Attention: Ms. Noemi Avila-Zamudio

Subject: DRAFT Limited Phase II Environmental Site Assessment
Juan Cabrillo Elementary School (JCES)
30237 Morning View Drive
Malibu, California

Leighton Consulting, Inc. (Leighton) is pleased to present this report summarizing the Supplemental Phase II Environmental Site Assessment (ESA) activities completed at Juan Cabrillo Elementary School located at 30237 Morning View Drive in Malibu, California.

We appreciate the opportunity to work with you on this project. If you have any questions regarding this report, please call us at your convenience.

Respectfully submitted,

LEIGHTON CONSULTING

Gwen Tellegen, PE
Principal Environmental Engineer

1.0 INTRODUCTION

Leighton Consulting, Inc. (Leighton) is pleased to present this report summarizing the Supplemental Phase II Environmental Site Assessment (ESA) activities completed at Juan Cabrillo Elementary School located at 30237 Morning View Drive in Malibu, California (Site, **Figure 1**). This investigation supplements previous subsurface environmental investigations conducted by Ramboll Environ US Corporation (Ramboll) in 2014 and 2015. References cited in this report are attached as **Appendix A**.

DRAFT

2.0 BACKGROUND

The existing JCES is immediately adjacent to and northeast of the Malibu Middle and High School (MMHS) campus in the city of Malibu, California. Currently, the JCES campus includes 11 classroom/administration buildings, playgrounds, playfields, a blacktop, asphalt paved parking lots, and various other ancillary improvements.

Based on information obtained from Santa Monica Malibu Unified School District (SMMUSD), implementation of the MMHS Campus Plan will result in eventual demolition of all 11 buildings at Juan Cabrillo Elementary School (JCES) and 7 buildings on the MMHS Campus to allow for the construction of new buildings at MMHS. This work, beginning in the fall of 2022, will redevelop and modernize the existing MMHS Campus and former JCES. This modernization will create three distinct areas: Middle School Core, High School Core and shared facilities with all Phases completed in 2030.

DRAFT

3.0 OBJECTIVE

The objective of this Supplemental Phase II ESA is to further evaluate shallow soils at JCES for chemicals of concern previously identified at the Site by Ramboll in 2014 and 2015. Leighton selected sample locations to fill in identified data gaps (such as the area septic tank 7, the playground area and the northern portion of the Site adjacent to the bus barn) and to better define areas of potential environmental concern (such as the planters south of Building C and north of Building D and Septic Tank 9) previously found by Ramboll. On **Figure 2** the locations of the Ramboll soil and soil vapor borings with samples with detected concentrations of chemicals of concerns above residential screening levels are depicted in orange on and those with no detections above screening levels are shown in green (for soil) or pink (for soil vapor). Tables that summarize the results of the Ramboll soil investigation are attached as **Appendix B**. Leighton's 2020 soil sample location are also shown on **Figure 2** in blue.

DRAFT

4.0 SCOPE OF WORK

Leighton's scope of work for this investigation included the following:

- Advancement of 25 initial exploratory soil borings (JC-PG1 through JC-PG8 and JC-9 through JC-25) to total depths of ranging from 3-7 feet below ground surface (bgs) and collection of two to five soil samples from each boring for chemical analysis;
- Based a review of the initial soil sample results, the advancement of 13 additional (follow-up) soil borings (JC-10N, JC-10E, JC-12N, JC-12E, JC-12S, JC-20NN, JC-20N, JC-20SE, JC-20SW, JC-24N, JC-24W, JC-24S, and JC-26) to total depths ranging from 0.5 to 15 feet bgs and collection of one to six soil samples from each boring for chemical analysis; and
- Preparation of this report summarizing our findings and conclusions, including tables, illustrations, and appendices.

DRAFT

5.0 PHASE II ESA

5.1 Health and Safety Plan

Prior to starting work, Leighton prepared a site-specific Health and Safety Plan (HSP) to include safety aspects of the work performed at the site. The HSP was in compliance with the Occupational Safety and Health and Administration (OSHA) regulation 29 CFR 1910.120. The HSP was onsite with Leighton personnel at all times. The HSP outlined site procedures, potential hazards, and contains a hospital location map. All onsite Leighton personnel signed the HSP acknowledging acceptance.

5.2 Utility Clearance

Underground Service Alert (USA) was contacted more than 48 hours prior to the commencement of fieldwork to mark underground utility locations originating off-site from public utilities. Each proposed boring location was clearly marked in white paint prior to contacting USA. In addition, prior to advancement of soil boreholes, Leighton hired a private utility locator to clear each of the borehole locations, which resulted in the adjustment of the placement of several borings.

5.3 Field Activities

5.3.1 Soil Sampling

On September 16 and October 2, 2020, Leighton oversaw the advancement of 25 soil borings to a total depth of 3-7 feet bgs throughout the site, logging soil lithology and collecting samples (**Figure 2**). The sampling locations were selected to supplement and further define the findings of previous soil sampling activities conducted by Ramboll as summarized in their Draft Preliminary Environmental Assessment Report – Juan Cabrillo Elementary School and Malibu High School (Ramboll, 2015).

The borings were advanced using direct push and hand auger drilling equipment operated by Millennium Environmental, a State of California licensed drilling contractor. A coring machine was used to cut clean holes in concrete and asphalt paved areas to allow for advancement of borings with minimal surface disturbance.

DRAFT

Soil samples were logged and described under direct supervision of a licensed California Professional Engineer (PE-Civil) and were retained in either 6-inch acetate sleeves capped with Teflon® paper and plastic end caps or 8-ounce laboratory-supplied glass jars (from hand auger borings). Soil samples to be analyzed for volatile organic compounds (VOCs) or total petroleum hydrocarbons as gasoline (TPHg) were collected in laboratory supplied preserved containers in accordance with EPA Method 5035. The containers were clearly marked with sample identification, placed in an ice-cooled chest for temporary storage, and transported Eurofins Test America, Inc. in Irvine, California under standard chain-of-custody protocol. Chain-of-custody protocol was followed throughout all phases of the sample handling process.

During this round of investigation, boreholes were advanced to a maximum depth of 5-7 feet below ground surface (bgs), or practical refusal, whichever was shallower. Soil samples were collected from two to five depth intervals in each borehole (approximate sample depths of 0.5, 1.0, 3.0, 5.0 and 7.0 feet bgs). Ninety-four (94) soil samples were collected.

5.3.2 Additional Soil Sampling

On November 23, 2020, Leighton directed the advancement of fourteen soil additional borings to a total depth of 0.5-15 feet bgs throughout the site (**Figure 2**). The sampling locations were selected to supplement the results obtained Leighton's first round of sampling to define areas of elevated detections of constituents of concern.

The borings were advanced using direct push and hand auger drilling equipment operated by JHA Drilling, Inc., a State of California licensed drilling contractor. A coring machine was used to cut clean holes in concrete and asphalt paved areas to allow for advancement of borings with minimal surface disturbance.

Soil samples were logged and described under direct supervision of a licensed California Professional Engineer (PE-Civil) and were retained in either 6-inch acetate sleeves capped with Teflon® paper and plastic end caps or 8-ounce laboratory-supplied glass jars. Soil samples to be analyzed for VOCs or TPHg were collected in laboratory supplied preserved containers in accordance with EPA Method 5035. The containers were clearly marked with sample identification, placed in an ice-cooled chest for

DRAFT

temporary storage, and transported Eurofins Test America, Inc. in Irvine, California under standard chain-of-custody protocol. Chain-of-custody protocol was followed throughout all phases of the sample handling process.

The boreholes were advanced to a maximum depth of 0.5-15 feet below ground surface (bgs), or practical refusal, whichever is shallower. Soil samples were collected from one to six depth intervals in each borehole (approximate sample depths of 0.5, 1.0, 3.0, 5.0, 7.0, 10.0 and 15.0 feet bgs). Thirty-three (33) soil samples were collected.

Non-dedicated sampling equipment was decontaminated between sample locations using a biodegradable detergent water scrub followed by a potable water rinse and two rinses with distilled water. Soil borings were backfilled to surface with hydrated bentonite and patched to match the existing surface conditions.

While conducting this Limited Phase II ESA, Leighton encountered mostly sandy clay with varying amounts of silty clay, clayey sand and clayey silty sand in the upper fifteen feet. The deepest sample collected was 15 feet bgs. Groundwater was not encountered in any of the soil borings during this investigation. Boring Logs are included in **Appendix C**.

5.4 Laboratory Analysis

Based upon the results of past soil investigations conducted by others and historic site uses, soil samples from each boring were analyzed for potential chemicals of concern in the area of that boring including:

- Polychlorinated Biphenyls (PCBs) by EPA Method 8082,
- Organochlorine Pesticides (OCPs) by EPA Method 8081A,
- CAM 17, Lead and Arsenic by EPA Method 6010B/7000 series,
- VOCs by EPA Method 8260B and,
- Total petroleum hydrocarbons as diesel (TPHd), as motor oil (TPHmo) or as gasoline (TPHg) by EPA Method 8015.

Copies of the chain of custody forms and complete analytical reports are included in **Appendix D**.

DRAFT

6.0 RESULTS

6.1 Soil Analytical Results

The soil analytical results were compared to one or more of the following regulatory screening criteria:

- EPA Region IX Residential Regional Screening Levels for Residential Use (RSLs, November 2020); and
- DTSC Office of Human and Ecological Risk (HERO) Note Number 3 for Residential Use (June 2020);
- San Francisco Bay Regional Water Quality Control Board Environmental Screening Level for Residential Use (Revision 2, 2019).

Soil samples with lead concentrations exceeding waste characterization criteria as defined in California Code of Regulations, Title 22, Chapter 11, Article 3, were analyzed for soluble lead using the soluble threshold limit concentration (STLC) waste extraction test (WET) by EPA Method 6010B.

The complete laboratory reports are included in **Appendix D**. A summary of laboratory results are presented in **Tables 1 through 4** and discussed in the text below.

6.1.1 Soil Sampling Results – Initial and Follow Up Investigation

Polychlorinated Biphenyls (PCBs)

No PCBs were detected in 30 of the 31 soil samples analyzed during the initial Leighton investigation (see **Table 1** and **Figure 3a**). The PCB Aroclor 1260 was detected at a concentration above the reporting limits (49 µg/kg to 50 µg/kg) in one soil sample at 84 µg/kg. The detection of Aroclor 1260 in sample JC-20-0.5 did not exceed the residential RSL criteria of 240 µg/kg. No other PCB Arochlors were detected in any of the 31 soil samples analyzed during this investigation.

Soil sample JC-20-0.5, in which the PCB Aroclor 1260 was detected at 84 µg/kg, is located in small triangular landscape planter in the central portion of the Site at the southwest corner of Building E. In Leighton's follow up sampling, four additional samples were collected in the same small dirt

DRAFT

covered area, surrounding JC-20 to the north (JC-20N), further north (JC-20NN), southeast (JC-20SE) and southwest (JC-20SW).

In these step-out samples, Aroclor 1260 was detected in JC-20NN-0.5 and JC-20SE-0.5, at concentrations of 310 µg/kg and 500 µg/kg, respectively. Theses detections of Aroclor 1260 in samples JC-20NN-0.5 and JC-20SE exceed the residential RSL criteria of 240 µg/kg.

The PCB Aroclor 1254 was also detected in both JC-20NN-0.5 and JC-20SE-0.5, at concentrations of 73 µg/kg and 490 µg/kg, respectively. The detection of Aroclor 1254 in sample JC-20SE exceeds the residential RSL criteria of 240 µg/kg. The detection of Aroclor 1254 in sample JC-20NN-0.5 did not exceed the residential RSL.

Arochlor 1268 was detected in sample JC-20SE-0.5 at 0.5 feet bgs at a concentration of 150 ug/kg. There is currently no residential RSL for Aroclor 1268.

Organochlorine Pesticides (OCPs)

Three OCPs were detected above laboratory reporting limits in soil samples collected in Leighton's initial and follow up investigation activities (see **Table 2** and **Figure 4a**).

- Alpha- and Gamma-Chlordane were detected above the laboratory limits in two samples (JC-19-0.5 and JC-19-20-0.5) at concentrations ranging from 31-350 ug/kg and 25-250 ug/kg, respectively. Estimated concentrations below the reporting limit were reported for Alpha-Chlordane and Gamma-Chlordane in five and 21 samples, respectively. There are no published screening levels for Alpha- and Gamma-Chlordane.

- Heptachlor epoxide was detected at a concentration above the reporting limits (24 to 25 µg/kg) in one of the 62 soil samples analyzed during this investigation, at 31 µg/kg (JC-19-0.5) and this sample is found at 0.5 feet bgs within the garden area near the southeast corner of Building C. Estimated concentrations below the method reporting limit, but greater than the detection limit (J-flags) were reported in one of the 62 soil samples analyzed at a concentrations of 0.72 µg/kg. The detection of heptachlor epoxide did not exceed the residential RSL criteria of 70 µg/kg.

DRAFT

Five OCPs were found at very low, estimated concentrations, below laboratory reporting limits in soil samples collected in Leighton's initial and follow up investigation activities.

- No Chlordane was detected above the laboratory reporting limits in any of the 62 soil samples analyzed during this investigation. Estimated concentrations (J-Flags) of chlordane below the reporting limit were detected in 11 at concentrations ranging from 3.6 µg/kg to 1,000 µg/kg. The detections of Chlordane did not exceed the residential RSL criteria of 1,700 µg/kg.

- Dieldrin was not detected at concentrations above the reporting limits (24 to 25 µg/kg) in any of the 62 soil samples analyzed during this investigation. Estimated concentrations below the method reporting limit, but greater than the detection limit (J-flags) were reported in 4 of the 62 soil samples at concentrations ranging from 0.46 µg/kg to 4.8 µg/kg (samples JC-18-0.5, JC-19-0.5, JC-20-0.5 and JC-21-0.5). The estimated detections of dieldrin did not exceed the residential RSL criteria of 34 µg/kg. These samples are located in the garden area between buildings B and C, in the central- to south-eastern portion of the Site.

- 4,4' - DDE was detected at a concentration above the reporting limits (24 to 25 µg/kg) in one of the 62 soil samples analyzed during this investigation, at 28 µg/kg (JC18-0.5) and this sample is found at 0.5 feet bgs within the garden area south of Building C. This detected concentration is below the residential RSL criteria of 2,000 µg/kg. Estimated concentrations below the method reporting limit, but greater than the detection limit (J-flags) were reported in eleven of the 62 soil samples analyzed at concentrations ranging from 0.73 µg/kg to 21 µg/kg. The reporting limit of 4,4' – DDE is much lower than the residential RSL criteria of 2,000 µg/kg.

- No 4,4' – DDT was detected at concentrations above the reporting limits (24 to 25 µg/kg) in any of the 62 soil samples analyzed during this investigation. Estimated concentrations below the method reporting limit, but greater than the detection limit (J-flags) were reported in eleven of the 62 soil samples analyzed at concentrations ranging from 0.59 µg/kg to 8.6 µg/kg. The reporting limit of 4,4' – DDT is much lower than the residential RSL criteria of 1,900 µg/kg.

DRAFT

- Endosulfan I was not detected at concentrations above the reporting limits (24 to 25 µg/kg) in any of the 62 soil samples analyzed during this investigation. Estimated concentrations below the method reporting limit, but greater than the detection limit (J-flags) were reported in one of the 62 soil samples analyzed at a concentration of 9.6 µg/kg. The one estimated detection and reporting limit of Endosulfan I are much lower than the residential RSL criteria of 470,000 µg/kg.

CAM 17 Metals

In Leighton's initial investigation, twenty-nine (29) samples were analyzed for CAM 17 metals and no thallium, silver or antimony were detected above laboratory reporting limits in any of these samples. Several soil samples had estimated (J-Flag) concentrations of silver and antimony (see **Table 3**). Low concentrations (below residential screening levels) of barium, beryllium, cadmium, total chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium and zinc were detected in each of the 29 soil samples analyzed during this investigation

In addition to the 29 samples in Leighton's initial investigation were analyzed for CAM 17 Metals, 30 soil samples were analyzed just for lead and arsenic, since these constituents were previously identified as the Site's chemicals of potential concern by Ramboll (2015). In all of the 59 samples analyzed for arsenic, concentrations were below the DTSC accepted background arsenic concentration of 12 mg/kg (Chernoff, Bosnan, and Oudiz, 2008).

Lead was detected in two soil samples (JC-12-7.0 and JC-24-0.5) at concentrations that exceed the DTSC HERO Note 3 residential screening level value of 80 mg/kg. None of the 57 other samples analyzed for lead contained concentrations of lead that exceeded this screening level respective screening criteria. Sample JC-12-7.0 (1000 mg/kg lead) is was collected from 7 feet below current ground surface which is paved with asphalt, adjacent to the septic tank on the western portion of the Site. Sample JC-24-0.5 (84 mg/kg lead) is located near the surface at 0.5 feet bgs within a grass-covered lawn area at the southern portion of the site.

The detected total lead concentration detected in sample JC-12-7 (1,000 mg/kg) is equal to the Total Threshold Limit Concentration (TTLC) hazardous waste limit of 1,000 mg/kg. Therefore this soil, if excavated

DRAFT

during future site construction activities will need to be treated as a California Hazardous Waste. Since this sample is collected from 7 feet below ground surface, it is unlikely that this soil will be disturbed during construction work unless the septic system on the western side of the site is removed. Since the soluble lead detected in this sample was very low, below hazardous waste levels, leaving this sample in place does not pose a threat to underlying groundwater.

In Leighton's follow up investigation, additional samples were collected surrounding the two samples (JC-12-7.0 and JC-24-0.5) in the initial investigation that exceeded the DTSC HERO Note 3 residential screening level value of 80 mg. Nine (9) additional samples were taken from three (3) step-out borings surrounding JC-12; six (6) additional samples were taken from three (3) step-out borings surrounding JC-24.

- In the step-out sampling, no lead exceeding the residential screening level was found in eight of the nine samples. Lead was detected at a concentration exceeding 80 mg/kg in one sample, JC-24W-0.5, at a concentration of 84 mg/kg. This sample is found near the surface at a depth of 0.5 feet in the grassy lawn area north of the parking and student drop-off lot along Morning View Drive, south of Building B.

Six soil samples containing total metal (TTLC) concentrations greater than 10 times the Soluble Threshold Limit Concentration (STLC) limit for California Hazardous wastes were analyzed using the STLC waste extraction test. The results of these analyses are summarized in **Table 3**. The following metals were analyzed by the STLC extraction method:

- Soluble lead (STLC) was analyzed the three samples (JC-12-7.0, JC-24-0.5 and JC-24W-0.5) with the total lead concentrations of 1000 mg/kg 84 mg/kg and 84 mg/kg, respectively. The lead STLC concentrations were 0.12 mg/L, 2.2 mg/L and 2.6 mg/L, respectively, which are all below the lead STLC California Hazardous Waste threshold of 5 mg/L.

- Soluble Chromium (STLC) was analyzed in five samples (JC-10-0.5, JC-10-1.0, JC-12-5.0 and JC-25-5.0) from the first round of investigation with elevated total chromium concentration ranging from 59-65 mg/kg. The chromium STLC concentrations ranged from 0.002J mg/L to 0.13 mg/L, which is below the hazardous waste threshold of 5 mg/L.

DRAFT

Total Petroleum Hydrocarbons (TPH) and Volatile Organic Compounds (VOCs)

Leighton investigated near surface soils at the JCES site's northern property line adjacent to the deed restricted "bus barn" parcel for the presence of TPH or VOCs. In the initial round of investigation, benzene and toluene were detected in three soil samples from JC-10 and JC-11 which are located on northern property line of the Site. Twelve (12) additional samples were taken from three (3) step-out borings (JC-10N, JC-10E, and JC-26) also along the northern property to be analyzed for TPHg and VOCs.

Benzene

- In Leighton's initial investigation, benzene was detected at concentrations above the reporting limits (0.76 to 1.1 µg/kg) in 3 of the 9 soil samples analyzed, at concentrations ranging from 0.85 µg/kg to 1.6 µg/kg. Estimated concentrations below the method reporting limit, but greater than the detection limit (J-flags) were reported in 5 of the 9 soil samples analyzed at concentrations ranging from 0.31 µg/kg to 0.61 µg/kg. No detections of benzene exceeded the conservative residential HERO Note Number 3 screening criteria of 330 µg/kg and the reporting limit for benzene is well below this screening level.

- In the step-out sampling, no benzene was detected above the residential use screening criteria of 330 µg/kg. Benzene was detected at concentrations above the reporting limits (0.82 to 1.7 µg/kg) in 6 of the 12 soil samples analyzed during the follow-up investigation, at concentrations ranging from 0.91 µg/kg to 4.1 µg/kg. The samples in which benzene detected include:

  - In boring JC-10N samples collected from 5.0, 7.0 and 10.0 feet had detected benzene at 1.1, 1.6 and 0.91 ug/mg.

  - In boring JC-10E samples collected from 1.0, 3.0 and 7.0 feet had detected benzene at 1.3, 1.6 and 4.1 ug/mg.

- In the step out sampling, six samples had no benzene detected above the reporting limit, but had estimated concentrations (J-Flags) ranging from 0.27 µg/kg to 1.0 µg/kg in the following samples:

DRAFT

- In Boring JC-10N at 1' and 3' bgs, at concentrations of 0.27 µg/kg and 0.39 µg/kg, respectively.
- In Boring JC10E at 5' and 10' bgs, at concentrations of 1.0 µg/kg and 0.61 µg/kg, respectively.
- In boring JC-26 at 1' and 3' bgs, at concentrations of 0.67 µg/kg and 0.69 µg/kg, respectively.

Toluene

- In Leighton's initial investigation, toluene was detected at a concentration above the reporting limits (0.76 to 1.1 µg/kg) in one of the 9 soil samples analyzed, at a concentration of 1.4 µg/kg. No detections of toluene exceeded the conservative residential HERO Note Number 3 screening criteria of 1,100,000 µg/kg and the reporting limit for toluene is well below this screening level.
- In the step out investigation, no toluene was detected at concentrations above the residential HERO Note Number 3 screening value of 1,100,000 µg/kg. Low concentrations of toluene was reported in 3 of the 12 soil samples analyzed during the follow-up investigation, at concentrations ranging from 1.2 to 3.4 µg/kg. The samples with detected concentrations of toluene are as follows JC-10E-3.0, JC-10E-5.0 and JC-10E-7.0. Estimated concentrations below the method reporting limit, but greater than the detection limit (J-flags) were reported in 3 of the 12 soil samples analyzed at concentrations ranging from 0.61 to 0.95 µg/kg.

Ethylbenzene

- No Ethylbenzene was detected at concentrations above the reporting limits in in any of the 20 samples analyzed during Leighton's initial or follow-up investigations. Estimated concentrations below the method reporting limit, but greater than the detection limit (J-flags) were reported in 7 of the 12 soil samples analyzed, at concentrations ranging from 0.22 to 0.44 µg/kg. These estimated concentrations are far below the residential screening criteria of 5,800 µg/kg.

DRAFT

Xylenes

- No Xylenes were detected at concentrations above the reporting limits (1.6 to 3.3 µg/kg) in any of the 20 samples analyzed during Leighton's initial or follow-up investigations. Estimated concentrations below the method reporting limit, but greater than the detection limit (J-flags) were reported in 5 of the 12 soil samples analyzed, at concentrations ranging from 0.70 to 1.3 µg/kg. All detections of Xylenes were well below the residential USEPA Region 9 screening criteria of 580,000 µg/kg.

p-Isopropyltoluene

- No p-Isopropyltoluene was detected at concentrations above the reporting limits (0.76 to 1.1 µg/kg) in any of the 20 samples analyzed during Leighton's investigations. An estimated concentrations below the method reporting limit, but greater than the detection limit (J-flags) was reported in one of the 9 soil samples analyzed at a concentration of 0.72 µg/kg. There are no applicable screening criteria for p-Isopropyltoluene.

Ethanol

- Ethanol was detected at concentrations above the reporting limits (210 to 310 µg/kg) in one of the 20 samples analyzed during Leighton's initial and follow-up investigations, at a concentration of 250 µg/kg. Estimated concentrations below the method reporting limit, but greater than the detection limit (J-flags) were reported in 5 of the 12 soil samples analyzed at concentrations ranging from 99 µg/kg to 180 µg/kg. All detections of ethanol were well below the residential USEPA Region 9 screening criteria of 2,500,000 µg/kg.

TBA

- No tert-Butyl alcohol (TBA) was detected at concentrations above the reporting limits (16 to 33 µg/kg) in any of the 20 samples analyzed during the follow-up. Estimated concentrations below the method reporting limit, but greater than the detection limit (J-flags) were reported in 2 of the 12 soil samples analyzed, at concentrations of 6.1 and 12 µg/kg. There are no applicable screening criteria for TBA.

DRAFT

TPH as Gasoline

- No TPH as Gasoline (TPHg; C4-C12) was detected at concentrations above the reporting limits (0.075 to 0.10 mg/kg) in any of the 12 soil samples analyzed during Leighton's initial investigation, nor in any of the 12 soil samples in the follow-up investigation. The reporting limit of TPHg is much lower than the San Francisco Bay Regional Water Quality Control Board (SFRWQCB) residential screening level of 82 mg/kg (SFRWQCB, 2019).

TPH as Diesel

- TPH as Diesel (TPHd; C13-C22) was detected in one of the 12 soil samples at a concentration above the reporting limits, at a concentration of 8.8 mg/kg. The one detection in sample JC-25-7.0 and the reporting limits of TPHd (4.8 to 5.0 mg/kg) are much lower than the SFRWQCB residential SL of 260 mg/kg.

TPH as Motor Oil

- TPH as Motor Oil (TPHmo; C23-C40) were detected in two of the 12 soil samples analyzed during this investigation at concentrations above the reporting limits, at concentrations of 5.8 mg/kg and 28 mg/kg. The detections in samples JC-23-0.5 and JC-25-3.0, and the laboratory reporting limit (4.8 to 5.0 mg/kg) of TPHmo is much lower than the SFRWQCB residential SL of 10,000 mg/kg.

DRAFT

7.0 CONCLUSIONS

Ramboll's soil investigations at JCE identified one sample (JC-SB-13 at 0-0.5 feet bgs) with a detected PCB Aroclor 1260 concentration of 250 ug/kg which exceeds the residential screening level of 240 ug/kg (see **Figures 3b and 3c**). This sample is located in a planter area along the north side of Building D. Leighton limited the approximate extent of this soil impact with borings JC-15, JC-16 and JC-17 which had no detected PCBs (see **Figure 3a**). No PCBs were detected in 30 of the 31 soil samples analyzed during Leighton's initial investigation. In one sample, JC-20-0.5, which is located southwest of Building E in a landscape planter, the PCB Aroclor 1260 was detected at a concentration of 84 ug/kg, which is well below the residential RSL criteria of 240 µg/kg. Follow-up sampling was conducted to delineate PCB impacts in the immediate area of JC-20 with the advancement of four soil borings with the collection of soil samples at depths of 0.5 and 1 feet bgs. Two samples (JC-20NN-0.5 and JC-20SE-0.5) were found to contain Aroclor 1260 at concentrations of 310 and 500 ug/kg, respectively, both of which are in exceedance of the residential RSL of 240 ug/kg. Sample JC-20SE-0.5 also contained Aroclor 1254 at a concentration of 490 ug/kg, which exceeds the residential RSL of 240 ug/kg. Both JC-20NN-0.5 and JC-20SE-0.5 contained Aroclor 1268 at concentrations of 73 and 150 ug/kg, respectively; there is no residential RSL currently set for Aroclor 1268. No other PCB estimated or reported concentrations were found in the onsite soil samples analyzed during this investigation. The excavation and proper off-site disposal of soils in the immediate area of JC-SB-13 in the planter north of Building D, and in the triangular planter southwest of Building D (borings JC-20NN and JC-20SE) is recommended since the soils are exposed and near the surface at a depth of half a foot. In both locations, deeper samples were found to have no detected PCBs, so only limited excavation would be required in each of these two areas.

During their site investigations, Ramboll detected the OCP Chlordane in one sample (JC-SB-39 at 0-0.5 feet bgs) with a level of 2,600 ug/kg, which exceeds of the residential screening level of 1,700 ug/kg (see **Figures 4b and 4c**) . Leighton defined the area of this impact, finding no levels of chlordane above laboratory reporting limits in samples collected from borings east (JC-18) and west (JC-19) of JC-SB-39 (see **Figure 4a**). Since soil sample JC-SB-39 is located in an exposed dirt area at a shallow depths with limited extent, it is recommended that soils in this area be excavated and disposed of properly off-site.

No other OCPs were detected at concentrations above residential screening levels during Leighton's or Ramboll's soil sampling activities. Therefore, OCPs other than chlordane are not considered chemicals of concern for the Site.

DRAFT

Leighton's investigation evaluated TPH and VOCs at the JCES northern property line because of the known deed restricted impacts to soil and soil vapor on the Bus Barn parcel located adjacent to the north of the Site, No VOCs or TPH were detected above residential screening levels at JCES during Leighton's investigations of the JCES Site. Previous subsurface sampling by Ramboll also did not identify VOCs or TPH above residential screening criteria at the Site. Therefore, these groups of chemicals are not currently considered constituents of concern for the Site. However low concentrations of benzene, below residential screening levels, were observed in soil samples collected from borings JC10, JC10N, JC26, located in the northern portion of the Site, just south the bus barn. During future subsurface demolition or grading activities in that area, environmental monitoring for VOCs using a PID, and visual observation for discolored soils is recommended.

Ramboll found no metals at concentrations above residential screening levels (or accepted background levels for arsenic), except for lead in one sample (JC-SB-13 at 0-0.5 feet bgs) with a concentration of 89 mg/kg compared to the screening level of 80 mg/kg (see **Figures 5b through 5h**). Leighton limited the approximate extent of this soil impact with borings JC-15, JC-16 and JC-17 which had no detected lead above the residential screening level (see **Figure 5a**). Soils in a limited area around sample location JC-SB-13, located in the planter north of Building D is already recommended for removal because of the presence of PCBs above screening levels.

Lead was also detected at concentrations above the residential use screening levels of 80 mg/kg in two of Leighton's initial soil samples, in near surface soils in the front lawn area at JC-24-0.5 (84 mg/kg) and in deeper soils under pavement at the western parking area near the septic tank at JC-12-7.0 (1000 mg/kg). Additional sampling for lead was conducted in the vicinity of borings JC-12 and JC-24 in the step-out investigation. Lead was detected at a concentration above the residential use screening level of 80 mg/kg in one of these follow-up soil samples, JC-24W-0.5 (84 mg/kg). To determine whether the soils in the area of these lead detections a samples JC-12-7.0, JC-24-0.5 and JC-24W-0.5 would be considered a hazardous waste, these samples were analyzed for soluble (STLC) lead using EPA Method 6010B. The soluble lead were 0.12 mg/L, 2.3 mg/L and 2.6, which is less than the STLC limit of 5.0 mg/L in soil. Soil in the vicinity of these borings will likely be classified as non- hazardous waste if removed from the subject site. It is recommended that a limited removal of near surface soils in the vicinity of soil samples JC-24 and JC24W located in the front lawn area be conducted. Since the elevated concentration of lead found in JC-12 is located in a paved area, at 7 feet below ground surface, no excavation of soil is recommended in this area is recommended, unless a

Leighton

future removal of the septic tank, or significant grade changes are anticipated during future construction.

Since detectable concentrations of benzene below residential screening levels were noted in soils collected from Leighton's borings at the northern property line of JCES (JC-10, JC-10-N and JC-10E, see **Figure 6**), it is recommended that environmental monitoring be conducted during future grading of this area, including observations for discolored odorous soil and photo ionization detector (PID) monitoring for VOCs.

The locations of soil samples with elevated concentrations of constituents of concern, which require environmental consideration prior to future grading activities are depicted on **Figure 7**.

8.0 LIMITATIONS

This investigation was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions.

The observations and conclusions presented in this report are professional opinions based on the scope of activities, work schedule, and information obtained through the activities described herein, and are limited to the portion of the Site investigated. Opinions presented herein apply to property conditions existing at the time of our study and cannot necessarily be taken to apply to property conditions outside of the area investigated or changes that we are not aware of or have not had the opportunity to evaluate. It must be recognized that conclusions drawn from these data are limited to the portion of the Site investigated, and the amount, type, distribution, and integrity of the information collected at the time of the investigation, and the methods utilized to collect and evaluate the data. Although Leighton has taken steps to obtain true copies of available information, we make no representation or warranty with respect to the accuracy or completeness of the information provided by others.

Table 2 - Soil Analytical Results for OCPs

Sample ID	Sample Depth (feet)	Date Sampled	Organochlorine Pesticides (OCPs) EPA Method 8081								
			4,4' DDT	4,4' DDE	Chlordane	alpha Chlordane	gamma Chlordane	Dieldrin	Endosulfan I	Heptachlor epoxide	All other OCPs
		Units	ug/kg	ug/kg	ug/kg	ug/kg	ug/kg	ug/kg	ug/kg	ug/kg	--
SCREENING CRITERIA											
		USEPA RSL Residential Soil	1,900	2,000	1,700	--	--	34	470,000	70	Varies
		DTSC-SL Residential Soil	1,900	2,000	1,700	--	--	34	450,000	70	Varies

Notes:

USEPA RSL = Environmental Protection Agency Regional Screening Levels (RSLs) for residential soil (May 2020)
DTSC-SL = Department of Toxic Substances Control (DTSC) Office of Human and Ecological Risk (HERO) Note Number 3 (June 2020)
ug/kg = Micrograms per Kilogram
-- = Not Analyzed or Not Applicable
ND or <25 = Not Detected Above Laboratory Reporting Limits
Red values exceed one or more screening level

Legend

Sample ID	Depth	Depth
Compound	Concentration	Concentration

Site Boundary

Juan Cabrillo Elementary School (JCES)

Soil Sample Location AOI-1: Results exceed residential RSLs

Soil Sample Location AOI-1: PCBs were not detected above laboratory RLs

Notes:

1. Soil samples were analyzed for Polychlorinated Biphenyls (PCBs) by United States Environmental Protection Agency (USEPA) method 8082A.
2. Results are reported in micrograms per kilogram (µg/kg).
3. Only PCBs that have been found above laboratory Reporting Limits (RLs) at least once in AOI-1 are posted in the summary table.
4. RLs for Aroclor 1260 ranged from <49 to <140 µg/kg.
5. Bold cells indicates that the concentration exceed USEPA's residential Regional Screening Level (RSL) of 240 µg/kg.
6. ND - Not detected above laboratory RLs.
7. Depth is in feet below ground surface.

