J. Vehicle Miles Traveled Analysis

Introduction

Senate Bill (SB) 743 was approved by the California legislature in September 2013. SB 743 requires changes to California Environmental Quality Act (CEQA), specifically directing the Governor's Office of Planning and Research (OPR) to develop alternative metrics to the use of vehicular "level of service" (LOS) for evaluating transportation Projects. OPR has updated guidelines for CEQA and written a technical advisory for evaluating transportation impacts in CEQA and has set a deadline of July 1, 2020 for local agencies to update their CEQA transportation procedures. OPR has recommended that Vehicle Miles Travelled (VMT) replace LOS as the primary measure of transportation impacts. This analysis was prepared to document the VMT analysis for the Olive Avenue Development Project following the OPR Technical Advisory (December 2018) and the San Bernardino County Transportation Authority (SBCTA) Recommended VMT Guidelines .

Vehicle Miles traveled Screening

This section documents Vehicle Miles Traveled (VMT)/ SB 743 considerations for the Project. OPR provides details on appropriate screening thresholds that can be used to identify when a proposed land use Project is anticipated to result in a less than significant impact without conducting a more detailed level analysis. Screening thresholds are broken into the following three steps:

1. Transit Priority Area (TPA) Screening
2. Low VMT Area Screening
3. Low Project Type Screening

A land use project needs only meet one of the above screening thresholds to be presumed to result in not significant impact under CEQA pursuant to SB 743.

Transit Priority Area (TPA) Screening

As described in the OPR Guidelines, projects located within half mile from an existing major transit stop or within half of a mile from an existing stop along a high-quality transit corridor can be screened out. Based on San Bernardino County Transportation Authority (SBCTA) VMT Screening Tool, the project is not located in a Transit Priority Area (TPA). The TPA screening criteria is not met.

Low VMT Area Screening

The Project is not located in a Low VMT (15% below County Average) zone based on SBCTA VMT Screening tool, as shown in **Table 16**.

Table 18– SBCT VMT Screening Tool Results

Threshold Option		Threshold	Project TA	% Above Threshold	Potentially Significant?
PA VMT per Worker		14.5	15.1	4.14%	Yes

As such, the Low VMT Area screening threshold is not met.

Land Use Type Screening

The OPR and SBCTA VMT Guidelines identify that Project types falling under the screening criteria includes the following:

- Local-serving retail less than 50,000 square feet K-12 Schools
- Local-serving K-12 schools
- Local parks
- Day care centers
- Local serving gas stations
- Local serving banks
- Local serving hotels (e.g. non-destination hotels)
- Student housing Projects on or adjacent college campuses
- Local-serving assembly uses, Community Institutions
- Local serving community colleges
- Affordable or supportive housing, Assisted living facilities, Senior housing
- Projects generating less than 110 daily vehicle trips

The Land Use Type Screening criteria is not met.

VMT Thresholds

The City of Rialto is in the process of adopting VMT guidelines and thresholds. Based on discussions with the City's traffic consultant a VMT threshold set to 15% below the baseline County of San Bernardino Home Based Work (HBW) VMT per Employee, consistent with the OPR recommendations has been used for this analysis.

As the Project does not satisfy VMT screening criteria, a VMT analysis has been conducted for the Project based on San Bernardino County Transportation Analysis Model (SBTAM) consistent with the SBCTA VMT guidelines.

For purposes of this VMT assessment the Project's home-based work (HBW) VMT per Employee has been compared to 15% below countywide average VMT, based on data provided by SBCTA. Table 19 shows the calculated VMT thresholds for HBW VMT per Employee:

Table 19 – VMT Impact Thresholds

Threshold Option	Countywide Average	Threshold (15% below)
HBW VMT per Employee	17.1	14.5

VMT Analysis

A logical way to evaluate this type of facility is to consider the major trip purposes of the site in terms of their trip length and frequency. Given the description, three types of trips were broadly considered for this development given its context: (1) employee commute trips; (2) other trips related to functioning of the business and/or its employees and (3) truck trips related to shipping activities. The following discussion is provided regarding these three broad trip types.

