When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013
Number of Days to Update: 45

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248

UTM Y (Meters):	3770665.5
Elevation:	264 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630733 BEVERLY HILLS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

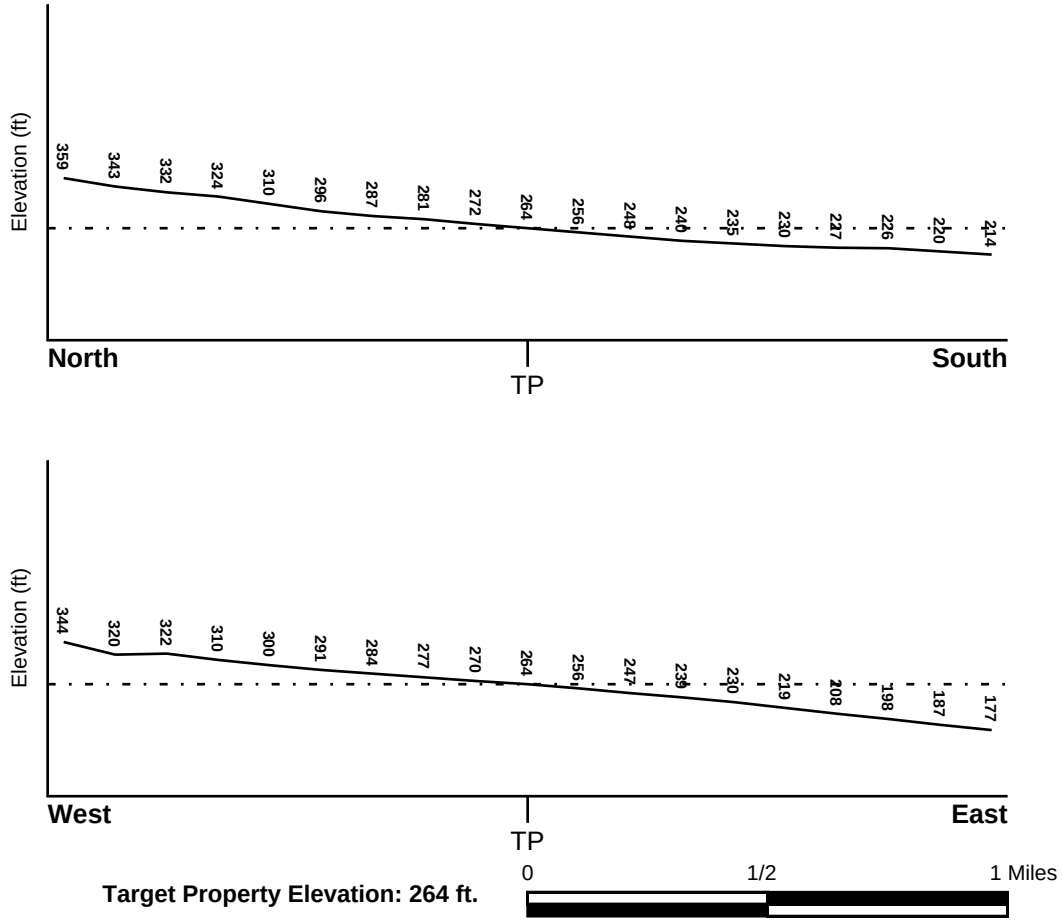
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1585F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1595F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BEVERLY HILLS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX D: QUALIFICATIONS

PARTNER

Colin James Donohue
Partner Associate

Education
B. A., History and Political Science, University of California, Irvine

Registrations
DHS Certified Lead Inspector/Risk Assessor

California AHERA-Certified Asbestos Building Inspector/Management planner

Summary of Professional Experience
Mr. Colin Donohue has six years of experience in the environmental consulting industry. He has significant experience in due diligence assessments for a variety of property types and the needs and requirements of varied number of reporting standards, including ASTM standards, EPA's All Appropriate Inquiry (AAI), and customized client formats. Specifically, Mr. Donohue has performed Phase I Environmental Site Assessments, Environmental Transaction Screens, Asbestos Surveys, and Lead-based Paint Surveys.

Mr. Colin Donohue is a Project Scientist with over six years of experience specializing in environmental site assessments for telecommunication clients. Mr. Donohue has performed Phase I Environmental Site Assessments (ESAs), and NEPA assessments, in a wide range of residential, commercial, and industrial settings throughout the United States. His duties included on-site visual inspections, public record searches, aerial photograph reviews, various map reviews, personal interviews, and preparation of technical reports. Mr. Donohue has also conducted asbestos-containing materials (ACM) surveys, which include collecting bulk samples, and conducted lead-based paint (LBP) surveys, which include using an x-ray fluorescence (XRF) analyzer and collecting both dust wipe and paint chip samples.

Mr. Donohue performed due diligence and compliance consulting for multiple wireless industry clients in the southern California, Arizona, Washington, Oklahoma, Illinois, Texas, Utah, Alabama, Nevada, Wisconsin, and Michigan markets, which included over 600 sites between 2006 and 2011. Due diligence and compliance consulting includes the performance of Environmental Site Assessments, NEPA Assessments, Asbestos, Lead-containing Materials surveys, and on-site Radio Frequency-Electro Magnetic Emmission monitoring. In addition to conducting field work and report writing, Mr. Donohue assisted other scientists in order to complete the projects efficiently and uniformily.

Finally, Mr. Donohue's diversity across residential, industrial, municipal, and commercial environments is a major contribution to Partner Engineering and Science's Associate team in the Western region of the United States.

Highlights

Over 25 years of experience in the environmental service industry with a focus on due diligence assessments
Knowledgeable with ASTM, EPA's All Appropriate Inquiry (AAI), and customized client formats.
100+ Phase I Environmental Site Assessments

Experience Summary

As Technical Director for due diligence services as part of the Investment Advisory Group, Ms. Stott focuses on report quality, client service, and sharing her years of expertise with staff and clients.

Ms. Stott has performed hundreds of Phase I Environmental Site Assessments, Third Party Reviews, Due Diligence Audits, Record Search and Risk Assessments, Phase II and III Subsurface Investigations, Underground storage tank investigations, Remedial Investigations, Radon Studies, Mold Assessments, Methane Surveys, Indoor Air Quality Assessments, and Lead-in-water sampling and analysis.

Clients have varied and have included: individual investors, City of Los Angeles Agencies, Los Angeles County, City of Anaheim, institutional investors, private and institutional equity companies, insurance companies, attorneys, brokers, developers, and multiple lenders.

Project Experience

Ms. Stott has conducted, managed and directed thousands of ESAs throughout her career and has been Senior Project Manager for hundreds of site investigations, characterization studies and remediation projects throughout California and the US. The following select projects summarize her experience and due diligence background:

Transaction Due Diligence

Project Manager, Western US and Southern California, LBA Realty. For over 16 years performed due diligence services related to real estate transfers as well as asset refinances for LBA Realty. The relationship requires close coordination and communication with property managers and representatives to provide a smooth process with client and lenders. Services have also included review of third party reports, asbestos surveys, subsurface investigations, and development of soil management plans. Many projects involved multiple locations in several states thus requiring coordination with other offices and client contacts.

Environmental Lead, West Coast, Barings, LLC (Barings). Ms. Stott assists with management and review of environmental due diligence and environmental actions associated with acquisitions, property development, joint venture developments, property divestments and finance group loan transactions. Environmental due diligence includes Phase I ESAs, Phase II ESAs, indoor air quality assessments, mold assessment and mitigation planning, providing third party review, asbestos investigations, asbestos abatement, operation and maintenance plan development, remedial action development and implementation, regulatory correspondence and permitting.

Phase I ESAs – multiple clients throughout US.. Ms. Stott manages and oversees preparation of Phase I Environmental Site Assessments for several confidential clients. All are completed to ASTM guidelines with various special criteria specific to each client.

Subsurface Investigations/Vapor Intrusion

Project Manager, Whittier, CA, Confidential Client. Conducted several investigations to evaluate the potential for vapor intrusion associated with contaminated groundwater into client buildings. At one location a horizontal well system was installed to passively vent vapors. Site investigations involved the installation of multiple, multi-depth vapor probes through the property to map the plume and to assist in decision making for potential further investigation. Data collected from both soil vapor and indoor air monitoring was subjected to risk assessment in order to determine if indoor air quality had been negatively impacted and engineering controls needed to protect workers. Client was able to purchase and redevelop portions of the desired parcels for use as parking.

Project Manager and Environmental Lead, Berkeley, CA, LBA Realty. Evaluation of potential risks associated with the presence of trichloroethylene (TCE) and breakdown products cis 1,2- dichloroethene (cis 1,2-DCE) and vinyl chloride (VC), and methyl tert butyl ether (MTBE) in groundwater and ambient air at an existing building in Berkeley, CA. Worked with outside counsel to evaluate, summarize, and present the risks and potential risks of continued investment in the property. Remedial systems were installed under DTSC oversight, risk assessment performed and the building remodeled and reused for office space.

Municipal/State Contracts

Project Manager, ESAs for City of Anaheim widening of Lincoln Avenue. As a subcontractor to the geotechnical consultant, Partner provided Environmental Site Assessments for multiple properties along the project alignment. The parcel uses ranged from car wash, to older office and motel properties, automotive repair, banks, public school, and a church. Partner finished the multi-site project on time and within budget.

Engineering and Science, Inc.

July 31, 2018

Mr. Paul Williams
468 N RODEO DRIVE LLC, a Delaware limited liability company
c/o Morgan Lewis
300 South Grand Avenue, Twenty-Second Floor
Los Angeles, California 90017

Subject: Phase I Environmental Site Assessment
468 North Rodeo Drive
Beverly Hills California 90210
Partner Project No. 18-220933.1

Dear Mr. Williams:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (424) 318-5742.

Sincerely,

Timothy Kidd
Relationship Manager

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by 468 N RODEO DRIVE LLC, a Delaware limited liability company c/o Morgan Lewis for the property located at 468 North Rodeo Drive in the City of Beverly Hills, Los Angeles County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide 468 N RODEO DRIVE LLC, a Delaware limited liability company c/o Morgan Lewis with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the southeast side of South Santa Monica Boulevard and the northwest side of North Rodeo Drive within a mixed commercial/retail/residential area of Los Angeles County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address(es):	468 North Rodeo Drive
Additional Address(es):	460-468 North Rodeo Drive, 467 North Rodeo Drive, 9478-9496 Santa Monica Boulevard
Historical Address(es):	1426-1444 Burton Way
Property Use:	Commercial
Land Acreage (Ac):	0.35 Ac
Number of Buildings:	One
Number of Floors:	Two
Gross Building Area (SF):	23,509 SF (Total)
Date of Construction:	1999
Assessor's Parcel Number (APN):	4343-016-001
Type of Construction:	Masonry or Wood-Framed
Current Tenants:	Brooks Brothers
Site Assessment Performed By:	Jason Bates and Brooke Hasty of Partner
Site Assessment Conducted On:	July 24, 2018

The subject property is currently occupied by Brooks Brothers for commercial retail use. The subject property consists of a two-story structure and is improved with an asphalt-paved parking/loading area throughout the northeast of the property. Onsite operations consist of clothing storage and retail operations. The two-story structure harbors two large showroom areas and various storage areas located on the first and second floors as well as two balconies situated to the southwest and southeast of the subject property structure. Furthermore, the subject property consists of a northeastern back-of-house area located on the first floor which contains various storage rooms and an elevator equipment room. Partner observed two hydraulic elevators located within the central portion of the building.

According to available historical sources, the subject property was formerly undeveloped as early as 1884; developed with one commercial structure comprised of various commercial retail tenants between 1924

and circa 1994; and developed with the current structure in 1997. Tenants on the subject property include various commercial retail tenants (1925-1991); Tommy Hilfiger (1998-2000); Lawrence Martin Gallery (2000-2006); and Brooks Brothers (2001-Present).

The immediately surrounding properties consist of two commercial retail strip centers to the north across South Santa Monica Boulevard (9455-9497 South Santa Monica Boulevard, 474 North Rodeo Drive, 475 North Beverly Drive); two commercial structures occupied by commercial retail tenants identified as MaxMara, Loro Piana and Brioni to the south across North Rodeo Drive (451-459 North Rodeo Drive); one commercial structure occupied by various commercial retail tenants identified as DSquared2, Zadig & Voltaire, and Saint Laurent to the southwest across North Rodeo Drive (461-467 North Rodeo Drive, 9500 South Santa Monica Boulevard); one commercial retail strip center to the west across South Santa Monica Boulevard (9507-9523 South Santa Monica Boulevard, 479 North Rodeo Drive); one commercial structure occupied by The Paley Center for Media to the east (461 and 465 North Beverly Drive); and one vacant commercial structure to the southeast (456 North Rodeo Drive).

According to topographic map interpretation and the Regional Water Quality Control Board (RWQCB) GeoTracker database, the depth and direction of groundwater in the vicinity of the subject property is inferred to be approximately 33 to 50 feet below ground surface (bgs) and flow toward the southeast.

Findings

A recognized environmental condition (REC) refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A controlled recognized environmental condition (CREC) refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A historical recognized environmental condition (HREC) refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An environmental issue refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- The subject property is equipped with two elevator motors located within the back-of-house portion of the subject property building. The elevator motor in closer proximity to the access door was observed with absorption pads placed underneath and minor evidence of leakage was noted. No floor drains were observed near the motor and the releases appear to be surficial in nature. Minor cracks in the concrete flooring were observed in this area, but no hydraulic fluid stains were observed in the vicinity of these small cracks. Based on the small quantity and surficial nature of staining observed, this equipment is not expected to represent a significant environmental concern.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 468 North Rodeo Drive in the City of Beverly Hills, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of recognized environmental conditions and/or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- The elevator equipment should be repaired as part of routine building maintenance to address the potential source of the leaking.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 468 North Rodeo Drive in the City of Beverly Hills, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "landowner liability protections," or "LLPs"). ASTM Standard E1527-13 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential

exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Morgan Lewis engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of 468 N RODEO DRIVE LLC, a Delaware

limited liability company c/o Morgan Lewis. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted Partner's standard Terms and Conditions, a copy of which can be found at http: / www.partneresi.com/terms-and-conditions.php.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of a pre-survey questionnaire from the Report User. This information was not provided at the time of the assessment.
- Partner submitted Freedom of Information Act (FOIA) requests to Los Angeles County Fire Department Health Hazardous Materials Division (LACFDHMMD) for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property and/or adjacent properties. As of this writing, this agency has not responded to Partner's request. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.
- Partner's view of the ground during the site assessment was obstructed due to excessive storage. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 468 in Beverly Hills, California is located on the southeast side of South Santa Monica Boulevard and the northwest side of North Rodeo Drive. According to the Los Angeles County Assessor, the subject property is legally described as "Beverly Lots 1 and Lot 2 Block 2" and Assessor Parcel Number (APN) 4343-016-001.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently occupied by Brooks Brothers for commercial retail use. The subject property consists of a two-story structure and is improved with an asphalt-paved parking/loading area throughout the northeast of the property. Onsite operations consist of clothing storage and retail operations. The two-story structure harbors two large showroom areas and various storage areas located on the first and second floors as well as two balconies situated to the southwest and southeast of the subject property structure. Furthermore, the subject property consists of a northeastern back-of-house area located on the first floor which contains various storage rooms and an elevator equipment room. Partner observed two hydraulic elevators located within the central portion of the building.

The subject property is designated for commercial development by the City of Beverly Hills.

The subject property was not identified in the regulatory database report of Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed commercial/retail/residential area of Los Angeles County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties	
North:	South Santa Monica Boulevard beyond which are two commercial retail strip centers (9455-9497 South Santa Monica Boulevard, 474 North Rodeo Drive, 475 North Beverly Drive)
South:	North Rodeo Drive beyond which are MaxMara, Alexander McQueen, Loro Piana and Brioni (451-459 North Rodeo Drive)
Southwest:	North Rodeo Drive beyond which are DSquared2, Zadig & Voltaire, and Saint Laurent (461-467 North Rodeo Drive, 9500 South Santa Monica Boulevard)
Southeast:	One vacant commercial structure (456 North Rodeo Drive)
East:	The Paley Center for Media (461 and 465 North Beverly Drive)
West:	South Santa Monica Boulevard beyond which is one commercial retail strip center (9507-9523 South Santa Monica Boulevard, 479 North Rodeo Drive)

The adjacent properties to the north were identified as EDR Exclusive Historical Cleaners (EDR Hist Cleaner) and Resource Conservation and Recovery Act Small Quantity Generator (RCRA-SQG) sites in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) Beverly Hills, California Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 265 above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping moderately toward the southeast. The subject property structure is not depicted on the 2012 map.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

According to topographic map interpretation, the direction of groundwater in the vicinity of the subject property is inferred to flow toward the southeast. The nearest surface water in the vicinity of the subject property is the Franklin Canyon Reservoir located approximately 1.7 miles north of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the Beverly Hills Public Works Department serves the subject property vicinity. According to a representative of the Beverly Hills 2017 Annual Water Quality Report, the sources of public water for the City of Beverly hills are the City's Reverse Osmosis Water Treatment Plant (10%) and the Metropolitan Water District (MWD) (90%). The MWD lures water from the Jensen and Weymouth surface water treatment plant which draws from the State Water Project and the Colorado River. The osmosis plant lures water from the City of Beverly Hill's four groundwater wells located within the Hollywood Basin and this treated water is then blended with the MWD water. These waters are stored in steel tanks and throughout the City's reservoirs.

According to a previous subsurface investigation conducted on a nearby property (427 North Crescent Drive, Case # I-10978) the depth of groundwater in the vicinity of the subject property is inferred to be approximately 33 to 50 feet below ground surface (bgs).

2.4.3 Geology/Soils

The subject property lies within the Los Angeles County Coastal Plain area of the Los Angeles Basin. The plain consists of predominantly alluvial basin-fill material deposited by meandering tributaries of the Santa Ana River system (Morton, et al., 1979). Surficial geology in the subject property vicinity consists of recent alluvium of gravel, sand, silty sand, and clayey silt with an average thickness of 200 feet (Poland, et al., 1956; California DWR, 1967). This recent alluvium is underlain by the upper Pleistocene Lakewood Formation, which averages 500 feet in thickness and consists of alternating stratigraphic zones of coarse-grained sand and clayey silt. The estimated depth to bedrock is more than 1,000 feet.