Juan Cabrillo Elementary School (JCES)

Soil Sample Location AOI-4: Pesticides were detected above laboratory RLs

Soil Sample Location AOI-4: Pesticides were not detected above laboratory RLs

Notes:

1. Soil samples were analyzed for Pesticides by United States Environmental Protection Agency (USEPA) method 8081.
2. Results are reported in micrograms per kilogram (µg/kg).
3. Only Pesticides that have been found above laboratory Reporting Limits (RLs) at least once in AOI-4 are posted in the summary table.
4. RLs for 4,4'-Dichlorodiphenyldichloroethylene (4,4'-DDE) and 4,4'-Dichlorodiphenyltrichloroethane (4,4'-DDT) ranged from <4.9 to <9.9 µg/kg.
5. Depth is in feet below ground surface.
6. ESHA – Endangered Species Habitat Area.

- Soil Sample Location (Leighton, 2020) With Detected Concentrations Above Residential RSLs
- Soil Sample Location (Leighton, 2020)
- Soil Sampling Location: Results ranged from ND to < 2020 residential RSLs (Ramboll, 2015)
- Soil Sampling Location: Results Exceed 2020 residential RSLs (Ramboll, 2015)
- Juan Cabrillo Elementary School (JCES)

ND J = Estimated detection below laboratory reporting limits (See Table 4; Appendix D)
ND = Not Detected
-- = Not Analyzed or Not Applicable
Notes:
Depth is measured in feet below existing ground surface
Laboratory results for TPH are reported in miligrams per kilogram (mg/kg);
laboratory results for Benzene and Toluene are reported in micrograms per kilogram (ug/kg)

- Soil Sampling Location: Results Exceed 2020 residential RSLs (Ramboll, 2015)
- Juan Cabrillo Elementary School (JCES)

2,600= Concentration exceeds one or more regulatory screening criteria
1000 J= Anomalously high estimated concentration below laboratory reporting limit

Notes:
Depth is measured in feet below existing ground surface.
All detections for constituents of concern from this study are displayed;
only detections above residential RSLs shown for prior study by Ramboll.
Lead concentrations are reported in miligrams per kilogram (mg/kg);
all other laboratory results are reported in micrograms per kilogram (ug/kg)

Notes:
Bolded values exceed the Residential DTSC-Modified RSL or USEPA RSL
µg/kg - micrograms per kilogram
Field duplicates are shown in italics
PCBs by USEPA Method 8082A
PCBs - Polychlorinated biphenyls
DTSC - Department of Toxic Substances Control
USEPA - United States Environmental Protection Agency
RSLs - Regional Screening Levels
bgs - below ground surface

Notes:
Bolded values exceed the Residential DTSC-Modified RSL or USEPA RSL
µg/kg - micrograms per kilogram
Field duplicates are shown in italics
Pesticides by USEPA Method 8081
USEPA - United States Environmental Protection Agency
bgs - below ground surface
DTSC - Department of Toxic Substances Control
RSLs - Regional Screening Levels
J - Results and or reporting limits are estimated
NA - not available

RSLs - Regional Screening Levels
bgs - below ground surface

J - Results and or reporting limits are estimated

[a] Arsenic occurs naturally in soil. An evaluation of arsenic soil data from school sites in Southern California found arsenic concentrations ranging from 0.15 mg/kg to 20 mg/kg, with an upper-bound background arsenic concentration of 12 mg/kg (Chernoff G, Bosan W, Oudiz D. 2008. Determination of a Southern California Regional Background Arsenic Concentration in Soil). Arsenic concentrations in soil samples collected at the site were conservatively screened against 12 mg/kg. Arsenic concentrations greater than 12 mg/kg were further evaluated in Section 9 of the PEA Report.

[b] - As specified in the DTSC-approved PEA Work Plan, the reporting limit for thallium exceeds the RSL. As all results are non-detect, values are not bolded.

VOCs - Volatile Organic Compounds

VOCs by United States Environmental Protection Agency Method 8260B

[a] As specified in the DTSC-approved PEA Work Plan, the reporting limit for 1,2,3-trichloropropane and 1,2-dibromo-3- chloropropane exceed the RSL. As all results are non-detect, values are not bolded.

[b] Soil gas screening levels are calculated as the ratio of DTSC- Modified RSL (Cal/EPA 2014) or USEPA RSL (USEPA 2014) for residential air to a default attenuation factor of 0.001 for future residential building, as recommended by CalEPA (2013). This screening evaluation does not take into account sample depth.

Soil gas screening levels are applicable to soil gas data collected at 5 feet bgs or less.

Notes:

µg/L - micrograms per liter

bgs - below ground surface

Field duplicates are shown in italics

VOCs - Volatile Organic Compounds

VOCs by United States Environmental Protection Agency Method 8260B

[a] As specified in the DTSC-approved PEA Work Plan, the reporting limit for 1,2,3-trichloropropane and 1,2-dibromo-3- chloropropane exceed the RSL. As all results are non-detect, values are not bolded.

[b] Soil gas screening levels are calculated as the ratio of DTSC- Modified RSL (Cal/EPA 2014) or USEPA RSL (USEPA 2014) for residential air to a default attenuation factor of 0.001 for future residential building, as recommended by CalEPA (2013). This screening evaluation does not take into account sample depth.

Soil gas screening levels are applicable to soil gas data collected at 5 feet bgs or less.

Notes:

Bolded values exceed the Residential DTSC-Modified RSL or USEPA RSL

mg/kg - milligrams per kilogram

Field duplicates are shown in italics

Metals by USEPA Method 6010/7471

USEPA - United States Environmental Protection Agency

J - Results and/or reporting limits are estimated

bgs - below ground surface

DTSC - Department of Toxic Substances Control

RSLs - Regional Screening Levels

[a] Arsenic occurs naturally in soil. An evaluation of arsenic soil data from school sites in Southern California found arsenic concentrations ranging from 0.15 mg/kg to 20 mg/kg, with an upper-bound background arsenic concentration of 12 mg/kg (Chernoff G, Bosan W, Oudiz D. 2008. Determination of a Southern California Regional Background Arsenic Concentration in Soil).Arsenic concentrations in soil samples collected at the site were conservatively screened against 12 mg/kg. Arsenic concentrations greater than 12 mg/kg were further evaluated in Section 9 of the PEA Report.

[b] As specified in the DTSC-approved PEA Work Plan, the reporting limit for thallium exceeds the RSL. As all results are non-detect, values are not bolded.

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative
440-271915-1

Comments
No additional comments.

Receipt
The samples were received on 9/16/2020 2:30 PM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.6º C.

GC Semi VOA
Method 8081A: The continuing calibration verification (CCV) associated with batch 570-95352 recovered above the upper control limit for < 4,4'-DDT>. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCV 570-95352/5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 6020: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Antimony for preparation batch 440-624745 and analytical batch 440-624823 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6020: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision of Barium and Antimony for preparation batch 440-624746 and analytical batch 440-624839 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

440-271915 Chain of Custody

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐ Return to Client ☑ Disposal by Lab ☐ Archive for _____ Months

Special Instructions/QC Requirements & Comments:

Custody Seals Intact: ☐ Yes ☐ No | Custody Seal No. | Cooler Temp. (°C): Obs'd 1.7 Corr'd 1.6 | Therm ID No. 1289

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins Calscience.

Possible Hazard Identification	*Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*
Unconfirmed	☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* _____ *Months*

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	False	Refer to Job Narrative for details.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 10/2/2020 5:45 PM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 5.2º C and 5.5º C.

GC/MS VOA
Method 8260B: The initial calibration curve analyzed in batch 570-99997 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered an estimated concentration.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-99997.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
Method 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-100006.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081A: The continuing calibration verification (CCV) associated with batch 570-100496 recovered above the upper control limit for < Endosulfan I>. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8081A: The following samples has clear evidence of the presence of chlordane based on the presence of cis and trans chlordane; however, the chlordane peaks in the sample do not closely match the laboratory's Technical Chlordane standard: JC-13-1.0 (440-272679-19), JC-18-0.5 (440-272679-38) and JC-11-0.5 (440-272679-57). As a result, there is increased quantitative uncertainty associated with this result.

Method 8082: The continuing calibration verification (CCV) associated with batch 570-100338 recovered above the upper control limit for < DCB Decachlorobiphenyl (Surr)>. The samples associated with this CCV were non-detects; therefore, the data have been reported.

Method 8082: The following sample appears to contain polychlorinated biphenyls (PCBs); however, due to weathering or other environmental processes, the PCBs in the sample do not closely match any of the laboratory's Aroclor standards used for instrument calibration: JC-20-0.5 (440-272679-45). The sample(s) has been quantified and reported as Aroclor-1260. Due to the poor match with the Aroclor standard(s), there is increased qualitative and quantitative uncertainty associated with this result.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 6010B: The serial dilution performed of Cr and V for the following sample associated with batch 440-627056 was outside control limits: (440-272679-F-9-A SD ^25)

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-626781 and analytical batch 440-627056 were outside control limits for Antimony and Vanadium. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-626811 and analytical batch

Job ID: 440-272679-1 (Continued)

Laboratory: Eurofins Calscience Irvine (Continued)

440-627056 were outside control limits for Antimony. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
Method 5035: The following samples were received in pre-weighed containers with a label that was added in the field, which would cause a slight low bias in the final results. JC-10-3.0 (440-272679-7), JC-10-5.0 (440-272679-8), JC-23-0.5 (440-272679-9), JC-23-1.0 (440-272679-10), JC-23-3.0 (440-272679-11), JC-11-1.0 (440-272679-58), JC-11-3.0 (440-272679-59), JC-25-1.0 (440-272679-66) and JC-25-3.0 (440-272679-67).

Method 5035: The following samples were received in pre-weighed containers with a label that was added in the field, which would cause a slight low bias in the final results. JC-10-3.0 (440-272679-7), JC-10-5.0 (440-272679-8), JC-23-0.5 (440-272679-9), JC-23-1.0 (440-272679-10), JC-23-3.0 (440-272679-11), JC-11-1.0 (440-272679-58), JC-11-3.0 (440-272679-59), JC-25-1.0 (440-272679-66) and JC-25-3.0 (440-272679-67).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 440-272679-2

Laboratory: Eurofins Calscience Irvine

Comments
No additional comments.

Receipt
The samples were received on 10/2/2020 5:45 PM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 5.2º C and 5.5º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 1311: Insufficient sample was provided to perform the leaching procedure with the required 100g for the following sample: JC-12-7.0 (440-272679-17). The volume of leaching fluid was adjusted proportionally to maintain a 20:1 ratio of leaching fluid to weight of sample. Reporting limits (RLs) are not affected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: Leighton Consulting Inc
Project/Site: Cabrillo Elementary

Job ID: 440-272679-1
SDG: Cabrillo Elementary

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
Z	The chromatographic response does not resemble a typical fuel pattern.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Accreditation/Certification Summary

Client: Leighton Consulting Inc
Project/Site: Cabrillo Elementary

Job ID: 440-272679-1
SDG: Cabrillo Elementary

Laboratory: Eurofins Calscience Irvine

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
California	State	2706	06-30-21

Laboratory: Eurofins Calscience LLC

The accreditations/certifications listed below are applicable to this report.

ATTORNEY-CLIENT WORK PRODUCT

September 17, 2009 002-11144-03-001

Mr. Stuart Sam
Director of Facility Improvement Projects
Santa Monica-Malibu Unified School District
1651 Sixteenth Street
Santa Monica, California 90404-3891

Subject: Phase I Environmental Site Assessment, Malibu Middle and High School Campus, 30215 Morning View Drive, Malibu, California

Dear Mr. Sam:

LFR Inc. (LFR) is pleased to present the attached Phase I Environmental Site Assessment (ESA) report for the above-referenced property. The conclusions presented in this Phase I ESA report are based on the results of a reconnaissance-level site visit conducted by LFR personnel and a review of available and pertinent agency information and background material pertaining to the Site.

LFR appreciates this opportunity to provide consulting services to the Santa Monica-Malibu Unified School District. If you have any questions concerning this project, or would like to discuss other environmental concerns, please contact Stephanie Gentry at (916) 786-0320 or Martin Hamann at (714) 444-0111.

Sincerely,

Stephanie M. Gentry
Senior Toxicologist

Martin E. Hamann, PG, CHG, REA II

EXECUTIVE SUMMARY

LFR Inc. (LFR) performed a Phase I Environmental Site Assessment (ESA) of the Malibu Middle and High School Campus located at 30215 Morning View Drive in the City of Malibu, County of Los Angeles, California ("the Site").

This Phase I ESA has been conducted in accordance with the current version of the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments, Phase I Environmental Site Assessment Process (E 1527-05). The purpose of the Phase I ESA is to evaluate whether records concerning the Site and vicinity indicate a release or threatened release of hazardous materials that may pose a potential health risk to the students, faculty, and/or staff of Malibu Middle and High School.

On Site

The Site is currently improved with the following:

- multiple permanent and temporary structures
- three common areas (located among the permanent structures in the southern portion of the property)
- multiple permanent structures in the central portion of the campus that contain classrooms, laboratories (including a chemistry laboratory and photography laboratories) and shop areas
- various recreational facilities including a pool and several sports fields, which span the eastern half of the campus
- undeveloped land east of the sports fields, except for multiple footpaths and a double-track dirt road
- library, administration, and cafeteria buildings located adjacent to the southwest boundary of the Site along Morning View Drive
- two large metal barn structures used for facilities storage and vehicle maintenance, including a bus washing station ("the bus barn"), located in the northwest portion of the Site
- a greenhouse and a garden area in the northwest portion of the property
- multiple asphalt parking areas

Local Agency Research

LFR reviewed files for the Santa Monica Middle and High School at the Santa Monica-Malibu Unified School District (SMMUSD) offices in Santa Monica, the Los Angeles

Department of Public Works, and the California Regional Water Quality Control Board, Los Angeles Region (RWQCB). A review of documents indicated that two 10,000-gallon diesel underground storage tanks (USTs) and their dispensers were removed from the Site in August 1992. The USTs were located in the northwest portion of the Site near a bus maintenance area. Impacts from petroleum hydrocarbons to both soil and groundwater were detected. Soil impacts were generally limited to the areas beneath the USTs, and the affected soils were adequately defined. Four groundwater monitoring wells were subsequently installed in the vicinity of the former USTs. On September 11, 1996, the RWQCB issued a closure letter to the SMMUSD for the leaking UST (LUST) site.

Off Site

An environmental database report prepared by Environmental Data Resources, Inc. (EDR) was reviewed for local, state, and federal listings for properties within the Site vicinity. Regulatory database lists were reviewed for cases pertaining to LUSTs and aboveground storage tanks, hazardous waste sites, and abandoned sites within the specified radii of standards established by the ASTM. No off-site facilities were determined to represent an environmental concern to the Site.

Opinions

On Site

LFR identified the following recognized environmental conditions (RECs) associated with past activities at the Site that may have the potential to impact areas of the Malibu Middle and High School campus improvements project:

- **REC #1 –** Based on the original date of construction for the site buildings, the potential exists for lead-based paint (LBP), termiticides, and/or asbestos-containing materials (ACMs) to be present at the Site. It should be noted, however, that Malibu High School was part of an asbestos abatement program conducted in the 1990s.
- **REC #2 –** Two 10,000-gallon diesel USTs and their dispensers were removed from the Malibu Middle and High School campus in August 1992. Upon removal of the USTs, impacts from petroleum hydrocarbons to both soil and groundwater were detected. Four groundwater monitoring wells were installed and three rounds of groundwater monitoring were performed. Ocean Blue Engineers. Inc. concluded that, although the groundwater plume had not been fully defined, benzene, toluene, ethylbenzene, and total xylenes (BTEX) concentrations had generally been declining, and therefore requested closure from the RWQCB, which was granted on September 11, 1996. Although the case has been closed, residual concentrations of petroleum hydrocarbons remained in the soil and residual concentrations of

benzene above the maximum contaminant levels (MCLs), though diminishing, were noted in groundwater.

- **REC #3 –** Small quantities of hazardous materials were observed in the chemistry laboratory storeroom, woodshop, art studios, and photography dark room. Wastewater from these locations drains to septic systems where direct infiltration occurs. Although no evidence of chemical releases, spills or leaks was observed during the Site reconnaissance activities, potential releases from these locations via wastewater lines and/or seepage pits may have occurred over time and in aggregate constitute an REC.
- **REC #4 –** A bus washing station was observed in the bus barn. The area was serviced by two floor drains that were observed to hold standing water with an oily sheen. Although no evidence of chemical releases, spills or leaks was observed during the Site reconnaissance activities, potential releases from these locations via wastewater lines and/or seepage pits may have occurred over time and in aggregate constitute an REC.
- **REC #5 –** Several transformers are present throughout the campus. Although no releases were observed, it is possible that polychlorinated biphenyls (PCBs), which are associated with older transformers (prior to the early1980s), may have leaked historically and as such constitute an REC.
- **REC #6 –** Backup generator (*trying to get additional information from Terry to solidify – to be finalized in final version. May be an REC depending upon age of generator and fuel source*).

Off Site

A review of agency database information provided by EDR indicated there are no off-site facilities that are likely to represent an environmental concern to the Site.

Conclusions and Recommendations

LFR has performed a Phase I ESA of the Site in conformance with the scope and limitations of ASTM Practice E-1527-05. Any exceptions to or deviations from this practice are described in Section 1.4 of this report. The findings and conclusions provided herein are based on information obtained from the Site reconnaissance and agency review of the subject property and surrounding areas.

Additionally, based on the results of this Phase I ESA report, and per California Department of Education (CDE) requirements related to findings:

- The Site is not a current or former hazardous waste disposal or solid waste disposal site, and
- The Site is not a currently listed hazardous substance release site identified by the DTSC in a current list adopted pursuant to Section 25356 for removal or remedial

action pursuant to Chapter 6.8 of Division 20 of the Health and Safety Code. The Site was listed as having a former release from a UST, but case closure has been granted and as such this does not represent a current listing.

This Phase I ESA has identified several RECs or other conditions that would appear to require additional investigation prior to the Site being approved for school use:

- **REC #1 –** Due to the presence of current and former structures on the Site, the Department of Toxic Substances Control (DTSC) would likely require sampling for lead and termiticides (i.e., organochlorinated pesticides) in soil. DTSC typically requires lead sampling anytime a structure that was constructed prior to the ban of LBP in the late 1970s/early 1980s is present at a site, and typically requires organochlorine pesticide sampling anytime a structure that was constructed prior to the ban of organochlorine pesticides in the late 1970s/early 1980s is present at a site.
- **REC #2 –** As groundwater in the Site vicinity is reported to flow south and the center of the Site is located south of the former USTs, it is likely that DTSC would require soil vapor sampling related to the closed LUST case due to the detectable benzene concentrations reported prior to site closure and the agency's increased awareness of potential vapor intrusion from volatile chemicals present in the subsurface.
- **REC #3 –** Due to the potential for hazardous material releases from the chemistry laboratories, woodshop, art studios, and photography dark room to the septic system, DTSC would likely require soil sampling for metals, pH, and/or volatile organic compounds (VOCs) around the wastewater lines and seepage pits. (It is noted that VOCs are typically evaluated by collecting soil vapor samples as opposed to soil samples.)
- **REC #4 –** Due to the presence of a bus washing station in the bus barn, and observations of standing water with an oily sheen in the two floor drains, DTSC would likely require soil sampling for total petroleum hydrocarbons, polynuclear aromatic hydrocarbons, VOCs, and/or metals around the wastewater lines and seepage pits. (It is again noted that VOCs are typically evaluated by collecting soil vapor samples as opposed to soil samples.)
- **REC #5 –** Due to the presence of transformers at the Site, DTSC would likely require soil sampling for PCBs near the bases of the transformers.
- **REC #6 –** Backup generator (*trying to get additional information from Terry to solidify – to be finalized in final version. May be an REC depending upon age of generator and fuel source – may recommend sampling for TPH; however no campus improvements planned currently in this area)*.

LFR recommends development of a Preliminary Environmental Assessment (PEA) Workplan to address the RECs noted above. Following development and implementation of the sampling plan, a PEA report should be prepared to document the results of the investigation.

It is noted that this Phase I ESA has been prepared to address potential RECs located throughout the entire campus. LFR understands that SMMUSD is in the process of finalizing its plan for campus improvements. Once the Improvement Project Plan has been finalized, and assuming it is finalized prior to the preparation of the PEA Workplan, the PEA Workplan should be tailored to address those RECs located within (or potentially affecting) areas of the campus that are proposed for construction, exterior modification, and/or renovation.

If a "no further action" determination for the Site is needed from an agency, the Phase I ESA should be submitted to DTSC, along with an Environmental Oversight Application and a request for a scoping meeting.

1.0 INTRODUCTION

LFR Inc. (LFR) was commissioned by the Santa Monica-Malibu Unified School District (SMMUSD) to perform a Phase I Environmental Site Assessment (ESA) of the Malibu Middle and High School Campus located at 30215 Morning View Drive in the City of Malibu, County of Los Angeles, California ("the Site"; Figures 1 and 2). Based on the current proposed site modification plan, there are 20 proposed improvement areas within the Site boundaries that may be expanded or modified during renovation activities on the campus (Figure 3). However, as the proposed renovation plan has not been finalized, this Phase I ESA addresses the entire Malibu Middle and High School Campus, such that this report is comprehensive and covers any changes that may be made to the proposed renovation plan before it is finalized.

1.1 Purpose

The SMMUSD requested that LFR conduct a Phase I ESA for the purpose of identifying recognized environmental conditions (RECs) in connection with the redevelopment of the Site. The term "recognized environmental conditions," as defined by American Society for Testing and Materials (ASTM) Standard Practice E 1527-05, means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release or the material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with environmental laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not RECs.

This assessment has been performed to evaluate whether records concerning the Site and immediate vicinity indicate a release or threatened release of hazardous materials that may pose a potential health risk to the students, faculty, and/or staff of Malibu Middle and High School. This Phase I ESA is the first step in evaluating the Site for potentially harmful hazardous materials.

1.2 Detailed Scope of Services

This Phase I ESA was conducted for SMMUSD by LFR. The Phase I ESA conducted by LFR included, but was not limited to, the following services:

- a reconnaissance-level visit of the Site to check for evidence of the release(s) of hazardous materials and petroleum products and to assess the potential for on-site releases of hazardous materials and petroleum products

- drive-by observations of adjacent properties and the Site vicinity
- interviews with people familiar with the Site
- review of regulatory agency files
- review of historical documents
- review of available previous reports
- preparation of a report presenting our findings, including a summary of conclusions and recommendations

1.3 Significant Assumptions

LFR assumes that the purpose of this Phase I ESA is to provide appropriate inquiry into the previous ownership and use of the Site so that SMMUSD can meet environmental due diligence requirements for the siting of new schools or expansion of existing schools, as set forth in the State of California General Education Code Provisions, Chapter 1, Article 1. LFR also assumes that the information provided by SMMUSD, the regulatory database provider, and regulatory agencies is true and reliable.

1.4 Limitations and Exceptions

Site-specific activities performed by LFR and information collected regarding these activities are summarized in the following sections. The findings of this Phase I ESA are presented in Section 7.0. Opinions and conclusions drawn by LFR and identified RECs, based on the information collected as part of the Phase I ESA, are presented in Sections 8.0 and 9.0, respectively.

The opinions and recommendations presented in this report are based upon the scope of services, information obtained through the performance of the services, and the schedule as agreed upon by LFR and the original party for whom this report was originally prepared. This report is an instrument of professional service and was prepared in accordance with the generally accepted standards and level of skill and care under similar conditions and circumstances established by the environmental consulting industry. To the extent that LFR relied upon any information prepared by other parties not under contract to LFR, LFR makes no representation as to the accuracy or completeness of such information. LFR is not aware of any inaccuracies or failings of the information upon which it relied. Only the party for whom this report was originally prepared, and other specifically named parties, may make use of and rely upon the information in this report, in its entirety, for a period not to exceed 180 days in accordance with the ASTM's "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," ASTM Designation E 1527-00, dated May 10, 2000; the ASTM's "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," ASTM Designation E 1527-05, dated November 1, 2005; and/or the Code of Federal Regulations (CFR) 40 Part 312, "Standards and Practices for

All Appropriate Inquiries: Final Rule" (AAI Rule) dated November 1, 2005. After 180 days, and prior to using the information contained herein, the report should be updated in accordance with ASTM Standards and federal regulations.

The findings presented in this report apply solely to site conditions existing at the time when LFR's assessment was performed. It must be recognized, however, that an ESA is intended for the purpose of evaluating the potential for contamination through limited research and investigative activities and in no way represents a conclusive or complete site characterization. Conditions in other parts of the Site may vary from those at the locations where data were collected. LFR's ability to interpret investigation results is related to the availability of the data and the extent of the investigation activities. As such, 100 percent confidence in ESA conclusions cannot reasonably be achieved.

LFR, therefore, does not provide any guarantees, certifications, or warranties (express or implied) that a property is free from environmental contamination. Furthermore, nothing contained in this document shall relieve any other party of its responsibility to abide by contract documents and all applicable laws, codes, regulations or standards.

1.5 Special Terms and Conditions

All observations reported herein were based on visual observations conducted during reconnaissance of the subject area, information from agency records, and review of other available historical records.

The scope of work for this Phase I ESA did not include testing of electrical equipment for the potential presence of polychlorinated biphenyls (PCBs), testing materials for the presence of asbestos or collection of other environmental samples; assessment of natural hazards such as naturally occurring asbestos, radon gas, or methane gas; assessment of the potential presence of radionuclides; or assessment of nonchemical hazards such as the potential for damage from earthquakes or floods, or the presence of endangered species or wildlife habitats. This Phase I ESA also did not include an extensive assessment of the environmental compliance status of the Site or of the businesses operating at the Site, or a health-based risk assessment.

1.6 User Reliance

This report is for the exclusive use of the SMMUSD, their legal counsel, the California Regional Water Quality Control Board, Los Angeles Region (RWQCB), and the California Environmental Protection Agency, Department of Toxic Substances Control (DTSC). Use of this report by any other party shall be at such party's sole risk.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The Malibu Middle and High School campus is located at 30215 Morning View Drive, north of the intersection of Morning View Drive and Merritt Drive, in the City of Malibu, County of Los Angeles, California (Figure 1). Based on information provided by the City of Malibu, the approximately 72-acre campus that contains the Site has been assigned the following Assessor's Parcel Numbers (APNs): 4469-017-900, 4469-017-901, 4469-017-902, and 4469-017-903.

2.2 Site and Vicinity General Characteristics

The Site is enclosed by the boundaries of the Malibu Middle and High School campus (Figure 1).

The topography of the Site and site vicinity slopes gently toward the west-southwest. Land in the site vicinity consists of rural residential and recreational properties.

2.3 Current Use of the Site

The Site is currently occupied by the Malibu Middle and High School campus. The Site is used for educational purposes. A detailed Site Plan is presented as Figure 2.

There are 20 proposed improvement areas within the Site boundaries that may be expanded or modified during renovation activities on the campus (Figure 3).

2.4 Descriptions of Structures, Roads, and Other Improvements on the Site

The Site is currently improved with multiple permanent and temporary structures and various recreational facilities including a pool and multiple sports fields. Multiple permanent structures that contain classrooms, laboratories, and shop areas are located in the central portion of the campus. There are three common areas located among the permanent structures in the southern portion of the property. The library, administration, and cafeteria buildings are located adjacent to the southwest boundary of the Site along Morning View Drive. Two large metal barn structures that are used for facilities storage and vehicle maintenance, including a bus washing station ("the bus barn"), are located in the northwest portion of the Site.

A greenhouse and garden area are located in the northwest portion of the property. The pool and sports fields span the eastern half of the campus. The area to the east of the

sports fields is generally undeveloped land except for multiple footpaths and a double-track dirt road. There are multiple asphalt parking areas on the Site.

2.4.1 Source of Potable Water

Los Angeles County Waterworks District No. 29 provides potable water to the Site.

2.4.2 Sewage Disposal System

The Malibu Middle and High School disposes of sewage and wastewater via on-site septic systems. The septic systems are designed with large subsurface tanks for settling of solid waste and vertical concrete seepage pits for infiltration of wastewater. The seepage pits are approximately 4 feet in diameter and are designed to infiltrate from approximately 10 feet below ground surface (bgs) to the base of the pit. There are 5 septic systems with a total of 22 seepage pits located on the Site (GeoConcepts 2009b).

The Site is currently undergoing renovation of its septic systems.

2.4.3 Waste Disposal and Recycling

Solid waste and recycling are transported offsite by Waste Management Company.

2.4.4 Heating and Cooling Systems

Ventilation and air conditioning systems are either located on the roofs or adjacent to structures on the Malibu Middle and High School campus. Southern California Edison (SCE) supplies electricity to Malibu Middle and High School. The Southern California Gas Company (SCGC) supplies natural gas to Malibu Middle and High School.

2.5 Current Uses of Adjoining Properties

The Site is entirely contained within the boundaries of the Malibu Middle and High School campus. An equestrian facility is located along the eastern Site boundary. A church is located adjacent to the southernmost corner of the campus, and an elementary school is located adjacent to the westernmost portion of the campus. The remainder of the adjoining properties can be described as either residential or rural-residential.

3.0 USER PROVIDED INFORMATION

The following items regarding the Site were provided by SMMUSD. Wherever the U.S. Environmental Protection Agency's (EPA) AAI Rule permits either the

Environmental Professional or the report user to conduct an inquiry, that inquiry has been performed by LFR and SMMUSD provided materials.

3.1 Title Records

LFR was not provided with title records for the site parcel as part of this Phase I ESA.

3.2 Specialized Knowledge

The SMMUSD did not provide LFR with any additional specialized knowledge, beyond that described elsewhere in this report, as part of this Phase I ESA.

3.3 Commonly Known or Reasonably Ascertainable Information

Information provided by the SMMUSD is referenced, where applicable, throughout this report.

3.4 Valuation Reduction for Environmental Issues

The SMMUSD did not provide LFR with an estimated valuation reduction, related to known environmental issues associated with the Site, as part of this Phase I ESA.

3.5 Owner, Site Manager, and Occupant Information

Malibu Middle and High School is reportedly owned by SMMUSD.

Interview documentation is included in Appendix D.

3.6 Reason for Performing Phase I

This Phase I ESA was performed to provide appropriate inquiry in the current or past uses of the Site for the purpose of ascertaining RECs associated with the Site to evaluate its suitability for the construction or modification of facilities within the current Malibu Middle and High School campus.

3.7 Other

No other information was obtained during the investigation.

4.0 RECORDS REVIEWED

4.1 Published Government List Review

Regulatory agency database information was obtained from the Radius Map Report compiled by Environmental Data Resources, Inc. (EDR). The Radius Map Report maps and lists properties in U.S. government and California state environmental databases with existing conditions or status that may have the potential to impact the Site. The EDR report is provided as Appendix A. The direction of groundwater flow in the site vicinity is inferred to be to the south based on groundwater monitoring completed on the Site from May 1995 to July 1996.

There were four listings at the Site for the current tenant, as summarized below:

- **Malibu High** is listed in the FINDS database. The FINDS database is a pointer to other databases with more complete information, and does not include any technical information.
- **Santa Monica Malibu Uni Sch D** is listed on the Los Angeles County HMS database. The facility identification number is 012962-013216 and the status is listed as "removed."
- **Santa Monica-Malibu USD/Malibu HI** is listed twice in the HAZNET database. The first listing is related to the disposal of liquids containing mercury at concentrations less than 20 milligrams per liter (mg/l) via a transfer station. The other listing (under the name Malibu High School) is related to the disposal of asbestos-containing waste at an appropriate landfill facility.
- **Malibu High School** is listed in the LUST, LUST REG 4, Cortese, and SWEEPS UST databases for a 1993 hydrocarbon release from a leaking underground storage tank (LUST). The current status of the listings is "Case Closed"; see Section 4.3 for more information regarding the former USTs on the Site.

4.1.1 Federal Environmental Record Sources

ASTM E 1527-05 guidance requires review of the following federal databases.

4.1.1.1 National Priorities List (1.0 mile)

The National Priorities List (NPL) is a subset of the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) and identifies over 1,200 sites for priority cleanup under the Superfund program. An NPL site must meet or surpass a predetermined hazard ranking system score, be chosen as a state's top priority site, or meet three specific criteria set jointly by the U.S. Department of Health and Human Services and the U.S. EPA. Source: U.S. EPA.

There are no NPL listed properties within 1.0 mile of the Site.

4.1.1.2 Delisted NPL Site List (1.0 mile)

The Delisted NPL Site List includes properties that have been removed from the NPL.

There are no Delisted NPL properties within 1.0 mile of the Site.

4.1.1.3 CERCLIS (0.5 mile)

CERCLIS contains data on potentially hazardous waste sites that have been reported to the U.S. EPA by states, municipalities, private companies, and private persons pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The CERCLIS List includes sites that are either proposed for the NPL or in the screening and assessment phase for possible inclusion on the NPL. Source: U.S. EPA/National Technical Information Service (NTIS).

