# APPENDIX INT-1

## NOTICE OF PREPARATION

**Office of Planning and Environmental Review**
Leighann Moffitt, Director

**County Executive**
Navdeep S. Gill

# COUNTY OF SACRAMENTO
## OFFICE OF PLANNING AND ENVIRONMENTAL REVIEW
## NOTICE OF PREPARATION

**OCTOBER 5, 2020**

**TO: ALL INTERESTED PARTIES**

**SUBJECT: NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR UPPER WESTSIDE SPECIFIC PLAN (PLNP2018-00284)**

Sacramento County will be the CEQA Lead Agency for preparation of an Environmental Impact Report (EIR) for a project known as Upper Westside Specific Plan. This Notice of Preparation has been sent to responsible and trustee agencies, and involved federal agencies, pursuant to Section 15082 of the CEQA Guidelines. Agencies should comment on the scope and content of the environmental information that is germane to the agencies' statutory responsibilities in connection with the Project. Due to the time limits mandated by State law, your response must be sent at the earliest possible date, but not later than 30 days after receipt of this notice.

The project description, location, and the probable environmental effects are contained in the attached materials, which may be viewed online at the following webpage along with full resolution images for the each of the attached Plates:

https://planningdocuments.saccounty.net/ViewProjectDetails.aspx?ControlNum=PLNP2018-00284

Please send your Agency's response to this Notice to:

Todd Smith, Acting Environmental Coordinator
Office of Planning and Environmental Review
827 7th Street, Room 225, Sacramento, CA 95814

Or via e-mail to: CEQA@saccounty.net.

Your response should include the name of a contact person in your agency.

Agencies with specific questions about the Project should contact Todd Taylor, Project Manager, at (916) 874-3125 for further information.

**COMMENT PERIOD:**

October 5, 2020 to November 6, 2020

**SCOPING MEETINGS:**

Two scoping meetings have been scheduled for the Project, one for service providers and other public agencies, and one for the public. Interested parties and agency representatives are invited to learn more about the Project and submit comments and suggestions concerning the analysis in the EIR.

In compliance with directives of the County, State, and Centers for Disease Control and Prevention (CDC), the scoping meetings will be conducted virtually using the BlueJeans software application. The dates, times, and locations for those meetings are as follows:

Service Providers and Public Agencies Scoping Meeting

**October 13, 2020, 3:00 PM**
Location: Online via the BlueJeans app at https://bluejeans.com/952299568
Meeting ID: 952 299 568
Teleconference option: 1 (408) 419-1715

Public Scoping Meeting

**October 13, 2020, 6:00 PM**
Location: Online via the BlueJeans app at https://bluejeans.com/403358137
Meeting ID: 403 358 137
Teleconference option: 1 (408) 419-1715

**PROJECT TITLE:**

Upper Westside Specific Plan

**CONTROL NUMBER:**

PLNP2018-00284

**PROJECT PROPONENT(S):**

Applicant: Upper Westside, LLC
Applicant's Representative: Thomas Law Group
Applicant's Planner/Engineer: Wood Rodgers, Inc.

**PROJECT DESCRIPTION AND LOCATION:**

The Project is a Specific Plan that encompass approximately 2,066 acres in the unincorporated Natomas community of Sacramento County, approximately 3.5 miles from downtown Sacramento (see **Plate NOP-1**). The Project area is bounded by Interstate 80 to the south, the West Drainage Canal to the east, Fisherman's Lake Slough to the north, and Garden Highway to the west. The Project is located outside of the County's Urban Policy Area (UPA) and Urban Services Boundary (USB), but is bounded on three sides by the City of Sacramento, bordering the communities of North and South Natomas (see **Plate NOP-2**).

The Project area is mostly agricultural, but has existing agricultural residential homes inside the northeastern and southwestern boundaries, and commercial uses located near the intersection of El Centro Road and West El Camino Avenue. Existing General Plan Land Use designations include Agricultural Cropland (1,858.3± acres); Agricultural Residential (97.0± acres); Commercial and Office (52.2± acres); and Recreation (58.8± acres). A number of individuals own property within the Project area.

The Project includes the following entitlement requests:

- Amend the Sacramento County General Plan (General Plan) to move the UPA and USB boundaries to include the proposed 1,532± acre Development Area within the 2,066-acre Project area (see **Plate NOP-3**),
- Amend the General Plan Land Use Diagram to change land use designations within the 1,532-acre Development Area (see **Plate NOP-4**),
- Amend the General Plan Transportation Plan to identify roadway classifications within the 2,066-acre Project area (see **Plate NOP-5**),
- Amend the Bicycle Master Plan, a policy document of the General Plan, to identify bikeway classifications within the 2,066-acre Project area (see **Plate NOP-6**),
- Amend the General Plan text and policies to align County policies in various General Plan Elements regarding urban development in the Natomas Joint Vision Area,
- Amend the Sacramento County Zoning Ordinance to adopt zoning district classifications for the participating property owners (see **Plate NOP-7**),
- Adopt the Upper Westside Specific Plan, and
- Adopt other necessary entitlements to support the Project.

The Preliminary Land Use Plan (see **Plate NOP-8**) envisions a community with a 1,532± acre Development Area and a 534± acre Ag Buffer Area that is located west of the Development Area, providing a transition to the Garden Highway. Within the Development Area, the applicant has proposed an urban, commercial mixed-use town center district near the intersection of El Centro Road and West El Camino Avenue surrounded by neighborhoods. The Development Area includes 9,356± dwelling units and 3,096,245± square feet of commercial uses, with three K-8 school sites, one high school site, and several parks (see **Table NOP-1**). A 10.0± acre urban farm site is proposed on property owned by the Los Rios Community College District that is envisioned to be a 16.0± vocational training campus. Other amenities include trail networks, a greenbelt and urban farm corridor, and a canal system that will all encourage pedestrian and bicycle use by providing connections between neighborhoods.

**PROPOSED SERVICES:**

Schools

The Project is located within the Natomas Unified School District (NUSD). There are three proposed K-8 schools at 16.0± acres each, one 79.3± acre high school, and a 16.0± acre vocational training

campus. The K-8 schools are located so that they are within walking and biking distance of future students, and are adjacent to parks to allow for shared use of green space. The high school and vocational training campus are located on sites already owned by NUSD and the Los Rios Community College District, respectively.

Parks and Open Space

The Project area is not currently within the boundaries of any recreation or park district. Parks are distributed throughout the Project area, within neighborhoods to be within convenient walking distance of future residents, and adjacent to school sites to allow for shared use. The town center district will include an “activated median” and may include small plazas or squares associated with adjacent high-density development, and a larger 25.8± acre park is located directly west of the town center district.

The greenbelt and urban farm corridors provide connections throughout the Project, with trails through the landscaped corridors connecting between neighborhoods and to spaces targeted for urban farming. Amenities placed along these corridors could include raised planter beds to allow gardening by local residents, sheds for tools, greenhouses, meeting rooms and/or an outdoor demonstration kitchen. A 10.0± acre urban farm is proposed to be located next to the envisioned Los Rios Community College vocational training campus. This urban farm will allow for the production of crops and provides a place where students could have test plots and study agricultural methods.

The Westside Canal is centrally located and connects north-south through the Project. It is proposed to be approximately 1-mile long with pedestrian and bike trails on either side, and front-on architecture. It will be similar to “Amsterdam-style” canals, and could provide recreational opportunities on the water with kayaks, canoes, rowboats, water taxis, etc.

Open space is proposed along the western edge of the Development Area as a buffer between existing agricultural residential and agricultural properties and the proposed housing. The open space corridor is proposed to be 30- to 40-feet in width, planted with native vegetation and trees, and will include a hiking/biking trail to facilitate connectivity and access of the area. This corridor will be located over the top of an underground Natomas Central Mutual Water Company water line.

The operation and maintenance of these facilities has yet to be determined, but may include the creation of a new recreation and park district, community service area (CSA), and/or community service district (CSD).

Fire Protection

The Project is located within the boundaries of the Natomas Fire Protection District. Although it is not within the City of Sacramento’s jurisdiction, fire protection and prevention services are currently provided by the City’s Fire Department through a contract with the Natomas Fire Protection District. The City’s Fire Station 43, at 4201 El Centro Road, is the closest station to the Project area and is located approximately 2 miles north of the town center district.

Water Supply

The Project area is currently served by the Natomas Central Mutual Water Company (NCMWC) with agricultural water drawn from the Sacramento River from existing pump stations located outside

the 2,066± acre Project area to the northwest. Additionally, the Project area is located within the City of Sacramento's American River Place of Use. Domestic water required to serve the Project may be provided through one of the following three alternatives:

- Alternative No. 1 – NCMWC via City of Sacramento. NCMWC has water rights that could be utilized if converted from agricultural use to municipal and industrial use. NCMWC water would be conveyed via the Sacramento River to the City's intake system at the Matsui Waterfront Park or other location for treatment. Treated water would then be conveyed via existing City infrastructure to the Project.

- Alternative No. 2 – NCMWC with Onsite Treatment. Similar to Alternative No. 1, NCMWC water rights would be converted. NCMWC water would be conveyed via existing and proposed facilities to the Project area for treatment. This alternative would require a new domestic water treatment plant.

- Alternative No. 3 – Utilize Place of Use Water. Utilize excess water rights held by the City of Sacramento. Delivery of City treated water to the Project would be by existing City infrastructure. The anticipated Project water use is approximately 3% of the City's unused available water supply.

The Project would require a retailer to deliver treated water. The retailer would own, operate, and maintain the transmission and distribution facilities. The retailer is anticipated to be one of the following three options:

- City of Sacramento - Department of Utilities

- Sacramento County Water Agency through an establishment of a water supply zone

- Creation of an independent water district or annexation to an existing water district

Land uses that do not require treated water, including landscape corridors, parks, and the Westside Canal may be able to use existing NCMWC water as a potential alternative water source for irrigation and make-up water.

Sewer

The project is partly within the Sacramento Regional County Sanitation District (Regional San) and the Sacramento Area Sewer District (SASD) boundaries. Existing sewer conveyance infrastructure borders the Project area to the north and traverses through the Project area on El Centro Road to San Juan Road, then east on San Juan Road to a regional pump station operated by Regional San located northeast of the I-80/I-5 interchange. It is anticipated that this regional facility will provide sewer service to the Project. The existing sewer infrastructure within San Juan Road has some available capacity and the remaining development flows will gravity flow to a new on-site pump station that will convey wastewater to Regional San's existing pump station via a force main within the San Juan Road right-of-way.

**PROJECT OBJECTIVES:**

The primary objectives for the Project as submitted by the applicant are outlined below:

1. Formulate a specific plan and related land use planning documents and regulatory approvals for the Project area as a means of expanding the USB and UPA in an orderly manner and accommodating the County's share of future regional population growth.

2. Create a land use plan that satisfies County policies, regulations, and expectations, as defined in the General Plan, including Policies LU-114, LU-119, and LU-120.

3. Provide a comprehensively planned, high quality, large-scale, residential-based community in northwestern Sacramento County, directly northwest of the City of Sacramento, with a balanced mix of uses, employment opportunities, a wide variety of housing types, park and open space, and supporting public and quasi-public uses.

4. Develop a master-planned community that can be efficiently served by existing infrastructure or proposed infrastructure that would encourage logical, orderly development and would discourage leapfrog or piecemeal development and sprawl.

5. Provide residential housing within five miles of the existing job centers of downtown Sacramento and West Sacramento, as well as in close proximity to newly developing or proposed job centers.

6. Create a development that has an overall positive economic impact on Sacramento County and achieves a neutral to positive fiscal impact on the County's finances and existing ratepayers.

7. Create a community that can be logically and efficiently phased to allow the orderly build-out of the community.

8. Provide a safe and efficient circulation system that interconnects land uses and promotes pedestrian and bicycle circulation and transit options that will encourage non-vehicular trips, thereby reducing vehicle miles traveled (VMT).

9. Incorporate parks and open space, including an urban farm-greenbelt and canal, into the project design in a manner that provides community connectivity and encourages walking and bicycle use.

10. Make efficient use of development opportunity as the project site is bordered on three sides by existing or planned urban development.

11. Plan for enough units to provide housing choices in varying densities to respond to a range of market segments, including opportunities for rental units and affordable housing, and significant commercial uses, consistent with the General Plan and Housing Element.

12. Design a land use plan where the development footprint avoids impacts to wetland resources to the extent feasible.

13. Develop a specific plan that respects existing agricultural land uses and operations to the west of the proposed Development Area.

14. Provide for development that meets the seven identified SACOG Blueprint principles, including provision of transportation choice, compact development, mixed use development, housing choice and diversity, use of existing assets, natural resource conservation, and quality design.

15. Develop the Project and any associated on- and/or off-site mitigation to complement the Natomas Basin Habitat Conservation Plan and the Metro Airpark Habitat Conservation Plan.

16. Designate open space preserves along the south side of Fisherman's Lake Slough or along the West Drainage Canal that provide natural buffer to these features, and along the westerly edge of the proposed Development Area to provide a transition between residential and agricultural designations to the west, which will provide a regional benefit for habitat, resources, and open space amenities.

17. Balance development with resource protection in an inter-connected, permanent open space.

18. Create multi-functional habitat within open space corridors that provide on-site habitat and contribute to water quality.

**REQUESTED ENTITLEMENTS:**

The Project would require the following entitlements:

1. A General Plan Amendment to expand the USB and UPA to include the 1,532± acre Development Area within the 2,066-acre Project area (see **Plate NOP-3**). The 534± acre Ag Buffer Area, located west of the Development Area, which is mostly agricultural-residential homes inside of the southwestern boundary, would remain outside of the UPA and USB, providing a transition to the Garden Highway.

2. A General Plan Amendment to amend the Land Use Diagram to change the land use designations in the Project area from: Agricultural Cropland (1,858.3± acres), Agriculture Residential (97.0± acres), Recreation (58.8± acres), and Commercial and Offices (52.2± acres); to Low Density Residential (851.3± acres), Medium Density Residential (46.0± acres), High Density Residential (29.7± acres), Commercial and Office (57.4± acres), Mixed Use (101.2± acres), Public/Quasi-Public (156.3± acres), Recreation (323.1± acres), Agricultural Cropland (415.5± acres), and Agricultural Residential (85.8± acres) (see **Plate NOP-4**).

3. A General Plan Amendment to amend the Transportation Plan to include the roadway system as proposed in the Project area (see **Plate NOP-5**).

4. An amendment to the Sacramento County Bicycle Master Plan, a policy document of the General Plan, to include the bikeway system as proposed in the Project area (see **Plate NOP-6**).

5. A General Plan Amendment for text amendments to align County policies in various General Plan Elements regarding development in the Natomas Joint Vision Area.

6. A Zoning Ordinance Amendment to adopt the Upper Westside Special Planning Area (SPA), and rezone the 291.2± acres of property controlled by the applicant from AG-40 to SPA (see **Plate NOP-7**). Properties not controlled by the applicant will retain their existing zoning until non-participating property owners elect to submit a rezoning application.

7. Adopt the Upper Westside Specific Plan document to establish land use, zoning, and development standards for the Very Low Density Residential VLDR (160.6± acres), Low Density Residential LDR (431.5± acres), Low Medium Density Residential LMDR (138.6± acres), Medium Density Residential MDR (62.5± acres), High Density Residential HDR (36.4± acres), Very High Density Residential (22.6± acres), Commercial Mixed Use CMU (83.2± acres), and Employment/Highway Commercial E/HC (52.9± acres).

8. Adopt an Urban Services Plan that discusses in detail the plan for sheriff, fire, library and other public services. This document may be summarized by the appropriate sections of the Specific Plan.

9. Adopt an Affordable Housing Strategy that discusses the plan for the provision of moderate, low, and very-low income housing. This document may be summarized by the appropriate sections of the Specific Plan.

10. Adopt a Water Supply Master Plan for the 1,532± acre Development Area within the 2,066-acre Project area.

11. Approve a Water Supply Assessment (WSA) for the 1,532± acre Development Area within the 2,066-acre Project area.

12. Adopt a Public Facilities Financing Plan for the 1,532± acre Development Area within the 2,066-acre Project area.

13. Adopt a Reimbursement Fee so that the applicant is reimbursed for the cost to prepare and process the Project, including a Specific Plan and EIR, by non-participating property owners when they elect to submit development applications.

14. Adopt a Development Agreement for the applicant's properties located within the 1,532± acre Development Area within the 2,066-acre Project area.

In addition to the above entitlements, separate Service District Annexation requests for the Project area are proposed to include:

- Annexation to County Service Area 10 (CSA-10) or the creation of a new CSA. (Note: A separate subsequent action may be required by the Sacramento County Board of Supervisors to establish a Benefit Zone to implement funding and service provision.)

- Annexation to Sacramento Regional County Sanitation District (Regional San).

- Annexation to Sacramento Area Sewer District (SASD).

**ENVIRONMENTAL/LAND USE SETTING:**

The Project area is bounded on three sides by the City of Sacramento and is mostly agricultural with large parcels devoted to growing crops. General Plan land use designations for the Project consist of: Agricultural Cropland (1,858.3± acres), Agricultural Residential (97.0± acres), Recreation (58.8± acres), and Commercial and Offices (52.2± acres).

Well known agriculturally-related uses include Goblin Gardens Pumpkin Patch at Bastiao Farms and Perry's Garden. Agricultural residential homes are located inside the northeastern boundary near El Centro Road and inside the southwestern boundary along Garden Highway. Commercial uses located near the intersection of El Centro Road and West El Camino Avenue include a truck stop, gas stations, restaurants, hotels, self-storage, construction equipment sales, and union offices. The Natomas Unified School District and the Los Rios Community College District own two vacant parcels within the Project area. Finally, a radio broadcast tower is located in the northern part of the Project and a television broadcast tower is located within the agricultural residential area along the southwestern boundary.

The Project area is considered agricultural land in the Natomas Basin Habitat Conservation Plan (NBHCP) and the Metro Air Park Habitat Conservation Plan (MAPHCP). The NBHCP and MAPHCP are supporting documents for federal Endangered Species Act Section 10(a)(1)(B) and State Fish & Game Code Section 2081 permits. Sacramento County is not a party to either of these Habitat Conservation Plans (HCPs). The HCPs limit urban development in their Permit Areas to a combined total of 17,500 acres, (the City of Sacramento (8,050 acres), Sutter County (7,467 acres), and Metro Air Park in Sacramento County (1,983 acres)).

**PROBABLE ENVIRONMENTAL EFFECTS/EIR FOCUS:**

The analysis in the EIR will describe existing conditions, describe the legal and regulatory framework relevant to the Project, describe standards of significance to be used in analysis, and describe analysis methodologies. A review of the Project and of the environmental resources in the study area has resulted in the identification of potential categories of environmental effect. The descriptions below are not exhaustive, and other sections and discussions may be included if further research indicates that their inclusion is warranted. As the analyses progress and the extent of impacts to the categories is determined, appropriate CEQA alternatives will be included for analysis.

<u>Aesthetics</u>

The proposed Development Area will be analyzed for its effects on the views from surrounding properties and roadways.

<u>Agricultural Resources</u>

Areas of active agricultural use, designated agricultural lands, prime farmland soils, and Williamson Act contract land will be identified and analyzed within and adjacent to the Project area.

<u>Air Quality</u>

Project-related emissions analyzed may include toxic air contaminants, ozone precursors, and particulates. The analysis will include discussions of emissions resulting from construction-related activities and emissions resulting from operational activities of the completed Project.

Biological Resources

The Project will be analyzed to identify areas where proposed changes may affect biological resources. The analysis will discuss impacts to general wildlife populations and habitats, but will focus on special-status species and particularly sensitive habitats, including wetlands. The Project will also be analyzed to determine if it would conflict with the provisions of an adopted HCP or other approved local, regional, State or federal plan for the conservation of habitat.

Climate Change

Project-related greenhouse gas emissions will be quantified and analyzed for the cumulative impacts to climate change. The probable impacts to the Project as a result of climate change will also be examined.

Cultural/Historical Resources

The Project will be analyzed to identify areas where proposed changes may impact cultural and historical resources, including tribal cultural resources.

Geology, Soils, and Mineral Resources

Underlying soil types and suitability will be examined in the Development Area where urban uses are proposed. Erosion potential will also be considered.

Hazards and Hazardous Materials

Hazardous materials sites, if any, will be identified in the vicinity of the proposed Development Area. Project compatibility with any existing hazardous materials sites will be examined.

Hydrology and Water Quality

Areas of potential flooding will be identified and drainage patterns will be examined within the watersheds affected by the Project. The Project will be analyzed for impacts to the existing hydrologic environment and vice-versa. Agencies involved with flood control issues will be consulted. These may include, but are not limited to the California State Department of Water Resources, the Central Valley Flood Protection Board (CVFPB), the Sacramento Area Flood Control Agency (SAFCA), Reclamation District 1000 (RD-1000) and the Sacramento County Department of Water Resources. The potential impacts of the Project on water quality will also be examined, which includes construction-related impacts (e.g., erosion of exposed soil) and operational impacts (e.g., use of pesticides and fertilizers).

Land Use

The Project will be examined to determine consistency with land use policies/ordinances/plans that have been adopted in order to avoid environmental effects. The Project's impact relative to the planned and existing land use environment will also be disclosed. The EIR will include analysis of the Project's compatibility with the Sacramento International Airport Land Use Compatibility Plan and applicable FAA regulations, policies, and guidance for land use decisions that have the potential to affect airport operations. The EIR will include analysis of potential hazardous wildlife attractants associated with the proposed land uses.

Noise

Existing and proposed uses with the potential to generate significant noise will be analyzed, which will include modeling of noise generated by transportation sources.

Public Services

The Project will be analyzed for its compatibility with public services and to determine what may be required to extend service to the Project. Services analyzed may include but are not limited to schools, park services, libraries, fire protection, and police protection.

Public Utilities

The Project will be analyzed for its compatibility with public utilities and to determine what may be required to extend service to the Project. Utilities analyzed may include but are not limited to water supply, sewer service, and energy services.

Transportation

A Transportation Analysis will be prepared to examine the impacts of the Project on VMT in compliance with Senate Bill 743. A Local Transportation Analysis (LTA) will also be prepared to examine the Project's effects on area roadways as well as transit and bicycling and pedestrian modes of transportation. However, the LTA is not required to be part of the CEQA document.

**INTENDED USES OF THE EIR:**

The Sacramento County Planning Commission and the Board of Supervisors will use the information contained in the EIR to evaluate the Project and render a decision to approve or deny the requested entitlements. Responsible and other agencies, including but not limited to those listed below, may also use the EIR for their own discretionary approvals associated with the Project.

- Federal Clean Water Act Section 404 Permit (U.S. Army Corps of Engineers)
- Federal Endangered Species Act Section 7 or 10 Consultation (U.S. Fish and Wildlife Service)
- Federal Clean Water Act Section 401 Water Quality Certification (Regional Water Quality Control Board – Central Valley Region)
- California Endangered Species Act Incidental Take Permit (California Department of Fish and Wildlife)
- California Fish and Game Code Section 1602 Streambed Alteration Agreement (California Department of Fish and Wildlife)
- Federal Clean Water Act Section 402 National Pollutant Discharge Elimination System Permit (Regional Water Quality Control Board – Central Valley Region)
- Reclamation Board
- State Lands Commission

- California Department of Transportation
- Sacramento Local Agency Formation Commission (LAFCO) Service District Annexations
- Sacramento Area Flood Control Agency (SAFCA)
- Sacramento Metropolitan Air Quality Management District
- Sacramento County Water Agency (SCWA)
- Sacramento Area Sewer District (SASD)
- Sacramento Regional County Sanitation District (Regional San)
- Natomas Unified School District
- Los Rios Community College District
- Sacramento Municipal Utilities District (SMUD)
- Pacific Gas and Electric Company (PG&E)
- Natomas Central Mutual Water Company

(1) Net acreage based on Preliminary Land Use Plan generated in GIS/AutoCAD by Wood Rodgers March 2020. This plan is subject to change. Arterial and collector roads, and landscape corridors as shown on map, are netted out.

(2) Estimated population calculated utilizing 3.0 persons per household (pph) for single-family and 2.5 pph for multi-family (HDR and higher). This is a preliminary estimate and subject to change.

(3) The 1.2 acre CMU site located southwest of the town center is intended for a special use (e.g. fire station, sheriff sub-station, church, day-care, etc.) and therefore was not allocated residential units.

(4) The AR (Agricultural Residential) and AG (Agricultural Cropland) areas are not included in proposed 1,532-acre Development Area or the UPA / USB Expansion request. It is assumed the "Ag Buffer" area will remain as is and no units are allocated.

The Preliminary Land Use Plan may change based on input received during the specific plan preparation, detailed engineering studies, environmental analysis, and other factors.

**Re: 2020100069, Upper Westside Specific Plan Project, Sacramento County**

Dear Mr. Taylor:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements**. If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

**Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws**.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

**1.** Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

**2.** Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

**3.** Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

**4.** Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

**5.** Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

**6.** Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

**7.** Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

**a.** The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

**b.** A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

**8.** Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

**9.** Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

**10.** Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

**a.** Avoidance and preservation of the resources in place, including, but not limited to:

**i.** Planning and construction to avoid the resources and protect the cultural and natural context.

**ii.** Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

**b.** Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

**i.** Protecting the cultural character and integrity of the resource.

**ii.** Protecting the traditional use of the resource.

**iii.** Protecting the confidentiality of the resource.

**c.** Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

**d.** Protecting the resource. (Pub. Resource Code §21084.3 (b)).

**e.** Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

**f.** Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

**11.** Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

**a.** The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

**b.** The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

**c.** The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

**1.** Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).

**2.** No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.

**3.** Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).

**4.** Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:

- **a.** The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
- **b.** Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

**1.** Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:

- **a.** If part or all of the APE has been previously surveyed for cultural resources.
- **b.** If any known cultural resources have already been recorded on or adjacent to the APE.
- **c.** If the probability is low, moderate, or high that cultural resources are located in the APE.
- **d.** If a survey is required to determine whether previously unrecorded cultural resources are present.

**2.** If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.

- **a.** The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
- **b.** The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

**3.** Contact the NAHC for:

**a.** A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.

**b.** A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

**4.** Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

**a.** Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.

**b.** Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.

**c.** Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Nancy.Gonzalez-Lopez@nahc.ca.gov.

Sincerely,

Nancy Gonzalez-Lopez
Cultural Resources Analyst

**To:** PER-CEQA <CEQA@saccounty.net>
**Subject:** Notice of Preparation (NOP) of an Environmental Impact Report for the Upper Westside Specific Plan project

**EXTERNAL EMAIL:** If unknown sender, do not click links/attachments.

TO: Todd Smith, Acting Environmental Coordinator

I just received the email regarding the Notice of Preparation (NOP) of an Environmental Impact Report for the Upper Westside Specific Plan project.

I have two concerns about the project, which will greatly affect those of us who live on the Garden Hwy opposite the project, as well as everyone in the west Natomas area.

1. The plans continue to show street access from the project to the Garden Hwy around one mile south of San Juan Road. This is a very bad idea inasmuch as the Garden Hwy is a substandard width road with no shoulders, on top of a levy. I live a little south of San Juan Road on the Garden Hwy and cars have run off the road into my front yard fence twice, and have once run off the road down the levy opposite my home, taking out a quite substantial mailbox! All three times the cars had to be removed with tow trucks. The ingress and egress from the project must only be to a widened San Juan Road and a widened El Central Road, and not to the Garden Hwy anywhere. Not anywhere on the Garden Hwy!
2. Southbound El Central Road backs up around 7/8 of a mile almost to San Juan Road in morning rush hours (pre-Covid-19) as the existing road and street structure, including on and off ramps to I-80, are inadequate for the existing level of traffic. This project must not be approved without including extensive, massive improvements to the transportation infrastructure in the adjacent areas. For example, at a minimum widening the overpass of West El Camino Avenue over I-80 and widening all of West El Camino to a minimum of two through lanes in each direction, as well as the same for El Central Road and San Juan Road. Nice text about public transportation or other attempts to minimize this problem, if taken seriously and allow the project to go forward absent adequate accompanying transportation infrastructure (for vehicles) improvements, will very significantly affect the quality of life of everyone in the west Natomas area for the foreseeable future as ingress and egress to the entire area during rush hours will be a nightmare! Actually a much worse nightmare than it already is!

Thanks for your consideration. I am looking forward to reading about realistic, significant improvements to the streets and freeway intersections to accompany the project, in the Environmental Impact Report.

NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT (EIR) FOR UPPER WESTSIDE SPECIFIC PLAN – DATED OCTOBER 5, 2020 (STATE CLEARINGHOUSE NUMBER: 2020100069)

Mr. Taylor:

The Department of Toxic Substances Control (DTSC) received a Notice of Preparation of an Environmental Impact Report (EIR) for the Upper Westside Specific Plan (Project). The Lead Agency is receiving this notice from DTSC because the Project includes one or more of the following: groundbreaking activities, work in close proximity to a roadway, work in close proximity to mining or suspected mining or former mining activities, presence of site buildings that may require demolition or modifications, importation of backfill soil, and/or work on or in close proximity to an agricultural or former agricultural site.

DTSC recommends that the following issues be evaluated in the EIR. Hazards and Hazardous Materials section:

1. The EIR should acknowledge the potential for historic or future activities on or near the project site to result in the release of hazardous wastes/substances on the project site. In instances in which releases have occurred or may occur, further studies should be carried out to delineate the nature and extent of the contamination, and the potential threat to public health and/or the environment should be evaluated. The EIR should also identify the mechanism(s) to initiate any required investigation and/or remediation and the government agency who will be responsible for providing appropriate regulatory oversight.
2. Refiners in the United States started adding lead compounds to gasoline in the 1920s in order to boost octane levels and improve engine performance. This practice did not officially end until 1992 when lead was banned as a fuel additive in California. Tailpipe emissions from automobiles using leaded gasoline

contained lead and resulted in aerially deposited lead (ADL) being deposited in and along roadways throughout the state. ADL-contaminated soils still exist along roadsides and medians and can also be found underneath some existing road surfaces due to past construction activities. Due to the potential for ADL-contaminated soil DTSC, recommends collecting soil samples for lead analysis prior to performing any intrusive activities for the project described in the EIR.

3. If any sites within the project area or sites located within the vicinity of the project have been used or are suspected of having been used for mining activities, proper investigation for mine waste should be discussed in the EIR. DTSC recommends that any project sites with current and/or former mining operations onsite or in the project site area should be evaluated for mine waste according to DTSC's 1998 Abandoned Mine Land Mines Preliminary Assessment Handbook (https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/11/aml_handbook.pdf).

4. If buildings or other structures are to be demolished on any project sites included in the proposed project, surveys should be conducted for the presence of lead-based paints or products, mercury, asbestos containing materials, and polychlorinated biphenyl caulk. Removal, demolition and disposal of any of the above-mentioned chemicals should be conducted in compliance with California environmental regulations and policies. In addition, sampling near current and/or former buildings should be conducted in accordance with DTSC's 2006 *Interim Guidance Evaluation of School Sites with Potential Contamination from Lead Based Paint, Termiticides, and Electrical Transformers* (https://dtsc.ca.gov/wpcontent/uploads/sites/31/2018/09/Guidance_Lead_Contamination_050118.pdf).

5. If any projects initiated as part of the proposed project require the importation of soil to backfill any excavated areas, proper sampling should be conducted to ensure that the imported soil is free of contamination. DTSC recommends the imported materials be characterized according to *DTSC's 2001 Information Advisory Clean Imported Fill Material* (https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/09/SMP_FS_Cleanfill-Schools.pdf).

6. If any sites included as part of the proposed project have been used for agricultural, weed abatement or related activities, proper investigation for organochlorinated pesticides should be discussed in the EIR. DTSC recommends the current and former agricultural lands be evaluated in accordance with DTSC's 2008 *Interim Guidance for Sampling Agricultural Properties (Third Revision)* (https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/09/Ag-Guidance-Rev-3-August-7-2008-2.pdf).

DTSC appreciates the opportunity to comment on the EIR. Should you need any assistance with an environmental investigation, please submit a request for Lead Agency Oversight Application, which can be found at: https://dtsc.ca.gov/wp-

content/uploads/sites/31/2018/09/VCP_App-1460.doc. Additional information regarding voluntary agreements with DTSC can be found at: https://dtsc.ca.gov/brownfields/.

If you have any questions, please contact me at (916) 255-3710 or via email at Gavin.McCreary@dtsc.ca.gov.

**Subject: Notice of Preparation of a Draft Environmental Impact Report for the Upper Westside Project Specific Plan – Control No. PLNP2018-00284**

Dear Mr. Smith,

The Sacramento Regional County Sanitation District (Regional San) and the Sacramento Area Sewer District (SASD) have the following comments regarding the Notice of Preparation of a Draft Environmental Impact Report for the Upper Westside Specific Plan.

Large areas of the Upper Westside Specific Plan (Project) are located outside of the Urban Services Boundary (USB) and the SASD and Regional San service areas. Regional San does not plan for areas located outside of the USB or SASD or Regional San service areas. To receive sewer service, the Project area must annex into both SASD and Regional San service areas. The Project applicant should work closely with the Sacramento Local Agency Formation Commission (https://saclafco.saccounty.net) to begin the annexation process.

Upon annexation, SASD will provide local sewer service for the Project area. Regional San provides conveyance from local trunk sewers to the Sacramento Regional Wastewater Treatment Plant (SRWTP) through large-diameter pipelines called interceptors.

In February 2013, the Regional San Board of Directors adopted the Interceptor Sequencing Study (ISS). The ISS updated the Regional San Master Plan 2000. The ISS is located on the Regional San website at www.regionalsan.com/ISS.

In January 2012, the SASD Board of Directors approved the most current SASD planning document, the 2010 System Capacity Plan Update (SCP). The SCP is located on the SASD website at www.sacsewer.com/devres-standards.html.

Regional San and SASD are not land-use authorities. Regional San and SASD plans and designs its sewer systems using information from land use authorities. Regional San and SASD base the projects identified within its planning documents on growth projections provided by these land-use authorities.

Onsite and offsite environmental impacts associated with extending sewer services to this development should be contemplated within this Environmental Impact Report.

The project proponents propose connecting the Project wastewater conveyance facilities to the Regional San New Natomas Pump Station (NNPS) through proposed and existing SASD facilities. The Upper Westside Specific Plan area was never intended to be provided service by SASD facilities, the NNPS, Lower Northwest Interceptor (LNWI) or the South River Pump Station (SRPS) during design of these facilities. Allowing connection of the Upper Westside Specific Plan area may result in significant capacity constraints within the existing SASD and Regional San system. These capacity constraints must be thoroughly addressed by the project proponent before receiving service from SASD and Regional San. Project proponents should work closely with both SASD and Regional San Development Services to ensure proper connection to any existing SASD or Regional San facilities.

The project proponent must complete a Sewer Master Plan that includes connection points and phasing information to assess the capacity of the existing sewer system to accommodate the additional flows generated by this project.

Customers receiving service from Regional San and SASD are responsible for rates and fees outlined within the latest Regional San and SASD ordinances. Fees for connecting to the sewer system recover the capital investment of sewer and treatment facilities that serves new customers. The SASD ordinance is located on the SASD website at www.sacsewer.com/ordinances.html, and the Regional San ordinance is located on their website at www.regionalsan.com/ordinance.

If you have any questions regarding this letter, please feel free to contact me at (916) 876-6104 or by email: armstrongro@sacsewer.com.

Sincerely,

*Robb Armstrong*

**SENT VIA EMAIL**

Todd Smith, Acting Environmental Coordinator
Office of Planning and Environmental Review
County of Sacramento
827 7th Street, Room 225, Sacramento, CA 95814

**Subject: Comment Letter for the Notice of Preparation of a Draft Environmental Impact Report for Upper Westside Specific Plan**

Dear Mr. Smith:

Thank you for the opportunity to comment on the Upper Westside Specific Plan's (Project) Notice of Preparation (NOP) of a Draft Environmental Impact Report. The Sacramento Metropolitan Fire District (District) has reviewed the document and has the following comments.

*Natomas Fire Protection District*

The Project is located within the boundaries of the Natomas Fire Protection District (NFPD) which is a dependent special district with no employees. Currently, the NFPD contracts with the City of Sacramento's Fire Department for fire protection and prevention services. Planning for fire protection and prevention services can be labor and capital intensive and often extends beyond project and jurisdictional boundaries. As such, the District has a vested interest in service delivery within Sacramento County and offers the following.

*Response Standards and Initial Deployment Study*

The District adopted a neighborhood-based fire company deployment plan, with response times, meeting national best practice recommendations. These response standards are in place to deliver good outcomes to keep serious, but still emerging, fires small and to rescue and treat the emergency's victims. For areas that have over 1,000 people per square mile (Suburban/Urban Areas), the District's standard 1st due travel time is four minutes with an overall reflex time of seven minutes. Given the Project's acreage and proposed land uses, the proposed development fits the District's Suburban/Urban Area response model. Additionally, multiple units are needed to quickly control building fires. The District's performance standard for an Effective Response Force to a building fire incident is to deliver 3 engines, 1 ladder truck and 1 battalion chief and have all the units arrive at the incident within 8 minutes travel time.

The District uses deployment studies and a gap analysis to anticipate the number and location of new fire stations that will be required to serve the Project given the 1st Due and 1st Alarm response requirements. The initial deployment study indicates a new station will be needed to meet the 1st Due response requirements for the southern portion of the Project. The northern portion of the Project area will also be served by the City of Sacramento's existing station #43.

- The NOP depicts a potential fire station location on a 1.2 acre CMU site southwest of the town center. At the earliest convenience please forward the proposed street network shapefiles to the District to ensure adequate response coverage.

*Fire Service*

Based on the proposed land use, the District estimates the Project could generate approximately 1,250 emergency calls per year at full buildout. Additionally, given the large amount of wetland preserve and urban farm land uses, the District anticipates the need for wildland fire protection. Based on this information, 1st Due Response for the Project would include:

- 1 Structural Engine Company (full time assignment)
- 1 Wildland Fire Engine (cross-staffed by structural engine company)
- 1 Medic Company (full time assignment)

*Station Criteria, Lot Size and Timing*

To meet the District's 1st Due and Effective Response Force standards, the District requires the new station to meet the following criteria:

- 3 Bay:8 Bed Station
- 2 acre site

District policy requires new stations to be operational by the time the Project's population density exceeds 1,000 people per square mile outside of the 4 minute response time from an in-service station. In future documents, please describe/depict Project phasing.

If you have any questions, please feel free to contact me at (916) 859-4517 or via email at frye.jeff@metrofire.ca.gov.

Sincerely,

Jeff Frye
Chief Development Officer

**Upper Westside Project – Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR)**

Dear Mr. Smith,

Thank you for including the California Department of Transportation (Caltrans) in the review process for the project referenced above. Caltrans' new mission, vision, and goals signal a modernization of our approach to California's transportation system. We reviewed this local development for impacts to the State Highway System (SHS) in keeping with our mission, vision, and goals for sustainability/livability/economy, and safety/health. We provide these comments consistent with the State's smart mobility goals that support a vibrant economy, and build communities, not sprawl.

The Upper Westside Project (Project) proposes general plan amendments, rezoning, and development of 2,066 acres in unincorporated Sacramento County. The Project will rezone most of the current agricultural land to a variety of uses including residential, commercial mixed-use, open space/public park, and agricultural. The Project is bounded by Interstate 80 (I-80) to the south, the West Drainage Canal to the east, Fisherman's Lake Slough to the north, and Garden Highway to the west. The center of the Project is located approximately 3.5 miles from downtown Sacramento and is outside of the Urban Policy Area (UPA) and Urban Services Boundary (USB) in the Natomas New Growth Area. Based on the information received, Caltrans provides the following comments.

**Traffic Operations / Forecasting**

On June 10, 2020 and October 21, 2020, Caltrans provided advance feedback to the Sacramento County Department of Transportation on the Transportation Analysis Scope of Work for the Project. Caltrans has no additional comments at this time on the Transportation Analysis Scope of Work. We would like to thank Sacramento County for the advance coordination. We look forward to continuing that effort.

**Hydraulics**

The Project will increase impervious surface runoff due to the proposed construction. Increases in peak runoff discharge for the 10-year and 100-year storm events to the State Right of Way and to Caltrans highway drainage facilities must be reduced to at or below the pre-construction levels. Any cumulative impacts to Caltrans drainage facilities arising from effects of development on surface water runoff discharge from the 10-year and 100-year storm events should be minimized through project drainage mitigation measures.

All grading and/or drainage improvements must maintain or improve existing drainage pathways and may not result in adverse hydrologic or hydraulic conditions within the State Right of Way or to Caltrans drainage facilities. The developer must maintain or improve existing drainage patterns and/or facilities affected by the proposed project to the satisfaction of the State and Caltrans. This may be accomplished through the implementation of storm water management Best Management Practices (i.e., detention/retention ponds or basins, sub-surface galleries, on-site storage and/or infiltration ditches, etc.). Once installed, the property owner must properly maintain these systems. The proponent/developer may be held liable for future damages due to impacts for which adequate mitigation was not undertaken or sustained.

Runoff from the Project that will enter the State Right of Way and/or Caltrans drainage facilities must meet all regional water quality control board water quality standards prior to entering the State Right of Way or Caltrans drainage facilities. Appropriate storm water quality Best Management Practices may be applied to ensure that runoff from the site meets these standards (i.e., is free of oils, greases, metals, sands, sediment, etc.). Once installed, the property owner must properly maintain these systems in perpetuity.

All work proposed and performed within the State Right of Way must be in accordance with Caltrans standards and require a Caltrans Encroachment Permit prior to commencing construction. For the encroachment permit application, provide drainage plans and calculations for the pre and post 10- and 100-year peak run-off

(quantities and velocities) and water quality treatment for all discharge to the State Right of Way and to Caltrans highway drainage facilities.

**Encroachment Permit / Right of Way Engineering**

As the Project moves forward, please note that an encroachment permit will be required from Caltrans for any work performed on the State Right of Way if not previously obtained. Specifically, an encroachment permit will be required if the Project will affect the areas of traffic operations, hydraulics, or environmental. All mitigations required by Caltrans must be addressed before issuance of an encroachment permit. To apply, a completed encroachment permit application, environmental documentation, and five sets of plans clearly indicating State Right of Way must be submitted to:

Hikmat Bsaibess
California Department of Transportation
District 3, Office of Permits
703 B Street
Marysville, CA 95901
(530) 755-6357

Please contact d3rwmaprequest@dot.ca.gov for any right of way map request/information needs.

Please provide our office with copies of any further actions regarding the Project. We would appreciate the opportunity to review and comment on any changes related to this development.

If you have any questions regarding these comments or require additional information, please contact Douglas Adams, Intergovernmental Review Coordinator, at (530) 741-4543 or by email at: douglas.adams@dot.ca.gov.

Sincerely,

Alexander Fong

Planning, Local Assistance, and Sustainability

# Central Valley Regional Water Quality Control Board

30 October 2020

Todd Smith
Office of Planning and Environmental Review
Sacramento County
827 7th Street
Sacramento, CA 95814

**COMMENTS TO REQUEST FOR REVIEW FOR THE NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT (EIR), UPPER WESTSIDE PROJECT, SCH#2020100069, SACRAMENTO COUNTY**

Pursuant to the State Clearinghouse's 5 October 2020 request, the Central Valley Regional Water Quality Control Board (Central Valley Water Board) has reviewed the *Notice of Preparation of a Draft Environmental Impact Report* for the Upper Westside Project, located in Sacramento County.

Our agency is delegated with the responsibility of protecting the quality of surface and groundwaters of the state; therefore our comments will address concerns surrounding those issues.

## I. Regulatory Setting

### Basin Plan

The Central Valley Water Board is required to formulate and adopt Basin Plans for all areas within the Central Valley region under Section 13240 of the Porter-Cologne Water Quality Control Act. Each Basin Plan must contain water quality objectives to ensure the reasonable protection of beneficial uses, as well as a program of implementation for achieving water quality objectives with the Basin Plans. Federal regulations require each state to adopt water quality standards to protect the public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act. In California, the beneficial uses, water quality objectives, and the Antidegradation Policy are the State's water quality standards. Water quality standards are also contained in the National Toxics Rule, 40 CFR Section 131.36, and the California Toxics Rule, 40 CFR Section 131.38.

The Basin Plan is subject to modification as necessary, considering applicable laws, policies, technologies, water quality conditions and priorities. The original Basin Plans were adopted in 1975, and have been updated and revised periodically as required, using Basin Plan amendments. Once the Central Valley Water Board has adopted a Basin Plan amendment in noticed public hearings, it must be approved by the State Water Resources Control Board (State Water Board), Office of Administrative Law (OAL) and in some cases, the United States Environmental

Protection Agency (USEPA). Basin Plan amendments only become effective after they have been approved by the OAL and in some cases, the USEPA. Every three (3) years, a review of the Basin Plan is completed that assesses the appropriateness of existing standards and evaluates and prioritizes Basin Planning issues. For more information on the *Water Quality Control Plan for the Sacramento and San Joaquin River Basins*, please visit our website:
http://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/

**Antidegradation Considerations**

All wastewater discharges must comply with the Antidegradation Policy (State Water Board Resolution 68-16) and the Antidegradation Implementation Policy contained in the Basin Plan. The Antidegradation Implementation Policy is available on page 74 at:
https://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/sacsjr_201805.pdf

In part it states:

*Any discharge of waste to high quality waters must apply best practicable treatment or control not only to prevent a condition of pollution or nuisance from occurring, but also to maintain the highest water quality possible consistent with the maximum benefit to the people of the State.*

*This information must be presented as an analysis of the impacts and potential impacts of the discharge on water quality, as measured by background concentrations and applicable water quality objectives.*

The antidegradation analysis is a mandatory element in the National Pollutant Discharge Elimination System and land discharge Waste Discharge Requirements (WDRs) permitting processes. The environmental review document should evaluate potential impacts to both surface and groundwater quality.

