US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/14/2019

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

USGS TOPOGRAPHIC MAP

Target Property Map:	5630733 BEVERLY HILLS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

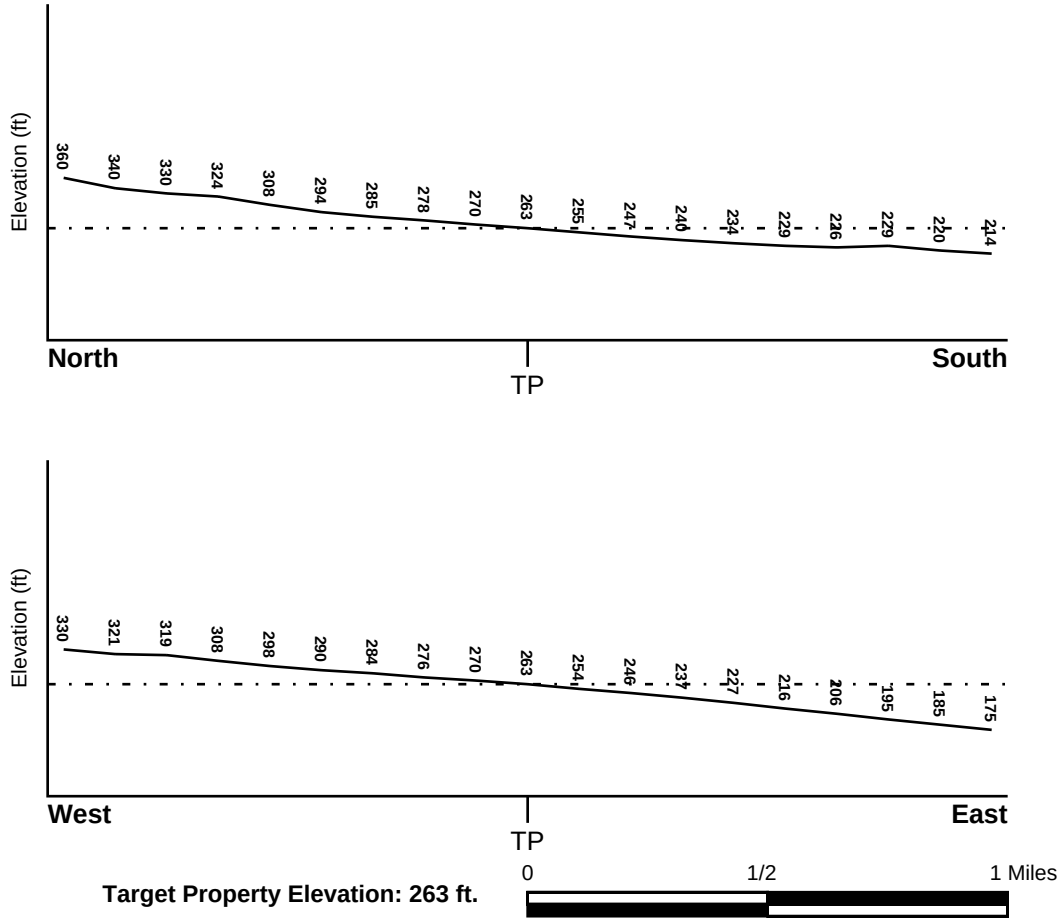
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1585F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1595F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BEVERLY HILLS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

9G	1/2 - 1 Mile SSE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

www.edrnet.com

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

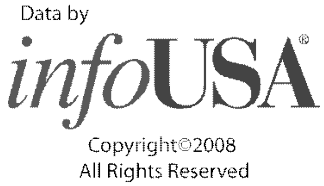
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by EFI Global Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

BOARD OF TRUSTEES CITY OF BEVERLY HILLS

DEPARTMENT OF BUILDINGS

Application for the Erection of Building

CLASS

To the Board of Trustees of the City of Beverly Hills:

Application is hereby made to the Board of Public Works of the City of Beverly Hills, through the office of the Chief Inspector of Buildings, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Beverly Hills.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

Do I Need Methane Mitigation?

Find out if your property is within 1,000 feet of a methane producing site or 300 feet of an oil or gas well.

Search by: Address or Intersection ▾ | 449 North Berverly Drive, Beverly Hills, CA 90210 | Search

Measure Tool | Report a Problem

✓ The address [449 N BEVERLY DR , BEVERLY HILLS CA] is not within 300 feet of an oil or gas well or 1,000 feet of a methane producing site. A methane mitigation system may not be required. The address is located within the City of BEVERLY HILLS and is therefore subject to the City's methane code. For information about the City's methane zones and mitigation standards, please visit the City's website here

RE: PRA of November 15, 2019, Reference # H016805-111519.

Dear EFI Global Alberto Jimenez,

The Los Angeles County Fire Department, Health Hazardous Materials Division, being the custodian or keeper of records, certify that a thorough search for the records you requested has been carried out.

Re: 417 N BEVERLY DR

Beverly Hills CA 90210

The search revealed that your noted address did not match our database.

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or may have been destroyed based on this Department's Record Retention Policy. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

For businesses in Burbank, Culver
City, Downey, City of LA, La Habra, Monrovia, Pasadena, Santa Monica, Torrance & Underground Storage Tanks in Los Angeles County jurisdiction click here.

Dear Ms. Penado:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control.

After a thorough review of our files we have found that no such records exist at this office pertaining to the site/facility referenced above.

We would also like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. Envirostor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view Envirostor.

If you have any questions or would like further information regarding your request, please contact me at (818) 717-6522.

Sincerely,

Robert Hardison, for

Glenn Castillo /JVT
Regional Records Coordinator

The Department of Toxics Substances Control (DTSC) takes every precaution to ensure the accuracy of data in the Hazardous Waste Tracking System (HWTS). However, because of the large number of manifests handled, inaccuracies in the submitted data, limitations of the manifest system and the technical limitations of the database, DTSC cannot guarantee that the data accurately reflect what was actually transported or produced.

INSTRUCTIONS FOR REQUESTING RECORDS

(California Public Records Act, Govt. Code Sections 6250-6276.48)

1. In order to expedite your request, please fill out the form completely. Requests may also be submitted by phone at (909) 396-3700, by facsimile to (909) 396-3330, or by email to PublicRecordsRequests@aqmd.gov.

2. Requests must be for records prepared, owned, used, or retained by the District (Gov. Code Sec. 6252(e)). Requests should be for clearly identifiable records. The District is not required to create a new record in response to a request. The District will assist the requestor in making a request that describes reasonably identifiable records (Gov. Code Sec. 6253.1). Documents will not be provided if disclosure would infringe upon a copyright, trade secret, or is otherwise exempt in accordance with state law.

3. A search for facility records can only be conducted by one or all of the following:

-- a) Facility Name, Address, or Identification Number

-- b) Facility Application Number, or Permit to Operate Number; or

-- c) Facility Notice of Violation/Notice to Comply Number.

4. You will be notified within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency. In some cases, the District may need an additional 14 days to respond. If so, you will be notified in writing. You will also be provided an estimated date of when the records will be made available.

5. Communications regarding your request, and any records, will be provided by email, unless specified otherwise.

6. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.

7. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's Trade Secret process.

8. If your request is to review records, rather than receive copies, the District will notify you once the records are gathered, and arrangements will be made for your review.

9. The charge for the direct cost of duplication is as follows: Paper Copies, $0.15/page each over 10 pages (first 10 pages are free); Copied CD's or flash drives, no charge; and Copied Audio Tapes, $5.00 each. After a preliminary estimate, advance payment may be required.

10. If the request is for information in an electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record, when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. (Gov. Code Sec. 6253.9(b)). The transfer of gathered electronic records onto CD, DVD or flash drive typically costs $10.00 each. An invoice will accompany your records when completed.

Note: For further information, please refer to the District's Guidelines for Implementing the California Public Records Act. The Guidelines are available in the lobby of the District Headquarters or on the District's web site at www.aqmd.gov.

Note: If you have questions pertaining to the submittal of a Public Records Act request, you may contact the Public Records Unit, (909) 396-3700, Tuesday through Friday, 7:00 a.m. to 5:30 p.m. Our Fax number is (909) 396-3330. Our email address is PublicRecordsRequests@aqmd.gov.

INSTRUCTIONS FOR REQUESTING RECORDS

(California Public Records Act, Govt. Code Sections 6250-6276.48)

1. In order to expedite your request, please fill out the form completely. Requests may also be submitted by phone at (909) 396-3700, by facsimile to (909) 396-3330, or by email to PublicRecordsRequests@aqmd.gov.

2. Requests must be for records prepared, owned, used, or retained by the District (Gov. Code Sec. 6252(e)). Requests should be for clearly identifiable records. The District is not required to create a new record in response to a request. The District will assist the requestor in making a request that describes reasonably identifiable records (Gov. Code Sec. 6253.1). Documents will not be provided if disclosure would infringe upon a copyright, trade secret, or is otherwise exempt in accordance with state law.

3. A search for facility records can only be conducted by one or all of the following:

-- a) Facility Name, Address, or Identification Number

-- b) Facility Application Number, or Permit to Operate Number; or

-- c) Facility Notice of Violation/Notice to Comply Number.

4. You will be notified within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency. In some cases, the District may need an additional 14 days to respond. If so, you will be notified in writing. You will also be provided an estimated date of when the records will be made available.

5. Communications regarding your request, and any records, will be provided by email, unless specified otherwise.

6. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.

7. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's Trade Secret process.

8. If your request is to review records, rather than receive copies, the District will notify you once the records are gathered, and arrangements will be made for your review.

9. The charge for the direct cost of duplication is as follows: Paper Copies, $0.15/page each over 10 pages (first 10 pages are free); Copied CD's or flash drives, no charge; and Copied Audio Tapes, $5.00 each. After a preliminary estimate, advance payment may be required.

10. If the request is for information in an electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record, when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. (Gov. Code Sec. 6253.9(b)). The transfer of gathered electronic records onto CD, DVD or flash drive typically costs $10.00 each. An invoice will accompany your records when completed.

Note: For further information, please refer to the District's Guidelines for Implementing the California Public Records Act. The Guidelines are available in the lobby of the District Headquarters or on the District's web site at www.aqmd.gov.

Survey Questionnaire – Please Return to Fax Number Below

A. GENERAL

1. Subject Property Address 449 - 453 N Beverly Drive

2. Name of business(es) occupying the subject property Shapes Brow Bar, Teuscher pop-up, Galanie Michael

3. Person completing this questionnaire:

Carrie Klein — Name

3102758397 — Telephone Number

B+A Management — Title

12-2-19 — Date

Manager — Relationship to Property

5 yrs. — How Long?

4. If you are the person who has ordered this report, what is the purpose of this report?

Purchase ☐ Sale ☐ Refinance ☐

B. PROPERTY DESCRIPTION

1. **Land**

A. What is the approximate square footage of the land? 6300 sf

B. Were there any buildings or other improvements on the property prior to the existing improvements?

Yes ☐ No ☒ DK ☐

If yes, what were the buildings used for? _____

C. Is or has there been a well on the subject property? Yes ☐ No ☐ DK ☐

If yes, what type of well is it?: ☐ Drinking Water, ☐ Irrigation, ☐ Monitoring, ☐ Dry Well

D. Is or has there been a septic system on the subject property? Yes ☐ No ☒ DK ☐

E. Has fill of unknown origin been imported onto the subject property?

Yes ☐ No ☒ DK ☐

2. **Improvements (Buildings) - This includes all buildings**

5261 West Imperial Highway, Los Angeles, California 90045

Toll Free: 888-705-6300 Phone: 310-854-6300 Fax: 310-854-0199 Web: https://www.efiglobal.com/our-services/environmental/

A. What is the approximate square footage of the onsite structure? _____

B. What year was the onsite structure built? _____

C. Is there a heating system at the site? Yes ☒ No ☐ DK ☐

If yes, what is it fueled by?: ☐ Natural Gas, ☐ Fuel Oil, ☒ Electricity, ☐ Solar

D. Is there a boiler at the site? Yes ☐ No ☐ DK ☒

If yes, what is it fueled by?: ☐ Natural Gas, ☐ Fuel Oil , ☐ Electricity, ☐ Solar

E. Do you have copies of the Subject Property's construction, site, and/or "as-built" drawings and building specifications? Yes ☐ No ☒ If so, please provide copies of same.

C. STORAGE TANKS

1. Are there any registered or unregistered (active or inactive) Underground Storage Tanks ("UST") or Aboveground Storage Tanks ("AST") located on the premises? Yes ☐ No ☒ DK ☐

2. Do you have any knowledge of USTs or ASTs that once existed on the Subject Property and whether such tanks were removed or abandoned? Yes ☐ No ☐ DK ☒

D. HAZARDOUS MATERIALS

1. Are any regulated hazardous materials, chemicals, or waste stored/used on-site? Yes ☐ No ☒ DK ☐

If "yes" please provide a copy of the chemical inventory.

2. To the best of your knowledge, do any of the following operations take place on the Subject Property or have ever taken place on the Subject Property:

Dry Cleaning:	Yes ☐ No ☒	Battery Storage/Sales:	Yes ☐ No ☒
Paint Storage/Sales:	Yes ☐ No ☒	Petroleum Storage/Sales:	Yes ☐ No ☒
Landfill/Dumping:	Yes ☐ No ☒	Junkyard:	Yes ☐ No ☒
Photo or X-Ray Finishing:	Yes ☐ No ☒	Electric Equip Manufacturing:	Yes ☐ No ☒
Solvent Storage or Sales:	Yes ☐ No ☒	Chemical Manufacture/Sales:	Yes ☐ No ☒
Automobile Storage or Repair:	Yes ☐ No ☒	Agriculture:	Yes ☐ No ☒
Metals Machining:	Yes ☐ No ☒	Metals Heat Treating:	Yes ☐ No ☒

Any other commercial or industrial process which may have included the use of chemicals: Yes ☐ No ☒
If yes, Please specify: _____

5261 West Imperial Highway, Los Angeles, California 90045

USER QUESTIONNAIRE

As part of the All Appropriate Inquiry (AAI) standard for conducting Phase I Environmental Site Assessments set by the Environmental Protection Agency (EPA), the following questions are to be asked of the prospective purchaser.

Please return to fax number below or e-mail to your project manager. Please also provide a **Title Report, previous environmental reports including Phase I and Phase II, Site Characterization, Removal or Remediation, Geotechnical Reports, Lead Based Paint or Asbestos Survey or Removal,** or other relevant material, as available**.**

A. GENERAL

1. Subject Property Address 449 N. Beverly Drive

2. Person completing this questionnaire:

Franklin Dickinson — Name

212 931 2602 — Telephone Number

Purchaser — Relationship to Property

Nov. 25, 2019 — Date

3. What is your intended use of the property?

☐ No Change ☐ Residential Development ☐ Commercial/Industrial Development

4. What is the purpose of ordering a Phase I ESA?

☐ Purchase ☐ Refinance ☐ Other (please specify)_____

B. AAI STANDARD QUESTIONS

1. Are you aware of any environmental liens or activity and use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have filed or recorded against the property under federal, tribal, state or local law? Yes ☐ No ☐ If Yes, Please Explain _____

2. Do you have any specialized knowledge or experience that is material to recognized environmental conditions in connection with the property? Yes ☐ No ☐ If Yes, Please Explain _____

3. Are you aware of any commonly known or reasonably ascertainable information within the local community about the property that is material to recognized environmental conditions in connection with the property? Yes ☐ No ☐ If Yes, Please Explain_____

4. Is the purchase price of the property comparable to the fair market value of the property? Yes ☐ No ☐ N/A ☐ If the purchase price is significantly lower than the fair market value, the user must identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products._____

Alberto JImenez | Phase I Environmental Specialist / Project Manager

5261 West Imperial Highway, Los Angeles, CA, 90045 *310-820-6300*
Alberto_Jimenez@efiglobal.com

Professional Summary:

Mr. Jimenez conducts historical research and works with regulatory bodies to investigate historical and current uses of properties as part of the Phase I Environmental Site Assessment. Mr. Jimenez's areas of expertise include: technical report writing, project management, data integrity assurance, data quality control, data standards and modeling concepts, database design and administration, query building, and data analysis. Mr. Jimenez' areas of expertise include:

- Field work
- Project management
- Technical report writing
- Data analysis

Licenses and Certifications

OSHA 40-Hour Hazardous Waste Operations Certified, Safety Unlimited Inc, CA, #1808221243678

Project Experience:

EFI Global Inc., Los Angeles, CA
Phase I – Multiple Properties
Performed initial file reviews for multiple properties throughout the greater Los Angeles metropolitan area as part of due diligence for real estate transactions and property redevelopments.

Professional Experience:

EFI Global Inc. Los Angeles, Phase I Environmental Specialist / Project Manager, 2018 – Present

Education:

Bachelor of Arts, Chicano Studies, University of California, Los Angeles, Los Angeles, CA 2013

©2018 EFI Global, Inc.

Heather Nilson | Senior Project Manager

5261 West Imperial Highway, Los Angeles, California 90045 *310-854-6300*231*
heather_nilson@efiglobal.com

Professional Summary:

Ms. Nilson has more than 12 years of experience in the environmental business with 11 years in the professional consulting field. Ms. Nilson meets the definition of an Environmental Professional (EP) as defined in the EPA All Appropriate Inquiry (AAI) regulations. Ms. Nilson is an experienced environmental professional with experience working both for regulatory agencies and in the private sector. Ms. Nilson has worked directly with clients and regulatory bodies to assess environmental conditions and has assisted in the development of plans by which to resolve such conditions. Ms. Nilson's experience includes all stages of environmental projects including Phase I environmental site assessments, soil vapor surveys (Phase II), Property Condition Assessments, Seismic Risk Assessments, and project management of ALTA Surveys.

- Phase I Environmental Site Assessment
- Property Condition Assessment
- Seismic Risk Assessment
- ALTA Surveys

Licenses and Certifications:

OSHA 40-Hour Hazardous Waste Operations Certified

OSHA 8-Hour HAZWOPER Annual Refresher

Environmental Professional, per the CFR Title 40, Chapter I, Subchapter J, Part 312, Subpart C, Section 312.21

Project Experience:

Housing Authority of the City of Los Angeles (HACLA), Los Angeles, California
Phase I Environmental Site Assessment
Ms. Nilson conducted a Phase I of an approximately 99-acre project site including Jordan Downs Housing project, a 21-acre former steel mill (which was later remediated). Jordan Downs High School and privately owned industrial sites. Ms. Nilson researched the property as part of an EIR and transferred the project to additional Site Assessment teams and Remediation. Involvement included attending meetings with the community and community activist.

Various Affordable Housing Developers, California
Phase I Environmental Site Assessments
Phase I Environmental Site Assessment Reports were conducted for various properties throughout the state of California for public agencies and private entities as potential sites for affordable housing projects. Special challenges involved with specific projects included soil sampling and pesticide testing for properties that were historically utilized for agricultural purposes.

©2018 EFI Global, Inc.

Industrial Real Estate Firm, Los Angeles, California
Property Condition Assessments
Ms. Nilson leads assessments of properties from Ventura to San Diego Counties for an industrial real estate firm acquiring properties in typically short escrows. Ms. Nilson manages inspector and client needs to deliver quality final reports.

Lending Institutions, California
Environmental Site Assessment
Serves as senior project manager for lending sector projects which involve Phase I ESA, Property Condition Assessments, Seismic risk Assessments, and ALTA Surveys for local, regional and national lenders. Projects include adaptive reuse of existing historical other structures for affordable and low income housing and ground up construction projects on previously undeveloped, commercial and industrial properties.

Golden Security Bank, Rosemead, California
Phase I Environmental Site Assessment, Firestone Boulevard – Southgate, California
Due diligence performed at a property which revealed a fill port during site inspection. In the 1940's and 1950's, the site had been identified as a historical "gas station" and "service station." Based on the observation of the fill port and historical data, a geophysical survey and soil sampling program was initiated at the site. As no contamination was encountered at the site after extensive testing, the bank loan was funded and a reserve account was establish to remove the UST post-closing.

Professional Experience:

EFI Global, Senior Project Manager, 2015 – present
Andersen Environmental, Senior Project Manager, 2012 – 2015
Andersen Environmental, Project Manager, 2008 – 2012
Andersen Environmental, Environmental Specialist, 2007 – 2008
Los Angeles Regional Water Quality Control Board, Student File Review Intern, 2006 – 2007

Specialized Education:

Property Condition Assessments 101 Course, EDR CommonGround University, 2017

APPENDIX

Appendix A Laboratory Report and Chain-of-Custody Documentation

1.0 INTRODUCTION

EFI Global has performed a Phase II Environmental Site Assessment (ESA) for the property located at 449 North Beverly Drive, Los Angeles, California (the Site). The Phase II ESA was based on the findings of the Phase I ESA performed by EFI Global, as documented in the report dated December 5, 2019. A recognized environmental condition (REC) was identified for the Site, as follows:

- Dry cleaning facilities operated at the Site for approximately 17 years from at least 1928 to 1944.

EFI Global conducted this Phase II ESA to evaluate whether the former dry-cleaning operations have significantly impacted the subsurface of the Site. To evaluate soil vapor conditions at the Site, soil vapor samples were collected from five locations and analyzed for volatile organic compounds (VOCs). EFI Global understands that the Site will continue to be used for commercial purposes; therefore, the Site has been evaluated for a commercial land use scenario.

2.0 SITE INFORMATION

This section provides pertinent site information, including the location, a description, and the geologic and hydrogeologic settings.

2.1 SITE LOCATION AND DESCRIPTION

The Site is located on the southwest side of North Beverly Drive, approximately 150 feet southeast of South Santa Monica Boulevard, in Los Angeles, California (Figure 1). The Site is approximately 0.18 acre in size and is developed with two single-story commercial structures on the northeast and southwest portions that are connected by a canopy on the central portion. The structures are approximately 6,020 square feet in total size. The building on the northeast portion of the Site has three units. The unit at 449 North Beverly Drive is a retail store, and the units at 451 and 453 North Beverly Drive are vacant. The building on the southwest portion (451 ½ North Beverly Drive) is currently used for art storage. The remaining portions of the property consist of a canopy and storage area in the central portion between the structures, and concrete-paved walkways along the northwest and southeast sides (Figure 2). The surrounding area is used for commercial and residential purposes.

2.2 REGIONAL GEOLOGIC AND HYDROGEOLOGIC SETTINGS

The Site is located in the Los Angeles Basin, which is a part of the Peninsular Ranges geomorphic province. The Peninsular Ranges province, which is characterized by northwest-trending topographic and structural features, is bound by the Transverse Ranges province to the north and the Colorado Desert province to the east. The inland part of the Peninsular Ranges province consists of numerous mountain ranges that are composed predominantly of igneous and metamorphic rocks of Mesozoic and Paleozoic age (*Note 36: California Geomorphic Provinces*, California Geological Survey, December 2002). An irregular coastal plain, including the Los Angeles Coastal Plain and Basin, is located on the western edge of the province. This coastal plain is composed predominantly of marine and non-marine deposits of Upper Cretaceous, Tertiary, and Quaternary age (*Geology of the Los Angeles Basin California – an Introduction, Geological Survey Professional Paper 420 A*, Yerkes et al, 1965).

The Site is located within the Hollywood Subbasin of the Coastal Plain of Los Angeles Groundwater Basin. The Hollywood Subbasin underlies the northeastern part of the Coastal Plain of Los Angeles Groundwater Basin. The subbasin is bounded on the north by Santa Monica Mountains and the Hollywood fault, on the east by the Elysian Hills, on the west by the Inglewood fault zone, and on the south by the La Brea High, formed by an anticline that brings impermeable rocks close to the surface. Groundwater in the Hollywood Subbasin is mainly produced from Pleistocene age alluvial sands and gravels. Groundwater flow is generally westward through the subbasin toward the Inglewood fault (*California's Groundwater, Bulletin 118*, California Department of Water Resources, February 2004).

2.1 Local Geologic and Hydrogeologic Settings

The Site is approximately 265 feet above sea level (USGS Beverly Hills, CA 7.5-Minute Topographic Quadrangle) and is located in the northern portion of the Los Angeles Coastal Plain, approximately 1 mile southeast of the Santa Monica Mountains and approximately 7 miles northeast of the Pacific Ocean. The Site is underlain with Quaternary-aged surficial sedimentary deposits. These deposits are generally characterized as alluvial gravel, sand, and silt-clay derived mostly from the Santa Monica Mountains (*Geologic Map of the Beverly Hills-Van Nuys (South ½) Quadrangle*, Dibblee Geological Foundation, 1991).

Based on our review of groundwater data presented in the State Water Resources Control Board's (SWRCB's) GeoTracker website, groundwater was detected at a leaking underground storage tank site at 427 North Crescent Drive, located approximately 0.12 mile (650 feet) east-northeast of the Site, at depths ranging from approximately 35 to 50 feet below ground surface (bgs). During the most recent quarterly groundwater monitoring event performed at this nearby site, the depth to groundwater ranged from approximately 45 to 50 feet bgs, and groundwater flow was reported to be toward the northeast (*Second Quarter 2009 Waste Discharge Requirement Monitoring Report, Compliance File No. CI-8841, Former 76 Station No. 0971, 427 N. Crescent Drive, Beverly Hills, California*; Environ Strategy Consultants, Inc., July 8, 2009).

3.0 FIELD ACTIVITIES

All field activities pertaining to the Phase II ESA were completed on December 6, 2019.

3.1 Field Preparation

Prior to conducting field activities, EFI Global personnel marked the work area clearly with white paint. Underground Service Alert (USA) was notified of the pending field work a minimum of two full working days before mobilization, and the utility owners subsequently checked the boring locations for utility conflicts.

3.2 Geophysical Survey

On December 6, 2019, EFI Global field personnel directed Ground Penetrating Radar Systems, Inc. (GPRS) in performing a geophysical survey at the Site. The goal of the survey was to scan the proposed sampling locations to identify subsurface utilities or other subsurface features that may impede boring advancement. The geophysical survey was conducted using ground penetrating radar (GPR) equipment, electromagnetics (EM), and various utility line tracers. No subsurface utilities or other obstructions were identified at the planned sampling locations.

3.3 SOIL VAPOR SAMPLING

On December 6, 2019, EFI Global directed Optimal Technology (Optimal) to conduct a soil vapor survey to evaluate for the presence of VOCs in the subsurface. The historical dry cleaning operations were reportedly within the central unit of the northeast structure (451 Beverly Drive); therefore, soil vapor samples were collected from a total of five locations (B1 through B5) spaced throughout the central unit and immediately southwest of the unit. The soil vapor sample locations are shown on Figure 2. All soil vapor samples were collected at a depth of 5 feet bgs.

3.3.1 SOIL VAPOR PROBE INSTALLATION

In each location, surficial concrete pavement was initially cored using a rotary hammer drill equipped with a 1.0-inch-diameter percussion bit. A temporary soil vapor sampling probe was emplaced in each boring by advancing a decontaminated, steel vapor sampling rod to the target sampling depth. Upon advancement to the target sampling depth, the probe was retracted slightly, revealing a 1-inch-long permeable screen.

3.3.2 PURGE AND SAMPLE PROTOCOL

At each sampling location, an electric vacuum pump set to draw 200 milliliters per minute (ml/min) of soil vapor was attached to the probe, and a vacuum was applied. The sample train was then purged of three probe volumes before sampling. Each vapor sample was collected in a gas-tight syringe and immediately transferred to the on-site mobile laboratory for analysis.

3.3.3 SHUT-IN AND LEAK TESTING

Leakage during soil vapor sampling may dilute samples with ambient air and produce results that underestimate actual site concentrations or contaminate the sample with external contaminants. Therefore, upon securing the purge and sample train to the vapor probe, a shut-in test was conducted to check for leaks in the above-ground sampling system. The above-ground valves, lines, and fittings downstream from the top of the probe were assembled, and the system was evacuated to a minimum of 100 inches of water column (in WC). The vacuum gauge was calibrated and sensitive enough to indicate a vacuum change of 0.5 in WC. If a loss in vacuum was observed, the sample train was adjusted, and the test was repeated. Upon verification of sample train integrity, efforts were made to minimize disturbance of the apparatus until completion of purging and vapor sample collection.

In addition to shut-in testing, leak testing was performed. Isobutane was selected as the leak check compound. During purging and sampling at each location, the compound was placed near locations where ambient air could enter the sampling system or where cross-contamination may occur immediately before sampling (i.e., at the location of the vapor probe surface completion and along the sampling train). Isobutane was included in the analyte list at a reporting limit of 1.00 microgram per liter (µg/l).

4.0 CHEMICAL ANALYSIS

All collected soil vapor samples were immediately transferred to Optimal's on-site mobile laboratory and analyzed for VOCs by Modified United States Environmental Protection Agency (EPA) Method 8260B. The certified laboratory analytical report and the chain-of-custody documentation are provided in Appendix A.

