Qualifiers and Definitions

Item	Qualifiers
D	Sample was analyzed under dilution due to matrix interference.
S6	Surrogate recovery is outside control limits due to matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Long Beach, CA 90807	Attention:	Jonathan Barkman		
	Project Name:	Cabrillo ES PCB	Reported:	11/02/2020 14:27

PCB	Polychlorinated Biphenyl
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

COOLER RECEIPT FORM

Client Name: NVS
Project Name:
AETL Job Number: BBK0216
Date Received: 11/13/2020 Received by: Sergio Pinch
Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):
Inside temperature of shipping container No 1: 4°C, No 2: ____, No 3: ____
Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): Bags
How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH
☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			N/A	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?	✓			
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			N/A	
11. Are the jars free of headspace?			N/A	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.

Qualifiers are noted in the report.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
D	Sample was analyzed under dilution due to matrix interference.
S6	Surrogate recovery is outside control limits due to matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration

PCB	Polychlorinated Biphenyl
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

AETL Job Number: BBK0215
Date Received: 11/13/2020 Received by: Sargis Pirch
Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):
Inside temperature of shipping container No 1: 4°C, No 2: _____, No 3: _____
Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): Bags
How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☐ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH
☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			N/A	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?	✓			
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			N/A	
11. Are the jars free of headspace?			N/A	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.
Qualifiers are noted in the report.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

PCB	Polychlorinated Biphenyl
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

COOLER RECEIPT FORM

Client Name: NVS

Project Name:

AETL Job Number: BBL0210

Date Received: 11/13/2020 Received by: Sanjis Pivek

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS

☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):

Inside temperature of shipping container No 1: 4°C, No 2: _____, No 3: _____

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): Bags

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice

☐ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH

☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			N/A	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?	✓			
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			N/A	
11. Are the jars free of headspace?			N/A	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.
Qualifiers are noted in the report.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
D	Sample was analyzed under dilution due to matrix interference.
S6	Surrogate recovery is outside control limits due to matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration

PCB	Polychlorinated Biphenyl
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

COOLER RECEIPT FORM

Client Name: N/S

Project Name:

AETL Job Number: BBK0208

Date Received: 11/13/2020 Received by: Sergio Pineda

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS

☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):

Inside temperature of shipping container No 1: 4°C, No 2: _____, No 3: _____

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): Bags

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice

☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH

☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			N/A	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?	✓			
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			N/A	
11. Are the jars free of headspace?			N/A	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.

Qualifiers are noted in the report.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
S6	Surrogate recovery is outside control limits due to matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

COOLER RECEIPT FORM

Client Name: NVS

Project Name:

AETL Job Number: BCA09049

Date Received: 1/8/21 Received by: Sergio Pinon

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS

☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):

Inside temperature of shipping container No 1: 4°C, No 2: _____, No 3: _____

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): Baggie

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice

☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$

☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			N/A	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?	✓			
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			N/A	
11. Are the jars free of headspace?			N/A	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.
Qualifiers are noted in the report.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration

Long Beach, CA 90807	Attention:	Jonathan Barkman		
	Project Name:	Cabrillo ES PCB	Reported:	01/12/2021 15:34

PCB	Polychlorinated Biphenyl
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

Subject: RE: Results SMSD-20-9850 Cabrillo ES PCB (AETL BCA0049)

Hi Harriet – We need to see about analysis a few of the archived samples for report AETL No. BCA0049
Please analyze the following for PCBs on a rush TAT:

- B10,
- B11,
- B16,
- B17,
- B23,
- B24,
- B30, and
- B31

Regards,

Jonathan Barkman | Project Manager | **NV5**

Subject: Results SMSD-20-9850 Cabrillo ES PCB (AETL BCA0049)

Hello Jonathan,

We apologize for the delay.

Please see the attached documents for the following:

Carbrillo ES PCB --- SMSD-20-9850
Sample Date: 1.8.2021
AETL No. BCA0049

Please let us know if you have any questions or concerns.

Sincerely,

Harriet Torosyan
Project Manager

COOLER RECEIPT FORM

Client Name: NVS

Project Name:

AETL Job Number: BCA09049

Date Received: 1/8/21 Received by: Sergio Pinon

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS

☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):

Inside temperature of shipping container No 1: 4°C, No 2: _____, No 3: _____

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): Baggie

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice

☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$

☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			N/A	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?	✓			
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			N/A	
11. Are the jars free of headspace?			N/A	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.
Qualifiers are noted in the report.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.

Hi Harriet – We need to see about analysis a few of the archived samples for report AETL No. BCA0049
Please analyze the following for PCBs on a rush TAT:

- B10,
- B11,
- B16,
- B17,
- B23,
- B24,
- B30, and
- B31

Regards,

Jonathan Barkman | Project Manager | **NV5**

Subject: Results SMSD-20-9850 Cabrillo ES PCB (AETL BCA0049)

Hello Jonathan,

We apologize for the delay.

Please see the attached documents for the following:

Carbrillo ES PCB --- SMSD-20-9850
Sample Date: 1.8.2021
AETL No. BCA0049

Please let us know if you have any questions or concerns.

Sincerely,

Harriet Torosyan
Project Manager

Subject: BCA0049 sample numbers corrected
Attachments: Pages from BCA0049 PRM_AETL_LabAnalysis FINAL 01 12 2021 1534.pdf

Good morning,

Our technician duplicated some sample numbers for this Cabrillo Project (AETL Job No: BCA0049) . Can you please change the sample numbers to the corrected sample numbers below? Attached is a copy of the COC that was submitted.

If you need any additional information, please let me know.

New sample number	Current sample number
B-54	B-1
B-55	B-2
B-56	B-3
B-57	B-4
B-58	B-5
B-59	B-6
B-60	B-7
B-61	B-8
B-62	B-9
B-63	B-10
B-64	B-11
B-65	B-12

COOLER RECEIPT FORM

Client Name: NVS

Project Name:

AETL Job Number: BCA09049

Date Received: 1/8/21 Received by: Sergio Pinon

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS

☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):

Inside temperature of shipping container No 1: 4°C, No 2: _____, No 3: _____

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): Baggie

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice

☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$

☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			N/A	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?	✓			
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			N/A	
11. Are the jars free of headspace?			N/A	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.

Qualifiers are noted in the report.

This report contains revisions. The information changed are the sample identifications per client request. This document is the official version and replaces the earlier report. Please delete, discard, or destroy prior versions.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Long Beach, CA 90807	Attention:	Jonathan Barkman		
	Project Name:	Cabrillo ES PCB	Reported:	01/18/2021 15:05

PCB	Polychlorinated Biphenyl
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

Subject: RE: Results SMSD-20-9850 Cabrillo ES PCB (AETL BCA0049)

Hi Harriet – We need to see about analysis a few of the archived samples for report AETL No. BCA0049
Please analyze the following for PCBs on a rush TAT:

- B10,
- B11,
- B16,
- B17,
- B23,
- B24,
- B30, and
- B31

Regards,

Jonathan Barkman | Project Manager | **NV5**

Subject: Results SMSD-20-9850 Cabrillo ES PCB (AETL BCA0049)

Hello Jonathan,

We apologize for the delay.

Please see the attached documents for the following:

Carbrillo ES PCB --- SMSD-20-9850
Sample Date: 1.8.2021
AETL No. BCA0049

Please let us know if you have any questions or concerns.

Sincerely,

Harriet Torosyan
Project Manager

COOLER RECEIPT FORM

Client Name: NVS

Project Name:

AETL Job Number: BCA09049

Date Received: 1/8/21 Received by: Sergio Pinon

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS

☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):

Inside temperature of shipping container No 1: 4°C, No 2: _____, No 3: _____

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): Baggie

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice

☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$

☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			N/A	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?	✓			
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			N/A	
11. Are the jars free of headspace?			N/A	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.
Qualifiers are noted in the report.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.

COOLER RECEIPT FORM

Client Name: NTS

Project Name:

AETL Job Number: BCA0090

Date Received: 1/13/21 Received by: Sayers Pinch

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐ Others:

Samples were received in: ☒ Cooler (1) ☐ Other (Specify):

Inside temperature of shipping container No 1: 4 °C, No 2: _____, No 3: _____

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☒ Others (Specify): Bags

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	↘			
2. Are Sample labels legible & indelible ink?	↘			
3. Do samples match the COC?	↘			
4. Are the required analyses clear?	↘			
5. Is there enough samples for required analysis?	↘			
6. Does cooler or samples have custody seal(s)?			N/A	
7. Are sample containers in good condition?	↘			
8. Are samples preserved?	↘			
9. Are samples preserved properly for the intended analysis?	↘			
10. Are the VOAs free of headspace?			N/A	
11. Are the jars free of headspace?			N/A	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.
Qualifiers are noted in the report.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

1.0 INTRODUCTION

The Santa Monica-Malibu Unified School District (District) will undertake a project to fully demolish identified buildings on the Juan Cabrillo Elementary School campus, located at 30237 Morning View Drive, Malibu, California 90265 (herein identified as "Site"). Buildings B and C of the Site have been identified to contain regulated levels of polychlorinated biphenyls (PCBs). ***This document has been prepared prior to the anticipated review and approval of a PCB remediation plan by the USEPA Region 9. As such, this document is subject to change. Once approved, the USEPA-approved document will take precedence over this version.***

The District has retained Alta Environmental DBA NV5(NV5) to prepare this site-specific Pre-demolition PCB Removal/Remediation Plan (Plan) to address previously identified PCB-impacted building materials prior to planned demolition activities. PCB-impacted building materials identified for remediation/removal are presented in Table 1, below.

Table 1 – PCB-Impacted Building Materials

Material/Description	Location	Disposal	Specification Section
Exterior blue paint	Building B-Exterior Stucco	Bulk Product Waste	8.1
Vinyl wall covering (and associated substrates)	Building B-Interior perimeter walls and adjacent interior walls within 16" of vinyl wall coating	Bulk Product Waste	8.1
Vinyl wall covering (and associated substrates)	Building C-Interior Perimeter walls and interior walls with vinyl and adjacent surfaces within 16" of vinyl wall coating	Bulk Product Waste	8.1
Sediments from all catch basins	Storm drains surrounding Building B	Remediation Waste	8.2

The scope of work described in this Plan shall be completed by a remediation contractor (Remediation Contractor) qualified to perform PCB removal/remediation work using properly trained Hazardous Waste Operations and Emergency Response (HAZWOPER) workers. Further, it should be noted that asbestos containing materials (ACM) and lead based paints (LBP) have also been identified within the boundaries of the PCB related work. Requirements for ACM and LBP remediation work are not included in this Plan. The remediation contractor should consult with the District to obtain the ACM and LBP abatement work plan.

The PCB removal work may be completed concurrently and in conjunction the ACM and LBP removal

work where necessary, if feasible and cost effective. All PCB related work shall be completed using proper worker protection which may include air purifying respirators, disposable clothing, hand, foot, eye and head protection, as required.

PCB removal/remediation work should be completed in accordance with all applicable regulations. Waste must be properly segregated, characterized, labelled, transported and disposed at an approved waste disposal facility.

If a specified minimum procedure described in this document cannot be utilized, a request shall be made in writing to Owner's Authorized Representative providing details of the issues encountered and recommended alternatives.

The Remediation Contractor is required to comply with all applicable regulatory requirements including but not limited to worker training, personal protection equipment and waste disposal. The selected Remediation Contractor will be required to provide a written Site-specific work plan which complies with this Plan.

By submitting a bid, the Remediation Contractor warrants its intent to conduct said work properly using qualified personnel.

The Remediation Contractor shall furnish all labor, materials, services, and equipment which is specified, shown or reasonably implied for the removal, transport, and disposal of PCB-impacted building materials presented in Table 1. In addition, the Remediation Contractor shall obtain insurance prior to Site mobilization which specifically covers the handling and transportation of PCBs,

2.0 PCB REMOVAL/REMEDIATION SCOPE OF WORK

It is the intent of the District to safely and efficiently remove source material containing PCB concentrations greater than 50 part per million (ppm) and adjacent porous surfaces impacted by those source materials at PCB concentrations greater than 1 ppm.

The following materials have been identified for removal/remediation:

- Light blue paint associated with exterior stucco walls-Building B
- Vinyl wallpaper coated with white paint on interior perimeter walls-Building B
- Vinyl wallpaper coated with white paint on interior perimeter and various interior walls-Building C

3.0 SEDIMENTS FOUND IN STORMWATER CATCH BASINS SURROUND BUILDING B. WASTE CHARACTERIZATION

Waste generated during this project should be segregated and classified as presented in Table 2, in accordance with 40 CFR 761.3. Asbestos and or lead have been identified to be present in the PCB containing materials as well.

Table 2 - Waste Characterization

Waste Classification	Materials	PCB Concentration (ppm)
PCB Bulk Product Waste	Painted Exterior Stucco Building B[1][2] Wall Vinyl Buildings B and C [2]	Source material concentration equal to or greater than 50 PPM
	Porous building materials adjoining identified PCB-impacted source material B and C	Greater than 1 ppm
PCB Remediation Waste	Sediments in catch basin	Greater than 1 ppm
	Personal Protective Equipment	
	Rags and Other Cleaning Products Used for Decontamination	

[1] Stucco contains regulated concentrations of asbestos.

[2] Paint on surfaces contains lead.

If segregation and separation of non-impacted porous materials in direct contact with impacted material is determined to be infeasible during remediation, the non-impacted porous materials will be handled as a PCB Bulk Product Waste.

4.0 ENGINERRING CONTROLS

An integral step in implementing effective protective measures is to build a containment area at each location where removal/remediation work is completed, in a manner that minimizes airborne dust from migrating outside of the abatement area.

4.1 ESTABLISHING A CONTAINED WORK AREA

The containment area(s) shall be maintained under constant negative air pressure by installing localized fan systems equipped with high efficiency particulate air filters (HEPA). The filtered exhaust from the fans will be routed outside the containment area and vented outside of the building. A minimum pressure differential of 0.02 inches water column shall always be maintained during the work and documented using a recording manometer.

All plastic, spray-on strippable coatings and structural materials used shall be UL-certified as fire retardant or non-combustible. Polyethylene sheeting utilized for worker decontamination and construction/containment barriers shall be designated fire-retardant and have a minimum thickness of six-mil.

Appropriate warning signs as may be required by Cal/OSHA shall be utilized at all entrances to the containment.

4.2 HEPA FILTRATION

A sufficient quantity of HEPA vacuums and/or differential pressure air filtration devices equipped with HEPA filtration shall be used during the removal/remediation work activities. HEPA units shall be tested throughout the project using a particle counter or other appropriate device to document the efficacy of the filtration system.

All powered tools should be equipped with appropriate tool guards and dust/debris collection point-of-capture HEPA filtration systems. Filters shall be disposed of as PCB remediation waste at the end of the project and may not be taken offsite for re-use.

4.3 WORKER DECONTAIMINATION

A worker decontamination unit shall be constructed and maintained at the work area exit. A hand and face wash station will be provided for use by all workers prior to exiting the work area. Waste rinse-water must be disposed in accordance with applicable regulations.

5.0 AIR MONITORING

5.1 OCCUPATIONAL EXPOSURE

To verify the effectiveness of dust minimization and engineering controls, air monitoring for respirable airborne particulates will be conducted using data-logging, real-time monitors. Particulate concentrations shall be maintained below the California Division of Occupational Safety and Health (Cal-OSHA) permissible exposure limits (PELs), based on an 8-hour time-weighted average (8-hour TWA).

Table 3 - Permissible Exposure Limits

Contaminant	Permissible Exposure Limit
Total Dust	10 milligrams per cubic meter (mg/m^3)
Respirable Fraction	5 mg/m^3
PCBs (42% Chlorine)	1 mg/m^3
PCBs (54% Chlorine)	0.5% mg/m^3

5.2 ENVIRONMENTAL MONITORING

Environmental air sampling will be conducted to document the efficacy of the Remediation Contractor's engineering controls, in accordance with the following:

1. A total airborne particulate action limit for the areas outside of the exclusion zone has been established for the PCB remediation work to be conducted at the Site, with consideration of specific receptors, PCB concentrations, work activities, and Cal/OSHA permissible exposure limits. The action limit applies only to air monitoring at the perimeter of the work zone; an action limit has not been set for the active work zones (exclusion zones), as engineering controls will be used within these zones.

2. An action limit of 0.1 mg/m^3 above background will be maintained during site work. The action limit will be determined based on real-time monitoring at a location representative of background/ambient conditions (i.e. a location upwind of the work area). The action limit will be used to determine when additional engineering controls and/or work stoppages are necessary, if any.

3. Should the action limit be exceeded during remediation, work procedures will be evaluated for potential corrective actions, including additional engineering controls or modified work practices. Any recommended changes to work practices will be documented.

4. Air monitoring stations will be established along the work zone perimeter, at upwind and downwind locations, and within the designated work area, if feasible. Air monitoring will be conducted at all times during PCB remediation activities. Alta will review monitoring data at a minimum of once per hour during the work. The logged data will be downloaded and reviewed daily so that changes to the work practices can be recommended based on observable trends in airborne dust concentrations.

5. If monitoring indicates that particulate matter concentrations are not maintained below the action level, remediation activities shall cease until work practices can be evaluated and adjusted.

6.0 WORKER PROTECTION

6.1 PERSONAL PROTECTION EQUIPMENT

Appropriate personal protection equipment (PPE) shall be selected based on the nature of the work performed and the condition on the work area. At a minimum, all personnel entering controlled work areas shall wear disposable, non-porous full-body coveralls (Tyvek or equivalent) and shall utilize air purifying respirators equipped with High Efficiently Particulate Air (HEPA) P-100 filters. In addition, appropriate hand (chemical resistant gloves), foot, eye and hearing protection should always be worn.

6.2 WORKER DECONTAINMINATION SYSTEMS

Worker decontamination enclosure systems shall be provided at all locations where workers will enter or exit PCBs work areas, in accordance with the following:

- A Worker decontamination enclosure system shall consist of at least a cleansing station in accordance with the requirements of 8 CCR 1527 and 8 CCR 1529, and which is equipped with adequate water, towels and cleansing agents to accommodate all users.
- Worker decontamination enclosure systems constructed at the Site shall utilize six-mil, fire-retardant polyethylene sheeting, or other approved materials for privacy.
- Worker decontamination enclosure systems shall not be located inside the work area(s) unless specifically authorized by the Project Environmental Consultant.
- Alternate methods of providing decontamination facilities may be submitted to the Project Environmental Consultant for approval. Do not proceed with any such method(s) without prior written authorization.

7.0 EQUIPMENT DECONTAMINATION

All non-disposable equipment used for the removal/remediation of PCB Bulk Product Waste and PCB Remediation Waste materials included in this work plan must be properly decontaminated prior to removal from any controlled work area. Decontamination procedures shall be implemented in accordance with 40 CFR 761.79.

Any equipment utilizing, or otherwise containing, HEPA filters shall have the HEPA filters removed and properly packaged for disposal prior to demobilizing from the controlled work area. In addition, the equipment's filter compartment and drum should be thoroughly wet-wiped and HEPA vacuumed while still within the controlled work area. The subject filters shall be subsequently disposed in accordance with of this document, and all applicable regulations.

Equipment should be inspected by both the Remediation Contractor Supervisor overseeing the remediation/removal work and the Project Environmental Consultant. Equipment shall only be removed from the work area once the equipment has been inspected and found to be acceptably clean of visible dust and debris.

8.0 REMOVAL ACTIVITIES

Removal/remediation of PCB impacted materials shall be conducted under controlled conditions. At each removal location, establish a controlled work area which includes a negative pressure enclosure in accordance with Section 4.1, above. In addition, surface preparation for removal activities will include surficial wetting in order to minimize dust generation.

All waste materials shall be handled and transported for disposal in according with all applicable regulatory requirements. Waste characterization shall be completed in accordance with Section 3 of this document.

8.1 PAINT ASSOCIATED WITH STUCCO ON EXTERIOR WALLS AND VINYL WALLPAPER ON INTERIOR WALLS

1. Pre-clean all surfaces within the proposed work area by HEPA vacuuming and wet-wiping.

2. Establish a containment work area including negative pressure enclosure

3. At locations where PCBS are to be removed polyethylene sheeting will be placed on the ground surface and removal will be conducted using hand tools to achieve removal to the maximum extent practicable while minimizing dust or other airborne particulates generated.

4. Surface preparation will include surficial wetting of visibly dry and/or deterioration material to minimized dust generation.

5. Debris generated during this project will be immediately collected in waste bags or similar containers and stored in a labeled PCB Bulk Product Waste container at the end of each work shift.

8.2 CATCH BASIN SEDIMENTS

Contractor shall remove sediments from all catch basins around Building B, then flush storm conveyance piping associated with each catch basin, from the most upstream catch basins on each line segment, in the vicinity of Building B, to the identified downstream manhole where flushed liquids can be collected and removed for disposal.

Contractor personnel involved in removal and handling of dry catch basins sediments shall be 40-Hour HAZWOPER-trained per 29 CFR1910.120, and CCR Title 8, Section 5192. It is the Contractor's responsibility to locate all CBs, locations of nearest available water sources relative to the work area, and investigate each manhole to determine depth, discharge piping sizes requiring temporary plugging to allow flushed liquids to accumulate in the manhole, and available access for necessary equipment.

The scope of work for sediment removal and line flushing is further described below.

1. Contractor shall locate all stormwater system catch basins around former Building B to be cleaned via sediment removal. Contractor shall remove the steel grates and physically remove sediments by hand methods or HEPA vacuuming both the catch basin, and the catch basin upper edge where the steel grate rests. All collected sediments shall be containerized in a DOT-approved steel drum or other approved container for disposal. (Contractor shall perform catch basin sediment removal prior to line-flushing with potable water.)

2. Contractor shall temporarily seal the discharge lines from each of the designated manhole recovery locations. Storm conveyance lines that exit each of these manholes shall be blocked with plugs or inflatable packers to retain flushed liquids and sediment inside the manhole. Work inside the manholes is considered a "Permitted Confined Space" and shall be performed accordingly, including any necessary interactions and permits/approvals by McCarthy.

3. Prior to working inside the manholes, a Confined Space Entry Plan (Plan) shall be prepared for review by Project Health and Safety Officer, that describes the work, including air monitoring of the confined space, designated team member roles and responsibilities, and describes equipment to be used in performing confined space entry. The Plan shall also describe confined space protocols and equipment shall be in place for performing emergency confined space rescue, prior to starting any confined space entry work.