## II. Permitting Requirements

**Pesticide Discharge Permits**

If the proposed project involves the application of pesticides at, near, or over waters of the United States that could result in the discharge of pollutants, the proposed project will require coverage under one or more of the State Water Resources Control Board (State Water Board) National Pollutant Discharge Elimination System (NPDES) Pesticide Permits. For more information regarding the Pesticides Permits, visit the State Water Board website at:
https://www.waterboards.ca.gov/water_issues/programs/npdes/pesticides/

**Construction Storm Water General Permit**

Dischargers whose project disturb one or more acres of soil or where projects disturb less than one acre but are part of a larger common plan of development that in total disturbs one or more acres, are required to obtain coverage under the General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (Construction General Permit), Construction General Permit Order No. 2009-0009-DWQ. Construction activity subject to this permit includes clearing, grading, grubbing, disturbances to the ground, such as stockpiling, or

excavation, but does not include regular maintenance activities performed to restore the original line, grade, or capacity of the facility. The Construction General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP). For more information on the Construction General Permit, visit the State Water Resources Control Board website at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/constpermits.shtml

**Phase I and II Municipal Separate Storm Sewer System (MS4) Permits**[1]
The Phase I and II MS4 permits require the Permittees reduce pollutants and runoff flows from new development and redevelopment using Best Management Practices (BMPs) to the maximum extent practicable (MEP). MS4 Permittees have their own development standards, also known as Low Impact Development (LID)/post-construction standards that include a hydromodification component. The MS4 permits also require specific design concepts for LID/post-construction BMPs in the early stages of a project during the entitlement and CEQA process and the development plan review process.

For more information on which Phase I MS4 Permit this project applies to, visit the Central Valley Water Board website at: http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/municipal_permits/

For more information on the Phase II MS4 permit and who it applies to, visit the State Water Resources Control Board at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/phase_ii_municipal.shtml

**Industrial Storm Water General Permit**
Storm water discharges associated with industrial sites must comply with the regulations contained in the Industrial Storm Water General Permit Order No. 2014-0057-DWQ. For more information on the Industrial Storm Water General Permit, visit the Central Valley Water Board website at: http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/industrial_general_permits/index.shtml

**Clean Water Act Section 404 Permit**
If the project will involve the discharge of dredged or fill material in navigable waters or wetlands, a permit pursuant to Section 404 of the Clean Water Act may be needed from the United States Army Corps of Engineers (USACE). If a Section 404 permit is required by the USACE, the Central Valley Water Board will review the permit application to ensure that discharge will not violate water quality standards. If the project requires surface water drainage realignment, the applicant is advised to

[1] Municipal Permits = The Phase I Municipal Separate Storm Water System (MS4) Permit covers medium sized Municipalities (serving between 100,000 and 250,000 people) and large sized municipalities (serving over 250,000 people). The Phase II MS4 provides coverage for small municipalities, including non-traditional Small MS4s, which include military bases, public campuses, prisons and hospitals.

contact the Department of Fish and Game for information on Streambed Alteration Permit requirements. If you have any questions regarding the Clean Water Act Section 404 permits, please contact the Regulatory Division of the Sacramento District of USACE at (916) 557-5250.

**Clean Water Act Section 401 Permit – Water Quality Certification**

If an USACE permit (e.g., Non-Reporting Nationwide Permit, Nationwide Permit, Letter of Permission, Individual Permit, Regional General Permit, Programmatic General Permit), or any other federal permit (e.g., Section 10 of the Rivers and Harbors Act or Section 9 from the United States Coast Guard), is required for this project due to the disturbance of waters of the United States (such as streams and wetlands), then a Water Quality Certification must be obtained from the Central Valley Water Board prior to initiation of project activities. There are no waivers for 401 Water Quality Certifications. For more information on the Water Quality Certification, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/water_issues/water_quality_certification/

**Waste Discharge Requirements – Discharges to Waters of the State**

If USACE determines that only non-jurisdictional waters of the State (i.e., "non-federal" waters of the State) are present in the proposed project area, the proposed project may require a Waste Discharge Requirement (WDR) permit to be issued by Central Valley Water Board. Under the California Porter-Cologne Water Quality Control Act, discharges to all waters of the State, including all wetlands and other waters of the State including, but not limited to, isolated wetlands, are subject to State regulation. For more information on the Waste Discharges to Surface Water NPDES Program and WDR processes, visit the Central Valley Water Board website at:https://www.waterboards.ca.gov/centralvalley/water_issues/waste_to_surface_water/

Projects involving excavation or fill activities impacting less than 0.2 acre or 400 linear feet of non-jurisdictional waters of the state and projects involving dredging activities impacting less than 50 cubic yards of non-jurisdictional waters of the state may be eligible for coverage under the State Water Resources Control Board Water Quality Order No. 2004-0004-DWQ (General Order 2004-0004). For more information on the General Order 2004-0004, visit the State Water Resources Control Board website at: https://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2004/wqo/wqo2004-0004.pdf

**Dewatering Permit**

If the proposed project includes construction or groundwater dewatering to be discharged to land, the proponent may apply for coverage under State Water Board General Water Quality Order (Low Threat General Order) 2003-0003 or the Central Valley Water Board's Waiver of Report of Waste Discharge and Waste Discharge Requirements (Low Threat Waiver) R5-2018-0085. Small temporary construction dewatering projects are projects that discharge groundwater to land from excavation activities or dewatering of underground utility vaults. Dischargers seeking coverage

under the General Order or Waiver must file a Notice of Intent with the Central Valley Water Board prior to beginning discharge.

For more information regarding the Low Threat General Order and the application process, visit the Central Valley Water Board website at: http://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2003/wqo/wqo2003-0003.pdf

For more information regarding the Low Threat Waiver and the application process, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/waivers/r5-2018-0085.pdf

**Regulatory Compliance for Commercially Irrigated Agriculture**

If the property will be used for commercial irrigated agricultural, the discharger will be required to obtain regulatory coverage under the Irrigated Lands Regulatory Program.

There are two options to comply:

1. **Obtain Coverage Under a Coalition Group.** Join the local Coalition Group that supports land owners with the implementation of the Irrigated Lands Regulatory Program. The Coalition Group conducts water quality monitoring and reporting to the Central Valley Water Board on behalf of its growers. The Coalition Groups charge an annual membership fee, which varies by Coalition Group. To find the Coalition Group in your area, visit the Central Valley Water Board's website at: https://www.waterboards.ca.gov/centralvalley/water_issues/irrigated_lands/regulatory_information/for_growers/coalition_groups/ or contact water board staff at (916) 464-4611 or via email at IrrLands@waterboards.ca.gov.
2. **Obtain Coverage Under the General Waste Discharge Requirements for Individual Growers, General Order R5-2013-0100**. Dischargers not participating in a third-party group (Coalition) are regulated individually. Depending on the specific site conditions, growers may be required to monitor runoff from their property, install monitoring wells, and submit a notice of intent, farm plan, and other action plans regarding their actions to comply with their General Order. To enroll as an Individual Discharger under the Irrigated Lands Regulatory Program, call the Central Valley Water Board phone line at (916) 464-4611 or e-mail board staff at IrrLands@waterboards.ca.gov. To find information on Agricultural and Irrigated land Fees, visit the State Water Resources Control Board website at https://www.waterboards.ca.gov/resources/fees/water_quality/#agwaiver and click the California Code of Regulations (Fee Schedule) linked text.

**Limited Threat General NPDES Permit**

If the proposed project includes construction dewatering and it is necessary to discharge the groundwater to waters of the United States, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. Dewatering discharges are typically considered a low or limited threat to

water quality and may be covered under the General Order for *Limited Threat Discharges to Surface Water* (Limited Threat General Order). A complete Notice of Intent must be submitted to the Central Valley Water Board to obtain coverage under the Limited Threat General Order. For more information regarding the Limited Threat General Order and the application process, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/general_orders/r5-2016-0076-01.pdf

**NPDES Permit**

If the proposed project discharges waste that could affect the quality of surface waters of the State, other than into a community sewer system, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. A complete Report of Waste Discharge must be submitted with the Central Valley Water Board to obtain a NPDES Permit. For more information regarding the NPDES Permit and the application process, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/help/permit/

If you have questions regarding these comments, please contact me at (916) 464-0335 or Angela.Nguyen-Tan@waterboards.ca.gov.

Todd Taylor, Associate Planner
Sacramento County
345 N. El Dorado Street
Stockton, CA 95202

Dear Ms. Moore:

NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT FOR THE UPPER WESTSIDE SPECIFIC PLAN PROJECT (PLNP2018-00284), SCH# 2020100069

The Department of Conservation's (Department) Division of Land Resource Protection (Division) has reviewed the Initial Study and Notice of Preparation of an Environmental Impact Report for the Upper Westside Specific Plan Project (Project). The Division monitors farmland conversion on a statewide basis, provides technical assistance regarding the Williamson Act, and administers various agricultural land conservation programs. We offer the following comments and recommendations with respect to the project's potential impacts on agricultural land and resources.

Project Description

The project is a Specific Plan that encompass approximately 2,066 acres in the unincorporated Natomas community of Sacramento County, approximately 3.5 miles from downtown Sacramento. The Project is located outside of the County's Urban Policy Area (UPA) and Urban Services Boundary (USB), but is bounded on three sides by the City of Sacramento, bordering the communities of North and South Natomas. The Preliminary Land Use Plan envisions a community with a 1,532± acre development area and a 534± acre ag buffer area located west of the development area. The development area includes 9,356± dwelling units and 3,096,245± square feet of commercial uses, with three K-8 school sites, one high school site, and several parks.

The project site contains Prime Farmland as defined by the Department of Conservation's Farmland Mapping and Monitoring Program[1], and a portion of the site is enrolled in a Williamson Act contract.

[1] California Department of Conservation, Division of Land Resource Protection, Farmland Mapping and Monitoring Program, https://maps.conservation.ca.gov/DLRP/CIFF/

Department Comments

Although conversion of agricultural land is often an unavoidable impact under CEQA analysis, feasible alternatives and/or feasible mitigation measures must be considered. In some cases, the argument is made that mitigation cannot reduce impacts to below the level of significance because agricultural land will still be converted by the project, and therefore, mitigation is not required. However, reduction to a level below significance is not a criterion for mitigation under CEQA. Rather, the criterion is feasible mitigation that lessens a project's impacts. As stated in CEQA statue, mitigation may also include, "Compensating for the impact by replacing or providing substitute resources or environments, including through permanent protection of such resources in the form of conservation easements."[2]

The conversion of agricultural land represents a permanent reduction in the State's agricultural land resources. As such, the Department advises the use of permanent agricultural conservation easements on land of at least equal quality and size as partial compensation for the loss of agricultural land. Conservation easements are an available mitigation tool and considered a standard practice in many areas of the State. The Department highlights conservation easements because of their acceptance and use by lead agencies as an appropriate mitigation measure under CEQA and because it follows an established rationale similar to that of wildlife habitat mitigation.

Mitigation via agricultural conservation easements can be implemented by at least two alternative approaches: the outright purchase of easements or the donation of mitigation fees to a local, regional, or statewide organization or agency whose purpose includes the acquisition and stewardship of agricultural conservation easements. The conversion of agricultural land should be deemed an impact of at least regional significance. Hence, the search for replacement lands should not be limited strictly to lands within the project's surrounding area.

A source that has proven helpful for regional and statewide agricultural mitigation banks is the California Council of Land Trusts. They provide helpful insight into farmland mitigation policies and implementation strategies, including a guidebook with model policies and a model local ordinance. The guidebook can be found at:

http://www.calandtrusts.org/resources/conserving-californias-harvest/

Of course, the use of conservation easements is only one form of mitigation that should be considered. Any other feasible mitigation measures should also be considered.

[2] Public Resources Code Section 15370, Association of Environmental Professionals, 2020 CEQA, California Environmental Quality Act, Statute & Guidelines, page 284, https://www.califaep.org/docs/2020_ceqa_book.pdf

Conclusion

The Department recommends further discussion of the following issues:

- Type, amount, and location of farmland conversion resulting directly and indirectly from implementation of the proposed project.
- Impacts on any current and future agricultural operations in the vicinity; e.g., land-use conflicts, increases in land values and taxes, loss of agricultural support infrastructure such as processing facilities, etc.
- Incremental impacts leading to cumulative impacts on agricultural land. This would include impacts from the proposed project, as well as impacts from past, current, and likely future projects.
- Proposed mitigation measures for all impacted agricultural lands within the proposed project area.
- Potential contract resolutions for land in an agricultural preserve and/or enrolled in a Williamson Act contract.

Thank you for giving us the opportunity to comment on the Notice of Preparation of an Environmental Impact Report for the Upper Westside Specific Plan Project. Please provide this Department with notices of any future hearing dates as well as any staff reports pertaining to this project. If you have any questions regarding our comments, please contact Farl Grundy, Associate Environmental Planner via email at Farl.Grundy@conservation.ca.gov.

Sincerely,

Monique Wilber

November 2, 2020

Todd Smith, Acting Environmental Coordinator
Office of Planning and Environmental Review
827 7th Street, Room 225
Sacramento, CA 95814

Dear Mr. Smith:

Thank you very much for providing notice of the forthcoming Environmental Impact Report (EIR) for the Upper Westside Specific Plan.

As you know, the Natomas Unified School District would serve the proposed Specific Plan Area. We greatly appreciate the proactive outreach to the District, and the changes to the preliminary land use plan and Specific Plan application to set aside land for schools, factor in the specific types of schools that will serve the Specific Plan Area, and ensure that schools are appropriately spaced from one another and integrated into residential areas with parks and greenways. We need to insist that the land set aside for schools remains consistent with the California Department of Education's (CDE) requirements and evaluation of safety factors for a school site https://www.cde.ca.gov/ls/fa/sf/schoolsiteguide.asp. Factors the CDE evaluates include but are not limited to the school site's proximity to airports, high-voltage power transmission lines, hazardous air emissions within a quarter mile and proximity to pressurized gas or sewer lines. The District understands the complexities in planning for such a large area and diverse mix of land uses, and we would like to remain an active partner through development of the Specific Plan, preparation of the EIR, and implementation of the County's vision for Upper Westside.

We appreciate that schools are within biking and walking distance of future residences, which is the most important factor in ensuring that future students can access schools without the use of automobiles. There are also programmatic elements that can help promote walking and bicycling to school, including programs that could be adaptively managed over time to help reduce vehicle miles travelled (VMT) impacts of the Specific Plan, while also promoting safe and convenient pedestrian and bicycle travel to and from school.

As noted, we support integration of school sites in areas with parks and greenways. If school sites are to rely on adjacent parks for school recreational use, it will be important to address access, security, design, and maintenance related to shared-use parkland so that it may meet the needs of the adjacent schools, while also meeting the needs of the community.

Relative to the scope of analysis, the EIR should study impacts of residential development on school services and facilities, as well as impacts that can be caused when there are insufficient school sites in close proximity to students' homes. Such impacts may include greenhouse gas emissions, air quality effects, transportation noise impacts, and other impacts related to students not being able to safely and conveniently walk or bike to school, as well as parents driving relatively longer distances to get students to school. As noted above, we acknowledge and appreciate the efforts in preliminary planning to place school sites within close proximity of the homes they would likely serve – carrying these concepts through to the Specific Plan land use and transportation diagrams will help reduce these impacts.

The District is interested in using the County's EIR for analysis and mitigation of impacts related to future school sites within the Specific Plan Area. As such, we would encourage appropriate survey work to establish the environmental baseline in appropriate detail, along with comprehensive analysis and mitigation of all impacts associated with constructing and operating schools. While it is possible that the District will need to prepare site-specific studies in the future, we would like to start with the goal of using this environmental documentation to support District actions, appropriate school sites as well as issuance of any required permits for future schools, including encroachment permits and grading permits from the County.

As a part of the Specific Plan's implementation section or EIR mitigation, please include language requiring, as a condition of approval for projects developed under the Specific Plan, for the subject developer to enter into an agreement with the Natomas Unified District to fully mitigate and address the costs associated with housing students generated by the proposed development.

The District looks forward to coordinating with the County throughout this important planning process.

Sincerely,

Re: Notice of Preparation of DEIR for Upper West Side Specific Plan (PLNP2018-00284)

Dear Mr. Smith:

Thank you for the invitation to comment on the Upper West Side project proposal. SACOG's primary responsibility as the Metropolitan Planning Organization for the six county Sacramento region is the development and implementation of the Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS), a document that establishes transportation spending priorities throughout the region. The MTP/SCS must be based on an estimated land use pattern to be built over a 20+ year planning period, and it must conform with federal and state air quality regulations.

The focus of the MTP/SCS is on the intersection of land use and transportation: it identifies the region's strategies for meeting the regional greenhouse gas (GHG) emissions reduction target; establishes conformity with state and federal clean air act requirements; provides the foundation for the regional housing needs allocation and establishes a plan for housing the population of the region; considers the impact of the plan on regional resources, including financial, biological, agricultural and farming, etc.; and identifies a transportation network to serve the transportation needs of the region, and to reduce vehicle miles traveled (VMT) to, among other things, support achievement of the region's GHG emissions reduction target. For these reasons, the MTP/SCS provides a benchmark for considering the impacts of a project.

The foundation for the MTP/SCS land use forecast includes local government general plans, community plans, specific plans, and other local policies and regulations, and the Sacramento Region Blueprint. The Blueprint vision, based on the principles of smart growth, contributes to the development of the MTP/SCS by giving general direction on how the region should develop over time to curb sprawl, cut down on vehicle emission and congestion, and improve the quality of life for residents. Implementation of the Blueprint vision depends greatly on the efforts of cities and counties through local plans and projects. In support of city

and county efforts, SACOG regularly monitors and comments on projects in the region as they relate to implementation of the MTP/SCS and Sacramento Region Blueprint.

The Upper West Side project and the project area itself are not anticipated for development in either the MTP/SCS or the Blueprint. However, the Blueprint is not just a map, it is based on a set of smart growth principles. We're encouraged to see that the early goals and initial plans for the Upper Westside project include alignment with many of the principles contained in the Blueprint and the county's smart growth policy LU-120. We also understand that the project applicants are striving to design the Upper West Side project to exemplify excellent planning principles and be a model for new development. We appreciate and applaud that goal and hope these comments are useful in making the proposed project achieve that standard of excellence. We believe projects like this represent unique opportunities to examine how new growth can be planned in the region while also contributing to regional goals to reduce reliance on single-occupant automobiles, build in walking, bicycling and transit options from the ground up, and offer both housing and transportation choice to residents.

Throughout much of the Sacramento region, the capacity for growth in existing entitled lands far exceeds expected demand for new growth over the next twenty years. Because of this overabundance of entitled lands, it is critical that any new lands entitled for urban development be well thought out and fully implement Blueprint smart growth principles. Planning and development that fully implements the Blueprint principles is critical to allowing the Sacramento region to reducing vehicle miles traveled and greenhouse gas emissions. These principles are described in more detail below along with our initial comments on the proposed project.

**Transportation Choice**: There is a strong connection between land use patterns, travel behavior and air quality. Higher density housing and employment, locating jobs near housing, and providing strong connectivity in the design of the street and bicycle and pedestrian networks, all lead to increased walking, biking, and transit use, and shorten the length of auto trips. How a new growth area contributes to the region's vehicle miles traveled and greenhouse gas reduction goals is an important consideration in determining whether or not a project is consistent with the Blueprint.

The Upper West Side proposal discusses a commitment to travel options beyond single occupancy vehicles (SOV), including car share, micro-mobility, and walking/biking. The proposed bike network is comprehensive and includes both class 1 and 2 facilities throughout the project area. However, while the mixed use town center area is gridded with short block lengths, the area outside this grid, which will include over 3,675 units, appears to have longer block lengths and low intersection density, as identified in the project materials. This street and block design across the majority of the project area may promote auto-centric travel patterns and presents a challenge for alternative modes of transportation. The project should examine ways in which higher intersection density, traffic calming, or other design elements, could

encourage improved integration of non-auto modes across a greater proportion of the project area. Incorporating an internal circulation system that provides more separation of cars from bicycle and pedestrian traffic, such as shifting priority for vehicles to outer ring roads and prioritizing bicycles and pedestrians on the internal roadways by expanding the number of Class 1 facilities and converting Class 2 facilities to Class 4 cycle tracks, can encourage high use of walking and biking for local trips. Additionally, ensuring the proposed network of bike paths offer direct and front door access to destinations in the mixed use town center and other destinations throughout the project will increase the likelihood that walking, biking and other non-SOV modes are the most convenient choice for local trips.

While the project demonstrates strong proximity to existing jobs, with over 200,000 jobs within five miles of the project area, access to downtown is still challenging and largely auto-centric. The primary gateway to the project area will be El Camino Ave, with over half the trips coming into or out of the project, according to the conceptual traffic feasibility analysis. The I-80 interchange at El Camino and the 6-lane El Camino overpass are, as stated in the Project Description, "already experiencing congestion during peak hours" and will accommodate an additional 53,000 daily trips from the project. As such, while ensuring the proposed circulation plan creates fast and direct bicycle and pedestrian connections to amenities throughout the project area such as the town center, urban farm, parks, educational node, school sites, and the Westside Canal can facilitate good transportation choice for internal trips, the project may struggle to promote non-auto modes for trips in and out of the project area. Additionally, the high volume of traffic on El Camino will be funneled from six lanes immediately onto the "smart growth street" in the mixed use town center, which may present challenges to fostering a truly pedestrian and bike-friendly corridor. To better ensure traffic into and out of the project area is compatible with the goal of promoting travel choice, the county and project applicant could coordinate with the City of Sacramento and SACOG to identify measures that would provide safe and comfortable integration of non-auto modes, and potentially, local auto trips, into the surrounding transportation system. Some examples, though by no means an exhaustive list, could include ways to diffuse or calm traffic entering the town center, street design elements to provide additional comfort and protection for non-auto modes, strategic local street connections from the project to the street network of the surrounding communities. Further, to better demonstrate a commitment to encouraging transportation choice, the project could offer incentives and design elements that support micro-mobility options like bike and scooter share such as mobility hubs, memberships discounts, and integration of sufficient, secure, and attractive bike parking in convenient locations in front of priority destinations and throughout neighborhoods surrounding the town center.

The location also offers opportunity for transit access to employment centers. Existing and planned bus transit service provides connections from South Natomas, immediately across I-80 from the project location, to Downtown Sacramento, the regional's largest employment center, as well as connection via bus to the planned Green Line LRT extension from Downtown, Railyards and the River District into South and North Natomas. Extensions of existing or planned transit to the project, plus opportunities for new local transit within the project itself, should be explored.

In short, the project location has significant characteristics that would allow for the project to be a truly low-VMT and high alternative mode community. The standards applied to the project in terms of lowering vehicle miles traveled within Sacramento County and the region should be very high, and the target performance on VMT per capita for future project residents should be ambitious and well below the standard applied to other projects.

**Housing Choice and Diversity:** Offering a variety of housing options is critical to supporting residents of all ages and incomes. SACOG recently adopted cycle six of the Regional Housing Needs Assessment, which significantly increased the number of affordable, higher density, housing units the region needs to plan for. The MTP/SCS assumes that almost 74 percent of the new homes in the region are small-lot or attached homes. The region has a history and established pattern of constructing single-family homes on large lots, making it critical to plan for small-lot detached and attached housing at higher densities. The Upper Westside Preliminary Land Use Plan targets 2,560 large-lot single-family homes, 1,118 homes that could be small- or large-lot single-family homes, 2,418 attached homes, and 3,135 homes in the commercial mixed use district. If all the targeted homes are built as planned, the proposal will be at least 60 percent small-lot or attached homes. The concept of higher densities and mixed use in and around the town center is Blueprint supportive, but the extent to which this project will promote housing choice will depend upon whether the homes targeted in the mixed use district come to fruition. Vertical mixed use is a particularly challenging product to bring to market in a developing community and there is a potential risk that the mixed use district will develop as employment-only uses. Developing communities that seek to promote housing choice can look to increase the amount of land that allows for higher density multifamily housing and pursue policies and safeguards to prevent mixed use areas from developing exclusively as commercial or office.

While the specific plan for the Upper West Side includes a variety of housing types, most of this diversity is contingent upon the mixed use town center developing as planned. Outside of the town center, approximately 600 of the 941 residentially designated acres and over 2,500 units will be large-lot single-family neighborhoods, which lend themselves to being homogenous, expensive, and segregated. One way to provide more housing choice within neighborhoods of the plan would be to allow for more “missing middle” housing products, like fourplexes, garden apartments, and bungalow courts, wherever housing is allowed in the plan area. These types of housing products are more likely to facilitate economic integration and a diversity of households.

**Mixed Use Development:** Districts that have a mix of uses are efficient in their use of land and resources, but also function as local activity centers where people tend to walk or bike to destinations, use transit more frequently, and take shorter auto trips. The project’s mixed use town center is of central importance for encouraging non-auto modes as an attractive and convenient option for internal circulation and providing a diversity of housing products, particularly higher density housing, within the project area. The mixed use town center estimates 3,135 new units, making up approximately 34-percent of the planned housing units and the majority of the plan’s higher density housing. Maintaining a housing product mix in the

proposed Upper West Side Project that is in alignment with the Blueprint Vision and the MTP/SCS hinges on fully realizing the higher density homes proposed in mixed use town center.

While mixed use development that blends housing and commercial uses is crucial for many reasons, this type of development is particularly challenging to bring to market in new communities and risks being developed as solely commercial products. Further, the uncertain future of retail, made even more uncertain by the global COVID-19 pandemic, necessitates creating flexibility in our commercial products to make them more resilient in the face of an evolving economy.

The town center proposed in the project is ambitious and warrants measures that can help ensure it is developed as planned and remains successful into the future. Building communities in greenfield areas that seek to promote mixed use development may benefit from measures that ensure mixed use sites do not develop as auto-oriented, lower density, commercial-only uses. These measures may include, but are certainly not limited to, exploring parking maximums that are compatible with pedestrian scale design, triggers that limit commercial only buildings within the mixed use areas, and flexibility to allow for telework space, childcare, community space, or other revenue generating uses that complement adjacent housing, but do not rely on traditional retail.

**Compact Development and Natural Resources Conservation:** These two principles work together at both the neighborhood and the larger citywide scale. At a neighborhood level, environments that are more compactly built at pedestrian scale can encourage more walking, biking, and public transit use and shorter auto trips. Incorporating public-use open space (such as parks, town squares, trails, greenbelts) is an important contribution to the aesthetics and sense of community and also helps lead to these outcomes. The Upper Westside specific plan includes a variety of these features, including parks, trails, an agricultural greenbelt, and an urban canal. At a larger scale, these two principles call for urban growth expansion that is adjacent to existing developed lands, well planned, and conserves natural resources. Growing in a way that utilizes existing urbanized lands ensures more open space, including wildlife and plant habitat preservation, agricultural preservation, and open recreation areas. The compact footprint and growth pattern of the MTP/SCS assumes that only 34 percent of the new housing growth in the region happens in greenfield areas. The Upper Westside proposal would increase the percentage of development in greenfields, should it move forward. Additionally, because the project area is not anticipated for growth in the Blueprint or the MTP/SCS, it would convert more agricultural land to urban uses beyond what was analyzed as part of the Blueprint or MTP/SCS.

**Design for Quality** is the Blueprint Principle that relates not only to the attractiveness of buildings but also to street pattern and urban design of a development. A walkable street pattern is one of the most significant factors in reducing VMT for an area. A pedestrian-friendly street pattern and quality urban design encourages not only walking but also transit use. Other factors affecting walkability include the presence or absence of sidewalks, pedestrian amenities on the street, traffic volumes, presence or absence of crosswalks, treatment of pedestrians at signalized intersections, public spaces, and the orientation and proximity of buildings to the

street. The proposed Upper Westside project includes many smart growth principles in its design of the mixed use town center, where there is a tight street grid and buildings are oriented towards the street. These types of design principles can be further strengthened through strong policies in the specific plan itself and through objective design guidelines that ensure a pedestrian-oriented streetscape.

**Using Existing Assets:** It is important for urbanized areas to take advantage of existing public infrastructure and services and for local jurisdictions to ensure they can meet the needs of existing assets they plan for new growth and development that will create additional maintenance and operational costs. Most of the new growth projected in the MTP/SCS is in existing communities and aims to utilize and invest in existing infrastructure. The proposed Upper Westside project makes use of some existing infrastructure, but as a developing community in an area that is largely undeveloped, it will also require new roadways, utilities, and other infrastructure. The county should consider how phasing in of new development and the needs of newly added infrastructure fit within long term costs of upkeep. Further, to the extent feasible, new infrastructure is best planned with consideration of future reuse or adaptation in response to changing economic and environmental conditions.

The Upper West Side project is striving to follow many of the Blueprint design principles, but the project raises important policy questions for the region's implementation of the Blueprint. For example, the capacity for growth in existing entitled lands far exceeds expected demand over the next twenty years: collectively, the region's jurisdictions have entitled, or are in the process of entitling 2.5 times the region's projected need for the next 20 years. More than half of that capacity—387,000 units—is in greenfield areas that are on the edge of existing development.

Unincorporated Sacramento county has 100,000 of those new units of capacity in a dozen planned new growth areas (greenfields) that are either under construction, approved, or going through entitlement. How and when this regional capacity is phased and built out over time is critically important to the future economic and environmental health of the region. Dispersing growth incrementally over a larger number of developments and geographies without a phasing strategy creates challenges in meeting our shared goals of improving air quality, reducing greenhouse gas emissions, revitalizing our existing communities, and of funding the construction and maintenance of the public infrastructure needed to serve both existing and new communities.

Thank you for consideration of these comments. We look forward to working with the county on these issues as the Upper Westside Project moves forward.

Thank you,

James Corless
Executive Director

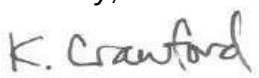
Subject: **Upper Westside Specific Plan / NOP / 2020100069**

Dear Mr. Smith:

The Sacramento Municipal Utility District (SMUD) appreciates the opportunity to provide comments on the Notice of Preparation (NOP) for the Upper Westside Specific Plan (Project, SCH 2020100069). SMUD is the primary energy provider for Sacramento County and the proposed Project area. SMUD's vision is to empower our customers with solutions and options that increase energy efficiency, protect the environment, reduce global warming, and lower the cost to serve our region. As a Responsible Agency, SMUD aims to ensure that the proposed Project limits the potential for significant environmental effects on SMUD facilities, employees, and customers.

It is our desire that the Project will acknowledge any impacts related to the following:



- Overhead and or underground transmission and distribution line easements. Please view the following links on smud.org for more information regarding transmission encroachment:
  - https://www.smud.org/en/Business-Solutions-and-Rebates/Design-and-Construction-Services
  - https://www.smud.org/en/Corporate/Do-Business-with-SMUD/Land-Use/Transmission-Right-of-Way
- Utility line routing
- Electrical load needs/requirements
- Energy Efficiency
- Climate Change
- Cumulative impacts related to the need for increased electrical delivery
- The potential need to relocate and or remove any SMUD infrastructure that may be affected in or around the project area

The information provided in the NOP states the Project will be analyzed for its compatibility with public utilities and to determine what may be required to extend service to the Project. It is SMUD's expectation the environmental impacts of any new onsite and offsite electric facilities needed to meet the electricity demands of the Upper Westside Specific Plan will be analyzed in the EIR.

SMUD would like to be involved with discussing the above areas of interest as well as discussing any other potential issues. We aim to be partners in the efficient and sustainable delivery of the proposed Project. Please ensure that the information included in this response is conveyed to the Project planners and the appropriate Project proponents.

Environmental leadership is a core value of SMUD, and we look forward to collaborating with you on this Project. Again, we appreciate the opportunity to provide input on this NOP. If you have any questions regarding this letter, please do not hesitate to contact me at 916.732.5063, or by email at Kim.Crawford@smud.org.

Sincerely,

Kim Crawford
Environmental Services Specialist

Subject: Upper Westside Specific Plan - Notice of Preparation
SCH# 2020100069

Dear Mr. Smith:

The California Department of Fish and Wildlife (CDFW) received and reviewed the Notice of Preparation (NOP) of an Environmental Impact Report (EIR) from Sacramento County for the Upper Westside Specific Plan (Project) in Sacramento County (the County) pursuant the California Environmental Quality Act (CEQA) statute and guidelines.[1] CDFW previously submitted comments in response to the County's request for comments on the Project's application to the County dated March 6, 2020.

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish, wildlife, plants and their habitats. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may need to exercise its own regulatory authority under the Fish and Game Code (Fish & G. Code).

**CDFW ROLE**

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the State (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a).). CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (*Id.*, § 1802.). Similarly, for purposes of CEQA, CDFW provides, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.

CDFW may also act as a Responsible Agency under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381.) CDFW expects that it may need to exercise

1 CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

regulatory authority as provided by the Fish and Game Code. As proposed, for example, the Project may be subject to CDFW's lake and streambed alteration regulatory authority. (Fish & G. Code, § 1600 et seq.) Likewise, to the extent implementation of the Project as proposed may result in "take" as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), the project proponent may seek related take authorization as provided by the Fish and Game Code.

## PROJECT DESCRIPTION SUMMARY

The Project is a Specific Plan that encompass approximately 2,066 acres in the unincorporated Natomas community of Sacramento County, approximately 3.5 miles from downtown Sacramento. The Project area is bounded by Interstate 80 to the south, the West Drainage Canal to the east, Fisherman's Lake Slough to the north, and Garden Highway to the west. The Project is located outside of the County's Urban Policy Area (UPA) and Urban Services Boundary (USB), but is bounded on three sides by the City of Sacramento, bordering the communities of North and South Natomas.

The Project's Preliminary Land Use Plan envisions a community with a 1,532± acre Development Area and a 534± acre Ag Buffer Area that is located west of the Development Area. Within the Development Area, the applicant has proposed an urban, commercial mixed-use town center district near the intersection of El Centro Road and West El Camino Avenue surrounded by neighborhoods. The Development Area includes 9,356± dwelling units and 3,096,245± square feet of commercial uses, with three K-8 school sites, one high school site, and several parks.

The Project description should include the whole action as defined in the CEQA Guidelines § 15378 and should include appropriate detailed exhibits disclosing the Project area including temporary impacted areas such as equipment stage area, spoils areas, adjacent infrastructure development, staging areas and access and haul roads if applicable.

As required by § 15126.6 of the CEQA Guidelines, the EIR should include appropriate range of reasonable and feasible alternatives that would attain most of the basic Project objectives and avoid or minimize significant impacts to resources under CDFW's jurisdiction.

## COMMENTS AND RECOMMENDATIONS

CDFW offers the comments and recommendations presented below to assist the County in adequately identifying and/or mitigating the Project's significant, or potentially significant, impacts on biological resources. The comments and recommendations are also offered to enable CDFW to adequately review and comment on the proposed Project with respect to impacts on biological resources. CDFW recommends that the forthcoming EIR address the following:

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

**Assessment of Biological Resources**

Section 15125(c) of the CEQA Guidelines states that knowledge of the regional setting of a project is critical to the assessment of environmental impacts and that special emphasis should be placed on environmental resources that are rare or unique to the region. To enable CDFW staff to adequately review and comment on the Project, the EIR should include a complete assessment of the flora and fauna within and adjacent to the Project footprint, with emphasis on identifying rare, threatened, endangered, and other sensitive species and their associated habitats. CDFW recommends that the EIR specifically include:

1. An assessment of all habitat types located within the Project footprint, and a map that identifies the location of each habitat type. CDFW recommends that floristic, alliance- and/or association-based mapping and assessment be completed following *The Manual of California Vegetation*, second edition (Sawyer et al. 2009). Adjoining habitat areas should also be included in this assessment where site activities could lead to direct or indirect impacts offsite. Habitat mapping at the alliance level will help establish baseline vegetation conditions.

2. A general biological inventory of the fish, amphibian, reptile, bird, and mammal species that are present or have the potential to be present within each habitat type onsite and within adjacent areas that could be affected by the Project. CDFW recommends that the California Natural Diversity Database (CNDDB), as well as previous studies performed in the area, be consulted to assess the potential presence of sensitive species and habitats. A nine United States Geologic Survey (USGS) 7.5-minute quadrangle search is recommended to determine what may occur in the region, larger if the Project area extends past one quad (see *Data Use Guidelines* on the Department webpage www.wildlife.ca.gov/Data/CNDDB/Maps-and-Data). Please review the website for information on how to access the database to obtain current information on any previously reported sensitive species and habitat, including Significant Natural Areas identified under Chapter 12 of the Fish and Game Code, in the vicinity of the Project. CDFW recommends that CNDDB Field Survey Forms be completed and submitted to CNDDB to document survey results. Online forms can be obtained and submitted at: https://www.wildlife.ca.gov/Data/CNDDB/Submitting-Data.

   Please note that CDFW's CNDDB is not exhaustive in terms of the data it houses, nor is it an absence database. CDFW recommends that it be used as a starting point in gathering information about the *potential presence* of species within the general area of the Project site. Other sources for identification of species and habitats near or adjacent to the Project area should include, but may not be limited to, State and federal resource agency lists, California Wildlife Habitat Relationship (CWHR) System, California Native Plant Society (CNPS) Inventory, agency contacts, environmental documents for other projects in the vicinity, academics, and professional or scientific organizations.

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

3. A complete, recent inventory of rare, threatened, endangered, and other sensitive species located within the Project footprint and within offsite areas with the potential to be affected, including California Species of Special Concern and California Fully Protected Species (Fish & G. Code § 3511). Species to be addressed should include all those which meet the CEQA definition (CEQA Guidelines § 15380). The inventory should address seasonal variations in use of the Project area and should not be limited to resident species. The EIR should include the results of focused species-specific surveys, completed by a qualified biologist and conducted at the appropriate time of year and time of day when the sensitive species are active or otherwise identifiable. Species-specific surveys should be conducted in order to ascertain the presence of species with the potential to be impacted directly, indirectly, on or within a reasonable distance of the Project activities. CDFW recommends the lead agency rely on survey and monitoring protocols and guidelines available at: www.wildlife.ca.gov/Conservation/Survey-Protocols. Alternative survey protocols may be warranted; justification should be provided to substantiate why an alternative protocol is necessary. Acceptable species-specific survey procedures should be developed in consultation with CDFW and the U.S. Fish and Wildlife Service, where necessary. Some aspects of the Project may warrant periodically updated surveys for certain sensitive taxa, particularly if the Project is proposed to occur over a protracted time frame, or in phases, or if surveys are completed during periods of drought or deluge.

4. A thorough, recent (within the last two years), floristic-based assessment of special-status plants and natural communities, following CDFW's *Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities* (see www.wildlife.ca.gov/Conservation/Plants).

5. Information on the regional setting that is critical to an assessment of environmental impacts, with special emphasis on resources that are rare or unique to the region (CEQA Guidelines § 15125[c]).

**Analysis of Direct, Indirect, and Cumulative Impacts to Biological Resources**

The EIR should provide a thorough discussion of the Project's potential direct, indirect, and cumulative impacts on biological resources. To ensure that Project impacts on biological resources are fully analyzed, the following information should be included in the EIR:

1. The EIR should define the threshold of significance for each impact and describe the criteria used to determine whether the impacts are significant (CEQA Guidelines, § 15064, subd. (f)). The EIR must demonstrate that the significant environmental impacts of the Project were adequately investigated and discussed, and it must permit the significant effects of the Project to be considered in the full environmental context.

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

2. A discussion of potential impacts from lighting, noise, human activity, and wildlife-human interactions created by Project activities especially those adjacent to natural areas, exotic and/or invasive species occurrences, and drainages. The EIR should address Project-related changes to drainage patterns and water quality within, upstream, and downstream of the Project site, including: volume, velocity, and frequency of existing and post-Project surface flows; polluted runoff; soil erosion and/or sedimentation in streams and water bodies; and post-Project outcome of runoff from the Project site. The EIR should address sources of wildlife mortality such as human introduction of domestic cats (as it relates to bird mortality), bird strikes with Project buildings, increased wildlife control, and vehicle strikes.

3. A discussion of potential indirect Project impacts on biological resources, including resources in areas adjacent to the Project footprint, such as nearby public lands (e.g. National Forests, State Parks, etc.), open space, adjacent natural habitats, riparian ecosystems, wildlife corridors, and any designated and/or proposed reserve or mitigation lands (e.g., preserved lands associated with a Conservation or Recovery Plan, or other conserved lands).

4. A cumulative effects analysis developed as described under CEQA Guidelines section 15130. The EIR should discuss the Project's cumulative impacts to natural resources and determine if that contribution would result in a significant impact. The EIR should include a list of present, past, and probable future projects producing related impacts to biological resources or shall include a summary of the projections contained in an adopted local, regional, or statewide plan, that consider conditions contributing to a cumulative effect. The cumulative analysis shall include impact analysis of vegetation and habitat reductions within the area and their potential cumulative effects. Please include all potential direct and indirect Project-related impacts to riparian areas, wetlands, wildlife corridors or wildlife movement areas, aquatic habitats, sensitive species and/or special-status species, open space, and adjacent natural habitats in the cumulative effects analysis.

**Mitigation Measures for Project Impacts to Biological Resources**

The EIR should include appropriate and adequate avoidance, minimization, and/or mitigation measures for all direct, indirect, and cumulative impacts that are expected to occur as a result of the construction and long-term operation and maintenance of the Project. CDFW also recommends that the environmental documentation provide scientifically supported discussion regarding adequate avoidance, minimization, and/or mitigation measures to address the Project's significant impacts upon fish and wildlife and their habitat. For individual projects, mitigation must be roughly proportional to the level of impacts, including cumulative impacts, in accordance with the provisions of CEQA (Guidelines § § 15126.4(a)(4)(B), 15064, 15065, and 16355). In order for mitigation measures to be effective, they must be specific, enforceable, and feasible actions that will improve environmental conditions. When proposing measures to avoid, minimize, or mitigate impacts, CDFW recommends consideration of the following:

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

1. *Fully Protected Species*: Several Fully Protected Species (Fish & G. Code § 3511) have the potential to occur within or adjacent to the Project area, including, but not limited to: white-tailed kite (*Elanus leucurus*). Fully protected species may not be taken or possessed at any time. Project activities described in the EIR should be designed to completely avoid any fully protected species that have the potential to be present within or adjacent to the Project area. CDFW also recommends that the EIR fully analyze potential adverse impacts to fully protected species due to habitat modification, loss of foraging habitat, and/or interruption of migratory and breeding behaviors. CDFW recommends that the Lead Agency include in the analysis how appropriate avoidance, minimization and mitigation measures will reduce indirect impacts to fully protected species.

2. *Sensitive Plant Communities*: CDFW considers sensitive plant communities to be imperiled habitats having both local and regional significance. Plant communities, alliances, and associations with a statewide ranking of S-1, S-2, S-3, and S-4 should be considered sensitive and declining at the local and regional level. These ranks can be obtained by querying the CNDDB and are included in *The Manual of California Vegetation* (Sawyer et al. 2009). The EIR should include measures to fully avoid and otherwise protect sensitive plant communities from Project-related direct and indirect impacts.

3. *Mitigation*: CDFW considers adverse Project-related impacts to sensitive species and habitats to be significant to both local and regional ecosystems, and the EIR should include mitigation measures for adverse Project-related impacts to these resources. Mitigation measures should emphasize avoidance and reduction of Project impacts. For unavoidable impacts, onsite habitat restoration, enhancement, or permanent protection should be evaluated and discussed in detail. If onsite mitigation is not feasible or would not be biologically viable and therefore not adequately mitigate the loss of biological functions and values, offsite mitigation through habitat creation and/or acquisition and preservation in perpetuity should be addressed. Any mitigation proposed outside the Natomas Basin and within the jurisdiction of a different local government, should be supported by robust scientific reasoning and such a strategy should contemplate local degradation of Natomas Basin fish, wildlife, or plant resources and potential land use authority.

   The EIR should include measures to perpetually protect the targeted habitat values within mitigation areas from direct and indirect adverse impacts in order to meet mitigation objectives to offset Project-induced qualitative and quantitative losses of biological values. Specific issues that should be addressed include restrictions on access, proposed land dedications, long-term monitoring and management programs, control of illegal dumping, water pollution, increased human intrusion, etc.
4. *Habitat Revegetation/Restoration Plans*: Plans for restoration and revegetation should be prepared by persons with expertise in the regional ecosystems and native plant restoration techniques. Plans should identify the assumptions used to develop the proposed restoration strategy. Each plan should include, at a

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

minimum: (a) the location of restoration sites and assessment of appropriate reference sites; (b) the plant species to be used, sources of local propagules, container sizes, and seeding rates; (c) a schematic depicting the mitigation area; (d) a local seed and cuttings and planting schedule; (e) a description of the irrigation methodology; (f) measures to control exotic vegetation on site; (g) specific success criteria; (h) a detailed monitoring program; (i) contingency measures should the success criteria not be met; and (j) identification of the party responsible for meeting the success criteria and providing for conservation of the mitigation site in perpetuity. Monitoring of restoration areas should extend across a sufficient time frame to ensure that the new habitat is established, self-sustaining, and capable of surviving drought.

Onsite vegetation mapping at the alliance and/or association level should be used to develop appropriate restoration goals and local plant palettes. Reference areas should be identified to help guide restoration efforts. Specific restoration plans should be developed for various Project components as appropriate. Restoration objectives should include protecting special habitat elements or re-creating them in areas affected by the Project. Examples may include retention of woody material, logs, snags, rocks, and brush piles. Fish and Game Code sections 1002, 1002.5 and 1003 authorize CDFW to issue permits for the take or possession of plants and wildlife for scientific, educational, and propagation purposes. Please see our website for more information on Scientific Collecting Permits at www.wildlife.ca.gov/Licensing/Scientific-Collecting#53949678-regulations-.

5. *Nesting Birds:* It is the Project proponent's responsibility to comply with all applicable laws related to nesting birds and birds of prey. Migratory nongame native bird species are protected by international treaty under the federal Migratory Bird Treaty Act (MBTA) of 1918, as amended (16 U.S.C. 703 *et seq.*). CDFW implemented the MBTA by adopting the Fish and Game Code section 3513. Fish and Game Code sections 3503, 3503.5 and 3800 provide additional protection to nongame birds, birds of prey, their nests and eggs. Sections 3503, 3503.5, and 3513 of the Fish and Game Code afford protective measures as follows: section 3503 states that it is unlawful to take, possess, or needlessly destroy the nest or eggs of any bird, except as otherwise provided by the Fish and Game Code or any regulation made pursuant thereto; section 3503.5 states that is it unlawful to take, possess, or destroy any birds in the orders Falconiformes or Strigiformes (birds-of-prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by the Fish and Game Code or any regulation adopted pursuant thereto; and section 3513 states that it is unlawful to take or possess any migratory nongame bird as designated in the MBTA or any part of such migratory nongame bird except as provided by rules and regulations adopted by the Secretary of the Interior under provisions of the MBTA.

