| **West:** | The existing industrial buildings currently occupied by Stud Welding Products were present that were constructed in 1959 and 1960, per Assessor's records |

| ***Date: 1970*** | ***Scale: 1"=500'*** |
|---|---|
| **Subject Property:** | The southern portion subject building had expanded slightly to the west with two new building extensions in the center of the building. The west side of the property remained undeveloped covered with vegetation with no apparent usage. |
| **North:** | Undeveloped land that may have been used for off road recreation due to the presence of dirt paths and possible vehicles parked on the property |
| **South:** | The current existing buildings appear to be present. The building located at 12049 Woodruff Avenue was constructed in1963 |
| **East:** | The current large facility was first present |
| **West:** | The current existing industrial buildings appear to be present |

| ***Date: 1972*** | ***Scale: 1"=500'*** |
|---|---|
| **Subject Property:** | Additions had been added to the western and eastern ends of the northern building, as well as a central building (to the west); the west side of the property was fully developed with existing building space and pavement used for parking and exterior storage |
| **North:** | No significant changes noted |
| **South:** | No significant changes noted |
| **East:** | No significant changes noted |
| **West:** | No significant changes noted |

| *Date: 1983* | *Scale: 1"=500'* |
|---|---|
| **Subject Property:** | The subject property building appeared similar to its current configuration, with additions on the eastern and western sides of the southern building. |
| **North:** | The existing buildings were present that were constructed in 1978 and 1980 |
| **South:** | No significant changes noted |
| **East:** | No significant changes noted |
| **West:** | No significant changes noted |

| *Date: 1989* | *Scale: 1"=500'* |
|---|---|
| **Subject Property:** | No significant changes noted |
| **North:** | No significant changes noted |
| **South:** | No significant changes noted |
| **East:** | The property had been redeveloped into the existing industrial buildings that consisted of four new large buildings on one parcel constructed in 1988. The main address for this parcel is 12000 Woodruff Avenue and also includes 12020 Woodruff Avenue |
| **West:** | No significant changes noted |

| *Date: 1994 to 2016* | *Scale: 1"=500'* |
|---|---|
| **Subject Property:** | No significant changes noted |
| **North:** | No significant changes noted |
| **South:** | No significant changes noted |
| **East:** | No significant changes noted |
| **West:** | No significant changes noted |

Copies of reviewed aerial photographs are included in Appendix B of this report.

## 3.2 Fire Insurance Maps

Sanborn map coverage was not available for the subject property. A copy of the "No Coverage" letter is attached in Appendix B.

## 3.3 City Directories

Partner reviewed historical city directories obtained from EDR for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

| *City Directory Search for 12021 and 12023 Woodruff Avenue (Subject Property)* | |
|---|---|
| **Year(s)** | **Occupant Listed** |
| 1953 | Kirkhill Inc. (12021) – no listing for 12023 |
| 1961 | Kirkhill Chemical (12021) – no listing for 12023 |
| 1964 | Kirkhill Inc. (12021) – no listing for 12023 |
| 1971 | Kirkhill Inc. (12021) – no listing for 12023 |
| 1975 | Kirkhill Inc. (12021) – no listing for 12023 |
| 1980 | Kirkhill Inc. (12021) – no listing for 12023 |
| 1985 | Kirkhill Inc. (12021) – no listing for 12023 |
| 1992 | Kirkhill Inc. (12021) – no listing for 12023 |
| 1995 | Kirkhill Inc. (12021) – no listing for 12023 |

***City Directory Search for 12021 and 12023 Woodruff Avenue (Subject Property)***

| Year(s) | Occupant Listed |
|---|---|
| 2000 | Charcoal Masters International, Immanuel Industries Inc., Source One Staffing (12021) – no listing for 12023 |
| 2005 | Source One Staffing (12021) and Felchco Investment Group LLC (12023). Kong Pet Toys, a distributor of chewable pet toys, was also reported as a tenant in a prior report prepared by Orswell & Kasman Inc., dated 2005 |
| 2010 | Cal Pipe Industries Inc., Cal Pipe Manufacturing Inc., Carnaval Access, Discount Advertising Xpress, Ikeep Inventing Corporation, Kollaborator Productions Inc., Monster Sells, Hector Moran, Nomad Trading, Perimeter Defense Tech Inc., PTG International Inc, Source One Staffing, Standard Industries (12021) – no listing for 12023 |
| 2014 | Perimeter Defense Tech Inc. (12021) – no listing for 12023 |

According to the city directory review, the subject property has been occupied by Kirkhill since 1953 then additional tenants appeared to lease part of the building starting in 2000 that appeared to be primarily office and warehouse with the exception of Cal Pipe Manufacturing. The specific use of Cal Pipe Manufacturing was not available to Partner at the time of this assessment; however, it is noted that CERS documentation indicated that Cal Pipe Industries reported hazardous materials and hazardous waste that included various compressed gases, alkaline soap solution, waste oil, lubricating oil, lacquer thinner, and Stoddard solvent in 55-gallon drum.

* XXXX= A phone number is present but is not registered to a tenant or is disconnected

According to the city directory review, the adjacent properties have been occupied by various industrial manufacturing tenants since their development. Based on the city directory review, no environmentally sensitive listings were identified for the adjacent property addresses.

Copies of reviewed city directories are included in Appendix B of this report.

## 3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from EDR. No pits, ponds, lagoons, or areas of obvious fill were noted in the mapping. The following observations were noted to be depicted on the subject property and adjacent properties during the topographic map review:

***Date: 1896, 1899, 1902***

| | |
|---|---|
| **Subject Property:** | The subject property was depicted as primarily undeveloped land that may have had a small structure present along the north side that was most likely a residence or farm structure. Woodruff Avenue and Washburn Road were present at that time |
| **North:** | Undeveloped land with no apparent usage |
| **South:** | Undeveloped land with no apparent usage |
| **East:** | Woodruff Avenue was depicted followed by undeveloped land with the San Gabriel River depicted beyond |
| **West:** | Undeveloped land with no apparent usage |

***Date: 1923, 1925, 1936, 1942, 1943, 1947, 1949, 1951/1952***

| | |
|---|---|
| **Subject Property:** | The subject property was depicted as undeveloped land with no apparent usage. The topographic map may not depict agricultural land where it is present |
| **North:** | Undeveloped land with no apparent usage |
| **South:** | Undeveloped land followed by Washburn Crossing Road as it was named at that time. |
| **East:** | Undeveloped land with no apparent usage |
| **West:** | Undeveloped land with no apparent usage |

***Date: 1964/1965, 1972,1981***

| | |
|---|---|
| **Subject Property:** | The subject property was depicted as developed with the original buildings in 1964 with subsequent building additions. |
| **North:** | Undeveloped land until 1981 when industrial development was depicted |
| **South:** | The existing industrial buildings were depicted with subsequent additions |
| **East:** | The Darnell Corporation manufacturing facility was depicted during this time period |
| **West:** | The existing industrial buildings were depicted during this time period |

Copies of reviewed topographic maps are included in Appendix B of this report.

# 4.0 REGULATORY RECORDS REVIEW

## 4.1 Regulatory Agencies

### *4.1.1 State Department*

| ***Regulatory Agency Data*** | |
|---|---|
| **Name of Agency:** | California Environmental Protection Agency (Cal EPA) California Department of Toxic Substances Control (DTSC) |
| **Source:** | http://www.envirostor.dtsc.ca.gov/public/<br>http://hwts.dtsc.ca.gov/report_search.cfm?id=5<br>https://siteportal.calepa.ca.gov |
| **Agency Address:** | Headquarters: 1001 I Street, Sacramento, CA 95814 |
| **Agency Phone Number:** | (800) 728-6942 |
| **Date of Contact:** | September 2018 |
| **Method of Communication:** | Online Database Search |
| **Summary of Communication:** | The EnviroStor database is the DTSC's data management system for tracking cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known contamination or sites where there may be reasons to investigate further. No records were identified for the subject property on the EnviroStor database.<br><br>In addition, the DTSC Hazardous Waste Tracking System (HWTS) was researched for hazardous waste manifest data submitted to the California DTSC. The subject property was identified on the HWTS database going back to 1997, which was the first year to show California Waste Codes by Year, which was under the name of Kirkhill Manufacturing Inc. Since 2013 to 2018, the waste codes listed for the subject property included waste oil and mixed oil, oil/water separation sludge, and other organic solids. This is consistent with copies of hazardous waste manifests reviewed from the subject property. Three hazardous waste manifests were reviewed dated July, August, and September 2018 that listed Non-RCRA hazardous waste liquid (waste oil) 590 gallons; Non-RCRA hazardous waste liquid (waste oil) 1,900 gallons; and Non-RCRA hazardous waste solid (oily debris) in 26 55-gallon drums. The manifests all list Express Oil Company as the transporter.<br><br>Earlier hazardous waste manifest data dated between 1997 and 2013 listed six waste codes as other inorganic solid waste, unspecified solvent mixture, waste oil and mixed oil, oil/water separation sludge, off-spec, aged, or surplus organics, other organic solids. These materials were not necessarily generated on a consistent yearly basis but depicted as periodic yearly disposal events.<br><br>Partner reviewed the CalEPA California Environmental Reporting System (CERS) database in which Kirkhill Inc. and Kirkhill |

Manufacturing Company have profile listings; however, only Kirkhill Manufacturing reports chemical storage. Kirkhill Manufacturing currently lists up to 38 chemical components that included solid raw materials such as custom polymers, talc, neoprene, carbon black, monomers, and zinc stored in 55-gallon drums and larger totes up to 300 gallons. Kirkhill uses various polymers of different grades for custom orders, which are reflected in the CERS inventory. Hazardous liquids include petroleum hydrocarbons as lubricating oils, waste lubricating oil, and the process oil is classified as solvent refined in regulatory records. Process oils are currently stored in three interior aboveground storage tanks (ASTs) (two 3,000-gallon ASTs and one 4,000-gallon AST) within the manufacturing area; see Section 6.2.2. Various compressed gasses (oxygen, propane, argon, acetylene) are also listed. The noted materials in CERS and HWTS are consistent with Partner's visual observations at the subject property.

Under the compliance tab in CERS were listed eight evaluations and violations dated 2015, all of which appear to have returned to compliance by 2016. The violations included the failure to update Hazardous Materials Business Plan (HMBP) and chemical inventory and electronically submit information to CERS. No CERS submittal was on file at the time of February 18, 2015, inspection. It was noted that the business recently assumed control of entire building complex and will have to amend site map/floor plan. Inspection found fire code violations requiring further corrective action also, which were also corrected per the City Fire Department (see Section 4.1.4). By May 2015, it was reported that all violations were abated. HMBP updated and electronically submitted to CERS. No further action was required at that time.

It was also reported in the Compliance section of CERS that Kirkhill returned to compliance on April 11, 2016. Observation: 44 x 55 gallon drums of waste oil were reported. The correction action was reported as: immediately label the containers and ensure that all hazardous waste containers are marked with all the required information.

CERS also reported a profile for the former tenant Cal Pipe Industries, which listed an Environmental Interest Start Date of July 2013 and last inspection of January 2015. No Compliance information was reported other than routine inspections were done by local agency including the Downey Fire Department. The Cal Pipe chemical storage inventory listed 13 items that included various compressed gases (acetylene, argon and carbon dioxide in helium, argon, nitrogen, oxygen, propane, helium), alkaline soap solution,

| *Regulatory Agency Data* | |
|---|---|
| | waste oil, lubricating oil, lacquer thinner, and Stoddard solvent in 55-gallon drums. The amount of Stoddard solvent was reported as 12 to 59 gallons on average daily amount. |

Copies of pertinent files are attached in Appendix B of this report.

### *4.1.2 Regional Water Quality Agency*

| *Regulatory Agency Data* | |
|---|---|
| **Name of Agency:** | Los Angeles Regional Water Quality Control Board (RWQCB) via GeoTracker |
| **Source:** | http://geotracker.waterboards.ca.gov/default.asp |
| **Agency Address:** | 320 West Fourth Street, Suite 200, Los Angeles, California |
| **Agency Phone Number:** | (213) 576-6600 |
| **Date of Contact:** | September 2018 |
| **Method of Communication:** | Online Database Search |
| **Summary of Communication:** | GeoTracker is the State Water Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. GeoTracker contains records for sites that require cleanup, such as Leaking Underground Storage Tank (LUST) Sites, Department of Defense Sites, and Cleanup Program Sites. GeoTracker also contains records for various unregulated projects as well as permitted facilities including: Irrigated Lands, Oil and Gas production, operating Permitted USTs, and Land Disposal Sites. GeoTracker portals retrieve records and view integrated data sets from multiple State Water Board programs and other agencies.<br><br>The subject property is listed on the GeoTracker database under the name of Kirkhill Inc. at 12021 Woodruff Avenue for the investigation and cleanup of its former USTs. The status is listed as Case Closed dated August 6, 1992, which is consistent with the closure letter issued by the Los Angeles County Department of Public Works, Waste Management Division (now Environmental Programs Division) with the same date. GeoTracker reported that the case was associated with a tank closure and was a soil case. No remedial actions were entered. |

Copies of pertinent files are attached in Appendix B of this report.

### *4.1.3 Air Pollution Control Agency*

| *Regulatory Agency Data* | |
|---|---|
| **Name of Agency:** | South Coast Air Quality Management District (AQMD) |
| **Source:** | http://www.aqmd.gov/home/tools/public/find |
| **Agency Address:** | 21865 Copley Dr., Diamond Bar, CA |
| **Agency Phone Number:** | (909) 396-3700 |

| *Regulatory Agency Data* | |
|---|---|
| **Date of Contact:** | September 2018 |
| **Method of Communication:** | Online Facility INformation Detail (FIND) database |
| **Summary of Communication:** | According to records reviewed, the subject property maintains active air quality permits for several pieces of equipment including one or more of the following: baghouse, rubber blending, rubber roll mills, a boiler, and rubber presses/molds with ram diameter greater than 26 inches. The property is listed as having inactive permits for the same equipment including a rubber extruder and three diesel fuel oil storage tanks. No outstanding violations are reported at this time as it pertains to the active permits. The subject property was cited in the past at least six times between 2004 and 2010 for various emissions-related items including, but not limited to, baghouse connections, baghouse permitting, boiler testing and permitting, and production records, which have been corrected and brought into compliance shortly thereafter. |

Copies of pertinent files are attached in Appendix B of this report.

### *4.1.4 City of Downey Fire Department*

| *Regulatory Agency Data* | |
|---|---|
| **Name of Agency:** | City of Downey Fire Department |
| **Source/Point of Contact:** | Lee Kirby, HazMat Specialist/Fire Prevention Officer |
| **Agency Address:** | 11111 Brookshire Avenue, Downey, CA 90241 |
| **Agency Phone Number:** | (562) 904-7345 |
| **Date of Contact:** | September 2018 |
| **Method of Communication:** | In Person, Email Public Records Request, Telephone |
| **Summary of Communication:** | According to records reviewed, the most recent fire-hazmat code compliance inspection at the Kirkhill Manufacturing plant (12023 Woodruff) took place on February 19, 2015. All documented violations were satisfactorily abated and facility return-to-compliance on June 17, 2015. The violations noted pertained to labeling, height limits, evacuation plans, egress obstruction, fire lanes, securing compressed gases, and abatement of electrical hazards. The inspection report did not note spills, leaks, secondary containment violations, or other significant issues pertaining to possible environmental concerns.<br><br>This agency also provided CERS documentation for Kirkhill (2018) and former Cal Pipe Industries (2013). Cal Pipe Industries reported hazardous materials and hazardous waste that included various compressed gases, alkaline soap solution, waste oil, lubricating oil, lacquer thinner, and Stoddard solvent in 55-gallon drum. Photos were included with the documentation that depicted an oil spill/stain near one or more exterior bins, one of which had absorbent material over the spill. |

Copies of pertinent files are attached in Appendix B of this report.

### *4.1.5 Los Angeles County Department of Public Works*

| ***Regulatory Agency Data*** | |
|---|---|
| **Name of Agency:** | Los Angeles County Department of Public Works, Environmental Programs Division (LACEPD) |
| **Source:** | http://ladpw.org/epd/cleanla/OpenFileReview.aspx |
| **Agency Address:** | 900 S. Fremont Avenue, Alhambra, CA 91803 |
| **Agency Phone Number:** | (626) 458-5100 |
| **Date of Contact:** | September 2018 |
| **Method of Communication:** | In Person File Review, Online Database Search, Telephone |
| **Summary of Communication:** | The LACEPD maintains the UST program for the subject property. This agency had one file pertaining to the historical USTs operated at the subject property. According to reviewed information from this agency and other sources, a total of four steel USTs were formerly operated at the subject property, three of which contained diesel to fuel the boilers associated with rubber molding, and one of which contained naphthene oil (process oil). Three of the USTs (Tanks 1, 2 and 3) were located along the exterior south side of the subject property that were removed in 1989. A fourth UST (Tank 4 containing diesel) was abandoned in place in the central courtyard area in or around 1989. During the removal of Tanks 1 through 3, soil samples from beneath the tanks were tested and some contamination was found; therefore, additional site investigation, excavation, and remediation work was performed in this area under the oversight of the Los Angeles County Department of Public Works. Due to this remediation work, the LARWQCB was copied on the correspondence and therefore was placed in the on-line GeoTracker database (also attached in Appendix B in previous reports and discussed in Section 5.2.6).<br><br>A No Further Action (NFA) letter was issued for Closure Permit Number 5999B by the Los Angeles County Department of Public Works, Waste Management Division (LACDPW) (currently Environmental Programs Division) dated August 6, 1992, which pertains to the three exterior removed USTs. The abandoned in-place UST had a different Closure Permit Number of 6000B, which was not listed on the NFA letter. However, based on preliminary conversations with LACDPW, this appears to be an error in which Tank 4 should have been noted, and it appears that all four USTs have been closed under this NFA letter. |

Copies of pertinent files are attached in Appendix B of this report.

### 4.1.6 Los Angeles County Sanitation District

| *Regulatory Agency Data* | |
|---|---|
| **Name of Agency:** | Los Angeles County Sanitation District, Industrial Waste Section |
| **Source:** | https://www.lacsd.org/wastewater/industrial_waste/permit.asp |
| **Agency Address:** | 1955 Workman Mill Road, Whittier, CA 90601 |
| **Agency Phone Number:** | (562) 908-4288 x2900 – Industrial Waste Section |
| **Date of Contact:** | September 2018 |
| **Method of Communication:** | Email Public Records Request |
| **Summary of Communication:** | The Los Angeles County Sanitation District, Industrial Waste Section is the lead oversight agency as it pertains to the issuance of industrial waste discharge permits for the subject property. According to records reviewed, an active industrial waste discharge permit dated 2017 is on file for the subject property for discharges reported as calcium stearate water (a surfactant containing stearic acid and calcium oxide), cooling tower bleed off, boiler blowdown, household washers, rinse water from molding wash rack, lab sinks, self-regenerating water softener backflush, and floor scrubber. The earliest industrial waste discharge permit identified was issued to Kirkhill Inc. dated 1979 which listed the wastewater producing operations as blow down and bleed water from boilers and cooling tower, cleanup and floor wash down. The constituents of wastewater discharges were listed solely as water. The rate of flow as reported as 1,752 gallons per day at that time. |

Copies of pertinent files are attached in Appendix B of this report.

### 4.1.7 Building Department

| *Regulatory Agency Data* | |
|---|---|
| **Name of Agency:** | City of Downey Building & Safety |
| **Source:** | City Clerk |
| **Agency Address:** | 11111 Brookshire Avenue, Downey, CA 90241 |
| **Agency Phone Number:** | (562) 904-7142 |
| **Date of Contact:** | September 6, 2018 |
| **Method of Communication:** | In Person, Email, Telephone |
| **Summary of Communication:** | Partner visited the City of Downey Building Department on September 6, 2018, to review available building and mechanical permits issued to the subject property, which were found to be on microfiche. Several sheets of microfiche records were identified; however, the reader machine was not operational. Therefore, a written public records request was submitted with the City Clerk for copies to be emailed when possible, to which the City has not responded (although with an initial information request submitted in July 2018). |

| *Regulatory Agency Data* | |
|---|---|
| | The public records are pending as of the date of this report and will be forwarded should pertinent information be identified that would change the conclusions of this report. |

A copy of pertinent documents is included in Appendix B of this report.

### *4.1.8 Planning Department*

| *Regulatory Agency Data* | |
|---|---|
| **Name of Agency:** | City of Downey Planning Department |
| **Source:** | N/A |
| **Agency Address:** | 11111 Brookshire Avenue, Downey, CA 90241 |
| **Agency Phone Number:** | (562) 869-7331 |
| **Date of Contact:** | September 2018 |
| **Method of Communication:** | Online |
| **Summary of Communication:** | The subject property is zoned M-2 for industrial development by the City of Downey. |

A copy of pertinent records is attached in Appendix B of this report.

### *4.1.9 Oil & Gas Exploration*

| *Regulatory Agency Data* | |
|---|---|
| **Name of Agency:** | California Division of Oil, Gas and Geothermal Resources (DOGGR) |
| **Source:** | http://maps.conservation.ca.gov/doms/index.html |
| **Agency Address:** | Headquarters: 801 K Street, MS 24-01, Sacramento, CA 95814 |
| **Agency Phone Number:** | (916) 322-1080 |
| **Date of Contact:** | September 2018 |
| **Method of Communication:** | Online Database Search |
| **Summary of Communication:** | According to DOGGR, no oil or gas wells are located on or immediately adjacent to the subject property. Also, the subject property is not located within a designated oil field. |

A copy of pertinent records is attached in Appendix B of this report.

### *4.1.10 Assessor's Office*

| *Regulatory Agency Data* | |
|---|---|
| **Name of Agency:** | Los Angeles County Assessor |
| **Source:** | http://maps.assessor.lacounty.gov/mapping/viewer.asp |
| **Agency Address:** | 500 West Temple Street Room 225, Los Angeles, CA 90012 |

## 4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

### *4.2.1 Regulatory Database Summary*

*Radius Report Data*

| Database | Search Radius (mile) | Subject Property | Adjacent Properties | Sites of Concern |
|---|---|---|---|---|
| Federal NPL or Delisted NPL Site | 1.00 | N | N | N |
| Federal CERCLIS Site | 0.50 | N | N | N |
| Federal CERCLIS-NFRAP Site | 0.50 | N | N | N |
| Federal RCRA CORRACTS Facility | 1.00 | N | N | N |
| Federal RCRA TSDF Facility | 0.50 | N | N | N |
| Federal RCRA Generators Site (LQG, SQG, CESQG) | 0.25 | **Y** | **Y** | N |
| Federal IC/EC Registries | 0.50 | N | N | N |
| Federal ERNS Site | Subject Property | N | N | N |
| State/Tribal Equivalent NPL | 1.00 | N | N | N |
| State/Tribal Equivalent CERCLIS | 1.00 | N | N | N |
| State/Tribal Landfill/Solid Waste Disposal Site | 0.50 | N | N | N |
| State/Tribal Leaking Storage Tank Site | 0.50 | **Y** | N | N |
| State/Tribal Registered Storage Tank Sites (UST/AST) | 0.25 | N | N | N |
| State/Tribal Voluntary Cleanup Sites (VCP) | 0.50 | N | N | N |
| State/Tribal Spills | 0.50 | N | N | N |
| State HazNet Manifest Data | Varies | **Y** | N | N |
| Emissions | Varies | **Y** | N | N |
| Federal Brownfield Sites | 0.50 | N | N | N |

### *4.2.2 Subject Property Listings*

The subject property is identified in the EDR regulatory database report, as discussed below:

- The subject property, identified as Kirkhill Inc. and Kirkhill Rubber Inc., at 12021 Woodruff Avenue, is listed on several state and local regulatory databases, where much of the information was previously discussed in Section 4.1. Kirkhill Inc. was listed on the Resource Conservation and Recovery Act (RCRA_-Small Quantity Generator (SQG), LUST, Historical UST, Facility Index (FINDS), Enforcement Compliance History On-line (ECHO), HazNet, Emissions (EMI), California Integrated Waster Quality System (CIWQS), Los Angeles County HMS (Hazardous Waste and Industrial Sites), and RGA LUST databases.

  The Historical UST database listed four historical USTs described as Tank 1 10,000-gallons installed in 1967 containing aliphatic hydrocarbons (process oil); Tank 2 10,000 gallons installed in 1973 containing diesel for boiler fuel; Tank 3 10,000 gallons installed in 1976 containing diesel for boiler fuel; and Tank 4 7,500 gallons installed in 1953 containing diesel for boiler fuel. Based on regulatory database (and state file review) information, the USTs have been either removed or closed in place and received NFA from the local oversight agency, see Section 4.1.5. The closure of the four USTs is also related to the LUST listing that was discussed in Section 4.1.2 as reported on the GeoTracker database, which involved some remediation of diesel and oil impacted soils identified during UST removal between 1989 and 1992 (26 years ago). Kirkhill Inc. is listed on the State HazNet database for hazardous waste manifest data, which was discussed in Section 4.1.1, and on the Emissions database as described in the SCAQMD Section 4.1.3.

- Cal Conduit Products, at 12021 Woodruff Avenue, appears to have been a former tenant of the subject building and was listed on the State HazNet database for the year 2009 only for generating 0.95 tons of waste oil and mixed oil. No additional information was identified for this former tenant. This listing is not expected to represent a significant environmental concern.

### *4.2.3 Adjacent Property Listings*

Four adjacent addresses were identified in the EDR regulatory database report, as discussed below:

- The property, identified as Classic Graphix at 9459 Washburn Road, is located adjacent to the west (cross gradient) of the subject property and is listed as a RCRA-SQG, FINDS, ECHO, Haznet and Los Angeles HMS property. This is a historical listing, as this property is currently occupied by

Stud Welding Products. This former tenant is listed as a hazardous waste generator and as having been inspected for storm water by the Los Angeles County Environmental Programs Division in 2000 and 2001. No SWPPP was reportedly needed. No USTs or releases were reported. Based on this information, this listing is not expected to represent a significant environmental concern, and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.

- The property, identified as Fuji Photo Film USA Inc., at 12010 Woodruff Avenue, Suite A, is located adjacent to the east (cross gradient) of the subject property and listed as a RCRA No Longer Registered (NLR) site, FINDS, ECHO, and Haznet associated with photodeveloping. This appears to be a historical listing based upon the dates listed on the HazNet database of 2003. This (former) tenant is listed as a hazardous waste generator and a RCRA Non-Generator. No USTs or releases were reported in connection with this listing. Based on this information, this listing is not expected to represent a significant environmental concern, and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.
- The property, identified as Darnell Corporation at 12000 Woodruff Avenue, is located adjacent to the east (cross gradient) of the subject property and is listed on the SWEEPS UST, RCRA NLR, FINDS, ECHO, and Los Angeles County HMS databases. This is a historical listing, as this property was redeveloped in 1988 (30 years ago) from the former manufacturing site operated by Darnell. This former tenant was reported as a hazardous waste generator and operator of nine USTs. No releases, investigations or remediation were reported. Based on this information, and since this property is cross gradient with respect to the subject property, this listing is not expected to represent a significant environmental concern, and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.
- The property, identified as Stud Welding Products Inc. at 9455 Washburn Road, is located adjacent to the west (cross gradient) of the subject property and listed on the RCRA-SWG, FINDS, ECHO, Haznet and Los Angeles County HMS databases. Stud Welding appears to occupy two adjacent buildings at 9455 and 9459 Washburn Road. This tenant is listed as a hazardous waste generator and as having been inspected for storm water by the Los Angeles County Environmental Programs Division. No SWPPP was reportedly needed. No USTs or releases were reported at this location. Based on this information, this listing is not expected to represent a significant environmental concern, and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

### *4.2.4 Sites of Concern Listings*

No sites of concern are identified in the EDR regulatory database report that warrant discussion in this section.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

### *4.2.5 Orphan Listings*

Two unmapped "orphan" listings were presented in the database report that were not specifically plotted due to poor or inadequate address information. These sites are listed as Star Cleaners at 8020 Stewart and Gray Road (over one mile) and the Stonewood Shopping Center located over one-half mile north. Based upon the distance of these sites, they are not expected to represent a significant environmental concern.

A copy of the regulatory database report is included in Appendix C of this report.

# 5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from Prologis, Inc. (User of this report).

| ***User Responsibilities*** | | | | |
|---|---|---|---|---|
| **Item** | **Provided By User** | **Not Provided By User** | **Discussed Below** | **Does Not Apply** |

## 5.1 Interviews

### *5.1.1 Interview with Owner*

Mr. Mike Kilroy, Operations, Sales & Marketing Manager of Kirkhill (assumed to be related to the property owner of record, Felchco Investment Group LLC) and subject property owner representative, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

Mr. Kilroy further stated that there are no active USTs, on-going investigations, open violations, or groundwater monitoring wells associated with the subject property to the best of his knowledge.

### *5.1.2 Interview with Report User*

Please refer to Section 5.2 below for information requested from the Report User. The information requested was not received prior to the issuance of this report. It is understood that the Report User would not have knowledge of the property that would significantly impact our ability to satisfy the objectives of this assessment. The lack of this information is not considered to represent a significant data gap.

### *5.1.3 Interview with Key Site Manager*

Mr. Mike Kilroy also acted as key site manager, as discussed above in Section 5.1.1.

### *5.1.4 Interviews with Past Owners, Operators and Occupants*

Interviews with past owners, operators, and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

### *5.1.5 Interview with Others*

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

## 5.2 User Provided Information

### *5.2.1 Title Records, Environmental Liens, and Activity and Use Limitations (AULs)*

At the request of the User, Partner contracted AFX Research LLC to perform an Environmental Lien and AUL search for the subject property. No environmental liens or AULs were identified for the subject property. The owner was reported as Felchco Investment Group LLC at this time (assumed to be related to Kirkhill).

Copies of pertinent pages are included in Appendix B of this report.

### 5.2.2 Specialized Knowledge

The User did not have specialized knowledge of environmental conditions associated with the subject property at the time of the assessment.

### 5.2.3 Actual Knowledge of the User

The User was not aware of environmental liens and/or AULs encumbering the subject property or in connection with the subject property at the time of the assessment.

### 5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

### 5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

### 5.2.6 Previous Reports and Other Provided Documentation

The following information was provided to Partner for review during the course of this assessment:

*Environmental Audit Report,* Tetra Tech Inc., February 1990 (was included as an Appendix to PIC Environmental Services August 2013 report)

At the time of the assessment, the property was owned by Kirkhill, Inc. and was operated as a plumbing rubber goods manufacturing plant. The subject property was described as having five major operations conducted in the building as: office, warehouse/storage, manufacturing, packaging, and printing. The report briefly discussed the removal and closure of the former USTs as three former 10,000-gallon USTs on site (2 diesel and one oil). The tanks were located just south of the building in the parking lot area. The three tanks were removed in August 1989 by Tank Protect Engineering (TPE). A fourth 7,500-gallon diesel tank located in the courtyard was abandoned in place. Tetra Tech reported that contaminated soil was encountered during the site investigation and soil sampling activities performed. The report indicated that identified contaminated soil was excavated and disposed of. The excavation was backfilled with clean imported soil material and the area paved over.

Tetra Tech described chemicals and hazardous substances used or stored on site as oils, inks, lubricants, solvents, paints, and rubber type substances. Chemicals stored at the subject property were aboveground and generally kept in their original factory containers, primarily 55-gallon drums for liquids or 60-lb sacks on wooden pallets for dry bulk chemicals. There was one aboveground 750-gallon AST which contained Edgeflex CX100 oil. This tank did not have secondary containment. Some minor spills were noticed near the chemical drum storage area in the courtyard, near the air compressors, and adjacent to the high pressure machinery. These spills were being contained and cleaned-up by using standard absorbent-type material. Disposal of this absorbent material is done by the hazardous waste hauler Cosby-Overton. The amount disposed of is generally limited to one or two 55-gallon barrels every year. The floor of the

building showed little or no staining. The tool and die machinery have their own oil sumps and recirculation system. Minor staining of the floor near the tool and die equipment was also observed.

The electrical station and transformers on site were reported to have been replaced in 1974 and do not contain any PCBs. There were two boilers, four rubber rolling mills and a basic dry filter baghouse (to remove air particulates) on site. Permits from SCAQMD to operate these equipment were identified. During the site inspections several items and materials were noticed that potentially contain asbestos.

Tetra Tech concluded that they did not discover any activities presently conducted on-site which may be a source of significant soil, groundwater, or surface contamination. Some minor surface contamination was evident near the chemical drum storage area, the air compressors, and the high pressure machinery. The location of the chemical drum storage area was not noted in the report, and the site contact reported to Partner that no centrailized drum storage area is present at the subject property. Tetra Tech noted that good housekeeping practices and prompt cleanup of any spills should minimize any impact to local environment, but secondary containment in these areas should be constructed.

*Phase I ESA,* Orswell & Kasman, Inc., August 10, 2005

This report was prepared on behalf of the Olsen Family Trust. At the time of the assessment, the subject property was occupied by Kong Pet Toys, a distributor of chewable pet toys, located on the northern portion of the subject property building and Kirkhill Manufacturing Company located on the southern portion of the subject property building The report identified RECs including visible oil stains on the paved surface and exterior wall near the AST oil storage tank within the southern portion of the building (assumed to be the process oil AST area observed by Partner during the site visit) and on pavement near the cooling tower system in the open area near the center of the building. A historical REC was reported pertaining to the closure of the USTs at the subject property. It was recommended that samples be obtained in the area of the process oil storage tank and in the area of the cooling system to determine of soil has been impacted. It was also recommended that better housekeeping practices be employed to prevent spills in the outdoor storage areas from being washed into the local stormwater runoff system.

*Supplemental Phase II Environmental Audit,* GeoScience Analytical, Inc. (GSA), September 14, 2005

This assessment was conducted to define an arsenic anomaly that was previously identified in the central courtyard area near the clarifier. Partner notes that previous investigation reports were not available to Partner, but noted in the 2013 Phase I (described below) as prepared by Tank Protect Engineering and Converse Consultants. The GSA assessment included reviewing prior sampling reports pertaining to arsenic sampling and the advancement of four soil borings in the area of concern to a depth of 6 feet bgs. Soils from depths of 2 feet and 6 feet bgs were analyzed for total arsenic (TTLC), which identified concentrations ranging from <0.5 to 90 milligrams per kilogram (mg/kg). Maximum arsenic concentrations were identified at 2 feet. All TTLC arsenic concentrations were significantly below regulatory thresholds. Additional characterization of soil at Boring GSA-4, which identified the highest concentration of total arsenic at 2 feet (90 mg/kg), was advanced with soluble arsenic (STLC), which was found to be slightly above the regulatory level threshold of 5.0 mg/L at 7.3 mg/kg. Based on the available

analytical data, the maximum volume of soil potentially containing arsenic in excess of STLC concentrations for disposal purposes was estimated to be 3 to 6 cubic yards. The GSA report concluded that the subject property contains *total arsenic* within allowable limits; however, within a small area of the subject property in the immediate vicinity of the clarifier, *soluble arsenic* is present at a concentration slightly above threshold limits. Based upon the small volume of arsenic expected to be present under a capped surface, no remediation or further investigation was recommenced.

*Phase II Environmental Assessment Report of Findings,* S&S Commercial Environmental Services, Inc., November 9, 2005

S&S Commercial prepared this report on behalf of Foothill Independent Bank. The assessment was conducted to better qualify the findings from two previous Phase II investigations pertaining to arsenic concentrations, which concluded that the arsenic impact comprised a small area (3 to 6 cubic yards) and existed slightly above Cal-Hazardous levels. The investigation identified high concentrations of diesel range and oil range petroleum in the soil to a maximum depth of 20 feet in the courtyard area. The investigation included 14 soil borings in the central courtyard area of the building adjacent to the clarifier/discharge channel and cooling tower. Concentrations of diesel were as high as 54,100 mg/kg at 5 feet bgs and 21,300 mg/kg at 20 feet bgs at Boring SS-5 location. No volatile organic compounds (VOCs) (as analyzed via Environmental Protection Agency (EPA) Method 8260B) or semi-VOCs (via EPA Method 8270B) were detected at SS-5 (the only boring analyzed for VOCs).

The arsenic investigation included eight soil borings labeled (SS1 through SS8) located in the courtyard area near the cooling tower and clarifier/channel with samples collected at 0.5 foot, 1 foot and 2 feet bgs, for a total of 24 soil samples. Concentrations of arsenic were detected in all soil samples ranging from 3.5 to 71.3 mg/kg. In a majority of the borings, the concentration of arsenic increased from 1 to 2 feet bgs. It was concluded that arsenic was detected at concentrations slightly above Cal-Hazardous levels, which was later determined to be an isolated area of 3 to 6 cubic yards of soluble arsenic above threshold limits that was left in place due to the presence of a capped surface.

In addition, the diesel and oil impacted soils were left in place and not remediated due to a reported clean earth interval between the last identified diesel impacted soil at 20 feet bgs and the maximum depth explored to 45 feet bgs. This clean earth interval was evaluated at only one boring location (SS-5 Alt).

*Phase I and Phase II ESA Report,* PIC Environmental Services (PIC), August 30, 2013

PIC Environmental Services (PIC) was contracted by KMC and/or Kirkhill, Inc. The subject property was occupied by Kirkhill Inc. and Cal Pipe at the time of the assessment with Cal Pipe located in the northern portion of the building and Kirkhill in southern portion of the building. Cal Pipe was described as a conducting pipe threading; however, a description of further activities was not included. Kirkhill was reported as a rubber manufacturer and metal fabricator.

The Phase II site investigation operations were conducted on August 13, 2013, and included the advancement of a total of seven soil borings (PIC-1 through PIC-7). Boring locations were selected on the basis of proximity to historic potential sources of petroleum or hazardous materials contamination (i.e. former UST #1 and existing oil-water separator). Soil samples were recovered at five feet intervals in each

boring, which were cored to depths ranging from 5 to 50 feet below surface. A total of 25 soil samples were recovered and selectively analyzed for petroleum, metals, and volatile contaminants at Cal Tech Environmental Laboratories. Perched groundwater was encountered in two borings on the subject property. According to the investigation, groundwater was reported at approximately 45 feet bgs at the subject property.

A total of 25 soil samples were recovered during coring operations on August 13, 2013. All 25 soil samples were transported to Cal Tech Environmental Laboratories (Paramount). Twenty-one soil samples recovered from PIC-1 - PIC-7 were quantitatively analyzed for total petroleum hydrocarbons (gasoline, diesel, and oil) by EPA Method 8015. In addition, ten soil samples were analyzed for total volatiles (fuel oxygenates and solvents) by EPA Method 8260B, and six soil samples were analyzed for total metals by EPA Method 6010.

The laboratory results measured no detectable, subsurface soil contamination by petroleum hydrocarbons or volatile organic compounds in the samples. All metals concentrations were measured at non-detectable to background concentrations. All measured concentrations are well below regulatory action levels.

The assessment concluded the following:

1. One documented, historic occurrence of petroleum hydrocarbon contamination (environmental impairment) was discovered at the subject property. In 1989, diesel and oil contamination in soil was discovered during UST removal operations. PIC noted that after successful completion of site assessment and soil remediation requirements, Los Angeles County Department of Public Works awarded regulatory closure in correspondence dated August 6, 1992;

2. PIC concluded that potential historic onsite sources of petroleum or hazardous materials contamination were adequately investigated by Phase ll Testing operations. More specifically, several subsurface investigations were conducted onsite from 1989 through 2013 by Tank Protect Engineering, Converse Consultants, GeoScience Analytical, S & S Environmental Services, and PIC Environmental Services. Within the "courtyard" area, adjacent to the oil-water separator, some near surface soil above a depth of five feet was found to contain slightly elevated concentrations of arsenic. In addition, S & S Environmental measured elevated concentrations of nonvolatile, petroleum hydrocarbons as deep as 20 feet southeast of the oil-water separator. PIC's recent confirmation testing near and within the same location measured no detectable petroleum contaminants below a depth of five feet. PIC concurs with previous investigations that the occurrences of elevated arsenic and nonvolatile petroleum are very limited and do not warrant remedial action or further investigation;

3. PIC concluded that the site lacks significant environmental impairments (Recognized Environmental Conditions); and

4. PIC recommended no further investigation.

Copies of pertinent pages reviewed of the above reports are included in Appendix B of this report.

# 6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

| *Site Assessment Data* | |
|---|---|
| **Site Assessment Performed By:** | Margaret Thomas and Kathy Lehnus |
| **Site Assessment Conducted On:** | September 6, 2018 |

The table below provides the subject property personnel interviewed during the field reconnaissance:

| *Site Visit Personnel for 12021 and 12023 Woodruff Avenue (Subject Property)* | | | |
|---|---|---|---|
| **Name** | **Title/Role** | **Contact Number** | **Site Walk* Yes/No** |
| Mr. Mike Kilroy | Key Site Manager | (562) 803-1117 | Yes |

* Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property

Environmental concerns were identified during the onsite reconnaissance related to current and/or former manufacturing activities and the use, storage, and generation of hazardous substances, wide spread surface oil staining, trenches, and other subsurface conduits, as further discussed in Sections 6.1 and 6.2.

## 6.1 General Site Characteristics

### *6.1.1 Solid Waste Disposal*

Solid waste generated at the subject property is disposed of in large bins located on the exterior southwest side of the subject property. An independent solid waste disposal contractor removes solid waste from the subject property. According to property personnel, only inert trash is collected in the on-site solid waste dumpsters. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

### *6.1.2 Sewage Discharge and Disposal*

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Downey services the subject property vicinity. No septic systems are observed or reported on the subject property. The subject property has an active industrial waste discharge permit associated with a clarifier that is further discussed in Section 6.2.7.

### *6.1.3 Surface Water Drainage*

Storm water is removed from the subject property primarily by sheet flow action across the paved surfaces, which is directed toward the southwest side of the subject property via a drainage culvert that runs along the west side of the property. Storm water ultimately enters the public right of way and storm drain system. Site storm water from roofs, landscaped areas, and paved areas is directed to the public right of way and to on-site storm water drains identified in select areas. The subject property is connected to a municipal owned and maintained sewer system.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

### *6.1.4 Source of Heating and Cooling*

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity and/or natural gas provided by Southern California Edison and Southern California Gas Company. The mechanical system is comprised of rooftop-mounted packaged HVAC units that serve the office and laboratory areas. Large mechanical systems are present at the subject property that include a cooling tower and steam boilers that area associated with the manufacturing system and not the HVAC system.

### *6.1.5 Wells and Cisterns*

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

### *6.1.6 Wastewater*

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. Industrial processes are currently performed at the subject property as further discussed in Section 6.2.7.

### *6.1.7 Septic Systems*

No septic systems were observed or reported on the subject property.

### *6.1.8 Additional Site Observations*

No additional general site characteristics were observed during the site reconnaissance.

## 6.2 Potential Environmental Hazards

### *6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site*

Partner identified hazardous substances used, stored, and generated on the subject property. In general, the materials appeared to be properly labeled and stored at the time of the assessment with no signs of major leaks, stains, or spills (and secondary containment was noted on many of the raw materials). Kirkhill maintains several regulatory permits for the operation of equipment, storage of hazardous materials and hazardous waste generation and industrial waste discharges to the municipal sewer system. The subject property reports its hazardous substances stored at the subject property through the CERS, which most recently listed up to 38 chemical components that included solid raw materials such as custom polymers, talc, neoprene, carbon black, monomers, and zinc stored in 55-gallon drums and larger totes up to 300 gallons. Kirkhill uses several different polymers of different grades for custom orders. Hazardous liquids include petroleum hydrocarbons as lubricating oils, waste lubricating oil, and the process oil is classified as solvent refined in regulatory records. Process oils are currently stored in three interior aboveground storage tanks (ASTs) (two 3,000-gallon ASTs and one 4,000-gallon AST) within the manufacturing area; see Section 6.2.2. Various compressed gasses (oxygen, propane, argon, acetylene) are also listed.

Open violations for hazardous materials storage was not reported at this time by the City of Downey Fire Department, by site personnel or reported through the CERS database. In addition, site personnel are not aware of any environmental impacts, enforcement orders or ongoing environmental investigations at the subject property at this time.

Based on the nature of use, presence of secondary containment, and lack of violations on-file with the City fire department, these materials are not expected to represent a significant environmental concern at this time.

### *6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)*

Partner observed four ASTs at the subject property used for the storage of process oils, one of which was empty (2,000 gallons). The ASTs are located inside the building in the main manufacturing area. The three active ASTs contain various grades of petroleum-based process oil, which include two 3,000-gallon ASTs and one 4,000-gallon AST. The ASTs appear to be double-walled systems with internal secondary containment safeguards. No environmental concerns were noted or reported with the ASTs.

No active USTs are present at the subject property. One abandoned in-place UST is present within the courtyard area of the subject property that formerly contained diesel fuel for the boilers. The UST is 7,500 gallons in size, was installed in 1953, and was filled with slurry in approximately 1989.

Copies of pertinent documents are included in Appendix B of this report.

### *6.2.3 Evidence of Releases*

The floor in the manufacturing areas is stained with oil due to years of operating hydraulic equipment, small surface spills, and general industrial usage over time. It does not appear that a large release event occurred but rather a slow general staining of the area. The dark staining may also be a result of the rubber polymers including carbon black.

### *6.2.4 Polychlorinated Biphenyls (PCBs)*

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – "*Non-PCB;*" 2) 50 ppm-500 ppm – "*PCB-Contaminated;*" and, 3) Greater than 500 ppm – "*PCB-Containing.*" The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

The on-site reconnaissance addressed indoor and outdoor transformers that may contain PCBs. The subject property operates a small electrical substation that includes one large pad-mounted transformer and additional electrical equipment situated within a chain link fence within the central courtyard, with apparent associated equipment on the interior adjacent wall. The transformer was not labeled indicating PCB content. The electrical equipment is not original and has been replaced at least once or twice. No staining or leakage was observed in the vicinity of the transformer equipment; however based on the use

of multiple generations of electrical equipment in this area, the sub-station is a REC for the subject property.

According to a prior Environmental Audit Report prepared by Tetra Tech Inc. dated February 1990, the electrical station and transformers on site in 1990 were replaced in 1974 and reportedly did not contain PCBs. As such, it appears that electrical upgrades have occurred since 1974.

In addition, other historical sources of PCBs may be present at the subject property that include older hydraulic presses, interior transformers, possible oil-filled switches, hoists, dock levelers, or other equipment.

### *6.2.5 Strong, Pungent or Noxious Odors*

No unusual strong, pungent, or noxious odors were evident during the site reconnaissance other than the expected odor of rubber manufacturing and oil.

### *6.2.6 Pools of Liquid*

No pools of liquid were observed on the subject property during the site reconnaissance.

### *6.2.7 Drains, Sumps, Trenches, and Clarifiers*

The manufacturing areas includes an internal hydraulic system comprised of a network of below-grade trenches and overhead piping that deliver a recirculated water and hydraulic oil mixture to the presses and molding machines.

In addition, a central clarifier is present that is used primarily for boiler blowdown and cooling tower discharges. The clarifier previously received rinse water from a former tank wash out area that included acid and caustic tanks and rinse water tanks, which was used to clean molds, as the molds would get covered with rubber and need to be washed, which then discharged through the clarifier. This operation is no longer conducted and all former wash tanks are gone. The earliest industrial waste discharge permit identified was issued to Kirkhill Inc. dated 1979 which listed the wastewater producing operations as blow down and bleed water from boilers and cooling tower, cleanup and floor wash down. The constituents of wastewater discharges were listed solely as water. The rate of flow as reported as 1,752 gallons per day at that time. The active 2017 permit reported discharges as calcium stearate water, cooling tower bleed off, boiler blowdown, household washers, rinse water from molding wash rack, lab sinks, self-regenerating water softener backflush, and floor scrubber.

According to provided information, the trenches are cleaned out (of sludge build-up) approximately every five years.The clarifier has the potential to impact the subsurface of the subject property should the system become compromised.

### *6.2.8 Pits, Ponds and Lagoons*

No pits, ponds, or lagoons were observed on the subject property.

### *6.2.9 Stressed Vegetation*

No stressed vegetation was observed on the subject property.

### *6.2.10 Additional Potential Environmental Hazards*

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

## 6.3 Non-ASTM Services

### *6.3.1 Asbestos-Containing Materials (ACMs)*

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property building was constructed in 1951 with subsequent additions through the 1970s. A prior survey conducted in 1990 (Environmental Audit report by Tetra Tech February 1990) identified asbestos in drywall next to the cooling tower and office ceiling tiles (1,360 SF of material). The amount of asbestos containing drywall was not reported.

Partner has conducted a limited, visual evaluation of accessible areas for the presence of suspect ACMs at the subject property. The objective of this visual survey was to note the presence and condition of suspect ACM observed. Please refer to the table below for identified suspect ACMs:

***Suspect ACMs***

| Suspect ACM | Location | Friable Yes/No | Physical Condition |
|---|---|---|---|
| Drywall Systems | Throughout Building Interior | No | Good |
| Flooring Materials | Throughout Building Interior | No | Good |
| Flooring Mastic | Throughout Building Interior | No | Good |
| Acoustical Ceiling Panels | Throughout Office | No | Good |
| Roofing Materials | Throughout Building Interior | No | Good |
| Mechanical Systems/Conduits | Throughout Building | No | Good |

The limited visual survey consisted of noting observable materials (materials which were readily accessible and visible during the course of the site reconnaissance) that are commonly known to potentially contain asbestos. This activity was not designed to discover all sources of suspect ACM, PACM, or asbestos at the site; or to comply with any regulations and/or laws relative to planned disturbance of building materials such as renovation or demolition, or any other regulatory purpose. Rather, it is intended to give the User an indication if significant (significant due to quantity, accessibility, or condition) potential sources of ACM or PACM are present at the subject property. Additional sampling, assessment, and evaluation will be warranted for any other use.