4. After Contractor completes dry sediment removal from all identified catch basins in the conveyance network around Building B, the conveyance lines shall be cleaned and flushed by hydro-jetting with potable water, starting from the most upstream catch basin on each line, pushing liquids downstream ultimately to the designated recovery manhole. Water is available on site.

5. All flushed liquids (and residual sediments) shall be removed from each recovery manhole and containerized in DOT-approved containers for offsite disposal as a PCB Remediation Waste.

6. After line flushing is complete, Contractor shall also clean the steel grate and interior surfaces of each catch basin prior to reinstalling the steel grate. The steel grate and catch basin interior areas shall be wet-wiped with water-soaked rags. All soiled rags shall be placed in the same container as removed dry sediments for offsite disposal as a PCB Remediation Waste.

7. All containerized PCB Remediation Wastes shall be temporarily stored on site in the designated waste storage area, until offsite shipment can occur. Waste profiling shall be the responsibility of the Contractor.

9.0 POST REMEDIATION CONFIRMATION SAMPLING

Upon completion of the PCB related work, the Project Environmental Consultant and the Remediation Contractor will conduct a post-remediation visual inspection of the controlled work area. If any material designated for removal is observed, including loose dust or debris, the Remediation Contractor will be required to re-clean the area until deemed acceptable by the Project Environmental Consultant.

9.1 BULK SAMPLING

Following removal activities, sampling of materials immediately adjacent to the removal area may be conducted. Analytical results of the post-removal samples will be evaluated to determine whether the task has been successfully completed as shown in Table 2 below.

Table 4 – Post Remediation Bulk Sampling Results and Actions

PCB Concentration	Action
<1 ppm	No further action-dispose of construction debris
>1 ppm and <50 ppm	Action dependent on EPA Risk Based Disposal approval
>50 ppm	Additional removal activities required

9.2 AIR SAMPLING

Representative air sampling within Building B will be conducted following the completion of removal activities and successful visual inspection. The Remediation Contractor is advised that air sample analysis may take several days for sampling and analysis. It should be noted that containment areas must be maintained until samples results are received from the laboratory and reviewed by the Project Environmental Consultant.

Each air sample will be collected utilizing a calibrated pump to draw air through laboratory supplied polyurethane foam cartridges at a flow rate of approximately 5 liters per minute, for approximately 24 hours. The air samples were collected at breathing zone height and without the use of pre-filters. All samples shall be prepared for analysis by the laboratory using EPA Method 3540 (Soxhlet extraction) and analyzed for PCBs using EPA Method TO-10A.

The results of the post-remediation air samples shall be compared to the USEPA's criteria for evaluating exposure levels in indoor air at school sites. The criteria are as follows:

Age in Years Range	1 to <2	2 to <3	3 to <6	6 to <12	12 to <15	15 to <19	*19 +*
PCBs ng/m^3	100	100	200	300	500	600	*500*

If these conditions are not met, decontamination shall be deemed incomplete and the cleaning procedures shall be repeated. The area shall be re-cleaned and re-tested at no additional cost to Owner until satisfactory levels are obtained.

9.3 WIPE SAMPLING

Post removal/remediation wipe samples will be collected on gauze pads (or similar sampling media) using the Standard Wipe Test described in 40 CFR 761.123. Following collection, each sample shall be properly packaged, labeled, and recorded on a chain-of-custody for transport to the laboratory for analysis. All wipe samples shall be prepared for analysis by the laboratory using EPA Method 3540 (Soxhlet extraction) and analyzed for PCBs using EPA Method 8082.

A total PCB comparison threshold of 1 microgram per 100 square centimeters (1µg/100 cm^2) must be met for wipe samples collected at the Site. Clearance will be issued when all wipe samples results have met these levels.

If these conditions are not met, decontamination shall be deemed incomplete and the cleaning procedures shall be repeated. The area shall be re-cleaned and re-tested at no additional cost to Owner until satisfactory levels are obtained.

The contractor is advised that wipe sample analysis turnaround time will be dependent on laboratory may be delayed as 48 hours. capacity. It should be noted that containment areas must be maintained until samples results are received from the laboratory.

9.4 QUALITY CONTROL

A quality control (QC) assessment of all samples analyzed will be completed. This assessment will include a complete check of field documentation, including sample collection and preservation methods, a completeness check of the laboratory data and documentation, a review of the internal laboratory QA/QC procedure and results including surrogate recoveries, MS/MSD results, blank results, and laboratory control standard results, and an evaluation of sample holding times, and field duplicate results, as necessary.

10.0 RESERVED CONTINGENCY PLAN

If unanticipated elevated PCB concentrations or larger distribution of PCB impacted materials are found, or if other obstacles force changes to the remediation approach, contingencies will be developed and included in the remediation Plan.

11.0 WASTE MANAGEMET AND DISPOSAL

Waste management and disposal incudes on-site handling, accumulation, containerizing and labelling, and off-site transportation (including providing and preparing manifest, bills of lading, etc.) and disposal of PCB waste streams. PCB waste streams will be transported by a licensed waste hauler to the appropriate waste disposal facility.

Secured, lined, and covered waste containers (roll-off containers or equivalent) or 55-gallon DOT-approved steel drums will be staged for the collection of PCB wastes generated during the work activities in accordance with applicable requirements in 40 CFR 761.65 and 40 CFR 761, Subpart K. All containers will be properly labelled and marked in accordance with 40 CFR 761.40 and 22 CCR 66262.34.

The Remediation Contractor will be required to develop a waste sampling and management plan to the Owner and the Project Environmental Consultant for review and approval prior to start of the project. At a minimum, the plan shall include: the name, location and contact information for the Disposal Facility, certification from the Disposal Facility that the PCB waste will be accepted, approved hazardous waste transporter information, a plan for disposal of PCB waste streams, a description of the sampling procedures and sample frequencies, etc. for acceptance by the Disposal Facility.

PCB Bulk Product Waste will be segregated for disposal and transported under a proper manifest to a disposal facility in accordance with 40 CFR 761.62 and 22 CCR 66262.23.

PCB Remediation Waste with a total PCB concentration greater than or equal to 50 ppm will be segregated for disposal and transported under a hazardous waste manifest to a hazardous waste landfill in accordance with 40 CFR 761.61 and 22 CCR 66262.23.

Excluded PCB Product (e.g. concrete, plaster, wood, stucco etc.) containing <50 ppm PCBs will be segregated, further evaluated for other potential hazardous waste characteristics unrelated to PCB concentration, as applicable, and transported offsite under manifest or bill of lading to an appropriate hazardous or nonhazardous waste disposal facility.

Water generated during decontamination (or as part of dust suppression) that is collected on polyethylene sheeting will be containerized onsite, sampled for PCBs and other potential constituents as necessary, and characterized for off-site disposal in accordance with 40 CFR 761.79 and/or California hazardous waste regulations, as applicable. Polyethylene sheeting, PPE, and non-liquid cleaning materials will be managed and disposed of offsite in accordance with 40 CFR 761.61 (a)(5)(v).

12.0 RECORDKEEPING AND DOCUMENTATION

Following completion of the work activities, applicable records and documents will be generated and maintained at one location. A post-remediation report will be prepared which will contain a detailed description of the remediation activities, post clean up samples, appropriate figures and drawings, and analytical date tables presenting results and post-clean-up samples. In addition, the report will include volumes of disposed materials and all waste disposal records. The post-remediation report will be prepared for the purpose of providing a full account of activities preformed, including documentation necessary to support the conclusion that the remedial activities meet the objective of the project.

13.0 CERTIFICATION

A certification form signed by both the owner of the property where the clean-up site is located and by the party conducting the clean-up shall be developed that stating that all sampling plans, sample collection procedures, sample preparation procedures, extraction procedures, and instrumental/chemical analysis procedures used to assess or characterize the PCB contamination at the clean-up site will be maintained at a centralized designated location, available for USEPA inspection.

LAND USE COVENANT AND AGREEMENT

ENVIRONMENTAL RESTRICTIONS

County of Los Angeles, Assessor Parcel Number 4469-017-900
Malibu High/Middle School and Juan Cabrillo Elementary School
(Site Code: 301648-11)

This Land Use Covenant and Agreement ("Covenant") is made by and between Santa Monica Malibu Unified School District (the "Covenantor"), the current owner of property located at 30237 and 30215 Morning View Drive, Malibu, in the County of Los Angeles, State of California (the "Property"), and the Department of Toxic Substances Control (the "Department"). Pursuant to Civil Code section 1471, the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined in Health and Safety Code section 25260. The Covenantor and the Department hereby agree that, pursuant Civil Code section 1471 and Health and Safety Code section 25355.5, the use of the Property be restricted as set forth in this Covenant and that the Covenant shall conform with the requirements of California Code of Regulations, title 22, section 67391.1.

ARTICLE I

STATEMENT OF FACTS

1.1. Property Location. The Property that is subject to this Covenant, totaling approximately 0.66 acres, is more particularly described in the attached Exhibit A, "Legal Description", and depicted in Exhibit B, "Plot Plan, or Licensed Land Survey". The Property is located within the approximately 80 acre area occupied by the Malibu High/Middle School and Juan Cabrillo Elementary School, which is now generally bounded by Via Cabrillo on the west, and Mountain View Drive on the south and southwest. The Property is more particularly described as located northwest of the Malibu High/Middle School's Gymnasium and northeast of the Juan Cabrillo Elementary School's Playground/Grassy Area. The Property is commonly known as the Bus Barn Area, and is also identified as a portion of County of Los Angeles, Assessor Parcel Number 44-59-017-900.

1.2. Remediation of Property. This Property has been investigated and/or remediated under the Department's oversight. On June 27, 2014, the Department approved a Preliminary Environmental Assessment (PEA) Work Plan for the entire 80 acre Malibu High/Middle School and Juan Cabrillo Elementary School. The PEA Work Plan was implemented under the Department's oversight during the summer of 2014, and completed in August 2014. On November 23, 2015, in accordance with the Health and Safety Code, division 20, chapter 6.8, the Department approved the PEA Report and issued a No Further Action determination letter to allow for future unrestricted use of the remaining approximately 79.33 acres of the Malibu High/Middle School and Juan Cabrillo Elementary School.

The Preliminary Environmental Assessment Report confirmed the presence of volatile organic compounds in soil vapor remain at the Property above levels acceptable for unrestricted land use. A Human Health Risk Screening Evaluation was performed for the Property which concluded that no significant risks due to exposure to chemicals in soil vapor would be expected for the current or future school students and teachers/staff. However, re-evaluation of risk associated with soil vapor would be required if the land use at the Property is re-zoned for future residential use.

1.3. Basis for Environmental Restrictions. As a result of the presence of hazardous substances which are also hazardous materials as defined in Health and Safety Code section 25260, at the Property, the Department has concluded that it is reasonably necessary to restrict the use of the Property in order to protect present or future human health or safety or the environment, and that this Covenant is required as part of the Department-approved remedy for the Property. The Department has also concluded that the Property, as remediated and when used in compliance with the Environmental Restrictions of this Covenant, does not present an unacceptable risk to present and future human health or safety or the environment.

ARTICLE II
DEFINITIONS

2.1. Department. "Department" means the California Department of Toxic Substances Control and includes its successor agencies, if any.

2.2. Environmental Restrictions. "Environmental Restrictions" means all protective provisions, covenants, restrictions, requirements, prohibitions, and terms and conditions as set forth in this Covenant.

2.3. Improvements. "Improvements" includes, but is not limited to buildings, structures, roads, driveways, improved parking areas, wells, pipelines, or other utilities.

2.4. Lease. "Lease" means lease, rental agreement, or any other document that creates a right to use or occupy any portion of the Property.

2.5. Occupant. "Occupant" or "Occupants" means Owner and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

2.6. Owner. "Owner" or "Owners" means the Covenantor, and any successor in interest including any heir and assignee, who at any time holds title to all or any portion of the Property.

ARTICLE III
GENERAL PROVISIONS

3.1. Runs with the Land. This Covenant sets forth Environmental Restrictions that apply to and encumber the Property and every portion thereof no matter how it is improved, held, used, occupied, leased, sold, hypothecated, encumbered, or conveyed. This Covenant: (a) runs with the land pursuant to Civil Code section 1471 and Health and Safety Code section 25355.5; (b) inures to the benefit of and passes with each and every portion of the Property; (c) is for the benefit of, and is enforceable by the Department; and (d) is imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.2. Binding upon Owners/Occupants. This Covenant: (a) binds all Owners of the Property, their heirs, successors, and assignees; and (b) the agents, employees, and lessees of the Owners and the Owners' heirs, successors, and assignees. Pursuant to Civil Code section 1471, all successive Owners of the Property are expressly bound hereby for the benefit of the Department; this Covenant, however, is binding on all Owners and Occupants, and their respective successors and assignees, only during their respective periods of ownership or occupancy except that such Owners or Occupants shall continue to be liable for any violations of, or non-compliance with, the Environmental Restrictions of this Covenant or any acts or omissions during their ownership or occupancy.

3.3. Incorporation into Deeds and Leases. This Covenant shall be incorporated by reference in each and every deed and Lease for any portion of the property.

3.4. Conveyance of Property. The Owner and new Owner shall provide Notice to the Department not later than 30 calendar days after any conveyance or receipt of any ownership interest in the Property (excluding Leases, and mortgages, liens, and other non-possessory encumbrances). The Notice shall include the name and mailing address of the new Owner of the Property and shall reference the site name and site

code as listed on page one of this Covenant. The notice shall also include the Assessor's Parcel Number(s) noted on page one. If the new Owner's property has been assigned a different Assessor Parcel Number, each such Assessor Parcel Number that covers the Property must be provided. The Department shall not, by reason of this Covenant, have authority to approve, disapprove, or otherwise affect proposed conveyance, except as otherwise provided by law or by administrative order.

3.5. Costs of Administering the Covenant to Be Paid by Owner. The Department has already incurred and will in the future incur costs associated with this Covenant. Therefore, the Covenantor hereby covenants for the Covenantor and for all subsequent Owners that, pursuant to California Code of Regulations, title 22, section 67391.1(h), the Owner agrees to pay the Department's costs in administering, implementing and enforcing this Covenant.

ARTICLE IV
RESTRICTIONS AND REQUIREMENTS

4.1. Prohibited Uses. The Property shall not be used for any of the following purposes without prior written approval by the Department:

(a) A residence, including any mobile home or factory built housing, constructed or installed for use as residential human habitation.

4.2. Soil Management. Soil management activities at the Property are subject to the following requirements in addition to any other applicable Environmental Restrictions:

(a) No activities that will disturb the soil (e.g., excavation, grading, removal, trenching, filling, earth movement, mining, or drilling) shall be allowed at the Property without a Soil Management Plan pre-approved by the Department in writing.

(b) Any soil brought to the surface by grading, excavation; trenching or backfilling shall be managed in accordance with all applicable provisions of state and federal law.

4.3. Prohibited Activities. The following activities shall not be conducted at the Property:

(a) Drilling for any water, oil, or gas without prior written approval by the Department.

(b) Extraction or removal of groundwater without a Groundwater Management Plan pre-approved by the Department in writing.

(c) Activity that may alter, interfere with, or otherwise affect the integrity or effectiveness of, or the access to, any investigative, remedial or monitoring system, or activity required for the Property without prior written approval of the Department.

4.4. Access for Department. The Department shall have reasonable right of entry and access to the Property for inspection, investigation, monitoring, and other activities as deemed necessary by the Department in order to protect human health or safety or the environment.

4.5. Access for Implementing Operation and Maintenance. The entity or person responsible for implementing the operation and maintenance activities, if any, shall have reasonable right of entry and access to the Property for the purpose of implementing such operation and maintenance activities until the Department determines that no further operation and maintenance activity is required.

4.6. Inspection and Reporting Requirements. The Owner shall conduct an annual inspection of the Property verifying compliance with this Covenant and shall submit an annual inspection report to the Department for its approval by January 15th of each year. The annual inspection report must include the dates, times, and names of those who conducted the inspection and reviewed the annual inspection report. It also shall describe how the observations that were the basis for the statements and conclusions in the annual inspection report were performed (e.g., drive by, fly over, walk in, etc.). If any violation is noted, the annual inspection report must detail the steps taken to correct the violation and return to compliance. If the Owner identifies any violations of this Covenant during the annual inspection or at any other time, the Owner must within 10 calendar days of identifying the violation: (a) determine the identity of the party in violation; (b) send a letter advising the party of the violation of the Covenant; and (c) demand that the violation cease immediately. Additionally, a copy of any correspondence related to the violation of this Covenant shall be sent to the Department within 10 calendar days of its original transmission.

4.7 Five-Year Review. In addition to the annual reviews noted above, after a period of five (5) years from April 15th and every five (5) years thereafter, Owner shall submit a Five-Year Review report documenting its review of the remedy implemented and its evaluation to determine if human health and the environment are being adequately protected by the remedy as implemented. The report shall describe the results of all inspections, sampling analyses, tests and other data generated or received by Owner and evaluate the adequacy of the implemented remedy in protecting human health and the environment. As a result of any review work performed, the Department may require Owner to perform additional review work or modify the review work previously performed by Owner.

ARTICLE V
ENFORCEMENT

5.1. Enforcement. Failure of the Owner or Occupant to comply with this Covenant shall be grounds for the Department to require modification or removal of any Improvements constructed or placed upon any portion of the Property in violation of this Covenant. Violation of this Covenant, such as failure to submit (including submission of any false statement) record or report to the Department, shall be grounds for the Department to pursue administrative, civil, or criminal actions, as provided by law.

ARTICLE VI
VARIANCE, REMOVAL AND TERM

6.1. Variance from Environmental Restrictions. Any person may apply to the Department for a written variance from any of the Environmental Restrictions imposed by this Covenant. Such application shall be made in accordance with Health and Safety Code section 25223.

6.2 Removal of Environmental Restrictions. Any person may apply to the Department to remove any of the Environmental Restrictions imposed by this Covenant or terminate the Covenant in its entirety. Such application shall be made in accordance with Health and Safety Code section 25224.

6.3 Term. Unless ended in accordance with paragraph 6.2, by law, or by the Department in the exercise of its discretion, this Covenant shall continue in effect in perpetuity.

ARTICLE VII

MISCELLANEOUS

7.1. No Dedication Intended. Nothing set forth in this Covenant shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof, to the general public or anyone else for any purpose whatsoever.

7.2. Recordation. The Covenantor shall record this Covenant, with all referenced Exhibits, in the County of Los Angeles within 10 calendar days of the Covenantor's receipt of a fully executed original.

7.3. Notices. Whenever any person gives or serves any Notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: (a) when delivered, if personally delivered to the person being served or to an officer of a corporate party being served; or (b) five calendar days after deposit in the mail, if mailed by United States mail, postage paid, certified, return receipt requested:

To Owner: The Santa Monica Malibu Unified School District.

And

To Department: Unit Chief

Schools Evaluation and Brownfields Cleanup Branch
5796 Corporate Avenue
Cypress, California 90630

Any party may change its address or the individual to whose attention a Notice is to be sent by giving advance written Notice in compliance with this paragraph.

7.4. Partial Invalidity. If this Covenant or any of its terms are determined by a court of competent jurisdiction to be invalid for any reason, the surviving portions of this Covenant shall remain in full force and effect as if such portion found invalid had not been included herein.

7.5. Statutory References. All statutory or regulatory references include successor provisions.

7.6. Incorporation of Exhibits. All exhibits and attachments to this Covenant are incorporated herein by reference.

IN WITNESS WHEREOF, the Covenantor and the Department hereby execute this Covenant.

REMOVAL ACTION CERTIFICATION FORM

1. **Certification of Removal Action:**

I hereby certify that the following information is true and correct to the best of my knowledge.

Maria Gillette, Project Manager — 5/9/2016 Date

Peter A. Garcia, Branch Chief — 5-9-16 Date

2. **Certification Statement:** Based upon the information which is currently and actually known to the Department,

☑ The Department has determined that all appropriate response actions have been completed, that all acceptable engineering practices were implemented and that no further removal/remedial action are necessary at the Site.

☐ The Department has determined, based upon a remedial investigation or site characterization that the site poses no significant threat to public health, welfare or the environment and therefore implementation of removal/remedial measures is not necessary.

☐ The Department has determined that all appropriate removal/remedial actions have been completed and that all acceptable engineering practices were implemented; however, the site requires ongoing operation and maintenance (O&M) and monitoring efforts. The Site will be deleted from the "active" site list following (1) a trial operation and maintenance period and (2) execution of a formal written settlement between Department and the responsible parties, if appropriate. However, the Site will be placed on the Department's list of sites undergoing O&M to ensure proper monitoring of long-term cleanup efforts.

3. **Site Name and Location:**

Malibu High/Middle School and Juan Cabrillo Elementary School
30237 and 30215 Morning View Drive
Malibu, Los Angeles County, California 90265
(Site Code: 301648-11)

A. List any other names that have been used to identify this Site:
No other names have been used for this Site.

B. Address of Site if different from above: (none)

C. Assessor's Parcel Numbers: 44-59-017-900, 44-59-017-901, 44-59-017-902, and 4469-017-903.

4. **Responsible Parties:**

Name:	Santa Monica-Malibu Unified School District
Title:	Ms. Jan L. Maez, Associate Superintendent Chief Financial Officer
Address:	1651 Sixteenth Street Santa Monica, California 90404-3891
Telephone:	(310) 450-8338 (extension 70269)

Relationship to Site: Owner

Current Landowner/Operator: SMMUSD owns and operates the Site property.

Brief Description and History of the Site:

The Malibu Middle/High School (MHS) and the Juan Cabrillo Elementary School (JCES) collectively identified as the Site, is located in the City of Malibu, Los Angeles County, California. The 80-acre Site property is owned by the Santa Monica-Malibu Unified School District (SMMUSD) and zoned for institutional use. The property surrounding the Site consists of rural residential and recreational properties. Construction of the majority of the school buildings at the Site occurred in the late 1950s and early 1960s, with new construction occurring at JCES in 1992 and 1995, and at MHS in 2002. Prior to the construction of MHS and JCES, historical aerial photos and topographic maps indicate the Site property was largely undeveloped and may have been used for activities related to dry farming.

On March 12, 2014, the Department executed a Voluntary Investigation Agreement (Agreement) with SMMUSD for the purpose of conducting a Preliminary Environmental Assessment (PEA) at the Site property. The main objectives of the PEA investigation were to evaluate the Site for the presence of hazardous substances, determine the need for further investigation, and if necessary, conduct remediation to reduce an existing or potential risk to public health and/or the environment. The PEA also included a Site-wide Human Health Screening Risk Evaluation.