   Potential habitat for nesting birds and birds of prey is present within the Project area. The Project should disclose all potential activities that may incur a direct or

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

indirect take to nongame nesting birds within the Project footprint and its vicinity. Appropriate avoidance, minimization, and/or mitigation measures to avoid take must be included in the EIR.

CDFW recommends that the EIR include specific avoidance and minimization measures to ensure that impacts to nesting birds or their nests do not occur. Project-specific avoidance and minimization measures may include, but not be limited to: Project phasing and timing, monitoring of Project-related noise (where applicable), sound walls, and buffers, where appropriate. The EIR should also include specific avoidance and minimization measures that will be implemented should a nest be located within the Project site. In addition to larger, protocol level survey efforts (e.g. Swainson's hawk surveys) and scientific assessments, CDFW recommends a final preconstruction survey be required no more than three (3) days prior to vegetation clearing or ground disturbance activities, as instances of nesting could be missed if surveys are conducted earlier.

6. *Moving out of Harm's Way:* The Project is anticipated to result in the clearing of habitats that support native species. To avoid direct mortality, the Lead Agency may condition the EIR to require that a qualified biologist with the proper permits be retained to be onsite prior to and during all ground- and habitat-disturbing activities. The qualified biologist with the proper permits may move out of harm's way special-status species or other wildlife of low or limited mobility that would otherwise be injured or killed from Project-related activities. Movement of wildlife out of harm's way should be limited to only those individuals that would otherwise be injured or killed, and individuals should be moved only as far as necessary to ensure their safety (i.e., CDFW does not recommend relocation to other areas). It should be noted that the temporary relocation of onsite wildlife does not constitute effective mitigation for habitat loss.

7. *Translocation of Species*: CDFW generally does not support the use of relocation, salvage, and/or transplantation as the sole mitigation for impacts to rare, threatened, or endangered species as these efforts are generally experimental in nature and largely unsuccessful.

The EIR should incorporate mitigation performance standards that would ensure that impacts are reduced to a less-than-significant level. Mitigation measures proposed in the EIR should be made a condition of approval of the Project. Please note that obtaining a permit from CDFW by itself with no other mitigation proposal may constitute mitigation deferral. CEQA Guidelines section 15126.4, subdivision (a)(1)(B) states that formulation of mitigation measures should not be deferred until some future time. To avoid deferring mitigation in this way, the EIR should describe avoidance, minimization and mitigation measures that would be implemented should the impact occur.

**California Endangered Species Act**

CDFW is responsible for ensuring appropriate conservation of fish and wildlife resources including threatened, endangered, and/or candidate plant and animal

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

species, pursuant to CESA. CDFW recommends that a CESA Incidental Take Permit (ITP) be obtained if the Project has the potential to result in "take" (Fish & G. Code § 86 defines "take" as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill") of state-listed CESA species, either through construction or over the life of the Project. CESA ITPs are issued to conserve, protect, enhance, and restore State-listed CESA species and their habitats.

The Project area has the following State-listed species that are known to be present:

- Swainson's hawk (*Buteo swainsoni*)
- Giant garter snake (*Thamnophis gigas*)

The Project area as shown in the NOP also may include habitat for these State and/or federally listed species: bank swallow (*Riparia riparia*), California tiger salamander (*Ambystoma californiense*), tricolored blackbird (*Agelaius tricolor*), valley elderberry longhorn beetle (*Desmocerus californicus dimorphous*), vernal pool fairy shrimp (*Branchinecta lynchi*), vernal pool tadpole shrimp (*Lepidurus packardi*), Bogg's Lake hedge-hyssop (*Gratiola heterosepala*), Sacramento Orcutt grass (*Orcuttia viscida*), and slender orcutt grass (*Orcuttia tenuis*).

The EIR should disclose the potential of the Project to take State-listed species and how the impacts will be avoided, minimized, and mitigated. Please note that mitigation measures that are adequate to reduce impacts to a less-than significant level to meet CEQA requirements may not be enough for the issuance of an ITP. To issue an ITP, CDFW must demonstrate that the impacts of the authorized take will be minimized and fully mitigated (Fish & G. Code §2081 (b)). To facilitate the issuance of an ITP, if applicable, CDFW recommends the EIR include measures to minimize and fully mitigate the impacts to any State-listed species the Project has potential to take. CDFW encourages early consultation with staff to determine appropriate measures to facilitate future permitting processes and to engage with the U.S. Fish and Wildlife Service to coordinate specific measures if both State and federally listed species may be present within the Project vicinity.

**Native Plant Protection Act**

The Native Plant Protection Act (NPPA) (Fish & G. Code §1900 *et seq*.) prohibits the take or possession of State-listed rare and endangered plants, including any part or product thereof, unless authorized by CDFW or in certain limited circumstances. Take of State-listed rare and/or endangered plants due to Project activities may only be permitted through an ITP or other authorization issued by CDFW pursuant to California Code of Regulations, Title 14, section 786.9 subdivision (b).

**Lake and Streambed Alteration (LSA) Program**

The EIR should identify all perennial, intermittent, and ephemeral rivers, streams, lakes, other hydrologically connected aquatic features (such as ditches), and any associated biological resources/habitats present within the entire Project footprint (including utilities, access and staging areas). The EIR should analyze all potential temporary, permanent,

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

direct, indirect and/or cumulative impacts to the above-mentioned features and associated biological resources/habitats that may occur because of the Project. If it is determined that the Project will result in significant impacts to these resources, the EIR shall propose appropriate avoidance, minimization and/or mitigation measures to reduce impacts to a less-than-significant level.

Section 1602 of the Fish and Game Code requires an entity to notify CDFW prior to commencing any activity that may do one or more of the following: substantially divert or obstruct the natural flow of any river, stream or lake; substantially change or use any material from the bed, channel or bank of any river, stream, or lake; or deposit debris, waste or other materials that could pass into any river, stream or lake. Please note that "any river, stream or lake" includes those that are episodic (i.e., those that are dry for periods of time) as well as those that are perennial (i.e., those that flow year-round). This includes ephemeral streams and watercourses with a subsurface flow. It may also apply to work undertaken within the flood plain of a body of water or some agricultural drainages.

If CDFW determines that the Project activities may substantially adversely affect an existing fish or wildlife resource, an LSA Agreement will be issued which will include reasonable measures necessary to protect the resource. CDFW's issuance of an LSA Agreement is a "project" subject to CEQA (see Pub. Resources Code 21065). To facilitate issuance of an LSA Agreement, the EIR should fully identify the potential impacts to the lake, stream, or riparian resources, and provide adequate avoidance, mitigation, and monitoring and reporting commitments. Early consultation with CDFW is recommended, since modification of the Project may avoid or reduce impacts to fish and wildlife resources. To obtain an LSA notification package, please go to https://www.wildlife.ca.gov/Conservation/LSA/Forms.

Please note that other agencies may use specific methods and definitions to determine impacts to areas subject to their authorities. These methods and definitions often do not include all needed information for CDFW to determine the extent of fish and wildlife resources affected by activities subject to Notification under Section 1602 of the Fish and Game Code. Therefore, CDFW does not recommend relying solely on methods developed specifically for delineating areas subject to other agencies' jurisdiction (such as United States Army Corps of Engineers) when mapping lakes, streams, wetlands, floodplains, riparian areas, etc. in preparation for submitting a Notification of an LSA.

CDFW relies on the lead agency environmental document analysis when acting as a responsible agency issuing an LSA Agreement. Addressing CDFW's comments to appropriately address Project impacts facilitates the issuance of an LSA Agreement and CDFW's associated CEQA compliance as a responsible agency.

The following information will be required for the processing of an LSA Notification and CDFW recommends incorporating this information into any forthcoming CEQA document(s) to avoid subsequent documentation and Project delays:

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

1. Mapping and quantification of lakes, streams, and associated fish and wildlife habitat (e.g., riparian habitat, freshwater wetlands, etc.) that will be temporarily and/or permanently impacted by the Project, including impacts from access and staging areas. Please include an estimate of impact to each habitat type.

2. Discussion of specific avoidance, minimization, and mitigation measures to reduce Project impacts to fish and wildlife resources to a less-than-significant level. Please refer to section 15370 of the CEQA Guidelines.

Based on review of Project materials, aerial photography and observation of the site from public roadways, the Project site contains tributaries to lakes and streams within the Natomas Basin. CDFW recommends that the EIR fully identify the Project's potential impacts to lakes, streams, and/or its associated vegetation and wetlands.

**Regional Habitat Conservation Plans**

CEQA Guidelines section 15125(d) states that EIRs must discuss any inconsistencies between projects and applicable plans (including habitat conservation plans/natural community conservation plans). If the Project is contemplating the viability of offsite mitigation, the EIR should include a discussion of each Project alternative's consistency with any approved habitat conservation plan that overlaps with the Project's mitigation area or the Project itself. Such plans would include the Natomas Basin Habitat Conservation Plan (NBHCP), Metro Air Park Habitat Conservation Plan (MAP HCP) , Yolo Habitat Conservation Plan/Natural Community Conservation Plan, South Sacramento Habitat Conservation Plan (SSHCP), and the Placer County Conservation Program.

**Local Habitat Conservation Plans**

The Project area is within the NBHCP and is in close proximity to the MAP HCP. Both the NBHCP and MAP HCP are approaching their twentieth year of implementation, conserving to date more than 4000 acres of land in the Natomas Basin. These conserved lands provide tremendous benefit to wildlife in Sacramento and Sutter Counties, and the larger surrounding region. Additional development is authorized under both plans, conditioned on in-perpetuity conservation obligations, such as land acquisition and commitments to agriculture, not yet completed within the Natomas Basin. Therefore a robust analysis of whether, in what way, and to what extent the Project may affect future implementation and the continued viability of the NBHCP and MAP HCP in the Natomas Basin is essential to the County's informed review of the Project.

CDFW appreciates the Project proponent and the County's previous commitment to prepare a related effects analysis as part of the County's review of the Project. The analysis will provide critical information essential to a meaningful understanding of the Project's regional setting. That, in turn, will also help ensure the EIR's environmental analysis is robust and includes all the potentially significant effects on fish and wildlife that may be caused by the Project.

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

Section 15125 of the CEQA guidelines states that special emphasis should be placed on environmental resources that are rare or unique to that region and would be affected by the project, while also discussing any inconsistencies between the proposed project and applicable general plans, specific plans and regional plans. To identify any identify any potential inconsistencies with the Natomas Basin plans and provide special emphasis on rare or unique resources in compliance with CEQA, CDFW recommends that the EIR address, specific to the effects analysis, the following:

- Persistence of NBHCP and MAP HCP Covered Species in the Natomas Basin
- Impacts to established reserve land managed by the Natomas Basin Conservancy (TNBC)
- Reduction of available reserve land in the Natomas Basin under the NBHCP and MAP HCP (with appropriate buffers and setbacks as detailed in the NBHCP)
- Reduction of ability for TNBC to establish or enhance Covered Species range and habitats in the southern Natomas Basin.
- Continued viability of the land uses in the Natomas Basin as detailed in the NBHCP and MAP HCP
- Financial impacts to TNBC and feepayers under the NBHCP and MAP HCP, including the recent action by TNBC Board of Directors and the Sacramento City Council to address related ongoing financial challenges of continuing to implement the required conservation strategy in the Natomas Basin, and
- Cumulative impact of the Project, in combination with other development in the Natomas Basin approved since 2003 that is outside of the City of Sacramento and Sutter County's permitted area under the NBHCP (e.g., levee improvements by the Sacramento Area Flood Control Agency and the Greenbriar project). A visual representation of the mounting pressure on the continued viability of the NBHCP is shown in Figure 1.

CDFW highlights that the County also has vested interest in the success of the MAP HCP. The MAP HCP and the related authorization under CESA serves as a regulatory platform for the Metro Air Park I-5 Interchange, the Amazon fulfilment center, and other large warehouse facilities all of which provide significant economic benefit to the County. The Project's potential effect on the continued success of the MAP HCP is an important consideration for the County as it considers the proposed Project, particularly with County interest in the build-out of Metro Air Park and the MAP HCP's implementation reliance on structure provided by the NBHCP.

**Joint Vision**

The 2002 Joint Vision Memorandum of Understanding (MOU) outlines a vision shared by the County and City for land use and revenue by the two agencies in the Natomas Basin. The MOU, importantly, recognizes the City as the agent of development in the Sacramento portion of the basin and the County as the agent of permanent open space, habitat, and farmland/ranchland preservation. The MOU, in this respect, defines a set of guiding principles for the County and City to jointly implement a number of goals, including proactively guiding future urban growth for more efficient land use, while

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

securing permanent preservation of open space at a mitigation ratio of at least one-to-one. The Joint Vision MOU, importantly, also acknowledges and has served to bolster the coordinated effort by the NBHCP and MAP HCP permittees, and TNBC to minimize the effects of other projects on fish and wildlife resources in the basin. The County and City's Joint Vision MOU has been a cornerstone for land use planning in the Natomas Basin for nearly two decades.

The Joint Vision MOU executed by the County and City in 2002 also informed CDFW's approval of the NBHCP and issuance of the related CESA ITPs to the City, Sutter County, and TNBC in July 2003. The County and City's Joint Vision has also been a key benchmark for CDFW as it monitors the nearly two-decade implementation of the NBHCP by the permittees. The Projects marks an apparent departure by the County from the principles detailed in its shared vision with the City. The County's web page reads currently, for example, that the Joint Vision project has been withdrawn and individual landowners are moving forward with their own projects, including this Project and the Grand Park Specific Plan. It should also be noted that the County's web page does not appear to describe the status of the Joint Vision MOU (signed 2002, after a unanimous vote by the County Board of Supervisors). CDFW flags this issue and recommends that the County analyzes this deviation from the 2002 Joint Vision MOU. This is of particular importance because the County and City's Joint Vision has been critical to the integrity of the NBHCP and the successful management and conservation of the unique biological resources in the Natomas Basin.

**Swainson's Hawk**

The Natomas Basin is known for its importance to Swainson's hawk within the Sacramento Valley (NBHCP 2003). Over 100 documented nesting occurrences occur within 10 miles[2] of the Project area (The Natomas Basin Conservancy 2019 Implementation Annual Report). Therefore, high value foraging habitat present in a majority of the Project area could contribute to foraging ability for hundreds of Swainson's hawks in the Natomas Basin, as well as those using surrounding nests in Yolo and east and south Sacramento County, and Swainson's hawk migrating through the Project area (CDFW 2020). This highlights the Natomas Basin's unique contribution in providing valuable nesting and foraging habitat, both of which are essential for the species' life history. As such, a thorough evaluation in the EIR of the Project's impacts to both nesting and foraging habitat as independent factors will be crucial, considering the value of the Natomas Basin for the species. The EIR should cite survey methodology, specifically a full set of protocol surveys using the Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (Swainson's Hawk Tech. Advis. Comm., 5/2000), empirical data, and discuss how proposed avoidance, minimization, and mitigation measures for the Project are informed

[2] 10 miles is typically understood as the maximum distance to which a Swainson's hawk will forage during the breeding season (SSHCP 2018)

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

by that information. Having this information in the EIR facilitates more efficient and detailed review and feedback from CDFW.

Much of the Project area is mapped within the Swainson's Hawk Zone (SHZ), which the NBHCP describes as the area within one mile of the Sacramento River in the Natomas Basin. The SHZ was derived from the high density of Swainson's hawk nests within this area and scientific evidence for the value of the habitat (NBHCP 2003). The NBHCP recognizes the importance of the SHZ to this species and the viability of their plan which resulted in substantial effort from the City of Sacramento and Sutter County to replan development outside of this area. Replanning efforts in the SHZ have been vital to preserve the area's ecological value and the overall goals of the NBHCP, despite the associated economic and political opportunity costs. Although the County is not party to the NBHCP, CDFW recommends the County considers the Project's 1) biological impact in an ecologically valuable area and 2) the effect that Project development in the SHZ will have on the continued implementation and viability of the NBHCP, as well as the MAP HCP.

As such, robust analysis of the Project's potentially significant effects on Swainson's hawk will be a critical part of the development of the EIR. With the Project in the SHZ, there could be several potentially significant effects to the species, both in the project-specific and cumulative context. Creating a feasible mitigation approach should be an early and focal part of the EIR development given the high utilization of the area by the species.

While typical projects often focus on initial surveys, this Project is in a particularly unique area where extensive surveys and biological resource mapping has already been completed. The most recent surveys indicated that 14 Swainson's hawk nests are present within the Project area or within a 0.5-mile radius that Project activities may impact (TNBC 2019, CDFW 2020). Due to the density of known nest sites, CDFW recommends the EIR analyze the individual nesting and foraging behavior patterns associated with each known nest pair and propose avoidance, minimization and mitigation that specifically addresses those patterns, rather than simply acknowledging presence. CDFW also recommends the EIR analyze the Project's regional impacts to the species, both to the overall persistence of Swainson's hawk within the Natomas Basin and indirect impacts to individual Swainson's hawk that may depend on the Project area's foraging habitat. Data from such studies can more effectively inform a mitigation strategy that complies with CESA.

**Other Covered Species**

The Natomas Basin has significant biological resources, including habitat and documented occurrences for 22 Covered Species under the NBHCP and other sensitive species. While CDFW recognizes the need for focus on Swainson's hawk and giant garter snake, further detail on the other Covered Species is needed so that all impacts to fish, wildlife, and plant resources can be adequately assessed. Specific focus on the resources likely to be most impacted, including the 22 Covered Species, and robust analysis of these species can strengthen the Project's mitigation strategy.

DocuSign Envelope ID: F7BD2547-03AE-4F93-BB3A-5D242114BEDD

**ENVIRONMENTAL DATA**

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database, which may be used to make subsequent or supplemental environmental determinations (Pub. Resources Code, § 21003, subd. (e)). Accordingly, please report any special-status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDB). The CNNDB field survey form can be found at the following link: https://www.wildlife.ca.gov/Data/CNDDB/Submitting-Data. The completed form can be submitted online or mailed electronically to CNDDB at the following email address: CNDDB@wildlife.ca.gov.

**FILING FEES**

The Project, as proposed, would have an effect on fish and wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code § 711.4; Pub. Resources Code, § 21089.)

**CONCLUSION**

Pursuant to Public Resources Code sections 21092 and 21092.2, CDFW requests written notification of proposed actions and pending decisions regarding the Project. Written notifications shall be directed to: California Department of Fish and Wildlife North Central Region, 1701 Nimbus Road, Rancho Cordova, CA 95670.

CDFW personnel are available for consultation regarding biological resources and strategies to minimize impacts.

If you have any questions regarding the comments provided in this letter or wish to schedule a meeting and/or site visit, please contact Dylan Wood, Environmental Scientist, at 916-358-2384 or dylan.a.wood@wildlife.ca.gov.

Sincerely,

Subject: Notice of Preparation for the Upper Westside Specific Plan

To Whom It May Concern;

I request that the Environmental Impact Report for the Upper Westside Specific Plan carefully consider the Agricultural designation for the area along the Garden Highway. Designation as Open Space with agriculture as an allowable use would better protect this area.

Once the development contemplated in the Plan is carried out, the feasibility of agriculture in this area will be questionable. The proximity of residential development will cause conflicts with agricultural activities such as night time operations, applications of pesticides and herbicides and other aspects of agricultural operations The result will be that the land owners will ask for changes to the agricultural designation, most likely in favor of further development. The intent of the Plan and mitigation for loss of agricultural and open space lands, likely to be required by the environmental review, will be frustrated.

Designation as open space with agriculture as a permitted use, would require that the developers of the Plan purchase and record easements to preserve these designations. This would prevent loss of these lands from the intended purpose and would compensate landowners for the loss of future development opportunities. The future feasibility of agriculture would not be relevant because of the open space designation.

Also recommended would be to implement these requirements by recording agreements for permanent land use restrictions. The agreements would be with third party organizations whose purpose is environmental protection or open space protection and management. This further prevents future changes to the protective designations. The Coastal Commission utilizes this method and could provide language for the plan requirement, development conditions, and agreements.

Thank you for your consideration of this request. I would be happy to discuss this further with County staff or the EIR preparers.

Yours truly

Paul D. Thayer

**RE: Notice of Preparation of a Draft Environmental Impact Report for the Upper Westside Specific Plan (PLNP2018-00284)**

Dear Mr. Smith,

Thank you for providing the Sacramento Metropolitan Air Quality Management District (Sac Metro Air District) with an opportunity to review the Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) for the Upper Westside Specific Plan. The Upper Westside Specific Plan would encompass approximately 2,066 acres in the unincorporated Natomas community of Sacramento County, approximately 3.5 miles from downtown Sacramento. It would be located outside of the County's Urban Policy Area (UPA) and Urban Services Boundary (USB). Please accept the following comments to ensure that air quality and climate change impacts are adequately addressed.

**Guidance on California Environmental Quality Act Analysis and Disclosure**
Please reference Sac Metro Air District's guidance on analyzing and disclosing project impacts under the California Environmental Quality Act (CEQA), The Guide to Air Quality Assessment in Sacramento County (CEQA Guide), in preparing the DEIR. Our specific recommendations follow.

Because this project is a specific plan, we recommend referring to Chapter 9 of our CEQA Guide (Program-Level Analysis of General Plans and Area Plans) to guide air quality and climate change analysis, including both construction and operational criteria pollutant and greenhouse gas (GHG) emissions. For full public disclosure, all emissions projections, including those from vehicle miles traveled (VMT), should be disclosed alongside any model runs.

Chapter 9 of the CEQA Guide underscores the importance of analyzing the proposed land use's consistency with Sacramento Area Council of Governments' (SACOG's) Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS). The motor vehicle emissions budget in the Sac Metro Air District's Sacramento Regional Ozone Attainment Plan is based on the MTP/SCS land use assumptions and travel demand modeling. The MTP/SCS is also an essential component implementing Senate Bill 375 (SB 375, Steinberg, 2008). To demonstrate consistency with the MTP/SCS, the DEIR should analyze the project's consistency the MTP/SCS population and employment projections, jobs-housing match, and associated VMT per capita, in addition to other criteria.

The NOP states that project objectives include satisfying "County policies, regulations, and expectations, as defined in the General Plan, including Policies LU-114, LU-119, and LU-120." These policies are essentially supportive of SB 375 goals. The DEIR should analyze consistency with the General Plan, particularly these policies, and include a discussion of how implementation of these policies affects project air quality and climate change impacts.

**Operational Air Quality Mitigation Plan**
Due to this project's location outside of the UPA and USB, the DEIR should include an Air Quality Mitigation Plan (AQMP) with measures to reduce operational criteria pollutant emissions by 35% or more. We recommend using the Sac Metro Air District's Recommended Guidance for Land Use Emission Reductions when developing the AQMP. Please consult with Sac Metro Air District staff to review the AQMP for technical adequacy prior to inclusion in the final EIR. Please note that many of the measures in this guidance can also be used to achieve GHG emissions reductions.

**Greenhouse Gas Analysis and Mitigation**
Because Sacramento County is still in the process of updating its GHG thresholds, and its Climate Action Plan (CAP) is under development, the DEIR should use Sac Metro Air District's GHG thresholds to analyze its effect on climate change and mitigate GHG emissions. We recommend mitigation measures from CEQA Guide Chapter 6, on GHG emissions and Chapter 9, on Program Level Analysis. Please note that many of the GHG mitigation measures also correspond to the land use and other mitigation measures in the Sac Metro Air District's Recommended Guidance for Land Use Emission Reductions. The DEIR's AQMP measures can be used as mitigation for both criteria pollutant and GHG emissions.

**Climate Change Impacts, Adaptation and Resilience**
The DEIR should include an analysis of the project's impacts on climate adaptation and resilience in the context of the climate impacts that studies show the Sacramento County will likely face in 2040, 2050 and beyond.

As weather patterns change due to climate change, more intense atmospheric river storm events in the winter could deliver high volumes of rainfall within a short time frame, challenging levees and local stormwater systems and creeks, increasing risk of localized flooding in and surrounding the project area.

The DEIR should analyze the project's impacts on the urban heat island effect. The urban heat island effect results from the conversion of undeveloped land to urbanized land. According to the Sac Metro Air District's May 2020 Urban Heat Island Mitigation Project (UHI Project), the heat island effect already presents a serious challenge for our region, with urbanized areas some 3 to 9 degrees Fahrenheit warmer than surrounding areas.

During extreme heat and extended heat waves, these higher temperatures can lead to heat stress, heatstroke, and even heat mortality, especially for the elderly, the young, unhoused populations, and those with preexisting health conditions. Extreme heat also damages transportation infrastructure, for example by damaging the structural integrity of roads and reducing pavement lifespan. Higher ambient temperatures increase the formation of ground

level ozone through the increased use of air conditioners for cooling. Ground level ozone is a respiratory system irritant and a pollutant for which the Sacramento region has still not achieved the federal and state health-based standards.

Converting undeveloped land to urban uses results in a loss of carbon sequestration potential, releasing more greenhouse gases into the atmosphere.

The DEIR should assess the potential of cool roofs, cool pavement, and tree canopy to mitigate the project's impacts on the urban heat island effect.

**Vehicle Miles Traveled Analysis**
According to California's 2017 Climate Change Scoping Plan, the requirements of SB 375 do not provide enough VMT reductions to meet the 2050 GHG reduction targets, so land use and transportation projects that are consistent with SB 375 plans will still need additional GHG reductions to be consistent with state climate change goals.

To adequately assess and mitigate for the project's climate change impacts, the DEIR must provide a VMT analysis consistent with SB 743 (Steinberg, 2013), and apply all necessary mitigation to reduce project VMT. Particularly due to its location outside of the UPA and USB, this project is unlikely to meet the screening thresholds in the Governor's Office of Planning and Research's Technical Advisory on Evaluating Transportation Impacts in CEQA (OPR Technical Advisory) that would allow it to bypass a full VMT analysis pursuant to SB 743. The Sac Metro Air District's GHG thresholds reference SB 743's VMT criteria, and Sacramento County has recently adopted its own VMT thresholds for CEQA analysis pursuant to SB 743.

The DEIR should provide a meticulous assessment of VMT impacts resulting from the project's operations, consistent with methods referenced in the OPR Technical Advisory. In particular, the DEIR should analyze the project's effect on jobs-housing match in its vicinity, and how that in turn affects VMT; the project's impacts on transit use, walking and biking, and associated VMT; and public health outcomes.

Locating housing near transit, existing development and job centers can help increase active transportation as people choose to walk, bike, or use transit for commuting, grocery trips, errands, entertainment, and other trips. Active transportation can result in improved health outcomes through decreasing obesity, diabetes, and other chronic illnesses, as well as health benefits associated with improved air quality.

**Friant Ranch**
In December 2018, the California Supreme Court issued a decision in the Sierra Club v. County of Fresno case regarding the "Friant Ranch" project ((2018) 6 Cal. 5th 502). The Court determined that CEQA air quality analyses should include a reasonable effort to connect a project's air quality impacts to likely health consequences or explain in meaningful detail why it may be unreasonable to do so.

The Sac Metro Air District recommends the County analyze the project's criteria pollutant health effects considering the Guidance to Address the Friant Ranch Ruling for CEQA Projects in the Sac Metro Air District. The guidance and health screening tools can be

obtained on the Sac Metro Air District's CEQA Guidance & Tools webpage in the Friant Guidance section: http://www.airquality.org/Residents/CEQA-Land-Use-Planning/CEQA-Guidance-Tools.

**Conclusion**
All projects are subject to the Sac Metro Air District rules and regulations at the time of construction and are required to implement our Basic Construction Emission Control Practices (BCECP). Please visit our website to find a list of the most common rules that apply at the construction phase of projects, and a copy of our BCECP.

Thank you for your consideration. If you have questions, please contact me at rdubose@airquality.org.

Sincerely,

RDuBose

**To:** PER-CEQA <CEQA@saccounty.net>
**Cc:** 'Sui Lim' <suilim@winfirst.com>; Supervisor Serna <SupervisorSerna@saccounty.net>
**Subject:** Comment to EIR -- Upper Westside Plan

**EXTERNAL EMAIL:** If unknown sender, do not click links/attachments.

Hello,

Submitting comments to the EIR for the Upper Westside Plan.

Requesting the following items to be included in the study:

- Impact and affect to the levee system all along Garden Highway
- Infrastructure of water and sewer and their ability to support the proposed plan
- Infrastructure of roads and freeways/highways and their ability to support the proposed plan
- Impact of traffic/congestion, etc.
- Amount of greenhouse gas emission (California is aiming towards a zero emission in about 20 years)
- Impact to wildlife in the area (cranes, egrets, ducks, geese, hawks, owls, falcons, rabbits, pelicans, river otters, etc.), as they should be left undisturbed

Not sure if the study can include, but estimated costs and how to fund these costs would be a critical element.

Let me know if you have any questions.

Thanks!

Sui Lim

**EXTERNAL EMAIL:** If unknown sender, do not click links/attachments.

Hi, Todd.

Due to our high volume of workload we have not been able to sufficiently review the Notice of Preparation of the Environmental Impact Report (EIR) for the Upper Westside Specific Plan (SCH#2020100069), pursuant to the California Environmental Quality Act (CEQA). At this time we have not met with the project proponents but plan to do so in the future. We can offer the following general comments at this time and will continue to work closely with Sacramento County as the Upper Westside project moves forward.

We concur with the California Department of Fish and Wildlife's (CDFW) November 6, 2020, comments regarding the potential impact of the Upper Westside project on the existing Natomas Basin Habitat Conservation Plan (NBHCP) and the Metro Air Park Habitat Conservation Plan (MAP HCP), captured in the following (indented) text from their correspondence:
CDFW stated that

> "Both the NBHCP and MAP HCP are approaching their twentieth year of implementation, conserving to date more than 4,000 acres of land in the Natomas Basin. These conserved lands provide tremendous benefit to wildlife in Sacramento and Sutter Counties, and the larger surrounding region. Additional development is authorized under both plans, conditioned on in-perpetuity conservation obligations, such as land acquisition and commitments to agriculture, not yet completed within the Natomas Basin. Therefore a robust analysis of whether, in what way, and to what extent the Project may affect future implementation and the continued viability of the NBHCP and MAP HCP in the Natomas Basin is essential to the County's informed review of the Project.
>
> CDFW appreciates the Project proponent and the County's previous commitment to prepare a related effects analysis as part of the County's review of the Project. The analysis will provide critical information essential to a meaningful understanding of the Project's regional setting. That, in turn, will also help ensure the EIR's environmental analysis is robust and includes all the potentially significant effects on fish and wildlife that may be caused by the Project.
>
> Section 15125 of the CEQA guidelines states that special emphasis should be placed on environmental resources that are rare or unique to that region and would be affected by the project, while also discussing any inconsistencies between the proposed project and applicable general plans, specific plans and regional plans. To identify any potential inconsistencies with the Natomas Basin plans and provide

special emphasis on rare or unique resources in compliance with CEQA, CDFW recommends that the EIR address, specific to the effects analysis, the following:

- Persistence of NBHCP and MAP HCP Covered Species in the Natomas Basin
- Impacts to established reserve land managed by the Natomas Basin Conservancy (TNBC)
- Reduction of available reserve land in the Natomas Basin under the NBHCP and MAP HCP (with appropriate buffers and setbacks as detailed in the NBHCP)
- Reduction of ability for TNBC to establish or enhance Covered Species range and habitats in the southern Natomas Basin
- Continued viability of the land uses in the Natomas Basin as detailed in the NBHCP and MAP HCP
- Financial impacts to TNBC and feepayers under the NBHCP and MAP HCP, including the recent action by TNBC Board of Directors and the Sacramento City Council to address related ongoing financial challenges of continuing to implement the required conservation strategy in the Natomas Basin, and
- Cumulative impact of the Project, in combination with other development in the Natomas Basin approved since 2003 that is outside of the City of Sacramento and Sutter County's permitted area under the NBHCP (e.g., levee improvements by the Sacramento Area Flood Control Agency and the Greenbriar project). A visual representation of the mounting pressure on the continued viability of the NBHCP is shown in Figure 1 *(within CDFW's comment letter)*.

CDFW highlights that the County also has vested interest in the success of the MAP HCP. The MAP HCP and the related authorization under CESA served as a regulatory platform for the Metro Air Park I-5 Interchange, the Amazon fulfilment center, and other large warehouse facilities all of which provide significant economic benefit to the County. The Project's potential effect on the continued success of the MAP HCP is an important consideration for the County as it considers the proposed Project, particularly with County interest in the build-out of Metro Air Park and the MAP HCP's implementation reliance on structure provided by the NBHCP."

In addition, the FWS believes that the effects analysis prepared by the project proponent should be reviewed and approved by the FWS and CDFW. During this review process, the FWS will work closely with the project proponent, Sacramento County, CDFW, the NBHCP permittees (Sutter County, the City of Sacramento, and the Natomas Basin Habitat Conservancy), and the MAP HCP permittees (Metro Air Park Property Owners Association) to ensure that the effects analysis provided by the project proponents adequately addresses our concerns regarding the ability of the NBHCP and the MAP HCP to be successfully implemented in the future.

Thank you for the opportunity to comment. If you have any questions, please feel free to contact me.

PROJECT TITLE: Upper Westside Specific Plan
TYPE OF DOCUMENT: Notice of Preparation for Draft Environmental Impact Report

Dear Mr. Smith,

Thank you for the opportunity to review the Notice of Preparation (NOP) for the Draft Environmental Impact Report (DEIR) for the Upper Westside Specific Plan. As described in the NOP, the specific plan area encompasses approximately 2,066 acres in the unincorporated Natomas community of Sacramento County, approximately 3.5 miles from downtown Sacramento.

Sacramento Regional Transit District (SacRT) has been meeting with the County of Sacramento, the Applicant (Upper Westside, LLC), and the Applicant's Planning/Engineering team (Wood Rodgers, Inc.) to discuss the specific plan's development, and have a plan in place so that the community will be efficiently and safely served by transit in a cost-effective matter.

**PROJECT OBJECTIVES:**

3. *Provide a comprehensively planned, high quality, large-scale, residential-based community in northwestern Sacramento County, with a balanced mix of uses, employment opportunities, a wide variety of housing types, park and open space, and supporting public and quasi-public uses.*

SacRT is in support of this objective, and recognizes that the project plans for this community will likely generate transit demand, which SacRT is prepared to consider implementing in a cost-effective manner. SacRT also recognizes the benefit of serving a community with a balance of mixed-uses, new employment opportunities, and new residents.

*8. Provide a safe and efficient circulation system that interconnects land uses and promotes pedestrian and bicycle circulation and transit options that will encourage non-vehicular trips, thereby reducing VMTs.*

SacRT supports this objective to reduce VMT's by planning for a safe and efficient circulation system, with the proper transit infrastructure in order to do so. SacRT also recognizes the importance of promoting safe pedestrian and bicycle circulation so individuals can move within the community safely.

*11. Plans for enough units to provide housing choices in varying densities to respond to a range of market segments, including opportunities for rental units and affordable housing, and significant commercial uses, consistent with the General Plan and Housing Element.*

SacRT similarly recognizes the importance of providing a variety of housing choices in varying densities, as higher density housing is supportive of transit.

Additionally, SacRT agrees that this project is meeting the SACOG Blueprint, with the inclusion of each of the seven identified SACOG Blueprint principles.

**EIR FOCUS:**

*Transportation –*

SacRT is prepared to review the Transportation Analysis, and will continue to work with County staff and the other project proponents to assist with any data requests. SacRT is eager to collaborate with the County and others who are developing the EIR in order to provide accurate, transit-related information, and details about existing and planned service and infrastructure.

**Proposed Land Use Diagram Exhibit & Preliminary Land Use Plan Exhibit:**
SacRT is concerned about the K-8 school, located on the west side of the project area. SacRT has considered a potential fixed-route design to serve this community once developed; however, the location of this K-8 school is far from SacRT's theoretical bus route. SacRT would like to request the school be moved closer to West El Camino, in order to shorten the walking distance between future bus stops and the school. SacRT has received repeated complaints from parents concerning long walking distances from bus stops to schools, and they often request for bus routes to be closer to the school. SacRT understands that the County and proponents have been working with the Natomas Unified School District regarding the placement of schools in this plan; however, SacRT would like some additional consideration to this request.

**Proposed Transportation Plan Exhibit**
SacRT is in agreement with the Upper Westside Proposed Transportation Plan Amendment, as it is provides an additional thoroughfare, and other additional arterial

and collector streets, which would be necessary in order to provide efficient fixed-route service.

Thank you for the opportunity to comment. Please send any subsequent documents and notices that pertain to this project as they become available. If you have further questions regarding these requests, please contact me at 916.556.0518 or spoe@sacrt.com.

Sincerely,

Sarah Poe
Planner

Subject: **COMMENTS ON THE NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR UPPER WESTSIDE SPECIFIC PLAN (PLNP2018-00284).**

Dear Mr. Smith,

On October 5, 2020, the City of Sacramento Community Development Department received the Revised Notice of Preparation (NOP) for the Upper Westside Plan (UWSP). The proposed UWSP would include development of approximately 1,532± acres within a 2,066 acres project area located north and west of Interstate 80 and north Specific and east of Garden Highway. The proposal includes the addition of 9,356 dwelling units (58,671 population) and 3,096,245± square feet of commercial uses into the unincorporated Natomas area immediately adjacent to the City's North Natomas Community Plan Area. The project plan includes development consisting of residential, neighborhood mixed-use, neighborhood commercial, community mixed-use, office mixed-use and health & hospitality mixed-use. The plan includes three K-8 school sites, one high school site, several parks, and a 10.0± acre urban farm site on property owned by the Los Rios Community College District that is envisioned to be part of a 16.0± vocational training campus.

The City of Sacramento has previously provided initial comments regarding the proposed development in the project area and has been in contact with County staff since the application was initiated with the County on February 26, 2019. The City's comments below are preliminary in nature and respond specifically to the information presented and scope of analysis proposed. The Planning Division of the Community Development Department presents the comments below as single letter representing multiple City departments.

City of SACRAMENTO
Community Development

**Memorandum of Understanding between City & County**

On December 10, 2002, the City & County entered into a Memorandum of Understanding (MOU) (City Resolution 2002-830 and County Resolution 2002-1566) regarding Principles of Land Use and Revenue Sharing for the Natomas Area. The MOU specifically calls for any future urbanization efforts in the Natomas Joint Vision Area (NJVA) to be processed through the City, with the County remaining a steward of agricultural lands and open spaces.

The City is proposing that the NJVA be identified as an Area of Concern as part of the City's update to the General Plan currently in process. The designation formally represents the City's interest for development in the area and would be an initial step towards a possible Sphere of Influence (SOI) amendment. While no formal application for an SOI amendment has been filed with the Local Agency Formation Commission (LAFCo) by the City, it is the City's intent to fully adhere to the MOU and carry forth the vision found within its mutually affirmed policies.

**Economic**

Locating retail, hospitality, and other commercial uses adjacent to the City boundary may cause secondary physical and economic impacts within the City. In reviewing the plan, it seems nearly all of proposed retail is concentrated on either side of a westerly extension of El Camino west of I-80, and thus be largely regional in nature with freeway access and not neighborhood serving. The 2002 City/County MOU recognized that the City and County have mutual economic interests in the future of NJVA and a revenue sharing framework was outlined as a component of the MOU. As the MOU pointed out, cities and counties are dependent upon tax revenues generated by continued commercial and industrial growth. The tax system creates intense competition between jurisdictions and can lead to economic development at the expense of good land use planning. The City requests that the County address these issues now while the EIR is being prepared especially in light of the entitlements that are being sought by project proponents.

300 Richards Blvd., 3rd Floor
Sacramento, CA 95811

Help Line: 916-264-5011
CityofSacramento.org/cdd

City of SACRAMENTO
Community Development

**Growth Inducement**

CEQA recognizes that the extension of urban infrastructure to a site or area may lead to future development in nearby areas that, as a result of the infrastructure extension, may now feasibly extend and connect, thus leading to additional new development. The proposed UWSP project would remove barriers to development and bring development to an area that has not been included in the long-range plans approved by the County or the City. The project is not anticipated in the Region's Sustainable Communities Strategy. In addition to analyzing the effects of the project itself, the EIR should carefully evaluate these growth inducing effects. For example, the project would require at least the extension of urban utilities to the site, which lacks sufficient water, wastewater, storm water and energy infrastructure to support the proposed development. CEQA recognizes that the extension of urban infrastructure to a site or area may lead to future development in nearby areas that, as a result of the infrastructure extension, may now feasibly extend and connect, thus leading to additional new development. This should be analyzed in the EIR.

**Habitat Conservation Plan**

While the County is not a party to the Natomas Basin Habitat Conservation Plan (NBHCP), activities that could affect the success of the conservation strategy established in the NBHCP should be considered in the EIR. In the Natomas Basin, any future development not covered by an existing Habitat Conservation Plan (HCP) must obtain take authorization under the Endangered Species Act (ESA). The NBHCP along with the Metro Airpark HCP require that a total of 8,750 acres of mitigation be located within Natomas Basin and the mitigation must adhere to specific requirements of the HCP. How will the County ensure that the required mitigation acreage of 8,750 aces will in fact be able to occur within the Natomas Basin if the County allows both Upper Westside and the Grandpark projects to develop in the future? The HCP provides a conservation strategy for the protection of 22 covered species. The implementation of the NBHCP has been underway for over 20 years. While the County is considering significant land use development proposals, how will the County ensure that the requirements of the NBHCP (and Metro Air Park HCP) including the respective conservation strategies will be met by the HCP parties? The City of Sacramento requests that the EIR include an analysis of:

a. Location and quality of proposed mitigation sites (including those within the Natomas Basin), including an analysis of the effect of market competition and price increases resulting from the UWSP project and its effect on the HCP conservation strategy;

b. Hydrological connectivity to existing preserves in the Basin;

c. Effects of a reduction in the inventory (supply) of land available for mitigation, while also increasing the demand for mitigation land, driving up the price of mitigation for the existing permit holders;

d. Appropriate mitigation ratio assuming development of the plan, which would appear to substantially change the assumptions that supported a 0.5:1 ratio for the Metro Air Park HCP and the NBHCP, and a 1:1 ratio for Greenbriar;

e. The Natomas Joint Vision Area is approximately 18,424 acres in size. This unincorporated area is located within Sacramento County and makes up a portion of the Natomas Basin. The County approved-Metro Air Park area and Sacramento County Airport-owned lands together represent approximately 7,983 acres. With the two pending development proposals under consideration by the County, a total of 15,766 acres of the 18,424 NJVA would be allocated for urban development if the County were to approve the proposed development. Both the EIR's for UWSP and Grandpark need to address how and where HCP parties with authorized development are to find land for mitigation.

**Agricultural, Prime Farmland and Open Space**

The Sacramento County General Plan land use designation for a majority of the project area is Agricultural Cropland. This designation represents agricultural lands most suitable for intensive agricultural activities, including row crops, tree crops, irrigated grains, and dairies. One single-family dwelling unit per 40 acres is also considered suitable in this designation.

The UWSP includes preservation of 636.2± acres as Agricultural Cropland, Agricultural Residential, and Open Space. Continued planning and coordination regarding preservation of these uses within the UWSP area will be crucial during the environmental review and overall master planning processes. The Natomas Basin HCP requires that 50% of habitat mitigation lands remain in rice cultivation for the Giant Garter Snake. As such, the HCP requires that 4,375 acres remain in rice cultivation in perpetuity in the Natomas Basin. Continued agricultural uses, farmland and open space are a critical component to the success of the HCP's conservation strategy. The EIR should include an analysis that not only addresses impacts to agricultural lands but also how this potential loss impacts the ability for the NBHCP requirements to be met by the City of Sacramento, Sutter County and the other parties.

**Transportation**

Initial comments from the City's Public Works Department were transmitted via email on April 17, 2020 (attached) with regards to scope of improvements and coordination with the City. Staff recognizes the ongoing technical coordination with County staff and consultants and wishes to continue technical assistance throughout the analysis and formal review of the UWSP.

The City continues to be concerned about the proposed approach in the EIR where the project's fair share funding would be identified to widen impacted roadways within City limits and the assumption it would be the City's responsibility and a City project to implement those roadway widenings. How substantial roadway widening projects would be implemented is unclear as the City should not be assumed to have any matching funds. Also, generally speaking, the City's current focus is on reducing the number of lanes on City roadways to align with Climate Change goals and provide bike lanes/buffered bike lanes. The City has reduced the number of vehicular travel lanes in several recent Complete Street projects within City Limits including Freeport Boulevard, Franklin Boulevard, Riverside Boulevard, and numerous lettered and numbered street in the Central Business District.

The City is also concerned about how the UWSP and Grandpark would redistribute growth away from the City. Where would this growth be coming from? Does this growth create a better and more efficient VMT outcome for the City and the Region? We request that the EIR model scenarios to see how the projects may impact the City of Sacramento's VMT relative to the regional average.

City of SACRAMENTO
Community Development

**Sewer System**

The City of Sacramento believes the impacts from additional sewer flows to the Sacramento Regional County Sewer Interceptor should be analyzed to ensure there is adequate sewer capacity in the interceptor to accommodate the build-out of the existing Natomas area and the Natomas Joint Vision area (including this plan and other proposed master development plans).

**Drainage - Long term maintenance & funding**

The EIR should review long term maintenance mechanisms and associated funding that are established for the drainage facilities including flood control basins, water quality treatment, hydro-modification basins, and low impact development measures.

**Flood Control and Flood Plain Management**

How will flood control and flood plain management be addressed on- and off-site? Remaining levee improvements & phased development should be identified. This development may put people and infrastructure at risk of flooding. Will the County have any milestones for allowing development as the remaining levee work (by the Corps) is completed in Natomas Basin? The EIR should include an analysis of flood protection, resources that would be needed in response to a major flood, and any potential impacts to the Natomas Basin Plan or the City's flood fight plan resources.