Based on information obtained from the USDA Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Urban land-Anthraltic Xerorthents, loamy substratum-Grommet complex, 0 to 5 percent slopes. This series consists of Human-transported material over young alluvium derived from sedimentary rock. These soils are considered to be well drained with a moderately high permeability rate and a high available water storage capacity.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06037C1585F, dated September 26, 2008, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

A copy of the reviewed flood map is not included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	Source	Description/Use
1884-1921	Topographic Maps	Undeveloped/Native land
1922	Sanborn Map	Vacant land
1924-1994	Aerial Photographs, City Directories, Topographic Maps, Sanborn Maps, Online Permits	Commercial
1997-Present	Aerial Photographs, City Directories, Assessor Records, Online Permits	Current commercial structure

Tenants on the subject property include various commercial/retail tenants (1925-1991); Tommy Hilfiger (1998-2000); Lawrence Martin Gallery (2000-2006); and Brooks Brothers (2001-Present). According to historical review, the subject property was occupied a printing facility from 1925 to 1929, as further discussed in Section 3.3.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources (EDR) on July 20, 2018. The following observations were noted to be visible on the subject property and adjacent properties during the aerial photograph review:

Date: 1928	Scale: 1"=500'
Subject Property:	Developed with one structure throughout the subject property
North:	Developed with two long, narrow structures across Santa Monica Boulevard
South:	Developed with one structure across North Rodeo Drive
Southeast:	Vacant land
Southwest:	Developed with two structures across North Rodeo Drive
East:	Developed with a large structure
West:	Developed with a long, narrow structure across Santa Monica Boulevard

Date: 1938	Scale: 1"=500'
Subject Property:	No significant changes visible
North:	No significant changes visible
South:	No significant changes visible
Southeast:	No significant changes visible
Southwest:	Developed with one structure with separate apparent units across North Rodeo Drive
East:	No significant changes visible
West:	No significant changes visible

Southeast:	No significant changes visible
Southwest:	No significant changes visible
East:	No significant changes visible
West:	No significant changes visible

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner reviewed the collection of Sanborn Fire insurance maps from Environmental Data Resources (EDR) on Jul 20, 2018. The following observations were noted to be depicted on the subject property and adjacent properties during the fire insurance map review:

Date: 1922	
Subject Property:	Vacant land
North:	Developed with two commercial structures across Burton Way which consist of a bank, offices, and vacant units
South:	Vacant land across North Rodeo Drive
Southeast:	Vacant land
Southwest:	Vacant land across North Rodeo Drive
East:	Developed for commercial use; includes offices, a barber shop, hardware/paint stores, and a furniture store
West:	Vacant land across Burton Way

Date: 1926	
Subject Property:	Developed with one commercial structure with multiple units occupied by stores, a restaurant, a bakery, and a printing facility
North:	Developed as two commercial structures across Burton Way which consist of a bank, stores, and a restaurant
South:	Developed with two stores across North Rodeo Drive
Southeast:	No significant changes depicted
Southwest:	Developed with an auto repair, gas station, and various other stores across North Rodeo Drive
East:	No significant changes depicted
West:	Developed with two structures with multiple units occupied by stores, including a drug store across Santa Monica Boulevard

Date: 1950	
Subject Property:	No structural changes are apparent; occupied by stores and offices; printing facility is no longer listed as a tenant
North:	No structural changes are apparent, occupied by various stores and restaurants across Santa Monica Boulevard
South:	Developed with an additional structure occupied by a paint store across North Rodeo Drive
Southeast:	Developed with one structure
Southwest:	Developed with stores and offices; the automotive repair facility is no longer on the property across North Rodeo Drive
East:	No significant structural changes are apparent, occupied by a bank, offices, and stores
West:	The drug store is now an office; no structural changes across Santa Monica Boulevard

Date: 1969	
Subject Property:	No significant changes depicted
North:	No significant changes depicted
South:	No significant changes depicted
Southeast	No significant changes depicted
Southwest:	No significant changes depicted
East:	No significant changes depicted
West:	No significant changes depicted

Copies of reviewed Sanborn Maps are included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from Environmental Data Resources (EDR) on July 19, 2018 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

City Directory Search for 468 North Rodeo Drive (Subject Property	
Year(s)	Occupant Listed
1925	Mortson Francisest, Kson Cora B Clerk Mortson & Co (462 North Rodeo Drive)
1925	Reynolds C M Printer Beverly Hills Citizen, George R Baker Editor and Publisher, various other commercial listings (460 North Rodeo Drive)
1933	Western Union Telegraph Co (9509 Santa Monica Boulevard)
1934	Allue Genuine French Hand Laundry (J S Allue) (462 North Rodeo Drive)
1934-1945	Clark William Manager Southern California Telephone Co (9478 Santa Monica Boulevard)
1934-1945	Various commercial listings, including photography (9490 Santa Monica Boulevard)
1934	Western Union Telegraph (9488 Santa Monica Boulevard)
1937	Central Station Central Ave at Fifth (9486 Santa Monica Boulevard)
1939-1945	Western Union Telegraph Co (9486 Santa Monica Boulevard)
1939	Glennon Gloria Beauty Parlor (462 North Rodeo Drive)
1939	Blumenthal S Dresses and Millinery (9509 Santa Monica Boulevard)
1939	Champlin Harry Cameras (1939 Santa Monica Boulevard)
1939-1950	Peterson S Woman Shop (9496 Santa Monica Boulevard)
1945-1958	Various commercial listings including retail (9488 Santa Monica Boulevard)
1945-1976	Freeman Jack Floor Coverings Carpets Rugs Asphalt and Rubber Tile, Freeman Jack Floor Covering Co (460 North Rodeo Drive)
1950-1971	Various investment and stocks commercial listings (9478 Santa Monica Boulevard)
1950-1954	Gift shop listings (9486 Santa Monica Boulevard)
1951-1954	Metal Carpet Anchoring Strip Co Inc (460 North Rodeo Drive)
1954-1990	Carroll & Company Mens Furnishings (466 North Rodeo Drive)
1958	Boyle B E & Co (9486 Santa Monica Boulevard)
1962-1967	Mayos Antiques (9486 Santa Monica Boulevard)
1990-1991	LACB LTD (460 North Rodeo Drive)
2000	Tommy Hilfiger Inc (466 North Rodeo Drive)
2000-2006	Lawrence Martin Gallery (460 North Rodeo Drive)
2006-Present	Brooks Brothers, Brooks Brothers Group Inc (468 North Rodeo Drive)

According to the city directory review and Sanborn review, the subject property was occupied a printing facility from 1925 to 1929. Based on the presumed short duration of printing operations on-site, this tenant listing is not expected to represent a significant environmental concern.

City Directory Search for Adjacent Properties	
Year(s)	Occupant Listed
1925	Various realty listings (471 North Beverly Drive)
1925	Various Wishin Tree listings, United Building & Loan Association (465 North Beverly Drive)
1925-1945	Various hardware and carpenter listings (461 North Beverly Drive)
1933	Branch (9475 Santa Monica Boulevard)
1933-1937	Various commercial listings (9474 Santa Monica Boulevard)
1934	Rosenberg Cecile, Yorkshire Sportswear for Women and Children (449 North Beverly Drive)
1934-1939	Lange Emma B Corsets (9511 Santa Monica Boulevard)
1934	Commerce Cleaners (9489 Santa Monica Boulevard)
1934-1939	Grotz Bros Café (9487 Santa Monica Boulevard)
1934-1939	Liquor store listings (9485 Santa Monica Boulevard)
1934	Pattys Auto Top Shop, Pattys Auto Glass Service, Turton Jack Auto Painting, Smith Dudley E Automotive Electrician, Plemneng Gordon J Service Station (9500 Santa Monica Boulevard)
1934-1939	Williams Lillian Beauty Studio (9523 Santa Monica Boulevard)
1934-1950	Various commercial/retail listings (9515 Santa Monica Boulevard)
1934-1939	Beauty Salon listings (451 North Rodeo Drive)
1934	Beverly Hills Drug Co (9501 Santa Monica Boulevard)
1934	Blumenthal Rose C Mrs Gowns (9514 Santa Monica Boulevard)
1934	Hutton E F & Co Stocks & Bonds (475 North Beverly Drive)
1934	Bank of America Building, various other commercial listings (9470 Santa Monica Boulevard)
1934-1950	Various commercial listings (9521 Santa Monica Boulevard)
1934-1991	Various retail listings (9513 Santa Monica Boulevard)
1934-2014	Various commercial/retail listings (9507 Santa Monica Boulevard)
1934-1975	Various commercial/retail listings (9499 Santa Monica Boulevard)
1934-1991	Various office and bank listings (469 North Beverly Drive)
1934-1962	Beverly Hills Securities Co (453 North Rodeo Drive)
1934-2006	Various commercial/retail listings (9497 Santa Monica Boulevard)
1934	Lundin Carl P Tailor (9483 Santa Monica Boulevard)
1934-1958	Various commercial/retail listings (9491 Santa Monica Boulevard)

City Directory Search for Adjacent Properties

Year(s)	Occupant Listed
1934-1958	Various commercial/retail listings (9493 Santa Monica Boulevard)
1934-1950	Various commercial listings (455 North Rodeo Drive)
1939-1945	Various stock and bonds listings (9520 Santa Monica Boulevard)

According to the city directory review, the adjacent property to the north was formerly occupied by a potential dry cleaning facility in 1934.

According to the city directory review, the adjacent property to the southwest was formerly occupied by an automotive repair facility in 1934.

According to the city directory review, the adjacent properties to the west were formerly occupied by printing facilities from as early as 1954 to 1958.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from Environmental Data Resources (EDR) on July 20, 2018. The following observations were noted to be depicted on the subject property and adjacent properties during the topographic map review:

Date: 1894	
Subject Property:	Undeveloped land
North:	Undeveloped land
South:	Undeveloped land
Southeast:	Undeveloped land
Southwest:	Railroad tracks
East:	Undeveloped land
West:	Railroad tracks

Date: 1896	
Subject Property:	No significant changes depicted
North:	No significant changes depicted
South:	No significant changes depicted
Southeast:	No significant changes depicted
Southwest:	No significant changes depicted
East:	No significant changes depicted

Date:	1896
West:	No significant changes depicted

Date:	1898
Subject Property:	No significant changes depicted
North:	No significant changes depicted
South:	No significant changes depicted
Southeast:	No significant changes depicted
Southwest:	No significant changes depicted
East:	No significant changes depicted
West:	No significant changes depicted

Date:	1900
Subject Property:	No significant changes depicted
North:	No significant changes depicted
South:	No significant changes depicted
Southeast:	No significant changes depicted

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 Health Department

Regulatory Agency Data	
Name of Agency:	Los Angeles County Fire Department Health Hazardous Materials Division (LACFD HMMD)
Point of Contact:	Online database query
Agency Address:	1320 North Eastern Avenue, Los Angeles, California
Agency Phone Number:	(323) 881-2411
Date of Contact:	July 12 and July 16, 2018
Method of Communication:	Online
Summary of Communication:	As of the date of this report, Partner has not received a response from the LACFD HMMD for inclusion in this report.

4.1.2 Fire Department

Regulatory Agency Data	
Name of Agency:	Beverly Hills Fire Department (BHFD)
Point of Contact:	Mr. Michael Dunn from the Office of the City Clerk
Agency Address:	455 North Rexford Drive, Suite 290, Beverly Hills, California
Agency Phone Number:	(310) 285-2403
Date of Contact:	July 20, 2018
Method of Communication:	Email
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the BHFD.

4.1.3 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	Southern California Air Quality Management District (SCAQMD)
Point of Contact:	Online database
Agency Address:	21865 Copley Drive, Diamond Bar, California
Agency Phone Number:	(909) 396-2000
Date of Contact:	July 20, 2018
Method of Communication:	Online
Summary of Communication:	According to the SCAQMD Online database, the subject property identified as Tommy Hilfiger Retail at 466 North Rodeo Drive obtained a 'Plans & Excavation' Permit on February 27, 2000 under Facility ID 126382 and Application Number 379139. According to this database, this permit was received in connection to SCQAQMC Rule 1415, which involves the installation, repair, maintenance, service, relocation, or disposal of an air conditioning system. There are no reported Notices to Comply or Notices of Violation.

4.1.4 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	Regional Water Quality Control Board (RWQCB)
Point of Contact:	GeoTracker and ENVIROSTOR Online databases
Agency Address:	320 W 4th St #200, Los Angeles, California
Agency Phone Number:	(916) 323-2514
Date of Contact:	July 12, 2018
Method of Communication:	Online database
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the RWQCB.

4.1.5 Department of Toxic Substances Control

Regulatory Agency Data	
Name of Agency:	California Department of Toxic Substances Control (DTSC)
Point of Contact:	Online database
Agency Address:	9211 Oakdale Avenue, Chatsworth, California
Agency Phone Number:	(877) 786-9427
Date of Contact:	July 12, 2018
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the DTSC.

4.1.6 Building Department

Regulatory Agency Data	
Name of Agency:	Beverly Hills Building Department (BHBD)
Point of Contact:	Online database
Agency Address:	455 North Rexford, Beverly Hills, California
Agency Phone Number:	(310) 285-1124
Date of Contact:	September 10, 2017
Method of Communication:	Email and Online
Summary of Communication:	Records were available for review, as further discussed in the following table.

Building Records Reviewed for 468 North Rodeo Drive (Subject Property)		
Year(s)	Owner/Applicant	Description
1934	Stanley Anderson	Awning Installation
1935	Stanley Anderson	Steel Frame for Marquise
1998	Tommy Hilfiger	Cocktail Party
1998-1999	Class Party Rentals	Temporary Tent Installation
1999	Regan Rents, Inc.	Canopy Tenant Installation
1999	Linda Cervantes	Interior Alteration for Tommy Hilfiger
1999	Tommy Hilfiger	New Cabinets Installation

Building Records Reviewed for 468 North Rodeo Drive (Subject Property)		
Year(s)	Owner/Applicant	Description
2001	Brooks Brothers	Sign and Awning Installation for Retail Clothing
2003	Brooks Brothers	Architectural Reviews for Retail Clothing (Previously Tommy Hilfiger)
2003	Newport Awning Company, AGAM Pool and Spa	Awnings with 'Brooks Brothers' Sign
2003	Commercial Sign & Lighting Inc	Business I.D. Signs for 'Brooks Brothers'
2003	Jerome Julian	Illuminated Wall Signs for 'Brooks Brothers'
2003	Erik Sondergaard, Forunat T. Rocio	Film on Windows Installation, Refinish Trellis, New Wall Scones, Building Power Wash
2003	Erik Sondergaard, Alan Pharr	Tenant Improvement for Brooks Brothers
2006	Jimmy Paola	Temporary Tent Installation
2008	Cal West Lighting	Light Change of Exterior
2011	Illumination Dynamics Inc	Temporary Generator
2012	Precision Air Conditioning and Mechanical	HVAC Change-Out for Commercial
2013	Excellence In Air Conditioning Inc	HVAC Repair

4.1.7 Planning Department

Regulatory Agency Data	
Name of Agency:	Beverly Hills Planning Department (BHPD)
Point of Contact:	Zoning and Property Information Online database
Agency Address:	455 North Rexford, Beverly Hills, California
Agency Phone Number:	(310) 285-1124
Date of Contact:	July 12, 2018
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is zoned BHC3 for commercial development by the City of Beverly Hills.

4.1.8 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Division of Oil, Gas and Geothermal Resources (DOGGR)
Point of Contact:	Online Well Finder GIS database
Agency Address:	801 K Street, Sacramento, California
Agency Phone Number:	(916) 445-9686
Date of Contact:	July 12, 2018
Method of Communication:	Online
Summary of Communication:	According to DOGGR, no oil or gas wells are located on or adjacent to the subject property.

4.1.9 Assessor's Office

Regulatory Agency Data	
Name of Agency:	Los Angeles County Assessor (LACA)
Point of Contact:	Online database
Agency Address:	500 West Temple Street, Room 225, Los Angeles, California
Agency Phone Number:	(213) 974-3211
Date of Contact:	July 12, 2018
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is identified by Assessor Parcel Number (APN) 4343-016-001. The current building was constructed in 1997 and total(s) approximately 23,509 square feet on a 15,255 square-foot lot. No records regarding property ownership or utility information for the subject property was on file with the LACA.

4.1.10 Sanitation District

Regulatory Agency Data	
Name of Agency:	Los Angeles County Sanitation District (LACSD)
Point of Contact:	Ms. Alexandria Pearch
Agency Address:	1955 Workman Mill Road, Whittier, California
Agency Phone Number:	(562) 908-4288
Date of Contact:	July 23, 2018
Method of Communication:	Email
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the LACSD.

4.1.11 Department of Public Works

Regulatory Agency Data	
Name of Agency:	Los Angeles County Public Works Division (LACPWD)
Point of Contact:	Online database
Agency Address:	900 South Fremont Avenue, Alhambra, California
Agency Phone Number:	(626) 458-5100
Date of Contact:	July 12, 2018
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the LACPWD.

A copy of pertinent documents is included in Appendix B of this report.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by Environmental Data Resources, Inc. (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in

this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data				
Database	Search Radius (mile)	Subject Property	Adjacent Properties	Sites of Concern
Federal NPL or Delisted NPL Site	1.00	N	N	N
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSDF Facility	0.50	N	N	N
Federal RCRA Generators Site (LQG, SQG, CESQG)	0.25	N	Y	N
Federal IC/EC Registries	0.50	N	N	N
Federal ERNS Site	Subject Property	N	N	N
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	N	N	N
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
State/Tribal Leaking Storage Tank Site	0.50	N	N	N
State/Tribal Registered Storage Tank Sites (UST/AST)	0.25	N	N	N
State/Tribal Voluntary Cleanup Sites (VCP)	0.50	N	N	N
State/Tribal Spills	0.50	N	N	N
Federal Brownfield Sites	0.50	N	N	N
State Brownfield Sites	0.50	N	N	N
EDR MGP	Varies	N	N	N
EDR US Hist Auto Station	Varies	N	N	N
EDR US Hist Cleaners	Varies	N	Y	N

4.2.2 Subject Property Listings

The subject property is not identified in the regulatory database report.

4.2.3 Adjacent Property Listings

The adjacent properties to the north are identified as EDR Hist Cleaner and RCRA-SQG sites in the regulatory database report, as discussed below:

- The property, identified as Commerce Cleaners at 9489 Santa Monica Boulevard, is located adjacent to the north of the subject property. According to the radius report, this site operated as a dry cleaning facility in 1934 identified as Commerce Cleaners. Based on the absence of a

reported release in connection to this listing coupled with the presumed short duration of dry cleaning operations on the site (one year), this listing is not expected to represent a significant environmental concern.

- The property, identified as Bobbi Brown – 002 at 9497 Santa Monica Boulevard, is located adjacent to the north of the subject property. According to the radius report and the RCRAInfo Online database, this site is listed as a Small Quantity Generator (SQG) in 2016 and 2017 in regard to ignitable waste, organic solids, and off-speciation, aged, or surplus organics under NAICS Code 446120 (Cosmetics, Beauty Supplies, and Perfume Stores). There are no reported violations in connection to this listing. Based on the lack of reported violations coupled with the absence of a documented release in connection to this site, this listing is not expected to represent a significant environmental concern.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.4 Sites of Concern Listings

No sites of concern are identified in the regulatory database report.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.5 Orphan Listings

No orphan listings are identified in the regulatory database report of concern.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the Brownfields Amendments), the User must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The User should provide the following information to the environmental professional. Failure to provide this information could result in a determination that all appropriate inquiries is not complete. The User is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or Reasonably Ascertainable information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from 468 N RODEO DRIVE LLC, a Delaware limited liability company c/o Morgan Lewis (User of this report).

User Responsibilities				
Item	Provided By User	Not Provided By User	Discussed Below	Does Not Apply
Environmental Pre-Survey Questionnaire		X		
Title Records, Environmental Liens, and AULs		X		
Specialized Knowledge		X		
Actual Knowledge		X		
Valuation Reduction for Environmental Issues		X		
Identification of Key Site Manager	Section 5.1.3			
Reason for Performing Phase I ESA	Section 1.1			
Prior Environmental Reports		X		
Other		X		

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property was not identified and was not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

The report user was not identified and was not available to be interviewed at the time of the assessment.