5.0 ANALYTICAL RESULTS

Table 1 presents a summary of soil vapor analytical results, and detailed analytical results are presented in Appendix A. VOCs, including the leak check compound (isobutane), were not detected in any of the soil vapor samples.

6.0 CONCLUSIONS AND RECOMMENDATIONS

EFI Global has performed a Phase II ESA for the property located at 449 North Beverly Drive in Beverly Hills, California. The Phase II ESA was based on the findings of EFI Global's Phase I ESA, which identified historical dry-cleaning facilities as a REC for the Site. EFI Global performed sampling to evaluate whether the past on-site operations have significantly impacted the subsurface of the Site and, if so, if a threat to human health or the environment may be present as a result of the impact. The work performed was as follows:

- Five soil borings (B1 through B5) were advanced for the collection of soil vapor samples.
- A soil vapor sample was collected from each location at a depth of 5 feet bgs and analyzed for VOCs.

A summary of the assessment results is presented below, along with EFI Global's conclusions based on the results.

- VOCs were not detected in any of the soil vapor samples collected at the Site. Therefore, the historical dry cleaning operations did not result in significant subsurface impacts.

This assessment has found no evidence of a significant release to the subsurface that would represent a risk to human health or groundwater. Based on the analytical results, no further investigation is warranted with respect to the REC that was identified during the Phase I ESA.

7.0 SIGNIFICANT ASSUMPTIONS, LIMITATIONS AND RELIANCE

This report has been prepared in accordance with generally-accepted environmental methodologies and industry standards as they relate to the Data Quality Objectives of the assessment. No warranties, expressed or implied, are made as to the professional services provided under the terms of EFI Global's contract(s) or specified in this report. This assessment has been conducted, in part, based on information, data or reports provided or prepared by others. EFI Global reviews and interprets these documents in good faith and relies that the provided data and documents are true and accurate.

Environmental conditions at the site were assessed or interpreted within the context of EFI Global's contract(s) and existing environmental regulations of applicable jurisdiction(s) as of the date of the report. Regulatory requirements, regulations and guidance are subject to change subsequent to the date of the report. Unless otherwise stated in the report, evaluating compliance of past, present or future owners with applicable local, provincial and federal government laws and regulations was not included within the scope of the assessment.

The environmental assessment is limited by the availability of information at the time of the assessment. The conclusions and recommendations regarding environmental conditions presented in this report are based on a scope of work authorized by the Client. It is possible that unreported conditions impairing the environmental status of the site may have occurred which could not be identified. EFI Global's opinions cannot be extended to portions of the site that were unavailable for direct access and observation reasonably beyond the control of EFI Global or outside of the scope of the assessment. Environmental assessment activities, particularly the

sampling of soil, vapor (air), groundwater and structure materials, represent those conditions which are present at the time of sampling within the immediate vicinity of the sample(s) collected. Although sampling plans are developed in an attempt to provide what is interpreted as sufficient coverage within the assessment area to achieve the investigative objectives, no extent of sampling can guarantee all environmental conditions, potential chemicals of concern (man-made or naturally occurring) and concentrations at which they occur have been identified and quantified absolutely. The assessment performed and outlined in this report was based, in part, upon visual observations of the site and attendant structures. It should be noted that compounds, materials or chemicals of potential concern other than those described could be present in the site environment, and the possibility remains that unexpected environmental conditions may be encountered at the site in locations not specifically investigated.

All components of this report, including but not limited to text, signatures, certifications, figures, tables, attachments, appendices, supporting documents and addenda are integral to the reporting of the assessment. This report may not be reproduced, except in full, without written approval of EFI Global.

This report has been prepared for the sole use of 449 North Beverly Dr LLC. The contents should not be relied upon by any other parties without the express written consent of 449 North Beverly Dr LLC, and EFI Global.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

This assessment has been conducted with the standards and level of care and skill exercised in such types of investigations, by qualified geologists, engineers, environmental scientists or environmental professionals, in conformance with generally-accepted industry standards and practices.

LABORATORY REPORT AND CHAIN-OF-CUSTODY DOCUMENTATION

OPTIMAL TECHNOLOGY
Specializing in Environmental Field Services

December 9, 2019

Ms. Diana Buchanan
EFI Global Inc.
5261 West Imperial Highway
Los Angeles, CA 90045

Dear Ms. Buchanan:

This letter presents the results of the soil vapor investigation conducted by Optimal Technology (Optimal), for EFI Global Inc. on December 6, 2019. The study was performed at 449 N. Beverly Dr., Beverly Hills, California.

Optimal was contracted to perform a soil vapor survey at this site to screen for possible chlorinated solvents and aromatic hydrocarbons. The primary objective of this soil vapor investigation was to determine if soil vapor contamination is present in the subsurface soil.

Gas Sampling Method

Gas sampling was performed by hydraulically pushing soil gas probes to a depth of 5.0 feet below ground surface (bgs). An electric rotary hammer drill was used to drill a 1.0-inch diameter hole through the overlying surface to allow probe placement when required. The same electric hammer drill was used to push probes in areas of resistance during placement.

At each sampling location, an electric vacuum pump set to draw 0.2 liters per minute (L/min) of soil vapor was attached to the probe and purged prior to sample collection. All vapor samples were collected in gas-tight syringes. Samples were immediately injected into the gas chromatograph/purge and trap after collection. New tubing was used at each sampling point to prevent cross contamination.

All analyses were performed on a laboratory grade Hewlett Packard model 5890 Series II gas chromatograph equipped with a Hewlett Packard model 5971 Mass Spectra Detector and Tekmar LSC 2000 Purge and Trap. An SGE capillary column using helium as the carrier gas was used to perform all analysis. All results were collected on a personal computer utilizing Hewlett Packard's 5971 MS and chromatographic data collection and handling system.

Quality Assurance

5-Point Calibration
The initial five-point calibration consisted of 20, 50, 100, 200 and 500 ul injections of the calibration standard. A calibration factor on each analyte was generated using a best fit line method using the HP data system. If the r^2 factor generated from this line was not greater than 0.990, an additional five-point calibration would have been performed. Method reporting limits were calculated to be 0.001-1.0 micrograms per Liter (ug/L) for the individual compounds.

A daily calibration check was performed using a pre-mixed standard supplied by Scotty Analyzed Gases. The standard contained common halogenated solvents and aromatic hydrocarbons (see Table 1). The individual compound concentrations in the standards ranged between 0.025 nanograms per microliter (ng/ul) and 0.25 ng/ul.

TABLE 1

Dichlorodifluoromethane	Carbon Tetrachloride	Chloroethane
Trichlorofluoromethane	1,2-Dichloroethane	Benzene
1,1-Dichloroethene	Trichloroethene	Toluene
Methylene Chloride	1,1,2-Trichloroethane	Ethylbenzene
trans-1,2-Dichloroethene	Tetrachloroethene	m-/p-Xylene
1,1-Dichloroethane	Chloroform	o-Xylene
cis-1,2-Dichloroethene	1,1,1,2-Tetrachloroethane	Vinyl Chloride
1,1,1-Trichloroethane	1,1,2,2-Tetrachloroethane	Freon 113
4-Methyl-2-Pentanone	Cyclohexane	Acetone
Chlorobenzene	2-Butanone	Isobutane

Sample Replicates
A replicate analysis (duplicate) was run to evaluate the reproducibility of the sampling system and instrument. The difference between samples did not vary more than 20%.

Equipment Blanks
Blanks were run at the beginning of each workday and after calibrations. The blanks were collected using an ambient air sample. These blanks checked the septum, syringe, GC column, GC detector and the ambient air. Contamination was not found in any of the blanks analyzed during this investigation. Blank results are given along with the sample results.

Tracer Gas Leak Test
A tracer gas was applied to the soil gas probes at each point of connection in which ambient air could enter the sampling system. These points include the top of the sampling probe where the tubing meets the probe connection and the surface bentonite seals. Isobutane was used as the tracer gas. No Isobutane was found in any of the samples collected.

Purge Volume
The standard purge volume of three volumes was purged in accordance with the July 2015 DTSC/RWQCB Advisory for Active Soil Gas Investigations.

Shut-in Test
A shut-in test was conducted prior to purging or sampling each location to check for leaks in the above-ground sampling system. The system was evaluated to a minimum measured vacuum of 100 inches of water. The vacuum gauge was calibrated and sensitive enough to indicate a water pressure change of at least 0.5 inches.

Scope of Work

To achieve the objective of this investigation a total of 6 vapor samples were collected from 5 locations at the site. Sampling depths, vacuum readings, purge volume and sampling volumes are given on the analytical results page. All the collected vapor samples were analyzed on-site using Optimal's mobile laboratory.

Subsurface Conditions

Subsurface soil conditions at this site offered sampling flows at 0" water vacuum. Depth to groundwater was unknown at the time of the investigation.

Results

During this vapor investigation, none of the compounds listed in Table 1 above were detected above the listed reporting limits. A complete table of analytical results is included with this report.

Disclaimer

All conclusions presented in this letter are based solely on the information collected by the soil vapor survey conducted by Optimal Technology. Soil vapor testing is only a subsurface screening tool and does not represent actual contaminant concentrations in either the soil and/or groundwater. We enjoyed working with you on this project and look forward to future projects. If you have any questions, please contact me at (877) 764-5427.

Sincerely,

Attila Baly
Project Manager

August 9, 2018

INTRODUCTION

PIC Environmental Services (PIC) was contracted by Morgan, Lewis, and Bockius, LLP to perform a Phase I Environmental Site Assessment (PESA) at commercial property located in Beverly Hills, California (see Figure 1). The purpose of this investigation was to determine if environmental impairments existed at the site. This document represents the PESA report prepared in accordance with customary industry practices and current ASTM (2013) Standards. More specifically, this report is compliant with ASTM E1527-13 standards. Finally, this report also intends to satisfy the "All Appropriate Inquiries" guidelines established by the Federal Environmental Protection Agency (EPA).

The following sources were used to prepare this report:

1. Site inspection
2. California Regional Water Quality Control Board (RWQCB) records
3. California Department of Health Services (DHS), Site Mitigation Division records
4. United States Environmental Protection Agency (EPA) and Geological Society (USGS) records
5. California Department of Natural Resources (CDNR), Division of Oil and Gas (DOG) records
6. Los Angeles County Waste Discharge Systems records of active and inactive landfills
7. EDR collection of historic aerial photographs
8. Los Angeles County UST and Industrial Waste Permit Records
9. Los Angeles County Title Records
10. Historic Telephone Directories
11. Sanborn Fire Insurance Maps
12. Beverly Hills Building Department Permit Records
13. Review of a prior Phase I Assessment Report

SCOPE OF INVESTIGATION

The scope of this investigation included: site inspection, survey of adjacent properties, review of the above listed government records, review of historical aerial photographs, geologic and hydrogeologic information search.

SITE INSPECTION

On August 8, 2018, PIC Project Manager, Ethan Hersch, conducted site inspections at the subject property and adjacent/nearby properties. Paul Williams (client) and Pamela Allen (occupant) assisted PIC with the inspections.

SITE DESCRIPTION

The subject property includes about one-half acre of commercial property located west of Beverly Drive and south of Santa Monica Blvd. in Beverly Hills, CA.

Historic addresses used at the property appear to include 457 through 471 North Beverly Drive and 9460 through 9474 Santa Monica Blvd., Beverly Hills, CA 90210 (see Appendices A, C, and D). The Los Angeles County Assessor Parcel Number for the subject property is 4343-016-023. Additional title information is attached in Appendix A.

Property boundaries are indicated by Beverly Drive to the east, a public alley to the west, Santa Monica Blvd, (South) to the north and adjacent commercial developments south (see Figures 2 and 7).

The subject property has been improved with one commercial building, constructed in 1996, that covers the entire property. Features observed onsite by PIC are illustrated on Figures 2 and 7 and photos in Appendix B.

The onsite building was occupied by the Paley Center for the Media at the time of PIC's inspection. The Paley Center for the Media uses the building to exhibit art and media memorabilia. Moreover, PIC observed no significant changes at the property since a previous site inspection in 2014 (see Appendix I).

The onsite building was constructed after to 1980. As a result, asbestos containing construction materials (ACM) should not be present. PIC observed no obvious ACM, but testing for ACM in suspect building materials was not conducted. A reference diagram of common ACM in older commercial structures is illustrated on Figure 5.

PIC observed no evidence of underground storage tanks (USTs), significant surface staining, or drains exhibiting stains. PIC observed no significant petroleum or solvent staining on the building foundation. To summarize, no evidence of Recognized Environmental Conditions (RECs) were observed during PIC's inspection.

SITE HISTORY

Based on a review of regulatory records, County title records, city permit records, historic telephone directories, historic topographic maps, historic fire insurance maps, and historic aerial photos, it appears the subject property was initially developed for commercial purposes in the 1920s, when former buildings were constructed at the property (see Appendices A, C, D, and F). Prior to the 1920s, the site may have contained single family residences. Historic telephone directory listings in Appendix G verify the property has been occupied by numerous commercial tenants including the existing museum, a bank, gift shops, realty offices, beauty salons, restaurants, grocery/meat markets, and hardware stores. In addition, a large former onsite building adjacent to Santa Monica Blvd. was occupied historically by several banks from about 1934 until the early 1990s. Office spaces in the former bank building were leased by numerous companies, attorneys, and businesses as documented in Appendix G. Based on historic uses, there is no obvious evidence of environmental impairment conditions at the subject property.

Accordingly, PIC's site inspection and review of historic records did not reveal Recognized Environmental Conditions (RECs).

SURVEY OF ADJACENT PROPERTIES

Commercial developments were observed on adjoining properties.

None of the adjacent properties exhibited obvious evidence of petroleum or hazardous materials contamination problems. In addition, the EDR Report in Appendix H does not identify any known contamination problems on adjoining properties. Historic dry cleaning and automotive repair facilities are known to have existed in close proximity to and downgradient of the subject property (see Appendix H).

Surface runoff at all surrounding properties appeared to be southeasterly.

No evidence of historic or improper waste disposal was observed by PIC in any storm drain at the site.

HISTORICAL AERIAL PHOTOGRAPH REVIEW

Historical aerial photographs provided by EDR were reviewed by PIC (see copies in Appendix F). Available photographs were dated 1928, 1938, 1948, 1952, 1964, 1972, 1977, 1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016, and 2017.

The subject property contains former commercial buildings in the 1928 photo. Beverly Drive is evident in all photos. In addition, Santa Monica Blvd. (formerly Burton Way) is also visible in all photos. By 1938, the subject property exhibits modifications to and/or construction of former onsite commercial buildings, including a large bank building in the northeast portion of the property. Similar features are observed onsite in the 1948, 1952, 1964, 1972, and 1977 photos.

By 1983, the former onsite buildings exhibit modifications apparently joining/connecting two historic buildings. Similar features are observed on the 1989 and 1994 photos.

By 2002, the existing onsite building, constructed in 1996, is observed to have replaced all former structures.

Subsequent photos reveal similar features and no significant changes. A recent (2017) photo has been enlarged and reproduced as Figure 7 for reference.

The aerial photo study indicates no obvious environmental impairments on the subject property or from adjacent properties. The aerial photo search did not indicate any historic oil well drilling, landfill, or gravel quarry activity on the site.

GOVERNMENT RECORDS REVIEW

The following federal, state, and local public records and associated lists were searched to determine the potential for or existence of onsite and/or offsite unauthorized releases of hazardous materials (i.e., contamination) related to onsite and/or offsite aboveground or underground storage tanks, or any other potential sources:

INDIAN LUST	Leaking Underground Storage Tanks on Indian Land
INDIAN UST	Underground Storage Tanks on Indian Land

EDR PROPRIETARY RECORDS

MANUFACTURED GAS PLANTS	EDR Proprietary Manufactured Gas Plants
EDR HISTORICAL AUTO STATIONS	EDR Proprietary Historic Gas Stations
EDR HISTORICAL CLEANERS	EDR Proprietary Historic Drycleaners

All of the above records were examined for up to a one mile radius by EDR (see Appendix H). The subject property does not appear on any of the lists.

The EDR record search also revealed that fourteen (14) sites exist within a one-half mile radius of the subject property which have sustained soil and/or groundwater contamination as a result of an underground storage tank leak. Please refer to the Executive Summary in Appendix H for the Leaking Underground Storage Tanks (LUST) list. However, all LUST sites within ½ mile of the subject property have received regulatory closure. As a result, contaminant impacts to the subject property are unlikely.

Finally, the EDR record search revealed the following concerning properties located within a one mile radius of the subject site:

Historic Oil and Gas Drilling Activity

Based on a review of State Division of Oil and Gas (DOG) records, it appears that no historic oil production or exploratory oil well drilling activity has ever occurred on the subject site. Figure 4 illustrates historic oil well drilling activity near the subject property. However, PIC has determined the subject property is located above or very near a portion of the San Vicente Oil Field (see Figure 4A). Nearby producing oil wells have been directionally drilled from an "island" located at the intersection of San Vicente Blvd. and Third Street as shown on Figure 4A. Given that all historic oil well drilling and production has occurred at offsite locations, there is no evidence the subject property has been impacted by historic oil well drilling or production. Further, the oil well operator remains liable indefinitely for any potential contamination resulting from oil well drilling and/or production operations.

Solid Waste Disposal Sites

The Los Angeles County Solid Waste Management Department provides a public index of Solid Waste and Liquid Industrial Waste Disposal Sites (see Figure 6). The EDR Report in Appendix H also includes a review of listings concerning landfills. Figure 6 and the EDR report both indicate that no landfills have been located on or near the subject property.

It appears the subject property has not been impacted historically by landfill or gravel quarry activities.

GEOLOGY AND HYDROGEOLOGY

The elevation of the site is approximately 264 feet above sea level. The surrounding topography generally slopes southeasterly away from the nearby Santa Monica Mountains (see Figure 1 and Topographic Maps in Appendix E).

The groundwater contour map published by Environmental Data Resources (EDR) indicates that depth to the first occurrence of groundwater is about 30 feet below surface (see Figure 3). The regional groundwater flow direction appears to be southeasterly mimicking surface drainage.

CONCLUSIONS AND RECOMMENDATIONS

Based upon the results of this Phase I Environmental Assessment, PIC offers the following:

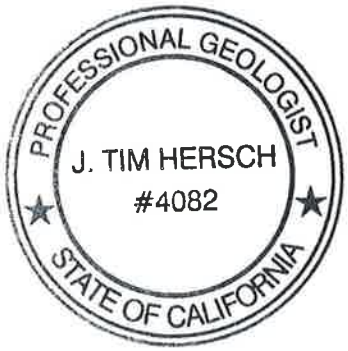
1. No documented, historic occurrence of petroleum or hazardous materials contamination or environmental impairments was discovered at the subject property.

2. No significant potential existing or historic onsite sources of petroleum or hazardous materials contamination were discovered.

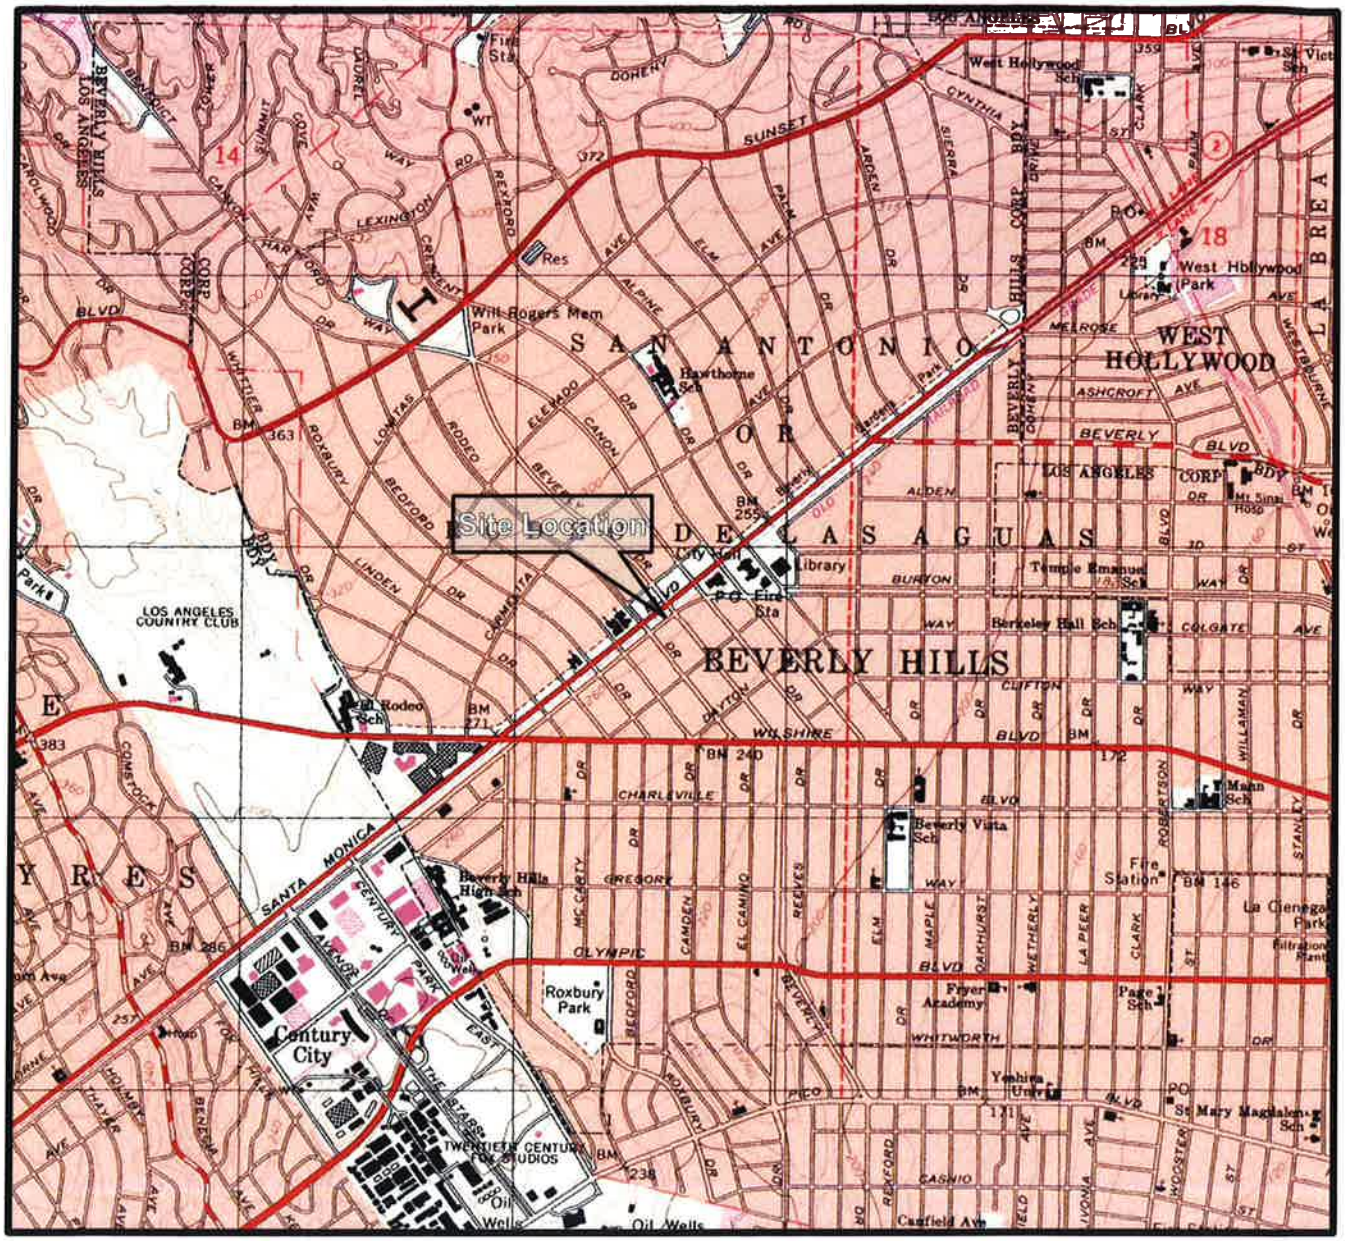
3. PIC concludes the site lacks significant environmental impairments (Recognized Environmental Conditions).

4. PIC recommends no additional investigation.

This report is proprietary and confidential, to be delivered to, and intended for the exclusive use of, the above named client and the client's assignees only. PIC Environmental Services assumes no responsibility nor liability for the reliance herein or use hereof by anyone other than the above named client or the client's assignees. In addition, the results of the government record search were prepared and provided by Environmental Data Resources, Inc. (EDR), who are responsible for the accuracy and completeness of the information provided.



Accordingly, we, J. Tim Hersch and Ethan J. Hersch, declare to the best of our knowledge and belief, we meet the definition of Environmental Professional as defined by 40 C.F.R. Section 312.10 and we have the specific qualifications based upon education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Section 312.



Should you have any questions or comments regarding the procedures outlined in this report, please do not hesitate to call us at 909/593-2427.

Respectfully submitted,

Ethan J. Hersch

DEPARTMENT OF BUILDINGS

Application for the Erection of Buildings

ZONE C-3 FIRE DISTRICT 1 TYPE 1 GROUP Two DIVISION 1

TO THE CITY COUNCIL OF THE CITY OF BEVERLY HILLS:

Application is hereby made to the Council of the City of Beverly Hills, through the office of the Chief Inspector of Buildings for a permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which shall be deemed conditions entering into the exercise of the permit:

FIRST: That the permit does not grant any right or privilege to erect any building or other structure herein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

SECOND: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Beverly Hills.

THIRD: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

FOURTH: Applicant agrees to hold the City of Beverly Hills, and all officers and employees harmless from all costs and damages, per Sec. 6, Ord. 181.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by PIC Environmental Services were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Longitude (West):	118.40338 - 118° 24' 12.17"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	370500.9
UTM Y (Meters):	3770709.5
Elevation:	265 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630733 BEVERLY HILLS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

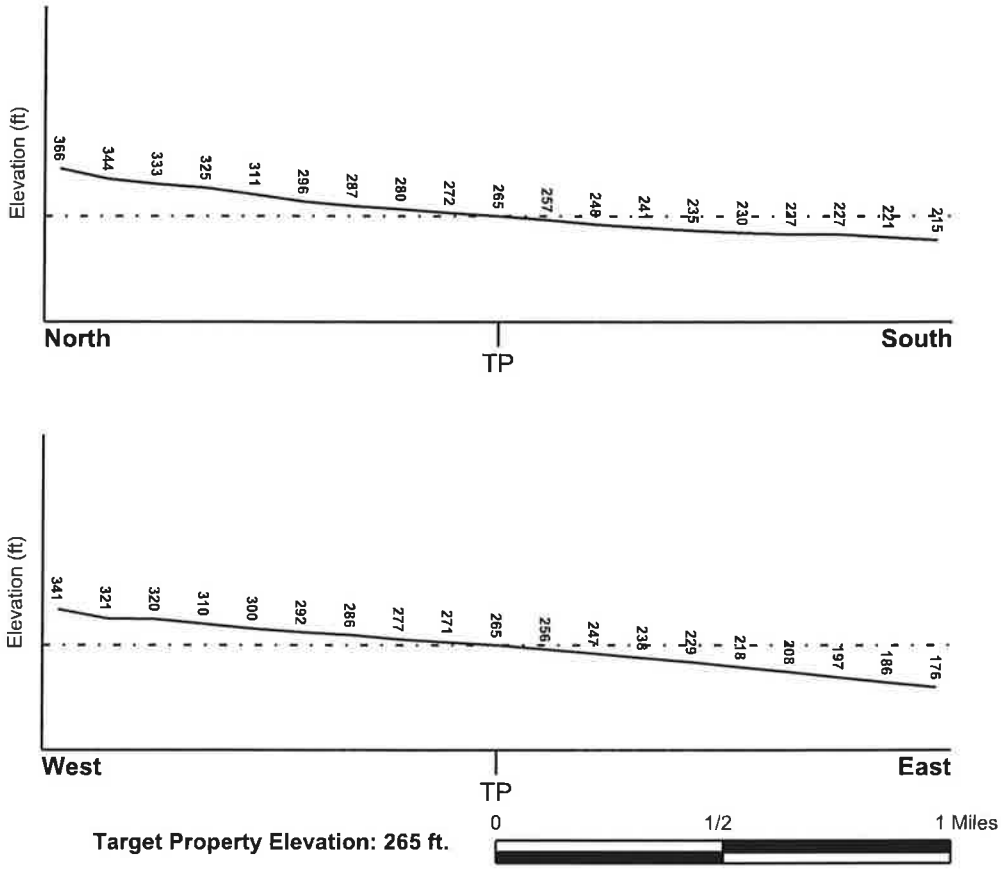
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 265 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1585F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1595F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BEVERLY HILLS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	0 - 1/8 Mile SE	Not Reported

8G	1/2 - 1 Mile ESE	ESE
9G	1/2 - 1 Mile SSE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

INTRODUCTION

PIC Environmental Services (PIC) was contracted by the Marianne Meeker to perform a Phase I Environmental Site Assessment (PESA) at commercial property located in Beverly Hills, California (see Figure 1). The purpose of this investigation was to determine if environmental impairments existed at the site. This document represents the PESA report prepared in accordance with customary industry practices and current ASTM (2013) Standards. More specifically, this report is compliant with ASTM E1527-13 standards. Finally, this report also intends to satisfy the "All Appropriate Inquiries" guidelines established by the Federal Environmental Protection Agency (EPA).