**Storm Drainage**

What is the plan for storm drainage on and off-site? There is no capacity in the current Natomas Drainage System for storm drainage from this or other developments.

**Water Supply**

The Project area is currently served by the Natomas Central Mutual Water Company (NCMWC) with agricultural water drawn from the Sacramento River from existing pump stations located outside the 2,066± acre Project area to the northwest. Additionally, the Project area is located within the City of Sacramento's American River

Place of Use. The NOP identified the following three alternatives to provide needed domestic water to serve the proposed UWSP area:

1. *Alternative No. 1 – NCMWC via City of Sacramento. NCMWC has water rights that could be utilized if converted from agricultural use to municipal and industrial use. NCMWC water would be conveyed via the Sacramento River to the City's intake system at the Matsui Waterfront Park or other location for treatment. Treated water would then be conveyed via existing City infrastructure to the Project.*

2. *Alternative No. 2 – NCMWC with Onsite Treatment. Similar to Alternative No. 1, NCMWC water rights would be converted. NCMWC water would be conveyed via existing and proposed facilities to the Project area for treatment. This alternative would require a new domestic water treatment plant.*

3. *Alternative No. 3 – Utilize Place of Use Water. Utilize excess water rights held by the City of Sacramento. Delivery of City treated water to the Project would be by existing City infrastructure. The anticipated Project water use is approximately 3% of the City's unused available water supply.*

The EIR should include an analysis that addresses what the delivery system will be engineered for: size of mains, distribution, volume, and future capacity. How will the system be pressurized and what will be the storage capacity and type in ground, above ground or combination. How will the water supply be protected? What reassurances does the City have the delivery system will not contaminate the City's existing water supply

The UWSP would need a retailer to deliver the treated water. The NOP noted several options that include City of Sacramento, Sacramento County Water Agency or the creation of an independent water district or annexing to an existing water district. It is clear from the NOP that water supply, treatment and delivery is highly dependent on the City of Sacramento.

The only option that does not heavily rely on the City is another entity obtaining new domestic water rights, construction of an on-site treatment plant and all the conveying the water via new infrastructure that does not tie into the City system. According to Senate Bill 610, a water supply assessment is required for proposed

residential developments with more than 500 units. In addition, SB 221 requires written verification of sufficient water supply before a project is approved.

**Fire Protection**

The City of Sacramento currently provides emergency medical care, fire prevention inspections, rescue, and fire protection services to the Natomas Fire Protection District (NFPD) under contract with the County Board of Supervisors (acting as the governing body for the dependent special district). The City of Sacramento and the Natomas Fire Protection District initially entered into an agreement in August 1984 (City Agreement 84-037) for the City to provide fire protection services within the District. The contractual arrangement has been mutually beneficial and has proven to be an efficient and effective way to provide fire protection and emergency medical services within the District. At present, the land uses within the Natomas Fire Protection District are predominantly agricultural.

Some residential development has occurred along the Garden Highway, as well as agricultural uses with related single-family residential land uses. Non-residential developments within the District include the Sacramento International Airport, Metro Air Park, Northgate I-80 Business Park (aka: The Pan), and Camino Norte an area on the east side of El Centro Road. New development in the Natomas Joint Vision Area will result in an increase in service demand for Fire and Emergency Medical Services (EMS). How will the project proponent mitigate the service demand impacts and the City's ability to maintain current levels of service? The 2002 MOU identified the City as the appropriate entity for planning new growth in the NJVA and can better provide a full range of municipal services. The City has been providing municipal services for over 100 years and is already providing fire protection services to the NJVA area. The EIR should include an analysis that address fire protection services and facilities.

**Law Enforcement**

Police protection services in the City of Sacramento are provided by the City of Sacramento Police Department (SPD). Additionally, the CHP responds to all incidents on the state highways, state-owned buildings, and state property within the City. Given the geographical location which is adjacent to the City but isolated from the County unincorporated developed areas receiving services, the SPD has concerns regarding the impacts to City law enforcement. The EIR should provide

an evaluation of how and when services and facilities will be provided so that impacts to the City of Sacramento will not occur.

**Parks & Recreation**

1. Consistency with the City of Sacramento's level of service for the adjacent planning areas, at 3.5 acres of neighborhood/community parks per 1,000, and 8 acres of regional park acres per 1,000.
2. Will detention basins to be considered for joint use as a park(s)?
3. Parks located in areas around residential land uses that would be within a 10-minute walkshed should have limited barriers to access.
4. The parks that are located on the western boundary should be located close to the agricultural properties with trail connections to the open space, greenbelt.
5. Project design should incorporate connections to the existing off-street trails and pedestrian/bicycles paths that connect to the North and South Natomas parks and parkways.
6. A community center and library should be provided for in this new plan area. Until library and recreational facilities are constructed and operational in the project area, what service impacts will be borne by the City and how will these services be funded?
7. The proposed Urban Farms should operate as a private facility.

**Schools**

The NOP identifies three K through 8 school sites, one high school site, and one community college/vocational school in the Plan Area within specifically designated areas. The Natomas Unified School District (NUSD) boundaries include the UWSP area in addition to the City of Sacramento (Natomas Communities). What schools would serve the residents that may be located outside of the UWSP development plan area including those that may serve the area while the schools are built?

City of SACRAMENTO
Community Development

Thank you for the opportunity to comment and we ask that the NOP comments be included in the EIR, and corresponding responses in the analysis. If you have follow-up questions or seek clarifications on any of the above issues, please contact me at chodge@cityofsacramento.org or 916-808-5971.

Sincerely,

Cheryle L. Hodge

**To:** Taylor. Todd <taylorto@saccounty.net>
**Subject:** Upper Westside

Todd,

Per my previous email, I indicated that we will need more time to provide comprehensive comments as our General Plan Update evaluation progresses. However, I do want to pass along the very preliminary feedback that I received from Dept. of Public Works staff:

*The implementation of the Upper Westside Development Project (Project) will significantly change the traffic patterns on West El Camino Avenue. The daily traffic volumes will more than double on West El Camino Avenue between I-80 WB Ramps and I-80 EB Ramps per the information provided in "Upper Westside – Traffic Conceptual Feasibility Analysis" (Wood Rodgers, March 6, 2020). West El Camino roadway and the interchange with I-80 will operate unacceptably.*

*Sacramento County must coordinate with Caltrans and City of Sacramento to design and build appropriate improvements to the offsite facilities. For I-80 and West El Camino interchange a new Project Study Report (PSR) should be prepared as soon as the Project EIR Transportation section is completed, and future traffic volumes confirmed. Based on the preliminary forecasts provided in "Upper Westside – Traffic Conceptual Feasibility Analysis", a 6+ lane overpass will be necessary to accommodate the Project generated traffic volumes.*

*City of Sacramento neighborhoods and planned development consistent with the City of Sacramento 2035 General Plan zoning were never anticipated to generate the traffic volumes of such magnitude east of I-80 and West El Camino interchange. City has always anticipated this interchange to be a 4-lane facility.*

Let me know if you have any questions. Hope you have a great weekend.

Project Name: Upper Westside Specific Plan
Project Description: The project proposes a new Specific Plan on approximately 2,083 acres in the unincorporated Natomas community. Necessary entitlements include multiple General Plan Amendments, including moving the UPA and USB.

Thank you for the opportunity to review and comment on this project. Sacramento County Board of Supervisor's resolution 2006-1379, adopted April 19, 2006, established the Sacramento International Airport, Airport Planning Policy Area (APPA) and associated land use conditions that were subsequently incorporated as Policies NO-3 and NO-4 in the Sacramento County 2030 General Plan Land Use Element, adopted in 2011. Those conditions read:

NO-3. New residential development within the 60 CNEL noise contours adopted by the County for planning purposes at any airport or Helipad within Sacramento County shall be prohibited. This policy is not applicable to Executive Airport.

NO-4. New residential development within adopted Airport Policy Area boundaries, but outside the 60 CNEL, shall be subject to the following conditions:

A. Provide minimum noise insulation to 45 dB CNEL within new residential dwellings, including detached single family dwellings, with windows closed in any habitable room.

B. Notification in the Public Report prepared by the California Department of Real Estate disclosing the fact to prospective buyers that the parcel is located within an Airport Policy Area.

C. An Avigation Easement prepared by the Sacramento County Counsel's Office granted to the County of Sacramento, recorded with the Sacramento County Recorder, and filed with Department of Airports. Such Avigation Easement shall acknowledge the property location within an Airport Planning Policy Area and shall grant the right of flight and unobstructed passage of all aircraft into and out of the subject Airport.

*Exceptions: New residential accessory dwellings on parcels zoned Agricultural, Agricultural-Residential, Interim Agricultural, Interim General Agricultural, or Interim Limited Agricultural and between the 60 and 65 CNEL contours, shall be permitted within adopted Airport Policy Area boundaries, but would be subject to the conditions listed above.*

The proposed Project's existing land use is zoned as Agricultural Cropland, Agricultural-Residential, Commercial and Office, and Recreation. The proposed Project lies within the Sacramento International Airport, Airport Planning Policy Area. Since the applicant seeks to develop multi-family dwelling units on these parcels, policy NO-4 applies for residential land use.

Department of Airports staff is available to assist with the preparation and submission of the easement required by the condition. The applicant is requested to contact Assistant Airport Planner, Orlando Olivas via e-mail at olivaso@saccounty.net for more information.

Thank you again for the opportunity to review and comment on this planned project.

Sincerely,

J. Glen Rickelton

June 25, 2021

TO: Mr. Todd Smith, Environmental Coordinator
Department of Community Development Planning & Environmental Review Division
827 7th Street, Room 220, Sacramento, CA 95814

SUBJECT: Notice of Preparation for the Upper Westside Specific Plan
(PLNP2018-00284)

Thank you for providing the Sacramento Local Agency Formation Commission (LAFCo) this opportunity to review and comment regarding the Notice of Preparation (NOP) for the Upper Westside Specific Plan Environmental Impact Report (Upper Westside EIR.) Kindly accept these somewhat tardy comments, in the cooperative intent with which they are provided.

As described in the NOP, implementation of the proposal may result in a land–use project consisting of a 1,532± acre Development Area and a 534± acre Agricultural Buffer Area, proposed to be located west of the Development Area, providing a transition area towards the Garden Highway/Sacramento River corridor. Within the Development Area, the applicant has proposed an urban, commercial mixed-use district near the intersection of El Centro Road and West El Camino Avenue, surrounded by residential neighborhoods. The Development Area proposes 9,356± dwelling units and 3,096,245± square feet of commercial uses, with three K-8 school sites, one high school site, and several parks.

To permit the proposed Upper Westside project, a number of discretionary entitlements would be necessary from the County of Sacramento, or potential other land use authority. Also, LAFCo proceedings may be necessary to be considered by Sacramento LAFCo, including various Sphere of Influence Amendments (SOIA), annexations or detachments to existing service providers and/or the potential creation of additional public service providers. Please note that much of the project site is presently unserved, and is not located within the Spheres of Influence of existing service providers, including the City of Sacramento, Sacramento Regional County Sanitation District (Regional San), the Sacramento Area Sewer District (SASD), and various County Service Areas. The current Sphere of Influence boundaries for existing municipal service providers are largely conterminous with the Sacramento County General Plan Urban Services Boundary (USB). As the proposed project contemplates amending the various service boundaries to include the project area, it will be necessary to first amend any affected agencies' Sphere of Influence as well. (Note: Sacramento LAFCo local Policies, Procedures and Guidelines establish that a Sphere of Influence will not generally be amended concurrently with an action of an (annexation) application, [IV.A.1.])

The potential for amending affected agency Spheres of Influence raises some potential process issues with LAFCo statute and the Commission's adopted Policies:

LAFCo's adopted policy is that LAFCo is the appropriate CEQA lead agency for the evaluation of Sphere amendments. In cases where the Sphere amendment(s) is/are part(s) of a larger project, such as the Upper Westside Specific Plan, LAFCo may consider entering into a Memorandum of Understanding (MOU) to establish LAFCo as a co-lead agency in concert with the land use agency. We respectfully request that the County consider such an approach, subject to the discretion of the Commission, for this project. It is also respectfully requested that favorable consideration be given to preparation of an

Executive Summary specific to those concerns presented by LAFCo, in order to inform potential future Commission proceedings.

We appreciate that the NOP appears to reference many of the statutory responsibilities and concerns of Sacramento LAFCo. Following is a discussion of project description, EIR analysis and environmental issue areas of concern to the Commission. It may be that construction and implementation of the project will have no adverse effect for one or more of these environmental issues. If so, we request that the environmental documentation clearly state that such resource is not present in the project area and that no impact would result.

## PROJECT DESCRIPTION

The project description needs to explicitly include all required LAFCo actions and entitlements, including formation of new services providers such as a County Service Area (CSA) or Community Services District (CSD), and/or Sphere amendments and annexation of the project site to various existing service providers and any potential for detachments from any special districts now providing services to the project area. The project description needs to include a discussion regarding the role and sequence of LAFCo in the decision-making process; and LAFCo's role as both lead agency (for any proposed SOIA), and a responsible agency for any related reorganization proceedings, as an approving agency.

## ENVIRONMENTAL ISSUES

The EIR should address the following issues of statutory concern to LAFCo in order to permit LAFCo to use the environmental documentation during potential proceedings involving the Commission's consideration of the proposed project.

### *Public Services*

The evaluation of public services should meet LAFCo requirements. To meet this standard, the evaluation should focus on the following issues, including whether any physical facilities would need to be constructed to serve the project, including those outside of the project site, whose construction potentially could have environmental effects. If so, the secondary effects of constructing and operating such facilities should be evaluated. These would include the offsite water and wastewater lines identified in the Notice of Preparation. Secondly, the evaluation should assess whether service providers have (1) the service capability and capacity to serve the project area, and (2) whether they can provide services to the project area without adversely affecting existing service levels elsewhere in their service areas.

The analysis may benefit from consideration of the required service provider Municipal Service Review (MSR) for any proposed SOIA; or Plan for Services (PFS) for any Reorganization, regarding the means and capacity, financing and timely provision of services with no adverse impact to existing ratepayers, for fire/life-safety services, Municipal and Industrial (M&I) sustainable water supplies/treatment/distribution and wastewater collection and treatment, as well as other public services and utilities.

The evaluation should assess whether new service providers would perform any services that are now being provided by another service provider in the project area, and whether substitution of the new

provider for the existing provider would have any adverse effects on the existing provider's ability to maintain services elsewhere in its service area.

## *Natural Resources - Agricultural Lands*

The evaluation of agricultural resources should provide information to allow LAFCo to make findings with respect to LAFCo policies and standards. To permit LAFCo to complete this evaluation, the analysis should include a discussion of any current agricultural uses and activities within and adjacent to the project area, including the presence of any lands protected by Williamson Act contracts or within a Farmland Security Zone. The evaluation should also discuss the characteristics of soils found within the area (NRCS land use capability classification and storie index rating [from soil survey], and Farmland Mapping and Monitoring Program classification [from Department of Conservation Important Farmlands Map]) to determine the presence or absence of "prime agricultural land" as defined by Government Code §56064. Areas of prime agricultural land should be displayed on a map. In addition to soils information, if agricultural uses are present, for each use or operation the EIR should determine if the use supports, at a minimum, one Animal Unit (AU)/acre or has returned, or would return if planted with fruit or nut bearing trees, an agricultural value of at least $400/acre for 3 of the last 5 years. Describe the location and determine the acreage of such areas. (See GC §56064) If there are lands protected by Williamson Act contracts or within a Farmland Security Zone, determine the status, location, and acreage of such lands (renewal, non-renewal), and if non-renewal, the expiration date of the contract(s). If the project would result in the loss of prime agricultural land or protected agricultural lands, evaluate the trend of agricultural land loss countywide and in adjacent areas of Yolo County, and what portion of the overall inventory and loss that this project represents. The EIR should propose mitigation to reduce any potential impacts to important agricultural resources to a less-than-significant level.

LAFCo is required to make findings regarding five tests of "prime agricultural land" as defined by GC §56064. The EIR needs to provide information regarding such lands to permit LAFCo to make these findings as an approving agency.

The EIR should assess the interface between planned urban uses and existing and ongoing agricultural uses. Specifically, the analysis should determine the types of crops typically grown in interface areas and the types of pesticides/biocides and other chemicals used on identified crops. For each identified chemical, the EIR should determine any setback required by the State and the Sacramento County Agricultural Commissioner between the application site and sensitive uses such as residences and schools. Any low sensitivity land use buffers necessary to permit continued farming operations should be identified.

## *Natural Resources - Open Space*

The analysis should include an evaluation of any open space resources as defined by GC §65560 that are located within or adjacent to the project area. Such resources should be depicted on a map. If the project would result in the loss of open space resources, the EIR needs to evaluate the trend of open space loss countywide, and what portion of the overall inventory and loss that this project represents. The EIR should propose mitigation to reduce any potential impacts to open space resources to a less-than-significant level.

### *Population, Employment and Housing*

The analysis of these issues should be added to the scope of the EIR. The evaluation should discuss the presence and potential loss of affordable housing within the project area and, if there would be any loss, what affect the loss would have on a countywide basis. LAFCo is required to ensure that there be no net loss of targeted housing resources on a countywide basis. While such resources are may not be located within the Specific Plan study area, the EIR sections discussing Population and Housing should explicitly state this fact and determine that there would be no impact. If targeted housing resources are located, or planned for the Specific Plan area, the EIR should evaluate whether the project would maintain such resources or continue to allow their potential development. If not, the EIR should explain how this loss of affordable housing would affect the County's provision of targeted housing types, and propose mitigation to ensure that the County meets its state allocation for affordable housing.

### *Environmental Justice*

State law requires LAFCo to consider the extent to which the project will promote environmental justice. "Environmental justice" means the fair treatment of people of all races, cultures, and incomes with respect to the location of public facilities and the provision of public services. The EIR should provide sufficient evidence to permit LAFCo to make a determination regarding this issue.

## OTHER ENVIRONMENTAL ISSUES

The EIR should address the following issues of concern to LAFCo to permit the Commission to use the environmental documentation in LAFCo's consideration of the proposed project:

***Air Quality – Air Pollutant Attainment Plans*** – The air quality analysis should evaluate whether the proposed project is consistent with the land use assumptions used in adopted regional air pollutant attainment and maintenance plans. If the project is inconsistent with adopted plans, mitigation should be identified to both reduce air emissions and amend attainment and maintenance plans to include the project.

***Biological Resources/Habitat Preservation*** – *Existing Natomas Area Habitat Conservation Plans* – The assessment of biological resources should evaluate the cumulative effects of the proposed project, together with all other constructed and approved projects within the Natomas Basin. Additionally, the biological resource evaluation should include an evaluation of the consistency with, and any impacts to, existing Natomas Area habitat conservation plans and other resource planning documents (such as the NBHCP and the MAPHCP), and provide mitigation for any identified adverse effects consistent with the requirements of State and Federal regulatory authorities for impacts to special status species and sensitive habitats.

***Hazardous Materials*** – The evaluation of hazardous materials should include a characterization of past and ongoing agricultural chemical application, and the potential for hazardous levels of residual chemicals to be present in onsite soils. Should hazardous levels of residual chemicals be identified, mitigation should be developed to reduce risks below State and federal thresholds.

***Hydrology and Water Quality/Floodplain Areas*** – The scope of the analysis of hydrology and water quality/stormwater quality should include an evaluation of the County's and the project's compliance with the requirements of the Central Valley Flood Protection Plan, and with the regulations of all other applicable Federal, State, and regional agencies.

***Land Use*** – The analysis of the project's consistency with adopted plans to avoid or reduce environmental effects should be expanded to include as appropriate air pollutant attainment plans, flood protection plans, transportation planning documents, and relevant City of Sacramento planning documents and requirements. The analysis of topics to be evaluated within Land Use should include a consistency evaluation with the adopted SACOG Blueprint.

***Climate Change*** - The analysis should include an evaluation of the project's consistency with all applicable adopted and pending Climate Action Plan(s) and any ensuing Greenhouse Gas Emissions Reduction Plan(s).

***Transportation*** – The analysis of transportation effects should include an evaluation of the consistency of the proposed project with the adopted Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS).

***Alternatives*** – The range of alternatives assessed in the EIR should include an alternative that would amend the Sphere of Influence of the City of Sacramento and annex the project site to the City. LAFCo requests an evaluation of this alternative consistent with LAFCo policy to favor the most efficient and comprehensive service provider to the proposed project. As set forth in the NOP, the project anticipates that the City may furnish a water supply to the project as well as potentially treating and distributing potable water. Additionally, according to the NOP, the City currently provides fire protection services to the site via a contract with the Natomas Fire Protection District.

We look forward to working with your office in the course of the project and environmental review, and related LAFCo concerns. Please feel free to contact this office if there are any questions regarding these comments.

Sincerely,

**SACRAMENTO LOCAL AGENCY FORMATION COMMISSION**

Donald J. Lockhart, AICP
Executive Officer

CC: Commissioners
LAFCo Counsel
City of Sacramento

# APPENDIX PD-1

## PROPOSED GENERAL PLAN TEXT AMENDMENTS

Example of General Plan Consistency Analysis from Upper Westside

| | |
|---|---|
| Agricultural | AG-1. The County shall protect prime, statewide importance, unique and local importance farmlands located outside of the USB from urban encroachment, consistent with General Plan policies authorizing amendment of the Land Use Diagram in the interest of the public health, safety, and welfare of the residents of Sacramento County (see LU-114, LU-119 – LU- 128). |
| Agricultural | AG-5. Projects resulting in the conversion of more than fifty (50) acres of farmland shall be mitigated within Sacramento County, except as specified in the paragraph below, based on a 1:1 ratio, for the loss of the following farmland categories through the specific planning process or individual project entitlement requests to provide in-kind or similar resource value protection (such as easements for agricultural purposes):<br>• prime, statewide importance, unique, local importance, and grazing farmlands located outside the USB;<br>• prime, statewide importance, unique, and local importance farmlands located inside the USB.<br>The Board of Supervisors retains the authority to ~~override~~ set aside the in- County mitigation requirement for ~~impacts~~ ~~to~~ Unique, Local, and Grazing farmlands, but not with respect to Prime and Statewide farmlands.<br>However, if that land is also required to provide mitigation for impacts to special-status species ~~pursuant to Sacramento County endorsed or approved Habitat Conservation Plan (HCP)~~, then the Board of Supervisors may consider, on a case by case basis, the mitigation land ~~provided~~ required to mitigate for impacts to special-status species ~~in accordance with the HCP~~ as meeting the requirements of this section including land outside of Sacramento County.<br>Note: This policy is not tied to any maps contained in the Agricultural Element. Instead, the most current Important Farmland map from the Department of Conservation should be used to calculate mitigation. |
| Conservation | CO-60. Mitigation should be directed to lands identified on the Open Space Vision Diagram and associated component maps (please refer to the Open Space Element), consistent with LU-114. |
| Land Use | LU-15. Planning and development of new growth areas should be consistent with Sacramento County- adopted Habitat Conservation Plans and/or other efforts to preserve and protect natural resources. |

## AIR QUALITY AND GREENHOUSE GAS IMPACT ANALYSIS

SACRAMENTO METROPOLITAN AIR QUALITY MANAGEMENT DISTRICT

June 5, 2024

Julie Newton
Environmental Coordinator, Sacramento County
Planning and Environmental Review
827 7th street, Room 225
Sacramento, CA 95814

newtonj@saccounty.gov

Subject: **Upper Westside Specific Plan Project**

Dear Mrs. Newton,

Thank you for providing the March 2024 Air Quality and Greenhouse Gas Impact Analysis and the March 2022 Air Quality Mitigation Plan (AQMP) for the Upper Westside Specific Plan Project.

By way of this letter, District staff are verifying that we have reviewed the Upper Westside Air Quality and Greenhouse Gas Impact Analysis and find that it consistent with the District's CEQA guidance on greenhouse gas and air quality plans. The District also finds that the AQMP will, through on-site and off-site measures, achieve a 35 percent reduction in ozone precursors generated by mobile sources over the baseline project conditions.

Please contact me at rmuzzy@airquality.org or (279) 207-1139 if you have any questions regarding this verification of technical adequacy.

Sincerely,

Rich Muzzy

## Appendices

Appendix A CalEEMod Air Quality and Greenhouse Gas Modeling Results
Appendix B GDF Calculations
Appendix C AERMOD and HARP Modeling Results
Appendix D SMAQMD Minor Project Health Effects Screening Tool
Appendix E Air Quality Management Plan

## 1. INTRODUCTION

This Air Quality and Greenhouse Gas Impact Analysis identifies and analyzes the potential environmental impacts from the Upper Westside Specific Plan Project (proposed project) related to air quality and greenhouse gas (GHG) emissions. The information and analysis in this document are organized in accordance with the checklist in Appendix G of the California Environmental Quality Act (CEQA) Guidelines. The analysis includes a discussion of the existing air quality and GHG setting, the existing regulatory setting, as well as potential air quality and GHG impacts resulting from implementation of the project. In addition, the analysis includes mitigation measures warranted to reduce or eliminate any identified significant impacts. This analysis is based on the Sacramento Metropolitan Air Quality Management District (SMAQMD) CEQA Guide[1] and technical analysis performed by Raney Planning and Management, Inc. All modeling results are included as an appendix to this document.

## 2. PROJECT LOCATION

The proposed project is located northwest of Interstate 80 (I-80), north and east of the Sacramento River and the Sacramento County limits, west of the Witter Canal, and south of Fisherman's Lake/Slough. The 2,066-acre site is outside of the Urban Policy Area and Urban Services Boundary in the Natomas New Growth Area, and is predominantly agricultural land with existing commercial uses, including a truck stop, restaurants, gas stations, and hotels located west of the I-80 off-/on-ramp (see Figure 1 and Figure 2).

Surrounding existing land uses include the Sacramento River to the south and west; agricultural land to the west; I-80, multi-family residences, and a business park to the east; and single-family residences to the east, west, north, and south.

The Sacramento County General Plan designates the site as Agricultural Cropland, Agricultural Residential, Commercial/Office, and Recreation and the site is zoned Agricultural, Agricultural Residential, General Commercial, and Highway Travel Commercial.

## 3. PROJECT SUMMARY

The proposed project would create a Specific Plan for the Upper Westside planning area, which would include 9,231 residential dwelling units, 130.5 acres of commercial uses, 147.1 acres of schools, 73.2 acres of parks, 49.8 acres of open space, 83.9 acres of agricultural residences, and 407.6 acres of agricultural cropland (see Figure 3). The project would also include roadway improvements, including the expansion of El Centro Road and the development of additional roadways throughout the project site.

The project would require County approval of the following entitlements:

1. **Amend the Urban Services Boundary** to include the Upper Westside Development Area.
2. **Amend the Urban Policy Area (UPA)** to include the Upper Westside Plan Development Area.
   **Amend the General Plan Land Use Element and Land Use Diagram** to change the land use designations for the Upper Westside Development Area (1,532 acres) from Agricultural Cropland (1,825.8± acres), Agriculture Residential (97.0± acres), Recreation (55.3±), and Commercial and Offices (49.5± acres) to Low Density Residential (805.4±

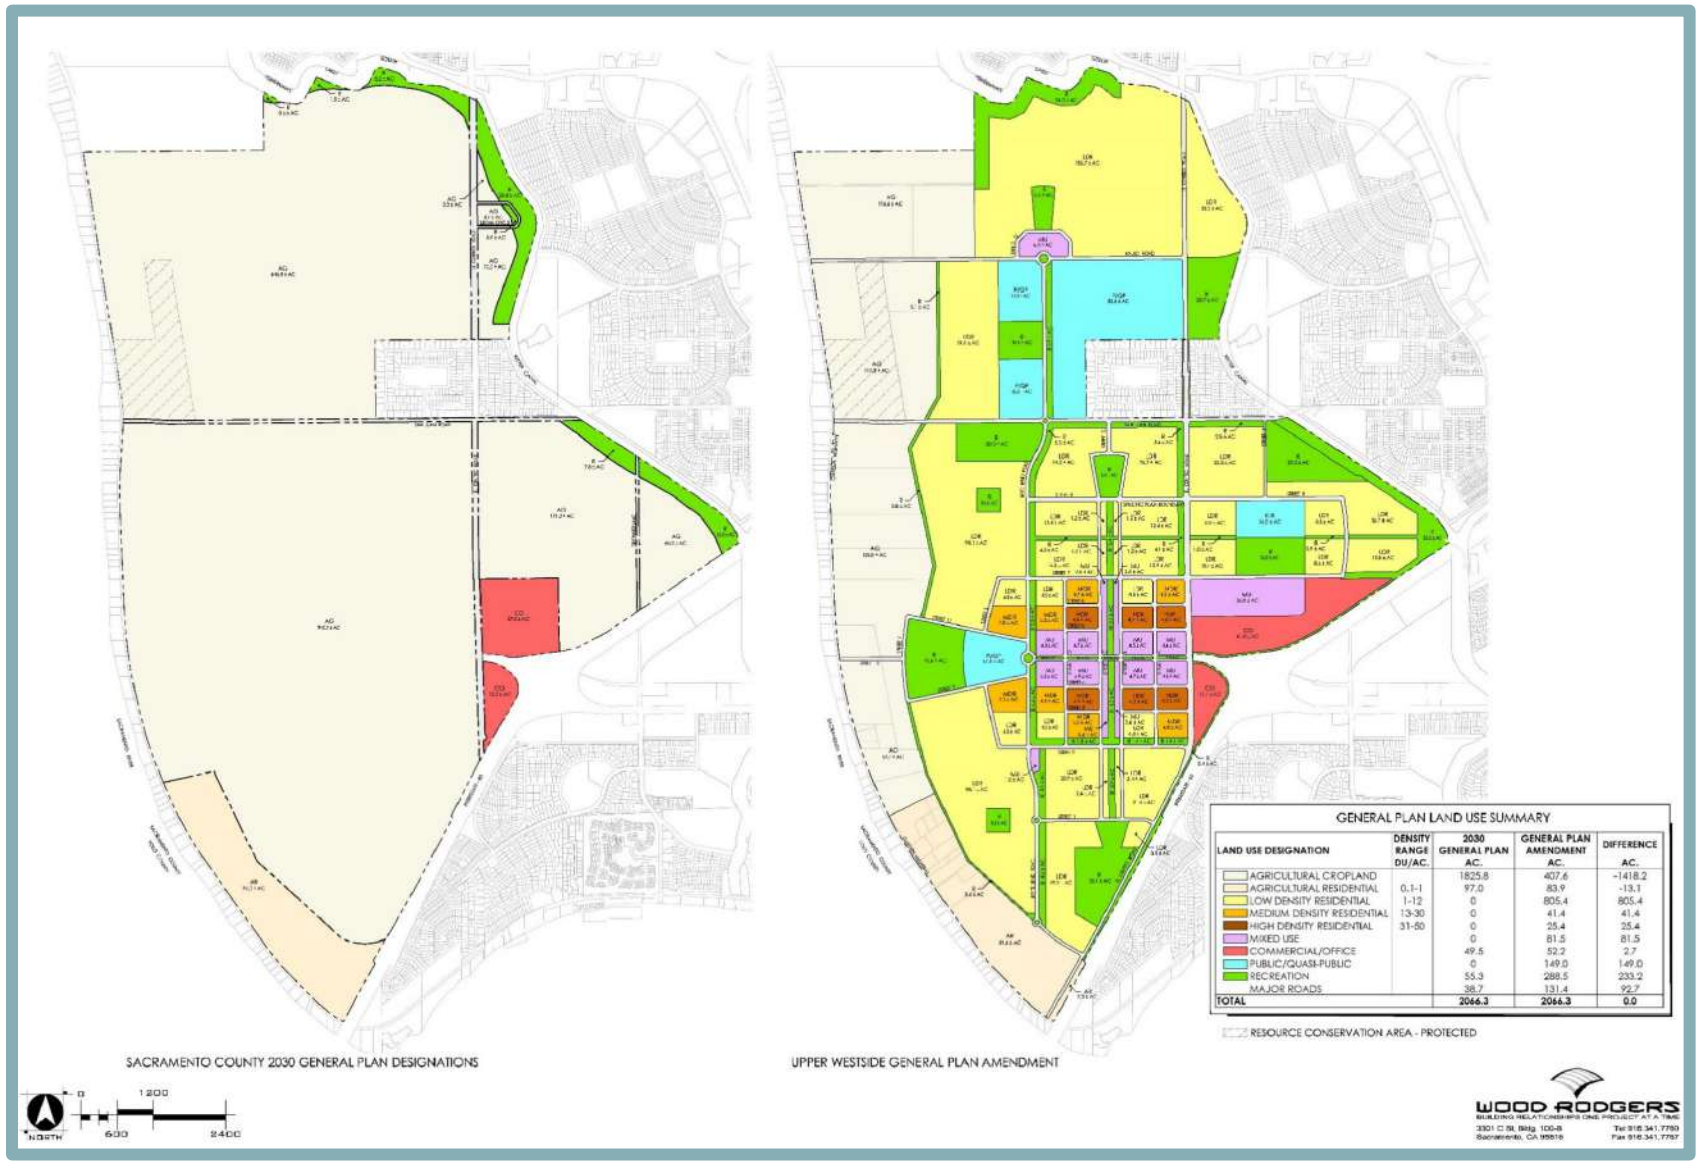
**Preliminary Land Use Plan**

acres), Medium Density Residential (41.4± acres), High Density Residential (25.4± acres), Commercial and Office (52.2± acres), Mixed Use (81.5± acres), Public/Quasi-Public (149.0± acres), Recreation (288.5± acres), Agricultural Cropland (407.6± acres) and Agricultural Residential (83.9± acres). The General Plan designations on parcels within the Ag Buffer area (534 acres) are proposed to remain unchanged (see Figure 4).



3. **Amend the General Plan Transportation Plan Diagram** to include the roadway system as designated for the Upper Westside Plan Area by the Specific Plan document.
4. **Amend the General Plan Bicycle Master Plan Diagram** to include the bikeway system as designated for the Upper Westside Plan Area by the Specific Plan document.
5. **Amend General Plan Text** to modify several policies within various elements of the General Plan.
6. **Amend the Zoning Diagram** to change the Zoning Designations for the Participating Properties (292± acres) within the Development Area of the Upper Westside Plan Area from AG-40 to Special Planning Area (SPA) (see Figure 5).
7. **Adopt the Upper Westside Specific Plan** document to establish land use, zoning, and development standards for the parcels located within the Development Area. The Specific Plan document will discuss and provide direction for the Very Low Density Residential VLDR (160.9± acres), Low Density Residential LDR (436.2± acres), Low Medium Density Residential LMDR (139.7± acres), Medium Density Residential MDR (57.8± acres), High Density Residential HDR (40.5± acres), Very High Density Residential (25.0± acres), Commercial Mixed Use CMU (79.6± acres), and Employment/Highway Commercial E/HC-SP (50.9± acres).
8. **Adopt an Urban Services Plan** for the Upper Westside Plan Development Area.
9. **Adopt an Affordable Housing Strategy** for the Upper Westside Plan Development Area.
10. **Adopt a Water Supply Master Plan** for the Upper Westside Plan Development Area.
11. **Approve a Water Supply Assessment (WSA)** for the Upper Westside Plan Development Area.
12. **Adopt a Public Facilities Financing Plan** for the Upper Westside Plan Development Area.
13. **Adopt a Reimbursement Fee** so that non-participating property owners within the Development Area can reimburse the sponsoring/participating property owners for the cost to prepare and process a Specific Plan and EIR for the Upper Westside Plan Area.
14. **Adopt a Development Agreement** for the sponsoring/participating property owners, controlling 295± acres, located within the Upper Westside Plan Development Area.

In addition to the above entitlements, separate Service District Annexation requests for the Upper Westside Plan Area are proposed to include:

- Annexation to County Service Area 10 (CSA-10) or the creation of a new CSA.
- Annexation to Sacramento Regional County Sanitation District (Regional San).
- Annexation to Sacramento Area Sewer District (SASD).

The following analysis assesses air quality impacts resulting from construction and operations of the proposed project.

## Figure 4
## General Plan Amendment Exhibit

| LAND USE DESIGNATION | DENSITY RANGE DU/AC. | 2030 GENERAL PLAN AC. | GENERAL PLAN AMENDMENT AC. | DIFFERENCE AC. |
|---|---|---|---|---|
| AGRICULTURAL CROPLAND | | 1825.8 | 407.6 | -1418.2 |
| AGRICULTURAL RESIDENTIAL | 0.1-1 | 97.0 | 83.9 | -13.1 |

# 4. EXISTING ENVIRONMENTAL SETTING

The following information provides an overview of the existing environmental setting in relation to air quality within the proposed project area. Air basin characteristics, ambient air quality standards (AAQS), attainment status and regional air quality plans, local air quality monitoring, odors, sensitive receptors and GHGs are discussed.

## Air Basin Characteristics

The project site is located within the Sacramento Valley Air Basin (SVAB) and is within the jurisdictional boundaries of the SMAQMD. The SVAB is in the northern half of California's Great Valley and is bordered on three sides by mountain ranges. Air flows into the SVAB through the Carquinez Strait, moves across the Delta and carries pollutants from the heavily populated San Francisco Bay Area into the SVAB. The prevailing winds are moderate in strength and vary from moist clean breezes from the south to dry land flows from the north.

Most precipitation in the SVAB results from air masses moving in from the Pacific Ocean during the winter months. Storms usually move through the area from the west or northwest. During the winter rainy season (November through February) over half the total annual precipitation falls while the average winter temperature is a moderate 49 degrees Fahrenheit. During the summer, daytime temperatures can exceed 100 degrees Fahrenheit. Dense fog occurs mostly in mid-winter and rarely in the summer. Daytime temperatures from April through October average between 60- and 80-degrees Fahrenheit with low humidity. The inland location and surrounding mountains shelter the valley from much of the ocean breeze that keeps the coastal regions moderate in temperature. The only breech in the mountain barrier is the Carquinez Strait, which exposes the midsection of the valley to the coastal air mass.

## Ambient Air Quality Standards

Both the U.S. Environmental Protection Agency (USEPA) and the California Air Resources Board (CARB) have established AAQS for common pollutants. The federal standards are divided into primary standards, which are designed to protect the public health, and secondary standards, which are designed to protect the public welfare. The AAQS for each contaminant represent safe levels that avoid specific adverse health effects. Pollutants for which AAQS have been established are called "criteria" pollutants. Table 1 identifies the major pollutants, characteristics, health effects and typical sources. The national and California AAQS (NAAQS and CAAQS, respectively) are summarized in Table 2. The NAAQS and CAAQS were developed independently with differing purposes and methods. As a result, the federal and State standards differ in some cases. In general, the State of California standards are more stringent than the federal standards, particularly for ozone and particulate matter (PM).

A description of each criteria pollutant and its potential health effects is provided below.

### Ozone

Ozone is a reactive gas consisting of three oxygen atoms. In the troposphere, ozone is a product of the photochemical process involving the sun's energy, and is a secondary pollutant formed as a result of a complex chemical reaction between reactive organic gases (ROG) and oxides of nitrogen ($NO_X$) emissions in the presence of sunlight. As such, unlike other pollutants, ozone is not released directly into the atmosphere from any sources. In the stratosphere, ozone exists naturally and shields Earth from harmful incoming ultraviolet radiation. The primary source of ozone precursors is mobile sources, including cars, trucks, buses, construction equipment, and agricultural equipment. Ground-level ozone reaches the highest level during the afternoon and early evening hours. High levels occur most often during the summer months.

**Table 1**
**Summary of Criteria Pollutants**

| Pollutant | Characteristics | Health Effects | Major Sources |
|---|---|---|---|
| Ozone | A highly reactive gas produced by the photochemical process involving a chemical reaction between the sun's energy and other pollutant emissions. Often called photochemical smog. | • Eye irritation<br>• Wheezing, chest pain, dry throat, headache, or nausea<br>• Aggravated respiratory disease such as emphysema, bronchitis, and asthma | Combustion sources such as factories, automobiles, and evaporation of solvents and fuels. |
| Carbon Monoxide | An odorless, colorless, highly toxic gas that is formed by the incomplete combustion of fuels. | • Impairment of oxygen transport in the bloodstream<br>• Impaired vision, reduced alertness, chest pain, and headaches<br>• Can be fatal in the case of very high concentrations | Automobile exhaust, combustion of fuels, and combustion of wood in woodstoves and fireplaces. |
| Nitrogen Dioxide | A reddish-brown gas that discolors the air and is formed during combustion of fossil fuels under high temperature and pressure. | • Lung irrigation and damage<br>• Increased risk of acute and chronic respiratory disease | Automobile and diesel truck exhaust, industrial processes, and fossil-fueled power plants. |
| Sulfur Dioxide | A colorless, irritating gas with a rotten egg odor formed by combustion of sulfur-containing fossil fuels. | • Aggravation of chronic obstruction lung disease<br>• Increased risk of acute and chronic respiratory disease | Diesel vehicle exhaust, oil-powered power plants, and industrial processes. |
| Particulate Matter ($PM_{10}$ and $PM_{2.5}$) | A complex mixture of extremely small particles and liquid droplets that can easily pass through the throat and nose and enter the lungs. | • Aggravation of chronic respiratory disease<br>• Heart and lung disease<br>• Coughing<br>• Bronchitis<br>• Chronic respiratory disease in children<br>• Irregular heartbeat<br>• Nonfatal heart attacks | Combustion sources such as automobiles, power generation, industrial processes, and wood burning. Also from unpaved roads, farming activities, and fugitive windblown dust. |
| Lead | A metal found naturally in the environment as well as in manufactured products. | • Loss of appetite, weakness, apathy, and miscarriage<br>• Lesions of the neuromuscular system, circulatory system, brain, and gastrointestinal tract | Industrial sources and combustion of leaded aviation gasoline. |

**Table 2**
**Ambient Air Quality Standards**

| Pollutant | Averaging Time | CAAQS | NAAQS | |
|---|---|---|---|---|
| | | | Primary | Secondary |
| **Ozone** | 1 Hour | 0.09 ppm | - | Same as primary |
| | 8 Hour | 0.070 ppm | 0.070 ppm | |
| **Carbon Monoxide** | 8 Hour | 9 ppm | 9 ppm | - |
| | 1 Hour | 20 ppm | 35 ppm | |
| **Nitrogen Dioxide** | Annual Mean | 0.030 ppm | 53 ppb | Same as primary |
| | 1 Hour | 0.18 ppm | 100 ppb | - |
| **Sulfur Dioxide** | 24 Hour | 0.04 ppm | - | - |
| | 3 Hour | - | - | 0.5 ppm |
| | 1 Hour | 0.25 ppm | 75 ppb | - |
| **Respirable Particulate Matter ($PM_{10}$)** | Annual Mean | 20 ug/$m^3$ | - | Same as primary |
| | 24 Hour | 50 ug/$m^3$ | 150 ug/$m^3$ | |
| **Fine Particulate Matter ($PM_{2.5}$)** | Annual Mean | 12 ug/$m^3$ | 12 ug/$m^3$ | 15 ug/$m^3$ |
| | 24 Hour | - | 35 ug/$m^3$ | Same as primary |
| **Lead** | 30 Day Average | 1.5 ug/$m^3$ | - | - |
| | Calendar Quarter | - | 1.5 ug/$m^3$ | Same as primary |
| **Sulfates** | 24 Hour | 25 ug/$m^3$ | - | - |
| **Hydrogen Sulfide[1]** | 1 Hour | 0.03 ppm | - | - |
| **Vinyl Chloride[1]** | 24 Hour | 0.010 ppm | - | - |
| **Visibility Reducing Particles[2]** | 8 Hour | see note below | - | - |

Notes:
ppm = parts per million; ppb = parts per billion; µg/$m^3$ = micrograms per cubic meter

1 The emission of hydrogen sulfide is associated with geothermal activity, oil and gas production, refineries, sewage treatment, and confined animal feeding operations. Vinyl chloride is associated with the production of plastic products. The proposed project does not have the potential to generate hydrogen sulfide or vinyl chloride and, thus, such pollutants are not discussed further in this analysis.

2 Statewide Visibility Reducing Particle Standard (except Lake Tahoe Air Basin): Particles in sufficient amount to produce an extinction coefficient of 0.23 per kilometer when the relative humidity is less than 70 percent. This standard is intended to limit the frequency and severity of visibility impairment due to regional haze and is equivalent to a 10-mile nominal visual range.

***Source: California Air Resources Board. Ambient Air Quality Standards. May 4, 2016. Available at: http://www.arb.ca.gov/research/aaqs/aaqs2.pdf. Accessed August 2021.***

Ground-level ozone is a strong irritant that could cause constriction of the airways, forcing the respiratory system to work harder in order to provide oxygen. Ozone at the Earth's surface causes numerous adverse health effects and is a major component of smog. High concentrations of ground level ozone can adversely affect the human respiratory system and aggravate cardiovascular disease and many respiratory ailments.

## Reactive Organic Gas

ROG refers to a group of reactive chemical gas composed of hydrocarbon compounds, typically found in paints and solvents, that contributes to the formation of smog and ozone by involvement in atmospheric chemical reactions. Because ROG is the umbrella term used to identify several types of ozone precursors, and ozone has its own health standard, a separate health standard does not exist for ROG. However, some compounds that make up ROG are toxic, such as the carcinogen benzene.

### Oxides of Nitrogen

$NO_X$ are a family of gaseous nitrogen compounds and are precursors to the formation of ozone and particulate matter. The major component of $NO_X$, nitrogen dioxide ($NO_2$), is a reddish-brown gas that discolors the air and is toxic at high concentrations. $NO_X$ results primarily from the combustion of fossil fuels under high temperature and pressure. On-road and off-road motor vehicles and fuel combustion are the major sources of $NO_X$. $NO_X$ reacts with ROG to form smog, which could result in adverse impacts to human health, damage the environment, and cause poor visibility. Additionally, $NO_X$ emissions are a major component of acid rain. Health effects related to $NO_X$ include lung irritation and lung damage and can cause increased risk of acute and chronic respiratory disease.