There are no CERCLIS listed properties within 0.5 mile of the Site:

4.1.1.4 CERCLIS-No Further Remedial Action Planned (0.5 mile)

CERCLIS-No Further Remedial Action Planned (CERCLIS-NFRAP) contains data on sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be place on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. Source: U.S. EPA/NTIS.

There are no CERCLIS-NFRAP listed properties within 0.5 mile of the Site.

4.1.1.5 Corrective Action Report (1.0 mile)

The Corrective Action Report (CORRACTS) identifies hazardous waste handlers with Resource Conservation and Recovery Act (RCRA) corrective action activity. Source: U.S. EPA.

There are no CORRACTS listed properties within 1.0 mile of the Site.

4.1.1.6 RCRA Treatment, Storage, and Disposal Facilities (0.5 mile)

The RCRA Treatment, Storage, and Disposal (TSD) Facilities database includes selected information on facilities that generate, transport, store, treat, and/or dispose of hazardous waste, as defined by RCRA. Source: U.S. EPA/NTIS.

There are no RCRA TSD facilities listed within 0.5 mile of the Site.

4.1.1.7 RCRA Generators Lists (0.25 mile)

RCRA-Large Quantity Generators (RCRA-LQG) are those facilities that generate at least 1,000 kilograms per month (kg/month) of non-acutely hazardous waste or meet other applicable RCRA requirements. RCRA-Small Quantity Generators (RCRA-SQG) generate less than 1,000 kg/month of non-acutely hazardous waste or meet other applicable RCRA requirements.

There are no RCRA-LQG or RCRA-SQG listed facilities within 0.25 mile of the Site.

4.1.1.8 Federal Institutional Control/Engineering Control Registries (0.5 mile)

Federal institutional control and engineering control registries were requested in the database search.

There are no listed properties within 0.5 mile of the Site.

4.1.1.9 Emergency Response Notification System (Site Only)

The Emergency Response Notification System (ERNS) is a national database that records and stores information on reported releases of oil and hazardous substances. The database contains information on spill reports made to federal authorities including the U.S. EPA, U.S. Coast Guard, National Response Center, and Department of Transportation.

The Site is not listed on the ERNS database.

4.1.2 State Environmental Record Sources

ASTM E 1527-05 requires review of the following state databases.

4.1.2.1 State and Tribal-Equivalent CERCLIS Hazardous Waste Sites (1.0 mile)

The State and Tribal-Equivalent CERCLIS Hazardous Waste Sites (SHWS) database lists properties that have potential or confirmed releases of hazardous substances.

There are no SHWS listed sites within 1.0 mile of the Site.

4.1.2.2 State and Tribal-Equivalent SWF/LF, State Landfill (0.5 mile)

The State and Tribal-Equivalent SWF/LF, State Landfill (SWIS) database is an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 2004 criteria for solid waste landfills or disposal sites.

There are no SWIS listed facilities within 0.5 mile of the Site.

4.1.2.3 State and Tribal LUST Database (0.5 mile)

The State and Tribal LUST database is a list of reported leaking UST incidents.

In addition to the Site listing, one property was listed on the LUST database within a 0.5-mile radius of the Site:

- **Zuma Beach Service Yard** (30100 Pacific Coast Highway) is listed as a closed case for a 1988 diesel release. Soil was the only media affected and the impacted soils were excavated and treated. This listing does not represent an environmental concern for the Site.

4.1.2.4 State and Tribal Registered UST (Site and Adjoining Properties)

There are no state and tribal registered UST facilities listed on the Site or on adjoining properties.

4.1.25 Waste Management Unit Database System (0.5 mile)

The Waste Management Unit Database System (WMUDS/SWAT) is used by the State Water Resources Control Board (SWRCB) for tracking and inventory of waste management units. WMUDS comprises the following databases: facility information, scheduled inspections information, waste management unit information, Solid Waste Assessment Test (SWAT) program information, SWAT report summary information, SWAT report summary data, Chapter 15 information and monitoring parameters, TPCA program information, RCRA program information, closure information, and interested parties information. Source: SWRCB.

There are no WMUDS/SWAT facilities within 0.5 mile of the Site.

4.2 Additional Environmental Record Sources

No environmental liens or activity and use limitations were noted in the environmental database reports provided by EDR.

The following databases were also checked by EDR:

- CONSENT [EPA Regional Offices Superfund Consent Decrees (1 mile)]
- ROD [Records of Decision (1 mile)]
- HMIRS [Hazardous Materials Information Reporting Systems (target property)]
- MLTS [Material Licensing Tracking System (target property)]

- MINES [Mines Master Index Files (0.25 mile)]
- PADS [PCB Activity Database System (target property)]
- DOD [Department of Defense Site (1 mile)]
- RAATS [RCRA Administrative Action Tracking System (target property)]
- TRIS [Toxic Chemical Release Inventory System (target property)]
- TSCA [Toxic Substances Control Act (target property)]
- SSTS [Section 7 Tracking Systems (target property)]
- FTTS [FIFRA/TSCA Tracking System (target property)]
- AST [Aboveground Petroleum Storage Tank Facilities (target property)]
- CLEANERS [California DTSC Drycleaners (0.25 mile)]
- CA WDS [Waste Discharge System (target property)]
- DEED [List of Deed Restrictions (target property)]
- SCH [School Property Evaluation Program (0.25 mile)]
- EMI [Emissions Inventory Data (target property)]
- REF [Unconfirmed Properties Referred to Another Agency (0.25 mile)]
- NFA [No Further Action Determination (0.25 mile)]
- NFE [Properties Needing Further Evaluation (0.25 mile)]
- CA SLIC [Spills, Leaks, Investigation & Cleanup Cost Recovery Listing (0.50 mile)]
- COAL GAS [Manufactured Gas Plants (1.0 mile)]
- ENVIROSTOR [DTSC Site Mitigation and Brownfields Reuse Program (1.0 mile)]
- VCP [Voluntary Cleanup Program Properties (0.50 mile)]

No other properties within their respective search distances were listed on the above databases that appear likely to represent an environmental concern to the Site. In addition, no facilities listed on the Orphan Summary of the EDR report appear likely to represent an environmental concern to the Site.

All of the databases reviewed for this assessment appeared to be complete and sufficient for the purposes of this assessment.

4.3 Agency File Review

4.3.1 Department of Toxics Substance Control

LFR requested information from the DTSC regarding the Site address. According to the DTSC, there are no records for the Site address.

4.3.2 City Planning and Building Departments

LFR requested permit records from City of Malibu; no building permits for the Site are on file with the city (Appendix E).

4.3.3 California Division of Oil, Gas, and Geothermal Resources

LFR reviewed readily available and pertinent oil and gas field maps from the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR). According to the W2-1 Map, the McKeon Oil Co. "Malibou 1" well was located within 0.5 mile of the Site. According to the map information, the "Malibou 1" well was a "plugged and abandoned dry hole" and thus does not represent an environmental concern for the Site.

4.3.4 Los Angeles County Department of Environmental Health, Public Health Investigations

LFR requested information pertaining to the Site from the Los Angeles County Department of Environmental Health, Public Health Investigations (PHI). According to the PHI, there are no records for the Site.

4.3.5 SMMUSD Files

LFR reviewed files for the Site at the SMMUSD offices in Santa Monica. Based on a review of documents, two 10,000-gallon diesel USTs and their dispensers were removed from the Malibu Middle and High School campus in August 1992. The USTs were located in the bus maintenance area, in the northwest portion of the Site. Impacts from petroleum hydrocarbons to both soil and groundwater were detected, with the maximum concentration of total petroleum hydrocarbons (TPH) of 5,800 milligrams per kilogram (mg/kg) at a depth of 13 feet bgs. Soil impacts were generally limited to beneath the USTs and the affected soils were adequately defined.

Four groundwater monitoring wells were subsequently installed in the vicinity of the former USTs. Depth to water in these wells ranged from approximately 27.6 to 38.65 feet bgs from May 1995 to July 1996, with a southward groundwater gradient toward the center of the Site.

Using the Leaking Underground Fuel Tank (LUFT) Field Manual, Ocean Blue Engineers, Inc. (Ocean Blue) determined the leaching potential of TPH in the soil to be 100 mg/kg. The manual employs several characteristics to determine concentration of soil contaminants that can be left in place, and takes into account such factors as groundwater depth, annual precipitation, unique site features, and manmade conduits. While the concentrations encountered at the school campus exceeded the concentrations in the LUFT Field Manual, Ocean Blue concluded that the source of contaminants had been removed, and since the Site was paved, it was unlikely that soil contaminants would impact groundwater unless the water table rose.

After three rounds of groundwater monitoring, concentrations of benzene, toluene, ethylbenzene, and xylenes (BTEX) were all below their respective Maximum Contaminant Levels (MCLs), with one exception. Benzene had been detected at concentrations as high as 119.7 micrograms per liter (μg/l); the MCL for benzene is 1 μg/l. Ocean Blue concluded that, although the groundwater plume had not been fully defined, concentrations of BTEX had generally been declining, and therefore requested closure from the RWQCB.

Information obtained from the GeoTracker database (Section 4.3.7) and EDR indicates that the RWQCB has closed this UST case.

4.3.6 Los Angeles County Department of Public Works, Environmental Programs

Information reviewed at the Los Angeles County Department of Public Works (DPW) was similar to the information reviewed at the SMMUSD office, except a copy of the UST closure letter from the RWQCB dated September 11, 1996 was found in the file.

4.3.7 Los Angeles RWQCB

LFR reviewed information from the SWRCB maintained for the state's RWQCBs on the Internet at http://www.geotracker.swrcb.ca.gov. The Site address is listed as a Region 4 LUST case (# I-13216; global ID T0603704051) with a closed status. The GeoTracker database confirmed that RWQCB issued a closure letter to the SMMUSD on September 11, 1996.

4.4 Physical Setting Sources

4.4.1 Geology

4.4.1.1 Surface Features

According to the United States Geological Survey (USGS) 7.5-Minute Series Topographic Map of the Point Dume, California, quadrangle (1995), the Site is located

at an elevation of approximately 147 feet above mean sea level. The topography of the surrounding area is generally flat with a gradual slope to the south-southwest.

4.4.1.2 Subsurface Features

According to an environmental database report prepared by EDR, the geology of the Site is identified as part of the Miocene Series of the Tertiary System of the Cenozoic Era. According to the United States Department of Agriculture (USDA) Soil Conservation Service (SCS), the subject property is underlain by a Millsholm loam soil. This soil type is described as clayey with very slow infiltration rates and intermediate water holding capacity.

The Site is located in the Malibu Valley Basin, which is a small alluvial basin bounded by the Pacific Ocean to the south and by non-water bearing Tertiary rocks to the north, east, and west (California Groundwater Bulletin 2003).

4.4.2 Hydrology

4.4.2.1 Surface Water

The natural surface drainage in the site vicinity is southwest, towards the Pacific Ocean. The Pacific Ocean is approximately 0.5 mile southwest of the Site. Two ephemeral drainages are also located adjacent the Malibu Middle and High School campus, one along the northwest boundary of the Site and one to the south-southeast of the campus.

No evidence of surface water was observed at the Site or on adjacent properties. Storm water runoff from the Site flows onto adjacent streets and into storm drains.

4.4.2.2 Groundwater

Groundwater in the Malibu Valley Basin is found in Holocene alluvium comprised of clays, silts, sands and gravels that range in thickness from 90 to 140 feet (California Groundwater Bulletin 2003). Four groundwater monitoring wells were installed on the property following removal of the former USTs. Depth to water in these wells ranged from approximately 27.6 to 38.65 feet bgs from May 1995 to July 1996, with a groundwater gradient to the south toward the center of the Site.

4.4.3 Vicinity Review of Naturally Occurring Asbestos

Asbestos deposits can be found in many parts of California. The closest mapped rock outcrops that are likely to contain naturally occurring asbestos are located approximately 60 to 80 miles northwest of the Site in Santa Barbara County (DOC 2000, USGS 1969).

Based on the maps reviewed, outcrops of naturally occurring asbestos rocks are well beyond the 10-mile criterion, a distance criterion defined in the "Interim Guidance, Naturally Occurring Asbestos (NOA) at School Sites" (DTSC 2004).

It should be noted that certain rocks, which sometimes have associated asbestos when metamorphosed, are shown within 10 miles of the Site on the *Geologic Map of the Topanga and Canoga Park (South ½) Quadrangles* (Dibblee 1992). However, these rocks are described as intrusive dikes and sills, and are not indicated as metamorphosed. Due to the lack of metamorphism, these rocks have a low probability of associated asbestos.

Based on these observations, the potential for naturally occurring asbestos to be present on the Site is considered low.

4.5 Historical Use Information on the Site and Site Vicinity

The following information was obtained from a review of historical topographic maps, city directories and aerial photographs of the site vicinity (Appendix B).

4.5.1 Topographic Maps

LFR reviewed the following historical USGS topographic maps: the 1903 Camulos, California, 30-Minute Series; the 1921 and 1947 Triunfo Pass, California, 15-Minute Series; and the 1950 (with photorevisions dated 1967, 1981, and 1994), 1951, and 1995 Point Dume, California 7.5-Minute Series.

The 1903, 1921, and 1947 maps all depict the Site as undeveloped land. Pacific Coast Highway (PCH) was depicted as a dirt road approximately 0.2 mile south of the Site on the 1903 and 1921 maps, and as a paved highway beginning on the 1947 map.

The 1951 map depicts the Site as undeveloped land north of Morning View Drive. Several new roads in the Site vicinity lead to scattered residences.

The 1967, 1981, 1994, and 1995 maps all depict several buildings on the school campus. In addition, buildings were depicted west of the Site on the Juan Cabrillo Elementary School property. Surrounding land use remains relatively unchanged.

No environmental concerns were identified during a review of the topographic maps.

4.5.2 Aerial Photograph Review

Historical research into the land use of the Site included a review of historical aerial photographs of the Site vicinity. LFR reviewed aerial photographs of the Site that were received from EDR for the years 1928, 1947, 1952, 1965, 1976, 1990, 1994, and

2002. Brief descriptions of the Site and vicinity as they appear in these photographs are provided below. Copies of the aerial photographs are provided in Appendix B.

1928 and 1947

The 1928 and 1947 photographs depict the Site as undeveloped land covered with natural vegetation. PCH is depicted approximately 0.2 mile south of the Site. Morning View Drive is first depicted on the 1947 photograph.

1952

In the 1952 aerial photograph, the Site and surrounding area appear to be mostly undeveloped, although the central portion of the Malibu Middle and High School campus appears to have been used for agriculture (likely dry land farming).

1965

The 1965 photograph depicts a few school buildings on the Malibu Middle and High School campus (cafeteria, a classroom structure, and the bus barn). The dry land farming agricultural use has been abandoned. Structures are also depicted on the Juan Cabrillo Elementary School campus to the west. Scattered residential development is evident in the Site vicinity.

1976

In the 1976 photograph, additional buildings are depicted on the Site, including the library and administration buildings in the southwest portion of the Site and additional structures in the central portion of the Site (current classrooms, laboratories, and shop areas). The football field and track are visible on the east side of the campus.

1990, 1994, and 2002

The 1990, 1994, and 2002 aerial photographs all depict the Site in the current configuration. The surrounding properties consist of scattered residential development.

Based on a review of the aerial photographs, historic agricultural activities that may be associated with historic pesticide usage were identified on the central portion of the Site. However, the activities appear to be related to dry land farming, which is generally thought not to involve use or application of pesticides and/or water. As such, these agricultural activities are not identified as an environmental concern within this report. No additional environmental concerns were identified during the aerial photograph review.

4.5.3 Sanborn Map Review

Sanborn Fire Insurance Maps (Sanborn Maps) were originally generated in the late 1800s to mid 1900s to document possible fire hazards related to the types of building structures and their general use. LFR requested Sanborn maps from EDR. According to EDR, there is no Sanborn map coverage for the Site vicinity.

4.5.4 Historical City Directories

LFR reviewed a historical city directory abstract spanning the years from 1971 to 2006 at approximately five-year intervals. There are no listings at the Site address in the 1971, 1975, 1980, and 1985 directories. "Malibu High School" is listed at the Site address in the 1991 and 1996 directories. "Santa Monica Malibu High School" and the "Boy's & Girl's Club of Malibu" are listed at the Site in the 2001 and 2006 directories.

Nearby listings consist of residences and Malibu United Methodist Church.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

On June 23, 2009, Mr. Aaron Hook, a representative of LFR, conducted a reconnaissance assessment of the Site to observe general site conditions and indications of the possible use(s) and release(s) of hazardous materials and/or petroleum products. The site reconnaissance was specifically focused on the use and storage of chemicals and wastes (both above and below ground) that might impact the subject property. Photographs taken during the site visit are included in Appendix C. Interviews with site representatives were conducted prior to and during the Site reconnaissance and are documented in Appendix D.

5.2 General Site Setting

The Site is entirely contained within the Malibu Middle and High School Campus. The topography of the Site and Site vicinity slopes gently toward the west-southwest to the Pacific Ocean. Land in the Site vicinity consists of rural residential and recreational properties.

The Site is currently improved with multiple permanent and temporary structures and various recreational facilities including a pool and sports fields. Multiple permanent structures that contain classrooms, laboratories, and shop areas are located in the central portion of the campus. Three common areas are located among the permanent structures in the southern portion of the property. The library, administration, and cafeteria buildings are located adjacent to the southwest boundary of the Site along

Morning View Drive. Two large metal barn structures that are used for facilities storage and vehicle maintenance, including a bus washing station ("the bus barn"), are located in the northwest portion of the Site.

The pool and sports fields span the eastern half of the campus. The area to the east of the sports fields is generally undeveloped land except for multiple footpaths and a double-track dirt road. A greenhouse and garden area are located in the northwest portion of the property. Multiple asphalt parking areas are located on the Site.

5.3 Site Observations

The Site reconnaissance visit suggested evidence of a previous removal presumably associated with the former USTs located in the bus maintenance area, in the northwest portion of the Site. The asphalt in the vicinity of the former USTs had been replaced, suggesting the specific location of the release. Groundwater monitoring wells associated with the former USTs were also identified. Five empty 55-gallon drums were observed adjacent to the bus barn (Appendix C). Site representatives indicated that the drums were left onsite from the UST abandonment and groundwater monitoring effort.

A bus washing station was observed in the bus barn. The area is serviced by two floor drains that were observed to hold standing water with an oily sheen. According to Site representatives, the water eventually drains to a septic system that is located north of the structure.

LFR observed the chemistry classroom, which appeared to be neat and orderly. No evidence of leaks or spills of chemicals was noted. The chemicals for the entire science department are stored in a single, secure storeroom located in Classroom 102; a chemical storage inventory was provided by SMMUSD (Appendix E). Laboratory wastes are also stored in this location and are disposed of offsite on an annual basis. The hazardous materials contractor for laboratory waste disposal employed by SMMUSD is CTL Environmental Services of Harbor City, California.

LFR observed a woodshop, art classrooms, and a photography dark room where small quantities of hazardous materials were stored. No evidence of leaks or spills of chemicals was noted. One 55-gallon poly drum that was labeled for pickup by the hazardous materials contractor was observed in the photography classroom. LFR also observed a sink area with floor drains in the photography dark room (Appendix C).

Multiple groundwater monitoring wells were observed on the Site. LFR interviewed a representative of Topanga Underground, the septic system inspection contractor, for information regarding the monitoring wells and connectivity of structures and septic locations. The monitoring wells were reportedly installed between March 28 and April 6, 2009 during an evaluation of the existing septic system (GeoConcepts 2009a). According to the representative, it is likely that all of the wastewater from the science laboratories and the woodshop drain to the septic system located north of

Classroom 102. The photography dark room wastewater may drain to a septic system located in the southern portion of the Site, directly east of the library.

The nurse's office maintains one "sharps" container for used syringes that is stored in a closed, locked cabinet. The waste is then shipped in a U.S Postal Service container to Sharps Compliance, Inc., an approved waste facility. No environmental concerns associated with the "sharps" container were observed. Any medical waste (i.e., used bandages) is handled by SMMUSD custodial staff.

An outdoor storage area for water treatment chemicals was observed adjacent to the pool. The area is secured with a locked fence. Adequate warning signs and an eye wash station were also observed in the storage area. No environmental concerns associated with the chemical storage area were noted.

A backup generator is situated behind the kitchen/auditorium. [*Trying to get more information from Terry which will be included in final report. May be an REC depending upon fuel type/age of generator*.]

Multiple electrical transformers were observed on concrete pads in the sports field areas and behind the kitchen/auditorium, as noted on Figure 2. The transformer locations did not coincide with any of the currently proposed improvement areas depicted on Figure 3. No evidence of oil leaks or stained soil were observed adjacent to the transformers.

6.0 INTERVIEWS

6.1 Interviews with Site Representatives

LFR interviewed the following Malibu Middle and High School representatives: Mr. Philip Wenker, Assistant Principal of Malibu High School, and Mr. Terry Kamibayashi, District Facilities Technician. According to the interviewees, no chemical spills or environmental cleanups, other than the UST removals documented above, have occurred at the Site. They were unaware of any environmental cleanup liens against the Site, activity or land use limitations, litigations or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site, or notices from any government entity regarding possible violations of environmental laws or possible liability relating to hazardous substances or petroleum products at the Site. In addition, the interviewees did not know of any obvious indicators that point to the presence or likely presence of contamination at the Site.

6.2 Interviews with Local Government Officials

LFR contacted Mr. Robert Sanchez of the City of Malibu regarding building permit records at the City. According to Mr. Sanchez, no building permits for Malibu Middle and High School are on file with the City (Appendix E).

7.0 FINDINGS

LFR performed a Phase I ESA of the Malibu Middle and High School Campus at 30215 Morning View Drive, Malibu, County of Los Angeles, California ("the Site"; Figure 1). There are 20 proposed improvement areas within the Site boundaries that may be expanded or modified during renovation activities to the campus (Figure 2).

7.1 On Site

Based on a review of historical topographic maps, city directories, and aerial photographs, the Site and vicinity were undeveloped land from at least as early as 1903 until 1947. Scattered residential development in the Site vicinity was first apparent in 1951. The Site was depicted as mostly undeveloped land in the 1952 aerial photograph. The Site was depicted as improved with school buildings in the 1965 aerial photograph, with residences depicted in the Site vicinity. The 1952 aerial photograph depicted limited agricultural use for dry land farming in the central portion of the Site. Additional school buildings were depicted in the 1976 aerial photograph. The Site was developed to the current configuration by 1990. Malibu High School was first listed at the current Site address in the 1991 city directory.

The Site is currently improved with multiple permanent and temporary structures and various recreational facilities including a pool and multiple sports fields. Multiple permanent structures that contain classrooms, laboratories, and shop areas are located in the central portion of the campus. Three common areas are located among the permanent structures in the southern portion of the property. The library, administration, and cafeteria buildings are located adjacent to the southwest boundary of the Site along Morning View Drive. Two large metal barn structures that are used for facilities storage and vehicle maintenance, including a bus washing station ("the bus barn"), are located in the northwest portion of the Site.

The pool and sports fields span the eastern half of the campus. The area to the east of the sports fields is generally undeveloped land except for multiple footpaths and a double track dirt road. A recently developed greenhouse and an organic garden area are located in the northwest portion of the property. Multiple asphalt parking areas are located on the Site.

The Site reconnaissance visit suggested evidence of a previous removal in the northwest portion of the Site, presumably associated with the former USTs located in

the bus maintenance area. The asphalt in the vicinity of the former USTs had been replaced, suggesting the specific location of the release. Groundwater monitoring wells associated with the former USTs were also identified. Five empty 55-gallon drums were observed adjacent to the bus barn (Appendix C). Site representatives indicated that the drums were left onsite from the UST abandonment and groundwater monitoring effort.

A bus washing station was observed in the bus barn. The area is serviced by two floor drains that were observed to hold standing water with an oily sheen. According to Site representatives, the water eventually drains to a septic system located north of the structure. No oil water separators were observed; furthermore, the facility representative was not aware of one.

LFR observed the chemistry classroom, which appeared to be neat and orderly. No evidence of leaks or spills of chemicals was noted. The chemicals for the entire science department are stored in a single, secure storeroom located in Classroom 102; a chemical storage inventory was provided by SMMUSD (Appendix E). Laboratory wastes are also stored in this location and are disposed of on an annual basis. The hazardous materials contractor for laboratory waste disposal employed by SMMUSD is CTL Environmental Services of Harbor City, California.

LFR observed a woodshop, art classrooms, and a photography dark room where de minimis amounts of hazardous materials were stored. No evidence of leaks or spills of chemicals was noted. One 55-gallon poly drum that was labeled for pickup by the hazardous materials contractor was observed in the photography classroom. LFR also observed a sink area with floor drains in the photography dark room (Appendix C).

Multiple groundwater monitoring wells were observed on the Site. LFR interviewed a representative of Topanga Underground, the septic system inspection contractor, for information regarding the monitoring wells and connectivity of structures and septic locations. The monitoring wells were reportedly installed between March 28 and April 6, 2009 during an evaluation of the existing septic system (GeoConcepts 2009a). According to the representative, it is likely that all of the wastewater from the science laboratories and the woodshop drains to the septic system located north of Classroom 102. The photography dark room wastewater may drain to a septic system located in the southern portion of the Site, directly east of the library.

The nurse's office maintains one "sharps" container for used syringes that is stored in a closed, locked cabinet. The waste is then shipped in a U.S Postal Service container to Sharps Compliance, Inc., an approved waste facility. No environmental concerns associated with the "sharps" container were noted. Any medical waste (i.e., used bandages) is handled by SMMUSD custodial staff.

An outdoor storage area for water treatment chemicals was observed adjacent to the pool. The area is secured with a fence and lock. Adequate warning signs and an eye

wash station were also observed in the storage area. No environmental concerns associated with the chemical storage area were observed.

Multiple electrical transformers were observed on concrete pads in the sports field areas and behind the kitchen/auditorium. The transformer locations did not coincide with any proposed improvement areas depicted on Figure 3. No evidence of oil leaks or stained soil were observed adjacent to the transformers.

Local Agency Research

LFR reviewed files for the Site at the SMMUSD offices in Santa Monica, the LADPW, and the RWQCB. Based on a review of documents, two 10,000-gallon diesel USTs and their dispensers were removed from the Malibu Middle and High School campus in August 1992. The USTs were located near a bus maintenance area, in the northwest portion of the Site. Impacts from petroleum hydrocarbons to both soil and groundwater were detected. Soil impacts were generally limited to the area beneath the USTs, and the affected soils were adequately defined.

Four groundwater monitoring wells were subsequently installed in the vicinity of the former USTs. Depth to water in these wells ranged from approximately 27.6 to 38.65 feet bgs from May 1995 to July 1996, with a groundwater gradient to the south toward the center of the Site.

After three rounds of groundwater monitoring, BTEX concentrations were all below their respective MCLs, with one exception. Benzene was detected at concentrations as high as 119.7 μg/l; the MCL for benzene is 1 μg/l. Ocean Blue concluded that, although the groundwater plume had not been fully defined, concentrations of BTEX had generally been declining, and therefore requested closure from the RWQCB. On September 11, 1996, the RWQCB issued a closure letter to the SMMUSD for the LUST site.

LFR also contacted the DTSC, the City of Malibu, DOGGR, and PHI for information regarding the Site; however, none of these agencies had records on file for the Malibu Middle and High School property address.

Regulatory Database Listings

There were four listings for the Malibu Middle and High School address, three of which were index listings or listings relating to disposal of certain waste streams under manifest (i.e., asbestos-containing materials [ACMs] or laboratory wastes) and did not identify that any releases had occurred. The fourth listing identified an on-site release and is summarized below:

- **Malibu High School** is listed in the LUST, LUST REG 4, Cortese, and SWEEPS UST databases for a 1993 LUST hydrocarbon release. The current status of the

listings is "Case Closed"; more information regarding the former USTs on the Site is provided in Section 7.1.1.

7.2 Off Site

The Site is entirely contained within the boundaries of the Malibu Middle and High School campus. Potential environmental concerns associated with the campus are described in Section 7.1.

An environmental database report prepared by EDR was reviewed for local, state, and federal listings for properties within the site vicinity. Regulatory database lists were reviewed for cases pertaining to leaking USTs and ASTs, hazardous waste sites, and abandoned sites within the specified radii of standards established by the ASTM.

No off-site facilities were determined to represent an environmental concern to the Site.

8.0 OPINIONS

8.1 On Site

LFR identified the following features from past activities at the Site that may have the potential to impact the Malibu Middle and High School Campus improvements project areas (Figure 2):

- **REC #1 –** Based on the original date of construction for the Site buildings, the potential exists for lead-based paint (LBP), termiticides, and/or ACMs to be present at the Site. It should be noted, however, that Malibu High School was part of an asbestos abatement program conducted in the 1990s.
- **REC #2 –** Two 10,000-gallon diesel USTs and their dispensers were removed from the Malibu Middle and High School campus in August 1992. Upon removal of the USTs, impacts from petroleum hydrocarbons to both soil and groundwater were detected. Four groundwater monitoring wells were installed and three rounds of groundwater monitoring were performed. Ocean Blue concluded that, although the groundwater plume had not been fully defined, BTEX concentrations had generally been declining, and therefore requested closure from the RWQCB, which was granted on September 11, 1996. Although the case has been closed, residual concentrations of petroleum hydrocarbons remained in the soil, and residual concentrations of benzene above the MCL, though diminishing, were noted in groundwater.
- **REC #3 –** Small quantities of hazardous materials were observed in the chemistry laboratory storeroom, woodshop, art studios, and photography dark room. Wastewater from these locations drains to septic systems where direct infiltration occurs. Although no evidence of chemical releases, spills or leaks was observed

during the site reconnaissance activities, potential releases from these locations via wastewater lines and/or seepage pits may have occurred over time and in aggregate constitute an REC.

- **REC #4 –** A bus washing station was observed in the bus barn. The area is serviced by two floor drains that were observed to hold standing water with an oily sheen. Although no evidence of chemical releases, spills or leaks was observed during the site reconnaissance activities, potential releases from these locations via wastewater lines and/or seepage pits may have occurred over time and in aggregate constitute an REC.
- **REC #5 –** Several transformers are present throughout the campus. Although no releases were observed, it is possible that PCBs, associated with older transformers (manufactured prior to the early 1980s), may have leaked historically and as such constitute an REC.
- **REC #6 –** Backup generator (*trying to get additional information from Terry to solidify – to be finalized in final version. May be an REC depending upon age of generator and fuel source*).

8.2 Off Site

A review of agency database information provided by EDR indicated that no off-site facilities are likely to represent an environmental concern to the Site.

9.0 CONCLUSIONS AND RECOMMENDATIONS

LFR has performed a Phase I ESA of the Site in conformance with the scope and limitations of ASTM Practice E-1527-05. Any exceptions to or deviations from this practice are described in Section 1.4 of this report. The findings and conclusions provided herein are based on information obtained from the site reconnaissance and agency review of the subject property and surrounding areas.

Additionally, based on the results of this Phase I ESA report, and per California Department of Education (CDE) requirements related to findings:

- The Site is not a current or former hazardous waste disposal or solid waste disposal site, and
- The Site is not a currently listed hazardous substance release site identified by the DTSC in a current list adopted pursuant to Section 25356 for removal or remedial action pursuant to Chapter 6.8 of Division 20 of the Health and Safety Code. The Site was listed as having a former release from a UST, but case closure has been granted and therefore this does not represent a current listing.

This Phase I ESA has identified several RECs or other conditions that would appear to require additional investigation prior to the Site being approved for school use:

- **REC #1 –** Due to the presence of current and former structures on the Site, DTSC would likely require sampling for lead and termiticides (i.e., organochlorinated pesticides) in soil. DTSC typically requires lead sampling anytime a structure that was constructed prior to the ban of LBP in the late 1970s/early 1980s is present at a site, and typically requires organochlorine pesticide sampling anytime a structure that was constructed prior to the ban of organochlorine pesticides in the late 1970s/early 1980s is present at a site.
- **REC #2 –** Since groundwater in the Site vicinity reportedly flows southward, and the center of the Site is located south of the former USTs, it is likely that DTSC would require soil vapor sampling related to the closed LUST case due to the detectable benzene concentrations reported prior to Site closure and the agency's increased awareness of potential vapor intrusion from volatile chemicals present in the subsurface.
- **REC #3 –** Due to the potential for releases of hazardous materials from the chemistry laboratories, woodshop, art studios, and photography dark room to the septic system, DTSC would likely require soil sampling for metals, pH, and/or volatile organic compounds (VOCs) around the wastewater lines and seepage pits. (It is noted that VOCs are typically evaluated by collecting soil vapor samples as opposed to soil samples.)
- **REC #4 –** Due to the presence of a bus washing station in the bus barn, including observations of standing water with an oily sheen in the two floor drains, DTSC would likely require soil sampling for TPH, polynuclear aromatic hydrocarbons (PAHs), VOCs, and/or metals around the wastewater lines and seepage pits. (It is again noted that VOCs are typically evaluated by collecting soil vapor samples as opposed to soil samples.)
- **REC #5 –** Due to the presence of transformers at the Site, DTSC would likely require soil sampling for PCBs near the bases of the transformers.
- **REC #6 –** Backup generator (*trying to get additional information from Terry to solidify – to be finalized in final version. May be an REC depending upon age of generator and fuel source – may recommend sampling for TPH; however no campus improvements planned currently in this area)*.

LFR recommends development of a Preliminary Environmental Assessment (PEA) Workplan to address the RECs noted above. Following development and implementation of the sampling plan, a PEA report should be prepared to document the results of the investigation.