The following sources were used to prepare this report:

1. Site inspection
2. California Regional Water Quality Control Board (RWQCB) records
3. California Department of Health Services (DHS), Site Mitigation Division records
4. United States Environmental Protection Agency (EPA) and Geological Society (USGS) records
5. California Department of Natural Resources (CDNR), Division of Oil and Gas (DOG) records
6. Los Angeles County Waste Discharge Systems records of active and inactive landfills
7. EDR collection of historic aerial photographs
8. Los Angeles County UST and Industrial Waste Permit Records
9. Los Angeles County Title Records
10. Historic Telephone Directories
11. Sanborn Fire Insurance Maps
12. Beverly Hills Building Department Permit Records

SCOPE OF INVESTIGATION

The scope of this investigation included: site inspection, survey of adjacent properties, review of the above listed government records, review of historical aerial photographs, geologic and hydrogeologic information search.

SITE INSPECTION

On January 21, 2014, PIC Project Manager, Ethan Hersch, conducted site inspections at the subject property and adjacent/nearby properties. Chris Holland assisted PIC with the inspections.

SITE DESCRIPTION

The subject property includes about one-half acre of commercial property located west of Beverly Drive in Beverly Hills, CA.

Historic addresses used at the property appear to include 457 through 471 North Beverly Drive, Beverly Hills, CA 90210 (see Appendices A, C, and D). The Los Angeles County Assessor Parcel Number for the subject property is 4343-016-023. Additional title information is attached in Appendix A.

Property boundaries are indicated by Beverly Drive to the east, a public alley to the west, Santa Monica Blvd, (South) to the north and adjacent commercial developments south (see Figures 2 and 7).

The subject property has been improved with one commercial building, constructed in 1996, that covers the entire property. Features observed onsite by PIC are illustrated on Figures 2 and 7 and photos in Appendix B.

The onsite building was occupied by the Paley Center for the Media at the time of PIC's inspection. The Paley Center for the Media uses the building to exhibit art and media memorabilia.

The onsite building was constructed after to 1980. As a result, asbestos containing construction materials (ACM) should not be present. PIC observed no obvious ACM, but testing for ACM in suspect building materials was not conducted. A reference diagram of common ACM in older commercial structures is illustrated on Figure 5.

PIC observed no evidence of underground storage tanks (USTs), significant surface staining, or drains exhibiting stains. PIC observed no significant petroleum or solvent staining on the building foundation.

SITE HISTORY

Based on a review of regulatory records, County title records, city permit records, historic telephone directories, historic topographic maps, historic fire insurance maps, and historic aerial photos, it appears the subject property was initially developed for commercial purposes in the 1920s, when former buildings were constructed at the property (see Appendices A, C, D, and F). Prior to the 1920s, the site may have contained single family residences. Historic telephone directory listings in Appendix G verify the property has been occupied by numerous commercial tenants including the existing museum, a bank, gift shops, realty offices, beauty salons, restaurants, grocery/meat markets, and hardware stores. Based on historic uses, there is no obvious evidence of environmental impairment concerns at the subject property.

Accordingly, PIC's site inspection and review of historic records did not reveal Recognized Environmental Concerns (RECs).

SURVEY OF ADJACENT PROPERTIES

Commercial developments were observed on adjoining properties.

None of the adjacent properties exhibited obvious evidence of petroleum or hazardous materials contamination problems. In addition, the EDR Report in Appendix H does not identify any known contamination problems on adjoining properties. Historic dry cleaning and automotive repair facilities are known to have existed in close proximity to the subject property (see Appendix H).

Surface runoff at all surrounding properties appeared to be southeasterly.

No evidence of historic or improper waste disposal was observed by PIC in any storm drain at the site.

HISTORICAL AERIAL PHOTOGRAPH REVIEW

Historical aerial photographs provided by EDR were reviewed by PIC (see copies in Appendix F). Available photographs were dated 1928, 1938, 1948, 1952, 1964, 1972, 1981, 1989, 1994, 2005, 2009, 2010, 2012, and 2013.

The subject property contains former commercial buildings in the 1928 photo. Beverly Drive is evident in all photos. In addition, Santa Monica Blvd. (formerly Burton Way) is also visible in all photos. By 1938, the subject property exhibits modifications and/or construction of former onsite commercial buildings. Similar features are observed onsite in the 1948, 1952, 1964, and 1972 photos.

By 1981, the former onsite buildings exhibit modifications apparently joining/connecting two historic buildings. Similar features are observed on the 1989 and 1994 photos.

By 2005, the existing onsite building, constructed in 1996, is observed to have replaced all former structures.

Subsequent photos reveal similar features and no significant changes. A recent (2013) photo has been enlarged and reproduced as Figure 7 for reference.

The aerial photo study indicates no obvious environmental impairments on the subject property or from adjacent properties. The aerial photo search did not indicate any historic oil well drilling, landfill, or gravel quarry activity on the site.

GOVERNMENT RECORDS REVIEW

The following federal, state, and local public records and associated lists were searched to determine the potential for or existence of onsite and/or offsite unauthorized releases of hazardous materials (i.e., contamination) related to onsite and/or offsite aboveground or underground storage tanks, or any other potential sources:

FEDERAL SOURCES

INDIAN UST	Underground Storage Tanks on Indian Land

EDR PROPRIETARY RECORDS

MANUFACTURED GAS PLANTS	EDR Proprietary Manufactured Gas Plants
EDR HISTORICAL AUTO STATIONS	EDR Proprietary Historic Gas Stations
EDR HISTORICAL CLEANERS	EDR Proprietary Historic Drycleaners

All of the above records were examined for up to a one mile radius by EDR (see Appendix H). The subject property does not appear on any of the lists.

The EDR record search also revealed that fourteen (14) sites exist within a one-half mile radius of the subject property which have sustained soil and/or groundwater contamination as a result of an underground storage tank leak. Please refer to the Executive Summary in Appendix H for the Leaking Underground Storage Tanks (LUST) list. However, all LUST sites within ¼ mile of the subject property have received regulatory closure. As a result, contaminant impacts to the subject property are unlikely.

Finally, the EDR record search revealed the following concerning properties located within a one mile radius of the subject site:

Historic Oil and Gas Drilling Activity

Based on a review of State Division of Oil and Gas (DOG) records, it appears that no historic oil production or exploratory oil well drilling activity has ever occurred on the subject site. Figure 4 illustrates historic oil well drilling activity near the subject property. However, PIC has determined the subject property is located above or very near a portion of the San Vicente Oil Field (see Figure 4A). Nearby producing oil wells have been directionally drilled from an "island" located at the intersection of San Vicente Blvd. and Third Street as shown on Figure 4A. Given that all historic oil well drilling and production has occurred at offsite locations, there is no evidence the subject property has been impacted by historic oil well drilling or production. Further, the oil well operator remains liable indefinitely for any potential contamination resulting from oil well drilling and/or production operations.

Solid Waste Disposal Sites

The Los Angeles County Solid Waste Management Department provides a public index of Solid Waste and Liquid Industrial Waste Disposal Sites (see Figure 6). The EDR Report in Appendix H also includes a review of listings concerning landfills. Figure 6 and the EDR report both indicate that no landfills have been located on or near the subject property.

It appears the subject property has not been impacted historically by landfill or gravel quarry activities.

GEOLOGY AND HYDROGEOLOGY

The elevation of the site is approximately 264 feet above sea level. The surrounding topography generally slopes southeasterly away from the nearby Santa Monica Mountains (see Figure 1 and Topographic Maps in Appendix E).

The groundwater contour map published by Environmental Data Resources (EDR) indicates that depth to the first occurrence of groundwater is about 30 feet below surface (see Figure 3). The regional groundwater flow direction appears to be southeasterly mimicking surface drainage.

CONCLUSIONS AND RECOMMENDATIONS

Based upon the results of this Phase I Environmental Assessment, PIC offers the following:

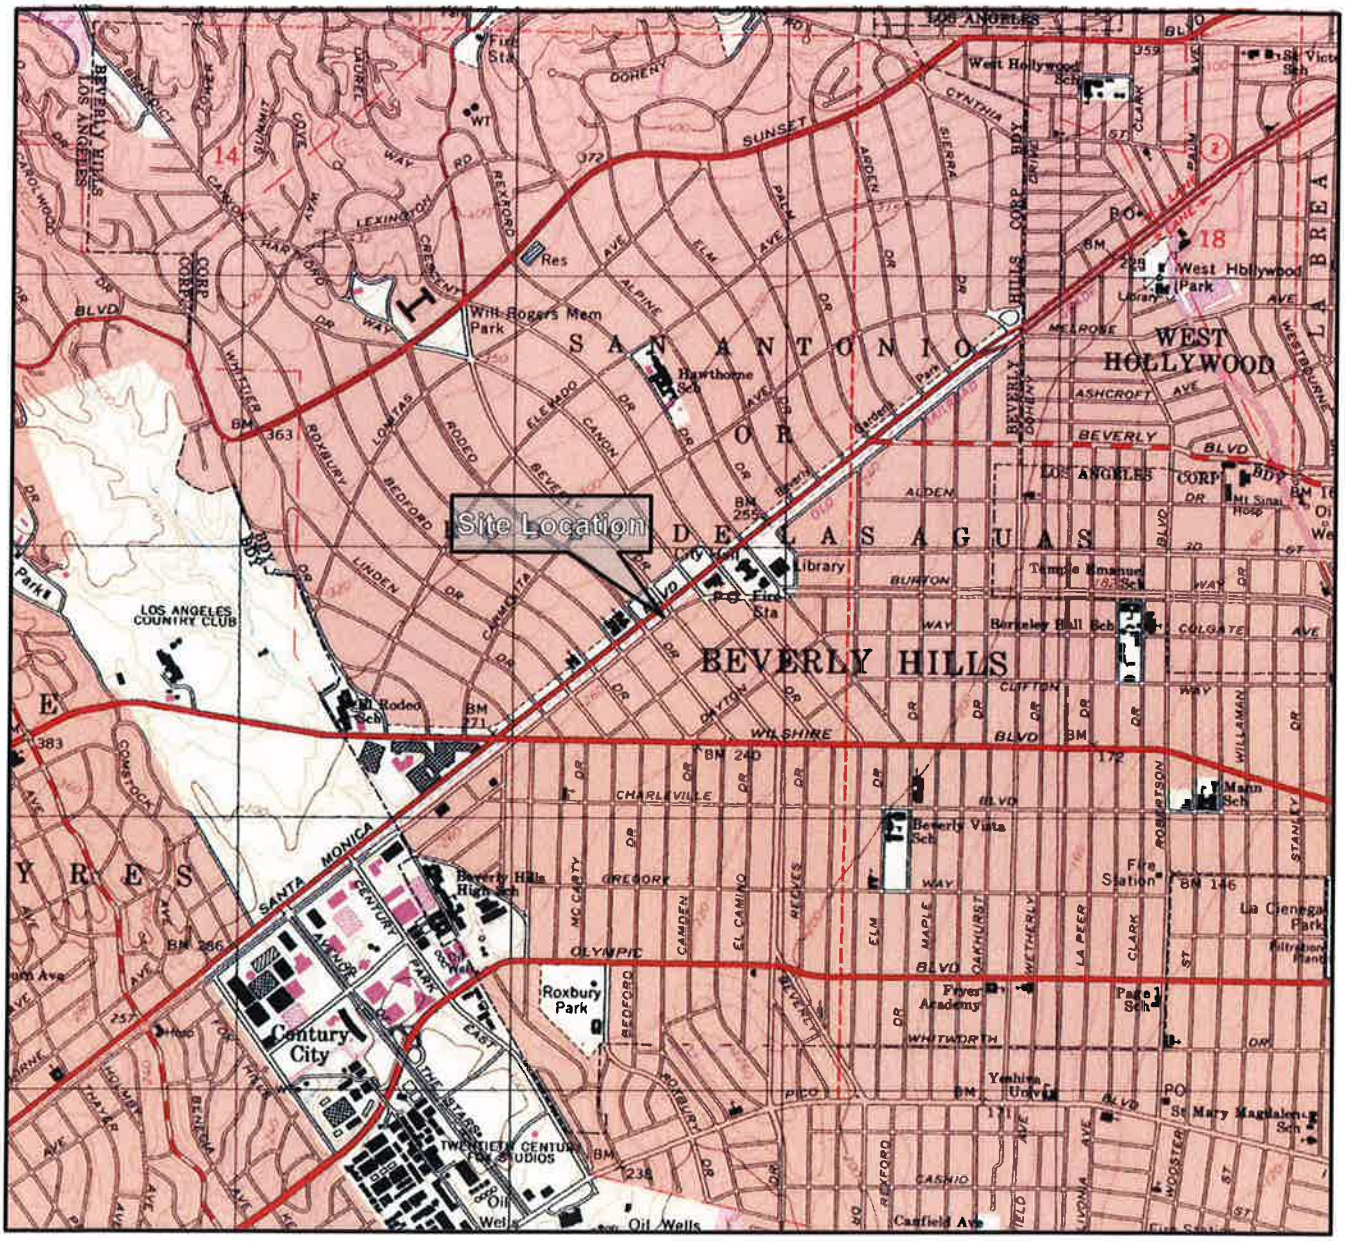
1. No documented, historic occurrence of petroleum or hazardous materials contamination or environmental impairments was discovered at the subject property.

2. No significant potential existing or historic onsite sources of petroleum or hazardous materials contamination were discovered.

3. PIC concludes the site lacks significant environmental impairments (Recognized Environmental Concerns).

4. PIC recommends no additional investigation.

This report is proprietary and confidential, to be delivered to, and intended for the exclusive use of, the above named client and the client's assignees only. PIC Environmental Services assumes no responsibility nor liability for the reliance herein or use hereof by anyone other than the above named client or the client's assignees. In addition, the results of the government record search were prepared and provided by Environmental Data Resources, Inc. (EDR), who are responsible for the accuracy and completeness of the information provided.



Should you have any questions or comments regarding the procedures outlined in this report, please do not hesitate to call us at 909/593-2427.

Respectfully submitted,

Ethan J. Hersch

EDR® Environmental Data Resources Inc

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by PIC Environmental Services were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Section 100: Introduction

100.1 Introduction

The Project site is comprised of 1.28 acres located at 449 (Inclusive of 451 and 453), 456, and 468 N. Rodeo Drive, and 461 (Inclusive of 463 and 465) N. Beverly Drive in Beverly Hills, CA. The proposed site development includes a multi-story mixed-use development with a 115-key hotel and 91,592 square feet (sf) of commercial retail, private club restaurant, and amenity space. The Project will also include private internal driveways, landscaping, stormwater conveyance and treatment structures/utilities, and subterranean parking. This technical memorandum provides a preliminary storm water design for the Project. It considers existing and proposed conditions and provides calculations for the sizing of storm drain pipes and associated structures.

100.2 Methodology

The Los Angeles County Department of Public Works Hydrology Map was used to determine the approximate rainfall during a 50-year storm on the site. This hydrology map contains historical rainfall data from the previous 40-80 years at 99 rainfall gauges across the County. HydroCalc was used to determine the pre- and post-development on-site flows. The calculations are included in Appendix A.

100.3 Existing Drainage Conditions

The elevation of the site ranges from approximately 265 to 262 feet above mean sea level (MSL). In the existing condition, stormwater runoff from the surface parking areas and alley sheet flows south towards Brighton Way at a slope of approximately 1%.

The runoff from the roof areas of the existing buildings discharges at the curb face of the frontage streets of N. Rodeo Drive, S. Santa Monica Boulevard, and N. Beverly Drive via curb and parkway drains respectively. The runoff is then conveyed via a concrete curb and gutter south towards Brighton Way where it discharges into the public storm drain system.

See Exhibit 1 – Existing Drainage Area Map for details.

100.4 Proposed Drainage Conditions

The Project site improvements will include constructing storm drainage infrastructure, including storm drain inlets internal to the site and within the private driveways, to convey onsite runoff to a stormwater treatment system. The proposed stormwater treatment system will consist of an underground rainwater harvesting cistern which will capture the stormwater runoff and then dispose of it via metered discharge to the City's system. See Table 1 on page 2 for a summary of the Pre- and Post-Development Conditions.

Table 1: Pre- and Post-Development Conditions

Construction site area	1.28	acres
Percent impervious before construction	100	%
Percent pervious before construction	0	%
Percent impervious after construction	87	%
Percent pervious after construction	13	%

Per the ALTA/Topographic Survey provided by Calvada Surveying Inc., dated 4/28/2020, there is an existing City-maintained catch basin north of the site near the intersection of N. Rodeo Drive and S. Santa Monica Boulevard. Onsite runoff that exceeds the required stormwater treatment volume will overflow to the catch basin via a direct connection from an underground storm drain pipe.

A summary of proposed drainage areas and their associated flows are as follows:

Area-1: Area-1 is comprised of building and driveway area (87% impervious) with landscape areas located on the ground, balcony, and roof levels (13% pervious). The landscape areas are comprised of landscape planters and tree wells with substantial soil depth for incidental stormwater treatment and thus can be considered pervious. See Appendix B – Landscape Plans for additional information.

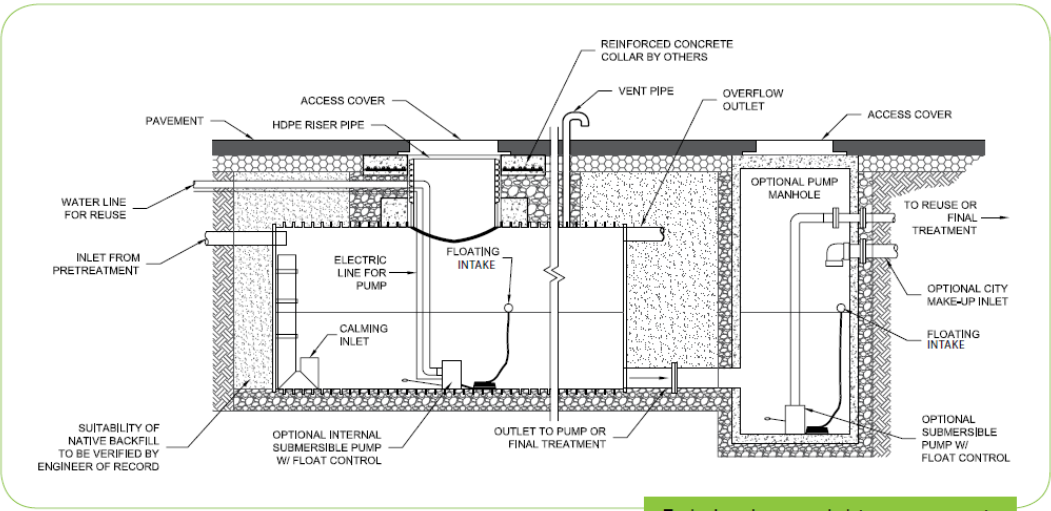
This drainage tributary area has a Q_{50} flow of 3.63 cfs. The onsite runoff will be captured by the roof drains/area drains and conveyed via the stormwater pipe network to the stormwater treatment system and associated overflow structure. The overflow from the underground cistern will be discharged to the catch basin at N. Rodeo Drive and S. Santa Monica Blvd. and conveyed to the public storm drain system to the north of the proposed development.

The Project will decrease the total runoff for the Q_{50} from pre-development to post-development conditions by 0.08 cfs (3.63 cfs existing vs 3.71 cfs proposed). See Table 2 below for a summary of the existing and proposed drainage areas and flows. Refer to Exhibit 1 for the Existing Drainage Area Map, and Exhibit 2 for the Proposed Drainage Area Map.

Table 2: Existing and Proposed Drainage Areas and Flows

Drainage Area Number	Drainage Area (Acres)	50-year Flow (CFS)
EX-1	0.41	1.17
EX-2	0.23	0.66
EX-3	0.48	1.37
EX-4	0.18	0.51
Total Pre-Dev.	**1.28**	**3.71**
AREA-1	1.28	3.63
Total Post-Dev.	**1.28**	**3.63**

100.5 LID Design Criteria & Feasibility Analysis



Proposed peak mitigated flows and volumes have been calculated using the Los Angeles County HydroCalc Calculator. Per the Los Angeles County Department of Public Works' requirements, the peak mitigated flows and mitigated volumes are based on the 85th

Percentile of rainfall or ¾" rainfall, whichever is greater. Our analysis shows the 85th Percentile to be greater, which shows to be 1.12 inches.

The tributary area of the site of 1.28 acres includes building area, proposed paved traffic circulation area, and landscaping. The peak mitigated discharge volume was calculated to be 4,099 cubic feet per the LA County HydroCalc Calculator.

Per the Preliminary Geotechnical Engineering Investigation performed by Feffer Geological Consulting, dated March, 5, 2020, a stormwater infiltration system is not recommended at the site due to the observed groundwater level of 50 feet below the surface, and proposed subgrade parking extending to a total maximum depth of 44 feet. Since a minimum of 10 feet is required from the groundwater level to the bottom of a proposed infiltration device, it is reasonable to assume that infiltration is not feasible for the Project. Thus, a rainwater harvesting system is proposed for the Project. Stormwater will be pre-treated with an approved pretreatment structure prior to entering the cistern. Stormwater will then be metered out to the City storm drain system in coordination with the City, as irrigation for the site will be provided via greywater reuse.

Sample Rainwater Harvesting System

Typical underground cistern components

100.6 Conclusions

The Project's proposed drainage system is designed to provide storm water control and quality measures based on the current City of Beverly Hills requirements. The Project has been analyzed for adherence to Low Impact Development (LID) design requirements for stormwater treatment, along with stormwater runoff control for the 50-year (Q50) storm event per the Los Angeles County requirements.

The analysis shows that the proposed development will decrease the overall runoff flow. Runoff will ultimately discharge to the existing catch basin to the north of the site near the intersection of S. Santa Monica Boulevard and N. Rodeo Drive. Since the total runoff from the site will decrease in the post-development condition, it has been determined that the existing storm drain system has adequate capacity for the proposed development.

100.7 Limitations

Kimley-Horn was retained to perform a limited preliminary hydrology analysis and report to support the California Environmental Quality Act analysis that is being prepared by the City of Beverly Hills. Our assessment is based on information provided to Kimley-Horn by others (municipality staff, design team, utility company representatives, etc.) up to the date of this report.

Alley Study

PD EXHIBIT 2 - Alley Study

HIRSCH GREEN
Hirsch/Green Transportation Consulting, Inc.

April 28, 2020

Mr. Masa Alkire, AICP
Principal Planner
Department of Community Development, Planning Division
City of Beverly Hills
455 North Rexford Drive
Beverly Hills, California 90210

RE: Responses to April 10, 2020 City of Beverly Hills Department of Community Planning Initial Review Comment Letter Related to the Cheval Blanc Hotel Specific Plan Project Located at 468 North Rodeo Drive (PL2000138)

Dear Mr. Alkire,

This document provides responses to several traffic and/or access-related comments contained in the City of Beverly Hills April 10, 2020 Department of Community Planning initial review letter regarding the proposed Cheval Blanc Hotel Specific Plan Project at 468 North Rodeo Drive; a copy of the Department's letter (including applicable supporting comments from Fehr & Peers, the City's contract traffic engineering consultant) is provided in the attachments. Specifically, this letter addresses comments identified under the "Planning and Zoning Comments" heading ("Project Description Attachments" subheading, page 6) of the City's letter, including the request for a study of the operations of the north-south access alley currently bisecting the project site (which is proposed to be modified as part of the project), as well as other assorted comments related to the effects of the proposed project's access and construction activities on the alley.

Alley Study

The subject alley is an approximately 20-foot wide, one-way southbound facility located mid-block between Rodeo Drive and Beverly Drive that connects South Santa Monica Boulevard on the north with Wilshire Boulevard on the south, as shown in Figure 1. Within the immediate vicinity of the proposed project, the alley provides access to loading and employee/customer parking areas for a variety of commercial and retail businesses fronting along both Rodeo Drive and Beverly Drive between South Santa Monica Boulevard and Brighton Way, along with an exit-only driveway for a private/public parking garage at 421 North Beverly Drive. The subject project proposes to vacate the portion of the alley adjacent to its currently individual parcels (in order to merge the separate project sites) and relocate the alley entrance to Beverly Drive, as indicated in Figure 2. As part of the City's initial review comments on the proposed project, Fehr & Peers noted that a study of the current (and anticipated future) operations of the alley should be provided to identify whether the proposed alley reconfiguration would impact other businesses using the alley.

PROJECT SITE LAYOUT AND
ALLEY ACCESS RECONFIGURATION

Alley Traffic Volumes

The amount of traffic currently using the alley was identified through a series of 24-hour counts conducted at the alley's South Santa Monica Boulevard entrance in April and May of 2019, including a total of eight weekdays, two Saturdays, and two Sundays. These counts represent typical weekday and weekend conditions during weeks with no holidays or other notable events, with area schools and businesses exhibiting normal operations, and seasonal weather conditions (temperatures, rainfall, etc.) throughout the count period.

The results of the counts indicate that on weekdays, the alley exhibited an eight-day average of approximately 718 total vehicles per day, including a maximum of about 801 vehicles per day. The majority (about 67 percent) of these vehicles entered the alley via an eastbound right turn from South Santa Monica Boulevard, with the remainder entering from the westbound direction via a left turn move. Further, most of the observed alley traffic consisted of typical automobiles (654 vehicles per day, or about 91 percent) and single-unit (SU-30 or SU-40) delivery trucks (58 vehicles per day, or about eight percent), with garbage trucks and motorcycles making up the rest of the traffic (each averaging three vehicles per day, or about 0.5 percent of the total).

These daily averages are generally maintained during each of the three weekday "peak periods" (morning, mid-day, and afternoon/evening) examined for the purposes of this study. Specifically, during the AM peak hour (which typically occurred within the period from 8:30 AM to 9:45 AM), the alley accommodated an average of 110 total vehicles (with a maximum of 123 vehicles), including 103 automobiles (approximately 94 percent), six delivery trucks (roughly five percent), and one motorcycle. During the mid-day peak hour (which varied widely for each individual day, but with all occurring between 12:00 noon and 2:00 PM), an average of about 59 total vehicles (maximum of 75 vehicles) accessed the alley, including 52 automobiles (about 88 percent) and seven delivery trucks (about 12 percent), while during the weekday afternoon/evening peak hour (which also varied by day, although all occurred during the period between 3:00 PM and 5:15 PM), an average of about 48 total vehicles (including a maximum of 63 vehicles) entered the alley, including 43 automobiles (about 90 percent) and five delivery trucks (about 10 percent). As with the overall daily conditions, most of the peak hour alley traffic (between about 56 and 73 percent) entered via a right turn from South Santa Monica Boulevard.

Overall traffic in the alley on weekends was substantially lower than during the weekdays, with two-day averages of about 597 total vehicles per day (maximum of 610 total vehicles per day) on Saturdays, and of about 279 total vehicles per day (maximum of 283 vehicles per day) on Sundays. Again, most of this traffic (around 70 percent for each day) entered the alley via a right turn from South Santa Monica Boulevard, and was comprised primarily of typical automobiles, including about 570 vehicles per day (about 95 percent) on Saturdays, and about 274 vehicles per day (about 98 percent) on Sundays. The remaining average daily Saturday traffic consisted primarily

of single-unit delivery trucks (23 vehicles, or approximately four percent of the total), although three garbage trucks and one semi-trailer truck were also observed. *However, while the averages suggest that a semi-trailer truck could be expected to access the alley on any typical Saturday, it is of note that only one semi-trailer truck used the alley during the 12-day observation period, on Saturday May 11, 2019 at 11:30 AM*. On Sundays, in addition to the 274 daily automobiles, an average of five single-unit delivery trucks per day were observed (about two percent of the total daily traffic for that day); no other types of vehicles utilized the subject alley on Sundays.