## Carbon Monoxide

Carbon monoxide (CO) is a colorless, odorless, poisonous gas produced by incomplete burning of carbon-based fuels such as gasoline, oil, and wood. When CO enters the body, the CO combines with chemicals in the body, which prevents blood from carrying oxygen to cells, tissues, and organs. Symptoms of exposure to CO can include problems with vision, reduced alertness, and general reduction in mental and physical functions. Exposure to CO can result in chest pain, headaches, reduced mental alertness, and death at high concentrations.

## Sulfur Dioxide

Sulfur Dioxide ($SO_2$) is a colorless, irritating gas with a rotten egg odor formed primarily by the combustion of sulfur-containing fossil fuels from mobile sources, such as locomotives, ships, and off-road diesel equipment. $SO_2$ is also emitted from several industrial processes, such as petroleum refining and metal processing. Similar to airborne $NO_X$, suspended sulfur oxide particles contribute to poor visibility. The sulfur oxide particles are also a component of particulate matter that is 10 micrometers in diameter and smaller ($PM_{10}$). Exposure to $SO_2$ can result in aggravation of chronic obstruction lung disease and increased risk of acute and chronic respiratory disease

## Particulate Matter

Particulate matter, also known as particle pollution or PM, is a complex mixture of extremely small particles and liquid droplets. Particle pollution is made up of a number of components, including acids (such as nitrates and sulfates), organic chemicals, metals, and soil or dust particles. The size of particles is directly linked to their potential for causing health impacts. The USEPA is concerned about $PM_{10}$ because those are the particles that generally pass through the throat and nose and enter the lungs. Once inhaled, the particles could affect the heart and lungs and cause serious health effects. USEPA groups particle pollution into three categories based on their size and where they are deposited:

- "Inhalable coarse particles ($PM_{2.5-10}$)," which are found near roadways and dusty industries, are between 2.5 and 10 micrometers in diameter. $PM_{2.5-10}$ is deposited in the thoracic region of the lungs.
- "Fine particles ($PM_{2.5}$)," which are found in smoke and haze, are 2.5 micrometers in diameter and smaller. $PM_{2.5}$ particles could be directly emitted from sources such as forest fires, or could form when gases emitted from power plants, industries, and automobiles react in the air. They penetrate deeply into the thoracic and alveolar regions of the lungs.
- “Ultrafine particles (UFP),” are very, very small particles (less than 0.1 micrometers in diameter) largely resulting from the combustion of fossil fuels, meat, wood, and other hydrocarbons. While UFP mass is a small portion of $PM_{2.5}$, their high surface area, deep lung penetration, and transfer into the bloodstream could result in disproportionate health

impacts relative to their mass. UFP is not currently regulated separately, but is analyzed as part of $PM_{2.5}$.

$PM_{10}$, $PM_{2.5}$, and UFP include primary pollutants, which are emitted directly to the atmosphere and secondary pollutants, which are formed in the atmosphere by chemical reactions among precursors. Generally speaking, $PM_{2.5}$ and UFP are emitted by combustion sources like vehicles, power generation, industrial processes, and wood burning, while $PM_{10}$ sources include the same sources plus roads and farming activities. Fugitive windblown dust and other area sources also represent a source of airborne dust. Long-term PM pollution, especially fine particles, could result in significant health problems including, but not limited to, the following: increased respiratory symptoms, such as irritation of the airways, coughing or difficulty breathing; decreased lung function; aggravated asthma; development of chronic respiratory disease in children; development of chronic bronchitis or obstructive lung disease; irregular heartbeat; heart attacks; and increased blood pressure.

### Visibility Reducing Particles

Visibility Reducing Particles are a mixture of suspended particulate matter consisting of dry solid fragments, solid cores with liquid coatings, and small droplets of liquid. The standard is intended to limit the frequency and severity of visibility impairment due to regional haze and is equivalent to a 10-mile nominal visual range.

## Lead

Lead is a relatively soft and chemically resistant metal that is a natural constituent of air, water, and the biosphere. Lead is neither created nor destroyed in the environment, and, thus, essentially persists forever. Lead forms compounds with both organic and inorganic substances. As an air pollutant, lead is present in small particles. Sources of lead emissions in California include a variety of industrial activities. Gasoline-powered automobile engines were a major source of airborne lead through the use of leaded fuels. The use of leaded fuel has been mostly phased out, with the result that ambient concentrations of lead have dropped dramatically. However, because lead was emitted in large amounts from vehicles when leaded gasoline was used, lead is present in many soils (especially urban soils) as a result of airborne dispersion and could become re-suspended into the air.

Because lead is only slowly excreted by the human body, exposures to small amounts of lead from a variety of sources could accumulate to harmful levels. Effects from inhalation of lead above the level of the ambient air quality standard may include impaired blood formation and nerve conduction. Lead can adversely affect the nervous, reproductive, digestive, immune, and blood-forming systems. Symptoms could include fatigue, anxiety, short-term memory loss, depression, weakness in the extremities, and learning disabilities in children. Lead also causes cancer.

## Sulfates

Sulfates are the fully oxidized ionic form of sulfur and are colorless gases. Sulfates occur in combination with metal and/or hydrogen ions. In California, emissions of sulfur compounds occur primarily from the combustion of petroleum-derived fuels (e.g., gasoline and diesel fuel) that contain sulfur. The sulfur is oxidized to $SO_2$ during the combustion process and subsequently converted to sulfate compounds in the atmosphere. The conversion of $SO_2$ to sulfates takes place comparatively rapidly and completely in urban areas of California due to regional meteorological features.

The sulfates standard established by CARB is designed to prevent aggravation of respiratory symptoms. Effects of sulfate exposure at levels above the standard include a decrease in ventilatory function, aggravation of asthmatic symptoms, and an increased risk of cardio-pulmonary disease. Sulfates are particularly effective in degrading visibility, and, because they are usually acidic, can harm ecosystems and damage materials and property. The SVAB is in attainment for the sulfate CAAQS.

## Toxic Air Contaminants

In addition to the criteria pollutants discussed above, Toxic Air Contaminants (TACs) are also a category of environmental concern. TACs are present in many types of emissions with varying degrees of toxicity. Public exposure to TACs can result from emissions from normal operations, as well as accidental releases. Common stationary sources of TACs include gasoline stations, dry cleaners, and diesel backup generators, which are subject to SMAQMD stationary source permit requirements. The other, often more significant, common source type is on-road motor vehicles, such as cars and trucks, on freeways and roads, and off-road sources such as construction equipment, ships, and trains.

Fossil fueled combustion engines, including those used in cars, trucks, and some pieces of construction equipment, release at least 40 different TACs. In terms of health risks, the most volatile contaminants are diesel particulate matter (DPM), benzene, formaldehyde, 1,3-butadiene, toluene, xylenes, and acetaldehyde. Gasoline vapors contain several TACs, including benzene, toluene, and xylenes. Diesel engines emit a complex mixture of air pollutants, including both gaseous and solid material. The solid material in diesel exhaust, DPM, is composed of carbon particles and numerous organic compounds, including over 40 known cancer-causing organic substances. Examples of such chemicals include polycyclic aromatic hydrocarbons, benzene, formaldehyde, acetaldehyde, acrolein, and 1,3-butadiene. Diesel exhaust also contains gaseous pollutants, including volatile organic compounds and $NO_X$. Due to the published evidence of a relationship between diesel exhaust exposure and lung cancer and other adverse health effects, the CARB has identified DPM from diesel-fueled engines as a TAC. Although a variety of TACs are emitted by fossil fueled combustion engines, the cancer risk due to DPM exposure represents a more significant risk than the other TACs discussed above.[2]

More than 90 percent of DPM is less than one micrometer in diameter, and, thus, DPM is a subset of $PM_{2.5}$. As a California statewide average, DPM comprises about eight percent of $PM_{2.5}$ in outdoor air, although DPM levels vary regionally due to the non-uniform distribution of sources throughout the State. Most major sources of diesel emissions, such as ships, trains, and trucks, operate in and around ports, rail yards, and heavily-traveled roadways. Such areas are often located near highly populated areas. Thus, elevated DPM levels are mainly an urban problem, with large numbers of people exposed to higher DPM concentrations, resulting in greater health consequences compared to rural areas.

Due to the high levels of diesel activity, high volume freeways, stationary diesel engines, rail yards and facilities attracting heavy and constant diesel vehicle traffic are identified as having the highest associated health risks from DPM. Construction-related activities also have the potential to generate concentrations of DPM from on-road haul trucks and off-road equipment exhaust emissions.

[2] California Air Resources Board. *Reducing Toxic Air Pollutants in California's Communities*. February 6, 2002.

The size of diesel particulates that are of the greatest health concern are fine particles (i.e., $PM_{2.5}$) and UFPs. UFPs have a small diameter (on the order of 0.1 micrometers).[3] The small diameter of UFPs imparts the particulates with unique attributes, such as high surface areas and the ability to penetrate deeply into lungs. Once UFPs have been deposited in lungs, the small diameter allows the UFPs to be transferred to the bloodstream. The high surface area of the UFPs also allows for a greater adsorption of other chemicals, which are transported along with the UFPs into the bloodstream of the inhaler, where the chemicals can eventually reach critical organs.[4] The penetration capability of UFPs may contribute to adverse health effects related to heart, lung, and other organ health.[5] UFPs are a subset of DPM and activities that create large amounts of DPM, such as the operations involving heavy diesel-powered engines, also release UFPs.

Health risks from TACs are a function of both the concentration of emissions and the duration of exposure, which typically are associated with long-term exposure and the associated risk of contracting cancer. Health effects of exposure to TACs other than cancer include birth defects, neurological damage, and death. Because chronic exposure can result in adverse health effects, TACs are regulated at the regional, State, and federal level. The identification, regulation, and monitoring of TACs is relatively new compared to criteria air pollutants that have established AAQS. TACs are regulated or evaluated on the basis of risk to human health rather than comparison to an AAQS or emission-based threshold.

## Attainment Status and Regional Air Quality Plans

The Federal Clean Air Act (FCAA) and the California Clean Air Act (CCAA) require all areas of California to be classified as attainment, nonattainment, or unclassified as to their status with regard to the NAAQS and/or CAAQS. The FCAA and CCAA require that the CARB, based on air quality monitoring data, designate portions of the State where the federal or State AAQS are not met as "nonattainment areas." Because of the differences between the national and State standards, the designation of nonattainment areas is different under the federal and State legislation. The FCAA requires areas violating the NAAQS to prepare an air quality control plan referred to as the State Implementation Plan (SIP). The CCAA requires local air pollution control districts to prepare air quality attainment plans. These plans must provide for district-wide emission reductions of five percent per year averaged over consecutive three-year periods or, provide for adoption of "all feasible measures on an expeditious schedule."

As presented in Table 3, under the CCAA, Sacramento County has been designated nonattainment for the State one-hour ozone, State and federal eight-hour ozone, State $PM_{10}$, and Federal $PM_{2.5}$ standards. The County is designated attainment or unclassified for all other AAQS. Due to the nonattainment designations, the SMAQMD, along with the other air districts in the SVAB region, is required to develop plans to attain the federal and State standards for ozone and particulate matter. The air quality plans include emissions inventories to measure the sources of air pollutants, to evaluate how well different control measures have worked, and show how air pollution would be reduced. In addition, the plans include the estimated future levels of pollution to ensure that the area would meet air quality goals. Each of the attainment plans currently in effect are discussed in further detail in the Regulatory Context section of this document.

## Local Air Quality Monitoring

Air quality is monitored by CARB at various locations to determine which air quality standards are being violated, and to direct emission reduction efforts, such as developing attainment plans and rules, incentive programs, etc. The nearest local air quality monitoring station to the project site is the Woodland-Gibson Road station, located in Woodland, CA, approximately ten miles west of the project site. Data for $NO_2$ was not available for the Woodland-Gibson Road monitoring site; thus, such data was obtained from the next nearest site, the Davis-UCD Campus monitoring site. Table 4 shows historical occurrences of pollutant levels exceeding the State and federal AAQS for the three-year period from 2018 to 2020.

**Table 4**
**Air Quality Data Summary (2018-2020)**

| Pollutant | Standard | Days Standard Was Exceeded | | |
|---|---|---|---|---|
| | | 2018 | 2019 | 2020 |
| 1-Hour Ozone | State | 1 | 0 | 1 |
| | Federal | 0 | 0 | 0 |
| 8-Hour Ozone | State | 2 | 0 | 2 |
| | Federal | 0 | 0 | 0 |
| 24-Hour $PM_{2.5}$ | Federal | 12.3 | * | * |
| 24-Hour $PM_{10}$ | State | 24.5 | * | * |
| | Federal | 6.1 | 0 | * |
| 1-Hour Nitrogen Dioxide | State | 0 | 0 | 0 |
| | Federal | 0 | 0 | 0 |

Note: * indicates that sufficient data was not available to determine the value.

## Odors

While offensive odors rarely cause physical harm, they can be unpleasant, leading to considerable annoyance and distress among the public and can generate citizen complaints to local governments and air districts. Due to the subjective nature of odor impacts, the number of variables that can influence the potential for an odor impact, and the variety of odor sources, quantitative or formulaic methodologies to determine the presence of a significant odor impact do not exist. Adverse effects of odors on residential areas and other sensitive receptors warrant the closest scrutiny; but consideration should also be given to other land use types where people congregate, such as recreational facilities, worksites, and commercial areas. The potential for an odor impact is dependent on a number of variables including the nature of the odor source, distance between a receptor and an odor source, and local meteorological conditions.

One of the most important factors influencing the potential for an odor impact to occur is the distance between the odor source and receptors, also referred to as a buffer zone or setback. The greater the distance between an odor source and receptor, the less concentrated the odor emission would be when reaching the receptor.

Meteorological conditions also affect the dispersion of odor emissions, which determines the exposure concentration of odiferous compounds at receptors. The predominant wind direction in an area influences which receptors are exposed to the odiferous compounds generated by a nearby source. Receptors located upwind from a large odor source may not be affected due to the produced odiferous compounds being dispersed away from the receptors. Wind speed also influences the degree to which odor emissions are dispersed away from any area.

Odiferous compounds could be generated from a variety of source types including both construction and operational activities. Examples of common land use types that typically generate significant odor impacts include, but are not limited to wastewater treatment plants; sanitary landfills; composting/green waste facilities; recycling facilities; petroleum refineries; chemical manufacturing plants; painting/coating operations; rendering plants; and food packaging plants. The project site is not located in the vicinity of any land use types that are known to generate significant odor impacts.

## Sensitive Receptors

Some land uses are considered more sensitive to air pollution than others, due to the types of population groups or activities involved. Children, pregnant women, the elderly, and those with existing health problems are especially vulnerable to the effects of air pollution. Accordingly, land uses that are typically considered to be sensitive receptors include residences, schools, day care centers, playgrounds, and medical facilities. The northeastern and southeastern boundaries of the project site are characterized by residential land uses. Thus, in the project vicinity, the nearest sensitive receptors are primarily residences, as well as public schools, including Witter Ranch Elementary, Two Rivers Elementary, and Merryhill Preschool. The closest receptors are the residences located approximately 50 feet away, on the eastern side of the project site.

## Greenhouse Gas Emissions

GHGs are gases that absorb and emit radiation within the thermal infrared range, trapping heat in the earth's atmosphere. Some GHGs occur naturally and are emitted into the atmosphere through both natural processes and human activities. Other GHGs are created and emitted solely through human activities. The principal GHGs that enter the atmosphere due to human activities are carbon dioxide ($CO_2$), methane ($CH_4$), nitrous oxide ($N_2O$), and fluorinated carbons. Other common GHGs include water vapor, ozone, and aerosols. The increase in atmospheric

concentrations of GHG due to human activities has resulted in more heat being held within the atmosphere, which is the accepted explanation for global climate change.

The primary GHG emitted by human activities is $CO_2$, with the next largest components being $CH_4$ and $N_2O$. A wide variety of human activities result in the emission of $CO_2$. Some of the largest sources of $CO_2$ include the burning of fossil fuels for transportation, electricity production, and industrial processes, including plastic and cement production. The primary sources of $CH_4$ emissions include domestic livestock sources, decomposition of wastes in landfills, releases from natural gas systems, coal mine seepage, and manure management. The main human activities producing $N_2O$ are agricultural soil management, fuel combustion in motor vehicles, nitric acid production, manure management, and stationary fuel combustion. Emissions of GHG by economic sector indicate that energy-related activities account for the majority of U.S. emissions. The transportation sector is the largest single-source of GHG emissions, and electricity production is the second largest source, followed by industrial activities. The agricultural, commercial, and residential sectors account for the remainder of GHG emission sources.[6]

Emissions of GHG are partially offset by uptake of carbon and sequestration in trees, agricultural soils, landfilled yard trimmings and food scraps, and absorption of $CO_2$ by the earth's oceans. Additional emission reduction measures for GHG could include, but are not limited to, compliance with local, State, or federal plans or strategies for GHG reductions, on-site and off-site mitigation, and project design features. Attainment concentration standards for GHGs have not been established by the federal or State government.

## Global Warming Potential

Global Warming Potential (GWP) is one type of simplified index (based upon radiative properties) that can be used to estimate the potential future impacts of emissions of various gases. According to the USEPA, the GWP of a gas, or aerosol, to trap heat in the atmosphere is the "cumulative radiative forcing effects of a gas over a specified time horizon resulting from the emission of a unit mass of gas relative to a reference gas." The reference gas for comparison is $CO_2$. GWP is based on a number of factors, including the heat-absorbing ability of each gas relative to that of $CO_2$, as well as the decay rate of each gas relative to that of $CO_2$. Each gas's GWP is determined by comparing the radiative forcing associated with emissions of that gas versus the radiative forcing associated with emissions of the same mass of $CO_2$, for which the GWP is set at one. Methane gas, for example, is estimated by the USEPA to have a comparative global warming potential 25 times greater than that of $CO_2$, as shown in Table 5.

As shown in the table, at the extreme end of the scale, sulfur hexafluoride is estimated to have a comparative GWP 22,800 times that of $CO_2$. The "specified time horizon" is related to the atmospheric lifetimes of such GHGs, which are estimated by the USEPA to vary from 50 to 200 years for $CO_2$, to 50,000 years for tetrafluoromethane. Longer atmospheric lifetimes allow GHG to buildup in the atmosphere; therefore, longer lifetimes correlate with the GWP of a gas. The common indicator for GHG is expressed in terms of metric tons of $CO_2$ equivalents ($MTCO_2e$), which is calculated based on the GWP for each pollutant.

[6] U.S. Environmental Protection Agency. *Sources of Greenhouse Gas Emissions*. Available at: https://www.epa.gov/ghgemissions/sources-greenhouse-gas-emissions. Accessed May 2021.

**Table 5**
**GWPs and Atmospheric Lifetimes of Select GHGs**

| Gas | Atmospheric Lifetime (years) | GWP (100-year time horizon) |
|---|---|---|
| Carbon Dioxide ($CO_2$) | See footnote[1] | 1 |
| Methane ($CH_4$) | 12 | 25 |
| Nitrous Oxide ($N_2O$) | 114 | 298 |
| Hydrofluorocarbon (HFC)-23 | 270 | 14,800 |
| HFC-134a | 14 | 1,430 |
| HFC-152a | 1.4 | 124 |
| PFC: Tetrafluoromethane ($CF_4$) | 50,000 | 7,390 |
| PFC: Hexafluoroethane ($C_2F_6$) | 10,000 | 12,200 |
| Sulfur Hexafluoride ($SF_6$) | 3,200 | 22,800 |

[1] For a given amount of carbon dioxide emitted, some fraction of the atmospheric increase in concentration is quickly absorbed by the oceans and terrestrial vegetation, some fraction of the atmospheric increase will only slowly decrease over a number of years, and a small portion of the increase will remain for many centuries or more.

## Effects of Global Climate Change

Uncertainties exist as to exactly what the climate changes will be in various areas of the Earth. According to the Intergovernmental Panel on Climate Change's Working Group I Report, *Climate Change 2021: The Physical Science Basins,*[7] climate change impacts to North America may include:

- Increase in hot extremes;
- Change in heavy precipitation;
- Sea level rise;
- Ocean acidification;
- Strong declines in glaciers, permafrost, and snow cover;
- Increase in tropical cyclones, severe storms, and dust storms; and
- Agricultural and ecological droughts.

In the Sacramento region, specifically, global climate change hazards include extreme heat and flooding. California's Fourth Climate Change Assessment predicts that the Sacramento Valley region is expected to see an average daily temperature maximum increase of 10 degrees Fahrenheit by the end of the century. Additionally, Midtown Sacramento is anticipated to experience up to 40 days per year of extreme heat (>103.9 F), as compared to the approximately four days per year that occur now.[8] Such extreme heat events pose a public health hazard. In addition to extreme heat, the Sacramento region is anticipated to experience more extreme floods, greater floodplain vulnerability, and higher Delta water levels.[9] Although average annual

[9] *Ibid.*

precipitation is not anticipated to substantially change in the next 50 to 75 years, precipitation will likely be delivered in more intense storms and over the course of a shorter wet season.[10]

# 5. REGULATORY CONTEXT

Air quality and GHG emissions are monitored and regulated through the efforts of various international, federal, State, and local government agencies. Agencies work jointly and individually to improve air quality through legislation, regulations, planning, policy-making, education, and a variety of programs. The agencies responsible for regulating and improving the air quality within the project area and monitoring or reducing GHG emissions are discussed below.

## Federal Regulations Related to Air Quality

The following discussion provides a summary of the federal regulations relevant to air quality, organized by pollutant type.

### Criteria Pollutants

The FCAA, passed in 1970 and last amended in 1990, forms the basis for the national air pollution control effort. The USEPA is responsible for implementing most aspects of the FCAA, including setting NAAQS for major air pollutants; setting hazardous air pollutant standards; approving state attainment plans; setting motor vehicle emission standards; issuing stationary source emission standards and permits; and establishing acid rain control measures, stratospheric ozone protection measures, and enforcement provisions. Under the FCAA, NAAQS are established for the following criteria pollutants: ozone, CO, $NO_2$, $SO_2$, $PM_{10}$, $PM_{2.5}$, and lead.

The NAAQS describe acceptable air quality conditions designed to protect the health and welfare of the citizens of the nation. The NAAQS (other than for ozone, $NO_2$, $SO_2$, $PM_{10}$, $PM_{2.5}$, and those based on annual averages or arithmetic mean) are not to be exceeded more than once per year. NAAQS for ozone, $NO_2$, $SO_2$, $PM_{10}$, $PM_{2.5}$ are based on statistical calculations over one- to three-year periods, depending on the pollutant. The FCAA requires the USEPA to reassess the NAAQS at least every five years to determine whether adopted standards are adequate to protect public health based on current scientific evidence. States with areas that exceed the NAAQS must prepare a state implementation plan that demonstrates how those areas will attain the standards within mandated time frames.

### Hazardous Air Pollutants/Toxic Air Contaminants

The 1977 FCAA amendments required the USEPA to identify national emission standards for hazardous air pollutants to protect public health and welfare. Hazardous air pollutants include certain volatile organic chemicals, pesticides, herbicides, and radionuclides that present a tangible hazard, based on scientific studies of exposure to humans and other mammals. Under the 1990 FCAA Amendments, which expanded the control program for hazardous air pollutants, 189 substances and chemical families were identified as hazardous air pollutants.

## Federal Regulations Related to GHG Emissions

The following are the federal regulations relevant to GHG emissions.

[10] Cal-Adapt. *Local Climate Change Snapshot for Sacramento, California*, Available at: https://cal-adapt.org/tools/local-climate-change-snapshot. Accessed March 2022.

## Federal Vehicle Standards

In 2007, in response to the *Massachusetts v. EPA* U.S. Supreme Court ruling, the Bush Administration issued Executive Order (EO) 13432 directing the USEPA, the Department of Transportation, and the Department of Energy to establish regulations that reduce GHG emissions from motor vehicles, non-road vehicles, and non-road engines by 2008. In 2009, the National Highway Transportation Safety Administration (NHTSA) issued a final rule regulating fuel efficiency and GHG emissions from cars and light-duty trucks for model year 2011; and, in 2010, the USEPA and NHTSA issued a final rule regulating cars and light-duty trucks for model years 2012 through 2016 (75 FR 25324–25728).

In 2010, President Obama issued a memorandum directing the Department of Transportation, Department of Energy, USEPA, and NHTSA to establish additional standards regarding fuel efficiency and GHG reduction, clean fuels, and advanced vehicle infrastructure. In response to this directive, the USEPA and NHTSA proposed stringent, coordinated federal GHG and fuel economy standards for model years 2017 through 2025 light-duty vehicles. The proposed standards were projected to achieve emission rates as low as 163 grams per mile of $CO_2$ by model year 2025 on an average industry fleet-wide basis, which is equivalent to 54.5 miles per gallon if the foregoing emissions level was achieved solely through fuel efficiency. The final rule was adopted in 2012 for model years 2017 through 2021 (77 FR 62624–63200), and NHTSA intended to set standards for model years 2022 through 2025 in future rulemaking.

In addition to the regulations applicable to cars and light-duty trucks described above, in 2011, the USEPA and NHTSA announced fuel economy and GHG standards for medium- and heavy-duty trucks for model years 2014 through 2018. The standards for $CO_2$ emissions and fuel consumption are tailored to three main vehicle categories: combination tractors; heavy-duty pickup trucks and vans; and vocational vehicles. According to the USEPA, this regulatory program reduced GHG emissions and fuel consumption for the affected vehicles by six to 23 percent over the 2010 baselines (76 FR 57106–57513).

In August 2016, the USEPA and NHTSA announced the adoption of the phase two program related to the fuel economy and GHG standards for medium- and heavy-duty trucks. The phase two program applied to vehicles with model years 2018 through 2027 for certain trailers, and model years 2021 through 2027 for semi-trucks, large pickup trucks, vans, and all types of sizes of buses and work trucks. The final standards were expected to lower $CO_2$ emissions by approximately 1.1 billion MT, and reduce oil consumption by up to two billion barrels over the lifetime of the vehicles sold under the program.

In August 2018, the USEPA and NHTSA proposed to amend certain Corporate Average Fuel Economy and GHG standards for passenger cars and light trucks and establish new, less-stringent standards for model years 2021 through 2026 (see 40 CFR Part 85, Part 86 and Part 600; and 49 CFR Part 523, Part 531, Part 533, Part 536, and Part 537). Compared to maintaining the post-2020 standards that were previously in place, the 2018 proposal would increase U.S. fuel consumption by approximately 0.5 million barrels per day, and would impact the global climate by 3/1000$^{th}$ of 1°C by 2100. California and other states stated their intent to challenge federal actions that would delay or eliminate GHG reduction measures, and committed to cooperating with other countries to implement global climate change initiatives.

On September 27, 2019, the USEPA and NHTSA published the *Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule Part One: One National Program* (84 FR 51,310), which became effective November 26, 2019. The Part One Rule revokes California's authority to set its own GHG

emissions standards and set zero-emission-vehicle mandates in California. On March 31, 2020, the USEPA and NHTSA issued the Part Two Rule, which sets $CO_2$ emissions standards and corporate average fuel economy standards for passenger vehicles and light-duty trucks for model years 2021 through 2026. On January 20, 2021, President Joe Biden issued an EO on Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis, which includes review of the Part One Rule by April 2021 and review of the Part Two Rule by July 2021. In response to the Part One Rule, in December 2021, the U.S. Department of Transportation withdrew its portions of the "SAFE I" rule. As a result, states are now allowed to issue their own GHG emissions standards and zero-emissions vehicle mandates.[11] In addition, the Part Two Rule was adopted to revise the existing national GHG emission standards for passenger cars and light trucks through model year 2026. These standards are the strongest vehicle emissions standards ever established for the light-duty vehicle sector, and will result in avoiding more than three billion tons of GHG emissions through 2050.[12]

## State Regulations Related to Air Quality

The following discussion summarizes applicable State regulations related to air quality, organized by pollutant type. Only the most prominent and applicable California air quality-related legislation is included below; however, an exhaustive list and extensive details of California air quality legislation can be found at the CARB website (http://www.arb.ca.gov/html/lawsregs.htm).

### Criteria Air Pollutants

The FCAA delegates the regulation of air pollution control and the enforcement of the NAAQS to the states. In California, the task of air quality management and regulation has been legislatively granted to CARB, with subsidiary responsibilities assigned to air quality management districts and air pollution control districts at the regional and county levels. CARB, which became part of the California Environmental Protection Agency in 1991, is responsible for ensuring implementation of the CCAA of 1988, responding to the FCAA, and regulating emissions from motor vehicles and consumer products.

CARB has established CAAQS, which are generally more restrictive than the NAAQS. The CAAQS describe adverse conditions; that is, pollution levels must be below these standards before a basin can attain the standard. Air quality is considered “in attainment” if pollutant levels are continuously below the CAAQS and do not violate the standards more than once each year. The CAAQS for ozone, CO, $SO_2$ (one-hour and 24-hour), $NO_2$, $PM_{10}$, $PM_{2.5}$, and visibility-reducing particles are values that are not to be exceeded. All others are not to be equaled or exceeded. The NAAQS and CAAQS are presented in Table 2.

### Hazardous Air Pollutants/Toxic Air Contaminants

The State Air Toxics Program was established in 1983 under Assembly Bill (AB) 1807 (Tanner), and involved definition of a list of TACs. The California TAC list identifies more than 700 pollutants, of which carcinogenic and noncarcinogenic toxicity criteria have been established for a subset of these pollutants pursuant to the California Health and Safety Code. The State list of TACs includes the federally-designated hazardous air pollutants. In 1987, the Legislature enacted the Air Toxics “Hot Spots” Information and Assessment Act of 1987 (AB 2588) to address public concern over

[11] National Highway Traffic Safety Administration. *In Removing Major Roadblock to State Action on Emissions Standards, U.S. Department of Transportation Advances Biden-Harris Administration’s Climate and Jobs Goals.* Available at: https://www.nhtsa.gov/press-releases/cafe-preemption-final-rule. Accessed March 2022.

[12] U.S. Environmental Protection Agency. *Final Rule to Revise Existing National GHG Emissions Standards for Passenger Cars and Light Trucks Through Model Year 2026*. Available at: https://www.epa.gov/regulations-emissions-vehicles-and-engines/final-rule-revise-existing-national-ghg-emissions. Accessed March 2022.

the release of TACs into the atmosphere. AB 2588 law requires facilities emitting toxic substances to provide local air pollution control districts with information that will allow an assessment of the air toxics problem, identification of air toxics emissions sources, location of resulting hot spots, notification of the public exposed to significant risk, and development of effective strategies to reduce potential risks to the public over five years. TAC emissions from individual facilities are quantified and prioritized. "High-priority" facilities are required to perform a health risk assessment, and, if specific thresholds are exceeded, the facility operator is required to communicate the results to the public in the form of notices and public meetings.

## CARB Air Quality and Land Use Handbook

CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* (CARB Handbook) addresses the importance of considering health risk issues when siting sensitive land uses, including residential development, in the vicinity of intensive air pollutant emission sources including freeways or high-traffic roads, distribution centers, ports, petroleum refineries, chrome plating operations, dry cleaners, and gasoline dispensing facilities (GDF).[13] The CARB Handbook draws upon studies evaluating the health effects of traffic traveling on major interstate highways in metropolitan California centers within Los Angeles (Interstate-405 and Interstate-710), the San Francisco Bay, and San Diego areas. The recommendations identified by CARB, including siting residential uses a minimum distance of 500 feet from freeways or other high-traffic roadways, are consistent with those adopted by the State of California for location of new schools. Specifically, the CARB Handbook recommends, "Avoid siting new sensitive land uses within 500 feet of a freeway, urban roads with 100,000 vehicles/day, or rural roads with 50,000 vehicles/day".[14] Additionally, the CARB Handbook recommends avoiding locating sensitive receptors within 50 feet away from a "typical" GDF. "Typical" is defined as a GDF with a throughput of less than 3.6 million gallons of gasoline per year.

Importantly, the Introduction chapter of the CARB Handbook clarifies that the guidelines are strictly advisory, recognizing that: "[l]and use decisions are a local government responsibility. The CARB Handbook is advisory and these recommendations do not establish regulatory standards of any kind." CARB recognizes that there may be land use objectives as well as meteorological and other site-specific conditions that need to be considered by a governmental jurisdiction relative to the general recommended setbacks, specifically stating, "[t]hese recommendations are advisory. Land use agencies have to balance other considerations, including housing and transportation needs, economic development priorities, and other quality of life issues".[15]

## Diesel Particulate Matter

In 2000, CARB approved a comprehensive diesel risk reduction plan to reduce diesel emissions, including DPM, from new and existing diesel-fueled vehicles and engines. The regulation is anticipated to result in an 80 percent decrease in statewide diesel health risk by 2020 compared with the diesel risk in 2000. Additional regulations apply to new trucks and diesel fuel, including the On-Road Heavy Duty Diesel Vehicle (In-Use) Regulation, the On-Road Heavy Duty (New) Vehicle Program, the In-Use Off-Road Diesel Vehicle Regulation, and the New Off-Road Compression-Ignition (Diesel) Engines and Equipment program. The aforementioned regulations and programs have timetables by which manufacturers must comply and existing operators must upgrade their diesel-powered equipment. Several Airborne Toxic Control Measures (ATCMs) exist that reduce diesel emissions, including In-Use Off-Road Diesel-Fueled Fleets (13 California

[13] California Air Resources Board. *Air Quality and Land Use Handbook: A Community Health Perspective*. April 2005.
[14] *Ibid.*
[15] *Ibid.*

Code of Regulations [CCR] 2449 et seq.) and In-Use On-Road Diesel-Fueled Vehicles (13 CCR 2025).

### Heavy-Duty Diesel Truck and Bus Regulation

CARB adopted the final Heavy-Duty Truck and Bus Regulation, Title 13, Division 3, Chapter 1, Section 2025, on December 31, 2014, to reduce DPM (black carbon) and $NO_X$ emissions from heavy-duty diesel vehicles. The rule requires DPM filters be applied to newer heavier trucks and buses by January 1, 2012, with older vehicles required to comply by January 1, 2015. The rule requires nearly all diesel trucks and buses to be compliant with the 2010 model year engine requirement by January 1, 2023. CARB also adopted an ATCM to limit idling of diesel-fueled commercial vehicles on December 12, 2013. The rule requires diesel-fueled vehicles with gross vehicle weights greater than 10,000 pounds to idle no more than five minutes at any location (13 CCR 2485).

## California Health and Safety Code Section 41700

Section 41700 of the Health and Safety Code states that a person must not discharge from any source whatsoever quantities of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public; or that endanger the comfort, repose, health, or safety of any of those persons or the public; or that cause, or have a natural tendency to cause, injury or damage to business or property. Section 41700 also applies to sources of objectionable odors.

## Heavy-Duty Vehicle Idling Emission Reduction Program

On October 20, 2005, CARB approved a regulatory measure to reduce emissions of toxics and criteria pollutants by limiting idling of new and in-use sleeper berth equipped diesel trucks.16 The regulation established new engine and in-use truck requirements and emission performance requirements for technologies used as alternatives to idling the truck's main engine. For example, the regulation requires 2008 and newer model year heavy-duty diesel engines to be equipped with a non-programmable engine shutdown system that automatically shuts down the engine after five minutes of idling, or optionally meet a stringent $NO_X$ emission standard. The regulation also requires operators of both in-state and out-of-state registered sleeper berth equipped trucks to manually shut down their engine when idling more than five minutes at any location within California. Emission producing alternative technologies such as diesel-fueled auxiliary power systems and fuel-fired heaters are also required to meet emission performance requirements that ensure emissions are not exceeding the emissions of a truck engine operating at idle.

## In-Use Off-Road Diesel Vehicle Regulation

On July 26, 2007, CARB adopted a regulation to reduce DPM and $NO_X$ emissions from in-use (existing), off-road, heavy-duty diesel vehicles in California.[17] Such vehicles are used in construction, mining, and industrial operations. The regulation is designed to reduce harmful emissions from vehicles by subjecting fleet owners to retrofit or accelerated replacement/repower requirements, imposing idling limitations on owners, operators, renters, or lessees of off-road diesel vehicles. The idling limits require operators of applicable off-road vehicles (self-propelled diesel-fueled vehicles 25 horsepower and up that were not designed to be driven on-road) to limit idling to less than five minutes. The idling requirements are specified in Title 13 of the CCR.

## State Regulations Related to GHG Emissions

The statewide GHG emissions regulatory framework is summarized below. The following text describes EOs, legislation, regulations, and other plans and policies that would directly or indirectly reduce GHG emissions and/or address climate change issues. The following discussion does not include an exhaustive list of applicable regulations; rather, only the most prominent and applicable California legislation related to GHG emissions and climate change is included below.

## State Climate Change Targets

California has taken a number of actions to address climate change, including EOs, legislation, and CARB plans and requirements, which are summarized below.

### EO S-3-05

EO S-3-05 (June 2005) established California's GHG emissions reduction targets and laid out responsibilities among the State agencies for implementing the EO and for reporting on progress toward the targets. The EO established the following targets:

- By 2010, reduce GHG emissions to 2000 levels;
- By 2020, reduce GHG emissions to 1990 levels; and
- By 2050, reduce GHG emissions to 80 percent below 1990 levels.

EO S-3-05 also directed the California EPA to report biannually on progress made toward meeting the GHG targets and the impacts to California due to global warming, including impacts to water supply, public health, agriculture, the coastline, and forestry. The Climate Action Team was formed, which subsequently issued reports from 2006 to 2010.

### AB 32

In furtherance of the goals established in EO S-3-05, the Legislature enacted AB 32 (Núñez and Pavley). The bill is referred to as the California Global Warming Solutions Act of 2006 (September 27, 2006). AB 32 provided initial direction on creating a comprehensive, multi-year program to limit California's GHG emissions at 1990 levels by 2020 and initiate the transformations required to achieve the State's long-range climate objectives. AB 32 also required that the CARB prepare a "scoping plan" for achieving the maximum technologically feasible and cost-effective GHG emission reductions by 2020. The CARB's Scoping Plan is described in further detail below.

### CARB's 2007 Statewide Limit on GHG Emissions

In 2007, in accordance with California Health and Safety Code Section 38550, CARB approved a statewide limit on GHG emissions by 2020, consistent with the determined 1990 baseline (427 million metric tons [MMT] $CO_2e$).

### EO B-18-12

EO B-18-12 (April 2012) directed State agencies, departments, and other entities under the governor's executive authority to take action to reduce entity-wide GHG emissions by at least 10 percent by 2015 and 20 percent by 2020, as measured against a 2010 baseline. EO B-18-12 also established goals for existing State buildings for reducing grid-based energy purchases and water use.

### EO B-30-15

EO B-30-15 (April 2015) identified an interim GHG reduction target in support of targets previously identified under EO S-3-05 and AB 32. EO B-30-15 set an interim target goal of reducing GHG

emissions to 40 percent below 1990 levels by 2030 to keep California on its trajectory toward meeting or exceeding the long-term goal of reducing GHG emissions to 80 percent below 1990 levels by 2050 as set forth in EO S-3-05. To facilitate achieving this goal, EO B-30-15 called for an update to the CARB's *Climate Change Scoping Plan: A Framework for Change* (Scoping Plan) to express the 2030 target in terms of MMT $CO_2e$. The CARB's Scoping Plan is discussed in further detail below. The EO also called for State agencies to continue to develop and implement GHG emission reduction programs in support of the reduction targets.

## Senate Bill (SB) 32 and AB 197

SB 32 and AB 197 (enacted in 2016) are companion bills. SB 32 codified the 2030 emissions reduction goal of EO B-30-15 by requiring CARB to ensure that statewide GHG emissions are reduced to 40 percent below 1990 levels by 2030. AB 197 established the Joint Legislative Committee on Climate Change Policies, consisting of at least three members of the Senate and three members of the Assembly, to provide ongoing oversight over implementation of the State's climate policies. AB 197 also added two members of the Legislature to the Board as non-voting members; requires CARB to make available and update (at least annually via the CARB's website) emissions data for GHGs, criteria air pollutants, and TACs from reporting facilities; and requires CARB to identify specific information for GHG emissions reduction measures when updating the Scoping Plan.

## CARB's Climate Change Scoping Plan

One specific requirement of AB 32 is for CARB to prepare a scoping plan for achieving the maximum technologically feasible and cost-effective GHG emission reductions by 2020 (Health and Safety Code Section 38561[a]), and to update the Scoping Plan at least once every five years. In 2008, CARB approved the first Scoping Plan. The Scoping Plan included a mix of recommended strategies that combined direct regulations, market-based approaches, voluntary measures, policies, and other emission reduction programs calculated to meet the 2020 statewide GHG emission limit and initiate the transformations needed to achieve the State's long-range climate objectives. The key elements of the Scoping Plan include the following:

1. Expanding and strengthening existing energy efficiency programs as well as building and appliance standards;
2. Achieving a statewide renewable energy mix of 33 percent;
3. Developing a California cap-and-trade program that links with other Western Climate Initiative partner programs to create a regional market system and caps sources contributing 85 percent of California's GHG emissions;
4. Establishing targets for transportation-related GHG emissions for regions throughout California, and pursuing policies and incentives to achieve those targets;
5. Adopting and implementing measures pursuant to existing State laws and policies, including California's clean car standards, goods movement measures, and the Low Carbon Fuel Standard (LCFS) (17 CCR, Section 95480 et seq.); and
6. Creating targeted fees, including a public goods charge on water use, fees on high GWP gases, and a fee to fund the administrative costs of the State's long-term commitment to AB 32 implementation.

The Scoping Plan also identified local governments as essential partners in achieving California's goals to reduce GHG emissions because they have broad influence and, in some cases, exclusive authority over activities that contribute to significant direct and indirect GHG emissions through their planning and permitting processes, local ordinances, outreach and education efforts, and municipal operations. Specifically, the Scoping Plan encouraged local governments to adopt a

reduction goal for municipal operations and for community emissions to reduce GHGs by approximately 15 percent from then levels (2008) by 2020. Many local governments developed community-scale local GHG reduction plans based on this Scoping Plan recommendation.

In 2014, CARB approved the first update to the Scoping Plan. The *First Update to the Climate Change Scoping Plan: Building on the Framework* (First Update) defined the State's GHG emission reduction priorities for the next five years and laid the groundwork to start the transition to the post-2020 goals set forth in EO S-3-05 and EO B-16-2012. The First Update concluded that California is on track to meet the 2020 target but recommended a 2030 mid-term GHG reduction target be established to ensure a continuation of action to reduce emissions. The First Update recommended a mix of technologies in key economic sectors to reduce emissions through 2050, including energy demand reduction through efficiency and activity changes; large-scale electrification of on-road vehicles, buildings, and industrial machinery; decarbonizing electricity and fuel supplies; and the rapid market penetration of efficient and clean energy technologies. As part of the First Update, CARB recalculated the State's 1990 emissions level using more recent GWPs identified by the Intergovernmental Panel on Climate Change, from 427 MMT $CO_2e$ to 431 MMT $CO_2e$.

In 2015, as directed by EO B-30-15, CARB began working on an update to the Scoping Plan to incorporate the 2030 target of 40 percent below 1990 levels by 2030 to keep California on a trajectory toward meeting or exceeding the long-term goal of reducing GHG emissions to 80 percent below 1990 levels by 2050, as set forth in EO S-3-05. Governor Jerry Brown called on California to pursue a new and ambitious set of strategies, in line with the five climate change pillars from his inaugural address, to reduce GHG emissions and prepare for the unavoidable impacts of climate change. In summer 2016, the Legislature affirmed the importance of addressing climate change through passage of SB 32 (Pavley, Chapter 249, Statutes of 2016).

In December 2017, the Scoping Plan was once again updated. The 2017 Scoping Plan built upon the successful framework established in the initial Scoping Plan and First Update, while identifying new, technologically feasible and cost-effective strategies that would serve as the framework to achieve the 2030 GHG target as established by SB 32 and define the State's climate change priorities to 2030 and beyond. For local governments, the 2017 Scoping Plan replaced the initial Scoping Plan's 15 percent reduction goal with a recommendation to aim for a communitywide goal of no more than six $MTCO_2e$ per capita by 2030, and no more than two $MTCO_2e$ per capita by 2050, which are consistent with the State's long-term goals. The 2017 Scoping Plan recognized the benefits of local government GHG planning (e.g., through Climate Action Plans [CAPs]) and provided more information regarding tools to support those efforts. The 2017 Scoping Plan also recognized the CEQA streamlining provisions for project-level review where a legally adequate CAP exists.

When discussing project-level GHG emissions reduction actions and thresholds in the context of CEQA, the 2017 Scoping Plan stated that "achieving no net additional increase in GHG emissions, resulting in no contribution to GHG impacts, is an appropriate overall objective for new development" for project-level CEQA analysis, but also recognized that such a standard may not be appropriate or feasible for every development project. The 2017 Scoping Plan further provided that "the inability of a project to mitigate its GHG emissions to net zero does not imply the project results in a substantial contribution to the cumulatively significant environmental impact of climate change under CEQA."

The most recent update to the Scoping Plan, the 2022 Scoping Plan for Achieving Carbon Neutrality (2022 Scoping Plan Update) was adopted by the CARB in December 2022. The 2022

Scoping Plan Update builds upon previous efforts to reduce GHG emissions and is designed to continue to shift the California economy away from dependence on fossil fuels. The 2022 Scoping Plan Update, the most comprehensive and far-reaching Scoping Plan developed to date, identifies a technologically feasible and cost-effective path to achieve carbon neutrality by 2045 while also assessing the progress California is making toward reducing its GHG emissions by at least 40 percent below 1990 levels by 2030, as called for in SB 32 and laid out in the 2017 Scoping Plan. The 2030 target is an interim but important stepping stone along the critical path to the broader goal of deep decarbonization by 2045. The relatively longer path assessed in the Scoping Plan incorporates, coordinates, and leverages many existing and ongoing efforts to reduce GHGs and air pollution, while identifying new clean technologies and energy. Given the focus on carbon neutrality, the Scoping Plan also includes discussion for the first time of the Natural and Working Lands (NWL) sectors as both sources of emissions and carbon sinks.

The 2022 Scoping Plan Update lays out a path to achieve targets for carbon neutrality and reduce GHG emissions by 85 percent below 1990 levels by 2045, as directed by AB 1279. The actions and outcomes in the plan will achieve significant reductions in fossil fuel combustion by deploying clean technologies and fuels, further reductions in short-lived climate pollutants, support for sustainable development, increased action on natural and working lands to reduce emissions and sequester carbon, and the capture and storage of carbon.