In accordance with the Agreement, DTSC assumed regulatory oversight of the PEA's comprehensive soil, soil-vapor and groundwater investigation at the Site property. The United States Environmental Protection Agency (USEPA) provided regulatory oversight of investigation actions related to potential chemicals inside the school buildings, including Polychlorinated Biphenyls (PCBs) in building materials. USEPA was responsible for the review and approval of SMMUSD's Comprehensive PCB-Related Building Materials Inspection, Management and Removal Plan which

focused specifically on PCB-contaminated building materials within classrooms and buildings at the Site property. DTSC's regulatory oversight focused exclusively on the PEA's subsurface investigation, and did not address potentially contaminated building materials inside the classrooms.

On May 23, 2014, SMMUSD's consultant submitted a Draft PEA Work Plan to DTSC. The Draft PEA Work Plan identified 18 Areas of Interest (AOIs) at the Site. AOI-1 through AOI-4 were located at JCES, and AOI-5 through AOI-18 were located at MHS. Dependent upon the historic land use and current activities identified at each AOI, soil, soil vapor and groundwater samples were collected and selectively analyzed for Polychlorinated Biphenyls (PCBs), pesticides, herbicides, total petroleum hydrocarbons (TPH), metals, semi-volatile organic compounds (SVOCs), and Volatile Organic Compounds (VOCs).

On June 27, 2014, DTSC conditionally approval the PEA Work Plan and the investigation was initiated on June 30, 2014. The PEA investigation field work was conducted during summer break, and coordinated so that students and staff attending summer school were prevented from accessing the areas where sampling activities were being performed. All the PEA-related field investigation activities at the Site were conducted under DTSC's regulatory oversite, in accordance with the PEA Work Plan and Site-specific Health and Safety Plan. The PEA investigation fieldwork was completed by August 18, 2014.

The PEA investigation included the collection of soil samples around buildings constructed prior to 1981, the athletic fields (football, baseball and soccer/softball fields), the JCES campus, the MHS campus (including the quad area where a soil investigation and remedial action was previously conducted by ARCADIS in 2011), the pad-mounted electric transformers, Cornucopia Garden, and areas proposed for future redevelopment.

The validated investigation sample data reported the presence of the PCB Aroclor 1254 in surface soil at a concentration of 1.5 parts per million (ppm), exceeding US EPA's Residential Regional Screening Level (RSL) of 1.0 ppm. The PCB-impacted surface soil was confined within an approximately 40-foot-long by 7-foot-wide planter bed located directly adjacent to a concrete walkway east of the MHS Building G Area. The PCB-impacted soil was confined to a depth of 1.5 feet below the ground surface. There were no similar PCB exceedances detected at other areas of the Site, and it appeared the presence of PCB-contaminated surface soil was unique to the MHS Building G Area.

Although DTSC determined the PCB-impacted surface soil did not pose a significant risk to human health, a removal action was proposed because SMMUSD wished to remediate the MHS Building G Area property to a conservative soil screening level. Due to SMMUSD's limited time frame to address the PCB-impacted soil during the school's two week winter break in 2014, it was agreed that preparation of the Draft

Removal Action Work Plan (RAW) would take priority over the PEA Completion Report and Site-wide Human Health Risk Screening Evaluation (HHRSE).

On October 24, 2014, a Draft RAW for the MHS Building G Area was submitted to DTSC. Pursuant to the California Health and Safety Code (HS&C) Section 25356.1, DTSC approved the Draft RAW on November 7, 2014. In accordance with the California Environmental Quality Act (CEQA), DTSC, as the Lead Agency, filed a Notice of Exemption (NOE) for the Draft RAW. A 30-day public comment period for the Draft RAW and NOE documentation was held from November 7, 2014 to December 10, 2014. As supporting documentation, DTSC also posted a Public Notice in the local newspaper, and prepared a Community Profile Report and Community Update fact sheet to notify the community of the proposed removal action.

DTSC received three comments from individual community members during the public comment period. No comments were submitted by the City of Malibu, or local, state and federal agencies for the proposed project.

On December 15, 2014, DTSC issued an approval letter to SMMUSD for the Draft RAW. DTSC's RAW approval letter included a Response to Comments document which provided answers to questions raised by the local community. Additionally, DTSC distributed a Start Work Notice fact sheet announcing the RAW implementation schedule to the local community. On December 17, 2014, SMMUSD's consultant submitted the Final RAW to DTSC.

RAW implementation fieldwork was initiated at the MHS Building G Area on December 21, 2014, and all associated requirements were completed by December 30, 2014. The removal action was conducted in accordance with the approved RAW and Site-specific Health and Safety Plan, under DTSC's oversight and by a California certified contractor under the supervision of a California registered geologist, or a Professional Civil Engineer. The RAW resulted in the excavation of approximately 15 cubic yards of PCB-impacted soil from MHS Building Area G. The excavated soil was profiled, determined to be non-hazardous, and transported off-Site for disposal at a state permitted landfill.

On February 27, 2015, a Draft Removal Action Completion Report (RACR) was submitted to DTSC. The RACR documented the soil excavation activities completed at the MHS Building G Area in December 2014 as part of the DTSC-approved RAW. The Draft RACR stated that excavation of the highest detected concentrations of the PCB Aroclor 1254 reduced the residential human health based risk associated with the PCB-impacted soil to the target risk of 1 x10-6.

On March 26, 2015, DTSC concurred with the findings as presented in the RACR, and issued a No Further Action determination letter to SMMUSD certifying the removal action objectives had been met and the MHS Building G Area property was suitable for future unrestricted use.

On May 29, 2015, a Draft PEA Report was submitted to DTSC which documented the soil, soil-vapor and groundwater investigation activities completed at the Site property between June 30, 2014 and August 18, 2014. The Draft PEA Report included a Site-wide Human Health Risk Screening Evaluation (HHRSE).

DTSC provided comments on the Draft PEA Report and Site-wide HHRSE to SMMUSD on June 29, 2015. The intent of DTSC's comments were to request revisions to the HHRSE calculations, and provide notification that a Land Use Covenant (i.e., deed restriction) would be required for the Bus Barn Area should the outcome of the revised risk evaluation calculations for volatile organic compound (VOC) concentrations remain unchanged.

On September 10, 2015, a Final PEA Report was submitted to DTSC. Based on review of the Final PEA Report and the revised risk evaluation calculations, DTSC determined the VOC concentrations detected at the Bus Barn Area may pose risk to human health based on an unrestricted (residential) land use scenario. In a letter dated November 23, 2015, DTSC stated a land use restriction in the form of a Land Use Covenant would be required for the Bus Barn Area to prevent future residential use of the property. The Bus Barn Area is approximately 0.66 acres in size and located in the northwest portion of the Site. While not acceptable for residential use, DTSC determined the VOC concentrations at the Bus Barn Area did not pose a human health risk for school-based use.

The November 23, 2015 letter also documented DTSC's No Further Action determination for the remainder of the approximately 79.33-acre Site property (including the property identified as the MHS Building G Area).

On March 29, 2016, SMMUSD file a Land Use Covenant for the property identified as the Bus Barn Area with the Los Angeles County Recorder's Office. The 0.66 acre Bus Barn Area is also identified as a portion of County of Los Angeles, Assessor Parcel Number 44-59-017-900.

5. **Type of Site:**

Included in Bond Expenditure Plan?	Yes ___ No _X_
RCRA-Permitted Facility ____	Bond – funded ____
RCRA Facility Closure ____	RP - funded _____
*NPL ___	Federal Facility ___

Other: Voluntary Investigation Agreement.
Explain Briefly: DTSC and the SMMUSD executed a Voluntary Investigation Agreement on March 12, 2014 for the purpose of conducting a PEA and Site-wide HHRSE.

6. **Size of Site:**

Small _X_ Medium ____ Large ____ Extra Large ____

7. **Dates of Removal Action:**

A. Initiated: December 22, 2014 B. Completed: December 30, 2014

*All RAW associated field work activities were conducted under DTSC's oversight during Winter Break 2014, when the school campus was closed and vacant.

8. **Response Action Taken on Site:**

_X_ Removal Action (satisfactory abatement of Site)
____ Final Remedial Action
____ RCRA Enforcement/Closure action
____ No action, further investigation verified that no cleanup action at Site was needed.

A. Type of Remedial or Removal Action (e.g. Excavation and redisposal, cap, on-site treatment?):

Excavation and off-Site disposal of PCB impacted surface soil.

B. Estimated quantity of waste associated with the site (i.e., tons/gallons/cubic yards) which was:

1. ___ Treated Amount: _____
2. ___ Untreated (capped sites) Amount: _____
3. _X_ removed (soil) Amount: Fifteen Cubic Yards

9. **Cleanup Levels/Standards:**

A. What were the cleanup standards established by the Department of Toxic Substances Control (DTSC) pursuant to the final remedial action plan (RAP or RAW) or work plan (if cleanup occurred as the result of a removal action (RA) prior to development of a RAP)?

In accordance with the RAW, soil at the Site was remediated to comply with USEPA's Residential Regional Screening Level (RRSL) for Polychlorinated Biphenyls (PCBs):

- PCBs (Aroclor 1254) – 1.0 milligram per kilogram (mg/kg).

B. Were the specified cleanup standards met? Yes _X_ No ___

10. **DTSC Involvement in the Removal Action**:

A. Did the Department order the Removal Action?

Yes ___ No _X_ Date of Order: _____

B. Did the Department review and approve the following plans/procedures? (Indicate date of review/approval if done):

- o Sampling Analysis Procedures Date: December 15, 2014
- o Health & Safety Protections Date: December 15, 2014
- o Removal/Disposal Procedures Date: December 15, 2014
- o Removal Action Work Plan Date: December 15, 2014

C. If Site was abated by a responsible party, did the Department receive a signed statement from a licensed professional on all phases of the Removal Actions? (Indicate date of statement)

- o Removal Action Completion Report Date: February 27, 2015
- o Design & Construction Specifications Date: N/A
- o Post Construction Date: N/A

D. Did a registered engineer or geologist verify that acceptable engineering practices were implemented?

Yes _X_ No ___ Name: Ms. Carol L. Serlin, P.G., C.P.G.

E. Did the Department confirm completion of all Removal Actions?

Yes _X_ No ___ Date of verification: March 26, 2015 (RACR approval and No Further Action determination letter)

F. Did the Department (directly or through a contractor) actually perform the Removal Action?

Yes ___ No _X_ Name of Contractor: ENVIRON RAMBOLL

G. Was there a community relations plan in place? Yes _X_ No ___
(Community Profile, dated November 2014)

H. Was a Removal Action Work Plan developed for this site? Yes _X_ No ____

I. Did DTSC hold a public meeting regarding the draft RAW? Yes ___ No _X_
(The community did not request a public meeting for the Draft RAW).

J. Were public comments addressed? Yes _X_ No ____
(DTSC Response to Comment letter dated November 13, 2014.)

K. Are all the facts cited above adequately documented in the DTSC files?

Yes _X_ No

If no, identify areas where documentation is lacking.

11. **EPA Involvement in the Remedial or Removal Action:**

A. Was the EPA involved in the site cleanup? Yes ___ No_X_

B. If yes, did EPA concur with all remedial actions? Yes ___ No ___

C. EPA comments: N/A

EPA staff involved in cleanup: N/A

12. **Other Regulatory Agency Involvement in the Cleanup Action:** N/A

Agency:	Activity:
___ RWQCB	_____
___ ARB	_____
___ CHP	_____
___ Caltrans	_____
___ Other:	_____

Name of contact persons and agency: _____

13. **Post-Closure Activities:**

A. Will there be post-closure activities at this site? (e.g. Operation and Maintenance)

Yes ___ No _X_

B. Have post-closure plans been prepared and approved by the Department?

Yes ___ No _X_

C. What is the estimated duration of post-closure (including operations and maintenance) activities? (Not applicable)

D. Are deed restrictions proposed or in place? Yes _X_ No ___

If "yes", have deed restrictions been recorded with the County recorder?

Yes _X_ No ___ Date: 3/29/2016

If "no", who is responsible for assuring that the deed restrictions are recorded? _____

Who is the Department contact? Maria Gillette (714) 484-5377

E. Has cost recovery been initiated? Yes _X_ No _____

If yes, amount received: $251,096.47 as of March 3, 2016.

- Voluntary Investigation Agreement (Agreement), Docket Number HSA-VCA 13/14-85, executed with SMMUSD on March 12, 2014.
- First Amendment to the Agreement, Docket Number HSA-VCA 13/14-85, executed with SMMUSD on August 22, 2014.
- Second Amendment to the Agreement, Docket Number HSA-VCA 13/14-85, executed with SMMUSD on November 21, 2014.

F. Were local planning agencies notified of the cleanup action? Yes ___ No _X_

If yes, the name and address of agency: _____

14. **Expenditure of Funds and Source:** N/A

Funding Source and amount expended:

___ HWCA	$ _____	___ HSA	$ _____
___ HSCF	$ _____	___ RCRA	$ _____
___ RP	$ _____	___ Other	$ _____
___ Federal Cooperative Agreement	$ _____		
___ Other (Site Remediation Account)	$ _____		

15. **Additional Comments:**

DTSC team involved with the project:

- Project Manager: Maria Gillette (March 2013 – Present)
- Geologist: Wendy Arano (March 2013 – March 2016)
- Toxicologist: Dr. CY Jeng (March 2013 – March 2016)
- Industrial Hygienist: Ryan Kinsella (October 2014 – December 2014)
- Public Participation Specialist: Marcia Rubin (February 2014 – March 2016)
- CEQA Staff: Candace Hill (September 2014 – December 2014)
- Public Information Officer: Jorge Moreno (June 2014 – Present)

SUBJECT: SMMUSD Malibu, Data Validation

Dear Ms. Dergham

Enclosed is the final validation report for the fractions listed below. This SDG was received on August 12, 2014. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #32422:

SDG #	Fraction
440-84472-1	Volatiles, Semivolatiles, Dissolved Metals, Gasoline Range Organics, Total Petroleum Hydrocarbons as Extractables

The data validation was performed under EPA Level III guidelines. The analyses were validated using the following documents, as applicable to each method:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008
- USEPA Contract Laboratory National Functional Guidelines for Inorganic Superfund Data Review, January 2010
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; Update IV, February 2007

Please feel free to contact us if you have any questions.

Sincerely,

Andrew Kong
Project Manager/Senior Chemist

Introduction

This data review covers 5 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8260B for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 15.0% for each individual compound and less than or equal to 30.0% for calibration check compounds (CCCs).

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990.

Average relative response factors (RRF) for all compounds were within method and validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

Percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were within the method criteria of less than or equal to 20.0% for all compounds.

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
8/1/14	Bromoform	23.2	All samples in SDG 440-84472-1	J (all detects) UJ (all non-detects)	A

All of the continuing calibration relative response factors (RRF) were within method and validation criteria.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No volatile contaminants were found in the method blanks.

Sample TB-073114 was identified as a trip blank. No volatile contaminants were found.

Sample EB-073114 was identified as an equipment blank. No volatile contaminants were found.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

XI. Target Compound Identifications

Raw data were not reviewed for this SDG.

XII. Compound Quantitation

Raw data were not reviewed for this SDG.

XIII. Tentatively Identified Compounds (TICs)

Raw data were not reviewed for this SDG.

XIV. System Performance

Raw data were not reviewed for this SDG.

XV. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XVI. Field Duplicates

No field duplicates were identified in this SDG.

MW-3

Introduction

This data review covers 4 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8270C for Semivolatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 15.0% for each individual compound and less than or equal to 30.0% for calibration check compounds (CCCs).

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990.

Average relative response factors (RRF) for all compounds were within method and validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

Percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were within the validation criteria of less than or equal to 20.0% for all compounds.

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
7/9/14	Benzidine	39.5	All samples in SDG 440-84472-1	J (all detects) UJ (all non-detects)	A

All of the continuing calibration relative response factors (RRF) were within method and validation criteria.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No semivolatile contaminants were found in the method blanks.

Sample EB-073114 was identified as an equipment blank. No semivolatile contaminants were found.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there was insufficient sample volume for analysis of the matrix spike and matrix spike duplicate.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

XI. Target Compound Identifications

Raw data were not reviewed for this SDG.

XII. Compound Quantitation

Raw data were not reviewed for this SDG.

XIII. Tentatively Identified Compounds (TICs)

Raw data were not reviewed for this SDG.

XIV. System Performance

Raw data were not reviewed for this SDG.

XV. Overall Assessment

Data flags are summarized at the end of this report if data has been qualified.

XVI. Field Duplicates

No field duplicates were identified in this SDG.

Introduction

This data review covers 4 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Methods 6010B and 7470A for Dissolved Metals. The metals analyzed were Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Lead, Mercury, Molybdenum, Nickel, Selenium, Silver, Thallium, Vanadium, and Zinc.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review (January 2010).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

The initial and continuing calibrations were performed at the required frequency.

The calibration standards criteria were met with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
8/7/14	CRQL (13:48)	Mercury	137 (70-130)	All samples in SDG 440-84472-1	J (all detects)	P

III. Blanks

Method blanks were reviewed for each matrix as applicable. No dissolved metal contaminants were found in the initial, continuing and preparation blanks.

Sample EB-073114 was identified as an equipment blank. No dissolved metals contaminants were found.

IV. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

V. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VI. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

VIII. ICP Serial Dilution

ICP serial dilution was not performed for this SDG.

IX. Sample Result Verification

Raw data were not reviewed for this SDG.

X. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XI. Field Duplicates

No field duplicates were identified in this SDG.

Introduction

This data review covers 4 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8015B for Gasoline Range Organics.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Initial Calibration

Initial calibration was performed as required by the method.

The percent relative standard deviations (%RSD) of calibration factors for compounds were less than or equal to 20.0%.

III. Calibration Verification

Continuing calibration was performed at required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds.

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds.

IV. Blanks

Method blanks were reviewed for each matrix as applicable. No gasoline range organic contaminants were found in the method blanks.

Sample EB-073114 was identified as an equipment blank. No gasoline range organic contaminants were found.

V. Surrogate Recovery

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VI. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VII. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

VIII. Target Compound Identification

Raw data were not reviewed for this SDG.

IX. Compound Quantitation

Raw data were not reviewed for this SDG.

X. System Performance

Raw data were not reviewed for this SDG.

XI. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XII. Field Duplicates

No field duplicates were identified in this SDG.

Sample Identification

MW-10
MW-11
EB-073114
MW-3

Introduction

This data review covers 4 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8015B for Total Petroleum Hydrocarbons (TPH) as Extractables.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Initial Calibration

Initial calibration was performed as required by the method.

Percent relative standard deviations (%RSD) were less than or equal to 20.0% for all compounds.

III. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds.

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds.

IV. Blanks

Method blanks were reviewed for each matrix as applicable. No total petroleum hydrocarbons as extractable contaminants were found in the method blanks.

Sample EB-073114 was identified as an equipment blank. No total petroleum hydrocarbons as extractable contaminants were found.

V. Surrogate Recovery

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VI. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VII. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

VIII. Target Compound Identification

Raw data were not reviewed for this SDG.

IX. Compound Quantitation

Raw data were not reviewed for this SDG.

X. System Performance

Raw data were not reviewed for this SDG.

XI. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XII. Field Duplicates

No field duplicates were identified in this SDG.

SUBJECT: SMMUSD Malibu, Data Validation

Dear Ms. Dergham

Enclosed is the final validation report for the fractions listed below. This SDG was received on August 13, 2014. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #32442:

SDG #	Fraction
440-84534-1	Volatiles, Semivolatiles, Dissolved Metals, Gasoline Range Organics, Total Petroleum Hydrocarbons as Extractables

The data validation was performed under EPA Level III guidelines. The analyses were validated using the following documents, as applicable to each method:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008
- USEPA Contract Laboratory National Functional Guidelines for Inorganic Superfund Data Review, January 2010
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; Update IV, February 2007

Please feel free to contact us if you have any questions.

Sincerely,

Andrew Kong
Project Manager/Senior Chemist

Introduction

This data review covers 6 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8260B for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 15.0% for each individual compound and less than or equal to 30.0% for calibration check compounds (CCCs).

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990.

Average relative response factors (RRF) for all compounds were within method and validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

Percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were within the method criteria of less than or equal to 20.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
8/4/14	Dibromochloromethane	24.0	All samples in SDG 440-84534-1	J (all detects) UJ (all non-detects)	A
	Bromoform	34.0		J (all detects) UJ (all non-detects)	

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds

All of the continuing calibration relative response factors (RRF) were within method and validation criteria.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No volatile contaminants were found in the method blanks.

Sample TB-080114 was identified as a trip blank. No volatile contaminants were found.

Sample EB-080114 was identified as an equipment blank. No volatile contaminants were found.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

XI. Target Compound Identifications

Raw data were not reviewed for this SDG.

XII. Compound Quantitation

Raw data were not reviewed for this SDG.

XIII. Tentatively Identified Compounds (TICs)

Raw data were not reviewed for this SDG.

XIV. System Performance

Raw data were not reviewed for this SDG.

XV. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XVI. Field Duplicates

Samples MW-4 and MW-4-FD were identified as field duplicates. No volatiles were detected in any of the samples.

Introduction

This data review covers 5 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8270C for Semivolatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 15.0% for each individual compound and less than or equal to 30.0% for calibration check compounds (CCCs).

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990.

Average relative response factors (RRF) for all compounds were within method and validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

Percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were within the validation criteria of less than or equal to 20.0% for all compounds.

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
7/9/14	Benzidine	39.5	All samples in SDG 440-84534-1	J (all detects) UJ (all non-detects)	A

All of the continuing calibration relative response factors (RRF) were within method and validation criteria.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No semivolatile contaminants were found in the method blanks.

Sample EB-080114 was identified as an equipment blank. No semivolatile contaminants were found.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there was insufficient sample volume for analysis of the matrix spike and matrix spike duplicate.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	RPD (Limits)	Flag	A or P
440-197932/2-3 (All samples in SDG 440-84534-1)	Benzidine	-	-	88 (≤35)	J (all detects) UJ (all non-detects)	P

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

XI. Target Compound Identifications

Raw data were not reviewed for this SDG.

XII. Compound Quantitation

Raw data were not reviewed for this SDG.

XIII. Tentatively Identified Compounds (TICs)

Raw data were not reviewed for this SDG.

XIV. System Performance

Raw data were not reviewed for this SDG.

XV. Overall Assessment

Data flags are summarized at the end of this report if data has been qualified.