During the AM peak hour on Saturday (from 8:45 AM to 9:45 AM for both count days), the alley exhibited an average total traffic demand of about 98 vehicles (and a maximum of 100 vehicles), including 96 automobiles (approximately 98 percent), and two delivery trucks (about two percent), while during the mid-day peak hour (between 12:00 noon and 1:00 PM for both observed days), an average (and maximum) of about 61 total vehicles utilized the alley, including 58 automobiles (about 95 percent) and three single-unit delivery trucks (about five percent). During the Saturday afternoon/evening peak hour (which occurred from 3:00 PM to 4:00 PM on both of the count days), an average of approximately 53 total vehicles (with a maximum of 59 vehicles) used the alley, including 50 automobiles (about 94 percent) and three delivery trucks (about six percent). Again, the majority of the Saturday peak hour traffic (between about 58 and 74 percent) entered the alley via an eastbound right turn from South Santa Monica Boulevard.

Finally, on Sunday, during the AM peak hour (occurring generally between 8:00 AM and 9:30 AM), an average of approximately 14 total vehicles (maximum of 16 total vehicles) utilized the alley, including 13 automobiles (about 93 percent), and one delivery truck (about seven percent). During the Sunday mid-day peak hour (generally between 12:00 noon and 1:15 PM), an average (and maximum) of approximately 25 total vehicles, including 24 automobiles (about 96 percent) and one delivery truck (about four percent) used the alley, along with an average (and maximum) of about 38 total vehicles (all automobiles) during the Sunday afternoon/evening peak hour (which occurred during the overall time period between 3:15 PM to 4:45 PM). As with both the weekday and Saturday conditions described previously, most of the Sunday peak hour traffic (about 64 to 72 percent) entered the alley via a right turn from South Santa Monica Boulevard.

The average alley traffic volumes for the weekday daily (24-hour) and various peak hour periods are shown in Figure 3(a), while the average alley volumes during these same periods are shown for Saturday and Sunday conditions in Figures 3(b) and 3(c), respectively. The alley traffic counts for each of the individual surveyed days are provided in the attachments to this document.

As identified previously in Figure 2, the project's proposed relocation of the alley entrance from its existing location to Beverly Drive will require that vehicles currently making the right turn into the alley instead continue eastward on South Santa Monica Boulevard to Beverly Drive, where they would then turn right onto Beverly Drive in order to access the new alley entrance. However,

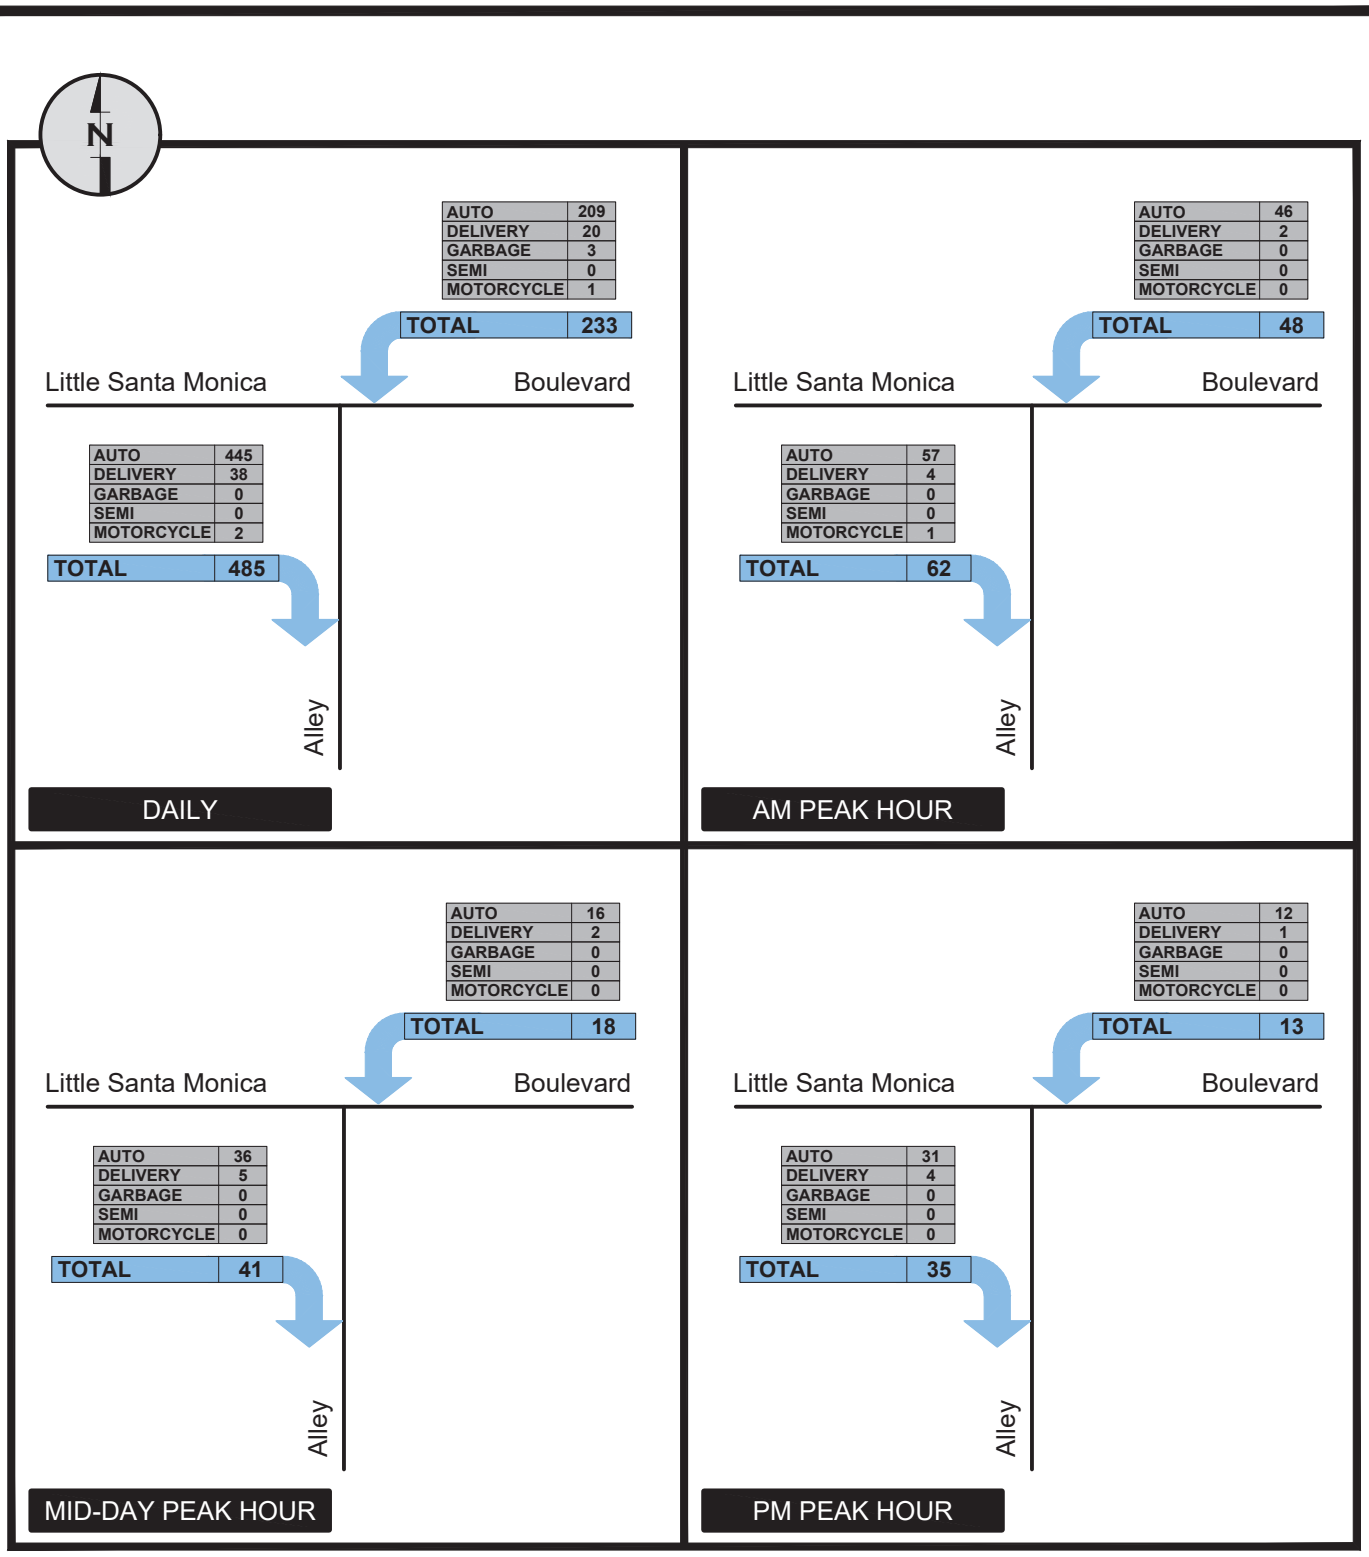

FIGURE 3(a)

Hirsch/Green Transportation Consulting, Inc.

while this “redistribution” of the eastbound traffic entering the alley would likely increase the number of vehicles travelling through the intersection of South Santa Monica Boulevard and Beverly Drive, as described earlier, any such additional traffic would be relatively nominal, with a maximum of about 72 vehicles per hour during any of the typical weekday “peak hour” periods (AM, Mid-day, PM), and a maximum of approximately 65 vehicles per hour during any of these time periods on typical weekends (specifically, on Saturdays). This potential increase in traffic at the subject intersection would equate to only about one or two new vehicles per signal cycle, assuming that none of the existing eastbound alley traffic diverts to other travel routes following the relocation of the alley entrance, and further, would be right turns, some of which could occur as a “right-turn on red” move when eastbound South Santa Monica Boulevard traffic is stopped. Changes to the number of vehicles passing through this intersection along the other approaches would be essentially unchanged, although they would exhibit somewhat different travel patterns (changing from southbound right turns to southbound through moves, and from westbound through to westbound left turn moves, and eliminating the northbound left turn movement). Therefore, the potential impacts of the proposed relocation of the alley entrance alone on the operations of the intersection of South Santa Monica Boulevard and Beverly Drive are expected to be minimal.

Alley Access and Operations

In addition to the relocation of the alley entrance, the proposed alley reconfiguration will require that vehicles using the alley make a 90-degree turn from the new east-west oriented portion of the alley (from Beverly Drive) in order to access the existing and unaffected north-south segment. Therefore, additional evaluations were performed to assure that all of the various vehicle types observed accessing the alley could make this move. As described earlier, the majority of the vehicles using the alley are typical automobiles (and light trucks, such as pickups and vans), although a number of larger single-unit delivery trucks and garbage trucks were also identified, along with one semi-trailer truck. Further, while not observed during the alley traffic counts, the reconfigured alley must also be able to accommodate emergency vehicles such as fire trucks.

The results of the supplemental vehicular turning movement evaluations for the reconfigured alley for each of the vehicle types directly observed or anticipated to utilize the alley are shown in the attachments to this document, and include typical single-unit delivery trucks (SU-30 and SU-40), a typical garbage truck, two types of single-body fire trucks (not large “hook and ladder” trucks), and a semi-trailer truck (WB-40) of the size typically used for deliveries in urban environments). The results of these evaluations indicate that all of these vehicle types will be able to make the required new left turn from the relocated (Beverly Drive) alley access to the remaining portions of the alley with little or no difficulty (no multi-point turns or other such maneuvers). As a result, the proposed reconfiguration of the alley would not limit its use (by the observed vehicle types), and since the portions of the alley south of the project site will be unaffected by its development, no significant impact to the existing operations of the alley for its other users are anticipated.

Additionally, vehicular access to the alley will be provided at all times during construction of the proposed project, so that no disruption in alley service for the existing businesses to the south of the project site will occur. As detailed in the proposed project's construction management plan (submitted under separate cover), the construction of the project will occur in multiple phases, with the first phase(s) involving the demolition of the eastern half of the project site, currently occupied by the Paley Center for Media building and adjacent 449 Beverly Drive building, and the subsequent excavation of that area in order to construct the project's subterranean levels. Vehicular access to the alley from its existing access location on South Santa Monica Boulevard will be maintained throughout this portion of the project's construction activities. This phase will also include the construction of the new segment of the alley, between Beverly Drive and the existing alley, atop the subterranean levels. Once the new alley segment has been completed, it will be connected to the remaining north-south portion of the alley, and the existing entrance from South Santa Monica Boulevard (along with the portions of the alley north of the new segment) will be closed and ultimately removed during subsequent phases of the project's construction. Note that the connection of the new alley segment with the remainder of the existing alley may require a temporary and short-duration closure of all access to the alley, although it is expected that this procedure can be accomplished during late weekday or weekend evening hours (with permission from the City) when alley activity is nominal to minimize impacts to alley operations.

As a result, based on these evaluations, the proposed alley reconfiguration will not affect access for any of the vehicle types observed to use that facility, up to and including semi-trailer trucks. Therefore, since neither the physical configuration nor the operational conditions of the portions of the alley south of the project site will be affected, the proposed relocation of the alley entrance is not anticipated to result in any significant impacts to other (non-project) users of the alley.

Alley Access to Proposed Project Loading Docks and Subterranean Parking

As also shown earlier in Figure 2, vehicular access to the proposed project's on-site loading bays will be provided from the relocated portion of the alley. Delivery vehicles using the loading bays will enter the project site from the (relocated) alley, and then back into either of the two bays; once the loading/unloading activity is completed, the trucks will then exit the site into the alley to continue southward through the remaining portion of the alley toward Brighton Way. A study of the configuration of the loading bays indicated that a typical SU-30 single-unit delivery truck, which is the type and size of vehicle anticipated to serve the proposed project, can accomplish the maneuvers necessary to access either of the loading bays entirely within the project site, although it is likely that multiple vehicle moves will be required for egress from "loading bay 2" when another vehicle is utilizing the adjacent "loading bay 1". Additionally, while larger trucks are not expected to use the project's loading bays, a supplemental evaluation identified that an SU-40 single-unit truck could also enter and exit both loading bays, although such vehicles could encounter somewhat more difficulty (due to their additional length and larger turning radii),

and may temporarily encroach into the alley itself, particularly when exiting from “loading bay 2” if another vehicle is using “loading bay 1”; this move would require that the delivery truck exiting “loading bay 2” back up into the alleyway in order to correctly orient itself for southbound travel. Graphics illustrating the entry and exit maneuvers of both an SU-30 and SU-40 single-unit truck for each of the loading bays (when the other bay is being used) are provided in the attachments.

However, it is of note that the loading bays are located in an area that will be used by vehicles returning from the proposed project’s subterranean parking levels to the on-site porte cochere. Therefore, while adequate vehicular access to the project’s on-site loading bays will be provided, in order to avoid conflicts with both “internal” (on-site) project-related vehicular circulation and general (non-project) alley operations, it is recommended that all deliveries to the project site that require the use of the loading bays be scheduled during the “off-peak” periods of the day, when traffic activity at the project site and/or in the alley are expected to be reduced. Further, during the delivery truck loading dock “entering” and “exiting” maneuvers, attendants should be provided to direct and/or control project and alley traffic, to further ensure that potential conflicts do not occur, and that acceptable vehicular circulation in the alley on the project site is maintained.

Summary and Conclusions

The evaluations of the Cheval Blanc Hotel Specific Plan Project’s proposed relocation of the alley entry from its current location on South Santa Monica Boulevard to Beverly Drive indicate that no significant impacts to vehicular access or to the operations of the alley are expected. Further, the location and operations of the project’s loading bays will be acceptable, and will not significantly impact the alley, although it is recommended that the project schedule deliveries for off-peak times, and provide attendants to assure that conflicts with alley traffic do not occur.

Please review the preceding and attached information and analyses, and feel free to contact me if you have any questions or comments.

Sincerely,

Ron Hirsch, P.E.
Principal

CITY OF BEVERLY HILLS DEPARTMENT OF COMMUNITY PLANNING

INITIAL REVIEW COMMENT LETTER (APRIL 10, 2020)

CHEVAL BLANC HOTEL SPECIFIC PLAN PROJECT (PL2000138)

DocuSign Envelope ID: 6708CF5D-D472-47B0-AABC-DE80F3EE4B45

April 10, 2020

Deborah E. Quick
Morgan, Lewis & Bockius, LLP
One Market, Spear Street Tower
San Francisco, CA, 94105

RE: Initial Review of submitted application for the proposed Cheval Blanc Hotel Specific Plan Project (Specific Plan, Zoning Map and Zone Text Amendment, General Plan Amendment, Vesting Tentative Parcel Map, Encroachment Agreement, and Development Agreement) located at 468 North Rodeo Drive (PL2000138).

Dear Ms. Quick:

Staff has conducted a review of the above application, which was submitted to the City on March 12, 2020. At this time, the submitted application and plans have been deemed incomplete. Please note that due to the need for certain City staff to focus on providing essential City services during the on-going covid-19 pandemic, complete comments are not available from all City departments at this time. Responses to the following information requests and provided comments are required to continue evaluation of your application:

PLANNING AND ZONING COMMENTS

Project Plans

1) G001 – PARCEL, NUMBERS AND SITE AREA: Also identify the total parcel size of 55,606 SF as an additional line item as this is the size of the project site if the parcel map is approved.

2) G001 – FLOOR AREA AND FLOOR AREA RATIO: Add additional row “Gross Site Area – 55,606 SF”. In the ON PLANS column provide the actual PROPOSED MAX. FAR TOTAL SITE calculation (4.06?), move the 4.2 FAR calculation to the SPECIFIC PLAN MAX. column. Also move the 3.9 PROPOSED MAX. FAR ABOVE GRADE figure to the SPECIFIC PLAN MAX. column, provide the actual FAR (3.78?) in the ON PLANS column.

3) G001- Add a table that provides floor area by use type: “Hotel” (breakdown by subcategory, such as “Member Club”, “Public Restaurant”, “Hotel Restaurant”, “Spa/Wellness Center”), “Retail”, “Exempt Space” and “Total”. This table will be

DocuSign Envelope ID: 6708CF5D-D472-47B0-AABC-DE80F3EE4B45

used as a reference in the future regulation amendments proposed in the Draft Specific Plan.

4) G001- BUILDING HEIGHT – ZONING: delete ZONING from title. Retitle the text at the beginning of this section as “Current C-3 Height Requirement”. Modify the table REQUESTED HEIGHT/STORIES into ON PLANS column and SPECIFIC PLAN MAX. column. Create rows in this table to clearly identify the maximum height allowed for the various portions of the building. See comments in the height section of the attached Specific Plan markup for further information.

5) G001- BUILDING HEIGHT: The “calculation of the height of the building” paragraph needs to be substantially rewritten, as the proposed height measurement for this Project does not match the cited BHMC section. See the comments on the Draft Specific Plan, and update this section. The list of allowable height exemptions can reference the appropriate section of Cheval Blanc Specific Plan instead of being listed in their entirety on the cover sheet.

6) G001- CODE PARKING ANALYSIS: Retitle text at beginning of this section as “Current Requirements”. Retitle the table “Requested Parking Requirements”. Rename columns “Provided Spaces On Plans” and “Specific Plan Required Spaces” and fill the table in with applicable information. Rename “Ratio” column “Required Ratio”. Add rows to document parking credits the Project will utilize (in lieu parking, 50% hotel parking for retail credit, 15% project reduction credit). See comments in Draft Specific Plan regarding the 15% reduction credit. The credit rows should be filled in with negative numbers. The required and provided columns will then both have totals based on the sum of all rows included in the table.

7) G001- COMMERCIAL LOADING: Rename text at beginning of section “Current Requirements”. Change end of section to “Requested Loading Requirements”. Provide a table that includes columns: “Required Loading Space Type”, “Required Loading Space Size”, “Specific Plan Loading Space Requirement”, and “Provided Loading Spaces”.

8) G003- PLOT PLAN: Label location of height datum point. Provide elevation of height datum point. Label Pedestrian Plaza.

9) G003- PLOT PLAN: Clarify “Zero Lot Line No Setback” label. Is this a Specific Plan regulation, if so, include a setback regulation in the specific plan, and include a setback table on sheet G001 that identifies required and provided building setbacks. Identify the actual building distance from the lot line on the plot plan. There appears to be space between the lot line and the proposed building at both locations labeled “Zero Lot Line, No Setback”.

10) G004- SITE CROSS SECTION: On each section, provide depth measurements from the ground surface to the top of the underground encroachments. The depth

DocuSign Envelope ID: 6708CF5D-D472-47B0-AABC-DE80F3EE4B45

of these encroachments must meet or exceed the depth requirement proposed in the Draft Specific Plan (10 feet).

11) G004- SITE CROSS SECTION: Indicate the height datum elevation as a line across each elevation. Building height measurement should originate from this line. Provide a building height envelope line that visually represents the requested maximum building heights that are included in the Draft Specific Plan.

12) A101 to A103- BASEMENT LEVELS: Provide directional indicators for one way and two way drive aisles; provide dimension for drive aisle widths (one way and two way); on each sheet provide measurements for typical stall sizes for standard spaces, tandem spaces, compact spaces, and loading bays; provide measurements indicating additional required clearances from obstructions, such as building columns; label each tandem stall; provide ramp slope information for both transition slopes and main slopes.

13) A101 to A103- BASEMENT LEVELS: Revise the PARKING SUMMARY table on each sheet to identify tandem spaces on a per stall basis. This will double the number of spaces. This will allow the table to sum correctly and better mesh with the regulations requested in the draft Specific Plan.

14) A101 to A103- BASEMENT LEVELS: Provide electric vehicle charging information on applicable levels. The Green Building Code requires that a certain number of vehicle charging stations be provided. In addition vehicle charging was identified as a project feature in Section 4.9 of the draft Specific Plan.

15) A103- B1: Identify location of bicycle parking and bicycle amenities compliant with the Green Building Code and Sections 4.4.D and 4.9 of the draft Specific Plan.

16) A103- B1: The back-up area for Loading Bay 1 does not appear to be compliant with the loading space access requirements of 4.4.C. There appears to be a conflict with the most eastern parallel space.

17) A111- A192 All floor plans: Provide setback distances of the structure from property lines. At the ground level it appears that the building is setback from the southern interior property lines. Upper levels of the building are stepped back from the property line, provide information on those step back distances.

18) A111- GROUND LEVEL: Include directional information on vehicle drive aisles and ramps, provide width of drive vehicle drive aisles. Provide slope information for ramps.

19) A111- GROUND LEVEL: The configuration of the two truck loading bays appears to conflict with the draft Specific Plan's minimum drive aisle requirement for one way traffic.

DocuSign Envelope ID: 6708CF5D-D472-47B0-AABC-DE80F3EE4B45

20) CIRCULATION COMMENT: Provide a separate exhibit that provides turning radius information (AutoTURN) for vehicles that could access the site, such as identified delivery vehicle types, emergency vehicles and standard passenger vehicles.

21) A111- GROUND LEVEL: Label taxi/ride share spaces. Provide dimensions for all loading/drop-off and valet vehicle spaces in the motor court.

22) A121- SECOND LEVEL: Provide more detailed information regarding the dimensions and configuration of the Porte Cochere, as this sheet is referenced in draft Specific Plan Section 4.3 as the control on the size and attachment of this feature.

23) A151- 5th LEVEL: Provide height of glass guardrail and landscaped planter box located on guestroom balconies, provide height of operable awning.

24) A161- 6th LEVEL: Provide height for the following features: cabana shade structures, main shade structure, acoustic barrier, and exterior rooftop bar.

25) A171- 7th LEVEL: Provide building step back measurements; provide height of acoustic barrier, glass guardrail, and operable awnings on guestroom balconies.

26) A181- 8th LEVEL: Provide building step back measurements: provide height of acoustic barrier, glass guardrail, and operable awnings on guestroom balconies.

27) A191- 9th LEVEL: Provide building step back measurements: provide height of acoustic barrier, glass guardrail, planters for landscaping, trellis, shade structure, and operable awnings on guestroom balcony.

28) A192- LOW ROOF PLAN: Provide distance of mechanical enclosure from property lines. Provide height of screen wall.

29) A193- HIGH ROOF PLAN: Provide height of rooftop features.

30) ALL FLOOR AREA DIAGRAMS: Provide a floor area total for each of the use types that are color coded on each diagram sheet. Add an additional sheet that provides a table that tallies the floor area identified on each level. This new sheet should match the information in the new table requested on G001 (see Comment 3 above). Create a separate Outdoor Areas category, do not combine it with exempt space (MEP, Cores, shafts). Provide separate calculations for outdoor dining areas and other outdoor space. On each sheet provide the area of each elevator lobby exclusion.

31) ALL ELEVATIONS AND SECTIONS: Add the height datum as a line across the elevation. Provide a building height envelope that indicates the maximum allowable heights of the building. Include rooftop features on all elevations and indicate the height of the rooftop features. Include measurement on sections

DocuSign Envelope ID: 6708CF5D-D472-47B0-AABC-DE80F3EE4B45

identifying the depth of the portions of Level B2 that project beyond the property line.

Project Description

1) Provide more information on the Private Club use. This Project Description discussion should inform the regulations that you add to the draft Specific Plan that are applicable to the Private Club. The operation of the club within the hotel facilities, hours of operation, membership and guest policy should all be addressed. Questions include: the maximum number of members, the maximum occupancy of the club, the number of allowable guests per member, how will events be held at the club, and how does the lobby entrance on Beverly drive operate for pedestrians and vehicles? The operation of the Private Club could inform parking demand and should be directly addressed in the parking demand analysis.

2) Add information to the construction phasing discussion that address when the alley realignment will occur. This information will be an important consideration when construction related traffic impacts are analyzed. Also see the Public Works Engineering comments in this letter.

3) The appropriate recommended export hauling route will need to be discussed with the City's Traffic Engineer.

4) Provide specific in lieu parking information, including a copy of the covenant recorded against the property.

5) P.1 and P.5- Update to include proposed parcel size (1.275 acres), identify the 1.2 acres is exclusive of the alley area.

6) P.3- According to the plans the Private Club entrance is from Beverly Drive, not the alley.

7) P.8- Allowable construction hours in Beverly Hills start at 8 AM: BHMC 5-1-205. update Phase 1 information to reflect this requirement.

8) P.9- Provide a basis for the use of a 25% bulking/fluff factor.

9) P.11- Provide verification information that the cited privately owned sites have surplus parking available above the required parking for those sites, that can be used to provide construction employee parking for this Project.

10) P.11- Table 4: Why are operational hours identified as extended hours? That is a specific permit type in the BHMC that this Project does not require.

DocuSign Envelope ID: 6708CF5D-D472-47B0-AABC-DE80F3EE4B45

11) P.12- Application types: The application includes a submittal for a Vesting Tentative Parcel Map, not a Tract Map. Add Specific Plan to the list of requested entitlements.

Project Description Attachments

Exhibit 1 – Parking Demand Analysis

1) Please review the City's Traffic Engineer comments below and review the comments of the City's traffic peer reviewer (Attachment 2) regarding Parking Demand and the Motor Court.

2) Table 3 – Parking Tabulation: identify in lieu parking as a row in the table and include the number of in lieu spaces as a negative number. Include a row in the table for the 15% reduction and include a negative number of spaces to account for the reduction. The 170 space total identified in this table does not match the project plans.

Exhibit 2- Valet Parking Management Plan

3) Please review the comments of the City's traffic peer reviewer (Attachment 2) regarding the valet parking plan.

4) Please provide more information as to when drive aisle stacked parking will be used. Is this intended for occasional use, such as during events or other functions of the Private Club?

Additional Traffic Peer Review Comments

5) Submit an Alley Study. Please review the City's traffic peer reviewer comments regarding submittal of an alley study for the Project.

Exhibit 3- Loading and Deliveries Narrative

6) The 12' by 35' spaces located on the ground level appear to conflict with the required drive aisle for vehicles exiting the ramp from B1, please clarify whether there is a conflict.

7) Provide information to describe an SU-30 truck and proof that this would be the largest delivery vehicle that would visit the site. Provide information whether the provided spaces are large enough for an SU-30 truck.

8) Provide a weekly or monthly estimated delivery schedule that includes both retail and hotel deliveries. It should include delivery type, size of vehicle used, and number of deliveries per week/month.

DocuSign Envelope ID: 6708CF5D-D472-47B0-AABC-DE80F3EE4B45

9) Please clarify the statement “if the City of Beverly Hills is hosting a large event”. What does the statement refer to?

Exhibits 4 through 7
Thank you for providing two Historic Resource Assessments and building permit records for two of the sites. This information will be peer reviewed as part of the CEQA environmental review process.