### CARB's Regulations for the Mandatory Reporting of GHG Emissions

CARB's Regulation for the Mandatory Reporting of GHG Emissions (17 CCR 95100–95157) incorporated by reference certain requirements that the USEPA promulgated in its Final Rule on Mandatory Reporting of GHGs (40 Code of Federal Regulations [CFR] Part 98). Specifically, Section 95100(c) of the Mandatory Reporting Regulation incorporated those requirements that the USEPA promulgated in the Federal Register on October 30, 2009; July 12, 2010; September 22, 2010; October 28, 2010; November 30, 2010; December 17, 2010; and April 25, 2011. In general, entities subject to the Mandatory Reporting Regulation that emit more than 10,000 $MTCO_2e$ per year are required to report annual GHGs through the California Electronic GHG Reporting Tool. Certain sectors, such as refineries and cement plants, are required to report regardless of emission levels. Entities that emit more than the 25,000 $MTCO_2e$ per year threshold are required to have their GHG emission report verified by a CARB-accredited third party.

### SB 605 and SB 1383

SB 605 (2014) required CARB to complete a comprehensive strategy to reduce emissions of SLCPs in the State, and SB 1383 (2016) required CARB to approve and implement that strategy by January 1, 2018. SB 1383 also establishes specific targets for the reduction of SLCPs (40 percent below 2013 levels by 2030 for $CH_4$ and HFCs, and 50 percent below 2013 levels by 2030 for anthropogenic black carbon), and provides direction for reductions from dairy and livestock operations and landfills. Accordingly, CARB adopted its SLCP Reduction Strategy in March 2017. The SLCP Reduction Strategy establishes a framework for the statewide reduction of emissions of black carbon, $CH_4$, and fluorinated gases.

### EO B-55-18

EO B-55-18 (September 2018) establishes a statewide policy for California to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net-negative emissions thereafter. The goal is an addition to the existing statewide targets of reducing the State's GHG emissions. CARB intends to work with relevant State agencies to ensure that future scoping plan updates identify and recommend measures to achieve the carbon neutrality goal.

## Mobile Sources

The following regulations relate to the control of GHG emissions from mobile sources. Mobile sources include both on-road vehicles and off-road equipment.

### AB 1493

AB 1493 (Pavley) (July 2002) was enacted in response to the transportation sector accounting for more than half of California's $CO_2$ emissions. AB 1493 required CARB to set GHG emission standards for passenger vehicles, light-duty trucks, and other vehicles determined by the State board to be vehicles that are primarily used for non-commercial personal transportation in the State. The bill required that CARB set GHG emission standards for motor vehicles manufactured in 2009 and all subsequent model years. CARB adopted the standards in September 2004. When fully phased in, the near-term (2009–2012) standards would result in a reduction of approximately 22 percent of GHG emissions compared to the emissions from the 2002 fleet, and the mid-term (2013–2016) standards would result in a reduction of approximately 30 percent. However, as previously described within the Federal Vehicle Standards section, the USEPA's SAFE Vehicles Rule Part One, adopted in November 2019, revokes California's authority to set GHG emissions standards. As the USEPA rule is the subject of pending legal challenges and President Biden issued an EO to review Part One and Part Two, the analysis within this document uses the best available information at this time, as set forth in CARB's Emission Factor Database (EMFAC).

### EO S-1-07

EO S-1-07 (January 2007, implementing regulation adopted in April 2009) set a declining LCFS for GHG emissions measured in $CO_2e$ grams per unit of fuel energy sold in California. The target of the LCFS is to reduce the carbon intensity of California passenger vehicle fuels by at least 10 percent by 2020 (17 CCR 95480 et seq.). Carbon intensity measures the amount of GHG emissions in the lifecycle of a fuel, including extraction/feedstock production, processing, transportation, and final consumption, per unit of energy delivered.

### SB 375

SB 375 (Steinberg) (September 2008) addresses GHG emissions associated with the transportation sector through regional transportation and sustainability plans. SB 375 requires CARB to adopt regional GHG reduction targets for the automobile and light-truck sector for 2020 and 2035, and to update those targets every eight years. SB 375 requires the State's 18 regional metropolitan planning organizations to prepare a sustainable communities strategy as part of their Regional Transportation Plans that will achieve the GHG reduction targets set by CARB. If a metropolitan planning organization is unable to devise a sustainable communities strategy to achieve the GHG reduction target, the metropolitan planning organization must prepare an alternative planning strategy demonstrating how the GHG reduction target would be achieved through alternative development patterns, infrastructure, or additional transportation measures or policies.

Pursuant to California Government Code Section 65080(b)(2)(K), a sustainable communities strategy does not (1) regulate the use of land, (2) supersede the land use authority of cities and counties, or (3) require that a city's or county's land use policies and regulations, including those in a general plan, be consistent with the sustainable community strategy. Nonetheless, SB 375 makes regional and local planning agencies responsible for developing those strategies as part of the federally required metropolitan transportation planning process and the State-mandated housing element process.

### Advanced Clean Cars Program and Zero-Emissions Vehicle Program

The Advanced Clean Cars program (January 2012) is an emissions-control program for model years 2015 through 2025. The program combines the control of smog- and soot-causing pollutants and GHG emissions into a single coordinated package. The package includes elements to reduce smog-forming pollution, reduce GHG emissions, promote clean cars, and provide the fuels for clean cars. To improve air quality, CARB has implemented new emission standards to reduce smog-forming emissions beginning with 2015 model year vehicles. By 2025, implementation of the rule is anticipated to reduce emissions of smog-forming pollution from cars by 75 percent compared to the average new car sold in 2015. To reduce GHG emissions, CARB, in conjunction with the USEPA and NHTSA, adopted GHG standards for model year 2017 to 2025 vehicles; the standards were estimated to reduce GHG emissions by 34 percent by 2025. The zero-emissions vehicle program acts as the focused technology of the Advanced Clean Cars program by requiring manufacturers to produce increasing numbers of zero-emissions vehicles and plug-in hybrid electric vehicles in the 2018 to 2025 model years. However, implementation of the Advanced Clean Cars program is contingent upon the outcome of the ongoing SAFE Vehicles Rule litigation.

### EO B-16-12

EO B-16-12 (March 2012) required that State entities under the governor's direction and control support and facilitate the rapid commercialization of zero-emissions vehicles. The order directed CARB, California Energy Commission (CEC), California Public Utilities Commission (CPUC), and other relevant agencies to work with the Plug-In Electric Vehicle Collaborative and the California Fuel Cell Partnership to establish benchmarks to help achieve goals by 2015, 2020, and 2025. On a statewide basis, EO B-16-12 established a target reduction of GHG emissions from the transportation sector equaling 80 percent less than 1990 levels by 2050. EO B-16-12 did not apply to vehicles that have special performance requirements necessary for the protection of the public safety and welfare.

### AB 1236

AB 1236 (October 2015) (Chiu) required a city, county, or city and county to approve an application for the installation of electric-vehicle charging stations, as defined, through the issuance of specified permits unless the city or county makes specified written findings based on substantial evidence in the record that the proposed installation would have a specific, adverse impact upon the public health or safety, and a feasible method to satisfactorily mitigate or avoid the specific, adverse impact does not exist. The bill provided for appeal of that decision to the planning commission, as specified. AB 1236 required electric-vehicle charging stations to meet specified standards. The bill required a city, county, or city and county with a population of 200,000 or more residents to adopt an ordinance, by September 30, 2016, that created an expedited and streamlined permitting process for electric-vehicle charging stations. The bill also required a city, county, or city and county with a population of less than 200,000 residents to adopt the ordinance by September 30, 2017.

## Water

The following regulations relate to the conservation of water, which reduces GHG emissions related to electricity demands from the treatment and transportation of water.

### EO B-29-15

In response to a drought in California, EO B-29-15 (April 2015) set a goal of achieving a statewide reduction in potable urban water usage of 25 percent relative to water use in 2013. The term of the EO extended through February 28, 2016, although many of the directives subsequently

became permanent water-efficiency standards and requirements. The EO includes specific directives that set strict limits on water usage in the State. In response to EO B-29-15, the California Department of Water Resources modified and adopted a revised version of the Model Water Efficient Landscape Ordinance that, among other changes, significantly increases the requirements for landscape water use efficiency, and broadens the applicability of the ordinance to include new development projects with smaller landscape areas.

### EO B-37-16

Issued in May 2016, EO B-37-16 directed the State Water Resources Control Board (SWRCB) to adjust emergency water conservation regulations through the end of January 2017 to reflect differing water supply conditions across the State. The SWRCB also developed a proposal to achieve a mandatory reduction of potable urban water usage that builds off the mandatory 25 percent reduction called for in EO B-29-15. The SWRCB and Department of Water Resources were directed to develop new, permanent water use targets that build upon the existing State law requirements that the State achieve 20 percent reduction in urban water usage by 2020. EO B-37-16 also specifies that the SWRCB permanently prohibit water-wasting practices such as hosing off sidewalks, driveways, and other hardscapes; washing automobiles with hoses not equipped with a shut-off nozzle; using non-recirculated water in a fountain or other decorative water feature; watering lawns in a manner that causes runoff, or within 48 hours after measurable precipitation; and irrigating ornamental turf on public street medians.

### EO B-40-17

EO B-40-17 (April 2017) lifted the drought emergency in all California counties except Fresno, Kings, Tulare, and Tuolumne. It also rescinded EO B-29-15, but expressly stated that EO B-37-16 remains in effect and directed the SWRCB to continue development of permanent prohibitions on wasteful water use.

## Solid Waste

The following regulations relate to the generation of solid waste and means to reduce GHG emissions from solid waste produced within the State.

### AB 939 and AB 341

In 1989, AB 939, known as the Integrated Waste Management Act (California Public Resources Code [PRC] Sections 40000 et seq.), was passed because of the observed increase in waste stream and the decrease in landfill capacity. The statute established the California Integrated Waste Management Board, which oversees a disposal reporting system. AB 939 mandated a reduction of waste being disposed where jurisdictions were required to meet diversion goals of all solid waste through source reduction, recycling, and composting activities of 25 percent by 1995 and 50 percent by 2000.

AB 341 (Chapter 476, Statutes of 2011 [Chesbro]) amended the California Integrated Waste Management Act of 1989 to include a provision declaring that the policy goal of the State is that not less than 75 percent of solid waste generated be source-reduced, recycled, or composted by 2020, and annually thereafter. In addition, AB 341 required the California Department of Resources Recycling and Recovery to develop strategies to achieve the State's policy goal.

## Other State Actions

The following State regulations are broadly related to GHG emissions.

## SB 97

SB 97 (Dutton) (August 2007) directed the Governor's Office of Planning and Research to develop guidelines under CEQA for the mitigation of GHG emissions. In 2008, the Governor's Office of Planning and Research issued a technical advisory as interim guidance regarding the analysis of GHG emissions in CEQA documents. The advisory indicated that the lead agency should identify and estimate a project's GHG emissions, including those associated with vehicular traffic, energy consumption, water usage, and construction activities. The advisory further recommended that the lead agency determine the significance of the impacts and impose all mitigation measures necessary to reduce GHG emissions to a level that is less than significant. The California Natural Resource Agency (CNRA) adopted the CEQA Guidelines amendments in December 2009, and the amended CEQA Guidelines became effective in March 2010.

Under the amended CEQA Guidelines, a lead agency has the discretion to determine whether to use a quantitative or qualitative analysis, or apply performance standards to determine the significance of GHG emissions resulting from a particular project (14 CCR 15064.4[a]). The CEQA Guidelines require a lead agency to consider the extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions (14 CCR 15064.4[b]). The CEQA Guidelines also allow a lead agency to consider feasible means of mitigating the significant effects of GHG emissions, including reductions in emissions through the implementation of project features or off-site measures. The adopted amendments do not establish a GHG emission threshold, instead allowing a lead agency to develop, adopt, and apply the lead agency's own thresholds of significance or those developed by other agencies or experts. CNRA acknowledges that a lead agency may consider compliance with regulations or requirements implementing AB 32 in determining the significance of a project's GHG emissions.

With respect to GHG emissions, the CEQA Guidelines state that lead agencies should "make a good faith effort, to the extent possible on scientific and factual data, to describe, calculate or estimate" GHG emissions (14 CCR 15064.4[a]). The CEQA Guidelines note that an agency may identify emissions by either selecting a "model or methodology" to quantify the emissions or by relying on "qualitative analysis or other performance based standards" (14 CCR 15064.4[a]). Section 15064.4(b) states that the lead agency should consider the following when assessing the significance of impacts from GHG emissions on the environment: (1) the extent to which a project may increase or reduce GHG emissions as compared to the existing environmental setting; (2) whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project; and (3) the extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions (14 CCR 15064.4[b]).

## EO S-13-08

EO S-13-08 (November 2008) is intended to hasten California's response to the impacts of global climate change, particularly sea-level rise. Therefore, the EO directs State agencies to take specified actions to assess and plan for such impacts. The final 2009 California Climate Adaptation Strategy report was issued in December 2009, and an update, *Safeguarding California: Reducing Climate Risk*, followed in July 2014. To assess the State's vulnerability, the report summarizes key climate change impacts to the State for the following areas: agriculture, biodiversity and habitat, emergency management, energy, forestry, ocean and coastal ecosystems and resources, public health, transportation, and water. Issuance of the *Safeguarding California: Implementation Action Plans* followed in March 2016. In January 2018, the CNRA

released the *Safeguarding California Plan: 2018 Update,* which communicates current and needed actions that the State government should take to build climate change resiliency.

## Local Regulations

The most prominent local regulations related to air quality and GHG emissions are established by the SMAQMD and Sacramento County, as discussed in further detail below.

## Sacramento Metropolitan Air Quality Management District

The SMAQMD regulates many sources of pollutants in the ambient air as well as GHG emissions, and is responsible for implementing certain programs and regulations for controlling air pollutant and GHG emissions to improve air quality in order to attain federal and State AAQS and reduce GHG emissions in compliance with State goals.

### Air Quality Attainment Plan

As a part of the SVAB federal ozone nonattainment area, the SMAQMD works with the other local air districts within the Sacramento area to develop a regional air quality management plan under the FCAA requirement. The regional air quality management plan is called the SIP which describes and demonstrates how Sacramento County, as well as the Sacramento nonattainment area, would attain the required federal ozone standard by the proposed attainment deadline. In accordance with the requirements of the FCAA, the SMAQMD, along with the other air districts in the region, prepared the *Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan* (Ozone Attainment Plan) in December 2008. The CARB determined that the Ozone Attainment Plan met federal Clean Air Act requirements and approved the Plan on March 26, 2009 as a revision to the SIP. An update to the plan, *2017 Revisions to the Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan* (2017 Ozone Attainment Plan), was prepared and adopted by CARB on November 16, 2017. An additional update to the plan was prepared and adopted by CARB on October 15, 2018, and known as the *2018 Updates to the California State Implementation Plan.*

The Ozone Attainment Plan, and subsequent updates, demonstrate how existing and new control strategies would provide the necessary future emission reductions to meet the FCAA requirements, including the NAAQS. It should be noted that in addition to strengthening the 8-hour ozone NAAQS, the USEPA also strengthened the secondary 8-hour ozone NAAQS, making the secondary standard identical to the primary standard. On October 26, 2015, the USEPA released a final implementation rule for the revised NAAQS for ozone to address the requirements for reasonable further progress, modeling and attainment demonstrations, and reasonably available control measures (RACM) and reasonably available control technology (RACT). The USEPA published designations for areas in attainment/unclassifiable for the 2015 ozone standards. The USEPA identified the entire Sacramento County as nonattainment for the 2015 ozone standards.[18] More specifically, Sacramento County is part of the Ozone Sacramento Federal Nonattainment Area (SFNA) which includes Feather River Air Quality Management District (FRAQMD), El Dorado Air Quality Management District (EDAQMD), Yolo Solano Air Quality Management District (YSAQMD) and Placer County Air District (PCAPCD). The attainment deadline for the SFNA is July 2025.

[18] U.S. Environmental Protection Agency. *Nonattainment and Unclassifiable Area Designations for the 2015 Ozone Standards*. April 30, 2018.

## Sacramento County General Plan

The Sacramento County General Plan includes several goals and policies related to air quality and GHG emissions.[19] The applicable policies are listed below:

### Air Quality Element

Policy AQ-1. New development shall be designed to promote pedestrian/bicycle access and circulation to encourage community residents to use alternative modes of transportation to conserve air quality and minimize direct and indirect emission of air contaminants.

Policy AQ-2. Support Regional Transit's efforts to secure adequate funding so that transit is a viable transportation alternative. Development shall pay its fair share of the cost of transit facilities required to serve the project.

Policy AQ-3. Buffers and/or other appropriate exposure reduction measures shall be established on a project-by project basis and incorporated during review to provide for protection of sensitive receptors from sources of air pollution or odor. The California Air Resources Board's "Strategies to Reduce Air Pollution Exposure Near High Volume Roadways" Technical Advisory and the AQMD's "Mobile Sources Air Toxics Protocol" or applicable AQMD guidance shall be utilized when establishing these exposure reduction measures.

Policy AQ-4. Developments which meet or exceed thresholds of significance for ozone precursor pollutants, and/or Greenhouse Gases (GHG) as adopted by the Sacramento Metropolitan Air Quality Management District (SMAQMD), shall be deemed to have a significant environmental impact. An Air Quality Mitigation Plan and/or a Greenhouse Gas Reduction Plan shall be submitted to the County of Sacramento prior to project approval, subject to review and recommendation as to technical adequacy by the Sacramento Metropolitan Air Quality Management District.

Policy AQ-4B Land uses with sensitive receptors (such as residences, schools, senior care facilities and day care centers) which are proposed within 500 feet of a freeway or other high volume roadway (defined as an urban roadway with more than 100,000 average daily trips or a rural roadway with more than 50,000 average daily trips), a railyard or an active railroad shall incorporate exposure reduction measures consistent with the guidance listed in Air Quality Element policy AQ-3.

Policy AQ-5. Reduce emissions associated with vehicle miles travelled and evaporation by reducing the surface area dedicated to parking facilities; reduce vehicle emissions associated with "hunting" for on-street parking by implementing innovative parking innovative parking solutions including shared parking, elimination of minimum parking requirements, creation of maximum parking requirements, and utilize performance pricing for publicly owned parking spaces both on- and off-street, as well as creating parking benefit districts.

Policy AQ-6. Provide incentives for the use of transportation alternatives, including a program for the provision of financial incentives for builders that construct

[19] Sacramento County. *Sacramento County General Plan for 2005-2030*. November 9, 2011.

ownership housing within a quarter mile of existing and proposed light rail stations.

Policy AQ-8. Promote mixed-use development and provide for increased development intensity along existing and proposed transit corridors to reduce the length and frequency of vehicle trips.

Policy AQ-10. Encourage vehicle trip reduction and improved air quality by requiring development projects that exceed the SMAQMD's significance thresholds for operational emissions to provide on-going, cost-effective mechanisms for transportation services that help reduce the demand for existing roadway infrastructure.

Policy AQ-11. Encourage contractors operating in the county to procure and to operate low-emission vehicles, and to seek low emission fleet status for their off-road equipment.

Policy AQ-12. Minimize air pollutant emissions from Sacramento County facilities and operations.

Policy AQ-13. Use California State Air Resources Board (ARB) and SMAQMD guidelines for Sacramento County facilities and operations to comply with mandated measures to reduce emissions from fuel consumption, energy consumption, surface coating operations, and solvent usage.

Policy AQ-14. Support SMAQMD's development of improved ambient air quality monitoring capabilities and the establishment of standards, thresholds and rules to more adequately address the air quality impacts of plans and proposals proposed by the County.

Policy AQ-16. Prohibit the idling of on-and off-road engines when the vehicle is not moving or when the off-road equipment is not performing work for a period of time greater than five minutes in any one-hour period.

Policy AQ-17. Promote optimal air quality benefits through energy conservation measures in new development.

Policy AQ-19. Require all feasible reductions in emissions for the operation of construction vehicles and equipment on major land development and roadway construction projects.

Policy AQ-20. Promote Cool Community strategies to cool the urban heat island, reduce energy use and ozone formation, and maximize air quality benefits by encouraging four main strategies including, but not limited to: plant trees, selective use of vegetation for landscaping, install cool roofing, and install cool pavements.

Policy AQ-21. Support SMAQMD's particulate matter control measures for residential wood burning and fugitive dust.

Policy AQ-22. Reduce greenhouse gas emissions from County operations as well as private development.

# 6. IMPACTS AND MITIGATION MEASURES

The standards of significance and methodology used to analyze and determine the proposed project's potential project-specific impacts related to air quality and GHG emissions are described below. In addition, a discussion of the project's impacts, as well as mitigation measures where necessary, is also presented.

## Standards of Significance

Based on the recommendations of SMAQMD, and consistent with Appendix G of the CEQA Guidelines, the effects of a project are evaluated to determine if they would result in a significant adverse impact on the environment. For the purposes of this analysis, an impact is considered significant if the proposed project would:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors);
- Expose sensitive receptors to substantial pollutant concentrations (including localized CO concentrations and TAC emissions);
- Result in other emissions (such as those leading to odors) affecting a substantial number of people;
- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or
- Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

## Criteria Pollutant Emissions and TAC Emissions

In order to evaluate criteria air pollutant emissions from development projects, SMAQMD has established significance thresholds for emissions of $NO_X$, ROG, $PM_{10}$, and $PM_{2.5}$. The significance thresholds serve as air quality standards in the evaluation of air quality impacts associated with proposed development projects. Thus, if the proposed project's emissions exceed the SMAQMD thresholds, the project could have a significant effect on regional air quality and attainment of federal and State AAQS. The SMAQMD's recommended thresholds of significance are listed in Table 6. Sacramento County, as the CEQA Lead Agency for the proposed project, has formally adopted the SMAQMD's thresholds of significance. Therefore, if the proposed project's emissions exceed the pollutant thresholds presented in Table 6, the project could have a significant effect on air quality, the attainment of federal and State AAQS, and could conflict with or obstruct implementation of the applicable air quality plan.

To assess the potential impacts of TACs from stationary sources, such as GDFs, chrome plating facilities, and dry cleaners, the SMAQMD maintains thresholds of significance for the review of local community risk and hazard impacts. The thresholds are designed to assess the impact of new sources of TACs on existing sensitive receptors. Based on the SMAQMD thresholds, the proposed project would result in a significant impact related to TACs if nearby sensitive receptors would experience an increased cancer risk of greater than or equal to 10 in one million people, or experience a chronic or acute hazard index of greater than or equal to 1.0.[20] While SMAQMD has regulatory authority to require a health risk assessment for stationary sources of TACs, SMAQMD

[20] Sacramento Metropolitan Air Quality Management District. *Guide to Air Quality Assessment in Sacramento County: Toxic Air Contaminants.* April 2020.

does not have authority to require a health risk assessment for area sources of TACs (i.e., rail yards, distribution centers, and freeways), and does not have adopted thresholds related to such. Nonetheless, if a project would introduce a new area source of TACs or would site a new sensitive receptor near an existing area source of TACs that would not meet the CARB's minimum recommended setback, as established in the CARB Handbook, a detailed health risk assessment may be warranted for disclosure purposes and to provide useful information for decision-makers.

**Table 6**
**SMAQMD Thresholds of Significance**

| Pollutant | Construction Threshold | Operational Threshold |
|---|---|---|
| $NO_X$ | 85 lbs/day | 65 lbs/day |
| ROG | - | 65 lbs/day |
| $PM_{10}$ | Zero (0). If all feasible BACT/BMPs are applied, then: 80 lbs/day and 14.6 tons/yr | Zero (0). If all feasible BACT/BMPs are applied, then: 80 lbs/day and 14.6 tons/yr |
| $PM_{2.5}$ | Zero (0). If all feasible BACT/BMPs are applied, then: 82 lbs/day and 15 tons/yr | Zero (0). If all feasible BACT/BMPs are applied, then: 82 lbs/day and 15 tons/yr |

Notes: BACT = Best Available Control Technologies; BMP = Best Management Practices.
***Source: SMAQMD Thresholds of Significance Table, April 2020.***

In addition, neither SMAQMD nor the County has established quantitative thresholds of significance for construction-related TAC emissions. Additionally, the SMAQMD does not have adopted thresholds of significance for cumulative health effects from multiple sources of TACs. However, for reference, the nearby Bay Area Air Quality Management District (BAAQMD) considers an impact associated with TACs to be significant if the total sources of TACs would result in a cumulative cancer risk hazard in excess of 100 cancers in a million from all local sources, or a cumulative chronic hazard index in excess of 10.0.[21] In the absence of adopted cumulative thresholds, the SMAQMD recommends presenting the BAAQMDs thresholds for informational purposes and to provide context.[22]

## GHG Emissions and Other Cumulative Emissions

Nearly all development projects in the region have the potential to generate air pollutants that may increase global climate change. SMAQMD has adopted thresholds of significance for GHG emissions during construction and operations of projects. This GHG analysis has been prepared to show compliance with SMAQMD's GHG thresholds of significance.

For construction-related GHG emissions, the SMAQMD has adopted a threshold of significance of 1,100 $MTCO_2e$/yr. If construction of the proposed project would result in emissions that exceed 1,100 $MTCO_2e$/yr, then construction of the project could be considered to result in a potentially significant impact and mitigation measures would be required.

For evaluating operational GHG emissions, SMAQMD has prepared a two-tiered framework of analysis for new projects. All discretionary projects subject to CEQA review, excluding exempt projects, are required to implement Tier 1 measures (BMP 1 and 2). If operations of the proposed project would exceed 1,100 $MTCO_2e$/yr after implementation of the Tier 1 measures, then the

[21] Bay Area Air Quality Management District. *California Environmental Quality Act Air Quality Guidelines*. May 2017.
[22] Rachel DuBose, Air Quality Planner and Analyst, Sacramento Metropolitan Air Quality Management District. Personal Communication [phone] with Briette Shea, Associate/Air Quality Technician, Raney Planning and Management, Inc. July 27, 2021.

project is required to implement Tier 2 measures (BMP 3). The Tier 1 and Tier 2 requirements are explained in further detail below.

## Tier 1

All discretionary projects subject to CEQA review within SMAQMD's jurisdiction would be required to comply with the Best Management Practices (BMPs) included in Tier 1. The proposed Tier 1 BMPs are as follows:

- ***BMP 1:*** No natural gas: Projects shall be designed and constructed without natural gas infrastructure.
- ***BMP 2:*** Electric vehicle (EV) ready: Projects shall meet the current CalGreen Tier 2 standards, except all EV Capable spaces shall instead be EV Ready.

If a project would not comply with both of the foregoing BMPs, the project would be required to include features that would achieve an equivalent level of GHG emissions reductions. Should a project opt to include natural gas infrastructure, the project would be required to include pre-wiring to allow for the future retrofit of all natural gas appliances with all-electric appliances. After implementation of BMPs 1 and 2, if a project's operational emissions would be at or below 1,100 $MTCO_2e$/yr, the operational emissions would be considered less than significant. Projects that would still result in emissions in excess of 1,100 $MTCO_2e$/yr after implementation of BMPs 1 and 2 are subject to review under Tier 2 of SMAQMD's thresholds.

Furthermore, projects that are below the Governor's Office of Planning and Research's (OPR's) *de minimis* vehicle miles travelled (VMT) criteria, and/or projects that emit less than 1,100 $MTCO_2e$/yr prior to implementation of BMP 1 and BMP 2 would be considered sufficiently small to screen out of further requirements, and would be assumed to result in a less-than-significant impact related to GHG emissions and climate change. The following types of projects would be considered to be below the OPR's *de minimis* VMT criteria:

- Small projects that generate or attract fewer than 110 trips per day;
- Residential and office projects in areas with low VMT (currently below threshold VMT) that incorporate similar features (i.e., density, mix of uses, transit accessibility), including affordable housing infill development; or
- Residential, retail, office, or mixed-use projects within 0.5-mile walking distance of an existing major transit stop or existing stop along a high-quality transit corridor, unless the primary use of the site is auto-oriented (e.g., car dealership, car wash, gas station).

It is noted, however, that all projects within the jurisdiction of SMAQMD are required to implement the Tier 1 measures, even if the project qualifies for screening using the OPR's *de minimis* VMT criteria.

## Tier 2

The second tier of SMAQMD's thresholds includes the following BMP:

- ***BMP 3***: Residential projects shall achieve a 15 percent reduction in VMT per resident, and office projects should achieve a 15 percent reduction in VMT per worker compared to existing average VMT per capita for the county, or for the city if a more local SB 743 target has been established. VMT reductions can be achieved by many strategies, such as:
    - Locate in an area that already has low VMT due to location, transit service, etc.;

- Adopt CAPCOA measures;
- Adopt measures noted in Sacramento's CAP checklist;
- Join a Transportation Management Association;
- Incorporate traffic calming measures;
- Incorporate pedestrian facilities and connections to public transportation; and/or
- Promote electric bicycle or other micro-mobility options.

The VMT evaluation conducted to assess compliance with BMP 3 shall be consistent with the County's adopted Transportation Analysis Guidelines, which sets forth methodology to conduct transportation analyses in compliance with SB 743.[23] Pursuant to the Tier 2 requirement, if a project can successfully achieve a 15 percent reduction in VMT, then impacts associated with operational GHG emissions are considered less than significant.

If a project cannot incorporate any of the foregoing BMPs, other reductions or purchasing and retiring of GHG/carbon offsets can be used as an alternative method of compliance. Given that the developer demonstrates that the alternative method(s) of compliance would achieve the same reductions as those required by BMPs 1 through 3, the project can be considered to result in a less-than-significant impact related to operational GHG emissions.

In accordance with CARB and SMAQMD recommendations, Sacramento County uses the currently adopted SMAQMD GHG thresholds of significance, as presented above. Therefore, if the proposed project would result in construction GHG emissions in excess of 1,100 $MTCO_2e$/yr, construction of the proposed project would be considered to result in a cumulatively considerable contribution to global climate change. In addition, if the proposed project would not achieve the SMAQMD's Tier 1 GHG requirements (BMPs 1 and 2) and, if applicable, Tier 2 GHG requirements (BMP 3), operations of the project would be considered to result in a cumulatively considerable contribution to global climate change.

With regard to other cumulative emissions, such as the cumulative emissions of criteria air pollutants, the SMAQMD directs lead agencies to use the region's existing attainment plans as a basis for analysis of cumulative emissions. If a project would interfere with an adopted attainment plan, the project would inhibit the future attainment of AAQS, and thus result in a significant incremental contribution to cumulative emissions. As discussed throughout this document, the SMAQMD's recommended thresholds of significance for ozone precursors and $PM_{10}$ are based on attainment plans for the region. Thus, SMAQMD concluded that if a project's ozone precursor and $PM_{10}$ emissions would be less than the associated thresholds, the project would not be expected to conflict with any relevant attainment plans, and would not result in a cumulatively considerable contribution to a significant cumulative impact. As a result, the operational phase cumulative-level emissions thresholds established by SMAQMD are identical to the project-level operational emissions thresholds; the operational/cumulative thresholds for criteria pollutants are presented in Table 6.

## Method of Analysis

The analysis protocol and guidance provided by the SMAQMD's *CEQA Guide*, including screening criteria and pollutant thresholds of significance, was used to analyze the proposed project's air quality impacts. All modeling results are included as an appendix to this document.

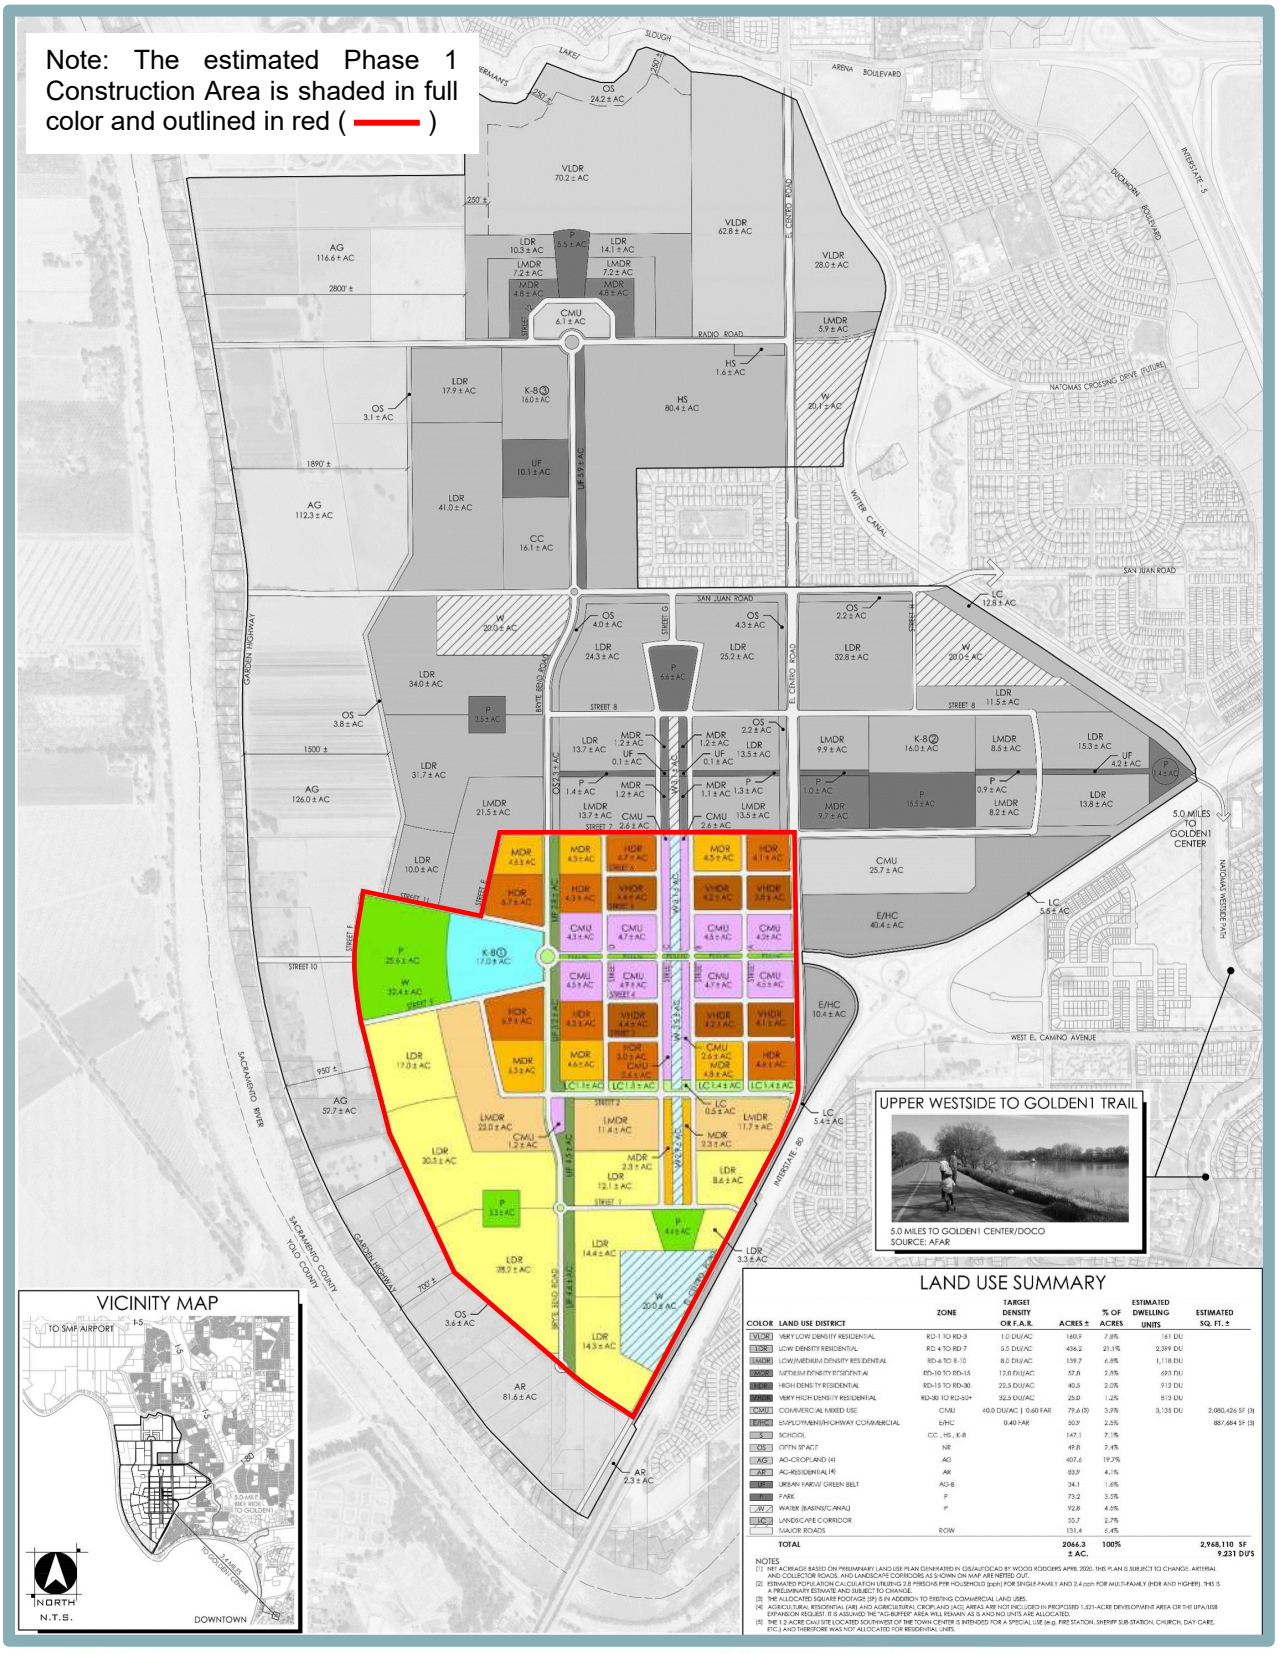
[23] Sacramento County. *Transportation Analysis Guidelines*. September 10, 2020.

## Construction Emissions

The proposed project would be built out over several phases across approximately 20 years in response to market-based demand for housing. As a result, the construction schedule is subject to economic fluctuations related to the housing market, and modeling construction of the entire project area in one phase would not represent a realistic analysis. Thus, in order to provide a conservative evaluation of potential impacts, this analysis evaluates Phase 1 of construction, which represents the most emissions-intensive phase of construction. Construction of the remainder of the project area would occur in subsequent phases, in response to market demand. However, it is anticipated that all other phases would be smaller in size and would result in a less intense level of construction. The approximate boundaries of Phase 1 are shown in Figure 6.

The construction emissions for Phase 1 of the proposed project were estimated using the California Emissions Estimator Model (CalEEMod) version 2020.4.0 software – a statewide model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify air quality emissions, including GHG emissions, from land use projects. The model applies inherent default values for various land uses, including construction data, trip generation rates, vehicle mix, trip length, timing, inherent site or project design features, compliance with applicable average speed, compliance with the 2019 California Building Standards Code (CBSC), etc.

Where project-specific data was available, such data was input into the model (e.g., construction phases and regulations, etc.).



Accordingly, the Phase 1 construction modeling assumed the following:

- Construction would commence in June of 2023 and would occur over an approximately seven-year period;
- Approximately 122,570 cubic yards (CY) of material would be exported during site preparation;
- The timing of each phase of construction was adjusted based on applicant-provided information; and
- The amount of construction equipment was doubled to account for the size of the construction area and the construction timing.

As noted above, construction of Phase I of the proposed project would represent the most emissions-intensive phase, and construction of the remainder of the proposed project would occur in response to market demand. Thus, the construction timing of subsequent phases is speculative. Nonetheless, in order to disclose total construction emissions from the proposed project, modeling was conducted to represent buildout of the remainder of the proposed project. The modeling assumed construction of all remaining land uses, excluding those built during Phase I. The construction modeling of the remainder of the project assumed the following:

- Construction would commence in August of 2030 and would occur over an approximately 15-year period;
- The timing of each phase of construction was based on the applicant-provided timing for Phase I, and proportionally scaled to occur over the 15-year construction period; and
- The amount of construction equipment was doubled to account for the size of the construction area and the construction timing.

## Figure 6
## Estimated Phase 1 Construction Area

## Operational Emissions

The project site is currently developed with existing land uses including, but not limited to, the following: approximately 20 single-family residences; an approximately 40,000-sf general office building; an approximately 70,000-sf warehouse building; a 12-hole golf course; a 145-room hotel; and more. These existing land uses emit criteria pollutants during operations, and such emissions would cease upon buildout of the proposed project. In order to accurately represent the net change in criteria pollutants emissions associated with the proposed project, emissions were calculated for an estimated operations year of 2045 under both A) existing conditions and B) the proposed project.

A) The existing conditions operational emissions were estimated using CalEEMod version 2020.4.0 software. All existing land uses and vehicle trip generation rates were entered consistent with the project-specific Trip Generation Memorandum prepared by Fehr and Peers.[24]
B) The proposed project's operational emissions were also estimated using CalEEMod version 2020.4.0 software. All proposed land uses and associated vehicle trip generation rates were entered consistent with the project-specific Trip Generation Memorandum prepared by Fehr and Peers. The modeling also assumed compliance with the 2019 CalGreen Code and the adopted Model Water Efficiency Landscape Ordinance (MWELO).

## Construction Health Risk Assessment

Sensitive receptors do not currently exist in the immediate vicinity of the Phase 1 area. However, as buildout of each phase occurs, receptors would be located on the project site, and construction activities would have the potential to occur adjacent to sensitive receptors (existing and future), including residences and/or schools. In order to model the worst-case scenario, the construction emissions modeling associated with construction of Phase 1 assumed sensitive receptors along the perimeter of the Phase 1 construction area. In addition, an additional receptor was placed in the center of the Phase 1 construction area to represent receptors that would be exposed to emissions associated with subsequent phases of the proposed project in combination with the Phase 1 construction. The combination of the two receptor locations represents the maximum possible exposure to any one receptor through the course of the 30-year development associated with the proposed project. While these receptor locations are hypothetical for modeling purposes, the conditions represent the most emissions-intensive phase of construction occurring adjacent to sensitive receptors. In reality, because subsequent construction phases of the project would likely be less intense than Phase 1, construction which would occur adjacent to receptors would be less intense than what is evaluated herein.

To analyze potential health risks to nearby receptors that could result from DPM emissions from off-road equipment at the project site, total DPM emissions from construction of Phase 1 of the proposed project were estimated. DPM is considered a subset of $PM_{2.5}$, thus, the CalEEMod estimated $PM_{2.5}$ emissions from exhaust during construction was conservatively assumed to represent all DPM emitted on-site. The CalEEMod estimated $PM_{2.5}$ exhaust emissions were then used to calculate the concentration of DPM at the maximally exposed sensitive receptor near the project site.

[24] Fehr and Peers. *Draft Technical Memorandum #2, Upper Westside Specific Plan – Project Trip Generation*. December 8, 2020.

DPM concentrations resulting from project implementation were estimated using the American Meteorological Society/Environmental Protection Agency (AMS/EPA) Regulatory Model (AERMOD). The associated cancer risk and non-cancer hazard index were calculated using the CARB's Hotspot Analysis Reporting Program Version 2 (HARP 2) Risk Assessment Standalone Tool (RAST), which calculates the cancer and non-cancer health impacts using the risk assessment guidelines of the 2015 Office of Environmental Health Hazard Assessment (OEHHA) Guidance Manual for Preparation of Health Risk Assessments.[25] The modeling was performed in accordance with the USEPA's User's Guide for the AERMOD[26] and the 2015 OEHHA Guidance Manual.

Although pollutant concentrations at all nearby receptors were estimated, for the purpose of determining potential health risks, only the highest estimated pollutant concentrations were used in calculating cancer risk and hazard indices. The receptor experiencing the highest estimated pollutant concentrations was considered to be the maximally exposed receptor, and would experience the highest potential health risks. Health risks to all other receptors would be lower than the health risks to the maximally exposed receptor, because all other receptors would be exposed to lower concentrations of construction-related pollutants as compared to the maximally exposed receptor.

Additionally, considering that both schools and residences exist in proximity to the area of disturbance, the estimation of health risks conservatively assumed that nearby receptors would be continuously exposed to pollutants from construction at the maximum estimated concentrations. This assumption would represent a scenario whereby a resident living nearby also attends one of the nearby schools and is therefore exposed to pollutants both at home and at school. In practice, concentrations of pollutants at nearby schools would be much less than the concentration of pollutants at the maximally exposed receptor location. Due to the difference in pollutant concentrations at the maximally exposed receptor location and nearby schools, a single receptor would not be anticipated to be continuously exposed to the maximum level of pollutant concentrations both at home and at school. Nevertheless, by using the maximum estimated concentrations and assuming continuous exposure to pollutants, the estimated health risks presented below are considered a worst-case estimate of potential health risks, and actual health risks to receptors in the project area would be lower than the levels presented within this analysis.

## Operational Health Risk Assessment

Impacts of the environment on a project (as opposed to impacts of a project on the environment) are beyond the scope of required CEQA review. While not a CEQA consideration, this issue is hereby addressed given that the proposed project would involve locating sensitive receptors near existing sources of TACs, including two GDFs and I-80.

Figure 7 presents the modeled sources of TACs in yellow, as well as an overlay of the proposed site plan to demonstrate where future sensitive receptors would be located. The methods used to calculate the TAC emissions associated with each source are described below.

[25] Office of Environmental Health Hazard Assessment. *Air Toxics Hot Spots Program Risk Assessment Guidelines, Guidance Manual for Preparation of Health Risk Assessments* [pg. 8-18]. February 2015.

[26] U.S. Environmental Protection Agency. *User's Guide for the AMS/EPA Regulatory Model (AERMOD)*. December 2016.