It is noted that this Phase I ESA has been prepared to address potential RECs located throughout the entire campus. LFR understands that SMMUSD is in the process of finalizing its plan for campus improvements. Once the Improvement Project Plan has been finalized, and assuming it is finalized prior to the preparation of the PEA

Workplan, the PEA Workplan should be tailored to address those RECs located within (or potentially affecting) areas that are proposed for construction, exterior modification, and/or renovation.

If a "no further action" determination for the Site is needed from an agency, the Phase I ESA should be submitted to DTSC, along with an Environmental Oversight Application and a request for a scoping meeting.

10.0 DEVIATIONS

LFR did not deviate from or alter the scope of work, as defined in Section 1.2 of this report, in any way and conducted the Phase I ESA and prepared this report in conformance with ASTM E 1527-05.

11.0 ADDITIONAL SERVICES

LFR did not perform any work outside the scope of work as defined in Section 1.2 of this report.

APPROVAL OF THE FINAL PRELIMINARY ENVIRONMENTAL ASSESSMENT REPORT FOR MALIBU MIDDLE/HIGH SCHOOL AND JUAN CABRILLO ELEMENTARY SCHOOL, 30237 AND 30215 MORNING VIEW DRIVE, MALIBU, LOS ANGELES COUNTY, CALIFORNIA (SITE CODE: 301648)

Dear Superintendent Lyon:

The Department of Toxic Substances Control (DTSC) has completed review of the Final Preliminary Environmental Assessment (PEA) Report for the Malibu Middle/High School and the Juan Cabrillo Elementary School (Site). The PEA Report was revised based on DTSC's comment letters dated June 29, 2015 and re-submitted to DTSC on September 10, 2015, by Ramboll Environ, on behalf of the Santa Monica-Malibu Unified School District (SMMUSD). The PEA investigation field work was conducted in accordance with a DTSC approved PEA Work Plan to assess potential impacts from current and historical land use at the approximately 80-acre Site property. The PEA Report documents the findings of the comprehensive soil, soil gas and groundwater investigation activities conducted under DTSC's oversight at the Site during the summer of 2014. The PEA Report also includes a Site-wide Human Health Screening Risk Evaluation (HHSRE).

Based upon the revised PEA Report, DTSC has determined volatile organic compound (VOC) concentrations at the Bus Barn Area, also identified as Area of Interest-9 (AOI-9) may pose risk to human health based on unrestricted (residential) land use risk scenario; but is appropriate for school based use. Therefore, DTSC will require a land use restriction in the form of a land use covenant be filed for AOI-9 to prevent future residential use of this area. AOI-9 is approximately 0.66 acres in size and located in the northwest portion of the Site. AOI-9 is further identified as a portion of the Los Angeles County Assessor's Parcel Number (APN) 4469-017-900. In addition, DTSC has determined no further action is necessary for the remainder of the Site.

In accordance with the California Education Code Section 17213.1 (a) (6) (A), SMMUSD is required to provide public notice of the land use covenant in a local newspaper of general circulation. DTSC will issue a Site-wide certification letter for the

Printed on Recycled Paper

Site property (including the property identified as the Malibu High School Building G Area) after the after SMMUSD has filed the land use covenant for the AOI-9 property with the Los Angeles County Recorder's Office.

Pursuant to Education Code section 17213.2, subsection (e), if a previously unidentified release or threatened release of a hazardous material or the presence of a naturally occurring hazardous material is discovered at the Site at any future time, additional assessment, investigation or cleanup may be required.

If you have any questions regarding this letter, please contact DTSC's Project Manager, Maria Gillette, at (714) 484-5377 or at Maria.Gillette@dtsc.ca.gov.

Sincerely,

APPROVAL OF THE FINAL PRELIMINARY ENVIRONMENTAL ASSESSMENT REPORT FOR MALIBU MIDDLE/HIGH SCHOOL AND JUAN CABRILLO ELEMENTARY SCHOOL, 30237 AND 30215 MORNING VIEW DRIVE, MALIBU, LOS ANGELES COUNTY, CALIFORNIA (SITE CODE: 301648)

Dear Superintendent Lyon:

The Department of Toxic Substances Control (DTSC) has completed review of the Final Preliminary Environmental Assessment (PEA) Report for the Malibu Middle/High School and the Juan Cabrillo Elementary School (Site). The PEA Report was revised based on DTSC's comment letters dated June 29, 2015 and re-submitted to DTSC on September 10, 2015, by Ramboll Environ, on behalf of the Santa Monica-Malibu Unified School District (SMMUSD). The PEA investigation field work was conducted in accordance with a DTSC approved PEA Work Plan to assess potential impacts from current and historical land use at the approximately 80-acre Site property. The PEA Report documents the findings of the comprehensive soil, soil gas and groundwater investigation activities conducted under DTSC's oversight at the Site during the summer of 2014. The PEA Report also includes a Site-wide Human Health Screening Risk Evaluation (HHSRE).

Based upon the revised PEA Report, DTSC has determined volatile organic compound (VOC) concentrations at the Bus Barn Area, also identified as Area of Interest-9 (AOI-9) may pose risk to human health based on unrestricted (residential) land use risk scenario; but is appropriate for school based use. Therefore, DTSC will require a land use restriction in the form of a land use covenant be filed for AOI-9 to prevent future residential use of this area. AOI-9 is approximately 0.66 acres in size and located in the northwest portion of the Site. AOI-9 is further identified as a portion of the Los Angeles County Assessor's Parcel Number (APN) 4469-017-900. In addition, DTSC has determined no further action is necessary for the remainder of the Site.

In accordance with the California Education Code Section 17213.1 (a) (6) (A), SMMUSD is required to provide public notice of the land use covenant in a local newspaper of general circulation. DTSC will issue a Site-wide certification letter for the

Printed on Recycled Paper

Site property (including the property identified as the Malibu High School Building G Area) after the after SMMUSD has filed the land use covenant for the AOI-9 property with the Los Angeles County Recorder's Office.

Pursuant to Education Code section 17213.2, subsection (e), if a previously unidentified release or threatened release of a hazardous material or the presence of a naturally occurring hazardous material is discovered at the Site at any future time, additional assessment, investigation or cleanup may be required.

If you have any questions regarding this letter, please contact DTSC's Project Manager, Maria Gillette, at (714) 484-5377 or at Maria.Gillette@dtsc.ca.gov.

Sincerely,

Executive Summary

ENVIRON International Corporation (ENVIRON), on behalf of the Santa Monica/Malibu School District (the District), has prepared this Removal Action Completion Report (RACR) to document soil removal activities conducted at the planter area, east of Building G (Building G Area) of Malibu High School (MHS or site), located at 30215 Morning View Drive, Malibu, California (see Figures 1 and 2; for Building G Area see Figure 3). Soil removal was conducted in accordance with ENVIRON's Removal Action Work Plan (RAW) entitled "*Removal Action Work Plan, Building G Area, Malibu High School, 30215 Morning View Drive, Malibu, California*," which was submitted as a Draft RAW to the Department of Toxic Substances Control (DTSC) on November 6, 2014. DTSC approved the Draft RAW with no modifications in a letter dated December 15, 2014, after which the Final RAW was submitted to DTSC on December 17, 2014. DTSC is the designated lead agency pursuant to the March 14, 2014 Voluntary Investigation Agreement (Agreement) between the District and the DTSC.

Subsurface investigations conducted during the summer of 2014 in accordance with the DTSC approved *Draft Preliminary Environmental Assessment Work Plan* (PEA Work Plan), dated May 23, 2014, indicated that polychlorinated biphenyls (PCBs), specifically Aroclor 1254, were detected in shallow soil in the Building G Area. The soil sampling conducted in the Building G Area revealed a relatively small PCB-impacted area in which two or more adjacent borings contained Aroclor 1254 at a concentration that exceeded its United States Environmental Protection Agency (USEPA) Regional Screening Level (RSL) for residential use. These PCB exceedances were localized and confined to surficial soil in a planter area, directly adjacent to a concrete walkway, located east of Building G. Similar PCB exceedances were not observed in other areas at MHS and thus appear to be unique to the Building G Area. The area of Aroclor 1254-impacted soil consisted of an approximate 1.5-foot thick surficial layer, measuring approximately 38 feet long by 7 feet wide (see Figures 3 through 5).

ENVIRON conducted a Human Health Risk Evaluation (HHRE) of the Building G Area considering the current school use and potential future residential use. Under a school scenario, the estimated excess lifetime cancer risks before and after excavation are below the target cancer risk of $1x10^{-6}$. Under a residential scenario, before excavation, the estimated excess lifetime cancer risk for hypothetical future on-site residents are $1.5 x10^{-6}$. For the after excavation residential scenario (after excavating the two highest Aroclor 1254 detections exceeding 1000 micrograms per kilogram [µg/kg]), the estimated excess lifetime cancer risk for hypothetical future on-site residents was at the target cancer risk of $1x10^{-6}$. Therefore, although no remediation was necessary or recommended under the school scenario, because the District desired to be able to use the Building G Area for any purpose in the future (e.g., unrestricted use), the District and DTSC agreed that the soil containing the highest Aroclor 1254 concentrations in the Building G Area would be excavated to lower the residential cancer risk estimate to the target risk of $1x10^{-6}$.

A RAW was prepared to address the PCB-impacted soil in the Building G Area. The purpose of the RAW was to provide for limited excavation of Aroclor-1254 impacted shallow soil in the Building G Area of MHS, to conditions that allow for future unrestricted (i.e., residential) use.

This RACR documents work completed at the Building G Area as part of the DTSC-approved RAW. Pre-excavation and excavation activities occurred between December 21 and December 30, 2014, during MHS Winter Break. The planar footprint of the excavation encompassed the highest detected concentrations of Aroclor 1254; soil samples MH-SB-76 and MH-SB-118, as well as locations MH-SB-119 through MH-SB-121 and MH-SB-124. Approximately 15 cubic yards (yd^3) of soil was excavated, determined to be non-hazardous, and transported off site for disposal at the Waste Connections - Chiquita Landfill, located in Castaic, California.

Excavation of the highest detected concentrations of Aroclor 1254 (soil samples MH-SB-76 and MH-SB-118), lowered the residential human health based risk associated with the PCB-impacted soil in the Building G Area to the target risk of $1x10^{-6}$, providing a site that is suitable for unrestricted regulatory closure.

Based on the results of the excavation activities performed in the Building G Area, as described herein, the District respectfully requests that DTSC issue a “No Further Action” for the PCBs in shallow soil in the Building G Area.

1 Introduction

ENVIRON International Corporation (ENVIRON) has prepared this Removal Action Completion Report (RACR) on behalf of the Santa Monica/Malibu Unified School District (the District), to document soil removal activities conducted at the planter area, east of Building G (Building G Area) of Malibu High School (MHS or site), located at 30215 Morning View Drive, Malibu, California (see Figures 1 and 2; for Building G Area see Figure 3). The removal action (RA) was performed between December 21 and December 30, 2014, during the Winter Break when school was not in session. Excavation activities were performed in accordance with ENVIRON's Removal Action Work Plan (RAW), entitled "*Removal Action Work Plan, Building G Area, Malibu High School, 30215 Morning View Drive, Malibu, California*," which was submitted as a Draft RAW to the Department of Toxic Substances Control (DTSC) on November 6, 2014. DTSC approved the Draft RAW with no modifications in a letter dated December 15, 2014, after which the Final RAW was submitted to DTSC on December 17, 2014. DTSC is the designated lead agency pursuant to the March 14, 2014 Voluntary Investigation Agreement (Agreement) between the District and the DTSC.

1.1 Purpose

The purpose of this RACR is to document that remedial actions presented in the DTSC-approved RAW have been completed, and the removal action objectives were met.

1.2 Removal Action Objectives

The soil removal action in the Building G Area focused on the removal and disposal of a defined area containing the highest detected concentrations of Aroclor-1254 in soil and provided a permanent solution that reduced the toxicity, mobility, and volume of impacted soil. DTSC determined that the soil removal action was the preferred RA remedy in terms of the three technology evaluation criteria: effectiveness, implementability, and cost (as evaluated in the DTSC-approved RAW).

Removal action objectives (RAOs) were established to be protective of human health and the environment. RAOs were based upon the current environmental conditions and current and anticipated future uses of MHS and the Building G Area. The RAOs, as presented in the approved RAW, were to:

- Reduce concentrations of Aroclor 1254 in soil to minimize the human health-based risks associated with soil in the Building G Area to achieve unrestricted land use;
- Provide a site that is acceptable for regulatory closure under unrestricted scenario; and

Based on the RAOs, the excavation area, as depicted on Figure 3, was defined at and in proximity to the impacted shallow soil. The extent of the excavation was determined from: (1) information obtained during the Preliminary Environmental Assessment (PEA) investigation and subsequent soil step-out sampling at the Building G Area; and (2) risk management decisions based upon the current and anticipated future use of MHS and the Building G Area. Information used to develop the extent and dimensions of the excavation area included validated laboratory analytical results, historical uses, and operations at the Building G Area, and the Building G Area Human Health Risk Evaluation (HHRE).

1.3 Scope

The completed RA combined excavation of PCB-impacted soil with off-site disposal. Activities conducted to implement the RA are summarized below and described in greater detail in subsequent sections of this report.

- Conducted pre-excavation activities by defining the exclusion zone, identified areas to be fenced (including hillside), erected fencing to isolate the exclusion zone, and laid down plastic sheeting (Visqueen) adjacent to the excavation area, in areas traversed by earth moving equipment, and where roll-off bins are staged;
- Marked out the boundaries of the excavation using stakes and high visibility paint;
- Excavated PCB-impacted soil from the Building G Area per the DTSC-approved RAW (Figure 3);
- Conducted air and meteorological monitoring during excavation activities (Figure 4);
- Conducted post-excavation incremental soil sampling (Figure 5);
- Pre-characterized soil for off-site disposal using existing soil data;
- Loaded and transported excavated soil off site to a disposal facility (Figure 6); and
- Backfilled the excavation with DTSC-approved clean fill and restored the area to its original condition.

RA activities were conducted in accordance with a site-specific Health and Safety Plan (see Appendix B of the RAW) and a Transportation Plan (see Section 7 of the RAW).

2 Site Background and Characterization

On March 13, 2014, an Agreement was executed between the DTSC and the District to conduct a PEA at Juan Cabrillo Elementary School (JCES) and MHS to evaluate the environmental condition of soils at the schools. Accordingly, ENVIRON prepared and submitted a PEA Work Plan to DTSC on May 23, 2014 detailing the proposed soil, soil gas, and groundwater investigation at JCES and MHS. The PEA Work Plan was conditionally approved by DTSC on June 27, 2014. Initial field activities were conducted between June 30 and August 18, 2014 under DTSC's oversight and in accordance with the DTSC-approved PEA Work Plan. PEA sampling results were presented to the DTSC in two separate data transmittals. The first data transmittal entitled, "*Final Summary of Soil, Soil Vapor, and Groundwater Sampling Results, Juan Cabrillo Elementary School, 30237 Morning View Drive, Malibu, California,*" dated September 12, 2014, presented sampling results collected from JCES. The second data transmittal entitled "*Final Summary of Soil, Soil Vapor, and Groundwater Sampling Results, Malibu High School, 30215 Morning View Drive, Malibu, California*," dated September 23, 2014 presented sampling results collected from MHS. Based on the data collected as part of the PEA investigation, DTSC and the District identified one area for further action at MHS, the Building G Area. As a result, DTSC and the District signed a Second Amendment to the Agreement in November 2014, which outlined the RA.

The RAW was prepared at the request of the DTSC, pursuant to the Agreement, and in accordance with DTSC's guidance entitled "Removal Action Work Plans," dated September 23, 1998, to perform a removal action in the Building G Area at MHS. A RAW is one of two remedy selection documents that may be prepared for a hazardous substance release site pursuant to Health and Safety Code Section 25356.1, and is appropriate for removal actions that are projected to cost less than $2,000,000. DTSC approved ENVIRON's November 6, 2014 Draft RAW on December 15, 2014, and ENVIRON subsequently submitted a final RAW to DTSC on December 17, 2014.

2.1 Site Description

MHS is located in the Zuma Beach Area, in the City of Malibu, on the southern flank of the western portion of the Santa Monica Mountains, at 30215 Morning View Drive (Figure 2), 0.2 miles north of Pacific Coast Highway. MHS is comprised of approximately 80 acres (including areas leased to others) and consists of many buildings (Buildings A through K, and New Gymnasium). Construction of most of the buildings occurred in the 1960s and 1970s, except for Building K and the New Gymnasium, which were built in 2002. Most buildings at MHS are bordered by an approximately 8- to 10- foot wide concrete walkway and a concrete and/or vinyl siding overhang. Two large metal barn-like structures that are used for equipment storage and vehicle maintenance, including a bus washing station ("Bus Barn") are located in the northwestern portion of MHS. The terrain generally consists of rolling hills with a maximum topographic relief of approximately 90 feet and elevations ranging from approximately 80 to 170 feet above mean sea level. The topography at the site and its vicinity slopes gently southwesterly to the Pacific Ocean.

2.1.1 Land Use

MHS is owned by the District and is zoned for institutional use. Since construction, MHS has been used for educational purposes.

2.1.2 Historic Uses

In the late 1940s through early 50s, MHS appears to be mostly undeveloped and may have been used for activities related to dry land farming. MHS was used for educational purposes starting in the early 60s. Building H (the Auditorium and Kitchen), Building E (Middle School/Blue Building), Building F (Music), Building I (Graphic Arts), and the Bus Barn were developed from early to mid-1960s. Buildings A (Library), B/C (Administration), D (Science), G (Art, Woodshop), and the Old Gymnasium were completed by mid-70s. Building K and the New Gymnasium were built in 2002.

2.1.3 Adjacent Properties

MHS is located in the Zuma Beach Area, in the City of Malibu, California. MHS is comprised of Assessor Parcel Numbers 4469-017-900 (out of which 6.4 acres are shared with JCES), 4469-017-901, 4469-017-902, and 4469-017-903. The Building G Area is located within Parcel Number 4469-017-900. The following border MHS (Figure 2):

- To the north: residential properties;
- To the west: JCES;
- To the south: across from Mountain View Drive, is the Malibu United Church and Nursery School. Zuma Beach and the Pacific Coast Highway are located approximately 1,000 feet and 1,500 feet south of MHS; and
- To the east: residential properties and the Malibu Equestrian Center.[1]

2.2 Site Owner

MHS is owned by the District.

2.3 MHS Hydrology and Geology

Geology

Based on previous subsurface investigations and the United States Geologic Society Geologic Map (Yerkes and Campbell, 2005), the geology beneath MHS consists of two main units: the Young Non-Marine Terrace Deposits (Qyd) and the Monterey Shale (Tmt). These geologic units are further described below:

<u>Young Non-Marine Terrace Deposits</u>

This unit consists primarily of very stiff to stiff silty to sandy clay, interbedded with bedrock clasts. Non-marine terrace deposits are encountered from the surface or below surface fill to a maximum depth of 20 feet below ground surface (bgs) (Leighton, 2009).

[1] The Malibu Equestrian Center leases property from the District.

Monterey Shale

Interbedded claystone and siltstone of the Monterey Shale formation are encountered at depths ranging from 10 to 20 feet bgs (Leighton, 2009). The unit is described as light brown, moderately hard to hard, fractured, oxidized, and weathered, with calcite staining.

Two other geologic units are exposed at MHS: the Trancas Formation (Tr) and Zuma Volcanics (Tz). The Trancas Formation is aerially limited to a small portion on the northwest corner of MHS. The Zuma Volcanics geological unit is sporadically exposed in the north-northeastern half of MHS and appears to contact the Young Non-Marine Terrace and the Monterey Shale in the center of MHS.

Hydrogeology

MHS lies within the Malibu Hydrological Unit and the Truncas Canyon Hydrologic Sub-Area (Los Angeles Regional Water Quality Control Board, Basin Plan). There is no groundwater basin designated in the MHS area and groundwater is not assigned any beneficial uses according to the Basin Plan. Zuma Beach Coastal Waters are designated for recreational uses. Groundwater underlying the site is not used for drinking water. Drinking water at the site is supplied by the Metropolitan Water District of Southern California (MWDSC). MHS is bounded to the northwest by an ephemeral stream, designated by the City of Malibu as an Endangered Species Habitat Area.

During the PEA investigation, groundwater at MHS was encountered at depths ranging from approximately 51feet bgs to 62 feet bgs. The calculated groundwater gradient from the existing monitoring wells (MW-1 through MW-11) indicates that groundwater flows to the southwest, toward the Pacific Ocean.

2.4 Site Characterization

The PEA Work Plan identified 18 Areas of Interest (AOIs), AOI-1 through AOI-4, located at JCES and AOI-5 though AOI-18 located at MHS. The scope of the PEA Work Plan included soil, soil gas, and groundwater sampling. The results of sampling conducted during execution of the PEA Work Plan are provided in the final data transmittals for JCES and MHS. The final data transmittals were presented to the DTSC on September 5 and 23, respectively, and are also available electronically on DTSC's EnviroStor website.

This RACR focuses on the Building G Area, located within AOI-5 at MHS. AOI-5 addresses buildings constructed prior to 1981 at MHS. During implementation of the PEA Work Plan, 46 borings were advanced within AOI-5, out of which 7 were located in the "Building G Area." Upon review of initial soil sampling results, soil step-out sampling was conducted in the Building G Area. A description of the initial and step-out sampling conducted in the Building G Area is provided below.

2.4.1 Location and Description of the Building G Area

The Building G Area, within the MHS footprint, is comprised of the planters located immediately east of Building G and north of Building I. The area is composed of planters varying in width from 2 feet (east of Building G) to approximately 5 feet (north of Building I). Building G is bordered to the east by an 8-10 foot wide concrete walkway, followed by a 2-foot planter. The

north side of Building I does not have a concrete walkway; therefore the planter abuts the edge of Building I. Both Building G and Building I are bordered to the north and east by an open grassy area, surrounded by approximately 20-foot high hills and the Amphitheatre stairs (see Figures 3 and 4). Building G and Building I are used for art/ woodshop and graphic arts, respectively.

2.4.2 Characterization of the Building G Area

The Building G Area is depicted on Figure 3. In July 2014, as part of implementation of the PEA Work Plan, four borings (MH-SB-10, MH-SB-76, MH-SB-77, and MH-SB-79) were advanced in the planter area, abutting the concrete walkway, immediately east of Building G and three borings (MH-SB-11, MH-SB-13, MH-SB-14) were advanced in the planter area north of Building I (Figure 3). Soil samples were collected from the surface (0 – 0.5 feet bgs) and from 1.5 to 2 feet bgs and were analyzed for pesticides (organochlorine and organophosphates), herbicides, lead, and PCBs, using United Stated Environmental Protection Agency (USEPA) Methods 8081A, 8141A, 8151A, 6010, and 8082, respectively. Soil sampling results are presented on Figure 3. In summary:

- Of the organochlorine pesticides, 4,4'-dichlorodiphenyldichloroethylene (4,4'-DDE) was detected at concentrations ranging from 6 micrograms per kilograms (µg/kg) in surface soil sample MH-SB-11 to 59 µg/kg in surface sample MH-SB-10 and total chlordane was detected in one surface soil sample, MH-SB-13, at a concentration of 88 µg/kg. Detections of 4,4'-DDE and total chlordane were well below their respective Residential DTSC-Modified Regional Screening Level (RSL) or USEPA RSL for residential soil of 1,600 µg/kg and 1,800 µg/kg, respectively.
- Herbicides and organophosphates pesticides were not detected above their respective laboratory reporting limits in any of the soil samples.
- Lead was detected at concentrations ranging from 3.1 milligrams per kilogram (mg/kg) in MH-SB-76 at a depth of 1.5 feet bgs to 42 mg/kg in surface soil sample MH-SB-10. Lead detections were well below the DTSC-Modified RSL for residential soil of 80 mg/kg.
- Of the PCBs, Aroclor 1254 was the only PCB detected. Aroclor 1254 was detected at concentrations ranging from 130 µg/kg in soil sample MH-SB-77 at a depth of 2 feet bgs to 1,500 µg/kg in soil sample MH-SB-76 at the ground surface. Five soil samples, MH-SB-10 at the surface and 1.5 feet bgs, and surface samples MH-SB-76, MH-SB-77, and MH-SB-79, contained Aroclor 1254 at concentrations of 590 µg/kg, 270 µg/kg, 1,500 µg/kg, 720 µg/kg, and 700 µg/kg, respectively. These concentrations exceeded the USEPA RSL for residential soil of 240 µg/kg for Aroclor 1254. PCB sampling results are summarized on Figure 3.

Based on the results of the initial PEA investigation, 11 step out soil borings, MH-SB-114 through MH-SB-124, were advanced within the Building G Area (Figure 3). Twenty-two soil samples were collected from borings MH-SB-114 through MH-SB-124 and were analyzed for PCBs using USEPA Method 8082. Five of the 22 step-out soil samples, MH-SB-114, MH-SB-116, MH-SB-118, MH-SB-119, and MH-SB-120, contained Aroclor 1254 at concentrations of 800 µg/kg, 410 µg/kg, 1,100 µg/kg, 340 µg/kg, and 430 µg/kg, respectively, exceeding the USEPA RSL for residential soil. The step-out soil sampling results, combined

with the original soil sampling results, were used to evaluate the extent of Aroclor 1254 in soils in this area.

2.5 Nature and Extent of PCB-containing Soil in the Building G Area

Eighteen soil borings were advanced in the Building G Area, and 36 soil samples were analyzed for PCBs (18 soil samples from 0 to 0.5 feet bgs and 18 soil samples from 1.5 to 2 feet bgs). Soil sample results in the Building G Area for PCBs are illustrated on Figure 3.

Initial soil sampling results for PCBs and subsequent soil step-out sampling conducted immediately east of Building G, indicated that PCB detections were limited to Aroclor 1254. Maximum concentrations of Aroclor 1254, were detected in surface soil samples collected from borings MH-SB-76 (1,500 µg/kg) and MH-SB-118 (1,100 µg/kg) located adjacent to one another in the planter directly adjacent to the concrete walkway that abuts Building G. These exceedances were localized and confined to surficial soil in the planter. Similar exceedances were not observed in other areas at MHS and thus this situation appears to be unique to the Building G Area. PCB concentrations in this area are unlikely to pose a significant risk to public health because the concentrations are fairly low and access to the area is restricted. The average concentration (i.e., 95 per cent upper confidence limit [UCL] on the mean concentration) in the Building G Area is below the risk-based concentration for staff and students in a school-based scenario, as further discussed in Section 2.6.

2.6 Human Health Risk Evaluation

To evaluate the potential human health risks to current and potential future on-site populations due to exposure to the chemicals detected in soil in the Building G Area, a HHRE was performed. The HHRE was presented in Section 2.4 of the DTSC-approved RAW and evaluated the potential human health risks to current and potential future on-site populations both before and after soil excavation.

The HHRE concluded that, under a school scenario, chemicals in soil are not expected to result in adverse health effects to students and teachers/staff through direct contact both before and after excavation. Under a residential scenario, the HHRE concluded that chemicals in soil are not expected to result in adverse health effects to hypothetical future on-site residents through direct contact both before and after excavation. However, to achieve a target excess lifetime cancer risk of $1x10^{-6}$, the District agreed to conduct a RA to address the highest concentrations of Aroclor 1254 in shallow soil in the Building G Area.

3 Applicable or Relevant and Appropriate Requirements

Previous investigations in the Building G Area indicated the presence of the Aroclor 1254 in soil exceeding its residential RSL. The most effective remedial action was determined to be removal consisting of soil excavation and off-site disposal. This section discusses the applicable or relevant and appropriate requirements for the soil excavation and off-site disposal activities conducted.

3.1 Public Participation

The public participation requirements and activities conducted during the RAW process included:

1. The development of a community profile;
2. Conducting community interviews;
3. Publishing a notice of the availability of the RAW for public review and comments (the public comment period was from November 7, 2014 to December 10, 2014);
4. Making the RAW and other supporting documents available at DTSC's office and in a local information repository;
5. Responding to public comments received on the RAW and California Environmental Quality Act (CEQA) documents;
6. Sending a community update to the site mailing list describing the Building G Area, the proposed RA, and the RAW implementation schedule; and
7. Preparing final documents in electronic format and uploading to DTSC's publicly accessible EnviroStor database and at the MHS Library and Malibu Public Library.

3.2 California Environmental Quality Act Documentation

CEQA requires public agencies to evaluate the potential effects of projects on a full-range of physical environmental conditions, including land, air, water, mineral, flora, fauna, noise, and objects of historical or aesthetic significance. CEQA applies to all discretionary projects proposed to be carried out or approved by California public agencies, unless an exemption applies. DTSC considered the potential impacts of the selected removal action alternative activities upon existing environmental conditions, and concluded that the environmental safeguards and monitoring procedures included in the RAW ensured that impact to the environment would be less than significant. As a result, DTSC found that the project is exempt from further environmental review under CEQA and prepared a Notice of Exemption (NOE), dated November 6, 2014. Upon approval of the RAW, DTSC filed the NOE with the State to comply with the CEQA requirements.

3.3 Hazardous Waste Management

Based on existing soil data and before soil removal activities commenced, Aroclor 1254 was detected at a maximum concentration of 1,500 μg/kg (or 1.5 mg/kg) in one soil sample collected from the Building G Area. Existing soil data obtained from the Building G excavation area was

used to evaluate appropriate off-site disposal of the excavated soil. As a result, Aroclor 1254-impacted soil excavated from the Building G Area was handled as non-hazardous waste.

3.4 South Coast Air Quality Management District

The South Coast Air Quality Management District (AQMD) has two rules that address excavation (Rules 1150 and 1166), and one that addresses fugitive dust (Rule 403). Rule 1150 applies to the excavation of sanitary landfills, and is not relevant to this project. Rule 1166 applies to the excavation of soils containing volatile organic compounds (VOCs) and does not apply to this project, as Aroclor 1254 is not a VOC.

Several elements of Rule 403, such as protocols to mitigate potential fugitive dust emissions, were incorporated into the RAW. Excavation, loading, and transport of impacted soils was performed in compliance with AQMD Rule 403, prevention, reduction, and mitigation measures for fugitive dust emissions. However, notification of AQMD is required only for large operations Therefore, no notification or filing of a Fugitive Dust Emission Control Plan was required due to project size.

3.5 Health and Safety Plan

All contractors were responsible for operating in accordance with the most current requirements of Title 8, California Code of Regulations (CCR), section 5192 (8 CCR 5192) and Title 29, Code of Federal Regulations (CFR), section 1910.120 (29 CFR 1910.120), Standards for Hazardous Waste Operations and Emergency Response. On-site personnel were responsible for operating in accordance with all applicable regulations of the Occupational Safety and Health Administration (OSHA) outlined in 8 CCR General Industry and Construction Safety Orders and 29 CFR 1910 and 29 CFR 1926, Construction Industry Standards, as well as other applicable federal, state and local laws and regulations. All personnel operated in compliance with all California OSHA requirements.

A Health and Safety Plan (HASP) was prepared for the site and was used during the execution of the PEA Work Plan. The HASP was modified to include excavation of the Building G Area. A copy of the revised HASP is included in Appendix B of the RAW.

The provisions of the HASP were mandatory for all MHS personnel and its contractors who are at the site. Subcontractors conducting fieldwork in association with this RAW adopted and abided by the HASP or developed their own safety plans, which, at a minimum, met the requirements of the HASP. All on-site personnel read the HASP and signed a log provided by the site Health and Safety Officer before initiating activities at the Building G Area.

4 Removal Action Work Activities

Soil removal activities were performed during Winter Break, between December 21 and December 30, 2014, by a California-certified contractor under the supervision of a California registered Professional Geologist.

Removal, transportation, and disposal were performed in accordance with applicable federal, state, and local laws, regulations, and ordinances. Soil handling and disposal practices were described in the Transportation Plan (presented in Section 7 of the DTSC-approved RAW and is summarized in Section 4.8.2 below).

Figure 3 illustrates the excavated area, along with a summary of the PEA sampling results. Figure 4 depicts the location and extent of the excavation along with air monitoring stations, temporary fencing, and the locations of the areas where Visqueen was used to cover and protect the surfaces. Figure 5 shows post-excavation incremental soil sampling locations, and Figure 6 depicts the truck route used to transport excavated soil off-site. A photo log documenting each day of removal action activities is included in Appendix A.

4.1 Extent of Area of Excavation

In order to achieve the RAOs listed in Section 1.2, soil containing the highest Aroclor 1254 concentrations was excavated. Therefore, the excavation encompassed the locations of borings MH-SB-76 and MH-SB-118 where Aroclor 1254 was detected in surface soils at concentrations of 1,500 µg/kg and 1,100 µg/kg, respectively. The excavation extended north to include MH-SB-120 where Aroclor 1254 was detected in surface soil at a concentration of 430 µg/kg, and south to the edge of concrete ramp, approximately 20 feet south of boring MH-SB-76. The excavation was extended east to include soil step-out sampling locations MHS-SB-119, MH-SB-121, and MH-SB-124 where Aroclor 1254 was detected at concentrations of 340 µg/kg, 140 µg/kg, and 72 µg/kg, respectively. The excavation extended as far west as the edge of the concrete walkway. Based on the results of existing and step-out sampling locations collected from 1.5 feet bgs, the excavation was extended vertically to 1.5 feet. Figures 3 and 4 and Photos 12 and 14 illustrate the lateral extent of the excavation in the Building G Area. The final excavation dimensions were approximately 38 feet long by 7 feet wide and 1.5 feet deep.

4.2 Pre-Excavation Activities and Security Measures

Prior to equipment mobilization, site preparation activities were performed, including site inspections, demarcation of excavated areas, and placing of Visqueen cover over areas adjacent to the excavation and along soil transport routes (see Photos 1, 2, and 3).

