1.0 INTRODUCTION

This Biological Resources Technical Report (BRTR) has been prepared to evaluate the potential effects on sensitive biological resources that may occur for the proposed 3575 Mendocino Avenue Project (Project). The Project includes redevelopment of an approximately 13.3 acre in-fill site to construct a compact, sustainable, transit-oriented, master planned community (transit village) of up to 532 high-density multi-family housing units.

The proposed Project is located within the City of Santa Rosa, in Sonoma County. The Project site is bordered by Mendocino Avenue, Russell Creek, Kaiser Permanente Santa Rosa Medical Center, US Highway 101 (US 101) and the Mendocino Over-change. The site is centrally located on Mendocino Avenue, a major arterial that connects the Project site with downtown Santa Rosa to the south and greater Sonoma County to the north. The Assessor's Parcel Number (APN) is 173-030-001 and 173-030-002 (Figure 1). The approximate center of the Project is located at GPS coordinate; 38°28'24.67"N, 122°43'44.25"W.

This BRTR is based on information gathered from a review of desktop resources including existing literature, data, and maps; and from a reconnaissance-level field survey of the survey area performed by Stantec Consulting Services Inc. (Stantec) biologists. The survey area for this BRTR encompasses approximately 30 acres and consists of the main proposed Project footprint with a 200-foot buffer and contains all Project components (Figure 2).

The overall purpose of this BRTR is to:

- Characterize the habitat and vegetation communities present;
- Evaluate the potential for special-status plant and animal species to occur;
- Provide the location and approximate boundary of potential Waters of the United States (WOTUS) and Waters of the State (WOTS); and
- Discuss potential impacts to special-status species, sensitive natural communities and jurisdictional aquatic features.

2.0 PROJECT DESCRIPTION

The proposed Project would redevelop an approximately 13.3-acre former mobile home park site into a compact, sustainable, transit-oriented master planned community (transit village) up to 532 units in a high-density multi-family housing development. In addition to redesigning streets, improvements and infrastructure, redevelopment of this in-fill site would include construction of 162 senior affordable housing units, up to 370 market rate housing units, approximately one acre of open space, and parking (including surface, covered and garage). The Project also includes construction of a storm drain outfall into the adjacent, off-site Russell Creek.

The proposed Project requires the following entitlements: 1) General Plan Amendment; 2) Rezoning; 3) Tentative Map; 4) Minor Design Review, and other related approvals.

3.0 METHODS

The analysis presented in this BRTR includes a review of existing information about sensitive biological resources known to occur in the vicinity of the proposed Project as well as the reconnaissance-level field survey conducted to determine whether the biological resources are absent, present, and/or are likely to be present.

3.1 DEFINITIONS

3.1.1 Special-Status Species and Sensitive Communities

For the purpose of this evaluation, "special-status" plant species include plants that are: 1) listed as threatened or endangered under the California Endangered Species Act (CESA) and/or Federal Endangered Species Act (FESA); 2) proposed for federal listing as threatened or endangered; 3) State or federal candidate species; 4) designated as rare by the California Department of Fish and Wildlife (CDFW); or 5) California Rare Plant Rank (CRPR) 1A, 1B, 2A or 2B species. Special-status animal species include species that are: 1) listed as threatened or endangered under the CESA and/or FESA; 2) proposed for federal listing as threatened or endangered; 3) State and/or federal candidate species; or 4) identified by the CDFW as species of special concern or fully protected species.

Sensitive natural communities are those communities that are of highly limited distribution, and may or may not contain rare, threatened, or endangered species. The California Natural Diversity Database (CNDDB) ranks natural communities according to their rarity and endangerment in California. Habitats are considered "sensitive" if they are identified on the CDFW List of Vegetation Alliances and Associations as being highly imperiled or classified by CDFW in the CNDDB as natural communities of special concern – Ranks S1 to S3.

3.1.2 Potential to Occur

The potential for special-status species to occur within the survey area, was classified under one of six categories as described below. Only those special-status species with an occurrence potential of "Moderate" or greater are evaluated in detail as those species are most likely to occur.

- **Present:** The species is known to be present or has been recently observed in the survey area.
- **High:** The species has been observed and documented within five miles of the survey area within the last five years and suitable habitat for the species is present.
- **Moderate:** The proposed Project is located within the range of the species, there are documented occurrences within five miles of the survey area, and/or suitable habitat for the species exists in the survey area.
- **Low:** The proposed Project is located within the range of the species and low-quality (e.g., disturbed, agricultural) habitat is present.
- **Absent:** The proposed Project area is located outside of the species range and/or potential habitat to support the species is not present in the survey area.
- **Not Present:** Potential habitat for the species is present in the survey area; however, the species has been determined to be absent from the survey area given the results of focused/protocol-level survey(s).

3.2 LITERATURE AND DATABASE REVIEW

Information about habitat types and special-status species that could occur in the survey area was obtained from the following sources:

- CDFW CNDDB plant and animal records (CDFW 2020a) (Appendix A);
- California Native Plant Society (CNPS) online *Inventory of Rare and Endangered Plants* (CNPS 2020) (Appendix A);
- Calflora (2020);
- United States Fish and Wildlife Service (USFWS) list of endangered and threatened species that may occur in the survey area (USFWS 2020a) (Appendix A); and
- USFWS Designated Critical Habitat within the survey area (USFWS 2020a)

The survey area is within the *Santa Rosa* U.S. Geological Survey (USGS) 7.5-minute quadrangle. A CNDDB and CNPS database search for special-status species included the USGS 7.5-minute quadrangles within a 5-mile radius of the Project site. In this case, the *Santa Rosa*, *Healdsburg*, *Sebastopol*, and *Mark West Springs* topographic quadrangles were queried. A 5-mile radius quadrangle search was conducted based on habitat types and migration distances for potential special-status species that could occur within the survey area. The USFWS database of endangered species was also utilized to query all federally endangered, threatened, candidate, and proposed animal and plant species, as well as designated critical habitat with known occurrences in the Project quadrangle and the adjacent quadrangles. Calflora and CNPS' Online Inventory databases were used to obtain more information on the habitat requirements of rare plants.

Other information sources consulted to determine which special-status species could potentially occur in the survey area included:

- United States Geological Survey (USGS) California 7.5-minute topographic quadrangles for *Santa Rosa*, *Healdsburg*, *Sebastopol*, and *Mark West Springs*;
- Aerial photographs of the survey area and surrounding vicinity (Google Earth 2020);
- USFWS National Wetlands Inventory (USFWS 2020b);
- *Special Animals List* (CDFW 2020b);
- *State and Federally Listed Endangered and Threatened Animals of California* (CDFW 2020c);
- *State and Federally Listed Endangered, Threatened and Rare Plants of California* (CDFW 2020d);
- *Special Vascular Plants, Bryophytes, and Lichens List* (CDFW 2020e);
- California Wildlife Habitat Relationships System (WHRS) (CDFW 2014); and
- Other pertinent databases and literature, including *The Jepson Manual: Vascular Plants of California*, *Second Edition* (Baldwin et. al. 2012).

Based on this background research, a list of special-status species that have the potential to occur or are known to occur in the survey area and vicinity was developed. The list was refined based on a reconnaissance-level biological field survey to determine the potential for those species to occur in the survey area.

3.3 FIELD SURVEYS CONDUCTED

A biological survey for special-status species and sensitive natural communities was conducted by Stantec Biologists Jared Elia and Scott Elder on June 3, 2020. The biological survey was performed by walking meandering transects throughout the entire survey area to characterize habitats, identify aquatic resources that may be subject to regulatory agency jurisdiction (e.g., United States Army Corps of Engineers [USACE], Regional Water Quality Control Board (RWQCB) and CDFW), assess potential for special-status species to occur, and to record observed species. To better focus the field survey efforts on those plant and animal special-status species that may occur in the survey area, a target list of potentially occurring species was developed during the literature and database review process. Plant taxonomy for the botanical survey was determined using the Jepson Manual (Baldwin et al. 2012).

4.0 REGULATORY CONTEXT

4.1 FEDERAL REGULATORY REQUIREMENTS

4.1.1 Federal Endangered Species Act

The FESA of 1973 was established to protect and recover endangered and threatened species and the ecosystems upon which they depend. According to the FESA "endangered" indicates a species is in danger of extinction throughout all or a significant portion of its range. In addition, the FESA defines a species as "threatened" if that species is likely to become endangered within the foreseeable future. The USFWS maintains a list of endangered and threatened species. The USFWS and the National Marine Fisheries Service (NMFS) administer FESA and are responsible for consulting with other federal agencies pursuant to FESA. Consultation with the USFWS would be necessary if a proposed Project action has the potential to affect federally listed species, their habitat, as well as areas of Designated Critical Habitat (DCH). This consultation would proceed under Section 7 of the FESA if a federal action is required for the Project or it would proceed through Section 10 of the FESA if no such federal nexus were available.

4.1.2 Clean Water Act

The objective of the Clean Water Act (CWA) of 1977, as amended, is to maintain and restore the chemical, physical, and biological integrity of the nation's waters. The discharge of dredged or fill material into Waters of the US (WOTUS), including jurisdictional wetlands, is regulated under Section 404 of the CWA by the USACE via a permitting process. Surface water quality is further regulated by the United States Environmental Protection Agency (USEPA); in California this authority is delegated to the State Water Resources Control Board (SWRCB) or the RWQCB. Applicants for Section 404 permits are also required to comply with Section 401 of the CWA by obtaining Water Quality Certification (WQC) through the State.

4.1.3 Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) of 1918 enacts the provisions of treaties between the United States, Great Britain, Mexico, Japan, and the Soviet Union and authorizes the U.S. Secretary of the Interior to protect and regulate the taking of migratory birds. This treaty prohibits "take," which has been variously defined to include harming any migratory bird listed under the MBTA, including nests, eggs, and/or young.

4.1.4 Executive Orders

Federal agencies are required to demonstrate that their actions comply with Presidential Executive Orders established to protect the environment. Relevant Executive Orders include the following:

- **Executive Order 11990 (Wetlands):** For Projects that could affect wetlands, federal agencies are required to demonstrate that no practicable alternative exists to avoid the wetland(s) and that all practicable avoidance, mitigation, and/or preservation measures have been incorporated into a project to minimize impacts to wetlands. Federal agencies are also required to provide opportunity for early public review of any plans or proposals for new construction in wetlands.

- **Executive Order 11988 (Floodplain Management):** For projects that may be located in a floodplain, federal agencies are required to evaluate the effects of the action on the floodplain and identify practicable alternatives or measures to avoid long- and short-term adverse impacts associated with the occupancy and modification of the floodplain and to avoid incompatible development in the floodplain.
- **Executive Order 13112 (Invasive Species):** Federal agencies are required to prevent the introduction of invasive species and not authorize actions that could cause or promote the introduction or spread of invasive species. Federal agencies need to identify feasible and prudent measures to minimize the risk of harm caused by invasive species.
- **Executive Order 13186 (Migratory Birds):** Federal agencies are required to evaluate the effects of their actions on migratory birds, with emphasis on species of concern, and to minimize the take of migratory birds through development of procedures for evaluating such take and conservation efforts in coordination with the USFWS. This Executive Order further implements the MBTA and requires coordination between the USFWS and federal agencies.

4.2 CALIFORNIA REGULATORY REQUIREMENTS

4.2.1 California Endangered Species Act

The CESA prohibits "take" of plants or animals listed as endangered or threatened and protects native species of fish, amphibians, reptiles, birds, mammals, invertebrates, and plants, and their habitats, that are threatened with extinction or experiencing a significant decline which, if not halted, would lead to a threatened or endangered designation. "Take" is defined in Section 86 of the California Fish and Game Code (FGC) as to "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." CESA authorizes the CDFW to issue incidental take permits for state-listed species, when specific criteria are met.

4.2.2 Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act (Porter-Cologne), Section 1601 to 1602 of the California FGC, authorizes the SWRCB to oversee water rights and water quality policy, and as such has established nine RWQCBs to protect and enhance water quality at the regional and local levels. In addition to preparing WQCs to designate beneficial uses of water bodies in each region, the RWQCBs issue a permit, referred to as a Waste Discharge Requirement (WDR), for activities that result in pollutant or nuisance discharges that may affect surface or groundwater, including isolated wetlands not subject to the jurisdiction of the USACE.

4.2.3 California Fish and Game Code

The California FGC has several provisions for the protection of Waters of the State (WOTS), and special-status plant, fish, and wildlife resources, including their habitat. The applicable California FGCs are as follows:

- **Sections 1600-1616 (Streambed Alteration):** The CDFW is responsible for the protection and conservation of fish and wildlife resources in California. Under Section 1602, CDFW has the authority to issue Lake or Streambed Alteration Agreements (LSAA) for construction activities that substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake designated by the CDFW as providing resources for fish or wildlife.

- **Sections 1900-1913 (Native Plant Protection Act):** The Native Plant Protection Act (NPPA) of 1977 prohibits the taking, possessing, or sale within the State of any plants that the CDFW has determined are rare, threatened, or endangered. The CDFW has the authority to enforce the provisions of this act and authorize measures to salvage native plants that may otherwise be affected by project activities, if deemed appropriate.
- **Sections 3500-3516 (Game Birds and Birds of Prey):** The CDFW protects game birds, birds of prey, migratory birds, and fully protected birds and their nests, eggs, and young from take or possession, except as otherwise provided by the code (e.g., incidental take under CESA).
- **Sections 3511, 4700, 5050, and 5515 (Fully Protected Species):** California statutes accord a "fully protected" status to specific birds, mammals, reptiles, amphibians, and fish. These species cannot be "taken," and no process exists for issuance of incidental take permits for fully protected species.

5.0 ENVIRONMENTAL SETTING

5.1 SITE CONDITIONS AND LAND USE

5.1.1 Local Setting and Existing Land Use

The Project site is an irregular shaped parcel that has previously been fully developed. The most recent use of the property was the former Journey's End Mobile Home Park which was destroyed in the October 2017 Tubbs Fire. The Park has been formally closed and is unoccupied. The Project site is generally comprised of developed areas including paved asphalt, dirt/gravel and limited, fire damaged vegetation. The southern portion of the site is occupied by multiple uninhabited mobile homes, which were being removed at the time of preparation of this report from the Project site as part of the Park closure process.

The Project site is completely surrounded by urban development and located in close proximity to services and major employers, including healthcare and medical services, retail, restaurant, and market/grocery. The Project site is surrounded by the following land uses:

- **North:** Mendocino Over-change
- **East:** Commercial and office uses
- **South:** Russell Creek, Kaiser Permanente Santa Rosa Medical Center
- **West:** US 101 and commercial uses

5.1.2 Physical Conditions

The topography of the survey area is relatively flat, with the survey area gradual sloping east to west. At the southern end of the survey area, the land slopes down where Russell Creek flows adjacent to the Project site. The survey area occurs at elevations between 141 and 149 feet (ft) above mean sea level. Regionally, the survey area has a Mediterranean climate characterized by hot, dry summers and moderate winters, with average temperatures ranging seasonally from 57.3 to 82.5 degrees Fahrenheit (°F). Historical data used to describe the climate was collected at Santa Rosa, California (Western Regional Climate Center 2020). The station is located approximately 2.8 miles southeast of the survey area. Precipitation in the survey area occurs as rain. Average annual rainfall is 30.13 inches and occurs primarily from December through February. The growing season (i.e., 50 percent probability of air temperature 28ºF or higher) in the survey area is around 310 days (Western Regional Climate Center 2020).

5.2 BIOTIC HABITATS

5.2.1 Vegetation Communities

Vegetation types in the survey area were classified based on descriptions provided in *A Guide to Wildlife Habitats of California* (Mayer and Laudenslayer 1988), as well as the *California Natural Community List* (CDFW 2019f), which is adapted from the technical approach and vegetation alliance classification system described in *A Manual of California Vegetation* (Sawyer et al. 2009). The vegetation communities present in the survey area are primarily barren and ruderal with urban development. Aquatic vegetation communities within the survey area consisted of fresh emergent

wetland and perennial stream. Descriptions of the vegetation communities within the survey area are provided below. Representative photographs are provided in Appendix B, and a complete list of plant and wildlife species observed is provided in Appendix C.

Upland Habitat Types

Barren and Ruderal

Barren and ruderal habitat occur within a majority of the survey area. The Project site was a previous mobile home park that burned in 2017, the site consists of existing residential streets and vegetated lots where mobile homes previously existed. Vegetation within previous mobile home lots consists of barren patches including primarily opportunistic non-native and invasive ruderal forb species, such as wild oats (*Avena fatua*), bristly ox-tongue (*Helminthotheca echioides*), prickly lettuce (*Latuca serrioloa*), annual sweetclover (*Melilotus indicus*), rabbitsfoot grass (*Polypogon monspeliensis*) and Jersey cudweed (*Pseudognaphalium leteoalbum*).

Urban/Developed

This land use type does not describe any specific vegetation type under Sawyer et al. (2009) but encompasses land that has been anthropogenically modified with structures and facilities, including roads and buildings. Ornamental plantings and ruderal vegetation may be present within and/or on the margins of developed areas. A small portion of the survey area extends into the commercial development along the southern and eastern extents.

Aquatic Habitat Types

Fresh Emergent Wetland

One fresh emergent wetland occurs within the survey area (Figure 2), located within the southeastern portion of the Project site. The fresh emergent wetland is approximately 0.019 acres and located between existing paved roadways and appears to receive roadside runoff during precipitation events. Dominant hydrophytic herbaceous vegetation included tall faltsedge (*Cyperus eragrostis*), Hyssop loosestrife (*Lythrum hyssopifolia*), and common spike rush (*Eleocharis macrostachya*). Hydrology indicators were observed in the form of Soil Cracks and hydric soils observed were Depleted Dark Surfaces.

Perennial Stream

One perennial stream was observed in the survey area (Figure 2) located just south of the Project site. This feature is also referred to as Russell Creek and appears to convey water year-around and is a tributary to Santa Rosa Creek. This feature receives enough water during the rainy season to develop a bed, bank, and channel and exhibit an ordinary high water mark. The section of stream within the survey area is approximately 0.192 acres (1,045 linear feet) and has been channelized as it flows between the Project site and a commercial development. Vegetation along the stream within the survey area consisted of herbs and forbs in the understory with trees in the overstory. Trees observed included coast live oak (*Quercus agrifolia*) and arroyo willow (*Salix angustifolia*). Understory vegetation consisted of velvet grass (*Holcus lanatus*), harding grass (*Phalaris aquatica*), wild radish (*Raphanus sativus*), curly dock (*Rumex crisp*us), field hedge parsley (*Torilis arvensis*), spring vetch (*Vicia sativa*), common rush (*Juncus effuses*), English ivy (*Hedera helix*), Himalayan blackberry (*Rubus armeniacus*), and sweet fennel (*Foeniculum vulgare*).

5.2.2 Habitat Connectivity

Habitat corridors are segments of land that provide linkages for wildlife movement between different habitats while also providing cover. Corridors also function as avenues along which plants can propagate, genetic interchange can occur, populations can move in response to environmental changes and natural disasters, and populations can be replenished from other areas. Habitat corridors often consist of riparian areas along streams, rivers, or other natural features. The survey area contains a perennial stream that could provide a potential corridor for aquatic and semi-aquatic species dispersal and/or migration. The survey area is also within the Santa Rosa Plain Conservation Service Action (USFWS 2017) which was established to help protect federally listed species that occur within the Santa Rosa Plain. Within the Santa Rosa Plain Conservation Area, the survey area is designated as "Already Developed or Permitted."

5.2.3 Invasive Species

Invasive plants (i.e., noxious weeds) are undesirable, non-native plants that commonly invade disturbed sites. Most species were introduced from Europe and Asia and many are known to negatively affect native wildlife habitat and plant communities. When disturbance results in the creation of habitat openings or in the loss of intact native vegetation, invasive plants may colonize the site and spread, often out-competing native species. Once established, they are very difficult to eradicate.

All pertinent non-native plant species were reviewed to determine their status as invasive plants according to the ratings in the California Invasive Plant Inventory produced by California Invasive Plant Council (Cal-IPC) (Cal-IPC 2006, 2020). Cal-IPC categorizes non-native invasive plants into three categories of overall negative ecological impact in California as "high", "moderate", and "limited". Invasive species with a Cal-IPC rating of "high" that were observed in the survey area include Sweet fennel, English ivy, and Himalayan blackberry.

5.2.4 Sensitive Natural Communities and Aquatic Habitats

Habitats are considered "sensitive" by CDFW if they are identified on the List of Vegetation Alliances and Associations as being highly imperiled or classified by CDFW in the CNDDB as natural communities of special concern – Ranks S1 to S3. No sensitive natural communities were observed within the survey area.

Potential WOTUS and State were also observed in the survey area, including one perennial stream and one freshwater emergent wetland.

5.2.5 Special-Status Plant Species

Regionally occurring special-status plant species were identified based on a review of pertinent literature, the USFWS species list, CNDDB, and CNPS database records, and the reconnaissance-level biological field survey results. CNDDB special-status plant species occurrences within five miles of the survey area are illustrated in Figure 3. For each species, habitat requirements were assessed and compared to the habitats in the survey area and immediate vicinity to determine if potential habitat occurs in the survey area. For the purposes of this review, all regionally occurring plant species listed under the FESA, CESA and CNPS are included in Table 1, regardless of whether the survey area provides potential habitat. Based on database records 47 special-status plants were evaluated for their potential to occur within the survey area. Of these 47 species, all of them were determined to be absent from the survey area and therefore none were found to have a high or moderate potential to occur as discussed in Table 1.

Table 1. Special-Status Plant Species with Potential to Occur in the Survey Area

Common Name Scientific Name	Listing Status[1] (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
Sonoma Alopecurus *Alopecurus aequalis* var. *sonomensis*	FE/-/1B.1	Freshwater marshes and swamps and riparian scrub. Elev. 15-1200 ft.	May-Jul	**Absent**. The survey area does not contain scrub or marsh habitat and this species was not observed during the biological survey.
Napa false indigo *Amorpha californica* var. *napensis*	-/-/1B.2	Broadleafed upland forest in openings, chaparral, and cismontane woodland. Elev. 395-6560 ft.	Apr-Jul	**Absent**. The survey area does not contain forests, woodland, or chaparral habitat and this species was not observed during the biological survey.
Bent-flowered fiddleneck *Amsinckia lunaris*	-/-/1B.2	Coastal bluff scrub, cismontane woodland, and valley and foothill grassland. Elev. 10-1640 ft.	Mar-Jun	**Absent**. The survey area does not contain scrub, woodland, or grassland habitat and this species was not observed during the biological survey.
Vine Hill manzanita *Arctostaphylos densiflora*	-/SE/1B.1	Chaparral in acid marine sand soils. Elev. 165-395 ft.	Feb-Apr	**Absent**. The survey area does not contain chaparral habitat and this species was not observed during the biological survey.
Rincon Ridge manzanita *Arctostaphylos stanfordiana* ssp. *Decumbens*	-/-/1B.1	Chaparral in rhyolitic soils and cismontane woodland. Elev. 245-1215 ft.	Feb-Apr	**Absent**. The survey area does not contain woodland or chaparral habitat and this species was not observed during the biological survey.
Clara Hunt's milk-vetch *Astragalus claranus*	FE/ST/1B.1	Serpentinite or volcanic, rocky, and clay soils in chaparral openings, cismontane woodland, and valley and foothill grassland. Elev. 245-900 ft.	Mar-May	**Absent**. The survey area does not contain woodland, grassland, or chaparral habitat and this species was not observed during the biological survey.
Big-scale balsamroot *Balsamorhiza macrolepis*	-/-/1B.2	Chaparral, cismontane woodland, valley and foothill grassland (sometimes serpentinite soils). Elev. 145-5100 ft.	Mar-Jun	**Absent**. The survey area does not contain woodland, or grassland habitat and this species was not observed during the biological survey.

Common Name Scientific Name	Listing Status[1] (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
Sonoma sunshine *Blennosperma bakeri*	FE/SE/1B.1	Mesic valley and foothill grassland and vernal pools. Elev. 30-360 ft.	Mar-May	**Absent**. The survey area does not contain grassland habitat or vernal pools and this species was not observed during the biological survey.
Narrow-anthered brodiaea *Brodiaea leptandra*	-/-/1B.2	Volcanic soils in broadleafed upland forest, chaparral, cismontane woodland, lower montane coniferous forest, and valley and foothill grassland. Elev. 360-3000 ft.	May-Jul	**Absent**. The survey area does not contain forests, woodland, or grassland habitat and this species was not observed during the biological survey.
Thurber's reed grass *Calamagrostis crassiglumis*	-/-/2B.1	Mesic coastal scrub and freshwater marshes and swamps. Elev. 30-195 ft.	May-Aug	**Absent**. The survey area does not contain scrub or marsh habitat and this species was not observed during the biological survey.
Swamp harebell *Campanula californica*	-/-/1B.2	Mesic habitat in bogs and fens, closed-cone coniferous forest, coastal prairie, meadows and seeps, freshwater marshes and swamps, and North Coast coniferous forest. Elev. 5-1330 ft.	Jun-Oct	**Absent**. The survey area does not contain bogs and fens, forest, prairie, meadows and seeps, or marsh habitat and this species was not observed during the biological survey.
Pitkin Marsh paintbrush *Castilleja uliginosa*	-/SE/1A	Freshwater marshes and swamps. Elev. unknown	Jun-Jul	**Absent**. The survey area does not contain marsh habitat and this species was not observed during the biological survey.
Rincon Ridge ceanothus *Ceanothus confuses*	-/-/1B.1	Volcanic or serpentinite soils in closed-cone coniferous forest, chaparral, and cismontane woodland. Elev. 245-3495 ft.	Feb-Jun	**Absent**. The survey area does not contain forest, woodland, or chaparral habitat and this species was not observed during the biological survey.

Common Name Scientific Name	Listing Status[1] (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
Calistoga ceanothus *Ceanothus divergens*	-/-/1B.2	Serpentinite or volcanic, rocky soils in chaparral. Elev. 555-3115 ft.	Feb-Apr	**Absent**. The survey area does not contain chaparral habitat and this species was not observed during the biological survey.
Vine Hill ceanothus *Ceanothus foliosus* var. *vineatus*	-/-/1B.1	Chaparral. Elev. 145-1000 ft.	Mar-May	**Absent**. The survey area does not contain chaparral habitat and this species was not observed during the biological survey.
Holly-leaved Ceanothus *Ceanothus purpureus*	-/-/1B.2	Volcanic, rocky soils in chaparral and cismontane woodland. Elev. 395-2100 ft.	Feb-Jun	**Absent**. The survey area does not contain chaparral or woodland habitat and this species was not observed during the biological survey.
Sonoma ceanothus *Ceanothus sonomensis*	-/-/1B.2	Sandy, serpentinite, or volcanic soils in chaparral. Elev. 705-2625 ft.	Feb-Apr	**Absent**. The survey area does not contain chaparral habitat and this species was not observed during the biological survey.
Pappose tarplant *Centromadia parryi* ssp. *parryi*	-/-/1B.2	Often alkaline soils in chaparral, coastal prairie, meadows and seeps, coastal salt marshes and swamps, and vernally mesic valley and foothill grassland. Elev. 0-1375 ft.	May-Nov	**Absent**. The survey area does not contain chaparral, prairie, meadow, salt marsh, or grassland habitat and this species was not observed during the biological survey.
Sonoma spineflower *Chorizanthe valida*	FE/SE/1B.1	Sandy soils in coastal prairie. Elev. 30-1000 ft.	Jun-Aug	**Absent**. The survey area does not contain prairie habitat and this species was not observed during the biological survey.
Vine Hill clarkia *Clarkia imbricata*	FE/SE/1B.1	Acidic sandy loam soils in chaparral and valley and foothill grassland. Elev. 165-245 ft.	Jun-Aug	**Absent**. The survey area does not contain chaparral or grassland habitat and this species was not observed during the biological survey.
Peruvian dodder *Cuscuta obtusiflora* var. *glandulosa*	-/-/2B.2	Freshwater marshes and swamps. Elev. 50-920 ft.	Jul-Oct	**Absent**. The survey area does not contain marsh habitat and this species was not observed during the biological survey.

Common Name Scientific Name	Listing Status[1] (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
Golden larkspur *Delphinium luteum*	FE/SR/1B.1	Rocky soils in chaparral, coastal prairie, and coastal scrub. Elev. 0-330 ft.	Mar-May	**Absent**. The survey area does not contain chaparral, prairie, or scrub habitat and this species was not observed during the biological survey.
Dwarf downingia *Downingia pusilla*	-/-/2B.2	Valley and foothill grassland in mesic habitats and vernal pools. Elev. 5-1460 ft.	Mar-May	**Absent**. The survey area does not contain grassland habitat or vernal pools and this species was not observed during the biological survey.
Fragrant fritillary *Fritillaria liliacea*	-/-/1B.2	Cismontane woodland, coastal prairie, coastal scrub, valley and foothill grassland often in serpentinite soil. Elev. 10-1345 ft.	Feb-Apr	**Absent**. The survey area does not contain woodland, prairie, scrub, or grassland habitat and this species was not observed during the biological survey.
Boggs Lake hedge-hyssop *Gratiola heterosepala*	-/SE/1B.2	Marshes and swamps (freshwater), vernal pools. Elev. 13-7,907 ft	Apr-Aug	**Absent**. The survey area does not contain marsh habitat or vernal pools and this species was not observed during the biological survey.
Congested-headed hayfield tarplant *Hemizonia congesta* ssp. *congesta*	-/-/1B.2	Valley and foothill grassland. Elev. 16-1,706 ft.	Apr-Nov	**Absent**. The survey area does not contain grassland habitat and this species was not observed during the biological survey.
Thin-lobed horkelia *Horkelia tenuiloba*	-/-/1B.2	Broadleafed upland forest, chaparral, valley and foothill grassland. Elev, 148-2,100 ft	May-Jul	**Absent**. The survey area does not contain forest, chaparral, or grassland habitat and this species was not observed during the biological survey.
Burke's goldfields *Lasthenia burkei*	FE/SE/1B.1	Vernal pools, meadows and seeps. Elev. 50-1,903 ft.	Apr-Jun	**Absent**. The survey area does not contain vernal pools or meadow habitat and this species was not observed during the biological survey.

Common Name Scientific Name	Listing Status[1] (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
Baker's goldfields *Lasthenia californica* ssp. *bakeri*	-/-/1B.2	Closed-cone coniferous forest, coastal scrub, meadows and seeps, marshes and swamps. Elev. 197-1,706 ft.	Apr-Oct	**Absent**. The survey area does not contain forest, scrub, meadow, or marsh habitat and this species was not observed during the biological survey.
Colusa layia *Layia septentrionalis*	-/-/1B.2	Chaparral, cismontane woodland, valley and foothill grassland. Elev. 50-3,609 ft.	Apr-May	**Absent**. The survey area does not contain chaparral, woodland, or grassland habitat and this species was not observed during the biological survey.
Legenere *Legenere limosa*	-/-/1B.1	Vernal pools. Elev. 5-2885 ft.	Apr-Jun	**Absent**. The survey area does not contain vernal pools and this species was not observed during the biological survey.
Jepson's leptosiphon *Leptosiphon jepsonii*	-/-/1B.2	Usually volcanic soils in chaparral, cismontane woodland, and valley and foothill grassland. Elev. 330-1640 ft.	Mar-May	**Absent**. The survey area does not contain chaparral, woodland, or grassland habitat and this species was not observed during the biological survey.
Pitkin Marsh lily *Lilium pardalinum ssp. pitkinense*	FE/SE/1B.1	Cismontane woodland, meadows and seeps, marshes and swamps. Elev. 148-213 ft.	Jun-Jul	**Absent**. The survey area does not contain woodland, meadow, or marsh habitat and this species was not observed during the biological survey.
Sebastopol meadowfoam *Limnanthes vinculans*	FE/SE/1B.1	Meadows and seeps, vernal pools, valley and foothill grassland. Elev. 50-377 ft.	Apr-May	**Absent**. The survey area does not contain vernal pools, meadow, or grassland habitat and this species was not observed during the biological survey.
Cobb Mountain lupine *Lupinus sericatus*	-/-/1B.2	Chaparral, cismontane woodland, lower montane coniferous forest, broadleafed upland forest. Elev. 394-4,560 ft.	Mar-Jun	**Absent**. The survey area does not contain chaparral, woodland, or forest habitat and this species was not observed during the biological survey.

Common Name Scientific Name	Listing Status[1] (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
Marsh microseris *Microseris paludosa*	-/-/1B.2	Closed-cone coniferous forest, cismontane woodland, coastal scrub, valley and foothill grassland. Elev. 10-2,001 ft.	Apr-Jun	**Absent**. The survey area does not contain forest, woodland, scrub, or grassland habitat and this species was not observed during the biological survey.
Baker's navarretia *Navarretia leucocephala* ssp. *bakeri*	-/-/1B.1	Cismontane woodland, meadows and seeps, vernal pools, valley and foothill grassland, lower montane coniferous forest. Elev. 10-5,512 ft.	Apr-Jul	**Absent**. The survey area does not contain woodland, vernal pools, meadow, forest, or grassland habitat and this species was not observed during the biological survey.
Many-flowered navarretia *Navarretia leucocephala ssp. plieantha*	FE/SE/1B.2	Vernal pools. Elev. 98-3,002 ft.	Apr-Jun	**Absent**. The survey area does not contain vernal pools and this species was not observed during the biological survey.
White beaked-rush *Rhynchospora alba*	-/-/2B.2	Bogs and fens, meadows and seeps, marshes and swamps. Elev. 197-6,152 ft.	Jul-Aug	**Absent**. The survey area does not contain bogs and fens, meadow, or marsh habitat and this species was not observed during the biological survey.
California beaked-rush *Rhynchospora californica*	-/-/1B.1	Bogs and fens, marshes and swamps, lower montane coniferous forest, meadows and seeps. Elev. 148-886 ft.	May-Jul	**Absent**. The survey area does not contain bogs and fens, marsh, forest, or meadow habitat and this species was not observed during the biological survey.
Brownish beaked-rush *Rhynchospora capitellata*	-/-/2B.2	Lower montane coniferous forest, meadows and seeps, marshes and swamps, upper montane coniferous forest. Elev. 148-5,610 ft.	Jul-Aug	**Absent**. The survey area does not contain forest, meadow, or marsh habitat and this species was not observed during the biological survey.
Round-headed beaked-rush *Rhynchospora globularis*	-/-/2B.1	Marshes and swamps. Elev. 148-197 ft.	Jul-Aug	**Absent**. The survey area does not contain marsh habitat and this species was not observed during the biological survey.

Common Name Scientific Name	Listing Status[1] (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
Two-fork clover *Trifolium amoenum*	FE/-/1B.1	Coastal bluff scrub and sometimes in serpentinite soils in valley and foothill grassland. Elev. 15-1360 ft.	Apr-Jun	**Absent**. The survey area does not contain scrub or grassland habitat and this species was not observed during the biological survey.
Santa Cruz clover *Trifolium buckwestiorum*	-/-/1B.1	Gravelly soil, along margins in broadleafed upland forest, cismontane woodland, and coastal prairie. Elev. 345-2000 ft.	Apr-Oct	**Absent**. The survey area does not contain forest, woodland, or prairie habitat and this species was not observed during the biological survey.
Saline clover *Trifolium hydrophilum*	-/-/1B.2	Marshes and swamps, valley and foothill grassland in mesic areas with alkaline soil, vernal pools. Elev. 0-985 ft.	Apr-Jun	**Absent**. The survey area does not contain marsh, vernal pools, or grassland habitat and this species was not observed during the biological survey.
Coastal triquetrella *Triquetrella californica*	-/-/1B.2	Coastal bluff scrub and coastal scrub Elev. 30-330 ft.	n/a (moss)	**Absent**. The survey area does not contain scrub habitat and this species was not observed during the biological survey.
Oval-leaved viburnum *Viburnum ellipticum*	-/-/2B.3	Chaparral, cismontane woodland, and lower montane coniferous forest. Elev. 705-4595 ft.	May-Jun	**Absent**. The survey area does not contain chaparral, woodland, or forest habitat and this species was not observed during the biological survey.

[1]Federal and State Status Codes
- = No status, or not applicable
FE = Listed as endangered under the Federal Endangered Species Act (FESA); FT = Listed as threatened under FESA
SE = Listed as endangered under the California Endangered Species Act (CESA); SR = Listed as rare under CESA; ST = Listed as threatened under CESA

CNPS Ranking
1A = Presumed extinct in California and either rare or extinct elsewhere.
1B = Rare, threatened, or endangered in California and elsewhere.
2A = Presumed extinct in California but common elsewhere.
2B = Rare, threatened, or endangered in California but more common elsewhere.

Threat Ranks
0.1 = Seriously threatened in California (more than 80% of occurrences threatened/high degree and immediacy of threat).
0.2 = Moderately threatened in California (20-80% occurrences threatened/moderate degree and immediacy of threat).
0.3 = Not very threatened in California (less than 20% of occurrences threatened/low degree and immediacy of threat or no current threats known).

5.2.6 Special-Status Animal Species

Regionally occurring special-status animal species were identified based on a review of pertinent literature, the USFWS species list, CNDDB database records, a query of the California WHRS (CDFW 2014), and the reconnaissance-level biological field survey results. CNDDB special-status animal species occurrences within five miles of the survey area are illustrated in Figure 4. For each species, habitat requirements were assessed and compared to the habitats in the survey area and immediate vicinity to determine the species' potential to occur in or near the survey area. For the purposes of this review, all regionally occurring wildlife species listed under the FESA or CESA are included in Table 2, regardless of whether the survey area provides potential habitat. The literature and database review identified 21 special-status wildlife species with suitable habitat or known to occur in or near the survey area. Based on initial assessment of wildlife habitats conducted during the biological survey, 19 of these species were determined to be absent, 2 have a low potential to occur and none of these species were determined to be present or have a high or moderate potential to occur.

Table 2. Special-Status Animal Species within Potential to Occur in the Survey Area

Common Name Scientific Name	Listing Status[1] (Fed/State)	Known Habitat Requirements	Potential for Occurrence
Invertebrates			
California freshwater shrimp *Syncaris pacifica*	FE/SE	Endemic to Marin, Napa, and Sonoma counties. Found in low-elevation, low-gradient streams where riparian cover is moderate to heavy; in shallow pools away from main streamflow.	**Absent.** No suitable aquatic habitat for this species occurs within the survey area. There are no CNDDB occurrences for this species within 5-miles of the Project site.
Western bumble bee *Bombus occidentalis*	-/CE	Meadows and grasslands with abundant floral resources throughout the mountains and northern coast of California. Nests in underground cavities including old rodent burrows in open west-southwest slopes bordered by trees.	**Absent.** No suitable nesting habitat occurs within the survey area. There is one historical record from 1947 within 5-miles of the survey area.
San Bruno elfin butterfly *Callophrys mossii bayensis*	FE/-	Found in coastal, mountainous areas with grassy ground cover, mainly in the vicinity of San Bruno Mountain, San Mateo County. Colonies are located on steep, north-facing slopes. Larval host plant is *Sedum spathulifolium*.	**Absent.** The survey area does not provide habitat for larval host plants and there are no CNDDB occurrences within 5-miles of the Project site.
Fish			
Coho salmon-central California coast ESU *Oncorhynchus kisutch* pop. 4	FE/TE	Federal listing = pops between Punta Gorda & San Lorenzo River. State listing = pops south of Punta Gorda. Require beds of loose, silt-free, coarse gravel for spawning. Also need cover, cool water & sufficient dissolved oxygen.	**Absent.** The survey area does not provide suitable spawning or migration habitat for this species. Within the survey area, Russell Creek flows through a modified channel with clay substrate. Upstream of the survey area, Russell Creek flows through culverts and narrow drainages, with no suitable spawning habitat.
Steelhead – Central Valley DPS *Oncorhynchus mykiss irideus*	FT/-	Populations in the Sacramento and San Joaquin rivers and their tributaries.	**Absent.** The survey area is not within the Sacramento or San Joaquin River watersheds; therefore, this DPS would not occur within the survey area.

Common Name Scientific Name	Listing Status[1] (Fed/State)	Known Habitat Requirements	Potential for Occurrence
Russian River tule perch *Hysterocarpus traskii pomo*	-/SSC	Low elevation streams of the Russian River system. Requires clear, flowing water with abundant cover. They also require deep (> 1 m) pool habitat.	**Absent.** The survey area does not provide suitable aquatic habitat for this species. Within the survey area, Russell Creek lacks abundant cover from emergent or riparian vegetation.
Navarro roach *Lavinia symmetricus navarroensis*	-/SSC	Found in warm, intermittent streams as well as cold, well-aerated streams. Navarro roach are confined to the Navarro River and its tributaries.	**Absent.** The survey area is not within the Navarro River watershed; therefore, this species would not occur within the survey area. Only one CNDDB occurrences for this species from 1999 is within 5-miles of the Project, within West Mark Creek approximately 4-miles north of the Project.
Amphibians			
California tiger salamander *Ambystoma californiense*	FT/ST	Central Valley DPS federally listed as threatened. Santa Barbara County and Sonoma County DPS federally listed as endangered. Needs underground refuges, especially ground squirrel burrows, and vernal pools or other seasonal water sources for breeding.	**Absent.** The survey area does not provide suitable aquatic or terrestrial habitat for this species.
California giant salamander *Dicamptodon ensatus*	-/SSC	Known from wet coastal forests near streams and seeps from Mendocino County south to Monterey County, and east to Napa County. Aquatic larvae found in cold, clear streams, occasionally in lakes and ponds. Adults known from wet forests under rocks and logs near streams and lakes.	**Absent.** The survey area does not provide suitable aquatic or terrestrial habitat for this species.
California red-legged frog *Rana draytonii*	FT/SSC	Requires perennial or near-perennial aquatic habitats, especially for breeding; often slow-moving streams, freshwater pools and ponds over 1-foot deep, often with overhanging vegetation; adjacent upland habitats are often used for temporary refuges or dispersal movements.	**Low.** The survey area and adjacent area does not provide suitable terrestrial habitat for this species. Marginal aquatic habitat occurs within Russell Creek; however, there are no CNDDB occurrences for this species within 5-miles.
Foothill yellow-legged frog *Rana boylii*	-/CT, SSC	Inhabits partly shaded, shallow streams and riffles with a rocky substrate in a variety of habitats. Needs cobble-sized substrate for egg-laying and at least 15 weeks of water to attain metamorphosis.	**Absent.** Aquatic habitat within the survey area does not provide suitable habitat for this species. The substrate within Russell Creek does not contain a rocky substrate necessary for this species.

Common Name Scientific Name	Listing Status[1] (Fed/State)	Known Habitat Requirements	Potential for Occurrence
Red-bellied newt *Taricha rivularis*	-/SSC	Coastal drainages from Humboldt County south to Sonoma County, inland to Lake County. Isolated population of uncertain origin in Santa Clara County. Lives in terrestrial habitats, juveniles generally underground, adults active at surface in moist environments. Will migrate over 1 km to breed, typically in streams with moderate flow and clean, rocky substrate.	**Absent.** No suitable aquatic habitat for this species occurs within the survey area. Russell Creek does not contain a rocky substrate.
Reptiles			
Western pond turtle *Emys marmorata*	-/SSC	Slow water aquatic habitat with available basking sites. Hatchlings require shallow water with dense submergent or short emergent vegetation. Require an upland oviposition site near the aquatic site.	**Low.** Russell Creek, located south of the Project site, does provide marginal aquatic habitat for this species in the form of foraging and as a migration corridor. No suitable nesting habitat occurs within or adjacent to the survey area. The nearest CNDDB occurrence record (432) is located approximately 0.5 mile north with an unknown date.
Birds			
Tricolored blackbird *Agelaius tricolor*	-/ST; SSC	Highly colonial species, most numerous in Central Valley and vicinity. Largely endemic to California. Requires open water, protected nesting substrate, and foraging area with insect prey near the colony.	**Absent.** No suitable nesting or foraging habitat occurs within the survey area.
White-tailed kite *Elanus leucurus*	-/FP	Rolling foothills and valley margins with scattered oaks & river bottomlands or marshes next to deciduous woodland. Open grasslands, meadows, or marshes for foraging close to isolated, dense-topped trees for nesting and perching.	**Absent.** No suitable nesting or foraging habitat occurs within the survey area.
Yellow rail *Coturnicops noveboracensis*	-/SSC	Breeds in sedge marshes/meadows with moist soil or shallow standing water within the northeastern interior California (Modoc County). Winter resident on the coast and in the Suisun marsh region. Inhabits wet meadows and coastal tidal marshes during winter.	**Absent.** No suitable nesting or foraging habitat occurs within the survey area.

Common Name Scientific Name	Listing Status[1] (Fed/State)	Known Habitat Requirements	Potential for Occurrence
Northern spotted owl *Strix occidentalis caurina*	FT/-	Old-growth forests or mixed stands of old-growth and mature trees. Occasionally in younger forests with patches of big trees. North coast coniferous forest, old-growth Redwoods.	**Absent.** No suitable nesting or foraging habitat occurs within the survey area.
Burrowing owl *Athene cunicularia*	-/SSC	Grasslands and ruderal habitats. Uses mammal burrows or other suitable underground cavities.	**Absent.** No suitable nesting or foraging habitat occurs within the survey area.
Mammals			
Townsend's big-eared bat *Corynorhinus townsendii*	-/SSC	Occurs throughout California in a wide variety of habitats. Most common in mesic sites. Roosts in man-made structures such as old buildings and bridge crevices.	**Absent.** No suitable roosting habitat occurs within the survey area.
Pallid bat *Antrozous pallidus*	-/SSC	Found in deserts, grasslands, shrublands, woodlands, and forests. Most common in open, dry habitats with rocky areas for roosting.	**Absent.** No suitable roosting habitat occurs within the survey area.
American badger *Taxidea taxus*	-/SSC	Most abundant in drier, open stages of most shrub, forest, and herbaceous habitats, with friable soils. Needs open, uncultivated ground. Preys on burrowing rodents. Digs burrows.	**Absent.** Suitable habitat for this species does not occur within the survey area.

[1]Federal and State Status Codes

- = No status, or not applicable

FE = Listed as endangered under the Federal Endangered Species Act (FESA)

FT = Listed as threatened under FESA

SE = Listed as endangered under the California Endangered Species Act (CESA)

ST = Listed as threatened under CESA

SSC = Designated as a Species of Special Concern by CDFW under the California Environmental Quality Act (CEQA)

FP = Fully Protected under the California Fish and Game Code (F.G.C.)

C = Candidate for listing as either endangered or threatened under FESA

CE = Candidate for listing as endangered under CESA

CT = Candidate for listing as threatened under CESA

6.0 RESULTS: BIOLOGICAL RESOURCES AND IMPACTS

6.1 HABITATS AND NATURAL COMMUNITIES OF CONCERN

Two aquatic habitats (fresh emergent wetland and perennial stream) were identified within the survey area that could be considered potential WOTUS and/or WOTS. The fresh emergent wetland could be considered a potential WOTS while the perennial stream could be considered a potential WOTUS and WOTS. Based on the location of the fresh emergent wetland as well as the Project design, the potential WOTUS and WOTS determinations are subject to verification by the USACE and RWQCB. WOTUS and WOTS are regulated by the USACE and RWQCB under Sections 404 and 401 of the CWA, and CDFW jurisdiction under Section 1600 of the California FGC. Table 3 summarizes the aquatic features that were delineated within the survey area.

Table 3. Potential Waters of the U.S. and State Summary

Aquatic Features	Total Acreage	Total Linear Feet	Cowardin Type[1]	Agency Jurisdiction
Perennial Stream (PS-1)	0.192	1045	R3UB	USACE, RWQCB, CDFW
Fresh Emergent Wetland (W-1)	0.019	N/A	PEM1	RWQCB
Total Delineated Aquatic Features	**0.211**	**1045**	**N/A**	**--**

1. Cowardin et al. 1979

PEM = Palustrine Emergent

R3UB = Riverine Upper Perennial, Unconsolidated Bottom

Within the survey area, 0.192 ac of potential WOTUS (perennial stream) occur; however, only 0.009 acre (400 square feet) will be temporarily impacted and less than 0.001 acre (2 square feet) will be permanently impacted through the installation of the storm drain outfall. For potential WOTS (wetland), 0.019 acre will be permanently impacted during Project activities (Figure 5). Project impacts to the wetland and perennial stream are associated with new development, site grading, temporary access and installation of a new storm drain outfall (24” pipe) into Russell Creek.

Following the completion of construction, temporary (excavation, vegetation removal, dewatering) and permanent (storm drain outfall installation) impacts to Russell Creek will be mitigated by restoring the site to preconstruction conditions, including grading and revegetation using a local native seed mix and/or planting. Permanent impacts to the wetland feature will be mitigated at a 1:1 (impact:mitigation) ratio through the purchase of wetland conservation credits at a local mitigation bank. The Project will also implement best management practices that will be utilized throughout construction to minimize indirect impacts to jurisdictional features.

6.1.1 Critical Habitat

The survey area is not within USFWS designated critical habitat.

6.2 SPECIAL-STATUS PLANT SPECIES

There is no potential for special plant species to occur within the survey area. The nearest CNDDB occurrences for special-status plants is for two-forked clover from 1929 located approximately 0.3 mile south of the survey area.

6.3 SPECIAL-STATUS ANIMAL SPECIES

No special-status species have a moderate or high potential to occur within the survey area. Only the western pond turtle and California red-legged frog have a low potential to occur in the survey area and the survey area provides only marginal habitat for these two special-status animal species. Russell Creek is considered marginal habitat for these species because it provides foraging and dispersal habitat for these species, but Russell Creek does not provide breeding or suitable upland habitat within the survey area. The nearest CNDDB occurrence for the western pond turtle is approximately 0.5-mile north of the survey area (see description in Table 3 above). There are no CNDDB occurrences for California red-legged frog within 5 miles of the survey area or within the survey area. The potential for these special-status species to occur within the survey area is low. There are both temporary and permanent impacts to Russell Creek and only a small area of Russell Creek will be impacted; therefore, no impacts are anticipated to these species during Project activities.

6.3.1 Migratory Nesting Birds

The study area does not provide suitable nesting habitat for special-status birds or raptors; however, trees and shrubs within the survey area could provide suitable nesting habitat for other migratory birds protected under the MBTA or California Fish and Game Code. The Project anticipates the removal of 36 heritage trees from the Project site. A few Chinese pistache (*Pistacia chinensis*) trees on the north end of Mendocino Avenue would be preserved. Removal of trees during the typical nesting season (February 1 through September 1) could have an impact to nesting migratory birds.

If tree removal occurs during the typical nesting season (February 1 through September 1) the Project will implement avoidance and minimization measures to avoid impacts to migratory nesting birds. These measures include conducting a preconstruction nesting bird survey during the nesting season to document any nests on the project site and implementation of protective buffers around documented nests during construction to minimize disturbance to nesting birds during construction.

6.4 ANTICIPATED STATE AND FEDERAL PERMITS

Based on the proposed Project impacts to WOTS and WOTUS, the following permit applications are anticipated to be needed for the Project:

- Section 404 Nationwide Permit Application for submittal to the USACE
- Section 401 Water Quality Certification Application for submittal to the RWQCB
- 1602 Streambed Alteration Agreement for submittal to CDFW

APPENDIX A

USFWS, CNDDB and CNPS Database Results

IPaC **U.S. Fish & Wildlife Service**

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

Location

Sonoma County, California

NOT FOR CONSULTATION

Local office

Sacramento Fish And Wildlife Office

(916) 414-6600
(916) 414-6713

Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population, even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

NOT FOR CONSULTATION

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information.
2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Birds

NAME	STATUS
Northern Spotted Owl Strix occidentalis caurina There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/1123	Threatened

Reptiles

NAME	STATUS
Green Sea Turtle Chelonia mydas No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/6199	Threatened

Amphibians

NAME	STATUS
California Red-legged Frog Rana draytonii There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/2891	Threatened
California Tiger Salamander Ambystoma californiense There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/2076	Endangered

NOT FOR CONSULTATION

Insects

NAME	STATUS
San Bruno Elfin Butterfly Callophrys mossii bayensis There is **proposed** critical habitat for this species. The location of the critical habitat is not available. https://ecos.fws.gov/ecp/species/3394	Endangered

Crustaceans

NAME	STATUS
California Freshwater Shrimp Syncaris pacifica No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/7903	Endangered

Flowering Plants

NAME	STATUS
Burke's Goldfields Lasthenia burkei No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/4338	Endangered
Clara Hunt's Milk-vetch Astragalus clarianus No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/3300	Endangered
Sebastopol Meadowfoam Limnanthes vinculans No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/404	Endangered

NOT FOR CONSULTATION

Showy Indian Clover Trifolium amoenum — Endangered
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/6459

Sonoma Sunshine Blennosperma bakeri — Endangered
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/1260

White Sedge Carex albida — Endangered
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/3063

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

THERE ARE NO CRITICAL HABITATS AT THIS LOCATION.

