Appendix D: Applicable or Relevant and Appropriate Requirements Assessment

Section 121(d)(1)(A) of CERCLA requires that remedial actions at CERCLA sites attain (or justify the waiver of) any federal or state environmental standards, requirements, criteria, or limitations that are determined to be legally applicable or relevant and appropriate requirements (ARARs). Federal ARARs may include requirements promulgated under any federal environmental laws. State ARARs may only include promulgated, enforceable environmental or facility-siting laws of general application that are more stringent or broader in scope than federal requirements and that are identified by the state in a timely manner. ARARs are identified on a site-specific basis from information about the chemicals at the site, the remedial actions contemplated, the physical characteristics of the site, and other appropriate factors. ARARs include only substantive, not administrative, requirements and pertain only to onsite activities. There are three general categories of ARARs: chemical-specific, location-specific, and action-specific.

Because this remedy is an interim action that does not include restoration of the aquifer as an objective, EPA is not, at this time, establishing chemical-specific ARARs as *in situ* cleanup goals for contaminated groundwater at the Site. In situ cleanup goals will be addressed in a subsequent decision document. While chemical specific ARARs are not cleanup goals for groundwater, they are applicable to the extracted and treated water which will be utilized as drinking water. Chemical-specific ARARs identified in the ROD for the extracted and treated groundwater are shown in Table A.1.

Table A.1. Summary of Extracted and Treated Groundwater ARAR Changes

Contaminants of Concern	2010 ROD cleanup goals (µg/L)	State MCL (µg/L)	Federal MCL (µg/L)	Is the cleanup goal above the current MCL?
Carbon tetrachloride	0.5 (State)	0.5	5	No
Chloroform (Trichloromethane)	80[1] (Federal)	80[1]	80[1]	No
Methylene Chloride (Dichloromethane)	5 (Federal)	5	5	No
Perchlorate	6 (State)	6	none	No
Trichloroethene (TCE)	5 (Federal)	5	5	No

Notes: [1]There is no MCL for chloroform. The values listed for chloroform are for the combined concentration of four trihalomethanes: chloroform, dibromochloromethane, bromodichloromethane, and bromoform.

No Site contaminants of concern have cleanup levels above their respective current maximum contaminant level (MCL) and there have been no changes to State or Federal MCLs since the 2010 Interim ROD. The California Office of Environmental Health Hazard Assessment (OEHHA) published an updated public health goal (PHG) of 1 part per billion (ppb) for perchlorate in drinking water in February 2015. This updates the previous California PHG of 6 ppb perchlorate, which was set in 2004. The updated PHG is lower because it incorporates new research about the effects of perchlorate on infants.

Federal and State laws and regulations other than the chemical-specific ARARs that have been promulgated or changed over the past five years are described in A-2. There have been no revisions to laws or regulations that are pertinent to the Site which affect the protectiveness of the remedy. The table does not include those ARARs identified in the ROD that are no longer pertinent, now that the remedial design is complete. The table also does not include those ARARs identified in the ROD that have not changed since finalization of the 2010 ROD; and therefore, do not affect protectiveness.

Non-pertinent ARARs are listed below:

- National Historic Preservation Act
- Historic Site Act
- Archaeological and Historic Preservation Act
- Archaeological Resources Protection Act
- Endangered Species Act
- California Endangered Species Act
- Native Plants Protection Act
- Migratory Bird Treaty Act
- California Fish and Game Code
- Native American Graves Protection and Repatriation Act
- Executive Order Protection and Enhancement of the Cultural Environment
- Executive Order on Floodplain Management
- Executive Order Protection of Wetlands
- Executive Order Indian Sacred Sites

ARARs that have not changed since the finalization of the 2010 Interim ROD:

- Clean Air Act, South Coast Air Quality Management District (SCAQMD) Regulation XIII, Rules 1301-1304, 1305-1313, 1401 and 401-403
- RCRA Subtitle C Hazardous Waste Identification and Generator Requirements; California Hazardous Waste Regulations, Generator Requirements 22 CCR, Division 4.5, Chapter 11, Articles 2-5 and Article 1 sections 66261.1-66261.3 and sections 66261.6-66261.9.5.
- Federal SDWA Underground Injection Control (UIC) Regulations, 42 U.S.C. §300f et seq.
  - 40 CFR 144.12-144.13
- Resource Conservation and Recovery Act §3020
  - 42 U.S.C. §6939b

- California Porter- Cologne Water Quality Act, California Water Code 13240
  - Water Quality Control Plan (Basin Plan) for the Santa Ana River Basin, Chapters 2(Plans and Policies), 3(Beneficial Uses), and 4 (Water Quality Objectives)
- Federal Water Pollution Control Act 33 USC 1311, 1314(b)
- Federal Water Pollution Control Act 33 USC 1342,1344
  - 33 CFR 323.1 et seq.
- California Toxics Rule
  - 40 CFR 131.36(d)(10)(ii)
- California Land Disposal Restrictions, Requirements for Generators
  - 22 CCR 66268.1 et seq. Also 22 CCR 66268.3, 22 CCR 66268.7, 22 CCR 66268.9, 66268.40 and 22 CCR 66268.50
- California Hazardous Waste Regulations, Generator Requirements
  - 22 CCR 66262.34(a)(1)(A)
- California Hazardous Waste Regulations, Storage of Hazardous Waste
- 22 CCR 66265.170 et seq. (Article 9) 22 CCR 66265.190 et seq. (Article 10)

Table A-2. Applicable or Relevant and Appropriate Requirements Evaluation

Original ARAR	**Document and Citation**	Original ARAR requirement	Revised requirement	**Revision Date (between Sept. 2010-present)**	**Effect on Protectiveness**
Clean Air Act, South Coast Air Quality Management District (SCAQMD)	2010 Interim ROD SCAQMD Regulation XIII, comprising Rules 1301 through 1313 SCAQMD Rule 1401 SCAQMD Rule 1401.1	Rules 1301 through 1313 establish new source review requirements. Rule 1303 requires that all new sources of air pollution in the district use best available control technology (BACT) and meet appropriate offset requirements. Emissions offsets are required for all new sources that emit in excess of 1 pound per day of volatile organic compounds. SCAQMD Rule 1401.1 applies to discharges that are within 500 feet of a school and requires that the discharges from a facility do not create a cancer risk in excess of 1 in 1 million (1 × 10-6) at the school.	Rule 1304.1 requires paying fees for up to the full amount of offsets provided by SCAQMD. Rule 1401.1 requires additional direction for staff to provide a report to the stationary source committee regarding the use of historical data in health risk assessments in certain circumstances and receiving and filing the SCAQMD risk assessment procedures for preparing risk assessments for the air toxics 'hot spots' information and assessment act	Rule 1304.1 adopted September 6, 2013 Rule 1401.1 revision date June 5, 2015	None. Also, the revised requirement is not substantive to the remedy.

Original ARAR	**Document and Citation**	Original ARAR requirement	Revised requirement	**Revision Date (between Sept. 2010-present)**	**Effect on Protectiveness**
RCRA Subtitle C Hazardous Waste Identification and Generator Requirements; California Hazardous Waste Regulations, Generator Requirements	2010 Interim ROD 22 CCR, Division 4.5, Chapter 11 Identification and Listing of Hazardous Waste	A solid waste is a RCRA hazardous waste if it exhibits any of the characteristics of ignitability, corrosivity, reactivity, or toxicity identified in 22 CCR 66261.21, 66261.22(a)(1), 66261.22(a)(2), 66261.23, 66261.24(a)(1), 22 CCR 66262.11, and 22 CCR 66260.200, or if it is listed as a hazardous waste in Article 4 of Chapter 11. Under the California RCRA program, wastes can be classified as non-RCRA, state-only hazardous wastes if they exceed the soluble threshold limit concentration (STLC) or the total threshold limit concentration (TTLC) values listed in 22 CCR 66261.24(a)(2).	Chapter 11, Article 1, § 66261.4. Exclusions amends subsection (h) stating the CRT panel glass that meets the criteria in section 66273.81 of chapter 23 of this division and destined for disposal is not a hazardous waste for purposes of disposal and is exempt from the generator and hazardous waste disposal fees. Subsection (i) states the CRT panel glass that is managed in accordance with section 25143.2.5 of the Health and Safety Code is not subject to regulation by DTSC pursuant to Health and Safety code and 40 CFR Section 261.4.	Revision date October 22, 2018	None

EPA SEEKS PUBLIC INPUT ON CLEANUP WORK AT ROCKETS, FIREWORKS AND FLARES SUPERFUND SITE

The U.S. Environmental Protection Agency (EPA) is reviewing its work to clean up the Rockets, Fireworks and Flares Superfund site in and near Rialto, California. This review—called a "Five-Year Review" —will see if the cleanup plan for the site is still working as it was designed and that it still protects human health and the environment. According to the Superfund law, EPA is required to review its cleanup plan, or "remedy," every five years if either the cleanup takes more than five years to complete, or, if hazardous waste remains on site.

The Rockets, Fireworks, and Flares site includes a 160-acre industrial area in Rialto, California where the U.S. Army, defense contractors, fireworks manufacturers, and other businesses have operated since the 1940s. These companies handled perchlorate salts and/or other hazardous chemicals and disposed of chemical wastes on site, contaminating the soil and groundwater.

This is the first Five-Year Review for the site.

What Is Included in a Five-Year Review?
Five-Year Reviews include:
- an inspection of the site and cleanup technologies;
- *if available, review of monitoring data, operating data, and maintenance records;* and
- a determination if any new relevant regulatory requirements have been established since EPA's original cleanup decision was finalized.

EPA Wants to Hear from You!
EPA invites the community to learn more about the site and welcomes your input about how the site cleanup is going in an interview. If you would like to be interviewed, please contact Wayne Praskins, Remedial Project Manager for the site, at (415) 972-3181 or at praskins.wayne@epa.gov before April 30, 2020.

For more site information, visit EPA's web page at: www.epa.gov/superfund/rf

RE: County of San Bernardino's Response U.S. Army Corps of Engineers Review Questionnaire Rockets, Fireworks & Flares Superfund Site Rialto, California

Thank you for allowing the County of San Bernardino (County) to respond to the U.S. Army Corps of Engineers' interview questionnaire regarding the remedy planned by Emhart Industries Inc. (Emhart) for Source Area Operable Unit 1 (SAOU-1) for the Rockets, Fireworks and Flares Superfund Site in Rialto, California (the Remedy). The Remedy is designed to remediate contamination in the northern portion of what is known as the Eastern Perchlorate Plume in the Rialto Colton Basin. Emhart is implementing the Remedy pursuant to a 2012 Consent Decree. The County appreciates this opportunity to provide input to help ensure that the Remedy is effective and does not adversely impact the County's remedy for another, nearby plume, the Western Perchlorate Plume.

Background

Since 2005, the County has been operating a separate remedy to address the Western Perchlorate Plume under the oversight of the California Regional Water Quality Control Board. Initially, the County's system extracted water only from City of Rialto Well No. 3 (CR-3). As anticipated, data indicates that the Western Perchlorate Plume has been shifting west for a number of years, and for the last several years, the County has been gradually shifting the focus of its containment program to the west.

In 2013, Emhart completed modeling for its Remedial Design for the Eastern Perchlorate Plume. Emhart's modeling relies on two wells, EW-1 (constructed by Emhart) and CR-3 (constructed by Rialto) to capture the Eastern Perchlorate Plume target area. Emhart's Remedial Design indicates that Emhart will construct a second well (EW-2) if pumping from EW-1 and CR-3 cannot adequately contain the Eastern Perchlorate Plume as part of SAOU-1.

BOARD OF SUPERVISORS
Robert A. Lovingood, First District | Janice Rutherford, Second District | Dawn Rowe, Third District | Curt Hagman, Chairman, Fourth District | Josie Gonzales, Vice Chair, Fifth District
Gary McBride, Chief Executive Officer

The County entered into an agreement with Emhart in 2015 that allows Emhart to expand the County's existing perchlorate and VOC treatment plant at CR-3, which the County has used to address the Western Perchlorate Plume, to support the Remedy for the Eastern Perchlorate Plume. The agreement between the County and Emhart also allows Emhart to utilize CR-3 to help contain the perchlorate and VOC plume associated with the SAOU-1 even if the County shifts its remedy extraction to other wells. The County and Emhart also entered into an agreement in 2015 with the City of Colton and the City of Rialto in connection with the combined treatment system for these response actions.

Issues of Concern

The County has the following comments regarding the ongoing implementation of the SAOU-1. The County raises these issues to facilitate the implementation of the Remedy, now that it is about to become operational.

(1) **Definition of Source Area.** The Record of Decision (ROD) for the SAOU-1 provides for the refinement of the target area for the remedy during remedial design. *See* USEPA, Interim Action Record of Decision (Sept. 30, 2010) at Section 2.4.8, p. 2-15. ("It is expected that additional monitoring wells will be installed during the remedial design phase of the remedy to refine the upgradient and downgradient boundaries of the targeted area."). Emhart's 2013 Modeling Report, too, concludes that installation of additional monitoring wells is necessary to address the uncertainty regarding the northern boundary of the Target Area. *See* ERM Final Groundwater Flow Modeling Report (July 26, 2013), section 6.0, p. 36.

In June 2014 comments on the Remedial Design, USEPA requested that Emhart re-evaluate the boundaries of the Target Area "after installation and sampling of the new groundwater monitoring wells in early 2014." USEPA Response to Comments on Remedial Design, Comment #4. In response, Emhart stated that it would "re-evaluate the boundaries of the Target Area as appropriate based on monitoring data and remedy performance." Though USEPA approved Emhart's Remedial Design, it did not agree with Emhart's plan to re-evaluate the Target Area "as appropriate," and stated that Emhart needed a firm timetable for the re-evaluation. USEPA stated: "[a] re-evaluation is appropriate after sampling data are available in 2014 from the installation of the new groundwater monitoring wells. Data should be available well before the remedy becomes operational." USEPA, Approval of Preliminary Design Report (Nov. 18. 2013), Comment #2. As far as the County is aware, a re-evaluation of the boundaries of the Target Area has not yet been completed, as required by USEPA. An analysis of the Target Area will be important for evaluating the adequacy of the response action to achieve its objectives and how that response action can be optimized over time.

(2) **Measuring Containment.** It is anticipated that the Remedy will begin operating this year. It could be helpful to identify the analytical measures and well locations where containment of the Eastern Perchlorate Plume will be measured. Similarly, it could be useful to identify the metrics for determining adequate containment efficiency and a time-frame for its determination.

(3) **Pumping Rate of CR-3.** Emhart's Remedial Design considers past and potential pumping rates at CR-3, and relies on CR-3 in part for capturing the Eastern Plume. Emhart's 2013 Modeling Report relies upon CR-3 pumping at a rate of 1300 gpm if only CR-3 and EW-1 are used. *See*

BOARD OF SUPERVISORS
ROBERT A. LOVINGOOD First District | JANICE RUTHERFORD Second District | DAWN ROWE Third District | CURT HAGMAN Chairman, Fourth District | JOSIE GONZALES Vice Chair, Fifth District
Gary McBride Chief Executive Officer

ERM Final Groundwater Flow Modeling Report (July 26, 2013), section 6.0, p. 36. *See also* Preliminary Design Report (2013), section 4.2.1. As the Emhart remedy is implemented, and as the County moves the focus of its remedial pumping away from CR-3 to optimize containment of the Western Plume under oversight of the Regional Board, it may be necessary for EPA to re-evaluate the optimal strategy for the Eastern Plume containment program.

(4) **Impact of Current Groundwater Elevations**. Given current groundwater elevations (which for this water year reflect a 39% reduction in key water rights due to lower water levels in the index wells) and other data, it may be prudent to re-evaluate ways to optimize the containment program for the Remedy, including whether an additional extraction well (such as EW-2) should be installed. Emhart originally proposed that the need for a second remedy well (EW-2) will be determined *after* evaluating the performance of the planned remedy well. USEPA has indicated that EW-2 will be necessary if any of the following three conditions occur: data indicating insufficient capture of the plume, monitoring well results indicating a more westerly groundwater flow, and data indicating that the Target Area is larger than assumed in the Final Design. *See* USEPA Comments on the Preliminary Design Report (Nov. 1, 2013), Comment #8. Further, in approving the remedial design, USEPA stated that the need for a second remedy well may become apparent even before Emhart's remedy well (EW-1) begins operation. *See* USEPA, Approval of Preliminary Design Report (Nov. 18. 2013), Comment #4 (stating "As we have commented before, new data may warrant installation of a second new extraction well before the remedy begins operation."). The County believes that these conditions have been met, and that EPA should further evaluate optimization of the remedy, including the potential need for an additional extraction well.

Thank you again for the opportunity to provide comments on the SAOU-1 remedy in the context of the 5-year review. Please contact Ralph Murphy at (909) 781-9021 if you have any questions or would like to schedule a time to discuss this matter.

Respectfully,

for **DARREN J. MEEKA, P.E.**
Interim Deputy Director

2. SUMMARY

A site visit to the location of the groundwater treatment plant for the Rockets, Fireworks & Flares (RFF) was conducted on 14 January 2020. The participants toured the groundwater treatment plant, groundwater extraction well location and the location of the recently completed pilot study. The existing groundwater treatment plant is owned and operated by the City of Rialto but was expanded to accept water from the RFF extraction well system to be treated and discharged. The expansion portion of the treatment plant is not currently in operation but is planned to begin in 2020 pending permitting from the State of California.

3. DISCUSSION

On 13 January 2020 Benino McKenna traveled from Seattle, Washington to Ontario, California and met with the site visit participants on 14 January 2020 at the existing groundwater treatment plant owned by the City of Rialto, California. The weather was partly cloudy and cool with an approximate temperature of 56ºF. The site is accessed from North Linden Ave and is located approximately 6.5 miles west of the downtown San Bernardino.

Mr. McKenna arrived on site at 11:00am and met with the site participants. The participants were given a briefing on the purpose of the site visit by Mr. Wayne Praskins and a health and safety briefing from the plant operators from Veolia.

Mr. McKenna proceeded to inspect the existing groundwater treatment system operated by the City of Rialto. The system extracts from one well on site (Rialto 3) and receives additional influent water from offsite extraction wells.

Influent groundwater is filtered through a sand separating unit and 5-micron bag filtration before being treated by ultra-violet (UV) system. After the UV treatment groundwater is sent to a 125,000 gallon equalization tank which distributes groundwater to the existing groundwater treatment system as well as the new expansion of the system for the RFF groundwater. Both the existing treatment system and the new RFF expansion utilize ion exchange (IX) and granular activated carbon (GAC) vessels to treat groundwater before final chlorination before discharging to the municipal water system

The new expansion of the groundwater treatment system that was constructed to treat the groundwater from the RFF extraction wells was not operation at the time of inspection. The treatment vessels did not contain any GAC or IX but did have groundwater actively being cycled through them to prevent any interior corrosion or biofouling. The new expansion is anticipated to come on line in April of 2020.

A Site Inspection Checklist was completed for the existing treatment system even though the new expansion was not active to document the process that will eventually be utilized for the new expansion. All components of the treatment system were in excellent condition with clear signage and all influent, mid and effluent sample ports clearly marked and labeled.

After the groundwater treatment plant walkthrough, part of the team then drove east to an active drilling location where drill crews were installing a 70 foot deep dry well adjacent to the newly installed extraction well EW-1. The new extraction well will eventually be tied into the existing supply lines and supply groundwater to the new expansion of the treatment system. The drilling location was located adjacent to the site of the recent pilot study which was completed to facilitate the permitting of the new treatment plant expansion.

After viewing the drilling operations the majority of the team departed. AECOM Construction Manager Tom Munoz escorted Mr. McKenna into the drill site to document activities and then to existing supply wells Miro-2 and Miro-3.

The site visit concluded at approximately 1530.

4. ACTIONS

The USACE will incorporate information obtained from the site visit into the Five Year Review report.

Subject: Phase I Environmental Site Assessment, Olive Grove, 31.61-Acre Parcel Located Near the Northwest Corner of the Intersection of Baseline Road and Cactus Avenue, Rialto, California

Dear Mr. Howard:

LFR Inc. (LFR) is pleased to present the attached Phase I environmental site assessment (ESA) report for the above-referenced property in Rialto, California. The conclusions presented in this report are based on the results of a reconnaissance-level Site visit conducted by LFR personnel, and a review of available and pertinent background information. The ESA was conducted in accordance with the Prudential Real Estate Investors' (PREI) current scope of work for ESAs. PREI is a potential partner in this transaction.

LFR appreciates this opportunity to provide consulting services to Oakmont Industrial Group. If you have any questions concerning this project, or would like to discuss other environmental concerns, please contact me at (714) 444-0111.

Sincerely,

Thomas S. Chandler
Principal Engineer

EXECUTIVE SUMMARY

LFR Inc. (LFR) has prepared this Phase I environmental site assessment (ESA) report for the Olive Grove property, which consists of 31.61 acres of land located near the northwest corner of the intersection of Baseline Road and Cactus Avenue in Rialto, San Bernardino County, California ("the Site"). The Site is owned by Lewis Operating Corporation, and is currently undeveloped. This Phase I ESA was conducted on behalf of Oakmont Industrial Group (Oakmont) and Prudential Real Estate Investors (PREI) in accordance with PREI guidelines. The Site is proposed to be developed commercially.

The Oakmont Project Manager for this project is Mr. Timothy J. Howard (telephone number 949-253-8080). PREI's Project Manager for this project is Mr. Bill Anderson (telephone number 973-734-1397). LFR's project team includes Ms. Shauna Head, Ms. Dana Brodie, Ms. Janet Holtz, and Mr. Thomas Chandler (telephone number 714-444-0111 and fax number 714-444-0117). This report has been reviewed by Mr. Thomas Chandler, LFR's Deputy Prudential Coordinator for West Coast projects.

Background

Based on LFR's historical research, the Site was utilized for agriculture from as early as the mid-1930s until the mid-1960s. Since the mid-1960s, the Site has been vacant land covered in vegetation. No structures were located on the property. The surrounding area has also been used for agriculture from at least 1930 to as late as the mid-1990s. Residential and commercial uses were developed in the surrounding area by the mid-1960s. Cactus Dump, a solid waste disposal site, was located approximately 0.1 mile to the northeast of the Site until it closed in 1956. It was then excavated for use as a gravel pit. Gravel pits were also excavated on the adjacent properties to the north and east of the Site from the 1950s to as late as 1990. The historic gravel pits are currently utilized by the San Bernardino County Flood Control Department as a flood control area. This area and the Site are located within a 500-year floodplain. The presence of these former off-site features does not appear to present an environmental concern to the Site, based on agency research and current use.

Based on the past agricultural use of the Site, there is the potential for pesticides to have historically been used on the property. However, if these materials were applied in an approved manner in a homogeneous application across the Site, it is unlikely that their use would trigger regulatory intervention. The Site is proposed to be developed commercially and will be covered with paving and a building footprint(s); therefore, the exposure pathway for potential residual pesticides is significantly reduced. Furthermore, grading prior to development at the Site will rework the soil, also reducing the impact of these substances, if present. In addition, LFR did not identify any pesticide mixing or storage areas onsite. LFR does not believe the previous agricultural use represents an environmental concern to the Site.

Site Inspection

On the day of LFR's site inspection, the 31.61-acre Site consisted of undeveloped desert terrain that generally sloped downward to the southeast. The Site was fenced along the perimeter except at the northeast corner. Vegetation consisting of desert shrubs as tall as approximately 2 to 3 feet was observed throughout the property. Pathways approximately 25 to 30 feet across were plowed north-south and east-west in a grid pattern throughout the Site and along the perimeter of the property for firebreaks. Smaller dirt trails were observed around the northwest end of the Site.

Non-hazardous debris in the form of plastic, glass, tires, a couch, fabric, and paper were observed scattered throughout the Site. LFR also observed a pile of empty "Megaplex X Grease 2" 14-ounce containers near the northeast corner of the property. No surface staining was observed.

Mounds of soil approximately 5 to 6 feet high were observed along the east property boundary. According to the owner of the Site, Shea Homes was allowed to dispose on the Site excess soil generated during construction of Shea Homes' residential development located at the southeast corner of Baseline Road and Cactus Avenue, approximately 0.25 mile southeast of the Site. The Site owner provided a Phase I ESA report and a Limited Phase II report for the Shea Homes property, which stated that the prior use of that property was agricultural. Therefore, four soil samples were collected and analyzed for organochlorine pesticides. No pesticides were detected at concentrations above the U.S. Environmental Protection Agency (EPA) Preliminary Remediation Goal (PRG) for a residential scenario. Based on these analytical results, it does not appear that the onsite soil mounds represent an environmental concern for the Site.

No evidence of the disposal of hazardous materials or surface staining was observed.

During the inspection, no distressed vegetation (other than from water stress), monitoring wells or remediation systems were observed at the Site. There was no evidence of current aboveground storage tanks (ASTs), underground storage tanks (USTs), pits, ponds or sumps on the Site.

As the subject property is undeveloped land, asbestos-containing materials, lead-based paint, and microbial amplification are not considered a concern to the Site.

Regulatory Records

There were no records for the Site location at local agencies researched, as the property has not currently been assigned a street address.

An environmental database report prepared by Environmental Data Resources, Inc. (EDR) was reviewed for local, state, and federal listings for properties within the site vicinity. Regulatory databases were reviewed for cases pertaining to leaking USTs and

ASTs, hazardous waste sites, and abandoned sites within the specified radii of standards established by the American Society for Testing and Materials (ASTM) guidelines for ESAs. No off-site facilities with the potential to present an environmental concern for the Site were listed on any of the databases reviewed, other than those discussed below.

Off-Site Properties

The Site is bounded to the north by Jerry Eaves Park and a dry flood control area; to the east by a dry flood control area; to the south by Baseline Road, followed by a residential area; and on the west by vacant lots and commercial buildings. Aboveground power lines and underground telephone cables are located between the southern boundary of the Site and Baseline Road.

The Cactus Dump, a solid waste dump site, was located at a lower elevation approximately 0.1 mile northeast of the Site. After its closure in 1956, the property was excavated as gravel pits. Gravel pits were located on the north and east adjacent properties by at least 1954. According to the San Bernardino County Flood Control Department, the northeast adjacent property has been under their control since the 1940s, and is currently utilized as a flood control area. Based on the fact that the contents of the dump were excavated and then over-excavated for gravel pits, the prior existence of this dump does not represent an environmental concern to the Site.

According to the City of Rialto and the California Regional Water Quality Control Board, Santa Ana Region (RWQCB), groundwater in the City of Rialto including the groundwater beneath the Site has been impacted with perchlorate. The source of the perchlorate was an area known as the "160-acre site" and the Mid-Valley Sanitary Landfill, both located approximately 2 miles northwest of the Site. The 160-acre site has been used by different companies since the 1940s to produce various products such as fireworks. Many of these companies used perchlorate in the production of goods and/or disposed of chlorate onsite. The plume has moved under and beyond the Site; however, because the depth to groundwater is deep (approximately 333 feet below ground surface), the contaminated groundwater is not expected to impact the Site. Previous activities at the Site did not contribute to the perchlorate contamination of the groundwater. Currently, the State Water Board is conducting hearings to determine who is responsible for paying cleanup costs, and when and how the responsible parties should investigate and clean up the perchlorate contamination. San Bernardino County has installed monitoring wells and conducted soil and groundwater investigations to determine the extent of the contamination. The City of Rialto has installed wellhead treatment facilities on three of its wells in and around the Rialto-Colton Groundwater Basin. The city has increased the pumping from these wells, and treats the water pumped from these wells to remove the perchlorate. Wells that have not been fitted with wellhead treatment facilities are out of service. Therefore, LFR does not believe the perchlorate plume represents an environmental concern to the Site.

Conclusions

LFR has performed a Phase I ESA of the Site in conformance with the scope and limitations of ASTM Practice E1527-05 for Phase I ESAs and PREI's Environmental Site Assessment Scope of Work dated July 3, 2001. LFR identified no evidence of environmental concerns at the Site, and no further investigation is recommended at this time.

1.0 INTRODUCTION

LFR Inc. (LFR) has prepared this Phase I environmental site assessment (ESA) report for the Olive Grove property, which consists of 31.61 acres of undeveloped land located near the northwest corner of the intersection of Baseline Road and Cactus Avenue in Rialto, San Bernardino County, California ("the Site"). The Site is proposed to be developed for commercial use.

This Phase I ESA was conducted on behalf of the Oakmont Industrial Group (Oakmont) in accordance with Prudential Real Estate Investors' (PREI) guidelines. PREI is a potential partner in this transaction. This report has been reviewed by Mr. Thomas S. Chandler, LFR's Deputy Prudential Coordinator for West Coast projects.

1.1 Objective

Oakmont requested that LFR conduct a Phase I ESA of the Site. The objective of the ESA was to identify recognized environmental conditions in connection with the property, to the extent feasible pursuant to the processes prescribed in American Society for Testing and Materials (ASTM) E-1527-05 and PREI's 2001 Environmental Site Assessment Scope of Work. The term *recognized environmental conditions* as defined by ASTM is the presence or likely presence of any *hazardous substances* or *petroleum products* on a *property* under conditions that indicate an existing release, a past release, or the material threat of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, groundwater or surface water of the property. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

This Phase I ESA includes information gathered from federal, state, and local agencies; personal interviews with people familiar with the Site and surrounding properties; and a Site visit conducted by LFR representatives. The report is intended to meet the requirements of ASTM and PREI's Environmental Site Assessment Scope of Work dated July 3, 2001.

1.2 Detailed Scope of Services

The Phase I ESA conducted by LFR included, but was not limited to, the following services:

- a reconnaissance-level Site visit to look for evidence of the release(s) of hazardous materials and petroleum products and to assess the potential for on-site releases of hazardous materials and petroleum products

- drive-by observations of adjacent properties and the site vicinity
- interviews with people familiar with the Site
- review of regulatory agency files
- review of historical documents
- preparation of a report presenting our findings including summary of conclusions

1.3 Significant Assumptions

The purpose of this Phase I ESA is to provide appropriate inquiry into the previous ownership and use of the Site consistent with good commercial and customary practice in an effort to minimize liability. LFR also assumes that the information provided by the Client, regulatory database provider, and regulatory agencies is true and reliable.

1.4 Limitations and Exceptions

This document was prepared for the sole use of Oakmont, PREI, and their successors and assignees, and may be relied upon by such parties. No other party should rely on the information contained herein without the prior written consent of LFR, Oakmont, and PREI.

The opinions and recommendations presented in this report are based upon the scope of services, information obtained through the performance of the services, and the schedule as agreed upon by LFR and the original party for whom this report was originally prepared. This report is an instrument of professional service and was prepared in accordance with the generally accepted standards and level of skill and care under similar conditions and circumstances established by the environmental consulting industry. To the extent that LFR relied upon any information prepared by other parties not under contract to LFR, LFR makes no representation as to the accuracy or completeness of such information. Only the party for whom this report was originally prepared, and other specifically named parties, may make use of and rely upon the information in this report, in its entirety, for a period not to exceed 180 days, in accordance with ASTM's Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Designation E 1527-00, dated May 10, 2000); ASTM's Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Designation E 1527-05, dated November 1, 2005); and/or the Code of Federal Regulations (CFR) Standards and Practices for All Appropriate Inquiries: Final Rule (40 CFR Part 312, dated November 1, 2005). After 180 days, and prior to using the information contained herein, the report should be updated in accordance with ASTM standards and federal regulations.

The findings presented in this report apply solely to site conditions existing at the time when LFR's assessment was performed. It must be recognized, however, that an ESA is intended for the purpose of evaluating the potential for contamination through limited

research and investigative activities and in no way represents a conclusive or complete site characterization. Conditions in other parts of the project site may vary from those at the locations where data were collected. LFR's ability to interpret investigation results is related to the availability of the data and the extent of the investigation activities. As such, 100 percent confidence in ESA conclusions cannot reasonably be achieved.

LFR, therefore, does not provide any guarantees, certifications or warranties (express or implied) that a property is free from environmental contamination. Furthermore, nothing contained in this document shall relieve any other party of its responsibility to abide by contract documents and all applicable laws, codes, regulations or standards.

1.5 Special Terms and Conditions

The scope of work for this Phase I ESA did not include testing of electrical equipment for the potential presence of polychlorinated biphenyls (PCBs) or the assessment of natural hazards such as naturally occurring asbestos, radon gas or methane gas, assessment of the potential presence of radionuclides, or assessment of non-chemical hazards such as the potential for damage from earthquakes or floods. This Phase I ESA also did not include an extensive assessment of the environmental compliance status of the Site or of the businesses operating at the Site, or a health-based risk assessment.

2.0 SITE OVERVIEW

2.1 Site Location and Description

The Site consists of one 31.61-acre parcel in the City of Rialto. The San Bernardino County Assessor's Office designates the Site with Assessor's Parcel Number (APN) 0264-211-18-0000.

2.2 Site and Vicinity General Characteristics

The Site Vicinity Map and Site Map with adjacent properties are presented as Figures 1 and 2, respectively. The Site is located near the northwest corner of the intersection of Baseline Road and Cactus Avenue. The surrounding area is residential and commercial. A former solid waste disposal site was located northeast of the Site. The properties to the northeast and east, including the former solid waste disposal site, were excavated as gravel pits. The gravel pits are now utilized as a flood control area by the San Bernardino County Flood Control Department. The Rialto Municipal airport is located approximately 0.4 mile distant from the northwest portion of the Site at its closest point.

2.3 Site Improvements

The Site is undeveloped land, and there are no Site improvements.

2.4 Topography

According to the United States Geological Survey (USGS) 7.5-Minute Series Topographic Map of the Fontana, California quadrangle (1967, photorevised 1980), the Site is located at an elevation approximately 1,360 to 1,375 feet above mean sea level (msl). The overall Site vicinity is sloped towards the southeast.

2.5 Geological Characterization

2.5.1 Surface Features

The Site is made up of undeveloped land that has a soil surface texture of gravelly-loamy sand and desert vegetation.

2.5.2 Subsurface Features

According to the database report compiled by Environmental Data Resources, Inc, (EDR), the geology of the Site is identified as part of the Quaternary Series of the Quaternary System and Cenozoic Era. According to the United States Department of Agriculture, Soil Conservation Service, the property is underlain by soils of the Hanford and Tujunga components. Hanford soils have moderate infiltration rates, and are moderately well and well-drained soils with moderately coarse textures. Tujunga soils have high infiltration rates, and are well drained to excessively drained sands and gravels.

It should be noted that LFR has not drilled soil borings at the Site, and the local and regional geologic conditions described herein are based solely on available literature regarding the area.

2.6 Hydrogeologic Characterization

2.6.1 Surface Water

There is no natural surface water onsite. According to the EDR report, the Site is located within a 500-year floodplain.

2.6.2 Groundwater

The City of Rialto maintains a water monitoring well at the southwest corner of the intersection of Baseline Road and Cactus Avenue (identified as Rialto-04), or within

0.1 mile of the Site. According to Mr. Peter Fox, Superintendent with the City of Rialto Water District, the depth to groundwater in this well is 333 feet below ground surface (bgs) when last measured in 2007. According to the City of Rialto, contaminants of concern in the groundwater in the area include perchlorate. However, the City of Rialto drinking water wells have been fitted with a wellhead treatment system, which was approved by the California Department of Health Services. The wellhead treatment system uses ion exchange technology to remove perchlorate from the water. The groundwater gradient is to the southeast.

According to the City of Rialto and the California Regional Water Quality Control Board, Santa Ana Region (RWQCB), the source of the perchlorate was an area known as the "160-acre site" and the Mid-Valley Sanitary Landfill, both located approximately 2 miles northwest of the Site. The 160-acre site has been used by different companies since the 1940s to produce various products such as fireworks. Many of these companies used perchlorate in the production of goods and/or disposed of chlorate onsite. The plume has moved under and beneath the Site; however, because the depth to groundwater is deep (333 feet bgs), the contaminated groundwater is not expected to impact the subject property. Previous activities at the Site did not contribute to the perchlorate contamination of the groundwater. Currently, the State Water Board is conducting hearings to determine who is responsible for paying cleanup costs, and when and how the responsible parties should investigate and clean up the perchlorate contamination. San Bernardino County has installed monitoring wells and conducted soil and groundwater investigations to determine the extent of the contamination. The City of Rialto has installed wellhead treatment facilities on three of its wells in and around the Rialto-Colton Groundwater Basin. The city has increased the pumping from those wells and treats the water from those wells until the level of perchlorate is below detection levels. Wells that have not been fitted with wellhead treatment facilities are out of service. Therefore, LFR does not believe the perchlorate plume represents an environmental concern to the Site. See Appendix D for copies of information from the City of Rialto and the RWQCB addressing this issue, including a map defining the boundaries of the plume.

3.0 USER-PROVIDED INFORMATION

Information pertaining to the Site provided by the User of this report is provided in this section. LFR provided Oakmont an ASTM User Questionnaire regarding the Site; however, the completed questionnaire had not been returned to LFR as of the publication date of this report.

3.1 Title Records

It is LFR's understanding that a title report will be reviewed by PREI as part of its due diligence activities; therefore, LFR did not acquire an environmental lien report as part of this Phase I ESA. However, LFR did not review any information with regard to the

Site during the course of our investigation that would indicate the property is encumbered by an environmental lien or an activity and use limitation.

3.2 Owner, Property Manager, and Occupant Information

The Site is owned by Lewis Operating Corporation, a residential and commercial developer, and currently consists of undeveloped land.

3.3 Reason for Performing Phase I

The reason for performing this Phase I ESA was to evaluate the Site for the presence of environmental concerns in preparation for a property transfer.

3.4 Other

LFR was not provided with any other information regarding the Site.

4.0 SITE HISTORY

4.1 History of Property Use

LFR reviewed the historical usage of the Site and adjacent properties to assess whether prior owners of the Site or adjacent properties may have conducted activities that could pose environmental concerns to the Site. LFR's research included reviewing historical aerial photographs, historical topographic maps, historical Sanborn Fire Insurance Maps (Sanborn maps), and local agency records associated with the Site, and conducting personal interviews with people familiar with the Site. LFR's sources of information included the following:

- Black-and-white aerial photographs dated 1930, 1938, 1953, 1966, 1977, 1990, 1994, and 2002 were provided by EDR. Copies of these aerial photographs are included in Appendix B.

- Historical U.S. Geological Survey (USGS) topographic maps including the 1901 San Bernardino quadrangle, 15-minute series; 1901 Southern California Sheet 1 quadrangle, 60-minute series; 1954 San Bernardino quadrangle, 15-minute series; 1966 (with 1980 photorevision) Devore quadrangles, 7.5-minute series; 1967 (with 1973 and 1980 photorevisions) Fontana quadrangles, 7.5-minute series; and 1996 Devore quadrangle, 7.5-minute series were provided by EDR. The 1966 (with 1980 photorevision) and 1996 Devore quadrangle maps show the region just north of the Site. Copies of the topographic maps are provided in Appendix B.

- A City Directory Abstract covering the years intermittently from 1986 to 2006 was reviewed. A copy of the City Directory Abstract is included in Appendix B.

- Sanborn maps were not available for the Site and vicinity.

4.2 Historical Records Review

The following sections present the results of LFR's historical record's review including aerial photographs, topographic maps, city directories, and agency information pertaining to the Site.

4.2.1 Historical Aerial Photographs

Historical aerial photographs were provided by EDR for the years 1930, 1938, 1953, 1966, 1977, 1990, 1994, and 2002. The photographs were reviewed to identify former land use on and in the vicinity of the Site. The photographs consisted of low-altitude, black-and-white photographs. Brief descriptions of the Site and vicinity, as observed in the aerial photographs, are presented below.

1930

In this photograph, the Site is depicted as vacant land. Baseline Road is visible south of the Site, followed by vacant land. Vacant land is also present to the north, east, and west of the Site. An unnamed drainage wash is visible northeast of the Site.

1938

The 1938 photograph depicts the Site as agricultural land. The vacant land previously depicted to the west and north of the Site is developed for agricultural use, while land to the east and south of the Site continues to be vacant. No structures are present on the Site or adjacent properties. The drainage wash is still visible northeast of the Site.

1953

In the 1953 photograph, the Site is depicted as agricultural or vacant land. A dirt road is visible along the north Site boundary, and the drainage wash previously depicted north of the Site appears overgrown. The vacant property to the east of the Site appears to have been excavated, while the vacant land previously depicted to the south of the Site has been divided into sections for agricultural use. Properties to the west of the Site continue to be agricultural or vacant land.

1966

The 1966 photograph depicts the Site as vacant land with scattered vegetation. Vacant land is present north of the Site, and vacant or agricultural land is shown west of the Site. Agricultural land is depicted south of the Site. The excavation area remains visible east of the Site; however, it appears either less active than previously depicted or no longer active. The drainage wash previously depicted north of the Site no longer

appears to receive runoff since it is overgrown and the streambeds are not as visible. Houses and other buildings are depicted further to the northeast and southeast of the Site.

1977

In the 1977 photograph, the Site appears to be vacant and overgrown with vegetation. An unidentified dirt road runs through the property. Land to the north of the Site is depicted as vacant and covered in vegetation. The excavation area continues to be visible east of the Site, but has not grown in size. More houses are depicted further to the east of the Site. Properties south of the Site remain agricultural, as previously depicted. Buildings are visible on the southeast adjacent property. Ayala Drive is visible west of the Site. The property located west of the Site remains either agricultural or vacant land. The Rialto Municipal Airport (Miro Field) is depicted approximately 0.4 mile northwest of the Site at its closest point.

1990, 1994, and 2002

In the 1990, 1994, and 2002 photographs, the Site appears to be vacant land. Gridlines have been plowed into the Site, and unidentified trails and dirt roads are depicted throughout the property. The east adjacent property appears to have been excavated and is used for water runoff. The residential area depicted further east of the Site has been expanded. Large circular water tanks are visible approximately 0.2 mile southeast of the Site in the 1994 and 2002 photographs. These water tanks are associated with the San Bernardino County Water District. Properties located south of the Site are depicted as residential areas. Buildings and Fitzgerald Avenue are depicted west of the Site. The Rialto Municipal Airport, located northwest of the Site, appears to have been enlarged.

Summary

The Site appears to have been used for agricultural purposes from at least 1938 until the 1960s. No structures are depicted on the Site. The surrounding area appears to have been mostly agricultural or vacant up until 1966, when evidence of residential and commercial areas is first visible to the northeast, east, and southeast of the Site. Excavation of the east adjacent property occurred approximately from the 1950s until as late as 1990. An unnamed drainage wash is depicted northeast of the Site until the 1950s. It appears to return to its original state in the 1990s. As late as the 1970s, the majority of the surrounding area was either in agricultural production or vacant land.

The prior agricultural use of the Site and surrounding areas indicates the potential presence of residual pesticides and herbicides in Site soils. However, if these materials were applied in an approved manner in a homogeneous application across the property, it is unlikely that their use would trigger regulatory intervention. Grading during future development would also rework the soil at the Site, reducing the impact of these substances, if present. In addition, no evidence of pesticide mixing or storage areas

was evident onsite. Therefore, LFR does not believe the previous usage of the property for agricultural purposes represents an environmental concern to the Site.

4.2.2 Historical Topographic Maps

Historical topographic maps reviewed included the 1901 San Bernardino quadrangle, 15-minute series; 1901 Southern California Sheet 1 quadrangle, 60-minute series; 1954 San Bernardino quadrangle, 15-minute series; 1966 (with 1980 photorevisions) Devore quadrangles, 7.5-minute series; 1967 (with 1973 and 1980 photorevision) Fontana quadrangle, 7.5-minute series; and 1996 Devore quadrangle, 7.5-minute series and were provided by EDR. The 1966 (with 1980 photorevisions) and 1996 Devore quadrangle maps show the region just north of the Site.

The 1901 map depicts the Site as undeveloped land. The 1954 map depicts the Site and the land to the south and west used for agricultural purposes. Gravel pits are depicted bordering the Site to the northeast. Miro-Fontana Airport is depicted approximately 0.5 mile northwest of the Site at its closest point. The Lytle Creek Wash is depicted approximately 1.5 miles northeast of the Site at its closest point. On the 1967, 1973, and 1980 photorevision maps, the Site is depicted as undeveloped land. Gravel pits are depicted bordering the Site to the northeast and east. A well is depicted approximately 0.25 mile southeast of the Site. Using both the Fontana and Devore quadrangle maps for the 1980 photorevisions, the Rialto Municipal Airport (Miro Field) is depicted approximately 0.5 mile northwest of the Site, and a well is depicted approximately 0.75 mile north of the Site.

No features of environmental concern to the Site were depicted on the topographic maps reviewed.

4.2.3 Historical City Directory Review

LFR requested a City Directory Abstract from EDR. The City Directories cover the years from 1986 through 2006 in 5-year intervals. As the Site does not have a street address, there were no listings for the Site. A target search was made on an adjacent property to the west of the Site. The only listings were for the properties to the west of the Site on Fitzgerald Avenue during the covered period, when the addresses 1240, 1245, 1260, 1265, 1280, 1285, and 1320 Fitzgerald Avenue were listed as office buildings and commercial properties. No other off-site properties were identified.

4.2.4 Historical Sanborn Maps

LFR requested that EDR perform a search of available Sanborn Fire Insurance Maps for the site vicinity. Sanborn maps were originally generated in the late 1800s to mid-1900s to document possible fire hazards related to the types of building structures and their general use. No Sanborn maps were found for the Site and vicinity.

4.3 Agency File Review

4.3.1 San Bernardino County Fire Department, Hazardous Materials Division (HMD)

The Site location was not identified in HMD records based on a review of local agency records provided in the EDR database report. As the Site has not been assigned a street address, a written request was not submitted to the HMD.

4.3.2 Santa Ana Regional Water Quality Control Board (RWQCB)

As the Site has not been assigned a street address, a written request was not submitted to the RWQCB.

4.3.3 San Bernardino County Flood Control Department

LFR contacted the San Bernardino County Flood Control Department in order to obtain information regarding the flood control area located on the adjacent property to the east of the Site. This flood control area is located in the Cactus Basin. According to the San Bernardino County Flood Control Department, the property has been in their possession since the 1940s.

4.3.4 City of Rialto

According to the City of Rialto and the RWQCB, groundwater in the City of Rialto has been impacted with perchlorate. The source of the perchlorate was a 160-acre site and the Mid-Valley Sanitary Landfill, both located approximately 2 miles northwest of the Site. The 160-acre site has been used by different companies since the 1940s to produce various products such as fireworks. Many of these companies used perchlorate in the production of goods and/or disposed of chlorate onsite. The plume has moved under and beyond the Site; however, because the depth to groundwater is deep (333 feet bgs), the contaminated groundwater is not expected to impact the Site. Previous activities at the Site did not contribute to the perchlorate contamination of the groundwater. Currently, water board hearings are being conducted by the State Water Board to determine who is responsible for paying cleanup costs, and when and how the responsible parties should investigate and clean up the perchlorate contamination. San Bernardino County has installed monitoring wells and conducted soil and groundwater investigations to determine the extent of the contamination. The City of Rialto has installed wellhead treatment facilities on three of its wells in and around the Rialto-Colton Groundwater Basin. The city has increased the pumping from those wells and treats the water from those wells until perchlorate is non-detect. Wells that have not been fitted with wellhead treatment facilities are out of service. Therefore, LFR does not believe the perchlorate plume represents an environmental concern to the Site. See Appendix D for a copy of a map outlining the boundaries of the plume.

4.3.5 California Integrated Waste Management Board

The former Cactus Dump was located approximately 0.10 mile northeast of the Site. The dump accepted solid waste and was closed in 1956. According to topographic maps, discussions with City of Rialto personnel, and visual observations, the dump was excavated and then overexcavated for gravel pits sometime after 1956. According to the California Integrated Waste Management Board (CIWMB), Cactus Dump (SWIS number 36-CR-0006) was a solid waste disposal site. It does not list any inspection records or enforcement action records. The CIWMB lists the operation status of Cactus Dump as closed. Therefore, based on the fact that the contents of the dump were excavated and that the area continued to be mined for gravel, this former dump does not appear to represent an environmental concern to the Site.

4.4 Summary of Historical Information

Based on LFR's historical research, the Site was in agricultural use as early as 1938. The Site has been vacant from the 1960s until present. No structures were identified on the Site. The surrounding area was mostly agricultural from at least 1930 to the 1990s. Residential and commercial development began in the surrounding area in the1960s. Cactus Dump, a solid waste disposal site, was located approximately 0.1 mile northeast of the Site. Cactus Dump closed in 1956. Gravel pits were excavated on the properties to the north and east of the Site, including where the former Cactus Dump was located, in the 1950s. After excavation, the gravel pit area was utilized as a flood control area by the San Bernardino County Flood Control Department for surface water runoff. The presence of these former features does not appear to present an environmental concern to the Site, based on agency research and current uses.

5.0 SITE RECONNAISSANCE

5.1 Site Reconnaissance

On November 6, 2007, Ms. Shauna Head and Ms. Dana Brodie, representatives of LFR, performed a reconnaissance-level assessment of the Site to observe general site conditions and indications of the possible release(s) of chemicals to the subsurface. A walkover site inspection was conducted to identify visible evidence of recognized environmental conditions. Ms. Head and Ms. Brodie were unaccompanied during the site walk. Photographs taken during LFR's site inspection are included in Appendix A. All photographs were taken on November 6, 2007 rather than January 25, 2005, as shown on the photographs.

5.1.1 Interviews with Persons Knowledgeable about the Site

LFR was able to obtain information regarding the Site from Mr. Erren O'Leary, Vice President with Lewis Operating Corporation, the Site owner. Information obtained from the interview is included in relevant sections of this report.

5.1.2 Property Inspection

On the day of LFR's site inspection, the 31.61-acre Site consisted of undeveloped desert terrain that generally sloped downward to the southeast. The Site was fenced along the perimeter except at the northeast corner. Vegetation consisting of desert scrub up to approximately 2 to 3 feet high was observed throughout the property. Non-hazardous debris in the form of plastic, glass, tires, a couch, fabric, and paper were observed scattered throughout the Site. LFR also observed a pile of empty "Megaplex X Grease 2" 14-ounce containers near the northeast corner of the Site. No surface staining was observed.

Pathways approximately 25 to 30 feet across were plowed in a grid pattern north-south and east-west throughout the Site and along the perimeter of the Site for use as a firebreak. Smaller dirt trails were observed around the northwest end of the Site. Mounds of soil (some including concrete rubble) approximately 5 to 6 feet in height were observed along the east boundary of the Site. According to the owner of the Site, Shea Homes was allowed to dispose on the Site excess soil generated during construction of Shea Homes' residential development at the southeast corner of Baseline Road and Cactus Avenue, approximately 0.25 mile southeast of the Site. The Site owner provided a Phase I ESA and Limited Phase II report for the Shea Homes property that stated the prior use of that property was agricultural. Therefore, four soil samples were collected and analyzed for organochlorine pesticides (see Appendix D for a sample location figure). No pesticides were detected at concentrations above the EPA Preliminary Remediation Goal (PRG) for a residential scenario. Based on these analytical results, it does not appear that the soil mounds on site represent an environmental concern for the Site.

No evidence of the disposal of hazardous materials or surface staining was observed.

During the inspection, no distressed vegetation (other than from water stress), monitoring wells or remediation systems were observed at the Site. There was no evidence of current ASTs, USTs, pits, ponds or sumps on the Site.

As the Site is undeveloped land, asbestos-containing materials, lead-based paint, and microbial amplification are not considered a concern to the Site.

5.1.3 Hazardous Substances and Petroleum Products in Connection with Identified Uses

LFR investigated the presence of hazardous substances or petroleum products in connection with the Site. LFR did not identify any hazardous substances or petroleum products onsite.

5.1.4 Storage Tanks

No current or historical petroleum or chemical USTs or ASTs are known to be associated with the Site. No evidence of USTs such as vent pipes, fill pipes or access ways was identified during this investigation.

5.1.5 Odors

No readily noticeable strong, pungent or noxious odors were identified during this investigation.

5.1.6 Pools of Liquid

No readily visible areas of standing surface water, pools or sumps containing liquids likely to be hazardous substances or petroleum products were identified during this investigation.

5.1.7 Drums

LFR did not observe any drums located onsite.

5.1.8 Hazardous Substances and Petroleum Product Containers (Not Necessarily in Connection with Identified Uses)

Empty 14-ounce containers labeled "Megaplex X Grease 2" were found discarded in a pile on the northeast end of the Site. LFR has no reason to believe that the product was used onsite, and no surface staining was observed beneath the containers; therefore, these containers are not considered an environmental concern to the Site.

No other containers of hazardous substances or petroleum products were identified during this investigation.

5.1.9 Unidentified Substance Containers

No opened or damaged containers with unidentified contents suspected of being hazardous substances or petroleum products were identified during this investigation.

5.1.10 PCBs

During the site visit, LFR looked for electrical or hydraulic equipment known to contain PCBs or likely to contain PCBs. No equipment likely to contain PCBs was observed during this investigation.

5.1.11 Pits, Ponds or Lagoons

During the site visit, LFR looked for pits, ponds or lagoons on the subject property. LFR also looked for pits, ponds, and lagoons on adjoining properties to the extent that such features were visually and/or physically observed from the Site or identified in the interviews or records review. LFR did not observe any ponds or lagoons on either the Site or adjoining properties. However, historic gravel pits, which are now utilized as flood control areas, are located adjacent to the northeast and east of the Site. The pit to the east of the Site is behind a fence. Neither area appears to be impacting the Site.

5.1.12 Stained Soil or Pavement

LFR did not observe stained soil or pavement during the site investigation.

5.1.13 Stressed Vegetation

During the site visit, LFR looked for areas of stressed vegetation (from other than insufficient water). No areas of stressed vegetation were observed during this investigation.

5.1.14 Solid Waste

During the site visit, LFR looked for areas that were apparently filled or graded by non-natural causes (or filled with material of unknown origin) suggesting trash construction debris, demolition debris or other solid waste disposal, or mounds or depressions suggesting trash or other solid waste disposal. These types of areas were not observed during LFR's site investigation.

5.1.15 Wastewater

During the site visit, LFR looked for wastewater or other liquids (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the Site. Wastewater was not observed discharging into any drains or underground injection systems.

5.1.16 Wells

During the site visit, LFR looked for wells including dry wells, irrigation wells, injection wells, monitoring wells, abandoned wells or other wells. No wells were observed during this investigation.

5.1.17 Septic Systems

During the site visit, LFR looked for indications of on-site septic systems or cesspools. No on-site septic systems or cesspools were observed during this investigation.

5.1.18 Heating/Cooling

LFR did not observe any heating/cooling sources, as there are no buildings onsite.

5.1.19 Stains or Corrosion

No evidence of stains or corrosion was observed at the Site.

5.1.20 Drains and Sumps

No drains or sumps were observed onsite.

5.1.21 Water Intrusion

As there are no structures on the Site, no evidence of water intrusion or microbial amplification was observed during the site visit.

5.1.22 Asbestos-Containing Materials (ACMs)

LFR observed some broken concrete piping of unidentified origin in the soil mounds located on the east end of the Site. Concrete irrigation piping has the potential to contain Transite™. It is also possible that Transite™ piping is buried in the subsurface, if the Site was previously irrigated. LFR recommends that the disposal of this piping, if encountered during site development, be handled in accordance with regulatory guidelines.

5.1.23 Lead–Based Paint (LBP)

As the Site is undeveloped, no materials suspected of containing LBP were observed.

5.1.24 Current Uses of Adjoining Properties

LFR performed a drive-by reconnaissance of adjacent properties to observe businesses that may use, store, generate or dispose of hazardous materials. The adjacent properties are identified on Figure 2, and are described below:

- **North:** Jerry Eaves Park and dry flood control area
- **East:** Dry flood control area
- **South:** Baseline Road followed by residential area
- **West:** Vacant lots and commercial buildings

Based on their current uses, none of the adjacent properties are likely to represent an environmental concern to the Site. As a result, LFR recommends no further investigation.

6.0 REGULATORY AGENCY RESEARCH

6.1 Published Government List Review

Regulatory agency database information was obtained from the EDR Radius Map Report, which maps and lists properties in U.S. government and California state environmental databases with existing conditions or status that may have the potential to impact the Site. The EDR report is provided as Appendix C.

6.1.1 Federal Environmental Record Sources

ASTM E 1527-05 guidance requires review of the following federal databases:

National Priorities List (NPL; 1.0 mile)

The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. An NPL site must meet or surpass a predetermined hazard ranking system score, be chosen as a state's top priority site, or meet three specific criteria set jointly by the U.S. Department of Health and Human Services and the U.S. EPA. *Source: U.S. EPA.*

No properties listed on the NPL database are located within 1.0 mile of the Site.

Proposed NPL (1.0 mile)

The Proposed NPL is a listing of sites being considered for NPL status. *Source: U.S. EPA.*

No Proposed NPL properties are listed within 1.0 mile of the Site.

Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS, 0.5 mile)

CERCLIS contains data on potentially hazardous waste sites that have been reported to the U.S. EPA by states, municipalities, private companies, and private persons pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The CERCLIS List includes sites that are either proposed for the National Priorities List (NPL) or in the screening and assessment phase for possible inclusion on the NPL. *Source: U.S. EPA/National Technical Information Service (NTIS).*

There are no CERCLIS properties listed within a 0.5-mile radius of the Site.

CERCLIS-No Further Remedial Action Planned (CERCLIS-NFRAP, 0.5 mile)

CERCLIS-NFRAP contains data on sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be place on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. *Source: U.S. EPA/ NTIS.*

There are no properties listed on the CERCLIS-NFRAP database within 0.5-mile of the Site.

Corrective Action Report (CORRACTS, 1.0 mile)

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity. *Source: U.S. EPA.*

No facilities listed on the CORRACTS database are located within a 1.0-mile radius of the Site.