According to the US EPA, ACM and PACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition.

### 6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm$^2$ (or 5,000 µg/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X," to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

Based on the age of the subject property building (pre-1978), there is a potential that LBP is present. Interior and exterior painted surfaces were observed in good condition and therefore not expected to represent a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated.

Actual material samples would need to be collected in order to determine if LBP is present.

### 6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

| *EPA Radon Zones* | | |
|---|---|---|
| **EPA Zones** | **Average Predicted Radon Levels** | **Potential** |
| Zone 1 | Exceed 4.0 pCi/L | Highest |
| Zone 2 | Between 2.0 and 4.0 pCi/L | Moderate |
| Zone 3 | Less than 2.0 pCi/L | Low |

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

### 6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the City of Downey Department of Public Works serves the subject property vicinity. According to the City of Downey 2017 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal

regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

### *6.3.5 Mold*

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g., in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property building for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this ESA should not be used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

No obvious indications of water damage or mold growth were observed during Partner's visual assessment.

## 6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

# 7.0 FINDINGS AND CONCLUSIONS

### Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- All or part of the subject property building has been occupied by Kirkhill, a manufacturer of custom rubber products, since initial construction in 1951, utilizing raw materials including polymers, talc, neoprene, carbon black, monomers, and zinc as well as petroleum hydrocarbons as lubricating oils, waste lubricating oil, and the process oils (classified as solvent refined in regulatory records). Process oils are currently stored in three interior ASTs (two 3,000-gallon ASTs and one 4,000-gallon AST) within the manufacturing area. In addition, the manufacturing area includes an internal hydraulic system comprised of a network of below-grade trenches and overhead piping that deliver a recirculated water and hydraulic oil mixture to the rubber presses and molding machines. Additionally, a central clarifier is present that is used primarily for boiler blowdown and cooling tower discharges. The clarifier previously received rinse water from a former tank wash out area that included acid and caustic tanks and rinse water tanks, which were used to clean molds, as the molds would get covered with rubber and need to be washed, which then discharged through the clarifier. The subject property operates a small electrical substation that includes one large pad-mounted transformer and additional electrical equipment situated within a chain link fence within the central courtyard, with apparent associated equipment on the interior adjacent wall. The transformer was not labeled indicating PCB content. The electrical equipment is not original and has been replaced at least once or twice. No staining or leakage was observed in the vicinity of the transformer equipment.

  A prior Phase II ESA was conducted at the subject property by S&S Commercial Environmental Services, Inc., dated November 9, 2005, that identified high concentrations of diesel range and oil range petroleum in the soil located in the courtyard area to a maximum depth of 20 feet. The investigation included the advancement of 14 soil borings in the central courtyard area adjacent to the clarifier/discharge channel and cooling tower. Concentrations of diesel were reported as high as 54,100 milligrams per kilogram (mg/kg) at 5 feet bgs and 21,300 mg/kg at 20 feet bgs at the Boring SS-5 location. No VOCs or semi-VOCs were detected at SS-5 (the only boring analyzed for VOCs). Arsenic was detected at concentrations slightly above Cal-Hazardous levels, which was later determined to be an isolated area of 3 to 6 cubic yards of soluble arsenic above threshold limits that was left in place due to the presence of a capped surface. Additionally, the diesel and oil impacted soils were left in place and not remediated due to a reported clean earth interval between the last identified diesel impacted soil at 20 feet bgs and the maximum depth explored to 45 feet bgs.

Due to the known release of petroleum in the courtyard area and the number of years the subject property has operated as a rubber manufacturing plant. including the presence of subsurface conduits/trenches that carry a petroleum based cutting fluid and a clarifier that was previously used for wash down of rubber residues, soil beneath the concrete slab may be impacted with petroleum-based cutting oils or other constituents. Of note, polychlorinated biphenyls (PCBs) may be associated with historical usage of hydraulic equipment and electrical transformers on the subject property.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- A total of four steel USTs were formerly operated at the subject property, three of which contained diesel to fuel the two boilers associated with rubber molding (when the rubber products produced were volcanized), and one of which contained naphthene cutting oil. Three of the USTs (Tanks 1, 2, and 3) were located along the exterior south side of the subject property and were removed in 1989. A fourth UST (Tank 4 containing diesel) was abandoned in place in the central courtyard area in or around 1989. During the removal of Tanks 1 through 3, soil samples from beneath the tanks were tested and a release was detected; therefore, additional site investigation, excavation, and remediation work was performed in this area under the oversight of the (LACDPW. Subsequently, a NFA letter was issued for Closure Permit Number 5999B by the Los Angeles County Department of Public Works, Waste Management Division (currently Environmental Programs Division) dated August 6, 1992, which pertains to the three exterior removed USTs. The abandoned in-place UST was assigned a separate Closure Permit Number of 6000B, which was not listed on the NFA letter. However, based on preliminary conversations with LACDPW staff, this appears to be an error in which Tank 4 should have been noted, as all four USTs appear to have been closed under this NFA letter.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Partner noted exterior storage at the subject property including raw materials (covered) and unused hydraulic equipment, as well as approximately eight 55-gallon drums with no secondary containment, predominantly on the exterior west side of the building. Due to the presence of excessive storage covered with plastic sheeting (to protect raw material from sun exposure), this area was not fully accessed and evaluated by Partner. Partner noted that the observed drums were labelled as Non-RCRA hazardous waste solid, which is an oily debris, and Non-RCRA liquid waste oil. Minor oil staining was observed on the pavement under one of the drums that was covered with an absorbent material. According to site personnel, the waste is routinely collected by Express Oil Company, a third party vendor, on a regular basis. Based on the nature of the reported contents issuance of a Stormwater Pollution Prevention Plan (SWPPP), and lack of violations noted, the exterior storage is not expected to represent a significant environmental concern;
- The subject property formerly operated printing machinery, which is no longer conducted. The printing area was located in the southeast portion of the building that was constructed in 1973. This area is used for general storage at this time. According to reported information in a prior Environmental Audit Report dated 1990, small amounts of oil-based ink and MEK (35 gallons/year) were used. No drains or other subsurface conduits are located in this area. Former printing operations are not expected to present a significant environmental concern;
- Due to the age of the subject property buildings, there is a potential that ACM and/or LBP are present. Overall, all suspect ACMs and painted surfaces were observed in fair to good condition and do not pose a health and safety concern to the occupants of the subject property at this time. The identified suspect ACMs would need to be sampled to confirm the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants. A prior survey conducted in 1990 (Environmental Audit report by Tetra Tech February 1990) identified asbestos in drywall next to the cooling tower and office ceiling tiles (1,360 SF of material). The amount of asbestos containing drywall was not reported.

**Conclusions, Opinions and Recommendations**

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 12021 and 12023 Woodruff Avenue in the City of Downey, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of a recognized environmental condition and environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- A limited subsurface investigation should be conducted in order to determine the presence or absence of soil and/or soil vapor contamination due to the current and historical use of the subject property;

- A Soil Management Plan (SMP) should be prepared to appropriately handle the known oil releases at the subject property and any unknown releases associated with the current and former industrial use;
- The NFA letter dated August 6, 1992, pertaining to the historical USTs at the subject property should be revised to clearly include Closure Permit Number 6000B for the abandoned in-place UST to avoid confusion in the future as to whether it was officially closed.
- An asbestos survey conducted in 1990 identified asbestos in the subject property building. It is not known if the survey was conducted for all equipment and building materials at the time; therefore, an asbestos survey should be performed and known ACM should be abated or removed for safety purposes (or an Operations and Maintenance (O&M) Program should be implemented in order to safely manage the known and suspect ACMs located at the subject property).

# 8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 12021 and 12023 Woodruff Avenue in the City of Downey, Los Angeles County, California in general conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Partner Engineering and Science, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## *Certified Sanborn Results:*

**Certification #** 0FB2-4DAB-A307

**PO #** NA

**Project** 18-220634.1

### UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 0FB2-4DAB-A307

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

*The Sanborn Library LLC Since 1866™*

### Limited Permission To Make Copies

Partner Engineering and Science, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

# EXECUTIVE SUMMARY

## DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

## RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

# EDR Historical Topo Map Report

08/29/18

**Site Name:**

Kirkhill
12021 Woodruff Avenue
Downey, CA 90242
EDR Inquiry # 5408632.4

**Client Name:**

Partner Engineering and Science, Inc.
2154 Torrance Blvd, Suite 200
Torrance, CA 90501-0000
Contact: Colleen Tubridy

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Partner Engineering and Science, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Waste Code Matrix as a spreadsheet

The Department of Toxics Substances Control (DTSC) takes every precaution to ensure the accuracy of data in the Hazardous Waste Tracking System (HWTS). However, because of the large number of manifests handled, inaccuracies in the submitted data, limitations of the manifest system and the technical limitations of the database, DTSC cannot guarantee that the data accurately reflect what was actually transported or produced.

Waste Code Matrix as a spreadsheet

The Department of Toxics Substances Control (DTSC) takes every precaution to ensure the accuracy of data in the Hazardous Waste Tracking System (HWTS). However, because of the large number of manifests handled, inaccuracies in the submitted data, limitations of the manifest system and the technical limitations of the database, DTSC cannot guarantee that the data accurately reflect what was actually transported or produced.

**KIRKHILL MANUFACTURE CO** 12023 WOODRUFF AVE, DOWNEY, CA 90241

**Facility Identifier:** LACoFA0030310

## Industry Codes

**SIC:** 3069 - Fabricated rubber products, n.e.c.

## î€’ Geopolitical Data

**County:** Los Angeles County
**CalEnviroscreen 2.0 Percentile Range:** 91-95%

## î€• Regulatory Programs

### Chemical Storage Facilities î□§

**Environmental Interest Start Date:** 7/10/2013
**Last Inspected:** 7/2/2015

**Source System:** California Environmental Reporting System
**Source System ID:** 10303885

### Hazardous Waste Generator î□§

**Environmental Interest Start Date:** 7/10/2013
**Last Inspected:** 7/2/2015

**Source System:** California Environmental Reporting System
**Source System ID:** 10303885

**KIRKHILL MANUFACTURE CO** 12023 WOODRUFF AVE, DOWNEY, CA 90241

**Time Frame:** All years ▼ **Expand/Collapse All**

## Evaluations

**7/2/2015 Hazardous Waste Generator - Compliance Evaluation Inspection**

**Type:** Routine done by local agency
**Notes:** An inspection consent was granted by Mike Kilroy(Operations, sales,& Marketing Manager)

**5/11/2015 Hazardous Materials Release Response Plans (HMRRP) - Other/Unknown**

**Type:** Other, not routine, done by local agency
**Notes:** Re-inspection conducted by HMS L. Kirby. All violations abated. HMBP updated and electronically submitted to CERS. No further action required at this time.

**4/1/2015 Hazardous Materials Release Response Plans (HMRRP) - Other/Unknown**

**Type:** Other, not routine, done by local agency
**Notes:** Re-inspection conducted by HMS L. Kirby. Facility complied and uploaded CERS submittal. However, submittal NOT APPROVED upon review as incomplete hazmat inventory and submittal missing emergency response/contingency plan. Notification made to complete required submittal elements and re-submit HMBP.

**2/18/2015 Hazardous Materials Release Response Plans (HMRRP) - Compliance Evaluation Inspection**

**Type:** Routine done by local agency
**Notes:** HMRRP inspection conducted by HMS L. Kirby. NOV issued for failure to update HMBP and chemical inventory, and electronically submit information to CERS. No CERS submittal on file at time of inspection. Business recently assumed control of entire building complex and will have to amend site map/floor plan. Inspection found fire code violations requiring further corrective action.

## Violations

**7/2/2015 Hazardous Waste Generator - Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.**

**Citations:**

- 22 CCR 12 66262.34(f): California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

**Notes:** Returned to compliance on 04/11/2016. OBSERVATION: 44 x 55 gallon drums of waste oil. All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information.

**2/18/2015 Hazardous Materials Release Response Plans (HMRRP) - Failure to annually review and electronically certify that the business plan is complete, accurate, and up-to-date.**

**Citations:**

- HSC 6.95 25508(c): California Health and Safety Code, Chapter 6.95, Section(s) 25508(c)
- HSC 6.95 25508.2: California Health and Safety Code, Chapter 6.95, Section(s) 25508.2

**Notes:** Returned to compliance on 04/01/2015.

**2/18/2015 Hazardous Materials Release Response Plans (HMRRP) - Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.**

**Citations:**

- 19 CCR 6.95 25505: California Code of Regulations, Title 19, Chapter 6.95, Section(s) 25505
- HSC 6.95 25508(a)(1): California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
- HSC 6.95 25508(d): California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)

**Notes:** Returned to compliance on 04/01/2015.

## Enforcement Actions

**2/18/2015 Hazardous Materials Release Response Plans (HMRRP) - Notice of Violation**

**Type:** Notice of Violation (Unified Program)

**CAL PIPE INDUSTRIES** 12021 WOODRUFF AVE, DOWNEY, CA 90241

**Time Frame:** All years **Expand/Collapse All**

## Evaluations

**1/7/2015 Hazardous Waste Generator - Compliance Evaluation Inspection**

**Type:** Routine done by local agency

**3/25/2013 Hazardous Materials Release Response Plans (HMRRP) - Compliance Evaluation Inspection**

**Type:** Routine done by local agency
**Notes:** Inspection by HMS L. Kirby (Downey FD)

Subject: RE: routed: seeking database for Santiation Districts IW permits

Hi Alexandria!

Thanks very much—the address of this one is **12021 Woodruff Avenue in Downey**, and while I'm at it I will also ask for **2400 and 2410 E. Dominguez Street in Carson**.

Is this the method by which that we should request files? If so, you may be getting e-mails from me every couple of weeks with an address to search.

But before I start doing that--do you cover all the cities in LA County? When does someone obtain a permit form you guys versus the LA County Department of Public Works?

Let me know if you want to have a quick call so you don't have to write out a long e-mail…

Thanks,
Kathy

Subject: RE: routed: seeking database for Santiation Districts IW permits

Hi Kathy,

If you can provide me the address of the property, I can search our database for any existing permits associated with that site. If we have any PDF files available, I can email them to you. We may also have records on microfiche, which require an appointment to view.

Thank you,

Hello,

I am an environmental consultant and I do research on properties in LA County to understand their processes. Typically if I'm looking for discharge permits I review files at the LA County Department of Public Works (http://ladpw.org/epd/cleanla/OpenFileReview.aspx), but I just came across a property that had an industrial discharge through your department (and the LA County Department of Public Works noted no permits for the Site. Can you let me know who files permits with you and how we (the public) can search them?

Thanks,
Kathy

Acct. # 1227752

Mr. Sidnor A. Johnson
Kirkhill Inc
12021 Woodruff Ave
Downey, Ca, 90241

Dear Mr.Johnson:

Industrial Wastewater Discharge Permit No.6373

The Sanitation Districts' records indicate that a review of the above facility's Industrial Wastewater Discharge Permit has not been conducted since the original approval on January 29, 1978. Pursuant to recent amendments to federal regulations outlined in 40 CFR Part 403.8, all Industrial Wastewater Discharge Permits must be renewed every five (5) years. As such, a formal Industrial Wastewater Discharge Permit Submittal must be filed by" 30 days". Furthermore, please also be advised that Sanitation Districts inspection of your facility revealed the following deficiencies: a) lack of an adequate wastewater sampling point, and b) lack of ph monitoring equipment, such as a recording ph meter. Your company is required to propose the installation of a sampling box and recording ph meter equipment for your existing wastewater batch neutralization system. Four (4) sets of plans showing the location for the required sampling point (sampling box I-12 standard attached) and the ph recording probe and instrumentation equipment must be submitted to the Districts thru the City of Downey for approval prior to any installation.

The Submittal must contain all required supporting information and four (4) sets of plans as indicated above and as detailed in the enclosed Information and Instructions for Obtaining an Industrial Wastewater Discharge Permit. Please submit the requested documentation within 30 days to:

Mr. Robert M. Brace
City of Downey
Engineering Div
Caller No. 7016
Downey, CA 90241

If you have any questions concerning this requirement, please contact Tom Glasner of the Sanitation Districts' Industrial Waste Section at extension 2939.

Very truly yours,

Charles W. Carry

Subject: Second Notification of Requirement to Obtain Industrial Wastewater Discharge Permit

Gentlemen:

In September, 1978, your company was sent a letter notifying you that a permit must be obtained by any company discharging industrial wastewater to the public sewers.

As yet, this office has not received any response from your company concerning this matter. The application form and required supporting information, as explained in the instruction booklet, must be submitted within 30 days of the date of this letter to the City of Downey. Enforcement actions may be implemented against your company if the application is not submitted within the stated time period.

If your application may be delayed for any reason, or if you have any questions concerning the permit application, please contact the Sanitation Districts' Industrial Waste Section at extension #261.

Very truly yours,

John D. Parkhurst

Subject: Notification of Industrial Wastewater Discharge Permit and Surcharge Requirements

Dear Sir:

According to Sanitation Districts' records, your company has not yet applied for an Industrial Wastewater Discharge Permit. The Sanitation Districts' Ordinance, adopted April 1, 1972, requires that a permit be obtained by any company discharging industrial wastewater to the Districts' sewerage system. A Surcharge Statement must also be filed annually to reimburse the Districts for the costs of treatment of your industrial wastewater. The Ordinance establishes a deadline for filing of permit applications, which was April 1, 1976.

Since the deadline has passed for submittal of a permit application by your company, continued use of the sewerage system for disposal of industrial wastewater is technically illegal, and may be subject to interruption through Districts' enforcement actions. To avoid any such enforcement actions, you are advised to complete
* the enclosed permit application as soon as possible, in accordance
** with the requirements outlined in the Wastewater Ordinance and
*** permit instruction booklet which are also enclosed. Your completed application should be submitted, along with any necessary supporting information or plans to the local agency responsible for processing industrial waste permits. In your area, the responsible agency is:

City of Downey
8425 E. Second Street
Downey, CA 90241

Attention: H.J. Henricksen

Attention: H.J. Henricksen

If you will be unable to submit your completed permit application within 30 days from the date of this letter or if you have any questions, you are urged to telephone the Industrial Waste Section of the Sanitation Districts at extension #261 so that any problems can be resolved. The information obtained through permit applications is use by the Sanitation Districts to determine the best means to maintain a clean environment at the least cost to the local community. Please help us to render this service.

Dan Mueller
City of Downey
11111 Brookshire Ave.
Downey, CA 902417016

Dear Mr. Mueller:

Amendment to Industrial Wastewater Discharge Permit No. 014882

Kirkhill Manufacturing Company
12023 Woodruff Avenue
Downey, CA 90241

Enclosed are copies of the approved Industrial Wastewater Discharge Permit Amendment for the subject company. This permit amendment was submitted in accordance with Ordinance requirements. The approved permit amendment consists of this approval letter, the Industrial Wastewater Discharge Permit Requirement list, and the Industrial Wastewater Discharge Permit Data Sheet . Please review these for compliance with your requirements, and retain the copies you require for your files. The applicant's copy of this letter, data sheet, and requirement list, should be forwarded to the applicant. A copy of this letter is forwarded to the applicant as notification of the Districts' permit requirements, which are in force from the current date. If any additional permit requirements are issued to the applicant by your agency, copies should be forwarded to the Districts for our records.

Approval of the permit amendment is subject to compliance with all applicable Ordinance requirements, and upon the items indicated on the attached requirement list. Failure to comply with all items on the requirement list, including any deadline for submittal of approvable plans, invalidates this approval and the previously issued permit. Invalidation of the permit will result in the permittee being deemed to be operating without a valid permit and subject to immediate discontinuance of sewer services for industrial operations.

If you have any questions concerning these requirements, please call Fariba Saleminik of the Districts' Industrial Waste Section at extension 2916.

Very truly yours,

David B. Whipple P.E.

## SECTION 9: *Program Requirements*

| Program Name | Status | Due Date | Approved Date | Plan Name |
|---|---|---|---|---|
| *No Programs Are Required* | | | | |

## SECTION 10: *Submissions/Completions Requirements*

| Required Submissions/Completions | Due Date |
|---|---|
| *Not Applicable* | |

Except as directed in permit requirement statements, all submissions and notifications of completions should be mailed to:

County Sanitation Districts of Los Angeles County
Industrial Waste Section
Fariba Saleminik
P.O. Box 4998
Whittier, CA 90607-4998

Permit related questions should be directed to:

Fariba Saleminik
562-908-4288 Ext. 2916
fsaleminik@lacsd.org

## SELF-MONITORING REPORTING SCHEDULE

Permittees required to submit self-monitoring reports per Section 5 of this Permit Data Sheet are subject to the following schedule:

| SELF-MONITORING REPORTING SCHEDULE[1] | | |
|---|---|---|
| **Analysis Frequency** | **Reporting Period** | **Due Date[2]** |
| Annually | July 1 - June 30 | July 15 (the following year) |
| Semi-annually | January 1 - June 30<br>July 1 - December 31 | July 15<br>January 15 |
| Quarterly | January 1 - March 31<br>April 1 - June 30<br>July 1 - September 30<br>October 1 - December 31 | April 15<br>July 15<br>October 15<br>January 15 |
| Monthly | Day 1 - Day 31 of the month | Day 15 (the following month) |

[1]The laboratory data sheet(s) for each analysis performed during the reporting period must be included with the Self - monitoring Report form. However, only the results from the most recent sample collected during the reporting period should be recorded on the Self-monitoring Report form.

[2]The Self-monitoring Report form may be submitted before the due date as long as the sample is taken during the appropriate reporting period.

## SURCHARGE TEST REQUIREMENTS

Industrial users participating in the Sanitation Districts' Surcharge Program may be subject to additional self-monitoring requirements besides those specified in the permit conditions. Surcharge testing parameters include Chemical Oxygen Demand (COD) and suspended solids (SS). For companies that file Long Form Surcharge Statements, the testing frequency for COD and SS is based on flow as shown in the table below. Surcharge wastewater analyses must adequately represent the average daily discharge to the sewer system and the results must be submitted annually with the wastewater treatment surcharge statement in accordance with each year's "Instruction for Filing a Long Form Wastewater Treatment Surcharge Statement." **Surcharge test requirements are independent of the self-monitoring report requirements**.

| SURCHARGE TESTING FREQUENCY FOR COD AND SS<br>(Must be 24-hour Composite Samples) | |
|---|---|
| **Yearly Cumulative Flow from Each Outlet (in million gallons)** | **Required Testing Frequency** |
| Less than 15.00 | 1 sample per 3 months |
| 15.01 to 40.00 | 1 sample per 2 months |
| 40.01 to 100.00 | 2 samples per month |
| 100.01 to 250.00 | 1 sample per week |
| More than 250.00 | 2 samples per week |

# INDUSTRIAL WASTEWATER DISCHARGE PERMIT REQUIREMENT LIST

The approval and issuance of this permit is being made conditionally and subject to Kirkhill Manufacturing Company being in compliance with all indicated items on this list and accompanying data sheet. Satisfactory evidence of compliance with these conditions should be supplied to the Districts where requested. Satisfactory evidence will consist of a minimum of written notification signed by a responsible company official, and in some cases may involve the submission of additional drawings and data, or verification by a Districts representative. Failure to comply with all items on the requirement list, including all deadlines specified, invalidates this approval and issuance. Invalidation of this permit will result in Kirkhill Manufacturing Company being deemed to be operating without a valid permit and subject to immediate discontinuance of sewer services for industrial operations. Per Section 401 of the Districts' Wastewater Ordinance, this permit is not transferable.

| | |
|---|---|
| **FACILITY NAME** | Kirkhill Manufacturing Company |
| **FACILITY ID** | 2024526 |
| **PERMIT NUMBER** | 014882 |
| **DATE OF APPROVAL** | March 17, 2017 |
| **DATE OF EXPIRATION** | March 20, 2019 |

**1. Approval SIU (Rev 04-15-2013)**

This Industrial Wastewater Discharge Permit is issued only for the discharge of treated wastewater from the operations listed as "outgoing" in Section 3 of the Permit Data Sheet. This Permit will expire as shown in Section 2 of the Permit Data Sheet. The permittee must submit a permit application and supporting documents to the appropriate local agency at least six months prior to the expiration date. Failure to obtain a renewed permit by the expiration date will result in the permittee being deemed to be operating without a valid permit. As such, the expired permit may be voided and a temporary permit issued.

**2. Flow limitation**

The discharger shall not discharge more than two 55-gallon drums of the cooling water / mold release during each 8-hour discharge day. The discharge will be maintain at a flowrate of approximately 1 gallon/min to limit the strength of the wastewater being discharged at any one time.

**3. Log of each discharge**

A log documenting each of the discharges shall be kept by the company and made available to Districts IW Inspectors immediately upon request. The log shall contain the following information:
Date/Time of each discharge.
Total volume or number of drums discharged on each discharge day.
Initials of operator who conducted each discharge.

**4. Local Limits (Rev 10-02-2015)**

Numerical limits have been established by the Districts for the temperature, pH, flashpoint, and maximum concentrations of heavy metals and other toxic materials permissible in an industrial discharge to the public sewers. The limits are those shown in Section 6 of the Permit Data Sheet with the designation of Local in the Regulation column. In addition, applicable state and federal limits are shown in Section 6 of the Permit Data Sheet with the respective designations of State and Federal in the Regulation column. The permittee is advised that any discharge in excess of the limits shown in Section 6 of the Permit Data Sheet requires corrective action by the discharger. Penalties applicable to violations of these limits will be strictly enforced by the Districts.

**5. SMR (Rev 07-17-2015)**

Self-monitoring of the industrial wastewater must be performed at the intervals indicated in section 5 of the Permit Data Sheet and reported on the Self-Monitoring Report (SMR) form. The Districts will send the necessary SMR forms before each reporting period. All indicated analyses must be performed by a State or Districts' certified laboratory. The certification section of the SMR form must be completed and signed by a responsible company official. For each reporting period, the completed SMR form and the corresponding laboratory report must be submitted to the Districts' Industrial Waste Section no later than the due date indicated on the form. The wastewater samples must be analyzed in accordance with 40 CFR Part 136 and must be collected in such a way that they are representative of the total discharge generated by a typical day's operations. Each representative sample (composite and/or grab) should be collected over one 24-hour period and analyzed for all parameters in Section 5. A minimum of four grab samples must be taken for cyanide, total phenols, sulfides, volatile organics, and oil and grease if the parameter is subject to federal limitations. The samples may be analyzed separately or composited in accordance with acceptable procedures prior to analysis. Compositing of these grab samples may be conducted in a laboratory prior to analysis for all parameters; alternatively, cyanide, total phenol, and sulfides samples may be composited in the field. All representative samples must be submitted and meet all applicable limits. Violations of effluent limitations must be reported to the Districts within 24 hours of the discharger becoming aware of the violation at (562) 699-7411, extension 2907. Additional sampling and analysis must be conducted for all parameters in violation. The results of the repeat analysis must be submitted within 30 days of becoming aware of the violation.

**6. Records Retention (Rev 02-14-2011)**

The permittee shall maintain records of all information resulting from any monitoring activities required by 40 CFR 403.12, including self-monitoring reports, baseline monitoring reports, and documents associated with required best Management Practices. Such records shall include for all samples:

a) The date, exact place, method, and time of sampling and the name of the person or persons taking the samples;

b) The dates analyses were performed;

c) Who performed the analyses;

d) The analytical techniques/methods used; and

e) The results of such analyses.

The permittee is required to retain for a minimum of four years any records of monitoring activities and results (whether or not such monitoring activities are required by 40 CFR 403.12) and shall make such records available for inspection and copying by the Districts. This period of retention shall be extended during the course of any unresolved litigation regarding the permittee or when requested by the Districts.

**7. Sample Point (Rev 01-01-2007)**

The permittee's legal sampling point(s) are indicated in Section 4 of the Permit Data Sheet. The permittee is responsible for maintaining and cleaning the sampling point(s) to prevent any build-up of oil and grease, sediment or sludge; failure to do so does not invalidate sampling test results. Analytical results from samples taken from the location(s) according to accepted sampling procedures shall be accepted as binding. Safe and convenient access to the sampling point(s) must be provided for representatives of the Districts. Should Districts' staff determine that the sampling locations(s) are unsafe, difficult to access or require modification, the permittee must propose alternatives which will provide sampling point(s) acceptable to the Districts. If a locked security enclosure is necessary, a Districts' padlock shall be used to secure the sampling point area. The permittee must call (562) 699-7411, extension 2907 to make arrangements for installation of the lock.

**8. Split Sample (Rev 01-01-2007)**

The Districts' personnel may provide a split of any composite sample collected if sufficient sample volume is available. Districts' personnel may also provide split, concurrent, or sequential grab samples. These samples will be left with a designated company representative. If the designee is not available, these samples will be left with whoever is available.

The permittee is required to follow appropriate preservation techniques, analytical procedures, and holding periods specified in 40 CFR 136, if the analytical test results from these samples are to be used for compliance or surcharge reporting purposes. Failure to follow the prescribed procedures will invalidate the test results.

**9. Peak flow limit**

The discharge shall be made such that it flows through the company's legal sample point (existing sample box). The discharge shall not cause the flowrate as measured at the legal sample point to exceed the existing peak flow rate limit of 6 gallons/minute.

**10. Pretreatment Maintenance (Rev 01-01-2007)**

The permittee is required to have in place a program of regular pretreatment equipment maintenance and cleaning to prevent a build-up of grit, oil, or grease or other prohibited materials which may enter the sewer and to ensure compliance at all times with applicable industrial wastewater effluent limits. The permittee should also provide trained personnel for proper operation and regular maintenance of all components of the pretreatment system and should also maintain an adequate supply of treatment chemicals as well as replacement parts for key components of the pretreatment system.

**11. Floor Drains Advisory (Rev 01-01-2007)**

All floor drains shall have grated covers with 3/8" maximum openings to prevent larger particles from clogging the sewer.

**12. Bypass Notification (Rev 02-23-2012)**

In accordance with federal regulations found at 40 CFR Part 403.17, the permittee must not bypass required pretreatment equipment unless the bypass was unavoidable to prevent loss of life, personal injury or severe property damage and there were no feasible alternatives to the bypass and the permittee notified the Districts at least 10 days prior to an anticipated bypass or within 24 hours of an unanticipated bypass. Severe property damage does not include economic loss due to production delays. Feasible alternatives include use of auxiliary treatment facilities, retention of untreated wastes or cessation of production.

The permittee shall submit oral notice of an unanticipated bypass that exceeds effluent limitations to the Districts within 24 hours from the time the permittee becomes aware of the bypass.

A written submission shall also be provided within five days of the time that the permittee becomes aware of the bypass. The written submission shall contain a description of the bypass and its cause; the duration of the bypass, including exact dates and times, and, if the bypass has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the bypass. The Districts may waive the written report on a case-by-case basis if the oral report has been received within 24 hours.

The permittee may allow any bypass to occur which does not cause Pretreatment Standards or Requirements to be violated, but only if it also is for essential maintenance (i.e. pipe or pump failures) to assure efficient operation. However, routine maintenance should be conducted during normal periods of production downtime. Notification is not required for bypasses that do not result in federal categorical violations.

The Districts will determine whether the permittee has met all bypass criteria above thus avoiding enforcement action for violation of federal regulations. However, this does not relieve a discharger of the responsibility to comply with Districts' Ordinance or effluent limitations at all times. Any repair or maintenance costs to Districts' facilities associated with any bypass of pretreatment equipment will be borne by the permittee.

**13. Pretreatment**

The discharge from each drum shall be put through a 1/8" screen mesh filter to remove any large particles or solids prior to its discharge to the sewer. Additionally the discharge shall not be made directly into the existing sample box but instead into a drain located upstream of the sample box.

**14. Rainwater, General (Rev 01-01-2007)**

The Districts' policy on rainwater and stormwater is established under the provisions of Section 305 of the Wastewater Ordinance as amended November 1, 1989. Section 305 specifies that no rainwater or stormwater shall be discharged to the Districts' sewerage system, except where prior approval has been given by the Chief Engineer. As a general practice, the Districts require roofing or regrading of all open areas with exposed drains which discharge to the public sewer. This practice protects the Districts' sewerage system from excessive hydraulic loads that can be created by unwanted rainwater and stormwater runoff. Rainwater diversion systems shall divert any rainfall in excess of 0.1 inch to the storm drain. Diverted rainwater must meet any requirements of the Regional Water Quality Control Board. Any rainwater discharge to the sewer system must be in accordance with the Districts' "Guidelines for the Discharge of Rainwater, Stormwater, Groundwater and Other Water Discharges" available at http://www.lacsd.org/info/industrial_waste/forms/default.asp.

**15. Spill Containment, General (Rev 01-01-2007)**

Any industrial user with a significant potential to discharge restricted materials, as defined in the Districts' "Slug Discharge Control and Spill Containment Policy" available at http://www.lacsd.org/info/industrial_waste/policies/slugdischarge.asp, is required to install and maintain an adequate spill containment system.

**16. Spill Containment Logbook (Rev 01-01-2007)**

If the permittee has restricted materials which must be contained in spill containment areas, the permittee is required to maintain a log book that is available to Districts' employees upon request or during inspections. Any material that enters a spill containment area must be handled as a spill, including rainwater and any process wastewater that results from "normal" operations. All materials removed from spill containment areas, whether restricted or non-restricted as defined in the Districts' "Slug Discharge Control and Spill Containment Policy" (http://www.lacsd.org/info/industrial waste/policies/slugdischarge.asp) must be included in the log book. The log book must contain the following information:

a) Date and time

b) Identity of material (an analysis is required if the spill is of unknown origin to determine the type of treatment or remediation for proper disposal)

c) Quantity (volume)

d) Cause

e) Method of disposal (includes transfer to off-site treatment system)

f) Corrective action implemented to prevent spills from reoccurring

**17. Haul Untreated Spills (Rev 01-01-2007)**

Under no circumstances shall process solution spills be discharged directly to the sewer. Unreclaimed or untreated process solution spills shall be hauled to a legal disposal site.

**18. Manually Actuated Pump (Rev 01-01-2007)**

Spills may be pumped from containment areas to pretreatment systems for treatment prior to discharge after determining their treatability and entering the information into the required log book. Pumps used for this purpose must be manually actuated and there must be no other available access to the sewer.

**19. Slug Discharge Control Plan Adv (Rev 04-15-2013)**
Upon request by the Districts, the permittee may be required to develop a Slug Discharge Control Plan which complies with the Districts' "Slug Discharge Control and Spill Containment Policy" (available at http://www.lacsd.org/wastewater/industrial_waste/iwpolicies/slugdischarge.asp) and includes, at a minimum, the following elements:

a) Description of discharge practices, including non-routine batch discharges (non-routine batch discharges are not allowed unless specified as an approved discharge in the permit);

b) Description of stored chemicals;

c) Procedures for immediately notifying the Districts of slug discharges, including any discharge that would violate a prohibition under 40 CFR 403.5(b), with procedures for follow-up written notification within five days;

d) Procedures to prevent adverse impact from accidental spills, including inspection and maintenance of storage areas, handling and transfer of materials, loading operations, control of plant site run-off, worker training, building of containment structures or equipment, measures for containing toxic organic pollutants (including solvents), and/or measures and equipment for emergency response;

e) This plan must be maintained at the discharge location and must be made available for review by Districts' personnel upon request.

**20. Slug Discharge Modification Adv (Rev 04-15-2013)**
The permittee is required to immediately notify the Districts if modifications from the approved discharge practices are expected that may affect the potential for a slug discharge. Slug discharges are any discharges of a non-routine, episodic nature, including but not limited to an accidental spill or a non-customary batch discharge, which has a reasonable potential to cause Interference or Pass Through, or in any other way violates regulations for the Districts' treatment plants or sewer collection system.

**21. Penalties (Rev 01-01-2007)**

Every person or permittee violating any provision of this Industrial Wastewater Discharge Permit (permit) or the Districts' *Wastewater Ordinance* (*Ordinance*) is guilty of a misdemeanor, and upon conviction is punishable as provided by law (California Health & Safety Code Section 4766 currently allows for a fine not to exceed $1,000, or imprisonment for not more than thirty days, or both. Misdemeanor violations of California Health & Safety Code Section 25189.5 currently allow for a fine not to exceed $100,000 and imprisonment not to exceed one year. Misdemeanor violations of the Clean Water Act, 33 USC 1319(c) currently allow for a fine not to exceed $25,000 and imprisonment not to exceed one year). Each day during which any violation continues shall constitute a separate offense. The Chief Engineer is authorized to seek, through the office of the District Attorney of Los Angeles County or other appropriated authority, prosecution of criminal charges against any person violating any provision of the permit or the *Ordinance*. Violations of discharge limitations established under this permit or the *Ordinance* may also be violations of state and federal environmental laws which may be punishable as felonies and which may also carry substantial fines and penalties (California Health & Safety Code 25189-5 currently allows for a fine not to exceed $100,000 (except the fine can be up to $250,000 for great bodily injury or substantial probability of death) and imprisonment up to three years and 33 USC Section 1319(c) currently allows for a fine not to exceed $1,000,000 for a first conviction and imprisonment of up to 15 years).

In addition, any person or permittee who violates any provision of the *Ordinance* or any term or condition of any permit issued pursuant to the *Ordinance* or plan approval that prohibits or limits the discharge of any waste or imposes any pretreatment requirement shall be civilly liable to the Districts in the maximum sum provided by law for each day in which such violation occurs (California Government Code Section 54740 currently allows for civil penalties which include, but are not limited to, a fine of up to $25,000 per day of violation).

**22. Additional Pretreatment Advisory (Rev 01-01-2007)**

The permittee is advised that additional industrial wastewater pretreatment equipment or other measures may be required if inspection or monitoring indicates prohibited materials are discharged. If such measures include installation of new pretreatment equipment, plans and necessary documentation for such added equipment must be submitted to the local permit agency and the Districts for approval prior to construction.

**23. Prohibited Discharge Notification (Rev 01-01-2007)**

In the event of the discharge of any prohibited waste, excessive quantities or concentrations of any restricted waste, or of the discharge of material not covered under this permit, the company must immediately notify the Districts by calling (562) 699-7411, extension 2907, during office hours or the Long Beach Pumping Plant, (562) 437-6520, during non-office hours.

The Districts must also be notified of any circumstances affecting plant processes or facility operations that may potentially result in the discharge of similarly prohibited or restricted wastes, including but not limited to the malfunction, upset or improper operation of plant processes, pretreatment systems, spill containment facilities, or diversion/bypass mechanisms. Failure to immediately notify the Districts of any such event or condition is a violation of the Wastewater Ordinance.

**24. Surcharge Testing (Rev 01-01-2007)**

If the permittee is required or chooses to file a Long Form Surcharge Statement, surcharge tests of the industrial wastewater must be performed at the intervals indicated on Table A of the Long Form Surcharge Statement booklet and submitted annually with the wastewater treatment surcharge statement. The company is reminded that the surcharge testing requirements are independent of the test for self-monitoring reports required in Section 5 of the Permit Data Sheet. For further information on surcharge testing requirements, please contact the Districts' Surcharge group at (562) 699-7411, extension 2600.

**25. Capacity Unit Increase Advisory (Rev 01-01-2007)**
If the wastewater flow rate and strength data indicate an increase in the sewerage capacity unit usage by 25% or more, the permittee may be required to revise its permit, and will be required to pay a corresponding connection fee should existing sewerage baseline capacity units be insufficient to accommodate discharge at that time.

**26. Status Change Notification (Rev 01-01-2007)**
The permittee is required to notify the Districts of any change in the status of the subject facility, if ownership or operating responsibility changes, or if the industrial waste connection is legally abandoned.

**27. 25 Percent Change - Rev Req (Rev 07-01-2011)**
A new permit application must be submitted when there is a significant change in wastewater quantity (more than 25 percent) or quality from that given in the approved permit information. The completed application must be submitted to the local governmental agency for initial processing prior to Districts' review. Approval must be obtained prior to any construction of new facilities.

**28. Waste Hauler Reports (Rev 01-01-2007)**
Waste hauler reports must be obtained and kept on file for a period of at least four years for any solid wastes from the wastewater pretreatment system and liquid wastes leaving the plant other than in the sewer system. These reports must be made available to representatives of the Districts upon request.

**29. Equipment Changes (Rev 01-01-2007)**
Engineering drawings for changes in equipment or processes must be submitted to the Districts through the local agency for approval before implementation.

## REQUEST FOR INFORMATION
## UNDER THE *COMMUNITY RIGHT-TO-KNOW* LAWS

The Emergency Planning & Community Right-to-Know Act (EPCRA), also known as Title III of the Superfund Amendments and Reauthorization Act (SARA), was signed into law on October 17, 1986 by Congress as national legislation on community safety. This law is designed to help local communities protect public health, safety, and the environment from chemical hazards.

The public has a right to know the chemical/hazardous materials information disclosed to the City of Downey Fire Department under the provisions of Title III of the Superfund Amendment and Reauthorization Act (SARA) of 1986, Chapter 6.95 of the California Health and Safety Code, and Title 27 of the California Code of Regulations.

To request information, please complete the *Information Request Form*, and contact:

Downey Fire Department
Hazardous Materials Section
11111 Brookshire Avenue
Downey, California 90241
(562) 904-7345

Please note the following conditions when requesting information:

1. A fee is assessed for request to access disclosure records. A **fee of $20.00 for the 1st request, and $10.00 for each additional request** will be assessed.
2. A separate request form is required for each facility
3. **Photo Identification Is Required Before Any Information Will Be Released.**
4. **Information indicating locations of hazardous materials storage/handling will NOT be released**
5. Information that is protected under the Privacy Act (i.e. home telephones) **will not** be released
6. Information that has been designated by the facility as a **trade secret**, requires additional time and procedures. The Hazardous Materials Section will advise you of these additional procedures.
7. If information requested is not available, you will be notified in writing.

## HAZARDOUS MATERIALS RECORDS REQUEST

The City of Downey Fire Department maintains records of the hazardous materials handled at regulated businesses within the community. Under Federal and State Law, Californians have the right to access this public information as to be informed of the chemical hazards in their community.

To request hazardous materials information, please *legibly* complete this form and submit to:

Downey Fire Department
Hazardous Materials Section
11111 Brookshire Avenue
Downey, California 90241
cityclerk@downeyca.org

Please note the following conditions when requesting information:

- A fee of $20.00 is assessed for the first requested addressed location, $10.00 for EACH additional location
- Records request are address specific. Please provide CORRECT address for EACH location. An application with a range of addresses will **NOT** be processed
- Information specifying the precise location of where hazardous materials are stored or handled, including site maps, will **NOT** be released per State Law [CA HSC 25509(b)]
- Information that is protected under the Privacy Act (i.e. home telephones) will **NOT** be released
- Information that has been designated by the facility as a **Trade Secret**, requires additional time and procedures The Fire Department's Hazardous Materials Section will advise you of these additional procedures

| Attachments: | 12023 woodruff NOV Feb. 2015.pdf; 12021 Woodruff Ave - Cal Pipe Hazmat Inventory CERS 2013.pdf; 12021 Woodruff Ave - Cal Pipe HM Release Jan 2013.pdf; 12021 Woodruff Ave - Cal Pipe HM-Fire Inspection 2013.pdf; 12023 Woodruff - Kirkhill Hazmat Inventory CERS 2018.pdf |

Good day Ms. Lehnus,

A records search was undertaken for 12021 and 12023 Woodruff Ave. properties as to determine the site's history as it relates to the handling of hazardous materials subject to EPCRA reporting, the operation of underground storage tanks (USTs), and historical record of hazardous material releases and code violations.

Downey Fire's records indicate that 12023 Woodruff Ave., and the former 12021 Woodruff Ave., were locations handling reportable quantities of hazardous materials. These business operations established and filed the required hazardous materials business plans (HMBP) with the Fire Department in accordance with State Law. Please see attachments for further details.

Neither of the referenced locations have a history of UST operations. The only documented hazardous substances releases were for the former Cal Pipe Industries at 12021 Woodruff Ave. The release (petroleum hydrocarbon oil) was observed during a fire inspection on Jan. 29, 2013 (see attached photographs). The release and associated fire code violations were satisfactorily abated.

The most recent fire-hazmat code compliance inspection at the Kirkhill Manufacturing plant (12023 Woodruff) took place on 2/19/15. All documented violations were satisfactorily abated and facility return-to-compliance on 6/17/15.

Sincerely,

Lee Kirby
HazMat Specialist/Fire Prevention Officer

February 19, 2015

John Doma
Chief Operating Officer
Kirkhill
12023 Woodruff Avenue
Downey, CA 90241

Re: **Fire-Life Safety & Hazardous Materials Inspection – Kirkhill, 12023 Woodruff Ave., Downey, CA**

Dear Mr. Doma:

Thank you for taking time out of your schedule to accompanying the Downey Fire Department on the safety inspection of Kirkhill Manufacturing. Again, the Downey Fire Department greatly appreciates the efforts Kirkhill has initiated to review, improve, and maintain its regulatory compliance and corporate safety.

As per the inspection of February 18, 2015, the following deficiencies were observed. Please undertake the necessary corrective action to satisfactorily abate these violations.

1. **Water-based Fire Protection Systems Maintenance** – water-based fire protection systems shall be inspected, tested and maintained in accordance with NFPA 25 (*Please ensure a sprinkler map is developed and posted with signs affixed to risers indicating zones they serve, provide signs to FDC, provide hydraulic calculation plates to sprinkler riser; cease placing covers to sprinkler heads in press area of south side of production floor).*
   Reference: NFPA 25, California Edition; California Code of Regulations Title 19

2. **Fire Protection Equipment Identification** - Fire protection equipment shall be identified in an *approved* manner. *Approved* signs required to identify fire protection equipment and equipment location shall be constructed of durable materials, permanently installed and readily visible (p*rovide required signage to identify sprinkler riser locations and areas (zones) in which they serve; provide fire protection equipment location and zone map to Downey FD)*
   Reference: California Fire Code § 509.1

3. **Electronic Submission of Hazardous Materials Business Plan –** handlers of hazardous materials shall electronically submit its business plan to the statewide information management system (CERS) for handling of substances in excess of 55 gallons of liquid; 500 pounds of solid; or 200 cubic feet of gas (*Electronically submit a business plan for the handling of reportable quantities of hazardous materials i.e. waste oil, process oil, rubber materials, compressed gases, etc.*)
   Reference: California Health & Safety Code § 25505 (a)(C); 25508 (a) (1)

4. **Means of Egress Obstructions** – maintain access to and exit discharge from man-door exits (emergency exits) on south side of plant (*cease placing equipment in exit discharge; maintain egress pathway free of obstructions*)
   Reference: California Fire Code § 1030.2

5. **Outside Combustible Storage** - Outside storage of combustible materials shall not be located within 10 feet of a property line (Exceptions: The separation distance is allowed to be reduced to 3 feet for storage not exceeding 6 feet in height) [*Cease storing rubber crumb and wood pallets along property lines; provide proper clearance to neighboring properties]*.
   Reference: California Fire Code § 315.3

6. **Hazard identification/Container Identification -** visible hazard identification signs as specified in NFPA 704 for the specific material contained shall be placed on stationary containers (i.e. drums, above-ground tanks) tanks and at entrances to locations where hazardous materials are stored, dispensed, used or handled in quantities requiring a permit (*provide approved labels/identification signs (NFPA) placard at north entrance; provide HMIS or other approved labels to drum and tote bins; provide labels to waste oil drums as necessary).*
   Reference: California Fire Code § 5003.5

7. **Empty containers Identification -** empty containers (i.e. drums, pails, tote bins) previously used for the storage of hazardous materials shall be free from residual material and vapor; and be properly stored as to be identified as empty (*provide sign/labels for empty drums and storage area*).
   Reference: California Fire Code § 5003.2.5

8. **High-piled storage height limits** – storage of combustible materials shall not exceed 12 feet in height; if height of storage to exceed 12 feet, high-pile storage permit shall be obtained from City of Downey Building & Safety Department.
   Reference: California Fire Code, Chp. 32

9. **Fire safety/Evacuation Plans -** Fire safety /evacuation plans shall be provided and posted in conspicuous locations as to include (but not limited) to the following:
   - Occupancy assembly point
   - Locations of fire protection equipment (i.e. fire sprinkler risers, portable extinguishers, pull stations, etc.)
   - Fire department vehicle access
   - Exits
   - Primary evacuation routes
   - Secondary evacuation routes
   - Accessible egress routes

   Reference: California Fire Code § 404.3.2

10. **Obstruction of Fire Apparatus Access -** Fire apparatus access roads shall not be obstructed in any manner. The minimum widths and clearances of 20 – 26 feet wide shall be provided and maintained throughout the exterior of the entire complex (*cease storage of equipment, materials in fire access lanes; provide fire access around entire building*)
    Reference: California Fire Code § 503.4; D103.6.1

11. **Obstruction of Fire Apparatus Access -** Fire apparatus access roads shall not be obstructed in any manner. The minimum widths and clearances of 20 – 26 feet wide shall be provided and maintained throughout the exterior of the entire complex (*cease storage of equipment, materials in fire access lanes; provide fire access around entire building*)
    Reference: California Fire Code § 503.4; D103.6.1

12. **Fire Lane (access road) Marking –** post *approved* signs or other *approved* markings that include the words NO PARKING—FIRE LANE shall be provided for fire apparatus access roads to identify such roads or prohibit the obstruction thereof (*provide marking identifying fire lanes as to designate area that is to remain clear of any obstructions; and allow access to facility by fire apparatus*. *Signs shall read NO PARKING-FIRE LANE and shall be posted on one or both sides of the fire apparatus road. See sample images below*)
    Reference: California Fire Code § 503.3; D103.6

13. **Securing Compressed Gas Containers/Cylinders -** *Compressed gas* containers, cylinders and tanks shall be secured to prevent falling caused by contact, vibration or seismic activity (*provide additional means to properly secure Acetylene gas cylinders*)
    Reference: California Fire Code § 5303.5.3

14. **Abatement of Electrical Hazards.** Identified electrical hazards shall be abated [*provide breaker blanks to north (new operational area of former CalPipe) warehouse*].
    Reference: California Fire Code § 605.1

15. **Address Identification -** Existing buildings shall have *approved* address numbers, placed in a position that is plainly legible and visible from the street or road fronting the property (*remove additional, non-used address numerals from building exterior; building shall now be recognized by single approved address number of 12023 Woodruff Ave*.)