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

NOT FOR CONSULTATION

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON (IF A BREEDING SEASON IS INDICATED FOR A BIRD ON YOUR LIST, THE BIRD MAY BREED IN YOUR PROJECT AREA SOMETIME WITHIN THE TIMEFRAME SPECIFIED, WHICH IS A VERY LIBERAL ESTIMATE OF THE DATES INSIDE WHICH THE BIRD BREEDS ACROSS ITS ENTIRE RANGE. "BREEDS ELSEWHERE" INDICATES THAT THE BIRD DOES NOT LIKELY BREED IN YOUR PROJECT AREA.)

NOT FOR CONSULTATION

Allen's Hummingbird Selasphorus sasin — Breeds Feb 1 to Jul 15
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9637

Bald Eagle Haliaeetus leucocephalus — Breeds Jan 1 to Aug 31
This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
https://ecos.fws.gov/ecp/species/1626

Burrowing Owl Athene cunicularia — Breeds Mar 15 to Aug 31
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9737

California Thrasher Toxostoma redivivum — Breeds Jan 1 to Jul 31
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Common Yellowthroat Geothlypis trichas sinuosa — Breeds May 20 to Jul 31
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/2084

Golden Eagle Aquila chrysaetos — Breeds Jan 1 to Aug 31
This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
https://ecos.fws.gov/ecp/species/1680

NOT FOR CONSULTATION

Nuttall's Woodpecker Picoides nuttallii — Breeds Apr 1 to Jul 20
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9410

Oak Titmouse Baeolophus inornatus — Breeds Mar 15 to Jul 15
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9656

Rufous Hummingbird selasphorus rufus — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/8002

Song Sparrow Melospiza melodia — Breeds Feb 20 to Sep 5
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA

Spotted Towhee Pipilo maculatus clementae — Breeds Apr 15 to Jul 20
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/4243

Tricolored Blackbird Agelaius tricolor — Breeds Mar 15 to Aug 10
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/3910

Wrentit Chamaea fasciata — Breeds Mar 15 to Aug 10
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

NOT FOR CONSULTATION

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

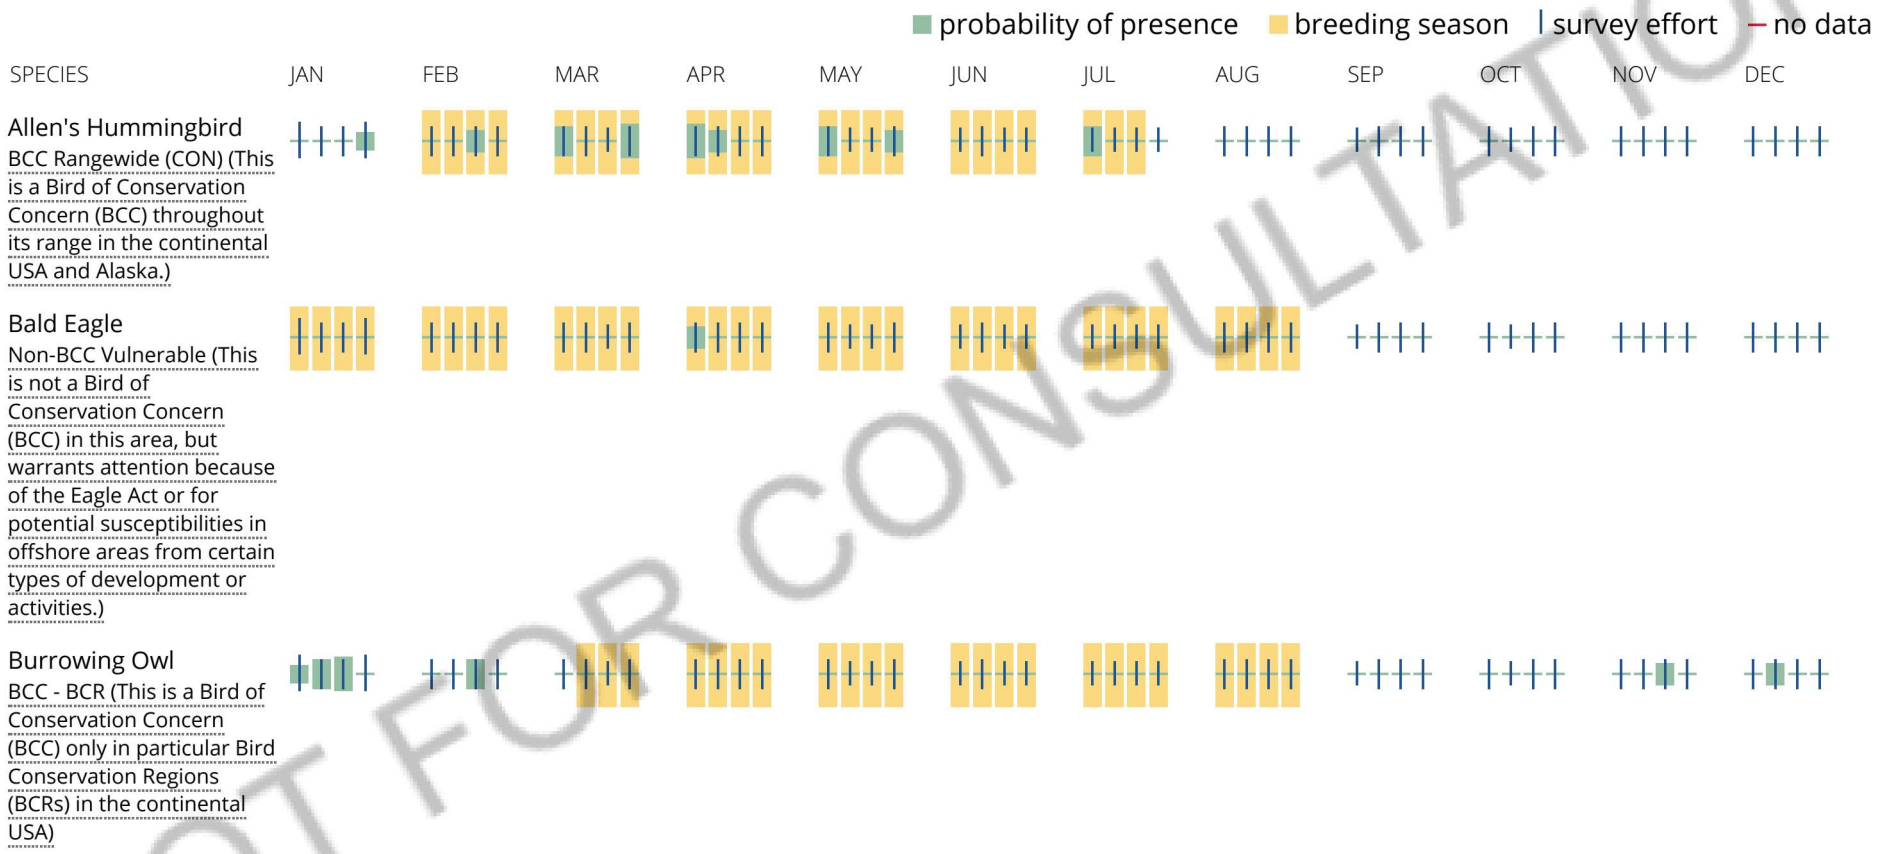
How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)



NOT FOR CONSULTATION

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

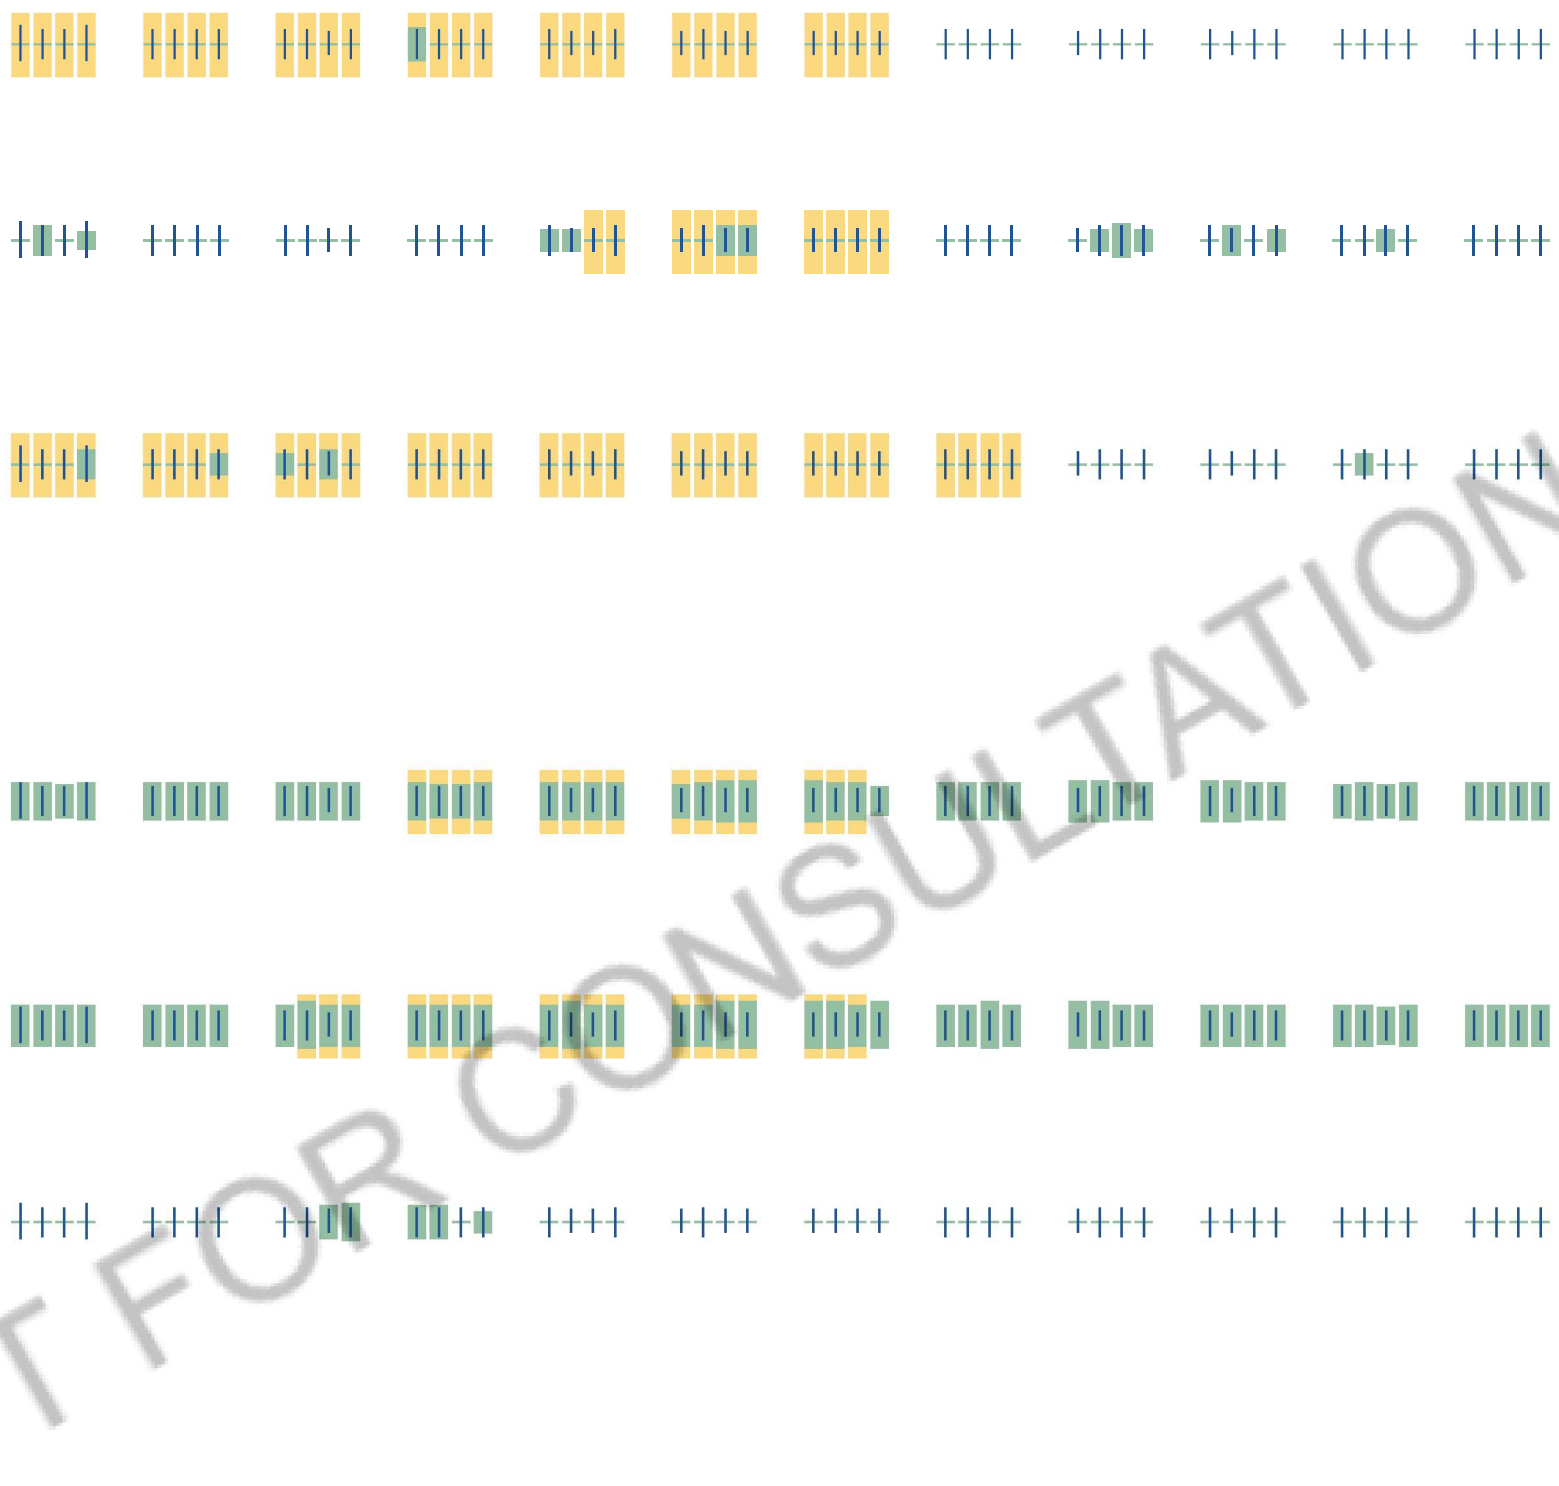
To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

NOT FOR CONSULTATION

California Thrasher
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)



Common Yellowthroat
BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

Golden Eagle
Non-BCC Vulnerable (This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.)

Nuttall's Woodpecker
BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

Oak Titmouse
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Rufous Hummingbird
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

NOT FOR CONSULTATION

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures and/or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

NOT FOR CONSULTATION

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

NOT FOR CONSULTATION

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Facilities

NOT FOR CONSULTATION

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

WETLAND INFORMATION IS NOT AVAILABLE AT THIS TIME

This can happen when the National Wetlands Inventory (NWI) map service is unavailable, or for very large projects that intersect many wetland areas. Try again, or visit the NWI map to view wetlands at this location.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

NOT FOR CONSULTATION

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Observed Plant and Wildlife Species Tables

Table C1. Plant Species Observed on June 3, 2020

Scientific Name	Common Name	Native/Non-Native	Cal-IPC Level
Avena fatua	Wild oats	Non-native	Moderate
Callistemon citrinus	Common bottlebrush	Non-Native	
Conium maculatum	Poison hemlock	Non-Native	Moderate
Cyperus eragrostis	Tall flatsedge	Native	
Dipsacus fullonum	Wild teasel	Non-Native	Moderate
Eleocharis macrostachya	Common spike rush	Native	
Erigeron canadensis	Canada horseweed	Native	
Foeniculum vulgare	Sweet fennel	Non-Native	High
Galium aparine	Bedstraw	Native	
Hedera helix	English ivy	Non-Native	High
Helminthotheca echioides	Bristly ox-tongue	Non-native	Limited
Holcus lanatus	Velvet grass	Non-Native	Moderate
Juncus effusus	Common rush	Native	
Lactuca serriola	Prickly lettuce	Non-native	
Ligustrum lucidum	Glossy privet	Non-native	Limited
Liquidambar styraciflua	Sweetgum	Non-native	
Lythrum hyssopifolia	Hyssop loosestrife	Non-native	Limited
Melilotus indicus	Annual sweetclover	Non-native	
Phalaris aquatica	Harding grass	Non-Native	Moderate
Phoenix canariensis	Canary island date palm	Non-native	Limited
Polypogon monspeliensis	Rabbitsfoot grass	Non-native	Limited
Pseudognaphalium luteoalbum	Jersey cudweed	Non-native	
Quercus agrifolia	Coast live oak	Native	
Quercus lobata	Valley oak	Native	
Raphanus sativus	Wild radish	Non-Native	Limited
Rubus armeniacus	Him blackberry	Non-Native	High
Rumex crispus	Curly dock	Non-Native	Limited
Salix lasiolepis	Arroyo willow	Native	
Torilis arvensis	Field hedge parsley	Non-Native	Moderate
Typha angustifolia	Narrow leaf cattails	Non-native	
Vicia sativa	Spring vetch	Non-Native	
Washingtonia robusta	Mexican fan palm	Non-native	Moderate

Table C2. Wildlife Observed on June 3, 2020

Scientific Name	Common Name
Birds	
Corvus brachyrhynchos	American crow
Poecile rufescens	Chestnut-backed chickadee
Mammals	
Odocoileus hemionus	Black tail deer

Note: High temperatures on June 3, 2020 likely reduced the number of species observed during the biological survey.

Executive Summary

On behalf of the City of Santa Rosa, Stantec Consulting Services Inc. (Stantec) conducted a delineation of waters of the U.S. and State for the 3575 Mendocino Avenue Project (Project) in Santa Rosa, Sonoma County, California. The delineation was conducted within an approximately 30-acre (ac) survey area in accordance with the Corps of Engineers Wetlands Delineation Manual (Environmental Laboratory 1987), the Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region (Version 2.0) (U.S. Army Corps of Engineers 2008a) and the *Implementation Guidance for the State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (State Water Resources Control Board, 2020). The field delineation was conducted on June 3, 2020. A total of 0.211 ac of potential waters of the U.S. and State were mapped within the survey area and include a fresh emergent wetland (0.019 ac) and a perennial stream (0.192 ac, 1045 linear feet).

This delineation is subject to verification by the U.S. Army Corp of Engineers (USACE), San Francisco District and North Coast Regional Water Quality Control Board (RWQCB). Stantec advises all parties to treat the information contained herein as preliminary until the USACE and RWQCB provide verification of the boundaries of their jurisdiction.

1.0 INTRODUCTION

This delineation of potential waters of the U.S. and State has been prepared to evaluate the potential aquatic resources that may occur for the proposed 3575 Mendocino Avenue Project (Project). The Project would redevelop a 13.3-acre former mobile home park site into a compact, sustainable, transit-oriented, master planned community (transit village) with up to 532 high-density multi-family housing units. Redevelopment of this in-fill site would include: 1) constructing 162 senior affordable housing units comprised of three separate four-story buildings, approximately 77,175 square feet (sf), 33,210 sf, and 36,540 sf each; 2) constructing up to 370 market rate units comprised of approximately eight separate three- or four-story buildings; 3) constructing approximately 1 acre of private open space, public street, landscaping, on- and off-site utility infrastructure, parking (including surface, covered, and garage), driveways, frontage improvements and other associated improvements; and 4) constructing a storm drain outfall into the adjacent, off-site Russell Creek. The parking garage would be a total of three stories and 72,000 sf.

1.1 PROJECT LOCATION

The proposed Project is located within the City of Santa Rosa, Sonoma County, California. The Project site is bordered by Mendocino Avenue, Russell Creek, Kaiser Permanente Santa Rosa Medical Center, US Highway 101 (U.S. 101) and the Mendocino Over-change. The site is centrally located on Mendocino Avenue, a major arterial that connects the Project site with downtown Santa Rosa to the south and greater Sonoma County to the north. The Assessor's Parcel Number (APN) is 173-030-001 and 173-030-002 (Figure 1). The Project is shown on the Santa Rosa 7.5-minute U.S. Geological Survey quadrangle in Township 7N, Range 8W, Section 10. The approximate center of the Project is located at GPS coordinate; 38°28'24.67"N, 122°43'44.25"W (North American Datum of 1983). The survey area encompasses approximately 30 acres (ac) and consists of all proposed Project components and a 200-foot buffer (Figure 2).

To access the survey area from U.S. 101, take the Mendocino Avenue exit and travel south 0.2 miles before turning right onto Columbia Street. This is the entrance to the former Journey's End mobile home park and survey area (Figures 1 and 2).

2.0 ENVIRONMENTAL SETTING

2.1 CURRENT/RECENT LAND USE

The Project site is an irregular shaped parcel. The most recent use of the property was the Journey's End Mobile Home Park which was destroyed in the October 2017 Tubbs Fire. The Park has been formally closed and is unoccupied. The Project site is generally comprised of areas including paved asphalt, dirt/gravel and limited, fire damaged vegetation. The southern portion of the site is occupied by multiple uninhabited mobile homes, which are currently being removed from the Project site as part of the Park closure process.

The Project site is completely surrounded by urban development and located in close proximity to services and major employers, including healthcare and medical services, retail, restaurant, and market/grocery. The Project site is surrounded by the following land uses:

- **North:** Mendocino Over-change
- **East:** Commercial and office uses
- **South:** Russell Creek, Kaiser Permanente Santa Rosa Medical Center
- **West:** U.S. 101 and commercial uses

2.2 SITE TOPOGRAPHY AND ELEVATION

The topography of the survey area is relatively flat, with the survey area gradually sloping east to west. At the southern end of the survey area, the land slopes down where a perennial stream (Russell Creek) flows adjacent to the Project site. The survey area occurs at elevations between 141 and 149 feet (ft) above mean sea level.

2.3 CLIMATE

Climate in the survey area is based on historical weather data collected at Santa Rosa, California (Western Regional Climate Center 2020). The station is located approximately 2.8 miles southeast of the survey area:

Type: The climate of the area is characterized as Mediterranean with moderate winters and hot, dry summers.

Precipitation: Precipitation in the survey area primarily occurs as rain. The average annual rainfall is approximately 30.13 inches.

Air Temperature: Air temperatures in the survey area ranges between an average January high of 57.3 degrees Fahrenheit (ºF) and an average July high of 82.5 ºF. The annual average high is approximately 71.4 ºF.

Growing Season: The growing season (i.e., 50 percent probability of air temperature 28ºF or higher) in the survey area is approximately 310 days and occurs between February and December.

2.4 HYDROLOGY/HYDROLOGIC FEATURES

The primary hydrologic feature in the survey area is Russell Creek, a perennial stream that flows east to west along the southern boundary of the survey area. Russell Creek originates from the hills east of the survey area and flows west into Piner Creek. Piner Creek flows into Santa Rosa Creek, and eventually into Laguna De Santa Rosa. Russell Creek within the survey area has been channelized as it flows between the Project site and a commercial development. Within the Project site, hydrologic sources include runoff from paved roadways during precipitation events that drain into ruderal areas between the roads.

2.5 SOIL MAP UNITS

Two soil map units occur in the survey area. They are described in the *Soil Survey of Sonoma County, California* (Natural Resources Conservation Service [NRCS] 2020). These map units are summarized in Table 1 and shown in Figure 3.

Table 1. Soil Map Units in the Study Area

Map Unit Name Taxonomy	Map Unit Reference Code	Drainage Class	Depth to Restrictive Layer	Hydric Soils
Arbuckle gravelly sandy loam, 5 to 15 percent slopes	AgD	Well drained	More than 80 inches	No
Clear Lake clay, sandy substratum, drained, 0 to 2 percent slopes, MLRA 14	CeA	Poorly drained	More than 80 inches	Yes

2.6 VEGETATION COMMUNITIES

Vegetation types in the survey area were classified based on descriptions provided in *A Guide to Wildlife Habitats of California* (Mayer and Laudenslayer 1988), as well as the California Natural Community List (California Department of Fish and Wildlife 2020), which is adapted from the technical approach and vegetation alliance classification system described in *A Manual of California Vegetation* (Sawyer et al. 2009). Four vegetation communities occur in the study area and are described below.

Barren and Ruderal. Barren and ruderal habitat occur within a majority of the survey area. The Project site was a previous mobile home park that burned in 2017, the site consists of existing residential streets and vegetated lots where mobile homes previously existed. Vegetation within previous mobile home lots consists of barren patches and include primarily opportunistic non-native and invasive ruderal forb species, such as wild oats (*Avena fatua*), bristly ox-tongue (*Helminthotheca echioides*), prickly lettuce (*Latuca serrioloa*), annual sweetclover (*Melilotus indicus*), rabbitsfoot grass (*Polypogon monspeliensis*) and Jersey cudweed (*Pseudognaphalium leteoalbum*).

Urban. This land use type does not describe any specific vegetation type under Sawyer et al. (2009) but encompasses land that has been anthropogenically modified with structures and facilities, including roads and buildings. Ornamental plantings and ruderal vegetation may be present within and/or on the margins of developed areas. A small portion of the survey area extends into the commercial development along the southern and eastern extents.

Fresh Emergent Wetland. One fresh emergent wetland occurs within the survey area (Figure 4), located within the southeastern portion of the Project site. The fresh emergent wetland is located between existing paved roadways and appears to receive roadside runoff during precipitation events. Dominant hydrophytic herbaceous vegetation includes tall faltsedge (*Cyperus eragrostis*), Hyssop loosestrife (*Lythrum hyssopifolia*), and common spike rush (*Eleocharis*

macrostachya). In some areas, narrow leaf cattails (*Typha angustifolia*) were observed and becoming established within the fresh emergent wetland.

Riverine. One perennial stream was observed in the survey area (Figure 4) located just south of the Project area. This feature is also referred to as Russell Creek and appears to convey water year-around and is a tributary to Santa Rosa Creek. The section of stream within the survey area has been channelized as it flows between the Project site and a commercial development. Within the survey area, vegetation along the stream consisted of herbs and forbs in the understory with trees in the overstory. Trees observed included coast live oak (*Quercus agrifolia*) and arroyo willow (*Salix angustifolia*). Understory vegetation consisted of velvet grass (*Holcus lanatus*), harding grass (*Phalaris aquatica*), wild radish (*Raphanus sativus*), curly dock (*Rumex crispus*), field hedge parsley (*Torilis arvensis*), spring vetch (*Vicia sativa*), common rush (*Juncus effuses*) and sweet fennel (*Foeniculum vulgare*). Narrow leaf cattails were growing in patches within the creek bed and emerging in other portions of the creek.

3.0 METHODS

Stantec biologists conducted an on-site delineation of wetlands and “other waters” of the U.S. and State based on field observations of positive indicators for wetland vegetation, hydrology, and soils; and indicators of an OHWM. The delineation includes a standard 3-parameter data point to determine wetland features, other waters, and uplands. This methodology is consistent with the approach outlined in the *Corps of Engineers Wetlands Delineation Manual* (Environmental Laboratory 1987) and the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region* (Version 2.0) (U.S. Army Corps of Engineers [USACE] 2008a). Plant taxonomy follows *The Jepson Manual: Vascular Plants of California, Second Edition* (Baldwin et al. 2012), including applicable errata and supplements (Jepson Flora Project 2020). Wetland indicator status for plant species was confirmed using The National Wetland Plant List (USACE 2018), and the “50/20 Rule” or “Prevalence Index” was applied to determine plant dominance (USACE 2008a). Presence of primary and secondary wetland hydrology indicators were documented for potential aquatic resources. The OHWM was determined using the approach outlined in *A Field Guide to the Identification of the OHWM in the Arid West Region of the Western United States* (USACE 2008b).

Soil pits were dug in representative wetland features, adjacent uplands, and suspect areas to a depth sufficient to document the presence or confirm the absence of hydric soil or wetland hydrology indicators. Soils were examined to assess field indicators of hydric soils. Stantec evaluated soils for positive indicators of hydric soils in the field following the criteria outlined in *Field Indicators of Hydric Soils in the U.S.* (Vasilas et al. 2018). Soil colors were determined using a Munsell® soil color chart. The hydric status of each soil map unit occurring in the study area was reviewed using the Web Soil Survey (NRCS 2020).

Other waters are defined as traditional navigable waters and their tributaries (33 Code of Federal Regulations [CFR] 329). Delineation of other waters was based on presence of an OHWM as defined in USACE regulations (33 CFR 328.3 and 33 CFR 328.4). Physical characteristics of an OHWM include but are not limited to the following conditions: a natural line impressed on the bank, shelving, changes in the character of the soil, destruction of terrestrial vegetation, presence of litter and debris, leaf litter disturbed or washed away, scour, deposition, presence of bed and bank, and water staining. At least one data point was selected to best represent the OHWM of other waters for each other waters type.

For potential wetlands that are not considered waters of the U.S. due to the Environmental Protection Agency's (EPA) 2020 change (33 CFR Part 328), Stantec biologists followed the SWRQCB *Implementation Guidance for the State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (SWRQB 2020). The document defines wetlands as: "*An area is wetland if, under normal circumstances, (1) the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both; (2) the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and (3) the area's vegetation is dominated by hydrophytes or the area lacks vegetation"* (SWRQB 2020). Unlike the federal definition, the SWRQB wetland definition allows for the presence of hydric substrates as a criteria for wetland identification (not just wetland soils) and wetland hydrology for an area devoid of vegetation (less than 5% cover) to be considered a wetland. However, if any vegetation is present, then the USACE procedures would apply to the vegetation component (i.e., hydrophytes must dominate).

Prior to conducting the on-site delineation, the U.S. Fish and Wildlife Service's (USFWS), National Wetlands Inventory (NWI) Wetlands Mapper (USFWS 2020) was reviewed to determine if any surface water and wetland features were previously mapped in the survey area and general vicinity. Surface water and wetland features within NWI are described by the Cowardin et al. (1979) system, as amended by subsequent updates (Federal Geographic Data Committee 2013). The USACE Aquatic Resources Excel spreadsheet, which includes specific information about the wetland and other waters features delineated, including their Cowardin type, was completed and submitted as a separate deliverable with this report (Appendix D).

Three data points were established in the study area and were used to characterize and document each wetland and other water feature type, including the adjacent upland. The boundaries of delineated features and the associated data points were mapped using a sub-meter-accurate Arrow™ Global Positioning Service Unit (Arrow) paired with Apple™ iPhone loaded with Collector for ArcGIS™ (Collector). All spatial data was collected in the WGS 84 datum. Field observations were conducted on June 3, 2020.

4.0 RESULTS AND DISCUSSION

Potential waters of the U.S. and State occur in the survey area as wetlands and other waters. Wetlands include fresh emergent wetland and other waters include perennial stream (Russell Creek).

The boundaries and area of potential waters of the U.S. and State occurring in the survey area are illustrated in Figure 4. A total of 0.211 ac of potential waters of the U.S. and State were delineated. A summary of the delineated features is presented in Table 2. Wetland and OHWM determination data forms are presented in Appendix A. A plant list is provided in Appendix B. Representative photographs of the delineated features and data point locations are presented in Appendix C.

Table 2. Potential Waters of the U.S. and State Summary

Aquatic Features	Total Acreage	Total Linear Feet	Cowardin Type[1]
Potential Waters of the U.S.			
Perennial Stream (PS-1)	0.192	1045	R3UB
Potential Waters of the State			
Fresh Emergent Wetland (W-1)	0.019	N/A	PEM1
Total Delineated Aquatic Features	**0.211**	**1045**	**N/A**

1. Cowardin et al. 1979

PEM = Palustrine Emergent

R3UB = Riverine Upper Perennial, Unconsolidated Bottom

4.1 CHARACTERIZATION OF DELINEATED FEATURES

4.1.1 Fresh Emergent Wetland

Fresh emergent wetlands are frequently flooded, long enough for anaerobic conditions to occur and perennial herbaceous hydrophytic vegetation to become established. These wetlands generally form within basins or depressions located on flat to gently rolling topography. One fresh emergent wetland (W-1) occurs within a slight depression between paved roadways within the Project site. W-1 has no surface hydrologic connection with Russell Creek, therefore, it is a potential waters of the State (as defined by 33 CFR Part 328). Dominate herbaceous species includes tall faltsedge (facultative wet [FACW]) and hyssop loosestrife (obligate [OBL]). Narrow leaf cattails were becoming established in various parts of W-1. Evidence of primary wetland hydrology includes soil surface cracks (B6), along with secondary hydrologic indicator FAC-neutral test (D5). Hydric soil criteria were met through indicators of long duration saturation including depleted dark surface (F7) with redox depletions occurring throughout the soil profile matrix. The dominate substrate of the fresh emergent wetland was clay.

This potential wetland is located in a previously developed area that previously contained mobile homes and associated improvements prior to the October 2017 wildfires and therefore, it is possible this potential feature was created following the wildfires during the cleanup and debris removal process that occurred onsite following the wildfires.

4.1.2 Perennial Stream

Perennial streams consist of natural drainages that convey water perennially or near perennially, such as rivers and larger streams. Perennial streams typically support a well-developed riparian corridor, with the exception of modified or artificial channels for flood control. One perennial stream (PS-1), also known as Russell Creek, occurs in the survey area just south of the Project area. The creek consists of an earthen bed and bank which has been channelized for flood control purposes within the survey area. PS-1 receives enough water during the rainy season to

develop a bed, bank, and channel with OHWM indicators including break in slope, change in vegetation cover, and water marks on emergent vegetation growing along the banks. The dominate substrate throughout the creek is clay. The OHWM width is 8 ft. and depth is 4 ft. and top of bank width is 18 ft. and depth is 6 ft. Russell Creek eventually flows to Laguna De Santa Rosa.

5.0 CONCLUSION

Potential waters of the U.S. and State delineated within the survey area occupy a total of 0.211 ac (1045 linear feet) and include a fresh emergent wetland (W-1) and perennial stream (PS-1), summarized in Table 2 above.

Determinations of waters of the U.S. and State are based on current conditions, (i.e., normal circumstances) and were made in accordance with relevant USACE and SWRQCB guidance. Determinations are subject to verification by the USACE and North Coast Regional Water Quality Control Board (RWQCB). Stantec advises all interested parties to treat the information contained herein as preliminary pending verification of jurisdictional boundaries by the USACE and RWQCB.

APPENDIX A
WETLAND AND OHWM DETERMINATION DATA FORMS

WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Sampling Point: 1W Feature ID: FEW1

Project/Site: 3575 Mendocino Avenue City/County: Santa Rosa/Sonoma County Sampling Date: 6/3/2020

Applicant/Owner: City of Santa Rosa State: California

Investigator(s): JE, SE Section, Township, Range: S10, T7N, R8W

Local relief (hillside, terrace, etc.): Santa Rosa Plain Local Relief (concave, convex, none): Concave Slope (%): 2

Subregion (LRR): C-Mediterranean California Lat: 38.473019 Long: -122.728653 Datum: WGS84

Soil Map Unit Name: Clear lake clay, sandy substratum, drained, 0 to 2% slopes, MLRA 14 NWI classification: PEM1

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No ____ (If no, explain in Remarks.)

Are Vegetation ____, Soil ____, or Hydrology ____ significantly disturbed? ____ Are "Normal Circumstances" present? Yes X No ____

Are Vegetation ____, Soil ____, or Hydrology ____ naturally problematic? ____ (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes x No ____

Hydric Soil Present? Yes x No ____

Wetland Hydrology Present? Yes x No ____

Is the Sampled Area within a Wetland? Yes x No ____

Remarks: Fresh emergent wetland located between roadways in a depression. The site used to be a mobile home park but was destroyed by a fire in 2017.

VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECENDING ORDER

Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100% (A/B)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL species	35	x 1 =	35
FACW species	50	x 2 =	100
FAC species	0	x 3 =	0
FACU species	0	x 4 =	0
UPL species	0	x 5 =	0
Column Totals:	85 (A)		135 (B)

Prevalence Index = B/A = 1.5882

Hydrophytic Vegetation Indicators:

____ 1 - Rapid Test for Hydrophytic Vegetation

Yes 2 - Dominance Test is >50%

Yes 3 - Prevalence Index is ≤3.0[1]

____ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

____ 5 - Wetland Non-Vascular Plants[1]

____ 6 - Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic Vegetation Present? Yes X No ____

Remarks:

SOIL Sampling Point: 1W

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-10	10YR 3/1	90	10YR 5/1	10	D	M	Clay	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- ___ Histosol (A1)
- ___ Histic Epipedon (A2)
- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5) (**LRR C**)
- ___ 1 cm Muck (A9) (**LRR D**)
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)
- ___ Sandy Mucky Mineral (S1)
- ___ Sandy Gleyed Matrix (S4)
- ___ Sandy Redox (S5)
- ___ Stripped Matrix (S6)
- ___ Loamy Mucky Mineral (F1)
- ___ Loamy Gleyed Matrix (F2)
- ___ Depleted Matrix (F3)
- ___ Redox Dark Surface (F6)
- X Depleted Dark Surface (F7)
- ___ Redox Depressions (F8)
- ___ Vernal Pools (F9)

Indicators for Problematic Hydric Soils[3]:

- ___ 1 cm Muck (A9) (**LRR C**)
- ___ 2 cm Muck (A10) (**LRR B**)
- ___ Reduced Vertic (F18)
- ___ Red Parent Material (TF2)
- ___ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: ___

Depth (inches): ___

Hydric Soil Present? **Yes** [X] **No** [ ]

Remarks: Redox depletions obsserved throughout the soil profile.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1) (**Nonriverine**)
- ___ Sediment Deposits (B2) (**Nonriverine**)
- ___ Drift Deposits (B3) (**Nonriverine**)
- X Surface Soil Cracks (B6)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Water-Stained Leaves (B9)
- ___ Salt Crust (B11)
- ___ Biotic Crust (B12)
- ___ Aquatic Invertebrates (B13)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres along Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- ___ Water Marks (B1) (**Riverine**)
- ___ Sediment Deposits (B2) (**Riverine**)
- ___ Drift Deposits (B3) (**Riverine**)
- ___ Drainage Patterns (B10)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Shallow Aquitard (D3)
- X FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes ___ No X Depth (inches): ___

Water Table Present? Yes ___ No X Depth (inches): ___

Saturation Present? Yes ___ No X Depth (inches): ___
(includes capillary fringe)

Wetland Hydrology Present? **Yes** [X] **No** [ ]

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Hydrologic source is roadway runnoff from adjacent roads.

Yes [ ] **No** [X]

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Arid West Ephemeral and Intermittent Streams OHWM Datasheet

Sampling Point: D1 **Feature ID:** PS1 **Date:** 6/3/2020

Project: 3575 Mendocino Avenue

Location: Santa Rosa, CA **Photo begin/end file#:** See Field Photos

Investigator(s): JE, SE

Y [X] / N [ ] Do normal circumstances exist on the site?

Y [ ] / N [X] Is the site significantly disturbed?

Location Details: Southern limits of Survey Area

Projection: Lambert **Datum:** NAD83

Coordinates: 38.471756, -122.729494

Potential anthropogenic influences on the channel system:

Artificial earthlined channel. Recieves roadside runoff from adjacent roadways.

Brief site description:

Channelized portion of Russell Creek between burnned mobile home park and hospital parking garage. Culverts at each end of the channel.

Checklist of resources (if available)

[X] Aerial photography [ ] Stream gage data

Dates: 2019 **Gage number:**

[ ] Topographic maps

[ ] Geologic maps

[ ] Vegetation maps

[ ] Soils maps

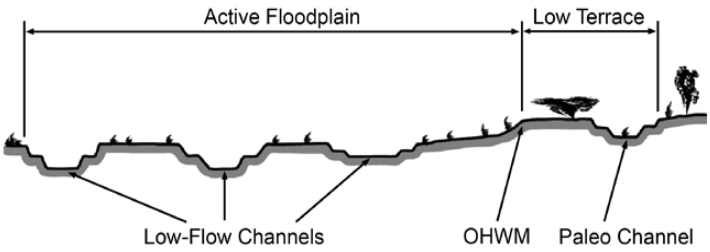
[ ] Rainfall/precipitation maps

[ ] Existing delineation(s) for site

[ ] Global positioning system (GPS)

[X] Other studies City of Santa Rosa Creek Drainage Plan Map

Period of record:



[ ] History of recent effective discharges

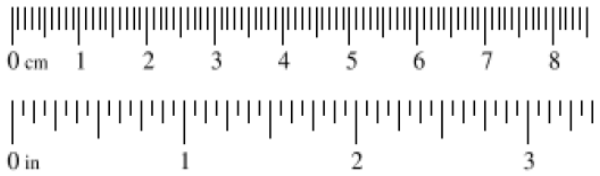
[ ] Results of flood frequency analysis

[ ] Most recent shift-adjusted rating

[ ] Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event

Hydrogeomorphic Floodplain Units

Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:



1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
   a) Record the floodplain unit and GPS position.
   b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
   c) Identify any indicators present at the location.
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
5. Identify the OHWM and record the indicators. Record the OHWM position via:

[ ] Mapping on aerial photograph [X] GPS

[ ] Digitized on computer [ ] Other:

OHWM width: 8 ft.
OHWM depth: 4 ft.

OHWM

GPS point: _____

Indicators:

- [ ] Change in average sediment texture
- [ ] Change in vegetation species
- [X] Change in vegetation cover
- [X] Break in bank slope
- [X] Other: Water marks on emergent veg
- [ ] Other: _____

Comments:

Perennial stream with ~3 ft. of water. Patches of emergent vegetation within stream bed (Typha sp.) and a mix of upland and hydrophytic vegetation along the banks above the OHWM. Dominante substrate is clay.

Floodplain unit: [ ] Low-Flow Channel [ ] Active Floodplain [ ] Low Terrace

GPS point: _____

Characteristics of the floodplain unit:

Average sediment texture: _____

Total veg cover: ____ % Tree: ____ % Shrub: ____ % Herb: ____ %

Community successional stage:

- [ ] NA
- [ ] Early (herbaceous & seedlings)
- [ ] Mid (herbaceous, shrubs, saplings)
- [ ] Late (herbaceous, shrubs, mature trees)

Indicators:

- [ ] Mudcracks
- [ ] Ripples
- [ ] Drift and/or debris
- [ ] Presence of bed and bank
- [ ] Benches
- [ ] Soil development
- [ ] Surface relief
- [ ] Other: _____
- [ ] Other: _____
- [ ] Other: _____

APPENDIX B
PLANT LIST

Scientific Name	Common Name	Native Status	Cal-IPC Rating	Wetland Status (AW 2018)
Avena fatua	Wild oats	Non-native	Moderate	UPL
Callistemon citrinus	Common bottlebrush	Non-Native	--	UPL
Conium maculatum	Poison hemlock	Non-Native	Moderate	FACW
Cyperus eragrostis	Tall flatsedge	Native	--	FACW
Dipsacus fullonum	Wild teasel	Non-Native	Moderate	FAC
Eleocharis macrostachya	Common spike rush	Native	--	OBL
Erigeron canadensis	Canada horseweed	Native	--	FACU
Foeniculum vulgare	Sweet fennel	Non-Native	High	UPL
galium aparine	Bedstraw	Native	--	FACU
Hedera helix	English ivy	Non-Native	High	FACU
Helminthotheca echioides	Bristly ox-tongue	Non-native	Limited	FAC
Holcus lanatus	Velvet grass	Non-Native	Moderate	FAC
Juncus effusus	Common rush	Native	--	FACW
Lactuca serriola	Prickly lettuce	Non-native	--	FACU
Ligustrum lucidum	Glossy privet	Non-native	Limited	UPL
Liquidambar styraciflua	Sweetgum	Non-native	--	FAC
Lythrum hyssopifolia	Hyssop loosestrife	Non-native	Limited	OBL
Melilotus indicus	Annual sweetclover	Non-native	--	FACU
Phalaris aquatica	Harding grass	Non-Native	Moderate	FACU
Phoenix canariensis	Canary island date palm	Non-native	Limited	UPL
Polypogon monspeliensis	Rabbitsfoot grass	Non-native	Limited	FACW
Pseudognaphalium luteoalbum	Jersey cudweed	Non-native	--	FAC
Quercus agrifolia	Coast live oak	Native	--	UPL
Quercus lobata	Valley oak	Native	--	FACU
Raphanus sativus	Wild radish	Non-Native	Limited	UPL
Rubus armeniacus	Him blackberry	Non-Native	High	FAC
Rumex crispus	Curly dock	Non-Native	Limited	FAC
Salix lasiolepis	Arroyo willow	Native	--	FACW
Torilis arvensis	Field hedge parsley	Non-Native	Moderate	UPL
Typha angustifolia	Narrow leaf cattails	Non-native	--	OBL
Vicia sativa	Spring vetch	Non-Native	--	FACU
Washingtonia robusta	Mexican fan palm	Non-native	Moderate	FACW

APPENDIX C
REPRESENTATIVE PHOTOGRAPHS

The following photos are documentation of conditions within the survey area during the field delineation conducted on June 3, 2020.

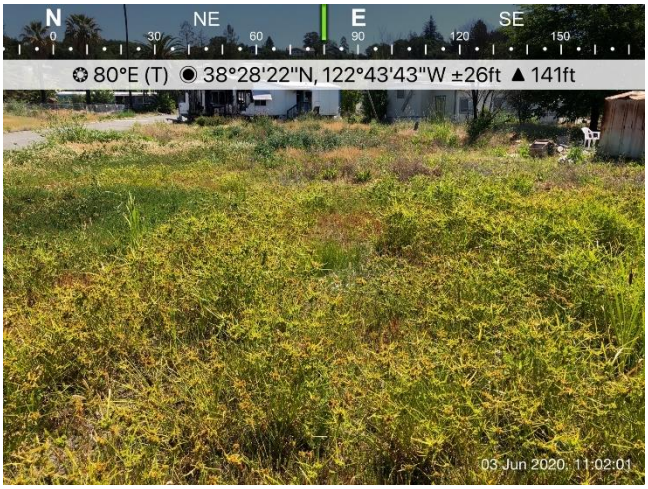

Photo 1. Fresh emergent wetland (W-1) with tall flatsedge and hyssop loosestrife as the dominate hydrophytic species throughout FEW1.

Photo 2. W-1 with adjacent paved roadways.

Photo 3. Soil profile for W-1 wetland data point. Depleted dark surface (F7) was the hydric soil indicator.

Photo 4. Soil profile for W-1 upland data point.

	
Photo 5. Perennial stream (PS-1) with OHWM indicators change in vegetation cover, break in slope, and water marks on emergent vegetation.	**Photo 6.** PS-1 with the mobile home park fence on the right side of the picture.
	
Photo 7. PS-1 with narrow leaf cattails growing within the bed of the creek and establishing a dense patch.	**Photo 8**. Barren and ruderal vegetation communities with non-native and invasive species spread throughout.

Russell Creek Storm Drain Outfall
3575 Mendocino Avenue Project
3575 Mendocino Avenue
Santa Rosa, California

Project Number: 1259.09.04.1

This letter addresses the proposed storm drain outfall into Russell Creek as part of the planned project at 3575 Mendocino Avenue in Santa Rosa, California. We performed a geotechnical study for the planned project and presented the results in a report dated December 6, 2019 and revised December 20, 2019. The report addressed a project that included construction of multi-story structures on the eight lots shown on the Tentative Map for 3575 Mendocino Avenue prepared by BKF. Our report also addressed streets, private drives, parking areas, and underground utilities. The report did not specifically address the outfall of the storm drain into Russell Creek. However, the subsurface conditions at the outfall are anticipated to be similar to those encountered in our subsurface exploration performed within the property. Therefore, the recommendations presented in our report are applicable to the storm drain outfall.

We trust this provides the information you require at this time. If you have questions or need additional information, please contact the undersigned.

Very truly yours,
RGH Consultants

INFORMATION ABOUT YOUR GEOTECHNICAL REPORT

INTRODUCTION

This report presents the results of our geotechnical study for the residential development to be constructed at 3575 Mendocino Avenue in Santa Rosa, California. The property is designated as Assessor Parcel Number 173-030-001 and extends over relatively flat terrain. The property was previously occupied by mobile homes of which most burned in the October 2017 Tubbs fires. The site location is shown on Plate 1, Appendix A.

We understand it is planned to construct a residential development on the 13.31-acre property located off the west side of Mendocino Avenue. We understand that the project will include twelve buildings that are a maximum of four stories in height. One of the structures may include below grade parking. We assume that new streets and/or parking areas and underground utilities will be required.

Actual foundation loads are not known at this time. We anticipate the loads will be typical for the heavy type of construction planned. Grading plans are not available, but we anticipate that, with the exception of the below grade parking, the planned grading will be the minimum amount needed to construct the building site with positive drainage.

SCOPE

The purpose of our study, as outlined in our Professional Service Agreement dated June 25, 2018 (Revised August 16, 2018), was to generate geotechnical information for the design and construction of the project. Our scope of services included reviewing selected published geologic data pertinent to the site; evaluating the subsurface conditions with borings, Cone Penetration Tests (CPTs), and laboratory tests; analyzing the field and laboratory data; and presenting this report with the following geotechnical information:

1. A brief description of the soil and groundwater conditions observed during our study;

2. A discussion of seismic hazards that may affect the proposed improvements; and

3. Conclusions and recommendations regarding:

    a. Primary geotechnical engineering concerns and mitigating measures, as applicable;

    b. Site preparation and grading including remedial grading of weak, porous, compressible and/or expansive surface soil;

    c. Foundation type(s), design criteria, and estimated settlement behavior;

    d. Lateral loads for retaining wall design;

    e. Support of concrete slabs-on-grade;

    f. Preliminary pavement thickness based on our experience with similar soil and projects;

g. Utility trench backfill;

h. Geotechnical engineering drainage improvements; and

i. Supplemental geotechnical engineering services.

STUDY

Site Exploration

Exploration Drilling

We reviewed our previous geotechnical studies in the vicinity and selected geologic references pertinent to the site. The geologic literature reviewed is listed in Appendix B. On November 26 and 27, 2018, we performed a geotechnical reconnaissance of the site and explored the subsurface conditions by drilling six borings (B-1 through B-6) to depths ranging from about 13½ to 20½ feet. The borings were drilled with a truck-mounted drill rig equipped with 6-inch diameter, solid stem augers and 8-inch diameter, hollow stem augers at the approximate locations shown on the Exploration Plan, Plate 2. On January 10 and 11, 2019, we further explored the subsurface conditions by drilling two borings (RW-1 and RW-2) on the order of 101½ feet deep. These borings were drilled with a truck-mounted drill rig capable of solid stem auger and rotary wash drilling at the approximate locations shown on Plate 2. The boring locations were determined approximately by pacing their distance from features shown on the Exploration Plan and should be considered accurate only to the degree implied by the method used. Our staff engineer located and logged the borings and obtained samples of the materials encountered for visual examination, classification and laboratory testing.

Relatively undisturbed samples were obtained from the borings at selected intervals by driving a 2.43-inch inside diameter, split spoon sampler, containing 6-inch long brass liners, using a 140-pound hammer dropping approximately 30 inches. The sampler was driven 12 to 18 inches. The blows required to drive each 6-inch increment were recorded and the blows required to drive the last 12 inches, or portion thereof, were converted to equivalent Standard Penetration Test (SPT) blow counts for correlation with empirical data. Disturbed samples were also obtained at selected depths by driving a 1.375-inch inside diameter (2-inch outside diameter) SPT sampler, without liners or rings, using a 140-pound hammer dropping approximately 30 inches. The sampler was driven 12 to 18 inches, the blows to drive each 6-inch increment were recorded, and the blows required to drive the final 12 inches, or portion thereof, are provided on the boring logs. Disturbed “bulk” samples were also obtained at selected depths from the borings and placed in buckets.