4.2.1 Delineation of Excavation Area

The areal limits of the excavation were delineated by ENVIRON before commencement of soil removal activities. The area to be excavated was marked in the field by ENVIRON using stakes and high visibility paint. The original proposed length of the excavation in the north-south direction was measured from Google Earth at approximately 45 feet; however, the distance measured in the field from the concrete walkway to borings MH-SB-120 and MH-SB-121 was 38 feet, 7 feet shorter than the original proposed length in the RAW. DTSC's Geologist was

present during excavation activities, and concurred with ENVIRON's measurements of the total length of the excavation.

4.2.2 Utility Clearance

Prior to commencement of excavation, ENVIRON notified Underground Service Alert (USA) of its intent to conduct excavation, in accordance with California State law (Assembly Bill AB 73). ENVIRON also worked with the District to identify any buried utilities, including buried irrigation pipe lines. ENVIRON did not contact a private utility locator as the Building G Area has been cleared for underground utilities during the implementation of the PEA Work Plan.

4.2.3 Security Measures

Fencing was erected prior to the commencement of the excavation to isolate the exclusion zone and to ensure that all work areas were secure and safe (See Figure 4). Persons requesting site access were required to have pre-access authorization and demonstrate a valid purpose for access. If access to work areas was planned, visitors were briefed regarding the site-specific HASP (see Appendix B of the RAW).

4.2.4 Contaminant Control

Measures were implemented during soil excavation activities to prevent potential air transport of excavated soil and dust to the adjacent areas. The nearest occupied and/or residential areas in the vicinity of the area addressed by the RAW are located uphill and at least a mile away from the area to be excavated. Excavation took place during Winter Break, when school was not in session, to minimize exposure to faculty and students. Based on these factors, and because air monitoring procedures (see Section 4.3) and measures to reduce dust emissions (see Section 4.4) were implemented during excavation activities, particulate migration of PCBs outside the excavation area was not expected. Additionally, On December 21, 2014, prior to the commencement of excavation activities and prior to earth moving equipment mobilization, areas and surface directly adjacent to the marked excavation boundaries were covered with Visqueen. These areas are depicted on Figure 4 and include the grassy area and hillside that surround the excavation, the concrete walkway west of the excavation, areas traversed by earth moving equipment (the concrete walkway east of Building G and directly adjacent to the proposed excavation area, the concrete area north of Building G, and the asphalt and a portion of the parking lot where the roll off bins were stored (Photos 1, 2, 3, and 12). Additionally, a portion of the hillside north of Building G, the lower half of the wall in proximity to the westernmost perimeter, and the grass and picnic areas in proximity to the roll off bins and excavation area were covered with Visqueen to reduce the potential deposition of dust and soil particulates during soil loading procedures (Photos 3 and 13).

Additionally, four air monitoring stations and one weather station were placed around the perimeters of the exclusion zone as depicted on Figure 4. The air monitoring and weather stations were assembled, calibrated, and checked prior to commencement of the excavation activities to minimize disruptions and down time.

4.2.5 Excavation Activities

Excavation activities were conducted between December 22 and 30, 2014 by trained and equipped hazardous waste workers from Innovative Construction Solutions (ICS) of Santa Ana,

California. Prior to the commencement of excavation activities, the four air monitoring and one weather station were turned on. One additional hand held air monitoring unit also was set up in the work zone, directly adjacent to the excavation.

Soil was removed from the excavation area using a mini-excavator (Photo 1). Excavated soil was transferred directly from the bucket of the mini-excavator into a Super Sack® that was anchored on a forklift, directly adjacent and/or over the excavation during the transfer (Photos 9 and 10). Super Sacks® were used as an alternative to direct-soil loading into the roll-off bins from a bobcat, as originally proposed in the RAW, due to space limitations and to provide better containment of the excavated soil. DTSC's Geologist approved this modification to the RAW. After the soil was loaded into the Super Sack®, the Super Sack® was sealed with tape, transported via forklift from the excavation area, north of and around Building G, and to the roll-off bin staging area by the Gymnasium, where it was temporarily staged on Visqueen pending placement into roll off bins (Photo 11). The Super Sacks® were directly loaded into the roll-off bin, after the bins were delivered to the site.

During excavation activities, dust generation was controlled through wetting the soil and air monitoring was conducted at locations depicted on Figure 4 to confirm particulate concentrations were acceptable. Air monitoring stations were manually checked and logged in the field at five minute intervals (see Section 4.3 for more detail). Excavation was not conducted during times of high wind conditions (e.g., wind speed in excess of 25 miles per hour). Excavation activities were not conducted on December 26, 2014, due to local high wind conditions. At the end of each working day, temporary fencing was erected around areas where equipment was stored (Photo 6) and around the excavation area (Photo 15).

Following the completion of excavation activities, roll-off bins were loaded on to ICS's vehicles and taken off- site for disposal to a Class III landfill at the Waste Connections - Chiquita Canyon Landfill. Upon completion of all excavation activities, the Visqueen sheets were taken down and removed from the Building G Area (Photo 22).

Removal of PCB-impacted soils in the Building G Area resulted in an excavation approximately 38 feet long, 7 feet wide, and 1.5 feet deep (see Figures 4 and 5). Approximately 22.5 tons of soil were removed from the site and subsequently disposed of as further discussed in Section 4.8.

4.2.6 Soil Staging and Storage Operations

Excavated soil was stored on-site in roll-off bins equipped with secured lockable covers, pending off-site transportation and disposal. Roll-off bins were staged on Visqueen to protect the ground surface. Excavated soil handling is further discussed in Section 4.8. In addition, the morning of the December 22, 2014, at the direction of the DTSC's Geologist, filled Super Sacks® initially were staged on Visqueen north of Building G, pending delivery of roll-off bins (Photo 11); DTSC's Geologist concurred with this modification to the RAW. Filled Super Sacks® were placed into the roll-off bins after delivery.

4.3 Air and Meteorological Monitoring

Air and meteorological monitoring were conducted to achieve to following goals:

- Identify and measure the particulates generated during the soil removal and decontamination activities to assign the appropriate personal protective equipment and safety systems specified for those activities.
- Provide feedback to site operations personnel regarding potential hazards from exposure to hazardous air contaminants generated through excavation activities.
- Identify and measure particulates at points outside of the soil removal and exclusion zones.

Air monitoring was conducted during work activities to measure potential exposure of sensitive receptors to site chemical constituents, as a result of removal activities.

4.3.1 Air Monitoring

Air monitoring was performed during excavation activities in which impacted or potentially impacted soils were disturbed or handled, and included:

- Monitoring dust levels around the perimeter of the Exclusion Zone (fenced area) as depicted on Figure 4 (Photos 3 through 6). ENVIRON also monitored dust levels within the work zone using a hand-held air monitor. As stated in the RAW, ENVIRON had the authority to stop work in the event that on-site activities generated dust levels that exceed the site action levels (2.5 milligrams per cubic meter [mg/m^3]) or community (0.05 mg/m^3), however such levels were not encountered during the excavation. ENVIRON monitored on-site meteorological instrumentation and coordinated with off-site meteorological professionals to identify conditions that required cessation of work, (e.g., winds in excess of 25 miles per hour [mph], which is defined as high wind condition by the AQMD). Such conditions were identified on December 26, 2014; hence, no excavation was conducted on that day.
- Assuring that all real-time aerosol monitors and hand-held industrial hygiene air sampling equipment and media were properly calibrated and in good working condition. Real-time, data-logging aerosol monitors (MIE DataRAM 4000) were used to measure dust levels around the fenced perimeter of the Building G Area. These monitors measured particles with an aerodynamic diameter of 0.1 to 10 µm (micrometer). Real-time information was posted daily, and discussed with site workers. Hand held air monitors (Thermo Personal Data RAM 1500) were used in the work zone to monitor potential worker exposure during excavation activities.
- Coordinating general site safety activities including all daily hazard communication, safety practices, and procedure briefings.
- Oversight of personal decontamination practices.
- Performing general site safety leadership, support, and recordkeeping activities.
- Developing air monitoring strategy and methodologies.
- Implementing the overall strategy for controlling both on-site and off-site exposures to control the respirable dust levels around the fenced perimeter of the Building G Area. Four MIE DataRAM 4000 monitors were placed along the fence lines as depicted on Figure 4.

Air monitoring was conducted over an 8 -10 hour period each day during RA activities. The air-monitoring professional manually checked and logged the worker exposure monitor every 15 minutes during excavation activities.

4.3.2 Meteorological Monitoring

On-site ambient weather conditions (wind speed and direction, and relative humidity) were monitored by the following methods: an on-site meteorological station as shown in Photo 5, real-time weather websites, and the National Weather Service. On-site meteorological monitoring was performed during excavation activities. Meteorological monitoring resulted in the cessation of work one time during the RA process, on December 26, 2014. Wind gusts were measured at speeds in excess of 40 mph, which is over the 25 mph high wind condition as defined by AQMD, using the meteorological station at the site. ENVIRON personnel confirmed winds were in excess of 25 mph by checking local weather stations and real-time weather websites prior to postponing work.

4.4 Dust Control

ENVIRON implemented applicable procedures to control the airborne dusts generated by soil removal activities. Employee and community exposures to PCBs were controlled by minimizing exposure to Particulate Matter Of Size Less Than Or Equal To 10 Micrometers (PM_{10}). Therefore, it was not necessary to collect and analyze air samples. Such procedures included the following:

- Dust levels were monitored at the locations shown on Figure 4 (see Photos 3 through 6). The PM_{10} data from the fence line monitors were downloaded at the end of each work day, and were analyzed as differential upwind/downwind 5-hour rolling average concentrations. The results were compared to 50 micrograms per cubic meter ($\mu g/m^3$) and were used to gauge site activities and to potentially modify the on-site PM_{10} action level (AL) if necessary. Generation of dust during the removal operations was minimized as necessary with the use of water as a dust suppressant. The water was dispensed from a hose connected to a spigot outside of the ceramics room (Building G). The excavation contractor controlled dust generation by spraying water prior to daily work activities and during excavation activities (as necessary to maintain concentrations below ALs). Watering equipment was continuously available to provide proper dust control.
- Real-time dust monitors were calibrated daily and were set to log dust levels over 5-minute periods.

Dust monitor data are provided in Appendix B; the 50 $\mu g/m^3$ criterion was not exceeded.

4.5 Department of Toxic Substances Control Oversight

DTSC provided oversight on December 22 and 23, 2014 during soil excavation activities in the Building G Area. DTSC's Geologist oversaw excavation activities and DTSC's Industrial Hygienist performed air monitoring by setting up hand held dust monitors (Thermo Personal Data RAM or similar) on tripods adjacent to ENVIRON's air monitoring stations for concurrent air monitoring to confirm ENVIRON's air monitoring data.

4.6 Post-Excavation Incremental Sampling

Post-excavation incremental soil sampling was conducted using the DTSC-approved incremental sampling methodology that was previously used during implementation of the PEA. Two Decision Units were identified for the post-excavation soil samples: 1) DU-1 is comprised of the bottom, or base, of the excavation and 2) DU-2 is comprised of the sidewalls (northern, eastern, and part of the southern wall where soil is exposed) of the excavation. The base (DU-1) was divided into 26 grids that measured approximately 3.5 feet long by 2.9 feet wide, and the sidewalls were divided into 25 grids of varying sizes (see Figure 5): 22 grids along the eastern sidewall, 2 grids along the northern sidewall, and one grid along the southern sidewall. The number of grids within DU-1 and DU-2 were modified from those described in the RAW based on field measurements of the actual excavation dimensions (see Section 4.2.1). DTSC's Geologist approved the modifications to reduce the number of sampling grids.

Following the same procedures used during implementation of the PEA Work Plan, three incremental soil sampling borings (i.e., A, B, and C) were randomly selected within each grid in a given DU for a total of 78 borings in DU-1 and 75 borings in DU-2. Soil boring locations were marked in the field with flags prior to commencement of the incremental soil sampling (Photos 15 and 17). At each boring location, one soil sample was collected from the surface, placed in laboratory supplied glassware, and stored in an ice-filled cooler for transport to Test America laboratory, a California state-certified laboratory under chain-of-custody procedures. Per DTSC's request, a disposable scoop with a flat leading edge was used to collect each sample (see Photo 16). For each DU, soil sample increments were combined at the laboratory (i.e., into A, B, and C increments) and analyzed for PCBs, using USEPA Method 8082. Due to a miscommunication with the laboratory, a duplicate incremental soil sample was not analyzed.

Validated post-excavation incremental soil sampling results are presented in Table 1. In DU-1, Aroclor 1254 was detected at concentrations ranging from 140 μg/kg to 600 μg/kg. In DU-2, Aroclor 1254 was detected at concentrations ranging from 92 μg/kg to 190 μg/kg. Laboratory analytical reports are included in Appendix C. Data validation, performed at Level III by an independent third party, Laboratory Data Consultants, is included in Appendix D. A laboratory duplicate incremental soil sample was not analyzed.

4.7 Decontamination

Each piece of equipment used for excavation had a clean-out bucket or continuous edge across the cutting face of its bucket; no excavation was conducted with equipment utilizing teeth across the cutting edge of its bucket.

Entry to the excavation area was fenced off and access was limited to avoid unnecessary exposure and limit the potential for cross contamination. Equipment that came into direct contact with potentially PCB-impacted soil or water was decontaminated to assure the quality of samples collected and/or to avoid cross contamination. Decontamination was conducted over Visqueen prior to and after each designated use of a piece of equipment, using the following procedures:

- Non-phosphate detergent and tap water wash, using a brush if necessary.
- Tap-water rinse.

- Initial deionized/distilled water rinse.
- Final deionized/distilled water rinse.

Disposable equipment for one time use was not decontaminated, but was packaged for appropriate off-site disposal.

Trucks did not come into direct contact with potentially impacted soil as the roll-off bins were staged outside the excavation area of the Exclusion Zone (Photo 13). Trucks were visually inspected before leaving the Exclusion Zone and dirt, if any, adhering to the exterior surfaces was brushed off and collected on Visqueen. The storage bins were inspected to ensure the loads were properly covered and secured. Excavation equipment surfaces were also brushed off over Visqueen prior to removal from the exclusion zone.

Cleaned bulky equipment was stored on Visqueen in away from the excavation area. Cleaned smaller equipment was stored in plastic bags. Materials to be stored for more than a few hours were also covered.

4.8 Management of Excavated Soil

4.8.1 Excavated Soil Profiling

Table 3 of the California Code of Regulations (CCR) Title 22, Division 4.5, Chapter 11, Article 3, prohibits the disposal of any waste containing PCBs in excess of 50 mg/kg in California to other than a Class I disposal facility. In addition, the state Soluble Threshold Limit Concentration limit for hazardous waste classification is 5 mg/l for soluble PCBs. Based on the analytical results gathered during the PEA, the soil excavated from the Building G Area was determined to be non-hazardous waste, and was transported to a Class III landfill, Waste Connections – Chiquita Canyon Landfill, in Castaic, California for disposal. Non-hazardous waste manifests are included in Appendix E.

4.8.2 Transportation Plan for Off-site Disposal

Three trucks were used to transport the three roll-off bins containing excavated soil from the site to the off-site disposal facility.

As stated in the RAW and depicted on Figure 6, trucks entered the site from Morning View Drive and traveled along the gated alley way that separates MHS from JCES to the parking lot north of Building K. The trucks then stopped at the westernmost perimeter fenced area where the roll-off bins were staged so the bins could be loaded onto the trucks. Trucks maintained slow speeds (i.e. less than 5 miles per hour) for safety and dust control.

Prior to exiting the loading/fenced area, the trucks were swept to remove any soil or dust. Prior to off-site transport, the trucks were inspected to ensure that the roll-off bins were securely covered and cleaned of excess soil, properly placarded, and that the non-hazardous soil manifest had been completed and signed by the generator and the transporter. Once loaded, the trucks left the loading fenced area and exited the site via the entry route, back to Morning View Drive, to Pacific Coast Highway.

4.9 Backfill and Site Restoration

The excavated area was backfilled using DTSC-approved clean fill soil and topsoil and restored to its original condition. The source of the imported fill material was sampled prior to the start of the field work in accordance with DTSC's guidelines entitled "*Information Advisory, Clean Imported Fill Material*," dated October 2001. Sampling results were submitted to the DTSC and were approved in an email dated December 17, 2014. After placement, the imported clean fill soil and topsoil were compacted using a vibrating plate. Sod was placed outside the planters to replace the grass that was removed. Bushes were planted inside the planters to replace those removed during the excavation (Photos 20 and 21).

5 Conclusion

Approximately 15 cy^3 of PCB-impacted soil was excavated from the Building G Area during the RA, in accordance with the DTSC-approved RAW. The planar footprint of the excavation encompassed the highest detected concentrations of Aroclor 1254; soil samples MH-SB-76 and MH-SB-118, as well as locations MH-SB-119 through MH-SB-121 and MH-SB-124. Approximately 15 yd^3 of soil was excavated, determined to be non-hazardous, and transported off site for disposal at the Chiquita Landfill, located in Castaic, California.

Excavation of the highest detected concentrations of Aroclor 1254 (soil samples MH-SB-76 and MH-SB-118), lowered the residential human health based risk associated with the PCB-impacted soil in the Building G Area to the target risk of $1x10^{-6}$, providing a site that is suitable for unrestricted regulatory closure. Based on the results of the excavation activities performed in the Building G Area, as described herein, the District respectfully requests that DTSC issue a "No Further Action" for the PCBs in shallow soil in the Building G Area.

Table

Table 1. Summary of Post-Excavation Incremental Soil Sampling Results
Building G Area, Malibu High School
30215 Morning View Drive
Malibu, California

Sample ID	Date	Depth (feet bgs)	Aroclor 1254 µg/kg
Decision Unit 1 - Base of Excavation			
IS-BASE-A	12/24/2014	1.5	140
IS-BASE-B	12/24/2014	1.5	600
IS-BASE-C	12/24/2014	1.5	230
Decision Unit 2 - Sidewalls of Excavation			
IS-SIDEWALL-A	12/24/2014	0	120
IS-SIDEWALL-B	12/24/2014	0	190
IS-SIDEWALL-C	12/24/2014	0	92

Notes
µg/kg - micrograms per kilogram
bgs - below ground surface

Appendix A

Photo Log

Photo 1: Pre-excavation: Plastic laid down along soil transport route, east of Gymnasium.

Photo 2: Pre- excavation: Plastic laid down along soil transport route, north of Building G.

Photo 3: Pre-excavation: Setting up air monitoring station (ENVIRON), looking east toward Building G.

Photo 4: Pre-excavation: Setting up air monitoring stations (DTSC left, ENVIRON right) at top of hill by Building J.

Photo 5: Pre-excavation: setting up air monitoring stations (DTSC left, ENVIRON center) and meteorological station (ENVIRON, right) at top of Amphitheatre steps.

Photo 6: Pre-excavation: Setting up air monitoring stations (DTSC left, ENVIRON right) in front of temporary fencing by Building I.

Photo 7: First day of excavation: Removing grass and surficial soil with mini-excavator, looking north.

Photo 8: First day of excavation: Removing shrubbery adjacent to walkway; irrigation lines (blue, gray) exposed.

Photo 9: First day of excavation: Empty Super Sack® loaded on forklift, looking south.

Photo 10: First day of excavation: Loading excavated soil into Super Sack®; lockers covered in plastic in background.

Photo 11: First day of excavation: Temporary Super Sack® staging location north of Building G; plastic sheeting on ground, walls, and hill.

Photo 12: First day of excavation: Southern end of excavation down to total depth of 1.5 feet; blue irrigation line supported by sandbags.

Photo 13: Second day of excavation: Roll-off bins staged on plastic by Gymnasium, looking northwest.

Photo 14: Second day of excavation: Completing northern half of excavation while southern half is flagged for incremental sampling.

Photo 15: Completed excavation with flagged post-excavation sampling locations, temporary fencing, and plastic; looking north.

Photo 16: Sample jars and disposable sampler for post-excavation incremental soil sampling.

Photo 17: Collecting southern sidewall post-excavation incremental soil sample.

Photo 18: Looking east at Building G: Staging area for Super Sacks of clean imported soil for backfill (to the right) and stockpile of imported topsoil covered in plastic (to the left). Note that the fill soils were approved by DTSC.

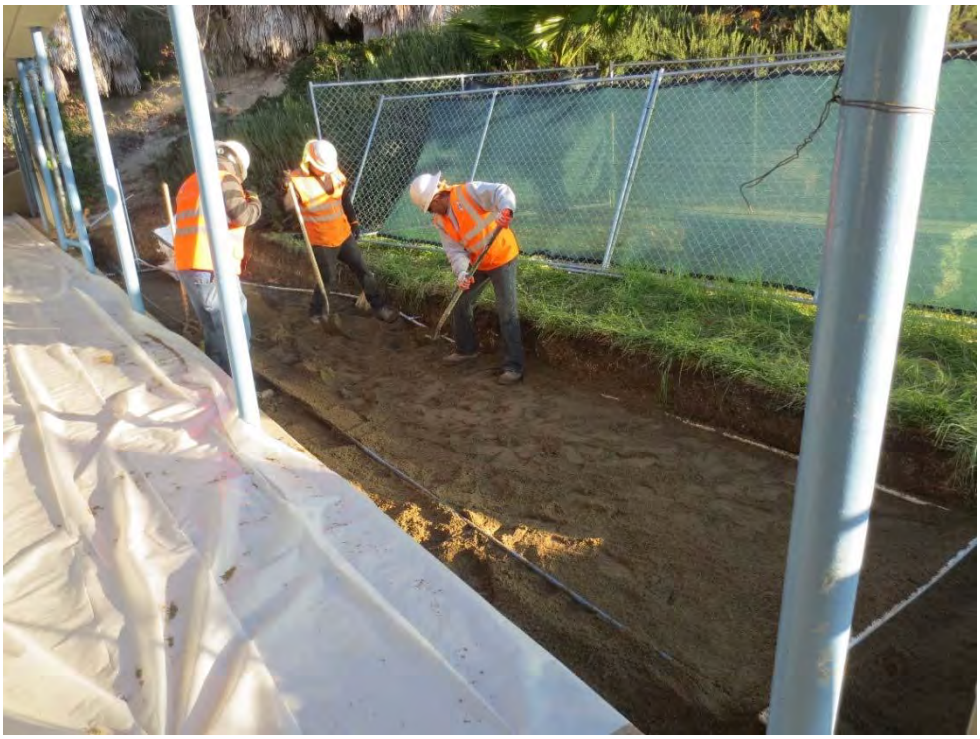

Photo 19: Distributing clean imported backfill soil throughout excavation, looking north-northeast.

Photo 20: Post Excavation: Looking north - Excavation area restored to previous state with sod and plants.

Photo 21: Post excavation: Looking northwest - Excavation area backfilled and restored.

Photo 22: Post excavation: Looking southwest: Soil transport route adjacent to Gymnasium after excavation activities.

Notes:
[1] Baseline, before excavation
µg/m^3 – micrograms per cubic meter
TWA – time weighted average
MIE DR-4000 – stationary dust monitor model
pDR-1500 A – personal dust monitor model
mph – miles per hour
- = only pDR 1500A used during off-loading to roll off bin
AL - Action Level
Readings were collected every 15 minutes during excavation and every hour during backfill.
Y - Yes
E - East
N - North
NE - Northeast
S - South
SE - Southeast
SW - Southwest
NA - Not Applicable

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 12/24/2014 3:15 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.9º C.

GC Semi VOA
Method(s) 8082: Batch: 258899 / 259027
The following samples underwent a sulfuric acid clean-up, via EPA Method 3665A, to reduce matrix interferences: (440-97767-2), (440-97773-1), (440-97773-1 MS), (440-97773-1 MSD), (LCS 280-258758/2-A), (MB 280-258758/1-A).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method(s) Increment, prep: The following samples were air dried and sieved per the procedure; however, the samples contained material that would not pass through the sieve: IS-SIDEWALL-B (440-97767-2). This material was removed and not extracted. The material appeared to be rocks and small amount of vegetation including grass and leaves. Batch: 258575; Method: 8082 (ISM_DD_SI_SS)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
F1	MS and/or MSD Recovery exceeds the control limits
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The sample was received on 12/24/2014 3:15 PM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.9º C.

GC Semi VOA
Method(s) 8082: The following samples required a dilution due to abundance of target analytes: IS-BASE-B (440-97768-1). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.
Elevated reporting limits (RLs) are provided.

Method(s) 8082: The following samples underwent a sulfuric acid clean-up, via EPA Method 3665A, to reduce matrix interferences: (440-97773-1 MS), (440-97773-1 MSD), (LCS 280-258758/2-A), (MB 280-258758/1-A), IS-BASE-B (440-97768-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method(s) Increment, prep: The following samples were air dried and sieved per the procedure; however, the samples contained material that would not pass through the sieve: IS-BASE-B (440-97768-1). This material was removed and not extracted. The material appeared to be rocks and small amount of vegetation including grass and leaves. Batch: 258575; Method: 8082 (ISM_DD_SI_SS)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
E	Result exceeded calibration range.
F1	MS and/or MSD Recovery exceeds the control limits
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The sample was received on 12/24/2014 3:15 PM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.4º C.

GC Semi VOA
Method(s) 8082: The following samples underwent a sulfuric acid clean-up, via EPA Method 3665A, to reduce matrix interferences: (440-97773-1 MS), (440-97773-1 MSD), (LCS 280-258758/2-A), (MB 280-258758/1-A), IS-BASE-A (440-97769-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method(s) Increment, prep: The following samples were air dried and sieved per the procedure; however, the samples contained material that would not pass through the sieve: IS-BASE-A (440-97769-1). This material was removed and not extracted. The material appeared to be rocks and small amount of vegetation including grass and leaves. Batch: 258575; Method: 8082 (ISM_DD_SI_SS)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
F1	MS and/or MSD Recovery exceeds the control limits
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

No additional comments.

Receipt
The sample was received on 12/24/2014 3:15 PM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.4º C.

GC Semi VOA
Method(s) 8082: The following samples underwent a sulfuric acid clean-up, via EPA Method 3665A, to reduce matrix interferences: (440-97773-1 MS), (440-97773-1 MSD), (LCS 280-258758/2-A), (MB 280-258758/1-A), IS-SIDEWALL-A (440-97771-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method(s) Increment, prep: The following samples were air dried and sieved per the procedure; however, the samples contained material that would not pass through the sieve: IS-SIDEWALL-A (440-97771-1). This material was removed and not extracted. The material appeared to be rocks and small amount of vegetation including grass and leaves. Batch: 258575; Method: 8082 (ISM_DD_SI_SS)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
F1	MS and/or MSD Recovery exceeds the control limits
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The sample was received on 12/24/2014 3:15 PM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.0º C.

GC Semi VOA
Method(s) 8082: The following samples underwent a sulfuric acid clean-up, via EPA Method 3665A, to reduce matrix interferences: (440-97773-1 MS), (440-97773-1 MSD), (LCS 280-258758/2-A), (MB 280-258758/1-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method(s) Increment, prep: The following samples were air dried and sieved per the procedure; however, the samples contained material that would not pass through the sieve: IS-BASE-C (440-97772-1). This material was removed and not extracted. The material appeared to be rocks and small amount of vegetation including grass and leaves. Batch: 258575; Method: 8082 (ISM_DD_SI_SS)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
F1	MS and/or MSD Recovery exceeds the control limits
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The sample was received on 12/24/2014 3:15 PM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.8º C.

GC Semi VOA
Method(s) 8082: The following samples underwent a sulfuric acid clean-up, via EPA Method 3665A, to reduce matrix interferences: (440-97773-1 MS), (440-97773-1 MSD), (LCS 280-258758/2-A), (MB 280-258758/1-A), IS-SIDEWALL-C (440-97773-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method(s) Increment, prep: The following samples were air dried and sieved per the procedure; however, the samples contained material that would not pass through the sieve: (440-97773-1 MS), (440-97773-1 MSD), IS-SIDEWALL-C (440-97773-1). This material was removed and not extracted. The material appeared to be rocks and small amount of vegetation including grass and leaves. Batch: 258575; Method: 8082 (ISM_DD_SI_SS)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
F1	MS and/or MSD Recovery exceeds the control limits
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

SUBJECT: SMMUSD Malibu, Data Validation

Dear Ms. Dergham

Enclosed are the final validation reports for the fraction listed below. These SDGs were received on January 5, 2015. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #33436:

SDG #	Fraction
440-97767-1, 440-97768-1, 440-97769-1 440-97771-1, 440-97772-1, 440-97773-1	Polychlorinated Biphenyls

The data validation was performed under EPA Level III guidelines. The analyses were validated using the following documents, as applicable to each method:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; Update IV, February 2007

Please feel free to contact us if you have any questions.

Sincerely,

Andrew Kong
Project Manager/Senior Chemist

IS-SIDEWALL-B

Introduction

This data review covers one soil sample listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8082 for Polychlorinated Biphenyls.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC Instrument Performance Check

Instrument performance was not required by the method.

III. Initial Calibration

Initial calibration was performed as required by the method.

The laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990.

IV. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds.

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polychlorinated biphenyl contaminants were found in the method blanks.

No field blanks were identified in this SDG.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were not within QC limits. Since there were no associated samples, no data were qualified.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Florisil Cartridge Check

Florisil cleanup was not reviewed in this SDG.

XI. GPC Calibration

GPC cleanup was not reviewed in this SDG.

XII. Target Compound Identification

Raw data were not reviewed for this SDG.

XIII. Compound Quantitation

Raw data were not reviewed for this SDG.

XIV. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XV. Field Duplicates

No field duplicates were identified in this SDG.

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were not within QC limits. Since there were no associated samples, no data were qualified.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Florisil Cartridge Check

Florisil cleanup was not reviewed in this SDG.

XI. GPC Calibration

GPC cleanup was not reviewed in this SDG.

XII. Target Compound Identification

Raw data were not reviewed for this SDG.

XIII. Compound Quantitation

Raw data were not reviewed for this SDG.

XIV. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XV. Field Duplicates

No field duplicates were identified in this SDG.

Sample Identification

IS-SIDEWALL-A

Introduction

This data review covers one soil sample listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8082 for Polychlorinated Biphenyls.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC Instrument Performance Check

Instrument performance was not required by the method.

III. Initial Calibration

Initial calibration was performed as required by the method.

The laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990.

IV. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds.

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polychlorinated biphenyl contaminants were found in the method blanks.

No field blanks were identified in this SDG.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were not within QC limits. Since there were no associated samples, no data were qualified.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Florisil Cartridge Check

Florisil cleanup was not reviewed in this SDG.

XI. GPC Calibration

GPC cleanup was not reviewed in this SDG.

XII. Target Compound Identification

Raw data were not reviewed for this SDG.

XIII. Compound Quantitation

Raw data were not reviewed for this SDG.

XIV. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

IS-SIDEWALL-CMSD

Introduction

This data review covers 3 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8082 for Polychlorinated Biphenyls.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC Instrument Performance Check

Instrument performance was not required by the method.

III. Initial Calibration

Initial calibration was performed as required by the method.

The laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990.

IV. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds.

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polychlorinated biphenyl contaminants were found in the method blanks.

No field blanks were identified in this SDG.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Affected Compound	Flag	A or P
IS-SIDEWALL-CMS/MSD (IS-SIDEWALL-C)	Aroclor-1016	320 (54-132)	-	100 (≤36)	Aroclor-1016 Aroclor-1221 Aroclor-1232	J (all detects) J (all detects) J (all detects)	A
IS-SIDEWALL-CMS/MSD (IS-SIDEWALL-C)	Aroclor-1260	160 (62-129)	132 (62-129)	-	Aroclor-1242 Aroclor-1248 Aroclor-1254 Aroclor-1260	J (all detects) J (all detects) J (all detects) J (all detects)	A

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Florisil Cartridge Check

Florisil cleanup was not reviewed in this SDG.

XI. GPC Calibration

GPC cleanup was not reviewed in this SDG.

XII. Target Compound Identification

Raw data were not reviewed for this SDG.

XIII. Compound Quantitation

Raw data were not reviewed for this SDG.

XIV. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XV. Field Duplicates

No field duplicates were identified in this SDG.

EXECUTIVE SUMMARY

At the request of Santa Monica-Malibu Unified School District, Alta Environmental, LP an NV5 company (Alta/NV5) conducted a limited Asbestos and Lead Paint Survey at Juan Cabrillo Elementary School Located in Malibu, California. The survey was performed in anticipation of a demolition project that will take place at the site. Our Certified Asbestos Consultant and Certified Lead Inspector/Assessor conducted the following activities in areas affected by the scope of work to document the project:

- Initial investigation to locate suspect ACM;
- Initial investigation to locate suspect LBP;
- Investigation to locate suspect PCB containing light ballasts and fluorescence light tubes;
- Physical assessment of suspect materials;
- Collection of bulk samples from suspect materials; and
- Laboratory analysis of all collected samples.

Alta Environmental recommends that any damaged asbestos materials be removed, repaired, encapsulated or enclosed. Asbestos materials that are not damaged may be managed in place with a good operations and maintenance (O&M) program.

Alta Environmental recommends an O&M program for the identified LBP in good condition. Abatement (e.g., stabilization) is recommended for damaged LBP, or if materials noted as being in good condition should change in condition. Abatement is also recommended for paints impacted by renovation and/or demolition activities.

1.0 INTRODUCTION

Intermittently from October 26, 2020 to January 13, 2021, Alta Environmental, LP an NV5 company (Alta/NV5) conducted a hazardous materials investigation for the presence of asbestos-containing materials (ACM), lead-based paint (LBP) and other pertinent universal waste at Juan Cabrillo Elementary School located at 30237 Morning View Drive, Malibu, CA 90265.