    Reference: California Fire Code § 505.1

Please ensure the Fire and Health & Safety Code violations listed in this report are satisfactorily abated by **March 30, 2015.** If further information or assistance is needed, feel free to call me at (562) 904-7348.

Sincerely,
**DOWNEY FIRE DEPARTMENT**

Lee Kirby
Hazardous Materials Specialist-Fire Inspector

**SUBJECT:** **HAZARDOUS MATERIALS RE-INSPECTION / RETURN TO COMPLIANCE**
**CalConduit – 12021 Woodruff Ave., Downey, CA**

Pursuant to the re-inspection of your facility by the Downey Fire Department on March 25, 2013, it has been determined that the required corrective action has been satisfactorily completed with the areas inspected free of any condition that presents an immediate fire-life safety and/or environmental hazard. Further, the business was determined to be in compliance with the requirements of the Hazardous Materials Business Plan Program as outlined in Chapter 6.95 of the California Health & Safety Code.

Nothing in the above shall be construed as indicating approval of the integrity of the building, nor shall it preclude the requirements of any other agency. If there are any questions, please feel free to call me at (562) 904-7348.

Downey, CA 90241

Subject: **Hazardous Materials Inspection – CalPipe Industries, 12021 Woodruff Ave., Downey, CA**

Dear Mr. Keller:

Members of the Downey Fire Department conducted a hazardous materials inspection at the above-referenced location this day. The following fire code violations were observed and require the necessary corrective action.

1. Hazardous Materials Disclosure Update – California Health & Safety Code requires a business, which handles hazardous materials, to annually review and certify their hazardous materials inventory; and the business shall review and certify all documents within their Hazardous Material Business Plan (HMBP) [**create a CERS account at cers.calepa.ca.gov and electronically submit HMBP and chemical inventory. Provide required updated site map for change in chemical storage and handling**]
   Reference: California H&S Code, Section 25505(d)

2. Container Identification Labeling/Signs - Containers, drums, above-ground tanks or other packages of hazardous materials shall be clearly identified or labeled in accordance with nationally recognized standards as to container's contents (**provide approved hazardous materials / NFPA 704 signage to Stoddard solvent dip tank**)
   Reference: California Fire Code, Section 2703.5

3. Abatement of Electrical Hazards - Electrical wiring, devices, appliances and other equipment which are modified or damaged and constitute and electrical shock or fire hazard shall not be used (**cease hanging of clothes and/or other items on electrical breaker boxes in packing-shipping area**)
   Reference: California Fire Code, Section 605.1

4. Electrical Wiring and Equipment - Areas where flammable liquids are stored, handled or dispensed, shall be equipped in the appropriate classification of wiring and equipment, in accordance with the Electrical Code and otherwise required by Article 79 (**cease storing flammable solvents adjacent to electrical panel in machining area**)
   Reference: California Fire Code, Section 1503.2.1

5. Unauthorized Releases / Housekeeping - Flammable and combustible liquids and petroleum waste products shall not be discharged or released upon the ground. Immediate action shall be taken to control leakage and prevent accidental escape of flammable or combustible liquids (**abate oil releases to shop floor around machinery throughout facility**)
   Reference: California Fire Code, Section 2703.3; 1504.5

6. Separation from Incompatible Materials - Incompatible materials shall be separated by a distance of not less than 20 feet (**cease storing oxidizers and flammables together. Compressed Oxygen (oxidizer) was observed stored with flammable Acetylene**)
   Reference: California Fire Code, Section 2703.9.8

7. Bonding of Vessels - Vessels used for mixing or dispensing of flammable liquids shall be electrically connected by bond wires, piping or similar means where differences of potential could be created by the accumulation of static electricity charges [**where flammable liquids are being dispensed from drums (i.e. Stoddard solvent, lacquer thinner) provide approved bond-grounding of these containers**]
   Reference: California Fire Code, Section 2304.3.2

A re-inspection will be conducted on, or after **March 4, 2013** to ensure the necessary corrective action has been completed. If further assistance is needed, feel free to call (562) 904-7345.

Sincerely,

**DOWNEY FIRE DEPARTMENT**

Lee Kirby
Hazardous Materials Specialist

## Submittal Status

Submitted on 3/25/2013 by *Scott Keller* of CAL PIPE INDUSTRIES (DOWNEY, CA)
Submittal was ***Accepted***; Processed on 7/30/2013 by *LAWRENCE SCHUSTER* for Los Angeles County Fire Department
Comments by regulator: An initial review of your submission has been accepted for completeness of required forms; however, the accuracy of your submission will be verified by your inspector at a future date.

If you have any questions please contact the Data Operations Unit at (323)890-4000.

## Hazardous Materials

| | |
|---|---|
| Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70? | **Yes** |

## Underground Storage Tank(s) (UST)

| | |
|---|---|
| Does your facility own or operate underground storage tanks? | **No** |

## Hazardous Waste

| | |
|---|---|
| Is your facility a Hazardous Waste Generator? | **Yes** |
| Does your facility treat hazardous waste on-site? | **No** |
| Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)? | **No** |
| Does your facility consolidate hazardous waste generated at a remote site? | **No** |
| Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site? | **No** |
| Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste. | **No** |
| Is your facility a Household Hazardous Waste (HHW) Collection site? | **No** |

## Excluded and/or Exempted Materials

| | |
|---|---|
| Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)? | **No** |
| Does your facility own or operate ASTs above these thresholds? Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers. | **No** |
| Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)? | **No** |

| Subject: | 12021 & 12023 Woodruff- HAZMAT Records Request |
| Attachments: | 12023 woodruff NOV Feb 2015.pdf; 12023 Woodruff - Kirkhill Hazmat Inventory CERS 2018.pdf; 12021 Woodruff Ave - Cal Pipe HM-Fire Inspection 2013.pdf; 12021 Woodruff Ave - Cal Pipe HM Release Jan 2013.pdf; 12021 Woodruff Ave - Cal Pipe Hazmat Inventory CERS 2013.pdf |

Good afternoon Ms. Thomas,

A records search was undertaken for 12021 and 12023 Woodruff Ave. properties as to determine the site's history as it relates to the handling of hazardous materials subject to EPCRA reporting, the operation of underground storage tanks (USTs), and historical record of hazardous material releases and code violations.

Downey Fire's records indicate that 12023 Woodruff Ave., and the former 12021 Woodruff Ave., were locations handling reportable quantities of hazardous materials. These business operations established and filed the required hazardous materials business plans (HMBP) with the Fire Department in accordance with State Law. Please see attachments for further details.

Neither of the referenced locations have a history of UST operations. The only documented hazardous substances releases were for the former Cal Pipe Industries at 12021 Woodruff Ave. The release (petroleum hydrocarbon oil) was observed during a fire inspection on Jan. 29, 2013 (see attached photographs). The release and associated fire code violations were satisfactorily abated.

The most recent fire-hazmat code compliance inspection at the Kirkhill Manufacturing plant (12023 Woodruff) took place on 2/19/15. All documented violations were satisfactorily abated and facility return-to-compliance on 6/17/15.

Should you have any questions, please feel free to contact myself or Hazmat Specialist, Lee Kirby.

Sincerely,

Charitye Cunningham
Fire Prevention Technician

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

# PERMIT to OPERATE

METRO ZONE – 434 South San Pedro Street, Los Angeles, California 90013

M 01892

SECTOR CB

Operation under this permit must be conducted in compliance with all information included with the initial application and the initial permit conditions. The equipment must be properly maintained and kept in good operating condition at all times. In accordance with Rule 206, this Permit to Operate or copy must be posted on or within 8 meters of equipment.

LEGAL OWNER OR OPERATOR: **KIRKHILL INC.**

Appl. No. C-04694
PREVIOUS PERMIT NO. P-1206

EQUIPMENT LOCATED AT: 12021 **WOODRUFF AVENUE**
**DOWNEY, CALIFORNIA**

EQUIPMENT DESCRIPTION AND CONDITIONS:

**AIR POLLUTION CONTROL SYSTEM CONSISTING OF:**

1. **BAGHOUSE,NATIONAL CORNICE WORKS, WITH 160 FILTER BAGS, EACH 8" DIA. X 4'-7" L., 1,220 SQ. FT. TOTAL FILTER AREA, WITH A 1½ H.P. SHAKER.**
2. **EXHAUST SYSTEM, WITH A 10 H.P. BLOWER VENTING FOUR RUBBER MILLS.**

**-CONDITIONS-**

1. **A MECHANICAL GAUGE MUST BE INSTALLED AND MAINTAINED SO AS TO INDICATE, IN INCHES WATER COLUMN, THE STATIC PRESSURE DIFFERENTIAL ACROSS THE BAGS.**
2. **DUST COLLECTED IN THE BAGHOUSE MUST BE DISCHARGED ONLY INTO CLOSED CONTAINERS.**

FILE COPY

This initial permit must be renewed by 10/5/78 or an earlier date if equipment is moved, altered, or changes ownership. If billing for annual renewal fee (Rule 301.f) not received by expiration date, contact Zone office above.

This permit does not authorize the emission of air contaminants in excess of those allowed by Division 26 of the Health and Safety Code of the State of California or the Rules of the Air Quality Management District. This permit cannot be considered as permission to violate existing laws, ordinances, regulations or statutes of other government agencies.

County of Los Angeles
P.O. Box 1460
Alhambra, California 91802-1460

Attn: Mr. Pat Proano

Reference: (a) TPE Revised Workplan for Confirmation Boring dated April 21, 1992

(b) UST Local Oversight Program Review Sheet dated May 12, 1992

**Subject:** **FINAL CONFIRMATION BORINGS REPORT**
**Kirkhill, Inc.**
**12021 Woodruff Avenue**
**Downey, California 90241**
**(File No. I-12987-1F)**

Dear Mr. Proano:

Pursuant to Tank Protect Engineering's ("TPE's") revised workplan and your review sheet referenced above, TPE conducted the final confirmation borings, soil sampling and analyses between July 7 and July 24, 1992.

In accordance with the workplan, a total of 12 samples from two 30-foot soil borings were collected and analyzed for total recoverable petroleum hydrocarbons (TRPH) using EPA Method 418.1, for benzene, toluene, xylenes and ethylbenzene (BTXE) using EPA Method 8020, and for polynuclear aromatic hydrocarbons (PAHs) using EPA Method 8100. The soil samples indicated TRPH concentrations ranging from non-detectable (<10 parts per million (ppm)) to 91 ppm, and non-detectable (ND) levels of BTXE (<0.001 ppm) and PAHs (<0.005 ppm).

In addition to the soil sample analyses, a liquid sample of Edgiflex-200® (source liquid) provided by Kirkhill, Inc. was analyzed for aromatic compounds (BTXE) using EPA Method 8020 and for PAHs using EPA Method 8100. The source liquid samples indicated non-detectable levels of targeted compounds. According to the reasoning provided by the analytical laboratory (refer to Appendix A), the lowest detection limits that could be achieved without sacrificing the accuracy of the method for analyzing Edgiflex-200 was 1 ppm for BTXE and 50 ppm for PAHs. The analytical laboratory also indicated that the compound has a carbon range which will match the diesel or heavier range.

Engr. Contr. Lic.#
489994

An inquiry to the supplier and manufacturer of Edgiflex-200 to better define the chemical composition of the compound revealed the following:

"Edgiflex-200 general use oil was a blend of two oils each carefully refined from segregated, single source, virgin crude. The Edgiflex series oils were considered specialty products by Edgington. Edgiflex-200 was not, nor did it contain, reused petroleum oils or substances thought to be 'toxic'. Its boiling range was typically 550°F to above 900°F. This boiling range effectively excludes BTXE compounds.

"The flash point of Edgiflex-200 is well over 300°F, making the product safe at ambient and most elevated temperatures."

According to the president of Kirkhill, Inc., Mr. Gary Riopelle, "Edgiflex-200 was used by Kirkhill and other rubber manufacturers in the compounding of gaskets and washers for use with potable water in industry and homes."

No aromatics (BTXE) or PAHs were detected either in the soil samples collected at the site or in the source liquid that warrants a toxicologic risk assessment. Therefore, risk assessment to determine the acute or chronic toxic affects could not be performed for the site.

The UST under question was used to store Edgiflex-200. According to the MSDS sheet of the stored product, the common name is Naphthenic-type oil, generic name is Naphthenic distillate, chemical name is Petroleum Distillate, chemical family name is Petroleum Hydrocarbon and DOT proper shipping name is Petroleum Distillate. The product ingredients are a complex mixture of naphthenic, paraffinic and aromatic petroleum hydrocarbons.

In the past correspondence regarding the project, Los Angeles County Department of Public Works, Waste Management Division, UST Local Oversight Program (the County) expressed or implied that Edgiflex-200 contained naphthalene. Due to typographical errors made by TPE in past reports, TPE referenced 'naphthalene'. However, it is clarified that based on the available information on the compound, Edgiflex-200 contained **no** naphthalene.

The maximum TRPH detected and left in-place near the underground storage tank (UST) in question to date are 852 ppm at a depth of 15 feet below ground surface. Assuming that the Edgiflex-200 contained hydrocarbons in the range of diesel or heavier, and according to the leaching potential analysis conducted for the site (please refer to TPE reports dated June 5, 1990, April 15, 1991 and October 30, 1991), a total of 1,000 ppm of diesel could be left in-place. Therefore, it is requested that the County allow Kirkhill to leave the maximum detected 852 ppm of TRPH detected in a soil sample at 15 feet below ground surface (BGS) be left-in place and the site file be closed.

Following are the details on the field procedures and findings of the site assessment.

## DRILLING AND SOIL SAMPLING

Per the revised workplan and the County approved sampling locations, on July 14, 1992, TPE supervised drilling two 30-foot depth borings near the former Edgiflex-200 (naphthenic-type oil) UST using a mobile B-53 drill rig. Please refer to Figure 1 for the sampling locations.

As described in the workplan, soil samples were properly collected at five-foot intervals starting from five feet below ground surface (BGS) until the termination depth. Based on the field indications such as visual observations and field screening instrument (Flame Ionization Detector (FID)) readings, evidence of contamination was not observed. Therefore, drilling and sampling past 30 feet BGS in each boring was discontinued. Bore logs prepared for the site based on the soil sample description are provided in Appendix B.

According to the workplan, soil samples were collected using 2.5-inch-diameter by 3-inch-long brass tubes mounted within a Californian split-spoon sampler used in advance of the augers. Prior to sampling, all brass tubes were washed in an aqueous solution of Alconox detergent, rinsed with tap water, and then triple rinsed with distilled water. After sample recovery, the lowermost brass ring from each sample interval was immediately end-wrapped with aluminum foil, polyethylene caps taped over the ends, labeled, placed into an ice chest chilled using frozen blue ice, and relinquished to Redi Express, Rancho Cucamonga, CA, a courier service, to transportation to Applied P & Ch Laboratory (APCL), Pomona, CA, a State-certified laboratory. All the samples were logged and accompanied by a chain-of-custody record form.

A portable flame-ionization detector (FID) calibrated against hexane was used on the soil samples contained within the sampler at each sampling interval within the boring to monitor the volatile organic compounds (VOCs).

The sampling equipment was decontaminated prior to and between each sampling. The drilling augers were environmentally cleaned before the drilling process.

The soil cuttings generated during drilling were placed and sealed in four 17H DOT-approved 55-gallon drums. Based on the analytical results of the soil samples, it is determined that the soil cuttings could be disposed of by handling as a non-hazardous material.

## SAMPLE ANALYSES

According to the County review sheet on the workplan and a telephone conversation with Mr. Ofari Amoah on July 15, 1992, all twelve soil samples collected from the two borings were analyzed for TRPH using EPA Method 418.1. All samples with detectable TRPH were analyzed for BTXE using EPA Method 8020. One soil sample from each boring with highest TRPH was analyzed for PAHs using EPA Method 8100. In addition, a sample of the source liquid (Edgiflex-200) supplied by Kirkhill, Inc. was analyzed for BTXE and PAHs using EPA Method 8100. A summary of the analytical results is provided in Table 1. Copies of detailed analytical result reports and chain-of-custody record are provided in Appendix C. Per Mr. Amoah's request, a copy of the SDOHS certification on the methods to be performed at APCL are also provided in Appendix C.

TABLE 1: SUMMARY OF SAMPLE (COLLECTED ON 7/14/92) ANALYSES

| SAMPLE # | TRPH (mg/kg) | BTXE ug/kg | PAHs ug/kg |
|---|---|---|---|
| FB-1/5' | 13 | ND | ND |
| FB-1/10' | ND | - | - |
| FB-1/15' | 17 | ND | - |
| FB-1/20' | ND | - | - |
| FB-1/25' | 21 | ND | - |
| FB-1/30' | 25 | ND | ND |
| FB-2/5' | ND | - | - |
| FB-2/10' | 13 | ND | - |
| FB-2/15' | ND | - | - |
| FB-2/20' | 21 | ND | - |
| FB-2/25' | 91 | ND | ND |
| FB-2/30' | ND | - | - |
| Edgiflex-200* | - | ND* | ND* |
| DETECTION LIMIT | 10 | 1 | 50 |

* = Measurements are in mg/L. ND = Not detected - = Not analyzed

As shown in the table, the soil samples indicated TRPH concentrations in the range of ND (< 10 ppm) and 91 ppm. None of the samples indicated detectable levels of either BTXE or PAHs.

## RISK ASSESSMENT

As proposed in the revised workplan, a full-scale risk assessment for the subject site could not be conducted, as there were no detectable levels of suspected toxic chemicals in the subsurface soil or the source liquid (Edgiflex-200). However, based on the previously conducted leaching potential analysis, it is TPE's opinion that the maximum concentration of 852 ppm TRPH previously discovered in the previous investigation at the site could be left in-place.

## NOTIFICATION PROCEDURES

Upon obtaining the County review sheet on the TPE revised workplan, Kirkhill, Inc. authorized TPE to proceed with the plan in first week of July to implement the plan. Per the requirement, TPE notified Mr. Dave Lobato at (818) 458-4374 on the site assessment on July 8, 1992.

## SITE HEALTH AND SAFETY PLAN

The health and safety plan prepared for the site was implemented during the site assessment. Air monitoring near the drilling operations did not warrant level "C" personnel protection. Therefore the assess-

ment was conducted under level "D" protection. A statement on the health and safety plan implementation and compliance from the site personnel is provided in Appendix D.

## CLOSURE

It is TPE's opinion that the information provided in this report and in the previous site assessment conducted at the site adequately defines the problem and there is no imminent threat to environment or human health based on the compounds discovered near the location of the site under investigation. Therefore, it is requested that the County allow the maximum detected 852 ppm of TRPH be left in-place and to close the subject site file.

## LIMITATIONS

This report should be used solely for its intended purpose and within the limitations of our scope of work. Prior to use for other than its intended purpose or beyond the limitations described herein, sufficient and thorough studies should be performed to confirm the findings presented in this report.

Changes in conditions at a property can occur with the passage of time whether they be due to acts of man or natural causes. Due to increased knowledge, concerning hazardous materials, and subsequent code alterations by legislative or regulatory agencies, standards concerning the presence of hazardous material on the site could change.

If you have any questions and/or need further information, regarding this matter, please feel free to contact the undersigned.

Respectfully submitted,

Re: Laboratory Analyses

Dear Mr. Pendurthi:

Our analysis for your sample EDGIFLEX-200 from Kirkhill, Inc. indicates that the sample is diesel fuel or a type of lubrication oil. The sample is a mixture of organics (hydrocarbons) which mask the presence of polynuclear aromatic hydrocarbons (PAH). As a result, it cannot be concentrated to achieve a lower detection limit and, in fact, has to be diluted in order to get the response to your sample into the operating range of the GC. Consequently, we have 50ppm of MDL for your sample EDGIFLEX-200.

Sincerely,

George Zhou, Ph.D.
Service Manager
Applied P & Ch Laboratory

Dear Mr. Ballenger:

**UST LOCAL OVERSIGHT PROGRAM REVIEW SHEET**
**CLOSURE PERMIT NO. 5999B**
**LOCATION: 12021 WOODRUFF AVENUE, DOWNEY**

The proposal to drill additional borings has been reviewed and approved. Borings must be drilled to 30 feet at the locations shown in the attached plot plan. If contamination is encountered at 30 feet borings must be drilled to five and 15 feet below the last detected contamination. Analyze all soil samples collected at every five feet using a State certified laboratory. Using the highest levels of total recoverable petroleum hydrocarbons by EPA 418.1 Method, analyze for naphthalene using EPA methods 8100 and 8020. As discussed at the meeting of April 6, 1992 based on the highest levels of contamination prepare a health-based risk assessment report demonstrating that the contaminants left in place will not cause a threat to human health and/or groundwater.

Use all necessary precautions and comply with all NIOSH requirements of Health and Safety for the protection of all personnel during the drilling operations.

Submit a Site Assessment Report and Risk Assessment Report on/before July 30, 1992.

Notify Dave Lobato at (818) 458-4374 a minimum of 72 hours prior to commencing any significant investigation, remediation, or assessment activities on site. The Los Angeles County Department of Public Works may disregard the work performed if the County was not properly notified.

Correspondence should be submitted in duplicate to the Los Angeles County Department of Public Works, UST Local Oversight Program, Annex Building, P. O. Box 1460, Alhambra, CA 91802-1460.

If you have any questions regarding this matter, please contact Ofori Amoah at (818) 458-3573.

Very truly yours,

T. A. TIDEMANSON

Mr. Ray Ballenger
Kirkhill, Inc.
P.O. Box 7012
Downey, CA 90241-0030

Dear Mr. Ballenger:

**UST LOCAL OVERSIGHT PROGRAM REVIEW SHEET**
**SITE ASSESSMENT PROPOSAL**
**PREPARED BY: TANK PROTECT ENGINEERING**
**REPORT DATE: FEBRUARY 5, 1992**
**CLOSURE PERMIT NOS. 5999B AND 6000B**
**LOCATION: 12021 WOODRUFF AVENUE, DOWNEY**

The proposal to drill one boring has not been approved for the following reasons:

> The boring will not define the lateral extent of the contamination. A boring is required to the north, south, and east of the previous borings designated as CB-10 and CB-11. A boring also needs to be drilled adjacent to the previously drilled boring CB-9 to investigate the soil at 35 feet if it is believed that no contamination exists at this depth.

Submit the revised Site Assessment Proposal to this office by May 14, 1992.

Notify Dave Lobato at (818) 458-4374 a minimum of 72 hours prior to commencing any significant investigation, remediation, or assessment activities on site. The Los Angeles County Department of Public Works may disregard the work performed if the County was not properly notified.

Correspondence should be submitted in duplicate to the Los Angeles County Department of Public Works, UST Local Oversight Program, Annex Building, P. O. Box 1460, Alhambra, CA 91802-1460.

If you have any questions regarding this matter, please contact Scott Small at (818) 458-3996.

FINAL
UST
CLOSURE

Mr. Gary A. Riopelle
President and C. E. O.
Kirkhill, Inc.
P. O. Box 7012
Downey, CA 90241-0030

Dear Mr. Riopelle:

**HAZARDOUS MATERIALS UNDERGROUND STORAGE**
**SITE ASSESSMENT/REMEDIAL ACTION PLAN CLOSURE CERTIFICATION**
**FACILITY LOCATION: 12021 WOODRUFF AVENUE, DOWNEY**
**CLOSURE PERMIT NUMBER: 5999B**

This office has reviewed the final report submitted on August 5, 1992. Based on the information submitted, this letter confirms the completion of site investigation and remedial action at the above site. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is our position that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at this site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings or site usage.

Any questions regarding this matter should be directed to Ofori Amoah at (818) 458-3573.

Very truly yours,

T. A. TIDEMANSON

## Thomas, Margaret

From: Mike Kilroy <mkilroy@kirkhillrubber.com>
Sent: Sunday, September 16, 2018 3:34 PM
To: Thomas, Margaret
Subject: Re: Additional Historical UST Records

Hello Margaret

Unfortunately I have NO records other then what we supplied all ready.

My information is all 2nd or 3rd hand from that period.

My understanding was that everything was closed and signed off on.

Regards

Mike

> Hello Mike,
>
> I am reviewing the closure information for the historical USTs and notice on the No Further Action (NFA) letter dated August 6, 1992, that it references only one of the two closure permit numbers (5999B for the three removed USTs). Attached is the NFA letter and one other letter showing both permit numbers for quick reference. Do you know if the County issued just one NFA letter to cover all four USTs ? Also, would you have a copy of the very last final report that is referenced in the NFA letter that was submitted August 5, 1992 ? Thank you for any additional information you can provide.

**Subject:** RE: Additional Historical UST Records

Hello Mike,

I have another question about the volume in gallons of the interior aboveground storage tanks (ASTs) in the manufacturing area including:

1) 77606 Raffene Oil (gray colored);
2) white AST next to the first one – I though it may be empty;
3) 77614 Sunpar 2280 oil; and

4) Hynap N100 Oil near #3 along south side of the building.

Thank you for your time in obtaining this information. If you don't have the exact size in gallons, would you be able to give me an approximate capacity of each one.

Thank you again.

Respectfully,

Margaret R. Thomas

Hello Margaret

Attached are the recent manifests, including one for oily debris/solids (sludge/grease) – This is what was in the 8 drums – we usually accumulate 25-30 before disposing.

Regards

Hello Mike,

Question, would you be able to email me the most recent hazardous waste manifest(s) to show what types and amounts of hazardous waste were transported off site most recently. Also, my photos show about (8) 55-gallon drums on the exterior west side of the building labeled hazardous waste that says non RCRA hazardous waste solid. What is that material, as my notes did not include a description – thank you.

Thank you for your time and information.

Hello Margaret

Unfortunately I have NO records other then what we supplied all ready.

My information is all 2nd or 3rd hand from that period.

My understanding was that everything was closed and signed off on.

Regards

Mike

**PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT**

INDUSTRIAL BUILDINGS
12021-12023 WOODRUFF AVENUE
DOWNEY, CALIFORNIA 90241

## 1.0 SUMMARY

Based on a review of regulatory records, historical site information, and a visual inspection of the subject property and surrounding area, this assessment has revealed no *recognized environmental conditions* or *historical recognized environmental conditions* in connection with the Property, except as follows:

1) According to the records of the State of California Regional Water Quality Control Board (RWQCB), in March 1990, the subject property reported an unauthorized release of diesel fuel from a leaking underground storage tank. The tank and the impacted soil was removed from the site, and the file was closed in August 1992;

2) An inspection of the subject property determined there were visible stains of oil on the paved surface and on the exterior wall near the aboveground process oil storage tank on the south side of the building. In addition, water-soluble oil was observed on the paved surface near the cooling system in the open area near the center of the building; and

3) In addition, three offsite locations have been identified as potential risks or threats to the subject property. According to the data, the sites are not located in the near vicinity, and there is no indication that contaminants from these sites have migrated onto the subject property.

Based on the results of this assessment, it is recommended samples be obtained in the area of the process oil storage tank and in the area of the water-soluble oil cooling system, to determine if the soil has been impacted from the spilled materials. In addition, the company needs to institute better housekeeping procedures to prevent spilled materials in the outdoor storage areas from being washed into the local stormwater runoff system.

## 2.0 INTRODUCTION

### 2.1 Purpose

The purpose of this Phase I Environmental Site Assessment is to determine if any *recognized environmental conditions* or *historical recognized environmental conditions* exist on or near the subject property. As defined by the ASTM Standard, a *recognized environmental condition* is the presence or likely presence of any hazardous substances or petroleum products on a property

under conditions that indicate an existing release, a past release, or a material threat of a release into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The ASTM Standard defines a *historical recognized environmental condition* as a condition which in the past would have been considered a *recognized environmental condition*, but which may or may not be considered a *recognized environmental condition* currently. If a past release of any hazardous substance or petroleum products has occurred in connection with the property and has been remediated, with such remediation accepted by the responsible regulatory agency, this condition shall be considered a *historical recognized environmental condition.*

## 2.2 Detailed Scope of Services

This report is based on a preliminary study into the past and current uses of the subject property and the surrounding area. The report includes a visual inspection of the property and adjacent sites, and a review of regulatory agency records, aerial photographs, and other historic record sources. Also included in this report are maps, diagrams, and photographs pertaining to this site.

## 2.3 Significant Assumptions

The information in this report is furnished in good faith and was obtained from sources and databases considered to be reliable; however, nothing in this report should be construed as a promise or guarantee that the subject property is free of environmental hazards. In many instances, this report relies on regulatory database information provided by federal, state and local governmental agencies. Although the database information used in this report consists of the most recently released records, it may not reflect the actual current status of the case.

## 2.4 Limitations and Exceptions

This report was prepared in conformance to meet or exceed the scope and practice as set forth by the American Society for Testing & Materials (ASTM) Standard Practice E 1527-00, "Standard Practice of Environmental Site Assessments: Phase I Environmental Site Assessment Process." No tests were conducted, and no samples of air, water, soil or building materials were taken.

2.5 Special Terms and Conditions

No special terms or conditions have been incorporated into the preparation of this report. There were also no limiting physical conditions such as rain or lack of electrical power, that had a limiting effect on the site inspection.

2.6 User Reliance

This report is prepared for the express use of the client, and its contents are considered to be privileged and confidential. Acceptance of this report constitutes an agreement by the client to assume full liability for information contained herein. This report is for the sole use and interpretation of the client, and it is not be reproduced or distributed to outside parties.

## 3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property, 12021-12023 Woodruff Avenue, Downey, California, is located on the west side of Woodruff Avenue, north of Washburn Road. The property is described as Los Angeles County Tax Assessor's Parcel Number (APN) 6284-025-018.

3.2 Site and Vicinity General Characteristics

The site consists of a large, single-story industrial building, with paved parking and storage areas, located in a light industrial area of Downey, California (see site plan). The site and surrounding area are fairly level, and the subject property is connected to the municipal water and sewage systems.

3.3 Current Use of Property

The subject property is currently occupied by Kong Pet Toys, a distributor of chewable pet toys, and the Kirkhill Manufacturing Company, a manufacturer of rubber products.

3.4 Descriptions of Structures, Roads, Other Improvements On Site

In the center of the subject property is a large industrial building, which is divided into offices, a manufacturing area, warehouses and storage areas. On the north, west, and south sides of the site are paved parking and storage areas.

3.5 Current Uses of the Adjoining Properties

North of the subject property is a multi-tenant industrial building. To the east is Woodruff Avenue, and further east is a multi-tenant industrial building. South of the subject property are several smaller industrial buildings. To the west are several smaller industrial buildings.

## 4.0 USER PROVIDED INFORMATION

4.1 Title Records

No recorded land title records were provided by the client for review.

4.2 Environmental Liens or Activity and Use Limitations

The client has not provided any information concerning environmental liens or activity and use limitations.

4.3 Specialized Knowledge

No specialized knowledge of *recognized environmental conditions* or *historical recognized environmental conditions* in connection with the subject property has been provided by the client.

4.4 Valuation Reduction for Environmental Issues

No information has been provided which indicates the subject property is being sold or purchased at a significantly reduced price due to outstanding environmental issues.

4.5 Owner, Property Manager, and Occupant Information

Information provided by the owner, property manager, and/or occupants of the site are included in this report under Section 7.0, Interviews.

4.6 Reasons for Performing Phase I Environmental Site Assessment

The reasons for performing this Phase I Environmental Site Assessment is to satisfy commercial real estate lending requirements, or provide due diligence information concerning the historical uses and current condition of the site.

4.7 Other User Provided Information

No other information concerning the subject property has been provided by the client.

## 5.0 RECORDS REVIEW

5.1 Standard Environmental Records Sources

### FEDERAL AGENCY RECORDS

**United States Environmental Protection Agency (USEPA)**
**National Priorities List**

The National Priorities List (NPL) identifies abandoned or uncontrolled hazardous waste sites which have been identified as possibly representing a long-term threat to the public health or environment. These sites have been identified as being highly contaminated with hazardous substances and represent the USEPA's target enforcement and cleanup efforts. Studies of individual sites are conducted by the USEPA to determine level of contamination, and the sites are then compared and ranked to other sites on the NPL.

*A review of the USEPA National Priorities List dated May 2005 indicates there are no proposed or final sites within one mile of the subject property.*

**United States Environmental Protection Agency (USEPA)**
**Federal Superfund Liens List**

The USEPA maintains a list of Superfund Lien sites that have been issued on properties throughout the United States. These sites have been remediated through the expenditures of Superfund monies; the purpose of the lien is to prevent the property owner from gaining a financial benefit from the federal government's cleanup and restoration activities.

*A review of the July 1993 Federal Superfund List revealed there are no Superfund Liens on or adjacent to the site.*

**United States Environmental Protection Agency (USEPA)**
**Comprehensive Environmental Response, Compensation**
**and Liability Information System (CERCLIS)**

The USEPA has developed a database known as CERCLIS which contains information on potential hazardous waste sites located throughout the United States. There are over 33,000 sites

on the CERCLIS inventory. All sites are subjected to a preliminary assessment and thereafter are either placed on the National Priority List (NPL) or are placed in a category for those sites requiring no further Federal Superfund action.

*A review of the May 2005 CERCLIS report indicates there is one CERCLIS site within a ½ mile radius of the subject property:*

Boeing North American, Inc. (#1 on map)
12214 Lakewood Boulevard
Downey, CA 90242

According to the records, this site was discovered in November 1998, and no further remedial action has been reported for this site.

*There are no listed "No Further Remedial Action Planned" (NFRAP) sites on or adjacent to the subject property.*

**United States Environmental Protection Agency (USEPA)**
**Resource Conservation and Recovery Act (RCRA)**
**Treatment, Storage or Disposal Facilities (TSDF)**

The USEPA maintains a list of facilities which have been authorized to receive hazardous waste. These facilities have permits to treat, store, or dispose of the waste, as determined by the RCRA regulations. In addition, the USEPA publishes a list of those facilities who are subject to a corrective action, based on the facilities waste handling and storage procedures. The facilities which are subject to a corrective action are identified as CORRACTS sites.

*A review of the November 2004 RCRA TSDF list determined there are no CORRACTS facilities within a one mile radius of the subject property. In addition, there are no non-CORRACTS TSD facilities listed within a one mile radius.*

**United States Environmental Protection Agency (USEPA)**
**Resource Conservation and Recovery Act (RCRA)**
**Hazardous Waste Generators**

The USEPA maintains a list of facilities which are identified as generators of large and small quantities of hazardous waste. These facilities have permits to generate, store and dispose of the waste, as determined by the RCRA regulations.

*A review of the November 2004 RCRA Hazardous Waste Generators list determined the subject*

*property (Kirkhill Inc., 12021 Woodruff Avenue) is identified as small quantity hazardous waste generator. According to the records, there are small quantity hazardous waste generators identified on the adjacent properties to the east (Fuji Photo Film USA Inc., 12010 Woodruff Avenue, Suite A) and to the west (Classic Graphix, 9459 Washburn Road and Stud Welding Products Inc., 9455 Washburn Road).*

**United States Environmental Protection Agency (USEPA)**
**Office of Emergency and Remedial Response**
**Emergency Response Notification System (ERNS)**

The USEPA maintains a list of locations which have reported a release of oil or hazardous substances to the federal government. Most of the data in this system is based on information that was received during the initial notification.

*A review of the ERNS list for 1999 determined there are no reported incidents on the subject property.*

**United States Department of Transportation**
**United States Coast Guard**
**National Response Center (NRC)**

The NRC is the national point of contact for reporting all oil, chemical, radiological, biological and etiological discharges into the environment anywhere in the United States and its territories. In addition to gathering and distributing spill data for Federal On-Scene Coordinators and serving as the communications and operations center for the National Response Team, the NRC maintains agreements with a variety of federal entities to make additional notifications regarding incidents meeting established trigger criteria.

*A review of the NRC list for 2004 determined there are no reported incidents on the subject property.*

## STATE AGENCY RECORDS

**State of California**
**Environmental Protection Agency (CAL-EPA)**
**Department of Toxic Substances Control (DTSC)**

CAL-EPA is responsible for the regulation and enforcement of environmental health laws within the state of California, as set forth by the California Health and Safety Code. CAL-EPA is also designated by the USEPA to assist in enforcing federal environmental laws. CAL-EPA regulates

companies involved in the generation, transportation, storage and disposal of hazardous substances. CAL-EPA records include the "CalSites" database, which is a listing of 7,800 known active, inactive and abandoned hazardous waste sites. These sites have previously been reported in the Abandoned Site Program Information System (ASPIS), Bond Expenditure Plan (BEP), and Cortese databases. CAL-EPA records also include an October 1990 listing of registered underground tanks and the California Integrated Waste Management Board's "Active" and "Closed and Inactive" landfills database.

*A review of the June 2005 CAL-EPA records determined there is one listed "CalSite" facility within one mile of the subject property:*

NASA Industrial Plant - Kaiser (#1 on map)
12214 Lakewood Boulevard
Downey, CA 90241

The business has completed a Voluntary Cleanup Program with DTSC.

*There are historical records of a registered underground storage tank on the subject property (Kirkhill Inc., 12021 Woodruff Avenue) and on the adjacent property to the east (Darnell Corp., 12000 Woodruff Avenue). There are also historical and current records of a registered underground storage tank on the adjacent property to the north (Inco Express Inc., 11941 Woodruff Avenue). In addition, there is one landfill site listed within a ½ mile radius of the subject property:*

Downey Dump (#2 on map)
9612 Ardine Street
Downey, CA 90241

This site is identified as a closed, solid waste disposal site.

**State of California**
**Water Resources Control Board**
**Regional Water Quality Control Board (RWQCB)**

The RWQCB is responsible for monitoring the quality and flow of the groundwater, and compiles lists of known leaking underground storage tanks. In addition, the RWQCB addresses other potential threats to the groundwater from surface spills and leaks. The RWQCB monitors the contamination problem, the investigation and any remedial action.

*A review of the May 2005 leaking underground storage tank records of the RWQCB determined*

*the subject property is not currently listed as the source of a known leaking storage tank. In March 1990, the subject property reported an unauthorized release of diesel fuel from a leaking underground storage tank. The tank and the impacted soil was removed from the site, and the file was closed in August 1992. According to the records, there is one known leaking underground tank site within a ½ mile radius of the subject property:*

Calsan, Inc. (#3 on map)
9821 Downey & Norwalk Road
Downey, CA 90241

This site was first reported in September 2000. According to the records, a leak is suspected at the site, and the responsible party is conducting an inspection of the tanks and plumbing system to verify the existence of a leak.

*The subject property or adjacent sites were not identified on the RWQCB Spills, Leaks, Investigations and Cleanups (SLIC) list.*

5.2 Additional Environmental Sources

**State of California**
**Department of Conservation**
**Division of Mines and Geology (CDMG)**

The CDMG conducts studies, publishes maps, and provides information concerning the geological formations throughout the state of California. CDMG research information is combined with information from the United States Geological Survey and the ensuing geologic maps of the state are prepared. These geologic maps also illustrate the approximate locations of known earthquake faults.

*A review of the area map published by CDMG indicates the geologic area surrounding the subject property consists of Recent alluvium, which includes alluvial fan, flood-plain, and streambed deposits. The client may wish to refer to the enclosed geologic map.*

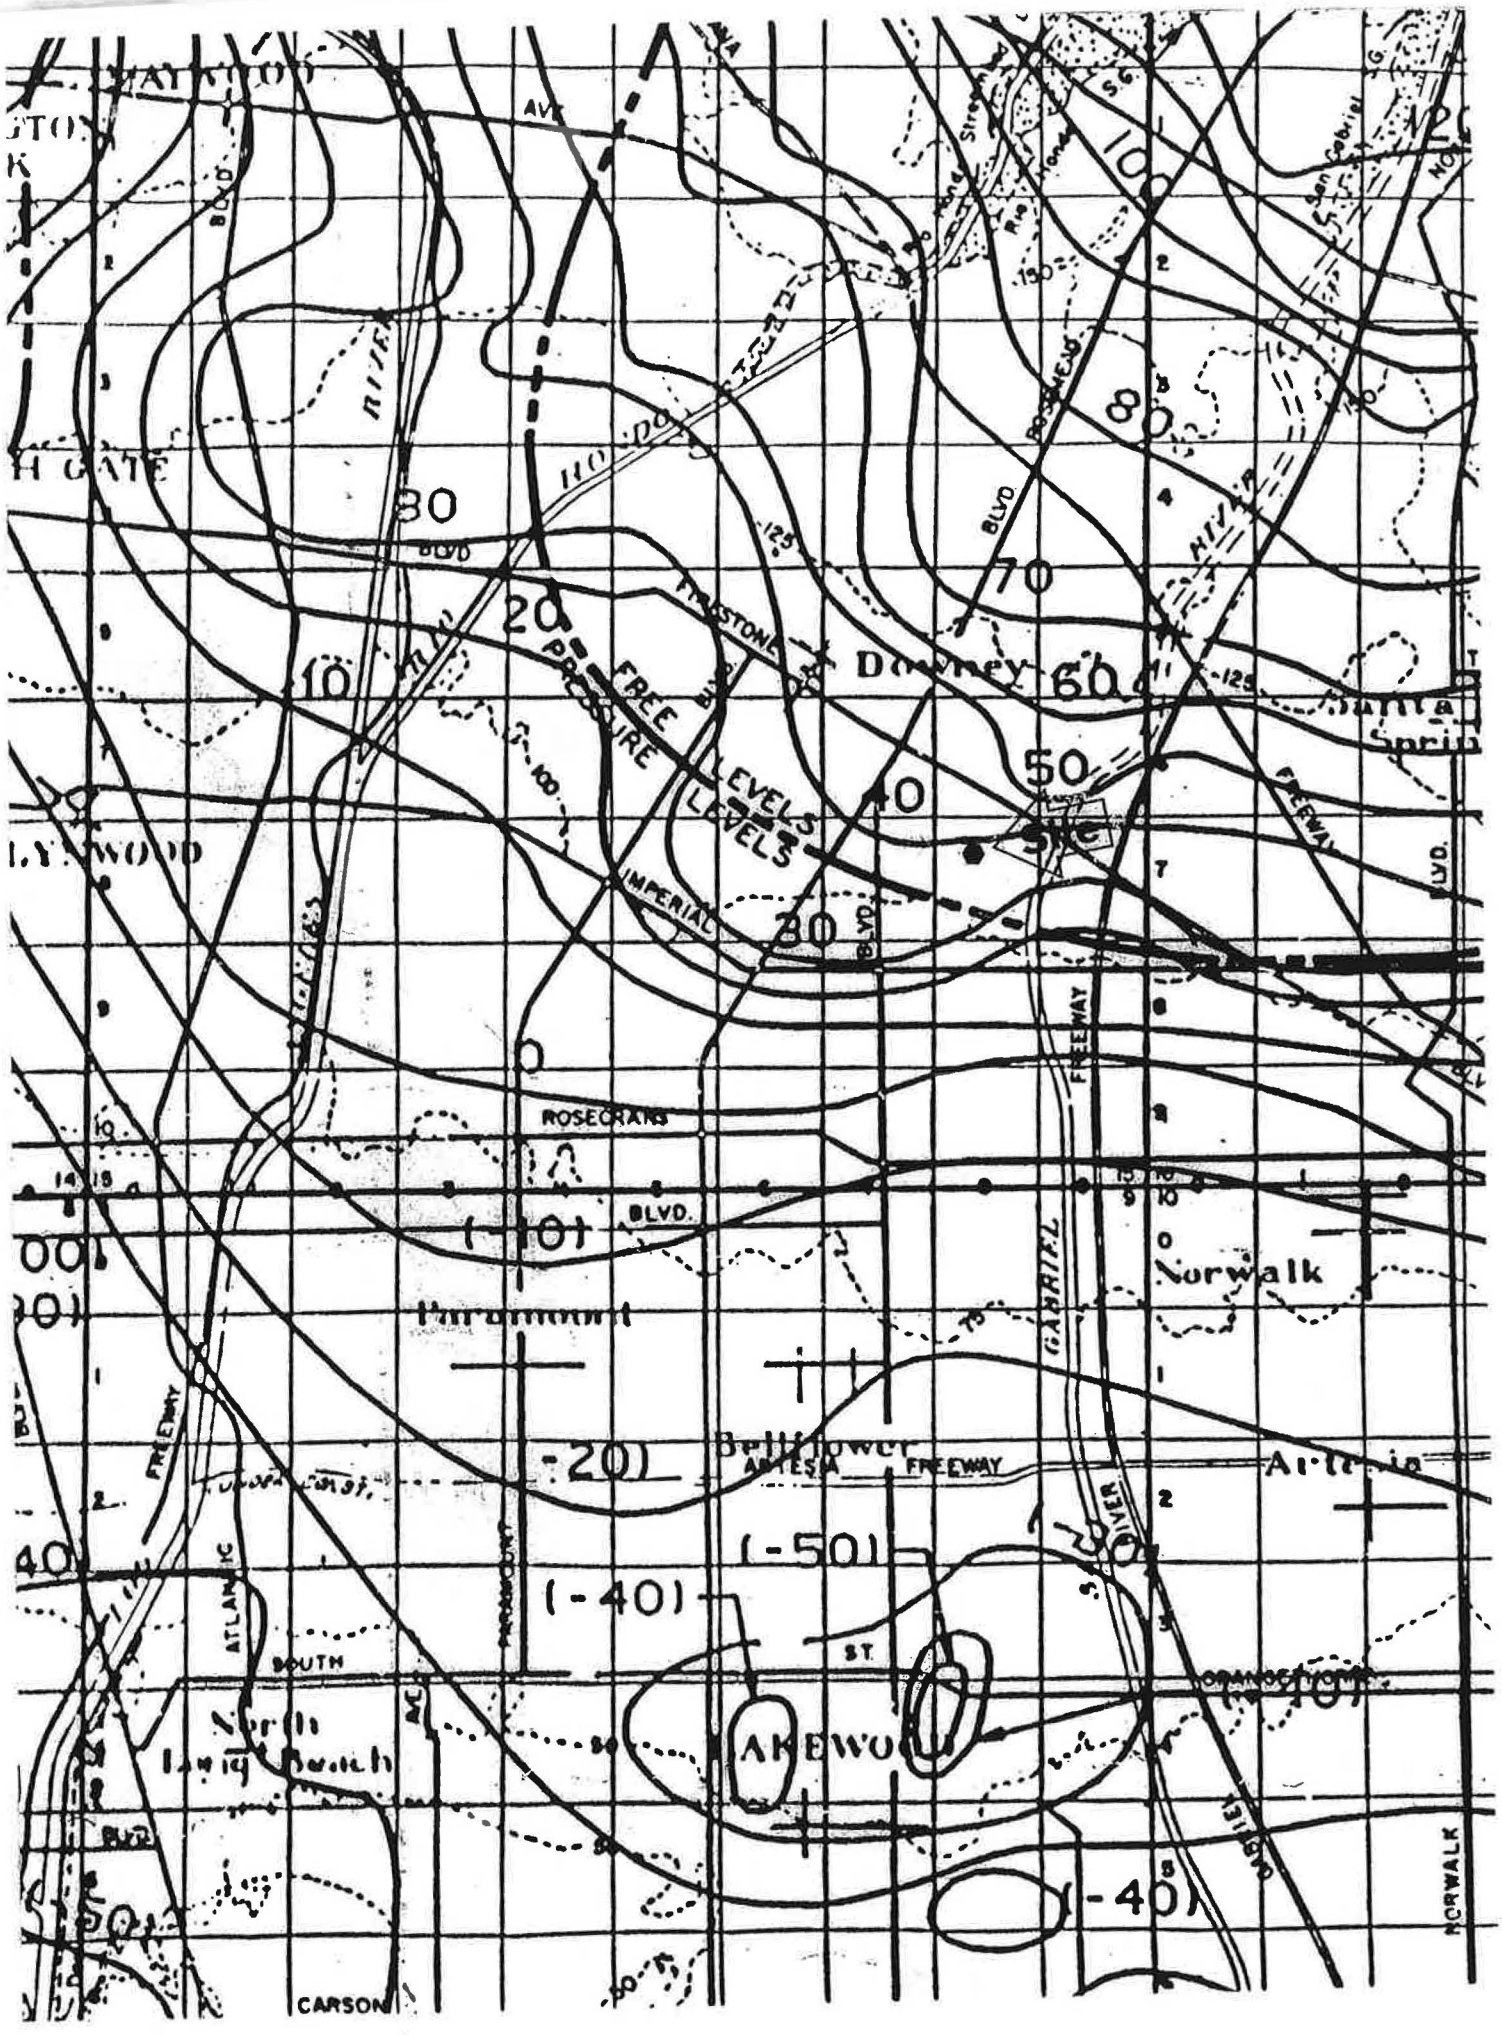
**State of California**
**Department of Conservation**
**Division of Oil and Gas (CDOG)**

The CDOG regulates the drilling, operation and abandonment of gas and oil wells throughout the state of California. If an active, idle or abandoned well is located on or adjacent to a proposed construction site, CDOG requires a site plan review prior to issuing a building permit.

Abandoned oil wells must meet standards established in 1984.

*A review of the area map published by CDOG indicates there are no producing, idle or abandoned oil wells on or adjacent to the subject property. The client may wish to review the enclosed map.*

**South Coast Air Quality**
**Management District (AQMD)**



The AQMD is responsible for the development and enforcement of regulations concerning air emissions and airborne hazards from stationary sources in the South Coast Air Basin. AQMD maintains a "Hot Spot" list of facilities whose air emissions pose as a risk to the surrounding community.