The logs of the borings showing the materials encountered, groundwater conditions, converted blow counts, and sample depths are presented on Plates 3 through 10. The soil is described in accordance with the Unified Soil Classification System, outlined on Plate 11.

The boring logs show our interpretation of the subsurface soil and groundwater conditions on the date and at the locations indicated. Subsurface conditions may vary at other locations and times. Our interpretation is based on visual inspection of soil samples, laboratory test results, and interpretation of

drilling and sampling resistance. The location of the soil boundaries should be considered approximate. The transition between soil types may be gradual.
After completion of borings B-1 and B-2, these borings were converted to open-standpipe piezometers for measuring fluctuation in groundwater level over time.

Cone Penetration Testing

On November 7 and 8, 2017, we performed 12 Cone Penetration Tests (CPT) to depths ranging from about 39 to 96 feet at the approximate locations shown on Plate 2. The CPT locations were determined approximately by pacing their distance from features shown on the Exploration Plan and should be considered accurate only to the degree implied by the method used. The CPT method consists of pushing an instrumented cone, with the tip facing down, into the ground at a controlled rate. The CPT measures the resistance of the tip to penetration into the soil and the skin friction along a sleeve located slightly above the tip. These values are used to estimate various soil properties and determine their Soil Behavior Type using the methods of Robertson (1990). The plots of the CPT's are presented on Plates 12 through 23 in Appendix A.

Laboratory Testing

The samples obtained from the borings were transported to our office and re-examined to verify soil classifications, evaluate characteristics, and assign tests pertinent to our analysis. Selected samples were laboratory tested to determine their water content, dry density, classification (Atterberg Limits, percent of silt and clay), expansion potential (Expansion Index - EI), shear strength, consolidation characteristics, and corrosion potential. The results of water content, dry density, classification, expansion potential, and shear strength tests are presented on the boring logs and on Plates 24 through 39. Test results for consolidation and corrosion are presented on Plates 40 through 44.

Infiltration Testing

We obtained infiltration rates at two locations located at the north and south portions of the property. We understand that typical design of infiltration systems requires water to infiltrate into the ground at a depth of about 5 feet below the existing ground surface. Therefore, our infiltration tests consisted of extending a 2-inch diameter PVC pipe to a depth of about 5 feet. The pipe was sealed around the bottom so that water could not flow up the sides of the pipe. Water was then poured into the pipe and allowed to infiltrate for about 46 minutes to 3 hours. At the end of the time period, the volume of water that infiltrated was measured. Based on the results of the infiltration tests, we calculated infiltration rates for the near surface soil of 0.00117 cubic centimeters per second (cm^3/sec) on the north portion of the site and 0.00466 cm^3/sec on the south portion of the site. These values yield an average infiltration rate is 0.00292 cm^3/sec.

SITE CONDITIONS

General

Sonoma County is located within the California Coast Range geomorphic province. This province is a geologically complex and seismically active region characterized by sub-parallel northwest-trending faults, mountain ranges and valleys. The oldest bedrock units are the Jurassic-Cretaceous Franciscan Complex and Great Valley sequence sediments originally deposited in a marine environment. Subsequently, younger rocks such as the Tertiary-age Sonoma Volcanics group, the Plio-Pleistocene-age Clear Lake Volcanics and sedimentary rocks such as the Guinda, Domengine, Petaluma, Wilson Grove, Cache, Huichica and Glen Ellen formations were deposited throughout the province. Extensive folding and thrust faulting during late Cretaceous through early Tertiary geologic time created complex geologic conditions that underlie the highly varied topography of today. In valleys, the bedrock is covered by thick alluvial soil.

Geology

Published geologic maps (McLaughlin et al., 2008) indicate the property is underlain by undivided alluvial fan and fluvial terrace deposits (Qhf). The deposits are shown to comprise gravel, sand, and silt from sedimentary and igneous units including older Tertiary to Pleistocene non-marine gravel, late Tertiary volcanic rocks, and Mesozoic bedrock units of the Franciscan Complex, Coast Range Ophiolite, and Great Valley Sequence.

Landslides

Published landslide maps (Dwyer, 1976) do not indicate large-scale slope instability at the site, and we did not observe active landslides at the site during our study.

Surface

The property extends primarily over relatively flat terrain and covers half a city block with the Mendocino Avenue overpass on the north, Mendocino Avenue on the east, the Kaiser Permanente campus on the south, and Highway 101 on the west. The site had previously contained a mobile home park of which more than 60% were destroyed in the Tubbs Fire of 2017. Mobile homes remain in the southern end and southeastern corner. The vegetation remaining after the fire consists of mature trees in landscaping areas around the remaining mobile homes. In general, the ground surface is soft and spongy. This is a condition generally associated with soil disturbed from fire debris removal. Drainage around the property is primarily contained within municipal storm water collection and dispersion systems.

Subsurface

Our borings and laboratory tests indicate that the portion of the site we studied is blanketed by 9 to 24 inches of asphalt and aggregate base. Due to the impacts of weather, our borings were drilled within the existing streets of the former mobile home park. Therefore, it is possible that the mobile home areas are underlain by approximately 1 to 2 feet of heterogeneous fill from original grading at the park or loose fill created by debris removal after the fire. Heterogeneous fill and loose fill are materials with varying density, strength, compressibility and shrink-swell characteristics that often have an unknown origin and placement history. These materials are underlain by medium stiff to stiff clay to depths ranging from 6 to 9 feet. This soil exhibits high plasticity (LL = 78.5 and 79.6; PI = 54.0 and 55.1) and very high expansion potential (EI = 148 and 149) These surface materials are underlain predominantly by medium stiff to hard clay with varying amounts of sand with thinner deposits of medium dense to very dense sand with varying amounts of clay.

A detailed description of the subsurface conditions found in our borings is given on Plates 3 through 10, Appendix A. Based on Table 20.3-1 of American Society of Civil Engineers (ASCE) Standard 7-16, titled "Minimum Design Loads and Associated Criteria for Buildings and Other Structures" (2017), we have determined a Site Class of D should be used for the site.

Corrosion Potential

Results of the soil corrosivity tests performed for samples from borings B-1 through B-5 are presented on Plates 43 and 44. Because we are not corrosion experts, these results should be reviewed by a corrosion expert to determine if the proposed improvements are appropriate as they relate to corrosion resistance.

Groundwater

Free groundwater was first detected in our borings at depths ranging from 8 to 17½ feet below the ground surface at the time of drilling. When the holes were backfilled after drilling was completed, the water level had risen to a depth as shallow of 6½ feet. As discussed previously, two borings were converted to open stand-pipe piezometers. Piezometer measurements taken between November 2018 and December 2019 have found the depth to groundwater to range from 4.4 to 7.5 feet in boring B-1 and from 6.4 to 9.0 feet in boring B-2. Fluctuation in the groundwater level typically occurs because of a variation in rainfall intensity, duration and other factors such as flooding and periodic irrigation.

Flooding

Our review of the Federal Emergency Management Agency (FEMA) Flood Zone Map for City of Santa Rosa (No. 06097C0726E) dated December 2, 2008, indicates that the proposed building site is located within Zone "X," an area determined to be outside the 500-year flood plain. Evaluation of flooding potential is typically the responsibility of the project civil engineer.

DISCUSSION AND CONCLUSIONS

Seismic Hazards

Faulting and Seismicity

We did not observe landforms within the area that would indicate the presence of active faults and the site is not within a current Alquist-Priolo Earthquake Fault Zone (Bryant and Hart, 2007). Therefore, we believe the risk of fault rupture at the site is low. However, the site is within an area affected by strong seismic activity and future seismic shaking should be anticipated at the site. It will be necessary to design and construct the proposed improvements in strict adherence with current standards for earthquake-resistant construction.

Liquefaction

Liquefaction is a rapid loss of shear strength experienced in saturated, predominantly granular soil below the groundwater level during strong earthquake ground shaking due to an increase in pore water pressure. The occurrence of this phenomenon is dependent on many complex factors including the intensity and duration of ground shaking, particle size distribution and density of the soil.

Granular soil was encountered at the site below the groundwater table. Therefore, we performed an analysis of the blow count data from our borings using the methods of Seed and Idriss (1982), Seed and others (1985), Youd and Idriss (2001), Idriss and Boulanger (2004) and Idriss and Boulanger (2008). These procedures normalize the blow counts to account for overburden pressure, rod length, hammer energy, and fines (percent of silt and clay) content. Once the blow counts are normalized and adjusted to a clean sand blow count, the cyclic resistance ratio (CRR) for each blow count is then determined using the same procedures referenced above. The CRR is compared to the cyclic stress ratio (CSR) induced by the earthquake. Calculating the CSR requires a peak ground acceleration and design earthquake magnitude.

Peak ground acceleration (PGA) was determined using the methods in the 2019 California Building Code (CBC) and the site-specific ground motion methods in Chapter 21 of ASCE Standard 7-16 (2017). Using the site's latitude and longitude of 38.4734°N and 122.7289°W, respectively, and a site soil Class of D, the PGA for the site is 0.832g. Using this information, the CSR for a M_M 7.5 earthquake at the site ranges from 0.54 to 0.76. The Healdsburg-Rogers Creek fault is most likely controlling the ground motions at the site. According to Petersen (1996), the Healdsburg-Rogers Creek fault is capable of a M_M 7.0 earthquake. Therefore, the CRR values at the site must be scaled to account for the difference between M_M 7.0 and M_M 7.5. When the scaling factor for magnitude and confining stress corrections presented in Idriss and Boulanger (2004) are applied, the CRR value at the site did not exceed the CSR value for layers between about 11½ and 13½ feet in boring B-4 and from about 63 to 65½ feet and 95 to 99 feet in boring RW-2. Therefore, we judge that there is the potential for liquefaction at the site.

In addition, we analyzed the data from the 12 CPT's using the methods of Idriss and Boulanger (2014) and the CPT liquefaction program called CLiq. For the analysis, we used the Cetin et al. (2009) weighting factors and transition zone detection as recommended by Dr. Robertson in his 2014 presentation to the San Diego Regional Chapter of Earthquake Engineering Research Institute (EERI). Dr. Robertson reports that making these adjustments has resulted in analysis more closely matching observed settlements. As

stated above, the earthquake magnitude for the site is M_M 7.0 and the peak ground acceleration is 0.832g. Our analysis found potentially liquefiable layers of variable thickness between about 10 and 40 feet.

There are three potential consequences of liquefaction: bearing capacity failure, lateral spreading toward a free face (e.g. riverbank) and settlement. Bearing capacity failure is sudden and extreme settlement of foundations that typically occurs when the liquefied layer is relatively close (typically within two times the footing width, depending on the loads) to the bottom of the foundation. The liquefiable layer is as shallow as 10 feet below the ground surface and below the groundwater table based on our groundwater level measurements. Given the size of some of the planned buildings and that some may have below grade parking, we judge that there is the potential for bearing capacity failure at the site.

Lateral spreading can occur where continuous layers of liquefiable soil extend to a free face, such as a creek bank. There are no significant free faces in the vicinity of the site. Therefore, we judge the potential for liquefaction-induced lateral spreading at the site is low.

The third potential consequence of liquefaction is settlement due to densification of the liquefied soil. Potential settlements based on the CPT data were calculated using the methods of Idriss and Boulanger (2014). For the layers encountered between about 10 and 40 feet, we calculated total settlement ranging from 0.75 to 2.8 inches. Based on the CPT analysis, differential settlement could range up to about 2 inches. Based on the CPT data, differential settlement between CPT locations is estimated to be as high as 1½ inches.

Densification

Densification is the settlement of loose, granular soil above the groundwater level due to earthquake shaking. Granular soils were not encountered above the groundwater table at the site. Therefore, we judge that there is a low potential for densification to impact structures at the site.

Geotechnical Issues

General

Based on our study, we judge the proposed improvements can be built as planned, provided the recommendations presented in this report are incorporated into their design and construction. The primary geotechnical concerns during design and construction of the project are:

1. The presence of various thicknesses of heterogeneous fill and loose fill beneath existing pavement areas and the mobile home areas;

2. The presence of highly expansive near surface soil;

3. The presence of potentially compressible soil in the upper 15 feet;

4. The presence of potentially liquefiable soils of variable thicknesses between about 10 and 40 feet;

5. The presence of potentially high ground water; and

6. The strong ground shaking predicted to impact the site during the life of the project.

Heterogeneous Fill and Loose Fill

Heterogeneous fills of unknown quality and unknown method of placement and loose fills from debris removal can settle and/or heave erratically under the load of new fills, structures, slabs, and pavements. Footings, slabs, and pavements supported on heterogeneous fill could also crack as a result of such erratic movements. Thus, where not removed by planned grading, the heterogeneous fill and loose fill must be excavated and replaced as an engineered fill if it is to be used for structural support.

Expansive Surface Soil

The near surface soil below the heterogeneous fill and loose fill is highly expansive. Expansive surface soil shrinks and swells as they lose and gain moisture throughout the yearly weather cycle. Near the surface, the resulting movements can heave and crack lightly loaded shallow foundations (spread footings) and slabs and pavements. The zone of significant moisture variation (active layer) is dependent on the expansion potential of the soil and the extent of the dry season. In the Santa Rosa area, the active layer is generally considered to range in thickness from about 2 to 3 feet. The detrimental effects of the above-described movements can be reduced by pre-swelling the expansive soil and covering it with a moisture fixing and confining blanket of properly compacted select fill, as subsequently defined. In building areas, the blanket thickness required depends on the expansion potential of the soil and the anticipated performance of the foundations and slabs. In order to effectively reduce foundation and slab heave given the expansion potential of the site's soil, a blanket thickness of 30 inches will be needed. Alternatively, structures can be supported on a mat slab foundation. In exterior slab and paved areas, the select fill blanket need only be 12 inches thick.

Potentially Compressible Soils

Our borings encountered soils that could be susceptible to settlement under heavy loads such as those for larger buildings as are planned for this project. Settlement calculations indicate that the interior columns will settle about two times as much as interior columns. Using assumed bearing pressures and footing sizes, we estimate that interior columns could settle as much as 2 inches. This means that differential settlement between interior columns and exterior columns could be on the order of 1 inch. In order to reduce the impacts of settlement, foundation support can be obtained from a mat slab foundation designed for lower bearing pressures or from a deep foundation system such as a driven-piles, drilled caissons, torque-down piles, or auger cast piles. With this option, the floor slabs will need to be structurally supported. Alternatively, spread footings or mat slabs can be used with ground improvement, such as Drilled Displacement Columns (DDC), Compacted or Rammed Aggregate Piers, or deep soil mixing, in order to reduce settlement and increase bearing capacity.

Potentially Liquefiable Soils

As discussed previously, potentially liquefiable soils were encountered at the site. In particular, potentially liquefiable soils extend in various thicknesses from approximately 10 to 40 feet. As discussed

previously, potentially liquefiable soils present at the site are susceptible to bearing capacity failure (sudden large unpredictable settlements) for foundations bearing within or slightly above this layer. Furthermore, non-bearing capacity failure related earthquake-induced total settlement ranging from 0.75 to 2.8 inches with differential settlement of 1½ inches is anticipated at the site. In order to reduce the impacts of the above consequences, the structures need to be founded on a mat slab or spread footings constructed over ground improvement such as DDC, Compacted/Rammed Aggregate Piers, or deep soil mixing in order to reduce settlement and increase bearing capacity. As an alternative, the structures can be supported on a deep foundation such as driven piles, drilled caissons, torque-down piles, or auger cast piles. With this option, the floor slabs will need to be structurally supported.

Foundation Supports – Provided remedial grading of heterogeneous and loose fill and expansive soils is performed as recommended herein, here are the following options.

The first option is that satisfactory foundation support for the structures can be obtained from mat slabs or spread footings with a slab-on-grade floor that is constructed over ground improvement consisting of DDC, Compacted/Rammed Aggregate Piers, or deep soil mixing. Ground improvement needs to extend to depths of 25 to 30 feet depending on the level of allowable settlement for the structures.

Alternatively, the structures need to be supported on a deep foundation system that gain support below a depth of 30 feet. Deep foundations consist of driven piles, drilled shafts, Drill Displacement Piles (DDP), torque-down piles, or auger cast piles. With this option, the slab floor for the structure needs to be structurally supported and needs to be underlain by at least 30 inches of select fill in order to reduce the impacts of expansive soils.

For improvements outside of the structure that have their own foundation, spread footings bearing on firm, native soil or drilled piers can be used and impacts from settlement due to liquefaction should be expected.

Exterior Slabs and Pavements

Exterior slabs and pavements will heave and crack as the moderately expansive soil shrinks and swells through the yearly weather cycle. Slab and pavement cracking and distress are typically concentrated along edges where moisture content variation is more prevalent within subgrade soil. Slab and pavement performance can be improved and the incidence of repair can be reduced, but not eliminated, by covering the pre-swelled expansive soil with at least 12 inches of select fill (see “On-Site Soil Quality” section) prior to constructing the slab or pavement required to carry the anticipated traffic.

On-Site Soil Quality

All fill materials used in the upper 30 inches of the building area and the upper 12 inches of exterior slab and pavement subgrade must be select, as subsequently described in “Recommendations.” We anticipate that, with the exception of organic matter and of rocks or lumps larger than 6 inches in diameter, the excavated material will be suitable for re-use as general fill but will not be suitable for use as select fill unless stabilized with lime.

Select Fill

The select fill can consist of approved on-site soil or import materials with a low expansion potential or lime stabilized on-site clayey soil. Lime stabilized soil may prevent the growth of landscape vegetation due to the inherent elevated pH level of the soil. The geotechnical engineer must approve the use of on-site soil as select fill during grading.

Settlement

Provided the remedial grading is performed and foundations, plus ground improvement if required, are installed as recommended herein, we estimate that total settlements of heavily loaded column footings will be about 1 inch and settlement of the strip footings will be ½ inch. We estimate that post-construction differential settlements between columns and lightly loaded perimeter footings will be about ½ inch. Earthquake-induced settlement will be reduced to less than ½ inch with differential settlement of ½ inch over the longitudinal length of the structure.

Basement Dewatering

We understand that below grade levels are being considered for this project. As previously discussed, the groundwater level at the site is currently between within about 5 and 9 feet of the existing ground surface. Therefore, groundwater will impact below grade excavations not only on a short-term basis (during construction) but also during the life of the project. We did not perform a site-specific groundwater study to quantify the inflow volume of groundwater into an excavation. Construction excavation dewatering and the sizing of the required dewatering system is typically the responsibility of the contractor. The adequacy of the construction dewatering system for use on a long-term basis should be analyzed (including the waterproofing type) and resized, as applicable. We are not experts in this field and recommend a hydrogeologist and excavation dewatering expert be consulted prior to installing such a system. As an alternative to the long-term dewatering system, the below grade level can be waterproofed and designed to resist full hydrostatic pressure.

RECOMMENDATIONS

Seismic Design

Seismic design parameters presented below are based on Section 1613 titled "Earthquake Loads" of the 2019 California Building Code (CBC). Based on Table 20.3-1 of ASCE Standard 7-16 (2017), we have determined a Site Class of D should be used for the site. Using a site latitude and longitude of 38.4734°N and 122.7289°W, respectively, the Site Class of D, and the site-specific ground motion procedures of Chapter 21 of ASCE 7-16, we recommend that the following seismic design criteria be used for structures at the site.

2019 CBC Seismic Criteria	
Spectral Response Parameter	**Acceleration (g)**
S_S (0.2 second period)	2.250
S_1 (1 second period)	0.871
S_{MS} (0.2 second period)	2.349
S_{M1} (1 second period)	2.818
S_{DS} (0.2 second period)	1.566
S_{D1} (1 second period)	1.879

Grading

Site Preparation

Areas to be developed should be cleared of vegetation and debris including that left by the removal of obsolete structures. Trees and shrubs that will not be part of the proposed development should be removed and their primary root systems grubbed. Cleared and grubbed material should be removed from the site and disposed of in accordance with County Health Department guidelines. We did not observe septic tanks, leach lines or underground fuel tanks during our study. Any such appurtenances found during grading should be capped and sealed and/or excavated and removed from the site, respectively, in accordance with established guidelines and requirements of the County Health Department. Voids created during clearing should be backfilled with engineered fill as recommended herein.

Stripping

Areas to be graded should be stripped of the upper few inches of soil containing organic matter. Soil containing more than two percent by weight of organic matter should be considered organic. Actual stripping depth should be determined by a representative of the geotechnical engineer in the field at the time of stripping. The strippings should be removed from the site, or if suitable, stockpiled for re-use as topsoil in landscaping.

Excavation Dewatering

Groundwater was encountered within the planned excavation depth for a below grade level. Therefore, in order to accomplish the planned excavation, it will be necessary to dewater excavations. The dewatering system can consist of a perforated plastic pipe (in a grid array) embedded in free draining rock. The system should discharge to a sump area that is pumped continuously during construction. The general contractor is responsible for the design, operation and maintenance of the temporary dewatering system. If this system is to be incorporated into the final dewatering system of the underground structure, we should evaluate its performance during excavation.

Excavations

Following initial site preparation, excavation should be performed as recommended herein. Excavations extending below the proposed finished grade should be backfilled with suitable materials compacted to the requirements given below.

Within fill and building areas, the old and loose fill should be excavated in their entirety. We estimate that these materials will be as thick as 24 inches. In addition, within building areas, the expansive surface soil below the old fill and loose fill should be excavated, as necessary, to allow space for the installation of a blanket of select fill, at least 30 inches thick, beneath the building pad subgrade. The excavation of old and loose fill and expansive soil should also extend at least 12 inches below exterior slab and pavement subgrade to allow space for the installation of the select fill blanket discussed in the conclusions section of this report. The excavation of old and loose fill and expansive surface materials should extend at least 5 feet beyond the outside edge of building foundations and 3 feet beyond the edge of exterior slabs and pavements. The excavated materials should be stockpiled for later use as compacted fill, or removed from the site, as applicable.

At all times, temporary construction excavations should conform to the regulations of the State of California, Department of Industrial Relations, Division of Industrial Safety or other stricter governing regulations. The stability of temporary cut slopes, such as those constructed during the installation of underground utilities, should be the responsibility of the contractor. Depending on the time of year when grading is performed, and the surface conditions exposed, temporary cut slopes may need to be excavated to 1½:1, or flatter. The tops of the temporary cut slopes should be rounded back to 2:1 in weak soil zones.

Fill Quality

All fill materials should be free of perishable matter and rocks or lumps over 6 inches in diameter and must be approved by the geotechnical engineer prior to use. The upper 30 inches of fill beneath and within 5 feet of the building area and the upper 12 inches of fill beneath and within 3 feet of exterior slabs and pavement edges should be select fill. We judge the on-site soil is generally suitable for use as general fill but will not be suitable for use as select fill unless they are stabilized with lime. Lime stabilized soil may prevent the growth of landscape vegetation due to the inherent elevated pH level of the soil. The suitability of the on-site soil for use as select fill should be verified during grading.

Select Fill

Select fill should be free of organic matter, have a low expansion potential, and conform in general to the following requirements:

SIEVE SIZE	PERCENT PASSING (by dry weight)
6 inch	100
4 inch	90 – 100
No. 200	10 – 60

Liquid Limit – 40 Percent Maximum
Plasticity Index – 15 Percent Maximum
R-value – 20 Minimum (pavement areas only)

Expansive on-site soil may be used as select fill if it is stabilized with lime. In general, imported fill, if needed, should be select. Material not conforming to these requirements may be suitable for use as import fill; however, it shall be the contractor's responsibility to demonstrate that the proposed material will perform in an equivalent manner. The geotechnical engineer should approve imported materials prior to use as compacted fill. The grading contractor is responsible for submitting, at least 72 hours (3 days) in advance of its intended use, samples of the proposed import materials for laboratory testing and approval by the soils engineer.

Lime Stabilization

For preliminary planning purposes, we estimate that high calcium lime mixed at a minimum of 5½ percent (dry weight) will stabilize the expansive site soil. This percentage of lime needs to be verified prior to construction with engineering analysis and laboratory Atterberg Limits and/or pH testing using lime from the same source as that planned for use on the project and a sample of the soil to be treated. Laboratory test results and engineering analysis may indicate that a higher percentage of lime is required. The contractor should allow a minimum of 5 business days for the laboratory tests to be completed.

The lime stabilization should be performed in accordance with Section 24 of the Caltrans Standard Specifications except that a curing seal will not be required, provided the moisture content of the lime-stabilized material is maintained at or above optimum moisture content until it is permanently covered with subsequent construction. Lime stabilized materials are generally not suitable for reuse as general fill, select fill or backfill after compaction has taken place.

Fill Placement

The surface exposed by stripping and removal of heterogeneous fill and loose fill and expansive surface soil should be scarified to a depth of at least 6 inches, uniformly moisture-conditioned to at least 4 percent above optimum and compacted to at least 90 percent of the maximum dry density of the materials as determined by ASTM Test Method D-1557. In expansive soil areas, moisture conditioning should be sufficient to completely close all shrinkage cracks for their full depth within pavement,

exterior slab and building areas. If grading is performed during the dry season, the shrinkage cracks may extend to a few feet below the surface. Therefore, it may be necessary to excavate a portion of the cracked soil to obtain the proper moisture condition and degree of compaction. Approved fill material should then be spread in thin lifts, uniformly moisture-conditioned to near optimum and properly compacted. All structural fills, including those placed to establish site surface drainage, should be compacted to at least 90 percent relative compaction. Expansive soil used as fill should be moisture-conditioned to at least 4 percent above optimum. Only approved select materials should be used for fill within the upper 30 inches of finished pad grade and within the upper 12 inches of exterior slab and pavement subgrades.

SUMMARY OF COMPACTION RECOMMENDATIONS

Area	Compaction Recommendation (ASTM D-1557)
Preparation for areas to receive fill	After preparation in accordance with this report, compact upper 6 inches to a minimum of 90 percent relative compaction.
General fill (native or import)	Compact to a minimum of 90 percent relative compaction.
Structural fill beneath buildings, extending outward to 5' beyond building perimeter	Compact to a minimum of 90 percent relative compaction.
Trenches	Compact to a minimum of 90 percent relative compaction. Compact the top 6 inches below vehicle pavement subgrade to a minimum of 95 percent relative compaction.
Retaining wall backfill	Compact to a minimum of 90 percent relative compaction, but not more than 95 percent.
Pavements, extending outward to 3' beyond edge of pavement	Compact upper 6 inches of subgrade to a minimum of 95 percent relative compaction.
Concrete flatwork and exterior slabs, extending outward to 3' beyond edge of slab	Compact subgrade to a minimum of 90 percent relative compaction. Where subject to vehicle traffic, compact upper 6 inches of subgrade to at least 95 percent relative compaction.
Aggregate Base	Compact aggregate base to at least 95 percent relative compaction.

Wet Weather Grading

Generally, grading is performed more economically during the summer months when the on-site soil is usually dry of optimum moisture content. Delays should be anticipated in site grading performed during the rainy season or early spring due to excessive moisture in on-site soil. Special and relatively expensive construction procedures, including dewatering of excavations and importing granular soil, should be anticipated if grading must be completed during the winter and early spring or if localized areas of soft saturated soil are found during grading in the summer and fall.

Open excavations also tend to be more unstable during wet weather as groundwater seeps towards the exposed cut slope. Severe sloughing and occasional slope failures should be anticipated. The occurrence of these events will require extensive clean up and the installation of slope protection measures, thus delaying projects. The general contractor is responsible for the performance, maintenance and repair of temporary cut slopes.

Foundation Support

As discussed previously, there are options for foundation support that include shallow foundations over ground improvement and deep foundations. These foundation options are outlined below. In addition, spread footing and drilled pier recommendations are provided for structural improvements outside of the planned structure.

Shallow Foundations over Ground Improvement

Given the compressible soils and potentially liquefiable soils at the site, the structures can be supported on spread footings or a mat slab that are supported on ground improvement consisting of drilled displacement columns (DDC), or compacted or rammed aggregate piers (CAP or RAP), or deep soil mixing that are installed to 25 to 30 feet below the existing ground surface. The ground improvement should be sized and spaced to provide an allowable bearing pressure of about 5,000 pounds per square foot (psf) for dead plus code live loads that can be increased by 1/3 for wind and seismic forces. Based on our recent experience in the area and with similar conditions, we recommend that the following sizes and spacing be used for project planning and preliminary cost estimating:

- DDC at 16 to 19 inches in diameter, spaced every 4 feet on center extending to 30 feet
- CAP or RAP at 24 inches in diameter, spaced every 6 to 7 feet on center extending to 30 feet.

We have no recent experience in the area with deep soil mixing. If this appears to be a viable option, we will consult with a specialty contractor to develop the required recommendations.

Final ground improvement depth, spacing and allowable bearing pressure should be determined by your design build ground improvement contractor once foundation loading has been finalized.

The portion of the spread footing or mat foundations extending into the engineered fill and supported on ground improvement may impose a passive equivalent fluid pressure and a friction factor of 390 pounds per cubic foot (pcf) and 0.35, respectively, to resist sliding. Passive pressure should be neglected within the upper 6 inches, unless the soil is confined by concrete slabs or pavements.

For this option, the mat slab and spread footings should be designed for non-seismic differential settlement of ½ inch between interior columns and perimeter foundations and earthquake-induced differential settlement of ½-inch over the longitudinal length of the structure.

Excavations for spread footings and thickened areas of the mat slab should be thoroughly cleaned out, wetted and compacted prior to placing steel and concrete. This will remove the soils disturbed during excavations, restore their adequate bearing capacity, and reduce post-construction settlements.

A mat slab should be underlain with a capillary moisture break consisting of at least 4 inches of clean, free-draining crushed rock or gravel (excluding pea gravel) at least ¼-inch and no larger than ¾-inch in size. A vapor barrier should be placed under the mat slab if it is likely to receive an impermeable floor finish or be used for any purpose where the passage of water vapor through the floor is undesirable. RGH does not practice in the field of moisture vapor transmission evaluation or mitigation. Therefore, we recommend that a qualified person be consulted to evaluate the general and specific moisture vapor transmission paths and any impact on the proposed construction. This person should provide recommendations for mitigation of the potential adverse impact of moisture vapor transmission on various components of the structure as deemed appropriate.

Deep Foundations

Deep foundation options consist of driven piles, drilled caissons, torque-down piles, and auger cast piles (or similar equivalent). Recommendations for each alternative are provided herein. Drilled caissons, torque-down piles, and auger cast piles are designed for skin friction with no end bearing so they can be designed using the same criteria.

Driven Piles - There are a wide variety of pile types that could be used for the project. We typically see 12-inch square pre-cast concrete piles, or 16-inch diameter steel pipe piling used for this type of project. Recommendations for both pile types are presented herein. If the project design team elects to use a different type or dimension of pile, we should be contacted for additional evaluation and recommendations.

Vertical Capacity - The ultimate vertical capacity of the pile depends on the skin friction and end bearing developed in the alluvial soils. The ultimate capacity of an individual pile with depth was calculated using the wave equation and the resulting values presented on Plate 45. The values represented by this design line are an estimate of actual forces that are likely to develop and are intended for use in a working stress analysis. The values do not contain a factor of safety or load factor. In addition, a Factor of Safety of 2.0 was applied to calculate an allowable capacity versus depth line, which is also presented on Plate 45. If piles other than those described herein are to be used, we should be consulted to provide revised criteria.

Under static loading conditions, we estimate total settlement of a single pile designed in accordance with these recommendations will be less than 1-inch. This value pertains to soil compression only and does not include elastic compression of the pile.

Lateral Capacity - We understand that lateral loads for determining load deflections (p-y) curves are not currently available. Once the project structural engineer has developed these loads, we should be consulted to provide p-y curves, if required.

Pile Installation - The piles should be installed with a diesel hammer having a rated energy of at least 40,000 foot-pounds. This energy corresponds to a Delmag D16-32. The contractor should select a hammer and driving system that is capable of driving piles to the desired capacity without overstressing the piles in either tension or compression. Prior to the start of pile installation at the site, the contractor should submit the following information regarding the hammer and driving system to the geotechnical engineer:

- confirmation of pile type, length and size
- hammer type and rated energy
- helmet weight, including striker plate
- hammer cushion material, cross-section area, and thickness
- pile cushion material and thickness, if used

This information will be used to provide driving criteria based on wave equation analysis using the proposed pile and hammer combination. The contractor should be advised that modifications to the proposed equipment, including the use of a different hammer, may be required if the analysis indicates that the proposed equipment is not sufficient to obtain the desired ultimate pile capacity, or is likely to damage the pile during driving.

Our subsurface exploration at the site did not encounter subsurface conditions that would be expected to obstruct pile driving. If obstructions are encountered, we recommend the pile locations be pre-drilled.

Drilled Cassions, Torque-down Piles, and Auger Cast Piles - Drilled caissons will create large amounts of soil cuttings that will need to be disposed of during the installation process. Furthermore, the caissons will encounter ground water, which complicates their construction. This is especially a concern if groundwater has been contaminated by an off-site source. Torque-down piles and auger cast piles does not create cuttings or the need to dispose of groundwater. Those types of deep foundations are designed for skin friction with no end bearing and designed using the same criteria. These design criteria are presented below. Cassions and piles should be spaced no closer than 3 diameters center to center.

The portion of the piles extending from 5 to 15 feet below the ground surface may be designed using an allowable skin friction of 500 psf for dead load plus long-term live loads. Below 15 feet, this value increases to 750 psf. These values can be increased by ⅓ for total loads, including downward vertical wind or seismic forces; however, the skin friction should be neglected in the upper 30 feet for seismic loading conditions. Skin friction values of 350 psf and 500 psf should be used to resist uplift forces within the upper 15 feet and below 15 feet, respectively, with the exception of the upper 30 feet for seismic loading conditions.

Lateral loads on caissons/piles will be resisted by passive pressure on the engineered fill at the surface. An equivalent fluid pressure of 390 pcf acting on the edge of the concrete slab may be used for design. Where the caissons piles are within the engineered fill, the above passive resistance can be applied to each pile acting on two pile diameters. In addition, passive resistance of 390 pcf for the soils below 30 feet can also be used to resist lateral loads. This value can also be applied over two pile diameters and confinement starts at a depth of 30 feet.

We understand that the CBC may require that piles be designed as unbraced in fluid soils. Fluid soils result from liquefaction, which is anticipated at the site during a major seismic event. As described in the report, potentially liquefiable soils were encountered between about 10 and 40 feet. The liquefiable layers vary in thickness so for design purposes the soil should be assumed to provide lateral stability for the piles for 15 of the 30 feet where liquefiable soil is anticipated and below 40 feet.

Other Spread Footings

Spread footings can be used for foundation support of structural improvements that are not associated with the structure, such as free-standing site walls and signs. The spread footings should be at least 12 inches wide and should bottom on firm, native soil at least 36 inches below lowest adjacent grade. Additional embedment or width may be needed to satisfy code and/or structural requirements.

The bottoms of all footing excavations should be thoroughly cleaned out or wetted and compacted using hand-operated tamping equipment prior to placing steel and concrete. This will remove the soil disturbed during footing excavations, or restore their adequate bearing capacity, and reduce post-construction settlements. Footing excavations should not be allowed to dry before placing concrete. If shrinkage cracks appear in soil exposed in the footing excavations, the soil should be thoroughly moistened to close all cracks prior to concrete placement. The moisture condition of the foundation excavations should be checked by the geotechnical engineer no more than 24 hours prior to placing concrete.

Bearing Pressures - Footings installed in accordance with these recommendations may be designed using allowable bearing pressures of 1,200, 1,800 and 2,400 psf, for dead loads, dead plus code live loads, and total loads (including wind and seismic), respectively.

Lateral Pressures - The portion of spread footing foundations extending into firm native soil may impose a passive equivalent fluid pressure and a friction factor of 300 pcf and 0.30, respectively, to resist sliding. Passive pressure should be neglected within the upper 6 inches, unless the soil is confined by concrete slabs or pavements.

Drilled Piers

Drilled, cast-in-place, reinforced concrete piers can be used for foundation support of structural improvements that are not associated with the structure, such as light and flag poles and trellises. Drilled piers should be at least 12 inches in diameter and should extend at least 8 feet below finished grade. Larger piers and deeper embedment may be needed to resist the lateral forces imposed by earthquakes per the 2019 California Building Code. Piers should be spaced no closer than 3 pier diameters, center to center.

Skin Friction - The portion of the piers extending below a depth of 2 feet may be designed using an allowable skin friction of 500 psf for dead load plus long term live loads. This value can be increased by ⅓ for total loads, including downward vertical wind or seismic forces. A skin friction value of 350 psf should be used to resist uplift forces. End bearing should be neglected because of the difficulty of cleaning out small diameter pier holes, and the uncertainty of mobilizing end bearing and skin friction simultaneously.

Lateral Forces - Lateral loads on piers will be resisted by passive pressure on the soil. An equivalent fluid pressure of 300 pcf acting on two pier diameters should be used. Confinement for passive pressure may be assumed from 2 feet below the lowest adjacent finished ground surface.

Pier Drilling - We encountered groundwater within the planned pier depth during our study. If groundwater is encountered during drilling, it may be necessary to de-water the holes and/or place the concrete by the tremie method. If caving soil is encountered, it may be necessary to case the holes.

Concrete - Concrete mix design and placement should be done in accordance with the current ADSC and/or ACI specifications. Concrete should not be allowed to mushroom at the top of the piers or below the bottom of grade beams.

Below-Grade Retaining Walls

If a below grade level is constructed, retaining walls will be required. Below-grade retaining walls constructed at the site must be designed to resist lateral earth pressures plus additional lateral pressures that may be caused by surcharge loads applied at the ground surface behind the walls. Retaining walls free to rotate (yielding greater than 0.1 percent of the wall height at the top of the backfill) should be designed for active lateral earth pressures. If walls are restrained by rigid elements to prevent rotation, they should be designed for “at rest” lateral earth pressures. In the absence of backdrains, the retaining walls should be designed to resist full hydrostatic pressure. Given the groundwater levels in the area, draining these walls will require continuous dewatering to lower the water table. This does not appear to be economically feasible. Therefore, we have assumed that the walls will not have backdrains, so this section is directed towards that assumption.

Retaining walls should be designed to resist the following earth equivalent fluid pressures (triangular distribution):

EARTH EQUIVALENT FLUID PRESSURES		
Loading Condition	**Pressure (pcf)**	**Additional Seismic Pressure (pcf)***
Active Full Hydrostatic	83	15
At Rest Full Hydrostatic	94	38

* If required

These pressures do not consider additional loads resulting from adjacent foundations or other loads. If these additional surcharge loadings are anticipated, we can assist in evaluating their effects. Where retaining wall backfill is subject to vehicular traffic, the walls should be designed to resist an additional surcharge pressure equivalent to two feet of additional backfill.

Foundation Support

Retaining walls should be supported on spread footings, mat slabs or deep foundations, as applicable, designed in accordance with the recommendations presented in this report. Retaining wall foundations should be designed by the project civil or structural engineer to resist the lateral forces set forth in this section.

Backfill

Retaining walls will yield slightly during backfilling. Therefore, walls should be backfilled prior to building on, or adjacent to, the walls. Backfill against retaining walls should be compacted to at least 90 and not more than 95 percent relative compaction. Over-compaction or the use of large compaction equipment should be avoided because increased compactive effort can result in lateral pressures higher than those recommended above.

Expansive soil should not be used for wall backfill. Where expansive soil is present in the excavation made to install the retaining wall, the excavation should be sloped back 1:1 from the back of the footing. The ground surface behind retaining walls should be sloped to drain. Where migration of moisture through retaining walls would be detrimental, retaining walls should be waterproofed.

Slab-On-Grade

Provided grading is performed in accordance with the recommendations presented herein, interior slabs and exterior slabs should be underlain by select engineered fill. The select engineered fill for interior slabs will be supported on ground improvement. The ground improvement spacing should be able to be increased. For planning purposes, assume it can be widened to 8 to 10 feet on center beneath interior slabs with a treatment depth of 25 to 30 feet. Final ground improvement depth and spacing should be determined by your design-build ground improvement contractor once foundation loading and slab design have been finalized.

Slab-on-grade subgrade should be rolled to produce a dense, uniform surface. The slabs should be underlain with a capillary moisture break consisting of at least 4 inches of clean, free-draining crushed rock or gravel (excluding pea gravel) at least ¼-inch and no larger than ¾-inch in size. Interior slabs subject to vehicular traffic may be underlain by Class 2 aggregate base. The use of Class 2 aggregate base should be reviewed on a case by case basis. Class 2 aggregate base can be used for slab rock under exterior slabs. Interior area slabs should be provided with an underdrain system. The installation of this subdrain system is discussed in the “Geotechnical Drainage” section.

Slabs should be designed by the project civil or structural engineer to support the anticipated loads, reduce cracking and provide protection against the infiltration of moisture vapor. A vapor barrier should be placed under all slabs-on-grade that are likely to receive an impermeable floor finish or be used for

any purpose where the passage of water vapor through the floor is undesirable. RGH does not practice in the field of moisture vapor transmission evaluation or mitigation. Therefore, we recommend that a qualified person be consulted to evaluate the general and specific moisture vapor transmission paths and any impact on the proposed construction. This person should provide recommendations for mitigation of the potential adverse impact of moisture vapor transmission on various components of the structure as deemed appropriate.

Utility Trenches

The shoring and safety of trench excavations is solely the responsibility of the contractor. Attention is drawn to the State of California Safety Orders dealing with "Excavations and Trenches."

Unless otherwise specified by the City of Santa Rosa, on-site, inorganic soil may be used as general utility trench backfill. Where utility trenches support pavements, slabs and foundations, trench backfill should consist of aggregate baserock. The baserock should comply with the minimum requirements in Caltrans Standard Specifications, Section 26 for Class 2 Aggregate Base. Trench backfill should be moisture-conditioned as necessary and placed in horizontal layers not exceeding 8 inches in thickness, before compaction. Each layer should be compacted to at least 90 percent relative compaction as determined by ASTM Test Method D-1557. The top 6 inches of trench backfill below vehicle pavement subgrades should be moisture-conditioned as necessary and compacted to at least 95 percent relative compaction. Jetting or ponding of trench backfill to aid in achieving the recommended degree of compaction should not be attempted.

Pavements

Provided the site grading is performed to remediate expansive soil heave, as recommended herein, the uppermost 12-inches of pavement subgrade soil will be either imported select fill with a minimum R-value of 20 or lime stabilized site soil that generally has an R-value of at least 50. Based on those R-values we recommend the pavement sections listed in the tables below be used.

PAVEMENT SECTIONS WITH IMPORTED SELECT FILL SUBGRADE			
TI	ASPHALT CONCRETE (feet)	CLASS 2 AGGREGATE BASE (feet)	IMPORTED SELECT FILL* (feet)
7.0	0.30	1.15	1.0
6.0	0.25	1.05	1.0
5.0	0.20	0.90	1.0

* R-value ≥ 20

PAVEMENT SECTIONS WITH LIME STABILIZED SELECT FILL SUBGRADE			
TI	ASPHALT CONCRETE (feet)	CLASS 2 AGGREGATE BASE (feet)	LIME STABILIZED SELECT FILL* (feet)
7.0	0.35	0.50	1.0
6.0	0.30	0.50	1.0
	0.20	0.50	1.0

* R-value ≥ 50

Pavement thicknesses were computed using Caltrans design methods and are based on a pavement life of 20 years. These recommendations are intended to provide support for traffic represented by the indicated Traffic Indices. They are not intended to provide pavement sections for heavy concentrated construction storage or wheel loads such as forklifts, parked truck-trailers and concrete trucks or for post-construction concentrated wheel loads such as self-loading dumpster trucks. In areas where heavy construction storage and wheel loads are anticipated, the pavements should be designed to support these loads. Support could be provided by increasing pavement sections or by providing reinforced concrete slabs. Alternatively, paving can be deferred until heavy construction storage and wheel loads are no longer present. Loading areas for self-loading dumpster trucks should be provided with reinforced concrete slabs.

Because of the very high expansion potential of the soil and bedrock at the site and the difficulty in controlling seasonal moisture variation beneath and adjacent to the driveway, significant cracking may develop in the pavement even if 12-inches of select fill is installed. Increasing the thickness of select fill or installing moisture cutoffs may reduce but not eliminate the potential for cracks to develop. It should be understood that pavements will likely require regular maintenance including crack sealing and the aesthetics may not be desirable.

Prior to placement of aggregate base, the upper 6 inches of the pavement subgrade soil (excluding lime stabilized soil) should be scarified, uniformly moisture-conditioned to near optimum, and compacted to at least 95 percent relative compaction to form a firm, non-yielding surface. Lime stabilized select fill

subgrade soil should be compacted as specified in Section 24 of the Caltrans Standard Specifications. Aggregate base materials should be spread in thin layers, uniformly moisture-conditioned, and compacted to at least 95 percent relative compaction to form a firm, non-yielding surface. The materials and methods used should conform to the requirements of the City of Santa Rosa and the current edition of the Caltrans Standard Specifications, except that compaction requirements should be based on ASTM Test Method D-1557. Aggregate used for the base course should comply with the minimum requirements specified in Caltrans Standard Specifications, Section 26 for Class 2 Aggregate Base.

Geotechnical Drainage

Surface water should be diverted away from slopes, foundations and edges of pavements. Surface drainage gradients should slope away from building foundations in accordance with the requirements of the CBC or local governing agency. Where a gradient flatter than 2 percent for paved areas and 4 percent for unpaved areas is required to satisfy design constraints, area drains should be installed with a spacing no greater than about 20 feet. Roofs should be provided with downspouts that are connected to closed (glued Schedule 40 PVC or ABS with SDR of 35 or better) conduits discharging well away from foundations, onto paved areas, or into the site's surface drainage system. Roof downspouts and surface drains must be maintained entirely separate from the slab underdrains recommended hereinafter.

Water seepage or the spread of extensive root systems into the soil subgrade of footings, slabs or pavements could cause differential movements and consequent distress in these structural elements. Landscaping should be planned with consideration for these potential problems.

Slab Underdrains

Where interior slab subgrades are less than 6 inches above adjacent exterior grade and where migration of moisture through the slab would be detrimental, slab underdrains should be installed to dispose of surface and/or groundwater that may seep and collect in the slab rock. Slab underdrains should consist of 6-inch wide trenches that extend at least 6 inches below the bottom of the slab rock and slope to drain by gravity. The slab underdrain trenches should be spaced no further than 15 feet, both ways. Additional drain trenches should be installed, as necessary, to drain all isolated under slab areas. Four-inch diameter perforated pipe (SDR 35 or better) sloped to drain to outlets by gravity should be placed in the bottom of the trenches. Slab underdrain trenches should be backfilled to subgrade level with clean, free draining slab rock. An illustration of this system is shown on Plate 46. If slab underdrains are not used, it should be anticipated that water will enter the slab rock, permeate through the concrete slab and ruin floor coverings.

Maintenance

Periodic land maintenance will be required. Surface and subsurface drainage facilities should be checked frequently and cleaned and maintained as necessary or at least annually. A dense growth of deep-rooted ground cover must be maintained on all slopes to reduce sloughing and erosion. Sloughing and erosion that occurs must be repaired promptly before it can enlarge.

Supplemental Services

Pre-Bid Meeting

It has been our experience that contractors bidding on the project often contact us to discuss the geotechnical aspects. Informal contacts between RGH and an individual contractor could result in incomplete or misinterpreted information being provided to the contractor. Therefore, we recommend a pre-bid meeting be held to answer any questions about the report prior to submittal of bids. If this is not possible, questions or clarifications regarding this report should be directed to the project owner or their designated representative. After consultation with RGH, the project owner or their representative should provide clarifications or additional information to all contractors bidding the job.

Plan and Specifications Review

Coordination between the design team and the geotechnical engineer is recommended to assure that the design is compatible with the soil, geologic and groundwater conditions encountered during our study. RGH Consultants (RGH) recommends that we be retained to review the project plans and specifications to determine if they are consistent with our recommendations. In the event we are not retained to perform this recommended review, we will assume no responsibility for misinterpretation of our recommendations.

Construction Observation and Testing

Prior to construction, a meeting should be held at the site that includes, but is not limited to, the owner or owner's representative, the general contractor, the grading contractor, the foundation contractor, the underground contractor, any specialty contractors, the project civil engineer, other members of the project design team and RGH. This meeting should serve as a time to discuss and answer questions regarding the recommendations presented herein and to establish the coordination procedure between the contractors and RGH.

In addition, we should be retained to monitor all soil related work during construction, including:

- Site stripping, over-excavation, grading, and compaction of near surface soil;
- Placement of all engineered fill and trench backfill with verification field and laboratory testing;
- Observation of all foundation excavations; and
- Observation of foundation and subdrain installations.

If, during construction, we observe subsurface conditions different from those encountered during the explorations, we should be allowed to amend our recommendations accordingly. If different conditions are observed by others, or appear to be present beneath excavations, RGH should be advised at once so that these conditions may be evaluated and our recommendations reviewed and updated, if warranted. The validity of recommendations made in this report is contingent upon our being notified and retained to review the changed conditions.

If more than 18 months have elapsed between the submission of this report and the start of work at the site, or if conditions have changed because of natural causes or construction operations at, or adjacent to, the site, the recommendations made in this report may no longer be valid or appropriate. In such case, we recommend that we be retained to review this report and verify the applicability of the conclusions and recommendations or modify the same considering the time lapsed or changed conditions. The validity of recommendations made in this report is contingent upon such review.

