Appendix A.1

Initial Study

Sunset + Wilcox Project

Case Number: ENV-2020-1930-EIR

Project Location: 1440, 1420, 1424, 1426, 1428, 1432, 1432½, 1434, 1436, 1438, 1450, 1452, and 1454 North Wilcox Avenue; 6450, 6460, and 6462 West Sunset Boulevard; 1413, 1417, 1419, 1425, 1427, 1433, 1435, 1439, 1441, 1443, 1445, and 1447 North Cole Place; and, 6503 De Longpre Avenue, Los Angeles, California 90028. (Project Site)

Community Plan Area: Hollywood

Council District: 13—O'Farrell

Project Description: The Project is a new commercial development containing office and restaurant uses proposed on an approximately 74,193-square-foot (1.70-acre) site located in the Hollywood Community Plan Area of the City of Los Angeles (City). The Project Site is currently occupied with approximately 26,261 square feet of office and retail uses and associated surface parking. The Project includes the development of a 15-story commercial building with a total floor area of 443,418 square feet consisting of 431,032 square feet of office space and 12,386 square feet of ground floor restaurant space. As detailed in Section 3, Project Description, for conservative purposes, this Initial Study assumes a total floor area of 445,218 square feet, including 431,032 square feet of office space and 14,186 square feet of restaurant space. The Project also includes the construction of an 18-foot-tall, 3,550-square-foot building to house Los Angeles Department of Water and Power (LADWP) equipment and an underground generator. The area proposed for this use would not constitute floor area as defined by Los Angeles Municipal Code (LAMC) Section 12.03. As part of the Project, the existing uses would be demolished. Upon completion, the Project would result in a net floor area of 418,957 square feet and a floor area ratio (FAR) of 6:1. The Project would include a total of 1,291 vehicular parking spaces, including 1,286 vehicular parking spaces for the proposed office and retail/restaurant uses and five vehicular parking spaces adjacent to the LADWP building. The Project would provide a variety of open space areas totaling 61,449 square feet, of which 32,077 square feet would comply with LAMC Open Space requirements. Because there are no residential uses proposed, open space is not required for the Project. Additionally, as proposed, the Project signage would comply with Hollywood Signage Supplemental Use District regulations.

1 INTRODUCTION

An application for the proposed Sunset + Wilcox Project (Project) has been submitted to the City of Los Angeles Department of City Planning for discretionary review. The City of Los Angeles, as Lead Agency, has determined that the Project is subject to the California Environmental Quality Act (CEQA) and that the preparation of an Initial Study is required.

This Initial Study evaluates the potential environmental effects that could result from the construction, implementation, and operation of the Project. This Initial Study has been prepared in accordance with CEQA (Public Resources Code Section 21000 et seq.), the State CEQA Guidelines (Title 14, California Code of Regulations, Section 15000 et seq.), and the City of Los Angeles CEQA Threshold Guidelines (1981, amended 2006). The City uses Appendix G of the State CEQA Guidelines as the thresholds of significance unless another threshold of significance is expressly identified in the document. Based on the analysis provided within this Initial Study, the City has concluded that the Project may result in significant impacts on the environment, and the preparation of an Environmental Impact Report (EIR) is required. This Initial Study and the forthcoming EIR are intended as informational documents, which are ultimately required to be considered and certified by the decision-making body of the City prior to approval of the Project.

1.1 PURPOSE OF AN INITIAL STUDY

The California Environmental Quality Act was enacted in 1970 with several basic purposes, including: (1) to inform governmental decision makers and the public about the potential significant environmental effects of proposed projects; (2) to identify ways that environmental damage can be avoided or significantly reduced; (3) to prevent significant, avoidable damage to the environment by requiring changes in projects through the use of feasible alternatives or mitigation measures; and (4) to disclose to the public the reasons behind a project's approval even if significant environmental effects are anticipated.

An Initial Study is a preliminary analysis conducted by the Lead Agency, in consultation with other agencies (responsible or trustee agencies, as applicable), to determine whether there is substantial evidence that a project may have a significant effect on the environment. If the Initial Study shows that there is no substantial evidence, in light of the whole record before the agency, that the project may have a significant effect on the environment, the Lead Agency shall prepare a Negative Declaration. If the Initial Study identifies potentially significant effects but revisions have been made by or agreed to by the applicant that would avoid the effects or mitigate the effects to a point where clearly no significant effects would occur, a Mitigated Negative Declaration is appropriate. If the Initial Study concludes that neither a Negative Declaration or Mitigated Negative Declaration is appropriate, an EIR is normally required.¹

¹ State CEQA Guidelines Section 15063(b)(1) identifies the following three options for the Lead Agency when there is substantial evidence that the project may cause a significant effect on the environment: "(A) Prepare an EIR, or (B) Use a previously prepared EIR which the Lead Agency determines would adequately analyze the project at hand, or (C) Determine, pursuant to a program EIR, tiering, or another appropriate process, which of a project's effects were adequately examined by an earlier EIR or negative declaration.

1.2 ORGANIZATION OF THE INITIAL STUDY

This Initial Study is organized into sections as follows:

1. INTRODUCTION

Describes the purpose and content of the Initial Study and provides an overview of the CEQA process.

2. EXECUTIVE SUMMARY

Provides Project information, identifies key areas of environmental concern, and includes a determination whether the Project may have a significant effect on the environment.

3. PROJECT DESCRIPTION

Provides a description of the environmental setting and the Project, including project characteristics and a list of discretionary actions.

4. EVALUATION OF ENVIRONMENTAL IMPACTS

Contains the completed Initial Study Checklist and discussion of the environmental factors that would be potentially affected by the Project.

1.3 CEQA PROCESS

Below is a general overview of the CEQA process. The CEQA process is guided by the CEQA statutes and guidelines, which can be found on the State of California's website (<http://resources.ca.gov/ceqa>).

1.3.1 Initial Study

At the onset of the environmental review process, the City has prepared this Initial Study to determine if the Project may have a significant effect on the environment. This Initial Study has determined that the Project may have a significant effect(s) on the environment and an EIR will be prepared.

A Notice of Preparation (NOP) is prepared to notify public agencies and the general public that the Lead Agency is starting the preparation of an EIR for the Project. The NOP and Initial Study are circulated for a 30-day review and comment period. During this review period, the Lead Agency requests comments from agencies and the public on the scope and content of the environmental information to be included in the EIR. After the close of the 30-day review and comment period, the Lead Agency continues the preparation of the Draft EIR and any associated technical studies, which may be expanded in consideration of the comments received on the NOP.

1.3.2 Draft EIR

Once the Draft EIR is complete, a Notice of Completion and Availability is prepared to inform public agencies and the general public of the availability of the document and the locations where the document

can be reviewed. The Draft EIR and Notice of Availability are circulated for a 45-day review and comment period. The purpose of this review and comment period is to provide public agencies and the general public an opportunity to review the Draft EIR and comment on the adequacy of the document, including the analysis of environmental effects, the mitigation measures presented to reduce potentially significant impacts, and the alternatives analysis. After the close of the 45-day review and comment period, responses to all comments on environmental issues received during the comment period are prepared.

1.3.3 Final EIR

The Lead Agency prepares a Final EIR, which incorporates the Draft EIR or any revisions to the Draft EIR, comments received on the Draft EIR and list of commenters, and responses to significant environmental points raised in the review and consultation process.

The decision-making body then considers the Final EIR, together with any comments received during the public review process, and may certify the Final EIR and approve the Project. In addition, when approving a project for which an EIR has been prepared, the Lead Agency must prepare findings for each significant effect identified, a statement of overriding considerations if there are significant impacts that cannot be mitigated, and a mitigation monitoring and reporting program.

2 EXECUTIVE SUMMARY

PROJECT TITLE	Sunset + Wilcox Project
ENVIRONMENTAL CASE NO.	ENV-2020-1930
RELATED CASES	CPC-2020-1929-HD-VCU-MCUP-SPR-RDP-WDI / VTT-83088

PROJECT LOCATION	1440, 1420, 1424, 1426, 1428, 1432, 1432 ½, 1434, 1436, 1438, 1450, 1452, and 1454 North Wilcox Avenue; 6450, 6460, and 6462 West Sunset Boulevard; 1413, 1417, 1419, 1425, 1427, 1433, 1435, 1439, 1441, 1443, 1445, and 1447 North Cole Place; and, 6503 De Longpre Avenue, Los Angeles, California 90028

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a “Potentially Significant Impact” as indicated by the checklist on the following pages.

- | | | |
|---|--|--|
| ☐ Aesthetics | ☒ Greenhouse Gas Emissions | ☒ Public Services |
| ☐ Agriculture & Forestry Resources | ☐ Hazards & Hazardous Materials | ☐ Recreation |
| ☒ Air Quality | ☐ Hydrology/Water Quality | ☒ Transportation |
| ☐ Biological Resources | ☒ Land Use/Planning | ☒ Tribal Cultural Resources |
| ☐ Cultural Resources | ☐ Mineral Resources | ☒ Utilities/Service Systems |
| ☒ Energy | ☒ Noise | ☐ Wildfire |
| ☐ Geology/Soils | ☐ Population/Housing | ☒ Mandatory Findings of Significance |

DETERMINATION

On the basis of this initial evaluation:

- ☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- ☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions on the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- ☒ I find the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- ☐ I find the proposed project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

EVALUATION OF ENVIRONMENTAL IMPACTS

- 1) A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.
- 4) “Negative Declaration: Less Than Significant With Mitigation Incorporated” applies where the incorporation of a mitigation measure has reduced an effect from “Potentially Significant Impact” to “Less Than Significant Impact.” The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from “Earlier Analysis,” as described in (5) below, may be cross referenced).
- 5) Earlier analysis must be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR, or negative declaration. Section 15063 (c)(3)(D). In this case, a brief discussion should identify the following:
 - a) Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are “Less Than Significant With Mitigation Measures Incorporated,” describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated
- 7) Supporting Information Sources: A sources list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project’s environmental effects in whichever format is selected.
- 9) The explanation of each issue should identify:
 - a) The significance criteria or threshold, if any, used to evaluate each question; and
 - b) The mitigation measure identified, if any, to reduce the impact to less than significance.

3 PROJECT DESCRIPTION

3.1 PROJECT SUMMARY

The Sunset + Wilcox Project (Project) is a new commercial development containing office and restaurant uses proposed on an approximately 74,193-square-foot (1.70-acre)² site located at 1440, 1420, 1424, 1426, 1428, 1432, 1432½, 1434, 1436, 1438, 1450, 1452, and 1454 North Wilcox Avenue; 6450, 6460, and 6462 West Sunset Boulevard; 1413, 1417, 1419, 1425, 1427, 1433, 1435, 1439, 1441, 1443, 1445, and 1447 North Cole Place; and, 6503 De Longpre Avenue (Project Site) in the Hollywood Community Plan Area of the City of Los Angeles (City). The Project Site is currently occupied with approximately 26,261 square feet of office and retail uses and associated surface parking. The Project includes the development of a 15-story commercial building with a total floor area of 443,418 square feet consisting of 431,032 square feet of office space and 12,386 square feet of ground floor restaurant space. However, as detailed below in Section 3.3.1, Project Overview, for conservative environmental analysis purposes, this Initial Study assumes the outdoor dining areas adjacent to the ground floor commercial space would count as floor area, resulting in a total floor area of 445,218 square feet, including 431,032 square feet of office space and 14,186 square feet of restaurant space. The Project also includes the construction of an 18-foot-tall, 3,550-square-foot building to house Los Angeles Department of Water and Power (LADWP) equipment and an underground generator. The area proposed for this use would not constitute floor area as defined by Los Angeles Municipal Code (LAMC) Section 12.03. As part of the Project, the existing office and retail uses and associated surface parking would be demolished. Upon completion, the Project would result in a net floor area of 418,957 square feet on the Project Site, under a conservative analysis, and a floor area ratio (FAR) of 6:1.

The Project would provide a total of 1,291 vehicular parking spaces, including 1,286 vehicular parking spaces for the proposed office and restaurant uses and five vehicular parking spaces adjacent to the LADWP equipment building. Parking for the office and restaurant uses would be provided within three subterranean levels, at-grade parking, a small parking mezzanine, and two full floor fully-enclosed, mechanically ventilated above-grade levels. The five additional vehicular parking spaces would be provided in a small surface parking area adjacent to the LADWP equipment building. The Project would provide a variety of open space areas totaling 61,449 square feet of which 32,077 square feet would comply with LAMC Open Space requirements. Because there are no residential uses proposed, open space is not required for the Project.

3.2 ENVIRONMENTAL SETTING

3.2.1 Project Location

The Project Site consists of 10 contiguous lots at 1440, 1420, 1424, 1426, 1428, 1432, 1432 ½, 1434, 1436, 1438, 1450, 1452, and 1454 North Wilcox Avenue; 6450, 6460, and 6462 West Sunset Boulevard; 1413, 1417, 1419, 1425, 1427, 1433, 1435, 1439, 1441, 1443, 1445, and 1447 North Cole Place; and,

² The Project includes a 2,275-square-foot merger of the public right-of-way along a portion of Wilcox Avenue. The Project Site includes the site area prior to the merger (71,918 square feet) plus the 2,275-square-foot merger.

6503 De Longpre Avenue, Los Angeles, California 90028 in the Hollywood Community Plan Area of the City. As shown in Figure 1 on page 9 and in Figure 2 on page 10, the Project Site is bound by Sunset Boulevard to the north, Cole Place to the east, De Longpre Avenue to the south, and Wilcox Avenue to the west.

Regional access to the Project Site is provided by the US-101, located less than 1 mile from the Project Site. Local access to the Project Site is provided by several local streets and avenues, including Sunset Boulevard and Wilcox Avenue. The Project Site is also well served by a variety of public transit options, including local and regional bus lines, subway stations, and regional rail service. In particular, the Project Site is located approximately 0.5 mile from the Los Angeles County Metropolitan Transit Authority (Metro) B Line Hollywood/Vine Station and immediately adjacent to the Metro 2 Local Line on Sunset Boulevard.

3.2.2 Existing Conditions

As shown in Figure 3 on page 11, the Project Site is currently developed with three buildings and surface parking. The existing buildings on the Project Site comprise approximately 26,261 square feet of floor area consisting of a one-story, 16,932-square-foot commercial building along Sunset Boulevard and Wilcox Street/Cole Place, a one-story, 4,446-square-foot commercial office building along Wilcox Street, and a two-story, 4,883-square-foot commercial office building along Cole Place and De Longpre Avenue. Vehicular access to the parking areas of the Project Site is provided via curb cuts and driveways located on Wilcox Avenue and Cole Place. Pedestrian access to the Project Site is provided via sidewalks located along the perimeter of the Project Site. The Project Site is relatively flat with limited ornamental landscaping.

The Project Site is located within the Hollywood Community Plan area. The Project Site has a Regional Center Commercial General Plan Land Use designation with the corresponding zones of C4-2D-SN (Commercial Zone, Height District 2 with Development Limitation, Hollywood Signage Supplemental Use District), C4-2D (Commercial Zone, Height District 2 with Development Limitation), and C2-1XL (Commercial Zone, Height District 1XL). The C2 and C4 zones allow for a wide variety of land uses, including retail stores, offices, restaurants, theaters, hotels, broadcasting studios, parking buildings, parks, and playgrounds. These zones also permit any land use permitted in the R4 zone, including multiple residential uses. Height District 2 allows a 6:1 FAR in the Project Site's C4-Zoned portions with no height or story limit. The Project Site is subject to a D Limitation, which limits the Project Site to a 2:1 FAR.³ The D Limitation does not impose any height limits on the Project Site. Height District Number 1XL allows a 1.5:1 FAR in the Project Site's C2-zoned portions with a 30-foot and two-story height limit.

The Project Site is also located within a Transit Priority Area, the Hollywood Redevelopment Area, the Los Angeles State Enterprise Zone, the Hollywood Entertainment District, the Hollywood Signage Supplemental Use District, and within a Tier 3 Transit Oriented Communities (TOC) area.

³ Ordinance No. 165,661, adopted by the Los Angeles City Council on May 7, 1990.

Figure 1
Project Location

Figure 2
Aerial Photograph of the Project Vicinity

Figure 3
Existing Site Plan

3.2.3 Surrounding Land Uses

The Project Site is within a vibrant commercial area in the Hollywood Community Plan Area. The area surrounding the Project Site is developed primarily with a mix of low- to high-intensity residential, commercial, and mid-rise office buildings, which vary widely in building style and period of construction. Land uses adjacent to the Project Site include the Rise Hollywood mixed-use development, the Los Angeles Police Department Hollywood Station, and Los Angeles Fire Department Station 27 south of the Project Site, the 14-story CNN building east of the Project Site, and an 11-story office building located west of the Project Site. The uses surrounding the Project Site are designated as Regional Center Commercial, Limited Commercial, Low Medium II Residential, and Public Facilities, and have varying zoning designations, including C4-2, C4-2D-SN, C2-1XL, C1-1VL, and RD1.5-1XL.

3.3 DESCRIPTION OF PROJECT

3.3.1 Project Overview

As shown in Figure 4 on page 13, the Project includes the construction of a 15-story, 275-foot tall⁴ commercial building with a total floor area of 443,418 square feet consisting of 431,032 square feet of office space and 12,386 square feet ground floor restaurant space. However, approximately 1,800 square feet of outdoor covered patio areas adjacent to the ground floor restaurant space along Sunset Boulevard would not count towards the Project's total floor area pursuant to LAMC Sections 12.03 and 12.21.1-A.5. Nevertheless, to provide a conservative environmental analysis, this Initial Study assumes these aforementioned outdoor dining areas count towards the floor area, resulting in a total floor area of 445,218 square feet, including 431,032 square feet of office space and 14,186 square feet of restaurant space. The Project also includes the construction of a two-story (18-foot), 3,550-square-foot building to house LADWP equipment and an underground generator. The area proposed for the LADWP equipment building would not constitute floor area as defined by the LAMC. As part of the Project, the existing office and retail uses comprising 26,261 square feet and associated surface parking would be removed. Upon completion, the Project would result in a net floor area of 417,157 square feet on the Project Site or 418,957 square feet under a conservative analysis, and a FAR of 6:1.

The Project would provide a total of 1,291 vehicular parking spaces, including 1,286 vehicular parking spaces for the proposed office and restaurant uses and five vehicular parking spaces adjacent to the LADWP equipment building. Parking for the office and restaurant uses would be provided within three subterranean levels, at-grade parking, a small parking mezzanine, and two full floor fully-enclosed, mechanically ventilated above-grade levels. The five additional vehicular parking spaces would be provided in a small surface parking area adjacent to the LADWP equipment building. In addition, the Project would provide a variety of private open space areas totaling 61,449 square feet of which 32,077 square feet would comply with LAMC Open Space requirements. Because there are no residential uses proposed, open space is not required for the Project.

⁴ The building would measure 271 feet to the top of the parapet and 275 feet to the top of the mechanical and penthouse projections.

Figure 4
Conceptual Site Plan

3.3.2 Design and Architecture

As illustrated in Figure 5 on page 15, the proposed commercial building would incorporate design elements consistent with other surrounding buildings in Hollywood and would feature a new contemporary glass façade with various repeating rectangle forms, creating a distinctive character. The building would be designed with partially landscaped terraces throughout. To enhance pedestrian activity, the ground floor of the building would include commercial uses consisting of retail and restaurant spaces along the Sunset Boulevard frontage. Also included within the ground floor would be office space, a lobby, ground floor parking, and a loading dock. The Project would include two fully-enclosed, mechanically ventilated above ground parking levels, which would be within a parking podium. The parking podium would consist of the ground floor parking, mezzanine level parking (which is within the height of the ground floor lobby and retail levels), and parking levels two and three. The parking podium would be wrapped in a distinctive, softly luminous material and wood screens, reducing the visibility of the parked cars from the street. The levels above the parking podium would include office spaces and would be designed with partially landscaped terraced levels. As shown in Figure 5, the massing of the building would shift south beginning at level six where 22,020 square feet of landscaped open space surrounding the office space would be provided. The Project would also include a penthouse office suite on level 14 and the mechanical roof on level 15, which would both be treated as a distinctive design element and may include the use of timber.

Also included in the Project is a 3,550-square-foot, 18-foot tall building housing LADWP equipment across the alley within the De Longpre lot. The LADWP equipment building would include a green wall-type screen to visually enhance the building.

3.3.3 Open Space and Landscaping

The Project would include several open space areas consisting of private landscaped outdoor terraces on the various upper levels. The Project would provide 61,449 square feet of private open space, of which 12,290 square feet would be landscaped and 49,159 square feet would be hardscape. As shown in Figure 6 on page 16, the primary open space area of the Project would be a large, 22,020-square-foot landscaped deck located on the sixth level of the commercial building. Of the 61,449 square feet, 32,077 square feet would comply with LAMC Open Space requirements. Because there are no residential uses proposed, open space is not required. Based on the Tree Report included in Appendix IS-1 of this Initial Study, the Project would not involve the removal of any trees considered protected under the City of Los Angeles Native Tree Protection Ordinance either within the Project Site or in the adjacent right-of-way (street trees). To allow for development of the Project, the existing four onsite trees and 12 street trees would be removed in the adjacent right-of-way. Pursuant to the requirements of the City of Los Angeles Urban Forestry Division, the onsite trees to be removed would be replaced at a 1:1 ratio and the street trees to be removed would be replaced at a 2:1 basis.

3.3.4 Access, Circulation, and Parking

Vehicular access to the Project Site would be provided via driveways along Wilcox Avenue and Cole Place. A one-way valet driveway into the Project Site would be located along Cole Place with a corresponding exit driveway located on Wilcox Avenue. This drop-off and pick-up area would include a waiting area for both patrons and tenants utilizing the valet service. A second one-way driveway into the Project Site would be located further south on Wilcox Avenue for both patrons and tenants to drive in and park, with a corresponding exit driveway along Cole Place. Valets would be able to move cars from the

Figure 6
Conceptual Landscape/Open Space Plan

valet drop-off to the parking garage and back from the parking garage to the valet pick-up while remaining on-site. The Project also includes a loading zone for loading and trash operations with a tertiary driveway located further north along Cole Place. A fourth driveway is proposed along Cole Place for the surface parking lot outside of the LADWP equipment building. An on-street passenger loading zone for rideshare services is proposed along the east curb of Wilcox Avenue adjacent to the Project Site. The Project Site would be accessible for pedestrians through pedestrian points of entry along Sunset Boulevard and Wilcox Avenue, with bicycle access provided from Cole Place and Wilcox Avenue.

The Project would provide a total of 1,291 vehicular parking spaces, including 1,286 vehicle parking spaces for the proposed office and commercial uses and five vehicular parking spaces adjacent to the LADWP equipment building. Parking for the office and commercial uses would be provided within three subterranean levels, which would extend to a maximum depth of 52 feet, at-grade parking, a small parking mezzanine, and two full floor fully-enclosed, mechanically ventilated above-grade parking levels. The five additional vehicular parking spaces would be provided within a small surface parking area adjacent to the LADWP equipment building. It is noted that the Project Applicant is required to record a covenant against the property to provide up to thirty-five (35) vehicular parking spaces at the Project Site for off-site uses. These spaces, which are already included in the 1,291 total vehicular parking spaces, would be unreserved. In accordance with LAMC requirements, the Project would also provide 143 bicycle parking spaces, including 93 long-term spaces and 50 short-term spaces in a bicycle parking facility within the first floor of the parking garage. The Project would also include other amenities for bicyclists such as showers and a repair facility near the bicycle parking facility. In addition, the Project would comply with City and State requirements for providing electric vehicle charging capabilities and electric vehicle charging stations within the parking areas.

The Project Site is conveniently accessible by various transit options, including the Metro B Line Hollywood/Vine Station located approximately 0.5 mile northeast of the Project Site. Local and regional bus lines are also in close proximity to the Project Site with frequent stops and service to various locations throughout the City.

3.3.5 Lighting and Signage

Project lighting would include architecturally-integrated low-level exterior lights on the buildings and along pathways for security and wayfinding purposes. In addition, low-level lighting to accent signage, architectural features, and landscaping elements would be incorporated throughout the Project Site. Project lighting would be designed to provide for efficient, effective, and aesthetically pleasing lighting solutions that would minimize light trespass from the Project Site and minimize sky-glow to increase night sky access. All exterior lighting would be dimmable and automatically controlled via occupancy sensors and photo sensors to allow for the appropriate control of nighttime lighting. Interior lighting would be dimmable and controlled to meet all prevailing code requirements, which includes the use of occupancy sensors, multi-scene presets, and timeclock events.

All exterior and interior lighting would meet the requirements of the California Energy Commission Building Energy Efficiency Standards—Title 24, version 2016 and the National Electrical Code (NEC). Light trespass from interior spaces would be limited by blinds and/or drapery or will be installed in such a way as to not create light trespass off of the Project Site. Any new street and/or pedestrian lighting within the public right-of-way would comply with all applicable City regulations and would be approved by the

Bureau of Street Lighting, as required, in order to maintain appropriate and safe lighting levels on both sidewalks and roadways while minimizing light and glare on adjacent properties.

The Project would include retail and building identification signage that would be aesthetically compatible with the proposed architecture of the Project Site. Proposed signage would include general street level tenant/site identification and visitor directional signage as permitted by LAMC. All on-site and off-site signage, including one digital (non-animated) wall sign along the Sunset Boulevard frontage, would fit within the permitted area per each sign type, the combined area of all signs, and the permitted sign location pursuant to the LAMC, the Hollywood Signage Supplemental Use District, and the Hollywood Redevelopment Plan Revised Amended Design for Development for Signs in Hollywood, as applicable.

3.3.6 FAR, Density, and Setbacks

As discussed above, the Project Site is designated as Regional Center Commercial and zoned C4-2D-SN (Commercial Zone, Height District 2 with Development Limitation, Hollywood Signage Supplemental Use District), C4-2D (Commercial Zone, Height District 2 with Development Limitation), and C2-1XL (Commercial Zone, Height District 1XL). Height District 2 allows a 6:1 FAR in the Project Site's C4 zoned portions with no height limit. However, the Project Site is subject to D Limitations, which limits the Project Site to a 2:1 FAR. Height District 1XL allows a 1.5:1 FAR in the Project Site's C2-zoned portions with a 30-foot and two-story height limit. The Project includes a total floor area of 443,418 square feet with a FAR of 6:1; however, as previously discussed above, this Initial Study assumes a total floor area of 445,218 square feet for conservative purposes. In order to permit a FAR of 6:1, the Project has requested a Height District Change from Height 1XL and 2D to Height District 2.

According to LAMC Sections 12.14 and 12.16, there is no setback requirement for the front, side, or rear yards for buildings used exclusively for commercial purposes. While the Project Site does not have front, side, or rear yards, the Project would incorporate transitions from the sidewalk to the ground floor uses and building entryways along Sunset Boulevard and Wilcox Street through the use of landscaped areas and canopies.

3.3.7 Sustainability Features

The Project would be designed and constructed to incorporate environmentally sustainable building features equivalent to a Gold certification under the U.S. Green Building Council's LEED® Rating System for new construction, and environmentally sustainable building features and construction protocols required by the Los Angeles Green Building Code and CALGreen. These standards would reduce energy and water usage and waste and, thereby, reduce associated greenhouse gas emissions and help minimize the impact on natural resources and infrastructure. The Project would incorporate sustainability features for alternative, low-carbon modes of transportation, such as a protected bicycle storage facility and electric vehicle charging infrastructure. The Project would also incorporate water conservation features through low-water use plant selections and ultra-low flow indoor water fixtures. Additionally, as previously mentioned, the Project would include exterior and interior lighting that would meet the requirements of the California Energy Commission Building Energy Efficiency Standards—Title 24, version 2016 and the National Electrical Code.

3.3.8 Anticipated Construction Schedule

Construction of the Project would commence with demolition of the existing buildings and surface parking areas. This phase would be followed by grading and excavation for the subterranean parking. Building foundations would then be laid, followed by building construction, paving/concrete installation, and landscape installation. Project construction is anticipated to be completed in 2026. It is estimated that approximately 93,000 cubic yards of export would be hauled from the Project Site.

3.4 REQUESTED PERMITS AND APPROVALS

The list below includes the anticipated requests for approval of the Project. The Environmental Impact Report will analyze impacts associated with the Project and will provide environmental review sufficient for all necessary entitlements and public agency actions associated with the Project. The discretionary entitlements, reviews, permits and approvals required to implement the Project include, but are not necessarily limited to, the following:

- Pursuant to LAMC Section 12.32-F, a Height District Change for the Project Site to change the Project Site's Height Districts No. 1XL and No. 2D to No. 2;
- Pursuant to LAMC Section 12.24-U.14, a Vesting Conditional Use Permit for a Major Development Project;
- Pursuant to LAMC Sections 12.24-W.1 a Master Conditional Use Permit for the sale and dispensing of alcoholic beverages for on-site and off-site consumption for three restaurants;
- Pursuant to LAMC Section 16.05, a Site Plan Review for a development that results in an increase of 50,000 square feet or more of non-residential floor area or generates more than 1,000 average daily trips;
- Pursuant to LAMC Section 11.5.14-D and 11.5.7-C, a Project Permit Compliance Review for Project signage in the Hollywood Signage Supplemental Use District;
- Pursuant to LAMC Section 17.15 and 17.03, a Vesting Tentative Tract Map No. 83088 to merge a 2,275 square-foot portion of Wilcox Avenue into the Project Site, merge and re-subdivide the Project Site to create two ground lots and 12 airspace lots, and request to remove the five-foot dedication along the entire alley abutting the lot with APN 5546-014-014 and remove a five-foot dedication along the alley abutting the lot with APN 5546-014-01; and
- Other discretionary and ministerial permits and approvals that are or may be required, including, but not limited to, temporary street closure permits, grading permits, excavation permits, haul route approval, street tree removal approval, foundation permits, and sign permits.

3.5 RESPONSIBLE PUBLIC AGENCIES

A Responsible Agency under CEQA is a public agency with some discretionary authority over a project or a portion of a project, but which has not been designated the Lead Agency (State CEQA Guidelines Section 15381). No responsible agencies have been identified for the Project.

4 ENVIRONMENTAL IMPACT ANALYSIS

I. AESTHETICS

Senate Bill (SB) 743 [Public Resources Code (PRC) Section 21099(d)] sets forth new guidelines for evaluating project transportation impacts under CEQA, as follows: “Aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area (TPA) shall not be considered significant impacts on the environment.” PRC Section 21099 defines a “transit priority area” as an area within 0.5 mile of a major transit stop that is “existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations.” PRC Section 21064.3 defines “major transit stop” as “a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.” PRC Section 21099 defines an “employment center project” as “a project located on property zoned for commercial uses with a floor area ratio of no less than 0.75 and that is located within a transit priority area. PRC Section 21099 defines an “infill site” as a lot located within an urban area that has been previously developed, or on a vacant site where at least 75 percent of the perimeter of the site adjoins, or is separated only by an improved public right-of-way from, parcels that are developed with qualified urban uses. This state law supersedes the aesthetic impact thresholds in the 2006 L.A. CEQA Thresholds Guide, including those established for aesthetics, obstruction of views, shading, and nighttime illumination.

The related City of Los Angeles Department of City Planning Zoning Information (ZI) File ZI No. 2452 provides further instruction concerning the definition of transit priority projects and that “visual resources, aesthetic character, shade and shadow, light and glare, and scenic vistas or any other aesthetic impact as defined in the City’s CEQA Threshold Guide shall not be considered an impact for infill projects within TPAs pursuant to CEQA.”⁵ However, ZI No. 2452 further states that “the law does not limit the ability of the City to regulate, or study aesthetic related impacts pursuant to other land use regulations found in the Los Angeles Municipal Code (LAMC) or the City’s General Plan, including specific plans.” Thus, pursuant to PRC Section 21099 and ZI No. 2452, impact findings related to views, scenic resources, visual character, shading, and light and glare, would not be required, unless standards related to these issues are set forth in the General Plan, the LAMC, and other adopted plans. In the latter case, plan or regulation consistency must be evaluated for determination of significance.

PRC Section 21099 applies to the Project. Specifically, pursuant to PRC Section 21099, the Project is an employment center project that would be located on an infill site within a TPA. The Project is considered an employment center project because it is located on property that is zoned to permit commercial uses with a maximum FAR greater than 0.75. In addition, the Project Site is located on an infill site, as that term is defined in PRC Section 21099(a)(4), because the Project Site includes lots located within an urban

⁵ City of Los Angeles Department of City Planning, Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking Within TPAs Pursuant to CEQA, <http://zimas.lacity.org/documents/zoneinfo/ZI2452.pdf>, accessed Dec. 2, 2016.

area that has been previously developed. Lastly, the Project Site is located within a TPA, as that term is defined in PRC Section 21099(a)(7), because it is located within one-half mile of an existing “major transit stop.” In particular, the Project Site is located within one-half mile of the Los Angeles County Metropolitan Transit Authority (Metro) Hollywood and Vine Station and bus routes including the Metro 2 Local Line. The City’s Zone Information and Map Access System (ZIMAS) also confirms the Project Site’s location within a TPA, as defined in the ZI No. 2452. Therefore, in accordance with PRC Section 21099(d)(1), the Project’s aesthetic impacts shall not be considered significant impacts on the environment and therefore do not have to be evaluated under CEQA. The analysis in this Initial Study is for informational purposes only and not for determining whether the Project will result in significant impacts on the environment. Any aesthetic impact analysis in this Initial Study is included to discuss what aesthetic impacts could occur from the Project if PRC Section 21099(d) was not in effect. As such, nothing in the aesthetic impact discussion in this Initial Study shall trigger the need for any CEQA findings, CEQA analysis, or CEQA mitigation measures.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Except as provided in Public Resources Code Section 21099, would the project:				
a. Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

a. Would the project have a substantial adverse effect on a scenic vista?

Less Than Significant Impact. A scenic vista is a panoramic view of a valued visual resource.⁶ Panoramic views or vistas provide visual access to a large geographic area, for which the field of view can be wide and extend into the distance. Panoramic views are typically associated with vantage points looking out over a section of urban or natural areas that provide a geographic orientation not commonly available. Examples of panoramic views include an urban skyline, valley, mountain range, the ocean, or other water bodies. Focal views are also relevant when considering this question from Appendix G of the CEQA Guidelines. Examples of focal views include natural landforms, public art/signs, individual buildings, and specific, important trees.

With regard to panoramic views, valued visual resources in the vicinity of the Project Site include the Hollywood Hills and the Hollywood Sign, City of Los Angeles (City)-designated Historic-Cultural Monument No. 111, to the distant north. With regard to focal views, valued visual resources in the vicinity of the Project Site include Fire Station No. 27 (1355 N. Cahuenga Boulevard), which is located directly southeast of the Project Site and is listed on the National Register of Historic Places and as City Historic-Cultural Monument No. 165 and the Pacific Cinerama Dome and Theatre and Marquee, which is located at 6360 Sunset Boulevard, approximately 600 feet east of the Project Site, and which is a City-designated Historic Cultural Monument (No. 659).

Adjacent to the Project Site, views of the Hollywood Hills and the Hollywood Sign are available from Sunset Boulevard looking north between buildings and north-south streets. Specifically, views of the Hollywood Hills and the Hollywood Sign are available from along Wilcox Avenue west of the Project Site and at Wilcox Avenue and De Longpre Avenue. More limited views of the Hollywood Hills and the Hollywood Sign are also available from Cole Place east of the Project Site. As discussed in Section 3, Project Description, of this Initial Study, the Project Site is bound by Sunset Boulevard to the north, Cole Place to the east, De Longpre Avenue to the south, and Wilcox Avenue to the west.

The Project would replace the existing one- and two-story buildings and surface parking lot within the Project Site with a new 15-story commercial building within the northern portion of the Project Site and a two-story building on the southern portion of the Project Site to house LADWP equipment. Therefore, the Project could potentially block existing views of the Hollywood Hills and Hollywood Sign available along De Longpre Avenue when looking north/northeast through the Project Site. However, in the vicinity of the Project Site, views would continue to be available on an intermittent basis along roadway segments, particularly north-south roadways. In particular, the Project would not block existing public views of the distant Hollywood Hills or Hollywood Sign from Cole Place or Wilcox Avenue because the existing views are oriented north-south and the Project Site is an infill location between these north-south streets. Therefore, while the Project would obstruct some partial and distant views of the Hollywood Hills and Hollywood Sign (primarily views across the Project Site from De Longpre Avenue), such blockage would occur on an intermittent basis at single, fixed vantage points, rather than resulting in substantial blockages across long distances, such as along the length of a public roadway. Furthermore, a myriad of other views of the Hollywood Hills and Hollywood Sign at various degrees would continue to be available throughout the greater Hollywood neighborhood. Therefore, the reduction in publicly-available intermittent views of the Hollywood Hills and the Hollywood Sign that would result from the Project would not be considered a substantial obstruction of existing views of these visual resources.

Focal views of the visual resources found in the vicinity of the Project Site are largely limited to adjacent properties due to the dense infill development which blocks views of properties located further from the Project Site. In particular, due to the distance of the Pacific Cinerama Dome and Theatre and Marquee from the Project Site and intervening development, including large high-rise buildings, views of the theatre from the Project Site are not available. Therefore, development of the Project would not block existing views of the Pacific Cinerama Dome and Theatre and Marquee across the Project Site as none are available. As previously discussed, Fire Station No. 27 is located directly southwest of the Project Site at the intersection of De Longpre Avenue and Cahuenga Boulevard. The portion of the Project Site located nearest to Fire Station No. 27 is currently occupied by a two-story, 4,848-square-foot commercial building

⁶ City of Los Angeles, 2006 L.A. CEQA Thresholds Guide, page A.2-1

along Cole Place and De Longpre Avenue. This existing building would be replaced by the proposed 18-foot, 3,550-square-foot LADWP equipment building, which would be located only along Cole Place with surface parking located along Cole Place and De Longpre Avenue. Therefore, the Project would actually open this area of the Project Site in close proximity to Fire Station No. 27. Due to the location of the Project Site northwest of Fire Station No. 27 and existing intervening development, the Project would not block existing publicly available views of Fire Station No. 27 when looking across the Project Site. Specifically, focal views of Fire Station No. 27 from along Cole Place, De Longpre Avenue, and Cahuenga Boulevard would remain. In addition, public views of Fire Station No. 27 are best experienced looking west from Cahuenga Boulevard and looking south from De Longpre Avenue. As the Project would be located across De Longpre Avenue to the northwest of Fire Station No. 27, the Project would not block these views of the fire station.

Overall, as the area is fully developed and highly urbanized, the Project would not have a substantial adverse effect on a publicly available scenic vista. Moreover, pursuant to SB 743 and ZI No. 2452, the Project's aesthetics impact would not be considered a significant impact on the environment. Therefore, no further evaluation of this topic in an EIR is required.

b. Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Less Than Significant Impact. The Project Site is not located along a state scenic highway. The nearest officially eligible state scenic highway is along the Foothill Freeway (I-210), approximately 10 miles northeast of the Project Site,⁷ and the nearest City-designated scenic highway is along Mulholland Drive, approximately 2 miles northwest of the Project Site.⁸ Therefore, the Project would not substantially damage scenic resources within a state or City-designated scenic highway as no scenic highways are located adjacent to the Project Site. Moreover, pursuant to SB 743 and ZI No. 2452, the Project's aesthetics impact would not be considered a significant impact on the environment. Therefore, no further evaluation of this topic in an EIR is required.

c. In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Less Than Significant Impact. The Project is located in an urbanized area. As such, this analysis focuses on whether the Project would conflict with applicable zoning and other regulations governing scenic quality.

With regard to zoning, as discussed in Section 3, Project Description, of this Initial Study, the Project Site is designated as Regional Center Commercial with the corresponding zones of C4-2D-SN (Commercial Zone, Height District 2 with Development Limitation, Hollywood Signage Supplemental Use District),

⁷ California Department of Transportation, Scenic Highways, <https://dot.ca.gov/programs/design/lap-landscape-architecture-and-community-livability/lap-liv-i-scenic-highways>, accessed April 20, 2020.

⁸ City of Los Angeles, Department of City Planning, Mobility Plan 2035: An Element of the General Plan, Map A4, last adopted by City Council on September 7, 2016.

C4-2D (Commercial Zone, Height District 2 with Development Limitation), and C2-1XL (Commercial Zone, Height District 1XL). The C2 and C4 zones allow for a wide variety of land uses, including retail stores, office buildings, theaters, hotels, broadcasting studios, public utilities and public service uses and structures, parking buildings, parks, and playgrounds. Height District 2 allows a 6:1 FAR in the Project Site's C4-zoned portions with no height limit. However, the Project Site is subject to D Limitations, which limits the Project Site to a 2:1 FAR. Height District 1XL allows a 1.5:1 FAR in the Project Site's C2-zoned portions with a 30-foot and two-story height limit.

The Project includes the development of a 15-story commercial building with a total floor area of 443,418 square feet consisting of 431,032 square feet of office space and 12,386 square feet of ground floor commercial space.⁹ The Project also includes the construction of an 18-foot-tall, 3,550-square-foot building to house LADWP equipment and an underground generator. The area proposed for the LADWP equipment building would not constitute floor area as defined by the LAMC. The Project uses would be consistent with the types of uses permitted in the C4 and C2 Zone, as described above. As previously discussed, the zoning of the Project Site does not establish a height maximum or a maximum number of stories, but rather permits a maximum FAR of up to six times the buildable area of the lot. Upon completion, the Project would result in a net floor area of 417,157 square feet on the Project Site or 418,957 square feet under a conservative analysis, and a FAR of 6:1. In order to permit a FAR of 6:1, the Project has requested a Height District Change from Height 1XL and 2D to Height District 2.

With regard to the City's regulations governing scenic quality, local land use plans applicable to the Project Site also include policies governing scenic quality, including the Citywide General Plan Framework Element (Framework Element), the Hollywood Community Plan (1988), the Hollywood Redevelopment Plan, the Citywide Urban Design Guidelines, and the City's Walkability Checklist. The Project's lack of conflict with the general intent of these plans is briefly discussed below.

Citywide General Plan Framework Element

The Framework Element provides direction regarding the City's vision for future development in the City and includes an Urban Form and Neighborhood Design chapter to guide the design of future development. One of the key objectives of the Urban Form and Neighborhood Design Chapter is to enhance the livability of all neighborhoods by upgrading the quality of development and improving the quality of the public realm (Objective 5.5). As described in Section 3, Project Description, of this Initial Study, the Project Site is currently occupied by three buildings and a surface parking lot. The existing buildings on the Project Site include a one-story building along Sunset Boulevard and Wilcox Street/Cole Place, a one-story building along Wilcox Street, and a two-story building along Cole Place and De Longpre Avenue. The area surrounding the Project Site is developed primarily with a mix of low- to high-intensity residential, commercial, and mid-rise office buildings, which vary widely in building style and period of construction. Land uses adjacent to the Project Site include the Rise Hollywood mixed-use development, the Los Angeles Police Department Hollywood Station, the Los Angeles Fire Department (LAFD) Station 27 south of the Project Site, the 14-story CNN building east of the Project Site, and an 11-

⁹ As provided in Section 3, Project Description, of this Initial Study, approximately 1,800 square feet of outdoor covered patio areas adjacent to the ground floor restaurant space along Sunset Boulevard would not count towards the Project's total floor area pursuant to LAMC Sections 12.03 and 12.21.1-A.5. Nevertheless, to provide a conservative environmental analysis, this Initial Study assumes these aforementioned outdoor dining areas count towards the floor area, resulting in a total floor area of 445,218 square feet, including 431,032 square feet of office space and 14,186 square feet of restaurant space.

story office building located west of the Project Site. The 14-story CNN building east of the Project Site is designed with black glass and the 11-story building west of the Project Site is a lighter dark-rose colored building with ribbon windows and a parking podium. The Project would complement the surrounding buildings in terms of scale and massing as the proposed commercial building is of similar scale and mediates between the two adjacent buildings by stepping back from Sunset Boulevard. Similar to the CNN Building's cladding, the Project would incorporate a glass façade, and like the 11-story building west of the Project Site, the Project would incorporate a parking podium. The Project would enhance the built environment in the surrounding neighborhood and upgrade the quality of development by replacing the existing buildings and surface parking lot with a high quality commercial building that features a new contemporary glass façade structure with various repeating rectangle forms, creating a distinctive character. The Project would include design elements that would contribute to the neighborhood's vibrant commercial energy and supportive of pedestrian circulation. Specifically, the proposed commercial building would be designed in a contemporary architectural style that would be compatible with the general urban characteristics of the surrounding neighborhood. The proposed commercial building would be moderated by a high degree of articulation, using both variations in building planes and façade setbacks, as well as a variety of materials, and would be designed to complement the surrounding neighborhood. In particular, the proposed commercial building, located along Sunset Boulevard, would feature varying façade planes articulated by non-reflective glass curtain walls, metal panels, black mullions, exposed black steel beams, polycarbonate cladding, board formed concrete, and a decorative screening element. Ground level windows would use transparent glass, which would contribute to an inviting and pedestrian-oriented streetscape along Sunset Boulevard. The proposed commercial building would also include a large landscaped outdoor deck, pulling back the building massing along Sunset Boulevard.

Additionally, the proposed LADWP equipment building, located along Cole Place, would feature a minimalist design with a muted color palette and a green wall-type screen to visually enhance the building and the pedestrian experience along this area of the Project Site. The Project would also include 35 new street trees adjacent to the Project Site to enhance pedestrian-level amenities.

Overall, the Project would be generally consistent with the applicable objectives and policies that support the goals set forth in the Framework Element's Urban Form and Neighborhood Design Chapter and, therefore, would not conflict with the Framework Element policies regarding scenic quality.