Resource Conservation and Recovery Act (RCRA) Treatment, Storage, and Disposal (TSD) Facilities (0.5 mile)

RCRIS includes selected information on facilities that generate, transport, store, treat and/or dispose of hazardous waste, as defined by the Resource Conservation and Recovery Act (RCRA). *Source: U.S. EPA/NTIS.*

There are no properties listed on the RCRIS TSD database located within 0.5 mile of the Site.

RCRA Generators Lists (Site and adjoining)

RCRIS large quantity generators (LQG) are those facilities that generate at least 1,000 kilograms per month (kg/month) of non-acutely hazardous waste or meet other applicable RCRA requirements. RCRIS small quantity generators (SQG) generate between 100 and 1,000 kg/month of hazardous waste.

There are no properties listed on the RCRA-LQG database within a 0.25-mile radius of the Site. There are no properties listed on the RCRA-LQG or -SQG databases adjoining the Site.

Emergency Response Notification System (ERNS, target property)

ERNS is a national database that records and stores information on reported releases of oil and hazardous substances. The database contains information on spill reports made to federal authorities including the U.S. EPA, U.S. Coast Guard, National Response Center, and Department of Transportation.

There are no listed properties on the Site.

6.1.2 California Environmental Record Sources

ASTM E 1527-05 requires review of the following state databases.

EnviroStor (EnviroStor, 1.0 mile)

EnviroStor is maintained by the Department of Toxic Substance Control and includes similar information that was provided in the AWP and Cal-Sites databases. *Source: Department of Toxic Substance Control (DTSC).*

There are no properties listed on the EnviroStor database within 1.0 mile of the Site.

California Hazardous Material Incident Report System (CHMIRS, Target Property)

CHMIRS contains information on reported hazardous material incidents (accidental releases or spills). No update of this list is planned. *Source: California Office of Emergency Services (OES).*

The Site is not listed on the CHMIRS database.

Cortese List (0.5 mile)

This database contains summary information pertaining to contaminated sites in California. The sites for the list are designated by the State Water Resources Control Board (leaking underground storage tanks [LUSTs]), the California Integrated Waste

Management Board (SWF/LF [see below]), and the DTSC (Cal-Sites). *Source: Cal/EPA/Office of Emergency Information.*

There are no properties listed on the Cortese database within a 0.5-mile radius of the Site.

Leaking Underground Storage Tank Information System (LUST, 0.5 mile)

The LUST database is a list of reported leaking UST incidents compiled by the State Water Resources Control Board (SWRCB). *Source: State Water Resources Control Board.*

There are no properties on the LUST database that are listed within 0.5 mile of the Site.

SWF/LF, Solid Waste Information System (SWIS, 0.5 mile)

This database is an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 2004 criteria for solid waste landfills or disposal sites. *Source: California Integrated Waste Management Board.*

There is one facility on the SWF/LF database located within 0.5 mile of the Site:

- **Cactus Dump** was located approximately 0.1 mile northeast of and hydraulically cross/downgradient to the Site, and is listed on the SWF/LF database. The landfill was a solid waste disposal site that closed in 1956. Based on its distance from the Site, hydraulic location with respect to groundwater flow, and closed status, this listing is not anticipated to pose an environmental concern to the Site. In addition, this dump was excavated for gravel pits after it closed in 1956.

Toxic Pits Cleanup Act Sites (TOXIC PITS, 1.0 mile)

This list identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. No update of this list is planned. *Source: SWRCB.*

There are no Toxic Pits properties listed within 1.0 mile of the Site.

Hazardous Substance Storage Container Database (UST and Hist UST) and Facility Inventory Database (CA FID UST) (Site and adjoining)

These databases are historical listings of UST sites and active and inactive underground storage tank locations. Local and county sources have current UST information. *Sources: SWRCB for UST/Hist UST, Cal/EPA for FID.*

There is one facility listed on the UST and Hist UST databases:

- The historic UST was owned by **West San Bernardino County Water District** and was located at 855 West Baseline Road (approximately 0.15 mile southeast of the Site at its closest point). The UST was installed in 1975 and contained unleaded gasoline. The currently listed UST is also owned by San Bernardino County Water District, and is located at the same address as the historic UST. No leaks were reported from these USTs. It is possible that they are either the same UST or that the historic UST was replaced by the currently listed UST. The USTs are downgradient from the Site. Based on the distance and hydraulic location with respect to groundwater flow, these listings are not anticipated to pose an environmental concern to the Site.

No facilities are listed on the CA FID database.

Waste Management Unit Database System (WMUDS/SWAT, 0.5 mile)

This system is used by the SWRCB for tracking and inventory of waste management units. WMUDS comprises the following databases: facility information, scheduled inspections information, waste management unit information, Solid Waste Assessment Test (SWAT) program information, SWAT report summary information, SWAT report summary data, Chapter 15 information and monitoring parameters, TPCA program information, RCRA program information, closure information, and interested parties information. *Source: SWRCB.*

There are no listed properties within 0.5 mile of the Site.

6.1.3 Non-ASTM Databases

The following non-ASTM databases were also checked by EDR:

- CONSENT [EPA Regional Offices Superfund Consent Decrees (1 mile)]
- ROD [Records of Decision (1 mile)]
- DELISTED [NPL EPA Delisted NPL (1 mile)]
- FINDS [Facility Index System (target property)]
- HMIRS [Hazardous Materials Information Reporting Systems (target property)]
- MLTS [Material Licensing Tracking System (target property)]
- MINES [Mines Master Index Files (0.25-mile)]
- NPL LIENS [Superfund Liens (target property)]
- PADS [PCB Activity Database System (target property)]
- DOD [Department of Defense Site (1 mile)]
- RAATS [RCRA Administrative Action Tracking System (target property)]
- TRIS [Toxic Chemical Release Inventory System (target property)]

- TSCA [Toxic Substances Control Act (target property)]
- SSTS [Section 7 Tracking Systems (target property)]
- FTTS [FIFRA/TSCA Tracking System (target property)]
- AST [Aboveground Petroleum Storage Tank Facilities (target property)]
- CLEANERS [California DTSC Drycleaners (0.25-mile)]
- CA WDS [Waste Discharge System (target property)]
- DEED [List of Deed Restrictions (target property)]
- SCH [School Property Evaluation Program (0.25-mile)]
- EMI [Emissions Inventory Data (target property)]
- CA SLIC [Spills, Leaks, Investigation & Cleanup Cost Recovery Listing (0.25-mile)]
- HAZNET [Hazardous Materials Database (0.25-mile)]
- Manufactured Gas Plants (Coal Gas) (1.0-mile)]
- US BROWNFIELDS [A Listing of Brownfield Sites (0.5-mile)]
- WIP [Well Investigation Program (0.25-mile)]
- VCP [Voluntary Cleanup Program Properties (0.25-mile)]
- San Bernardino County Permit (0.25-mile)

One site is listed on the HAZNET database within 0.25 mile of the Site. **Sudhakar Company** is located at 1450 N. Fitzgerald Avenue, approximately 0.1 mile northwest of the Site. The facility is listed as disposing of "other organic solids."

Four sites located within 0.25-mile of the Site are listed on the San Bernardino County Fire Department Hazardous Materials Division database. **Affordable Cabinet Refacing** is located at 1240 N. Fitzgerald Avenue, approximately 0.05 mile west of the Site. The facility has a San Bernardino County permit as a limited quantity generator. The facility is listed as active, and no violations were reported. The **Sudhakar Company** is located at 1450 N. Fitzgerald Avenue, approximately 0.1 mile northwest of the Site. The facility has San Bernardino County permits for generator (26 to 50 employees) and hazmat handler (26 to 50 employees). The facility is listed as active, and no violations were reported. **Klaers Aviation** is located at 1462 N. Fitzgerald Avenue, approximately 0.15 mile northwest of the Site. The facility has San Bernardino County permits for special handler and special generator. The facility is listed as active, and no violations were reported. **7-Eleven #33442** is located at 1276 W. Baseline Road, approximately 0.2 mile west of the Site. The facility has San Bernardino County permits for hazmat handler (UST only) and a UST ownership/ operating permit. The facility is listed as active, and no violations were reported. Based on their non-adjacent locations, the fact that none of the facilities are listed as a site of known or suspected contamination, and the depth to area groundwater (333 feet bgs), LFR does not believe that these nearby facilities represent an environmental concern to the Site.

In conclusion, no properties within their respective search distances were listed on the above databases that would appear to present an environmental concern for the Site. In addition, no facilities were listed on the Orphan Summary that would appear to present an environmental concern for the Site.

7.0 FINDINGS

This section discusses known or suspect environmental concerns, historical environmental concerns, and *de minimis* conditions identified during the conduct of this ESA.

7.1 Known or Suspect Environmental Concerns

LFR did not identify any known or suspected environmental concerns in connection with the Site during the conduct of this Phase I ESA.

7.2 Historical Environmental Concerns

LFR identified no historical environmental concerns during this Phase I ESA.

7.3 De Minimis Conditions

LFR identified the following *de minimis* condition during this Phase I ESA.

- Care should be taken during development activities to look for subsurface features such as irrigation piping. LFR observed unidentified concrete piping onsite. Concrete irrigation pipes have the potential to contain Transite™ and there is a potential for it to be buried in the subsurface. If Transite™ piping is discovered, it should be properly handled and disposed of.

8.0 OPINION

The findings noted above do not indicate environmental concerns in connection with the Site.

9.0 CONCLUSIONS

LFR has performed a Phase I ESA of the Site in conformance with the scope and limitations of ASTM Practice E 1527-05 for Phase I ESAs and the PREI's requirements for Phase I ESAs. This assessment has revealed no evidence of environmental concerns in connection with the Site, and no further investigation is recommended at this time.

10.0 DEVIATIONS/DATA GAPS

No deviations from the ASTM practice or significant data gaps were identified during the conduct of this Phase I ESA.

11.0 ADDITIONAL SERVICES

No additional services were provided as part of this Phase I ESA.

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1986 through 2006. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the forgoing analysis.

STATE AND LOCAL RECORDS

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 09/10/2007 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
CACTUS DUMP (RIALTO)	E 1/2,NE 1/4 OF S3, T1S	0 - 1/8 NE	2	6

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 10/10/2007 has revealed that there is 1 UST

site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
DI-WEST SAN BDNO CWD	855 W BASE LINE RD	1/8 - 1/4 E	A3	7

HIST UST: Historical UST Registered Database.

A review of the HIST UST list, as provided by EDR, and dated 10/15/1990 has revealed that there is 1 HIST UST site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
WEST SAN BERNARDINO CO. WATER	855 W BASE LINE RD	1/8 - 1/4 E	A4	8

DEHS Permit System: San Bernardino County Fire Department Hazardous Materials Division.

A review of the San Bern. Co. Permit list, as provided by EDR, and dated 06/27/2007 has revealed that there are 4 San Bern. Co. Permit sites within approximately 0.25 miles of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/18/2007
Date Data Arrived at EDR: 08/03/2007
Date Made Active in Reports: 08/29/2007
Number of Days to Update: 26

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/09/2007
Date Data Arrived at EDR: 09/05/2007
Date Made Active in Reports: 10/11/2007
Number of Days to Update: 36

Telephone: N/A
Last EDR Contact: 08/31/2007
Next Scheduled EDR Contact: 10/29/2007
Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 08/27/2007
Date Data Arrived at EDR: 08/29/2007
Date Made Active in Reports: 10/11/2007
Number of Days to Update: 43

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994
Number of Days to Update: 56

Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/23/2007
Date Data Arrived at EDR: 06/20/2007
Date Made Active in Reports: 08/29/2007
Number of Days to Update: 70
Source: EPA
Telephone: 703-412-9810
Last EDR Contact: 09/19/2007
Next Scheduled EDR Contact: 12/17/2007
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 08/21/2007

Data Release Frequency: Quarterly

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/13/2006

US BROWNFIELDS: A Listing of Brownfields Sites
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/19/2006

Data Release Frequency: No Update Planned

CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Next Scheduled EDR Contact: 12/31/2007
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

LUST: Geotracker's Leaking Underground Fuel Tank Report
Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state. For more information on a particular leaking underground storage tank sites, please contact the appropriate regulatory agency.

DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or formerhazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

ENVIROSTOR: EnviroStor Database
The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Historical Auto Stations: EDR Proprietary Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Most Recent Revision:	1988

EDR's GeoCheck Physical Setting Source Addendum is provded to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

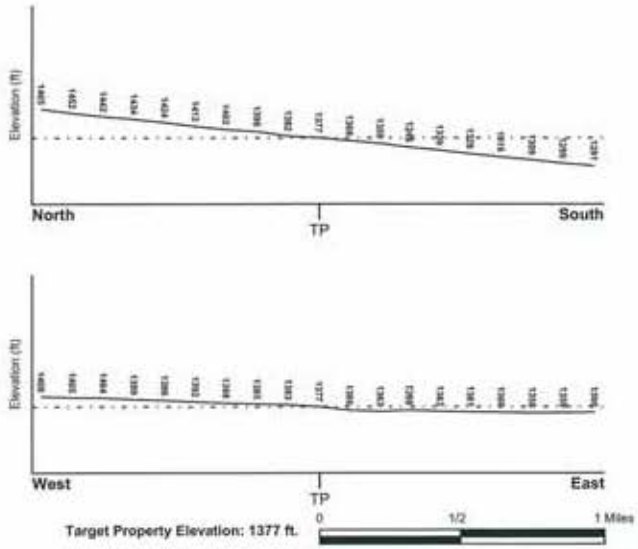
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	Not Available

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the data of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HANFORD

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

Soil Layer Information

	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	12 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 2.00	Max: 7.80 Min: 6.10
2	12 inches	60 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 2.00	Max: 7.80 Min: 5.60

Soil Map ID: 2

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly - loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessive. Soils have high hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Soil does not meet the requirements for a hydrc soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

Soil Layer Infomation

	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)

Water System Information:

Prime Station Code:	01N/05W-34M01 S	User ID:	TAN
FRDS Number:	3610038001	County:	San Bernardino
District Number:	13	Station Type:	WELL/AMBNT
Water Type:	Well/Groundwater	Well Status:	Active Raw
Source Lat/Long:	340800.0 1172400.0	Precision:	1 Mile (One Minute)
Source Name:	AIRPORT WELL (RIALTO 03)		
System Number:	3610038		
System Name:	RIALTO-CITY		
Organization That Operates System:	150 S PALM AVE RIALTO, CA 92376		
Pop Served:	48418	Connections:	11080
Area Served:	RIALTO		

Sample Collected:	01/31/2002 00:00:00	Findings:	.06 NTU
Chemical:	TURBIDITY, LABORATORY		
Sample Collected:	02/20/2002 00:00:00	Findings:	9 MG/L
Chemical:	NITRATE (AS NO3)		
Sample Collected:	02/20/2002 00:00:00	Findings:	.635 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	03/12/2002 00:00:00	Findings:	.3 MG/L

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map,USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Citizen's Guide To The Water Board Hearings On Perchlorate In Rialto

The State Water Resources Control Board, known as the State Water Board, is California's authority on water quality and water rights. One of the Board's jobs is deciding cases about water. To make the right decision, the Board sometimes holds hearings to look at evidence, hear witnesses and listen to legal arguments.

The State Water Board is holding hearings about perchlorate contamination of groundwater in the Rialto area with a main focus on 160 acres in Rialto. At the hearing, evidence will be collected and legal and policy arguments will be heard. Some of the issues expected to be considered are how did the contamination occur, who is responsible and who should be liable for the cost to investigate and clean up, as well as the methods and standards to be used to protect public health.

A hearing officer, Ms. Tam Doduc, chair of the State Water Board, will run the proceedings. State law requires that the hearing officer is always neutral and can only receive information from witnesses and interested parties during the formal hearing process.

Ms. Doduc's advisory team will be seated on the stage with her. The advisory team is the group of experts (four state water board attorneys and a water science expert) who help her with different decisions before, during, and after the hearing. Other state water board members may join Ms. Doduc on stage during the proceeding. Other team members, including support staff, and an attorney will be in the hearing room. Like Ms. Doduc, the advisory team members can only receive information during the actual hearing proceedings.

In this hearing, there are six parties. They are: The Santa Ana Regional Water Quality Control Board, the city of Rialto, Goodrich Corporation, Pyro Spectaculars, Emhart Industries, and the Center for Community Action and Environmental Justice. Shortly before the hearing, Ms. Doduc will decide in what order the parties will speak.

This is a hearing, not a trial. No one has been charged with any criminal wrongdoing. In general, the Advocacy Team from the Santa Ana Regional Water Board claims that Goodrich Corporation, Pyro Spectaculars and Emhart Industries are responsible for the perchlorate contamination. The Advocacy Team is like the prosecution in a trial. Its job is to prove the many issues of fact and law in the hearing. The Advocacy Team must prove each element of their case by a 'preponderance of the evidence.'

After the Advocacy Team presents its case, the other parties will follow. In this hearing, each party may support certain parts of the Advocacy Team's case, defend against other parts, and/or present entirely new arguments.

Members of the public, referred to as 'interested parties,' can also speak and present their views but cannot present evidence or ask questions. Interested parties may speak for a limited time about any of the issues raised in the hearing. People can speak even if they do not submit anything in writing, but they cannot present any documents. If you want to speak during the hearing, you must fill in a card that will be available at

the rear of the room. You will be called to the podium in the front of the room.

After all of the parties make their cases and the interested persons speak, the hearing will adjourn.

After the Hearing Officer considers the evidence, testimony, and the arguments made by the parties and interested persons, Ms. Doduc will recommend a decision to the entire five member State Water Board at a regular Board meeting. The Board will decide whether to issue an order that may tell the parties when and how to investigate and clean up the site and who is responsible for portions of the cleanup cost.

Any final order will be issued by a vote of the full Board at a public meeting in Sacramento.

Dates for Ms. Doduc's recommendation and the full Board's vote, will be listed at http://www.waterboards.ca.gov.

Maximum Perchlorate Concentrations (µg/L) in Groundwater Between 2005 and 2006

The 160 Acre Site

West Coast Loading Corporation - 1950s

The War Assets Administration (now the Department of Defense) owned and operated facilities in the Rialto Ammunition Storage Point (also called the RASP site) located in the northern portion of Rialto from approximately 1941 to 1946. The War Assets Administration constructed munitions storage bunkers and railroad spurs, and undertook munitions and ordnance shipping, testing and handling, military operations and burning, and on-site disposal operations, which resulted in the disposal, discharge and release of perchlorate-containing products, substances and wastes into the environment. In the early 1950s, West Coast Loading Corporation, which manufactured products under contract with the United States Department of Defense, built a production facility for loading ammunition, ordnance and pyrotechnics shells with chemicals. West Coast Loading's facility was located on a 160-acre site within the former RASP site. Many of the items built by West Coast Loading used perchlorate.

WCLC Products

West Coast Loading is out of business. The City believes that the legal successors to West Coast Loading include Kwikset (the maker of Kwikset Locks), Black and Decker, Inc. (the maker of Black and Decker tools) and Emhart Industries, Inc. The City believes that one or more of these corporations is legally responsible for the releases of perchlorate by West Coast Loading.

Today the 160 acre site sits in the middle of Rialto, adjacent to numerous homes and further-developing real estate. Click here to view the map of the160-acre site and the County of San Bernardino's.

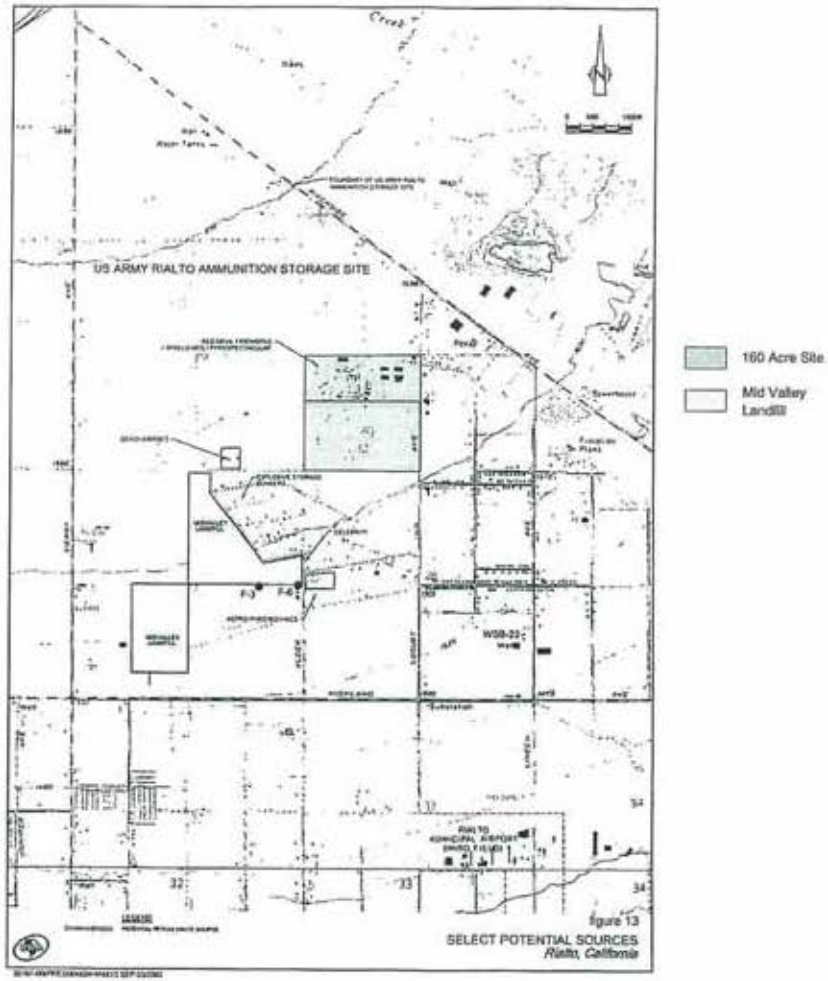
Goodrich Rocket Test Firing in Rialto (1960s)

In 1957, B.F. Goodrich Corporation purchased the West Coast Loading Corporation site. Goodrich performed solid propellant research and development for the United States Air Force and others at the site including rocket engine testing until 1963. Goodrich sold the property in 1966. Goodrich used ammonium perchlorate as an oxidizer in the manufacture of solid rocket propellants at the site.

To Learn More About the Regional Water Quality Control Board Enforcement Orders against B.F. Goodrich, visit: http://www.waterboards.ca.gov/santaana/html/perchlorate.html

After B.F. Goodrich sold the property, it has been used by a variety of other defense and industrial contractors. Today, the 160 acre site is still in use by some fireworks manufacturers, and perchlorate is still used on the property in connection with those operations.

Rialto believes that ALL of the above referenced companies and entities have contributed to the problem by discharging perchlorate into our environment.



California Regional Water Quality Control Board
Santa Ana Region

Cleanup and Abatement Order No. R8-2003-0013
for
County of San Bernardino, Solid Waste Management Division
City of Rialto, San Bernardino County

The California Regional Water Quality Control Board, Santa Ana Region (hereinafter Regional Board), finds that:

1. The County of San Bernardino (hereinafter County) currently owns property in Sections 28 and 29, Township 1 North, Range 5 West, San Bernardino Base and Meridian, in the County of San Bernardino, State of California.

2. The County operates the Mid-Valley Sanitary Landfill (MVSL) on the property noted above. This property overlies the Rialto Groundwater Subbasin. The MVSL property consists of about 497 acres, of which about 222 acres are currently used for waste disposal activities. A sand and gravel operation utilizes a portion of the property in accordance with a formal agreement between the County and the sand and gravel operator. Soil is stockpiled on another portion of the property for processing by the sand and gravel operation prior to use of that portion of the property for landfilling. Ultimately, waste disposal activities will be expanded to include about 408 acres of the property, all within Section 29.

3. The MVSL is a municipal solid waste disposal facility that has been operated by the County since 1958. Landfilling of waste has been conducted in phases, with each phase consisting of waste being applied on a different portion of the property. Early phases of the landfill (Units 1 and 2) were constructed on native soil without a clay or synthetic liner, or a leachate collection system. The most recent phase of the landfill (Unit 3) began operation in 2002. This phase has, and all future phases (Units 4 and 5) will have, a double composite liner and a leachate collection and removal system.

4. Perchlorate, in the form of perchlorate salts, such as ammonium perchlorate, was used historically, and is still used, by several tenants of properties in close proximity to the landfill. Therefore, it is possible that the landfill may have accepted perchlorate waste from these neighboring tenants. However, there is currently no evidence that perchlorate waste was disposed in the landfill or that there has been a discharge of perchlorate from Units 1, 2 or 3 of the landfill.

5. The County purchased the northeast area of its current property in 1994. This property contained storage bunkers that were known to have housed explosives, chemicals, propellant, oxidizers, and fireworks. These bunkers were constructed, and were initially used, by the military in the mid-1940s. The bunkers were used subsequently by aerospace, hazardous waste and fireworks companies. Perchlorate salts were handled and stored in these bunkers. The County's operations contractor demolished the bunkers in 1998. A portion of this area is currently utilized by a sand and gravel operation.

6. Perchlorate salts are highly soluble and dissociate in water to form perchlorate ions. There are currently no state or federal drinking water standards for perchlorate. However, in 1997, the California Department of Health Services (DHS) established a drinking water Action Level (AL) for perchlorate of 18 parts per billion (ppb), and in 2002, DHS lowered the AL to four ppb. An AL is a temporary safe drinking water level that is based on limited studies that have been performed. Perchlorate is currently present in the Rialto, Colton, Chino I and Chino II Groundwater Subbasins. The West San Bernardino County Water District, the Fontana Water Company, and the Cities of Rialto and Colton have limited or ceased use of 20 municipal water supply wells that exceed the AL for perchlorate.

7. Municipal water supply wells in the Rialto, Colton, Chino I and Chino II Groundwater Subbasins have been, or are likely to be, affected by the perchlorate pollution in these basins. Regional Board staff is currently attempting to identify all parties that may have discharged perchlorate in these basins.

8. Perchlorate was initially detected in low concentrations (less than 5 ppb) in two of the MVSL monitoring wells in 1997. In 2001, the concentration of perchlorate in one of these wells increased significantly, to 250 ppb. As a result, the County increased its monitoring for perchlorate in existing monitoring wells and assessed possible perchlorate sources on its property, which included collecting and analyzing soil samples and process water samples from the sand and gravel operation on the northeast area of the County's property. The County found that the source of the perchlorate currently found in groundwater immediately adjacent to, and downgradient of, the County's property may be from the northeast area of its property that the County purchased in 1994.

9. Beginning in August 2002, the County installed six monitoring wells on, and in the vicinity of, the northeast area of their property. The analytical results of groundwater samples obtained from these monitoring wells showed that perchlorate was not present in the monitoring wells located

upgradient of the northeast area of the County's property, but was present in concentrations as high as 1,000 ppb in a monitoring well downgradient of the northeast area.

10. On September 26, 2002, the Executive Officer issued an Investigation Order to the County. This Order directed the County to further define the lateral and vertical extent of perchlorate in soil and groundwater in the vicinity of the MVSL.

11. On November 15, 2002, the County submitted a work plan to further define the lateral and vertical extent of perchlorate. Board staff has completed its review of the work plan, and is coordinating and evaluating comments on the work plan that are being submitted by other interested parties.

12. Based on the results of the soil and groundwater investigations conducted by the County, it is evident that perchlorate is being discharged to groundwater from property that is currently owned by the County.

13. The beneficial uses of the Rialto Groundwater Subbasin include:

    A. Municipal and domestic supply,
    B. Agricultural supply,
    C. Industrial service supply, and
    D. Industrial process supply.

14. The County has caused or permitted, or is causing or permitting, waste, i.e., perchlorate, to be discharged to waters of the state, specifically the Rialto Groundwater Subbasin, and has created, or threatens to create, a condition of pollution or nuisance. (The term "waste" as used here is defined at Water Code §13050(d).)

15. California Water Code Section 13304 allows the Regional Board to recover reasonable expenses from responsible parties for overseeing cleanup and abatement activities. It is the Regional Board's intent to recover such costs for regulatory oversight work conducted in accordance with this order.

16. This enforcement action is being taken by a regulatory agency to enforce a water quality law. Such action is exempt from the provisions of the California Environmental Quality Act (Public Resources Code, Section 21000, et seq.) in accordance with Section 15321, Article 19, Division 3, Title 14, California Code of Regulations.

17. Additional investigation is necessary to define the vertical and lateral extent of the perchlorate that is discharging, has been discharged, or threatens to be discharged, from the County's property.

18. It is appropriate to order the County to clean up and abate the effects of the discharge of perchlorate from property that the County currently owns and controls.

19. A similar order may be issued at a later date to former tenants or former owners of the County's property if Regional Board staff obtains additional information indicating that other specific tenants or owners have also discharged perchlorate that is present in the groundwater.

IT IS HEREBY ORDERED THAT, pursuant to Section 13304, Article 1, Chapter 5, Division 7, of the California Water Code, the County of San Bernardino shall cleanup and abate the effects of the discharge at the site as follows:

1. Implement the work plan submitted on November 15, 2002, as approved by the Executive Officer, in order to further define the lateral and vertical extent of the perchlorate that is discharging, has been discharged, or threatens to be discharged, from the County's property noted in Finding 1, above.

2. Prepare and implement additional work plans that the Executive Officer deems necessary to sufficiently characterize the lateral and vertical extent of perchlorate that is discharging, has been discharged, or threatens to be discharged, from the County's property. The work plans shall be implemented in accordance with time schedules approved by the Executive Officer.

3. After the Executive Officer determines that the lateral and vertical extent of perchlorate that is discharging, has been discharged, or threatens to be discharged from the County's property has been sufficiently defined, submit a detailed remedial action plan, including an implementation schedule, to cleanup or abate the effects of the perchlorate that is discharging, has been discharged, or threatens to be discharged, from the County's property. The remedial action plan and implementation schedule shall be submitted within 60 days of the Executive Officer's notification to the County that the definition of the extent of perchlorate is sufficiently complete. The remedial action plan and schedule shall be subject to approval by the Executive Officer.

4. Implement the remedial action plan in 3., above, as approved by the Executive Officer.

I, Gerard J. Thibeault, Executive Officer, do hereby certify that the foregoing is a full, true and correct copy of an order adopted by the California Regional Water Quality Control Board, Santa Ana Region, on January 17, 2003.

Gerard J. Thibeault
Executive Officer

California Regional Water Quality Control Board
Santa Ana Region

San Bernardino, CA 92415-0017

TRANSMITTAL OF ADOPTED CLEANUP AND ABATEMENT ORDER NO. R8-2003-0013 FOR THE COUNTY OF SAN BERNARDINO, SOLID WASTE MANAGEMENT DIVISION

Dear Mr. Wulfman:

At the regular Board Meeting held on January 17, 2003, the Regional Board adopted Cleanup and Abatement Order No. R8-2003-0013. A certified original copy is enclosed for your records. The adopted order includes two changes to the draft Order that were made at the Board Meeting (see Finding 14 and the statement immediately following Finding 19).

If you have any questions, please contact me at (909) 782-3284, Ann Sturdivant, Chief of the Board's SLIC/DoD Section, at (909) 782-4904, or Kamron Saremi, staff engineer, at (909) 782-4303.

Sincerely,

for Gerard J. Thibeault
Executive Officer

Subject: Re: Phase I Questions - Olive Grove Site

1. The soil is excess dirt that we allowed Shea to stockpile on Olive Grove from their Elm Park project at the southeast corner of Cactus and Baseline. We also thought we might need some import for Olive Grove as a residential project.
2. It is also my understanding the paths are fire breaks.

Subject Phase I Questions - Olive Grove Site

Erren:

Hope you are well. With regard to the Phase I Environmental report that is being produced on our behalf for the 31 acre Olive Grove site, our engineers had two concerns which we were hoping that you or someone else from Lewis could provide additional information on.

1. Unidentified soil piles along the easterly property line. The piles appear to be fairly new as they were not visible on pervious years aerials.
2. The reason for the 25'0" - 30'0" pathways that criss-cross the site. The pathways are visible from aerials dating back to 1990. One of our environmental engineers suggested that they may be "fire-breaks" as required by the City of Rialto.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that

there are 23 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Case Type:	Cleanup Program Site
Case Worker:	Not reported
Local Agency:	Not reported
RB Case Number:	Not reported
File Location:	Regional Board
Potential Media Affected:	Soil
Potential Contaminants of Concern:	Lead
Site History:	The site is located in a residential area of Rialto, immediately to the east and north of Cactus Drainage Basin. Existing onsite structures include the District Headquarters, a warehouse/Maintenance building, Well No. 33 and associated pumping equipment, a concrete reservoir, two above ground fuel storage tanks, and a waste oil storage area. The site was previously owned by the County of San Bernardino. It was once a rock quarry and was operated as a refuse disposal and burn dump that ceased operation in 1956. Vertically, fill waste appears to extend from 8 to 13 feet below ground surface. The first encountered groundwater is more than 100 feet deep in the vicinity of the site. The district and the City of Rialto extract about two thirds of the demand from groundwater. In recent years, perchlorate has been detected in several of the wells. As a result, the district has plans to construct a wellhead treatment system that will remove perchlorate and nitrate from the groundwater. The Regional Board has reviewed the plans and has given concurrance with the plans. The district will excavate and remove the fill material below the planned site to remediate the lead contaminated soils at the site prior to constructing the well head treatment system.

Violation Description:	Failure to include in the SPCC Plan: 1. A contact list and phone

WEST SAN BERNARDINO CO. WATER (Continued) **S101619412**

numbers for the facility response coordinator, National Response Center, cleanup contractors with an agreement for response, and all Federal, State, and local agencies who must be contacted in case of a discharge 2. Information and procedures that would enable a person reporting an oil discharge to relate all information as described in 40 CFR 112.7(a)(4), unless facility submitted a Facility Response Plan.

Violation Notes: OBSERVATION: The current plan does not list the correct emergency phone number for the local CUPA. 909-386-8425 is the correct phone number that shall be used. CORRECTIVE ACTION: Submit a signed statement that the plan has been revised.
Violation Division: San Bernardino County Fire Department
Violation Program: APSA
Violation Source: CERS

Site ID: 171119
Site Name: WEST VALLEY WTR DIST CMPLEX WELL#33
Violation Date: 05-10-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 07/06/2017. The Hazardous Materials Inventory submitted to CERS on 2/10/17 is not consistent with what was observed at time of inspection.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:
Site ID: 433957
Site Name: Medline Industries C09
Violation Date: 07-16-2020
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to comply with one or more of the following requirements: 1. Have record of inspections and tests, including integrity tests, signed by the appropriate supervisor or inspector. 2. Keep written procedures and records of inspections and tests, including integrity tests, for at least three years. 3. Keep comparison records.
Violation Notes: Returned to compliance on 07/30/2020. OBSERVATION: Written documentation of tank inspections were not available for review. CORRECTIVE ACTION: Submit most recent copy of tank inspection log or submit a signed statement indicating that monthly visual inspections of the diesel ASTs are being conducted and documented as described in the SPCC plan.
Violation Division: San Bernardino County Fire Department
Violation Program: APSA
Violation Source: CERS

Site ID:	87574
Site Name:	7-ELEVEN INC #33442
Violation Date:	01-13-2016
Citation:	HSC 6.7 25299 - California Health and Safety Code, Chapter 6.7, Section(s) 25299
Violation Description:	Failure to comply with one or more of the operating permit conditions.
Violation Notes:	Returned to compliance on 03/01/2016. THE S4 VACUUM SENSOR (87 FILL & STP SUMPS) FAILED TO CLEAR THE HIGH LIQUID ALARM FOLLOWING TESTING. MULTIPLE EFFORTS WERE MADE TO DETERMINE SOURCE OF FAILURE WITHOUT SUCCESS DURING THE INSPECTION. THE TURBINES WILL NOT AUTHORIZE (EVEN AFTER "X-ING" OUT THE SENSOR FROM PROGRAMMING). THE SENSOR WAS REPLACED WITH LIKE-FOR-LIKE EQUIPMENT AND THE FAILURE CONTINUED. THE TECHNICIANS CONTINUED TO TROUBLESHOOT AT THE TIME THIS REPORT WAS WRITTEN. REQUIREMENT: IMMEDIATELY DETERMINE FAILURE AND RETURN PROGRAMMING TO NORMAL OPERATING STATUS. RE-SCHEDULE A WITNESSED RETEST FOR THE S4 SENSOR AND FOR THE TWO LEAK DETECTORS (NOT TESTED DURING INSPECTION) WITH THIS DEPARTMENT WITHIN 15 DAYS. NOTE: THE ANNIVERSARY DATE FOR TESTING IS 1/15. THE FACILITY WILL BE IN VIOLATION FOR FAILING TO ANNUALLY CERTIFY UNLESS DOCUMENTATION OF REPAIR/RETEST IS RECEIVED BY JANUARY 15, 2016. SUBMIT RESULTS TO JKOOYMAN@SBCFIRE.ORG. A WITNESSED RETEST WILL STILL BE REQUIRED.

RB Case Number:	2080086
File Location:	Regional Board
Potential Media Affected:	Soil
Potential Contaminants of Concern:	Aviation, Diesel, Gasoline
Site History:	The Site covers 480.6 acres including and surrounding the RMA, located at 1451 North Linden Avenue, Rialto, California. The Site is generally bounded by State Highway 210 to the north, Miro Road and Baseline Road to the south, Laurel Avenue to the west, and Ayala Avenue and the flood control channel to the east. The Site was originally divided into four properties identified as Properties A,

RIALTO MUNICIPAL AIRPORT PROPERTY (Continued) **S110326758**

B, C and D. The Site is currently owned by the City of Rialto. The Site has been determined, through prior environmental assessments, to have soil impacted with Total Petroleum Hydrocarbons in gasoline range (TPHg), Total Recoverable Petroleum Hydrocarbons (TRPH), Polychlorinated Biphenyls (PCBs), and Polynuclear Aromatic Hydrocarbons (PSAHs). Excavation activities to remove the impacted soil were conducted at the Site between January 12 and February 5, 2016 by Westech. Each of the identified areas of concern (AOCs) were excavated, as proposed in the Cleanup Plan (Converse, 2015).A total of 5,315 CY of soil were excavated and stockpiled at the designated locations on site. A total 370 Cy (535 tons) of soil from the Sand Drag area was excavated and transported offsite to the Philadelphia Recycling Mine in Mira Loma, California for disposal.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 12/11/2020

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 10/05/2020

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

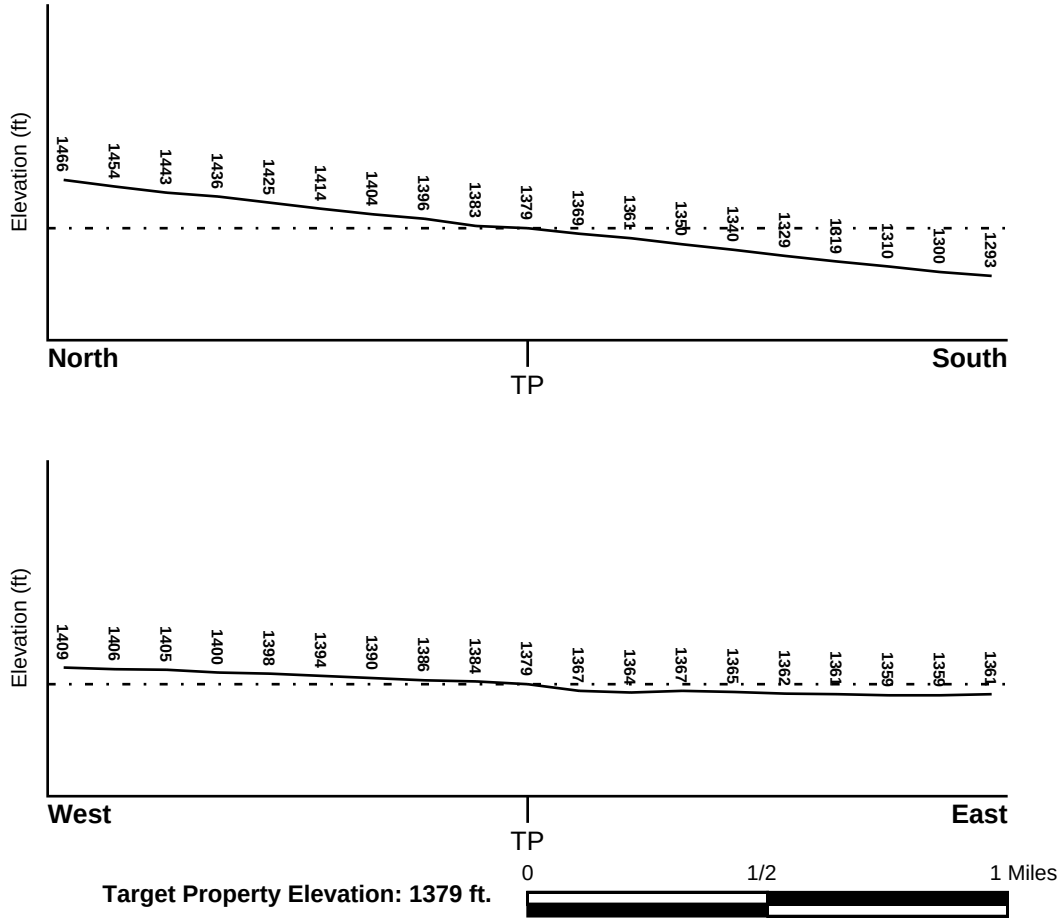
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
FONTANA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Hanford

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6
2	11 inches	59 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6

Soil Map ID: 2

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	35 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
2	35 inches	59 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1

Soil Map ID: 3

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

Soil Map ID: 4

Soil Component Name: PITS

Soil Surface Texture: very gravelly coarse sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	very gravelly coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand.	Max: 141 Min: 42	Max: Min:
2	5 inches	59 inches	extremely gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand.	Max: 141 Min: 42	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Highlights
5 years of experience in the environmental consulting industry
Phase I Environmental Site Assessments
Environmental Transaction Screens
Records Search Risk Assessment Reports

Experience Summary
Ms. Manuel has over 5 years of experience in the environmental consulting industry conducting Database Reviews (DR), Records Search Risk Assessment Reports (RSRA), Historical Records Review (HRR), Historical Records and Database Review (HRDR), Extended Database Search (EDS), Environmental Transaction Screen (ETS), Phase I Environmental Site Assessments (ESA), and other related environmental assessments for sites including apartment buildings/complexes, commercial office buildings, shopping centers, multi-tenant commercial complexes, and dry cleaning operations.

Project Experience
Sartori Avenue two-story mixed use building, Torrance, California, 14-114299.1. A 20,800 SF commercial and residential building on .24 acres including offices/retail on the ground floor and residential on the second floor.

Athens Gate Apartments, El Paso, Texas, 15-138621.1. A two story, 233-unit multifamily apartment complex on 8.92 acres.

Aldine Plaza, Houston, Texas, 16-175611.1. A 35,278 SF retail center consisting of nine commercial/retail units and one vacant unit on 4.77 acres.

Radar Road, San Diego, California 16-161761.2, 3, 4. Three industrial parcels improved with a 13,065 SF building and a 14,313 SF building on 4.11 acres. Onsite operations include the sales, storage, rental, and maintenance of construction equipment.

Sisters Storage, Sisters, Oregon, 16-158333.1. A 22,800 square foot storage/retail/rental facility on 2.69 acres, consisting of public storage lockers, U-Haul truck rental, and power tool/equipment sales and rental.

PARTNER

Michael Emilio
Senior Project Manager/Geologist

Education

Masters of Science – Geology, University of South Florida, Tampa, FL
Bachelors of Science – Geology, Central Michigan University, Mt. Pleasant, MI
Honors Diploma, Central Michigan University, Mt. Pleasant, MI

Registrations

Certified Project Manager, per the Project Management Institute standards

Training

40-hour OSHA HAZWOPER certified, under 29 CFR 1910.120
8-hour OSHA HAZWOPER Supervisor certified, under 29 CFR 1910.120
AHERA Asbestos Building Inspector, per State of Florida and USEPA, 40 CFR 763

Highlights

19 years of experience in environmental consulting
18 years of experience in Phase I and Phase II Environmental Site Assessments (ESAs), Peer Reviews, and compliance/health and safety audits
18 years of experience in site assessment and remediation of petroleum hydrocarbon and hazardous materials-impacted soil and groundwater
Extensive experience with automotive-based facilities such as, dealerships, repair shops, collision centers, rental cars, port terminals, and processing and training facilities
Experience in Industrial Hygiene including, asbestos, lead-based paint and dust, and mold assessments
Experience with SPCC, SWPPP, and potable water Consumptive Use Permits

Experience Summary

Mr. Emilio has over 19 years of extensive experience in environmental science and consulting in the areas of due diligence environmental assessments; compliance/ environmental health and safety audits; hydrocarbon and hazardous chemical assessment; remedial design, testing and active remediation for petroleum and hazardous chemical projects; risk-based corrective action planning; petroleum storage system management and AST/UST closure; Best Management Practices; SWPPP plans; SPCC Plans and environmental regulatory compliance at petroleum/hazardous chemical facilities, for government and private industrial/commercial clients, including investment equity groups and lenders.

Mr. Emilio has conducted and managed hundreds of Phase I and Phase II ESAs nationwide per ASTM standards to evaluate potential environmental liabilities associated with property transactions and operations of automotive properties, retail centers, hospitality facilities, multi-family complexes, mixed use, warehouse and distribution facilities, undeveloped land, and industrial, commercial, and manufacturing facilities. Mr. Emilio has also designed, implemented, and oversaw soil, groundwater, and vapor investigations related to Phase II ESAs, Corrective Action Reports, Source Removal Reports, Site Assessment Reports, Tank Closure Assessment Reports, Natural Attenuation Monitoring, Remedial System Operations & Maintenance Reports for the above facilities. Constituents of concern included: petroleum hydrocarbons, chlorinated solvents, pesticides, fertilizers, insecticides, metals etc. Major clients have included, AutoNation, Inc, Barings Asset Management, Blackstone Real Estate Group, Dollar Thrifty Automotive Group, Kimco Realty, The Hertz Corporation, Hertz Equipment Rental, UBS Realty Investors, and Verizon.

Mr. Emilio has experience in managing multiple small and large-scale Phase I ESA, Property Condition Assessment (PCA) and Probable Maximum Loss (PML) portfolios ranging up to a 100+ sites in the US and Canada. His management techniques utilize a skill set requiring strong organizational and communication skills with the internal team, client, and other external stakeholders.

Project Experience

Project Manager, Due Diligence Portfolio of Light-Industrial and Commercial Warehouse Facilities, Project Sites- SE United States. Mr. Emilio successfully managed a 100-plus site environmental services portfolio for ESAs and PCAs, spread across several states for an equity client. Purchase price of the assets exceeded $950 million. The project involved the management and coordination of dozens of people, including assessors, quality assurance reviews, and authoring of summary matrices to keep the client up to date. Mr. Emilio's logistical oversight helped his team to complete their assessments on schedule and exceed client expectations.

Project Manager, Various Fannie Mae and Freddie Mac-financed loans, Project Sites Nationwide. Project manager of various multi-family housing projects and portfolios. The project scopes included performance Fannie Mae/Freddie Mac-compliant Phase I ESAs and Property Condition Assessments. Supplemental work included the completion of Phase II subsurface investigations, geophysical, asbestos and lead identification surveys and Operation and Maintenance Plans.

Site Assessment and Corrective Action Implementation, Former Mattress Manufacturing Plant, Jacksonville, FL. Designed, managed, and implemented Site Assessment, Pilot Tests, and Remedial Action Plan related to chlorinated solvent groundwater plume located beneath the plant floor and petroleum hydrocarbon impacts located along a former rail spur. Assessment activities and interim remedial actions included excavation of 600+ tons of petroleum-impacted soil and dual-phase extraction for chlorinated solvent impacted groundwater within the warehouse. Site activities conducted in conjunction with FDEP, third-party interests, and legal counsel oversight. Subsequent pilot tests and Remedial Action included injection of potassium permanganate in-situ chemical oxidation (ISCO) to treat chlorinated solvents using both re-circulation and direct inject as a means of application. Chlorinated solvent concentrations in groundwater were lowered from initial concentrations greater than 10,000 ppb to concentrations below 1,000 ppb.

Phase II ESA Portfolio, Statewide, FL. Project Manager for a Phase II ESA portfolio of 22 automotive repair facilities located across Florida. Duties included developing scope of works, managing staff, and subcontractors, conducting senior review of reports and developing client summaries. Areas of Concern investigated included in-ground lifts, oil-water separators, floor drains, former underground storage tanks, and offsite concerns. Project was successfully completed within the client's six-week due diligence period.

Phase I & II ESA, Golden Glades, FL. Oversaw and Conducted field activities and reporting for a Phase I/ II ESA of 55,000-acre former agricultural land for hydrological restoration by the South Florida Water Management District and the Comprehensive Everglades Restoration Program. Investigations included the grab and composite soil sampling of point source areas (storage, mixing and burn areas) and furrowed agricultural fields for pesticides, herbicides, and metals. Assessment data was used to determine ecological and human health risk exposure for the potential re-flooding of the area to restore natural hydraulic flow.

Compliance and Environmental Health and Safety Audits, AL, FL, GA, & SC. Conducted compliance and environmental health and safety audits for multiple manufacturing facilities including, a clay and sand mining facility, ply-wood plant, vending machine plant, bio-pharmaceutical research and development facility, optical lens manufacture, roofing tile plants, waste disposal and incineration facilities, and medical supply warehouses.

Industrial Hygiene Investigations and Remediation, AL, CA, CO, FL, & NY. Project manager for several industrial hygiene studies related to asbestos, lead-based paint and dust, mold assessments, indoor air quality assessments, and worker compliant health issues. Projects included initial assessments, sampling, development of work plans, bid solicitation, and abatement/ remediation.

FDIC Peer Reviews, Nationwide. Authored environmental review memorandums on behalf of the FDIC for properties that were in Receivership. Properties were located nationwide and included review of third party Phase I ESAs and/or checklist, review and confirmation special resources; such as protected species, historic properties, sole source aquifers, covered properties under the Coastal Barrier Systems Protection Act, and the National Wetland Inventory. Recommendations and findings were conveyed per FDIC guidelines.

Cellular Tower Network ESA and NEPA Assessments, Statewide, FL. Environmental Manager for the State of Florida telecommunications projects, which included a network of 100+ cellular towers across the state. Sites included new towers and co-locates at existing towers. Project was completed for major clients which included Sprint, M/A-COM, Harris Corporation, and SBA Communications and was done in conjunction with upgrading the State of Florida's emergency notification system. The ESA and National Environmental Policy Act (NEPA) Reports (including field work and agency contacts) were completed in accordance with FCC regulations 47 CFR - § 1.1307, Parts A and B.

SPCC Development & Compliance, Nationwide. Prepared and implemented multiple SPCCs for rental car facilities, large automotive terminals, and port facilities per standards set in 40 CFR Part 112. Duties included developing new plans, updating existing plans, employee training, and evaluating existing site conditions for existing compliance.

UST Closure, FL, GA, KS, TN, WA and TX. Completed and managed UST tank closures per regulatory standards at automotive rental facilities, automotive dealerships, and service dealerships. Responsibilities included solicitation and management of subcontractors, oversight during the tank system closure, and successful completion and filing of the tank closure reports with the respective regulatory agencies.

Highlights

33 years of experience in environmental consulting
Soil and groundwater investigation and remediation
Quantitative hydrogeology
Environmental due diligence services (Phase I/II ESAs)
Indoor air quality assessments
Litigation support / expert witness
Forensic studies related to methane stray gas incidents *(characterization of thermogenic and biogenic gases using isotopic analyses)*

Experience Summary

At Partner Engineering and Science, Inc. (Partner), Mr. Newton serves as National Client Manager for several nationwide financial and real estate investment firms. In this capacity, he focuses on providing clients with high quality and timely assessments as part of their due diligence process. He is familiar with the reporting standards of due diligence requirements including: ASTM E1527-13 Standard, EPA's All Appropriate Inquiry (AAI), and New Jersey's Property Transfer Law known as Industrial Site Recovery Act (f/k/a Environmental Cleanup Responsibility Act). Mr. Newton has advised clients through the completion of Phase I Environmental Site Assessments, Environmental Transaction Screens, Phase II Subsurface Investigations,

Remedial Cost Estimates, Remediation Design, and Property Condition Assessments. He has extensive experience managing due diligence projects for the following types of nationwide and local clients:

- Residential Developers
- Commercial Developers
- Real Estate Brokers
- Local Governmental Entities
- REITS
- Private Equity Groups
- Financial Institutions
- Insurance Companies

In addition to due diligence assessments, Mr. Newton has also performed and managed Phase II site investigations, underground storage tank (UST) management and closure activities, remedial investigations, and cleanups under various regulatory programs. He has prepared and successfully implemented soil and groundwater remedial investigation, and remedial action work plans for the cleanup of petroleum and industrial facilities, gasoline service stations, dry cleaner facilities, and vacant and/or undeveloped properties. Management responsibilities included consulting clients, negotiating with regulatory agencies, and using innovative remedial technologies for cost-effective remedial actions at project sites.

Mr. Newton is also a Professional Geologist with 36 years of geological experience serving oil & gas, industrial, commercial, financial and real estate clients throughout the U.S. Mr. Newton's diverse experience in the fields of geology and hydrogeology includes designing and managing remedial investigations (RI); managing remedial design (RD) projects; hydrogeologic studies; design/installation of water production wells; providing litigation support and expert testimony; assisting clients with consent order negotiations; conducting borehole geophysical investigations and aquifer characterization studies. In addition, Mr. Newton has performed or managed well over 1,000 environmental site assessments for commercial, industrial and residential properties throughout the continental U.S. and Mexico. He has assisted oil & gas operators in the Marcellus Shale play with pre-drill water sampling programs, implementing emergency response actions related to stray gas events and incidental releases on shale gas pad sites. He has managed many projects for industrial clients under the Resource Conservation and Recovery Act (RCRA); the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA); and various state programs, such as Pennsylvania's Land Recycling Program (Act 2) and New Jersey Industrial Site Cleanup Act (ISRA). As a Petroleum Geologist prior to entering the environmental field, Mr. Newton was selected to serve on Texaco's Unitization Committee where he prepared technical exhibits and presented expert geological testimony on numerous occasions to the Louisiana Office of Conservation.

Project Experience

Environmental Due Diligence

Wells Fargo Bank (f/k/a First Fidelity, First Union and Wachovia). For the last 20 years, Mr. Newton has served as one of the principal environmental consultants for the Corporate Properties Group of Wells Fargo Bank located in Philadelphia. He has conducted or managed 100's of Phase I and Phase II Environmental Site Assessments (ESAs) on behalf of this client at sites throughout the U.S.

PGIM (f/k/a Prudential Real Estate Investors). As the Environmental Coordinator for PGIM, he is directly responsible for reviewing all work products related to due diligence portfolios nationwide. These project sites have ranged from Greenfield sites and to abandoned industrial properties. Many of these projects have involved Phase II investigations, radon testing, asbestos surveys, wetland delineation, and indoor air quality surveys.

ModSpace Corporation (f/k/a GE TIP). Mr. Newton reviews all proposals and reports associated with this national program. Work mostly consists of providing traditional due diligence services in connection with leasing new property for the storage of the trailers and conducting property exit assessments to determine if there were any environmental impacts related to the storage of these units.

Site Investigation and Remediation

CERCLA Site - Swope Oil & Chemical Company, Pennsauken, New Jersey. Mr. Newton served as the Principal Hydrogeologist for the RI/FS and the remedial design / action and other environmental services for implementation, operation and maintenance of a 16-well soil vapor extraction (SVE) system and implementation of semi-annual groundwater monitoring program at a New Jersey Superfund site. The two-acre industrial site is characterized by contaminated soil; unlined lagoon affected by hydrocarbons, phenols and metals; and impacted shallow groundwater. At the request of the Swope Technical Committee, he managed this CERCLA project from 1988 to 2008, including serving as Project Director on behalf of the Potentially Responsible Party (PRP) group for the remedial action program. He was instrumental in negotiating with the USEPA for the use of a phyto-cover to enhance the performance of the SVE system. During the RI, he identified up gradient and offsite sources of contamination that were contributing to the groundwater problem at the site, resulting in the elimination of the originally planned groundwater pump and treatment system, and the elimination of potential long-term liabilities associated with the contamination of an adjacent public water supply well. His efforts also led to a modification of the original ROD by gaining USEPA acceptance of a SVE system for soils in lieu of a full-scale RCRA-type cap, with several letters received from the PRP group commending his management and technical capabilities.

Former Celotex Facility - Northumberland County, Pennsylvania. Mr. Newton served as the Principal Hydrogeologist for the Remedial Investigation and Cleanup Plan for the former Celotex facility in Northumberland County, Pennsylvania. Work included: Phase I Environmental Site Assessment; Phase II work and subsequent RI in accordance with applicable PADEP Act 2 Technical Regulations; asbestos and lead–based paint surveys; interim storm water control measures; and preparation of the Final Report. A Cleanup Plan was also prepared that focused on the southern 8-acre portion of the property, which is a portion of the larger 20-acre former Celotex facility. The County is planning on redeveloping the Site with a County Prison, which requires Act 2 relief of liability for Residential Use. The Cleanup Plan will attain the Residential Direct Contact Soil MSC with pathway elimination through the use of institutional and engineering controls. PADEP approved the Cleanup Plan on December 16, 2015.