Employee commute trips. These are the primary automobile trips associated with employment generating uses such as the proposed Project. This facility is expected to provide additional jobs and some related trips to the area. The efficiency of VMT associated with employee commute trips has been assessed based on SBTAM.

Other trips. These are often the smallest number and shortest distance of trips for a facility like this and include a broad range of trip types, such as, employee lunches off-site, maintenance teams for on-site infrastructure, office supply deliveries, etc. As such their impact to the overall VMT of the site is likely minimal. As such it is not likely that they are impactful to the local transportation system and are secondary to the other two trip types discussed.

Truck trips related to shipping activities. CEQA Guidelines Section 15064.3, subdivision (a) states "For the purposes of this section 'vehicle miles traveled' refers to the amount and distance of automobile travel attributable to a project." The OPR's 2018 Technical Advisory indicates that, although heavy vehicle traffic can be included for analysis convenience, the provided analysis requirements are specific to passenger-vehicles and light duty trucks. While it may be appropriate to consider heavy vehicle traffic if directed by the lead agency, it is generally understood that Interstate commerce and related heavy vehicle traffic are regulated by the federal government as it relates to commerce. Irrespective of this and considering that the end-user of this facility is unknown at this time (so the nature of the business enterprise and its probably origins and destinations are unknown), it is reasonable to assume that the ultimate end user will select this location, at least in part, as to how it effects their transportation costs. Most often businesses who have shipping as a significant part of their operations are sensitive to transportation costs and their relative proximity to customers and suppliers. Accordingly, it is reasonable to assume that industrial buildings are often located in a manner to reduce VMT given that it is the interest of the business. It is also recognized that the Project would generate Heavy Duty Truck (HDT) traffic and has been considered in this VMT assessment. For consistency with other CEQA technical studies, HDT VMT identified in this analysis will be reflected in other applicable technical studies (e.g. Air Quality Impact Analysis, Greenhouse Gas Analysis, etc.).

Project VMT

The calculation of vehicle miles traveled has two components – the total number of trips generated and the average trip length of each vehicle. SBTAM is a useful tool to estimate VMT as it considers interaction between different land uses based on socio-economic data such as population, households and employment. Project VMT was calculated using the most current version of SBTAM. Adjustments in socio-economic data (households, population and employment) were made to the appropriate traffic analysis zone (TAZ) within the SBTAM model to reflect the Project's proposed land use.

Project Home-Based Work (HBW) VMT per Employee

The home-based work (HBW) VMT per employee is the HBW attraction VMT divided by the number of employees derived from the SBTAM model. The HBW VMT per Employee is used to measure efficiency of VMT generated by employment-based uses. The Project HBW VMT per Employee calculated based on SBTAM is 17.04.

Heavy Truck VMT

Consistent with air quality and greenhouse gas analyses, the average trip length for heavy trucks were based on the data provided in Forecasting Metropolitan Commercial and Freight Travel (NCHRP Synthesis 384, Transportation Research Board, 2008) document. The document cites average internal trip lengths of 5.92 miles for light truck, 13.06 for medium truck, and 24.11 for heavy trucks. As a conservative measure, a trip length of 25 miles has been utilized for all trucks multiplied by the daily truck trips (473) estimated in this TIS based on Institute of Transportation Engineer (ITE) trip rates, resulting in a heavy truck daily VMT of 11,825.

Potential Impacts

As shown in Table 20, the Project's HBW VMT per Employee would not meet the 15% below countywide average threshold. As such, the Project's transportation impact is potentially significant based on the OPR recommended thresholds.

Table 20 – VMT Impact Evaluation

Threshold Option	Threshold	Project	Change in VMT	Potentially Significant?
HBW VMT Employee	14.5	17.04	+2.54 (14.9%)	Yes

Mitigation

The following choices are available to the applicant:

- Modify the Project's built environment characteristics to reduce VMT generated by the Project.
- Participate in a VMT fee program and/or VMT mitigation exchange/banking program (if they exist) to reduce VMT from the Project or other land uses to achieve acceptable

levels.