Hollywood Community Plan

As it relates to scenic quality, the Hollywood Community Plan includes the following policy applicable to the Project:

- That, where feasible, new power lines be placed underground and that the undergrounding of existing lines be continued and expanded.

As part of the Project, new power lines would be placed underground consistent with the public improvements section of the Hollywood Community Plan and, therefore, would not conflict with the Hollywood Community Plan objective and policy related to scenic quality.

Hollywood Redevelopment Plan

Section 300 of the Hollywood Redevelopment Plan sets forth the goals of the Redevelopment Plan. Related to scenic quality, the Hollywood Redevelopment Plan provides the following goal:

5) Improve the quality of the environment, promote a positive image for Hollywood and provide a safe environment through mechanisms such as: a) adopting land use standards; b) promoting architectural and urban design standards including: standards for height, building setback, continuity of street facade, building materials, and compatibility of new construction with existing structures and concealment of mechanical appurtenances; c) promoting landscape criteria and planting programs to ensure additional green space; d) encouraging maintenance of the built environment; e) promoting sign and billboard standards; f) coordinating the provision of high quality public improvements; g) promoting rehabilitation and restoration guidelines; h) integrate public safety concerns into planning efforts.

As previously discussed above, the Project would enhance the built environment in the surrounding neighborhood and upgrade the quality of development over existing Project Site improvements. Specifically, the proposed commercial building would be designed in a contemporary architectural style that would be compatible with the general urban characteristics of the surrounding neighborhood. The proposed commercial building would be moderated by a high degree of articulation, using both variations in building planes and façade setbacks, as well as a variety of materials, and would be designed to complement the surrounding neighborhood. Additionally, the proposed LADWP equipment building would feature a minimalist design with a muted color palette and a green wall-type screen to visually enhance the building and the pedestrian experience along this area of the Project Site. The Project would also enhance the streetscape by installing landscaping, including new street trees. In addition, the Project would implement several safety features such as an enhanced closed-circuit camera system and keycard or guarded entry. Proper lighting of buildings and walkways would be incorporated to maximize visibility and provide for pedestrian orientation and clearly identify a secure route between parking areas and points of entry into the commercial building. Parking areas would also be lit to maximize visibility and reduce areas of concealments. Finally, entrances to, and exits from the building, would be designed to be open and in view of surrounding sites. Overall, the Project would support the Redevelopment Plan's goal to improve the quality of the environment and, therefore, would not conflict with the Hollywood Redevelopment Plan goals related to scenic quality.

In summary, for all the foregoing reasons, the Project would not conflict with applicable zoning and other regulations governing scenic quality. Moreover, pursuant to SB 743 and ZI No. 2452, the Project's aesthetics impact would not be considered a significant impact on the environment. Therefore, no further evaluation of this topic in an EIR is required.

d. Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less Than Significant Impact. As discussed in the *L.A. CEQA Thresholds Guide*, new light sources introduced by a project may increase ambient nighttime illumination levels. Additionally, nighttime spillover of light onto adjacent properties has the potential to interfere with certain functions, including vision, sleep, privacy, and general enjoyment of the natural nighttime condition. The significance of the

impact depends on the type of use affected, proximity to the affected use, the intensity of the light source, and the existing ambient light environment. Uses considered sensitive to nighttime light include, but are not limited to, residential, some commercial and institutional uses, and natural areas.

Construction

While the majority of Project construction would occur during daylight hours, there is a potential that construction could occur in the evening hours and require the use of artificial lighting, particularly during the winter season when daylight is no longer sufficient earlier in the day. Outdoor lighting sources, such as floodlights, spot lights, and/or headlights associated with construction equipment and hauling trucks, typically accompany nighttime construction activities. To the extent evening construction includes artificial light sources, such use would be temporary and would cease upon completion of Project construction. Furthermore, construction-related illumination would be used for safety and security purposes only, in compliance with LAMC light intensity requirements.¹⁰ Additionally, as part of the Project, construction lighting would be shielded such that no light source can be seen from adjacent residential properties. Construction lighting, while potentially bright, would be focused on the particular area undergoing work.

Daytime glare could potentially occur during construction activities if reflective construction materials were positioned in highly visible locations where the reflection of sunlight could occur. However, any glare would be highly transitory and short-term, given the movement of construction equipment and materials within the construction area, and the temporary nature of construction activities. In addition, large, flat surfaces that are generally required to generate substantial glare are typically not an element of construction activities. Furthermore, temporary construction fencing would be placed along the periphery of the Project Site to screen construction activity from view at the street level from off-site locations. Therefore, there would be a negligible potential for daytime or nighttime glare associated with construction activities to occur.

Based on the above, light and glare associated with temporary Project construction would not substantially alter the character of off-site areas surrounding the Project Site or adversely impact day or nighttime views in the area. Moreover, pursuant to SB 743 and ZI No. 2452, the Project's aesthetics impacts would not be considered a significant impact on the environment. Therefore, no further evaluation of this topic in an EIR is required.

Operation

The Project would replace the existing buildings and associated surface parking areas on the Project Site with a new 15-story commercial building and two-story building to house LADWP equipment, which would increase light and glare levels emanating from the Project Site. The Project lighting would include architecturally-integrated low-level exterior lights on the buildings and along pathways for security and wayfinding purposes. In addition, low-level lighting to accent signage, architectural features, and landscaping elements would be incorporated throughout the Project Site. Project lighting would be designed to provide for efficient, effective, and aesthetically pleasing lighting solutions that would minimize

¹⁰ LAMC Chapter 9, Article 3, Section 93.0117 provides that, no exterior light source may cause more than 2 foot-candles (21.5 lx) of light intensity or generate direct glare onto exterior glazed windows or glass doors; elevated porch, deck, or balcony; or any ground surface intended for uses such as recreation, barbecue or lawn areas or any property containing a residential unit or units.

light trespass from the Project Site and minimize sky-glow to increase night sky access. All exterior lighting would be dimmable and automatically controlled via occupancy sensors and photo sensors to allow for the appropriate control of nighttime lighting. Interior lighting would be dimmable and controlled to meet all prevailing code requirements, which includes the use of occupancy sensors, multi-scene presets, and timeclock events.

All exterior and interior lighting would meet the requirements of the California Energy Commission Building Energy Efficiency Standards—Title 24 and the National Electrical Code (NEC). Light trespass from interior spaces would be limited by blinds and/or drapery or would be installed in such a way as to not create light trespass off of the Project Site. Any new street and/or pedestrian lighting within the public right-of-way would comply with all applicable City regulations and would be approved by the Bureau of Street Lighting, as required, in order to maintain appropriate and safe lighting levels on both sidewalks and roadways while minimizing light and glare on adjacent properties.

As discussed in Section 3, Project Description, of this Initial Study, proposed signage would include general street level tenant/site identification and visitor directional signage as permitted by the LAMC. Proposed signage would be internally illuminated for nighttime use and would include one digital (non-animated) wall sign along the Sunset Boulevard frontage. In accordance with the LAMC, illumination used for Project signage would be limited to a light intensity of 3 foot-candles above ambient lighting, as measured at the property line of the nearest residentially zoned property. In addition, given the Project Site's location along the highly active Sunset Boulevard corridor, the proposed signage and associated lighting would not generate lighting that would be out of character with the well-developed commercial boulevard. All proposed signage would also comply with permitted sign locations pursuant to the LAMC, the Hollywood Signage Supplemental Use District, and the Hollywood Redevelopment Plan Revised Amended Design for Development for Signs in Hollywood, as applicable.

Daytime glare can result from sunlight reflecting from a shiny surface that would interfere with the performance of an off-site activity, such as the operation of a motor vehicle. Reflective surfaces can be associated with window glass and polished surfaces, such as metallic trim. In general, sun reflection that has the greatest potential to interfere with driving occurs from the lower stories of a structure. Sun reflection from the Project would occur during periods in which the sun is low on the horizon and when the point of reflection within the Project Site is in front of the driver, in the direction of travel. The Project would feature a variety of surface materials, including glass, concrete, timber, and metal. As part of the Project, glass used in building façades would have high-performance coatings that would not be highly reflective, thereby minimizing glare from reflected sunlight. In addition, windows on the upper levels of the building would include exterior shading elements including an overhanging wooden crown, shading devices hung from cantilevers, and architectural screens to further reduce glare.

Nighttime glare could result from illuminated signs and vehicle headlights. As described above, Project illuminated signs would not exceed the prescribed lighting requirements of the LAMC. Furthermore, while headlights from vehicles entering and exiting the parking levels on the ground floor would be visible during the evening and nighttime hours, such lighting sources would be typical for the area. Thus, nighttime glare would not result in a substantial adverse impact.

Based on the above, with adherence to regulatory requirements, lighting associated with Project operation would not create a new source of substantial light or glare that would adversely affect day or nighttime views in the area. Moreover, pursuant to SB 743 and ZI No. 2452, the Project's aesthetic impact would

not be considered a significant impact on the environment. Therefore, no further evaluation of this topic in an EIR is required.

II. AGRICULTURE AND FORESTRY RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment Project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d. Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

a. Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. The Project Site is located in an urbanized area of the City. As discussed in Section 3, Project Description, of this Initial Study, the Project Site is currently developed with commercial uses and surface parking. No agricultural uses or operations occur on-site or in the vicinity of the Project Site. The Project Site and surrounding area are not mapped as Prime Farmland, Unique Farmland, or Farmland of

Statewide Importance pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency Department of Conservation.¹¹ As such, the Project would not convert farmland to a non-agricultural use. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

b. Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact. The Project Site is zoned as C4-2D-SN (Commercial Zone, Height District 2 with Development Limitation, Hollywood Signage Supplemental Use District), C4-2D (Commercial Zone, Height District 2 with Development Limitation), and C2-1XL (Commercial Zone, Height District 1XL). The Project Site is not zoned for agricultural use. Furthermore, no agricultural zoning is present in the surrounding area. The Project Site and surrounding area are also not enrolled under a Williamson Act Contract.¹² Therefore, the Project would not conflict with any existing zoning for agricultural uses or a Williamson Act Contract. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

c. Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

No Impact. As previously discussed, the Project Site is located in an urbanized area and is currently developed with commercial uses and surface parking. The Project Site does not include any forest land or timberland. In addition, the Project Site is currently zoned for commercial uses and is not zoned and/or used as forest land.¹³ Therefore, the Project would not conflict with existing zoning for, or cause rezoning of, forest land or timberland as defined by the Public Resources and Government Codes. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

d. Would the project result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. As previously discussed, the Project Site is located in an urbanized area and does not include any forest land. Therefore, the Project would not result in the loss or conversion of forest land to non-forest use. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

¹¹ City of Los Angeles Department of City Planning, Zone Information and Map Access System (ZIMAS), Parcel Profile Report for APNs 5546014056, 5546014013, 5546014014, and 5546014017, <http://zimas.lacity.org/>, accessed April 20, 2020.

¹² City of Los Angeles Department of City Planning, Zone Information and Map Access System (ZIMAS), Parcel Profile Report for APNs 5546014056, 5546014013, 5546014014, and 5546014017, <http://zimas.lacity.org/>, accessed April 20, 2020.

¹³ City of Los Angeles Department of City Planning, Zone Information and Map Access System (ZIMAS), Parcel Profile Report for APNs 5546014056, 5546014013, 5546014014, and 5546014017, <http://zimas.lacity.org/>, accessed April 20, 2020.

e. Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

No Impact. As discussed above, the Project Site is located in an urbanized area of the City and does not include farmland or forest land. The Project Site and surrounding area are also not mapped as farmland or forest land, are not zoned for farmland/agricultural use or forest land, and do not contain any agricultural or forest uses.¹⁴ As such, the Project would not result in the conversion of farmland to non-agricultural use or in the conversion of forest land to non-forest use. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

III. AIR QUALITY

Where available, the significance criteria established by the South Coast Air Quality Management District (SCAQMD) may be relied upon to make the following determinations.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☒	☐	☐	☐
c. Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

a. Would the project conflict with or obstruct implementation of the applicable air quality plan?

Potentially Significant Impact. The Project Site is located within the 6,700-square-mile South Coast Air Basin (the Basin). Within the Basin, the South Coast Air Quality Management District (SCAQMD) is required, pursuant to the federal Clean Air Act, to reduce emissions of criteria pollutants for which the Basin is in non-attainment (i.e., ozone, particulate matter less than 2.5 microns in size [PM_{2.5}], and lead¹⁵). SCAQMD's 2016 Air Quality Management Plan (AQMP) contains a comprehensive list of pollution control strategies directed at reducing emissions and achieving ambient air quality standards. These strategies

¹⁴ City of Los Angeles Department of City Planning, Zone Information and Map Access System (ZIMAS), Parcel Profile Report for APNs 5546014056, 5546014013, 5546014014, and 5546014017, <http://zimas.lacity.org/>, accessed April 20, 2020.

¹⁵ Partial Nonattainment designation for lead for the Los Angeles County portion of the Basin only.

are developed, in part, based on regional population, housing, and employment projections prepared by the Southern California Association of Governments (SCAG). SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino and Imperial Counties, and addresses regional issues relating to transportation, the economy, community development and the environment.¹⁶ With regard to future growth, SCAG has prepared their Regional Transportation Plan/Sustainable Communities Strategy,¹⁷ which provides population, housing, and employment projections for cities under its jurisdiction. The growth projections in the RTP/SCS are based on growth projections in local general plans for jurisdictions in SCAG's planning area. Construction and operation of the Project may result in an increase in stationary and mobile source air emissions. As a result, development of the Project could have a potential adverse effect on SCAQMD's implementation of the AQMP. Therefore, the EIR will provide further analysis of the Project's potential conflicts with the AQMP.

b. Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Potentially Significant Impact. As discussed above, construction and operation of the Project, including the on-site LADWP generator, would result in the emission of air pollutants in the South Coast Air Basin, which is currently in non-attainment of federal air quality standards for ozone, PM_{2.5} and lead, and state air quality standards for ozone, particulate matter less than 10 microns in size (PM₁₀), and PM_{2.5}. Therefore, implementation of the Project could potentially contribute to air quality impacts, which could cause a cumulative impact in the Basin. The EIR will provide further analysis of cumulative air pollutant emissions associated with the Project.

c. Would the project expose sensitive receptors to substantial pollutant concentrations?

Potentially Significant Impact. As discussed above, the Project, including the on-site LADWP generator, could result in increased short- and long-term air pollutant emissions from the Project Site during construction (short-term) and operation (long-term). Sensitive receptors located in the vicinity of the Project Site include residential and school uses. Therefore, the Project could expose sensitive receptors to additional pollutant concentrations and the EIR will provide further analysis of the Project's potential to result in substantial adverse impacts to sensitive receptors.

d. Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less Than Significant Impact. No objectionable odors are anticipated as a result of either construction or operation of the Project. Specifically, construction of the Project would involve the use of conventional building materials typical of construction projects of similar type and size. Any odors that may be generated during construction would be localized and temporary in nature and would not be sufficient to affect a substantial number of people. With respect to Project operation, according to the SCAQMD

¹⁶ SCAG serves as the federally designated metropolitan planning organization (MPO) for the Southern California region.

¹⁷ The Regional Council of Southern California Association of Governments (SCAG) formally adopted the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (2020–2045 RTP/SCS) September 2020. However, the 2020–2045 RTP/SCS has not been formally certified by the California Air Resources Board. As such, SCAG's 2016–2040 RTP/SCS is also considered in the discussion of population and housing provided below.

CEQA Air Quality Handbook, land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. The Project does not propose these uses and consists of commercial office and restaurant uses. On-site trash receptacles would also be contained, located, and maintained in a manner that promotes odor control, and would not result in substantially adverse odor impacts.

In addition, the construction and operation of the Project would also comply with SCAQMD Rules 401, 402, and 403, regarding visible emissions violations.¹⁸ In particular, Rule 402 provides that a person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.¹⁹

Based on the above, the Project would not result in other emissions such as those leading to odors. Impacts during construction and operation of the Project would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

IV. BIOLOGICAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒

¹⁸ SCAQMD, Visible Emissions, Public Nuisance, and Fugitive Dust, www.aqmd.gov/home/regulations/compliance/inspection-process/visible-emissions-public-nuisance-fugitive-dust, accessed April 16, 2020.

¹⁹ SCAQMD, Rule 402, Nuisance, www.aqmd.gov/docs/default-source/rule-book/rule-iv/rule-402.pdf, accessed April 16, 2020.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☒	☐
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

a. Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

No Impact. The Project Site is located in an urbanized area and is currently developed with three buildings and surface parking. Landscaping within the Project Site is limited to common ornamental trees, grasses, and shrubs. Due to the urbanized and disturbed nature of the Project Site and the surrounding areas, and lack of large expanses of open space areas, species likely to occur on-site are limited to small terrestrial and avian species typically found in urbanized developed settings. Based on the lack of habitat on the Project Site, it is unlikely any special status species listed by the California Department of Fish and Wildlife (CDFW)²⁰ or by the U.S. Fish and Wildlife Service (USFWS)²¹ would be present on-site. Furthermore, the Project Site is not located in or adjacent to a Biological Resource Area as defined by the City.²² Therefore, the Project would not have a substantial adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations by the CDFW or USFWS. No impact would occur, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

b. Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

²⁰ California Department of Fish and Wildlife, California Natural Diversity Database, Special Animals List, August 2019.

²¹ United States Fish and Wildlife Service, ECOS Environmental Conservation Online System, Listed species believed to or known to occur in California, <https://ecos.fws.gov/ecp0/reports/species-listed-by-state-report?stateAbbrev=CA&stateName=California&statusCategory=Listed&status=listeds>, accessed August 17, 2020.

²² City of Los Angeles, Department of City Planning, Los Angeles Citywide General Plan Framework, Draft Environmental Impact Report, January 19, 1995, P. 2-18-4.

No Impact. The Project Site is located in an urbanized area and is currently developed with commercial uses and surface parking. No riparian or other sensitive natural community exists on the Project Site or in the surrounding area.^{23,24} Furthermore, the Project Site and surroundings are not located in or adjacent to a Biological Resource Area or Significant Ecological Area as defined by the City or County of Los Angeles.^{25,26} In addition, there are no other sensitive natural communities identified by the CDFW or the USFWS.^{27,28,29} Therefore, the Project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community. No impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

c. Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact. The Project Site is located in an urbanized area and is currently occupied by commercial uses and surface parking. No water bodies or state or federally protected wetlands exist on the Project Site or in the immediate vicinity.³⁰ As such, the Project would not have an adverse effect on state or federally protected wetlands. No impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

d. Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less Than Significant Impact. As described above, the Project Site is located in an urbanized area and is currently occupied by commercial uses and surface parking. The Project Site currently contains some ornamental trees and landscaping. The areas surrounding the Project Site are fully developed, and there are no large expanses of open space areas within and surrounding the Project Site that provide linkages to natural open spaces areas that may serve as wildlife corridors. The Project Site is also not located in or adjacent to a Biological Resource Area or Significant Ecological Area as defined by the City or County

²⁷ California Department of Fish and Wildlife, Biogeographic Information and Observation System (BIOS <https://apps.wildlife.ca.gov/bios/>), accessed April 20, 2020.

²⁸ California Department of Fish and Wildlife, CDFW Lands, www.wildlife.ca.gov/Lands, accessed April 20, 2020.

²⁹ U.S. Fish and Wildlife Service, National Wetlands Inventory, www.fws.gov/wetlands/index.html, accessed April 20, 2020.

³⁰ U.S. Environmental Protection Agency, NEPAassist, www.epa.gov/nepa/nepassist, accessed April 20, 2020.

of Los Angeles.^{31,32} Therefore, the Project Site and surroundings do not include areas that could be used as wildlife corridors.

The Project Site is relatively flat with limited ornamental landscaping. As discussed in the Tree Report prepared for the Project, included in Appendix IS-1 of this Initial Study, there are four trees within the Project Site and 12 street trees around the perimeter of the Project Site. The Project would involve removal of all onsite trees and the 12 street trees adjacent to the Project Site. Although unlikely, these trees could potentially provide nesting sites for migratory birds. However, the Project would comply with the Migratory Bird Treaty Act, which prohibits the take, possession, import, export, transport, sell, purchase, barter, or offer for sale, purchase, or barter, any migratory bird, or the parts, nests, or eggs of such a bird except under the terms of a valid permit issued pursuant to federal regulations. Additionally, California Fish and Game Code Section 3503 states that “[i]t is unlawful to take, possess, or needlessly destroy the nest or eggs of any bird, except as otherwise provided by this code or any regulation made pursuant thereto.” No exceptions are provided in the California Fish and Game Code and California Department of Fish and Wildlife has never promulgated any regulations interpreting these provisions.

In accordance with the Migratory Bird Treaty Act and California Fish and Game Code, tree removal activities associated with the Project would take place outside of the nesting season (February 1–August 31), to the extent feasible. Should vegetation removal activities occur during the nesting season, a biological monitor would be present during the removal activities to ensure that no active nests would be impacted. If active nests are found, a buffer would be established until the fledglings have left the nest. The size of the buffer area varies with species and local circumstances (e.g., presence of busy roads) and is based on the professional judgement of the monitoring biologist, in coordination with the California Department of Fish and Wildlife.

With compliance with the Migratory Bird Treaty Act, the Project would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

e. Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance (e.g., oak trees or California walnut woodlands)?

Less Than Significant Impact. The City of Los Angeles Protected Tree Ordinance (LAMC Chapter IV, Article 6) regulates the relocation or removal of all Southern California native oak trees (excluding scrub oak), California black walnut trees, Western sycamore trees, and California Bay trees of at least four inches in diameter at breast height. These tree species are defined as “protected” by the City of Los Angeles. Trees that have been planted as part of a tree planting program are exempt from the City’s Protected Tree Ordinance and are not considered protected. The City’s Protected Tree Ordinance prohibits, without a permit, the removal of any regulated protected tree, including “acts which inflict

³¹ City of Los Angeles, Department of City Planning, Los Angeles Citywide General Plan Framework, Draft Environmental Impact Report, January 19, 1995, P. 2-18-4.

³² Los Angeles County, Los Angeles County General Plan, Figure 9.3 Significant Ecological Areas and Coastal Resource Areas Policy Map, October 6, 2015.

damage upon root systems or other parts of the tree...” and requires that all regulated protected trees that are removed be replaced on at least a 2:1 basis with trees that are of a protected variety.

Based on the Tree Report included in Appendix IS-1 of this Initial Study, the Project would not involve the removal of any trees considered protected under the City of Los Angeles Native Tree Protection Ordinance either within the Project Site or in the adjacent right-of-way (street trees). To allow for development of the Project, the existing four onsite trees and 12 street trees would be removed in the adjacent right-of-way. Pursuant to the requirements of the City of Los Angeles Urban Forestry Division, the onsite trees to be removed would be replaced at a 1:1 ratio and the street trees to be removed would be replaced at a 2:1 basis. Therefore, in compliance with the City’s tree replacement requirements, the Project would not conflict with any local policies or ordinances protecting biological resources. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

f. Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. As discussed in Section 3, Project Description, of this Initial Study, the Project Site is located in an urbanized area and is currently occupied by commercial uses and surface parking. As described above, the Project Site does not support any habitat or natural community.^{33,34} No Conservation Plan, Natural Community Conservation Plan, or other approved habitat conservation plans apply to the Project Site.³⁵ Thus, the Project would not conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other related plans. No impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

V. CULTURAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	☒	☐	☐	☐
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	☐	☐	☒	☐
c. Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☒	☐

³³ California Department of Fish and Wildlife, Biogeographic Information and Observation System (BIOS <https://apps.wildlife.ca.gov/bios/>, accessed April 20, 2020).

³⁴ United States Fish and Wildlife Service, National Wetlands Inventory, www.fws.gov/wetlands/data/Mapper.html, accessed April 20, 2020.

³⁵ California Department of Fish and Wildlife, California Regional Conservation Plans, October 2017.

a. Would the project cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?

Potentially Significant Impact. Section 15064.5 of the CEQA Guidelines generally defines a historical resource as a resource that is: (1) listed in, or determined to be eligible for listing in the California Register of Historical Resources (California Register); (2) included in a local register of historical resources (pursuant to Section 5020.1(k) of the Public Resources Code); or (3) identified as significant in an historical resources survey (meeting the criteria in Section 5024.1(g) of the Public Resources Code). In addition, any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register. The California Register automatically includes all properties listed in the National Register of Historic Places (National Register) and those formally determined to be eligible for listing in the National Register. The local register of historical resources is managed by the Los Angeles Office of Historic Resources, which operates SurveyLA, a comprehensive program to identify significant historical resources throughout the City.

As previously described, the Project Site is currently developed with three buildings and surface parking. Some of the buildings within and adjacent to the Project Site appear to be 50 or more years old. In addition, the adjacent LAFD Fire Station No. 27 is a designated historical resource. Therefore, further evaluation of the Project's potential impacts on historical resources will be included in the EIR.

b. Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to State CEQA Guidelines §15064.5?

Less Than Significant Impact. CEQA Guidelines Section 15064.5(a)(3)(D) generally defines archaeological resources as any resource that "has yielded, or may be likely to yield, information important in prehistory or history." Archaeological resources are features, such as tools, utensils, carvings, fabric, building foundations, etc., that document evidence of past human endeavors and that may be historically or culturally important to a significant earlier community. The Project Site is located within an urbanized area of the City and has been subject to grading and development in the past. Therefore, surficial archaeological resources that may have existed at one time have likely been previously disturbed. As discussed in Section 3, Project Description, of this Initial Study, the Project would involve excavation to a maximum depth of 52 feet. Thus, the Project could have the potential to disturb previously undiscovered archaeological resources. Based on the records search conducted by the South Central Coastal Information Center (SCCIC) on July 22, 2020 and included in Appendix IS-2 of this Initial Study, no archaeological resources have been found at the Project Site. Specifically, SCCIC records indicate that two previously recorded cultural resources have been documented within a 0.5-mile radius of the Project Site. None of these resources overlap, intersect, or are adjacent to the Project Site. Nevertheless, it is always possible that unknown and unanticipated intact archaeological deposits and/or features could be present at subsurface levels. To this end, the City has established a standard condition of approval to address inadvertent discovery of archaeological resources. Should archaeological resources be inadvertently encountered, the City's condition of approval provides for temporarily halting construction activities near the encounter and retaining a qualified archaeologist to assess the find. In accordance with the condition of approval, all activities would be conducted in accordance with regulatory requirements as set forth in CEQA Section 21083.2. Overall, with adherence to the City's condition of

approval consistent with CEQA Section 21083.2, the Project would not cause a substantial adverse change in the significance of an archaeological resource. Impacts would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

c. Would the project disturb any human remains, including those interred outside of dedicated cemeteries?

Less Than Significant Impact. The Project Site is located within an urbanized area and has been subject to previous grading and development. No known traditional burial sites have been identified on the Project Site. Nevertheless, the Project would require grading and excavation at a depth of 52 feet below ground surface, which could have the potential to disturb existing but undiscovered human remains. If human remains were discovered during construction of the Project, work in the immediate vicinity of the construction area would be halted, the County Coroner, construction manager, and other entities would be notified per California Health and Safety Code Section 7050.5. In addition, disposition of the human remains and any associated grave goods would occur in accordance with Public Resources Code Section 5097.98 and CEQA Guidelines Section 15064.5(e), which requires that work stop near the find until a coroner can determine that no investigation into the cause of death is required and if the remains are Native American. Specifically, in accordance with CEQA Guidelines Section 15064.5(e), if the coroner determined the remains to be Native American, the coroner shall contact the Native American Heritage Commission who shall identify the person or persons it believes to be most likely descended from the deceased Native American. The most likely descendent may make recommendations regarding the treatment of the remains and any associated grave goods in accordance with PRC Section 5097.98. Therefore, due to the low potential that any human remains are located on the Project site, and because compliance with the regulatory standards described above would ensure appropriate treatment of any potential human remains unexpectedly encountered during grading and excavation activities, the Project’s impact related to human remains would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

VI. ENERGY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☒	☐	☐	☐
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☒	☐	☐	☐

a. Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Potentially Significant Impact. As discussed in Section 3, Project Description, of this Initial Study, the Project Site is currently developed with three buildings and surface parking lots. The Project includes the development of a 15-story commercial building consisting of 431,032 square feet of office space and 12,386 square feet of ground floor commercial space.³⁶ The Project would also include the construction of a two-story building to house LADWP equipment and an underground generator. The Project would generate an increased demand for electricity and natural gas services provided by LADWP and the Southern California Gas Company, respectively, compared to existing conditions. While development of the Project would not be anticipated to cause wasteful, inefficient, and unnecessary consumption of energy resources, further analysis of the Project's demand on existing energy resources will be provided in the EIR.

b. Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Potentially Significant Impact. First established in 2002 under Senate Bill 1078, California's Renewable Portfolio Standards require retail sellers of electric services to increase procurement from eligible renewable energy resources to 33 percent of total retail sales by 2020.³⁷ The LADWP provides electrical service throughout the City and many areas of the Owens Valley. LADWP generates power from a variety of energy sources, including hydropower, coal, gas, nuclear sources, and renewable resources, such as wind, solar, and geothermal sources. In accordance with Senate Bill 1078, LADWP is required to procure at least 33 percent of its energy portfolio from renewable sources by 2020.

Regarding energy efficiency, the California Building Energy Efficiency Standards for Residential and Nonresidential Buildings (California Code of Regulations, Title 24, Part 6) were adopted to ensure that building construction, system design, and installation achieve energy efficiency and preserve outdoor and indoor environmental quality. The current California Building Energy Efficiency Standards (Title 24 standards) are the 2019 Title 24 standards, which became effective on January 1, 2020.³⁸ The 2019 Title 24 standards include efficiency improvements to the residential standards for attics, walls, water heating, and lighting and efficiency improvements to the non-residential standards include alignment with the American Society of Heating and Air-Conditioning Engineers (ASHRAE) 90.1 2013 national standards.³⁹

As previously described, the Project Site is currently developed with three buildings and surface parking. The Project Site does not include any renewable energy sources used by LADWP. The Project has been designed and would be constructed to incorporate environmentally sustainable building features and construction protocols required by the Los Angeles Green Building Code and CALGreen. In addition, the Project would be designed and constructed to incorporate environmentally sustainable building features equivalent to a Gold certification under the U.S. Green Building Council's LEED® Rating System for new

³⁶ As provided in Section 3, Project Description, of this Initial Study, approximately 1,800 square feet of outdoor covered patio areas adjacent to the ground floor restaurant space along Sunset Boulevard would not count towards the Project's total floor area pursuant to LAMC Sections 12.03 and 12.21.1-A.5. Nevertheless, to provide a conservative environmental analysis, this Initial Study assumes these aforementioned outdoor dining areas count towards the floor area, resulting in a total floor area of 445,218 square feet, including 431,032 square feet of office space and 14,186 square feet of restaurant space.

³⁸ CEC, 2019 Building Energy Efficiency Standards, www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2019-building-energy-efficiency, accessed October 5, 2020, 2020..

³⁹ CEC, 2019 Building Energy Efficiency Standards for Residential and Nonresidential Buildings, December 2018..

construction. While the Project would not be anticipated to conflict with or obstruct a state or local plan for renewable energy or energy efficiency, the Project's compliance with LADWP's plans for renewable energy, as well as the Project's compliance with California Building Energy Efficiency Standards, will be further evaluated in the EIR.

VII. GEOLOGY AND SOILS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii. Strong seismic ground shaking?	☐	☐	☒	☐
iii. Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv. Landslides?	☐	☐	☐	☒
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c. Be located on a geologic unit that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☐	☒	☐
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
e. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☒	☐

The following analysis is based on the Geotechnical Feasibility Report prepared for the Project by Group Delta Consultants, dated May 2020. All specific information on geologic and soils conditions in the discussion below is from this report unless otherwise noted. The Geotechnical Feasibility Report is included as Appendix IS-3 of this Initial Study. The Grading Division of the Los Angeles Department of Building and Safety reviewed the Geotechnical Feasibility Report and provided comments. The assessment letter provided by the Grading Division of the Los Angeles Department of Building and Safety

as well as an addendum report to the Geotechnical Feasibility Report are also included in Appendix IS-3 of this Initial Study. Additionally, the final soils approval letter from the Grading Division of the Los Angeles Department of Building and Safety is also included in Appendix IS-3 of this Initial Study.

a. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

- i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.**

Less Than Significant Impact. Fault rupture occurs when movement on a fault deep within the earth breaks through to the surface. Based on criteria established by the California Geological Survey, faults can be classified as active, potentially active, or inactive. Active faults are those having historically produced earthquakes or shown evidence of movement within the past 11,000 years (during the Holocene Epoch). Potentially active faults have demonstrated displacement within the last 1.6 million years (during the Pleistocene Epoch) while not displacing Holocene Strata. Inactive faults do not exhibit displacement younger than 1.6 million years before the present. In addition, there are buried thrust faults, which are faults with no surface exposure. Due to their buried nature, the existence of buried thrust faults is usually not known until they produce an earthquake.

The California Geological Survey establishes regulatory zones around active faults, called Alquist-Priolo Earthquake Fault Zones (previously called Special Study Zones). These zones, which extend from 200 to 500 feet on each side of the known fault, identify areas where a potential surface fault rupture could prove hazardous for buildings used for human occupancy. Development projects located within an Alquist-Priolo Earthquake Fault Zone are required to prepare special geotechnical studies to characterize hazards from any potential surface ruptures. In addition, the City designates Fault Rupture Study Areas along the sides of active and potentially active faults to establish areas of potential hazard due to fault rupture.⁴⁰

Based on the Geotechnical Feasibility Report and a review of the City's General Plan Safety Element, the Project Site is not within an Alquist-Priolo Earthquake Fault Zone or within a City-designated Fault Rupture Study Area, and no known active faults underlie the Project Site.⁴¹ According to the Geotechnical Feasibility Report, the Project Site is located within the Hollywood Basin. The Hollywood Basin is structurally bound by the Hollywood Fault to the north and the North South Lake Fault to the south. The Hollywood fault is the closest active fault considered capable of surface rupture, located approximately 0.43 mile (0.6 kilometer) north of the Project Site.⁴² However, as concluded in the Geotechnical Feasibility Report, the risk for surface rupture at the Project Site is considered low as there are no known faults underlying the Project Site. Furthermore, while the Project would involve excavation for the three subterranean parking levels, the proposed development would not involve mining operations or deep excavation into the earth, which could create unstable seismic conditions or stresses in the Earth's crust.

⁴⁰ City of Los Angeles, Safety Element of the Los Angeles City General Plan, November 26, 1996, Exhibit A, p. 47.

⁴¹ City of Los Angeles Department of City Planning, Zone Information and Map Access System (ZIMAS), Parcel Profile Report for APNs 5546014056, 5546014013, 5546014014, and 5546014017, <http://zimas.lacity.org/>, accessed April 20, 2020.

⁴² City of Los Angeles Department of City Planning, Zone Information and Map Access System (ZIMAS), Parcel Profile Report for APNs 5546014056, 5546014013, 5546014014, and 5546014017, <http://zimas.lacity.org/>, accessed April 20, 2020.

The Project would not exacerbate existing fault rupture conditions and thus, the Project would not exacerbate existing environmental conditions by introducing people or structures into areas potentially susceptible to substantial adverse effects, including fault rupture. Therefore, the Project's impacts associated with surface rupture from a known earthquake fault would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

ii. Strong seismic ground shaking?

Less Than Significant Impact. The Project Site is located in the seismically active Southern California region, which generally experiences moderate to strong ground shaking in the event of an earthquake on a local or regional fault. However, as noted above, no active faults are known to pass directly beneath the Project Site. In addition, state and local code requirements ensure that buildings are designed and constructed in a manner that, although the buildings may sustain damage during a major earthquake, would reduce the substantial risk that buildings would collapse. Specifically, the state and City mandate compliance with numerous rules related to seismic safety, including the Alquist-Priolo Earthquake Fault Zoning Act, Seismic Safety Act, Seismic Hazards Mapping Act, the City's General Plan Safety Element, and the Los Angeles Building Code. Pursuant to those laws, the Project must demonstrate compliance with the applicable provisions of these safety requirements before permits can be issued for construction of the Project. Accordingly, the design and construction of the Project would comply with all applicable existing regulatory requirements, the applicable provisions of the Los Angeles Building Code relating to seismic safety, and the application of accepted and proven construction engineering practices. The Los Angeles Building Code incorporates current seismic design provisions of the 2019 California Building Code, with City amendments, to minimize seismic impacts. The 2019 California Building Code incorporates the latest seismic design standards for structural loads and materials, as well as provisions from the National Earthquake Hazards Reduction Program to mitigate losses from an earthquake and maximize earthquake safety. The Los Angeles Department of Building and Safety (LADBS) is responsible for implementing the provisions of the Los Angeles Building Code, and the Project would be required to comply with the plan review and permitting requirements of the LADBS, including the recommendations provided in a final, site-specific geotechnical report subject to review and approval by the LADBS. The Project would not involve mining operations, deep excavations into the earth, or borings of large areas and thus would not exacerbate potential on-site seismic conditions. Therefore, through compliance with regulatory requirements and site-specific geotechnical recommendations contained in a final design-level geotechnical engineering report, the Project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking. Impacts related to strong seismic ground shaking would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

iii. Seismic-related ground failure, including liquefaction?

Less Than Significant Impact. Liquefaction involves the sudden loss in strength of a saturated, cohesionless soil caused by the build-up of pore water pressure during cyclic loading, such as that produced by an earthquake. This increase in porewater can temporarily transform the soil into a fluid mass, resulting in differential settlement, and can also cause ground deformations. Typically, liquefaction occurs in shallow groundwater areas where there are loose, cohesionless, fine grained soils.

As discussed in the Geotechnical Feasibility Report, the Project Site is not located in a State of California designated Liquefaction Hazard Zone. In addition, the historically highest groundwater level at the Project Site is approximately 50 feet below ground surface. As discussed in the Geotechnical Feasibility Report,

the subsurface soil conditions consist of predominantly very stiff clayey materials and is not susceptible to liquefaction. Therefore, the Project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving liquefaction. Impacts associated with liquefaction would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

iv. Landslides?

No Impact. Landslides can occur in loosely consolidated, wet soil and/or rocks on steep sloping terrain during precipitation, soil disturbance, changes in groundwater, or seismic activity. The Project Site is not located in a landslide area as mapped by the state⁴³ or the City.^{44,45} Development of the Project would not substantially alter the existing topography of the Project Site. Specifically, the Project does not propose creating any steep slopes or altering the Project Site's terrain. Therefore, the Project would not exacerbate existing conditions that could result in the exposure of people and/or buildings to potential substantial adverse effects, including the risk of loss, injury, or death involving landslides. As such, no impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

b. Would the project result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. As discussed in Section 3, Project Description, of this Initial Study, the Project Site is currently fully developed with buildings and surface parking; and the Project would cover the same area. As such, there are no open spaces and there would not be open spaces at the Project Site with exposed topsoil. However, development of the Project would require grading, excavation, and other construction activities that have the potential to disturb existing soils underneath the Project Site and expose these soils to rainfall and wind during construction, thereby potentially resulting in soil erosion. This potential would be reduced by implementation of standard erosion controls imposed during site preparation and grading activities. Specifically, all grading activities would require grading permits from the LADBS, which would include requirements and standards designed to limit potential effects associated with erosion to acceptable levels. In addition, on-site grading and site preparation would comply with all applicable provisions of Chapter IX, Article 1 of the LAMC, which addresses grading, excavations, and fills. Regarding soil erosion during Project operations, the potential is negligible since the Project Site would mostly remain fully developed, except for some landscaping located throughout the Project Site. However, the landscaping would include trees to prevent soil erosion. Furthermore, the Project would be required to comply with the City's Low Impact Development (LID) ordinance and implement standard erosion controls to limit stormwater runoff, which can contribute to erosion. Therefore, with compliance with applicable regulatory requirements, impacts regarding soil erosion or the loss of topsoil would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

⁴⁴ Los Angeles General Plan Safety Element, November 1996, Exhibit C, Landslide Inventory & Hillside Areas, p. 51.

⁴⁵ City of Los Angeles Department of City Planning, Zone Information and Map Access System (ZIMAS), Parcel Profile Report for APNs 5546014056, 5546014013, 5546014014, and 5546014017, <http://zimas.lacity.org/>, accessed April 20, 2020.

c. Would the project be located on a geologic unit that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Less Than Significant Impact. As discussed above, the Project Site is not located near slopes or geologic features that would result in on- or off-site landsliding. Therefore, no impacts related to landslides would occur, and no mitigation measures are required.

Liquefaction-related effects include lateral spreading. As evaluated in the Geotechnical Feasibility Report and discussed above, the Project Site is not susceptible to liquefaction and would not potentially result in lateral spreading. Impacts related to liquefaction and lateral spreading would be less than significant, and no mitigation measures are required.

Subsidence generally occurs when a large portion of land is displaced vertically, usually due to the withdrawal of groundwater, oil, or natural gas. No large scale extraction of groundwater, gas, oil or geothermal energy is occurring or planned at the Project Site or in the general vicinity of the Project Site. Therefore, there is minimal to no potential for ground subsidence due to withdrawal of fluid or gas at the Project Site. Thus, impacts related to subsidence would be less than significant, and no mitigation measures are required.

Collapsible soils consist of loose, dry, low-density materials that collapse and compact under the addition of water or excessive loading. Soil collapse occurs when the land surface is saturated at depths greater than those reached by typical rain events. According to the Geotechnical Feasibility Report, the soils underlying the Project Site indicate moist, very stiff/dense clayey soils. Due to the type and density of the soils underlying the Project Site, the Project Site soils would not be considered collapsible soils. Therefore, the Project Site is not located on a geologic unit or soil that is unstable or that would become unstable as a result of the Project and potentially result in collapse. Impacts associated with collapsible soils would be less than significant, and no mitigation measures are required.

Based on the above, the Project would not cause a geologic unit or soil to become unstable. The Project would not exacerbate existing conditions with regard to geologic or soil stability. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

d. Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less Than Significant Impact. Expansive soils are typically associated with clayey soils that have the potential to shrink and swell with repeated cycles of wetting and drying. As discussed in the Geotechnical Feasibility Report, the underlying site conditions include artificial fill materials consisting of silty sand to sandy silt with little gravel. The underlying native soils generally consist of medium dense silty sand to a depth of 15 feet, and very stiff clayey materials to a depth of 61 feet. The on-site geological materials are considered to be expansive and are classified as medium expansive. As discussed in the Geotechnical Feasibility Report, it is recommended that the upper two feet of subgrade clayey soils are removed and replaced with non-expansive properly compacted fill soils and that the moisture barriers and control are implemented. Therefore, with implementation of the recommendations set forth in the Geotechnical Feasibility Report into the design of the Project, the Project would not exacerbate existing environmental

conditions that could create substantial risk to life or property due to expansive soils. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

e. Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact. The Project Site is located within a community served by existing wastewater infrastructure. The Project's wastewater demand would be accommodated by connections to the existing wastewater infrastructure. As such, the Project would not require the use of septic tanks or alternative wastewater disposal systems. Therefore, the Project would have no impact related to the ability of soils to support septic tanks or alternative wastewater disposal systems. No impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

f. Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less Than Significant Impact. Paleontological resources are the fossilized remains of organisms that have lived in a region in the geologic past and whose remains are found in the accompanying geologic strata. This type of fossil record represents the primary source of information on ancient life forms, since the majority of species that have existed on earth from this era are extinct. As the Project Site has been previously graded and developed, surficial paleontological resources that may have existed at one time have likely been previously disturbed. In addition, a paleontological records search conducted by the Natural History Museum for the Project Site included in Appendix IS-4 of this Initial Study indicates there are no previously encountered fossil vertebrate finds located within the Project Site. However, according to the records search, vertebrate fossil localities have been discovered either at the surface or at depth nearby from the same sedimentary deposits that occur on the Project Site. As detailed in the records search fossil localities have been found in older alluvium in the vicinity of the Project Site. As discussed in the Geotechnical Feasibility Report, artificial fill materials were encountered within the Project Site to approximately 2 feet depth. Older alluvial fan deposits lie below the fill materials to maximum depth explored (over 40 feet). Therefore, very shallow excavations are unlikely to uncover significant vertebrate deposits. However, the Project would include excavations up to a maximum depth of 52 feet below ground surface. Thus, the possibility exists that paleontological artifacts that were not discovered during prior construction or other human activity may be present. The City has established a standard condition of approval to address inadvertent discovery of paleontological resources. Should paleontological resources be inadvertently encountered, the City's condition of approval provides for temporarily halting construction activities near the encounter and retaining a qualified paleontologist to assess the find and, if necessary, developing a plan for removal and treatment of the find. Overall, with adherence to the City's condition of approval, the Project would not directly or indirectly destroy a unique paleontological resource. Impacts would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

With regard to a unique geologic feature, the Project Site is currently developed with three buildings and surface parking and there are no unique geologic features on the Project Site. Therefore, the Project would not directly or indirectly destroy a unique geologic feature. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

VIII. GREENHOUSE GAS EMISSIONS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐

a. Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Potentially Significant Impact. Gases that trap heat in the atmosphere are called greenhouse gases since they have effects that are analogous to the way in which a greenhouse retains heat. Greenhouse gases are emitted by both natural processes and human activities. The accumulation of greenhouse gases in the atmosphere affects the earth's temperature. The State of California has undertaken initiatives designed to address the effects of greenhouse gas emissions, and to establish targets and emission reduction strategies for greenhouse gas emissions in California. Activities associated with the Project, including construction and operational activities and the on-site LADWP generator, could result in greenhouse gas emissions that may have a significant impact on the environment. Therefore, the EIR will provide further analysis of the Project's greenhouse gas emissions.

b. Would the project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Potentially Significant Impact. As the Project would have the potential to emit greenhouse gases, the EIR will include further evaluation of project-related emissions and associated emission reduction strategies to determine whether the Project conflicts with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases (e.g., Assembly Bill [AB] 32 and the City of Los Angeles Green Building Code).

