities, the Luiseño Native American monitor, may at their discretion, collect said resources and provide them to the appropriate TCA Luiseño Tribe, as determined through the appropriate process, for respectful and dignified treatment in accordance with the Tribe's cultural and spiritual traditions. Ground disturbing activities shall not resume until the Qualified Archaeologist, in consultation

with the Luiseño Native American Monitor, deems the cultural resource or feature has been appropriately documented and/or protected.

MM-CUL-1g The landowner shall relinquish ownership of all tribal cultural resources unearthed during the cultural resource mitigation monitoring conducted during all ground disturbing activities, and from any previous archaeological studies or excavations on the Project Site to the appropriate TCA Luiseño Tribe, as determined through the appropriate process, for respectful and dignified treatment and disposition, including reburial at a protected location onsite, in accordance with the Tribe's cultural and spiritual traditions. All cultural materials that are associated with burial and/or funerary goods will be repatriated to the Most Likely Descendant (MLD) as determined by the Native American Heritage Commission per California Public Resources Code Section 5097.98. No tribal cultural resources shall be subject to curation.

MM-CUL-1h Prior to the release of the grading bond, a monitoring report and/or evaluation report, if appropriate, which describes the results, analysis and conclusions of the archaeological monitoring program (e.g., data recovery plan) shall be submitted by the Qualified Archaeologist, along with the Luiseño Native American monitor's notes and comments, to the City of Oceanside Planning Division for approval.

4.19.6 Level of Significance After Mitigation

The analysis in Section 4.19.4 identified the potential for significant impacts related to an eligible or listed tribal cultural resource and resource to a California Native American Tribe. Implementation of mitigation measures MM-CUL-1a through MM-CUL-1h requires construction monitoring by a Qualified Archaeologist and Native American monitor and specific protocols for pre-construction, construction and post-construction activities, requirements for discovery of cultural resources and reporting of monitoring activities and evaluation of results. With implementation of mitigation measures MM-CUL-1a through MM-CUL-1h, Impact TCR-1a and Impact TCR-1b related to listed tribal cultural resources and resources to a California Native American Tribe would be reduced to below a level of significance by requiring specific monitoring program protocols during construction which would allow for proper care of resources in the event of a discovery. Therefore, all impacts to tribal cultural resources will be reduced to less than significant.

Chapter 4.20 UTILITIES AND SERVICE SYSTEMS

The following document was used in the preparation of this section and is included in its entirety in **Appendix S:**

City of Oceanside Water Utilities Department. October 7, 2020. *Water and Sewer Will Serve Letter Request.*

4.20.1 Environmental Setting

Water Utilities Department

The City of Oceanside Water Utilities Department is responsible for providing potable water, wastewater and storm water services to the City. This department is also responsible for overseeing waste and recycling services, as well as implementing the City's Zero Waste Plan.

Water Division

The Water Division of the Water Utilities Department is responsible for obtaining the City's water, including purchasing water from the San Diego County Water Authority (SDCWA) and delivering it throughout the City for domestic, commercial, irrigation, and fire protection purposes. The City treats up to 25 million gallons per day of water received from the SDCWA and up to six million gallons per day of local brackish groundwater from the Mission Basin. Imported raw water is treated at the Robert A. Weese Filtration Plant which is capable of treating up to 25 million gallons per day of surface water. The Water Utilities Department maintains and operates this plant on a 24-hour basis and it provides the majority of the City's water. The Plant was built in 1983 and has undergone several upgrades over the years to ensure its efficiency and compliance with all applicable rules and regulations. The Mission Basin Groundwater Purification Facility is a desalting treatment facility that provides 15% of the City's water supply. The facility uses reverse osmosis to treat local brackish groundwater extracted from the Mission Basin. The facility began service in 1992 with a capacity of two million gallons per day and was expanded to its current capacity of 6.4 million gallons per day in 2002.

Currently no water is provided onsite. However, water is supplied to adjacent developments in the surrounding area. There is an existing 10-inch water line running along Plaza Drive west of the Project Site, an 8-inch water line running along the shopping center on the western boundary of the Project Site, and a 12-inch water line running along Thunder Drive.

Wastewater Division

The City of Oceanside's Wastewater Division of the Water Utilities Department collects, treats, and disposes of all of the City's sewage at the San Luis Rey Wastewater Treatment Plant and the La Salina Wastewater Treatment Plants. The San Luis Rey plant serves areas east of I-5 and the La Salina plant treats sewage from areas west of I-5, downtown and along the coast. The City sewer system includes over 450 miles of pipelines, two wastewater treatment plants, 34 sewer lift stations and an industrial waste inspection program. The City's sewage is presently treated at full secondary treatment level according to the U.S. EPA standards. The City has a goal of zero sewer spills. The Wastewater Division also coordinates implementation of the Clean Water (storm water) program, recycling programs and implementation of the Waste Management contract.

The Project is located to the east of I-5 and would be served by the San Luis Rey Wastewater Treatment Plant. An existing 12-inch vitrified clay pipe (VCP) and 21-inch VCP sewer line runs from east to west through the southern portion of the Project Site. This line is fed by a 10-inch VCP line which runs from north to south along Thunder Drive, and it connects to an 8-inch VCP line running southwest along the eastern boundary of the shopping center west of the Project Site.

Storm Water

In its existing condition, the Project Site is vacant and has been previously graded. Existing runoff from the north side of the Project Site drains via overland flow to the southwest corner of the Project Site where it sheet flows over the existing berm and onto Plaza Drive. Plaza Drive drainage flows west towards the intersection of SR-78 and Plaza Drive where it enters a curb inlet. Runoff from the southern parcel drains south towards Buena Vista Creek with a small portion draining east over the sidewalk and curb onto Thunder Drive. The Drainage Study prepared by REC Consultants, Inc. (**Appendix J**) analyzes existing and developed conditions for 100-year flowrates from the development to the existing points of discharge. Treatment of storm water runoff from the site is addressed in the SWQMP prepared by REC Consultants, Inc. (**Appendix K**).

Electricity and Natural Gas

SDG&E is the utility company which provides electric and natural gas services in southern Orange County and the County, including the City and the Project Site. Within its 4,100 square-mile service area are 3.6 million customers, 1.4 million electric meters, and 873,000 natural gas meters. Most of the gas transported from out-of-state, as well as some of what is produced in-state is delivered to regional transmission systems for PG&E and SoCalGas natural gas transmission pipeline systems. SDG&E is a customer of SoCalGas and receives all of its natural gas from the SoCalGas system. Power and gas requirements for upcoming development Projects are handled on a case-by-case basis, where SDG&E consults developers to incorporate energy saving devices into Project design, where feasible. Section 4.7.1 provides additional details of local electricity and natural gas usage and history.

Telecommunication Systems

Communication systems for telephone, internet and cable television are serviced by utility providers such as SBC, AT&T, IBM, and other local independent cable companies. Communication systems needs for incoming Projects are serviced by these utility providers on an as-needed basis. Forecasting future service demand is typically performed by computerized statistical modeling based on land use patterns, zoning and other growth indicators. When feasible, developers and telecommunication utility providers work together during the early stages of development projects to establish upcoming service demand.

Solid Waste Disposal Service

The City implements and oversees solid waste and recycling services to ensure compliance with state regulations and the OMC. Waste Management, Inc. of North County services the entire City and disposes of solid waste at the El Sobrante Landfill located at 10910 Dawson Canyon Road, Corona, CA 92883. As of 2018, the landfill was projected to be able to continue its operations until 2051, with a remaining capacity of 143,977.180 CY (CalRecycle, 2018). Recyclables are collected by Waste Management, Inc. and delivered to the Waste Management Materials Recovery Facility located at 2050

North Glassell Street, Orange, CA 92865. Trash, recyclables, and green waste within the City are normally picked up weekly.

The City adopted and enacted the *Zero Waste Strategic Management Plan*, which establishes methods to reach the goal of diverting 75% to 90% of solid waste by 2020, and works in conjunction with the goals of the City Council's adoption of Resolution No. 10-R0636-1 (Zero Waste Resolution) and the State of California AB 341. The City currently has achieved a 67% diversion and recycling rate.

4.20.2 Regulatory Setting

Federal

Federal Safe Drinking Water Act

The Safe Drinking Water Act grants the EPA the authority to set drinking water standards. There are two (2) categories of standards: (a) the National Primary Drinking Water Regulations; and (b) the National Secondary Drinking Water Regulations. The former are legally enforceable standards that apply to public water systems, and protect water quality by limiting levels of contaminants known to adversely affect public health. The latter are non-mandatory guidelines for certain substances that do not pose a risk to public health.

Clean Water Act

The CWA is the primary federal law for the regulation of water quality. The CWA includes water quality standards, discharge limitations, and required permits as part of the NPDES. The CWA establishes regulatory requirements for potable water supplies, including raw and treated water quality criteria.

State

Senate Bill 221

Signed into law on October 8, 2001, SB 221 established a process whereby sufficient water supply must be identified and available for new development for any residential development of 500 homes or more, or, in the case wherein a water supplier has fewer than 5,000 service connections or the proposed development would increase the number of connections by at least 10%, unless there is proof of adequate water over at least the next 20 years, including long periods of drought. Due to the size of the proposed project, a water supply assessment and verification report pursuant to SB 221 and SB 610, described below, are not required.

Senate Bill 610

Signed into law October 9, 2001, SB 610 resulted in amendments to the Public Resources Code and the Water Code. Revising provisions established by SB 901, SB 610 requires that the planning agency determine whether a proposed project, subject to CEQA, meets any of the thresholds for requiring preparation of a water supply assessment. Specifically, if the project is a proposed development of more than 500 dwelling units (or equivalent water use for another development type), the planning agency must then request that the urban water supplier prepare a water supply assessment. The assessment would include the identification of existing water entitlements, water rights, or water service contracts

relevant to the water supply identified for the proposed project, and the amount of water received pursuant to such entitlements, rights, or contracts. Due to the size of the proposed project, a water supply assessment pursuant to SB 610 is not required.

State Safe Drinking Water Act

The State Safe Drinking Water Act builds on and strengthens the Federal Safe Drinking Act. The State Act authorizes the SWRCB to protect public health by establishing maximum contaminant levels that are at least as stringent as those mandated by the EPA under the Federal Safe Drinking Water Act.

Porter-Cologne Water Quality Control Act

The Porter-Cologne Act establishes the responsibilities and authorities of the SWRCB and the nine (9) RWQCB. In California, all surface waters and groundwater are considered to be "Waters of the State" under this Porter-Cologne Act. Pursuant to the Porter-Cologne Act, a Water Quality Control Plan for the San Diego Basin was prepared.

California Green Building Standards Code

The CALGreen Code is set forth in CCR, Title 24, Part 11. It establishes minimum mandatory standards as well as voluntary standards for the planning and design of sustainable site development, water conservation, and other issues. The CALGreen Code provides waste diversion requirements, plumbing fixture requirements, water efficiency and conservation measures and energy efficiency measures.

Executive Order B-29-15

On April 1, 2015, Governor Jerry Brown signed Executive Order B-29-15 which directs the SWRCB to implement mandatory water reductions in cities and towns across California to reduce water usage by 25%. This order directs the SWRCB to require commercial, industrial, and institutional properties to immediately implement water efficiency measures to reduce potable water usage by the 25% target.

California Integrated Waste Management Board

The California Integrated Waste Management Board policies require local governments to prepare a Source Reduction and Recycling Element in its Solid Waste Management Plan calling for integration of solid waste management, including such processes as source reduction, reuse, recycling, and composting before landfill disposal.

California Solid Waste Reuse and Recycling Access Act of 1991

The California Solid Waste Reuse and Recycling Access Act of 1991 (California Public Resource Code, Division 30, Part 3, Chapter 18) provides solid waste diversion requirements through source reduction, recycling and composting activities for cities and counties in California.

Assembly Bill 341

On October 5, 2011 AB 341 was approved by Governor Jerry Brown and declared the policy goal of the state that not less than 75% of solid waste generated would be source-reduced, recycled, or composted

by the year 2020. AB 341 required a report to be prepared by January 1, 2014 that provides strategies to achieve the goal and would include other specifications and recommendations.

Local

San Diego Regional Water Quality Control Board

The San Diego Water Board regulates water quality in the County and portions of Orange and Riverside Counties pursuant to the CWA. The San Diego Water Board sets standards, determines regulatory compliance, issues discharge permits and enforces other actions related to ensuring the water quality of the region. The San Luis Rey Plant, La Salinas Treatment Plan and Mission Basin Groundwater Purification Facility in the City operate in compliance with the NPDES Permit No. CA0107433 adopted by the San Diego Water Board through Order No. R9-2011-0016, as amended by Order Nos. R9-2012-0042 and R9-2012-0060.

City of Oceanside General Plan

Community Facilities Element

The General Plan's Community Facilities Element provides direction for the provision of adequate public facilities necessary to serve the existing and future developed areas of the City in a coordinated and cost effective manner. The following policies are relevant to the Project:

> **Water and Sewer Systems**
>
> **Policy 5.3:** Within the San Luis Rey Wastewater Service Area, the City shall construct adequate sewer mains and lift stations as required to meet existing needs and future growth requirements and will increase the capacity of the Oceanside outfall line by constructing a parallel line to serve future needs of the community.
>
> **Policy 5.4:** New development shall be responsible for on-site wastewater facility improvements required by that development.
>
> **Policy 5.10:** New development in unserved areas shall be approved only with assurance that required supply, storage facilities, and distribution systems shall be provided prior to occupancy.
>
> **Policy 5.11:** New development shall be responsible for on-site water facilities improvements required by that development.

Hazardous Waste Management Element

The Hazardous Waste Management Element provides overall policy guidance for safe and effective managing of hazardous waste within the City. Items within this element's scope include hazardous waste facilities and waste reduction and elimination. This element is consistent with the City's General Plan and other elements.

City of Oceanside Climate Action Plan

The City adopted the CAP in May of 2019. The purpose of the CAP is to align the City with state efforts to reduce greenhouse gas emissions while balancing a variety of community interests such as quality of life, economic development and social equity. The CAP contains measures and strategies to reduce greenhouse gas emissions associated with the provision of drinking water, transportation and treatment of wastewater, and disposal of solid waste. Relevant measures and strategies for the Project include:

Measure W1: Implementation of the Water Conservation Master Plan

- Require plan reviews for water use efficiency for all new business customers
- City will install Automated Meter Infrastructure (AMI) meters and provide a means of viewing daily consumption inside their home/business either through the internet or separate device. The AMI system would, on demand, indicate to the customer and utility where and how their water is used, facilitating water use reduction and prompt leak identification. Also require that larger or irrigation customers install such AMI meters.
- Offer commercial, industrial, and institutional rebates to replace inefficient equipment.
- Top Water Users Program: Top water customers from each category would be offered a professional water survey that would evaluate ways for each to save water and money. The surveys would be for high-volume users such as hotels, restaurants, stores and schools.

Measure W2: Non-Residential Water Use Benchmarking and Disclosure

- Promote use of building water consumption benchmarking using tools such as Portfolio Manager.
- Promote disclosure of building water consumption and water consumption benchmark scores at the time-of-sale of non-residential real estate.

Measure SW1: Implementation of Zero Waste Strategic Resource Plan

- Update the City's recycling ordinance and provide technical assistance to businesses to comply with the AB 341 State mandatory commercial recycling program
- Develop a program for business and institution waste reduction services

Urban Water Management Plan

As required by California Water Code Sections 10617 and 10620, the City, as an urban water supplier, must prepare and adopt an Urban Water Management Plan (UWMP) every five (5) years. The City adopted its 2015 UWMP in June 2016. The UWMP describes current water system services, facilities, supplies and demands, and includes an analysis of the City's water supply and demand planning within its service area for variable water years (average, single-dry, and multiple-dry years) over a 20-year horizon. Based on the 2015 UWMP the City's supply and reliability analysis show that with implementation of additional planned supplies and water conservation measures, supplies would meet demand under all water years through 2040.

Zero Waste Strategic Resource Management Plan

In response to the adoption of Resolution No. 10-R0636-1 by the City Council on August 25, 2010, to divert 75 percent of waste by 2020, the City developed the Zero Waste Strategic Resource Management Plan (Zero Waste Plan). The Zero Waste Plan identifies and recommends strategies for the City to

achieve this goal. At the time of the preparation of the Zero Waste Plan, the City had already reached 67 percent waste diversion. The private companies contracted to provide solid waste and recycling services such as Waste Management, Inc., Agri Service Inc., and Moodys are also working to support the City in achieving this goal.

City of Oceanside Municipal Code

Chapter 13 of the OMC provides the Solid Waste and Recycling Code. The Solid Waste and Recycling Code provides definitions, administration requirements, enforcement and regulations for storage, disposal, and collection of solid waste and provision of recycling facilities and separation of recyclables within the City.

4.20.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, in determining the significance of impacts associated with the Project, it must be considered whether the Project would:

a. Require or result in the relocation or construction of new or expanded water, or wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects;
b. Have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years;
c. Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments;
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals;
e. Comply with federal, state, and local management and reduction statues and regulations related to solid waste.

4.20.4 Project Impact Analysis

Would the Project:

a. Require or result in the relocation or construction of new or expanded water, or wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Water

The Project Site would be served by the City of Oceanside Water Utilities Department. Currently, no water service is provided onsite; however, water is supplied to adjacent developments in the surrounding area. There is an existing 10-inch water line running along Plaza Drive west of the Project Site, an 8-inch water line running along the shopping center on the western boundary of the Project Site, and a 12-inch water line running along Thunder Drive. As part of the proposed off-site improvements, the Project would connect to existing water infrastructure in the vicinity and the construction of onsite and off-site water infrastructure would be required to serve the Project.

A new 2-inch domestic water service line would run east to west along the middle of the southern parcel of the Project Site. The Project would also include a 1-inch irrigation meter and 1-inch backflow on the south side of Plaza Drive, west of the test drive-only driveway and security gate. A ¾-inch irrigation meter and ¾-inch backflow would be provided on the north side of Plaza Drive east of the driveway and security gate. These onsite water infrastructure improvements are considered within the Project footprint, as described in the Project Description (Section 3.0 of this EIR). These onsite water infrastructure improvements do not result in any new Project-footprint related impacts beyond those already disclosed in this document.

Off-site Project improvements would include the extension of the existing 10-inch water line west of the Project Site and would provide a 12-inch PVC water main along Plaza Drive that would run across the Project frontage and the DMV and would be looped to Thunder Drive. The construction related activities to install this infrastructure was included in the air quality, GHG and noise analysis of this EIR (see Section 4.4, Section 4.8 and Section 4.14) and construction related air quality and GHG emissions are less than significant. Similarly, construction related noise impacts are less than significant. These off-site improvements would be located within already disturbed/developed areas and would not result in impacts to sensitive resources. Impacts related to construction of these off-site water improvements are **less than significant.**

Further, as part of the entitlement application review process, the City of Oceanside Water Utilities Department has reviewed the Project and has provided a letter stating that: "As part of this [entitlement] process, any off-site improvements to the City's water and sewer systems that are necessary to accommodate the proposed Project must be identified and included as part of the development. Once the entitlement process is complete, the flow and capacity allowances will be set aside for the approved project." This letter is provided in its entirety as **Appendix S.** The Project would comply with all Water Utilities Department conditions and would incorporate all requirements into the Project design. General conditions include the following:

1. The landowner must enter into an agreement with the City providing for landowner's assignment of rights to divert and extract local groundwater supplies;
2. The developer will be responsible for developing all water and sewer utilities necessary to develop the property;
3. Water and wastewater construction conformance with the recent edition of the *Water, Sewer, and Recycled Water Design and Construction Manual;*
4. The property owner shall maintain private water and wastewater utilities located on private property;
5. Water services and sewer laterals constructed in existing right-of-way are to be constructed by an approved and licensed contractor at developer's expense;
6. Provide separate irrigation water meter with reduced pressure principle backflow device for common area landscaping;
7. Buildings requiring automatic sprinkler system for fire protection shall have a dedicated fire service connection to a public water main with a double check detector backflow assembly; and
8. Car wash facility shall recycle 90% of the water utilized in the washing process.

Wastewater Treatment

The City Wastewater Division collects, treats and disposes of all of the City's sewage. The Project would be served by the San Luis Rey Wastewater Treatment Plant. The San Luis Rey Waste Water Treatment Plant has a design capacity of 13.5 million gallons per day (mgd) according to the City's Biosolids Annual

Report (Oceanside 2016), and has an average flow of 8.7 mgd. An existing 12-inch VCP and 21-inch VCP sewer line runs from east to west through the southern portion of the Project Site. This line is fed by a 10-inch VCP line which runs from north to south along Thunder Drive, and it connects to an 8-inch VCP line running southwest along the eastern boundary of the shopping center west of the Project Site.

The Project would connect to existing sewer infrastructure in the vicinity. The Project would realign the existing sewer mains and would construct a new 12-inch and new 21-inch PVC sewer main that would run along the southern portion of the site, south of the sales and staging and customer and employee parking lots, and would connect to existing sewer to the west and to the east in Thunder Drive. The existing 12-inch and 21-inch sewer mains located directly north of the proposed sewer mains would be abandoned. An existing sewer easement for the City runs east to west along the southern portion of the Project Site is to be relocated in line with the proposed sewer realignment. The existing sewer easement that runs north to south on the eastern portion of the site is to be vacated.

The sewer realignment would encroach approximately six (6) feet into a small portion of the 50-foot planning buffer. This is a temporary impact and was analyzed in Chapter 4.5 *Biological Resources.* As detailed in Section 4.5.4, temporary direct impacts will occur to approximately 0.008 acre (334 SF) of disturbed habitat within the planning buffer. These impacts are considered temporary as they would recover on their own within one growing season. Additionally, because these impacts are minimal and occur to disturbed habitat, and because they are located at least 94 feet from the riparian habitat, no direct significant impacts will occur.

As part of the Project review process, the City of Oceanside Wastewater Division of the Water Utilities Department reviewed the Project and has provided a letter stating that: “As part of this [entitlement] process, any off-site improvements to the City’s water and sewer systems that are necessary to accommodate the proposed project must be identified and included as part of the development. Once the entitlement process is complete, the flow and capacity allowances will be set aside for the approved project.” This letter is provided in its entirety as **Appendix S.** The Project would comply with all Wastewater Utilities Department conditions and would incorporate all requirements into the Project design.

Impacts related to the construction or relocation of new or expanded wastewater facilities will be **less than significant.**

Storm Water Drainage

As discussed in Chapter 4.11 *Hydrology and Water Quality,* storm water drainage facilities would be located entirely onsite. The northern parcel would be constructed solely of permeable material and runoff from the southern parcel would be treated via an underground proprietary BMP. The Project would not create or contribute runoff which would exceed the capacity of an existing or planned storm water drainage system.

The construction related activities to install this infrastructure was included in the air quality, GHG and noise analysis of this EIR (see Section 4.4, Section 4.8 and Section 4.14) and construction related air quality and GHG emissions are less than significant. Similarly, construction related noise impacts are less than significant. The environmental effects of installing these facilities have been evaluated within this EIR and these improvements are included within the Project development footprint. These onsite storm water infrastructure improvements are considered within the Project footprint, as described in the

Project Description (Section 3.0 of this EIR). These onsite storm water infrastructure improvements do not result in any new project-footprint related impacts beyond those already disclosed in this document.

Impacts related to the construction or relocation of new or expanded storm water drainage facilities will be **less than significant.**

Gas, Electric Power, and Telecommunication Facilities

The 8-inch fire water supply and gas and water services would run south of the sales and administration building through the customer and employee parking lot. New electrical services and telephone lines would run east to west through the customer and employee parking lot. The construction related activities to install this infrastructure was included in the air quality, GHG and noise analysis of this EIR (see Section 4.4, Section 4.8 and Section 4.14) and construction related air quality and GHG emissions are less than significant. Similarly, constriction related noise impacts are less than significant. The environmental effects of installing these facilities have been evaluated within this EIR and these improvements are included within the Project development footprint. These onsite gas, electric and telecommunications infrastructure improvements are considered within the Project footprint, as described in the Project Description (Section 3.0 of this EIR). These onsite energy and telecommunications infrastructure improvements do not result in any new Project-footprint related impacts beyond those already disclosed in this document.

Impacts related to the construction or relocation of new or expanded gas, electric power, or telecommunication facilities will be **less than significant**.

b. Have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years?

The Project will result in an increase in water demand through proposed Project activities, such as water use for irrigation, car washing, restroom facilities, fire protection system, and other uses that create a demand for water.

The anticipated water demand for the Project is 200,000 to 300,000 gallons per year based on the water usage of existing CarMax facilities in the region of similar size. A Water Supply Assessment pursuant to SB 610 is not required for the Project as it does not propose the construction of 500 residential units, or development with an equivalent water demand.

The City Water Utilities Department currently serves the Project area with potable water, and would serve the Project. Citywide water supply planning is completed through the 2015 UWMP. The UWMP includes an analysis of the City's water supply and demand planning within its service area for variable water years (average, single-dry, and multiple-dry years) over a 20-year horizon. The UWMP considered the City's planning documents (e.g., General Plan), regional planning documents, and the SANDAG Series 13 Growth Forecast in determining future water demand. Water demand assumptions for the Project Site in the 2015 UWMP would have been based on a commercial land use, since that was the land use designation at the time the UWMP was prepared. The Project Site still has a commercial land use designation and no change in land use or zoning is required as part of the Project.

The 2015 UWMP, Table 7-2, indicates that in an average year, a single-dry year, and in Year 1 and Year 2 of a multiple-dry year scenario, there are available water supplies. In Year 3 of a multiple-dry year scenario supplies could fall short of demand but that the difference could be made up through

extraordinary conservation or conversion to recycled water and the demand could ultimately be met (Table 7-6 of the 2015 UWMP).

The Project would be in compliance with the Zoning Code and General Plan designations and therefore water demand for the Project has been planned for in the City and regional water supply documents that are based on the buildout of the City, as discussed above. The City has also developed the Oceanside Water Conservation Master Plan that further ensures water availability to the City during drought years. Additionally, the Project would include water conserving landscaping along with efficient irrigation design consistent with the City's water planning efforts.

There would be sufficient water supplies available from the City Water Utilities Department to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. Impacts will be **less than significant**.

c. Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments?

Based on the sewer generation rates provided in the City Water, Sewer, and Reclaimed Water Design & Construction Manual, commercial land uses would generate 1,000 gpd/acre of sewer. Using this generation rate, the Project would be anticipated to generate approximately 11,700 gpd of wastewater.

The City's 2015 Sewer Master Plan (SMP) is utilized to help the City plan, develop, and finance wastewater collection facilities for existing and planned future growth. It acts as a strategic planning guide for upgrading, improving, and expanding the City's wastewater collection system. The 2015 SMP considers existing flow conditions as well as future growth projected by a number of specific near-term development projects and SANDAG's long-term (2050) regional growth projections. Wastewater demand assumptions for the Project Site in the SMP would have been based on a commercial land use, since that was the land use designation at the time the SMP was prepared. The Project Site still has a commercial land use designation, and no change in the land use or zoning is required as part of the Project.

Two (2) future flow scenarios were developed to analyze system capacity as part of the SMP: a near-term scenario (2020) and a long-term scenario (2050). Near-term flow projection through year 2020 assumes that all planned and currently being constructed development projects (during the preparation of the SMP) have been built. The long-term flow projection through year 2050 assumes wastewater flow increases according to SANDAG's 2011-2050 population and employment projections. The average dry weather flows (ADWF) and peak wet weather flows (PWWF) in near-term and long-term scenarios were used to determine peaking factors at the San Luis Rey Wastewater Treatment Plan and La Salina Wastewater Treatment Plan. The City's sewer models were then updated to perform an evaluation of the wastewater collection system.

The 2015 SMP includes evaluation of the City's wastewater collection system facilities and identified current and future system deficiencies. As provided in the SMP, wastewater collection system improvement projects are recommended and included in the City's Capital Improvement Plan (CIP). The construction of these improvements are not part of, or a result of, the Project and would require separate environmental analysis for determining environmental effects.

The Project is in compliance with the General Plan and Zoning Ordinance and therefore the Project's wastewater demand has been planned for in the City's wastewater system plans which are based on buildout of the City, as discussed above. Impacts related to adequate wastewater treatment capacity would be **less than significant**.

d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Waste Management, Inc. would provide solid waste disposal services to the Project Site as with the rest of the City. Solid waste collected from the City is disposed of at the El Sobrante Landfill located in Corona, California. The El Sobrante Landfill was projected to have a remaining capacity of 134,549,993 tons at the end of 2018. At the current rate this equates to approximately 40 years of site life remaining.

Construction waste would be generated onsite throughout the construction phase of the Project and would include items such as dredging materials, tree stumps, rubble, dirt, building materials scrap and packaging materials. In accordance with the City's adoption of the CALGreen Building Standards Code, a Waste Management Plan would be submitted to the City prior to the issuance of building permits. This Waste Management Plan would provide detail of how non-hazardous construction waste generated during the course of the Project would be recycled or salvaged for re-use at a minimum rate of 65 %.

CalRecycle procures commercial sector waste generation rates for different business types from select city and county planning documents. The waste generation rate provided for auto dealer and service stations is 0.9 lbs./100SF/per day. The Project would cover a total of 11,447 SF. Operational solid waste generation estimates are provided in **Table 4.20-1**.

Table 4.20-1
Project Waste Generation

Activity	Type	Waste Generation Rate	Total Square Feet	Waste Generation	
				Pounds per day	Pounds per year
Operational	Commercial/Auto-Dealer	0.9 lbs/100 SF/day	11,447	103	37,603
Source: CalRecycle; REC, 2020					

The Project is estimated to generate a total of 37,603 pounds of solid waste annually. This estimate, however, does not account for landfill diversion that would result from recycling and waste reduction activities. Given the remaining lifespan of the El Sobrante Landfill and the Project's waste generation, the landfill would have sufficient permitted capacity remaining to serve the Project. Additionally, the Project would participate in the City's recycling programs which would further reduce solid waste being sent to the landfill. The Project would provide three (3) separate trash enclosures each properly labeled for solid waste, recyclable waste and organic waste as required by the City. The trash enclosures would contain a metal roof and would be placed behind corrugated metal panel gates.

The City Waste Plan indicates the City's goal for achieving a 75% diversion/ recycling rate by 2020. This plan provides a program for expanded commercial composting along with requirements for compost and recycling bins. The Project would comply with these measures in accordance with the Zero Waste Plan.

The Project is not expected to generate solid waste in excess of the capacity of local infrastructure or state or local standards, nor is it expected to impair the attainment of solid waste reduction goals, and impacts will **be less than significant**.

e. Comply with federal, state, and local management and reduction statues and regulations related to solid waste?

The Project would generate solid waste both from construction and operation. As stated above, the Project would provide three (3) separate trash enclosures each properly labeled for solid waste, recyclable waste and organic waste as required by the City. In accordance with the City's adoption of the CALGreen Building Standards Code, a Waste Management Plan would be submitted to the City prior to the issuance of building permits. This Waste Management Plan would provide detail of how non-hazardous construction waste generated during the course of the Project would be recycled or salvaged for re-use at a minimum rate of 65%.

Compliance with the City waste requirements would ensure compliance with all federal, state and local management and reduction statutes and regulations for solid waste, and impacts will be **less than significant**.

4.20.5 Mitigation Implementation and Monitoring

No significant impacts to utilities and service systems have been identified and therefore no mitigation measures are required.

4.20.6 Level of Significance After Mitigation

Project impacts to utilities and service systems will be less than significant.

Chapter 4.21 WILDFIRE

4.21.1 Environmental Setting

The threat of brushfire is endemic to the Southern California coastal area. The County has experienced many major fires in recent history, with some of the most notable and destructive occurring in 2003 (Cedar Fire) and 2007 (Harris and Witch Creek Fires). CAL FIRE, the County, and local fire districts can provide guidance on preparing structures for wildfire including proper landscaping practices, construction standards and techniques, adequate emergency water supply needs and access.

The City is vulnerable to many types of disasters including wildfires. The probability of fire occurring is higher than for any other natural hazard. Responses to brushfires in the City constitutes nearly one third of all fire calls. The City topography, consisting of a semi-arid climate and wildland urban interface, when fueled by shrub overgrowth, occasional Santa Ana winds, and high temperatures, creates an ever-present threat of wildland fire. Extreme weather conditions such as high temperature, low humidity, and/or winds of extraordinary force may cause an ordinary fire to expand into one of massive proportions. There are three (3) primary factors that contribute to the brushfire threat in this area – vegetation, climate and development patterns. The chaparral, sage and other native vegetation of Southern California is dry and resinous, making it very combustible, especially during the hot summer months. The normal "fire season" is April through November when strong, hot winds of the Santa Ana variety compound the problem and can spread a minor fire into a major conflagration in minutes. The current practice of developing "canyon view" subdivisions introduces the potential for loss of homes and lives into the natural hazard.

Brush fire hazards in the City exist to some degree throughout the City; however, fire hazards are "high" in areas in proximity to residential development. The hazard is rated "extreme" in those areas where the vegetation changes from grass and sage to the denser and more flammable chaparral. An even higher risk occurs where residential development is scattered on large lots, where more of the natural vegetation is preserved, than in the standard single-family development. The Project Site is not located in an area of "high" or "extreme" fire hazard as depicted in Figure PS-5 in the General Plan Public Safety Element.

The Project Site is not located in a SRA recognized by CAL FIRE.

4.21.2 Regulatory Setting

Federal

International Fire Code

The International Fire Code (IFC) was published by the International Code Council and is a comprehensive fire code that establishes minimum regulations for fire prevention and fire protection systems using prescriptive and performance-related provisions. It is a model code and forms the basis for the current California Fire Code (California Code of Regulations, Title 24, Part 9). The IFC is the underlying nationally recognized code that sets standards and requirements to safeguard against the threat fires may pose to public health, safety, and the environment.

National Fire Protection Association Standards

The National Fire Protection Association (NFPA) Standards are a product of the NFPA, a world-wide organization of fire industry, fire agencies, fire professionals and concerned individuals. These model standards are annually compiled from the standards, recommended practices, manuals, guides, and model laws that are prepared by the individual technical committees of the NFPA. The standards are typically revised on a three-year cycle. The published standards are voted on by the members of the NFPA. The individual standards can be adopted by jurisdictions or modified and adopted as that jurisdiction's ordinance.