The following mitigation measures require the preparation of a TDM program for the Project, which would include but not be limited to the following:

- Provide a transportation information center and on-site TDM coordinator to educate residents, employers, employees, and visitors of surrounding transportation options;
- Promote bicycling and walking through design features such as showers for employees, self-service bicycle repair area, etc. around the project site;
- Provide on-site car share amenities for employees who make only occasional use of a vehicle, as well as others who would like occasional access to a vehicle of a different type than they use day-to-day;
- Incorporate incentives for using alternative travel modes, such as preferential load/unload areas or convenient designated parking spaces for carpool/vanpool users.

Transportation demand management (TDM) strategies have been evaluated for reducing VMT impacts determined to be potentially significant. Given the jurisdiction's suburban land use context, the following key strategies may be considered for the Project:

- Provide pedestrian network improvements (potential VMT reduction 0.5% - 5.7%)
- Provide traffic calming measures (potential VMT reduction 0.25% - 1%)
- Build low-stress bicycle network (potential VMT reduction 0%-1.7%)
- Provide ride-share programs. (potential VMT reduction 2.5%-8.3%)
- Implement subsidized or discounted transit program (potential VMT reduction 0.3% - 20%)

The Rialto Active Transportation Plan show Ayala Drive and Cactus Avenue as existing Class II Bike lanes and Baseline Road as a proposed Class II/III bike lane/route. Baseline Road does not contain any current bicycle facilities. Pedestrian sidewalks are located on the south side of Baseline Road. The Project would construct pedestrian sidewalks along Project frontage on Baseline Road. The Project site is accessible by transit via OmniTrans bus Route 10, which has stops on Baseline Road adjacent to the Project site.

The effectiveness of the above-noted TDM measures would be dependent on the ultimate building tenant(s), which are unknown at this time. Beyond Project design and tenancy considerations, land use context is a major factor relevant to the potential application and effectiveness of TDM measures. More specifically, the land use context of the Project is characteristically suburban. Of itself, the Project's suburban context acts to reduce the range of feasible TDM measures and their potential effectiveness.

Based on available research, for projects located within a suburban context, a maximum 10% reduction in VMT is achievable when combining multiple mitigation strategies. Due to limitations of project-level approaches to reducing VMT, the City or region may consider larger mitigation programs such as VMT mitigation banks and exchanges. VMT mitigation banks and exchanges have not yet been developed or tested in the region. SBCTA is undertaking a study to evaluate the feasibility of a VMT mitigation bank or exchange in order to assist lead agencies in implementing SB 743.

Conclusion

The Project's transportation impact based on VMT is potentially significant based on the OPR recommended thresholds. As the efficacy of TDM measures and reduction of VMT impacts below thresholds cannot be assured, Project's VMT impact is therefore considered significant and unavoidable.

Scenario 1 EX AM
10/28/2021

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Alder Ave at SR-210 WB Ramp	Signalized	HCM 6th Edition	NB Left	0.613	24.4	C
2	Alder Ave at SR-210 EB Ramps	Signalized	HCM 6th Edition	SB Left	0.569	25.7	C
3	Alder Ave at Renaissance Pkwy	Signalized	HCM 6th Edition	EB Left	0.351	25.5	C
4	Alder Ave at Base Line Rd	Signalized	HCM 6th Edition	EB Left	0.343	29.0	C
5	Ayala Dr at SR-210 WB Ramps	Signalized	HCM 6th Edition	WB Right	0.547	26.5	C
6	Ayala Dr at SR-210 EB	Signalized	HCM 6th Edition	SB Left	0.553	20.1	C
7	Ayala Dr at Renaissance Pkwy	Signalized	HCM 6th Edition	EB Left	0.328	19.4	B
8	Ayala Dr at Fitzgerald Ave	Two-way stop	HCM 6th Edition	WB Thru	0.022	46.3	E
9	Ayala Dr at Base Line Rd	Signalized	HCM 6th Edition	EB Left	0.416	32.5	C
10	Fitzgerald Ave at Base Line Rd	Two-way stop	HCM 6th Edition	SB Left	0.183	15.5	C
11	Cactus Ave at Base Line Rd	Signalized	HCM 6th Edition	SB Left	0.386	32.0	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Alder Ave at SR-210 WB Ramp