XVI. Field Duplicates

Samples MW-4 and MW-4-FD were identified as field duplicates. No semivolatiles were detected in any of the samples.

Data Validation Report

Project/Site Name: SMMUSD

Collection Date: August 1, 2014

LDC Report Date: August 14, 2014

Matrix: Water

Parameters: Dissolved Metals

Validation Level: EPA Level III

Laboratory: TestAmerica, Inc.

Sample Delivery Group (SDG): 440-84534-1

Sample Identification

MW-5
MW-4
MW-4-FD
EB-080114
MW-7
MW-5MS
MW-5MSD

Introduction

This data review covers 7 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Methods 6010B and 7470A for Dissolved Metals. The metals analyzed were Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Lead, Mercury, Molybdenum, Nickel, Selenium, Silver, Thallium, Vanadium, and Zinc.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review (January 2010).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

The initial and continuing calibrations were performed at the required frequency.

The calibration standards criteria were met with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
8/8/14	CRQL (16:18)	Antimony	62 (70-130)	MW-5 MW-4 MW-4-FD EB-080114 MW-7	J (all detects) UJ (all non-detects)	P
8/8/14	CRQL (16:18)	Arsenic	137 (70-130)	MW-5 MW-4 MW-4-FD EB-080114 MW-7	J (all detects)	P
8/7/14	CRQL (17:12)	Mercury	137 (70-130)	MW-5 MW-4 MW-4-FD	J (all detects)	P

III. Blanks

Method blanks were reviewed for each matrix as applicable. No dissolved metal contaminants were found in the initial, continuing and preparation blanks.

Sample EB-080114 was identified as an equipment blank. No dissolved metals contaminants were found.

IV. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

V. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VI. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

VIII. ICP Serial Dilution

ICP serial dilution was not performed for this SDG.

IX. Sample Result Verification

Raw data were not reviewed for this SDG.

X. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XI. Field Duplicates

Samples MW-4 and MW-4-FD were identified as field duplicates. No dissolved metals were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/L)		RPD
	MW-4	MW-4-FD	
Barium	0.045	0.044	2
Chromium	0.015	0.015	0
Molybdenum	0.027	0.025	8
Nickel	0.013	0.013	0
Vanadium	0.010	0.010	0

Introduction

This data review covers 5 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8015B for Gasoline Range Organics.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Initial Calibration

Initial calibration was performed as required by the method.

A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination (r^2) was greater than or equal to 0.990.

III. Calibration Verification

Continuing calibration was performed at required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds.

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds.

IV. Blanks

Method blanks were reviewed for each matrix as applicable. No gasoline range organic contaminants were found in the method blanks.

Sample EB-080114 was identified as an equipment blank. No gasoline range organic contaminants were found.

V. Surrogate Recovery

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VI. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there was insufficient sample volume for analysis of the matrix spike and matrix spike duplicate.

VII. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

VIII. Target Compound Identification

Raw data were not reviewed for this SDG.

I. Technical Holding Times

All technical holding time requirements were met.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Initial Calibration

Initial calibration was performed as required by the method.

Percent relative standard deviations (%RSD) were less than or equal to 20.0% for all compounds.

III. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds.

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds.

IV. Blanks

Method blanks were reviewed for each matrix as applicable. No total petroleum hydrocarbons as extractable contaminants were found in the method blanks.

Sample EB-080114 was identified as an equipment blank. No total petroleum hydrocarbons as extractable contaminants were found.

V. Surrogate Recovery

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VI. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there was insufficient sample volume for analysis of the matrix spike and matrix spike duplicate.

VII. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

VIII. Target Compound Identification

Raw data were not reviewed for this SDG.

IX. Compound Quantitation

Raw data were not reviewed for this SDG.

X. System Performance

Raw data were not reviewed for this SDG.

XI. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XII. Field Duplicates

Samples MW-4 and MW-4-FD were identified as field duplicates. No total petroleum hydrocarbons as extractables were detected in any of the samples.

LDC #: 32442A8 **VALIDATION COMPLETENESS WORKSHEET** Date: 8-15-14
SDG #: 440-84534-1 Level III Page: 1 of 1
Laboratory: Test America, Inc. Reviewer: CM
2nd Reviewer: C

METHOD: GC TPH as Extractables (EPA SW846 Method 8015B)

The samples listed below were reviewed for each of the following validation areas. Validation findings are noted in attached validation findings worksheets.

	Validation Area		Comments
I.	Technical holding times	A	Sampling dates: 8/1/14
II	Initial calibration	A	≤20
III.	Calibration verification/ICV	A	CCV/ICV ≤ 20
IV.	Blanks	A	
V	Surrogate recovery	A	
VI.	Matrix spike/Matrix spike duplicates	N	insuff. sample
VII.	Laboratory control samples	A	LCS
VIII.	Target compound identification	N	
IX.	Compound quantitation/RL/LOQ/LODs	N	
X.	System Performance	N	
XI.	Overall assessment of data	A	
XII.	Field duplicates	ND	D=2+3
XIII.	Field blanks	ND	EB=4

Note: A = Acceptable; N = Not provided/applicable; SW = See worksheet; ND = No compounds detected; R = Rinsate; FB = Field blank; D = Duplicate; TB = Trip blank; EB = Equipment blank

Comments
No additional comments.

Receipt
The samples were received on 7/31/2014 7:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.3º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270C LL: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 197487. This laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: ENVIRON International Corp.
Project/Site: Malibu, SMMUSD

TestAmerica Job ID: 440-84472-1

Laboratory: TestAmerica Irvine

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Authority	Program	EPA Region	Certification ID	Expiration Date
Alaska	State Program	10	CA01531	06-30-15
Arizona	State Program	9	AZ0671	10-13-14
California	LA Cty Sanitation Districts	9	10256	01-31-15
California	State Program	9	2706	06-30-16
Guam	State Program	9	Cert. No. 12.002r	01-23-15
Hawaii	State Program	9	N/A	01-29-15 *
Nevada	State Program	9	CA015312007A	07-31-15
New Mexico	State Program	6	N/A	01-29-15
Northern Mariana Islands	State Program	9	MP0002	01-29-15
Oregon	NELAP	10	4005	01-29-15
USDA	Federal		P330-09-00080	06-06-15
USEPA UCMR	Federal	1	CA01531	01-31-15

* Certification renewal pending - certification considered valid.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 8/1/2014 4:22 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.7º C.

GC/MS VOA
Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for Bromodichloromethane and Dibromochloromethane in batch 197586 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270C LL: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 197932. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

Method(s) 8270C LL: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 197932 recovered outside control limits for Benzidine. The individual LCS/LCSD percent recoveries were within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike/matrixspike duplicate (MS/MSD) associated with batch 197846. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 198104. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery exceeds the control limits

GC/MS Semi VOA

Qualifier	Qualifier Description
*	RPD of the LCS and LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: ENVIRON International Corp.
Project/Site: Malibu, SMMUSD

TestAmerica Job ID: 440-84534-1

Laboratory: TestAmerica Irvine

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Authority	Program	EPA Region	Certification ID	Expiration Date
Alaska	State Program	10	CA01531	06-30-15

Creator: Kim, Guerry

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 9/24/2014 7:32 PM; the samples arrived in good condition, properly preserved and, where required, on ice.
The temperatures of the 3 coolers at receipt time were 2.1º C, 2.4º C and 3.3º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: ENVIRON International Corp.
Project/Site: Malibu, SMMUSD

TestAmerica Job ID: 440-88856-1

Laboratory: TestAmerica Irvine

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Comments
No additional comments.

Receipt
The samples were received on 9/24/2014 7:32 PM; the samples arrived in good condition, properly preserved and, where required, on ice.
The temperatures of the 3 coolers at receipt time were 2.1º C, 2.4º C and 3.3º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments
No additional comments.

Receipt
The samples were received on 9/24/2014 7:32 PM; the samples arrived in good condition, properly preserved and, where required, on ice.
The temperatures of the 3 coolers at receipt time were 2.1º C, 2.4º C and 3.3º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 9/24/2014 7:32 PM; the samples arrived in good condition, properly preserved and, where required, on ice.
The temperatures of the 3 coolers at receipt time were 2.1º C, 2.4º C and 3.3º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Creator: Freitag, Kevin R

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 9/24/2014 7:32 PM; the samples arrived in good condition, properly preserved and, where required, on ice.
The temperatures of the 3 coolers at receipt time were 2.1º C, 2.4º C and 3.3º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 9/25/2014 6:37 PM; the samples arrived in good condition, properly preserved and, where required, on ice.
The temperature of the cooler at receipt was 2.8º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 9/25/2014 6:37 PM; the samples arrived in good condition, properly preserved and, where required, on ice.
The temperature of the cooler at receipt was 2.8º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Sample Summary

Client: ENVIRON International Corp.
Project/Site: Malibu, SMMUSD

TestAmerica Job ID: 440-89023-1

Lab Sample ID	Client Sample ID	Matrix	Collected	Received
440-89023-25	MH-IS-CORNUCOPIA-B-0-0.25	Solid	09/25/14 10:28	09/25/14 18:37

Job ID: 440-89023-1

Laboratory: TestAmerica Irvine

Narrative

Job Narrative
440-89023-1

Comments
No additional comments.

Receipt
The samples were received on 9/25/2014 6:37 PM; the samples arrived in good condition, properly preserved and, where required, on ice.
The temperature of the cooler at receipt was 2.8º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments
No additional comments.

Receipt
The samples were received on 9/25/2014 6:37 PM; the samples arrived in good condition, properly preserved and, where required, on ice.
The temperatures of the 2 coolers at receipt time were 1.8º C and 2.8º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments
No additional comments.

Receipt
The samples were received on 9/25/2014 6:37 PM; the samples arrived in good condition, properly preserved and, where required, on ice.
The temperature of the cooler at receipt was 1.8º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

SUBJECT: SMMUSD Malibu, Data Validation

Dear Ms. Dergham

Enclosed are the final validation reports for the fraction listed below. These SDGs were received on October 14, 2014. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #32851:

SDG #	Fraction
440-88856-1, 440-88858-1, 440-88865-1, 440-88882-1, 440-89021-1 440-89022-1, 440-89023-1, 440-89025-1, 440-88867-1, 440-88869-1 440-89044-1, 440-89047-1	Arsenic

The data validation was performed under EPA Level III guidelines. The analyses were validated using the following documents, as applicable to each method:

- USEPA Contract Laboratory National Functional Guidelines for Inorganic Superfund Data Review, January 2010
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; Update IV, February 2007

Please feel free to contact us if you have any questions.

Sincerely,

Andrew Kong
Project Manager/Senior Chemist

Data Validation Report

Project/Site Name: SMMUSD

Collection Date: September 24, 2014

LDC Report Date: October 23, 2014

Matrix: Soil

Parameters: Arsenic

Validation Level: EPA Level III

Laboratory: TestAmerica, Inc.

Sample Delivery Group (SDG): 440-88856-1

Sample Identification

MH-IS-PLANTER-A-0-0.25
MH-IS-PLANTER-A-0-0.25-DUP

Introduction

This data review covers 2 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 6010B for Arsenic.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review (January 2010).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. ICPMS Tune

ICP-MS was not utilized in this SDG.

III. Calibration

The initial and continuing calibrations were performed at the required frequency.

The calibration standards criteria were met.

IV. Blanks

Method blanks were reviewed for each matrix as applicable. No arsenic was found in the initial, continuing and preparation blanks.

No field blanks were identified in this SDG.

V. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

IX. Internal Standards (ICP-MS)

ICP-MS was not utilized in this SDG.

X. ICP Serial Dilution

ICP serial dilution analysis was performed by the laboratory. The analysis criteria were met.

XI. Sample Result Verification

Raw data were not reviewed for this SDG.

XII. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XIII. Field Duplicates

Samples MH-IS-PLANTER-A-0-0.25 and MH-IS-PLANTER-A-0-0.25-DUP were identified as field duplicates. No metals were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/Kg)		RPD
	MH-IS-PLANTER-A-0-0.25	MH-IS-PLANTER-A-0-0.25-DUP	
Arsenic	8.7	8.7	0

Data Validation Report

Project/Site Name:	SMMUSD
Collection Date:	September 24, 2014
LDC Report Date:	October 23, 2014
Matrix:	Soil
Parameters:	Arsenic
Validation Level:	EPA Level III
Laboratory:	TestAmerica, Inc.
Sample Delivery Group (SDG):	440-88858-1

Sample Identification

MH-IS-PLANTER-A-1.5-1.75

Introduction

This data review covers one soil sample listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 6010B for Arsenic.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review (January 2010).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. ICPMS Tune

ICP-MS was not utilized in this SDG.

III. Calibration

The initial and continuing calibrations were performed at the required frequency.

The calibration standards criteria were met.

IV. Blanks

Method blanks were reviewed for each matrix as applicable. No arsenic was found in the initial, continuing and preparation blanks.

No field blanks were identified in this SDG.

V. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

IX. Internal Standards (ICP-MS)

ICP-MS was not utilized in this SDG.

X. ICP Serial Dilution

ICP serial dilution analysis was performed by the laboratory. The analysis criteria were met.

XI. Sample Result Verification

Raw data were not reviewed for this SDG.

XII. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XIII. Field Duplicates

No field duplicates were identified in this SDG.

Sample Delivery Group (SDG): 440-89023-1

Sample Identification

MH-IS-CORNUCOPIA-B-0-0.25

Introduction

This data review covers one soil sample listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 6010B for Arsenic.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review (January 2010).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. ICPMS Tune

ICP-MS was not utilized in this SDG.

III. Calibration

The initial and continuing calibrations were performed at the required frequency.

The calibration standards criteria were met.

IV. Blanks

Method blanks were reviewed for each matrix as applicable. No arsenic was found in the initial, continuing and preparation blanks.

No field blanks were identified in this SDG.

V. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

IX. Internal Standards (ICP-MS)

ICP-MS was not utilized in this SDG.

X. ICP Serial Dilution

ICP serial dilution analysis was performed by the laboratory. The analysis criteria were met.

XI. Sample Result Verification

Raw data were not reviewed for this SDG.

XII. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XIII. Field Duplicates

No field duplicates were identified in this SDG.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. ICPMS Tune

ICP-MS was not utilized in this SDG.

III. Calibration

The initial and continuing calibrations were performed at the required frequency.

The calibration standards criteria were met.

IV. Blanks

Method blanks were reviewed for each matrix as applicable. No arsenic was found in the initial, continuing and preparation blanks.

No field blanks were identified in this SDG.

V. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

IX. Internal Standards (ICP-MS)

ICP-MS was not utilized in this SDG.

X. ICP Serial Dilution

ICP serial dilution analysis was performed by the laboratory. The analysis criteria were met.

XI. Sample Result Verification

Raw data were not reviewed for this SDG.

XII. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XIII. Field Duplicates

No field duplicates were identified in this SDG.

PCB Congeners Data Analysis

D.1 Polychlorinated Biphenyl (PCB) Congener Data Analysis

As discussed in the Department of Toxic Substance Control (DTSC) approved Final Preliminary Environmental Assessment Work Plan (PEA Work Plan) dated October 13, 2014, DTSC required that five percent of the soil samples (10 soil samples) selected for polychlorinated biphenyls (PCB) analysis also be analyzed for specific PCBs congeners by United States Environmental Protection Agency (USEPA) Method 1668. PCB congener data was to be compared to results reported using USEPA Method 8082 to confirm the presence or absence of PCBs in soil matrix.

DTSC selected 10 surface (0 – 0.5 feet below ground surface) soil samples, including soil samples collected from both Juan Cabrillo Elementary School (JCES) and Malibu Middle/High School (MHS) and covering the full range of PCB concentrations and Aroclors detected at the site. After making its preliminary selection, DTSC reviewed its recommendations with Malibu Unites consultant, Kurt Fehling, and then finalized the selection of the 10 surface samples. Selected surface soil samples were:

- JC-SB-11, JC-SB-13, JC-SB-42, and JC-SB-43 from Area of Interest (AOI)-1, 3, and 4 at JCES; and
- MH-SB-8, MH-SB-44, MH-SB-53, MH-SB-76, MH-SB-79, and MH-SB-91 from AOI-5, 6, and 17 at MHS.

PCB concentrations in these soil samples ranged from less than the laboratory reporting limit of 50 micrograms per kilogram (μg/kg) to 1,500 μg/kg (the maximum concentration detected). PCB congener sampling results are summarized in Table D.1, and the analytical laboratory reports and data validation reports are included in Attachment A.

PCB congener results obtained by USEPA Method 1668 were compared with the Aroclor results measured by USEPA Method 8082 using two different comparisons.

- First, the sum of all of the detected congeners in each soil sample (total congener concentration) was compared to the sum of all the detected Aroclors[1] in the same sample (total Aroclor concentration). As shown in Table D.2, the samples with no detected Aroclors (JC-SB-11, MH-SB-8, JC-SB-43, and JC-SB-42), at a reporting limit of 50 μg/kg, also had the lowest total congener concentrations, ranging from 1.5 μg/kg to 40 μg/kg. The samples with the highest total Aroclor concentrations (MH-SB-76 and MH-SB-79 where Aroclor 1254 was detected at concentrations of 1,500 μg/kg and 700 μg/kg, respectively; and JC-SB-13 where Aroclor 1260 was detected at a concentration of 250 μg/kg) also had the highest total congener concentrations, ranging from 308 μg/kg to 1,664 μg/kg. Therefore, the total congener concentrations were generally consistent with the total Aroclor concentration in the same sample.
- Second, the weight percent of homologs calculated based on the PCB congener data collected in the ten soil samples were compared to the weight percent of homologs in Aroclor 1254 and 1260 as presented by the Agency for Toxic Substances and Disease

[1] The only Aroclors detected in the soil samples were Aroclor 1254 and Aroclor 1260.

Registry (ATSDR 2000). As shown in Table D.2, Aroclor 1254 is mainly composed of pentachlorobiphenyl and hexachlorobiphenyl, while Aroclor 1260 is mainly composed of hexachlorobiphenyl and heptachlorobiphenyl. In the soil samples with neither Aroclor 1254 nor 1260 detected (JC-SB-11, MH-SB-8, JC-SB-43, and JC-SB-42) or with both Aroclor 1254 and 1260 detected (MH-SB-44 and MH-SB-53), the weight percent of homologs fell between the ATSDR weight percent of homologs for Arcolor 1254 and 1260. In the soil samples with only Aroclor 1254 detected (MH-SB-76, MH-SB-79, and MH-SB-91), the weight percent of homologs was consistent with the ATSDR weight percent of homologs in Arcolor 1254. In the soil sample with only Aroclor 1260 detected (JC-SB-13), the weight percent of homologs was consistent with the ATSDR weight percent of homologs in Arcolor 1260.

In conclusion, PCB Aroclor analysis provides consistent results with the PCB congener analysis.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative
440-82275-3

Comments
Additional PCB Congeners tests were requested for selected samples on 8/29/14. Only the PCB Congener results are included in this report.

Receipt
The samples were received on 7/2/2014 6:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 5.7º C and 22.9º C.

PCB Congeners
Method(s) 1668A: The following sample was diluted for selected analytes due to the nature of the sample matrix: JC-SB-11-0-0.5 (440-82275-19). Elevated reporting limits (RLs) are provided.

Method(s) 1668A: The following samples exhibited elevated noise or matrix interferences for one or more analytes resulting in elevated reporting limits (RLs): JC-SB-13-0-0.5 (440-82275-24), JC-SB-43-0-0.5 (440-82275-58). The Reporting Limits (RL) were raised and these analytes flagged with the "G" qualifier.

Method(s) 1668A: The concentration of one or more analytes associated with the following samples exceeded the instrument calibration range: JC-SB-13-0-0.5 (440-82275-24). These analytes have been qualified with "E" flags; however, the peaks did not saturate the instrument detector. Historical data indicate that for the isotope dilution method, dilution and re-analysis will not produce significantly different results from those reported above the calibration range.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PCB Congeners Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Dioxin

Qualifier	Qualifier Description
G	The reported quantitation limit has been raised due to an exhibited elevated noise or matrix interference
E	Result exceeded calibration range.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: ENVIRON International Corp.
Project/Site: SMMUSD, 04-33980A

TestAmerica Job ID: 440-82275-3

Laboratory: TestAmerica Irvine

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
Additional PCB Congeners tests were requested for selected samples on 8/29/14. Only the PCB Congener results are included in this report.

Receipt
The samples were received on 7/7/2014 6:20 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.9º C and 3.1º C.

PCB Congeners
Method(s) 1668A: The following samples exhibited elevated noise or matrix interferences for one or more analytes requiring the reporting limits (RLs): JC-SB-42-0-0.5 (440-82503-14), MH-SB-53-0-0.5 (440-82503-37). These analytes were flagged with the "G" qualifier.

Method(s) 1668A: The concentration of one or more analytes associated with the following samples exceeded the instrument calibration range: JC-SB-42-0-0.5 (440-82503-14), MH-SB-53-0-0.5 (440-82503-37). These analytes have been qualified with "E" flags; however, the peaks did not saturate the instrument detector. Historical data indicate that for the isotope dilution method, dilution and re-analysis will not produce significantly different results from those reported above the calibration range.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PCB Congeners Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Dioxin

Qualifier	Qualifier Description
G	The reported quantitation limit has been raised due to an exhibited elevated noise or matrix interference
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.
E	Result exceeded calibration range.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: ENVIRON International Corp.
Project/Site: SMMUSD

TestAmerica Job ID: 440-82503-3

Laboratory: TestAmerica Irvine

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
Additional PCB Congeners tests were requested for selected samples on 8/29/14. Only the PCB Congener results are included in this report.

Receipt
The samples were received on 7/8/2014 8:15 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 4.6° C and 5.1° C.

PCB Congeners
Method(s) 1668A: The following samples exhibited elevated noise or matrix interferences for one or more analytes requiring the reporting limits (RL): MH-SB-44-0-0.5 (440-82809-27). These analytes were flagged with the "G" qualifier.

Method(s) 1668A: The concentration of one or more analytes associated with the following samples exceeded the instrument calibration range: MH-SB-44-0-0.5 (440-82809-27). These analytes have been qualified with "E" flags; however, the peaks did not saturate the instrument detector. Historical data indicate that for the isotope dilution method, dilution and re-analysis will not produce significantly different results from those reported above the calibration range.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PCB Congeners Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Dioxin

Qualifier	Qualifier Description
G	The reported quantitation limit has been raised due to an exhibited elevated noise or matrix interference
E	Result exceeded calibration range.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
Additional PCB Congeners tests were requested for selected samples on 8/29/14. Only the PCB Congener results are included in this report.