10) Preliminary comment: The two assessments should analyze the National and California register criteria separately, and specifically with respect to the criteria relating to the significance of buildings that are less than 50 years old.

Exhibits 8 though 12
Thank you for providing the five geotechnical and seismic reports. These will be reviewed as part of the CEQA environmental review of the Project.

Draft Specific Plan

1) Please review the comments included in the attached marked-up Draft Specific Plan (Attachment 1) and resubmit a revised version of this document.

Draft Specific Plan Figures

1) Figure 3- EXISTING SITE CONDITIONS: Provide the boundaries of the existing parcels on the exhibit.

2) Figure 5- MODIFIED ZONING AND LAND USE: The zoning and general plan maps will need to be updated to also include the M-PD-5 zoning and land use designation.

3) Figure 6- SPECIFIC PLAN LAND USE CONCEPTS: The east elevation identifies retail at the corner of North Beverly Drive and South Santa Monica Boulevard. This appears to be inaccurate.

4) Figure 7- BUILDING PLACEMENT: This figure is cited on page 7 of the Draft Specific Plan as controlling the size and configuration of the pedestrian plaza. If the figure is used for this purpose additional information needs to be included regarding the plaza, including : plaza dimensions, art location, as well as distances from obstructions for the art piece location, and ADA paths of travel in plaza.

5) Figure 8-SURROUNDING CIRCULATION: Provide the City’s street classifications of the streets included in this exhibit.

6) Figure 9- SITE CIRCULATION: Provide directional information for alleys, on-site drive aisles and ramps.

DocuSign Envelope ID: 6708CF5D-D472-47B0-AABC-DE80F3EE4B45

7) Figures 10 to 12- PARKING PLANS: Update based on comments provided for the parking levels on the Plans.

8) Figure 13 to 18- UTILITY PLANS: These will need to be updated as more information becomes available.

9) Figure 29- AT-GRADE LOADING SPACES: Provide a separate exhibit to provide more detailed information regarding the utility yard and SCE capacitor yard. This exhibit should include screening information, access information, and provide information on the appearance from North Beverly Drive.

10) Figure 30- BUILDING HIEGHT: Identify 266' elevation as the height datum point for the project. Identify that all heights in exhibit are measured from the datum point. Label each height with the building feature that is measured (i.e. Rodeo Drive adjacent commercial, pool deck area, penthouse pool deck, etc.). Provide a table on this sheet that lists the height limitations of the Specific Plan.

11) Figure 31- OUTDOOR DINING GROUND FLOOR: Provide overall dimensions and area of outdoor dining area. Provide dimensions and area of outdoor dining on the public right of way and the outdoor dining on private property. Provide unobstructed width for adjacent sidewalk. Provide distance measurement between outdoor dining area and obstructions (i.e. tree well to the east)

12) Figure 32- OUTDOOR DINING LEVEL 6 & 7: Provide the area of each identified outdoor dining area, add a table that totals outdoor dining areas of the Project.

13) Figures 35 and 36- ELEVATIONS: Add a line that indicates project height datum. Provide height measurements to different features on each elevation. Identify the maximum height envelope. Show rooftop structures.

14) Figures 39 and 40- OUTDOOR LIVE ENTERTAINMENT: Identify height of acoustic barriers.

Vesting Tentative Parcel Map

1) Increase the differentiation between the lines used for "Existing Lot Line" and "Proposed Easement".

2) The area delineated by "Proposed Underground Building Limits" do not appear to match the configuration of underground parking as shown in the project plans.

Encroachment Permit (Subsurface Encroachment)

1) Add a request letter to the application requesting the encroachment and articulating why the encroachment is proposed.

DocuSign Envelope ID: 6708CF5D-D472-47B0-AABC-DE80F3EE4B45

2) Submit the encroachment fee ($8490).

3) Submit the legal description and plat for the encroachment area for review.

Application

1) Attachment #4: Update to add Specific Plan and modify Vesting Tentative Tract Map to Vesting Tentative Parcel Map. Modify Encroachment Permit request to identify subsurface parking structure and remove above surface awnings.

Traffic Engineer Comments

1. Include an additional 1-FT width for parking spaces adjacent to obstructions/walls.

2. Include 26- foot-back up space for standard, compact, and tandem spaces.

3. Include “entrance” and “internal” ramp slopes.

4. Stack spaces shall meet the City’s parallel parking standard guideline.

5. Check with Community Development/ Public Works regarding statement: “[t]en (10) feet below grade, parking spaces and aisles may extend under the public sidewalk up to the existing cub.”

6. Reduce compacted parking limitation from 25% to 10%.

7. Provide more information regarding “In Lieu Parking” to ensure those spaces are allocated to the uses permitted by BHMC Title 10, Article 33.

Public Works Department Comments

1) Please review the attached April 2, 2020 Memorandum from the Civil Engineering Division of the Public Works Department (Attachment 3).

Urban Designer Comments

Historic Preservation and Preliminary Architectural Review Comments
General Comments – Technical Reports

1. At this time, materials related to the historic nature of the subject properties that has been provided by the applicant include:
    a. Historic Resource Assessment Report for 461 North Beverly Drive (Paley Center)
    b. Historic Resource Assessment Report for 468 North Rodeo Drive (formerly Brooks Brothers)
    c. Overview building permit history

DocuSign Envelope ID: 6708CF5D-D472-47B0-AABC-DE80F3EE4B45

2. In the environmental document that will be prepared for the proposed project (whether an EIR or other), a comprehensive overview of all of the subject properties' architectural descriptions and histories should be provided.
    a. Please explain the decision to provide Historic Assessment Reports on two properties only. An analysis should be provided initially studying each property and explaining why further historic analysis was not required.
    b. Permit history documentation has been provided loosely by the applicant. This information should be reviewed and synthesized by the applicant's historic consultant and included in the comprehensive overview.
    c. Additional background on 461 North Beverly Drive (Paley Center) should also be provided to conclude the evaluation of the Master Architect's work with an understanding of any publications in which the structure had appeared and/or any design awards received (See Section 6, etc.).

3. Based on the scope of the project and the historic assessment reports provided, a peer review will be required, to be conducted by the City's historic consultant, Ostashay & Associates Consulting, for which a deposit is required to be remitted. Additional peer review will be required of the environmental document when it is prepared (i.e. EIR or other).

Architectural Comments – Preview – Drawing Set

1. Consider closely vehicular circulation that extends beyond the building footprint and onto City streets, etc. A careful review of this component of the project, in conjunction with a traffic analysis, should be undertaken to ensure vehicular circulation does not negatively impact pedestrian circulation and busy existing traffic patterns at the site (south Santa Monica Boulevard and North Beverly Drive).

    General Plan: CIR 1.4a Strive to maintain vehicle flow on City roadways and intersections. Congestion may be accepted, provided that provisions are made to improve the overall system and/or promote non-motorized transportation, such as bicycling and walking, as part of a development or City-initiated project. (Imp. 3.7)
    General Plan: CIR 6.7 Multi-Modal Design. Require proposed development projects to implement site designs and on-site amenities that support alternative modes of transportation, and consider TDM programs with achievable trip reduction goals as partial mitigation for project traffic impacts. (Imp. 3.7)
    General Plan: LU 2.8 Pedestrian-Active Streets. Require that buildings in business districts be oriented to, and actively engage the street through design features such as build-to lines, articulated and modulated façades, ground floor transparency such as large windows, and the limitation of parking entries directly on the street. Parking ingress and egress should be accessed from alleys where feasible. (Imp. 2.1)

DocuSign Envelope ID: 6708CF5D-D472-47B0-AABC-DE80F3EE4B45

General Plan: LU 11.4 Parking in Pedestrian-Oriented Districts. Require that driveways be minimized in pedestrian oriented commercial districts to avoid interruptions in the continuity of the pedestrian shopping experience, prioritizing driveway locations to side streets and alleys wherever feasible. (Imp. 2.1, 2.2)

2. In the current iteration of the design, the hotel lobby is sequestered within the massing at the ground level and accessible only through the vehicular circulation area off of South Santa Monica Boulevard. A pedestrian presence for the hotel may be considered off of the major City arterials, e.g., North Rodeo Drive to complement the proposed retail district and to afford general public access. Further consideration of a pedestrian friendly public entrance for the main programming of the project would also create a visual presence on the main street-facing elevation(s) and better inform the architecture as it addresses the public way.

   General Plan: LU 11.3 Retail Street Frontages. Require that development and street frontages in districts containing retail uses be designed and developed to promote pedestrian activity including: (a) location and orientation of the building to the sidewalk; (b) transparency of and direct access to the ground floor elevation from the sidewalk; (c) articulation of street-facing elevations to promote interest and sense of quality; (d) inclusion of uses and public spaces that extend interior functions to the sidewalk such as cafes and plazas; and (e) use of pedestrian oriented signage and lighting. (Imp. 2.1, 2.2)

3. Further consideration may also be given to creating a more uniquely contemporary architectural expression in design and materiality that responds to our own time, while imbuing the sense of timeless elegance suggested in the current design iteration.

   General Plan: LU 2.4 Architectural and Site Design. Require that new construction and renovation of existing buildings and properties exhibit a high level of excellence in site planning, architectural design, building materials, use of sustainable design and construction practices, landscaping, and amenities that contribute to the City's distinctive image and complement existing development. (Imp. 2.2, 2.3)
   General Plan: LU 11.2 Site Planning and Architectural Design. Require that commercial and office properties and buildings are planned and designed to exhibit a high level of site and architectural design quality and excellence. (Imp. 2.1, 2.2)

Plan Review Engineer (Building Safety) Comments

The purpose of this review is for a high-level preliminary conceptual review only. This is not a comprehensive plan review and or concept review. Other corrections may follow, after complete plans are submitted that are suitable for a thorough review.

DocuSign Envelope ID: 6708CF5D-D472-47B0-AABC-DE80F3EE4B45

Additional comments will follow when complete and fully dimensioned plans are submitted for thorough plan review.

1. Since the proposed project is a high-rise building, it shall comply with all the applicable requirements of Section 403 of 2019 CBC including but not limited to:
    - 403.3.3 Secondary water supply
    - 403.5.1 Remoteness of interior exit stairways
    - 403.5.2 Additional interior exit stairway
    - 403.6 Elevators (including enclosed elevator lobbies)

2. Please clarify whether nonseparated occupancies are used per Section 508.3 of 2019 CBC.

3. The building elements shall have a fire-resistance rating not less than that specified in Table 601 and exterior walls shall have a fire-resistance rating not less than that specified in Table 602. Where required to have a fire-resistance rating by Table 601, building elements shall comply with the applicable provisions of Section 703.2. The protection of openings, ducts and air transfer openings in building elements shall not be required unless required by other provisions of this code.

4. The maximum area of unprotected and protected openings permitted in an exterior wall in any story of a building shall not exceed the percentages specified in Table 705.8. Please provide required calculation to verify the maximum area of openings on the south and west (facing alley) sides of the building.

5. Please provide complete egress analyses for each space, story and entire building and show compliance with the corresponding sections in CH 10 of CBC:
    - Occupant Load (Section 1004)
    - Means of egress sizing (Section 1005)
    - Number of exits and exit access doorways (Section 1006); Egress from each space (1006.2) and egress from stories or occupied roof (1006.3)
    - Separation between required exits (1007.1)
    - Accessible means of egress (Section 1009)
    - Exit access travel distance (Section 1017) and common path of egress travel distance (Table 1006.2.1)
    - Exit discharge (Section 1028)

6. Exits shall discharge directly to the exterior of the building. The exit discharge shall be at grade or shall provide a direct path of egress travel to grade. The exit discharge shall not reenter a building. The combined use of Exceptions 1 and 2 shall not exceed 50 percent of the number and minimum width or required capacity of the required exits. (Section 1028)
   The exits discharge the occupants to a location where it is still under the building. Please clarify.

DocuSign Envelope ID: 6708CF5D-D472-47B0-AABC-DE80F3EE4B45

7. Provide required number of exits in the Members Club area at third level, Spa in 4th and 5th levels and the restaurant in 6th floor.

8. Guest rooms shall comply with the accessibility requirements of CH. 11B and minimum number of guest rooms with mobility features and with communication features shall comply with Tables 11B-224.2 and 11B-224.4, respectively.

9. A complete and detailed construction means and method is required to elaborate all construction phases in detail including but not limited to shoring, excavation, haul route, tower crane installation, traffic control plan, etc.

10. Please clarify and elaborate fire department access to all sides of the building specially in the south, west and south west sides from the alley.

11. Please show a complete accessible path of travel from public way AND accessible parking spaces to all floors.

12. Please delineate long-term and short-term bicycle parking spaces with the minimum required vs provided bicycle parking stalls.

13. Please clarify and show the location and number of EVCS and accessible EVCS spaces on plans.

Should you have any questions regarding the above comments, please feel free to contact me at (310) 285-1135, or by email at malkire@beverlyhills.org.

Sincerely,

Masa Alkire

Masa Alkire, AICP, Principal Planner

FEHR PEERS

CHEVAL BLANC
INITIAL REVIEW OF SITE PLAN, SITE ACCESS AND PARKING

Specific Plan (March 12, 2020)

No transportation comments on Specific Plan; noted items below that relate to the other studies submitted to ensure consistency and clarity on project description.

Luxury hotel with private club, restaurant, lounge, bar and other appurtenant uses, ground floor and second floor retail:

- Up to 115 hotel rooms
- Member's club – 7 KSF
- Restaurant – 20 KSF
- Retail - 24 KSF
- Parking – 172 spaces
- Motor Court – 9 pick-up/drop-off spaces (including 2 ridesharing spaces) + Truck loading may be used for pick-up/drop-off during peak event times
- Loading – Two truck loading spaces (35-feet)

Existing uses consist of approximately 57 KSF retail and 65 parking spaces:

- Brooks Brothers - 20,265 square feet and six surface parking spaces
- Celine - 6,895 square feet and nine surface parking spaces
- Formerly the Paley Center for Media - 23,351 square feet, five surface parking spaces and 45 underground parking spaces
- Three small retail shops (a beauty supply store, a jewelry store, and a pop-up shop) and a storage facility - 6,276 square feet

Parking Analysis Study (March 10, 2020)

Parking Demand

- Empirical Data for Beverly Hills and Vicinity: Confirm that 3 Year Trend of Luxury Hotel Overnight Drive-In Rates (page 6) reflects Hotels in Beverly Hills
- The method for estimating hotel overnight demand and guest demand is reasonable (page 7):
    - 38 overnight guest parking spaces (25% of demand)

- 115 transient visitor parking spaces (74% of demand)
- 153 total parking spaces

- Comments on Table 2 – Parking Demand for the Cheval Blanc Project:
  - Total visitor parking demand of 153 spaces is reasonable based on data provided
  - The reduction of 94 parking spaces due to lack of banquet facilities may be unreasonable due to the following:
    - The study is assuming that 94 of the 264 parking spaces at the Peninsula are devoted to public assembly (36% of parking) for a 2,630 square foot banquet facility and reducing the demand at the Cheval Blanc by 94 spaces since it doesn't have banquet facilities.
    - The transient parking demand of 75% of total guest parking accounts for some banquet use but the extent of banquets/special events is unclear. Since this is based on average daily demand, the extent of banquet/special event parking may be low when averaged throughout the week, and therefore subtracting 94 spaces from this demand may not be reasonable.
    - The amount of public assembly parking required per BHMC (1 space per 28 SF) for each of the hotels may be misleading; in comparing the BHMC code requirements to the total amount of parking provided at the hotels, the percentage of parking demand being assigned to the assembly space is 36% at the Peninsula (94 of 264 total spaces) and 83% at the Waldorf Astoria (261 of 314 total spaces).
    - The proposed hotel has a 7,000 square foot private club. The parking demand for the club is not factored into the parking demand and could be similar to, or potentially higher, than the 2,630 square feet of public assembly space at the Peninsula Hotel.
  - It is unclear how the retail demand of 69 spaces is calculated.
    - Does the demand include retail and restaurant space?
    - Does the demand include the 50% credit for retail uses associated with hotels as noted in Table 1?
    - Does the demand factor in the in-lieu parking credits for existing retail uses?
  - No data is provided on how the employee parking demand of 30% of 120 employees per shift was developed.
- Comments on Table 3 – Parking Tabulations from Cheval Blanc Specific Plan

    - It appears that the only difference in parking demand between Table 1 and Table 3 is the 23 additional parking spaces required for BOH in Table 1. It is unclear why the BOH operations were not included in Table 3.
- General Comment on Parking Demand: It appears that if the BHMC requirements were applied to the project as shown in Table 1 and the study clearly accounted for the in-lieu parking credits of 49 spaces noted in Table 3, then the project would be able to show that it is meeting it's required parking demand through a combination of on-site supply and off-site in-lieu parking.

Motor Court

- Total demand is estimated at 11 spaces; project is proposing 9 spaces
- Total demand does not account for 7,000 sf private club
- In comparison to other hotels, the motor court appears to be sufficient to accommodate expected demand
- Point of clarification – Does motor court provide vehicle egress from underground parking onto South Santa Monica Boulevard? If so, vehicle queuing capacity in the motor court for vehicles exiting onto South Santa Monica Boulevard should also be shown on the site plan.

Valet Parking Management Plan

- The overall assumptions and conclusions of the valet management plan are reasonable
- The valet study includes additional detail on the number of standard and tandem spaces that would be helpful to incorporate into the overall parking study; more clarification on who is using the standard vs. tandem spaces in comparison to their anticipated parking demand should be incorporated into the parking study.
- In addition, the valet study shows how additional parking demand can be met, if needed, through stacked parking in the drive aisles. Stacked parking would provide 64 additional parking spaces. Given that the project is not meeting BHMC parking requirements, it would be helpful for the parking study to note that demand during peak periods or special events associated with the private club could be accommodated through this additional stacked parking.

Additional Comments

- Request Alley Study – An alley study should be prepared in consideration of the other existing uses that may be impacted by the realignment of the alley. The alley study should contain the following:
    - Existing daily traffic volumes entering alley from S. Santa Monica Boulevard and exiting alley onto Brighton Way (including AM and PM peak hour turning movement volumes so that directionality of travel to/from the alley is known)
    - Number and type/size of trucks utilizing existing alley
    - Diagrams showing how trucks and emergency access vehicles will access realigned alley and turning movement radius for east/west to north/south alley transition
    - Summary of any impacts to adjacent business resulting from alley realignment
    - Maintaining alley access during construction

Appendix IS-10

Utility Memorandum

AP EXHIBIT 6

Kimley»Horn

M E M O R A N D U M

Date: October 16th, 2020

To: Gruen Associates

From: Kimley-Horn and Associates, Inc.

Subject: Cheval Blanc Beverly Hills – 449 (Inclusive of 451 and 453), 456, and 468 N. Rodeo Dr., 461 (Inclusive of 463 and 465) N. Beverly Dr. -- Utility Memorandum

Introduction

Kimley-Horn and Associates, Inc. is providing this utility investigation technical memorandum based on our review of the proposed Project's Entitlement Submittal Package dated July 17, 2020, and our understanding of the existing utilities surrounding the site in coordination with the Plumbing Engineer, Dry Utility Consultant, and the City of Beverly Hills. A summary of our utility analysis for the Project is provided below.

Sanitary Sewer:

a. Existing Improvements: Existing sewer lines within Beverly Hills are maintained by the City's Public Works Department. The existing sewer system for the street frontage is described further below:

- Alley: There is an existing 8" sewer main line that flows southeast, located at the centerline of the alley that exists within the boundaries of the proposed development. The 8" sewer main connects to an 18" sewer main at an existing manhole within Wilshire Boulevard. See Attachment D – City of Beverly Hills Existing Sewer Main Map for additional information.

  The existing commercial building at the north side of S. Santa Monica Blvd. has an existing sewer lateral service which connects to the existing 8" sewer main within the alley after the terminal manhole. This line will likely need to be relocated to tie into the main line several hundred feet to the east on S. Santa Monica Blvd in coordination with the City. See Attachment C – Existing Sewer Plan and Attachment F – Existing Composite Utility Plan for additional information.

b. Proposed Improvements: The following are based on the Entitlement Submittal Package dated July 17, 2020:

Proposed Project Development Programming: The Proposed Project is a mixed-use development with hotel, private club, restaurant, spa, and retail uses and related amenities. See the table on page 2 for detailed development programming and page 3 for specific plan maximum allowances.

PD Table 1 – Development Program		
	Subtotals	Totals
Total Floor Area		(212,034 sf on the conceptual Architectural Plans submitted with the Specific Plan, dated 10/19/20)
Hotel Rooms		Up to 115
Hotel Floor Area, including:		
Rooms (with adjoining circulation)	120,129 sf	
Hotel Lobby and circulation (ground floor)	6,609 sf	
Wellness Center excluding deck	4,924 sf	
Spa	12,226 sf	
Central Kitchen/Employee Facilities/Office/BOH	14,638 sf	
Member's Club Floor Area, including:		
Meeting and Screening Rooms, Lounge (Level 3)	7,001 sf	
Member's Club Lobby (ground floor)	1,197 sf	
Total Hotel, Club and Appurtenant Uses		166,724 sf*
Restaurant Floor Area, including:		
Ground Floor/Level 2 Restaurant, Lounge, Bar, and Kitchen (indoor)	8,085 sf	
Levels 6 and 7 Restaurant, Lounge, Bar, and Kitchens (indoor)	12,249 sf	
Outdoor Dining/Bar (not included in floor area)	*4,760 sf**	
Total Restaurant		20,334 sf
Total Retail		24,976 sf
Parking Spaces Provided		178
Site Area (Total)		55,608 sf or 1.277 ac
Site Area (exclusive of alley) for FAR calculations		52,607 sf or 1.208 ac
Floor Area Ratio (**FAR**) on Plans*		4.03
Above Grade FAR on Plans*		3.75
Maximum FAR Ratio*		4.20
Maximum Above-Ground FAR*		3.91
* Exterior walls, stair shafts, elevators, elevator lobbies less than 100 sf per cab, parking spaces and access, mechanical equipment/machinery rooms, outdoor dining areas, decks and balconies, and 2,000 sf of storage per below grade parking level are not included in floor area calculations.		

Specific Plan Table 1 – Development Program[1]			
	Number of Hotel Rooms	Floor Area (SF)	Max. Floor Area Ratio (**FAR**)
Above Grade Maximum Floor Area and FAR		205,700	3.91
Below Grade Floor Area and FAR		*varies*	*varies*
Total Maximum Floor Area and FAR		220,950	4.2
Floor Area By Use[2]			
• Hotel Rooms, Club and Appurtenant Uses	Up to 115	166,720	
• Restaurants/Bars/Lounges[3]		20,330	
• Retail		24,980	

1. The Development Program sets forth the maximum allowed above grade and total floor area and FAR. Below grade floor area and FAR may vary based on actual above grade floor area and FAR, subject to the total maximum floor area and FAR. Site area for FAR purposes is 52,607 square feet. Floor area excludes exterior walls, stair shafts, elevators, elevator lobbies less than 100 square feet per cab, parking spaces and access, maintenance equipment/machinery rooms, outdoor dining areas, decks and balconies, and 2,000 square feet of storage per below grade parking level.

2. The Development Program includes the maximum number of hotel rooms and the approximate amount of space that may be allocated to each general use in the building. The floor area by use may be decreased or increased by up to 5% pursuant to Section 6.3; however, the maximum floor area of the Project may not exceed 220,950 square feet.

3. Excludes 4,720 square feet of outdoor dining on private property

Proposed Sewer Demand:

Based on the summary below, the Project will generate 0.24 cfs (155,138 gpd) of sewer discharge to the existing 8" sewer line within the Alley. Based on the existing development areas of 33,436 square feet of commercial space and 23,351 square feet of institutional space, we estimate the existing sewer generation for the site to be 0.022 cfs (14,200 gpd). Thus, the net increase of sewage demand for the proposed project is 0.22 cfs (142,209 gpd).

Our detailed analysis based on the Los Angeles County sewer loading per unit or usage is summarized in the tabulation provided below. It should be noted that the restaurant use includes the ground floor/level 2 restaurant, 6th floor/7th floor restaurant, and the outdoor dining and bar area. The spa use includes the spa and wellness center. The office use includes the central kitchen/employee facilities/office/ BOH, member's club, and hotel and member's club lobbies as described in the table on page 2. See Attachment I – LA County Sewage Generation Table for average daily flow factors.

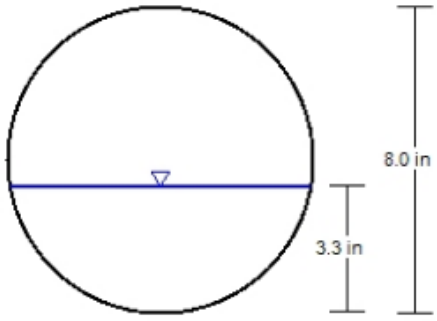
EXISTING FLOW - Cheval Blanc Beverly Hills

UNIT TYPE	SIZE	AREA (SF)	NUMBER	Unit of Measure	FLOW GPD*	TOTAL FLOW (GPD)
COMMERCIAL	Retail	33436	1	1000 sf	100	3344
COMMERCIAL	Institutional	23351	1	1000 sf	100	2335
					TOTAL GPD=	**5679**
*GPD TAKEN FROM COUNTY OF LOS ANGELES SEWAGE GENERATION TABLE					**TOTAL CFS =**	**0.009**
					TOTAL PEAK CFS=	**0.022**
			PEAK FACTOR =2.5		**TOTAL PEAK GPD=**	**14197**

PROPOSED FLOW - Cheval Blanc Beverly Hills

UNIT TYPE	SIZE	AREA (SF)	NUMBER	Unit of Measure	FLOW GPD*	TOTAL FLOW (GPD)
COMMERCIAL	Hotel	-	115	Rooms	150	17250
COMMERCIAL	Retail	24976	-	1000 sf	100	2498
COMMERCIAL	Restaurant	25094	-	1000 sf	1000	25094
COMMERCIAL	Office	29445	-	1000 sf	200	5889
COMMERCIAL	Spa	17150	-	1000 sf	600	10290
					TOTAL GPD=	**61021**
*GPD TAKEN FROM COUNTY OF LOS ANGELES SEWAGE GENERATION TABLE					**TOTAL CFS =**	**0.094**
					TOTAL PEAK CFS=	**0.24**
			PEAK FACTOR =2.5		**TOTAL PEAK GPD=**	**152552**

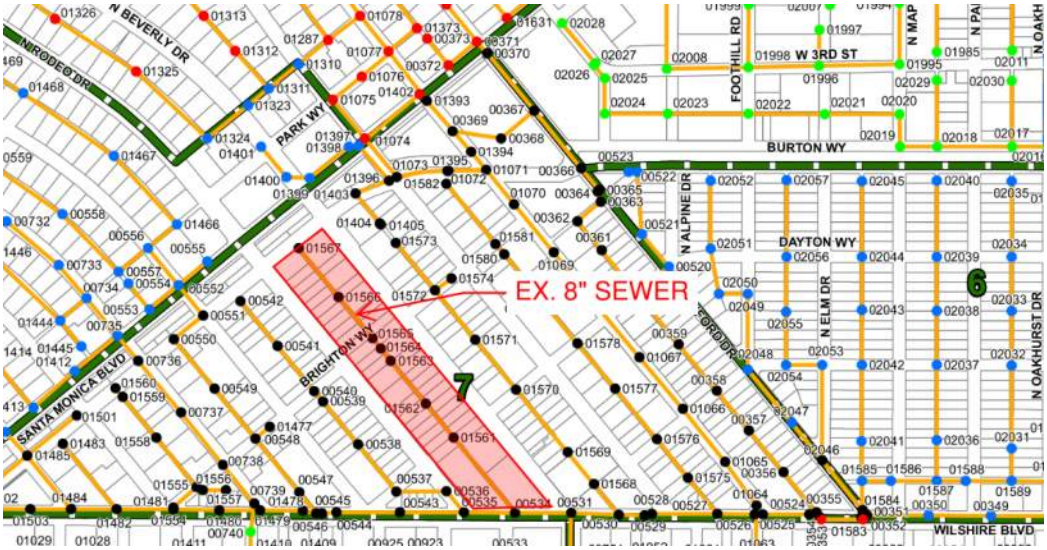
Two new 8” sewer laterals will likely be proposed. One will connect to the existing 8” sewer line in the Alley, and the other to the new 8” line extension in S. Santa Monica Blvd. See Attachment E – Proposed Sewer Plan for additional information. Size, location, and number of laterals is subject to design development and coordination with the Project’s Plumbing Engineer.



Will Serve Letter & Sewer Capacity:

The City of Beverly Hills does not provide a Will Serve Letter for sanitary services. Thus, we have calculated the existing sewer capacity based on estimated commercial acreage and Los Angeles County zoning coefficients for estimated average daily sewage flow (0.015 cfs for commercially zoned properties).