*A review of the AQMD records determined there are no "Hot Spot" facilities on or adjacent to the subject property.*

**Los Angeles County**
**Fire Department (LACOFD)**
**Health Hazardous Materials Division**

LACOFD maintains inspection and inventory records of companies involved in the storage and use of hazardous materials, petrochemicals, or hazardous waste. LACOFD attempts to maintain a current record of the types of hazardous substances that are utilized or stored at a particular site, and conducts periodic inspections for safety and compliance. In addition, LACOFD maintains records concerning hazardous material sites in Los Angeles County, which are reported to LACOFD by various regulatory agencies. Upon receiving the report, LACOFD monitors the cleanup process on the contaminated site.

*According to the LACOFD files, the subject property (Kirkhill Inc., 12021 Woodruff Avenue) is identified as a hazardous material handler. There are records of a hazardous waste generator and hazardous waste handler on the adjacent property to the north (Storopack Inc., 12007 South Woodruff Avenue). The records also identified a registered underground storage tank and hazardous material handler on the adjacent property to the north (Inco Express, Inc., 11941 Woodruff Avenue). A review of the Active Mitigation Complaint Control Logs determined there are no listed sites on or adjacent to the subject property.*

**Los Angeles County**
**Department of Public Works**
**Waste Management Division (DPW/WMD)**

DPW/WMD maintains maps showing the locations of active, inactive or future solid waste landfill sites in Los Angeles County.

*A review of DPW's major waste systems map determined there are no active, inactive or future landfill sites within a ½ mile radius of the subject property.*

**Los Angeles County**
**Department of Public Works**
**Hydraulic/Water Conservation Division (DPW/HWC)**

DPW/HWC maintains contour maps and data of the groundwater levels in the Los Angeles County area. The map shows the depth to the aquifer, as well as the approximate flow direction.

*A review of this data revealed the site is located at an elevation of approximately 100 feet above sea level. According to well data, the groundwater level in the area is approximately 40 feet above sea level, or about 60 feet below the ground surface. The groundwater contour lines in the area of the subject property indicate the groundwater flows in a southerly direction. The client may wish to review the enclosed map.*

**Los Angeles County**
**Department of Public Works**
**Underground Tank Division (DPW/UGT)**

DPW/UGT maintains records and permits on businesses which store hazardous materials in underground tanks, and issues permits to remove abandoned underground tanks.

*A review of the DPW/UGT records determined an underground tank was removed from the subject property (Kirkhill Rubber Inc., 12021 South Woodruff Avenue) and on the adjacent property to the north (Inco Express Inc., 11941 South Woodruff Avenue).*

5.3 Physical Setting Sources

A United States Geological Survey (USGS) 7.5 Minute Topographical map of the subject property and surrounding area is included in the appendices of the report. The map shows the locations of the identified offsite environmental risks or threats described in the report.

5.4 Historical Use Information on the Property

**City of Downey**
**Division of Building and Safety**

A review of the building records for the subject property revealed the following:

| Date | Activity | Owner |
|---|---|---|
| | 12021 Woodruff Avenue | |
| 2/55 | Building addition | Kirkhill, Inc. |
| 2/56 | Building addition | Kirkhill, Inc. |

No other building or demolition permits were on file for the subject property.

**Historical Aerial Photographs**

A review of historical aerial photographs of the subject property determined the following information:

| Date of Photo | Description |
|---|---|
| May 1938 | The subject property is vacant, agricultural land, with no visible buildings or structures on the site. |
| October 1953 | A large industrial building is now on the subject property. The west side of the site is vacant land. |
| February 1963 | The subject property appears to be about the same as the 1953 photograph. |
| October 1972 | A large industrial building is on the subject property. A paved storage yard is on the west side of the site. |
| March 1980 | The existing industrial building and storage areas are now on the subject property. |
| August 1989 | The subject property appears to be about the same as the 1980 photograph. |
| May 1994 | The existing industrial building and storage areas are on the subject property. |
| June 2002 | The subject property appears to be about the same as the 1994 photograph. |

**Historic Sanborn Fire Insurance Maps**

Sanborn Fire Insurance Maps provide information on commercial and industrial properties, based on risk data gathered for the fire insurance companies. The maps show the number of buildings located on the property, and the type of construction. The maps also describe the various businesses located nearby, and show the locations of tanks, boilers, and other potential hazards.

*A review of the Sanborn Fire Insurance Map collections from 1867-1970, did not locate any maps for the subject property.*

A review of building permit records and historical aerial photographs determined an industrial building was originally constructed on the site over 50 years ago, and expanded into its existing size in the 1960s. The subject property was part of a large agricultural field in the 1930s.

5.5 Historical Use Information on the Adjoining Properties

**Historical Aerial Photographs**

A review of historical aerial photographs of the adjoining properties determined the following information:

| Date of Photo | Description |
|---|---|
| May 1938 | The area surrounding the subject property is vacant agricultural land, with no visible buildings or structures. To the east is Woodruff Avenue. |
| October 1953 | North and west of the subject property is vacant agricultural land. To the east is Woodruff Avenue, and further east is a parking lot. To the south are two industrial buildings and vacant land. |
| February 1963 | North of the subject property is vacant agricultural land. To the east is Woodruff Avenue, and further east is a parking lot. South of the subject property are three industrial buildings and vacant land. To the west are three industrial buildings. |
| October 1972 | North of the subject property is vacant agricultural land. To the east is Woodruff Avenue, and further east is a parking lot. South of the subject property are four industrial buildings. To the west are three industrial buildings. |
| March 1980 | North of the subject property is an industrial building and vacant land. To the east is Woodruff Avenue, and further east is vacant land. South of the subject property are four industrial buildings. To the west are three industrial buildings. |
| August 1989 | North of the subject property are two industrial buildings. To the east is Woodruff Avenue, and further east is an industrial building. South of the subject property are four industrial buildings. To the west are three industrial buildings. |
| May 1994 | The area surrounding the subject property appears to be about the same as the 1989 photograph. |

| Date of Photo | Description |
|---|---|
| June 2002 | North of the subject property are two industrial buildings. To the east is Woodruff Avenue, and further east is an industrial building. South of the subject property are four industrial buildings. To the west are three industrial buildings. |

**Historic Sanborn Fire Insurance Maps**

Sanborn Fire Insurance Maps provide information on commercial and industrial properties, based on risk data gathered for the fire insurance companies. The maps show the number of buildings located on the property, and the type of construction. The maps also describe the various businesses located nearby, and show the locations of tanks, boilers, and other potential hazards.

*A review of the Sanborn Fire Insurance Map collections from 1867-1970, did not locate any maps for the area surrounding the subject property.*

A review of historical aerial photographs and Sanborn fire insurance maps determined the industrial buildings to the north were constructed about 20-25 years ago. The industrial building east of Woodruff Avenue was constructed about 20-25 years ago. The industrial buildings to the south were constructed 30-50 years ago. The industrial buildings west of the subject property were constructed 40-45 years ago. The area surrounding the subject property was vacant agricultural land in the 1930s.

## 6.0 SITE RECONNAISSANCE

### 6.1 Methodology and Limiting Conditions

The site reconnaissance consisted of a walk through the entire property, and visually observing the structures, storage areas, and parking lots. No inspection was conducted under floors, above ceilings, or behind walls.

### 6.2 General Site Setting

The site consists of a large, single-story industrial building, with paved parking and storage areas, located in a light industrial area of Downey, California (see site plan). The site and surrounding area are fairly level, and the subject property is connected to the municipal water and sewage systems.

6.3 Subject Property Observations

On August 1, 2005, an inspection of the site and surrounding area was conducted by Registered Environmental Assessor Jack Orswell. The single-story, concrete block industrial building (see photo #1) is divided into two areas, and described as follows:

12021 Woodruff Avenue

The north side of the industrial building is occupied by Kong Pet Toys, a distributor of chewable pet toys. Inside, on the east side of the building, are the business and sales offices. The office ceilings are covered with suspended-grid acoustical tile or sprayed with a white acoustical materials, which is painted and in good condition. The office floors are carpeted or covered with vinyl or terrazzo tile. An additional office area, which is currently vacant and empty, is located on the east side of the building. This area was previously occupied by a temporary employment services agency. The heating, ventilation and cooling (HVAC) system appears to be mounted on the roof of the building.

On the west side of the building is the packaging and warehouse area (see photos #2 and #3). The warehouse has an open wood beam ceiling, and an exposed concrete floor. The company packages and distributes chewable pet toys, and no manufacturing activities take place on the site. No large quantities of hazardous materials were observed being stored or used inside the building, and no hazardous wastes are generated from the business operations.

12023 Woodruff Avenue

The south side of the industrial building is occupied by the Kirkhill Manufacturing Company, a manufacturer of rubber products and gaskets. Inside, in the southeast corner, are the business and sales offices (see photo #4). The office ceilings are covered with suspended-grid acoustical tile, and the floors are covered with vinyl tile. The heating, ventilation and cooling (HVAC) system appears to be mounted on the roof of the building.

Along the southern side of the building is the manufacturing area and a warehouse for materials and finished goods (see photos #5 and #6). The company uses process oil and mixes the material with rubber, various additives and color pigments to blend the product material. The material is then placed into a pressurized mold, and the final product is formed. Liquid nitrogen stored in portable tanks (see photo #7) and cooling water is used to cool the equipment. Water-soluble oil is used to pressurize the molding process.

The process oil is stored in a large aboveground storage tank (see photo #8), which is located on the south side of the building. There were visible stains of oil on the paved surface (see photo

#9) and on the exterior wall (see photo #10) near the aboveground process oil storage tank on the south side of the building. On the west side of the warehouse is a shipping and receiving area (see photo #11) and a materials storage area (see photo #12). In the center of the building is an open yard (see photo #13), with an electrical transformer, a water evaporation and cooling system (see photo #14), and water-soluble oil cooling system (see photo #15). Water-soluble oil was observed on the paved surface (see photo #16) near the cooling system in the open area near the center of the building. Waste oil and lubricants are stored in 55-gallon drums with secondary spill containment under a covered area in the center yard.

Outside, on the north side of the building, is a paved parking lot and driveway (see photo #17). There is also a paved parking lot and storage yard on the south side of the site (see photo #18). The west side of the subject property is used to store materials, off-spec products, trash, wooden pallets, and old equipment (see photos #19 and #20). Large amounts of spilled powdered materials were observed on the west and south sides of the storage areas, and the company did not appear to have any containment in place to prevent these materials from being washed into the local stormwater runoff system. Commercial trash bins are located throughout the site, and no signs of improper solid waste disposal were observed in or near the trash bins. The company stores and uses large quantities of hazardous materials such as process oil, rubber additives, and solvents, and generates waste oil, lubricants, and solvents. All of the waste products appeared to be properly stored and managed. No evidence of waste water clarifiers, sumps, pits, septic tanks, or underground storage tanks was observed on the site. The electrical power in the area is supplied by overhead utility lines located along the west site of the property, and there were no nearby transformers with signs indicating the presence of polychlorinated biphenyls (PCBs).

6.4 Adjoining Property Observations

Northern Border

North of the subject property is a multi-tenant industrial building (see photo #21). There were no visible signs of spills or contamination on the adjacent property.

Eastern Border

East of the subject property is Woodruff Avenue, and further east is a multi-tenant industrial building (see photo #22). There were no visible signs of spills or contamination on the adjacent property.

Southern Border

South of the subject property are several smaller industrial buildings (see photo #23). There were

no visible signs of spills or contamination on the adjacent properties.

Western Border

West of the subject property are several smaller industrial buildings (see photo #24). There were no visible signs of spills or contamination on the adjacent properties.

## 7.0 INTERVIEWS

### 7.1 Interview with Owner

No interview with the property owner was conducted.

### 7.2 Interview with Site Manager

Mike Kilroy, the marketing and sales manager of the Kirkhill Manufacturing Company, stated the company has operated on the site for over 50 years, and they manufacture various rubber products and gaskets. He stated they sublease the northern portion of the building to Kong Pet Toys, and his company manufactures about 50% of the products for Kong Pet Toys. Mr. Kilroy advised they store and use large quantities of hazardous materials, including process oil, rubber additives, solvents, and lubricants. He stated the manufacturing process generates waste lubricants and solvents, which are stored in a secure area in the center of the building.

Mr. Kilroy stated an underground storage tank was removed from the site over ten years ago, and there are currently no underground storage tanks, waste water clarifiers, or septic tanks on the property. He advised the company is coming out of bankruptcy, and they are in the process of moving and replacing equipment, and changing the warehouse and materials storage areas. Mr. Kilroy stated he is not aware of any chemical spills or contamination problems with the site.

### 7.3 Interviews with Occupants

No interviews with the other occupants were conducted.

### 7.4 Interviews with Local Government Officials

No interviews with local government officials were conducted.

### 7.5 Interview with Others

No interviews with other people were conducted concerning the subject property.

## 8.0 FINDINGS

### 8.1 Recognized Environmental Conditions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E 1527-00 on the industrial buildings located at 12021-12023 Woodruff Avenue, Downey, California, the Property. Any exceptions to, or deletions from the Standard Practice are described in Section 2.4 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Property, except as follows:

1) An inspection of the subject property determined there were visible stains of oil on the paved surface and on the exterior wall near the aboveground process oil storage tank on the south side of the building. In addition, water-soluble oil was observed on the paved surface near the cooling system in the open area near the center of the building; and

2) In addition, three offsite locations have been identified as potential risks or threats to the subject property. According to the data, the sites are not located in the near vicinity, and there is no indication that contaminants from these sites have migrated onto the subject property.

### 8.2 Historical Recognized Environmental Conditions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E 1527-00 on the industrial buildings located at 12021-12023 Woodruff Avenue, Downey, California, the Property. Any exceptions to, or deletions from the Standard Practice are described in Section 2.4 of this report. This assessment has revealed no evidence of *historical recognized environmental conditions* in connection with the Property, except as follows:

According to the records of the State of California Regional Water Quality Control Board (RWQCB), in March 1990, the subject property reported an unauthorized release of diesel fuel from a leaking underground storage tank. The tank and the impacted soil was removed from the site, and the file was closed in August 1992.

## 9.0 OPINION

Based on a review of regulatory and historical records, an interview with the property manager, and a visual inspection of the site and surrounding area, this assessment has found evidence of *recognized environmental conditions* which may have impacted the subject property.

## 10.0 CONCLUSIONS

Based on the results of this assessment, it is recommended samples be obtained in the area of the process oil storage tank and in the area of the water-soluble oil cooling system, to determine if the soil has been impacted from the spilled materials. In addition, the company needs to institute better housekeeping procedures to prevent spilled materials in the outdoor storage areas from being washed into the local stormwater runoff system.

## 11.0 DEVIATIONS

This report was prepared in conformance to meet or exceed the scope and practice as set forth by the American Society for Testing & Materials (ASTM) Standard Practice E 1527-00, "Standard Practice of Environmental Site Assessments: Phase I Environmental Site Assessment Process." No significant deviations or deletions were made from this practice.

## 12.0 ADDITIONAL SERVICES

No additional services including a broader scope of services, liability/risk evaluations, or remedial activities are included in this report.

## 13.0 REFERENCES

All government records and maps were obtained directly from the regulatory agencies identified in this report. The fire insurance map information was obtained from Digital Sanborn Maps, 1867-1970, Ann Arbor, Michigan. The aerial photographs were obtained from Rupp Aerial Photography, Corona, California; the United States Geological Survey, Menlo Park, California; or the United States Department of Agriculture, Salt Lake City, Utah.

## 14.0 APPENDICES

### 14.1 Qualifications of the Environmental Professionals

Attached to this report are the résumés of Jack Orswell and Marty Kasman, who conducted the site inspection, the records review, and prepared the report.

### 14.2 Site and Vicinity Map

A United States Geological Survey (USGS) 7.5 Minute Topographical map of the subject property and surrounding area is included in the appendices of the report. The map shows the locations of the identified offsite environmental risks or threats described in the report.

14.3 Site Plan

A site plan of the subject property is included in the appendices of the report. The site plan shows the general location of the structures on the property, and other items of interest which were identified in the description of the site.

14.4 Site and Vicinity Photographs

Photographs of the subject property and surrounding neighborhood are attached to this report. These photographs were taken at the time of the site inspection.

14.5 Historical Research Documentation

Building permit records were obtained directly from the regulatory agency identified in this report. The aerial photographs summarized in this report were obtained from Rupp Aerial Photography, Corona, California; the United States Geological Survey, Menlo Park, California; or the United States Department of Agriculture, Salt Lake City, Utah. The Sanborn Fire Insurance Map information was obtained from Digital Sanborn Maps, 1867-1970, Ann Arbor, Michigan.

14.6 Regulatory Records Documentation

All government records were obtained directly from the regulatory agencies identified in this report.

14.7 Interview and Research Documentation

All of the field notes and supporting information obtained from interviews and research concerning the subject property are maintained in the report file at the offices of Orswell & Kasman, Inc.

14.8 Special Contractual Conditions between User and Environmental Professional

No special contractual conditions or agreements exist between the client and any of the employees of Orswell & Kasman, Inc., and Orswell & Kasman, Inc. does not have any financial interest in the subject property.

# APPENDIX

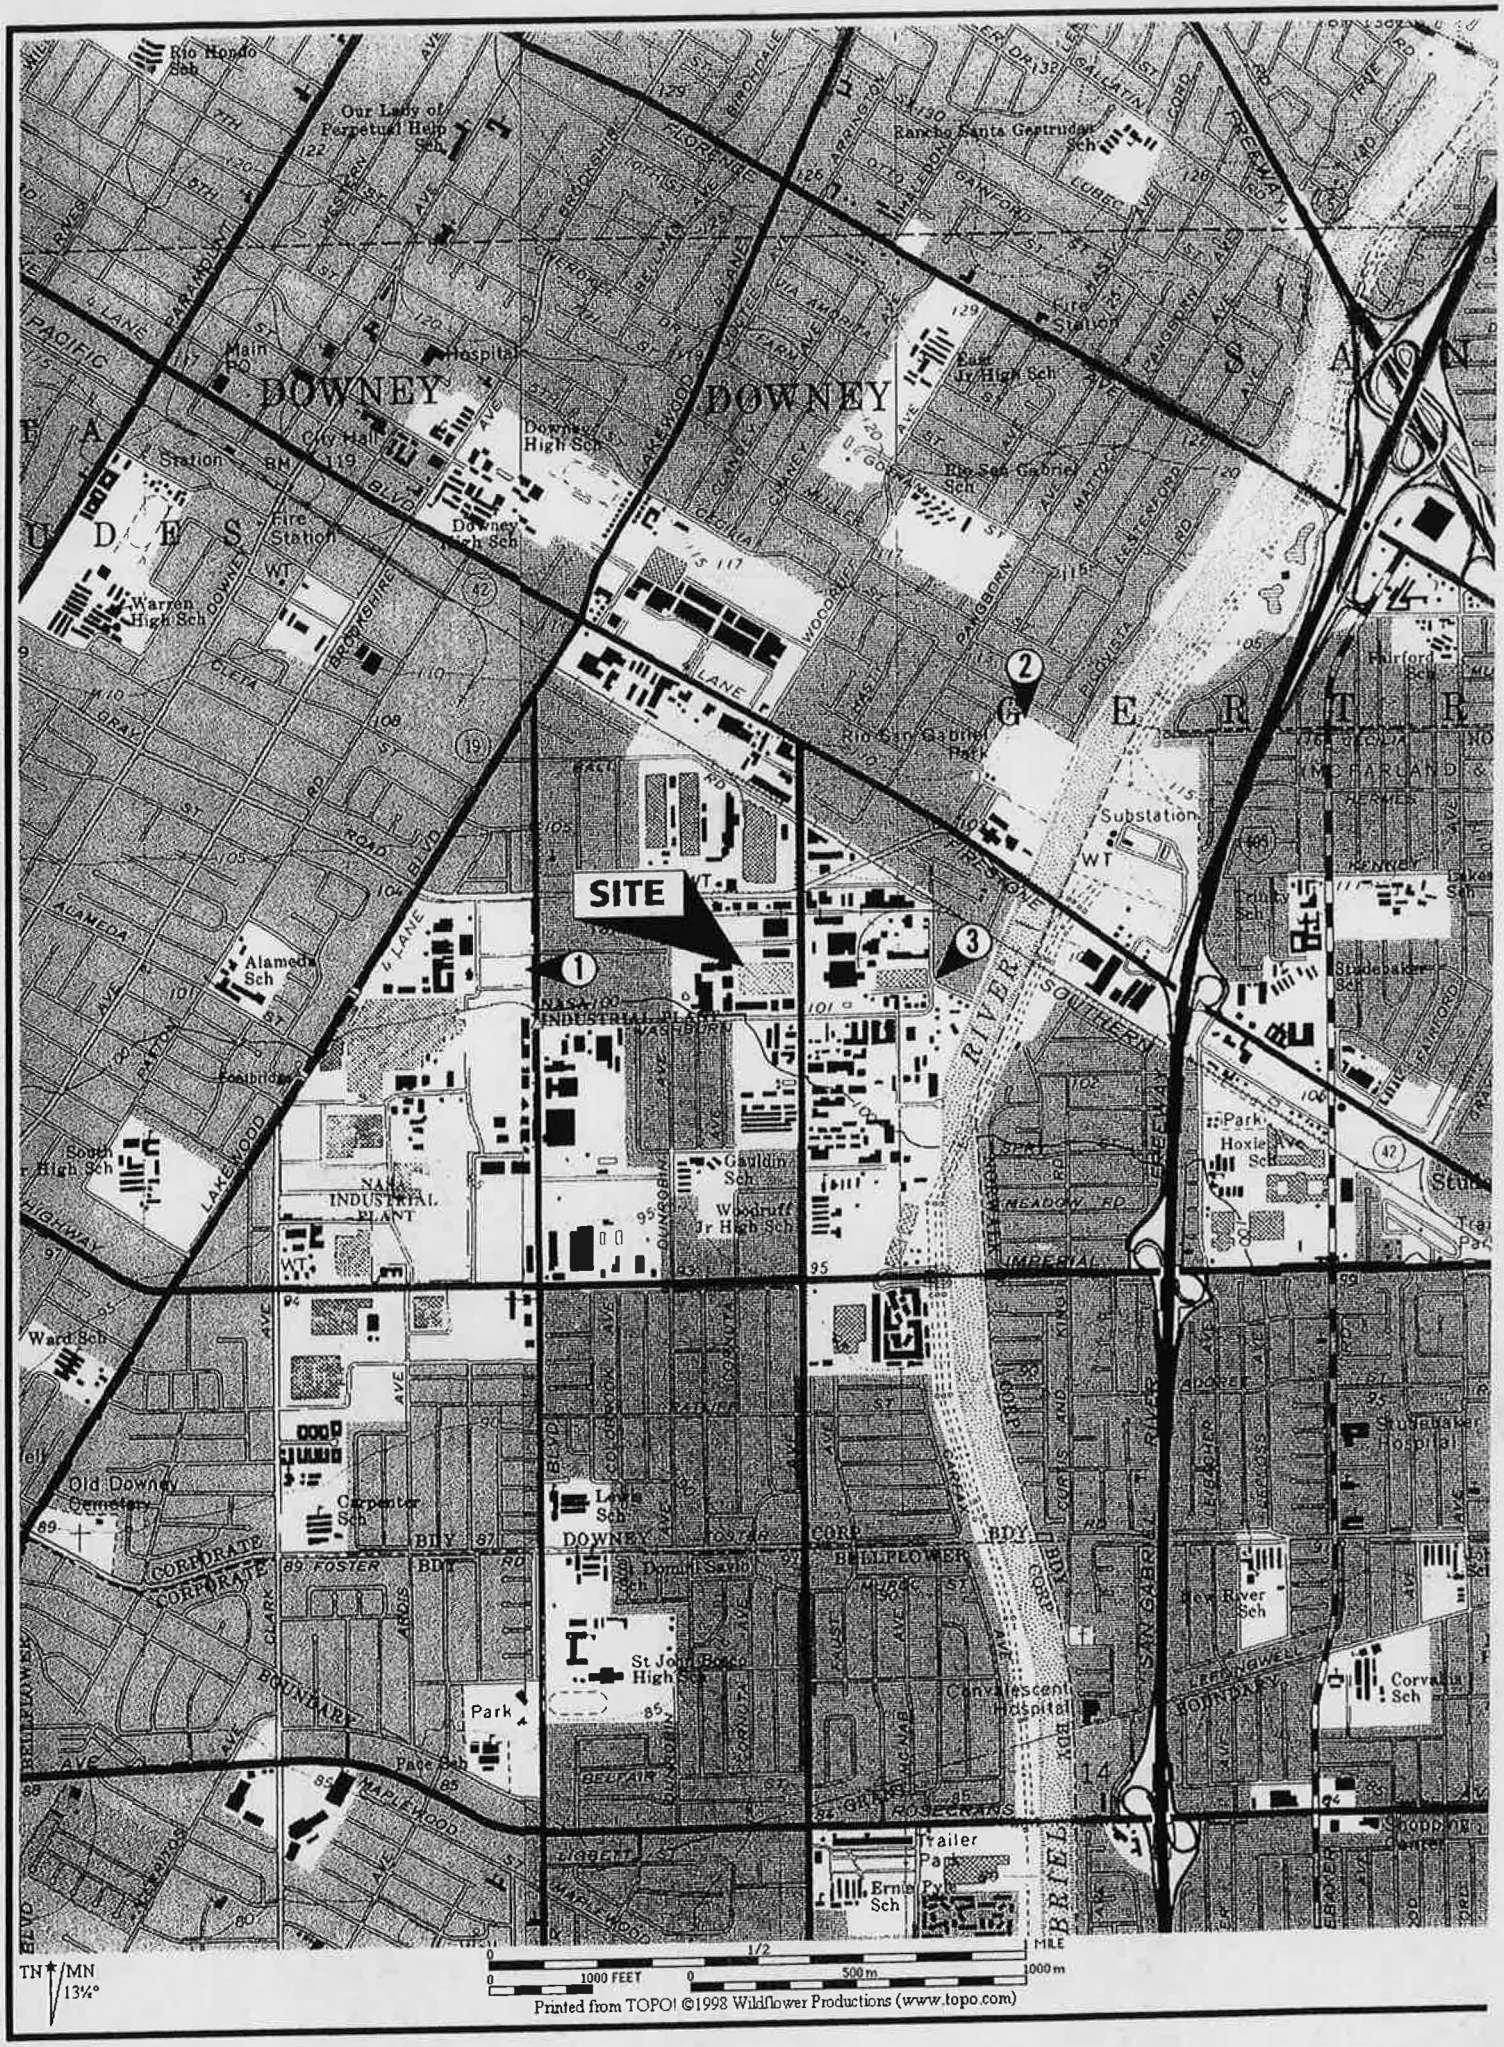
# JACK ORSWELL

Jack Orswell, a principal of the company, is a Registered Environmental Assessor (#1263) and a licensed Private Investigator (#PI 14366) with the State of California. He is also a USEPA/AHERA accredited Asbestos Management Planner and California Certified Asbestos Consultant (#92-0869). He received his Bachelor of Science degree in Business Administration from the University of Southern California, and spent 15 years as a Special Agent with the Federal Bureau of Investigation in the Denver, San Francisco and Los Angeles offices. Mr. Orswell received specialized training from the United States Environmental Protection Agency (EPA), and he was one of the first FBI Agents to work with the EPA in investigating federal environmental crimes.

While with the FBI, Mr. Orswell worked with the EPA's National Enforcement Investigations Center (NEIC) in Denver, Colorado, and helped establish evidence control procedures for their laboratory personnel. As coordinator of environmental investigations for the FBI's Los Angeles office, Mr. Orswell gained extensive training and experience working with the California Department of Health Services and the Los Angeles County Sheriff's Department.

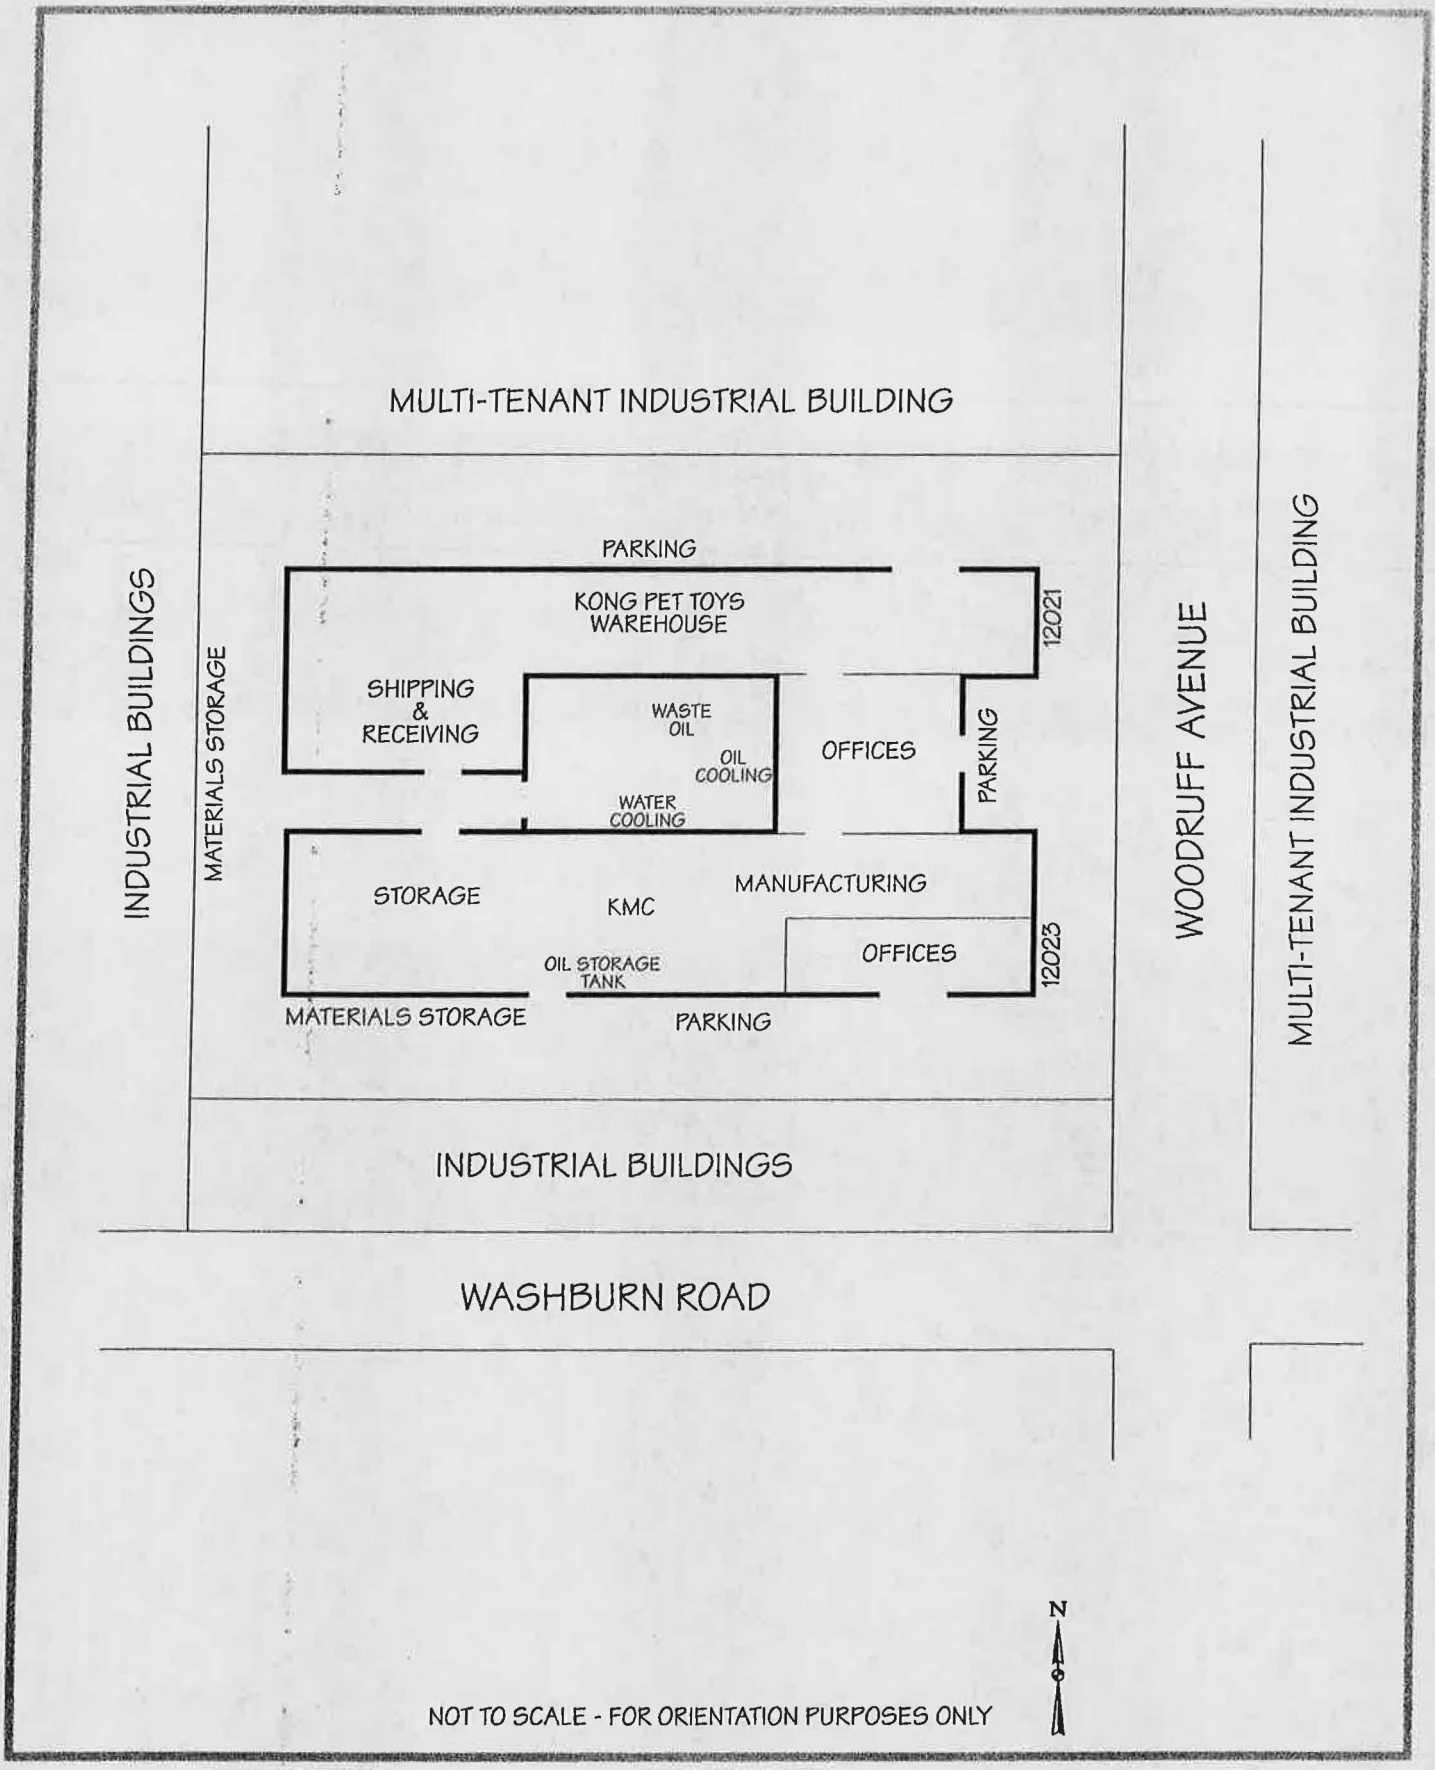
For the past 15 years, Mr. Orswell has been in private industry, conducting environmental assessments for several financial institutions, real estate companies and law firms. Mr. Orswell has conducted environmental investigations throughout the United States, locating and interviewing witnesses to determine how hazardous materials were handled in various manufacturing operations, and documenting the long term effects of improper disposal.

Mr. Orswell's extensive background in criminal environmental enforcement and civil litigation support make him uniquely qualified as an environmental assessor and investigator. He is a member of the California Hazardous Materials Investigators Association, the Society of Former Special Agents of the Federal Bureau of Investigation, the National Association of Environmental Professionals, the National Association of Government Guarantee Lenders, and the American Society for Testing of Materials (ASTM).



# MARTY KASMAN

Marty Kasman, a principal of the company, is a Registered Environmental Health Specialist (#4927) and a Registered Environmental Assessor (#4022) with the State of California. He is also a USEPA/AHERA accredited Asbestos Management Planner and California Certified Asbestos Consultant (#99-2553). He received his Bachelor of Science and Master of Science degrees in Environmental and Occupational Health Science from California State University at Northridge. He also has a Certificate in Hazardous Materials Management from the University of California at Los Angeles (UCLA). In addition, Mr. Kasman also received specialized hazardous materials training at the Federal Law Enforcement Training Center in Georgia.



Mr. Kasman served 14 years with the Los Angeles County Fire Department, as a Supervising Hazardous Material Specialist and Deputy Health Officer. His responsibilities included field and laboratory work in hazardous materials management, conducting inspections of industrial plant operations, and monitoring cleanup activities. In addition, Mr. Kasman has investigated hundreds of abandoned waste sites and other cases involving the illegal dumping of hazardous materials throughout Los Angeles County.

Mr. Kasman currently serves as an environmental consultant to industry management in the proper handling of hazardous materials and waste. He has taught courses in hazardous materials regulatory compliance and waste management at UCLA, California State University at Northridge, and the California Specialized Training Institute at San Luis Obispo. Mr. Kasman is also serving on the State of California Local Unified Program Implementation Committee (LUPIC) to develop a standardized hazardous materials contingency plan.

Mr. Kasman's extensive education, training, and experience in hazardous materials management make him fully qualified to conduct environmental assessments and investigations. He is the former president and director of the California Hazardous Materials Investigators Association. He is also a former director of the Local Environmental Enforcement Officers Association, and the Los Angeles County Association of Environmental Health Specialists. He is a member of California and National Environmental Health Associations, and the National Association of Government Guarantee Lenders.

# REFERENCE GUIDE TO THE REGULATORY AGENCY DATABASES

| SOURCE | DESCRIPTION |
|---|---|
| **NPL:**<br>*1 mile search radius*<br>*Date: May 2005* | The Natonal Priority List (NPL) identifies abandoned or uncontrolled hazardous waste sites, which have been identified as possibly representing a long-term threat to the public health or environment. These sites have been identified as being highly contaminated with hazardous substances and represent the USEPA's target enforcement and cleanup efforts. Studies of individual sites are conducted by the USEPA to determine the level of contamination, and the sites are then compared and ranked to other sites on the NPL. |
| **CORRACTS:**<br>*1 mile search radius*<br>*Date: November2004* | The USEPA maintains a list of facilities which have been authorized to receive hazardous waste. These facilities have permits to treat, store or dispose of the waste as determined by the RCRA regulations. In addition, the USEPA publishes a list of those facilities who are subject to a corrective action based on the facilities waste handling and storage procedures. The facilities, which are subject to a corrective action, are identified as CORRACTS sites. |
| **CERCLIS:**<br>*½ mile search radius*<br>*Date: May 2005* | The USEPA has developed a database known as the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS), which contains information on potential hazardous waste sites located throughout the United States. There are over 33,000 sites on the CERCLIS inventory. All sites are subjected to a preliminary assessment and thereafter are either placed on the National Priority List (NPL) or are placed in a category for those sites requiring no further Federal Superfund action. |
| **CALST:**<br>*½ mile search radius*<br>*Date: June 2005* | The State of California Environmental Protection Agency maintains the "CalSite" database, which is a listing of 7,800 known active, inactive and abandoned hazardous sites. These sites have previously been reported in the Abandoned Site Program Information System (ASPIS), Bond Ependiture Plan (BEP) and Cortese database. |
| **LUSTIS:**<br>*½ mile search radius*<br>*Date: May 2005* | The State of California Water Resources Control Board is responsible for monitoring the quality of flow of the groundwater and compiles lists of known leaking undergound storage tanks. The list is maintained as the Leaking Underground Storage Tank Information System (LUSTIS). The local Regional Water Quality Control Board (RWQCB) monitors the contamination problem, the investigation and any remedial activities. |
| **SWIS:**<br>*½ mile search radius*<br>*Date: December 2003* | The State of California Integrated Waste Management Board maintains a list of active and inactive landfill sites within California and provides information concerning the ownership and types of wastes brought to the landfills. |
| **TSD:**<br>*½ mile search radius*<br>*Date: November 2004* | Treatment, Storage or Disposal Facilities (TSDF) is a federal listing of facilities, which have been authorized to receive hazardous waste. These facilities have permits to treat, store or dispose of waste as determined by the RCRA regulations. |
| **ERNS:**<br>*Property & adjacent*<br>*Date: January 2004* | The Emergency Response Notification System (ERNS) is a list of locations which have reported a release of oil or hazardous substances to the USEPA Office of Emergency and Remedial Response. Most of the data in this system is based on information that was received during the initial notification. |
| **HWG:**<br>*Property & adjacent*<br>*Date: November 2004* | The United States Environmental Protection Agency maintains a list of known hazardous waste generators in the nation. A company on the list generates reportable quantities of hazardous waste, and the disposal and transportation of the waste is monitored through the use of a hazardous waste manifest. |
| **UTANK:**<br>*Property & adjacent*<br>*Date: May 2005* | The location and identy of registered underground tanks is maintained by the State of California Water Resources Control Board in the Hazardous Substance Storage Container Database. The list was compiled in 1991 and there are currently no plans to update the database at the present time. |
| **SFL:**<br>*Property & adjacent*<br>*Date: July 1993* | The USEPA maintains a list of Superfund Leins that have been issued on properties throughout the United States. These sites have been remediated through the expenditures of Superfund monies. The purpose of the lein is to prevent the property owner from gaining a financial benefit from the federal government's cleanup and restoration activities. |

# EXECUTIVE SUMMARY

S&S Commercial Environmental Services (S&S), Inc. was contracted by Foothill Independent Bank to conduct a Phase II Soil Investigation to better qualify the findings from two previous Phase II Investigations. The previous investigations found arsenic at concentrations above California State Hazardous levels, however the impacted soil was extremely limited in total extent (i.e., between 3-6 $yds^3$ impacted).

The additional Phase II Investigation conducted by S&S found nothing to indicate any greater arsenic contamination to exist, than what had previously been identified in the two prior Phase II Soil Investigations.

However, within the immediate area of the oil/water separator, elevated concentrations of oil impacted soil as high as 54,100 parts per million were identified, with quantifiable oil impacted soil concentrations found to 20-feet below grade. The impacted soil first appeared directly beneath the bottom (i.e., 5-feet down) of the oil/water separator discharge conveyance system, which appears to be more-or-less an open, concrete, gravity flow culvert type system.

Ultimately S&S identified a 25-foot "Clean Earth" interval between the last identified impacted soil depth interval of 20-feet and 45-feet beneath ground surface (bgs). Having met the 25-foot clean earth interval and knowing the contaminant in question is one of the lowest rated regulated compounds by the State, S&S believes no significant threat to the immediate environment, or human health risk upon physical contact exists as a result of the TPH impacted soil found during this project.

Based on S&S findings, it is our opinion that nothing further needs to be conducted with reference to the immediate area around the oil/water separator, however if future plans require disturbance of the soil in this area, then the soil must be properly handled and taken to a Cal-EPA certified recycler.

Based on boring locations and sample results, it is the opinion of S&S that if the entire site were leveled, a conservative cost estimate (in 2005 dollars) of $90,000 would be necessary to properly remediate the impacted soil, so that a "no further action" letter could be issued by the Los Angeles County, Department of Public Works – Environmental Programs Division.

Phase 1

## 1.0 INTRODUCTION

S&S was contracted by Foothill Independent Bank to confirm the recommendations of GeoScience Analytical's September 14, 2005 Phase II Environmental Investigation at a commercial property located at 12021-12023 Woodruff Ave., Downey, CA (Site). The additional Phase II Investigation was conducted in response to an initial Phase II Investigation conducted by Converse Consultants in August 2005 and an additional Phase II Investigation conducted by GeoScience Analytical, Inc. on September 6, 2005. The initial Phase II Investigation was conducted throughout the entire site beneath areas of concern. The additional Phase II Investigation conducted by GeoScience Analytical was conducted specifically near the oil-water separator, where Converse Consultants found an Arsenic concentration above Cal-Hazardous levels. The additional Phase II Investigation by GeoScience Analytical concluded the Arsenic contamination to be no more than 3-6 $yds^3$ and of no immediate concern.

## 2.0 SOIL INVESTIGATIVE METHODS

### 2.1 Boring Location Determination

The boring locations were determined based on the two prior Phase II Investigations conducted by Converse Consultants and GeoScience Analytical. Ultimately a total of 14 soil borings were drilled during this project with a maximum total penetrated depth of 45-feet being investigated in boring SS5-Alt

### 2.2 Geo Probe 2400 Direct-Push Rig Soil Investigation

On September 28, 2005, S&S advanced eight (8) exploratory borings to a total depth of 5-feet below ground surface (bgs). The borings were drilled using a Geo Probe, model 2420 confined space, hydraulic punch drill rig. On October 5, 2005 S&S conducted an additional soil characterization which comprised of drilling four additional borings near the previous four borings drilled by S&S by the oil/water separator, but drilling to greater depths. Finally an additional field investigation was conducted by S&S on October 10, 2005, which consisted of drilling boring SS5-Alt to a total depth of 30-feet to 45-feet below grade.

Undisturbed soil samples were collected at ½, 1, 2 and 5-feet bgs in each boring from the September 28th investigation, at 5-foot intervals beginning at 10-feet below grade to total boring depth (varying between 15 to 30-feet below grade) in the October 5th investigation and at 35, 40 and 45-feet below grade in boring SS5-Alt in the October 10th investigation. All samples collected during this project were collected by driving a 2-inch diameter by 2-foot long spoon sampler containing four 1½" diameter by six-inch long brass sample sleeves in advance of the bore-hole, using the hydraulic drill hammer. The "lead" sample

sleeve from each sampling interval was secured with Parafilm™ lined plastic end caps. Soil from the second sleeve was evacuated into one Encore™ 25-gram Teflon sampler. The evacuation was conducted by manually driving the Encore sampler into the brass sample sleeve using the Encore twist-loc sample handle. All soil samples were collected and logged per EPA method 5035 guidelines, by William C. Lachmar, R.G. # 6168.

The lead brass sample sleeve and 25-gram Encore sample was then clearly marked as to boring number and sample depth interval, then placed in a zip-loc bag that was also clearly labeled. The bagged sample was then placed in a chilled ice chest for temporary storage pending transport to the laboratory.

The remaining soil from the second brass sample sleeve was placed in zip-loc bags, marked as to boring location and sample depth and placed on S&S's vehicle to heat in the sun. After approximately 10-minutes to warm and equilibrate, the probe from a Micro Rae model PGM-7600, Photo Ionization Detector (PID) was placed approximately ½ the headspace width inside the zip-loc bag. The soil was then "turned" by hand and readings from the OVA posted on boring logs, along with the soil description. All soil borings were logged using the Unified Soil Classification System (USCS) and included a description of the soil matrix, with reference to classification, color, grain-size, sorting, plasticity/hardness, transition zones, moisture, field reading and any odors or signs of staining (discoloration).

## 2.3 Soil Sampling Methods

The collected soil samples were submitted to Southland Technical Services (STS), Inc., located in Montebello, CA. Based on field observations selected samples were submitted for testing of total petroleum hydrocarbons (TPH), by EPA method 8015m Arsenic by EPA method 7060A and total chromium by EPA method 7190 (for outside chiller). In addition the most elevated TPH sample (SS5-5') was further tested for Volatile Organic Compounds (VOC's) by EPA method 8260B and Semi-Volatile Organic Compounds by EPA method 8270C. A summary of the soil chemical analyses results is provided in Table 1 below. The certified laboratory chemical analyses results, with QA/QC data is provided in Appendix I.

### 2.4 Soil Sample Results

Results of the laboratory soil analyses testing found nothing in the soil to warrant further investigation. No organic compounds specified for analyses through EPA method 418.1, 8260B, 8270C, or 335.2 testing were found to exist, while the metals results found nothing above what can be considered normal soil background levels.

## 3.0 GEOLOGY / HYDROGEOLOGY

### 3.1 Regional

The site lies within the Montebello Forebay Area of the Central Basin of the Los Angeles Coastal Plain. The Central Basin is one of four identified groundwater basins within the Los Angeles Coastal Plain and its southeast boundary coincides with the Los Angeles-Orange County line. The Coastal Plain consists mainly of unconsolidated sediments or alluvium, which is underlain and bounded on the north and east, by essentially bedrock. The recent alluvium contains parts of the Gaspur and Gage aquifers.

The Central Basin is overlain by the Montebello and Downey Plains. The freshwater bearing sediments vary in age from recent, to early Pleistocene and extend to a maximum depth of approximately 900-feet below average mean sea level (AMSL). The aquifers to note within the Montebello Forebay area consist of the Lynwood and Silverado aquifers. The Lynwood and Silverado aquifers lie entirely within the San Pedro Formation[1].

### 3.2 Local

Referencing the 1989 Seismicity Map of the Los Angeles Region, published by the State of California, Division of Mines and Geology, the general site area lies to the interpreted most westerly extension of the Whittier Fault.

Referencing Cross Section B-B' from Bulletin 104, posts the Gaspur Aquifer at approximately 70-feet beneath the site. The more significant Lynwood and Silverado aquifers are shown to be approximately 290 and 410-feet beneath the site, with an estimated thickness of 80-feet and 220-feet respectively.