5.1.3 Interview with Key Site Manager

Ms. Parv Ebrahimi, key site manager, indicated that she did not have any information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

Ms. Ebrahimi did not have any knowledge of the historical use of the property.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or reasonably ascertainable within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

No previous reports or other pertinent documentation was provided to Partner for review during the course of this assessment.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Jason Bates and Brooke Hasty
Site Assessment Conducted On:	July 24, 2018

The table below provides the subject property personnel interviewed during the field reconnaissance:

Site Visit Personnel for 468 North Rodeo Drive			
Name	Title/ Role	Contact Number	Site Walk* Yes/ No
Ms. Parv Ebrahimi	Key Site Manager	(818) 462-3853	Yes

* Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property

No potential environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters located on the eastern portion of the asphalt parking/loading zone on the subject property. An independent solid waste disposal contractor, Athens Environmental Services, removes solid waste from the subject property. According to property personnel, only household trash is collected in the on-site solid waste dumpsters.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Beverly Hills services the subject property vicinity. No wastewater treatment facilities or septic systems are observed or reported on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across the paved surfaces towards two storm water drains located within the northern portion of the asphalt parking/loading zone. Storm drains were also observed within the floors of the two balconies on-site. The subject property is connected to a municipal owned and maintained sewer system.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity/ natural gas provided by Southern California Edison. According to the key site manager, the subject property consists of eight units which are located on the rooftop. One portable air conditioning unit, identified as a 'KwiKool Portable Cooling Systems' apparatus, was identified within a storage area on the second floor.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

Partner identified hazardous substances used, stored, and/or generated on the subject property as noted in the following table:

Hazardous Substances and/or Petroleum Products Noted Onsite				
Substance	Container Size	Location	Nature of Use	Disposal Method
Anti-Wear Hydraulic Oil	1x 5-gallon bucket	Elevator Equipment Room	Elevator Motor Routine Maintenance	N/A

The materials were found to be properly labeled and stored at the time of the assessment with no signs of leaks, stains, or spills. Secondary containment is not provided. Based on the nature of use, overall small quantities observed, presence of secondary containment, and lack of violations on-file with the local fire department, this material is not expected to represent a significant environmental concern.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

Partner observed signs of leaking from an elevator motor as further discussed in Section 6.2.4.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – "Non-PCB;" 2) 50 ppm-500 ppm – "PCB-Contaminated;" and, 3) Greater than 500 ppm – "PCB-Containing." The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

The on-site reconnaissance addressed indoor and outdoor transformers that may contain PCBs. One vaulted transformer and one indoor transformer were observed on the subject property. The transformers are not labeled indicating PCB content. No staining or leakage was observed in the vicinity of the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Additionally, the subject property building is equipped with two hydraulic elevators. The hydraulic fluid contained within elevator systems can potentially contain toxic polychlorinated biphenyls (PCBs). Based on the age of the building (post-1978), it is unlikely that the hydraulic fluid within the equipment contains PCBs. The elevator motor in closer proximity to the access door was observed with absorption pads placed underneath and minor evidence of leakage was noted. No floor drains were observed near the motor and the releases appear to be surficial in nature. Minor cracks in the concrete flooring were observed in this area, but no hydraulic fluid stains were observed in the vicinity of these small cracks. Based on the small quantity and surficial nature of staining observed, this equipment is not expected to represent a significant environmental concern.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property building was constructed in 1997. As such, an asbestos evaluation was not required by the scope of services; however, please refer to the table below for observed materials that would be considered suspect ACMs in the event of a thorough survey:

Suspect ACMs			
Suspect ACM	Location	Friable Yes/No	Physical Condition
Floor Tiles	Throughout Building Interior	No	Good

The limited visual survey consisted of noting observable materials (materials which were readily accessible and visible during the course of the site reconnaissance) that are commonly known to potentially contain asbestos. This activity was not designed to discover all sources of suspect ACM, PACM, or asbestos at the site; or to comply with any regulations and/or laws relative to planned disturbance of building materials such as renovation or demolition, or any other regulatory purpose. Rather, it is intended to give the User an indication if significant (significant due to quantity, accessibility, or condition) potential sources of ACM or PACM are present at the subject property. Additional sampling, assessment, and evaluation will be warranted for any other use.

Partner was not provided building plans or specifications for review, which may have been useful in determining areas likely to have used ACM.

According to the US EPA, ACM and PACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition. Prior to any disturbance of the construction materials within this facility, a comprehensive ACM survey is recommended.

A copy of the analytical data is not included in Appendix B of this report.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm^2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint

should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

It is unlikely that LBP is present in buildings constructed after 1977. Therefore, due to the age of the subject property building, it is unlikely that LBP is present.

Actual material samples would need to be collected in order to determine if LBP is present.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	Average Predicted Radon Levels	Potential
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Beverly Hills Public Works Department serves the subject property vicinity. According to a representative of the Beverly Hills 2017 Annual Water Quality Report, the sources of public water for the City of Beverly hills are the City's Reverse Osmosis Water Treatment Plant (10%) and the Metropolitan Water District (MWD) (90%). The MWD lures water from the Jensen and Weymouth surface water treatment plant which draws from the State Water Project and the Colorado River. The osmosis plant lures water from the City of Beverly Hill's four groundwater wells located within the Hollywood Basin and this treated water is then blended with the MWD water. These waters are stored in steel tanks and throughout the City's reservoirs. According to the report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property building for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this ESA should not be used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

No obvious indications of water damage or mold growth were observed during Partner's visual assessment.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises.

6.4.1 PCBs

One vaulted transformer was observed on the eastern adjacent property. No staining or leakage was observed in the vicinity of the transformer. Based on these observations and the likelihood that the subject property does not maintain ownership of the transformer, the presence of adjacent transformers is not expected to represent a significant environmental concern.

7.0 FINDINGS AND CONCLUSIONS

Findings

A recognized environmental condition (REC) refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A controlled recognized environmental condition (CREC) refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A historical recognized environmental condition (HREC) refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An environmental issue refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- The subject property is equipped with two elevator motors located within the back-of-house portion of the subject property building. The elevator motor in closer proximity to the access door was observed with absorption pads placed underneath and minor evidence of leakage was noted. No floor drains were observed near the motor and the releases appear to be surficial in nature. Minor cracks in the concrete flooring were observed in this area, but no hydraulic fluid stains were observed in the vicinity of these small cracks. Based on the small quantity and surficial nature of staining observed, this equipment is not expected to represent a significant environmental concern.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 468 North Rodeo Drive in the City of Beverly Hills, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of recognized environmental conditions and/or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- The elevator equipment should be repaired as part of routine business maintenance to address the potential source of the leaking.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 468 North Rodeo Drive in the City of Beverly Hills, Los Angeles County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

PRA Request #2018-133 (Hasty @ Partneresi): Hazmat, USTs/ASTs, Violations at 458-472 N. Rodeo Dr.

To Hasty, Brooke

Retention Policy DPT-Delete after 27 months (2 years, 3 months) Expires 10/21/2020

This message was sent with High importance.

2018-133 - Hasty.pdf
59 KB

Dear Ms. Hasty,

This email serves as response to your public records request of July 12, 2018.

The City does not have any records of Hazmat, USTs/ASTs, or clarifiers, and there are no fire code violations for the property located at 458-472 N. Rodeo Dr. Please note that the Los Angeles County Fire Department is the reporting agency for Hazmat disclosure, and their website may be accessed by clicking "here."

Kind Regards.

PRA Request #2018-135 (Hasty @ Partneresi): Hazmat, USTs/ASTs, Violations at 1426-1444 S. Santa Monica Blvd./Burton Way, and 9478-9496 S. Santa Monica Blvd

To Hasty, Brooke

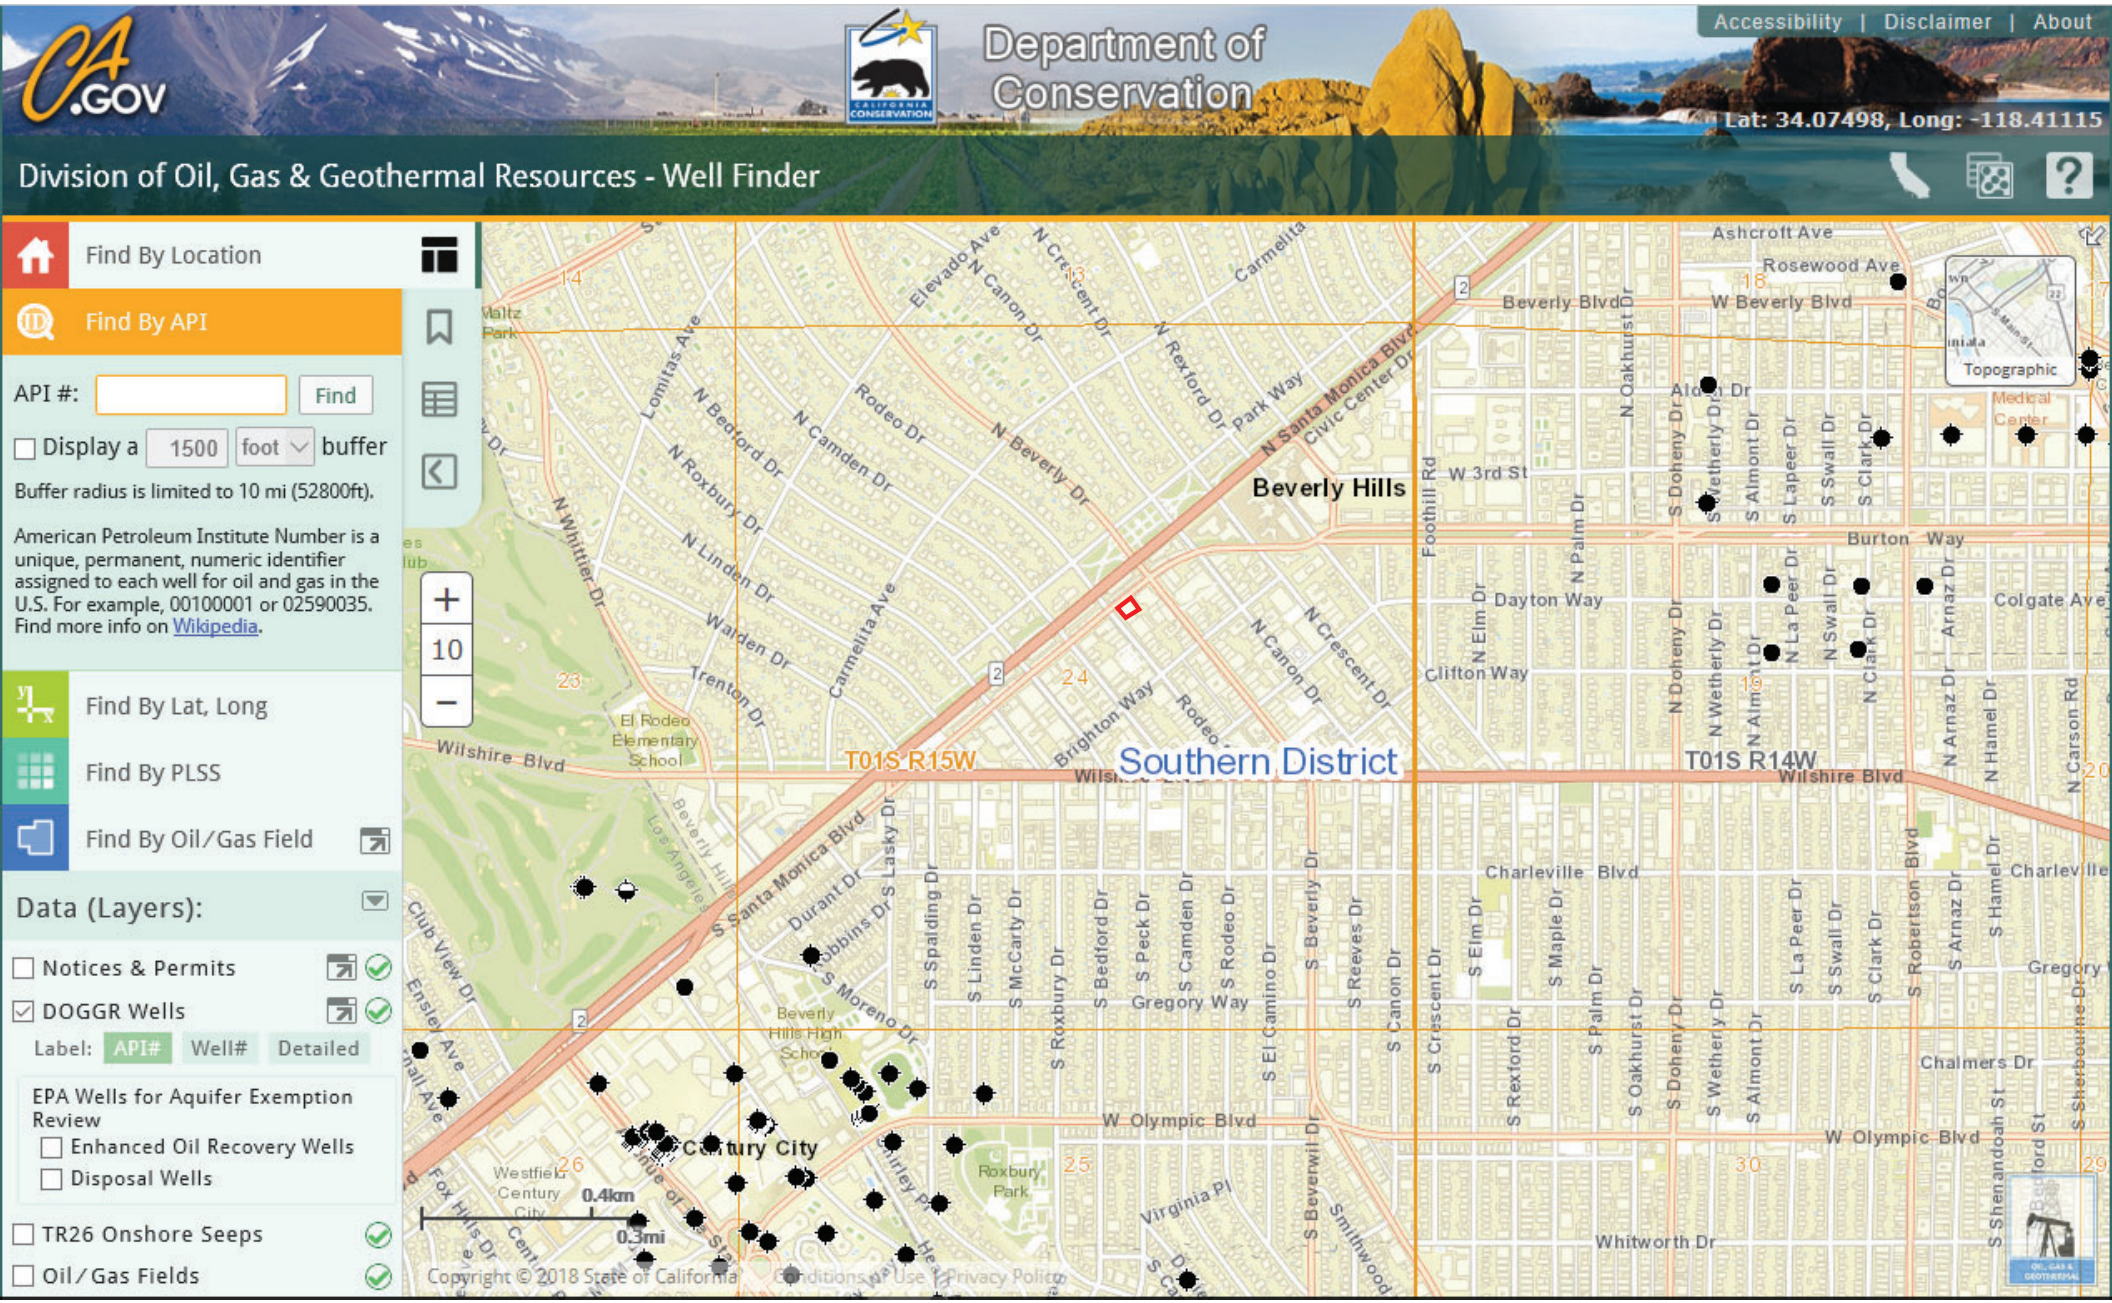
Retention Policy DPT-Delete after 27 months (2 years, 3 months) Expires 10/21/2020

This message was sent with High importance.

2018-135 - Hasty.pdf
60 KB

Dear Ms. Hasty,

This email serves as response to your public records request of July 12, 2018.



There are no documents responsive to your request, because the addresses listed are not in the City of Beverly Hills. Please note that 9478-9496 S. Santa Monica Blvd. is actually addressed as 462-472 N. Rodeo Dr., and information related to that location was provided as response to your previous public records request.

Kind Regards.

Michael Dunn, CMC, CPMC
Records Manager

DECLARATIONS

The Declarations below are mandated by the State of California under Section 19825 and Section 19826 of the Health and Safety Code.

LICENSED CONTRACTORS DECLARATION

I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Lic.Class _____ Lic. No. _____ Signature _____ Date __/__/____

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractors License Law for the following reason (Sec 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

[ ] I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale.).

[ ] I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractors Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.).

Owner Signature _____ Date __/__/____

ARCHITECT/ENGINEER DECLARATION

[ ] I am exempt under Sec. 7051, B. & P.C. for this reason: I am acting solely in my professional capacity.

Signature _____ Date __/__/____

WORKER'S COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Worker's Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab C.).

Policy No. WC 20683-115765 Company ARGONAUT Expiration Date: __/__/____

Signature _____ Date 4.6.06

[ ] Certified copy is hereby furnished. [ ] Certified copy is filed with the Department of Building & Safety.

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

(This section need not be completed if the permit is for one hundred dollars ($100) or less.)

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

Signature _____ Date __/__/____

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name and Address _____

ASBESTOS DECLARATION

(Health & Safety Sec. 19827.5)

Please mark the appropriate box and sign below:

The building has been surveyed and it [ ] does [ ] does not contain asbestos. A copy of the notification form as required by SCAQMD Rule 1403 is enclosed.

[ ] The building contained asbestos and the abatement work has been completed. A copy of the completion certificate is enclosed.

Owner or Agent _____ Date __/__/____

I certify that I have read this application and state that the information contained herein is correct. I agree to comply with all City ordinances and State laws relating to building construction, and hereby authorize representatives of this City to enter upon the above-mentioned property for inspection purposes.

DEPARTMENT OF BUILDINGS

Application for the Erection of Buildings

CLASS----------

TO THE CITY COUNCIL OF THE CITY OF BEVERLY HILLS:

Application is hereby made to the Council of the City of Beverly Hills, through the office of the Chief Inspector of Buildings for a permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which shall be deemed conditions entering into the exercise of the permit:

FIRST: That the permit does not grant any right or privilege to erect any building or other structure herein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

SECOND: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Beverly Hills.

THIRD: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

2017 Annual Water Quality Report

We are very pleased to share with you the 2017 Annual Drinking Water Quality Report that presents the high quality of your drinking water. This report contains 2016 water quality testing results, explanation of our local water supply, and additional water conservation information.

The City of Beverly Hills is continually working to ensure that all our customers have safe, reliable and high-quality water for years to come. That is why we are implementing the Water Enterprise Plan which focuses and strengthens our water supply portfolio. We are moving forward with increasing local supply for enhanced system resilience. Additionally, our customers and operations staff continues to respond proactively to conservation which enables the City to ensure the viability of our existing water supplies.

I am confident this report will not only illustrate the quality of our water, but our continued commitment to sustainability and delivery of this precious resource for the years to come.

Sincerely,

Trish Rhay
Assistant Director of Public Works

THE 2017 WATER QUALITY REPORT

Your Water Meets All Safe Drinking Water Standards

The technical and analytical water quality information presented in this report is required by State health regulations.

These regulations require water suppliers to inform customers where their water comes from, what is in their water, and any violation of standards that may have occurred.