Based on the estimated 14.0 acres of commercial development between N. Rodeo Drive and N. Beverly Drive that discharge to the existing 8” sewer main in the alley, we assume that the total peak flow currently within the pipe is 0.48 cfs (310,200 gpd). With the proposed development, we would assume this flow would increase to 0.70 cfs, which would make the pipe run about 41.5% full. Therefore, we assume the existing 8” sewer pipe in the alley has adequate capacity to serve the proposed development. See image below for sewer capacity calculation.



Cross Section for Circular Pipe - 1

Project Description	
Friction Method	Manning Formula
Solve For	Normal Depth
Input Data	
Roughness Coefficient	0.012
Channel Slope	0.022 ft/ft
Normal Depth	3.3 in
Diameter	8.0 in
Discharge	0.70 cfs

V: 1
H: 1

See image below for location of existing 8” sewer main and 14.0 acres existing commercial properties that are assumed to be currently discharging into the pipe.

Based on the existing sewer information provided by the City on 9/29/2020, we can assume for the wet condition for the 8” existing sewer main consists of a d/D of 0.06 and existing flow of ~0.02 cfs downstream at the intersection of the alley and Brighton Way. Our analysis based on the land use of the surrounding properties contributing to the flow of the 8” sewer main assumed an existing d/D of 0.34 and an existing flow of ~0.48 cfs. Thus, we can confirm based on our conservative analysis and the additional information provided by the City that there is sufficient capacity in the existing 8” sewer main to handle our proposed development. See image below for existing d/D and flow capacity information as provided by the City.

Our conclusion based on the analysis is that there is sufficient capacity to serve the project based on the development programming in PD Table 1 on Page 2 and the Specific Plan Table 1 on Page 3.

Sewer Relocation:

The commercial properties to the north of S. Santa Monica Blvd. are served by a sewer lateral which is assumed to connect to the existing 8" main in the alley after the terminal manhole. Since this service will be impacted by the proposed development, it will be rerouted in order to continue providing service to these neighboring properties. Based on email correspondence from Samer Elayyan, PE, Project Manager for City of Beverly Hills Public Works Department on February 5th, 2020, a sewer line relocation concept has been preliminarily approved. Engineering plans will be prepared and submitted to the City showing plan and profile views of the new sewer line which will travel east on S. Santa Monica Blvd. to tie into the existing sewer manhole between N. Beverly Drive and N. Canon Drive. The new sewer line will be designed to flow at a maximum capacity of 50% full. See Attachment E – Proposed Sewer Plan for preliminary routing.

Domestic/Fire Water

a. Existing Improvements: Existing water lines within the City of Beverly Hills are operated by the Beverly Hills Water Department within Public Works. The information summarized below is based on the ALTA/Topographic Survey prepared by Calvada Surveying, Inc. dated 4/28/2020, Entitlement Submittal Package, Preliminary Fixture Counts prepared by tk1sc, and the Preliminary Meeting with Public Works staff on 12/19/2019.

1) ***Water Mains:***

- S. Santa Monica Blvd: There is a 12" water line along S. Santa Monica Blvd. located approximately 5' from the southern curb underneath the eastbound lanes. An existing electrical line will be crossed to connect to the existing 12" water line.

- Alley: There is an 8" water line within the existing alley located on the eastern edge which connects to the 12" line in S. Santa Monica Blvd. and the 16" line in Brighton Way.

  This line will likely be removed and rerouted where it is in conflict with the proposed development. It has been proposed to the City that the water line be looped within the alley to tie back into the main line on Brighton Way. The City has reviewed the proposed relocation and performed preliminary hydraulic calculations. Initially they take no exception to the design based on the email from Greg Ripperger dated 2/6/2020. Once the Project receives preliminary conditions from the Planning Department and the Fire Department, the City will move forward with preparing a technical memorandum and continue the Will Serve process for the Project. Engineering Plan and Profiles for the proposed loop and relocation will also be prepared and submitted to the City for approval. See Attachment A – Water Will Serve Letter and Availability Request for additional information.

- Brighton Way: There is a 16" water line located within Brighton way.

  See Attachment B – Proposed Water Plan and Attachment F – Existing Composite Utility Plan for additional information.

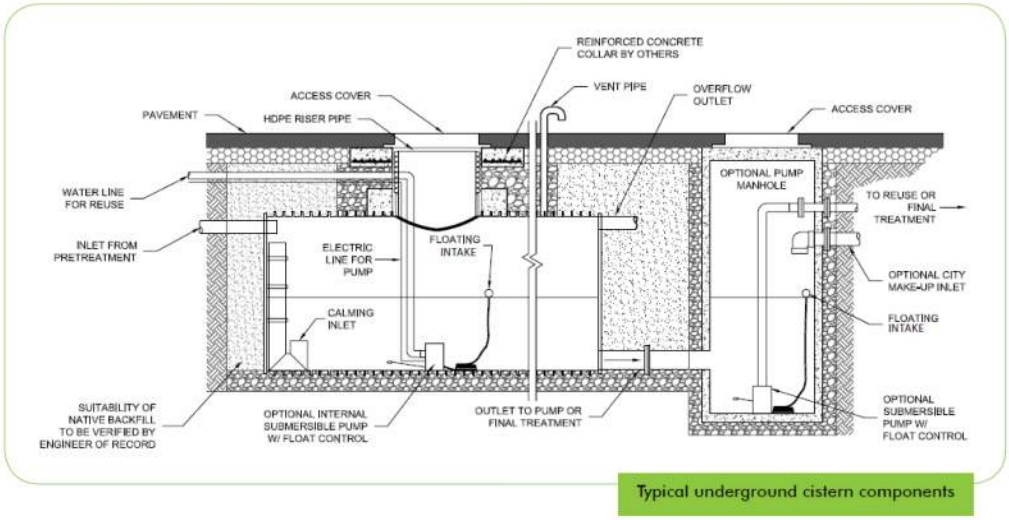
2) ***Fire Hydrants:*** The existing site has one fire hydrant near the northwestern corner of the property line along South Santa Monica Blvd. based on the ALTA/Topographic Survey.

3) ***Water Meters:*** There are 7 existing water meters shown around the site based on the ALTA/Topographic Survey. All 7 meters are located within the alley and are serviced by the existing 8" water main line.

The Project should consider reusing the meters and laterals to the extent necessary and feasible based on the locations noted on the ALTA/Topographic Survey and in coordination with the City. The presence of these meters gives an indication that the existing sanitary sewer, gas, and telecommunication lines can be crossed over from the site for the proposed water and fire services.

b. Proposed Improvements: The following are based on the Preliminary Fixture Counts dated August 21, 2019, prepared by tk1sc:

Proposed Domestic Water Demand**:** The Estimated Potable Water Demand has an average daily demand of 300 GPM. The domestic water service will likely connect to the existing 8" main in the alley south of the Project. Existing water meter(s) will be utilized if deemed feasible by the City. The plumbing engineer will assess the need for any booster pump for the Project in coordination with the City. If needed the booster pump will be located within the building footprint.



See Attachment A – Water Will Serve/Availability Request and Attachment B – Proposed Water Plan for additional information.

Proposed Fire Service Connection & Water Pressure**:** The proposed demand for fire water will be determined by a fire water consultant. Based on required service size and location of firewater infrastructure within the building, the firewater service will connect to ether the 8" water line in the Alley or the 12" water line in S. Santa Monica Blvd.

Water Conservation Features**:** The Project will comply with the City's Low Impact Development (LID) guidelines, which require implementation of a stormwater treatment system that captures a required runoff treatment volume. The required runoff treatment volume is based on the 85th Percentile of rainfall per Los Angeles County Department of Public Works Requirements. LID for the Project will need to consider infiltration, rainwater capture and reuse and a combination of treatment systems approved by the City. If infiltration on the site is not feasible due to soil conditions or other limiting factors, the Project will analyze implementation of a rainwater harvesting system such as a cistern/underground detention tank, which would treat and capture rainwater before metering it out to the City's storm drain system. See page 7 for a sample rainwater harvesting system. Additional LID information is available in the Preliminary Hydrology and Hydraulics Report prepared for the Project.

The Project's Plumbing Engineer will limit indoor water use by requiring plumbing fixtures to meet or exceed the water use limits as prescribed by the 2013 California Green Building Standards Code (CALGreen). 2013 CALGreen sets a 20% reduction of water use as compared to previous editions of CALGreen and sets a nationwide standard in green building and water conservation.

Sample Rainwater Harvesting System

Typical underground cistern components

Our conclusion based on the analysis is that there is sufficient capacity to serve the project based on the development programming in PD Table 1 on Page 2 and the Specific Plan Table 1 on Page 3.

Electrical:

a. **Existing Improvements:** Existing electric lines within Beverly Hills are maintained by Southern California Edison (SCE). The existing electrical system for the street frontage is described further below:

- S. Santa Monica Blvd: There is an existing main line distribution system located along S. Santa Monica in the eastbound lanes that consists of vaults, transformers, switches and cable. SCE maintains a 16kV system that services the surrounding area with multiple circuits connecting in the vault that is in the eastbound lanes.

- Alley: There is an existing main line distribution system located within the alley that consists of vaults, pull boxes, transformers and cable. The distribution system connects to the vault that is in the eastbound lanes of S. Santa Monica Blvd.

  Existing SCE conduit and structures within the Project boundaries will be capped and/or removed. SCE has completed a preliminary relocation design that will allow for the properties bordering the alley to be served from the circuit on Brighton Way. SCE is currently moving towards a final design for the electrical relocation portion of the Project. See Attachment G – SCE Preliminary Design for additional information.

- Brighton Way: There is an existing main line distribution system located along the south side of Brighton Way that consists of vaults, transformers, switches and cable. SCE maintains a 16kV system that services the surrounding area with multiple circuits connecting in the vault that is in the on Brighton Way.

b. **Proposed Improvements:** The following are based on the Preliminary Design dated August 21, 2019, prepared by tk1sc (Electrical Engineer):

  Proposed Project Development Programming: The proposed Project is a mixed-use development with hotel, private club, restaurant, spa, and retail uses and related amenities. See the table on page 2 for the development programming.

Proposed Electric Demand:

Based on the development program, the Project will generate 5.69MVA of electrical demand. The new service will be a 16kV service fed from a new SCE vault on Beverly Drive approximately 175' south of S. Santa Monica Blvd.

SCE engineering has reviewed the proposed new load and has agreed the Project can be served by their existing circuits. The new service will connect from the vault on Brighton Way to a new vault on Beverly Dr. New conduit will be installed along the west side of Beverly Dr between vaults.

This report will be updated with the results of a Will Serve Letter once it has been received from SCE.

Our conclusion based on the analysis is that there is sufficient capacity to serve the project based on the development programming in PD Table 1 on Page 2 and the Specific Plan Table 1 on Page 3.

Natural Gas

a. **Existing Improvements:** Existing gas lines within Beverly Hills are maintained by Southern California Gas Company (SCG). The existing gas system for the street frontage is described further below:

- S. Santa Monica Blvd: There is an existing 2" main line distribution system located along S. Santa Monica in the eastbound lane.
- Alley: There is an existing 3" main line distribution system located within the alley that connects S. Santa Monica Blvd and Brighton Way.

  Existing SCG pipe within the site boundaries will be capped in the alley and removed. SCG is completing additional engineering to confirm if additional upgrades are necessary to feed the Project and surrounding properties.
- Brighton Way: There is an existing 3" main line distribution system that crosses Brighton Way and continues south in the Alley.

See Attachment H – SCG Existing Facility Map for additional information.

b. **Proposed Improvements:** The following are based on the Preliminary Design dated August 21, 2019, prepared by tk1sc (Plumbing Engineer):

Proposed Project Development Programming:

The Proposed Project is a mixed-use development with hotel, private club, restaurant, spa, and retail uses and related amenities. See the table on page 2 for detailed development programming.

Proposed Natural Gas Demand:

Per the Project MEP Standards, we will be researching alternatives to gas-fired water and space heating equipment in an effort to reduce the Project's environmental impacts and CO2 emissions. Natural gas may still be used as a back-up to the alternative water heating systems.

There are multiple kitchens in the Project and some retail space that may require natural gas for cooking. If the Project processes laundry in-house, gas may be required for water heating due to the high temperature hot water supply that is required for commercial laundry applications. Thus, estimated natural gas demands require further analysis.

If the Project is not designed around natural gas restrictions (i.e., does not implement natural gas alternatives), the total gas demand would likely be in the range of 5,000,000 to 6,000,000 btuh. Alternate water heating concepts may cut that number by 40%.

SCG engineering has reviewed the proposed new load and has agreed the Project can be served by their existing system. SCG is continuing with its engineering analysis to determine if additional upgrades to their system are necessary.

This report will be updated with the results of a Will Serve Letter once it has been received from SCG.

Our conclusion based on the analysis is that there is sufficient capacity to serve the project based on the development programming in PD Table 1 on Page 2 and the Specific Plan Table 1 on Page 3.

December 26, 2019

BFKN
200 W. Madison Street, Suite 3900
Chicago, Illinois 60606

Attention: Dennis Farrazzano

Subject: Deposit Request for Water System Analysis
456-468 N. Rodeo Drive, Beverly Hills
Charge Code: HYDANL
Customer No. 14495

Dear Mr. Farrazzano,

In regards to your request for new water service connections for the proposed new Mixed Use project at 456-468 N. Rodeo Drive. In the City of Beverly Hills, the project is within the service boundary of the City of Beverly Hills water system.

The estimated cost to complete the hydraulic analysis for the project is $15,000. This is only an estimate. Should the actual cost be less than this amount, the difference will be returned to you. Should the actual cost exceed this amount or if the account balance is less than 10 percent of the original deposit, an additional deposit letter will be sent. The City will prepare a technical memorandum indicating the results of our analysis and hydraulic modeling of the new development and will conform to the criteria as included in the City's 2009 Water Master Plan. The City will issue you a finalized copy of the memorandum.

The City will need as much of the following items as soon as possible in electronic format (PDF) to complete the planning phase:

- Site Improvement Plans
- Street Improvement Plans
- Sanitary Sewer Plans and Profile
- Fire Department Requirements and New Fire Hydrant Location map
- Domestic Water Demand Calculations
- Fire Service Requirements and Demand
- Fire Hydrant Flow Testing (if available)

To begin the hydraulic analysis portion of the project, please send a check in the amount of $15,000. In order to verify your understanding of the above conditions, please sign a copy of this letter and return it along with your deposit check. If you have any questions regarding the above required information, please feel free to contact Greg Ripperger of Civiltec Engineering, Inc. at (626) 357-0588 or gripperger@civiltec.com. We are looking forward to working with you on this important new project.

All checks should be made payable to the City of Beverly Hills referencing your customer number, payable at:

(TO EXPEDITE PAYMENT PLEASE DO NOT MAIL CHECK)

SECTION III

I understand that the City of Beverly Hills is willing to supply water to the subject property with the following conditions: (***Conditions are subject to change without notice**.)*

1. This Water Will-Serve Request is not a guarantee of service. All conditions of approvals must be met prior to connection to the public water system.
2. This water will serve letter is only valid for the approved services that were submitted to and approved by the City. Should additional water services be requested, additional analysis, plan check, and fees may apply.
3. Applicants for Will Serve Letters shall be responsible for payment or reimbursement to the City as provided in the City's adopted rates, charges, and fees in existence on the date that a request by the applicant for connection to the City's water system is made. These fees may include but are not limited to processing, plan check, permit, inspection, capacity, supply, and other related impact fees as adopted by or in effect by the City at the time of applicant's water will serve request.
4. This determination of water availability will remain valid for two (2) years from the date of this letter. If the installation of these water improvements has not been completed within this two (2) year time frame, the City is under no obligation to serve the project and this letter becomes null and void. After the availability period has expired, the applicant must re-apply for this water will serve / availability letter unless an extension of the water will serve letter has been requested and approved by the City. Additional processing, plan-checking, and associated fees may apply.
5. Exact location of the water meter is to be determined by owner and approved by the City of Beverly Hills.
6. Detailed calculations and plans may be required for City approval prior to installation of water services.
7. Owner should confirm that mainline pressure is sufficient to serve the planned elevation of any improvements. In some cases, pressure-reducing valves or booster pumps may be required.
8. Developer or Applicant shall abide with the City's ordinances, codes, applicable laws and regulations including but not limited to water conservation, water contingency, water supply, or related ordinances in effect at the time of this Will Serve request, or as modified from time to time by the City Council.
9. If the above-referenced project includes commercial, industrial, landscaping, or fire services, all such services shall require backflow prevention devices installed and tested in accordance with the City's policy, requirements, and specifications prior to being constructed.
10. If a proposed project and/or development requires the construction of new or additional City water infrastructure improvements in order to provide the water services requested, the applicant will be required to enter into a Water Services Conditions Agreement between the applicant and the City.
11. The Water Services Conditions Agreement ("WSCA") will set forth all terms and conditions of water service for the applicant by the City and will describe in detail the responsibilities of the applicant and the City with respect to the construction of and payment for any required City water infrastructure improvements. Unless otherwise noted or agreed upon, the applicant as a result of his developer impacts to the City's water system shall be responsible for the planning, design, and construction of the additional water infrastructure improvements required to serve his new Development and/or project.
12. In the event that a WSCA is required for the applicant's proposed development or project, the applicant will be responsible to execute and deliver the WSCA prior to approval of project improvement plans by the City and to pay or to reimburse the City for fees and expenses incurred by the City for its preparation of the WSCA.

D53: Rev. 03/05/07

CONSTRUCTION NOTES:

Unless otherwise specified on the working drawing which forms a part of the specification, the Contractor/Developer shall furnish the following items at no cost to the Edison Company.

Southern California Edison Company has attempted to correctly show all existing utilities and substructures in the vicinity of the work, but does not guarantee there are no other substructures in the area. Failure of SCE to show all substructures in their correct location will not be a basis for a claim for extra work, and the contractor shall be responsible for all damages to substructures whether shown or not.

1. FOR GENERAL SPECIFICATIONS SEE UGS GI 001.

2. CONDUIT:
   a. Minimum cover in street or parkway is 30" below gutter grade, unless noted otherwise.
   b. Minimum cover on private property is 30" below finished grade, unless noted otherwise.
   c. Contractor is to furnish and install approved conduit to Edison specifications per UGS CD 100.1, 110 AND 120.
   d. For the type of conduit for this job, See UGS CD 110.1.
   e. Install all risers per UGS CD 160, 161, 162 and 170.
   f. Cap all mainline conduits per UGS CD 148 and service conduits per UGS CD 150.
   g. Install blank conduit plugs in all conduits terminating into Vaults, Manhole's, PMH's, SOE's & all cap locations, per UGS CD 180.1 & UGS CD 180.2
   h. Install pull rope in all conduit runs. Pull rope to be at least 3/8" polypropylene rope, braided or twisted. For specifications, approved makes, and suppliers, see UGS GI 040.
   i. All conduit must be mandreled with the approved mandrel UGS CD 197.

3. CONDUIT RADIUS REQUIREMENTS:
   a: The minimum radius for bends are:
      36" for conduits 3" in diameter or smaller
      48" for conduits 4" and 5" in diameter
      60" for 6" diameter conduit
   b: The minimum radius for all sweeps of all mainline conduits is 12'-6" (unless noted otherwise).

4. EXCAVATION AND BACKFILL:
   a. Work area shall be cleared and rough graded to within four inches of final grade prior to installation of Edison conduit or structures.
   b. All excavations shall be in accordance with the California State Construction Safety Orders (when applicable), Edison specifications, and all governing local ordinances.
   c. Each trench to be a uniform depth below final grade prior to installation of Edison conduit or structures.
   d. Backfill shall be provided by the Contractor for all excavations and shall include crushed rock, concrete, and/or imported backfill, when required.
   e. Backfill with a MINIMUM of one sack per yard sand cement slurry around and over vaults and manholes per UGS GI 030, section 6.4 and around PMH's within one foot of finished grade, per UGS SS 590.1.
   f. Backfill, per Edison specifications, shall immediately follow conduit or substructure installation. At no time shall conduit be left exposed over 24 hours.
   g. No rocks are allowed within 12 inches of direct-buried cables or any conduit without concrete encasement. Native backfill capable of passing through a one-half inch mesh screen shall be considered to be "rock free". If existing backfill does not pass through a 1/2" screen, place imported sand 3" below and 12" above Edison cables. After this point, no rocks larger than 12" diameter are permitted.
   h. All backfill shall be compacted to meet or exceed local ordinances or other requirements. It shall be placed in a manner that will not damage the conduit or substructure or allow future subsidence of the trench or structures.

5. PAVING:
   Repaving, where required, shall be placed in such a manner that interference with traffic, including pedestrian traffic, will be kept to a minimum. The Contractor shall establish a program of repaving acceptable to the Municipality, County, or other authority having jurisdiction and which is acceptable to Edison.

6. STRUCTURES:
   a. All substructures shall be constructed or installed to Edison specifications.
   b. Install protection barriers per UGS MS 830 when required in areas exposed to traffic, per Edison Inspector.
   c. All conduit lines and concrete floored substructures shall be water tight.
   d. All grounding materials shall be furnished and installed by the Contractor.

7. RETAINING WALLS:
   When required, retaining walls shall be provided by the Developer. Walls are required wherever grade rises more than 18 inches above the structure or 24" above the pad surface at a distance of 5 feet from the same, or in areas subject to erosion. Design and installation must comply with local building ordinances. Refer to Edison Inspector for typical space requirements.

8. PERMITS:
   All permits necessary for excavation shall be provided by the Contractor/Developer.

9. ACCESS:
   Heavy truck access shall be maintained to equipment locations. Structures must be clear of all appurtenances that would obstruct the loading or unloading of equipment.

10. SERVICES:
    a. Meters and services shall comply with Edison Electrical Services Requirements.
    b. Wiring must be in accordance with applicable local ordinances and approved by local Inspection Authorities.

11. LOCATION:
    a. The location of excavations and structures for Edison shall be as shown on the working drawing. No deviation from the planned locations will be permitted unless approved by the Edison Inspector. See UGS GI 001, section 2.2.
    b. Actual location of obstructions, storm drains, and/or other foreign utilities to be the responsibility of the Contractor. See UGS GI 001, section 2.3.

12. Contractor is to verify location and widths of all sidewalks and driveways prior to street light installation. See UGS CD 175.1, UGS CD 175.2 and UGS CD 175.3.

13. SURVEY:
    Surveying of street improvements, property corners, lot lines, finished grade, etc., necessary for the installation of underground facilities must be completed and markers or stakes placed prior to the start of the installation. In addition, Developer shall maintain the markers during the installation and inspection by Edison. Grade and property line stakes must show any offset measurements.

14. COORDINATION AND SUPERVISION:
    The Developer shall provide supervision over and coordination among the various contractors working within the development in order to prevent damage to Edison facilities. He is responsible for the cost of repairs, replacement, relocation, or other corrections to Edison facilities made necessary by his failure to provide supervision or to otherwise comply with these specifications.

15. TELEPHONE AND OTHER UTILITY REQUIREMENTS:
    The drawing prepared for this job may also cover the facilities to be installed for the telephone company and/or other utility. Any questions concerning details of their installation should be referred to the company concerned.

16. OWNERSHIP:
    Developer is to deed to the Edison Company all structures shown hereon except those shown as customer owned.

17. WARRANTY:
    Applicants expressly represent and warrant that all work performed and all material used in meeting Applicants' obligations herein are free from defects in workmanship and are in conformity with Southern California Edison Company's requirements. This warranty shall commence upon receipt by Applicants of Company's final acceptance and shall expire one year from that date. Applicants agree to promptly correct to the Company's satisfaction and that of any governmental agency having jurisdiction and at Applicant's expense any breach of this warranty which may become apparent through inspection or operation of underground electric system by Company during this warranty period.

18. INSPECTION:
    Inspection is required during the construction period. A 48 hour advance notice of intent to start construction is required from the contractor to the Southern California Edison Company. Standards of Edison construction requirements are available upon request.

CONNECTING TO EXISTING SCE STRUCTURES

- Per SCE requirements, customers are not allowed to enter, intercept or tie-in to existing SCE facilities; e.g. structures, equipment, multi-conduit runs/banks, or conductors. These facilities may be energized and the work will only be performed by SCE. Contact the appropriate SCE inspector to schedule an appointment. Customers may connect to an existing conduit stub without a SCE inspector present.
- Multi-conduit runs/banks are runs of conduit in close proximity to each other and other SCE facilities. A conduit stub is a single empty conduit stub that is not in close proximity to other SCE owned facilities. Refer to the work order map for details.
- Per CPUC/SCE's Rule 15 B.1.A and Rule 16 D.1.A., the customer will provide all necessary excavations (with the exception of excavation under pads and primary splice boxes), material (including conduit and structures) and encasement, to be utilized in the intercept/tie-in process.
- The customer must adhere to all applicable Cal-OSHA, local, city, state and federal regulations, (including, but not limited to, all necessary shoring and traffic control in place to perform the intercept/tie-in work by SCE's underground civil contractor(s)).
- Intercept/tie-in work must be coordinated with SCE's civil contractors through the Division Inspector/P-Spec to limit exposure of excavation(s). Customer is responsible for securing excavation(s).

D84: Rev. 2/12/08

NOTE:
ALL ELECTRICAL DUCTS AND STRUCTURES WILL CONFORM TO GENERAL ORDER #128 (RULES FOR CONSTRUCTION OF UNDERGROUND ELECTRICAL SUPPLY AND COMMUNICATION PRESCRIBED BY THE PUBLIC UTILITIES COMMISSION OF THE STATE OF CALIFORNIA, JANUARY 2006).

WARNING
THE EXCAVATOR MUST TAKE ALL STEPS NECESSARY TO AVOID CONTACT WITH UNDERGROUND FACILITIES WHICH MAY RESULT IN INJURY TO PERSONS OR DAMAGE TO FACILITIES IN THE AREA. THE INDICATED LOCATIONS OF EDISON UNDERGROUND FACILITIES, AS PROVIDED, ARE BELIEVED TO BE ACCURATE, HOWEVER, THE FINAL DETERMINATION OF EXACT LOCATIONS AND THE COST OF REPAIR TO DAMAGED FACILITIES IS THE RESPONSIBILITY OF THE EXCAVATOR.

WHERE CONDUITS ARE PICKED UP OR INTERCEPTED, CONDUIT SHALL BE MANDRELLED AND PULL ROPE INSTALLED FROM TERMINAL TO TERMINAL.

SECTION 2.0 - CONNECTION FEE RATE

Pursuant to Section 3.03 of the Master Connection Fee Ordinance of County Sanitation District No. 8 of Los Angeles County, the following, to be effective on the dates given, shall constitute the Connection Fee Rate per capacity unit:

July 1, 2008	July 1, 2009	July 1, 2010
$2,530	$3,290	$4,150

SECTION 3.0 - COST ALLOCATION FACTORS

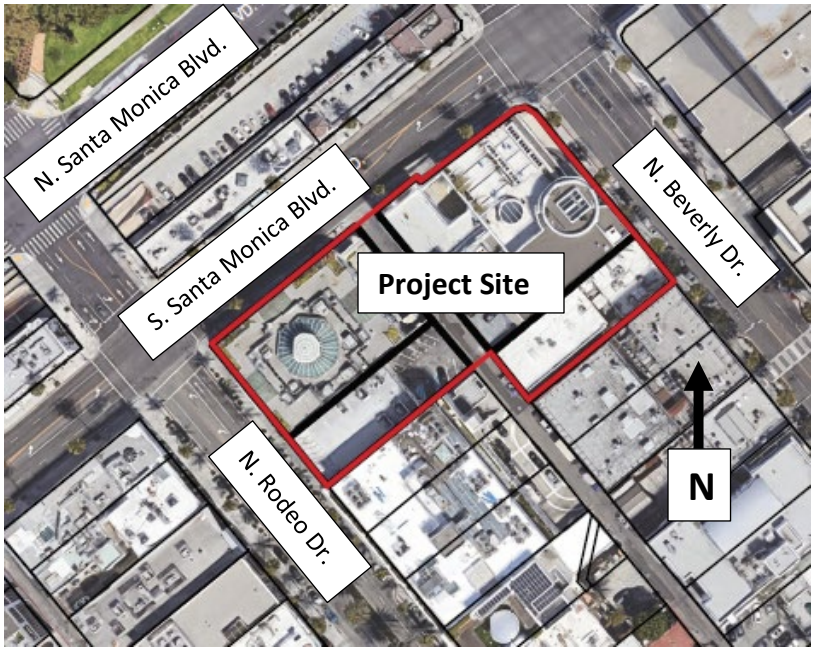
Pursuant to Section 3.04(1) of the Master Connection Fee Ordinance of County Sanitation District No. 8 of Los Angeles County, the proportions of the total capital costs required to construct an incremental expansion of the sewerage system of the next anticipated configuration for conveyance, treatment, and disposal of wastewater which are attributable to flow, COD, and suspended solids, designated as X, Y, and Z, respectively, to be effective on the dates given, shall be:

$X = 0.6696$ $Y = 0.1256$ $Z = 0.2048$

Appendix A.2

Notice of Preparation (NOP)

City of Beverly Hills
Notice of Preparation of an Environmental Impact Report (EIR) and Notice of Public Scoping Meeting



DATE: Wednesday, December 2, 2020 **TIME:** 6:30 p.m. to 8:00 p.m.