[1] State of California, Department of Water Resources, Bulletin 104

### 3.3 Site Specific

Shallow soil types encountered while drilling consisted mainly of a moist silt and silty-sand and fine-medium sand (please reference the soil boring logs in Appendix II). A nearby Los Angeles County water monitor well #1587Y, is located approximately 100 yards south of the site, at the intersection of Woodruff Avenue and Washburn Road. Depth to water as last recorded on March 31, 2005 was 74.3-feet bgs, with a measured surface elevation of 107.0-feet AMSL.

## 4.0 CONCLUSIONS

Based on all environmental information collected to date, S&S Commercial Environmental Services concludes the following:

- Nothing was found in this additional soil characterization that would alter the general conclusions presented in GeoScience Analytical, Inc.'s September 14, 2005 report, with reference to Arsenic contamination. GeoScience concluded a total of 3-6 cubic yards of soil exists on-site with Arsenic concentrations slightly above Cal-Hazardous levels. The impacted soil depth does not appear to continue beyond 3-feet below grade.

- Elevated oil concentrations as high as 54,100 parts per million (ppm) and quantifiable oil impacted soil concentrations to 20-feet below grade were found to exist during this project. The impacted soil first appeared directly beneath the bottom (i.e., 5-feet down) of the oil/water separator discharge conveyance system, which appears to be more-or-less an open, concrete, gravity flow culvert type system.

- S&S did identify a 25-foot "Clean Earth" interval between the last identified oil impacted soil depth interval of 20-feet and 45-feet beneath ground surface (bgs).

- The general site area is located approximately 70-feet above the first recognized commercially producible aquifer (Gage Aquifer).

- The general soil types found during this investigation was generally a moist silt and silty-fine sand to 20-feet, followed by a fine-medium sand to 45-feet below grade.

- Depth to groundwater is estimated at approximately 70-feet beneath this site.

## 5.0 RECOMMENDATIONS

Based on the soil chemical analyses results, recognized 25-foot "Clean Earth" interval for the oil impacted soil, the fact the Cal-Hazardous Arsenic soil is beneath a capped area and all Arsenic concentrations were found below the Cal-Hazardous Total Threshold Limit Concentration (TTLC) and only failed when tested for soluble Arsenic, no remediation is recommended at this time. Furthermore, it is the opinion of S&S Commercial Environmental Services, Inc. that no significant threat to the immediate environment, or human health risk upon physical contact exists as a result of the oil impacted soil found to exist during this project.

## 6.0 REPORT LIMITATIONS

The conclusions and recommendations presented above are based upon the agreed scope of work as approved by the client. S&S makes no guarantees as to the accuracy or completeness of information obtained from others. It is possible that additional soil and/or water data exists beyond what was presented or cited in this report.

The services performed by S&S have been conducted in a manner consistent with the level of care ordinarily exercised by members of our profession currently practicing under similar conditions.

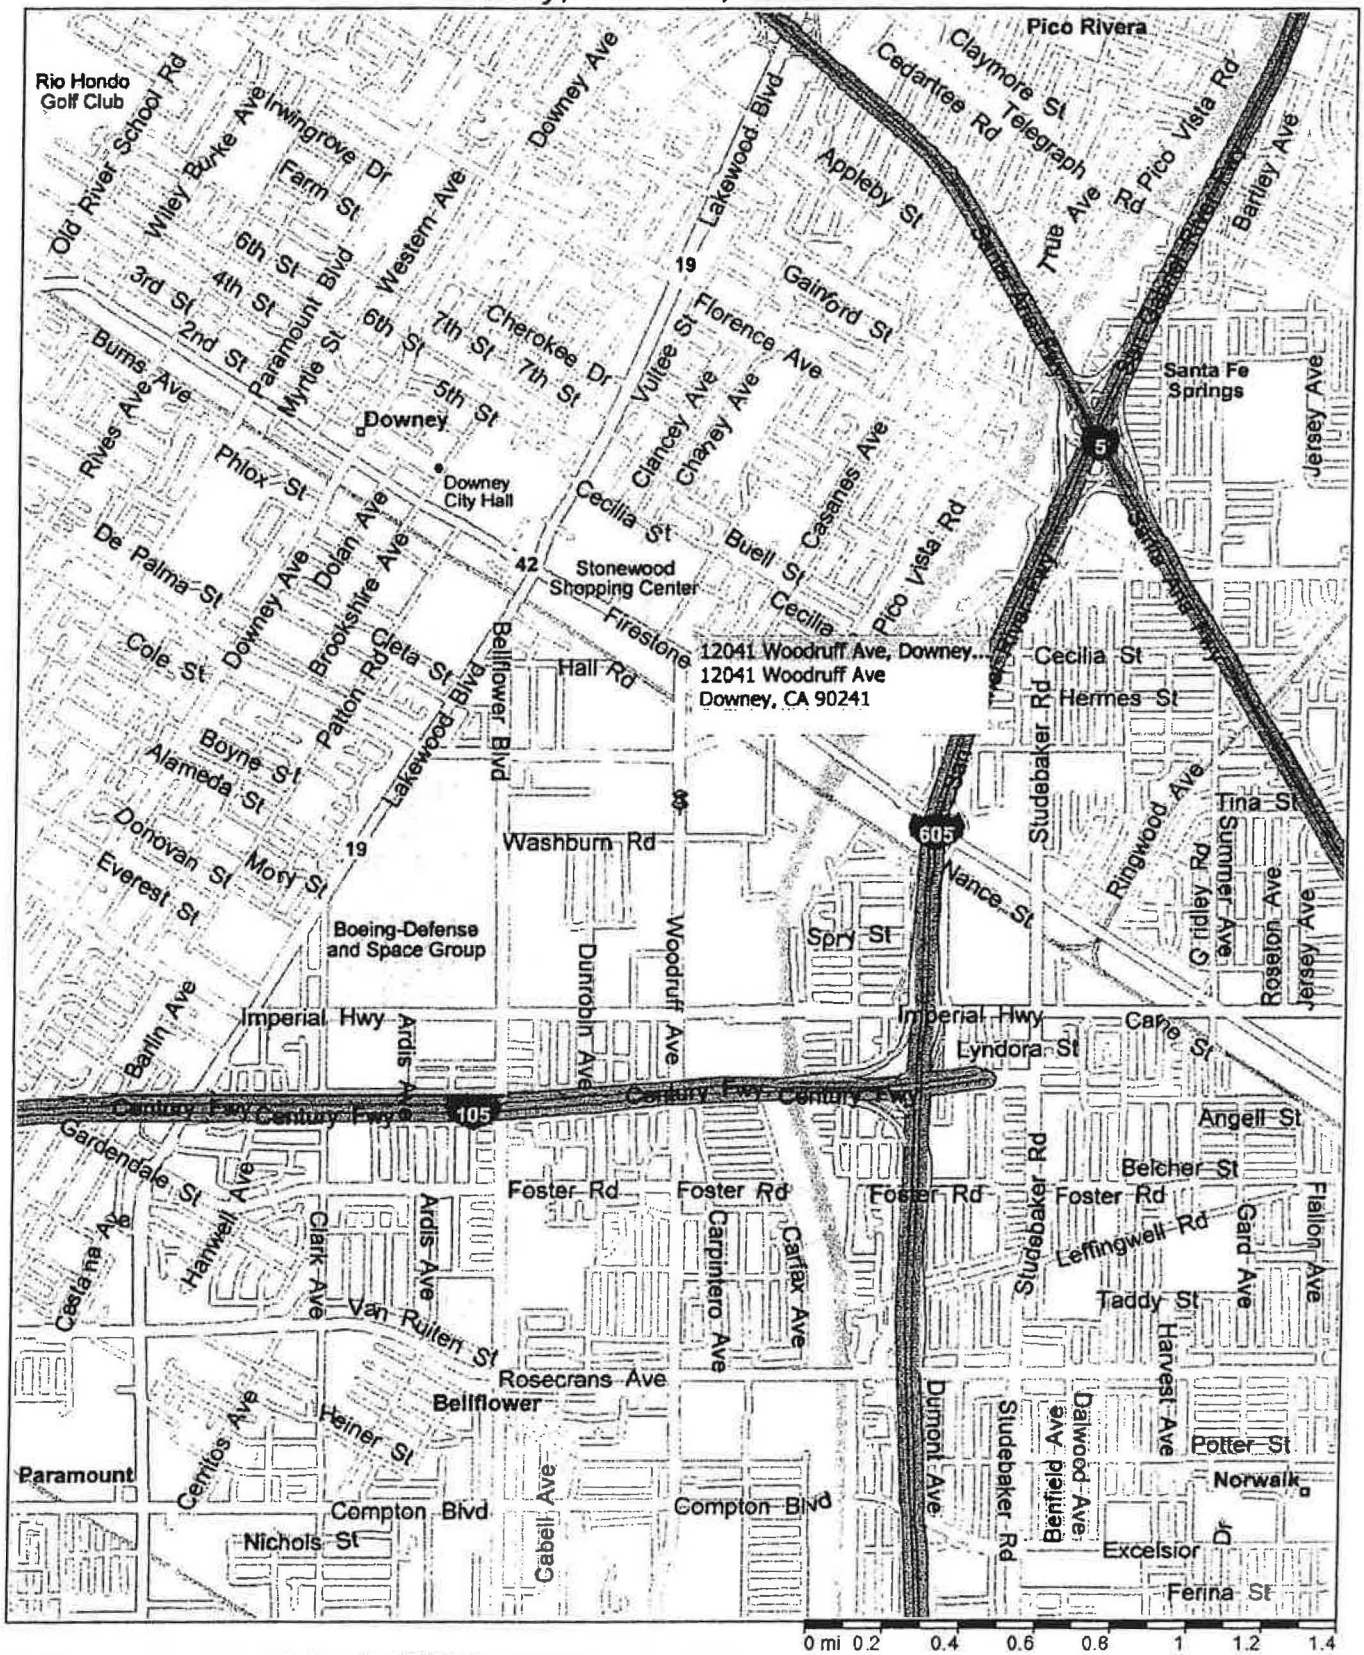
This report is not a legal opinion, but may under certain circumstances be prepared at the direction of counsel, may be in anticipation of litigation, and may be classified as an attorney client communication, or as an attorney-work product.

The findings in this report are based on field observations, and on the analytical data provided by an independent laboratory. Interpretations of the subsurface conditions at the site were made from a limited number of data points provided by the four investigative borings. Subsurface conditions may vary from these data points.

Furthermore, results of this investigation represent conditions at the time and specific locations where samples were collected and does not fully characterize the site for products not specified for analyses, or for other areas/structures not investigated.

All laboratory work cited in this report was prepared under the direction of Southland Technical Services, Inc., who is solely responsible for the contents and conclusions of the chemical analyses data.

If there are any questions regarding soil sample collection or soil analysis, please contact Mr. William C. Lachmar, Project Manager: at (714) 508-9794.



Respectfully,

*S&S Commercial Environmental Services, Inc.*

# APPENDIX I

Cal-EPA Certified Laboratory Chemical Analyses Results

**Southland Technical Services, Inc.**
Environmental Laboratories

09-30-20

Mr. Bill Lachmar
S & S Commercial Environmental Services
13520 Amber Road
Chino, CA 91710

Project: 5928
Project Site: KMS-12021-23 Woodruff Ave., Downey, CA
Date Sampled: 09-28-2005
Lab Job No.: Z509167

Dear Mr. Lachmar:

Enclosed please find the analytical report for the sample(s) received by STS Environmental Laboratories on 09-28-20 and analyzed by the following EPA methods:

EPA 8015M (Total Petroleum Hydrocarbons)
EPA 8260B (VOCs & Oxygenates)
EPA 7060A (Arsenic, TTLC )
EPA 7190 (Chromium, TTLC)
EPA 8270C (SVOCs by GC/MS)

All analyses have met the QA/QC criteria of this laboratory.

The sample arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

STS Environmental Laboratory is certified by CA DHS (Certificate Number 1986). Thank you for giving us t opportunity to serve you. Please feel free to call me at (323) 888-0728 if oB1-5ur laboratory can be of further servi to you.

Sincerely,

Roger Wang, Ph.D.
Laboratory Director

10-10-200

Mr. Bill Lachmar
S & S Commercial Environmental Services
13520 Amber Road
Chino, CA 91710

Project: 5928
Project Site: KMS-12021-23 Woodruff Ave., Downey, CA
Date Sampled: 10-05-2005
Lab Job No.: Z510018

Dear Mr. Lachmar:

Enclosed please find the analytical report for the sample(s) received by STS Environmental Laboratories on 10-05-200 and analyzed by the following EPA methods:

EPA 8015M (Total Petroleum Hydrocarbons)

All analyses have met the QA/QC criteria of this laboratory.

The sample arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

STS Environmental Laboratory is certified by CA DHS (Certificate Number 1986). Thank you for giving us th opportunity to serve you. Please feel free to call me at (323) 888-0728 if oB1-5ur laboratory can be of further servic to you.

Sincerely,

Roger Wang, Ph.D.
Laboratory Director

Environmental Laboratories

10/10/200:

Mr. Bill Lachmar
S & S Commercial Environmental Services
13520 Amber Road
Chino, CA 91710

Project: 5928
Project Site: KMS-12021-23 Woodruff Ave., Downey, CA
Date Sampled: 10-10-2005
Lab Job No.: Z510042

Dear Mr. Lachmar:

Enclosed please find the analytical report for the sample(s) received by STS Environmental Laboratories on 10-10-200 and analyzed by the following EPA methods:

EPA 8015M (Total Petroleum Hydrocarbons)

All analyses have met the QA/QC criteria of this laboratory.

The sample arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

STS Environmental Laboratory is certified by CA DHS (Certificate Number 1986). Thank you for giving us th opportunity to serve you. Please feel free to call me at (323) 888-0728 if oB1-5ur laboratory can be of further servic to you.

Sincerely,

Roger Wang, Ph.D.
Laboratory Director

14 September 2005

Mr. Paul Minoo (323) 583-3898
6270 S. Boyle Avenue
Vernon, CA 90058

**RE: Supplemental Phase II Environmental Audit at 12021-12023 Woodruff Avenue, Downey, CA 90241**

Dear Mr. Minoo:

We have reviewed the following documents that have been prepared as part of the environmental review of the above referenced property:

- Phase I Environmental Site Assessment Report prepared August 10, 2005: Industrial Buildings 12021-12023 Woodruff Avenue, Downey, CA 90241 prepared by Orswell & Kasman, Inc.
- Letter Report for Limited Soil Sampling prepared August 31, 2005: 12021-12023 Woodruff Avenue, Downey, CA prepared by Converse Consultants

The Phase I report identified the follow areas of environmental concern:

- A release of diesel fuel from a leaking underground storage tank in 1990. The tank and the impacted soil were removed from the site.
- Visible stains of oil on the paved surface and on the exterior wall near the aboveground process oil storage tank on the south side of the building. Water-soluble oil was observed on the paved surface near the cooling system in the open area near the center of the building.

The Phase II report provided the following analytical data:

- Soils in the vicinity of the above ground storage tanks were void of contaminants above regulatory levels.

- Soils in the vicinity of the oil-water separator in a cooling water processing area contained elevated concentrations of arsenic in one soil sample at a depth 2.0' with deeper soils void of these elevated levels.
- Soils in the vicinity of the rubber presses were void of contaminants above regulatory levels.
- Soils in the vicinity of the west property line adjacent to a drainage swale were void of contaminants above regulatory levels.

The Phase II report identified total arsenic at a concentration of 79.2 mg/kg at a depth of 2.0 ft. (bg) with soil boring GW-4. This concentration was significantly below the regulatory level threshold of 500.0 mg/kg. Soluble (STLC) arsenic was identified at a concentration of 5.28 mg/L. This concentration was slightly above the regulatory level threshold of 5.0 mg/L; however the Total Characteristic Leaching Potential (TCLP) at this location was 0.65 mg/L significantly below the regulatory limit of 5.0 mg/L. At deeper depths at this location, arsenic was significantly below regulatory levels at both 4.0 ft. and 8.0 ft.

In order to further define the arsenic anomaly at the location of GW-4, GSA advanced four (4) soil borings to depths of 6.0 ft. in soils surrounding this location as shown in Figure 1, attached. Soils from depths of 2.0 ft. and 6.0 ft. (bg) were analyzed for total arsenic (TTLC). Arsenic concentrations ranged from <0.5 – 90.0 mg/kg. Maximum arsenic concentrations were identified at GSA-3 and GSA-4 at the 2.0 ft. depth interval at both locations with TTLC arsenic concentrations of 33.0 and 90.0 mg/kg, respectively. All TTLC arsenic concentrations were significantly below regulatory thresholds in all cases.

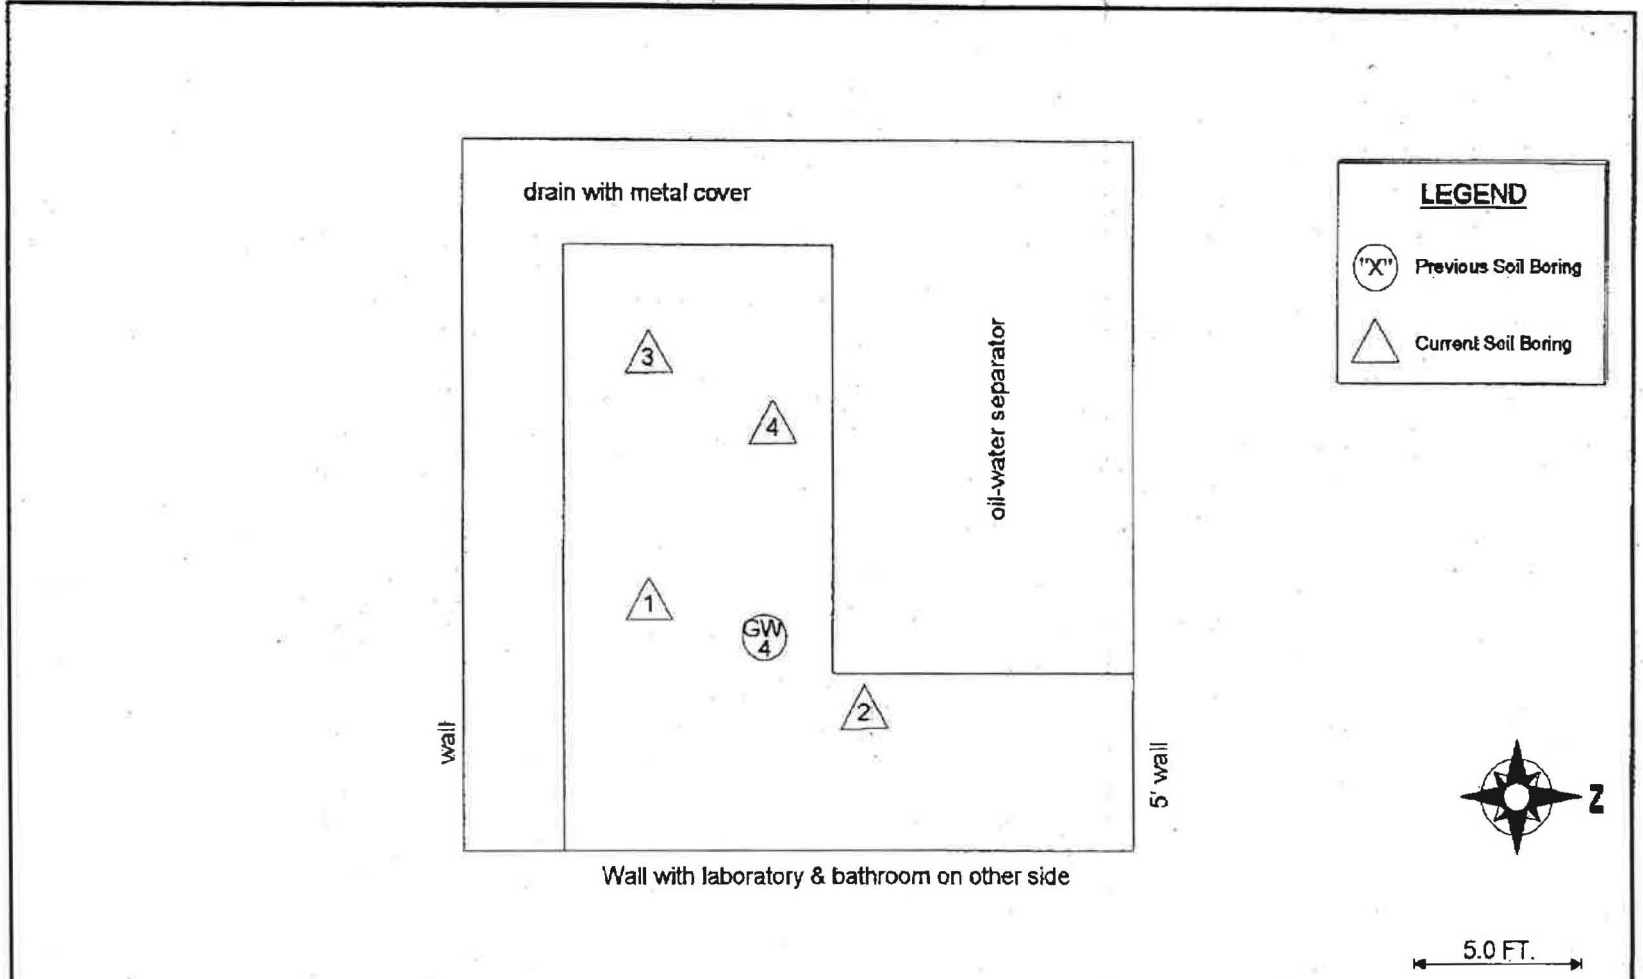
Additional characterization of soil at GSA-4 at a depth of 2.0 ft. was advanced with the analysis of soluble arsenic (STLC). Analytical results identified soluble arsenic at a concentration of 7.3 mg/L. This concentration is slightly above the regulatory levels threshold of 5.0 mg/L and in close agreement with the concentration observed at GW-4 reported previously.

Arsenic concentration isopleths have been contoured in Figure 2. Based on the available analytical data, maximum volume of soil potentially containing arsenic in excess of STLC concentrations for disposal purposes is estimated to be 3 – 6 cu.yds.

In summary, the subject site contains total arsenic within allowable limits. Within a small area of the site and in the immediate vicinity of the oil-water separator, soluble arsenic is present at a concentration slightly above threshold limits. Based on the low concentration of arsenic present under a capped surface, no remediation is recommended.

Please call us at your opportunity in the event we can provide you with any additional review.

Sincerely yours,



Louis J. Pandolfi

## INTRODUCTION

PIC Environmental Services (PIC) was contracted by KMC and/or Kirkhill, Inc. to conduct a Phase I Environmental Site Assessment (PESA) and Phase II Soil Investigation at commercial (industrial) property located in Downey, California (see Figure 1). The purpose of this investigation was to determine if environmental impairments existed at the site. This document represents the PESA report prepared in accordance with customary industry practices and current ASTM (2005) Standards. This document also intends to satisfy the "All Appropriate Inquiries" guidelines established by the Federal Environmental Protection Agency (EPA).

The following sources were used to prepare this report:

1. Site inspection
2. California Regional Water Quality Control Board (RWQCB) records
3. California Department of Health Services (DHS), Site Mitigation Division records
4. United States Environmental Protection Agency (EPA) and Geological Society (USGS) records
5. California Department of Natural Resources (CDNR), Division of Oil and Gas (DOG) records
6. Los Angeles County Waste Discharge Systems records of active and inactive landfills
7. EDR collection of historic aerial photographs
8. Los Angeles County Title Records
9. Historic Telephone Directories
10. City of Downey Permit Records
11. Los Angeles County Industrial Waste and UST Permit Records
12. Laboratory Results from a Phase II Investigation
13. Review of previous environmental assessment reports

## SCOPE OF INVESTIGATION

The scope of this investigation included: site inspection, survey of adjacent properties, review of the above listed government records, review of historical aerial photographs, geologic and hydrogeologic information search, and a Phase II Soil Investigation.

## SITE INSPECTION

On June 17, 2013, July 8, 2013, August 6, 2013 and August 13, 2013, PIC Professional Geologist, J. Tim Hersch and PIC Project Manager, Ethan Hersch, conducted site inspections at the subject property and adjacent/nearby properties. PIC was assisted by Mike Kilroy.

## SITE DESCRIPTION

The subject property is a rectangular shaped parcel including a total of about 6.3 acres west of Woodruff Avenue in Downey, CA 90241. Los Angeles County title records indicate the Assessor Parcel Number (APN) is 6284-025-018 (see Appendix A). The property is further identified as a portion of Section 10, T3S, R12W, SBB+M. Property boundaries are indicated by a public street to the east and adjoining commercial (industrial) developments to the north, west, and south. Features observed onsite by PIC are illustrated on Figures 2 and 7 and site photos in Appendix B. Historic site addresses appear limited to 12021 and 12023 Woodruff Avenue Downey, CA 90241.

The property has been improved with several contiguous commercial (industrial) buildings located in the central portion of the property. The site was occupied by Kirkhill, Inc. and Cal Pipe at the time of PIC's inspection. The property has been continuously occupied by Kirkhill, Inc and/or Kirkhill Rubber Manufacturing since at least 1971. Exterior areas are paved with asphalt and concrete.

County permit records confirm that four former underground storage tanks (USTs) were located onsite (see Figures 2 through 2D). County permit records and historic environmental assessment reports confirm that three of the historic USTs had been located in the southern exterior portion of the property (see Figures 2, 2B, and 2C). A fourth UST was located in the central portion of the site adjacent to the waste water treatment oil/water separator. Regulatory closure has been awarded to all former onsite USTs (see Appendix C).

Based on former historic leakage and use of underground fuel/oil storage tanks and concerns summarized in prior site assessment reports, PIC concluded that petroleum hydrocarbons (gasoline, diesel, hydraulic/lubricating oils, and/or waste oil), metals, and degreasing solvents could be present under the site. In consideration of the site's history and uses, PIC recommended performance of a Phase II Soil Investigation within areas of concern.

KMC and/or Kirkhill, Inc. conducts metal fabrication and rubber manufacturing operations onsite. The facility includes boilers, a waste water treatment unit/oil-water separator, a network of concrete-lined trenches and drains to circulate and recover water and oil based fluids, manufacturing equipment, and various petroleum and carbon based hazardous materials. Additional information concerning onsite manufacturing operations is included in the attached Environmental Audit Report in Appendix J.

As will be discussed later in this report, PIC's Phase II soil testing results confirmed a lack of significant petroleum or hazardous materials contaminants. As a result, there is no likelihood of significant, historic, residual, subsurface contamination onsite.

Historic aerial photographs in Appendix G and city permit records indicate most existing buildings were constructed prior to 1980. As a result, asbestos containing construction materials (ACM) may be present in the buildings. Figure 5 includes a reference diagram of ACM in older commercial buildings.

## SITE HISTORY

Based on PIC's site inspection and review of regulatory records, historic telephone directories, historic topographic maps, and historic aerial photos, it appears the subject property remained undeveloped and unoccupied prior to 1951 when one or more of the existing buildings were constructed in support of rubber manufacturing and metal fabrication activities. Historic telephone directory listings in Appendix H indicate the property has been occupied continuously by KMC/Kirkhill, Inc. from at least 1971 until the present. Additional occupants include a trucking company and office tenants.

County permit records were reviewed by PIC and contained documents which have been copied and attached in Appendices C and N. County records confirm the property contained four USTs historically. Three USTs were removed in 1989 from the southern portion of the site by Tank Protect Engineering (TPE). Figures 2B, 2C and 2D illustrate the removed USTs as Tanks 1, 2, and 3. A fourth tank (#4) was closed in-place by slurry filling due to access limitations (see Figures 2A, 2B, and 2C). County permit records are reproduced in Appendix C and historic TPE UST closure and investigation reports (15) are attached in Appendix N. Soil testing conducted under the former USTs discovered petroleum soil contamination under tanks 1 and 2. From 1989 through 1992, TPE conducted soil excavation as deep as 23 feet, conducted offsite soil disposal of contaminated soil, conducted onsite treatment of contaminated soil, and drilled/sampled a total of seventeen (17) soil borings. TPE submitted a total of 15 reports to the Los Angeles County Department of Public Works (LACDPW) from 1989 through 1992 documenting all UST closure and investigation activities summarized above. In correspondence dated August 6, 1992, regulatory closure was awarded to the subject property by LACDPW relevant to all four USTs.

In August 2005, Orswell and Kasman conducted a Phase I Environmental Site Assessment at the subject property (see copy of report in Appendix K). Based on petroleum surface staining observed near the cooling tower and oil-water separator "courtyard" area and an exterior, above-ground, oil storage tank in the southern portion of the property, the report recommended precautionary Phase II soil testing.

In September, 2005, GeoScience Analytical, Inc. (GSA), drilled and sampled four borings (B1-B4) in the "courtyard" area in close proximity to the oil-water separator (copy of report attached in Appendix L). The GSA report referenced results from a previous Phase II Soil Testing Report dated August 31, 2005 by Converse Consultants (Converse). PIC was unable to access the August 31, 2005 Converse Phase II Report. The GSA report confirmed that Converse had measured a lack of petroleum contamination in soil adjacent to the above-ground oil storage tank, but had measured an elevated total arsenic concentration of 79.2 ppm in shallow soil (two feet depth). The soluble fraction of arsenic in the same sample was measured at 5.28 ppm (slightly above the 5.0 ppm state guideline). The purpose of the GSA Supplemental Phase II Investigation was to determine the extent of arsenic impacted soil. Results from the four GSA borings confirmed the presence of elevated arsenic concentrations at a depth of two feet below surface in two of the four borings. All four borings confirmed a lack of elevated arsenic concentrations below two feet. The GSA report recommended no remedial action due to the limited lateral and vertical extent of arsenic impact and the fact that maximum arsenic concentrations measured only slightly above regulatory thresholds. In late September 2005, S & S Environmental Services (S&S) conducted additional, deeper, Phase II soil testing in the "courtyard" area on behalf of Foothill Independent Bank, to verify the previous findings of Converse and GSA. A copy of the S&S report is attached in Appendix M. In addition, locations of all Converse, GSA, and S&S borings are illustrated on Figure 2E. S&S drilled and sampled a total of 14 borings in close proximity to the cooling tower and oil-water separator. The maximum depth of soil testing by S&S was 45 feet below surface. Elevated arsenic concentrations in shallow soil were confirmed in one

boring (SS5), but measured at background concentrations in seven nearby S&S borings (SS1-SS8). S&S also measured elevated levels of nonvolatile, petroleum hydrocarbons in four borings (SS5/SS5ALT, SS11, SS12, and SS13) at depths ranging from 5 to 20 feet below surface. The S&S report contains analytical confirmation that no hazardous petroleum constituents (e.g. benzene) were present at detectable concentrations. In addition, the S&S report includes testing results below 20 feet to confirm that groundwater was not impacted by the presence of petroleum hydrocarbons in soil above a depth of 20 feet. Based on its findings, S&S recommended no further investigation and no remedial actions.

PIC's analysis of historic soil testing results conducted onsite between 1989 and 2005 prompt the following:

1. Soil contamination discovered in 1989 during UST closure operations was adequately investigated and remediated. Accordingly, regulatory closure was awarded in 1992. PIC's recommendation to conduct follow-up Phase II soil testing within the former UST area was made to confirm a lack of certain, volatile organic compounds (VOCs), including fuel oxygenates, which were not a part of analytical testing protocols until after 1992.

2. Soil testing results already completed in 2005, concerning elevated arsenic concentrations in shallow soil above a depth of two feet, are adequate to confirm the lateral and vertical extent of the arsenic impact. Accordingly, PIC recommended no additional Phase II testing concerning arsenic. Further, PIC concludes the shallow occurrence of arsenic in the courtyard area is probably an artifact of arsenic already present in imported fill material. That is, PIC concludes elevated arsenic concentrations were not the result of an onsite release of contaminant. Regardless, PIC concurs with the conclusions of previous investigations that the shallow occurrence of arsenic does not warrant further investigation nor remedial action.

3. Elevated concentrations of nonvolatile petroleum hydrocarbons measured by S&S in close proximity to the oil-water separator appears sporadic and limited. Of the initial eight S&S borings (SS1-SS8) only one (SS5) exhibited field evidence (odor and discoloration) of petroleum contamination. As a result, only the five feet deep sample from SS5 was analyzed for petroleum contaminants. In the subsequent seven S&S borings (SS5-ALT-SS14), elevated petroleum concentrations were measured only in 4 borings a few feet east of SS5 (SS5-ALT, SS11, SS12, and SS13). Accordingly, PIC recommended additional Phase II testing in proximity to the oil-water separator and S&S boring locations SS5/SS5-ALT to verify the limited lateral and vertical extent of elevated petroleum concentrations and to verify there is no continuing release of petroleum contaminants since 2005. As discussed later in this report, no elevated petroleum concentrations were measured in any of PIC's Phase II borings, thereby confirming the extremely limited lateral and vertical extent of nonvolatile, petroleum hydrocarbons measured by S&S in 2005.

In consideration of the foregoing, PIC concluded that petroleum hydrocarbons (gasoline, diesel, and/or oil) and volatile organic compounds (including fuel oxygenates) could have been stored, used, and/or released onsite by historic tenants.

Accordingly, PIC recommended performance of a subsurface Phase II Soil Investigation at seven locations. Figure 2 illustrates PIC's seven boring locations.

## SURVEY OF ADJACENT PROPERTIES

Figures 2 and 7 illustrate uses on adjacent properties. The subject property is bound by commercial (industrial) in all directions.

None of the adjacent properties exhibited obvious evidence of petroleum or hazardous materials contamination. In addition, the EDR Report in Appendix I does not contain documentation of environmental impairments on adjoining parcels. Further, the EDR Report documents successful regulatory closure at all Leaking Underground Storage Tank (LUST) sites located within one fourth mile of the subject property

Surface runoff at all surrounding properties appeared to be southerly towards the nearby San Gabriel River.

No evidence of historic or improper waste disposal was observed by PIC in any storm drain at the site or surrounding areas.

## HISTORICAL AERIAL PHOTOGRAPH REVIEW

Historical aerial photographs provided by EDR were reviewed by PIC (see copies in Appendix G). Available photographs were dated 1928, 1938, 1947, 1956, 1960, 1968, 1976, 1989, 1994, 2005, 2009, 2010, 2011, and 2012.

The 1928, 1938, and 1947 photos indicate the property was undeveloped and unoccupied. Agricultural cultivation is evident onsite in all three photos. Woodruff Avenue and Washburn Road are visible in all photos. By 1956, several buildings are evident onsite, in support of industrial use. By 1960, additional buildings and surface pavement are observed onsite. Similar features are observed on the 1968 photo. By 1976, additional warehouse buildings in the western portion of the site had been constructed. Subsequent photos exhibit similar features as observed in 1976.

Figure 7 provides a current aerial photo (2011) of the property.

The aerial photo study indicates no obvious or potential environmental impairments on the subject property.

PIC observed no historic evidence of oil wells, landfills or rock quarries on the subject property.

## PHASE II SOIL INVESTIGATION

Phase II site investigation operations were conducted on August 13, 2013.

PIC Project Manager, Ethan Hersch, supervised all field operations and conducted utility clearance operations.

On August 13, 2013, a total of seven (7) soil borings (PIC-1 – PIC-7) were drilled and sampled using direct push drilling equipment. Boring locations are illustrated on Figures 2 and 2A. Boring locations were selected on the basis of proximity to historic potential sources of petroleum or hazardous materials contamination (i.e. former UST #1 and existing oil-water separator). StrongArm Environmental was contracted to provide coring services. Soil samples were recovered at five feet intervals in each boring,

which were cored to depths ranging from five to fifty feet below surface. A total of 25 soil samples were recovered and selectively analyzed for petroleum, metal, and volatile contaminants at Cal Tech Environmental Laboratories. Laboratory results are attached in Appendix E.

The drill auger and core barrels were decontaminated with a liquinox detergent solution, then rinsed with water between boring locations to minimize potential cross contamination. Mr. Hersch conducted vapor monitoring of recovered soil samples during coring operations using an OVM Photoionization Detector (PID). None of the soil samples measured any detectable volatile contaminants using the PID nor was significant field evidence (odor or discoloration) of petroleum or hazardous materials contamination detected. Lithologic data were documented on boring logs attached in Appendix D.

All seven soil borings were backfilled with bentonite seal material and surface pavement.

Groundwater was apparently encountered in two of the borings (PIC-1 and PIC-2) at a depth of about 45 feet below surface.

## LABORATORY RESULTS

A total of twenty five (25) soil samples were recovered during coring operations on August 13, 2013. All 25 soil samples were transported to Cal Tech Environmental Laboratories (Paramount).

Twenty one (21) soil samples recovered from PIC-1 – PIC-7 were quantitatively analyzed for total petroleum hydrocarbons (gasoline, diesel, and oil) by EPA Method 8015. In addition, ten (10) soil samples were analyzed for total volatiles (fuel oxygenates and solvents) by EPA Method 8260B, and six (6) soil samples were analyzed for total metals by EPA Method 6010.

Table I below summarizes laboratory results, which are attached as Appendix E:

**TABLE I**
**LABORATORY RESULTS**

| Boring ID | Sample Depth (feet) | Soil Total Volatiles EPA Method 8260B (ppm) | Soil Total Petroleum EPA 8015 (ppm) | Total Metals EPA 6010 (ppm) |

| PIC-7 | 30 | All = ND | All = ND | - |
| Regulatory Action Level | Variable | Gas=500 Diesel=1,000 Oil=10,000 | Variable | Variable |

Note: All results reported as mg/kg = parts per million
ND = None Detected
= Not Analyzed

The laboratory results measured no detectable, subsurface soil contamination by petroleum hydrocarbons or volatile organic compounds in any sample. All metals concentrations were measured at nondetectable to background concentrations. All measured concentrations are well below regulatory action levels.

## GOVERNMENT RECORDS REVIEW

The following federal, state, and local public records and associated lists were searched to determine the potential for or existence of onsite and/or offsite unauthorized releases of hazardous materials (i.e., contamination) related to onsite and/or offsite aboveground or underground storage tanks, or any other potential sources:

All of the above records were examined for up to a one mile radius by EDR (see Appendix I). The subject property does appear on several of the regulatory lists. More specifically, the site appears on the following:

1. LUST – Leaking Underground Storage Tanks List: This list includes sites which have sustained historc soil and/or groundwater contamination due to leakage from underground storage tanks (USTs). The property appears on the LUST list due to diesel and oil soil contamination discovered in 1989 during UST removal operations (see Site History Section). Excavation, soil remediation, and site assessment requirements were completed in 1992 to the satisfaction of the Los Angeles County Dept. of Public Works (LACDPW). Regulatory closure was awarded in correspondence dated August 6, 1992 (See Appendix C).

2. CORTESE/HISTORIC CORTESE: These state lists are no longer updated. The CORTESE lists originally included sites known to have sustained contamination by leaking underground storage tanks, landfill use, or other industrial causes. All CORTESE sites have been reassigned to other

state lists such as the LUST, SLIC, or Landfill lists. The subject property appears on the HISTORIC CORTESE list due to soil contamination from leaking USTs discovered in 1989 already discussed above.

3. UST/SWEEPS UST/HIST UST: Underground Storage Tank Lists: These state lists identify sites which currently or historically have used, operated, and/or permitted underground storage tanks (USTs). The subject property appears on the state HIST UST list. The Site History Section and Appendix C contain documentation of regulatory closure for all historic onsite USTs. Appearance on the state UST Permit lists does not indicate the presence of a subsurface contamination problem.

4. RCRA: Resource Conservation and Recovery Act – This federal list includes sites that have obtained permits to legally use, store, and/or dispose of hazardous waste (e.g. waste oil). The property appears on the federal RCRA list. Appearance on the federal RCRA list does not indicate the presence of a subsurface contamination problem.

5. FINDS: Facility Index Registry System – This federal list includes sites which appear on one or more other federal lists. The property appears on the FINDS list in response to inclusion on the RCRA permit list. Appearance on the federal FINDS list does not indicate the presence of a subsurface contamination problem.

6. WDS: Waste Discharge System – This state lists includes sites permitted to conduct recycling operations for solid wastes and discharge waste according to permit requirements. The property appears on the state WDS list. Appearance on the WDS list does not indicate the presence of a subsurface contamination problem.

7. NPDES: National Pollutant Discharge Elimination System – This state list includes sites which have obtained federal EPA permits to discharge treated waste water into the municipal storm water system. The property appears on the NPDES list to facilitate disposal of waste process water generated during recycling operations. Appearance on the state NPDES list does not indicate the presence of a subsurface contamination problem.

8. HAZNET: Facility and Manifest Data – This state list, like the federal RCRA list, includes sites which have historically obtained permits to legally dispose of hazardous wastes (e.g. waste oil). Appearance on the HAZNET list does not indicate the presence of a subsurface contamination problem.

9. LA COUNTY HMS: Los Angeles County Hazardous Materials Sites – This county list includes sites which have been inspected or obtained industrial waste discharge/underground storage tank operating permits from the Los Angeles County Department of Public Works. PIC reviewed all available records at the county offices (See Appendix C). As discussed previously, all historic USTs have been removed under permit requirements of the LACDPW and received regulatory closure with "No Further Action" status (see Appendix C).

The EDR record search also revealed the following concerning properties located within a one mile radius of the subject site:

**Historic Oil and Gas Drilling Activity**

According to California Division of Oil and Gas Records, no historic exploratory oil drilling activity has occurred within one-half mile of the subject site. It is unlikely that any historic oil and gas drilling has impacted the site. Historic oil well drilling activity is illustrated on Figure 4.

**Solid Waste Disposal Sites**

The Los Angeles County Solid Waste Management Department provides a public index of Solid Waste and Liquid Industrial Waste Disposal Sites (see Figure 6). The EDR Report in Appendix I also includes a review of listings concerning landfills. Figure 6 and the EDR report both indicate that no landfills have been located on or near the subject property. In addition, results of PIC's Phase II Soil Investigation found no evidence of buried refuse of landfill debris.

It appears the subject property has not been impacted historically by landfill activity.

## GEOLOGY AND HYDROGEOLOGY

The subject site is located within the San Gabriel River flood plain. Underlying soil consists of Pleistocene alluvial sediments. The elevation of the property is about 105 feet above sea level; the surrounding topography slopes to the south (see Figure 1: USGS Topographic Map and Appendix F). PIC's recent Phase II Investigation determined that to an approximate depth of 50 feet below surface, soil consists of brown, fine grained sand and silt overlying grey, clayey silt (see Boring Logs in Appendix D). The lithology is consistent with alluvial deposition within the San Gabriel River Flood Plain.

The Los Angeles County Flood Control District publishes regional groundwater information (groundwater contour map) which includes coverage of this area (see Figure 3). The most likely direction of groundwater flow is southwesterly. According to Figure 3, depth to the first groundwater aquifer is about 60 feet below surface (sea level elevation of 45 feet).

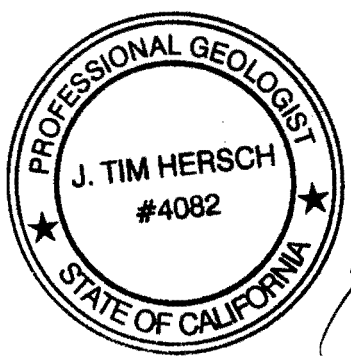
## CONCLUSIONS AND RECOMMENDATIONS

Based upon the results of this Phase I and Phase II Environmental Investigation and the research of available records, PIC has found no evidence to conclude that significant environmental impairments exist at the subject property. PIC concludes:

1. One documented, historic occurrence of petroleum hydrocarbon contamination (environmental impairment) was discovered at the subject property. In 1989, diesel and oil soil contamination was discovered during UST removal operations. After successful completion of site assessment and soil remediation requirements, Los Angeles County awarded regulatory closure in correspondence dated

August 6, 1992 (See Appendix C).

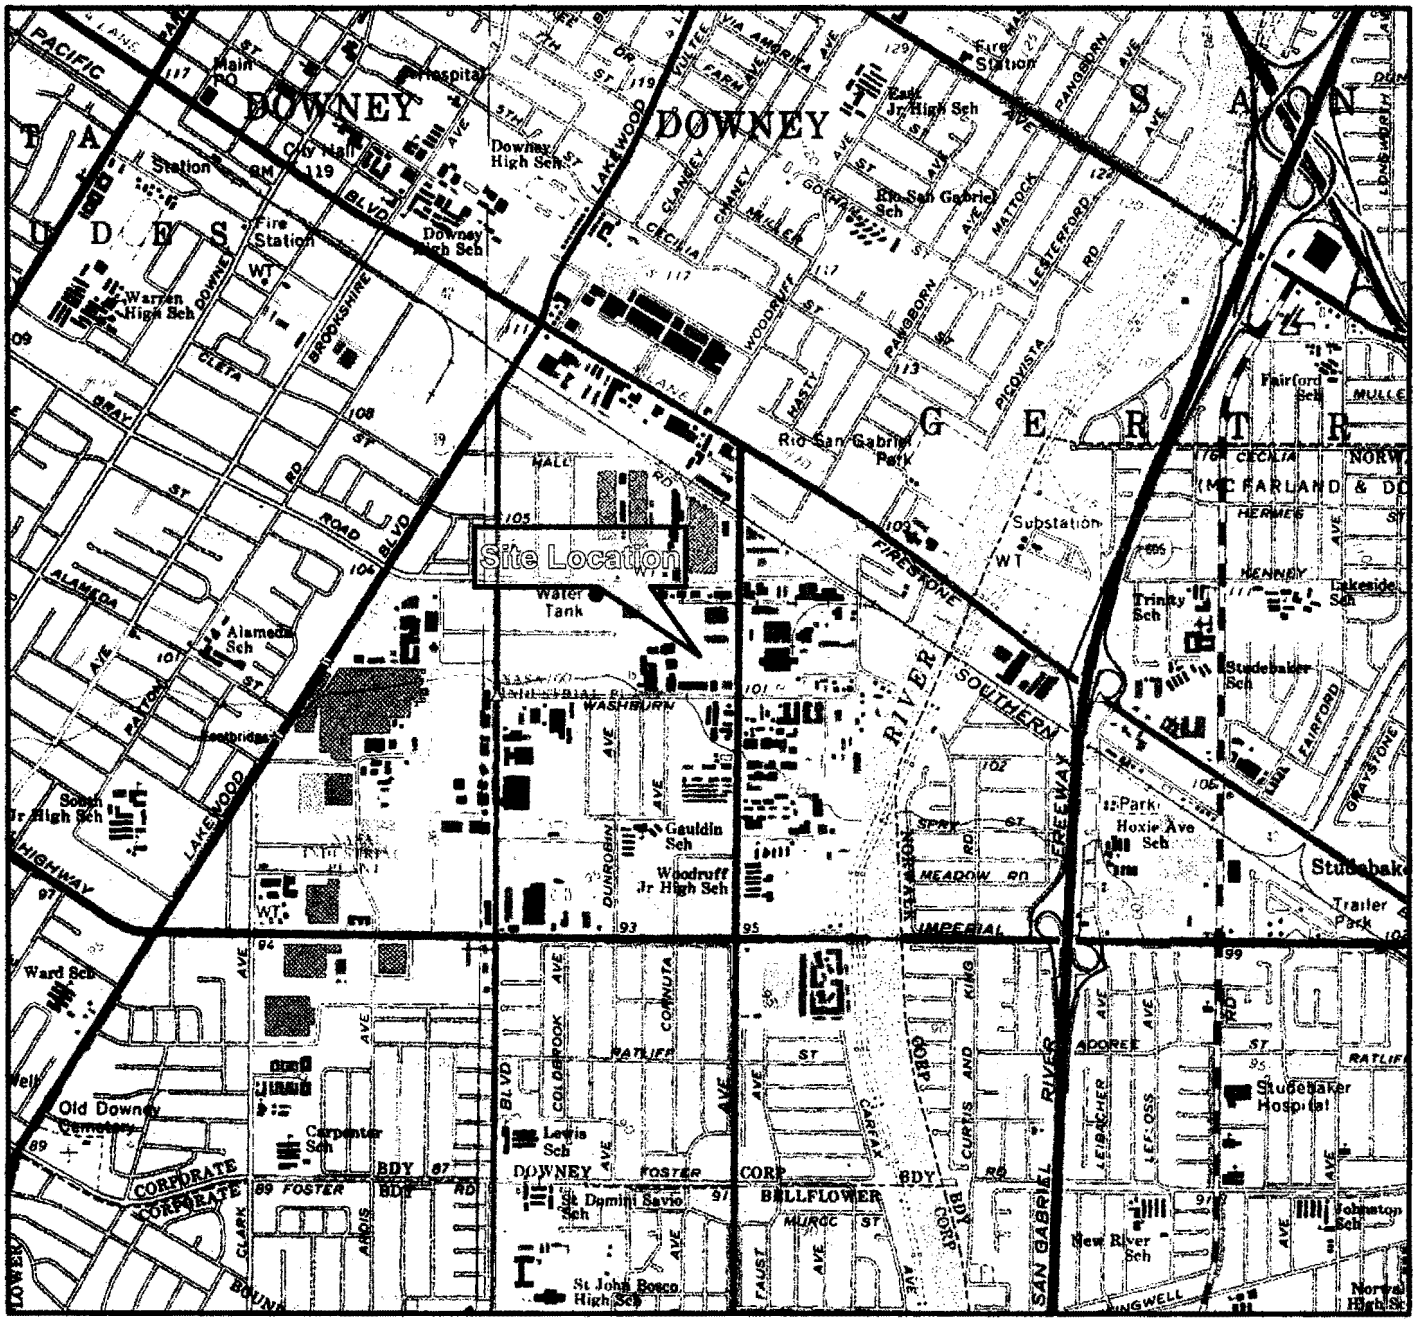
2. Potential historic onsite sources of petroleum or hazardous materials contamination were adequately investigated by Phase II Testing operations. More specifically, several subsurface investigations were conducted onsite from 1989 through 2013 by Tank Protect Engineering, Converse Consultants, GeoScience Analytical, S & S Environmental Services, and PIC Environmental Services. Within the "courtyard" area, adjacent to the oil-water separator, some near surface soil above a depth of five feet was found to contain slightly elevated concentrations of arsenic, probably as an artifact of imported fill material. In addition, S & S Environmental measured elevated concentrations of nonvolatile, petroleum hydrocarbons as deep as 20 feet southeast of the oil-water separator. PIC's recent confirmation testing near and within the same location measured no detectable petroleum contaminants below a depth of five feet. PIC concurs with previous investigations that the occurrences of elevated arsenic and nonvolatile petroleum are very limited and do not warrant remedial action or further investigation.