2.0 PROJECT BACKGROUND

The Santa Monica Malibu Unified School District (District), retained Alta/NV5 for this investigation. Randy Flores and Jorge Robles, both Cal/OSHA Certified Site Surveillance Technicians (CSST) and California Department of Public Health (CDPH) Certified Lead Sampling Technicians employed by Alta/NV5, as well as Carbany Becerril, also a California Department of Public Health (CDPH) Certified Lead Sampling Technician, conducted the sampling. Previous asbestos and lead survey data and Alta/NV5's AHERA 3-year re-inspection report dated August 18, 2017 were used during this survey. Data from these reports has been incorporated into this current survey report.

3.0 SCOPE OF WORK

The survey included the performance of the following activities as part of the project. Destructive testing was not utilized as part of the survey.

- Initial investigation to locate suspect ACM;
- Initial investigation to locate suspect LBP;
- Investigation to locate suspect PCB containing light ballasts and fluorescence light tubes;
- Physical assessment of suspect materials;
- Collection of bulk samples from suspect materials; and
- Laboratory analysis of all collected samples.

The buildings involved in this project consist of buildings A, B, C, D, E, F, G (MPR), H (Cottage A, I (Cottage B), Portable buildings C1-C5 and the Boy's and Girl's club.

Due to the non-destructive nature of the survey, the following areas were unable to be accessed at the time of the survey:

- Underneath cabinetry in all permanent buildings. Older floor tile and mastic may be present under cabinetry. These areas should be assessed after the buildings have been vacated and before the demolition process begins.
- Wall cavities. Pipe insulation was not observed in most of the buildings surveyed. However, wall cavities containing plumbing should be inspected for the presence of pipe insulation after the buildings have been vacated and before the demolition process begins.

4.0 METHODOLOGY

4.1 ASBESTOS

The sampling was conducted using guidelines set forth in *Federal Register 40 CFR Part 763*. Alta Environmental conducted an initial walkthrough of the site to develop a listing and sampling scheme of suspect materials. Samples were placed in sealable sample containers and assigned a unique sample identification number.

Bulk samples collected from the subject site were subsequently analyzed by polarized light microscopy (PLM) for asbestos content in accordance with the United States Environmental Protection Agency's (USEPA) *Determination of Asbestos in Bulk Building Materials: EPA/600/R-93/116, July 1993*, at AQ Environmental Labs, a laboratory accredited by the National Voluntary Laboratory Accreditation Program and located in Signal Hill, California.

Based on the requirements of the USEPA as set forth in *40 CFR 763*, a homogeneous area is defined as "an area of surfacing material, thermal system insulation material or miscellaneous material that is uniform in color and texture." Furthermore, the regulation requires that a minimum number of samples be collected from each identified homogeneous area. If one sample in a homogeneous area is found to contain asbestos, the entire homogeneous area is considered asbestos-containing.

It is possible that one sample out of a set of samples collected from a homogeneous area can be positive for asbestos and the remaining samples in the homogeneous area are negative. However, the entire area must be considered asbestos-containing.

Caution is advised in interpreting results provided herein.

The limited survey was conducted to identify hazardous materials (asbestos and lead). The investigation did not include destructive testing (i.e., the opening of wall and ceiling cavities) and was limited to accessible areas. Prior to renovation or demolition, materials not identified in this report or materials subsequently discovered through destructive sampling should be tested for the presence of asbestos. An investigation below soil grade was outside the scope of this project, and additional material such as asbestos-cement pipes, electrical wiring insulation, or other materials may subsequently be discovered.

4.2 LEAD

Paint chips were collected to determine the weight percent concentration of lead in the painted surfaces. Paint chip samples were collected for construction safety as defined by *Title 8 CCR Section 1532.1*. Paint chip sample analysis was conducted by EPA Method SW846/7420 at AQ Environmental Labs, a laboratory accredited by the Environmental Laboratory Accreditation Program and located in Signal Hill, California.

4.3 POLYCHLORINATED BIPHENYLS (PCB) IN LIGHTING EQUIPMENT

During the inspection, a representative number of fluorescent light fixtures and their associated ballasts were inspected for labeling regarding PCBs. Other mechanical systems that may contain PCBs were also noted and are documented in the results section below.

4.4 MERCURY IN FLOURESCENT LIGHT TUBES/BATTERIES/THERMOSTATS

Fluorescent light tubes, as well as any mercury-containing switches/gauges were inspected, categorized, and quantified. Additionally, the site was inspected for the presence of any battery devices which may need special disposal.

4.5 REFRIGERANT/GASES

Equipment in which any refrigerants, gases or liquid requiring special handling may have been used were also catalogued during this inspection.

5.0 RESULTS

5.1 ASBESTOS

If any materials were found to contain greater than one-tenth of one percent of asbestos by weight as determined by the PLM method of analysis, Cal/OSHA mandates that the material(s) be treated as an asbestos-containing construction material (ACCM) subject to regulation under *CCR Title 8, Section 1529*.

If any materials were found to contain more than one percent asbestos by weight as determined by the PLM method of analysis, the USEPA mandates that the material(s) be treated as ACM, subject to regulation under *40 CFR 61*.

The following materials were found to be asbestos-containing/ACCM:

Buildings A, B, C, D, E, F

Residual floor tile and mastic	NA	Potentially under cabinetry	ASSUMED	1,000 SF
Pipe elbow insulation	NA	Potentially in wall cavities where plumbing is located	ASSUMED	250 LF

Building A

Material	Sample No.	Material Location	Asbestos Content	Quantity
Drywall joint compound	A-12, A-13, A-14, A-15, A-16, A-17, A-18	All Interior walls, south center office restroom, south electrical room and work room	2% Chrysotile	8,000 SF

Material	Sample No.	Material Location	Asbestos Content	Quantity
3" TSI pipe	A-40, A-41, A-42	Above damaged ceiling in janitor's closet (maybe be present in wall and ceiling cavities	25% Chrysotile	250 LF
Stucco	Previously sampled	Exterior walls	<0.1% - < 1.0 % Chrysotile	5,000 SF

Building B

Material	Sample No.	Material Location	Asbestos Content	Quantity
Stucco	Previously sampled	Exterior walls	3% Chrysotile	7,000 SF
Sink undercoating	Previously sampled	Under sinks in classrooms	25-30% Chrysotile	20 SF
Chalkboard and mastic	NA	All rooms	ASSUMED	200 SF
Mirror mastic	NA	Restrooms	ASSUMED	100 SF
Non-skid flooring	B-30, B-31, B-32	SW of room 1 – exterior	10% Chrysotile	30 SF
9" tan floor tile	B-33, B-34, B35	Mechanical room 117 and room 4 closet	10% Chrysotile	20 SF

Building C

Material	Sample No.	Material Location	Asbestos Content	Quantity
Sink undercoating	Previously sampled	Under sinks in classrooms	25-30% Chrysotile	20 SF
Chalkboard and mastic	NA	All rooms	ASSUMED	200 SF
Mirror mastic	NA	Restrooms	ASSUMED	100 SF

Building D

Material	Sample No.	Material Location	Asbestos Content	Quantity
Drywall w/joint compound	Previously sampled	Room 12-15 and restrooms, heater closets and electrical closets	2% Chrysotile	3,700 SF
Sink undercoating	Previously sampled	Under sinks in classrooms	25-30% Chrysotile	40 SF
12" Reddish brown floor tile and mastic	Previously sampled	Classroom 13 (assumed under new 12" floor tile)	2-10% Chrysotile	900 SF

Building E

Material	Sample No.	Material Location	Asbestos Content	Quantity
Rough plaster walls	Previously sampled	Reading room, audio visual, workroom, office, electrical, closet, in mechanical room	<1% Chrysotile*	2,500 SF
Sink undercoating	Previously sampled	Under sinks in classrooms	25-30% Chrysotile	5 SF
Stucco	Previously sampled	Exterior walls	2% Chrysotile	5,000 SF
Chalkboard and mastic	NA	All classrooms	ASSUMED	200 SF
9" Tan floor tile and mastic	Previously sampled	Work room (assumed under new floor tile)	30-40% Chrysotile	180 SF

Building F

Material	Sample No.	Material Location	Asbestos Content	Quantity
White door caulk	F-7, F-8, F-9	Doors	<1% Chrysotile*	500 LF

Material	Sample No.	Material Location	Asbestos Content	Quantity
Sink undercoating	Previously sampled	Under sinks in classrooms	25-30% Chrysotile	40 SF
Chalkboard and mastic	NA	All classrooms	ASSUMED	200 SF
Stucco	Previously sampled	Exterior walls and ceilings	2% Chrysotile	12,000 SF
9" floor tile and mastic	Previously sampled	Heater rooms	Positive	200 SF

Building H and I (Cottage A and B)

Material	Sample No.	Material Location	Asbestos Content	Quantity
Roof mastic	Previously sampled	Roof	5% Chrysotile	3 SF

*In the absence of 1,000 point count analysis, this material must be handled and disposed of as asbestos-containing (> 1%).

The results for all other materials sampled in this current survey and previous surveys were reported as "none detected," based on the limitations of the analytical method. Please refer to the Material Inventory (Appendix A) and Appendix E for a complete listing of materials sampled.

5.2 LEAD

Currently, the State of California, HUD and the USEPA define LBP as paint or other surface coating with lead content equal to or greater than 5,000 parts per million (ppm) by paint chip analysis. The following are painted surfaces with results equal to or greater than 5,000 ppm of lead as tested by paint chip analysis. These surfaces are subject to regulation by the CDPH and the USEPA.

Component	Sample No.	Substrate	Paint Color	Material Location	Results (ppm)
Ceramic wall tile and fixtures	NA	Ceramic	Various	All-buildings – restrooms and kitchens	ASSUMED*
Arcade pole	C-L3	Metal	Blue	Building C	89,000

Arcade ceiling	D-L8	Wood	White	Building D – Exterior	10,000

**For the purposes of the survey, ceramic wall and floor tile, as well as ceramic fixtures, are assumed to contain lead in regulated amounts. Since this project is a demolition, no stabilization will be needed for these components. Only a waste stream analysis of the building debris will need to be performed following demolition to characterize the waste.*

The following are results of painted surfaces with any detectable levels of lead in paint below 5,000 ppm that were determined by paint chip sampling. When disturbed for construction purposes these surfaces are subjected to Cal/OSHA exposure assessment requirements set forth in *Title 8 CCR, Section 1532.1(d)*. This regulation requires initial employee exposure monitoring to evaluate work exposure during work that disturbs paint with any detectable level of lead. If airborne lead levels are above the established Cal/OSHA action limit or permissible exposure limit, additional monitoring and respiratory protection are required.

Building A

- Utility piping- metal-white
- Wall-drywall-white
- Door frame-metal-blue

Building B

- Z-flashing-metal-light blue

- Door frame-metal-blue

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 ASBESTOS

Asbestos-containing materials (ACM) were discovered during course of this inspection. Refer to Section 5 in this report for a summary of ACMs. If, during the course of this project, materials are found or added to the scope of

work that are not listed in this report as being sampled, they must be treated as asbestos-containing until subsequent sampling and laboratory analysis prove otherwise.

Materials assumed to contain asbestos in this report should be properly sampled and analyzed by or under the direction of a Certified Asbestos Consultant to determine asbestos content prior to construction, demolition or renovation. These materials were inaccessible for sampling during this inspection or would be substantially damage by such sampling.

Any damaged asbestos materials should be removed, repaired, encapsulated or enclosed. The USEPA requires that all asbestos materials be removed prior to any renovation or demolition activities that may impact the material. The USEPA recommends that a proactive, management- in-place program be developed and implemented whenever asbestos is discovered in a building. Asbestos materials that are not damaged may be managed in place with a good operations and maintenance (O&M) program.

Certain notification requirements apply to owners of buildings constructed prior to 1979 where asbestos is known to be present. California Health and Safety Code 25915-25915.7 requires that all employees working within a building known to contain asbestos be informed, in writing, initially and annually thereafter of its presence, location, procedures and handling restrictions, results for any sampling conducted in the building and potential health risks of asbestos. In addition, notification shall be provided to contractors, maintenance workers or others.

One hundred square feet or more of materials containing greater than 1/10th of one percent asbestos must be properly removed by a licensed asbestos abatement contractor using isolation control methods and disposed of appropriately. Workers handling materials containing asbestos must be properly trained and must wear the appropriate personal protective equipment (PPE).

Furthermore, when asbestos is present in any amount, be advised that certain provisions of Cal-OSHA regulation Title 8 Section 1529 still apply. These include, but are not limited to, exposure assessments, air monitoring, hazard communication, prohibitions and work practices, such as wet methods and HEPA vacuuming.

6.2 LEAD

Lead-based paint was reported during this inspection. Refer to Section 5 in this report for a summary of LBP.

An O&M program is recommended to properly manage-in-place identified or assumed LBP until the buildings are demolished. An O&M program is a set of measures designed to reduce lead exposure to humans and the environment. Such measures may include specialized cleaning, repairs, maintenance, painting, temporary containment, education programs, and on-going visual monitoring by owners and/or reevaluations by risk assessors. An initial evaluation of potential LBP and hazards by a certified inspector/assessor is recommended for successful implementation of an O&M program.

Workers handling Lead-Based Paint or Lead-Containing Paint must be have appropriate Lead Training and must wear the appropriate personal protective equipment.

Waste generated during removal or demolition of LBP components must be properly segregated into separate waste streams. Each waste stream should be randomly sampled and each sample analyzed for lead by the California Waste Extraction Test for comparison to the Total Threshold Limit Concentration (TTLC), and Soluble

Threshold Limit Concentration (STLC) and by Toxicity Characteristic Leaching Procedure (TCLP) as required, to determine the final disposition of the waste.

Disturbances of paints and/or component with any detectable amount of lead are subject to regulation under *Title 8 CCR, Section 1532.1 (d)*. These requirements include awareness training, and monitoring to determine worker exposure. This regulation requires initial and on-going (if necessary) employee exposure monitoring to evaluate lead work exposure that disturbs paint with any detectable level of lead. Alta Environmental suggests that engineering controls, respiratory protection and personal protective equipment be employed during any project that disturbs painted surfaces.

All other painted surfaces not listed above are considered lead-containing until confirmatory paint chip sampling proves otherwise.

6.3 POLYCHLORINATED BIPHENYLS (PCBS) IN LIGHTING EQUIPMENT

Quantities of light ballasts observed during the survey are listed in Appendix A.

Prior to demolition work, the light fixtures must be dismantled and the ballast exposed so that the label on each light ballast can be examined. If a label is missing or is not clearly labeled “No PCB” by the manufacture, the unit must be assumed to contain PCBs.

All ballasts assumed to contain PCB’s shall be removed intact and in a non-destructive manner. Ballasts shall be packaged and disposed of in accordance with Title 22 of the California Code of Regulations, Sections 66243, et seq., and Sections 25157.8, et al, of the California Health and Safety Code.

Any ballasts that are observed to be leaking shall be properly containerized and disposed of in accordance with 40 CFR 761.

In addition, any impacted electrical panels or other appropriate machinery should be assumed to contain some form of PCB oil and should be disposed of accordingly.

6.4 MERCURY IN FLORESCENCE LIGHT TUBES/BATTERIES/THERMOSTATS

Quantities of light tubes, exit signs and thermostats observed during the survey are listed in Appendix A.

All light tubes from this project shall be segregated, packaged and disposed of in accordance with all federal, state, and local regulations and guidelines including CA Title 22 division 4.5 Chapter 11 Section 66261.50. Mercury-containing thermostats, gauges or switches must be removed by properly trained personal and disposed of properly.

Ensure that any universal waste battery that shows evidence of leakage, spillage, or damage that could cause leakage are properly contained. All batteries associated with emergency exit signs, emergency lighting, and spent battery devices should be removed intact, packaged and disposed of under Title 22 of the California Code of Regulations, Sections 66243, et seq., and Sections 25157.8, et al, of the California Health and Safety Code.

6.5 REFRIGERANTS/GASES

Prior to renovation activities ensure all refrigerants/gases associated with HVAC units, etc. are properly collected, transported, and disposed of/recycled in accordance with federal and California Air Resource Boards. Personnel performing the removal and collection activities should be trained in compliance with the EPA's Technician Certification Program.

7.0 ASSUMPTIONS AND LIMITATIONS

This report was prepared exclusively for use by City of Fullerton and may not be relied upon by any other person or entity without Alta/NV5 's express written permission. The information, conclusions and recommendations described in this report apply to conditions existing at certain locations when services were performed and are intended only for the specific purposes, locations, time frames and project parameters indicated. Alta/NV5 cannot be responsible for the impact of any changes in environmental standards, practices or regulations after performance of services.

In performing our professional services, we have applied present engineering and scientific judgment and used a level of effort consistent with the current standard of practice for similar types of studies.

As applicable, Alta/NV5 has relied in good faith upon representations and information furnished by individuals with respect to operations and existing property conditions, to the extent that they have not been contradicted by data obtained from other sources. Accordingly, Alta/NV5 accepts no responsibility for any deficiencies, omissions, misrepresentations, or fraudulent acts of persons interviewed.

Alta/NV5 will not accept any liability for loss, injury claim, or damage arising directly or indirectly from any use or reliance on this report. Alta/NV5 makes no warranty, expressed or implied

This report is issued with the understanding that the client, the property owner, or its representative is responsible for ensuring that the information, conclusions, and recommendations contained herein are brought to the attention of the appropriate regulatory agencies, as required.

If you have any questions, please do not hesitate to contact the undersigned at (562) 495-5777. We appreciate the opportunity to be of service to City of Fullerton.

EXECUTIVE SUMMARY

At the request of Santa Monica-Malibu Unified School District, Alta Environmental, LP an NV5 company (Alta/NV5) conducted a limited Asbestos and Lead Paint Survey at Juan Cabrillo Elementary School Located in Malibu, California. The survey was performed in anticipation of a demolition project that will take place at the site. Our Certified Asbestos Consultant and Certified Lead Inspector/Assessor conducted the following activities in areas affected by the scope of work to document the project:

- Initial investigation to locate suspect ACM;
- Initial investigation to locate suspect LBP;
- Investigation to locate suspect PCB containing light ballasts and fluorescence light tubes;
- Physical assessment of suspect materials;
- Collection of bulk samples from suspect materials; and
- Laboratory analysis of all collected samples.

Alta Environmental recommends that any damaged asbestos materials be removed, repaired, encapsulated or enclosed. Asbestos materials that are not damaged may be managed in place with a good operations and maintenance (O&M) program.

Alta Environmental recommends an O&M program for the identified LBP in good condition. Abatement (e.g., stabilization) is recommended for damaged LBP, or if materials noted as being in good condition should change in condition. Abatement is also recommended for paints impacted by renovation and/or demolition activities.

1.0 INTRODUCTION

Intermittently from October 26, 2020 to January 13, 2021, Alta Environmental, LP an NV5 company (Alta/NV5) conducted a hazardous materials investigation for the presence of asbestos-containing materials (ACM), lead-based paint (LBP) and other pertinent universal waste at Juan Cabrillo Elementary School located at 30237 Morning View Drive, Malibu, CA 90265.

2.0 PROJECT BACKGROUND

The Santa Monica Malibu Unified School District (District), retained Alta/NV5 for this investigation. Randy Flores and Jorge Robles, both Cal/OSHA Certified Site Surveillance Technicians (CSST) and California Department of Public Health (CDPH) Certified Lead Sampling Technicians employed by Alta/NV5, as well as Carbany Becerril, also a California Department of Public Health (CDPH) Certified Lead Sampling Technician, conducted the sampling. Previous asbestos and lead survey data and Alta/NV5's AHERA 3-year re-inspection report dated August 18, 2017 were used during this survey. Data from these reports has been incorporated into this current survey report.

3.0 SCOPE OF WORK

The survey included the performance of the following activities as part of the project. Destructive testing was not utilized as part of the survey.

- Initial investigation to locate suspect ACM;
- Initial investigation to locate suspect LBP;
- Investigation to locate suspect PCB containing light ballasts and fluorescence light tubes;
- Physical assessment of suspect materials;
- Collection of bulk samples from suspect materials; and
- Laboratory analysis of all collected samples.

The buildings involved in this project consist of buildings A, B, C, D, E, F, G (MPR), H (Cottage A, I (Cottage B), Portable buildings C1-C5 and the Boy's and Girl's club.

Due to the non-destructive nature of the survey, the following areas were unable to be accessed at the time of the survey:

- Underneath cabinetry in all permanent buildings. Older floor tile and mastic may be present under cabinetry. These areas should be assessed after the buildings have been vacated and before the demolition process begins.
- Wall cavities. Pipe insulation was not observed in most of the buildings surveyed. However, wall cavities containing plumbing should be inspected for the presence of pipe insulation after the buildings have been vacated and before the demolition process begins.

4.0 METHODOLOGY

4.1 ASBESTOS

The sampling was conducted using guidelines set forth in *Federal Register 40 CFR Part 763*. Alta Environmental conducted an initial walkthrough of the site to develop a listing and sampling scheme of suspect materials. Samples were placed in sealable sample containers and assigned a unique sample identification number.

Bulk samples collected from the subject site were subsequently analyzed by polarized light microscopy (PLM) for asbestos content in accordance with the United States Environmental Protection Agency's (USEPA) *Determination of Asbestos in Bulk Building Materials: EPA/600/R-93/116, July 1993*, at AQ Environmental Labs, a laboratory accredited by the National Voluntary Laboratory Accreditation Program and located in Signal Hill, California.

Based on the requirements of the USEPA as set forth in *40 CFR 763*, a homogeneous area is defined as "an area of surfacing material, thermal system insulation material or miscellaneous material that is uniform in color and texture." Furthermore, the regulation requires that a minimum number of samples be collected from each identified homogeneous area. If one sample in a homogeneous area is found to contain asbestos, the entire homogeneous area is considered asbestos-containing.

It is possible that one sample out of a set of samples collected from a homogeneous area can be positive for asbestos and the remaining samples in the homogeneous area are negative. However, the entire area must be considered asbestos-containing.

Caution is advised in interpreting results provided herein.

The limited survey was conducted to identify hazardous materials (asbestos and lead). The investigation did not include destructive testing (i.e., the opening of wall and ceiling cavities) and was limited to accessible areas. Prior to renovation or demolition, materials not identified in this report or materials subsequently discovered through destructive sampling should be tested for the presence of asbestos. An investigation below soil grade was outside the scope of this project, and additional material such as asbestos-cement pipes, electrical wiring insulation, or other materials may subsequently be discovered.

4.2 LEAD

Paint chips were collected to determine the weight percent concentration of lead in the painted surfaces. Paint chip samples were collected for construction safety as defined by *Title 8 CCR Section 1532.1*. Paint chip sample analysis was conducted by EPA Method SW846/7420 at AQ Environmental Labs, a laboratory accredited by the Environmental Laboratory Accreditation Program and located in Signal Hill, California.

4.3 POLYCHLORINATED BIPHENYLS (PCB) IN LIGHTING EQUIPMENT

During the inspection, a representative number of fluorescent light fixtures and their associated ballasts were inspected for labeling regarding PCBs. Other mechanical systems that may contain PCBs were also noted and are documented in the results section below.

4.4 MERCURY IN FLOURESCENT LIGHT TUBES/BATTERIES/THERMOSTATS

Fluorescent light tubes, as well as any mercury-containing switches/gauges were inspected, categorized, and quantified. Additionally, the site was inspected for the presence of any battery devices which may need special disposal.

4.5 REFRIGERANT/GASES

Equipment in which any refrigerants, gases or liquid requiring special handling may have been used were also catalogued during this inspection.

5.0 RESULTS

5.1 ASBESTOS

If any materials were found to contain greater than one-tenth of one percent of asbestos by weight as determined by the PLM method of analysis, Cal/OSHA mandates that the material(s) be treated as an asbestos-containing construction material (ACCM) subject to regulation under *CCR Title 8, Section 1529*.

If any materials were found to contain more than one percent asbestos by weight as determined by the PLM method of analysis, the USEPA mandates that the material(s) be treated as ACM, subject to regulation under *40 CFR 61*.

The following materials were found to be asbestos-containing/ACCM:

Buildings A, B, C, D, E, F

Residual floor tile and mastic	NA	Potentially under cabinetry	ASSUMED	1,000 SF
Pipe elbow insulation	NA	Potentially in wall cavities where plumbing is located	ASSUMED	250 LF

Building A

Material	Sample No.	Material Location	Asbestos Content	Quantity
Drywall joint compound	A-12, A-13, A-14, A-15, A-16, A-17, A-18	All Interior walls, south center office restroom, south electrical room and work room	2% Chrysotile	8,000 SF

Material	Sample No.	Material Location	Asbestos Content	Quantity
3" TSI pipe	A-40, A-41, A-42	Above damaged ceiling in janitor's closet (maybe be present in wall and ceiling cavities	25% Chrysotile	250 LF
Stucco	Previously sampled	Exterior walls	<0.1% - < 1.0 % Chrysotile	5,000 SF

Building B

Material	Sample No.	Material Location	Asbestos Content	Quantity
Stucco	Previously sampled	Exterior walls	3% Chrysotile	7,000 SF
Sink undercoating	Previously sampled	Under sinks in classrooms	25-30% Chrysotile	20 SF
Chalkboard and mastic	NA	All rooms	ASSUMED	200 SF
Mirror mastic	NA	Restrooms	ASSUMED	100 SF
Non-skid flooring	B-30, B-31, B-32	SW of room 1 – exterior	10% Chrysotile	30 SF
9" tan floor tile	B-33, B-34, B35	Mechanical room 117 and room 4 closet	10% Chrysotile	20 SF

Building C

Material	Sample No.	Material Location	Asbestos Content	Quantity
Sink undercoating	Previously sampled	Under sinks in classrooms	25-30% Chrysotile	20 SF
Chalkboard and mastic	NA	All rooms	ASSUMED	200 SF
Mirror mastic	NA	Restrooms	ASSUMED	100 SF

Building D

Material	Sample No.	Material Location	Asbestos Content	Quantity
Drywall w/joint compound	Previously sampled	Room 12-15 and restrooms, heater closets and electrical closets	2% Chrysotile	3,700 SF
Sink undercoating	Previously sampled	Under sinks in classrooms	25-30% Chrysotile	40 SF
12" Reddish brown floor tile and mastic	Previously sampled	Classroom 13 (assumed under new 12" floor tile)	2-10% Chrysotile	900 SF

Building E

Material	Sample No.	Material Location	Asbestos Content	Quantity
Rough plaster walls	Previously sampled	Reading room, audio visual, workroom, office, electrical, closet, in mechanical room	<1% Chrysotile*	2,500 SF
Sink undercoating	Previously sampled	Under sinks in classrooms	25-30% Chrysotile	5 SF
Stucco	Previously sampled	Exterior walls	2% Chrysotile	5,000 SF
Chalkboard and mastic	NA	All classrooms	ASSUMED	200 SF
9" Tan floor tile and mastic	Previously sampled	Work room (assumed under new floor tile)	30-40% Chrysotile	180 SF

Building F

Material	Sample No.	Material Location	Asbestos Content	Quantity
White door caulk	F-7, F-8, F-9	Doors	<1% Chrysotile*	500 LF

Material	Sample No.	Material Location	Asbestos Content	Quantity
Sink undercoating	Previously sampled	Under sinks in classrooms	25-30% Chrysotile	40 SF
Chalkboard and mastic	NA	All classrooms	ASSUMED	200 SF
Stucco	Previously sampled	Exterior walls and ceilings	2% Chrysotile	12,000 SF
9" floor tile and mastic	Previously sampled	Heater rooms	Positive	200 SF

Building H and I (Cottage A and B)

Material	Sample No.	Material Location	Asbestos Content	Quantity
Roof mastic	Previously sampled	Roof	5% Chrysotile	3 SF

*In the absence of 1,000 point count analysis, this material must be handled and disposed of as asbestos-containing (> 1%).

The results for all other materials sampled in this current survey and previous surveys were reported as "none detected," based on the limitations of the analytical method. Please refer to the Material Inventory (Appendix A) and Appendix E for a complete listing of materials sampled.

5.2 LEAD

Currently, the State of California, HUD and the USEPA define LBP as paint or other surface coating with lead content equal to or greater than 5,000 parts per million (ppm) by paint chip analysis. The following are painted surfaces with results equal to or greater than 5,000 ppm of lead as tested by paint chip analysis. These surfaces are subject to regulation by the CDPH and the USEPA.

Component	Sample No.	Substrate	Paint Color	Material Location	Results (ppm)
Ceramic wall tile and fixtures	NA	Ceramic	Various	All-buildings – restrooms and kitchens	ASSUMED*
Arcade pole	C-L3	Metal	Blue	Building C	89,000

Arcade ceiling	D-L8	Wood	White	Building D – Exterior	10,000

**For the purposes of the survey, ceramic wall and floor tile, as well as ceramic fixtures, are assumed to contain lead in regulated amounts. Since this project is a demolition, no stabilization will be needed for these components. Only a waste stream analysis of the building debris will need to be performed following demolition to characterize the waste.*

The following are results of painted surfaces with any detectable levels of lead in paint below 5,000 ppm that were determined by paint chip sampling. When disturbed for construction purposes these surfaces are subjected to Cal/OSHA exposure assessment requirements set forth in *Title 8 CCR, Section 1532.1(d)*. This regulation requires initial employee exposure monitoring to evaluate work exposure during work that disturbs paint with any detectable level of lead. If airborne lead levels are above the established Cal/OSHA action limit or permissible exposure limit, additional monitoring and respiratory protection are required.

Building A

- Utility piping- metal-white
- Wall-drywall-white
- Door frame-metal-blue

Building B

- Z-flashing-metal-light blue

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 ASBESTOS

Asbestos-containing materials (ACM) were discovered during course of this inspection. Refer to Section 5 in this report for a summary of ACMs. If, during the course of this project, materials are found or added to the scope of

work that are not listed in this report as being sampled, they must be treated as asbestos-containing until subsequent sampling and laboratory analysis prove otherwise.

Materials assumed to contain asbestos in this report should be properly sampled and analyzed by or under the direction of a Certified Asbestos Consultant to determine asbestos content prior to construction, demolition or renovation. These materials were inaccessible for sampling during this inspection or would be substantially damage by such sampling.

Any damaged asbestos materials should be removed, repaired, encapsulated or enclosed. The USEPA requires that all asbestos materials be removed prior to any renovation or demolition activities that may impact the material. The USEPA recommends that a proactive, management- in-place program be developed and implemented whenever asbestos is discovered in a building. Asbestos materials that are not damaged may be managed in place with a good operations and maintenance (O&M) program.

Certain notification requirements apply to owners of buildings constructed prior to 1979 where asbestos is known to be present. California Health and Safety Code 25915-25915.7 requires that all employees working within a building known to contain asbestos be informed, in writing, initially and annually thereafter of its presence, location, procedures and handling restrictions, results for any sampling conducted in the building and potential health risks of asbestos. In addition, notification shall be provided to contractors, maintenance workers or others.

One hundred square feet or more of materials containing greater than 1/10th of one percent asbestos must be properly removed by a licensed asbestos abatement contractor using isolation control methods and disposed of appropriately. Workers handling materials containing asbestos must be properly trained and must wear the appropriate personal protective equipment (PPE).

Furthermore, when asbestos is present in any amount, be advised that certain provisions of Cal-OSHA regulation Title 8 Section 1529 still apply. These include, but are not limited to, exposure assessments, air monitoring, hazard communication, prohibitions and work practices, such as wet methods and HEPA vacuuming.

6.2 LEAD

Lead-based paint was reported during this inspection. Refer to Section 5 in this report for a summary of LBP.

An O&M program is recommended to properly manage-in-place identified or assumed LBP until the buildings are demolished. An O&M program is a set of measures designed to reduce lead exposure to humans and the environment. Such measures may include specialized cleaning, repairs, maintenance, painting, temporary containment, education programs, and on-going visual monitoring by owners and/or reevaluations by risk assessors. An initial evaluation of potential LBP and hazards by a certified inspector/assessor is recommended for successful implementation of an O&M program.

Workers handling Lead-Based Paint or Lead-Containing Paint must be have appropriate Lead Training and must wear the appropriate personal protective equipment.

Waste generated during removal or demolition of LBP components must be properly segregated into separate waste streams. Each waste stream should be randomly sampled and each sample analyzed for lead by the California Waste Extraction Test for comparison to the Total Threshold Limit Concentration (TTLC), and Soluble

Threshold Limit Concentration (STLC) and by Toxicity Characteristic Leaching Procedure (TCLP) as required, to determine the final disposition of the waste.

Disturbances of paints and/or component with any detectable amount of lead are subject to regulation under *Title 8 CCR, Section 1532.1 (d)*. These requirements include awareness training, and monitoring to determine worker exposure. This regulation requires initial and on-going (if necessary) employee exposure monitoring to evaluate lead work exposure that disturbs paint with any detectable level of lead. Alta Environmental suggests that engineering controls, respiratory protection and personal protective equipment be employed during any project that disturbs painted surfaces.

All other painted surfaces not listed above are considered lead-containing until confirmatory paint chip sampling proves otherwise.

6.3 POLYCHLORINATED BIPHENYLS (PCBS) IN LIGHTING EQUIPMENT

Quantities of light ballasts observed during the survey are listed in Appendix A.

Prior to demolition work, the light fixtures must be dismantled and the ballast exposed so that the label on each light ballast can be examined. If a label is missing or is not clearly labeled “No PCB” by the manufacture, the unit must be assumed to contain PCBs.

All ballasts assumed to contain PCB’s shall be removed intact and in a non-destructive manner. Ballasts shall be packaged and disposed of in accordance with Title 22 of the California Code of Regulations, Sections 66243, et seq., and Sections 25157.8, et al, of the California Health and Safety Code.