**Figure 7**
**Operational Health Risk Assessment: Sources of TACs**

### *Estimating TAC Emissions Associated with GDFs*

The maximum permitted gasoline throughput for each GDF was obtained through the SMAQMD's Public Information Request Form.[27]

Following the guidance within the SMAQMD's *Guide to Air Quality Assessment in Sacramento County*,[28] as well as guidance from the Toxics Committee of the California Air Pollution Control Officers Association (CAPCOA),[29] the concentrations of pollutants from operation of the existing GDFs were calculated using AERMOD. The associated cancer risk and non-cancer hazard indices were calculated using the CARB's HARP 2 RAST. For the purpose of this analysis, the primary TAC of concern is benzene. As such, potential health risks related to the exposure of receptors to benzene were considered.

Like the construction health risk assessment, only the highest estimated pollutant concentrations at the maximally exposed receptors were used in calculating cancer risk and hazard indices. Health risks to all other receptors would be lower than the health risks to the maximally exposed receptor, because all other receptors would be exposed to lower concentrations of GDF-related pollutants as compared to the maximally exposed receptor. Additionally, the estimation of health risks conservatively assumed that nearby receptors would be continuously exposed to pollutants from the GDF at the maximum estimated concentrations. This assumption would represent a scenario whereby a resident living nearby also attends one of the nearby schools and is therefore exposed to pollutants both at home and at school and, thereby, offers the most conservative approach to analysis.

### *Estimating TAC Emissions Associated with I-80*

Based on the SMAQMD's Mobile Sources Air Toxics Protocol Tool, the estimated cancer risk per million persons and the concentration of $PM_{2.5}$ from operation of I-80 were estimated at the nearest sensitive receptors.[30] The concentration of $PM_{2.5}$ was applied in the HARP 2 RAST software, over an assumed 30-year exposure period, in order to estimate the chronic hazard index at the receptors near I-80.

The SMAQMD's Mobile Sources Air Toxics Protocol Tool uses car and truck emission factors from the CARB's EMission FACtor (EMFAC) database for vehicles within Sacramento County, and assumes future emission reductions due to technological advancements. The SMAQMD does not recommend any particular thresholds for use with the Mobile Sources Air Toxics Protocol Tool.

Although a specific threshold does not exist, due to the proposed proximity of sensitive receptors and I-80, the proposed project will be required to comply with the SMAQMD's Landscaping Guidance for Improving Air Quality Near Roadways as a condition of project approval.[31]

## Project-Specific Impacts and Mitigation Measures

The following discussion of impacts is based on implementation of the proposed project in comparison with the standards of significance identified above.

### AQ-1 Conflict with or obstruct implementation of the applicable air quality plan. Based on the analysis below, the impact is *significant and unavoidable*.

The project's estimated emissions associated with construction and operations are presented and discussed in further detail below.

#### Construction Emissions

During construction of the project, various types of equipment and vehicles would temporarily operate on the project site. Construction exhaust emissions would be generated from construction equipment, vegetation clearing and earth movement activities, construction worker commutes, and construction material hauling for the entire construction period. The aforementioned activities would involve the use of diesel- and gasoline-powered equipment that would generate emissions of criteria pollutants. Project construction activities also represent sources of fugitive dust, which includes PM emissions. As construction of the proposed project would generate air pollutant emissions intermittently within the site and vicinity, until all construction has been completed, construction is a potential concern because the proposed project is in a non-attainment area for ozone, $PM_{10}$, and $PM_{2.5}$.

It is noted that the project is required to comply with all SMAQMD rules and regulations for construction, which would be noted on County-approved construction plans and ensured as a condition of approval for the proposed project. The applicable rules and regulations would include, but would not be limited to, the following:

- Rule 403 related to Fugitive Dust;
- Rule 404 Related to Particulate Matter;
- Rule 407 related to Open Burning;
- Rule 442 related to Architectural Coatings;
- Rule 453 related to Cutback and Emulsified Asphalt Paving Materials; and
- Rule 460 related to Adhesives and Sealants.

To apply the $PM_{10}$ and $PM_{2.5}$ thresholds presented in Table 6, projects must implement all feasible SMAQMD BACTs and BMPs related to dust control. In the case of construction activities, projects are required to implement the SMAQMD's identified Basic Construction Emissions Control Practices (BCECPs), which are considered by the SMAQMD to be the applicable construction BMPs. The control of fugitive dust during construction is required by SMAQMD Rule 403, and enforced by SMAQMD staff. The BCECPs for dust control include the following:

- Water all exposed surfaces two times daily. Exposed surfaces include, but are not limited to soil piles, graded areas, unpaved parking areas, staging areas, and access roads;

- Cover or maintain at least two feet of free board space on haul trucks transporting soil, sand, or other loose material on the site. Any haul trucks that would be traveling along freeways or major roadways should be covered;
- Use wet power vacuum street sweepers to remove any visible trackout mud or dirt onto adjacent public roads at least once a day. Use of dry power sweeping is prohibited;
- Limit vehicle speeds on unpaved roads to 15 miles per hour (mph);
- All roadways, driveways, sidewalks, parking lots to be paved should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil binders are used;
- Minimize idling time either by shutting equipment off when not in use or reducing the time of idling to 5 minutes [California Code of Regulations, Title 13, sections 2449(d)(3) and 2485]. Provide clear signage that posts this requirement for workers at the entrances to the site;[32]
- Provide current certificate(s) of compliance for CARB's In-Use Off-Road Diesel-Fueled Fleets Regulation [California Code of Regulations, Title 13, sections 2449 and 2449.1]. For more information contact CARB at 877-593-6677, doors@arb.ca.gov, or www.arb.ca.gov/doors/compliance_cert1.html.;[33] and
- Maintain all construction equipment in proper working condition according to manufacturer's specifications. The equipment must be checked by a certified mechanic and determine to be running in proper condition before it is operated.

Compliance with the foregoing measures is required per Rule 403, and compliance with all applicable SMAQMD rules, including Rule 403, is required as a County condition of approval. Thus, project construction would comply with the foregoing measures. Consequently, the project PM emissions are assessed in comparison to the thresholds presented in Table 6.

Table 7 presents the estimated construction-related emissions of ROG, $NO_X$, $PM_{10}$, and $PM_{2.5}$ associated with Phase 1 buildout of the proposed project in comparison with the SMAQMD thresholds of significance. It is noted that, as presented in Table 6, SMAQMD does not have an adopted threshold of significance for construction-related ROG emissions; thus, ROG emissions have been included in Table 7 for informational purposes only.

**Table 7**
**Maximum Unmitigated Construction Emissions – Phase 1**

| Pollutant | Project Emissions | Construction Threshold | Exceeds Threshold? |
|---|---|---|---|
| ROG | 53.03 lbs/day | - | **N/A** |
| $NO_X$ | 316.34 lbs/day | 85 lbs/day | **YES** |
| $PM_{10}$ | 40.52 lbs/day;<br>4.21 tons/yr | 80 lbs/day;<br>14.6 tons/yr | **NO** |
| $PM_{2.5}$ | 22.43 lbs/day;<br>1.27 tons/yr | 82 lbs/day;<br>15 tons/yr | **NO** |

***Source: CalEEMod, April 2023 (see Appendix A).***

[32] This BMP for dust control specifically applies to diesel-powered equipment. Non-diesel vehicles are not required to limit idling time.

[33] This BMP for dust control specifically applies to diesel-powered equipment.

As shown in the table, the maximum unmitigated construction-related emissions for the most intense phase of construction (i.e., Phase 1) would be below the applicable thresholds of significance for $PM_{10}$ and $PM_{2.5}$. However, emissions of $NO_X$ would exceed the applicable SMAQMD threshold of significance. Therefore, Mitigation Measure AQ-1, which would require the use of construction equipment with Tier 4 engines, would be required to ensure that emissions of $NO_X$ are below the SMAQMD threshold during construction of the proposed project.

### *Construction Emissions – Informational Discussion*

As noted above, construction of Phase I of the proposed project would represent the most emissions-intensive phase and, therefore, the conclusion presented above would be applicable to the entire project. In addition, as construction of the remainder of the proposed project would occur in response to market demand, the construction timing of subsequent phases is speculative. Nonetheless, in order to disclose total construction emissions from the proposed project, modeling was conducted to represent buildout of the remainder of the proposed project. The modeling assumed construction of all remaining land uses over approximately 15 years, for an operational year of 2045. The results of the modeling are presented below in Table 8, below.

**Table 8**
**Maximum Unmitigated Construction Emissions – Remainder of Project**

| Pollutant | Project Emissions | Construction Threshold | Exceeds Threshold? |
|---|---|---|---|
| ROG | 54.90 lbs/day | - | **N/A** |
| $NO_X$ | 103.53 lbs/day | 85 lbs/day | **YES** |
| $PM_{10}$ | 47.39 lbs/day;<br>6.00 tons/yr | 80 lbs/day;<br>14.6 tons/yr | **NO** |
| $PM_{2.5}$ | 13.22 lbs/day;<br>1.68 tons/yr | 82 lbs/day;<br>15 tons/yr | **NO** |

***Source: CalEEMod, April 2023 (see Appendix A).***

As shown in Table 8, buildout of the remainder of the proposed project is anticipated to be below the applicable thresholds of significance for $PM_{10}$ and $PM_{2.5}$. However, similar to Phase 1 buildout of the proposed project, emissions of $NO_X$ would exceed the applicable SMAQMD threshold of significance during buildout of the remainder of the proposed project. Therefore, Mitigation Measure AQ-1 would be required during all phases of the phases of project buildout to ensure that emissions of $NO_X$ are below the SMAQMD threshold during construction of the proposed project.

## Operational Emissions

Operational emissions of ROG, $NO_X$, and PM would be generated by the proposed project from both mobile and stationary sources. Day-to-day activities, such as the future resident's and employees' vehicle trips to and from the project site, would make up the majority of the mobile emissions. Emissions would also occur from area sources, including natural gas combustion from heating mechanisms, landscape maintenance equipment exhaust, and consumer products (e.g., deodorants, cleaning products, spray paint, etc.).

As discussed above, due to the nonattainment designations of the area, the SMAQMD has developed plans to attain the State and federal standards for ozone and particulate matter. The current applicable air quality plan for the proposed project area is the *Sacramento Regional 2009 NAAQS 8-Hour Ozone Attainment and Reasonable Further Progress Plan* (Ozone Attainment Plan), updated July 24, 2017. The Ozone Attainment Plan demonstrates how existing and new control strategies would provide the necessary future emission reductions to meet the CAA requirements, including the federal AAQS. Adopted SMAQMD rules and regulations, as well as the thresholds of significance, have been developed with the intent to ensure continued attainment of AAQS, or to work towards attainment of AAQS for which the area is currently designated nonattainment, consistent with the applicable air quality plan. Thus, if a project's operational emissions exceed the SMAQMD's mass emission thresholds, a project would be considered to conflict with or obstruct implementation of the SMAQMD's air quality planning efforts.

The estimated net new operational emissions associated with proposed project are presented in Table 9. It should be noted that the project would not involve installation or operation of any pieces of equipment that would require implementation of SMAQMD's BACTs; therefore, the project would be subject to SMAQMD's mass emissions thresholds for $PM_{10}$ and $PM_{2.5}$.[34] As demonstrated in Table 9, the project's net new unmitigated operational emissions would exceed the applicable thresholds of significance for all criteria pollutants. Therefore, operations associated with development of the proposed project could substantially contribute to the SVAB's non-attainment status for ozone, $PM_{10}$, or $PM_{2.5}$.

**Table 9**
**Unmitigated Maximum Operational Criteria Pollutant Emissions**

| Scenario | ROG | $NO_X$ | $PM_{10}$ | | $PM_{2.5}$ | |
|---|---|---|---|---|---|---|
| | lbs/day | lbs/day | lbs/day | tons/yr | lbs/day | tons/yr |
| A) Existing Conditions | 21.21 | 10.66 | 10.42 | 1.83 | 3.00 | 0.53 |
| B) Proposed Project | 632.06 | 252.57 | 443.82 | 77.83 | 126.18 | 22.06 |
| *Net Change in Emissions* | *610.85* | *241.91* | *433.40* | *76.00* | *123.18* | *21.53* |
| **Threshold of Significance** | **65** | **65** | **80** | **14.6** | **82** | **15** |
| **Exceeds Threshold?** | **YES** | **YES** | **YES** | **YES** | **YES** | **YES** |

***Source: CalEEMod, July 2021; and CalEEMod, March 2022 (see Appendix A).***

## Conclusion

Construction activities associated with the proposed project would be required to comply with all SMAQMD BCECPs, and would therefore adhere to local air quality

[34] Although not anticipated, should the proposed project include land uses or pieces of equipment that would require implementation of SMAQMD's BACTs (i.e., boiler, crematory, automotive spray painting, dry cleaning, pharmaceutical manufacturing, etc.), each stationary source would require an operational permit issued by SMAQMD. As part of the permitting process, compliance with the identified BACTs would be required. Thus, the thresholds of significance for PM emissions remain applicable.

plans. However, $NO_X$ emissions resulting from construction activity are anticipated to exceed SMAQMD's applicable threshold of significance. In addition, during operations, the proposed project is anticipated to result in criteria pollutant emissions which exceed the SMAQMD's thresholds of significance. The proposed project could also result in a cumulatively considerable net increase of a criteria air pollutant for which the project region is non-attainment under an applicable AAQS. Therefore, a ***significant*** impact could result.

## Mitigation Measure(s)

The primary source of project-related construction $NO_X$ emissions would be associated with off-road construction equipment used during construction of the proposed project. Implementation of Mitigation Measure AQ-1, which requires the use of higher-tier off-road equipment, would reduce the emissions of $NO_X$ to below the applicable SMAQMD threshold of significance, as presented in Table 10. It should be noted that while the emissions presented in Table 10 are only representative of Phase I of the project, given that construction of Phase I of the proposed project would represent the most emissions-intensive phase, Mitigation Measure AQ-1 would result in emissions of $NO_X$ to below the applicable SMAQMD threshold of significance during the remaining phases of construction as well. Therefore, implementation of the following mitigation measure would reduce the above potential impact related to construction emissions to a less-than-significant level.

**Table 10**
**Maximum Mitigated Construction Emissions – Phase 1**

| Pollutant | Project Emissions | Construction Threshold | Exceeds Threshold? |
|---|---|---|---|
| ROG | 50.44 lbs/day | - | **N/A** |
| $NO_X$ | 68.39 lbs/day | 85 lbs/day | **NO** |
| $PM_{10}$ | 38.11 lbs/day;<br>4.07 tons/yr | 80 lbs/day;<br>14.6 tons/yr | **NO** |
| $PM_{2.5}$ | 20.23 lbs/day;<br>1.13 tons/yr | 82 lbs/day;<br>15 tons/yr | **NO** |

***Source: CalEEMod, April 2023 (see Appendix A).***

For land development projects that are anticipated to exceed the SMAQMD's operational emissions thresholds of significance for criteria pollutants, such as the proposed project, SMAQMD requires that the project proponent develop an Air Quality Mitigation Plan (AQMP) describing what features the project will incorporate to reduce operational criteria pollutant emissions from baseline conditions. SMAQMD guidance provides that the creation and implementation of an AQMP represents all feasible mitigation, provided that the AQMP demonstrates a 15 percent reduction of ozone precursors below baseline emissions for projects considered in the State Implementation Plan (SIP) and 35 percent for projects not considered in the SIP. As the proposed project was not anticipated by the County in its current General Plan (adopted in 2011) or other community plan, development of the project is not included in the growth assumptions of the SIP. As such, a reduction of 35 percent below baseline emissions of ozone precursors is required for the proposed project. According to SMAQMD, a project's ozone precursor emissions reductions goals should be based on mobile emissions only. Mitigation Measure AQ-2 requires preparation and implementation of a project-specific AQMP. The maximum operational criteria pollutant emissions, with implementation of Mitigation Measure AQ-2, is presented in

Table 11. Implementation of the following measure, Mitigation Measure AQ-2, represents all feasible mitigation. However, as demonstrated in Table 11, emission levels would still exceed the applicable threshold of significance and, therefore, the impact would remain *significant and unavoidable*.

**Table 11**
**Mitigated Maximum Operational Criteria Pollutant Emissions**

| Scenario | ROG | $NO_X$ | $PM_{10}$ | | $PM_{2.5}$ | |
|---|---|---|---|---|---|---|
| | lbs/day | lbs/day | lbs/day | tons/yr | lbs/day | tons/yr |
| A) Existing Conditions | 21.21 | 10.66 | 10.42 | 1.83 | 3.00 | 0.53 |
| B) Proposed Project with AQ-1 | 625.05* | 210.53* | 427.52 | 74.97 | 121.81 | 21.29 |

| **Exceeds Threshold?** | **YES** | **YES** | **YES** | **YES** | **YES** | **YES** |

Note: ROG and $NO_X$ emissions followed by an (*) have been adjusted using off-model calculations to account for the prohibition of natural gas in residential land uses. Refer to the Air Quality Management Plan (see Appendix E) for further detail regarding the off-model calculation methodology.

***Source: CalEEMod, July 2021; and CalEEMod, March 2022 (see Appendix A).***

*AQ-1.* *Prior to the initiation of ground disturbance, the project applicant shall ensure that all heavy-duty off-road diesel-powered equipment to be used in the construction of the project (including owned, leased, and subcontractor equipment) shall be CARB Tier 4 Final or cleaner.*

*In addition, all off-road equipment working at the construction site must be maintained in proper working condition according to manufacturer's specifications. Idling shall be limited to five minutes or less in accordance with the Off-Road Diesel Fueled Fleet Regulation as required by CARB. Portable equipment over 50 horsepower must have either a valid District Permit to Operate (PTO) or a valid statewide Portable Equipment Registration Program (PERP) placard and sticker issued by CARB.*

*The aforementioned requirements shall be noted on improvement plans and submitted for review and approval by Sacramento County.*

*AQ-2.* *Prior to the approval of project improvement plans, the project applicant shall comply with the provisions of the Air Quality Management Plan prepared for the proposed project, dated March 2022 (see Appendix E), and incorporate all requirements into the Upper Westside Specific Plan conditions of approval. The measures included in the AQMP include the following:*

1. *Natural gas use shall be prohibited in all residential land uses (see Mitigation Measure GHG-3 below); and*
2. *The project shall implement a Transportation Management Association (TMA), such as Jibe North Natomas (for more information, visit https://jibe.org/). The TMA must comply with the following criteria, and is subject to approval by Sacramento County and SMAQMD:*

    a. *The TMA must be legally constituted as a non-profit organization, Property/Business Improvement District (PBID), or a government entity with a non-revocable funding mechanism, such as a community finance district, dedicated to TMA operations and services; and*
    b. *The TMA must provide a minimum level of TDM services to employees and residents within the area covered by the AQMP sufficient to achieve the emission reductions claimed by the measure. Services must be enumerated and funded to the satisfaction of the lead agency and SMAQMD.*

*The project applicant, in coordination with the SMAQMD, shall work with future developers to ensure proper implementation of the measures included in the Air Quality Management Plan, as well as any future replacement mitigation measures. Examples of replacement mitigation measures include the following:*

- ***Super-Compliant VOC Architectural Coatings during Operation.*** *Project sponsors shall include in all building rules and/or building operation plans (as applicable, depending on the parcel) a requirement that all future interior and exterior spaces be repainted only with "super-compliant" VOC (i.e., ROG) architectural coatings beyond Sacramento Metropolitan Air Quality Management District (air district) requirements (i.e., Rule 442: Architectural Coatings). "Super-compliant" coatings refer to paints that meet the more stringent regulatory limits in South Coast Air Quality Management District rule 1113, which requires a standard of 10 grams VOC per liter or less (http://www.aqmd.gov/home/regulations/compliance/architectural-coatings/super-compliant-coatings). Project sponsors shall be required to submit documentation to the County demonstrating compliance with this measure.*
- ***Best Available Emissions Controls for Stationary Emergency Generators.*** *To reduce emissions of ROG and toxic air contaminants (TACs) associated with operation of future projects, project applicants shall implement the following measures. These features shall be submitted to the County for review and approval, and shall be included on the project drawings submitted for the construction-related permit(s) or on other documentation submitted to the County prior to the issuance of any building permits:*

- *Permanent stationary emergency generators installed on-site shall have engines that meet or exceed California Air Resources Board Tier 4 Off-Road Compression Ignition Engine Standards (California Code of Regulations Title 13, Section 2423). If the California Air Resources Board adopts future emissions standards that exceed the Tier 4 requirement, the emissions standards resulting in the lowest ROG and DPM emissions shall apply.*
- *As non-diesel-fueled emergency generator technology becomes readily available and cost effective in the future, and subject to the review and approval of the County fire department for safety purposes, non-diesel-fueled generators shall be installed in new buildings, provided that alternative fuels used in generators, such as biodiesel, renewable diesel, natural gas, or other biofuels or other non-diesel emergency power systems, are demonstrated to reduce ROG and DPM emissions compared to diesel fuel.*
- *For each new diesel backup generator permit submitted to air district, project applicants shall submit the anticipated location and engine specifications to the planning department for review and approval prior to issuance of a permit for the generator. Once operational, all diesel backup generators shall be maintained in good working order for the life of the equipment, and any future replacement of the diesel backup generators must be consistent with these emissions specifications. The operator of the facility at which the generator is located shall maintain records of the testing schedule for each diesel backup generator for the life of that diesel backup generator and shall provide this information for review to the planning department within three months of requesting such information.*

- ***Promote Use of Green Consumer Products.*** *To reduce ROG emissions associated with future projects, project sponsors shall provide education for residential and commercial tenants concerning green consumer products. Prior to receipt of any certificate of occupancy, project sponsors shall develop electronic correspondence to be distributed by email annually and upon any new lease signing to residential and/or commercial tenants of each building on the project site that encourages the purchase of consumer products that generate lower than typical VOC emissions. The correspondence shall encourage environmentally preferable purchasing.*

- ***Operational Truck Emissions Reduction.*** *Project sponsors shall incorporate the following measures into the project design and construction contracts (as applicable) to reduce ROG emissions associated with operational trucks, along with the potential health risk caused by exposure to TACs. These features shall be submitted to the planning department for review and approval prior to the issuance of building permits and shall be included on the project drawings submitted for the construction-related permit or on other documentation submitted to the County. Emissions from project-related diesel trucks shall be reduced by implementing the following measures, if feasible:*
    - *Equip all truck delivery bays with electrical hook-ups for diesel trucks at loading docks to accommodate plug-in electric truck transport refrigeration units (TRUs) or auxiliary power units during project operations.*
    - *Provide a notice on the lease to all new tenants or owners of the project or any portion thereof requiring any truck-intensive uses on the site, such as large grocery stores or distribution facilities with their own fleet of trucks, to use TRUs and auxiliary power units that are electric plug-in capable and trucks that use advanced exhaust technology (e.g., hybrid) or alternative fuels.*
    - *Encourage the use of trucks equipped with diesel TRUs to meet U.S. Environmental Protection Agency Tier 4 emission standards.*
    - *Prohibit TRUs from operating at loading docks for more than thirty minutes, and post signs at each loading dock presenting this TRU limit.*
    - *Prohibit trucks from idling for more than two minutes, and post "no idling" signs at the site entry point, at all loading locations, and throughout the project site.*
- ***Electric Vehicle Charging Infrastructure.*** *Prior to the issuance of a certificate of occupancy for any project structure with parking, the project applicant shall demonstrate compliance with the California Green Building Standards (CALGreen Code) Tier 2 voluntary electric vehicle (EV) charging requirements current at that time or the mandatory requirements of the most recently adopted version of the County building code, whichever is more stringent. The installation of all EV charging equipment shall be included on project drawings submitted for construction-related permit(s) or on other documentation submitted to the County.*
- ***Electric Landscaping Equipment.*** *To reduce ROG emissions all projects shall use only electric landscaping equipment. No landscaping equipment powered by gasoline, diesel, propane, or other fossil fuels shall be used.*

*This requirement shall be incorporated into the project design and tenant contracts (as applicable).*

**AQ-2 Expose sensitive receptors to substantial pollutant concentrations. Based on the analysis below, the impact is *significant and unavoidable*.**

As noted previously, the nearest sensitive receptors to the project site include adjacent residential subdivisions and several public schools. The closest residences are approximately 50 feet away from the project site.

The major pollutant concentrations of concern are localized CO emissions, TAC emissions, and criteria pollutant emissions, which are addressed in further detail below.

### Localized CO Emissions

Localized concentrations of CO are related to the levels of traffic and congestion along streets and at intersections. Per the SMAQMD Guide, emissions of CO are generally of less concern than other criteria pollutants, as operational activities are not likely to generate substantial quantities of CO, and the SVAB has been in attainment for CO for multiple years.[35] Consequently, the proposed project is not anticipated to result in significant impacts to air quality related to localized CO emissions.

### TAC Emissions

Another category of environmental concern is TACs. The CARB Handbook provides recommended setback distances for sensitive land uses from major sources of TACs, including, but not limited to, freeways and high traffic roads, distribution centers, rail yards, and GDFs. Health risks associated with TACs are a function of both the concentration of emissions and the duration of exposure, where the higher the concentration and/or the longer the period of time that a sensitive receptor is exposed to pollutant concentrations would correlate to a higher health risk.

As noted previously, SMAQMD has permitting authority over stationary sources of TACs, but does not have authority to regulate area sources of TACs. Thus, any future land uses that may be considered a stationary source of TACs would be required to acquire the appropriate permits from the SMAQMD prior to operations. To assess the potential impacts of TACs from stationary sources, the SMAQMD maintains thresholds of significance for the review of local community risk and hazard impacts. The thresholds are designed to assess the impact of new stationary sources of TACs on existing sensitive receptors. Based on the SMAQMD thresholds, the proposed project would result in a significant impact related to stationary sources of TACs if nearby sensitive receptors would experience an increased cancer risk of greater than or equal to 10 in one million people, or experience a chronic or acute hazard index of greater than or equal to 1.0.[36]

---

[35] Sacramento Metropolitan Air Quality Management District. *Guide to Air Quality Assessment, Chapter 4: Operational Criteria Air Pollutant and Precursor Emissions*. June 2020.

[36] Sacramento Metropolitan Air Quality Management District. *Guide to Air Quality Assessment in Sacramento County: Toxic Air Contaminants.* April 2020.

Implementation of the proposed project would result in emissions of TACs from area sources, which could influence existing receptors. Emissions of TACs from construction, as well as emissions of existing sources of TACs on future sensitive receptors, are discussed in further depth in the sections below.

### *Construction Emissions*

Construction-related activities would result in the generation of TACs, specifically DPM, from on-road haul trucks and off-road equipment exhaust emissions. Consequently, the operation of heavy equipment within the project site during demolition and project construction could result in exposure of nearby residents to DPM. As noted above, the proposed project would be constructed in several phases, and Phase 1 represents the most emissions-intensive phase.

As noted in the Methods section, sensitive receptors do not currently exist in the immediate vicinity of the Phase 1 area. However, as buildout of each phase occurs, receptors would be located on the project site, and construction activities would have the potential to occur adjacent to sensitive receptors. In order to model the worst-case scenario, the construction emissions modeling associated with construction of Phase 1 assumed sensitive receptors along the perimeter of the Phase 1 construction area. While these receptor locations are hypothetical for modeling purposes, the conditions represent the most emissions-intensive phase of construction occurring adjacent to sensitive receptors. In addition, an additional receptor was placed in the center of the Phase 1 construction area to represent receptors that would be exposed to emissions associated with subsequent phases of the proposed project in combination with the Phase 1 construction. The combination of the two receptor locations represents the maximum possible exposure to any one receptor through the course of the 30-year development associated with the proposed project.

In reality, because subsequent construction phases of the project would likely be less intense than Phase 1, construction which would occur adjacent to receptors would be less intense than what is evaluated herein. According to CARB, DPM is highly dispersive in the atmosphere. Specifically, based on dispersion of DPM emissions, at a distance of 1,000 feet, DPM concentrations are decreased by approximately 80 percent.[37] As such, the maximally exposed individual of any given phase would be buffered sufficiently from DPM emissions associated with construction of any remaining phases such that exposure to substantial concentrations of DPM would not occur beyond what is presented herein. In addition, regulations pertaining to construction vehicles and equipment, including, but not limited to, State and federal vehicle standards, are becoming increasingly more stringent. As such, construction of the subsequent phases would be anticipated to generate less TAC emissions as future equipment regulations become effective, and construction equipment and vehicles become cleaner.

The cancer risk and non-cancer hazard indices were estimated and are presented in Table 12. As shown in Table 12, TAC emissions related to construction of the proposed project would not result in non-cancer hazard index health risks in excess of the SMAQMD's thresholds. However, while unlikely given the highly conservative assumptions included in the model, the potential exists for construction of the

[37] California Air Resources Board. *Air Quality and Land Use Handbook: A Community Health Perspective*. April 2005.

proposed project to result in cancer risks in excess of the SMAQMD threshold of significance. Therefore, a potentially significant impact could occur.

**Table 12**
**Maximum Cancer Risk and Hazard Index Associated with Construction of Phase I**

| | Cancer Risk (per million persons) | Acute Hazard Index | Chronic Hazard Index |
|---|---|---|---|
| Result at Maximally Exposed Receptor | 7.32 | 0.00 | 0.002544 |
| Result at On-Site Receptor | 11.96 | 0.00 | 0.004156 |
| *Total* | *19.28* | *0.00* | *0.0067* |
| **Thresholds of Significance** | **10.00** | **1.00** | **1.00** |
| **Exceed Thresholds?** | **YES** | **NO** | **NO** |

***Sources: AERMOD and HARP 2 RAST, April 2023, January 2024 (see Appendix C).***

## *Operational TACs on Existing Receptors*

The CARB's Handbook identified major sources of TACs, including, but not limited to, freeways and high traffic roads, GDFs, chrome plating operations, distribution centers, and rail yards. The CARB has identified diesel particulate matter (DPM) from diesel-fueled engines as a TAC; thus, high volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic are identified as having the highest associated health risks from DPM.

The proposed project entails the development of primarily residential and commercial land uses and, thus, does not include any operations that would be considered a substantial source of stationary TACs. Although the project could include the implementation of new GDFs, the project would be required to comply with the CARB's recommended buffer distances which ensure that nearby sensitive receptors are not adversely affected by TAC emissions associated with such GDFs. Accordingly, operations of the proposed project would not expose sensitive receptors to excess concentrations of TACs. However, the existing receptors located to the south of the site, across I-80, could be exposed to increased DPM emissions associated with increased traffic on I-80 generated by the proposed project, as discussed below.

## *Operational TACs on Future Receptors*

The CARB has identified DPM from diesel-fueled engines as a TAC; thus, high volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic are identified as having the highest associated health risks from DPM. Gasoline includes multiple TACs, which are released through various processes during the operation of GDFs. Such TACs include benzene, ethyl benzene, toluene, and xylene, among others. The following analysis evaluates the potential health risks associated with the proposed multi-family housing in close proximity to two existing GDFs and I-80.

To address potential health impacts that could result from the existing GDF operations and operations of I-80 upon the nearby proposed residences to the west, emissions of pollutants related to such sources were estimated and the potential health risks were

subsequently calculated. The dispersion of benzene emissions from each GDF were modeled using AERMOD, and the health risks associated with exposure to such concentrations were calculated using HARP 2 RAST. The cancer risk per million persons associated with DPM emissions from I-80 were determined using the SMAQMD's Mobile Sources Air Toxics Protocol Tool. In addition, the SMAQMD's Mobile Sources Air Toxics Protocol Tool provided the concentration of $PM_{2.5}$ at nearby receptors, which was then used to calculate the associated chronic hazard index using HARP 2 RAST. As noted previously, the SMAQMD does not have adopted thresholds of significance for cumulative health effects from multiple sources of TACs. In the absence of adopted cumulative thresholds, the SMAQMD recommends presenting the BAAQMDs thresholds as the applicable thresholds of significance.[38]

The results of the HRA for Existing conditions indicate that the cancer risk per million people associated with operations of the existing GDFs and traffic along I-80 would exceed the applicable cumulative threshold of significance of 100 cancers per million people. Thus, an existing hazardous condition is present. Accordingly, a model run was prepared for Cumulative No Project and Cumulative Plus Project conditions to determine whether the proposed project would exacerbate the existing hazardous condition. For the Cumulative No Project and Cumulative Plus Project conditions, vehicle emission factors for the year 2045 were obtained from EMFAC2021, and traffic volumes along the study segment were provided by Fehr & Peers.[39] The results of the modeling are presented in Table 13.

According to BAAQMD guidance, a project would have a cumulative significant impact if the aggregate total of all past, present, and foreseeable future sources, plus the contribution from the project, exceeds a cancer risk of 100 in one million persons, a chronic non-cancer risk of 10.0, or an annual average $PM_{2.5}$ concentration of 0.8 µg/$m^3$. As presented in the table, the total cancer risk for Cumulative No Project Conditions would be 287.41 cancer risks per million, and the Cumulative Plus Project Conditions would be 331.79 cancer risks per million. Therefore, the proposed project would exacerbate existing conditions related to potential health risks associated with the proposed multi-family housing in close proximity to two existing GDFs and I-80, and a cumulative significant impact would occur.

Similarly, as discussed above, the existing receptors located to the south of the site, across I-80, would be exposed to increased DPM emissions associated with increased traffic on I-80 generated by the proposed project. Total cancer risk for Cumulative No Project Conditions and the Cumulative Plus Project Conditions would generally be the same as the cancer risks associated with the proposed multi-family housing on-site, presented in Table 13. Therefore, the proposed project would exacerbate existing conditions related to potential health risks associated with the existing receptors located to the south of the site, across I-80, and a cumulative significant impact would occur.

| Total Health Risk Existing Conditions | 173.75 | 0.74 | 0.15 | 0.16832 |
| Total Health Risk Cumulative No Project Conditions | 287.41 | 0.74 | 0.18 | 0.0997 |
| Total Health Risk Cumulative Plus Project Conditions | 331.79 | 0.74 | 0.19 | 0.35099 |

***Sources:***
***1 AERMOD and HARP 2 RAST, July 2021 (see Appendix C).***
***2 AERMOD and HARP 2 RAST, September 2022 (see Appendix C).***

It should be noted, however, that the cancer and non-cancer hazard index risks presented above represent an absolute worst-case scenario with regard to project traffic. In reality, regulations pertaining to vehicle emissions, including, but not limited to, State and federal vehicle standards, are becoming increasingly more stringent. As such, project traffic, as well as future traffic travelling along I-80, is anticipated to generate less TAC emissions as future regulations become effective, and vehicle engines become cleaner. Therefore, when considering the effect of future, more stringent regulations, the cancer and non-cancer hazard index risks presented above represent a conservative estimate.

## Criteria Pollutants

Recent rulings from the California Supreme Court (including the *Sierra Club v. County of Fresno* (2018) 6 Cal. 5th 502 case regarding the proposed Friant Ranch Project) have underscored the need for analyzing potential health impacts resulting from the emission of criteria pollutants during operations of proposed projects. Although analysis of project-level health risks related to the emission of CO and TACs has long been practiced under CEQA, the analysis of health impacts due to individual projects resulting from emissions of criteria pollutants is a relatively new field. In October of 2020, SMAQMD released the *Guidance to Address the Friant Ranch Ruling for CEQA Projects in the Sac Metro Air District* (Guidance) for the analysis of criteria emissions in areas within the SMAQMD's jurisdiction. The Guidance represents SMAQMD's effort to develop a methodology that provides a consistent, reliable, and meaningful

analysis in response to the Supreme Court's direction on correlating health impacts to a project's emissions.

The Guidance was prepared by conducting regional photochemical modeling, and relies on the USEPA's Benefits Mapping and Analysis Program (BenMAP) to assess health impacts from ozone and $PM_{2.5}$. SMAQMD has prepared two tools that are intended for use in analyzing health risks from criteria pollutants. Small projects with criteria pollutant emissions close to or below SMAQMD's adopted thresholds of significance may use the *Minor Project Health Effect Screening Tool*, while larger projects with emissions between two and eight times greater than SMAQMD's adopted thresholds may use the *Strategic Area Project Health Screening Tool*.[40] Considering the proposed project would result in emissions which exceed the SMAQMD's thresholds of significance, the project would qualify for the *Strategic Area Project Health Screening Tool*. The *Strategic Area Project Health Screening Tool* is based on location specific modeling, in five specific growth area locations. The proposed project is located closest to the Downtown Sacramento location in the *Strategic Area Project Health Screening Tool*. Results from the *Strategic Area Project Health Effects Screening Tool* are shown in Table 14.

As shown in the table, the proposed project could result in 5.2 premature deaths per year due to the project's $PM_{2.5}$ impacts, and could result in 0.14 premature deaths per year due to the project's ozone impacts. Such numbers represent a very small increase over the background incidence of premature deaths due to $PM_{2.5}$ and ozone concentrations (0.0120 percent and 0.0005 percent, respectively). $PM_{2.5}$ emissions from the proposed project could result in 2.1 asthma-related emergency room visits per year, and ozone emissions from the proposed project could result in 2.9 asthma-related emergency room visits per year. Such numbers represent a minute increase over the background level of asthma-related emergency room visits (0.0110 percent and 0.0330 percent, respectively). Additionally, it is noted that the baseline health impacts and the estimated health impacts associated with the proposed project encompass the 5-Air-District Region, which includes over seven counties.

A threshold of significance has not been established for such data and, thus, the results of the *Strategic Area Project Health Screening Tool* have been presented for informational purposes only.

## Conclusion

Based on the above discussion, the proposed project would not expose any sensitive receptors to excess concentrations of localized CO or criteria pollutants during construction or operations of the project. However, with regard to TAC emissions, the proposed project could result in construction-related cancer risks in excess of the SMAQMD threshold of significance, and would exacerbate existing conditions related to potential health risks associated with the proposed multi-family housing in close proximity to two existing GDFs and I-80, as well as the exposure of the existing receptors to the south of the project site to increased DPM emissions associated with project traffic along I-80. Consequently, the proposed project would result in a ***significant*** impact related to the exposure of sensitive receptors to substantial pollutant concentrations.

| Hospital Admissions, All Respiratory | 65-99 | 0.20 | 0.0010 | 19,644 |
| Emergency Room Visits, Asthma | 0-17 | 1.1 | 0.0190 | 5,859 |
| Emergency Room Visits, Asthma | 18-99 | 1.8 | 0.0140 | 12,560 |
| **Mortality Ozone** | | | | |
| Mortality, Non-Accidental | 0-99 | 0.14 | 0.0005 | 30,386 |

1 Affected age ranges are shown. Other age ranges are available, but the endpoints and age ranges shown here are the ones used by the USEPA in their health assessments. The age ranges are consistent with the epidemiological study that is the basis of the health function.

2 Health effects are shown in terms of incidences of each health endpoint and how it compares to the base (2035 base year health effect incidences, or "background health incidence") values. Health effects are shown for the Reduced Sacramento 4-km Modeling Domain and the 5-Air-District Region.

3 The percent of background health incidence uses the mean incidence. The background health incidence is an estimate of the average number of people that are affected by the health endpoint in a given population over a given period of time. In this case, the background incidence rates cover the 5-Air-District Region (estimated 2035 population of 3,271,451 persons). Health incidence rates and other health data are typically collected by the government as well as the World Health Organization. The background incidence rates used here are obtained from BenMAP.

4 The total number of health incidences across the 5-Air-District Region is calculated based on the modeling data. The information is presented to assist in providing overall health context.

***Source: Sac Metro Air District Strategic Area Project Health Effects Tool, Version 2, Published September 2020.***

## Mitigation Measure(s)

With regard to construction-related cancer risks, as required by Mitigation Measure AQ-1 presented above, off-road equipment used during construction of the proposed project would be required to meet Tier 4 final engine standards.

Based on modeling conducted, as demonstrated in Table 15, use of higher tier construction equipment for all construction activities would ensure that DPM emissions from construction equipment do not result in increased health risks in excess of SMAQMD's standards. Consequently, implementation of AQ-1, as required by AQ-3, below, would reduce such impacts to a less-than-significant level.

**Table 15**
**Maximum Cancer Risk and Hazard Index Associated with Construction of Phase I**

| | Cancer Risk (per million persons) | Acute Hazard Index | Chronic Hazard Index |
|---|---|---|---|
| Result at Maximally Exposed Receptor | 1.96 | 0.00 | 0.00059 |
| Result at On-Site Receptor | 2.76 | 0.00 | 0.00096 |
| *Total* | *4.72* | *0.00* | *0.00155* |
| **Thresholds of Significance** | **10.00** | **1.00** | **1.00** |
| **Exceed Thresholds?** | **NO** | **NO** | **NO** |

***Sources: AERMOD and HARP 2 RAST, January 2024 (see Appendix C).***

With regard to operational cancer risks, Mitigation Measure AQ-4 would require the proposed project to include a minimum MERV 13 filter in the HVAC system for all on-site sensitive land uses within 500 feet of I-80. MERV 13 filters are rated to capture 80 to 90.9 percent of particles that are 1.3 to 3.0 microns in size, and over 90 percent of particles that are 3.0 to 10.0 microns in size.[41] In addition, the upgrade from standard home filters to MERV 13 filters has been shown to result in a decrease in mortality of 0.5 per 1,000 persons.[42] Therefore, the inclusion of MERV 13 filters in the proposed project would dramatically reduce resident $PM_{2.5}$ exposure. In fact, the installation of upgraded MERV rating filters has been shown to reduce indoor $PM_{2.5}$ exposure by 19 to 28 percent.[43] A linear relationship exists between $PM_{2.5}$ concentration and the associated cancer risk when all other variables, including exposure time, remains constant. Therefore, in the case of the proposed project, a 19 to 28 percent reduction in $PM_{2.5}$ concentration would equate to a 19 to 28 percent reduction in cancer risk. After installation of MERV 13 filters, the total Cumulative Plus Project cancer risk can reasonably be expected to range between 238.87 to 268.72 cases per million, which would be below the total Cumulative No Project cancer risk of 287.41 cases per million.

41 U.S. Environmental Protection Agency. *Indoor Air Quality (IAQ): What is a MERV rating?* Available at: https://www.epa.gov/indoor-air-quality-iaq/what-merv-rating-1. Accessed June 2023.

42 W.J. Fisk and W. R. Chan. *Effectiveness and cost of reducing particle-related mortality with particle filtration*. February 1, 2017.

43 M.S. Zuraimi and Zhongchao Tan. *Impact of residential building regulations on reducing indoor exposures to outdoor $PM_{2.5}$ in Toronto*. March 14, 2015.

Therefore, implementation of Mitigation Measure AQ-4 would ensure that the proposed project would not exacerbate cancer risk for future on-site receptors.

Installation of a minimum MERV 13 filter in the HVAC systems for the existing sensitive receptors to the south of the project site, across I-80, would ensure that the proposed project would not exacerbate cancer risk for such receptors as well. However, because installation of such filters in the existing residences would require resident approval, neither Sacramento County, nor the project applicant, can legally impose such improvements on private properties within the City of Sacramento. Therefore, the project's contribution to the cumulative health risk would remain *significant and unavoidable*.

*AQ-3* *Implement Mitigation Measure AQ-1.*

*AQ-4* *For sensitive land uses within 500 feet of Interstate 80, as determined to be feasible by the Sacramento County Planning Department, the project applicant shall implement measures that include, but are not limited to, the following:*

- *Install, operate and maintain in good working order a central heating, ventilation and air conditioning (HVAC) system or other air intake system in the building, or in each individual unit, that meets or exceeds a minimum efficiency reporting value (MERV) of 13 or higher. The HVAC system shall include the following features: Installation of a high efficiency filter and/or carbon filter to filter particulates and other chemical matter from entering the building. Either high efficiency particulate air (HEPA) filters or American Society of Heating, Refrigeration, and Air-Conditioning Engineers (ASHRAE) certified 85% supply filters shall be used.*
- *Maintain, repair and/or replace HVAC system on an ongoing and as needed basis or shall prepare an operation and maintenance manual for the HVAC system and the filter. The manual shall include the operating instructions and the maintenance and replacement schedule. This manual shall be included in the Covenants, Conditions and Restrictions (CC&Rs) for residential projects and/or distributed to the building maintenance staff. In addition, the applicant shall prepare a separate homeowners manual. The manual shall contain the operating instructions and the maintenance and replacement schedule for the HVAC system and the filters.*
- *Install passive electrostatic filtering systems with low air velocities (i.e., less than 1 mph).*
- *Individual and common exterior open space and outdoor activity areas proposed as part of individual projects shall be located as far away as possible within the project site boundary, face away major freeways, and shall be shielded from the source (i.e., the roadway) of air pollution by buildings or otherwise buffered to further reduce air pollution for project occupants.*
- *Locate air intakes and design windows to reduce PM exposure (e.g., windows nearest to the roadway do not open).*

- *Planting trees and/or vegetation between sensitive receptors and pollution source. Trees that are best suited to trapping PM shall be planted, including one or more of the following species: Pine (Pinus nigra var. maritima), Cypress (X Cupressocyparis leylandii), Hybrid popular (Populus deltoids X trichocarpa), California pepper tree (Schinus 63ole) and Redwoods (Sequoia sempervirens).*

## AQ-3 Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people. Based on the analysis below, the impact is *less than significant*.

Pollutants of principal concern include emissions leading to odors, emission of dust, or emissions considered to constitute air pollutants. Air pollutants have been discussed in sections AQ-1 and AQ-2 above. Therefore, the following discussion focuses on emissions of odors and dust.

### Odors

Construction activities often include diesel-fueled equipment and heavy-duty trucks, which could create odors associated with diesel fumes that may be considered objectionable. However, construction activities would be temporary, and hours of operation for construction equipment would be restricted to the hours of 6:00 AM and 8:00 PM on weekdays and 7:00 AM and 8:00 PM on weekends per Section 6.68.090 of the Sacramento County Code. Project construction would also be required to comply with all applicable SMAQMD rules and regulations, listed under section AQ-1 above. The aforementioned regulations would help to minimize emissions, including emissions leading to odors. Accordingly, substantial objectionable odors would not be expected to occur during construction activities.