Control Type:	Signalized	Delay (sec / veh):	24.4
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.613

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Alder Ave at SR-210 WB Ramp	Signalized	HCM 6th Edition	WB Left	0.628	24.9	C
2	Alder Ave at SR-210 EB Ramps	Signalized	HCM 6th Edition	SB Left	0.612	24.9	C
3	Alder Ave at Renaissance Pkwy	Signalized	HCM 6th Edition	WB Left	0.476	30.0	C
4	Alder Ave at Base Line Rd	Signalized	HCM 6th Edition	SB Left	0.551	31.9	C
5	Ayala Dr at SR-210 WB Ramps	Signalized	HCM 6th Edition	WB Left	0.560	27.6	C
6	Ayala Dr at SR-210 EB	Signalized	HCM 6th Edition	SB Left	0.696	21.7	C
7	Ayala Dr at Renaissance Pkwy	Signalized	HCM 6th Edition	SB Left	0.569	23.4	C
8	Ayala Dr at Fitzgerald Ave	Two-way stop	HCM 6th Edition	WB Thru	0.016	64.7	F
9	Ayala Dr at Base Line Rd	Signalized	HCM 6th Edition	EB Left	0.421	33.3	C
10	Fitzgerald Ave at Base Line Rd	Two-way stop	HCM 6th Edition	SB Left	0.317	19.0	C
11	Cactus Ave at Base Line Rd	Signalized	HCM 6th Edition	SB Left	0.426	28.5	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Alder Ave at SR-210 WB Ramp

Control Type:	Signalized	Delay (sec / veh):	24.9
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.628

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Alder Ave at SR-210 WB Ramp	Signalized	HCM 6th Edition	NB Left	0.641	26.7	C
2	Alder Ave at SR-210 EB Ramps	Signalized	HCM 6th Edition	SB Left	0.624	25.1	C
3	Alder Ave at Renaissance Pkwy	Signalized	HCM 6th Edition	WB Left	0.485	30.4	C
4	Alder Ave at Base Line Rd	Signalized	HCM 6th Edition	SB Left	0.564	32.2	C
5	Ayala Dr at SR-210 WB Ramps	Signalized	HCM 6th Edition	WB Thru	0.580	27.4	C
6	Ayala Dr at SR-210 EB	Signalized	HCM 6th Edition	SB Left	0.710	22.0	C
7	Ayala Dr at Renaissance Pkwy	Signalized	HCM 6th Edition	SB Left	0.578	23.6	C
8	Ayala Dr at Fitzgerald Ave	Two-way stop	HCM 6th Edition	WB Thru	0.017	68.4	F
9	Ayala Dr at Base Line Rd	Signalized	HCM 6th Edition	EB Left	0.430	33.8	C
10	Fitzgerald Ave at Base Line Rd	Two-way stop	HCM 6th Edition	SB Left	0.328	19.6	C
11	Cactus Ave at Base Line Rd	Signalized	HCM 6th Edition	SB Left	0.431	28.7	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Alder Ave at SR-210 WB Ramp

Control Type:	Signalized	Delay (sec / veh):	26.7
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.641

FIRE HYDRANT FLOW DATA

Project Address **Baseline Road & Fitzgerald Ave.**

Date of Water Flow Test: **October 8, 2019**

Location of Water Flow Test: **Baseline Road**

Static Pressure: **99 P.S.I.**

Residual Pressure: **94 P.S.I.**

G. P. M. Flow Observed: **1,126 G.P.M.**

G. P. M. Flow Calculated @ 20 P.S.I.: **4,996 G.P.M.**

Outlet	Static	Res.	Pitot	G.P.M.
2.5"	**99 P.S.I.**	**94 P.S.I.**	**45 P.S.I.**	**1,126 G.P.M.**

I CERTIFY THAT THE ABOVE INFORMATION IS CORRECT TO THE BEST OF MY KNOWLEDGE.