LOCATION: **VIRTUAL MEETING ON-LINE LOCATION**: https://www.gotomeet.me/CBHCD/events
Alternatively, phone access is available at 1-866-899-4679
Phone Access Code: 954-861-509

PROJECT: Cheval Blanc Beverly Hills Specific Plan Project

The City of Beverly Hills is preparing a Draft Environmental Impact Report (Draft EIR) for the proposed Cheval Blanc Beverly Hills Specific Plan (herein referred to as "Project"). The public is invited to attend a preliminary "scoping meeting" on **Wednesday, December 2, 2020 at 6:30 p.m.** to comment on environmental issues that should be addressed in the Draft EIR. Due to the on-going public health issues associated with holding in-person gatherings during the Covid-19 pandemic, the scoping meeting will be held virtually. Access to the meeting is available through: (i) the video conferencing link, and (ii) the phone access information identified at the top of this notice.

Project Location: The Project Site (456 and 468 North Rodeo Drive, 449, 451 and 453 North Beverly Drive and 461 through 465 North Beverly Drive) is located in the City of Beverly Hills and generally is located at on the southeast corner of Rodeo Drive and South Santa Monica Boulevard. The Project site is bounded on the north by South Santa Monica Boulevard, on the east by North Beverly Drive and on the west by North Rodeo Drive. The Project site is approximately 1.28 acres (55,608 square feet [SF]) in size and includes Assessor Parcel Numbers 4343-016-001, -002, -019, and -023, as well as a portion of the existing north-south alley located between North Rodeo Drive and North Beverly Drive. The Project Site is regionally accessible from Interstate 405 (the San Diego Freeway) and Santa Monica Boulevard, and locally accessible from North Santa Monica Boulevard. The Project Site is currently developed with two retail commercial structures on North Rodeo Drive (The former "Brooks Brothers" and the "Celine" retail locations) and developed with a retail building and an institutional building (the former "Paley Center") on North Beverly Boulevard.

Project Description: The Cheval Blanc Beverly Hills Specific Plan Project is a proposal for a single multiple-use building, up to 220,950 square-feet in floor area (a floor area ratio (FAR) of approximately 4.2 to 1 overall and a FAR of approximately 3.9 to 1 above ground), based on the proposed development standards set forth in the Specific Plan. The single building is proposed to include a luxury hotel with restaurant and ancillary services, private club, and retail uses at street level with frontage on North Rodeo Drive. The submitted conceptual plans for the Project identify the following features:

- The new building is proposed to vary in height across the Project site. The portion of the building fronting North Rodeo Drive is proposed to be 4-stories, 51-feet in height. The structure would step up in height to a maximum of 9-stories, 115-feet in height on North Beverly Drive.
- The proposed 187,058 square-foot (per conceptual plans) luxury hotel would contain up to 115 hotel rooms.
- The proposed private club would be physically contained within the hotel portion of the building. The club would provide facilities for social and recreational purposes for up to 500 individual members. Club amenities include meeting rooms, a screening room, and a club specific restaurant use.
- Appurtenant uses in connection with the hotel and club include: Restaurant uses, including a ground floor restaurant open to the public; a wellness center, including fitness and exercise equipment and services; a spa, including day spa, cosmetic spa, and beauty and barber services; and pools, decks, balconies, and outdoor dining facilities, which are proposed to be located on the building's rooftop areas.
- The new building is proposed to include a motor court with access from South Santa Monica Boulevard. The motor court will be valet operated and used for vehicle drop-off and pick-up for hotel, club, spa, retail, and restaurant users of the building.
- 24,980 square-feet of ground floor accessible retail space is proposed with frontage on North Rodeo Drive. The total linear length of the retail frontage is approximately 150 feet. The conceptual plan includes a new, approximately 20' by 35' pedestrian plaza on the southeast corner of the intersection of North Rodeo Drive and South Santa Monica Boulevard.
- 178 vehicle parking spaces are proposed to be located on three subterranean levels.

Construction is anticipated to commence in 2022 and take approximately 38 months to complete.

Initial Study: Based on the conclusions of the Initial Study prepared for the Cheval Blanc Beverly Hills Specific Plan Project, the following areas of potentially significant environmental impact are anticipated to require analysis in the Draft EIR:

- Air Quality
- Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions
- Land Use and Planning
- Noise
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems

Potential cumulative impacts and potential for growth inducement will also be addressed; alternatives, including the No Project Alternative, will be evaluated.

Purpose of the Scoping Meeting: The purpose of the scoping meeting is to present the Cheval Blanc Beverly Hills Specific Plan Project in a public setting and provide an opportunity for a full airing of the environmental issues that are important to the community. The meeting will include a presentation of the proposal and a description of the environmental issues to be analyzed in the Draft EIR. Following the

presentation, interested agencies, organizations, and members of the public will be encouraged to present views concerning what environmental issues should be included in the Draft EIR. The oral and written comments regarding potential environmental effects of the Project made during the scoping meeting will be addressed as appropriate in the Draft EIR.

Required 30-Day Comment Period: The City invites all interested members of the public to attend the public scoping meeting. The City also invites written comments on issues related to potential environmental impacts during a 35-day comment period, which starts on ***Friday, November 13, 2020*** and will conclude on ***Friday, December 18, 2020***. Written comments should be addressed to:

Masa Alkire, AICP, Principal Planner
City of Beverly Hills Community Development Department
455 North Rexford Drive
Beverly Hills, California 90210
Fax: (310) 858-5966
Email: malkire@beverlyhills.org

After the Draft EIR has been prepared, it will be released for public review and comment. The Planning Commission will then hold a public hearing on the Draft EIR and on the Project. Separate notices of the availability of the Draft EIR and of the hearings on the Project will be released at later dates.

The case file on this Project, which includes the plans and applications, is on file at the Planning Division, 455 North Rexford Drive, Beverly Hills, California 90210. Copies of the Initial Study are also available in the Planning Division at City Hall and online at www.beverlyhills.org/environmental. If there are any questions regarding this notice, or if you would like to review the case file (plans and applications) or receive copies of available documents, please contact **Masa Alkire, AICP, Principal Planner at (310) 285-1135 or via email at malkire@beverlyhills.org**.

RE: Cheval Blanc Beverly Hills Specific Plan – Notice of Preparation (NOP)
SCH# 2020110223
GTS# 07-LA-2020-03426
Vic. LA-405 / PM 30.853

Dear Masa Alkire:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced project. The Cheval Blanc Beverly Hills Specific Plan Project is a proposal for a multiple-use building that will include a luxury hotel with restaurant and ancillary services, private club, and retail uses at street level with frontage on North Rodeo Drive. The new building is proposed to vary in height, with the portion fronting North Rodeo Drive to be 4-stories and step up in height to a maximum of 9-stories on North Beverly Drive. The luxury hotel would contain up to 115 hotel rooms. The private club would be physically contained within the hotel portion of the building and would provide facilities for social and recreational purposes for up to 500 individual members. Club amenities include meeting rooms, a screening room, and a club specific restaurant use. Appurtenant uses in connection with the hotel and club include: Restaurant uses, including a ground floor restaurant open to the public; a wellness center, including fitness and exercise equipment and services; a spa, including day spa, cosmetic spa, and beauty and barber services; and pools, decks, balconies, and outdoor dining facilities, which are proposed to be located on the building's rooftop areas. The new building is proposed to include a motor court with access from South Santa Monica Boulevard. The motor court will be valet operated and used for vehicle drop-off and pick-up for hotel, club, spa, retail, and restaurant users of the building. 24,980 square-feet of ground floor accessible retail space is proposed with frontage on North Rodeo Drive. The total linear length of the retail frontage is approximately 150 feet. The conceptual plan includes a new, approximately 20' by 35' pedestrian plaza on the southeast corner of the intersection of North Rodeo Drive and South Santa Monica Boulevard. 178 vehicle parking spaces are proposed to be located on three subterranean level

The nearest State facility to the proposed project is SR-405. After reviewing the NOP, Caltrans does not expect project approval to result in a direct adverse impact to the existing State transportation facilities. However, due to the amount of car parking being provided, the Cheval Blanc Beverly Hills Specific Plan is still designed in a way that induces demand for additional vehicle trips. This demand should be addressed with appropriate design and management

principles. Caltrans supports reducing the amount of parking whenever possible. Research looking at the relationship between land-use, parking, and transportation indicates that car parking prioritizes driving above all other travel modes and undermines a community's ability to choose public transit and active modes of transportation. For any community or city to better support all modes of transportation and reduce vehicle miles traveled, we recommend the implementation of Transportation Demand Management (TDM) measures as an alternative to requiring car parking.

Caltrans also recommends that at least one long-term secure bicycle parking space should be provided per residential unit or guest room, allowing residents to more easily take advantage of the project's central location and choose the bicycle as their mode of travel. Long-term bicycle parking should be located onsite, on the ground floor, and within 200 feet of the pedestrian entrance to all main buildings.

This project site is also less than a half mile from a major light rail station which is part of the Metro Purple (D Line) Extension Transit Project. The forthcoming DEIR should reflect a project scope that includes robust walking and biking elements to improve the safety and comfort for a person using the Wilshire/Rodeo station, which is expected to begin operations by 2025.

Additionally, any transportation of heavy construction equipment and/or materials which requires use of oversized-transport vehicles on State highways will need a Caltrans transportation permit. We recommend large size truck trips be limited to off-peak commute periods.

If you have any questions, please contact project coordinator Anthony Higgins, at anthony.higgins@dot.ca.gov and refer to GTS# 07-LA-2020-03426.

Sincerely,

Miya Edmonson

Good afternoon Masa Alkire,

Please see the attached letter regarding CDFW's comments on the Cheval Blanc Specific Plan Project Notice of Preparation for a Draft Environmental Impact Report in Beverly Hills. If you have any questions or concerns relating to this letter, please feel free to contact CDFW at your convenience. Thank you for the opportunity to comment and have a good day.

Subject: Comments on the Notice of Preparation for the Cheval Blanc Beverly Hills Specific Plan Project, SCH #2020110223, Los Angeles County

Dear Masa Alkire:

The California Department of Fish and Wildlife (CDFW) has reviewed the Notice of Preparation (NOP) for a Draft Environmental Impact Report (DEIR) from the City of Beverly Hills (City; Lead Agency) for the Cheval Blanc Beverly Hills Specific Plan Project (Project). Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

CDFW's Role

CDFW is California's Trustee Agency for fish and wildlife resources, and holds those resources in trust by statute for all the people of the State [Fish & G. Code, §§ 711.7, subdivision (a) & 1802; Public Resources Code, § 21070; California Environmental Quality Act (CEQA) Guidelines, § 15386, subdivision (a)]. CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (Id., § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect State fish and wildlife resources.

CDFW is also submitting comments as a Responsible Agency under CEQA (Public Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code, including lake and streambed alteration regulatory authority (Fish & G. Code, § 1600 et seq.). Likewise, to the extent implementation of the Project as proposed may result in "take", as defined by State law, of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), or CESA-listed rare plant pursuant to the Native Plant Protection Act (NPPA; Fish & G. Code, §1900 et seq.) authorization as provided by the applicable Fish and Game Code will be required.

DocuSign Envelope ID: D3622858-A896-45AF-9C48-52D86ECCA04C

Project Description and Summary

Objective: The City proposes the development and construction of a single mixed-use building. The proposed building is to include a luxury hotel with restaurant, private club, and retail uses at street level with frontage on North Rodeo Drive. The site is currently developed with multiple commercial businesses and an assortment of ornamental street trees that will be demolished and cleared before construction.

Location: The Project site is located in the City of Beverly Hills and is generally located at the southeast corner of Rodeo Drive and South Santa Monica Boulevard. The Project site is bounded on the north by South Santa Monica Boulevard, on the east by North Beverly Drive, and on the west by North Rodeo Drive. Los Angeles County Assessor's Parcel Numbers (APN) associated with the Project are 4343-016-001, -002, -019, and -023.

COMMENTS AND RECOMMENDATIONS

CDFW offers the comments and recommendations below to assist the City in adequately identifying, avoiding, and/or mitigating the Project's significant, or potentially significant, direct, and indirect impacts on fish and wildlife (biological) resources. CDFW recommends the measures or revisions below be included in a science-based monitoring program that contains adaptive management strategies as part of the Project's CEQA mitigation, monitoring and reporting program (Public Resources Code, § 21081.6 and CEQA Guidelines, § 15097).

Specific Comments

1) Bat Species. The Initial Study (IS) for the proposed Project states that at least 12 palm trees will be removed as part of Project activities. A review of California Natural Diversity Database (CNDDB) indicates occurrences of hoary bat (*Lasiurus cinereus*) in the immediate vicinity of the Project site. 24 bat species occur in the south coast ecoregion of the State, indicating the importance of the region to bat diversity (Miner and Stokes 2005). Despite the high diversity and sensitivity of bats in Southern California, numerous bat species are known to roost in trees and structures throughout Los Angeles County. Project activities may have the potential to adversely impact bat populations within the vicinity.

    a) Bats are considered non-game mammals and are afforded protection by State law from take and/or harassment (Fish & G. Code, § 4150; Cal. Code of Regs., § 251.1). Project construction and activities, including (but not limited to) vegetation removal, increased noise, and ground disturbing activities, may have direct and/or indirect impacts on bats and roosts.

    b) CDFW recommends the DEIR provide a thorough discussion and adequate disclosure of potential impacts to bats and roosts from Project construction including (but not limited to) disturbances to vegetation, trees, and structures; demolition; grading; and excavating. If necessary, to reduce impacts to less than significant, the DEIR should provide bat-specific avoidance and/or mitigation measures [CEQA Guidelines, § 15126.4(a)(1)].

DocuSign Envelope ID: D3622858-A896-45AF-9C48-52D86ECCA04C

2) Tree Replacement. Appendix IS-1: Tree Removal and Replacement Memorandum (Tree Memo) of the IS indicates that there is a total of 15 existing street trees planted along the curbside around the Project site. Among those 15 trees are five king palms (*Archontophoenix cunninghamiana*), seven Mexican fan palms (*Washingtonia robusta*), and three tipu trees (*Tipuana Tipu*), all non-native ornamental trees. The Tree Memo does not list any protected or sensitive species. In urban environments such as this Project site, small pockets of green space and trees are vital habitat to local wildlife. Bats have been shown to utilize palm trees as habitat for roosting throughout the Los Angeles region. Tree trimming activities (for example, palm skinning) can impact bats that attempt to roost in landscape plantings (Miner and Stokes 2005). Tree trimming and removal are also likely to impact bird species found to be nesting or foraging among street trees.

    a) To compensate for any loss of trees, CDFW recommends replacing all non-native trees removed as a result of the proposed work activities with at least a 1:1 ratio with native trees. CDFW recommends replacing native trees with at least a 3:1 ratio with a combination of native trees and/or appropriate understory and lower canopy plantings.

3) Nesting Birds. As stated in the Tree Memo, 15 on-site trees will be removed as part of the proposed Project. This vegetation may provide potential nesting habitat where Project activities may impact nesting birds. Project activities occurring during the breeding season of nesting birds could result in the incidental loss of fertile eggs, or nestlings, or otherwise lead to nest abandonment in trees directly adjacent to the Project boundary. The Project could also lead to the loss of foraging habitat for sensitive bird species.

    a) CDFW recommends that measures be taken to avoid Project impacts to nesting birds. Migratory nongame native bird species are protected by international treaty under the Federal Migratory Bird Treaty Act (MBTA) of 1918 (Code of Federal Regulations, Title 50, § 10.13). Sections 3503, 3503.5, and 3513 of the California Fish and Game Code prohibit take of all birds and their active nests including raptors and other migratory nongame birds (as listed under the Federal MBTA).

    b) Proposed Project activities including (but not limited to) staging and disturbances to native and nonnative vegetation, structures, and substrates should occur outside of the avian breeding season which generally runs from February 15 through August 31 (as early as January 1 for some raptors) to avoid take of birds or their eggs.

    c) If avoidance of the avian breeding season is not feasible, CDFW recommends surveys by a qualified biologist with experience in conducting breeding bird surveys. Surveys are needed to detect protected native birds occurring in suitable nesting habitat that may be disturbed and any other such habitat within 300 feet of the disturbance area, to the extent allowable and accessible. For raptors, this radius should be expanded to 500 feet and 0.5 a mile for special status species. Project personnel, including all contractors working on site, should be instructed on the sensitivity of the area. Reductions in the nest buffer distance may be appropriate depending on the avian species involved, ambient levels of human activity, screening vegetation, or possibly other factors.

DocuSign Envelope ID: D3622858-A896-45AF-9C48-52D86ECCA04C

4) Non-Native Plants and Landscaping. The Project may involve significant landscaping for aesthetic purposes. Invasive plant species spread quickly and can displace native plants, prevent native plant growth, and create monocultures. The Tree Memo indicates that the 15 palm trees that are to be removed during Project activities will be replaced at a 1:1 ratio of the same palm species. CDFW recommends using native, locally appropriate plant species for landscaping on the Project site, similar to species found in adjacent natural habitats.

    a) CDFW recommends the DEIR provide the landscaping plant palette and restrict use of species listed as 'Moderate' or 'High' by the California Invasive Plant Council (Cal-IPC 2020). These species are documented to have substantial and severe ecological impacts on physical processes, plant and animal communities, and vegetation structure.

    b) If non-native invasive plants are on site, CDFW recommends the DEIR provide measures to reduce the spread of non-natives during Project construction and activities. Spreading non-native plants during Project activities may have the potential to impact areas not currently exposed to non-native plants. This could result in expediting the loss of natural habitats in and adjacent to the Project site and should be prevented.

General Comments

Despite the urban setting of the Project site, small patches of open space and clusters of trees are vital habitat for local wildlife populations. Preventing the loss of function of these important habitats is imperative in the face of constant urbanization. The following comments should be addressed in the DEIR to reduce the significant impact the Project may have on the Project area.

1) Disclosure. A DEIR should provide an adequate, complete, and detailed disclosure about the effect which a proposed project is likely to have on the environment (Pub. Resources Code, § 20161; CEQA Guidelines, §15151). Adequate disclosure is necessary so CDFW may provide comments on the adequacy of proposed avoidance, minimization, or mitigation measures, as well as to assess the significance of the specific impact relative to the species (e.g., current range, distribution, population trends, and connectivity).

2) Project Description and Alternatives. To enable CDFW to adequately review and comment on the proposed Project from the standpoint of the protection of plants, fish, and wildlife, we recommend the following information be included in the DEIR:

    a) A complete discussion of the purpose and need for, and description of, the proposed Project, including all staging areas and access routes to the construction and staging areas; and,

    b) A range of feasible alternatives to Project component location and design features to ensure that alternatives to the proposed Project are fully considered and evaluated (CEQA Guidelines, § 15126.6). CDFW recommends the City consider configuring Project construction and activities, as well as the development footprint, in such a way as to fully avoid impacts to rare plants, oak trees, and oak woodlands. CDFW also recommends the City consider establishing appropriate setbacks from rare

DocuSign Envelope ID: D3622858-A896-45AF-9C48-52D86ECCA04C

plants, oak trees, and oak woodlands. Setbacks should not be impacted by ground disturbance or hydrological changes for the duration of the Project and from any future development. Project alternatives should avoid or otherwise minimize direct and indirect impacts to sensitive biological resources. Project alternatives should be thoroughly evaluated, even if an alternative would impede, to some degree, the attainment of the Project objectives or would be more costly (CEQA Guidelines, § 15126.6).

3) Biological Baseline Assessment. CDFW recommends providing a complete assessment and impact analysis of the flora and fauna within and adjacent to the Project site, with emphasis upon identifying endangered, threatened, sensitive, regionally, and locally unique species, and sensitive habitats. Impact analysis will aid in determining any direct, indirect, and cumulative biological impacts, as well as specific avoidance or mitigation measures necessary to offset those impacts. CDFW recommends avoiding any sensitive natural communities found on or adjacent to the Project. CDFW also considers impacts to Species of Special Concern (SSC) a significant direct and cumulative adverse effect without implementing appropriate avoidance and/or mitigation measures [CEQA Guidelines, §§ 15064, 15065, 15125(c), and 15380]. The DEIR should provide the following information:

   a) Regional setting. Information on the regional setting that is critical to an assessment of environmental impacts, with special emphasis on resources that are rare or unique to the region [CEQA Guidelines, § 15125(c)].

   b) Database search. An updated and thorough assessment of biological resources in nine quadrangles containing the Project site and surrounding areas. A 5-mile radius should be applied for a database search of raptors. CDFW's California Natural Diversity Database (CNDDB) in Sacramento should be contacted to obtain current information on any recently reported sensitive wildlife, plants, and sensitive plant communities (CDFW 2020a). In addition, CDFW recommends an updated search for rare plants from Calflora's Information on Wild California Plants database (Calflora 2020) and CNPS Inventory of Rare and Endangered Plants of California database (CNPS 2020b).

   c) Rare plant mapping. An updated and thorough floristic-based assessment of special status plants following CDFW's Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities (CDFW 2018). Adjoining habitat areas should be included where Project construction and activities could lead to direct or indirect impacts off site. Species-specific surveys would identify any areas where these species occur which would help inform plans to fully avoid these areas/impacts and/or appropriate mitigation measures. The DEIR should disclose specific impacts to sensitive plants and habitat and provide measures to fully avoid Project-related impacts.

   d) Sensitive vegetation community mapping. An updated and thorough floristic-based alliance- and/or association-based mapping of sensitive vegetation communities and impact assessments conducted at the Project site and within the neighboring vicinity. The Manual of California Vegetation (MCV), second edition, should also be used to inform this mapping and assessment (Sawyer 2008). CDFW tracks rare natural communities using the MCV classification system. CDFW considers sensitive

DocuSign Envelope ID: D3622858-A896-45AF-9C48-52D86ECCA04C

vegetation communities as threatened habitats having both regional and local significance. Vegetation communities, alliances, and associations with a State-wide ranking of S1, S2, S3, and S4 should be considered sensitive and declining at the local and regional level. These ranks can be obtained by visiting CDFW's Vegetation Classification and Mapping Program webpage (CDFW 2020b). Adjoining habitat areas should be included in this assessment where site activities could lead to direct or indirect impacts offsite. Habitat mapping at the alliance level will help establish baseline vegetation conditions. The DEIR should fully disclose specific impacts to sensitive vegetation communities and provide measures to fully avoid Project-related impacts.

e) Wildlife. A complete, recent, assessment of rare, threatened, and endangered, and other sensitive species on site and within the area of potential effect, including SSC and California Fully Protected Species (Fish & G. Code, §§ 3511, 4700, 5050, and 5515). Species to be addressed should include all those which meet the CEQA definition of endangered, rare, or threatened species (CEQA Guidelines, § 15380). The DEIR should include a nine-quadrangle search of CNDDB (CDFW 2020a) to determine a list of species potentially present at the Project site. A larger search area may help account for change in species range and distribution, especially due to climate change effects. Seasonal variations in use of the Project site should also be addressed such as wintering, roosting, nesting, and foraging habitat. Many wildlife species utilize fossorial mammal dens and burrows as habitat structure. Typically, a field survey includes the Project site and a 500-foot buffer. Focused species-specific are required and should be conducted at the appropriate time of year and time of day when the sensitive species are active or otherwise identifiable. Acceptable species-specific survey procedures should be developed in consultation with CDFW and USFWS. Survey protocols and guidelines for special status plants and wildlife may be found on CDFW's Survey and Monitoring Protocols and Guidelines webpage (CDFW 2018).

4) Direct, Indirect, and Cumulative Biological Impacts. CDFW recommends providing a thorough discussion of direct, indirect, and cumulative impacts expected to adversely affect biological resources, with specific measures to offset such impacts. The following should be addressed in the DEIR:

a) A discussion regarding indirect Project impacts on biological resources, including resources in nearby public lands, open space, adjacent natural habitats, riparian ecosystems, and any designated and/or proposed or existing reserve lands (e.g., preserve lands associated with a Natural Community Conservation Plan (NCCP, Fish & G. Code, § 2800 et. seq.). Impacts on wildlife corridor/movement areas, including maintenance, staging areas, and access to undisturbed habitats in adjacent areas, should be fully evaluated in the DEIR.

b) A discussion of potential adverse impacts from lighting, noise, human activity, and exotic species along with identification of any mitigation measures.

c) A discussion on any potential Project-related changes on drainage patterns and downstream of the Project site; the volume, velocity, and frequency of existing and post-Project surface flows; polluted runoff; soil erosion and/or sedimentation in

DocuSign Envelope ID: D3622858-A896-45AF-9C48-52D86ECCA04C

streams and water bodies; and, post-Project fate of runoff from the Project site. The discussion should also address the proximity of the extraction activities to the water table, whether dewatering would be necessary, and the potential resulting impacts on the habitat supported by the groundwater. Mitigation measures proposed to alleviate such Project impacts should be included.

d) An analysis of impacts from land use and zoning designations located nearby or adjacent to natural areas that may inadvertently contribute to wildlife-human interactions. A discussion of possible conflicts and mitigation measures to reduce these conflicts should be included in the DEIR.

e) A cumulative effects analysis, as described under CEQA Guidelines section 15130. General and specific plans, including past, present, and anticipated future projects, should be analyzed relative to their impacts on similar plant communities and wildlife habitats.

5) Translocation/Salvage of Plants and Animal Species. Translocation and transplantation is the process of moving an individual from the Project site and permanently moving it to a new location. CDFW generally does not support the use of translocation or transplantation as the primary mitigation strategy for unavoidable impacts to rare, threatened, or endangered plant or animal species. Studies have shown that these efforts are experimental and the outcome unreliable. CDFW has found that permanent preservation and management of habitat capable of supporting these species is often a more effective long-term strategy for conserving sensitive plants and animals and their habitats.

6) Moving out of Harm's Way. To avoid direct mortality, we recommend that a qualified biological monitor, approved by CDFW, be on-site prior to and during ground and habitat disturbing activities. The biological monitor may need to move any special status species or other wildlife of low mobility out of harm's way that would likely be injured or killed by Project-related construction activities, such as grubbing or grading. It should be noted that the temporary relocation of on-site wildlife does not constitute effective mitigation for the purposes of offsetting Project impacts associated with habitat loss. If the Project requires species to be removed, disturbed, or otherwise handled, we recommend that the DEIR clearly identify that the designated entity should obtain all appropriate State and federal permits.

   CDFW has the authority to issue permits for the take or possession of wildlife, including mammals; birds, nests, and eggs; reptiles, amphibians, fish, plants; and invertebrates (Fish & G. Code, §§ 1002, 1002.5, 1003). Effective October 1, 2018, a Scientific Collecting Permit is required to monitor project impacts on wildlife resources, as required by environmental documents, permits, or other legal authorizations; and, to capture, temporarily possess, and relocate wildlife to avoid harm or mortality in connection with otherwise lawful activities (Cal. Code Regs., tit. 14, § 650). Please visit CDFW's Scientific Collection Permits webpage for information (CDFW 2020c).

7) Compensatory Mitigation. The DEIR should include mitigation measures for adverse Project-related direct or indirect impacts to sensitive plants, animals, and habitats. Mitigation measures should emphasize avoidance and reduction of Project impacts. For unavoidable impacts, on-site habitat restoration or enhancement should be discussed in detail. If on-site

DocuSign Envelope ID: D3622858-A896-45AF-9C48-52D86ECCA04C

mitigation is not feasible or would not be biologically viable, thus not adequately mitigating the loss of biological functions and values, off-site mitigation through habitat creation, acquisition, and/or preservation in perpetuity should be addressed. Areas proposed as mitigation lands should be protected in perpetuity through a conservation easement, with financial assurance and dedication to a qualified entity for long-term management and monitoring. Under Government Code, section 65967, the Lead Agency must exercise due diligence in reviewing the qualifications of a governmental entity, special district, or nonprofit organization to effectively manage and steward land, water, or natural resources on mitigation lands it approves.