CERCLA Site - Vineland Chemical Company Superfund Site, Vineland, New Jersey. Mr. Newton served as Principal Hydrogeologist for the pre-design groundwater investigation at the subject Superfund site. He was responsible for the preparation of the pre-design work plans, quality assurance plan and health and safety plan. The purpose of the pre-design study was to further characterize groundwater quality conditions and to identify and delineate a regional semi-confining layer. HydroPunchTM samples were collected in the field and analyzed for VOCs and arsenic (total and dissolved). In addition, Mr. Newton developed a work plan for the geophysical logging programs, which were approved by the USEPA Region 2 and the USACE.

ISRA Site – Former Bendix Facility, Eatontown, New Jersey. Mr. Newton served as interim Project Manager for a former manufacturing plant. The primary activity at the Site involved the manufacture and assembly of parts and components used to produce power-generating systems for aerospace applications. During these historical operations, unlined waste pits located south and southwest of the production facilities were used

for disposal of spent oils and solvents. Mr. Newton assisted with the preparation of a work plan for the pilot test of an enhanced bioremediation technology to degrade the residual trichloroethene in groundwater.

Pennsylvania Act 2 - Olin Corporation, Nazareth, Pennsylvania. Mr. Newton managed the remedial investigation, risk assessment, and final reports for a 13-acre Brownfield site in Nazareth, Pennsylvania. He was responsible for development of site closure strategy and technical review of project documents, which were used to obtain a release of liability under Pennsylvania's Act 2 program.

RCRA RFI/CMS, Confidential Client, Chesterfield, Virginia. Mr. Newton managed the on-going RFI at a RCRA facility in Chesterfield, Virginia. He was instrumental in completing the delineation of impacted groundwater at the subject site and furthering the understanding of the hydrogeology of the facility. The work was performed under a facility-lead Agreement between client and USEPA Region III. Mr. Newton prepared an RFI work plan that was designed to be performed in a phased-approach for specific SWMUs, which included the collection of background soil. In addition, Mr. Newton developed a work plan that was submitted to USEPA Region 3 to complete the delineation of DNAPL that is present at the site.

RCRA Site - Former GE Facility, Lancaster, Pennsylvania. Mr. Newton managed the RFI/CMS project at an industrial facility in Lancaster, Pennsylvania. The RFI involved the evaluation of groundwater flow conditions in a fractured bedrock aquifer system and the design and implementation of a borehole geophysical logging program and packer tests to assess lithology and vertical groundwater flow conditions. Mr. Newton prepared progress reports throughout the RFI process that thoroughly documented the hydrogeological site conditions, which resulted in the USEPA granting approval to waive the requirement for an RFI report saving the client significant costs. He proposed and received USEPA approval for a corrective measure that included no further action with regard to soils and groundwater at the site, a reduction of long-term monitoring and utilization of an existing groundwater recovery system.

Pennsylvania Act 2 Remediation Project, Confidential Client, Chichester, Pennsylvania. Mr. Newton managed the field testing / sampling, risk assessment services and reporting for Act 2 Site Characterization and Cleanup Plan at vacant 50-acre site proposed as site of Chichester School District Site educational facility. The site was previously owned by a chemical company; contamination from pesticides was found in soil and groundwater in certain areas on site. Mr. Newton was responsible for developing / implementing Act 2 remediation strategy; preparing reports; providing cost estimates; providing QA/QC services; and regularly interacting with client and stakeholders. Mr. Newton assisted with the preparation of the Cleanup Plan and managed soil and sediment remediation in accordance with the Plan, which was approved by the PADEP in 2006. Quarterly groundwater and surface water sampling will be conducted to demonstrate attainment of groundwater and surface water remediation in accordance with the PADEP-approved Act 2 Cleanup Plan.

Honeywell International (f/k/a AlliedSignal), Morristown, New Jersey. Mr. Newton served as Project Manager for a RI/FS project in Morristown, New Jersey. He participated in all phases of the negotiations with the NJDEP to focus the scope of work to only known source areas. He evaluated the complex groundwater flow regime in glacial till and outwash sediments. Proposed no further action for groundwater based on a site-specific risk assessment and the continued use of a production well that eliminated the overall risk to offsite groundwater users.

Industrial Hygiene – Emergency Response

Hurricane Harvey Response. Partner conducted emergency response assessment actions in connection with the Hurricane Harvey event in southern Texas and Louisiana. The purpose of the assessment was to assist the Client in evaluating their modular units that may have experienced water intrusion/flooding associated with Hurricane Harvey. Partner mobilized four, two-man teams of industrial hygienists and environmental scientists to the Texas gulf coast region for a period of up to five weeks to assess over 500 modular units in the affected areas. Work was performed under difficult conditions as many areas of Houston and the surrounding areas were without electricity for several days and remained flooded. Partner's work included meeting with Client personnel to discuss specific health and safety requirements, preparing a health and safety plan, becoming familiar with the construction of the units to be able to identify key features on the modular units that may be impacted due to flooding or water intrusion, and field inspections.

Partner's project teams mobilized rapidly to the affected areas to perform the inspections of the units. The field work consisted of the following activities: site access coordination; visual observations of staining on the walls for evidence of the flood stage; review information from FEMA and other local authorities to assist with determining flood (water) levels; thermal imaging and direct read moisture probe assessment of the modular units to assess horizontal and vertical extent of wet building materials; inspection of structural features for evidence of flooding; levelness of the units; and recording the lat/long of the units (+/- 3 feet) using GPS to determine if the units moved during the flood event. Partner prepared daily reports of our findings using a spreadsheet, which along with the photos, were uploaded to Partner's SiteLynx program. Use of SiteLynx provided Client with real-time project information and a concise summary of our findings and observations.

Experience in Unconventional Shale Gas Plays

Confidential Oil & Gas Operator. Mr. Newton managed a stray gas project for an operator in Lycoming County, Pennsylvania. The objective of the study was in part, to distinguish the source (i.e. origin) of two different gases that were present in a gas well and two water wells, allegedly impacted by stray gas. Through the analysis of carbon and hydrogen isotope analyses of methane, a plot of the methane isotopes and ethane isotopes was prepared for the two affected wells. Because of the difference in the ethane isotopes between the two water wells, he successfully demonstrated that the two gases are from two different sources.

Confidential Oil & Gas Operator. Mr. Newton conducted a hydrogeologic study in an area of Bradford County, Pennsylvania to develop a conceptual site model for a stray gas event. As part of the study, Mr. Newton performed a fracture trace analysis, collected aqueous samples for isotope analysis, conducted a well survey, reviewed the local geology and designed a borehole geophysical program to develop a better understanding of the local geology and well construction details of the allegedly affected well.

Confidential Oil & Gas Operator. Mr. Newton served as Principal Hydrogeologist and independent third party consultant for a litigation case involving 11 plaintiffs in Susquehanna County who alleged that their water supply was impacted by stray gas. This work was performed under a PADEP Administrative Consent Order (ACO), which required samples to be collected bi-monthly for specific dissolved gas constituents. He was responsible for coordinating the water sampling with the Plaintiff's outside counsel and forwarding the laboratory reports to the client's outside counsel.

Confidential Oil & Gas Operator. Mr. Newton designed residential well replacement programs for several Marcellus Shale operators in Pennsylvania. Specifically, he utilized fracture trace analyses, borehole

geophysics, and packer tests to collect discrete groundwater samples for dissolved methane laboratory analyses in order to ensure the successful completion of the new water supply wells. In addition, short term step-drawdown tests were performed to ensure an adequate well yield and to properly size the submersible pumps. At one site, he designed a 'retro-fit' option for three existing residential wells that were allegedly affected by elevated methane concentrations. This work included the use of borehole geophysical logs, video logs and discrete groundwater samples. The retro fit option eliminated the need to drill a replacement well and allowed the homeowners to keep their original wells while reducing or eliminating the concentration of dissolved methane in groundwater without a treatment system, providing the client with a significant saving savings by eliminating long-term operation and maintenance of such a system.

Groundwater Resource Development

Mr. Newton's experience in groundwater resource development includes water supply projects and groundwater remediation systems. Several of the major projects where he served as Project Manager/Principal Hydrogeologist involved detailed hydrogeologic studies to identify potential locations for production wells at manufacturing facilities in Pennsylvania and New Jersey. These studies included fracture trace analyses, groundwater modeling, and installation of pilot test wells, borehole geophysics, and aquifer testing.

Confidential Fortune 500 Pharmaceutical Company. He designed and installed three high-capacity production wells (100 to 200-gallon per minute) in fractured bedrock, and conducted a 72-hour aquifer testing program, for a major pharmaceutical firm located in southeastern Pennsylvania. These wells served as both production well water and remedial wells for the plant-wide groundwater remediation system, and were permitted through the Delaware River Basin Commission.

Confidential Fortune 500 Industrial Company. Mr. Newton served as Project Manager for industrial clients involving water supply systems and hydrogeologic budget analyses (water balances). He designed and installed a pilot test well and production well for a Fortune 500 company located in northern New Jersey. The well was installed in a glacial outwash deposit that was delineated by Mr. Newton, in part through the analysis of borehole geophysical logs and geologic logs. The well was designed to yield 250 gallons per minute.

1 INTRODUCTION

1.1 PROJECT DESCRIPTION AND PURPOSE

This Drainage Report is provided in support of the Precise Plan of Design (PPD) submittal for the proposed Olive Grove Business Park in Rialto, California.

The project site is approximately 31.6 acres and is located along W Baseline Road, east of the existing intersection of W Baseline Road and N Fitzgerald Avenue. The site encompasses two proposed buildings with a total of 678,744 square feet of building footprint. The buildings will include office and warehouse space.

The project site is currently undeveloped. See **Figure 1-1** for Project Location Map.

This drainage report includes the hydrologic analysis for the existing and proposed conditions, storm drain sizing, as well as the analysis of the onsite underground chamber system used to detain peak flows and infiltrate the water quality design capture volume. Refer to the site-specific Water Quality Management Plan for water quality treatment and analysis.

Figure 1–1 Project Location Map

2 PROJECT SETTING

2.1 TOPOGRAPHY

The existing topography drains from the northwest to the southeast corner of the site (approximately ranges from elevation 1393 to 1360). Overland flows exit the site along the southern project boundary and flows are collected in the existing storm inlets along the northern side of West Baseline Road, immediately adjacent to the project

2.2 PRECIPITATION

Precipitation values for the hydrologic analysis were determined from site specific precipitation frequency estimates published online in the NOAA Atlas 14. For this site (Rialto, California) the 100-year, 1-hour storm precipitation depth of 1.67 inches was used in both the storm water flow and volume calculations. The 2-year 6-hour and 24-hour depths of 1.77 inches and 3.28 inches, and the 100-year 6-hour and 24-hour depths of 4.08 inches and 7.57 inches, respectively. **Appendix A** contains the site-specific tabular output from NOAA Atlas 14.

2.3 WATERSHED DESCRIPTION

The project is relatively flat (<2%) and the regional topography slopes to the southeast. The project site is part of a larger drainage area tributary to the San Bernardino County Flood Control District Cactus Basin System. Runoff from this project will discharge into the Cactus Basin System. The Cactus Basin System is a network of five detention basins that are located between Cactus Avenue and Ayala Drive. These facilities are owned, operated and maintained by San Bernardino County Flood Control District. Based on review of the existing topography and storm drain networks, the project site discharges into Cactus Basin #2 via curb inlets in Baseline Road.

2.4 SOIL TYPES

The type of soil and soil conditions are major factors affecting infiltration and resultant storm water runoff. The Natural Resources Conservation Service (NRCS) has classified soils into four general hydrologic soil groups for comparing infiltration and runoff rates. The groups are based on properties that influence runoff, such as water infiltration rate, texture, natural discharge and moisture condition. The runoff potential is based on the amount of runoff at the end of a long duration storm that occurs after wetting and swelling of the soil not protected by vegetation.

Per the “Planning-Level Preliminary Geotechnical Investigation” prepared by Geotechnical Professionals, Inc on October 2, 2019, soils encountered were primarily sand and silty sand with varying amounts of gravel and cobbles. Undocumented fills fairly consistent with the natural soils and small boulders were also encountered. Preliminary infiltration testing indicates infiltration rates of 4.4 in/hr and 4.9 in/hr onsite, meaning infiltration is potentially feasible for the proposed project. The NRCS Web Soil Survey indicate Tujunga and Hanford soils (HSG type A), which are consistent with the findings in the geotechnical investigation. See **Appendix A** for NRCS soil information and **Appendix J** for geotechnical report.

2.5 LAND USE

The project site is located within the Airport-Related Development of Rialto Airport Specific Plan and is designated as I-AR (Airport Related Development Industrial Area) land use, which includes uses for a mixture of professional office, light industrial, research and development, business park, light manufacturing, assembly, and related storage and support services uses.

2.6 GROUNDWATER

According to the "Planning-Level Preliminary Geotechnical Investigation" prepared by Geotechnical Professionals, Inc on October 2, 2019, groundwater was not encountered during explorations drilled to a maximum depth of 36 feet below ground surface. The report references that published data by the California Department of Water Resources indicates that groundwater is deeper than 400 feet below ground surface. See **Appendix J** for geotechnical report.

2.7 FEMA MAPPING

The project site is covered by Map Number 06071C8657H of the FEMA Flood Insurance Rate Map (FIRM) for San Bernardino County, California and Incorporated Areas. The City of Rialto, community number 060280, is included in this FIRM. None of the project area is within a FEMA–mapped special flood hazard area. The site is classified as Zone X, which is an area of minimal flooding. The effective FEMA map is dated August 28, 2008 and is provided in **Appendix B.**

3 SITE CONDITIONS

3.1 EXISTING SITE CONDITIONS

The site is located along Baseline Road approximately 360 feet east of N Fitzgerald Avenue and 1,320 feet west of N Cactus Avenue. Based upon survey and field observation, the flows from the northwest sheet flow to the southeast corner where flows are collected by existing curb inlets that discharge into Cactus Basin #2. The estimated existing Q100 flow from the project site to the Cactus Basin #2 is 48.39 cfs. Refer to the Existing Drainage Exhibit, included in **Appendix C.**

3.2 PROPOSED SITE CONDITIONS

Proposed site topography and storm drain routing creates four main drainage areas onsite. Runoff from each of the four drainage areas will surface flow to proposed storm drain inlets where it will be captured and conveyed to an underground chamber system for infiltration and detention. There are four underground chamber systems proposed onsite. Mitigated flows will be released through outlet structures with energy dissipation and will flow across the public right of way via curb outlets.

Kimley-Horn is proposing to reduce the allowable discharge of 48.39 cfs by 76% to mitigate flows and prevent the flooding of Baseline Road. Kimley-Horn has provided an alternate design for construction of a storm drain line within Baseline Road to discharge the mitigated flows via underground piping. This alternative will be pursued to reduce the underground infrastructure for the 100-year detention requirements. The alternative is provided in **Appendix K**. The remainder of onsite runoff adjacent to Baseline Road (DA 5) will be captured within landscape drains and will flow across the public right of way via curb outlets.

The site hydrologic basins were delineated based on the proposed grading. Refer to the Proposed Drainage Exhibit, included within **Appendix C**.

4 HYDROLOGIC ANALYSIS

4.1 METHODOLOGY

Runoff calculations were prepared using the Modified Rational Method and the methodology described in Section D of the San Bernardino County Hydrology Manual (August 1986). AES HydroWin software (San Bernardino module) was used to estimate time of concentration and 100-year peak flow rate generated from the existing/ pre-developed conditions (see **Appendix D**).

Unit hydrographs were prepared using the methodology described in Section E of the San Bernardino County Hydrology Manual to determine the 100-year storm water volume. AES HydroWin software (San Bernardino module) was used to estimate the 100-year flow rate (**Appendix E**) and the 100-year volume over a 24-hour period for the proposed condition (see **Appendix F**).

A stage-storage analysis in conjunction with the peak flow rates and volumes from AES was prepared for the purposes of sizing and analyzing the proposed underground chamber system. The stage-storage analysis and the hydrographs from AES were imported into PondPack to determine the required detained storage volume (100-year) to mitigate proposed flows equal to, or less than, existing conditions.

4.1.1 GEOMETRY

Drainage Areas were delineated for the project site's existing and proposed drainage conditions. Existing elevations, slopes and flow paths were established from the topography available at the time of this drainage study. Proposed elevations, slopes and flow paths were based on the proposed site grading plan. These hydrologic parameters are shown for existing and proposed conditions on Drainage Exhibits in **Appendix C**.

4.1.2 INTENSITY AND TIME OF CONCENTRATION

Rainfall depths were manually input into AES based on the NOAA Atlas 14 rainfall depths shown in **Appendix A**. The existing and proposed conditions time of concentrations were calculated within AES given each drainage area's characteristics.

The time of concentration calculated from the Modified Rational Method was used to calculate the lag time necessary to develop the unit hydrographs within the AES software.

4.1.3 CURVE NUMBERS AND LOSS RATES

The Antecedent Moisture Condition (AMC) is a common index used to describe how saturated a soil is before the design storm occurs. AMC III, which assumes the watershed is already saturated, was used for the 100-year storm analysis. The San Bernardino County Hydrology Manual provides Curve Numbers of Hydrologic Soil-Cover for AMC II. These AMC II Curve Numbers can be converted to AMC III Curve Numbers manually by use of Table C.1 from the San Bernardino County Hydrology Manual. However, AES automatically does this conversion within the program analysis. The existing condition's land use consists of annual grass with fair ground cover. The proposed condition's land use is predominantly impervious with commercial landscaping.

Loss Rates were calculated by using the methodology presented in Section C.6 of the San Bernardino County Hydrology Manual. The Loss Rate calculation is a function of the Curve Number, Initial Abstraction and 24-hour rainfall depth, and was used to develop the unit hydrographs.

4.2 HYDROLOGIC RESULTS

Rational Method hydrologic results are summarized below for the existing conditions in **Table 4-1**. Refer to **Appendix D** and **Appendix E** for the existing and proposed conditions hydrology analysis respectively.

Table 4–1 Existing Conditions Modified Rational Method Hydrology Results Summary

Existing Conditions Rational Method Onsite Flow Rate (CFS)			
	DA 1	DA 2	Total
Total Tributary Area (AC)	19.2	12.4	31.6
100-Year Storm Event	30.54	17.85	48.39

Below, results shown in **Table 4-2**, are the proposed conditions peak flow rate from the AES modified rational method analysis.

Table 4–2 Proposed Unmitigated Conditions Modified Rational Method Hydrology Results Summary (Unmitigated)

Proposed Unmitigated Conditions Modified Rational Method Onsite Flow Rate (CFS)						
	DA 1	DA 2	DA 3	DA 4	DA 5	*Total*
Tributary Area (AC)	*6.5*	*9.6*	*5.9*	*8.4*	*1.2*	***31.6***
100 Year Storm Event	22.31	27.15	21.30	27.55	*2.02*	***100.33***

5 WATER QUALITY AND LOW IMPACT DEVELOPMENT REQUIREMENTS

5.1 STORMWATER MITIGATION

5.1.1 STORMWATER TREATMENT

The proposed project will provide water quality by means of infiltration. The required Design Capture Volume will be infiltrated fully within the proposed underground chamber systems. Refer to site-specific Water Quality Management Plan for water quality treatment and analysis. Sediment rows are included in each underground chamber system for pretreatment prior to infiltration. It is critical to minimize compaction and protect areas designated for water quality to ensure the effectiveness of the underground infiltration systems.

5.1.2 STORMWATER MAINTENANCE

Stormwater facilities require routine maintenance to operate efficiently. It is recommended that facilities be inspected prior to the rainy season (fall) and after each runoff producing storm event. Sediment and debris shall be removed from the system to maintain the system's effectiveness. The underground detention facilities shall be routinely inspected, and sediment/debris build up removed to maintain efficient operation of each facility.

6 HYDRAULICS ANALYSIS

6.1 UNDERGROUND DETENTION

6.1.1 UNDERGROUND DETENTION STANDARDS

The proposed underground detention facility was designed using the methodology described in San Bernardino County's Technical Guidance Document for Water Quality Management Plans. This document states that:

- The retained volume must be drawn down within 48 hours after the basin is filled.
- An emergency overflow pipe to control excess flows must be provided.

To prevent the flooding of Baseline Road in the 100-year storm event, the project proposes to detain and infiltrate a greater volume than required to meet predevelopment conditions. BMP 1 and 4, located along the southern boundary of the project, are designed as detention basins to mitigate outflows. Overflows exceeding the combined calculated flooding threshold of 12 cfs from BMP 1 and 4 are then routed to BMP 2 and 3, respectively, for full infiltration.

To reduce the underground basin volumes, Kimley-Horn is proposing an alternate storm drain connection along Baseline Road to allow the project to discharge equal to the predevelopment conditions. This alternative is shown in **Appendix K**.

6.1.2 UNDERGROUND DETENTION ANALYSIS

A basin inflow hydrograph was created using AES computer software for the 100-year storm event. The resulting hydrograph was manually imported into the PondPack computer software to use for the underground detention routing calculations. Per the Preliminary Geotechnical Investigation, measured infiltration rates onsite were averaged to 4.65 in/hr. A safety factor of 3.0 was assigned based on the San Bernardino County guidelines. The underground detention facilities were designed by applying the effective infiltration at a constant rate.

6.1.3 UNDERGROUND DETENTION RESULTS

The proposed underground detention facilities will provide detention for the delta 100-year volume as discussed in **Section 6.1.1** above. See underground detention routing calculations in **Appendix G** prepared with the PondPack Computer program. The analysis was performed using the 100-year hydrograph to achieve the required detention storage volume.

Mitigated flows from BMP 1 and BMP 4 will discharge via outlet structure and under sidewalk drains (see **Section 6.2.3** for further information). Overflows from BMP 1 and 4 are routed to BMP 2 and 3, respectively, and. See **Table 6-**1 for overflow routing, and **Table 6-2** for PondPack summary. Refer to **Appendix G** for all detention design details and analysis results from PondPack.

Table 6–1 100-Year Overflow Results Summary (PondPack)

Basin ID	Overflow (cfs)	Overflow Volume (CF)	Overflow Basin Routing
1	8.95	35,521	BMP 2
4	13.96	36,486	BMP 3
Total	22.91	72,007	

Table 6–2 100-Year Detention Results Summary (PondPack)

Basin ID	Underground Detention Inflow (cfs)	Underground Detention Outflow (cfs)	Detained Volume (CF)
1	20.88	4.49	53,688
2	35.17	0	125,249
3	31.12	0	95,359
4	26.99	5.10	62,661
Total	114.16	9.59	336,957

Based on the dead storage of each underground chamber system, the drawdown was calculated to ensure compliance with the 48-hour drawdown requirement. The results are shown below in **Table 6-3**.

Table 6–3 100-Year Detention Results Summary (PondPack)

Basin ID	Dead Storage (ft)	Drawdown (hr)
1	4.25	32.90
2	2.52	19.51
3	2.52	19.51
4	4.75	36.77

In order to mitigate the runoff created by proposed driveway and landscape areas as part of DA 5, the corresponding flow rates were subtracted from the total allowable discharge. The corresponding flow rate is shown in **Table 6-4**. A 5-minute time of concentration was assumed.

Table 6–4 Proposed Conditions Rational Method Hydrology Driveway and Landscape Results Summary

Proposed Conditions Rational Method Onsite Driveway and Landscape Runoff Flow Rate (CFS)	
	DA 5
Total Tributary Area	**1.2 acres**

100 Year Storm Event	**2.02 cfs**

Table 6-5 summarizes the total flows discharging from the project site.

Table 6–5 Mitigated 100-Year Discharge Compliance Comparison

DA1	DA2	DA3	DA4	DA5	Total Mitigated (cfs)	Total Pre-Development (cfs)	Percent Reduction (%)
4.49	0	0	5.10	2.02	11.61	48.39	76

6.2 HYDRAULIC ANALYSIS

6.2.1 STORM DRAIN PIPE CALCULATIONS

Storm drain pipe sizes have been preliminarily estimated using the AES normal depth calculation. The proposed strom drain will be modeled into a hydraulic modeling software during final design to size the proposed storm drain pipes. Hydraulic calculation output will be shown in **Appendix H** during final design.

6.2.2 INLET CALCULATIONS

Proposed storm drain inlets will be sized using FlowMaster during final design. Calculation output will be shown in **Appendix I.**

6.2.3 SPILLWAY

Mitigated discharge from the proposed underground chamber systems will be conveyed by underground storm drain to the southern property boundary where it will discharge through outlet structures with energy dissipation. Curb outlets are proposed to convey overflow across the public right of way. See **Appendix I** for calculations.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 9/9/2019 at 7:56:02 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

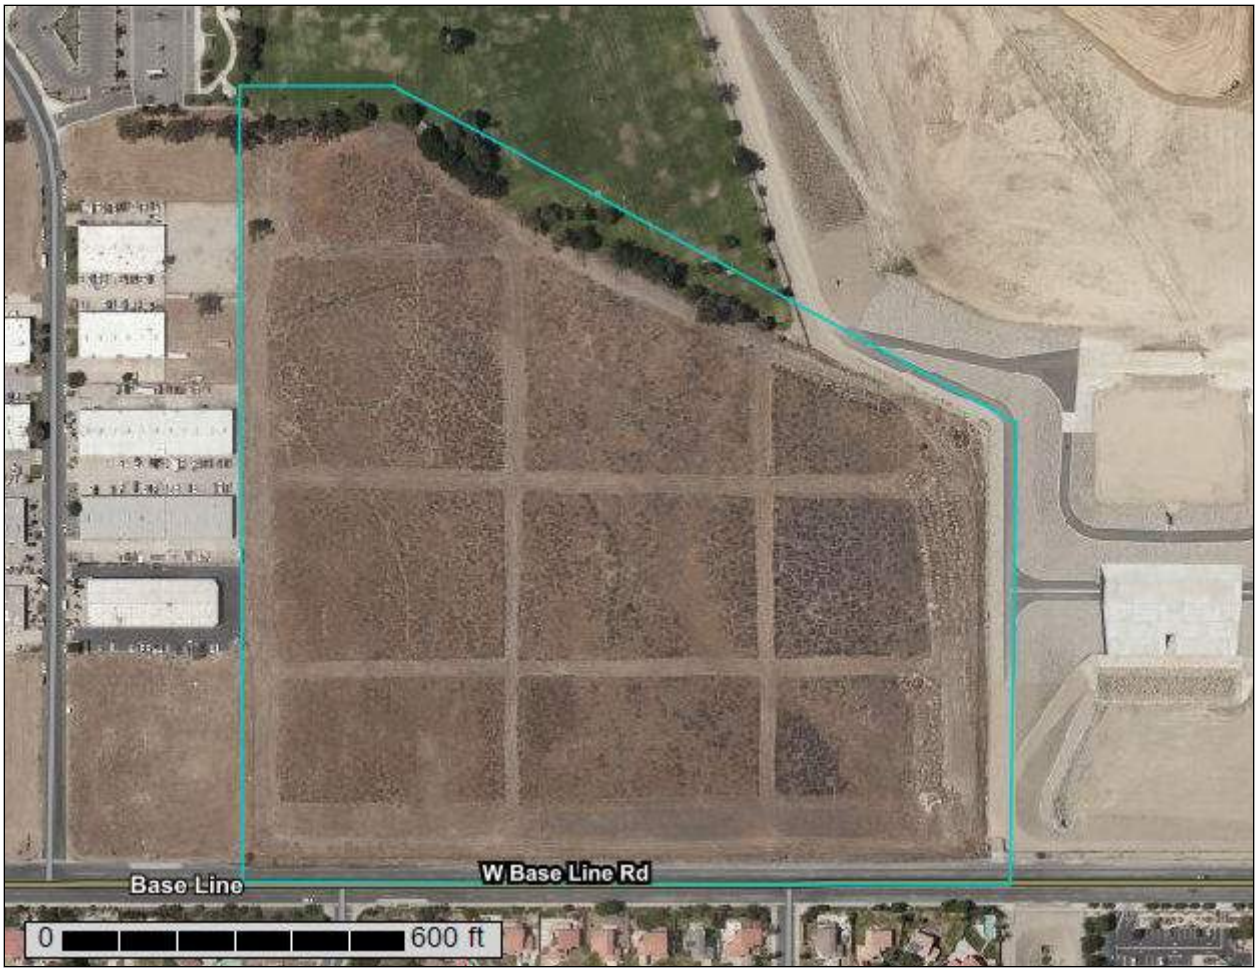
United States Department of Agriculture

NRCS

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for San Bernardino County Southwestern Part, California



November 19, 2019

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: San Bernardino County Southwestern Part, California
Survey Area Data: Version 11, Sep 16, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however,

onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

San Bernardino County Southwestern Part, California

HaC—Hanford coarse sandy loam, 2 to 9 percent slopes

Map Unit Setting

National map unit symbol: hck3
Elevation: 150 to 900 feet
Mean annual precipitation: 10 to 20 inches
Mean annual air temperature: 63 degrees F
Frost-free period: 250 to 280 days
Farmland classification: Prime farmland if irrigated

Map Unit Composition

Hanford and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Hanford

Setting

Landform: Alluvial fans
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium derived from granite

Typical profile

H1 - 0 to 12 inches: sandy loam
H2 - 12 to 60 inches: fine sandy loam

Properties and qualities

Slope: 2 to 9 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): High (1.98 to 5.95 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Rare
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: Moderate (about 7.8 inches)

Interpretive groups

Land capability classification (irrigated): 2e
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: A
Hydric soil rating: No

Minor Components

Greenfield, sandy loam

Percent of map unit: 10 percent
Hydric soil rating: No

Tujunga, loamy sand
Percent of map unit: 5 percent
Hydric soil rating: No

TvC—Tujunga gravelly loamy sand, 0 to 9 percent slopes

Map Unit Setting
National map unit symbol: hcl2
Elevation: 10 to 1,500 feet
Mean annual precipitation: 10 to 25 inches
Mean annual air temperature: 59 to 64 degrees F
Frost-free period: 250 to 350 days
Farmland classification: Not prime farmland

Map Unit Composition
Tujunga and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Tujunga

Setting
Landform: Alluvial fans
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium derived from granite

Typical profile
H1 - 0 to 36 inches: gravelly loamy sand
H2 - 36 to 60 inches: gravelly sand

Properties and qualities
Slope: 0 to 9 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Somewhat excessively drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High to very high (5.95 to 19.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Rare
Frequency of ponding: None
Available water storage in profile: Low (about 3.8 inches)

Interpretive groups
Land capability classification (irrigated): 4s
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: A
Hydric soil rating: No

Minor Components

Unnamed

Percent of map unit: 5 percent
Landform: Drainageways
Hydric soil rating: Yes

Soboba, gravelly loamy sand

Percent of map unit: 5 percent
Hydric soil rating: No

Delhi, fine sand

Percent of map unit: 5 percent
Hydric soil rating: No

APPENDIX G

UNDERGROUND DETENTION ANALYSIS, PONDPACK RESULTS

Chamber Model	HS180		
Number of Chambers	264		
Number of Endcaps	8		
Stone Voids (porosity)	40%		
Base of Stone Elevation	1364	ft	
Recommended Stone Below Chambers*	9	in.	**Include perimeter stone?** Yes
Recommended Stone Above Chambers*	30	in.	**Standard or metric?** Standard

Area of System** 14412 sq.ft

***Area must be greater than:* **14178.92 sq.ft**

**The minimum stone below and above the chambers to be determinded by the design engineer.*

Chamber Model	HS180		
Number of Chambers	291		
Number of Endcaps	10		
Stone Voids (porosity)	40%		
Base of Stone Elevation	1356.25	ft	
Recommended Stone Below Chambers*	24	in.	**Include perimeter stone?** Yes
Recommended Stone Above Chambers*	12	in.	**Standard or metric?** Standard

Area of System** **15806** sq.ft

***Area must be greater than:* **15509.67 sq.ft**

**The minimum stone below and above the chambers to be determinded by the design engineer.*

Subsection: Pond Routed Hydrograph (total out)
Label: BMP 4 (OUT)

Peak Discharge	19.05 ft³/s
Time to Peak	16.250 hours
Hydrograph Volume	94,880.122 ft³

HYDROGRAPH ORDINATES (ft³/s)
Output Time Increment = 0.050 hours
Time on left represents time for first value in each row.

APPENDIX J

GEOTECHNICAL REPORT

GEOTECHNICAL PROFESSIONALS INC.

October 2, 2019

Oakmont Rialto Olive Grove, LLC
c/o Crow Holdings Industrial
527 W. 7th Street, Suite 308
Los Angeles, California 90014

Attention: Mr. Jared Riemer

Subject: Planning-Level Preliminary Geotechnical Investigation
Proposed Olive Grove Business Park
North Side of Baseline Road, ¼ mile East of N. Ayala Drive
Rialto, California
GPI Project No. 2963.I

Dear Mr. Riemer:

In accordance with your request, this report presents the results of our planning-level preliminary geotechnical investigation for the proposed business park at the subject site. The purpose of our investigation was to characterize the geotechnical conditions at the site with respect to the feasibility of the development and to provide preliminary recommendations for earthwork and design of foundations, floor slabs and pavements.

INTRODUCTION

The project site is a 31.6 acre parcel located on the north side of Baseline Road, ¼ mile east of North Ayala Drive, in Rialto, California. The location of the site is shown on the Site Location Map, Figure 1. The approximate limits of proposed development are shown on the Site Plan, Figure 2.

The proposed project will consist of two industrial warehouse buildings approximately 416,106 and 235,896 square feet in size. The buildings are anticipated to be tall one-story buildings of concrete tilt-up construction and will likely include some office areas with mezzanines. Column loads are not available at this time; however, we anticipate typical maximum column loads of 80 to 100 kips and wall loads of 6 to 8 kips per foot (dead plus live). Floor slabs will be supported on-grade with dock-high construction.

The finish floor elevation of the west building will slope downward from north to south at about 0.5% from approximate elevation 1383 feet to 1379 feet. The finish floor elevation of the east building will slope downward from north to south at the same gradient from approximate elevation 1378 feet to 1375 feet. We anticipate site grading to include cuts and fills on the order of approximately 10 feet to develop the two building pads.

5736 Corporate Avenue • Cypress, CA 90630 • (714) 220-2211 , FAX (714) 220-2122

Site improvements will also include asphalt and concrete pavements for automobiles, truck and trailer traffic, and fire access lanes, site walls and underground utilities. Stormwater infiltration basins are currently being evaluated and may consist of small open basins or subterranean chamber basins below paved areas.

SCOPE OF WORK

Our scope of work included review of published information, subsurface exploration, field infiltration testing, laboratory testing, engineering evaluations, and preparation of this planning-level preliminary geotechnical letter report.

Our field exploration program for this study consisted of four hollow stem auger borings, ten exploratory test pits, and two infiltration test wells. The borings were performed to depths of approximately 21½ to 36½ feet below existing grade. The test pits were performed to depths of approximately 5 feet below existing grade, and the percolation wells were installed at depths of approximately 16 and 17 feet below existing grades. A description of field procedures and logs of the borings and test pits are presented in the attached Appendices A and B. The procedures and results of the infiltration tests are discussed in this report. The approximate locations of the subsurface explorations and infiltration test wells are shown on the Site Plan, Figure 2.

Laboratory soil tests were performed on selected representative samples as an aid in soil classification and to evaluate the engineering properties of the soils. The geotechnical laboratory testing program included determinations of moisture content and dry density, fines content, shear strength, corrosivity and maximum density. Corrosivity screening tests were performed by HDR under subcontract to GPI. The results of the laboratory testing by GPI and HDR are presented in Appendix C.

Engineering evaluations were performed to provide planning-level recommendations and an assessment of seismic hazards. The results of our evaluations are presented in the remainder of the report.

SURFACE CONDITIONS

The project site is currently unoccupied and covered with short grass, bushes, and weeds. Scatter cobbles and boulders are visible at the ground surface. Historic aerial photographs indicate that the site has been previously used for agriculture prior to 1966. From 1966 to current, the site has been vacant. The site is bounded on the north by Jerry Eaves Park, to the east by a stormwater detention basin, to the west by a series of commercial buildings along North Fitzgerald Avenue, and to the south by Base Line Road.

The ground surface gently slopes downward from about elevation 1390 feet at the northwest corner of the site to elevation 1360 in the southeast corner of the site.

SUBSURFACE CONDITIONS

Our field investigation disclosed a subsurface profile consisting of undocumented fills overlying natural soils. Detailed descriptions of the subsurface conditions encountered in our boring and test pit explorations are provided in Appendix A and B. A brief summary of the subsurface conditions is provided below.

Undocumented fills were encountered to approximately 3½ feet below existing grade in one of the ten test pit explorations (Test Pit TP-7). Approximately 2 to 3 feet of fill was noted in each of the four borings drilled at the site; however, it was difficult to distinguish between the fill and underlying natural soils as they were very similar in material makeup. As such, we conclude that localized shallow fills should be anticipated. The fill materials encountered consisted of silty sands with varying amounts of gravels and few cobbles. The fills were generally medium dense and dry.

The natural soils consist predominately of sand and silty sand with varying amounts of gravel and cobbles, and gravels with varying amounts of sand and silt. Scattered boulders, up to 22 inches in diameter, were also encountered. In general, the native soils were medium dense to very dense and dry to slightly moist. Drilling was performed with small diameter equipment, making it difficult to identify potential cobbles and boulders. The natural soils have moderate to high strength and low to medium compressibility characteristics.

Groundwater was not encountered in our current explorations drilled to a maximum depth of 36 feet below ground surface. Published data by the California Department of Water Resources indicates groundwater is deeper than 400 feet below the ground surface.

CONCLUSIONS AND PRELIMINARY RECOMMENDATIONS

General

Based on the results of our investigation and experience with nearby, similar projects, it is our opinion that from a geotechnical engineering viewpoint, it is feasible to develop the site as proposed. We anticipate the proposed buildings and any appurtenant structures may be supported on shallow foundations underlain by engineered fill. The most significant geotechnical issues that will affect the design and construction of the proposed structures are summarized below:

- Undocumented fills were encountered to depths of up to 3½ feet below existing grade at the site. The fill soils are not considered to be suitable for direct support of foundations or floor slabs. If not removed in the planned excavations, we recommend removal and recompaction of the fill materials to provide uniform support of the planned improvements.

- The fill and native materials encountered had significant amounts of gravel, varying amounts of cobbles, and occasional boulders. The cobbles were generally up to 5 inches in diameter and occasionally up to 12 inches in diameter. The boulders encountered were up to 22 inches in diameter. On-site materials greater than 8 inches in diameter can be exported, crushed, or disposed of in windrows outside of the building pads.

- To provide uniform support for the planned buildings, the soils should be removed to a depth of at least 4 feet below the planned finished pad grade, 2 feet below the base of foundations, or 3 feet below existing grade, whichever is greater. Foundations for minor structures, such as site walls, should be underlain by at least 1 foot of properly compacted fill. Deeper removals may be required were unsuitable fill soils extend below the recommended overexcavation depth.

- Deeper overexcavation in the area of deep cuts may be desirable during rough grading in utility corridors to aid in excavating utility trenches with conventional equipment.

- The undisturbed native materials may be suitable for direct support of building foundations but may be undesirable for future excavations of footings or utility trenches. The recommendation for removals to extend to a depth of at least 4 feet below the finished pad grade for building pads materials is provided so that future excavations for utilities and footings can be made with conventional equipment.

- Because of the likely presence of cobbles and boulders, oversize material (greater than 8-inches) should be anticipated to be generated from site cuts. Special handling and/or crushing of oversize material will be required in order to use the material as compacted fill. On-site placement of the boulders in compacted fills will depend on the final site grades.

- Fills placed within 3 feet of the finished pad grade should not contain particles greater than 3 inches in diameter.

- The in-place fill and native soils are generally dry to slightly moist with moisture contents near or below optimum. These soils will require processing and moisture conditioning prior to replacement as properly compacted fill.

Our preliminary recommendations related to the geotechnical aspects of the development of the site are presented in the subsequent sections of this report.

Seismic Considerations

There are no known faults crossing or projecting through the site. The development does not lie within an Alquist-Priolo Earthquake Fault Zone as designated by the California Geologic Survey (CGS), which would require further studies of the fault. Therefore, ground rupture due to faulting is considered unlikely at this site. The closest fault to the site is the San Jacinto fault, which is mapped about 1.6 miles to the northeast.

The buildings are anticipated to be designed in accordance with the 2019 California Building Code (CBC) which will be in effect as of January 1, 2020. The available data indicates that Site Class D, (Stiff Soil) and possibly Site Class C (Very Dense Soil and Soft Rock), would likely be appropriate for use in design of structures. Site specific field testing, which can be performed during final design, should be performed to determine the Site Class.

Typical of Southern California, there is a potential that the site development will be subjected to strong ground motion during its life. The peak ground acceleration used in design for CBC 2019 will be based on the final determination of the Site Class during final design. For a magnitude 8.1 earthquake, we computed that the site could be subjected to a site modified peak ground acceleration (PGA_M) of 0.939g for Site Class D (determined with field testing) and 1.025g for Site Class C. These accelerations were computed using the mapped Maximum Considered Geometric Mean peak ground acceleration from ASCE 7-16 (ASCE, 2016) and the appropriate site coefficient (F_{PGA}). The predominant earthquake magnitude (8.1) was determined using a 2 percent probability of exceedance in a 50-year period, or an average return period of 2,475 years. The structural design will need to incorporate measures to mitigate the effects of strong ground motion.

The site is not located in a Seismic Hazards Zone for liquefaction nor earthquake induced landslide zones. Due to the dense nature of the natural soils, the potential for seismic induced dry-sand settlement is not expected to impact site development.

Foundations

The proposed buildings and minor structures, such as free standing walls and trash enclosures, may be supported on spread footings underlain by engineered fill. We anticipate an allowable net bearing capacity for spread footings on the order of 4,000 pounds per square foot (psf) for building foundations and 2,500 psf for minor structure foundations underlain properly compacted fill. Settlement of the foundations underlain by engineered fill are anticipated to be within tolerable limits.

For preliminary design, a coefficient of friction of 0.40 may be used for frictional resistance and an allowable lateral bearing pressure equal to an equivalent fluid weighing of 300 pounds per cubic foot may be used for the compacted fill soils; these values may be used in combination without reduction.

Earthwork

General

The earthwork anticipated at the project site will consist of clearing and grubbing, excavation of undocumented fills and loose natural or disturbed soils, cuts and fills to grade, subgrade preparation including moisture conditioning, and placement and compaction of fill.

Overexcavation and Placement of Fill

To provide uniform support for the planned buildings, the soils should be removed to a depth of at least 4 feet below the planned finished pad grade, 2 feet below the base of foundations, or 3 feet below existing grade, whichever is greater. Foundations for minor structures, such as site walls, should be underlain by at least 1 foot of properly compacted fill. Deeper removals may be required were unsuitable fill soils extend below the recommended overexcavation depth. If not removed in the planned excavations, we recommend removal and recompaction of the fill materials to provide uniform support of the planned improvements.

Deeper overexcavation in the area of deep cuts may be desirable during rough grading utility corridors to aid in excavating utility trenches with conventional equipment.

The fill and native materials encountered had significant amounts of gravel, varying amounts of cobbles and occasional boulders. The cobbles were generally up to 5 inches in diameter and occasionally up to 12 inches in diameter. The boulders encountered were up to 22 inches in diameter. On-site materials greater than 8 inches in diameter can be exported, crushed, or disposed of in windrows outside of the building pads.

Because of the likely presence of cobbles and boulders, oversize material (greater than 8-inches) should be anticipated to be generated from site cuts. Special handling and/or crushing of oversize material will be required in order to use the material as compacted fill. On-site placement of the boulders in compacted fills will depend on the final site grades.

The undisturbed native materials may be suitable for direct support of building foundations but may be undesirable for future excavations of footings or utility trenches. The recommendation for removals to extend to a depth of at least 4 feet below the finished pad grade for building pads materials is provided so that future excavations for utilities and footings can be made with conventional equipment.

Fills placed within 3 feet of the finished pad grade should not contain particles greater than 3 inches in diameter.

After the recommended removals are complete, the exposed subgrade soils should be scarified to a depth of 8 inches, moisture-conditioned, and compacted to at least 90 percent

of the maximum dry density in accordance with ASTM D 1557. If the subgrade is evaluated by our field representative to consist of relatively undisturbed and dense native materials containing gravel and cobbles, scarification of the subgrade may be waived.

Fill soils should be placed in horizontal lifts, moisture-conditioned, and mechanically compacted to at least 90 percent of the maximum dry density in accordance with ASTM D1557.

The moisture content of the existing near surface soils was dry to slightly moist and generally below optimum. Moisture conditioning will be required during grading and consideration should be given to prewatering the site prior to starting earthwork. The moisture content of the fill materials should be between optimum and 2 percent over optimum moisture conditions at the time of compaction and the soils should not be allowed to dry out prior to covering with concrete or additional fill.

Materials for Fill

The on-site soils are, in general, suitable for use as compacted fill, with the exception of oversized materials. Existing on-site soils to be used as fill should be free of debris and any pieces larger than 8 inches in greatest dimension. Imported material and fills placed within 3 feet of the finished building pad grades should not contain particles greater than 3 inches in diameter. On-site materials greater than 8 inches in diameter can be exported, crushed, or disposed of in windrows outside of the building pads.

Soils used as retaining wall backfill should be granular (contain no more than 40 percent fines - portion passing No. 200 sieve) and non-expansive (E.I. less than 20). Such materials are anticipated to be available on-site. Imported fill material should be predominately granular and non-expansive as defined above.

Walls Below Grade

Although permanent retaining walls are not anticipated, preliminary lateral earth pressures for use in conceptual design of walls below grade are provided below:

Wall Condition	Equivalent Fluid Pressure
Cantilever walls with level, drained backfill comprised of granular soils or the undisturbed natural soils (Static Active Pressure Condition)	40 pcf (1)
Restrained basement walls with drained conditions (Static At-Rest Pressure Condition)	60 pcf (1)
Additional lateral pressure increases for seismic loading Active Pressure Condition: At-rest Pressure Condition:	 33 pcf 13 pcf
Surcharge Pressures	See below.

Note (1) does not include hydrostatic pressures or seismic earth pressures.

Walls subject to surcharge loads should be designed for an additional uniform lateral pressure equal to one-third and one-half the anticipated surcharge pressure for unrestrained and restrained walls, respectively. In addition to the recommended earth pressure, the upper 10 feet of the walls adjacent to the streets should be designed to resist a uniform lateral pressure of 100 pounds per square foot, acting as a result of an assumed 300 pound per square foot surcharge behind the shoring due to normal street traffic.

Concrete Floor Slabs

Concrete floor slabs supported at grade are anticipated to be underlain by engineered fill following overexcavation and recompaction or near surface unsuitable fill and natural soils. A moisture vapor retarder should be placed under slabs that are to be covered with moisture-sensitive floor coverings.

Pavements

Based on an assumed R-value of 45 and using the California Division of Highways Design Method, the following preliminary pavement sections have been developed for various levels of traffic.

PAVEMENT AREA	TRAFFIC INDEX	SECTION THICKNESS (inches)	
		ASPHALT CONCRETE	AGGREGATE BASE COURSE
Asphalt Concrete			
Auto Parking Stalls	4	3	4
Circulation Drives	5	3	4
Truck Drives	6	3	6
Heavy Truck Drives	7	4	6
Portland Cement Concrete		**PCC(1)**	
Auto Parking Stalls	4	6	0
Circulation Drives	5	6.5	0
Truck Drives	6	7	0
Heavy Truck Drives	7	7	0
	8	7.5	0

(1) Note: PCC pavement section can be reduced by ½ inch if underlain by 4 inches of aggregate base.

The pavement subgrade and the base course material should be compacted to at least 95 percent of the maximum dry density (ASTM D 1557). Testing of the subgrade soils should be performed during design and following rough grading to confirm and update the recommended pavement sections based on Traffic Indexes provided by the Civil Engineer.

Corrosion

Based on laboratory testing by HDR (included in Appendix C of this report) the site soils are considered to be mildly corrosive to concrete and ferrous metals. Based on the test results, foundation concrete and other concrete in contact with site soils should conform to the requirements outlined in ACI 318-14, Section 19.3 for a negligible level of soluble sulfate exposure for soil (Exposure Class S0). According to the American Concrete Institute (ACI) 318-14, Table 19.3.1.1, the Exposure Class for corrosion protection of reinforcement are "C0" if "concrete is dry or protected from moisture", and "C1" if "concrete is exposed to moisture but not to an external sources of chlorides".

The provided preliminary corrosion tests are only an indicator of potential soil corrosivity for the sample tested. GPI's scope of work did not include corrosion engineering. A corrosion engineer should be retained to evaluate the corrosion potential of the site to proposed improvements, to recommend further testing as required, and to provide specific corrosion mitigation methods appropriate for the project. Additional testing should be conducted during final design.

Percolation Test Wells

Test wells, P-1 and P-2 were, were installed in boreholes drilled using truck-mounted hollow-stem auger drill equipment at two of the preliminary infiltration basin locations. The locations of the test wells are shown on Figure 2. The wells consisted of 2-inch diameter PVC casing installed in an 8-inch diameter borehole. The casing was perforated in the lower 2 feet of the wells. Packing material around the slotted sections of the well casing consisted of #3 sand. The test wells P-1 and P-2 were constructed to depths of approximately 17½ and 16 feet, respectively, below existing grade in order to test the soils near the bottom elevations for two basins that were being considered at the time our field work was conducted. The percolation testing was performed in general accordance with the San Bernardino County guidelines for borehole infiltration tests.

The test wells were filled with water the day before testing and presoaked at least 15 hours. Prior to running the tests in the wells, we conducted the Sandy Soil Criteria Test by filling the test holes as described in the guidelines and taking measurements of the water levels. The Sandy Soil Criteria were achieved in both wells P-1 and P-2. Two consecutive measurements showed that at least 6 inches of water seeped away in less than 25 minutes, therefore the test was continued for at least 1 hour as described in the criteria. The results of the Sandy Soil Criteria Tests are shown on the table below.

The percolation testing was conducted as outlined in the Reference for 'sandy soils' for at least six consecutive 10-minute readings. The tests were performed in each well, measuring the drop in water level over the designated time increment, as appropriate for each location. The initial water heights in the test wells were on the order of 3 feet above the bottom of the test well. After each reading, the water level was raised to approximately the same height. Details of the percolation tests are presented in the attached Table 1, Borehole Infiltration Test Results.

The measured infiltration rates were calculated using the drop in water level over the test increment time and corrected using the Porchet Method. The final measured rates for each well, corrected as indicated above are presented in the following table and should be used with an appropriate factor of safety.

Infiltration Test Results Summary

TEST WELL	APPROXIMATE DEPTH OF TEST WELL (feet)	CORRECTED INFILTRATION RATE (in./hr.)
P-1	17.6	4.4
P-2	16.2	4.9

After completion of the infiltration testing, the well casings were removed, and the holes were backfilled with the on-site soils.

Based on the results of the tests, storm water disposal by infiltration into the shallow subsurface soils is anticipated to be technically feasible. The subsurface conditions encountered in the explorations across the site appear to be relatively uniform and comparable infiltration rates are anticipated in other areas of the site. During final design, additional explorations and infiltration testing should be conducted at the specific locations and depths of planned stormwater infiltration.

The Civil Engineer should evaluate the feasibility of surface infiltration using the rates provided above. Additional factors of safety in computing the design infiltration rate of the proposed infiltration BMP should be determined by the project Civil Engineer.

It should also be noted that the infiltration rates are for clean, clear water and do not include effects of sediment, fines, dissolved solids or other debris, as these materials will significantly reduce the infiltration rates of the subsurface soils. Prior to infiltration, water should be cleaned of sediment or other deleterious materials to help reduce the potential for clogging and reduced percolation rates. Should fines or suspended solids be permitted to enter the basin, reduced infiltration rates will result.

LIMITATIONS

The geotechnical investigation reported herein was performed for the exclusive use by Oakmont Rialto Olive Grove LLC and their consultants in evaluating the feasibility of constructing the proposed improvements. This report should not be used for evaluating the feasibility of developing the site for other uses or for the detailed design of the proposed project, because this report does not contain sufficient or appropriate information for such use.

Soil deposits may vary in type, strength, and many other important properties between points of exploration due to non-uniformity of the geologic formations or to man-made cut and fill operations. While we cannot evaluate the consistency of the properties of materials in areas not explored, the conclusions drawn in this report are based on the assumption that the data obtained in the field are reasonably representative of field conditions and are conducive to interpolation and extrapolation.

As noted previously, additional geotechnical investigations will be needed for design and construction. Furthermore, our recommendations were developed with the assumption that a proper level of field observation and construction review will be provided by a qualified geotechnical consulting firm during grading, excavation, and foundation construction. If design- and construction-phase geotechnical services are performed by others they must accept full responsibility for all geotechnical aspects of the project.

Our investigation and evaluations were performed using generally accepted engineering approaches and principles available at this time and the degree of care and skill ordinarily exercised under similar circumstances by reputable Geotechnical Engineers practicing in this area. No other representation, either express or implied, is included or intended in our report.

Respectfully submitted,
Geotechnical Professionals Inc.

APPENDIX A

APPENDIX A

EXPLORATORY BORINGS

The subsurface conditions for the site were investigated by drilling and sampling four exploratory borings. The borings were advanced to depths of 21½ to 36½ feet below the existing ground surface. The approximate locations of the explorations are shown on the Site Plan, Figure 2.

The exploratory borings were drilled using truck-mounted hollow-stem auger drill equipment. Relatively undisturbed samples were obtained using a brass-ring lined sampler (ASTM D 3550). The brass-rings have an inside diameter of 2.42 inches. The ring samples were driven into the soil by a 140-pound hammer dropping 30 inches. The number of blows needed to drive the sampler into the soil was recorded as the penetration resistance.

At selected locations, disturbed samples were obtained using a split-spoon sampler by means of the Standard Penetration Test (SPT, ASTM D 6066). The spoon sampler was driven into the soil by a 140-pound hammer dropping 30 inches, employing the “free-fall” hammer described above. After an initial seating drive of 6 inches, the number of blows needed to drive the sampler into the soil a depth of 12 inches was recorded as the penetration resistance. These values are the raw uncorrected blow counts.

The field explorations for the investigation were performed under the continuous technical supervision of GPI's representative, who visually inspected the site, maintained detailed logs of the borings, classified the soils encountered, and obtained relatively undisturbed samples for examination and laboratory testing. The soils encountered in the borings were classified in the field and through further examination in the laboratory in accordance with the Unified Soils Classification System. Detailed logs of the borings are presented in Figures A-1 through A-4 in this appendix. Upon completion of the sampling of hollow-stem auger borings, the holes were backfilled with the excavated soils.

The boring locations were laid out in the field by measuring from existing site features. Ground surface elevations at the exploration locations were estimated from an A.L.T.A./N.S.P.S. Land Title Survey Sheet 1 of 1, dated 5/13/19, by Madole and Associates, Inc., and should be considered approximate.

EXPLORATORY TEST PITS

The subsurface conditions at the site were investigated by excavating and sampling ten exploratory test pits. The excavations were advanced to depths of approximately 5 feet below the existing ground surface using a backhoe. The locations of the explorations are shown on the Site Plan, Figure 2.

The field exploration for the investigation was performed under the continuous technical supervision of GPI's representative, who visually inspected the site, maintained detailed logs of the test pits, and classified the soils encountered. The soils encountered in the test pits were classified in the field and through further examination in the laboratory in accordance with the Unified Soils Classification System. Detailed logs of the explorations are presented in Figures B-1 to B-10 in this appendix.

The test pit locations were laid out in the field by measuring from existing site features. Ground surface elevations at the exploration locations were estimated from an A.L.T.A./N.S.P.S. Land Title Survey Sheet 1 of 1, dated 5/13/19, by Madole and Associates, Inc., and should be considered approximate.

APPENDIX C

APPENDIX C

LABORATORY TESTS

INTRODUCTION

Representative undisturbed soil samples and bulk samples were carefully packaged in the field and sealed to prevent moisture loss. The samples were then transported to our Cypress office for examination and testing assignments. Laboratory tests were performed on selected representative samples as an aid in classifying the soils and to evaluate the physical properties of the soils affecting foundation design and construction procedures. Detailed descriptions of the laboratory tests are presented below under the appropriate test headings. Test results are presented in the figures that follow.

MOISTURE CONTENT AND DRY DENSITY

Moisture content and dry density were determined from a number of the ring and SPT samples from the borings. The samples were first trimmed to obtain volume and wet weight and then were dried in accordance with ASTM D 2216. After drying, the weight of each sample was measured, and moisture content and dry density were calculated. Moisture content and dry density values are presented on the boring logs in Appendix A.

PERCENTAGE PASSING NO. 200 SIEVE

Select soil samples were dried, weighed, soaked in water until individual soil particles were separated, and then washed on the No. 200 sieve. That portion of the material retained on the No. 200 sieve was oven-dried and weighed to determine the percentage of the material passing the No. 200 sieve. For select samples, the retained material was then run through a standard set of sieves in accordance with ASTM D 422 to classify the coarse fraction of representative sample. A summary of the percentages passing the No. 200 sieve is presented below. The grain size distribution data obtained from the full sieve analyses are presented in Figure C-1.

BORING NO.	DEPTH (ft)	SOIL DESCRIPTION	PERCENT PASSING No. 200 SIEVE
B-1	0-5	Silty Sand (SM)	45
B-3	15	Sand with Silt (SP-SM)	7
B-3	20	Sand with Silt (SP-SM)	5
B-4	0-5	Silty Gravel with Sand (GM)	16
B-4	15	Sand with Silt (SP-SM)	6

DIRECT SHEAR

A direct shear test was performed on undisturbed samples in accordance with ASTM D 3080. The sample was placed in the shear machine, and pre-selected normal loads were applied. The samples were inundated, allowed to consolidate, and then were sheared to failure at a strain rate of 0.002 inches per minute. The tests were repeated on additional test specimens under increased normal loads. Shear stress and sample deformation were monitored throughout the test. The results of the direct shear test are presented in Figure C-2.