IX. HAZARDS AND HAZARDOUS MATERIALS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment?	☐	☐	☒	☐
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒

The following analysis is based on the Phase I Environmental Site Assessments prepared for 6450 Sunset Boulevard, dated August 2020, 1413 Cole Place, dated January 2020, and 1424/1428 Wilcox Avenue, dated August 2020, (collectively referred to herein as the Phase I ESAs) prepared for the Project by BA Environmental. All specific information regarding the Project Site's hazards conditions in the discussion below is from these reports unless otherwise noted. These reports are included as Appendix IS-5 of this Initial Study.

a. Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less Than Significant Impact. The types and amounts of hazardous materials to be used for the Project would be typical of those used during construction activities and those typically used in the operation of commercial uses, as discussed in the following analysis.

Construction

The Project would not involve the routine transport of hazardous materials to and from the Project Site during construction. During demolition, excavation, on-site grading, and building construction, hazardous materials such as fuel and oils associated with construction equipment, as well as coatings, paints,

adhesives, and caustic or acidic cleaners could be routinely used on the Project Site through the duration of construction. While some hazardous materials used during construction could require disposal, such activity would occur only for the duration of construction and would cease upon completion of the Project. As such, construction of the Project would not involve the routine disposal of hazardous materials. Notwithstanding, all potentially hazardous materials used during construction of the Project would be used and disposed of in accordance with manufacturers' specifications and instructions, thereby reducing the risk of hazardous materials use. In addition, existing regulations are aimed at establishing specific guidelines regarding risk planning and accident prevention, protection from exposure to specific chemicals, and the proper storage of hazardous materials. The Project would comply with all applicable federal, state, and local requirements concerning the use, storage, and management of hazardous materials. Consequently, Project construction activities would not create a significant hazard to the public or the environment through the use of hazardous materials during construction. Therefore, impacts related to the routine transport, use, or disposal of hazardous materials during construction would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

Operation

Operation of the Project would involve the routine use of small quantities of potentially hazardous materials typical of those used in commercial uses, including cleaning products, paints, and those used for maintenance of landscaping. Such use would be consistent with that currently occurring at other nearby developments. In addition, as with Project construction, all hazardous materials used on the Project Site during operation would be used, stored, and disposed of in accordance with all applicable federal, state, and local requirements. Due to the type of development proposed (e.g., office and commercial), operation of the Project would not involve the routine transport of hazardous materials to and from the Project Site. Therefore, with implementation of appropriate hazardous materials management protocols at the Project Site and compliance with all applicable local, state, and federal laws and regulations relating to environmental protection and the management of hazardous materials, impacts associated with the routine transport, use, or disposal of hazardous materials during operation of the Project would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

b. Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less Than Significant Impact. The current and past land uses within the Project Site were identified as part of the Phase I ESAs to assess their potential to present concerns relative to the presence of hazards and/or the handling of hazardous materials. These concerns are classified as Recognized Environmental Conditions (RECs), which are defined in Section 1.1.1 of the ASTM Standard Practice as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, past release, or material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property.

As discussed in the Phase I ESA for the 6450 Sunset Boulevard property, based on available historical sources, the portion of the Project Site located on 6450 Sunset Boulevard was occupied by feed and hay storage buildings and a single-family residence from prior to 1907 until 1919 when the feed and hay

buildings were converted into retail store fronts. By 1938, the northern portion of the 6450 Sunset Boulevard property was redeveloped to include a gasoline service station and automotive repair shop, with the southern portion of the property occupied by single family residences and duplexes. The residential structures were later demolished by 1955 and redeveloped into a parking lot, and the gasoline service station was demolished in 1994 and was redeveloped into a retail store, Staples. This portion of the Project Site has remained in the same configuration since 1994.

As discussed in the Phase I ESA for 1413 Cole Place, based on available historical resources, the portion of the Project Site located on 1413 Cole Place consisted of vacant parcels of land prior to 1907, and then occupied by single-family residences up until 1950. By 1950, the northern portion of the property was redeveloped into a retail store with the remainder of the property occupied by single-family residences. By 1961, the remaining residence was converted into an office building. By 1966, the property was occupied by an office building and single-family residence. By 1968, the office building had been converted back into a residence, and the residence was converted into a store front. In 1985, the existing structures were demolished, and the property was redeveloped into a light industrial/office building, which is currently occupied by The Post Group.

As discussed in the Phase I ESA for 1424 and 1428 Wilcox Avenue, based on available historical resources, the portion of the Project Site located on 1424 and 1428 Wilcox Avenue was occupied by single-family residences from prior to 1907 until around 1945. By 1945, the properties facing Wilcox Avenue were occupied by retail stores, while the properties facing Cole Place were occupied by single-family residences. By 1957, the western portion of the property facing Wilcox Avenue was occupied by retail store fronts; the eastern portion of the Project Site was occupied by an office, warehouse and optical glass grinding building occupied by the American Optical Company; and the southernmost portion of the property was occupied by a store front and single-family residences. Further changes were completed to the eastern portion of the property in 1968 and was then occupied by a musical instrument stage and rehearsal studio. By 1977, the residence and store fronts in the southernmost portion of the Project Site were developed and these properties were used as parking lots. Other entertainment industries occupied the warehouse facing Cole Place from the early 1990s until the mid-2000s. The warehouse building in the eastern portion of the property was demolished around 2008, creating automobile parking for the retail/office buildings facing Wilcox Avenue, which are currently occupied by film and television companies.

Based on a review of the relevant Munger oil and gas field maps and State of California Geologic Energy Management Division (CalGEM), formerly the California Division of Oil, Gas and Geothermal Resources (DOGGR), Well Finder GIS, the Project Site is not located within any oil or gas field, and no oil or natural gas wells were located on the Project Site.

The Phase I ESAs for the properties within the Project Site have revealed that there are no RECs or Controlled Recognized Environmental Conditions (CRECs). According to the Phase I ESA for 6450 Sunset Boulevard, the former gasoline service station and automotive repair, located at the northernmost portion of the property, is considered to be a Historical Recognized Environmental Condition (HREC). As previously mentioned, the gasoline service station and automotive repair occupied the northernmost portion of the Project Site from 1938 to 1991. Based on a review of applicable records, all of the Underground Storage Tanks (USTs), a wastewater clarifier, and automotive lifts have been removed and assessed for releases, and impacted soils were excavated in the area of the former fuel dispensers. The USTs received closure in 1991 and there were no identified releases related to the clarifier and lifts at the

time of removal. Based on a review of the closure reports for the USTs and the assessment reports for the auto garage area, this area is considered to be a HREC and is not considered a concern at this time.

Construction

Hazardous Waste Generation, Handling, and Disposal

During demolition, excavation, on-site grading, and building construction, hazardous materials such as fuel and oils associated with construction equipment, as well as coatings, paints, adhesives, and caustic or acidic cleaners, could be used, and therefore, would require proper handling and management and, in some cases, disposal. The use, handling, storage, and disposal of these materials could increase the opportunity for hazardous materials releases and, subsequently, the exposure of people and the environment to hazardous materials. However, as previously discussed, all potentially hazardous materials used during construction of the Project would be used and disposed of in accordance with manufacturers' specifications and instructions, thereby reducing the risk of hazardous materials use. In addition, the Project would comply with all applicable federal, state, and local requirements concerning the use, storage, and management of hazardous materials. Consequently, Project construction activities would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of potentially hazardous materials used during construction.

As discussed above, the Phase I ESA for 6450 Sunset Boulevard identified a former gasoline service station and automotive repair. Based on a review of the closure reports for the USTs and the assessment reports for the auto garage area, this area is considered to be a HREC and is not considered a concern at this time. However, as provided in the Phase I ESA for 6450 Sunset Boulevard, there may be a potential for residual contaminants in the underlying soil requiring proper handling and disposal and monitoring is recommended. In the event that contaminated soils are encountered during construction, or construction occurs in areas of known or potential contamination, the nature and extent of the contamination would be determined and appropriate handling, disposal, and/or treatment would be implemented in accordance with applicable regulatory requirements, including SCAQMD Rule 1166.⁴⁶ Specifically, SCAQMD Rule 1166 requires that an approved mitigation plan be obtained from SCAQMD prior to commencing any of the following activities: the excavation of an underground storage tank or piping which has stored volatile organic compounds (VOCs); the excavation or grading of soil containing VOC material including gasoline, diesel, crude oil, lubricant, waste oil, adhesive, paint, stain, solvent, resin, monomer, and/or any other material containing VOCs; the handling or storage of VOC-contaminated soil [soil which registers >50 parts per million (ppm) or greater using an organic vapor analyzer (OVA) calibrated with hexane] at or from an excavation or grading site; or the treatment of VOC-contaminated soil at a facility. SCAQMD Rule 1166 further requires that a copy of the approved mitigation plan be on site during the entire excavation period and that the SCAQMD executive officer be notified at least 24 hours prior to excavation. In accordance with SCAQMD Rule 1166, monitoring for VOC contamination would occur at least once every 15 minutes and VOC concentration readings would be recorded. When VOC-contaminated soil is detected, the approved mitigation plan would be implemented. Therefore, compliance with existing regulations would ensure the Project would not create a significant hazard to the public or the

⁴⁶ South Coast Air Quality Management District. Rules and Compliance, Rule 1166, www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1166.pdf?sfvrsn=4, accessed December 23, 2019.

environment through reasonably foreseeable upset and accident conditions involving the handling and disposal of contaminated soil that may be encountered onsite.

In addition, according to the Phase I ESAs for the properties within the Project Site, there is no potential vapor encroachment conditions. Furthermore, there are no visible signs of mold on the Project Site and the potential for radon to be a concern is low.

Based on the above, construction of the Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and impacts associated with hazardous waste generation, handling, and disposal during construction would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

Underground and Aboveground Storage Tanks

According to the Phase I ESA for 6450 Sunset Boulevard, no evidence of existing USTs or ASTs was observed on the Project Site. No other records were found that indicate the presence of any remaining USTs within the areas proposed for construction. Notwithstanding, in the unlikely event that USTs are found, suspect materials would be removed in accordance with all applicable federal, state, and local regulations. For example, if underground storage tanks are encountered, prior to removal, applicable permits would be obtained from the LAFD. Therefore, with compliance with applicable regulations, the Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and impacts related to the potential removal of USTs during construction would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

Asbestos-Containing Materials

Asbestos was widely used in the building industry starting in the late 1800s and up until the late 1970s for a variety of uses, including acoustic and thermal insulation and fireproofing, and is often found in ceiling and floor tiles, linoleum, pipes, structural beams, and asphalt. Any building, structure, surface asphalt driveway, or parking lot constructed prior to 1979 could contain asbestos or Asbestos Containing Materials (ACMs). Based on the age of the on-site buildings (i.e., constructed as early as 1940), ACMs may be present on-site. Thus, in accordance with SCAQMD Rule 1403, the Project Applicant would be required to conduct a comprehensive asbestos survey prior to demolition, subject to approval by LADBS. In the event that ACMs are found within areas proposed for demolition, suspect materials would be removed by a certified asbestos abatement contractor in accordance with applicable regulations. With compliance with relevant regulations and requirements, Project construction activities would not expose people to a substantial risk resulting from the release of asbestos fibers into the environment. Therefore, with compliance with applicable regulations, the Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Impacts related to the removal of ACMs during demolition would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

Lead-Based Paint

Lead is a naturally occurring element and heavy metal that was widely used as a major ingredient in most interior and exterior oil-based paints prior to 1950. Lead compounds continued to be used as corrosion inhibitors, pigments, and drying agents from the early 1950s to 1972, when the Consumer Products Safety Commission specified limits on lead content in such products. Based on the age of the on-site buildings, lead-based paint (LBP) may be present on-site. In the event that LBP is found within areas proposed for demolition, suspect materials would be removed in accordance with procedural requirements and regulations for the proper removal and disposal of LBP prior to demolition activities, including standard handling and disposal practices pursuant to OSHA regulations. Example procedural requirements include the use of respiratory protection devices while handling lead-containing materials, containment of lead or materials containing lead on the Project Site or at locations where construction activities are performed, and certification of all consultants and contractors conducting activities involving LBP or lead hazards. With compliance with relevant regulations and requirements, Project construction activities would not expose people to a substantial risk resulting from the release of LBP into the environment. Therefore, with compliance with applicable regulations, the Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Impacts related to the removal of LBP during demolition would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

Polychlorinated Biphenyls

Typical sources of polychlorinated biphenyls (PCBs) include electrical transformer cooling oils, fluorescent light fixture ballasts, and hydraulic oil. In 1976, the USEPA banned the manufacture and sale of PCB-containing transformers. According to the Phase I ESAs for the properties on the Project Site, one electrical transformer was observed at 6450 Sunset Boulevard that appeared to be in good condition with no visible evidence of leakage. No other equipment likely to contain PCBs was observed on the Project Site. In the event that PCBs are found within areas proposed for demolition, suspect materials would be removed in accordance with all applicable federal, state, and local regulations. Therefore, with compliance with applicable regulations, the Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and impacts related to the removal of PCBs during demolition would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

Oil Wells and Methane

As described above, based on a review of the Munger oil and gas field maps and CalGEM Well Finder GIS, the Project Site is not located within any oil or gas field, and no oil or natural gas wells were located on the Project Site. The Project Site is also not found to be located within a designated Methane Zone or Methane Buffer Zone mapped by the City.

Operation

Hazardous Waste Generation, Handling, and Disposal

Operation of the Project would involve the routine use of small quantities of potentially hazardous materials typical of those used in commercial uses. As stated previously, activities involving the handling and disposal of hazardous wastes would occur in compliance with all applicable federal, state, and local requirements concerning the handling and disposal of hazardous waste. Therefore, with compliance with applicable regulations and requirements, operational activities would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and impacts associated with hazardous waste generation, handling, and disposal during operation of the Project would be less than significant. No further analysis of this topic in an EIR is required.

Underground and Aboveground Storage Tanks

Development of the Project includes commercial uses. The Project does not propose the installation of underground or aboveground storage tanks. As such, operation of the Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and impacts associated with underground and aboveground storage tanks during operation of the Project would be less than significant. No further analysis of this topic in an EIR is required.

Asbestos-Containing Materials

Development of the Project would include the use of commercially-sold construction materials that would not include asbestos or ACMs. Project operation is, therefore, not anticipated to increase the occurrence of friable asbestos or ACMs at the Project Site. Therefore, operation of the Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and no impacts associated with asbestos or ACMs during operation of the Project would occur. No further analysis of this topic in an EIR is required.

Lead-Based Paint

Development of the Project would include the use of commercially-sold construction materials that would not include LBP. Project operation is, therefore, not anticipated to increase the occurrence of LBP at the Project Site. Operation of the Project would not expose people to LBP as no LBPs would be used. Thus, the Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and impacts associated with LBP during operation of the Project would not occur. No further analysis of this topic in an EIR is required.

Polychlorinated Biphenyls

In accordance with existing regulations which ban the manufacture of PCBs, the new electrical systems to be installed as part of the Project would not contain PCBs. Therefore, during operation of the Project, maintenance of such electrical systems would not expose people to PCBs and operation of the Project

would not expose people to any risk resulting from the release of PCBs in the environment. Therefore, the Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and no impacts related to PCBs during Project operation would occur. No further analysis of this topic in an EIR is required.

Oil Wells and Methane Gas

The Project does not include the installation of oil wells. As such, operation of the Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and no impacts associated with oil wells during operation would occur. The Project is not within a Methane Zone or Methane Buffer Zone identified by the City. Therefore, there is a negligible risk of subsurface methane release. No further analysis of these topics in an EIR is required.

c. Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less Than Significant Impact. The Blessed Sacrament School is located within 0.25 mile of the Project Site. Although the Project would have the potential to emit and would involve the handling of hazardous materials, particularly during construction activities, all such activities involving the handling and disposal of hazardous materials and wastes would occur in compliance with all applicable federal, state, and local requirements concerning the handling and disposal of hazardous waste. Therefore, with compliance with relevant regulations and requirements, the Project would not create a significant hazard to nearby schools, and impacts regarding the Project's emission or handling of hazardous materials and wastes would be less than significant. No mitigation measures and no further analysis of this topic in an EIR are required.

d. Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment?

Less Than Significant Impact. Section 65962.5 of the California Government Code requires the California Environmental Protection Agency to develop and update annually the Cortese List, which is a "list" of hazardous waste sites and other contaminated sites. While Section 65962.5 makes reference to the preparation of a "list," many changes have occurred related to web-based information access since 1992 and information regarding the Cortese List is now compiled on the websites of multiple agencies. The Phase I ESA for the Project Site included the results of consultation with local agency representatives and a review of available federal, State, and local databases. The report documents findings of various federal, state, and local regulatory database searches regarding properties with known or suspected releases of hazardous materials or petroleum hydrocarbons.

Based on the Environmental Data Resources (EDR) database records search, portions of the Project Site are listed on hazardous materials or hazardous wastes databases. Specifically, the portion of the property located at 6450 Sunset Boulevard is listed on the HAZNET, CERS HAZ WASTE, SWEEPS UST, HIST UST, CA FID UST, RCRA, NonGen/NLR, FINDS and ECHO governmental databases. The property is listed within the UST databases due to the former gasoline service station that was previously

located on the property. The RCRA NonGen/NLR, FINDS and ECHO are related to the existing Staples and are typical for this business.

The portion of the Project Site located at 1428 Wilcox Avenue is listed under the HAZNET governmental environmental databases for Plain Rap Press. In addition, 1433 Cole Place is listed in the LAFD Historical UST database. A review of the LAFD records reported that the tank was not a UST, but rather an Above Ground Tank (AST). This tank was reported to be a 1,150-gallon atmospheric tank (pressure vessel) and interpreted to be containing LPG to fuel delivery trucks. Based on this information, there is a low potential for environmental impact to the Project from the reported AST. In regard to the HAZNET record, the hazardous waste tracking system has no records for disposal. It is likely that the EPA number was not used for disposal and currently is an inactive number and not a concern.

Therefore, based on the above, the Project would not have the potential to exacerbate current environmental conditions that would create a significant hazard, and impacts regarding this threshold would be less than significant. No mitigation measures are required. No further analysis of this topic in an EIR is required.

e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact. The Project Site is not located within an airport land use plan or within 2 miles of an airport. The closest airport to the Project Site is the Burbank Bob Hope Airport, located approximately 7.3 miles from the Project Site. Given the distance between the Project Site and the nearest airport, the Project would not result in a safety hazard or excessive noise for people residing or working in the Project area. Therefore, no impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

f. Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact. According to the Safety Element of the City of Los Angeles General Plan, the nearest disaster route to the Project Site is Santa Monica Boulevard, which is located approximately 0.5 mile south of the Project Site and the US-101, which is located less than 1 mile east of the Project Site. In addition, the Project Site is located just north of the LAPD's West Bureau and the Hollywood Community Police Station, which is located at 1358 N. Wilcox Avenue, and northwest of LAFD Fire Station No. 27, located at 1327 North Cole Avenue.^{47,48} While it is expected that the majority of construction activities for the Project would be confined to the Project Site, limited off-site Project-related construction activities may occur in adjacent street rights-of-way during certain periods of the day, which could potentially require temporary lane closures. However, if lane closures are necessary, the remaining travel lanes would be maintained in accordance with standard construction management plans that would be implemented to ensure adequate circulation and emergency access. The Project would coordinate

⁴⁷ Los Angeles Police Department, Hollywood Community Police Station, http://lapdonline.org/hollywood_community_police_station, accessed April 23, 2020.

⁴⁸ Los Angeles Fire Department, Fire Station No. 27, www.lafd.org/fire-stations/station-27, accessed August 20, 2020.

with LAPD and LAFD to address any potential construction related impacts on access to and from the nearby LAPD and LAFD stations. Accordingly, the Project would not impair implementation of or physically interfere with an adopted emergency response plan or evacuation plan. Impacts would be less than significant, and no mitigation measures are required.

Operation of the Project would generate traffic in the Project vicinity and would result in some modifications to site access. However, the Project would comply with LAFD access requirements and would not impede emergency access in the vicinity of the Project Site. Furthermore, as discussed above, the closest disaster routes include Santa Monica Boulevard and the US-101, which are both within 1 mile of the Project Site. Thus, the Project would not cause an impediment along the City's designated disaster routes or impair the implementation of the City's emergency response plan. Impacts related to the implementation of the City's emergency response plan would be less than significant, and no mitigation measures would be required. No further analysis of this topic in the EIR is required.

g. Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

No Impact. There are no wildlands located in the vicinity of the Project Site. The Project Site is not located within a City-designated Very High Fire Hazard Severity Zone, nor is it located within a City-designated fire buffer zone. Therefore, the Project would not exacerbate conditions that would subject people or structures to a significant risk of loss, injury, or death as a result of exposure to wildland fires. Furthermore, the Project would be developed in accordance with LAMC requirements pertaining to fire safety. Specifically, Section 57.106.5.2 of the LAMC provides that the Fire Chief shall have the authority to require drawings, plans, and sketches as necessary to identify access points, fire suppression devices and systems, utility controls, and stairwells; Section 57.118 of the LAMC establishes LAFD's fire/life safety plan review and LAFD's fire/life safety inspection for new construction projects; and Section 57.507.3.1 establishes fire water flow standards. Therefore, no impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

X. HYDROLOGY AND WATER QUALITY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i. Result in substantial erosion or siltation on- or off-site;	☐	☐	☒	☐
ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;	☐	☐	☒	☐
iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv. impede or redirect flood flows?	☐	☐	☐	☒
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

The following analysis is based, in part, on the *Sunset and Wilcox Hydrology and Water Quality Report* prepared for the Project by KPFF Consulting Engineers, dated August 2020 and included as Appendix IS-6 of this Initial Study.

a. Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less Than Significant Impact. As discussed below, the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality.

Surface Water Quality

Construction

As discussed in the Hydrology and Water Quality Report, construction activities such as earth moving, maintenance/operation of construction equipment, potential dewatering, and handling/storage/disposal of materials could contribute to pollutant loading in stormwater runoff. During Project construction, particularly during the grading phase, stormwater runoff from precipitation events could cause exposed and stockpiled soils to be subject to erosion and convey sediments into municipal storm drain systems. In addition, on-site watering activities to reduce airborne dust could contribute to pollutant loading in runoff. Pollutant discharges relating to the storage, handling, use and disposal of chemicals, adhesives, coatings, lubricants, and fuel could also occur. However, as Project construction would disturb more than one acre

of soil, the Project would be required to obtain coverage under the National Pollutant Discharge Elimination System (NPDES) Construction General Permit. In accordance with the requirements of the NPDES Construction General Permit, the Project would prepare and implement a site-specific Stormwater Pollution Prevention Plan (SWPPP) adhering to the California Stormwater Quality Association BMP Handbook. The SWPPP would specify Best Management Practices (BMPs) to be used during construction to manage stormwater and non-stormwater discharges. BMPs would include but not be limited to: erosion control, sediment control, non-stormwater management, and materials management BMPs. In addition, Project construction activities would occur in accordance with City grading permit regulations (Chapter IX, Division 70 of the LAMC), such as the preparation of an erosion control plan, to reduce the effects of sedimentation and erosion.

As previously discussed, the Project would include excavation of the Project Site to a depth of approximately 52 feet below grade on the north portion of the Project Site and 23 feet below grade on the southern portion of the Project Site. As provided in the Geotechnical Feasibility Report included in Appendix IS-3 of this Initial Study, groundwater was encountered at depths between 52.2 and 60.5 feet below grade. Therefore, groundwater may be encountered during Project construction and dewatering⁴⁹ could occur. If groundwater is encountered during construction, temporary pumps and filtration would be utilized in compliance with the NPDES permit. The temporary system would comply with all relevant NPDES requirements related to construction and discharges from dewatering operations. Furthermore, if dewatering is required, the treatment and disposal of the dewatered water would occur in accordance with the requirements of the Los Angeles Regional Water Quality Control Boards' (LARWQCB) Waste Discharge Requirements for Discharges of Groundwater from Construction and Project Dewatering to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties.

Based on the above, with compliance with NPDES requirements and City's grading permit regulations, construction of the Project would not result in discharges that would violate any surface water quality standard or waste discharge requirements. Thus, temporary construction-related impacts on surface water quality would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

Operation

Operation of the Project would introduce sources of potential stormwater pollution that are typical of commercial uses (e.g., cleaning solvents, pesticides for landscaping, and petroleum products associated with vehicular circulation areas). Stormwater runoff from precipitation events could potentially carry urban pollutants into municipal storm drains. Anticipated and potential pollutants generated by the Project include sediment, nutrients, pesticides, metals, pathogens, and oil and grease. Under the City's LID Ordinance, post-construction stormwater runoff from new projects must be infiltrated, evapotranspired, captured and used, and/or treated through high efficiency BMPs on-site for the volume of water produced by the 85th percentile storm event. Consistent with LID requirements to reduce the quantity and improve the quality of rainfall runoff that leaves the Project Site, the Project would include the installation of infiltration and capture and use BMPs as established by the LID Manual. The implementation of BMPs

⁴⁹ Dewatering operations are practices that discharge non-stormwater, such as groundwater, that must be removed from a work location into a drainage system to proceed with construction. Discharges from dewatering operations can contain high levels of fine sediments, which, if not properly treated, could lead to exceedance of the NPDES requirements.

required by the City's LID Ordinance would target the pollutants that could potentially be carried in stormwater runoff. As discussed in the Hydrology and Water Quality Report, since it appears there are currently no existing onsite BMPs, stormwater run-off during post-Project conditions would result in improved surface water quality. Therefore, with the incorporation of LID BMPs, operation of the Project would not result in discharges that would violate any surface water quality standards or waste discharge requirements. Impacts to surface water quality during operation of the Project would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

Groundwater Quality

Construction

As provided in the Geotechnical Feasibility Report included in Appendix IS-3 of this Initial Study, groundwater beneath the Project Site has been encountered between 52.2 and 60.5 feet below grade. Development of the Project would include excavations to a maximum depth of 52 feet below grade on the northern portion of the Project Site and 23 feet below grade on the southern portion of the Project Site. Therefore, as previously discussed, groundwater may be encountered during Project construction and dewatering operations could occur. In the event dewatering is required during Project construction, a temporary dewatering system would be installed and operated in accordance with NPDES requirements. Any discharge of groundwater during construction of the Project would occur pursuant to, and comply with, the applicable NPDES permit or industrial user sewer discharge permit requirements. Pursuant to such requirements, the groundwater extracted would be chemically analyzed to determine the appropriate treatment and/or disposal methods. As such, groundwater quality would not be impacted from these potential dewatering activities.

Other potential effects to groundwater quality could result from the presence of an underground storage tank (UST) or during the removal of a UST. While no UST or USTs are anticipated to be present within the Project Site, in the unlikely event that USTs are found, suspect materials would be removed in accordance with all applicable federal, state, and local regulations. For example, if underground storage tanks are encountered, prior to removal, applicable permits would be obtained from the LAFD to ensure handling and removal in accordance with applicable standards. Therefore, USTs would not pose a significant hazard on groundwater quality.

There are also risks associated with contaminated soil impacting groundwater quality. In the event contaminated soils are encountered during construction, the nature and extent of the contamination would be determined and appropriate handling, disposal, and/or treatment would be implemented in accordance with applicable regulatory requirements, including SCAQMD Rule 1166. Therefore, compliance with existing regulations would ensure the Project would not create a significant hazard to groundwater quality associated with potentially contaminated soil.

During on-site grading and building construction, hazardous materials, such as fuels, oils, paints, solvents, and concrete additives, could be used and would therefore require proper management and, in some cases, disposal. The management of any resultant hazardous wastes could increase the potential for hazardous materials to be released into groundwater. Compliance with all applicable federal, state, and local requirements concerning the handling, storage and disposal of hazardous waste, would reduce the potential for the construction of the Project to release contaminants into groundwater.

Based on the above, construction of the Project would not result in discharges that would violate any groundwater quality standard or waste discharge requirements. Therefore, construction-related impacts on groundwater quality would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

Operation

The Project does not include the installation or operation of water wells, or any extraction or recharge system that is in the vicinity of the coast, an area of known groundwater contamination or seawater intrusion, a municipal supply well or spreading ground facility.

Operational activities that could affect groundwater quality include spills of hazardous materials and leaking underground storage tanks. Surface spills from the handling of hazardous materials most often involve small quantities and are cleaned up in a timely manner, thereby resulting in little threat to groundwater. Other types of risks such as leaking USTs have a greater potential to affect groundwater. The Project would not include the installation of USTs that would have the potential to expose groundwater to contaminants. In addition, the Project would comply with all applicable existing regulations that would prevent the Project from affecting or expanding any potential areas of contamination, increasing the level of contamination, or causing regulatory water quality standards at an existing production well to be violated, as defined in the California Code of Regulations, Title 22, Division 4, Chapter 15 and the Safe Drinking Water Act. Therefore, operation of the Project would not result in discharges that would violate any groundwater quality standard or waste discharge requirements. The Project's potential impact on groundwater quality during operation would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

b. Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less Than Significant Impact. As provided by the following analysis, the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin.

Construction

No water supply wells are located at the Project Site or within 1 mile of the Project Site that could be impacted by construction, nor would the Project include the construction of water supply wells. Development of the Project would include excavations to a maximum depth of 52 feet below ground surface on the northern portion of the Project Site and 23 feet below ground surface on the southern portion of the Project Site. As provided in the Geotechnical Feasibility Report included in Appendix IS-3 of this Initial Study, groundwater was encountered at varying depth between 52.2 and 60.5 feet. Therefore, groundwater may be encountered during Project construction and dewatering could occur. In the event dewatering is required, due to the limited and temporary nature of dewatering operations, impacts to groundwater supplies and management of the basin are not considered to be significant. Furthermore, the Project Site is virtually impervious (approximately 96.2 percent) in the existing condition and there is minimal groundwater recharge potential. Therefore, construction of the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project

may impede sustainable groundwater management of the basin. Impacts on groundwater supplies during construction of the Project would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

Operation

As previously discussed, the Project Site is currently approximately 96.2 percent impervious. The Project would develop hardscape and structures that cover virtually the entire Project Site with impervious surfaces, and therefore the groundwater recharge potential will remain minimal. Furthermore, the Project's BMPs would control stormwater runoff with no increase in runoff resulting from the Project. Also, the Project would not include the installation of water supply wells and there are no existing wells or spreading ground within 1 mile of the Project Site. Therefore, the Project would not decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

c. Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i. Result in substantial erosion or siltation on- or off-site;

Less Than Significant Impact. The Project Site is not crossed by any water courses or rivers. Construction activities for the Project would include demolition of existing structures and hardscape and the excavation and removal of soil. These activities have the potential to temporarily alter existing drainage patterns and flows on the Project Site by exposing underlying soils, modifying flow direction, and making the Project Site temporarily more permeable. Exposed and stockpiled soils could be subject to erosion and conveyance into nearby storm drains during storm events. In addition, on-site watering activities to reduce airborne dust could contribute to pollutant loading in runoff. However, as discussed above, the Project would implement a SWPPP that specifies BMPs and erosion control measures to be used during construction to manage runoff flows. These BMPs are designed to contain stormwater or construction watering on the Project Site such that runoff does not impact off-site drainage facilities or receiving waters. In addition, Project construction activities would occur in accordance with City grading permit regulations that require necessary measures, plans, and inspections to reduce sedimentation and erosion. Thus, through compliance with all NPDES General Construction Permit requirements, including preparation of a SWPPP and implementation of BMPs, as well as compliance with applicable City grading permit regulations, construction activities for the Project would not substantially alter the Project Site drainage patterns in a manner that would result in substantial erosion or siltation on- or off-site. As such, construction-related impacts would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

As previously discussed, the Project Site is currently comprised of approximately 96.2 percent impervious surfaces under existing conditions. At buildout of the Project, the Project Site would be comprised of approximately 98.6 percent impervious areas. Accordingly, similar to existing conditions, there would be a limited potential for erosion or siltation to occur from exposed soils or large expanses of pervious areas. Therefore, the Project would not substantially alter the existing drainage pattern of the Project Site or surrounding area such that substantial erosion or siltation on-site or off-site would occur. Operational

impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;

Less Than Significant Impact. There are no streams or rivers that cross the Project Site. As previously discussed, construction activities have the potential to temporarily alter existing drainage patterns and flows on the Project Site by exposing the underlying soils, modifying flow direction, and making the Project Site temporarily more permeable. As discussed above in Response to Checklist Question X.a, the Project would implement a SWPPP that specifies BMPs and erosion control measures used during construction to manage runoff flows. These BMPs are designed to contain stormwater or construction watering on the Project Site such that runoff does not impact off-site drainage facilities or receiving waters. Thus, through compliance with all NPDES General Construction Permit requirements and compliance with applicable City grading permit regulations, construction activities for the Project would not substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site. As such, construction-related impacts would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

As previously discussed, the Project Site is currently comprised of approximately 96.2 percent impervious surfaces under existing conditions. At buildout of the Project, the Project Site would be comprised of approximately 98.6 percent impervious areas. As detailed in the Hydrology and Water Quality Report, a comparison of the pre- and post-Project peak flow rates indicates a 0.1 percent increase in stormwater runoff from the Project Site. However, as the Project Site currently does not have BMPs for the management of pollutants or runoff, the Project BMPs would control stormwater runoff and ultimately result in a minor decrease in runoff compared to existing conditions. As such, the Project would not substantially increase the rate or amount of surface runoff in a manner that would result in flooding on-site or off-site. Operational impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

Less Than Significant Impact. As discussed above, the Project would result in a minimal increase in the imperviousness of the Project Site. As detailed in the Hydrology and Water Quality Report, a comparison of the pre- and post-Project peak flow rates indicates a 0.1 percent increase in stormwater runoff from the Project Site. However, as the Project Site currently does not have BMPs for the management of pollutants or runoff, the Project BMPs would control stormwater runoff and ultimately result in a minor decrease in runoff compared to existing conditions. Consequently, the Project would decrease the amount of stormwater runoff discharging into the existing storm drainage infrastructure. In addition, the implementation of BMPs required by the City's LID Ordinance would target the pollutants that could potentially be carried in stormwater runoff. Therefore, the Project would not create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

iv. Impede or redirect flood flows?

No Impact. The Project Site is not located within a 100-year flood hazard area as mapped by the Federal Emergency Management Agency (FEMA) or by the City.^{50,51} Thus, the Project would not impede or redirect flood flows. No impacts would occur, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

d. In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

Less Than Significant Impact. As discussed above, the Project Site is not located within a 100-year flood hazard area as mapped by FEMA or by the City. In addition, the Safety Element of the City of Los Angeles General Plan does not map the Project Site as being located within a tsunami hazard area. Therefore, no tsunami or tsunami events would be expected to impact the Project Site. Additionally, there are no standing bodies of water near the Project Site that may experience a seiche.

Earthquake-induced flooding can result from the failure of dams or other water-retaining structures resulting from earthquakes. The Safety Element of the City of Los Angeles General Plan shows that the Project Site is located in the potential inundation area for the Hollywood Reservoir, which is held by the Mulholland Dam.⁵² The Mulholland Dam is a Los Angeles Department of Water and Power (LADWP) dam located in the Hollywood Hills. The Mulholland Dam was built in 1924 and designed to hold 2.5 billion gallons of water. Dam safety regulations are the primary means of reducing damage or injury due to inundation occurring from dam failure. The Mulholland Dam, as well as others in California, are continually monitored by various governmental agencies (such as the State of California Division of Safety of Dams and the U.S. Army Corps of Engineers) to guard against the threat of dam failure. Specifically, the California Division of Safety of Dams regulates the siting, design, construction, and periodic review of all dams in the State. In addition, LADWP operates the dams in the Project Site area and mitigates the potential for over flow and seiche hazard through control of water levels and dam wall height. These measures include seismic retrofits and other related dam improvements completed under the requirements of the 1972 State Dam Safety Act. The City's Local Hazard Mitigation Plan, which was adopted in July 2011, provides a list of existing programs, proposed activities and specific projects that may assist the City in reducing risk and preventing loss of life and property damage from natural and human-cause hazards including dam failure. The Hazard Mitigation Plan evaluation of dam failure vulnerability classifies dam failure as a moderate risk. Given the oversight by the Division of Safety of Dams, including regular inspections, and the LADWP's emergency response program, the potential for substantial adverse impacts related to inundation at the Project Site as a result of dam failure would be less than significant. Additionally, as discussed above, the Project would include new structural BMPs throughout the Project Site which would reduce the amount of pollutants entering the stormwater system and groundwater. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

⁵⁰ Federal Emergency Management Agency, Flood Insurance Rate Maps, Panel Numbers 06037C1636G, effective December 21, 2018.

⁵¹ Los Angeles General Plan Safety Element, November 1996, Exhibit F, 100-Year & 500-Year Flood Plains, p. 57.

⁵² City of Los Angeles, Safety Element of the Los Angeles City General Plan, Exhibit G, November 26, 1996, p. 59.

e. Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Less Than Significant Impact. Under Section 303(d) of the Clean Water Act, states are required to identify water bodies that do not meet their water quality standards. Biennially, the Los Angeles Regional Water Quality Control Board (LARWQCB) prepares a list of impaired waterbodies in the region, referred to as the 303(d) list. The 303(d) list outlines the impaired waterbody and the specific pollutant(s) for which it is impaired. All waterbodies on the 303(d) list are subject to the development of a Total Maximum Daily Load (TMDL). As discussed in the Hydrology and Water Quality Report, the Project Site is located within the Ballona Creek Watershed. According to the State Water Resources Control Board (SWRCB), constituents of concern listed for the Ballona Creek Watershed under California’s Clean Water Act Section 303(d) List include cadmium (sediment), chlordane (tissue and sediment), copper (dissolved), cyanide, lead, PCBs, silver, toxicity, trash, viruses (enteric), and zinc.

The County of Los Angeles, the City of Los Angeles, and all other cities in the Los Angeles Watershed are responsible for the implementation of watershed improvement plans or Enhanced Watershed Management Programs (EWMP) to improve water quality and assist in meeting the TMDL milestones. The objective of the EWMP Plan for the Ballona Creek is to determine the network of control measures (often referred to as best management practices) that will achieve required pollutant reductions while also providing multiple benefits to the community and leveraging sustainable green infrastructure practices.

Potential pollutants generated by the Project would be typical of commercial and office land uses and may include sediment, nutrients, pesticides, trash and debris, oil and grease, and metals. The implementation of BMPs required by the City’s LID Ordinance would target these pollutants that could potentially be carried in stormwater runoff. Since the existing Project Site does not have any structural or LID BMPs to treat or infiltrate stormwater, implementation of the LID features proposed as part of the Project would result in an improvement in surface water quality runoff as compared to existing conditions. As such, the Project would not introduce new pollutants or an increase in pollutants that could conflict with or obstruct any water quality control plans for the Ballona Creek Watershed. With compliance with existing regulatory requirements and implementation of LID BMPs, the Project would not conflict with or obstruct implementation of a water quality control plan or a sustainable groundwater management plan. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

XI. LAND USE AND PLANNING

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Physically divide an established community?	☐	☐	☒	☐
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☒	☐	☐	☐

a. Would the project physically divide an established community?

Less than Significant Impact. As discussed in Section 3, Project Description, of this Initial Study, the Project Site is bound by Sunset Boulevard to the north, Cole Place to the east, De Longpre Avenue to the south, and Wilcox Avenue to the west. The Project Site is currently developed with three commercial buildings and surface parking. The Project Site is within a vibrant commercial area in the Hollywood Community Plan Area. The area surrounding the Project Site is developed primarily with a mix of low- to high-intensity residential, commercial, and mid-rise office buildings, which vary widely in building style and period of construction. Land uses adjacent to the Project Site include the Rise Hollywood mixed-use development, the Los Angeles Police Department Hollywood Station, and Los Angeles Fire Department Station 27 south of the Project Site, the 14-story CNN building east of the Project Site, and an 11-story office building located west of the Project Site.

The Project would remove and replace the existing commercial buildings and surface parking areas on the Project Site with a new commercial development containing restaurant and office uses. These uses would be consistent with other office and commercial developments located adjacent to and in the general vicinity of the Project Site. All proposed development would also occur within the boundaries of the Project Site, including a 2,275-square-foot merger of the public right-of-way along a portion of Wilcox Avenue. In addition, the Project does not propose a freeway or other large infrastructure that would divide the existing surrounding community. Therefore, the Project would not physically divide an established community. Impacts related to the physical division of an established community would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

b. Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Potentially Significant Impact. As discussed in Section 3, Project Description, of this Initial Study, the Project requires several discretionary approvals including, but not limited to, a Height District Change, a Vesting Conditional Use Permit, a Master Conditional Use Permit, a Site Plan Review, Project Permit Compliance Review, and a Vesting Tentative Tract Map. The Project could potentially conflict with land use plans, policies or regulations that were adopted for the purpose of avoiding or mitigating an environmental effect. Therefore, further evaluation of this topic in an EIR is required.

XII. MINERAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

a. Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No Impact. No mineral extraction operations currently occur on the Project Site. Furthermore, the Project Site is not located within a City-designated Mineral Resource Zone where significant mineral deposits are known to be present, or within a mineral producing area as classified by the California Geologic Survey.^{53,54,55} The Project Site is also not located within a City-designated oil field or oil drilling area.⁵⁶ Therefore, the Project would not result in the loss of availability of a mineral resource or a mineral resource recovery site. No impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

b. Would the project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. See Response to Checklist Question XII.a, Mineral Resources, above.

XIII. NOISE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project result in:				
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☒	☐	☐	☐
b. Generation of excessive groundborne vibration or groundborne noise levels?	☒	☐	☐	☐

⁵³ City of Los Angeles, Department of City Planning, Los Angeles Citywide General Plan Framework, Draft Environmental Impact Report, January 19, 1995. Figure GS-1.

⁵⁴ State of California Department of Conservation, California Geologic Survey, Aggregate Sustainability in California, 2012.

⁵⁵ City of Los Angeles, Conservation Element of the Los Angeles City General Plan, January 2001, Exhibit A, p. 86.

⁵⁶ City of Los Angeles, Safety Element of the Los Angeles City General Plan, Exhibit E, November 26, 1996, p. 55.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

a. Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Potentially Significant Impact. During construction activities associated with the Project, the use of heavy equipment (e.g., bulldozers, backhoes, cranes, loaders, etc.) would generate noise on a short-term basis. In addition, noise levels from on-site sources may increase during operation of the Project. Furthermore, traffic attributable to the Project has the potential to increase noise levels along adjacent roadways. Therefore, further evaluation of this topic will be provided in the EIR.

b. Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Potentially Significant Impact. Construction of the Project could generate groundborne noise and vibration associated with demolition, site grading and excavation, other clearing activities, the installation of building footings, and construction truck travel. As such, the Project would have the potential to generate excessive groundborne vibration and noise levels during short-term construction activities. Therefore, further evaluation of this topic will be provided in the EIR. Due to the proposed land uses and vibration characteristics (rapid attenuation based on distance from source), operation of the Project would not be anticipated to result in operational vibration impacts. However, this topic will be discussed further in the EIR.

c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The Project Site is not located in the vicinity of a private airstrip, an airport land use plan, or within 2 miles of an airport. The closest airport to the Project Site is Bob Hope Airport, located approximately 7.3 miles from the Project Site. As such, the Project would not expose people residing or working in the Project area to excessive noise levels. Therefore, no impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

XIV. POPULATION AND HOUSING

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

a. Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less Than Significant Impact. The Project is a commercial development consisting of commercial and office uses. Since the Project does not propose a housing component, it would not directly induce a new residential population that would contribute to population growth in the vicinity of the Project Site. Additionally, while construction of the Project would create temporary construction-related jobs, the work requirements of most construction projects are highly specialized so that construction workers remain at a job site only for the time in which their specific skills are needed to complete a particular phase of the construction process. Thus, Project-related construction workers would not be anticipated to relocate their household's place of residence as a consequence of working on the Project and, therefore, no new permanent residents would be generated during construction of the Project.

Operation of the Project would generate new employment positions, which could result in increased population growth in the area. As discussed in Section 3, Project Description, of this Initial Study, the Project includes the development of a 15-story commercial building with a total floor area of 443,418 square feet consisting of 431,032 square feet of office space and 12,386 square feet of ground floor restaurant space. However, to provide a conservative analysis of the Project's environmental impacts, this Initial Study assumes the approximately 1,800 square feet of outdoor covered patio areas adjacent to the ground floor restaurant space along Sunset Boulevard would count as floor area, resulting in a total floor area of 445,218 square feet, including 431,032 square feet of office space and 14,186 square feet of restaurant space. As the Project would remove the existing approximately 26,261 square feet of office and retail uses, the Project, under this conservative analysis, would result in a net increase in floor area of 418,957 square feet. Based on employee generation rates promulgated by the City of Los Angeles VMT Calculator Documentation, the Project's net increase in floor area of 418,957 square feet would generate approximately 1,710 net new employees.⁵⁷ As noted above, the Project would not introduce new homes

⁵⁷ Los Angeles Department of Transportation and Los Angeles Department of City Planning, City of Los Angeles VMT Calculator Documentation, May 2020, Table 1. Based on the "General Office" employee generation rate of 4 employees per 1,000 square foot applied to the proposed (431,032 square feet) and existing (9,329 square feet) office uses, the "High-Turnover-Sit-Down Restaurant" employee generation rate of 4 employees per 1,000 square foot applied to the (Footnote continued on next page)

at the Project Site and would therefore not result in a direct population growth in the area. While some of the new employment positions could be filled by persons who would relocate to the vicinity of the Project Site, this potential increase in population would not be substantial since not all employees would move close to the Project Site. Specifically, some employment opportunities may be filled by people already residing in the vicinity of the Project Site and other persons would commute to the Project Site from other communities in and outside of the City.