Any ballasts that are observed to be leaking shall be properly containerized and disposed of in accordance with 40 CFR 761.

In addition, any impacted electrical panels or other appropriate machinery should be assumed to contain some form of PCB oil and should be disposed of accordingly.

6.4 MERCURY IN FLORESCENCE LIGHT TUBES/BATTERIES/THERMOSTATS

Quantities of light tubes, exit signs and thermostats observed during the survey are listed in Appendix A.

All light tubes from this project shall be segregated, packaged and disposed of in accordance with all federal, state, and local regulations and guidelines including CA Title 22 division 4.5 Chapter 11 Section 66261.50. Mercury-containing thermostats, gauges or switches must be removed by properly trained personal and disposed of properly.

Ensure that any universal waste battery that shows evidence of leakage, spillage, or damage that could cause leakage are properly contained. All batteries associated with emergency exit signs, emergency lighting, and spent battery devices should be removed intact, packaged and disposed of under Title 22 of the California Code of Regulations, Sections 66243, et seq., and Sections 25157.8, et al, of the California Health and Safety Code.

6.5 REFRIGERANTS/GASES

Prior to renovation activities ensure all refrigerants/gases associated with HVAC units, etc. are properly collected, transported, and disposed of/recycled in accordance with federal and California Air Resource Boards. Personnel performing the removal and collection activities should be trained in compliance with the EPA's Technician Certification Program.

7.0 ASSUMPTIONS AND LIMITATIONS

PROJECT NO: SMSD-20-9850
PROJECT NAME: Cabrillo 2021 Demolition

Building C

Component	Sample No.	Substrate	Paint Color	Sample Location	Material Location	Results (PPM)	Damage	Approx. Damage Qty.
Wall	C-L1	Stucco	Light blue	Southwest exterior	Exterior walls	62	No	N/A
Ceiling arcade	C-L2	Wood	White	Southeast	South and east of building	3,100	No	N/A
Arcade pole	**C-L3**	**Metal**	**Blue**	**South of room 10**	**Exterior**	**89,000**	**No**	**N/A**
Door	C-L4	Metal	Blue	North door of room 11	Classroom entrances	< 48	No	N/A
Door frame	C-L5	metal	Blue	North entrance of room 9	Classroom entrances	< 46	No	N/A
Window frame	C-L6	Wood	Blue	North windows of room 11	Classroom windows	600	No	N/A
Cabinet	C-L7	Wood	Blue	West of room 11	Classroom cabinets	400	No	N/A
Window sill	C-L8	Wood	Blue	North center exterior of room 11	North exterior of building	1,600	No	N/A
Wall	C-L9	Wood	White	North wall of room 9	Interior walls of classrooms	< 48	No	N/A

Building D

Component	Sample No.	Substrate	Paint Color	Sample Location	Material Location	Results (PPM)	Damage	Approx. Damage Qty.
Wall	D-L1	Stucco	White	North wall of room 15	Interior walls of building D	< 48	No	N/A
Wall	D-L2	Drywall	White	East center wall of room 14	Interior walls of building D	54	No	N/A
Wall	D-L3	Stucco	Light blue	Northwest exterior of building	Exterior walls	< 48	No	N/A
Window frame	D-L4	Metal	Blue	North center of room 14	Windows	1,900	No	N/A
Arcade pole	D-L5	Metal	Blue	South exterior of building	Arcade exterior	48	No	N/A
Rain spout	D-L6	Metal	Blue	South exterior of building	Exterior of building	290	No	N/A
Utility piping	D-L7	Metal	Light blue	South center exterior of building	Exterior of building	67	No	N/A
Arcade ceiling	**D-L8**	**Wood**	**White**	**South center of arcade**	**Exterior of building**	**10,000**	**No**	**N/A**
Cabinets	D-L9	Wood	Blue	West of room 14	Classrooms	49	No	N/A

Building E

Component	Sample No.	Substrate	Paint Color	Sample Location	Material Location	Results (PPM)	Damage	Approx. Damage Qty.
Wall	L-PC1	Stucco	Light blue	Northwest exterior of library	Exterior walls of library	66	No	N/A
Wall	L-PC2	Brick	Light blue	Northwest of library	West exterior of library	72	No	N/A
Arcade pole	L-PC3	Metal	Blue	Northeast of library	At exterior of library	2,100	No	N/A
Floor	L-PC4	Concrete	Baby blue	North of library patio	Library patio	< 47	No	N/A
Door/door frame	L-PC5	Metal	Blue	Northeast library entrance	Library entrances	65	No	N/A
Door/door frame	L-PC6	metal	White	Northwest entrance of therapy room	Therapy room	83	No	N/A
Door/door frame	L-PC7	Wood	Blue	Southwest door of work room	Therapy, work room, therapist room	91	No	N/A
Door frame/window frames	L-PC8	Wood	Blue	Southwest entrance of therapy room	Library room entrances	210	No	N/A
Window frame	L-PC9	Wood	White	Window (west) frame of work room	Work room, therapist room	60	No	N/A
Cabinet	L-PC10	Wood	White	Southeast cabinets fo work room	Cabinet thorughout library	< 49	No	N/A
Wall	L-PC11	Plaster	Tan	East wall of library	Interior library walls	210	No	N/A
Wall	L-PC12	Plaster	White	West wall of library	Interior library walls	740	No	N/A
Utility piping	L-PC13	Metal	White	North of therapist room	Thorughout library	< 47	No	N/A

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

CA-ELAP #2823

	Asbestos Present: No		Total % Non-Asbestos:	100.0%	**Total %Asbestos:**	**No Asbestos Detected**

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

Test Report

Laboratory ID / Sample No.	Sample Location / Description	Layer No. / Layer %	Non-Asbestos Components	(%)	Asbestos Type	(%)

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

CA-ELAP #2823

Test Report

Laboratory ID / Sample No.	Sample Location / Description	Layer No. / Layer %	Non-Asbestos Components	(%)	Asbestos Type	(%)

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

	Asbestos Present: No		Total % Non-Asbestos:	100.0%	**Total %Asbestos:**	**No Asbestos Detected**

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

Test Report

Laboratory ID / Sample No.	Sample Location / Description	Layer No. / Layer %	Non-Asbestos Components	(%)	Asbestos Type	(%)

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

CA-ELAP #2823

Test Report

Laboratory ID / Sample No.	Sample Location / Description	Layer No. / Layer %	Non-Asbestos Components	(%)	Asbestos Type	(%)

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

CA-ELAP #2823

Test Report

Laboratory ID / Sample No.	Sample Location / Description	Layer No. / Layer %	Non-Asbestos Components	(%)	Asbestos Type	(%)

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

CA-ELAP #2823

Test Report

Laboratory ID / Sample No.	Sample Location / Description	Layer No. / Layer %	Non-Asbestos Components	(%)	Asbestos Type	(%)
2042059-030	North East Wall					
C1-21B	Glue, Cream, Non-homogeneous	LAYER 1			None Detected	
		100%	Adhesive Binders/Filler	100%		

Asbestos Present: No Total % Non-Asbestos: 100.0% **Total %Asbestos:** **No Asbestos Detected**

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

CA-ELAP #2823

Test Report

Laboratory ID / Sample No.	Sample Location / Description	Layer No. / Layer %	Non-Asbestos Components	(%)	Asbestos Type	(%)

Method Detection Limit: Less than one percent (<1%). Asbestos content has been determined using calibrated visual estimation (CVES). Samples tested were received in acceptable condition unless otherwise stated. Test report relates only to items tested. Non-homogeneous samples containing discrete and separable layers are analyzed and reported separately; composite results may be reported upon customer's request. Non-homogeneous samples with inseparable layers are analyzed and reported as composite samples. Due to the limitations of Polarized Light Microscopy, samples reported as None Detected or with low asbestos concentrations may not be reliable and further analysis such as TEM is recommended to confirm PLM results. This report shall not be reproduced except in full without the written approval of this laboratory. This report may not be used by the customer to claim product certification, endorsement, or approval by NIST/NVLAP or any agency of the government. Samples shall be disposed according to local, state and federal laws, 30 days after results are reported unless otherwise instructed.

REPORTED: March 20, 2007 **CTL JOB NO.:** 107-0008

CLIENT: Santa Monica - Malibu Unified School District
1651 16th Street
Santa Monica, California 90404

ATTENTION: Mr. Wally Barriman

RE: **Asbestos Survey**
Juan Cabrillo Elementary School
30237 Morningview Drive
Malibu, California 90265

INVESTIGATION

On February 20, 2007, CTL Environmental Services (CTL) conducted an investigation for the presence of asbestos-containing materials (ACMs) at the subject property. The survey included:

(a) Review of existing survey information
(b) An investigation to locate accessible suspect ACMs;
(c) Physical assessment of suspect materials;
(d) The collection of bulk samples from suspect materials;
(e) Laboratory analysis of all collected samples

Santa Monica - Malibu Unified School District, located in Santa Monica, California, retained CTL for this investigation. Victor Sanchez, an EPA-accredited Building Inspector and Cal-OSHA Certified Site Surveillance Technician employed by CTL, conducted the sampling.

METHODOLOGY

The sampling was conducted using guidelines set forth in Federal Register *40 CFR Part 763.*

Based on the requirements of the United States Environmental Protection Agency (USEPA) as set forth in *40 CFR 763*, a homogeneous area is defined as "an area of surfacing material, thermal system insulation material, or miscellaneous material that is uniform in color and texture. Furthermore, the regulation requires that a minimum number of samples be collected from each identified homogeneous area. If one sample in a homogeneous area is found to contain asbestos, the entire homogeneous area is considered to be asbestos containing.

This report applies only to the sample, or samples, investigated and is not necessarily indicative of the quality or condition of apparently identical or similar material or products. As a mutual protection to clients, the public and the Laboratories, this report is submitted and accepted for the exclusive use of the client to whom it is addressed and upon the condition that it is not to be used, in whole or in part, in any advertising or publicity matter without prior written authorization from the Laboratories.

It is possible that one sample out of a set of samples collected from a homogeneous area can be positive for asbestos and the remaining samples in the homogeneous area are negative. However, the entire area must be considered as asbestos containing.

Caution is advised in interpreting results provided herein.

Bulk samples collected from the subject site were subsequently analyzed by Polarized Light Microscopy (PLM) for asbestos content in accordance with the USEPA *Determination of Asbestos in Bulk Building Materials: EPA/600/R-93/116*, July 1993, at AmeriSci Los Angeles a NVLAP-accredited laboratory in Carson, California.

RESULTS

The following samples were found to be asbestos-containing:

Building A

MATERIAL	SAMPLE NUMBER	MATERIAL LOCATION	ASBESTOS CONTENT
Stucco	7556 - 7560	Exterior walls	<1% Chrysotile

Building B

MATERIAL	SAMPLE NUMBER	MATERIAL LOCATION	ASBESTOS CONTENT
Exterior stucco	7549 - 7565	Exterior walls	3% Chrysotile
Sink Undercoat	C2801-C2803	Under sinks of all classrooms	25%-30% chrysotile
Chalkboard mastic	Not sampled to avoid damage	All classrooms (did not sampled to avoid damage)	Assumed

Building C

MATERIAL	SAMPLE NUMBER	MATERIAL LOCATION	ASBESTOS CONTENT
Sink Undercoat	C2801-C2803	Under sinks of all classrooms	25%-30% Chrysotile
Chalkboard mastic	Not sampled to avoid damage	All classrooms (did not sampled to avoid damage)	Assumed

Building D

MATERIAL	SAMPLE NUMBER	MATERIAL LOCATION	ASBESTOS CONTENT
Joint compound, drywall, drywall joint compound	7591 - 7596	Rooms 12-15 and bathrooms, Heater closets of electrical closets	None Detected - 2% Chrysotile
Sink Undercoat	C2801-C2803	Under sinks of all classrooms	25%-30% Chrysotile
Chalkboard mastic	Not sampled to avoid damage	All classrooms (did not sampled to avoid damage)	Assumed
12" reddish brown floor tile with white streaks and mastic	C0301	Classroom 13 (under new 12" floor tile)	2%-10% Chrysotile
Duct insulation	C1601	Mechanical room	30% Chrysotile

Building E

MATERIAL	SAMPLE NUMBER	MATERIAL LOCATION	ASBESTOS CONTENT
Rough plaster walls	7602 - 7605	Reading room, audio visual, work room, office, electrical closet of mechanical room	None Detected - <1% Chrysotile
Sink Undercoat	C2801-C2803	Under sinks of all classrooms	25%-30% Chrysotile
Chalkboard mastic	Not sampled to avoid damage	All classrooms (did not sampled to avoid damage)	Assumed
Exterior wall stucco	C0903	All exterior walls	2% Chrysotile
9" tan floor tile with white streaks and mastic	C2601	Work room (under new floor tile)	3%-40% Chrysotile

Building F

MATERIAL	SAMPLE NUMBER	MATERIAL LOCATION	ASBESTOS CONTENT
Sink Undercoat	C2801-C2803	Under sinks of all classrooms	25%-30% chrysotile
Chalkboard mastic	Not sampled to avoid damage	All classrooms (did not sampled to avoid damage)	Assumed
9" gray floor tile with white streaks and mastic	C0401	All classrooms except room 19	5%-10% chrysotile
Exterior wall stucco	C0901-C0902	All exterior walls	2% chrysotile
Exterior ceiling stucco	C1001-C1003	Exterior overhangs	2% chrysotile

Cottage A & B

MATERIAL	SAMPLE NUMBER	MATERIAL LOCATION	ASBESTOS CONTENT
Roof mastic	7619	Cottage A & B	5% Chrysotile

The results for all other materials sampled were reported as "None Detected" based upon the limitations of the analytical method. Please refer to the attached Material Inventory for a complete listing of materials sampled, locations and material conditions.

If any materials are found to contain more than one-tenth of one percent asbestos by weight as determined by Polarized Light Microscopy (PLM) method of analysis, Cal-OSHA mandates that the material(s) be treated as an asbestos-containing construction material (ACCM) and are subject to regulation under *CCR Title 8, Section 1529.*

If any materials are found to contain more than one percent asbestos by weight as determined by Polarized Light Microscopy (PLM) method of analysis, U.S. EPA mandates that the material(s) be treated as asbestos containing materials (ACM) and are subject to regulation under *40 CFR 61.*

The Occupational Safety and Health Administration (OSHA) considers sheetrock (drywall) and joint compound to be separate materials and therefore must be analyzed separately for asbestos content (OSHA Standards Interpretation and Compliance Letters 04/28/1997 – Sheetrock and Joint Compound).

All repair and/or removal work and subsequent disposal should be performed by a licensed asbestos abatement contractor prior to any disturbance of any materials determined to contain asbestos.

For the ACMs identified in this report, dry sawing, sanding, or drilling should be avoided. Additional suspect materials may be exposed during demolition and/or renovation activities; such materials should be sampled and analyzed prior to further disturbance.

RECOMMENDATIONS

Asbestos-containing materials should be monitored and maintained as part of the school's operations and maintenance program until renovation or demolition activities require removal, or until material becomes significantly damaged, or the hazard potential changes. Remove or repair these items when practical and cost effective in conjunction with an EPA-accredited Project Designer.

ASSUMPTIONS AND LIMITATIONS

This report has been prepared for the exclusive use of Santa Monica - Malibu Unified School District. In performing our professional services, we have applied present engineering and scientific judgment and used a level of effort consistent with the standard of practice measured on the date of work in the locale of the project site for similar type studies.

CTL has relied in good faith upon representations and information furnished by individuals with respect to operations and existing property conditions to the extent that they have not been contradicted by data obtained from other sources. Accordingly, CTL accepts no responsibility for any deficiencies, omissions, misrepresentations, or fraudulent acts of persons interviewed. In addition, CTL will not accept liability for any loss, injury, claim, or damage arising directly or indirectly from any use or reliance on this report. CTL makes no warranty, expressed or implied.

Material quantities are in some cases listed within this document. These quantities are not intended to be used for removal bidding purposes, nor is this document intended as a contract manual. Work methods and sequence, coordination of participants, applicable codes, engineering controls, required submittals, and notifications should in all cases be addressed in a separate and independent bidding and contract document.

If you have any questions, please feel free to contact the undersigned at (310) 530-5006. CTL appreciates the opportunity to be of service to Santa Monica - Malibu Unified School District.

Dear Cesar R.:

Enclosed are the results for polarized light microscopy analysis (PLM) of the following CTL Environmental Services samples received at AmeriSci on Thursday, February 22, 2007, for a 5 day turnaround:

7554, 7555, 7556, 7557, 7558, 7559, 7560, 7581, 7582, 7583, 7620, 7584, 7547, 7548, 7549, 7550, 7551, 7552, 7553, 7565, 7561, 7562, 7563, 7564, 7567, 7568, 7585, 7586, 7587, 7588, 7589, 7590, 7591, 7592, 7593, 7594, 7595, 7596, 7569, 7570, 7571, 7572, 7573, 7574, 7575, 7576, 7577, 7602, 7603, 7604, 7605, 7606, 7607, 7608, 7600, 7578, 7579, 7597, 7598, 7599, 7601, 7609, 7610, 7611, 7612, 7613, 7614, 7615, 7616, 7617, 7618, 7619, 7566, 7580

The 74 samples contained in Ziplock Bags were shipped to AmeriSci via Hand delivery. These samples were prepared and analyzed according to the EPA Interim Method (EPA 600/M4-82-020 per 40 CFR 763, subpt F, App. A). The samples were evaluated for homogeneity by low power stereomicroscopy. Asbestos fibers were identified by PLM and dispersion staining through the determination of the required optical properties including: morphology, color, pleochroism, refractive indices, birefringence, extinction and sign of elongation. The required analytical information, analysis results, analyst signature and laboratory identification is contained in the Analyst's Report.

This report relates ONLY to the sample analysis expressed as percent asbestos. AmeriSci assumes no responsibility for customer supplied data such as "sample type", "location", or "area sampled". This report must not be used to claim product endorsement by AmeriSci, NVLAP or any agency of the U. S. Government. The National Institute of Standards and Technology Accreditation requirements mandate that this report must not be reproduced, except in full without the written approval of the laboratory. This report may contain specific data not covered by NVLAP or ELAP accreditations respectively, if so identified in relevant footnotes.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Mary S. David

Reporting Notes:

Analyzed By: Raymundo Orozco _____; Date Analyzed: 2/27/2007 2/27/07

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0, CA ELAP lab #2322); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

Subject: PLM Analysis of Bulk Samples - Normal
C1122920045
41017-27

Dear Mr. Sabatino:

This report, which includes the attached Summary, contains the results of the analyses of the 63 bulk samples collected by you and submitted to this laboratory on May 23, 1992. The analyses were performed in accordance with the EPA Interim Method 600/M4-82-020, December 1982. The phase abundances provided are visually estimated and expressed as percent area. These results should be considered to lie within statistical limits of variability inherent in the method employed. On a per sample basis, the accuracy and precision of the results depend on the type of sample and on its asbestos content.

Hygeia recommends transmission electron microscopy (TEM) analysis on bulk materials which contain a large amount of interfering materials (e.g., vinyl floor tile, mastics, roofing materials, joint compounds) when polarized light microscopy (PLM) analysis shows less than one percent or undetectable quantities of asbestos. These materials often contain milled asbestos with fiber lengths of one micrometer or less. Because these fibers are not detected by PLM, PLM analysis may yield a false negative result.

Hygeia Environmental Laboratories Inc. is accredited under the NIST/NVLAP program for asbestos in bulk materials by polarized light microscopy and the State of California for asbestos analysis.

Hygeia Environmental Laboratories Inc. and its personnel shall not be liable for any misinformation provided to us by the client regarding these samples or for any misuse or interpretation of information supplied by us. Liability shall extend to providing replicate analyses only. This report must not be used by the client to claim product endorsement by NVLAP or any agency of the U.S. Government. We will retain these samples for a period of three months unless otherwise specified. This report relates only to the samples sumitted and analyzed.

If you have any questions regarding your results, this report, or the analytical methods employed, please feel free to contact us at (818) 355-4711.

Sincerely,
Hygeia Environmental Laboratories Inc.

Daniel Gamez
Supervisor of Optical Microscopy

PART 1 - GENERAL

1.1 PROJECT SITE

Juan Cabrillo Elementary School is located at 30237 Morning View Drive, Malibu, CA 90265. The work areas consist of Buildings A, B, C, D, E, F, G (MPR), H (Cottage A), I (Cottage B), Portable buildings C1-C5 and the Boy's and Girl's club.

1.2 PROPOSED PROJECT

The scope of work for this project will consist of the removal of all identified building related hazardous materials prior to a planned demolition project at the site.

1.3 REMOVAL SCOPE OF WORK

The general intent of this document is to notify the abatement contractor of the minimum requirements for handling, removal and disposal of asbestos-containing materials (ACM), lead-based paint (LBP), lead-containing paints (LCP), mercury-containing florescence light tubes and switches, and light ballast with suspect polychlorinated biphenyl (PCBs). Alternative procedures may be used, but the procedures must meet or exceed current federal, state, local and District requirements. Any proposed alternative procedures must be reviewed and approved by District representative prior to implementation of the work.

By submitting a bid, the Contractor warrants its intent to conduct said work properly using qualified personnel employed by licensed contractors.

A. Scope of work shall include all materials impacted as a result of the work located in buildings A, B, C, D, E, F, G (MPR), H (Cottage A), I (Cottage B), Portable buildings C1-C5 and the Boy's and Girl's club where hazardous materials have been identified, as outlined in the tables below.

B. All removal and disturbance of asbestos-containing materials (ACM) and subsequent waste disposal shall be performed by an asbestos abatement contractor, using 40-hour asbestos trained workers (Asbestos Worker trained as outlined in 40 CFR 763). Abatement contractor's workforce shall be supervised by experienced trained workers, knowledgeable and qualified in the techniques of asbestos abatement, handling and disposal of asbestos-containing and/or asbestos-contaminated materials, and the subsequent cleaning of contaminated areas, including, at a minimum, Competent Person/Contractor Supervisor training as outlined in 40 CFR 763.

C. All removal and disturbance of lead-based paints and subsequent waste disposal shall be performed by a state-licensed contractor, using CDPH-certified workers with at least one CDPH-certified Supervisor. Abatement contractor's workforce shall be supervised by experienced trained workers, knowledgeable and qualified in the techniques of lead abatement, handling and disposal of lead-containing and/or lead-contaminated materials, and the subsequent cleaning of contaminated areas.

D. All removal and disturbances of lead-containing painted surfaces (reported below 0.8 mg/cm^2 by XRF Testing) are subject to Cal/OSHA worker exposure requirements (8 CCR 1532.1) including the use of respirators and protective clothing until the contractor has demonstrated through objective data the exposure levels to lead dust based on a negative exposure assessment do not exceed the permissible exposure level.

E. When exposure monitoring of a specific lead-related task indicates that the permissible exposure level is or will be exceeded, the contractor shall use CDPH-certified lead workers to complete the task.

F. Contractor shall utilize employees with HAZWOPER training, as outlined in 29 CFR 1910.120

and 8 CCR 5192, when handling all "other" hazardous materials, including but not limited to fluorescent light ballasts with potential PCBs and Mercury light tubes.

G. Contractor shall furnish all labor, materials, services, insurance (specifically covering the handling and transportation of asbestos, lead, PCBs, mercury, and equipment which is specified, shown or reasonably implied for the removal, transport, and disposal of the hazardous materials identified in the following table:

SUMMARY OF ASBESTOS-CONTAINING MATERIALS (ACM) and ASBESTOS-CONTAINING CONSTRUCTION MATERIALS (ACCM)

Building A, B, C, D, E, F

MATERIAL	LOCATION	SCOPE OF IMPACT	ESTIMATED QUANTITY	SPECS SECTION
Residual floor tile and mastic	Potentially under cabinetry	Removal prior to Disturbance Activities	1,000 SF	3.7.2
Pipe elbow insulation	Potentially in wall cavities where plumbing is located	Removal Prior to Disturbance Activities	250 LF	3.7.1

Building A

MATERIAL	LOCATION	SCOPE OF IMPACT	ESTIMATED QUANTITY	SPECS SECTION
Drywall joint compound	All Interior walls, south center office restroom, south electrical room and work room	Removal prior to Disturbance Activities	8,000 SF	3.7.1
3" TSI pipe	Above damaged ceiling in janitor's closet (maybe be present in wall and ceiling cavities	Removal Prior to Disturbance Activities	250 LF	3.7.1
Stucco	Exterior walls	Removal Prior to Disturbance Activities	5,000 SF	3.7.3

Building B

MATERIAL	LOCATION	SCOPE OF IMPACT	ESTIMATED QUANTITY	SPECS SECTION
Stucco	Exterior walls	Removal prior to Disturbance Activities	7,000 SF	3.7.1
Sink undercoating	Under sinks in classrooms	Removal Prior to Disturbance Activities	20 SF	3.7.2
Chalkboard and mastic	All rooms	Removal Prior to Disturbance Activities	200 SF	3.7.2
Mirror mastic	Restrooms	Removal prior to Disturbance Activities	100 SF	3.7.2
Non-skid flooring	SW of room 1 – exterior	Removal prior to Disturbance Activities	30 SF	3.7.2
9" tan floor tile	Mechanical room 117 and room 4 closet	Removal prior to Disturbance Activities	20 SF	3.7.2

Building C

MATERIAL	LOCATION	SCOPE OF IMPACT	ESTIMATED QUANTITY	SPECS SECTION
Sink undercoating	Under sinks in classrooms	Removal prior to Disturbance Activities	20 SF	3.7.2
Chalkboard and mastic	All rooms	Removal Prior to Disturbance Activities	200 SF	3.7.2
Mirror mastic	Restrooms	Removal Prior to Disturbance Activities	100 SF	3.7.2

Building D

MATERIAL	LOCATION	SCOPE OF IMPACT	ESTIMATED QUANTITY	SPECS SECTION
Drywall w/joint compound	Room 12-15 and restrooms, heater closets and electrical closets	Removal prior to Disturbance Activities	3,700 SF	3.7.1
Sink undercoating	Under sinks in classrooms	Removal Prior to Disturbance Activities	40 SF	3.7.2
12” Reddish brown floor tile and mastic	Classroom 13 (assumed under new 12” floor tile)	Removal Prior to Disturbance Activities	900 SF	3.7.2

Building E

MATERIAL	LOCATION	SCOPE OF IMPACT	ESTIMATED QUANTITY	SPECS SECTION
Rough plaster walls	Reading room, audio visual, workroom, office, electrical, closet, in mechanical room	Removal prior to Disturbance Activities	2,500 SF	3.7.1
Sink undercoating	Under sinks in classrooms	Removal Prior to Disturbance Activities	5 SF	3.7.2
Stucco	Exterior walls	Removal Prior to Disturbance Activities	5,000 SF	3.7.1
Chalkboard and mastic	All classrooms	Removal Prior to Disturbance Activities	200 SF	3.7.2
9” Tan floor tile and mastic	Work room (assumed under new floor tile)	Removal Prior to Disturbance Activities	180 SF	3.7.2

Building F

SUMMARY OF LEAD-BASED PAINT

COMPONENT	LOCATION	SCOPE OF IMPACT	SPECS SECTION
Ceramic wall tile and fixtures	All-buildings – restrooms and kitchens	Paint stabilization prior to demolition	3.7.3
Arcade pole	Building C	Paint stabilization prior to demolition	3.7.3
Arcade ceiling	Building D – Exterior	Paint stabilization prior to demolition	3.7.3

1.4 WORK TO BE PERFORMED BY OTHERS

A. As per project specifications and approved abatement plan submittal.

1.5 RESPONSIBILITIES OF OWNER

A. The Owner will provide daily oversight and environmental monitoring surrounding the abatement/removal operations.

1.6 REQUIRED LICENSURE

A. Contractor shall be licensed by the State of California, Contractors State License Board and be registered to perform asbestos related work with the Division of Occupational Safety and Health, Department of Industrial Relations. At a minimum contractor shall hold the following license classification:

   a. ASB - Asbestos Certification
   b. C-22 Asbestos Abatement Contractor Classification

B. Transportation of Friable and Non-Friable Asbestos Containing Materials: Contractor shall itself be or have a subcontractor who is a registered hazardous waste transporter with the State of California, Department of Toxic Substances Control.

C. The Contractor shall ensure all workers performing specific tasks are properly certified and trained to perform said tasks.

D. Subcontractors shall hold all licenses applicable to specified trade work.

1.7 PERMITS

A. As required by California Division of Occupational Safety and Health (Cal/OSHA)
B. As required by the South Coast Air Quality Management District (SCAQMD)
C. As required by Department of Health Services (Cal/DPH)
D. As required by local agencies for specific tasks (i.e., temporary power, etc.)

1.8 NOTIFICATIONS

A. Contractor shall make all required written notifications to regulatory agencies including the following:

a. Cal/OSHA
b. SCAQMD
c. Cal/DPH
d. Local Agencies, as required
e. District prior to submittal

1.9 INSURANCE REQUIREMENTS

A. Provide as per Project Specifications.

1.10 BONDING REQUIREMENTS

A. Provide As per Project Specifications.

1.11 PROJECT SCHEDULE

A. Project Start Date: As specified by Owner
Project Completion Date: As specified by Owner

B. All work shall be performed as per agreement between Contractor and Owner.

1.12 APPLICABLE REGULATIONS

A. Contractor shall perform all Work in compliance with current, applicable federal, state, and local regulations, standards and codes including District specifications governing asbestos abatement, transport, and disposal of asbestos containing/contaminated materials, lead-based/containing surface coatings and contaminated materials, and all other hazardous materials.

a. Requirements include obtaining permits, licenses, inspections, releases and similar documentation, as well as payments, statements and similar requirements associated with codes, regulations, and standards.

B. Regulations, Standards, and Codes (General):

a. General applicability of federal, state, and local regulations, standards and codes governing hazardous materials abatement, demolition, transport, and disposal, except to the extent that more explicit or more stringent requirements are written directly into the contract documents, all applicable regulations, standards, and codes have the same force and effect and are made a part of the contract documents as if copied directly into the contract documents, or as if published copies are bound herewith.

C. Contractor Responsibility: The Contractor shall assume full responsibility and liability for the compliance with all applicable federal, state, and local regulations including District specifications pertaining to work practices, transport, disposal, and protection of workers, visitors to the site, and persons occupying areas adjacent to the site.

a. The contractor is responsible for providing training, medical examinations and maintaining

training/medical records of personnel as required by the applicable federal, state, and local regulations.

1.13 SUBMITTALS

A. Prior to commencement of work, Contractor shall submit to the Project Environmental Consultant (Owner's Representative) documentation that includes, without limitation, the following:

a. A detailed abatement plan outlining the scope of work and means/methods to be used for the duration of the project.

b. Copies of licenses and registrations required by Article 1.6 Required Licensure (include copies of subcontractors' licenses).

c. Copies of written notification to the following regulatory agencies:

I. Cal/OSHA
II. SCAQMD
III. Cal/DPH
IV. Local agencies, as applicable
V. The District

d. Manufacturer's certification that HEPA vacuums, differential pressure air filtration devices and other local exhaust ventilation equipment conform to ANSI Z9.2-79 and have been permitted by the SCAQMD. Applicable portable equipment registration program (PERP) certification(s) shall also be provided.

e. Documentation showing that Contractor's employees, including foreman, supervisor, and any other company personnel or agents who may be exposed to airborne asbestos fibers or who may be responsible for any aspects of asbestos abatement activities, have received training as required by 29 CFR 1926.1101 and 8 CCR 1529.

f. Documentation showing that Contractor's employees, including foreman, supervisor, and any other company personnel or agents who may be exposed to airborne lead dust or who may be responsible for any aspects of lead abatement activities, have received training as required by 29 CFR 1926.62 and 8 CCR 1532.1.

g. Documentation from Physician (signed by an M.D.) showing that all employees or agents who may be exposed to airborne asbestos fibers in excess of background levels have received medical monitoring to determine whether they are physically capable of working while wearing the respirator required without suffering adverse health effects. The Contractor must be aware of and provide information to the examining physician about unusual conditions in the workplace environment (e.g. high temperatures, humidity, chemical contaminants) that may impact on the employee's ability to perform work activities.

h. Documentation of respirator fit-testing for all Contractor employees and agents who must enter the work area. This fit-testing shall be conducted annually and in accordance with procedures as required by 29 CFR 1910.134 and 8 CCR 5144.

i. Contractor's Health and Safety Plan, including an emergency preparedness plan as required by Article 1.16 - Emergency Planning.

B. During abatement activities, Contractor shall maintain on-site records and submit to Project Environmental Consultant at the completion of the project documentation that includes, without limitation, the following:

a. Copies of the work area entry/exit log book.

b. Copies of logs documenting filter changes on respirators, HEPA vacuums, differential pressure air filtration devices, water filtration device, and other engineering controls.

c. Copies of Safety Data Sheets (SDS) for solvents, encapsulants, wetting agents, replacement materials, and other substances brought by Contractor to the Project Site. SDSs shall be available the first day that subject materials/substances are present on the project site.

d. Results of all required OSHA compliance air monitoring. Results shall be available for review by Consultant and Owner within 24 hours the sampling.

e. Copies of all accident/incident reports where injury or damage has occurred on or to the Owner's property.

f. Copies of daily logs indicating location(s) worked, type of materials removed, quantity of materials removed and number of personnel conducting the aforementioned activities.

g. Copies of all transport manifests, trip tickets and disposal receipts for all asbestos waste materials removed from the site.

1.14 NOTICES

A. Post in the clean room area of the worker decontamination enclosure a list containing the names, and telephone numbers of Owner, Construction Manager, Abatement Contractor, and Project Environmental Consultant.