State

California Code of Regulations Title 24, Part 2 and Part 9

The CCR, Title 24, Part 2 provides the CBC, which contains general construction building standards including fire, life safety, and field inspection provisions. Part 9 is the California Fire Code, which includes fire safety-related building standards.

California Code of Regulations Title 14

The CCR, Title 14, Subchapter 2 (SRA Fire Safe Regulations), contains regulations that establish minimum wildfire protection standards in conjunction with building construction and development in a SRA.

California Code of Regulations Title 19

The CCR, Title 19, Division 1 (State Fire Marshal) contains regulations that have been developed by the State Fire Marshal for the purpose of establishing additional fire protection for group occupancies, such as places of assembly, schools, high rise buildings, hospitals and organized camps.

Local

San Diego County Operational Area Emergency Operations Plan

The County Emergency Operation Plan is a comprehensive emergency management system that provides for a planned response to disaster situations associated with natural disasters, technological incidents and nuclear defense operations. The plan includes operational concepts relating to various emergency situations, identifies components of the emergency management organization and describes the overall responsibilities for protecting life and property and assuring the overall well-being of the population. The plan also identifies the sources of outside support that might be provided (through mutual aid and specific statutory authorities) by other jurisdictions, state and federal agencies, and the private sector.

City of Oceanside Emergency Plan

On December 12, 1973, the City adopted an Emergency Plan that forms the basis for the conduct and coordination of emergency operations within the City. The plan is designed to permit the City to respond to earthquakes, tsunamis, flood, fire, accident, civil disturbance, storm, pollution and epidemic. The Emergency plan was updated in 2016 and serves as the current plan.

City of Oceanside General Plan

Land Use Element

The General Plan Land Use Element identifies the following objectives and policies related to wildfires:

1.153 Fire Hazards

Policies

A. The City shall maintain the necessary equipment, personnel and water supply levels required for the current class 4 insurance rating of the entire City.

B. Places of public assembly shall be designed with adequate, well-marked emergency exits, and have public address systems which would not be rendered inoperable because of fire.

Public Safety Element

The General Plan Public Safety Element identifies and addresses features or characteristics existing in and near the City that represent a potential hazard to the community's citizens, sites and structures, public facilities and infrastructure. The Safety Element establishes policies to minimize the danger to residents, workers and visitors. The following are goals and objectives of the Public Safety Element related to wildfire:

Fire Hazard

Goal: Take the action necessary to ensure an acceptable level of public safety for prevention and reduction of loss of life and personal property of the citizens of Oceanside.

Objectives

1. Maintain the necessary equipment, personnel and water supply levels required for the current class 5 insurance rating of the entire City.

2. Continue an active and effective fire prevention program through public education, code enforcement, and inspection service.

Community Facilities Element

The Communities Facilities Element of the General Plan discusses fire department facilities and its objectives to protect the health, safety, and welfare of the City's residents and property through the provision of adequate fire protection and emergency services and to prepare for, respond to, and aid in the recovery from emergencies related to fire and natural disasters such as wildfires. The following policies are provided in the Community Facilities Element:

Fire Department Facilities

Policies:

3.3 The City of Oceanside shall cooperate with the cities and fire protection agencies in North San Diego County in planning, developing, and maintaining a proposed Regional Training Center and Fire Communication Center.

3.4 Automatic and Mutual Aid Agreements with the cities of Carlsbad and Vista shall be maintained, if possible, in order to provide adequate fire station service area coverage and response times to all portions of the City of Oceanside.

3.11 Development proposals within designated high fire hazard areas shall include plans for mitigation of potential grass and brush fires. These plans shall address the need for life and safety automatic fire sprinkler systems, water availability, secondary emergency access routes, construction requirements, and landscaping around structures.

3.12 The City shall participate in the California Disaster and Civil Defense Master Mutual Aid Agreement, the San Diego County Mutual Aid Agreement and Operational Plan for Fire Departments, and the Unified San Diego County Emergency Services Agreement. In addition to these mutual aid agreements, the City shall continue to pursue Automatic Aid Agreements with adjacent jurisdictions, when such agreements provide substantially equal benefits to each jurisdiction involved.

4.21.3 Thresholds of Significance

Per Appendix G of the CEQA Guidelines, impacts would be considered significant if the Project is located in or near SRAs or lands classified as very high fire hazard severity zones, and the Project would:

a. Substantially impair an adopted emergency response plan or emergency evacuation plan;
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose Project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire;
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment;
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes.

4.21.4 Project Impact Analysis

If located in or near SRA or lands classified as very high fire hazard severity zones, would the Project:

a. Substantially impair an adopted emergency response plan or emergency evacuation plan?

The Project Site is not located in a very high fire hazard severity zone within the Oceanside Local Responsibility Area as mapped by CAL FIRE, and is not located within a SRA where CAL FIRE is the primary emergency response agency responsible for fire suppression and prevention.

The additional sales display area on the northern parcel would be accessed from Plaza Drive and would be developed as part of Phase II. The southern parcel would be accessed from Thunder Drive at two (2) main access points. Access off of Plaza Drive from the southern parcel would be for test drives only and would not be accessible to the public. A Knox Box would be provided at the security gate and control island on the northern parcel sales display area as well as at the security gate and control island located at the test drive-only driveway.

The Project would provide all required setbacks, fire truck access, fire hydrants, address numbers, sprinklers and an OPTICOM system on all gates in accordance with the OFD requirements.

As provided in the Public Safety Element of the General Plan (Figure PS-11), SR-78 to the north, College Boulevard located to the west of the Project Site and Lake Boulevard to the south are the nearest evacuation routes. El Camino High School would be the nearest refuge center as provided in the Public Safety Element of the General Plan.

With compliance of all Fire Department requirements, the Project would not impair an adopted emergency response plan or emergency evacuation plan, and impacts are **less than significant**.

b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

The Project Site is relatively flat and slopes gently south toward Buena Vista Creek. Elevations range from approximately 180 to 220 feet amsl. The Project is located in a developed area and is surrounded by commercial uses to the west, medium density residential uses and a DMV facility to the east and SR-78 to the north. Located to the south are Buena Vista Creek, high density and residential estate uses including a senior living facility, commercial uses and public/semipublic uses including an OFD station.

The Project Site is not located in a very high fire hazard severity zone within the Oceanside Local Responsibility Area as mapped by CAL FIRE, nor is the site located within a SRA where CAL FIRE is the primary emergency response agency responsible for fire suppression and prevention. Additionally, the Project Site is not located in an area of “high” or “extreme” fire hazard as depicted in Figure PS-5 in the City of Oceanside General Plan Public Safety Element.

Therefore, the Project would not exacerbate wildfire risks due to slope, prevailing winds and other factors and thereby expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire, and impacts are **less than significant**.

c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

The Project proposes to construct a pre-owned automobile dealership including a sales and administration building, service building, non-public carwash, associated access drives, landscaped areas, presentation area, staging area, sales display area and a customer and employee parking lot. An additional sales display area would be provided on the northern parcel with a security gate and control island. The Project would provide all required setbacks, fire truck access, fire hydrants, address numbers, sprinklers and an OPTICOM system on all gates in accordance with the OFD requirements.

For water service the Project would construct a 2-inch domestic water service line and an 8-inch fire supply and gas and water services would run south of the sales and service buildings through the customer and employee parking lot. Additional off-site improvements would be required by the City and would include the extension of the 12-inch PVC water main along Plaza Drive across the Project frontage and the DMV to be looped to Thunder Drive. Full width improvements on Plaza Drive would construct an 80-foot curb to curb width across the Project frontage. This would include curb, gutter and sidewalk on both sides of Plaza Drive.

No installation or maintenance of associated infrastructure such as roads, fuel breaks or emergency water sources, power lines or other utilities would be required for the Project that would exacerbate fire risk or that would result in temporary or ongoing impacts to the environment, and impacts are **less than significant**.

d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

As stated in the Geotechnical Evaluation prepared by EEI (**Appendix H**), the site and surrounding areas are relatively flat and the potential for landslides to occur onsite is negligible. FEMA Flood Insurance Rate Map (FIRM) panel 06073C0766G was also reviewed to determine if the site was located within an area designated as a Flood Hazard Zone. The southern portion of the Project Site lies within Zone X of the FEMA 500-year floodplain and Zone AE of the 100-year floodplain. As stated in the Drainage Study prepared by REC Consultants, Inc. (**Appendix J**) the Project would not alter drainage patterns onsite or increase net runoff after development.

Therefore, the Project would not expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability or drainage changes, and impacts are **less than significant**.

4.21.5 Mitigation Implementation and Monitoring

No significant impacts to wildfire have been identified and therefore, no mitigation measures are required.

4.21.6 Level of Significance After Mitigation

Impacts related to wildfire from the implementation of the Project will be less than significant.

Chapter 5.0 CUMULATIVE IMPACTS

5.1 Introduction

CEQA requires an EIR to analyze cumulative impacts. The purpose of this section of the EIR is to explain the methodology for the cumulative analyses and present the potential cumulative effects of the Project.

Section 15355 of the CEQA Guidelines defines cumulative impacts as "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts." Section 15130 of the CEQA Guidelines provides guidance for analyzing significant cumulative impacts in an EIR. The discussion of cumulative impacts "need not provide as great detail as is provided for the effects attributable to the Project alone," but instead is to "be guided by standards of practicality and reasonableness" (Guidelines Section 15130(b)). The discussion should also focus only on significant effects resulting from the Project's incremental effects and the effects of other projects. According to Section 15130(a)(1), "an EIR should not discuss impacts which do not result in part from the Project evaluated in the EIR."

Cumulative impacts can result from the combined effect of past, present, and future projects located in proximity to the Project under review. Therefore, it is important for a cumulative impacts analysis to be viewed over time and in conjunction with other related past, present, and reasonably foreseeable future developments whose impacts might compound or interrelate with those of the Project under review.

5.2 Methodology

According to CEQA Guidelines Section 15130(b)(1) a cumulative impact analysis may be conducted and presented by either of two methods:

a) A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency, or

b) A summary of projections contained in an adopted general plan or related planning document, or in a prior environmental document which has been adopted or certified, which described or evaluated regional or area wide conditions contributing to the cumulative impact. Any such planning document shall be referenced and made available to the public at a location specified by the lead agency.

The cumulative "List Method" has been utilized in this cumulative analysis which consists of an analysis of related projects in the vicinity that are currently proposed or approved. The list of cumulative projects and the cumulative analysis is provided in the following sections.

5.3 Cumulative Projects

Based on the information provided by the City, City of Vista and City of Carlsbad, a list of cumulative projects under consideration for this analysis is presented in **Table 5.3-1** below. **Figure 4** displays the cumulative project locations.

Table 5.3-1
Cumulative Projects

#	Project Name	Location	Description	Status
City of Oceanside				
1	Arroyo Verde Commercial Center	North of Oceanside Boulevard and east of Rancho Del Oro Road	A 27,200-SF commercial retail center	Under Construction
2	Coastal Academy	South of Oceanside Boulevard between El Camino Real and Rancho Del Oro Road	Development of a Junior and Senior High School Campus on a 9.68-acre site formerly occupied by the Evergreen Nursery	Under Review
3	Dolphin Carwash	East of El Camino Real and north of Via Las Rosas	Development plan for carwash and smog check facility on a 1.2-acre site	Under Review
4	El Corazon Mixed Use	Oceanside Boulevard between El Camino Real and Rancho Del Oro Road	Development Plan for 268 residential units and 4,756 SF of commercial space.	Under Review
5	El Corazon Specific Plan	North of Oceanside Boulevard between El Camino Real and Rancho Del Oro Road	Subdivision of the property into four lots including a Zone Amendment and Specific Plan Amendment.	Approved
6	Arena Califino at El Corazon	North of Oceanside Boulevard between El Camino Real and Rancho Del Oro Road	A 170,000 SF multi-purpose sports arena, event facility within the El Corazon Specific Plan Area.	Under Review
7	Emerald Ridge	Southeast corner of Sky Haven Lane and Sunset Drive within the City of Oceanside; Emerald Drive and Sunset Drive located within the City of Vista	A 48-unit condominium project on a 7.78-acre site. The project would include nine townhome buildings, open space recreation areas and a sewer lift station. The project would install a storm drain in Sunset Drive/Emerald Drive within the City of Vista jurisdiction.	Approved
8	Home 2 Suites by Hilton	Rancho Del Oro Drive and El Corazon Drive	Development Plan for a four story, 137-unit hotel facility	Approved
9	La Paloma Nursing Facility Expansion	East of Thunder Drive and south of Waring Road	A 1,780-SF addition to the La Paloma Nursing Facility	Approved
10	Left Coast LLC	Southwest corner of Oceanside Boulevard and Ord Way	A Conditional Use Permit for the operation of a medical cannabis manufacturing facility	Approved
11	Lot 15 Office Building	North of Ocean Ranch Boulevard off of Maritime Way	Development Plan for a 99,800-SFoffice building with site improvements on a 4.22-acre site	Approved
12	Pacific Coast Business Park Phase II	West of College Boulevard, south of Old Grove Road and east of Avenida Del Oro	Construction of three industrial buildings totaling 278,127 SF on 17.57 acres	Under Construction
13	Seagate Shell Service Station	North of Oceanside Boulevard and east of Rancho Del Oro Road	A proposed gas station with convenience store, manager's office and carwash	Under Review

#	Project Name	Location	Description	Status
14	Tri-City Medical Office Building and Parking Structure	North of Vista Way and west of Thunder Drive	A three-story parking structure within the existing Tri-City Hospital property. The project includes a 60,000 SF medical office building. As provided in the Local Transportation Study (**Appendix O)**, the building construction is completed however; the building was not occupied during the traffic data collection period. Therefore, it is included as a cumulative project.	Approved
15	Pacific Ridge at Old Grove	Northwest corner of College Boulevard and Old Grove Road	Development of 320 residential units on a 28.2-acre site.	Under Construction
City of Vista				
16	Assi Retail	North of West Drive West of Emerald Drive	Site Development Plan for a 9,790-SF commercial building	Under Review
17	Cedar Road Townhomes	206 Cedar Road	35 attached residential condominiums on a 2-acre site	Under Review
18	Classic Chariots Service Center	129 Grapevine Road	14,522-SF automobile service center and expansion of existing used car dealership on a 1.45-acre site.	Approved
19	Hacienda Retail	Southwest corner of Hacienda Drive and La Tortuga Drive	Site Development Plan for a 3,200-SF retail building	Under Construction
20	Laurel Creek Condominiums	North of Date Street, east of Grapevine Road, and west of Durian Street	68 detached condominium units on 9.2 acres	Under Construction
21	Olive Avenue Annexation	1435 Olive Avenue	Annexation and Tentative Subdivision Map for 15 lots	Approved
22	Shell Gas Station Renovations	145 N. Emerald Drive	Building additions and renovations and for new services (smog check and car detail)	Under Review
23	Vista Emerald	729 N Emerald Road	27 detached single-family residences on 6.89 acres	Under Construction
City of Carlsbad				
24	Marja Acres	4901 El Camino real	State Density Bonus Residential for the development of 248 townhomes, 46 affordable units for seniors, and 10,000 SF of retail and restaurants with community recreation areas on 20.65 acres	Under Review
25	Quarry Creek Master Plan	South of Haymar Drive and west of College Boulevard	A master plan community with up 656 homes	Under Construction
26	The Shops at Robertson Ranch	El Camino Real and Cannon Road	Includes six retail buildings subdivided into five lots and would include banks, restaurants a private educational facility/ day care	Under Review

#	Project Name	Location	Description	Status
*Projects designated as Approved are approved through either the discretionary or building permit process.				

5.4 Cumulative Impact Analysis

The following section presents a discussion of the effects that the Project may have on each environmental category of concern.

5.4.1 Aesthetics

Existing development and infrastructure surrounding the Project Site, including SR-78, the Tri-City Crossroads shopping center to the west, the DMV and the residential development to the east have been present in the area for several decades and define the existing visual landscape. Due to existing development and intervening topography, cumulative impacts to aesthetics were determined based on the changes in the immediate vicinity of the Project Site. No other development projects are proposed in the immediate vicinity and therefore construction of the Project is the only anticipated change to the existing visual landscape.

The Project would contribute to the change in visual character of the area. These visual changes would be most evident along major arterials in the area including SR-78, Plaza Drive and Thunder Drive as well as from the existing Tri-City Crossroads shopping center, the DMV, and the residences to the east. However, cumulative development would not represent a substantial degradation in visual quality or substantial impediment to scenic views.

The Project would be constructed in an already urbanized area which consists of intense commercial development and would have similar massing appearance to the existing commercial center. In its present condition, the Project Site does not provide an expansive view of a highly valued landscape or scenic vista nor would it interfere with views of an existing scenic vista. The Project would comply with all development standards including building height, scale, setbacks, landscaping and parking. Further, the Project complies with the zoning and land use designations for the Project Site.

New sources of light and glare would be introduced to the surrounding area by the Project. The cumulative projects are also anticipated to contribute new sources of light and glare as projects are constructed. Each cumulative project would be required to address the effects of light and glare on sensitive receptors and provide mitigation as necessary.

As described in Section 4.2 *Aesthetics*, the Project would contain lighting in the proposed parking lot areas and along the site boundary. However, the Project would employ LED lamp technologies in lighting fixtures that would be full cut off with a flat lens, and downcast to reduce light spill onto adjacent properties. Proper shielding of lighting in parking areas would further prevent glare to adjacent properties. Light poles and associated pedestals would not exceed 25 feet per Section 3117 of the Zoning Ordinance and exterior lighting onsite would be reduced after operating hours. Lighting is reduced within the sales display area when the store closes to the public and is further reduced after employees exit the facility to the minimum level that sill allows security cameras to operate. Lighting in the customer and employee parking lot is reduced to the maximum extent possible while maintaining safety for customers and employees to reach their cars safely. All outdoor lighting would comply with the standards of the Zoning Ordinance, Article 30, Section 3024 and Article 31 for parking lot lighting

requirements. The CarMax sign is not illuminated and will not present additional light or glare to the Project area.

The proposed building siding would consist of split face CMU painted in dark earth tones with accents of smooth face CMU in light earth tones. The building would also have an aluminum storefront framing system, windows with blue tinted glazing and an entrance which would be accented by a blue standing seam metal roof. Windows would be tinted with blue tinted glazing which is typically used to reduce glare. All other proposed building materials would not contain highly reflective materials. Existing sources of light and glare in the surrounding area of the Project Site includes cars, streetlights, signs and reflective building materials. Development of the Project would not substantially add to the amount of light and glare present in the area. In addition, the Project and each cumulative project would be required to comply with lighting ordinances and regulations for the specific jurisdiction in which the Project is located in. Therefore, cumulative impacts related to aesthetics are **less than significant**.

5.4.2 Agriculture and Forestry Resources

Cumulative impacts to agriculture and forestry resources would occur if numerous projects within the City were to have significant impacts related to the conversion or loss of farmland, forest land or timberland. No projects listed within **Table 5.3-1** are known to have adverse impacts to agriculture or forestry resources.

A FMMP map was prepared for the Project Site and the site is classified as Urban and Built-Up Land. No prime farmland or unique farmland exist onsite. There are no areas designated as Williamson Act Contract lands located within the Project Site. The Project Site does not contain lands designated as forest land, timberland or timberland zoned Timberland Production as defined in the Public Resources Code Sections, and therefore, the Project would not result in the loss of forest land or the conversion of forest land to non-forest use. No farmland or forest land exists onsite or in the surrounding area and therefore the Project would not result in the conversion of farmland or forest land in the area to non-agricultural or non-forest uses. As the Project Site and the surrounding area do not include nor are adjacent to farmland or forest resources and are zoned for urban uses, in conjunction with other cumulative projects, would not result in significant impacts to agriculture and forestry resources. Cumulative impacts are **less than significant.**

5.4.3 Air Quality

Air pollution is largely a cumulative impact, which is measured cumulatively by the air basin. The Project is located within the SDAB and the SDAB is considered the cumulative air quality study area. All of the cumulative projects provided in **Table 5.3-1** are within the SDAB.

The portion of the SDAB where the Project is located is designated as nonattainment for federal and state O_3, and for state particulate matter (PM_{10} and $PM_{2.5}$). The 2016 RAQS and the SIP have been developed to reduce these emissions. These plans address measures for future attainment of ambient air quality standards. Based on these considerations, project-level thresholds of significance for criteria pollutants are relevant in the determination of whether a project's individual emissions would have a cumulatively significant impact on air quality.

As discussed in Section 4.4 *Air Quality,* the Project would have a less than significant air quality impact for short-term construction and long-term operation as the Project will not exceed SDAPCD thresholds

for any pollutant during construction or operation of the Project. Therefore, the Project's cumulative impacts on air quality are **less than significant cumulative impact**.

For the SDAB, the RAQS serves as the long-term regional air quality planning document for the purpose of assessing cumulative operational emissions of the basin to ensure the SDAB continues to make progress toward the NAAQS and the CAAQS attainment status. Cumulative projects located in the San Diego region would have the potential to result in a cumulative impact to air quality if, in combination, they would conflict with or obstruct implementation of the RAQS. Similarly, individual projects that are inconsistent with the regional planning documents upon which the RAQS is based, would have the potential to result in cumulative operational impacts if they represent development and population increases beyond regional projections. The Project has a zoning and land use designation as CC and would be consistent with the growth assumptions in the General Plan and SANDAG's growth projections and would not conflict with the RAQS or SIP. As a result, the Project would not have a cumulatively considerable contribution to regional O_3 concentrations or other criterial pollutant emissions. Cumulative impacts will be **less than significant.**

5.4.4 Biological Resources

Cumulative biological resources impacts consider the potential regional effects of a project and how a project may affect an ecosystem or one of its members beyond the project limits and on a regional scale. The cumulative biological study area consists of the City within the North County MHCP as it represents the regional area with similar habitats and species as the Project Site.

As discussed in Section 4.5.4, the Project would result in potentially significant impacts to sensitive plant species and vegetation communities, jurisdictional resources, *Brodiaea* species, fairy shrimp, coastal California gnatcatcher, least Bell's vireo, other MBTA-covered species and disturbed Diegan coastal sage scrub. The Project would include implementation of mitigation measures MM-BIO-1 through MM-BIO-7 for the provision of pre-construction, construction and post-construction measures, pre-construction sensitive plant surveys including *Brodiaea* species surveys, pre-construction fairy shrimp surveys, pre-construction coastal California gnatcatcher surveys, pre-construction least Bell's vireo surveys, construction outside of avian breeding season (February 1 to September 15), and off-site mitigation of Diegan coastal sage scrub. Implementation of mitigation measures MM-BIO-1 through MM-BIO-7 would reduce impacts to a level below significance.

All cumulative projects within the Project Area and within the City would be subject to conform to existing regulations including the MHCP and Subarea Plan with respect to avoidance, minimization and mitigation of impacts to sensitive biological resources. Therefore, the Project's contribution to cumulative impacts to biological resources will be **less than significant.**

5.4.5 Cultural Resources

Historic Resources

Considering the historical uses of the Project Site are limited to local relevance and do not rise to the regional level, the historic resources cumulative study area is limited to the City.

As discussed in Section 4.6 *Cultural Resources,* the General Plan Environmental Resource Management Element identifies several sites as being of particular historical significance within the Oceanside area:

the Mission San Luis Rey de Francia and the Rancho Guajome Adobe. These resources are located over five (5) miles from the Project Site.

No historic resources were found onsite during a survey of the Project area pursuant to CEQA Section 15064.2 or the City's Historical Preservation Ordinance. The SCIC records search identified 26 cultural resources that were previously recorded within the one-mile record search radius. Of these resources, none were recorded within the Project area. A search of the historic addresses on file at the SCIC identified six (6) previously recorded historic addresses within the one-mile record search radius. The Project would not contribute to a cumulative significant historical resources impact. Therefore, the Project will have **no cumulative impact** on historic resources.

Archaeological Resources

Cumulative development may potentially impact archaeological resources as a result of projects within the City and in nearby areas. The cumulative study area would consist of coastal northern portion of the County within the Luiseño and Kumeyaay Native American traditional cultural boundaries.

No significant archaeological resources have been identified within the Project area and there is a low potential for impacts to archaeological resources. However, given the Project Site's close proximity to Buena Vista Creek, there is potential for buried cultural resources within the alluvial deposits along the creek. The Project would implement mitigation measure MM-CUL-1a through MM-CUL-1h requiring a Qualified Archaeologist and Luiseño Native American Monitor to be present during all ground disturbing activities to reduce potentially significant impacts to archaeological resources to below a level of significance.

Identification of cultural resources within the area of potential effects (APE) and mitigation of potentially significant adverse impacts would be handled on a project-by-project basis. It is presumed that all reasonably foreseeable cumulative projects would be required to conform to existing regulations with respect to avoidance, minimization, and mitigation of impacts similar to the Project. Therefore, impacts would be assessed and mitigated pursuant to CEQA, and those projects within the City's jurisdiction would be reviewed by the City's project review and approval process. Consistent with CEQA and other applicable laws, monitoring programs would be required for all cumulative projects with potential to impact archaeological resources. The Project's contribution to the cumulative loss of archaeological resources will be **less than significant.**

Human Remains

Cumulative projects located in the region would have the potential to result in impacts associated with human remains due to grading, excavation or other ground-disturbing activities. The Project requires ground disturbing construction activities that have the potential to disturb human remains. The Project would implement mitigation measure MM-CUL-2 for compliance with Section 7050.5 of the California Health and Safety Code and California Public Resources Code Section 5097.98 for requirements in the event of discovery of human remains including determination for the MLD. Impacts would be reduced to a level below significance with implementation of this mitigation measure. Cumulative projects would also be subject to compliance with the California Health and Safety Code and California Public Resources Codes and cumulative impacts will be **less than significant.**

5.4.6 Energy

Potential cumulative impacts on energy would result if the proposed Project, in combination with past, present, and future projects, would result in the wasteful or inefficient use of energy. This could result from development that would not incorporate sufficient building energy efficiency features, would not achieve building energy efficiency standards, or would result in the unnecessary use of energy during construction and/or operation.

The cumulative projects within the areas serviced by the energy service providers would be applicable to this analysis. All projects listed in **Table 5.3-1** are within the service area of SDG&E and therefore are applicable to this cumulative analysis. Projects that include development of large buildings or other structures that would have the potential to consume energy in an inefficient manner would have the potential to contribute to a cumulative impact.

Construction activities include electricity associated with the conveyance of water that would be used for dust control and electricity to power necessary lighting, electronic equipment, and other construction activities necessitating electrical power. The electricity used for such activities would be less than that required during operation of the Project, would be temporary and would have a minimal contribution to the Project's overall energy consumption. Construction of the Project would not typically involve the consumption of natural gas.

As described in Section 4.7 *Energy,* the Project would not involve wasteful, inefficient, or unnecessary use of energy and would be consistent with the 2019 Title 24 Building Efficiency Standards. The Project would generate approximately 161,790 kilowatt hours of electricity per year (kWh/year). The Project is located in a developed area and would consume electricity similarly to that of the existing commercial developments to the west and northwest. Overall, the Project would not result in excessive electricity usage and would not contribute to a cumulative energy use impact.

It is also noted that cumulative projects would be subject to applicable Title 24 and CALGreen requirements similar to the Project, which includes energy efficiency standards to minimize the wasteful and inefficient use of energy. In consideration of cumulative energy use, the Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Thus, the Project would not contribute to a cumulative impact to the wasteful or inefficient use of energy. A **less than significant cumulative impact** will occur.

5.4.7 Geology and Soils

Due to the nature of geology and soils, geologic and soils impacts are limited to a localized area. The cumulative geologic study area would be limited to the Project Site and immediately surrounding properties.

The nearest cumulative project is the Tri-City Medical Office Building and Parking Structure located north of the Project across SR-78. The Tri-City Medical Office Building and Parking Structure project is conditioned to comply with the CBC for provisions relating to geotechnical reports, structure design and specific provisions for structures in seismic zones. Compliance with project-specific geotechnical reports and CBC regulations would reduce potential impacts related to geology and soils to a level below significance.

The CarMax Project would result in potentially significant impacts related to seismic ground shaking, erosion, and expansive soils. The Project would implement mitigation measures MM-GEO-1 and MM-HYDRO-1 through MM-HYDRO-3 which would reduce impacts to a level below significance. Therefore, cumulative geology and soil impacts will be **less than significant.**

The Project would result in potentially significant direct impacts to paleontological resources as the site contains highly sensitive Santiago Formation and Project grading would consist of 12,500 CY of cut. Mitigation measures MM-GEO-3a and MM-GEO-3b would reduce potentially significant impacts to paleontological resources to less than significant levels. Cumulative impacts for the Tri-City Medical Office Building and Parking Structure would also be subject to CEQA and CEQA Guidelines and would be required to implement similar mitigation in order to reduce potential impacts related to paleontological resources. The Project contribution to cumulative paleontological impacts will be l**ess than significant**.

5.4.8 Greenhouse Gas Emissions

Due to the global nature of the assessment of GHG and the effects of global climate change, impacts can currently only be analyzed from a cumulative impact context and therefore, this EIR analysis in Chapter 4.9 *Greenhouse Gas Emissions,* includes the assessment of both Project and cumulative impacts. Under CEQA a project would have a significant cumulative impact caused by the combined impact of past, present, and probable future projects if its incremental impact represents a "cumulatively considerable" contribution to such cumulative impacts (CEQA Guidelines Section 15064(h)).

Construction of the Project would result in GHG emissions primarily associated with the use of off-road construction equipment, on-road hauling, vendor trucks and worker vehicle trips. GHG emissions generated during construction of the Project would be short-term in nature and would not represent a long-term source of GHG emissions.

The Project would generate operational GHG emissions from area sources, energy sources, mobile sources and water supply and wastewater treatment, and solid waste. The Project would generate 308.36 MT CO_2E each year during a typical operational year. This includes the combined operational and construction GHG emissions over a 30-year period. The Project would not exceed the City's 900 MT CO_2E screening threshold for projects that must assess project-induced emissions against CAP-aligned thresholds of significance and therefore would be in compliance with the City's CAP. Further, the Project would generate approximately 1.3 MT CO_2E/SP, which is less than the 3.5 MT CO_2E/SP CAP threshold for projects that will be implemented prior to year 2025.The Project would not generate a significant impact to GHG emissions and thus, will have a **less than significant cumulative impact** to GHG emissions.

The Project is consistent with the SANDAG Regional Plan, the General Plan, the CAP and SB 32 and Executive Order S-3-05. Therefore, the Project would not conflict with an applicable plan adopted for the purpose of reducing GHG emissions at regional and state levels, and plan consistency impacts will have a **less than significant cumulative impact**.

5.4.9 Hazards and Hazardous Materials

Cumulative impacts related to hazards and hazardous materials would result from projects that combine to increase exposure to hazards and hazardous materials. Therefore, the geographic context considered for potential cumulative impacts related to hazards and hazardous materials is localized and limited to

the immediate surrounding area. As shown in **Figure 4** the Tri-City Medical Office Building and Parking Structure is the nearest cumulative project and is located north of the Project Site across SR-78.

During construction of the Project there is potential for release of hazardous materials during the routine transport of construction materials to the Project Site. These materials could include gasoline, diesel fuel, used oil, solvents, cleaners, lead paint debris, lubricants, and other petroleum-based products used for the operation and maintenance of construction equipment and vehicles. Handling of these hazardous materials would be temporary in nature, and limited to quantities and concentrations consistent with a typical infill commercial use of this size. BMPs such as proper and clear labeling of chemicals, storage in approved containers, preparation of an accidental release plan, and compliance with hazardous materials handling protocols would be prepared and implemented to ensure safe storage, handling, transport, use and disposal of all hazardous materials during the construction phase of the Project, in compliance with all applicable laws, ordinances, rules, regulations, and permits by the County DEH HMD. Project construction would also adhere to all local standards set forth by the City, as well as state and federal health and safety requirements that are intended to minimize hazardous materials risk to the public, such as CalOSHA requirements, Hazardous Waste Control Act CalARP, and the California Health and Safety Code.

Typical daily operations include deliveries of vehicles, parts and supplies to the Site, vehicle sales and test drives, preparation of vehicles for sales, and vehicle service work which is to be performed inside fully-conditioned buildings equipped with rollup doors. Only minor vehicle servicing will occur including routine maintenance, oil changes, tire rotations, diagnostic and mileage services. The Project would be expected to handle small quantities of commonly used hazardous substances such as cleaning solvents, diesel, gasoline, and oil as part of daily operations. The servicing operations would require the storage, transport, use and disposal of such potentially hazardous materials. Gasoline would be transported to the site by fuel trucks, which is a routine, permitted use. Fuel transportation would be subject to federal tank, placard, and shipment documentation and reporting requirements. The amount of hazardous materials stored and used is expected to be limited and would be required to comply with applicable local, state and federal regulations.

A private aboveground fuel storage tank with a capacity of 4,000 gallons would be located to the south of the sales building with a non-public fuel pump within the secured staging area to fuel inventory vehicles as needed. The aboveground storage tank would have a triple-wall design in order to provide an additional level of containment protection. The County of San Diego DEH HMD is the CUPA responsible for the regulatory inspections of all tank facilities subject to the Aboveground Petroleum Storage Act APSA in the County. In accordance with the APSA program, the Project would prepare and implement a SPCC Plan in order to prevent discharge of petroleum and to allow for the preparedness and proper response of petroleum discharges.

The Project would also be required to submit a Hazardous Material Business Plan to the County DEH HMD that details the onsite use and storage of fuels in order to prevent damage to public health, safety, and the environment. The Hazardous Materials Business Plan also provides emergency response personnel with adequate information to help better prepare and respond to incidents at regulated facilities. The aboveground storage tank and associated facilities would undergo yearly inspections by the County DEH including inspections of any installations, repairs or required updates.

Anticipated chemicals used in the carwash are as follows: presoak Hi pH 366, carwash detergent Blue Coral hi pH3600, Rain X Protectant, and Cold Wax (or similar). These chemicals would be stored in closed containers inside the carwash and used in only the small amounts necessary. Carwash wastewater

would go into an oil water separator, the water then would be reused in the carwash and the separated chemicals and oil would be taken off-site to be treated by a certified waste vendor.