According to SCAG's 2016–2040 RTP/SCS, the employment forecast for the City of Los Angeles Subregion in 2020 is approximately 1,831,457 employees.⁵⁸ As projected by the 2016–2040 RTP/SCS, in 2026, the projected occupancy year of the Project, the City of Los Angeles Subregion is anticipated to have approximately 1,932,750 employees.⁵⁹ Therefore, the projected employment growth in the City between 2020 and 2026 based on SCAG's 2016–2040 RTP/SCS is approximately 101,293 employees. The Project's 1,710 estimated net new employees would constitute approximately 1.7 percent of the employment growth forecasted in SCAG's 2016–2040 RTP/SCS between 2020 and 2026. According to SCAG's 2020–2045 RTP/SCS, the employment forecast for the City of Los Angeles Subregion in 2020 is approximately 1,887,969 employees.⁶⁰ In 2026, the projected occupancy year of the Project, the City of Los Angeles Subregion is anticipated to have approximately 1,947,972 employees.⁶¹ Therefore, the projected employment growth in the City between 2020 and 2026 based on SCAG's 2020–2045 RTP/SCS is approximately 60,003 employees. The Project's 1,710 estimated net new employees would constitute approximately 2.85 percent of the employment growth forecasted between 2020 and 2026.

Overall, the provision of new jobs would constitute a small percentage of employment growth and would not be considered "unplanned growth" and would not produce such a high quantity of new jobs that it would have the possibility to induce unplanned residential growth. Therefore, the Project would not cause an exceedance of SCAG's employment projections or induce substantial indirect population or housing growth related to Project-generated employment opportunities. As such, given that the Project would not directly contribute to substantial unplanned population growth in the Project area through the development of residential uses and as some of the employment opportunities generated by the Project would be filled by people already residing in the vicinity of the Project Site or who would commute, the potential growth associated with Project employees who may relocate their place of residence would not be substantial. Further, as the Project would be located in a highly developed area with an established network of roads

proposed restaurant uses (14,186 square feet), and the "General Retail" employee generation rate of 2 employees per 1,000 square foot applied to the existing 16,932 square feet of retail uses to be removed.

⁵⁸ Based on a linear interpolation of 2012 and 2040 data. The 2020 extrapolated value is calculated using SCAG's 2012 and 2040 values to find the average increase between years and then applying that annual increase to 2020: $((2,169,100 - 1,696,400) \div 28) * 8) + 1,696,400 = 1,831,457$.

⁵⁹ Based on a linear interpolation of 2012 and 2040 data. The 2026 extrapolated value is calculated using SCAG's 2012 and 2040 values to find the average increase between years and then applying that annual increase to 2026: $((2,169,100 - 1,696,400) \div 28) * 14) + 1,696,400 = 1,932,750$.

⁶⁰ SCAG. ConnectSoCal (2020–2045 RTP/SCS), Demographics and Growth Forecast Appendix, Table 14, page 35. Based on a linear interpolation of SCAG's employment data for 2016 and 2045 data. The 2020 extrapolated value is calculated using SCAG's 2016 and 2045 values to find the average increase between years and then applying that annual increase to 2020: $((2,135,900 - 1,848,300) \div 29) * 4) + 1,848,300 = 1,887,969$.

⁶¹ SCAG. ConnectSoCal (2020–2045 RTP/SCS), Demographics and Growth Forecast Appendix, Table 14, page 35. Based on a linear interpolation of 2016 and 2045 data. The 2026 extrapolated value is calculated using SCAG's 2016 and 2045 values to find the average increase between years and then applying that annual increase to 2026: $((2,135,900 - 1,848,300) \div 29) * 10) + 1,848,300 = 1,947,472$.

and other urban infrastructure, the Project would not require the extension of such infrastructure in a manner that would indirectly induce substantial population growth.

Based on the above, the Project would not induce substantial population or housing growth. Impacts would be less than significant and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

b. Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact. As no housing currently exists on the Project Site, the Project would not displace any persons or existing housing. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

XV. PUBLIC SERVICES

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Fire protection?	☒	☐	☐	☐
b. Police protection?	☒	☐	☐	☐
c. Schools?	☐	☐	☒	☐
d. Parks?	☐	☐	☒	☐
e. Other public facilities?	☒	☐	☐	☐

a. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection services?

Potentially Significant Impact. The LAFD provides fire protection and emergency medical services for the Project Site. The Project would increase the building square footage on Project Site and introduce a high-rise structure, which has the potential to result in an increased demand for fire protection services and associated facilities. Therefore, further analysis of this issue will be included in the EIR.

b. Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental

facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection services?

Asbestos-Containing Materials

Potentially Significant Impact. Police protection for the Project Site is provided by the City of Los Angeles Police Department. The Project would increase the building square footage on the Project Site and introduce additional commercial and new office uses to the Project Site, which could result in the need for additional police protection services. Therefore, the EIR will provide further analysis of this issue.

c. Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives for schools?

Less Than Significant Impact. The Project Site is located within the boundaries of the Los Angeles Unified School District (LAUSD). LAUSD is divided into six local districts. The Project Site is located in Local District–West. As previously discussed, the Project does not propose the development of residential uses. Therefore, implementation of the Project would not result in a direct increase in the number of students within the service area of LAUSD. In addition, the number of students that may be indirectly generated by the Project that could attend LAUSD schools serving the Project Site would not be anticipated to be substantial because not all employees of the Project are likely to reside in the vicinity of the Project Site. Furthermore, pursuant to Senate Bill 50, the Project Applicant would be required to pay development fees for schools to LAUSD prior to the issuance of building permits. Pursuant to Government Code Section 65995, the payment of these fees is considered mitigation of Project-related school impacts. Thus, the Project would not result in the need for new or altered school facilities. Therefore, impacts would be less than significant, and no mitigation measures are required. No further analysis of this issue in an EIR is required.

d. Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for park services?

Less Than Significant Impact. Parks and recreational facilities in the vicinity of the Project Site are primarily operated and maintained by the Los Angeles Department of Recreation and Parks. Nearby parks and recreational facilities within an approximate 2-mile radius of the Project Site include: Selma Park (0.2 mile northwest); De Longpre Park (0.3 mile southeast); Hollywood Pool and Recreation Center (0.4 mile south); Yucca Park and Community Center (0.49 mile north); Las Palmas Senior Citizen Center (0.59 mile north); Carlton Way Park (0.7 mile east); Dorothy and Benjamin Park (0.8 mile Franklin–Ivar Park (0.7 mile northeast); Seily Rodriguez Park (1.0 mile southeast); Runyon Can Park and Dog Park (1.15 miles north); Poinsettia Recreation Center (1.32 miles south); La Mirada Park (1.37 miles east); Wattles Mansion and Gardens and Garden Park (1.47 miles northeast); Lemon Grove Recreation Center (1.71 miles east); and Robert L. Burns Park (1.73 miles south).

As previously discussed, the Project does not propose the development of residential uses. Therefore, implementation of the Project would not result in on-site residents who would utilize nearby parks and/or recreational facilities. As discussed above, based on employee generation rates promulgated by the City of Los Angeles VMT Calculator Documentation,⁶² the Project would generate approximately 1,710 net new employees. These new employment opportunities that could be generated by the Project may be filled, in part, by employees already residing in the vicinity of the Project Site who already utilize existing parks and recreational facilities. Therefore, only a fraction of the new employees generated by the Project could create a demand for parks and recreational facilities. The Project would include several open space areas consisting of private landscaped outdoor terraces on the various upper levels, which would offset the demand for parks and recreational facilities for the new employees. While it is possible that some of the new employees that could be generated by the Project may utilize local parks and recreational facilities, this increased demand would be negligible due to the amount of time it would take for employees to access off-site local parks. In addition, Project employees would be more likely to use parks near their homes during non-work hours. Additionally, the new employment opportunities that would be generated by the Project may be filled, in part, by employees already residing in the vicinity of the Project Site who already utilize existing parks and recreational facilities. Therefore, while the Project's employment opportunities could have the potential to indirectly increase the population of the Hollywood Community Plan area, new demand for public parks and recreational facilities associated with Project development would be limited. Thus, impacts on parks would be less than significant, and no mitigation measures are required. No further analysis of this issue in an EIR is required.

e. Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for other public facilities?

Potentially Significant Impact. Other public facilities provided to the Project Site include library services and use of public roadways.

The Los Angeles Public Library (LAPL) provides library services to the City through its Central Library, eight regional branch libraries, and 64 neighborhood branch libraries, as well as through Web-based resources. The Project area is served by existing LAPL facilities including the Will and Ariel Durant Branch Library (1.0 mile west), Francis Howard Goldwyn–Hollywood Regional Library (0.3 mile north), and the John C. Fremont Branch Library (1.2 miles south). As previously discussed, the Project does not propose the development of residential uses. Therefore, implementation of the Project would not result in a direct increase in the number of residents within the service population of the local LAPL facilities. Notwithstanding, the Project may generate an indirect demand for library services, and further consultation with the LAPL is required. As such, this topic will be further evaluated in the EIR.

⁶² Los Angeles Department of Transportation and Los Angeles Department of City Planning, City of Los Angeles VMT Calculator Documentation, May 2020, Table 1. Based on the "General Office" employee generation rate of 4 employees per 1,000 square foot applied to the proposed (431,032 square feet) and existing (9,329 square feet) office uses, the "High-Turnover-Sit-Down Restaurant" employee generation rate of 4 employees per 1,000 square foot applied to the proposed restaurant uses (14,186 square feet), and the "General Retail" employee generation rate of 2 employees per 1,000 square foot applied to the existing 16,932 square feet of retail uses to be removed.

During construction and operation of the Project, roads would continue to be utilized to access the Project Site. As discussed below in Checklist Question XVI.a, further analysis of the potential for the Project to result in a significant increase in the number of vehicle trips on local roadways will be evaluated in the transportation section of the EIR. Any necessary improvements to local roadways associated with development of the Project will also be identified in the transportation section of the EIR.

XVI. RECREATION

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☒

a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated?

Less Than Significant Impact. As discussed in the Response to Checklist Question XV(d) above, the Project does not propose the development of residential uses which would create a demand on nearby parks and/or recreational facilities. As discussed above, based on employee generation rates promulgated by the City of Los Angeles VMT Calculator Documentation,⁶³ the Project would generate approximately 1,710 net new employees. These new employment opportunities that could be generated by the Project may be filled, in part, by employees already residing in the vicinity of the Project Site who already utilize existing parks and recreational facilities. Therefore, only a fraction of the new employees generated by the Project could create a demand for parks and recreational facilities. While it is possible that some of these employees may utilize local parks and recreational facilities, such use would be anticipated to be limited due to work obligations and the amount of time it would take for employees to access off-site local parks and recreational facilities. In addition, Project employees would be more likely to use parks near their homes during non-work hours. The Project would also include several open space areas consisting of private landscaped outdoor terraces on the various upper levels, which would offset the demand for parks and recreational facilities. Therefore, the Project would not substantially increase the demand for off-site public parks and recreational facilities such that substantial physical deterioration of those facilities would occur or be accelerated. The impact on parks and recreational facilities would be

⁶³ Los Angeles Department of Transportation and Los Angeles Department of City Planning, City of Los Angeles VMT Calculator Documentation, May 2020, Table 1. Based on the "General Office" employee generation rate of 4 employees per 1,000 square foot applied to the proposed (431,032 square feet) and existing (9,329 square feet) office uses, the "High-Turnover-Sit-Down Restaurant" employee generation rate of 4 employees per 1,000 square foot applied to the proposed restaurant uses (14,186 square feet), and the "General Retail" employee generation rate of 2 employees per 1,000 square foot applied to the existing 16,932 square feet of retail uses to be removed.

less than significant, and mitigation measures are not required. No further evaluation of this topic in an EIR is required.

b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

No Impact. The Project does not include any residential uses and therefore would not result in any direct substantial population growth that would increase use of existing recreational facilities. Therefore, the Project would not necessitate construction of new recreational facilities. Therefore, no impact would occur, and no mitigation measures would be required. No further evaluation of this topic in an EIR is required.

XVII. TRANSPORTATION

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☒	☐	☐	☐
b. Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	☒	☐	☐	☐
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☐	☒
d. Result in inadequate emergency access?	☐	☐	☒	☐

a. Would the project conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Potentially Significant Impact. A Transportation Assessment (TA) in accordance with LADOT's Transportation Assessment Guidelines (TAG) adopted in July 2019 will be prepared for the Project. In accordance with the TAG and consistent with the City CEQA Transportation Thresholds (adopted July 30, 2019), the TA's CEQA-required analyses will include an assessment of whether the Project would result in potential conflicts with transportation-related plans, ordinances, or policies. The results of the TA will be included in the EIR.

b. Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Potentially Significant Impact. SB 743, which went into effect in January 2014, requires the Governor's Office of Planning and Research to change the way public agencies evaluate transportation impacts of projects under CEQA. Under SB 743, the focus of transportation analysis has shifted from driver delay, which is typically measured by traffic level of service (LOS), to a new measurement that better addresses

the State's goals on reduction of greenhouse gas emissions, creation of a multi-modal transportation, and promotion of mixed-use developments. CEQA Guidelines Section 15064.3 states that vehicle miles traveled (VMT) is the most appropriate measure of transportation impacts, replacing LOS.

On July 30, 2019, the City adopted the CEQA Transportation Analysis Update, which sets forth the revised thresholds of significance for evaluating transportation impacts as well as screening and evaluation criteria for determining impacts. The CEQA Transportation Analysis Update establishes VMT as the City's formal method of evaluating a project's transportation impacts. In conjunction with this update, LADOT adopted its Transportation Assessment Guidelines (July 2019), which defines the methodology for analyzing a project's transportation impacts in accordance with SB 743. The Project would develop new office and commercial restaurant uses on the Project Site. As a result, VMT would increase over existing conditions. Therefore, further analysis of this issue will be provided in the EIR.

c. Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Asbestos-Containing Materials

No Impact. The Project's design does not include hazardous geometric design features (e.g., sharp curves or dangerous intersections). The roadways adjacent to the Project Site are part of the urban roadway network and contain no sharp curves or dangerous intersections, and the development of the Project would not result in roadway improvements such that safety hazards would be introduced adjacent to the Project Site. In addition, the proposed driveways along both Wilcox Avenue and Cole Place would be designed to meet all applicable City Building Code and Fire Code requirements regarding site access. The Project specifically includes four driveways to meet the various needs of the Project, including separate driveways for office tenants, rideshare and valet users, loading and trash operations, and for access to the LADWP equipment building. Two driveways are located on Wilcox Avenue and two driveways are located on Cole Place. The proposed driveways would not create hazards to the surrounding streets. The proposed uses would also be consistent with the surrounding uses (i.e., residential and commercial) and would not introduce hazards due to incompatible uses. Thus, the Project would not substantially increase hazards due to a geometric design feature or incompatible uses. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

d. Would the project result in inadequate emergency access?

Less Than Significant Impact. While it is expected that the majority of construction activities for the Project would primarily be confined on-site, limited off-site construction activities may occur in adjacent street rights-of-way during certain periods of the day, which could potentially require temporary lane closures. However, if lane closures are necessary, the remaining travel lanes would be maintained in accordance with standard construction management plans that would be implemented to ensure adequate circulation and emergency access. With regard to operation, the Project does not propose the permanent closure of any local public streets and primary access to the Project Site would continue to be provided from the surrounding streets. In addition, the Project would comply with Los Angeles Fire Department (LAFD) access requirements and applicable LAFD regulations regarding safety. Therefore, the Project would not result in inadequate emergency access to the Project Site or surrounding uses. Impacts regarding inadequate emergency access would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

XVIII. TRIBAL CULTURAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☒	☐	☐	☐
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☒	☐	☐	☐

a. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1 (k)?

b. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

Potentially Significant Impact (a and b). Assembly Bill (AB) 52 established a formal consultation process for California Native American Tribes to identify potential significant impacts to Tribal Cultural Resources, as defined in Public Resources Code Section 21074, which is part of the CEQA statute. As specified in AB 52, a lead agency must provide notice to tribes that are traditionally and culturally affiliated with the geographic area of a proposed project if the tribe has submitted a written request to be notified. The tribe must respond to the lead agency within 30 days of receipt of the notification if it wishes to engage in consultation on the project, and the lead agency must begin the consultation process within 30 days of receiving the request for consultation.

As noted above, the Project would require excavations up to 52 feet below grade. Therefore, the potential exists for the Project to significantly impact a site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native American Tribe. In compliance with AB 52, the City will notify all applicable tribes, and the City will participate in any requested consultations for the Project. Further analysis of this topic will be provided in the EIR.

XIX. UTILITIES AND SERVICE SYSTEMS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☒	☐	☐	☐
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☒	☐	☐	☐
c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☒	☐	☐	☐
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

a. Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Potentially Significant Impact. Water, wastewater, electric power, and natural gas systems consist of two components, the source of the supply or place of treatment (for wastewater), and the conveyance systems (i.e., distribution lines and mains) that link the location of these facilities to an individual development site. Given the Project's increase in the amount of developed floor area on the Project Site and the potential corresponding increase in water, electricity, and natural gas demand and wastewater generation, further analysis of these topics in an EIR will be provided.

With regard to storm water drainage, as discussed above in Checklist Question X, Hydrology and Water Quality, the Project would result in a decrease in stormwater flows. As such, the Project would not require or result in the relocation or construction of new or expanded storm water drainage.

With regard to telecommunications infrastructure, the Project would require construction of new on-site telecommunications infrastructure to serve the new building and potential upgrades and/or relocation of existing telecommunications infrastructure. Construction impacts associated with the installation of telecommunications infrastructure would primarily involve trenching in order to place the lines below surface. Such activities could involve temporary closure of portions of sidewalks or travel lanes. However, the Project would implement a construction management plan during construction, which would ensure safe pedestrian access, as well as emergency vehicle access and safe vehicle travel in general, to reduce any temporary pedestrian and traffic impacts occurring as a result of construction activities. In addition, when considering impacts resulting from the installation of any required telecommunications infrastructure, all impacts are of a relatively short duration (i.e., months) and would cease to occur when installation is complete. Installation of new telecommunications infrastructure would be limited to on-site telecommunications distribution with minor off-site work associated with connections to the public system. No upgrades to off-site telecommunications systems are anticipated. Any work that may affect services to the existing energy and telecommunications lines would be coordinated with service providers and the City, as applicable. Therefore, related impacts would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

b. Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Potentially Significant Impact. LADWP supplies water to the Project Site. Given the Project's proposed uses and increase in the amount of developed floor area on the Project Site, the Project would result in an increased demand for water provided by LADWP. In addition, the Project would meet certain criteria outlined in Section 10912 of the California Water Code requiring the preparation of a Water Supply Assessment by LADWP. Therefore, further analysis of this issue will be provided in the EIR.

c. Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Potentially Significant Impact. Refer to Response to Checklist Question XIX.a, above.

d. Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less Than Significant Impact. While the Bureau of Sanitation generally provides waste collection services to single-family and some small multi-family developments, private haulers permitted by the City provide waste collection services for most multi-family residential and commercial developments within the City. Solid waste transported by both public and private haulers is either recycled, reused, or transformed at a waste-to-energy facility, or disposed of at a landfill. Landfills within the County are categorized as either Class III or inert waste landfills. Non-hazardous municipal solid waste is disposed of in Class III landfills, while inert waste such as construction waste, yard trimmings, and earth-like waste are

disposed of in inert waste landfills.⁶⁴ Nine Class III landfills and one inert waste landfill with solid waste facility permits are currently serving the County.⁶⁵ In addition, there is one solid waste transformation facility within Los Angeles County that converts, combusts, or otherwise processes solid waste for the purpose of energy recovery.

Based on the 2018 Countywide Integrated Waste Management Plan (ColWMP) Annual Report, the most recent report available, the total remaining permitted Class III landfill capacity in the County is estimated at 163.39 million tons. The permitted inert waste landfill serving the County is Azusa Land Reclamation. This facility has 57.72 million tons of remaining capacity and an average daily in-County disposal rate of 1,148 tons per day.⁶⁶ Los Angeles County continually evaluates landfill disposal needs and capacity through preparation of the ColWMP Annual Reports. Within each annual report, future landfill disposal needs over the next 15-year planning horizon are addressed in part by determining the available landfill capacity.⁶⁷

Based on the 2018 ColWMP Annual Report, the countywide cumulative need for Class III landfill disposal capacity through the year 2033 will exceed the 2018 remaining permitted Class III landfill capacity of 163.39 million tons. The 2018 ColWMP Annual Report evaluated seven scenarios to increase capacity and determined that the County would be able to meet the disposal needs of all jurisdictions through the 15-year planning period with existing capacity under six of the seven scenarios. The 2018 ColWMP Annual Report concluded that in order to maintain adequate disposal capacity, individual jurisdictions must continue to pursue strategies to maximize waste reduction and recycling, expand existing landfills, promote and develop alternative technologies, expand transfer and processing infrastructure, and use out of county disposal, including waste by rail. The City implements a number of source reduction and recycling programs such as curbside recycling, home composting demonstration programs, and construction and demolition debris recycling.⁶⁸ The City is currently diverting 76 percent of its waste from landfills.⁶⁹ The City has adopted the goal of achieving 90 percent diversion by 2025, and zero waste by 2030.

The following analysis quantifies the Project's construction and operation solid waste generation.

⁶⁴ Inert waste is waste which is neither chemically or biologically reactive and will not decompose. Examples of this are sand and concrete.

⁶⁵ County of Los Angeles, Department of Public Works, Los Angeles County Integrated Waste Management Plan 2018 Annual Report, December 2019. The 9 Class III landfills serving the County include the Antelope Valley Landfill, the Burbank Landfill, the Calabasas Landfill, Chiquita Canyon Landfill, Lancaster Landfill, Pebbly Beach Landfill, Savage Canyon Landfill, the Scholl Canyon Landfill, and the Sunshine Canyon City and County Landfill. Azusa Land Reclamation is the only permitted Inert Waste Landfill in the County that has a full solid waste facility permit.

⁶⁶ County of Los Angeles, Department of Public Works; Los Angeles County Integrated Waste Management Plan 2018 Annual Report, December 2019.

Construction

The Project Site is currently developed with three buildings and surface parking. The existing buildings on the Project Site comprise approximately 26,261 square feet of floor area and would be removed as part of the Project. The Project, under a conservative analysis, would include the construction of a 445,218-square-foot mixed-use development consisting of 431,032 square feet of office space and 14,186 square feet of commercial uses. These uses would be provided in a single 15-story building. The Project would also construct a 3,550-square-foot building to house LADWP equipment. As shown in Table 1 on page 82, based on construction and debris rates established by the USEPA, it is anticipated that construction of the Project would generate a total of approximately 2,075 tons of demolition debris and 974 tons of construction debris, for a combined total of 3,049 tons of construction-related waste.

Pursuant to the requirements of Senate Bill 1374, the Project would implement a construction waste management plan to recycle and/or salvage a minimum of 75 percent of non-hazardous demolition and construction debris. Furthermore, pursuant to LAMC Sections 66.32 through 66.32.5 (Ordinance No. 181,519), the Project's construction contractor would be required to deliver all remaining construction and demolition waste generated by the Project to a certified construction and demolition waste processing facility. Thus, although the total diversion rate may ultimately exceed 75 percent, this analysis conservatively assumes a diversion rate of 75 percent. Materials that could be recycled or salvaged include asphalt, glass, and concrete. Debris not recycled could be accepted at the unclassified landfill (Azusa Land Reclamation) within Los Angeles County and within the Class III landfills open to the City. As shown in Table 1, after accounting for mandatory recycling, the Project would result in approximately 762 tons of construction-related waste in the County's permitted inert landfill (i.e., Azusa Land Reclamation Landfill) throughout the construction period. This amount of construction and debris waste would represent approximately 0.001 percent of the Azusa Land Reclamation Landfill's existing remaining disposal capacity of 57.72 million tons. Thus, the total amount of construction and demolition waste generated by the Project would represent a small fraction of the remaining capacity at this permitted inert landfill serving Los Angeles County. Given the remaining permitted capacity at the Azusa Land Reclamation facility as well as the remaining 163.39 million tons of capacity at the Class III landfills open to the City, the landfills serving the Project Site would have sufficient capacity to accommodate the Project's construction solid waste disposal needs.

Operation

As shown in Table 2 on page 83, upon full buildout, the Project, under a conservative analysis, would result in a net increase in solid waste generation of 714 tons per year. The estimated solid waste is conservative because the waste generation factors used do not account for recycling or other waste diversion measures such as compliance with Assembly Bill 341, which requires California commercial enterprises and public entities that generate four cubic yards or more per week of waste, and multi-family housing with five or more units, to adopt recycling practices. Likewise, the analysis does not include implementation of the City's Zero Waste Plan, which is expected to result in a reduction of landfill disposal Citywide with a goal of reaching a Citywide recycling rate of 90 percent by the year 2025.⁷⁰ The estimated

⁷⁰ LA Sanitation, Solid Waste Integrated Resources Plan, www.lacitysan.org/san/faces/home/portal/s-lsh-wwd/s-lsh-wwd-s/s-lsh-wwd-s-zwswirp?_afLoop=3608041245788654&_afWindowMode=0&_afWindowId=null&_adf.ctrl-state=8vrc5bges_179#!%40%40%3F_afWindowId%3Dnull%26_afLoop%3D3608041245788654%26_afWindowMode%3D0%26_adf.ctrl-state%3D8vrc5bges_183, accessed April 23, 2020.

Table 1
Project Demolition and Construction Waste Generation

Building	Size	Generation Rate (lbs/sf)^{a,b}	Total (tons)^b
Demolition Waste			
Existing Structures to be Removed	26,261 sf	158	2,075
<i>Demolition Waste Subtotal</i>			<i>2,075</i>
Construction Waste			
Office	431,032 sf	4.34	935
Commercial	14,186 sf	4.34	31
LADWP Building	3,550 sf	4.34	8
<i>Construction Waste Subtotal</i>			<i>974</i>
Total for Demolition and Construction Waste			3,049
Total After 75-Percent Recycling			762
<p><i>lbs = pound</i> <i>sf = square feet</i> ^a U.S. Environmental Protection Agency, Report No. EPA530-R-09-002, <i>Estimating 2003 Demolition and Materials Amounts</i>, March 2009, Table A-2 and Table 2-4. Generation rates used in this analysis are based on an average of individual rates assigned to specific building types. ^b Used conversion of 1 ton = 2,000 pounds. Numbers have been rounded. Source: Eyestone Environmental, 2020.</p>			

annual net increase in solid waste that would be generated by the Project of 714 tons represents approximately 0.0004 percent of the remaining capacity (163.39 million tons) for the County's Class III landfills open to the City of Los Angeles.⁷¹

Based on the above, the landfills that serve the Project Site would have sufficient permitted capacity to accommodate the solid waste that would be generated by the construction and operation of the Project. Therefore, impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in the EIR is required.

e. Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Less Than Significant Impact. Solid waste management in the State is primarily guided by the California Integrated Waste Management Act of 1989 (AB 939), which emphasizes resource conservation through reduction, recycling, and reuse of solid waste. AB 939 establishes an integrated waste management hierarchy consisting of (in order of priority): (1) source reduction; (2) recycling and composting; and (3) environmentally safe transformation and land disposal. In addition, AB 1327 provided for the development of the California Solid Waste Reuse and Recycling Access Act of 1991,

⁷¹ (714 tons per year/163.39 million tons) x 100 ≈ ~0.0004%

Table 2
Estimated Project Solid Waste Generation

Building	Size	Employee Generation Rate per sf^a	Estimated No. of Employees	Solid Waste Generation Rate^b	Total Generation (tons/year)
Existing					
Office	9,329 sf	0.004	37 emp	0.37/tons/year	14
Commercial (Retail)	16,932 sf	0.002	34 emp	2.98/tons/year	101

which requires the adoption of an ordinance by any local agency governing the provision of adequate areas for the collection and loading of recyclable materials in development projects. Furthermore, AB 341, which became effective on July 1, 2012, requires businesses and public entities that generate four cubic yards or more of waste per week and multi-family dwellings with five or more units, to recycle. The purpose of AB 341 is to reduce greenhouse gas emissions by diverting commercial solid waste from landfills and expand opportunities for recycling in California. In addition, in March 2006, the Los Angeles City Council adopted RENEW LA, a 20-year plan with the primary goal of shifting from waste disposal to resource recovery within the City, resulting in “zero waste” by 2030. The plan also calls for reductions in the quantity and environmental impacts of residue material disposed in landfills. In October 2014, Governor Jerry Brown signed AB 1826, requiring businesses to recycle their organic waste⁷² on and after April 1, 2016, depending on the amount of waste generated per week. Specifically, beginning April 1, 2016, businesses that generate eight cubic yards of organic waste per week were required to arrange for organic waste recycling services. In addition, beginning January 1, 2017, businesses that generate four cubic yards of organic waste per week were required to arrange for organic waste recycling services.

The Project would be consistent with the applicable regulations associated with solid waste. Specifically, the Project would provide adequate storage areas in accordance with the City of Los Angeles Space

⁷² Organic waste refers to food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste.

Allocation Ordinance (Ordinance No. 171,687), which requires that development projects include an on-site recycling area or room of specified size.⁷³ The Project would also comply with AB 939, AB 341, AB 1826 and City waste diversion goals, as applicable, by providing clearly marked, source-sorted receptacles to facilitate recycling. Since the Project would comply with federal, state, and local management and reduction statutes and regulations related to solid waste, impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

XX. WILDFIRE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒

a. Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

b. Due to slope, prevailing winds, and other factors, would the project exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

c. Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

⁷³ Ordinance No. 171,687, adopted by the Los Angeles City Council on August 6, 1997.

d. Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

No Impact (a–d). The Project Site is not located in or near state responsibility areas or lands classified as very high fire hazard severity zones. Therefore, these thresholds would not apply to the Project. The Project Site is located in an urbanized area, and there are no wildlands located in the vicinity of the Project Site. The Project Site is not located within a City-designated Very High Fire Hazard Severity Zone,⁷⁴ nor is it located within a City-designated fire buffer zone.⁷⁵ Therefore, no impacts regarding wildfire risks would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☒	☐	☐	☐
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

⁷⁴ City of Los Angeles Department of City Planning, Zone Information and Map Access System (ZIMAS), Parcel Profile Report for APNs 5546014056, 5546014013, 5546014014, and 5546014017, <http://zimas.lacity.org/>, accessed April 20, 2020.

⁷⁵ City of Los Angeles, Safety Element of the Los Angeles City General Plan, November 26, 1996, Exhibit D, p. 53.

Potentially Significant Impact. As discussed above, the Project is located in a highly urbanized area and does not serve as habitat for fish or wildlife species. In addition, no sensitive plant or animal community or special status species occur on the Project Site. Therefore, the Project would not have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal.

City's Zero Waste Plan, which is expected to result in a reduction of landfill disposal Citywide with a goal of reaching a Citywide recycling rate of 90 percent by the year 2025.⁷⁶ The estimated annual net increase in solid waste that would be generated by the Project of 714 tons represents approximately 0.0004 percent of the remaining capacity (163.39 million tons) for the County's Class III landfills open to the City of Los Angeles.⁷⁷

As discussed above, the Project's potential impacts to historic resources will be evaluated in the EIR. Environmental impacts for the following subject areas will also be further analyzed in the EIR: air quality; energy; greenhouse gas emissions; land use and planning; noise; public services (fire protection, police protection, and library services); transportation; tribal cultural resources; and utilities and service systems (water, wastewater, electricity, and natural gas).

b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Potentially Significant Impact. The potential for cumulative impacts occurs when the impacts of the Project are combined with impacts from related development projects and result in impacts that are greater than the impacts of the Project alone. Located in the vicinity of the Project Site are other current and reasonably foreseeable projects, the development of which, in conjunction with that of the Project, may contribute to potential cumulative impacts. Impacts of the Project on both an individual and cumulative basis will be addressed in the EIR for the following subject areas: air quality; cultural resources (historic resources); energy; greenhouse gas emissions; land use and planning; noise; public services (fire protection police protection, and library services); transportation; tribal cultural resources; and utilities and service systems (water, wastewater, electricity, and natural gas).

Regarding cumulative aesthetics impacts, related projects would be reviewed on a case-by-case basis by the City to comply with LAMC requirements regarding building heights, setbacks, massing and lighting or, for those projects that require discretionary actions, to undergo site-specific review regarding building density, design, and light and glare effects. Related projects are also subject to the City's design review process and review for consistency with zoning and regulatory documents governing scenic quality.

⁷⁷ (714 tons per year/163.39 million tons) x 100 ≈ ~0.0004%

Regardless, pursuant to Senate Bill 743, Public Resources Code Section 21099, and Zoning Information File ZI No. 2452, the Project's aesthetics impacts cannot be considered significant. Given the Project Site's location in a transit priority area, other residential, mixed-use, and employment center development projects located in the vicinity of the Project Site are anticipated to be of similar aesthetic character and would not have incremental combined effects that could create a cumulatively considerable impact. Thus, cumulative impacts associated with aesthetics would be less than significant.

With regard to agriculture and forestry resources, biological resources, and mineral resources, no such resources are located on the Project Site or in the surrounding area. In addition, where applicable, other developments would be required to comply with the Migratory Bird Treaty Act to avoid impacts to nesting birds. Also, similar to the Project, where the removal of onsite trees and street trees is proposed, such developments would be required to comply with City regulations regarding tree replacement. Overall, the Project would have no impact on these resources, and therefore could not combine with other projects to result in cumulative impacts. Therefore, cumulative impacts to agriculture and forestry resources, biological resources, and mineral resources would be less than significant.

With regard to potential cumulative impacts related to archaeological resources, the Project vicinity is located within an urbanized area that has been disturbed and developed over time. In the event that archaeological resources are uncovered, each related project would be required to comply with applicable regulatory requirements, including CEQA Guidelines Section 15064.5, Public Resources Code Section 21083.2, Health and Safety Code Section 7050.5, and Public Resources Code Section 5097.9. In addition, as with the Project, if human remains were discovered during construction, work in the immediate vicinity of the construction area would be halted, the County Coroner, construction manager, and other entities would be notified per California Health and Safety Code Section 7050.5. In addition, disposition of the human remains and any associated grave goods would occur in accordance with Public Resources Code Section 5097.98 and CEQA Guidelines Section 15064.5(e), which requires that work stop near the find until a coroner can determine that no investigation into the cause of death is required and if the remains are Native American. Therefore, with compliance with regulatory requirements and any necessary mitigation measures, the Project and related projects would not contribute considerably to cumulative impacts on archaeological resources and human remains, and cumulative impacts to such resources would be less than significant.

As discussed above, the Project would not result in significant impacts to geology and soils. Thus, the Project would not contribute to any cumulative impacts associated with geology and soils. In addition, due to their site-specific nature, geology and soils impacts are typically assessed on a project-by-project basis or for a particular localized area. Therefore, as with the Project, related projects would address site-specific geologic hazards through the implementation of site-specific geotechnical recommendations and/or mitigation measures. While cumulative development would expose a greater number of people to seismic hazards, as with the Project, related projects would be subject to local, state, and federal regulations and standards for seismic safety. In addition, as part of the environmental review processes for the related projects, it is expected that a condition of approval or mitigation measures would be established as necessary to address the potential for uncovering of paleontological resources. Thus, Project impacts related to geology and soils would not be cumulatively considerable and would be less than significant.

Due to their site-specific nature, hazards and hazardous materials impacts are typically assessed on a project-by-project basis. Therefore, as with the Project, related projects would address site-specific

hazards through the implementation of site-specific recommendations and/or mitigation measures. In addition, as with the Project, all related development located in the vicinity of the Project Site would be subject to local, regional, State, and federal regulations pertaining to hazards and hazardous materials. Therefore, with adherence to such regulations, the Project and related projects would not result in significant cumulative impacts with regard to hazards and hazardous materials. As such, the Project's contribution would not be cumulatively considerable, and cumulative impacts would be less than significant.

Related projects could potentially result in an increase in surface water runoff and contribute point and non-point source pollutants to nearby water bodies. However, as with the Project, related projects would be subject to the City's LID requirements. In addition, construction projects greater than one acre would be subject to NPDES permit requirements, including development of a SWPPP, SUSMP requirements during operation, and other local requirements pertaining to hydrology and surface water quality. It is anticipated that related projects would also be evaluated on an individual basis by City of Los Angeles Department of Public Works to determine appropriate BMPs and treatment measures to avoid significant impacts to hydrology and surface water quality. Thus, Project impacts related to hydrology and water quality would not be cumulatively considerable and, cumulative impacts would be less than significant.

In terms of population and housing, related development would not induce substantial population growth in the vicinity of the Project Site since most of the area is already fully developed and occupied by a long standing residential population. In addition, not all related projects would include residential uses. As discussed in the analysis above, the Project does not propose residential uses and thus would not directly contribute to population growth. While the Project would not displace housing or people, other projects might displace existing housing and people residing in them. However, even if construction of replacement housing were required elsewhere, such developments would likely occur on infill sites within the City and the appropriate level of environmental review would be conducted to analyze the extent to which the related projects could cause significant environmental impacts. Overall, the Project's contribution would not be cumulatively considerable, and cumulative impacts related to population and housing would be less than significant.

With regard to other public services such as schools, and parks and recreation, the Project would not generate a residential population that could increase the demand for schools or parks and recreational facilities. Therefore, the Project would not contribute to an increased demand for these services. Other related projects could increase the demand for these services and facilities. However, the applicants for those projects would be required to pay mitigation impact fees for identified impacts under applicable regulatory requirements. Specifically, in the case of schools, the applicants for some related projects may be required to pay school impact fees, which would offset any potential impact to schools associated with the related projects. Similarly, in the case of parks and recreation (i.e., existing neighborhood and regional parks), projects would be required by the LAMC to include open space and amenity spaces (e.g. gyms, outdoor decks with pools, etc.) and pay park in-lieu fees (as required), which would help reduce the demand on neighborhood and regional parks, thereby reducing the likelihood that there would be substantial deterioration of parks. Employees generated by the non-residential related projects would be more likely to use parks near their homes during non-work hours, as opposed to patronizing local facilities on their way to or from work or during their lunch hours. In addition, each related project would generate revenues to the City's General Fund (in the form of property taxes, sales tax, business tax, transient occupancy tax, etc.) that could be applied toward the provision of enhancing park facilities in the City, as deemed appropriate. These revenues to the City's General Fund would help offset the increase in

demand for park facilities as a result of the Project and the related projects. Therefore, the Project and related projects would not result in significant cumulative impacts with respect to schools or parks and recreation. As such, the Project's contribution would not be cumulatively considerable, and cumulative impacts would be less than significant.

With regard to solid waste, given the urbanized and built-out nature of most of the City, it is anticipated that other projects would similarly represent a minor percentage of the remaining capacity of the County's Class III landfills open to the City. Additionally, the demand for landfill capacity is continually evaluated by the County through preparation of the ColWMP annual reports. Each annual ColWMP report assesses future landfill disposal needs over a 15 year planning horizon. Based on the 2018 ColWMP Report, the County anticipates that future disposal needs can be adequately met for the next 15 years (i.e., 2033) with implementation of strategies to maximize waste reduction and recycling, expand existing landfills, promote and develop alternative technologies, expand transfer and processing infrastructure, and use out of county disposal, including waste by rail. The preparation of each annual ColWMP provides sufficient lead time (15 years) to address potential future shortfalls in landfill capacity. Furthermore, in future years, it is anticipated that the rate of declining landfill capacity would slow considering the City's goal to achieve zero waste by 2030. Therefore, cumulative impacts with respect to solid waste would be less than significant.

As discussed above, the Project Site is located in an urbanized area, and there are no wildlands located in the vicinity of the Project Site. Therefore, the Project would not contribute to an increased wildfire risk. Moreover, the Project and related projects would be developed in accordance with LAMC requirements pertaining to fire safety. Specifically, Section 57.106.5.2 of the LAMC provides that the Fire Chief shall have the authority to require drawings, plans, and sketches as necessary to identify access points, fire suppression devices and systems, utility controls, and stairwells; Section 57.118 of the LAMC establishes LAFD's fire/life safety plan review and LAFD's fire/life safety inspection for new construction projects; and Section 57.507.3.1 establishes fire water flow standards. Therefore, the Project and related projects would not result in significant cumulative impacts with respect to wildfire. As such, the Project's contribution would not be cumulatively considerable, and cumulative impacts would be less than significant.

c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Potentially Significant Impact. Based on the analysis contained in this Initial Study, the Project could result in potentially significant impacts with regard to the following topics: air quality; cultural resources (historic resources); energy; greenhouse gas emissions; land use and planning; noise; public services (fire protection, police protection, and library services); transportation; tribal cultural resources; and utilities and service systems (water, wastewater, electricity, and natural gas). As a result, these potential effects will be analyzed further in the EIR.

Re: 6460 West Sunset Boulevard, Los Angeles, California 90028

Dear Ms. Rodriguez,

This letter addresses our office's site visit of April 30, 2020 to the properties known collectively as 6460 West Sunset Boulevard in Los Angeles, California. We were retained to visit the properties and determine if any trees considered protected by the City of Los Angeles Tree Preservation Ordinance No. 177,404 were present. Protected trees as set forth in the Ordinance are coast live oak, western Sycamore, Southern California black walnut, and California bay laurel with trunk diameters (measured at 4.5 feet above grade) of 4 inches or greater. The Planning Division requires that all other trees with trunk diameters greater than 8 inches are included in the inventory.

We inventoried four private property and twelve City of Los Angeles rights-of-way trees associated with the properties. ***None of the private property trees are considered protected by the Ordinance.*** There are no off-site trees on adjacent properties that could be impacted by the proposed project. The table on the following pages sets forth the data for the 16 total trees inventoried.

Please feel welcome to contact me at our Santa Monica office if you have any immediate questions or concerns.

Respectfully submitted,

Cy Carlberg, Registered Consulting Arborist

EXHIBIT C – CAPTIONED TREE PHOTOGRAPHS

HEALTH AND STRUCTURE GRADE DEFINITIONS

Health and structure ratings are based on an archetypal tree of the same species, determined by a subjective evaluation of physiological health, aesthetic quality, and structural integrity.

Overall physiological condition (health) and structural condition are rated A-F:

Health

- A) **Outstanding** – Exceptional trees comprising above-average foliage production and vigor for their age class; exhibiting very good to excellent health as evidenced by normal to exceptional shoot growth during the current growing season, good bud development and leaf color, lack of leaf, twig or branch dieback throughout the crown, and the absence of decay, bleeding, or cankers. Common leaf and/or twig pests may be noted at very minor levels.
- B) **Above average** – Good to very good trees that exhibit minor necrotic (dead) or physiological symptoms of stress and/or disease; shoot growth is less than reasonably expected, leaf color is less than optimal in some areas, the crown may be thinning, minor levels of leaf, twig, and branch dieback may be present, and minor areas of decay, bleeding, or cankers may be manifesting. Minor amounts of epicormic growth may be present. Minor amounts of fire damage or mechanical damage may be present. Still healthy, but with moderately diminished vigor and vitality. No significant decline noted.
- C) **Average** – Average, moderately good trees whose growth habit and physiological or fire-induced symptoms indicate an equal chance to either decline or continue with good health into the near future. Most of these trees exhibit moderate to significant small dead material in outer crown areas, decreased shoot growth, and diminished leaf color and mass. Some stem and branch dieback is usually present and epicormic growth may be moderate to extensive. Cavities, pockets of decay, relatively significant fire damage, bark exfoliation, or cracks may be present. Moderate to significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it is expected to negatively impact the lifespan of the tree. Tree may be in early decline.
- D) **Below Average Poor** – trees whose growth habit and physiological or fire-induced symptoms indicate significant, irreversible decline. Most of these trees exhibit significant dieback of wood in the crown, possibly accompanied by significant epicormic sprouting. Shoot growth and leaf color and mass is either significantly diminished or nonexistent throughout the crown. Cavities, pockets of decay, significant fire damage, bark exfoliation, and/or cracks may be present. Significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it has negatively impacted the lifespan of the tree. Tree appears to be in irreversible decline.
- F) **Dead or in spiral of decline** – this tree exhibits very little to no signs of life.

Structure

- A) **Outstanding** – Trees with outstanding structure for their species exhibit trunk and branch arrangement and orientation that results in a sturdy form or architecture that can resist failure under normal circumstances. The spacing, orientation, and size of the branches relative to the trunk are quintessential for the species and free from defects. No outward signs of decay or pathological disease is present. Some trees exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, which would preclude them from achieving an “A” grade.
- B) **Above average** - Trees with good to very good structure for their species. They exhibit trunk and branch arrangement and orientation that result in a relatively sturdy form or architecture that resists

failure under normal circumstances, but may have some mechanical damage, over-pruning, or other minor structural defects. The spacing, orientation, and size of the branches relative to the trunk are still in the normal range for the species, but they exhibit a minor degree of defects. Minor, sub-critical levels of decay or pathological disease may be present, but the degree of damage is not yet structurally significant. Trees that exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, would generally fall in to this category. A small percentage of the canopy may be shaded or crowded, but not in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree.

- C) **Average** - Trees with moderately good structure for their species, but with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a less than sturdy form or architecture, which reduces their resistance to failure under normal circumstances. Moderate levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of some of the branches relative to the trunk are not in the normal range for the species. Moderate to significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A moderate to significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be moderately elevated.
- D) **Well Below Average Poor** - Trees with poor structure for their species and with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a significantly less than sturdy form or architecture, significantly reducing their resistance to failure under normal circumstances. Significant levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of many of the branches relative to the trunk are not in the normal range for the species. Significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be advanced.
- F) **Severely Compromised** – trees with very poor structure and numerous or severe defects due to growing conditions, historical or recent pruning, mechanical damage, history of limb or trunk failures, advanced and irreparable decay, disease, or severe fire damage. Trees with this rating are in severe, irreparable decline, or are barely alive. Risk of full or partial failures in the near future may be severe.