3. PIC concludes the site lacks significant environmental impairments (Recognized Environmental Conditions).

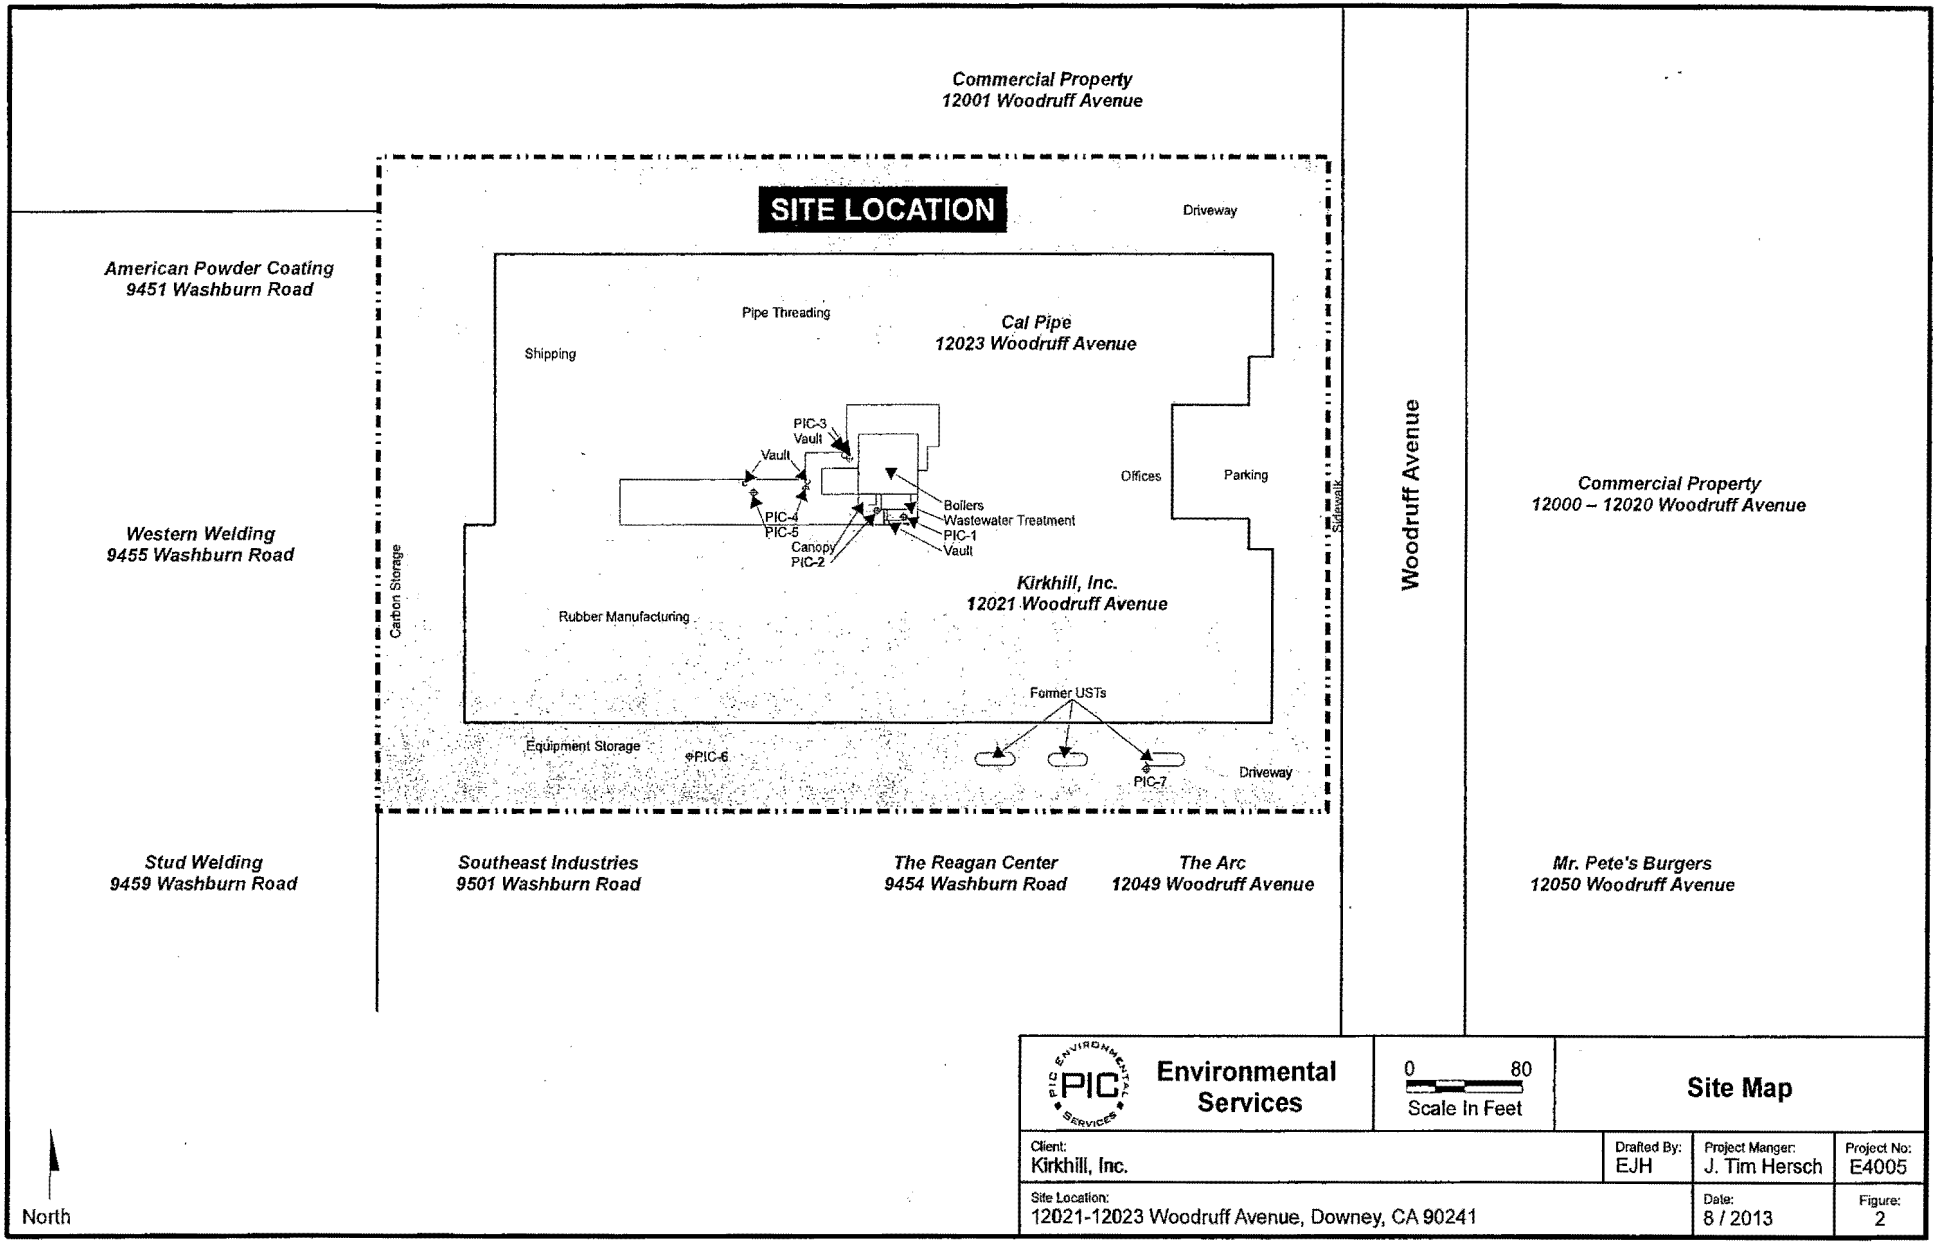
4. PIC recommends no further investigation.

This report is proprietary and confidential, to be delivered to, and intended for the exclusive use of, the above named client, or the client's assignees only. PIC Environmental Services assumes no responsibility nor liability for the reliance herein or use hereof by anyone other then the above named client or the client's assignees. In addition, the results of the government record search were prepared and conducted by EDR, who are responsible for the accuracy and completeness of the information provided. Finally, the laboratory results were prepared, conducted, and provided by Cal Tech Environmental Laboratories, under the direct supervision of Greg Tejirian, who is responsible for the accuracy and completeness of the results provided.



Should you have any questions or comments regarding the procedures outlined in this report, please do not hesitate to call us at 909/593-2427.

Respectfully submitted,



Ethan J. Hersch

Dear Mr. Riopelle:

**HAZARDOUS MATERIALS UNDERGROUND STORAGE**
**SITE ASSESSMENT/REMEDIAL ACTION PLAN CLOSURE CERTIFICATION**
**FACILITY LOCATION: 12021 WOODRUFF AVENUE, DOWNEY**
**CLOSURE PERMIT NUMBER: 5999B**

This office has reviewed the final report submitted on August 5, 1992. Based on the information submitted, this letter confirms the completion of site investigation and remedial action at the above site. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is our position that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at this site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings or site usage.

Any questions regarding this matter should be directed to Ofori Amoah at (818) 458-3573.

Very truly yours,

T. A. TIDEMANSON

**CHRONOLOGICAL SUMMARY OF SITE ACTIVITIES**
**KIRKILL, INC.**
**12021 WOODRUFF AVENUE, DOWNEY**

The following represents a summary of the events that have taken place for File I-12987:

| | |
|---|---|
| 9/13/86 | Tank integrity tests by Cal Tank Testing (10,000 gallon (naphthenic) oil tank failed the test). |
| 10/10/86 | The Hazardous Materials Underground Storage Permit (HUMSP) No. 4735 was applied for which documented one 10,000 gallon (naphthenic) processing oil tank, two 10,000 gallon diesel tanks and one 7,500 gallon diesel tank. |
| 6/12/87 | The deadline for the leak detection proposal (LDP) and the tank monitoring proposal (TMP) was set for September 14, 1987. |
| 9/18/87 | A letter was received proposing LDP/TMP. A detailed proposal was not submitted. |
| 9/22/87 | A County letter was sent disapproving of the interim monitoring plan. |
| 10/23/87 | A formal interim monitoring plan was submitted by Kirkill, Inc. |
| 11/23/87 | A County letter was sent conditionally approving the interim monitoring plan. The deadline was set for an application for tank closure by August 1, 1989, or the deadline was set for the LDP/TMP by July 1, 1989. |
| 11/24/87 | Tank integrity tests were received from Kirkill, Inc. All the tanks passed the test. |
| 8/9/89 | Closure Permit No. 5999B was pulled for three 10,000 gallon tanks (tank removal). Closure Permit No. 6000B was pulled for the 7,500 gallon tank (closure in place). |

| | |
|---|---|
| 8/24/89 | A County Inspector's Report was prepared after the tank removal occurred. Visual evidence of contamination was noted. |
| 12/11/89 | An incomplete Tank Closure Report was received from Tank Protect Engineering (TPE). Remedial excavation work was performed without written permission from the County. |
| 2/28/90 | An additional Tank Closure Report was received from TPE. Treatment was performed on the excavated soil, and the soil was backfilled in the open holes without written approval from the County. The treatment method utilized (hydrogen peroxide) by TPE did not appear to be an accepted technology according to the technologies investigated by the State Department of Health Services, Alternative Technology Section. It was reported that approximately 72 cubic yards of soil was hauled off-site for disposal. |
| 4/11/90 | A County Notice of Responsibility for Reimbursement letter was sent to Kirkill, Inc. |
| 5/17/90 | A County letter was sent requesting additional information to aid in the review process. |
| 6/22/90 | A report was received from TPE addressing the issues raised in the County letter dated May 17, 1990. |
| 7/30/90 | Additional cross-sections and plot plans were received from TPE. |
| 8/7/90 | A Health and Safety Plan along with manifests were received from TPE. This information was requested in the County letter dated May 17, 1990. |
| 9/17/90 | Additional information was received from TPE. This submittal was in response to a meeting dated August 17, 1990. The requested information was originally stated in the County letter dated May 17, 1990. |

| | |
|---|---|
| 10/11/90 | A County letter was sent reiterating some of the requested information of the County letter dated May 17, 1990. |
| 10/29/90 | A submittal was received from TPE which addressed the items raised in the County letter dated October 11, 1990. |
| 12/3/90 | A County geologic review was prepared by Steve Lipshie recommending further site assessment work. |
| 12/11/90 | Calculations estimating the volume of excavated soil were received. |
| 12/12/90 | A County inspection was performed by Scott Small and Stephen Groner to evaluate the current site status. The excavations were backfilled and paved over. |
| 1/15/91 | A Site Assessment Proposal was received from TPE to drill four borings. |
| 2/14/91 | A County letter was sent conditionally approving of the Site Assessment Proposal. |
| 2/26/91 | A County inspection was performed by Dave Lobato who observed the drilling process. The drilling and sampling protocol appeared adequate. |
| 4/18/91 | A Site Assessment Report was received from TPE. The deepest boring was drilled 35 feet deep. Contamination was detected in boring CB-9 and CB-10 as deep as 35 feet. |
| 5/9/91 | A County letter was sent requiring additional site assessment work to define the extent of the detected contamination. |
| 7/2/91 | A Site Assessment Proposal was received from TPE. |
| 7/11/91 | A Site Assessment Proposal addendum was received from TPE. |
| 7/22/91 | A County letter was sent conditionally approving of the Site Assessment Proposal. |

8/15/91 A County inspection was performed by Dave Lobato who observed the drilling of CB-9A (one of five borings). The Inspection Report did not mention inadequate drilling or sampling protocol. Four borings had been drilled prior to Dave Lobato arriving at the site.

11/1/91 HMUSP No. 4735B was renewed.

11/4/91 A Site Assessment Report was received from TPE. The deepest boring was drilled 50 feet deep. Lesser amounts of contamination were detected in each boring (<100 ppm) as deep as 45 feet. Contamination as high as 315 ppm was detected in boring CB-11.

12/4/91 A County letter was sent requiring further site assessment work and a Remedial Action Proposal to mitigate the existing contamination.

2/10/92 An inadequate Site Assessment Proposal was received from TPE.

3/9/92 A County letter was sent disapproving of the Site Assessment Proposal to drill one boring. The proposed boring would not have adequately defined the extent of the contamination.

8/5/92 A Final Confirmation Boring Report was received from TPE. Two borings were drilled to 30 feet. A total of 12 soil samples were collected and analyzed for the two borings drilled. Sample FB2 at 25 feet showed a TRPH concentration of 91 ppm. BTEX and PAHs concentration were nondetectable. Boring FB1 was provided. Soil disposal manifest was not provided. A TRPH concentration of 852 ppm of petroleum distillate previously discovered will be left in place, based on leading potential analyses. Risk assessment was not conducted.

Official Registration Form

**California Water Resources Control Board**

# Hazardous Substance Storage Statement

1985

**Who Must File:** Each person storing hazardous substances in any underground container must file this form no later than July 1, 1984 (After October 1, 1984 and no later than January 1, 1985 for tanks used on farms).

**Definition of Underground Containers:** The law applies to "concrete sumps, nonvaulted buried tanks or other underground containers." (Water Code section 13173) All containers, including earthen walled pits, ponds, lagoons and sumps, that are below the normal ground surface level must register. A tank sitting on the ground is not included. Containers partially beneath the surface are included. Lined or unlined pits, ponds and lagoons are covered if earth has been removed from the storage area to construct the facility. Normal grading is not considered construction below ground level.

**Definition of Hazardous Substance:** Any substance listed in Section 6382 of the Labor Code or in Section 25316 of the Health and Safety Code. This includes: gasoline, diesel fuel, all industrial solvents, pesticides, herbicides and fumigants. If the material must be carried by a registered hauler, disposed of at a hazardous waste site, is explosive, generates pressure due to heat or decomposition or would harm humans or wildlife you must register the tank. Wastes are included.

**Fee:** For each tank registered a $10 fee must be paid, except that retail gasoline stations pay $5 per tank.

**Penalties:** For failure to file, the penalty is $500-$5,000 per day. If you falsify information, you can be fined up to $20,000 for each day the information is incorrect and has not been corrected.

**Confidentiality:** If you have information protected by trade secret laws, please attach a list of the information on this form that is confidential and the justification for confidentiality, including specific citations of relevant statutory and case law.

**Multiple Containers:** Fill I and II on one form and leave it blank on all the remaining forms. Attach all forms together securely. If you own more than 50 tanks you can file information on computer tape. Call 916/324-1262 for information.

**This is not a Permit Application.** All Underground Tanks will be subject to local regulation. Some jurisdictions have already begun programs. Check with your local county government for further information.

**NOTE: ALL UNDERGROUND CONTAINERS MUST REGISTER EVEN IF STATE AND/OR LOCAL PERMITS ARE IN FORCE.**

**Who Must File:** Each person storing hazardous substances in any underground container must file this form no later than July 1, 1984 (After October 1, 1984 and no later than January 1, 1985 for tanks used on farms).

**Definition of Underground Containers:** The law applies to "concrete sumps, nonvaulted buried tanks or other underground containers." (Water Code section 13173) All containers, including earthen walled pits, ponds, lagoons and sumps, that are below the normal ground surface level must register. A tank sitting on the ground is not included. Containers partially beneath the surface are included. Lined or unlined pits, ponds and lagoons are covered if earth has been removed from the storage area to construct the facility. Normal grading is not considered construction below ground level.

**Definition of Hazardous Substance:** Any substance listed in Section 6382 of the Labor Code or in Section 25316 of the Health and Safety Code. This includes: gasoline, diesel fuel, all industrial solvents, pesticides, herbicides and fumigants. If the material must be carried by a registered hauler, disposed of at a hazardous waste site, is explosive, generates pressure due to heat or decomposition or would harm humans or wildlife you must register the tank. Wastes are included.

**Fee:** For each tank registered a $10 fee must be paid, except that retail gasoline stations pay $5 per tank.

**Penalties:** For failure to file, the penalty is $500-$5,000 per day. If you falsify information, you can be fined up to $20,000 for each day the information is incorrect and has not been corrected.

**Confidentiality:** If you have information protected by trade secret laws, please attach a list of the information on this form that is confidential and the justification for confidentiality, including specific citations of relevant statutory and case law.

**Multiple Containers:** Fill I and II on one form and leave it blank on all the remaining forms. Attach all forms together securely. If you own more than 50 tanks you can file information on computer tape. Call 916/324-1262 for information.

**This is not a Permit Application.** All Underground Tanks will be subject to local regulation. Some jurisdictions have already begun programs. Check with your local county government for further information.

**NOTE: ALL UNDERGROUND CONTAINERS MUST REGISTER EVEN IF STATE AND/OR LOCAL PERMITS ARE IN FORCE.**

PROVISIONAL
HAZARDOUS MATERIALS UNDERGROUND STORAGE PERMIT
COUNTY OF LOS ANGELES
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
2250 ALCAZAR STREET
LOS ANGELES, CALIFORNIA 90033

PERMIT NO. 4735

EXPIRATION DATE DEC 14 1987

PERMISSION IS HEREBY GRANTED UNDER LACC TITLE 11, DIVISION 4 TO:

012987-1F <<<<<<<< FILE NUMBER

KIRKHILL RUBBER INC <<<<<<<< PERMITTEE
12021 WOODRUFF AVE
DOWNEY CA 90241

RE: 12021 WOODRUFF AVE <<<<<<<< FACILITY ADDRESS

TO STORE HAZARDOUS MATERIALS IN UNDERGROUND TANK(S) LOCATED AT THE FACILITY ABOVE.

NUMBER OF PERMITTED TANKS: 4

**THIS PROVISIONAL PERMIT IS SUBJECT TO THE FOLLOWING REQUIREMENTS:**

**PART A** — GENERAL CONDITIONS AND LIMITATIONS (ATTACHED).

**PART B** — AUTHORIZED HAZARDOUS MATERIAL STORAGE TANKS (ATTACHED).

**PART C** — SPECIFIC CONDITIONS AND LIMITATIONS:

1. THE PERMITTEE SHALL SUBMIT FOR APPROVAL AND IMPLEMENT A LEAK DETECTION PROGRAM (LDP) AND A TANK MONITORING PROGRAM (TMP) PREPARED IN ACCORDANCE WITH "UNDERGROUND STORAGE OF HAZARDOUS MATERIALS - GUIDELINES FOR EXISTING FACILITIES, OCTOBER 1986."

2. THE FOLLOWING TIME SCHEDULE SHALL APPLY TO SUBMITTALS REQUIRED BY THIS PROVISIONAL PERMIT:

   a. PERMIT FEE DUE BY (SEE INVOICE) to be billed

   b. TANK INTEGRITY TEST RESULTS DUE BY N/A

   c. PROPOSALS FOR LDP AND TMP DUE BY SEP 14 1987

3. PERMIT EFFECTIVE DATE 10-20-86
   NOTE: THE EFFECTIVE DATE IS DETERMINED BY ORIGINAL DATE OF PERMIT APPLICATION.

**PART D** — SPECIAL CONDITIONS AND LIMITATIONS ATTACHED. YES [ ] NO [X]

This Provisional Permit is valid only for the continued operation of tanks providing suitable storage and expires six (6) months from the date of issue. Permittee has until the expiration date to complete an approved LDP and to install and be in compliance with an approved TMP. Upon full compliance with the approved LDP and TMP and all other conditions and limitations, this Provisional Permit will be replaced by a full term Operational Permit for the remainder of the unexpired five (5) year term from the effective date unless otherwise noted in Part D above.

T. A. TIDEMANSON
DIRECTOR OF PUBLIC WORKS

BY _____ JUN 12 1987

WASTE MANAGEMENT DIVISION

PP801 10/86

HAZARDOUS MATERIALS UNDERGROUND STORAGE PERMIT

PART A — GENERAL CONDITIONS AND LIMITATIONS

TERM OF PERMIT

. The combined provisional and full term operational permits shall be valid for a maximum period of five (5) years from the effective date. However, if the Department of Public Works (DPW) finds that the life expectancy of a facility is less than five (5) years, the DPW may adjust the term of the permit to reflect such a condition.

FEES

. All fees shall be due and payable on the billing date established by the DPW. Fees not paid within 30 calendar days from the billing date shall be considered delinquent. Delinquent fees shall be subject to a 10 percent penalty fee for each 30 day period beyond the billing date that the fee is due. Permits for which the annual permit fee installment is delinquent for 90 days or more are subject to suspension.

REPORTS AND RECORDS

. At least annually and due by the anniversary of the effective date of this permit, a written report must be submitted to the Department of Public Works, Waste Management Division, P.O. Box 4089 Terminal Annex, Los Angeles, CA 90051 detailing (but not limited to) the following:

a. Any changes in the type of hazardous materials stored within the facility.

b. Any changes in the uses of the underground facility.

c. Changes or modifications to monitoring procedure.

d. A detailed account of any unauthorized discharges, and the remedial measures employed.

e. Any modifications to the facility except for routine required maintenance.

In the event there has been no change of operation nor unauthorized release, a negative declaration to that effect may be submitted.

The report or negative declaration shall be certified by the permittee or an authorized representative who is responsible for operations at the facility.

This report is required by local agencies to satisfy Section 25286(c) of the State of California Health and Safety Code. A report form will be made available to owners and operators to comply with this requirement. The report shall be delinquent 30 days after its due date and as such may result in suspension or revocation of the permit.

. Every permittee shall provide testing, monitoring (if applicable), and inspections in compliance with this permit and shall maintain records adequate to demonstrate compliance therewith.

. All required records shall be maintained by the permittee and made available for inspection for a period of time not less than three (3) years from the date of the required annual report for the year during which the testing, monitoring or inspection was performed. Said records shall be made available to the DPW, County Health Officer or Forester and Fire Warden during normal working hours and at any time upon reasonable notice.

RENEWALS AND EXTENSIONS

. If this is a provisional permit, it may be extended to a maximum of one (1) additional year upon written application stating the reasons for such a request and upon approval by the Director of Public Works.

. Every application for the renewal of a operational permit or extension of a provisional permit shall be made at least 30 days prior to the expiration date of such permit. If a timely application for renewal has been submitted, the permit shall remain in effect until the DPW has made a decision and any administrative appeal has been exhausted.

APPEALS

8. Any person dissatisfied with the decision of the DPW may appeal the decision, in writing, to the Appeals Board, setting forth with particularity the ground or grounds for the appeal. Such appeal shall be submitted within 30 days after notice of the decision has been given.

ADDITIONAL APPROVALS AND REPAIRS

9. Additional approvals shall be required for any of the following actions:

a. Tank repair.

b. Modifications.

c. Change or addition of hazardous materials stored.

d. Change of approved monitoring system.

10. Procedures for an application for a permit shall also apply to an application for an additional approval. Each application for an additional approval shall be accompanied by the appropriate fee and supporting information.

11. Any substantial modification or repair of a facility other than minor repairs or emergency repairs shall be in accordance with plans to be submitted to the DPW as an additional approval.

12. Permittee shall carry out routine maintenance, ordinary upkeep and minor repairs in a careful and safe manner. No permit will be required for such maintenance, upkeep and repairs.

13. Permittee may make emergency repairs to a facility in advance of seeking an additional approval whenever an immediate repair is required to prevent or contain an unauthorized discharge or to protect the integrity of the containment. However, within five (5) working days after such emergency repairs have been started, permittee shall seek additional approval by submitting drawings or other information adequate to describe the repairs to the DPW.

CLOSURES, DECONTAMINATION AND NEW CONSTRUCTION

14. Replacement of tanks at an existing facility shall be considered a closure of the tanks to be replaced and a new installation of tanks, and all fees shall be assessed accordingly.

15. No tank shall be abandoned. Tanks which are temporarily out of service, and are intended to be returned to use, must continue to be monitored and inspected. Any tank which is not being monitored and inspected must be closed or removed in a manner approved by the DPW.

16. Prior to any permanent or temporary closures being initiated, an Application for Closure form, the appropriate fee and required supporting information shall be filed with the DPW.

17. Plans for the decontamination of a facility shall be submitted to the DPW for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies include the California Regional Water Quality Control Board, the Los Angeles County Department of Health Services and the South Coast Air Quality Management District.

18. The installation of a new tank shall require submittal to the DPW of an application for new construction, the appropriate new construction plan clearance fee and supporting information as required by the DPW.

TRANSFERS

19. A Hazardous Materials Underground Storage Permit may be transferred to a new owner of the same facility provided:

a. The new owner accepts full responsibility for all obligations under this permit at the time of the transfer of the facility.

b. The transfer shall be documented on a form provided by the DPW within 30 days of transfer of ownership.

c. The appropriate fee is paid.

Letter No. 8703831

Mr. Ray Bellanger, Plant Manager
Kirkhill Inc.
P. O. Box 7012
Downey, CA 90241-0030

Dear Mr. Bellanger:

HAZARDOUS MATERIAL UNDERGROUND STORAGE PERMIT (HMUSP)
TANK MONITORING PLAN (TMP)/INTERIM OPTION
FACILITY LOCATION: 12021 Woodruff Avenue, Downey
PERMIT NO. 00004735

This office has reviewed the proposed Interim Monitoring Plan submitted on October 29, 1987 for the subject facility.

[X] Your proposed Interim Monitoring Plan has been approved by this office. The HMUSP/Interim Monitoring Option is enclosed.

[ ] Your proposed Interim Monitoring Plan has not been approved. Please submit the information indicated on the attached Additional Requirements sheet to this office by _____.

If you have any questions regarding this matter, please contact Mr. David Esfandi of this office at (213) 226-4033.

Very truly yours,

T. A. TIDEMANSON

KIRKHILL RUBBER INC <<<<<<<< PERMITTEE
12021 WOODRUFF AVE
DOWNEY CA 90241

RE: 12021 WOODRUFF AVE <<<<<<<< FACILITY ADDRESS

TO STORE HAZARDOUS MATERIALS IN UNDERGROUND TANK(S) LOCATED AT THE FACILITY ABOVE.

NUMBER OF PERMITTED TANKS: 4

THIS PERMIT IS SUBJECT TO THE FOLLOWING REQUIREMENTS:

PART A -- GENERAL CONDITIONS AND LIMITATIONS (ATTACHED).

PART B -- AUTHORIZED HAZARDOUS MATERIAL STORAGE TANKS (ATTACHED).

PART C -- SPECIFIC CONDITIONS AND LIMITATIONS:

1. The results of the second annual tank tests must be submitted to the Department of Public Works (DPW) by August 1, 1988.

2. The results of the third annual tank tests must be submitted to DPW by August 1, 1989, unless Application for Closure has been filed prior to that date.

3. Records of daily inventory reconciliation must be kept for a period of three years. If any allowable variation is exceeded, the permittee must notify DPW within 24 hours. See attached Inventory Reconciliation Requirements.

PART D -- SPECIAL CONDITIONS AND LIMITATIONS.

[X] An Application for Closure must be on file with DPW prior to August 1, 1989.

or

[X] Proposals for Leak Detection and Tank Monitoring must be submitted to DPW by July 1, 1989.

TO BE COMPLETED BY THE DEPARTMENT OF PUBLIC WORKS

PURSUANT TO SECTION 11.80.070B, LOS ANGELES COUNTY CODE, PERMISSION IS HEREBY GRANTED TO PROCEED WITH THE CLOSURE DESCRIBED ABOVE SUBJECT TO THE ATTACHED CONDITIONS AND LIMITATIONS [X]. THIS PERMIT EXPIRES 180 DAYS FROM THE DATE BELOW.

T.A. TIDEMANSON T.A. Tidemanson 8-9-89

CLOSURE PERMIT SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

Closure Permit No. [illegible] B
File No. I- 12987-1F

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

| SP | Depth(s) | Compounds | Analysis Method |
|---|---|---|---|
| 1A, B, 2A | 2 4' Below ramp bottom | TPH | 418.1 |
| 3A, 3B | | TPH | 418.1 - Rev. |
| | | | |
| | | | |

3. All soil samples obtained shall be undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report.

4. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

5. The analysis results for all soil samples shall be expressed in milligrams per kilogram (mg/kg). Analysis results for groundwater samples shall be expressed in parts per billion (ppb).

6. Analysis results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) The method of analysis.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever earlier.

LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the Los Angeles County Department of Public Works, Waste Management Division, P.O. Box 1460, Alhambra, CA 91802 containing:

1. File number of facility and closure permit number.

2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets and north arrow.

3. Description of methods for obtaining, handling and transporting samples.

4. Time and date samples were obtained.

5. If borings were established, boring logs certified by a CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.

6. Chain-of-custody documentation initiated by person obtaining sample through person at State Department of Health Services certified laboratory.

7. Disposal destination of tanks and evidence of legal disposal.

8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction and methods of analysis.

9. Documentation as to depth of groundwater at facility.

10. Manifests to documentation hazardous waste disposal of any removed soil and rinseate.

11. Any observations of site contamination.

12. Remedial action plan to mitigate contamination.

13. Report to be signed by CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.

5. The analysis results for all soil samples shall be expressed in milligrams per kilogram (mg/kg). Analysis results for groundwater samples shall be expressed in parts per billion (ppb).

6. Analysis results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) The method of analysis.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever earlier.

Mr. Raymond Ballanger
Kirkhill, Inc.
P.O. Box 7012
Downey, CA 90241-0030

Dear Mr. Ballanger:

NOTIFICATION OF RESPONSIBILITY FOR REIMBURSEMENT FOR COSTS INCURRED IN ADMINISTERING THE UNDERGROUND STORAGE TANK CLEANUP PROGRAM
SITE ADDRESS: 12021 WOODRUFF AVE., DOWNEY, CA 90241

The purpose of this letter is to inform responsible parties that the Los Angeles County Department of Public Works has entered into an agreement with the State of California to oversee the cleanup of contaminated sites, resulting from the unauthorized release of hazardous substances from underground storage tanks. The cleanup of these sites is necessary to protect the public and environment from unnecessary exposure to hazardous chemicals.

The cleanup program developed by Los Angeles County is funded by State and Federal monies, and is subject to the reimbursement requirements associated with the use of these funds. In order to comply with the reimbursement requirement, it will be necessary to account for all time and materials expended by County staff at each cleanup site. On a routine basis, site specific amounts detailing the time and expenses expended for each site will be provided to the State. The State will then invoice the responsible party for all direct and indirect costs associated with the cleanup of the site.

For your information, please find the enclosed Notice of Reimbursement. This is your formal notification concerning reimbursement requirements for the responsible party. If any of the information contained in the Notice of Reimbursement is incorrect, or if you have any questions regarding the reimbursement requirements, please contact Pat Proano from the Underground Storage Tank Cleanup Program at (818) 458-3979. Any correspondence should be sent to:

Dear Mr. Ballange:

CLOSURE SITE ASSESSMENT
SOIL REMEDIATION REPORT
12021 WOODRUFF AVENUE, DOWNEY

This office has reviewed the report submitted on February 28, 1990 which contained information on the Site Assessment and the remediation of soil contaminated with cutting oil and diesel subsequent to the removal of three underground storage tanks. The following information must be submitted to our office to aid the review process:

1. Provide a cross-section of the plume under each tank.

2. Indicate the total volume of the soil removed. Support your answer with calculations for the each tank pit.

3. Indicate the post-excavation samples from each pit and/or stockpile.

4. Submit the field raw-data boring logs and the refined boring logs showing depths and contamination levels. Boring logs must include the description of the earth material (USCS), drilling date, company methods and signed by either a registered Civil Engineer with sufficient experience in soil or engineering geologist/geologist.

5. Identify all sample shown on the laboratory report.

6. Explain why borings were terminated at depth which showed contamination.

7. Describe the handling protocol.

8. Explain why the presence of napthtalene was not indicated on the closure permit application.

9. Describe the treatment process (including progress reports) used for the remediation and the laboratory results of the confirmation samples.

10. Provide evidence of proper soil compaction.

11. Submit a legible location map and a plot plan showing two adjacent cross streets and a north arrow.

12. Describe site hydrogeology and its features.

13. Provide information on site history (past and present business operation).

14. Submit detailed information on abandonment-of-tank-in-place.

15. Submit the site Health and Safety Plan used during the excavation and the treatment process.

Please submit the request by June 22, 1990.

Pleas fell free to contact Ofori Amoah at (818) 458-3573 for any further assistance.

Very truly yours,

T. A. TIDEMANSON

Mr. Raymond Ballanger
Kirkhill, Inc.
P.O. Box 7012
Downey, CA 90241-0030

Dear Mr. Ballanger:

**UST LOCAL OVERSIGHT PROGRAM REVIEW SHEET**
**HAZARDOUS MATERIALS UNDERGROUND STORAGE**
**REMEDIAL ACTION REPORT**
**CLOSURE PERMIT NO. 5999B AND 6000B**
**FACILITY: 12021 WOODRUFF AVENUE, DOWNEY**

This office has reviewed the subject document(s) submitted on September 17, 1990, dated August 30, 1990. The comments in this letter must be addressed and submitted to this office by November 8, 1990.

In order to better evaluate the Remedial Action Report, the information listed below must be submitted:

Note: The estimated quantity of soil that was or is in each stockpile on the site.

The end use of the stockpiled soil directly east of the oil tank excavation.

Compaction test results.

Clarification of samples from borings B5 and B6 being designated as grab samples.

A risk assessment report must be submitted for leaving the contamination in place under the diesel tank that was abandoned in place.

You are cautioned that any contaminated soils or hazardous materials generated during the approved operation must be manifested and transported to a hazardous waste disposal facility as required by California Health and Safety Code, Division 20, Chapter 6.5, unless evidence is presented indicating that the material may be disposed of at a less restricted facility. Copies of all completed manifests shall be submitted to this office as part of the final report.

Notify Dave Lobato at (818) 458-4374 a minimum of 72 hours prior to commencing any significant investigation, remediation, or assessment activities on site. The Los Angeles County Department of Public Works may disregard the work performed if the County was not properly notified.

Correspondence should be submitted to the Los Angeles County Department of Public Works, UST Local Oversight Program, Annex Building, P. O. Box 1460, Alhambra, CA 91802-1460.

If you have any questions regarding this matter, please contact Scott Small at (818) 458-3996.

Very truly yours,

NOTES TO THE GEOLOGY FILE

Consultant TPE Environmental  File No. I-12987

SUMMARY

4 tanks:

1 - 10K gal. processing oil tank (cutting oil) (Tank 1)
2 - 10K gal. diesel tanks (Tanks 2 & 3)
1 - 7500 gal. diesel tank (Tank 4)

12-5-89:

3 tanks removed on 8-24-89:

1 - 10K gal. processing oil tank
2 - 10K gal. diesel tanks

7 samples coll. (K-1 thru K-7) @ 3' depth

* K-1 thru K-6 (from tank excav.) not shown on map (Shown in 2-26-90 report by TPE)

K-7 from spoils pile

TPH content (ppm):

* K-1 = 52, K-2 & K-3 = 32, K-4 = 325
K-5 = 45,714, K-6 = 1, K-7 = 5030

* Soil contam. under tanks 1, 2, & 4 (High @ #1, low @ #2, #4)

6 borings (B-1 thru B-6) drilled to TD = 40'

* Contam. in B-3 & B-6 @ 20'

GW reportedly @ -89' depth (LACDPW well 1587, 4/89)

↖ 1587Y??

Well 1587Y (~½ blk. S of site)

(1950-87)

High GW level: -48' (5,6/72)
Low " " : -146' (8/57)
Latest " " : -79' (11/87)

Perfs.: 465'-510'

0-14': sand
14-26': sandy clay
26-36': clayey sand
36-50': sandy clay
50-113': sand & gravel
113-136': sandy clay

* Why is VS-8 OK @ 25' when VS-6 has 27,100 ppm TPH @ 23'?
* Boring logs lack:
  Name of logger (see 6-5-90)
  Contacts betw. earth mat'ls. (to nearest ft)
  Detailed descriptions
  Graphic column
  Surface elev.
  TD
  OVA readings
  On slant borings, have inclined depths been corrected to vertical? (see 6-5-90)
  20° inclination from vert. ⟹ 6% decrease in depth
* "SO" on log for B-2 isn't a USC symbol (see 6-5-90)
  Soil excav. from tank pits to 23' depth
  SW part of tank pit #1 excav. to 25' depth
  Remed. proposal:
  Oil-contam. soil to be hauled to disposal site
  Other contam. soil to be treated & then backfilled
  Oxidize HC's using $H_2O_2$ w/ $SiO_2$ catalyst
  TPE proposes to "slurfy in place the diesel tank #4."

2-26-90:

Tank #4 abandoned in place. (filled w/ slurry)
~72 cu yd of oil-contam. hauled away
Other stockpiled soil treated (cleaned to TPH < 100 ppm)
~50 cu yd of soil

3-9-90:

Identical to 2-26-90 report

6-5-90:

54 cu yd of contam. soil removed from tank pits 1 & 2
Hauled away to disposal site

50 cu yd. of contam. soil treated & backfilled

Boring logs revised:
Now have name of logger
"SO" corrected to "SP"
Vert. depths calc. from slant depths
No other changes

X-sec. $A_1$-$A_2$: (E-W)
Horiz. extent of contam. not defined W of B-3 in pit 2
" " " " " " E of K-5 " " 1
Should have analyzed 25' sample from B-4

X-sec. $B_1$-$B_2$: (N-S)
Horiz. extent of contam. @ K-4 (~13' depth) not defined in pit 2
Horiz. extent of contam. not defined S of B-6 (@ 20' depth) in pit 4
~~Vert & horiz. extent of contam. not defined for K-7 plume~~

* Compaction done "anticipating that there will not be any future construction at the excavated site"

Soil: 0-22', clay
22'-30', sand
30'-40'+, silt & silty sand

Top of Gaspur Aquifer ~60' below surface
TPE wants to use LUFT manual's general risk appraisal approach for tank #4
Acceptable TPH (diesel) = 1000 ppm
Due to proximity of bldg.

8-30-90:

Same info as previous report, but figures redrafted for neatness

10-19-90:

Includes revised LUFT risk analysis
⇒ 44 points, total

ACTION

____ Hydrogeologic Section Approved:
____ Hydrogeologic Section Approved, Yet Subject to Conditions Below:
____ Prior to Hydrogeologic Approval, Satisfy Conditions Below:

Horizontal extent of contamination needs to be defined south & west of boring B-3, south & east of sample location K-5, and west or southwest of boring B-6. The maximum extent of the contamination plume should be defined by "clean" (uncontaminated) soil samples, as analyzed by a State-certified lab.
Locations of borings, sampling localities, excavations, tanks, & the building do not match between the two cross-sections & the plan view. These discrepancies should be resolved.

# SUPPLEMENTAL HYDROGEOLOGIC REPORT CORRECTION/REVIEW SHEET

Satisfy Conditions Below:

1. ____ Describe the regional hydrogeologic setting. Cite all references.
2. ____ Describe the site specific hydrogeologic setting. Cite all references.
3. ✓ Provide a Plan view of:
   a. ✓ the maximum surface and subsurface extent of contamination.
   b. ____ groundwater features.
   c. ____ unique site features.
4. ✓ Provide a cross section of:
   a. ✓ the vertical and horizontal extent of contamination.
   b. ____ groundwater features.
   c. ____ unique site features.
5. ____ Verify the hydraulic gradient, direction of groundwater flow, and the high water.
6. ____ Provide a professional's wet ink signature and registration or certification number.
7. ____ Provide a complete index map.
8. ✓ Provide complete boring logs.
9. ____ Provide piezometer and/or monitor well construction detail(s) and procedures for installation.

COMMENTS:

3 & 4. A boundary line indicating the maximum extent of contamination (as defined by lab analyses of soil samples) should be shown on the plan view and cross-sections. It would also be helpful to plot lab analysis data on the cross-sections.

8. Boring logs should contain the following additional information:
Contact lines between different earth materials, determined to the nearest foot.
Lithographic column
Depth scale graduated in 1-ft increments
Surface elevation, in feet

Report reviewed by Steve Lipshie Date 12-3-90

HYDROGEOLOGIC REPORT CORRECTION/REVIEW

DETAILED SUMMARY OF THE SUPPLEMENTAL
HYDROGEOLOGIC REPORT CORRECTION/REVIEW
SHEET FOR SITE ASSESSMENT REPORTS

This is to be used only as a guideline, and may include, but is not limited to the items listed below).

1. Address the hydrogeologic setting, cite all references, and include the following in reference to the subject site:

   A. Discharge and Recharge Areas
   B. Groundwater Basins
   C. Depositional Basins and Stratigraphy
   D. Formations and Members
   E. Surficial Deposits
   F. Aquifer System

2. Address the site specific hydrogeologic setting, cite all references, and include the following in reference to the subject site:

   A. Local search of well records in close proximity.
   B. Identify local uses of groundwater.
   C. Local search of nearby contamination assessment reports.
   D. Groundwater features

      1). Vadose zone
      2). Saturated zones
      3). Capillary fringe
      4). Piezometric surface or water table level contours
      5). Aquifers, aquitards, and aquiclude
      6). Recharge and discharge sources
      7). Representative transmissivities

   E. Unique Site Features - (Physical characteristics of the site which could influence the movement and direction of contaminants through the subsurface)

      1). Earth material contacts - (Contact lines between the items listed below)

         a. Faults, fractures, and joints
         b. Soil horizons
         c. Bedrock materials
         d. Weathered zones
         e. Isolated lenses
         f. Fill materials

PRINTED ON RECYCLED PAPER

2). Man-made conduit contacts - (Contact lines between he items listed below)

a. Sewer line backfill
b. Utility trench backfill
c. Bedding material under footings
d. Wall backfill
e. Swales and berms
f. Surficial obstructions

F. Provide stratigraphic interpretation between well borings

3. Provide a plan view depicting the extent of contamination relative to all groundwater features and unique site features. Provide north arrow, scale, elevations, site boundaries, legend, trace of section lines, boring locations with representative contaminant concentrations, and topographic contours.

4. Provide a cross-section depicting the vertical and horizontal extent of contamination relative to all groundwater features and unique site features. Show interpolation between well borings. Provide direction of section lines, elevations, scale, legend, and boring locations with representative contamination concentrations shown at depth.

5. Establish the site specific hydraulic gradient, direction of groundwater flow, and the high water table level based on original field data. Resolve discrepancies between regional and local data Site all references for regional data.

6. Provide a registered or certified professional's wet ink signature.

7. Provide a complete index map which is clearly legible; preferably from the "Thomas Guide."

8. Provide complete and legible boring logs which may include the following:

A. Description of earth materials
B. Lithographic column with abbreviations and symbols
C. Thickness of floating product
D. Sample localities at depth
E. Depth to the piezometric or groundwater surface
F. Depths in feet
G. Penetration in blows per foot
H. Surface elevation in feet
I. Project name
J. Name of Field Geologist
K. Boring number

PRINTED ON RECYCLED PAPER

L. Termination depth in feet
M. Scale
N. Type of equipment and methods used
O. Isolated lenses
P. All borings for volatile and/or semi-volatile organic compound must show the field meter screening readings, supported by core analysis
Q. The termination of the boring depth must be established by non-detectable levels of contaminants (by core analysis)
R. Where groundwater proximity is close to the bottom of contamination envelope or the bottom of borings, groundwater well must be installed, developed, sampled and analyzed.

9. Provide piezometer and/or monitor well construction detail(s) and procedures for installation. Refer to the California Mitigation Decision Tree Document (DHS, 1986), Chapter 3.4.

PRINTED ON RECYCLED PAPER

Kimball Report June 5 1990
E90-1514A.

# CALCULATION OF EXCAVATED SOIL VOLUMES

TANK # 1 : Naphthenic Type Oil

12467

RECEIVED
DEC 11 1990
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION

Pit Volume of Tank #1 Pit (V)

V = Length x Width x Height

ABCD Volume ($V_1$) = 30' x 10' x 23' = 6,900 $ft^3$

CED Section Volume ($V_2$) = $\frac{1}{2}$ 30 x 10 x 2 = 300 $ft^3$

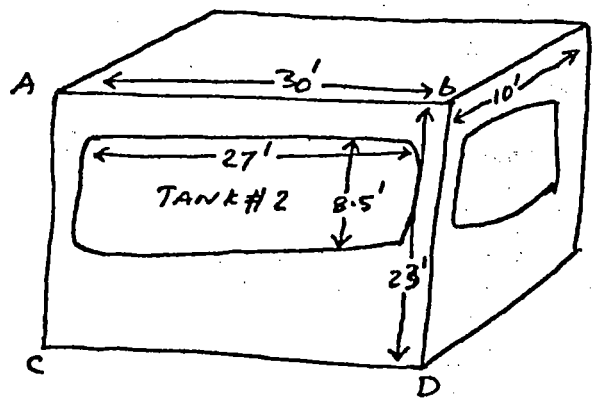
Total Tank #1 Pit Volume (V) = $V_1 + V_2$ = 7,200 $ft^3$

= $7200/27$ = 266.7 $yd^3$

Tank #1 Volume ($T_0$)

Tank outer Diameter = 8.5' Length (h) = 27'

Tank Volume (T) $\approx \pi r^2 h$



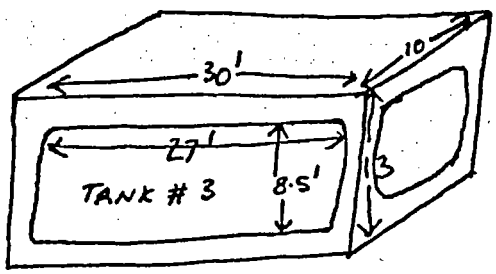
$T = \pi \times (4.25)^2 \times 27 = 1532.7\ ft^3$

= $1532.7/27$ = 56.8 yd

Volume of Soil Excavated (S) = V − T

S = 266.7 − 56.8 = 209.9 $yd^3$

Tank # 2 : Diesel Tank



Pit volume = $30' \times 23' \times 10'$ = 6,900 $ft^3$
= 255.6 $yd^3$

Tank volume = $\pi (4.25)^2 27$ = 1532.7 $ft^3$
= 56.8 $yd^3$

Excavated Soil vol. = 255.6 − 56.8 = 198.8 $yd^3$

Tank # 3 : Diesel Tank

Pit Volume = $30' \times 13' \times 10'$ = 3900 $ft^3$
= 144.5 $yd^3$

Tank Volume = $\pi (4.25)^2 27$ = 1532.7 $ft^3$ ?
= 56.8 $yd^3$

Excavated Soil vol. = 144.5 − 56.8 = 87.7 $yd^3$

Total Volume of Three Tank Pits.