COMPACTION TEST

A maximum dry density/optimum moisture test was performed in accordance with ASTM D1557 on a representative bulk sample of the surficial soils. The test results are as follows.

BORING NO.	DEPTH (ft)	SOIL DESCRIPTION	OPTIMUM MOISTURE (%)	MAXIMUM DRY DENSITY (pcf)
B-3	0-5	Silty Sand (SM)	8	133

Prepared: January 2020

Project Owner's Certification

This Water Quality Management Plan (WQMP) has been prepared for **Oakmont Rialto Olive Grove, LLC** by Kimley-Horn and Associates. The WQMP is intended to comply with the requirements of the **City of Rialto, San Bernardino County** and the NPDES Areawide Stormwater Program requiring the preparation of a WQMP. The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with San Bernardino County's Municipal Storm Water Management Program and the intent of the NPDES Permit for San Bernardino County and the incorporated cities of San Bernardino County within the Santa Ana Region. Once the undersigned transfers its interest in the property, its successors in interest and the city/county shall be notified of the transfer. The new owner will be informed of its responsibility under this WQMP. A copy of the approved WQMP shall be available on the subject site in perpetuity.

"I certify under a penalty of law that the provisions (implementation, operation, maintenance, and funding) of the WQMP have been accepted and that the plan will be transferred to future successors."

Section 1 Discretionary Permit(s)

Form 1-1 Project Information

Project Name	Olive Grove Business Park				
Project Owner Contact Name:	Phil Prassas				
Mailing Address:	527 W. 7th Street Suite 308, Los Angeles, CA 90014	E-mail Address:	pprassas@chindustrial.com	Telephone:	949.478.1883
Permit/Application Number(s):	PPD 2019-XXXX		Tract/Parcel Map Number(s):	PM 20195	
Additional Information/ Comments:					
Description of Project:	The proposed Olive Grove Business Park is approximately 31.6 acres and encompasses two proposed buildings with a combined total of 678,744 square feet of building footprint with paved parking and access to the building. The buildings will include office and warehouse space. The 31.6-acre project site is located within the City of Rialto's Rialto Airport Specific Plan and is designated as Airport-Related Planned Industrial Development which is intended to provide office and light industrial space for airport-related or airport-dependent uses. The site is located along W Baseline Road, approximately 350 feet east of N Fitzgerald Avenue and 1,350 feet west of N Cactus Avenue. This project proposes four underground chambers on-site to capture and infiltrate the water quailty design capture volume and detain the 100-yr design storm runoff volume.				
Provide summary of Conceptual WQMP conditions (if previously submitted and approved). Attach complete copy.	N/A				

Section 2 Project Description

2.1 Project Information

This section of the WQMP should provide the information listed below. The information provided for Conceptual/ Preliminary WQMP should give sufficient detail to identify the major proposed site design and LID BMPs and other anticipated water quality features that impact site planning. Final Project WQMP must specifically identify all BMP incorporated into the final site design and provide other detailed information as described herein.

The purpose of this information is to help determine the applicable development category, pollutants of concern, watershed description, and long term maintenance responsibilities for the project, and any applicable water quality credits. This information will be used in conjunction with the information in Section 3, Site Description, to establish the performance criteria and to select the LID BMP or other BMP for the project or other alternative programs that the project will participate in, which are described in Section 4.

Form 2.1-1 Description of Proposed Project

1 Development Category (Select all that apply):

☐ Significant re-development involving the addition or replacement of 5,000 ft² or more of impervious surface on an already developed site	☒ New development involving the creation of 10,000 ft² or more of impervious surface collectively over entire site	☐ Automotive repair shops with standard industrial classification (SIC) codes 5013, 5014, 5541, 7532- 7534, 7536-7539	☐ Restaurants (with SIC code 5812) where the land area of development is 5,000 ft² or more
☐ Hillside developments of 5,000 ft² or more which are located on areas with known erosive soil conditions or where the natural slope is 25 percent or more	☐ Developments of 2,500 ft² of impervious surface or more adjacent to (within 200 ft) or discharging directly into environmentally sensitive areas or waterbodies listed on the CWA Section 303(d) list of impaired waters.	☒ Parking lots of 5,000 ft² or more exposed to storm water	☐ Retail gasoline outlets that are either 5,000 ft² or more, or have a projected average daily traffic of 100 or more vehicles per day

☐ Non-Priority / Non-Category Project *May require source control LID BMPs and other LIP requirements. Please consult with local jurisdiction on specific requirements*.

2 Project Area (ft2):	1,376,774 SF (31.6 AC)	**3** Number of Dwelling Units:	N/A	**4** SIC Code:	1541

5 Is Project going to be phased? Yes ☐ No ☒ *If yes, ensure that the WQMP evaluates each phase as a distinct DA, requiring LID BMPs to address runoff at time of completion.*

*Underground chambers will be built during Phase 1 and are adequately sized for all phases of the project. Stormwater from rough graded pads will be treated in desilting basins prior to being conveyed into the underground chambers. Drainage areas will remain the same during the entirety of the project.

6 Does Project include roads? Yes ☐ No ☒ *If yes, ensure that applicable requirements for transportation projects are addressed (see Appendix A of TGD for WQMP)*

2.2 Property Ownership/Management

Describe the ownership/management of all portions of the project and site. State whether any infrastructure will transfer to public agencies (City, County, Caltrans, etc.) after project completion. State if a homeowners or property owners association will be formed and be responsible for the long-term maintenance of project stormwater facilities. Describe any lot-level stormwater features that will be the responsibility of individual property owners.

Form 2.2-1 Property Ownership/Management

Describe property ownership/management responsible for long-term maintenance of WQMP stormwater facilities:

The project site, including the proposed building, paved and unpaved areas, onsite utilities and the BMPs included within this WQMP will be owned, operated and maintained by Oakmont Rialto Olive Grove, LLC. No transfer of infrastructure to public agencies is anticipated. Long-term stormwater facility maintenance will be conducted by Oakmont Rialto Olive Grove, LLC staff and/ or subcontracted maintenance staff.

2.3 Potential Stormwater Pollutants

Determine and describe expected stormwater pollutants of concern based on land uses and site activities (refer to Table 3-3 in the TGD for WQMP).

Form 2.3-1 Pollutants of Concern			
Pollutant	Please check: E=Expected, N=Not Expected		Additional Information and Comments
Pathogens (Bacterial / Virus)	E ☒	N ☐	Pollutant includes petroleum hydrocarbons
Nutrients - Phosphorous	E ☒	N ☐	Landscaping is proposed on-site
Nutrients - Nitrogen	E ☒	N ☐	Landscaping is proposed on-site
Noxious Aquatic Plants	E ☒	N ☐	Landscaping is proposed on-site
Sediment	E ☒	N ☐	Landscaping is proposed on-site
Metals	E ☒	N ☐	Brake dust from vehicular traffic
Oil and Grease	E ☒	N ☐	Vehicular Traffic in parking areas
Trash/Debris	E ☒	N ☐	Covered trash enclosure proposed on-site
Pesticides / Herbicides	E ☒	N ☐	Landscaping is proposed on-site
Organic Compounds	E ☒	N ☐	Landscaping is proposed on-site
Other:	E ☐	N ☐	
Other:	E ☐	N ☐	
Other:	E ☐	N ☐	
Other:	E ☐	N ☐	
Other:	E ☐	N ☐	

2.4 Water Quality Credits

A water quality credit program is applicable for certain types of development projects if it is not feasible to meet the requirements for on-site LID. Proponents for eligible projects, as described below, can apply for water quality credits that would reduce project obligations for selecting and sizing other treatment BMP or participating in other alternative compliance programs. Refer to Section 6.2 in the TGD for WQMP to determine if water quality credits are applicable for the project.

Form 2.4-1 Water Quality Credits

1 Project Types that Qualify for Water Quality Credits: *Select all that apply*

☐ Redevelopment projects that reduce the overall impervious footprint of the project site. [Credit = % impervious reduced]	Higher density development projects ☐ Vertical density [20%] ☐ 7 units/ acre [5%]	☐ Mixed use development, (combination of residential, commercial, industrial, office, institutional, or other land uses which incorporate design principles that demonstrate environmental benefits not realized through single use projects) [25%]	☐ Brownfield redevelopment (redevelop real property complicated by presence or potential of hazardous contaminants) [25%]
☐ Redevelopment projects in established historic district, historic preservation area, or similar significant core city center areas [10%]	☐ Transit-oriented developments (mixed use residential or commercial area designed to maximize access to public transportation) [20%]	☐ Infill projects (conversion of empty lots & other underused spaces < 5 acres, substantially surrounded by urban land uses, into more beneficially used spaces, such as residential or commercial areas) [10%]	☐ Live-Work developments (variety of developments designed to support residential and vocational needs) [20%]

NOT APPLICABLE

2 Total Credit % *(Total all credit percentages up to a maximum allowable credit of 50 percent)*

Description of Water Quality Credit Eligibility (if applicable)	N/A

Section 3 Site and Watershed Description

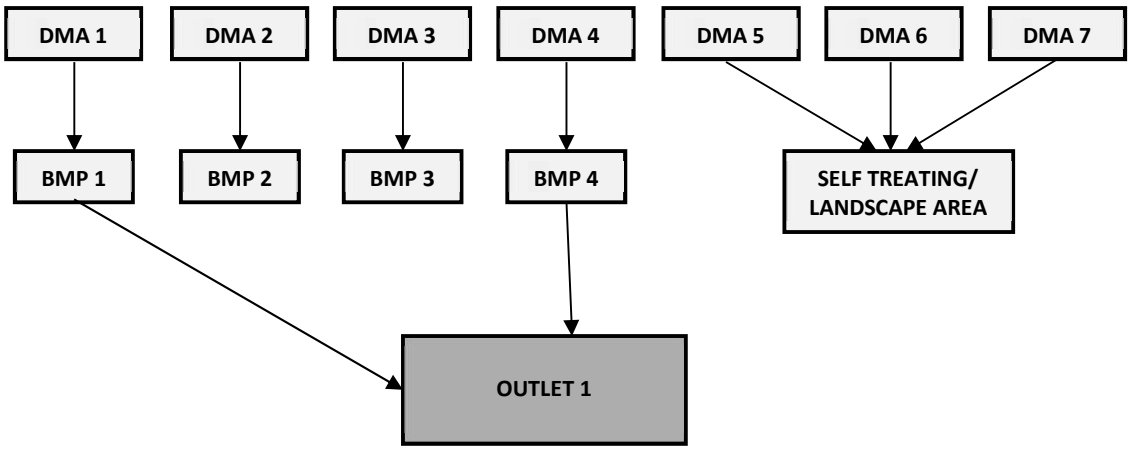
Describe the project site conditions that will facilitate the selection of BMP through an analysis of the physical conditions and limitations of the site and its receiving waters. Identify distinct drainage areas (DA) that collect flow from a portion of the site and describe how runoff from each DA (and sub-watershed DMAs) is conveyed to the site outlet(s). Refer to Section 3.2 in the TGD for WQMP. The form below is provided as an example. Then complete Forms 3.2 and 3.3 for each DA on the project site. ***If the project has more than one drainage area for stormwater management, then complete additional versions of these forms for each DA / outlet.***

Form 3-1 Site Location and Hydrologic Features

Site coordinates *take GPS measurement at approximate center of site*	Latitude 34˚07'22"	Longitude -117˚23'24"	Google Earth Pro

1 San Bernardino County climatic region: ☒ Valley ☐ Mountain

2 Does the site have more than one drainage area (DA): Yes☒ No☐ *If no, proceed to Form 3-2. If yes, then use this form to show a conceptual schematic describing DMAs and hydrologic feature connecting DMAs to the site outlet(s). An example is provided below that can be modified for proposed project or a drawing clearly showing DMA and flow routing may be attached*



Conveyance	Briefly describe on-site drainage features to convey runoff that is not retained within a DMA
DMA 1 to BMP 1	Stormwater from DMA 1 surface flows to onsite inlets where storm drains convey flows to the proposed underground chamber (BMP 1). The water quality volume is infiltrated into the ground and mitigated flows will be released through outlet structures with energy dissipation and will flow across the public right of way via curb outlets. Overflows from DMA 1 are routed to BMP 2 for full infiltration.

DMA 2 to BMP 2	Stormwater from DMA 2 surface flows to onsite inlets where storm drains convey flows to the proposed underground chamber (BMP 2). Overflows from DMA 1 are piped to BMP 2. The 100 year storm event for DMA 2 and overflows from DMA 1 are fully infiltrated with a 0 cfs mitigated discharge.
DMA 3 to BMP 3	Stormwater from DMA 3 surface flows to onsite inlets where storm drains convey flows to the proposed underground chamber (BMP 3). Overflows from DMA 4 are piped to BMP 3. The 100 year storm event for DMA 3 and overflows from DMA 4 are fully infiltrated with a 0 cfs mitigated discharge.
DMA 4 to BMP 4	Stormwater from DMA 4 surface flows to onsite inlets where storm drains convey flows to the proposed underground chamber (BMP 4). The water quality volume is infiltrated into the ground and mitigated flows will be released through outlet structures with energy dissipation and will flow across the public right of way via curb outlets. Overflows from DMA 4 are routed to BMP 3 for full infiltration.

Form 3-2 Existing Hydrologic Characteristics for Drainage Areas

For Drainage Area 1's sub-watershed DMA, provide the following characteristics	DA 1	DA 2		
1 DMA drainage area (ft^2)	837,223	540,144		
2 Existing site impervious area (ft^2)	0	0		
3 Antecedent moisture condition *For desert areas, use http://www.sbcounty.gov/dpw/floodcontrol/pdf/20100412_map.pdf*	3	3		
4 Hydrologic soil group *Refer to Watershed Mapping Tool – http://sbcounty.permitrack.com/WAP*	A	A		
5 Longest flowpath length (ft)	1347	1373		
6 Longest flowpath slope (ft/ft)	0.018	0.019		
7 Current land cover type(s) *Select from Fig C-3 of Hydrology Manual*	67	67

Section 4 Best Management Practices (BMP)

4.1 Source Control BMP

4.1.1 Pollution Prevention

Non-structural and structural source control BMP are required to be incorporated into all new development and significant redevelopment projects. Form 4.1-1 and 4.1-2 are used to describe specific source control BMPs used in the WQMP or to explain why a certain BMP is not applicable. Table 7-3 of the TGD for WQMP provides a list of applicable source control BMP for projects with specific types of potential pollutant sources or activities. The source control BMP in this table must be implemented for projects with these specific types of potential pollutant sources or activities.

The preparers of this WQMP have reviewed the source control BMP requirements for new development and significant redevelopment projects. The preparers have also reviewed the specific BMP required for project as specified in Forms 4.1-1 and 4.1-2. All applicable non-structural and structural source control BMP shall be implemented in the project.

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N1	Education of Property Owners, Tenants and Occupants on Stormwater BMPs	☒	☐	Property owner will familiarize himself/ herself with the education materials provided within this WQMP and educate tenants and employees.
N2	Activity Restrictions	☒	☐	No outdoor work areas, processing, storage or wash area proposed.
N3	Landscape Management BMPs	☒	☐	Irrigation must be consistent with the City's Water Conservation Ordinance. Fertilizer and pesticide usage will be consistent with County Management Guidelines for Use of Fertilizers and Pesticides.
N4	BMP Maintenance	☒	☐	BMP maintenance, implementation schedules, and responsible parties are included within this WQMP.
N5	Title 22 CCR Compliance (How development will comply)	☐	☒	Not Applicable – No hazardous waste onsite.
N6	Local Water Quality Ordinances	☐	☒	Not Applicable
N7	Spill Contingency Plan	☒	☐	Owner will have a spill contingency plan based on site needs.
N8	Underground Storage Tank Compliance	☐	☒	Not Applicable – No underground storage tank proposed onsite.
N9	Hazardous Materials Disclosure Compliance	☐	☒	Not Applicable – No hazardous materials onsite.

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N10	Uniform Fire Code Implementation	☒	☐	Owner will comply with Article 80 of the Uniform Fire Code enforced by the fire protection agency.
N11	Litter/Debris Control Program	☒	☐	Owner to implement litter debris control program to provide during regularly scheduled maintenance.
N12	Employee Training	☒	☐	Owner to ensure tenants are familiar with onsite BMPs and the associated maintenance required. Owner will check with City and County at least once a year to obtain new or updated education materials and provide these materials to tenants. Employees shall be trained to clean up spills and participate in ongoing maintenance. The WQMP requires bi-annually employee training and training for new hires within 2 months.
N13	Housekeeping of Loading Docks	☒	☐	All fluids to be kept indoors. Clean up spills immediately and keep spills from entering the storm drain system. No direct discharges are allowed into the storm drain system. Area shall be inspected weekly for proper containment and practices with spills cleansed up immediately and disposed of properly.
N14	Catch Basin Inspection Program	☒	☐	Monthly catch basin and inlet inspection by Owner's designee required. Vacuum when sediment or trash becomes 2 inches deep and dispose of properly.
N15	Vacuum Sweeping of Private Streets and Parking Lots	☒	☐	All landscape maintenance contractors will be required to vacuum sweep up all landscape cuttings, mowings and fertilizer materials off paved areas weekly and dispose of properly. Parking areas and drive ways will be swept monthly by sweeping contractor.
N16	Other Non-structural Measures for Public Agency Projects	☐	☒	Not Applicable – Not a public agency project.
N17	Comply with all other applicable NPDES permits	☒	☐	Project will comply with Construction General permit.

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, If not applicable, state reason
		Included	Not Applicable	
S1	Provide storm drain system stencilling and signage (CASQA New Development BMP Handbook SD-13)	☒	☐	"No Dumping" stencils will be included on all proposed catch basins and inlets. Legibility of stencil will be maintained on a yearly basis.
S2	Design and construct outdoor material storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-34)	☐	☒	Not Applicable – No outdoor material storage areas onsite.
S3	Design and construct trash and waste storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-32)	☒	☐	Trash and wastes storage areas will be paved with an impervious surface and not allowed any run-on from adjacent areas. Drainage will be diverted from adjoining roofs and pavements. Trash and waste storage area will be screened or walled to prevent offsite transport of trash and have solid roof or awning to prevent direct contact with rainfall.
S4	Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control (Statewide Model Landscape Ordinance; CASQA New Development BMP Handbook SD-12)	☒	☐	Irrigation systems shall include reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines. Timers will be used to avoid over watering and watering cycles and duration shall be adjusted seasonally by the landscape maintenance contractor. The landscaping areas will be grouped with plants that have similar water requirements. Native or drought tolerant species shall also be used where appropriate to reduce excess irrigation runoff and propose surface filtration.
S5	Finish grade of landscaped areas at a minimum of 1-2 inches below top of curb, sidewalk, or pavement	☒	☐	Where applicable, landscaped areas will be depressed in order to increase retention of stormwater/ irrigation water promote infiltration. This includes around parking lots.
S6	Protect slopes and channels and provide energy dissipation (CASQA New Development BMP Handbook SD-10)	☒	☐	All slopes will be vegetated or properly mulched with non-organic mulch (gravel/rocks) and maintained to prevent erosion and transport of sediment. Energy dissipaters are installed at all inlets into the basin.
S7	Covered dock areas (CASQA New Development BMP Handbook SD-31)	☐	☒	Not Applicable – Loading docks are not covered

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, If not applicable, state reason
		Included	Not Applicable	
S8	Covered maintenance bays with spill containment plans (CASQA New Development BMP Handbook SD-31)	☐	☒	Not Applicable – No maintenance bays onsite.
S9	Vehicle wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	Not Applicable – No vehicle wash areas onsite.
S10	Covered outdoor processing areas (CASQA New Development BMP Handbook SD-36)	☐	☒	Not Applicable – No outdoor processing areas onsite.
S11	Equipment wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	Not Applicable - No equipment wash area on-site.
S12	Fueling areas (CASQA New Development BMP Handbook SD-30)	☐	☒	Not Applicable - No fueling areas on-site.
S13	Hillside landscaping (CASQA New Development BMP Handbook SD-10)	☒	☐	Hillside landscaping will be vegetated and properly mulched with non-organic mulch (gravel/rocks) and maintained to prevent erosion and transport of sediment.
S14	Wash water control for food preparation areas	☐	☒	Not Applicable – No food preparation areas onsite.
S15	Community car wash racks (CASQA New Development BMP Handbook SD-33)	☐	☒	Not Applicable - No community car wash racks on-site.

4.1.2 Preventative LID Site Design Practices

Site design practices associated with new LID requirements in the MS4 Permit should be considered in the earliest phases of a project. Preventative site design practices can result in smaller DCV for LID BMP and hydromodification control BMP by reducing runoff generation. Describe site design and drainage plan including:

- A narrative of site design practices utilized or rationale for not using practices
- A narrative of how site plan incorporates preventive site design practices
- Include an attached Site Plan layout which shows how preventative site design practices are included in WQMP

Refer to Section 5.2 of the TGD for WQMP for more details.

Form 4.1-3 Preventative LID Site Design Practices Checklist

Site Design Practices *If yes, explain how preventative site design practice is addressed in project site plan. If no, other LID BMPs must be selected to meet targets*
Minimize impervious areas: Yes ☒ No ☐ Explanation: Landscaped areas are provided where practicable throughout the site, and along project frontage on Baseline Road.
Maximize natural infiltration capacity: Yes ☒ No ☐ Explanation: The underground chambers will maximize the site's natural infiltration.
Preserve existing drainage patterns and time of concentration: Yes ☒ No ☐ Explanation: Existing drainage patterns were preserved to the maximum extent practicable. The proposed site generally flows from the northwest to the southwest, similar to existing conditions.
Disconnect impervious areas: Yes ☒ No ☐ Explanation: The underground chambers will serve to disconnect impervious areas prior to discharging the site.
Protect existing vegetation and sensitive areas: Yes ☐ No ☒ Explanation: Not applicable – There are not any sensitive areas onsite. Areas that are not paved will be planted with approved landscape per the landscape plans.
Re-vegetate disturbed areas: Yes ☒ No ☐ Explanation: Landscaping will be provided in designated landscaped areas.
Minimize unnecessary compaction in stormwater retention/infiltration basin/trench areas: Yes ☒ No ☐ Explanation: Heavy construction vehicles will be prohibited from unnecessary soil compaction within the underground chamber areas.
Utilize vegetated drainage swales in place of underground piping or imperviously lined swales: Yes ☐ No ☒ Explanation: The site is mostly impervious surfaces. Stormwater runoff is captured via storm drain inlets and conveyed to underground basins via storm drain pipe.
Stake off areas that will be used for landscaping to minimize compaction during construction: Yes ☒ No ☐ Explanation: Landscape areas will be staked to minimize unnecessary compaction during construction.

4.2 Project Performance Criteria

The purpose of this section of the Project WQMP is to establish targets for post-development hydrology based on performance criteria specified in the MS4 Permit. These targets include runoff volume for water quality control (referred to as LID design capture volume), and runoff volume, time of concentration, and peak runoff for protection of any downstream waterbody segments with a HCOC. ***If the project has more than one outlet for stormwater runoff, then complete additional versions of these forms for each DA / outlet.***

Methods applied in the following forms include:

- For LID BMP Design Capture Volume (DCV), the San Bernardino County Stormwater Program requires use of the P_6 method (MS4 Permit Section XI.D.6a.ii) – Form 4.2-1
- For HCOC pre- and post-development hydrologic calculation, the San Bernardino County Stormwater Program requires the use of the Rational Method (San Bernardino County Hydrology Manual Section D). Forms 4.2-2 through Form 4.2-5 calculate hydrologic variables including runoff volume, time of concentration, and peak runoff from the project site pre- and post-development using the Hydrology Manual Rational Method approach. For projects greater than 640 acres (1.0 mi^2), the Rational Method and these forms should not be used. For such projects, the Unit Hydrograph Method (San Bernardino County Hydrology Manual Section E) shall be applied for hydrologic calculations for HCOC performance criteria.

Refer to Section 4 in the TGD for WQMP for detailed guidance and instructions.

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume (DMA 1)

1 Project area BMP 1 (ft^2): 283,990	**2** Imperviousness after applying preventative site design practices (Imp%): 91	**3** Runoff Coefficient (Rc): 0.75 *$R_c = 0.858(Imp\%)^{\wedge 3}-0.78(Imp\%)^{\wedge 2}+0.774(Imp\%)+0.04$*
4 Determine 1-hour rainfall depth for a 2-year return period $P_{2yr\text{-}1hr}$ (in): 0.657 http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html		
5 Compute P_6, Mean 6-hr Precipitation (inches): 0.97 *P_6 = Item 4 *C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Valley = 1.4807; Mountain = 1.909; Desert = 1.2371)*		
6 Drawdown Rate *Use 48 hours as the default condition. Selection and use of the 24 hour drawdown time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.*		24-hrs ☐ 48-hrs ☒
7 Compute design capture volume, DCV (ft^3): 33,901 *DCV = 1/12 * [Item 1* Item 3 *Item 5 * C_2], where C_2 is a function of drawdown rate (24-hr = 1.582; 48-hr = 1.963)* *Compute separate DCV for each outlet from the project site per schematic drawn in Form 3-1 Item 2*		

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume (DMA 2)

1 Project area BMP 2 (ft^2):	2 Imperviousness after applying preventative site design practices (Imp%):	3 Runoff Coefficient (Rc): 0.84
410,738	97	*$R_c = 0.858(Imp\%)^{3}-0.78(Imp\%)^{2}+0.774(Imp\%)+0.04$*

4 Determine 1-hour rainfall depth for a 2-year return period $P_{2yr\text{-}1hr}$ (in): 0.657 http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html

5 Compute P_6, Mean 6-hr Precipitation (inches): 0.97

*P_6 = Item 4 *C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Valley = 1.4807; Mountain = 1.909; Desert = 1.2371)*

6 Drawdown Rate	
Use 48 hours as the default condition. Selection and use of the 24 hour drawdown time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.	24-hrs ☐ 48-hrs ☒

7 Compute design capture volume, DCV (ft^3): 54,827

Compute separate DCV for each outlet from the project site per schematic drawn in Form 3-1 Item 2

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume (DMA 4)

1 Project area BMP 4 (ft^2): 370,581	2 Imperviousness after applying preventative site design practices (Imp%): 87	3 Runoff Coefficient (Rc): 0.69 *$R_c = 0.858(Imp\%)^{3}-0.78(Imp\%)^{2}+0.774(Imp\%)+0.04$*

4 Determine 1-hour rainfall depth for a 2-year return period $P_{2yr-1hr}$ (in): 0.657 http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html

5 Compute P_6, Mean 6-hr Precipitation (inches): 0.97

*P_6 = Item 4 *C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Valley = 1.4807; Mountain = 1.909; Desert = 1.2371)*

6 Drawdown Rate *Use 48 hours as the default condition. Selection and use of the 24 hour drawdown time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.*	24-hrs ☐ 48-hrs ☒

7 Compute design capture volume, DCV (ft^3): 40,802

*DCV = 1/12 * [Item 1* Item 3 *Item 5 * C_2], where C_2 is a function of drawdown rate (24-hr = 1.582; 48-hr = 1.963)*
Compute separate DCV for each outlet from the project site per schematic drawn in Form 3-1 Item 2

Form 4.2-2 Summary of HCOC Assessment (DA 1)

Does project have the potential to cause or contribute to an HCOC in a downstream channel: Yes ☐ No ☒

Go to: http://sbcounty.permitrack.com/WAP

If "Yes", then complete HCOC assessment of site hydrology for 2yr storm event using Forms 4.2-3 through 4.2-5 and insert results below

(Forms 4.2-3 through 4.2-5 may be replaced by computer software analysis based on the San Bernardino County Hydrology Manual)

If "No," then proceed to Section 4.3 Project Conformance Analysis

Condition	Runoff Volume (ft^3)	Time of Concentration (min)	Peak Runoff (cfs)
Pre-developed	1 *Form 4.2-3 Item 12*	2 *Form 4.2-4 Item 13*	3 *Form 4.2-5 Item 10*
Post-developed	4 *Form 4.2-3 Item 13*	5 *Form 4.2-4 Item 14*	6 *Form 4.2-5 Item 14*
Difference	7 *Item 4 – Item 1*	8 *Item 2 – Item 5*	9 *Item 6 – Item 3*
Difference (as % of pre-developed)	10 % *Item 7 / Item 1*	11 % *Item 8 / Item 2*	12 % *Item 9 / Item 3*

NOT APPLICABLE

Form 4.2-3 HCOC Assessment for Runoff Volume (DA 1)

Weighted Curve Number Determination for: Pre-developed DA	DMA A	DMA B	DMA C	DMA D	DMA E	DMA F	DMA G	DMA H
1a Land Cover type								
2a Hydrologic Soil Group (HSG)								
3a DMA Area, ft² *sum of areas of DMA should equal area of DA*								
4a Curve Number (CN) *use Items 1 and 2 to select the appropriate CN from Appendix C-2 of the TGD for WQMP*								
Weighted Curve Number Determination for: Post-developed DA	DMA A	DMA B	DMA C	DMA D	DMA E	DMA F	DMA G	DMA H
1b Land Cover type								
2b Hydrologic Soil Group (HSG)								
3b DMA Area, ft² *sum of areas of DMA should equal area of DA*								
4b Curve Number (CN) *use Items 5 and 6 to select the appropriate CN from Appendix C-2 of the TGD for WQMP*								

NOT APPLICABLE

5 Pre-Developed area-weighted CN:	**7** Pre-developed soil storage capacity, S (in): *S = (1000 / Item 5) - 10*	**9** Initial abstraction, I_a (in): *I_a = 0.2 * Item 7*
6 Post-Developed area-weighted CN:	**8** Post-developed soil storage capacity, S (in): *S = (1000 / Item 6) - 10*	**10** Initial abstraction, I_a (in): *I_a = 0.2 * Item 8*

11 Precipitation for 2 yr, 24 hr storm (in):
Go to: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html

12 Pre-developed Volume (ft³):
*V_{pre} =(1 / 12) * (Item sum of Item 3) * [(Item 11 – Item 9)^2 / ((Item 11 – Item 9 + Item 7)*

13 Post-developed Volume (ft³):
*V_{pre} =(1 / 12) * (Item sum of Item 3) * [(Item 11 – Item 10)^2 / ((Item 11 – Item 10 + Item 8)*

14 Volume Reduction needed to meet HCOC Requirement, (ft³):
*V_{HCOC} = (Item 13 * 0.95) – Item 12*

Form 4.2-4 HCOC Assessment for Time of Concentration (DA 1)

Compute time of concentration for pre and post developed conditions for each DA *(For projects using the Hydrology Manual complete the form below)*

Variables	Pre-developed DA1 *Use additional forms if there are more than 4 DMA*				Post-developed DA1 *Use additional forms if there are more than 4 DMA*			
	DMA A	DMA B	DMA C	DMA D	DMA A	DMA B	DMA C	DMA D
1 Length of flowpath (ft) *Use Form 3-2 Item 5 for pre-developed condition*								
2 Change in elevation (ft)								
3 Slope (ft/ft), S_o = *Item 2 / Item 1*								
4 Land cover								
5 Initial DMA Time of Concentration (min) *Appendix C-1 of the TGD for WQMP*								
6 Length of conveyance from DMA outlet to project site outlet (ft) *May be zero if DMA outlet is at project site outlet*								
7 Cross-sectional area of channel (ft^2)								
8 Wetted perimeter of channel (ft)								
9 Manning's roughness of channel (n)								
10 Channel flow velocity (ft/sec) V_{fps} = *(1.49 / Item 9) * (Item 7/Item 8)^0.67 * (Item 3)^0.5*								
11 Travel time to outlet (min) T_t = *Item 6 / (Item 10 * 60)*								
12 Total time of concentration (min) T_c = *Item 5 + Item 11*								

13 Pre-developed time of concentration (min): *Minimum of Item 12 pre-developed DMA*

14 Post-developed time of concentration (min): *Minimum of Item 12 post-developed DMA*

15 Additional time of concentration needed to meet HCOC requirement (min): $T_{C\text{-}HCOC}$ = *(Item 13 * 0.95) – Item 14*

NOT APPLICABLE

Form 4.2-5 HCOC Assessment for Peak Runoff (DA 1)

Compute peak runoff for pre- and post-developed conditions

Variables		Pre-developed DA to Project Outlet (*Use additional forms if more than 3 DMA)*			Post-developed DA to Project Outlet (*Use additional forms if more than 3 DMA)*		
		DMA A	DMA B	DMA C	DMA A	DMA B	DMA C
1 Rainfall Intensity for storm duration equal to time of concentration I_{peak} = 10^(LOG Form 4.2-1 Item 4 - 0.6 LOG Form 4.2-4 Item 5 /60)							
2 Drainage Area of each DMA (Acres) *For DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*							
3 Ratio of pervious area to total area *For DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*							
4 Pervious area infiltration rate (in/hr) *Use pervious area CN and antecedent moisture condition with Appendix C.3 of the SGD for WQMP*							
5 Maximum loss rate (in/hr) F_m = Item 3 * Item 4 *Use area-weighted F_m from DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*							
6 Peak Flow from DMA (cfs) Q_p =Item 2 * 0.9 * (Item 1 - Item 5)							
7 Time of concentration adjustment factor for other DMA to site discharge point *Form 4.2-4 Item 12 DMA / Other DMA upstream of site discharge point (If ratio is greater than 1.0, then use maximum value of 1.0)*	DMA A	*n/a*			*n/a*		
	DMA B		*n/a*			*n/a*	
	DMA C			*n/a*			*n/a*

8 Pre-developed Q_p at T_c for DMA A: Q_p = Item 6_{DMAA} + [Item 6_{DMAB} * (Item 1_{DMAA} - Item 5_{DMAB})/(Item 1_{DMAB} - Item 5_{DMAB})* Item $7_{DMAA/2}$] + [Item 6_{DMAC} * (Item 1_{DMAA} - Item 5_{DMAC})/(Item 1_{DMAC} - Item 5_{DMAC})* Item $7_{DMAA/3}$]	**9** Pre-developed Q_p at T_c for DMA B: Q_p = Item 6_{DMAB} + [Item 6_{DMAA} * (Item 1_{DMAB} - Item 5_{DMAA})/(Item 1_{DMAA} - Item 5_{DMAA})* Item $7_{DMAB/1}$] + [Item 6_{DMAC} * (Item 1_{DMAB} - Item 5_{DMAC})/(Item 1_{DMAC} - Item 5_{DMAC})* Item $7_{DMAB/3}$]	**10** Pre-developed Q_p at T_c for DMA C: Q_p = Item 6_{DMAC} + [Item 6_{DMAA} * (Item 1_{DMAC} - Item 5_{DMAA})/(Item 1_{DMAA} - Item 5_{DMAA})* Item $7_{DMAC/1}$] + [Item 6_{DMAB} * (Item 1_{DMAC} - Item 5_{DMAB})/(Item 1_{DMAB} - Item 5_{DMAB})* Item $7_{DMAC/2}$]
10 Peak runoff from pre-developed condition confluence analysis (cfs):		*Maximum of Item 8, 9, and 10 (including additional forms as needed)*
11 Post-developed Q_p at T_c for DMA A: *Same as Item 8 for post-developed values*	**12** Post-developed Q_p at T_c for DMA B: *Same as Item 9 for post-developed values*	**13** Post-developed Q_p at T_c for DMA C: *Same as Item 10 for post-developed values*
14 Peak runoff from post-developed condition confluence analysis (cfs):		*Maximum of Item 11, 12, and 13 (including additional forms as needed)*
15 Peak runoff reduction needed to meet HCOC Requirement (cfs):		$Q_{p\text{-}HCOC}$ = (Item 14 * 0.95) – Item 10

NOT APPLICABLE

4.3 Project Conformance Analysis

Complete the following forms for each project site DA to document that the proposed LID BMPs conform to the project DCV developed to meet performance criteria specified in the MS4 Permit (WQMP Template Section 4.2). For the LID DCV, the forms are ordered according to hierarchy of BMP selection as required by the MS4 Permit (see Section 5.3.1 in the TGD for WQMP). The forms compute the following for on-site LID BMP:

- Site Design and Hydrologic Source Controls (Form 4.3-2)
- Retention and Infiltration (Form 4.3-3)
- Harvested and Use (Form 4.3-4) or
- Biotreatment (Form 4.3-5).

At the end of each form, additional fields facilitate the determination of the extent of mitigation provided by the specific BMP category, allowing for use of the next category of BMP in the hierarchy, if necessary.

The first step in the analysis, using Section 5.3.2.1 of the TGD for WQMP, is to complete Forms 4.3-1 and 4.3-3) to determine if retention and infiltration BMPs are infeasible for the project. For each feasibility criterion in Form 4.3-1, if the answer is "Yes," provide all study findings that includes relevant calculations, maps, data sources, etc. used to make the determination of infeasibility.

Next, complete Forms 4.3-2 and 4.3-4 to determine the feasibility of applicable HSC and harvest and use BMPs, and, if their implementation is feasible, the extent of mitigation of the DCV.

If no site constraints exist that would limit the type of BMP to be implemented in a DA, evaluate the use of combinations of LID BMPs, including all applicable HSC BMPs to maximize on-site retention of the DCV. If no combination of BMP can mitigate the entire DCV, implement the single BMP type, or combination of BMP types, that maximizes on-site retention of the DCV within the minimum effective area.

If the combination of LID HSC, retention and infiltration, and harvest and use BMPs are unable to mitigate the entire DCV, then biotreatment BMPs may be implemented by the project proponent. If biotreatment BMPs are used, then they must be sized to provide sufficient capacity for effective treatment of the remainder of the volume-based performance criteria that cannot be achieved with LID BMPs (TGD for WQMP Section 5.4.4.2). **Under no circumstances shall any portion of the DCV be released from the site without effective mitigation and/or treatment**.

Form 4.3-1 Infiltration BMP Feasibility (DMA 1)

Feasibility Criterion – Complete evaluation for each DMA on the Project Site

1 Would infiltration BMP pose significant risk for groundwater related concerns? Yes ☐ No ☒

Refer to Section 5.3.2.1 of the TGD for WQMP

If Yes, Provide basis: (attach)

2 Would installation of infiltration BMP significantly increase the risk of geotechnical hazards? Yes ☐ No ☒

(Yes, if the answer to any of the following questions is yes, as established by a geotechnical expert):

- The location is less than 50 feet away from slopes steeper than 15 percent
- The location is less than eight feet from building foundations or an alternative setback.
- A study certified by a geotechnical professional or an available watershed study determines that stormwater infiltration would result in significantly increased risks of geotechnical hazards.

If Yes, Provide basis: (attach)

3 Would infiltration of runoff on a Project site violate downstream water rights? Yes ☐ No ☒

If Yes, Provide basis: (attach)

4 Is proposed infiltration facility located on hydrologic soil group (HSG) D soils or does the site geotechnical investigation indicate presence of soil characteristics, which support categorization as D soils? Yes ☐ No ☒

If Yes, Provide basis: (attach)

5 Is the design infiltration rate, after accounting for safety factor of 2.0, below proposed facility less than 0.3 in/hr (accounting for soil amendments)? Yes ☐ No ☒

If Yes, Provide basis: (attach)

6 Would on-site infiltration or reduction of runoff over pre-developed conditions be partially or fully inconsistent with watershed management strategies as defined in the WAP, or impair beneficial uses? Yes ☐ No ☒

See Section 3.5 of the TGD for WQMP and WAP

If Yes, Provide basis: (attach)

7 Any answer from Item 1 through Item 3 is "Yes": Yes ☐ No ☒

If yes, infiltration of any volume is not feasible onsite. Proceed to Form 4.3-4, Harvest and Use BMP. If no, then proceed to Item 8 below.

8 Any answer from Item 4 through Item 6 is "Yes": Yes ☐ No ☒

If yes, infiltration is permissible but is not required to be considered. Proceed to Form 4.3-2, Hydrologic Source Control BMP.
If no, then proceed to Item 9, below.

9 All answers to Item 1 through Item 6 are "No":

Infiltration of the full DCV is potentially feasible, LID infiltration BMP must be designed to infiltrate the full DCV to the MEP.
Proceed to Form 4.3-2, Hydrologic Source Control BMP.

Form 4.3-1 Infiltration BMP Feasibility (DMA 2)

Feasibility Criterion – Complete evaluation for each DMA on the Project Site

1 Would infiltration BMP pose significant risk for groundwater related concerns? Yes ☐ No ☒

Refer to Section 5.3.2.1 of the TGD for WQMP

If Yes, Provide basis: (attach)

2 Would installation of infiltration BMP significantly increase the risk of geotechnical hazards? Yes ☐ No ☒

(Yes, if the answer to any of the following questions is yes, as established by a geotechnical expert):

- The location is less than 50 feet away from slopes steeper than 15 percent
- The location is less than eight feet from building foundations or an alternative setback.
- A study certified by a geotechnical professional or an available watershed study determines that stormwater infiltration would result in significantly increased risks of geotechnical hazards.

If Yes, Provide basis: (attach)

3 Would infiltration of runoff on a Project site violate downstream water rights? Yes ☐ No ☒

If Yes, Provide basis: (attach)

4 Is proposed infiltration facility located on hydrologic soil group (HSG) D soils or does the site geotechnical investigation indicate presence of soil characteristics, which support categorization as D soils? Yes ☐ No ☒

If Yes, Provide basis: (attach)

5 Is the design infiltration rate, after accounting for safety factor of 2.0, below proposed facility less than 0.3 in/hr (accounting for soil amendments)? Yes ☐ No ☒

If Yes, Provide basis: (attach)

6 Would on-site infiltration or reduction of runoff over pre-developed conditions be partially or fully inconsistent with watershed management strategies as defined in the WAP, or impair beneficial uses? Yes ☐ No ☒

See Section 3.5 of the TGD for WQMP and WAP

If Yes, Provide basis: (attach)

7 Any answer from Item 1 through Item 3 is "Yes": Yes ☐ No ☒

If yes, infiltration of any volume is not feasible onsite. Proceed to Form 4.3-4, Harvest and Use BMP. If no, then proceed to Item 8 below.

8 Any answer from Item 4 through Item 6 is "Yes": Yes ☐ No ☒

If yes, infiltration is permissible but is not required to be considered. Proceed to Form 4.3-2, Hydrologic Source Control BMP.
If no, then proceed to Item 9, below.

9 All answers to Item 1 through Item 6 are "No":

Infiltration of the full DCV is potentially feasible, LID infiltration BMP must be designed to infiltrate the full DCV to the MEP.
Proceed to Form 4.3-2, Hydrologic Source Control BMP.

Form 4.3-1 Infiltration BMP Feasibility (DMA 3)

Feasibility Criterion – Complete evaluation for each DMA on the Project Site

1 Would infiltration BMP pose significant risk for groundwater related concerns? Yes ☐ No ☒

Refer to Section 5.3.2.1 of the TGD for WQMP

If Yes, Provide basis: (attach)

2 Would installation of infiltration BMP significantly increase the risk of geotechnical hazards? Yes ☐ No ☒

(Yes, if the answer to any of the following questions is yes, as established by a geotechnical expert):

- The location is less than 50 feet away from slopes steeper than 15 percent
- The location is less than eight feet from building foundations or an alternative setback.
- A study certified by a geotechnical professional or an available watershed study determines that stormwater infiltration would result in significantly increased risks of geotechnical hazards.

If Yes, Provide basis: (attach)

3 Would infiltration of runoff on a Project site violate downstream water rights? Yes ☐ No ☒

If Yes, Provide basis: (attach)

7 Any answer from Item 1 through Item 3 is "Yes": Yes ☐ No ☒

If yes, infiltration of any volume is not feasible onsite. Proceed to Form 4.3-4, Harvest and Use BMP. If no, then proceed to Item 8 below.

8 Any answer from Item 4 through Item 6 is "Yes": Yes ☐ No ☒

If yes, infiltration is permissible but is not required to be considered. Proceed to Form 4.3-2, Hydrologic Source Control BMP.
If no, then proceed to Item 9, below.

9 All answers to Item 1 through Item 6 are "No":

Infiltration of the full DCV is potentially feasible, LID infiltration BMP must be designed to infiltrate the full DCV to the MEP.
Proceed to Form 4.3-2, Hydrologic Source Control BMP.

Self-treating landscape/ driveway area

Sufficient right-of-way space for infiltration BMP is not available. Given that the existing sidewalk meanders through the parkway area, providing an infiltration BMP between the back of curb and sidewalk is not practicable, and would potentially create structural issues with the roadway and sidewalk sections. A majority of the area is pervious landscape so the runoff generated is considered as nuisance runoff. An infiltration BMP is not practicable in this area.

4.3.1 Site Design Hydrologic Source Control BMP

Section XI.E. of the Permit emphasizes the use of LID preventative measures; and the use of LID HSC BMPs reduces the portion of the DCV that must be addressed in downstream BMPs. Therefore, all applicable HSC shall be provided except where they are mutually exclusive with each other, or with other BMPs. Mutual exclusivity may result from overlapping BMP footprints such that either would be potentially feasible by itself, but both could not be implemented. Please note that while there are no numeric standards regarding the use of HSC, if a project cannot feasibly meet BMP sizing requirements or cannot fully address HCOCs, feasibility of all applicable HSC must be part of demonstrating that the BMP system has been designed to retain the maximum feasible portion of the DCV. Complete Form 4.3-2 to identify and calculate estimated retention volume from implementing site design HSC BMP. Refer to Section 5.4.1 in the TGD for more detailed guidance.

Form 4.3-2 Site Design Hydrologic Source Control BMPs (DA 1)

1 Implementation of Impervious Area Dispersion BMP (i.e. routing runoff from impervious to pervious areas), excluding impervious areas planned for routing to on-lot infiltration BMP: Yes ☐ No ☒ *If yes, complete Items 2-5; If no, proceed to Item 6*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Total impervious area draining to pervious area (ft^2)			
3 Ratio of pervious area receiving runoff to impervious area			
4 Retention volume achieved from impervious area dispersion (ft^3) *V = Item2 * Item 3 * (0.5/12), assuming retention of 0.5 inches of runoff*			
5 Sum of retention volume achieved from impervious area dispersion (ft^3):	$V_{retention}$ *=Sum of Item 4 for all BMPs*		
6 Implementation of Localized On-lot Infiltration BMPs (e.g. on-lot rain gardens): Yes ☐ No ☒ *If yes, complete Items 7-13 for aggregate of all on-lot infiltration BMP in each DA; If no, proceed to Item 14*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
7 Ponding surface area (ft^2)

4.3.2 Infiltration BMPs

Use Form 4.3-3 to compute on-site retention of runoff from proposed retention and infiltration BMPs. Volume retention estimates are sensitive to the percolation rate used, which determines the amount of runoff that can be infiltrated within the specified drawdown time. The infiltration safety factor reduces field measured percolation to account for potential inaccuracy associated with field measurements, declining BMP performance over time, and compaction during construction. Appendix D of the TGD for WQMP provides guidance on estimating an appropriate safety factor to use in Form 4.3-3.

If site constraints limit the use of BMPs to a single type and implementation of retention and infiltration BMPs mitigate no more than 40% of the DCV, then they are considered infeasible and the Project Proponent may evaluate the effectiveness of BMPs lower in the LID hierarchy of use (Section 5.5.1 of the TGD for WQMP)

If implementation of infiltrations BMPs is feasible as determined using Form 4.3-1, then LID infiltration BMPs shall be implemented to the MEP (section 4.1 of the TGD for WQMP).

The proposed underground chamber is sized to both infiltrate the entire design capture volume (DCV) and detain the delta 100-year design storm volume required to discharge flows at or below existing conditions. The calculations included in Form 4.3-3 show that the chamber geometry achieves the required DCV through underground storage while also satisfying the volume requirements for peak attenuation. Refer to project specific hydrology study for further information.

Form 4.3-3 Infiltration LID BMPs

1 Remaining LID DCV not met by site design HSC BMP (ft3): 163,444 Vunmet = Form 4.2-1 Item 7 - Form 4.3-2 Item 30

16 Total Retention Volume from LID Infiltration BMPs: **336,957 ft^3** (53,688 ft^3 (BMP 1), 125,249 ft^3(BMP 2), 95,359 ft^3(BMP 3) 62,661 ft^3(BMP 4))			
17 Fraction of DCV achieved with infiltration BMP: 206%			
18 Is full LID DCV retained on-site with combination of hydrologic source control and LID retention and infiltration BMPs? Yes ☒ No ☐ *If yes, demonstrate conformance using Form 4.3-10; If no, then reduce Item 3, Factor of Safety to 2.0 and increase Item 8, Infiltrating Surface Area, such that the portion of the site area used for retention and infiltration BMPs equals or exceeds the minimum effective area thresholds (Table 5-7 of the TGD for WQMP) for the applicable category of development and repeat all above calculations.*			

4.3.3 Harvest and Use BMP

Harvest and use BMP may be considered if the full LID DCV cannot be met by maximizing infiltration BMPs. Use Form 4.3-4 to compute on-site retention of runoff from proposed harvest and use BMPs.

Volume retention estimates for harvest and use BMPs are sensitive to the on-site demand for captured stormwater. Since irrigation water demand is low in the wet season, when most rainfall events occur in San Bernardino County, the volume of water that can be used within a specified drawdown period is relatively low. The bottom portion of Form 4.3-4 facilitates the necessary computations to show infeasibility if a minimum incremental benefit of 40 percent of the LID DCV would not be achievable with MEP implementation of on-site harvest and use of stormwater (Section 5.5.4 of the TGD for WQMP).

Form 4.3-4 Harvest and Use BMPs (DA 1)

1 Remaining LID DCV not met by site design HSC or infiltration BMP (ft^3): 0 *V_{unmet} = Form 4.2-1 Item 7 - Form 4.3-2 Item 30 – Form 4.3-3 Item 16*			
BMP Type(s) *Compute runoff volume retention from proposed harvest and use BMP (Select BMPs from Table 5-4 of the TGD for WQMP) - Use additional forms for more BMPs*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Describe cistern or runoff detention facility			
3 Storage volume for proposed detention type (ft^3) *Volume of cistern*			
4 Landscaped area planned for use of harvested stormwater (ft^2)			
5 Average wet season daily irrigation demand (in/day) Use local values, typical ~ 0.1 in/day			
6 Daily water demand (ft^3/day) *Item 4 * (Item 5 / 12)*			
7 Drawdown time (hrs) *Copy Item 6 from Form 4.2-1*			
8 Retention Volume (ft^3) *$V_{retention}$ = Minimum of (Item 3) or (Item 6 * (Item 7 / 24))*			
9 Total Retention Volume (ft^3) from Harvest and Use BMP *Sum of Item 8 for all harvest and use BMP included in plan*			
10 Is the full DCV retained with a combination of LID HSC, retention and infiltration, and harvest and use BMPs? Yes ☐ No ☐ *If yes, demonstrate conformance using Form 4.3-10. If no, then re-evaluate combinations of all LID BMP and optimize their implementation such that the maximum portion of the DCV is retained on-site (using a single BMP type or combination of BMP types). If the full DCV cannot be mitigated after this optimization process, proceed to Section 4.3.4.*			

NOT APPLICABLE

4.3.4 Biotreatment BMP

Biotreatment BMPs may be considered if the full LID DCV cannot be met by maximizing retention and infiltration, and harvest and use BMPs. A key consideration when using biotreatment BMP is the effectiveness of the proposed BMP in addressing the pollutants of concern for the project (see Table 5-5 of the TGD for WQMP).

Use Form 4.3-5 to summarize the potential for volume based and/or flow based biotreatment options to biotreat the remaining unmet LID DCV w. Biotreatment computations are included as follows:

- Use Form 4.3-6 to compute biotreatment in small volume based biotreatment BMP (e.g. bioretention w/underdrains);
- Use Form 4.3-7 to compute biotreatment in large volume based biotreatment BMP (e.g. constructed wetlands);
- Use Form 4.3-8 to compute sizing criteria for flow-based biotreatment BMP (e.g. bioswales)

Form 4.3-5 Selection and Evaluation of Biotreatment BMP (DA 1)

1 Remaining LID DCV not met by site design HSC, infiltration, or harvest and use BMP for potential biotreatment (ft^3): 0 *Form 4.2-1 Item 7 - Form 4.3-2 Item 30 – Form 4.3-3 Item 16- Form 4.3-4 Item 9*	List pollutants of concern *Copy from Form 2.3-1.*	
2 Biotreatment BMP Selected *(Select biotreatment BMP(s) necessary to ensure all pollutants of concern are addressed through Unit Operations and Processes, described in Table 5-5 of the TGD for WQMP)*	Volume-based biotreatment *Use Forms 4.3-6 and 4.3-7 to compute treated volume*	Flow-based biotreatment *Use Form 4.3-8 to compute treated volume*
	☐ Bioretention with underdrain ☐ Planter box with underdrain ☐ Constructed wetlands ☐ Wet extended detention ☐ Dry extended detention	☐ Vegetated swale ☐ Vegetated filter strip ☐ Proprietary biotreatment
3 Volume biotreated in volume based biotreatment BMP (ft^3): *Form 4.3-6 Item 15 + Form 4.3-7 Item 13*	4 Compute remaining LID DCV with implementation of volume based biotreatment BMP (ft^3): *Item 1 – Item 3*	5 Remaining fraction of LID DCV for sizing flow based biotreatment BMP: % *Item 4 / Item 1*
6 Flow-based biotreatment BMP capacity provided (cfs): *Use Figure 5-2 of the TGD for WQMP to determine flow capacity required to provide biotreatment of remaining percentage of unmet LID DCV (Item 5), for the project's precipitation zone (Form 3-1 Item 1)*		
7 Metrics for MEP determination: • Provided a WQMP with the portion of site area used for suite of LID BMP equal to minimum thresholds in Table 5-7 of the TGD for WQMP for the proposed category of development: ☐ *If maximized on-site retention BMPs is feasible for partial capture, then LID BMP implementation must be optimized to retain and infiltrate the maximum portion of the DCV possible within the prescribed minimum effective area. The remaining portion of the DCV shall then be mitigated using biotreatment BMP.*		

NOT APPLICABLE

4.3.5 Conformance Summary

Complete Form 4.3-9 to demonstrate how on-site LID DCV is met with proposed site design hydrologic source control, infiltration, harvest and use, and/or biotreatment BMP. The bottom line of the form is used to describe the basis for infeasibility determination for on-site LID BMP to achieve full LID DCV, and provides methods for computing remaining volume to be addressed in an alternative compliance plan. If the project has more than one outlet, then complete additional versions of this form for each outlet.

Form 4.3-9 Conformance Summary and Alternative Compliance Volume Estimate

1 Total LID DCV for the Project (ft^3): 163,444 *Copy Item 7 in Form 4.2-1*

2 On-site retention with site design hydrologic source control LID BMP (ft^3): 0 *Copy Item 30 in Form 4.3-2*

3 On-site retention with LID infiltration BMP (ft^3): 336,957 *Copy Item 16 in Form 4.3-3*

4 On-site retention with LID harvest and use BMP (ft^3): 0 *Copy Item 9 in Form 4.3-4*

5 On-site biotreatment with volume based biotreatment BMP (ft^3): 0 *Copy Item 3 in Form 4.3-5*

6 Flow capacity provided by flow based biotreatment BMP (cfs): 0 *Copy Item 6 in Form 4.3-5*

7 LID BMP performance criteria are achieved if answer to any of the following is "Yes":

- Full retention of LID DCV with site design HSC, infiltration, or harvest and use BMP: Yes ☒ No ☐
  If yes, sum of Items 2, 3, and 4 is greater than Item 1
- Combination of on-site retention BMPs for a portion of the LID DCV and volume-based biotreatment BMP that address all pollutants of concern for the remaining LID DCV: Yes ☐ No ☒
  If yes, a) sum of Items 2, 3, 4, and 5 is greater than Item 1, and Items 2, 3 and 4 are maximized; or b) Item 6 is greater than Form 4.3--5 Item 6 and Items 2, 3 and 4 are maximized
- On-site retention and infiltration is determined to be infeasible and biotreatment BMP provide biotreatment for all pollutants of concern for full LID DCV: Yes ☐ No ☒
  If yes, Form 4.3-1 Items 7 and 8 were both checked yes

8 If the LID DCV is not achieved by any of these means, then the project may be allowed to develop an alternative compliance plan. Check box that describes the scenario which caused the need for alternative compliance:

- Combination of HSC, retention and infiltration, harvest and use, and biotreatment BMPs provide less than full LID DCV capture: ☐
  Checked yes for Form 4.3-5 Item 7, Item 6 is zero, and sum of Items 2, 3, 4, and 5 is less than Item 1. If so, apply water quality credits and calculate volume for alternative compliance, V_{alt} *= (Item 1 – Item 2 – Item 3 – Item 4 – Item 5) * (100 - Form 2.4-1 Item 2)%*
- An approved Watershed Action Plan (WAP) demonstrates that water quality and hydrologic impacts of urbanization are more effective when managed in at an off-site facility: ☐
  Attach appropriate WAP section, including technical documentation, showing effectiveness comparisons for the project site and regional watershed

4.3.6 Hydromodification Control BMP

Use Form 4.3-10 to compute the remaining runoff volume retention, after LID BMP are implemented, needed to address HCOC, and the increase in time of concentration and decrease in peak runoff necessary to meet targets for protection of waterbodies with a potential HCOC. Describe hydromodification control BMP that address HCOC, which may include off-site BMP and/or in-stream controls. Section 5.6 of the TGD for WQMP provides additional details on selection and evaluation of hydromodification control BMP.