Receipt
The samples were received on 7/9/2014 5:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 7.2º C and 11.0º C.

PCB Congeners
Method(s) 1668A: The concentration of one or more analytes associated with the following samples exceeded the instrument calibration range: MH-SB-76-0-0.5 (440-82829-3), MH-SB-79-0-0.5 (440-82829-10). These analytes have been qualified with "E" flags; however, the peaks did not saturate the instrument detector. Historical data indicate that for the isotope dilution method, dilution and re-analysis will not produce significantly different results from those reported above the calibration range.

Method(s) 1668A: The following samples were diluted to bring the concentration of target analytes within the calibration range: MH-SB-76-0-0.5 (440-82829-3), MH-SB-79-0-0.5 (440-82829-10). Elevated reporting limits (RLs) are provided.

Method(s) 1668A: The following samples exhibited elevated noise or matrix interferences for one or more analytes resulting in elevated reporting limits (RL): MH-SB-76-0-0.5 (440-82829-3), MH-SB-79-0-0.5 (440-82829-10), MH-SB-8-0-0.5 (440-82829-30). The Reporting Limits (RL) were raised and these analytes flagged with the "G" qualifier.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PCB Congeners Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Dioxin

Qualifier	Qualifier Description
G	The reported quantitation limit has been raised due to an exhibited elevated noise or matrix interference
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.
E	Result exceeded calibration range.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: ENVIRON International Corp.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	Received same day of collection; chilling process has begun.
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
Additional PCB Congeners tests were requested for selected samples on 8/29/14. Only the PCB Congener results are included in this report.

Receipt
The samples were received on 7/21/2014 6:55 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.3° C.

PCB Congeners
Method(s) 1668A: The following samples exhibited elevated noise or matrix interferences for one or more analytes requiring the reporting limit (RL): MH-SB-91-0-0.5 (440-83739-38). These analytes were flagged with the "G" qualifier.

Method(s) 1668A: The concentration of one or more analytes associated with the following samples exceeded the instrument calibration range: MH-SB-91-0-0.5 (440-83739-38). These analytes have been qualified with "E" flags; however, the peaks did not saturate the instrument detector. Historical data indicate that for the isotope dilution method, dilution and re-analysis will not produce significantly different results from those reported above the calibration range.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PCB Congeners Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Dioxin

Qualifier	Qualifier Description
G	The reported quantitation limit has been raised due to an exhibited elevated noise or matrix interference
E	Result exceeded calibration range.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: ENVIRON International Corp.
Project/Site: SMMUSD

TestAmerica Job ID: 440-83739-3

Laboratory: TestAmerica Irvine

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Authority	Program	EPA Region	Certification ID	Expiration Date

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

UST	Underground Storage Tank
VOC	Volatile Organic Compound

E.1 Human Health Screening Risk Evaluation

To evaluate the potential human health risks to current and potential future on-site populations due to exposure to chemicals detected in soil and soil vapor at the site, a human health screening risk evaluation (HHSRE) was performed. Based on the California Environmental Protection Agency (CalEPA) Preliminary Endangerment Assessment (PEA) Guidance Manual (CalEPA 2013), the HHSRE was intended to be a health-conservative preliminary evaluation of potential risk and hazard and, therefore, assumed that the site will be used for residential purposes, the scenario that would result in the greatest exposure and risk. Also, based on the current land use of the site, a school scenario was evaluated. This HHSRE followed the methodology presented in the Department of Toxic Substances Control (DTSC) approved Final Preliminary Environmental Assessment Work Plan (PEA Work Plan) dated October 13, 2014.The HHSRE approach consisted of: 1) calculating cancer risks and non-cancer hazards for school receptors (i.e. school students and teachers/staff) potentially exposed to soil through direct contact using CalEPA Office of Environmental Health Hazard Assessment (OEHHA) Schools Risk Screening Model (CalEPA 2010); 2) calculating cancer risks and non-cancer hazards for hypothetical future on-site residents potentially exposed to soil through direct contact using established screening levels (i.e. CalEPA DTSC-modified Regional Screening Levels [RSLs] [CalEPA 2014] or United States Environmental Protection Agency [USEPA] RSLs [USEPA 2015] for residential soil; and, 3) calculating cancer risks and non-cancer hazards for current and future school receptors and hypothetical future on-site residents potentially exposed to volatile organic compounds (VOCs) in soil vapor migrating to indoor and outdoor air using site-specific vapor migration modeling. The methodology used in this HHSRE is consistent with CalEPA and USEPA risk assessment guidance as follows:

- CalEPA. 1997. Selecting Inorganic Constituents as Chemicals of Potential Concern at Risks Assessment at Hazardous Waste Sites and Permitted Facilities;
- CalEPA. 2004. Guidance for School Site Risk Assessment Pursuant to Health and Safety Code Section 901(f): Guidance for Assessing Exposures and Health Risks at Existing and Proposed School Sites;
- CalEPA. 2010. Schools Risk Screening Model;
- CalEPA. 2011. Final Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air;
- CalEPA. 2013. PEA Guidance Manual;
- CalEPA. 2014. Human Health Risk Assessment (HHRA) Note Number 3, Issue: DTSC recommended methodology for use of USEPA RSLs in the Human Health Risk Assessment process at hazardous waste sites and permitted facilities; and
- USEPA. 2015. Regional Screening Levels. January.

The various components of the HHSRE are discussed in the following subsections. Section E.1.1 identifies the exposure pathways and media of potential concern. The exposure concentrations and the chemicals of potential concern (COPCs) are discussed in Section E.1.2. Human health screening levels and risk assessment methodology are presented in Section

E.1.3. The toxicity of the chemicals evaluated is discussed in Section E.1.4. The results of the risk assessment including uncertainties and conclusions are presented in Section E.1.5.

E.1.1 Exposure Pathways and Media of Potential Concern

To evaluate the potential human health risks posed by a site, it is necessary to identify the populations that may potentially be exposed to the chemicals present in the media of concern and to determine the pathways by which these exposures may occur.

E.1.1.1 Potentially Exposed Human Populations

The site currently is occupied by Juan Cabrillo Elementary School (JCES) and Malibu Middle/High School (MHS) and there are no plans to use the site for other purposes. Therefore, this HHSRE identified school students and teachers/staff as the potentially exposed populations, which is consistent with the OEHHA guidance for school sites (CalEPA 2004). In addition, consistent with the DTSC PEA Guidance Manual (CalEPA 2013), future unrestricted/residential land use was considered as the most health-protective and conservative land use for the purposes of this HHSRE. Therefore, hypothetical future on-site residents were also evaluated in the HHSRE.

E.1.1.2 Media of Concern and Exposure Pathways

The PEA Guidance Manual recommends consideration of potential exposure to on-site soil and groundwater (CalEPA 2013). Consideration of these media was consistent with the results of previous investigations of the site, which have shown impacts to soil and localized impacts to groundwater (near the former underground storage tanks [USTs] in the Bus Barn). Since VOCs had been detected in soil and groundwater at the site previously, the potential for VOCs to migrate into indoor and outdoor air was considered. Soil vapor samples were collected at all locations where groundwater monitoring wells were sampled and were used to evaluate the potential vapor migration pathway in this HHSRE.

The Conceptual Site Model (CSM) for the HHSRE, shown on Figure 63, illustrates potential exposure pathways by which receptors (school students/staff and hypothetical future on-site residents) could be exposed to chemicals in soil and soil vapor at the site. Hypothetical future on-site residents could potentially be directly exposed to chemicals in soil through incidental ingestion, dermal contact, and inhalation of soil particulates in ambient air. These are the exposure routes on which the DTSC-modified RSLs (CalEPA 2014) and the USEPA RSLs (USEPA 2015) for residential soil are based. As discussed in the PEA Work Plan, hypothetical future on-site residents are assumed to be exposed to soils from 0 to 10 feet below ground surface (bgs) (assuming that soil may be re-graded during redevelopment).

For school receptors, to be consistent with the OEHHA Schools Risk Screening Model, in addition to direct contact with soil, indoor dust direct contact exposure routes, including incidental ingestion, dermal contact, and inhalation of dust particulates in indoor air, were also considered. As discussed in the PEA Work Plan, school receptors are assumed to be exposed to soil from 0 to 2 feet bgs. Approximately half the site is paved with asphalt and/or concrete, which may prevent direct contact to soil by current school receptors. Risks due to soil exposure estimated for these areas are considered conservative due to the limited amount of exposed soil at the site and the corresponding limited exposures.

Furthermore, current and future school receptors and hypothetical future on-site residents could potentially be exposed to VOCs in soil vapor migrating to ambient air. Soil vapor samples were collected near all existing septic tanks at both schools and in the Bus Barn area of MHS. Although currently there are no buildings over the soil vapor sampling locations, it was conservatively assumed that future buildings could be constructed over these locations, and the risks to future school receptors and hypothetical future on-site residents from exposure to VOCs in soil vapor migrating to indoor air were also evaluated.

Groundwater underlying the site is not in a designated groundwater basin, and is not used for drinking water. All water used at the site is provided by municipal water supply, and ingestion of groundwater was not quantitatively evaluated in the HHSRE.

Finally, Ramboll Environ confirmed with the Santa Monica Malibu Unified School District (the District) that the quantity of vegetables/fruits consumed from Cornucopia (Area of Interest [AOI]-15) by school receptors was limited; therefore, ingestion of fruits/vegetables was not evaluated in the HHSRE.

E.1.1.3 Exposure Assessment

The purpose of this section is to develop an upper-bound estimate of the theoretical intake for each of the potentially exposed human populations via each of the exposure routes identified in the CSM. Estimates of human intake are a function of exposure parameters such as duration, frequency, and contact rates. This section provides the equations and assumptions used to develop the intake factors used in the calculation of risk.

E.1.1.3.1 Exposure Assumptions

For current and future student receptors, Ramboll Environ used a set of exposure parameters for each year from age 5 to age 17, per the OEHHA Schools Risk Screening Model (CalEPA 2010), to take into consideration the rapid anatomical, physiological and behavioral changes for growing children. The exposure parameters for teachers/staff recommended by OEHHA (CalEPA 2004, 2010) also were used in this HHSRE. Exposure assumptions for the school scenario are presented in Table E.1 for kindergarten/elementary school students (5 to < 11 years old), and in Table E.2 for middle school students (11 to < 14 years old), high school students (14 to < 18 years old), and teachers/staff.

Since the potential excess lifetime cancer risks and non-cancer hazards for hypothetical future on-site residents exposed to soil through direct contact were evaluated by directly comparing the site data with the DTSC-modified RSLs or the USEPA RSLs for residential soil, the exposure assumptions used to develop these screening levels were applied. For a resident, exposure is assumed to occur 7 days/week for 350 days/year (or approximately 96 percent of the time). The exposure duration for the resident is assumed to be 26 years (USEPA 2015). According to USEPA (2011), this is the 90th percentile for time spent at one residence. These exposure parameters were also used to evaluate potential exposure to VOCs in soil vapor migrating to indoor and ambient air for hypothetical future on-site residents.

E.1.1.3.2 Intake Estimation

In order to quantify exposures, upper-bound estimates of the theoretical intakes were developed for the school receptors via each exposure route indicated in Section E.1.1.2. This section provides the equations and assumptions used to develop the intake factors used in the risk calculations, which are consistent with the OEHHA Schools Risk Screening Model. The calculated intake factors are presented in Tables E.1 and E.2.

Ingestion of Outdoor Soil

The intake factor for outdoor soil ingestion was calculated using the following equation:

$$IF_{soil.ing} = \frac{IR_{S/D} * F_O * EF * ED * CF}{BW * AT}$$

Where:

$IF_{soil.ing}$	=	Intake factor for outdoor soil ingestion (kilogram [kg] of soil/kg body weight/day)
$IR_{S/D}$	=	Soil/dust ingestion rate (milligram [mg] of soil/day)
F_o	=	Fraction of time outdoor at school during waking hours (unitless)
EF	=	Exposure frequency (day/year)
ED	=	Exposure duration (year)
BW	=	Body weight (kg)
AT	=	Averaging time (day)
CF	=	Conversion factor (kg of soil/mg of soil)

Ingestion of Indoor Dust

The intake factor for indoor dust ingestion was calculated using the following equation:

$$IF_{dust.ing} = \frac{IR_{S/D} * F_I * EF * ED * CF}{BW * AT}$$

Where:

$IF_{dust.ing}$	=	Intake factor for indoor dust ingestion (kg of soil/kg body weight/day)
IR_s	=	Soil/dust ingestion rate (mg of soil/day)
F_I	=	Fraction of time indoor at school during waking hours (unitless)
EF	=	Exposure frequency (day/year)
ED	=	Exposure duration (year)
BW	=	Body weight (kg)
AT	=	Averaging time (day)
CF	=	Conversion factor (kg of soil/mg of soil)

Dermal Contact with Outdoor Soil

The intake factor for dermal contact with outdoor soil was calculated using the following equation:

$$IF_{soil.derm} = \frac{\Sigma\ (AF * SA * F) *\ F_O *\ EF * ED * CF}{BW * AT}$$

Where:

$IF_{soil.derm}$	=	Intake factor for dermal contact with outdoor soil (kg of soil/kg body weight/day)
AF	=	Body-part-specific adherence factor (mg of soil/square centimeter [cm^2])
SA	=	Skin surface area (cm^2/day)
F	=	Body-part-specific fraction of skin surface area (unitless)
F_o	=	Fraction of time outdoor at school during waking hours (unitless)
EF	=	Exposure frequency (day/year)
ED	=	Exposure duration (year)
BW	=	Body weight (kg)
AT	=	Averaging time (day)
CF	=	Conversion factor (kg of soil/mg of soil)

Dermal Contact with Indoor Dust

The intake factor for dermal contact with indoor dust was calculated using the following equation:

$$IF_{dust.derm} = \frac{\Sigma\ (AF * SA * F) *\ F_I *\ EF * ED * CF}{BW * AT}$$

Where:

$IF_{dust.derm}$	=	Intake factor for dermal contact with indoor dust (kg of soil/kg body weight/day)
AF	=	Body-part-specific adherence factor (mg of soil/cm^2)
SA	=	Skin surface area (cm^2/day)
F	=	Body-part-specific fraction of skin surface area (unitless)
F_o	=	Fraction of time indoor at school during waking hours (unitless)
EF	=	Exposure frequency (day/year)
ED	=	Exposure duration (year)
BW	=	Body weight (kg)
AT	=	Averaging time (day)
CF	=	Conversion factor (kg of soil/mg of soil)

Inhalation of Outdoor Soil Particulates or Vapors Migrating from Soil Vapor to Outdoor Air

The intake factor for inhalation of outdoor soil particulates or vapors migrating from soil vapor to outdoor air was calculated using the following equation:

$$IF_{soil.part.inh} or\ IF_{OA.vapor.inh} = \frac{BR_O * ET_O * EF * ED}{AT}$$

Where:

$IF_{soil.part.inh}$	=	Intake factor for inhalation of outdoor soil particulates (cubic meter [m^3] of air/kg of body weight/day)
$IF_{OA.vapor.inh}$	=	Intake factor for inhalation of vapors migrating from soil vapor to outdoor air (m^3 of air/kg of body weight/day)
BR_O	=	Breathing rate, outdoor (m^3 of air/kg of body weight/hour)
ET_O	=	Exposure time, outdoor (hour/day)
EF	=	Exposure frequency (day/year)
ED	=	Exposure duration (year)
AT	=	Averaging time (day)

Inhalation of Indoor Dust Particulates or Vapors Migrating from Soil Vapor to Indoor Air

The intake factor for inhalation of indoor dust particulates or vapors migrating from soil vapor to indoor air was calculated using the following equation:

$$IF_{dust.part.inh} or\ IF_{IA.vapor.inh} = \frac{BR_I * ET_I * EF * ED}{AT}$$

Where:

$IF_{dust.part.inh}$	=	Intake factor for inhalation of indoor dust particulates (m^3 of air/kg of body weight/day)
$IF_{IA.vapor.inh}$	=	Intake factor for inhalation of vapors migrating from soil vapor to indoor air (m^3 of air/kg of body weight/day)
BR_I	=	Breathing rate, indoor (m^3 of air/kg of body weight/hour)
ET_I	=	Exposure time, indoor (hour/day)
EF	=	Exposure frequency (day/year)
ED	=	Exposure duration (year)
AT	=	Averaging time (day)

E.1.2 Exposure Concentrations and Chemicals

E.1.2.1 Identification of Chemicals of Potential Concern

Soil samples collected at 0-10 feet bgs from the site were selectively analyzed for herbicides, metals, polychlorinated biphenyl (PCBs), pesticides (organophosphates and organochlorine),

semi-volatile organic compounds (SVOCs), and total petroleum hydrocarbons (TPHs), while soil vapor samples collected at 5-56 feet bgs were analyzed for VOCs.

Fifteen metals were detected in site soils. As metals are naturally occurring chemicals, a comparison of site concentrations with background concentrations was conducted for identifying the non-site-related metals. Consistent with CalEPA (1997) and the DTSC PEA Guidance Manual (CalEPA 2013), metals present at levels less than or equivalent to background were eliminated as COPCs.

DTSC has established a regional upper-bound background soil level for arsenic of 12 milligrams per kilogram (mg/kg) for southern California based on over 1,000 samples collected at 19 school sites in Los Angeles County (Chernoff et al. 2008), which is the 95% upper confidence limit (UCL) on the 99th quantile of the arsenic dataset. The arsenic concentrations for the whole background dataset ranged from 0.15 mg/kg to 20 mg/kg. At the site, arsenic was detected at concentrations below 12 mg/kg in all AOI soil samples except two soil samples in AOI-15 (Cornucopia) at 0 and 1.5 feet bgs (17 mg/kg and 15 mg/kg, respectively). Incremental soil step out sampling in the planting beds (Decision Unit [DU]-1) and in the open areas outside the planting beds (DU-2) was conducted at the request of DTSC, and the results of the incremental samples were considered to be more representative of overall Cornucopia site conditions. In DU-1 arsenic concentrations in the incremental samples ranged from 4.3 mg/kg to 8.8 mg/kg, while in DU-2 arsenic concentrations in the incremental samples ranged from 4.4 mg/kg to 14 mg/kg. All soil samples, except the one sample at 14 mg/kg, were below 12 mg/kg. As recommended by the DTSC PEA Guidance Manual (CalEPA 2013), since the maximum concentration from the incremental sample data set (14 mg/kg) was below the maximum concentration from the background arsenic data set (20 mg/kg, Chernoff et al. 2008), arsenic was not identified as a COPC.

For the other 14 metals detected in soil at 0-10 feet bgs at the site, the maximum concentrations at each AOI were compared to the site-specific maximum background levels to distinguish between site-related metal concentrations and naturally occurring metal concentrations (CalEPA 2013). As discussed in Section 6.2.3 of the main report, 10 background soil samples were collected at approximately 0.5 feet bgs from areas located away from buildings in the undeveloped fields where natural terrain and vegetation are prominent. These background metal concentrations are shown in Table E.3. Although used for comparison with site data at 0-10 feet bgs, the background data do not necessarily reflect the background metal concentration at deeper depth. Metals detected at concentrations (top 10 feet bgs) above the maximum background levels at a particular AOI were identified as COPCs for that AOI.

For TPHs, the data collected from the site were reported in small carbon fractions (e.g., C11-C12). In order to compare the TPH data with the toxicity values or soil RSLs from CalEPA or USEPA, the concentrations from small carbon fractions were combined to obtain the total concentrations for the following carbon groups: TPH C4-C8, TPH C9-C18, TPH C19-C32, and TPH C33-C40. TPH C4-C8 was never detected in analyzed soil samples at the site.

In summary, all detected organic compounds and all metals above background in at least one AOI were retained as COPC for this evaluation. COPCs include 13 metals, five organochlorine

pesticides, two PCBs, one SVOC, and three TPH compounds for soil, while 13 VOCs were identified as COPCs for soil vapor. The COPCs for each AOI are summarized in Table E.4.

E.1.2.2 Fate and Transport

VOCs detected in soil vapor can potentially migrate through the unsaturated zone to indoor or outdoor air. This migration is quantified for the purposes of this HHSRE through an intermedia transfer factor. When the transfer factor is multiplied by the source concentration of a chemical in soil vapor (in microgram per cubic meter [µg/m^3]), the product is the resulting steady-state concentration that is predicted in indoor or outdoor air (in µg/m^3).

Ramboll Environ developed transfer factors for soil vapor to indoor or outdoor air (for exposure of current and future school receptors and hypothetical future on-Site residents) for the following scenarios:

- Transport of soil vapor from five feet bgs into a future school or residential slab-on-grade building with engineered fill below the base of the foundation or into outdoor air.
- Transport of soil vapor from 10 feet bgs into a future school or residential slab-on-grade building with engineered fill below the base of the foundation or into outdoor air.
- Transport of soil vapor from 15 feet bgs into a future school or residential slab-on-grade building with engineered fill below the base of the foundation or into outdoor air.
- Transport of soil vapor from 20 feet bgs into a future school or residential slab-on-grade building with engineered fill below the base of the foundation or into outdoor air.

For soil vapor concentrations collected at depths greater than 20 feet bgs, the transfer factors at 20 feet bgs were conservatively applied.

Intermedia transfer factors for hypothetical future on-site residents were estimated using the screening-level model described by Johnson and Ettinger (1991). Specifically, Version 3.2 of the spreadsheet implementation developed by the USEPA was used (USEPA 2004). The Johnson and Ettinger model was developed to predict vapor migration into buildings.

For modeling of outdoor air transport through the subsurface, a basic diffusion model was used, which was the same as the Johnson and Ettinger indoor air model used at distances far away from the building. This diffusion model would be comparable to the Johnson and Ettinger model assuming no advection due to a building and no building foundation. Once VOCs have moved through the subsurface, their dispersion into outdoor air were calculated using the Q/C model from the USEPA Soil Screening Guidance (USEPA 2002). Although this guidance document specifically deals with transport from soil to outdoor air, the assumptions and equations for the outdoor dispersion model do not depend on the medium of the source and are valid to model transport from soil vapor to outdoor air as well. The input values for the Q/C model are site-specific and depend on the geographic region and source area. When the diffusion model was combined with the dispersion model, the transfer factors from soil vapor to outdoor air were calculated using the following equation:

$$TF = (D_{eff} * CF)/(L_T * Q/C)$$

Where:

TF	=	Transfer factor from soil vapor to outdoor air (µg/m^3 per µg/m^3)
D_{eff}	=	Effective Diffusion Coefficient (cm^2/second)
CF	=	Conversion factor (1000 gram [g]/kg * 0.01 meter [m]/cm) = 10
L_T	=	Distance to source (cm)
Q/C	=	Outdoor air dispersion factor (kg/m^3 per g/m^2-s)

Intermedia transfer factors for school receptors can be modeled using the OEHHA Schools Risk Screening Model (CalEPA 2010), but the Johnson and Ettinger model embedded in the OEHHA Schools Risk Screening Model (Version 2.0) can incorporate soil properties for only one soil layer, which is not suitable for the site conditions. Therefore, indoor air intermedia transfer factors for school receptors were also modeled using the Johnson and Ettinger Model, following the assumptions from the OEHHA Schools Risk Screening Model, except for the site-specific soil properties discussed below.