$= 7200 + 6900 + 3900 = 18,000\ ft^3$

$= 666.7\ yd^3$

Total Volume of Three Tanks Removed

$= 1532.7 \times 3 = 4598.1\ ft^3$

$= 170.3\ yd^3$

Total Volume of Soil Excavated

$= 666.7 - 170.3 = 496.4\ yd^3$

Volume of Soil Disposed at a State Certified Disposal Facility $= 18\ yd^3 + 18\ yd^3 + 18\ yd^3 = 54\ yd^3$

Volume of Soil treated using TPE's Special Silica catalyst and hydrogen peroxide method

$\approx 50\ yd^3$

Uncontaminated Soil Excavated from Three Tank pits

$= 496.4 - (54 + 50) = 392.4\ yd^3$

Volume of Clean Soil Imported for Backfilling Three Excavated Tank pits.

$= 666.7 - (50 + 392.4) = \underline{224.3\ yd^3}$

INSPECTOR'S REPORT

TO: DAVE LOBATO DATE: 12/12/90

FROM: SCOTT SMALL FILE: I - 12987

INDUSTRY: KIRKHILL, INC.
12021 S. WOODRUFF AVE., DOWNEY

REPORT: Steve Groner and I visited this site during the morning and met with Ray Ballenger. He took us around the site and showed us the four ~~tanks~~ previous tank locations. There was evidence of a small amount of settlement in the southern parking lot (paved area) where three tanks had been removed. Mr. Ballenger also showed us the location of the diesel tank which has been abandoned in place. I noticed a few drums of oil product in this area. They were placed on top of ~~safety~~ precautionary catch basins. All excavations were backfilled. There were no signs that were observed to indicate contamination. The company manufactures rubber products and is involved in the plumbing industry.

Mr. Raymond Ballenger
Kirkhill, Inc.
P.O. Box 7012
Downey, CA 90241-0030

Dear Mr. Ballenger:

**UST LOCAL OVERSIGHT PROGRAM REVIEW SHEET**
**HAZARDOUS MATERIALS UNDERGROUND STORAGE**
**CONFIRMATION PROPOSAL**
**CLOSURE PERMIT NOS. 5999B AND 6000B**
**FACILITY: 12021 WOODRUFF AVENUE, DOWNEY**

This office has reviewed the subject document(s) submitted on January 15, 1991, dated January 9, 1991. The comments in this letter must be addressed and submitted to this office by April 25, 1991.

The Confirmation Proposal has been reviewed and found adequate, and must incorporate the comment below. You may proceed with the plan as proposed.

> Boring B-7 should be drilled at the same angle and direction as the previously drilled borings B-5 and B-6. Samples must be taken and analyzed every five feet. The borings should extend at least ten feet below non-detectable levels. Detection limits for the lab analyses must comply with the Los Angeles County Guidelines.

You are cautioned that any contaminated soils or hazardous materials generated during the approved operation must be manifested and transported to a hazardous waste disposal facility as required by California Health and Safety Code, Division 20, Chapter 6.5, unless evidence is presented indicating that the material may be disposed of at a less restricted facility. Copies of all completed manifests shall be submitted to this office as part of the final report.

Notify Dave Lobato at (818) 458-4374 a minimum of 72 hours prior to commencing any significant investigation, remediation, or assessment activities on site. The Los Angeles County Department of Public Works may disregard the work performed if the County was not properly notified.

Correspondence should be submitted to the Los Angeles County Department of Public Works, UST Local Oversight Program, Annex Building, P. O. Box 1460, Alhambra, CA 91802-1460.

If you have any questions regarding this matter, please contact Scott Small at (818) 458-3996.

Very truly yours,

T. A. TIDEMANSON
Director of Public Works

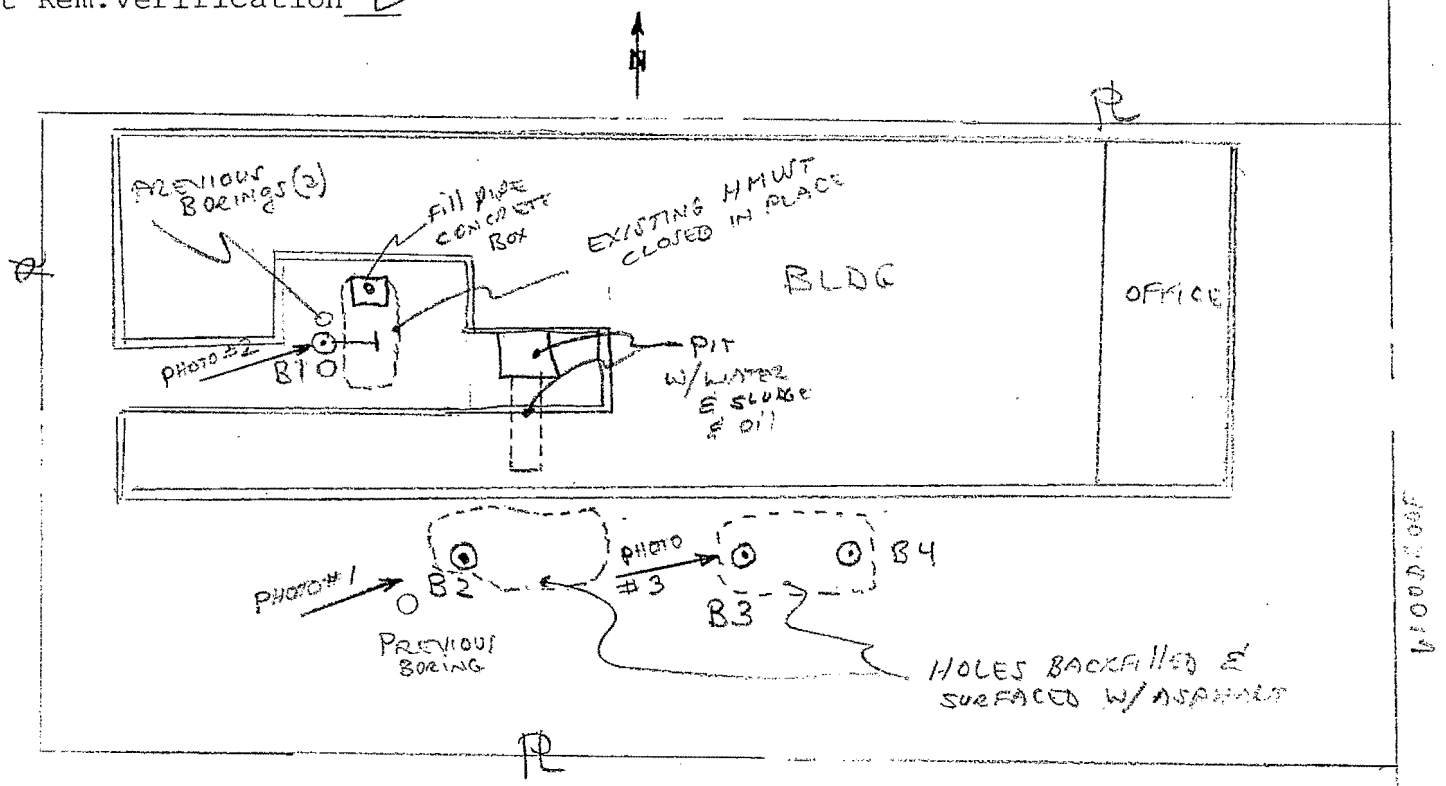
INSPECTOR'S REPORT

TO: FILE/ SMALL DATE: 2-26-91

FROM: DANIE LOBATO FILE: I-12987



INDUSTRY: KIRKHILL, INC.
12021 WOODRUFF AVE. DOWNEY

REPORT: THIS WAS AN OVERSIGHT INSPECTION TO WITNESS THE DRILLING & "SPLIT" SAMPLES OF 4 CONFIRMATION BORINGS. I MET MR. TONY LIZZI, GEOLOGIST FOR TPE ENVIR., WHO SHOWED ME THE SITE. I ARRIVED AFTER THEY HAD DRILLED THE SLANT BORING (OUR B1) AND WAS UNABLE TO SPLIT THIS SAMPLE, HOWEVER I DID SPLIT SAMPLES FOR BORINGS B2 & B3 (OUR NOTATION). THE DRILLING & SAMPLING PROTOCOL APPEARED ADEQUATE. THE COMPANY IS FULLY OPERATIONAL. THEY MANUFACTURE VARIOUS RUBBER PRODUCTS IN WHICH NAPHTHALENIC OIL IS USED IN THE CURING PROCESS. THE DIESEL HMUSTS WERE FOR FUELING THE STEAM BOILERS. AN INSPECTION OF THE PLANT SHOWED THAT THERE IS A LARGE COOLING WATER RECIRCULATION SUMP AND ASSOCIATED TRENCHES INSIDE & OUTSIDE THE BUILDING WHICH CONTAIN WATER, OILS & SLUDGE WHICH COULD BE CONSIDERED HMUST (IF ANALYSIS SHOWED HAZARDOUS MATERIALS). THERE IS, ALSO, AN INDUSTRIAL WASTEWATER INTERCEPTOR BEING USED, PROBABLY, PERMITTED BY L.A. CO. SANITATION DISTRICTS. REGARDING THE DIESEL TANK CLOSED IN PLACE, THERE REMAINS AN EXPOSED FILL PIPE & CONCRETE BOX AROUND IT. THESE STRUCTURES WOULD, NORMALLY, BE BACKFILLED & RESURFACED. MR. BALLENGER OF KIRKHILL, INC. SAID THEY WOULD BACKFILE & RESURFACE WHEN THEY RECEIVED OUR FINAL CLOSURE LETTER.

Mr. Raymond Ballanger
Kirkhill, Inc.
P.O. Box 7012
Downey, CA 90241-0030

Dear Mr. Ballanger:

**UST LOCAL OVERSIGHT PROGRAM REVIEW SHEET**
**HAZARDOUS MATERIALS UNDERGROUND STORAGE**
**SITE ASSESSMENT REPORT**
**CLOSURE PERMIT NOS. 5999B AND 6000B**
**FACILITY: 12021 WOODRUFF AVENUE, DOWNEY**

This office has reviewed the subject document(s) submitted on April 18, 1991, dated April 15, 1991.

In order to better evaluate the site status, the information indicated below must be submitted:

1. Based on the results of borings CB-9 and CB-10, a Site Assessment proposal must be submitted to define the extent of all remaining contamination.

2. According to the report dated March 9, 1990, there appears to be a missing hazardous waste soil manifest. The report states that 72 cubic yards were hauled away for disposal, but only 54 cubic yards are accounted for on the manifests (#88243329, #88243343, and # 89469174).

You are cautioned that any contaminated soils or hazardous materials generated during any operation must be manifested and transported to a hazardous waste disposal facility as required by California Health and Safety Code, Division 20, Chapter 6.5, unless evidence is presented indicating that the material may be disposed of at a less restricted facility. Copies of all completed manifests shall be submitted to this office as part of the final report.

Notify Dave Lobato at (818) 458-4374 a minimum of 72 hours prior to commencing any significant investigation, remediation, or assessment activities on site. The Los Angeles County Department of Public Works may disregard the work performed if the County was not properly notified.

Correspondence should be submitted to the Los Angeles County Department of Public Works, UST Local Oversight Program, Annex Building, P. O. Box 1460, Alhambra, CA 91802-1460.

If you have any questions regarding this matter, please contact Scott Small at (818) 458-3996.

Very truly yours,

Mr. Raymond Ballenger
Kirkhill, Inc.
P.O. Box 7012
Downey, CA 90241-0030

Dear Mr. Ballenger:

**UST LOCAL OVERSIGHT PROGRAM REVIEW SHEET**
**SITE ASSESSMENT PROPOSAL**
**PREPARED BY: TANK PROTECT ENGINEERING**
**REPORT DATE: JULY 8, 1991**
**CLOSURE PERMIT NO: 5999B AND 6000B**
**LOCATION: 12021 WOODRUFF AVENUE, DOWNEY**

The proposal to drill borings has been reviewed and found adequate. You may proceed with the plan with the following modifications:

1. Samples should be taken at five foot intervals and analyzed discretely at a State certified lab for EPA 418.1.

2. Boring CB-9A needs to be sampled only at 30, 35, 40, 45, and 50 feet.

Submit a Site Assessment Report to this office by October 3, 1991.

Correspondence should be submitted to the Los Angeles County Department of Public Works, UST Local Oversight Program, Annex Building, P. O. Box 1460, Alhambra, CA 91802-1460.

If you have any questions regarding this matter, please contact Scott Small at (818) 458-3996.

Very truly yours,

T. A. TIDEMANSON

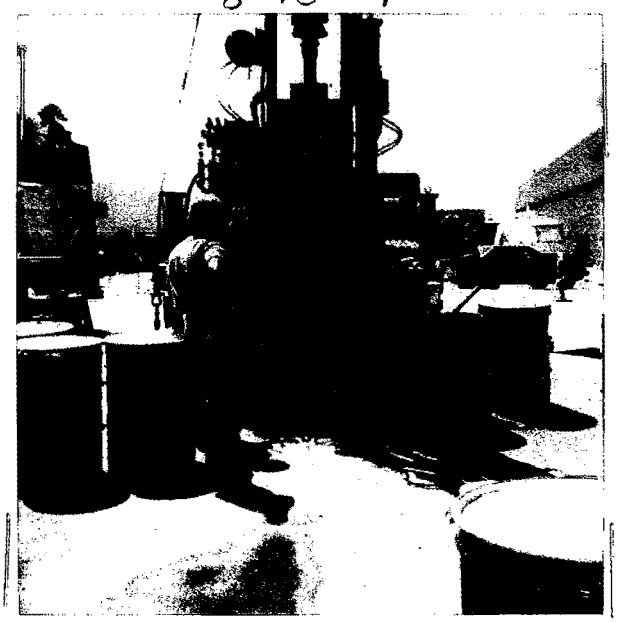
INSPECTOR'S REPORT

TO: FILE/SMALL DATE: 8-15-91



FROM: DAVE LOBATO FILE: I-12987

INDUSTRY: KIRKHILL, INC.
12021 S. WOODRUFF DOWNEY

REPORT: THIS WAS AN OVERSIGHT INSPECTION TO WITNESS THE DRILLING & SAMPLING OF FIVE (5) SOIL BORINGS. I MET MR. TONY LIZZI, GEOLOGIST FOR TPE, WHO EXPLAINED THE JOB STATUS. WHEN I ARRIVED THEY HAD COMPLETED 4 OF THE 5 BORINGS AND WERE JUST STARTING TO DRILL CB-9A. INSTEAD OF RE-DRILLING CB-9 THEY DRILLED AN OFFSET OF A FEW INCHES. THEY FOUND A GREY GREEN CLAYEY SILT 5 TO 10 FEET THICK AT ABOUT 40 FEET DEPTH. THIS CLAYEY SILT HAS ORGANIC PARTICLES. I CHECKED THE BORING LOGS AND THEY ALL SHOWED NO HEADSPACE (PLASTIC BAGGIES). THEY USED A BACHARACH SNIFFER 503A WHICH IS CGI INSTRUMENT. IT IS SUSPECT WHEN TRYING TO READ LOW PPM OF VOCS. I CROSS CHECKED HEADSPACE READINGS FOR CB-9A WITH OUR HNU.

| DEPTH | BACHARACH SNIFFER | HNU |
|---|---|---|
| 30' | ND | 6 ppm |
| 35' | ND | 9 " |
| 40' | ND | 3 " |
| 45' | ND | 11 " |
| 50' | ND | 3 " |

Mr. Ray Ballanger
Kirkhill, Inc.
P.O. Box 7012
Downey, CA 90241-0030

Dear Mr. Ballanger:

**UST LOCAL OVERSIGHT PROGRAM REVIEW SHEET**
**SITE ASSESSMENT REPORT**
**PREPARED BY: TANK PROTECT ENGINEERING**
**REPORT DATE: OCTOBER 30, 1991**
**CLOSURE PERMIT NOS. 5999B AND 6000B**
**LOCATION: 12021 WOODRUFF AVENUE, DOWNEY**

The report documenting the drilling of five borings has been reviewed and found adequate with the following exceptions:

1. Submit a Remedial Action Proposal to mitigate the contamination.
2. The extent of contamination needs to be defined in the area of borings CB-10 and CB-11.
3. A water sample was reported. Specify the location and reason why this sample was obtained.
4. Future soil samples will need to be tested at a State certified lab for EPA 418.1, EPA 8100, and EPA 8020.

Submit all the requested information to this office by February 6, 1992.

Notify Dave Lobato at (818) 458-4374 a minimum of 72 hours prior to commencing any significant investigation, remediation, or assessment activities on site. The Los Angeles County Department of Public Works may disregard the work performed if the County was not properly notified.

Correspondence should be submitted in duplicate to the Los Angeles County Department of Public Works, UST Local Oversight Program, Annex Building, P. O. Box 1460, Alhambra, CA 91802-1460.

If you have any questions regarding this matter, please contact Scott Small at (818) 458-3996.

**PREPARED BY: TANK PROTECT ENGINEERING**
**REPORT DATE: FEBRUARY 5, 1992**
**CLOSURE PERMIT NOS. 5999B AND 6000B**
**LOCATION: 12021 WOODRUFF AVENUE, DOWNEY**

The proposal to drill one boring has not been approved for the following reasons:

> The boring will not define the lateral extent of the contamination. A boring is required to the north, south, and east of the previous borings designated as CB-10 and CB-11. A boring also needs to be drilled adjacent to the previously drilled boring CB-9 to investigate the soil at 35 feet if it is believed that no contamination exists at this depth.

Submit the revised Site Assessment Proposal to this office by May 14, 1992.

Notify Dave Lobato at (818) 458-4374 a minimum of 72 hours prior to commencing any significant investigation, remediation, or assessment activities on site. The Los Angeles County Department of Public Works may disregard the work performed if the County was not properly notified.

Dear Mr. Ballenger:

**UST LOCAL OVERSIGHT PROGRAM REVIEW SHEET**
**CLOSURE PERMIT NO. 5999B**
**LOCATION: 12021 WOODRUFF AVENUE, DOWNEY**

The proposal to drill additional borings has been reviewed and approved. Borings must be drilled to 30 feet at the locations shown in the attached plot plan. If contamination is encountered at 30 feet borings must be drilled to five and 15 feet below the last detected contamination. Analyze all soil samples collected at every five feet using a State certified laboratory. Using the highest levels of total recoverable petroleum hydrocarbons by EPA 418.1 Method, analyze for naphthalene using EPA methods 8100 and 8020. As discussed at the meeting of April 6, 1992 based on the highest levels of contamination prepare a health-based risk assessment report demonstrating that the contaminants left in place will not cause a threat to human health and/or groundwater.

Use all necessary precautions and comply with all NIOSH requirements of Health and Safety for the protection of all personnel during the drilling operations.

Submit a Site Assessment Report and Risk Assessment Report on/before July 30, 1992.

Notify Dave Lobato at (818) 458-4374 a minimum of 72 hours prior to commencing any significant investigation, remediation, or assessment activities on site. The Los Angeles County Department of Public Works may disregard the work performed if the County was not properly notified.

Correspondence should be submitted in duplicate to the Los Angeles County Department of Public Works, UST Local Oversight Program, Annex Building, P. O. Box 1460, Alhambra, CA 91802-1460.

**CHRONOLOGICAL SUMMARY OF SITE ACTIVITIES**
**KIRKILL, INC.**
**12021 WOODRUFF AVENUE, DOWNEY**

The following represents a summary of the events that have taken place for File I-12987:

| | |
|---|---|
| 9/13/86 | Tank integrity tests by Cal Tank Testing (10,000 gallon (naphthenic) oil tank failed the test). |
| 10/10/86 | The Hazardous Materials Underground Storage Permit (HUMSP) No. 4735 was applied for which documented one 10,000 gallon (naphthenic) processing oil tank, two 10,000 gallon diesel tanks and one 7,500 gallon diesel tank. |
| 6/12/87 | The deadline for the leak detection proposal (LDP) and the tank monitoring proposal (TMP) was set for September 14, 1987. |
| 9/18/87 | A letter was received proposing LDP/TMP. A detailed proposal was not submitted. |
| 9/22/87 | A County letter was sent disapproving of the interim monitoring plan. |
| 10/23/87 | A formal interim monitoring plan was submitted by Kirkill, Inc. |
| 11/23/87 | A County letter was sent conditionally approving the interim monitoring plan. The deadline was set for an application for tank closure by August 1, 1989, or the deadline was set for the LDP/TMP by July 1, 1989. |
| 11/24/87 | Tank integrity tests were received from Kirkill, Inc. All the tanks passed the test. |
| 8/9/89 | Closure Permit No. 5999B was pulled for three 10,000 gallon tanks (tank removal). Closure Permit No. 6000B was pulled for the 7,500 gallon tank (closure in place). |

| | |
|---|---|
| 8/24/89 | A County Inspector's Report was prepared after the tank removal occurred. Visual evidence of contamination was noted. |
| 12/11/89 | An incomplete Tank Closure Report was received from Tank Protect Engineering (TPE). Remedial excavation work was performed without written permission from the County. |
| 2/28/90 | An additional Tank Closure Report was received from TPE. Treatment was performed on the excavated soil, and the soil was backfilled in the open holes without written approval from the County. The treatment method utilized (hydrogen peroxide) by TPE did not appear to be an accepted technology according to the technologies investigated by the State Department of Health Services, Alternative Technology Section. It was reported that approximately 72 cubic yards of soil was hauled off-site for disposal. |
| 4/11/90 | A County Notice of Responsibility for Reimbursement letter was sent to Kirkill, Inc. |
| 5/17/90 | A County letter was sent requesting additional information to aid in the review process. |
| 6/22/90 | A report was received from TPE addressing the issues raised in the County letter dated May 17, 1990. |
| 7/30/90 | Additional cross-sections and plot plans were received from TPE. |
| 8/7/90 | A Health and Safety Plan along with manifests were received from TPE. This information was requested in the County letter dated May 17, 1990. |
| 9/17/90 | Additional information was received from TPE. This submittal was in response to a meeting dated August 17, 1990. The requested information was originally stated in the County letter dated May 17, 1990. |

| | |
|---|---|
| 10/11/90 | A County letter was sent reiterating some of the requested information of the County letter dated May 17, 1990. |
| 10/29/90 | A submittal was received from TPE which addressed the items raised in the County letter dated October 11, 1990. |
| 12/3/90 | A County geologic review was prepared by Steve Lipshie recommending further site assessment work. |
| 12/11/90 | Calculations estimating the volume of excavated soil were received. |
| 12/12/90 | A County inspection was performed by Scott Small and Stephen Groner to evaluate the current site status. The excavations were backfilled and paved over. |
| 1/15/91 | A Site Assessment Proposal was received from TPE to drill four borings. |
| 2/14/91 | A County letter was sent conditionally approving of the Site Assessment Proposal. |
| 2/26/91 | A County inspection was performed by Dave Lobato who observed the drilling process. The drilling and sampling protocol appeared adequate. |
| 4/18/91 | A Site Assessment Report was received from TPE. The deepest boring was drilled 35 feet deep. Contamination was detected in boring CB-9 and CB-10 as deep as 35 feet. |
| 5/9/91 | A County letter was sent requiring additional site assessment work to define the extent of the detected contamination. |
| 7/2/91 | A Site Assessment Proposal was received from TPE. |
| 7/11/91 | A Site Assessment Proposal addendum was received from TPE. |
| 7/22/91 | A County letter was sent conditionally approving of the Site Assessment Proposal. |

8/15/91 A County inspection was performed by Dave Lobato who observed the drilling of CB-9A (one of five borings). The Inspection Report did not mention inadequate drilling or sampling protocol. Four borings had been drilled prior to Dave Lobato arriving at the site.

11/1/91 HMUSP No. 4735B was renewed.

11/4/91 A Site Assessment Report was received from TPE. The deepest boring was drilled 50 feet deep. Lesser amounts of contamination were detected in each boring (<100 ppm) as deep as 45 feet. Contamination as high as 315 ppm was detected in boring CB-11.

12/4/91 A County letter was sent requiring further site assessment work and a Remedial Action Proposal to mitigate the existing contamination.

2/10/92 An inadequate Site Assessment Proposal was received from TPE.

3/9/92 A County letter was sent disapproving of the Site Assessment Proposal to drill one boring. The proposed boring would not have adequately defined the extent of the contamination.

8/5/92 A Final Confirmation Boring Report was received from TPE. Two borings were drilled to 30 feet. A total of 12 soil samples were collected and analyzed for the two borings drilled. Sample FB2 at 25 feet showed a TRPH concentration of 91 ppm. BTEX and PAHs concentration were nondetectable. Boring FB1 was provided. Soil disposal manifest was not provided. A TRPH concentration of 852 ppm of petroleum distillate previously discovered will be left in place, based on leading potential analyses. Risk assessment was not conducted.

IN REPLY PLEASE REFER TO FILE: I-12987

FINAL
UST
CLOSURE

Mr. Gary A. Riopelle
President and C. E. O.
Kirkhill, Inc.
P. O. Box 7012
Downey, CA 90241-0030

Dear Mr. Riopelle:

**HAZARDOUS MATERIALS UNDERGROUND STORAGE**
**SITE ASSESSMENT/REMEDIAL ACTION PLAN CLOSURE CERTIFICATION**
**FACILITY LOCATION: 12021 WOODRUFF AVENUE, DOWNEY**
**CLOSURE PERMIT NUMBER: 5999B**

This office has reviewed the final report submitted on August 5, 1992. Based on the information submitted, this letter confirms the completion of site investigation and remedial action at the above site. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is our position that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at this site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings or site usage.

Any questions regarding this matter should be directed to Ofori Amoah at (818) 458-3573.

Very truly yours,

T. A. TIDEMANSON
Director of Public Works

# EXECUTIVE SUMMARY

## DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

## RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

| Year | Target Street | Cross Street | Source |

## 1.0 INTRODUCTION

Pursuant to the contract of January 9, 1990 between Tetra Tech, Inc. and Kirkhill, Inc, the following is an environmental property audit report of the site located at 12021 Woodruff Avenue, Downey, California, as shown on Figure 1. The property is owned by Kirkhill, Inc. and is operated as a plumbing rubber goods manufacturing plant.

The site covers an area of approximately 6.33 acres, with one major building of approximately 161,000 square feet. Five major operations are conducted in this building as follows:

- Office
- Warehouse/Storage
- Manufacturing
- Packaging
- Printing

The building is located in the center of the property with the remaining area mostly paved with asphalt concrete for parking. There is some landscaping along Woodruff Avenue. The building was initially constructed in 1952, but has undergone major additions and modifications since then.

## 2.0 PURPOSE AND SCOPE

Tetra Tech conducted the following investigations concerning the subject property:

- Site inspection of the property on January 23, 1990, for the purpose of detecting any presence of hazardous materials or any activities which may produce them;

- Review of available historical aerial photographs of the site to obtain evidence of past activities and land use which may have involved hazardous materials on the site;

- Search of ownership or property records on file at the Los Angeles County Records Office to determine if any previous owners or businesses conducted activities on the site which had the potential to use or produce hazardous substances;

- Examination of state and federal records and lists to obtain information whether any hazardous waste sites bordering the property or if there has been any hazardous waste released on or near the site; and

- Review of other appropriate files concerning the property to establish past land use and activities.

The results of each of these investigations and Tetra Tech's conclusions are described in the following sections.

## 3.0 SITE BACKGROUND

### 3.1 SITE DESCRIPTION

The property is located at 12021 Woodruff Avenue in an area historically utilized for commercial and light manufacturing purposes. The property is approximately 4,000 feet west of the intersection of Firestone Boulevard and San Gabriel River, (605) Freeway, as shown on Figure 1. The site is bordered by various small to medium-sized warehouses, wholesale distributors and manufacturers. The area in general is highly industrialized.

Basically, the site terrain is level. The majority of the area not occupied by the existing building is paved and used for parking. Some of the property adjacent to Woodruff is landscaped and is well maintained. Property surface water runoff generally drains east to Woodruff Avenue.

There were three 10,000-gallon underground storage tanks on site (2 diesel and one oil). These tanks were located just south of the building in the parking lot area. These three tanks were removed during August of 1989 by Tank Protect Engineering (TPE), Orange, California. A copy of the report prepared by TPE is included in Appendix A. A fourth 7,500-gallon diesel tank located in the courtyard was abandoned in place.

Contaminated soil was encountered during the site investigation and soil sampling activities. During the investigation, six exploratory soil borings, down to 40 feet depth, were made. Groundwater was not encountered. It was estimated that groundwater is 80 to 90 feet below the ground surface in this area. The report indicates that the contaminated soil was excavated and disposed of. The excavation was backfilled with clean imported soil material and the area paved over.

Water service for the site is provided by the local water company. No wells are on the property. The building is connected to the local sewer system.

## 3.2 SITE OPERATIONS AND HISTORY

Company operations at this site basically include the following:

- The manufacturing of rubber goods related to typical plumbing activities;
- The labeling and packaging of their manufactured rubber goods and other outside items;
- The storage and warehousing of the packaged goods; and
- The wholesale distribution of the plumbing-related rubber goods to retail outlets.

Chemicals and hazardous substances used or stored on site include oils, inks, lubricants, solvents, paints, and rubber type substances. The business has been issued EPA I.D. No. CAD008255648. A list of these chemicals and their annual consumption are included in Appendix B. Copies of the Material Safety Data Sheets (MSDS) information are included in Appendix C.

# 4.0 SITE ASSESSMENT RESULTS

## 4.1 SITE INSPECTION

On January 23, 1990, Mr. Javier Weckmann of Tetra Tech conducted an inspection of the site. Mr. Weckmann was accompanied by Mr. Ray Bellanger, Plant Manager, throughout the site inspection. The purpose of the inspection was to verify the on-site business operations, observe for visual evidence of uncontrolled hazardous waste or material, visual signs of underground tanks, contamination or any situation that would establish the potential release of hazardous substances into the environment. The inspection consisted of a walk-through of the building area and a drive by of the surrounding neighborhood. An inspection audit checklist was prepared which is included in Appendix D. Photographs taken during the site inspection are included in Appendix E.

The building has approximately 161,000 square feet and is utilized as an office, manufacturing, packaging and warehouse of plumbing-related rubber goods. An estimated 10,000 square feet is office space and 54,500 square feet is manufacturing space, with the remainder utilized primarily as warehouse space. An open area/courtyard is located in the center of the building (see Figure 2). There are approximately 112 factory and warehouse personnel, and 30 to 40 office personnel.

Chemicals stored on site are aboveground and generally kept in their original factory container. These are mostly 55-gallon drums for liquids or 60-lb sacks on wooden pallets for dry bulk chemicals. There is one aboveground 750-gallon storage tank which contains Edgeflex CX100 oil. This tank does not have any secondary containment. Some minor spills were noticed near the chemical drum storage area in the courtyard, near the air compressors, and adjacent to the high pressure machinery. These spills were being contained and cleaned-up by using standard absorbent-type material. Disposal of this absorbent material is done by the hazardous waste hauler Cosby-Overton. The amount disposed of is generally limited to one or two 55-gallon barrels every year. The floor of the building is concrete and shows

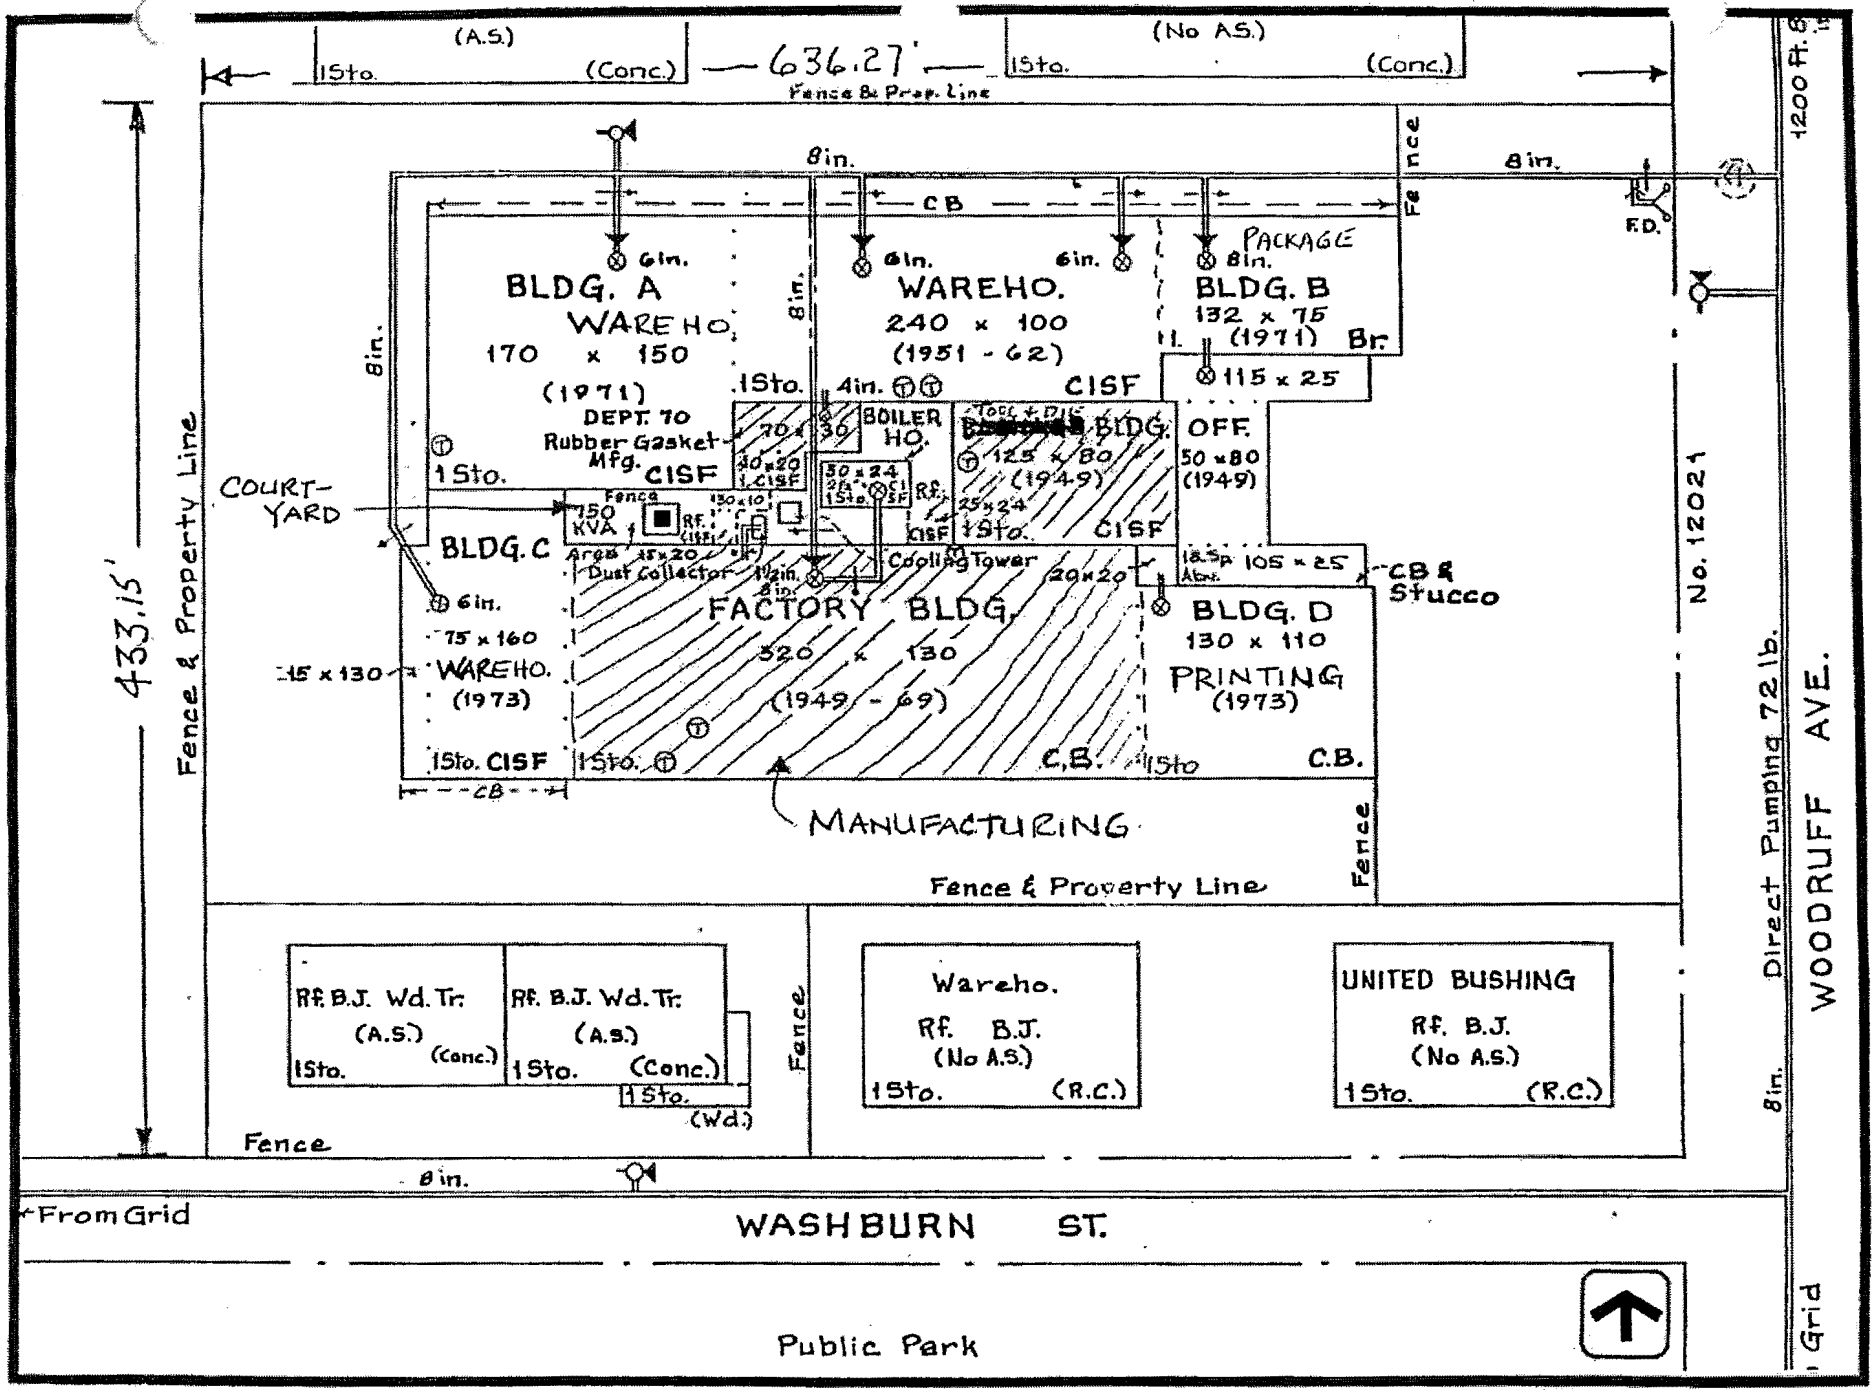

FIGURE 2 PROPERTY SITE PLAN

little or no staining. The tool and die machinery have their own oil sumps and recirculation system. Minor staining of the floor near the tool and die equipment was also observed.

The electrical station and transformers on site were replaced in 1974 and do not contain any PCB's.

There are two boilers, four rubber rolling mills and a basic dry filter baghouse (to remove air particulates) on site; these are used in the manufacturing process. Permits from South Coast Air Quality Management District to operate these equipment are included in Appendix F. Permits to operate several air pressure tank are also included in Appendix F.

During the site inspections several items and materials were noticed that potentially contain asbestos. These were the acoustic ceilings in the office area, the insulation around the cooling tower and the autoclave in the courtyard. Since no documentation exists concerning these materials, samples of these materials were taken and analyzed for asbestos content. Results documentation and discussion of the sampling is included in Appendix G.

## 4.2 OWNERSHIP REVIEW

The ownership review indicated that Kirkhill, Inc. has been the primary owner of the subject property since the commercial development of the land. Prior to Kirkhill the land was used exclusively for agricultural and farming purposes. This was evident in the aerial photo review discussed in the next section.

## 4.3 AERIAL PHOTO REVIEW

Tetra Tech reviewed several historical aerial photographs to determine apparent past uses of the property and surrounding land. The photographs reviewed were part of the Fairchild Photo Collection, maintained at the Whittier College's Department of Geology. Copies of the photos could not be obtained, but were analyzed at the collection center. Photographs

taken during the years 1927, 1928, December 21, 1944, June 18, 1947, September 30, 1949, April 11, 1950, July 15, 1953, September 8, 1958 and November 30, 1962 were available and reviewed.

The aerial review indicated the property was an open field and probably used as farmland up to 1950. From 1953 to 1958 the aerial photos show three buildings on the site with no immediate development to the north or west. The 1962 photo indicated four buildings on the site, creating the existing courtyard area. No development was evident immediately to the north.

## 4.4 REGULATORY AND FILE REVIEW

A search of government records and databases was performed to determine if any government-listed sites are located within a 1-mile radius of the subject property. The search was conducted by Environmental Information Systems, Inc., of Glendale, California and the report is included in Appendix H. The list of records searched is shown in Table 4.1. The results of the search are summarized below.

CERCLIS - Since 1982, U.S. EPA has developed and maintained lists of contaminated properties under the federal Superfund program pursuant to the Comprehensive Environmental Response Conservation and Liability Act of 1980 (CERCLA), 42 U.S.C. Section 9601 (1985). U.S. EPA discovers these sites from citizen reports, routine inspection of hazardous waste generators, treatment, storage and disposal facilities, and reporting requirements. This database tracks approximately 2300 sites of environmental concern in California.

There is one site on CERCLIS which is 0.5 mile away from the subject property. This site is Peacock Engineering located at 10670 East Firestone Boulevard. The CERCLIS indicates that this site is in the preliminary assessment stage as of October 13, 1989.

**TABLE 4.1**

**LIST OF RECORDS SEARCHED**

| DATABASE | TYPE OF RECORDS | AGENCY |
|---|---|---|
| CERCLIS | Federal Superfund Sites | U.S. EPA |
| NPL | National Priority List Sites | U.S. EPA |
| CORTESE | Hazardous Waste and Substances Site List | California Governor's Office of Planning & Research |
| BEP | Sites Authorized for Cleanup under the California Bond Expenditure Plan | CAL-DHS |
| HWP | Sites designated as Hazardous Waste Properties and Border Zone Properties | CAL-DHS |
| ASPIS | Abandoned Site Program | CAL-DHS |
| HWIS | Hazardous Waste Generators, Treatment, Storage & Disposal Facilities | CAL-DHS |
| SWIS | Active & Inactive Sanitary Landfills and Disposal Facilities | CAL-Waste Management Board |
| LUST | Leaking Underground Storage Tanks | CAL Regional Water Resources Control Boards |
| COUNTY DATA | Landfills & Waste Disposal Facilities | County Health Departments Health |

NPL - U.S. EPA maintains this list under the Comprehensive Environmental Response Conservation and Liability Act of 1980 (CERCLA) 42 U.S.C. Section 9601 (1985). Once sites have been designated on the CERCLIS List, U.S. EPA uses its Hazard Ranking System (HRS) to determine potential risks to human health and the environment. Only those CERCLIS sites which present the greatest risk are added to the NPL, which qualifies the sites to receive CERCLA remedial funding. EPA currently lists over 85 NPL sites in the State of California.

As of September 22, 1989, there are no sites listed in this database within a 1-mile radius of the subject property.

CORTESE - The California Governor's Office of Planning and Research annually publishes a listing of potential and confirmed hazardous waste sites throughout the State of California under Government Code Section 2. 65962.5. This database currently contains approximately 6,000 entries in the state of California. This list is based on input from the following agencies and sources:

1) The Toxic Substance Control Division of the Department of Health Services;
2) The Environmental Health Division of the Department of Health Services;
3) Section 23356 of the Health and Safety Code;
4) Water Resources Control Board records; and
5) California Waste Management Board records.

There are four sites on CORTESE list located within a 1-mile radius of the subject property. The nearest site is well No. 24, which belongs to the City of Downey. This well is located approximately 600 feet southeast of the subject property.

BOND EXPENDITURE PLAN - The 1989 Bond Expenditure Plan (BEP) contains a listing of all verified hazardous waste sites that are or will be targeted for abatement by the California Department of Health Services (Department) under the Hazardous Substance

Cleanup Bond Act of 1984 (Health and Safety Code Section 25356) and the Hazardous Substance Account (HSA). Hazardous waste sites may be discovered by the Department directly or referred to the Department for confirmation and follow up action by another government agency, such as a local health department, are Regional Water Quality Control Board, a responsible party or a concerned citizen. New sites are added to this database as they are verified and the "Preliminary Assessment, Site Investigation and Hazard Ranking System" processes are completed. This database is updated once annually after approval of the California state legislature and contains approximately 450 sites in the State of California.

As of January 31, 1989, there are no sites listed in this database located within a 1-mile radius of the subject property.

ASPIS - This list was developed under Section 25359.6 of the Health and Safety Code California Department of Health Services (DHS). This database contains a listing of potential hazardous waste sites identified by the historical Abandoned Site Survey Program and the current Rural Site Evaluation Program. DHS staff has interviewed officials from county health agencies, local fire departments, county agricultural commissioners, and other local agencies that could reasonably be expected to have information regarding potential waste sites. The records of the Regional Water Quality Boards, Department of Fish and Game and other state environmental regulatory agencies are also researched. DHS staff also review historical land use data sources to generate lists of potential sites . Information concerning most of the sites on ASPIS should be considered preliminary although most confirmed sites from this data base are merged into the BEP database once they have been priority ranked. This database currently contains more than 25,000 sites in the State of California. Many of these sites are currently identified as requiring no further action based on DHS determination that no release had occurred or if a release may have occurred, it did not represent a significant threat to the public or the environment.

Over 110 sites are listed in this database that are within a 1-mile radius of the subject property. Kirkhill, Inc. is also listed on ASPIS list. The majority of the sites including

Kirkhill, Inc. require no further action, and only four sites require preliminary assessments or additional study. The site with the highest priority is the Downey Dump located at 11014 Panghorn, Downey, approximately 0.5 miles northeast of the subject property.

HAZARDOUS WASTE INFORMATION SYSTEMS (HWS) - The California Department of Health Services, Toxic Substances Control Division, has developed and maintained lists of hazardous waste generators and hazardous waste treatment storage and disposal facilities in the State of California, pursuant to the Hazardous Waste Control Law (Health and Safety Code Section 25179.1 et seq). In addition, this law requires all counties to prepare and submit hazardous waste management plans. To assist the counties, the Toxic Substances Control Division maintains lists containing generation and disposal data within each county. This information has been assembled by the Toxic Substances Control Division from manifest reports required form hazardous waste generators. This database currently lists over 50,000 sites in the State of California.

Kirkhill, Inc. is not on the HWS in this database as of January 30, 1989. Eleven other sites are within a 1-mile radius.

SOLID WASTE INFORMATION SYSTEM - The California Waste Management Board maintains an inventory list of open as well as closed and inactive solid waste disposal facilities and transfer stations pursuant to the Solid Waste Management and Resource Recovery Act of 1972, Government Code Section 2.66790(b). Generally, the California Waste Management Board learns of locations of disposal facilities through permit applications and from local enforcement agencies. Since 1977, the SWIS system has grown to track approximately 1000 solid waste disposal facilities and transfer stations in the State of California.

As of September 29, 1989, there are no sites listed in this database located within a 1-mile radius of the subject property.

LEAKING UNDERGROUND STORAGE TANKS (LUST) - The California Water Resources Control Board, in cooperation with the Office of Emergency Services, compiles lists of all leaks of hazardous substances from underground storage tanks in the State of California pursuant to Section 25295 (b) of the Health and Safety Code. The nine regional boards maintain information on all reported leak cases within their jurisdiction, both for those where the regional board and where other local agencies take the lead in overseeing investigations and remedial actions. Although the data reported here represent sites where at least one leak is known to have occurred, it is not uncommon for more than one tank to have leaked at a given site or cleanup case. The total number of cases reported statewide is over 5,900.

There are 3 sites with reported leaky underground storage tanks located within a 1-mile radius of the subject property. However, none are within 0.5 mile.

COUNTY ENVIRONMENTAL HEALTH DEPARTMENT DATA - Each county in the State of California maintains an environmental health department responsible for local monitoring and enforcement of various environmental laws. Los Angeles County has provided the following specific information for inclusion in this report:

- Active Landfill listing updated to 11/20/89;
- Inactive landfill listing updated to 11/20/89; and
- Site Mitigation Log updated to 01/02/90.

There are 3 sites in this database located within a one-mile radius of the subject property.

The County of Los Angeles, Department of Health Services, Public Health Programs and Services, Public Health Investigation Department was contacted in regards to information on the subject property. The records search revealed no records or violations under the name of Kirkhill, Inc.

CITY OF DOWNEY FIRE DEPARTMENT - The City of Downey Fire Department was contacted for information regarding Kirkhill, Inc. Personal communication with Mr Bob Rowe of the City Fire Department indicates that Kirkhill does have a Hazardous Materials Business plan on file, as required by law. A copy is not included in this report, but may be requested from Kirkhill, Inc. The Fire Department will not release a complete copy of the business plan.

## 5.0 CONCLUSIONS

Through this environmental audit, Tetra Tech is not aware of any activities presently conducted on-site which may be a source of significant soil, groundwater or surface contamination. Some minor surface contamination was evident near the chemical drum storage area, the air compressors and the high pressure machinery. Good housekeeping practices and prompt cleanup of any spills should minimize any impact to local environment. Secondary containment in these areas should be constructed. The remaining area is generally kept in an organized manner and is considered clean.

In reviewing the available documentation for the removal of the three 10,000-gallon tanks and the abandonment of the 7,500-gallon tank, no official closure or certification of completed remediation from the County of Los Angeles has been received to date. The progress reports by Tank Protect Engineering have been submitted and the soil remediation work and laboratory results are being reviewed by the County. The final tank closure report is to be completed by February 14, 1990. Therefore, it should not be assumed that the tank closure is complete until it is officially approved by the County of Los Angeles, Department of Public Works. This matter should be followed up closely to assure the closure permit is issued expeditiously and no unforseen problems arise.