Form 4.3-10 Hydromodification Control BMPs (DA 1)

1 Volume reduction needed for HCOC performance criteria (ft^3): *(Form 4.2-2 Item 4 * 0.95) – Form 4.2-2 Item 1*	**2** On-site retention with site design hydrologic source control, infiltration, and harvest and use LID BMP (ft^3): *Sum of Form 4.3-9 Items 2, 3, and 4 Evaluate option to increase implementation of on-site retention in Forms 4.3-2, 4.3-3, and 4.3-4 in excess of LID DCV toward achieving HCOC volume reduction*
3 Remaining volume for HCOC volume capture (ft^3): *Item 1 – Item 2*	**4** Volume capture provided by incorporating additional on-site or off-site retention BMPs (ft^3): *Existing downstream BMP may be used to demonstrate additional volume capture (if so, attach to this WQMP a hydrologic analysis showing how the additional volume would be retained during a 2-yr storm event for the regional watershed)*

5 If Item 4 is less than Item 3, incorporate in-stream controls on downstream waterbody segment to prevent impacts due to hydromodification ☐ *Attach in-stream control BMP selection and evaluation to this WQMP*

6 Is Form 4.2-2 Item 11 less than or equal to 5%: Yes ☐ No ☐

If yes, HCOC performance criteria is achieved. If no, select one or more mitigation options below:

- Demonstrate increase in time of concentration achieved by proposed LID site design, LID BMP, and additional on-site or off-site retention BMP ☐
  BMP upstream of a waterbody segment with a potential HCOC may be used to demonstrate increased time of concentration through hydrograph attenuation (if so, show that the hydraulic residence time provided in BMP for a 2-year storm event is equal or greater than the additional time of concentration requirement in Form 4.2-4 Item 15)
- Increase time of concentration by preserving pre-developed flow path and/or increase travel time by reducing slope and increasing cross sectional area and roughness for proposed on-site conveyance facilities ☐
- Incorporate appropriate in-stream controls for downstream waterbody segment to prevent impacts due to hydromodification, in a plan approved and signed by a licensed engineer in the State of California ☐

7 Form 4.2-2 Item 12 less than or equal to 5%: Yes ☐ No ☐

If yes, HCOC performance criteria is achieved. If no, select one or more mitigation options below:

- Demonstrate reduction in peak runoff achieved by proposed LID site design, LID BMPs, and additional on-site or off-site retention BMPs ☐
  BMPs upstream of a waterbody segment with a potential HCOC may be used to demonstrate additional peak runoff reduction through hydrograph attenuation (if so, attach to this WQMP, a hydrograph analysis showing how the peak runoff would be reduced during a 2-yr storm event)
- Incorporate appropriate in-stream controls for downstream waterbody segment to prevent impacts due to hydromodification, in a plan approved and signed by a licensed engineer in the State of California ☐

NOT APPLICABLE

4.4 Alternative Compliance Plan (if applicable)

Describe an alternative compliance plan (if applicable) for projects not fully able to infiltrate, harvest and use, or biotreat the DCV via on-site LID practices. A project proponent must develop an alternative compliance plan to address the remainder of the LID DCV. Depending on project type some projects may qualify for water quality credits that can be applied to reduce the DCV that must be treated prior to development of an alternative compliance plan (see Form 2.4-1, Water Quality Credits). Form 4.3-9 Item 8 includes instructions on how to apply water quality credits when computing the DCV that must be met through alternative compliance. Alternative compliance plans may include one or more of the following elements:

- On-site structural treatment control BMP - All treatment control BMP should be located as close to possible to the pollutant sources and should not be located within receiving waters;
- Off-site structural treatment control BMP - Pollutant removal should occur prior to discharge of runoff to receiving waters;
- Urban runoff fund or In-lieu program, if available

Depending upon the proposed alternative compliance plan, approval by the executive officer may or may not be required (see Section 6 of the TGD for WQMP).

Section 5 Inspection and Maintenance Responsibility for Post Construction BMP

All BMP included as part of the project WQMP are required to be maintained through regular scheduled inspection and maintenance (refer to Section 8, Post Construction BMP Requirements, in the TGD for WQMP). Fully complete Form 5-1 summarizing all BMP included in the WQMP. Attach additional forms as needed. The WQMP shall also include a detailed Operation and Maintenance Plan for all BMP and may require a Maintenance Agreement (consult the jurisdiction's LIP). If a Maintenance Agreement is required, it must also be attached to the WQMP.

Form 5-1 BMP Inspection and Maintenance (use additional forms as necessary)

BMP	Responsible Party(s)	Inspection/ Maintenance Activities Required	Minimum Frequency of Activities
Underground Chambers (BMPs 1, 2, 3, 4)	Owner	Trash, debris and sediment must be removed and disposed of per local jurisdiction requirements. The sump manhole shall be cleaned of all debris, silt and trash when the capacity has reached 75% of the total depth to maintain clear flow from inlet and outlet pipe. BMPs shall be inspected for the presence of standing water more than 48 hours after the end of runoff.	Inspection and maintenance required after every rain event greater than 0.5 inches. Inspections should occur on a regular interval to ensure optimum performance

Section 6 WQMP Attachments

6.1. Site Plan and Drainage Plan

Include a site plan and drainage plan sheet set containing the following minimum information:

- Project location
- Site boundary
- Land uses and land covers, as applicable
- Suitability/feasibility constraints
- Structural Source Control BMP locations
- Site Design Hydrologic Source Control BMP locations
- LID BMP details
- Drainage delineations and flow information
- Drainage connections

See Appendix A for WQMP Exhibits and BMP Design Details

6.2 Electronic Data Submittal

Minimum requirements include submittal of PDF exhibits in addition to hard copies. Format must not require specialized software to open. If the local jurisdiction requires specialized electronic document formats (as described in their Local Implementation Plan), this section will describe the contents (e.g., layering, nomenclature, geo-referencing, etc.) of these documents so that they may be interpreted efficiently and accurately.

6.3 Post Construction

Attach all O&M Plans and Maintenance Agreements for BMP to the WQMP.

See Appendix D for BMP O&M

6.4 Other Supporting Documentation

- BMP Educational Materials
- Activity Restriction – C, C&R's & Lease Agreements

See Appendix B for BMP Educational Materials
See Appendix C for WQMP Agreement
See Appendix E for Geotechnical Report
See Appendix F for Hydromodification Exemption Documentation

Protecting Water Quality *from* URBAN RUNOFF

Clean Water Is Everybody's Business

In urban and suburban areas, much of the land surface is covered by buildings and pavement, which do not allow rain and snowmelt to soak into the ground. Instead, most developed areas rely on storm drains to carry large amounts of runoff from roofs and paved areas to nearby waterways. The stormwater runoff carries pollutants such as oil, dirt, chemicals, and lawn fertilizers directly to streams and rivers, where they seriously harm water quality. To protect surface water quality and groundwater resources, development should be designed and built to minimize increases in runoff.

The most recent National Water Quality Inventory reports that runoff from urbanized areas is the leading source of water quality impairments to surveyed estuaries and the third-largest source of impairments to surveyed lakes.

Did you know that because of impervious surfaces like pavement and rooftops, a typical city block generates more than 5 times more runoff than a woodland area of the same size?

How Urbanized Areas Affect Water Quality

Increased Runoff

The porous and varied terrain of natural landscapes like forests, wetlands, and grasslands traps rainwater and snowmelt and allows them to filter slowly into the ground. In contrast, impervious (nonporous) surfaces like roads, parking lots, and rooftops prevent rain and snowmelt from infiltrating, or soaking, into the ground. Most of the rainfall and snowmelt remains above the surface, where it runs off rapidly in unnaturally large amounts.

Storm sewer systems concentrate runoff into smooth, straight conduits. This runoff gathers speed and erosional power as it travels underground. When this runoff leaves the storm drains and empties into a stream, its excessive volume and power blast out streambanks, damaging streamside vegetation and wiping out aquatic habitat. These increased storm flows carry sediment loads from construction sites and other denuded surfaces and eroded streambanks. They often carry higher water temperatures from streets, roof tops, and parking lots, which are harmful to the health and reproduction of aquatic life.

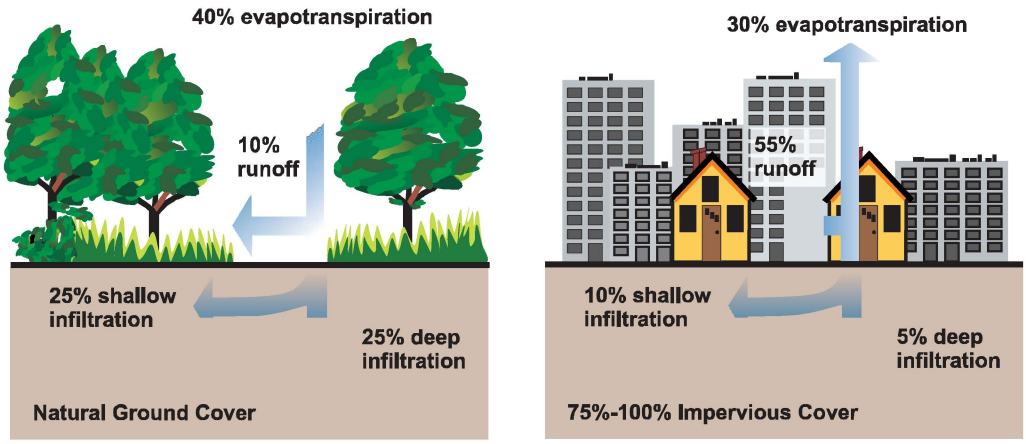
The loss of infiltration from urbanization may also cause profound groundwater changes. Although urbanization leads to great increases in flooding during and immediately after wet weather, in many instances it results in lower stream flows during dry weather. Many native fish and other aquatic life cannot survive when these conditions prevail.

Increased Pollutant Loads

Urbanization increases the variety and amount of pollutants carried into streams, rivers, and lakes. The pollutants include:

- Sediment
- Oil, grease, and toxic chemicals from motor vehicles
- Pesticides and nutrients from lawns and gardens
- Viruses, bacteria, and nutrients from pet waste and failing septic systems
- Road salts
- Heavy metals from roof shingles, motor vehicles, and other sources
- Thermal pollution from dark impervious surfaces such as streets and rooftops

These pollutants can harm fish and wildlife populations, kill native vegetation, foul drinking water supplies, and make recreational areas unsafe and unpleasant.



Relationship between impervious cover and surface runoff. Impervious cover in a watershed results in increased surface ruunoff. As little as 10 percent impervious cover in a watershed can result in stream degradation.

Managing Urban Runoff

What Homeowners Can Do

To decrease polluted runoff from paved surfaces, households can develop alternatives to areas traditionally covered by impervious surfaces. Porous pavement materials are available for driveways and sidewalks, and native vegetation and mulch can replace high maintenance grass lawns. Homeowners can use fertilizers sparingly and sweep driveways, sidewalks, and roads instead of using a hose. Instead of disposing of yard waste, they can use the materials to start a compost pile. And homeowners can learn to use Integrated Pest Management (IPM) to reduce dependence on harmful pesticides.

In addition, households can prevent polluted runoff by picking up after pets and using, storing, and disposing of chemicals properly. Drivers should check their cars for leaks and recycle their motor oil and antifreeze when these fluids are changed. Drivers can also avoid impacts from car wash runoff (e.g., detergents, grime, etc.) by using car wash facilities that do not generate runoff. Households served by septic systems should have them professionally inspected and pumped every 3 to 5 years. They should also practice water conservation measures to extend the life of their septic systems.

Controlling Impacts from New Development

Developers and city planners should attempt to control the volume of runoff from new development by using low impact development, structural controls, and pollution prevention strategies. Low impact development includes measures that conserve natural areas (particularly sensitive hydrologic areas like riparian buffers and infiltrable soils); reduce development impacts; and reduce site runoff rates by maximizing surface roughness, infiltration opportunities, and flow paths.

Controlling Impacts from Existing Development

Controlling runoff from existing urban areas is often more costly than controlling runoff from new developments. Economic efficiencies are often realized through approaches that target "hot spots" of runoff pollution or have multiple benefits, such as high-efficiency street sweeping (which addresses aesthetics, road safety, and water quality). Urban planners and others responsible for managing urban and suburban areas can first identify and implement pollution prevention strategies and examine source control opportunities. They should seek out priority pollutant reduction opportunities, then protect natural areas that help control runoff, and finally begin ecological restoration and retrofit activities to clean up degraded water bodies. Local governments are encouraged to take lead roles in public education efforts through public signage, storm drain marking, pollution prevention outreach campaigns, and partnerships with citizen groups and businesses. Citizens can help prioritize the clean-up strategies, volunteer to become involved in restoration efforts, and mark storm drains with approved "don't dump" messages.

STORMWATER Pollution Prevention

INDUSTRIAL AND COMMERCIAL FACILITIES

STORMWATER Pollution Prevention

To reduce the amount of pollutants reaching our storm drain system, which leads to the Santa Ana River and Pacific Ocean, the San Bernardino County Stormwater Program has developed Best Management Practices (BMPs) for Industrial and Commercial Facilities. City and County ordinances require that businesses comply with these BMPs, where applicable, to protect local water quality. Local cities and the County are required to verify implementation of these BMPs by performing regular facility inspections.

Prohibited Discharges

- Discontinue all non-stormwater discharges to the storm drain system. It is prohibited to discharge any chemicals, wastes or wastewater into the gutter, street or storm drain.

Outdoor Storage

- Install covers and secondary containment areas for all hazardous materials and wastes stored outdoors in accordance with County and/or City standards.
- Keep all temporary waste containers covered, except when in direct use.
- Sweep outdoor areas instead of using a hose or pressure washer.

Outdoor Processes

- Move all process operations including vehicle and equipment maintenance inside of the building or into a covered and contained area.
- Wash equipment and vehicles in a contained and covered wash bay which is closed-loop or connected to a clarifier sized to city standards, then discharged to a sanitary sewer or take them to a commercial car wash.

Spills and Clean Ups

- Clean up spills immediately when they occur, using dry clean up methods such as absorbent materials and followed by proper disposal of materials.
- Always have a spill kit available near chemical loading dock doors, vehicle maintenance and fueling areas.
- Follow your Business Emergency Plan, as filed with the County Fire Department at (909) 386-8401.

Industrial and Commercial Facilities

- Report all prohibited discharges and non-implementation of BMPs to your local Stormwater Coordinator either at (800) CLEANUP or as listed at www.sbcounty.gov/stormwater.
- Report hazardous materials spills to (800) 33 TOXIC and your local Fire Department Hazmat Team at 911.

Training

Train employees in spill response procedures and prohibited discharges to the storm drain system, as prescribed in your local Stormwater Ordinance and in applicable Best Management Practices available at www.cabmphandbooks.com and www. sbcounty.gov/stormwater.

Permitting

Stormwater discharges associated with specific categories of commercial and industrial facilities are regulated by the State Water Resources Control Board (SWRCB) through an Industrial Storm Water General Permit. A copy of the General Permit and application forms are available at: www.waterboards.ca.gov/stormwtr/industrial.html

Prevención de Contaminación
AL SISTEMA DE DRENAJE

INSTALACIONES INDUSTRIALES Y COMERCIALES

Prevención de Contaminación
AL SISTEMA DE DRENAJE

Para reducir la cantidad de contaminantes que alcanzan nuestro sistema de aguas pluviales, las cuales desembocan en el Río Santa Ana y el Océano Pacífico, el Programa del Condado de San Bernandino ha desarrollado las pautas de Mejores Prácticas de Manejo (BMPs, por sus siglas en inglés) para instalaciones industriales y comerciales. Los decretos de la ciudad y del condado establecen que todas las empresas deben de cumplir con estas BMPs, cuando corresponda, para proteger la calidad del agua local. Las ciudades locales y el condado tienen la obligación de verificar la implementación de estas BMPs al llevar a cabo inspecciones regulares en sus instalaciones.

Desagües Prohibidos

- Descontinúe todo desagüe de aguas no pluviales al sistema de drenaje de aguas pluviales. Está prohibido descargar cualquier sustancia química, residuo o agua residual a los drenajes de la cuneta, de la calle o de aguas pluviales.

Almacenamiento al Aire Libre

- Instale cubiertas y áreas de retención secundarias para todos los materiales peligrosos y residuos almacenados al aire libre, estas instalaciones deberán de cumplir con los estándares establecidos por el condado y/o la ciudad.
- Mantenga todos los recipientes temporales de residuos cubiertos, con la excepción de cuando se estén utilizando directamente.
- Barra todas las áreas al aire libre en lugar de usar una manguera o un equipo de limpieza con agua a alta presión.

Procesos al Aire Libre

- Reubique todos los procesos u operaciones, incluyendo el mantenimiento de vehículos y equipo, dentro de un edificio en una área cubierta e independiente.
- Lave el equipo y los vehículos en una fosa de lavado independiente que tenga un anillo cerrado o bien, esté conectada a un clarificador del tamaño de los estándares municipales, luego elimine los residuos en un drenaje sanitario o llévelos a un lavador de carros comercial.

Derrames y Limpieza

- Limpie los derrames inmediatamente, utilice métodos de limpieza en seco como son el uso de materiales absorbentes y elimine estos materiales de la manera adecuada.
- Siempre tenga a la mano un estuche para derrames cerca de las puertas de los muelles de carga de sustancias químicas, en las áreas de mantenimiento de vehículos y en las áreas de combustible.
- Siga su Plan de Emergencia Comercial, como lo registró con el Departamento de Bomberos del Condado marcando al (909) 386-8401.
- Reporte todos los desagües prohibidos y cualquier punto no implementado de las BMPs a su coordinador local de Aguas Pluviales llamando al (800) CLEANUP o como se indica en el enlace www.sbcounty.gov/stormwater.
- Reporte cualquier derrame peligroso al (800) 33 TOXIC y al equipo Hazmat de su departamento local de bomberos marcando al 911.

Instalaciones Industriales y Comerciales

Capacitación

Capacite a los empleados sobre los procedimientos de respuesta ante un derrame y los desagües prohibidos al sistema de aguas pluviales, como lo indica el decreto local de aguas pluviales de Mejores Prácticas de Manejo (BMPs) disponibles en el sitio www.cabmphandbooks.com y www.sbcounty.gov/stormwater.

Autoridad Competente

Los desagües de aguas pluviales relacionados con categorías específicas de instalaciones comerciales e industriales están regulados por la Junta Estatal de Control de Recursos Acuáticos (State Water Resources Control Board, SWRCB) a través de un permiso industrial general de aguas pluviales. Para obtener una copia de este permiso general y una solicitud, visite el sitio: www.waterboards.ca.gov/stormwtr/industrial.html

Para reportar el desagüe de residuos ilegales o para obtener información adicional sobre la prevención de contaminación a las aguas pluviales, llame a:

1 (800) CLEANUP

o visite nuestro sitio:

www.1800cleanup.org

San Bernardino County STORMWATER PROGRAM

LANDSCAPE MAINTENANCE

DISCHARGE TO THE STORM DRAIN, **ACCIDENTAL OR NOT**, COULD LEAD TO ENFORCEMENT ACTIONS, WHICH COULD INCLUDE FINES.

Follow the best practices below to **prevent water pollution from landscaping activities.**

RECYCLE YARD WASTE

- Recycle leaves, grass clippings and other yard waste.
- Do not blow, sweep, rake or hose yard waste into the street or catch basin.
- **Try grasscycling:** the natural recycling of grass by leaving clippings on the lawn when mowing.

  For more information, please visit: **www.calrecycle.ca.gov/organics/grasscycling**

USE FERTILIZERS, HERBICIDES AND PESTICIDES SAFELY

- Fertilizers, herbicides and pesticides are often carried into the storm drain system by sprinkler runoff. Use natural and non-toxic alternatives as often as possible.
- If you must use chemical fertilizers, herbicides or pesticides:
  - Spot apply, rather than blanketing entire areas.
  - Avoid applying near curbs and driveways, and **never** before a rain.
  - Apply fertilizers as needed: when plants could best use it and when the potential runoff would be low.
  - Follow the manufacturer's instructions carefully—this will not only give the best results, but will save money.

USE WATER WISELY

- Control the amount of water and direction of sprinklers. Sprinklers should only be on long enough to allow water to soak into the ground, but not so long as to cause runoff.
- Periodically inspect, fix leaks and realign sprinkler heads.
- Plant native vegetation to reduce the need of water, fertilizers, herbicides and pesticides.

HOMEOWNERS

KEEP THESE TIPS IN MIND WHEN HIRING PROFESSIONAL LANDSCAPERS AND REMIND AS NECESSARY.

Leftover pesticides, fertilizers, and herbicides contaminate landfills and should be disposed of through a Hazardous Waste Facility.

For more information on proper disposal call,

(909) 382-5401 or 1-800-OILY CAT.

*FREE for San Bernardino County residents only. Businesses can call for cost inquiries and to schedule an appointment.

To report illegal dumping, call (877) WASTE18 or visit sbcountystormwater.org
To report toxic spills, call 1(800) 33 TOXIC
To dispose of hazardous waste, call 1(800) OILY CAT

sbcountystormwater.org

Redlands • Rialto • San Bernardino • San Bernardino County • San Bernardino County Flood Control District • Upland • Yucaipa

MANTENIMIENTO DE JARDINERÍA

LAS DESCARGAS A LOS DESAGUES PLUVIALES, DE MANERA ACCIDENTAL O NO, PUEDEN INDUCIR A LA APLICACIÓN DE MULTAS Y OTRAS MEDIDAS.

Siga las mejores prácticas descritas debajo para evitar la contaminación del agua por actividades de jardinería.

RECICLAJE DE LOS DESECHOS DE JARDÍN

- Reciclar las hojas, recortes de césped y otros desechos de jardín.
- No soplar, barrer, o usar la manguera para empujar los desechos de jardín a la calle.
- **Poner a prueba el reciclaje de césped (grasscycling): la manera natural de reciclar el césped dejando los recortes sobre el césped cuando son cortados. Para más información, visite la página web: www.calrecycle.ca.gov/organics/grasscycling**

USAR FERTILIZANTES, HERBICIDAS Y PESTICIDAS DE MANERA SEGURA

- Los fertilizantes, herbicidas y pesticidas son arrastrados con frecuencia hacia el sistema de desagüe pluvial mediante el escurrimiento de los rociadores. Use alternativas naturales no tóxicas siempre que sea posible.
- Si tiene que usar fertilizantes, herbicidas o pesticidas químicos:
  Aplicar solo en el sitio necesario, en lugar de cubrir todas las áreas.
  Evitar aplicar cerca de los bordillos y las calzadas, y nunca antes de que llueva.
  Aplicar los fertilizantes cuando sea necesario: esto es, cuando las plantas mejor podrían usarlo y el posible escurrimiento sea bajo.
  Seguir las instrucciones del fabricante cuidadosamente – esto no solo le proporcionará los mejores resultados, pero le permitirá ahorrar dinero.

USAR EL AGUA DE MANERA PRUDENTE

- Controlar la cantidad de agua y la orientación de los rociadores. Los rociadores deben ser **solo lo suficientemente largos como para** permitir que el agua remoje el suelo, pero no tan largos que causen un escurrimiento.
- Inspeccione, repare los escapes y alinee los aspersores periódicamente.
- Siembre plantas nativas para reducir el uso de agua, fertilizantes, herbicidas y pesticidas.

PROPIETARIOS DE HOGARES

Tengan en cuenta estos consejos cuando contraten a paisajistas profesionales y recuérdenselos según sea necesario.

Los sobrantes de pesticidas, fertilizantes y herbicidas contaminan los vertederos y deben ser desechados a través de Plantas de Tratamiento para Residuos Peligrosos.

Para más información sobre el manejo adecuado de residuos peligrosos, llame a **(909) 382-5401 o 1-800-OILY CAT.**

*GRATIS únicamente para los residentes del Condado de San Bernardino. Las empresas pueden llamar para indagar sobre los costos y concertar una cita

Para denunciar el vertido ilegal de basura, llame al (877) WASTE18 o visite sbcountystormwater.org
Para denunciar derrames tóxicos, llame al 1(800) 33 TOXIC
Para desechar residuos peligrosos, llame al 1(800) OILY CAT

Building & Grounds Maintenance SC-41

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	✓
Nutrients	✓
Trash	
Metals	✓
Bacteria	✓
Oil and Grease	
Organics	

Description

Stormwater runoff from building and grounds maintenance activities can be contaminated with toxic hydrocarbons in solvents, fertilizers and pesticides, suspended solids, heavy metals, abnormal pH, and oils and greases. Utilizing the protocols in this fact sheet will prevent or reduce the discharge of pollutants to stormwater from building and grounds maintenance activities by washing and cleaning up with as little water as possible, following good landscape management practices, preventing and cleaning up spills immediately, keeping debris from entering the storm drains, and maintaining the stormwater collection system.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

Pollution Prevention

Switch to non-toxic chemicals for maintenance when possible.

Choose cleaning agents that can be recycled.

Encourage proper lawn management and landscaping, including use of native vegetation.

CASQA California Stormwater Quality Association

Encourage use of Integrated Pest Management techniques for pest control.

Encourage proper onsite recycling of yard trimmings.

Recycle residual paints, solvents, lumber, and other material as much as possible.

Suggested Protocols

Pressure Washing of Buildings, Rooftops, and Other Large Objects

In situations where soaps or detergents are used and the surrounding area is paved, pressure washers must use a water collection device that enables collection of wash water and associated solids. A sump pump, wet vacuum or similarly effective device must be used to collect the runoff and loose materials. The collected runoff and solids must be disposed of properly.

If soaps or detergents are not used, and the surrounding area is paved, wash runoff does not have to be collected but must be screened. Pressure washers must use filter fabric or some other type of screen on the ground and/or in the catch basin to trap the particles in wash water runoff.

If you are pressure washing on a grassed area (with or without soap), runoff must be dispersed as sheet flow as much as possible, rather than as a concentrated stream. The wash runoff must remain on the grass and not drain to pavement.

Landscaping Activities

Dispose of grass clippings, leaves, sticks, or other collected vegetation as garbage, or by composting. Do not dispose of collected vegetation into waterways or storm drainage systems.

Use mulch or other erosion control measures on exposed soils.

Building Repair, Remodeling, and Construction

Do not dump any toxic substance or liquid waste on the pavement, the ground, or toward a storm drain.

Use ground or drop cloths underneath outdoor painting, scraping, and sandblasting work, and properly dispose of collected material daily.

Use a ground cloth or oversized tub for activities such as paint mixing and tool cleaning.

Clean paintbrushes and tools covered with water-based paints in sinks connected to sanitary sewers or in portable containers that can be dumped into a sanitary sewer drain. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents (e.g., paint thinner, turpentine, etc.) for recycling or proper disposal.

Use a storm drain cover, filter fabric, or similarly effective runoff control mechanism if dust, grit, wash water, or other pollutants may escape the work area and enter a catch basin. This is particularly necessary on rainy days. The containment device(s) must be in place at the beginning of the work day, and accumulated dirty runoff and solids must be collected and disposed of before removing the containment device(s) at the end of the work day.

If you need to de-water an excavation site, you may need to filter the water before discharging to a catch basin or off-site. If directed off-site, you should direct the water through hay bales and filter fabric or use other sediment filters or traps.

Store toxic material under cover during precipitation events and when not in use. A cover would include tarps or other temporary cover material.

Mowing, Trimming, and Planting

Dispose of leaves, sticks, or other collected vegetation as garbage, by composting or at a permitted landfill. Do not dispose of collected vegetation into waterways or storm drainage systems.

Use mulch or other erosion control measures when soils are exposed.

Place temporarily stockpiled material away from watercourses and drain inlets, and berm or cover stockpiles to prevent material releases to the storm drain system.

Consider an alternative approach when bailing out muddy water: do not put it in the storm drain; pour over landscaped areas.

Use hand weeding where practical.

Fertilizer and Pesticide Management

Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers and pesticides and training of applicators and pest control advisors.

Use less toxic pesticides that will do the job when applicable. Avoid use of copper-based pesticides if possible.

Do not use pesticides if rain is expected.

Do not mix or prepare pesticides for application near storm drains.

Use the minimum amount needed for the job.

Calibrate fertilizer distributors to avoid excessive application.

Employ techniques to minimize off-target application (e.g., spray drift) of pesticides, including consideration of alternative application techniques.

Apply pesticides only when wind speeds are low.

Fertilizers should be worked into the soil rather than dumped or broadcast onto the surface.

Irrigate slowly to prevent runoff and then only as much as is needed.

Clean pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.

Dispose of empty pesticide containers according to the instructions on the container label.

Use up the pesticides. Rinse containers, and use rinse water as product. Dispose of unused pesticide as hazardous waste.

Implement storage requirements for pesticide products with guidance from the local fire department and County Agricultural Commissioner. Provide secondary containment for pesticides.

Inspection

Inspect irrigation system periodically to ensure that the right amount of water is being applied and that excessive runoff is not occurring. Minimize excess watering and repair leaks in the irrigation system as soon as they are observed.

Training

Educate and train employees on pesticide use and in pesticide application techniques to prevent pollution.

Train employees and contractors in proper techniques for spill containment and cleanup.

Be sure the frequency of training takes into account the complexity of the operations and the nature of the staff.

Spill Response and Prevention

Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.

Place a stockpile of spill cleanup materials, such as brooms, dustpans, and vacuum sweepers (if desired) near the storage area where it will be readily accessible.

Have employees trained in spill containment and cleanup present during the loading/unloading of dangerous wastes, liquid chemicals, or other materials.

Familiarize employees with the Spill Prevention Control and Countermeasure Plan.

Clean up spills immediately.

Other Considerations

Alternative pest/weed controls may not be available, suitable, or effective in many cases.

Requirements

Costs

Cost will vary depending on the type and size of facility.

Overall costs should be low in comparison to other BMPs.

Maintenance

Sweep paved areas regularly to collect loose particles. Wipe up spills with rags and other absorbent material immediately, do not hose down the area to a storm drain.

Supplemental Information

Further Detail of the BMP

Fire Sprinkler Line Flushing

Building fire sprinkler line flushing may be a source of non-stormwater runoff pollution. The water entering the system is usually potable water, though in some areas it may be non-potable reclaimed wastewater. There are subsequent factors that may drastically reduce the quality of the water in such systems. Black iron pipe is usually used since it is cheaper than potable piping, but it is subject to rusting and results in lower quality water. Initially, the black iron pipe has an oil coating to protect it from rusting between manufacture and installation; this will contaminate the water from the first flush but not from subsequent flushes. Nitrates, poly-phosphates and other corrosion inhibitors, as well as fire suppressants and antifreeze may be added to the sprinkler water system. Water generally remains in the sprinkler system a long time (typically a year) and between flushes may accumulate iron, manganese, lead, copper, nickel, and zinc. The water generally becomes anoxic and contains living and dead bacteria and breakdown products from chlorination. This may result in a significant BOD problem and the water often smells. Consequently dispose fire sprinkler line flush water into the sanitary sewer. Do not allow discharge to storm drain or infiltration due to potential high levels of pollutants in fire sprinkler line water.

Parking/Storage Area Maintenance SC-43

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	☑
Nutrients	☑
Trash	☑
Metals	☑
Bacteria	☑
Oil and Grease	☑
Organics	☑
Oxygen Demanding	☑

Description

Parking lots and storage areas can contribute a number of substances, such as trash, suspended solids, hydrocarbons, oil and grease, and heavy metals that can enter receiving waters through stormwater runoff or non-stormwater discharges. The following protocols are intended to prevent or reduce the discharge of pollutants from parking/storage areas and include using good housekeeping practices, following appropriate cleaning BMPs, and training employees.

Approach

Pollution Prevention

- Encourage alternative designs and maintenance strategies for impervious parking lots. (See New Development and Redevelopment BMP Handbook).
- Keep accurate maintenance logs to evaluate BMP implementation.

Suggested Protocols

General

- Keep the parking and storage areas clean and orderly. Remove debris in a timely fashion.
- Allow sheet runoff to flow into biofilters (vegetated strip and swale) and/or infiltration devices.
- Utilize sand filters or oleophilic collectors for oily waste in low concentrations.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Arrange rooftop drains to prevent drainage directly onto paved surfaces.
- Design lot to include semi-permeable hardscape.

Controlling Litter

- Post "No Littering" signs and enforce anti-litter laws.
- Provide an adequate number of litter receptacles.
- Clean out and cover litter receptacles frequently to prevent spillage.
- Provide trash receptacles in parking lots to discourage litter.
- Routinely sweep, shovel and dispose of litter in the trash.

Surface cleaning

- Use dry cleaning methods (e.g. sweeping or vacuuming) to prevent the discharge of pollutants into the stormwater conveyance system.
- Establish frequency of public parking lot sweeping based on usage and field observations of waste accumulation.
- Sweep all parking lots at least once before the onset of the wet season.
- If water is used follow the procedures below:
  - Block the storm drain or contain runoff.
  - Wash water should be collected and pumped to the sanitary sewer or discharged to a pervious surface, do not allow wash water to enter storm drains.
  - Dispose of parking lot sweeping debris and dirt at a landfill.
- When cleaning heavy oily deposits:
  - Use absorbent materials on oily spots prior to sweeping or washing.
  - Dispose of used absorbents appropriately.

Surface Repair

- Pre-heat, transfer or load hot bituminous material away from storm drain inlets.
- Apply concrete, asphalt, and seal coat during dry weather to prevent contamination form contacting stormwater runoff.
- Cover and seal nearby storm drain inlets (with waterproof material or mesh) and manholes before applying seal coat, slurry seal, etc., where applicable. Leave covers in place until job is complete and until all water from emulsified oil sealants has drained or evaporated. Clean any debris from these covered manholes and drains for proper disposal.

- Use only as much water as necessary for dust control, to avoid runoff.
- Catch drips from paving equipment that is not in use with pans or absorbent material placed under the machines. Dispose of collected material and absorbents properly.

Inspection

- Have designated personnel conduct inspections of the parking facilities and stormwater conveyance systems associated with them on a regular basis.
- Inspect cleaning equipment/sweepers for leaks on a regular basis.

Training

- Provide regular training to field employees and/or contractors regarding cleaning of paved areas and proper operation of equipment.
- Train employees and contractors in proper techniques for spill containment and cleanup.

Spill Response and Prevention

- Refer to SC-11, Spill Prevention, Control & Cleanup.
- Keep your Spill Prevention Control and countermeasure (SPCC) plan up-to-date, nad implement accordingly.
- Have spill cleanup materials readily available and in a known location.
- Cleanup spills immediately and use dry methods if possible.
- Properly dispose of spill cleanup material.

Other Considerations

- Limitations related to sweeping activities at large parking facilities may include high equipment costs, the need for sweeper operator training, and the inability of current sweeper technology to remove oil and grease.

Requirements

Costs

Cleaning/sweeping costs can be quite large, construction and maintenance of stormwater structural controls can be quite expensive as well.

Maintenance

- Sweep parking lot to minimize cleaning with water.
- Clean out oil/water/sand separators regularly, especially after heavy storms.
- Clean parking facilities on a regular basis to prevent accumulated wastes and pollutants from being discharged into conveyance systems during rainy conditions.

Supplemental Information

Further Detail of the BMP

Surface Repair

Apply concrete, asphalt, and seal coat during dry weather to prevent contamination form contacting stormwater runoff. Where applicable, cover and seal nearby storm drain inlets (with waterproof material or mesh) and manholes before applying seal coat, slurry seal, etc. Leave covers in place until job is complete and until all water from emulsified oil sealants has drained or evaporated. Clean any debris from these covered manholes and drains for proper disposal. Use only as much water as necessary for dust control, to avoid runoff.

Landscape Maintenance SC-73

Objectives

- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	☑
Nutrients	☑
Trash	☑
Metals	
Bacteria	
Oil and Grease	
Organics	
Oxygen Demanding	☑

Description

Landscape maintenance activities include vegetation removal; herbicide and insecticide application; fertilizer application; watering; and other gardening and lawn care practices. Vegetation control typically involves a combination of chemical (herbicide) application and mechanical methods. All of these maintenance practices have the potential to contribute pollutants to the storm drain system. The major objectives of this BMP are to minimize the discharge of pesticides, herbicides and fertilizers to the storm drain system and receiving waters; prevent the disposal of landscape waste into the storm drain system by collecting and properly disposing of clippings and cuttings, and educating employees and the public.

Approach

Pollution Prevention

- Implement an integrated pest management (IPM) program. IPM is a sustainable approach to managing pests by combining biological, cultural, physical, and chemical tools.
- Choose low water using flowers, trees, shrubs, and groundcover.
- Consider alternative landscaping techniques such as naturescaping and xeriscaping.
- Conduct appropriate maintenance (i.e. properly timed fertilizing, weeding, pest control, and pruning) to help preserve the landscapes water efficiency.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Consider grass cycling (grass cycling is the natural recycling of grass by leaving the clippings on the lawn when mowing. Grass clippings decompose quickly and release valuable nutrients back into the lawn).

Suggested Protocols

Mowing, Trimming, and Weeding

- Whenever possible use mechanical methods of vegetation removal (e.g mowing with tractor-type or push mowers, hand cutting with gas or electric powered weed trimmers) rather than applying herbicides. Use hand weeding where practical.
- Avoid loosening the soil when conducting mechanical or manual weed control, this could lead to erosion. Use mulch or other erosion control measures when soils are exposed.
- Performing mowing at optimal times. Mowing should not be performed if significant rain events are predicted.
- Mulching mowers may be recommended for certain flat areas. Other techniques may be employed to minimize mowing such as selective vegetative planting using low maintenance grasses and shrubs.
- Collect lawn and garden clippings, pruning waste, tree trimmings, and weeds. Chip if necessary, and compost or dispose of at a landfill (see waste management section of this fact sheet).
- Place temporarily stockpiled material away from watercourses, and berm or cover stockpiles to prevent material releases to storm drains.

Planting

- Determine existing native vegetation features (location, species, size, function, importance) and consider the feasibility of protecting them. Consider elements such as their effect on drainage and erosion, hardiness, maintenance requirements, and possible conflicts between preserving vegetation and the resulting maintenance needs.
- Retain and/or plant selected native vegetation whose features are determined to be beneficial, where feasible. Native vegetation usually requires less maintenance (e.g., irrigation, fertilizer) than planting new vegetation.
- Consider using low water use groundcovers when planting or replanting.

Waste Management

- Compost leaves, sticks, or other collected vegetation or dispose of at a permitted landfill. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Place temporarily stockpiled material away from watercourses and storm drain inlets, and berm or cover stockpiles to prevent material releases to the storm drain system.
- Reduce the use of high nitrogen fertilizers that produce excess growth requiring more frequent mowing or trimming.

- Avoid landscape wastes in and around storm drain inlets by either using bagging equipment or by manually picking up the material.

Irrigation

- Where practical, use automatic timers to minimize runoff.
- Use popup sprinkler heads in areas with a lot of activity or where there is a chance the pipes may be broken. Consider the use of mechanisms that reduce water flow to sprinkler heads if broken.
- Ensure that there is no runoff from the landscaped area(s) if re-claimed water is used for irrigation.
- If bailing of muddy water is required (e.g. when repairing a water line leak), do not put it in the storm drain; pour over landscaped areas.
- Irrigate slowly or pulse irrigate to prevent runoff and then only irrigate as much as is needed.
- Apply water at rates that do not exceed the infiltration rate of the soil.

Fertilizer and Pesticide Management

- Utilize a comprehensive management system that incorporates integrated pest management (IPM) techniques. There are many methods and types of IPM, including the following:
  - Mulching can be used to prevent weeds where turf is absent, fencing installed to keep rodents out, and netting used to keep birds and insects away from leaves and fruit.
  - Visible insects can be removed by hand (with gloves or tweezers) and placed in soapy water or vegetable oil. Alternatively, insects can be sprayed off the plant with water or in some cases vacuumed off of larger plants.
  - Store-bought traps, such as species-specific, pheromone-based traps or colored sticky cards, can be used.
  - Slugs can be trapped in small cups filled with beer that are set in the ground so the slugs can get in easily.
  - In cases where microscopic parasites, such as bacteria and fungi, are causing damage to plants, the affected plant material can be removed and disposed of (pruning equipment should be disinfected with bleach to prevent spreading the disease organism).
  - Small mammals and birds can be excluded using fences, netting, tree trunk guards.
  - Beneficial organisms, such as bats, birds, green lacewings, ladybugs, praying mantis, ground beetles, parasitic nematodes, trichogramma wasps, seed head weevils, and spiders that prey on detrimental pest species can be promoted.
- Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers and pesticides and training of applicators and pest control advisors.

- Use pesticides only if there is an actual pest problem (not on a regular preventative schedule).
- Do not use pesticides if rain is expected. Apply pesticides only when wind speeds are low (less than 5 mph).
- Do not mix or prepare pesticides for application near storm drains.
- Prepare the minimum amount of pesticide needed for the job and use the lowest rate that will effectively control the pest.
- Employ techniques to minimize off-target application (e.g. spray drift) of pesticides, including consideration of alternative application techniques.
- Fertilizers should be worked into the soil rather than dumped or broadcast onto the surface.
- Calibrate fertilizer and pesticide application equipment to avoid excessive application.
- Periodically test soils for determining proper fertilizer use.
- Sweep pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.
- Purchase only the amount of pesticide that you can reasonably use in a given time period (month or year depending on the product).
- Triple rinse containers, and use rinse water as product. Dispose of unused pesticide as hazardous waste.
- Dispose of empty pesticide containers according to the instructions on the container label.

Inspection

- Inspect irrigation system periodically to ensure that the right amount of water is being applied and that excessive runoff is not occurring. Minimize excess watering, and repair leaks in the irrigation system as soon as they are observed.
- Inspect pesticide/fertilizer equipment and transportation vehicles daily.

Training

- Educate and train employees on use of pesticides and in pesticide application techniques to prevent pollution. Pesticide application must be under the supervision of a California qualified pesticide applicator.
- Train/encourage municipal maintenance crews to use IPM techniques for managing public green areas.
- Annually train employees within departments responsible for pesticide application on the appropriate portions of the agency's IPM Policy, SOPs, and BMPs, and the latest IPM techniques.

- Employees who are not authorized and trained to apply pesticides should be periodically (at least annually) informed that they cannot use over-the-counter pesticides in or around the workplace.
- Use a training log or similar method to document training.

Spill Response and Prevention

- Refer to SC-11, Spill Prevention, Control & Cleanup
- Have spill cleanup materials readily available and in a know in location
- Cleanup spills immediately and use dry methods if possible.
- Properly dispose of spill cleanup material.

Other Considerations

- The Federal Pesticide, Fungicide, and Rodenticide Act and California Title 3, Division 6, Pesticides and Pest Control Operations place strict controls over pesticide application and handling and specify training, annual refresher, and testing requirements. The regulations generally cover: a list of approved pesticides and selected uses, updated regularly; general application information; equipment use and maintenance procedures; and record keeping. The California Department of Pesticide Regulations and the County Agricultural Commission coordinate and maintain the licensing and certification programs. All public agency employees who apply pesticides and herbicides in "agricultural use" areas such as parks, golf courses, rights-of-way and recreation areas should be properly certified in accordance with state regulations. Contracts for landscape maintenance should include similar requirements.
- All employees who handle pesticides should be familiar with the most recent material safety data sheet (MSDS) files.
- Municipalities do not have the authority to regulate the use of pesticides by school districts, however the California Healthy Schools Act of 2000 (AB 2260) has imposed requirements on California school districts regarding pesticide use in schools. Posting of notification prior to the application of pesticides is now required, and IPM is stated as the preferred approach to pest management in schools.

Requirements

Costs

Additional training of municipal employees will be required to address IPM techniques and BMPs. IPM methods will likely increase labor cost for pest control which may be offset by lower chemical costs.

Maintenance

Not applicable

Supplemental Information

Further Detail of the BMP

Waste Management

Composting is one of the better disposal alternatives if locally available. Most municipalities either have or are planning yard waste composting facilities as a means of reducing the amount of waste going to the landfill. Lawn clippings from municipal maintenance programs as well as private sources would probably be compatible with most composting facilities

Contractors and Other Pesticide Users

Municipal agencies should develop and implement a process to ensure that any contractor employed to conduct pest control and pesticide application on municipal property engages in pest control methods consistent with the IPM Policy adopted by the agency. Specifically, municipalities should require contractors to follow the agency's IPM policy, SOPs, and BMPs; provide evidence to the agency of having received training on current IPM techniques when feasible; provide documentation of pesticide use on agency property to the agency in a timely manner.

Drainage System Maintenance SC-74

Photo Credit: Geoff Brosseau

Objectives

- Contain
- Educate
- Reduce/Minimize

Description

As a consequence of its function, the stormwater conveyance system collects and transports urban runoff that may contain certain pollutants. Maintaining catch basins, stormwater inlets, and other stormwater conveyance structures on a regular basis will remove pollutants, prevent clogging of the downstream conveyance system, restore catch basins' sediment trapping capacity, and ensure the system functions properly hydraulically to avoid flooding.

Targeted Constituents

Sediment	☑
Nutrients	☑
Trash	☑
Metals	☑
Bacteria	☑
Oil and Grease	☑
Organics	☑
Oxygen Demanding	☑

Approach

Suggested Protocols

Catch Basins/Inlet Structures

- Municipal staff should regularly inspect facilities to ensure the following:
  - Immediate repair of any deterioration threatening structural integrity.
  - Cleaning before the sump is 40% full. Catch basins should be cleaned as frequently as needed to meet this standard.
  - Stenciling of catch basins and inlets (see SC-75 Waste Handling and Disposal).
- Clean catch basins, storm drain inlets, and other conveyance structures in high pollutant load areas just before the wet season to remove sediments and debris accumulated during the summer.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Conduct inspections more frequently during the wet season for problem areas where sediment or trash accumulates more often. Clean and repair as needed.
- Keep accurate logs of the number of catch basins cleaned.
- Record the amount of waste collected.
- Store wastes collected from cleaning activities of the drainage system in appropriate containers or temporary storage sites in a manner that prevents discharge to the storm drain.
- Dewater the wastes with outflow into the sanitary sewer if permitted. Water should be treated with an appropriate filtering device prior to discharge to the sanitary sewer. If discharge to the sanitary sewer is not allowed, water should be pumped or vacuumed to a tank and properly disposed of. Do not dewater near a storm drain or stream.
- Except for small communities with relatively few catch basins that may be cleaned manually, most municipalities will require mechanical cleaners such as eductors, vacuums, or bucket loaders.

Storm Drain Conveyance System

- Locate reaches of storm drain with deposit problems and develop a flushing schedule that keeps the pipe clear of excessive buildup.
- Collect flushed effluent and pump to the sanitary sewer for treatment.

Pump Stations

- Clean all storm drain pump stations prior to the wet season to remove silt and trash.
- Do not allow discharge from cleaning a storm drain pump station or other facility to reach the storm drain system.
- Conduct quarterly routine maintenance at each pump station.
- Inspect, clean, and repair as necessary all outlet structures prior to the wet season.
- Sample collected sediments to determine if landfill disposal is possible, or illegal discharges in the watershed are occurring.

Open Channel

- Consider modification of storm channel characteristics to improve channel hydraulics, to increase pollutant removals, and to enhance channel/creek aesthetic and habitat value.
- Conduct channel modification/improvement in accordance with existing laws. Any person, government agency, or public utility proposing an activity that will change the natural (emphasis added) state of any river, stream, or lake in California, must enter into a steam or Lake Alteration Agreement with the Department of Fish and Game. The developer-applicant should also contact local governments (city, county, special districts), other state agencies

(SWRCB, RWQCB, Department of Forestry, Department of Water Resources), and Federal Corps of Engineers and USFWS

Illicit Connections and Discharges

- During routine maintenance of conveyance system and drainage structures field staff should look for evidence of illegal discharges or illicit connections:
  - Is there evidence of spills such as paints, discoloring, etc.
  - Are there any odors associated with the drainage system
  - Record locations of apparent illegal discharges/illicit connections
  - Track flows back to potential dischargers and conduct aboveground inspections. This can be done through visual inspection of up gradient manholes or alternate techniques including zinc chloride smoke testing, fluorometric dye testing, physical inspection testing, or television camera inspection.
  - Once the origin of flow is established, require illicit discharger to eliminate the discharge.
- Stencil storm drains, where applicable, to prevent illegal disposal of pollutants. Storm drain inlets should have messages such as "Dump No Waste Drains to Stream" stenciled next to them to warn against ignorant or intentional dumping of pollutants into the storm drainage system.
- Refer to fact sheet SC-10 Non-Stormwater Discharges.

Illegal Dumping

- Regularly inspect and clean up hot spots and other storm drainage areas where illegal dumping and disposal occurs.
- Establish a system for tracking incidents. The system should be designed to identify the following:
  - Illegal dumping hot spots
  - Types and quantities (in some cases) of wastes
  - Patterns in time of occurrence (time of day/night, month, or year)
  - Mode of dumping (abandoned containers, "midnight dumping" from moving vehicles, direct dumping of materials, accidents/spills)
  - Responsible parties
- Post "No Dumping" signs in problem areas with a phone number for reporting dumping and disposal. Signs should also indicate fines and penalties for illegal dumping.
- Refer to fact sheet SC-10 Non-Stormwater Discharges.

- The State Department of Fish and Game has a hotline for reporting violations called Cal TIP (1-800-952-5400). The phone number may be used to report any violation of a Fish and Game code (illegal dumping, poaching, etc.).
- The California Department of Toxic Substances Control's Waste Alert Hotline, 1-800-69TOXIC, can be used to report hazardous waste violations.

Training

- Train crews in proper maintenance activities, including record keeping and disposal.
- Only properly trained individuals are allowed to handle hazardous materials/wastes.
- Train municipal employees from all departments (public works, utilities, street cleaning, parks and recreation, industrial waste inspection, hazardous waste inspection, sewer maintenance) to recognize and report illegal dumping.
- Train municipal employees and educate businesses, contractors, and the general public in proper and consistent methods for disposal.
- Train municipal staff regarding non-stormwater discharges (See SC-10 Non-Stormwater Discharges).

Spill Response and Prevention

- Refer to SC-11, Prevention, Control & Cleanup
- Have spill cleanup materials readily available and in a known location.
- Cleanup spills immediately and use dry methods if possible.
- Properly dispose of spill cleanup material.

Other Considerations

- Cleanup activities may create a slight disturbance for local aquatic species. Access to items and material on private property may be limited. Trade-offs may exist between channel hydraulics and water quality/riparian habitat. If storm channels or basins are recognized as wetlands, many activities, including maintenance, may be subject to regulation and permitting.
- Storm drain flushing is most effective in small diameter pipes (36-inch diameter pipe or less, depending on water supply and sediment collection capacity). Other considerations associated with storm drain flushing may include the availability of a water source, finding a downstream area to collect sediments, liquid/sediment disposal, and disposal of flushed effluent to sanitary sewer may be prohibited in some areas.
- Regulations may include adoption of substantial penalties for illegal dumping and disposal.
- Municipal codes should include sections prohibiting the discharge of soil, debris, refuse, hazardous wastes, and other pollutants into the storm drain system.
- Private property access rights may be needed to track illegal discharges up gradient.

- Requirements of municipal ordinance authority for suspected source verification testing for illicit connections necessary for guaranteed rights of entry.

Requirements

Costs

- An aggressive catch basin cleaning program could require a significant capital and O&M budget. A careful study of cleaning effectiveness should be undertaken before increased cleaning is implemented. Catch basin cleaning costs are less expensive if vacuum street sweepers are available; cleaning catch basins manually can cost approximately twice as much as cleaning the basins with a vacuum attached to a sweeper.

- Methods used for illicit connection detection (smoke testing, dye testing, visual inspection, and flow monitoring) can be costly and time-consuming. Site-specific factors, such as the level of impervious area, the density and ages of buildings, and type of land use will determine the level of investigation necessary. Encouraging reporting of illicit discharges by employees can offset costs by saving expense on inspectors and directing resources more efficiently. Some programs have used funds available from "environmental fees" or special assessment districts to fund their illicit connection elimination programs.

Maintenance

- Two-person teams may be required to clean catch basins with vactor trucks.

- Identifying illicit discharges requires teams of at least two people (volunteers can be used), plus administrative personnel, depending on the complexity of the storm sewer system.

- Arrangements must be made for proper disposal of collected wastes.

- Requires technical staff to detect and investigate illegal dumping violations, and to coordinate public education.

Supplemental Information

Further Detail of the BMP

Storm Drain flushing

Sanitary sewer flushing is a common maintenance activity used to improve pipe hydraulics and to remove pollutants in sanitary sewer systems. The same principles that make sanitary sewer flushing effective can be used to flush storm drains. Flushing may be designed to hydraulically convey accumulated material to strategic locations, such as to an open channel, to another point where flushing will be initiated, or over to the sanitary sewer and on to the treatment facilities, thus preventing re-suspension and overflow of a portion of the solids during storm events. Flushing prevents "plug flow" discharges of concentrated pollutant loadings and sediments. The deposits can hinder the designed conveyance capacity of the storm drain system and potentially cause backwater conditions in severe cases of clogging.

Storm drain flushing usually takes place along segments of pipe with grades that are too flat to maintain adequate velocity to keep particles in suspension. An upstream manhole is selected to place an inflatable device that temporarily plugs the pipe. Further upstream, water is pumped into the line to create a flushing wave. When the upstream reach of pipe is sufficiently full to

cause a flushing wave, the inflated device is rapidly deflated with the assistance of a vacuum pump, releasing the backed up water and resulting in the cleaning of the storm drain segment.

To further reduce the impacts of stormwater pollution, a second inflatable device, placed well downstream, may be used to re-collect the water after the force of the flushing wave has dissipated. A pump may then be used to transfer the water and accumulated material to the sanitary sewer for treatment. In some cases, an interceptor structure may be more practical or required to re-collect the flushed waters.

It has been found that cleansing efficiency of periodic flush waves is dependent upon flush volume, flush discharge rate, sewer slope, sewer length, sewer flow rate, sewer diameter, and population density. As a rule of thumb, the length of line to be flushed should not exceed 700 feet. At this maximum recommended length, the percent removal efficiency ranges between 65-75 percent for organics and 55-65 percent for dry weather grit/inorganic material. The percent removal efficiency drops rapidly beyond that. Water is commonly supplied by a water truck, but fire hydrants can also supply water. To make the best use of water, it is recommended that reclaimed water be used or that fire hydrant line flushing coincide with storm drain flushing.

Flow Management

Flow management has been one of the principal motivations for designing urban stream corridors in the past. Such needs may or may not be compatible with the stormwater quality goals in the stream corridor.

Downstream flood peaks can be suppressed by reducing through flow velocity. This can be accomplished by reducing gradient with grade control structures or increasing roughness with boulders, dense vegetation, or complex banks forms. Reducing velocity correspondingly increases flood height, so all such measures have a natural association with floodplain open space. Flood elevations laterally adjacent to the stream can be lowered by increasing through flow velocity.

However, increasing velocity increases flooding downstream and inherently conflicts with channel stability and human safety. Where topography permits, another way to lower flood elevation is to lower the level of the floodway with drop structures into a large but subtly excavated bowl where flood flows we allowed to spread out.

Stream Corridor Planning

Urban streams receive and convey stormwater flows from developed or developing watersheds. Planning of stream corridors thus interacts with urban stormwater management programs. If local programs are intended to control or protect downstream environments by managing flows delivered to the channels, then it is logical that such programs should be supplemented by management of the materials, forms, and uses of the downstream riparian corridor. Any proposal for steam alteration or management should be investigated for its potential flow and stability effects on upstream, downstream, and laterally adjacent areas. The timing and rate of flow from various tributaries can combine in complex ways to alter flood hazards. Each section of channel is unique, influenced by its own distribution of roughness elements, management activities, and stream responses.

Flexibility to adapt to stream features and behaviors as they evolve must be included in stream reclamation planning. The amenity and ecology of streams may be enhanced through the landscape design options of 1) corridor reservation, 2) bank treatment, 3) geomorphic restoration, and 4) grade control.

Corridor reservation - Reserving stream corridors and valleys to accommodate natural stream meandering, aggradation, degradation, and over bank flows allows streams to find their own form and generate less ongoing erosion. In California, open stream corridors in recent urban developments have produced recreational open space, irrigation of streamside plantings, and the aesthetic amenity of flowing water.

Bank treatment - The use of armoring, vegetative cover, and flow deflection may be used to influence a channel's form, stability, and biotic habitat. To prevent bank erosion, armoring can be done with rigid construction materials, such as concrete, masonry, wood planks and logs, riprap, and gabions. Concrete linings have been criticized because of their lack of provision of biotic habitat. In contrast, riprap and gabions make relatively porous and flexible linings. Boulders, placed in the bed reduce velocity and erosive power.

Riparian vegetation can stabilize the banks of streams that are at or near a condition of equilibrium. Binding networks of roots increase bank shear strength. During flood flows, resilient vegetation is forced into erosion-inhibiting mats. The roughness of vegetation leads to lower velocity, further reducing erosive effects. Structural flow deflection can protect banks from erosion or alter fish habitat. By concentrating flow, a deflector causes a pool to be scoured in the bed.

Geomorphic restoration – Restoration refers to alteration of disturbed streams so their form and behavior emulate those of undisturbed streams. Natural meanders are retained, with grading to gentle slopes on the inside of curves to allow point bars and riffle-pool sequences to develop. Trees are retained to provide scenic quality, biotic productivity, and roots for bank stabilization, supplemented by plantings where necessary.

A restorative approach can be successful where the stream is already approaching equilibrium. However, if upstream urbanization continues new flow regimes will be generated that could disrupt the equilibrium of the treated system.

Grade Control - A grade control structure is a level shelf of a permanent material, such as stone, masonry, or concrete, over which stream water flows. A grade control structure is called a sill, weir, or drop structure, depending on the relation of its invert elevation to upstream and downstream channels.