CONCLUSION

CDFW appreciates the opportunity to comment on the Notice of Preparation to assist the City of Beverly Hills in identifying and mitigating Project impacts on biological resources. If you have any questions or comments regarding this letter, please contact Andrew Valand, Environmental Scientist, at (562) 292-6821 or by email at Andrew.Valand@wildlife.ca.gov.

Sincerely,

Re: 2020110223, Cheval Blanc Beverly Hills Specific Plan Project, Los Angeles County

Dear Mr. Alkire:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

a. A brief description of the project.

b. The lead agency contact information.

c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).

d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

a. Alternatives to the project.

b. Recommended mitigation measures.

c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

a. Type of environmental review necessary.

b. Significance of the tribal cultural resources.

c. Significance of the project's impacts on tribal cultural resources.

d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

a. Whether the proposed project has a significant impact on an identified tribal cultural resource.

b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

RE: SCAG Comments on the Notice of Preparation of a Draft Environmental Impact Report for the Cheval Blanc Beverly Hills Specific Plan [SCAG NO. IGR10301]

Dear Ms. Alkire,

Thank you for submitting the Notice of Preparation of a Draft Environmental Impact Report for the Cheval Blanc Beverly Hills Specific Plan ("proposed project") to the Southern California Association of Governments (SCAG) for review and comment. SCAG is responsible for providing informational resources to regionally significant plans, projects, and programs per the California Environmental Quality Act (CEQA) to facilitate the consistency of these projects with SCAG's adopted regional plans, to be determined by the lead agencies.[1]

Pursuant to Senate Bill (SB) 375, SCAG is the designated Regional Transportation Planning Agency under state law and is responsible for preparation of the Regional Transportation Plan (RTP) including the Sustainable Communities Strategy (SCS). SCAG's feedback is intended to assist local jurisdictions and project proponents to implement projects that have the potential to contribute to attainment of Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) goals and align with RTP/SCS policies. Finally, SCAG is also the authorized regional agency for Inter-Governmental Review (IGR) of programs proposed for Federal financial assistance and direct Federal development activities, pursuant to Presidential Executive Order 12372.

SCAG staff has reviewed the Notice of Preparation of a Draft Environmental Impact Report for the Cheval Blanc Beverly Hills Specific Plan in Los Angeles County. The proposed project is a specific plan that includes 187,058 square feet (SF) for up to 115 hotel rooms, 24,980 SF of retail, and related hotel uses such as spa, private club, and restaurant, and 178 parking spaces on 1.28 acres.

When available, please email environmental documentation to *IGR@scag.ca.gov* providing, at a minimum, the full public comment period for review.

If you have any questions regarding the attached comments, please contact the Inter-Governmental Review (IGR) Program, attn.: Karen Calderon, Associate Regional Planner, at (213) 236-1983 or IGR@scag.ca.gov. Thank you.

Sincerely,

Ping Chang

Ping Chang
Manager, Compliance and Performance Monitoring

[1] Lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the 2020 RTP/SCS (Connect SoCal) for the purpose of determining consistency for CEQA.

COMMENTS ON THE NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE CHEVAL BLANC BEVERLY HILLS SPECIFIC PLAN [SCAG NO. IGR10301]

CONSISTENCY WITH CONNECT SOCAL

SCAG provides informational resources to facilitate the consistency of the proposed project with the adopted 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). For the purpose of determining consistency with CEQA, lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with Connect SoCal.

CONNECT SOCAL GOALS

The SCAG Regional Council fully adopted Connect SoCal in September 2020. Connect SoCal, also known as the 2020 – 2045 RTP/SCS, builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. The long-range visioning plan balances future mobility and housing needs with goals for the environment, the regional economy, social equity and environmental justice, and public health (see https://www.connectsocal.org/Pages/Connect-SoCal-Final-Plan.aspx). The goals included in Connect SoCal may be pertinent to the proposed project. These goals are meant to provide guidance for considering the proposed project. Among the relevant goals of Connect SoCal are the following:

SCAG CONNECT SOCAL GOALS	
Goal #1:	*Encourage regional economic prosperity and global competitiveness*
Goal #2:	*Improve mobility, accessibility, reliability and travel safety for people and goods*
Goal #3:	*Enhance the preservation, security, and resilience of the regional transportation system*
Goal #4:	*Increase person and goods movement and travel choices within the transportation system*
Goal #5:	*Reduce greenhouse gas emissions and improve air quality*
Goal #6:	*Support healthy and equitable communities*
Goal #7:	*Adapt to a changing climate and support an integrated regional development pattern and transportation network*
Goal #8:	*Leverage new transportation technologies and data-driven solutions that result in more efficient travel*
Goal #9:	*Encourage development of diverse housing types in areas that are supported by multiple transportation options*
Goal #10:	*Promote conservation of natural and agricultural lands and restoration of habitats*

For ease of review, we encourage the use of a side-by-side comparison of SCAG goals with discussions of the consistency, non-consistency or non-applicability of the goals and supportive analysis in a table format. Suggested format is as follows:

SCAG CONNECT SOCAL GOALS		
	Goal	Analysis
Goal #1:	*Encourage regional economic prosperity and global competitiveness*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
Goal #2:	*Improve mobility, accessibility, reliability and travel safety for people and goods*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
etc.		etc.

Connect SoCal Strategies

To achieve the goals of Connect SoCal, a wide range of land use and transportation strategies are included in the accompanying twenty (20) technical reports. To view Connect SoCal and the accompanying technical reports, please visit: https://www.connectsocal.org/Pages/Connect-SoCal-Final-Plan.aspx. Connect SoCal builds upon the progress from previous RTP/SCS cycles and continues to focus on integrated, coordinated, and balanced planning for land use and transportation that helps the SCAG region strive towards a more sustainable region, while meeting statutory requirements pertinent to RTP/SCSs. These strategies within the regional context are provided as guidance for lead agencies such as local jurisdictions when the proposed project is under consideration.

DEMOGRAPHICS AND GROWTH FORECASTS

A key, formative step in projecting future population, households, and employment through 2045 for Connect SoCal was the generation of a forecast of regional and county level growth in collaboration with expert demographers and economists on Southern California. From there, jurisdictional level forecasts were ground-truthed by subregions and local agencies, which helped SCAG identify opportunities and barriers to future development. This forecast helps the region understand, in a very general sense, where we are expected to grow, and allows SCAG to focus attention on areas that are experiencing change and may have increased transportation needs. After a year-long engagement effort with all 197 jurisdictions one-on-one, 82 percent of SCAG's 197 jurisdictions provided feedback on the forecast of future growth for Connect SoCal. SCAG also sought feedback on potential sustainable growth strategies from a broad range of stakeholder groups – including local jurisdictions, county transportation commissions, other partner agencies, industry groups, community-based organizations, and the general public. Connect SoCal utilizes a bottom-up approach in that total projected growth for each jurisdiction reflects feedback received from jurisdiction staff, including city managers, community development/planning directors, and local staff. Growth at the neighborhood level (i.e. transportation analysis zone (TAZ)) reflects entitled projects and adheres to current general and specific plan maximum densities as conveyed by jurisdictions (except in cases where entitled projects and development agreements exceed these capacities as calculated by SCAG). Neighborhood level growth projections also feature strategies that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Connect SoCal's Forecasted Development Pattern is utilized for long range modeling purposes and does not supersede actions taken by elected bodies on future development, including entitlements and development agreements. SCAG does not have the authority to implement the plan -- neither through decisions about what type of development is built where, nor what transportation projects are ultimately built, as Connect SoCal is adopted at the jurisdictional level. Achieving a sustained regional outcome depends upon informed and intentional local action. To access jurisdictional level growth estimates and forecasts for years 2016 and 2045, please refer to the Connect SoCal Demographics and Growth Forecast Technical Report: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal_demographics-and-growth-forecast.pdf?1606001579. The growth forecasts for the region and applicable jurisdictions are below.

	Adopted SCAG Region Wide Forecasts				Adopted City of Beverly Hills Forecasts			
	Year 2020	Year 2030	Year 2035	Year 2040	Year 2020	Year 2030	Year 2035	Year 2045
Population	19,517,731	20,821,171	21,443,006	22,503,899	34,802	35,225	35,458	35,832
Households	6,333,458	6,902,821	7,170,110	7,633,451	14,979	15,296	15,447	15,676
Employment	8,695,427	9,303,627	9,566,384	10,048,822	75,686	77,596	78,561	81,277

MITIGATION MEASURES

SCAG staff recommends that you review the Final Program Environmental Impact Report (Final PEIR) for Connect SoCal for guidance, as appropriate. SCAG's Regional Council certified the PEIR and adopted the associated Findings of Fact and a Statement of Overriding Considerations (FOF/SOC) and Mitigation Monitoring and Reporting Program (MMRP) on May 7, 2020 and also adopted a PEIR Addendum and amended the MMRP on September 3, 2020 (please see: https://scag.ca.gov/read-plan-certified-final-peir; and scroll to the bottom of the page for the PEIR Addendum). The PEIR includes a list of project-level performance standards-based mitigation measures that may be considered for adoption and implementation by lead, responsible, or trustee agencies in the region, as applicable and feasible. Project-level mitigation measures are within responsibility, authority, and/or jurisdiction of project-implementing agency or other public agency serving as lead agency under CEQA in subsequent project- and site- specific design, CEQA review, and decision-making processes, to meet the performance standards for each of the CEQA resource categories.

Good afternoon Ms. Alkire,

Please find attached SCAG Scoping Comments on NOP for the Cheval Blanc Beverly Hills Specific Plan [SCAG NO. IGR10301].

Please contact me at (213) 236-1983 or IGR@scag.ca.gov if you have any questions or difficulties with the attached file.

In light of the coronavirus and other public health concerns, please be advised that a majority of SCAG staff are teleworking with limited access to the SCAG offices. Therefore, if you wish to submit documents for IGR review, please submit it online via the IGR webpage or via email to IGR@scag.ca.gov.

Thank you!

RE: SCAG Comments on the Notice of Preparation of a Draft Environmental Impact Report for the Cheval Blanc Beverly Hills Specific Plan [SCAG NO. IGR10301]

Dear Ms. Alkire,

Thank you for submitting the Notice of Preparation of a Draft Environmental Impact Report for the Cheval Blanc Beverly Hills Specific Plan ("proposed project") to the Southern California Association of Governments (SCAG) for review and comment. SCAG is responsible for providing informational resources to regionally significant plans, projects, and programs per the California Environmental Quality Act (CEQA) to facilitate the consistency of these projects with SCAG's adopted regional plans, to be determined by the lead agencies.[1]

Pursuant to Senate Bill (SB) 375, SCAG is the designated Regional Transportation Planning Agency under state law and is responsible for preparation of the Regional Transportation Plan (RTP) including the Sustainable Communities Strategy (SCS). SCAG's feedback is intended to assist local jurisdictions and project proponents to implement projects that have the potential to contribute to attainment of Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) goals and align with RTP/SCS policies. Finally, SCAG is also the authorized regional agency for Inter-Governmental Review (IGR) of programs proposed for Federal financial assistance and direct Federal development activities, pursuant to Presidential Executive Order 12372.

SCAG staff has reviewed the Notice of Preparation of a Draft Environmental Impact Report for the Cheval Blanc Beverly Hills Specific Plan in Los Angeles County. The proposed project is a specific plan that includes 187,058 square feet (SF) for up to 115 hotel rooms, 24,980 SF of retail, and related hotel uses such as spa, private club, and restaurant, and 178 parking spaces on 1.28 acres.

When available, please email environmental documentation to *IGR@scag.ca.gov* providing, at a minimum, the full public comment period for review.

If you have any questions regarding the attached comments, please contact the Inter-Governmental Review (IGR) Program, attn.: Karen Calderon, Associate Regional Planner, at (213) 236-1983 or IGR@scag.ca.gov. Thank you.

Sincerely,

Ping Chang

Ping Chang
Manager, Compliance and Performance Monitoring

[1] Lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the 2020 RTP/SCS (Connect SoCal) for the purpose of determining consistency for CEQA.

COMMENTS ON THE NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE CHEVAL BLANC BEVERLY HILLS SPECIFIC PLAN [SCAG NO. IGR10301]

CONSISTENCY WITH CONNECT SOCAL

SCAG provides informational resources to facilitate the consistency of the proposed project with the adopted 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). For the purpose of determining consistency with CEQA, lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with Connect SoCal.

CONNECT SOCAL GOALS

The SCAG Regional Council fully adopted Connect SoCal in September 2020. Connect SoCal, also known as the 2020 – 2045 RTP/SCS, builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. The long-range visioning plan balances future mobility and housing needs with goals for the environment, the regional economy, social equity and environmental justice, and public health (see https://www.connectsocal.org/Pages/Connect-SoCal-Final-Plan.aspx). The goals included in Connect SoCal may be pertinent to the proposed project. These goals are meant to provide guidance for considering the proposed project. Among the relevant goals of Connect SoCal are the following:

SCAG CONNECT SOCAL GOALS	
Goal #1:	*Encourage regional economic prosperity and global competitiveness*
Goal #2:	*Improve mobility, accessibility, reliability and travel safety for people and goods*
Goal #3:	*Enhance the preservation, security, and resilience of the regional transportation system*
Goal #4:	*Increase person and goods movement and travel choices within the transportation system*
Goal #5:	*Reduce greenhouse gas emissions and improve air quality*
Goal #6:	*Support healthy and equitable communities*
Goal #7:	*Adapt to a changing climate and support an integrated regional development pattern and transportation network*
Goal #8:	*Leverage new transportation technologies and data-driven solutions that result in more efficient travel*
Goal #9:	*Encourage development of diverse housing types in areas that are supported by multiple transportation options*
Goal #10:	*Promote conservation of natural and agricultural lands and restoration of habitats*

For ease of review, we encourage the use of a side-by-side comparison of SCAG goals with discussions of the consistency, non-consistency or non-applicability of the goals and supportive analysis in a table format. Suggested format is as follows:

SCAG CONNECT SOCAL GOALS		
	Goal	Analysis
Goal #1:	*Encourage regional economic prosperity and global competitiveness*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
Goal #2:	*Improve mobility, accessibility, reliability and travel safety for people and goods*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
etc.		etc.

Connect SoCal Strategies

To achieve the goals of Connect SoCal, a wide range of land use and transportation strategies are included in the accompanying twenty (20) technical reports. To view Connect SoCal and the accompanying technical reports, please visit: https://www.connectsocal.org/Pages/Connect-SoCal-Final-Plan.aspx. Connect SoCal builds upon the progress from previous RTP/SCS cycles and continues to focus on integrated, coordinated, and balanced planning for land use and transportation that helps the SCAG region strive towards a more sustainable region, while meeting statutory requirements pertinent to RTP/SCSs. These strategies within the regional context are provided as guidance for lead agencies such as local jurisdictions when the proposed project is under consideration.

DEMOGRAPHICS AND GROWTH FORECASTS

A key, formative step in projecting future population, households, and employment through 2045 for Connect SoCal was the generation of a forecast of regional and county level growth in collaboration with expert demographers and economists on Southern California. From there, jurisdictional level forecasts were ground-truthed by subregions and local agencies, which helped SCAG identify opportunities and barriers to future development. This forecast helps the region understand, in a very general sense, where we are expected to grow, and allows SCAG to focus attention on areas that are experiencing change and may have increased transportation needs. After a year-long engagement effort with all 197 jurisdictions one-on-one, 82 percent of SCAG's 197 jurisdictions provided feedback on the forecast of future growth for Connect SoCal. SCAG also sought feedback on potential sustainable growth strategies from a broad range of stakeholder groups – including local jurisdictions, county transportation commissions, other partner agencies, industry groups, community-based organizations, and the general public. Connect SoCal utilizes a bottom-up approach in that total projected growth for each jurisdiction reflects feedback received from jurisdiction staff, including city managers, community development/planning directors, and local staff. Growth at the neighborhood level (i.e. transportation analysis zone (TAZ)) reflects entitled projects and adheres to current general and specific plan maximum densities as conveyed by jurisdictions (except in cases where entitled projects and development agreements exceed these capacities as calculated by SCAG). Neighborhood level growth projections also feature strategies that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Connect SoCal's Forecasted Development Pattern is utilized for long range modeling purposes and does not supersede actions taken by elected bodies on future development, including entitlements and development agreements. SCAG does not have the authority to implement the plan -- neither through decisions about what type of development is built where, nor what transportation projects are ultimately built, as Connect SoCal is adopted at the jurisdictional level. Achieving a sustained regional outcome depends upon informed and intentional local action. To access jurisdictional level growth estimates and forecasts for years 2016 and 2045, please refer to the Connect SoCal Demographics and Growth Forecast Technical Report: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal_demographics-and-growth-forecast.pdf?1606001579. The growth forecasts for the region and applicable jurisdictions are below.

	Adopted SCAG Region Wide Forecasts				Adopted City of Beverly Hills Forecasts			
	Year 2020	Year 2030	Year 2035	Year 2040	Year 2020	Year 2030	Year 2035	Year 2045
Population	19,517,731	20,821,171	21,443,006	22,503,899	34,802	35,225	35,458	35,832
Households	6,333,458	6,902,821	7,170,110	7,633,451	14,979	15,296	15,447	15,676
Employment	8,695,427	9,303,627	9,566,384	10,048,822	75,686	77,596	78,561	81,277

MITIGATION MEASURES

SCAG staff recommends that you review the Final Program Environmental Impact Report (Final PEIR) for Connect SoCal for guidance, as appropriate. SCAG's Regional Council certified the PEIR and adopted the associated Findings of Fact and a Statement of Overriding Considerations (FOF/SOC) and Mitigation Monitoring and Reporting Program (MMRP) on May 7, 2020 and also adopted a PEIR Addendum and amended the MMRP on September 3, 2020 (please see: https://scag.ca.gov/read-plan-certified-final-peir; and scroll to the bottom of the page for the PEIR Addendum). The PEIR includes a list of project-level performance standards-based mitigation measures that may be considered for adoption and implementation by lead, responsible, or trustee agencies in the region, as applicable and feasible. Project-level mitigation measures are within responsibility, authority, and/or jurisdiction of project-implementing agency or other public agency serving as lead agency under CEQA in subsequent project- and site- specific design, CEQA review, and decision-making processes, to meet the performance standards for each of the CEQA resource categories.

Notice of Preparation of an Environmental Impact Report for the Cheval Blanc Beverly Hills Specific Plan Project (Proposed Project)

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. Our comments are recommendations on the analysis of potential air quality impacts from the Proposed Project that should be included in the Environmental Impact Report (EIR). Please send a copy of the EIR upon its completion and public release directly to South Coast AQMD as copies of the EIR submitted to the State Clearinghouse are not forwarded. **In addition, please send all appendices and technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all emission calculation spreadsheets, and air quality modeling and health risk assessment input and output files (not PDF files). Any delays in providing all supporting documentation for our review will require additional review time beyond the end of the comment period.**

CEQA Air Quality Analysis

Staff recommends that the Lead Agency use South Coast AQMD's CEQA Air Quality Handbook and website[1] as guidance when preparing the air quality and greenhouse gas analyses. It is also recommended that the Lead Agency use the CalEEMod[2] land use emissions software, which can estimate pollutant emissions from typical land use development and is the only software model maintained by the California Air Pollution Control Officers Association.

South Coast AQMD has developed both regional and localized significance thresholds. South Coast AQMD staff recommends that the Lead Agency quantify criteria pollutant emissions and compare the emissions to South Coast AQMD's CEQA regional pollutant emissions significance thresholds[3] and localized significance thresholds (LSTs)[4] to determine the Proposed Project's air quality impacts. The localized analysis can be conducted by either using the LST screening tables or performing dispersion modeling.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road

[1] South Coast AQMD's CEQA Handbook and other resources for preparing air quality analyses can be found at: http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook.
[2] CalEEMod is available free of charge at: www.caleemod.com.
[3] South Coast AQMD's CEQA regional pollutant emissions significance thresholds can be found at: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf.
[4] South Coast AQMD's guidance for performing a localized air quality analysis can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds.

mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips, and hauling trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers and air pollution control devices), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis. Furthermore, emissions from the overlapping construction and operational activities should be combined and compared to South Coast AQMD's regional air quality CEQA ***operational*** thresholds to determine the level of significance.

If the Proposed Project generates diesel emissions from long-term construction or attracts diesel-fueled vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment[5].

In the event that implementation of the Proposed Project requires a permit from South Coast AQMD, South Coast AQMD should be identified as a Responsible Agency for the Proposed Project in the EIR. The assumptions in the air quality analysis in the EIR will be the basis for evaluating the permit under CEQA and imposing permit conditions and limits. Questions on permits should be directed to South Coast AQMD's Engineering and Permitting staff at (909) 396-3385.

Mitigation Measures

In the event that the Proposed Project results in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize these impacts. Any impacts resulting from mitigation measures must also be analyzed. Several resources to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project include South Coast AQMD's CEQA Air Quality Handbook[1], South Coast AQMD's Mitigation Monitoring and Reporting Plan for the 2016 Air Quality Management Plan[6], and Southern California Association of Government's Mitigation Monitoring and Reporting Plan for the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy[7].

South Coast AQMD staff is available to work with the Lead Agency to ensure that air quality, greenhouse gas, and health risk impacts from the Proposed Project are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at lsun@aqmd.gov.

Sincerely,

Lijin Sun

Masa please find enclosed an email on behalf of my client Chanel stating their concerns regarding the relocation of the southbound alley off of Little Santa Monica Blvd.
Please make sure their concerns are part of the record and noted to be studied.
Please also send us information as to all of the details as to the plans showing the reconfiguration as that was not shown in detail on the go to meet.
Please confirm receipt of this email.
murray

December 16, 2020

Masa Alkire, Senior Planner/Project Planner
Beverly Hills Planning Department

Dear Masa,

I am writing to you on behalf of my client, Chanel, Inc.

On December 7, 2020, I attended the "Go To" virtual meeting where the hotel Cheval Blanc presented its proposed Project plans to the City Planning Department and the public.

In short, we were surprised by what the hotel has proposed, specifically the reconfiguration of the south bound alley off of little Santa Monica Blvd., requiring vehicles to gain access to that alley by using a new point of ingress off of Beverly Drive.

First, would you please e-mail me (and those on copy) a copy of the plan that Cheval Blanc submitted as part of their Project application? Please also forward any and all supporting documentation presented by the hotel to the City, including any documentation as to why this plan does not impact the stores on either Rodeo Drive or Beverly Drive that use the alley in question for deliveries, employee use and/or for customer pick up and drop off.

In addition to the above, we request that the City and the hotel respond to the following list of questions:

1- What impact will this reconfiguration have on traffic issues, such as back up, from those vehicles that are trying to enter the alley going south on Beverly Drive, or for those vehicles trying to make a left turn off of Beverly Drive into the new alley?

2- What impact, including to health and safety ,will there be on city fire trucks and other emergency vehicles and trash trucks use of the alley, both in terms of the size of the alley and the timing (including in responding to an emergency) it will take to get to a retailer's back entrance from the reconfigured alley?

3- What size is the proposed new entry to the alley and how will the turn south be shaped to accommodate large vehicles, including trucks that deliver merchandise to the stores? (Please note that trash trucks and fire engines are substantially larger than even the UPS or FED-EX trucks.)

4- For those vehicles looking for a Rodeo Drive address, how will the drivers know that one needs to enter off of Beverly Drive?

5- Has the City considered the likelihood of the potential detrimental effect to retailers and to shoppers who park behind the various stores using the alley?

6- Many of the retailers on Rodeo Drive have their entries, valet parking, and staff parking off of the alley. How will retailers be able to optimize the use of the alley by their valet companies and shoppers, as well as employees, if it is cut off by the hotel?

7- As stated above, how will customers become aware that the valet parking that is being used for the stores off the alley cannot be accessed by coming south, off of little Santa Monica, into the alley?

8- What will be the impact on Beverly Drive and streets nearby as a result of additional traffic being routed to that street?

While Chanel does not object to a beautiful new hotel being built, it is very concerned about what it sees as a serious impact to the public, including its clients and ability to service those clients efficiently by using the alley in question. In addition, Chanel, as not only a retailer, but building owner with a vested interested in Rodeo Drive, is building a new luxury boutique on Rodeo Drive, spending considerable sums to do so, and is concerned that this proposed alley reconfiguration will adversely impact the operation of its new boutique, which relies heavily on the alley for employee needs, service needs and customer access. We are confident that the City and the hotel can come up with a better solution that best services not only the hotel but all of the retailers on Rodeo Drive.

As soon as the DEIR is prepared, we would appreciate a copy being furnished to me and to those copied on this e-mail. In addition, should there be any additional meetings or changes to the proposed Project, we would appreciate being advised at the same time that the City receives information of such additional meetings or changes, as the case may be.

Respectfully submitted on behalf of Chanel, Inc.,

Re: Cheval Blanc Project

Dear Mr. Alkire:

It seems almost unfathomable that the City would even consider a project which would so brutally impact traffic and have such a huge impact to the Beverly Hills sightline. The City has for many years restricted development along the Santa Monica Blvd corridor as its view from our homes and throughout Beverly Hills has remained sacrosanct.

We are very concerned and believe that approval of a project of this type, at this location, is not in keeping with Rodeo Drive's character and is likely a project that will fail..... and by its nature is a project that could cause divisive repercussions throughout our community and greater Los Angeles.

I've grown up in Beverly Hills and been here for 44 years.... Please do not subject the heart of our City to such a radical transfiguration. If indeed there is acceptance to the project by our citizens, government and design review boards, the height of this project should not be allowed above 5 stories on either Rodeo nor Beverly Drive.

Sincerely yours,

Mitchell & Bonnie Bloom

TO: Masa Alkire, Project Planner

RE: Cheval Blanc Initial Study

Masa –

Please be advised that this law firm represents Hermes of Paris, Inc., a New York Corporation, both the tenant and owner of the property located at 434 N. Rodeo Drive, Beverly Hills, California.

In accordance with your statement of providing information with respect to concerns based upon the project description, and the CEQA analysis, please find below both our comments and concerns:

1. Our store located at 434 N. Rodeo Drive has our customer parking located off the alley at the rear of our store. Prior to COVID, we had a continuance use of that area especially for our VIP customers, and we are very concerned about their ability to have the same ease of access off of the alley and entry that they used to enjoy from little Santa Monica Boulevard.

2. We are further concerned about our employees ability to access our employee parking off the alley and their ability to use the alley as pedestrians to walk in the alley to reach other retail establishments, banks, and restaurants, that they use by exiting the rear of our building and walking through the alley. We are concerned about the safety of forcing both customers and employees to exit the new ingress as we have no knowledge as to the width, the visibility, and the safety aspects with this new ingress.

3. We are further concerned about the turning radius off of Beverly Drive, and the additional left turn that will now be needed to be made going south in the alley by trucks using the alley. It should be noted that not only do we have continuous deliveries and pickups by Federal Express and UPS, but that we also have large trucks that we use with our merchandise that offloads not only to the rear of our building, but offloads to the rear of the North Face building where we also maintain storage areas. We constantly use the alley for employees to go back and forth between these two sites in order to bring merchandise into our store which raises the issue of safety.

4. **Signage**: We are concerned about both signage and visibility at the new ingress portion of the alley off of Beverly Drive, and will it be an inviting significantly open ingress.
   As stated earlier, our customers are accustomed to using our valet parking in the rear, and most customers know how to transverse the alley off of little Santa Monica Boulevard. Now, with this new ingress off of Beverly Drive, we are concerned about confusion whereby customers may not be able to recognize the ingress without proper signage and a friendly looking entrance. We are also concerned about the fact that we believe that the new hotel may be using the ingress off of Beverly Drive for their loading area for their hotel, and how the new configuration will provide if there is sufficient room so that none of the hotel trucks will block a portion of the entryway to impede other trucks and customers from using the new ingress.

5. Our neighbors to the north of our store Ralph Lauren, and Giorgio Armani, also have a valet operation for their customers, as well as Dr. Lancer has for his patients, and because of the

multiple uses, we are concerned again about the safety and the potential backup of cars impeding into the alley which will impact the free flow of the alley as it is currently designed.

While these are our initial comments and concerns, we reserve the right to address additional issues that will be addressed in the draft Environmental Impact Report when it is released. We would also like copies of any plans currently or to be discussed in the future, as to the reconfiguration of the entry way and alley.

Re: Cheval Blanc Project

Dear Mr. Alkire:

Traffic in this area is bad now but if this nine story building is allowed to be built on Beverly Drive it will become a nightmare.

A project of this size in the downtown city core is wrong.

Sincerely yours,

Ronald H. Bloom

Hello. I am a long-time Beverly Hills resident (South Wetherly Drive). I just want to comment that I strongly support this proposed hotel, I think it will be great for the City and the surrounding businesses, as well as the additional tax revenue it will generate.

Thank you