B. Additional postings shall include:

a. Visitor Entry and Exit Log.
b. Employee Daily Sign in Log.
c. Entry and Exit Procedures.
d. Emergency Procedures.
e. Copies of permits required in Article 1.7 of this document and copies of notifications required in Article 1.8 of this document.
f. As required by the Department of Labor.

1.15 SITE USE AND SECURITY

A. Confine operations at the site to the areas permitted under the Contract. Portions of the site beyond areas on which work is indicated are not to be disturbed.

B. The work area shall be restricted only to authorized, trained and protected personnel, including Contractor, Contractor's employees, Owner's employees, Owner, Construction Manager, Project Environmental Consultant, State and Local Inspectors.

C. Entry into the work area by unauthorized individuals shall be reported immediately to the Project Environmental Consultant.

D. Contractor shall be responsible for Project site security during abatement operations.

E. Contractor shall take meal and other breaks in areas not used by students.

1.16 EMERGENCY PLANNING

A. Emergency planning and procedures shall be developed by Contractor prior to abatement initiation.

B. Emergency procedures shall be in written form and prominently posted. Contractor shall ensure that all persons entering the work area read these procedures and understand the Project site layout, location of emergency

exits and emergency procedures.

C. Emergency planning shall include considerations of fire, explosion, electrical hazards, slips, trips and falls, confined spaces, and heat related injury. Written procedures shall be developed and employee training in procedures shall be provided by Contractor.

D. Employees shall be trained in evacuation procedures in the event of work place emergencies.

a. For non-life threatening situations, employees injured or otherwise incapacitated shall decontaminate following normal procedures with assistance from fellow workers, if necessary, before exiting the work place to obtain proper medical treatment.

b. For life threatening injury or illness, worker decontamination shall take least priority. After measures to stabilize the injured worker, remove him from the work place and secure proper medical treatment.

c. Telephone numbers of all emergency response personnel shall be prominently posted in the clean and equipment rooms.

1.17 FIRE PROTECTION

A. All plastic, spray-on strippable coatings, and structural materials used in the asbestos abatement process shall be UL-approved and certified as fire retardant or noncombustible.

B. Wood shall be pressure impregnable and certified as fire retardant.

C. Safety Data Sheets (SDS) for fire retardant materials shall be made available upon request.

D. All combustible rubbish and debris, including asbestos waste shall be properly packaged, labeled and stored in a District designated lockable storage facility at the end of each working day.

E. A minimum of one (1) 4A/60BC dry-chemical extinguisher shall be maintained at each of the following locations:

a. At each corner of the work area. Where no clear corners exist, four (4) extinguishers shall be placed around the exterior wall of the work area so that they are approximately 25 percent of the total distance apart.

1. Exception: Where total contained work area is less than 1,000 square feet, two (2) 4A/60BC extinguishers shall be provided. All extinguishers shall be clearly identified with red tape.

F. Contractor shall ensure that on site personnel are aware of the location and proper use of all extinguishers and other fire/life safety equipment.

G. All existing fire detection, alarm systems, connections and standpipes shall remain in place, active and unobstructed. Any alteration to this equipment must be approved by the Owner.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Generally, Contractor shall carefully adhere to the following:

a. All plastic, spray-on strippable coatings and structural materials used shall be UL-certified as fire retardant or non-combustible.

b. Fire-retardant polyethylene sheeting utilized for worker decontamination and construction/containment

barriers shall be a minimum of six-mil in thickness.

c. Disposal bags used to package hazardous waste shall be of six-mil polyethylene, pre-printed with labels as required by EPA regulation 40 CFR 61.152 (b) and 8 CCR 1529.

d. Warning signs as required by Cal/OSHA shall be utilized.

B. Removal and Encapsulation:

a. Apply surfactant during removal work activities.

b. Apply an encapsulating agent to the substrate surfaces from which asbestos-containing material has been stripped.

c. Mastic removal solvents shall be of the low odor variety.

2.2 EQUIPMENT

A. General:

a. A sufficient quantity of HEPA vacuums and/or differential pressure air filtration devices equipped with HEPA filtration shall be used to control asbestos fibers during the removal of asbestos containing materials. To calculate total air flow requirement:

$$\text{Total ft}^3\text{/min} = \frac{\text{Vol. of work area (in ft}^3\text{)}}{\text{15 min}}$$

To calculate the number of units needed for the abatement:

$$\text{Number of units needed} = \frac{\text{[total ft}^3\text{/min]}}{\text{[capacity of unit in ft}^3\text{/min]}}$$

b. At a minimum, full-face powered air-purifying respirators (PAPRs) equipped with HEPA filters cartridges shall be utilized during all friable/Class I asbestos removal and for all removal of lead-containing paints/substances involving abrasive removal techniques.

c. At a minimum, half-face air-purifying respirators with P-100 cartridges shall be utilized for the removal of all non-friable/Class II asbestos removal, and lead coated, ceramic tile, and impacted damaged lead-based paint except abrasive removal.

d. Respirators shall be furnished to the abatement workers by Contractor. The respirators shall have been tested and approved by National Institute of Occupational Safety and Health (NIOSH) for use in asbestos-contaminated atmospheres.

e. Full body disposable protective clothing, including head, body, and foot coverings shall be furnished to workers and visitors by the abatement contractor. The clothing shall include adequate sizes to accommodate movement without tearing.

f. Additional safety equipment as supplied in accordance with 8 CCR 1514, (e.g. hard hats meeting the requirements of 8 CCR 1515, eye protection meeting the requirements of 8 CCR 1516, safety shoes meeting the requirements of 8 CCR 1517, hand protection meeting the requirements of 8 CCR 1520, hearing protection meeting the requirements of 8 CCR 1521 and body protection meeting the requirements of 8 CCR 1522), as necessary, shall be furnished to all workers and authorized visitors.

B. Removal:

a. Removal shall be performed using manual means and methods. Perform removal in manageable section and perform continuous clean-up of debris. Mechanical removal shall only be perform in

conjunction with Owner approved HEPA air filtration systems.

b. Perform detail cleaning using HEPA vacuuming and wet wiping methods. No brooms shall be used during asbestos and lead-based paint related work.

C. Encapsulation: Encapsulants shall be sprayed using airless spray equipment or a hand pressurized sprayer.

PART 3 - EXECUTION

3.1 CLEAN-UP PROCEDURES

A. Remove and containerize all visible accumulations of asbestos-containing material, and asbestos/lead-contaminated debris utilizing rubber dust pans and rubber squeegees to move material around. Do not use metal shovels to pick up or move accumulated waste within contained work areas.

a. Asbestos-containing/contaminated waste shall be packaged and label in accordance with EPA regulation 40 CFR 61.152 (b) (l) (iv), Cal/OSHA (Title 8 CCR Sections 1529 and 5208), SCAQMD Rule 1403, and if applicable Title 22 CCR Section 66504.

b. Lead-waste wastes shall be packaged and label as required by 8 CCR 1532.1 and 22 CCR 66504.

c. All other hazardous wastes shall be containerized as appropriate and disposed of in a manner that satisfies the requirements for waste characterization and disposal in accordance with the requirements of Title 22 of the California Code of Regulations, Sections 66243, et seq., and Sections 25157.8, et al, of the California Health and Safety Code.

B. Whether cleaning an asbestos work area or a lead work area (or both), wet clean all surfaces in the work area using a HEPA-vacuum, as appropriate.

C. After gross cleaning of the work area, HEPA-vacuum and wet clean all objects and surfaces in the work area are completed, remove all containerized waste from the work area.

D. Decontaminate all tools and equipment and remove at the appropriate time in the cleaning sequence.

E. Project Environmental Consultant and the abatement contractor representative will inspect the work area for visible residue. If any accumulation of residue is observed, a second settling period and cleaning cycle repeated at no additional cost to Owner.

F. Following the satisfactory completion of clearance air monitoring or clearance wipe testing, the remaining barriers may be removed and prepared for proper disposal. A final visual inspection by Project Environmental Consultant and the abatement contractor representative will be performed. Unsatisfactory conditions may require additional cleaning and air monitoring/wipe sampling, at no additional cost to Owner.

3.2 WORKER DECONTAMINATION SYSTEMS

A. Worker decontamination enclosure systems shall be provided at all locations where workers will enter or exit regulated work areas.

B. Worker decontamination enclosure systems constructed at the Project site shall utilize six-mil, fire-retardant polyethylene sheeting, or other approved materials for privacy.

C. Personnel Decontamination Units shall not be located inside the work area(s) unless specifically authorized by the Project Environmental Consultant.

D. Alternate methods of providing Decontamination facilities may be submitted to the Project Environmental Consultant for approval. Do not proceed with any such method(s) without the written authorization.

E. The worker decontamination enclosure system shall consist of at least a cleansing station in accordance with the requirements of 8 CCR 1527 and 8 CCR 1529, equipped with adequate water, towels and cleansing agents to accommodate the entire crew and visitors.

3.3 DISPOSAL PROCEDURES

A. All Class I friable asbestos waste shall be disposed as hazardous, waste and disposed at an appropriate landfill facility. The waste shall be manifested using a Uniform Hazardous Waste Manifest.

B. All Class II non-friable asbestos waste shall be disposed of as Non-Hazardous, Non-Friable Asbestos Waste. A non-hazardous material data form will be required.

C. All asbestos-containing waste shall be placed and stored in clear, sealed, leak-tight and appropriately labeled containers, in accordance with 8 CCR 1529 and SCAQMD Rule 1403, and transported to an appropriate landfill for disposal.

D. The abatement contractor will be responsible for segregating lead waste (LBP and LCP) into separate waste streams. The contractor will be required to collect a sufficient number of samples to adequately characterize the waste stream. Sample analysis will include at a minimum, Total Threshold Limit Concentration (TTLC), Soluble Threshold Limit Concentration (STLC) and Toxicity Characteristic Leaching Procedure (TCLP).

The contractor shall develop and submit for review a waste sampling and management plan to the Owner and the Project Environmental Consultant.

E. All hazardous wastes (including non-hazardous asbestos wastes) must be transported by a certified waste hauler and disposed of at a waste facility approved by the Owner.

F. Obtain the EPA Hazardous Waste Generator Identification Number and State of California Hazardous Waste Tax Identification Number from the Owner for hazardous waste disposal.

G. All hazardous waste manifests, non-hazardous manifest, and tonnage forms shall be delivered to the owner within 14 business days. Record keeping format shall utilize a chain of custody form which includes the names and addresses of the Generator (Owner), Contractor, Waste Hauler, pickup site, disposal site, the estimated quantity of the asbestos waste and the type of containers used. The form shall be signed by the Generator, Contractor, Waste Hauler and the Disposal Site Operator, as the responsibility for the material changes hands.

H. In addition to the above the following will need to take place per the District's request:

   a. Field info regarding friability of waste and laboratory data characterizing any waste streams and associated reports that discuss whether waste streams are hazardous or non-hazardous and why
   b. Provide the laboratory data and report to proposed receiving facility, so that the receiving facility can provide a "waste acceptance" letter
   c. Prepare a draft manifest for District Facilities' review
   d. Provide lab data, report, "waste acceptance letter", transporter EPA ID for hazardous waste shipments, and populated draft manifest to Facilities for review and approval prior to disposal
   e. Provide facility weigh tickets from the receiving facilities for loads taken to the receiving facilities for tracking and tax purposes within 14 business days.

The contractor shall develop and submit for review a waste sampling and management plan to the Owner and the Project Environmental Consultant.

3.4 RE-ESTABLISHMENT OF THE WORK AREAS

3.4.1 VISUAL INSPECTION

Upon completion of the removal process, the Owner Representative and the abatement contractor will conduct a post-abatement visual inspection. Any material that is to be left in place for any reason shall be thoroughly encapsulated and/or stabilized. If any material designated for removal, including loose debris, is observed, the Contractor will be required to re-clean that specific area.

3.4.2 ABATEMENT CLEARANCE CRITERIA

A. Following the completion of final clean-up operations, notify the Project Environmental Consultant that work areas are ready for final inspection and clearance air monitoring.

B. Project Environmental Consultant will then sample the air in the work area for airborne fiber concentrations. Sampling will be completed in accordance with AHERA protocol and will be collected using either Phase Contrast Microscopy (PCM) or Transmission Electron Microscopy (TEM) methodologies.

   a. Removal of less than 160 sq. ft. or less than 260 linear feet-PCM sampling utilizing the NIOSH 7400 method. Minimum of five samples from inside the work area will be collected. Clearance will be issued when all samples results show that the airborne fiber concentrations inside the abatement work area are equal to or less than 0.01f/cc or the background level, whichever is greater.
   b. Greater than or equal to values stated above-TEM sampling will be completed using TEM AHERA protocols. The associated clearance criteria is an average of 70 structures per millimeter squared (s/mm^2).

C. If these conditions are not met, decontamination shall be deemed incomplete and the cleaning procedures shall be repeated. The area shall be re-cleaned and re-tested at no additional cost to Owner until satisfactory levels are obtained.

D. For lead-based removal work, wipe sampling shall be performed within the controlled work areas following completion of demotion work.

   a. Release Criteria: Decontamination of the work area is complete when at least one representative sample per work area is analyzed and reveals lead concentrations below 40 micrograms of lead per square foot of area on interior floors, 250 micrograms of lead per square foot of area on window channels/sills and 400 micrograms of lead per square foot of area on exterior floors.

   b. If these conditions are not met then the decontamination is incomplete and the cleaning procedures noted in Article 3.6 above shall be repeated. The area shall be re-tested at no additional cost to Owner until satisfactory levels are obtained.

   c. For removal of lead-based painted components where the component was removed intact, without creating a disturbance to the LBP, clearance will be issued upon passing of a final visual inspection completed as described in section 3.4.1 of this abatement specification.

3.5 ENVIRONMENTAL MONITORING

A. Air monitoring will be carried out by the Project Environmental Consultant on behalf of the Owner to verify that the building beyond the contamination area and the outside environment remains uncontaminated.

B. Area Air Monitoring: The Project Environmental Consultant will conduct in-progress air monitoring daily to determine area airborne contaminant concentrations within the confines of the work area.

   a. Environmental Air Sampling: Ambient air samples are taken and analyzed to indicate fiber migration from containment to the environment. Should any environmental sample outside work areas exceed the base line of 0.01 f/cc of air or established background concentrations as determined by PCM analysis, all work will immediately halt except for corrective work. The PEC shall determine the source of the high fiber count and notify the contractor with directions for the corrective action.

3.6 OSHA PERSONNEL AIR MONITORING

Air monitoring required by Cal/OSHA is the responsibility of the contractor. The contractor is responsible for providing daily Cal/OSHA compliance monitoring as per 8 CCR 1529 for asbestos and CCR 1532.1 for lead.

A. At minimum, Contractor shall conduct representative breathing zone personal air monitoring of its employees and repeated daily or until a "negative exposure assessment", as derived in accordance with 29 CFR 1926.1101 (f)(2)(iii) and 8 CCR 1529 for asbestos.

B. Employers must assess the amounts of lead breathed by workers on a regular basis for each trigger task as per 8 CCR 1532.1. This is usually done by employee breathing zone air sampling. Air sampling results are used to determine the protective measures needed as well as the type of respirator that must be worn for protection.

   a. **Level 1 trigger tasks** Any of the following with lead-containing coatings or materials: spray painting, manual demolition, manual scraping or sanding, use of heat gun, power tool cleaning with dust collection system. Minimum required respirator: half-mask respirator with N-100, R-100 or P-100 filters.

   b. **Level 2 trigger tasks** Any of the following with lead-containing coatings or materials: using lead-containing mortar, lead burning, rivet busting, power tool cleaning without dust collection system, clean-up activities using dry expendable abrasives, abrasive blasting enclosure movement or removal. Minimum required respirator: air-supplied hood or helmet, or loose fitting hood or helmet powered air purifying respirator with N-100, R-100 or P-100 filters.

   c. **Level 3 trigger tasks** Abrasive blasting, welding, cutting, or torch burning on structures where lead-containing coatings or materials are present. Minimum required respirator: half-mask supplied air respirator operated in a positive pressure mode.

C. Monitoring shall be conducted by a qualified air professional experienced and knowledgeable about the methods of air monitoring and in accordance with 29 CFR 1926.1101, 8 CCR 1529 and 8 CCR 1532.1.

D. Monitoring results and appropriate laboratory analysis work shall be posted within forty-eight (48) hours of the monitoring work.

3.7 REMOVAL WORK PROCEDURES

3.7.1 Stucco, TSI, Joint compound, Rough plaster walls

Engineering Controls:

1. Install a full containment work area including a 3-stage worker decontamination facility and temporary negative pressure differential with a measurable pressure differential of at least negative 0.02 inches water column.

Min. Resp. Protection:

1. Powered Air Purifying Respirators (PAPR). Perform the required CAL-OSHA worker exposure air monitoring.
2. Half Face Air Purifying Respirators where the contractor has completed a worker negative exposure assessment and demonstrated that the Cal-OSHA permissible exposure will not be exceeded.

Removal:

1. Apply a surfactant, allow surfactant to soak into material and remove in manageable sections.
2. Remove the material using manual means and methods.

Preparation/Transport:

1. Package and label the waste immediately. Keep wet and cover during transport to dumpster. Store all waste in a lockable storage dumpster.

Disposal:

1. Dispose of as friable, hazardous asbestos-containing waste. A waste shipment (manifest) will be required.

3.7.2 Roof mastic, Sink undercoating, Chalkboard and mastic, Mirror mastic, Non-skid flooring, 9" floor tile and mastic, Door caulking, Floor tile and mastic

In preparing this plan, we have assumed that the materials may be successfully removed using manual means and methods. If removal by mechanical means becomes necessary, the contractor must notify the Client. Mechanical means of removal will require a work plan to be prepared by the contractor, to be reviewed and approved by the client prior to implementation of any mechanical means of removal.

Engineering Controls:

1. Install a containment work area including a worker decontamination facility and a temporary negative pressure differential with a measurable pressure differential of at least negative 0.02 inches water column (as applicable).
2. Install signage at a minimum distance of 20 feet beyond the work area, if feasible, critical barriers as necessary, drop floors, and a 2-stage worker decontamination facility.

Min. Resp. Protection:

1. Half-face negative pressure respirators with HEPA-P100 filters. Perform the required CAL-OSHA worker exposure air monitoring.

Removal:

1. Remove using manual means and wet methods.
2. Remove in manageable section and perform continuous clean-up.
3. Apply a surfactant material to the impacted areas and allow soaking into the material. Package and label the waste immediately. Large components may be packaged using a burrito wrap technique using 2 layers of 6 mil polyethylene sheeting, if applicable.

Preparation/Transport:

1. Store all waste in a lockable storage dumpster.

Disposal:

1. Dispose of as non – friable, non-hazardous asbestos-containing waste. A non-hazardous waste manifest will be required.

3.7.3 LEAD-BASED PAINT- PAINT STABILIZATION/COMPONENT REMOVAL

Engineering Controls:

1. Install demarcation signage; drop floors, and critical barriers as necessary and a 2-stage worker decontamination facility with a wash station.

Min. Personal Protection:

1. Half-face air-purifying respirators equipped with HEPA-P100 filters. Disposable clothing (Tyvek [or equivalent] suits) and hand, foot, and eye protection is required.
2. Perform the required CAL-OSHA worker exposure air monitoring.

Removal:

1. Remove and stabilized all damaged loose and flaky paint prior to the component removal or surface preparation for repainting etc. Apply a paint sealer to the stabilized painted areas.
2. No mechanical removal such as saw cutting, torching cutting welding etc. through lead-based paint shall be conducted. Painted components which may require cutting shall first be spot abated. The paint in the area to be cut shall first be removed entirely at a minimum 6 inches to each direction of the cut point. In

addition to the requirements in this Section, the work also will be required to meet the engineering controls, and personal protection described below in Section 3.7.6.

Preparation/Transport:

1. Package the waste generated by the paint stabilization and separate the waste into waste streams. Conduct the required waste characterization for disposal. (Refer to Section 3.3 of this document).

Disposal:

1. Dispose of all lead waste in accordance with Federal, State, and Local regulations.

3.8 ADDITIONAL REGULATORY REQUIREMENTS

Procedures for impacting lead-containing paints (LCP) are not included in this abatement plan but remain subject to regulation. All construction work activities impacting lead-containing paints (LCP) (paints reported below 5,000 ppm) completed for this project, such as but not limited to renovation, removal, renovation etc. remain subject to Cal/OSHA worker exposure requirements (8 CCR 1532.1) including the use of respirators, protective clothing, training, air monitoring, waste disposal, etc. Further, it is the Contractors responsibility to ensure that his workers are adequately protected to potential lead exposure during the initial monitoring period. It is the responsibility of the contractor to fully comply with the requirements of the Cal/OSHA regulation. Cal/OSHA requirements are summarized below:

a. Employers must assess the concentration of lead breathed by workers on a regular basis for each trigger task as per Section 1532.1(d). This is usually done by employee breathing zone air sampling. Air sampling results are used to determine the protective measures needed as well as the type of respirator that must be worn for protection.

   i. **Level 1 trigger tasks** – Any of the following with lead-containing coatings or materials: spray painting, manual demolition, manual scraping or sanding, use of heat gun, power tool cleaning with dust collection system. Minimum required respirator: half-mask respirator with N-100, R-100 or P-100 filters.

   ii. **Level 2 trigger tasks** – Any of the following with lead-containing coatings or materials: using lead-containing mortar, lead burning, rivet busting, power tool cleaning without dust collection system, clean-up activities using dry expendable abrasives, abrasive blasting enclosure movement or removal. Minimum required respirator: air-supplied hood or helmet, or loose fitting hood or helmet powered air purifying respirator with N-100, R-100 or P-100 filters.

   iii. **Level 3 trigger tasks** – Abrasive blasting, welding, cutting, or torch burning on structures where lead-containing coatings or materials are present. Minimum required respirator: half-mask supplied air respirator operated in a positive pressure mode.

All lead waste shall be segregated into separate waste streams. The contractor will be required to collect a sufficient number of samples to adequately characterize the waste stream. Sample analysis will include at a minimum, Total Threshold Limit Concentration (TTLC), Soluble Threshold Limit Concentration (STLC) and Toxicity Characteristic Leaching Procedure (TCLP). Refer to Section 3.3 for additional information.

EXECUTIVE SUMMARY

On behalf of the Santa Monica-Malibu Unified School District (District), Alta Environmental LP DBA NV5 (NV5) has prepared this report summarizing polychlorinated biphenyl (PCB) bulk sampling activities completed for accessible materials within Juan Cabrillo Elementary School, located at 30237 Morning View Drive, Malibu, California 90265. The sampling activities were conducted to investigate the potential presence of PCBs in building material and to characterize the materials for off-site waste disposal.

Based on the findings of our investigation, in accordance with the US EPA PCB Bulk Product Waste Reinterpretation memorandum (October 24, 2012), and in consultation with the District, the sampled building materials should be characterized for disposal as follows:

Building Material	Waste Category
Painted Exterior Stucco – Building B Interior Vinyl Wall Coating – Buildings B and C Impacted porous building materials adjoining PCB-impacted source material	PCB Bulk Product Waste
All Other Materials Sampled	Excluded PCB Product

Removal of material characterized as PCB Bulk Product Waste should be conducted using proper engineering controls including, but not limited to, containment, worker training and worker protection. PCB waste should be characterized, packaged, labelled and disposed as required by the Toxic Substances Control Act (TSCA) 40 CFR 762 and California hazardous waste regulation set forth in Title 22, Division 4.5 of the California Code of Regulations

Material characterized as Excluded PCB Product is not regulated by the U.S. Environmental Protection Agency under TSCA.

Asbestos-containing material (ACM) and lead-based paint (LBP) have previously been identified at the site. Removal of ACM and LBP is subject to local, state and federal requirements. Any removal, abatement, or disturbance of building materials discussed herein should be conducted in consultation with site-specific ACM and LBP survey records and abatement plans.

1.0 INTRODUCTION/BACKGROUND

The United States Environmental Protection Agency (USEPA) believes that there was a potentially widespread use of polychlorinated biphenyl (PCB) containing building materials in schools and other buildings built or renovated between 1950 and 1979. Historically, PCBs were used as plasticizing agents in caulking and glazing materials, as additives to paints and floor finishes, as a sealant for heating systems and plumbing, and as insulators in ballasts and other electrical equipment. The manufacture and use of PCBs were banned in the United States in 1976 and PCB compounds were phased out between 1978 and 1979.

PCBs in manufactured materials may move directly into adjoining materials, particularly those material which are porous such as wood, concrete, and other types of masonry. In schools with manufactured PCB sources, many types of building materials adjoining those PCB sources have been documented to containing measurable levels of PCBs and are, therefore, considered potential secondary PCB sources.

Alta Environmental LP DBA NV5 (NV5) was retained by the Santa Monica Malibu School District (District) to investigate the potential presence of PCB-impacted building materials within all buildings at the Juan Cabrillo Elementary School campus. The following sections present an overview of sampling methods, laboratory results, and a discussion of findings.

2.0 PURPOSE OF INSPECTION AND SAMPLING

Building materials included in this report (select paint, vent, roofing components, mastics, and various porous materials not previously sampled) were only evaluated for PCB concentrations. A survey of asbestos-containing materials (ACM) and lead-based paint (LBP) has been completed for these buildings, and the results and findings are discussed in a separate document.

The objectives of the sampling event include:

- Draw conclusions regarding the potential presence of PCB-impacted materials; and
- Categorize each type of sampled building material for off-site disposal related solely to its PCB content. In general, PCB-impacted materials can be sorted and classified into the following categories:
    - PCB Bulk Product Waste (PCB concentration ≥ 50 ppm). According to the USEPA Memorandum, “PCB Bulk Product Waste Reinterpretation,” dated October 24, 2012, building materials “coated or serviced” with PCB bulk product waste (e.g., caulk, paint, mastic, sealants) at the time of designation for disposal are to be managed as a PCB bulk product waste. The reinterpretation document allows for disposal of both PCB Bulk Product Waste and PCB Remediation Waste together as a single waste stream (PCB Bulk Product Waste).
    - PCB Remediation Waste (PCB concentration ≥ 1 ppm). Waste material containing PCBs as a result of a spill, release or unauthorized disposal.

- Excluded PCB Product (PCB concentration <50 ppm). Material which were originally manufactured or produced with PCBs at concentrations less than 50ppm.

3.0 SCOPE OF SERVICES

Alta collected a total of 378 source samples and 20 delineation samples of select paint, roofing, mastics, and caulking materials from the entire campus buildings from October 21, 2020 to November 9, 2020 and from January 8, 2021 to January 13, 2021. The sampling was conducted to further characterize select building materials for waste disposal. Each sampling event was conducted in general accordance with the USEPA Region I *Standard Operation Procedures for Sampling Porous Surfaces for Polychlorinated Biphenyl* dated May 2011.

4.0 METHODOLOGY

Alta's bulk sampling was completed as follows:

- A one-inch drill bit, screwdriver, razor blade, chisel, or similar tool was used to collect the samples.
- A polyethylene drop-sheet was placed below the impacted area to capture any dust and debris which may have dislodged during the sample collection.
- Samples were labelled, packaged, and documented on a chain of custody for shipping to the laboratory.
- Samples were shipped to the laboratory in a chilled ice chest.
- Sample locations were patched using a non-PCB sealant. It should be noted that the patch is temporary and only intended to provide a barrier to the exposed sampled substrates.
- Prior to use, reusable sampling was decontaminated using a two-step decontamination process consisting of an initial wash with a phosphate-free cleaning solution, followed by a rinse with de-ionized water. After the two-step decontamination procedures, the equipment was placed on top of clean paper towels (or equivalent material) and set to dry individually. Each piece of equipment was inspected by NV5 for evidence of residual dust and debris prior to use
- All samples collected during this investigation were placed in an appropriate glass jar with a Teflon lined cap provided by the laboratory. Samples were labeled and packaged in a cooler and kept cool with ice during shipment.

The practical quantitative limit PQL used by the laboratory for this project was 0.5 ppm. In some cases, the PQL was raised above 0.5 ppm due to matrix interferences. In all cases, the PQL did not meet or exceed the USEPA defined screening-levels for PCB waste characterization.

All samples were prepared for analysis by the laboratory using EPA Method 3540 for Soxhlet extraction and were analyzed for PCBs using EPA Method 8082A.

5.0 RESULTS

While the sampling results of some building materials commonly characterized as PCB Bulk Product Waste were above the 50ppm screening level, further assessment and analysis finds that these materials were in fact not PCB source material. These materials include interior white paint, cove base glue, and cabinet caulking with PCB concentrations greater than 50ppm when applied to a vinyl wall covering (Buildings B and C), but which were below 50ppm when applied to other, non-vinyl wall surfaces.

The following summary tables are intended to be used in conjunction with the material inventories included in Appendix A, the sample location maps presented as Appendix B, and the laboratory reports included in Appendix C.

Table 1.0 – Summary of PCB Source Material with Concentrations ≥ 50 PPM

Material Location	Sample Description	Sample Numbers	Total PCBs (PPM)
Building B	Light blue paint on stucco	B-30 B-58 B-59	98.7 74.1 80
	Vinyl wallpaper with white paint	B-71 B-72 B-78 B-79 B-85 B-86	2,020 1,670 424 1,830 263 923
	Vinyl and wood wall core	B-60 B-73 B-74 B-75 B-76 B-77 B-80 B-82 B-83 B-84	492 1,020 719 240 531 360 336 433 406 439
Building C	Vinyl wallpaper with white paint	C0113-1 C0113-2 C0113-3 C0113-4	215 1,580 309 431

Summary of PCB Remediation Waste Material with Concentrations ≥ 1 PPM

Material Location	Sample Description	Sample Numbers	Total PCBs (PPM)
Building B	Cove base glue	B-10 B-11 B-12	87 60.8 67.9
	Cabinet caulking	B-15	121
	Lower z flash caulking	B-55	95.8

6.0 QUALITY CONTROL

Sample extraction and analysis was completed by American Environmental Testing (AETL), located at 2834 N Naomi Street, Burbank, California. AETL is a laboratory accredited by the California State Environmental Laboratory Accreditation Program. Based on our review of the quality control data included with the laboratory reports, the recovery and precision are within the acceptable limits of the laboratory.

7.0 CONCLUSIONS

Based on the findings of our investigation, in accordance with the US EPA PCB Bulk Product Waste Reinterpretation memorandum (October 24, 2012), and in consultation with the District, the sampled building materials should be characterized for disposal as presented in the following table.

Building Material	Waste Category
Painted Exterior Stucco – Building B Interior Vinyl Wall Coating – Buildings B and C Impacted building materials adjoining PCB-impacted source material	PCB Bulk Product Waste
All Other Materials Sampled	Excluded PCB Product

Materials characterized as *Excluded PCB Product* are not regulated by the U.S. Environmental Protection Agency under TSCA.

8.0 RECOMMENDATIONS

Removal and offsite disposal of identified *PCB Bulk Product Waste* material and surrounding porous materials should be conducted using proper engineering controls including, but not limited to containment, worker training, worker protection. Generated PCB waste should be characterized,

packaged, labelled and disposed offsite in accordance with TSCA 40 CFR 761 and California hazardous waste regulations set forth in Title 22, Division 4.5 of the California Code of Regulations.

A site-specific work plan for the removal of identified *PCB Bulk Product Waste* should be prepared by the abatement contractor, reviewed and approved by the District prior to the start of any removal action.

Asbestos-containing material (ACM) and lead-based paint (LBP) have previously been identified at the site and are described in a separate report. Removal of ACM and LBP is subject to local, state and federal requirements. A survey record and abatement plan have been prepared for this site which is to be used for the removal and waste disposal of ACM and LBP.

9.0 ASSUMPTIONS AND LIMITATIONS

The findings, conclusions and recommendations contained herein are intended for use by the District and its contractors for the purpose of characterizing generated building material waste for offsite disposal.

This report was prepared exclusively for use by Santa Monica-Malibu Unified School District and may not be relied upon by any other person or entity NV5's express written permission. The information, conclusions and recommendations described in this report apply to conditions existing at certain locations when services were performed and are intended only for the specific purposes, locations, time frames and project parameters indicated. NV5 cannot be responsible for the impact of any changes in environmental standards, practices or regulations after the performance of services.

In performing our professional services, we have applied engineering and scientific judgment and used a level of effort consistent with the current standard of practice for similar types of studies.

As applicable, NV5 has relied in good faith upon representations and information furnished by individuals with respect to operations and existing property conditions, to the extent that they have not been contradicted by data obtained from other sources. Accordingly, NV5 accepts no responsibility for any deficiencies, omissions, misrepresentations, or fraudulent acts of persons interviewed.

NV5 will not accept any liability for loss, injury claim, or damage arising directly or indirectly from any use or reliance on this report. NV5 makes no warranty, expressed or implied.

This report is issued with the understanding that the client, the property owner, or its representative is responsible for ensuring that the information, conclusions, and recommendations contained herein are brought to the attention of the appropriate regulatory agencies, as required.

Material quantities are in some cases listed within this document. These quantities are not intended to be used for removal bidding purposes. Nor is this document intended as a contract manual. Work methods and sequence, coordination of participants, applicable codes, engineering controls, required submittals, and notifications should in all cases be addressed in a separate and independent bidding and contract document. If you have any questions, please do not hesitate to contact the undersigned at (562) 495-5777. We appreciate the opportunity to be of service to Santa Monica-Malibu Unified School District.

COOLER RECEIPT FORM

Client Name: NVS
Project Name:
AETL Job Number: BBJ0304
Date Received: 10/23/2020 Received by: Sayris Rivera
Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):
Inside temperature of shipping container No 1: 4°C, No 2: _____, No 3: _____
Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): Plastic Bags
How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH
☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			N/A	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?	✓			
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			N/A	
11. Are the jars free of headspace?			N/A	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.

Qualifiers are noted in the report.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.