A sill is installed at the preexisting channel bed elevation to prevent upstream migration of nick points. It establishes a firm base level below which the upstream channel can not erode.

A weir or check dam is installed with invert above the preexisting bed elevation. A weir raises the local base level of the stream and causes aggradation upstream. The gradient, velocity, and erosive potential of the stream channel are reduced. A drop structure lowers the downstream invert below its preexisting elevation, reducing downstream gradient and velocity. Weirs and drop structure control erosion by dissipating energy and reducing slope velocity.

When carefully applied, grade control structures can be highly versatile in establishing human and environmental benefits in stabilized channels. To be successful, application of grade control structures should be guided by analysis of the stream system both upstream and downstream from the area to he reclaimed.

Examples

The California Department of Water Resources began the Urban Stream Restoration Program in 1985. The program provides grant funds to municipalities and community groups to implement stream restoration projects. The projects reduce damages from streambank aid watershed instability arid floods while restoring streams' aesthetic, recreational, and fish and wildlife values.

In Buena Vista Park, upper floodway slopes are gentle and grassed to achieve continuity of usable park land across the channel of small boulders at the base of the slopes.

The San Diego River is a large, vegetative lined channel, which was planted in a variety of species to support riparian wildlife while stabilizing the steep banks of the floodway.

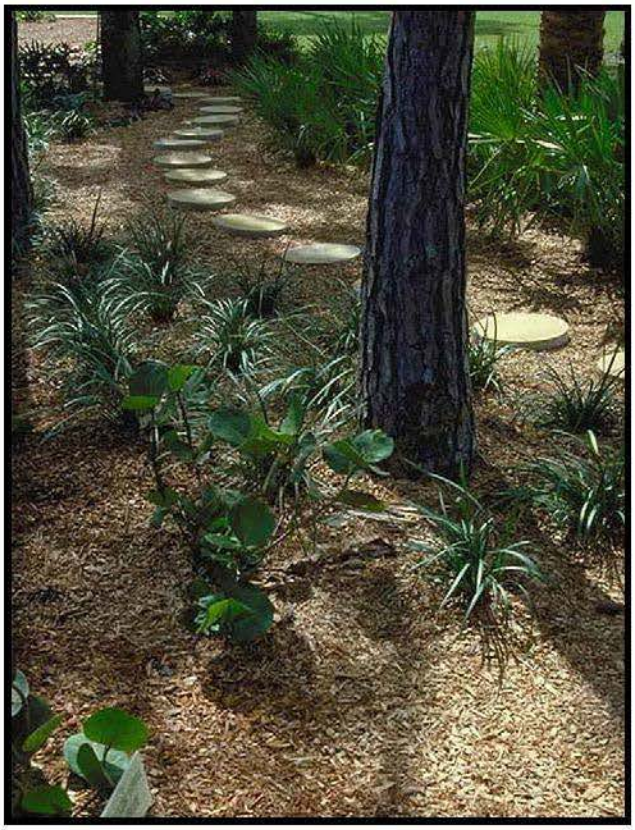
Site Design & Landscape Planning SD-10



Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- ☑ Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Each project site possesses unique topographic, hydrologic, and vegetative features, some of which are more suitable for development than others. Integrating and incorporating appropriate landscape planning methodologies into the project design is the most effective action that can be done to minimize surface and groundwater contamination from stormwater.

Approach

Landscape planning should couple consideration of land suitability for urban uses with consideration of community goals and projected growth. Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Design requirements for site design and landscapes planning should conform to applicable standards and specifications of agencies with jurisdiction and be consistent with applicable General Plan and Local Area Plan policies.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

Designing New Installations

Begin the development of a plan for the landscape unit with attention to the following general principles:

- Formulate the plan on the basis of clearly articulated community goals. Carefully identify conflicts and choices between retaining and protecting desired resources and community growth.

- Map and assess land suitability for urban uses. Include the following landscape features in the assessment: wooded land, open unwooded land, steep slopes, erosion-prone soils, foundation suitability, soil suitability for waste disposal, aquifers, aquifer recharge areas, wetlands, floodplains, surface waters, agricultural lands, and various categories of urban land use. When appropriate, the assessment can highlight outstanding local or regional resources that the community determines should be protected (e.g., a scenic area, recreational area, threatened species habitat, farmland, fish run). Mapping and assessment should recognize not only these resources but also additional areas needed for their sustenance.

Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Conserve Natural Areas during Landscape Planning

If applicable, the following items are required and must be implemented in the site layout during the subdivision design and approval process, consistent with applicable General Plan and Local Area Plan policies:

- Cluster development on least-sensitive portions of a site while leaving the remaining land in a natural undisturbed condition.

- Limit clearing and grading of native vegetation at a site to the minimum amount needed to build lots, allow access, and provide fire protection.

- Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.

- Promote natural vegetation by using parking lot islands and other landscaped areas.

- Preserve riparian areas and wetlands.

Maximize Natural Water Storage and Infiltration Opportunities Within the Landscape Unit

- Promote the conservation of forest cover. Building on land that is already deforested affects basin hydrology to a lesser extent than converting forested land. Loss of forest cover reduces interception storage, detention in the organic forest floor layer, and water losses by evapotranspiration, resulting in large peak runoff increases and either their negative effects or the expense of countering them with structural solutions.

- Maintain natural storage reservoirs and drainage corridors, including depressions, areas of permeable soils, swales, and intermittent streams. Develop and implement policies and

regulations to discourage the clearing, filling, and channelization of these features. Utilize them in drainage networks in preference to pipes, culverts, and engineered ditches.

- Evaluating infiltration opportunities by referring to the stormwater management manual for the jurisdiction and pay particular attention to the selection criteria for avoiding groundwater contamination, poor soils, and hydrogeological conditions that cause these facilities to fail. If necessary, locate developments with large amounts of impervious surfaces or a potential to produce relatively contaminated runoff away from groundwater recharge areas.

Protection of Slopes and Channels during Landscape Design

- Convey runoff safely from the tops of slopes.
- Avoid disturbing steep or unstable slopes.
- Avoid disturbing natural channels.
- Stabilize disturbed slopes as quickly as possible.
- Vegetate slopes with native or drought tolerant vegetation.
- Control and treat flows in landscaping and/or other controls prior to reaching existing natural drainage systems.
- Stabilize temporary and permanent channel crossings as quickly as possible, and ensure that increases in run-off velocity and frequency caused by the project do not erode the channel.
- Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion. Energy dissipaters shall be installed in such a way as to minimize impacts to receiving waters.
- Line on-site conveyance channels where appropriate, to reduce erosion caused by increased flow velocity due to increases in tributary impervious area. The first choice for linings should be grass or some other vegetative surface, since these materials not only reduce runoff velocities, but also provide water quality benefits from filtration and infiltration. If velocities in the channel are high enough to erode grass or other vegetative linings, riprap, concrete, soil cement, or geo-grid stabilization are other alternatives.
- Consider other design principles that are comparable and equally effective.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Redevelopment may present significant opportunity to add features which had not previously been implemented. Examples include incorporation of depressions, areas of permeable soils, and swales in newly redeveloped areas. While some site constraints may exist due to the status of already existing infrastructure, opportunities should not be missed to maximize infiltration, slow runoff, reduce impervious areas, disconnect directly connected impervious areas.

Efficient Irrigation SD-12

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Irrigation water provided to landscaped areas may result in excess irrigation water being conveyed into stormwater drainage systems.

Approach

Project plan designs for development and redevelopment should include application methods of irrigation water that minimize runoff of excess irrigation water into the stormwater conveyance system.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Designing New Installations

The following methods to reduce excessive irrigation runoff should be considered, and incorporated and implemented where determined applicable and feasible by the Permittee:

- Employ rain-triggered shutoff devices to prevent irrigation after precipitation.
- Design irrigation systems to each landscape area's specific water requirements.
- Include design featuring flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.
- Implement landscape plans consistent with County or City water conservation resolutions, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Design timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water drainage system.
- Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider design features such as:
  - Using mulches (such as wood chips or bar) in planter areas without ground cover to minimize sediment in runoff
  - Installing appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant materials where possible and/or as recommended by the landscape architect
  - Leaving a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible
  - Choosing plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth
- Employ other comparable, equally effective methods to reduce irrigation water runoff.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Ventura Countywide Technical Guidance Manual for Stormwater Quality Control Measures, July 2002.

Storm Drain Signage SD-13

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- ☑ Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Waste materials dumped into storm drain inlets can have severe impacts on receiving and ground waters. Posting notices regarding discharge prohibitions at storm drain inlets can prevent waste dumping. Storm drain signs and stencils are highly visible source controls that are typically placed directly adjacent to storm drain inlets.

Approach

The stencil or affixed sign contains a brief statement that prohibits dumping of improper materials into the urban runoff conveyance system. Storm drain messages have become a popular method of alerting the public about the effects of and the prohibitions against waste disposal.

Suitable Applications

Stencils and signs alert the public to the destination of pollutants discharged to the storm drain. Signs are appropriate in residential, commercial, and industrial areas, as well as any other area where contributions or dumping to storm drains is likely.

Design Considerations

Storm drain message markers or placards are recommended at all storm drain inlets within the boundary of a development project. The marker should be placed in clear sight facing toward anyone approaching the inlet from either side. All storm drain inlet locations should be identified on the development site map.

Designing New Installations

The following methods should be considered for inclusion in the project design and show on project plans:

- Provide stenciling or labeling of all storm drain inlets and catch basins, constructed or modified, within the project area with prohibitive language. Examples include "NO DUMPING

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

– DRAINS TO OCEAN" and/or other graphical icons to discourage illegal dumping.

- Post signs with prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area.

Note - Some local agencies have approved specific signage and/or storm drain message placards for use. Consult local agency stormwater staff to determine specific requirements for placard types and methods of application.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. If the project meets the definition of "redevelopment", then the requirements stated under " designing new installations" above should be included in all project design plans.

Additional Information

Maintenance Considerations

- Legibility of markers and signs should be maintained. If required by the agency with jurisdiction over the project, the owner/operator or homeowner's association should enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards or signs.

Placement

- Signage on top of curbs tends to weather and fade.

- Signage on face of curbs tends to be worn by contact with vehicle tires and sweeper brooms.

Supplemental Information

Examples

- Most MS4 programs have storm drain signage programs. Some MS4 programs will provide stencils, or arrange for volunteers to stencil storm drains as part of their outreach program.

Trash Storage Areas SD-32

Description

Trash storage areas are areas where a trash receptacle (s) are located for use as a repository for solid wastes. Stormwater runoff from areas where trash is stored or disposed of can be polluted. In addition, loose trash and debris can be easily transported by water or wind into nearby storm drain inlets, channels, and/or creeks. Waste handling operations that may be sources of stormwater pollution include dumpsters, litter control, and waste piles.

Approach

This fact sheet contains details on the specific measures required to prevent or reduce pollutants in stormwater runoff associated with trash storage and handling. Preventative measures including enclosures, containment structures, and impervious pavements to mitigate spills, should be used to reduce the likelihood of contamination.

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Design requirements for waste handling areas are governed by Building and Fire Codes, and by current local agency ordinances and zoning requirements. The design criteria described in this fact sheet are meant to enhance and be consistent with these code and ordinance requirements. Hazardous waste should be handled in accordance with legal requirements established in Title 22, California Code of Regulation.

Wastes from commercial and industrial sites are typically hauled by either public or commercial carriers that may have design or access requirements for waste storage areas. The design criteria in this fact sheet are recommendations and are not intended to be in conflict with requirements established by the waste hauler. The waste hauler should be contacted prior to the design of your site trash collection areas. Conflicts or issues should be discussed with the local agency.

Designing New Installations

Trash storage areas should be designed to consider the following structural or treatment control BMPs:

- Design trash container areas so that drainage from adjoining roofs and pavement is diverted around the area(s) to avoid run-on. This might include berming or grading the waste handling area to prevent run-on of stormwater.
- Make sure trash container areas are screened or walled to prevent off-site transport of trash.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Use lined bins or dumpsters to reduce leaking of liquid waste.
- Provide roofs, awnings, or attached lids on all trash containers to minimize direct precipitation and prevent rainfall from entering containers.
- Pave trash storage areas with an impervious surface to mitigate spills.
- Do not locate storm drains in immediate vicinity of the trash storage area.
- Post signs on all dumpsters informing users that hazardous materials are not to be disposed of therein.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Additional Information

Maintenance Considerations

The integrity of structural elements that are subject to damage (i.e., screens, covers, and signs) must be maintained by the owner/operator. Maintenance agreements between the local agency and the owner/operator may be required. Some agencies will require maintenance deed restrictions to be recorded of the property title. If required by the local agency, maintenance agreements or deed restrictions must be executed by the owner/operator before improvement plans are approved.

Potential Alternatives

None

Description and Purpose

Street sweeping and vacuuming includes use of self-propelled and walk-behind equipment to remove sediment from streets and roadways, and to clean paved surfaces in preparation for final paving. Sweeping and vacuuming prevents sediment from the project site from entering storm drains or receiving waters.

Suitable Applications

Sweeping and vacuuming are suitable anywhere sediment is tracked from the project site onto public or private paved streets and roads, typically at points of egress. Sweeping and vacuuming are also applicable during preparation of paved surfaces for final paving.

Limitations

Sweeping and vacuuming may not be effective when sediment is wet or when tracked soil is caked (caked soil may need to be scraped loose).

Implementation

- Controlling the number of points where vehicles can leave the site will allow sweeping and vacuuming efforts to be focused, and perhaps save money.
- Inspect potential sediment tracking locations daily.
- Visible sediment tracking should be swept or vacuumed on a daily basis.
- Do not use kick brooms or sweeper attachments. These tend to spread the dirt rather than remove it.

- If not mixed with debris or trash, consider incorporating the removed sediment back into the project

Costs

Rental rates for self-propelled sweepers vary depending on hopper size and duration of rental. Expect rental rates from $58/hour (3 yd^3 hopper) to $88/hour (9 yd^3 hopper), plus operator costs. Hourly production rates vary with the amount of area to be swept and amount of sediment. Match the hopper size to the area and expect sediment load to minimize time spent dumping.

Inspection and Maintenance

- Inspect BMPs prior to forecast rain, daily during extended rain events, after rain events, weekly during the rainy season, and at two-week intervals during the non-rainy season.
- When actively in use, points of ingress and egress must be inspected daily.
- When tracked or spilled sediment is observed outside the construction limits, it must be removed at least daily. More frequent removal, even continuous removal, may be required in some jurisdictions.
- Be careful not to sweep up any unknown substance or any object that may be potentially hazardous.
- Adjust brooms frequently; maximize efficiency of sweeping operations.
- After sweeping is finished, properly dispose of sweeper wastes at an approved dumpsite.

APPENDIX C

WQMP AGREEMENT

APPENDIX D

BMP OPERATION & MAINTENANCE (O&M)

Introduction

Prinsco's HydroStor chamber systems provide a solution to effectively manage and store stormwater runoff utilizing a pipe manifold system to distribute the stormwater to rows of chambers and end caps. As stormwater flows to the chamber system, it carries sediment and debris that tends to collect within the system. Given that chambers are an open bottom system, it is essential to capture the sediment and debris before it enters the chamber rows with the use of a pre-treatment device.

Pre-Treatment System Devices

The use of a pre-treatment unit is recommended for all Hydrostor chamber systems, as debris and sediment buildup in the system will clog the stone void space under the chambers. If the stone becomes clogged with sediment, the storage performance and service life of the system will be compromised. A pre-treatment unit is designed to capture a majority of the sediment and debris before it is able to enter the entire chamber system. Therefore, the maintenance and cleaning of the system will be limited to only the pre-treatment system and not the entire chamber system. It is crucial to ensure that the pre-treatment device(s) are maintained regularly. For chamber systems, there are two options for a pre-treatment device: a Stormwater Quality Unit or sediment row.

Sediment Row

Another option available for HydroStor chamber systems, which can be used in conjunction with a SWQU or by itself, is a Sediment Row. The sediment row consists of a series of chambers installed directly on top of two layers of a woven geotextile. The geotextile serves as a filter and prevents the sediment from clogging the bedding stone. The specified geotextile is also durable enough to withstand cleaning and maintenance procedures using water jet technology. The sediment row will typically be located in the first row of chambers and connected to the control structure(s). This connection is made with a short stub of 18" (450 mm) pipe for HS75 chambers or 24" (600 mm) pipe for HS180 chambers and will be the point of access for cleaning and maintenance procedures. A 24" (600 mm) connection to HS75 chambers is possible, however a pipe adapter will be required to make the connection to the end cap.

Inspection Ports

Inspections ports are not required for the entire chamber system but may be installed to monitor the sediment levels, particularly in the sediment row. Inspection ports are typically 4" - 8" (100 – 200 mm) PVC risers and are to be installed in the valley between the corrugations on the HS180 chambers or in the circular cut out point at the center of HS75 chambers.

Initial System Inspection

An initial inspection of the pre-treatment device should be performed before the chamber system is put into operation. It is best to create an Inspection and Maintenance log sheet at this time. The Inspection and Maintenance Log Sheet can be found at the end of this technical note. Included with the log sheet should be a layout of the system and/or pre-treatment devices with the invert elevations at the inspection ports prior to sediment accumulation. Initial measurements can be taken with a stadia rod or other measurement techniques. These measurements will allow for future sediment height measurements to be taken from outside of the system, eliminating the need for manned entrance.

© Prinsco, Inc. 09/19

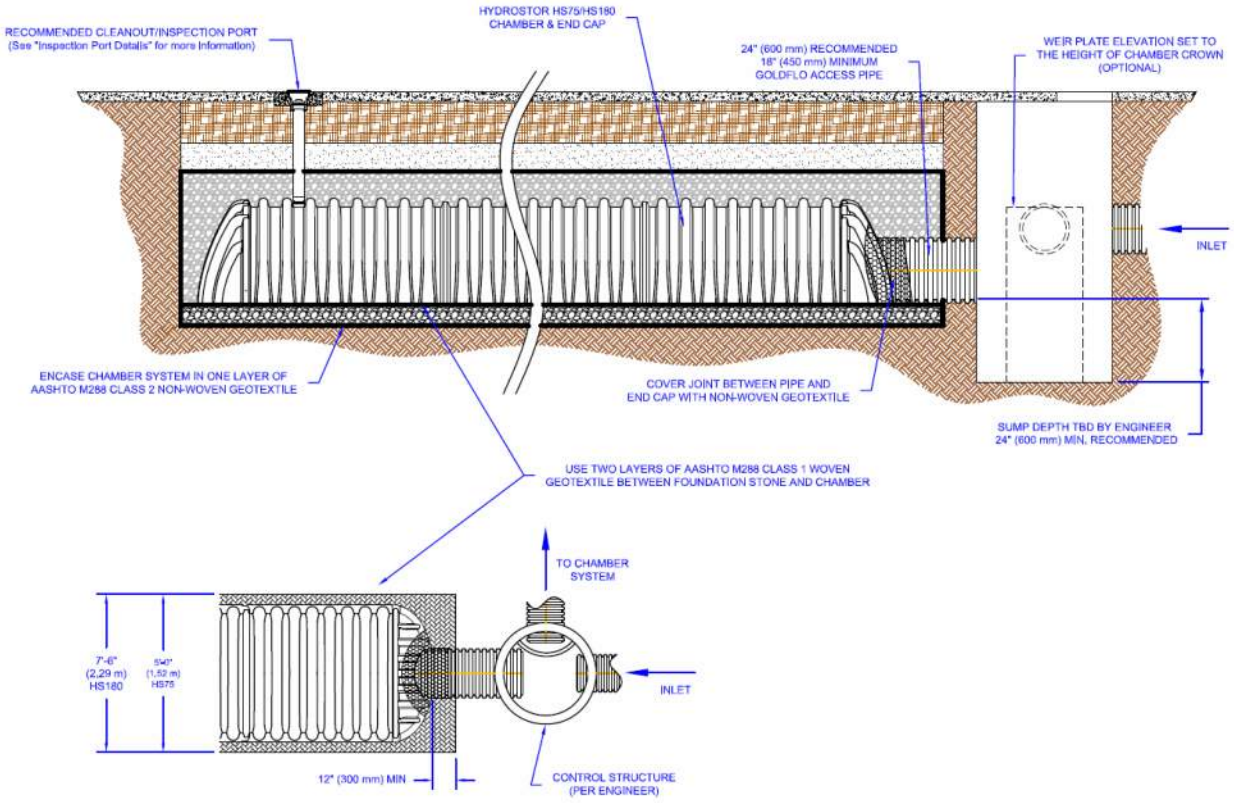

Figure 1 – Chamber Sediment Row

Inspection Frequency

Inspection frequency will vary based on the system design and requirements. A system inspection schedule should be developed for each individual system, with the industry standard being a minimum of once per year. After the inspection schedule is established for the system, it should be tracked on the Inspection and Maintenance Log Sheet.

During the first year of operation, more frequent inspections should be done due to construction activities. Construction sediment and debris loading can be minimized if the Stormwater Pollution Prevention Plan (SWPPP) plan for the construction site is followed. After the first year of operation, the rate at which the pretreatment system collects soil/pollutants will be heavily dependent on the site activities. During winter months, in geographical areas where sand is applied to road surface, systems may see increased sediment loading. Other increased loading areas are present with vehicle or equipment wash-down areas.

1717 16th St NE | Willmar, MN 56201 | 800.992.1725 | www.prinsco.com
© Prinsco, Inc. 09/19

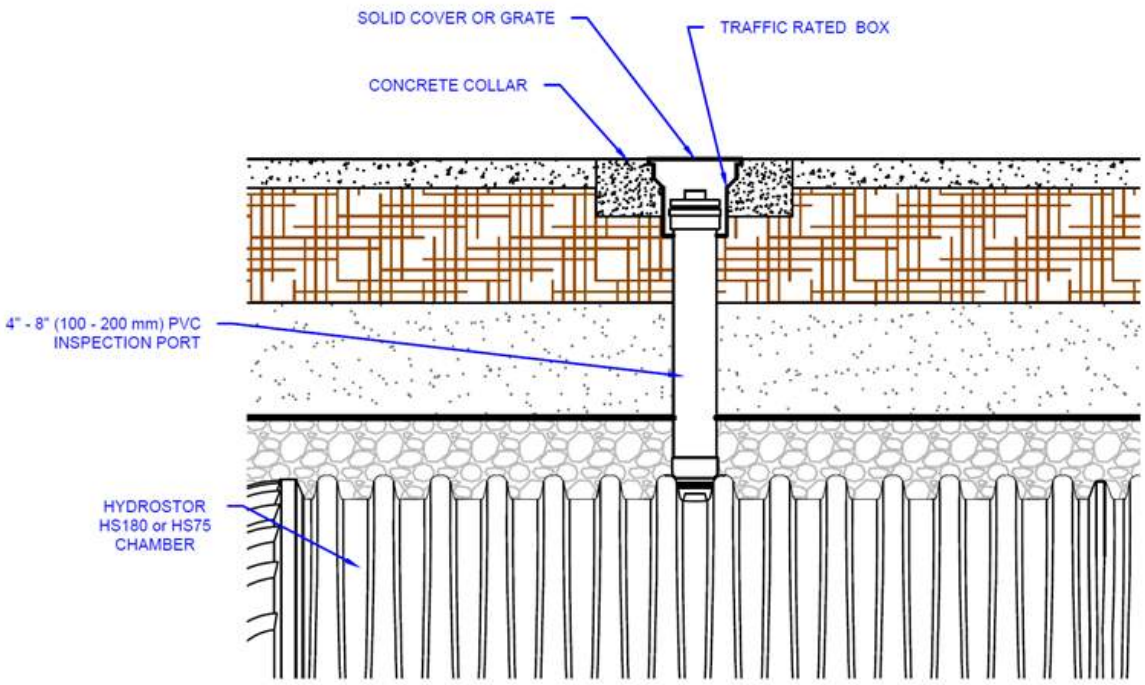

Figure 2 - Inspection Ports for Chamber System

Inspections for a sediment row can either be done through an inspection port or by examining the chamber row through the upstream control structure. During inspections, elevations of sediment height should be taken from each riser, cleanout or inspection port. These elevations should be recorded on the Inspection and Maintenance Log Sheet. During the inspection, personnel should be looking for blockages to inlet or outlet stubs or any other evidence of system malfunction.

Maintenance Frequency

Cleaning frequency will vary for each pre-treatment device based on the system design. It is at the sole discretion of the inspector to determine if or when the device will require cleaning. The following are recommendations of when the device should be cleaned:

- If the system is experiencing an unusual amount of silt and soil build up, the pre-treatment device should be investigated and or cleaned.
- If the chamber sediment row reaches a sediment height between 1”-3” (25-75 mm), the inspector should recommend cleaning.
- If the system reaches a sediment height greater than 3” (75 mm) in the chamber sediment row, the system should be clean at the soonest opportunity.

System Cleaning

The most common method of cleaning is done by using a vacuum truck. For the sediment row, a high-pressure nozzle with rear facing jets is used to direct the sediment and debris to the inlet control structure where it can then be vacuumed out. Care needs to be taken to ensure damage to the geotextile fabric does not occur when removing sediment and debris.

1717 16th St NE | Willmar, MN 56201 | 800.992.1725 | www.prinsco.com
© Prinsco, Inc. 09/19

Figure 3 - Sediment Row Cleaning

Before the system is cleaned, the following considerations should be made:

- The system will be much easier to clean when there is little to no flow into the system and the system does not have any standing water. For this reason, system cleaning should be scheduled around dry weather.
- Before cleaning begins, all outlet stubs should be blocked off. This includes the outlet from the diversion structure to the chamber system. If this is not done, sediment loading could back up or plug downstream pipelines adding to cleaning expenses. This is also done to prevent any of the debris or pollutants from washing into downstream waterways.
- When beginning the cleaning process all upstream pipelines and pre-treatment units should be cleaned first.

Safety

Before entering a retention or detention system, ensure all OSHA and local safety regulations are being followed. Only personnel with appropriate confined space permits and personal protective equipment should be allowed to enter the system.

Material Disposal

After maintenance and cleaning, dispose of sediment, as directed, in accordance to local regulations. Water and sediment from cleanout procedures should not be dumped into a sanitary sewer. In some locations, proper disposal of sediments from the sediment row can be compared to the disposal of sediments from manholes or catch basins.

Water Quality Management Plan (WQMP)
Olive Grove Business Park

Retention Basin Diversion and Pretreatment Manhole: Operation and Maintenance

Maintenance Required

Trash, debris and sediment must be removed and disposed of per local jurisdiction requirements. The sump manhole shall be cleaned of all debris, silt and trash when the capacity has reached 75% of the total depth to maintain clear flow from inlet and outlet pipe.

Frequency

The diversion structure should be inspected at regular intervals (twice a year minimum) and maintained when necessary to ensure optimum performance. In addition, inspection and maintenance is required after every rain event greater than 0.5 inches.

Record Keeping

Records of inspection shall be maintained for a minimum of 5 years. At minimum, these records shall document:

- Inspection Date
- Depth of Sediment/ Trash/ Debris
- Type of Maintenance Performed
- Maintenance Personnel
- Comments

APPENDIX E

GEOTECHNICAL REPORT

GEOTECHNICAL PROFESSIONALS INC.

October 2, 2019

Oakmont Rialto Olive Grove, LLC
c/o Crow Holdings Industrial
527 W. 7th Street, Suite 308
Los Angeles, California 90014

Attention: Mr. Jared Riemer

Subject: Planning-Level Preliminary Geotechnical Investigation
Proposed Olive Grove Business Park
North Side of Baseline Road, ¼ mile East of N. Ayala Drive
Rialto, California
GPI Project No. 2963.I

Dear Mr. Riemer:

In accordance with your request, this report presents the results of our planning-level preliminary geotechnical investigation for the proposed business park at the subject site. The purpose of our investigation was to characterize the geotechnical conditions at the site with respect to the feasibility of the development and to provide preliminary recommendations for earthwork and design of foundations, floor slabs and pavements.

INTRODUCTION

The project site is a 31.6 acre parcel located on the north side of Baseline Road, ¼ mile east of North Ayala Drive, in Rialto, California. The location of the site is shown on the Site Location Map, Figure 1. The approximate limits of proposed development are shown on the Site Plan, Figure 2.

The proposed project will consist of two industrial warehouse buildings approximately 416,106 and 235,896 square feet in size. The buildings are anticipated to be tall one-story buildings of concrete tilt-up construction and will likely include some office areas with mezzanines. Column loads are not available at this time; however, we anticipate typical maximum column loads of 80 to 100 kips and wall loads of 6 to 8 kips per foot (dead plus live). Floor slabs will be supported on-grade with dock-high construction.

The finish floor elevation of the west building will slope downward from north to south at about 0.5% from approximate elevation 1383 feet to 1379 feet. The finish floor elevation of the east building will slope downward from north to south at the same gradient from approximate elevation 1378 feet to 1375 feet. We anticipate site grading to include cuts and fills on the order of approximately 10 feet to develop the two building pads.

5736 Corporate Avenue • Cypress, CA 90630 • (714) 220-2211 , FAX (714) 220-2122

Site improvements will also include asphalt and concrete pavements for automobiles, truck and trailer traffic, and fire access lanes, site walls and underground utilities. Stormwater infiltration basins are currently being evaluated and may consist of small open basins or subterranean chamber basins below paved areas.

SCOPE OF WORK

Our scope of work included review of published information, subsurface exploration, field infiltration testing, laboratory testing, engineering evaluations, and preparation of this planning-level preliminary geotechnical letter report.

Our field exploration program for this study consisted of four hollow stem auger borings, ten exploratory test pits, and two infiltration test wells. The borings were performed to depths of approximately 21½ to 36½ feet below existing grade. The test pits were performed to depths of approximately 5 feet below existing grade, and the percolation wells were installed at depths of approximately 16 and 17 feet below existing grades. A description of field procedures and logs of the borings and test pits are presented in the attached Appendices A and B. The procedures and results of the infiltration tests are discussed in this report. The approximate locations of the subsurface explorations and infiltration test wells are shown on the Site Plan, Figure 2.

Laboratory soil tests were performed on selected representative samples as an aid in soil classification and to evaluate the engineering properties of the soils. The geotechnical laboratory testing program included determinations of moisture content and dry density, fines content, shear strength, corrosivity and maximum density. Corrosivity screening tests were performed by HDR under subcontract to GPI. The results of the laboratory testing by GPI and HDR are presented in Appendix C.

Engineering evaluations were performed to provide planning-level recommendations and an assessment of seismic hazards. The results of our evaluations are presented in the remainder of the report.

SURFACE CONDITIONS

The project site is currently unoccupied and covered with short grass, bushes, and weeds. Scatter cobbles and boulders are visible at the ground surface. Historic aerial photographs indicate that the site has been previously used for agriculture prior to 1966. From 1966 to current, the site has been vacant. The site is bounded on the north by Jerry Eaves Park, to the east by a stormwater detention basin, to the west by a series of commercial buildings along North Fitzgerald Avenue, and to the south by Base Line Road.

The ground surface gently slopes downward from about elevation 1390 feet at the northwest corner of the site to elevation 1360 in the southeast corner of the site.

SUBSURFACE CONDITIONS

Our field investigation disclosed a subsurface profile consisting of undocumented fills overlying natural soils. Detailed descriptions of the subsurface conditions encountered in our boring and test pit explorations are provided in Appendix A and B. A brief summary of the subsurface conditions is provided below.

Undocumented fills were encountered to approximately 3½ feet below existing grade in one of the ten test pit explorations (Test Pit TP-7). Approximately 2 to 3 feet of fill was noted in each of the four borings drilled at the site; however, it was difficult to distinguish between the fill and underlying natural soils as they were very similar in material makeup. As such, we conclude that localized shallow fills should be anticipated. The fill materials encountered consisted of silty sands with varying amounts of gravels and few cobbles. The fills were generally medium dense and dry.

The natural soils consist predominately of sand and silty sand with varying amounts of gravel and cobbles, and gravels with varying amounts of sand and silt. Scattered boulders, up to 22 inches in diameter, were also encountered. In general, the native soils were medium dense to very dense and dry to slightly moist. Drilling was performed with small diameter equipment, making it difficult to identify potential cobbles and boulders. The natural soils have moderate to high strength and low to medium compressibility characteristics.

Groundwater was not encountered in our current explorations drilled to a maximum depth of 36 feet below ground surface. Published data by the California Department of Water Resources indicates groundwater is deeper than 400 feet below the ground surface.

CONCLUSIONS AND PRELIMINARY RECOMMENDATIONS

General

Based on the results of our investigation and experience with nearby, similar projects, it is our opinion that from a geotechnical engineering viewpoint, it is feasible to develop the site as proposed. We anticipate the proposed buildings and any appurtenant structures may be supported on shallow foundations underlain by engineered fill. The most significant geotechnical issues that will affect the design and construction of the proposed structures are summarized below:

- Undocumented fills were encountered to depths of up to 3½ feet below existing grade at the site. The fill soils are not considered to be suitable for direct support of foundations or floor slabs. If not removed in the planned excavations, we recommend removal and recompaction of the fill materials to provide uniform support of the planned improvements.

- The fill and native materials encountered had significant amounts of gravel, varying amounts of cobbles, and occasional boulders. The cobbles were generally up to 5 inches in diameter and occasionally up to 12 inches in diameter. The boulders encountered were up to 22 inches in diameter. On-site materials greater than 8 inches in diameter can be exported, crushed, or disposed of in windrows outside of the building pads.

- To provide uniform support for the planned buildings, the soils should be removed to a depth of at least 4 feet below the planned finished pad grade, 2 feet below the base of foundations, or 3 feet below existing grade, whichever is greater. Foundations for minor structures, such as site walls, should be underlain by at least 1 foot of properly compacted fill. Deeper removals may be required were unsuitable fill soils extend below the recommended overexcavation depth.

- Deeper overexcavation in the area of deep cuts may be desirable during rough grading in utility corridors to aid in excavating utility trenches with conventional equipment.

- The undisturbed native materials may be suitable for direct support of building foundations but may be undesirable for future excavations of footings or utility trenches. The recommendation for removals to extend to a depth of at least 4 feet below the finished pad grade for building pads materials is provided so that future excavations for utilities and footings can be made with conventional equipment.

- Because of the likely presence of cobbles and boulders, oversize material (greater than 8-inches) should be anticipated to be generated from site cuts. Special handling and/or crushing of oversize material will be required in order to use the material as compacted fill. On-site placement of the boulders in compacted fills will depend on the final site grades.

- Fills placed within 3 feet of the finished pad grade should not contain particles greater than 3 inches in diameter.

- The in-place fill and native soils are generally dry to slightly moist with moisture contents near or below optimum. These soils will require processing and moisture conditioning prior to replacement as properly compacted fill.

Our preliminary recommendations related to the geotechnical aspects of the development of the site are presented in the subsequent sections of this report.

Seismic Considerations

There are no known faults crossing or projecting through the site. The development does not lie within an Alquist-Priolo Earthquake Fault Zone as designated by the California Geologic Survey (CGS), which would require further studies of the fault. Therefore, ground rupture due to faulting is considered unlikely at this site. The closest fault to the site is the San Jacinto fault, which is mapped about 1.6 miles to the northeast.

The buildings are anticipated to be designed in accordance with the 2019 California Building Code (CBC) which will be in effect as of January 1, 2020. The available data indicates that Site Class D, (Stiff Soil) and possibly Site Class C (Very Dense Soil and Soft Rock), would likely be appropriate for use in design of structures. Site specific field testing, which can be performed during final design, should be performed to determine the Site Class.

Typical of Southern California, there is a potential that the site development will be subjected to strong ground motion during its life. The peak ground acceleration used in design for CBC 2019 will be based on the final determination of the Site Class during final design. For a magnitude 8.1 earthquake, we computed that the site could be subjected to a site modified peak ground acceleration (PGA_M) of 0.939g for Site Class D (determined with field testing) and 1.025g for Site Class C. These accelerations were computed using the mapped Maximum Considered Geometric Mean peak ground acceleration from ASCE 7-16 (ASCE, 2016) and the appropriate site coefficient (F_{PGA}). The predominant earthquake magnitude (8.1) was determined using a 2 percent probability of exceedance in a 50-year period, or an average return period of 2,475 years. The structural design will need to incorporate measures to mitigate the effects of strong ground motion.

The site is not located in a Seismic Hazards Zone for liquefaction nor earthquake induced landslide zones. Due to the dense nature of the natural soils, the potential for seismic induced dry-sand settlement is not expected to impact site development.

Foundations

The proposed buildings and minor structures, such as free standing walls and trash enclosures, may be supported on spread footings underlain by engineered fill. We anticipate an allowable net bearing capacity for spread footings on the order of 4,000 pounds per square foot (psf) for building foundations and 2,500 psf for minor structure foundations underlain properly compacted fill. Settlement of the foundations underlain by engineered fill are anticipated to be within tolerable limits.

For preliminary design, a coefficient of friction of 0.40 may be used for frictional resistance and an allowable lateral bearing pressure equal to an equivalent fluid weighing of 300 pounds per cubic foot may be used for the compacted fill soils; these values may be used in combination without reduction.

Earthwork

General

The earthwork anticipated at the project site will consist of clearing and grubbing, excavation of undocumented fills and loose natural or disturbed soils, cuts and fills to grade, subgrade preparation including moisture conditioning, and placement and compaction of fill.

Overexcavation and Placement of Fill

To provide uniform support for the planned buildings, the soils should be removed to a depth of at least 4 feet below the planned finished pad grade, 2 feet below the base of foundations, or 3 feet below existing grade, whichever is greater. Foundations for minor structures, such as site walls, should be underlain by at least 1 foot of properly compacted fill. Deeper removals may be required were unsuitable fill soils extend below the recommended overexcavation depth. If not removed in the planned excavations, we recommend removal and recompaction of the fill materials to provide uniform support of the planned improvements.

Deeper overexcavation in the area of deep cuts may be desirable during rough grading utility corridors to aid in excavating utility trenches with conventional equipment.

The fill and native materials encountered had significant amounts of gravel, varying amounts of cobbles and occasional boulders. The cobbles were generally up to 5 inches in diameter and occasionally up to 12 inches in diameter. The boulders encountered were up to 22 inches in diameter. On-site materials greater than 8 inches in diameter can be exported, crushed, or disposed of in windrows outside of the building pads.

Because of the likely presence of cobbles and boulders, oversize material (greater than 8-inches) should be anticipated to be generated from site cuts. Special handling and/or crushing of oversize material will be required in order to use the material as compacted fill. On-site placement of the boulders in compacted fills will depend on the final site grades.

The undisturbed native materials may be suitable for direct support of building foundations but may be undesirable for future excavations of footings or utility trenches. The recommendation for removals to extend to a depth of at least 4 feet below the finished pad grade for building pads materials is provided so that future excavations for utilities and footings can be made with conventional equipment.

Fills placed within 3 feet of the finished pad grade should not contain particles greater than 3 inches in diameter.

After the recommended removals are complete, the exposed subgrade soils should be scarified to a depth of 8 inches, moisture-conditioned, and compacted to at least 90 percent

of the maximum dry density in accordance with ASTM D 1557. If the subgrade is evaluated by our field representative to consist of relatively undisturbed and dense native materials containing gravel and cobbles, scarification of the subgrade may be waived.

Fill soils should be placed in horizontal lifts, moisture-conditioned, and mechanically compacted to at least 90 percent of the maximum dry density in accordance with ASTM D1557.

The moisture content of the existing near surface soils was dry to slightly moist and generally below optimum. Moisture conditioning will be required during grading and consideration should be given to prewatering the site prior to starting earthwork. The moisture content of the fill materials should be between optimum and 2 percent over optimum moisture conditions at the time of compaction and the soils should not be allowed to dry out prior to covering with concrete or additional fill.

Materials for Fill

The on-site soils are, in general, suitable for use as compacted fill, with the exception of oversized materials. Existing on-site soils to be used as fill should be free of debris and any pieces larger than 8 inches in greatest dimension. Imported material and fills placed within 3 feet of the finished building pad grades should not contain particles greater than 3 inches in diameter. On-site materials greater than 8 inches in diameter can be exported, crushed, or disposed of in windrows outside of the building pads.

Soils used as retaining wall backfill should be granular (contain no more than 40 percent fines - portion passing No. 200 sieve) and non-expansive (E.I. less than 20). Such materials are anticipated to be available on-site. Imported fill material should be predominately granular and non-expansive as defined above.

Walls Below Grade

Although permanent retaining walls are not anticipated, preliminary lateral earth pressures for use in conceptual design of walls below grade are provided below:

Wall Condition	Equivalent Fluid Pressure
Cantilever walls with level, drained backfill comprised of granular soils or the undisturbed natural soils (Static Active Pressure Condition)	40 pcf (1)
Restrained basement walls with drained conditions (Static At-Rest Pressure Condition)	60 pcf (1)
Additional lateral pressure increases for seismic loading Active Pressure Condition: At-rest Pressure Condition:	 33 pcf 13 pcf
Surcharge Pressures	See below.

Note (1) does not include hydrostatic pressures or seismic earth pressures.

Walls subject to surcharge loads should be designed for an additional uniform lateral pressure equal to one-third and one-half the anticipated surcharge pressure for unrestrained and restrained walls, respectively. In addition to the recommended earth pressure, the upper 10 feet of the walls adjacent to the streets should be designed to resist a uniform lateral pressure of 100 pounds per square foot, acting as a result of an assumed 300 pound per square foot surcharge behind the shoring due to normal street traffic.

Concrete Floor Slabs

Concrete floor slabs supported at grade are anticipated to be underlain by engineered fill following overexcavation and recompaction or near surface unsuitable fill and natural soils. A moisture vapor retarder should be placed under slabs that are to be covered with moisture-sensitive floor coverings.

Pavements

Based on an assumed R-value of 45 and using the California Division of Highways Design Method, the following preliminary pavement sections have been developed for various levels of traffic.

PAVEMENT AREA	TRAFFIC INDEX	SECTION THICKNESS (inches)	
		ASPHALT CONCRETE	AGGREGATE BASE COURSE
Asphalt Concrete			
Auto Parking Stalls	4	3	4
Circulation Drives	5	3	4
Truck Drives	6	3	6
Heavy Truck Drives	7	4	6
Portland Cement Concrete		**PCC(1)**	
Auto Parking Stalls	4	6	0
Circulation Drives	5	6.5	0
Truck Drives	6	7	0
Heavy Truck Drives	7	7	0
	8	7.5	0

(1) Note: PCC pavement section can be reduced by ½ inch if underlain by 4 inches of aggregate base.

The pavement subgrade and the base course material should be compacted to at least 95 percent of the maximum dry density (ASTM D 1557). Testing of the subgrade soils should be performed during design and following rough grading to confirm and update the recommended pavement sections based on Traffic Indexes provided by the Civil Engineer.

Corrosion

Based on laboratory testing by HDR (included in Appendix C of this report) the site soils are considered to be mildly corrosive to concrete and ferrous metals. Based on the test results, foundation concrete and other concrete in contact with site soils should conform to the requirements outlined in ACI 318-14, Section 19.3 for a negligible level of soluble sulfate exposure for soil (Exposure Class S0). According to the American Concrete Institute (ACI) 318-14, Table 19.3.1.1, the Exposure Class for corrosion protection of reinforcement are "C0" if "concrete is dry or protected from moisture", and "C1" if "concrete is exposed to moisture but not to an external sources of chlorides".

The provided preliminary corrosion tests are only an indicator of potential soil corrosivity for the sample tested. GPI's scope of work did not include corrosion engineering. A corrosion engineer should be retained to evaluate the corrosion potential of the site to proposed improvements, to recommend further testing as required, and to provide specific corrosion mitigation methods appropriate for the project. Additional testing should be conducted during final design.

Percolation Test Wells

Test wells, P-1 and P-2 were, were installed in boreholes drilled using truck-mounted hollow-stem auger drill equipment at two of the preliminary infiltration basin locations. The locations of the test wells are shown on Figure 2. The wells consisted of 2-inch diameter PVC casing installed in an 8-inch diameter borehole. The casing was perforated in the lower 2 feet of the wells. Packing material around the slotted sections of the well casing consisted of #3 sand. The test wells P-1 and P-2 were constructed to depths of approximately 17½ and 16 feet, respectively, below existing grade in order to test the soils near the bottom elevations for two basins that were being considered at the time our field work was conducted. The percolation testing was performed in general accordance with the San Bernardino County guidelines for borehole infiltration tests.

The test wells were filled with water the day before testing and presoaked at least 15 hours. Prior to running the tests in the wells, we conducted the Sandy Soil Criteria Test by filling the test holes as described in the guidelines and taking measurements of the water levels. The Sandy Soil Criteria were achieved in both wells P-1 and P-2. Two consecutive measurements showed that at least 6 inches of water seeped away in less than 25 minutes, therefore the test was continued for at least 1 hour as described in the criteria. The results of the Sandy Soil Criteria Tests are shown on the table below.

The percolation testing was conducted as outlined in the Reference for 'sandy soils' for at least six consecutive 10-minute readings. The tests were performed in each well, measuring the drop in water level over the designated time increment, as appropriate for each location. The initial water heights in the test wells were on the order of 3 feet above the bottom of the test well. After each reading, the water level was raised to approximately the same height. Details of the percolation tests are presented in the attached Table 1, Borehole Infiltration Test Results.

The measured infiltration rates were calculated using the drop in water level over the test increment time and corrected using the Porchet Method. The final measured rates for each well, corrected as indicated above are presented in the following table and should be used with an appropriate factor of safety.

Infiltration Test Results Summary

TEST WELL	APPROXIMATE DEPTH OF TEST WELL (feet)	CORRECTED INFILTRATION RATE (in./hr.)
P-1	17.6	4.4
P-2	16.2	4.9

After completion of the infiltration testing, the well casings were removed, and the holes were backfilled with the on-site soils.

Based on the results of the tests, storm water disposal by infiltration into the shallow subsurface soils is anticipated to be technically feasible. The subsurface conditions encountered in the explorations across the site appear to be relatively uniform and comparable infiltration rates are anticipated in other areas of the site. During final design, additional explorations and infiltration testing should be conducted at the specific locations and depths of planned stormwater infiltration.

The Civil Engineer should evaluate the feasibility of surface infiltration using the rates provided above. Additional factors of safety in computing the design infiltration rate of the proposed infiltration BMP should be determined by the project Civil Engineer.

It should also be noted that the infiltration rates are for clean, clear water and do not include effects of sediment, fines, dissolved solids or other debris, as these materials will significantly reduce the infiltration rates of the subsurface soils. Prior to infiltration, water should be cleaned of sediment or other deleterious materials to help reduce the potential for clogging and reduced percolation rates. Should fines or suspended solids be permitted to enter the basin, reduced infiltration rates will result.

LIMITATIONS

The geotechnical investigation reported herein was performed for the exclusive use by Oakmont Rialto Olive Grove LLC and their consultants in evaluating the feasibility of constructing the proposed improvements. This report should not be used for evaluating the feasibility of developing the site for other uses or for the detailed design of the proposed project, because this report does not contain sufficient or appropriate information for such use.

Soil deposits may vary in type, strength, and many other important properties between points of exploration due to non-uniformity of the geologic formations or to man-made cut and fill operations. While we cannot evaluate the consistency of the properties of materials in areas not explored, the conclusions drawn in this report are based on the assumption that the data obtained in the field are reasonably representative of field conditions and are conducive to interpolation and extrapolation.

As noted previously, additional geotechnical investigations will be needed for design and construction. Furthermore, our recommendations were developed with the assumption that a proper level of field observation and construction review will be provided by a qualified geotechnical consulting firm during grading, excavation, and foundation construction. If design- and construction-phase geotechnical services are performed by others they must accept full responsibility for all geotechnical aspects of the project.

Our investigation and evaluations were performed using generally accepted engineering approaches and principles available at this time and the degree of care and skill ordinarily exercised under similar circumstances by reputable Geotechnical Engineers practicing in this area. No other representation, either express or implied, is included or intended in our report.

Respectfully submitted,
Geotechnical Professionals Inc.

APPENDIX A

APPENDIX A

EXPLORATORY BORINGS

The subsurface conditions for the site were investigated by drilling and sampling four exploratory borings. The borings were advanced to depths of 21½ to 36½ feet below the existing ground surface. The approximate locations of the explorations are shown on the Site Plan, Figure 2.

The exploratory borings were drilled using truck-mounted hollow-stem auger drill equipment. Relatively undisturbed samples were obtained using a brass-ring lined sampler (ASTM D 3550). The brass-rings have an inside diameter of 2.42 inches. The ring samples were driven into the soil by a 140-pound hammer dropping 30 inches. The number of blows needed to drive the sampler into the soil was recorded as the penetration resistance.

At selected locations, disturbed samples were obtained using a split-spoon sampler by means of the Standard Penetration Test (SPT, ASTM D 6066). The spoon sampler was driven into the soil by a 140-pound hammer dropping 30 inches, employing the “free-fall” hammer described above. After an initial seating drive of 6 inches, the number of blows needed to drive the sampler into the soil a depth of 12 inches was recorded as the penetration resistance. These values are the raw uncorrected blow counts.

The field explorations for the investigation were performed under the continuous technical supervision of GPI's representative, who visually inspected the site, maintained detailed logs of the borings, classified the soils encountered, and obtained relatively undisturbed samples for examination and laboratory testing. The soils encountered in the borings were classified in the field and through further examination in the laboratory in accordance with the Unified Soils Classification System. Detailed logs of the borings are presented in Figures A-1 through A-4 in this appendix. Upon completion of the sampling of hollow-stem auger borings, the holes were backfilled with the excavated soils.

The boring locations were laid out in the field by measuring from existing site features. Ground surface elevations at the exploration locations were estimated from an A.L.T.A./N.S.P.S. Land Title Survey Sheet 1 of 1, dated 5/13/19, by Madole and Associates, Inc., and should be considered approximate.

EXPLORATORY TEST PITS

The subsurface conditions at the site were investigated by excavating and sampling ten exploratory test pits. The excavations were advanced to depths of approximately 5 feet below the existing ground surface using a backhoe. The locations of the explorations are shown on the Site Plan, Figure 2.

The field exploration for the investigation was performed under the continuous technical supervision of GPI's representative, who visually inspected the site, maintained detailed logs of the test pits, and classified the soils encountered. The soils encountered in the test pits were classified in the field and through further examination in the laboratory in accordance with the Unified Soils Classification System. Detailed logs of the explorations are presented in Figures B-1 to B-10 in this appendix.

The test pit locations were laid out in the field by measuring from existing site features. Ground surface elevations at the exploration locations were estimated from an A.L.T.A./N.S.P.S. Land Title Survey Sheet 1 of 1, dated 5/13/19, by Madole and Associates, Inc., and should be considered approximate.

APPENDIX C

APPENDIX C

LABORATORY TESTS

INTRODUCTION

Representative undisturbed soil samples and bulk samples were carefully packaged in the field and sealed to prevent moisture loss. The samples were then transported to our Cypress office for examination and testing assignments. Laboratory tests were performed on selected representative samples as an aid in classifying the soils and to evaluate the physical properties of the soils affecting foundation design and construction procedures. Detailed descriptions of the laboratory tests are presented below under the appropriate test headings. Test results are presented in the figures that follow.

MOISTURE CONTENT AND DRY DENSITY

Moisture content and dry density were determined from a number of the ring and SPT samples from the borings. The samples were first trimmed to obtain volume and wet weight and then were dried in accordance with ASTM D 2216. After drying, the weight of each sample was measured, and moisture content and dry density were calculated. Moisture content and dry density values are presented on the boring logs in Appendix A.

PERCENTAGE PASSING NO. 200 SIEVE

Select soil samples were dried, weighed, soaked in water until individual soil particles were separated, and then washed on the No. 200 sieve. That portion of the material retained on the No. 200 sieve was oven-dried and weighed to determine the percentage of the material passing the No. 200 sieve. For select samples, the retained material was then run through a standard set of sieves in accordance with ASTM D 422 to classify the coarse fraction of representative sample. A summary of the percentages passing the No. 200 sieve is presented below. The grain size distribution data obtained from the full sieve analyses are presented in Figure C-1.

BORING NO.	DEPTH (ft)	SOIL DESCRIPTION	PERCENT PASSING No. 200 SIEVE
B-1	0-5	Silty Sand (SM)	45
B-3	15	Sand with Silt (SP-SM)	7
B-3	20	Sand with Silt (SP-SM)	5
B-4	0-5	Silty Gravel with Sand (GM)	16
B-4	15	Sand with Silt (SP-SM)	6

DIRECT SHEAR

A direct shear test was performed on undisturbed samples in accordance with ASTM D 3080. The sample was placed in the shear machine, and pre-selected normal loads were applied. The samples were inundated, allowed to consolidate, and then were sheared to failure at a strain rate of 0.002 inches per minute. The tests were repeated on additional test specimens under increased normal loads. Shear stress and sample deformation were monitored throughout the test. The results of the direct shear test are presented in Figure C-2.

COMPACTION TEST

A maximum dry density/optimum moisture test was performed in accordance with ASTM D1557 on a representative bulk sample of the surficial soils. The test results are as follows.

BORING NO.	DEPTH (ft)	SOIL DESCRIPTION	OPTIMUM MOISTURE (%)	MAXIMUM DRY DENSITY (pcf)

Hydromodification

A.1 Hydrologic Conditions of Concern (HCOC) Analysis

HCOC Exemption:

1. **Sump Condition:** All downstream conveyance channel to an adequate sump (for example, Prado Dam, Santa Ana River, or other Lake, Reservoir or naturally erosion resistant feature) that will receive runoff from the project are engineered and regularly maintained to ensure design flow capacity; no sensitive stream habitat areas will be adversely affected; or are not identified on the Co-Permittees Hydromodification Sensitivity Maps.

2. **Pre = Post**: The runoff flow rate, volume and velocity for the post-development condition of the Priority Development Project do not exceed the pre-development (i.e, naturally occurring condition for the 2-year, 24-hour rainfall event utilizing latest San Bernardino County Hydrology Manual.

    a. Submit a substantiated hydrologic analysis to justify your request.

3. **Diversion to Storage Area**: The drainage areas that divert to water storage areas which are considered as control/release point and utilized for water conservation.

    a. See Appendix F for the HCOC Exemption Map and the on-line Watershed Geodatabase (http://sbcounty.permitrack.com/wap) for reference.

4. **Less than One Acre**: The Priority Development Project disturbs less than one acre. The Co-permittee has the discretion to require a Project Specific WQMP to address HCOCs on projects less than one acre on a case by case basis. The project disturbs less than one acre and is not part of a common plan of development.

5. **Built Out Area**: The contributing watershed area to which the project discharges has a developed area percentage greater than 90 percent.

    a. See Appendix F for the HCOC Exemption Map and the on-line Watershed Geodatabase (http://sbcounty.permitrack.com/wap) for reference.

LIST OF ABBREVIATED TERMS

APN	Assessor's Parcel Number
ADT	average daily traffic
dBA	A-weighted sound level
CEQA	California Environmental Quality Act
CLSP	California Landings Specific Plan
CSMA	California Subdivision Map Act
CNEL	community equivalent noise level
L_{dn}	day-night noise level
dB	decibel
du/ac	dwelling units per acre
L_{eq}	equivalent noise level
FHWA	Federal Highway Administration
FTA	Federal Transit Administration
HVAC	heating ventilation and air conditioning
Hz	hertz
HOA	homeowner's association
in/sec	inches per second
L_{max}	maximum noise level
µPa	micropascals
L_{min}	minimum noise level
PPV	peak particle velocity
RMS	root mean square
VdB	vibration velocity level

1 INTRODUCTION

This report documents the results of an Acoustical Assessment completed for Olive Avenue Development Warehouse Project. The purpose of this Acoustical Assessment is to evaluate the potential construction and operational noise and vibration levels associated with the Project and determine the level of impact the Project would have on the environment.

1.1 Project Location

The Project site is located north of Baseline Road and east of Fitzgerald Avenue in the City of Rialto, in San Bernardino County. The project site is located southeast of Rialto Municipal Airport and south of Jerry Eaves Park. The project site is currently vacant and is bounded by Jerry Eaves Public Park to the north, vacant land and single-family residential uses to the east, West Baseline Road and single-family residential uses to the south, and vacant land and industrial uses to the west. The 31.6-acre site is located approximately one-mile south the Foothill Freeway (SR-210), Seven miles east of Interstate 15 (I-15), One mile north of Route 66 (RTE-66), and Five miles west of San Bernardino Freeway (SR-215); refer to Exhibit 1: Regional Location Map and Exhibit 2: Project Vicinity Map**.**

1.2 Project Description

The Project is proposing to develop an existing vacant property (location as referenced above) that would include the construction of a campus oriented industrial project with two primary, divisible, buildings consisting of approximately 10,000 square feet of office/mezzanine space, 866 square feet for exterior building sprinkler fire pumps, and 668,741 square feet of warehouse space for a total of 679,607 square feet on approximately 31.08 net acres. The Owner is proposing to split the existing property (referenced as Assessor Parcel No. (APN) 0264-213-18) from one large lot into two lots to allow for each of the two proposed buildings to each have their own legal parcel.

As shown in Exhibit 3: Conceptual Site Plan, Building 1 (west building) and Building 2 (east building) have been architecturally designed to allow for multiple units in various increments based on tenant demand. Exhibit 3 shows that Building 1 can be divided into 4 or more units and Building 2 can be divided into 3 or more units, each with a separate point of entry into the buildings. For noise modeling purposes, the Project is assumed to operate 24 hours per day, seven days per week.

Existing General Plan Land Use and Zoning Designations

The Project site is zoned for Industrial Park land Use. Adjacent properties to the north are zoned for open space resources and open space recreation uses. Properties to the west are zoned for a specific site plan: Renaissance site. The properties to the south are zoned for residential and open space resources. Properties zoned for residential and Community commercial are due east of the Project site.