Operational activities including vehicle servicing, carwash, fueling and fuel storage, and other service related activities would comply with all applicable federal, state and local laws and regulations. Furthermore, the Project would obtain all required DEH HMD permits and would prepare a Hazardous Materials Business Plan which would reduce potential impacts related to hazardous materials to a level below significance.

Cumulative projects would be required to remediate any hazardous conditions that could combine with the less than significant hazardous materials impacts of the Project. Specifically, the Tri-City Medical Office Building and Parking Structure would be subject to federal, state, and local regulations that avoid significant impacts related to hazardous materials. Therefore, the Project in conjunction with cumulative projects provided in **Table 5.3-1** will result in a **less than significant cumulative impact** related to hazards and hazardous materials.

As discussed in Section 4.10 *Hazards and Hazardous Mate*rials, the adopted emergency plans applicable to the Project area consist of the Multi-Jurisdictional Hazard Mitigation Plan for San Diego County, the San Diego County Emergency Operations Plan, and the City Emergency Plan. The Project would provide all required setbacks, fire truck access and turnarounds, fire hydrants, address numbers, sprinklers, Knox Box and an OPTICOM system on all gates in accordance with the OFD requirements.

The Project would not impede the implementation of these plans, nor cumulatively combine with other proposed developments in a manner that would affect implementation of these plans. The Project will have a **less than significant** impact related to impairing implementation of or physically interfering with an adopted emergency response plan or emergency evacuation plan.

The Project Site is not located in a SRA as recognized by the Board of Forestry and Fire Protection as areas where CAL FIRE is the primary emergency response agency responsible for fire suppression and prevention. Additionally, the Project Site is not located in an area of “high” or “extreme” fire hazard as depicted in Figure PS-5 in the General Plan Public Safety Element. The Project is located within an urbanized and developed area of the City. The Project Site does not contain and is not adjacent to wildlands where there is risk for wildfire. The Project would not combine with any cumulative projects in a manner that would increase potential wildfire exposure. Therefore, cumulative impacts related to wildfires will be **less than significant.**

5.4.10 Hydrology and Water Quality

As described in Section 4.11 *Hydrology and Water Quality,* the Project Site is located within the Vista Hydrologic Sub-Area 904.22 of the Buena Vista Creek Hydrologic Area (HA) 904.20 of the Carlsbad Hydrologic Unit (HU). The cumulative study area for hydrology and water quality is the Carlsbad HU/Watershed. All of the projects listed in **Table 5.3-1** are located within the Carlsbad Watershed.

Considering the downstream waters are impaired by the listed pollutants and the Project potential pollutants, the potential cumulative pollutants of concern are sediment, nutrients, heavy metals, organic compounds, trash and debris, oxygen demanding substances, oil and grease, bacteria and viruses, and pesticides. During construction and operation of the Project, there is potential to violate a water quality standard or waste discharge requirement. The Project also has the potential to result in exposed soils or

changes in runoff that could result in erosion or siltation during the construction phase of the Project. The Project would implement mitigation measures MM-HYDRO-1, MM-HYDRO-2 and MM-HYDRO-3 to reduce potential impacts to water quality and erosion to a level below significance.

Cumulative projects would similarly be required to comply with local, state and federal storm water regulations and would also be required to provide a SWQMP for operations and SWPPP for construction. Therefore, the Project will result in a **less than significant cumulative impact** to hydrology and water quality.

The Project would not use groundwater during construction or operation of the Project, nor is the Project Site is not located within a basin that requires a designated groundwater sustainability plan. Thus, the Project would not contribute to any cumulative groundwater impacts and will have **no cumulative impact** related to groundwater.

5.4.11 Land Use and Planning

Although land use and planning impacts tend to be localized, and specific impacts are tied either directly or indirectly to specific action, the Project may have the potential to work in conjunction with other past, present, or future projects to either cause unintended land use impacts, such as reducing available open space or to accommodate increased growth that may result in more intensive land uses. Therefore, the geographic context for the cumulative land use and planning analysis is the policy area, which in this case is the City. Cumulative projects in the City are presented in **Table 5.3-1** and include a mix of commercial, residential and industrial projects of various sizes.

The Project and related cumulative projects in the immediate vicinity are subject to the goals and policies of General Plan and other planning documents, as applicable. As discussed in Section 4.12 *Land Use and Planning,* the Project would not divide an established community and therefore, in combination with other related cumulative projects, would not disrupt or divide the existing community.

Prior to approval, the Project and all related cumulative projects, must be found consistent with the City's General Plan and other applicable City planning documents including the Subarea Plan of the MHCP. The Project has the potential to result in significant impacts to sensitive plant species and vegetative communities, jurisdictional resources, *Brodiaea* species, fairy shrimp, coastal California gnatcatcher, least Bell's vireo, and other MBTA-covered species. The Project would result in unavoidable direct impacts to disturbed Diegan coastal sage scrub. The Project would implement mitigation measures MM-BIO-1 through MM-BIO-7 and would reduce impacts to a level below significance. As stated in Section 5.4.4, all cumulative projects within the Project Area and within the City would be subject to conform to existing regulations including the MHCP and Subarea Plan with respect to avoidance, minimization and mitigation of impacts to sensitive biological resources. Therefore, the Project's contribution to cumulative impacts to biological resources will be less than significant.

The cumulative projects requiring General Plan amendments also would require approval by the City. Consistency with the City's applicable General Plan policies and other planning policies would ensure compliance and orderly development of the Project and other cumulative projects. Therefore, the Project would not contribute to a cumulatively considerable impact concerning conflicts with applicable plans, policies, and regulations. Cumulative Project impacts related to land use and planning will be **less than significant.**

5.4.12 Mineral Resources

As discussed in Section 4.13 *Mineral Resources,* the Project Site currently holds a Mineral Resource Zone MRZ-3 designation, which indicates that there are no known mineral resources present on the Project Site. Therefore, the Project would have no impact on known mineral resources of value and would not result in the loss of availability of locally-important mineral resources recovery sites. The Project would not contribute to a cumulatively considerable impact on mineral resources. **No cumulative impact** to mineral resources will occur.

5.4.13 Noise

Construction noise is short-term in nature and varies from hour to hour and day to day, depending on the equipment in use, the operations performed, and the distance between the source and receptor. Grading activities typically represent one of the highest sources of noise impacts. Site preparation and grading is estimated to occur over approximately six weeks. Due to normal site preparation operations, most of the equipment will be spread out over the site. If all equipment were working in the same area, at a distance as close as 330 feet, at worst case scenario, Project construction would result in an eight-hour average of 66 dBA at the property line. The Project would not generate a substantial temporary increase in ambient noise levels in excess of local standards.

The Tri-City Medical Office Building and Parking Structure would also result in short-term construction noise. However, the Tri-City Medical Office Building and Parking Structure site is located to the north of the Project Site and across SR-78. Due to distance and additional noise associated with vehicles traveling along SR-78, it is not likely that construction noise from the proposed medical office building and parking structure and the proposed CarMax Project would be heard cumulatively. Therefore, the Project would have a direct construction noise impact to adjacent uses but will result in a **less than significant cumulative impact** to construction noise.

As operational stationary noise is measured at the property line of receiving locations and is based on onsite noise generation only, operational stationary noise impacts would not be cumulative in nature. As detailed in Section 4.14 *Noise,* property line noise levels would result in 41.3 dBA and would not exceed the City's property line noise standards for both commercial and residential uses. Therefore, the increase in operation noise associated with the Project would not be cumulatively considerable and will have a **less than significant cumulative impact**.

5.4.14 Population and Housing

The geographic context for the analysis of cumulative impacts associated with population and housing consists of the City. Population and housing within the City is guided by the General Plan and RHNA. Cumulative projects in the City are presented in **Table 5.3-1** and include a mix of commercial, residential and industrial projects of various sizes.

As discussed in Section 4.15 *Population and Housing,* the Project does not include the construction of any new residential development. The Project would serve existing residences in the area and is unlikely to cause significant growth due to the nature of the development. Additionally, the Project would not displace substantial numbers of existing housing or people necessitating the construction of replacement housing elsewhere.

The water and sewer improvements associated with the Project would not induce additional growth beyond what has been planned for as the improvements would only serve development in the immediate vicinity and would not serve areas beyond the Project Site. Existing water and sewer services and facilities provide services to the surrounding developments. The Project would not induce substantial unplanned population growth in the City and will have a **less than significant cumulative impact**.

5.4.15 Public Services

The geographic context for the analysis of cumulative impacts associated with public services consists of the City, since fire protection, police protection, recreation and other public services are provided directly by the City, and school services are provided by Oceanside Unified School District within the City. Cumulative projects in the City are presented in **Table 5.3-1** and include a mix of commercial, residential and industrial projects of various sizes.

As described in Section 6.2 *Growth Inducing Impacts*, the intensity of development proposed by the Project is consistent with and therefore incorporated into the General Plan and the growth projections utilized to plan for future public service needs.

As discussed in Section 4.16 *Public Services,* the Project would be subject to the development impact fee program which provides funding for future public service improvements via the City's capital improvement program. This program is intended to address the incremental increase in demand for public services such as police, fire and recreation generated by new development. While the Project would contribute to the cumulative demand for public services, the Project would provide development impact fees intended to offset this demand and would not lead to significant physical environmental effects.

Other cumulative projects would be subject to the same development fees to address their incremental increase in demand for public services, including police, fire, and park/recreation services. Therefore, the Project would not result in a cumulatively considerable impact to public services and impacts will be **less than significant.**

5.4.16 Recreation

The geographic context for the analysis of cumulative impacts associated with recreation consists of the City because recreational facilities are provided by the City. Cumulative projects in the City are presented in **Table 5.3-1** and include a mix of commercial, residential and industrial projects of various sizes.

Due to the nature of the development, the Project would not increase the use of existing neighborhood and regional parks or other recreational facilities. It is typically residential projects that result in an increase in demand on parks and recreation facilities. Therefore, the Project would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility will occur or be accelerated. Additionally, the Project would pay all appropriate development fees, a portion of which would go towards funding of park and recreation facilities in the City.

Other cumulative projects would be subject to the same development fees to address their incremental increase in demand for park/recreation services. Therefore, impacts would not be cumulatively considerable. The Project's cumulative impact to recreation will be **less than significant.**

5.4.17 Transportation

A cumulative traffic impact analysis was conducted for the Project as part of the Local Transportation Study prepared by LOS Engineering, Inc. (**Appendix O**). Based on the City's new requirements for VMT, LOS discussions and cumulative LOS discussions have been omitted from this EIR.

Prior to issuance of occupancy permits, the following roadway improvements would be completed as part of the Project to the satisfaction of the City Engineer:

- Widen Thunder Drive along the Project frontage into the Project Site. Parking shall be restricted along the Project frontage side of Thunder Drive between the two Project driveways.
- Widen Plaza Drive along the Project frontage to the General Plan classification of a Secondary Collector. The Applicant shall stripe this segment with three (3) travel lanes (two eastbound lanes and one westbound lane).
- Provide a center two-way left turn lane on Plaza Drive in order to match the existing westbound single travel lane configuration adjacent to the DMV.
- Install sidewalks on both sides of Plaza Drive along the Project frontage.
- Include striping for bike lanes on both sides of Plaza Drive along the Project frontage.

Chapter 3 of the Circulation Element discusses the Master Transportation Roadway Plan which provides the guidelines for providing a network of roadways throughout the City. **Table 4.18-2** provides the Project's consistency with applicable policies and implementation strategies provided in the Circulation Element Master Transportation Roadway Plan. Cumulative projects would also be required to analyze project-specific consistency with the Circulation Element policies. The Project would not conflict with any applicable policies of the Circulation Element and would not contribute to a cumulative impact to an applicable policy and cumulative impacts are **less than significant**.

Multi-Modal Transportation

A LTS was prepared for the Project and is provided as **Appendix O** of this EIR. The LTS analyzed pedestrian, bicycle, and transit facilities to evaluate their opportunities and deficiencies. As part of the Project roadway improvements, the Project would provide a 5-foot sidewalk to connect to existing sidewalks to the west along the existing shopping center, and to the east along the DMV frontage. An 8-foot bicycle lane would also be constructed on both sides of Plaza Drive which includes the required 6-foot bike lane and 2-foot buffer. The Project would not conflict with a program, plan, ordinance or policy addressing the circulation system including transit, bicycle and pedestrian facilities. The Project would not contribute to a cumulative transportation impact related to plan or policy inconsistency and cumulative impacts will be **less than significant.**

Vehicle Miles Traveled Analysis

A VMT Analysis was prepared by LOS Engineering, Inc. and is provided as **Appendix N** of this EIR. As provided in the VMT Analysis, the Project would generate 475 ADT and the Project is consistent with the CC designation provided by the General Plan. The Project would comply with the screened out project type #20 provided in the City VMT Guidelines and is screened out from further VMT analysis. The Project would not conflict with CEQA Guidelines Section 15064.3 related to VMT. Projects in the vicinity would be subject to VMT analysis in accordance with the City's VMT Guidelines and CEQA Guidelines. The Project will have a **less than significant cumulative impact** to VMT and CEQA Guidelines Section 15064.3.

The Project would provide access and driveways designed in accordance with City standards. The Project would provide adequate width, turn-around radius and access to the building and would not increase hazards due to a geometric design feature, nor would the Project result in inadequate emergency access. Cumulative projects in the vicinity would be subject to the same design, access, and emergency standards, and therefore the Project will have a **less than significant cumulative impact** to transportation.

5.4.18 Tribal Cultural Resources

A cumulative impact, in terms of tribal cultural resources, refers to the mounting aggregate effect upon tribal cultural resources due to modern or recent historic land use, such as commercial development, and natural processes, such as erosion, that result from acts of humankind. The issue that must be explored in a cumulative impact analysis is the aggregate loss of tribal cultural resources, including impacts to Traditional Cultural Places.

Historic Resources

No cultural resources were identified in the Project area during the pedestrian survey and no cultural resources have been previously recorded within the Project area. The record search of the Sacred Lands File held by the NAHC had negative results. Based on the data and information obtained, there is a low potential for impacts to cultural resources associated with implementation of the Project. However, due to the Project's proximity to Buena Vista Creek the potential for buried cultural resources within alluvial deposits along the creek exists.

The Project would implement mitigation measures related to Cultural Resources identified in Section 4.6 of this document. Mitigation measure MM-CUL-1a through MM-CUL-1h would require a Native American monitor to be present during initial ground disturbance within the Project area and would require specific protocols in the event of a discovery. Implementation of mitigation measure MM-CUL-1a through MM-CUL-1h would reduce impacts to below a level of significance. Cumulative projects would be subject to similar requirements and therefore the Project will have a **less than significant cumulative impact** to historic tribal resources.

Tribal Cultural Resources

Consultation and coordination indicated that the Project is located in the territory of the Rincon Band of Luiseño Indians and is within the Bands specific Area of Historic Interest (AHI) and is therefore traditionally and culturally affiliated to the Project area. Therefore, there is potential for the discovery of unknown tribal cultural resources during Project grading. The Project would implement mitigation measures MM-CUL-1a through MM-CUL-1h to reduce potential impacts to tribal cultural resources to a

level below significance. Cumulative projects would be subject to similar consultation and coordination efforts with the project's culturally-affiliated tribes, and therefore the Project will have a **less than significant cumulative impact** to tribal cultural resources.

5.4.19 Utilities and Service Systems

The geographic context for the analysis of cumulative impacts associated with utilities and service systems consists of the City, because the City would provide utilities to the Project. Cumulative projects in the City are presented in **Table 5.3-1** and include a mix of commercial, residential and industrial projects of various sizes. The Project, along with all other cumulative projects within the City, would be subject to the City's current water and wastewater system capacity buy-in fees.

Water

The cumulative projects proposed in the City would result in an increase in water service demand. The City Water Utilities Department has reviewed the Project and has provided a letter stating that: "As part of this [entitlement] process, any off-site improvements to the City's water and sewer systems that are necessary to accommodate the proposed project must be identified and included as part of the development. Once the entitlement process is complete, the flow and capacity allowances will be set aside for the approved project." The Project would comply with all Water Utilities Department conditions and would incorporate all requirements into the Project design.

The UWMP includes an analysis of the City's water supply and demand planning within its service area for variable water years (average, single-dry, and multiple-dry years) over a 20-year horizon and are based on the buildout of the City. The UWMP considered the City's planning documents (e.g., General Plan), regional planning documents, and the SANDAG Series 13 Growth Forecast in determining future water demand. The UWMP would be used for determining future projects water supply and demand within the City. The Project is consistent with the zoning and land use designations of the Project Site, and thus its water usage would have previously been planned for. All water infrastructure improvements would be constructed in accordance with the City's design guidelines.

The City has also developed the Oceanside Water Conservation Master Plan that further ensures water availability to the City during drought years. The Project would include water conserving landscaping along with efficient irrigation design consistent with the City's water planning efforts. Cumulative projects in the City would be subject to similar requirements and compliance with the Water Conservation Master Plan.

As discussed in Section 4.20 *Utilities and Service Systems,* the onsite water infrastructure improvements are considered within the Project footprint, as described in the Project Description (Section 3.0 of this EIR). These onsite water infrastructure improvements do not result in any new Project-footprint related impacts beyond those already disclosed in this document. These off-site improvements would be located within already disturbed/developed areas and would not result in impacts to sensitive resources. Impacts related to construction of these off-site water improvements are less than significant.

The Project would have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. Cumulative impacts related

to the construction of water facilities and water supplies will have a **less than significant cumulative impact.**

Wastewater

The cumulative projects proposed in the City would result in an increase in sewer service demand. The City of Oceanside Wastewater Division of the Water Utilities Department reviewed the Project and has provided a letter stating that: "As part of this [entitlement] process, any off-site improvements to the City's water and sewer systems that are necessary to accommodate the proposed project must be identified and included as part of the development. Once the entitlement process is complete, the flow and capacity allowances will be set aside for the approved project."

Based on the available capacity of the system and treatment plant, along with the proposed onsite improvements, the facilities and infrastructure serving the Project would be able to handle the projected flow rates of the Project Site. The Project would comply with all Water Utilities Department conditions and would incorporate all requirements into the Project design. Additionally, the Project is consistent with the City's zoning and land use designation, and therefore the Project would generate wastewater that is consistent with its planned use.

The sewer realignment would encroach approximately six (6) feet into a small portion of the 50-foot planning buffer. This is a temporary impact and was analyzed in Chapter 4.5 *Biological Resources.* As detailed in Section 4.5.4, temporary direct impacts will occur to approximately 0.008 acre (334 SF) of disturbed habitat within the planning buffer. These impacts are considered temporary as they would recover on their own within one growing season. Additionally, because these impacts are minimal and occur to disturbed habitat, and because they are located at least 94 feet from the riparian habitat, no direct significant impacts will occur.

All future projects would be required to complete similar water and sewer analyses to evaluate impacts to facilities and would be required to provide necessary improvements. As such, the Project contribution to cumulative water and wastewater impacts will be **less than significant.**

Solid Waste

The El Sobrante Landfill was projected to have a remaining capacity of 134,549,993 tons at the end of 2018. At the current rate this equates to approximately 40 years of site life remaining. The Project is estimated to generate a total of 37,603 pounds of solid waste annually. This estimate, however, does not account for landfill diversion that would result from recycling and waste reduction activities. Given the remaining lifespan of the El Sobrante Landfill and the Project's waste generation, the landfill would have sufficient permitted capacity remaining to serve the Project. Additionally, the Project would participate in the City's recycling programs which would further reduce solid waste being sent to the landfill.

The City Zero Waste Plan indicates the City's goal for achieving a 75% diversion/ recycling rate by 2020. This plan provides a program for expanded commercial composting along with requirements for compost and recycling bins. The Project would comply with these measures in accordance with the Zero Waste Plan. Construction waste would be generated onsite throughout the construction phase of the Project.

Considering the Project's minimal contribution towards cumulative waste demands and the City-wide implementation of the waste reduction plan, the Project would not contribute to significant amounts of solid waste, which would result in the exceedance of landfill capacity. Therefore, cumulative Project impacts to solid waste will be **less than significant.**

5.4.20 Wildfire

The geographic context for the analysis of cumulative impacts associated with wildfires consists of the City, because the OFD would provide initial response to wildfires, emergency response and evacuations. The projects listed within **Table 5.3-1** under the City would be included within this cumulative analysis.

Section 4.21 *Wildfire,* provides analysis of the Project's compliance with adopted emergency response plan and evacuation plan. With compliance of all OFD requirements, the Project would not impair an adopted emergency response plan or emergency evacuation plan. Cumulative impacts to emergency response and evacuation plans will be **less than significant.**

The Project is located in a developed area and is surrounded primarily by commercial and residential uses. The Project Site is not located in a very high fire hazard severity zone within the Oceanside Local Responsibility Area as mapped by CAL FIRE, nor is the Project Site located within a SRA where CAL FIRE is the primary emergency response agency responsible for fire suppression and prevention. The entire City is located within a Local Responsibility area and is not located within a SRA; therefore wildfire protection would primarily be provided by OFD for cumulative projects. The Project would provide all required setbacks, fire truck access, fire hydrants, address numbers, sprinklers, Knox Box and an OPTICOM system on all gates in accordance with OFD requirements. All other cumulative projects within the City would adhere to OFD requirements and safety codes.

The Project and all other cumulative projects located within the City would be subject to the City's current development fees to address the incremental increase in demand of fire services and fire protection resources. No installation or maintenance of associated infrastructure such as roads, fuel breaks or emergency water sources, power lines or other utilities would be required for the Project that would exacerbate fire risk or that would result in temporary or ongoing impacts to the environment.

The Project would be in compliance with the CFC and the OMC and cumulative projects would also be subject to such regulations. Cumulatively, the Project in conjunction with cumulative projects would not contribute to an exacerbation of wildfire risks or exposure to significant risks as a result of wildfires. The Project's cumulative impact to wildfire will be **less than significant.**

Chapter 6.0 OTHER CEQA CONSIDERATIONS

6.1 Introduction

This chapter includes the following other considerations that are required in an EIR such as:

- Growth-Inducing Impacts (Section 6.2)
- Significant and Irreversible Environmental Changes (Section 6.3)
- Significant and Unavoidable Environmental Impacts (Section 6.4)

6.2 Growth-Inducing Impacts

Section 15126.2(d) of the CEQA Guidelines mandates that growth-inducing impacts related to the proposed CarMax pre-owned automobile dealership facility be discussed. The CEQA Guidelines states the growth-inducing analysis is intended to address the potential for the Project to "foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment." Further, CEQA Appendix G Checklist discussion under Population and Housing also mandates that a CEQA document speak to the proposed project's likelihood to induce substantial population grown in an area, either directly (e.g., by proposing new homes or businesses) or indirectly (e.g., through extension of roads or other infrastructure).

A project may be distinguished as either facilitating planned growth or inducing unplanned growth. Facilitating growth is relating to the establishment of direct employment, population, or housing growth that would occur within a project site. Inducing growth is related to lowering or removing barriers to growth or by creating an amenity or facility that attracts new population/economic activity. For purposes of this EIR analysis, a significant growth inducing impact would occur if the proposed project, and associated infrastructure improvements, directly or indirectly removes obstacles to growth such that the induced growth would significantly burden existing community services, the environment or cause a demand for General Plan Amendments. This section discusses growth inducing factors related to the proposed project and as defined under CEQA Guidelines Section 15126.2(e). A project is defined as growth inducing when it directly or indirectly:

1. Fosters population growth;
2. Fosters economic growth;
3. Includes the construction of additional housing in the surrounding environment;
4. Removes obstacles to population growth;
5. Taxes existing community service facilities, requiring construction of new facilities that could cause significant environmental effects; or
6. Encourages or facilitates other activities that could significantly affect the environment, either individually or cumulatively.

Population Growth

The City occupies approximately 42 square miles and has a population of 176,080 (USCB 2018) and comprises approximately 5% of the population of the County. According to the California Department of Finance, the City of Oceanside had 65,117 housing units in May 2016. A majority of the total housing units are single-family which comprises approximately 64.5% of the total housing units, reflecting the

City's family-oriented population and suburban neighborhoods character. Multi-family units make up approximately 31%of the total units, while mobile homes account for the remaining 5% of total housing units.

The Project proposes the construction of a CarMax pre-owned automobile dealership on a vacant, approximately 10.54-acre site and would consist of a sales building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area, sales display area, and a customer and employee parking lot on the southern parcel.

The Project Site is located in a primarily developed area and is surrounded by commercial uses to the west, including a shopping center and auto repair shops. To the east are medium density residential uses as well as a DMV facility at the corner of Plaza Drive and Thunder Drive. To the north is SR-78 and to the south are Buena Vista Creek, high density and residential estate uses including a senior living facility, and commercial and public/semipublic uses including an OFD station.

The Project would develop a CarMax facility on a site with a zoning and land use designation for commercial use and does not propose the construction of housing. Therefore, the Project would not alter the planned location, distribution, or growth of the human population in the area either directly or indirectly.

Public Services and Infrastructure

As part of the Project, sewer improvements would include the realignment of the existing sewer mains and the construction of a new 12-inch and new 21-inch PVC sewer main that would run along the southern portion of the Project Site, south of the sales and staging area and customer and employee parking lots, which would connect to existing sewer lines to the west and to the east in Thunder Drive. The existing 12-inch and 21-inch sewer mains located directly north of the proposed sewer mains will be abandoned. The Project would include off-site improvements such as the extension of the 12-inch PVC waterline along Plaza Drive across the Project frontage and the DMV to be looped to Thunder Drive.

Full width improvements on Plaza Drive would construct an 80-foot curb to curb width across the Project frontage. This would include curb, gutter, 5-foot sidewalks and 5-foot bicycle lanes on both sides of Plaza Drive and associated striping. Striping would include two (2) eastbound lanes and one (1) westbound lane with a center two-way left turn lane on Plaza Drive.

The Project would result in an incremental increase in demand for fire protection and emergency medical services, police protection, water demand, wastewater treatment, and solid waste services, these anticipated increases would not significantly burden existing community services facilities or require construction of new facilities that would cause significant environmental effects (see Section 4.16 *Public Services* and Section 4.20 *Utilities and Service Systems*). The Project would contribute to all required development impact fees in accordance with the City's current requirements, which would be allocated to offset for any increase in demand for such public services.

Although the Project would construct off-site improvements for the extension of the waterline along Plaza Drive, it would only serve development in the immediate vicinity and would not serve areas beyond the Project area. Surrounding developments are provided with existing water and sewer services. The Project Site has a land use and is zoned CC. The Project will not require a zone change or a General Plan amendment. Therefore, the Project's commercial use represents planned growth in accordance with the City of Oceanside General Plan and Zoning Ordinance. The Project is located within

an area served by urban infrastructure and services are generally consistent with existing and commercial uses to the west. The extension of the off-site waterline could act as a removal of a barrier to growth. The Project is intended to serve population growth that has already occurred in the region and would not be considered growth inducing. Therefore, the Project would not require extension of roads or other public services or infrastructure that would induce population growth either directly or indirectly. Growth-inducing impacts will be **less than significant.**

6.3 Significant and Irreversible Environmental Changes

CEQA Guidelines Section 15126.2(d) requires that an EIR identify any significant and irreversible environmental changes associated with project implementation. In accordance with Section 15126.2(d):

> Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified.

Non-renewable resources generally associated with the Project include agriculture/land, biological resources, archaeological and paleontological resources, mineral resources, water, and energy resources.

Implementation of the Project would result in irreversible environmental changes. Commitment of 10.54 acres of land would be physically altered to create a commercial use. The relatively small commitment of land to commercial use would be considered less than significant when compared to commercial development in a local and regional context. Additionally, the Project Site has a zoning and land use designation as a commercial use and therefore have accounted for this change in development through the adoption of the General Plan Land Use and Zoning Maps. Additionally, alteration of the human environment is a known consequence of the development process. The Project, which represents a commitment of land to a commercial use, intensifies land use at the Project Site.

Development of the Project Site would result in direct impacts to a total 7.041 acres of vegetation communities and land covers identified within the Project footprint including disturbed Diegan coastal sage scrub, developed land, disturbed land, iceplant, ornamental, and ruderal. Unavoidable direct impacts to approximately 0.408 acre of disturbed Diegan coastal sage scrub will be considered a significant impact. The Project has the potential to cause significant impacts to sensitive plant species and vegetation communities, jurisdictional resources, *Brodiaea* species, fairy shrimp, coastal California gnatcatcher, least Bell's vireo, and other MBTA-covered species. Implementation of mitigation measures MM-BIO-1 through MM-BIO-7 would reduce impacts to a level below significance.

The Project involves grading and excavation activities which could result in significant impacts to cultural and paleontological resources by advertently unearthing archaeological, tribal cultural and paleontological resources and human remains. Implementation of mitigation measures MM-CUL-1a through MM-CUL-1h would reduce impacts related to archaeological and tribal cultural resources to a level below significance, implementation of mitigation measure MM-CUL-2 would reduce impacts

related to human remains, and implementation of mitigation measures MM-GEO-3a and MM-GEO-3b would reduce impacts related to paleontological resources to a level below significance.

An increase in use of public services and utilities by the Project represents a long-term commitment of these resources. However, payment of all required development impact fees and requirement of off-site improvements would ensure that such commitment would not cause a significant adverse impact by the Project.

The use of various new raw materials such as lumber, sand, steel, and gravel for construction are resources that are continuously being depleted worldwide. However, the Project does not involve continuous use of these resources as they would only be used during Project construction.

Energy consumed in developing and operating the Project would be considered a permanent investment. The Project includes an aboveground fuel storage tank with a capacity of 4,000 gallons and a non-public fuel pump to fuel inventory vehicles. The Project would be a relatively minor consumer of these supplies when compared to a regional context. Use of these resources would represent an incremental effect on the regional consumption of these commodities. As such, the Project would result in the long-term use of energy resources, and other nonrenewable resources such as fossil fuels.

6.4 Significant and Unavoidable Impacts

CEQA Guidelines Section 15126.2(a) and (b) requires an EIR to identify and focus on the significant environmental effects of the proposed project, including significant environmental effects due to wasteful, inefficient, or unnecessary use of energy or wasteful use of energy resources. Section 15126.2(c) of the CEQA Guidelines requires the discussion of significant environmental effects which cannot be avoided if the proposed project is implemented. This includes impacts which can be mitigated but not reduced to a level of insignificance.

Section 4.0 *Environmental Analysis*, of this EIR describes the potential environmental impacts of the Project and recommends mitigation measures to reduce potentially significant impacts. As discussed in this EIR, implementation of the Project would result in potentially significant impacts to biological resources, cultural resources, geology and soils, hydrology and water quality, land use and planning, and tribal cultural resources. This EIR identifies potential impacts of each of these environmental issue areas as well as mitigation measures designed to reduce such impacts. Each impact identified will be mitigated to below a level of significance with the required mitigation measures. An analysis of energy use was presented in Section 4.7.4 and concluded that impacts would be less than significant. The Project will not result in any significant unavoidable impacts.

CHAPTER 7.0 ALTERNATIVES TO THE PROPOSED PROJECT

7.1 Overview

CEQA Guidelines Section 15126.6 requires the discussion of alternatives to the project to be analyzed. The discussion of alternatives shall include a No Project Alternative as well as a "…range of reasonable alternatives to the proposed project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project…". The discussion of alternatives need not be exhaustive and is subject to the "rule of reason". The key issue is whether the selection of alternatives fosters informed decision-making and informed public participation.

As discussed in Chapter 4.0 *Environmental Analysis*, the Project would result in potentially significant environmental impacts related to biological resources, cultural resources, geology and soils, hydrology and water quality, land use, and tribal cultural resources. Mitigation measures have been identified that would reduce all impacts to below a level of significance.

In developing the alternatives to be addressed in this section, consideration was given to those alternatives with the ability to meet the basic objectives of the Project and eliminate or substantially reduce significant environmental impacts. As identified in Section 3.3 *Project Objectives,* the objectives of the Project are as follows:

7. Construct and operate a retail commercial facility providing local residents with convenient access to an automobile sales center and related services.

8. Develop a thoughtfully designed, visually appealing automobile sales facility that is aesthetically compatible with surrounding development.

9. Positively impact local economy by creating employment opportunities and generating tax revenue.

7.2 Requirements for Alternatives Analysis

Under CEQA, the discussion of alternatives to a proposed action takes on particular significance if the EIR concludes there are significant adverse environmental impacts that are not avoided or reduced below a level of significance. As stated in CEQA Section 21002:

> "[It] is the policy of the state that public agencies should not approve projects as proposed if there are feasible alternatives or mitigation measures available which would substantially lessen the significant environmental effects of such projects… The legislature further finds and declares that in the event specific economic, social, or other conditions make infeasible such project alternatives or mitigation measures, individual projects may be approved in spite of one or more significant effects thereof."

As required under CEQA Guidelines Section 15126.6(e)(2), the EIR must identify the environmentally superior alternative. Pursuant to the CEQA Guidelines, if the No Project Alternative is determined to be the most environmentally superior project, then another alternative among the alternatives evaluated

must be identified as the environmentally superior alternative. Section 7.6 discusses the Environmentally Superior Alternative.

7.3 Selection of Alternatives

Pursuant to the CEQA Guidelines stated above, a range of alternatives to the Project are considered and evaluated in this EIR. These alternatives were developed in the course of Project planning, environmental review, public scoping meetings, and public hearings. The discussion of alternatives in the subsequent sections provides the following:

1. A description of alternatives considered;

2. An analysis of how each alternative fulfills the objectives the Project;

3. Per CEQA Guidelines Section 15126.6(d), a comparative analysis of the Project and the alternatives under consideration. Per CEQA Guidelines Section 15126.6(c), the alternatives are chosen by considering whether they can meet the basic Project objectives, their feasibility, and their ability to avoid the Project's significant environmental effects.

Factors that may be taken into account when addressing the feasibility of alternatives include site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries, and whether the proponent can reasonably acquire, control or otherwise have access to alternative sites.