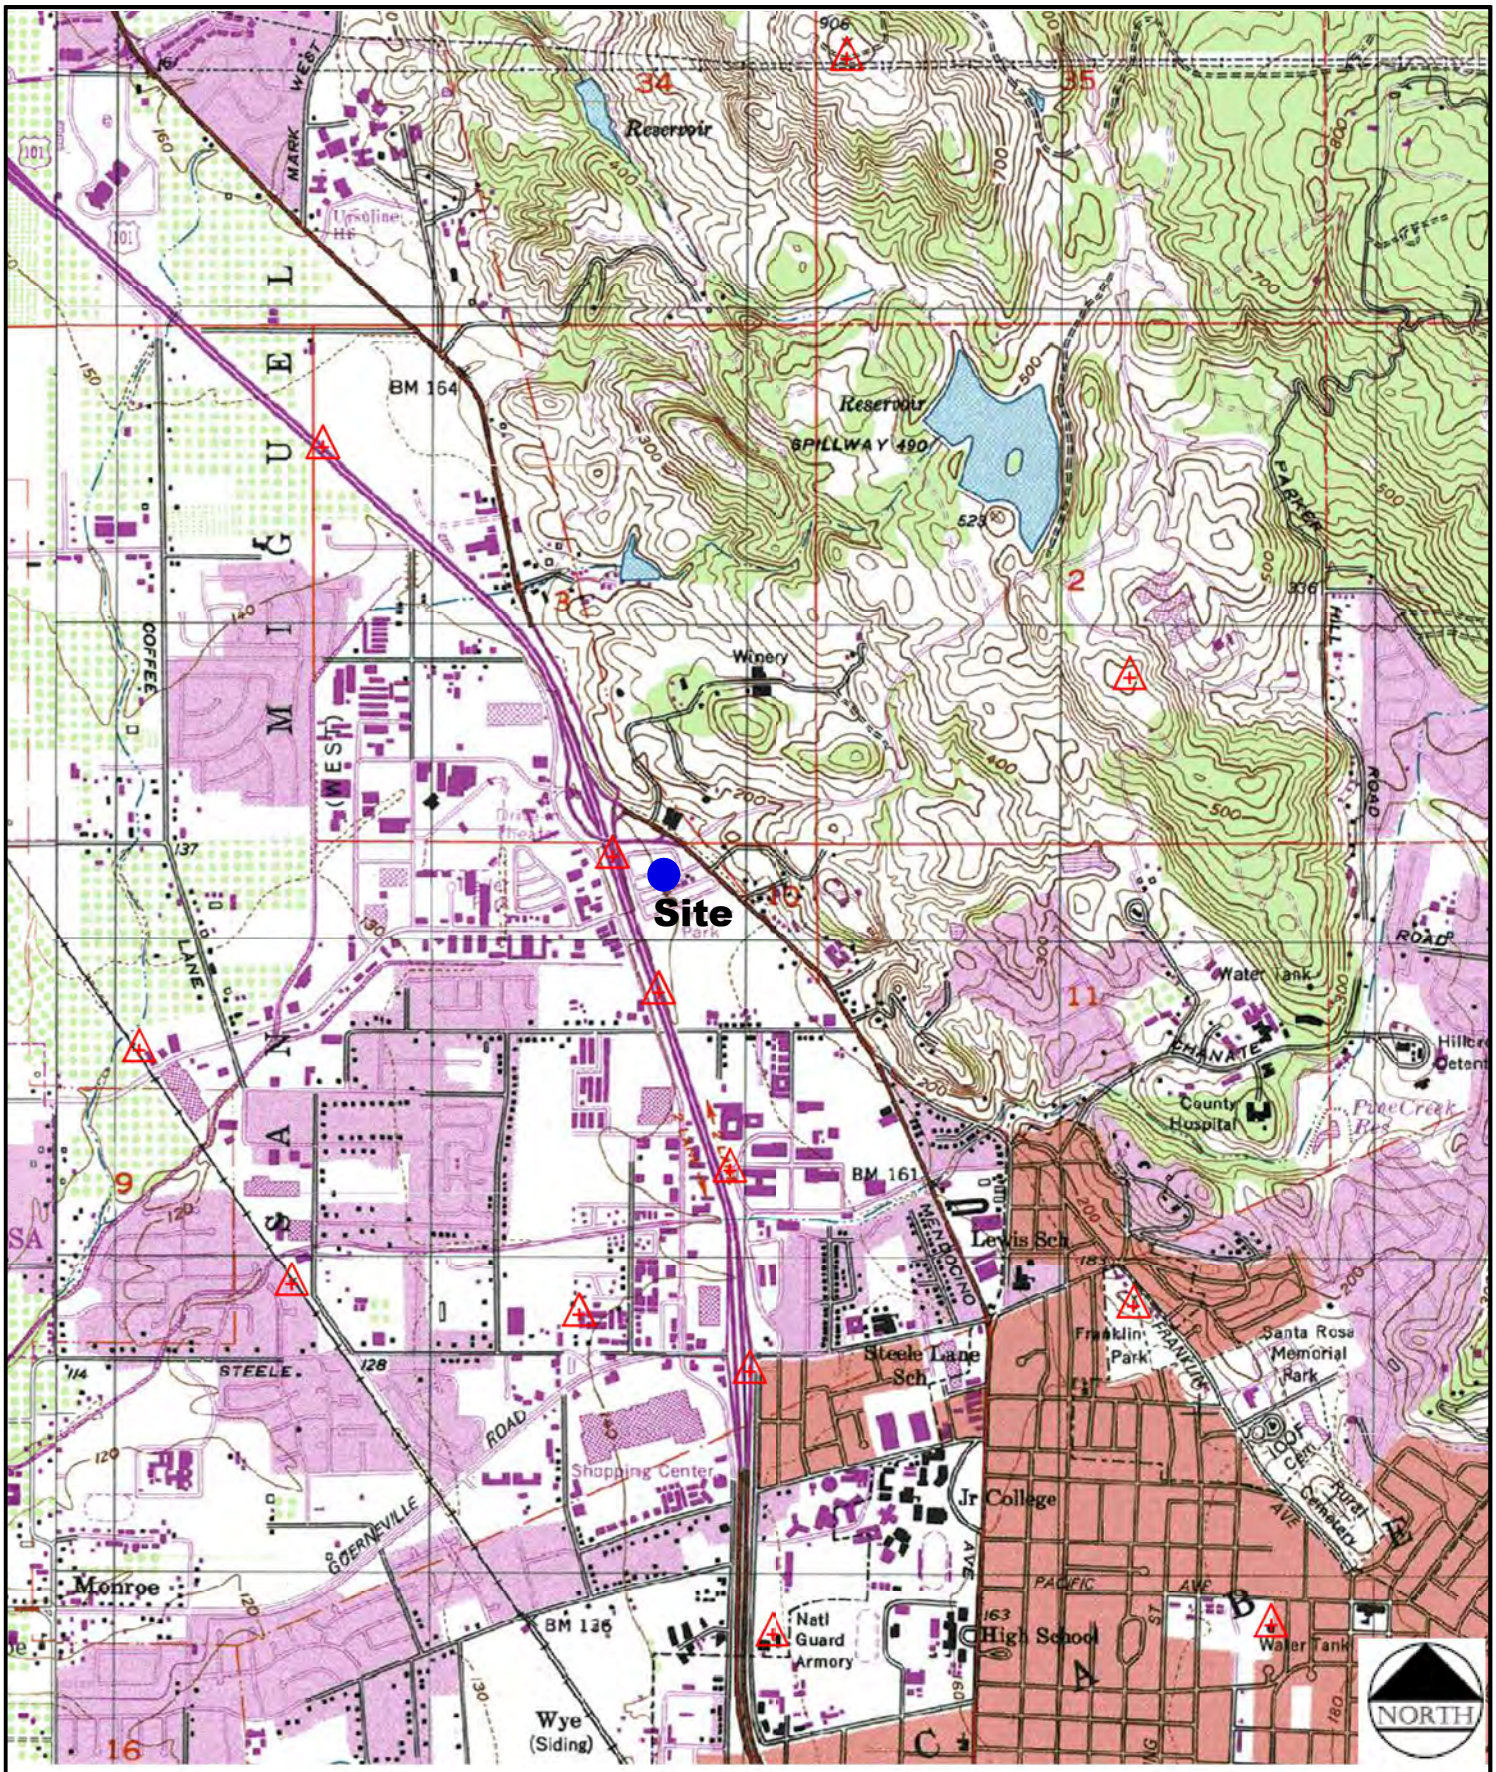
These supplemental services are performed on an as-requested basis and are in addition to this geotechnical study. We cannot accept responsibility for items that we are not notified to observe or for changed conditions we are not allowed to review.

LIMITATIONS

This report has been prepared by RGH for the exclusive use of Burbank Housing Development Corporation and their consultants as an aid in the design and construction of the proposed improvements described in this report.

The validity of the recommendations contained in this report depends upon an adequate testing and monitoring program during the construction phase. Unless the construction monitoring and testing program is provided by our firm, we will not be held responsible for compliance with design recommendations presented in this report and other addendum submitted as part of this report.

Our services consist of professional opinions and conclusions developed in accordance with generally accepted geotechnical engineering principles and practices. We provide no warranty, either expressed or implied. Our conclusions and recommendations are based on the information provided to us regarding the proposed construction, the results of our field exploration, laboratory testing program, and professional judgment. Verification of our conclusions and recommendations is subject to our review of the project plans and specifications, and our observation of construction.



The borings and CPT results represent the subsurface conditions at the locations and on the date indicated. It is not warranted that they are representative of such conditions elsewhere or at other times. Site conditions and cultural features described in the text of this report are those existing at the time of our field exploration and may not necessarily be the same or comparable at other times.

The scope of our services did not include an environmental assessment or a study of the presence or absence of toxic mold and/or hazardous, toxic or corrosive materials in the soil, surface water, groundwater or air (on, below or around this site), nor did it include an evaluation or study for the presence or absence of wetlands. These studies should be conducted under separate cover, scope and fee and should be provided by a qualified expert in those fields.

COLUMN DESCRIPTIONS

1 Elevation (feet): Elevation (MSL, feet).
2 Depth (feet): Depth in feet below the ground surface.
3 Sample Type: Type of soil sample collected at the depth interval shown.
4 Sampling Resistance, blows/ft: Number of blows to advance driven sampler one foot (or distance shown) beyond seating interval using the hammer identified on the boring log.
5 Graphic Log: Graphic depiction of the subsurface material encountered.
6 MATERIAL DESCRIPTION: Description of material encountered. May include consistency, moisture, color, and other descriptive text.
7 Dry Density (pcf): Dry density, in pcf.
8 Water Content (%): Water content, percent.
9 % <#200 Sieve: % <#200 Sieve
10 PI, %: Plasticity Index, expressed as a water content.
11 LL, %: Liquid Limit, expressed as a water content.
12 Expansion Index (EI): Expansion Index (EI)
13 UC, ksf: Unconfined compressive strength, in kips per square foot.
14 REMARKS AND OTHER TESTS: Comments and observations regarding drilling or sampling made by driller or field personnel.

FIELD AND LABORATORY TEST ABBREVIATIONS

CHEM: Chemical tests to assess corrosivity
COMP: Compaction test
CONS: One-dimensional consolidation test
LL: Liquid Limit, percent
PI: Plasticity Index, percent
SA: Sieve analysis (percent passing No. 200 Sieve)
UC: Unconfined compressive strength test, Qu, in ksf
WA: Wash sieve (percent passing No. 200 Sieve)

MATERIAL GRAPHIC SYMBOLS

Asphaltic Concrete (AC)
Fat CLAY, CLAY w/SAND, SANDY CLAY (CH)
Lean CLAY, CLAY w/SAND, SANDY CLAY (CL)
SILT, SILT w/SAND, SANDY SILT (MH)
Clayey SAND (SC)
Poorly graded SAND (SP)
Poorly graded SAND with Clay (SP-SC)

TYPICAL SAMPLER GRAPHIC SYMBOLS

Bulk Sample
2.5-inch-ID Modified California w/ brass liners
Sample Recovered But Not Retained
2-inch-OD unlined split spoon (SPT)

OTHER GRAPHIC SYMBOLS

Water level (at time of drilling, ATD)
Water level (after waiting)
Minor change in material properties within a stratum
Inferred/gradational contact between strata
Queried contact between strata

GENERAL NOTES

1: Soil classifications are based on the Unified Soil Classification System. Descriptions and stratum lines are interpretive, and actual lithologic changes may be gradual. Field descriptions may have been modified to reflect results of lab tests.
2: Descriptions on these logs apply only at the specific boring locations and at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or times.

**********COMMENTS**********

Resistivities are in the 500-1,000 ohm-cm range, i.e., poor, but soil reactions (i.e., pHs) are neutral to mildly alkaline; sulfates are mildly elevated (@ >200 ppm), and two chlorides are very mildly elevated (i.e., @ >100 ppm); two soils are mildly reduced (i.e., @ 200-300+ mV), but one is strongly reduced [see table below on right for assigned point values & ranges]. The CalTrans (CT) times to perforation and full depth pitting times (following Uhlig) for these soils are determined based on several pertinent parameters [see table below at left]. Sulfate could have some very mild to mild adverse impact on concrete, cement, mortar or grout; two chlorides could have some very mild adverse impact on steel rebar or buried steel in these soils. This should be very minor, except in MA3/SR. Lime or mild cement treatment could be of some benefit for MA2 in that raising its pH to the 7.5-8.5, range would improve times to perf as indicated below. At times, structural strength considerations may require heavier gauge steel than is used in the presented examples such that perforation and pitting times can be beyond specified life span. Otherwise, to increase longevity any more in these soils would require steel upgrading and/or other actions. For example, cathodic protection is one potential solution along with coating or wrapping the steel assets; other potential solution involved the use of specialized engineering fill, use of polymers or other coatings, or use of plastic, fiberglass, or concrete assets. With the poor resistivties in all three cases, and elevated sulfate and chlorides as well (as mild as they are), it probably would be prudent to upgrade constructrion materials (steel & cement). And due to its unusual redox, MA3/SR may need even more upgrading of steel, and/or its protection, and also concrete in terms of its grade.

COMMENTS

Resistivities are in the 500-1,000 ohm-cm range, i.e., poor, but soil reactions (i.e., pHs) are mildly alkaline; sulfates are very mildly elevated (@ >200 ppm), and both chlorides are very mildly elevated (i.e., @ >100 ppm); these soils are moderately to strongly reduced (i.e., 100-200 & <100 mV) [see table below on right for assigned point values & ranges]. The CalTrans (CT) times to perforation and full depth pitting times (following Uhlig) for these soils are determined based on pertinent parameters [see table below at left]. Sulfate could have some very mild adverse impact on concrete, cement, mortar or grout; the chlorides could have some very mild adverse impact on steel rebar or buried steel in these soils. This should be very minor in general. Lime or mild cement treatment would not be of any benefit in these two cases since their pHs are already in the 7.5-8.5 range. Keep in mind that at times, structural strength considerations may require heavier gauge steel than is used in the presented examples such that perforation and pitting times can be beyond specified life span. Where this is not the case, then increasing construction materials longevity any more in these soils would require steel upgrading and/or other actions. For example, one method is cathodic protection as a potential solution which is done along with coating or wrapping the steel assets. Other potential solutions include the use of specialized engineering fill, use of polymers or other coatings, or use of plastic, fiberglass, or concrete assets. With the poor resistivties in both cases, and elevated sulfate and chlorides as well (as mild as they are), it probably would be prudent to upgrade constructrion materials (both steel & cement). This is especially true of the MA5/SR soil materials (as its redox is <+100 mV).

SAMPLE ID	CT 18 ga	CT 12 ga	2 mm (Uhlig)

Important Information About Your

Geotechnical Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes

The following information is provided to help you manage your risks.

Geotechnical Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical engineering study conducted for a civil engineer may not fulfill the needs of a construction contractor or even another civil engineer. Because each geotechnical engineering study is unique, each geotechnical engineering report is unique, prepared *solely* for the client. No one except you should rely on your geotechnical engineering report without first conferring with the geotechnical engineer who prepared it. *And no one - not even you* - should apply the report for any purpose or project except the one originally contemplated.

Read the Full Report

Serious problems have occurred because those relying on a geotechnical engineering report did not read it all. Do not rely on an executive summary. Do not read selected elements only.

A Geotechnical Engineering Report Is Based on A Unique Set of Project-Specific Factors

Geotechnical engineers consider a number of unique, project-specific factors when establishing the scope of a study. Typical factors include: the client's goals, objectives, and risk management preferences; the general nature of the structure involved, its size, and configuration; the location of the structure on the site; and other planned or existing site improvements, such as access roads, parking lots, and underground utilities. Unless the geotechnical engineer who conducted the study specifically indicates otherwise, do not rely on a geotechnical engineering report that was:

- not prepared for you,
- not prepared for your project,
- not prepared for the specific site explored, or
- completed before important project changes were made.

Typical changes that can erode the reliability of an existing geotechnical engineering report include those that affect:

- the function of the proposed structure, as when it's changed from a parking garage to an office building, or from alight industrial plant to a refrigerated warehouse,
- elevation, configuration, location, orientation, or weight of the proposed structure,
- composition of the design team, or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes - even minor ones - and request an assessment of their impact. *Geotechnical engineers cannot accept responsibility or liability for problems that occur because their reports do not consider developments of which they were not informed.*

Subsurface Conditions Can Change

A geotechnical engineering report is based on conditions that existed at the time the study was performed. *Do not rely on a geotechnical engineering report* whose adequacy may have been affected by: the passage of time; by man-made events, such as construction on or adjacent to the site; or by natural events, such as floods, earthquakes, or groundwater fluctuations. *Always* contact the geotechnical engineer before applying the report to determine if it is still reliable. A minor amount of additional testing or analysis could prevent major problems.

Most Geotechnical Findings Are Professional Opinions

Site exploration identifies subsurface conditions only at those points where subsurface tests are conducted or samples are taken. Geotechnical engineers review field and laboratory data and then apply their professional judgment to render an opinion about subsurface conditions throughout the site. Actual subsurface conditions may differ-sometimes significantly from those indicated in your report. Retaining the geotechnical engineer who developed your report to provide construction observation is the most effective method of managing the risks associated with unanticipated conditions.

A Report's Recommendations Are *Not* Final

Do not overrely on the construction recommendations included in your report. *Those recommendations are not final*, because geotechnical engineers develop them principally from judgment and opinion. Geotechnical engineers can finalize their recommendations only by observing actual

subsurface conditions revealed during construction. The geotechnical engineer who developed your report cannot assume responsibility or liability for the report's recommendations if that engineer does not perform construction observation.

A Geotechnical Engineering Report Is Subject to Misinterpretation

Other design team members' misinterpretation of geotechnical engineering reports has resulted in costly problems. Lower that risk by having your geotechnical engineer confer with appropriate members of the design team after submitting the report. Also retain your geotechnical engineer to review pertinent elements of the design team's plans and specifications. Contractors can also misinterpret a geotechnical engineering report. Reduce that risk by having your geotechnical engineer participate in prebid and preconstruction conferences, and by providing construction observation.

Do Not Redraw the Engineer's Logs

Geotechnical engineers prepare final boring and testing logs based upon their interpretation of field logs and laboratory data. To prevent errors or omissions, the logs included in a geotechnical engineering report should *never* be redrawn for inclusion in architectural or other design drawings. Only photographic or electronic reproduction is acceptable, *but recognize that separating logs from the report can elevate risk.*

Give Contractors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can make contractors liable for unanticipated subsurface conditions by limiting what they provide for bid preparation. To help prevent costly problems, give contractors the complete geotechnical engineering report, *but* preface it with a clearly written letter of transmittal. In that letter, advise contractors that the report was not prepared for purposes of bid development and that the report's accuracy is limited; encourage them to confer with the geotechnical engineer who prepared the report (a modest fee may be required) and/or to conduct additional study to obtain the specific types of information they need or prefer. A prebid conference can also be valuable. *Be sure contractors have sufficient time* to perform additional study. Only then might you be in a position to give contractors the best information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions.

Read Responsibility Provisions Closely

Some clients, design professionals, and contractors do not recognize that geotechnical engineering is far less exact than other engineering disciplines. This lack of understanding has created unrealistic expectations that have led to disappointments, claims, and disputes. To help reduce the risk of such outcomes, geotechnical engineers commonly include a variety of explanatory provisions in their reports. Sometimes labeled "limitations" many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely.* Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The equipment, techniques, and personnel used to perform a *geoenvironmental* study differ significantly from those used to perform a *geotechnical* study. For that reason, a geotechnical engineering report does not usually relate any geoenvironmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated environmental problems have led to numerous project failures.* If you have not yet obtained your own geoenvironmental information, ask your geotechnical consultant for risk management guidance. *Do not rely on an environmental report prepared for someone else.*

Obtain Professional Assistance To Deal with Mold

Diverse strategies can be applied during building design, construction, operation, and maintenance to prevent significant amounts of mold from growing on indoor surfaces. To be effective, all such strategies should be devised for the express purpose of mold prevention, integrated into a comprehensive plan, and executed with diligent oversight by a professional mold prevention consultant. Because just a small amount of water or moisture can lead to the development of severe mold infestations, a number of mold prevention strategies focus on keeping building surfaces dry. While groundwater, water infiltration, and similar issues may have been addressed as part of the geotechnical engineering study whose findings are conveyed in-this report, the geotechnical engineer in charge of this project is not a mold prevention consultant; ***none of the services performed in connection with the geotechnical engineer's study were designed or conducted for the purpose of mold prevention. Proper implementation of the recommendations conveyed in this report will not of itself be sufficient to prevent mold from growing in or on the structure involved.***

Rely on Your ASFE-Member Geotechnical Engineer For Additional Assistance

Membership in ASFE/The Best People on Earth exposes geotechnical engineers to a wide array of risk management techniques that can be of genuine benefit for everyone involved with a construction project. Confer with your ASFE-member geotechnical engineer for more information.

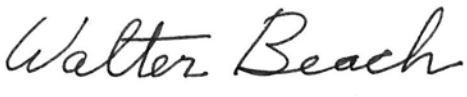
Santa Rosa, CA 95404

Re: Adjacent Parcel to Journey's End Development

Harris and Lee Environmental Sciences, LLC ("HLENV") has prepared and issued the following report with respect to the property located at 3575 Mendocino Avenue, Santa Rosa, CA 95403 ("Subject Property", "Journey's End"):

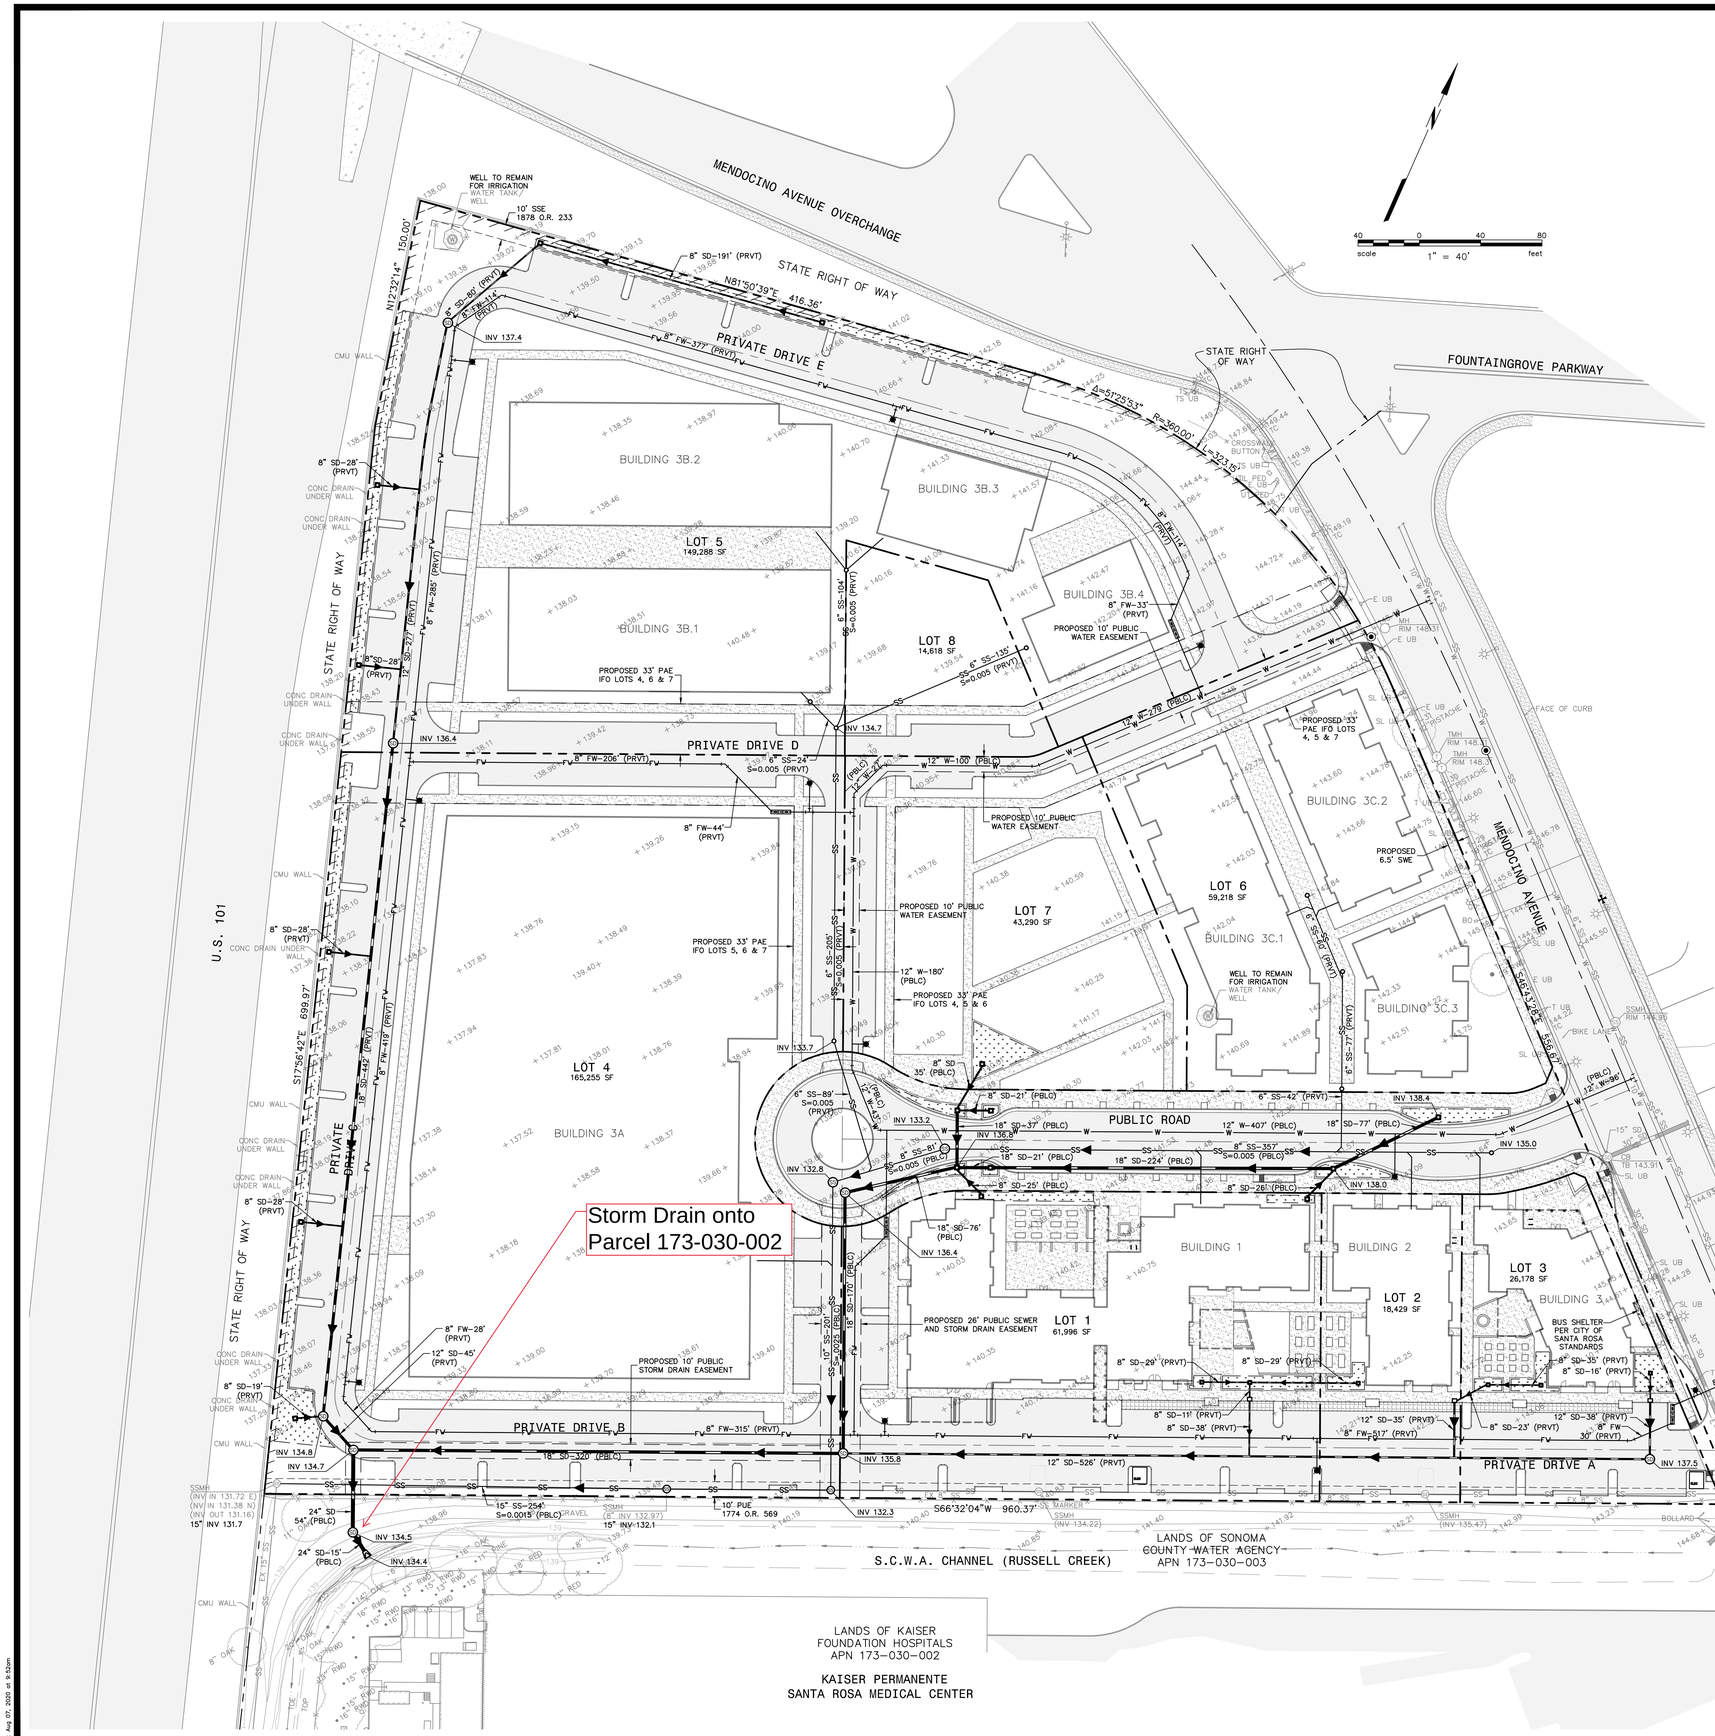
- All Appropriate Inquiry-Environmental Site Assessment, Phase 1 Investigation, 3575 Mendocino Avenue, Santa Rosa, CA 95403, dated August 6, 2018 ("Report").

Client has provided development plans that indicate a storm drain originating on the Subject Property that terminates on the parcel immediately to the south. This parcel has Assessor's Parcel Number 173-030-002 ("Adjacent Parcel"). It is owned by the Sonoma County Water Agency and consists of a path, grass, trees and Russell Creek.



HLENV has reviewed the following data sources fpr the Adjacent Parcel to evaluate environmental risk:

- GeoTracker Database
- Environmental Protection Agency Database
- EDR Radius Report (associated with 2018 Phase I Report)
- EDR Historical Aerials Report (associated with 2018 Phase I Report)



These sources did not indicate issues of environmental risk for the Adjacent Parcel. The Adjacent Parcel appears to have been undeveloped historically.

It does not appear likely that the use of the Adjacent Parcel as a storm drain terminus for the Subject Property will encounter environmental issues or risk associated with the Adjacent Parcel.

Very truly yours,

Walter Beach
Partner
Harris & Lee Environmental Sciences, LLC

1.0 EXECUTIVE SUMMARY

Pursuant to the request and assignment of Burbank Housing Development Corp, Harris and Lee Environmental Sciences, LLC (HLENV) has performed a Phase 1 Environmental Site Assessment on the property identified as 3575 Mendocino Avenue, Santa Rosa, CA 95403, Sonoma County Assessor's Parcel Number 173-030-001 ("Subject Property"), which is located in the City Limits of Santa Rosa in Sonoma County, CA.

The purpose of this All Appropriate Inquiry, Environmental Site Assessment Phase 1 Investigation is to provide information as to the Recognized Environmental Conditions on or near the Subject Property noted above. Recognized Environmental Conditions are defined with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. This Environmental Site Assessment follows the guidelines established by the American Society for Testing and Materials (ASTM) in the document entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" and designated E1527-13. As such, this assessment is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser protection as noted in CERCLA and the California Health and Safety Code; that is the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice as defined at 42 U.S.C. 9601(35)(B).

The Scope of Service for this Phase I Environmental Site Assessment consists of four overall tasks:

Task I: Research and review of regulatory information
Task II: A site reconnaissance of subject and nearby property
Task III: Interviews of persons with knowledge of subject and surrounding property
Task IV: Preparation of the final Environmental Site Assessment report

Site Description and Current Use
The Subject Property is located in the City Limits of Santa Rosa in Sonoma County. It is approximately 3.14 miles north of Highway 12, Highway 101 runs along the western side of the Subject Property and it is approximately 2.56 miles north of the City Center of Santa Rosa.

The Subject Property is an irregular shaped parcel of real estate that is approximately 13.31 acres in area. The southern portion of the Subject Property is the location of multiple unoccupied mobile homes. The northern portion of the Subject Property is covered in areas of paved asphalt and grass with no structures. The former use of the property was Journey's End mobile home park. The Subject Property is currently unoccupied.

The general characteristic of the property's vicinity is a mix of commercial sites with a Kaiser Permanente hospital to the south and U.S. Highway 101 to the west.

Historical Use of Subject Property
The Subject Property was undeveloped land until the 1950's. In the mid 1950's Journey's End Mobile Home Park was constructed on the site. Journey's End Mobile Home Park was located on the site until October 2017 when the majority of the mobile home park was destroyed by the Tubbs Fire. The site currently has unoccupied mobile homes located on the southern portion of the site and the northern portion of the site is paved asphalt with areas of grass, dirt and some fire damaged trees.

Adjoining Properties Use
- **North:** Ramp to Highway 101
- **East:** Mendocino Avenue; Extended Stay Hotel
- **South:** Kaiser Permanente Medical Center
- **West:** Highway 101

Standard and Additional Environmental Records Search
The Standard and Additional Environmental Records Search did not disclose issues on the Subject Property or any of the properties within the standard ASTM search radius of 1-mile that appeared to pose a Recognized Environmental Condition for the Subject Property.

Detailed discussions of specific listings are included in Section 5.1.

Physical Setting
The elevation of the Subject Property is at 143 feet above sea level with the general topographic gradient towards the southwest. Soils consist of poorly drained soils with very slow infiltration rates. The property is outside the 500-year and the 100-year flood zones.

ASTM Non-Scope Considerations
See Section 14 for discussion of ASTM Non-Scope Considerations for Asbestos Containing Construction Materials, Lead-Based Paint, Radon and Mold.

Recognized Environmental Conditions
In the course of performing this All Appropriate Inquiry-Environmental Site Assessment, Phase 1 Investigation evidence of Recognized Environmental Conditions was not identified on the Subject Property.

- **Controlled Recognized Environmental Conditions**
  No Controlled Recognized Environmental Conditions were identified in connection with the Subject Property.

- **Vapor Encroachment Conditions**
  No Vapor Encroachment Conditions were identified in connection with the Subject Property.

Historical Recognized Environmental Conditions
No Historic Recognized Environmental Conditions were identified in connection with the Subject Property.

Activity and Use Limitations
No Activity and Use Limitations were identified in connection with the Subject Property.

De Minimis Conditions
No de minimis conditions were found for the Subject Property.

Data Gaps
No data gaps were encountered during the performance of this investigation.

Summary of Findings
- The Subject Property was undeveloped land until the 1950's.
- In the mid 1950's Journey's End Mobile Home Park was constructed on the site.
- Journey's End Mobile Home Park was located on the site until October 2017.
- In October 2017, the majority of the mobile home park was destroyed by the Tubbs Fire.
- The site currently has unoccupied mobile homes located on the southern portion of the site and the northern portion of the site is paved asphalt with areas of grass, dirt and some fire damaged trees.
- The fire destroyed the water well that supplied water to the site and destroyed the PG&E utility hook ups.
- In January 2018, under the direction of the EPA, asbestos containing material was removed from the site. A copy of the completion report is included in Exhibit G.
- There are no underground or aboveground storage tanks located at the site.
- There are no hazardous materials located on the site.

Conclusions
Harris and Lee Environmental Sciences, LLC has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 of the Subject Property designated as Sonoma County Assessor's Parcel Number 173-030-001 with the physical address of 3575 Mendocino Avenue, Santa Rosa, CA 95403. Any exceptions to, or deletions from, this practice are described in Section 2.4 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

Opinion
Harris and Lee Environmental Sciences, LLC reminds the client that it is always prudent to maintain care in handling chemicals and any hazardous materials in any building or any property. It is pertinent to be reminded that the building / property owner is ultimately responsible for the environmental compliance that occurs in any building or on any

property. Thus, if a tenant is not in compliance, the owner, who has nothing to do with the tenant's operations, can be held responsible.

Recommendations

Harris and Lee Environmental Sciences, LLC recommends that no further environmental investigation is warranted on the Subject Property given the findings of this Phase I Environmental Site Assessment.

This report is governed by the Limitations set forth in Sections 2.4 and 2.5 of this report. This Executive Summary is not to be used without the accompaniment of the entire report.

2.0 INTRODUCTION

2.1 Purpose

Pursuant to the request and assignment of Burbank Housing Development Corp, Harris and Lee Environmental Sciences, LLC (HLENV) has performed a Phase 1 Environmental Site Assessment on the property identified as 3575 Mendocino Avenue, Santa Rosa, CA 95403, Sonoma County Assessor's Parcel Number 173-030-001 ("Subject Property"), which is located in the City Limits of Santa Rosa in Sonoma County, CA.

The purpose of this All Appropriate Inquiry, Environmental Site Assessment Phase 1 Investigation is to provide information as to the Recognized Environmental Conditions on or near the Subject Property noted above. Recognized Environmental Conditions are defined with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. This Environmental Site Assessment follows the guidelines established by the American Society for Testing and Materials (ASTM) in the document entitled "Standard Practice for Environmental Site Assessments: Phase 1 Environmental Site Assessment Process" and designated E-1527-13. As such, this assessment is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser protection as noted in CERCLA and the California Health and Safety Code; that is the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice as defined at 42 U.S. C. 9601(35)(B).

2.2 Definition of Terms

This section provides definitions and descriptions of terms used in this report.

Activity and Use Limitations - legal or physical restrictions or limitations on the use of, or access to, a site or facility:(1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

Controlled Recognized Environmental Condition - a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

De Minimis Condition - a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.

Data Gap - a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

Historical Recognized Environmental Condition - a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Recognized Environmental Condition – "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions." (ASTM E1527-13)

Pursuant to the ASTM E-1527-13 Standard Practice for Environmental Site Assessments: Phase 1 Environmental Site Assessment Process, Recognized Environmental Conditions do not include Controlled Substances, Asbestos Containing Materials, Lead-based paint, Mold, Radon or other non-CERCLA related conditions.

Vapor Encroachment Condition - the presence or likely presence of chemical vapors in the sub-surface of the Subject Property caused by the release of vapors from contaminated soil or groundwater either on or near the Subject Property. A vapor encroachment condition may be considered a recognized environmental condition or a de minimis condition.

2.3 Scope of Services

The Scope of Services for this All Appropriate Inquiry, Environmental Site Assessment Phase 1 Investigation consists of four overall tasks:

Task I: Research and review of regulatory information

Task II: A site reconnaissance of subject and nearby properties
Task III: Interviews of persons with knowledge of subject and surrounding property
Task IV: Preparation of the final Environmental Site Assessment report

The Scope of Services for this All Appropriate Inquiry, Environmental Site Assessment, Phase 1 Investigation follows the Standard Practice for Environmental Site Assessments designated as E-1527-13 of the ASTM. Accordingly, the All Appropriate Inquiry, Environmental Site Assessment, Phase 1 Investigation is targeted towards the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. As such, "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in 42 USC 9601(35)(B) is applied. However, an evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that identified in this assessment.

The Scope of Services includes observations for Recognized Environmental Conditions, as well as review of information that can be obtained from regulatory files that is reasonably ascertainable within reasonable time and cost constraints. Accordingly, it cannot be guaranteed that all files are examined or that every contingency is investigated. These limitations are in conformance with the stated guidelines of ASTM E1527-13.

The Records Review includes review of files for the Subject Property available at state, county and local offices or websites, as listed in Section 5.1 of this report. Records were reviewed for adjacent properties, as appropriate, as required by ASTM E1527-13. In some cases, the status of a site is determined from telephone interviews of staff persons of these offices.

The potential for contaminated vapor migration, as well as soil and groundwater contamination, on the Subject Property is considered during evaluation of potentially relevant releases, as required by ASTM 1527-13. Releases reported with a contaminated groundwater plume within a critical distance from the Subject site were reviewed to evaluate if the reported release could constitute a potential vapor encroachment condition to the Subject Property. The critical distance between the Subject Property and a contaminated plume is defined by ASTM E2600-15 as 30 feet for dissolved petroleum hydrocarbons, and 100 feet for free-product petroleum hydrocarbons and non-petroleum chemicals of concern.

The site reconnaissance consists of the Subject Property and the identification of nearby properties. Interviews are conducted of persons associated with the Subject Property and reasonably available at the time of the site reconnaissance, and on occasion, by telephone when such interviews are possible. The report follows the Standard Practice of ASTM E-1527-13.

The Scope of Services for this All Appropriate Inquiry, Environmental Site Assessment, Phase 1 Investigation does not include analysis of Controlled Substances (CS) or Asbestos Containing Materials (ACM). Neither does the Scope of Services include analysis of the building constituents for Lead based paint or other non-CERCLA related conditions. If there is suspicion that these substances or conditions may be present, professionals licensed to assess their presence should be contacted. Harris and Lee Environmental Sciences, LLC can assist, if requested.

2.4 Significant Assumptions

The All Appropriate Inquiry, Environmental Site Assessment, Phase 1 Investigation is intended to assess the environmental conditions of a specific parcel of commercial real estate. It is intended to constitute all appropriate inquiry for purposes of the CERCLA liability, i.e., innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability. This Phase 1 is intended to reflect a commercially prudent and reasonable inquiry designed to identify recognized environmental conditions in connection with a property.

2.5 Limitations and Exceptions

The Scope of Services performed to complete this All Appropriate Inquiry, Environmental Site Assessment, Phase 1 Investigation was limited in nature. While we consider work of this type to be valuable in the preliminary evaluation of potential hazardous materials or waste at the site, we also must alert the Client that this study may not reveal hazardous materials releases that have occurred. Also, the site conditions can change with time, and our assessment was not intended to predict future site conditions. Because of the limited nature of this assessment, this report is not a risk assessment and the Scope of Services does not include a determination of the extent of business environmental risk nor the public health impact of, known or suspected hazardous materials or wastes. This assessment does not address whether requirements in addition to all appropriate inquiry have been met in order to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on liability protections under CERCLA. Furthermore, this assessment does not address requirements of state or local laws or federal laws other than the all appropriate inquiry provisions of the landowner liability protections. Client(s) are cautioned that federal, state and local laws may impose environmental assessment obligations that are beyond the scope of the all appropriate inquiry provisions of this assessment.

This service has been performed in accordance with generally accepted environmental investigation practices for similar investigations conducted at this time and in this geographic area. No other guarantees or warranties, expressed or implied, are provided.

It is understood by the parties hereto that the Client who has requested this assessment will use the assessment (in addition to other information) to provide information to a lender, investors in the property, for the purposes of refinancing or purchasing said

property or to satisfy regulatory agency requirements. Consultant intends no other use or disclosure. Client agrees to hold Consultant harmless for any inverse condemnation or devaluation of said property that may result if the Consultant's report or information generated is used for other purposes. Also, this report is issued with the understanding that it is to be used only in its entirety.

2.6 User Reliance

Only Burbank Housing Development Corp, Oakmont Senior Living LLC, 3575 Mendocino Avenue Associates LLC, the financing institution(s) providing financing for the purchase and/or redevelopment of the property and any pertinent regulatory agencies may rely upon this report. No other person or entity may rely upon the report without written consent of Harris and Lee Environmental Sciences, LLC.

2.7 Involved Parties

The following are the parties involved in this proposed transaction on the property identified as Sonoma County Assessor's Parcel Number 173-030-001:

- 3575 Mendocino Avenue Associates LLC - listed current owner
- Oakmont Senior Living LLC
- Burbank Housing Development Corp

3.0 SITE DESCRIPTION

3.1 Site Locations and Description

Exhibit A is a vicinity map of the general area of the Subject Property. Exhibit B presents an Assessor's Parcel Map for the Subject Property having Sonoma County Assessor's Parcel Number 173-030-001. The legal description of the Subject Property may be found in the title report, which is not included in this report.

Using the Earth's Grid System, the coordinates of the Subject Property location are:

Latitude:	N 38.4734360° - 38° 28' 24.36''
Longitude:	W 122.7288780° - 122° 43' 43.96''
Elevation:	143 feet above sea level

Table: Subject Property Information

Street Address	APN	Recorded Owner	Size (Acres)	Structure-Year built/ Square. ft./ # of floors	Use	Zone
3575 Mendocino Avenue, Santa Rosa, CA 95403	173-030-001	3575 Mendocino Avenue Associates LLC	13.31	44 Mobile Home structures	Mobile Home Park	RR

3.2 Site and Vicinity General Characteristics

The Subject Property is located in the City Limits of Santa Rosa in Sonoma County. It is approximately 3.14 miles north of Highway 12, Highway 101 runs along the western side of the Subject Property and it is approximately 2.56 miles north of the City Center of Santa Rosa.

The Subject Property is an irregular shaped parcel of real estate that is approximately 13.31 acres in area. The southern portion of the Subject Property is the location of multiple unoccupied mobile homes. The northern portion of the Subject Property is covered in areas of paved asphalt and grass with no structures. The former use of the property was Journey's End mobile home park. The Subject Property is currently unoccupied.

The general characteristic of the property's vicinity is a mix of commercial sites with a Kaiser Permanente hospital to the south and U.S. Highway 101 to the west.

The Subject Property's zoning designation is RR. RR stands for Rural Residential District.

3.3 Current Use of the Property

The former use of the property was Journey's End mobile home park. The Subject Property is currently unoccupied.

3.4 Descriptions of Current Improvements

3.4.1 Structures

The following structures are located on the Subject Property:

- Forty-four (44) mobile homes are located on the southern portion of the parcel.

3.4.2 Roads

The Subject Property is bounded by Mendocino Avenue to the east. Access to the property is via a driveway from Mendocino Avenue.

3.4.3 Sewage Disposal

Municipal sewage services are available to the Subject Property.

3.4.4 Water Supply

The Subject Property was formerly provided water from a water well. Municipal water services are available to the Subject Property.

3.4.5 Heating and cooling systems

These systems were not inspected in the course of this assessment.

3.4.6 Utilities

Pacific Gas and Electric Company provided electricity and gas service to the Subject Property. These were destroyed in the Tubbs Fire. Temporary power poles have been installed and are now energized.

3.5 Current Uses of the Adjoining Properties

According to the 40 CFR 312.10, "adjoining properties are defined as any real property or properties the border of which is (are) shared in part or in whole with that of the Subject Property, or that would be shared in part or in whole with that of the Subject Property but for a street, road, or other public thoroughfare separating the properties."

- **North:** Ramp to Highway 101
- **East:** Mendocino Avenue; Extended Stay Hotel
- **South:** Kaiser Permanente Medical Center
- **West:** Highway 101

4.0 USER PROVIDED INFORMATION

The purpose of this section is to identify general tasks that will help identify the possibility of recognized environmental conditions in connection with the Subject Property. The general tasks are 1) Searches for Environmental Liens; 2) Valuation Reduction for Environmental Issues; and 3) Assessments of Specialized Knowledge. These tasks do not require technical expertise and Environmental Professionals do not normally perform these tasks. These tasks are the responsibility of the client. However, the results of these tasks must be made available for the Environmental Professionals to review; if none are provided they will be identified as "data gaps". The Environmental Professional(s) are required to review these items in order to formulate an opinion regarding the obviousness of the presence or likely presence of contamination at the property or identify them as missing "data gaps."

4.1 Searches for Environmental Liens

Searches for environmental cleanup liens against the Subject Property that are filed or recorded under federal, tribal, state or local law as required under 40 CFR Part 312 Section 312.25.

40 CFR Part 312 Section 312.25(b) states: "All information collected regarding the existence of such environmental cleanup liens associated with the property must be provided to the environmental professional."

Preliminary Title Report
Old Republic Title Company, 555 12th Street, Suite 2000, Oakland, California, provided a contemporary preliminary title report. The report Order Number is 1117018947-JM and is dated March 13, 2018.

The preliminary title report did not identify any environmental liens in connection with the Subject Property.

4.2 Valuation Reduction for Environmental Issues

An assessment of the relationship of the purchase price to the fair market value of the Subject Property, assuming there is no contamination of the property, is required under 40 CFR Part 312 Section 312.29 to maintain the innocent landowner defense. The sections from the federal document are reproduced (with edits for clarity) following:

(a) Persons to whom this part is applicable must consider whether the purchase price of the Subject Property reasonably reflects the fair market value of the property, assuming there is no contamination of the property;

(b) Persons who conclude that the purchase price of the Subject Property does not reasonably reflect the fair market value of that property, if the property were not contaminated, should consider whether or not the differential in purchase price and fair market value is due to the presence of releases or threatened releases of hazardous substances.

An appraisal of the Subject Property was provided for review. The appraisal indicates that there is no value reduction for environmental reasons.

4.3 Assessments of Specialized Knowledge

Assessments of any specialized knowledge or experience on the part of the purchaser or landowner is required by 40 CFR Part 312 Section 312.28 to maintain the innocent landowner defense. The sections from the federal document are reproduced (with edits for clarity) following:

(a) Persons to whom this part is applicable must take into account, their specialized knowledge of the Subject Property, the area surrounding the Subject Property, the conditions of adjoining properties, and any other experience relevant to the inquiry, for the purpose of identifying conditions indicative of releases or threatened releases at the Subject Property.

(b) All appropriate inquiries are not complete unless the results of the inquiries take into account the relevant and applicable specialized knowledge and experience of the persons responsible for undertaking the inquiry.

No specialized knowledge relating to the Subject Property was obtained via interviews of persons with knowledge of the status and history of the property.

5.0 RECORDS REVIEW

The purpose of the records review is to obtain and review records that will help identify recognized environmental conditions in connection with the Subject Property. This is one of the Criteria required under the All Appropriate Inquiry, Environmental Site Assessment Phase 1 Investigation.

5.1 Standard and Additional Environmental Record Sources

The *Standard Environmental Record Sources* and the *Additional Environmental Record Sources* were obtained through a computer data bank search company, Environmental Data Resources of Milford, Connecticut. Computer data bank searches for active sites can be useful in locating sites that may have the potential to adversely impact the subject site. It is important to keep in mind that computer database searches provide general overview data and may not be precise in the data that is presented. Consequently, an investigator needs additional familiarity with active sites to properly interpret the data that is provided.

The Environmental Radius Report is included in Exhibit F. This report accessed a large number of active federal, state and local databases—some are Standard Environmental Record Sources (Section 8.2.1 ASTM E-1527-13) and others are Additional Environmental Record Sources that provide additional data and supplement the Standard Environmental Record Sources. A comprehensive listing of government records searched is listed in the Radius Report and is not repeated in the text.

EDR Database Search

Subject Property: The Subject Property appears on the standard record sources and additional environmental record sources searched and reported upon in the Radius Report.

Journey's End Mobile Home Park is listed on the **FIND, ECHO** and **HAZNET** databases. Under Gepaid ID CAC002599920 there is one record from 2006 for the handling and disposal of 'asbestos containing waste'. This record is most likely related to a construction upgrade at the site and is not of adverse environmental significance for the Subject Property. Journey's End Mobile Home Park is also registered with the Environmental Protection Agency and there are no violations.

Virginia Tiensvold located at 544 Flamingo Road (this is located in Journey's End Mobile Home Park) is listed on the **HAZNET** and **CHMIRS** (California Hazardous Material Incident Report System). Regulatory records indicate an incident occurred at the site on January 13, 1989. No follow up or further action was required. Under Gepaid ID CAC002718407 there is one record from 2013 for the handling and disposal of hazardous materials. There are no violations or evidence of releases noted in the records.

Neighboring Properties: Summary of relevant findings of the database search within the minimum radius search distance of the property as specified by ASTM E-1527-13, Section 8.2.1 are summarized in the Table below.

U.S. Federal Databases		
Database	**ASTM Criteria Search Distance (miles)**	**Number of Properties within the Search Distance**
NPL	1.0	0
Delisted NPL	0.5	0
CERCLIS	0.5	0
CERCLIS NFRAP	0.5	0
RCRA CORRACTS facilities	1.0	1
RCRA non-CORRACTS TSD facilities	0.5	0
Generators list: RCRA_LQG	Property; adjoining property	0
Generators list: RCRA_SQG	Property; adjoining property	0
Federal Institutional / Engineering Control	Property	0
Federal ERNS List	Property	0

State, Tribal and Local Databases		
Database	**ASTM Search Distance (miles)**	**Properties within the Search Distance**
ENVIROSTOR[1]	1.0	5
SLIC	0.5	7
LUST	0.5	13
SWF/LS	0.5	0
AST[2]	Property; adjoining property	0
UST[2]	Property; adjoining property	0
Notify 65[2]	Property; adjoining property	0
Old Databases[3]	Property; adjoining property	0

Note 1: The following databases are part of Envirostor under DTSC; they are not listed individually: Cal-Sites (State equivalent to NPL is AWP, BE), Hist. Cal-Sites, Response, Institutional & Engineering Controls, VCP and Brownfield sites.