Warehouse Facility

The proposed Project consists of two warehouse buildings for a total of 679,390 square feet; refer to Table 1: Building Summary. Building “1” would include 425,148 square feet of warehouse area, 5,000 square feet of office space, and 433 feet designated for a fire pump. Building “2” would include 243,376 square feet of warehouse area, 5,000 square feet of office space, and 433 feet designated for a fire pump.

Table 1: Building Summary

Building	Warehouse (sf)	Office Mezzanine (sf)	Fire Pump (sf)	Total Building (sf)	Parking			Landscaping (sf)
					Automobiles	Truck/Trailer Stalls	Loading Docks	
1	425,148	5,000	433	430,581	308	64	48	97,826
2	243,593	5,000	433	249,026	197	58	31	79,031

Notes: sf = square feet

Site Access

Vehicular access provisions for the project site would consist of three driveways on Baseline Road. Passenger vehicles would access the site via all three driveways. The center driveway would be signalized and would provide truck and passenger vehicle ingress/egress to the site. The eastern and western driveways would be right-in right-out and would be dedicated to passenger and emergency vehicles. Street improvements to Baseline Road may consist of the following: sidewalk, parkway landscaping, curb and gutter, median improvements, bike lanes, dry utility undergrounding, streetlights, fire hydrants, traffic signal equipment (center driveway intersection), rehabilitation of existing asphalt pavement, offsite utility connections, and signing and striping, as required by the City. Off-site improvements would include construction of a new signalized intersection at Idyllwild Avenue and Baseline Road to provide signalized access to the residences south of Baseline Road and construction of a new signalized intersection at the center of the Project along Baseline Road to allow for direct truck access into and out of the Project.

Parking

The Project provides 505 automobile parking stalls, exceeding the requirement of 414 automobile parking stalls. Additionally, 122 trailer parking spaces and 79 loading docks are provided.

Landscaping

Landscaping is required by City code to cover 10% of each lot and based on the proposed Project would cover approximately 12.27% (97,826 square feet) on Parcel 1 and 14.17% (79,031 square feet) on Parcel 2 of the site. Landscaping would be installed in all areas not devoted to buildings, parking, traffic and specific user requirements, in accordance with the City's Municipal Code Section 18.61.250 and Section 18.61.270 which specify landscape design guidelines for industrial districts.

2 ACOUSTIC FUNDAMENTALS

2.1 Sound and Environmental Noise

Acoustics is the science of sound. Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a medium (e.g. air) to human (or animal) ear. If the pressure variations occur frequently enough (at least 20 times per second), they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound and is expressed as cycles per second, or hertz (Hz).

Noise is defined as loud, unexpected, or annoying sound. In acoustics, the fundamental model consists of a noise source, a receptor, and the propagation path between the two. The loudness of the noise source, obstructions, or atmospheric factors affecting the propagation path, determine the perceived sound level and noise characteristics at the receptor. Acoustics deal primarily with the propagation and control of sound. A typical noise environment consists of a base of steady background noise that is the sum of many distant and indistinguishable noise sources. Superimposed on this background noise is the sound from individual local sources. These sources can vary from an occasional aircraft or train passing by to continuous noise from traffic on a major highway. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a large range of numbers. To avoid this, the decibel (dB) scale was devised. The dB scale uses the hearing threshold of 20 micropascals (µPa) as a point of reference, defined as 0 dB. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The dB scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels correspond closely to human perception of relative loudness. Table 2: Typical Noise Levels provides typical noise levels.

Table 2: Typical Noise Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	– 110 –	Rock Band
Jet fly-over at 1,000 feet		
	– 100 –	
Gas lawnmower at 3 feet		
	– 90 –	
Diesel truck at 50 feet at 50 miles per hour		Food blender at 3 feet
	– 80 –	Garbage disposal at 3 feet
Noisy urban area, daytime		
Gas lawnmower, 100 feet	**– 70 –**	Vacuum cleaner at 10 feet
Commercial area		Normal Speech at 3 feet
Heavy traffic at 300 feet	**– 60 –**	
		Large business office
Quiet urban daytime	**– 50 –**	Dishwasher in next room
Quiet urban nighttime	**– 40 –**	Theater, large conference room (background)
Quiet suburban nighttime		
	– 30 –	Library
Quiet rural nighttime		Bedroom at night, concert hall (background)
	– 20 –	
		Broadcast/recording studio
	– 10 –	
Lowest threshold of human hearing	**– 0 –**	Lowest threshold of human hearing

Noise Descriptors

The dB scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Several rating scales have been developed to analyze the adverse effect of community noise on people. Because environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise, as well as the time of day when the noise occurs. The equivalent noise level (L_{eq}) represents the continuous sound pressure level over the measurement period, while the day-night noise level (L_{dn}) and Community Equivalent Noise Level (CNEL) are measures of energy average during a 24-hour period, with dB weighted sound levels from 7:00 p.m. to 7:00 a.m. Most commonly, environmental sounds are described in terms of L_{eq} that has the same acoustical energy as the summation of all the time-varying events. Each is applicable to this analysis and defined in Table 3: Definitions of Acoustical Terms.

Table 3: Definitions of Acoustical Terms

Term	Definitions
Decibel (dB)	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in µPa (or 20 micronewtons per square meter), where 1 pascals is the pressure resulting from a force of 1 newton exerted over an area of 1 square meter. The sound pressure level is expressed in dB as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g. 20 µPa). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency (Hz)	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level (dBA)	The sound pressure level in dB as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level (L_{eq})	The average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
Maximum Noise Level (L_{max}) Minimum Noise Level (L_{min})	The maximum and minimum dBA during the measurement period.
Exceeded Noise Levels (L_{01}, L_{10}, L_{50}, L_{90})	The dBA values that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day-Night Noise Level (L_{dn})	A 24-hour average L_{eq} with a 10 dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity at nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.4 dBA L_{dn}.
Community Noise Equivalent Level (CNEL)	A 24-hour average L_{eq} with a 5 dBA weighting during the hours of 7:00 a.m. to 10:00 p.m. and a 10 dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.7 dBA CNEL.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends on its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

The A-weighted decibel (dBA) sound level scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends on the distance between the receptor and the noise source.

A-Weighted Decibels

The perceived loudness of sounds is dependent on many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable and can be approximated by dBA values. There is a strong correlation between dBA and the way the human ear perceives sound. For this reason, the dBA has become the standard tool of environmental noise assessment. All noise levels reported in this document are in terms of dBA, but are expressed as dB, unless otherwise noted.

Addition of Decibels

The dB scale is logarithmic, not linear, and therefore sound levels cannot be added or subtracted through ordinary arithmetic. Two sound levels 10 dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic dB is A-weighted, an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound and twice as loud as a 60-dBA sound. When two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be 3 dBA higher than one source under the same conditions. Under the dB scale, three sources of equal loudness together would produce an increase of 5 dBA.

Sound Propagation and Attenuation

Sound spreads (propagates) uniformly outward in a spherical pattern, and the sound level decreases (attenuates) at a rate of approximately 6 dB for each doubling of distance from a stationary or point source. Sound from a line source, such as a highway, propagates outward in a cylindrical pattern. Sound levels attenuate at a rate of approximately 3 dB for each doubling of distance from a line source, such as a roadway, depending on ground surface characteristics. No excess attenuation is assumed for hard surfaces like a parking lot or a body of water. Soft surfaces, such as soft dirt or grass, can absorb sound, so an excess ground-attenuation value of 1.5 dB per doubling of distance is normally assumed. For line sources, an overall attenuation rate of 3 dB per doubling of distance is assumed.

Noise levels may also be reduced by intervening structures; generally, a single row of buildings between the receptor and the noise source reduces the noise level by about 5 dBA, while a solid wall or berm reduces noise levels by 5 to 10 dBA. The way older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dBA with closed windows. The exterior-to-interior reduction of newer residential units is generally 30 dBA or more.

Human Response to Noise

The human response to environmental noise is subjective and varies considerably from individual to individual. Noise in the community has often been cited as a health problem, not in terms of actual physiological damage, such as hearing impairment, but in terms of inhibiting general well-being and contributing to undue stress and annoyance. The health effects of noise in the community arise from interference with human activities, including sleep, speech, recreation, and tasks that demand concentration or coordination. Hearing loss can occur at the highest noise intensity levels.

Noise environments and consequences of human activities are usually well represented by median noise levels during the day or night or over a 24-hour period. Environmental noise levels are generally considered low when the CNEL is below 60 dBA, moderate in the 60 to 70 dBA range, and high above 70 dBA. Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet, suburban, residential streets with noise levels around 40 dBA. Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate-level noise environments are urban residential or semi-commercial areas (typically 55 to 60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most will accept the higher levels associated with noisier urban residential or residential-commercial areas (60 to 75 dBA) or dense urban or industrial areas (65 to 80 dBA). Regarding increases in dBA, the following relationships should be noted:

- Except in carefully controlled laboratory experiments, a 1-dBA change cannot be perceived by humans.
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference.
- A minimum 5-dBA change is required before any noticeable change in community response would be expected. A 5-dBA increase is typically considered substantial.
- A 10-dBA change is subjectively heard as an approximate doubling in loudness and would almost certainly cause an adverse change in community response.

Effects of Noise on People

Hearing Loss

While physical damage to the ear from an intense noise impulse is rare, a degradation of auditory acuity can occur even within a community noise environment. Hearing loss occurs mainly due to chronic exposure to excessive noise but may be due to a single event such as an explosion. Natural hearing loss associated with aging may also be accelerated from chronic exposure to loud noise. The Occupational Safety and Health Administration has a noise exposure standard that is set at the noise threshold where hearing loss may occur from long-term exposures. The maximum allowable level is 90 dBA averaged over 8 hours. If the noise is above 90 dBA, the allowable exposure time is correspondingly shorter.

Annoyance

Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The L_{dn} as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise

and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. A noise level of about 55 dBA L_{dn} is the threshold at which a substantial percentage of people begin to report annoyance[1].

2.2 Groundborne Vibration

Sources of groundborne vibrations include natural phenomena (earthquakes, volcanic eruptions, sea waves, landslides, etc.) or man-made causes (explosions, machinery, traffic, trains, construction equipment, etc.). Vibration sources may be continuous (e.g. factory machinery) or transient (e.g. explosions). Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One is the peak particle velocity (PPV); another is the root mean square (RMS) velocity. The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. The RMS velocity is defined as the average of the squared amplitude of the signal. The PPV and RMS vibration velocity amplitudes are used to evaluate human response to vibration.

Table 4: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations, displays the reactions of people and the effects on buildings produced by continuous vibration levels. The annoyance levels shown in the table should be interpreted with care since vibration may be found to be annoying at much lower levels than those listed, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage. In high noise environments, which are more prevalent where groundborne vibration approaches perceptible levels, this rattling phenomenon may also be produced by loud airborne environmental noise causing induced vibration in exterior doors and windows.

Table 4: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations

Maximum PPV (in/sec)	Vibration Annoyance Potential Criteria	Vibration Damage Potential Threshold Criteria	FTA Vibration Damage Criteria
0.008	--	Extremely fragile historic buildings, ruins, ancient monuments	--
0.01	Barely Perceptible	--	--
0.04	Distinctly Perceptible	--	--
0.1	Strongly Perceptible	Fragile buildings	--
0.12	--	--	Buildings extremely susceptible to vibration damage
0.2	--	--	Non-engineered timber and masonry buildings
0.25	--	Historic and some old buildings	--
0.3	--	Older residential structures	Engineered concrete and masonry (no plaster)
0.4	Severe	--	--
0.5	--	New residential structures, Modern industrial/commercial buildings	Reinforced-concrete, steel or timber (no plaster)

PPV = peak particle velocity; in/sec = inches per second; FTA = Federal Transit Administration

Source: California Department of Transportation, *Transportation and Construction Vibration Guidance Manual*, 2020 and Federal Transit administration, Transit Noise and Vibration Assessment Manual, 2018.

Ground vibration can be a concern in instances where buildings shake, and substantial rumblings occur. However, it is unusual for vibration from typical urban sources such as buses and heavy trucks to be

[1] Federal Interagency Committee on Noise, *Federal Agency Review of Selected Airport Noise Analysis Issues*, August 1992.

perceptible. Common sources for groundborne vibration are planes, trains, and construction activities such as earth-moving which requires the use of heavy-duty earth moving equipment. For the purposes of this analysis, a PPV descriptor with units of inches per second (in/sec) is used to evaluate construction-generated vibration for building damage and human complaints.

3 REGULATORY SETTING

To limit population exposure to physically or psychologically damaging as well as intrusive noise levels, the Federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise.

3.1 Federal

Federal Transit Administration Noise and Vibration Guidance

The Federal Transit Administration (FTA) has published the Transit Noise and Vibration Impact Assessment Manual to provide guidance on procedures for assessing impacts at different stages of transit project development. The report covers both construction and operational noise impacts and describes a range of measures for controlling excessive noise and vibration. In general, the primary concern regarding vibration relates to potential damage from construction. The guidance document establishes criteria for evaluating the potential for damage for various structural categories from vibration.

3.2 State of California

California Government Code

California Government Code Section 65302(f) mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines established by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of "normally acceptable", "conditionally acceptable", "normally unacceptable", and "clearly unacceptable" noise levels for various land use types. Single-family homes are "normally acceptable" in exterior noise environments up to 60 CNEL and "conditionally acceptable" up to 70 CNEL. Multiple-family residential uses are "normally acceptable" up to 65 CNEL and "conditionally acceptable" up to 70 CNEL. Schools, libraries, and churches are "normally acceptable" up to 70 CNEL, as are office buildings and business, commercial, and professional uses.

Title 24 – Building Code

The State's noise insulation standards are codified in the California Code of Regulations, Title 24: Part 1, Building Standards Administrative Code, and Part 2, California Building Code. These noise standards are applied to new construction in California for interior noise compatibility from exterior noise sources. The regulations specify that acoustical studies must be prepared when noise-sensitive structures, such as residential buildings, schools, or hospitals, are located near major transportation noise sources, and where such noise sources create an exterior noise level of 65 dBA CNEL or higher. Acoustical studies that accompany building plans must demonstrate that the structure has been designed to limit interior noise in habitable rooms to acceptable noise levels. For new multi-family residential buildings, the acceptable interior noise limit for new construction is 45 dBA CNEL.

3.3 Local

City of Rialto General Plan

The City of Rialto is a roadmap that encompasses the hopes, aspirations, values, and dreams of the community. The City of Rialto General Plan (RGP) specifies exterior noise guidelines for land uses in the Safety and Noise chapter. The City requires that new developments be designed to meet these guidelines[2]. Noise compatibility can be achieved by avoiding the location of conflicting land uses adjacent to one another, incorporating buffers and noise control techniques including setbacks, landscaping, building transitions, site design, and building construction techniques. Selection of the appropriate noise control technique would vary depending on the level of noise that needs to be reduced as well as the location and intended land use. RGP policies that directly address reducing and avoiding noise or vibration impacts include the following:

Goal 5-10: Minimize the impact of point source and ambient noise levels throughout the community.

Policy 5-10.1: Revise the City's noise ordinance to address ongoing noise issues by using quantitative noise limits where appropriate and establishing comprehensive noise control measures.

Policy 5-10.2: Consider noise impacts as part of the development review process, particularly he location of parking, ingress/egress/loading, and refuse collection areas relative to surrounding residential development and other noise-sensitive land uses.

Policy 5-10.3: Ensure that acceptable noise levels are maintained near schools, hospitals, and other noise sensitive areas in accordance with the RMC (Rialto Municipal Code) and noise standards contained in Exhibit 5-5.

Policy 5-10.4: Limit the hours of operation at all noise generation sources that are adjacent to noise-sensitive areas.

Policy 5-10.5: Require all exterior noise sources (construction operations, air compressors, pumps, fans and leaf blowers) to use available noise suppression devices and techniques to reduce exterior noise to acceptable levels that are compatible with adjacent land uses.

Goal 5-11: Minimize the impacts of transportation-related noise.

Policy 5-11.1: Work with responsible Federal and State agencies to minimize the impact of transportation-related noise, including noise associated with freeways, major arterials, and Metrolink and other rail lines.

Policy 5-11.2: Require development which is, or will be, affected by railroad noise to include appropriate measures to minimize adverse noise effects on residents and business persons.

Policy 5-11.3: Require development of truck-intensive uses to minimize noise impacts on adjacent uses through appropriate site design.

[2] City of Rialto, *General Plan Chapter 5,* 2010.

Policy 5-11.4: Develop a program for monitoring noise levels and investigating complaints.

Policy 5-11.5: Provide education to the community at large about the importance of maintaining a healthy noise environment, and identify ways residents can assist in noise abatement efforts.

The City of Rialto is largely built out and the street system is well established, creating challenges for separating noise-sensitive land uses from primary noise sources. Thus, the Safety and Noise chapter of the RGP establishes policies guarding against new noise or land use conflicts to minimize the impact of existing noise sources on the community. Table 5: Rialto Noise Guidelines for Land Use Planning presents the City's exterior noise guidelines for land use planning. It should also be noted that the Safety and Noise chapter of the RGP mentions sound levels exceeding 40 to 45 dBA are generally considered to cause sleep interference within a residence. The RGP also references Title 24 of the California Health and Safety Code stipulating a maximum of 45 dBA for interior residential noise levels.

Table 5: Rialto Noise Guidelines for Land Use Planning

Land Use Category	Community Noise Exposure (L_{dn} or CNEL, dBA)			
	Normally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable
R2 - Residential 2, R6 - Residential 6	50 – 60	60 – 65	65 – 70	70 – 85
R12 - Residential 12	50 – 60	60 – 65	65 – 70	70 – 85
R21 - Residential 21, R45 - Residential 45	50 – 60	60 – 70	70 – 75	75 – 85
DMU - Downtown Mixed-Use	50 – 60	60 – 75	75 – 80	80 – 85
CC - Community Commercial	50 – 65	65 – 75	75 – 80	80 – 85
GC - General Commercial	50 – 65	65 – 75	75 – 80	80 – 85
BP - Business Park, O - Office	50 – 65	65 – 75	75 – 80	80 – 85
LI - Light Industrial	50 – 70	70 – 75	75 – 80	80 – 85
GI - General Industrial	50 – 75	75 – 85	NA	NA
P - Public Facility, P - School Facility	50 – 60	60 – 65	65 – 70	70 – 85
OSRC - Open Space - Recreation	50 – 75	NA	75 – 80	80 – 85
OSRS - Open Space - Resources	50 – 75	NA	75 – 80	80 – 85

NA: Not Applicable; dBA: Decibel

Notes:
Normally Acceptable – Specified land use is satisfactory, assuming buildings are of conventional construction.
Conditionally Acceptable – New development should be undertaken only after detailed analysis of noise reduction requirements are made.
Normally Unacceptable – New development should be discouraged, or a detailed analysis of noise reduction requirements must be made.
Clearly Unacceptable – New development should generally not be undertaken.

Source: City of Rialto, *General Plan Chapter 5*, 2010.

City of Rialto Code of Ordinances

A noise ordinance is intended to control unnecessary, excessive, and annoying sounds from stationary, non-transportation noise sources. Noise ordinance requirements are not applicable to mobile noise sources such as heavy trucks traveling on public roadways. Federal and State laws preempt control of mobile noise sources on public roads. Noise ordinance standards generally apply to industrial and commercial noise sources, as well as parks and schools affecting residential areas. The RMC prohibits the production of excessive noise, and is applied to future development within the City to determine potential noise impacts.

The City has also instated permitted hours for disturbances specifically from construction activity under RMC Section 9.50.070. This code states that no person shall be engaged in any type of work relating to construction, alteration, repair, addition, movement, demolition, or improvement to any building or structure except within the hours provided in Table 6: Permitted Hours of Construction Work below. However, Section 9.50.060 of the RMC indicates exclusions from the provisions of this specific chapter of the RMC. As described in Section 9.50.060(L) of the RMC, noise sources associated with construction, repair, or excavation, are exempt so long as there is a valid written agreement with the City or any of its political subdivisions that provides for noise mitigation measures.

Table 6: Permitted Hours of Construction Work

Days of Week	Time[1,2]
October 1st through April 30th	
Monday – Friday	7:00 a.m. to 5:30 p.m.
Saturday	8:00 a.m. to 5:00 p.m.
Sunday	No Permissible Hours
State Holidays	No Permissible Hours
May 1st through September 30th	
Monday – Friday	6:00 a.m. to 7:00 p.m.
Saturday	8:00 a.m. to 5:00 p.m.
Sunday	No Permissible Hours
State Holidays	No Permissible Hours

Notes:
For purposes of this section, the following exceptions shall apply:
[1] Emergency repair of existing installations, equipment, or appliances; and
[2] Such work that complies with the terms and conditions of a written early work permit issued by the city manager or his or her designee upon a showing of a sufficient need and justification for the permit due to hot or inclement weather, the use of an unusually long process material, or other circumstances of an unusual and compelling nature.

Source: City of Rialto, *Code of Ordinances*, Section 9.50.070, 2018.

Depicted in Table 6, the Project would be subject to the limitations imposed by the City regarding construction noise.

The following section of the RMC noise ordinance is relevant for operational noise.

9.50.050: Controlled hours of operation.

It is unlawful for any person to engage in the following activities other than between the hours of 7:00 a.m. and 8:00 p.m. in all zones.

A. Operate or permit the use of powered model vehicles and planes;

B. Load or unload any vehicle, or operate or permit the use of dollies, carts, forklifts, or other wheeled equipment that causes any impulsive sound, raucous or unnecessary noise within one thousand feet of a residence;

C. Operate or permit the use of domestic power tools, or machinery or any other equipment or tool in any garage, workshop, house or any other structure;

D. Operate or permit the use of gasoline or electric powered leaf blowers, such as commonly used by gardeners and other persons for cleaning lawns, yards, driveways, gutters and other property;

E. Operate or permit the use of privately operated street/parking lot sweepers or vacuums, except that emergency work and/or work necessitated by unusual conditions may be performed with the written consent of the city manager;

F. Operate or permit the use of pile driver, steam or gasoline shovel, pneumatic hammer, steam or electric hoist or other similar devices;

G. Operate or permit the use of electrically operated compressor, fan, and other similar devices;

H. Perform ground maintenance on golf course grounds and tennis courts contiguous to golf courses that creates a noise disturbance across a residential or commercial property line;

I. Operate or permit the use of any motor vehicle with a gross vehicle weight rating in excess of ten thousand pounds, or of any auxiliary equipment attached to such a vehicle, including but not limited to refrigerated truck compressors, for a period longer than fifteen minutes in any hour while the vehicle is stationary and on a public right-of-way or public space except when movement of the vehicle is restricted by other traffic;

J. Repair, rebuild, reconstruct or dismantle any motor vehicle or other mechanical equipment or devices in a manner so as to be plainly audible across property lines.

Additionally, Section 9.50.060(O) of the RMC states that sounds generated in commercial and industrial zones that are necessary and incidental to the uses permitted therein are exempt from the Controlled Hours of Operation.

4 EXISTING CONDITIONS

4.1 Existing Noise Sources

Rialto is impacted by various noise sources. Mobile sources of noise, especially cars and trucks, are the most common and significant sources of noise in most communities. Other sources of noise are the various land uses (i.e., residential, commercial, institutional, and recreational and parks activities) throughout the City that generate stationary-source noise. The Rialto Municipal Airport is located approximately 0.6 miles from the Project site; however, the airport was officially closed in 2014.

Mobile Sources

Existing roadway noise levels were calculated for the roadway segments in the project vicinity. This task was accomplished using the Federal Highway Administration (FHWA) Highway Traffic Noise Prediction Model (FHWA-RD-77-108) and existing traffic volumes from the project traffic analysis (prepared by Kimley-Horn, 2021). The noise prediction model calculates the average noise level at specific locations based on traffic volumes, average speeds, roadway geometry, and site environmental conditions. The average vehicle noise rates (also referred to as energy rates) used in the FHWA model have been modified to reflect average vehicle noise rates identified for California by the California Department of Transportation (Caltrans). The Caltrans data indicates that California automobile noise is 0.8 to 1.0 dBA higher than national levels and that medium and heavy truck noise is 0.3 to 3.0 dBA lower than national levels.[3] The average daily noise levels along roadway segments in proximity to the project site are included in Table 7: Existing Traffic Noise Levels.

Table 7: Existing Traffic Noise Levels

Roadway Segment	ADT	dBA CNEL 100 Feet from Roadway Centerline
Ayala Drive, between Renaissance Parkway to Fitzgerald Avenue	23,506	71.1
Ayala Drive, between Fitzgerald Avenue to Baseline Road	19,876	70.4
Baseline Road, between West of Ayala Drive	15,164	69.2
Baseline Road, between Ayala Drive to Fitzgerald Avenue	13,141	68.6
Baseline Road, between Idyllwild Avenue to Cactus Avenue	14,553	69.1
Notes: ADT = average daily trips; dBA = A-weighted decibels; CNEL = community noise equivalent level		
Source: Based on traffic data within the *Traffic Impact Study*, prepared by Kimley-Horn, 2021. Refer to Appendix A for traffic noise modeling assumptions and results.		

As depicted in Table 7, the existing traffic-generated noise level on Project-vicinity roadways currently ranges from 68.6 dBA CNEL to 71.1 dBA CNEL 100 feet from the centerline. As previously described, CNEL is 24-hour average noise level with a 5 dBA "weighting" during the hours of 7:00 p.m. to 10:00 p.m. and a 10 dBA "weighting" added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively.

Stationary Sources

The primary sources of stationary noise in the Project vicinity are those associated with the operations of adjacent general industrial uses. The noise associated with these sources may represent a single-event

[3] California Department of Transportation, *California Vehicle Noise Emission Levels*, 1987.

noise occurrence or short-term noise. Other noises include dogs barking, residents talking, and general recreational noise.

4.2 Noise Measurements

The Project site is currently vacant and unoccupied. To quantify existing ambient noise levels in the Project area, Kimley-Horn conducted four short-term noise measurements on March 3, 2020; see Appendix A: Noise Measurement and Modeling Data. The noise measurement sites were representative of typical existing noise exposure within and immediately adjacent to the Project site. The 10-minute measurements were taken between 9:39 a.m. and 12:01 p.m. near potential sensitive receptors. Short-term L_{eq} measurements are considered representative of the noise levels throughout the day. The average noise levels and sources of noise measured at each location are listed in Table 8: Existing Noise Measurements and shown on Exhibit 4: Noise Measurement Locations.

Table 8: Existing Noise Measurements

Site	Location	L_{eq} (dBA)	L_{min} (dBA)	L_{max} (dBA)	Time
1	Jerry Eaves Park	66.0	55.2	79.6	9:39 a.m.
2	Center of Project Site	50.8	46.4	59.6	10:07 a.m.
3	North central of Project	52.0	47.8	63.1	10:23 a.m.
4	Northwest of Project Site	56.8	49.4	65.3	10:40 a.m.
5	Southwest of Project Site	62.6	46.1	75.6	10:58 a.m.
6	South side of Baseline Rd, west of Idyllwild Ave	72.1	48.8	81.0	11:11 a.m.
7	Resident's backyard (house just west of Idyllwild), South side of Baseline Rd	70.6	44.2	76.8	11:26 a.m.
8	Resident's backyard (house north of cul-de-sac), South side of Baseline Rd	60.7	47.2	72.3	11:45 a.m.
9	South side of Baseline Rd, west of Glenwood Ave	72.9	49.9	85.0	12:01 p.m.

4.3 Sensitive Receptors

Noise exposure goals for various types of land uses reflect the varying noise sensitivities associated with those uses. Noise sensitive uses typically include residences, hospitals, schools, childcare facilities, and places of assembly. Vibration sensitive receivers are generally similar to noise sensitive receivers but may also include businesses, such as research facilities and laboratories that use vibration-sensitive equipment. Sensitive receptors near the Project site consist mostly of single-family residences, parks, educational institutions, and senior facilities. Sensitive land uses nearest to the Project are shown in Table 9: Sensitive Receptors.

Table 9: Sensitive Receptors

Receptor Description	Distance and Direction from the Project
Single-Family Residential Community	90 feet to the south
Single-Family Residential Community	800 feet to the east
Jerry Eaves Park	870 feet to the north
Single-Family Residential Community	1,600 feet to the north
Winchester Senior Home II	1,500 feet to the northeast
La Petite Academy of Rialto	1,900 feet to the east
Helen L. Dollahan Elementary School	2,100 feet to the south
Flores Park	2,400 feet to the South
Camino Nuevo Church	2,500 feet to the southeast
Eisenhower Senior High School	3,000 feet to the east
Dunn Elementary School	4,000 feet to the southeast

5 SIGNIFICANCE CRITERIA AND METHODOLOGY

5.1 CEQA Thresholds

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains analysis guidelines related to noise impacts. These guidelines have been used by the City to develop thresholds of significance for this analysis. A project would create a significant environmental impact if it would:

- Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Generate excessive groundborne vibration or groundborne noise levels; and
- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the Project area to excessive noise levels.

Thresholds

Construction Noise

The following thresholds of significance are set forth in the Rialto Code of Ordinances, which states that a project would normally have a significant impact on noise levels from construction if construction activities would occur outside the following hours:

- October 1st through April 30th - 7:00 A.M. to 5:30 P.M. Monday through Friday, 8:00 A.M. to 5:00 P.M. on Saturday. Construction activities are not permitted on Sundays and State holidays; and May 1st through September 30th - 6:00 A.M. to 7:00 P.M. Monday through Friday, 8:00 A.M. to 5:00 P.M. on Saturday. Construction activities are not permitted on Sundays and State holidays.

Operation Noise

The following threshold of significance is applied to operational noise impacts:

- The Project would cause ambient noise levels to increase by 5 dBA, CNEL or more and the resulting noise falls on a noise-sensitive land use within an area categorized as either “clearly compatible” or “normally compatible” (see Table 4); or cause ambient noise levels to increase by 3 dBA, CNEL or more and the resulting noise falls on a noise sensitive land use within an area categorized as either “normally incompatible” or “clearly incompatible.”

Vibrations

The City currently does not have a significance threshold to assess vibration impacts. Thus, the FTA guidelines set forth in FTA’s Transit Noise and Vibration Impact Assessment Manual are used to evaluate potential impacts related to vibration.

- Any vibration that exceeds 75 VdB, the approximate threshold for annoyance
- A vibration level that exceeds 0.20 in/sec

5.2 Methodology

Construction

Construction noise levels were based on typical noise levels generated by construction equipment published by the Federal Transit Administration (FTA) and the Federal Highway Administration (FHWA). Construction noise is assessed in dBA L_{eq}. This unit is appropriate because L_{eq} can be used to describe noise level from operation of each piece of equipment separately, and levels can be combined to represent the noise level from all equipment operating during a given period.

FTA's quantitative 8-hour L_{eq} construction noise assessment methodology as described in the 2018 *Transit Noise and Vibration Impact Assessment Manual* was used to estimate construction noise at the nearest sensitive receptors. Following FTA methodology, when calculating construction noise, all equipment is assumed to operate at the center of the Project because equipment would operate throughout the project site and not at a fixed location for extended periods of time. Therefore, the distance used in the RCNM model was 605 feet to the residential uses to the south and 660 feet to the west of the Project site.

Operations

The analysis of the Without Project and With Project noise environments is based on noise prediction modeling and empirical observations. Reference noise level data are used to estimate the Project operational noise impacts from stationary sources. Noise levels are collected from field noise measurements and other published sources from similar types of activities are used to estimate noise levels expected with the Project's stationary sources. The reference noise levels are used to represent a worst-case noise environment as noise level from stationary sources can vary throughout the day. Operational noise is evaluated based on the standards within the City's Noise Ordinance and General Plan. The Without Project and With Project traffic noise levels in the Project vicinity were calculated using the FHWA Highway Noise Prediction Model (FHWA-RD-77-108).

Vibration

Groundborne vibration levels associated with construction-related activities for the Project were evaluated utilizing typical groundborne vibration levels associated with construction equipment, obtained from FTA published data for construction equipment. Potential groundborne vibration impacts related to building/structure damage and interference with sensitive existing operations were evaluated, considering the distance from construction activities to nearby land uses and typically applied criteria.

For a building that is constructed with engineered timbers or reinforced concrete, the FTA guidelines show that a vibration level of up to 0.50 in/sec is considered safe and would not result in any vibration damage. The FTA architectural damage criterion for continuous vibrations (i.e., 0.2 in/sec) appears to be conservative. Human annoyance is evaluated in vibration decibels (VdB) (the vibration velocity level in decibel scale) and occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. The FTA Transit Noise and Vibration Impact Assessment Manual identifies 75 VdB as the threshold for buildings where people normally sleep.

6 POTENTIAL IMPACTS AND MITIGATION

6.1 Acoustical Impacts

Threshold 6.1 Would the Project generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Construction

On-Site Construction Noise. Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect the sensitive receptors near the construction site.

Construction activities would include site preparation, grading, building construction, paving, and architectural coating. Such activities would require graders, dozers, and tractors during site preparation and grading; cranes, forklifts, generators, tractors, and welders during building construction; pavers, rollers, mixers, tractors, and paving equipment during paving; and air compressors during architectural coating. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 to 4 minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. Typical noise levels associated with individual construction equipment are listed in Table 10: Typical Construction Noise Levels.

Table 10: Typical Construction Noise Levels

Equipment	Typical Noise Level (dBA) at 50 feet from Source	Typical Noise Level (dBA) at 90 feet from Source[1]
Air Compressor	80	75
Backhoe	80	75
Compactor	82	77
Concrete Mixer	85	80
Concrete Pump	82	77
Concrete Vibrator	76	71
Crane, Mobile	83	78
Dozer	85	80
Generator	82	77
Grader	85	80
Impact Wrench	85	80
Jack Hammer	88	83
Loader	80	75
Paver	85	80
Pneumatic Tool	85	80
Pump	77	72
Roller	85	80
Saw	76	71

Table 10: Typical Construction Noise Levels		
Equipment	**Typical Noise Level (dBA) at 50 feet from Source**	**Typical Noise Level (dBA) at 90 feet from Source[1]**
Scraper	85	80
Shovel	82	77
Truck	84	79
Notes: 1. Calculated using the inverse square law formula for sound attenuation: $dBA_2 = dBA_1+20Log(d_1/d_2)$, where dBA_2 = estimated noise level at receptor; dBA_1 = reference noise level; d_1 = reference distance; d_2 = receptor location distance.		
Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.		

While the Rialto Municipal Code does not establish quantitative construction noise standards, this analysis conservatively uses the FTA's threshold of 80 dBA (8-hour L_{eq}) for residential uses and 90 dBA (8-hour L_{eq}) for non-residential uses to evaluate construction noise impacts.[4] The noise levels calculated in Table 11: Project Construction Noise Levels, show estimated exterior construction noise without accounting for attenuation from existing physical barriers. The nearest noise sensitive receptors are the residential uses located 90 feet to the south of the Project boundary, on the opposite side of Baseline Road.

Table 11: Project Construction Noise Levels				
Construction Phase	**Modeled Exterior Noise Level at Residential Uses South of Project Site (dBA L_{eq})[1]**	**Modeled Exterior Noise Level at Industrial Uses West of Project Site (dBA L_{eq})[1]**	**FTA 80 dBA L_{eq} Residential Noise Threshold Exceeded?**	**FTA 85 dBA L_{eq} Non-Residential Noise Threshold Exceeded?**
Site Preparation	66.0	65.2	No	No
Grading	66.6	65.8	No	No
Construction/Paving/Painting	65.4	64.6	No	No
Notes: 1. Following FTA methodology, all equipment is assumed to operate at the center of the Project site because equipment would operate throughout the Project site and not at a fixed location for extended periods of time. Thus, the distance used in the RCNM model was 605 feet for the residential uses to the south of the construction zone and 660 feet for industrial uses to the west of the construction zone.				
Source: Refer to Appendix A for noise modeling assumptions and results.				

As shown in Table 11, exterior noise levels could reach 66.6 dBA at the nearest residential uses to the south and 65.8 dBA at the nearest industrial uses to the west of the Project site. As indicated in Table 11, Project construction noise levels would not exceed the FTA's 80 dBA L_{eq} threshold for residential uses or 85 dBA L_{eq} threshold for non-residential uses. Construction equipment would operate throughout the Project site and the associated noise levels would not occur at a fixed location for extended periods of time. Although some sensitive uses may be exposed to elevated noise levels during project construction, heavy construction equipment will be in motion and construction noise would be acoustically dispersed throughout the project site (i.e., not concentrated in one area near surrounding sensitive uses).

While impacts would be considered less than significant, the Project would be subject to Standard Condition and Requirements (SC) NOI-1 which includes a list of requirements that must be meet by the applicant and contractor. These requirements include; all construction equipment being equipped with mufflers, notifying property owners within 200 feet of the Project boundary at least 15 days prior to construction, designating a member of the construction staff as a Noise Disturbance Coordinator, using construction noise reduction methods where feasible, designating construction haul routes to avoid noise

[4] Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, Table 7-2, Page 179, September 2018.

sensitive uses, directing stationary construction equipment away from noise sensitive receptors, and permitting construction to only occur during established allowable hours of construction (refer to Table 6).

Off-Site Construction Traffic Noise. Construction noise may be generated by passenger cars from worker trips and trucks to deliver materials and haul soil to and from the Project site. Delivery trucks, haul trucks, and worker vehicles associated with the construction of the proposed Project would vary from day to day, with the highest volumes generally occurring during construction initiation. The Project's off-site construction noise impact from haul trucks was analyzed by using the FHWA RD-77-108 model to quantify noise from the Project's maximum estimated haul truck usage with existing traffic and roadway noise levels along the potential haul routes. The location of roadside sensitive receptors was also considered. As the Project would require haul trucks over the course of the construction period to accommodate the soil off haul necessary for construction. The addition of haul trucks would alter the fleet mix of haul route roadways. This effect was accounted for by adjusting the fleet mix (i.e., increasing the truck percentages) in the FHWA RD-77-108 model.

Table 12: Construction Traffic Noise Levels provides the predicted noise levels at nearby roadway segments near the Project site. As shown in Table 12, roadway noise levels would range from 68.6 dBA to 71.1 dBA under existing conditions and from 69.6 dBA to 71.7 dBA under existing conditions plus Project construction. The greatest change in noise levels would occur along Baseline Road (Ayala Drive to Fitzgerald Avenue). Construction traffic would result in an increase in ambient noise levels of up to 1.0 dBA. This increase in ambient noise levels is below the perceptible range (3.0 dBA). Therefore, a less than significant impact would occur.

Table 12: Construction Traffic Noise Levels

Roadway Segment	Existing Conditions		Existing Plus Construction		Change	Significant Impacts
	ADT	dBA CNEL at 100 feet from Roadway Centerline	ADT	dBA CNEL at 100 feet from Roadway Centerline		
Ayala Drive, between Renaissance Parkway to Fitzgerald Avenue	23,506	71.1	24,405	71.7	0.5	No
Ayala Drive, between Fitzgerald Avenue to Baseline Road	19,876	70.4	20,775	71.1	0.6	No
Baseline Road, between West of Ayala Drive	15,164	69.2	16,063	70.1	0.8	No
Baseline Road, between Ayala Drive to Fitzgerald Avenue	13,141	68.6	14,040	69.6	1.0	No
Baseline Road, between Idyllwild Avenue to Cactus Avenue	14,553	69.1	15,452	69.9	0.9	No

ADT = average daily trips; dBA = A-weighted decibels; CNEL = community noise equivalent level.

Source: Based on traffic data within the *Traffic Impact Study*, prepared by Kimley-Horn, 2021. Refer to Appendix A for traffic noise modeling assumptions and results.

Compliance with SC NOI-1 will ensure that construction noise impacts remain less than significant.

Operations

Implementation of the proposed project would create new sources of noise in the project vicinity. The major noise sources associated with the project that would potentially impact existing and future nearby residences include the following:

- Mechanical equipment (i.e. trash compactors, air conditioners, etc.);
- Slow moving trucks on the Project site, approaching and leaving the loading areas;
- Activities at the loading areas (i.e. maneuvering and idling trucks, equipment noise);
- Parking areas (i.e. car door slamming, car radios, engine start-up, and car pass-by); and
- Off-Site Traffic Noise.

As discussed previously, Section 9.50.050 of the RMC identifies activities that are unlawful to engage in between the hours of 8:00 p.m. and 7:00 a.m. This includes the loading or unloading any vehicle, or operate or permit the use of dollies, carts, forklifts, or other wheeled equipment that causes any impulsive sound, raucous or unnecessary noise within one thousand feet of a residence. However, RMC Section 9.50.060 notes that sounds generated in commercial and industrial zones that are necessary and incidental to the uses permitted there in are exempt from the provisions of the RMC Chapter 9.50 (Noise Control) including Section 9.5.050 (Controlled Hours of Operation).

Additionally, all loading and unloading activities, including the operation of dollies, carts, and forklifts, would occur within the warehouse buildings while trucks are docked. Loading dock doors would also be surrounded with protective aprons, gaskets, or similar improvements that, when a trailer is docked, would serve as a noise barrier between the interior warehouse activities and the exterior loading area. This would attenuate noise emanating from interior activities, and as such, interior loading and associated activities would be permissible during all hours of the day.

Mechanical Equipment

The Project is surrounded by residential, recreational and, commercial uses. The nearest sensitive receptors to the Project site are the residences 75 feet to the south of the Project boundaries. Potential stationary noise sources related to long-term operation of the project site would include mechanical equipment. Mechanical equipment (e.g. heating ventilation and air conditioning [HVAC] equipment) typically generates noise levels of approximately 52 dBA at 50 feet.[6] Based on the site plan, the closest sensitive receptors are located approximately 220 feet from the nearest building. At this distance mechanical equipment noise would attenuate to 39.1 dBA. As shown in Table 8, existing noise levels near residential properties ranged from 60.7 dBA and 72.9 dBA. Operation of mechanical equipment would not increase ambient noise levels beyond existing noise levels. Therefore, the proposed Project would result in a less than significant impact related to stationary noise levels.

Truck and Loading Dock Noise

During loading and unloading activities, noise would be generated by the trucks' diesel engines, exhaust systems, and brakes during low gear shifting' braking activities; backing up toward the docks; dropping down the dock ramps; and maneuvering away from the docks. Loading or unloading activities would occur

[6] Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, July 6, 2010.

on the north, east, and west sides of the Project site within the warehouse building. Driveways and access to the site would occur along E Baseline Road. Typically, heavy truck operations generate a noise level of 68 dBA at a distance of 30 feet.[7] The closest residences are located approximately 390 feet south of the nearest proposed loading areas. At this distance, the closet residences would experience truck noise levels of approximately 45.7 dBA conservatively assuming no attenuation from the intervening warehouse buildings. As shown in Table 8, existing noise levels near residential properties range from 60.7 dBA and 72.9 dBA. The addition of truck and loading dock noise at these locations would be below ambient levels and would not result in a perceivable increase in existing noise levels. Loading dock doors would also be surrounded with protective aprons, gaskets, or similar improvements that, when a trailer is docked, would serve as a noise barrier between the interior warehouse activities and the exterior loading area. This would attenuate noise emanating from interior activities, and as such, interior loading and associated activities would be permissible during all hours of the day. Noise levels associated with trucks and loading or unloading activities would not exceed the City's standards and impacts would be less than significant.

Parking Noise

The proposed Project would accommodate the need for parking. Traffic associated with parking lots is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the CNEL scale. The instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys range from 60 to 63 dBA and may be an annoyance to adjacent noise-sensitive receptors. Conversations in parking areas may also be an annoyance to adjacent sensitive receptors. Sound levels of speech typically range from 33 dBA at 50 feet for normal speech to 50 dBA at 50 feet for very loud speech. It should be noted that parking lot noises are instantaneous noise levels compared to noise standards in the hourly L_{eq} metric, which are averaged over the entire duration of a time period.

Actual noise levels over time resulting from parking lot activities would be far lower than the reference levels identified above. Parking lot noise would occur within the surface parking lot on-site. It is also noted that parking lot noise occurs at the adjacent properties under existing conditions. Parking lot noise would be consistent with the existing noise in the vicinity and would be partially masked by background noise from traffic along East Baseline Road and Ayala Drive. According to the site plan, sensitive receptors to the south would be located approximately 145 feet from the nearest parking area. Noise attenuation based strictly on distance and not taking into account intervening barriers or structures would reduce parking lot noise 53.8 dBA. Noise associated with parking lot activities is not anticipated to exceed the City's noise standards during operation. Therefore, noise impacts from parking lots would be less than significant.

Table 13: Operational Noise provides a summary of the operational noise levels discussed above. Table 13 shows that operational noise levels would not exceed the lowest measured ambient level at the closest receptors and would not result in a perceptible increase (3 dBA). Project generated noise levels would also not cause an exceedance the City's exterior land use compatibility standards and would comply with the RMC. As standard construction has an exterior to interior attenuation rate of 25 dBA[8], the highest interior noise levels would be approximately 36.5 dBA and would not exceed the City's 45 dBA interior standard of Title 24 of the California Health and Safety Code as referenced by the RGP. Additionally, Section 9.50.060(O) of the RMC states that sounds generated in commercial and industrial zones that are

[7] Loading dock reference noise level measurements conducted by Kimley-Horn on December 18, 2018.
[8] U.S. EPA, *Protective Noise Levels*, 1979.

necessary and incidental to the uses permitted therein are exempt from the Controlled Hours of Operation.

Table 13: Operational Noise

Noise Source	Reference Level (dBA)	Reference Distance (feet)	Distance to Receptor (feet)	Level at Receptor (dBA)[4]	Ambient Level (dBA)[5]	Combined Noise at Receptor (dBA)	Incremental Increase (dBA)	Significant?
Mechanical Equipment[1]	52	50	220	39.1	60.7	60.7	0.0	No
Truck and Loading Docks[2]	68	30	390	45.7	60.7	60.8	0.1	No
Parking[3]	63	50	145	53.8	60.7	61.5	0.8	No

1. Source for reference level: Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, July 6, 2010.
2. Loading dock reference noise level measurements conducted by Kimley-Horn on December 18, 2018.
3. Source for reference level: Kariel, H. G., *Noise in Rural Recreational Environments*, Canadian Acoustics 19(5), 3-10, 1991.
4. Calculated using the inverse square law formula for sound attenuation: $dBA_2 = dBA_1+20Log(d_1/d_2)$, where dBA_2 = estimated noise level at receptor; dBA_1 = reference noise level; d_1 = reference distance; d_2 = receptor location distance.
5. Measured ambient noise levels ranged from 60.7 dBA and 72.9 dBA (refer to Table 8). The lowest measured level at the closest residential receptor is conservatively used for this evaluation.

Off-Site Traffic Noise

Future development generated by the proposed project would result in additional traffic on adjacent roadways, thereby increasing vehicular noise near existing and proposed land uses. Based on the Traffic Impact Analysis, the proposed project would result in approximately 1,139 daily trips. The Opening Year "2021 Without Project" and "2021 Plus Project" scenarios were also compared. As shown in Table 14: Opening Year Traffic Noise Levels, roadway noise levels would range from 68.6 dBA to 71.1 under 2021 Without Project conditions and from 68.8 dBA to 71.3 dBA under 2021 Plus Project conditions. The highest noise levels would occur along Ayala Drive, between Renaissance Parkway to Fitzgerald Avenue. As shown in Table 13, project generated traffic would result in a maximum increase of 0.2 dBA. As the noise level increase is below 3.0 dBA, a less than significant impact would occur in this regard.

Table 14: Opening Year Traffic Noise Levels

Roadway Segment	2021 Without Project		2021 With Project		Change	Significant Impacts
	ADT	dBA CNEL at 100 feet from Roadway Centerline	ADT	dBA CNEL at 100 feet from Roadway Centerline		
Ayala Drive, between Renaissance Parkway to Fitzgerald Avenue	23,506	71.1	24,456	71.3	0.2	No
Ayala Drive, between Fitzgerald Avenue to Baseline Road	19,876	70.4	20,679	70.6	0.2	No
Baseline Road, between West of Ayala Drive	15,164	69.2	15,777	69.4	0.2	No
Baseline Road, between Ayala Drive to Fitzgerald Avenue	13,141	68.6	13,672	68.8	0.2	No
Baseline Road, between Idyllwild Avenue to Cactus Avenue	14,553	69.1	15,141	69.2	0.1	No

ADT = average daily trips; dBA = A-weighted decibels; CNEL = community noise equivalent level.

Source: Based on traffic data within the *Traffic Impact Study*, prepared by Kimley-Horn, 2021. Refer to Appendix A for traffic noise modeling assumptions and results.

Standard Conditions and Requirements:

NOI-1 Prior to Grading Permit issuance, the applicant shall demonstrate, to the satisfaction of the City of Rialto Director of Public Works or City Engineer that the Project complies with the following:

- Construction contracts specify that all construction equipment, fixed or mobile, shall be equipped with properly operating and maintained mufflers and other state required noise attenuation devices.
- Property owners and occupants located within 200 feet of the project boundary shall be sent a notice, at least 15 days prior to commencement of construction of each phase, regarding the construction schedule of the proposed project. A sign, legible at a distance of 50 feet shall also be posted at the project construction site. All notices and signs shall be reviewed and approved by the City of Rialto Development Services Department, prior to mailing or posting and shall indicate the dates and duration of construction activities, as well as provide a contact name and a telephone number where residents can inquire about the construction process and register complaints.
- Prior to issuance of any Grading or Building Permit, the Contractor shall provide evidence that a construction staff member will be designated as a Noise Disturbance Coordinator and will be present on-site during construction activities. The Noise Disturbance Coordinator is responsible for responding to local complaints about construction noise. When a complaint is received, the Noise Disturbance Coordinator shall notify the City within 24-hours of the complaint, determine the cause (e.g., starting too early, bad muffler, etc.), and implement reasonable measures to resolve the complaint as deemed acceptable by the Public Works Department. All notices sent to residential units surrounding the construction site and all signs posted at the construction site shall include the contact name and the telephone number for the Noise Disturbance Coordinator.
- Prior to issuance of any Grading or Building Permit, the project Applicant shall demonstrate to the satisfaction of the City Engineer that construction noise reduction methods shall be used where feasible. These reduction methods include shutting off idling equipment, installing temporary acoustic barriers around stationary construction noise sources, maximizing the distance between construction equipment staging areas and occupied residential areas, and electric air compressors and similar power tools.
- Construction haul routes shall be designed to avoid noise sensitive uses (e.g., residences, convalescent homes, etc.), to the extent feasible.
- During construction, stationary construction equipment shall be placed such that emitted noise is directed away from sensitive noise receivers.
- Construction activities shall not take place outside of the allowable hours specified by the City's *Municipal Code Chapter 9.50, Noise Control* (from October 1st to April 30th, allowable construction hours are between 7:00 a.m. and 5:30 p.m. on weekdays and between 8:00 a.m. and 5:00 p.m. on Saturdays and from May 1st to September 30th, allowable construction hours are between 6:00 a.m. and 7:00 p.m. on weekdays and between 8:00 a.m. and 5:00 p.m. on Saturdays; construction activities are not permitted on Sundays or legal holidays).

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

Threshold 6.2 Would the Project expose persons to or generate excessive ground borne vibration or ground borne noise levels?

Once operational, the Project would not be a source of groundborne vibration. Increases in groundborne vibration levels attributable to the proposed Project would be primarily associated with short-term construction-related activities. Construction on the Project site would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved.

The Federal Transit Administration (FTA) has published standard vibration velocities for construction equipment operations. In general, the FTA architectural damage criterion for continuous vibrations (i.e., 0.2 in/sec) appears to be conservative. The types of construction vibration impacts include human annoyance and building damage. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience any cosmetic damage (e.g., plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on the soil composition and underground geological layer between vibration source and receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment. For example, for a building that is constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.20 in/sec is considered safe and would not result in any construction vibration damage.

Table 15: Typical Construction Equipment Vibration Levels, lists vibration levels at 25 feet for typical construction equipment. Groundborne vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. As indicated in Table 15, based on FTA data, vibration velocities from typical heavy construction equipment operations that would be used during Project construction range from 0.003 to 0.089 in/sec PPV at 25 feet from the source of activity.

Table 15: Typical Construction Equipment Vibration Levels

Equipment	Peak Particle Velocity at 25 Feet (in/sec)	Peak Particle Velocity at 90 Feet (in/sec)[1]	Approximate VdB at 25 Feet	Approximate VdB at 90 Feet[2]
Large Bulldozer	0.089	0.013	87	70
Caisson Drilling	0.089	0.013	87	70
Loaded Trucks	0.076	0.011	86	69
Jackhammer	0.035	0.005	79	62
Small Bulldozer/Tractors	0.003	0.0004	58	41

1. Calculated using the following formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$, where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance; PPV_{ref} = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018; and D = the distance from the equipment to the receiver.
2. Calculated using the following formula: Lv(D)=Lv(25)-(30xlog10(D/25))

Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018.

The nearest sensitive receptors are the residential uses approximately 90 feet to the south of the Project boundary. Using the calculation shown in Table 15, at 90 feet the vibration velocities from construction equipment would not exceed 0.016 in/sec PPV, which is below the FTA's 0.20 PPV threshold. Table 15 also shows that construction VdB levels would not exceed 70 VdB at 90 feet and would be below the 75 VdB annoyance threshold). It can reasonably be assumed that at any further distance, the vibration levels

would attenuate further. It is also acknowledged that construction activities would occur throughout the Project site and would not be concentrated at the point closest to the nearest residential structure. Therefore, vibration impacts associated with the proposed Project would be less than significant.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

Threshold 6.3 For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

The Rialto Municipal Airport was officially closed in 2014 and is the nearest airport in the immediate area, located approximately 0.6 miles from the Project site. There are no other airports within two miles of the project site. Therefore, there is no impact surrounding the proposed Project concerning airport noise, including from a private airstrip.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

6.2 Cumulative Noise Impacts

Cumulative Construction Noise

The Project's construction activities would not result in a substantial temporary increase in ambient noise levels. Construction noise would be periodic and temporary noise impacts that would cease upon completion of construction activities. The Project would contribute to other proximate construction project noise impacts if construction activities were conducted concurrently. However, based on the noise analysis above, the Project's construction-related noise impacts would be less than significant following the City of Rialto Municipal Code and SC NOI-1.

Construction activities at other planned and approved projects near the Project site would be required to comply with applicable City rules related to noise and would take place during daytime hours on the days permitted by the applicable Municipal Code, and projects requiring discretionary City approvals would be required to evaluate construction noise impacts, comply with the City's standard conditions of approval, and implement mitigation, if necessary, to minimize noise impacts. Construction noise impacts are by nature localized. Based on the fact that noise dissipates as it travels away from its source, noise impacts would be limited to the Project site and vicinity. Therefore, Project construction would not result in a cumulatively considerable contribution to significant cumulative impacts, assuming such a cumulative impact existed, and impacts in this regard are not cumulatively considerable.

Cumulative Operational Noise

Cumulative Off-Site Traffic Noise. Cumulative noise impacts describe how much noise levels are projected to increase over existing conditions with the development of the proposed Project and other foreseeable

projects. Cumulative noise impacts would occur primarily as a result of increased traffic on local roadways due to buildout of the proposed Project and other projects in the vicinity. Cumulative increases in traffic noise levels were estimated by comparing the Existing and Opening Year Without Project scenarios to the Opening Year Plus Project scenario. The traffic analysis considers cumulative traffic from future growth assumed in the transportation model, as well as cumulative projects.

A project's contribution to a cumulative traffic noise increase would be considered significant when the combined effect exceeds perception level (i.e., auditory level increase) threshold. The following criteria is used to evaluate the combined and incremental effects of the cumulative noise increase.

- *Combined Effect*. The cumulative with Project noise level ("Opening Year With Project") would cause a significant cumulative impact if a 3.0 dB increase over "Existing" conditions occurs and the resulting noise level exceeds the applicable exterior standard at a sensitive use. Although there may be a significant noise increase due to the proposed Project in combination with other related projects (combined effects), it must also be demonstrated that the Project has an incremental effect. In other words, a significant portion of the noise increase must be due to the proposed Project.
- *Incremental Effects*. The "Opening Year With Project" causes a 1.0 dBA increase in noise over the "Opening Year Without Project" noise level.

A significant impact would result only if both the combined and incremental effects criteria have been exceeded. Noise by definition is a localized phenomenon and reduces as distance from the source increases. Consequently, only the proposed Project and growth due to occur in the general area would contribute to cumulative noise impacts.

Table 16: Opening Year Plus Project Conditions Predicted Traffic Noise Levels identifies the traffic noise effects along roadway segments in the Project vicinity for "Existing," "Opening Year Without Project," and "Opening Year With Project," conditions, including incremental and net cumulative impacts. Table 16 shows the increase for combined effects and incremental effects and none of the segments meet the criteria for cumulative noise increase. The proposed Project would not result in long-term mobile noise impacts based on project-generated traffic as well as cumulative and incremental noise levels. Therefore, the proposed Project, in combination with cumulative background traffic noise levels, would result in a less than significant cumulative impact. The proposed Project's contribution would not be cumulatively considerable.