A range of alternatives have been considered in an effort to meet a majority of the basic Project objectives. The alternatives identified in this section are intended to further reduce or avoid significant environmental effects of the Project. Alternatives that are considered and evaluated in the EIR include:

- Alternative 1 – No Project Alternative
- Alternative 2 – Reduced Project Footprint Alternative
- Alternative 3 – Alternative Site Location
- Alternative 4 – Neighborhood Commercial Center Alternative

Alternatives Considered but Rejected

Factors that may be used to eliminate alternatives from detailed consideration in an EIR include failure to meet a majority of the basic Project objectives, infeasibility, and inability to avoid significant environmental impacts. Alternatives that were identified but not considered include the following:

- Mixed-Use Development Alternative
- Residential Development Alternative

Mixed-Use Development Alternative

The Mixed-Use Development Alternative would develop the Project Site with a mixture of land uses including residential and commercial uses. The mixed-use development would create a live/work environment for employees of the surrounding commercial uses and Tri-City Medical Center to the north. Compared to the Project, which consists primarily of vehicle display areas and parking, and

11,447 SF of buildings, a mixed-use development would have a larger building footprint and building height and would include parking for the commercial uses and residences. This Alternative estimates approximately 30,000 SF of retail space and approximately 100-200 residential units. Retail uses would be provided on the ground floor of the development with multi-family residential units on the above floors, resulting in a vertically integrated mixed-use building. For the purposes of this EIR alternative analysis, it is assumed that the mixed-use development would develop the entire 10.54-acre site, both the northern and southern parcels. Under the Mixed-Use Development Alternative, a zone change and General Plan amendment would be required, as the Project Site is zoned CC.

With the provision of a mixed-use development, this alternative would be expected to have similar impacts related to biological resources, cultural resources, geology and soils, hydrology and water quality and tribal cultural resources compared to the Project.

Due to the nature of a mixed-use development, it is expected that this alternative would generate a larger ADT compared to the Project. Based on the SANDAG *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, it is estimated that the Mixed-Use Alternative would generate anywhere from approximately 3,800 to 4,300 trips (110 trips/1,000 SF of retail and 5 trips/dwelling unit) based on the assumption that 30,000 SF of retail and 100-200 residential units would be developed. The Mixed-Use Development Alternative would provide much larger building square footages, increasing traffic impacts compared to the Project. An increase in ADT and building size would further increase impacts to air quality, energy, GHG emissions and noise. The Mixed-Use Alternative would also increase impacts to aesthetics due larger building heights and massing. Additionally, this alternative would increase the number of people residing in the area, further increasing the need for public services, including schools and recreation facilities, in which the Project would not. An increase in the need for utilities and service systems would also have a greater impact compared to the Project.

The Mixed-Use Development Alternative was eliminated from further analysis as it would not meet the Project objectives of development and operating an automobile sales facility. Further, this alternative would have greater environmental impacts compared to the Project.

Residential Development Alternative

Under the Residential Development Alternative, the 10.54-acre site would be developed solely as a residential development. In accordance with the surrounding multi-family developments, this alternative would most likely provide 60-100 multi-family or townhome units. This alternative would require a zone change and a General Plan amendment to allow for such uses.

With the development of residential units on the Project Site, the Residential Development Alternative would be expected to have similar impacts related to biological resources, cultural resources, geology and soils, hydrology and water quality and tribal cultural resources compared to the Project, as this alternative would disturb approximately the same area as the Project. It is anticipated that impacts related to noise would be similar or less than that of the Project.

Depending on the type of residential development (i.e., multi-story units), this alternative has the potential to have an increased impact on aesthetics compared to the Project. Based on the SANDAG *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region* the Residential Development Alternative would generate anywhere from 480 to 800 trips (8 trips/ dwelling unit for condominium or multi-family units) based on the assumption that 60 to 100 residential units would be developed. This alternative would therefore have an increased impact on transportation compared to

the Project as a result of increased trip generation. Impacts to air quality, GHG, and energy would be greater than that of the Project due to the increase in traffic and based on the nature of the residential development that would have a greater use in electricity and gas. Additionally, this alternative would increase the number of people residing in the area, further increasing the need for public services, including schools and recreational facilities, in which the Project would not. An increase in the need for utilities and service systems would also have a greater impact compared to the Project.

The Residential Development Alternative was eliminated from further analysis as it would not meet the Project objectives of developing and operating an automobile sales facility. Further, the Residential Use Alternative as discussed above would have greater environmental impacts compared to the Project.

7.4 Alternatives Considered

This section also addresses Alternatives Considered including a No Project Alternative, Reduced Project Footprint Alternative, Alternative Site Location and Neighborhood Commercial Center Alternative. Each major environmental issue area included in the impact analysis of this EIR has been given consideration in the alternatives analysis as discussed below.

7.4.1 Alternative 1: No Project Alternative

The No Project Alternative assumes that the Project Site would not be developed and that the Project Site would remain vacant, as in its present condition. The purpose of the No Project Alternative analysis is to allow a lead agency to compare the impacts of approving the proposed project with the impacts of not approving the Project. Analysis of the No Project Alternative and the impacts associated with this alternative is provided below.

Environmental Analysis

Aesthetics

As discussed in Section 4.2 *Aesthetics,* the Project area is primarily developed and surrounding land uses consist of residential and commercial development. The Project Site is visible from adjacent residential developments, commercial developments, as well as adjacent roadways from Plaza Drive, Thunder Drive and SR-78. To viewers from adjacent properties and roadways, the Project Site appears as a set of vacant, disturbed lots dominated by non-native plant species with a few introduced tree species along the Project Site boundary. Long-distance views are generally constrained by intervening development and urban landscaping.

The Project is located 3.5 miles east of Buena Vista Lagoon, over four (4) miles east of the Pacific Ocean, 5.5 miles southeast of Oceanside Pier and over six (6) miles southeast of Oceanside Harbor. Due to the location of the Project Site, views of open space and designated visual open spaces areas are not visible from the vacant Project Site. Buena Vista Creek is not identified as an aesthetic resource in the City's LCP. The vacant Site is not visible from a designated state scenic highway and does not contain any scenic resources.

Under the No Project Alternative there would be no removal of existing vegetation, no grading or earthwork would be performed, and there would be no development of structures or parking facilities. Maintaining the Project Site in its existing condition under this alternative would result in no impact on

scenic vistas or scenic resources. Visual character and quality impacts would be slightly reduced compared to the Project as the existing condition of the disturbed lot and vegetation would remain and no new structures would be developed. The site would not conform to the visual character of the surrounding commercial and residential development.

The No Project Alternative would result in no light and glare impacts as the building and parking lot lighting would not be developed. Overall, the No Project Alternative impacts to aesthetics would be less than that of the Project.

Agriculture and Forestry Resources

A FMMP map was prepared for the Project and designates the project site as Urban and Built-Up Land. No prime farmland, unique farmland, or farmland of statewide importance is located onsite. Additionally, no forest land or timberland areas are located onsite and therefore no impacts to agriculture or forestry resources would occur as a result of the Project.

Under the No Project Alternative the site designation as Urban Built-Up Land would remain and no impacts to agriculture, forest land or timberland would occur. Impacts to agriculture and forestry resources would be similar to that of the Project.

Air Quality

Short-term construction emissions associated with grading and construction activities as well as long-term operational emissions associated with operation of the CarMax facility would be avoided under the No Project Alternative. Additionally, the project would remain under the CC zoning and land use designation and therefore is anticipated in the local plan and SANDAG's growth projections and would not conflict with the SIP or RAAQS.

Construction and operation of the Project would result in less than significant impacts to air quality, however, the No Project Alternative would avoid and construction and operation emissions entirely and therefore no impact to air quality would occur under this alternative. Thus, the No Project Alternative would avoid impacts to air quality and impacts would be less than the Project.

Biological Resources

The Project would result in potentially significant impacts to sensitive plant species and vegetation communities, jurisdictional resources, *Brodiaea* species, fairy shrimp, coastal California gnatcatcher, least Bell's vireo, other MBTA-covered species and disturbed Diegan coastal sage scrub. Implementation of mitigation measures MM-BIO-1 through MM-BIO-7 would reduce Project impacts to a level below significance.

The No Project Alternative would avoid all grading and construction of the Project and therefore, all impacts to biological resources would be avoided. No mitigation would be required under the No Project Alternative.

The Project has been designed to include the requisite 100-foot wetland buffer, which includes the required 50-foot biological buffer on the jurisdictional resources as well as the requisite 50-foot planning buffer. The riparian area and associated natural habitats within the 100-foot buffer will be designated as biological open space and incorporated into the Preserve per Section 5 of the Oceanside Subarea Plan.

Under the No Project Alternative, no riparian buffer to Buena Vista Creek would be provided and this area would not be designated into open space. Additionally, the chain link fence and retaining wall at the southwestern portion of the Project Site would not be provided under the No Project Alternative, providing an additional buffer and separation from the Buena Vista Creek.

Therefore, no impacts to biological resources would occur under the No Project Alternative, and impacts would be reduced compared to the Project.

Cultural Resources

No historical resources were identified on the Project Site, nor have any cultural resources been previously recorded within the Project Site area. No archaeological resources were identified during the pedestrian archaeological surveys. However, given the Project Site's close proximity to Buena Vista Creek, there is potential for buried cultural resources within the alluvial deposits along the creek and the Project would implement mitigation measures for the presence of archaeological and Native American monitors during ground disturbing activities. The Project would result in potentially significant impacts to human remains due to Project ground disturbing activities. The Project requires mitigation to reduce potential impacts to human remains.

In absence of grading under the No Project Alternative there would be no potential for the discovery of cultural resources or human remains. Any unknown buried cultural, archaeological or tribal resources, including human remains would remain buried and preserved in place. Therefore, impacts to cultural resources would be avoided under the No Project Alternative and would be less than the Project.

Energy

Short-term energy use associated with construction activities and long-term energy use associated with operation of the Project would be avoided under the No Project Alternative. As discussed in Section 4.7 *Energy,* impacts to energy use would be less than significant. The No Project Alternative would avoid all construction and operation activities and therefore, no energy use would occur under this alternative. Thus, the No Project Alternative would avoid impacts related to energy and would have less of an impact compared to the Project.

Geology and Soils

The CarMax Project would result in potentially significant impacts related to seismic ground shaking, erosion, and expansive soils. The Project would also result in potentially significant impacts related to paleontological resources. Impacts related to geology and soils would be mitigated to a level below significance.

The No Project Alternative would not include development or include any ground-disturbing activities. Therefore, the No Project Alternative would not expose people or structures to seismic ground shaking and would not include grading and excavation that could result in erosion, the discovery of paleontological resources or the effects of expansive soils. Therefore, no impacts related to geology and soils would occur and impacts would be less than that of the Project.

Greenhouse Gas Emissions

Construction of the Project would result in GHG emissions primarily associated with the use of off-road construction equipment, on-road hauling and vendor trucks and worker vehicle trips. The Project would generate construction emissions at a yearly average of 18.52 MT CO_2E over a 30-year period.

The Project would generate 308.36 MT CO_2E each year during a typical operational year. The Project would not exceed the City's 900 MT CO_2E screening threshold for projects that must assess project-induced emissions against CAP-aligned thresholds of significance and therefore would be in compliance with the City's CAP. Further, the Project would generate approximately 1.3 MT CO_2E/SP, which is less than the 3.5 MT CO_2E/SP CAP threshold for projects that will be implemented prior to year 2025. Project compliance with the City's CAP would further ensure compliance with state GHG reduction goals and policies as the CAP was developed to align with state efforts to reduce GHG emissions. The project would have a less than significant impact related to GHG emissions.

The No Project Alternative would not generate construction or operational GHG emissions and there would be no impact to GHG emissions. Therefore, impacts to GHG emissions would be less than that of the Project.

The Project is consistent with all applicable plans, policies and regulations adopted for the purpose of reducing GHG emissions at regional and state levels, and plan consistency impacts would be less than significant. The No Project Alternative would result in no development, and therefore, would not result in conflicts with applicable plans, policies and regulations related to GHG emissions and no impact would occur. Impacts related to GHG emissions under the No Project Alternative would be avoided and less than that of the Project.

Hazards and Hazardous Materials

The Project would comply with all applicable regulations for the handling of hazardous materials which would ensure that the Project would not create a significant hazard to the public or environment through the routine transport, use, or disposal of hazardous materials. The Project is not listed as a hazardous materials site compiled pursuant to Government Code Section 65962.5. The Project is not located within the Oceanside Municipal ALUCP nor would the Project interfere with an adopted emergency response or evacuation plan. The Project would not expose people or structures to risk of wildfires.

Under the No Project Alternative the Project Site would remain undeveloped and no risks associated with the routine transport, use, or disposal of hazardous materials would occur as no development or operation of facilities with such potentially hazardous materials would occur. The No Project Alternative would not risk people or structures to any wildfire hazards as no people or structures would inhabit the Project Site. Therefore, impacts would be avoided and less than that of the Project.

Hydrology and Water Quality

During construction and operation of the Project, there is potential to violate a water quality standard or waste discharge requirement. The Project also has the potential to result in exposed soils or changes in runoff that could result in erosion or siltation during the construction phase of the Project.

Under the No Project Alternative construction and operation of a CarMax Project would not occur and would not violate a water quality standard or waste discharge requirement or result in exposed soils or changes in runoff that could result in erosion or siltation. Leaving the Project Site in its existing condition

would allow for more water infiltration as there would not be any new impervious surfaces. Therefore, impacts to hydrology and water quality under the No Project Alternative would not occur and would be less than that of the Project.

Land Use and Planning

The Project does not include any features that would have the potential to physically divide an established community. The Project has the potential to conflict with a land use plan, policy or regulation including a local habitat conservation plan but would be mitigated to a level below significance. No impact to a local land use plan, policy, or regulation would occur under the No Project Alternative. The Project does not require any changes to the existing land use or zoning designation and therefore, impacts would be the same under the No Project Alternative. Therefore, impacts related to land use and planning would be less than that of the Project.

Mineral Resources

The Project Site is located within the Mineral Resource Zone-3 (MRZ-3), which indicates that there ae no known mineral resources present on the Project Site. The Project would not result in impacts to known mineral resources.

The Project Site in its existing condition under the No Project Alternative would remain in the MRZ-3 and therefore would not impact mineral resources. Impacts to mineral resources would be similar to that of the Project.

Noise

Noise associated with construction of the Project would be short-term and would vary hour-to-hour and day-to -day, depending on the equipment in use, the operations performed, and the distance between the source and receptor. The Project would not generate a substantial temporary increase in ambient noise levels in excess of local standards during construction. Operational noise associated with the CarMax Project would not generate substantial permanent increase in ambient noise levels in the vicinity. Vibration impacts as a result of construction and operation of the Project were determined to be less than significant. The Project was determined to have a less than significant noise impact.

Under the No Project Alternative, construction noise and noise associated with operation of a CarMax Project would not occur. Existing noise associated with vehicle traffic along SR-78 would remain under this alternative. Therefore, impacts related to noise and vibration would be avoided and less than that of the Project.

Population and Housing

The Project does not propose the development of housing, nor would the Project result in the displacement of people or housing. The Project would not result in impacts to population and housing.

No development or housing would occur under the No Project Alternative, and therefore no impacts to population and housing would occur. Impacts to population and housing would be similar to that of the Project.

Public Services

The Project would not require any new or physically altered fire or emergency medical facilities, police facilities, schools, parks or other public facilities and project impacts to public services and impacts would be less than significant. Under the No Project Alternative, demand for public services would be reduced as no development would occur. No impacts to public services would occur under the No Project Alternative and therefore, impacts would be less than that of the Project.

Recreation

The CarMax Project does not propose a use that would increase the use of existing neighborhood and regional parks or other recreational facilities in the area. Additionally, the Project does not propose recreational facilities that would have an effect on the environment. The Project would be subject to all required development fees, which would go towards funding of park and recreation facilities within the City. The Project would not have a significant impact on recreation.

Under the No Project Alternative, no impacts to recreational facilities would occur. No development fees for park and recreation funding would be required as no development would be proposed. Therefore, impacts to recreation under the No Project alternative would be similar to that of the Project.

Transportation

Under the Project, additional traffic would be generated along local intersections and street segments surrounding the Project Site. The Project would generate 475 ADT. The Project would not conflict with any applicable policies of the Circulation Element including the Master Transportation Roadway Plan. Prior to issuance of occupancy permits, the following roadway improvements would be constructed as part of the Project:

- Widen Thunder Drive along the Project frontage into the Project Site. Parking shall be restricted along the Project frontage side of Thunder Drive between the two Project driveways.
- Widen Plaza Drive along the Project frontage to the General Plan classification of a Secondary Collector. The Applicant shall stripe this segment with three (3) travel lanes (two eastbound lanes and one westbound lane).
- Provide a center two-way left turn lane on Plaza Drive in order to match the existing westbound single travel lane configuration adjacent to the DMV.
- Install sidewalks on both sides of Plaza Drive along the Project frontage.
- Include striping for bike lanes on both sides of Plaza Drive along the Project frontage.

Under the No Project Alternative existing traffic conditions would remain including street segments that already operate at low performance conditions. Project improvements would improve traffic along Plaza Drive along the Project frontage and Thunder Drive along the Project access points. No sidewalk improvements or bicycle lanes would be constructed under this alternative, benefiting pedestrians and bicyclists in the area. Existing traffic conditions would remain and therefore no impact to transportation would occur under this alternative. No impact would occur, and overall impacts under the No Project Alternative would be less than that of the Project.

Tribal Cultural Resources

Based on the data and information obtained, there is a low potential for impacts to cultural resources associated with implementation of the Project. However, due to the Project's proximity to Buena Vista Creek the potential for buried cultural resources within alluvial deposits along the creek exists. The Rincon Band of Luiseño Indians is traditionally and culturally affiliated to the Project area and the potential for the discovery of unknown tribal cultural resources exists. Potential impacts related to tribal cultural resources would be reduced to below a level of significance after incorporation of mitigation measures.

Under the No Project Alternative there would be no potential for the discovery of buried tribal cultural resources as no grading would occur. Therefore, impacts related to historic tribal resources would be avoided and would be less than that of the Project.

Utilities and Service Systems

The Project Site is located in a developed area surrounded by existing commercial and residential developments. Water supply is currently provided by the City of Oceanside Water Utilities Department who has indicated sufficient water supplies are available to serve the Project. The Project would include off-site improvements for the installation of water infrastructure.

Wastewater would be provided by the City Wastewater Division of the Water Utilities Department. Based on the available capacity of the system and treatment plant, along with the proposed onsite improvements, the wastewater facilities and infrastructure serving the Project would be able to handle the projected flow rates of the Project Site. Impacts associated with on- and off-site water and wastewater improvements would be mitigated by Project mitigation measures and impacts would be reduced to below a level of significance.

As part of the entitlement process, any off-site improvements to water and sewer systems that are necessary to accommodate the proposed Project that are included as part of the Project, will be set aside for the Project once approved. The City Water Utilities Department would have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. Additionally, given the remaining lifespan of the El Sobrante Landfill and the Project's waste generation, the landfill would have sufficient permitted capacity remaining to serve the Project.

Under the No Project Alternative, no on- or off-site water or wastewater improvements would be required as no development would occur. Impacts related to water supplies and landfill capacity would not occur. Therefore, impacts related to utilities and service systems under the No Project Alternative would be avoided and less than that of the Project.

Wildfire

The Project is located in a developed area and is not located in a very high fire hazard severity zone within the Oceanside Local Responsibility Area as mapped by CAL FIRE, and the Project Site is not located within a SRA where CAL FIRE is the primary emergency response agency responsible for fire suppression and prevention. The Project would provide all required setbacks, fire truck access, fire hydrants, address numbers, sprinklers, Knox Box and an OPTICOM system on all gates in accordance with OFD requirements. The Project would not impair an adopted emergency or evacuation plan,

expose occupants to wildfire or require installation of infrastructure that would exacerbate fire risk. The Project would have a less than significant impact related to wildfire.

Under the No Project Alternative, the Project Site would remain in its existing condition and would not develop a site that would expose people to wildfire risks. Therefore, impacts related to wildfire under the No Project Alternative would be less than that of the Project.

Conclusion

Under implementation of the No Project Alternative, potentially significant project impacts associated with biological resources, cultural resources, geology and soils, hydrology and water quality, land use and planning, and tribal cultural resources would not occur. The No Project Alternative would maintain the existing undeveloped condition of the Project Site and would avoid potentially significant impacts; however, none of the Project objectives would be achieved as a result. Additionally, benefits of the Project such as roadway widening improvements, improved traffic conditions on Plaza Drive along the Project frontage, enhancement of pedestrian and bicyclist infrastructure and fencing for creek protection would not be realized under the No Project Alternative.

7.4.2 Alternative 2: Reduced Project Footprint Alternative

Environmental Analysis

The Reduced Project Footprint Alternative would construct a reduced size CarMax facility. For the purposes of this analysis, it is assumed that all buildings for sales and service would not change and the Project total building square footage would remain as 11,447 SF. Under this alternative, it is assumed that the vehicle sales display, sales and staging area, and customer and employee parking areas are reduced. Under this alternative an increased biological and planning buffer of 150 feet would be implemented. This increased buffer would provide a greater barrier between sensitive riparian areas of the Buena Vista Creek and the proposed CarMax operations. Under the Reduced Project Footprint Alternative, the proposed sewer re-alignment would not be required and the Project would utilize the existing sewer mains in their existing locations. The area of disturbance by grading and earthwork would also be reduced under this alternative, further reducing impacts to unknown cultural, tribal cultural and paleontological resources. The environmental impacts associated with the Reduced Project Footprint Alternative are further discussed below.

<u>Aesthetics</u>

The Reduced Project Footprint Alternative would reduce the parking areas for vehicle display and staging as well as customer and employee parking, thereby reducing the amount of change in the visual character of the site by a slight amount. Development of the site would be slightly less intense as a whole, although the building sizes would be unchanged. Less grading and disturbance would take place thereby increasing the amount of vegetation to remain onsite. The site under this alternative would conform to the developed characteristics of the surrounding area and would be consistent with the character and quality of the surrounding environment. Fewer lighting fixtures would be required around the site and within the associated parking areas. Overall, impacts to scenic resources, visual character, and lighting would be less than significant and slightly reduced compared to the Project.

<u>Agriculture and Forestry Resources</u>

A FMMP map was prepared for the Project and designates the project site as Urban and Built-Up Land. No prime farmland, unique farmland, or farmland of statewide importance is located onsite. Additionally, no forest land or timberland areas are located onsite and therefore no impacts to agriculture or forestry resources would occur as a result of the Project.

Similarly, no impacts to agriculture and forestry resources under the Reduced Project Footprint Alternative would occur and impacts would remain the same as the Project.

Air Quality

The Reduced Project Footprint Alternative would result in short-term air quality impacts during construction activities and long-term air quality impacts during operation of the CarMax Project. However, a reduced Project footprint and development area would reduce the amount of grading and short-term air quality impacts. The Project is expected to result in 475 ADT. A reduction in the Project footprint area would generate fewer trips to the site and fewer emissions than would be generated by the Project.

Under the Reduced Project Footprint Alternative, the Project would not conflict with implementation of local and regional air quality plans, would not contribute to air quality violations, and would not expose sensitive receptors to emissions or objectionable odors. Therefore, the Reduced Project Footprint Alternative would have fewer construction and operational emissions and would have a less than significant impact to air quality, which is less than that of the Project.

Biological Resources

Under this alternative an increased biological and planning buffer of a total of 150 feet would be implemented. This increased buffer would provide a greater buffer between sensitive riparian areas of the Buena Vista Creek and the CarMax Project. Under the Reduced Project Footprint Alternative, the proposed sewer re-alignment would not be required and the project would utilize the existing sewer mains in their existing locations. Therefore, temporary impacts to approximately 0.0008 acre (344 sf) of disturbed habitat within the planning buffer would not occur under this alternative.

The Reduced Project Alternative would still involve vegetation clearing, grading and other construction activities that have the potential to impact sensitive biological resources. Implementation of mitigation measures MM-BIO-1 through MM-BIO-7 would still be required under this alternative to further reduce potential impacts related to sensitive plant species and vegetation communities, jurisdictional resources, *Brodiaea* species, fairy shrimp, coastal California gnatcatcher, least Bell's vireo, and other MBTA-covered species. Under the Reduced Project Alternative, impacts would be less than significant after mitigation, and would be slightly reduced compared to the Project.

Cultural Resources

A reduced Project footprint would reduce the area of disturbance by grading and earthwork under this alternative, further reducing impacts to unknown cultural resources. However, due to the close proximity of the Project Site to Buena Vista Creek, potential for buried cultural resources, including human remains, to be unearthed during Project construction would still be considered potentially significant. Implementation of mitigation measures MM-CUL-1a through MM-CUL-1h and MM-CUL-2 would still be required under this alternative to further reduce potential impacts related to cultural

resources and human remains. Overall, impacts related to cultural resources under the Reduced Project Footprint Alternative would be less than significant with mitigation and impacts would be slightly reduced compared to the Project.

Energy

The Reduced Project Footprint Alternative would result in less short-term construction energy usage as less grading would take place within the Project footprint. Long-term energy usage would be reduced as vehicle trips to the Project Site would be less than that of the fully developed Site. Under this alternative the Project would not conflict with or obstruct a state or local plan or policy for renewable energy or energy efficiency. Therefore, the Reduced Project Footprint Alternative would have a less than significant impact to energy, which is less than that of the Project.

Geology and Soils

Although the Reduced Project Footprint Alternative would reduce the intensity of development compared to the Project, potential impacts related to geology and soils would remain. Compliance with the Project Geotechnical Evaluation, permanent storm water BMPs, the CBC and City regulations would be required to ensure that the Reduced Project Footprint Alternative would not expose people or structures to seismic hazards, unstable soils or erosion. The requirements set forth in mitigation measures MM-GEO-1, MM-HYDRO-1 through MM-HYDRO-3 would ensure impacts to geology and soils are reduced to a level below significance.

Potentially significant impacts to paleontological resources as a result of Project grading and ground disturbing activities would occur under this alternative. Implementation of mitigation measure MM-GEO-3a and MM-GEO-3b which requires a qualified paleontologist to be present during ground-disturbing activities and compliance with a PRIMP would be required under the Reduced Project Footprint Alternative. Impacts to geology and soils under this alternative would be less than significant with mitigation, similar to the Project.

Greenhouse Gas Emissions

GHG emissions during Project construction would be reduced under the Reduced Project Footprint Alternative as less grading would take place. As discussed previously, vehicle trips to the Project Site would be reduced further reducing GHG emissions as a result of this Project alternative. The size of the sales and service buildings would remain and therefore, GHG emissions associated with building operations would remain the same as the Project.

The Project would remain in compliance with local and regional policies and plans related to the reduction of GHG emissions. Impacts related to GHG emissions under the Reduced Project Footprint Alternative would be less than significant and less than that of the Project.

Hazards and Hazardous Materials

Under the Reduced Project Footprint Alternative construction activities would still involve the transportation of potentially hazardous materials. However, with less grading and a smaller development footprint, fewer hazardous materials such as gasoline, diesel fuel, oil, lubricants would be required compared to the Project. Compliance with proper BMPs and all applicable laws, ordinances,

rules and regulations would ensure significant impacts related to hazardous materials would be less than significant.

Operation of the Project under the Reduced Footprint Alternative would still include a service building, carwash, and an aboveground fuel storage tank. Under this alternative fewer inventory vehicles would be stored onsite and therefore less fuel would be required to fuel inventory vehicles. The Project would still comply with the County DEH HMD requirements for plan checks, UPFP, preparation of a SPCC Plan, and would be subject to all required inspections. Wastewater from the carwash would go through the onsite oil water separator and the oil would be transported off-site to be treated by a certified waste vendor.

The Project under the Reduced Project Footprint Alternative would not interfere with an adopted emergency response or evacuation plan. The Project would continue to incorporate all required setbacks and driveway and drive aisle widths in accordance with the fire department standards. Overall, the Project would have a less than significant impact related to hazards and hazardous materials under this alternative and impacts would be less than that of the Project.

Hydrology and Water Quality

Under the Reduced Project Footprint Alternative, Project construction would still require earth-moving activities, exposing soils which would cause pollutant discharge and potentially degrade water quality. However, less grading would occur and earth-moving activities and exposed soils would occur over a smaller area compared to the Project. The Project would still require construction BMPs and preparation of a SWPPP in order to reduce pollutant discharge during construction operations.

The Reduced Project Footprint Alternative would result in a reduction of impervious areas thereby reducing sources of pollutants from urban runoff. This alternative would not alter existing drainage patterns or increase net runoff after development. Under the Reduced Project Footprint Alternative, the Project would still require implementation of mitigation measures MM-HYDRO-1 through MM-HYDRO-3 in order to further reduce impacts to water quality and erosion. Overall, impacts to hydrology and water quality would be less than significant with mitigation and would be reduced compared to the Project.

Land Use and Planning

The Project under the Reduced Project Footprint Alternative would not physically divide an established community and adequate access for vehicles and pedestrians would be provided. The Project would remain in compliance with the zoning and land use designation as CC and would not conflict with the Zoning Ordinance or General Plan. Impacts related to Project compliance with the Subarea Plan of the MHCP would be reduced by mitigation measures MM-BIO-1 through MM-BIO-7. The Project would have a less than significant impact after mitigation to land use and planning under this alternative and impacts would be similar to that of the Project.

Mineral Resources

The Project Site is located within the Mineral Resource Zone-3 (MRZ-3), which indicates that there ae no known mineral resources present on the Project Site. The Project would not result in impacts to known mineral resources. Under the Reduced Project Footprint Alternative the Project not result in impacts to mineral resources. Impacts would be the same under the Reduced Project Footprint Alternative and the Project.

Noise

Under this alternative the Project would have a reduced Project footprint, reducing the customer and employee parking area as well as the area for vehicle display, staging and storage. The Project would result in short-term construction noise during site preparation and grading which would include heavy duty off-road equipment. With a reduced Project footprint grading and site preparation would occur over a shorter amount of time thereby reducing the amount of noise produced during construction operations. The Project would continue to comply with City ordinances related to hours of construction and construction noise level requirements.

Operation of the CarMax Project under the Reduced Project Footprint Alternative would result in noise produced from car carrier trucks, service building operations, carwash operations, Project-related traffic, test drives and HVAC units. Under this alternative reduced vehicle storage areas would result in fewer car carrier truck trips as fewer vehicles would be stored onsite compared to the Project. The Project under this alternative would have proportionately less noise during operation of the CarMax facility and the Project would continue to operate under the City noise standards. Noise impacts would be less than significant under this alternative and would be less than the Project.

Population and Housing

The Project does not propose the development of housing, nor would the Project result in the displacement of people or housing. No impacts to population and housing would occur under the Reduced Project Footprint Alternative or the Project. No impact would occur under the proposed Project or the Reduced Project Footprint Alternative.

Public Services

The Project would not require any new or physically altered fire or emergency medical facilities, police facilities, schools, parks or other public facilities and project impacts to public services would be less than significant.

Under the Reduced Project Footprint Alternative, demand for public services would be similar or slightly reduced compared to the Project. The Project under this alternative would still be required to contribute to all required development impact fees in accordance with the City's current requirements, which would be allocated to offset for any increase in demand for such public services. Overall, impacts to public services would be less than significant and slightly reduced under the Reduced Project Footprint Alternative compared to the Project.

Recreation

The CarMax Project does not propose a use that would increase the use of existing neighborhood and regional parks or other recreational facilities in the area. Additionally, the Project does not propose recreational facilities that would have an effect on the environment. The Project would be subject to all required development fees, which would go towards funding of park and recreation facilities within the City. The Project would have a less than significant impact on recreation.

Similarly, under the Reduced Project Footprint Alternative the Project would not increase the use of existing parks or recreational facilities and would be subject to all required development fees in

accordance with current City requirements. Therefore, a less than significant impact would occur and impacts to recreation under this alternative would be similar to that of the Project.

Transportation

Under the Project, additional traffic would be generated along local intersections and street segments surrounding the Project Site and would result in Project trip generation of 475 ADT. The Project would provide roadway improvements as part of the Project including widening improvements along Plaza Drive and Thunder Drive, a center two-way left turn lane on Plaza Drive, sidewalks along both sides of Plaza Drive, and striping for bike lanes on both sides of Plaza Drive

Under the Reduced Project Footprint Alternative, the Project would result in slightly fewer vehicle trips and fewer car carrier truck trips to the Project Site as a result of the reduced Project footprint. Impacts related to VMT would be slightly reduced compared to the Project and impacts to VMT would remain less than significant under this alternative. The Project under this alternative would still provide roadway improvements as part of the Project further improving traffic along the surrounding roadways of the Project Site. Overall impacts related to transportation would be less than significant and would be slightly less than the Project.

Tribal Cultural Resources

A reduced Project footprint would reduce the area of disturbance by grading and earthwork under this alternative, further reducing impacts to unknown tribal cultural resources. However, due to the close proximity of the Project Site to Buena Vista Creek, potential for buried tribal cultural resources to be unearthed during Project construction would still be considered potentially significant. Implementation of mitigation measure MM-CUL-1a through MM-CUL-1h would still be required under this alternative to further reduce potential impacts related to tribal cultural resources. Overall, impacts related to tribal cultural resources under the Reduced Project Footprint Alternative would be less than significant with mitigation and impacts would be reduced compared to the Project.

Utilities and Service Systems

Under the Reduced Project Footprint Alternative, the Project would still include off-site improvements for the installation of water infrastructure along Plaza Drive. The onsite water infrastructure improvements are considered within the Project footprint, as described in the Project Description (Section 3.0 of this EIR). These onsite water infrastructure improvements do not result in any new Project-footprint related impacts beyond those already disclosed in this document. The off-site improvements would be located within already disturbed/developed areas and would not result in impacts to sensitive resources.

An increased planning and biological buffer of 150 feet would be provided and the Project would no longer require the sewer realignment at the southern portion of the Project Site, thereby reducing impacts to biological resources, cultural resources, geology and soils and tribal cultural resources.

Water and wastewater facilities within the City would continue to have available capacity under this alternative and sufficient water supplies would be available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. Additionally, less waste would be generated from the Project Site and therefore, the El Sobrante Landfill would continue to have sufficient permitted capacity to serve the Project under this alternative.

Impacts related to utilities and service systems under the Reduced Project Footprint Alternative would be less than significant and would be slightly reduced compared to the Project.