For information or concerns about this report, or your water quality in general, please contact Trish Rhay, Assistant Director of Public Works-Infrastructure and Field Operations, at (310) 285-2467 You may also address your concerns at scheduled Public Works Commission meetings. The Public Works Commission is an advisory group to the City Council that generally meets at 8:00 a.m. on the second Thursday of every month. For exact meeting dates and time, please contact the City Clerk at (310) 285-2400. The Public Works Commission for 2016 includes residents Barry Pressman, Ron Shalowitz, Sandra Aronberg, Jeff Wolfe and Jerrold S. Felsenthal.

This report contains important information about your drinking water. Please share this information or have it translated.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.

این اطلاعیه شامل اطلاعات مهمی راجع به آب آشامیدنی است. اگر

BASIC INFORMATION ABOUT DRINKING WATER COMPONENTS

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activities.

Components that may be present in source water include:

- **Microbial components**, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildfires.
- **Inorganic components**, such as salts and metals, which can be naturally occurring or result from urban storm runoff, industrial or domestic wastewater discharges, oil and gas production, mining and farming.
- **Radioactive components**, that can be naturally occurring or be the result of oil and gas production or mining activities.
- **Pesticides and herbicides**, that may come from a variety of sources such as agriculture, urban storm water runoff and residential uses.
- **Organic chemical components**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production and can also come from gasoline stations, urban storm runoff, agricultural application and septic systems.
- The City uses **chloramines** to disinfect your water. The City is required to disinfect your water to prevent waterborne pathogens.
- Your drinking water also contains small amount of **fluoride ions.** This additive helps prevent tooth decays. The fluoride concentration in your water ranges from 0.6 to 1.2 mg/L.
- Your average **water hardness** is approximately 300 mg/L or 17.5 grains/gallon.

In order to ensure that tap water is safe to drink, the United States Environmental Protection Agency (USEPA) and Division of Drinking Water (DDW) prescribe regulations that limit the amount of certain components in water provided by public water systems. DDW also establishes limits for the components in bottled water that must provide the same protection for public health.

ADDITIONAL CHARACTERISTICS OF OUR DRINKING WATER

- **Disinfection with Chloramines** – Your water is disinfected with chloramines, a compound of chlorine and ammonia. This type of disinfectant is very stable and reduces the formation of disinfection by-products in your water. We carefully monitor the amount of chloramine disinfectant to protect the safety of your water.
- **Chloramines** – Chloraminated water is safe for people and animals to drink, and for all other general uses. Three special user groups, including kidney dialysis patients, aquarium owners, and businesses or industries that use water in their treatment process, must remove chloramine from the water prior to use. Hospitals or dialysis centers should be aware of chloramine in the water and should install proper chloramine removal equipment, such as dual carbon adsorption units. Aquarium owners can use readily available products to remove or neutralize chloramine. Businesses and industries that use water in any manufacturing process or for food or beverage preparation should contact their water treatment equipment supplier regarding specific equipment needs.

Water Conservation - Uplifting Update

If you don't want a water wise landscape, at least water wisely!
Grass does not have to be a water waster!

Beverly Hills water customers reduced their water use 22% in 2016. This is especially impressive given the State relaxed some regulations mid-year causing many of our neighboring cities conservation efforts to plummet.

The drought is officially over due to the ample rain events this past winter which have filled our reservoirs and created abundant snowpack. Our groundwater aquifers are still low and future rain years are unknown. Therefore, we must always remember *water conservation is a Beverly Hills way of life.*

The City's Water Conservation Administrator, Debby Figoni, assists our customers with conservation efforts through water wise landscaping workshops, large landscape water audits and the City's Water Tracker Program (water.beverlyhills.org).

For more information, visit bhsaves.org, call 310-285-2467 or email DFigoni@beverlyhills.org

Water Conservation is a Beverly Hills Way of Life

Large Landscape Water Evaluations

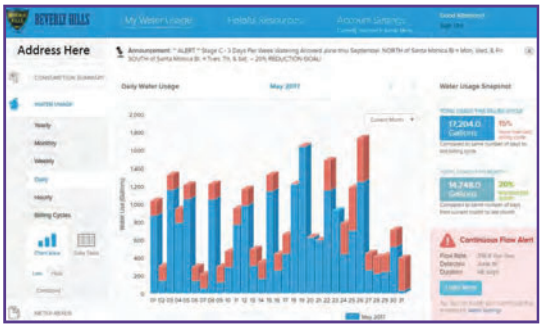
"Prior audits performed in Beverly Hills have helped residents reduce up to 50% of the total water used at their property!"

A typical single family home uses two-thirds of their total water consumption outdoors to water the landscape. In an effort to help our higher water consumers use water more efficiently, the City is offering large landscape water evaluations. Irrigation professionals will examine every valve and sprinkler in the landscape for water efficiency and provide a comprehensive report detailing adjustments and retrofits that can be implemented in order to reduce water use. There is a fee for the assessment, but the City will cover part of the cost. The resident is responsible for the other rest and for any retrofits they choose to perform. Prior audits performed in Beverly Hills have helped residents reduce up to 50% of the total water used at their property!

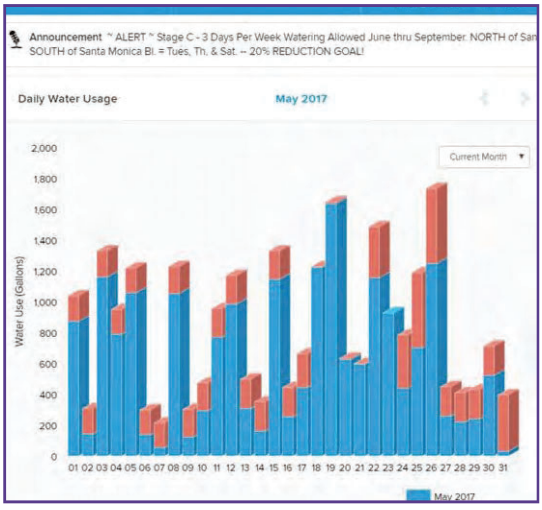
To sign up, please call 310-285-2467 or email DFigoni@beverlyhills.org

Control Your (Sprinkler) Controller

Experts estimate that up to 50-percent of residential irrigation water use goes to waste due to evaporation, runoff, or over-watering.



To use water efficiently in your landscape, follow these simple steps that produce great results:



- Communicate with the person who sets your sprinkler controller to make sure the days and times are set the way you want. Install a new 9-volt back-up battery every year in the back of the controller which will keep your settings in case the power goes out.
- Adjust your sprinkler controller with the seasons. The City provides rebates on smart weather-based irrigation controllers that automatically adjust with the weather. For details, visit: SoCalWaterSmart.com
- Check your irrigation system monthly to ensure water is distributed evenly on the landscape and there is no over-spray onto paved areas. Look for an irrigation specialist to keep your system working efficiently.
- Water your landscape up to three days per week, adhering to the City's guidelines. Check for good, even sprinkler coverage. Aerate and dethatch the lawn one to two times per year.
- Landscape with plants that are suited for our climate. Many shrubs in existing landscapes are low water plants and can survive on half of the water they presently receive.
- **Sign up for Water Tracker to keep an eye on water usage water.beverlyhills.org**

Sign up for the City of Beverly Hills' FREE Water Tracker program to keep track of your daily, weekly or monthly water use.

This free program can help you save water, money and future headaches!

1	To sign up, visit water.beverlyhills.org and click on "signup here".
2	Enter your e-mail address and hit "submit".
3	Check your email (possibly junk mail) for a link to create a password.
4	Sign-in to Water Tracker using your login email address and newly created password.
5	To link up your account, enter your 6 digit customer number (check your water bill). Note: If your customer number is less than 6 digits, add "0" to the beginning of your number.
6	Re-enter your login and password to finalize set up.
7	Click "My Water Use" to start observing your usage. View your billing cycle usage at "Consumption Summary".
8	Set your notifications via "Account Settings" (top bar) to complete your "Account Profile" and hit "Save."
9	Go to "Water Settings" (side bar) and set: 1. "Usage Budget" at 10% above your typical outdoor watering day usage (ex: if you use 600 gallons, set it for 660 gallons "daily"), and 2. "Continuous Flow Threshold" at 0 in order to be notified of potential leaks. 3. Enter your email and cell phone (aka: sms) to receive leak or excessive water use alerts.
10	Save this site under your favorites

Caring for Your Lawn – Water Conservation Tips

If you don't want a water wise landscape, at least water wisely! Grass does not have to be a water waster!

WATERING GUIDELINES

On average, outdoor water use accounts for about two-thirds of a typical home's water use. Many homeowners over water their lawns by 30% to 100%! Not only can over-watering be bad for your lawn, it often causes the excess water to run off the landscape, into the street and down our storm drains.

EASY STEPS TO WATER MORE EFFICIENTLY

1. Water between 5:00 pm to 9:00 am (BH Municipal Code).
2. Water 3 days a week:

North of Santa Monica Blvd:

October - May: Monday and Friday
June - September: Monday, Wednesday & Friday

South of Santa Monica Blvd:

October - May: Tuesday and Saturday
June - September: Tuesday, Thursday and Saturday

3. Use MP rotating sprinkler heads which water slower and more efficiently than traditional sprinkler heads (rebates available at www.SoCalWaterSmart.com).
4. Water more efficiently for your type of grass, soil, sprinkler type and location.
5. Check and adjust your irrigation system (timer and sprinkler heads) monthly.
6. Install a weather based irrigation controller that automatically adjusts with the weather (rebates available at www.SoCalWaterSmart.com).
7. Change the back-up battery in your irrigation timer twice a year.

MOWING HEIGHT

Select less thirsty grasses (see options below). Use a longer cut for maximum water conservation and healthier turf. Raise your lawn mower blade to 3" to 3-1/2" in the summer and to 1-1/2" to 2-1/2" in the cooler months. A lawn cut higher encourages grass roots to grow deeper, shades the root system and holds in soil moisture better than a closely clipped lawn.

THIRSTY!

Cool Season Turf

Kentucky bluegrass
Fescue
Marathon
Ryegrass

MEDIUM WATER

Warm Season Turf

Bermuda
Zoysia
St. Augustine
Kikuyu

WATER WISE

Turf Alternatives

Buffalo Grass
Carex Pansa
Dymondia
Kurapia
Creeping Thyma
Various groundcovers

OTHER HELPFUL TIPS

1. **Water in Cycles** (aka: Cycle & Soak) – Deep watering less frequently encourages stronger, healthier turf with deeper roots. To avoid overwatering and run-off, water in cycles (example: instead of watering for 10 minutes straight, water for 5 minutes at 4:00 am and an hour later, water for another 5 minutes). If you have clay soil or a slope, you may need to split the time into three cycles. This also works well for water wise plants.
2. **Aerate and Dethatch** – At least twice a year aerate and dethatch your lawn to help water infiltrate.
3. **Reduce Lawn Area** – Expand planter bed borders with drought tolerant plants. Make sure these areas are on separate valves than your grass in order to water these areas appropriately.
4. **Grasscycle** – Leave grass clipping on the lawn to naturally decompose. The clippings return nutrients back into the soil and prevent overfilling our landfills.
5. **Fertilizer** – If you fertilize, use an organic compost or composted manure instead of chemical fertilizers. This will build healthier soil, conserve moisture, and be less likely to cause water quality problems if run-off gets into our storm drains.

Finding a Leak

Where, Oh Where, Could Your Water Leak Be?

It is not uncommon for continuous water flow issues to occur in a home or business. Most of the time, they are easy to find and easy to repair. The City of Beverly Hills has a helpful tool called "Water Tracker" that shows the customer their daily water use. Plus, it notifies the customer of continuous flow issues (such as a leak or the irrigation being stuck on). **To sign up or Water Tracker, visit: water.beverlyhills.org**

BASIC AREAS TO LOOK FOR LEAKS		
Area	**Leak (gallons/hr)**	**How to Detect It**
Toilet	Up to 200	Put a few drops of food coloring in the toilet tank and wait 15 minutes. If food color leaks to toilet bowl, you have a leak. To avoid staining the toilet, flush after test is completed.
Irrigation	Up to hundreds	1. Check each head and riser for leaks. 2. Check the valve to see if it is leaking. 3. If there are no leaks here, turn off the valve that moves water to your irrigation system (not all homes have this) – Note that this has nothing to do with your irrigation controller. Underground irrigation leaks are more common in older, galvanized pipes.
Water Heater	Up to hundreds	Check your heater water leaking into a nearby drain. (Note: This can also cause an increase to your gas bill.)
Pool, Pond or Jacuzzi	Up to hundreds	1. Check float valve to see if it's functioning properly. 2. Check auto fill to see if it's running. Check the water feature for leaks.
Pipes	Up to hundreds	1. Check pipes to house, especially older, galvanized steel. 2. It may take a leak detection company to detect more challenging leaks.

If you cannot find the issue, try to isolate it. Check your water meter (see "How To Read Your Meter" flyer) to see the flow rate. Shut off the valve that supplies water to the irrigation (your gardener may have to help) and check the meter again. If the short read on the meter shows "0", the issue is in your irrigation. If the meter is still registering a flow, turn off the water to the house and check the meter again. If the meter read does not change, the issue may be in the service line (the pipe going from the house to the meter). For leaks you cannot locate or fix yourself, contact a plumber or leak detection company. FYI - A leak of 1 gallon per minute could cost you $600 to $1,800 a billing cycle!

Water Conservation Stage C

Water Conservation is a Beverly Hills Way of Life

STAGE C

ontinue to conserve
ommunicate with your gardener
orrect leaks

In April of 2017, the City moved to a Water Conservation Stage C. The changes associated with Stage C include:

20% water reduction
(citywide, not per customer)

New Watering Schedule:

	October - May	June - September
North of Santa Monica Blvd.	Monday & Friday	Monday, Wednesday & Friday
South of Santa Monica Blvd.	Tuesday & Saturday	Tuesday, Thursday & Saturday

No pool refill fee

BH2O

MCL	Maximum Contaminant Level	ppq	parts per quadrillion or picograms per liter (pg/L)		

DEFINITIONS

1. **Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.
2. **Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency.
3. **Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.
4. **Maximum Residual Disinfectant Level (MRDL):** The level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap.
5. **Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a disinfectant added for water treatment below which there is no known or expected risk to health. MRDLGs are set by the U.S. Environmental Protection Agency.
6. **Primary Drinking Water Standard (PDWS):** MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.
7. **Treatment Technique:** A required process intended to reduce the level of a contaminant in drinking water.
8. **Regulatory Action Level:** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

FOOTNOTES

(a) As a Primary Standard, the turbidity levels of the filtered water were less than or equal to 0.3 NTU in 95% of the online measurements taken each month and did not exceed 1 NTU for more than one hour. Turbidity, a measure of the cloudiness of the water, is an indicator of treatment performance. The turbidity levels for grab samples at these locations were in compliance with the Secondary Standard.

(b) Total coliform MCL: No more than 5.0% total coliform-positive samples in a month. Compliance is based on the combined distribution system sampling from all of the treatment plants. Three total coliform-positive samples were found out of the 7,106 samples analyzed in 2016. The MCL was not violated.

(c) Acute total coliform (E. coli) MCL: The occurrence of two consecutive total coliform-positive samples, one of which contains E. coli, constitutes an acute MCL violation. No samples were E. coli-positive and the MCL was not violated.

(d) Total coliform TT trigger, Level 1 assessments, and total coliform TT violations: More than 5.0% total coliform-positive samples in a month trigger Level 1 assessments. Failure to conduct assessments and correct findings within 30 days is a total coliform violation. No triggers, Level 1 assessments, or violations occurred.

(e) E. coli MCL and Level 2 TT triggers for assessments: Routine and repeat samples are total coliform-positive and either sample is E. coli-positive or system fails to collect all repeat samples following an E. coli-positive sample, or fails to test for E. coli when therepeat sample is total coliform-positive. No samples were E. coli-positive. No MCLs violations or no assessments occurred.

(f) All distribution system samples collected had detectable total chlorine residuals and no HPC was required. (f') HPC reporting level is 1 CFU/mL. Values are based on monthly median per State guidelines and recommendations.

(g) Data are from samples collected in 2015. Metropolitan's required triennial monitoring (2017-2019) will be performed in 2018.

(h) Data are from samples collected in 2011 and reported once every nine-year compliance cycle until the next samples are collected.

(i) Metropolitan's chromium VI reporting level is 0.03 ppb, which is below the state DLR of 1 ppb. Data above Metropolitan's reporting level but below the DLR are reported as ND in this report. These data are available upon request.

(j) As a wholesaler, Metropolitan has no retail customers and is not required to collect samples at the consumers' tap under the Lead and Copper Rule. Results are based from annual compliance monitoring.

(k) Metropolitan was in compliance with all provisions of the State's Fluoridation System Requirements.

(l) Metropolitan's perchlorate reporting level is 0.1 ppb, which is below the state DLR of 4 ppb.Data above Metropolitan's reporting level but below the DLR are reported as ND in this report. These data are available upon request.

(m) Data are from samples collected (triennially) during four consecutive quarters of monitoring in 2014 and reported for three years until the next samples are collected.

(n) SWRCB considers 50 pCi/L to be the level of concern for beta particles.

(o) These data represent the treatment plant specific core locations per the State approved monitoring plan. For the Jensen service area, the data for the B-5 location were excluded when served by the Weymouth treatment plant.

(p) These data represent the Locational Running Annual Average (LRAA) of all data collected at distribution system-wide monitoring locations.

(q) No MCL exceedance occurred. Compliance with State and Federal Bromate MCL is based on RAA.

(r) Noncompliance monthly percentage of coliform-positive samples analyzed at each treatment plant.