<u>Education</u>	B.S., Landscape Architecture, California State Polytechnic University, Pomona, 1985 Graduate, Arboricultural Consulting Academy, American Society of Consulting Arborists, Chicago, Illinois, February 2002 Graduate, Municipal Forestry Institute, Lied, Nebraska, 2012
<u>Experience</u>	Consulting Arborist, Carlberg Associates, 1998-present Manager of Grounds Services, California Institute of Technology, Pasadena, 1992-1998 Director of Grounds, Scripps College, Claremont, 1988-1992
<u>Certificates</u>	Certified Arborist (□WE-0575A), International Society of Arboriculture, 1990 Registered Consulting Arborist (□405), American Society of Consulting Arborists, 2002 Certified Urban Forester (□013), California Urban Forests Council, 2004 Qualified Tree Risk Assessor, International Society of Arboriculture, 2011

AREAS OF EXPERTISE

Ms. Carlberg is experienced in the following areas of tree management and preservation:

- Tree health, pest and disease identification, and risk assessment
- Master Planning
- Historic landscape assessments, preservation plans, reports
- Tree inventories and reports to satisfy jurisdictional requirements
- Expert Testimony
- Post-fire assessment, valuation, and mitigation for trees and native plant communities
- Value assessments for native and non-native trees
- Guidelines for oak preservation
- Selection of appropriate tree species
- Planting, pruning, and maintenance specifications
- Tree and landscape resource mapping – GPS, GIS, and AutoCAD
- Planning Commission, City Council, and community meetings representation

PREVIOUS CONSULTING EXPERIENCE

Ms. Carlberg has overseen residential and commercial construction projects to prevent damage to protected and specimen trees. She has thirty-five years of experience in arboriculture and horticulture and has performed tree health evaluation, value and risk assessment, and expert testimony for private clients, government agencies, cities, school districts, and colleges. Representative clients include:

The Huntington Library and Botanical Gardens	The City of Claremont
The Los Angeles Zoo and Botanical Gardens	The City of Beverly Hills
The Rose Bowl and Brookside Golf Course, Pasadena	The City of Pasadena
Walt Disney Concert Hall and Gardens	The City of Los Angeles
The Art Center College of Design, Pasadena	The City of Santa Monica
Pepperdine University	Santa Monica/Malibu Unified School District
Loyola Marymount University	San Diego Gas & Electric
The Claremont Colleges (Pomona, Scripps, CMC, Harvey Mudd,	Los Angeles Department of Water and Power
Claremont Graduate University, Pitzer, Claremont University Center)	Rancho Santa Ana Botanic Garden, Claremont
Quinn, Emanuel, Urquhart and Sullivan (attorneys at law)	Latham & Watkins, LLP (attorneys at law)
Getty Trust – Eames House	Architectural Resources Group
Historic Resources Group	AHBE Landscape Architects
Mia Lehrer & Associates	Moule and Polyzoides, Architects and Urbanists

AFFILIATIONS

Ms. Carlberg serves with the following national, state, and community professional organizations:

- California Urban Forests Council, Board Member, 1995-2006
- Street Tree Seminar, Past President, 2000-present
- American Society of Consulting Arborists Academy, Faculty Member, 2003-2005; 2014
- American Society of Consulting Arborists, Board of Directors, 2013-2015
- Member, Los Angeles Oak Woodland Habitat Conservation Strategic Alliance, 2010-present

Re: Records Search Results for the Sunset and Wilcox Project

The South Central Coastal Information Center received your records search request for the project area referenced above, located on the Hollywood, CA USGS 7.5' quadrangle. Due to the COVID-19 emergency, we have temporarily implemented new records search protocols. With the exception of some reports that have not yet been scanned, we are operationally digital for Los Angeles, Orange, and Ventura Counties. See attached document for your reference on what data is available in this format. The following reflects the results of the records search for the project area and a ½-mile radius:

As indicated on the data request form, the locations of archaeological resources and reports are provided in the following format: ☐ custom GIS maps ☒ shape files ☐ hand drawn maps

Archaeological Resources within project area: 0	None
Archaeological Resources within ½-mile radius: 2	SEE ATTACHED LIST
Reports within project area: 5	LA-07562, LA-07565, LA-07566, LA-08020, LA-11797
Reports within ½-mile radius: 34	SEE ATTACHED LIST

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the record search number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the California Historical Resources Information System,

Michelle Galaz
Assistant Coordinator

Dept. Approval Letter	113343	06/17/2020	LADBS
Soils Report	LA-1429	05/15/2020	Group Delta Consultants, Inc.

The Grading Division of the Department of Building and Safety has reviewed the referenced addendum report providing supplemental recommendations for the proposed development.

The Department reviewed and conditionally approved the previous referenced report that provides recommendations for the proposed 15-story commercial building over three subterranean parking and a 15 feet high switchgear structure over 18 feet below grade level. The earth materials at the subsurface exploration locations consist of up to 2 feet of uncertified fill underlain by clay and clayey sand. The consultants recommend to support the proposed structure on conventional foundations bearing on native undisturbed soils.

The referenced reports are acceptable, provided the following conditions are complied with during site development:

(Note: Numbers in parenthesis () refer to applicable sections of the 2020 City of LA Building Code. P/BC numbers refer the applicable Information Bulletin. Information Bulletins can be accessed on the internet at LADBS.ORG.)

6450 - 6562 W SUNSET BLVD // 1420-1454 N. Wilcox Ave. and 1445-1447 & 1413-1443 N Cole Pl.

1. All conditions of the Department approval letter dated 06/17/2020 (Log # 113343) shall be complied with.
2. All latest recommendations of the current referenced report that are in addition to or more restrictive than the conditions contained herein shall be incorporated into the plans.
3. The proposed structure and subterranean walls shall be designed to resist uplift and hydrostatic pressures that would develop due to the historic high groundwater level conditions or the current groundwater level, whichever is higher.
4. A design-level geotechnical investigation shall be conducted as recommended on page 2 of the 10/06/2020 report.

CURRENT REFERENCE <u>REPORT/LETTER(S)</u>	REPORT <u>No.</u>	DATE OF <u>DOCUMENT</u>	<u>PREPARED BY</u>
Soils Report	LA-1429	05/15/2020	Group Delta Consultants, Inc.

The Grading Division of the Department of Building and Safety has reviewed the referenced report that provides recommendations for the proposed 15-story commercial building over three subterranean parking and a 15 feet high switchgear structure over 18 feet below grade level. The earth materials at the subsurface exploration locations consist of up to 2 feet of uncertified fill underlain by clay and clayey sand. The consultants recommend to support the proposed structure on conventional foundations bearing on native undisturbed soils.

The referenced report is acceptable, provided the following conditions are complied with during site development:

(Note: Numbers in parenthesis () refer to applicable sections of the 2020 City of LA Building Code. P/BC numbers refer the applicable Information Bulletin. Information Bulletins can be accessed on the internet at LADBS.ORG.)

1. Provide a notarized letter from all adjoining property owners allowing tie-back anchors on their property (7006.6).
2. The soils engineer shall review and approve the detailed plans prior to issuance of any permit. This approval shall be by signature on the plans that clearly indicates the soils engineer has reviewed the plans prepared by the design engineer; and, that the plans included the recommendations contained in their reports (7006.1).
3. All recommendations of the report that are in addition to or more restrictive than the conditions contained herein shall be incorporated into the plans.

4. A copy of the subject and appropriate referenced reports and this approval letter shall be attached to the District Office and field set of plans (7006.1). Submit one copy of the above reports to the Building Department Plan Checker prior to issuance of the permit.
5. A grading permit shall be obtained for all structural fill and retaining wall backfill (106.1.2).
6. All man-made fill shall be compacted to a minimum 90 percent of the maximum dry density of the fill material per the latest version of ASTM D 1557. Where cohesionless soil having less than 15 percent finer than 0.005 millimeters is used for fill, it shall be compacted to a minimum of 95 percent relative compaction based on maximum dry density. Placement of gravel in lieu of compacted fill is only allowed if complying with LAMC Section 91.7011.3.
7. Existing uncertified fill shall not be used for support of footings, concrete slabs or new fill (1809.2, 7011.3).
8. Drainage in conformance with the provisions of the Code shall be maintained during and subsequent to construction (7013.12).
9. The applicant is advised that the approval of this report does not waive the requirements for excavations contained in the General Safety Orders of the California Department of Industrial Relations (3301.1).
10. Temporary excavations that remove lateral support to the public way, adjacent property, or adjacent structures shall be supported by shoring. Note: Lateral support shall be considered to be removed when the excavation extends below a plane projected downward at an angle of 45 degrees from the bottom of a footing of an existing structure, from the edge of the public way or an adjacent property. (3307.3.1)
11. Prior to the issuance of any permit that authorizes an excavation where the excavation is to be of a greater depth than are the walls or foundation of any adjoining building or structure and located closer to the property line than the depth of the excavation, the owner of the subject site shall provide the Department with evidence that the adjacent property owner has been given a 30-day written notice of such intent to make an excavation (3307.1).
12. The soils engineer shall review and approve the shoring and/or underpinning plans prior to issuance of the permit (3307.3.2).
13. Prior to the issuance of the permits, the soils engineer and the structural designer shall evaluate all applicable surcharge loads for the design of the retaining walls and shoring.
14. Shoring shall be designed for the lateral earth pressures specified in the section titled "Lateral Earth Pressure" starting on page 9 of the referenced report; all surcharge loads shall be included into the design.
15. Shoring shall be designed for a maximum lateral deflection of 1 inch, provided there are no structures within a 1:1 plane projected up from the base of the excavation. Where a structure is within a 1:1 plane projected up from the base of the excavation, shoring shall be designed for a maximum lateral deflection of ½ inch, or to a lower deflection determined by the consultant that does not present any potential hazard to the adjacent structure.

16. A shoring monitoring program shall be implemented to the satisfaction of the soils engineer.
17. All foundations shall derive entire support from native undisturbed soils, as recommended and approved by the geologist and soils engineer by inspection.
18. Footings shall be reinforced with a minimum of four (4), ½-inch diameter (#4) deformed reinforcing bars. Two (2) bars shall be placed near the bottom and two (2) bars placed near the top of the footing.
19. The seismic design shall be based on a Site Class D, as recommended. All other seismic design parameters shall be reviewed by LADBS building plan check.
20. Basement walls shall be designed for the lateral earth pressures specified in the section titled "Basement Walls" starting on page 13 of the referenced report. All surcharge loads shall be included into the design.
21. All retaining walls shall be provided with a standard surface backdrain system and all drainage shall be conducted in a non-erosive device to the street in an acceptable manner (7013.11).
22. With the exception of retaining walls designed for hydrostatic pressure, all retaining walls shall be provided with a subdrain system to prevent possible hydrostatic pressure behind the wall. Prior to issuance of any permit, the retaining wall subdrain system recommended in the soils report shall be incorporated into the foundation plan which shall be reviewed and approved by the soils engineer of record (1805.4).
23. Installation of the subdrain system shall be inspected and approved by the soils engineer of record and the City grading/building inspector (108.9).
24. Basement walls and floors shall be waterproofed/damp-proofed with an LA City approved "Below-grade" waterproofing/damp-proofing material with a research report number (104.2.6).
25. Prefabricated drainage composites (Miradrain, Geotextiles) may be only used in addition to traditionally accepted methods of draining retained earth.
26. All roof, pad and deck drainage shall be conducted to the street in an acceptable manner in non-erosive devices or other approved location in a manner that is acceptable to the LADBS and the Department of Public Works (7013.10).
27. An on-site storm water infiltration system at the subject site shall not be implemented, as recommended.
28. All concentrated drainage shall be conducted in an approved device and disposed of in a manner approved by the LADBS (7013.10).
29. The soils engineer shall inspect all excavations to determine that conditions anticipated in the report have been encountered and to provide recommendations for the correction of hazards found during grading (7008, 1705.6 & 1705.8).

30. Prior to pouring concrete, a representative of the consulting soils engineer shall inspect and approve the footing excavations. The representative shall post a notice on the job site for the LADBS Inspector and the Contractor stating that the work inspected meets the conditions of the report. No concrete shall be poured until the LADBS Inspector has also inspected and approved the footing excavations. A written certification to this effect shall be filed with the Grading Division of the Department upon completion of the work. (108.9 & 7008.2)
31. Prior to excavation an initial inspection shall be called with the LADBS Inspector. During the initial inspection, the sequence of construction; [shoring; ABC slot cuts; underpinning; pile installation;] protection fences; and, dust and traffic control will be scheduled (108.9.1).
32. Installation of shoring, underpinning, slot cutting and/or pile excavations shall be performed under the inspection and approval of the soils engineer and deputy grading inspector (1705.6, 1705.8).
33. The installation and testing of tie-back anchors shall comply with the recommendations included in the report or the standard sheets titled "Requirement for Tie-back Earth Anchors", whichever is more restrictive. [Research Report #23835]
34. Prior to the placing of compacted fill, a representative of the soils engineer shall inspect and approve the bottom excavations. The representative shall post a notice on the job site for the LADBS Inspector and the Contractor stating that the soil inspected meets the conditions of the report. No fill shall be placed until the LADBS Inspector has also inspected and approved the bottom excavations. A written certification to this effect shall be included in the final compaction report filed with the Grading Division of the Department. All fill shall be placed under the inspection and approval of the soils engineer. A compaction report together with the approved soil report and Department approval letter shall be submitted to the Grading Division of the Department upon completion of the compaction. In addition, an Engineer's Certificate of Compliance with the legal description as indicated in the grading permit and the permit number shall be included (7011.3).

October 6, 2020
Group Delta Project No. LA-1429

Attention: Mr. Edgar Khalatian

**Subject: Addendum No. 1 for Geotechnical Feasibility Report
Supplemental Preliminary Recommendation**
Proposed Sunset + Wilcox Project
6450 Sunset Blvd., 1429 & 1423 Wilcox Ave., and 1413 Cole Pl.
Los Angeles, California

This letter presents our supplemental recommendations for the proposed Sunset +Wilcox Project at the subject site. We previously performed a geotechnical feasibility study and presented the results in a report dated May 2020 (May 2020 Report). We understand that the design of the proposed basement level has been modified. Accordingly, the supplemental preliminary recommendations provided in this letter reflect the changes in design. The recommendations provided herein supplement those in the May 2020 Report and other recommendations in that report remain valid.

1.0 REVISED PROJECT DESCRIPTION

The Sunset and Wilcox Project site is located at the southeast corner of Sunset Boulevard and Wilcox Street and extends south, in part, to De Longpre Avenue in the City of Los Angeles, California. The Project includes development of a mixed-use commercial building with subterranean parking and a separate switchgear and generator structure (LADWP Building) with surface parking lot.

The main commercial building is planned to be constructed at the “Sunset Lot.” The Sunset Lot is a rectangular shaped property comprised of nine lots with a combined footprint area of 66,994 square feet. The proposed commercial building would be 15-stories in height with a mechanical roof top and three additional subterranean levels of parking, which would extend to a maximum depth of 52 feet. The estimated column loads at this time are 3,000-3,600 kips for dead load and 600 kips for live load.

The LADWP Building is planned to be constructed at the “De Longpre Lot.” The De Longpre Lot is a rectangular shaped property comprised of one lot with a footprint area of 6,909 square feet. The LADWP Building would be 15 feet in height above grade and 23 feet depth below grade subterranean level.

2.0 SUPPLEMENTAL GEOTECHNICAL RECOMMENDATIONS - FOUNDATION

Excavation of the proposed basement level will extend to a maximum depth of 52 feet below the existing grade. The existing groundwater depths ranges between 52.2 to 60.5 feet below ground. Shallow groundwater may be present seasonally following rains and could be encountered during basement excavation. Therefore, the bottom of excavation will likely be saturated during construction. Dewatering may be required during foundation construction. Based on the clayey nature of the onsite soils, it is our opinion that dewatering utilizing well points may not be feasible. Groundwater inflow to excavation collected and pump from sump may be used during construction.

The preliminary recommendations for foundation provided in the May 2020 Report remain applicable. However, since foundation and floor slab on grade will extend below the historical highest groundwater level, waterproofing should be installed around the foundation and portion of basement wall below the historical highest groundwater level. The proposed foundation systems should be designed to accommodate hydrostatic pressure based on the assumed historical high groundwater table.

The final foundation types and bearing capacity should be confirmed during the design-level geotechnical investigation.

3.0 NON-TECHNICAL RELATED CLARIFICATION TO MAY 2020 REPORT

In Section 2.1 Prior Field Investigation

The prior limited field investigation was performed at the Project Site on December 16 and 17, 2019.

In Section 3.3 Groundwater

The prior investigation, which was a Group Delta investigation, encountered groundwater at depth below ground surface at 52.2 feet and 60.5 feet. The data from the prior investigation was not included in the May 2020 Report.

In Section 4 Geologic/Soils CEQA Impact Geotechnical Evaluation

For the CEQA specific geology and soil impact evaluation, an evaluation of the checklist items was performed. First it was assessed if the potential hazard was present at the Project Site or may develop as a result of the proposed Project. Then the degree in which the potential may be present was evaluated. If there was a potentially significant hazard present, it is then evaluated if the hazard can be 1) reduced through regulatory compliance to a less than significant impact; 2) requires extensive mitigation which may result in changes to the Project Plan to reduce the impact to less than significant; 3) have significant impact even with mitigations; or 4) have

significant impact with no known ability to mitigate. Below is the summary table presented in the reference report. Its contents are supported in the context of the referenced report and should not be used outside of this supplement document without the context of the referenced report. Here within the Table 1 – VII. Geology and Soils Impacts should now be referenced as Section 4 Table 1 – VII. Geology and Soils Impacts.

Section 4 Table 1 – VII. Geology and Soils Impacts

Geology and Soils Item	Impact	Regulatory Compliance Measures
a.i. Rupture of Earthquake Fault	No Impact	Alquist Priolo Act Compliance. The Project is not located on or nearby an active-fault
a.ii. Seismic Ground Shaking	Less than Significant with Regulatory Compliance Measures Incorporated	Building Code – Current Seismic Design Compliance
a.iii. Seismic Ground Failure	Less than Significant	None Required
a.iv. Landslides	Less than Significant with Regulatory Compliance Measures Incorporated	Building Code Compliance
b. Soil Erosion	No Impact	Best Management Practices Compliance
c. Ground Stability	No Impact	Building Code Compliance
d. Expansive Soil	Less than Significant with Regulatory Compliance Measures Incorporated	Building Code Compliance
e. Waste Water Management	Less than Significant with Regulatory Compliance Measures Incorporated	City of Los Angeles Low Impact Development Best Management Practices Handbook Compliance
f*. Destroy a Unique Geologic Feature	No Impact	NA

Note* - only the geotechnical related part of item f is addressed here within.

In Section 4.2 Seismic Setting

Table 1: List of Known Earthquake Faults Closest to the Subject Site, is renamed here within to Section 4.2 Table 1: List of Known Earthquake Faults Closest to the Subject Site.

In the report Figures, Figure 4 – Cross Section A-A' should be amended such that the cross section is labelled with A' at the southern extent of the section.

4.0 CLOSING

The recommendations were developed in accordance with generally accepted geotechnical engineering principles and practice. The professional engineering work and judgments presented in this memorandum meet the standard of care of our profession at this time. No other warranty, expressed or implied, is made.

Sincerely,

Group Delta Consultants, Inc.

Dear Mr. Khalatian,

Group Delta Consultants (GDC) is pleased to submit this geotechnical feasibility report for the Sunset + Wilcox Project at the subject site. Our scope of work was conducted in general accordance with change order No. 2 dated April 3, 2020 and the Consulting Agreement between Seward Partners, LLC and Group Delta Consultants, Inc. dated November 21, 2019.

We appreciate the opportunity to provide geotechnical services for this significant project. If you have any questions pertaining to this report, or if we can be of further service, please do not hesitate to contact us.

Sincerely,
Group Delta Consultants, Inc.

Ethan Tsai, G.E.

Geotechnical Feasibility Report
Proposed Sunset + Wilcox Redevelopment
6450 Sunset Blvd., 1429 & 1423 Wilcox Ave., and 1413 Cole Pl.
Los Angeles, California

1.0 INTRODUCTION

This report was prepared to address the feasibility of the proposed Sunset + Wilcox Project from a geotechnical standpoint in preparation for the project Environmental Impact Report (EIR) submittal. This report includes a review of geotechnical related geological/soils CEQA checklist items as well as preliminary geotechnical foundation and construction recommendations for project planning.

1.1 Project Description

The Sunset and Wilcox Project site is located at the southeast corner of Sunset Boulevard and Wilcox Street and extends south, in part, to De Longpre Avenue in the City of Los Angeles, California. The site vicinity is shown in Figure 1. The Project includes development of a commercial office building with subterranean parking and a separate switchgear and generator structure with surface parking lot. The main commercial building is planned to be constructed at the Sunset Lot, location shown in Figures 2 and 3. The Sunset Lot is a rectangular shaped property comprised of nine lots with a combined footprint area of 66,994 square feet. The proposed commercial building is 15-stories in height with a roof top helipad and three additional subterranean levels of parking. The estimated column loads at this time are 3,000-3,600 kips for dead load and 600 kips for live load.

The switchgear and generator building is planned to be constructed at the De Longpre Lot, location shown in Figures 2 and 3. The De Longpre Lot is a rectangular shaped property comprised of one lot with a footprint area of 6,909 square feet. The proposed switchgear structure will be 15 feet in height above grade and 18 feet depth below grade subterranean level.

1.2 Scope of Work

This report is intended to address the primary geotechnical factors which may impact the planned Sunset + Wilcox Project and provide preliminary geotechnical recommendations for earthwork and foundation support. Our scope of work included the following:

- Review of regional geotechnical maps and reports published by the U.S. Geological Survey (USGS), California Geological Survey (CGS), and City of Los Angeles;
- Review prior subsurface field exploration at the site including the Due Diligence Investigations, dated January 24, 2020;

- Incorporate the current Sunset + Wilcox Project conceptual plans prepared by Gensler, dated May 4, 2020 in our evaluation;
- Perform a preliminary borehole percolation test within 5 feet to 15 feet depth below existing ground surface;
- Update figures to include conceptual plans dated March 18, 2020;
- Provide geotechnical background and evaluation for pertinent geology/soils CEQA Environmental Checklist items;
- Perform preliminary analyses to provide preliminary geotechnical recommendations for excavation, shoring, foundation design, earthwork, and construction-related issues; and
- Prepare a report to present our findings and preliminary recommendations.

2.0 GEOTECHNICAL INVESTIGATION AND LABORATORY TESTING

2.1 Prior Field Investigation

A limited field investigation was previously performed on the Project Site December 16 and 17, 2020. The prior field exploration is presented here within. The soil conditions beneath the Project Site were explored by drilling four hollow stem auger borings, B-1, B-2, B-3, and B-4, and sampled to a maximum depth of 61.5 feet below the existing grade. In addition to the prior exploration, boring INF-1 was drilled on April 3, 2020 to the depth of 16.5 feet, to perform percolation testing. The locations of these borings are shown on Figure 2, Exploration Plan. Details of the explorations and the logs are presented in Appendix A.

2.2 Laboratory Testing Program

Laboratory testing was performed on representative samples obtained during the field investigation to further evaluate and correlate the physical properties and engineering characteristics of the soils encountered. The following tests were performed/and or reviewed as part of this study:

- Moisture and density
- Grain size distribution
- Direct shear
- Consolidation
- Atterberg limits
- Corrosivity (pH, sulfate, chloride, electrical resistivity)
- Expansion index

All testing was done in general accordance with applicable ASTM specifications. Details of the laboratory testing program and test results are presented in Appendix B.

3.0 SITE CONDITIONS

3.1 Site Conditions

The Project Site is located in a densely developed area in the Hollywood area of Los Angeles, California, as shown in Figure 1. The Project Site is occupied by commercial buildings at the north, west, and south parcels, as shown in Figure 2. There is minimal vegetation, which includes only perimeter landscape. The rest of the Site is paved with at grade parking, sidewalks, and driveways. The Sunset Lot is bordered entirely by streets, on the north by Sunset Boulevard, the west by Wilcox Avenue, the east by Cole Place, and the south by a public alleyway. The De Longpre Lot is bordered by the public alleyway to the north, a single-story commercial building and at grade parking to the west, Cole Place to the east, and De Longpre Avenue to the south. Topography at the Site and surrounding area has a gentle down gradient to the south, topographically as illustrated in Figures 1 and 2.

3.2 Subsurface Conditions

Artificial fill materials were encountered within the borings to about 2 feet depth. The fill materials consist of silty to clayey sand with gravel. However, it should be noted that in the City of Los Angeles, it is common to encounter undocumented old fills and construction debris buried below developed properties. Deeper fills/debris may exist between exploration locations.

Older alluvial fan deposits (Qof) lie below the fill materials to maximum depth explored. From 2-foot depth to about 15-foot depth the alluvium consists of a medium dense, brown to dark brown, moist silty to clayey sand, within interbedded clayier layers. Below 15-ft depth to about 30-35 feet depth, the soil generally becomes a medium stiff to very stiff, light to dark brown, moist sandy lean clay to lean clay. There appears to be a layer of medium dense to dense sand from about 30 to 35-40ft depth. At about 35-40 feet depth, down to maximum depth explored the alluvium consists of very stiff to hard, light to dark brown, sandy lean clay to clayey sand. A geologic cross section presenting the general subsurface conditions is presented in Figure 4.

3.3 Groundwater

During the geotechnical feasibility study for this Project Site, soil borings were drilled to a maximum depth of 61.5 feet (about Elevation 288.5 feet) below the ground surface. Groundwater was encountered during our investigation at depths 52.2 feet to 60.5 feet, corresponding to approximate elevation of 290 feet. The Seismic Hazard Zone Report for the Hollywood Quadrangle (CGS, 1999) indicates that the historically highest ground water level in the site area is about 50 feet below ground surface. However, shallower perched ground water may be present seasonally following rains and could be encountered during basement excavation.

4.0 GEOLOGIC/SOILS CEQA IMPACT GEOTECHNICAL EVALUATION

The Sunset + Wilcox Project Site has been evaluated for “potential substantial adverse environmental effects” involving geology and soils according to the 2020 CEQA Statute & Guidelines Appendix G, which ask if the project would:

- a) Expose people or structures to potential substantial adverse effects, involving the risk of loss, injury, or death involving:
 - i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area of based on other substantial evidence of a known fault?
 - ii) Strong seismic ground shaking?
 - iii) Seismic-related ground failure, including liquefaction?
 - iv) Landslides?
- b) Result in substantial soil erosion or the loss of topsoil?
- c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?
- d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?
- e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?
- f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

The findings are summarized in Table 1 VII. Geology and Soils Impacts and discussed further in the sections below.

Table 1 – VII. Geology and Soils Impacts

Geology and Soils Item	Impact	Mitigation
a.i. Rupture of Earthquake Fault	Less than Significant with Mitigation Incorporated	Alquist Priolo Act Compliance. The Project is not located on or nearby an active-fault
a.ii. Seismic Ground Shaking	Less than Significant with Mitigation Incorporated	Building Code – Current Seismic Design Compliance
a.iii. Seismic Ground Failure	Less than Significant	None Required
a.iv. Landslides	Less than Significant with Mitigation Incorporated	Building Code Compliance
b. Soil Erosion	Less than Significant Mitigation Incorporated	Best Management Practices Compliance
c. Ground Stability	Less than Significant with Mitigation Incorporated	Building Code Compliance
d. Expansive Soil	Less than Significant with Mitigation Incorporated	Building Code Compliance
e. Waste Water Management	Less than Significant with Mitigation Incorporated	City of Los Angeles Low Impact Development Best Management Practices Handbook Compliance
f*. Destroy a Unique Geologic Feature	No Impact	NA

Note* - only the geotechnical related part of item f is addressed here within.

4.1 Geologic Setting

The Project Site is located within the seismically active Los Angeles Basin area of southern California. The basin began forming over 7 million years ago (Wright 1991). Today, the basin is undergoing transpressional stress bound by surrounding fault systems, including the Whittier, Palos Verdes, and Santa Monica-Hollywood-Raymond faults. Internally, the basin is filled with sedimentation thousands of feet thick structurally influenced by thrusting fault blocks and strike slip fault expressions trending northwest (Dolan, et al., 1995). Locally, the Project Site is near the northern boundary of the Los Angeles Basin within a broad alluvial fan gently sloping south (CGS, 2012). The alluvial fan deposits (Qof) are generally comprised of granitic and sedimentary erosional debris from the Santa Monica Mountains, north of the site. The Older Alluvial Fan deposits encountered below the site generally consist of overconsolidated and weathered clays with varying amounts of sand. The site with respect to Regional geology is presented in Figure 5.

4.2 Seismic Setting

The Project Site is located within the seismically active area of southern California and there is a high potential for the site to experience strong ground shaking from local and regional faults. These hazards and their potential impact can be mitigated with proper seismic design to have

less than significant impacts. The intensity of ground shaking is highly dependent upon the distance of the Project Site to the earthquake source, the magnitude of the earthquake, and the underlying soil conditions. Data evaluated for the regional fault and seismic hazard at the site was obtained from USGS and CGS online earthquake catalog and Quaternary Fault Database resources unless otherwise noted. The Project Site in relation to regional seismic faults and significant historical earthquake epicenters is presented in Figure 6, Regional Seismicity and Fault Map.

Local historical earthquakes recorded within a 100 km radius of the Project Site from 1812 to present include 234 recorded events with M4.0 or greater (USGS, 01/22/2020). Of the 234 events, 5 were M6.0 and greater and include the 1971 M6.6 San Fernando Earthquake and the 1994 M6.7 Northridge Earthquake. Thirty-three recorded events were M5.0 to less than M6.0 earthquakes. The closest recorded seismic event is a M4.2 earthquake in 2001, epicentered about 4.2 miles southwest of the site. While not within the search radius, earthquakes of M7.0 and greater have been recorded in southern California. As recently as 2019, a M7.1 earthquake ruptured about 140 miles north, northeast of the site. A M7.5 earthquake occurred in 1952 located about 70 miles north of the site and a M7.3 earthquake in 1992 was located about 100 miles east of the site. No known earthquake related damage has been reported at the site. Construction in this area should be designed with accepted engineering practices and in compliance with current building codes that accommodate strong seismic ground motion. A list of nearby active faults considered capable of producing significant shaking at the site is provided in Table 1 below:

Table 1: List of Known Earthquake Faults Closest to the Subject Site

Abbreviated Fault Name	Fault Type	Max. Magnitude (Mw)	Slip Rate (mm/yr)	Approximate Closest Distance* (Km)
Hollywood	Strike Slip	6.7	1	0.6
Santa Monica Alt 2	Strike Slip	7.0	1	0.39
Newport Inglewood	Strike Slip	7.5	1.3	9
Elysian Park (Upper)	Blind Thrust	6.7	1.3	2.9
Puente Hills	Blind Thrust	7.0	0.7	7
San Andreas	Strike Slip	7.9	N/A	33.56

Notes: Distance as measured in Google Earth from CFM5.2 KMZ file, 2014 Hazardous Faults Model KMZ File, CGS Hollywood Quad EZRI KMZ, and USGS/CGS Quaternary Fault and Fold KMZ files

4.3 Earthquake Fault Rupture

Anywhere in southern California there is a potential for fault rupture hazard due to an earthquake. The potential impact of fault rupture hazard is considered to be more significant on and nearby earthquake faults. The Alquist-Priolo Act as well as Preliminary Fault Rupture Study areas within the city of Los Angeles are regulations intended to identify areas with higher potential for fault rupture hazard and mitigate this hazard by restricting new development for human occupancy on or nearby known earthquake faults. The Project Site is not located within a CGS identified Alquist-Priolo Earthquake Fault Zone of Required Investigation (2015) as shown in Figure 7; nor a city Preliminary Fault Rupture Study Area (Navigatela). The Project Site is situated centrally within the Hollywood Basin. The Hollywood Basin is structurally bound between the Hollywood Fault to the north and the North Salt Lake Fault to the south. The Hollywood Fault is the closest known active fault considered capable of surface fault rupture, located about 0.6 km north of the Project Site. The North Salt Lake Fault activity is unknown at this time, but considered a Quaternary active fault, located about 0.39 km south of the Project Site. There are no known faults trending below or nearby toward the Project Site. Therefore, the potential hazard for earthquake fault rupture at the Project Site is less than significant.

4.4 Seismic Induced Ground Failure

Liquefaction involves the sudden loss in strength of a saturated, cohesionless soil caused by the build-up of pore water pressure during cyclic loading, such as that produced by an earthquake. This increase in pore water pressure can temporarily transform the soil into a fluid mass, resulting in differential settlement, and can also cause ground deformations. Typically, liquefaction occurs in shallow groundwater areas where there are loose, cohesionless, fine grained soils.

The Project Site is not located in a State of California designated Liquefaction Hazard Zone (Figure 7). Historical high groundwater at the site is reported to be about 50 feet in depth (CDMG, 1999). Subsurface soil conditions beneath the historical highest ground water table consist predominantly of very stiff to dense clayey materials and is not susceptible to liquefaction or significant seismic settlements. There are no open slopes or waterways nearby which may present the seismic ground failure of lateral spreading. Therefore, the potential for seismic induced ground failure hazards such as liquefaction, seismic settlement, and lateral spreading onsite is considered less than significant.

4.5 Landslides

The Project Site and local vicinity have a gentle gradient down to the south with no significant slopes within the immediate vicinity of the Project Site. There are no mapped landslides or CGS designated Earthquake Zone of Required Investigation for landslide hazard at or adjacent the Project Site, as illustrated in Figure 7. The potential for landslide hazard at the Project Site is negligible. With proper engineered shoring and/or laying back of planned cut slopes and deep excavations, the potential hazard of slope instability at the Project Site to impact the surrounding developments is less than significant.

4.6 Soil Stability

4.6.1 Erosion

Substantial soil erosion can occur along slopes and gentle gradients where loose and weakly vegetated soils are present and exposed to surface water flow and/or wind. The current Project Site conditions have very minimal space where soil is open to the atmosphere, limited perimeter landscaping. The planned Sunset + Wilcox Project will cover the land with buildings and pavements. With best management practices during construction, erosion of soils would not be significant. The potential hazard of substantial soil erosion is negligible.

4.6.2 Collapse and/or Expansion

The soils onsite encountered during our field investigation indicate moist, very stiff/dense clayey soils that are not considered susceptible to collapse due to soil bridging and/or hydro collapse and should have no impact to on the planned development. Expansion test results indicate the clayey soils may have a potential to shrink and swell with changes in moisture content. Expansion potential impacts can be mitigated through proper design to be less than significant.

4.7 Waste Water Disposal

The city provides waste water disposal through the city sewer systems. The Project plans to develop low impact waste disposal systems to minimize disposal to the city sewer systems in compliance with the City of Los Angeles Low Impact Development Best Management Practices Handbook. Therefore, the impact for soils supporting wastewater disposal systems are considered less than significant.

4.8 Geologic Feature

The Project Site is situated within a densely developed area of Los Angeles, California. The site is currently developed with commercial structures and pavements. There is no natural landscape remaining at the Project Site or in the Project Site vicinity. Therefore, there is no potential hazard of destroying a natural geological feature of significance.

4.9 Naturally Occurring Methane

A revision of the General Plan Safety Element Exhibit E (1996) indicates the site is outside of major oil drilling areas. The closest State-Designated oil field is the Salt Lake, about 1 mile south from the site. The closest known well is about 1,600 feet south east of the site according to the online CalGEM GIS well finder accessed April 29, 2020. The site is not within a recognized City of Los Angeles Methane Zone or Methane Buffer Zone. Therefore, the potential naturally occurring oil and methane onsite is considered low with no impact to the Project Site.

5.0 INFILTRATION TEST

The boring percolation test was performed in boring INF-1 to evaluate the infiltration rate of the subsurface soil from the depth of 5 feet to 15 feet below the existing grade. The result of the infiltration test indicates that the infiltration rate is estimated to be 0.02 inch per hour. The City of Los Angeles Low Impact Development Best Management Practices Handbook Table 4.1 Infiltration Feasibility Screening indicates the infiltration practices are not feasible at the Project Site at the depths and location tested.

The field measurements, calculations, and well installation details are provided in Appendix C.

6.0 DISCUSSION AND RECOMMENDATIONS

6.1 General

Based on the results of our preliminary geotechnical investigation, it is our professional opinion that redevelopment of the Project Site for the Sunset + Wilcox Project is feasible from a geotechnical standpoint. Preliminary geotechnical recommendations for design planning are discussed in the following sections. A design-level geotechnical report will be required to develop geotechnical recommendations for final design, including possible supplemental geotechnical investigation to better define the subsurface conditions and confirm engineering parameters for detailed engineering analyses.

6.2 Excavation and Shoring

For construction of subterranean walls, conventional soldier beams with lagging for shoring is feasible. This method of shoring would consist of steel soldier piles placed in drilled holes, backfilled with concrete, and either tied back with earth anchors or braced internally. The tie-back anchors will have to be planned to avoid utilities in the street.

6.2.1 Lateral Earth Pressure

For cantilevered shoring, we recommend using a triangular pressure distribution for calculating earth pressures. At minimum, an active earth pressure equal to that of a fluid with a density of 35 pcf may be used for level retained ground, plus any groundwater pressure encountered in the excavation and any surcharge loads resulting from loads placed above the excavation and within a 1:1 plane extending upward from the base of the excavation. The active earth pressure condition assumes that the shoring will deflect at the top about 0.2 percent of the shoring height.

We recommend the use of a trapezoidal distribution of earth pressure. The recommended pressure distribution for the case where the grade is level behind the shoring is illustrated in the following diagram, with the maximum pressure equal to 25H in pounds per square foot, where H is the height of the shoring in feet, plus any surcharge loads resulting from loads placed above the excavation and within a 1:1 plane extending upward from the base of the excavation.

The recommended earth pressure provided above is preliminary value. The design earth pressure should be estimated based on the depth of the excavation, type of the retaining structure and soil properties.

In addition to the recommended earth pressure, the upper 10 feet of shoring adjacent to normal vehicular traffic should be designed to resist a uniform lateral pressure of 100 pounds per square foot, acting as a result of an assumed 300 pounds per square foot surcharge behind the shoring due to normal traffic. If the traffic is kept back at least 10 feet from the shoring, the traffic surcharge may be neglected. Furthermore, the shoring should be designed to resist any lateral surcharge pressure imposed by the foundations of any adjacent existing structures.

6.2.2 Soldier Pile

For soldier piles embedded in compacted fill or alluvial materials, and spaced at least 2 pile diameters on centers, an allowable passive pressure of 500 psf per foot of embedment (over twice the pile width) up to a maximum of 5,000 psf may be used. To develop the full passive pressure, provisions should be taken to assure firm contact between the soldier piles and the undisturbed soils. To support vertical loading, an allowable friction capacity of 450 pounds per square foot may be used for the portion of soldier pile embedded below the proposed excavation elevation.

The concrete placed in the soldier pile excavations may be a lean-mix concrete. However, the concrete used in that portion of the soldier pile which is below the planned excavated level should be of sufficient strength to adequately transfer the imposed loads to the surrounding soils. If lean-mix concrete is used around the soldier pile below the planned excavation level, only the

passive resistance developed by the steel soldier pile itself may be used, not the entire diameter of the drilled hole.

Caving may be anticipated during drilling. Special technique, such as casing or drilling mud may be used to prevent caving. In addition, either lean-mix concrete or structural concrete should be pumped from the bottom up through a rigid pipe extending to the bottom of the drilled excavation, with the pipe being slowly withdrawn as the concrete level rises. The discharge end of the pipe should be at least 5 feet below the surface of the concrete at all times during placement. The discharge pipe should be kept full of concrete during the entire placing operation and should not be removed from the concrete until all of the concrete is placed and fresh concrete appears at the top of the pile. The volume of concrete pumped into the hole should be recorded and compared to design volume.

6.2.3 Lagging

Continuous lagging will be required throughout. The soldier piles and anchors should be designed for the full-anticipated lateral pressure. However, the pressure on the lagging will be less due to arching in the soils. We recommend that the lagging be designed for the recommended earth pressure but may be limited to a maximum value of 400 psf.

6.2.4 Anchors

Tieback anchors may be used to resist lateral loads. However, it has been our experience that friction anchors involve fewer installation problems and provide more uniform support than belled anchors. For design purposes, it may be assumed that the active wedge adjacent to the shoring may be defined by a plane projected upward from the base of the excavation 35° from vertical. Friction anchors should extend at least 20 feet beyond the active wedge or to a greater length as necessary to develop the desired capacities. For design purposes, it may be estimated that friction anchors will develop an average friction value of 500 psf. For post-grouted anchors, it may be estimated that the anchors will develop an average friction of 1,500 pounds per square foot in the overburden soils. Only the frictional resistance developed beyond the active wedge would be effective in resisting lateral loads. If the anchors are spaced at least 6 feet on centers, no reduction in the capacity of the anchors need be considered due to group action. Anchor capacities should be proof-tested during construction.

The values of anchor friction recommended above are only for preliminary estimation. If other configurations of tie-back anchors are developed during design phase, we can provide detail recommendation based upon the different configuration.

6.2.5 Anchor Installation

The anchors may be installed at angles of 15 to 40 degrees below the horizontal. Caving of the anchor holes may occur in the sandy alluvial fan deposits and provisions should be made to minimize such caving. The anchors should be filled with concrete placed by pumping from the tip

out, and the concrete should extend from the tip of the anchor to the active wedge. If there is significant caving of the anchor shaft, we suggest that the portion of the anchor shaft within the active wedge be backfilled with sand before testing the anchor. This portion of the shaft should be filled tightly and flush with the face of the excavation. The sand backfill may contain a small amount of cement to allow the sand to be placed by pumping. For post-grouted anchors of 8-inch diameter or less, the anchor may be filled with concrete to the surface of the shoring.

All tieback anchor in the public way including alleys that are located within 20 feet of surface shall be removed after permanent wall is constructed. All other tiebacks shall be detensioned.

6.2.6 Internal Bracing

Raker bracing may be used to internally brace the soldier piles. If used, raker bracing could be supported laterally by temporary concrete footing (deadmen) or by the permanent interior footings. For design of such temporary footings, poured with the bearing surface normal to the rakers inclined at 45 to 60 degrees with the vertical, a bearing value of 6,000 pounds per square foot may be used, provided the shallowest point of the footing is at least 1 foot below the lowest adjacent grade. To reduce the movement of the shoring, the rakers should be tightly wedged against the footings and/or shoring system.

6.2.7 Deflection

It is difficult to accurately predict the amount of deflection of a shored excavation. It should be realized, however, that some deflection will occur. We estimate that this deflection could be on the order of about $\frac{3}{4}$ to 1 inch at the top of a 35-foot deep shored excavation. If greater deflection occurs during construction, additional bracing may be necessary to minimize damage to utilities in the adjacent streets. A greater lateral pressure could also be used in the shoring design to reduce deflection.

For shoring supporting the adjacent existing structure, the shoring should be designed to limit maximum deflection of $\frac{1}{2}$ inch.

6.2.8 Monitoring

Some means of monitoring the performance of the shoring system and permanent retaining wall is recommended. The monitoring should consist of periodic surveying of the lateral and vertical locations of the tops of all the soldier piles and wall. We will be pleased to discuss this further with the design consultants and the contractor when the design of the shoring system and retaining wall has been finalized.

6.2.9 Anchor Testing

The soil engineer should select three of the initial anchors for Performance Tests to at least 150 percent of design load using procedures in accordance with PTI manual (1996). Remaining anchors should be proof tested to at least 150 percent of design load. Where satisfactory tests

are not achieved on the initial anchors, the anchor diameter, and/or length should be increased until satisfactory test results are obtained.

For anchors tested for 150 percent of design load, the total deflection during the test should not exceed 12 inches. The rate of creep under the 150 percent test should not exceed 0.1 inch over a 15-minute period in order for the anchor to be approved for the design load.

After a satisfactory test, each anchor should be locked-off at the design load. The locked-off load should be verified by rechecking the load on the anchor. If the locked-off load varies by more than 10 percent from the design load, the load should be reset until the anchor is locked off within 10 percent of the design load. The installation of the anchors and the testing of the completed anchors should be observed by a representative of our firm.

6.2.10 Drainage

We recommend 1-cubic-foot crushed rock pockets with a horizontal spacing 8 feet or less be placed at the bottom of the shoring as part of the drainage system behind basement walls. The rock should be separated from the adjacent soils by an appropriate filter fabric.

6.3 Basement Walls

Braced basement walls should be designed to resist at-rest earth pressures. Accordingly, for the case where the grade is level behind the walls, a triangular distribution of lateral earth pressure equivalent to that developed by a fluid with a density of 60 pounds per cubic foot may be used. This earth pressure assumes that all walls are constructed with a properly designed drainage system to prevent buildup of hydrostatic pressures behind the wall. Any surcharge loadings occurring as a result of the traffic, any heavy crane loads, and stockpiled materials should be added to this pressure.

Basement walls adjacent to areas subject to vehicular traffic should be designed to resist a uniform lateral pressure of 100 pounds per square foot, acting as a result of an assumed 300 pounds per square foot surcharge behind the walls due to normal vehicular traffic. If the traffic is kept back at least 10 feet from the walls, the traffic surcharge can be neglected.

Applicable lateral and vertical surcharge pressures from adjacent buildings, foundations of minor structures should be estimated based on the magnitude and location of the load and added to the earth pressures stated above.