Wildfire

The Project Site is located in a developed area and is not located in a very high fire hazard severity zone within the Oceanside Local Responsibility Area as mapped by CAL FIRE, and is not located within a SRA where CAL FIRE is the primary emergency response agency responsible for fire suppression and prevention. The Project would continue to provide all required setbacks, fire truck access, fire hydrants, address numbers, sprinklers, Knox Box and an OPTICOM system on all gates in accordance with the OFD requirements under the Reduced Project Footprint Alternative. The Project would not impair an adopted emergency or evacuation plan, expose occupants to wildfire or require installation of infrastructure that would exacerbate fire risk. The Project would have a less than significant impact related to wildfire under this alternative, similar to that of the Project.

Conclusion

The Reduced Project Footprint Alternative would have minor reductions to Project impacts related to aesthetics, air quality, biological resources, cultural resources, energy, geology and soils, GHG, hydrology and water quality, noise, public services, transportation, tribal cultural resources and utilities and service systems. The Project under this alternative would still require all Project mitigation measures in order to reduce potentially significant impacts to a level below significant. All other impacts would be the same under the Reduced Project Footprint Alternative and the Project. Project objectives under this alternative would be partially.

7.4.3 Alternative 3: Alternative Site Location

CEQA Guidelines Section 15126.6(f)(2)(A) states that the key question and first step in the Alternative Location analysis is whether any of the significant effects of the Project would be avoided or substantially lessened by placing the Project in another location. Only locations that would avoid or substantially lessen any of the significant effects of the Project need to be considered for inclusion in the EIR.

As analyzed in Chapter 4.0, the Project would result in potentially significant impacts to biological resources, cultural resources, geology and soils, hydrology and water quality, land use and planning, and tribal cultural resources. This section determines if an alternative site could be identified that would reduce impacts to any of the environmental issue areas above. Alternative Project Site locations were evaluated based on the following criteria:

- Provides adequate developable area and does not reduce the net developable acres below the minimum amount needed to build a CarMax facility.
- Would not substantially increase the cost of Project construction.
- Located on a major roadway with high travel volumes and that maximize the site's visibility from the vantages of surrounding roadways.
- Be located in proximity to major retailers, a mall, and/or other car dealers to create a symbiotic relationship between CarMax and other uses and customers are shared.

- Availability of the site to the applicant (owned or which could reasonably be obtained, utilized, expanded, or managed).
- The extent that an alternative site would reduce impacts to biological resources, cultural resources, geology and soils, hydrology and water quality, land use and planning, tribal cultural resources and utilities and service systems, while not substantially increasing the cost of constructing the Project and not substantially impacting additional environmental resources.

Table 7.4-1 provides a list of alternative site locations that were evaluated under this alternative analysis. As shown in **Table 7.4-1**, none of the alternative site locations would have met the basic operational requirements for a CarMax facility. The alternative sites were determined to be either financially infeasible, have land use or other site restrictions, or were not located within the intended market area. However, for the purpose of this alternatives analysis, the alternative site located at 1302 Encinitas Boulevard is used to analyze potential impacts related to the construction and operation of the CarMax Project at this location as it is the most feasible of the alternative site locations. The alternative site located at 1302 Encinitas Boulevard currently operates as a BMW dealership and any construction or demolition related to the current site is considered in this alternative analysis.

Table 7.4-1
Alternative Site Locations Considered

Alternative Site Location	Land Use	Acres	Meets Project Requirements?
Sites Within Car Country Carlsbad – South of Cannon Road, Along Paseo Del Norte	Commercial – Retail	Various	No – Several sites within the Car Country Carlsbad area were analyzed. Ultimately restrictions would not be lifted which prohibited used car-only facilities
5475 Car Country Drive, Carlsbad – Hoehn Motors Mercedes Benz	Commercial – Retail	5.9 Acres	No – This site would relocate the existing Mercedes dealership to a site adjacent to the existing Hoehn Porsche dealership located at 6800 Avenida Encinas in Carlsbad. However, the use was unable to be changed to automobile sales.
6070 Avenida Encinas, Carlsbad	Industrial	8.6 Acres	No – The site was encumbered by a numerous leases and would ultimately be costly to demolish.
Northeast Corner of Jefferson Street and SR-78, Oceanside	Commercial – Vacant	5.5 Acres	No – The site is now under construction by Sharp Healthcare.
1302 Encinitas Boulevard, Encinitas	Commercial – Retail	6.0 Acres	No – This site was deemed to be located too far south for the intended market area.

Environmental Analysis

Aesthetics

The Alternative Site Location alternative would operate the CarMax Project at a location where there is an existing car dealership with similar size and scale as a CarMax facility. Therefore, impacts related to scenic vista or scenic resources at this location would not exist as a similar use is already existent. The Project at the currently proposed location would change the existing character of the vacant site to one that is developed, whereas one already exists at the alternative site location. Therefore, impacts under the Alternative Site Location would be less than significant and would be reduced compared to the Project.

Agriculture and Forestry Resources

The Project Site is designated as Urban and Built-Up Land by the FMMP map prepared for the Project Site. Although the Project Site is vacant, no prime farmland, unique farmland, or farmland of statewide importance is located onsite. Additionally, no forest land or timberland areas are located onsite and therefore no impacts to agriculture or forestry resources would occur as a result of the Project.

Similarly, the alternative site location currently operates as a car dealership and therefore, is not likely to contain any agricultural, forestry or timberland resources. No impacts to agriculture and forestry resources under the Alternative Site Location alternative would occur and impacts would be the same compared to the Project.

Air Quality

The Alternative Site Location alternative would result in short-term air quality impacts during construction and demolition of the existing site and long-term air quality impacts during operation of the CarMax facility. This alternative would not require grading activities as the site is already developed however; demolition of existing buildings would be required in order for the site to conform to the typical layout of a CarMax facility. Operational emissions under the Alternative Site Location alternative would be slightly reduced as the alternative site location has a smaller land area and therefore smaller buildings and fewer vehicles would be stored at this location. Fewer employees would be warranted and fewer deliveries of vehicles would be made at this location due to the decrease in size compared to the Project. Therefore, fewer vehicles trips to the site would occur at the alternative site location compared to the proposed Project location.

Impacts to air quality as a result of the Project would remain as less than significant and impacts related to air quality at the alternative site location would result in a reduction in air quality impacts compared to the Project.

Biological Resources

Under the Alternative Site Location alternative, the CarMax Project would be constructed on a site with an existing car dealership. No grading or vegetation clearing would take place under this alternative. The alternative site location would not be expected to contain any sensitive biological resources as it is fully developed and operates as an existing car dealership.

The alternative site location contains undeveloped land to the southwest of the site and therefore may be subject to avoidance and mitigation measures. However, impacts would be mitigated to a level below significance and would be reduced compared to the Project.

Cultural Resources

The Project would result in potentially significant impacts to cultural resources as a result of disturbance by grading and earthwork activities. The Project would require implementation of mitigation measure MM-CUL-1a through MM-CUL-1h and MM-CUL-2 to reduce impacts to a level below significant.

The development of the CarMax facility at the alternative site location would not result in potential impacts to buried cultural resources, including human remains because the site has already been graded and developed as an existing car dealership. The Alternative Site Location alternative would not require

mitigation measures as a result. Impacts related to cultural resources under the Alternative Site Location alternative would be less than significant and would be reduced compared to the Project.

Energy

The Alternative Site Location alternative would result in short-term energy impacts during construction and demolition of the existing site and long-term energy impacts during operation of the CarMax facility. This alternative would not require grading activities as the site is already developed however; demolition of existing buildings would be required in order for the site to conform to the typical layout of a CarMax facility.

The alternative site location is 6.0 acres which is smaller than the 10.54-acre Project Site. Due to the difference in development area, it is anticipated that less energy would be required during construction and operation of the CarMax facility under the Alternative Site Location alternative. A less than significant impact to energy would occur as a result of the Project and impacts would be slightly reduced under the Alternative Site Location alternative.

Geology and Soils

The Project would result in potentially significant impacts related to seismic hazards, unstable soils, erosion and paleontological resources and would require mitigation measures in order to reduce impacts to a level below significance.

Under the Alternative Site Location alternative, a geotechnical assessment would be required for any proposed demolition and new construction and the development of the Project at this site would be required to comply with all recommendations set forth in the geotechnical assessment. Therefore, the Project under this alternative would have a potentially significant impact to geology and soils and mitigation measures would be required.

Impacts related to paleontological resources as a result of grading and ground disturbing activities would not occur under this alternative as the site has been previously graded and developed. No impacts related to paleontological resources would occur. Impacts related to geology and soils under the Alternative Site Location alternative would be less than significant with mitigation but would be reduced compared to the Project.

Greenhouse Gas Emissions

Under the Alternative Site Location alternative, the Project would result in construction GHG emissions during demolition and building construction. However, alternative site location would be located on a smaller parcel, resulting in a reduced development footprint. Therefore, construction GHG emissions would be reduced compared to the Project. Operational emissions under the Alternative Site Location alternative would be slightly reduced as smaller buildings and fewer vehicles would be stored at this location. Fewer employees would be warranted and fewer deliveries of vehicles would be made at this location due to the decrease in size compared to the Project. Therefore, fewer vehicles trips to the site would occur at the alternative site location compared to the proposed Project location.

The alternative site location would remain in use as vehicle sales and is anticipated to be in compliance with local and regional policies and plans related to the reduction of GHG emissions. However, the Project at this location would be subject to the plans, policies and regulations provided by the City of

Encinitas. Project impacts related to GHG emissions would be less than significant and impacts would be slightly reduced under the Alternative Site Location alternative.

Hazards and Hazardous Materials

Under the Alternative Site Location alternative construction activities would still involve the transportation of potentially hazardous materials. However, with a small development footprint, fewer hazardous materials such as gasoline, diesel fuel and oil lubricants would be required compared to the Project. Compliance with proper BMPs and all applicable laws, ordinances, rules and regulations would ensure significant impacts related to hazardous materials would be less than significant.

Operation of the Project at the alternative site location would still include a service building, carwash and an aboveground fuel storage tank. Under this alternative fewer inventory vehicles would be stored onsite and therefore less fuel would be required to fuel inventory vehicles. The Project would still comply with the DEH HMD requirements to plan checks, UPFP, preparation of a SPCC Plan and would be subject to all required inspections. An onsite oil water separator would still be located onsite to treat wastewater from the carwash and the separated oil would be transported off-site to be treated by a certified waste vendor.

The Project under the Alternative Site Location alternative would not interfere with an adopted emergency response or evacuation plan as the use would be similar to the existing dealership onsite. The Project would incorporate all required setbacks, driveway and drive aisle widths in accordance with the City of Encinitas Fire Department. Overall, the Project would have a less than significant impact related to hazards and hazardous materials under this alternative and impacts would be less than that of the Project.

Hydrology and Water Quality

Under the Alternative Site Location alternative, Project construction would not require earth-moving activities such as grading, which would expose soils and cause pollutant discharge and potentially degrade water quality. However, the Project would require construction BMPs in order to further reduce the potential for storm water pollution during construction.

The Alternative Site Location alternative would result in less impervious area thereby reducing sources of pollutants from urban runoff. This alternative would not alter existing drainage patters or increase net runoff after development as the Project would result in drainage similarly to that of the existing car dealership. Under the Alternative Site Location alternative, the Project would require mitigation measures for implementation and maintenance of required storm water BMPs. Overall, impacts to hydrology and water quality would be less than significant after mitigation and would be slightly reduced compared to the Project.

Land Use and Planning

The Project under the Alternative Site Location alternative would not physically divide an established community and adequate access for vehicles and pedestrians would be provided as the Project currently operates as a car dealership. The Project would comply with the existing zoning designation as the use of the site would not change. The alternative site location is not anticipated to contain sensitive biological resources as it is a developed site, and therefore no mitigation measures for biological

resources would be required. Impacts to land use and planning under this alternative would be less than significant and reduced compared to the Project.

Mineral Resources

The Alternative Site Location alternative would locate the Project on a developed site that contains and existing car dealership. Therefore, it is not likely that mineral resources would be present onsite. Therefore, no impact to mineral resources would occur under the Project and the Alternative Site Location alternative.

Noise

The Project under the Alternative Site location alternative would also be located in close proximity to both residential and commercial uses. This alternative would not require grading activities as the site is already developed however; demolition of existing buildings would be required in order for the site to conform to the typical layout of a CarMax facility. With a reduced development area at the alternative site location, building construction would occur over a shorter period of time thereby reducing the amount of noise produced during construction operations. The Project would continue to comply with all ordinances related to hours of construction and construction noise level requirements.

Operation of the Project at the alternative site location would still result in noise produced from car carrier trucks, service building operations, carwash operations and HVAC units. Under this alternative reduced vehicle storage areas would result in fewer car carrier truck trips as fewer vehicles would be stored at this location. The Project under this alternative would have proportionately less noise during operation of the CarMax facility and the Project would continue to operate under the required noise standards. Noise impacts under the Alternative Site Location alternative would be less than significant and would be slightly reduced compared to the Project.

Population and Housing

The Project does not include the development of housing, nor would the Project result in the displacement of people or housing onsite as the alternative site location does not include existing housing. No impacts to population and housing would occur under the Alternative Site Location alternative or the Project. No impact would occur as a result of the Project or as a result of the Project under the Alternative Site Location alternative.

Public Services

The alternative site location currently operates as an existing car dealership and is served by existing police, fire and emergency personnel and facilities, schools, parks and other public facilities. Therefore, the need of new or physically altered facilities as a result of the Project under this alternative would not occur. Under the Alternative Site Location alternative, demand for public services would be similar or slightly reduced compared to the Project as the alternative site location would contain a smaller development area. Overall, impacts to public services would be less than significant under this alternative and would be slightly reduced compared to the Project.

Recreation

The Project does not propose a use that would increase the use of existing neighborhood and regional parks or other recreational facilities in the area. The Project does not propose recreational facilities that would have an effect on the environment. Similarly, the Project under the Alternative Site Location alternative would not contain recreational facilities or increase the use of existing recreational facilities. Therefore, no impact to recreation would occur under the Project or under the Alternative Site Location alternative.

Transportation

Under the Alternative Site Location alternative, the Project would be developed on a site with an existing car dealership. Trips generated by the Project at this location are anticipated to be similar to the trips generated by the existing car dealership. Impacts related to VMT would be similar to that of the Project as a similar number of trips would be generated from the site. It is assumed that the Project would still be screened out of a VMT analysis. Therefore, impacts related to transportation would be less than significant and the construction of roadway improvements is not anticipated under this alternative. Impacts would be less than significant and less than that of the Project under the Alternative Site Location Alternative.

Tribal Cultural Resources

The Project under the Alternative Site Location alternative would be located on a developed site with an existing car dealership. The Project would not require grading and earthwork activities that would uncover buried tribal cultural resources under this alternative. The alternative site location does not contain a creek where the potential for buried tribal cultural resources could be unearthed. Therefore, impacts to tribal cultural resources under the Alternative Site Location alternative would be less than significant and would be reduced compared to the Project.

Utilities and Service Systems

Off-site water infrastructure improvements would not be required under the Alternative Site Location alternative as the Project would provide the same use as the existing car dealership and therefore existing water facilities exist in the vicinity. Similarly, the sewer realignment would not be required under this alternative as sewer services and facilities exist to serve the existing car dealership.

It is anticipated that the Project at the alternative site location would generate similar water, wastewater and waste as the existing car dealership and therefore, sufficient capacity exists for the Project at this location. Impacts related to utilities and service systems under the Alternative Site Location alternative would be less than significant and would be reduced compared to the Project.

Wildfire

The Project would be located in a developed area under Alternative Site Location and would not be located in an area that would have a very high fire hazard severity designation as it is surrounded by development. The Project would continue to comply with all required setbacks, fire truck access, fire hydrants, sprinklers, address numbers and Knox Box onsite in accordance with City of Encinitas Fire Department requirements. The Project would not impair an adopted emergency or evacuation plan as the Project would have the same use and intensity of development as the existing car dealership. Therefore, the Project would have a less than significant impact related to wildfire under this alternative, similar to that of the Project.

Conclusion

Development of the Project under the Alternative Site Location alternative would result in reduced impacts to aesthetics, air quality, biological resources, energy, geology and soils, GHG emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, public services, transportation, tribal cultural resources and utilities and service systems. The Project under this alternative would still require mitigation measures related to geology and soils and hydrology and water quality for compliance with all geotechnical recommendations and provision of storm water BMPs in order to reduce potential impacts to a level below significant. All other impacts under this alternative would be the same under the Alternative Site Location alternative and the Project. Project objectives under this alternative would be met to an extent, as the alternative site location would not provide the same development area as the proposed Project Site.

7.4.4 Alternative 4: Neighborhood Commercial Center Alternative

The Neighborhood Commercial Center Alternative would replace the proposed CarMax Project with another commercial use such as a neighborhood shopping center on the Project Site. Under the CC zone, uses such as retail sales, food and beverage, full service restaurants and restaurants with drive-thru services are permitted, some requiring a use permit. For the purposes of this EIR alternative analysis, it is assumed that the proposed retail center would develop the entire 10.54-acre Project Site, both the northern and southern parcels, and buildings would be a maximum of 55,000 SF total. This estimated building square footage is based on other commercial retail centers in the surrounding area. Uses within the shopping center could consist of retail ranging from grocery stores, drugstores, cleaners, beauty and barber shops and fast food services.

A neighborhood commercial center with a maximum building size of 55,000 SF would generate approximately 6,600 ADT based on the SANDAG *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region* (based on the generation rate of 120 trips/1,000 SF). This alternative would result in an intensity of approximately 13 times more vehicular trips compared to the Project.

Environmental Analysis

Aesthetics

Under the Neighborhood Commercial Center Alternative the Project Site would operate as a neighborhood shopping center similar to the Tri-City Crossroads shopping center located to the west of the Project Site. The visual character of the site would change from a vacant site to one that is comparable to the existing commercial uses. The site under this alternative would conform to the developed characteristic of the surrounding area and would be consistent with the character and quality of the surrounding environment. Increase in light and glare impacts from the development of a neighborhood shopping center would occur similarly to that of the Project. Overall impacts to scenic resources, visual character and lighting would be less than significant; however, due to the increase in building square footage and mass of a neighborhood commercial center building, impacts to aesthetics would be greater than the Project.

Agriculture and Forestry Resources

The development of a neighborhood commercial center on the Project Site would remain on a parcel that is designated as Urban Built-Up Land by the FMMP map prepared for the Project Site. No farmland, unique farmland, or farmland of statewide importance is located onsite. Additionally, no forest land or timberland areas are located onsite. Therefore impacts to agriculture and forestry resources would not occur as a result of this alternative.

Air Quality

The Neighborhood Commercial Center Alternative would result in short-term air quality impacts during construction activities and long-term air quality impacts during operation of the neighborhood commercial shopping center. Although this alternative would be developed with a similar development footprint, the neighborhood commercial center would have a larger building footprint and would operate as a more intense use compared to the Project. Therefore an increase in vehicle trips would result in greater air quality emissions and larger building footprints would result in greater operational emissions.

Under the Neighborhood Commercial Center Alternative, the Project would not conflict with implementation of local and regional air quality plans as it would comply with the CC zoning designation. The neighborhood commercial center would not expose sensitive receptors to emissions or objectionable odors. Therefore, the Neighborhood Commercial Center Alternative would have a less than significant air quality impact but would have a greater impact to air quality compared to the Project.

Biological Resources

The Neighborhood Commercial Center Alternative would require grading, vegetation clearing, and building construction similar to the Project, resulting in potentially significant impacts to sensitive biological resources. Therefore, implementation of mitigation measures MM-BIO-1 through MM-BIO-7 would still be required under this alternative.

Under this alternative it is assumed that the design features to include the 100-foot wetland buffer, which includes the required 50-foot biological buffer on the jurisdictional resources as well as the requisite 50-foot planning buffer, would still be implemented. Depending on the specific design of the neighborhood commercial center, the proposed sewer re-alignment may not be required and the Project would utilize the existing sewer mains in their existing locations. Therefore, temporary impacts to approximately 0.0008 acre (344 sf) of disturbed habitat within the planning buffer could not occur under this alternative.

Overall, impacts to biological resources under the Neighborhood Commercial Center Alternative would be less than significance with mitigation incorporated and would be similar to that of the Project.

Cultural Resources

Under the Neighborhood Commercial Center Alternative grading and ground disturbance would be required to develop the site. These activities would still occur in close proximity to the Buena Vista Creek resulting in potentially significant impacts to unknown cultural resources and human remains. Implementation of mitigation measures MM-CUL-1a through MM-CUL-1h and MM-CUL-2 would be required to reduce potential impacts to below a level of significance. Overall, impacts to cultural

resources under the Neighborhood Commercial Center Alternative would be less than significant with mitigation incorporated and impacts would be similar to that of the Project.

Energy

The Neighborhood Commercial Center Alternative would result in short-term construction usage similar to that of the Project. Long-term energy usage would be greater than that of the Project as a larger commercial building would be developed and therefore would require a greater demand in energy for electricity. Additionally, the neighborhood commercial center would be a more intense use compared to the Project, resulting in greater trips to the site and further increase energy usage. The neighborhood commercial center would generate approximately 6,600 ADT, which is 13 times more intense than the Project. Energy associated with fuel usage and vehicle miles traveled from delivery trucks and customer and employee trips would be greater under this alternative.

It is not anticipated that this alternative would result in wasteful, inefficient or unnecessary consumption of energy resources or conflict with or obstruct with a state or local plan for renewable energy, and therefore, the Neighborhood Commercial Center Alternative would result in a less than significant impact to energy, however, impacts would be greater than that of the Project.

Geology and Soils

The development of a neighborhood commercial center would have a similar development footprint as the Project, and therefore would result in potential impacts related to geology and soils. Compliance with the Geotechnical Evaluation, storm water BMPs, the CBC and City regulations would be required to ensure that the Neighborhood Commercial Center Alternative would not expose people or structures to seismic hazards, unstable soils or erosion. The requirements set forth in mitigation measures MM-GEO-1, MM-HYDRO-1 through MM-HYDRO-3 would ensure impacts to geology and soils are reduced to a level below significance.

Potentially significant impacts to paleontological resources as a result of Project grading and ground disturbing activities would remain under this alternative. Implementation of mitigation measure MM-GEO-3a and MM-GEO-3b would be required under this alternative. Impacts to geology and soils would be less than significant after mitigation, with impacts similar to that of the Project.

Greenhouse Gas Emissions

The development of a neighborhood commercial center would result in similar short-term GHG emissions associated with Project construction. Operation of the neighborhood commercial center would result in greater GHG emissions as the building footprint would be greater than that of the Project. Additionally, a more intensive use such as a neighborhood commercial center would result in an increased number of trips to the site resulting in greater GHG emissions. The neighborhood commercial center would generate approximately 6,600 ADT, which is 13 times more intense compared to the Project, resulting in an increase in corresponding GHG emissions.

The Neighborhood Commercial Center Alternative would comply with the existing CC zoning and land use designation and therefore would remain in compliance with local and regional policies and plans related to the reduction of GHG emissions. Impacts related to GHG emissions under the Neighborhood Commercial Center Alternative would be less than significant, but would be greater than that of the Project.

Hazards and Hazardous Materials

The Neighborhood Commercial Center Alternative would still involve the transportation of potentially hazardous materials during construction such as gasoline, diesel fuel, oil and lubricants. Compliance with proper BMPs and all applicable laws, ordinances, rules and regulations would ensure significant impacts related to hazards and hazardous materials would be less than significant.

Operation of the neighborhood commercial center would no longer include the aboveground fuel storage tank and carwash. Depending on the specific uses within the neighborhood commercial center, other potentially hazardous materials could be warranted onsite. However, compliance with all state and local regulations would reduce impacts to a level below significance.

The neighborhood commercial center would be subject to all required setbacks, driveway and drive aisle dimensions in accordance with OFD standards and would not interfere with an adopted emergency response or evacuation plan. Overall, a less than significant impact related to hazards and hazardous materials would occur under the Neighborhood Commercial Center Alternative and impacts would be less than the Project.

Hydrology and Water Quality

Under the Neighborhood Commercial Center Alternative construction would require earth-moving activities, exposing soils which would cause pollutant discharge and potentially degrade water quality. The development of the neighborhood commercial center would require construction BMPs and preparation of a SWPPP in order to reduce pollutant discharge during construction operations.

The Neighborhood Commercial Center Alternative would result in similar impervious areas resulting in sources of pollutants from urban runoff. The development under this alternative would not alter existing drainage patters or increase net runoff after development. The Neighborhood Commercial Center Alternative would still require implementation of mitigation measures MM-HYDRO-1 through MM-HYDRO-3 in order to further reduce impacts to water quality and erosion. Overall, impacts to hydrology and water quality would be less than significant after mitigation and would be similar to that of the Project.

Land Use and Planning

The development of a neighborhood commercial center on the Project Site would not divide an established community and adequate access for vehicles and pedestrians would be ensured. The neighborhood commercial center would comply with all requirements in the CC zone and would not conflict with the Zoning Ordinance or General Plan. Impacts related to Project compliance with the Subarea Plan of the MHCP would be reduced by mitigation measures MM-BIO-1 through MM-BIO-7. The Neighborhood Commercial Center Alternative would have a less than significant impact to land use and planning after mitigation and impacts would be similar to that of the Project.

Mineral Resources

The Project Site is located within the MRZ-3, which indicates that there are no known mineral resources present on the Project Site. Therefore development of the neighborhood commercial center would not

result in impacts to known mineral resources. No impact would occur under the Neighborhood Commercial Center Alternative, similar to that of the Project.

Noise

Under this alternative, the development of the neighborhood commercial center would result in similar short-term construction noise relating to grading and building construction. Construction would continue to comply with City ordinances related to hours of construction and construction noise level requirements.

Operation of the neighborhood commercial center would result in a larger building footprint and approximately 6,600 ADT, which is 13 times more intense compared to the Project, resulting in an increase in noise corresponding to the increase in vehicular trips. Development under the Neighborhood Commercial Center Alternative would be required to operate under the City noise standards. Noise impacts would be less than significant under the Neighborhood Commercial Center Alternative, but would be greater than that of the Project.

Population and Housing

The Neighborhood Commercial Center Alternative would not include the development of housing, nor would it result in the displacement of people or housing. Therefore, no impacts to population or housing would occur under this alternative, similar to that of the Project.

Public Services

The development of a neighborhood commercial center would not require new or physically altered fire or emergency medical facilities, police facilities, schools, parks or other public facilities. The Neighborhood Commercial Center Alternative would result in a greater number of people visiting the Project Site compared to the Project however; the demand for public services would not require new facilities. The development of the neighborhood commercial center would be required to contribute to all required development impact fees in accordance with the City's current requirements, which would be allocated to offset for any increase in demand for such public services. Overall, impacts to public services would be slightly greater compared to the Project, but impacts would remain less than significant.

Recreation

The Neighborhood Commercial Center Alternative would not include recreational facilities that would have an effect on the environmental and would not increase the use of existing neighborhood and regional parks or other recreational facilities in the area. The development of the neighborhood commercial center would be subject to all required development fees in accordance with the City's current requirements. The Neighborhood Commercial Center Alterative would have a less than significant impact to recreation, similar to that of the Project.

Transportation

The Neighborhood Commercial Center Alternative would be anticipated to generate an increase in ADT compared to the Project, due the nature of the use compared to the use as a CarMax facility. The

neighborhood commercial center would generate approximately 6,600 ADT, which is 13 more intense compared to the Project which would generate 475 ADT.

Under this alternative the construction of roadway improvements along Plaza Drive and Thunder Drive would be required and it is assumed that additional roadway improvements would be required along surrounding roadways as a result of increased traffic compared to the Project. The neighborhood commercial center under this alternative would also be subject to a VMT analysis as it is expected to generate greater than 1,000 ADT. Mitigation measures may be warranted as a result. Therefore, impacts related to transportation under the Neighborhood Commercial Center Alternative would be potentially significant and would require mitigation and would be greater than that of the Project.

Tribal Cultural Resources

The development of a neighborhood commercial center on the Project Site would include grading and ground disturbing activities in close proximity to Buena Vista Creek therefore resulting in the potential for buried tribal cultural resources. The Project Site is located within the culturally-affiliated territory of the Rincon Band of Luiseño Indians and therefore the discovery of unknown tribal cultural resources during grading activities would result in a significant impact. The Neighborhood Commercial Center Alternative would be required to implement mitigation measures MM-CUL-1a through MM-CUL-1h in order to reduce potential impacts to tribal cultural resources to a level below significance. Impacts would be less than significant after mitigation, similar to that of the Project.

Utilities and Service Systems

Under the Neighborhood Commercial Center Alternative, the Project would still include off-site improvements for the installation of water infrastructure along Plaza Drive. The onsite water infrastructure improvements are considered within the Alternative Project footprint. The off-site improvements would be located within already disturbed/developed areas and would not result in impacts to sensitive resources, similar to the Project.

The development of a neighborhood commercial center would be anticipated to generate a greater demand for water and wastewater facilities compared to the Project due to the larger building footprint. However, because the neighborhood commercial development would be located on the Project Site which is zoned as CC, it is anticipated that available wastewater capacity and sufficient water supplies would be available to serve the Project Site under this alternative. Water and wastewater demand assumptions for the Project Site in the SMP and UWMP would have been based on a commercial land use, since that was the land use designation at the time the SMP and UWMP were prepared. Therefore, water and wastewater demand under this alternative would have been assumed in the City planning documents for water and sewer.

Similarly, the neighborhood commercial center would be expected to generate more waste compared to the Project however, the El Sobrante Landfill is expected to have sufficient permitted capacity to serve the Project Site under this alternative.

Impacts related to utilities and service systems under the Neighborhood Commercial Center Alternative would be less than significant but would be slightly greater than the Project.

Wildfire

The Neighborhood Commercial Center Alternative would remain on the Project Site which is not located in a very high fire hazard severity zone and is not located within a SRA under CAL FIRE. The development of the neighborhood commercial center would be required to comply with all required setbacks, fire truck access, fire hydrants, address numbers, sprinklers, Knox Box and OPTICOM system in accordance with OFD requirements. The neighborhood commercial center would not impair an adopted emergency or evacuation plan, expose occupants to wildfire or require installation of infrastructure that would exacerbate fire risk. Therefore, the Neighborhood Commercial Center Alternative would have a less than significant impact to Wildfire and impacts would be similar to that of the Project.

Conclusion

The Neighborhood Commercial Center Alternative would have increased environmental impacts related to air quality, energy, GHG emissions, noise, public services, transportation and utilities and service systems due to an increase in building size with a maximum of 55,000 SF and increase in vehicle trips of 6,600 ADT compared to 475 ADT generated by the Project. Impacts to aesthetics, agriculture, biological resources, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, population and housing, recreation, tribal cultural resources and wildfire would be similar to that of the Project. All required mitigation measures under the Project would also be required under this alternative and would reduce potentially significant impacts to a level below significant. It is anticipated that transportation mitigation measures to offset VMT increases would be warranted as a result of such increases to traffic generated from the Project Site under this alternative. This alternative would not meet any of the Project objectives.

7.5 Summary of Alternatives Impacts

Table 7.5-1 below provides a summary of the effects of each alternative for each of the environmental impact areas addressed above.

Table 7.5-1
Comparison of Project and Alternatives Impacts

Environmental Issue Area	Project Impact	Alternative 1: No Project Alternative	Alternative 2: Reduced Project Alternative	Alternative 3: Alternative Site Location	Alternative 4: Neighborhood Commercial Center Alternative
Aesthetics	Less Than Significant	No Impact	Less Than Significant (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Less Than Significant (Greater Impact than Project)
Agriculture and Forestry Resources	No Impact	No Impact	No Impact (Similar Impact as Project)	No Impact (Similar Impact as Project)	No Impact (Similar Impact as Project)
Air Quality	Less Than Significant	No Impact	Less Than Significant (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Less Than Significant (Greater Impact than Project)
Biological Resources	Less Than Significant with	No Impact (No creek	Less Than Significant with	Less Than Significant with	Less Than Significant with

Environmental Issue Area	Project Impact	Alternative 1: No Project Alternative	Alternative 2: Reduced Project Alternative	Alternative 3: Alternative Site Location	Alternative 4: Neighborhood Commercial Center Alternative
	Mitigation Incorporated	protection measures would occur)	Mitigation Incorporated (Less Impact than Project)	Mitigation Incorporated (Less Impact than Project)	Mitigation Incorporated (Similar Impact as Project)
Cultural Resources	Less Than Significant with Mitigation Incorporated	No Impact	Less Than Significant with Mitigation Incorporated (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Less Than Significant with Mitigation Incorporated (Similar Impact as Project)
Energy	Less Than Significant	No Impact	Less Than Significant (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Less Than Significant (Greater Impact than Project)
Geology and Soils	Less Than Significant with Mitigation Incorporated	No Impact	Less Than Significant with Mitigation Incorporated (Similar Impact as Project)	Less Than Significant with Mitigation Incorporated (Less Impact than Project)	Less Than Significant with Mitigation Incorporated (Similar Impact as Project)
Greenhouse Gas Emissions	Less Than Significant	No Impact	Less Than Significant (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Less Than Significant (Greater Impact than Project)
Hazards and Hazardous Materials	Less Than Significant	No Impact	Less Than Significant (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Less Than Significant (Less Impact than Project)
Hydrology and Water Quality	Less Than Significant with Mitigation Incorporated	No Impact	Less Than Significant with Mitigation Incorporated (Less Impact than Project)	Less Than Significant with Mitigation Incorporated (Less Impact than Project)	Less Than Significant with Mitigation Incorporated (Similar Impact as Project)
Land Use and Planning	Less Than Significant with Mitigation Incorporated	No Impact	Less Than Significant with Mitigation Incorporated (Similar Impact as Project)	Less Than Significant (Less Impact than Project)	Less Than Significant with Mitigation Incorporated (Similar Impact as Project)
Mineral Resources	No Impact	No Impact	No Impact (Similar Impact as Project)	No Impact (Less Impact than Project)	No Impact (Similar Impact as Project)
Noise	Less Than	No Impact	Less Than	Less Than	Less Than

Environmental Issue Area	Project Impact	Alternative 1: No Project Alternative	Alternative 2: Reduced Project Alternative	Alternative 3: Alternative Site Location	Alternative 4: Neighborhood Commercial Center Alternative
	Significant		Significant (Less Impact than Project)	Significant (Less Impact than Project)	Significant (Greater Impact than Project)
Population and Housing	No Impact	No Impact	No Impact (Similar Impact as Project)	No Impact (Similar Impact as Project)	No Impact (Similar Impact as Project)
Public Services	Less Than Significant	No Impact	Less Than Significant (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Less Than Significant (Greater Impact than Project)
Recreation	Less Than Significant	No Impact	Less Than Significant (Similar Impact as Project)	No Impact (Similar Impact as Project)	Less Than Significant (Similar Impact as Project)
Transportation	Less Than Significant	No Impact (No roadway, sidewalk or bicycle lane improvements would occur)	Less Than Significant (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Potentially Significant Impact (Greater Impact than Project)
Tribal Cultural Resources	Less Than Significant with Mitigation Incorporated	No Impact	Less Than Significant with Mitigation Incorporated (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Less Than Significant with Mitigation Incorporated (Similar Impact as Project)
Utilities and Service Systems	Less Than Significant	No Impact	Less Than Significant (Less Impact than Project)	Less Than Significant (Less Impact than Project)	Less Than Significant (Greater Impact than Project)
Wildfire	Less Than Significant	No Impact	Less Than Significant (Similar Impact as Project)	Less Than Significant (Similar Impact as Project)	Less Than Significant (Similar Impact as Project)
Meets the Project Objectives?	Yes	No	Partially	Partially	No

7.6 Environmentally Superior Alternative

The Environmentally Superior Alternative is generally defined as the alternative which would result in the least adverse environmental impacts on the Project Site and the surrounding area. The No Project Alternative would be the Environmentally Superior Alternative as it would avoid impacts associated with all environmental issue areas. However, this alternative would not meet any of the Project objectives. In

accordance with CEQA Guidelines Section 15126.6(e)(2), if the Environmentally Superior Alternative is the No Project Alternative, the EIR shall also identify an Environmentally Superior Alternative among the other alternatives.