The model is conservative because it assumes that the chemical source has infinite mass and it does not include other attenuation processes that typically would reduce the amount of vapor migration, such as biodegradation, leaching from infiltration, and lateral diffusion.

The calculation of intermedia transfer factors was based on parameters describing the properties of the chemicals evaluated, the vadose zone, the surface barrier (e.g, concrete slab), and the air dispersion zone. The physical-chemical properties used in these calculations are listed in Table E.5. Based on guidance from USEPA (1991), only VOCs that easily volatilize were included in the evaluation of soil vapor. These include chemicals with a Henry's Law constant of greater than 1 x 10^{-5} atmosphere-cubic meter per mole (atm-m^3/mol) (CalEPA 2013).

Site-specific vadose zone soil parameters and conservative assumptions that were used in the Johnson and Ettinger model to calculate the effective diffusion coefficients are listed in Tables E.6a and E.6b. Soil vapor samples were collected from AOI-2 in JCES as well as AOI-8, AOI-9, and AOI-12 in MHS, but VOCs were only detected in AOI-9 (Bus Barn) and AOI-12 (Septic Tanks) in MHS. Based on information from soil boring logs advanced in AOI-9 and AOI-12 (Appendix A), different soil types were identified from ground surface down to 20 feet bgs. In AOI-9, the soil column down to 20 feet bgs was identified as silty clay loam. In Septic Tanks 1, 4 and 11 in AOI-12, the top 10 feet of the soil column was identified as silty clay loam, while the remaining 10 feet of the soil column was identified as silt loam. In Septic Tanks 3, 5 and 6 in AOI-12, the top 10 feet of the soil column was identified as silty clay loam, while the remaining 10 feet of the soil column was identified as loamy sand. Therefore, in the modeling the upper vadose zone in AOI-9 was assumed to consist of one distinct layer, while the upper vadose zone in AOI-12 was assumed to consist of two distinct layers.

The default values of soil physical properties recommended by USEPA (2004) were used for the identified soil types. The future building scenario included engineered fill, adding two additional upper layers (CalEPA 2005) to both scenarios as follows: 1) a 10 centimeter (cm) layer of sand

on the top; and 2) a 30 cm layer of engineered fill. The building parameters for the residential scenario were the residential defaults recommended by CalEPA (2011), while the building parameters for the school scenario were the default values from the OEHHA Schools Risk Screening Model (CalEPA 2010).

Examples of Johnson and Ettinger model input and output sheets have been provided in Attachment A for benzene at 20 feet bgs for each of the three lithology types (as shown Table E.6b) for both school and residential scenarios (A total of six example scenarios are presented). The modeling results for the shallower depths can be determined by reducing the depth to source and layer thicknesses as appropriate. The Johnson and Ettinger modeling sheets are designed to include soil properties and diffusion coefficients for up to three layers, however, for this site four layers (two layers representing the engineered fill and two layers for the site-specific soil) were evaluated. As such, the soil properties and calculated diffusion coefficients for the two layers representing engineered fill (which are identical for all scenarios) are shown separately in the sheet of Engineered Fill Calculations at the beginning in Attachment A, followed by the Johnson and Ettinger model input and output sheets for each of the six example scenarios. The overall effective diffusion coefficients were calculated based on both the diffusion coefficients and layer thickness for soil layers from Johnson and Ettinger output sheet as well as the diffusion coefficients and layer thicknesses from Engineered Fill Calculations. Such a calculation is shown as a footnote in each Johnson and Ettinger model output sheet. As these modeling sheets were only used to calculate attenuation factors (and not for cancer risks and non-cancer hazards), the cells which were not used in the calculations are shown as “NA”.

The intermedia transfer factors for VOCs migrating from soil vapor to indoor and outdoor air for the school scenario are presented in Table E.7 for AOI-9, Table E.8 for Septic Tanks 1, 4 and 11 in AOI-12, and Table E.9 for Septic Tanks 3, 5 and 6 in AOI-12. The intermedia transfer factors for VOCs migrating from soil vapor to indoor and outdoor air for the residential scenario are presented in Table E.10 for AOI-9, Table E.11 for Septic Tanks 1, 4 and 11 in AOI-12, and Table E.12 for Septic Tanks 3, 5 and 6 in AOI-12.

E.1.2.3 Exposure Point Concentrations

An exposure point concentration (EPC) of a chemical is the estimated concentration of that chemical to which a receptor (i.e., a member of a potentially exposed population) is exposed over an assumed duration of exposure. For soil direct contact pathways, soil EPCs were calculated based on soil concentrations at 0-2 feet bgs for school receptors and 0-10 feet bgs for hypothetical future on-site residents, assuming that soil may be re-graded during redevelopment. According to CalEPA (2010), a transfer factor from outdoor soil to indoor dust of two (2) was used for the school model, which means the indoor dust EPC is twice that of the outdoor soil EPC. This default transfer factor was conservatively derived based on the mean of the 95% upper confidence limits (UCLs) on the median dust/soil concentration ratios of the data from 67 school sites for three metals (i.e., chromium, nickel, and vanadium) (CalEPA 2004), without considering the indoor sources for these metals. Therefore, use of the default transfer factor is likely to overestimate the indoor dust EPCs.

For soil vapor migration pathways, the indoor or outdoor air EPCs were calculated by multiplying the soil vapor concentrations by the transfer factors at the corresponding depths. As

a conservative assessment, transfer factors at five feet bgs were applied to soil vapor concentrations at less than 10 feet bgs, transfer factors at 10 feet bgs were applied to soil vapor concentrations from 10 feet bgs to less than 15 feet bgs, transfer factors at 15 feet bgs were applied to soil vapor concentrations from 15 feet bgs to less than 20 feet bgs, and transfer factors at 20 feet bgs were applied to soil vapor concentrations at 20 feet bgs or deeper.

For the school scenario, per discussion with DTSC, soil EPCs or soil vapor concentrations used as the input to calculate indoor or outdoor air EPCs were calculated as the 95% UCLs on the mean soil or soil vapor concentrations using the ProUCL software (Version 5.0). Because of the uncertainty associated with estimating the true mean concentration based on sampling data collected at a site, the 95% UCL provides reasonable confidence and a high degree of conservatism that the true site mean will not be underestimated.

For the school scenario, soils and soil vapor were evaluated as follows (also see Tables E.28 and E.29):

- For soil, both individual AOIs and the entire school (JCES or MHS) were evaluated for potential exposure to site soils for school receptors.
  - The individual AOIs evaluated in the HHSRE included AOI-1, AOI-3, and AOI-4 in JCES as well as AOI-5 through AOI-8, AOI-10, AOI-11, AOI-13 through AOI-17 in MHS. No soil samples were collected at 0-2 feet bgs at AOI-2 (Septic Systems), AOI-9 (Bus Barn), and AOI-12 (Septic Systems), so these AOIs were not evaluated for soils in the school scenario. Incremental samples collected at AOI-14 (Athletic Fields) were evaluated separately for football, baseball, and soccer fields.
  - Since the exposure patterns in AOI-14 (Athletic Fields) and AOI-15 (Cornucopia) are different from the other school areas (i.e. less exposure frequency and duration, more homogenous use), soil samples collected from these two AOIs were included in the risk calculation for individual AOIs but excluded from the JCES and MHS school-wide calculation.
- For soil vapor, VOCs were only detected in AOI-9 and AOI-12 in MHS; therefore, AOI-9 (Bus Barn), Septic Tanks 1, 4 and 11 in AOI-12, and Septic Tanks 3, 5 and 6 in AOI-12 were evaluated in the HHSRE.

For hypothetical future on-site residents, soil EPCs or soil vapor concentrations used as the input to calculate indoor or outdoor air EPCs were designated as the maximum soil (upper 10 feet) or soil vapor concentrations collected over an AOI. For the hypothetical future on-site resident scenario, soils and soil vapor were evaluated as follows:

- For soil, the individual AOIs evaluated in the HHSRE included AOI-1 through AOI-4 in JCES as well as AOI-5 through AOI-17 in MHS. Incremental samples collected at AOI-14 (Athletic Fields) were evaluated separately for football, baseball, and soccer fields.
- For soil vapor, AOI-9 (Bus Barn), Septic Tanks 1, 4 and 11 in AOI-12, and Septic Tanks 3, 5, and 6 in AOI-12 at MHS were evaluated in the HHSRE.

Several duplicate soil or soil vapor samples were collected for quality assurance/quality control (QA/QC) purposes. Only the maximum concentration between the duplicate sample and its primary sample was included in the calculation of the 95% UCLs.

After the excavation activities were completed at the Building G Area (AOI-5) in December 2014, it was assumed that PCB Aroclor 1254 would not be present at detectable concentrations in the surface soil (0-0.5 feet bgs) at MH-SB-76 and MH-SB-118 with a detection limit of 50 µg/kg. This is consistent with the measurement which were taken of the clean fill which were nondetect for PCB Aroclor 1254. Concentrations for all the other chemicals at those two locations were calculated using the original sampling results.

The 95% UCLs were selected mainly based on the methods recommended by the ProUCL software, except incorporating the following rules through discussion with DTSC:

- If a Chebyshev 97.5% UCL or 99% UCL was recommended by the ProUCL software, a Chebyshev 95% was selected. Based on discussion with DTSC, a Chebyshev 97.5% UCL or 99% UCL may be overly conservative, sometimes even greater than the maximum detected value.
- If more than one 95% UCL was recommended by the ProUCL software, a 95% UCL generated by a parametric method was selected if the data followed a certain distribution (based on a normal distribution first, gamma distribution second, lognormal distribution last). If the data followed a gamma distribution a 95% UCL generated by the Adjusted Gamma method was preferred. If the data did not follow any distribution, a 95% UCL generated by a non-parametric method was selected.

If a 95% UCL could not be calculated by the ProUCL software (e.g. insufficient detections of a particular COPC to perform the calculation) or the 95% UCL recommended by the ProUCL software was greater than the maximum detected concentration, the maximum detected concentration was selected as soil EPC or soil vapor input concentration to indoor or outdoor air EPC.

The soil EPCs as well as the indoor and outdoor air EPCs are presented in the result tables in Section E.1.5.2. The ProUCL output files are included in Attachment B.

E.1.3 Human Health Screening Levels

For each chemical, the relationship between the magnitude of exposure and the likelihood of adverse health effects is dependent on whether a chemical acts by a threshold or non-threshold mechanism. For carcinogens (non-threshold mechanism), the likelihood of adverse effects is quantified by the estimation of cancer risk. The cancer risk represents the upper-bound incremental probability that an individual will develop cancer over a lifetime as a direct result of exposure to a potential carcinogen in a medium (i.e., excess lifetime cancer risk). For non-carcinogens (threshold mechanism), the likelihood of adverse effects is quantified by development of a hazard quotient (HQ). The HQ represents the ratio of the estimated dose from exposure to a non-carcinogen in a medium to a value that is believed to not produce non-cancer adverse health effects.

The estimated cancer risks and non-cancer hazards for hypothetical future on-site residents potentially exposed to soil through direct contact were evaluated by comparing the site data with the DTSC-modified RSLs or the USEPA RSLs for residential soil. DTSC-modified RSLs or USEPA RSLs are concentrations of chemicals in residential soil that the DTSC or USEPA consider to be below thresholds of concern for risks to human health over a lifetime. Since 2013, the DTSC incorporated CalEPA toxicity criteria and recommendations (e.g. route-to-route extrapolation), and calculated the DTSC-modified residential soil screening levels for a subset of chemicals for which 1) the CalEPA-recommended toxicity value was more protective than the toxicity value used to derive the USEPA RSLs, or 2) there was no RSL due to the lack of route-to-route extrapolation when deriving the USEPA RSLs. For the chemicals listed by the DTSC, the DTSC-modified RSLs were used as the health-based screening values; otherwise, the USEPA RSLs were used. For TPHs, the most conservative USEPA residential RSLs for the carbon ranges of C9-C18 and C19-C32 were used, and the RSL for TPH C19-C32 was conservatively used as a surrogate for TPH C33-C40 as there is no RSL for TPH C33-C40.

The National Contingency Plan (NCP) (40 Code of Federal Regulations [CFR] § 300) is commonly cited as the basis for target risk and hazard levels. According to the NCP, excess lifetime cancer risks posed by a site should not exceed one in a million (1×10^{-6}) to one hundred in a million (1×10^{-4}), and noncarcinogenic chemicals should not be present at levels expected to cause adverse health effects (i.e., HQ greater than 1). As a risk management policy, the CalEPA generally considers 1×10^{-6} to be a point of departure for purposes of making risk management decisions. The RSLs used for evaluation of the residential scenario correspond to an excess lifetime target cancer risk of one in 1×10^{-6} or a target HQ of 1 for noncancer health effects. The screening levels for identified COPCs in residential soil that were carried into the HHSRE are presented in Table E.13.

The estimated excess lifetime cancer risks and non-cancer hazards for school receptors exposed to soil through direct contact were evaluated using the OEHHA Schools Risk Screening Model (CalEPA 2010). The estimated excess lifetime cancer risks and non-cancer hazards for school receptors and hypothetical future on-site residents exposed to VOCs in soil vapor migrating to indoor and outdoor air were evaluated using site-specific vapor migration modeling. Methodology details are presented in Section E.1.5.1, and results are presented in Section E.1.5.2.

E.1.4 Toxicity Values

For hypothetical future on-site residents exposed to soil through direct contact, current toxicity values are embedded in the derivation of the DTSC-modified RSLs or the USEPA RSLs for residential soil. Therefore, it was not necessary to select toxicity values for this scenario.

The toxicity values used for school receptors exposed to soil through direct contact as well as the vapor migration pathways for both school receptors and hypothetical future on-site residents were updated to be consistent with those used to develop the DTSC-modified RSLs or the USEPA RSLs for soil and air, except for cadmium and TPH. Per discussion with DTSC, the recommended toxicity value for cadmium from the OEHHA School Risk Screening Model (CalEPA 2010) was used to evaluate school receptors.

TPHs are chemical mixtures made up of hundreds of individual compounds belonging to two major groups, aliphatic and aromatic. Except for specifically identified carcinogenic aromatic compounds such as benzene, ethylbenzene, and carcinogenic polyaromatic hydrocarbons (PAHs), the hydrocarbons typically found in petroleum products are considered to be noncarcinogenic. No PAHs were detected in soil, and the toxicity of benzene, toluene, ethylbenzene, and xylenes (BTEX) as well as naphthalene in soil vapor were evaluated individually through vapor migration pathways. The noncarcinogenic toxicity values recommended by the DTSC PEA Guidance Manual (CalEPA 2013) were used to evaluate the hazard for school receptors exposed to TPHs in soil.

The toxicity values used in this HHSRE are summarized in Table E.14.

Inhalation unit risks (IURs) and inhalation reference concentrations (RfCs) are listed in the HHRA Note Number 3 (CalEPA 2014) or USEPA RSL (USEPA 2015) table for carcinogenic and non-carcinogenic effects through the inhalation pathway. Based on the OEHHA School Risk Screening Model (CalEPA 2010), in order to take into account different body weights and breathing rates of different age groups, IURs and RfCs were converted to inhalation cancer slope factors (CSFs) and inhalation reference doses (RfDs) in the calculation of inhalation risk and hazard for school receptors using the underlying body weight and breathing rate for the IURs and RfCs, that is 70 kg and 20 m^3/day.

In the OEHHA Schools Risk Screening Model, an age-dependent adjustment factor (ADAF) of 3 is applied to the cancer toxicity values for mutagenic chemicals for children aged 2 to < 16 years old. However, since none of the COPCs in this analysis is a mutagen, an ADAF was not applied.

In 2007, CalEPA OEHHA developed a toxicity evaluation for lead with a benchmark change in children's blood lead concentration of one (1) microgram per deciliter (µg/dL), which would reduce an intelligence quotient (IQ) by up to one point (CalEPA 2007). In light of the CalEPA lead toxicity criterion, the DTSC-modified RSL for lead in residential soil (80 mg/kg) was developed using LeadSpread 8 and corresponds to a concentration in soil that will result in a 90th percentile estimate of 1 µg/dL increase in blood lead in a child resident (CalEPA 2014).

E.1.5 Risk Characterization Summary

E.1.5.1 Risk/Hazard Characterization

Using the EPCs, pathway-specific parameters, and the toxicity values discussed above, the estimated excess lifetime cancer risks and non-cancer HQs were calculated for current and future school receptors and hypothetical future on-site residents exposed to soil and soil vapor at the site. For kindergarten/elementary school, middle school and high school students, excess lifetime cancer risks and non-cancer HQs were calculated for each exposure pathway and each age year separately. Estimated excess lifetime cancer risks from each age year were summed to represent the excess lifetime cancer risk for the whole exposure duration; that is 5 to < 11 years old for kindergarten/ elementary school students, 11 to < 14 years old for middle school students, 14 to < 18 years old for high school students, and 11 to < 18 years old for middle/high school students. The maximum HQ among different age years was selected to represent the HQ for the whole exposure duration; that is 5 years old for kindergarten/elementary school

students, 11 years old for middle school students, 14 years old for high school students, and 11 years old for middle/high school students. For teachers/staff, excess lifetime cancer risks and non-cancer HQs were calculated for the whole adult age group.

For both school receptors and hypothetical future on-site residents, the cumulative excess lifetime cancer risks were calculated by summing the cancer risks across all the individual carcinogenic COPCs, and the cumulative non-cancer hazard indices (HIs) were calculated by summing the HQs across all the individual COPCs.

It should be noted that the risk and hazard estimated in the HHSRE do not represent absolute estimates at the site, since generic and conservative assumptions for hypothetical future residential land use and conservative assumptions for school receptors were used. The goal of the PEA HHSRE was to ensure that no potential health hazard is overlooked; therefore, the screening evaluation's assumptions and default values are restricted to a reasonable maximum exposure (RME) scenario. Use of these conservative assumptions are likely to overestimate actual exposures and calculated risks.

E.1.5.1.1 Soil

E.1.5.1.1.1 School Scenario

The equations used to calculate the estimated excess lifetime cancer risks and non-cancer HQs for school receptors exposed to COPCs in soil through direct contact are presented in this section, which came from the OEHHA Schools Risk Screening Model. An example of the OEHHA Schools Risk Screening Model input and out is presented in Attachment C.

Ingestion of Outdoor Soil or Indoor Dust

The estimated excess lifetime cancer risks and non-cancer HQs for outdoor soil or indoor dust ingestion were calculated using the following equations:

$$Cancer\ Risk = EPC * IF_{ing} * \ CSF_{oral} * CF$$

$$HQ = EPC * IF_{ing} / \ RfD_{oral} \ * CF$$

Where:

EPC	=	Exposure point concentration, outdoor soil or indoor dust (microgram per kilogram [µg/kg])
IF_{ing}	=	Intake factor for outdoor soil or indoor dust ingestion (kg of soil/kg body weight/day)
CSF_{oral}	=	Oral cancer slope factor (mg/kg body weight/day)$^{-1}$
RfD_{oral}	=	Oral reference dose (mg/kg body weight/day)
CF	=	Conversion Factor (µg/mg)

Dermal Contact with Outdoor Soil or Indoor Dust

The estimated excess lifetime cancer risks and non-cancer HQs for dermal contact with outdoor soil or indoor dust were calculated using the following equations:

$$Cancer\ Risk = EPC * IF_{derm} * \ CSF_{oral} * ABS * CF$$

$$HQ = EPC * IF_{derm} * ABS / \ RfD_{oral} \ * CF$$

Where:

EPC	=	Exposure point concentration, outdoor soil or indoor dust (µg/kg)
IF_{derm}	=	Intake factor for dermal contact with outdoor soil or indoor dust (kg of soil/kg body weight/day)
CSF_{oral}	=	Oral cancer slope factor (mg/kg body weight/day)$^{-1}$
RfD_{oral}	=	Oral reference dose (mg/kg body weight/day)
ABS	=	Soil dermal absorption factor (unitless)
CF	=	Conversion Factor (µg/mg)

Soil dermal absorption factors (ABS) are presented in Table E.14.

Inhalation of Outdoor Soil or Indoor Dust Particulates

The estimated excess lifetime cancer risks and non-cancer HQs for inhalation of outdoor soil or indoor dust particulates were calculated using the following equations:

$$Cancer\ Risk = EPC * IF_{part.inh} * \ (IUR / BR_{assumed} * BW_{assumed}) \ / \mathrm{PEF}$$

$$HQ = EPC * IF_{part.inh} / \ (RfC_{inh} * BR_{assumed} / BW_{assumed}) / \mathrm{PEF}$$

Where:

EPC	=	Exposure point concentration, outdoor soil or indoor dust (µg/kg)
$IF_{part.inh}$	=	Intake factor for inhalation of outdoor soil or indoor dust particulates (m^3 of air/kg of body weight/day)
IUR	=	Inhalation unit risk (µg/m^3)$^{-1}$
RfC_{inh}	=	Inhalation reference concentration (µg/m^3)
$BR_{assumed}$	=	Breathing rate assumed with IUR (20 m^3/day)
$BW_{assumed}$	=	Body weight assumed with IUR (70 kg)
PEF	=	Particulate emission factor (cubic meter per kilogram [m^3/kg] of soil)

It is assumed that school receptors potentially may be exposed to airborne particulates on a daily basis at the site. Consistent with the OEHHA Schools Risk Screening Model (CalEPA 2010), a PEF of 5.6 x 10^8 m^3/kg was used to estimate airborne concentrations of a COPC from

corresponding outdoor soil or indoor dust concentrations for school receptors. This PEF reflects an airborne concentration of particulates of approximately 1.8 µg/m^3.