Basement walls should also be designed for seismic earth pressure. The basement walls should be designed to resist, an active pressure combined with a seismic increment of lateral active earth pressure. The combined active static and seismic lateral earth pressure were computed based on an k_{eq} of 0.54g (one-half of PGA_M). The combined active static and seismic lateral earth pressure is equivalent to a fluid with a density of 76 pounds per cubic foot. The active static lateral earth pressure is equivalent to a fluid with a density of 35 pounds per cubic foot. Therefore, a seismic increment of 41 pounds per cubic foot may be used for design of seismic earth pressure. Seismic

earth pressure will be provided during final design investigation when structural feature is available.

6.4 Foundations

The site soils consist of medium dense to silty to clayey sand to a depth of about 15 feet below existing grade and become medium dense to dense sand and very stiff to hard clayey materials. Design of type of foundation and foundation capacities are based on the design structural column/wall loads and allowable total and differential settlement. According the preliminary plans, the bottom elevation for the commercial building in the Sunset Lot will be at the depth of about 30 feet below existing grade. The utility building in the De Longpre Lot is planned have a bottom elevation at the depth of about 18 feet below existing grade.

Based on the conceptual design of the proposed structures and preliminarily estimated structural column loads provided to us, proposed structures may be supported on mat foundations. A design-level geotechnical investigation will be required to develop recommendations for foundation design parameters and feasibility for the proposed structure supported on spread footings.

For preliminary analyses, the proposed commercial building in the Sunset Lot, which has three subterranean levels, may be supported on a mat foundation which may be designed to impose an allowable dead-plus-live load pressure of 5,000 psf. The proposed utility building in the De Longpre Lot, which has one subterranean levels, may be supported on a mat foundation which may be designed to impose an allowable dead-plus-live load pressure of 3,000 psf. The final foundation types and bearing capacity should be confirmed during the design-level geotechnical investigation.

6.5 Floor Slab

The onsite clayey materials are expansive and are classified as medium expansive. The floor slab subgrade should be replaced with at least 2-feet of non-expansive properly compacted fill soils. Moisture barriers and moisture control may be required.

6.6 Seismic Considerations

Seismic design parameters are obtained from the United States Geological Service (USGS) generic code-based seismic design maps webtool provided by the through the Office of Statewide Health Planning and Development (OSHPD) and the Structural Engineers Association of California (SEAOC) (<https://seismicmaps.org/>). We have assumed that the Project Site may be classified as Site Class D based on the subsurface conditions. Site Class should be confirmed during final design investigation.

The site coordinates used are: Latitude: 34.09768 Longitude: -118.3306

The summary of the Design Acceleration Parameters are presented in the following table:

Table 2: Summary of the Design Acceleration Parameters for the Project Site

Parameter	Value
PGA_m	1.086 g
S_s	2.111 g
S_1	0.745 g
Site Class	D-Default
F_a	1.2
F_v	1.7
S_{MS}	2.533 g
S_{M1}	1.267 g
S_{DS}	1.689 g
S_{D1}	0.844 g
C_{rs}	0.896
C_{r1}	0.896

Notes: If S_{D1} is used to obtain C_s with either equation 12.8-3 or 12.8-4 of ASCE 7-16, the value must be increased by a factor of 1.5. This may only be used for $T > 1.5 T_s$.

⁽²⁾ For $T \leq T_s$, S_{DS} should be used only to obtain C_s using Equation 12.8-2

It should be noted that based on ASCE 7-16, section 11.4.8, for structures on site class D with S_1 values greater than 0.2 g, site-specific ground motion hazard analysis is required.

For structures with a fundamental period of 0.5s or less, the seismic design parameters for short period parameters provided herein may be used for structural design. F_v , S_{M1} , and S_{D1} value can only be used for calculation of T_s and should not be used for design. Proper penalty factors are included in determination of seismic response coefficient as recommended by ASCE 7-16.

7.0 LIMITATIONS

This geotechnical feasibility report was performed in accordance with generally accepted Geotechnical Engineering principles and practice. The professional engineering work and judgments presented in this report meet the standard of care of our profession at this time. No other warranty, expressed or implied, is made. This report has been prepared for the Seward Partners LLC, and their design consultants. It may not contain sufficient information for other parties or other purposes and should not be used for other projects or other purposes without review and approval by GDC. This feasibility report will not be sufficient to obtain a building permit from the City. A design-level geotechnical investigation will be required prior to developing final plans for the project.

APPENDIX A
Field Investigation

APPENDIX A

FIELD EXPLORATION

A.1 Introduction

A geotechnical subsurface investigation was conducted for the proposed development in Los Angeles, California on December 16 of 2019 and April 3 of 2020. The investigation consisted of drilling five hollow stem auger (HSA) borings and performing one bore hole percolation testing. The exploration locations and numbers are shown in **Figure 2, 3 and 4** of the main report. Summary table of the recent field investigations by Group Delta is provided in Table A-1.

A.2 Soil Borings

Five HSA borings were drilled, four were drilled to the proposed depth of about 61.5 feet below existing grade and one HSA boring for infiltration testing was drilled to the proposed depth of about 16.5 feet. The borings were performed under continuous technical supervision of a Group Delta Consultant's field engineer, who maintained detailed log of the soil encountered, classified the materials, according to the Unified Soil Classification System (USCS), and assisted in obtaining soil samples.

Drive samples and bulk samples of the encountered materials were obtained from the borings and recorded on the boring log. Drive samples were obtained with a Modified California Sampler lined with 1-inch high metal sample rings and a Standard Penetration Test (SPT) sampler. The Modified California Sampler has an outside diameter of 3-inches, and the inside diameter of 2.5-inches with a 2.42-inches inside diameter cutting shoe. The samples were retained in brass rings and placed in sealed plastic canisters to prevent moisture loss. Standard penetration tests (SPT) were conducted using a standard 2-inch outside diameter, 1.375-inch inside diameter, split-spoon sampler in accordance with ASTM D1586. SPT samples were placed in sealable plastic bags to protect the natural moisture. The SPT and Modified California samplers were driven into the soil at the bottom of the borehole using a 140-pound hammer free falling 30 inches. The penetration resistance (or "blowcount") in blows per six inches of driving was recorded on the logs. Bulk samples were obtained in the upper 5 feet by a shovel and placed into polyethylene bags. Bulk samples were obtained for the infiltration testing zone of 5 feet depth to 15 depth below existing grade from the boring for infiltration testing.

A key for soil classification and a boring record legend are presented in Figures A-1a and A-1b and A-2a to A-2c respectively. The boring logs are presented in Figures A-3a to A-3c, A-4a to A-4c, A-5a to A-5c, A-6a to A-6c, and A-7.

Hard	> 2.0	> 4.0	> 2.0	> 2.0

APPARENT DENSITY OF COHESIONLESS SOILS	
Descriptor	SPT N_{60} - Value (blows / foot)
Very Loose	0 - 5
Loose	5 - 10
Medium Dense	10 - 30
Dense	30 - 50
Very Dense	> 50

MOISTURE	
Descriptor	Criteria
Dry	No discernable moisture
Moist	Moisture present, but no free water
Wet	Visible free water

PERCENT OR PROPORTION OF SOILS	
Descriptor	Criteria
Trace	Particles are present but estimated to be less than 5%
Few	5 to 10%
Little	15 to 25%
Some	30 to 45%
Mostly	50 to 100%

PARTICLE SIZE		
Descriptor		Size (in)
Boulder		> 12
Cobble		3 - 12
Gravel	Coarse	3/4 - 3
	Fine	1/5 - 3/4
Sand	Coarse	1/16 - 1/5
	Medium	1/64 - 1/16
	Fine	1/300 - 1/64
Silt and Clay		< 1/300

PLASTICITY OF FINE-GRAINED SOILS	
Descriptor	Criteria
Nonplastic	A 1/8-inch thread cannot be rolled at any water content.
Low	The thread can barely be rolled, and the lump cannot be formed when drier than the plastic limit.
Medium	The thread is easy to roll, and not much time is required to reach the plastic limit; it cannot be rerolled after reaching the plastic limit. The lump crumbles when drier than the plastic limit.
High	It takes considerable time rolling and kneading to reach the plastic limit. The thread can be rerolled several times after reaching the plastic limit. The lump can be formed without crumbling when drier than the plastic limit.

CONSISTENCY OF COHESIVE SOILS VS. N_{60}	
Description	SPT N_{60} (blows / foot)
Very Soft	0 - 2
Soft	2 - 4
Medium Stiff	4 - 8
Stiff	8 - 15
Very Stiff	15 - 30
Hard	> 30

Ref: Peck, Hansen, and Thornburn, 1974, "Foundation Engineering", Second Edition

Note: Only to be used (with caution) when pocket penetrometer or other data on undrained shear strength are unavailable. Not allowed by Caltrans Soil and Rock Logging and Classification Manual, 2010

CEMENTATION	
Descriptor	Criteria
Weak	Crumbles or breaks with handling or little finger pressure.
Moderate	Crumbles or breaks with considerable finger pressure.
Strong	Will not crumble or break with finger pressure.

Ref.: Caltrans Soil and Rock Logging Classification, and Presentation Manual (2010), with the exception of consistency of cohesive soils vs. N_{60} .

APPENDIX B
Laboratory Testing

APPENDIX B

LABORATORY TESTING

B.1 Introduction

The laboratory testing was performed using appropriate American Society for Testing and Materials (ASTM) and Caltrans Test Methods (CTM).

Modified California drive samples, Standard Penetration Test (SPT) drive samples, and bulk samples collected during the field investigation were carefully sealed in the field to prevent moisture loss. The samples of earth materials were then transported to Group Delta's laboratory for further examination and testing. Tests were performed on selected samples as an aid in classifying the earth materials and to evaluate their physical properties and engineering characteristics. Laboratory testing for this investigation included:

- Soil Classification: USCS (ASTM D2487) and Visual Manual (ASTM D2488);
- Moisture content (ASTM D2216) and Dry Unit Weight (ASTM D2937);
- Atterberg Limits (ASTM D4318);
- Pocket Penetrometer;
- Direct Shear (ASTM D3080);
- One-Dimensional Consolidation (ASTM D2435)
- Soil Expansion Index (ASTM D4829)
- Sieve Analysis and Percent Passing No. 200 Sieve;
- Soil Corrosivity:
 - pH (CTM 643);
 - Water-Soluble Sulfate (ASTM D516, CTM 417);
 - Water-Soluble Chloride(Ion-Specific Probe, CTM 422);
 - Minimum Electrical Resistivity (CTM 643);

A brief description of the laboratory testing program and test results are presented below.

B.2 Soil Classification

The subsurface materials were classified visually in the field using the Unified Soil Classification System (USCS), in accordance with ASTM Test Methods D-2487 and D 2488 and following Caltrans Soil and Logging Classification and Presentation Manual (2010). Soil classifications were modified as necessary based on further inspection and testing in the laboratory. The soil classifications are presented on the key for soil classification and on the boring logs in Appendix A.

B.3 Moisture Content and Dry Unit Weight

The natural moisture content of selected SPT and California ring samples and dry unit weight of California ring samples were determined in general accordance with ASTM D2216 and ASTM D2937. Results of these tests are presented on the boring log in Appendix A.

B.4 Atterberg Limits

Soil plasticity was evaluated by measuring the Atterberg limits. This test includes Liquid Limit (LL) and Plastic Limit (PL) tests to determine the Plasticity Index (PI) in accordance with ASTM D4318. Results of these tests are illustrated in the plasticity chart shown in Figures B-1a and B-1b and on the boring log in Appendix A.

B.5 Pocket Penetrometer

The shear strengths of cohesive samples were evaluated using a pocket penetrometer. The pocket penetrometer is a hand held testing device, consisting of a small probe connected to a calibrated spring. As the probe is pushed into the soil a standardized distance, the spring compresses and records the unconfined compressive strength. The shear strength obtained from the pocket penetrometer is shown directly on the boring logs.

B.6 Direct Shear

Direct shear tests were performed on selected samples in accordance with ASTM D3080. After the initial weight and volume measurements were made, the samples were placed in a calibrated shear machine and a selected normal load was applied. Each sample was then saturated and allowed to consolidate, and then were sheared under a constant strain to failure. Shear stress and sample deformations were monitored throughout the test. The test results are presented in Figures B-2a and B-2b.

B.7 One-Dimensional Consolidation Test

The consolidation characteristics of the foundation soils were determined by performing one-dimensional consolidation in general accordance with ASTM D 2435, using a floating ring consolidometer and dead weight system. Results of the test from the current investigation IS presented in Figure B-3.

B.8 Soil Expansion Index

The expansion potential of the site soil was estimated using the Expansion Index Test in accordance with ASTM D 4829. The result of this test is discussed in the main report text.

B.9 Sieve Analysis and Percent Passing No. 200 Sieve

Determination of grain size distribution of soils was performed to separate particles into size ranges and to determine quantitatively the mass of particles in each range following ASTM D 6913. This test method uses a square opening sieve criterion in determining the gradation of soil between the 3-in. (75-mm) and No. 200 (75- μ m) sieves. In cases where the gradation of particles

smaller than No. 200 (75- μ m) sieve is needed, Test Method D7928 was used to obtain the grain size distribution. Results of passing sieve no. 200 are shown in boring logs as percentage per soil type.

Soil Corrosivity

Tests were performed to determine corrosion potential of site soils on concrete and ferrous metals. Corrosivity testing included minimum electrical resistivity and soil pH (Caltrans method 643), water soluble chlorides (Orion 170A+ Ion Probe or Caltrans Test Method 422), and water-soluble sulfates (ASTM D516). The test result is summarized in Table B-1 and shown in Figure B-4.

B.10 List of Attached Tables and Figures

APPENDIX C
Infiltration Test

APPENDIX C

BORING PERCOLATION TEST

The boring percolation test was performed in boring INF-1 to evaluate the infiltration rate of the subsurface soil from the depth of 5 feet to 15 feet below existing grade. The boring was drilled with a 10-inch diameter hollow stem auger and to the depth of 15 feet and a 3 -inch diameter PVC pipe was inserted to the bottom of the drilled hole. The pipe was perforated from 5 feet to 15 feet depth. The perforated section was wrapped in filter fabric and the annular space from 5 feet to 15 feet depth was filled with filter gravel. A bentonite plug was installed at the 5 feet depth.

Before performing the boring percolation test, the well was filled with water to presoak (saturate the soils with the purpose of developing a steady state flow within the test zone) for at least an hour. After the completion of the test, the well was abandoned by removing the PVC pipe casing and backfilled with cement grout.

Following presoaking, falling head permeability tests were conducted in each test well in accordance with Los Angeles County Administrative Manual (GS200.2) and ASTM 5912-96. The well casing was filled with water and then the level of water in the well was recorded at 10 minute intervals. The water levels were recorded a minimum of eight times. Stabilized rates were achieved in the readings, that is, the readings were within ten percent of each other in each of the two boring infiltration tests.

The field infiltration rates were calculated based on the percolation rate data in the following manner:

- Calculate the field percolation rate as the rate of drop in water level in inches per hour.
- Convert the percolation rate to a raw infiltration rate by accounting for flow out of the sides and bottom of the boreholes and the volume of water in the pipes.

Reduction Factors may be applied to the raw percolation rate based on the following:

- Use of the Boring Percolation Test Procedure;
- Site Variability; and
- Long-term siltation, plugging, and maintenance.

A reduction factor of 2 was added for using the boring percolation procedure. A reduction factor of 2 was used for site variability and 2 for long-term siltation, plugging, and maintenance. Therefore, a total reduction factor of 8.0 was used on the raw percolation rates. A summary of the recommended design infiltration rates is shown in the table below.

Table C-1: Summary of Boring Infiltration Tests

Test Well	Soil Type	Zone Evaluated (feet below grade)	Raw Percolation Rate (in/hr)	Recommended Design Infiltration Rate (in/hr)
INF-1	SANDY lean CLAY	5-10	0.15	0.02

Based on the County of Los Angeles Department of Public Works, Geotechnical and Materials Engineering Division, Guidelines for Geotechnical Investigation and Reporting Low Impact Development Stormwater Infiltration, the required minimum design infiltration rate is 0.3 inches per hour. The field measurements and the details of the infiltration rate calculations are attached hereafter.

Boring Percolation Test

Field Measurement and Calculations

Project Location	1413 Cole Pl, Los Angeles	Date	4/3/2020
Earth Description	Concrete slab/parking	Boring/Test Number	INF-1
Tested by	Asheesh Pradhan	Diameter of Boring (in)	10
Liquid Description	Clear water	Diameter of Casing (in)	3
Measurement method	Steel tape	Depth of Boring (ft)	15
		Depth to Invert of BMP (ft)	5
		Depth to Water Table (ft)	NE
		Depth to Initial Water Depth (d1) (ft)	3.5
		Water Remaining in Boring (Y/N)	Y
		Standard Time Interval Between Readings (min)	10
		Depth to the top of perforated casing (ft)	5
		Depth to the bottom of the perforated casing (ft)	15
		Depth to the bottom of the top plug (ft)	5
		Length of infiltration testing zone (ft)	10

TIME INTERVAL STANDARD

Start Time for Pre-Soak	8:12 AM
Start Time for Standard	9:30 AM

Side surface area of the infiltration testing zone (in ²)	3769.9
Bottom surface area of the infiltration testing zone (in ²)	71.5
Total surface area of infiltration testing zone (in ²)	3841.4
Volume of water per inch length of the casing (in ³)	7.1

REDUCTION FACTOR

Boring percolation (RF _t)	2
Site variability, number of tests, and thoroughness of subsurface investigation (RF _v)	2
Long-term siltation, plugging and maintenance (RF _s)	2
Total Reduction Factor, RF = RF _t X RF _v X RF _s	8

Reading Number	Time Start/End (hh:mm)	Elapsed Time Δtime (min)	Water Drop During Standard Time Interval Δd (in)	Volume of water infiltrated in 10 min (in ³)	Volume of water infiltrated in 1 hour (in ³)	Raw Infiltration Rate - Volume/Surface area (in/hr)	Percent change in Paercolation Rate (%)	Total Reduction Factor (RF)	Average of last three stabilized Infiltration Rate (in/hr)	Design Infiltration Rate = Measured Percolation Rate/RF

re: Paleontological resources for the Sunset + Wilcox Project, City of Los Angeles,
California

Dear Stephanie:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at Sunset + Wilcox Project, City of Los Angeles, California project area as outlined on the portion of the Hollywood USGS topographic quadrangle map that you sent to me via e-mail on 3 August 2020. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County.

Locality Number	Location	Formation	Taxa	Depth
LACM IP 3280	2443 N. Gower St	unknown (Eocene)	<i>Amaurellina clarki</i>	unknown
LACM VP 6300	Metro Rail Red Line Hollywood Blvd. subway tunnel; Wilton Place & Carlton Way	Older alluvium	Camel (<i>Camelops</i>)	80 feet bgs
LACM VP 6297- 6299	Metro Rail Red Line Hollywood Blvd. subway tunnel, Hollywood Blvd from St. Andrews Place to Western Ave	Older alluvium	Bison (<i>Bison</i>), mammoth (<i>Mammut americanum</i>), horse (<i>Equus</i>)	60 feet bgs
LACM VP 5845	West side of Western Ave. just north of Council St	Older alluvium	Mastodon (<i>Mammutidae</i>)	5-6 feet bgs

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

Excavations into older alluvium or underlying deposits may well encounter significant fossils. Any substantial excavations in the proposed project area, therefore, should be closely monitored to quickly and professionally collect any specimens without impeding development. Also, sediment samples should be collected and processed to determine the small fossil potential in the proposed project area. Any fossils recovered during mitigation should be deposited in an accredited and permanent scientific institution for the benefit of current and future generations.

This records search covers only the records of the Natural History Museum of Los Angeles County. It is not intended to take the place of a thorough paleontological assessment of the proposed project area covering other institutional records, a literature review, or any potential on-site survey.

Sincerely,

A handwritten signature in black ink that reads "Alyssa Bell". The signature is written in a cursive, flowing style. The first name "Alyssa" is written with a large, looped 'A' and the last name "Bell" is written with a large, looped 'B'. The signature is set against a light beige rectangular background.

Alyssa Bell, Ph.D.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professionals as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

BA Environmental (a Division of Building Analytics) has conducted a Phase I Environmental Site Assessment (ESA) at the subject property located at 6450 Sunset Boulevard, in the City of Los Angeles, California. This Phase I ESA was conducted in general accordance with ASTM Standard Practice E 1527-13 and the United States Environmental Protection Agency All Appropriate Inquiry (AAI) Rule (as defined in the Code of Federal Regulations 40 CFR Part 312). Any exceptions to, or deletions from, this practice are described in the Objective and Scope of Work Section of this report. This Executive Summary presents a brief summary of the salient portions of the document. The Executive Summary, however, is not a stand-alone document, and must be read in conjunction with the entire Phase I ESA Report.

Report Findings and Conclusions Summary

Wetlands	X						

† De Minimis Conditions are those defined as conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

†† Recognized Environmental Condition (REC) is defined as □the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.□

††† Historical Recognized Environmental Condition (HREC) is defined as □a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).□

†††† Controlled Recognized Environmental Condition (CREC) is defined as □a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-

based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).□

††††† An Environmental Concern is defined as any other environmental condition which BA Environmental would not identify/consider a REC, CREC or an HREC.

Note 1: Historically, the subject property was occupied by a gasoline service station and automotive repair from around 1938 until around 1991. Agency oversight records reported, all of the USTs, a wastewater clarifier and automotive lifts have been removed and assessed for releases. Impacted soils were over excavated in the UST excavation and removed from the subject property. The USTs received closure in 1991. There were no identified releases related to the clarifier and lifts at the time of removal. Based on review of the closure reports for the USTs and the assessment reports for the automobile garage area, BA Environmental considers this to be a HREC and not an environmental concern at this time.

Significant Data Gap Summary

Report Section	Description
Environmental Liens and Activity Use Limitations (AULs)	No significant data gap
Interviews	No significant data gap
Historical Site Usage	No significant data gap
Historical Adjacent Property Usage	No significant data gap
Site Reconnaissance	No significant data gap
Environmental Agency Files	No significant data gap
Environmental Database	No significant data gap

Findings and Conclusions

BA Environmental has identified **no** Recognized Environmental Conditions (RECs), **no** Controlled Recognized Environmental Conditions (CRECs) and no Environmental Concerns. BA Environmental did identified **one** Historical Recognized Environmental Condition (HREC) in connection with historical gasoline fueling and automotive repair.

Recommendations

Based on the findings of this Phase I ESA, BA Environmental recommends **no** further investigations at this time. However, if redevelopment of the subject property should disturb subsurface soils, monitoring should be conducted to determine if any residual contaminants remain that would need specific disposal or handling.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

6450 Sunset Boulevard
Los Angeles, California

1.0 REASON FOR PERFORMING PHASE I ESA

The Phase I ESA was conducted in accordance with ASTM Standard Practice for Environmental Site Assessments E1527-13, and the United States Environmental Protection Agency AAI. This Phase I ESA was conducted for the purpose of informing the Client and User of environmental conditions at the subject property in connection with a commercial property acquisition and to assist User in qualifying for an LLP.

2.0 INTRODUCTION

BA Environmental (a Division of Building Analytics) has prepared the following Phase I Environmental Site Assessment (ESA) for **Seward Partners LLC. ("Client")**, **which acts on behalf of 6450 Sunset Owner LLC ("User")**. This report is regarding the subject property located at 6450 Sunset Boulevard, in the City of Los Angeles, California.

This report was prepared in accordance with the BA Environmental Proposal and Contract (LA12116) dated August 5, 2020. The assessment was performed at the Client's request using the methods and procedures consistent with good commercial and customary practice designed to conform to acceptable industry standards.

The independent conclusions represent our professional judgment based on information and data available to us during the course of this assignment. Factual information regarding operations, conditions, and test data provided by the Client, on behalf of User has been assumed to be correct and complete. The conclusions presented are based on the data provided, observations, and conditions that existed on the date of the on-site visit.

In expressing the opinions stated in this report, BA Environmental has exercised the degree of skill and care ordinarily exercised by a reasonable prudent environmental professional in the same community and in the same time frame given the same or similar facts and circumstances. Documentation and data provided by the Client on behalf of User, designated representatives of the Client or other interested third parties, or from the public domain, and referred to in the preparation of this assessment, have been used and referenced with the understanding that BA Environmental assumes no responsibility or liability for their accuracy.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. BA Environmental should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

Phase I ESA reports are valid for up to 180 days prior to the date of an acquisition, per ASTM E1527-13.

3.0 RELIANCE

All reports, both written and verbal, are for the sole use and benefit of User and Client. This report may not be relied upon by any other person or entity without the express written permission of BA Environmental. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this investigation. In the absence of a written agreement with BA Environmental Building Analytics granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against BA Environmental Building Analytics, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold BA Environmental Building Analytics, Client, User and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply for misuse or misapplication of this report.

4.0 OBJECTIVE AND SCOPE OF WORK

The purpose of the ESA is to identify, to the extent feasible, recognized environmental conditions. The identification of the presence or lack of recognized environmental conditions will permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections," or "LLPs"); that is, the practice that constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B) (ASTM E1527-13).

This Phase I ESA meets or exceeds the general requirements of the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments E1527-13, and the United States Environmental Protection Agency All Appropriate Inquiry (AAI) Rule (as defined in the Code of Federal Regulations 40 CFR Part 312). The ASTM standard practice defines good commercial and customary practice for conducting ESAs using reasonable inquiry. The scope of services for this Phase I ESA consisted of several tasks, including:

- A reconnaissance of the site and its vicinity;
- Interviews with current owners and occupants of the subject property, and personnel at local government agencies;
- A compilation of the property history, including the review of previous environmental reports regarding the subject property (if available);
- A review of pertinent Site and local regulatory agency files;
- An agency list search of facilities with recorded environmental issues located within the radii required by ASTM E1527-13;
- Tier 1 Vapor Encroachment Screen; and
- A summary of our findings, conclusions and recommendations.

Additional services that were provided include:

- A visual survey and review of a map of designated wetlands;
- A visual mold survey;
- A visual asbestos survey of suspect asbestos-containing materials (ACMs);
- A visual lead-based paint survey;
- A review of a survey and map of radon zones; and
- A review of relevant Methane Zones.

The scope of this Phase I ESA is not intended to address, assess, or otherwise determine whether soil or groundwater contamination, waste emplacement, existing or threatened mold/fungus growth, asbestos-containing building materials, and/or lead-based paint actually exists at the subject property. BA Environmental considers a Tier 2 vapor encroachment screen beyond the scope of this Phase I ESA, and therefore a Tier 2 vapor encroachment screen was not conducted as part of this ESA. Additionally, this ESA does not serve as a comprehensive wetlands, mining, oil, pipeline, and/or gas well survey, which would require additional surveys, comprehensive subsurface exploration and/or other sampling activities, which are beyond the scope of service for this Phase I ESA. This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions as noted by AAI Rule (as defined in the Code of Federal Regulations 40 CFR Part 312). Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

As per ASTM Practice E1527-13, there are no deviations from, or deletions of, the general requirements of this standard practice contained in this report. This Phase I ESA has been performed by, or under the direct supervision of an environmental professional, as defined in ASTM E1527-13 and the EPA AAI Rules.

A Phase I ESA is a non-intrusive investigation. As such, it is not a full and complete assessment of all environmental conditions. Adverse conditions may exist that could not be discovered by such an assessment. No ESA can completely eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a subject property. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. The ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property. The practices of ASTM E1527-13 recognize reasonable limits of time and cost. The term "All appropriate inquiry" does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained, or the time required to gather it outweighs the usefulness of the information, and in fact may interrupt or interfere with the orderly or timely completion of a property transaction. One of the purposes of ASTM E1527-13 is to identify a balance between limiting the costs and time demands inherent in performing an ESA and the reduction of uncertainty about unknown conditions resulting from additional information. BA Environmental has made every reasonable effort to discover and interpret the information and current conditions regarding the site within the time available. We will recommend prudent additional investigations, if deemed necessary.

Several terms are commonly used throughout this report. For the purpose of this report, the **site vicinity** refers to an area within a 1-mile radius of the subject site. The term **adjacent property** includes those properties next to or across a street or a railroad track from the subject property. **Adjoining properties** are those which directly abut the

subject property. **Recognized environmental conditions** (RECs) refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies (ASTM E1527-13). Conditions determined to be de minimis are not recognized environmental conditions (ASTM E1527-13).

A Historical REC (HREC) is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). If a past release of a hazardous substance or petroleum product that has occurred at the subject property and has been remediated, and the remediation has been accepted by the responsible regulatory agency (for example, as evidenced by the issuance of a no further action letter or equivalent), this condition shall be considered an HREC.

Controlled Recognized Environmental Condition (CREC) is defined as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report.

An Environmental Concern is defined as any other environmental conditions which BA Environmental would not be identified or considered as a REC CREC or HREC.

BA Environmental uses risk levels (low, moderate and high) to provide the User with a relative risk for the potential for impact to the subject property. These risk levels are qualitative only and have no quantitative basis.

It should be understood that the conditions of a site can change with time as a result of natural processes or the activities of humankind at the subject site or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur at any time due to government action or the broadening of knowledge. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations, standards of practice, and property conditions existing at the time the assessment was performed. BA Environmental Building Analytics cannot be held responsible or liable for any changes in conclusions or recommendations affected by changes in the site or government regulations.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain factual assumptions, findings, conclusions, or circumstances discussed in this report. A change in any factual assumption, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

5.0 DESCRIPTION OF SUBJECT PROPERTY

5.1 Site Location and Legal Description

The subject property is located at 6450 Sunset Boulevard, in the City of Los Angeles, California, on the south side of Sunset Boulevard, between Wilcox Avenue on the west and Cole Place on the east, in the City of Los Angeles, California. The subject site is identified as APN 5546-014-056.

5.2 Site Improvements

The subject property is occupied by a single-story commercial retail building, consisting of approximately 17,136 square feet, situated on an approximate 0.76-acre parcel of land. Other improvements include surface asphalt parking and landscaping. The subject building was reportedly constructed in 1993 on previously developed land. Vehicular access to the parking lot is from Wilcox Avenue to the west and Cole Place to the east.

5.3 Utilities

Electric:	Los Angeles Department of Water and Power (LADWP)
Natural Gas:	Southern California Gas Company
Water:	LADWP
Sewer:	City of Los Angeles
Storm Drain:	City of Los Angeles
Solid Waste Disposal:	City of Los Angeles

5.4 Drinking Water

Municipal water service is supplied by the City of Los Angeles. According to the 2018 Water Quality Report for the City of Los Angeles Municipal Water System, there are no MCL violations, and the drinking water supplied by this municipal supplier meets all drinking water standards. A copy of the 2018 Water Quality Report for the City of Los Angeles Municipal Water System is included in Appendix A.

5.5 Adjacent Land Use

During the reconnaissance of the surrounding area within a 0.25-mile radius, BA Environmental observed that the subject site is located in an area of commercial, retail and residential properties.

The adjacent properties to the subject site are as follows (Figures 1 and 2):

North: Sunset Boulevard followed by Studio Instrument Rentals

East: Cole Place followed by a commercial office building

South: Alleyway followed by studio office space and media storage

West: Wilcox Avenue followed by a commercial office building

6.0 PHYSICAL SETTINGS

6.1 Topography

The property is depicted on the Hollywood, California Topographic Quadrangle map of the United States Geological Survey (USGS). The location of the subject site is at Latitude 34°5'51.12"North, Longitude 118°19'50.28"West of the Prime Meridian. The topography of the subject site slopes generally towards the south at a gradient of approximately 75 feet per mile. The elevation at the site is approximately 351 feet above mean sea level (msl).

Surface drainage of the subject site generally flows towards the south. Some localized changes in surface drainage are present throughout the subject site.

No other major bodies of surface water (i.e., oceans, lakes, rivers, streams, etc.) are depicted within a 1.0-mile radius of the site.

6.2 Geology and Hydrogeology

The subject Site is located in the Hollywood Piedmont Slope area of the Los Angeles Coastal Plain, on the northern side of the Hollywood Syncline (DWR 1961). The Coastal Plain of the Los Angeles County consists primarily of unconsolidated sediments of alluvium, underlain and bounded to the north and east by bedrock and the west and south by the Pacific Ocean. The Santa Monica Mountains are located to the north and east-west trending Santa Monica-Hollywood Fault is located approximately 10 miles north of the subject site. The subject Site is situated over the Hollywood Sub-basin of the Central Groundwater Basin of the Los Angeles, San Gabriel Hydrologic Unit. The alluvium within the site vicinity consists of Holocene alluvium, underlain by the Pleistocene deposits of the Lakewood Formation. The Lakewood Formation included the Bellflower Aquiclude, and the Exposition and Gage Aquifers (DWR 1961).

A site located approximately 1,600 feet to the southeast of the subject site reported groundwater typically encountered at 35 to 40 feet bgs with a hydraulic gradient of approximately 0.006 feet per foot (ft/ft) (Murex 2019).

6.3 Oil Wells and Oil Fields

The State of California Geologic Energy Management Division (CalGEM), formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR), oversees the drilling, operation, maintenance, and plugging and abandonment of oil, natural gas, and geothermal energy wells.

A review of relevant Munger oil and gas field maps and CalGEM Well Finder GIS indicated that the subject site was not located within any oil or gas fields, and that no oil or natural gas wells were located on the subject site (Munger, 1993; Cal GEM, 2020).

7.0 USER PROVIDED INFORMATION

As stated in the ASTM E1527-13 guidelines, the "User" of the Phase I ESA is responsible to identify recorded and known environmental liens and activity and use limitations (AULs) for the subject property, unless contracted with the Consultant. The User should also inform the Consultant of any specialized knowledge or experience of the User material to REC at the subject property, as well as community known or reasonably ascertainable information about the subject property. The Consultant is also to be informed by the User if the User believes that the purchase price of the subject property is lower than fair market value due to contamination. The Consultant should also be informed of the purpose of the Phase I ESA. Unless otherwise stated, the purpose of the Phase I ESA is assumed to be to qualify for an LLP.

During this investigation, BA Environmental has requested from the Client acting on behalf of User, any information, records, and/or knowledge of the subject property. BA Environmental also requests any past environmental reports (including but not limited to Phase I ESAs, Phase II Subsurface Investigations, Site Characterization Reports, Groundwater Monitoring Reports, Remediation Reports, Asbestos or Lead-Based Paint Surveys or Abatement Documents, Mold Surveys or Abatement Documents, and Indoor Air Quality Reports) regarding the subject property. BA Environmental has requested copies of all operating permits regarding environmental issues (i.e., generators, USTs and ASTs, wastewater discharge, hazardous materials storage and handling, hazardous waste storage and disposal and air emissions permits). BA Environmental has also requested any present or historic knowledge of environmental litigations, administrative proceedings and violations associated with hazardous materials/wastes and/or petroleum products.

7.1 Title Records

A title records review, or chain-of-title, can be used to identify prior ownership of a property and to evaluate previous activities or operations in terms of environmental significance. It is also reviewed to determine if there are any easements, covenants, restrictions, limitations or environmental liens which may affect the subject properties usage.

BA Environmental was provided by Client, acting on behalf of User, with a copy of a Preliminary Title Report. A review of this Preliminary Title Report did not indicate that there were any recorded Environmental Liens and Activity and Use Limitations (AULs) associated with the subject property. A copy of the Preliminary Title Report is included in Appendix B.

7.2 Specialized Knowledge and Commonly Known or Reasonably Ascertainable Information

No specialized knowledge of the subject site, or commonly known or reasonably ascertainable information not otherwise included in the ESA, was reported to BA Environmental by the Client, acting on behalf of User.

7.3 Valuation Reduction Due to Environmental Issues

In a transaction involving the purchase of a parcel of commercial real estate, the user shall consider the relationship of the purchase price of the property to fair market value of the property if the property was not affected by hazardous substances or petroleum products. No information regarding deviations from a fair market value purchase price for the subject property on account of environmental contamination was reported to BA Environmental by the Client acting on behalf of the User.

7.4 Review of Previous Environmental Reports

On behalf of the User, Client provided BA Environmental copies of the following previous environmental reports regarding the subject property.

BA Environmental, Phase I Environmental Site Assessment (ESA) Report, Staples, 6450 Sunset Boulevard, Los Angeles, California, prepared January 2, 2019 - In December of 2019, BA Environmental (BA) conducted a Phase I ESA of the subject site. This ESA included a review of historical documents, a site reconnaissance, review of governmental environmental databases, review of environmental agency files and interviews of individuals familiar with the subject site. BA Environmental interviewed the Loss Prevention Manager for Staples (Mr. Brian Magallanes) regarding any known environmental issues in connection with the subject property. Mr. Magallanes has been associated with the subject property for approximately 5 years. According to Mr. Magallanes he is unaware of any present USTs, ASTs located on the subject property. Mr. Magallanes was unaware of the property's history prior to Staples occupying the subject site since around 2000. Mr. Magallanes, to the best of his knowledge, no hazardous materials are used or stored on-site and he is unaware of any asbestos containing materials or lead-based paint in association with the subject building or business. BA Environmental did not identify any Recognized Environmental Conditions (RECs) associated with the subject property. A Historical Recognized Environmental Condition (HREC) was identified in association with a former gasoline service station which occupied the subject property from 1938 to 1990. This former gasoline service station received closure in 1991 from the LAFD, based on information provided in a GTI, Tank Removal Report dated October 26, 1990. BA Environmental reviewed other investigations, including confirmation sampling and soil removal in the areas of the former automotive repair associated with the subject property. No further investigations based on their findings, were recommended. Based on the previous reports provided to BA Environmental for review, BA Environmental was of the opinion there is a low potential for any residual contaminants to be a significant threat to human health. BA did not identify any concerns regarding the investigation in the garage area based on reports reviewed. However, if redevelopment of the subject property should disturb subsurface soils, monitoring should be conducted to determine if any of the residual contaminants would need any specific disposal or handling.

Smith Emery Company, 1993, Soil Sampling, Garage Excavation, 6450 Sunset Boulevard, Los Angeles, CA, dated May 28, 1993 - In May of 1993, Smith Emery Company (SEC), conducted soil sampling near a 4-foot by 9-foot open cut within the concrete slab on the western end of the garage. Two borings were advanced to a depth of 5 feet bgs on each end of the open cut in the concrete slab. Two soil samples, HF-1 and HF-2 were collected from the two borings. Each of the soil samples was analyzed for gasoline, mineral spirits, Kerosene, diesel fuel and heavy hydrocarbons. The soil sample HF-1 was reported to contain a very low concentration of gasoline range hydrocarbons (1.1 milligram per kilogram (mg/kg)). The soil sample HF-2 was reported not to contain detectable concentrations of gasoline, mineral spirits, Kerosene, diesel fuel or heavy hydrocarbons. Based on their findings, SEC recommended no further investigations.

Smith Emery Company, 1992, Phase II Environmental Assessment, 6450 Sunset Boulevard, Los Angeles, CA, dated September 10, 1992 - On August 25, 1992 SEC conducted a Phase II Environmental Assessment on the subject property, which was occupied by a vacant automotive service center. Areas investigated were the four hydraulic automotive lifts and suspected clarifier as well as two soil stockpiles located in the interior garage and exterior of the garage. Borings B1-B3 and B5 was advanced adjacent to the lifts. Three of the soil samples were collected at 5 feet bgs and one was collected at 3.5 feet bgs. Soil samples collected from these borings reported no detectable concentrations of total petroleum hydrocarbons in the full carbon chain (TPH-cc). Soil boring B4 was advanced adjacent to the suspect clarifier. Soil samples collected at 5 feet bgs and 10 feet bgs within this boring. The 5-foot samples were reported not to contain detectable concentrations of TPH-cc, and the 10-foot-deep sample was reported not to contain detectable concentrations of TPH-cc or volatile organic compounds (VOCs). Grab soil samples collected from the two soil stockpiles were analyzed for Total Recoverable Petroleum Hydrocarbons (TRPH). The interior stockpile sample contained a reported TRPH concentration of 55 mg/kg and was disposed of off-site. The exterior stockpile sample was reported not to contain any detectable concentrations of TRPH. SEC concluded that based on the analytical results, no further assessment or remedial measures are warranted in the areas assessed in this report.

Groundwater Technology (GTI), Inc., 1990, Tank Removal Report, Chevron Service Station #9-9625, 6450 Sunset Boulevard, Los Angeles, CA, dated October 26, 1990 - On August 30, 1990 two borings were advanced (SB-1 and SB-2) in an area to be excavated. BA Environmental has interpreted that SB1 and SB-2 were advanced adjacent to the tank pit prior to excavation. SB1 was advanced to a total depth of 10 feet bgs, with soil samples collected at 5 and 10 feet bgs. SB2 met with refusal at 2 feet bgs and a soil sample was collected at this depth. Samples were analyzed for Total Petroleum Hydrocarbons as gasoline (TPH-g), Total Petroleum Hydrocarbons as diesel fuel (TPH-d), and benzene, toluene, ethylbenzene and xylene (BTEX). None of the soil samples were reported to contain detectable concentrations of TPH-g, TPH-d and BTEX compounds.

On September 4, 1990, a total of 5 USTs were removed from the subject property under permit and oversight of the Los Angeles City Fire Department (LAFD). Four of the USTs were reported to have a capacity of 10,000 gallons and to have contained gasoline and diesel fuel. One 1,000-gallon UST was reported to contain waste oil. All the tanks were reported to be of fiberglass construction. When removed, the tank integrity was reported to be good with no visible evidence of holes.

A total of 10 soil samples (DO-1, DO-2, DO-3, S-1, S-2, U-1, U-2, R-1, R-2 and R-3) were collected beneath the 10,000 gallon fuel USTs (fill ends, centers, and outlet ends).

One soil sample (UO-1) was collected beneath the waste oil tank. A total of 12 soil samples (D1 thru D12) were collected beneath the former fuel dispensers. An additional 4 soil samples (D-13 thru D-16) were collected below grade at the western end of the two former pump islands. Two soil samples (L-1 and L-2) were collected beneath the product lines. Six soil samples (SP-1 thru SP-6) were taken from the main tank pit excavation soil stockpile. One soil sample (SP-7) was collected from the waste oil tank excavation soil stockpile.

Soil sample DO-1, collected at 14 feet bgs in the UST excavation was reported to contain 5,200 mg/kg of TPH-d. Soil was over excavated in the southeastern corner of the tank pit. Soil was further removed from the UST excavation to a depth of 22 feet bgs. Soil samples DO-5 (22 feet bgs), DO-6 (east wall □ 18 feet bgs) and DO-4 (on the south wall □ 20 feet bgs) were reported not to contain detectable concentrations of TPH-d.

Analytical data for the 12 soil samples collected from beneath the fuel dispensers reported maximum concentrations of benzene, toluene, ethylbenzene and xylenes and TPH-g of 0.75 (D-8), 0.55 (D-8), 3.7 (D-11), 40 (D-11) and 660 kg/mg (D-8) in soil, respectively. Two soil samples (D-3 and D-8) were reported not to contain detectable concentrations of TPH-d. Additional soil samples D-13 thru D-16 were collected September 17, 1990 at 5 feet bgs at the west end of the two pump islands.

The two soil samples (L-1 and L-2), collected three feet bgs from beneath the product lines reported only two concentrations of VOC's (benzene at 0.010 mg/kg and xylene at 0.037 mg/kg) in the L-1 sample.

Soil samples FP-7, FP-8 and FP-9, collected from the soil stockpile, reported concentrations of 78, 160 and 900 mg/kg of TPH-d, respectively.

Areas identified to have impacted soil were reportedly excavated. All stockpiles of contaminated soil were reported to have been removed from the subject property for disposal.

Below are all of the analytical results associated with the removal of the USTs, fuel dispensers, auto lifts, and soil stockpiles.

Table 1. Soil Samples taken from the UST excavation (mg/Kg)						
Sample ID	TPH-d	TPH-g	Benzene	Toluene	Ethylbenzene	Xylene

- All concentrations are in ppm (mg/kg)
- ND = does not exceed the laboratory detection limits
- NS = Not analyzed
- TPH-g = hydrocarbons as gasoline
- TPH-d = hydrocarbons as diesel
- TPH-o = hydrocarbons as oil range organics

7.5 Permits

BA Environmental was not provided operating or handling permits by the Client or User.

8.0 HISTORICAL REVIEW

As part of the historical review, BA Environmental reviewed available historical aerial photographs for the years 1928, 1938, 1948, 1952, 1954, 1964, 1970, 1977, 1981, 1989, 1994, 2002, 2005, 2009, 2012 and 2016 (EDR, 2019a); city directories for the years 1920-2014 (EDR, 2019b); historical topographic maps for the years 1894, 1896, 1898, 1900, 1902, 1920, 1921, 1924, 1926, 1948, 1953, 1966, 1972, 1981, 1991 and 2012 (EDR, 2019c); historical fire insurance maps for the years 1907, 1913, 1919, 1950, 1955, 1957, 1960, 1961, 1962, 1966, 1968, 1969 and 1970 (EDR, 2019d); and building online records (City of Los Angeles, 2019). Copies of the above historical documents are provided in Appendices C through F.

The following summaries of the use history of the subject property and of adjacent properties are based on a review of the foregoing material.

8.1 History of Subject Property

The subject property was occupied by feed and hay storage buildings and a single-family residence from prior to 1907 until around 1919. By 1919, the feed and hay buildings were converted into retail store fronts. During this time period, the single-family residence remained on the southernmost portion of the subject property. By 1938, the northern portion of the subject property was redeveloped to include a gasoline service station and automotive repair shop, with the southern portion of the subject property being occupied by single family residences and duplexes. By 1955, the residential structures were demolished, and the southern portion of the subject property was redeveloped into a parking lot. By 1994, the gasoline service station had been demolished and the subject property was redeveloped into a retail store occupied by Staples. Since, 1994 there have been no significant changes to the use or configuration of the subject property.