Note 2: The following databases are discussed only if the listed sites are on the property or on adjoining properties: UST, AST, and Notify 65.
Note 3: The following databases are old and are not updated; unless the sites listed are on the Subject Property or adjoining properties, they are not discussed; the databases include: CA FID; HIST UST; & SWEEPS.

There are numerous sites listed within the standard ASTM search distance of 1-mile of the Subject Property. A brief review of the listed sites reveals that they are not likely threats for the Subject Property due to one or more of the following reasons: listing database not relevant, sufficient distance from Subject Property, location relative to site topography and ground water flow direction, and the status of the listed site (e.g., closed, contamination characterized, contamination under remediation, etc.).

The Environmental Radius Report is attached to this report. A summary of those sites in the report considered pertinent for the Subject Property is presented below in Section 5.4.

Other Environmental Record Sources
To enhance and supplement the Environmental Radius Report data bank searches for active sites, local records and / or additional state or tribal records were independently searched through their various websites. These records are reasonably ascertainable, and are sufficiently useful, accurate and complete in light of the objective of the records review. Other Environmental Record Sources contacted for information pertaining to the subject and nearby properties were as follows:

- U.S. EPA (http://www.epa.gov/region09/)
- California Environmental Protection Agency, Department of Toxic Substances Control (http://www.calepa.ca.gov/ and http://www.envirostor.dtsc.ca.gov/public/)
- County of Sonoma — all departments (http://www.co.Sonoma.ca.us/)
- California State Water Resources Control Board (http://geotracker.swrcb.ca.gov/)

Any information obtained from these sources is documented in appropriate sections of this report.

Environmental File Review - Unified Program
The Unified Program is the consolidation of six state environmental programs into one program under the authority of a Certified Unified Program Agency. These can be a county, city or JPA (Joint Powers Authority). This program was established under the amendments to the California Health and Safety Code made by SB 1082 in 1994. The six programs are the Hazardous Materials Business Plan/Emergency Response Plan, Hazardous Waste, Tiered Permitting, Underground Storage Tanks, Aboveground Storage Tanks (SPCC only) and the Uniform Fire Code Hazardous Materials Management Plan.

A CUPA or Certified Unified Program Agency is a local agency that has been certified by Cal EPA to implement the six state environmental programs within the local agency's jurisdiction.

The City of Santa Rosa Fire Department is the designated local agency for the Subject Property.

No additional records of environmental significance were found for the Subject Property.

5.2 Physical Setting

5.2.1 Topography

Exhibit C is the U. S. Department of Interior, Geological Survey Quadrangle 7.5-Minute Series topographic map. The Subject Property lies at an elevation of approximately 143 feet above mean sea level. The general topographic gradient at the Subject Property is generally southwest. Surface topography may be indicative of the direction of surficial groundwater flow.

5.2.2 Flood Insurance Rate Map

According to FEMA Flood Panel Maps, the Subject Property is outside the 500-year flood zone and the 100-year flood zone.

5.2.3 Geologic and Hydrogeologic Setting

Soil Conditions
The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Table: Soil types found near Subject Property				
Soil series		Texture	Hydrologic Group	Drainage Class
1	Clear Lake series	Clay	Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.	Poorly drained

Note: The definition of a hydric soil is a soil that formed under conditions of saturation, flooding or ponding long enough during the growing season to develop anaerobic conditions in the upper part. The concept of hydric soils includes soils developed under sufficiently wet conditions to support the growth and regeneration of hydrophytic vegetation.

Groundwater Flow Direction
EDR GeoCheck-Physical Setting Source Summary provides the following site-specific hydrogeologic data.

Search Radius:	1.25 miles
Status:	not found

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

Thirty-eight sites with groundwater flow directions were identified within a radius of one mile of the Subject Property. Only three are within 1/2 mile of the Subject Property. The groundwater flow directions are reported to be west-southwest and northeast.

5.3 Results of Site History and Land Use Review

The objective of consulting historical sources is to develop a history of the previous uses of the Subject Property and surrounding area in order to identify the likelihood of past uses having led to recognized environmental conditions. All obvious uses of the property must be identified from the present back to the property's first developed use or back to 1940, whichever is earlier (§ 8.3.2 ASTM 1527-13). The Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13) requires a review of reasonably ascertainable standard historical sources. Reasonably ascertainable is defined by ASTM as information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable. The following standard historical sources for the Subject Property were reviewed: Sanborn Fire Insurance Maps, City Directories, County Records Review, personal interviews, historical aerial photographs and previous environmental investigations.

5.3.1 Sanborn Fire Insurance Maps

Environmental Data Resources of Milford, Connecticut investigated the historic Sanborn Fire Insurance Maps. The inquiry Number is 5361911.3.

No coverage was reported.

The report is attached to this Environmental Site Assessment as a component of Exhibit F.

5.3.2 Historical Topographic Maps

Environmental Data Resources of Milford, Connecticut performed a search for historical topographic maps. The topographic maps are presented in the EDR report number 5361911. The report is reproduced in Exhibit E of this report.

The historical topographic maps report did not reveal any significant potential liability resulting from past activities.

5.3.3 Aerial Photographs

Environmental Data Resources of Milford, Connecticut performed a search for historic aerial photographs. The photographs are presented in the EDR report number 5361911. The report is reproduced in Exhibit E of this report. A synopsis of the aerial photography is presented in the Table below.

Table: Description of the Subject Property from aerial photographs		
DATE	**ON SITE DESCRIPTION**	**OFFSITE DESCRIPTION**
1942	The site is undeveloped land with no structures.	**North:** Predominately undeveloped land with a few rural residences and agricultural farmland to the north-west. **East:** Immediately east is a road that runs from north to south. East of the road is a mix of undeveloped land, agricultural farmland and a few residences. **South:** A mix of undeveloped land and agricultural farmland. **West:** Undeveloped land.
1952	The site is undeveloped land with no structures.	**North:** Predominately undeveloped land with a few rural residences and agricultural farmland to the north-west. **East:** Immediately east is a road that runs from north to south. East of the road is a mix of undeveloped land, agricultural farmland and a few residences. **South:** A mix of undeveloped land and agricultural farmland. **West:** Immediately west is Highway 101. West of the highway is undeveloped land.
1968-1982	A mobile home park is on the site.	**North:** Immediately north is the ramp to Highway 101. Further north is undeveloped land with a few residences. **East:** Immediately east is a road that runs from north to south. East of the road is a mix of undeveloped land and a few residences. **South:** Immediately south is undeveloped land. Further south are some commercial structures. **West:** Immediately west is Highway 101. West of the highway is developed with a mix of residences and commercial structures.
1993	A mobile home park is on the site.	**North:** Immediately north is the ramp to Highway 101. Further north is undeveloped land, a few residences and some commercial structures. **East:** Immediately east is a road that runs from north to south. East of the road is a mix of undeveloped land and a few residences. **South:** Developed with a mix of commercial structures and residences. **West:** Immediately west is Highway 101. West of the highway is developed with a mix of residences and commercial structures.

Table: Description of the Subject Property from aerial photographs		
DATE	**ON SITE DESCRIPTION**	**OFFSITE DESCRIPTION**
2006-2016	A mobile home park is on the site.	**North:** Immediately north is the ramp to Highway 101. Further north is undeveloped land, a few residences and some commercial structures. **East:** Immediately east is a road that runs from north to south. East of the road is a mix of undeveloped land and a few residences. Commercial develop begins and continues to develop further east. **South:** Developed with a mix of commercial structures and residences. **West:** Immediately west is Highway 101. West of the highway is developed with a mix of residences and commercial structures.

5.3.4 City Directory

Environmental Data Resources of Milford, Connecticut investigated historic City Directory; this report is documented in the City Directory Abstract Report with Inquiry Number 5361911. It is included in this report as a component of Exhibit F.

Business directories including city, cross-reference and telephone directories were reviewed, if available, at approximately five-year intervals for the years spanning 1930 through 2014. (These years are not necessarily inclusive.)

The Subject Property was listed as follows:

Year(s)	**Listing**
1958-2014	Journey's End Mobile Park

These listings are consistent with usage as a mobile home park. The listings do not indicate an issue of environmental concern.

Adjacent Property listings were a mix of commercial and residential listings. Some of these listings may be for businesses that regularly generate and/or handle hazardous wastes. These sites do not indicate issues of environmental concern unless a record of contamination (such as listings in regulatory records) is found. Any such sites are discussed in Section 5.1.

5.3.5 Local Records Review

Historical Permit records for the Subject Property were researched at the City of Santa Rosa Building Department. This review included the Building and Zoning Records.

No Permit history of environmental impact related to the Subject Property at Sonoma County Assessor's Parcel Number 173-030-001 was found.

5.3.6 Synopsis of Previous and Current Environmental Investigations

No previous or current environmental investigations prior to this report were identified.

5.4 Discussion of Records Review

Subject Property
Based on the review of the database report and other records review, there are no issues that constitute a recognized environmental condition for the Subject Property. This opinion is based on current and available information.

Surrounding Properties
Sites considered potentially relevant to environmental conditions on the Subject Property based on the records review are discussed below. Sites not mentioned are judged insignificant for the Subject Property. In some cases, rather than engage in an exhaustive discussion of the various sites, these are grouped together in a summary discussion.

Based on the review of the open and active surrounding properties listed on the database report and other records review, there are none that constitute a recognized environmental condition for the Subject Property. This opinion is based on current and available information.

6.0 SITE RECONNAISSANCE

On July 25, 2018, an environmental professional performed a site reconnaissance of the Subject Property and nearby properties. The objective of the site reconnaissance is to obtain information indicating the likelihood of identifying recognized environmental conditions in connection with the property. It is not an environmental compliance audit; this process does not determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations.

Photo-documentation of the property is presented in Exhibit D of this report.

6.1 Methodology and Limiting Conditions

The method used in conducting the site reconnaissance consisted of walking the perimeter of the Subject Property and inspecting as closely as possible the features of the property. Visual observations of nearby properties were performed in an effort to identify conditions that potentially could negatively impact the subject site.

6.2 General Site Setting

The Subject Property is located in the City Limits of Santa Rosa in Sonoma County. It is approximately 3.14 miles north of Highway 12, Highway 101 runs along the western side of the Subject Property and approximately 2.56 miles north of the City Center of Santa Rosa.

The general characteristic of the property's vicinity is a mix of commercial sites with a Kaiser Permanente hospital to the south and U.S. Highway 101 to the west.

6.3 Subject Property

The Subject Property is an irregular shaped parcel that is approximately 13.31 acres in area. The Subject Property is Journey's End mobile home park. There are currently multiple mobile homes on the southern portion of the site. There are no mobile homes on the northern portion of the site. The northern portion of the site has areas of paved asphalt and areas of grass and trees. Several of the trees are fire damaged.

The Subject Property is enclosed with a chain link fence.

Access to the property is from Mendocino Avenue on the eastern side.

Two water wells are located on the Subject Property. One for landscaping and one for domestic use.

No underground storage tanks were evident on the Subject Property.

No excessive staining or distressed vegetation was evident on the Subject Property.

No hazardous materials are located on the Subject Property.

In the course of the inspection no indications of recognized environmental conditions were observed.

6.4 Adjacent Properties

- **North:** Ramp to Highway 101
- **East:** Mendocino Avenue; Extended Stay Hotel
- **South:** Kaiser Permanente Medical Center
- **West:** Highway 101

7.0 INTERVIEWS

7.1 Interviews with Past and Present Owners, Operators, and Occupants

The present owner for the Subject Property, Mr. Ramsey Shuayto, was interviewed in the course of this assessment. According to Mr. Shuayto:

- The mobile home park was impacted by the Tubbs fire in October.
- No one has been living at the site since the fire.
- In January 2018, the EPA removed asbestos containing material from the site.
- The water well and utility hook ups were destroyed by the fire.

7.2 Interviews with Local Government Officials

No local government officials were interviewed for this report.

7.3 Interviews with Others

Various individuals encountered while conducting the site reconnaissance of the site were interviewed. These brief interviews were conducted in a casual conversational manner in an attempt to determine if there are any historic factors that would indicate an impact on the property.

8.0 VAPOR ENCROACHMENT SCREENING

This section presents a Vapor Encroachment Screening (VES) of the Subject Property to determine whether a Vapor Encroachment Condition (VEC) is present or likely to be present on the Subject Property. The VES was performed in conjunction with this Phase I ESA for the Subject Property in general accordance with Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions adopted by ASTM International in Method E2600-15.

The VES process as described in ASTM Standard E2600-15 is a two-tiered screening process. Tier 1 VES focuses on known or suspected contaminated properties located within the area of concern (AOC). The ASTM Standard E2600-15 defines the AOC for petroleum release sites as the area within one-tenth mile (528 feet) around the Subject Property. For non-petroleum release sites (for example, solvent release sites), the AOC is defined as the area within one-third mile (1,760 feet) around the Subject Property. In accordance with the Tier 1 VES process, a search distance test was performed to determine whether known or suspected contaminated properties are located within the AOC.

Tier 2 VES uses a plume test and critical distance determination to evaluate whether vapors from the contaminated property might migrate and encroach on the Subject Property. The critical distance between the Subject Property and a contaminated plume

is defined by E2600-15 as 30 feet for dissolved petroleum hydrocarbons, and 100 feet for free-product petroleum hydrocarbons and non-petroleum chemicals of concern ("COC"). Contaminated groundwater plumes within these distances may constitute a VEC to the Subject Property.

Summary
No evidence was found for a present or likely to be present Vapor Encroachment Condition on the Subject Property.

9.0 FINDINGS

Site Description and Current Use
The Subject Property is located in the City Limits of Santa Rosa in Sonoma County. It is approximately 3.14 miles north of Highway 12, Highway 101 runs along the western side of the Subject Property and it is approximately 2.56 miles north of the City Center of Santa Rosa.

The Subject Property is an irregular shaped parcel of real estate that is approximately 13.31 acres in area. The southern portion of the Subject Property is the location of multiple unoccupied mobile homes. The northern portion of the Subject Property is covered in areas of paved asphalt and grass with no structures. The former use of the property was Journey's End mobile home park. The Subject Property is currently unoccupied.

The general characteristic of the property's vicinity is a mix of commercial sites with a Kaiser Permanente hospital to the south and U.S. Highway 101 to the west.

Historical Use of Subject Property
The Subject Property was undeveloped land until the 1950's. In the mid 1950's Journey's End Mobile Home Park was constructed on the site. Journey's End Mobile Home Park was located on the site until October 2017 when the majority of the mobile home park was destroyed by the Tubbs Fire. The site currently has unoccupied mobile homes located on the southern portion of the site and the northern portion of the site is paved asphalt with areas of grass, dirt and some fire damaged trees.

Adjoining Properties Use
- **North:** Ramp to Highway 101
- **East:** Mendocino Avenue; Extended Stay Hotel
- **South:** Kaiser Permanente Medical Center
- **West:** Highway 101

Land Use Designations
The Subject Property is zoned RR for Rural Residential District.

Standard and Additional Environmental Records Search
The Standard and Additional Environmental Records Search did not disclose issues on the Subject Property or any of the properties within the standard ASTM search radius of 1-mile that appeared to pose a Recognized Environmental Condition for the Subject Property.

Detailed discussions of specific listings are included in Section 5.1.

Physical Setting
The elevation of the Subject Property is at 143 feet above sea level with the general topographic gradient towards the southwest. Soils consist of poorly drained soils with very slow infiltration rates. The property is outside the 500-year and the 100-year flood zones.

Recognized Environmental Conditions
In the course of performing this All Appropriate Inquiry-Environmental Site Assessment, Phase 1 Investigation evidence of Recognized Environmental Conditions was not identified on the Subject Property.

- **Controlled Recognized Environmental Conditions**
  No Controlled Recognized Environmental Conditions were identified in connection with the Subject Property.

- **Vapor Encroachment Conditions**
  No Vapor Encroachment Conditions were identified in connection with the Subject Property.

Historic Recognized Environmental Conditions
No Historic Recognized Environmental Conditions were identified in connection with the Subject Property.

Activity and Use Limitations
No Activity and Use Limitations were identified in connection with the Subject Property.

De Minimis Conditions
No de minimis conditions were found for the Subject Property.

Data Gaps
No data gaps were encountered during the performance of this investigation.

10.0 CONCLUSIONS

Harris and Lee Environmental Sciences, LLC has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 of the Subject Property designated as Sonoma County Assessor's Parcel Number 173-030-001 with the physical address of 3575 Mendocino Avenue, Santa Rosa, CA 95403.

Any exceptions to, or deletions from, this practice are described in Section 2.4 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

11.0 OPINION

Harris and Lee Environmental Sciences, LLC reminds the client that it is always prudent to maintain care in handling chemicals and any hazardous materials in any building or any property. It is pertinent to be reminded that the building / property owner is ultimately responsible for the environmental compliance that occurs in any building or on any property. Thus, if a tenant is not in compliance, the owner, who has nothing to do with the tenant's operations, can be held responsible.

Recommendations
Harris and Lee Environmental Sciences, LLC recommends that no further environmental investigation is warranted on the Subject Property given the findings of this Phase I Environmental Site Assessment.

12.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR §312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

13.0 DEVIATIONS

There are no deviations in the preparation of this Environmental Site Assessment from the Standard Practice for Environmental Site Assessments: Phase 1 Environmental Site Assessment Process (ASTM Designation: E-1527-13).

14.0 NON-SCOPE SERVICES

No additional services beyond the All Appropriate Inquiry, Environmental Site Assessment Phase 1 Investigation ASTM E-1527-13 Standard Practice for Environmental Site Assessments: Phase 1 Environmental Site Assessment Process were added to this report. The following general statements and observations are provided for ASTM Non-Scope considerations.

14.1 Asbestos Containing Construction Materials

An asbestos survey was not conducted at the property as part of this assessment. The 44 Mobile Homes on site are estimated to have been constructed between 1960 and 2010.

Asbestos containing construction materials was banned in 1979. Any building built prior to this time may have been utilized asbestos in its construction. No obvious evidence of friable suspect asbestos containing materials was observed within easily accessible areas of the structure. To confirm if any asbestos materials are contained within the structure on the subject site, an asbestos survey should be performed by an AHERA trained asbestos professional. If the property building is slated for renovation or demolition, an asbestos inspection will be required, pursuant to the National Emission Standards for Hazardous Air Pollutant (NESHAPs).

14.2 Lead-Based Paint

A lead-based paint survey was not conducted at the property as a part of this assessment. The 44 Mobile Homes on site are estimated to have been constructed between 1960 and 2010.

The use of lead-based paint was banned in 1978. Any building built prior to this time may have been utilized lead-based paint. Visual observations of the painted surfaces of the subject site structure appeared to be in fair condition with no obvious signs of chipping, cracking, and/or significant health risk concerns.

14.3 Radon

Radon sampling was not conducted at the property as a part of this assessment. According to the United States EPA, the radon zone level for this area is

- Zone 3 - Below 2.0 piC/L

Radon is a naturally-occurring, odorless, invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings. Concentrations at, or above, 4 pCi/l are considered to be of concern per the EPA.

14.4 Mold

A mold survey was not conducted at the property as a part of this assessment. However, no obvious evidence of mold or water damaged materials were observed within easily accessible areas of the structures.

We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

PROFESSIONAL PROFILE

Robert S. Harris

TITLE: Partner/Senior Scientist: Harris and Lee Environmental Sciences LLC

Partner: Lee Seeley & Harris

EXPERTISE: Thirty-six (36) years experience in Environmental Analytical Chemistry and Environmental Toxicology. Efforts involved full research laboratory supervision for the University of California as well as commercial laboratories involved in Environmental Analytical Chemistry. Developed and refined the now standard method for PCB Analysis in various matrices. Mr. Harris has supported Risk Assessments, Site Audits, Health and Safety Management programs, and Hazardous Waste Management Programs. In addition, Mr. Harris has brought electronic data management technology into major petroleum industry members including Exxon, USA, Chevron USA, Texaco, USA, Mobil Oil Corporation, Atlantic Richfield (ARCO), Amarada Hess, Unocal, and Pacific Gas and Electric Company.

EXPERIENCE: Laboratory Director for the University of California for 11 years beginning in 1964; operated laboratories on the Davis Campus and the Hopland Field Station in Mendocino County, California. Published 12 research papers at the University of California

Founded Multi-Tech Laboratories in Ukiah in 1974. Established laboratories in Ukiah and Santa Rosa, CA. Multi-Tech Laboratories was one of the larger laboratories in California. During this time Mr. Harris developed several methodologies for environmental analysis, including the standard method for the analyses of Polychlorinated Biphenyls (PCB's) in water, soils and oils. When the laboratory became a part of Environmental Testing and Certification Corporation, Mr. Harris was Executive Vice President in charge of western United States operations.

Established American Technologies in 1992 and developed it in the United States and Mexico. Changed name of American Technologies to Harris and Lee Environmental Sciences in 1997. Development and refinement of the concept of environmental management where toxic risk evaluation and regulatory requirements guide the project oversight. Supervised the management and orchestration of source monitoring in Southern

California. In Northern California, developed a waste minimization program that converted waste costing $120K per month for disposal into a usable fuel to operate high pressure steam boilers.

Has carried out property transfer assessments and aided in the control and management of environmental as well as health and safety risk. In this capacity, Mr. Harris has used his knowledge of the sciences of chemistry and toxicology to properly identify risks that are real and to separate these from situations where the risk is suspected but not real. In this capacity, Mr. Harris has assisted lending institutions, insurance companies, real estate professionals and law firms in identifying chemical profiles and characteristics in toxic situations and managing environmental risk. Mr. Harris has extensive experience in litigation support and expert testimony in areas of environmental chemistry and industrial process chemistry.

ACADEMIC BACKGROUND: BS. Zoology, Minor, Chemistry, University of California, Davis, 1964
MS, Biology, emphasis Biochemistry, California State University, Sonoma, 1972

PUBLICATIONS: Published approximately 12 times in the fields of agricultural chemistry, neurophysiology and animal physiology.

SPECIALIZED TRAINING:
Varian Gas Chromatography Course
Varian Electronic Chromatograph Data Reduction
Hewlett Packard GC/MS Course I
Hewlett Packard GC/MS Course II
Risk Assessment for Hazardous Chemicals
University of California Hazardous Materials Courses
University of California Advanced Environmental Auditing
University of California, Risk Assessment Modeling, The Cal Tox Model. Presented in association with California Dept of Toxic Substances Control.
American Society for Testing and Materials, Risk Based Corrective Action

PROFESSIONAL AFFILIATIONS:
American Chemical Society
American Association for the Advancement of Science
American Water Works Association
Rotary International

CERTIFICATIONS:
California Registered Environmental Assessor - REA #4966

PROFESSIONAL PROFILE

Walter Beach

TITLE: Partner: Harris and Lee Environmental Sciences, LLC

EXPERTISE: Mr. Beach is a Registered Environmental Assessor, certified in the State of California. Mr. Beach has performed or supervised over 2,500 environmental assessments and numerous Phase II, III and IV Environmental Investigations. Mr. Beach leads the Environmental Due Diligence group within Harris and Lee Environmental Sciences, LLC.

Mr. Beach has over 25 years experience in Environmental Sciences and Management and Information Technology for Fortune 500 companies including: Charles Schwab & Co., Price Waterhouse Consulting, Novartis and Wells Fargo Bank. He specializes in Merger and Acquisition Integration, Process Improvement, Offshore Outsourcing, Project Management and Software Development and Maintenance. Mr. Beach has a unique blend of business, technical and organizational acumen to effectively communicate the issues to a range of stakeholders from individual contributors to executive leaders to solve problems always with business needs and goals in mind.

EXPERIENCE: Mr. Beach's experience includes building and managing organizations in multiple companies of all sizes. He has worked extensively in management consulting. His background is engineering and computer information technology.

Some of Mr. Beach's professional experience includes:

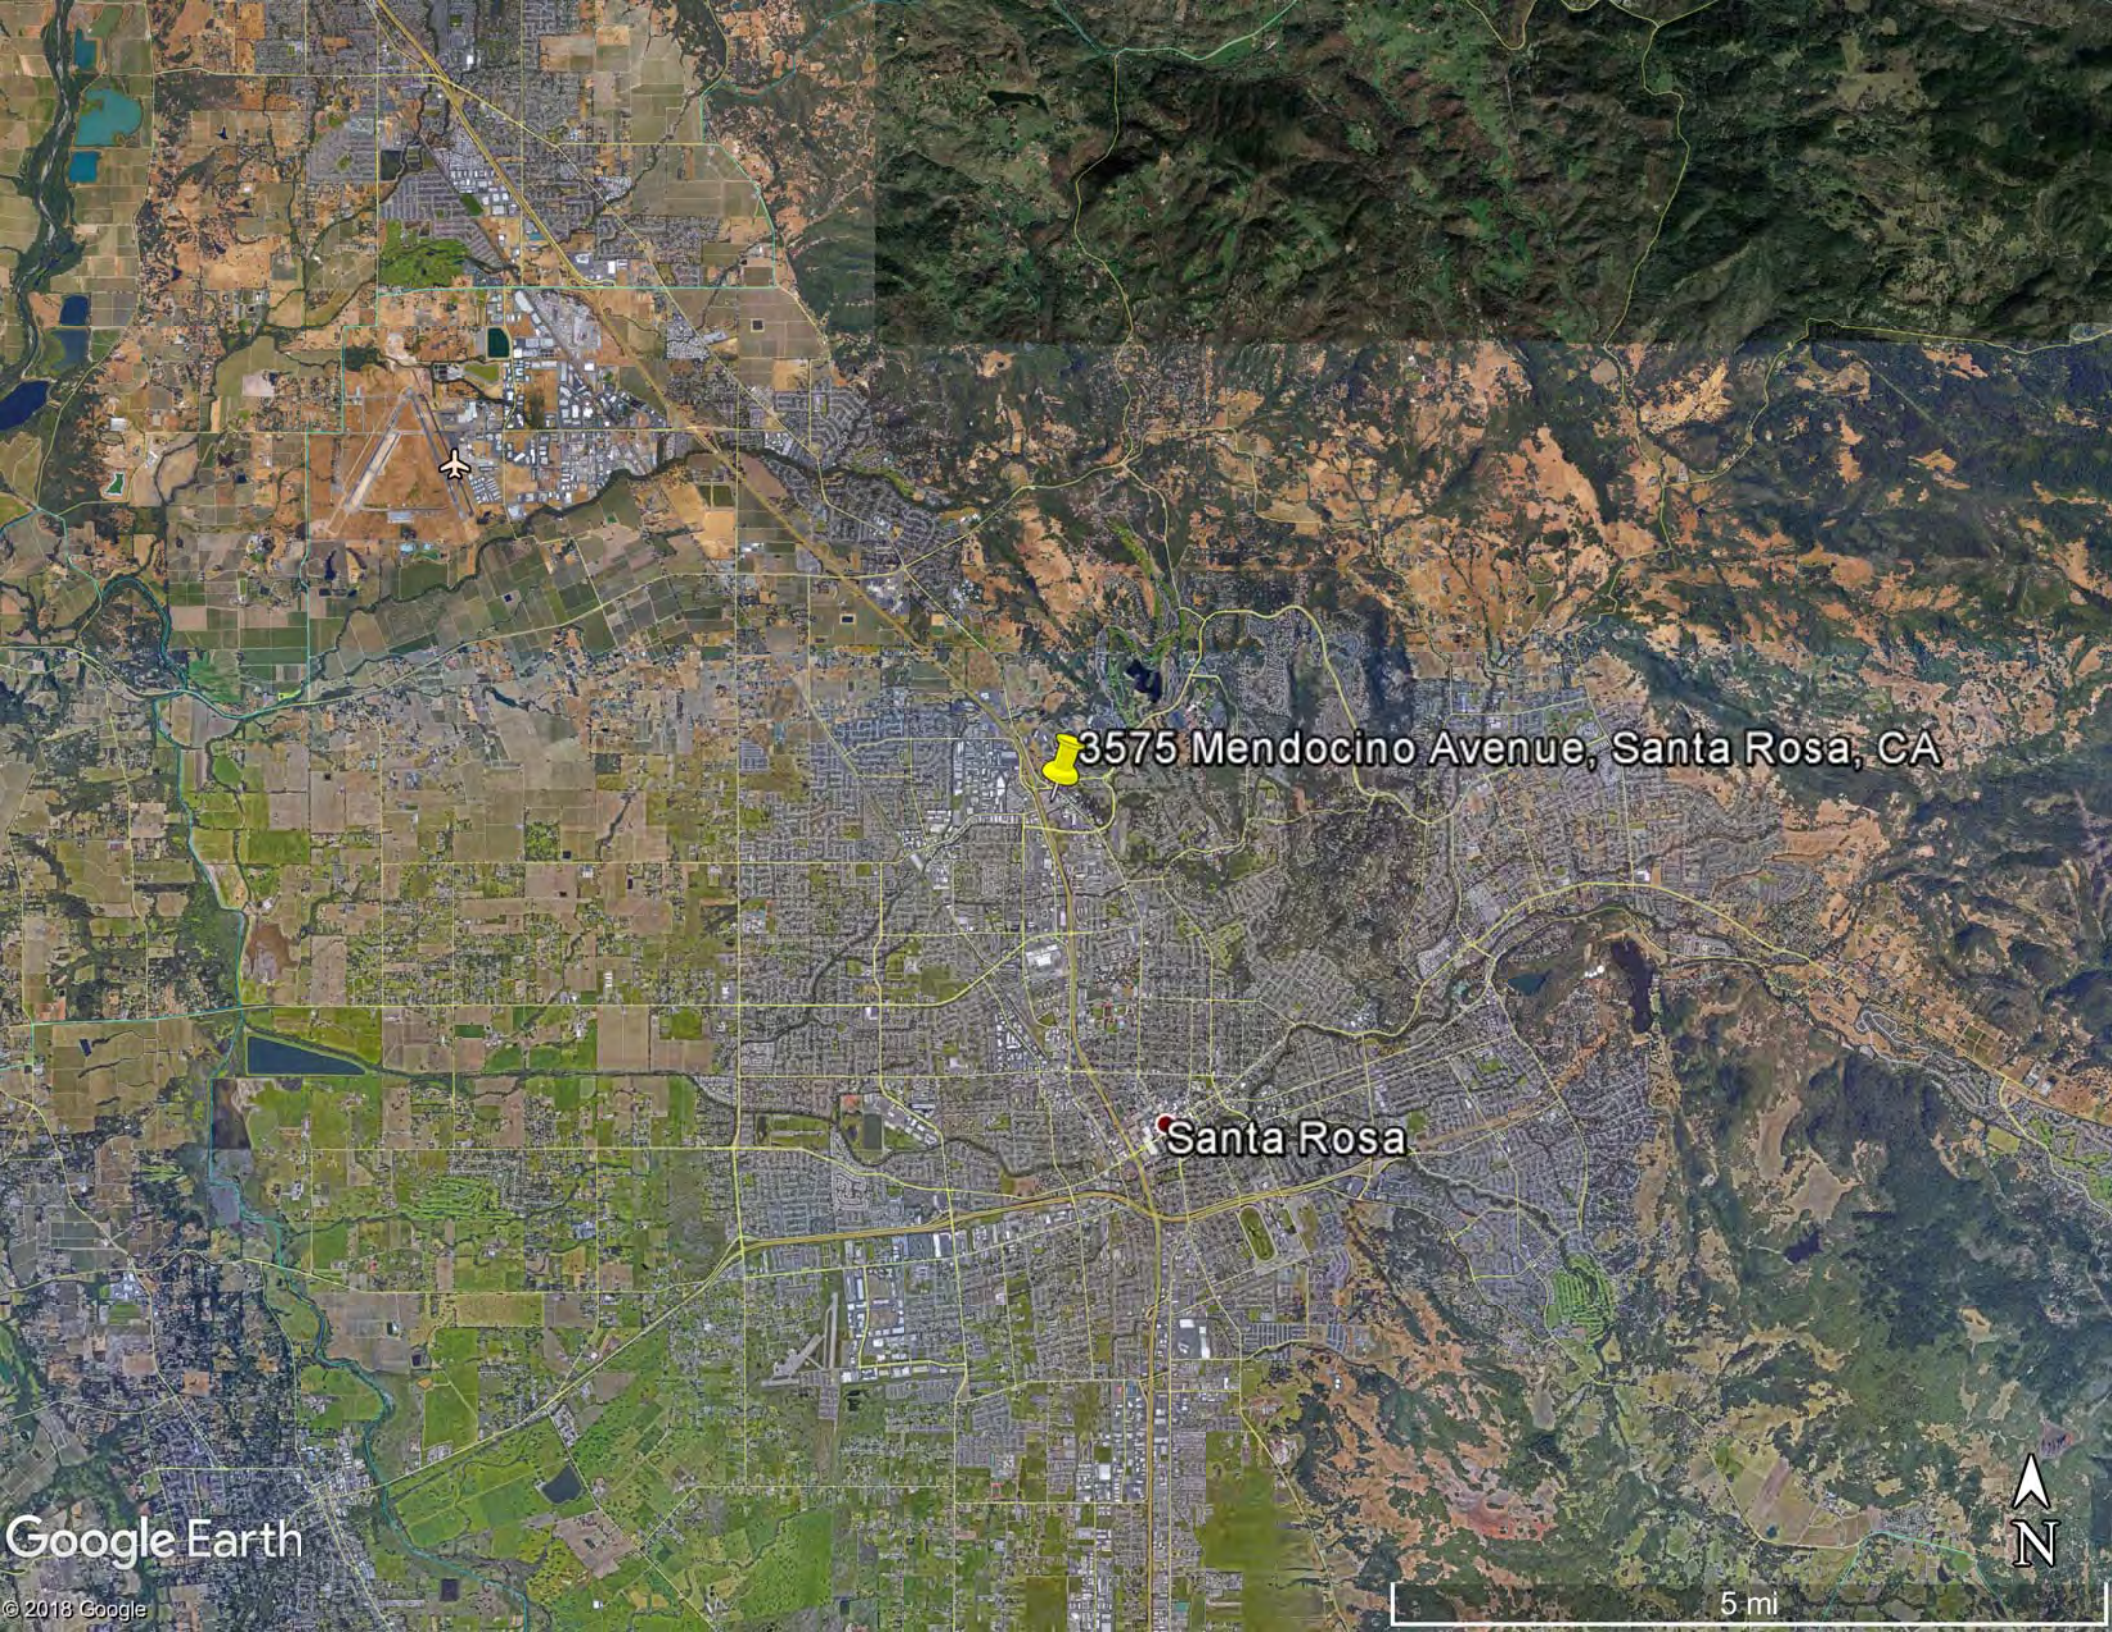
Performed or supervised over 2,500 environmental assessments and numerous Phase II, III and IV Environmental Investigations.

Implemented post-acquisition integration including organization restructure, technology (applications and infrastructure), brand and business processes at a Financial Organization. Included multiple geographical locations including off-shore. Successfully met aggressive budget and schedule targets.

Responsible for developing and implementing cohesive application architecture for subsidiary of Global Pharmaceutical Corporation's world-wide enterprise. Included systems and functional areas of SAP, Siebel CRM, corporate Intranet, DR/CAPA, LIMS, R&D, Finance, Human Resources, Supply Chain Management, Clinical Development, Document Management, Contingent Workforce Outsourcing and

Business Intelligence. Implemented Long Range Planning process across the Corporation. Developed comprehensive Business Intelligence strategy for all reporting and analysis needs at Chiron. Incorporated SAP BW, Cognos and Business Objects suites and numerous, international data sources. Worked on project team that implemented the first PMO for the organization. Worked closely with business and technical areas. Experienced in regulatory and CFR Part 11 requirements.

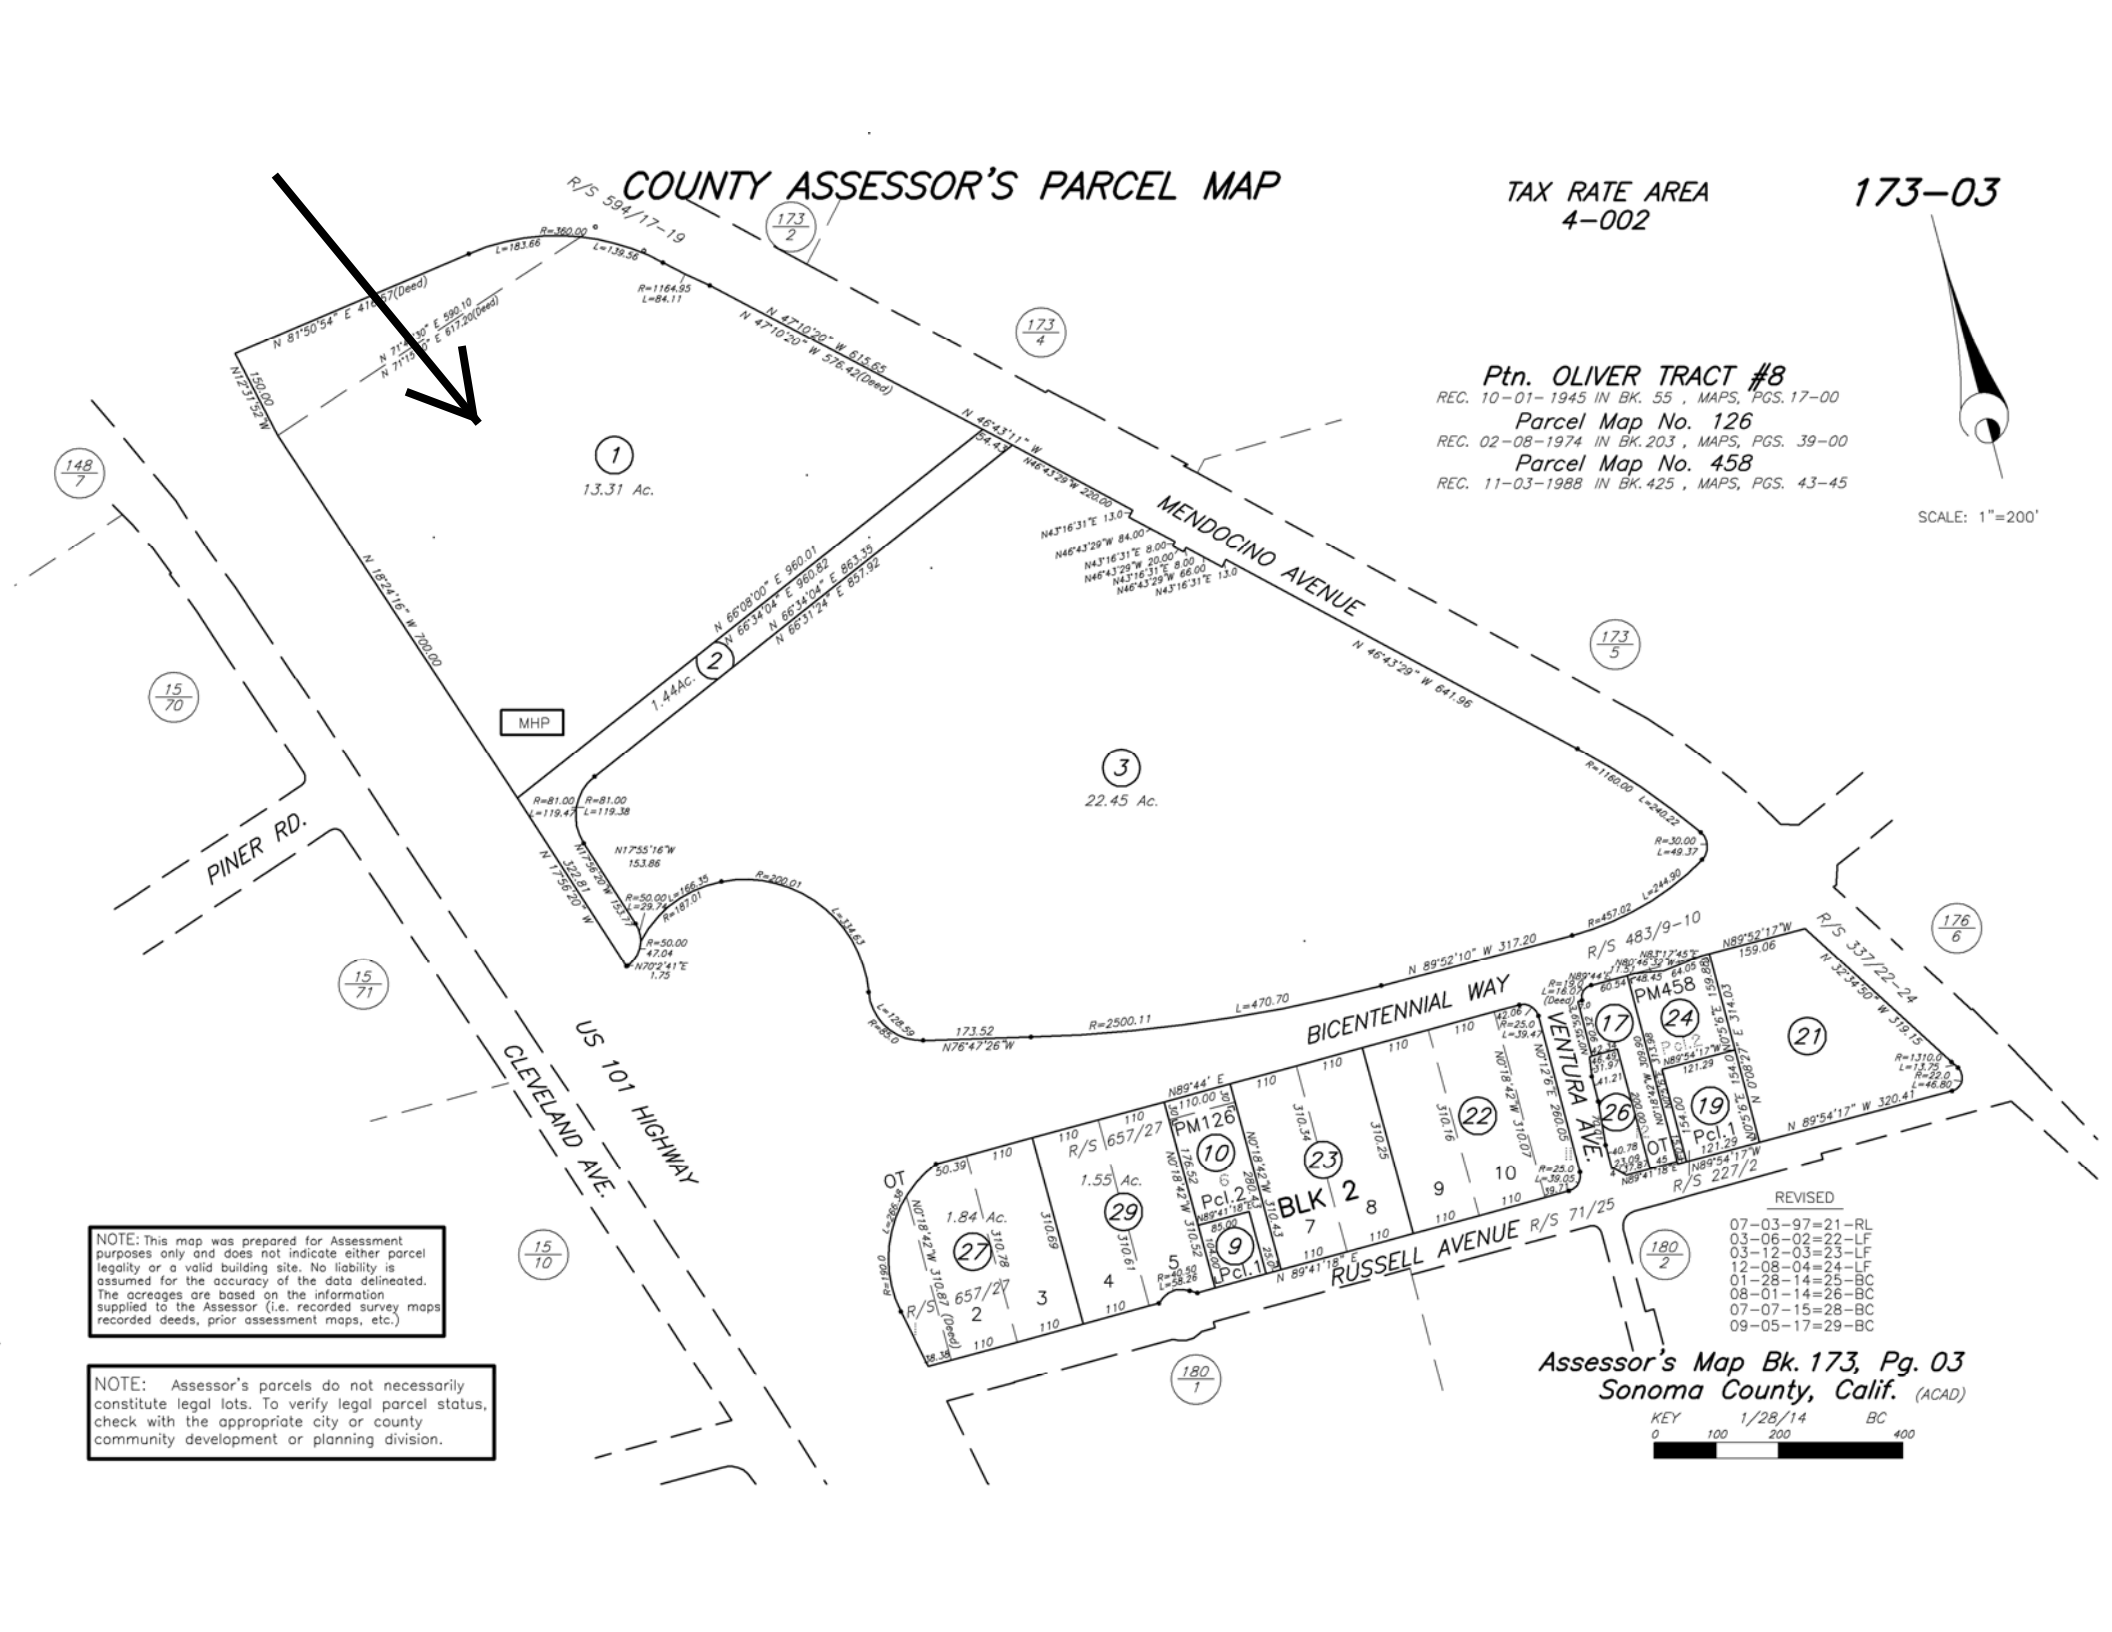
Head of Information Technology Off-shoring corporate-wide for Financial Company. Created program for utilization of offshore companies for all aspects of system life cycle work within the company. The Offshore Development Office was responsible for vendor selection, negotiating contracts, governance, infrastructure, security, and financial reporting. Demonstrated 40% project savings over traditional approaches with annual savings of $22,000,000.
Director of Technology for Capital Markets and Trading business in Brokerage. Responsible for all technology solutions and infrastructure (desktop, servers, applications, helpdesk, etc.) for business unit with over $1B annual revenue. Multiple geographic locations supported. Partnered with business to decrease unit operating costs by 42% while revenues increased by 300%. Led application development and maintenance organization of 100+. Hired skilled staff, including successor, and developed processes and tools to promote repeatable success and drive down costs. Partnered with business clients and fostered team concept and pride in work. Group achieved the finest track record of any within the company, delivering over 300 projects with 93+% success rate and receiving 15 corporate-wide awards.



ACADEMIC BACKGROUND: BS, Computer Engineering, Boston University, 1983
MS, Computer Science, University of California, Berkeley, 1986
MBA, Duke University-Fuqua School of Business, 1991

PATENTS: Mr. Beach holds three patents in Computer Design

PROFESSIONAL AFFILIATIONS: Rotary International; Project Management Institute; ASTM



CERTIFICATIONS: Project Management Professional

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 05/18/2018 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there are 2 RESPONSE sites within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk

characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/30/2018 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 7 CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

Local Lists of Hazardous waste / Contaminated Sites

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 HIST Cal-Sites site within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2016 has revealed that there is 1 HAZNET site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110002938304

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002952886

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Local Agency:	SANTA ROSA, CITY OF
File Location:	Regional Board
Local Case Number:	Not reported
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Benzene, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	This is an active service station with a documented release of petroleum hydrocarbons and fuel oxygenates to soil and groundwater. Soil and groundwater contamination was reported in December 1989. Overexcavation of contaminanted soil was completed in 2005. The site was closed under the SWRCB's LTCP in May, 2014.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Local Case Number: Not reported
Potential Media Affect: Not reported
Potential Contaminants of Concern: * Solvents
Site History: This site is the location of solvent releases to soil and groundwater from former printed circuit board manufacturing facilities. These facilities included one waste solvent tank, which appears to be the basis for the UST Program site investigation case. The waste solvent UST was removed under the regulatory oversight of Sonoma County Health Department. No releases from the tank were noted at the time of the tank removal. All invesatigative data, regulatory and cleanup activities for this site are being managed under the SIte Clceanup Program, with staff oversight costs funded under a Cost Recovery Program ageement with Hewlett Packard Company. All case activity and reports are tracked and uploaded to the Geotracker case # 1NSO039.

Potential Media Affected: Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Solvents
Site History: From 1972 to 1987, Hewlett-Packard Company (Hewlett-Packard) leased three parcels identified by the Sonoma County Assessors Parcel Numbers APN 015-670-024, APN 015-670-027 and APN 015-670-028, Hewlett-Packard operated a light industrial, ultra-high frequency test and instrument manufacturing facility at the site. The manufacturing operations included milling, machining, and coating metal parts and components for test and instrument manufacturing. The site occupied approximately 8 acres and included two buildings, designated as 1T and 2T, plus a separate cafeteria building. The site is bordered on the south by Piner Road, on the north by Center Drive,

HEWLETT-PACKARD, VALLEY SITE (Continued) **1000281844**

on the west by Industrial Drive, and on the east by Airway Drive. In 1987, Hewlett-Packard Company ceased operations at Building 1T, which was then converted into office space. The Building 1T was subsequently remodeled to accommodate additional occupancy by a church and a private school. Hewlett Packard continued to perform research and development activities in Building 2T until 1998. Building 1T was constructed in 1969 on the parcel APN 015-670-024. Operations within and surrounding Building 1T included 23 chemical use areas that generated chemical wastes including metals, volatile organic compounds, detergents, acids, and caustics. Building 2T was constructed on parcels APN 015-670-27 and APN 015-670-028. 6. The facilities within and surrounding Building 2T included hazardous waste management units permitted under the Federal Resource Conservation and Recovery Act of 1976 (RCRA) as amended (42 U.S.C. 6901 et seq);. These waste management units consisted of a drum storage area, and the Brite Dip Sump system, which included a dip sump, waste transfer trench, waste storage tanks, and a drum rinse shed. The RCRA permitted waste management operations were located on parcel APN 015-670-028. In February 1993, closure of the two waste management units was completed according to a closure plan approved by the U.S. Environmental Protection Agency and the California Department of Toxic Substances Control on June 22, 1992. Hewlett-Packard continued research and development operations at Building 2T until 1998, when Agilent Corporation assumed control of the premises. Agilent ceased operations at Building 2T in November 2002. In a letter dated March 3, 2008, submitted to NCRWQCB by email on Februsry 23, 2009, Geosyntec consultants stated on behalf of Hewlett Packard Company, that the soil vapor extraction system installed at Building 1T would be operated continuously through 2008. In-situ bioremediation consisting of injections of carbon substrate, microbial nutrients and Dehalicoccoides microbial culture commecnced on Sepetember 24, 2012 in four horizontal wells installed in two treatment zones beneath Building 1T.

Description:	The product was found to have been dumped by an employee of a market. The product was dumped onto asphalt which led to a storm drain that feeds to a creek. The RP on scene does not think it has reached the creek as of yet and public works is on scene to vacumn it out. The product has been diked to prevent further milk entering the storm drain.

Action: Remedy Constructed

FINDS:

Registry ID: 110000621426

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Status Date:	01/26/2012
Case Worker:	ZZZ
RB Case Number:	1TSR265
Local Agency:	SANTA ROSA, CITY OF
File Location:	Regional Board
Local Case Number:	Not reported
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	The site is the location of the County of Sonoma' Administration and Facilities Operations Complex, and includes numerous government office buildings, as well as vehicle operations and maintenance facilities. A former 1000-gallon waste oil tank was removed from the site in May 1988. Soil and groundwater samles subsequently showed impacts by petroleum and several chlorinated volatile organic compounds. Methyl tertiary butyl ether (MTBE) discovered in groundwater north of the site does not appear to have been released from the former waste oil tank.