Table 16: Opening Year Plus Project Conditions Predicted Traffic Noise Levels

Roadway Segment	Existing	Opening Year Without Project	Opening Year With Project	Combined Effects	Incremental Effects	Cumulatively Significant Impact?
				Difference In dBA Between Existing and Opening Year With Project	Difference In dBA Between Opening Year Without Project and Opening Year With Project	
Slover Avenue						
Ayala Drive, between Renaissance Parkway to Fitzgerald Avenue	71.1	71.1	71.3	0.2	0.2	No
Ayala Drive, between Fitzgerald Avenue to Baseline Road	70.4	70.4	70.6	0.2	0.2	No

Table 16: Opening Year Plus Project Conditions Predicted Traffic Noise Levels

Roadway Segment	Existing	Opening Year Without Project	Opening Year With Project	Combined Effects	Incremental Effects	Cumulatively Significant Impact?
				Difference In dBA Between Existing and Opening Year With Project	Difference In dBA Between Opening Year Without Project and Opening Year With Project	
Baseline Road, between West of Ayala Drive	69.2	69.2	69.4	0.2	0.2	No
Baseline Road, between Ayala Drive to Fitzgerald Avenue	68.6	68.6	68.8	0.2	0.2	No
Baseline Road, between Idyllwild Avenue to Cactus Avenue	69.1	69.1	69.2	0.1	0.1	No

ADT = average daily trips; dBA = A-weighted decibels; CNEL = Community Noise Equivalent Level; WB = westbound; EB = eastbound

1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.

Source: Based on traffic data within the *VMT Assessment & Local Access, Safety, and Circulation Study*, prepared by Kimley-Horn, 2021. Refer to Appendix A for traffic noise modeling assumptions and results.

Cumulative Stationary Noise. Stationary noise sources of the proposed Project would result in an incremental increase in non-transportation noise sources in the Project vicinity. However, as discussed above, operational noise caused by the proposed Project would be less than significant. Similar to the proposed Project, other planned and approved projects would be required to mitigate for stationary noise impacts at nearby sensitive receptors, if necessary. As stationary noise sources are generally localized, there is a limited potential for other projects to contribute to cumulative noise impacts.

No known past, present, or reasonably foreseeable projects would combine with the operational noise levels generated by the Project to increase noise levels above acceptable standards because each project must comply with applicable City regulations that limit operational noise. Therefore, the Project, together with other projects, would not create a significant cumulative impact, and even if there was such a significant cumulative impact, the Project would not make a cumulatively considerable contribution to significant cumulative operational noises.

Given that noise dissipates as it travels away from its source, operational noise impacts from on-site activities and other stationary sources would be limited to the Project site and vicinity. Thus, cumulative operational noise impacts from related projects, in conjunction with Project specific noise impacts, would not be cumulatively significant.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

TRAFFIC IMPACT STUDY
FOR THE PROPOSED
OLIVE AVENUE DEVELOPMENT PROJECT
IN THE CITY OF RIALTO

I. INTRODUCTION

A. Purpose of the TIA and Study Objectives

This Traffic Impact Study has been prepared to address the traffic-related impacts of the proposed Olive Avenue Development Project in the City of Rialto.

This Traffic Impact Study ("**Study**") has been conducted in accordance with the traffic study requirements of the City of Rialto, based on the City's *Traffic Impact Analysis Report Guidelines and Requirements* (Date: December 2013), and in accordance with San Bernardino Association of Governments (SANBAG) Congestion Management Program (CMP) requirements.

This Study addresses existing, short-term future, and long-term future traffic conditions, taking into account the Project trips to be generated by the Project and potential Project-related impacts on the surrounding circulation system.

This Study includes a description of existing traffic conditions in the surrounding area, estimated Project trip generation and distribution, future traffic growth, and an assessment of Project-related impacts on the roadway system. Where necessary, circulation system improvements have been identified to achieve acceptable intersection operation in the vicinity of the Project.

The Project will be evaluated for the following conditions:

- Existing Conditions
- Opening Year 2022 – Existing Plus Growth
- Opening Year 2022 – Existing Plus Growth Plus Project
- Opening Year 2022 Cumulative – Without Project
- Opening Year 2022 Cumulative – With Project

B. Site Plan Location and Study Area

The Project is located in the western area of the City of Rialto, and is shown in its regional setting on a vicinity map on **Figure 1**. The Project site (approximately 31.08 acres) is bounded by a park to the north, Baseline Road to the south, permanent open space vacant land to the east (San Bernardino County Flood Control land), and industrial uses and vacant land to the west.

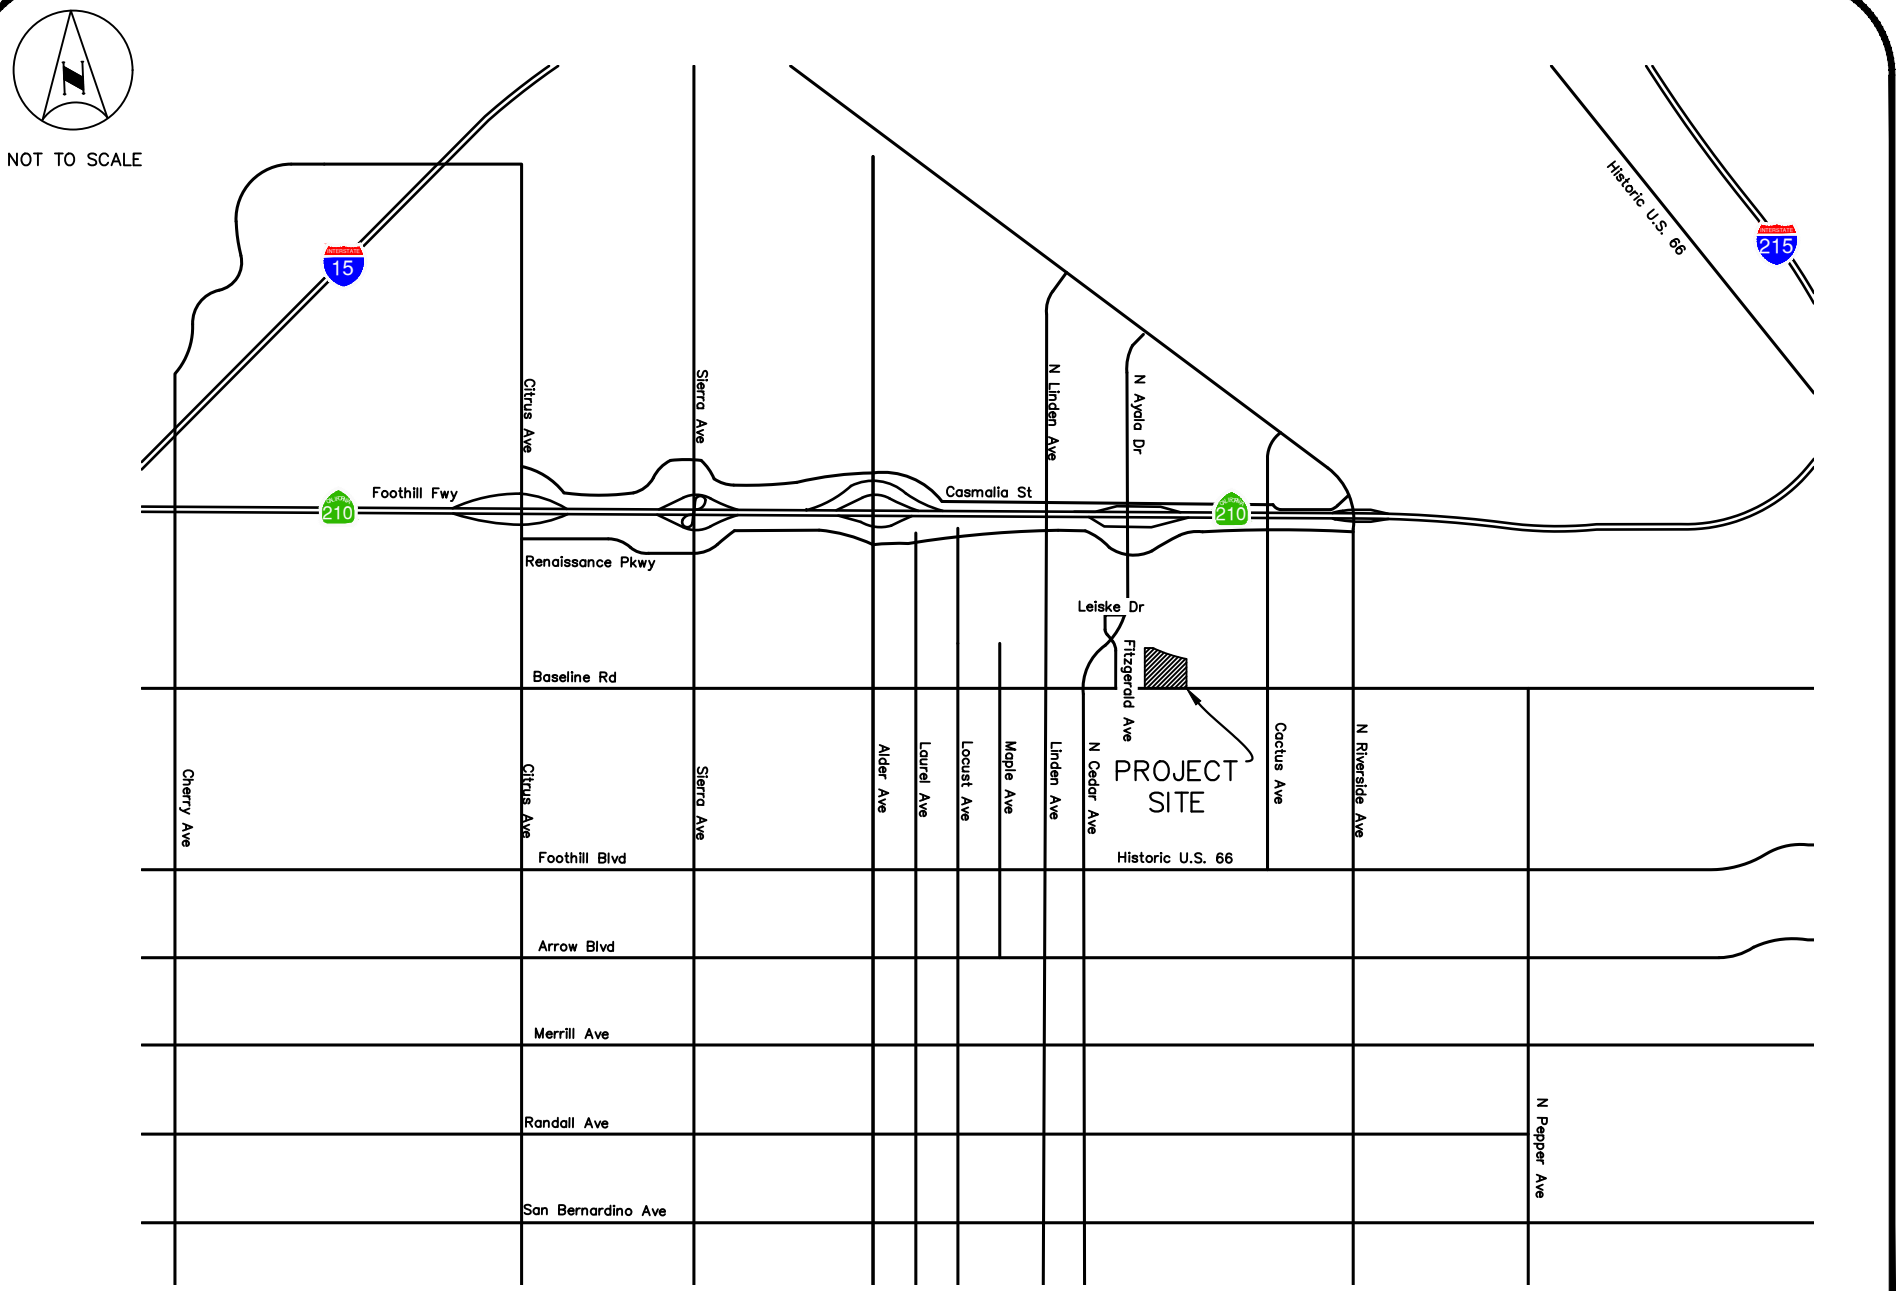

FIGURE 1
VICINITY MAP

C. Development Project Identification

Pending

D. Development Project Description

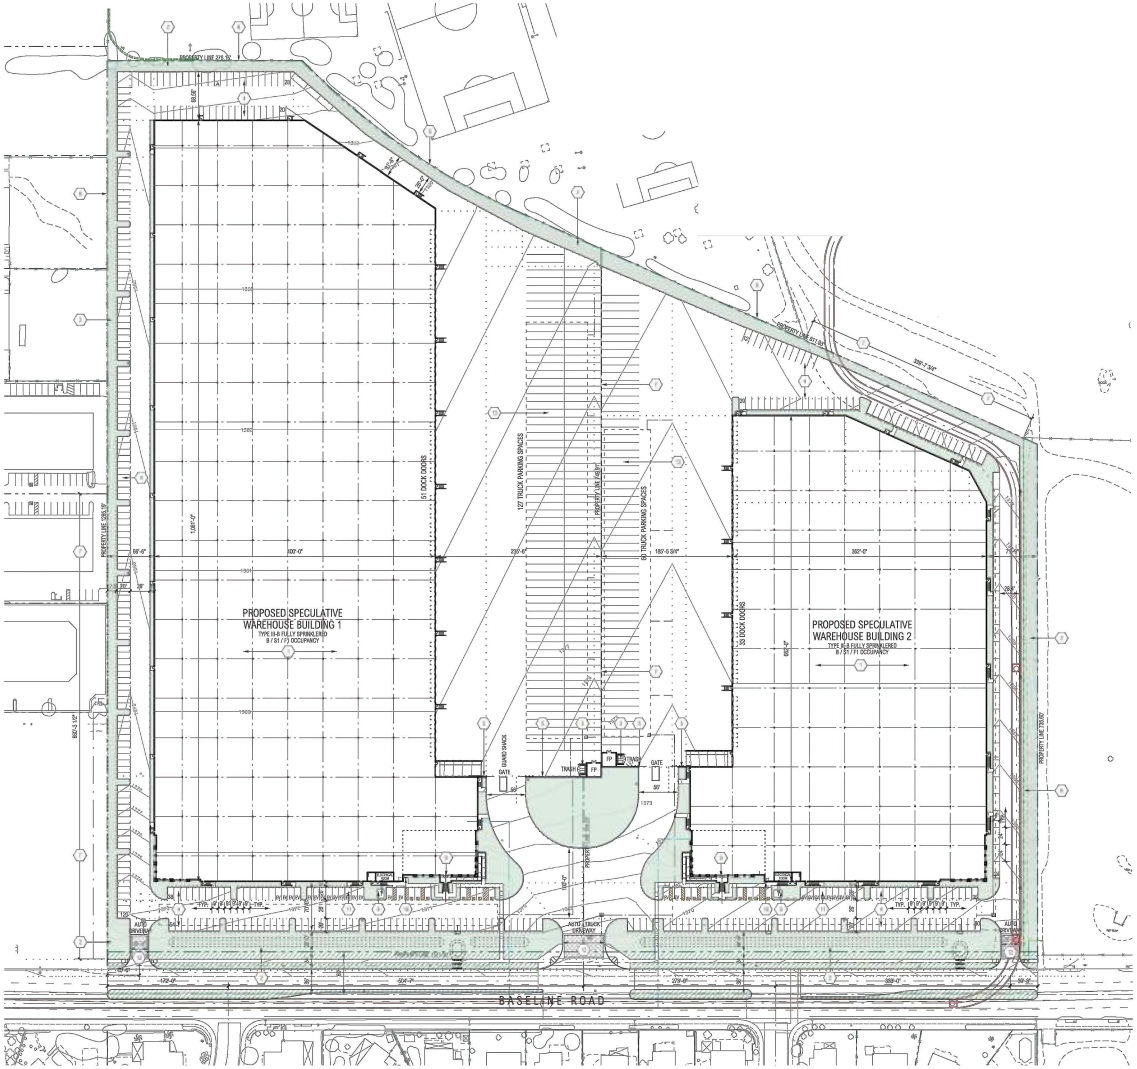
The Project will involve the construction of two industrial buildings in a business park environment totaling 679,607 square feet. A copy of the Project site plan is provided on **Figure 2.**

The Project is located within the City of Rialto Airport Specific Plan area and designates the Project site as an Industrial-Airport Related (I-AR) land use.

Vehicular access provisions for the Project site would consist of three access points along Baseline Road. Passenger vehicles would access the Project site via all three entry points. The westernmost and easternmost entry points along Baseline Road would be unsignalized, right-in right-out only access points. The center of the Project main entry point would provide for full-access and will be signalized. There will be a raised median constructed along the entire Project frontage to assist with traffic movement along Baseline Road, and required per City of Rialto General Plan. This Project main entry point would primarily handle truck ingress and egress. Passenger cars exiting the project would use the driveways proportionally based on available parking supply, except for passenger cars that require making a left turn out (20%) at the center of the Project driveway (D2). The majority of the passenger cars entering the project would use the center driveway main entry point (80%) to make a left into the project. Trucks exiting the Project site would travel to/from the west to utilize City identified truck routes along Alder Avenue, that lead to full access to the SR-210 freeway.

The Project also proposes to construct an additional, new signalized intersection where Baseline Road and Idyllwild Avenue intersect to allow residents south of the Project to have improved ingress and egress into and out of their residential community. The traffic signal will create an offset intersection with the Project main entry point and be interconnected with one controller. An operational analysis for this intersection is described in Section V of this study.

The proposed opening year for the Project is Year 2022. The Project will be developed in a single Project phase. The Project site is located approximately ¾ miles from the City of Rialto's border with the City of Fontana.



NOT TO SCALE

FIGURE 2
PROJECT SITE PLAN

E. Analysis Methodology

1. Intersection Analysis – HCM Methodology

Peak hour intersection operations at signalized and unsignalized intersections were evaluated using the methods prescribed in the Highway Capacity Manual (HCM) 6th Edition, consistent with the requirements of the City of Rialto and the San Bernardino County CMP.

The City of Rialto guidelines require analysis of traffic operations to be based on the vehicular delay methodologies of the HCM (Transportation Research Board Special Report 209). The intersection analysis for the proposed Project has been accomplished using the VISTRO software program and using the specified input parameters outlined in the City's *Traffic Impact Analysis Report Guidelines and Requirements*.

Due to limitations for analyzing offset intersections with VISTRO software and HCM methodologies, Synchro 10 (Trafficware) was used with methodologies outlined in the 2000 HCM for the Signal Proximity and Operational Analysis in Section V of this study.

Per the HCM Methodology, Level of Service (LOS) for signalized intersections is defined in terms of average vehicle delay. Specifically, LOS criteria are stated in terms of the average control delay per vehicle for the peak 15-minute period within the hour analyzed. The charts on the following page provide a description of the operating characteristics of each Level of Service and define the LOS in terms of average seconds of delay for signalized and unsignalized intersections.

2. Level of Service Standards and Measure of Significance

The City of Rialto, per the City of Rialto 2010 General Plan Update, establishes minimum Level of Service standards. According to Policy 4-1.20 of the General Plan document, the City requires that signalized intersections operate at LOS D or better during the morning and evening peak hours. The City's Traffic Study Guidelines require new development to mitigate impacts that cause the Level of Service to fall below LOS D, or cause the peak hour delay to increase as follows:

- LOS A/B – by 10.0 seconds
- LOS C – by 8.0 seconds
- LOS D – by 5.0 seconds
- LOS E – by 2.0 seconds
- LOS F – by 1.0 second

The City's traffic study guidelines require unsignalized intersections to operate with no vehicular movement having an average delay exceeding 120 seconds during the morning and evening peak hours.

LEVEL OF SERVICE DEFINITIONS	
Level of Service	**Description**
A	No approach phase is fully utilized by traffic and no vehicle waits longer than one red indication. Typically, the approach appears quite open, turns are made easily and nearly all drivers find freedom of operation.
B	This service level represents stable operation, where an occasional approach phase is fully utilized and a substantial number are approaching full use. Many drivers begin to feel restricted within platoons of vehicles.
C	This level still represents stable operating conditions. Occasionally drivers may have to wait through more than one red signal indication, and backups may develop behind turning vehicles. Most drivers feel somewhat restricted but not objectionably so.
D	This level encompasses a zone of increasing restriction, approaching instability at the intersection. Delays to approaching vehicles may be substantial during short peaks within the peak period; however, enough cycles with lower demand occur to permit periodic clearance of developing queues, thus preventing excessive backups.
E	Capacity occurs at the upper end of this service level. It represents the most vehicles that any particular intersection approach can accommodate. Full utilization of every signal cycle is seldom attained no matter how great the demand.
F	This level describes forced flow operations at low speeds, where volumes exceed capacity. These conditions usually result from queues of vehicles backing up from a restriction downstream. Speeds are reduced substantially, and stoppages may occur for short or long periods of time due to the congestion. In the extreme case, both speed and volume can drop to zero.

[2] Source: Highway Capacity Manual (HCM 6th Edition), Exhibits 19-1 and 20-2.

Roadway Segment Analysis

The roadway segment analysis will address the Project's impact on daily operating conditions on roadway segments within the Project vicinity. Roadway segments are evaluated by comparing the daily traffic volume on a roadway segment to the daily capacity of that segment, to determine the volume-to-capacity (v/c) ratio. Daily capacity is based on the roadway classification, as shown in the following chart:

CITY OF RIALTO ROADWAY CAPACITY (1)				
Roadway Classification	**No. of Lanes**	**Two-Way Traffic Volume (ADT)(2)**		
		Service Level C	**Service Level D**	**Service Level E**
Local	2	2,500-2,799	2,800-3,099	3,100 +
Collector (60' or 64')	2	9,900-11,199	11,200-12,499	12,500 +
Industrial (45')	2	9,900-11,199	11,200-12,499	12,500 +
Arterial(3)	2	14,400-16,199	16,200-17,999	18,000 +
Secondary Highway	4	16,900-19,399	19,400-21,999	22,000 +
Modified Arterial (100')	4	26,200-29,599	29,600-32,999	33,000 +
Arterial (120')	6	38,700-44,099	44,100-49,499	49,500 +

Notes:
(1) All capacity figures are based on optimum conditions and are intended as guidelines for planning purposes only
(2) Maximum two-way ADT values are based on the 1999 Modified Highway Capacity Manual Level of Service Tables.
(3) Two-lane roads designated as future arterials that conform to arterial design standards for vertical and horizontal alignments are analyzed as arterials.

Source: City of Rialto *Traffic Impact Analysis Report Guidelines and Requirements* (2013)

Per the City of Rialto 2010 General Plan Update, roadway segments may or may not be governed by signalized intersections at the ends of the segment. If the segments exceed 1,500 feet and the V/C ratio exceeds 1.0, the segment must be mitigated even if improved intersections at the ends do not exceed LOS D. Additional study may be required or presented to support allowing V/C to exceed 1.0, but are subject to the discretion of the Public Works Director/City Engineer and Transportation Commission, on a case by case basis, as to the acceptability of allowing such segments being un-mitigated.

II. AREA CONDITIONS

A. Identify Study Area and Intersections

The City requested that a traffic study be completed that includes documentation of existing conditions, analysis of cumulative traffic conditions, and identification of Project-related impacts at the following study intersections:

Existing Intersections:

1. Alder Avenue at SR-210 Westbound Ramps
2. Alder Avenue at SR-210 Eastbound Ramps
3. Alder Avenue at Renaissance Parkway
4. Alder Avenue at Baseline Road
5. Ayala Drive at SR-210 Westbound Ramps
6. Ayala Drive at SR-210 Eastbound Ramps
7. Ayala Drive at Renaissance Parkway
8. Ayala Drive at Fitzgerald Avenue
9. Ayala Drive at Baseline Road
10. Fitzgerald Avenue at Baseline Road
11. Cactus Avenue at Baseline Road

Future Project Driveway Intersections:

D1. Baseline Road at Driveway 1
D2. Baseline Road at Driveway 2
D3. Baseline Road at Driveway 3

In addition, the following roadway segments were analyzed:

- Ayala Drive: Renaissance Parkway to Fitzgerald Avenue
- Ayala Drive: Fitzgerald Avenue to Baseline Road
- Baseline Road: West of Ayala Drive
- Baseline Road: Ayala Drive to Fitzgerald Avenue
- Baseline Road: Idyllwild Avenue to Cactus Avenue
- Alder Avenue: Renaissance Parkway to Walnut Avenue
- Alder Avenue: Walnut Avenue to Miro Way
- Alder Avenue: Miro Way to Baseline Road

The study locations were established in conjunction with City staff through the Scoping Agreement process (Exhibit B of the City of Rialto *Traffic Impact Analysis Report Guidelines and Requirements*). A copy of the approved Scoping Agreement is provided in ***Appendix A***.

B. Description of Existing Roads, Traffic Controls, and Intersection Geometrics

Regional access to the site is provided primarily by the State Route 210 (SR-210) Freeway, approximately one mile to the north of the Project site. In addition, the I-215 Freeway is located approximately 5 miles to the east of the site; the I-15 Freeway is approximately 7 miles to the west of the site, and access to the I-10 Freeway is approximately 4 miles to the south.

Existing lane configurations, bicycle/pedestrian infrastructure, and intersection controls at the study intersections are shown on **Figure 3**. The following provides a description of the roadways surrounding the Project site.

Ayala Drive – Ayala Drive is currently a four-lane roadway within the Project vicinity and is located west of the Project site. Ayala Drive is designated as a Major Arterial in the Circulation Element of the General Plan. Ayala Drive is designated as a truck route in the Circulation Element of the General Plan, adopted December, 2010. The posted speed limit along Ayala Drive is 45 miles per hour. Ayala Drive has an existing raised median between Baseline Road and Renaissance Parkway.

Alder Avenue – Alder Avenue is currently a four-lane roadway within the Project vicinity, located approximately 1.5 miles west of the Project site. Alder Avenue is designated as a Major Arterial, with four travel lanes, a bike lane in each direction, and a raised center median. Alder Avenue is a designated truck route from Baseline Road to Casa Grande in the City of Rialto Circulation Element. Alder Avenue currently does not go through to Casa Grande, with a gap between Bohnert Avenue and Summit Avenue. The posted speed limit along Alder Avenue is 50 miles per hour.

Baseline Road – Baseline Road is currently a four-lane roadway that borders the southern edge of the Project site. Baseline Road is designated as a Major Arterial in the Circulation Element of the General Plan, with four travel lanes and a two-way left-turn median lane between Cactus Avenue and Linden Avenue that is planned to be converted to a raised median. Baseline Road is designated as a truck route in the Circulation Element. The posted speed limit along Baseline Road is 45 miles per hour.

Renaissance Parkway – Renaissance Parkway is a four-lane roadway with bike lanes between Citrus Avenue and Arrowhead Avenue, where it enters a residential neighborhood and transitions to a two-lane facility. Renaissance Parkway is designated by the City of Rialto Renaissance Specific Plan as a Major Arterial west of Ayala Drive and a Secondary Arterial between Ayala Drive and the RSP boundaries. In the General Plan, it is designated as a Major Arterial between the RSP boundaries and Cactus Avenue, and a Collector Street east of Cactus Avenue. Within the Project vicinity, four-lane segments of Renaissance Parkway contain a raised center median. Renaissance Parkway is designated as a truck route in the Circulation Element. The posted speed limit along Renaissance Parkway is 45 miles per hour.

Fitzgerald Avenue – Fitzgerald Avenue is a two-lane local roadway located approximately 400 feet west of the Project site that terminates at Baseline Road and forms a two-way stop-controlled intersection with Ayala Drive. There is on-street parking available on both sides of Fitzgerald Avenue.

Cactus Avenue – Cactus Avenue is a four-lane roadway located approximately 2,000 feet east of the Project site. Cactus Avenue is designated as a Major Arterial in the Circulation Element, with four lanes and a two-way left-turn median lane. The posted speed limit along Cactus Avenue is 40 miles per hour north of Baseline Road and 45 miles per hour south of Baseline Road.

EXISTING LANE CONFIGURATION AND TRAFFIC CONTROL

C. Existing Traffic Volumes

Existing Peak Hour Turning Movement Volumes

Existing morning and evening peak hour turning movement volumes were collected in May, 2019. Copies of the traffic count data worksheets are provided in ***Appendix B***.

Intersection count data included vehicle classifications for passenger vehicles and trucks. Vehicle classifications are necessary to compute Passenger Car Equivalent (PCE) volumes, which are used in the traffic analysis to address the impacts of truck traffic on intersection and roadway operation.

The PCE volumes were developed by applying a PCE factor of 1.5 for 2-axle trucks, 2.0 for 3-axle trucks, and 3.0 for trucks with 4 or more axles. These factors are consistent with the City of Rialto's *Traffic Impact Analysis Guidelines and Requirements*. PCE volume worksheets are provided in ***Appendix C***. Existing morning and evening peak hour volumes with the PCE factors applied are presented on **Figure 4**.

Existing Roadway Daily Volumes

Existing daily roadway volumes were collected in May, 2019 with vehicle classification. The PCE factors were applied to the truck volumes, and the resulting existing daily traffic volumes with PCE are shown on Figure 4 (previously referenced). Daily traffic count data collection worksheets are provided in ***Appendix B***.

D. Existing Delay and Level of Service

Peak Hour Operating Conditions

Existing Intersection Level of Service analysis was conducted for the morning and evening peak hours using the analysis procedures and assumptions described previously in this report. The results of the intersection analysis for Existing Conditions are shown on **Table 1**. Review of this table indicates that the following intersection currently operates at an unacceptable Level of Service under Existing conditions:

- #8 – Ayala Drive at Fitzgerald Avenue: AM – LOS E; PM – LOS F

The Level of Service for an unsignalized intersection is reported based on the single approach movement with the highest delay, which in this case, would be the southbound approach for intersection #8. While the side street approach operates at a deficient Level of Service based on the highest delay approach, the overall intersection delay would be acceptable. Any queuing that occurs on the side street is contained on the minor intersection approach and does not impact the progression of traffic on the main arterial.

Copies of Existing Conditions intersection analysis worksheets are provided in ***Appendix D***.

Notes:
- **Bold** and shaded values indicate intersections operating at LOS E or F or significant impact to intersection per City standards.
- At a signalized intersection, delay refers to the average control delay for the entire intersection, measured in seconds per vehicle.
- At a two-way stop-controlled intersection, delay refers to the average vehicle delay on the worst (highest delay) movement.
- Delay values are based on the methodology outlined in the Highway Capacity Manual, (6th Edition).

S = Signalized
U = Unsignalized

Daily Roadway Operating Conditions

Roadway Level of Service analysis was conducted based on the roadway capacities presented previously in this report. The results of the roadway analysis for Existing Conditions are shown on **Table 2**. Review of this table indicates that the study roadway segments are currently operating within their current Level of Service D capacity.

E. General Plan Circulation Element

A copy of the General Plan Street Classifications is provided on **Figure 5. Figure 6** shows Renaissance Specific Plan Street Classification. Designated truck routes in the Renaissance Specific Plan are shown on **Figure 7**. Project truck traffic is assumed to use the designated truck route system to access the freeway. Note that per City direction, this report assumes that Project-related truck traffic will not use Ayala Drive to access the SR-210 freeway, as Ayala Drive is currently being considered for removal from the City truck route network.

F. Transit Service

Transit service to the Project area is provided via the OmniTrans transit lines, which serve various San Bernardino cities in the area. Bus stops in the Project vicinity are located adjacent to the Project site along Baseline Road. The bus stop near Fitzgerald Avenue is approximately 950' from the center of the Project and the bus stop near Glenwood Avenue is approximately 500' from the center of the Project. A description of the bus route serving the Project area is provided below.

OmniTrans Route 10 operates between the City of Fontana and the City of San Bernardino, traveling through Rialto along Baseline Road in the Project vicinity. Route 10 operates on weekdays from 5:10 AM to 8:15 PM with approximately 30-minute to 1-hour headways (the time between bus arrivals), on Saturdays from 6:20 AM to 7:00 PM with approximately 1-hour headways, and on Sundays from 7:20 AM to 6:00 PM with approximately 1-hour headways. There are bus stops for those traveling westbound adjacent to the Property and with the new signalized intersection, there will be a pedestrian crosswalk to the bus stops on the south side of Baseline Road, for the OmniTrans route going eastbound.

FIGURE 7
RENAISSANCE SPECIFIC PLAN TRUCK ROUTES

III. PROJECTED FUTURE TRAFFIC

A. Project Traffic

1. Project Trip Generation

Trip generation estimates for the Olive Avenue Development Project are based on daily and peak hourly trip generation rates obtained from the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition). ITE trip generation estimates for the Project are based on the trip generation rates for ITE Land Use 150: Warehousing.

Trip generation rates and resulting trip generation estimates for the Project are summarized on **Table 3**. The Project is estimated to generate 1,183 vehicles trips on a daily basis, with 116 trips during the morning peak hour travel times, and 129 trips during the evening peak hour travel times.

Passenger vehicle and truck mix rates for Warehouse projects are provided in the City of Rialto *Traffic Impact Analysis Report Guidelines and Requirements*. These rates are based on the South Coast Air Quality Management District's (SCAQMD) recommendations for traffic impact studies. The guidelines specify using a minimum truck rate of 40% of total Project traffic. These vehicle classification splits were applied to the daily and peak hour trip generation to develop an estimate of truck volumes by number of axles (2-axle, 3-axle, and 4+-axle trucks) that would be associated with the proposed Project.

Passenger car equivalent (PCE) factors, per City recommendations, were then applied to the truck types, based on number of axles (1.5 PCE for 2-axle trucks, 2.0 PCE for 3-axle trucks, and 3.0 PCE for 4+-axle trucks) to determine the total PCE volumes to be generated by the Project. With the PCE factors, the Olive Avenue Development Project is estimated to generate 1,981 PCE trips on a daily basis, with 194 PCE trips in the morning peak hour travel times, and 215 PCE trips in the evening peak hour travel times.

2. Trip Distribution and Assignment

Trip distribution assumptions for the Project were developed by taking into account the proposed site uses, the location of the site access points, and the routes to and from the freeway system for the warehouse trucks. Separate distribution patterns were assumed for passenger car trips and truck trips. The truck docks are located in the center of the site between the two Project buildings, and all trucks will access the site via intersection D2: Baseline Road at Driveway 2. Trip distribution patterns for passenger vehicles are shown on **Figures 8 and 9** and trip distribution patterns for trucks are shown on **Figures 10 and 11**. Trip distribution percentages at each study intersection were applied to the Project trip generation to determine the Project trips through each intersection. The resulting Project-related peak hour trips at the study intersections are shown on **Figure 12**

PROJECT-RELATED TRAFFIC VOLUMES

B. Existing Plus Growth Conditions (Opening Year 2022)

The Project Opening Year is anticipated to be late 2022. Local roadway and intersection improvements that are currently underway or have been conditioned on other projects are expected to be in place by the Project Opening in 2022.

1. Ambient Growth Rate

An ambient growth rate of 2.0% was applied to existing peak hour traffic volumes to develop Existing Plus Growth forecasts. This ambient growth rates was found to be adequate for estimating volumes growth between 2019 and 2022 taking into account the impact of the COVID pandemic to traffic volumes and patterns. The resulting daily and peak hour Existing Plus Growth without the Project (Opening Year 2022) traffic volumes are shown on **Figure 13.**

Project traffic was then added to develop Existing Plus Growth Plus Project (Opening Year 2022) traffic forecasts. Existing Plus Growth Plus Project daily and peak hour traffic volumes are shown on **Figure 14.** As part of the Project, a raised center median is planned to be constructed on Baseline Road within the Project vicinity. As a result, existing vehicles turning left into and out of Glenwood Avenue and Idyllwild Avenue, which serve existing residential areas, would re-route to accomplish these movements. Note that with construction of the Project and center median along Baseline Road, existing vehicles making a northbound left-turn from Glenwood Avenue onto Baseline Road would now make a northbound right-turn onto Baseline Road and an eastbound U-turn at Project Driveway 2, as shown in Figure 14.

2. Opening Year 2022 Existing Plus Growth

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for Existing Plus Growth without the Project (Opening Year 2022). The results are shown on **Table 4**. Intersection analysis worksheets are provided in ***Appendix D***.

The intersection(s) outlined below currently operate at an unacceptable Level of Service without the addition of ambient growth. Review of this table indicates that with the addition of ambient growth, the following intersection(s) would operate at an unacceptable Level of Service under Opening Year 2022 conditions:

- #8 – Ayala Drive at Fitzgerald Avenue: AM – LOS E; PM – LOS F

Daily Roadway Operating Conditions

Roadway Level of Service analysis was conducted for the Existing Plus Growth conditions and the results are shown on **Table 5**. Review of this table indicates that the study roadway segments would continue to operate within their LOS D capacity with the addition of ambient growth traffic.

Notes: LOS = Level of Service
ADT = Average Daily Traffic
PCE = Passenger Car Equivalent

3. Opening Year 2022 Existing Plus Growth Plus Project

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the Existing Plus Growth Plus Project conditions. The results of the intersection analysis are shown on **Table 6**. Review of this table indicates that the following study intersection would continue to operate at an unacceptable Level of Service during both peak hours with the addition of Project traffic under Existing Plus Growth Plus Project conditions:

- #8 – Ayala Drive at Fitzgerald Avenue: AM – LOS F; PM – LOS F

The Level of Service for an unsignalized intersection is reported based on the single approach movement with the highest delay.

Based on the significance thresholds presented earlier in this report, the unsignalized intersection delay would not exceed an average delay of 120 seconds; therefore, the Project impact would not be considered significant.

Copies of intersection analysis worksheets are provided in ***Appendix D***.

Daily Roadway Operating Conditions

Roadway Level of Service analysis was conducted for the Existing Plus Growth Plus Project condition and the results are shown on **Table 7**.

Review of this table indicates that the study roadway segments would continue to operate within their Level of Service D capacity with the addition of Project traffic.

Notes:
- **Bold** and shaded values indicate intersections operating at LOS E or F or significant impact to intersection per City standards.
- At a signalized intersection, delay refers to the average control delay for the entire intersection, measured in seconds per vehicle.
- At a two-way stop-controlled intersection, delay refers to the average vehicle delay on the worst (highest delay) movement.
- Delay values are based on the methodology outlined in the Highway Capacity Manual, (6^{th} Edition).

S = Signalized
U = Unsignalized

TABLE 7
SUMMARY OF ROADWAY ANALYSIS
OPENING YEAR 2022 - EXISTING PLUS GROWTH PLUS PROJECT

Roadway	Segment	LOS D Capacity[1]	Existing ADT w/ PCE	Existing Plus Growth ADT	Daily Project Traffic	Existing + Growth + Project ADT	LOS D or Better?

Notes: LOS = Level of Service
ADT = Average Daily Traffic
PCE = Passenger Car Equivalent

C. Cumulative Conditions (Existing Plus Growth Plus Cumulative Projects)

1. Cumulative Projects

In addition to ambient growth, traffic volumes for Cumulative projects (approved and pending projects) were added to the Existing Plus Growth traffic volumes. Cumulative projects consist of any project that has been approved and is not yet occupied, and projects that are in various stages of the application and approval process, but have not yet been approved.

A summary of Cumulative projects in the Project vicinity and the trip generation associated with each is provided on **Table 8**. The locations of the Cumulative projects are shown on **Figure 12.** Cumulative project traffic volumes are shown on **Figure 15**.

2. Background Growth Rate

As discussed earlier, an ambient growth rate of 2.0% per year to Opening Year 2022 was assumed for this analysis.

3. Cumulative Projects Trip Generation

Trip generation information for the Cumulative projects was derived either from approved traffic studies, where available; or developed by Kimley-Horn if approved traffic studies were not available. Project information and trip generation assumptions for Cumulative projects are provided in ***Appendix E***.

4. Cumulative Projects Trip Distribution and Assignment

Likewise, trip distribution and assignment for the Cumulative projects were either derived from approved traffic studies, where available; or were developed by Kimley-Horn if approved traffic studies were not available. Trip distribution assumptions for Cumulative projects are provided in ***Appendix E***.

FIGURE 16
CUMULATIVE PROJECTS TRAFFIC VOLUMES

5. Opening Year 2022 Cumulative Without Project Conditions

Peak Hour Operating Conditions

Daily and peak hour traffic volumes for Opening Year 2022 Cumulative Without Project Conditions are shown on **Figure 17**. Intersection Level of Service results are shown on **Table 9.** Review of this table indicates that the following study intersections would operate at an unacceptable Level of Service under Cumulative Without Project conditions:

- #1 – Alder Avenue at SR-210 WB Ramps: AM – LOS F; PM – LOS F
- #2 – Alder Avenue at SR-210 EB Ramps: AM – LOS F; PM – LOS F
- #3 – Alder Avenue at Renaissance parkway: AM – LOS F; PM – LOS F
- #8 – Ayala Drive at Fitzgerald Avenue: AM – LOS F; PM – LOS F
- #9 – Ayala Drive at Baseline Road: PM – LOS E

Copies of intersection analysis worksheets are provided in ***Appendix D***.

Daily Roadway Operating Conditions

Roadway Level of Service analysis was conducted for Opening Year 2022 Cumulative Without Project conditions and the results are shown on **Table 10.**

Review of this table indicates that the study roadway segments would continue to operate within their Level of Service D capacity.

6. Opening Year 2022 Cumulative Plus Project Conditions

Peak Hour Operating Conditions

Project traffic was added to Opening Year 2022 Cumulative traffic volumes to develop Opening Year 2022 Cumulative plus Project traffic forecast volumes. The resulting daily and peak hour traffic volumes are shown on **Figure 18**.

Intersection Level of Service analysis results are shown on **Table 11**. Review of this table indicates that the following study intersection(s) would continue to operate at an unacceptable Level of Service with the addition of Project traffic under Cumulative Plus project conditions:

- #1 – Alder Avenue at SR-210 WB Ramps: AM – LOS F; PM – LOS F
- #2 – Alder Avenue at SR-210 EB Ramps: AM – LOS F; PM – LOS F

Notes:
- **Bold** and shaded values indicate intersections operating at LOS E or F or significant impact to intersection per City standards.
- At a signalized intersection, delay refers to the average control delay for the entire intersection, measured in seconds per vehicle.
- At a two-way stop-controlled intersection, delay refers to the average vehicle delay on the worst (highest delay) movement.
- Delay values are based on the methodology outlined in the Highway Capacity Manual, (6th Edition).

S = Signalized
U = Unsignalized

Based on the significance thresholds presented earlier in this report, the Project impact would be considered cumulatively significant at the following intersections under Cumulative With Project conditions:

- #1 – Alder Avenue at SR-210 WB Ramps: AM and PM peak hours
- #2 – Alder Avenue at SR-210 EB Ramps: AM and PM peak hours
- #3 – Alder Avenue at Renaissance Parkway: AM and PM peak hours
- #8 – Ayala Drive at Fitzgerald Avenue: AM and PM peak hours
- #10 – Fitzgerald Avenue at Baseline Road: PM peak hour

Recommended measures to mitigate the Project impacts are presented in the Project Impact Mitigation section of this report. Copies of intersection analysis worksheets are provided in ***Appendix D***.

Daily Roadway Operating Conditions

Roadway Level of Service analysis results for Opening Year 2022 Cumulative Plus Project conditions are shown on **Table 12.** Review of this table indicates that with the addition of Project traffic, the study roadway segments would continue to operate within their Opening Year 2022 Level of Service D capacity.

TABLE 12
SUMMARY OF ROADWAY ANALYSIS
OPENING YEAR 2022 CUMULATIVE PLUS PROJECT

Roadway	Segment	LOS D Capacity[1]	Opening Year + Cum. Projects ADT	Daily Project Traffic	Opening Year + Cum. Project + Project ADT	LOS D or Better?

	Walnut Avenue to Miro Way	33,000	21,199	708	21,907	Yes
	Miro Way to Baseline Road	33,000	16,660	708	17,368	Yes

[1] Per Specific Plan

Notes: LOS = Level of Service
ADT = Average Daily Traffic

IV. MITIGATION MEASURES

A. Intersection Improvements

Based on the impact criteria in the City's *Traffic Impact Analysis Report Guidelines and Requirements* (Exhibit F), the Project-related impact would be considered significant at the following intersections:

- #1 – Alder Avenue at SR-210 WB Ramps: AM and PM peak hours
- #2 – Alder Avenue at SR-210 EB Ramps: AM and PM peak hours
- #3 – Alder Avenue at Renaissance Parkway: AM and PM peak hours
- #8 – Ayala Drive at Fitzgerald Avenue: AM and PM peak hours
- #10 – Fitzgerald Avenue at Baseline Road: PM peak hour

Notes:

- Although Intersection #9 (Ayala Drive at Baseline Road) would operate at LOS E under Cumulative With Project conditions in the PM peak hour, the Project impact would be an increase of 1.5 seconds, and therefore, would not be considered a significant impact based on the sliding scale shown on page 5.

Implementation of the fair-share contribution by the Project for the following improvements would mitigate Project impacts:

#1 – Alder Avenue at SR-210 WB Ramps: Restripe the northbound approach to add a second dedicated northbound left turn lane. Although the intersection would continue to operate at an unacceptable Level of Service, the addition of a second northbound left turn lane would improve the overall intersection delay and would more than offset the project-related incremental increase in delay.

#2 – Alder Avenue at SR-210 EB Ramps: Restripe the southbound approach to add a second southbound left turn lane. Although the intersection would continue to operate at an unacceptable Level of Service, the addition of a second southbound left turn lane would improve the overall intersection delay and would more than offset the project-related incremental increase in delay.

#3 – Alder Avenue at Renaissance Parkway: Restripe the southbound approach to provide a second southbound left turn lane. Although the intersection would continue to operate at an unacceptable Level of Service, the addition of a second southbound left turn lane would improve the overall intersection delay and would more than offset the project-related incremental increase in delay.

Appendix I contains the Alder Avenue and SR-210 interchange improvement concept.

The following unsignalized intersections, which already operate at an unacceptable Level of Service, would continue to operate at an unacceptable Level of Service with the addition of Project traffic:

- #8 – Ayala Drive at Fitzgerald Avenue
- #10 – Fitzgerald Avenue at Baseline Road

The following improvements would assist with mitigating deficiencies at these intersections:

#8 – Ayala Drive at Fitzgerald Avenue:
A signal warrant analysis was conducted for the intersection of Ayala Drive at Fitzgerald Avenue.

The signal warrant analysis shows that the future PCE volumes at this intersection would satisfy the One-Hour Signal Warrant during the AM and PM peak hours under Opening Year 2022 Cumulative Without Project and Opening Year 2022 Cumulative Plus Project conditions. This improvement would be completed by the City and would remain consistent with recommendations set forth in the *Traffic Impact Study for the City of Rialto Renaissance Specific Plan Amendment*. The Project will contribute on a fair-share basis to this improvement.

#10 – Fitzgerald Avenue at Baseline Road:
A signal warrant analysis was conducted for the intersection of Fitzgerald Avenue at Baseline Road.

The signal warrant analysis shows that the future PCE volumes at this intersection would satisfy the One-Hour Signal Warrant during the AM and PM peak hours under Opening Year 2022 Cumulative Without Project and Opening Year 2022 Cumulative Plus Project conditions. This improvement would be completed by the City and would remain consistent with recommendations set forth in the *Traffic Impact Study for the City of Rialto Renaissance Specific Plan Amendment*. The Project will contribute on a fair-share basis to this improvement.

A summary of the intersections operation before and after implementation of these mitigation measures is provided on **Table 13**. The Project fair share proportion of the improvements are shown on **Table 14**, and the estimated costs of the proposed improvements, as derived from the Citywide Development Impact Fee Program, the *Draft Feasibility Study Report* for the Alder Avenue and SR-210 Interchange, and the Congestion Management Program (CMP) Appendix G, are shown on **Table 15**.

B. Roadway Improvements

The Project would not have a significant impact on any of the study roadway segments.

TABLE 13
SUMMARY OF INTERSECTION OPERATIONS WITH PROPOSED MITIGATION MEASURES

Int. #	Intersection	AM Peak Hour				PM Peak Hour			
		Without Mitigation		With Mitigation		Without Mitigation		With Mitigation	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1	Alder Avenue at SR-210 WB Ramps								
	Alder Avenue Improvement Project (Restripe NB approach to add a second NB Left Turn lane)[1]	159.7	**F**	93.4	**F**	144.1	**F**	70.4	**E**
2	Alder Avenue at SR-210 EB Ramps								
	Alder Avenue Improvement Project (Restripe SB approach to add a second SB left-turn lane.)[1]	159.0	**F**	120.6	**F**	161.2	**F**	129.2	**F**
3	Alder Avenue at Renaissance Parkway								
	Alder Avenue Improvement Project (Restripe SB approach to add a second SB left-turn lane.)[1]	112.8	**F**	84.5	**F**	134.7	**F**	75.5	**E**
8	Ayala Drive at Fitzgerald Avenue								
	Install Traffic Signal	92.9	**F**	26.7	C	146.1	**F**	37.1	D
10	Fitzgerald Avenue at Baseline Road								
	Install Traffic Signal	22.2	C	25.5	C	35.1	**E**	43.6	D

Notes:
- **Bold** and shaded values indicate intersections operating at LOS E or F or significant impact to intersection per City standards.
- At a signalized intersection, delay refers to the average control delay for the entire intersection, measured in seconds per vehicle.
- At a two-way stop-controlled intersection, delay refers to the average vehicle delay on the worst (highest delay) movement.
- Delay values are based on the methodology outlined in the Highway Capacity Manual, (6^{th} Edition).

TABLE 14

SUMMARY OF PROJECT FAIR SHARE FOR MITIGATION MEASURES

Intersection	AM Peak Hour					PM Peak Hour				
	Total Volume		Total	Project		Total Volume		Total	Project	
	2019	2020	Growth	Trips	%-age	2019	2020	Growth	Trips	%-age
#1 - Alder Avenue at SR-210 WB Ramps	1,823	4,286	2,463	67	2.7%	1,947	4,001	2,054	97	4.7%
#2 - Alder Avenue at SR-210 EB Ramps	1,749	4,631	2,882	139	4.8%	2,115	4,417	2,302	164	7.1%
#3 - Alder Avenue at Renaissance Parkway	1,362	4,236	2,874	147	5.1%	1,745	4,096	2,351	148	6.3%
#8 - Ayala Drive at Fitzgerald Avenue	1,555	2,102	547	38	6.9%	1,712	2,374	662	41	6.2%
#10 - Fitzgerald Avenue at Baseline Road	1,016	1,703	687	195	28.4%	1,333	1,930	597	209	35.0%

TABLE 15
TRAFFIC IMPACT MITIGATION FAIR-SHARE COST

#1, #2, #3 - Alder Avenue Improvement	Unit Cost	Quantity	Total
Alder Avenue Improvement Project [1]	$ 4,417,059	1	$ 4,417,059
Project Fair Share percentage[2]			6.1%
Project Cost			$ 269,441
#8 - Ayala Drive at Fitzgerald Avenue			
Install Traffic Signal	$ 400,000	1	$ 400,000
Project Fair Share percentage[3]			6.9%
Project Cost			$ 27,600
#10 - Fitzgerald Avenue at Baseline Road			
Install Traffic Signal	$ 400,000	1	$ 400,000
Project Fair Share percentage[3]			35.0%
Project Cost			$ 140,000
	Total Project Cost		**$ 437,041**

[1] Cost based on Exhibit A - PS&E Final Design Cost Estimate ($1,192,059) and Exhibit B - Construction Cost Estimate ($3,225,000) for the SR-210/Alder Ave Interchange Improvements Project, provided as part of City Council Agenda Item #20-0741 (dated November 10, 2020).

[2] Average blended fair share percentage calculated based on AM and PM peak hour volumes between intersections #1, #2, and #3, as noted in Table 14.

[3] Higher of AM or PM project fair share percentage

V. FINDINGS AND RECOMMENDATIONS

A. Improvements

Off-site mitigation improvements were identified to assist with mitigating the Project's impacts at the following study intersections:

- #1 – Alder Avenue at SR-210 WB Ramps
- #2 – Alder Avenue at SR-210 EB Ramps
- #3 – Alder Avenue at Renaissance parkway

B. Traffic Signal Warrant Analysis

Signal warrant analyses were conducted for the unsignalized intersections of Ayala Drive at Fitzgerald Avenue, Ayala Drive at Baseline Road, and Driveway 2 at Baseline Road. The signal warrant analysis shows that the future volumes at these intersections would satisfy the One-Hour Signal Warrant for during AM and PM peak hours at the following locations:

- #8 – Ayala Drive at Fitzgerald Avenue
- #10 – Fitzgerald Avenue at Baseline Road
- #12 – Baseline Road and Driveway 2/Idyllwild Road

The installation of traffic signals at these locations to improve future year intersection operations is consistent with the *Traffic Impact Study for the City of Rialto Renaissance Specific Plan Amendment.*

Signal analysis worksheets for these intersections are provided in ***Appendix F***.

C. Site Circulation

Vehicular access provisions for the Project site would consist of three driveways on Baseline Road.

Passenger vehicles would access the site via all three driveways on Baseline Road. The westernmost driveway (Driveway 1) and easternmost driveway (Driveway 3) would have right-in right-out access control. Trucks would enter and exit the site via the middle driveway (Driveway 2) on Baseline Road and would travel to/from the west to utilize truck routes along Alder Avenue. A raised median on Baseline Road along Project frontage would be constructed as part of the Project. **Figures 19-20** shows the ingress and egress truck turn template at Driveway 2, **Figure 21-24** shows the U-Turn templates for passenger cars and trucks, **Figure 25** shows the truck queues at Driveway 2, and **Figures 26-27** shows the proposed signal operations at Driveway 2 and Idyllwild Avenue.

D. Safety and Operational Improvements

The site driveways and Project improvements must be designed so that adequate sight distance for drivers entering and exiting the site is maintained.

The line of sight – a straight line between the driver's eye and oncoming vehicles on the adjacent roadway defines the Limited Use Area. The Limited Use Area for each driveway must be kept clear of visual obstructions, including Project signs, building structures, and landscaping, in order to maintain adequate sight distance.

E. Signal Proximity and Operational Analysis

An operational analysis was conducted for the proposed new signal at Driveway 2 and Idyllwild, to evaluate signal proximity with the future signal at Fitzgerald Avenue and Baseline and the existing signal at Ayala Drive and Baseline Road. The following is the summary of the evaluation.

1. Build-Out Delay and Level of Service

The operational analysis assumes the project buildout conditions. The analysis includes the residential diverted trips from Glenwood Avenue through the local roads due to the proposed raised median restricting northbound left-turn movements and forcing vehicles to use the new signalized intersection at Idyllwild Avenue. Table 16 shows the intersection's LOS under signalized controls for Opening Year 2022 Cumulative Plus Project Conditions. As shown in the table, all three new traffic signals will operate at optimum level of service.
Appendix G contains the Glenwood Avenue Redistribution Figure and Buildout Analysis Level of Service worksheets.

2. Build-Out Queueing Analysis

Table 17 shows the 95th percentile queues conducted using methodologies outlined in the Highway Capacity Manual 6th Edition and Synchro 10 software. As shown in Table 17, all 95th percentile queues are expected to be accommodated within the proposed driveway throat depths and the standard left-turn pockets lengths at the signalized intersections at Ayala Drive at Fitzgerald Avenue and Fitzgerald Avenue at Baseline Road.
Appendix H contains the Level of Service worksheets and the SimTraffic queueing reports.
As part of the implementation of the traffic signal at Driveway 2 and Idyllwild Avenue, the applicant will provide a signal timing plan to maximize efficiency of the system.

TABLE 16
SUMMARY OF INTERSECTION OPERATION
OPENING YEAR 2022 - WITH PROJECT BUILDOUT AND REDISTRIBUTION

Int. #	Intersection	Traffic Control	AM Peak Hour		PM Peak Hour	
			Delay	LOS	Delay	LOS
8	Ayala Drive at Fitzgerald Avenue	S	7.1	C	12.6	B
10	Fitzgerald Avenue at Baseline Road	S	12.2	B	8.3	A
D2	Baseline Road at Driveway 2/Idyllwild Rd[1]	S	14.3	B	14.2	B

Notes:
1. Intersection was analyzed based on the methodology outlined in the 2000 Highway Capacity Manual due to limitations for calculating delay at clustered intersections.
- All other delay values are based on the methodology outlined in the Highway Capacity Manual 6th Edition.

S = Signalized

TABLE 17
OPENING YEAR (2022) WITH PROJECT BUILDOUT
QUEUEING SUMMARY

Intersection	Movement	Available Storage (ft)	95% Queues (ft)[1]	
			AM Peak	PM Peak
D1. Baseline Rd at Driveway 1				
	SBR	–	34	42
D2. Baseline Rd at Driveway 2				
	EBL	150	138	102
	SBLR	–	50	75
	NBLR	–	93	91
	WBL	100	<25	34

	SBR	–	<25	34
8. Ayala Dr at Fitzgerald Ave				
	WBL	100	<25	<25
	NBL	110	<25	<25
	SBL	125	43	124
	EBLTR	–	<25	<25
10. Fitzgerald Ave at Baseline Road				
	EBL	–	53	56
	SBLR	–	64	128

[1] Queue is based on the average of three SimTraffic simulation runs.

[2] Queues less than 25 feet are denoted as '<25'

F. Fair Share Calculations

The Project fair share proportion of the improvements are shown on Table 14 (presented previously), and the estimated costs of the proposed improvements, are shown on Table 15 (presented previously).

G. Specific Plan Signalization

Not Applicable.

H. General Plan Conformance

The proposed Olive Grove Business Park development is anticipated to conform to the City's latest General Plan.

I. Regional Funding Mechanisms

The Project is subject to the City's city-wide traffic impact fee program. To the extent that a mitigation measure is included in an existing fee program, the Project's payment of impact fees can be used to offset the costs of implementing the mitigation measures. In addition, the Project may be required construct a needed improvement in advance of the City's receipt of full funding, in which case the improvement may be subject to a reimbursement agreement, to allow the Project to recoup costs from future development.