(s) AI ≥ 12.0 = Non-aggressive water
AI (10.0–11.9) = Moderately aggressive water
AI ≤ 10.0 = Highly aggressive water
Reference: ANSI/AWWA Standard C400-93 (R98)

(t) Positive SI index = non-corrosive; tendency to precipitate and/or deposit scale on pipes
Negative SI index = corrosive; tendency to dissolve calcium carbonate

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

RITE AID #5462	300 N CANON DR	ESE 1/8 - 1/4 (0.239 mi.)	L59	77

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 14 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/30/2018 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

FILOY CLEANERS INC Database: DRYCLEAN SOUTH COAST, Date of Government Version: 03/16/2018	337 N CANON DR	ESE 1/8 - 1/4 (0.194 mi.)	L53	69

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 9 HIST CORTESE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 13 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 13 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002633222

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste name: Liquids with pH < 2

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

RITE AID #5462 (Continued) **1016954141**

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 05/13/2018
Date Data Arrived at EDR: 05/30/2018
Date Made Active in Reports: 06/22/2018
Number of Days to Update: 23

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/13/2018

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/13/2018

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

Next Scheduled EDR Contact: 10/15/2018
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 05/18/2018

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 05/18/2018

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

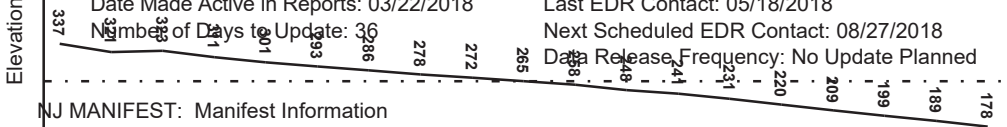
OTHER DATABASE(S)



Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Longitude (West):	118.403876 - 118° 24' 13.95''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	370454.7
UTM Y (Meters):	3770683.5
Elevation:	265 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630733 BEVERLY HILLS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

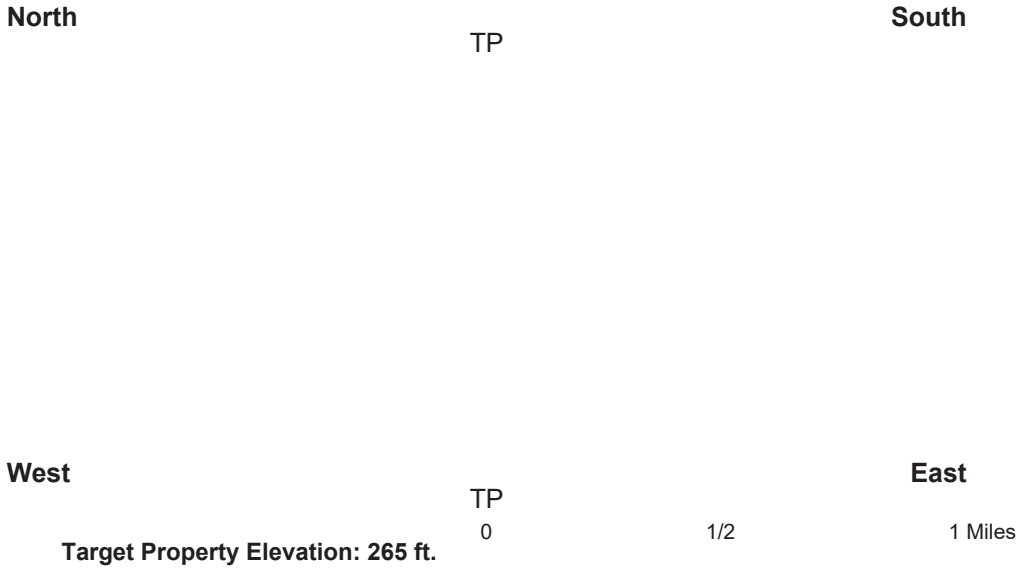
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1585F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1595F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BEVERLY HILLS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

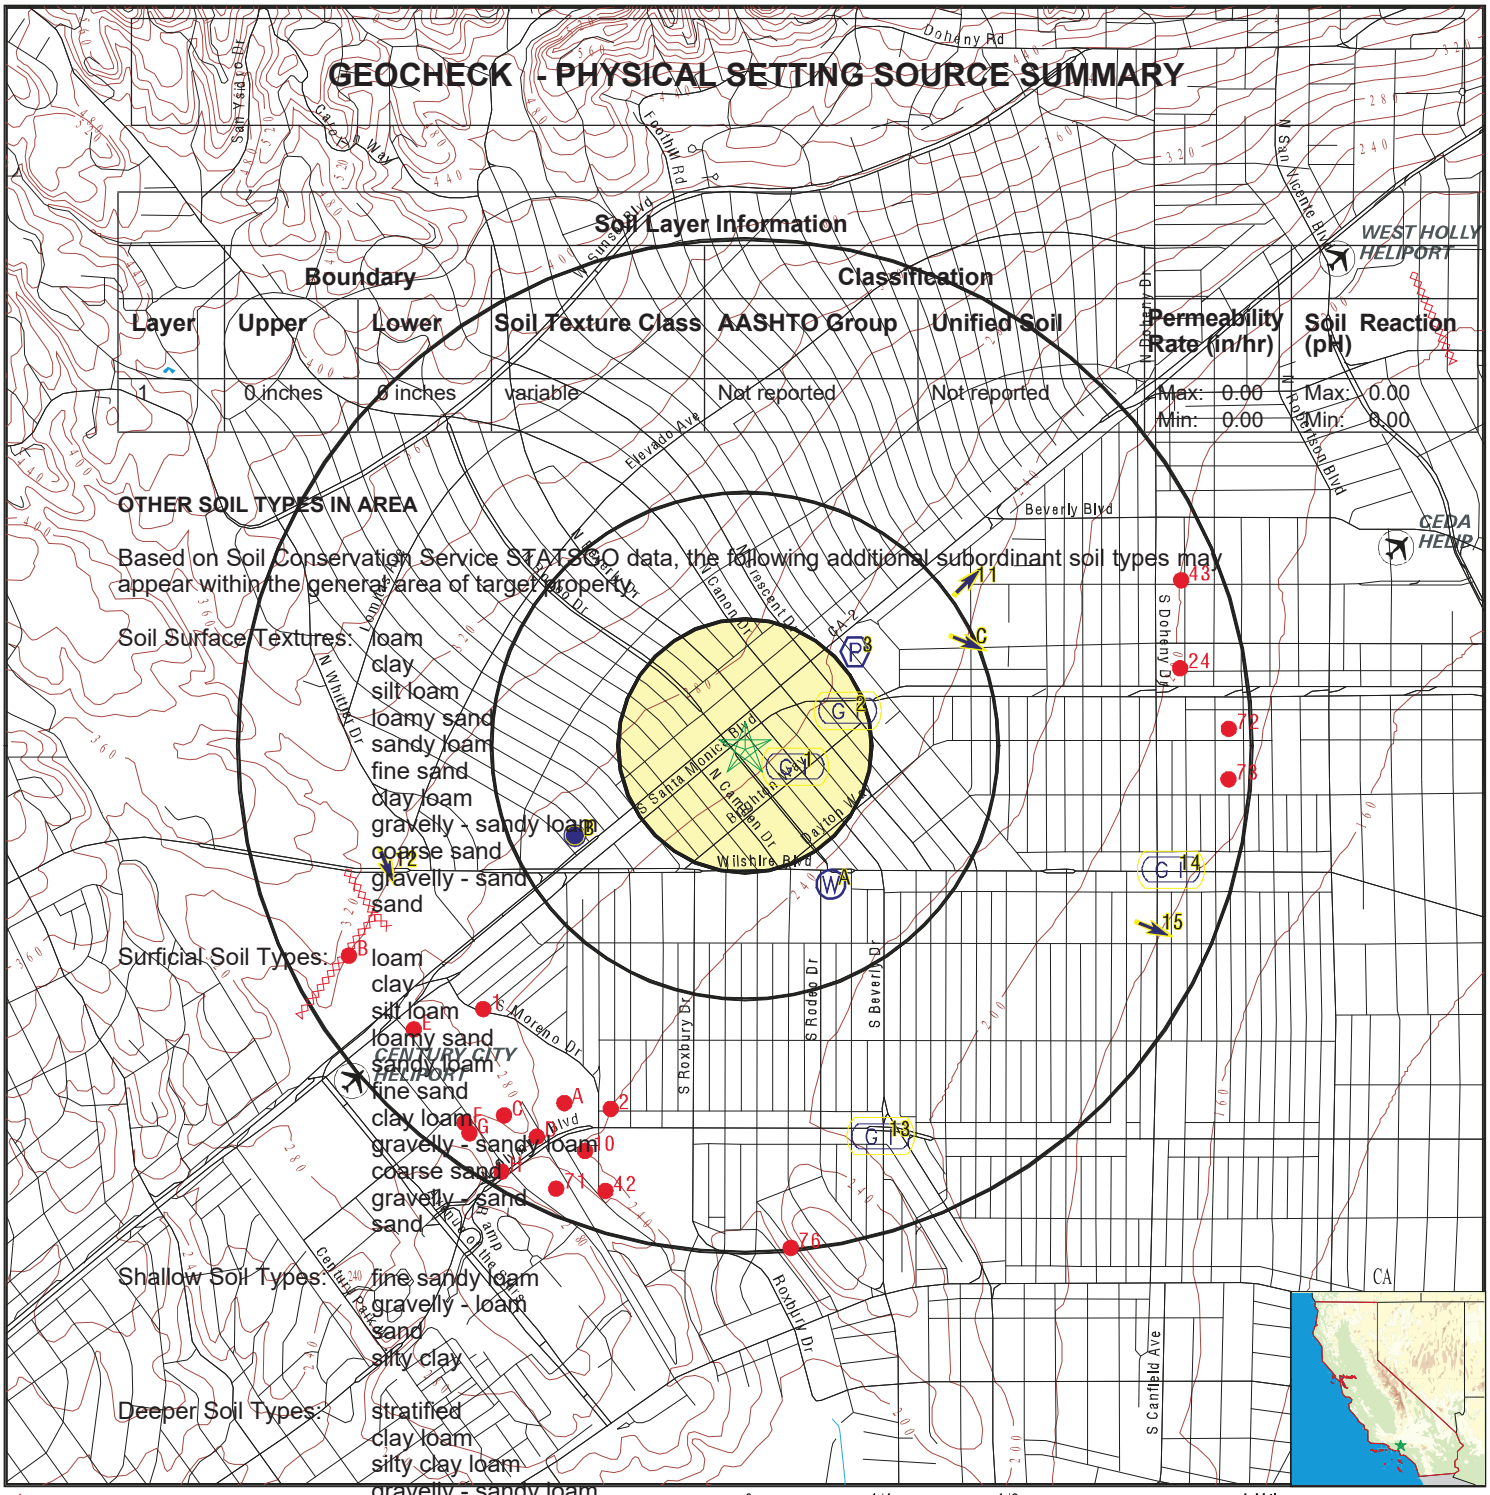
The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported



Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

APPENDIX D: QUALIFICATIONS

PARTNER

Education

B.A., in Geography / Environmental Studies, Political Science and Environmental Systems & Society Minors
University of California Los Angeles (UCLA)

Highlights

10 years in the environmental consulting industry, conducting and managing Phase I Environmental Site Assessments (Phase I ESAs)

7 years managing multiple scope projects, including Phase I ESAs, Property Condition Assessments (PCAs), Seismic assessments, ALTA Surveys, Zoning reports, and Asbestos, Lead Based Paint, Radon, Mold, and Methane assessments/screenings

Experienced in different property types including rural/agricultural land, single and multi-family residential, commercial office and retail (i.e. gas stations and dry cleaners), and industrial and manufacturing operations

Experience Summary

Mr. Bates serves as a Principal and Senior Project Manager for Partner Engineering and Science, Inc. (Partner), performing and managing Phase I Site Assessments in accordance with EPA's All Appropriate Inquiry (AAI) and the American Society of Testing and Materials (ASTM) standard, as well as customized client formats and requirements. Mr. Bates also manages multiple scope projects, and works directly with clients to discuss any specific requirements as well as report findings and recommendations.

Mr. Bates works with large financial institutions including top lenders, equity firms and investors, as well as the Federal Deposit Insurance Corporation (FDIC). For the FDIC, Mr. Bates serves as the Lead Project Manager in managing Phase I ESAs. Mr. Bates also has extensive experience working with many asset management groups, real estate firms and brokers, law firms, and individual owners or prospective buyers.

Mr. Bates entered the environmental consulting industry as a Project Staffer, conducting Phase I ESA assessments. Mr. Bates' thorough breath of field experience quickly translated well into transitioning to project management and conducting technical report reviews. Mr. Bates has completed over thousands of Phase I ESAs and limited environmental scope reports, and peer reviewed hundreds of third-party Phase I and Phase II reports. Mr. Bates has also conducted radon testing, and asbestos and lead based paint sampling throughout Southern California. As a project manager, Mr. Bates has also shown strong prowess in portfolio management, successfully completing various portfolios of up to more than 125 sites.

Mr. Bates is also committed to furthering Partner's position as an industry leader, and is actively involved with internal technical training programs, team management strategies, and marketing.

Project Experience

Mr. Bates has worked on numerous large scope and high profile projects including commercial high rise and new development projects located in Los Angeles, New York City, and throughout the southeastern US.

Gas Station Portfolio, Northern California. Mr. Bates managed a large number of gas station Phase I ESAs on a fast turnaround that involved significant regulatory agency file and historical reviews.

Sheraton Atlanta, Downtown Atlanta, Georgia. Mr. Bates managed multiple scope assessments that were performed on this centrally located 763 room hotel in Downtown Atlanta.

Various Borrower to Lender/Agency Portfolios. Mr. Bates managed several portfolios with multiple scope assessments that were performed to meet borrower requirements and then were converted to meet lender and/or agency-specific requirements.

Stater Bros. Supermarkets Portfolio, Nationwide. Mr. Bates conducted technical report reviews as part of this 300 site portfolio.

40,000 Acres of Land, Hobbs, New Mexico. Mr. Bates conducted the Phase I ESA on this large ranchland site, with Federal and State lands, agricultural, and oil and gas well development concerns.

Fig Central Development, Downtown Los Angeles, California. Mr. Bates managed multiple scope assessments that were performed on this high profile area in Downtown Los Angeles, adjacent to the Staples Center. The assessments were conducted on a 4.6 acre lot in anticipation of a new development including luxury condos, a five star hotel, and 200,000 square feet of commercial space that will feature an open-air shopping mall.

PARTNER

Timothy E. Kidd
National Client Manager

Education

MBA, University of Miami
BBA, University of Michigan

Highlights

Over 11 years in the Commercial Real Estate Due Diligence Industry
11 assisting clients with their Due Diligence including ALTA Land survey, Zoning reports, Property Condition Assessments, Phase I's, II's, ADA Seismic Reports
7 years specifically with Phase I's, II's, Property Condition Assessments, ADA and Seismic Reports

Experience Summary

Mr. Kidd brings over 20 years of experience of sales and account management experience to his role as National Client Manager for Partner Engineering and Science, Inc (Partner). For the last 11 years, Mr. Kidd served as the western region's director for Bock & Clark, expanding the reach of the company from ALTA Surveys to a full-fledged due diligence company, including zoning reports and environmental and engineering due diligence.

An experienced marketing, promotional, and business development professional, Mr. Kidd currently serves as a National Client Manager for Partner, providing solutions to clients' due diligence and engineering needs. He is responsible for all aspects of client management, including ensuring consistency, quality, and on-time delivery of due diligence and engineering services provided by Partner. Current day-to-day responsibilities include business development, client management, project oversight, staff supervision, and technical assistance.

Project Experience

Mr. Kidd works with REIT's, Title Companies, Financial Institutions, Freddie and Fannie and Law Firms throughout North America. Projects include various property types, such as, Multi-Family, Industrial, Shopping Centers, Fast Food Corporate and Franchise as well as Student Housing and Retirement Facilities.

Portfolio Management/Transaction Due Diligence

Independent Living Community Portfolio. Assisted leading independent living owner/operator with the disposition of an approximately $640 million-dollar portfolio 28 properties, containing 3,298 units across 21 states. To help facilitate the disposition of the assets, ALTA land surveys were completed within a three-week time frame.

1031 Exchange Firm. Assisted a national 1031 exchange firm which has over $1 billion of assets under management, 10+ million square feet of value-added multifamily, with their ALTA survey, Zoning reports and Phase I reporting.

Healthcare REIT. Over a ten-year period assisted one of the largest healthcare REIT, with ALTA land surveys and zoning reports for a variety of real estate acquisitions. Including senior housing, life science, medical office, and hospitals.

APPENDIX IV: SUPPORTING DOCUMENTATION

EXECUTIVE SUMMARY

EFI Global, Inc. has performed a Phase I Environmental Site Assessment (Phase I) for 449 North Beverly Drive LLC (Client) for a commercial property located at 449 North Beverly Drive, in Los Angeles County, and the City of Beverly Hills, California, Assessor's Parcel Number (APN): 4343-016-019. The research conducted for this study and the report prepared are in conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the American Society for Testing and Materials (ASTM) E 1527-13 scope of work.

SITE DESCRIPTION

According to our research and information provided by the Client, the following addresses have been found to be associated with the subject property: 417, 417A, 417B, 417C, 449, 449 ½, 449C, 451, 451 ½, 453, and 453B North Beverly Drive, Beverly Hills, California. The subject property is located on the southwest side of North Beverly Drive, approximately 150 feet southeast of South Santa Monica Boulevard, in the City of Beverly Hills. The subject property is approximately 0.18 acre (7,632 square feet) in size and is developed with two single-story commercial structures on the northeast and southwest portions that are connected by a canopy on the central portion. The structures are approximately 6,020 square feet in total size. The building on the northeast portion is currently occupied by Teuscher Swiss Chocolates as a chocolate retail store (449 North Beverly Drive), a vacant space formerly occupied by Hanacci as a jewelry store and skin care facility through November 2019 (451 North Beverly Drive), and a vacant space formerly occupied by The Organic Pharmacy LLC as a cosmetics store through November 2019 (453 North Beverly Drive). The building on the southwest portion (451 ½ North Beverly Drive) is currently occupied by Galerie Michael for art storage purposes. The remaining portions of the property consist of a canopy and storage area on the central portion and concrete-paved walkways on the central and southwest portions. The surrounding area is used for commercial and residential purposes. Groundwater is estimated to be between approximately 35 to 50 feet below ground surface in the area of the site and is assumed to flow towards the east-northeast.

- No significant hazardous material storage or recognized environmental conditions were observed at the site. Those interviewed, as persons familiar with the site were not aware of any negative environmental conditions associated with the property.

HISTORICAL LAND USE

According to EFI Global, Inc.'s interpretation of the historical research data, in 1921, the subject property was developed with the two existing single-story commercial structures (historically addressed as 417, 417A, 417B, and 417C North Beverly Drive) on the northeast and southwest portions, connected by a canopy on the central portion. By 1925, the addresses for the northeast structure changed to 449, 451, and 453 North Beverly Drive. The address of the southwest structure changed to 449C North Beverly Drive by at least 1926. By 1950, the southwest address again changed to 451 ½ North Beverly Drive. The subject property has remained in this configuration through the present and has been utilized for commercial purposes since construction.

Occupants of the subject property at 417 and 449 North Beverly Drive have included Beverly Hills Furniture Company (1922 to 1925), general store (1926), Yorkshire's Sportswear for Women and Children (1934), Liquors LTD (1950 to 1954), Portofino Men's and Women's Shop (1962), Liza Penn

Boutique (1975), Altadena My Muffins (1985), Irma May Florists (1985), Muffin Oven (1991), Saint Urbain Street Bagels (2000 to 2010), Karbo Hi Company Inc., doing business as Saint Urbain Street Bagels (2014), and Teuscher Swiss Chocolates store (present).

Occupants of the subject property at 417A and 451 North Beverly Drive have included an office (1922), general store (1926 to 1969), Albert Sheets Homemade Mission Candies (1927), Colonial Cleaners and Dyers; Colonial Hand Laundry; Community Cleaners and Dyers; Premier Cleaners and Dyers (1934), Daniels of Beverly Hills Fine Costume Jewelry Bags and Blouses (1945 to 1958), Sweaters Et Cetera (1967), Lady Madonna Maternity Boutique (1971 to 1991), Now Showing Maternity (1991), Dale Michelle (2006 to 2014), Hanacci (2019), and vacant (present).

Occupants of the subject property at 417B and 453 North Beverly Drive have included a furniture store (1922), Café Goody Shop (1925), restaurant (1926), Battle Creek Health Foods (1934), Anthony's Sport Wear (1939), Beverly Hills Gift Shop (1945), Louis H. Brown's Optical Dispensary (1950 to 1954), The Coffee Bean (1975), Cultured Cow (1985), Frozen Yogurt Company (1985), Sammy's Sports (2000 to 2006), The Organic Pharmacy LLC (2010 to 2019), and vacant (present).

Occupants of the subject property at 417C, 449C, and 451 ½ North Beverly Drive have included a furniture storage (1922) and upholstery (1922 to 1926), general storage with small machine shop (1950), general storage (1969), and Galerie Michael, for art storage purposes (1981 to present).

- Historical research indicated that the subject property at 417C, 449C, and 451 ½ North Beverly Drive was utilized as an upholstery facility from 1922 to 1926 and developed with a small machine shop in least 1950. It should be noted that the small machine shop was no longer on site by 1969. Based on the small nature of these operations and limited time frames, these former operations are not expected to represent a significant environmental concern for the subject property.