E.1.5.1.1.2 Residential Scenario

The excess lifetime cancer risks and non-cancer HQs for hypothetical future on-site residents exposed to COPCs in soil through direct contact were evaluated by directly comparing the soil EPCs with the DTSC-modified RSLs or the USEPA RSLs for residential soil using the following equations:

$$Cancer\ Risk = \frac{Soil\ EPC}{Residential\ Soil\ Cancer\ RSL} * 10^{-6}$$

$$HQ = \frac{Soil\ EPC}{Residential\ Soil\ Non-Cancer\ RSL}$$

E.1.5.1.2 Soil Vapor

The estimated excess lifetime cancer risks and non-cancer HQs for school receptors and hypothetical future on-site residents exposed to VOCs in soil vapor migrating to indoor and outdoor air were calculated using the following equations:

$$Cancer\ Risk = EPC * IF_{vapor.inh} * \ (IUR/BR_{assumed} * BW_{assumed})$$

$$HQ = EPC * IF_{vapor.inh} / \ (RfC_{inh} * BR_{assumed}/BW_{assumed})$$

Where:

EPC	=	Exposure point concentration, indoor or outdoor air (µg/m^3)
$IF_{part.inh}$	=	Intake factor for inhalation of vapors migrating from soil vapor to indoor or outdoor air (m^3 of air/kg of body weight/day)
IUR	=	Inhalation unit risk (µg/m^3)$^{-1}$
RfC_{inh}	=	Inhalation reference concentration (µg/m^3)
$BR_{assumed}$	=	Breathing rate assumed with IUR (20 m^3/day)
$BW_{assumed}$	=	Body weight assumed with IUR (70 kg)

E.1.5.1.3 Lead

In this HHSRE, to evaluate the potential adverse health effects resulting from exposure to lead in soil, especially the effects on blood lead concentrations, soil lead data were compared to the DTSC-modified RSL of 80 mg/kg for lead in residential soil for both residential and school scenarios.

E.1.5.2 Summary of Results

E.1.5.2.1 School Scenario

E.1.5.2.1.1 Soil

The estimated excess lifetime cancer risks and non-cancer HQs/HIs for exposure to soil through direct contact at each AOI are presented in Table E.15 for kindergarten/elementary school students, Table E.16 for middle/high school students, and Table E.17 for teachers/staff. No soil COPCs were detected at 0-2 feet bgs in AOI-3 (Electrical Transformer) in JCES and AOI-17 (Electrical Transformers) in MHS, and no soil COPCs were identified in the baseball field and softball field of AOI-14 in MHS. Therefore, cancer risk and non-cancer HI/HQ results were not calculated for these AOIs. As shown in Tables E.15 through E.17, the estimated excess lifetime cancer risks and non-cancer HIs for kindergarten/elementary school students, middle/high school students, and teachers/staff exposed to soil are below 1x 10^{-6} (the conservative end of the target risk range of 10^{-6} to 10^{-4}) and below the non-cancer HI of greater than one.

The school-wide estimated excess lifetime cancer risks and non-cancer HQs/HIs for exposure to soil through direct contact are presented in Table E.18 for kindergarten/elementary school students, Table E.19 for middle/high school students, and Table E.20 for teachers/staff at both JCES and MHS. As shown in Tables E.18 through E.20, the estimated excess lifetime cancer risks and non-cancer HIs for kindergarten/elementary school students, middle/high school students, and teachers/staff exposed to soil in both schools are below 1x 10^{-6} (the conservative end of the target risk range of 10^{-6} to 10^{-4}) and below the non-cancer HI of greater than one.

Therefore, COPCs in soil in JCES and MHS are not expected to result in significant adverse health effects to current and future students and teachers/staff through direct contact.

E.1.5.2.1.2 Soil Vapor

No VOCs were detected in soil vapor at JCES. Since no COPCs in soil vapor were identified at JCES, cancer risks and non-cancer HQ/HIs were not calculated. The estimated excess lifetime cancer risks and non-cancer HQs/HIs for exposure to soil vapor migrating to outdoor air at MHS are presented in Table E.21 for middle/high school students and Table E.22 for teachers/staff. As shown in Tables E.21 and E.22, the estimated excess lifetime cancer risks and non-cancer HIs for middle/high school students and teachers/staff exposed to soil vapor migrating to outdoor air over both AOI-9 and AOI-12 are below 1x 10^{-6} (the conservative end of the target risk range of 10^{-6} to 10^{-4}) and below the non-cancer HI of greater than one.

There are no current school buildings over the areas of soil vapor investigation. Assuming that future buildings could be constructed in these areas, the estimated excess lifetime cancer risks and non-cancer HQs/HIs for exposure to soil vapor migrating to indoor air at MHS are presented in Table E.23 for future middle/high school students and Table E.24 for future teachers/staff. As shown in Tables E.23 and E.24, the estimated excess lifetime cancer risks and non-cancer HIs for future middle/high school students and teachers/staff exposed to soil vapor migrating to indoor air over both AOI-9 and AOI-12 are at or below 1x 10^{-6} (the conservative end of the target risk range of 10^{-6} to 10^{-4}) and below the non-cancer HI of greater than one.

Therefore, COPCs in soil vapor in both AOI-9 and AOI-12 at MHS are not expected to result in significant adverse health effects to current and future students and teachers/staff through vapor migration pathways.

E.1.5.2.2 Residential Scenario

E.1.5.2.2.1 Soil

The estimated excess lifetime cancer risks and non-cancer HQs/HIs for hypothetical future on-site residents exposed to soil through direct contact are presented in Table E.25. No soil COPCs were detected at 0-10 feet bgs in AOI-3 (Electrical Transformer) in JCES as well as AOI-9 (Bus Barn) and AOI-17 (Electrical Transformers) in MHS, and no soil COPCs were identified in the baseball field and softball field of AOI-14 in MHS; therefore, cancer risk and non-cancer HI/HQ results were not calculated for these AOIs. As shown in Tables E.25, by using the maximum detected concentration as soil EPCs, the estimated excess lifetime cancer risks and non-cancer HIs for hypothetical future on-site residents exposed to soil in all of the AOIs are below 1x 10^{-6} (the conservative end of the target risk range of 10^{-6} to 10^{-4}) and below the non-cancer HI of greater than one, except for AOI-1 and AOI-2 in JCES as well as AOI-5 and AOI-7 in MHS. The cancer risk and non-cancer HI/HQ results for these four AOIs are discussed in details below:

- AOI-1 (Buildings constructed prior to 1981) in JCES: By using the maximum detected concentration as soil EPCs, the estimated excess lifetime cancer risk (4 x 10^{-6}) for hypothetical future on-site residents is near the low end of the NCP risk range (10^{-6} to 10^{-4}), and the estimated non-cancer HI (0.4) for hypothetical future on-site residents is below the non-cancer HI of greater than one. The major chemical contributors to the cancer risk are chlordane (total) and PCB Aroclor 1260.
  - The soil EPC for chlordane (total) (the maximum concentration detected of 2,600 µg/kg) was detected at ground surface at JC-SB-39 in a planter box between Buildings B and C, and it is the only sample in AOI-1 exceeding the residential soil RSL of 1,800 µg/kg. Thirty soil samples (at both ground surface and 1.5 feet bgs, JC-SB-28 through JC-SB-42) were collected in the same planter box, and chlordane (total) was detected in five samples. The 95% UCL on the mean concentration of all the 30 soil samples in the planter box is 311 µg/kg, which is well below the RSL.
  - The soil EPC for PCB Aroclor 1260 (the maximum concentration detected of 250 µg/kg) was detected at ground surface at JC-SB-13 in a planter box containing bushes along the side of Building D, which is slightly above the residential soil RSL of 240 µg/kg. PCB Aroclor 1260 was not detected in the other nine soil samples (at both ground surface and 1.5 feet bgs, JC-SB-9 through JC-SB-13) collected in the same planter box or any other area in AOI-1. A 95% UCL could not be calculated for this area due to the limited detections, but using the only one detected concentration as the soil EPC for PCB Aroclor 1260 in the risk calculation is overly conservative.
  - The excess lifetime cancer risk and non-cancer HI for hypothetical future on-site residents exposed to soil COPCs in AOI-1 were recalculated using the modified EPC for chlordane (total). As shown in Table E.25, the refined excess lifetime cancer risk of 2 x 10^{-6} is near

the low end of the NCP risk range (10^{-6} to 10^{-4}). As noted above, this is a conservative estimate as all but one of the Aroclor 1260 samples were nondetect.

- AOI-2 (Septic Systems) in JCES: By using the maximum detected concentration as soil EPCs, the estimated excess lifetime cancer risk (7×10^{-8}) for hypothetical future on-site residents is below 1×10^{-6} (the conservative end of the target risk range of 10^{-6} to 10^{-4}). The estimated non-cancer HI (3) for hypothetical future on-site residents is above the non-cancer HI of greater than one. The major chemical contributors to the non-cancer HI are cadmium and cobalt. The non-cancer HQ from cadmium alone (2) is above the threshold.
  - The soil EPC for cadmium (the maximum detection of 7,200 µg/kg) was detected at 4.5 feet bgs at JC-SB-59, while the cadmium concentrations detected at other locations in AOI-2 ranged from 1,200 µg/kg to 2,800 µg/kg compared to the residential soil RSL of 4,580 µg/kg. Excluding this maximum concentration (7,200 µg/kg), the cadmium concentrations detected at JECS ranged from 950 µg/kg to 4,200 µg/kg. Due to the depth of the sample (4.5 feet bgs) and the lower concentration range of other samples collected at the same AOI and school, this maximum concentration (7,200 µg/kg) is not likely to present a health concern for a residential scenario.
  - Similarly, the soil EPC for cobalt (the maximum detected concentration of 22,000 µg/kg) was detected at 9.5 feet bgs at JC-SB-60, which is the only concentration above the site maximum background (21,000 µg/kg) in AOI-2. The cobalt concentrations detected at other locations in AOI-2 ranged from 11,000 µg/kg to 20,000 µg/kg. Excluding this maximum concentration (22,000 µg/kg), the cobalt concentrations detected at JECS ranged from 1,300 µg/kg to 20,000 µg/kg. Due to the depth of the sample (9.5 feet bgs) and the lower concentration range of other samples collected at the same AOI and school, this maximum concentration (22,000 µg/kg) is not likely to present a health concern for a residential scenario.
  - For screening purposes, the non-cancer HI was first calculated by summing the HQs from all the COPCs regardless of target organ. Based on the DTSC PEA Guidance Manual (CalEPA 2013), when the non-cancer HI is greater than 1, the HI should be segregated by only summing the HQs for chemicals affecting the same target organ. Based on the USEPA Integrated Risk Information System (IRIS), the target organ for cadmium is the kidney, while based on Provisional Peer Reviewed Toxicity Values (PPRTV), the target organ for cobalt is the thyroid.
- AOI-5 (Buildings constructed prior to 1981) in MHS: By using the maximum detected concentration as soil EPCs, the estimated excess lifetime cancer risk (4×10^{-6}) for hypothetical future on-site residents is near the low end of the NCP risk range (10^{-6} to 10^{-4}), and the estimated non-cancer HI (0.8) for hypothetical future on-site residents is below the non-cancer HI of greater than one. The major chemical contributor to the cancer risk is PCB Aroclor 1254. The estimated cancer risk from PCB Aroclor 1254 alone is 3×10^{-6}.
  - The soil EPC for PCB Aroclor 1254 (the maximum detected concentration of 800 µg/kg) was detected at ground surface at MH-SB-114 located in the Building G Area, where the excavation activities were conducted during December 2014 by removing the two surface soil samples (MH-SB-76 and MH-SB-118) with PCB Aroclor 1254 above 1,000 µg/kg. The 95% UCL on the mean concentration of the 36 soil samples in the Building G Area (at

both ground surface and 1.5 feet bgs, MH-SB-10, MH-SB-11, MH-SB-13, MH-SB-14, MH-SB-76, MH-SB-77, MH-SB-79, and MH-SB-114 through JC-SB-124) after excavation is 231 µg/kg.

  - The excess lifetime cancer risk and non-cancer HI for hypothetical future on-site residents exposed to soil COPCs in AOI-5 were recalculated using the above modified EPC for PCB Aroclor 1254 in the Area G portion of AOI-5. As shown in Table E.25, the refined excess lifetime cancer risk of 2 x 10^{-6} is near the low end of the NCP risk range (10^{-6} to 10^{-4}).
  - Please note as specified in the Removal Action Work Plan (RAW), for the after excavation residential scenario, the estimated excess lifetime cancer risk in the Building G Area for hypothetical future on-site residents was 1x10^{-6}, which was lower than the excess lifetime cancer risk of 2 x 10^{-6} for all of AOI-5 calculated in this HHSRE. That is because the cancer risk for AOI-5 was conservatively calculated based on the maximum concentrations of all the five chemicals (chlordane [total], 4,4'-DDE, 4,4'-DDT, Aroclor 1254, and Aroclor 1260) detected in AOI-5 regardless of location, while in the Building G Area, 4,4'-DDT and Aroclor 1260 were never detected, and chlordane (total) and 4,4'-DDE were detected at lower concentrations.

- AOI-7 (Open areas around and in between older buildings within AOI-5) in MHS: By using the maximum detected concentration as soil EPCs, the estimated excess lifetime cancer risk (1 x 10^{-7}) for hypothetical future on-site residents is below 1 x 10^{-6} (the conservative end of the target risk range of 10^{-6} to 10^{-4}). The estimated non-cancer HI (2) for hypothetical future on-site residents is above the non-cancer HI of greater than one. The major chemical contributor to the non-cancer HI is cadmium.
  - The soil EPC for cadmium (a maximum concentration of 5,700 µg/kg) was detected at 1.5 feet bgs at MH-SB-23 near building F, and it is the only sample in AOI-7 exceeding the residential soil RSL of 4,580 µg/kg. The other seven soil samples (at both ground surface and 1.5 feet bgs, MH-SB-22 through MH-SB-25) were collected in the same area, and the 95% UCL on the mean concentration of all eight soil samples collected near Building F is 3,592 µg/kg.
  - The excess lifetime cancer risk and non-cancer HI for hypothetical future on-site residents exposed to soil COPCs in AOI-7 were recalculated using the modified EPC of 3,592 µg/kg for cadmium. As shown in Table E.25, the refined non-cancer HI (1) is below the non-cancer HI of greater than one.

In summary, COPCs in soil in JCES and MHS are not expected to result in significant adverse health effects to hypothetical future on-site residents through direct contact with soil.

E.1.5.2.2.2 Soil Vapor

As shown in Table E.26, the estimated excess lifetime cancer risks and non-cancer HIs for hypothetical future on-site residents exposed to soil vapor migrating to outdoor air over both AOI-9 and AOI-12 are below 1x 10^{-6} (the conservative end of the target risk range of 10^{-6} to 10^{-4}) and below the non-cancer HI of greater than one.

The estimated excess lifetime cancer risks and non-cancer HQs/HIs for hypothetical future on-site residents exposed to soil vapor migrating to indoor air are presented in Table E.27,

assuming that future buildings would be constructed in AOI-9 or AOI-12. The estimated excess lifetime cancer risks and non-cancer HIs in AOI-12 are at or below 1x 10^{-6} (the conservative end of the target risk range of 10^{-6} to 10^{-4}) and below the non-cancer HI of greater than one.

In AOI-9, no VOCs were detected at 10 or 15 feet bgs. At five feet bgs, the estimated excess lifetime cancer risk (2 x 10^{-5}) based on the maximum soil vapor concentrations is above 1 x 10^{-6} but within the NCP risk range (1 x 10^{-6} to 1 x 10^{-4}), and the major chemical contributors are benzene, ethylbenzene and naphthalene at MH-SV-2 and MH-SV-4. The estimated non-cancer HI (2) based on the maximum soil vapor concentrations is above the non-cancer HI of greater than one, and the major chemical contributors are 1,2,4-trimethylbenzene and xylenes at MH-SV-2. At 20 feet bgs, the estimated excess lifetime cancer risk (6 x 10^{-5}) based on the maximum soil vapor concentrations is above 1 x 10^{-6} but within the NCP risk range (1 x 10^{-6} to 1 x 10^{-4}), and the major chemical contributors are benzene, ethylbenzene and naphthalene at MH-SV-2 and MH-SV-4. The estimated non-cancer HI (3) based on the maximum soil vapor concentrations is above the non-cancer HI of greater than one, and the major chemical contributors are xylenes, 1,2,4-trimethylbenzene and toluene at MH-SV-2.

AOI-9 (Bus Barn) historically contained two 10,000 gallon USTs. The major chemicals of concern in this area are petroleum hydrocarbon related compounds that generally degrade over time, assuming the source has been removed, as has been done in this instance. Because the school property will continue in its current use into the foreseeable future (i.e., remain a school), and due to the expectation that residual concentrations in AOI-9 (Bus Barn) will continue to decline, this single area is unlikely to represent a significant risk in the future. If land use changes to residential in the future, this area may be re-evaluated at that time.

E.1.5.2.3 Lead

In this HHSRE, to evaluate the potential adverse health effects resulting from exposure to lead in soil, especially the effects on blood lead concentrations, soil lead data were conservatively compared to the DTSC-modified RSL of 80 mg/kg for lead in residential soil for both residential and school scenarios.

Among the 268 soil samples collected at 0-10 feet in JCES and MHS, only one sample at ground surface at JC-SB-13 in AOI-1 in JCES (89 mg/kg) and one sample at 1.5 feet bgs at MH-SB-93 in AOI-5 in MHS (170 mg/kg) are above the DTSC-modified RSL of 80 mg/kg for lead in residential soil (CalEPA 2014).

JC-SB-13 is located in a planter box containing bushes along the side of Building D. The lead concentration in the other nine soil samples (at both ground surface and 1.5 feet bgs, JC-SB-9 through JC-SB-13) collected in the same planter box ranged from non-detect to 23 mg/kg. The 95% UCL on the mean concentration of the five surface soil samples in the planter box is 58 mg/kg, while the 95% UCL on the mean concentration of the ten soil samples at both depths in the planter box is 55 mg/kg, both of which are below the DTSC-modified RSL of 80 mg/kg for lead in residential soil.

MH-SB-93 is located in a planter box at the northeast corner of Building H. The lead concentration in the surface soil at MH-SB-93 is 47 mg/kg. Due to the lead detect of 170 mg/kg

at 1.5 feet bgs, step out sampling for lead was conducted within the planter box. The soil lead concentrations in the step out samples (at both ground surface and 1.5 feet bgs) ranged from 8.1 mg/kg to 49 mg/kg indicating that the 170 mg/kg was not representative of the soils in the planter box. Because of the low detections in the step out soil samples and the limited accessibility and duration of potential exposures in the planter box, lead in soil is not expected to result in significant adverse health effects to hypothetical future on-site residents, students, and teachers/staff through direct contact with soil at the site.

E.1.5.2.4 Uncertainties in Risk Assessments

The USEPA (1989) notes that the conservative assumptions used in risk assessments are intended to assure that the estimated risks do not underestimate the actual risks posed by a site and that the estimated risks do not necessarily represent actual risks experienced by population at or near a site. By using standardized conservative assumptions in a risk assessment, USEPA further states that:

> *"These values are upper-bound estimates of excess cancer risk potentially arising from lifetime exposure to the chemical in question. A number of assumptions have been made in the derivation of these values, many of which are likely to over-estimate exposure and toxicity. The actual incidence of cancer is likely to be lower than these estimates and may be zero."*

The HHSRE was based primarily on a series of conservative assumptions. The use of conservative assumptions tends to produce upper-bound estimates of risk. Although it is difficult to quantify the uncertainties associated with all the assumptions used in this assessment, the use of conservative assumptions is likely to result in a substantial overestimate of exposure, and hence, risk.

E.1.5.2.5 Conclusions

The objective of the HHSRE was to evaluate potential health risks to current/future school receptors (students and teachers/staff) and hypothetical future on-site residents due to exposure to chemicals detected in soil and soil vapor at the site.

Result summaries for the school receptors are presented in Table E.28 for soil and Table E.29 for soil vapor. Based on this site-wide HHSRE, no significant risks due to exposure to chemicals in soil (direct contact) and soil vapor (vapor migration) are expected for the current or future school students and teachers/staff.

Similarly, based on this site-wide HHSRE, no significant risks due to exposure to chemicals in soil (direct contact) or soil vapor (vapor migration) are expected for hypothetical future on-site residents in all AOIs, except AOI-9 (Bus Barn). If land use in AOI-9 (Bus Barn) should ever change to residential in the future, soil vapor adjacent to the former USTs may need to be re-evaluated at that time.

Table E.6a Modeling Parameters
Juan Cabrillo Elementary School and Malibu Middle/High School
Malibu, California

Vadose Zone Parameters	Value	Unit	Note
Vadose Zone Parameters			
Soil vapor sampling depth	5	feet	Site-specific estimate
Soil vapor sampling depth	10	feet	Site-specific estimate
Soil vapor sampling depth	15	feet	Site-specific estimate
Soil vapor sampling depth	20	feet	Site-specific estimate
Soil/groundwater temperature	19	Celsius	Estimated average shallow groundwater temperature (USEPA 2004, Figure 8)
USDA soil type in upper fill layer (0-10 cm)	Sand	--	Engineered Fill (Cal/EPA 2005)
Bulk density	1.66	g/cm^3	Default value for Engineered Fill (Cal/EPA 2005)
Total porosity	0.375	unitless	Default value for Engineered Fill (Cal/EPA 2005)
Water-filled porosity	0.054	unitless	Default value for Engineered Fill (Cal/EPA 2005)
USDA soil type in lower fill layer (10-40 cm)	Fill	--	Engineered Fill (Cal/EPA 2005)
Bulk density	1.8	g/cm^3	Default value for Engineered Fill (Cal/EPA 2005)
Total porosity	0.300	unitless	Default value for Engineered Fill (Cal/EPA 2005)
Water-filled porosity	0.15	unitless	Default value for Engineered Fill (Cal/EPA 2005)
Surface Barrier Parameters - Indoor Air Scenarios			
Thickness of foundation	10	cm	Default value (USEPA 2004)
Foundation crack ratio	0.005	unitless	Default value (Cal/EPA 2011)
Average vapor flow rate into building	5	L/min	Default value (USEPA 2004; Cal/EPA 2011)
Air Dispersion Parameters - Indoor School Scenario			
Air exchange rate (R/C)	4	1/hour	Default value from Schools Risk Screening Model (Cal/EPA 2010)
Length of building	10	meter	Default value from Schools Risk Screening Model (Cal/EPA 2010)
Width of building	10	meter	Default value from Schools Risk Screening Model (Cal/EPA 2010)
Mixing height of building (R/C)	2.44 (8)	meter (feet)	Default value from Schools Risk Screening Model (Cal/EPA 2010)
Air Dispersion Parameters - Indoor Residential Scenarios			
Air exchange rate (R/C)	0.5	1/hour	Default value for residential buildings (Cal/EPA 2011)
Length of building	10	meter	Default value (USEPA 2004)
Width of building	10	meter	Default value (USEPA 2004)
Mixing height of building (R/C)	2.44 (8)	meter (feet)	Conservative Estimate
Air Dispersion Parameters - Outdoor Scenarios			
Site area	1.13	acre	Site-specific estimate for source area
Site specific dispersion facotr (Q/C_{vol})	58.95	g/m^2-s per kg/m^3	Site-specific estimate based on default constants from meteorological station in Los Angeles (USEPA 2002).