RB Case Number: 1TSR020
Local Agency: SANTA ROSA, CITY OF
File Location: Regional Board
Local Case Number: Not reported
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Aviation, Diesel, Gasoline
Site History: The site is the location of the Golden Gate Bridge District bus depot, and includes an administration building, paved parking area, bus washing areas, and fueling facilities. In 1999, petroleum

GOLDEN GATE BRIDGE AND TRANSIT DISTRICT (Continued) **1000187001**

releases to soil and groundwater at the site were discovered during the removal of gasolie underground storage tanks. A SOil Vapor Extraction system removed approximately 284 pounds of petroleum hyfrocarbons, based in information presented in a report dated 2/14/1997, prepared by Woodward-Clyde Engineering.

Case Worker: ZZZ
RB Case Number: 1TSR441
Local Agency: SONOMA COUNTY
File Location: Regional Board
Local Case Number: Not reported
Potential Media Affect: Under Investigation
Potential Contaminants of Concern: Diesel
Site History: Petroleum impacted soil was discovered at the removal of underground stroage tanks. RWQCB staff requested an investigation to determine whether groundwater has been impacted by the releases. A sample of water from the tank excavation showed the presence of TPH as Diesel at 410 ppb. Groundwater sampling conducted on July 30, 2008 did not show any petroleum related constituents above detection levels, except for methyl tertiary butyl ether (MTBE) at 4.48 parts per billion. - This case has been referred for case closure assessment and proccessing.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Document Type: Technical Workplan
Completed Date: 08/01/2006
Comments: Installation of an additional monitoring well approved. Work Plan approved with modifications and comments.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 08/17/2006
Comments: Workplan for inspecting wells noted as being damaged approved for implementation with modifications.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 08/28/2006
Comments: Workplan to repair damaged wells is being implemented. All wells except one should be available for sounding as part of September sounding event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 12/20/2006
Comments: Report approved with modifications. Work Plan to achieve required capture zone was required on 12/5/2006.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 01/05/2007
Comments: Report includes the information required in a monthly report. However, the groundwater extraction system has not yet been restarted. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

FOUNTAINGROVE PLAZA SITE (Continued) **S102564485**

Completed Document Type: Other Report
Completed Date: 01/05/2007
Comments: DTSC received notification that project manager for SCS Engineers changed from Gene Suemnicht, CEG, to Karin Fresnel, CEG #2264.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 03/15/2007
Comments: Consultant notified on 3/13 via email that sampling event would occur on 3/15/07.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 10/01/2007
Comments: Insufficient information and analysis has been submitted to support the document's conclusion that the Site has achieved asymptotic levels. The groundwater extraction system has not operated continuously over the past year within the operating parameters outlined in the RAP. Therefore, recommendations not approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 02/05/2007
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/23/2007
Comments: Three comments sent via email. 1. Table 2, Cumulative Groundwater Treatment System Results. Subsequent reports including this table should include the restart date for the groundwater extraction and treatment system in the notes for 10/27/2006. 2. Figure 3, Site Plan with Groundwater Elevation Contours for April 2007. The capture zone for the groundwater extraction trench is required on this figure. I am going to need a revised figure showing this in next month's monthly report. 3. It looks like SCS is consistently conducting the sounding events in the middle of the month. Therefore, would it make sense to revise the existing requirement to require sounding in the middle of the month instead of during the first full week of the month?

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 07/30/2007
Comments: The groundwater elevation in Table 1A for MW-24 is correct (139.34 feet MSL). This groundwater elevation was usd to determine the isopleths and flow directions on Figure 3. SCS staff indicated that the groundwater elevation for MW-24 shown on Figure 4 is a typographical error that was not caught during internal QA/QC.

FOUNTAINGROVE PLAZA SITE (Continued) **S102564485**

and groundwater sampling of six wells (FPBC-MW-1, MW-9, MW-19, MW-22, MW-23 and MW-24). The Report recommends the reduction of groundwater monitoring to once every five-years, corresponding to required Five-Year Review for the Site. The Report also recommends the reduction of depth to groundwater measurements and groundwater sampling to five monitoring wells. The groundwater extraction system was shutdown in September 2008. Groundwater monitoring data collected since 2008, demonstrates that contaminates in groundwater have continued to decline and that the groundwater flow direction is reliably south to southwest. The Five-Year Review Report requires a detailed cost estimate and, as of March 6, 2015 is still under review.

Completed Date: 05/23/2007
Comments: Three comments sent via email. 1. Table 2, Cumulative Groundwater Treatment System Results. Subsequent reports including this table should include the restart date for the groundwater extraction and treatment system in the notes for 10/27/2006. 2. Figure 3, Site Plan with Groundwater Elevation Contours for April 2007. The capture zone for the groundwater extraction trench is required on this figure. I am going to need a revised figure showing this in next month's monthly report. 3. It looks like SCS is consistently conducting the sounding events in the middle of the month. Therefore, would it make sense to revise the existing requirement to require sounding in the middle of the month instead of during the first full week of the month?

Completed Document Type: Operations and Maintenance Report
Completed Date: 03/05/2015
Comments: The monitoring program for the Fountaingrove Plaza Site includes biennial groundwater depth measurement for fifteen monitoring wells and groundwater sampling of six wells (FPBC-MW-1, MW-9, MW-19, MW-22, MW-23 and MW-24). The Report recommends the reduction of groundwater monitoring to once every five-years, corresponding to required Five-Year Review for the Site. The Report also recommends the reduction of depth to groundwater measurements and groundwater sampling to five monitoring wells. The groundwater extraction system was shutdown in September 2008. Groundwater monitoring data collected since 2008, demonstrates that contaminates in groundwater have continued to decline and that the groundwater flow direction is reliably south to southwest. The Five-Year Review Report requires a detailed cost estimate and, as of March 6, 2015 is still under review.

Completed Document Type: Remedial Investigation Report
Completed Date: 04/13/2005
Comments: PCE was detected in ground water samples collected in the vicinity of the site at concentrations ranging from 89 ug/l to 13,000 ug/l. Detections of TCE ranged from 23 ug/l to 110 ug/l. Cis-1,2-DCE was reported at levels ranging from 77 ug/l to 270 ug/I. MTBE detections ranged from 25 ug/l to 100 ug/l. MTBE impacts from the vicinity of the Unocal site appear to migrate in a westerly direction beneath the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 11/30/2006
Comments: PCE, TCE, cis-1,2-DCE, trans-1,2-DCE, and MTBE werer detected in the shallow groundwater. Deeper groundwater zones do not appear to be affected by VOCs.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 05/31/2007
Comments: Ground water samples collected from monitoring wells in the shallow water bearing interval had detections of PCE, TCE, cis-1,2-DCE, and MTBE. Cis-1,2-DCE, PCE, and TCE were reported in the surface water samples collected from Poppy Creek.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/27/2007
Comments: Ground water samples collected from monitoring wells in the shallow water bearing interval had detections of PCE, TCE, cis-1,2-DCE, vinyl chloride, and MTBE. PCE was reported in the surface water samples collected from Poppy Creek.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/04/2008
Comments: CPT soil probes were conducted at four off-site locations. PCE, TCE, and cis-1,2-DCE were detected in the shallow water bearing zone.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 12/29/2009
Comments: Interim removal action workplan approved to install a soil vapor extraction and treatment system.

Completed Date: 01/09/2009
Comments: CFA for remedial investigation work approved

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 09/17/2008
Comments: Soil vapor sampling using a mobile lab conducted under North Coast Regional Water Quality Control Board (NCRWQCB) oversight. Sampling results indicated very high VOC concentrations in soil gas at the Site and downgradient of the Site. NCRWQCB requested DTSC to take lead at this site since the issues related to health exposure need to be addressed at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: *Correspondence - Received
Completed Date: 09/17/2008
Comments: NCRWQCB requested DTSC to take lead at this site since the issues related to health exposure need to be addressed at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 11/07/2002
Comments: Preliminary Assessment was conducted under Water Board oversight and the results documented a release of PCE and related chemicals to soil and groundwater.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/13/2005
Comments: PCE was detected in ground water samples collected in the vicinity of the site at concentrations ranging from 89 ug/l to 13,000 ug/l. Detections of TCE ranged from 23 ug/l to 110 ug/l. Cis-1,2-DCE was reported at levels ranging from 77 ug/l to 270 ug/l. MTBE detections ranged from 25 ug/l to 100 ug/l. MTBE impacts from the vicinity of the Unocal site appear to migrate in a westerly direction beneath the Site.

PETER PAN CLEANERS (Continued) **1000211154**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 11/30/2006
Comments: PCE, TCE, cis-1,2-DCE, trans-1,2-DCE, and MTBE werer detected in the shallow groundwater. Deeper groundwater zones do not appear to be affected by VOCs.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 05/31/2007
Comments: Ground water samples collected from monitoring wells in the shallow water bearing interval had detections of PCE, TCE, cis-1,2-DCE, and MTBE. Cis-1,2-DCE, PCE, and TCE were reported in the surface water samples collected from Poppy Creek.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/27/2007
Comments: Ground water samples collected from monitoring wells in the shallow water bearing interval had detections of PCE, TCE, cis-1,2-DCE, vinyl chloride, and MTBE. PCE was reported in the surface water samples collected from Poppy Creek.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/04/2008
Comments: CPT soil probes were conducted at four off-site locations. PCE, TCE, and cis-1,2-DCE were detected in the shallow water bearing zone.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 12/29/2009
Comments: Interim removal action workplan approved to install a soil vapor extraction and treatment system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Implementation Workplan
Completed Date: 07/27/2009
Comments: Workplan for the soil vapor extraction system installation at the site is approved.

Latitude:	38.4618728444523
Longitude:	-122.717775461971
Case Type:	Cleanup Program Site
Case Worker:	PBN
Local Agency:	DEPARTMENT OF TOXIC SUBSTANCES CONTROL
RB Case Number:	1NSR390
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Soil, Soil Vapor, Surface water
Potential Contaminants of Concern:	Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride, MTBE / TBA / Other Fuel Oxygenates
Site History:	This is a DTSC lead site. This site has operated as a dry cleaners since 1966. PCE , a dry cleaning solvent, has been detected in soil and groundwater at the site. Groundwater is contaminated with PCE, TCE, cis-1,2-DCE and vinyl chloride. Subsurface investigations indicate that the contaminant plume extends more than 1,000 feet from the site to the west and northwest. MTBE from a nearby service station is co-minglerd with the PCE plume. Groundwater contaminants have also been detected in Poppy Creek adjacent to Steeele Lane Elementary School. DTSC took over as lead agency of the site in September 2008 due to potential human health concerns from indoor air intrusion. An indoor air investigation has been conducted at the site, in the residential and commercial neighborhood surrounding the site and at Steele Lane Elementary School. Additional information about this site can be found on the DTSC Envirostor website.

Lien Amount: $1,373,662.54
Amount Remaining: Not reported
APNS: 180-230-013-000, 180230013
Description: The site is an active dry cleaner which has operated since 1966. The current dry cleaner use petroleum based dry cleaning chemicals, but from 1966 to 2002, tetrachloroethylene (PCE) was used at the site. The presence of tetrachloroethylene, or PCE, in groundwater was discovered in 2002 when a private water supply well on Rowe Drive in Santa Rosa was tested for VOCs. Subsequent historical and physical investigative work identified Peter Pan Cleaners as the source of the PCE contamination. The North Coast Regional Water Quality Control Board (NCRWQCB) has been overseeing the investigation of the site since 2002. NCRWQCB requested DTSC to take the lead at this site since the issues related to health exposure need to be addressed at the site due to high soil gas concentrations detected at the vicinity of the site.

RB Case Number:	1TSR101
Local Agency:	SANTA ROSA, CITY OF
File Location:	Regional Board
Local Case Number:	Not reported
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	This site is an active service station. Gasoline and fuel oxygenates, MTBE and TBA, have been detected in groundwater both onsite and offsite to the west. The MTBE groundwater plume is commingled with the Peter Pan Dry Cleaner's (Case No-1NSR390) groundwater plume west of Mendocino Avenue. A domestic irrigation well on Rowe Drive is impacted by the commingled plume and contamination is reported in surface water of Poppy Creek.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region’s active disposal pits are operating without permission.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 01/03/2018
Date Data Arrived at EDR: 02/14/2018
Date Made Active in Reports: 03/22/2018
Number of Days to Update: 36

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

BURBANK HOUSING DEVELOPMENT CORP
3575 MENDOCINO AVENUE
SANTA ROSA, CA 95403

TARGET PROPERTY COORDINATES

Latitude (North):	38.473436 - 38° 28' 24.37''
Longitude (West):	122.728878 - 122° 43' 43.96''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	523650.6
UTM Y (Meters):	4258174.0
Elevation:	143 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5602166 SANTA ROSA, CA
Version Date:	2012
Southwest Map:	5602170 SEBASTOPOL, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

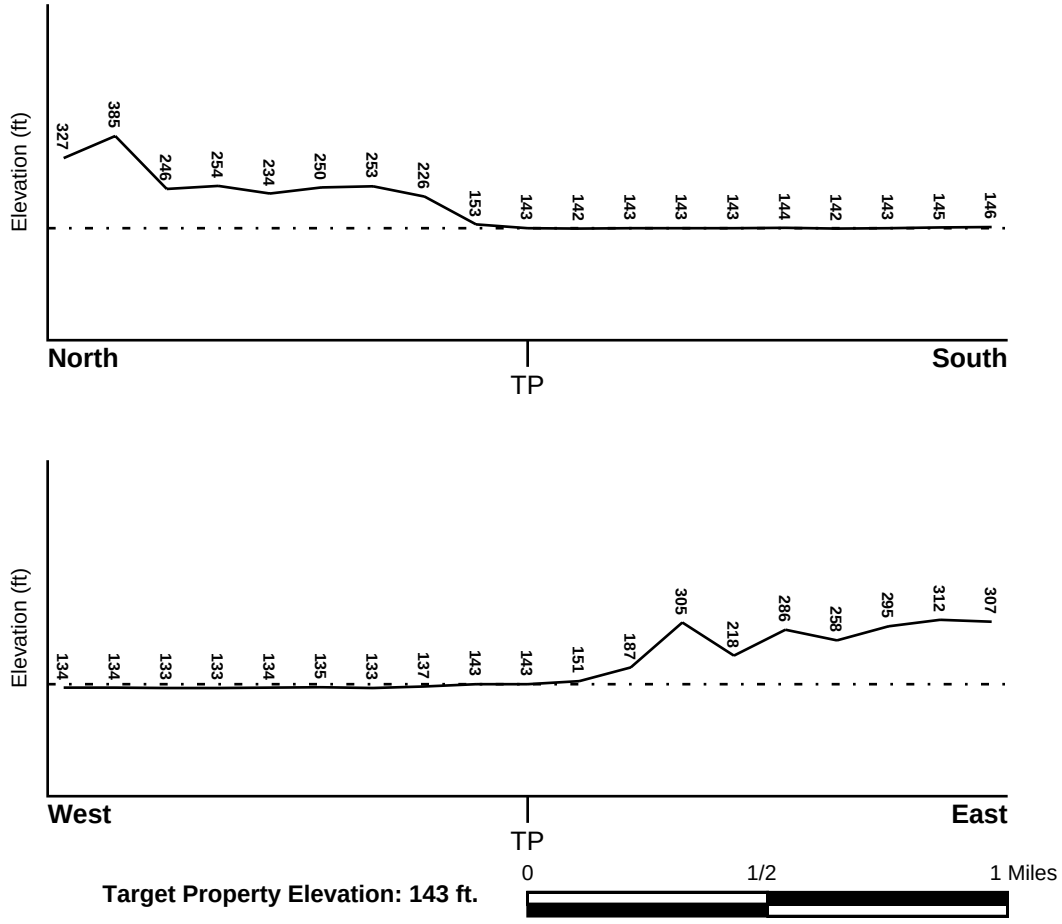
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 143 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
0603810005B	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
0603750725B	FEMA Q3 Flood data
06097C0729E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SANTA ROSA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CLEAR LAKE

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	38 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 7.3 Min: 5.6
2	38 inches	59 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4

Soil Map ID: 2

Soil Component Name: ARBUCKLE

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 6.1
2	5 inches	27 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 7.3 Min: 6.1
3	27 inches	72 inches	gravelly clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 4 Min: 1.4	Max: 6.5 Min: 5.6

Soil Map ID: 3

Soil Component Name: CLEAR LAKE

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	12 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 7.3 Min: 5.6
2	12 inches	59 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4

Soil Map ID: 4

Soil Component Name: SPRECKELS

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 6.5 Min: 6.1

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	9 inches	18 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 6.5 Min: 6.1
3	18 inches	37 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 6 Min: 5.1

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1930 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Certified Sanborn® Map Report

07/16/18

Site Name:	Client Name:
Burbank Housing Development	Harris & Lee Env. Sciences
3575 Mendocino Avenue	120 Ross Valley Drive
SANTA ROSA, CA 95403	San Rafael, CA 94901-0000
EDR Inquiry # 5361911.3	Contact: Cathy Neumann

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Harris & Lee Env. Sciences were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # A7DD-4E7D-87EB

PO # 3575 Mendocino Ave

Project Burbank Housing Development Co

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: A7DD-4E7D-87EB

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✔ Library of Congress
- ✔ University Publications of America
- ✔ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Harris & Lee Env. Sciences (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Subject: EPA Assessment and Removal of Asbestos Containing Material at Journey's End Mobile Home Park, 3735 Mendocino Avenue, Santa Rosa, CA 95403 (APN 173-030)

Dear Mr. Evans:

The United States Environmental Protection Agency (EPA) has conducted assessments and, where appropriate, removals of asbestos containing material (ACM) in Sonoma, Napa, Lake, and Mendocino Counties under the authorization of the Federal Emergency Management Agency (FEMA).

Asbestos is the name given to a group of six different fibrous minerals (amosite, chrysotile, crocidolite, and the fibrous varieties of tremolite, actinolite, and anthophyllite) that occur naturally in the environment. Asbestos minerals have long separable fibers that are strong and flexible enough to be spun and woven and are heat resistant. Because of these characteristics, asbestos has been used for a wide range of manufactured goods, mostly in building materials (roofing shingles, ceiling and floor tiles, paper products, and asbestos cement products), friction products (automobile clutch, brake, and transmission parts), heat-resistant fabrics, packaging, gaskets, and coatings. ACM is defined as containing 1% or greater of any of the 6 fibrous minerals. Additional information about asbestos from the Agency for Toxic Substances and Disease Registry, a branch of the Federal Centers for Disease Control, is attached (Attachment #1).

EPA assessed bulk ACM at the property located at 3735 Mendocino Avenue in Santa Rosa, CA 95403 (APN 173-030-001), and on January 29, 2018, completed a removal of the identified ACM from the property. Attached is a list of the property addresses (Attachment #2) associated

with the above referenced parcel. EPA's ACM assessment and removal activities at this property was provided at no expense to the property owner(s). The U.S. Army Corps of Engineers or a private contractor, as appropriate, was responsible for removing the remaining debris from the property. Again, the ACM detected on the above referenced property has been removed.

If you would like additional information related to EPA's Emergency Response activities, please visit EPA's Northern California Fires Emergency Response website www.epa.gov/norcalfireresponse.

Sincerely,

Michelle Rogow
Incident Commander
EPA Northern California Fire Response

ATSDR
AGENCY FOR TOXIC SUBSTANCES AND DISEASE REGISTRY

ASBESTOS
CAS # 1332-21-4

Division of Toxicology ToxFAQs™ September 2001

This fact sheet answers the most frequently asked health questions (FAQs) about asbestos. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, individual susceptibility and personal habits, and whether other chemicals are present.

HIGHLIGHTS: Exposure to asbestos usually occurs by breathing contaminated air in workplaces that make or use asbestos. Asbestos is also found in the air of buildings that are being torn down or renovated. Asbestos exposure can cause serious lung problems and cancer. This substance has been found at 83 of the 1,585 National Priorities List sites identified by the Environmental Protection Agency (EPA).

What is asbestos?

Asbestos is the name given to a group of six different fibrous minerals (amosite, chrysotile, crocidolite, and the fibrous varieties of tremolite, actinolite, and anthophyllite) that occur naturally in the environment. Asbestos minerals have separable long fibers that are strong and flexible enough to be spun and woven and are heat resistant. Because of these characteristics, asbestos has been used for a wide range of manufactured goods, mostly in building materials (roofing shingles, ceiling and floor tiles, paper products, and asbestos cement products), friction products (automobile clutch, brake, and transmission parts), heat-resistant fabrics, packaging, gaskets, and coatings. Some vermiculite or talc products products may contain asbestos.

What happens to asbestos when it enters the environment?

Asbestos fibers can enter the air or water from the breakdown of natural deposits and manufactured asbestos products. Asbestos fibers do not evaporate into air or dissolve in water. Small diameter fibers and particles may remain suspended in the air for a long time and be carried long distances by wind or water before settling down. Larger diameter fibers and particles tend to settle more quickly.

Asbestos fibers are not able to move through soil. Asbestos fibers are generally not broken down to other compounds and will remain virtually unchanged over long periods.

How might I be exposed to asbestos?

We are all exposed to low levels of asbestos in the air we breathe. These levels range from 0.00001 to 0.0001 fibers per milliliter of air and generally are highest in cities and industrial areas.

People working in industries that make or use asbestos products or who are involved in asbestos mining may be exposed to high levels of asbestos. People living near these industries may also be exposed to high levels of asbestos in air.

Asbestos fibers may be released into the air by the disturbance of asbestos-containing material during product use, demolition work, building or home maintenance, repair, and remodeling. In general, exposure may occur only when the asbestos-containing material is disturbed in some way to release particles and fibers into the air.

Drinking water may contain asbestos from natural sources or from asbestos-containing cement pipes.

How can asbestos affect my health?

Asbestos mainly affects the lungs and the membrane that surrounds the lungs. Breathing high levels of asbestos fibers for a long time may result in scar-like tissue in the lungs and in the pleural membrane (lining) that surrounds the lung. This disease is called asbestosis and is usually found in workers exposed to asbestos, but not in the general public. People with asbestosis have difficulty breathing, often a cough, and in severe cases heart enlargement. Asbestosis is a serious disease and can eventually lead to disability and death.

Breathing lower levels of asbestos may result in changes called plaques in the pleural membranes. Pleural plaques can occur in workers and sometimes in people living in areas with high environmental levels of asbestos. Effects on breathing from pleural plaques alone are not usually serious, but higher exposure can lead to a thickening of the pleural membrane that may restrict breathing.

How likely is asbestos to cause cancer?

The Department of Health and Human Services (DHHS), the World Health Organization (WHO), and the EPA have determined that asbestos is a human carcinogen.

It is known that breathing asbestos can increase the risk of cancer in people. There are two types of cancer caused by exposure to asbestos: lung cancer and mesothelioma. Mesothelioma is a cancer of the thin lining surrounding the lung (pleural membrane) or abdominal cavity (the peritoneum). Cancer from asbestos does not develop immediately, but shows up after a number of years. Studies of workers also suggest that breathing asbestos can increase chances of getting cancer in other parts of the body (stomach, intestines, esophagus, pancreas, and kidneys), but this is less certain. Early identification and treatment of any cancer can increase an individual's quality of life and survival.

Cigarette smoke and asbestos together significantly increase your chances of getting lung cancer. Therefore, if you have been exposed to asbestos you should stop smoking. This may be the most important action that you can take to improve your health and decrease your risk of cancer.

How can asbestos affect children?

We do not know if exposure to asbestos will result in birth defects or other developmental effects in people. Birth defects have not been observed in animals exposed to asbestos.

It is likely that health effects seen in children exposed to high levels of asbestos will be similar to the effects seen in adults.

How can families reduce the risk of exposure to asbestos?

Materials containing asbestos that are not disturbed or deteriorated do not, in general, pose a health risk and can be left alone. If you suspect that you may be exposed to asbestos in your home, contact your state or local health department or the regional offices of EPA to find out how to test your home and how to locate a company that is trained to remove or contain the fibers.

Is there a medical test to show whether I've been exposed to asbestos?

Low levels of asbestos fibers can be measured in urine, feces, mucus, or lung washings of the general public. Higher than average levels of asbestos fibers in tissue can confirm exposure but not determine whether you will experience any health effects.

A thorough history, physical exam, and diagnostic tests are needed to evaluate asbestos-related disease. Chest x-rays are the best screening tool to identify lung changes resulting from asbestos exposure. Lung function tests and CAT scans also assist in the diagnosis of asbestos-related disease.

Has the federal government made recommendations to protect human health?

In 1989, EPA banned all new uses of asbestos; uses established before this date are still allowed. EPA established regulations that require school systems to inspect for damaged asbestos and to eliminate or reduce the exposure by removing the asbestos or by covering it up. EPA regulates the release of asbestos from factories and during building demolition or renovation to prevent asbestos from getting into the environment.

EPA has proposed a concentration limit of 7 million fibers per liter of drinking water for long fibers (lengths greater than or equal to 5 μm). The Occupational Safety and Health Administration has set limits of 100,000 fibers with lengths greater than or equal to 5 μm per cubic meter of workplace air for 8-hour shifts and 40-hour work weeks.

USACE STRUCTURAL DEBRIS REMOVAL

CONFIRMATION SAMPLING - APPROVAL FORM

SITE ADDRESS: 3575 Mendocino Avenue, Santa Rosa, CA

APN: 173030001

Sample Identification: CA-173-030-001 Number of Samples: 153

Date(s) Sample Collected: 2/28 and 3/27/18

Laboratory: GCAL

Cleanup Results: The property identified above has been cleared of fire-related debris and tested in accordance with guidance provided in the following document: Background Sampling and Cleanup Goals for the Napa, Sonoma, Lake and Mendocino County 2017 Fires, California. The cleanup goals are based on either the calculated soil background, US EPA Regional Screening Levels, and/or the California Environmental Protection Agency (CalEPA), California Human Health Screening Levels (CHHSLs; 2009).

Based on the results of the lab testing of soil samples taken from the site, the property has passed the requirements established by the standards noted above.

If a vehicle was removed from your property under this program, we recommend you follow up with the DMV to ensure that your registration was properly updated in their system.

Date Approved: 14 April 2018

Observations:

This Clearance Letter pertains to all Rigths-of-Entry and addresses within Journey's End Trailer Park that participated in the debris removal program.

Property Clearance Notification

3575 Mendocino Ave Assoc LLC Attn: Debra Marincic
1996 Pleasant Hill Rd
Sebastopol, CA 95472

RE: 3575 Mendocino Ave, APN 173-030-001

Thank you for participating in the Sonoma County Consolidated Fire Debris Removal Program. Per the attached letter from the U.S. Army Corps of Engineers (USACE), your property has been cleared of all program eligible fire-related debris. Based on the results of the lab testing of soil samples taken from the site, USACE has determined that the property meets environmental standards and you are cleared to rebuild. A Debris Removal closure letter from the USACE is attached for your reference.

Additional site documentation and soil analytical results will be provided to the County by the USACE once compiled. You will be notified once we receive this documentation. This documentation will also include an accounting of the costs to clear the debris from your property. In coordination with state and federal agencies, the County of Sonoma will work with you to collect the amount specified for debris removal in your insurance, but this process will take time. In the meantime, do not spend any funds you might receive from your insurance claim payment that are specified for debris removal for other rebuilding activities. More information can be found at https://www.sonomacountyrecovers.org/debris-removal-insurance-reimbursement

You can find permitting and rebuilding information at: www.SonomaCountyRecovers.org/Rebuild.

To protect your property and the environment, erosion control Best Management Practices (BMPs) were placed on your property upon completion of debris removal. BMPs are protective measures that stabilize disturbed areas to minimize erosion, prevent site runoff pollution, and protect our water resources. In accordance with state and local laws and regulations, please ensure you replace and/or improve these erosion control measures to prevent water quality pollution over the rainy season. For more information go to: www.SonomaCountyRecovers.org.

The County of Sonoma and City of Santa Rosa are committed to restoring our community, and we are ready to assist you through the rebuilding process.

Christine Sosko
Director of Environmental Health

CONSOLIDATED DEBRIS REMOVAL PROGRAM | April 18, 2018

Property Clearance Notification

3575 Mendocino Ave Assoc LLC Attn: Debra Marincic
1996 Pleasant Hill Rd
Sebastopol, CA 95472

RE: 3575 Mendocino Ave, APN 173-030-001

Gracias por participar en el Programa Consolidado de Remoción de Escombros del Condado de Sonoma. Según la carta adjunta del Cuerpo de Ingenieros del Ejército de los EE. UU. (USACE, por sus siglas en ingles), su propiedad ha sido limpiada de todos los escombros relacionados con incendios elegibles para el programa. En base a los resultados de las pruebas de laboratorio de muestras de suelo tomadas del sitio, USACE ha determinado que la propiedad cumple con los estándares ambientales y que usted está autorizado para reconstruir. Una carta de cierre de eliminación de escombros del USACE se adjunta para su referencia.

Documentación adicional del sitio y resultados del análisis del suelo serán provistos al Condado por el USACE una vez que este compilado. Se le notificará una vez que recibamos esta documentación. Esta documentación también incluirá una contabilidad de los costos para despejar los desechos de su propiedad. En coordinación con las agencias estatales y federales, el condado de Sonoma trabajará con usted para cobrar la cantidad especificada para la eliminación de escombros en su seguro, pero este proceso tomará tiempo. Mientras tanto, no gaste los fondos que pueda recibir de su pago de reclamo de seguro que se especifiquen para la eliminación de escombros para otras actividades de reconstrucción. Se puede encontrar más información en https://www.sonomacountyrecovers.org/debris-removal-insurance-reimbursement

Para información sobre reconstrucción y permisos vaya a www.SonomaCountyRecovers.org/Rebuild.

Para proteger su propiedad y el medio ambiente, las mejores prácticas de manejo (BMP, por sus siglas en ingles) de control de la erosión se colocaron en su propiedad después de completar la eliminación de escombros. Las BMP son medidas de protección que estabilizan las áreas perturbadas para minimizar la erosión, prevenir la contaminación de la escorrentía del sitio y proteger nuestros recursos hídricos. De acuerdo con las leyes y reglamentos estatales y locales, asegúrese de reemplazar y / o mejorar estas medidas de control de la erosión para evitar la contaminación de la calidad del agua durante la temporada de lluvias. Para obtener más información, vaya a www.SonomaCountyRecovers.org.

El Condado de Sonoma y la Ciudad de Santa Rosa se han comprometido a restaurar nuestra comunidad, y estamos listos para ayudarlo durante el proceso de reconstrucción.

Christine Sosko
Director de Salud Ambiental

Executive Summary

The proposed residential development project to be located at 3575 Mendocino Avenue in the City of Santa Rosa would replace the 161 senior housing units that were destroyed in the 2017 Tubbs fire with a 532-unit apartment community, including 162 senior affordable units and 370 market-rate units. The trip generation for this project is anticipated to result in 2,016 new trips per day, including 133 new trips during the morning peak hour and 163 new trips during the evening peak hour.

The study area includes seven intersections in the vicinity of the project site in northern Santa Rosa that would carry project traffic along Mendocino Avenue and Fountaingrove Parkway, as well as to and from US 101. Traffic counts were collected in 2017 before the Tubbs Fire and COVID-19 pandemic and scaled up by approximately three percent to estimate what conditions in 2020 might have been like without these events to form the basis of the Existing Conditions scenario. The seven study intersections would operate acceptably with these volumes applied and would be expected to continue operating acceptably with the addition of project traffic.

Baseline Conditions were generated by adding the anticipated volumes from several approved and pending projects in the vicinity of the project site to the anticipated existing volumes. It was determined that the study intersections would continue to operate acceptably without or with the addition of traffic that would be generated by the project.

To evaluate the Future Conditions scenario for a horizon year of 2040, the Sonoma County Transportation Authority gravity demand model was used to estimate future volumes. It was determined that under these future volumes three intersections, Industrial Drive-Mendocino Overcrossing/Cleveland Avenue, Bicentennial Way/Mendocino Avenue, and Fountaingrove Parkway-Mendocino Overcrossing/Mendocino Avenue, would operate at an unacceptable LOS E during one or both peak hours without project traffic. The addition of project traffic would not increase the delay at these intersections by more than five seconds, precluding an adverse impact. The service levels at the other four study intersections would remain acceptable without or with project traffic added.

In addition to operational impacts, potential queuing impacts to off-ramps and turn lanes at the study intersections were assessed. There are three locations that are projected to have queue lengths of less than the available capacity without the project during the a.m. peak hour that would extend to beyond the available stacking length with the addition of project traffic. However, this was presumed to not cause an adverse impact as the anticipated stacking length in each turn lane would be shorter than the projected stacking in the through lane adjacent to each turn lane. This would prevent motorists from accessing the turn lane and therefore preclude an adverse impact.

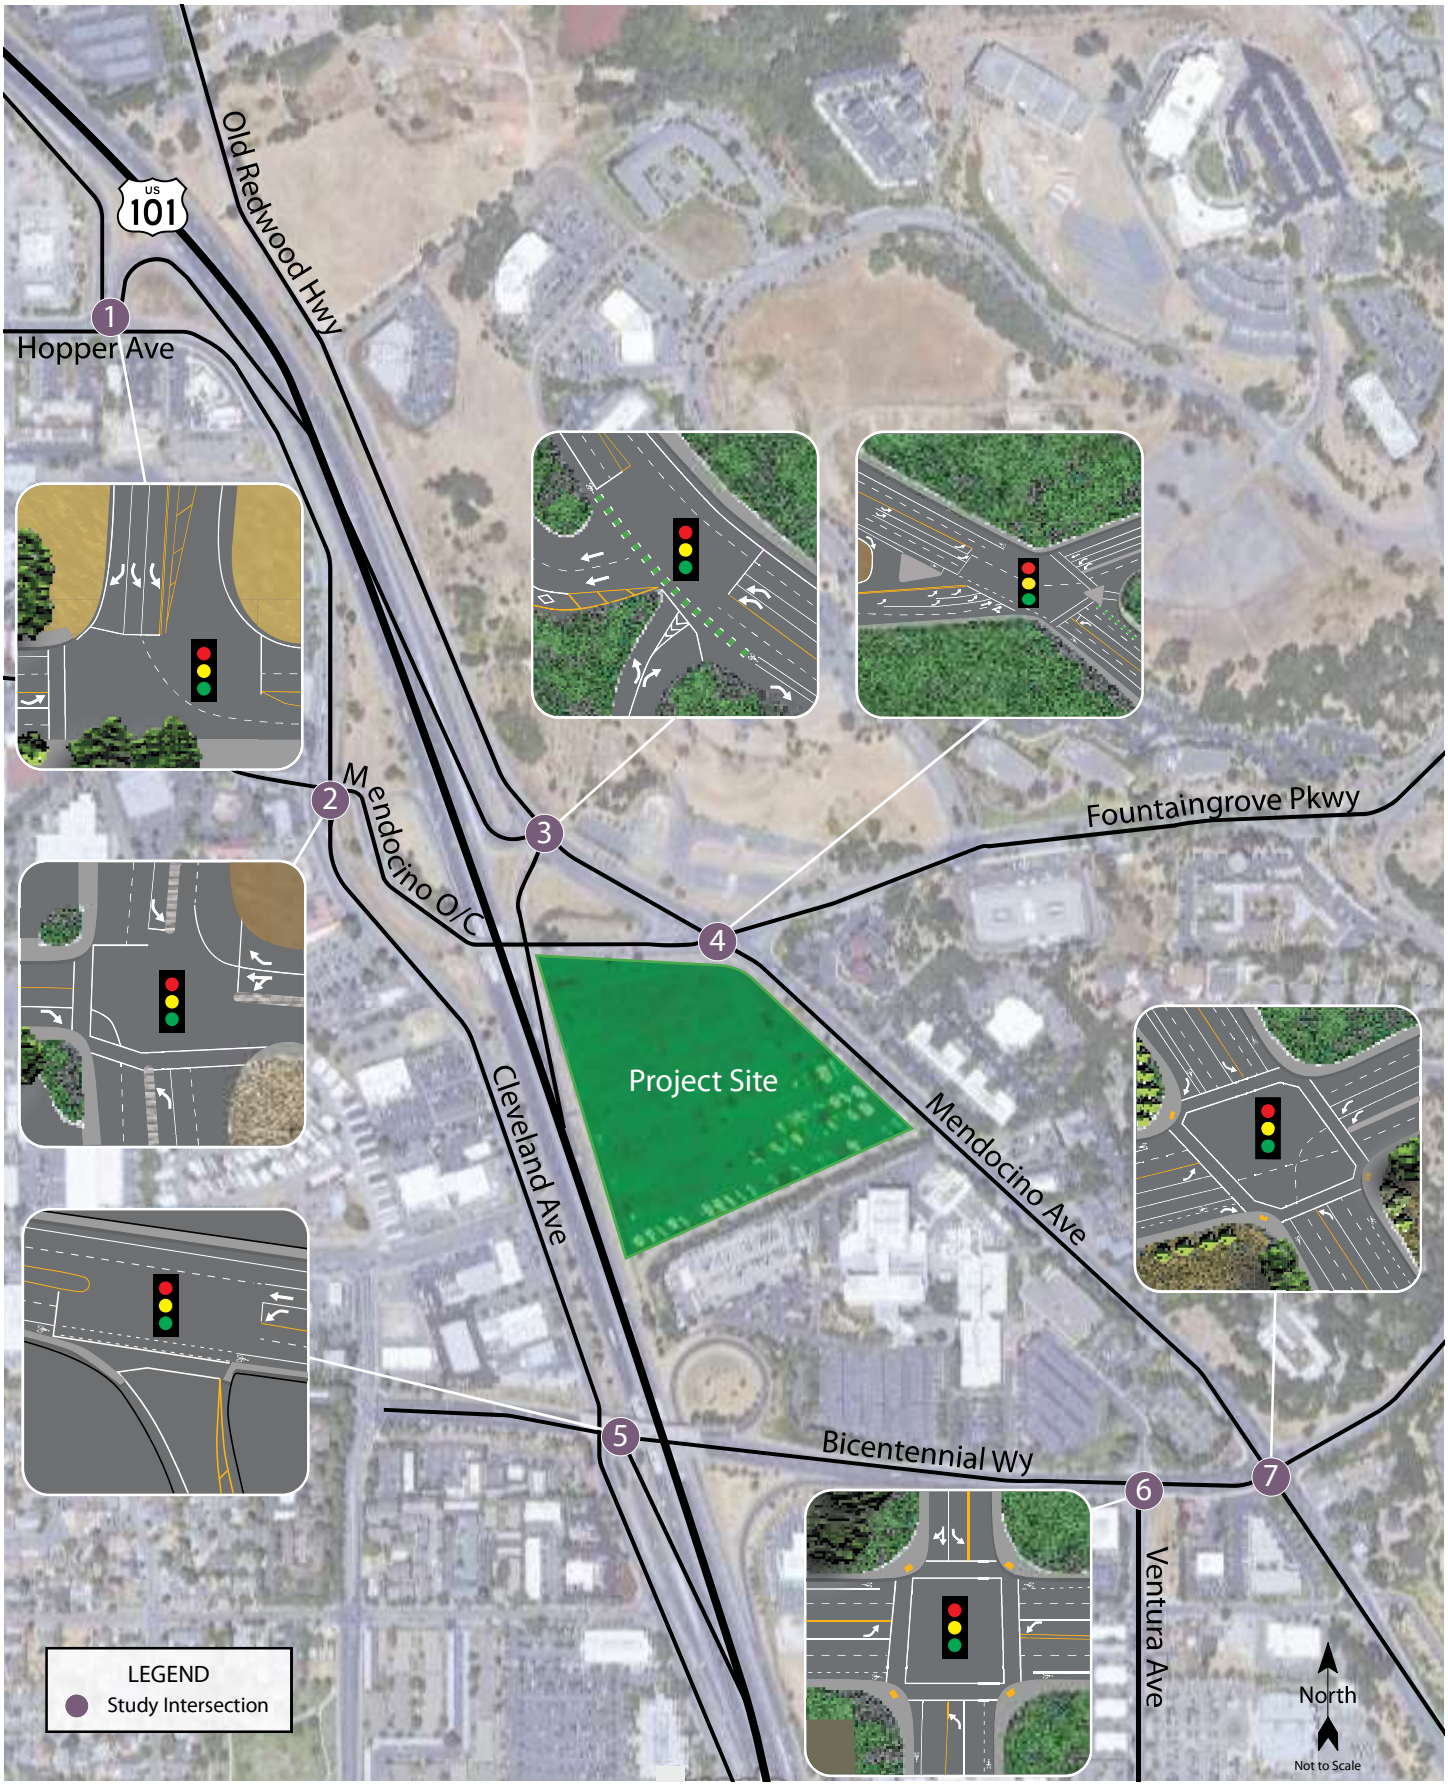
The proposed pedestrian, bicycle, and transit facilities were assessed and determined to be adequate with respect to the proposed project, as would the proposed bicycle parking supply.

Sight distance was also assessed for the three project access points and determined to be adequate. Installation of a traffic signal or HAWK was determined not to be warranted for the main project access.

The proposed parking supply of 719 spaces is fewer than the required 958 parking spaces per the City of Santa Rosa Zoning Code. However, the code allows for a reduction of up to 25 percent of this requirement, which would reduce the requirement to 719 spaces, equal to the proposed supply.

The potential impacts to vehicle miles traveled (VMT) was assessed using guidance from the California Governor's Office of Planning and Research and draft VMT guidelines from the City of Santa Rosa. As the project is located near a high-quality transit corridor, in an area with below average VMT, and would contain 30 percent affordable housing, it was determined that the project would have a less-than-significant impact on VMT.

Introduction



This report presents an analysis of the potential for adverse traffic effects due to redevelopment of the project site, which would include 162 affordable senior apartments and up to 370 multifamily apartments to be located at 3575 Mendocino Avenue in the City of Santa Rosa. The traffic study was completed in accordance with the criteria established by the City of Santa Rosa and is consistent with standard traffic engineering techniques.

Prelude

The purpose of a traffic impact study is to provide City staff and policy makers with data they can use to make an informed decision regarding the potential of a proposed project to have adverse effects on traffic operation, and any associated improvements that would be required to reduce these effects to a level of insignificance as defined by the City's General Plan or other policies. Effects on vehicular traffic operation are typically evaluated by determining the number of new trips that the proposed use would be expected to generate, distributing these trips to the surrounding street system based on existing travel patterns or anticipated travel patterns specific to the proposed project, then analyzing the impact the new traffic would be expected to have on critical intersections or roadway segments. Impacts relative to access for pedestrians, bicyclists, and to transit are also addressed.

Project Profile

The proposed project is the redevelopment of the former Journey's End Mobile Home Park site, which was occupied by 161 mobile homes, all of which were destroyed or made uninhabitable in October 2017 by the Tubbs Fire. The project includes redevelopment of 162 affordable senior apartments and up to 370 multifamily apartments on the site, with the intensity increasing from what previously existed, though the traffic analysis accounts for the site's historic uses and the associated trips. The project site is located at 3575 Mendocino Avenue in the City of Santa Rosa, as shown in Figure 1.

3575 Mendocino Avenue Traffic Impact Analysis

Figure 1 – Study Area and Existing Lane Configurations

Transportation Setting

Operational Analysis

Study Area and Periods

The study area consists of the following intersections:

1. Hopper Avenue/US 101 South Ramps
2. Industrial Drive-Mendocino Overcrossing/Cleveland Avenue
3. US 101 North Ramps/Mendocino Avenue
4. Fountaingrove Parkway-Mendocino Overcrossing/Mendocino Avenue
5. Bicentennial Way/US 101 South Ramps
6. Bicentennial Way/Ventura Avenue
7. Bicentennial Way/Mendocino Avenue

There would be three project access points on Mendocino Avenue consisting of two driveways and a public-street intersection. It is noted that the two project driveways were not included as study intersections. The *California Vehicle Code* defines an intersection as "the area embraced within the prolongation of the lateral curb lines, or, if none, then the lateral boundary lines of the roadways, of two highways which join one another at approximately right angles or the area within which vehicles traveling upon different highways joining at any other angle may come in conflict." This definition specifies that intersections are created where two "highways," or public streets, intersect. As driveways are not public streets, where they connect with a public road is not an intersection, so it would be unreasonable to evaluate it as such. The driveway connections were, however, evaluated for operational issues such as adequacy of sight distance and delay, though they would not necessarily be associated with a Level of Service.

The project would create a new public-street intersection on Mendocino Avenue at the primary (center) access point. Under the City's General Plan policies the emphasis is placed on operation of arterial streets; it is common for minor approaches to operate at lower service levels and with higher delays but this is considered acceptable unless the volume of traffic is sufficient to indicate that a change in the right-of-way controls, such as a traffic signal, might be warranted. Barring the need for a change in controls, an operational analysis would not provide any relevant information. As a result, operation of the intersection that would be created by the project was not evaluated though the potential need for a traffic signal was.

Operating conditions during the a.m. and p.m. peak periods were evaluated to capture the highest potential impacts for the proposed project as well as the highest volumes on the local transportation network. The morning peak hour occurs between 7:00 and 9:00 a.m. and reflects conditions during the home to work or school commute, while the p.m. peak hour occurs between 4:00 and 6:00 p.m. and typically reflects the highest level of congestion during the homeward bound commute.

Study Intersections

Hopper Avenue/US 101 South Ramps is a signalized tee-intersection with protected left-turn phasing on the eastbound Hopper Avenue approach. The intersection has a marked crosswalk on the west leg.

Industrial Drive-Mendocino Overcrossing/Cleveland Avenue is a signalized four-legged intersection. The northbound and southbound Cleveland Avenue approaches have protected left-turn phasing. The eastbound Industrial Drive and westbound Mendocino Avenue Overcrossing approaches are split phased with right-turn overlap phasing. The intersection has marked crosswalks on the south and west legs.

US 101 North Ramps/Mendocino Avenue is a signalized tee-intersection. The northbound Mendocino Avenue approach has protected left-turn phasing. The eastbound approach has a right-turn overlap phase.

Fountaingrove Parkway-Mendocino Overcrossing/Mendocino Avenue is a skewed, signalized four-legged intersection. All approaches have protected left-turn phasing, and the westbound Fountaingrove Parkway approach has a right-turn overlap phase. There is a channelized right-turn lane on the northbound and southbound approaches. There are crosswalks on the south and east legs.

Bicentennial Way/US 101 South Ramps is a signalized tee-intersection with protected left-turn phasing on the westbound Bicentennial Way approach. The intersection has a marked crosswalk on the east leg.

Bicentennial Way/Ventura Avenue is a signalized four-legged intersection. The northbound approach has protected-permitted left-turn phasing. The southbound approach has permitted left-turn phasing. The eastbound and westbound approaches have protected left-turn phasing. There are marked crosswalks on all legs.

Bicentennial Way/Mendocino Avenue is a signalized four-legged intersection. All four approaches have left-turn phasing, and the southbound and eastbound approaches have right-turn overlap phases. The intersection has marked crosswalks on all legs.

The locations of the study intersections and the existing lane configurations and controls are shown in Figure 1.

Collision History

The collision history for the study area was reviewed to determine any trends or patterns that may indicate a safety issue. Collision rates were calculated based on records available from the California Highway Patrol as published in their Statewide Integrated Traffic Records System (SWITRS) reports. The most current five-year period available is September 1, 2014 through August 31, 2019.

As presented in Table 1, the calculated collision rates for the study intersections were compared to average collision rates for similar facilities statewide, as indicated in *2016 Collision Data on California State Highways*, California Department of Transportation (Caltrans). Four were determined to have above-average collision rates, so these locations were reviewed in more detail. The collision rate calculations are provided in Appendix A.

Table 1 – Collision Rates for the Study Intersections

Study Intersection	Number of Collisions (2014-2019)	Calculated Collision Rate (c/mve)	Statewide Average Collision Rate (c/mve)
1. Hopper Ave/US 101 S Ramps	9	**0.23**	0.19
2. Industrial Dr-Mendocino OC/Cleveland Ave	16	**0.29**	0.24
3. US 101 N Ramps/Mendocino Ave	5	0.09	0.19
4. Fountaingrove Pkwy-Mendocino OC/ Mendocino Ave	33	**0.41**	0.24
5. Bicentennial Wy/US 101 S Ramps	6	0.10	0.19
6. Bicentennial Wy/Ventura Ave	11	0.24	0.24
7. Bicentennial Wy/Mendocino Ave	25	**0.37**	0.24

Note: c/mve = collisions per million vehicles entering; **Bold** text = higher collision rate than statewide average

Of the nine collisions that were reported during the study period for Hopper Avenue/US 101 South Ramps, seven were determined to be caused by southbound drivers, including four rear-end collisions. Though these were conservatively assumed to be on the off-ramp, they may have been on the mainline and therefore not associated with the intersection at all. Further, the injury rate at this intersection was 11.1 percent compared to an average Statewide of 46.8 percent. Based on these details, no remedial action appears to be warranted.

For Industrial Drive-Mendocino Overcrossing/Cleveland Avenue, half of the reported collisions were right-angle or rear-end crashes. Updating the signal timing may reduce the frequency of these types of collisions, though given that the average rate was only marginally higher than the statewide average and the injury rate was below-average, no remedial action is needed.

The most-reported collision factor for Fountaingrove Parkway-Mendocino Overcrossing/Mendocino Avenue was speeding, which was cited in ten collisions; six of these crashes were caused by northbound drivers and four by westbound drivers. This intersection has a highly-skewed alignment, resulting in very long crossings in all directions. Additionally, the westbound approach is at the end of a long downward grade, inviting higher speeds. Increased speed enforcement in these directions in particular may reduce the rate of collisions at this intersection. Additionally, the City may wish to review clearance intervals to ensure that they are adequate given the long crossing distances.

Eight of the 25 collisions reported for Bicentennial Way/Mendocino Avenue were determined to be the result of red light running, with four each caused by northbound through and eastbound through drivers. This intersection is located on a curve in Bicentennial Way, limiting visibility for approaching drivers. The City may wish to install a signal head facing eastbound traffic on the back side of the left-turn head facing westbound traffic to enhance visibility. A similar treatment could be considered by the City for the northbound approach due to the width of the intersection. Five collisions were caused by speeding, which may be abated through increased speed enforcement.

Alternative Modes

Pedestrian Facilities

Pedestrian facilities include sidewalks, crosswalks, pedestrian signal phases, curb ramps, curb extensions, and various streetscape amenities such as lighting, benches, etc. In general, a network of sidewalks, crosswalks, pedestrian signals, and curb ramps provide access for pedestrians in the vicinity of the proposed project site. Continuous sidewalk is provided on Mendocino Avenue both along the project frontage as well as north and south of the project site.

Bicycle Facilities

The *Highway Design Manual*, Caltrans, 2017, classifies bikeways into four categories:

- **Class I Multi-Use Path** – a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross flows of motorized traffic minimized.
- **Class II Bike Lane** – a striped and signed lane for one-way bike travel on a street or highway.
- **Class III Bike Route** – signing only for shared use with motor vehicles within the same travel lane on a street or highway.
- **Class IV Bikeway** – also known as a separated bikeway, a Class IV Bikeway is for the exclusive use of bicycles and includes a separation between the bikeway and the motor vehicle traffic lane. The separation may include, but is not limited to, grade separation, flexible posts, inflexible physical barriers, or on-street parking.

In the project area, Class II bike lanes exist on Mendocino Avenue between Fountaingrove Parkway and Bicentennial Way, on Bicentennial Way between Range Avenue and Mendocino Avenue, and on Old Redwood Highway between Fountaingrove Parkway and Mark West Springs Road. Table 2 summarizes the existing and planned bicycle facilities in the project vicinity, as contained in the *City of Santa Rosa Bicycle & Pedestrian Master Plan Update 2018*.

Table 2 – Bicycle Facility Summary

Status Facility	Class	Length (miles)	Begin Point	End Point
Existing				
Bicentennial Wy	II	0.50	Range Ave	Mendocino Ave
Mendocino Ave	II	0.40	Fountaingrove Pkwy	Bicentennial Wy
Old Redwood Hwy	II	1.25	Fountaingrove Pkwy	Mark West Springs Rd
Planned				
Bicentennial Wy	II	0.47	Fountaingrove Pkwy	Mendocino Ave
Cleveland Ave	II	0.28	Hopper Ave	Industrial Dr
Cleveland Ave	II	1.17	Industrial Dr	Guerneville Rd
Hopper Ave	II	0.49	Coffey Ln	Airway Dr

Transit Facilities

The Santa Rosa CityBus provides fixed route bus service in the City of Santa Rosa, and Sonoma County Transit (SCT) provides fixed route bus service in Sonoma County. Several routes have stops within a half-mile of the project site and are detailed in Table 3.