- Historical research indicated that the subject property was occupied by a dry cleaning facility at 451 North Beverly Drive in at least 1934. For further discussion please refer to the Environmental Data Search section below.

- The earliest historical resource obtained during this investigation was a Sanborn map from 1922 which indicated development of the subject property for commercial uses. The lack of historical data sources for the subject property dating back to first developed uses represents historical data source failure. However, it is assumed that prior to 1922, the subject property would have been developed for commercial uses, if not undeveloped. Based on this notion, this limitation is not expected to significantly alter the findings of this investigation.

- EFI Global was not able to identify any historical tenants or reported property usage in association with the commercial structure on the southwest portion (417C, 449C, and 451 ½ North Beverly Drive) from 1970 through 1980, which constitutes a data gap. However, based on the aerial observations, lack of evidence of a documented release, relatively small scale storage nature of the structure, and low likelihood of significant industrial or manufacturing operations during this time period, this is not expected to represent a significant environmental concern for the subject property. Based on this information, this limitation is not expected to significantly alter the findings of this investigation.

- **Karbo Hi Company doing business as (DBA) Saint Urbain Street Bagels / Juice Served Here / Premier Cleaners and Dyers / Community Cleaners and Dyers / Colonial Cleaners and Dyers (449 and 451 North Beverly Drive) -** The subject property is listed on the Facility Index System/Facility Registry System (FINDS), Los Angeles County Hazardous Material Storage –Industrial Waste and Underground Storage Tank Sites (Los Angeles Co. HMS), and EDR Exclusive Historic Dry Cleaners (EDR Hist Cleaner) databases. According to the FINDS listing, Karbo Hi Company DBA Saint Urbain Street Bagels was listed under registry identification number 110070270213. According to the Los Angeles Co. HMS information provided, Juice Served Here is associated with one open undisclosed category permit with facility ID of 034560-060967. No further information regarding the former operations of Karbo Hi Company DBA Saint Urbain Street Bagels and Juice Served Here at 449 and 451 North Beverly Drive are provided. Given the type of operation (food related/restaurant) and open status of the permit, it is expected that the Los Angeles Co. HMS listing relates to water discharge or storm water, however, no file was available for review at the Los Angeles County Department of Public Works Environmental Programs Division (LACDPW EPD). Based on the lack of evidence of a documented release and operations as restaurants, these aforementioned listings are not expected to represent a significant environmental concern for the subject property.

  According to the EDR Hist Cleaner listing and historical research, the subject property at 451 North Beverly Drive was occupied by a dry cleaning facility (Premier Cleaners and Dyers, Community Cleaners and Dyers, Colonial Cleaners and Dyers, and Colonial Hand Laundry) in at least 1934. Historically, Albert Sheets Homemade Mission Candies occupied this tenant space in at least 1927 and Daniels of Beverly Hills Fine Costume Jewelry Bags and Blouses occupied the site from at least 1945 to 1958. Therefore, the maximum period of occupancy for the dry cleaning operation is approximately 17 years (1928 to 1944). Dry cleaning operations typically use chlorinated solvents, particularly tetrachloroethylene (PCE), during the dry cleaning process. These solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with onsite operations. Chlorinated solvents are highly mobile chemicals that can easily accumulate beneath a facility. Based on this information, the presence of a dry cleaning facility on the subject property represents evidence of a recognized environmental concern (REC).

- In our opinion, none of the other sites listed on the regulatory database report pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.

The Los Angeles Regional Water Quality Control Board (LARWQCB), Department of Toxic Substances Control (DTSC), South Coast Air Quality Management District (SCAQMD), Los Angeles County Fire Department Health and Hazardous Materials Division (LACFD HHMD), Los Angeles County Department of Public Works Environmental Programs Division (LACDPW EPD), and Los Angeles County Bureau of Sanitation (LACSD) were contacted regarding permits, air emissions, site investigation files, hazardous materials, underground storage tank, and industrial waste discharge records for the subject property. Additionally, the State Water Resources Control Board's (SWRCB)

GeoTracker and California Integrated Water Quality System (CIWQS) Storm Water Multiple Applications and Report Tracking System (SMARTS), DTSC's Hazardous Waste Tracking System (HWTS) and EnviroStor, SCAQMD's Facility Information Detail (FIND), Los Angeles County Department of Public Works Solid Waste Information Management System (SWIMS), the LACFD HHMD Active Certified Unified Program Agency (CUPA) Program Records, Inactive CUPA Program Records, Site Mitigation Unit (SMU) Case Records, and California Accidental Release Program (CalARP) online databases were reviewed for information pertaining to the subject property.

- According to responses to our requests from the LARWQCB, DTSC, SCAQMD, LACFD HHMD, LACDPW EPD, and LACSD, and a review of the aforementioned databases, there are no files for the subject property.

- No significant data gaps were encountered during our agency file reviews.

The Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System was reviewed for information pertaining to oil and gas exploration on or nearby the subject property. No oil wells were identified within 500 feet of the subject property.

- The User did not provide EFI Global any information either verbally or in writing (i.e. Title Report) regarding environmental cleanup liens or activity and use limitations encumbering the subject property. An environmental lien search was not requested by the User; however, based on our review of the DTSC EnviroStor Database, no environmental liens enforced by the DTSC were identified.

ADDITIONAL ISSUES

- Based on the age of the onsite structures, there is a potential for asbestos-containing building materials at the subject property; however, no testing was completed as part of this report. Suspect asbestos-containing materials (ACMs) were observed in the form of drywall ceilings and partitions, stucco, carpeting, and ceramic wall tiles and associated mastics. All building materials appeared in good to moderate condition at the time of our site reconnaissance. Individual suspect materials would need to be tested as part of an asbestos survey prior to any renovation or demolition in order to confirm the presence or non-presence of asbestos.

- Based on the age of the onsite structures, there is a potential for lead-based paint (LBP) at the site. All painted surfaces appeared in good condition at the time of our site reconnaissance. Individual suspect materials would need to be tested as part of a LBP survey prior to any renovation or demolition in order to confirm the presence or non-presence of LBP.

- According to our research, the potential for radon to be present at the subject property is considered to be moderate.

- EFI Global, Inc. did not observe visible or olfactory indications of the presence of mold, nor did EFI Global, Inc. observe obvious indications of significant water damage. No sampling was conducted as part of this assessment.

- According to our research, the potential for methane to be present at the subject property is considered to be low.

CONCLUSIONS

EFI Global, Inc. has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice 1527-13, at 449 North Beverly Drive, Beverly Hills, California, the subject property. Any exceptions to or deletions from this practice are described in the individual sections of this report. This assessment has revealed no evidence of recognized environmental conditions or *de minimis* conditions in connection with the subject property, except for the following:

RECOGNIZED ENVIRONMENTAL CONDITIONS (REC)

The historical use of the subject property as a dry cleaning facility for up to 17 years (1928 through 1944) is considered a REC.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS (HREC)

In our opinion, no HRECs were identified during the course of this assessment.

CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS (CREC)

In our opinion, no CRECs were identified during the course of this assessment.

DE MINIMIS CONDITIONS

In our opinion, no *de minimis* conditions were identified during the course of this assessment.

RECOMMENDATIONS

Based upon the foregoing, a Phase II Environmental Site Assessment is recommended.

1.0 INTRODUCTION

EFI Global, Inc. has performed a Phase I Environmental Site Assessment (Phase I) for the property located at 449 North Beverly Drive, in Los Angeles County, and the City of Beverly Hills, California (Subject Property). This report has been prepared for the sole use of 449 North Beverly Drive LLC (Client).

The research conducted for this study and the report prepared are in general conformance with the EPA "All Appropriate Inquiries" standard and the ASTM 1527-13 "Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process". The primary purpose for performing a Phase I ESA is to "...permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations (commonly known as landowner liability protections) on Comprehensive Environmental Response Compensation and Liability Act (CERCLA) liability." (ASTM, 2013) An environmental site assessment meeting or exceeding this practice and completed less than 180 days prior to the date of acquisition is presumed to be valid under this standard. In order to maintain landowner liability protections, the User also has a "continuing obligation to not interfere with activity and use limitations associated with the property," must take "reasonable steps to prevent releases" and must "comply with legal release reporting obligations." (ASTM, 2013) Further, it is the goal of this study to identify business risks related to the property associated with environmental conditions. This investigation is not an environmental compliance audit and is not designed to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations.

The goal of this process is to identify any (1) recognized environmental conditions (RECs), (2) historic recognized environmental conditions (HRECs), (3) controlled recognized environmental conditions (CRECs), and/or (4) *de minimis* conditions associated with the subject property.

- A **recognized environmental condition** is defined as "...the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." This definition does not include de minimis conditions defined as "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies" (ASTM, 2013).

- A **historical recognized environmental condition** is defined as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." (ASTM, 2013). The HREC designation requires the comparison of residual contamination concentrations, if any, to current regulatory standards.

- A **controlled recognized environmental condition** is defined as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or

equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)" (ASTM, 2013).

- A ***de minimis condition*** is defined as "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not recognized environmental conditions nor controlled recognized environmental conditions" (ASTM, 2013).

In order to identify environmental conditions at the site, the Phase I ESA includes a site inspection, interviews with parties familiar with the property, historical research into the past uses of the property, and an environmental records search with regard to the subject property, adjoining and immediately surrounding properties, and the surrounding area. In addition, EFI Global, Inc. provides an opinion regarding the potential for asbestos containing materials, lead-based paints, mold, radon, oil and gas exploration, and methane as they relate to the subject property. Reviewing those documents that are publicly available, reasonably ascertainable, and practically reviewable controls the completeness of this assessment. The inability to review documents which do not exist or are not publicly available, reasonably ascertainable, or practically reviewable may result in a data gap.

1.1 Significant Assumptions

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. It is possible that unreported disposal of waste or illegal activities impairing the environmental status of the property may have occurred which could not be identified. The conclusions and recommendations regarding environmental conditions that are presented in this report are based on a scope of work authorized by the Client. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground.

1.2 Limitations and Exceptions

This report has been prepared in accordance with generally accepted environmental methodologies referred to in ASTM 1527-2013, and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report. The conclusions of this report are based in part, on the information provided by others. The possibility remains that unexpected environmental conditions may be encountered at the site in locations not specifically investigated. The services performed and outlined in this report were based, in part, upon visual observations of the site and attendant structures. Our opinion cannot be extended to portions of the site that were unavailable for direct observation, reasonably beyond the control of EFI Global, Inc. The objective of this report was to assess environmental conditions at the site, within the context of our contract and existing environmental regulations within the applicable jurisdiction. Evaluating compliance of past or future owners with applicable local, provincial, and federal government laws and regulations was not included in our contract for services. Our observations relating to the condition of environmental media at the site are described in this report. It should be noted that compounds or materials other than those described could be present in the site environment.

1.3 Reliance

This report has been prepared for the sole use of 449 North Beverly Drive LLC. The contents should not be relied upon by any other parties without the express written consent of 449 North Beverly Drive LLC and EFI Global, Inc.

1.4 User Responsibilities

The United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) and ASTM E 1527-13 Phase I Standards require that the User conduct independent research and consider certain information before purchasing a property:

- Obtain a recent (less than 180 days old) title report prepared for the subject property. The report should be reviewed to obtain information regarding environmental clean-up liens or activity and use limitations (AULs) with regard to the subject property. If environmental cleanup liens or AULs encumbering the subject property or in connection with the subject property are identified, the User should provide that information to the Environmental Professional (EFI Global, Inc.). If the User has actual knowledge of environmental cleanup liens or AULs encumbering the subject property or in connection with the subject property, the User should provide that information to the Environmental Professional (EFI Global, Inc.).

- The User should provide the Environmental Professional (EFI Global, Inc.) with any specialized knowledge the User has with regard to recognized environmental conditions in connection with the property.

- If the User is aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions, the User should provide the information to the Environmental Professional (EFI Global, Inc.).

- If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the User to consider the relationship of the purchase price to the fair market value of the property. If the purchase price is significantly lower than the fair market value, the User should identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products.

2.0 SITE DESCRIPTION

EFI Global, Inc. has performed a Phase I for a commercial property located at 449 North Beverly Drive, in Los Angeles County, and the City of Beverly Hills, California. The subject property is located on the southwest side of North Beverly Drive, approximately 150 feet southeast of South Santa Monica Boulevard, in the City of Beverly Hills. The subject property is approximately 0.18 acre (7,632 square feet) in size and is developed with two single-story commercial structures on the northeast and southwest portions that are connected by a canopy on the central portion. The structures are approximately 6,020 square feet in total size. The building on the northeast portion is currently occupied by Teuscher Swiss Chocolates as a chocolate retail store (449 North Beverly Drive), a vacant space formerly occupied by Hanacci as a jewelry store and skin care facility through November 2019 (451 North Beverly Drive), and a vacant space formerly occupied by The Organic Pharmacy LLC as a cosmetics store through November 2019 (453 North Beverly Drive). The building on the southwest portion (451 ½ North Beverly Drive) is currently occupied by Galerie Michael for art storage purposes. The remaining portions of the property consist of a canopy and storage area on the central portion and concrete-paved walkways on the central and southwest portions. The surrounding area is used for commercial and residential purposes.

Natural gas and electrical services are provided to the subject property by Southern California Gas Company and Southern California Edison, respectively. Potable water and sewer services are provided by the City of Beverly Hills.

2.1 Current and Historical Addresses

According to our research and information provided by the Client, the following addresses have been found to be associated with the subject property: 417, 417A, 417B, 417C, 449, 449 ½, 449C, 451, 451 ½, 453, and 453B North Beverly Drive, Beverly Hills, California.

2.2 Legal Description

According to the Los Angeles County Assessor's Office, the subject property is located in the City of Beverly Hills, and is described by the Assessor's Parcel Number: 4343-016-019.

2.3 Physical Setting

The elevation of the subject property is approximately 265 feet above sea level (United States Geological Survey Beverly Hills, California 7.5 minute topographic quadrangle). Based on our review of the GeoCheck Section of the Environmental Data Resources, Inc. (EDR) Radius report, the subject property is not situated within a 100-year Federal Environmental Management Agency (FEMA) Flood Zone. No wetlands were identified at the property or adjoining/immediately surrounding properties. Based on our review of groundwater data presented in the State Water Resources Control Board (SWRCB) GeoTracker website, groundwater was detected at a leaking underground storage tank site (427 North Crescent Drive) approximately 0.12 mile (650 feet) northeast of the subject property at approximately 35 to 50 feet below ground surface. However, perched and semi-perched aquifers may be present beneath the site. Based on regional groundwater data, regional groundwater flow direction is estimated to be towards the east-northeast; however, local groundwater flow direction may vary.

3.0 SITE RECONNAISSANCE/INTERVIEWS

3.1 Site Reconnaissance

On November 27, 2019, Mr. Alberto Jimenez of EFI Global, Inc. conducted a site reconnaissance of the subject property. The site inspection was conducted to attempt to identify current site use(s), current hazardous materials storage, and evidence of past site uses and hazardous material storage and to identify evidence of other recognized environmental conditions. The following table summarizes our Site Reconnaissance observations:

Yes	No	Observed Feature(s)
	✔	Hazardous Substances and Petroleum Products Containers
	✔	Underground and/or Aboveground Storage Tanks
	✔	Drains/Sumps/Clarifiers/Sewer Interceptors/Septic Systems
	✔	Stained or Corroded Surfaces/Stained Soil or Stressed Vegetation
	✔	Pits/Ponds/Lagoons/Wetlands
	✔	Electrical Equipment with the Potential to contain Fluids
	✔	Production or Monitoring Wells
	✔	Evidence of Solid Waste Disposal/Dumping/Fill Areas

3.1.1 Exterior Observations

The exterior portions of the site consist of a canopy and storage area on the central portion and concrete-paved walkways on the central and southwest portions. All paved surfaces appeared to be in good to moderate conditions with evidence of minor cracking and staining observed. Based on the surficial nature, the staining is not expected to represent an environmental concern for the subject property. No storm drains were observed on the exterior portions of the subject property. Four (4) trash dumpsters were observed on the southwest portion next to the southwest adjoining property, which, according to Ms. Stephanie Abrams, the site manager, are shared by the subject property and the southwest adjoining property. No evidence of hazardous materials storage or disposal or subsurface features such as drains were observed within or in the vicinity of the trash dumpsters. No pole- or pad-mounted electrical transformers or polychlorinated biphenyl (PCB)-containing equipment were observed on-site.

The canopy and storage area on the central portion contained miscellaneous household supplies and retail items (wooden cabinets, plastic briefcases, closed boxes, a sealed DVR box, etc.). Small quantities (less than 10) of paint and household cleaning supplies stored in 1- and 5-quart containers were observed in the central portion and storage area. Based on the small quantities of hazardous materials observed and lack of conduits to the subsurface observed, the cleaning and maintenance supplies are not expected to represent a significant environmental concern for the subject property.

No recognized environmental conditions were observed in the exterior portions of the subject property.

3.1.2 Interior Observations

The subject property is developed with two single-story commercial structures on the northeast and southwest portions that are connected by a canopy on the central portion. The structure on the northeast portion (449, 451, and 453 North Beverly Drive) is of reinforced brick, concrete masonry unit (block), and wood frame construction, with concrete slab-on-grade foundation, and a flat roof. Building materials observed within all tenant spaces included stucco, drywall partitions and ceilings, ceramic wall tiles, and smooth concrete and wood laminate flooring. The concrete flooring was observed to be in good condition. The building is currently occupied by Teuscher Swiss Chocolates as a chocolate retail store (449 North Beverly Drive), a vacant space formerly occupied by Hanacci as a jewelry store and skin care facility through November 2019 (451 North Beverly Drive), and a vacant space formerly occupied by The Organic Pharmacy LLC as a cosmetics store through November 2019 (453 North Beverly Drive). The structure consisted of open retail customer areas, restrooms, storage rooms, and facial treatment rooms. The subject property building is connected to municipal sewer and water supplies. No floor drains were observed within the structure. Small containers (less than 5-gallons each) of household cleaning supplies were observed throughout the property. No stains or spills were observed in the vicinity of the supplies. Based on the nature and small quantities stored, the presence of the cleaning supplies is not expected to represent a significant environmental concern for the subject property.

The structure on the southwest portion is of reinforced brick construction, with a concrete slab-on-grade foundation, and a flat roof. The building is currently occupied by Galerie Michael for art storage purposes (451 ½ North Beverly Drive) and includes office and storage areas and restrooms. Building materials observed within included drywall partitions and ceilings, carpeting, and smooth concrete and wood laminate flooring. The concrete flooring was observed to be in good condition. The subject property building is connected to municipal sewer and water supplies. No floor drains were observed within the structure.

No significant hazardous material storage or recognized environmental conditions were observed in the interior portions of the subject property.

3.1.3 Reconnaissance Limitations

No significant limitations were encountered during our reconnaissance of the subject property.

3.2 Adjoining and Immediately Surrounding Properties

The adjoining and immediately surrounding properties (within 100-feet of the subject property boundary) were visually and physically observed from public right-of ways and the subject property in an attempt to identify recognized environmental conditions. Our observations are summarized in the following table:

Location	Address(es)	Uses/Observations
Northeast	460 North Beverly Drive	Bank of America
Southeast	437-447 (odd) North Beverly Drive	Tom's Toys, The Farm of Beverly Hills, The Coffee Bean and Tea Leaf, and T-Mobile
Northwest	465 North Beverly Drive	The Paley Center For Media

Location	Address(es)	Uses/Observations
Southwest	444 North Rodeo Drive	Ralph Lauren department store

- The adjoining/immediately surrounding properties to the southeast and southwest were listed on the regulatory database report and are further discussed in Section 5.2 below.