The Alternative Site Location alternative would be the Environmentally Superior Alternative due to its ability to reduce the severity of impacts to biological resources, cultural resources, land use and planning, and tribal cultural resources which were found to be potentially significant unless mitigated under the Project. The Alternative Site Location alternative would have reduced impacts to aesthetics, air quality, energy, GHG emissions, hazards and hazardous materials, noise, public services, transportation and utilities and service systems. Reduced impacts are generally due to the fact that the alternative site location has already been developed with an existing car dealership and therefore, impacts associated with grading have been reduced. The alternative site location would also be located on a smaller parcel and the Project would have a smaller development footprint, further reducing impacts compared to the Project. All other impacts would be less than significant or no impact, similar to that of the Project.

The Alternative Site Location alternative would not entirely meet the Project objectives. This alternative would only partially meet the objective of constructing and operating a retail commercial facility providing local residences with convenient access to an automobile sales center with related services. The Alternative Site Location alternative would only partially meet the objective of developing a thoughtfully designed and visually appealing automobile sale facility, as the development footprint would be reduced compared to the originally-designed Project. Lastly, the Alternative Site Location alternative would meet the objective of positively impacting the local economy by creating employment opportunities and generating tax revenue, however, would not meet this object to the fullest extent. Implementation of the Project at an alternative site location would not achieve the Project objectives to the same degree as the Project would due to the reduction in the site area, reducing vehicle storage and display areas resulting in a decrease in commercial activity. Lastly, the alternative site location was considered to be located too far south of the intended market area.

CHAPTER 8.0 LIST OF PREPARERS AND AGENCIES CONSULTED

City of Oceanside

Richard Greenbauer, Principal Planner

REC Consultants, Inc.

Hedy Levine, Director of Environmental Division

Sophia Habl Mitchell, Senior Environmental Project Manager

Rayna Del Rosario, Environmental Analyst

Mauro Guevara, Environmental Analyst/ GIS Specialist

Danielle Ornelas, Environmental Analyst

Raab Rydeen, PE, Director of Engineering

Alan Ream, Director of Survey Division

Angie Ortiz, PE, Senior Project Engineer

Jacob Watson, Project Engineer

ASM Affiliates

Stephen Harvey, Senior Archaeologist

Busby Biological Services, Inc.

Darin Busby, Principal Biologist

APPENDIX A
NOP and Public Scoping Comments

Appendix A
Notice of Preparation (NOP) Comments (Received August 11, 2020 – September 15, 2020)

Reference #	Date	Name	Group/ Association	Comment Format	CEQA Issue Area	Comment Summary	EIR Section Where Comment Addressed
1	8/24/2020	Christian Julliay	Individual	Email	Transportation	Consideration of traffic light at the corner of Thunder Drive and Tiberon Drive. Concerns regarding traffic from DMV to Tiberon Drive specifically during morning and evening peak hours. Addition of traffic from proposed entrances on Thunder Drive.	The transportation analysis for the Project is provided in Section 4.18 Transportation.
2	8/25/2020	Andrew Green	Native American Heritage Commission	Letter	Tribal Cultural Resources	Description of AB 52 and SB 18 requirements and timelines. Recommendations for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project.	The results of Tribal Consultation and the analysis of Project impacts to Tribal Cultural Resources are provided in Section 4.19 Tribal Cultural Resources.
3	8/25/2020	Patrick Brogan	Individual	Email	Transportation, Parking, Land Use, Aesthetics	1. Concerns regarding increase traffic along Plaza Drive and Thunder Drive and loss of parking along Thunder Drive. Mentions recent accidents at the Plaza Drive and Thunder Drive intersection. 2. Concerns regarding appropriateness of land use of the proposed project. Suggests more appropriate land uses such as residential, park, community garden, or selling a portion of the site to the DMV for additional parking. 3. Safety concerns for emergency vehicles from the nearby fire station. 4. Aesthetics concerns of a car dealership.	1. Section 4.18.5 Transportation 2. Section 4.12.4.b Land Use and Planning 3. Section 4.16.4 Public Services – Fire Protection. 4. Section 4.2.1 and 4.2.4 Aesthetics.
4	8/26/2020	Robert Rapista	County of San Diego Department of Environmental Health (DEH) Hazardous Materials Division (HMD)	Letter	Hazardous Materials	1. Required to Submit a Hazardous Materials Questionnaire to the HMD and complete HMD Hazardous Materials Plan Check application to see if a Unified Program Facility Permit (UPFP) is required. Required prior to issuance of certificate of occupancy by a Building Department. 2. If an underground storage tank (UST) is proposed, requirement of an UST installation permit before construction of the system. 3. If an aboveground petroleum tank with storage capacity of 1,320 gallons or more is proposed, a Spill Prevention Control and Countermeasures Plan (SPCC) and demonstration of compliance with the Aboveground Petroleum Storage Act is required. 4. Any and all construction-related hazardous waste (used oil, paint waste, lead pain debris, etc.) generated onsite must be properly classified, labeled and handled in a manner to prevent release to the environment. Contractor to ensure hazardous waste generated is properly classified, labeled, and disposed of. 5. HMD authority to regulate facilities that handle or store hazardous materials, and/or generate or treat hazardous waste.	1. Section 4.10.4.a Hazards and Hazardous Materials 2. An underground storage tank is not proposed. Therefore, this comment is not applicable. 3.Section 4.10.4.a Hazards and Hazardous Materials 4. Section 4.10.4.a Hazards and Hazardous Materials 5. Section 4.10.2 and 4.10.4.a Hazards and Hazardous Materials
5	8/26/2020	Diane Nygaard	Individual	Speaker Comment	Biological Resources, Transportation, Greenhouse Gas Emissions	1. What is allowed in the Planning Buffer? 2. Requests more-clear site plan. 3. Is VMT being used to analyze traffic? 4. Is the GHG analysis per the City's CAP? 5. Is anything being done to address the residential neighborhood to the east? 6. Where will test drives occur? How are they accounted in the traffic study?	1. Section 3.4 Project Characteristics – Open Space and Section 4.5 Biological Resources. 2. Additional plans and Figures were emailed to commenter on 8/27. 3. A VMT Analysis was prepared for the Project and is used in the preparation of Section 4.18.5 Transportation. 4. Section 4.9 Greenhouse Gas Emissions 5. Section 3.4 Project Characteristics 6. Section 3.0 Project Description and Section 4.18 Transportation.

Reference #	Date	Name	Group/ Association	Comment Format	CEQA Issue Area	Comment Summary	EIR Section Where Comment Addressed
6	8/28/2020	Diane Nygaard	Preserve Calavera	Email	Transportation/VMT, Greenhouse Gas/CAP, Biological Resources, Air Quality, Public Services	1. Transportation analysis to include VMT analysis. 2. Compliance with CAP and implementing ordinances. 3. Buffer along Buena Vista Creek. 4. Creek corridor restoration and management of public access. 5. Parking 6. Test drive routes and mileage and impacts related to GHG, VMT, Air Quality, and Public Safety.	1. Section 4.18 Transportation. The VMT Analysis is provided as Appendix N of the EIR. 2. Section 4.9.4.b Greenhouse Gas Emissions and Section 4.7.4.b Energy 3. Section 3.4 Project Characteristics – Open Space and Section 4.5 Biological Resources. 4. Section 3.4 Project Characteristics – Open Space 5. Section 3.0 Project Description 6. Section 4.4 Air Quality, Section 4.9 Greenhouse Gas Emissions, Section 4.18 Transportation
7	8/26/2020	Daniel Valdez	County of San Diego Department of Environmental Health (DEH) Vector Control Program (VCP)	Letter	Mosquito Breeding, Vector Control	1. Ensure construction-related depressions do not hold water. Any area that is capable of accumulating and holding at least ½ inch of water for more than 96 hours can support mosquito breeding and development. 2. Authority of VCP during construction and operation of the project. 3. Further information for significance guidelines and BMPs for mosquito control.	1. Section 3.4 Project Characteristics – Drainage and Hydrology and Section 4.11.4.a Hydrology and Water Quality 2. Section 4.11.2 Hydrology and Water Quality 3. This comment provides information only.
8	9/10/2020	Maurice Eaton	California Department of Transportation	Letter	Transportation, Noise	1. A Vehicle Miles Traveled based Traffic Impact Study should be provided. 2. Caltrans is not responsible for existing or future traffic noise impacts associated with the existing configuration of SR-78 3. Encroachment permit will be required for any work within the Caltrans right-of-way (ROW). 4. Recommends identification of impacts caused by the project that occur within the Caltrans ROW. 5. Perpetuation of survey monuments by a licensed land surveyor is required, if they are being destroyed by any construction. 6. Any work performed within the Caltrans ROW will require discretionary review and approval by Caltrans and an encroachment permit will be required for any work within the Caltrans ROW prior to construction.	1. A VMT Analysis (Append N) and a Local Transportation Study (Appendix O) were prepared for the Project and used in the preparation of this EIR. 2. This comment is noted by the Project applicant and does not require discussion within the EIR. 3. This comment is noted as the Project does not propose to encroach into the Caltrans ROW. 4. This comment is noted as the Project would not cause impacts within the Caltrans ROW. 5. This comment is noted. 6. This comment is noted as the Project would not require any work within the Caltrans ROW.
9	9/10/2020	Mitchell M. Tsai	Attorneys for Southwest Regional Council of Carpenters (SWRCC)	Letter	Energy, GHG	1. Recommendation for City to require project to be built to standards exceeding the 2019 California Green Building Code. 2. Recommends the City adopt a Mandatory Finding of Significance that the project may cause substantial adverse effect on human beings and mitigate COVID-19 impacts. This comment provides recommendations for construction site protocols during the COVID-19 crisis.	1. The Project would comply with the most recent adopted California Green Building Code. 2. At time of construction, current construction site and construction worker protocols would be followed in

Reference #	Date	Name	Group/ Association	Comment Format	CEQA Issue Area	Comment Summary	EIR Section Where Comment Addressed
							accordance with current state and local regulations. Section 4.10 Hazards and Hazardous Materials.
10	9/14/2020	Cheryl Madrigal	Rincon Band of Luiseño Indians	Letter	Tribal Cultural Resources	1. The project is located within the specific Area of Historic Interest (AHI) of the Rincon Band of Luiseño Indians. 2. Recommends archaeological study be conducted with tribal monitor from Rincon Band during survey. 3. Right of the Rincon Band to fully participate in the environmental review process and submittal of information.	1. Section 4.19 Tribal Cultural Resources. 2. Section 4.6 Cultural Resources and 4.19 Tribal Cultural Resources 3. This comment is noted.

Warning: External Source

Hello Richard ; In regards to the Carmax Superstore with its two accesses on Thunder Dr., are there plans to place a traffic light at the corner of Thunder Dr. and Tiberon Dr. ? There should be consideration for a light there because there is already a lot of traffic coming from the DMV already making it a challenge for traffic coming out of Tiberon Dr., especially early morning and the after work period for jobs and school. Those two Carmax entrances will add a lot more traffic. Christian Julliay a resident there.

Re: 2020089012, CarMax Auto Superstore Oceanside; Development Plan (019-00021) and Conditional Use Permit (CUP19-00029) Project, San Diego County

Dear Mr. Greenbauer:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.

b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:

a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.

b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.

b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.

c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

> ---
>
> Dear Mr. Greensburg:
>
> I am writing you today to offer my comments regarding the request for approval of the Development Plan and Conditional Use Permit for the above-referenced project and why strongly OPPOSE said project.
>
> I have been an Oceanside resident and owner at the below address since February 1979, and so I speak to the changes I have seen in this neighborhood over the past 41+ years.
>
> Traffic, and decrease in street parking, greatly increased with the construction of the DMV and the extension of Plaza Drive. This neighborhood has less of a residential feel, and more-and-more of a commercial feel.
>
> To build a used car lot would be an inappropriate land use. A more appropriate use of this property would be some combination of residential, park, or community garden. Even selling some of the property to the State to sift DMV traffic off the street would be an improvement!
>
> Examining the documents that I received yesterday shows that Thunder Drive would lose parking spaces, and increase traffic. Also, traffic would increase on Plaza Drive. I also would like to point out that in the past couple of weeks, a driver made an unsafe turn from Plaza Drive southbound on Thunder Drive driving onto the roof of a vehicle who was making a left turn from Thunder Drive to Plaza Drive. Increased traffic would also be a safety hazard to any EMS vehicles coming from the nearby fire station.
>
> The aesthetics of a large car lot would be a negative factor on my property value, and that of the two condo associations, and the several older single family residences on Thunder Drive.
>
> Your meeting on Wednesday evening, in my opinion, starts when many workers may be still

commuting home. Also, since there is a presentation first, time for public comment is very limited.

Finally, as a side note, on the envelope that was mailed from the City of Oceanside, there is a major spelling error:

There is no such word as "serviceses". The plural of service is services.

Thank you for your consideration in this matter.

Sincerely yours,

Patrick Eoin Brogan

COMMENTS: CARMAX AUTO SUPERSTORE OCEANSIDE; DEVELOPMENT PLAN (019-00021) AND CONDITIONAL USE PERMIT (CUP19-00029)

Thank you for the opportunity to comment on the referenced project. The County of San Diego Hazardous Materials Division (HMD) is responsible for the protection of public health and the environment by ensuring hazardous materials, hazardous waste, medical waste, aboveground tanks and underground storage tanks are properly managed. The HMD has completed their review and has the following comments regarding the project.

The proposed project description as stated in the Notice:

The project is a request for approval of a Development Plan (D19- 000021) and Conditional Use Permit (CUP19-00029) to allow for the development and operation of a CarMax facility. The proposed development consists of the construction of a CarMax pre-owned automobile dealership, including a sales and administration building, service building, private carwash, associated access drives, landscaped areas, presentation area, staging area (93 spaces), sales display area (285 spaces), and a customer and employee parking lot (148 spaces). An additional sales display area would be provided on the northern parcel with a security gate and control island and would be developed as part of Phase II of the project.

City of Oceanside - Planning Division
Carmax Auto Superstore Oceanside; Development Plan (019-00021) And Conditional Use Permit (CUP19-00029)

COMMENTS:

1. According to the project description in the document, the proposed new construction of a CarMax pre-owned automobile dealership facility, will include a service building and private carwash. The facility may be handling and storing reportable quantities of hazardous materials and/or generating hazardous waste. The facility may need a Unified Program Facility Permit (UPFP).

   The facility operator is required to submit a Hazardous Materials Questionnaire to the HMD and complete an HMD Hazardous Materials Plan Check application to determine if a UPFP will be required. The HMD Hazardous Materials Plan Check review will be required prior to issuance of a certificate of occupancy by a Building Department.

   For your reference, information regarding the Hazardous Materials Plan Check plan check requirement can be reviewed at:
   https://www.sandiegocounty.gov/content/sdc/deh/hazmat/hazmat/hmd_plan_check.html

2. If the facility is planning on installing an underground storage tank (UST) system or underground sump/vault to collect and/or store a hazardous substance, a UST installation permit will be required by State law and County ordinance before construction of the system. Information about the permitting process and laws is found at:
   https://www.sandiegocounty.gov/content/sdc/deh/hazmat/ust.html

3. If the facility is planning on installing an aboveground petroleum tank with a storage capacity of ≥1,320 gallons, the facility would require a Spill Prevention Control and Countermeasures Plan (SPCC) and demonstrate compliance with the Aboveground Petroleum Storage Act, Cal. Health and Safety Code, sections 25270 etc. The facility operator shall complete the SPCC plan and retain a copy onsite for inspection by the HMD.

4. Please be advised, any and all construction-related hazardous waste (examples: used oil, paint waste, lead paint debris, etc.) generated onsite anytime during this project must be properly classified, labeled and handled in manner to prevent release to the environment. Contractor(s) must ensure hazardous waste generated during all construction project work is properly classified, labeled, and disposed by a California registered hazardous waste hauler. Unified Program Facility Permit may also be required for the accumulation and storage of these wastes. More information is found at this webpage:
   https://www.sandiegocounty.gov/content/sdc/deh/hazmat/hazwaste.html

5. Please note, anytime during construction and after completion of the project, the HMD has the authority pursuant to state law and County Code to regulate facilities that handle or store hazardous materials, and/or generate or treat hazardous waste. The HMD will apply that authority as necessary to protect public health and the environment. Additional regulatory guidance information can be found on our website at: https://www.sandiegocounty.gov/content/sdc/deh/hazmat.html.

The HMD appreciates the opportunity to participate in the environmental review process for this project. If you have any questions regarding these comments, please contact me at (858) 505-6818 or by e-mail at robert.rapista@sdcounty.ca.gov

Sincerely,

Robert Rapista

Sent: Friday, August 28, 2020 1:57 PM
To: Richard Greenbauer <RGreenbauer@oceansideca.org>
Subject: Comments on CarMax NOP

Warning: External Source

Mr Greenbauer

Please reply to confirm timely receipt of these comments on the NOP for the CarMax project:

- Inadequate notice of public meeting/deadline for comments.

The NOP that I received in the mail was signed by you on August 10,2020. I received it on August 24th- for a community meeting on August 26th- which was difficult to access. I saved the envelope from the mailing- but it is using a postage permit and has no date stamp or postage cancellation. The notice says the deadline for comments is 30 days from receipt of the notice- but there is no way to determine when the notice was received. I believe these notices should actually provide a reasonable notice to the community of public meetings- and there should be a clearly stated date for when comments are due.

This is particularly important for this project which will require a CUP and is immediately adjacent to a residential neighborhood. Not one neighbor attended the meeting which by itself is a clear indication there were problems with the noticing. Greater outreach should be proved to this adjacent neighborhood.

- CUP is a discretionary action- allowing the city greater latitude in adding conditions of approval than would otherwise be the case

That procedural clarification is important public information and needs to be included in a way the public understands. I expect the city to carefully consider all conditions that would make this project a better fit with this commercial area and the adjacent residential neighborhood- and riparian corridor. The developer should not just do the minimum that is required- they should step up to do more- and the city should ask for more.

- transportation analysis needs to be based on VMT per guidelines recently adopted by the city.

SB 743 passed in 2013- with an implementation date of July 1, 2020. It is not acceptable to ignore this for a project that is just now doing its first public noticing for CEQA.

- Compliance with CAP implementing ordinances

At the scoping meeting it was stated that the project will comply with the adopted CAP. We assume that also means full compliance with the CAP implementing ordinances that were recently adopted- again before this public CEQA noticing for the project. The TDM ordinance is of particular concern.

- buffer along Buena Vista Creek

At the scoping meeting it was stated that there will be a 50' biological buffer and a 50' planning buffer- but nothing is being proposed in the planning buffer. The figures provided after the meeting identify a "100' buffer" along the creek- not making that same distinction. Several other recent projects along BV Creek have provided for a 100' biological buffer which provides much greater long term benefits to the riparian corridor. Since nothing is being proposed in this buffer we would encourage the entire 100' to be designated as a biological buffer.

- Creek corridor restoration

This is a highly degraded reach of the creek with long term problems of trash, pet waste and homeless encampments. The restoration should include the buffer area and include provisions for managing the necessary restrictions on public access to the area. We would also expect this will all be added to the city's hardline preserve with an appropriate endowment to ensure preservation of the biological function in perpetuity.

- parking

"Rightsizing " of parking lots is a key concern as we try to move away from car-centric travel and encourage fewer auto trips and more by alternative transportation. Generally we push for parking to be reduced. However on this site it is important to look at how development of this parcel can address chronic issues with parking in the area. The DMV facility results in parking on public streets already. The adjacent neighborhood parks along Thunder. There are some good examples in the region of shared parking arrangements that really should be considered here. It would be easy to facilitate some shared parking - especially for DMV employees along their fenceline, and for the adjacent neighborhood along Thunder. Angle in parking along Thunder would increase the number of spaces available for public use- and also serve this facility.

- mileage and location of routes for vehicle test drives

This needs to be included in the CEQA documents as it could have significant impacts on GHG, VMT, air quality, and public safety. Deferring this till later in the process fails to recognize /mitigate any potential adverse impacts from this activity that is part of site operations and would exclude the public from meaningful input.

Thank you for considering these comments.

COMMENTS ON THE NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT FOR THE CARMAX AUTO SUPERSTORE PROJECT

Dear Mr. Greenbauer,

Thank you for the opportunity to comment on the Notice of Preparation of an Environmental Impact Report for the above referenced project. The County of San Diego Vector Control Program (VCP) is responsible for the protection of public health through the surveillance and control of mosquitoes that are vectors for human disease including West Nile virus (WNV). The VCP has completed their review and has the following comments regarding the proposed project.

1. The VCP respectfully requests that the project design features address potential impacts from possible mosquito breeding sources created by the project and that the project is constructed in a manner to minimize those impacts. Specifically, ensure construction-related depressions created by grading activities, vehicle tires, ditches, and landscaping do not result in depressions that will hold standing water. In addition, ensure drainage areas and other structures do not create a potential mosquito breeding source. Any area that is capable of accumulating and holding at least ½ inch of water for more than 96 hours can support mosquito breeding and development.

2. Please note, the VCP has the authority pursuant to state law and County Code to order the abatement of any mosquito breeding that does occur either during construction or after the project is completed that is determined to be a vector breeding public nuisance. The VCP will exert that authority as necessary to protect public health if the project is not designed and constructed to prevent such breeding.

3. For your information, the County of San Diego Guidelines for Determining Significance for Vectors can be accessed at http://www.sandiegocounty.gov/content/dam/sdc/pds/docs/vector_guidelines.pdf and the

California Department of Public Health Best Management Practices for Mosquito Control in California is available at https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/MosquitoesandMosquitoBorneDiseases.aspx#

The VCP appreciates the opportunity to participate in the environmental review process for this project. If you have any questions regarding these comments, please contact Daniel Valdez at 858-688-3722 or by e-mail at Daniel.Valdez@sdcounty.ca.gov.

Sinc ely,

DANIEL VALDEZ, Registered Environmental Health Specialist

CarMax Auto Superstore Oceanside
NOP/SCH#2020089012

Mr. Richard Greenbauer
City of Oceanside
300 N Coast Highway
Oceanside, CA 92054

Dear Mr. Greenbauer:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the Notice of Preparation for the CarMax Auto Superstore Oceanside project located near State Route 78 (ISR-78). The mission of Caltrans is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability. The Local Development-Intergovernmental Review (LD-IGR) Program reviews land use projects and plans to ensure consistency with our mission and state planning priorities.

Caltrans has the following comments:

Traffic Impact Study

- A Vehicle Miles of Travel (VMT) based Traffic Impact Study (TIS) should be provided for this project. Please use the Governor's Office of Planning and Research Guidance to identify VMT related impacts.[i]

- The TIS may also need to identify the proposed project's near-term and long-term safety or operational issues, on or adjacent any existing or proposed State facilities.

[i] California Governor's Office of Planning and Research (OPR) 2018. "Technical Advisory on Evaluating Transportation Impacts in CEQA." http://opr.ca.gov/docs/20190 I 22-743_Technical_Advisory.pdf

Noise

The applicant must be informed that in accordance with 23 Code of Federal Regulations (CFR) 772, the Department of Transportation (Caltrans) is not responsible for existing or future traffic noise impacts associated with the existing configuration of SR-78.

Environmental

Caltrans welcomes the opportunity to be a Responsible Agency under the California Environmental Quality Act (CEQA), as we have some discretionary authority of a portion of the project that is in Caltrans' R/W through the form of an encroachment permit process. We look forward to the coordination of our efforts to ensure that Caltrans can adopt the alternative and/or mitigation measure for our R/W. We would appreciate meeting with you to discuss the elements of the EIR that Caltrans will use for our subsequent environmental compliance.

An encroachment permit will be required for any work within the Caltrans' R/W prior to construction. As part of the encroachment permit process, the applicant must provide approved final environmental documents for this project, corresponding technical studies, and necessary regulatory and resource agency permits. Specifically, CEQA determination or exemption. The supporting documents must address all environmental impacts within the Caltrans' R/W and address any impacts from avoidance and/or mitigation measures.

We recommend that this project specifically identifies and assesses potential impacts caused by the project or impacts from mitigation efforts that occur within Caltrans R/W that includes impacts to the natural environment, infrastructure (highways/roadways/on- and off-ramps) and appurtenant features (lighting/signs/guardrail/slopes). Caltrans is interested in any additional mitigation measures identified for the DEIR.

Right-of-Way

- Per Business and Profession Code 8771, perpetuation of survey monuments by a licensed land surveyor is required, if they are being destroyed by any construction.

- Any work performed within Caltrans R/W will require discretionary review and approval by Caltrans and an encroachment permit will be required for any work within the Caltrans R/W prior to construction.

Additional information regarding encroachment permits may be obtained by contacting the Caltrans Permits Office at (619) 688-6158 or by visiting the website at http://www.dot.ca.gov/trafficops/ep/index.html. Early coordination with Caltrans is strongly advised for all encroachment permits.

If you have any questions, please contact Kimberly Dodson, of the Caltrans Development Review Branch, at (619) 688-2510 or by e-mail sent to Kimberly.Dodson@dot.ca.gov.

Sincerely,

electronically signed by

MAURICE EATON, Branch Chief

RE: CarMax Auto Superstore Oceanside Notice of Preparation ("NOP"); Development Plan (D19-00021) and Conditional Use Permit (CUP19-00029)

Dear Mr. Greenbauer,

On behalf of the Southwest Regional Council of Carpenters ("**Commenter**" or "**Carpenters**"), my Office is submitting these comments on the City of Oceanside's ("**City**") Notice of Preparation of an Environmental Impact Report ("**NOP**") (SCH No. 2020089012) for the CarMax Auto Superstore Oceanside Project ("**Project**").

The Southwest Carpenters is a labor union representing 50,000 union carpenters in six states, including in southern California, and has a strong interest in well ordered land use planning and addressing the environmental impacts of development projects.

Individual members of the Southwest live, work and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

Commenter expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearings and proceedings related to this Project. Cal. Gov. Code § 65009(b); Cal. Pub. Res. Code § 21177(a); *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal. App. 4th 1184, 1199-1203; see *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal. App. 4th 1109, 1121.

Commenter incorporates by reference all comments raising issues regarding the environmental impact report ("**EIR**") submitted prior to certification of the EIR for the Project. *Citizens for Clean Energy v City of Woodland* (2014) 225 CA4th 173, 191 (finding that any party who has objected to the Project's environmental documentation may assert any issue timely raised by other parties).

Moreover, Commenter requests that the Lead Agency provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act ("**CEQA**"), Cal Public Resources Code ("**PRC**") § 21000 *et seq*, and the California Planning and Zoning Law ("**Planning and Zoning Law**"), Cal. Gov't Code §§ 65000–65010. California Public Resources Code Sections 21092.2, and 21167(f) and Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

The City should seriously consider proposing that the Applicant provide additional community benefits such as requiring local hire and paying prevailing wages to benefit the City. Moreover, it would be beneficial for the City to require the Applicant to hire workers: (1) who have graduated from a Joint Labor Management apprenticeship training program approved by the State of California, or have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state approved apprenticeship training program and; (2) who are registered apprentices in an apprenticeship training program approved by the State of California.

In addition, the City should require the Project to be built to standards exceeding the current 2019 California Green Building Code and 2020 County of Los Angeles Green Building Standards Code to mitigate the Project's environmental impacts and to advance progress towards the State of California's environmental goals.

I. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

A. Background Concerning the California Environmental Quality Act

CEQA has two basic purposes. First, CEQA is designed to inform decision makers and the public about the potential, significant environmental effects of a project. 14 California Code of Regulations ("**CCR**" or "**CEQA Guidelines**") § 15002(a)(1).[1] "Its

[1] The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 150000 et seq, are regulatory guidelines promulgated by the state Natural Resources Agency

purpose is to inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made. Thus, the EIR 'protects not only the environment but also informed self-government.' [Citation.]" *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal. 3d 553, 564. The EIR has been described as "an environmental 'alarm bell' whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return." *Berkeley Keep Jets Over the Bay v. Bd. of Port Comm'rs.* (2001) 91 Cal. App. 4th 1344, 1354 ("*Berkeley Jets")*; *County of Inyo v. Yorty* (1973) 32 Cal. App. 3d 795, 810.

Second, CEQA directs public agencies to avoid or reduce environmental damage when possible by requiring alternatives or mitigation measures. CEQA Guidelines § 15002(a)(2) and (3). *See also, Berkeley Jets,* 91 Cal. App. 4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Ass'n v. Regents of the University of California* (1988) 47 Cal. 3d 376, 400. The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to "identify ways that environmental damage can be avoided or significantly reduced." CEQA Guidelines § 15002(a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns" specified in CEQA section 21081. CEQA Guidelines § 15092(b)(2)(A–B).

While the courts review an EIR using an "abuse of discretion" standard, "the reviewing court is not to 'uncritically rely on every study or analysis presented by a project proponent in support of its position.' A 'clearly inadequate or unsupported study is entitled to no judicial deference.'" *Berkeley Jets*, 91 Cal. App. 4th 1344, 1355 (emphasis added) (quoting *Laurel Heights,* 47 Cal.3d at 391, 409 fn. 12). Drawing this line and determining whether the EIR complies with CEQA's information disclosure requirements presents a question of law subject to independent review by the courts. (*Sierra Club v. Cnty. of Fresno* (2018) 6 Cal. 5th 502, 515; *Madera Oversight Coalition, Inc. v.*

---

for the implementation of CEQA. (Cal. Pub. Res. Code § 21083.) The CEQA Guidelines are given "great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous." *Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal. 4th 204, 217.

County of Madera (2011) 199 Cal. App. 4th 48, 102, 131.) As the court stated in *Berkeley Jets*, 91 Cal. App. 4th at 1355:

> A prejudicial abuse of discretion occurs "if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process.

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. The EIR's function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Communities for a Better Environment v. Richmond* (2010) 184 Cal. App. 4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449–450).

B. The NOP Fails to Provide All Required Information

Notice of Preparations or NOPs must provide responsible and trustee agencies with sufficient information concerning the project and its potential environmental effects to enable them to make a "meaningful response." CEQA Guidelines § 15082(a)(1). CEQA Guidelines section 15082(a)(1) provides that at a minimum, the NOP must contain:

- A description of the project;
- The location of the project by street address and cross street (for a project in an urban area) or by attaching a specific map; and
- The project's probable environmental effects.

However, the City's two-page NOP merely provides the general description of the Project. While the NOP provides a list of "issues" the EIR will address in detail, the NOP does not provide what the Project's probable environmental effects would be in any detail.

Moreover, the NOP fails to list all "each responsible agency, the Office of Planning and Research, and those public agencies having jurisdiction by law over natural

resources affected by the project" as required by CEQA. PRC § 21080.4(a). While the State Clearinghouse webpage for the Project lists the responsible and trustee agencies, the NOP should provide such a list so the information can be readily available and referred to.

C. Due to the COVID-19 Crisis, the City Must Adopt a Mandatory Finding of Significance that the Project May Cause a Substantial Adverse Effect on Human Beings and Mitigate COVID-19 Impacts

CEQA requires that an agency make a finding of significance when a Project may cause a significant adverse effect on human beings. PRC § 21083(b)(3); CEQA Guidelines § 15065(a)(4).

Public health risks related to construction work requires a mandatory finding of significance under CEQA. Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupations Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.[2]

SWRCC recommends that the Lead Agency adopt additional CEQA mitigation measures to mitigate public health risks from the Project's construction activities. SWRCC requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon SWRCC's experience with safe construction site work practices, SWRCC recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.

[2] Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, *available at* https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx.

- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.
- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody

gaining entry to the project site such as returning personnel, deliveries, and visitors.

- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.[3]

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that

[3] *See also* The Center for Construction Research and Training, North America's Building Trades Unions (April 27 2020) NABTU and CPWR COVIC-19 Standards for U.S Constructions Sites, *available at* https://www.cpwr.com/sites/default/files/NABTU_CPWR_Standards_COVID-19.pdf; Los Angeles County Department of Public Works (2020) Guidelines for Construction Sites During COVID-19 Pandemic, *available at* https://dpw.lacounty.gov/building-and-safety/docs/pw_guidelines-construction-sites.pdf.

..

all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

If the City has any questions or concerns, feel free to contact my Office.

Sincerely,

_____

Re: CarMax Auto Superstore Oceanside; Development Plan (D19-00021) and Conditional Use Permit (CUP19-00029)

Dear Mr. Greenbauer,

This letter is written on behalf of the Rincon Band of Luiseño Indians ("Rincon Band" or "Band"), a federally recognized Indian Tribe and sovereign government. We have received your Notice of Preparation of an Environmental Impact Report (EIR) for the Car Max Auto Superstore. The identified location is within the Territory of the Luiseño people and within the Band's specific Area of Historic Interest (AHI). As such, Rincon is traditionally and culturally affiliated to the project area.