Table 3 – Transit Routes					
Transit Agency Route	**Distance to Stop (mi)[1]**	**Service**			**Connection**
		Days of Operation	**Time**	**Frequency**	
Santa Rosa CityBus					
Route 1	0.38	Weekdays Saturday Sunday	6:00 AM – 8:00 PM 6:00 AM – 8:00 PM 10:00 AM – 5:20 PM	15 min 30 min 45 min	Santa Rosa, including Coddingtown Mall Transit Hub and Downtown Transit Mall
Route 10	Adjacent to Site	Weekdays Saturday Sunday	6:00 AM – 8:00 PM 7:45 AM – 5:30 PM 9:45 AM – 4:30 PM	30 min 60 min 60 min	Santa Rosa, including Coddingtown Mall Transit Hub and Downtown Transit Mall
Sonoma County Transit					
Routes 44, 48, and 54	0.38	Weekdays Weekends	5:20 AM – 10:30 PM 7:00 AM – 10:15 PM	15-75 min 1-2.5 hours	Coddingtown Mall, Santa Rosa, Rohnert Park, Sonoma State University, Cotati, Petaluma
Route 60	Adjacent to Site	Weekdays Weekends	6:00 AM – 10:00 PM 7:30 AM – 10:00 PM	15-120 min 1-3 hours	Cloverdale, Healdsburg, Windsor, Santa Rosa
Route 62	Adjacent to Site	Weekdays	7:00 AM – 6:15 PM	25-105 min	Sonoma County Airport, Fulton, Santa Rosa

Note: [1] Defined as the shortest walking distance between the project site and the nearest bus stop

Two bicycles can be carried on most CityBus and SCT buses. Bike rack space is on a first come, first served basis. Additional bicycles are allowed on CityBus or SCT buses at the discretion of the driver.

Dial-a-ride, also known as paratransit, or door-to-door service, is available for those who are unable to independently use the transit system due to a physical or mental disability. Volunteer Wheels, the ADA paratransit operator for Sonoma County Transit, is designed to serve the needs of individuals with disabilities within the incorporated areas of Sonoma County, the Greater Santa Rosa Area, and between the County's nine incorporated cities.

Capacity Analysis

Intersection Level of Service Methodologies

Level of Service (LOS) is used to rank traffic operation on various types of facilities based on traffic volumes and roadway capacity using a series of letter designations ranging from A to F. Generally, Level of Service A represents free flow conditions and Level of Service F represents forced flow or breakdown conditions. A unit of measure that indicates a level of delay generally accompanies the LOS designation.

The study intersections were analyzed using methodologies published in the *Highway Capacity Manual* (HCM), Transportation Research Board, 2010. This source contains methodologies for various types of intersection control, all of which are related to a measurement of delay in average number of seconds per vehicle.

The study intersections are controlled by traffic signals and were evaluated using the signalized methodology from the HCM. This methodology is based on factors including traffic volumes, green time for each movement, phasing, whether the signals are coordinated or not, truck traffic, and pedestrian activity. Average stopped delay per vehicle in seconds is used as the basis for evaluation in this LOS methodology. For purposes of this study, delays were calculated using signal timing obtained from the City of Santa Rosa or Caltrans. For some intersections, updated cycle and phase lengths were applied to the Baseline and Future conditions analyses to capture potential signal timing updates in response to future shifts in volumes.

The ranges of delay associated with the various levels of service are indicated in Table 4.

Table 4 – Signalized Intersection Level of Service Criteria	
LOS A	Delay of 0 to 10 seconds. Most vehicles arrive during the green phase, so do not stop at all.
LOS B	Delay of 10 to 20 seconds. More vehicles stop than with LOS A, but many drivers still do not have to stop.
LOS C	Delay of 20 to 35 seconds. The number of vehicles stopping is significant, although many still pass through without stopping.
LOS D	Delay of 35 to 55 seconds. The influence of congestion is noticeable, and most vehicles have to stop.
LOS E	Delay of 55 to 80 seconds. Most, if not all, vehicles must stop and drivers consider the delay excessive.
LOS F	Delay of more than 80 seconds. Vehicles may wait through more than one cycle to clear the intersection.

Reference: *Highway Capacity Manual*, Transportation Research Board, 2010

Traffic Operation Standards

City of Santa Rosa

The *Circulation Element* of the *City of Santa Rosa General Plan* contains goals and policies that set forth the traffic operation standards for the City, including Section 5.8, Transportation Goals & Policy, which states:

T-D-1 *Maintain a Level of Service (LOS) D or better along all major corridors. Exceptions to meeting the standard include:*

- *Within downtown;*

- *Where attainment would result in significant degradation;*
- *Where topography or impacts makes the improvement impossible; or*
- *Where attainment would ensure loss of an area's unique character.*

The LOS is to be calculated using the average traffic demand over the highest 60-minute period.

Traffic Engineering Division will require a level of service evaluation of arterial and collector corridors if deemed necessary.

T-D-2 *Monitor level of service at intersections to assure that improvements or alterations to improve corridor level of service do not cause severe impacts at any single intersection.*

General interpretation of Policy T-D-2. The impact to an intersection is considered adverse if the project related and/or future trips result in:

1. The level of service (LOS) at an intersection degrading from LOS D or better to LOS E or F, OR
2. An increase in average vehicle delay of greater than 5 seconds at a signalized intersection where the current LOS is either LOS E or F.
3. Queuing impacts based on a comparative analysis between the design queue length and the available queue storage capacity. Impacts include, but are not limited to, spillback queue at project access locations (both ingress and egress), turn lanes at intersections, lane drops, spill back that impacts upstream intersections or interchange ramps.
4. Exceptions may be granted under the following conditions:
   a. Within downtown,
   b. Where attainment would result in significant degradation,
   c. Where topography or impacts makes the improvement impossible; or
   d. Where attainment would ensure loss of an area's unique character.

T-C-3 *Implement traffic calming techniques on streets subject to high speed and/or cut-through traffic, in order to improve neighborhood livability, Techniques Include:*

- *Narrow Streets*
- *On-street parking*
- *Choker or diverters*
- *Decorative crosswalks*
- *Planted islands*

General interpretation of Policy T-C-3. An impact is considered adverse if the project has the potential to alter community character by significantly increasing cut-through traffic, unexpected vehicle maneuvers or commercial vehicle trips in a residential area.

T-H-3 *Require new development to provide transit improvements, where a rough proportionality to demand from the project is established. Transit improvements may include:*

- *Direct and paved pedestrian access to transit stops*
- *Bus turnouts and shelters*
- *Lane width to accommodate buses.*

General interpretation of Policy T-H-3. An impact is considered adverse if the project has the potential to disrupt existing transit operations or establishes transit facilities and equipment such that it creates a sight distance deficiency or vehicle conflict point.

T-J *Provide attractive and safe streets for pedestrian and bicyclists.*

General interpretation of Policy T-J. An impact is considered adverse if the project generates 20 pedestrians in any single hour at an unsignalized intersection, mid-block crossing or where no crossing has been established.

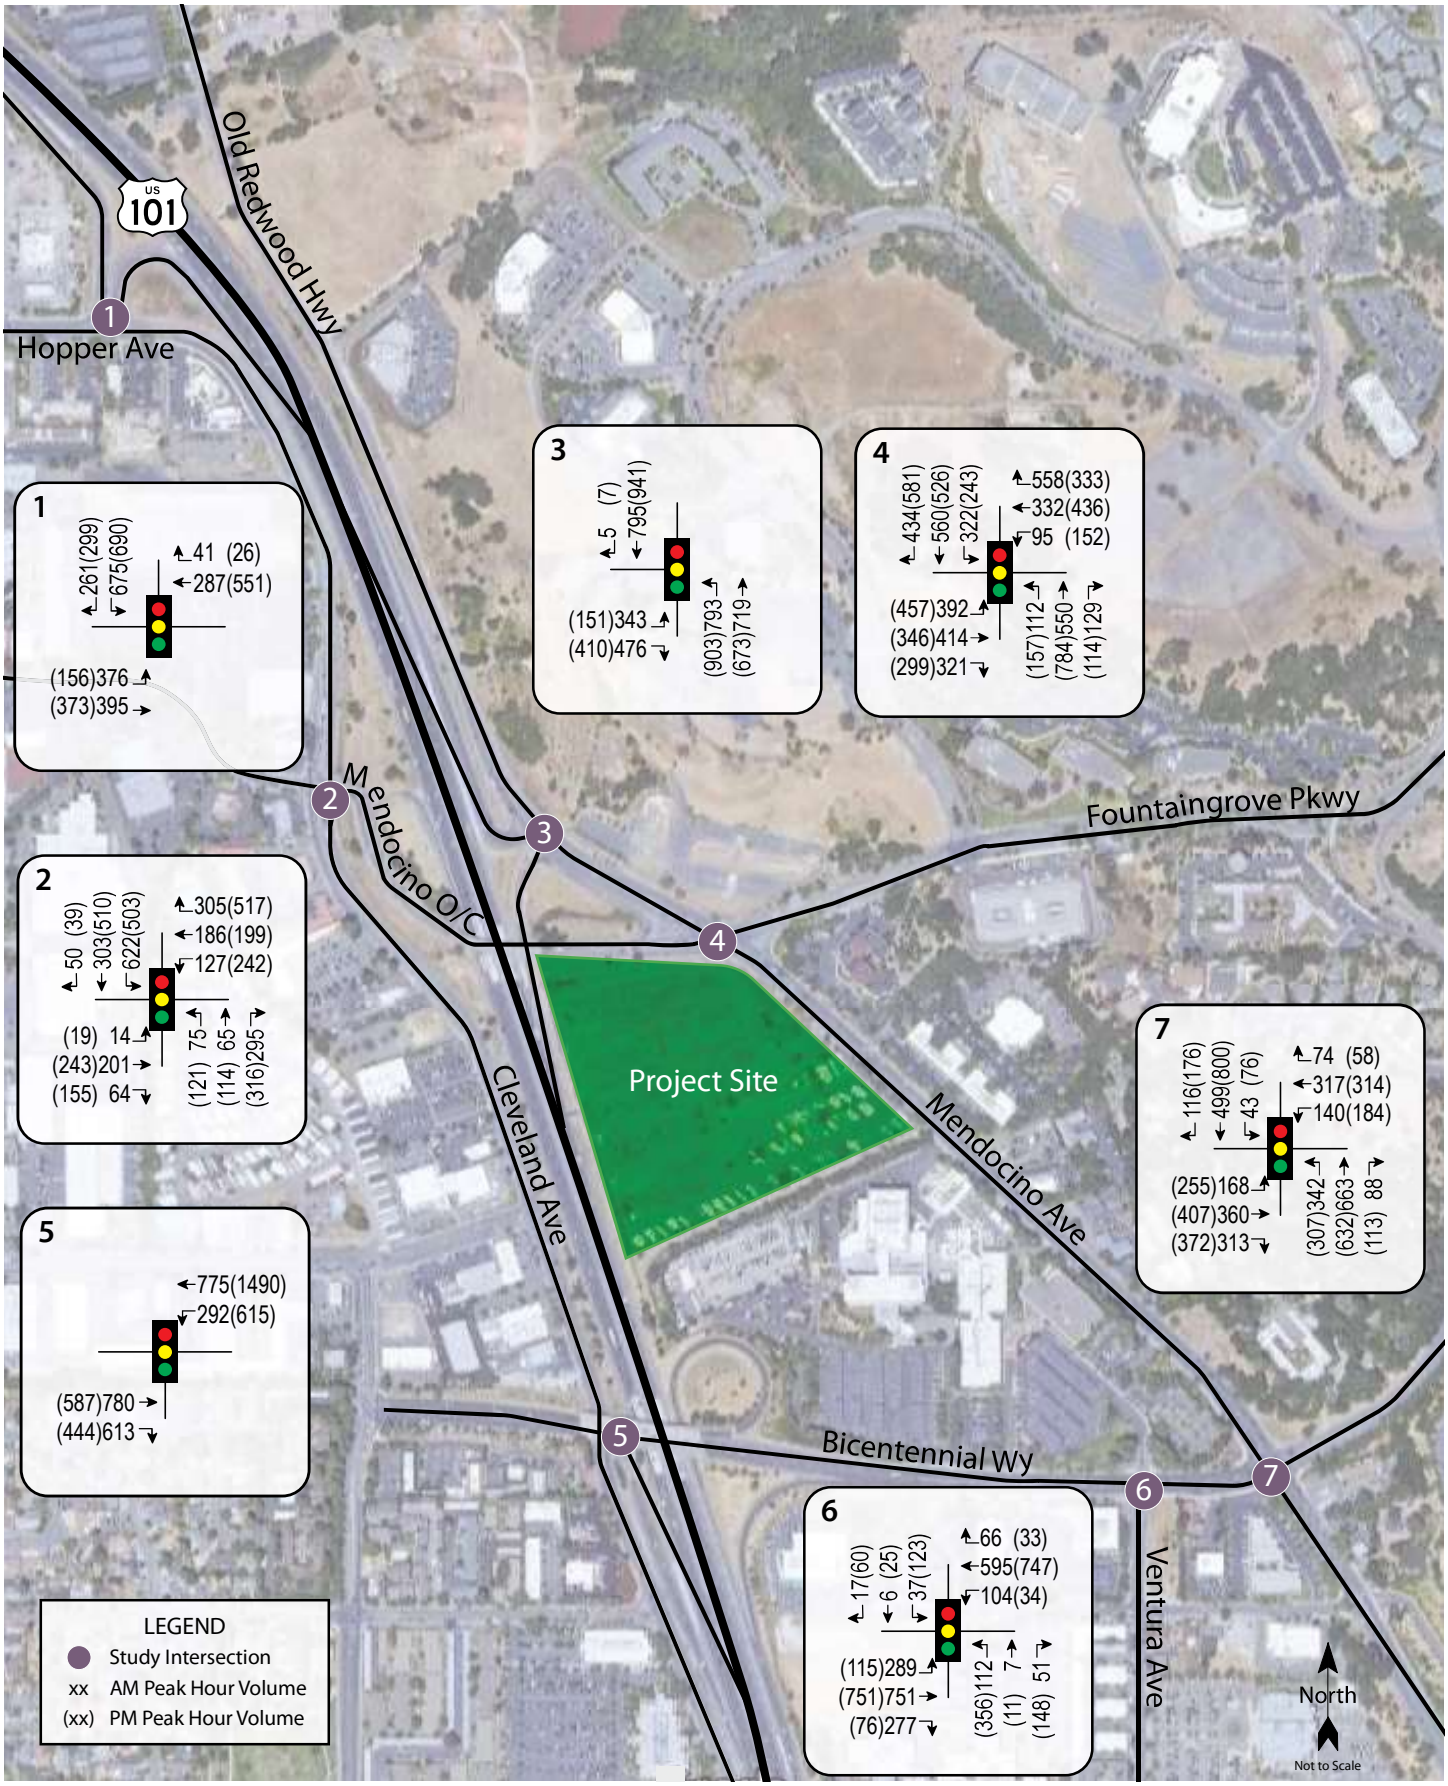
An impact is further considered significant if the project interrupts existing or proposed pedestrian, bicycle and transit facilities, path or travel, direct access resulting in excessive rerouting or creates a vehicle conflict condition which affects the safety of other roadway users.

Caltrans

Caltrans indicates that they endeavor to maintain operation at the transition from LOS C to LOS D. For signalized intersections this transition point occurs at a delay of 35 seconds per vehicle, which is the threshold between LOS C and LOS D.

For the study intersections that include freeway ramps, and are therefore under the jurisdiction of Caltrans, for analysis purposes the City's operational standard was applied as is typically the case for locations that are crucial to a local jurisdiction's circulation system.

Existing Conditions



The Existing Conditions scenario provides an evaluation of current operation based on existing traffic volumes during the a.m. and p.m. peak periods. This condition does not include project-generated traffic volumes although it does include traffic from the previous Journey's End Mobile Home Park use that was in operation during the data collection. Volume data was collected in March and May 2017 when local schools were in session, and before disruptions in local traffic patterns caused by the October 2017 Tubbs Fire and 2020 COVID-19 pandemic. These volumes were factored up approximately three percent to reflect what would have been normal 2020 conditions based on an annual growth rate derived from comparing Sonoma County Transportation Authority's (SCTA) gravity demand model for the 2010 and 2040 model years.

Under the assumed existing conditions, all of the study intersections are operating acceptably. A summary of the intersection level of service calculations is contained in Table 5, and copies of the Level of Service calculations are provided in Appendix B. The existing traffic volumes are shown in Figure 2.

Table 5 – Existing Peak Hour Intersection Levels of Service

Study Intersection	AM Peak		PM Peak	
	Delay	LOS	Delay	LOS
1. Hopper Ave/US 101 S Ramps	11.2	B	10.3	B
2. Industrial Dr-Mendocino OC/Cleveland Ave	27.3	C	35.4	D
3. US 101 N Ramps/Mendocino Ave	38.6	D	23.7	C
4. Fountaingrove Pkwy-Mendocino OC/Mendocino Ave	52.8	D	41.7	D
5. Bicentennial Wy/US 101 S Ramps	6.2	A	7.7	A
6. Bicentennial Wy/Ventura Ave	21.3	C	28.1	C
7. Bicentennial Wy/Mendocino Ave	34.4	C	42.9	D

Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service

sro482-2.ai 5/20

3575 Mendocino Avenue Traffic Impact Analysis

Figure 2 – Existing Traffic Volumes

Baseline Conditions

Baseline (Existing plus Approved plus Pending) operating conditions were determined with traffic from approved and pending projects in and near the study area added to the assumed 2020 volumes. The following projects contained in the *Pending Development Report*, City of Santa Rosa, May 2020, were considered for the Baseline Conditions. The same trip generation and distribution assumptions used in the traffic studies for the various projects, where available, were used in this analysis. Standard rates as published by the Institute of Transportation Engineers (ITE) in *Trip Generation Manual*, 10th Edition, 2017, were applied.

The Arbors is an approved 37-unit single family residential development that would be located at 3500 Lake Park Drive. Based on the use of ITE rates, the project would be expected to generate 349 daily trips on average, with 27 trips during the morning peak hour and 37 trips during the evening peak hour.

Round Barn Village is an approved 237-unit single family residential development that would be located on Round Barn Boulevard. Based on the use of ITE rates, the project would be expected to generate 2,237 daily trips on average, with 175 trips during the morning peak hour and 235 trips during the evening peak hour.

Residence Inn by Marriott is an approved 114-room hotel to be located at 3558 Round Barn Boulevard. Based on application of standard ITE trip generation rates, the project is anticipated to generate 817 daily trips on average, including 60 trips during the weekday p.m. peak hour.

Emerald Isle Condominiums is an approved housing development consisting of 82 attached senior housing units, to be constructed on a currently vacant 12.5-acre site surrounded by the Fountaingrove Golf Course. The proposed 82 units are expected to generate an average of 303 new trips daily, including 16 during the a.m. peak hour and 21 during the p.m. peak hour.

Canyon Oaks is an approved 96-unit residential condominium complex to be located at 4611 Thomas Lake Harris Drive. The proposed project is expected to generate an average of 558 new trips on a daily basis, including 42 during the a.m. peak hour and 50 during the p.m. peak hour.

Fountain Grove Inn Apartments is an approved 224-unit multifamily residential development that would be located at 3586 Mendocino Avenue. Based on the use of ITE rates and including reductions for the hotel and restaurant that existed on the site in 2017 when the counts were taken, the project would be expected to generate 22 net new trips during the morning peak hour and 5 trips during the evening peak hour.

Solstice Sonoma is an approved lodging development that is expected to generate a total of 13 weekday a.m. peak hour trips and 15 weekday p.m. peak hour trips.

Hampton Inn and Suites is an approved 100-room hotel to be located at 3883 Airway Drive. Based on application of standard trip generation rates, the project is anticipated to generate 817 daily trips on average, including 60 trips during the weekday p.m. peak hour.

Airway Community Care is an approved assisted living and memory care facility to be located at 3737 Airway Drive. The project is expected to generate an average of 306 trips per day, including 16 trips during the a.m. peak hour and 25 trips during the p.m. peak hour.

O'Rourke New Industrial Buildings is an approved 9,280-square-foot warehouse to be located at 3300 Industrial Drive. The project is expected to generate an average of 16 trips per day, including 2 trips during the a.m. peak hour and 2 trips during the p.m. peak hour.

T&L Micro is an approved 19,500-square-foot cannabis cultivation, distribution, and manufacturing facility to be located at 3515 Industrial Drive. With reductions taken for the existing 13,650-square-foot furniture store, the

project is expected to generate a net total of 11 trips per day, including 10 trips during the a.m. peak hour and 5 trips during the p.m. peak hour.

Upon adding the trips associated with the above projects to the assumed 2020 volumes, all seven study intersections are expected to continue operating acceptably. These results are summarized in Table 6 and Baseline volumes are shown in Figure 3.

Table 6 – Baseline Peak Hour Intersection Levels of Service

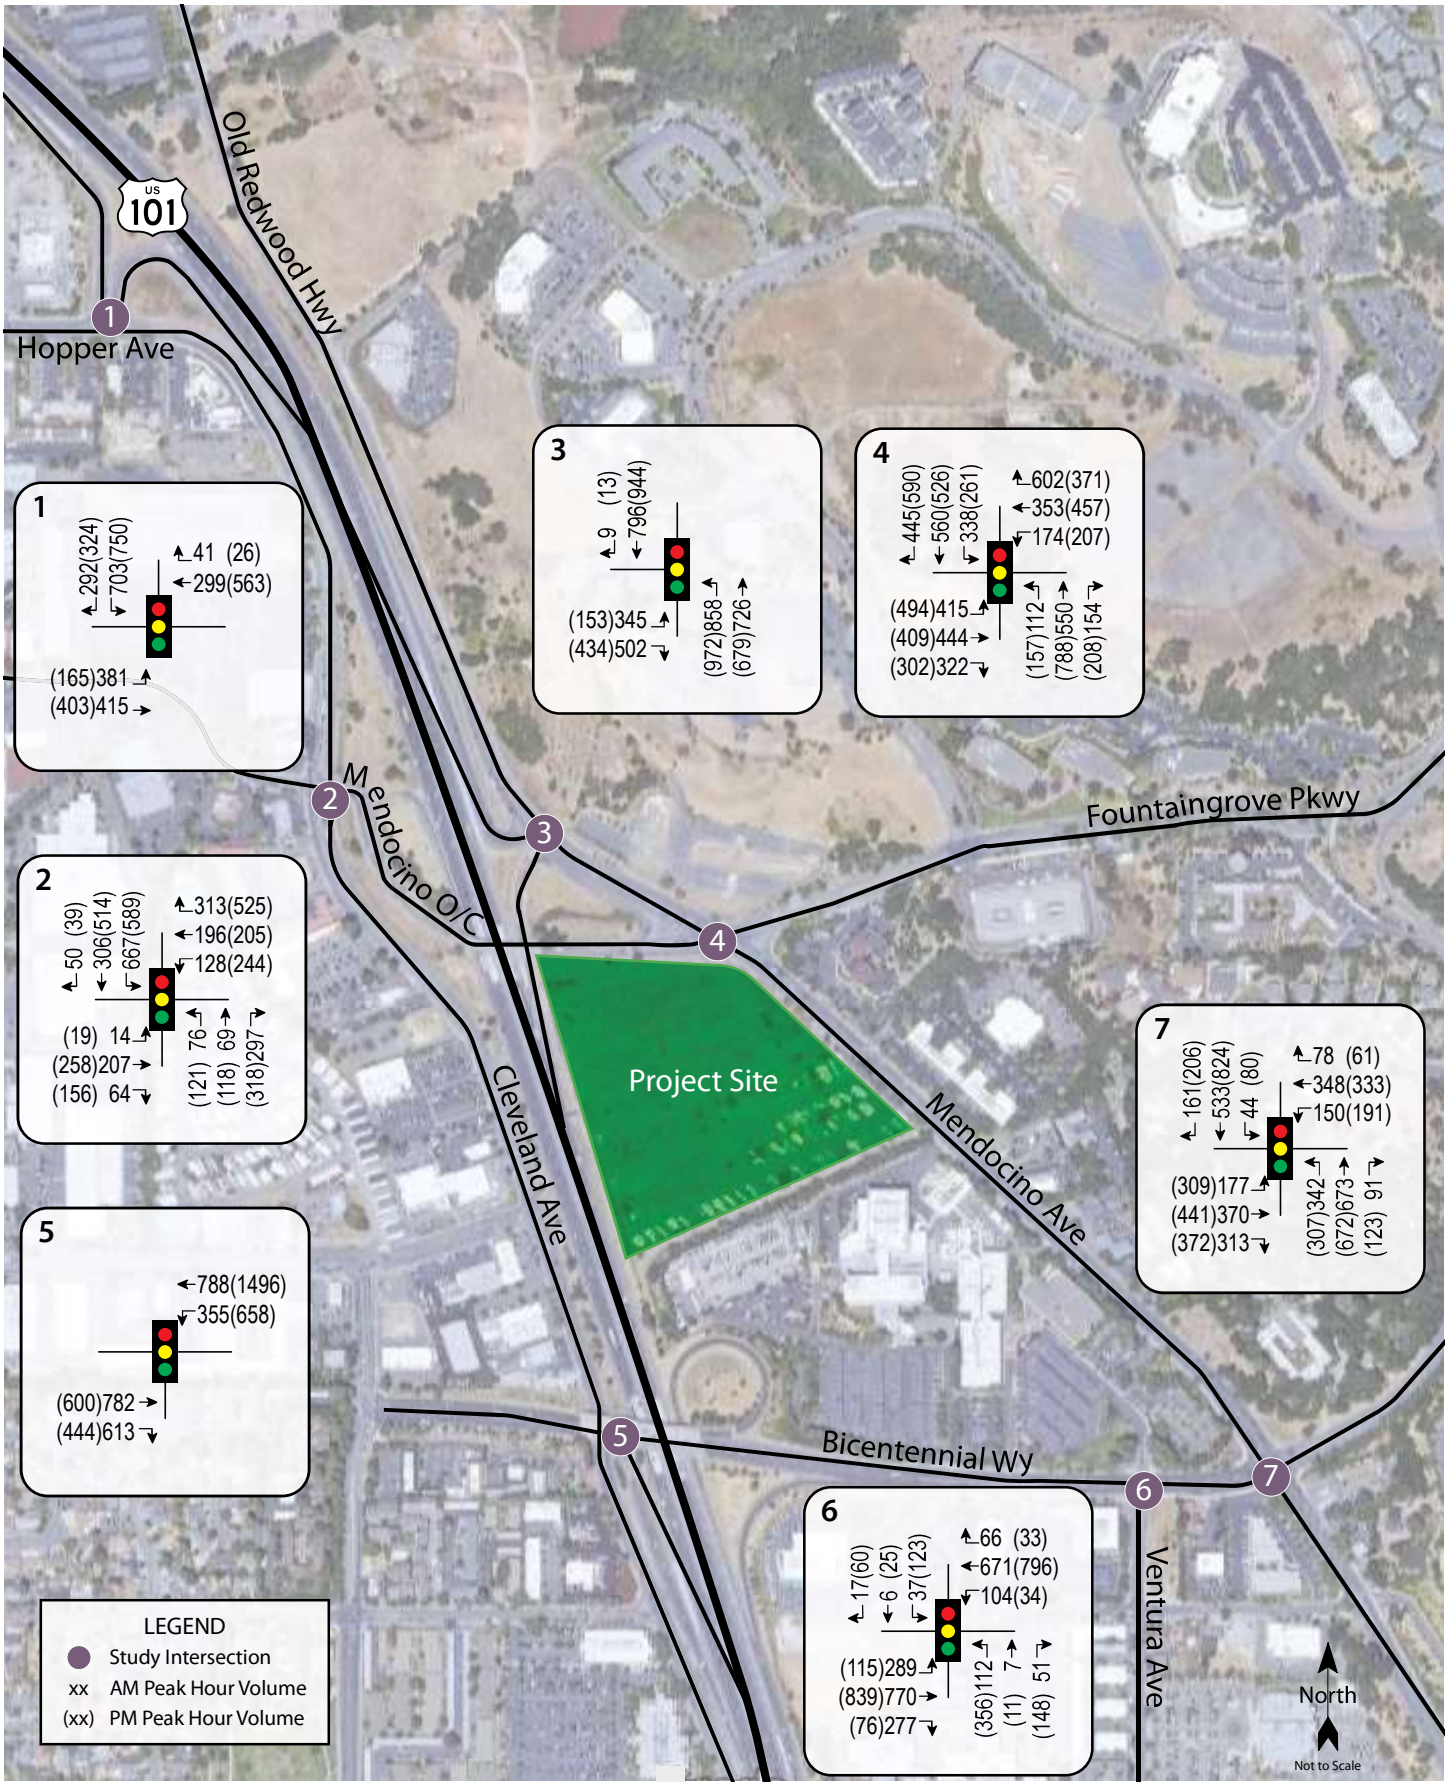
Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service

Future Conditions



Segment volumes for the horizon year of 2040 were obtained from the SCTA gravity demand model and translated to turning movement volumes for each of the study intersections using the "Furness" method. The Furness method is an iterative process that employs existing turning movement data, existing link volumes and future link volumes to project likely turning future movement volumes at intersections.

Under the anticipated Future volumes, the study intersections are expected to operate acceptably except for Fountaingrove Parkway-Mendocino Overcrossing/Mendocino Ave, which would operate at LOS E during the a.m. and p.m. peak hours, Bicentennial Way/Mendocino Avenue, which would operate at LOS E during the p.m. peak hour, and Industrial Drive-Mendocino Overcrossing/Cleveland Avenue, which would operate at LOS E during the p.m. peak hour. Operating conditions are summarized in Table 7 and Future volumes are shown in Figure 4.

Figure 4 – Future Traffic Volumes

Project Description

The project consists of 532 housing units, of which 370 units would be market rate and 162 would be reserved as affordable units for senior residents. These 162 units would replace the 161 units that existed on the site previously and were destroyed in the 2017 Tubbs Fire. The proposed project site plan is shown in Figure 5.

Trip Generation

The anticipated trip generation for the proposed project was estimated using standard rates published by ITE in the *Trip Generation Manual* for "Multifamily Housing (Mid-Rise)" (ITE LU 221) for the market-rate units and "Senior Adult Housing – Attached" (ITE LU 252) for the senior housing component. Because the traffic counts for this study were collected in 2017 before the Tubbs Fire and while the previous mobile home units were occupied, they were removed from the overall trip generation. As these mobile home units were for senior housing, the "Senior Adult Housing – Attached" (ITE LU 252) land use was used for this reduction. Although the mobile homes were detached, the "Senior Adult Housing – Attached" land use was selected over the "Senior Adult Housing – Detached" (ITE LU 251) land use to provide consistency between the former and proposed land uses. Additionally, this is conservative as the "Senior Adult Housing – Attached" land use has lower trip generation rates than the "Senior Adult Housing – Detached" land use, resulting in a smaller reduction to the overall trip generation.

The expected trip generation potential for the proposed project is indicated in Table 8, with deductions taken for trips made to and from the previous housing at the site. The proposed project is expected to generate an average of 2,612 trips per day, including 165 trips during the a.m. peak hour and 205 during the p.m. peak hour. After deducting trips for the mobile homes previously located on the project site, the project would be expected to generate 2,016 new trips on a daily basis, including 133 during the morning peak hour and 163 during the evening peak hour; these new trips represent the increase in traffic associated with the project compared to previously existing volumes.

Table 8 – Trip Generation Summary

Land Use	Dwelling Units	Daily		AM Peak Hour				PM Peak Hour			
		Rate	Trips	Rate	Trips	In	Out	Rate	Trips	In	Out
Previous											
Senior Housing	-161	3.70	-596	0.20	-32	-11	-21	0.26	-42	-23	-19
Proposed											
Senior Housing	162	3.70	599	0.20	32	11	21	0.26	42	23	19
Market-Rate Housing	370	5.44	2,013	0.36	133	35	98	0.44	163	99	64
Total			**2,016**		**133**	**35**	**98**		**163**	**99**	**64**

Trip Distribution

The pattern used to allocate new project trips to the street network was based on data from the 2015 Census for home-to-work trips. Project traffic volumes and distributions are shown in Figure 6. The applied distribution assumptions and resulting trips are shown in Table 9.

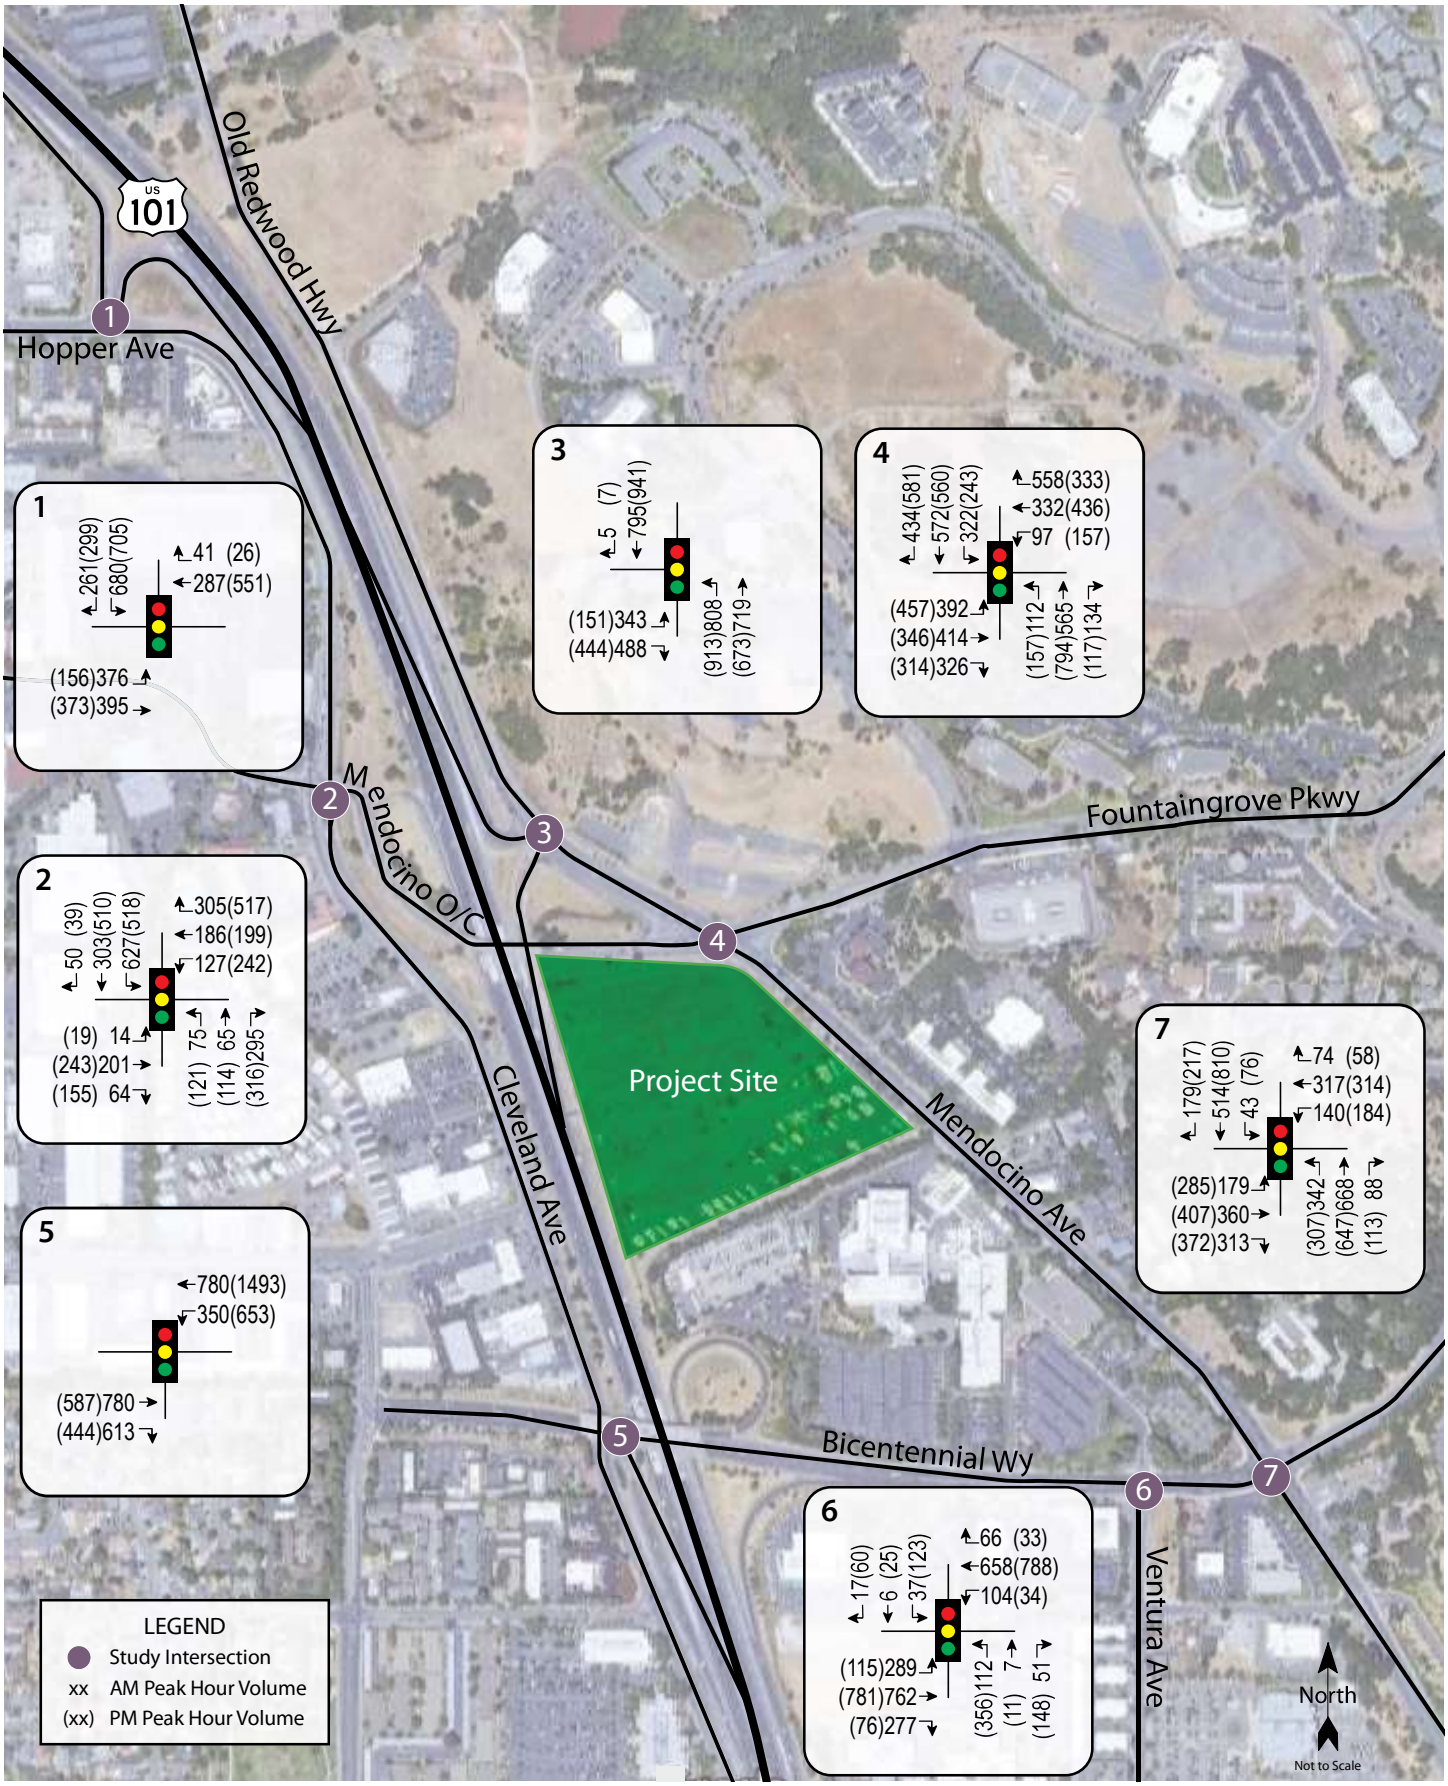
Intersection Operation



Existing plus Project Conditions

Upon the addition of project-related traffic to the assumed 2020volumes, the study intersections are expected to continue operating at acceptable service levels during both the a.m. and p.m. peak hours. These results are summarized in Table 10. Existing plus Project traffic volumes are shown in Figure 7.

Table 10 – Existing and Existing plus Project Peak Hour Intersection Levels of Service

7. Bicentennial Wy/Mendocino Ave	34.4	C	42.9	D	34.8	C	45.1	D

Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service

It should be noted that with the addition of project-related traffic volumes, average delays at the US 101 North Ramps/Mendocino Avenue would be expected to decrease during the a.m. and p.m. peak hours. While this is counter-intuitive, this condition occurs when a project adds trips to movements that are currently underutilized or have delays that are below the intersection average, resulting in a better balance between approaches and lower overall average delay. The project adds traffic predominantly to the northbound left-turn movement which has an average delay that is lower than the average for the intersection as a whole, resulting in a slight reduction in the overall average delay. The average delay would similarly decrease for Fountaingrove Parkway-Mendocino Overcrossing/Mendocino Avenue during the a.m. peak hour with the addition of project traffic. For this intersection, project traffic would be added primarily to the northbound and southbound through movements, which have delays lower than the intersection average and would accordingly decrease the overall average delay. The conclusion could incorrectly be drawn that the project actually improves operation based on this data alone; however, it is more appropriate to conclude that the project trips are expected to make use of movements with

sro482-2.ai 5/20

3575 Mendocino Avenue Traffic Impact Analysis

Figure 7 – Existing plus Project Traffic Volumes

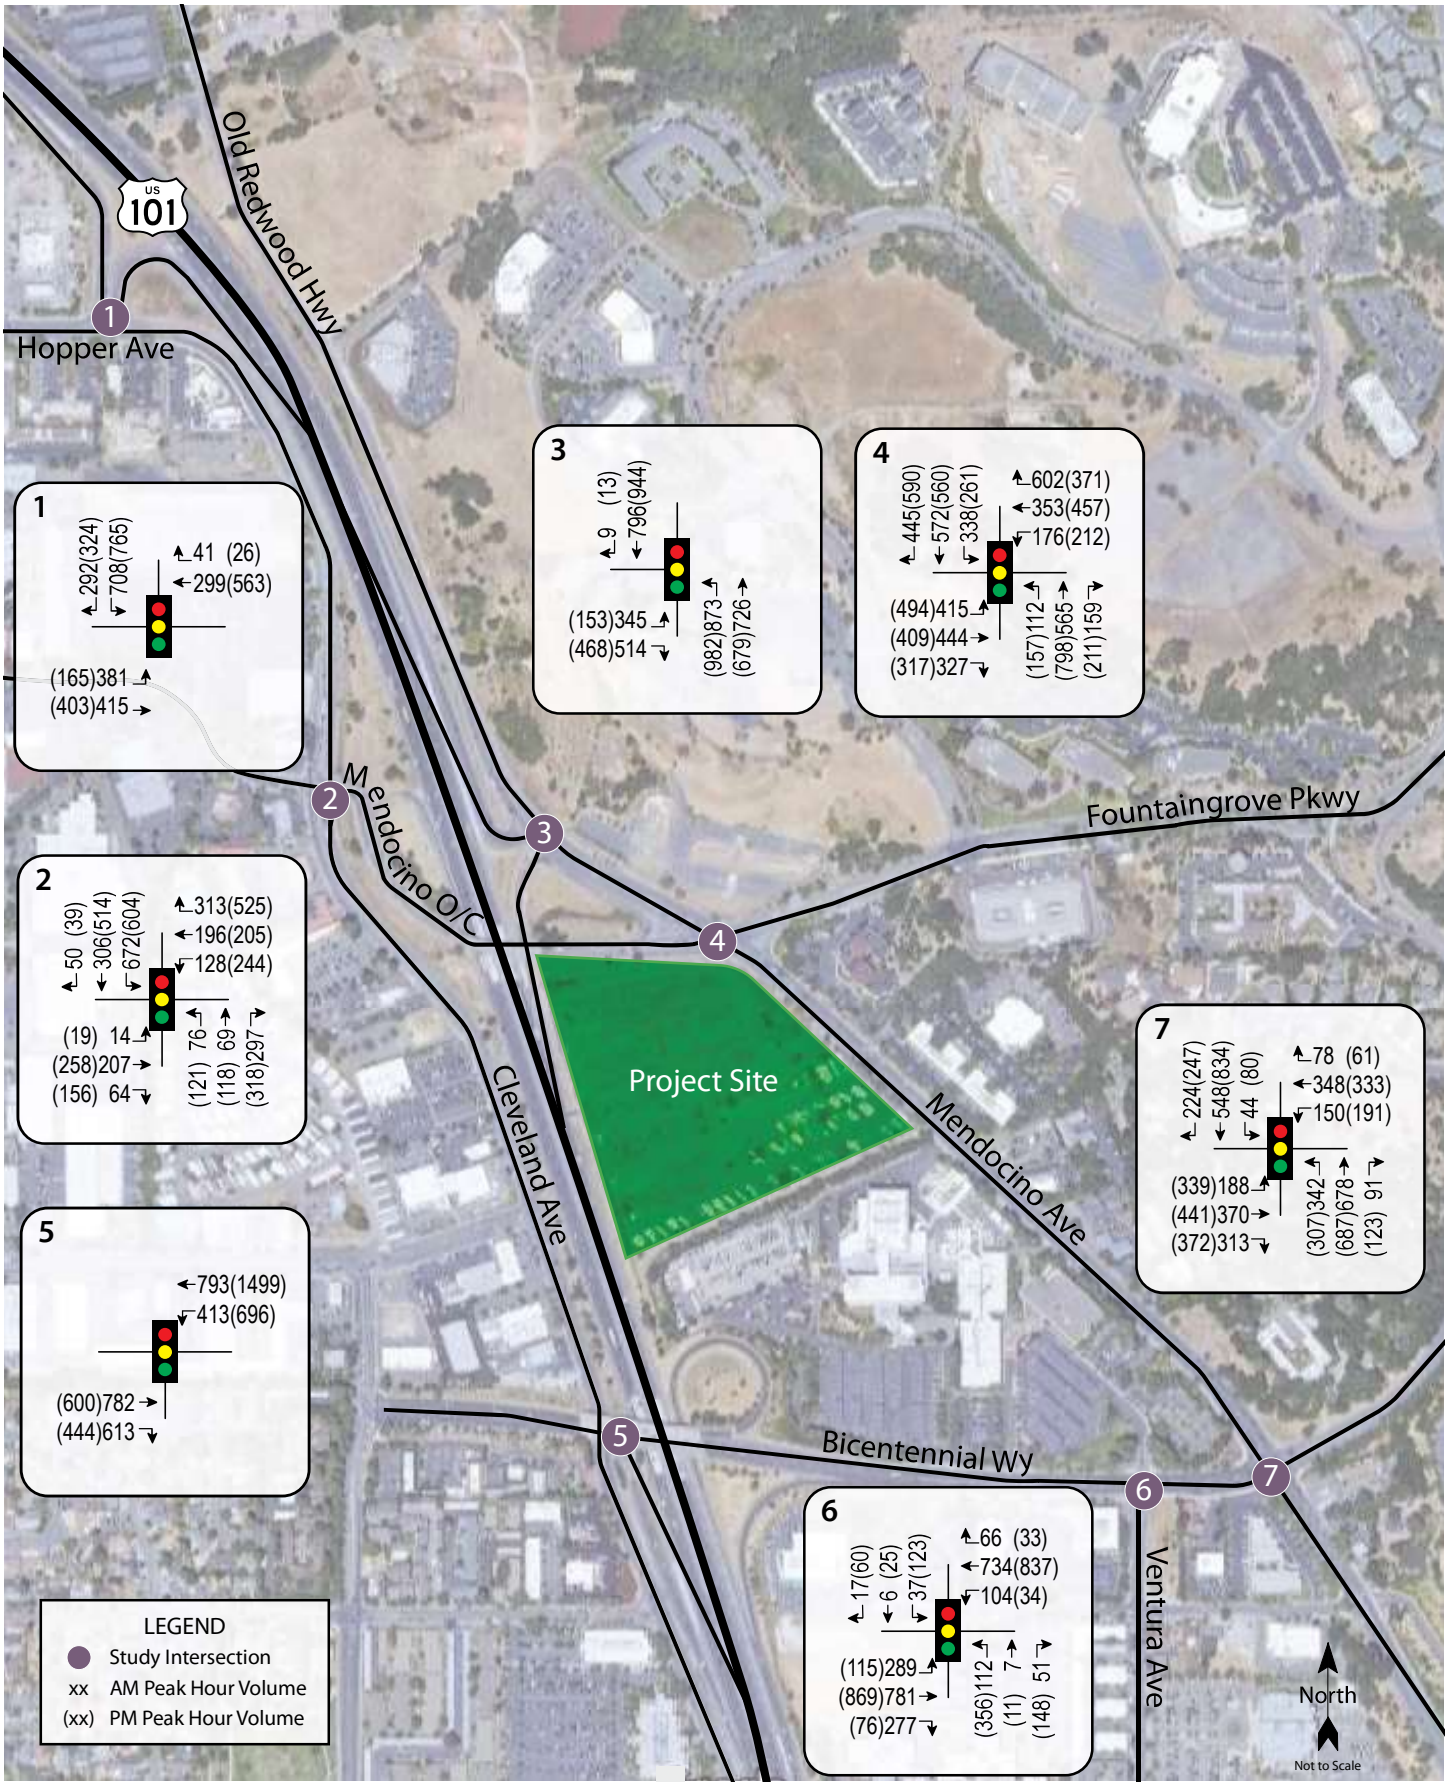
delays lower than the intersection average, so drivers would experience little, if any, change in conditions as a result of the project.

Finding – The study intersections are expected to continue operating acceptably at the same levels of service upon the addition of project-generated traffic to assumed 2020 volumes.

Baseline plus Project Conditions

With project-related traffic added to Baseline volumes, the study intersections are expected to operate acceptably. These results are summarized in Table 11, and Baseline plus Project volumes are shown in Figure 8.