3.3 Surrounding Area Observations

3.3.1 Surrounding Property Uses

The surrounding area is developed with commercial and residential structures.

3.3.2 Surrounding Geography

The surrounding area is mostly flat with a slight topographic slope to the east-northeast. No nearby hills or bedrock outcroppings were observed in the area of the site. No lakes, ponds, rivers or streams were observed in the surrounding area.

3.4 Interviews

3.4.1 Property Owner

Ms. Carrie Klein, the property owner's representative, completed an owner questionnaire for the purpose of this report, dated December 2, 2019. Ms. Klein did not provide the year of construction. Please note, according to a Property Detail Report obtained from the Los Angeles County Assessor's Office, the current structures are believed to have been constructed in 1921. Ms. Klein was unaware of any environmental conditions associated with the property.

3.4.2 Key Site Manager

Ms. Stephanie Abramson, the site manager, was interviewed during the course of the site reconnaissance conducted on November 27, 2019. According to Ms. Abramson, no hazardous materials are utilized at the subject property. Ms. Abramson was not aware of any environmental conditions at the subject property.

3.4.3 Property Occupants

No occupants were available for interview during the completion of this report.

3.4.4 Past Owners, Operators and Occupants

Past owners, operators and occupants were not able to be identified for an interview for this report.

3.4.5 Prospective Purchaser

Mr. Franklin Dickinson, the prospective purchaser, completed a potential purchaser questionnaire for the purpose of this report, dated November 25, 2019. Mr. Dickinson was unaware of any recognized environmental conditions such as underground storage tanks or any generated hazardous materials associated with the property.

3.4.6 Neighboring Property Owners/Tenants

Per ASTM, an attempt to interview neighboring property owners/tenants should be conducted when the subject property is vacant and unsecured land.

As the subject property is currently developed and utilized for commercial retail and storage purposes, no neighboring property owners/tenants were interviewed during this assessment.

3.5 User Provided Information

The United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) and ASTM 1527-13 Phase I Standards require that the Report User conduct independent research and consider certain information before purchasing a property. EFI Global, Inc. recommends that the User documents completion of the following items:

3.5.1 Lien Search

The User is required to obtain a recent (less than 180 days old) title report prepared for the subject property. The report should be reviewed to obtain information regarding environmental clean-up liens or activity and use limitations with regard to the subject property. If environmental cleanup liens or activity and use limitations encumbering the subject property or in connection with the subject property are identified, the User should provide that information to the Environmental Professional (EFI Global, Inc.). If the User has actual knowledge of environmental cleanup liens or activity and use limitations encumbering the subject property or in connection with the subject property, the User should provide that information to the Environmental Professional (EFI Global, Inc.).

- The User did not provide EFI Global any information either verbally or in writing (i.e. Title Report) regarding environmental cleanup liens or activity and use limitations encumbering the subject property. An environmental lien search was not requested by the User; however, based on our review of the DTSC EnviroStor Database, no environmental liens enforced by the DTSC were identified.

3.5.2 Specialized Knowledge

The User should provide the Environmental Professional (EFI Global, Inc.) with any specialized knowledge the User has with regard to recognized environmental conditions in connection with the property.

- The User has no specialized knowledge with respect to recognized environmental conditions in connection with the property.

3.5.3 Commonly Known or Reasonably Ascertainable Information

If the User is aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions, the User should provide the information to the Environmental Professional (EFI Global, Inc.).

- The User is not aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions.

3.5.4 Property Valuation

If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the User to consider the relationship of the purchase price to the fair market value of the property. If the purchase price is significantly lower than the fair market value, the User should identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products.

- According to the User, the purchase price generally reflects the fair market value of the property.

3.5.5 Purpose of Performing Phase I ESA

According to the User, the User is a prospective purchaser of the subject property and the Phase I is being performed to qualify for landowner liability protections under CERCLA as well as identify business risks related to the property associated with environmental conditions.

3.6 User Provided Documents

No documents were provided to EFI Global, Inc. by the report User.

4.0 HISTORICAL LAND USE

A review of historical data derived from standard historical resources is provided in this section. The objective of consulting historical sources is to develop a history of the previous uses of the property and surrounding area, in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the property. During our historical review, acute attention is paid to the subject property. Data relating to the adjoining and immediately surrounding properties (within 100-feet of the subject property boundary) and the surrounding area is reviewed to the extent that it is revealed in the course of researching the property itself.

4.1 Aerial Photography Review

Aerial Photography of many portions of the United States dates back to the 1920's. Items searched for in each photograph included, but were not limited to: evidence of tanks, gas stations, industrial site usage, water drainage pathways, areas which show evidence of drums or excessive debris, discolored or stained soils, areas of distressed vegetation, et cetera.

Aerial Photograph Coverage was available from EDR for the years: 1927, 1938, 1947, 1956, 1965, 1976, 1989, 1994, 2005, 2009, 2010, 2012, 2014, 2016, and 2019. A summary of our observations is presented in the following table.

Year	Subject Property	Notable Adjoining Property Observations	Notable Observations of the Surrounding Area
1927, 1938, 1947, 1956, 1965, 1976, 1989, 1994, 2005, 2009, 2010, 2012, 2014, 2016, and 2019	The subject property appears to be developed with the two existing commercial structures on the northeast and southwest portions that are connected by a canopy on the central portion.	Northeast: North Beverly Drive and commercial development beyond Southeast: Commercial development Southwest: Alleyway and commercial development beyond Northwest: Commercial development	The surrounding area is depicted with commercial and residential structures.

- Aerial photographs from Historic Aerials by Nationwide Environmental Title Research (NETR) for the years 2009, 2010, 2012, 2014, and 2016 were reviewed for the subject property. The subject property and all adjoining/immediately surrounding properties remained in their existing configurations. Since these photographs are copyrighted, they have not been included in the report. Additionally, a 2019 aerial photograph

from Google Maps was reviewed for the subject property and has been included in the report. The subject property and all adjoining/immediately surrounding properties remained in their existing configurations.

4.2 Building Department Records Review

The addresses identified as current and historical addresses for the subject property were researched at the City of Beverly Hills Building and Safety Department (BHBSD). Items considered in the course of the building permit review are previous site usage, previous ownership, and the construction or demolition of any structures that may have had a negative environmental impact on the property. The following table summarizes relevant building permits obtained and reviewed:

449, 451, and 453 North Beverly Drive		
Date	**Owner/Occupant**	**Purpose**
10/15/1921	S. C. Campbell	Construction of a single-story commercial structure

- Based on the changes in addresses over time, the remaining building permits did not apply to the subject property.

4.3 City Directory Review

City directories have been published since the 1800's and provide detailed occupant information for the property and its surrounding area at five-year intervals. The purpose of the City Directory research is to attempt to determine the businesses that historically occupied the subject property. Historical City Directories provided by EDR and reviewed by EFI Global, Inc. are listed below.

417 North Beverly Drive	
Date	**Listing**
1934, 1939, 1945, 1950, 1954, 1958, 1962, 1967, 1970, 1971, 1975, 1976, 1981, 1985, 1986, and 1990	Beverly Hills Camera Shop
1991	Beverly Hills Camera Shop; Leica Collector's Corner
2000	J Elzas
2006	Jill Roberts Corporate Office
2010	Beverly Hills Luggage Inc.

449 North Beverly Drive	
Date	**Listing**
1925	Beverly Hills Furniture Company
1934	Yorkshire's Sportswear for Women and Children
1950 and 1954	Liquors LTD
1962	Portofino Men's and Women's Shop
1975	Liza Penn Boutique

449 North Beverly Drive	
Date	**Listing**
1985	Altadena My Muffins
1991	Muffin Oven
2000	Saint Urbain Street Bagels
2006	Saint Urbain Street Bagels; Spencer and Hawkins
2010	Saint Urbain Street Bagels
2014	Galerie Michael; Karbo Hi Company Inc.; Saint Urban Street Bagels

449 ½ North Beverly Drive	
Date	**Listing**
1985	Irma May Florists

451 North Beverly Drive	
Date	**Listing**
1934	Colonial Cleaners and Dyers; Colonial Hand Laundry; Community Cleaners and Dyers; Premier Cleaners and Dyers
1945, 1950, 1951, 1954, and 1958	Daniels of Beverly Hills Fine Costume Jewelry Bags and Blouses
1967	Sweaters Et Cetera
1975, 1976, 1980, 1981, 1985, 1986, and 1990	Lady Madonna Maternity Boutique
1991	Lady Madonna Maternity Boutique; Now Showing Maternity
2006, 2010, and 2014	Dale Michelle

453 North Beverly Drive	
Date	**Listing**
1925	Café Goody Shop; Mary Holcomb Waitress Goody Shop; Robert Sporneder Cook Goody Shop; Tillie Peereboom Waitress Goody Shop
1934	Battle Creek Health Foods
1939	Anthony's Sport Wear
1945	Beverly Hills Gift Shop
1950 and 1954	Louis H. Brown's Optical Dispensary
1975	The Coffee Bean
1985	Cultured Cow; Frozen Yogurt Company
2000 and 2006	Sammy's Sports
2010 and 2014	The Organic Pharmacy LLC

- The 417 North Beverly Drive address was associated to the subject property in at least 1922. By 1925, the subject property was addressed as 449, 449C, 451, and 453 North Beverly Drive. The 417 North Beverly Drive address is presently associated to a surrounding property

located approximately 250 feet southeast of the subject property. As all city directory listings above for 417 North Beverly Drive are from 1934 to 2010, none of these listings pertain to the subject property.

- City directories indicate that the subject property was occupied by a dry cleaning facility at 451 North Beverly Drive in at least 1934. For further discussion refer to Section 5.1.

- City directories indicate that the southeast adjoining property at 437 North Beverly Drive was developed with an automobile repair facility (Beverly Drive Garage) from at least 1934 to 1945. For further discussion refer to Section 5.2.

- City directories indicate that the adjacent property located approximately 20 feet southwest of the subject property at 452 North Rodeo Drive was occupied by a French hand laundry facility (Beverly-Wilshire French Hand Laundry) from at least 1934 to 1945. For further discussion refer to Section 5.2.

- City directories indicate that the immediately surrounding property located approximately 55 feet south of the subject property at 438 North Rodeo Drive was developed with an automobile repair facility (Douglas L. Phillips Company) from in least 1934. For further discussion refer to Section 5.2.

4.4 Sanborn Map Review

Originally compiled by the Sanborn Map Company of Pelham, New York for fire insurance companies to assess fire risks related to building materials and hazardous materials storage, today Sanborn Maps are an invaluable tool for Environmental Professionals in determining historical site use and the potential for environmental conditions. Sanborn Map Coverage is available from as early as 1867 in some cities. Although Sanborn maps were created for approximately twelve thousand cities and towns in the United States, Canada, and Mexico, Sanborn Map Coverage is not available in newer and more rural communities. Sanborn Map Coverage was available from EDR for the years: 1922, 1926, 1950, and 1969. A summary of our observations is presented in the following table.

Year	Subject Property	Notable Adjoining Property Observations	Notable Observations of the Surrounding Area
1922	The subject property is depicted with the two existing single-story commercial structures on the northeast (417, 417A, and 417B North Beverly Drive) and southwest (417C North Beverly Drive) portions that are connected by a canopy on the central portion. The structure on the northeast portion was utilized as an office and a furniture store and the southwest structure was used as a furniture storage and repair facility.	Northeast: North Beverly Drive and undeveloped land beyond Southeast: Undeveloped land and Beverly Drive Garage and automobile repair facility (413 North Beverly Drive) beyond Southwest: Alleyway and undeveloped land beyond Northwest: Commercial development	The surrounding area is depicted with commercial and residential structures.
1926	The subject property is depicted with the two existing single-story commercial structures on the northeast (449, 451, and 453 North Beverly Drive) and southwest (449C North Beverly Drive) portions that are connected by a canopy on the central portion. The structure on the northeast portion was utilized as a restaurant and a general store and the structure on the southwest portion was utilized as an upholstery facility.	Northeast: North Beverly Drive and commercial development beyond Southeast: Commercial automobile parking garage and automobile repair facility (439 North Beverly Drive) Southwest: Alleyway and undeveloped land beyond Northwest: Commercial development	The surrounding area is depicted with commercial and residential structures.

Year	Subject Property	Notable Adjoining Property Observations	Notable Observations of the Surrounding Area
1950	The subject property is depicted with the two existing single-story commercial structures on the northeast (449, 451, and 453 North Beverly Drive) and southwest (451 ½ North Beverly Drive) portions that are connected by a canopy on the central portion. The structure on the northeast portion was occupied by three general stores and the structure on the southwest portion was utilized for miscellaneous storage with a small machine shop.	Northeast: North Beverly Drive and commercial development beyond Southeast: Commercial development and warehouse Southwest: Alleyway and commercial development beyond Northwest: Commercial development	The surrounding area is depicted with commercial and residential structures.
1969	The subject property is depicted with the two existing single-story commercial structures on the northeast (449, 451, and 453 North Beverly Drive) and southwest (451 ½ North Beverly Drive) portions that are connected by a canopy on the central portion. The structure on the northeast portion was occupied by three general stores and the structure on the southwest portion was utilized for miscellaneous storage.	Northeast: North Beverly Drive and commercial development beyond Southeast: Commercial development and warehouse Southwest: Alleyway and commercial development beyond Northwest: Commercial development	The surrounding area is depicted with commercial and residential structures.

- Sanborn maps indicate the following historical street addresses associated with the subject property: 417, 417A, 417B, 417C, 449, 449C, 451, 451 ½, 453, and 453B North Beverly Drive. These addresses were researched during the completion of this report.

- Sanborn maps indicate that the subject property was developed with an upholstery facility from 1922 to 1926 and with a small machine shop on the southwest portion from in least 1950. For further discussion refer to Section 4.5.1.

- Sanborn maps indicated that the southeast adjoining property was developed with an automotive repair facility from at least 1922 to 1926. For further discussion refer to Section 5.2.

4.5 Historical Summary

4.5.1 Subject Property

According to EFI Global, Inc.'s interpretation of the historical research data, in 1921, the subject property was developed with the two existing single-story commercial structures (historically addressed as 417, 417A, 417B, and 417C North Beverly Drive) on the northeast and southwest portions, connected by a canopy on the central portion. By 1925, the addresses for the northeast structure changed to 449, 451, and 453 North Beverly Drive. The address of the southwest structure changed to 449C North Beverly Drive by at least 1926. By 1950, the southwest address again changed to 451 ½ North Beverly Drive. The subject property has remained in this configuration through the present and has been utilized for commercial purposes since construction.

Occupants of the subject property at 417 and 449 North Beverly Drive have included Beverly Hills Furniture Company (1922 to 1925), general store (1926), Yorkshire's Sportswear for Women and Children (1934), Liquors LTD (1950 to 1954), Portofino Men's and Women's Shop (1962), Liza Penn Boutique (1975), Altadena My Muffins (1985), Irma May Florists (1985), Muffin Oven (1991), Saint Urbain Street Bagels (2000 to 2010), Karbo Hi Company Inc., doing business as Saint Urbain Street Bagels (2014), and Teuscher Swiss Chocolates store (present).

Occupants of the subject property at 417A and 451 North Beverly Drive have included an office (1922), general store (1926 to 1969), Albert Sheets Homemade Mission Candies (1927), Colonial Cleaners and Dyers; Colonial Hand Laundry; Community Cleaners and Dyers; Premier Cleaners and Dyers (1934), Daniels of Beverly Hills Fine Costume Jewelry Bags and Blouses (1945 to 1958), Sweaters Et Cetera (1967), Lady Madonna Maternity Boutique (1971 to 1991), Now Showing Maternity (1991), Dale Michelle (2006 to 2014), Hanacci (2019), and vacant (present).

Occupants of the subject property at 417B and 453 North Beverly Drive have included a furniture store (1922), Café Goody Shop (1925), restaurant (1926), Battle Creek Health Foods (1934), Anthony's Sport Wear (1939), Beverly Hills Gift Shop (1945), Louis H. Brown's Optical Dispensary (1950 to 1954), The Coffee Bean (1975), Cultured Cow (1985), Frozen Yogurt Company (1985), Sammy's Sports (2000 to 2006), The Organic Pharmacy LLC (2010 to 2019), and vacant (present).

Occupants of the subject property at 417C, 449C, and 451 ½ North Beverly Drive have included a furniture storage (1922) and upholstery (1922 to 1926), general storage with small machine shop (1950), general storage (1969), and Galerie Michael, for art storage purposes (1981 to present).

- Historical research indicated that the subject property at 417C, 449C, and 451 ½ North Beverly Drive was utilized as an upholstery facility from 1922 to 1926 and developed with a small machine shop in least 1950. It should be noted that the small machine shop was no longer on site by 1969. Based on the small nature of these operations and limited time frames, these former operations are not expected to represent a significant environmental concern for the subject property.

- Historical research indicated that the subject property was occupied by a dry cleaning facility at 451 North Beverly Drive in at least 1934. For further discussion refer to Section 5.1.

4.6 Historical Data Gaps

The earliest historical resource obtained during this investigation was a Sanborn map from 1922 which indicated development of the subject property for commercial uses. The lack of historical data sources for the subject property dating back to first developed uses represents historical data source failure. However, it is assumed that prior to 1922, the subject property would have been developed for commercial uses, if not undeveloped. Based on this notion, this limitation is not expected to significantly alter the findings of this investigation.

EFI Global was not able to identify any historical tenants or reported property usage in association with the commercial structure on the southwest portion (417C, 449C, and 451 ½ North Beverly Drive) from 1970 through 1980, which constitutes a data gap. However, based on the aerial observations, lack of evidence of a documented release, relatively small scale storage nature of the structure, and low likelihood of significant industrial or manufacturing operations during this time period, this is not expected to represent a significant environmental concern for the subject property. Based on this information, this limitation is not expected to significantly alter the findings of this investigation.

5.0 REGULATORY DATABASE REPORT

A radial database search was conducted in accordance with the specifications defined in ASTM E 1527-13 which sets the radial search distances for each regulatory database. The radial database search was conducted by EDR on November 14, 2019. A copy of the database report is presented in Appendix II of this report. The following table summarizes required databases reviewed, the approximate search distances, and indicates if the subject site, adjoining/immediately surrounding properties or surrounding sites are listed on the respective database.

Following the table are summaries of the information found in the relevant database listings and our opinion regarding the potential for the subject property to be impacted. Our opinion is based on the information found in the database listings, through other historical and regulatory resources, "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM E2600-15), and assumed groundwater flow direction. As discussed in Section 2.3, groundwater is estimated to be approximately 35 to 50 feet below ground surface in the area of the site and is assumed to flow towards the east-northeast.