Full buildout of the project area would include operations of fast-food and sit-down restaurants, and other uses which could include commercial kitchens. Operations of the commercial kitchens would have the potential to result in emissions of odors related to food preparation and disposal. In particular, preparation of oily food, some baking processes, and cooking using charbroiling grills may create odorous emissions. However, commercial kitchens and cooking areas are required to comply with State and local regulations associated with cooking equipment and controls, such as grease filtration and removal systems, exhaust hood systems, and blowers to move air into the hood systems, through air cleaning equipment, and then outdoors. Such equipment would ensure that pollutants associated with smoke and exhaust from cooking surfaces would be captured and filtered, allowing only filtered air to be released into the atmosphere. For instance, Article 2, Ventilation, and Article 4, Refuse, of the California Retail Food Code, set standards for mechanical exhaust ventilation equipment and waste management to reduce the emissions of odors.[44] In addition, the disposal of solid waste, including food waste, is regulated under 6.20.115, Solid Waste Removal, of the Sacramento County Code.

Furthermore, the SMAQMD regulates objectionable odors through Rule 402 (Nuisance), which prohibits any person or source from emitting air contaminants that

[44] *California Health and Safety Code: Division 104. Environmental Health, Part 7. California Retail Food Code*. January 1, 2020.

cause detriment, nuisance, or annoyance to a considerable number of persons or the public. Rule 402 is enforced based on complaints. If complaints are received, the SMAQMD is required to investigate the complaint, as well as determine and ensure a solution for the source of the complaint, which could include operational modifications. Thus, although not anticipated, if odor complaints are made regarding food preparation or GDF operations after the proposed project is approved, the SMAQMD would ensure that such odors are addressed, and any potential odor effects reduced to less than significant.

### Dust

As noted previously, construction of the proposed project is required to comply with all applicable SMAQMD rules and regulations, including, but not limited to, Rule 403 (Fugitive Dust) and Rule 404 (Particulate Matter). Furthermore, all projects within Sacramento County are required to implement the SMAQMD's BCECPs during construction, which are required as a condition of approval of development projects in Sacramento County. Compliance with SMAQMD rules and regulations and BCECP would help to ensure that dust is minimized during project construction. Following project construction, vehicles operating within the project site would be limited to paved areas of the site, which would not have the potential to create substantial dust emissions. Thus, project operations would not include sources of dust that could adversely affect a substantial number of people.

### Conclusion

For the aforementioned reasons, project construction and operations would not result in substantial emissions, such as those leading to odors or dust, which could adversely affect a substantial number of people, and a ***less-than-significant*** impact would result.

### Mitigation Measure(s)

*None required.*

## Cumulative Impacts and Mitigation Measures

As defined in Section 15355 of the CEQA Guidelines, "cumulative impacts" refers to two or more individual effects which, when considered together, are considerable, compound, or increase other environmental impacts. The individual effects may be changes resulting from a single project or a number of separate projects. The cumulative impact from several projects is the change in the environment that results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects.

A project's emissions may be individually limited, but cumulatively considerable when taken in combination with past, present, and future development projects. The geographic context for the cumulative air quality and GHG analysis includes Sacramento County and surrounding areas within the portion of the SVAB that is designated nonattainment for ozone, $PM_{10}$, and $PM_{2.5}$.

**AQ-4 Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors). Based on the**

**analysis below, and with the implementation of mitigation, the impact would be *cumulatively considerable* and *significant and unavoidable.***

A cumulative impact analysis considers a project over time in conjunction with other past, present, and reasonably foreseeable future projects whose impacts might compound those of the project being assessed. Due to the dispersive nature and regional sourcing of air pollutants, air pollution is already largely a cumulative impact. The non-attainment status of regional pollutants, including ozone and PM, is a result of past and present development, and, thus, cumulative impacts related to these pollutants could be considered cumulatively significant.

The SMAQMD directs lead agencies to use the region's existing attainment plans as a basis for analysis of cumulative emissions. A project's interference with such plans may be determined through the use of the SMAQMD's recommended thresholds of significance for ozone precursors, $PM_{2.5}$, and $PM_{10}$. Given the project's required compliance with all applicable BMPs, the SMAQMD's recommended cumulative thresholds are identical to the operational thresholds, which are presented in Table 6. Accordingly, if the proposed project would result in an increase of ROG, $NO_X$, $PM_{10}$, or $PM_{2.5}$ in excess of SMAQMD's operational phase cumulative-level emissions threshold, which are equivalent to SMAQMD's project-level operational emissions thresholds, the project could potentially result in a significant incremental contribution towards cumulative air quality impacts. The proposed project's unmitigated cumulative contribution to regional emissions is equivalent to the project's unmitigated operational emissions, as presented in Table 9.

As discussed above, the proposed project would result in operational emissions which exceed all applicable SMAQMD thresholds of significance. Therefore, the proposed project could be considered to result in a ***cumulatively considerable*** net increase of a criteria pollutant for which the project region is non-attainment.

### Mitigation Measure(s)

Implementation of the following mitigation measure represents all feasible mitigation to address criteria pollutant emissions. However, as presented in Table 11, emission levels would still exceed the applicable thresholds of significance and, therefore, the impact would remain *significant and unavoidable*.

*AQ-5. Implement Mitigation Measure AQ-2.*

**GHG-1 Generation of GHG emissions that may have a significant impact on the environment or conflict with an applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs. Based on the analysis below, and with the implementation of mitigation, the project's incremental contribution to this significant cumulative impact is *less than cumulatively considerable*.**

Buildout of the proposed project would contribute to increases of GHG emissions that are associated with global climate change during construction and operation.

## Construction GHG Emissions

The estimated unmitigated maximum annual construction-related emissions from the proposed project are presented in Table 16. As shown in the table, the maximum annual emissions related to construction of the proposed project would exceed the SMAQMD's threshold of 1,100 $MTCO_2e$/yr. Therefore, unmitigated project construction emissions could be considered to result in a cumulatively considerable contribution to global climate change.

**Table 16**
**Maximum Unmitigated Construction GHG Emissions**

| | **GHG Emissions ($MTCO_2e$/yr)** |
|---|---|
| Maximum Annual Construction Emissions | 5,238.86 |
| **SMAQMD Threshold** | **1,100.00** |
| **Exceed Thresholds?** | **YES** |

***Source: CalEEMod, April 2023 (see Appendix A).***

## Operational GHG Emissions

The unmitigated maximum annual operational GHG emissions were estimated under both A) existing conditions and B) the proposed project. The results are presented in Table 17.

**Table 17**
**Unmitigated Annual Operational GHG Emissions ($MTCO_2e$/yr)**

| **Source** | **A) Existing Conditions** | **B) Proposed Project** | ***Net Change*** |
|---|---|---|---|
| Area | 0.35 | 161.62 | *161.27* |
| Energy | 700.21 | 14,161.52 | *13,461.31* |
| Mobile | 1,395.13 | 54,632.27 | *53,237.14* |
| Waste | 245.26 | 6,392.06 | *6,146.80* |
| Water | 27.91 | 649.98 | *622.07* |
| **Total Annual Operational GHG Emissions** | **2,368.85** | **75,997.45** | ***73,628.60*** |

***Source: CalEEMod, July 2021; and CalEEMod, March 2022 (see Appendix A).***

The proposed project's compliance with the SMAQMD's BMPs is discussed in further detail below.

### *BMP-1: No Natural Gas*

Consistent with BMP-1, the residential portion of the proposed project would not include natural gas infrastructure. However, the non-residential components are anticipated to include natural gas. Pursuant to SMAQMD's Guidance, BMP-1 may be replaced with an alternative mitigation strategy that would reduce GHG to the same extent. Nonetheless, the non-residential components would be required to pre-wire for a future retrofit to remove natural gas plumbing and become all-electric.

Per the CalEEMod results, non-residential natural gas combustion at full buildout of the proposed project accounts for 5,995.77 $MTCO_2e$/yr. In order to fully comply with BMP-1 at full buildout, the proposed project must reduce overall GHG emissions by

5,995.77 $MTCO_2e$/yr. It is noted, however, that project buildout would be phased, and not all non-residential land uses would become operational at once. Thus, throughout the development period, non-residential natural gas combustion would result in fewer GHG emissions per year. Compliance with BMP-1 through the equivalent reduction in GHG emissions would be ensured by Mitigation Measure GHG-3.

### *BMP-2: EV-Ready*

Consistent with BMP-2, the proposed project would provide EV Ready parking spaces at the ratio with which the current CalGreen Tier 2 standards require EV Capable spaces. Given that the project would be constructed over several phases across approximately 20 years in response to market-based demand for housing, the current (i.e., most recently adopted) CalGreen Tier 2 standards would vary depending on when each specific phase of the project is developed. For example, Table 18 presents EV Ready parking spaces requirements based on the 2022 CALGreen Code, which is the most recently adopted version of CALGreen Code currently available. Compliance with BMP-2 would be ensured by Mitigation Measure GHG-2.

**Table 18**
**EV Ready Parking Space Requirements**

| Land Use Type | Requirements for New Construction | | |
|---|---|---|---|
| 1-2 family dwelling units/townhouses[1] | Each dwelling unit shall have a listed raceway to accommodate a dedicated 208/40-volt branch circuit | | |
| Multifamily dwelling units, hotels, and motels[2] | 55 percent of total parking spaces shall be EV Ready, and 20 percent of spaces shall have Level 2 EV Chargers | | |
| Nonresidential[3] | **Total Number of Parking Spaces** | **EV Ready Spaces** | **EVSE Spaces** |
| | 0-9 | 3 | 0 |
| | 10.25 | 8 | 3 |
| | 26-50 | 17 | 6 |
| | 51-75 | 28 | 9 |
| | 76-100 | 40 | 13 |
| | 101-150 | 57 | 19 |
| | 151-200 | 79 | 26 |
| | 201 and over | 45 percent of actual parking spaces | 33 percent of EV Ready Spaces |

### *BMP-3: No Net increase in Total VMT*

Because the project is located within the jurisdiction of SMAQMD, the project is required to implement BMPs 1 and 2. However, even with implementation of BMPs 1 and 2, the project would still result in annual emissions over the SMAQMD's threshold of significance and, therefore, would be subject to BMP 3.

A Transportation Impact Analysis was prepared for the proposed project, based primarily on the OPR's *Technical Advisory on Evaluating Transportation Impacts in*

*CEQA* as well as Sacramento County's *Transportation Analysis Guidelines* (TAG).[45,46] Per the TAG, the VMT analysis was performed using the Sacramento Area Council of Government's (SACOG) SACSIM19 tour-based travel demand model. The version of the model that was used is similar to what was used as the basis for SACOG's 2020 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS), but has been improved upon by considering the length of trips generated by land uses within the SACOG region that have an origin or destination outside the region. SACSIM19 simulates people's activities on a typical weekday and tracks travel of individuals throughout the day in trip tours. The model allocates household and employment at a parcel level, which allows the model to capture smaller-scale land use changes and demographic differences. SACSIM19 is sensitive to the local physical environment, including the presence (or absence) of pedestrian and bicycle facilities, the patterns of local street networks (e.g., grid vs. cul-de-sacs), and the density, proximity and mix of surrounding land uses (i.e. employment destinations, schools, retail, parks, etc.

SACSIM19 estimated that 15.4 percent of home-based household trips would be internal to the project site, which is considered low given the diversity and proximity of on-site land uses. In contrast, the MXD+ mixed-use trip generation model estimated 22.9 percent of home-based trips being internal. According to Fehr and Peers, because SACSIM19 is a regional travel demand model, while MXD+ was developed to more accurately estimate internal trips associated with mixed-use projects, the household VMT estimate from SACSIM19 was adjusted to reflect the expected level of internal resident trips. Adjustments were not made to work tour VMT per employee because the results appeared reasonable, and work tour VMT represents a relatively small (i.e., approximately 20 percent) component of the project's total VMT.

Results of the modeled VMT per capita associated with the proposed project is presented in Table 19.

**Table 19**
**VMT per Capita and per Employee Baseline Conditions**

| Measure | Work Tour VMT Per Employee[1] | Household VMT per Capita[2] |
|---|---|---|
| Regional Average[2] | 18.48 | 17.44 |
| Project[4] | 15.31 | 14.34 |
| **Threshold of Significance[3]** | **15.70** | **14.83** |
| **Exceeds threshold?** | **NO** | **NO** |

Notes:
1. Calculated per Sacramento County TAG.
2. Regional Average is from Existing No Project Model run. VMT includes the entire length of trips outside of SACOG Region, whereas Sacramento County TAG threshold didn't include trip length outside SACOG Region; hence, values are slightly different.
3. 85 percent of Regional Average per Sacramento County TAG.
4. Project was added to the base year MTP/SCS model. Average trip distance outside of SACOG region for the project was estimated using the average of nearby TAZs.

***Source: Fehr and Peers. Draft Report CEQA Transportation Impact Analysis for Upper Westside Specific Plan. June 16, 2021.***

45 Governor's Office of Planning and Research. *Technical Advisory on Evaluating Transportation Impacts in CEQA*. December 2018.
46 Sacramento County. *Transportation Analysis Guidelines*. September 10, 2020.

As demonstrated in the table, the proposed project would not exceed the applicable threshold of significant related to VMT per capita.

In addition, the project's retail components are considered regional-serving because they are situated nearest to and visible from I-80. The SACSIM19 model was run for the project with and without the regional retail component. The results are shown in Table 20.

As shown in the table, the proposed project without the regional retail component generates more VMT than the project with the regional retail added, as the regional retail uses decrease the travel distance for many residents in the project area who are traveling to a regional retail destination.

Based on the above, the proposed project would comply with BMP-3.

**Table 20**
**Effect of Project's Regional Retail on VMT – Baseline Conditions**

| Measure[1] | Base Year SACSIM Model Plus Project | Base Year SACSIM Model Plus Project Without Regional Retail |
|---|---|---|
| Total Regional VMT | 42,992,142 | 43,014,069 |

[1] Calculated using Daysim trip tables, which is a step within the overall SACSIM19 model.

## Consistency with 2022 Scoping Plan

Appendix D to the CARB's 2022 Scoping Plan provides examples of key project attributes that could be considered to assess a project's compliance with the State's 2030 GHG emissions reductions goals. Thus, general implementation of the suggested project attributes within the 2022 Scoping Plan would be considered to demonstrate the project's compliance with SB 32. The project's consistency with the key attributes within the 2022 Scoping Plan is assessed in Table 21 below.

As shown in Table 21, the proposed project would generally comply with the majority of the suggested project attributes. Because the 2022 Scoping Plan is the CARB's strategy for meeting the State's 2030 emissions goals established by SB 32, the project would not be considered to conflict with SB 32.

**Table 21**
**Project Consistency with the 2022 Scoping Plan**

| Key Project Attributes | Consistency Discussion |
|---|---|
| Provides EV charging infrastructure that, at minimum, meets the most ambitious voluntary standard in the California Green Building Standards Code at the time of project approval. | Consistent with SMAQMD BMP-2, as discussed above, the proposed project would provide EV Ready parking spaces at the ratio with which the current CalGreen Tier 2 standards require EV Capable spaces (see Table 18). Compliance with BMP-2 would be ensured by Mitigation Measure GHG-2. |

**Table 21**
**Project Consistency with the 2022 Scoping Plan**

| Key Project Attributes | Consistency Discussion |
|---|---|
| Is located on infill sites that are surrounded by existing urban uses and reuses or redevelops previously undeveloped or underutilized land that is presently served by existing utilities and essential public services (e.g., transit, streets, water, sewer). | The project site is predominantly agricultural land with existing commercial uses, including a truck stop, restaurants, gas stations, and hotels located west of the I-80 off-/on-ramp (see Figure 1 and Figure 2). The site is also surrounded by I-80, multi-family residences, and a business park to the east; and single-family residences to the east, west, north, and south. Therefore, the proposed project would develop the site with urban uses consistent with the existing uses in the project vicinity. The project would also include roadway improvements, including the expansion of El Centro Road and the development of additional roadways throughout the project site. |
| Does not result in the loss or conversion of natural and working lands. | While the project site is predominantly agricultural land, existing commercial uses, including a truck stop, restaurants, gas stations, and hotels are currently located on-site. In addition, portions of the project site are designated Commercial/Office by the Sacramento County General Plan, and are zoned General Commercial, and Highway Travel Commercial. Therefore, portions of the site have been anticipated for urban development by the County. |
| Consists of transit-supportive densities (minimum of 20 residential dwelling units per acre), or<br><br>Is in proximity to existing transit stops (within a half mile), or<br><br>Satisfies more detailed and stringent criteria specified in the region's SCS. | The proposed project includes a range of residential uses, including very low density, low density, low/medium density, medium density, high density, and very high density residential, which would be developed at a density of one dwelling unit per acre (du/ac) to 32.5 du/ac. Overall, approximately 65.5 acres of the site would be developed at a density higher than 20 du/ac. It should also be noted that the proposed project would include the development of commercial mixed use and employment/highway commercial uses, as well as schools. By providing a range of residential, commercial, and school uses within the project site, approximately 22.9 percent of home-based trips associated with the proposed project would be internal. In addition, the proposed project's regional retail uses decrease the travel distance for many residents in the project area who are traveling to a regional retail destination. |
| Reduces parking requirements by: | The proposed project would create a Specific Plan for the Upper Westside planning area. As such, the analysis included herein is a |

**Table 21**
**Project Consistency with the 2022 Scoping Plan**

| Key Project Attributes | Consistency Discussion |
|---|---|
| • Eliminating parking requirements or including maximum allowable parking ratios (i.e., the ratio of parking spaces to residential units or square feet); or<br>• Providing residential parking supply at a ratio of less than one parking space per dwelling unit; or<br>• For multifamily residential development, requiring parking costs to be unbundled from costs to rent or own a residential unit. | program-level analysis of the Specific Plan, and specific development proposals have not yet been prepared for the proposed land uses within the Specific Plan area. Nonetheless, as specific development proposals are prepared in the future, detailed plans would be prepared, which would include parking standards, which would require review and approval by Sacramento County. As such, future review of specific development proposals would ensure that the key project attributes identified in the 2022 Scoping Plan related to parking are implemented. |
| At least 20 percent of units included are affordable to lower-income residents. | As discussed above, the proposed project would create a Specific Plan for the Upper Westside planning area. As such, the analysis included herein is a program-level analysis of the Specific Plan, and specific development proposals have not yet been prepared for the proposed land uses within the Specific Plan area. Specific development proposals prepared in the future would be required to comply with the Sacramento County Affordable Housing Ordinance (Chapter 22.35 of the Sacramento County Code), which requires new development projects pay an affordability fee on all newly constructed market rate units; comply with the development project's approved affordable housing plan, if one exists; or enter into a development agreement or other form of agreement with the County which provides for a fee credit for land dedication, construction of affordable dwelling units, or other mechanism which leads to the production of affordable housing, in an amount at least equivalent to the affordability fee established by the County. |
| Results in no net loss of existing affordable units. | The project site does not currently include any affordable housing units. Therefore, the proposed project would not result in a net loss of existing affordable units. |
| Uses all-electric appliances without any natural gas connections and does not use propane or other fossil fuels for space heating, water heating, or indoor cooking. | As discussed above, consistent with SMAQMD BMP-1, the residential portion of the proposed project would not include natural gas infrastructure. However, the non-residential components are anticipated to include natural gas. Pursuant to SMAQMD's Guidance, BMP-1 may be replaced with an alternative mitigation strategy that would reduce GHG to the same extent. As such, |

| **Table 21**<br>**Project Consistency with the 2022 Scoping Plan** | |
|---|---|
| **Key Project Attributes** | **Consistency Discussion** |
| | compliance with BMP-1 through the equivalent reduction in GHG emissions would be ensured by Mitigation Measure GHG-3. |
| ***Source: California Air Resources Board. 2022 Scoping Plan [Appendix D]. December 2022.*** | |

## Conclusion

Based on the analysis presented above, while the proposed project would generally comply with the majority of the suggested project attributes included in the 2022 Scoping Plan, the proposed project would exceed SMAQMD's 1,100 $MTCO_2e$/yr threshold of significance during construction. In addition, based on the project site proximity to downtown Sacramento, the proposed project would inherently comply with SMAQMD Tier 2 requirement. However, during operations, if the SMAQMD's Tier 1 requirements are not ensured, a potentially significant impact could occur. Thus, the proposed project could be considered to generate GHG emissions, either directly or indirectly, that would have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. Consequently, the project could result in a cumulatively considerable incremental contribution to GHG emissions or climate change and the project's impact would be ***potentially significant***.

## Mitigation Measure(s)

Mitigation Measure GHG-1 ensures that construction-related GHG emissions are reduced to below the applicable threshold of significance. Mitigation Measure GHG-2 ensures that Tier 1 BMP 2 is implemented, and Mitigation Measure GHG-3 ensures that an equivalent GHG reduction is applied to establish compliance with Tier 1 BMP 1. Therefore, implementation of the following mitigation measures would reduce the above potentially significant impact to a *less-than-significant* level.

### *Construction*

*GHG-1* *Prior to the initiation of construction, the applicant shall demonstrate that construction-related GHG emissions would be reduced to 1,100 $MTCO_2e$/yr and shall submit proof to the County's Department of Planning and Environmental Review.*

*Construction-related GHG emissions can be reduced through several options. The SMAQMD recommends the following options for reducing greenhouse gas emission from construction projects:*

- *Modify the construction schedule to reduce the intensity of construction to lower emissions;*
- *Ensure that phases of development do not overlap;*
- *Use of renewable diesel for construction fuel rather than diesel;*
- *Improve fuel efficiency from construction equipment by:*
  - *Minimizing idling time either by shutting equipment off when not in use or reducing the time of idling to no more than three minutes (five-minute limit is required by the state airborne*

*toxics control measure [Title 13, sections 2449(d)(3) and 2485 of the California Code of Regulations]). Provide clear signage that posts this requirement for workers at the entrances to the site; and*

- *Using equipment with new technologies (repowered engines, electric drive trains).*

- *Perform on-site emission reductions such as implementing on-site material hauling with trucks equipped with on-road engines (if determined to be less emissive than the off-road engines) or real, quantifiable, permanent, verifiable, and enforceable on-site emission reductions;*
- *Use alternative fuels for generators at construction sites such as propane or solar, or use electrical power;*
- *Use a CARB-approved low carbon fuel for construction equipment; ($NO_X$ emissions from the use of low carbon fuel must be reviewed and increases mitigated.)*
- *Encourage and provide carpools, shuttle vans, transit passes and/or secure bicycle parking for construction worker commutes;*
- *Reduce electricity use in the construction office by using LED bulbs, powering off computers every day, and replacing heating and cooling units with more efficient ones;*
- *Recycle or salvage non-hazardous construction and demolition debris (goal of at least 75 percent by weight);*
- *Use locally sourced or recycled materials for construction materials (goal of at least 20 percent based on costs for building materials, and based on volume for roadway, parking lot, sidewalk and curb materials). Wood products utilized should be certified through a sustainable forestry program;*
- *Minimize the amount of concrete for paved surfaces or utilize a low carbon concrete option;*
- *Produce concrete on-site if determined to be less emissive than transporting ready mix;*
- *Use SmartWay certified trucks for deliveries and equipment transport; and*
- *Develop a plan to efficiently use water for adequate dust control.*

*The project applicant may elect to implement any combination of the foregoing measures to reduce construction-related GHG emissions. All GHG emissions reductions must be quantified. Compliance with the aforementioned measures shall be ensured by the County's Department of Planning and Environmental Review.*

*If the quantified reduction measures do not reduce construction-related GHG emissions to below 1,100 $MTCO_2e/yr$, offsite carbon credits may be purchased to make up the difference. The purchase of off-site mitigation credits shall be negotiated with the County and SMAQMD at the time that credits are sought. Off-site mitigation credits shall be real, quantifiable, permanent, verifiable, enforceable, and additional, consistent with the standards set forth in Health and Safety Code section 38562, subdivisions (d)(1) and (d)(2). The offsets shall be retired, and emissions must be offset*

*through the year 2045. Such credits shall be based on CARB-approved protocols that are consistent with the criteria set forth in subdivision (a) of Section 95972 of Title 17 of the California Code of Regulations, and shall not allow the use of offset projects originating outside of California, except to the extent that the quality of the offsets, and their sufficiency under the standards set forth herein, can be verified by Sacramento County and/or the SMAQMD. Such credits must be purchased through one of the following: (i) a CARB-approved registry, such as the Climate Action Reserve, the American Carbon Registry, and the Verified Carbon Standard; (ii) any registry approved by CARB to act as a registry under the California Cap and Trade program; or (iii) any registry established by SMAQMD.*

### *Operations*

*GHG-2* *Consistent with SMAQMD's GHG BMP-2, prior to the approval of project improvement plans, the applicant shall indicate that EV Ready parking spaces shall be installed throughout the project site at the ratio with which the current CalGreen Tier 2 standards require EV Capable spaces. Compliance with this measure shall be ensured by the County's Department of Planning and Environmental Review.*

*GHG-3* *Prior to the approval of project tentative maps, the applicant shall implement the following measures:*

1. *Consistent with SMAQMD's GHG BMP-1, natural gas shall be prohibited in all residential land uses; and*
2. *The applicant shall reduce GHG emissions associated with each phase of the proposed project at a rate of 0.001423 $MTCO_2e/yr$ per square foot of non-residential development (5,995.77 $MTCO_2e/yr$ / the modeled total of 4,213,916.52 square feet of non-residential development = 0.001432 $MTCO_2e/yr$ per square foot of non-residential development) through any combination of the following on-site mitigation options:*

    - *Prohibiting natural gas infrastructure in a portion of the non-residential buildings.*
    - *Requiring on-site renewable energy generation for non-residential buildings in excess of Code requirements.*
    - *Increasing the number of EV charging stations.*
    - *Constructing on-site or fund off-site carbon sequestration projects (such as tree plantings or reforestation projects).*
    - *Implementing a Transportation Demand Management Program.*
    - *Should new and quantifiable GHG emission reduction technology become available, the applicant may otherwise achieve the required GHG emissions reduction through other means, subject to review and approval by Sacramento County and the SMAQMD.*

*The project applicant may elect to implement any combination of the foregoing measures to reduce operational GHG emissions. All GHG emissions reductions must be quantified.*

*If it is determined that the above on-site mitigation options are not sufficient to achieve the required GHG reduction, subject to the discretion of Sacramento County and the SMAQMD, off-site carbon credits may be purchased to make up the difference. The purchase of off-site mitigation credits shall be negotiated with the County and SMAQMD at the time that credits are sought. Off-site mitigation credits shall be real, quantifiable, permanent, verifiable, enforceable, and additional, consistent with the standards set forth in Health and Safety Code section 38562, subdivisions (d)(1) and (d)(2). The offsets shall be retired, and emissions must be offset through the year 2045. Such credits shall be based on CARB-approved protocols that are consistent with the criteria set forth in subdivision (a) of Section 95972 of Title 17 of the California Code of Regulations, and shall not allow the use of offset projects originating outside of California, except to the extent that the quality of the offsets, and their sufficiency under the standards set forth herein, can be verified by Sacramento County and/or the SMAQMD. Such credits must be purchased through one of the following: (i) a CARB-approved registry, such as the Climate Action Reserve, the American Carbon Registry, and the Verified Carbon Standard; (ii) any registry approved by CARB to act as a registry under the California Cap and Trade program; or (iii) any registry established by SMAQMD.*

*Compliance with the aforementioned measures shall be ensured by the County's Department of Planning and Environmental Review.*

# Appendix A

# CalEEMod Air Quality and Greenhouse Gas Modeling Results

UWSP - Phase 1 Construction - Sacramento Metropolitan AQMD Air District, Annual

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

# UWSP - Phase 1 Construction

**Sacramento Metropolitan AQMD Air District, Annual**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Office Park | 1,252.00 | 1000sqft | 47.90 | 1,252,000.00 | 0 |
| Elementary School | 850.00 | Student | 17.00 | 71,062.86 | 0 |
| City Park | 33.50 | Acre | 33.50 | 1,459,260.00 | 0 |
| Apartments High Rise | 816.00 | Dwelling Unit | 25.10 | 816,000.00 | 2179 |
| Apartments Low Rise | 404.00 | Dwelling Unit | 33.70 | 404,000.00 | 1079 |
| Apartments Mid Rise | 914.00 | Dwelling Unit | 40.60 | 914,000.00 | 2440 |
| Single Family Housing | 1,067.00 | Dwelling Unit | 173.50 | 1,920,600.00 | 2849 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.5 | **Precipitation Freq (Days)** | 58 |
| **Climate Zone** | 6 | | | **Operational Year** | 2045 |
| **Utility Company** | Sacramento Municipal Utility District | | | | |
| **CO2 Intensity (lb/MWhr)** | 357.98 | **CH4 Intensity (lb/MWhr)** | 0.033 | **N2O Intensity (lb/MWhr)** | 0.004 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Lot acreages updated based on preliminary land use summary.

Construction Phase - Construction phase timing adjusted based on applicant-provided information.

Off-road Equipment - Architectural coating equipment doubled.

Off-road Equipment - Building construction phase equipment doubled.

Off-road Equipment - Construction equipment updated per engineer information.

UWSP - Phase 1 Construction - Sacramento Metropolitan AQMD Air District, Annual

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

Off-road Equipment - Construction equipment updated per engineer information.

Off-road Equipment - Number of equipment has been updated.

Grading -

| Table Name | Column Name | Default Value | New Value |

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Office Park | 1,252.00 | 1000sqft | 47.90 | 1,252,000.00 | 0 |
| Elementary School | 850.00 | Student | 17.00 | 71,062.86 | 0 |
| City Park | 33.50 | Acre | 33.50 | 1,459,260.00 | 0 |
| Apartments High Rise | 816.00 | Dwelling Unit | 25.10 | 816,000.00 | 2179 |
| Apartments Low Rise | 404.00 | Dwelling Unit | 33.70 | 404,000.00 | 1079 |
| Apartments Mid Rise | 914.00 | Dwelling Unit | 40.60 | 914,000.00 | 2440 |
| Single Family Housing | 1,067.00 | Dwelling Unit | 173.50 | 1,920,600.00 | 2849 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.5 | **Precipitation Freq (Days)** | 58 |
| **Climate Zone** | 6 | | | **Operational Year** | 2045 |
| **Utility Company** | Sacramento Municipal Utility District | | | | |
| **CO2 Intensity (lb/MWhr)** | 357.98 | **CH4 Intensity (lb/MWhr)** | 0.033 | **N2O Intensity (lb/MWhr)** | 0.004 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Lot acreages updated based on preliminary land use summary.

Construction Phase - Construction phase timing adjusted based on applicant-provided information.

Off-road Equipment - Architectural coating equipment doubled.

Off-road Equipment - Building construction phase equipment doubled.

Off-road Equipment - Construction equipment updated per engineer information.

UWSP - Phase 1 Construction - Sacramento Metropolitan AQMD Air District, Summer

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

Off-road Equipment - Construction equipment updated per engineer information.

Off-road Equipment - Number of equipment has been updated.

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Office Park | 1,252.00 | 1000sqft | 47.90 | 1,252,000.00 | 0 |
| Elementary School | 850.00 | Student | 17.00 | 71,062.86 | 0 |
| City Park | 33.50 | Acre | 33.50 | 1,459,260.00 | 0 |
| Apartments High Rise | 816.00 | Dwelling Unit | 25.10 | 816,000.00 | 2179 |
| Apartments Low Rise | 404.00 | Dwelling Unit | 33.70 | 404,000.00 | 1079 |
| Apartments Mid Rise | 914.00 | Dwelling Unit | 40.60 | 914,000.00 | 2440 |
| Single Family Housing | 1,067.00 | Dwelling Unit | 173.50 | 1,920,600.00 | 2849 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.5 | **Precipitation Freq (Days)** | 58 |
| **Climate Zone** | 6 | | | **Operational Year** | 2045 |
| **Utility Company** | Sacramento Municipal Utility District | | | | |
| **CO2 Intensity (lb/MWhr)** | 357.98 | **CH4 Intensity (lb/MWhr)** | 0.033 | **N2O Intensity (lb/MWhr)** | 0.004 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Lot acreages updated based on preliminary land use summary.

Construction Phase - Construction phase timing adjusted based on applicant-provided information.

Off-road Equipment - Architectural coating equipment doubled.

Off-road Equipment - Building construction phase equipment doubled.

Off-road Equipment - Construction equipment updated per engineer information.

UWSP - Phase 1 Construction - Sacramento Metropolitan AQMD Air District, Winter

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

Off-road Equipment - Construction equipment updated per engineer information.

Off-road Equipment - Number of equipment has been updated.

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Office Park | 1,252.00 | 1000sqft | 47.90 | 1,252,000.00 | 0 |
| Elementary School | 850.00 | Student | 17.00 | 71,062.86 | 0 |
| City Park | 33.50 | Acre | 33.50 | 1,459,260.00 | 0 |
| Apartments High Rise | 816.00 | Dwelling Unit | 25.10 | 816,000.00 | 2179 |
| Apartments Low Rise | 404.00 | Dwelling Unit | 33.70 | 404,000.00 | 1079 |
| Apartments Mid Rise | 914.00 | Dwelling Unit | 40.60 | 914,000.00 | 2440 |
| Single Family Housing | 1,067.00 | Dwelling Unit | 173.50 | 1,920,600.00 | 2849 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.5 | **Precipitation Freq (Days)** | 58 |
| **Climate Zone** | 6 | | | **Operational Year** | 2045 |
| **Utility Company** | Sacramento Municipal Utility District | | | | |
| **CO2 Intensity (lb/MWhr)** | 357.98 | **CH4 Intensity (lb/MWhr)** | 0.033 | **N2O Intensity (lb/MWhr)** | 0.004 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Lot acreages updated based on preliminary land use summary.

Construction Phase - Construction phase timing adjusted based on applicant-provided information.

Off-road Equipment - Architectural coating equipment doubled.

Off-road Equipment - Building construction phase equipment doubled.

Off-road Equipment - Construction equipment updated per engineer information.

UWSP - Phase 1 Construction_Mitigated - Sacramento Metropolitan AQMD Air District, Annual

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

Off-road Equipment - Construction equipment updated per engineer information.

Off-road Equipment - Number of equipment has been updated.

Grading -

Construction Off-road Equipment Mitigation - Required by Mitigation to use all Tier 4 Final Equipment.

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Office Park | 1,252.00 | 1000sqft | 47.90 | 1,252,000.00 | 0 |
| Elementary School | 850.00 | Student | 17.00 | 71,062.86 | 0 |
| City Park | 33.50 | Acre | 33.50 | 1,459,260.00 | 0 |
| Apartments High Rise | 816.00 | Dwelling Unit | 25.10 | 816,000.00 | 2179 |
| Apartments Low Rise | 404.00 | Dwelling Unit | 33.70 | 404,000.00 | 1079 |
| Apartments Mid Rise | 914.00 | Dwelling Unit | 40.60 | 914,000.00 | 2440 |
| Single Family Housing | 1,067.00 | Dwelling Unit | 173.50 | 1,920,600.00 | 2849 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.5 | **Precipitation Freq (Days)** | 58 |
| **Climate Zone** | 6 | | | **Operational Year** | 2045 |
| **Utility Company** | Sacramento Municipal Utility District | | | | |
| **CO2 Intensity (lb/MWhr)** | 357.98 | **CH4 Intensity (lb/MWhr)** | 0.033 | **N2O Intensity (lb/MWhr)** | 0.004 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Lot acreages updated based on preliminary land use summary.

Construction Phase - Construction phase timing adjusted based on applicant-provided information.

Off-road Equipment - Architectural coating equipment doubled.

Off-road Equipment - Building construction phase equipment doubled.

Off-road Equipment - Construction equipment updated per engineer information.

UWSP - Phase 1 Construction_Mitigated - Sacramento Metropolitan AQMD Air District, Summer

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

Off-road Equipment - Construction equipment updated per engineer information.

Off-road Equipment - Number of equipment has been updated.

Grading -

Construction Off-road Equipment Mitigation - Required by Mitigation to use all Tier 4 Final Equipment.

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Office Park | 1,252.00 | 1000sqft | 47.90 | 1,252,000.00 | 0 |
| Elementary School | 850.00 | Student | 17.00 | 71,062.86 | 0 |
| City Park | 33.50 | Acre | 33.50 | 1,459,260.00 | 0 |
| Apartments High Rise | 816.00 | Dwelling Unit | 25.10 | 816,000.00 | 2179 |
| Apartments Low Rise | 404.00 | Dwelling Unit | 33.70 | 404,000.00 | 1079 |
| Apartments Mid Rise | 914.00 | Dwelling Unit | 40.60 | 914,000.00 | 2440 |
| Single Family Housing | 1,067.00 | Dwelling Unit | 173.50 | 1,920,600.00 | 2849 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.5 | **Precipitation Freq (Days)** | 58 |
| **Climate Zone** | 6 | | | **Operational Year** | 2045 |
| **Utility Company** | Sacramento Municipal Utility District | | | | |
| **CO2 Intensity (lb/MWhr)** | 357.98 | **CH4 Intensity (lb/MWhr)** | 0.033 | **N2O Intensity (lb/MWhr)** | 0.004 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Lot acreages updated based on preliminary land use summary.

Construction Phase - Construction phase timing adjusted based on applicant-provided information.

Off-road Equipment - Architectural coating equipment doubled.

Off-road Equipment - Building construction phase equipment doubled.

Off-road Equipment - Construction equipment updated per engineer information.

UWSP - Phase 1 Construction_Mitigated - Sacramento Metropolitan AQMD Air District, Winter

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

Off-road Equipment - Construction equipment updated per engineer information.

Off-road Equipment - Number of equipment has been updated.

Grading -

Construction Off-road Equipment Mitigation - Required by Mitigation to use all Tier 4 Final Equipment.

## 1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensity factor adjusted to reflect SMUD's RPS projections.

Land Use - Land uses adjusted to remove Phase I.

Construction Phase - Construction phasing adjusted to reflect 20-year buildout.

Off-road Equipment - Fleet mix adjusted based on size/timing of project.

Off-road Equipment - Fleet mix adjusted based on size/timing of project.

Off-road Equipment - Fleet mix adjusted based on size/timing of grading phase.

Off-road Equipment -

Grading -

Vehicle Trips - Trip rates adjusted per the project-specific traffic report from F&P.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Water Mitigation - Water conservation strategy applied to reflect project compliance with MWELO.

| **Utility Company** | Sacramento Municipal Utility District | | | | |
| **CO2 Intensity** | 0 | **CH4 Intensity** | 0.033 | **N2O Intensity** | 0.004 |

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

**(lb/MWhr) (lb/MWhr) (lb/MWhr)**

## 1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensity factor adjusted to reflect SMUD's RPS projections.

Land Use - Land uses adjusted to remove Phase I.

Construction Phase - Construction phasing adjusted to reflect 20-year buildout.

Off-road Equipment - Fleet mix adjusted based on size/timing of project.

Off-road Equipment - Fleet mix adjusted based on size/timing of project.

Off-road Equipment - Fleet mix adjusted based on size/timing of grading phase.

Off-road Equipment -

Grading -

Vehicle Trips - Trip rates adjusted per the project-specific traffic report from F&P.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Water Mitigation - Water conservation strategy applied to reflect project compliance with MWELO.

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| General Office Building | 40.00 | 1000sqft | 0.92 | 40,000.00 | 0 |
| General Light Industry | 45.00 | 1000sqft | 1.03 | 45,000.00 | 0 |
| Unrefrigerated Warehouse-No Rail | 70.00 | 1000sqft | 1.61 | 70,000.00 | 0 |
| Fast Food Restaurant with Drive Thru | 3.00 | 1000sqft | 0.07 | 3,000.00 | 0 |
| Golf Course | 12.00 | Hole | 83.77 | 0.00 | 0 |
| High Turnover (Sit Down Restaurant) | 9.00 | 1000sqft | 0.21 | 9,000.00 | 0 |
| Hotel | 145.00 | Room | 4.83 | 210,540.00 | 0 |
| Single Family Housing | 20.00 | Dwelling Unit | 6.49 | 36,000.00 | 53 |
| Convenience Market with Gas Pumps | 12.00 | Pump | 0.04 | 1,694.10 | 0 |
| Convenience Market with Gas Pumps | 29.00 | 1000sqft | 0.67 | 29,000.00 | 0 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.5 | **Precipitation Freq (Days)** | 58 |
| **Climate Zone** | 6 | | | **Operational Year** | 2045 |
| **Utility Company** | Sacramento Municipal Utility District | | | | |
| **CO2 Intensity (lb/MWhr)** | 0 | **CH4 Intensity (lb/MWhr)** | 0.033 | **N2O Intensity (lb/MWhr)** | 0.004 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensity factor adjusted to represent compliance with SMUD's RPS projections.

Land Use -

Construction Phase - construction not modeled.

UWSP - Existing Conditions - Sacramento Metropolitan AQMD Air District, Summer

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

Grading -

Vehicle Trips - Trip generation rates adjusted per project-specific traffic report.

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| General Office Building | 40.00 | 1000sqft | 0.92 | 40,000.00 | 0 |
| General Light Industry | 45.00 | 1000sqft | 1.03 | 45,000.00 | 0 |
| Unrefrigerated Warehouse-No Rail | 70.00 | 1000sqft | 1.61 | 70,000.00 | 0 |
| Fast Food Restaurant with Drive Thru | 3.00 | 1000sqft | 0.07 | 3,000.00 | 0 |
| Golf Course | 12.00 | Hole | 83.77 | 0.00 | 0 |
| High Turnover (Sit Down Restaurant) | 9.00 | 1000sqft | 0.21 | 9,000.00 | 0 |
| Hotel | 145.00 | Room | 4.83 | 210,540.00 | 0 |
| Single Family Housing | 20.00 | Dwelling Unit | 6.49 | 36,000.00 | 53 |
| Convenience Market with Gas Pumps | 12.00 | Pump | 0.04 | 1,694.10 | 0 |
| Convenience Market with Gas Pumps | 29.00 | 1000sqft | 0.67 | 29,000.00 | 0 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.5 | **Precipitation Freq (Days)** | 58 |
| **Climate Zone** | 6 | | | **Operational Year** | 2045 |
| **Utility Company** | Sacramento Municipal Utility District | | | | |
| **CO2 Intensity (lb/MWhr)** | 0 | **CH4 Intensity (lb/MWhr)** | 0.033 | **N2O Intensity (lb/MWhr)** | 0.004 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensity factor adjusted to represent compliance with SMUD's RPS projections.

Land Use -

Construction Phase - construction not modeled.

UWSP - Existing Conditions - Sacramento Metropolitan AQMD Air District, Winter

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

Grading -

Vehicle Trips - Trip generation rates adjusted per project-specific traffic report.

## 1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensity factor adjusted to reflect SMUD's RPS projections.

Land Use - All land uses are consistent with the project-specific traffic report.

Construction Phase - construction not modeled.

Vehicle Trips - Trip rates adjusted per the project-specific traffic report from F&P.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Water Mitigation - Water conservation strategy applied to reflect project compliance with MWELO.

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.5 | **Precipitation Freq (Days)** | 58 |
| **Climate Zone** | 6 | | | **Operational Year** | 2045 |
| **Utility Company** | Sacramento Municipal Utility District | | | | |
| | | | | | Operational Emissions - Proposed Project |
| **CO2 Intensity** | 0 | **CH4 Intensity** | 0.033 | **N2O Intensity** | 0.004 |

UWSP - Proposed Project - Sacramento Metropolitan AQMD Air District, Summer

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

**(lb/MWhr) (lb/MWhr) (lb/MWhr)**

## 1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensity factor adjusted to reflect SMUD's RPS projections.

Land Use - All land uses are consistent with the project-specific traffic report.

Construction Phase - construction not modeled.

Vehicle Trips - Trip rates adjusted per the project-specific traffic report from F&P.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Water Mitigation - Water conservation strategy applied to reflect project compliance with MWELO.

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

# UWSP - Proposed Project

**Sacramento Metropolitan AQMD Air District, Winter**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| General Office Building | 1,573.00 | 1000sqft | 36.11 | 1,573,000.00 | 0 |
| Government Office Building | 74.00 | 1000sqft | 1.70 | 74,000.00 | 0 |
| Medical Office Building | 41.60 | 1000sqft | 0.96 | 41,600.00 | 0 |
| High School | 1,500.00 | Student | 4.57 | 198,991.47 | 0 |
| Junior College (2yr) | 2,500.00 | Student | 2.51 | 208,000.00 | 0 |
| Junior High School | 3,000.00 | Student | 8.10 | 352,685.05 | 0 |
| Arena | 72.00 | 1000sqft | 23.14 | 72,000.00 | 0 |
| Fast Food Restaurant with Drive Thru | 24.00 | 1000sqft | 0.55 | 24,000.00 | 0 |
| Health Club | 65.00 | 1000sqft | 1.49 | 65,000.00 | 0 |
| High Turnover (Sit Down Restaurant) | 104.00 | 1000sqft | 2.39 | 104,000.00 | 0 |
| Hotel | 410.00 | Room | 13.67 | 595,320.00 | 0 |
| Hotel | 410.00 | Room | 13.67 | 595,320.00 | 0 |
| Apartments Mid Rise | 4,989.00 | Dwelling Unit | 131.29 | 4,989,000.00 | 13321 |
| Single Family Housing | 4,367.00 | Dwelling Unit | 1,417.86 | 7,860,600.00 | 11660 |
| Regional Shopping Center | 245.00 | 1000sqft | 5.62 | 245,000.00 | 0 |
| Supermarket | 65.00 | 1000sqft | 1.49 | 65,000.00 | 0 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.5 | **Precipitation Freq (Days)** | 58 |
| **Climate Zone** | 6 | | | **Operational Year** | 2045 |
| **Utility Company** | Sacramento Municipal Utility District | | | | |
| | | | | | Operational Emissions - Proposed Project |
| **CO2 Intensity** | 0 | **CH4 Intensity** | 0.033 | **N2O Intensity** | 0.004 |

UWSP - Proposed Project - Sacramento Metropolitan AQMD Air District, Winter

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

**(lb/MWhr) (lb/MWhr) (lb/MWhr)**

## 1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensity factor adjusted to reflect SMUD's RPS projections.

Land Use - All land uses are consistent with the project-specific traffic report.

Construction Phase - construction not modeled.

Vehicle Trips - Trip rates adjusted per the project-specific traffic report from F&P.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Water Mitigation - Water conservation strategy applied to reflect project compliance with MWELO.