Table 11 – Baseline and Baseline plus Project Peak Hour Intersection Levels of Service



Study Intersection		Baseline Conditions				Baseline plus Project			
		AM Peak		PM Peak		AM Peak		PM Peak	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1.	Hopper Ave/US 101 S Ramps	11.4	B	10.8	B	11.5	B	10.9	B
2.	Industrial Dr-Mendocino OC/Cleveland Ave	30.5	C	47.0	D	30.9	C	48.8	D

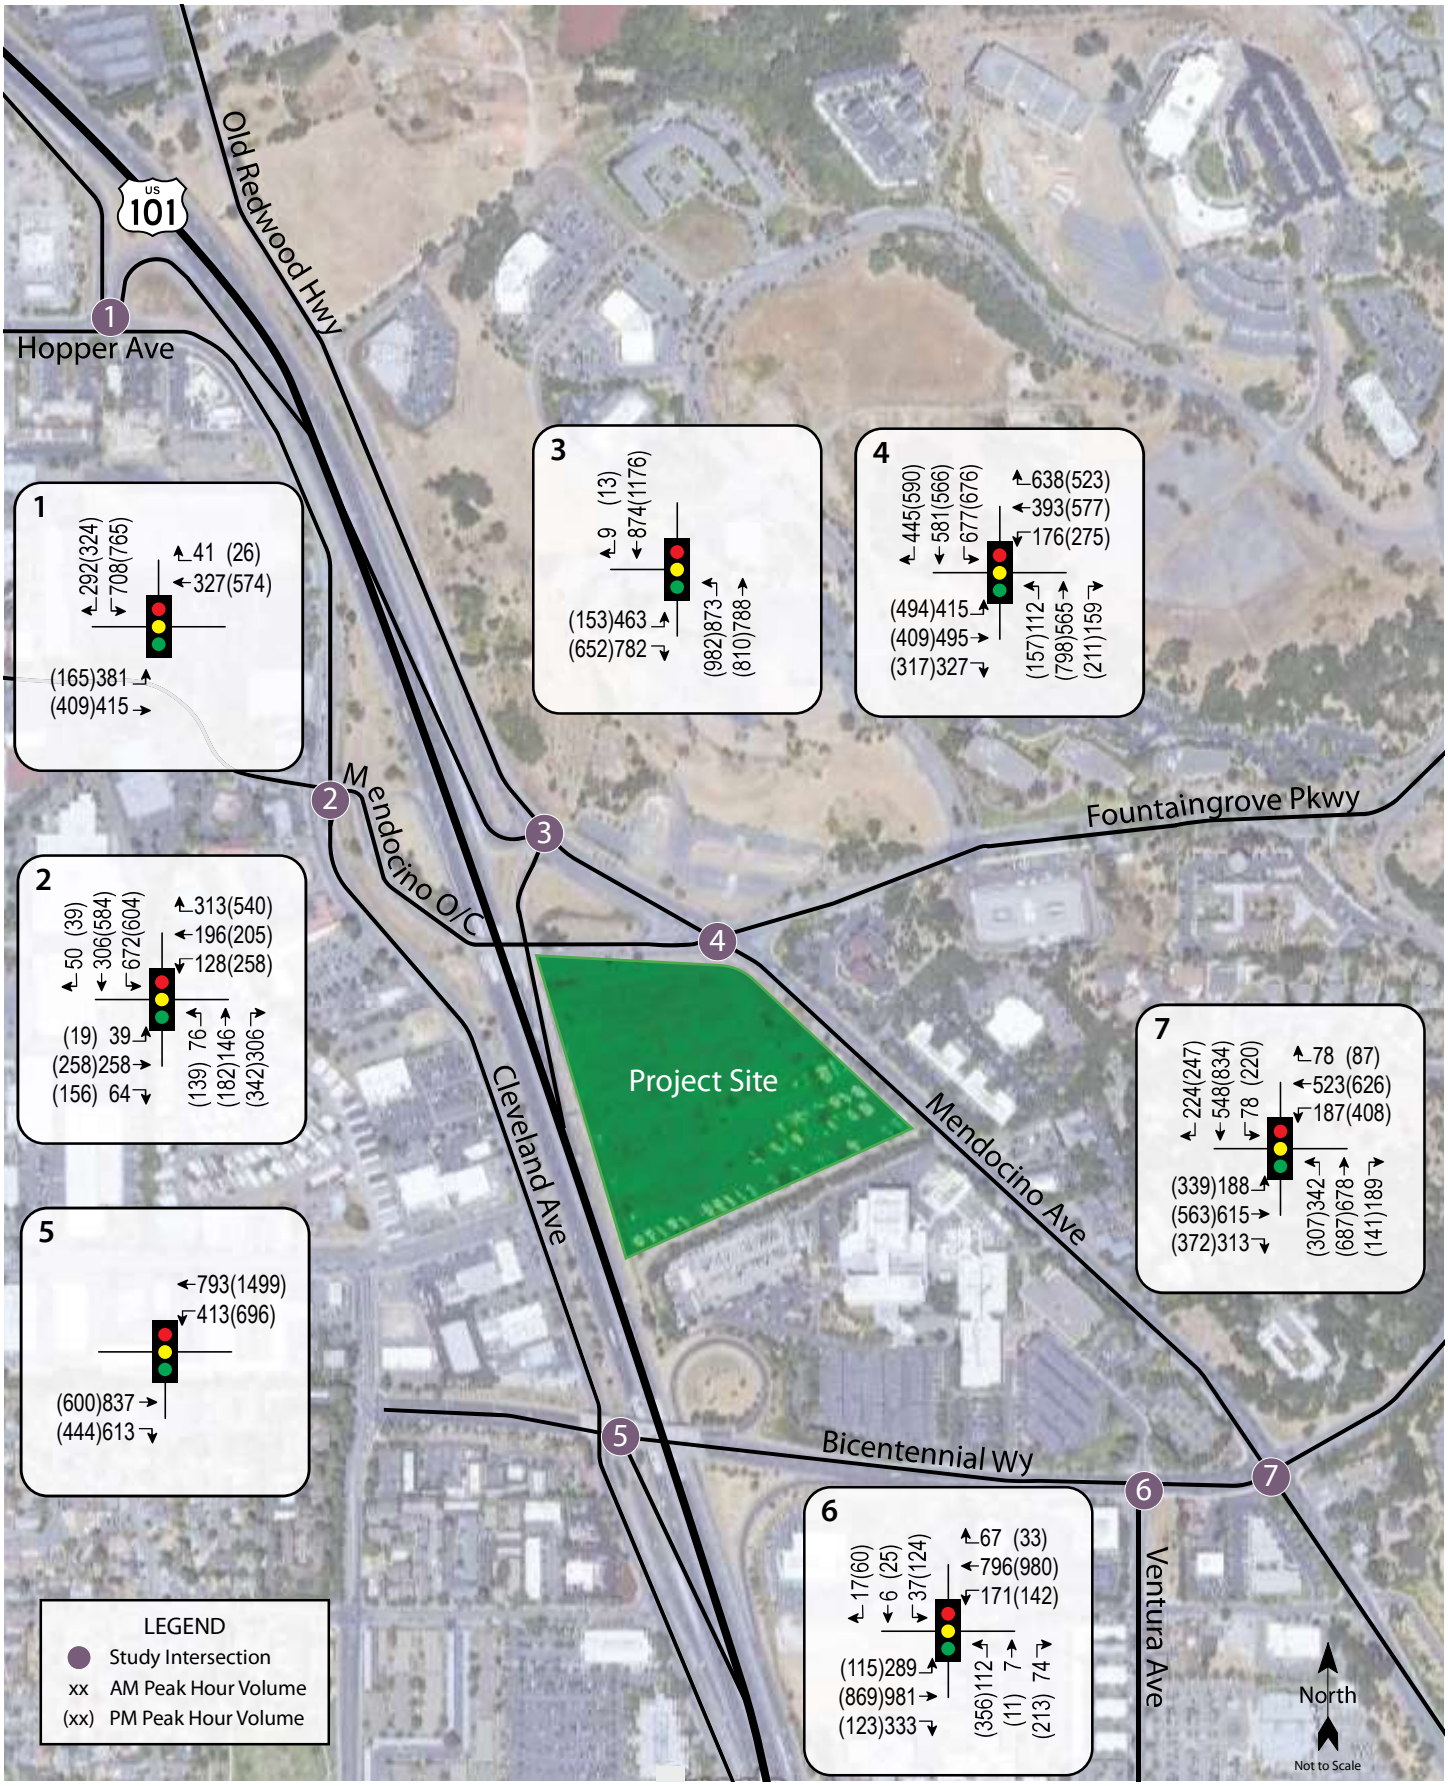
5.	Bicentennial Wy/US 101 S Ramps	7.4	A	8.5	A	8.6	A	9.3	A
6.	Bicentennial Wy/Ventura Ave	21.9	C	28.8	C	22.8	C	29.4	C
7.	Bicentennial Wy/Mendocino Ave	36.0	D	49.1	D	36.5	D	53.0	D

Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service

Finding – The study intersections would operate acceptably at LOS D or better under Baseline Conditions with or without the addition of project traffic.

Future plus Project Conditions



Upon the addition of project-generated traffic to the anticipated Future volumes, the study intersections are expected to operate at the same levels of service as without the project. Future plus Project volumes are shown in Figure 9 and the Future plus Project operating conditions are summarized in Table 12.

7. Bicentennial Wy/Mendocino Ave	40.6	D	**63.5**	**E**	41.2	D	**67.2**	**E**

Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; **Bold** text = deficient operation

With the addition of project traffic, all study intersections would continue operating at the same levels of service. While there would be an increase in delay at the intersections already operating at LOS E without the project, because this change would be less than five seconds, this is considered acceptable per policy T-D-2 from the *City of Santa Rosa General Plan*.

Finding – The study intersections that operate acceptably under Future Conditions without project traffic would continue to operate acceptably with the addition of project traffic. The intersections that are expected to be operating unacceptably under Future Conditions would experience an acceptable increase in delay of less than five seconds with the addition of project traffic.

Queuing

Under each scenario, the projected maximum queues in left-turn and right-turn pockets at the study intersections were determined using the SIMTRAFFIC application of Synchro, averaging the 95th percentile projected queue for each of five runs. Summarized in Table 13 are the predicted queue lengths for approaches to intersections where queues are expected to exceed the existing available storage capacity. Copies of the SIMTRAFFIC projections are contained in Appendix C.

Notes: Maximum Queue based on the average of the maximum value from five SIMTRAFFIC runs; all distances are measured in feet; E = existing conditions; E+P = existing plus project conditions; B = baseline conditions; B+P = baseline plus project conditions; F = future conditions; F+P = future plus project conditions; **Bold** text = queue length exceeds available storage; * Distance to freeway mainline from the intersection

It is noted that for all conditions, queue lengths are projected to decrease in several lanes upon adding project-generated traffic. This can be attributed to the stochastic nature of SIMTRAFFIC. Because the queuing analysis is based on numerous runs with varying traffic patterns and random seeding of vehicle arrivals, reduced queues are occasionally projected despite increased volumes.

Each turn lane or off-ramp would have a queue longer than the available capacity for at least one analysis scenario, except for the southbound off-ramp at Hopper Avenue/US 101 South Ramps. For each of the locations and scenarios where the queue would exceed the available capacity without project traffic, the addition of project traffic would not present an adverse impact as the queue would already exceed available storage; the project would merely extend this overage but not present a new impact.

There are three locations where a queue that would be contained within a turn lane without the project would extend outside the turn pocket and into the adjacent through lane upon the addition of project traffic during the a.m. peak hour. The northbound left-turn at Fountaingrove Parkway-Mendocino Overcrossing/ Mendocino Avenue has 200 feet of stacking distance, which would contain the 177-foot queue under Future Conditions during the morning peak hour. However, this would extend to 224 feet with the addition of project traffic, or 24 feet past the existing capacity. It is noted that because the adjacent through lane would be anticipated to have a queue of 347 feet, the excess queue in the turn lane would not affect traffic operation and therefore not represent an impact.

Likewise, the westbound left-turn lane at Bicentennial Way/Mendocino Avenue has 270 feet of storage. Without project traffic and under Future Conditions, the queue would extend to 267 feet during the a.m. peak hour. The addition of project traffic would increase this to 286 feet, or 16 feet more than the existing capacity of this turn lane. For the adjacent through lane, the queue length would extend to 444 feet. Again, as the queue in the through lane is longer than that in the left-turn pocket, it does not represent an adverse effect.

Finally, at Bicentennial Way/Mendocino Avenue, the southbound right-turn lane has 170 feet of storage. The addition of project traffic to Baseline Conditions would extend the morning peak hour queue from 134 feet to 186 feet, and to Future Conditions would extend the queue from 127 feet to 187 feet. This represents 16 feet over capacity for Baseline Conditions and 17 feet over for Future Conditions. The through lane adjacent to this turn lane would have a queue length of 231 feet under Baseline Conditions and 251 feet under Baseline plus Project Conditions, which is again in excess of that in the turn pocket.

For each projected queue length overage, the adjacent through lane would be projected to have a queue greater than the respective turn-lane queue. This would prevent turning motorists from accessing the turn pocket and therefore these overages would not present an adverse impact.

Finding – The increase in queuing due to adding project-generated traffic would be contained within available storage for most of the turn lanes or off-ramps at the study intersections. The addition of project traffic would cause queues to exceed available storage at several locations; however, as the queue lengths in the adjacent through lanes would be longer than in the turn pocket, there is not an associated adverse impact.

Alternative Modes

Pedestrian Facilities

Given that the site is surrounded by public institutional, commercial and residential land uses, it is reasonable to assume that some project residents would want to walk and/or use transit to reach their destinations. The sidewalks on Mendocino Avenue effectively connect the site to the surrounding pedestrian network and neighboring uses. Residents would be able to access existing and proposed sidewalks to reach nearby transit stops, healthcare facilities, and retail uses. The project description includes a variety of pedestrian amenities, such as benches and shade trees along the project frontage on Mendocino Avenue, and a central park to provide an on-site opportunity for recreation. Pedestrian-scale lighting is proposed to be included throughout the project site to increase pedestrian comfort at night. With these features and the general transit- and pedestrian-oriented nature of the project, the proposed pedestrian facilities would be adequate.

Consideration was given to adequacy of pedestrian access across Mendocino Avenue at the main project entrance that would be aligned with Don Martin Road, approximately 450 feet south of Fountaingrove Parkway on Mendocino Avenue. There is currently no pedestrian access across Mendocino Avenue between Fountaingrove Parkway and Bicentennial Way, and a crossing at the main project entrance would provide direct access for project residents to the northbound bus stop on Mendocino Avenue and the medical offices on the east side of Mendocino Avenue. A High-intensity Activated crossWalK (HAWK) system was considered for this location due to the high traffic volumes and speeds on Mendocino Avenue, as well as the curb-to-curb width that a crossing pedestrian would need to traverse. It is noted that there are HAWKs in operation in the City of Santa Rosa, including on Mendocino Avenue in front of the Santa Rosa Junior College.

Use of guidance from the Federal Highway Administration's *Field Guide for Selecting Countermeasures at Uncontrolled Pedestrian Crossing Locations,* July 2018, indicates that a HAWK would be recommended for this location given the geometry, volumes, and speeds along Mendocino Avenue. Chapter 4C of the *California Manual on Uniform Traffic Control Devices* (CA-MUTCD) provides guidance for the installation of HAWKs based on a chart of major road vehicle volumes plotted against pedestrian volumes crossing the major street. The CA-MUTCD chart includes different minimum threshold lines based on the curb-to-curb width that the crossing treatment would occupy, with shorter lengths requiring higher volumes. The CA-MUTCD requires a minimum of 20 pedestrians crossing the major street per hour.

With 1,767 vehicles on Mendocino Avenue during the a.m. peak hour and 2,032 vehicles during the p.m. peak hour, a HAWK would be warranted with 20 crossing pedestrians. As the crossing does not currently exist, pedestrians are discouraged from crossing at this location.

To determine the likelihood that the volume of pedestrian trips that would be generated by the project would warrant installation of a HAWK, standard person-trip rates published in the *Trip Generation Manual* for Multifamily Housing (Mid-Rise) (Land Use #221) and Senior Adult Housing (LU #252) were used. It is noted that because the peak hour of generation for senior housing differs from that for multifamily housing, the senior housing rate was adjusted to reflect commute hour pedestrian trips based on the ratio of the trip generation rates for the peak hour versus the peak hour of generator. As shown in Table 14, the application of these rates indicates that the project would be expected to generate an average of 151 pedestrian trips during the morning peak hour and 220 person-trips during the evening peak hour. It was conservatively assumed that all these trips would be to transit, though in reality many would be walking trips to nearby destinations such as Kaiser Permanente or the Sonoma County government center.

Table 14 – Person Trip Generation Summary									
Land Use	**Units**	**AM Peak Hour**				**PM Peak Hour**			
		Rate	**Trips**	**In**	**Out**	**Rate**	**Trips**	**In**	**Out**
Multifamily Housing (Mid-Rise)	370 du	0.36	133	27	106	0.52	192	131	61
Senior Housing	162 du	0.11	18	7	11	0.15	24	14	10
Total			**151**	**29**	**122**		**220**	**130**	**90**

Note: du = dwelling units

According to the 2000 US Census data, four percent of Santa Rosa residents commute north of Santa Rosa to destinations such as Windsor, Healdsburg, Larkfield-Wikiup, and Cloverdale. Of the remaining 95 percent, it was estimated that approximately 70 percent were assumed to use the Downtown Transit Center. Of these, it is estimated that 15 percent would take SCT and disembark at the northbound stop on Mendocino Avenue across from the project site; the remaining riders would take CityBus and disembark on Bicentennial Way. This estimate is conservative as CityBus Route 1 runs every 15 minutes during the weekday and SCT Routes 60 and 62 run as infrequently as every two hours. With the 15 percent using SCT applied to the 70 percent traveling south of the project site, it is conservatively estimated that 11 percent of site transit users arriving to the site would use SCT Routes 60 and 62 and disembark on Mendocino Avenue across from the project site.

These rates were applied to the person trips from Table 14 to estimate the number of project residents that would cross Mendocino Avenue to and from the northbound bus stop. As shown in Table 15, five outbound trips during morning and four evening peak hour trips would be crossing Mendocino Avenue to travel to the north. In addition, three inbound trips during the morning and 14 inbound trips in the afternoon would cross Mendocino Avenue into the project area from the south. Together, this would represent eight pedestrians crossing Mendocino Avenue during the a.m. peak hour and 18 pedestrian crossings during the p.m. peak hour.

Table 15 – Distribution of Person Trips Crossing Mendocino Avenue					
Route	**Percent**	**AM Peak Hour**		**PM Peak Hour**	
		In	**Out**	**In**	**Out**
To/from the north on Mendocino Ave	4%	n/a	5	n/a	4
To/from the south on Mendocino Ave	11%	3	n/a	14	n/a
TOTAL		**3**	**5**	**14**	**4**

It is conservatively estimated that the project would generate a maximum of 18 pedestrian crossings during either peak hour, which is insufficient to meet the threshold of 20 pedestrians crossing in one hour. The remaining pedestrian trips would not require a crossing as most facilities are located on the west side of Mendocino Avenue, including the CityBus Routes 1 and 10 bus stops and Kaiser Permanente Santa Rosa Medical Center. For the pedestrians that may wish to cross Mendocino Avenue, a crossing is provided to the north at the intersection with Fountaingrove Parkway.

A copy of the CA-MUTCD HAWK warrant worksheet is provided in Appendix D.

Finding – Pedestrian facilities serving the project site are adequate. A HAWK for crossing Mendocino Avenue at the main project entrance was considered but would not likely attract sufficient pedestrian crossing volumes to be warranted to serve project-generated pedestrian trips.

Bicycle Facilities

Existing bike lanes on Mendocino Avenue along with planned future bicycle facilities in the vicinity would provide adequate access for bicyclists. Residents of the proposed development would be able to use the bike lanes on this roadway to connect to many of the bicycle facilities in the City.

Finding – Bicycle facilities serving the project site are adequate.

Bicycle Storage

The project site plan indicates that 100 bicycle parking spaces would be provided for the 370 market-rate units and 60 bicycle parking spaces for the 162 senior affordable units, for 160 bicycle parking spaces total. According to the City of Santa Rosa's *Municipal Code*, Chapter 20.36.040, multifamily dwellings are required to provide bicycle storage at the rate of one space per four units if the units do not have a private garage or private storage space; likewise, one space per eight units is required for senior housing. This translates to 93 bicycle parking spaces for the 370 market-rate units and 21 bicycle parking spaces for the senior affordable units, for 114 total required bicycle parking spaces. Therefore, the 160 bicycle parking spaces indicated on the site plan exceeds the City's requirement.

Finding – Bicycle parking facilities included on the project site plan would be adequate.

Transit

The project site is located within a priority development area as defined in the City's *General Plan* for densifying residential development around transit corridors. CityBus Route 10 with 30-minute headways during the weekday has a stop adjacent to the project site on Mendocino Avenue, and CityBus Route 1 with 15-minute weekday headways has a stop on Bicentennial Way within a half-mile of the project site. Sonoma County Transit Routes 44, 48, 54, 60, and 62 also have stops within a half-mile of the project site. These stops are within a convenient walking distance of the site and accessible via a continuous sidewalk network on Mendocino Avenue. Existing transit routes are adequate to accommodate project-generated transit trips.

Additionally, the project description and site plan include relocating the bus stop adjacent to the site on Mendocino Avenue and providing a new turn-out for buses to onboard or offload riders out of the way of vehicles and bicycles. With the real-time transit arrival and departure monitors proposed for the stop, this would provide enhanced transit facilities for the project residents.

Finding – Transit facilities serving the project site are adequate.

Access and Circulation

Site Access

The project would have three access points on Mendocino Avenue. The northern driveway on Mendocino Ave would be approximately 125 feet south of the crosswalk on the south leg at Fountaingrove Parkway-Mendocino Overcrossing/Mendocino Avenue and would be limited to right-turns in and out. The center (main) entrance would be a public street providing full-access and be aligned opposite Don Martin Road, and the southern driveway, limited to right turns only, would be aligned with Sahara Street, approximately 180 feet south of Don Martin Road.

Sight Distance

Sight distances along Mendocino Avenue at the project access points were evaluated based on sight distance criteria contained in the *Highway Design Manual* published by Caltrans. The recommended sight distance for driveway approaches is based on stopping sight distance and uses the approach travel speed as the basis for determining the recommended sight distance. For intersections, the recommended sight distance is based on corner sight distance.

The speed limit on Mendocino Avenue is posted at 40 miles per hour (mph), resulting in a recommended minimum corner sight distance of 440 feet for intersections. Due to the relatively level terrain of the paved area combined with the straight roadway geometry, over 440 feet of sight distance was observed in each direction at the location of the new public intersection at the center of the site, exceeding the recommended minimum corner sight distance.

As the northern and southern entrances are driveways and not intersections, stopping sight distance was used. At a posted speed limit of 40 mph, the recommended minimum stopping sight distance is 300 feet. Since the northern and southern driveways are limited to right-in and right-out movements, only sight distance to the north was considered for these two driveways. Sight distance to the north from the southern driveway was measured in excess of 300 feet, meeting the recommended minimum sight distance.

There would be approximately 125 feet between the south leg crosswalk at Fountaingrove Parkway-Mendocino Overcrossing/Mendocino Avenue and the northern driveway. Westbound left-turning and eastbound right-turning drivers at this intersection would be visible to a driver exiting this driveway at approximately 170 feet. A speed of 25 mph, which is the likely speed of turning drivers, would correspond to a recommended minimum sight distance of 150 feet. At least 300 feet of sight distance is available to southbound through drivers at the intersection who may be traveling at the 40-mph speed limit. Therefore, the recommended minimum sight distance is available at the northern driveway for southbound traffic approaching from each movement at Fountaingrove Parkway-Mendocino Overcrossing/Mendocino Avenue that results in a southbound departure.

Finding – Based on field observations and the site plan, sight distances along Mendocino Avenue at the project egresses are adequate.

Traffic Signal Warrants

A signal warrant analysis was performed to determine potential need for a traffic signal at the center (main) access point.

Chapter 4C of the CA-MUTCD provides guidance on when a traffic signal should be considered. There are nine different warrants, or criteria, presented, as follows:

- Warrant 1, Eight-Hour Vehicular Volume
- Warrant 2, Four-Hour Vehicular Volume
- Warrant 3, Peak Hour Volume
- Warrant 4, Pedestrian Volume
- Warrant 5, School Crossing
- Warrant 6, Coordinated Signal System
- Warrant 7, Crash Experience
- Warrant 8, Roadway Network
- Warrant 9, Intersection Near a Grade Crossing

For the purposes of this study the Peak Hour Volume Warrant, which determines the need for traffic control based on the highest volume hour of the day, was used as an initial indication of traffic control needs. The use of this signal warrant is common practice for planning studies. Other warrants, which are more generally applicable to existing traffic issues, require collection of traffic volumes for the highest four or eight hours of the day, review of the collision history, and evaluation of the system surrounding the location.

Under the Peak Hour Volume Warrant the need for a traffic control signal may be indicated if an engineering study finds that the criteria in either of the following two categories are met:

A. If all three of the following conditions exist for the same one hour (any four consecutive 15-minute periods) of an average day:

    1. The total stopped time delay experienced by the traffic on one minor-street approach (one direction only) controlled by a STOP sign equals or exceeds: four vehicle-hours for a one-lane approach; or five vehicle-hours for a two-lane approach, and
    2. The volume on the same minor-street approach (one direction only) equals or exceeds 100 vehicles per hour for one moving lane of traffic or 150 vehicles per hour for two moving lanes, and
    3. The total entering volume serviced during the hour equals or exceeds 650 vehicles per hour for intersections with three approaches or 800 vehicles per hour for intersections with four or more approaches.

B. The plotted point representing the vehicles per hour on the major street (total of both approaches) and the corresponding vehicles per hour on the higher-volume minor-street approach (one direction only) for one hour (any four consecutive 15-minute periods) of an average day falls above the applicable curve in Figure 4C-3 for the existing combination of approach lanes.

A key component of the Peak Hour Volume Warrant is the volume of traffic entering from the minor street, or in this case the new project street. Condition A.2 requires 100 vehicles to enter from the minor street, and the figure for Condition B (Figure 4C-3) requires lower minor street volumes with higher major street volumes, but the curve bottoms out at a minimum requirement of 100 minor street vehicles. The Peak Hour Volume Warrant therefore cannot be satisfied without a minimum volume of 100 vehicles entering Mendocino Avenue from the new project street, representing outbound trips.

Using the trip generation detailed in Table 8, it is anticipated that the two housing components would generate 119 outbound vehicles during the a.m. peak hour and 83 outbound vehicles during the p.m. peak hour.

The p.m. peak hour outbound volume of 83 vehicles is insufficient to meet the Peak Hour Volume Warrant even if all outbound trips were made using the new project street. For the a.m. peak hour, it is not likely that 100 or more outbound trips would be made using the center project access point. While all northbound trips would need to

use the new public street to turn left out of the site, these trips only represent 20 percent of the total, or 24 trips. For southbound trips, drivers would have the option to use any of the three proposed access points, although it is likely that preference would be given to the southern and northern driveways due to the concentration of parking that is more directly accessed via these driveways, particularly the southern driveway which would provide the most direct route for drivers leaving the parking garage traveling southbound. As this would leave too few vehicles departing the site using the new public street intersection to warrant installation of a traffic signal by way of the Peak Hour Volume Warrant, the warrant would remain unmet with any volume of traffic on Mendocino Avenue. For this reason, specific signal warrants for Existing, Baseline, and Future Conditions were not assessed, as it can be determined by inspection that none of these would be satisfied.

A copy of the Peak Hour Volume Warrant worksheet is included in Appendix E.

Finding – As the project would result in fewer than 100 outbound vehicles departing the site via the new public street intersection during either peak hour, and 100 outbound vehicles represents the minimum threshold for warranting a signal via the peak-hour warrant of the CA-MUTCD, a signal would not be warranted at the proposed new intersection under any traffic scenario included in this analysis.

Parking

The project was analyzed to determine whether the proposed parking supply would be sufficient to meet applicable requirements. As proposed, a total of 719 parking spaces would be provided on-site.

Jurisdiction parking supply requirements are based on Section 20-36.040 of the City of Santa Rosa Zoning Code. The municipal code requires multifamily apartment buildings to provide parking at a rate of 1.5 spaces per unit for one-bedroom apartments and 2.5 spaces per unit for two-bedroom apartments, which applies to the 370 market-rate units. For senior affordable housing, one space per unit is required. Based on these rates, the project would need to provide a total of 958 parking spaces.

Section 20-36-050 (C) of the zoning code indicates that the City has the discretion to apply a reduction in parking requirements of up to 25 percent. Given the project's proximity to transit, including CityBus Routes 1 and 10 and Sonoma County Transit Routes 44, 48, 54, 60, and 62, providing service throughout Santa Rosa and Sonoma County, including every 15 minutes throughout the day on CityBus Route 1 and every 30 minutes throughout the day on CityBus Route 10, it would be reasonable for the City to grant the 25-percent reduction in parking requirements. This would translate to 719 required parking spaces.

The proposed parking supply as well as City requirements are shown in Table 16.

Table 16 – Parking Analysis

Land Use	Units	Rate	Parking Spaces
City and State Required Parking			
Multifamily Housing – Senior Affordable Units	162 du	1 space/du	162
Multifamily Housing – Market-Rate Units	370 du		
0-1 bedrooms	129 du	1.5 space/du	193.5
2+ bedrooms	241 du	2.5 spaces/du	602.5
City Required Parking Total			*958*
25% Reduction			*-239*
City Required Parking Total with Reduction			*719*
Proposed Parking Supply			**719**

Notes: du = dwelling unit

Finding – The proposed parking supply for the project would satisfy the City parking requirements, assuming a 25-percent reduction is applied per Section 20-36-050 (C) of the zoning code.

Vehicle Miles Traveled

Because the City of Santa Rosa has not yet adopted a standard of significance for evaluating vehicle miles traveled (VMT), guidance provided by the California Governor's Office of Planning and Research (OPR) in the publication *Transportation Impacts (SB 743) CEQA Guidelines Update and Technical Advisory*, 2018, was used. Guidance provided in this document with respect to assessing VMT for residential projects is that a project generating vehicle travel that is 15 or more percent below the existing citywide residential VMT per capita may indicate a less-than-significant transportation impact. The OPR publication, as well as *CEQA Guidelines Section 15064.3(b)(1)* also indicate that "generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high-quality transit corridor should be presumed to cause a less than significant transportation impact." The City of Santa Rosa has prepared draft guidelines for VMT analysis in their June 2020 document *Vehicle Miles Traveled (VMT) Guidelines*. This draft document contains much of the same guidance as in the OPR Advisory, including the less-than-significant presumption for projects near high-quality transit corridors and/or in areas with VMT that is 15 or more percent below the regional average.

The proposed project is approximately 0.4 miles walking distance from the CityBus Route 1 stop on Bicentennial Way near Ventura Avenue, which has service every 15 minutes on weekdays, and would be accessible to the station by both walking and bicycling. This fulfills the screening criterion of being within one-half mile of a high-quality transit corridor.

The City of Santa Rosa VMT Guidelines states that "the City of Santa Rosa will be using the 2015 Sonoma County Travel Model as the forecasting method for VMT." Using this tool, the model VMT for the traffic analysis zone which includes the project site is 8.63 VMT per capita, which is more than 15 percent less than the Sonoma County average of 15.56 VMT per capita.

Of the 532 residential units, 162 would be designated affordable senior housing, representing approximately 30 percent of the total. As designating a portion of the project housing to be affordable is listed as a VMT reduction strategy in the City of Santa Rosa VMT Guidelines, this would likely further reduce the VMT of the project.

As the project site is within one-half mile walking distance of a high-quality transit corridor and the project site is in an area with model VMT more than 15 percent below the county average, the project site is included in the City of Santa Rosa's *Residential VMT: Pre-Screened* map, March 11, 2020. A copy of this map is included in Appendix F.

Finding – Because the project is included in the pre-screened map and 30 percent of units would be designated affordable, the project would be expected to have a less-than-significant transportation impact on vehicle miles traveled.

Conclusions

Conclusions

- The anticipated trip generation for the proposed project is 2,016 net new trips per day, including 133 net new trips during the a.m. peak hour and 163 net new trips during the p.m. peak hour.

- An operational analysis indicates that under assumed Existing 2020 Conditions all seven study intersections are operating acceptably and they would be expected to continue operating acceptably at the same levels of service upon the addition of project-generated traffic.

- Volumes for the near-term Baseline Conditions scenario were generated by adding potential traffic from approved and pending projects near the study area to assumed 2020 volumes. It was determined that the study intersections would operate acceptably under Baseline Conditions without or with the addition of traffic that would be generated by the project.

- The SCTA gravity demand model was used to estimate Future Conditions for the horizon year of 2040. Under these future volumes, the intersections of Industrial Drive-Mendocino Overcrossing/Cleveland Avenue and Bicentennial Way/Mendocino Avenue would operate at LOS E during the p.m. peak hour. The intersection of Fountaingrove Parkway-Mendocino Overcrossing/Mendocino Avenue would operate at LOS E during both peak hours. The addition of project traffic to these future volumes would not increase delays sufficiently to present an adverse impact.

- For all study scenarios, queue lengths were assessed as compared to available capacity for all turn lanes and off-ramps at the seven study intersections. Three locations would have queues within the turn lane without project traffic, but the addition of project traffic would increase the back of queue beyond the available turn lane capacity. These locations are the northbound left-turn lane at Fountaingrove Parkway-Mendocino Overcrossing/Mendocino Avenue during the future a.m. peak hour, the westbound left-turn lane at Bicentennial Way/Mendocino Avenue during the future a.m. peak hour, and the southbound right-turn lane at Bicentennial Way/Mendocino Avenue during the baseline and future a.m. peak hours. These are not considered adverse impacts as the overages would occur when the respective queue in the adjacent lane would be longer than the queue for the turn lane, preventing motorists from accessing the turn lane or queues in the turn lane from blocking access to the through lane.

- The pedestrian, bicycle, and transit facilities serving the project site were assessed and determined to be adequate. The proposed bicycle storage on-site would surpass City requirements.

- The potential need for improvements at the new public intersection to be created by the project was evaluated. The Peak Hour Volume Warrant from the CA-MUTCD, which would indicate need for a traffic signal was assessed and it was determined that the warrant would not be met under any analysis scenario as the project would have too few outbound trips to meet the minimum threshold for minor-street entering traffic. Similarly, the potential need for a HAWK was assessed and the warrants were determined to not be fulfilled due to a lack of current or anticipated future pedestrian activity.

- The sight distance for each proposed project egress point was assessed and determined to be adequate.

- Assuming that a 25-percent reduction is applied as allowed by Section 20-36-050 (C) of the zoning code, the proposed parking supply of 719 spaces is equal to the requirement of 719 spaces.

- A VMT analysis was conducted and it was determined that the project would have a less-than-significant impact to VMT, as the project would be located within a half-mile of a high-quality transit corridor, in an area with a VMT more than 15 percent below the Countywide average, and would be comprised of 30-percent affordable housing.

ADT = average daily total vehicles entering intersection
c/mve = collisions per million vehicles entering intersection
* 2016 Collision Data on California State Highways, Caltrans

Intersection Collision Rate Worksheet

3575 Mendocino Avenue TIS

Intersection # 7: Bicentennial Way & Mendocino Avenue
Date of Count: March 2017 Data Extrapolated to 2020

Number of Collisions: 25
Number of Injuries: 13
Number of Fatalities: 0
Average Daily Traffic (ADT): 36900
Start Date: September 1, 2014
End Date: August 31, 2019
Number of Years: 5

Intersection Type: Four-Legged
Control Type: Signals
Area: Urban

$$\text{Collision Rate} = \frac{\text{Number of Collisions x 1 Million}}{\text{ADT x Days per Year x Number of Years}}$$

$$\text{Collision Rate} = \frac{25 \times 1{,}000{,}000}{36{,}900 \times 365 \times 5}$$

	Collision Rate	Fatality Rate	Injury Rate
Study Intersection	**0.37 c/mve**	**0.0%**	**52.0%**
Statewide Average*	**0.24 c/mve**	**0.5%**	**44.6%**

Notes
ADT = average daily total vehicles entering intersection
c/mve = collisions per million vehicles entering intersection
* 2016 Collision Data on California State Highways, Caltrans

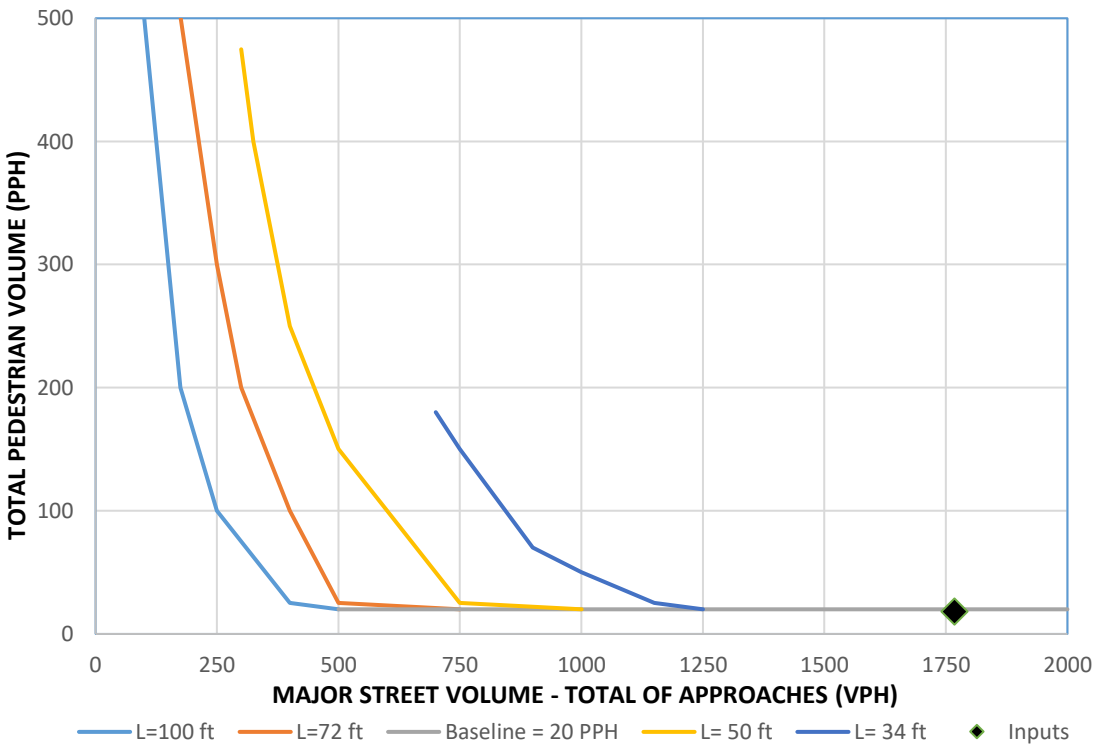
Appendix D

HAWK Warrant Worksheet

This page intentionally left blank

Pedestrian Hybrid Beacon (HAWK) Signal Warrant

High-Speed Roadway



Project Name: Journey's End TIA

Scenario: AM Existing
Location: Mendocino Avenue/Center Project Driveway
Date of Count: 2020 Estimated Volumes

Speed Limit: 40 mph
Crosswalk Length: 64 feet

Major Street Approach Volume: 1,767 VPH
Pedestrians Crossing: 18 PPH

WARRANT MET? **NO**

Note: Installation of a HAWK Singal is warranted when the plotted point (see graph above) falls above the curve representing the corresponding crosswalk length (L).

If the length (L) of the crosswalk does not match one displayed on the graph, interpolate between existing curves to find the position of the curve representing the crosswalk length being analyzed.

Appendix E

Signal Warrant Worksheet

This page intentionally left blank

Warrant 3: Peak-Hour Volumes and Delay

Mendocino Ave & Project Driveway
City of Santa Rosa

Project Name: Journey's End

Intersection: 8

	Major Street	Minor Street
Street Name	Mendocino Ave	Project Driveway
Direction	N-S	E-W
Number of Lanes	2	1
Approach Speed	40	25

Population less than 10,000? No
Date of Count: Tuesday, May 2, 2017
Scenario: Future plus Project AM

Warrant 3 Met?: Met when either Condition A or B is met — **No**

Condition A: Met when conditions A1, A2, and A3 are met — Not Met

Condition A1 — Not Met

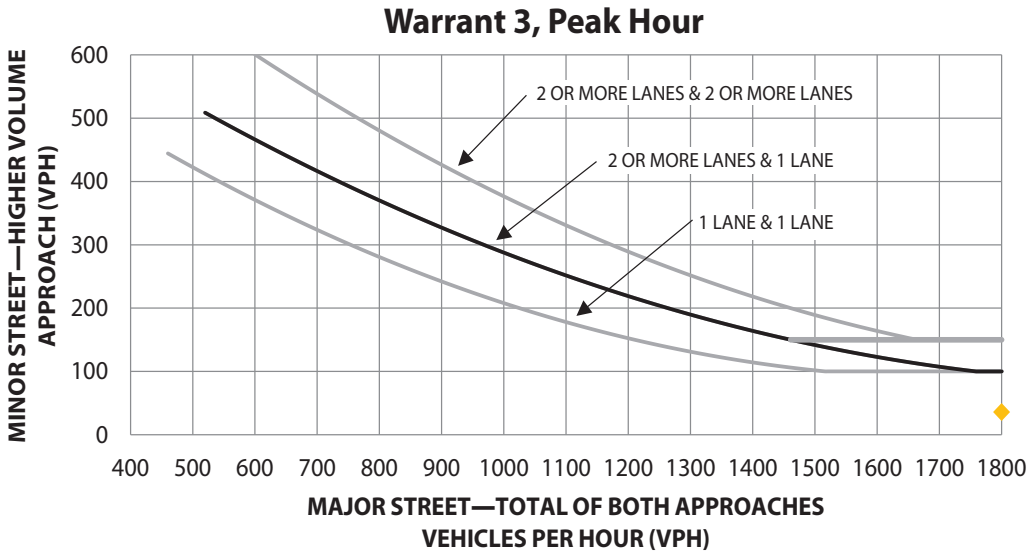
The total delay experienced by traffic on one minor street approach (one direction only) controlled by a STOP sign equals or exceeds four vehicle-hours for a one lane approach, or five vehicle-hours for a two-lane approach

Minor Approach Delay: N/A vehicle-hours

Condition A2 — Not Met

The volume on the same minor street approach (one direction only) equals or exceeds 100 vph for one moving lane of traffic of 150 vph for two moving lanes

Minor Approach Volume: 36 vph



Condition A3 — Met

The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with four or more appraches or 650 vph for intersections with three approaches

Total Entering Volume: 1985 vph

Condition B — Not Met

The plotted point falls above the curve

Appendix M FIRE AND POLICE WILL SERVE RESPONSE LETTERS

August 17, 2020

Stantec Consulting Services Inc.
1340 Treat Boulevard, Suite 300
Walnut Creek, CA 94597
Attn: Anna Radonich

Dear Mrs. Radonich,

The following is in response to your request for information related to the Sustainable Communities Environmental Assessment (SCEA) for the proposed 3575 Mendocino Avenue Project. The Santa Rosa Fire Department has provided the following responses to your questionnaire in our effort to determine potential project impacts and our ability to deliver services to the community.

The proposed project involves redevelopment of a 13.3-acre infill site to construct a compact, sustainable, transit-oriented, master planned community (transit village) with up to 532 high-density multi-family housing units consisting of 162 affordable senior housing units and 370 market rate housing units. The proposed transit village would be developed as two separate components consisting of senior affordable housing on 2.5 acres and market rate housing on 9 acres of the project site. The proposed project would also include approximately 1-acre of common open space and the construction of a new public street (0.8-acre), on- and off-site utility infrastructure, parking (including surface, covered, and an aboveground garage), driveways, frontage improvements, landscaping, and a new storm drain outfall into the adjacent, off-site Russell Creek.
The proposed project would include a mix of studio, one-bedroom, two-bedroom, and three-bedroom units. The number of occupants would depend on the type of unit and would range from 1.9 to 3.25 people per unit. For purposes of this CEQA analysis, a conservative approach of 100 percent occupancy of the 532 total residential units is used resulting in 1,383 residents at the project site. The number of residents generated by the proposed project is within the population projections estimated for the zoning and land use designations in the City of Santa Rosa's 2035 General Plan.

Santa Rosa Fire Department Questionnaire:

(Content for the following questions have been provided by Deputy Chief Scott Westrope and Battalion Chief Steve Suter.)

1. Please provide a description of the Santa Rosa Fire Department. We would appreciate information about services provided, organization, stations, staffing, response times, and aid agreements.

The Santa Rosa Fire Department (SRFD) is an "all-risk", ISO Class 1 organization that provides emergency services for fire, medical, hazardous material and urban rescue incidents. The SRFD responds with 10 paramedic engine companies and 2 ladder truck companies out of 10 strategically located fire stations. The department is comprised of three bureaus (Operations, Prevention, and Administration) with a total staff of 151 FTE. SRFD responded to 28,666 calls for service in 2019, a 2.65 percent increase from 2018, when there were 27,901 calls for service. Of the 28,666 calls for service, 18,091 (63.1 percent) of these calls were emergency medical incidents.

The SRFD is part of a Joint Powers Agreement for fire and emergency medical dispatch services, called the Redwood Empire Dispatch Communications Authority (REDCOM). REDCOM provides fire/emergency medical dispatch services for most cities and fire protection districts within Sonoma County. The Santa Rosa Fire Department has Auto Aid Agreements with the Sonoma County Fire District, Sebastopol Fire Department, and the Kenwood Fire Protection District. The Sonoma County Fire

District agreement is designed to ensure the closest, most appropriate fire resources are dispatched to an incident regardless of jurisdictional boundaries. All the agreements cover automatic emergency response to specific areas in which the City and the respective district share jurisdictional boundaries.

In addition to Auto Aid Agreements, the Department is a member of a joint response plan with the Sonoma County Fire District and CALFIRE which covers specific wildland/urban interface areas. This plan is known as the Santa Rosa Mutual Threat Zone Operating Plan.

Growth of the City continues to have a cumulative impact on the ability of the Fire Department to deliver service. For example, traffic congestion continues to delay Fire Department response times. The General Plan's fire emergency response time goal is that the Fire Department shall achieve 90 percent performance of arrival of the first fire company at an emergency within five minutes of notification by the dispatch center. The time goal does not include the additional 70 second standard for the dispatch center call taking and emergency medical dispatching. In 2019, the Department's emergency resources arrived on scene within 5 minutes of dispatch 70 percent of the time on average. The Fire Department was not able to meet the General Plan's response time goal this year. The addition of fire stations, relocation of fire stations, and the addition of operational personnel will provide a significant improvement to response time goals.

Additional information can be found in the following resources:

- *SRFD Strategic Plan*
- *SRFD Standards of Coverage and Deployment Plan*
- *SRFD Staffing Needs Assessment*

2. Please provide the number of calls for service the Fire Department responded to citywide in 2019. If possible, please provide a breakdown of call type (medical emergencies, fires, false alarms, etc.).

2019 Incident Summary	Number	Percent
Fires/Explosions	500	1.74%
EMS/Rescue	18,091	63.11%
Haz Condition	666	2.32%
Service Call	1,996	6.96%
Good Intent	5,816	20.29%
False Call	1,576	5.50%
Other	22	0.08%
Total:	28,667	

3. Please identify the number of calls for service that you anticipate the proposed project will generate, and, if possible, please provide a breakdown of call type (medical emergencies, fires, false alarms, etc.). Please indicate if the Fire Department would have adequate resources to accommodate this number of calls for service.

In order to best determine the potential impact to the SRFD calls for service by the proposed project, the following metrics were utilized. Looking at four comparable occupancies by type (multifamily/high density)

and two comparable occupancies by type (large senior living complexes), an average of call volume and call type was established to reasonably predict the impact of the proposed project.

Total calls for service: 196
Fires: 3
Medical: 162
Hazardous Conditions: 2
Service Calls: 12
False Calls: 17

It should be noted that these metrics were established comparing number of units, not residents. This, along with other variables, could skew the predicted impact numbers. It should be assumed that this numbers above should be considered on the lower end of the potential impact spectrum. The addition of 200+ calls for service annually will have an impact on the overall 911 system. Please reference the answers to Question 4 for adequacy of resources to accommodate the increase.

4. Please describe any significant challenges the proposed project may present to the Fire Department. This includes concerns related to response times, staffing, apparatus, fire stations, etc. For any significant concerns, please describe what measures you would recommend to reduce the potential impact.

The SRFD will proudly serve this new community development. The challenges that the organization will face in providing service to the proposed project may include, however are not limited to:

- *Population increase – The proposed project falls within the borders of three SRFD response districts that are already extremely busy. The addition of 532 additional units and nearly 1,500 residents will potentially create impacts to services provided by fire companies that are already quite busy. The effects could be increased unit service hours (measure of work), increased response times to the proposed project and surrounding areas, and delays in assembly of an effective fire fighting force.*

- *Traffic impacts – The proposed project will be constructed in an area that is historically a very high-volume traffic area. Predictably, traffic in the area will be increased with the addition of residential units and community members. This will potentially lead to impacts to response times not only into the complex, however to other emergency incidents throughout the northern parts of Santa Rosa.*

- *Fire Department infrastructure – With the loss of Fire Station 5 on Newgate Court during the Tubbs fire in 2017, the infrastructure to house fire resources that would be protecting the proposed project are impacted. The replacement fire station that would primarily serve the proposed project has currently just begun the CEQA process (12-18 months) and completed construction is years away. This will potentially result in extended response times to the proposed project due to resources responding from fire stations that are geographically more distant than the replacement Station 5.*

- *Apparatus and personnel – As previously stated, the increase in high-density population will create an impact on service levels and service delivery to not only the proposed project, but also the adjoining SRFD response districts. While not specific to this project, an aging fleet and personnel shortage will exacerbate the issue by increasing call volume, subsequently increasing apparatus wear as well as demands on personnel.*

Mitigation recommendations:

- *Population increase + Apparatus and personnel – The recommended mitigation strategy to offset the population increase would be to add additional fire companies with new personnel or augment current fire companies with additional personnel. This may be accomplished with addition of a fire station or moving a fire station (area of County Complex), addition of a second fire company to a current fire station, addition of a paramedic squad to a current fire station, and/or adding a fourth person to existing three-person staffed companies in the northern response districts.*

- *Traffic impacts - The recommended mitigation strategy to offset the traffic impacts would be to engineer the traffic plan with emergency ingress and egress specifically addressed. The intersection of Mendocino Avenue/Bicentennial Way and Mendocino Avenue/Fountaingrove require augmentation for emergency response to the proposed project. Access to and from the proposed project will also be an important factor to consider. Of particular concern is access from the northbound lanes of Mendocino Avenue as it is not uncommon for all lanes to be gridlocked.*

- *Fire Department infrastructure - The recommended mitigation strategy to offset the Fire Department infrastructure challenge would be the addition of and replacement of fire stations. The replacement of Fire Station 5 will assist in reducing response times and providing a higher level of service delivery to the proposed project. However, due to the location, number of high-density units, and increase in population, the proposed project would best be served with the addition or relocation of a fire station to the area of Mendocino Avenue/Chanate Road (near County Complex).*

5. Please feel free to provide any additional information you believe to be relevant to the proposed project.

The SRFD supports and applauds this project as it better serves the community. We look forward to working with the development team and other City partners to ensure that this proposed project is well served by the Fire Department.

Thank you,

Scott Moon
Division Chief Fire Marshal
Santa Rosa Fire Department

SANTA ROSA
POLICE

M E M O R A N D U M

DATE: August 11, 2020

TO: Anna Radonich

FROM: Pam Lorence, Administrative Services Officer

SUBJECT: **3575 Mendocino Avenue Project**

---

1. The Police Department is responsible for safeguarding lives and property, the preservation of constitutional rights, and the maintenance of the quality of life to promote safe and secure neighborhoods for the citizens of Santa Rosa. The department responds to a wide range of calls for service and provides numerous community support and outreach programs to promote police/community partnerships. The six program areas that carry out these core functions are General Administration, Field Services, Investigative Services, Technical Services, Support Bureau, and Measure O. There is a total of 254 employees; 177 sworn and 77 civilians. The City operates nine patrol beats and has one main Public Safety Building on Sonoma Avenue; and two substations one in the Transit Mall and one on West Steele Lane.

Response time for Priority 1 Calls	6:48 minutes
Response time for Priority 2 Calls	12:33 minutes
Response time for Priority 3 Calls	25:38 minutes

2. 2019 Calls for Service

Total calls to dispatch	255,224
Number of calls for service SRPD responded to	137,690
Number of 9-1-1 calls	74,517
Number of non-9-1-1 calls	136,517

3. Projecting calls for service for a 532-unit high density multi- family housing project considered a variety of contributing factors including, but not limited to, population demographics, density, and terrain factors. Utilizing three of the most common projection models estimated annual calls for service to be approximately 182.

4. Historically, this location was the home to 157 mobile home units with an estimated population of 235 occupants, not to include care providers and visitors. This neighborhood is part of patrol beat 2. As a large segment of the patrol area continues to rebuild from the Tubbs Fire of 2017, it is anticipated there will be an increase in calls for service. While there is no one nationally recommended police staffing model, there are five common methods used throughout the United States. The Santa Rosa Police Department considers components of each of the five largely recognized methods, weighing heavily on staffing decisions made on actual workload and community oriented policing recommendations consistent with U.S. Department of Justice BJS per capita guidelines. Once an additional 532 housing units are at occupancy within this patrol area, the workload and per capita guidelines would be exceeded.

   Mitigating significant impacts to police services start with crime prevention through environmental design collaboration and adding an additional .5 of an officer to remain consistent with local response time goals, workload levels and per capita guidelines.