DATABASE	Search Distance (Miles)	Subject Site (Yes/No)	Adjacent Site (Yes/No)	Total Listings (#)
Federal National Priorities List (NPL)	1.0	No	No	0
Federal De-listed NPL	1.0	No	No	0
Federal CERCLIS	0.5	No	No	0

State/Tribal Brownfield Sites	0.5	No	No	0

5.1 Subject Property

Karbo Hi Company doing business as (DBA) Saint Urbain Street Bagels / Juice Served Here / Premier Cleaners and Dyers / Community Cleaners and Dyers / Colonial Cleaners and Dyers (449 and 451 North Beverly Drive) - The subject property is listed on the Facility Index System/ Facility Registry System (FINDS), Los Angeles County Hazardous Material Storage –Industrial Waste and Underground Storage Tank Sites (Los Angeles Co. HMS), and EDR Exclusive Historic Dry Cleaners (EDR Hist Cleaner) databases. According to the FINDS listing, Karbo Hi Company DBA Saint Urbain

Street Bagels was listed under registry identification number 110070270213. According to the Los Angeles Co. HMS information provided, Juice Served Here is associated with one open undisclosed category permit with facility ID of 034560-060967. No further information regarding the former operations of Karbo Hi Company DBA Saint Urbain Street Bagels and Juice Served Here at 449 and 451 North Beverly Drive are provided. Given the type of operation (food related/restaurant) and open status of the permit, it is expected that the Los Angeles Co. HMS listing relates to water discharge or storm water, however, no file was available for review at the Los Angeles County Department of Public Works Environmental Programs Division (LACDPW EPD). Based on the lack of evidence of a documented release and operations as restaurants, these aforementioned listings are not expected to represent a significant environmental concern for the subject property.

According to the EDR Hist Cleaner listing and historical research, the subject property at 451 North Beverly Drive was occupied by a dry cleaning facility (Premier Cleaners and Dyers, Community Cleaners and Dyers, Colonial Cleaners and Dyers, and Colonial Hand Laundry) in at least 1934. Historically, Albert Sheets Homemade Mission Candies occupied this tenant space in at least 1927 and Daniels of Beverly Hills Fine Costume Jewelry Bags and Blouses occupied the site from at least 1945 to 1958. Therefore, the maximum period of occupancy for the dry cleaning operation is approximately 17 years (1928 to 1944). Dry cleaning operations typically use chlorinated solvents, particularly tetrachloroethylene (PCE), during the dry cleaning process. These solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with onsite operations. Chlorinated solvents are highly mobile chemicals that can easily accumulate beneath a facility. Based on this information, the presence of a dry cleaning facility on the subject property represents evidence of a recognized environmental concern (REC).

5.2 Adjoining and Immediately Surrounding Properties

Fox Photo Inc. / Fox Photo Inc. #05016 / Beverly Drive Garage (437 and 447 North Beverly Drive) - The adjoining property located southeast of the subject property (hydrologically cross-gradient) is listed on the Los Angeles Co. HMS, Facility and Manifest Data (HAZNET), and EDR Exclusive Historic Gas Stations (EDR Hist Auto) databases. According to the EDR Hist Auto listing and historical research, Beverly Drive Garage operated as an automobile repair facility from at least 1922 to 1945. No further information is provided. According to the HAZNET listing, Fox Photo Inc. generated between 0.06- and 0.17-ton of hazardous waste annually from 1994 to 1997. Types of hazardous waste generated include metal sludge (alkaline solution (pH greater than or equal to 12.5) with metals), other inorganic solid waste, and photo chemical/photo processing waste. Hazardous wastes were disposed via recycler. According to the Los Angeles Co. HMS information provided, Fox Photo Inc. #05016 is associated with one industrial waste water permit which has since been removed. No further information was provided. Based on the lack of evidence of a documented release and cross-gradient location with regards to the subject property, these listings are not expected to represent a significant environmental concern for the subject property.

Beverly-Wilshire French Hand Laundry (452 North Rodeo Drive) - The adjacent property located approximately 20 feet southwest (hydrologically up-gradient), across an alleyway, is listed on the EDR Hist Cleaner database. According to the EDR Hist Cleaner listing and historical research, Beverly-Wilshire French Hand Laundry occupied the site from at least 1934 to 1945 as a French hand laundry facility. Based on this facility reportedly being a hand washing operation, it is unlikely that dry cleaning was performed onsite. Based on this information and lack of a reported release, this listing is not expected to represent a significant environmental concern for the subject property.

Douglas L. Phillips Company (438 North Rodeo Drive) - The immediately surrounding property located approximately 55 feet south of the subject property (hydrologically up-gradient) is listed on the EDR Hist Auto database. According to the EDR Hist Auto listing and historical research, Douglas L. Phillips Company operated as an automobile repair facility in least 1934. No further information is provided. Based on the lack of evidence of a documented release, this listing is not expected to represent a significant environmental concern for the subject property.

No other adjoining/immediately surrounding properties (within 100-feet) were listed on any of the regulatory databases researched or the listings were not associated with the storage or disposal of hazardous wastes including aboveground or underground storage tanks, did not indicate a known chemical release, and did not indicate a property use where the use of hazardous chemicals would be expected.

5.3 Surrounding Area

In our opinion, none of the other sites listed on the regulatory database report pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.

5.4 Orphan Sites

Orphan sites are unmappable sites which appear in a list form in the Radius Map Report rather than on the standard Radius Map. Three (3) orphan sites were identified in the Radius Map Report prepared for this site. The sites were manually mapped to determine the location of the site relative to the subject property and groundwater gradient. The following conclusions were made:

In our opinion, none of the orphan sites listed pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.

6.0 AGENCY FILE REVIEWS

6.1 State Agencies

The Los Angeles Regional Water Quality Control Board (LARWQCB), Department of Toxic Substances Control (DTSC), and South Coast Air Quality Management District (SCAQMD) were contacted regarding permits, air emissions, and site investigation files for the subject property. Additionally, the State Water Resources Control Board's (SWRCB) GeoTracker and California Integrated Water Quality System (CIWQS) Storm Water Multiple Applications and Report Tracking System (SMARTS), DTSC's Hazardous Waste Tracking System (HWTS) and EnviroStor, and SCAQMD's Facility Information Detail (FIND) online databases were reviewed for information pertaining to the subject property.

- According to responses to our requests from the LARWQCB, DTSC, and SCAQMD, and a review of the aforementioned databases, there are no files for the subject property.

The Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System was reviewed for information pertaining to oil and gas exploration on or nearby the subject property.

- No oil wells were identified within 500 feet of the subject property.

6.2 City/County Agencies

The Los Angeles County Fire Department Health and Hazardous Materials Division (LACFD HHMD), Los Angeles County Department of Public Works Environmental Programs Division (LACDPW EPD), and Los Angeles County Bureau of Sanitation (LACSD) were contacted regarding hazardous materials, underground storage tank, and industrial waste discharge records for the subject property. Additionally, the Los Angeles County Department of Public Works Solid Waste Information Management System (SWIMS), LACFD HHMD Active Certified Unified Program Agency (CUPA) Program Records, Inactive CUPA Program Records, Site Mitigation Unit (SMU) Case Records, and California Accidental Release Program (CalARP) online databases were reviewed for information pertaining to the subject property.

- According to responses to our requests from the LACFD HHMD, LACDPW EPD, and LACSD, and a review of the aforementioned databases, there are no files for the subject property.

6.3 Agency File Review Limitations

No significant data gaps were encountered during our agency file reviews.

7.0 NON-SCOPE ENVIRONMENTAL RISKS

ASTM Standard E1527-13 identifies additional conditions which, should they exist at the subject property, may create a human health risk to the occupants of the site. These risks may also create additional costs to the property owner in the form of identification, operations & maintenance, and cleanup or remediation.

7.1 Asbestos Containing Building Materials

Asbestos is a group of naturally occurring minerals used in many products, including building materials vehicle brakes, insulation and other products that require resistance to heat and corrosion. Asbestos includes: chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, actinolite asbestos, and any of these materials that have been chemically treated and/or altered.

The inhalation of asbestos fibers by workers can cause cancer and other serious diseases of the lungs and other organs that may not appear until years after the exposure has occurred. For instance, asbestosis can cause a buildup of scar-like tissue in the lungs and result in loss of lung function. Asbestos fibers associated with these health risks are too small to be seen with the naked eye, and smokers are at higher risk of developing some asbestos-related diseases.

Asbestos-containing materials (ACM) do not always pose a hazard to occupants and workers in buildings that contain these materials. Intact, undisturbed ACMs generally do not pose a health risk. ACMs may become hazardous and pose an inhalation risk when they are damaged, disturbed in some manner, or deteriorate over time and asbestos fibers are released into building air.

ACM can be found in a multitude of building products which include decorative and acoustical plaster texture, fire-proofing (Monokote), joint compound, attic and wall insulation, resilient floor covering, mastic, recessed lighting fixtures, wiring, elevator brakes, fire doors, pipe insulation, pipe gaskets, duct insulation, duct tape, siding and roofing materials (tar/shingles), textured paint, stucco, concrete, asphalt underlayment (Petromat) and plaster.

Local jurisdictions have specific laws and regulations regarding asbestos and actions including building renovations and building demolition.

- Based on the age of the onsite structures, there is a potential for asbestos-containing building materials at the subject property; however, no testing was completed as part of this report. Suspect asbestos-containing materials (ACMs) were observed in the form of drywall ceilings and partitions, stucco, carpeting, and ceramic wall tiles and associated mastics. All building materials appeared in good to moderate condition at the time of our site reconnaissance. Individual suspect materials would need to be tested as part of an asbestos survey prior to any renovation or demolition in order to confirm the presence or non-presence of asbestos.

7.2 Lead-Based Paint

Although the use of lead-based paint in residential structures has been prohibited since 1978, it may still be used in commercial and industrial buildings. It is approximated that 80 percent of buildings built prior to 1978 contain lead paint. Even at low levels, lead poisoning can cause IQ deficiencies, reading and learning disabilities, impaired hearing, reduced attention spans, hyperactivity and other behavior problems with children under 6 years old being most at risk.

Lead is a highly toxic metal that was used for many years in products found in and around our homes and commercial buildings. Lead can be found in dust from friction surfaces of windows and doors that are painted with lead-based paint and from building components coated with lead-based paint that has begun peeling, flaking and chalking. There is also the potential for soil to have elevated lead levels due to leaching from lead based paint on nearby structures and deposition of airborne lead when leaded fuel was in use prior to the 1976 ban and phase out.

Since the 1980's, lead has been phased out in gasoline, reduced in drinking water, reduced in industrial air pollution, and banned or has been limited in use in consumer products.

Between the local, State and Federal agencies, including the Environmental Protection Agency (EPA), Department of Housing and Urban Development (HUD), Occupational Safety & Health Administration (OSHA) and the California Department of Public Health (CDPH), each state has various action limits that have been enacted with the intent to prevent human exposure and contamination of the surrounding environment.

- Based on the age of the onsite structures, there is a potential for lead-based paint (LBP) at the site. All painted surfaces appeared in good condition at the time of our site reconnaissance. Individual suspect materials would need to be tested as part of a LBP survey prior to any renovation or demolition in order to confirm the presence or non-presence of LBP.

7.3 Radon

Radon is a radioactive gas that has been found in structures all over the United States. Radon is produced from the natural breakdown of uranium in soil, rock, and water. Radon typically moves up through the ground and into structures through cracks and other holes in the foundation. Movement of radon through the earth is strongly influenced by moisture content and permeability of soil, porosity, and degree of fracturing in rocks, as well as surface meteorological conditions. High levels of radon have been discovered in every state.

Radon cannot be seen, smelled, or tasted. Breathing air-containing radon may increase the risk of getting lung cancer. The Surgeon General of the United States has warned that radon is the second leading cause of lung cancer in the United States today after smoking.

Testing for the presence of radon is fairly inexpensive, simple and is the only way to be certain of the on-site concentrations. Various types of sampling methods exist to determine the concentration. On-site radon sampling was not performed during the completion of this assessment.

- Based on our research at the United States Environmental Protection Agency (USEPA), the average estimated radon concentrations for Los Angeles County are between 2.0 picocuries per liter (pCi/L) and 4.0 pCi/L, below the 4.0 pCi/L action level set by the USEPA. Further, the California Geological Survey *Radon Potential Radon Zone Map for Southern California*, dated January 2005, shows no concentrations of radon in the vicinity of the subject property. Site specific radon levels vary greatly within the USEPA radon zones and on-site radon measurements would need to be collected in order to determine the radon levels at the subject property.

7.4 Wetlands

According to the Clean Water Act, a wetland is "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions." Wetland areas have been identified as ecologically diverse and sensitive areas and are generally subject to more stringent development, re-development, and building regulations.

- The U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory was reviewed to determine if the subject property is situated within an identified wetland. According to the USFWS, the subject property is not located within a wetland area.

7.5 Mold

Mold and mildew are simple, microscopic organisms in the Fungi kingdom that can grow virtually anywhere if they have adequate moisture, nutrients, air and appropriate temperatures. Depending on the particular mold or fungus, growing colonies can be almost any color. Most household molds and fungi (mildews) are white, black, grey, or brown colored. Spores of dozens of kinds of mold and fungus (mildew) are present at all times in indoor and outdoor air. These spores can settle, germinate and grow wherever good growth conditions are found. They can grow on soil, plants, dead plant materials, foods, fabrics, paper, wood and many other materials found within buildings. Many molds are not harmful and actually have a beneficial role in the environment and in living systems. In soil, molds play a crucial part in decomposition of organic matter and in making nutrients available to plants.

When mold and fungi (mildews) growth occurs in buildings, it can be very destructive to the materials on which they grow and cause high levels of airborne mold spores and volatile organic compounds associated with the characteristic musty / moldy odor. They cause staining, decomposition (rotting of materials) and objectionable, musty odors. Where colonies are extensive they can also produce enough spores, and by-products to be harmful to health. Many of the by-products of mold and fungus (mildew) are irritating to skin, eyes and respiratory tracts. Some molds produce true allergic sensitization and allergic reactions in susceptible people. Some molds produce toxic by-products that could be harmful to skin, and poisonous if ingested or inhaled in quantity. Persons with compromised immune systems may even experience systemic fungal infections of the respiratory tract.

EFI Global, Inc. observed a limited amount of interior areas of the subject buildings in order to identify the significant, visible presence of mold. This activity was not intended to discover all areas which may be affected by mold growth at the subject property. Potential areas of mold not observed as part of this limited assessment, include but are not limited to, pipe chases, HVAC systems and within enclosed wall and ceiling cavities that may be present in the subject property. A complete mold assessment, which may include various types of sampling, would be required to determine if mold levels within the subject buildings are at levels acceptable by industry standards.

- EFI Global, Inc. did not observe visible or olfactory indications of the presence of mold, nor did EFI Global, Inc. observe obvious indications of significant water damage. No sampling was conducted as part of this assessment.

7.6 Methane Gas

In response to growing concern regarding methane intrusion into buildings and to the potential for methane build-up underneath buildings, certain municipalities have established methane requirements for structures based on the proximity to oil wells and landfills. If a subject property is located in the proximity of active or abandoned oil wells or landfills, methane mitigation devices installed prior to construction activities at a subject property may be necessary.

- The Los Angeles County Department of Public Works, Solid Waste Information System was reviewed to determine if the property is within 1,000 feet of a landfill or 300 feet of an oil well. According to the information reviewed, the subject property is not located within 1,000 feet of a landfill or 300 feet of an oil well. Therefore, the presence of methane beneath the property is considered low.

8.0 FINDINGS

EFI Global, Inc. has performed a Phase I Environmental Site Assessment (Phase I) for 449 North Beverly Drive LLC (Client) for a commercial property located at 449 North Beverly Drive, in Los Angeles County, and the City of Beverly Hills, California, Assessor's Parcel Number: 4343-016-019. The research conducted for this study and the report prepared are in conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the American Society for Testing and Materials (ASTM) E 1527-13 scope of work.

8.1 CONCLUSIONS

EFI Global, Inc. has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice 1527-13, at 449 North Beverly Drive, Beverly Hills, California, the subject property. Any exceptions to or deletions from this practice are described in the individual sections of this report. This assessment has revealed no evidence of recognized environmental conditions or *de minimis* conditions in connection with the subject property, except for the following:

Recognized Environmental Condition (REC)

The historical use of the subject property as a dry cleaning facility for up to 17 years (1928 through 1944) is considered a REC.

Historical Recognized Environmental Condition (HREC)

In our opinion, no HRECs were identified during the course of this assessment.

Controlled Recognized Environmental Condition (CREC)

In our opinion, no CRECs were identified during the course of this assessment.

De Minimis Condition

In our opinion, no *de minimis* conditions were identified during the course of this assessment.

8.2 RECOMMENDATIONS

Based upon the foregoing, a Phase II Environmental Site Assessment is recommended.

9.0 SIGNATURES

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Prepared By: Date: December 5, 2019

Alberto Jimenez
Project Manager

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/24/2019 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
RITE AID #5462 EPA ID:: CAL000273229	300 N CANON DR	ESE 1/8 - 1/4 (0.206 mi.)	L95	140

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/24/2019 has revealed that there are 15 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/29/2019 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 7 UST sites within

approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 10 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/24/2019 has revealed that there are 21 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 11 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 18 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110069706571

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002621663

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 131
. Waste name: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 181
. Waste name: Other inorganic solid waste

RITE AID #5462 (Continued) **1000857038**

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 221
. Waste name: Waste oil and mixed oil

. Waste code: 223
. Waste name: Unspecified oil-containing waste

. Waste code: 232
. Waste name: Pesticides and other waste associated with pesticide production

. Waste code: 261
. Waste name: Polychlorinated biphenyls and material containing PCB's

. Waste code: 291
. Waste name: Latex waste

. Waste code: 311
. Waste name: Pharmaceutical waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 541
. Waste name: Photochemicals / photo processing waste

. Waste code: 561
. Waste name: Detergent and soap

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D009
. Waste name: MERCURY

. Waste code: D010
. Waste name: SELENIUM

. Waste code: D011
. Waste name: SILVER

RITE AID #5462 (Continued) **1000857038**

. Waste code: D024
. Waste name: M-CRESOL

. Waste code: D026
. Waste name: CRESOL

. Waste code: P001
. Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

. Waste code: P075
. Waste name: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

. Waste code: U165
. Waste name: NAPHTHALENE

. Waste code: U188
. Waste name: PHENOL

. Waste code: U201
. Waste name: 1,3-BENZENEDIOL (OR) RESORCINOL

. Waste code: U279
. Waste name: CARBARYL (OR) 1-NAPHTHALENOL, METHYLCARBAMATE

Violation Status: No violations found

FINDS:

Registry ID: 110006465618

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that

CITY OF BEVERLY HILLS/FIRE STATION #1 (Continued) **S113167820**

none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,?2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October?1,?2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Completed Document Type: Environmental Oversight Agreement Application
Completed Date: 01/30/2015
Comments: Received EOP Application via email 01/28/2015 by mail on 01/30/15.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Workplan
Completed Date: 06/18/2015
Comments: The PEA investigation field work incorporated DTSC's comments. The District will address DTSC's comments on PEA Workplan during preparation of PEA report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 10/08/2015
Comments: DTSC approved the PEA with a Further Action determination.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Workplan
Completed Date: 07/13/2015
Comments: The district's PEA field work incorporated DTSC's comments. The consultant indicated that the comments will be addressed in preparation of PEA report and no revision to PEA workplan will be

BEVERLY HILLS HIGH SCHOOL (Continued) **1001614433**

performed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 11/23/2015
Comments: DTSC approved the Removal Action Workplan for implementation

Completed Area Name: PROJECT WIDE

CERS Description: Construction Storm Water

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-09-2018
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Staff conducted a compliance inspection to the construction site. The

BEVERLY HILLS HIGH SCHOOL (Continued) **1001614433**

construction project was complete. The construction project included the installation of relocatable classrooms and restrooms buildings and the installation of two administration building and relocatable restroom building. COI may be submitted to include other construction projects under this permit. The SWPPP and monitoring program met the CGP requirements. The construction project was compliance with CGP during the inspection. Photos attached.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 06/11/2019

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.