After review of the provided documents and our internal information, the Band has specific concerns that the project may impact tangible Tribal Cultural Resources. Embedded in these resources and within the AHI are Rincon's history, culture, and continuing traditional identity. The Rincon Band recommends that an archaeological/cultural resources study be conducted by a Secretary of the Interior qualified archaeologist to include an archeological record search and complete intensive survey of the property. A professional Tribal monitor from the Rincon Band should accompany the archaeologist during the survey.

The Rincon Band reserves its right to fully participate in the environmental review process and to review and submit additional information during our consultation meeting(s) with the City of Oceanside. If you have additional questions or concerns, please do not hesitate to contact our office at your convenience at (760) 297-2635 or via electronic mail at cmadrigal@rincon-nsn.gov. We look forward to working together to protect and preserve our cultural assets.

Sincerely,

Cheryl Madrigal
Tribal Historic Preservation Officer
Cultural Resources Manager

EXECUTIVE SUMMARY

EnviroApplications, Inc. (*EAI*) is pleased to present this Phase I Environmental Site Assessment (ESA) report. The following table presents an overview of the project, including a summary of our significant findings:

Property Name (Subject Property):	Proposed Oceanside CarMax Facility (Vacant Commercial Property).
Subject Property Address (or Other Physical Location Description):	3843-4003 Plaza Drive and 3441-3552 Thunder Drive, Oceanside, (North) San Diego County, California (CA) 92056. Plaza Drive (south side), Thunder Drive (west side) approximately 300 feet southwest of their intersection.
Subject Property and Area Description:	According to information provided by the County of San Diego, the subject property consists of two parcels: Assessor's Parcel Number (APN) 168-012-42-00 (Lot 42) a roughly triangular, 1.1-acre, vacant, piece of land bound to the north by the east-bound lanes of State Route 78 and to the south by Plaza Drive, and APN 168-012-43-00 (Lot 43) a 9.42-acre, undeveloped, commercial lot bounded to the north by Plaza Drive and to the south by Buena Vista Creek. The subject property is located in southeastern Oceanside near its east boundary with the City of Vista in an area that is characterized by mixed residential, commercial and government land uses.
Observed Current Subject Property Use/Operations:	The subject property consists of vacant land with no business or other uses or operations occurring. The subject property appears to have been graded and crushed rock is present on its surface along the western boundary. Two rectangular-shaped mounds of fill soil appear to have been placed on the eastern portion of the subject property adjacent to Thunder Drive. Sampling is recommended.

Year	Summary of Subject Property History
Since at least as early as 1928 until circa 1966	Open, brush-covered, creek bottom land in a rural setting, located approximately 7-miles east of downtown Oceanside on the north bank of Buena Vista Creek. State Route 78 constructed through the area to the north circa 1964, but Plaza Drive and Thunder Drive not yet present.
1967 - circa 1978	Graded, vacant land with some trails across surface. Plaza Drive and Thunder Drive still not present.
1979 to 2019	Graded vacant land with Plaza Drive and Thunder Drive roadways present. Northwestern portion of Lot 43 occasionally used for temporary, seasonal purposes (Christmas tree lot, Halloween pumpkin patch, dairy products sales, kids playland).

CONCLUSIONS AND RECOMMENDATIONS

EAI has performed a Phase I ESA in conformance with the Scope of Work (SOW) required by Title 40 Code of Federal Regulations (CFR) Part 312 (All Appropriate Inquiry; AAI), ASTM International (ASTM) E1527-13 for a Phase I ESA of the Proposed Oceanside CarMax facility vacant commercial property in Oceanside, (North) San Diego County, CA 9205 (subject property). Any exceptions to, or deletions from the ASTM SOW are described in this report where applicable.

The subject property is not listed in the Environmental Data Resources Inc. (EDR) Report that was obtained and reviewed during this ESA. As far as could be determined, the subject property has never come to the attention of the Local, State or Federal environmental regulatory agencies that have jurisdiction over it. No building department, fire department or other governmental agency records were found.

No known environmental release sites located either hydrogeologically up or immediately side-gradient of the subject property that qualify as a potential adverse environmental contaminant impact source condition to the subject property were identified in the EDR Report. No non-ASTM environmental issues associated with the possible presence of lead-based paint (LBP), mold, radon gas or asbestos containing material (ACM) were identified. No evidence of waste building materials, trash or other illegal disposal was observed.

EAI performed a Vapor Encroachment Screen (VES) for the subject property, in accordance with ASTM E2600-15. The purpose was to evaluate whether sites (e.g., gas stations, dry cleaners, or other listings of environmental concern) that store or dispose of potential chemicals of concern or have documented releases, may migrate as vapors onto the property, as a result of contaminated soil and/or groundwater which may be present on or near the property (i.e., a Vapor Encroachment Condition or VEC). Based on *EAI's* Tier 1 Screening evaluation, presence of a potential VEC at the subject property can be ruled out, due to the lack of chemicals of concern.

The presence of two mounds of fill soil (apparently located to each side of a sewer easement, or possibly a buried city sewer main) on the eastern portion of the subject property does not qualify as an ASTM recognized environmental condition (REC), however, depending on the source of the soil and what, if anything it contains, it may be an adverse environmental issue associated with the subject property. Phase II soil sampling and analysis are recommended for the two soil mounds since information about them was not provided by the subject property owner.

This ESA has revealed no evidence of potential ASTM RECs, controlled RECs (CRECs) or historical (HRECs) associated with the subject property. See the definitions of these ASTM terms in Attachment 4.

1.0 INTRODUCTION

1.1 Subject Property Name and Location

Subject Property Name:	Proposed Oceanside CarMax Facility (Vacant Commercial Property).
Street Address:	3843-4003 Plaza Drive and 3441-3552 Thunder Drive Oceanside, (North) San Diego County, California (CA) 92056.
Physical Location:	Plaza Drive (south side), Thunder Drive (west side) approximately 300 feet southwest of their intersection.
Assessor's Parcel Nos.:	168-012-42 and -43-00.

1.2 Contact Information

Client (User):	CarMax c/o Centerpoint Integrated Solutions, LLC, Attn: Stacey Haggerson.
Subject Property Owner:	Plaza Thunder, LLC, a California limited liability company.
Key Site Manager:	None (vacant commercial property).
Date Project Authorized:	July 25, 2019.

1.3 Objective

This Phase I ESA has been completed in accordance with the practices identified in the ASTM *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, ASTM Designation E1527-13 and pursuant to the terms set forth in the Authorization for Environmental Investigation and contracting Services (AEICS) between the *EAI* and Centerpoint Integrated Services, LLC dated July 17, 2019.

1.4 Scope Of Work, Significant Assumptions, Terms and Conditions, Reliance

The scope of work, significant assumptions, and terms and conditions applicable to this Phase I ESA are identified in the following documents:
AEICS No. 01-080-19 and Centerpoint Integrated Solutions RFP SOW dated 12-30-2018.
ASTM E1527-13 and E2600-15.
Certifications are presented in Section 2 of this report.
This report was prepared for the exclusive use of the following:
CarMax c/o Centerpoint Integrated Solutions, LLC Attn: Stacey Haggerson.

2.0 SCOPE AND DECLARATIONS

2.1 Introduction

EAI has completed a Phase I ESA of the subject property. This Phase I ESA Report was prepared for CarMax c/o Centerpoint Integrated Solutions, LLC, Attn: Stacey Haggerson for real estate transaction due diligence purposes. Photographs of the subject and surrounding properties are provided in Attachment 1. The regional and community locations of the subject property are depicted on Figure 1 (Regional Site Location Map) and Figure 2 (Site Location Map). Figure 3 is a Site Plan of the proposed CarMax Oceanside facility provided by Ms. Haggerson. Figure 4 is a Site Plan based on a recent aerial photograph showing the subject property and adjacent property uses. Maps showing the subject property in its physiographic setting are presented in Attachment 6.

2.2 Scope

The objective of this ESA was to perform all appropriate inquiry (AAI) into the past ownership and uses of the subject property consistent with good commercial or customary practice as outlined by the ASTM in Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-13. The purpose of this ESA work was to identify, to the extent feasible, adverse environmental conditions (including ASTM RECs) of the subject property that potentially have and/or may cause an adverse environmental impact to the subject property. The effective date of this ESA is the same as its date of issue. In accordance with ASTM E1527-13 Section 4.6, its continued viability extends to 180 days after its effective date. The viability of this ESA can be extended beyond 180 days, up to one (1) year, if the specific ESA components specified in ASTM E1527-13 Section 4.0 are updated.

2.3 Declarations

Frederic A. Allee and Craig A. Smith of *EAI* declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Title 40 Code of Federal Regulations (CFR) Part 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The term REC is defined by ASTM Standard E 1527-13 as:

"…the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property due to release to the environment; under conditions indicative of a release to the environment or under conditions that pose a material threat of future release."

The term does not include de minimis conditions, which generally do not present a material risk to human health or the environment and would not likely be subject to enforcement action if brought to the attention of governmental agencies. An example of such a de minimis condition would be the engine oil stains typically present on the pavement surfaces of parking spaces due to minor leaks from parked vehicles.

The SOW for this ESA consisted of a visual reconnaissance of the subject property, interviews, review of historical aerial photographs, maps and telephone directories, a current Environmental Data Resources, Inc. Report (EDR Report), and, a review of the practically available pertinent records of local, state, and federal agencies. The SOW did not include an assessment for historical overall environmental regulatory compliance of every facility or entity that ever operated at the subject property or sampling and analyzing of environmental media. *EAI* was not contracted to perform any independent evaluation of the purchase or lease price of the subject property and its relationship to current fair market value. The conclusions presented in this ESA Report are professional opinions based on data described herein. Any data gaps resulting from the ESA described in this report are listed and discussed in the following table:

Deletions or Exceptions From Scope of Work Referenced in Section 1.4:	The ASTM User did not provide a copy of an environmental cleanup lien search report to *EAI* for review and summary. This ASTM data gap is not considered significant since the subject property is undeveloped land.
Weather-Related Restrictions to Site Reconnaissance:	None.
Facility Access Restrictions to Site Reconnaissance:	None.
Other Site Reconnaissance Restrictions:	None.
Data Gaps from Environmental Records Review:	None.
Data Gaps from Historical records Review:	No historical Sanborn fire insurance industry map coverage was found for the subject property and surrounding area. The Sanborn map ASTM data gap does not alter the conclusions of this report, since adequate historical aerial photograph coverage and other data were obtained.
Data Gaps from Interviews:	None.
Other Data Gaps:	None.

No other entity may rely on the information presented in the report without the expressed written consent of *EAI*. Any use of this Phase I ESA report constitutes acceptance of the terms and conditions under which it was prepared. *EAI*'s liability extends only to its Client, CarMax c/o Centerpoint Integrated Solutions, LLC, Attn: Stacey Haggerson and not to third or other parties who may obtain copies of this Phase I ESA Report.

3.0 USER-PROVIDED INFORMATION

Prior to initiating a reconnaissance visit to the subject property, *EAI* reviewed information relevant to performance of this Phase I ESA received from the Client/ASTM User CarMax c/o Centerpoint Integrated Solutions, LLC Attn: Stacey Haggerson for the subject property.

3.1 Information

1) Past Uses	Not stated in documents.
2) Current Conditions	Unoccupied commercial land.
Reason Why the User Wants to Have this Phase I ESA Performed:	Phase I ESA Report prepared as a requirement of Centerpoint Integrated Solutions, LLC, Attn: Stacey Haggerson, for real estate transaction due diligence purposes.

3.2 User-Provided Documents

The following documents were provided by CarMax c/o Centerpoint Integrated Solutions, LLC Attn: Stacey Haggerson, to *EAI* and are summarized as follows:

Proposed CarMax Oceanside Preliminary Site Plan, dated 06-04-2019.	Depicts the planned subject property improvements and surrounding land occupants. Identifies no potential environmental issues with the subject property (Figure 3).
Preliminary Title Insurance Report (PTIR) prepared by Chicago Title Insurance Company and dated 07-01-2019.	Provides ownership, legal description, APN, utility easements and other real estate information for the subject property along with size and use. Contains no information regarding the environmental condition of the subject property (Attachment 2).
Phase I ESA User's Questionnaire completed by Jason Pruitt, Real Estate Manager for CarMax, dated 08-12-2019.	Indicates no known environmental issues exist with subject property. Indicates subject property will be leased not purchased and that Mr. Pruitt has been familiar with it for approximately the last year (Attachment 2).

4.0 SUBJECT PROPERTY AND AREA RECONNAISSANCE

The reconnaissance visit to the subject property was conducted by *EAI* on July 29, 2019. The subject property is not fenced. No one accompanied *EAI* during the reconnaissance visit.

4.1 Site Reconnaissance Methodology

EAI utilized the following methodology to observe the subject property:
Traversed the central area of the subject property lots.
Walked the reasonably accessible boundary areas of the subject property.
Observed adjacent property areas from public thoroughfares.

4.2 General Description

Subject Property and Area Description:	According to information provided by the County of San Diego, the subject property consists of two parcels: APN 168-012-42-00 (Lot 42) a roughly triangular, 1.1-acre, vacant, piece of land bounded to the north by the east-bound lanes of State Route 78 and to the south by Plaza Drive, and APN 168-012-43-00 (Lot 43) an undeveloped commercial lot bounded to the north by Plaza Drive, to the east by the Oceanside CA DMV facility and Thunder Drive, to the south by Buena Vista Creek and to the west by a shopping center. The subject property is located in southeastern Oceanside near its east boundary with the City of Vista in an area that is characterized by mixed residential, commercial and government land uses.
Structures, Roads, Other Improvements:	The subject property appears to have been graded, but there are no structures, roads or other improvements.
Subject Property Size:	Approximately 1.1 acres (Lot 42) and 9.42 acres (Lot 43).
Estimated % of Property Covered by Buildings/Pavement:	None (0; based on the reconnaissance visit).
Observed Current Subject Property Use/Operations:	The subject property consists of vacant land with no business or other uses or operations occurring.
Observed Evidence of Past Subject Property Use(s):	The subject property appears to have been graded and crushed rock is present on its surface along the western boundary. Two rectangular-shaped mounds of fill soil appear to have been placed on the eastern portion of the subject property adjacent to Thunder Drive.

Sewage Disposal Method (and age):	Oceanside Water Utilities Division (OWUD) services the subject property area. No laterals have been installed.
Emergency Generator	None observed or reported to be present.
Potable Water Source:	OWUD provides water supply services to the subject property area. No landscaping or sprinklers were observed.
Electric and Natural Gas Utility:	San Diego Gas & Electric Co. (SDG&E) services the subject property area. No utilities were observed at the subject property.

4.3 Hazardous Substances and Petroleum Products

EAI made the following visual observations during the subject property reconnaissance visit and identified the following information about hazardous substances at the subject property during the interview/records review portions of the ESA:

Observation	Description
Hazardous Substances and Petroleum Products:	None observed.
Drums (≥ 5 gallons):	None observed.
Strong, Pungent, or Noxious Odors:	None observed.
Pools of Liquid:	None observed.
Unidentified Substance Containers:	None observed.
PCB-Containing Equipment:	None observed.
Other Observed Evidence of Hazardous Substances or Petroleum Products:	None.

4.4 Interior Observations

There are no structures on the subject property, therefore this ASTM ESA item is not applicable.

4.5 Exterior Observations

EAI made the following observations during the reconnaissance of exterior areas of the subject property and/or identified the following information during the interview or records review portions of the assessment:

Observation	Description
On-site Pits, Ponds, or Lagoons:	None observed.
Stained Soil or Pavement:	None observed.
Stressed Vegetation:	None observed.
Waste Streams and Waste Collection Areas:	None observed.
Solid Waste Disposal:	None observed.
Potential Areas of Fill Placement:	When the subject property was graded level, it is likely that fill soil was placed on its southern half where it originally sloped downwards to Buena Vista Creek. No retaining wall or other engineered fill soil retention systems were observed. The two rectangular-shaped mounds of fill soil placed on the eastern portion of the subject property adjacent to Thunder Drive appear to consist of several hundred cubic yards of soil.
Wastewater:	No sources observed. Both Oceanside and Vista sewer manholes were observed along the boundary with Buena Vista Creek.
Storm water:	Storm water appears to soak into the surface of the subject property. No ditches or swales (other than the area between the two previously indicated soil mounds) were observed. The subject property is not listed on the National Pollutant Discharge and Elimination System (NPDES) database in the EDR Report (Attachment 3). No indication of a discharge that would require a NPDES permit was observed.
Wells:	None observed.
Septic Systems:	None observed.
Electromagnetic Radiation Source:	No high-voltage electrical power transmission lines or other potential sources of elevated electromagnetic radiation observed.
Other Exterior Observations:	None.

4.6 Underground Storage Tanks/Structures

Existing USTs:	None observed.
Former USTs:	No evidence observed.

Other Underground Structures:	None observed.

4.7 Aboveground Storage Tanks

Existing ASTs:	None observed.
Former ASTs:	No evidence observed.

4.8 Adjoining Properties

4.8.1 Current Uses of Adjoining Properties

As viewed from the subject property and/or from public rights-of-way, *EAI* made the following observations about use and activities on adjoining properties:

North:	The east-bound lanes of State Route 78.
East:	From north to south: the Oceanside CA DMV facility at 4005 Plaza Drive then Thunder Drive followed by a residential neighborhood.
South:	Buena Vista Creek.
West:	A large, multi-tenant shopping center with nearest address being 3841 Plaza Drive (a vacant shop for lease).

4.8.2 Observed Evidence of Past Uses of Adjoining Properties

Observations of adjoining properties providing indications of past use and activities, if any, are described as follows:

North:	None observed.
South:	None observed.
East:	None observed.
West:	None observed.

4.8.3 Pits, Ponds or Lagoons on Adjoining Properties

As viewed from the subject property and/or from public right-of-ways, *EAI* made the following observations about the presence of pits, ponds and lagoons on adjoining properties:

North:	None observed.
South:	None observed.

East:	None observed.
West:	None observed.

4.9 Observed Physical Setting

Topography of the Subject Property and Surrounding Area:	The topography of the subject property area is hilly. The land to the north of the subject property is higher in elevation, the land to the south slopes downward toward Buena Vista Creek and the land to the east and west is similar in elevation.

4.10 Summary of Findings From Subject Property Reconnaissance

There were no observed potential adverse environmental conditions and no evidence of an ASTM REC or Historic REC (HREC) of the subject property based on the reconnaissance visit.

5.0 PHYSICAL SETTING

Topography:	The topography of the subject property area is hilly. The land to the north of the subject property is higher in elevation, the land to the south slopes downward toward Buena Vista Creek and the land to the east and west is similar in elevation. The subject property has an approximate surface elevation of 194 feet above mean sea level.
Soil/Bedrock Data:	The subject property is located within the coastal plain of Southern California. The subject property vicinity is underlain by two intermixed formations, the Tujunga: consisting of old lacustrine beach and estuarine deposits of fine-grained silt, sand and clay; and, Tertiary age Terrace Escarpments consisting primarily of sandstone and conglomerate. Both formations are overlain with recent alluvium (sand, silt and clay) deposited by Buena Vista Creek.
Estimated Depth to Groundwater:	Based on a review of the EDR Report and data on the California State GeoTracker database, the expected depth-to-groundwater beneath the subject property is 10 to 15 feet below ground surface (bgs).
Estimated Direction of Gradient:	Groundwater movement direction is to the south-southwest toward Buena Vista Creek. According to the San Diego Regional Water Quality Control Board (SDRWQCB), the subject property is located in Vista Hydrologic Sub Area of the Buena Vista Creek Hydrologic Area in the Carlsbad Hydrologic Unit (designated a beneficial ground and surface water use area for domestic, agricultural, industrial and process supply purposes).
Known Regional Groundwater Impairment:	None.

Sources of this information:

- USGS Topographic Map "San Luis Rey, CA" Quadrangle 7.5 Minute, 2012 (Attachment 6).
- San Diego Regional Water Quality Control Board, 2003, Basin Plan, Region 9.00.
- EDR Report (Attachment 3).

6.0 ENVIRONMENTAL RECORDS REVIEW

6.1 Federal, State and Tribal Environmental Records

A government agency database search report was obtained from Environmental Data Resources, Inc. (EDR), a third-party environmental database search firm. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in Attachment 3.

EAI evaluated the properties listed within the EDR Report on the basis of their potential to environmentally impact the subject property. As part of this process, inferences have been made regarding the likely groundwater movement direction (south-southwest toward Buena Vista Creek). The following table summarizes the listings:

Agency List/Database	Search Radius	Number of Listed Sites	ASTM REC?
Federal NPL Sites	1.0 mile	0	No.
Federal Delisted NPL Sites	1.0 mile	0	No.
Federal CERCLIS List	0.5 mile	0	No.
Federal CERCLIS NFRAP List	0.5 mile	0	No.
Federal RCRA CORRACTS Facilities	1.0 mile	0	No.
Federal RCRA Non-CORRACTS TSDF	0.5 mile	0	No.
Federal RCRA SQG Generators	0.25 mile	3	No.
Federal RCRA CESQG/LQG Generators	0.25 mile	1 (CESQG) 2 (LQG)	No.
Federal RCRA Non-Gen/NLR	0.25 mile	26	No.
Federal ERNS	Subject Property	Not Listed.	No.
State and Tribal - Equivalent NPL (a.k.a. RESPONSE)	1.0 mile	0	No.
State and Tribal - Equivalent CERCLIS (a.k.a. ENVIROSTOR)	1.0 mile	2	No.
State and Tribal Solid Waste Facilities (a.k.a. SWF/LF); Toxic Pits (TP)	0.5 mile	0	No.
State and Tribal Registered Storage Tank Sites (a.k.a. UST & AST)	0.25 mile	3 UST 2 AST	No.

Agency List/Database	Search Radius	Number of Listed Sites	ASTM REC?
State and Tribal Leaking Storage Tank Sites (a.k.a. SLIC & LUST)	0.5 mile	12 LUST 3 SLIC	No.
State and Tribal Voluntary Cleanup Sites	0.5 mile	0	No.
U.S. Brownfield Sites	0.5 mile	0	No.
Local Lists of Registered USTs (a.k.a. CA FID / HIST / SWEEPS / CERS)	0.5 mile Subject Property	0 / 1 / 4 / 3 Not Listed	No.
Local Lists of Hazardous Waste/Contaminated Sites (a.k.a. San Diego County HMMD & SAM)	Subject Property 0.25 mile 0.5 mile	Not Listed 12 HMMD 7 SAM	No.
Local Land Records (Liens 2)	Subject Property	Not Listed	No.
Drycleaners	0.25 mile	1	No.
EDR Historical Cleaners	0.25 mile	1	No.
EDR Historical Auto Stations	0.25 mile	0	No.
EPA FINDS, NPDES, EMI, HAZNET	Subject Property	Not Listed	No.

6.1.1 Listings For The Subject Property

The subject property is not listed in the EDR Report.

6.1.2 Listings for Nearby Sites with Potential to Impact Subject Property

The listings (including those with poor or inadequate address information a.k.a. Orphan Sites) in the EDR Report, provided in Attachment 3, were evaluated in accordance with the *Database Assessment Criteria* presented in Attachment 4 and determined to not qualify as potential sources of impact and/or ASTM RECs of the subject property (i.e. were not found to be adjacent, or hydrologically up-gradient with unassessed groundwater contaminant plumes).

Oil & Gas Wells

The EDR Report does not indicate any oil or gas well sites are located near the subject property. *EAI* also reviewed the California Department of Conservation, Division of Oil, Gas and Geothermal Resources database and confirmed that there are no existing or abandoned oil/gas wells or dry holes present on, or within a 1-mile radius of the subject property.

6.2 Local/Regional Environmental Records

EAI checked the following sources to obtain information pertaining to subject property use and/or indicative of potential RECs in connection with the subject property.

6.2.1 Local Environmental Health Department

Agency Name, Contact Information	Finding
San Diego County Department of Environmental Health (DEH): Edwin Andrus - Edwin.Andrus2@ sdcounty.ca.gov.	The DEH responded that they have no records associated with the subject property (Attachment 5).

6.2.2 Fire Department

Agency Name, Contact Information	Finding
Oceanside Fire Department (OFD): Hector Gomez - hegomez@ci.oceanside.ca.us	The OFD responded that they have no records for the subject property (Attachment 5).

6.2.3 Building Department

Agency Name, Contact Information	Finding
Oceanside Building Department (OBD): Hector Gomez - hegomez@ci.oceanside.ca.us	The OBD responded they have no records for the subject property (Attachment 5).

6.2.4 State Environmental Departments

Agency Name, Contact Information	Finding
DTSC (Cal/EPA): Jone Barrio - Jone.Barrio@dtsc.ca.gov	The response from the DTSC indicates they have no files pertaining to the subject property (Attachment 5).
SDRWQCB (Cal/EPA): Leah Lorch - RB9_Records@ waterboards.ca.gov	The SDRWQCB responded that they have no records associated with the subject property (Attachment 5).

6.2.5 Air District

Agency Name, Contact Information	Finding
San Diego County Air Pollution Control District (APCD): Cynthia Gould, Aide - Cynthia.Gould@sdcounty.ca.gov	The APCD responded that they have no records associated with the subject property (Attachment 5).

6.2.6 Industrial Wastewater Agency

Agency Name, Contact Information	Finding
OWUD: Hector Gomez - hegomez@ci.oceanside.ca.us	The OWUD indicated there are no discharge permit or other records for the subject property (Attachment 5).

6.3 Discussion and Summary of Findings from Environmental Records Review

The subject property was not identified in the EDR Report. No records were found for the subject property at the DEH, OBD, OFD, DTSC, SDRWQCB, APCD or OWUD. The environmental records review did not result in an indication of a potential ASTM HREC or REC of the subject property.

7.0 HISTORICAL RECORDS REVIEW

7.1 Land Title Records/Deeds

The San Diego County Assessor's Office was contacted and the subject property APNs were confirmed to be 168-012-42 and -43-00 and the owner was identified as Teresa M. Cannon.

7.2 Environmental Cleanup Lien Search

A search report for environmental cleanup lien(s) which might exist against the subject property parcel was not provided by the ASTM User, as they were not aware of any past releases.

7.3 Aerial Photographs

EAI contracted with EDR to provide historical aerial photographs of the subject property and surrounding area. The following table summarizes the features observed during a review of the photographs (all provided at a scale of 1"=500'):

Years	Observations, Subject Property and Adjoining Properties
1928 1939 1946 1953	The subject property and surrounding area appear to be open, hilly land in a rural, ranching setting. The currently existing roadways are not yet present. The subject property appears to be covered with brush and Buena Vista Creek is clearly visible to the south in its natural channel.
1964 1967 1970	The subject property still appears to be open, brush-covered land. State Route 78 has been constructed through the area to the north. Beyond the freeway further to the north are what appear to be a hospital campus and a drive-in movie theater. Thunder Drive (unpaved) is present along the eastern boundary of the subject property. By the time of the 1967 photo, the subject property and properties to the east appear to have been graded.
1979 1985	The subject property appears to be vacant, graded land crossed by several trails. The homes in the residential neighborhood across Thunder Drive to the east have been constructed. Land along Buena Vista Creek to the south appears to have been graded to control flooding. The land to the west of the subject property is still vacant. By the 1985 photo the currently existing CA DMV facility is present to the east of the subject property.
1989, 1990 1994, 2005 2009, 2012 2016	The subject and surrounding properties appear similar to the way they did during the reconnaissance visit for this ESA.

No conditions that might obviously affect the environmental condition of the subject property were observed in the photographs. Copies of the aerial photographs are included in Attachment 6.

7.4 City Directories

The subject property is undeveloped land with no associated address, therefore this ASTM ESA item is not applicable.

7.5 Historical Fire Insurance Maps

There is no historical fire insurance industry (Sanborn) map coverage for the subject property and surrounding area according to EDR. A copy of the map search information results notification is included in Attachment 6.

7.6 Historical Topographic Maps

EAI reviewed U.S. Geological Survey (USGS) maps of the subject property and surrounding area. The following table summarizes the information on the USGS maps reviewed:

Year(s)	Observations
1996 2012	The subject property is depicted as vacant hillside land with State Route 78 present to the north and Marron Canyon and Buena Vista Creek to the south. The surrounding area on the 1996 map is shaded pink, an indication of fully-developed land, with no features depicted.

There are no indicators of potential ASTM RECs depicted on the maps. Copies of the topographic maps are included in Attachment 6.

7.7 Other Historical Sources

No other historical sources were found during this ESA.

7.8 Summary of Findings from Historical Records Review

The historical records reviewed indicated that the subject property was historically open, hillside land to the north of Buena Vista Creek and south of State Route 78. The subject property and land to the east appear to have been mass graded circa 1967. No historic information reviewed indicated a potential ASTM HREC or current REC of the subject property.

8.0 INTERVIEWS

8.1 Findings From Interview With ASTM User

Responses to the AAI questions are summarized as follows:

Name, Title, Telephone, Years Familiar with subject property:	Jason Pruitt, Real Estate Manager for CarMax, Inc., (804) 747-0422, familiar with the subject property for the last year.
Are you aware of any environmental cleanup liens against the subject property that are filed or recorded under federal, tribal, state or local law? If yes, explain:	No.
Are you aware of any environmental cleanup liens against the subject property that are filed or recorded under federal, tribal, state or local law? If yes, explain:	No.
Are you aware or any activity and land use limitations (ALLs), such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded in a registry under federal, tribal, state or local law? If yes, explain:	No.
Do you have any specialized knowledge or experience related to the subject property or nearby properties?	No.

In your opinion does the purchase price being paid for the subject property reasonable reflect the fair market value of the property?	Yes, but not a purchase, CarMax, Inc. will be renting.
Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases?	No.
Do you know anything about the past use of subject property?	No.
Do you know of specific chemicals that are present or once present at the subject property?	No.
Do you know of spills or other chemical releases that have taken place at the subject property?	No.
Do you know of any environmental cleanups that have taken place at the subject property?	No.

Based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of contamination at the subject property?	No.
Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property?	No.
Are you aware of any correspondence from any government agency relating to past or current violations of environmental laws with respect to the subject property?	No.
Do you know whether any documents such as reports, environmental reports, permits, registrations, manifests exist related to the subject property? If so, list:	No.

8.2 Summary of Findings from Interview With Owner

Mr. John Hamby with Fortis Legacy Partners did not elect to represent the owners and be interviewed. Based on the interview responses described above, the information obtained does not indicate the existence of a potential ASTM REC and/or HREC of the subject property.

9.0 SUMMARY OF HISTORICAL SUBJECT AND ADJOINING PROPERTY USES

The following summary of the historical uses of the subject property and adjoining properties was compiled from the referenced materials and interviews detailed in Sections 5.0, 6.0, and 7.0.

9.1 Subject Property Use

Year	Summary of Subject Property Use
Since at least as early as 1928 until circa 1966	Open, brush-covered, creek bottom land in a rural setting, located approximately 7-miles east of downtown Oceanside on the north bank of Buena Vista Creek. State Route 78 constructed through the area to the north circa 1964, but Plaza Drive and Thunder Drive not yet present.
1967 - circa 1978	Graded, vacant land with some trails across surface. Plaza Drive and Thunder Drive still not present.
1979 to 2019	Graded vacant land with Plaza Drive and Thunder Drive roadways present. Northwestern portion of Lot 43 occasionally used for temporary, seasonal purposes (Christmas tree lot, Halloween pumpkin patch, dairy products sales, kids playland).

9.2 Surrounding Property Use

Direction	Summary of Historical Adjoining Property Use
North:	Originally open hillside land that became developed with the east-bound lanes of State Route 78.
East:	Originally open hillside land that became developed with, from north to south: the Oceanside CA DMV facility at 4005 Plaza Drive then Thunder Drive followed by a residential neighborhood.
South:	Always occupied by Buena Vista Creek, whose banks have undergone grading for flood control purposes.
West:	Originally open hillside land that became developed with a large, multi-tenant shopping center with nearest address being 3841 Plaza Drive (a vacant shop for lease).

10.0 OTHER (INCLUDING NON-ASTM) ENVIRONMENTAL ISSUES

10.1 Lead-Based Paint

The subject property has no structures, or known buried debris and there are no concerns regarding the presence of lead-based paint (LBP).

10.2 Asbestos

The subject property has no structures, or known buried debris and there are no concerns regarding the presence of asbestos containing materials (ACMs).

10.3 Flood Zones

EAI reviewed the Federal Emergency Management Agency (FEMA) flood insurance rate maps information for the subject property presented in the EDR Report. They indicate the subject property is not located in either a 100 or 500-year flood zone. There are 100-year and 500-year flood plains immediately south of the subject property that are associated with Buena Vista Creek. A copy of the EDR Report is included as Attachment 3 of this report. The information is summarized on the following table:

FLOOD INSURANCE RATE MAPS	
Map Source & Name:	EDR Report – FEMA Panel 06073C0766G - DFIRM Flood Data.
Subject Property Within 100-Year Flood Plain:	No.
Subject Property Within 500-Year Flood Plain:	No.

10.4 Wetlands

Wetlands cannot be definitively identified through visual observation alone. Defensible wetland delineations require taxonomic classification of subject site vegetation, an investigation into the surface and subsurface hydrology of the subject property, and identification of hydric soils. This level of delineation is outside of the scope or work for this assessment. However, *EAI* reviewed US Fish and Wildlife Service National Wetland Inventory maps and USDA Soil Survey reports included in the EDR Report. No wetlands are mapped on the subject property, but they are shown all along Buena Vista Creek immediately to the south (Attachment 3).

10.5 Vapor Encroachment And Indoor Air Quality

EAI did not identify any volatile organic compound (VOC) release sites located hydrogeologically up-gradient, or immediately side-gradient, of the subject property that could act as a source of contamination to soil gas underlying the subject property. Based on the data contained in the EDR Report (Attachment 3), the potential for subsurface contaminant vapor having reached the subject property boundaries, defined by ASTM Standard E2600-15 as a Vapor Encroachment Condition (VEC), is low. If it existed, an ASTM VEC would be of concern due to potential VOC

vapor intrusion from the subsurface upwards and into one or more future subject property buildings.