Historically, a gasoline service station occupied the subject property from 1938 to 1990. A total four 10,000-gallon fuel USTs and one 1,000-gallon waste oil tank were removed in 1990. In 1991, the LAFD issued a closure letter regarding the USTs, which required no further action needed.

8.2 History of Adjacent Properties

From prior to 1907 until around 1913, the adjacent properties to the north of the subject site were occupied by Sunset Boulevard followed by a vacant parcel of land, the electric company's storage yard and a single-family residence. By 1913, the residence also had a restaurant associated with it. By 1919, the properties to the north of Sunset Boulevard were occupied by vacant land, an electric company's storage yard and a building occupied by retail establishments and the Film Exchange. Sometime prior to 1938, the adjacent property to the north of Sunset Boulevard was occupied by an automotive dealership and automotive repair. The adjacent property to the north of Sunset Boulevard remained an automotive dealership and automotive repair used by Packard from the 1930s through the 1950s, and then by a Mercedes Benz dealership until around 1990.

Since the late 1990s, the adjacent property to the north of Sunset Boulevard has been occupied by a studio rental space.

The adjacent property to the south of the subject Site was occupied by single-family residences from prior to 1907 until around 1945. By 1945, the adjacent properties to the south were occupied by retail stores facing Wilcox Avenue and single-family residences facing Cole Place. There continued to be no changes in the use of the adjacent properties to the south until around 1957, when the property facing Wilcox Avenue was occupied by retail store fronts and the property facing Cole Place was occupied by an office, warehouse and optical glass grinding building used by the American Optical Company. By 1968, the adjacent properties to the south were occupied by store fronts facing Wilcox Avenue, and a musical instrument stage and rehearsal studio facing Cole Place. Other entertainment industry related businesses occupied the warehouse building facing Cole Place from the early 1990s until around the mid-2000s. Around 2008 the warehouse building facing Cole Place was demolished, creating automobile parking for the retail office buildings facing Wilcox Avenue. Currently, the structures facing Wilcox Avenue are occupied by film and television production office space.

Historically, the adjacent properties to the east of the subject property were occupied by a carriage painting shop from prior to 1907 until around 1938. By 1938, the adjacent properties to the east were occupied by Cole Place followed by retail shops. In the 1960s, the adjacent property to the east of Cole Place was redeveloped into a parking lot. Sometime prior to 1970, the parking lot was redeveloped into the current office building. Since 1970, there have been no changes in the configuration or usage of the adjacent properties to the east.

Historically, the adjacent properties to the west were occupied by Wilcox Avenue followed by a vacant parcel of land from prior to 1907 until around 1919. By 1919, the properties west of Wilcox Avenue were occupied by single-family houses. The adjacent properties remained occupied by single-family residences until sometime prior to 1938. By 1938, the adjacent properties to the west of Wilcox Avenue were redeveloped into retail spaces. By 1970, the adjacent properties to the west of Wilcox Avenue were redeveloped into the present-day commercial office building. Since 1970, there have been no significant changes to the adjacent properties to the west.

8.3 Environmental Liens and Deed Restrictions

In addition to reviewing a copy of a Preliminary Title Report, which revealed no indications of recorded Environmental Liens or AULs associated with the subject property, BA Environmental obtained a EDR Radius Map report which, reflected the results of a search of databases for Federal Superfund Liens, US Engineering Controls, Institutional Controls, and Deed Restrictions. According to the EDR report, **no** Federal Superfund Liens, US Engineering Controls, US Institutional Controls, or Deed Restrictions exist for the subject site (EDR, 2020a).

8.4 Interviews

BA Environmental interviewed any available individuals familiar with the subject property, to the best of knowledge, regarding current and past usages, presence of underground storage tanks (USTs), usage and storage of hazardous materials, and the possibilities of any spills or unauthorized releases of hazardous materials on the subject property. BA Environmental assumes that the interviewees used good faith in answering

questions and in obtaining information for the subject property. Mr. Brian Magallanes, Loss Prevention Manager for Staples (the current occupant) was interviewed regarding the subject property.

Mr. Brian Magallanes, Loss Prevention Manager for Staples, the site current occupant, was interviewed with regard to the subject site on December 27, 2019. According to Mr. Magallanes, he has been with the subject site for approximately five years. Mr. Magallanes indicated that he was unaware of the property's history prior to Staples occupying the subject site since around 2000. Mr. Magallanes indicated that no USTs are located on-site. According to Mr. Magallanes, to the best of his knowledge, there are no wastewater clarifiers or grease interceptors on-site. According to Mr. Magallanes, no hazardous materials are used or stored on-site, except for small quantities of maintenance supplies and janitorial supplies. Mr. Magallanes was unaware of any releases or spills of hazardous materials on the subject property. According to Mr. Magallanes, he was unaware of any past or present environmental investigations or reports for the subject property. Mr. Magallanes was interviewed with regard to asbestos and lead-based paint existing on the subject property. Mr. Magallanes stated that he was not aware of any asbestos or lead-based paint on-site. Mr. Magallanes was interviewed with regard to water leaks and mold. According to Mr. Magallanes he was unaware of any current mold growth within the building. Mr. Magallanes stated he was unaware of any past or present roof leaks or plumbing leaks. The quality of the answers obtained from Mr. Magallanes during the interview was judged to be good.

9.0 SITE RECONNAISSANCE AND IMPROVEMENTS

On August 13, 2020, BA Environmental performed a visual reconnaissance of the subject property located at 6450 Sunset Boulevard, in the City of Los Angeles, California. Mr. Richard O'Neil of BA Environmental was given access to the subject property through Randy Rumrill (Sr. Facilities Coordinator, Facilities Management of Staples). During the site reconnaissance, BA Environmental visually assessed the subject property, exterior of the subject building, sales floor area, backroom areas, parking lot, roof and all storage areas which may contain hazardous materials, all janitorial spaces, all mechanical areas, and all building maintenance shops.

9.1 Site Improvements

The subject property is occupied by a single-story commercial retail building, consisting of approximately 17,136 square feet, situated on an approximate 0.76-acre parcel of land. Other improvements include surface asphalt parking and landscaping. The subject building was reportedly constructed in 1993 on previously developed land.

9.2 Building Construction

The subject building is of concrete masonry unit (CMU) construction, built on a concrete slab on-grade. The CMU walls support glue-laminated beams and wood purlins covered with plywood sheeting. The roof is a built-up asphalt roofing system. Interior flooring consists of commercial grade carpeting, bare concrete and resilient floor tiles. Interior walls are primarily of painted drywall, with bare CMU in backroom areas. The ceiling of the sales floor area consists of open panelized wood with insulation and some areas finished with painted drywall. Exterior finishes are of painted CMU and aluminum framed window glazing.

9.3 HVAC Systems

The heating, ventilating and air conditioning (HVAC) system consists of rooftop mounted units. No environmental issues were observed with this equipment.

9.4 Elevators

No Elevators service the subject property.

9.5 Industrial Equipment/Manufacturing Processes

During the site reconnaissance, no industrial equipment was observed on the subject site. No manufacturing processes which utilize hazardous materials or petroleum products were observed during the site visit.

9.6 Hazardous Materials/Waste Storage

Only small quantities of normal household cleaners and consumer products were observed to be used and sold on the subject property. These cleaning agents were observed to be in good condition with no visible evidence of leakage from containers. No staining was observed on the surfaces beneath the containers.

9.7 Biohazards and Infectious Wastes

No biohazards or infectious wastes were observed on the subject site during the site reconnaissance.

9.8 Radiologic Hazards

No radiologic hazards were observed on the subject site during the site reconnaissance.

9.9 Underground Storage Tanks

No evidence for the presence of on-site underground storage tanks (USTs), such as fuel dispensers, fill ports, aboveground vents or piping, was observed during the site reconnaissance. According to the California State Water Resources Control Board and the City of Los Angeles Fire Department (LAFD), USTs are not currently present on the subject property.

Historically a gasoline service station occupied the subject property from 1938 until 1990. A total four 10,000-gallon fuel USTs and one 1,000-gallon waste oil tank were removed in 1990. In 1991, the LAFD issued a closure letter regarding the USTs, which required no further action needed.

9.10 Aboveground Storage Tanks

On the day of the site reconnaissance, no aboveground storage tanks (ASTs) were observed on the subject site.

9.11 Hydraulic Lifts and Equipment

One hydraulically operated truck dock plate was noted on the subject property. No noted leakage was observed from the hydraulic aboveground tank. No environmental concerns were observed with this equipment.

Historically, below ground hydraulic lifts were located on the subject property associated with automotive repair. These lifts were removed around 1993 and reported to have no elevated concentrations of TRPH.

9.12 Generators and Emergency Power Systems

No electrical generators or emergency power systems were observed on the subject site on the day of the site reconnaissance.

9.13 Wastewater Treatment Systems, Clarifiers and Interceptors

No wastewater treatment systems, wastewater clarifiers or interceptors were observed on the subject site on the day of the site reconnaissance.

Historically, a wastewater clarifier was associated with automotive repair shop. This clarifier was removed in 1990. Soil samples collected during abandonment revealed no elevated concentrations of hydrocarbons or VOCS.

9.14 Pits, Ponds and Lagoons

Pits, ponds and lagoons are often associated with the disposal of solid and liquid wastes, which may include hazardous materials. According to ASTM Standard E1527-13, pits, ponds and lagoons are "man-made or natural depressions in the ground surface that are likely to hold liquid or sludge containing hazardous substances or petroleum products." No pits, ponds or lagoons were observed during the site reconnaissance, and information obtained from the assessment indicated that pits, ponds and lagoons do not currently exist, or have ever existed on the subject site or any of the adjacent properties.

9.15 Septic Tanks and Cesspools

Septic tanks and cesspools are often associated with the disposal of wastewater from structures that are not served by public sewer systems. Septic tanks and cesspools may be associated with hazardous materials, if such materials have been inappropriately disposed of in the past via sinks. Information obtained from the subject site reconnaissance indicated that septic tanks and cesspools do not currently exist on the subject site. Presently, the sanitary sewer discharge to the subject building is tied into the city-owned sanitary sewer system.

9.16 Distressed Vegetation and Staining

Areas of vegetation (trees and shrubbery) in planters were observed to be associated with the subject property. No distressed vegetation, dead vegetation or discolored vegetation was observed during the site reconnaissance.

No areas of significantly stained soil, or stained asphalt or concrete, were observed on-site during the site reconnaissance.

9.17 Spills, Corroded Surfaces and Odors

No visible evidence of spills or ponded liquids was observed during the site reconnaissance. No corroded or degraded metal or concrete surfaces were observed. No unusual odors were detected inside or outside of the subject building on the day of the site reconnaissance.

9.18 Wells, Cisterns, Sumps and Floor Drains

No evidence of the presence of cisterns, sumps, floor drains or well heads, was observed at the subject property.

9.19 Pipelines

No evidence for the presence of underground pipelines used to transport petroleum products such as crude oil, gasoline, or natural gas was observed on or adjacent to the subject property on the day of the site reconnaissance.

9.20 Mines, Oil and Gas Wells, Oil Production Facilities

During the site reconnaissance, no visible evidence of mine shafts, open pit mines or other mining activities were observed on the day of the site reconnaissance.

No oil or natural gas wells were observed on the subject site. No evidence of oil production facilities, sumps, tank batteries, piping or refineries were observed on the day of the site reconnaissance.

9.21 Polychlorinated Biphenyls (PCBs)

PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Federal regulations put into effect following the Toxic Substance Control Act (TSCA) require that electrical transformers be labeled to identify their PCB content. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs □ **Non-PCB;** 2) 50 ppm-500 ppm □ **PCB-Contaminated;** and, 3) Greater than 500 ppm □ **PCB-Containing.** The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after January 1, 1977. The manufacture and distribution of PCBs was banned in 1979. One pad mounted electrical transformer was observed on the subject site. The

transformer appeared to be in good condition with no visible evidence of leakage. No staining was observed on the concrete pad beneath the transformer or on the soil surrounding the pad. The transformer is owned and operated by the LADWP. LADWP is responsible for all environmental issues concerning this transformer.

Fluorescent lighting was observed throughout the subject building. Fluorescent ballasts containing PCBs have not been manufactured since the late 1970s and have a maximum life expectancy of 15 years. Although the light ballasts were not inspected up close, at a distance the light ballasts appeared to be of relatively recent manufacture. At a distance, the light ballasts appeared to be in good condition with no visible evidence of leakage. Based on the date of construction of the subject building (1994), there is a low potential for the light fixtures to contain PCBs. BA Environmental did not observe other equipment on-site likely to contain PCBs.

9.22 Other Environmental Concerns

BA Environmental did not observe any other environmental concerns on the day of the site reconnaissance.

9.23 Trash and Waste Containment

Trash dumpsters were observed on the subject property. This dumpster was observed to contain non-hazardous paper and plastic waste, and food waste. No staining was observed on the surface beneath the dumpsters. No environmental conditions were noted with trash disposal/containment.

9.24 Stormwater

Stormwater that collects on the roof is directed into roof drains, which drain to the parking lot and then either into the sanitary sewer system or to the city street. From there it drains into the city-owned storm drain system.

10.0 AGENCY CONTACTS

10.1 City of Los Angeles Fire Department (LAFD)

On August 10, 2020, BA Environmental searched the LAFD, hazardous materials storage database, for files regarding the subject property. BA Environmental placed a request for records regarding a gasoline service station located on the subject property. Information was limited; however, the property owner was able to provide the Tank Removal report and other pertinent documentation. A review of the UST closure report is provided in Section 6.6 above. The subject property received agency closure from the LAFD requiring no further investigation in 1991.

A copy of the Closure Letter is in Appendix H.

10.2 California State Regional Water Quality Control Board (RWQCB)

On August 10, 2020, BA Environmental searched the RWQCB's Geotracker database for UST Program, and Spills, Leaks, Investigations and Cleanups (SLIC) Program, files for the subject site. According to the RWQCB's Geotracker database, no files exist for the subject property.

10.3 California State Department of Toxic Substance Control (DTSC)

On August 10, 2020, BA Environmental searched the ENVIROSTOR database for any files regarding contamination beneath the subject site. According to the DTSC's ENVIROSTOR database, no files exist for the subject property.

10.4 South Coast Air Quality Management District (AQMD)

On August 10, 2020, BA Environmental searched the AQMD's Facility Information Detail (FIND) database for AQMD records regarding air emissions permits for the subject property. According to the AQMD's FIND database, no files exist for the subject property.

11.0 GOVERNMENT RECORDS REVIEW

Regulatory compliance is a primary element of an ESA. Failure to comply with governmental regulations can result in fines, and can expose businesses or individuals to liabilities from which the law would otherwise shield them. The presence of hazardous wastes or hazardous materials, on-site or at neighboring sites, may present certain liabilities. Environmental Data Resources, Inc. (EDR) searches over 900 federal, state and local databases nationwide to provide the most recent information regarding the hazardous materials sites within the site vicinity, and which are identified below (EDR, 2020a). EDR searches each database to the radius specified in ASTM E1527-13 and the EPA AAI Rules. Descriptions of each database searched are provided in the EDR Radius Report. A copy of the EDR Radius Report dated August 7, 2020 is provided in Appendix F. A summary of the sites listed within the governmental databases researched by EDR is provided in Table 1 below.

Table 1
Environmental Databases Searched
and Their Search Radii

AGENCY DATABASE	SEARCH RADIUS	TARGET PROPERTY	NUMBER OF SITES IDENTIFIED	DATE OF GOVERNMENT VERSION
United States Environmental Protection Agency (EPA) National Priority List (NPL) for Superfund Sites	1.0 mile	---	0	4/27/20

Other Local, State, and/or Federal Databases (see EDR report for complete listing of databases and search radii)	Variable according to database	8	12	

11.1 Subject Property

The subject property under the address of 6450 Sunset Boulevard is listed on the HAZNET, HWTS, CERS HAZ WASTE, SWEEPS UST, HIST UST, CA FID UST, RCRA NonGen/NLR, FINDS and ECHO governmental environmental databases.

The HAZNET/HWTS listings are in regards to the former automotive repair conducted on the subject property in 1990. These listings are for the manifest and removal of waste oil from the subject property regarding historical automotive repair. Other historical database listings are in the regards to the former USTs which were located on the subject property (HIST UST, HAZNET/HWTS, SWEEPS UST, CA FID UST) which were associated with a Chevron service station. BA Environmental reviewed UST removal documentation associated with the gasoline service station. These reports included soil sampling, removal of the USTs and excavated soil from the property. Impacted soil identified during the abandonment of the USTs was removed from the subject property. Under the oversight of the LAFD, a closure letter was issued in 1991 (Appendix H). BA Environmental considers this to be a HREC and not a concern at this time; however, if redevelopment of the subject property should disturb subsurface soils, monitoring should be conducted to determine if any residual contaminants remain that would need specific disposal or handling. Automotive repair was also conducted on the subject property during the same period of the gasoline service station operation. Investigations in the areas of the former auto garage included soil sampling and removal of excavated soil. Based on the findings of the investigation in the automotive repair portion of the subject site, BA Environmental is of the opinion there is no environmental concern at this time; however, if redevelopment of the subject property should disturb subsurface soils, monitoring should be conducted to determine if any residual contaminants remain that would need specific disposal or handling.

Staples was listed on the RCRA NonGen □NLR. FINDS, ECHO, CERS HAZ WASTE, FINDS and ECHO governmental environmental databases searched. These listings are typical for a business which documents chemicals stored and sold as part of the business. No RCRA wastes are generated. Based on the types of listings, there is a low potential for environmental impact to the subject property and not a concern at this time.

11.2 Adjacent Properties

CNN America INC/Turner Broadcasting system and Sunset Tower LLC located at 6430 Sunset Boulevard is located adjacent following Cole Place to the east. This facility is listed on the CERS TANKS, HAZMAT and CERS governmental environmental databases. These listings are understood to be associated with diesel powered emergency generators and the diesel fuel located on this property. There have been no reported releases. Based on this information, there is a low potential for impact to the subject property from this off-site facility.

The former Hollywood Mercedes Benz located at 6465 Sunset Boulevard located north following Sunset Boulevard is listed on the RCRA-SQG, HIST UST, FINDS, ECHO and HAZNET governmental environmental databases. This facility has reported no RCRA violations and no releases were noted in the governmental records. Based on this information, there is a low potential for impact to the subject property from this off-site facility.

11.3 Site Vicinity

The closest listed facility is the LAPD Maintenance Garage, located at 1401 Wilcox Avenue, approximately 150 feet south-southwest of the subject site. This facility is listed on the CERS HAZ WASTE, SWEEPS UST, CERS TANKS, CA FID UST, HAZMAT, RCRA-SQG and CERS governmental environmental databases. No RCRA violation reported and no reported releases. With respect to groundwater flow, this facility is located in a down-gradient location relative to the subject property. Based on this information, there is a low potential for environmental impact to the subject property from this off-site facility.

BA Environmental reviewed the EDR database report for off-site facilities in the site vicinity which may have impacted the subject property. Sites of concern included those with known releases, facilities which use significant quantities of hazardous materials, sites with USTs, and facilities which are hydraulically up-gradient of the subject site.

A review of all of the sites listed within the subject site vicinity revealed that the closest non-adjacent facility is greater than 300 feet from the subject site. Based on the distances and statuses of these facilities, there is a low potential for environmental impact due to off-site sources.

12.0 DATA GAP DISCUSSION

The ASTM E1527-13 standard defines the term Data Failure as a failure to achieve the historical research objectives even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. The term Data Gap is defined as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance, interviews, and agency file reviews.

Based on all of the historical documents available and the reconnaissance of the subject site, it appears that no significant data gaps exist. Although minor historical data gaps exist, it is BA Environmental's opinion that these data gaps are not significant, and that during these data gaps the subject property's use did not significantly change. BA Environmental did not identify any significant data gaps in connection with the subject property.

13.0 NATIONAL PIPELINE MAPPING SYSTEM

On August 10, 2020, BA Environmental reviewed the National Pipeline Mapping System (NPMS) regarding pipelines, liquefied natural gas (LNG) plant and breakout tank data, and gas transmission and hazardous liquid pipeline accidents and incidents. The NPMS pipeline data consists of gas transmission pipelines and hazardous liquid pipelines

jurisdictional to United States Department of Transportation's Pipelines and Hazardous Materials Safety Administration (PHMSA). It does not contain gas gathering or distribution pipelines, such as lines which deliver gas to a customer's home. According to the NPMS, no pipelines or pipeline incidents are present on or adjacent to the subject property.

14.0 VAPOR ENCROACHMENT SCREEN

Vapor encroachment can occur when vapor migrates into on-site subsurface soils from on-site or off-site soils and/or groundwater contaminated with petroleum hydrocarbons or other volatile organic compounds.

Current or past uses such as gas stations (using petroleum hydrocarbons), dry cleaning establishments (using chlorinated volatile organic compounds), former manufactured gas plant sites (using volatile and semi-volatile organic compounds), and former industrial sites such as those that had vapor degreasing or other parts-cleaning operations (using chlorinated volatile organic compounds) are of particular concern. Vapors are capable of migrating great distances omnidirectionally along subsurface conduits such as utility lines, pipelines, sewer and storm water lines, and building foundations. The migration of these vapors into a building or structure can pose a health risk. To assess for the potential of vapor encroachment, ASTM created the Standard Guide for Vapor Encroachment Screening on Property Involved Real Estate Transactions, ASTM 2600-10. This Standard Guide supersedes ASTM 2600-08. The purpose of this guide is to provide practical guidance and a useful process for conducting a vapor encroachment screen (VES) on a property parcel involved in a real estate transaction in the United States of America with respect to chemicals of concern (COC) that may migrate as vapors onto a property as a result of contaminated soil and groundwater on or near the property. The VES is conducted in a two-tier process, which is as follows:

Tier 1 □ Initial Screening (non-invasive)

Tier 2 □ Site Specific Numeric Screening (non-invasive and invasive)

BA Environmental performed a Tier 1 VES on the subject property in general accordance with ASTM 2600-10. The Tier 1 VES has revealed no potential vapor encroachment conditions (VECs) which may impact the subject site.

15.0 ADDITIONAL NON-ASTM SCOPE ASSESSMENT

15.1 Visual Asbestos Survey

On July 12, 1989, the EPA issued a final rule banning most asbestos-containing products. In 1991, this regulation was overturned by the Fifth Circuit Court of Appeals in New Orleans. As a result of the Court's decision, the following specific asbestos-containing products remain banned: flooring felt, rollboard, and corrugated, commercial, or specialty paper. In addition, the regulation continues to ban the use of asbestos in products that have not historically contained asbestos, otherwise referred to as "new uses" of asbestos. Although the use of asbestos in the manufacture of most building materials was for the most part discontinued by 1979, some non-friable ACMs, such as roofing material and floor coverings (floor tile and mastic), were manufactured and used into the mid-1980s. Other non-friable ACMs such as mastics and coatings in which the asbestos is bound by organic binders can still be found in materials today.

- Friable materials are materials which can be crumbled, pulverized, or reduced to powder by hand pressure when dry.
- Non-friable materials are materials in which the fibers have been locked in by a bonding agent, coating, or binder, and may not release fibers during normal use and handling. Improper handling, such as grinding or sanding of non-friable ACMs, will render these materials friable.

BA Environmental performed a visual survey of suspect friable and non-friable asbestos-containing materials (ACMs). Suspect materials observed during the site reconnaissance include 12" by 12" resilient floor tiles and associated mastic, vinyl base molding and adhesive, drywall, joint compound, carpet mastic, mirror mastic, caulking, sealant, and roofing materials. All building materials were observed to be in good condition, with a low potential for damage. Based on the date of construction of the subject building (constructed in 1994), there is a low potential for ACMs to exist within building materials.

15.2 Visual Mold Survey

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g. in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

When excessive moisture or water accumulates indoors, mold growth may occur, particularly if the moisture problem remains undiscovered or unaddressed. As such, interior areas of buildings characterized by limited ventilation and high humidity are the most common locations of mold growth. Mold growths often appear as discoloration, staining, or fuzzy growth on building materials or furnishings and are varied colors of white, gray, brown, black, yellow, and green; however mold may not visually manifest itself.

Mold spores primarily cause health problems through the inhalation of spores or the toxins they emit when they are present in large numbers. This can occur when there is active mold growth within places where people live or work. Mold can cause allergic reactions, respiratory conditions and in some rare cases death in individuals which are sensitive to them, have respiratory conditions, or to the young or elderly.

BA Environmental performed a visual mold survey in accessible areas at the subject property. This visual assessment should not be construed as a mold survey or inspection. This assessment was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the Client and User an indication if significant (based on observed areas) mold growth is present at the subject property. BA Environmental did not assess areas not readily accessible, nor did we conduct a destructive or invasive survey. It is possible that significant fungal spore growth inside walls, insulation, attic spaces, or other areas can exist and not be visible on the finished surfaces of a building's interior spaces. BA Environmental did not 1) perform a mold/fungi inspection, 2) perform any building material surface mold sampling, or 3) perform air sampling for mold spores at the subject property as part of this Phase I.

No areas of visible mold or moist areas conducive to mold growth were observed within the interior of the building during the site visit. No mold odors, evidence of roof leaks

(such as wet walls or carpets), plumbing leaks or areas that have remained moist for extended periods of time were observed within the building during the site visit.

15.3 Visual Lead-Based Paint Survey

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the mid-1970s. In 1978, the Consumer Products Safety Commission banned paint and other surface coating materials that are lead-containing.

BA Environmental performed a visual lead-based paint survey in accessible areas at the subject property. All of the paint observed on-site appeared to be in good condition with no visible evidence of damage or peeling. Based on the age of the current subject building, constructed in 1994, there is a low potential that lead-based paint exists on the subject site.

15.4 Radon Gas Survey

Radon is a radioactive gas that occurs naturally in the environment and cannot be seen, smelled or tasted. The human health effect associated with exposure to elevated levels of radon is an increased risk of developing lung cancer. The US Environmental Protection Agency (EPA) and the US Center for Disease Control are concerned about the increased risk of lung cancer developing in individuals exposed to above average levels of radon in their homes or offices. In order to address these concerns, the US EPA conducted a radon survey and presented the results for various counties in 1993.

The EPA's map of Radon Zones assigns each of the 3,141 counties in the United States to one of three zones. The zone designations were determined by assessing five factors that are known to be important indicators of radon potential: indoor radon measurements, geology, aerial radioactivity surveys, soil parameters and foundation types. The subject site falls within the designation of Zone 2. Zone 2 counties have a predicted average indoor radon screening level of greater than or equal to two pico curies per liter (pCi/l) of air and less than or equal to four pCi/l of air. According to the EPA, of the 63 sites tested within the subject site's zip code, 100% of the 1st floor living areas tested were reported to have radon levels below 4pCi/l of air. The average radon concentration was reported to be 0.711 pCi/l of air. According to the California Radon database, 13 sites were tested in the subject site's zip code. No sites were reported to have radon levels above 4 pCi/l of air. It is BA Environmental's opinion, based upon these results, that there is a low potential that radon is a concern for the subject property.

15.5 Methane Zones

Methane zones in the city of Los Angeles were recently established and defined in Los Angeles Ordinance No. 175790 amended Section 91.106.4.1 and Division 71 of Article 1, Chapter IX of the Los Angeles Municipal Code to address the potential for methane intrusion into buildings emanating from geologic formations, to establish citywide methane mitigation requirements, and include more current construction standards to control methane intrusion into buildings. The Los Angeles Department of Public Works recently produced a map of Methane and Methane Buffer Zones for the City of Los Angeles (City of Los Angeles, 2004). According to this map, the subject property is **not** located within a Methane Zone.

15.6 Wetlands and Flood Plains

During the site reconnaissance and drive-by survey of the surrounding area, BA Environmental observed no indications of wetlands. According to the Environmental Data Resources, Inc. (EDR) report, no wetlands as per the National Wetlands Inventory (1994) are located within 0.25 miles of the subject site. BA Environmental reviewed the US Fish and Wildlife (USFW) National Wetlands Inventory Wetlands Mapper website. According to the USFW, the subject site is not located within a Wetlands or Riparian environment (USFW, 2020).

According to information provided in the EDR report, the subject site is not located within a 100- or 500-year flood zone per the Federal Emergency Management Agency (FEMA). According to FEMA's National Flood Insurance Program (NFIP) Panel 1605F, the subject site is located within an Other Flood Area Zone X. This is defined as areas being outside of 0.2% annual chance floodplain (FEMA, 2020).

16.0 FINDINGS, CONCLUSIONS AND RECOMMENDATIONS

BA Environmental has performed a Phase I ESA, in conformance with the scope and limitations of ASTM Practice E1527-13, regarding the commercial office building located at 6450 Sunset Boulevard, in the City of Los Angeles, California. Any exceptions to, or deletions from, this practice are described in the Objective and Scope of Work section of this report.

This assessment has revealed **no** Recognized Environmental Conditions (RECs) in connection with the subject property.

This assessment has revealed **no** Controlled Recognized Environmental Conditions (CRECs) in connection with the subject property.

This assessment has revealed the following Historical Recognized Environmental Condition (HREC) in connection with the subject property:

- Historically, the subject property was occupied by a gasoline service station and automotive repair from around 1938 until around 1991. Reportedly, all of the USTs, a wastewater clarifier and automotive lifts have been removed and assessed for releases. Impacted soils were excavated in the area of the former fuel dispensers and removed from the subject property. The USTs received closure in 1991 under the guidance of the LAFD. There were no identified releases related to the clarifier and lifts at the time of removal. Based on review of the closure reports for the USTs and the assessment reports for the auto garage area, BA Environmental considers this to be a HREC and not a concern at this time.

Based on the findings of this Phase I ESA, BA Environmental recommends no further investigations at this time. However, if redevelopment of the subject property should disturb subsurface soils, monitoring should be conducted to determine if any residual contaminants remain that would need specific disposal or handling.

17.0 LIMITATIONS

17.1 General Limitations

This report contains all of the limitations inherent in the methodologies that are referred to in ASTM E1527-13. BA Environmental has made every reasonable effort to discover and interpret the information and current conditions regarding the site within the time available. This assessment has been completed under the time and cost restraints implemented by the Client and User. There is a possibility that, even with the proper application of the methodologies outlined in ASTM E1527-13, there may exist on the subject property conditions that could not be identified within the scope of the assessment or which are not reasonably identifiable from reasonably ascertainable information. This assessment is a visual, non-intrusive investigation, and conditions may exist at the site that cannot be identified solely by visual observation. No sampling, destructive or subsurface, of any type has been conducted on-site, unless expressly stated in the Objective and Scope of Work section above. This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of AAI Rule (as defined in the Code of Federal Regulations 40 CFR Part 312). Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property. All conclusions and recommendations are based on the visual observations made on the day of the site reconnaissance. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. BA Environmental is not responsible for identifying any environmental issues or site conditions which may have occurred after the site reconnaissance.

This assessment relied upon information obtained from the site reconnaissance and from relevant regulatory agencies. BA Environmental believes that the information contained herein is reliable. This assessment has relied upon information obtained from the record review, previous reports and interviews of individual concerning the subject property, and assumes it to be correct and accurate. However, BA Environmental cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. This assessment has been completed in general accordance with ASTM E1527-13 and accepted practices of the environmental industry.

This report is not intended to address, assess, or otherwise determine whether soil or groundwater contamination, waste emplacement, existing or threatened mold/fungus growth, asbestos-containing building materials, and/or lead-based paint actually exists at the subject property. Such determination would require comprehensive subsurface exploration and/or other sampling activities, which were beyond the scope of service for this assessment. BA Environmental considers vapor intrusion beyond the scope of this Phase I ESA, and therefore a vapor intrusion study was not conducted. Additionally, this report does not serve as a comprehensive wetlands, mining, oil, pipeline, and/or gas well survey.

This report summarizes an environmental investigation conducted for the subject property. Although conditions at neighboring properties may impact the subject property and, to the extent they were identified, were included in the subject property evaluation, this report does not serve as an assessment of sites other than the subject property.

This Assessment was prepared for a limited use involving a single transaction, as set forth herein, and may not be used for any other purpose without the written consent of BA Environmental. No re-publication, copying, or distribution of any part of this report is authorized without the written consent of BA Environmental. Field data, field notes, and other data and documents assembled by BA Environmental to produce this

assessment, represent the work product of BA Environmental's training, experience and professional skill. This information belongs to, and remains the property of BA Environmental Building Analytics.

17.2 ASTM Limitations

The innocent landowner, contiguous owner, and bonafide prospective purchaser defenses to liability under CERCLA require that a person acquiring property conduct an all appropriate inquiry with respect to the site. BA Environmental has conducted this environmental assessment in accordance with the standards for conducting an all appropriate inquiry set forth at 40 CFR Part 312. Those standards require the application of scientific principles and professional judgment to certain facts with resultant subjective interpretations and exercise of discretion. Professional judgments expressed herein are based on the facts currently available within the limits of the existing data, and data gaps identified herein, scope of work, budget, and schedule. Those standards also require that the User undertake certain additional inquiries. In addition, the liability defenses under CERCLA require, among several other things, that the User after the acquisition stop any continuing releases, prevent any future threatened releases and prevent or limit human, environmental or natural resource exposure to any hazardous substance released at the site. Therefore, BA Environmental makes no warranties, expressed or implied, including, without limitation, warranties as to merchantability or fitness for a particular purpose, including any warranty that this Phase I ESA will in fact qualify User for the innocent landowner, contiguous property owner or prospective purchaser defense to liability under CERCLA. BA Environmental's assessment is limited strictly to identifying recognized environmental conditions associated with the site. Results of this assessment are based upon the visual site inspection of readily accessible areas of the site conducted by BA Environmental personnel, information from interviews with knowledgeable persons regarding the site, information reviewed regarding historical uses, information provided by contacted regulatory agencies, and review of publicly available and practically reviewable information identifying current and historical uses of the property and surrounding properties. All conclusions and recommendations regarding the site represent the professional opinions of the BA Environmental personnel involved with the project, and the results of this report should not be considered a legal interpretation of existing environmental regulations. BA Environmental assumes no responsibility or liability for errors in the public data utilized, statements from sources outside of BA Environmental, or developments resulting from situations outside the scope of this project. BA Environmental make no warranties, expressed or implied, including, without limitation, warranties as to merchantability or fitness for a particular purpose.

18.0 GLOSSARY OF ACRONYMS

AAI = All Appropriate Inquiry

ACGIH = American Congress of Government Industrial Hygienists

ACMs = asbestos-containing materials

AHERA = Asbestos Hazard Emergency Response Act

AQMD = Air Quality Management District

ASTs = aboveground storage tanks

ASTM - American Society for Testing and Materials

AUL = activity and use limitations

bgs = below ground surface

BTEX = benzene, toluene, ethylbenzene and xylenes

CDPH = California Department of Public Health (formerly DHS)

CERCLA = Comprehensive Environmental Response, Compensation, and Liability Act

CFR = Code of Federal Regulations

COC = chemical of concern

DHS = Department of Health Services

DOGGR = California Department of Oil, Gas and Geothermal Resources

DOT = Department of Transportation

DTSC = Department of Toxic Substance Control

EA = Environmental Assessment

EDR = Environmental Data Resources, Inc.

EPA = United States Environmental Protection Agency

ESA = Environmental Site Assessment

FEMA = Federal Emergency Management Agency

HREC = Historical Recognized Environmental Condition

HVAC = heating ventilating and conditioning

HWS = Hazardous Waste Site

IAQ = indoor air quality

Kw = kilowatts

LACDPW = Los Angeles County Department of Public Works

LAFD = Los Angeles City Fire Department

LBP = lead-based paint

LEL = lower explosive limit

LLPs = land owner liability protections

LQG = large quantity generator of hazardous waste

LUSTs = leaking underground storage tanks
 MCL = maximum concentration limit
 MSDS = Material Safety Data Sheet
 MTBE = methyl-tertiary-butyl ether
 µg/l = micrograms per liter
 µg/kg = micrograms per kilogram
 mg/kg = milligrams per kilogram
 mg/l = milligrams per liter
 msl = mean sea level
 NOV = Notice of Violation
 NPL = National Priority List
 NRC = Nuclear Regulatory Commission
 OCHCA = Orange County Health Care Agency
 O&M = Operations and Maintenance
 OSHA = Occupational Safety and Health Administration
 PCBs = polychlorinated biphenyls
 PCE = perchloroethene or tetrachloroethylene
 ppb = parts per billion
 ppm = parts per million
 PVC = polyvinyl chloride
 RCDEH = Riverside County Department of Environmental Health
 RCRA = Resource Conservation and Recovery Act
 REC = Recognized Environmental Condition
 RWQCB = Regional Water Quality Control Board
 SBCFD = San Bernardino County Fire Department
 SLIC = Spills Leaks, Investigations and Cleanups
 SPCC = Spill Prevention, Control and Countermeasure
 SQG = small quantity generator of hazardous waste
 SVOC = semi-volatile organic compounds
 SWPPP = Stormwater Pollution Prevention Plan
 TCA = trichloroethane
 TCE = trichloroethene
 TPH-cc = total petroleum hydrocarbons, carbon chain range
 TPH-d = total petroleum hydrocarbons as diesel
 TPH-g = total petroleum hydrocarbons as gasoline
 TRPH = total recoverable petroleum hydrocarbons

TSCA = Toxic Substance Control Act
UPS = uninterrupted power source
USFW = United States Fish and Wildlife
USGS = United States Geological Survey
USTs = underground storage tanks
VES = Vapor Encroachment Screen
VCP = Voluntary Cleanup Program
VOCs = volatile organic compounds
WIP = Well Investigations Program

QUALITY IN EVERY DROP

Director Message, Razmik Manoukian

For over a century, LADWP has been the steward of our City's water system and supply. It is a responsibility we take very seriously. Every day, we import raw water, purify it and deliver it to your tap 24-hours a day – all for less than half a penny per gallon. It is our duty to maintain the value of this precious resource, and to comply with increasing state and federal water quality mandates to protect every drop of water we deliver. In 2018, LADWP tested for over 200 constituents in the water and performed more than 120,000 tests on samples taken throughout the City - not just for regulatory compliance, but also for research and operational improvements.

We are proud of our success in water quality, especially with our continued progress on several large water quality initiatives. Over the last 20 years, LADWP has actively improved the water quality for our customers by removing large uncovered reservoirs such as Encino, Lower Stone, Silverlake and Hollywood out of service; covering distribution reservoirs such as Santa Ynez,

Elysian and Upper Stone; building the new Headworks Reservoir, installing a state-of-the-art Dr. Pankaj Parekh Ultraviolet Disinfection Facility and deployed 96 million shade balls on the Los Angeles Reservoir. The latest water quality Improvement project is the Los Angeles Reservoir Ultraviolet Disinfection Plant project which is currently under construction. These projects were a massive undertaking which resulted in excellence in water quality.

This report summarizes the results of the water quality tests conducted in 2018 and provides specific information about the quality of water served in our neighborhoods. You will see that most constituents have not been detected in our water sources and those that are (see tables I-IV on pages 11-15), are safely within the regulatory limits for drinking water. We are proud to bring pure, clean, refreshing tap water to all our customers across the city – at home, at work and in our neighborhood parks every day.

At LADWP, we are committed to customer service. If you have any questions about your water quality or seek advice on how to improve water quality at your home or workplace, please do not hesitate to call our Water Quality Customer Care Line at (213) 367-3182.

MANAGING OUR WATER RESOURCES

A Message from Richard F. Harasick, LADWP Senior Assistant General Manager, Water System

Compared to previous years, the last two have been good for Los Angeles in terms of water resources. The Eastern Sierra snowpack, the main water source for the Los Angeles Aqueduct, is in very good shape for a change. The above average snowfall and the rains have made for a spectacular spring, and will help sustain our water needs well into the rest of the year.

We have gone from one extreme to the next; from parched dry conditions to more water than we can handle just like in 2017. It is important to remember that one good rainy season does not necessarily mean we will always enjoy an overabundance of water in the future.

That is why LADWP continues to focus on L.A.'s water future, employing long-term resource planning and management no matter the situation. Our goal in 2019 will be to get the water windfall to the right storage or treatment facility, thus ensuring a sustainable and resilient water supply for the years to come.

With our abundant rainfall, stormwater capture in L.A. County, which includes the LADWP service territory, stood at 113 percent of normal for the water year October 1, 2018 to May 1, 2019. That's approximately 23.5 billion gallons of water, enough to supply over 24,000 L.A. households annually. Through our stormwater capture infrastructure, rain barrels and cisterns, Los Angeles has been carefully harnessing this precious resource to recharge our local aquifers and help reduce our reliance on imported purchased water.

LADWP is also rising to meet the challenges of future water supplies with the ultimate sustainability endeavor. The city of Los Angeles' recent announcement to recycle 100 percent of all wastewater by 2035 will require major infrastructure investment to move advanced treated

pure water from the Hyperion Water Treatment Plant to additionally replenish our groundwater aquifers. This large capital improvement project represents another Mulholland moment, a game-changer at par with building another aqueduct. Its completion will be a leap for Los Angeles towards water independence.

To kick start that effort a wastewater ozone demonstration project at the Donald C. Tillman Plant in the San Fernando Valley is in progress to begin advanced wastewater treatment operations. This is the initial phase of an effort to replenish L.A.'s groundwater in the San Fernando Valley. This pure water will be conveyed to the Hansen Spreading Grounds where it will percolate through the soil. Once ready it will be pumped through existing groundwater wells, treated again and placed back into the distribution system.

There is no better and smarter way to manage our water resources than through water conservation. L.A. residents have truly made this a way of life and our city's per capita water use as of fiscal year 2017-18 is 112 gallons. Ours is one of the lowest of any major U.S. city and lower than it was in 1970, despite a population increase of more than one million people. LADWP has been working closely with our elected officials, other city departments, and customers to reduce water use across all sectors. The city's goal is to reduce water use by 25 percent by 2025, and 30 percent by 2035. We continue to encourage conservation through rebates and incentives for water-saving measures and devices. Furthermore, we are finding ways to conserve within our own system and operations. As an example, LADWP's Water Loss Task Force has been deploying strategies to reduce water losses in our distribution system.

Our professional forefathers undertook the complex and monumental task of constructing the Los Angeles Aqueduct to bring reliable, fresh, quality water to Los Angeles. LADWP staff today are just as committed to fulfill that goal, innovating and adopting modern solutions to operational and resource challenges. We remain steadfast in our resolve to ensure the reliability and sustainability of water for our customers and the entire city of Los Angeles.

WHERE DOES L.A. GET THE WATER IT NEEDS?

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants that can be naturally-occurring or the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (U.S. EPA) and the State Water Resources Control Board (SWRCB) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. SWRCB regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. 2019. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (800) 426-4791.

IMPORTANT NOTICE

Precautions for the Special Needs Population

There are certain health conditions for which additional precautions on environmental exposures, including drinking water, would be advisable. Elderly customers and infants can be particularly at risk from infection as well as those with weakened immune systems including individuals living with HIV/AIDS or other immune system disorders, those who may have undergone chemotherapy or those who have received organ transplants.

Customers concerned with these types of health challenges should seek advice from their health care providers about drinking tap water. Contact U.S. EPA's Safe Drinking Water Hotline at (800) 426-4791, or visit www.epa.gov for free guidelines on how to reduce the risk of infection by *Cryptosporidium* and other microbial contaminants.

L.A.'S WATER SOURCES IN 2018

2018 Water Sources

REGULATORY COMPLIANCE

Regulatory Compliance **How do we measure up?**

LADWP works around the clock to ensure that the drinking water we deliver to our customers is of the highest quality and meets all safety requirements. Highly trained, certified treatment operators monitor our water treatment operations continuously, thereby helping meet federal and state standards for drinking water. In 2018, we tested for more than 200 constituents in the water and performed more than 120,000 tests on samples taken throughout our water system.

Notice of Violations of Drinking Water Regulations

Water quality is LADWP's highest priority. Staff works to ensure treatment protocols are followed year round at each of the city's water treatment facilities. Unfortunately, LADWP was issued one citation in 2018 for violating the surface water treatment rule. This violation was reported in the 2017 annual drinking water report. LADWP addressed the citation and put measures in place to prevent this type of occurrence in the future. LADWP received no additional violations in 2018.

Notification Levels Established for Two Fluorinated Compounds

On July 13, 2018, the California State Water Resources Control Board, Division of Drinking Water (SWRCB-DDW) issued health-based drinking water Notification Levels (NLs) for Perfluorooctanoic acid (PFOA) and Perfluorooctane sulfonic acid (PFOS). PFOA and PFOS are compounds that have been used in consumer products to make materials stain-resistant, water-proof, and non-stick. They are also used on surface coatings for paper, cardboard packaging, carpets, furniture, leather, fire-retardant foams, cookware, and equipment lubricants.

The NL issued is a health-based advisory level, not a regulatory level, established by SWRCB-DDW for chemicals that may present health risks but have yet to go through a Health Hazard Assessment. A Health Hazard Assessment is part of the process required to formally adopt a Maximum Contaminant Level (MCL) and includes rigorous research and data analysis by the State Office of Environmental Health.

The NLs for PFOA and PFOS have been set at 14 parts per trillion (ppt) and 13 ppt, respectively. A ppt is equivalent to one ounce in 7.5 billion gallons of water. An NL requires a public water supplier to notify SWRCB-DDW and its governing bodies if drinking water tests exceed the level and recommends customer notification.