Notes:
-- = Not Applicable
cm = centimeter
g/cm^3 = gram per cubic centimeter
g/m^2-s per kg/m^3 = (gram per square meter-second) per (kilogram per cubic meter)
L/min = liter per minute
AOI = Area of Interest
Cal/EPA = California Environmental Protection Agency
USEPA = United States Environmental Protection Agency

Table E.6b Soil Properties
Juan Cabrillo Elementary School and Malibu Middle/High School
Malibu, California

Parameter	Unit	Value			Note
		AOI-9	AOI-12 Septic Tanks 1, 4, and 11	AOI-12 Septic Tanks 3, 5, and 6	
Thickness of Layer A	ft	20	10	10	Site-Specific Estimate
Thickness of Layer B	ft	--	10	10	Site-Specific Estimate
Soil Type in Layer A	--	Silty Clay Loam	Silty Clay Loam	Silty Clay Loam	Site-Specific Estimate
Soil Type in Layer B	--	--	Silt Loam	Loamy Sand	Site-Specific Estimate
Bulk density of Layer A	g/cm^3	1.37	1.37	1.37	Default Value for Soil Type (DTSC 2014)
Total porosity of Layer A	unitless	0.482	0.482	0.482	Default Value for Soil Type (USEPA 2004)
Water-filled porosity of Layer A (a)	unitless	0.1965	0.1965	0.1965	Default Value for Soil Type (USEPA 2004)
Bulk density of Layer B	g/cm^3	--	1.49	1.62	Default Value for Soil Type (USEPA 2004)
Total porosity of Layer B	unitless	--	0.439	0.39	Default Value for Soil Type (USEPA 2004)
Water-filled porosity of Layer B	unitless	--	0.18	0.076	Default Value for Soil Type (USEPA 2004)

Notes:
-- = Not Applicable
ft = feet
g/cm^3 = gram per cubic centimeter
AOI = Area of Interest
DTSC = Department of Toxic Substances Control
USEPA = United States Environmental Protection Agency

(a) The water-filled porosity value of 0.1965 (USEPA 2004) is slightly lower than the water-filled porosity value of 0.198 listed in the DTSC version of the Johnson and Ettinger model (DTSC 2014). Using the DTSC value would result in a less conservative estimate of exposure and health risk than presented here by on average one percent (ranging from 0.5 to 1.5 percent).

Notes:
-- = Not applicable
µg/kg = microgram per kilogram
Cal/EPA = California Environmental Protection Agency
DDE = Dichlorodiphenyldichloroethylene
DDT = Dichlorodiphenyltrichloroethane
PCB = Polychlorinated Biphenyl
RSL = Regional Screening Level
SVOC = Semivolatile Organic Compound
TPH = Total Petroleum Hydrocarbon
USEPA = United States Environmental Protection Agency

a. The non-cancer RSL for mercuric chloride was used for mercury compounds in soil.
b. DDT was used as a surrogate for DDE for the non-cancer RSL.
c. Aroclor 1254 was used as a surrogate for Aroclor 1260 for the non-cancer RSL.
d. TPH C19-C32 was used as a surrogate for TPH C33-C40 for the non-cancer RSL.

RfD = Reference Dose
RfC = Reference Concentration
SVOC = Semivolatile Organic Compound
TPH = Total Petroleum Hydrocarbon
USEPA = United States Environmental Protection Agency
VOC = Volatile Organic Compound

a. Mercuric chloride was used as a surrogate for mercury.
b. The oral RfD toxicity value for vanadium was derived from the IRIS oral RfD for vanadium pentoxide by factoring out the molecular weight of the oxide ion.
c. DDT was used as a surrogate for DDE.
d. Route to route extrapolation.
e. According to USEPA (2014a), Aroclor 1254 and 1260 was assigned the high risk toxicity values from IRIS.
f. Aroclor 1254 was used as a surrogate for Aroclor 1260.
g. TPH C19-C32 was used as a surrogate for TPH C33-C40.
h. Cumene was used as a surrogate for sec-butylbenzene based on Cal/EPA 2014b.

EPC = Exposure Point Concentration
HI = Hazard Index
µg/kg = microgram per kilogram
PCB = Polychlorinated Biphenyl
HQ = Hazard Quotient
bgs = below ground surface
TPH = Total Petroleum Hydrocarbon
AOI = Area of Interest
DDE = Dichlorodiphenyldichloroethylene
DDT = Dichlorodiphenyltrichloroethane
UCL = Upper Confidence Limit

a. Soil EPCs were calculated as the 95% UCLs on the mean soil concentrations at 0-2 feet bgs in Malibu Middle/High School (excluding Athletic Fields [AOI-14] and Cornucopia [AOI-15]). Only the maximum concentration between the duplicate sample and its primary sample was included in the calculation of the 95% UCLs

b. It was assumed that after excavation PCB Aroclor 1254 will not be detected in the surface soil (0-0.5 feet bgs) at MH-SB-76 and MH-SB-118 with a detection limit of 50 µg/kg, while the concentrations for all the other chemicals will remain the same.

a. Soil vapor concentrations used to calculate outdoor air EPCs were calculated as the 95% UCLs on the mean soil vapor concentrations in each AOI. Only the maximum concentration between the duplicate sample and its primary sample was included in the calculation of the 95% UCLs. If a 95% UCL could not be calculated, the maximum detected concentration was used.

Notes:

-- = Not applicable
µg/kg = microgram per kilogram
bgs = below ground surface
AOI = Area of Interest
DDE = Dichlorodiphenyldichloroethylene
DDT = Dichlorodiphenyltrichloroethane
EPC = Exposure Point Concentration
HI = Hazard Index
HQ = Hazard Quotient
PCB = Polychlorinated Biphenyl
SVOC = Semivolatile Organic Compound
TPH = Total Petroleum Hydrocarbon
UCL = Upper Confidence Limit

a. Soil EPCs were the maximum soil concentrations at 0-10 feet bgs in each AOI or 95% UCLs on the mean soil concentrations at 0-10 feet bgs over a specific area. Only the maximum concentration between the duplicate sample and its primary sample was included in the calculation of the 95% UCLs.
b. It was assumed that after excavation PCB Aroclor 1254 will not be detected in the surface soil (0-0.5 feet bgs) at MH-SB-76 and MH-SB-118 with a detection limit of 50 µg/kg, while the concentrations for all the other chemicals will remain the same.

Notes:

There are four layers included in this model (two associated with the Site-specific soil and two associated with the default engineered fill). The total overall effective diccusion coefficient is based on diffusion through all four layers as shown below:

$D^{eff}_T = L_T/\sum(L_i/D^{eff}_i) = 594.6/((10/1.42E\text{-}2)+(30/1.77E\text{-}3)+((304.8\text{-}15\text{-}10\text{-}30)/5.83E\text{-}3)+(304.8/5.08E\text{-}3)) = 4.93E\text{-}3$

Johnson and Ettinger Model Input: Benzene and 20 feet bgs in Septic Tank 1, 4, 11 of AOI-12 for School Scenario

Gamma ROS Statistics using Imputed Non-Detects			
GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs			
GROS may not be used when kstar of detected data is small such as < 0.1			
For such situations, GROS method tends to yield inflated values of UCLs and BTVs			
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Warning: Data set has only 2 Detected Values.			
This is not enough to compute meaningful or reliable statistics and estimates.			

Note: Sample size is small (e.g., <10), if data are collected using ISM approach, you should use			
guidance provided in ITRC Tech Reg Guide on ISM (ITRC, 2012) to compute statistics of interest.			
For example, you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).			
Chebyshev UCL can be computed using the Nonparametric and All UCL Options of ProUCL 5.0

and Singh and Singh (2003). However, simulations results will not cover all Real World data sets.			
For additional insight the user may want to consult a statistician.			
ProUCL computes and outputs H-statistic based UCLs for historical reasons only.			
H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.			
It is therefore recommended to avoid the use of H-statistic based 95% UCLs.			
Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.

Result (chlordane (total)_aoi-11_soil 2 ft)

General Statistics			
Total Number of Observations	2	Number of Distinct Observations	2
Number of Detects	1	Number of Non-Detects	1
Number of Distinct Detects	1	Number of Distinct Non-Detects	1

Warning: This data set only has 2 observations!

Data set is too small to compute reliable and meaningful statistics and estimates!

The data set for variable Result (chlordane (total)_aoi-11_soil 2 ft) was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!

If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

95% Hall's Bootstrap UCL	18.94	95% Percentile Bootstrap UCL	18.89
95% BCA Bootstrap UCL	18.83		
90% Chebyshev(Mean, Sd) UCL	21.54	95% Chebyshev(Mean, Sd) UCL	24.04
97.5% Chebyshev(Mean, Sd) UCL	27.52	99% Chebyshev(Mean, Sd) UCL	34.35

Suggested UCL to Use

95% Student's-t UCL	19.2

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

These recommendations are based upon the results of the simulation studies summarized in Singh, Singh, and Iaci (2002)

and Singh and Singh (2003). However, simulations results will not cover all Real World data sets.

For additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be

reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

and Singh and Singh (2003). However, simulations results will not cover all Real World data sets.			
For additional insight the user may want to consult a statistician.			
ProUCL computes and outputs H-statistic based UCLs for historical reasons only.			
H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.			
It is therefore recommended to avoid the use of H-statistic based 95% UCLs.			
Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.

DL/2 is not a recommended method, provided for comparisons and historical reasons

Nonparametric Distribution Free UCL Statistics

Data do not follow a Discernible Distribution at 5% Significance Level

Suggested UCL to Use

95% KM (Chebyshev) UCL	0.0857

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Result (silver_aoi-15_soil 2 ft)

General Statistics

Total Number of Observations	8	Number of Distinct Observations	3
Number of Detects	2	Number of Non-Detects	6
Number of Distinct Detects	2	Number of Distinct Non-Detects	2
Minimum Detect	1.5	Minimum Non-Detect	1.5
Maximum Detect	2.3	Maximum Non-Detect	3
Variance Detects	0.32	Percent Non-Detects	75%
Mean Detects	1.9	SD Detects	0.566
Median Detects	1.9	CV Detects	0.298
Skewness Detects	N/A	Kurtosis Detects	N/A
Mean of Logged Detects	0.619	SD of Logged Detects	0.302

Warning: Data set has only 2 Detected Values.

This is not enough to compute meaningful or reliable statistics and estimates.

Note: Sample size is small (e.g., <10), if data are collected using ISM approach, you should use

guidance provided in ITRC Tech Reg Guide on ISM (ITRC, 2012) to compute statistics of interest.

For example, you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).

Chebyshev UCL can be computed using the Nonparametric and All UCL Options of ProUCL 5.0

Warning: This data set only has 1 observations!

Data set is too small to compute reliable and meaningful statistics and estimates!

The data set for variable Result (benzene_aoi-12_septic tank 1,4,11_15 ft) was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!

If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Result (benzene_aoi-12_septic tank 1,4,11_20 ft)

General Statistics

Total Number of Observations	5	Number of Distinct Observations	2
Number of Detects	1	Number of Non-Detects	4
Number of Distinct Detects	1	Number of Distinct Non-Detects	1

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!

It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable Result (benzene_aoi-12_septic tank 1,4,11_20 ft) was not processed!

Result (benzene_aoi-12_septic tank 1,4,11_5 ft)

General Statistics

Total Number of Observations	5	Number of Distinct Observations	2
Number of Detects	1	Number of Non-Detects	4
Number of Distinct Detects	1	Number of Distinct Non-Detects	1

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!

It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable Result (benzene_aoi-12_septic tank 1,4,11_5 ft) was not processed!

Result (benzene_aoi-12_septic tank 3,5,6_20 ft)

Mean of Logged Detects	-1.615	SD of Logged Detects	1.228
Warning: Data set has only 3 Detected Values.			
This is not enough to compute meaningful or reliable statistics and estimates.			
Note: Sample size is small (e.g., <10), if data are collected using ISM approach, you should use			
guidance provided in ITRC Tech Reg Guide on ISM (ITRC, 2012) to compute statistics of interest.			
For example, you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).			
Chebyshev UCL can be computed using the Nonparametric and All UCL Options of ProUCL 5.0

Nonparametric Distribution Free UCL Statistics

Detected Data appear Normal Distributed at 5% Significance Level

Suggested UCL to Use

95% KM (t) UCL	0.416	95% KM (Percentile Bootstrap) UCL	N/A

Warning: One or more Recommended UCL(s) not available!

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Result (ethyl benzene_aoi-12_septic tank 1,4,11_15 ft)

General Statistics

Total Number of Observations	1	Number of Distinct Observations	1
		Number of Missing Observations	0
Minimum	0.038	Mean	0.038
Maximum	0.038	Median	0.038

Warning: This data set only has 1 observations!

Data set is too small to compute reliable and meaningful statistics and estimates!

The data set for variable Result (ethyl benzene_aoi-12_septic tank 1,4,11_15 ft) was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!

If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Result (ethyl benzene_aoi-12_septic tank 1,4,11_20 ft)

General Statistics

Total Number of Observations	5	Number of Distinct Observations	2
Number of Detects	1	Number of Non-Detects	4
Number of Distinct Detects	1	Number of Distinct Non-Detects	1

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!

It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable Result (ethyl benzene_aoi-12_septic tank 1,4,11_20 ft) was not processed!

Result (ethyl benzene_aoi-9_20 ft)

Note: Sample size is small (e.g., <10), if data are collected using ISM approach, you should use			
guidance provided in ITRC Tech Reg Guide on ISM (ITRC, 2012) to compute statistics of interest.			
For example, you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).			
Chebyshev UCL can be computed using the Nonparametric and All UCL Options of ProUCL 5.0

Nonparametric Distribution Free UCL Statistics

Detected Data appear Normal Distributed at 5% Significance Level

Suggested UCL to Use

95% KM (t) UCL	1.468	95% KM (Percentile Bootstrap) UCL	N/A

Warning: One or more Recommended UCL(s) not available!

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Result (p-cymene_aoi-12_septic tank 1,4,11_10 ft)

General Statistics

Total Number of Observations	1	Number of Distinct Observations	1
		Number of Missing Observations	0
Minimum	0.284	Mean	0.284
Maximum	0.284	Median	0.284

Warning: This data set only has 1 observations!

Data set is too small to compute reliable and meaningful statistics and estimates!

The data set for variable Result (p-cymene_aoi-12_septic tank 1,4,11_10 ft) was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!

If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Result (p-cymene_aoi-12_septic tank 1,4,11_15 ft)

General Statistics

Total Number of Observations	1	Number of Distinct Observations	1
		Number of Missing Observations	0
Minimum	0.179	Mean	0.179
Maximum	0.179	Median	0.179

Warning: This data set only has 1 observations!

Data set is too small to compute reliable and meaningful statistics and estimates!

The data set for variable Result (p-cymene_aoi-12_septic tank 1,4,11_15 ft) was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!

If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Result (p-cymene_aoi-12_septic tank 1,4,11_20 ft)

General Statistics

Total Number of Observations	5	Number of Distinct Observations	2
Number of Detects	1	Number of Non-Detects	4
Number of Distinct Detects	1	Number of Distinct Non-Detects	1

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!

It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable Result (p-cymene_aoi-12_septic tank 1,4,11_20 ft) was not processed!

Result (p-cymene_aoi-9_20 ft)

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.			

Recommendations are based upon data size, data distribution, and skewness.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Result (sec-butylbenzene_aoi-9_sg 5 ft)

General Statistics

Total Number of Observations	6	Number of Distinct Observations	5
Number of Detects	4	Number of Non-Detects	2
Number of Distinct Detects	4	Number of Distinct Non-Detects	1
Minimum Detect	0.066	Minimum Non-Detect	0.008
Maximum Detect	0.478	Maximum Non-Detect	0.008
Variance Detects	0.0357	Percent Non-Detects	33.33%
Mean Detects	0.201	SD Detects	0.189
Median Detects	0.129	CV Detects	0.942
Skewness Detects	1.766	Kurtosis Detects	3.171
Mean of Logged Detects	-1.901	SD of Logged Detects	0.853

Note: Sample size is small (e.g., <10), if data are collected using ISM approach, you should use

guidance provided in ITRC Tech Reg Guide on ISM (ITRC, 2012) to compute statistics of interest.

For example, you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).

Chebyshev UCL can be computed using the Nonparametric and All UCL Options of ProUCL 5.0

Normal GOF Test on Detects Only

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detected data is small such as < 0.1

For such situations, GROS method tends to yield inflated values of UCLs and BTVs

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Gamma ROS Statistics using Imputed Non-Detects			
GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs			
GROS may not be used when kstar of detected data is small such as < 0.1			
For such situations, GROS method tends to yield inflated values of UCLs and BTVs			
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Result (xylenes (total)_aoi-9_sg 5 ft)

General Statistics

Total Number of Observations	6	Number of Distinct Observations	5
Number of Detects	4	Number of Non-Detects	2
Number of Distinct Detects	4	Number of Distinct Non-Detects	1
Minimum Detect	2.95	Minimum Non-Detect	0.008
Maximum Detect	103	Maximum Non-Detect	0.008
Variance Detects	2363	Percent Non-Detects	33.33%
Mean Detects	30.23	SD Detects	48.61
Median Detects	7.49	CV Detects	1.608
Skewness Detects	1.975	Kurtosis Detects	3.914
Mean of Logged Detects	2.398	SD of Logged Detects	1.578

Note: Sample size is small (e.g., <10), if data are collected using ISM approach, you should use
guidance provided in ITRC Tech Reg Guide on ISM (ITRC, 2012) to compute statistics of interest.
For example, you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options of ProUCL 5.0

Result (aroclor-1260_jces_soil 2 ft)

General Statistics

Total Number of Observations	90	Number of Distinct Observations	5
Number of Detects	1	Number of Non-Detects	89
Number of Distinct Detects	1	Number of Distinct Non-Detects	4

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!

It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable Result (aroclor-1260_jces_soil 2 ft) was not processed!

Suggested UCL to Use			
95% H-UCL	137.5		

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

These recommendations are based upon the results of the simulation studies summarized in Singh, Singh, and Iaci (2002)

and Singh and Singh (2003). However, simulations results will not cover all Real World data sets.

For additional insight the user may want to consult a statistician.

ProUCL computes and outputs H-statistic based UCLs for historical reasons only.

H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.

It is therefore recommended to avoid the use of H-statistic based 95% UCLs.

Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.

Suggested UCL to Use			
95% Student's-t UCL	19.2		
Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.			
These recommendations are based upon the results of the simulation studies summarized in Singh, Singh, and Iaci (2002)			
and Singh and Singh (2003). However, simulations results will not cover all Real World data sets.			
For additional insight the user may want to consult a statistician.			
Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be			
reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.			
Result (dieldrin_jces_soil 2 ft)			
General Statistics			
Total Number of Observations	105	Number of Distinct Observations	5

Gamma ROS Statistics using Imputed Non-Detects			
GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs			
GROS may not be used when kstar of detected data is small such as < 0.1			
For such situations, GROS method tends to yield inflated values of UCLs and BTVs			
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Skewness Detects	0.722	Kurtosis Detects	-1.99
Mean of Logged Detects	3.924	SD of Logged Detects	1.081

Note: Sample size is small (e.g., <10), if data are collected using ISM approach, you should use

guidance provided in ITRC Tech Reg Guide on ISM (ITRC, 2012) to compute statistics of interest.

For example, you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).

Chebyshev UCL can be computed using the Nonparametric and All UCL Options of ProUCL 5.0

Survey Report

SAWAYA ENGINEERING CONSULTANTS, INC.
CIVIL ENGINEERING • LAND PLANNING • SURVEYING

August 7, 2015

Ranboll Environ
Ms. Safaa Dergham, PG
Project Manager
18100 Von Karman, Suite 600
Irvine, CA 92612

Re: Juan Cabrillo Elementary School and Malibu High School Survey Data.

Ms. Dergham,

Thank you for giving Sawaya Engineering the opportunity to provide surveying services to Environ Corp.

The survey at the school sites located at 30215 and 30237 Morning View Drive, in the City of Malibu was conducted in July 2014.

The horizontal and vertical controls used are depicted in Exhibit "A".

The coordinates of the incremental sampling location for the staking of the athletic fields (300 points) as provided by Environ are depicted in Exhibit "B".

The surveyed locations at the Elementary School are depicted in Exhibit "C".

The surveyed locations at the High School are depicted in Exhibit "D".

The surveyed locations at the Cornucopia area are depicted in Exhibit "E".

Once again, thank you for the opportunity to be of service. If you have any questions or require further information, please contact us.

Respectfully submitted

Selim R. Sawaya, PE / PLS
Sawaya Engineering Consultants, INC.

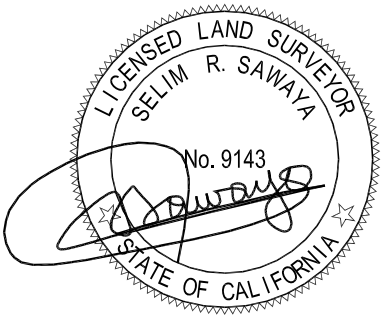

Exhibit "A"

HORIZONTAL AND VERTICAL CONTROL

Horizontal Control of eight strategically located points was established using the Online Positioning User Service (OPUS). State Plane Coordinate, California Coordinate System Zone 5 (CCS 5) based on NAD83

Vertical control used was the elevation of 85.280 feet at the found nail & Tag ls 2743, no reference, 12.50' SW'LY from street Centerline and having a coordinate of: N: 1831866.524' E: 6311249.305'

The elevation of 85.280' was based upon the North American Datum of 1988 using US National Geodetic Survey Benchmarks

Exhibit "B"