An assessment of indoor air quality issues by *EAI* was not included in the SOW for this ESA and there are currently no structures at the subject property.

10.6 Radon

Radon is a colorless, tasteless radioactive gas with a U.S. Environmental Protection Agency (EPA) specified action level of 4.0 picocuries per liter (pCi/L) of air. Radon gas has a very short half-life of 3.8 days. The health risk potential of radon is associated with its rate of accumulation within confined areas, particularly confined areas near to the ground, where vapors can readily transfer to indoor air from the ground through foundation cracks or other pathways. Large, adequately ventilated rooms generally present limited risk for radon exposure. According to the EPA, the radon concentrations in buildings and homes depend on many factors, including soil types, temperature, barometric pressure, and building construction.

EAI reviewed the California Department of Health Services (CDHS) Radon Database for California (last updated in May 2010) and found that in zip code area 92056 where the subject property is located, thirty-eight (38) tests were taken as part of the survey. The 92056 zip code test results indicated none (0) of the air samples had a radon level that was greater than 4.0 pCi/L, the concentration beyond which EPA recommends action be taken to lower radon gas exposure as indicated in the following summary table:

Subject property Location:	**State**	**County & Zip Code**
	California	San Diego 92056
EPA Radon Zones (with Average Measured Indoor Radon Concentrations)		
Zone 1 – High (> 4.0 pCi/L)	Zone 2 - Moderate (2 to 4 pCi/L)	Zone 3 – Low (< 2 pCi/L)
No.	No.	Yes.
Normally-occupied sub grade areas (i.e., basements, etc.)?		
Subject property has no structures.		

Information regarding the presence of radon gas at the subject property relies on regional data and does not represent site-specific data. Based on the Federal EPA Radon Zone rating and CDHS survey results, radon gas is not expected to represent an environmental impact risk at the subject property and no further consideration appears to be warranted.

10.7 Dry-Cleaning Operations

No dry-cleaning operations were reported or observed to be at or near the subject property. The EDR Report and historical review did not indicate a potential for past dry-cleaning operations on the subject property or in the immediate vicinity and no nearby historical dry cleaners were identified in the EDR Report (Attachment 3).

10.8 Pesticides & Other Agricultural Chemicals

The historical research for the subject property does not indicate that it was ever used for agricultural purposes. There are no concerns regarding residual pesticides or other agricultural chemicals presenting environmental impact issue for the subject property.

10.9 Mold

No structures or areas of moisture accumulation or readily evident/obvious mold-like substances were observed at the subject property.

11.0 OPINION AND CONCLUSIONS

EAI has performed a Phase I ESA in conformance with the SOW required by 40 CFR Part 312 AAI, ASTM E1527-13 of the Proposed Oceanside CarMax facility vacant commercial property in Oceanside, (North) San Diego County, CA 92056. Any exceptions to, or deletions from the ASTM SOW were described in this report where applicable.

The subject property is not listed in the EDR Report that was obtained and reviewed during this ESA. As far as could be determined, the subject property has never come to the attention of the Local, State or Federal environmental regulatory agencies that have jurisdiction over it. No building department, fire department or other governmental agency records were found.

No known environmental release sites located either hydrogeologically up or immediately side-gradient of the subject property that qualify as a potential adverse environmental contaminant impact source condition to the subject property were identified in the EDR Report that was obtained and reviewed during performance of this ESA. Based on *EAI's* Tier 1 Screening evaluation, presence of a potential ASTM VEC at the subject property can be ruled out, due to the lack of chemicals of concern.

No non-ASTM issues associated with the possible presence of LBP, radon gas, mold or ACM were identified.

The presence of two mounds of fill soil (apparently located to each side of a sewer easement, or possibly a buried city sewer main) on the eastern portion of the subject property does not qualify as an ASTM REC, however, based on the undetermined source of the soil, it may represent an adverse environmental issue associated with the subject property. Phase II soil sampling and analysis are recommended for the two soil mounds since information about them was not provided by the subject property owner.

This ESA has revealed no evidence of potential ASTM RECs, CRECs or HRECs associated with the subject property. See the definitions of these ASTM terms in Attachment 4.

12.0 LIMITATIONS

The conclusions and recommendations contained in this report/assessment are based upon professional opinions with regard to the subject matter. These opinions were prepared in accordance with generally accepted environmental consulting and engineering standards and practices applicable to this location and existing at this time. The use of this report is subject to the following limitations:

1. The data and findings presented in this report are valid as of the dates when the investigations were performed. The passage of time, manifestation of latent conditions or occurrence of future events may require further exploration at the Subject Property, analysis of the data, and reevaluation of the findings, observations, and conclusions expressed in the report.
2. The data reported and the findings, observations, and conclusions expressed in the report are limited by the Scope of Work, budget, site access and schedule, as defined in EnviroApplications's Proposal for the work.
3. This report is based, in part, on unverified information supplied to EnviroApplications by third-party sources, such as regulatory agencies, prior owners or operators of the property, analytical laboratories, subcontractors, etc. Whereas efforts may have been made to substantiate this third-party information, EnviroApplications cannot guarantee the completeness or accuracy of this information.
4. The findings, observations, and conclusions expressed by EnviroApplications in this report are not, and should not be, considered an opinion concerning the compliance of any past or present owner or operator of the Subject Property with any Federal, state or local law or regulation.
5. No warranty or guarantee, whether expressed or implied, is made with respect to the data or the reported findings, observations, and conclusions, which are based solely upon conditions in existence at the time of investigation.
6. EnviroApplications reports present professional opinions and findings of a scientific and technical nature. Whereas attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer a legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations or policies of Federal, state or local governmental agencies. Issues raised by the report should be reviewed by appropriate legal counsel.
7. This report is intended for the use of EnviroApplications Client, CarMax c/o Centerpoint Integrated Solutions, LLC, Attn: Stacey Haggerson; any other use must be approved by EnviroApplications and the Client in writing. If any such unauthorized use occurs, it shall be at the user's sole risk without liability to EnviroApplications.

PHASE I ESA USER'S QUESTIONNAIRE

In order to qualify for protection from land owner liability under CERCLA as an *innocent landowner, bona fide prospective purchaser,* or *contiguous property owner*, ASTM standard practice E1527-13 and the federal all appropriate inquiry (AAI) rule (40 CFR 312) require that the User of the Phase I ESA report provide certain information (if available) to the Environmental Professional completing the assessment. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Information that is not or cannot be provided to the Environmental Professional may be identified as a "data gap" in the Phase I ESA Report.

Please answer the following questions as completely as possible. Attach additional pages if needed. Return the completed questionnaire to EnviroApplications along with the executed authorization for services form.

1. **Property Information.** Property Name: CarMax – Oceanside

   Property Address: Vacant

   City: Oceanside State CA Zip _____

   Property Owner Name: Plaza Thunder, LLC

   Property Owner Phone #: Jon Hamby (advisor to owner) – 619-881-7875

2. **Contact For Site Access.** Name: no notice required

   Company/Organization/Title: _____

   Phone #: _____ E-Mail Address: _____

3. **Environmental Cleanup Liens.** Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

   _____ Yes ___X___ No

   If yes, describe or attach details of the lien _____

4. **Activity and Land Use Limitations.** Are you aware of any activity and use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded as applicable to the property as a result of environmental contamination, investigation, cleanup, or related matters?

   _____ Yes ___X___ No

   If yes, describe or attach details of the limitations _____

5. **Specialized Knowledge or Experience.** As the User of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property, such that you would have specialized knowledge about chemicals and processes used by this type of business?

   _____ Yes ___X___ No

   If yes, describe or attach details of your specialized knowledge or experience _____

6. **Relationship of Purchase Price to Fair Market Value of Property.** Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, do you have any reason to believe that the reduced purchase price may be related to contamination known or believed to be present at the property?

_____ Yes, I have reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property?

__X__ No, I have no reason to believe that the ~~purchase price~~ rent for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property?

_____ Not applicable. User is not involved in a purchase of the property.

7. **Commonly Known or Reasonably Ascertainable Information.** Are you aware of commonly known or reasonably ascertainable information about the property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases of hazardous substances or petroleum products? For example:

Do you know the past uses of the property?
_____ Yes (describe) _____
__X__ No

Do you know of chemicals, hazardous substances or petroleum products that are present or once were present at the property?
_____ Yes (describe) _____
__X__ No

Do you know of spills or other releases of chemicals, hazardous substances or petroleum products that have taken place at the property?
_____ Yes (describe) _____
__X__ No

Do you know of any environmental cleanups that have taken place at the property?
_____ Yes (describe) _____
__X__ No

8. **The Degree of Obviousness of Contamination.** E1527-13 and the federal AAI rule (40 CFR 312.31) require that the Phase I ESA consider the degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation. Based on your knowledge and experience related to the property, are there any *obvious* indictors that point to the presence or likely presence of contamination at the property?
_____ Yes (describe) _____
_____
__X__ No

9. **Availability of Previous Environmental, Geotechnical and Preliminary Title Insurance Reports.** Are you aware of previous environmental site assessment reports, other environmental reports, documents, correspondence, etc. concerning the property and its environmental condition?
__X__ No
_____ Yes (please identify and provide copies, if available):
Environmental Site Assessment Reports_____
Environmental Compliance Audit Reports_____
Risk Assessments_____
Geotechnical Studies_____
Reports regarding hydrogeologic conditions on the property or surrounding area_____
Environmental permits or registrations for above and/or underground storage tanks, underground injection or waste water storage systems, hazardous materials handling, hazardous waste generation or disposal, wastewater treatment systems and NPDES permits._____

COMMITMENT FOR TITLE INSURANCE

Issued by

Chicago Title Insurance Company

NOTICE

IMPORTANT—READ CAREFULLY: THIS COMMITMENT IS AN OFFER TO ISSUE ONE OR MORE TITLE INSURANCE POLICIES. ALL CLAIMS OR REMEDIES SOUGHT AGAINST THE COMPANY INVOLVING THE CONTENT OF THIS COMMITMENT OR THE POLICY MUST BE BASED SOLELY IN CONTRACT.

THIS COMMITMENT IS NOT AN ABSTRACT OF TITLE, REPORT OF THE CONDITION OF TITLE, LEGAL OPINION, OPINION OF TITLE, OR OTHER REPRESENTATION OF THE STATUS OF TITLE. THE PROCEDURES USED BY THE COMPANY TO DETERMINE INSURABILITY OF THE TITLE, INCLUDING ANY SEARCH AND EXAMINATION, ARE PROPRIETARY TO THE COMPANY, WERE PERFORMED SOLELY FOR THE BENEFIT OF THE COMPANY, AND CREATE NO EXTRACONTRACTUAL LIABILITY TO ANY PERSON, INCLUDING A PROPOSED INSURED.

THE COMPANY'S OBLIGATION UNDER THIS COMMITMENT IS TO ISSUE A POLICY TO A PROPOSED INSURED IDENTIFIED IN SCHEDULE A IN ACCORDANCE WITH THE TERMS AND PROVISIONS OF THIS COMMITMENT. THE COMPANY HAS NO LIABILITY OR OBLIGATION INVOLVING THE CONTENT OF THIS COMMITMENT TO ANY OTHER PERSON.

COMMITMENT TO ISSUE POLICY

Subject to the Notice; Schedule B, Part I—Requirements; Schedule B, Part II—Exceptions; and the Commitment Conditions, **Chicago Title Insurance Company**, a Florida Corporation (the "Company"), commits to issue the Policy according to the terms and provisions of this Commitment. This Commitment is effective as of the Commitment Date shown in Schedule A for each Policy described in Schedule A, only when the Company has entered in Schedule A both the specified dollar amount as the Proposed Policy Amount and the name of the Proposed Insured.

If all of the Schedule B, Part I—Requirements have not been met within 180 Days after the Commitment Date, this Commitment terminates and the Company's liability and obligation end.

COMMITMENT CONDITIONS

1. DEFINITIONS

(a) "Knowledge" or "Known": Actual or imputed knowledge, but not constructive notice imparted by the Public Records.

(b) "Land": The land described in Schedule A and affixed improvements that by law constitute real property. The term "Land" does not include any property beyond the lines of the area described in Schedule A, nor any right, title, interest, estate, or easement in abutting streets, roads, avenues, alleys, lanes, ways, or waterways, but this does not modify or limit the extent that a right of access to and from the Land is to be insured by the Policy.

(c) "Mortgage": A mortgage, deed of trust, or other security instrument, including one evidenced by electronic means authorized by law.

(d) "Policy": Each contract of title insurance, in a form adopted by the American Land Title Association, issued or to be issued by the Company pursuant to this Commitment.

(e) "Proposed Insured": Each person identified in Schedule A as the Proposed Insured of each Policy to be issued pursuant to this Commitment.

(f) "Proposed Policy Amount": Each dollar amount specified in Schedule A as the Proposed Policy Amount of each Policy to be issued pursuant to this Commitment.

(g) "Public Records": Records established under state statutes at the Commitment Date for the purpose of imparting constructive notice of matters relating to real property to purchasers for value and without Knowledge.

(h) "Title": The estate or interest described in Schedule A.

2. If all of the Schedule B, Part I—Requirements have not been met within the time period specified in the Commitment to Issue Policy, this Commitment terminates and the Company's liability and obligation end.

3. The Company's liability and obligation is limited by and this Commitment is not valid without:

(a) the Notice;
(b) the Commitment to Issue Policy;
(c) the Commitment Conditions;
(d) Schedule A;
(e) Schedule B, Part I—Requirements;
(f) Schedule B, Part II—Exceptions; and
(g) a counter-signature by the Company or its issuing agent that may be in electronic form.

4. COMPANY'S RIGHT TO AMEND

The Company may amend this Commitment at any time. If the Company amends this Commitment to add a defect, lien, encumbrance, adverse claim, or other matter recorded in the Public Records prior to the Commitment Date, any liability of the Company is limited by Commitment Condition 5. The Company shall not be liable for any other amendment to this Commitment.

5. LIMITATIONS OF LIABILITY

(a) The Company's liability under Commitment Condition 4 is limited to the Proposed Insured's actual expense incurred in the interval between the Company's delivery to the Proposed Insured of the Commitment and the delivery of the amended Commitment, resulting from the Proposed Insured's good faith reliance to:

(i) comply with the Schedule B, Part I—Requirements;
(ii) eliminate, with the Company's written consent, any Schedule B, Part II—Exceptions; or
(iii) acquire the Title or create the Mortgage covered by this Commitment.

Copyright American Land Title Association. All rights reserved. The use of this Form is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

(b) The Company shall not be liable under Commitment Condition 5(a) if the Proposed Insured requested the amendment or had Knowledge of the matter and did not notify the Company about it in writing.
(c) The Company will only have liability under Commitment Condition 4 if the Proposed Insured would not have incurred the expense had the Commitment included the added matter when the Commitment was first delivered to the Proposed Insured.
(d) The Company's liability shall not exceed the lesser of the Proposed Insured's actual expense incurred in good faith and described in Commitment Conditions 5(a)(i) through 5(a)(iii) or the Proposed Policy Amount.
(e) The Company shall not be liable for the content of the Transaction Identification Data, if any.
(f) In no event shall the Company be obligated to issue the Policy referred to in this Commitment unless all of the Schedule B, Part I—Requirements have been met to the satisfaction of the Company.
(g) In any event, the Company's liability is limited by the terms and provisions of the Policy.

6. LIABILITY OF THE COMPANY MUST BE BASED ON THIS COMMITMENT

(a) Only a Proposed Insured identified in Schedule A, and no other person, may make a claim under this Commitment.
(b) Any claim must be based in contract and must be restricted solely to the terms and provisions of this Commitment.
(c) Until the Policy is issued, this Commitment, as last revised, is the exclusive and entire agreement between the parties with respect to the subject matter of this Commitment and supersedes all prior commitment negotiations, representations, and proposals of any kind, whether written or oral, express or implied, relating to the subject matter of this Commitment.
(d) The deletion or modification of any Schedule B, Part II—Exception does not constitute an agreement or obligation to provide coverage beyond the terms and provisions of this Commitment or the Policy.
(e) Any amendment or endorsement to this Commitment must be in writing and authenticated by a person authorized by the Company.
(f) When the Policy is issued, all liability and obligation under this Commitment will end and the Company's only liability will be under the Policy.

7. IF THIS COMMITMENT HAS BEEN ISSUED BY AN ISSUING AGENT

The issuing agent is the Company's agent only for the limited purpose of issuing title insurance commitments and policies. The issuing agent is not the Company's agent for the purpose of providing closing or settlement services.

8. PRO-FORMA POLICY

The Company may provide, at the request of a Proposed Insured, a pro-forma policy illustrating the coverage that the Company may provide. A pro-forma policy neither reflects the status of Title at the time that the pro-forma policy is delivered to a Proposed Insured, nor is it a commitment to insure.

9. ARBITRATION

The Policy contains an arbitration clause. All arbitrable matters when the Proposed Policy Amount is $2,000,000 or less shall be arbitrated at the option of either the Company or the Proposed Insured as the exclusive remedy of the parties. A Proposed Insured may review a copy of the arbitration rules at <http://www.alta.org/arbitration>.

SCHEDULE B

PART I – REQUIREMENTS

All of the following Requirements must be met:

1. The Proposed Insured must notify the Company in writing of the name of any party not referred to in this Commitment who will obtain an interest in the Land or who will make a loan on the Land. The Company may then make additional Requirements or Exceptions.

2. Pay the agreed amount for the estate or interest to be insured.

3. Pay the premiums, fees, and charges for the Policy to the Company.

4. Documents satisfactory to the Company that convey the Title or create the Mortgage to be insured, or both, must be properly authorized, executed, delivered, and recorded in the Public Records.

5. For each policy to be issued as identified in Schedule A, Item 2; the Company shall not be liable under this commitment until it receives a designation for a Proposed Insured, acceptable to the Company. As provided in Commitment Condition 4, the Company may amend this commitment to add, among other things, additional exceptions or requirements after the designation of the Proposed Insured.

6. Release(s) or Reconveyance(s) of Item No(s). 17 and 18

7. Due to the special requirements of SB 50 (California Public Resources Code Section 8560 et seq.), any transaction that includes the conveyance of title by an agency of the United States must be approved in advance by the Company's State Counsel, Regional Counsel, or one of their designees.

8. The Company and its policy issuing agents are required by Federal law to collect additional information about certain transactions in specified geographic areas in accordance with the Bank Secrecy Act. If this transaction is required to be reported under a Geographic Targeting Order issued by FinCEN, the Company or its policy issuing agent must be supplied with a completed ALTA Information Collection Form ("ICF") prior to closing the transaction contemplated herein.

9. Unrecorded matters which may be disclosed by an Owner's Affidavit or Declaration. A form of the Owner's Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

   The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

SCHEDULE B
PART I – Requirements
(Continued)

10. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below:

    Limited Liability Company: PLAZA THUNDER, LLC, a California limited liability company and CARMAX AUTO SUPERSTORES CALIFORNIA, LLC, a Virginia limited liability company

    a) A copy of its operating agreement, if any, and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.

    b) If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendments thereto with the appropriate filing stamps.

    c) If the Limited Liability Company is member-managed, a full and complete current list of members certified by the appropriate manager or member.

    d) A current dated certificate of good standing from the proper governmental authority of the state in which the entity is currently domiciled.

    e) If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

    f) If Limited Liability Company is a Single Member Entity, a Statement of Information for the Single Member will be required.

    g) Each member and manager of the LLC without an Operating Agreement must execute in the presence of a notary public the Certificate of California LLC (Without an Operating Agreement) Status and Authority form.

11. Before the issuance of any title insurance under this application, the Company will require a full copy of the lease to be insured, together with all supplements, assignments and amendments for review. If a memorandum or short form of the lease is to be recorded, a full copy of the executed lease is still required.

    The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

SCHEDULE B

PART II – EXCEPTIONS

THIS COMMITMENT DOES NOT REPUBLISH ANY COVENANT, CONDITION, RESTRICTION, OR LIMITATION CONTAINED IN ANY DOCUMENT REFERRED TO IN THIS COMMITMENT TO THE EXTENT THAT THE SPECIFIC COVENANT, CONDITION, RESTRICTION, OR LIMITATION VIOLATES STATE OR FEDERAL LAW BASED ON RACE, COLOR, RELIGION, SEX, SEXUAL ORIENTATION, GENDER IDENTITY, HANDICAP, FAMILIAL STATUS, OR NATIONAL ORIGIN.

The Policy will not insure against loss or damage resulting from the terms and provisions of any lease or easement identified in Schedule A, and will include the following Exceptions unless cleared to the satisfaction of the Company:

I. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records. Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.

II. Any facts, rights, interests or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.

III. Easements, liens or encumbrances, or claims thereof, which are not shown by the public records.

IV. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.

V. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.

VI. Any lien or right to a lien for services, labor or material not shown by the public records.

VII. Defects, liens, encumbrances, adverse claims or other matters, if any, created, first appearing in the Public Records or attaching to the subsequent effective date hereof but prior to the date the proposed Insured acquires of records for value the estate or interest or mortgage thereon covered by this Commitment.

A. Property taxes, which are a lien not yet due and payable, including any assessments collected with taxes to be levied for the fiscal year 2019-2020.

B. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

1. Water rights, claims or title to water, whether or not disclosed by the public records.

INFORMATIONAL NOTES

1. None of the items shown in this report will cause the Company to decline to attach ALTA Endorsement Form 9 to an Extended Coverage Loan Policy, when issued.

2. The Company is not aware of any matters which would cause it to decline to attach CLTA Endorsement Form 116 indicating that there is located on said Land Commercial properties, known as apns: 168-012-42 & 168-012-43, located within the city of Oceanside, California, , to an Extended Coverage Loan Policy.

3. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

4. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

5. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

6. Due to the special requirements of SB 50 (California Public Resources Code Section 8560 et seq.), any transaction that includes the conveyance of title by an agency of the United States must be approved in advance by the Company's State Counsel, Regional Counsel, or one of their designees.

7. Note: Property taxes, including any personal property taxes and any assessments collected with taxes, are paid. For proration purposes the amounts were:

Tax Identification No.:	168-012-42-00
Fiscal Year:	2018-2019
1st Installment:	$283.80
2nd Installment:	$283.80
Exemption:	none
Code Area:	07018

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

Types of Information Collected
We may collect two types of information from you: Personal Information and Browsing Information.

Personal Information. FNF may collect the following categories of Personal Information:
- contact information (*e.g.,* name, address, phone number, email address);
- demographic information (*e.g.,* date of birth, gender, marital status);
- identity information (*e.g.,* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.,* loan or bank account information); and
- other personal information necessary to provide products or services to you.

Browsing Information. FNF may automatically collect the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or mobile device:
- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website

How Personal Information is Collected
We may collect Personal Information about you from:
- information we receive from you on applications or other forms;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

How Browsing Information is Collected
If you visit or use an FNF Website, Browsing Information may be collected during your visit. Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics
Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to other websites. FNF is not responsible for the privacy practices or the content of any of those other websites. We advise you to read the privacy policy of every website you visit.

Use of Personal Information
FNF uses Personal Information for three main purposes:
- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and third parties' products and services, jointly or independently.

When Information Is Disclosed
We may make disclosures of your Personal Information and Browsing Information in the following circumstances:
- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;
- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;

Copyright © 2018. Fidelity National Financial, Inc. All Rights Reserved

- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Please see "**Choices With Your Information**" to learn the disclosures you can restrict.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to guard your Personal Information. We limit access to nonpublic personal information about you to employees who need to know that information to do their job. When we provide Personal Information to others as discussed in this Privacy Notice, we expect that they process such information in compliance with our Privacy Notice and in compliance with applicable privacy laws.

Choices With Your Information
If you do not want FNF to share your information with our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information and Browsing Information with nonaffiliated third parties, except as permitted by California law.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.

For Oregon Residents: We will not share your Personal Information and Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not share information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are meant for adults and are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence for any of the purposes described in this Privacy Notice. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except (1) as required or authorized by contract with the mortgage loan servicer or lender, or

ATTACHMENT ONE (Revised 05-06-16)

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

{Except as provided in Schedule B - Part II,{ t{or T}his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

{PART I

{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.}

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:}

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:
{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown in the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY – ASSESSMENTS PRIORITY (04-02-15)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RITE AID #5635 EPA ID:: CAL000379871	3813 PLAZA DR	WSW 1/8 - 1/4 (0.135 mi.)	F28	234

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/25/2019 has revealed that there is

1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 04/29/2019 has revealed that there are 2 CA ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Global Id: T0607300508
Global Id: T0607301989

CA SAN DIEGO CO. SAM: The listing contains all underground tank release cases and projects pertaining to properties contaminated with hazardous substances that are actively under review by the Site Assessment and Mitigation Program.

A review of the CA SAN DIEGO CO. SAM list, as provided by EDR, and dated 03/23/2010 has revealed that there are 7 CA SAN DIEGO CO. SAM sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 3 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 3 CA UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 4 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 26 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the CA DRYCLEANERS list, as provided by EDR, has revealed that there is 1 CA DRYCLEANERS site within approximately 0.25 miles of the target property.

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2017 has revealed that there is 1

CA HAZNET site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash

& dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Description: Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information: (1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed; (2) Hazardous characteristics of the waste(s) to be handled; (3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of: (A) Factors affecting the potential for corrosion, including but not limited to: 1. Soil moisture content; 2. Soil pH; 3. Soil sulfides level; 4. Soil resistivity; 5. Structure to soil potential; 6. Influence of nearby underground metal structures (e.g., piping); 7. Stray electric current; and, 8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and (B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following: 1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic; 2. Corrosion-resistant coating (such as epoxy or f

Citation:	22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Description:	Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the

MEINEKE / ECONO- LUBE (Continued) **S113894666**

waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information: (1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed; (2) Hazardous characteristics of the waste(s) to be handled; (3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of: (A) Factors affecting the potential for corrosion, including but not limited to: 1. Soil moisture content; 2. Soil pH; 3. Soil sulfides level; 4. Soil resistivity; 5. Structure to soil potential; 6. Influence of nearby underground metal structures (e.g., piping); 7. Stray electric current; and, 8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and (B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following: 1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic; 2. Corrosion-resistant coating (such as epoxy or f

Handler Activities Summary:
U.S. importer of hazardous waste: No

FAIRLANE CLEANERS (Continued) **1000363920**

Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 04/12/2004
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State Contractor/Grantee

1, Section(s) 265.173
Violation Description: Failure to properly close hazardous waste containers when not in active use.
Violation Notes: Returned to compliance on 10/07/2014.
Violation Division: San Diego County Department of Env Health
Violation Program: HW
Violation Source: CERS

Site ID: 117817
Site Name: SHERWIN-WILLIAMS #1520
Violation Date: 10-07-2014
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 10/15/2014.
Violation Division: San Diego County Department of Env Health
Violation Program: HW
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-07-2014
Violations Found: No

Hazardous Waste Summary:

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 221
. Waste name: Waste oil and mixed oil

. Waste code: 311
. Waste name: Pharmaceutical waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 513
. Waste name: Empty containers less than 30 gallons

. Waste code: 551
. Waste name: Laboratory waste chemicals

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D003
. Waste name: REACTIVE WASTE

. Waste code: D009
. Waste name: MERCURY

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND

TRI-CITY MEDICAL CENTER (Continued) **1000138565**

F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: U002
. Waste name: 2-PROPANONE (I) (OR) ACETONE (I)

. Waste code: U023
. Waste name: BENZENE, (TRICHLOROMETHYL)- (OR) BENZOTRICHLORIDE (C,R,T)

. Waste code: U123
. Waste name: FORMIC ACID (C,T)

. Waste code: U154
. Waste name: METHANOL (I) (OR) METHYL ALCOHOL (I)

. Waste code: U220
. Waste name: BENZENE, METHYL- (OR) TOLUENE

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 12381

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN

TRI-CITY MEDICAL CENTER (Continued) **1000138565**

OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 240

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 20

Waste code: D009
Waste name: MERCURY
Amount (Lbs): 5

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 250

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 11260

Waste code: U023
Waste name: BENZENE, (TRICHLOROMETHYL)-
Amount (Lbs): 45

Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H14248-001
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Diesel
Site History: In February 1992, diesel was discovered in the trench backfill (sand and gravel) of the existing main sewer that parallels the access road

TRI-CITY MEDICAL CENTER (Continued) **1000138565**

serving the east side of Tri-City Medical Center (the hospital) in Oceanside, California. Emergency response actions were initiated, reportedly including the removal of 5 to 15 gallons of product using a vacuum truck. A temporary sump was installed to collect a fuel/water mixture that had accumulated in the main sewer trench backfill. The fuel/water mixture was periodically pumped into 55-gallon drums over a six-month period. A concrete cut-off wall was also constructed in the main sewer trench to mitigate further seepage of the release within the trench backfill. A soil sample, collected from the sewer trench backfill approximately 150 feet up-gradient of the location where the release was discovered, indicated diesel impacts up to 6,104 milligrams per kilogram (mg/kg). Upon confirming a report of the unauthorized release, DEH opened Case #H14248-001 on February 20, 1992. During a 1992 expansion of the surgical center on the east-central side of the hospital, one or two, 2-inch-diameter diesel pipelines were reportedly punctured by steel stakes driven to mark the perimeter of the surgical additions foundation. The diesel pipelines had previously supplied two boilers inside the hospitals former Central Plant addition. The pipeline corridor originated at two, fiberglass, single-walled, 10,000-gallon-capacity diesel underground storage tanks (USTs) located beneath a paved parking lot adjoining the eastern access road. The pipeline corridor extended northwest of the USTs approximately 110 feet, then angled north to tie in with the boilers inside the former Central Plant addition. In 1993, the diesel pipelines from the two, existing 10,000-gallon diesel USTs, located beneath the paved parking lot adjoining the eastern access road, were re-routed to the Electrical Service Building, which adjoined the south side of the former Central Plant. TPH-impacted materials were encountered during trenching for the new pipelines, but were removed. Once the new diesel pipelines were in operation, a 2,000-gallon fiberglass UST that had contained diesel was removed from the area south of the Electrical Service Building, which was also slated for construction of an addition. The former UST, which was removed on June 16, 1993, had supplied emergency generators. Although there was no direct evidence that the UST had leaked, TPH-impacted materials were encountered beneath a concrete pad underlying the UST. Approximately 200 yd3 of impacted soils were excavated, removed, and stockpiled at an unspecified location. [Note: the stockpile location was later found to be west the hospital in a vacant portion of the property]. Based on the RPA reports, the consultant estimated that 617 yd3 of diesel-impacted materials remain in place. The case was revisited in 1999 when remote fill piping near the existing 10,000-gallon capacity USTs was upgraded. Diesel was detected in a soil sample and a second DEH unauthorized release case was opened (#H14248-002). [Note: the second case was consolidated into #H14248-001 on January 14, 2010, because the diesel occurrence was attributed to the initial release]. In late 2004 and early 2005, diesel pipelines from the 10,000-gallon USTs, that appear to have been routed to a new, stand-alone, Central Plant building located east of the USTs, were closed. Diesel was detected in one soil sample collected from the pipe trench, but was deemed part of the initial release discovered in 1992. In October 2011, two monitoring wells were installed approximately 10 feet southwest of the 10,000-gallon capacity diesel USTs. The wells were positioned down-gradient of the junctions of the abandoned diesel pipeline corridor with several sewer laterals from the former Central Plant area, as well as the main sewer. One well was screened from 15 to 25 feet bgs and the

TRI-CITY MEDICAL CENTER (Continued) **1000138565**

other well was screened from 35 to 45 feet bgs. The Santiago Formation was encountered in the well boring at approximately 16 feet bgs, beneath silty sand/clay overburden. Soil/weathered bedrock samples collected at depths of 16 - 21 feet bgs from the well borings indicated impacts (200 to 240 mg/kg) from diesel-range organics. However, petroleum hydrocarbons, including diesel-range organics, were not detected in the groundwater samples collected from the wells. According to the consultant, the groundwater samples collected from the paired site monitoring wells appear to represent two different groundwater zones. Although the static water levels measured in the wells differed by only 0.54-foot, the conductivity of the water in the deeper zone was more than twice that measured in the shallow zone. Although the medical center is located in a groundwater basin with beneficial uses, there are no drinking water supply wells within a half-mile of the site and the City of Oceanside has no plans to use groundwater in the basin sub-area. Based on excavation of diesel-impacted soils and the lack of petroleum hydrocarbon impacts to groundwater, the diesel release does not pose a human health risk to potential receptors. Global Hydrogeology recommends no further action at the site and case closure. DEH concurs with these recommendations. In February 1992, diesel was discovered in the trench backfill (sand and gravel) of the existing main sewer that parallels the access road serving the east side of Tri-City Medical Center (the hospital) in Oceanside, California. Emergency response actions were initiated, reportedly including the removal of 5 to 15 gallons of product using a vacuum truck. A temporary sump was installed to collect a fuel/water mixture that had accumulated in the main sewer trench backfill. The fuel/water mixture was periodically pumped into 55-gallon drums over a six-month period. A concrete cut-off wall was also constructed in the main sewer trench to mitigate further seepage of the release within the trench backfill. A soil sample, collected from the sewer trench backfill approximately 150 feet up-gradient of the location where the release was discovered, indicated diesel impacts up to 6,104 milligrams per kilogram (mg/kg). Upon confirming a report of the unauthorized release, DEH opened Case #H14248-001 on February 20, 1992. Hazardous Waste Summary:

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 131
. Waste name: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 223
. Waste name: Unspecified oil-containing waste

RITE AID #5635 (Continued) **1014387661**

. Waste code: 232
. Waste name: Pesticides and other waste associated with pesticide production

. Waste code: 261
. Waste name: Polychlorinated biphenyls and material containing PCB's

. Waste code: 291
. Waste name: Latex waste

. Waste code: 311
. Waste name: Pharmaceutical waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 541
. Waste name: Photochemicals / photo processing waste

. Waste code: 561
. Waste name: Detergent and soap

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D005

Violation Date:	07-12-2016
Citation:	23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description:	Failure of the overfill prevention system to meet one of the following requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to

ARCO #05350 (Continued) **S106174725**

	overfilling.
Violation Notes:	Returned to compliance on 07/12/2016. Inspection Sequence ID:5488446;Tank ID:25750,25751,25752;Violation Description:(RP) Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity; and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 23 CCR 2635(b)(2), 2665