Health consequences for exposure to significant levels of PFOA and PFOS may include liver toxicity, cancer risks, and immunotoxicity. Human exposure to PFOA and PFOS are primarily through consumer products, food, indoor and outdoor air, and dust. There is potential for exposure via ingestion of drinking water, particularly in former PFC manufacturing areas. Major U.S. manufacturers voluntarily phased out production of PFOS between 2000 and 2002, and subsequently for PFOA in 2006 due to toxicological concerns.

LADWP tested for PFOA, PFOS, and other PFC's in its source water and distribution system in 2013-2014, well after phased out production of these compounds as part of U.S. EPA's Unregulated Contaminant Monitoring Rule 3 (UCMR3).

During UCMR3 over 38 samples were collected from 11 different monitoring locations. Results for all samples were below laboratory detection levels utilizing advanced U.S. EPA certified test methods for these compounds and well below the NLs for PFOA and PFOS. LADWP continues monitoring for PFOA, PFOS, and other PFC's, including testing of local groundwater sources.

LADWP has a comprehensive water quality monitoring program to help ensure the safety of our water supply. Our water meets or exceeds all State and Federal drinking water standards established by the SWRCB-DDW and the U.S. EPA.

SWRCB-DDW has results of statewide testing for PFOA and PFOS on its website: https://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/PFOA_PFOS.html

LEAD AND DRINKING WATER IN L.A.

Lead is commonly found throughout our environment – in the air, soil, and in homes with old lead-based paints. Fortunately, lead is not found in any of the city's water sources. LADWP has participated in the federal Lead and Copper Rule (LCR) sampling program since 1991 and has taken steps to eliminate lead containing materials in our distribution system. Los Angeles has and continues to be in compliance with the lead and copper regulation, based on residential sampling. In addition, LADWP is improving its corrosion control plan to further minimize lead exposure at the tap.

LADWP most recently conducted LCR residential sampling in 2018. To find the LCR results, see Table I (cont'd) on page 12.

The LCR sampling program focuses on single family residences which were built from 1982 to 1987 that have copper pipes plumbed with lead solder. Customers with qualifying homes that participate in the sampling program will get their tap water tested for lead and copper at no cost. Customers who think their home may qualify can participate in LADWP's next round of LCR sampling are asked to contact us at (213) 367-3182.

In Los Angeles, the main source of lead in drinking water is household plumbing, primarily in homes built before 1986 where lead solder was used to join copper pipes. In 1986, federal law restricted the use of lead in lead-based solder to 0.2% and in pipes and pipe fittings used to serve drinking water to 8%. This helped reduce the amount of lead at the tap inside homes. In 2010, California law further restricted the amount of lead in pipes and pipe fittings to 0.25%, which again reduced the amount of lead at the tap inside homes. The amount of time water remains stagnant in home plumbing will affect how much lead could potentially leach into the tap water. The longer water remains motionless in the pipes, the more likely higher levels of lead will leach into drinking water. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is also available from the Safe Drinking Water Hotline or at www.epa.gov/lead.

Voluntary Lead Testing of Drinking Water at California Public and Private K-12 Schools

In January 2017, the SWRCB-DDW amended LADWP's domestic water supply permit to include a new voluntary program to test for lead in drinking water at California public and private K-12 schools within its service area. Schools interested in participating in this program can find out more information on www.ladwp.com/waterquality under Water Quality in The News, Lead Testing for

Los Angeles Schools. Written requests will be accepted until November 1, 2019.

As of December 2018, LADWP has received and processed 24 requests from schools. No school had lead levels above the action level of 15 parts per billion. The breakdown of the samples results are as follows:

Total Samples Tested: 57

Non-Detect Results: 48

Above Action level: 0

Maximum Result: 3.5 µg/L

Average Result: 0.22 µg/L

If you have any questions regarding this program, please contact us at (213) 367-3182.

AB 746 Requires Lead Testing in California Public K-12 Schools

Effective January 1, 2018, California Assembly Bill 746 requires community water systems to test for lead in drinking water at California public K-12 schools within their service area by July 1, 2019. This law compliments the existing optional lead testing in schools program that began early last year. Under the new lead testing program, all public K-12 schools must participate in lead testing unless they can show that their school was constructed or their plumbing was replaced after December 31, 2009, and that they have conducted equivalent lead testing after January 1, 2009 and posted the results on their website.

Since the effective date, LADWP has established a schedule for four rounds of testing to complete sampling for 103 schools within our service area. LADWP has contacted and sent out testing kits to public K-12 schools within its service area. In 2018, three schools were tested. The results are included below. No school had lead levels above the action level of 15 parts per billion. All remaining schools should be tested by July 2019. If you have any questions regarding this new program, please contact us at (213) 367-3182.

Total Samples Tested: 11

Non-Detect Results: 5

Above Action level: 0

Maximum Result: 3.6 µg/L

Average Result: 1.24 µg/L

Assessment Programs for Surface and Groundwater Sources

Purchased Supplies:

The Metropolitan Water District (MWD) receives and treats water from the State Water Project and the Colorado River that is then delivered to Los Angeles customers. Three of the five MWD treatment plants: F.E. Weymouth, Robert B. Diemer and Joseph Jensen, supply water to the Los Angeles area. MWD tests its water for nearly 400 constituents and performs about 250,000 water quality tests per year on samples gathered from its vast distribution system. Analysis of these samples is undertaken at MWD's state-of-the art water quality laboratory. Results from MWD are provided to LADWP and are included in the report on Tables I, II and III.

Safeguarding Our Surface Water

Administered by the State Water Resources Control Board, Division of Drinking Water (SWRCB-DDW), the Surface Water Treatment Rule (SWTR) is a set of drinking water regulations that establish specific treatment requirements for surface water to reduce the risk of waterborne diseases.

The last update to the SWTR is the Long Term 2 Enhanced

Surface Water Treatment Rule (LT2). This rule protects treated water reservoirs from microbiological contamination by requiring one of three actions: 1) covering, 2) removing from service, or 3) providing additional treatment. In March of 2009, LADWP executed a Compliance Agreement for LT2 with SWRCB-DDW for six uncovered reservoirs: Los Angeles, Upper Stone Canyon, Santa Ynez, Ivanhoe, Silver Lake, and Elysian. Based on the agreement LADWP has met the requirements for five of the six reservoirs. The Los Angeles Reservoir is the only remaining reservoir awaiting regulatory compliance.

The Los Angeles Reservoir will be brought into compliance with the LT2 through a combination of shade balls and construction of a new ultraviolet (UV) disinfection plant. The "shading" of the reservoir was completed in 2015 with nearly 96 million shade balls deployed. The new UV treatment facility will disinfect water leaving the Los Angeles Reservoir to satisfy the LT2 water quality regulation. Construction began in June 2017 and will be completed by the December 2020 compliance date set by the SWRCB-DDW.

Go to www.ladwp.com/waterquality to learn more about water quality projects and issues.

2018 DRINKING WATER QUALITY MONITORING RESULTS

Tables I, II, and III list the results of water tests performed by the LADWP and MWD from January to December 2018. LADWP tests for over 200 substances. These tables include only substances with values that are detected.

How to Read the Tables

The substances found in the water served in your area are listed as follows:

- For San Fernando Valley Area – water test results are under the Los Angeles Aqueduct Filtration Plant, the Northern Combined Wells and the MWD Jensen Plant columns.
- For Central Los Angeles Area – water test results are under the Los Angeles Aqueduct Filtration Plant and the Southern Combined Wells columns.
- For Western Los Angeles Area – water test results are under the Los Angeles Aqueduct Filtration Plant columns.
- For Harbor/Eastern Los Angeles Area – water test results are under MWD, Weymouth, Diemer, and Jensen Plants columns.

Some substances are reported on a citywide basis as required by the SWRCB-DDW.

Abbreviations and Footnotes

ACU = apparent color unit

CFU/mL = colony-forming unit per milliliter

< = less than the detection limit for reporting purposes

µg/L = micrograms per liter (equivalent to ppb)

µS/cm = microSiemens per centimeter

mg/L = milligrams per liter (equivalent to ppm)

NTU = nephelometric turbidity units

NA = not applicable

NR = not reported

NT = not tested

NUM/100 mL = number per 100 milliliter

% = percentage

pCi/L = picoCuries per liter

TON = threshold odor number

Unregulated Contaminants Monitoring Rule

The Unregulated Contaminant Monitoring Rule (UCMR) is a special program developed by the U.S. EPA that requires public water systems to survey up to 30 selected contaminants of emerging concerns (CECs) once every five years. Results indicate that most of the contaminants were not detected at the very low minimum reporting levels required by the U.S. EPA for UCMR3 analyses. Of the contaminants that were detected (see Table IV on page 15) chlorate and strontium were in insignificant but expected concentrations.

LADWP routinely tests for and detects chlorate in the distribution system. Chlorate is a disinfection byproduct of chlorination. Although it is unregulated, the SWRCB-DDW has set a notification level of 800 mg/l. UCMR3 test results for chlorate were much lower, ranging from not detected to 296 mg/l.

TERMS USED IN THE TABLES

Compliance: A drinking water standard based on the health risk (primary standards) and aesthetic (secondary standards) exposure of a contaminant to consumers. For example, bacteria and nitrate have strict limits that must be met at all times due to the acute effects they can cause. Other standards, like small amounts of disinfection by-products and man-made chemicals, have standards that are based on a lifetime of exposure because the risk to consumers is very low. Compliance with most standards is based on an average of samples collected within a year. This allows for some fluctuation above and below the numerical standard, while still protecting public health.

Federal Action Level (AL): Concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow. ALs are set by U.S. Environmental Protection Agency (U.S. EPA).

Federal Minimum Reporting Level (MRL): Minimum concentration of a contaminant which can be detected in drinking water using analytical methods established by the U.S. EPA. Data reported in Table IV reflect MRLs.

Maximum Contaminant Level Goal (MCLG): Level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. EPA.

Maximum Residual Disinfectant Level (MRDL): Highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): Level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the beneficial use of disinfectants to control microbial contaminants. MRDLGs are set by U.S. EPA.

Notification Level (NL): Health-based advisory level established by SWRCB-DDW for chemicals in drinking water that lack MCLs.

Primary Drinking Water Standard (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Public Health Goal (PHG): Level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHA).

Secondary Maximum Contaminate Level (SMCL): Highest level a constituent allowed in drinking water that may affect the taste, odor or appearance. SMCLs are set by the U.S. EPA.

State Detection Limit (DLR): A detected contaminant at or above its detection level for reporting purposes. DLRs are set by the SWRCB-DDW. Data reported in Tables I through III reflect DLRs.

State Maximum Contaminant Level (MCL): Highest level of a contaminant allowed in drinking water. Primary MCLs are set as close to the Public Health Goals (PHGs) or Maximum Contaminant Level Goals (MCLGs) as is economically and technologically feasible. For certain contaminants, compliance with MCL is based on the average of all samples collected throughout the year.

Treatment Technique (TT): Required process intended to reduce the level of a contaminant in drinking water. For example, the filtration process is a treatment technique used to reduce turbidity (cloudiness in water) and microbial contaminants from surface water. High turbidities may be indicative of poor or inadequate filtration.

TABLE I

Calendar Year 2018 Water Quality Monitoring Results

Health-based Primary Drinking Water Standards (MCLs) Substances Detected in Treated Water

Substances	Major Sources in Drinking Water	Units	Meets Primary Standard (YES / NO)	State Primary Standard MCL	State PHG	Los Angeles Aqueduct Filtration Plant		Northern Combined Wells		Southern Combined Wells		MWD Weymouth Plant		MWD Diemer Plant		MWD Jensen Plant

(a) Values reflect Highest Running Annual Average (HRAA). HRAA is the highest of all Running Annual Averages (RAAs) in the reported calendar year. RAA is a calculated average of all samples collected within the previous 12-month period, which may include test data from the previous calendar year. HRAA may be higher than the range, which is based on the test data in the reported calendar year.

(b) Bromate is formed in water treated with ozone in the presence of bromide. Bromate has also been found in water treated with chlorine in some uncovered reservoirs in LADWP that have elevated bromide levels and are exposed to sunlight. MWD tests for bromate at its Diemer and Jensen Filtration Plants, which use ozone. Weymouth Plant has tested for bromate for less than 12-month period and so RAA is not calculated. All LADWP distribution reservoirs are now shielded with flexible covers or shade balls to minimize bromate formation.

(c) Radiological monitoring is performed in cycles of various frequencies in LADWP for treated sources water and at the blend points. Monitoring for Gross Alpha Particle Activity is performed in six year cycle and was conducted in 2016. Monitoring of Combined Radium-226 and Radium-228 is performed in three year cycle and was conducted in 2016. Monitoring of Gross Beta Particle Activity, Strontium-90, Tritium and Uranium is performed annually. MWD conducted all radiological monitoring in 2017.

(d) Turbidity is a measure of the cloudiness of water and is a good indicator of water quality and filtration performance. High turbidity can hinder the effectiveness of disinfectants. The Primary Drinking Water Standard for turbidity (included in this table) at water filtration plants is less than or equal to 0.3 NTU in at least 95 percent of the measurements taken in any month and shall not exceed 1.0 NTU at any time. The reporting requirement for treatment plant turbidity is to report the highest single measurement in the calendar year as well as the lowest monthly percentage of measurements that are less than or equal to 0.3 NTU.

TABLE I (CONT'D)

Calendar Year 2018 Water Quality Monitoring Results

Health-based Primary Drinking Water Standards (MCLs)

Substances Detected in Treated Water and Reported on City-Wide Basis

Substances	Major Sources in Drinking Water	Units	Meets Primary Standard (YES/NO)	State Primary Standard MCL or (MRDL)	State PHG / (MRDLG)	Average	Range
Bromate (uncovered reservoirs)	By-product of ozone disinfection; formed under sunlight for chlorinated water	µg/L	YES	10	0.1	HRAA = 2 (a)	Range = <1 – 3
Chlorine Residual, Total	Drinking water disinfectant added for treatment	mg/L	YES	(4)	(4)	HRAA = 2.0 (a)	Range = 1.8 – 2.1
Copper (at-the-tap) AL = 1300 (e)	Internal corrosion of household water plumbing systems	µg/L	YES	TT	300	90th Percentile value = 329	Number of samples exceeding AL = 0 out of 103
Fluoride	Erosion of natural deposits; water additive that promotes strong teeth	mg/L	YES	2	1	Average = 0.7	Range = 0.2 - 0.9
Haloacetic Acids (Five) (HAA5)	By-product of drinking water disinfection	µg/L	YES	60	none	HLRAA = 15 (f)	Range = 3 – 22
Lead (at-the-tap) AL = 15 (e)	Internal corrosion of household water plumbing systems	µg/L	YES	TT	0.2	90th Percentile value = 5.2	Number of samples exceeding AL = 1 out of 103
Total Coliform Bacteria	Naturally present in the environment	% Positives	YES	≤5% of monthly samples are coliform positive	0	Highest monthly % positive samples = 1.5%	Range = % positive samples 0% – 1.3%
Total Trihalomethanes (TTHM)	By-product of drinking water chlorination	µg/L	YES	80	none	HLRAA = 38 (f)	Range = 9 – 46

(a) Values reflect Highest Running Annual Average (HRAA). HRAA is the highest of all Running Annual Averages (RAAs) in the reported calendar year. RAA is a calculated average of all samples collected within the previous 12-month period, which may include test data from the previous calendar year. HRAA may be higher than the range, which is based on the test data in the reported calendar year.

(e) At-the-tap monitoring of lead and copper is conducted as required by the federal Lead and Copper Rule. A system is out of compliance if the federal Action Level is exceeded in more than 10 percent of all samples collected at the customers' tap. The most recent monitoring was conducted in 2018. Although the City's treated water has little or no detectable lead, studies were conducted and corrosion control implementation started. A small corrosion control facility utilizing zinc orthophosphate

(temporarily out of service for upgrades) has been in operation in the Watts area since the 1990's. Corrosion control was introduced to the Western Los Angeles area in 2010 and to the Hollywood area in 2015. The results of the corrosion control study will be available in 2019.

(f) The federal Stage 2 Disinfectants/Disinfection Byproducts Rule (Stage 2 D/DBPR) requires compliance monitoring and reporting for total trihalomethanes (TTHM) and five haloacetic acids (HAA5) based on Locational Running Annual Averages (LRAAs) of established monitoring locations. The Highest Locational Running Annual Averages (HLRAAs) of all LRAAs in the current calendar year for TTHM and HAA5 are reported.

TABLE II

Calendar Year 2018 Water Quality Monitoring Results

Aesthetic-based Secondary Drinking Water Standards (SMCLs) Substances Detected in Treated Water

Substances	Major Sources in Drinking Water	Units	Meets Secondary Standard (YES/NO)	State SMCL or Federal (SMCL)	Los Angeles Aqueduct Filtration Plant		Northern Combined Wells		Southern Combined Wells		MWD Weymouth Plant		MWD Diemer Plant		MWD Jensen Plant	
					Average	Range	Average	Range	Average	Range	Average	Range	Average	Range	Average	Range
Aluminum	Erosion of natural deposits; residue from some surface water treatment processes	µg/L	YES	200	<50	<50	<50	<50	<50	<50	105 (a)	<50 - 220	124 (a)	<50 - 210	< 50 (a)	<50 – 75
Chloride	Runoff / leaching from natural deposits; seawater influence	mg/L	YES	500	34	24 - 46	39	28 - 45	39	30 - 49	96	96 - 97	94	92 - 95	56	54 - 57

General Information

This annual Drinking Water Quality Report (also known as a Consumer Confidence Report) is required by the California State Water Resources Control Board, Division of Drinking Water (SWRCB-DDW) and is prepared in accordance with their guidelines. The report is available online at www.ladwp.com/waterqualityreport. Copies may be requested by calling (213) 367-3182.

LADWP, the largest municipal utility in the nation, was established more than 100 years ago. The utility now provides reliable and safe water and electric service to the city's more than 4 million residents and businesses. LADWP is governed by Board of Water and Power Commissioners, appointed by the Mayor and confirmed by the City Council. The Board meets regularly on the second and fourth Tuesdays of each month at 10:00 a.m.

Meetings are held at:

Los Angeles Department of Water and Power
111 North Hope Street, Room 1555H
Los Angeles, CA 90012-2694

The meeting agenda is available to the public on the Thursday prior to the week of the meeting. You can access the Board agenda at www.ladwp.com/board or by calling (213) 367-1351.

For general information about LADWP, call (800) DIAL-DWP or visit www.ladwp.com.

For questions regarding this report, call the Water Quality hotline at (213) 367-3182.

THIS MESSAGE IS FOR NON-ENGLISH SPEAKING LADWP CUSTOMERS

This report contains important information about your drinking water. If you have any questions regarding this report, ask someone to translate it for you.

Commitment

ALTA Commitment for Title Insurance

ISSUED BY

First American Title Insurance Company

File No: NCS-990709-CHI2

COMMITMENT FOR TITLE INSURANCE

Issued By

FIRST AMERICAN TITLE INSURANCE COMPANY

NOTICE

IMPORTANT-READ CAREFULLY: THIS COMMITMENT IS AN OFFER TO ISSUE ONE OR MORE TITLE INSURANCE POLICIES. ALL CLAIMS OR REMEDIES SOUGHT AGAINST THE COMPANY INVOLVING THE CONTENT OF THIS COMMITMENT OR THE POLICY MUST BE BASED SOLELY IN CONTRACT.

THIS COMMITMENT IS NOT AN ABSTRACT OF TITLE, REPORT OF THE CONDITION OF TITLE, LEGAL OPINION, OPINION OF TITLE, OR OTHER REPRESENTATION OF THE STATUS OF TITLE. THE PROCEDURES USED BY THE COMPANY TO DETERMINE INSURABILITY OF THE TITLE, INCLUDING ANY SEARCH AND EXAMINATION, ARE PROPRIETARY TO THE COMPANY, WERE PERFORMED SOLELY FOR THE BENEFIT OF THE COMPANY, AND CREATE NO EXTRACTIONAL LIABILITY TO ANY PERSON, INCLUDING A PROPOSED INSURED.

THE COMPANY'S OBLIGATION UNDER THIS COMMITMENT IS TO ISSUE A POLICY TO A PROPOSED INSURED IDENTIFIED IN SCHEDULE A IN ACCORDANCE WITH THE TERMS AND PROVISIONS OF THIS COMMITMENT. THE COMPANY HAS NO LIABILITY OR OBLIGATION INVOLVING THE CONTENT OF THIS COMMITMENT TO ANY OTHER PERSON.

COMMITMENT TO ISSUE POLICY

Subject to the Notice; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and the Commitment Conditions, ***First American Title Insurance Company***, a Nebraska Corporation (the "Company"), commits to issue the Policy according to the terms and provisions of this Commitment. This Commitment is effective as of the Commitment Date shown in Schedule A for each Policy described in Schedule A, only when the Company has entered in Schedule A both the specified dollar amount as the Proposed Policy Amount and the name of the Proposed Insured.

If all of the Schedule B, Part I-Requirements have not been met within six months after the Commitment Date, this Commitment terminates and the Company's liability and obligation end.

First American Title Insurance Company

COMMITMENT CONDITIONS

1. DEFINITIONS

- (a) "Knowledge" or "Known": Actual or imputed knowledge, but not constructive notice imparted by the Public Records.
- (b) "Land": The land described in Schedule A and affixed improvements that by law constitute real property. The term "Land" does not include any property beyond the lines of the area described in Schedule A, nor any right, title, interest, estate, or easement in abutting streets, roads, avenues, alleys, lanes, ways, or waterways, but this does not modify or limit the extent that a right of access to and from the Land is to be insured by the Policy.
- (c) "Mortgage": A mortgage, deed of trust, or other security instrument, including one evidenced by electronic means authorized by law.
- (d) "Policy": Each contract of title insurance, in a form adopted by the American Land Title Association, issued or to be issued by the Company pursuant to this Commitment.
- (e) "Proposed Insured": Each person identified in Schedule A as the Proposed Insured of each Policy to be issued pursuant to this Commitment.
- (f) "Proposed Policy Amount": Each dollar amount specified in Schedule A as the Proposed Policy Amount of each Policy to be issued pursuant to this Commitment.
- (g) "Public Records": Records established under state statutes at the Commitment Date for the purpose of imparting constructive notice of matters relating to real property to purchasers for value and without Knowledge.
- (h) "Title": The estate or interest described in Schedule A.

2. If all of the Schedule B, Part I—Requirements have not been met within the time period specified in the Commitment to Issue Policy, this Commitment terminates and the Company's liability and obligation end.

3. The Company's liability and obligation is limited by and this Commitment is not valid without:

- (a) the Notice;
- (b) the Commitment to Issue Policy;
- (c) the Commitment Conditions;
- (d) Schedule A;
- (e) Schedule B, Part I—Requirements; and
- (f) Schedule B, Part II—Exceptions.

4. COMPANY'S RIGHT TO AMEND

The Company may amend this Commitment at any time. If the Company amends this Commitment to add a defect, lien, encumbrance, adverse claim, or other matter recorded in the Public Records prior to the Commitment Date, any liability of the Company is limited by Commitment Condition 5. The Company shall not be liable for any other amendment to this Commitment.

5. LIMITATIONS OF LIABILITY

- (a) The Company's liability under Commitment Condition 4 is limited to the Proposed Insured's actual expense incurred in the interval between the Company's delivery to the Proposed Insured of the Commitment and the delivery of the amended Commitment, resulting from the Proposed Insured's good faith reliance to:
 - (i) comply with the Schedule B, Part I—Requirements;
 - (ii) eliminate, with the Company's written consent, any Schedule B, Part II—Exceptions; or
 - (iii) acquire the Title or create the Mortgage covered by this Commitment.
- (b) The Company shall not be liable under Commitment Condition 5(a) if the Proposed Insured requested the amendment or had Knowledge of the matter and did not notify the Company about it in writing.
- (c) The Company will only have liability under Commitment Condition 4 if the Proposed Insured would not have incurred the expense had the Commitment included the added matter when the Commitment was first delivered to the Proposed Insured.
- (d) The Company's liability shall not exceed the lesser of the Proposed Insured's actual expense incurred in good faith and described in Commitment Conditions 5(a)(i) through 5(a)(iii) or the Proposed Policy Amount.
- (e) The Company shall not be liable for the content of the Transaction Identification Data, if any.
- (f) In no event shall the Company be obligated to issue the Policy referred to in this Commitment unless all of the Schedule B, Part I—Requirements have been met to the satisfaction of the Company.
- (g) In any event, the Company's liability is limited by the terms and provisions of the Policy.

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by First American Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions.

Copyright 2006-2016 American Land Title Association. All rights reserved.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

6. LIABILITY OF THE COMPANY MUST BE BASED ON THIS COMMITMENT

- (a) Only a Proposed Insured identified in Schedule A, and no other person, may make a claim under this Commitment.
- (b) Any claim must be based in contract and must be restricted solely to the terms and provisions of this Commitment.
- (c) Until the Policy is issued, this Commitment, as last revised, is the exclusive and entire agreement between the parties with respect to the subject matter of this Commitment and supersedes all prior commitment negotiations, representations, and proposals of any kind, whether written or oral, express or implied, relating to the subject matter of this Commitment.
- (d) The deletion or modification of any Schedule B, Part II—Exception does not constitute an agreement or obligation to provide coverage beyond the terms and provisions of this Commitment or the Policy.
- (e) Any amendment or endorsement to this Commitment must be in writing and authenticated by a person authorized by the Company.
- (f) When the Policy is issued, all liability and obligation under this Commitment will end and the Company's only liability will be under the Policy.

7. IF THIS COMMITMENT HAS BEEN ISSUED BY AN ISSUING AGENT

The issuing agent is the Company's agent only for the limited purpose of issuing title insurance commitments and policies. The issuing agent is not the Company's agent for the purpose of providing closing or settlement services.

8. PRO-FORMA POLICY

The Company may provide, at the request of a Proposed Insured, a pro-forma policy illustrating the coverage that the Company may provide. A pro-forma policy neither reflects the status of Title at the time that the pro-forma policy is delivered to a Proposed Insured, nor is it a commitment to insure.

9. ARBITRATION

Arbitration provision intentionally removed.

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by First American Title Insurance Company. First American

Schedule BI & BII

ALTA Commitment for Title Insurance

ISSUED BY

First American Title Insurance Company

File No: NCS-990709-CHI2

Commitment No.: NCS-990709-CHI2

SCHEDULE B, PART I

Requirements

All of the following Requirements must be met:

- A. The Proposed Insured must notify the Company in writing of the name of any party not referred to in this Commitment who will obtain an interest in the Land or who will make a loan on the Land. The Company may then make additional Requirements or Exceptions.
- B. Pay the agreed amount for the estate or interest to be insured.
- C. Pay the premiums, fees, and charges for the Policy to the Company.
- D. Documents satisfactory to the Company that convey the Title or create the Mortgage to be insured, or both, must be properly authorized, executed, delivered, and recorded in the Public Records.
- E. Releases(s) or Reconveyance(s) of Item(s): 17 and 22
- F. Other: None
- G. You must give us the following information:
 - a. Any off record leases, surveys, etc.
 - b. Statement(s) of Identity, all parties.
 - c. Other: None

The following additional requirements, as indicated by "X", must be met:

- ☒ H. Provide information regarding any off-record matters, which may include, but are not limited to: leases, recent works of improvement, or commitment statements in effect under the Environmental Responsibility Acceptance Act, Civil Code Section 850, et seq.

The Company's Owner's Affidavit form (as provided by the company) must be completed and submitted prior to close in order to satisfy this requirement. This Commitment will then be subject to such further exceptions and/or requirements as may be deemed necessary.

- ☒ I. An ALTA/NSPS survey of recent date, which complies with the current minimum standard detail requirements for ALTA/NSPS land title surveys, must be submitted to the Company for review. This Commitment will then be subject to such further exceptions and/or requirements as may be deemed necessary.

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by First American Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions.

- [X] J. The following LLC documentation is required from:
- (i) a copy of the Articles of Organization
 - (ii) a copy of the Operating Agreement, if applicable
 - (iii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
 - (iv) express Company Consent to the current transaction
- [] K. The following partnership documentation is required :
- (i) a copy of the partnership agreement, including all applicable amendments thereto
 - (ii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
 - (iii) express Partnership Consent to the current transaction
- [] L. The following corporation documentation is required:
- (i) a copy of the Articles of Incorporation
 - (ii) a copy of the Bylaws, including all applicable Amendments thereto
 - (iii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
 - (iv) express Corporate Resolution consenting to the current transaction
- [X] M. Based upon the Company's review of that certain partnership/operating agreement dated **Not disclosed** for the proposed insured herein, the following requirements must be met:
Any further amendments to said agreement must be submitted to the Company, together with an affidavit from one of the general partners or members stating that it is a true copy, that said partnership or limited liability company is in full force and effect, and that there have been no further amendments to the agreement. This Commitment will then be subject to such further requirements as may be deemed necessary.
- [] N. A copy of the complete lease, as referenced in Schedule A, #3 herein, together with any amendments and/or assignments thereto, must be submitted to the Company for review, along with an affidavit executed by the present lessee stating that it is a true copy, that the lease is in full force and effect, and that there have been no further amendments to the lease. This Commitment will then be subject to such further requirements as may be deemed necessary.
- [X] O. Approval from the Company's Underwriting Department must be obtained for issuance of the policy contemplated herein and any endorsements requested thereunder. This Commitment will then be subject to such further requirements as may be required to obtain such approval.
- [] P. Potential additional requirements, if ALTA Extended coverage is contemplated hereunder, and work on the land has commenced prior to close, some or all of the following requirements, and any other requirements which may be deemed necessary, may need to be met:
- [] Q. The Company's "Indemnity Agreement I" must be executed by the appropriate parties.

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by First American Title Insurance Company. First American

Schedule BI & BII (Cont.)

ALTA Commitment for Title Insurance

ISSUED BY

First American Title Insurance Company

File No: NCS-990709-CHI2

Commitment No.: NCS-990709-CHI2

SCHEDULE B, PART II

Exceptions

THIS COMMITMENT DOES NOT REPUBLISH ANY COVENANT, CONDITION, RESTRICTION, OR LIMITATION CONTAINED IN ANY DOCUMENT REFERRED TO IN THIS COMMITMENT TO THE EXTENT THAT THE SPECIFIC COVENANT, CONDITION, RESTRICTION, OR LIMITATION VIOLATES STATE OR FEDERAL LAW BASED ON RACE, COLOR, RELIGION, SEX, SEXUAL ORIENTATION, GENDER IDENTITY, HANDICAP, FAMILIAL STATUS, OR NATIONAL ORIGIN.

The Policy will not insure against loss or damage resulting from the terms and provisions of any lease or easement identified in Schedule A, and will include the following Exceptions unless cleared to the satisfaction of the Company:

1. Any defect, lien, encumbrance, adverse claim, or other matter that appears for the first time in the Public Records or is created, attaches, or is disclosed between the Commitment Date and the date on which all of the Schedule B, Part I-Requirements are met.
2. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
3. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
4. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
5. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
6. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by First American Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions.

21. The effect of a deed dated September 12, 2017, executed by Staples the Office Superstore, LLC, a Delaware limited liability company, successor by conversion to Staples the Office Superstore, Inc., a Delaware corporation, which acquired title as Staples Properties, Inc., a California corporation, as Grantor, to USR Real Estate Holdings LLC, a Delaware limited liability company, as Grantee, recorded September 20, 2017, as Instrument No. [20171074477](#) of Official Records.

NOTE: The Company will require an Affidavit of Execution and Delivery of Deed executed by the grantor in the presence of a First American notary or other satisfactory proof that the deed was valid prior to removing this exception or insuring the contemplated transaction.

22. A deed of trust to secure the performance of an agreement or other obligation, recorded September 20, 2017 as Instrument No. [20171074478](#) of Official Records.

Dated: September 12, 2017
Trustor: USR Real Estate Holdings LLC, a Delaware limited liability company
Trustee: Chicago Title Company, a California corporation
Beneficiary: Wells Fargo Bank, National Association

(Affects Both Parcels)

The above deed of trust states that it secures a line of credit. Before the close of escrow, we require evidence satisfactory to us that (a) all checks, credit cards or other means of drawing upon the line of credit have been surrendered to escrow, (b) the borrower has not drawn upon the line of credit since the last transaction reflected in the lender's payoff demand, and (c) the borrower has in writing instructed the beneficiary to terminate the line of credit using such forms and following such procedures as may be required by the beneficiary.

23. Any facts, rights, interests or claims which would be disclosed by a correct ALTA/NSPS survey.
24. Rights of parties in possession.

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by First American Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions.

Copyright 2006-2016 American Land Title Association. All rights reserved.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

ALERT - CA Senate Bill 2 imposes an additional fee of \$75 up to \$225 at the time of recording on certain transactions effective January 1, 2018. Please contact your First American Title representative for more information on how this may affect your closing.

1. According to the latest available equalized assessment roll in the office of the county tax assessor, there is located on the land a(n) Commercial Structure known as 6450 West Sunset Boulevard, Los Angeles, CA.
2. According to the public records, there has been no conveyance of the land within a period of twenty-four months prior to the date of this report, except as follows:

None
3. This preliminary report/commitment was prepared based upon an application for a policy of title insurance that identified land by street address or assessor's parcel number only. It is the responsibility of the applicant to determine whether the land referred to herein is in fact the land that is to be described in the policy or policies to be issued.

The map attached, if any, may or may not be a survey of the land depicted thereon. First American Title Insurance Company expressly disclaims any liability for loss or damage which may result from reliance on this map except to the extent coverage for such loss or damage is expressly provided by the terms and provisions of this Commitment or the Policy, if any, to which the map is attached.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Building Analytics were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 2

EXECUTIVE SUMMARY

RCRA-LQG sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SELMA AVE ELEMENTARY EPA ID:: CAR000197244	6611 SELMA AVE	NW 1/8 - 1/4 (0.250 mi.)	AG202	310
Lower Elevation	Address	Direction / Distance	Map ID	Page
SUNSET AND VINE TOWE EPA ID:: CAR000186205	1480 VINE ST	E 1/8 - 1/4 (0.225 mi.)	AC186	271

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 18 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/27/2020 has revealed that there are 24 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 15 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 5 CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 35 UST sites within approximately 0.25 miles of the target property.

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 03/23/2020 has revealed that there are 54 Cortese sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

LOS ANGELES GAS AND	N FORMOSE AVE BTWN R	WSW 1/2 - 1 (0.987 mi.)	354	921

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 46 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 24 EDR Hist Cleaner sites within approximately 0.25 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 22 RGA LUST sites within approximately 0.5 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:

Site ID: 129688
Site Name: LAPD - HOLLYWOOD POLICE MOTOR TRANS
Violation Date: 02-05-2019
Citation: HSC 6.7 25299(a)(9) - California Health and Safety Code, Chapter 6.7, Section(s) 25299(a)(9)
Violation Description: Leak detection equipment disabled or tampered with in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak.
Violation Notes: Returned to compliance on 02/05/2019. OBSERVATION: The vent sump sensor was raised approximately 6 inches off the lowest point of the sump and not located to detect a leak at the earliest opportunity. Monitoring equipment shall be maintained to be able to detect a leak at the earliest possible opportunity. Corrected during inspection. CORRECTIVE ACTION: Ensure that all sensors are located at the lowest point of the sump.

Citation: 23 CCR 16 2716(a) through (e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(a) through (e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: OBSERVATION: The "Designated Operator Visual Inspection Reports" are missing signatures for months 2/20/19, 3/21/19, 4/17/19 & 5/15/19. CORRECTIVE ACTION: Complete missing signatures for months 2/20/19, 3/21/19, 4/17/19 & 5/15/19 and email Inspector a copy of the updated "Designated Operator Inspection Reports."

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-05-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Inspector Shane Bystrom LAFD, onsite this date to conduct routine inspection of underground storage tank. Consent to enter, inspect and take photographs was given on this date by Otto Tharp, Automotive Supervisor. Monitoring system certification was conducted at this time. Monitoring certification was performed by Richard Blankenbiller, Clean Fuels Inc.. Tester provided the following certifications: ICC: 5012767. EXP: 12/15/2019 VR: #A20929 EXP: 9/14/2019 VMI: #3041 EXP: 3/27/2020 OMNTEC: 120517TA EXP: 12/05/2019 The UST monitoring panel showed all functions normal. The monitoring set up and alarm history were provided for review. The sumps and UDCs were opened for inspection and the sensors were observed positioned to detect a leak at the earliest opportunity. The spill buckets were also visually inspected. The Monitoring Plan was compared to the equipment onsite. The operation of the UST system was compared to the conditions of the operating [Truncated]

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site ID: 43433
Site Name: LAPD - HOLLYWOOD DIVISION
Violation Date: 02-05-2019
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Returned to compliance on 02/05/2019. OBSERVATION: Owner/Operator failed to meet one or more of the following spill container requirements: install or maintain spill container which is liquid-tight, has a minimum capacity of five gallons, has a functional drain valve or other method for the removal of liquid from the spill container, and is resistant to galvanic corrosion; did not perform tightness test at installation, every 12 months thereafter, or within 30 days after a repair; did not have tested using manufacturer's guidelines, industry codes, engineering standards, or method approved by PE, or was not tested by a certified UST service technician; or failed to maintain testing records for 36 months. Spill bucket had 10" of liquid (~3 gallons) of liquid, and therefore did not hold 5 gallons. Liquid removed during inspection. CORRECTIVE ACTION: Ensure that spill bucket is free of liquid.

Violation Description: Failure to complete and electronically submit a site map with all required content.

Violation Notes: Provide all required labels.

Violation Division: Los Angeles City Fire Department

Violation Program: HMRRP

Violation Source: CERS

Evaluation:

Eval General Type: Other/Unknown

Eval Date: 07-26-2018

Violations Found: Yes

Eval Type: Other, not routine, done by local agency

Eval Notes: A follow-up is conducted. The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan, Employee Training Plan and APSA sections were reviewed in CERS and field verified. Violations indicated previously has not been corrected and remains unresolved. Please refer to the CERS file emailed to you with notations on what needs to be corrected. You have 30 days to resolve these violations to avoid further action. If you have any trouble, feel free to call or send an email. Once itG s complete, let me know by replying to this email and I'll verify in CERS and clear the violations. IG ve also attached a list of private contractors that can perform all of your CERS reporting for you if you choose, as well as information on a free training class offered by the city. Have a good day.

Eval Division: Los Angeles City Fire Department

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:

Site ID: 354452
Site Name: LAFD - FIRE STATION 27
Violation Date: 09-12-2018
Citation: 23 CCR 16 2632(c)(2)(B), 2634(d)(1)(a), 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2632(c)(2)(B), 2634(d)(1)(a), 2636(f)(1)
Violation Description: Failure of the leak detection equipment to have an audible and visual alarm as required.
Violation Notes: Returned to compliance on 10/12/2018. OBSERVATION: Owner/Operator did not maintain leak detection equipment with an audible and visual alarm (Power & Warning lights not functional). CORRECTIVE ACTION: Maintain leak detection equipment with an audible and visual alarm.
Violation Division: Los Angeles City Fire Department
Violation Program: UST
Violation Source: CERS

Site ID: 354452
Site Name: LAFD - FIRE STATION 27
Violation Date: 09-25-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, - 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional

Violation Date: 09-02-2015
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description: Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.
Violation Notes: Returned to compliance on 09/14/2017. OBSERVATION: Owner/Operator did not maintain overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. CORRECTIVE ACTION: Maintain overfill prevention system to meet one of the following requirements: 1. Violations Notes: install or maintain a liquid-tight spill bucket. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container. Be resistant to galvanic corrosion.

Returned to compliance on 03/04/2019. OBSERVATION: Owner/Operator did not install or maintain spill bucket which is liquid-tight, has a minimum capacity of five gallons, has a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, or is resistant to galvanic corrosion. Diesel spill bucket failed first test, possibly due to riser adapter. CORRECTIVE ACTION: Install or repair diesel spill bucket so that it is liquid-tight, has a minimum capacity of five gallons, has a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and is resistant to galvanic corrosion. Submit verification.

Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)

Violations Description: Failure of the functional line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 p.s.i.g. and restrict or shut off the flow of product through the piping when a leak is detected.

Violations Notes: Returned to compliance on 09/18/2019. Mr. Almeida did not have the proper equipment to test LLD on 9/12/18. Last certified on 9/14/17. His coworker was to bring equipment later same day to certify. 9/12/18 LLD test results indicated failure. OBSERVATION: Diesel line leak detector failed to meet one or more of the following requirements: Monitor at least hourly; Capable of detecting a release of 3.0 gallons per hour at 10 p.s.i.g.; Restricting or shutting off the flow of product through the piping when a leak is detected. CORRECTIVE ACTION: Repair or replace Diesel line leak detector so that it is capable of monitoring at least hourly, detecting a release of 3.0 gallons per hour at 10 p.s.i.g., and restricting or shutting off the flow of product through the piping when a leak is detected.

functional. The monitoring set up and alarm history were provided for review. The sumps and UDCs were opened for inspection and the sensors were observed positioned to detect a leak at the earliest opportunity. The spill buckets were also visually inspected. The Monitoring Plan was compared to the equipment onsite. The operation of the UST system was [Truncated]

Address: 1553 N SCHRADER BLVD
City,State,Zip: LOS ANGELES, CA 90028
Site ID: 86866
CERS ID: 10249702
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 86866
Site Name: HOLLYWOOD YMCA
Violation Date: 09-12-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a site map with all required content.
Violation Notes: Returned to compliance on 11/04/2019. Review, update and resubmit the site map in CERS to include all required elements. You can download detailed SITE MAP INSTRUCTIONS in the Hazardous Materials Business Plan (HMBP) Section using the following link
<https://www.lafd.org/fire-prevention/cupa/documents-forms>
Violation Division: Los Angeles City Fire Department
Violation Program: HMRRP
Violation Source: CERS

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-29-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by TONA CONTACT INFORMATION: ADRIANA QUIROZ@YMCALA.ORG Observed the facility and inspected hazardous materials storage. Annual employee safety training records were maintained. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents

Hazardous Waste Summary:

. Waste code: D000
. Waste name: Not Defined

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHTHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHTHLORETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F004
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The Business Activities, Owner/Operator Identification, Hazardous
Materials Inventory, Site Map, Emergency Response/Contingency Plan and
Employee Training Plan sections were reviewed in CERS and field
verified. Review and correct any violations indicated previously in
this report, on or before the COMPLY BY date associated with each
violation. NOTE: The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4;
57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store,
use or handle hazardous materials in the City of Los Angeles to obtain
a Consolidated Permit from the Los Angeles Fire Department CUPA ****
Annual submission of a Hazardous Materials Business Plan into CERS is
required between January 1 and March 1 of every year. Please remember
that any change in inventory of greater than 100 percent will require
new submission within 30 days of that change. As a reminder, you must
complete all the [Truncated]

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Description: A 3rd party contractor damaged a 2 inch plastic beam causing release of Natural Gas at a construction site. The natural gas leak is not yet stopped, crews are digging for control of the gas leak. They estimate ETA of leak stoppage to be around 1630 hours, will call back to report any updates. Los Angeles Fire Department is on site, and has evacuated 28 employees from the construction site. Road closure in both directions for Sunset Blvd, from Argyle Ave to North Gower.

Case Worker: NLA
Local Agency: Not reported
RB Case Number: 1224
File Location: Regional Board
Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor

Potential Contaminants of Concern: * Chlorinated Hydrocarbons, Tetrachloroethylene (PCE)
Site History: The Site was occupied by a motion picture post-production facility where titles, visual effects and special effects were applied onto motion picture film. The former Pacific Title and Art Studio (PTAS) was a post-production motion picture facility that operated from approximately 1946 to 2009. Operations in the main building included internal film developing and associated film cleaning and optical printing to support post-production processes. The main building housed office space, film developing, printing and film cleaning process units, studios and film viewing theaters. The garage-like structure in the southwest portion of the subject property was used for storage of equipment, paints, janitorial chemicals and other materials. In 2009, the Amidi Group acquired ownership of the property from PTAS for re- development of the main building into an executive office complex. The redevelopment was completed in June 2013.

Citation: 23 CCR 16 2716(a) through (e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(a) through (e)

Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Notes: Returned to compliance on 04/19/2019. OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: DO inspections conducted after 9/30/2018 must be every 30 days and in accordance with sections 2716(a)-(e). Inspections occurred greater than 30 days on 2 different occasions: between 10/27/18 & 11/27/18(31 days) and again between 12/27/18 & 1/27/19(31 days). CORRECTIVE ACTION: Ensure that DO is complying with all the requirements noted above. Submit copy of compliant DO inspection record.

Violation Program: UST
Violation Source: CERS

Site ID: 395521
Site Name: FRANKLIN ARGYLE INC
Violation Date: 02-19-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 04/04/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Was due by 10/13/18, but going to be tested today(2/19/19). Not witnessed by LAFD, results to be reviewed upon submittal. CORRECTIVE ACTION: Apply for permit for new drop tubes and repair/retest. Submit verification.

than drinking water)
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Acetone, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: The site, located at the northwest corner of Seward Street and Barton Avenue in Hollywood, was formerly used for film processing activities from 1926 until 2002. The site was occupied by approximately eleven structures (Buildings 1 through 11), parking lots, and an interior courtyard. Film processing and associated activities were conducted in three main buildings; Buildings 1, 2 and 3. The majority of the chemicals that had been used in film processing were stored in the basement of Buildings 2 and 3. Historically, the chemicals used for film processing included isopropyl alcohol, acetone, 1,1,1-Trichloroethane (1,1,1-TCA), Perchloroethylene (PCE), ammonium thiosulfate, and proprietary development solutions. The remaining buildings were used as offices and for other purposes, such as general storage, a maintenance shop, an electrical shop, and for archiving films. Buildings 1 through 11 were demolished between April and August of 2005. The site is presently vacant and awaiting commercial redevelopment.