The asbestos sampling uncovered two asbestos containing materials on-site, the cooling tower wallboard and the office acoustical ceiling. These materials were assigned a "high" degree of hazard due to their condition and location as discussed in Appendix G. Therefore, interim controls and a maintenance program should be implemented, and the material should be removed when practical. The amount of acoustical ceiling to be removed is approximately 1,360 square feet and the amount of wallboard is unknown at this time. Notification should be posted as to the presence of asbestos containing materials at this location. This notice should include potential health hazards associated with exposure to asbestos, and should warn against sanding or cutting the material. If the acoustical ceiling or wallboard are physically disturbed, appropriate regulations should be adhered to. These regulations include CFR

1910.1001, CFR 1926.58 and Title 8 of the California Code of Regulations, General Industry Safety Orders 5208.

Tetra Tech identified over 100 sites within a one-mile radius of the subject property that were investigated, plan to be investigated, or are listed as contaminant sites in various government lists and reports. This was not surprising since the general neighborhood is highly industrialized. The subject property was listed in the ASPIS records, but had a status of "no further action required." A preliminary evaluation of these sites indicated that they should have no direct impact on the subject property.

Tetra Tech's investigation of the subject property did not include any soil or groundwater sampling or analyses and provides no analytical data or other proof of the presence or absence of contamination.

## 6.0 DISCLAIMER

This report was compiled based partially on information supplied to Tetra Tech from outside sources and other information which is in the public domain. The conclusions and recommendations herein are based solely on the information Tetra Tech obtained in compiling the report. Documentation for the statements made in the report is on file at Tetra Tech's Pasadena, California office. Tetra Tech makes no warranty as to the accuracy of statements made by others which may be contained in the report, nor are any other warranties or guarantees, expressed or implied, included or intended by the report except that it has been prepared in accordance with the current generally accepted practices and standards consistent with the level of care and skill exercised under similar circumstances by other professional consultants or firms performing the same or similar services.

None of the work performed hereunder shall constitute or be represented as a legal opinion of any kind or nature, but shall be a representation of findings of fact from records examined.

Respectfully submitted,

TETRA TECH, INC.

IN REPLY PLEASE REFER TO FILE I-12987

Mr. Gary A. Riopelle
President and C. E. O.
Kirkhill, Inc.
P. O. Box 7012
Downey, CA 90241-0030

Dear Mr. Riopelle:

**HAZARDOUS MATERIALS UNDERGROUND STORAGE**
**SITE ASSESSMENT/REMEDIAL ACTION PLAN CLOSURE CERTIFICATION**
**FACILITY LOCATION: 12021 WOODRUFF AVENUE, DOWNEY**
**CLOSURE PERMIT NUMBER: 5999B**

This office has reviewed the final report submitted on August 5, 1992. Based on the information submitted, this letter confirms the completion of site investigation and remedial action at the above site. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is our position that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at this site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings or site usage.

Any questions regarding this matter should be directed to Ofori Amoah at (818) 458-3573.

Very truly yours,

T. A. TIDEMANSON

Gentlemen:

This report summarizes the work done on the above said site by Tank Protect Engineering, regarding removal of two diesel 10,000 gallon tanks, one oil 10,000 - gallon tank, site investigation and additional excavation activities to determine lateral and vertical extend of contamination.

((1))

## TANKS PULL - UP ACTIVITIES

On August 24, 1989 one 10,000 gallon gas tank which contained naphthenic type oil and two 10,000 gallon diesel tanks were removed from the subject site. The tanks were removed in accordance with local city and state regulations (i.e. drained, uncovered, washed, triple rinsed, decontaminated, purged with dry ice, and removed when L.E.L. readings were below the allowable level). The tanks were disposed of by delivery to American Metal Recycling Inc., at their facility located at 2202 S. Millken, Ontario, Ca 91761 for destruction. The liquid waste from triple rinse were shipped to De Menno/Kerdoon, at their location at 2000 N. Alameda St. Compton, Ca 90222 for disposal. Copy of liquid manifest and certificate of tank disposal attached.

## ON-SITE INVESTIGATION

After removal, a total of seven soil samples were taken on August 24, 1989 using a backhoe, from approximately 3 feet below the each end of the three underground storage tanks (sample points K-1, K-2, K-3, K-4, K-5 and K-6; see Figure 1) and one soil sample from Spoil pile (sample points K-7). All the soil samples obtained were immediately packed overflowing into brass jars, capped with a polyethylene lid, sealed with duct tape, labeled and immediately placed into a refrigerated ice chest. The samples were then transported by a company vehicle to a state certified laboratory (Ensotech Inc) accompanied by a chain-of-custody form. The chain-of-custody and history of events for the soil samples and analysis are documented in the attached enclosures. Originally liquid contents of the tank # 1 and the tank # 3 were mistakenly identified as diesel and oil respectively. An additional investigation of historical events indicates correct contents of the tank # 1 was naphthenic type oil and the tank # 3 was diesel.

As indicated from the laboratory test results, soil sample taken from under east end of oil tank #1 (sample point K-5) and soil sample from spoil pile (sample point K-7) showed high levels of total petroleum hydrocarbon (TPH) of 45,714 mg/kg and 5,030 mg/kg of total hydrocarbons respectively. Less than maximum allowable levels of hydrocarbon contamination were found in the soil samples K-1, K-2, K-3, K-4 and K-6. The contaminated soil was removed. The contamination was identified by color and odor.

## EXPLORATORY WELL DRILLING

Based upon the laboratory test results obtained and our site observation, it was recommended that a total of six exploratory borings be made in order to approximate the limits of vertical and lateral contamination.

Four borings (B-1, B-2, B-3 and B-4) were drilled on September 26 and two more (B-5 and B-6) on September 27, 1989 at locations shown on Figure 2 - Plot Plan to determined a vertical extent of hydrocarbon contaminations. A Drill-Line Mobile E-53, 3-inch-dimeter hollow stem auger drilling rig was utilized for

((1))

this borings. Soil samples were collected at 5 feet intervals using a california split sampler. The borings were drilled to a total depth of 40 feet. The lithologies of the samples were classified in accordance with the Unified Soil Classification System (Plate A-2). The lithologic logs of drilled well are enclosed. Upon completion of drilling, the borings were backfilled with soil.

## SOIL SAMPLING

Soil samples were monitored using Organic Vapor Analysis (OVA) for analyses of the emission of Volatile Organic Compounds (VOC) from soil per SCAQMD requirement. OVA reading were conducted continuously. A GasTechtor Hydrocarbon Surveyor Model 1314 was used to detect and indicate in parts per million (PPM) concentrations of hydrocarbons vapor from soil samples. The instrument has been properly calibrated by Allied Industrial Distributors.

The on-site observation and OVA reading were utilized to select a soil sample for laboratory analysis. A total of twelve soil samples from depths between 15 feet to 40 feet of six borings were considered to be most representative of the contamination. The selected soil samples were immediately end wrapped, capped, sealed by tape, labeled, placed into an ice chest and submitted for Hydrocarbon 418.1 analysis to Associated Laboratories and Ensotech Inc. Both laboratories are state-certified laboratories and chain of custody forms are attached. Copies of the laboratory test results on soil samples are enclosed.

Soil samples B-3/20 and B-6/20 indicated slight levels of hydrocarbon contamination. Laboratory results of soil samples taken at the depth of 20 feet (samples B-3 and B-6) showed 285 mg/kg and 158 mg/kg of TPH respectively. Test results of soil samples B-1/15, B-2/20, B-3/20, B-4/20, B-4/30, B-5/20 and B-6/20 are well within the acceptable limits of hydrocarbon content. Based on the above mentioned laboratory test results (see Appendix) contaminated soil zones are located in the vicinity of the removed oil tank pit #1 (Figure 2).

## GROUNDWATER

Groundwater was not encountered during the excavation. The depth of water table is reported to be at 89 feet below the surface of the ground at water well #1587, which located approximately .2 mile to the east from the site of investigation, as measured in April, 1989. (Data obtained from Flood Control District, ph: (818) 458-6120.

## EXCAVATION ACTION

Based on the data presented herein, it is evident that high levels of hydrocarbon contamination of the soil existed in the oil tank pit. Based on the lithological data presented and typical alluvial basin setting, the soil texture ranges from clay to sand. Based on lithology in conjunction with analytical data

((1))

for a number of leaks that have been investigated in the area, we assume hydrocarbon contamination is contained within clayey formation under the leak location.

On October 31, 1989 additional excavation of oil and diesel contaminated soil from removed tank pits down to 23 feet using a 235 Ecco excavator was performed. OVA monitoring and visual observation was utilized to determine the extent of contamination. A total of eight verification samples were collected using the excavator. All soil samples were immediately end wrapped, capped, sealed by tape, labeled, placed into ice chest and immediately delivered to state certified laboratory - Associated Laboratories, for Hydrocarbon 418.1 analysis with 24-hour turnaround. Chain of custody forms are attached as are copies of laboratory test results.

Six samples were analyze to characterize the soil contamination profile. As shown from the laboratory test results, soil samples taken from west end of oil tank pit#1 (sample point VS-6) indicated high level of hydrocarbon of 27,100 mg/kg. Non detectable level of hydrocarbon reported in the soil samples VS-1, VS-2, VS-3, VS-5 and VS-7. Additional excavation down to 25 feet was conducted on November 6, 1989 in the south west corner of the oil tank pit # 1. The contaminated soil was removed and piled separately. Soil sample VS-8 was collected from the west end of the oil tank pit#1, as was analyzed within 24-hours by Associated laboratories. The laboratory result indicated 55 mg/kg of hydrocarbon.

## REMEDIAL ACTION PROPOSAL

Based on the procedure and analysis discussed above, it was concluded that all contaminated soil has been removed from tank pits area. We propose to slurry in place the diesel tank # 4. The non-treatable naphthenic oil contaminated soil and the clumps to be hauled to the state approved waste dump landfill. The Tank Protect Engineering soil remediation process will be performed to abate the level of hydrocarbon contamination in piles, utilizing a special silica catalyst and hydrogen peroxide.

Hydrogen peroxide is adsorbed onto the the silica catalyst resulting in a slow release over time, enabling the treatment process to continue for several hours after application. A unique characteristic of silica catalyst is its catalytic surface which makes it several times more reactive and brings about rapid and complete oxidation of all hydrocarbons and other organics. Hydrogen peroxide also reacts with organic tetraethyl lead, cyanides, sulfides, and mercaptans. Hydrogen peroxide spontaneously decomposes to oxygen and water over time, so excessive peroxide during the treatment will not leave a hazardous residue. Nor is hydrogen peroxide toxic. When the soil is sprayed with hydrogen peroxide, an aerosol of hydrogen peroxide stays on top of the soil surface. This aerosol "blanket" prevents the escape of volatiles during mixing, thus no odors are produced. It is also in this aerosol space that photochemical oxidation of the hydrocarbons takes place. The

((1))

retained peroxide acts as a source of oxygen in the soil. Oxygen promotes aerobic bacterial growth, which further decompose any remaining organic residue.

Laboratory analysis will be performed of soil samples collected at three inches under the surface of the treated soil and continuing until a non-detectable level of hydrocarbon is reached. All soil samples will be analyzed by EPA Method 418.1.

After complete final verification soil sampling process the excavation site will be backfilled and compacted, using the clean decontaminated soil.

We trust that this proposal provides the required information for investigated site and we are looking forward to working with you on this project. Should you have any questions or suggestions regarding this remediation proposal, please contact Tank Protect Engineering office.

DOWNEY, CA. 90241

| MAJOR DIVISIONS | | | | | TYPICAL NAMES |
|---|---|---|---|---|---|
| COARSE-GRAINED SOILS (More than half is larger than No. 200 sieve) | GRAVELS (More than half coarse fraction is larger than No. 4 sieve size) | Clean gravels with little or no fines | GW |  | WELL-GRADED GRAVELS, GRAVEL-SAND MIXTURES |
| | | | GP |  | POORLY GRADED GRAVELS, GRAVEL-SAND MIXTURES |
| | | Gravels with over 12% fines | GM |  | SILTY GRAVELS, POORLY GRADED GRAVEL-SAND-SILT MIXTURES |
| | | | GC |  | CLAYEY GRAVELS, POORLY GRADED GRAVEL-SAND-CLAY MIXTURES |
| | SANDS (More than half coarse fraction is smaller than No. 4 sieve size) | Clean sands with little or no fines | SW |  | WELL-GRADED SANDS, GRAVELLY SANDS |
| | | | SP |  | POORLY GRADED SANDS, GRAVELLY SANDS |
| | | Sands with over 12% fines | SM |  | SILTY SANDS, POORLY GRADED SAND-SILT MIXTURES |
| | | | SC |  | CLAYEY SANDS, POORLY GRADED SAND-CLAY MIXTURES |
| FINE-GRAINED SOILS (More than half is smaller than No. 200 sieve) | SILTS AND CLAYS Liquid limit 50% or less | | ML |  | INORGANIC SILTS AND VERY FINE SANDS, ROCK FLOUR, SILTY OR CLAYEY FINE SANDS, OR CLAYEY SILTS WITH SLIGHT PLASTICITY |
| | | | CL |  | INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS |
| | | | OL |  | ORGANIC CLAYS AND ORGANIC SILTY CLAYS OF LOW PLASTICITY |
| | SILTS AND CLAYS Liquid limit greater than 50% | | MH |  | INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS FINE SANDY OR SILTY SOILS, ELASTIC SILTS |
| | | | CH |  | INORGANIC CLAYS OF HIGH PLASTICITY, FAT CLAYS |
| | | | OH |  | ORGANIC CLAYS OF MEDIUM TO HIGH PLASTICITY, ORGANIC SILTS |
| HIGHLY ORGANIC SOILS | | | Pt |  | PEAT AND OTHER HIGHLY ORGANIC SOILS |

■ – "Undisturbed" S&H or Shelby tube sample

▨ – Bulk or classification sample

▨ – Standard Penetration Test sample

▩ – No sample recovered

I – Core sample

Blows/ft – Blows required to drive sampler 12 inches with a 140-pound hammer falling 30 inches. Blow counts for S&H samplers are converted to approximate "equivalent" SPT N values (N = 0.5 X S&H blows per foot)

HC Odor – Hydrocarbon Odor
- No – No Odor
- Lo – Slight Odor
- Md – Moderate Odor
- Sg – Strong Odor

PID – Photoionization Detector reading (10.2-electron-volt lamp, calibrated using a benzene standard)

OVA – Organic Vapor Analyzer (flame ionization detector) calibrated using a methane standard

* – Sample submitted for chemical analysis

** – Based on HLA Temporary Bench Mark (TBM) shown on Plate 2. Assumed elevation = 100.00'.

**ORSWELL & KASMAN, INC.**
**PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT**

INDUSTRIAL BUILDINGS
12021-12023 WOODRUFF AVENUE
DOWNEY, CALIFORNIA 90241

## 1.0 SUMMARY

Based on a review of regulatory records, historical site information, and a visual inspection of the subject property and surrounding area, this assessment has revealed no *recognized environmental conditions* or *historical recognized environmental conditions* in connection with the Property, except as follows:

1) According to the records of the State of California Regional Water Quality Control Board (RWQCB), in March 1990, the subject property reported an unauthorized release of diesel fuel from a leaking underground storage tank. The tank and the impacted soil was removed from the site, and the file was closed in August 1992;

2) An inspection of the subject property determined there were visible stains of oil on the paved surface and on the exterior wall near the aboveground process oil storage tank on the south side of the building. In addition, water-soluble oil was observed on the paved surface near the cooling system in the open area near the center of the building; and

3) In addition, three offsite locations have been identified as potential risks or threats to the subject property. According to the data, the sites are not located in the near vicinity, and there is no indication that contaminants from these sites have migrated onto the subject property.

Based on the results of this assessment, it is recommended samples be obtained in the area of the process oil storage tank and in the area of the water-soluble oil cooling system, to determine if the soil has been impacted from the spilled materials. In addition, the company needs to institute better housekeeping procedures to prevent spilled materials in the outdoor storage areas from being washed into the local stormwater runoff system.

## 2.0 INTRODUCTION

### 2.1 Purpose

The purpose of this Phase I Environmental Site Assessment is to determine if any *recognized environmental conditions* or *historical recognized environmental conditions* exist on or near the subject property. As defined by the ASTM Standard, a *recognized environmental condition* is the presence or likely presence of any hazardous substances or petroleum products on a property

under conditions that indicate an existing release, a past release, or a material threat of a release into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The ASTM Standard defines a *historical recognized environmental condition* as a condition which in the past would have been considered a *recognized environmental condition*, but which may or may not be considered a *recognized environmental condition* currently. If a past release of any hazardous substance or petroleum products has occurred in connection with the property and has been remediated, with such remediation accepted by the responsible regulatory agency, this condition shall be considered a *historical recognized environmental condition.*

2.2 Detailed Scope of Services

This report is based on a preliminary study into the past and current uses of the subject property and the surrounding area. The report includes a visual inspection of the property and adjacent sites, and a review of regulatory agency records, aerial photographs, and other historic record sources. Also included in this report are maps, diagrams, and photographs pertaining to this site.

2.3 Significant Assumptions

The information in this report is furnished in good faith and was obtained from sources and databases considered to be reliable; however, nothing in this report should be construed as a promise or guarantee that the subject property is free of environmental hazards. In many instances, this report relies on regulatory database information provided by federal, state and local governmental agencies. Although the database information used in this report consists of the most recently released records, it may not reflect the actual current status of the case.

2.4 Limitations and Exceptions

This report was prepared in conformance to meet or exceed the scope and practice as set forth by the American Society for Testing & Materials (ASTM) Standard Practice E 1527-00, "Standard Practice of Environmental Site Assessments: Phase I Environmental Site Assessment Process." No tests were conducted, and no samples of air, water, soil or building materials were taken.

2.5 Special Terms and Conditions

No special terms or conditions have been incorporated into the preparation of this report. There were also no limiting physical conditions such as rain or lack of electrical power, that had a limiting effect on the site inspection.

2.6 User Reliance

This report is prepared for the express use of the client, and its contents are considered to be privileged and confidential. Acceptance of this report constitutes an agreement by the client to assume full liability for information contained herein. This report is for the sole use and interpretation of the client, and it is not be reproduced or distributed to outside parties.

## 3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property, 12021-12023 Woodruff Avenue, Downey, California, is located on the west side of Woodruff Avenue, north of Washburn Road. The property is described as Los Angeles County Tax Assessor's Parcel Number (APN) 6284-025-018.

3.2 Site and Vicinity General Characteristics

The site consists of a large, single-story industrial building, with paved parking and storage areas, located in a light industrial area of Downey, California (see site plan). The site and surrounding area are fairly level, and the subject property is connected to the municipal water and sewage systems.

3.3 Current Use of Property

The subject property is currently occupied by Kong Pet Toys, a distributor of chewable pet toys, and the Kirkhill Manufacturing Company, a manufacturer of rubber products.

3.4 Descriptions of Structures, Roads, Other Improvements On Site

In the center of the subject property is a large industrial building, which is divided into offices, a manufacturing area, warehouses and storage areas. On the north, west, and south sides of the site are paved parking and storage areas.

3.5 Current Uses of the Adjoining Properties

North of the subject property is a multi-tenant industrial building. To the east is Woodruff Avenue, and further east is a multi-tenant industrial building. South of the subject property are several smaller industrial buildings. To the west are several smaller industrial buildings.

## 4.0 USER PROVIDED INFORMATION

4.1 Title Records

No recorded land title records were provided by the client for review.

4.2 Environmental Liens or Activity and Use Limitations

The client has not provided any information concerning environmental liens or activity and use limitations.

4.3 Specialized Knowledge

No specialized knowledge of *recognized environmental conditions* or *historical recognized environmental conditions* in connection with the subject property has been provided by the client.

4.4 Valuation Reduction for Environmental Issues

No information has been provided which indicates the subject property is being sold or purchased at a significantly reduced price due to outstanding environmental issues.

4.5 Owner, Property Manager, and Occupant Information

Information provided by the owner, property manager, and/or occupants of the site are included in this report under Section 7.0, Interviews.

4.6 Reasons for Performing Phase I Environmental Site Assessment

The reasons for performing this Phase I Environmental Site Assessment is to satisfy commercial real estate lending requirements, or provide due diligence information concerning the historical uses and current condition of the site.

4.7 Other User Provided Information

No other information concerning the subject property has been provided by the client.

## 5.0 RECORDS REVIEW

5.1 Standard Environmental Records Sources

### FEDERAL AGENCY RECORDS

**United States Environmental Protection Agency (USEPA)**
**National Priorities List**

The National Priorities List (NPL) identifies abandoned or uncontrolled hazardous waste sites which have been identified as possibly representing a long-term threat to the public health or environment. These sites have been identified as being highly contaminated with hazardous substances and represent the USEPA's target enforcement and cleanup efforts. Studies of individual sites are conducted by the USEPA to determine level of contamination, and the sites are then compared and ranked to other sites on the NPL.

*A review of the USEPA National Priorities List dated May 2005 indicates there are no proposed or final sites within one mile of the subject property.*

**United States Environmental Protection Agency (USEPA)**
**Federal Superfund Liens List**

The USEPA maintains a list of Superfund Lien sites that have been issued on properties throughout the United States. These sites have been remediated through the expenditures of Superfund monies; the purpose of the lien is to prevent the property owner from gaining a financial benefit from the federal government's cleanup and restoration activities.

*A review of the July 1993 Federal Superfund List revealed there are no Superfund Liens on or adjacent to the site.*

**United States Environmental Protection Agency (USEPA)**
**Comprehensive Environmental Response, Compensation**
**and Liability Information System (CERCLIS)**

The USEPA has developed a database known as CERCLIS which contains information on potential hazardous waste sites located throughout the United States. There are over 33,000 sites

on the CERCLIS inventory. All sites are subjected to a preliminary assessment and thereafter are either placed on the National Priority List (NPL) or are placed in a category for those sites requiring no further Federal Superfund action.

*A review of the May 2005 CERCLIS report indicates there is one CERCLIS site within a ½ mile radius of the subject property:*

Boeing North American, Inc. (#1 on map)
12214 Lakewood Boulevard
Downey, CA 90242

According to the records, this site was discovered in November 1998, and no further remedial action has been reported for this site.

*There are no listed "No Further Remedial Action Planned" (NFRAP) sites on or adjacent to the subject property.*

**United States Environmental Protection Agency (USEPA)**
**Resource Conservation and Recovery Act (RCRA)**
**Treatment, Storage or Disposal Facilities (TSDF)**

The USEPA maintains a list of facilities which have been authorized to receive hazardous waste. These facilities have permits to treat, store, or dispose of the waste, as determined by the RCRA regulations. In addition, the USEPA publishes a list of those facilities who are subject to a corrective action, based on the facilities waste handling and storage procedures. The facilities which are subject to a corrective action are identified as CORRACTS sites.

*A review of the November 2004 RCRA TSDF list determined there are no CORRACTS facilities within a one mile radius of the subject property. In addition, there are no non-CORRACTS TSD facilities listed within a one mile radius.*

**United States Environmental Protection Agency (USEPA)**
**Resource Conservation and Recovery Act (RCRA)**
**Hazardous Waste Generators**

The USEPA maintains a list of facilities which are identified as generators of large and small quantities of hazardous waste. These facilities have permits to generate, store and dispose of the waste, as determined by the RCRA regulations.

*A review of the November 2004 RCRA Hazardous Waste Generators list determined the subject*

*property (Kirkhill Inc., 12021 Woodruff Avenue) is identified as small quantity hazardous waste generator. According to the records, there are small quantity hazardous waste generators identified on the adjacent properties to the east (Fuji Photo Film USA Inc., 12010 Woodruff Avenue, Suite A) and to the west (Classic Graphix, 9459 Washburn Road and Stud Welding Products Inc., 9455 Washburn Road).*

**United States Environmental Protection Agency (USEPA)**
**Office of Emergency and Remedial Response**
**Emergency Response Notification System (ERNS)**

The USEPA maintains a list of locations which have reported a release of oil or hazardous substances to the federal government. Most of the data in this system is based on information that was received during the initial notification.

*A review of the ERNS list for 1999 determined there are no reported incidents on the subject property.*

**United States Department of Transportation**
**United States Coast Guard**
**National Response Center (NRC)**

The NRC is the national point of contact for reporting all oil, chemical, radiological, biological and etiological discharges into the environment anywhere in the United States and its territories. In addition to gathering and distributing spill data for Federal On-Scene Coordinators and serving as the communications and operations center for the National Response Team, the NRC maintains agreements with a variety of federal entities to make additional notifications regarding incidents meeting established trigger criteria.

*A review of the NRC list for 2004 determined there are no reported incidents on the subject property.*

## STATE AGENCY RECORDS

**State of California**
**Environmental Protection Agency (CAL-EPA)**
**Department of Toxic Substances Control (DTSC)**

CAL-EPA is responsible for the regulation and enforcement of environmental health laws within the state of California, as set forth by the California Health and Safety Code. CAL-EPA is also designated by the USEPA to assist in enforcing federal environmental laws. CAL-EPA regulates

companies involved in the generation, transportation, storage and disposal of hazardous substances. CAL-EPA records include the "CalSites" database, which is a listing of 7,800 known active, inactive and abandoned hazardous waste sites. These sites have previously been reported in the Abandoned Site Program Information System (ASPIS), Bond Expenditure Plan (BEP), and Cortese databases. CAL-EPA records also include an October 1990 listing of registered underground tanks and the California Integrated Waste Management Board's "Active" and "Closed and Inactive" landfills database.

*A review of the June 2005 CAL-EPA records determined there is one listed "CalSite" facility within one mile of the subject property:*

NASA Industrial Plant - Kaiser (#1 on map)
12214 Lakewood Boulevard
Downey, CA 90241

The business has completed a Voluntary Cleanup Program with DTSC.

*There are historical records of a registered underground storage tank on the subject property (Kirkhill Inc., 12021 Woodruff Avenue) and on the adjacent property to the east (Darnell Corp., 12000 Woodruff Avenue). There are also historical and current records of a registered underground storage tank on the adjacent property to the north (Inco Express Inc., 11941 Woodruff Avenue). In addition, there is one landfill site listed within a ½ mile radius of the subject property:*

Downey Dump (#2 on map)
9612 Ardine Street
Downey, CA 90241

This site is identified as a closed, solid waste disposal site.

**State of California**
**Water Resources Control Board**
**Regional Water Quality Control Board (RWQCB)**

The RWQCB is responsible for monitoring the quality and flow of the groundwater, and compiles lists of known leaking underground storage tanks. In addition, the RWQCB addresses other potential threats to the groundwater from surface spills and leaks. The RWQCB monitors the contamination problem, the investigation and any remedial action.

*A review of the May 2005 leaking underground storage tank records of the RWQCB determined*

*the subject property is not currently listed as the source of a known leaking storage tank. In March 1990, the subject property reported an unauthorized release of diesel fuel from a leaking underground storage tank. The tank and the impacted soil was removed from the site, and the file was closed in August 1992. According to the records, there is one known leaking underground tank site within a ½ mile radius of the subject property:*

Calsan, Inc. (#3 on map)
9821 Downey & Norwalk Road
Downey, CA 90241

This site was first reported in September 2000. According to the records, a leak is suspected at the site, and the responsible party is conducting an inspection of the tanks and plumbing system to verify the existence of a leak.

*The subject property or adjacent sites were not identified on the RWQCB Spills, Leaks, Investigations and Cleanups (SLIC) list.*

5.2 Additional Environmental Sources

**State of California**
**Department of Conservation**
**Division of Mines and Geology (CDMG)**

The CDMG conducts studies, publishes maps, and provides information concerning the geological formations throughout the state of California. CDMG research information is combined with information from the United States Geological Survey and the ensuing geologic maps of the state are prepared. These geologic maps also illustrate the approximate locations of known earthquake faults.

*A review of the area map published by CDMG indicates the geologic area surrounding the subject property consists of Recent alluvium, which includes alluvial fan, flood-plain, and streambed deposits. The client may wish to refer to the enclosed geologic map.*

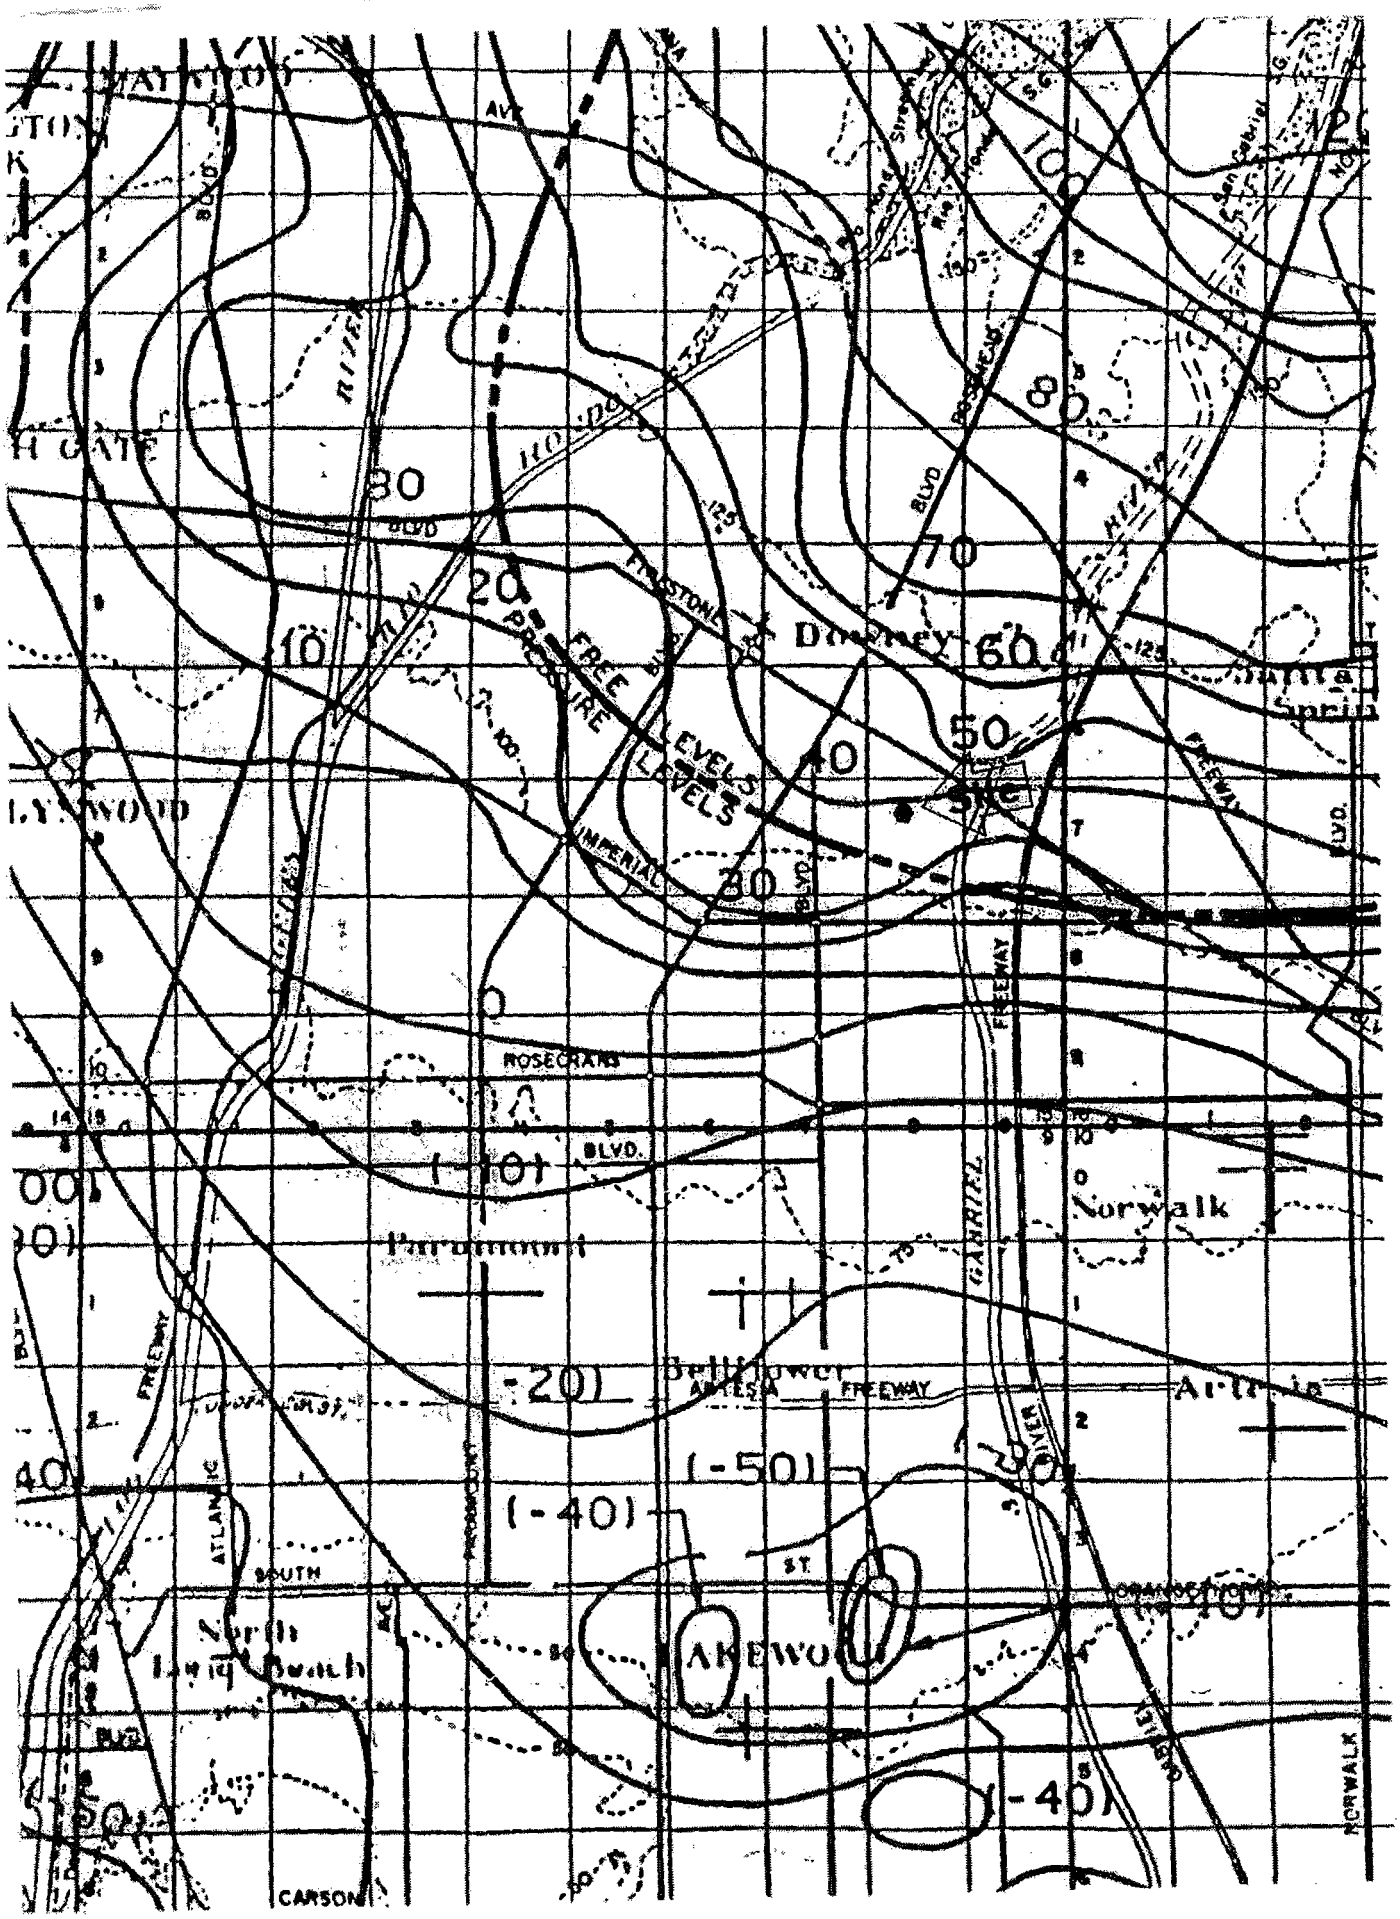
**State of California**
**Department of Conservation**
**Division of Oil and Gas (CDOG)**

The CDOG regulates the drilling, operation and abandonment of gas and oil wells throughout the state of California. If an active, idle or abandoned well is located on or adjacent to a proposed construction site, CDOG requires a site plan review prior to issuing a building permit.

Abandoned oil wells must meet standards established in 1984.

*A review of the area map published by CDOG indicates there are no producing, idle or abandoned oil wells on or adjacent to the subject property. The client may wish to review the enclosed map.*

**South Coast Air Quality**
**Management District (AQMD)**



The AQMD is responsible for the development and enforcement of regulations concerning air emissions and airborne hazards from stationary sources in the South Coast Air Basin. AQMD maintains a "Hot Spot" list of facilities whose air emissions pose as a risk to the surrounding community.

*A review of the AQMD records determined there are no "Hot Spot" facilities on or adjacent to the subject property.*

**Los Angeles County**
**Fire Department (LACOFD)**
**Health Hazardous Materials Division**

LACOFD maintains inspection and inventory records of companies involved in the storage and use of hazardous materials, petrochemicals, or hazardous waste. LACOFD attempts to maintain a current record of the types of hazardous substances that are utilized or stored at a particular site, and conducts periodic inspections for safety and compliance. In addition, LACOFD maintains records concerning hazardous material sites in Los Angeles County, which are reported to LACOFD by various regulatory agencies. Upon receiving the report, LACOFD monitors the cleanup process on the contaminated site.

*According to the LACOFD files, the subject property (Kirkhill Inc., 12021 Woodruff Avenue) is identified as a hazardous material handler. There are records of a hazardous waste generator and hazardous waste handler on the adjacent property to the north (Storopack Inc., 12007 South Woodruff Avenue). The records also identified a registered underground storage tank and hazardous material handler on the adjacent property to the north (Inco Express, Inc., 11941 Woodruff Avenue). A review of the Active Mitigation Complaint Control Logs determined there are no listed sites on or adjacent to the subject property.*

Matt
(310) 2075425

**Los Angeles County**
**Department of Public Works**
**Waste Management Division (DPW/WMD)**

DPW/WMD maintains maps showing the locations of active, inactive or future solid waste landfill sites in Los Angeles County.

*A review of DPW's major waste systems map determined there are no active, inactive or future landfill sites within a ½ mile radius of the subject property.*

**Los Angeles County**
**Department of Public Works**
**Hydraulic/Water Conservation Division (DPW/HWC)**

DPW/HWC maintains contour maps and data of the groundwater levels in the Los Angeles County area. The map shows the depth to the aquifer, as well as the approximate flow direction.

*A review of this data revealed the site is located at an elevation of approximately 100 feet above sea level. According to well data, the groundwater level in the area is approximately 40 feet above sea level, or about 60 feet below the ground surface. The groundwater contour lines in the area of the subject property indicate the groundwater flows in a southerly direction. The client may wish to review the enclosed map.*

**Los Angeles County**
**Department of Public Works**
**Underground Tank Division (DPW/UGT)**

DPW/UGT maintains records and permits on businesses which store hazardous materials in underground tanks, and issues permits to remove abandoned underground tanks.

*A review of the DPW/UGT records determined an underground tank was removed from the subject property (Kirkhill Rubber Inc., 12021 South Woodruff Avenue) and on the adjacent property to the north (Inco Express Inc., 11941 South Woodruff Avenue).*

5.3 Physical Setting Sources

A United States Geological Survey (USGS) 7.5 Minute Topographical map of the subject property and surrounding area is included in the appendices of the report. The map shows the locations of the identified offsite environmental risks or threats described in the report.

5.4 Historical Use Information on the Property

**City of Downey**
**Division of Building and Safety**

A review of the building records for the subject property revealed the following:

| Date | Activity | Owner |
|---|---|---|
| | 12021 Woodruff Avenue | |
| 2/55 | Building addition | Kirkhill, Inc. |
| 2/56 | Building addition | Kirkhill, Inc. |
| 7/56 | Building addition | Kirkhill, Inc. |
| 5/59 | Add warehouse | Kirkhill, Inc. |
| 9/59 | Add fire sprinklers | Kirkhill, Inc. |
| 1/60 | Repair fire damage | Kirkhill, Inc. |
| 3/66 | Repave parking lot | Kirkhill, Inc. |
| 6/66 | Add offices and factory | Kirkhill, Inc. |
| 6/66 | Add fire sprinklers | Kirkhill, Inc. |
| 1/68 | Add manufacturing area | Kirkhill, Inc. |
| 9/68 | Alter offices | Kirkhill, Inc. |
| 2/69 | Add fire sprinklers | Kirkhill, Inc. |
| 12/69 | Install office air conditioning | Kirkhill, Inc. |
| 12/69 | Add warehouse | Kirkhill, Inc. |
| 7/81 | Add partitions | Kirkhill, Inc. |
| 9/81 | Add fire sprinklers | Kirkhill, Inc. |
| 7/88 | Add offices and bathroom | Kirkhill, Inc. |
| 1/90 | Reroof building | Kirkhill, Inc. |
| 10/90 | Reroof building | Kirkhill, Inc. |
| 10/92 | Add handicapped ramp | Kirkhill Corp. |
| 1/99 | Add demising walls | IDC Corp |
| | 12023 Woodruff Avenue | |
| 5/99 | Add partitions | Kirkhill Manufacturing |
| 6/99 | Install new loading dock | IDC/Meyers |
| 10/04 | Install new foundation for equipment | Ed Reker |
| 3/05 | Raise existing roof | KMC |

No other building or demolition permits were on file for the subject property.

**Historical Aerial Photographs**

A review of historical aerial photographs of the subject property determined the following information:

| Date of Photo | Description |
|---|---|
| May 1938 | The subject property is vacant, agricultural land, with no visible buildings or structures on the site. |
| October 1953 | A large industrial building is now on the subject property. The west side of the site is vacant land. |
| February 1963 | The subject property appears to be about the same as the 1953 photograph. |
| October 1972 | A large industrial building is on the subject property. A paved storage yard is on the west side of the site. |
| March 1980 | The existing industrial building and storage areas are now on the subject property. |
| August 1989 | The subject property appears to be about the same as the 1980 photograph. |
| May 1994 | The existing industrial building and storage areas are on the subject property. |
| June 2002 | The subject property appears to be about the same as the 1994 photograph. |

**Historic Sanborn Fire Insurance Maps**

Sanborn Fire Insurance Maps provide information on commercial and industrial properties, based on risk data gathered for the fire insurance companies. The maps show the number of buildings located on the property, and the type of construction. The maps also describe the various businesses located nearby, and show the locations of tanks, boilers, and other potential hazards.

*A review of the Sanborn Fire Insurance Map collections from 1867-1970, did not locate any maps for the subject property.*

A review of building permit records and historical aerial photographs determined an industrial building was originally constructed on the site over 50 years ago, and expanded into its existing size in the 1960s. The subject property was part of a large agricultural field in the 1930s.

5.5 Historical Use Information on the Adjoining Properties

**Historical Aerial Photographs**

A review of historical aerial photographs of the adjoining properties determined the following information:

| Date of Photo | Description |
|---|---|
| May 1938 | The area surrounding the subject property is vacant agricultural land, with no visible buildings or structures. To the east is Woodruff Avenue. |
| October 1953 | North and west of the subject property is vacant agricultural land. To the east is Woodruff Avenue, and further east is a parking lot. To the south are two industrial buildings and vacant land. |
| February 1963 | North of the subject property is vacant agricultural land. To the east is Woodruff Avenue, and further east is a parking lot. South of the subject property are three industrial buildings and vacant land. To the west are three industrial buildings. |
| October 1972 | North of the subject property is vacant agricultural land. To the east is Woodruff Avenue, and further east is a parking lot. South of the subject property are four industrial buildings. To the west are three industrial buildings. |
| March 1980 | North of the subject property is an industrial building and vacant land. To the east is Woodruff Avenue, and further east is vacant land. South of the subject property are four industrial buildings. To the west are three industrial buildings. |
| August 1989 | North of the subject property are two industrial buildings. To the east is Woodruff Avenue, and further east is an industrial building. South of the subject property are four industrial buildings. To the west are three industrial buildings. |
| May 1994 | The area surrounding the subject property appears to be about the same as the 1989 photograph. |

| Date of Photo | Description |
|---|---|
| June 2002 | North of the subject property are two industrial buildings. To the east is Woodruff Avenue, and further east is an industrial building. South of the subject property are four industrial buildings. To the west are three industrial buildings. |

**Historic Sanborn Fire Insurance Maps**

Sanborn Fire Insurance Maps provide information on commercial and industrial properties, based on risk data gathered for the fire insurance companies. The maps show the number of buildings located on the property, and the type of construction. The maps also describe the various businesses located nearby, and show the locations of tanks, boilers, and other potential hazards.

*A review of the Sanborn Fire Insurance Map collections from 1867-1970, did not locate any maps for the area surrounding the subject property.*

A review of historical aerial photographs and Sanborn fire insurance maps determined the industrial buildings to the north were constructed about 20-25 years ago. The industrial building east of Woodruff Avenue was constructed about 20-25 years ago. The industrial buildings to the south were constructed 30-50 years ago. The industrial buildings west of the subject property were constructed 40-45 years ago. The area surrounding the subject property was vacant agricultural land in the 1930s.

## 6.0 SITE RECONNAISSANCE

### 6.1 Methodology and Limiting Conditions

The site reconnaissance consisted of a walk through the entire property, and visually observing the structures, storage areas, and parking lots. No inspection was conducted under floors, above ceilings, or behind walls.

### 6.2 General Site Setting

The site consists of a large, single-story industrial building, with paved parking and storage areas, located in a light industrial area of Downey, California (see site plan). The site and surrounding area are fairly level, and the subject property is connected to the municipal water and sewage systems.

6.3 Subject Property Observations

On August 1, 2005, an inspection of the site and surrounding area was conducted by Registered Environmental Assessor Jack Orswell. The single-story, concrete block industrial building (see photo #1) is divided into two areas, and described as follows:

12021 Woodruff Avenue

The north side of the industrial building is occupied by Kong Pet Toys, a distributor of chewable pet toys. Inside, on the east side of the building, are the business and sales offices. The office ceilings are covered with suspended-grid acoustical tile or sprayed with a white acoustical materials, which is painted and in good condition. The office floors are carpeted or covered with vinyl or terrazzo tile. An additional office area, which is currently vacant and empty, is located on the east side of the building. This area was previously occupied by a temporary employment services agency. The heating, ventilation and cooling (HVAC) system appears to be mounted on the roof of the building.

On the west side of the building is the packaging and warehouse area (see photos #2 and #3). The warehouse has an open wood beam ceiling, and an exposed concrete floor. The company packages and distributes chewable pet toys, and no manufacturing activities take place on the site. No large quantities of hazardous materials were observed being stored or used inside the building, and no hazardous wastes are generated from the business operations.

12023 Woodruff Avenue

The south side of the industrial building is occupied by the Kirkhill Manufacturing Company, a manufacturer of rubber products and gaskets. Inside, in the southeast corner, are the business and sales offices (see photo #4). The office ceilings are covered with suspended-grid acoustical tile, and the floors are covered with vinyl tile. The heating, ventilation and cooling (HVAC) system appears to be mounted on the roof of the building.

Along the southern side of the building is the manufacturing area and a warehouse for materials and finished goods (see photos #5 and #6). The company uses process oil and mixes the material with rubber, various additives and color pigments to blend the product material. The material is then placed into a pressurized mold, and the final product is formed. Liquid nitrogen stored in portable tanks (see photo #7) and cooling water is used to cool the equipment. Water-soluble oil is used to pressurize the molding process.

The process oil is stored in a large aboveground storage tank (see photo #8), which is located on the south side of the building. There were visible stains of oil on the paved surface (see photo

#9) and on the exterior wall (see photo #10) near the aboveground process oil storage tank on the south side of the building. On the west side of the warehouse is a shipping and receiving area (see photo #11) and a materials storage area (see photo #12). In the center of the building is an open yard (see photo #13), with an electrical transformer, a water evaporation and cooling system (see photo #14), and water-soluble oil cooling system (see photo #15). Water-soluble oil was observed on the paved surface (see photo #16) near the cooling system in the open area near the center of the building. Waste oil and lubricants are stored in 55-gallon drums with secondary spill containment under a covered area in the center yard.

Outside, on the north side of the building, is a paved parking lot and driveway (see photo #17). There is also a paved parking lot and storage yard on the south side of the site (see photo #18). The west side of the subject property is used to store materials, off-spec products, trash, wooden pallets, and old equipment (see photos #19 and #20). Large amounts of spilled powdered materials were observed on the west and south sides of the storage areas, and the company did not appear to have any containment in place to prevent these materials from being washed into the local stormwater runoff system. Commercial trash bins are located throughout the site, and no signs of improper solid waste disposal were observed in or near the trash bins. The company stores and uses large quantities of hazardous materials such as process oil, rubber additives, and solvents, and generates waste oil, lubricants, and solvents. All of the waste products appeared to be properly stored and managed. No evidence of waste water clarifiers, sumps, pits, septic tanks, or underground storage tanks was observed on the site. The electrical power in the area is supplied by overhead utility lines located along the west site of the property, and there were no nearby transformers with signs indicating the presence of polychlorinated biphenyls (PCBs).

6.4 Adjoining Property Observations

Northern Border

North of the subject property is a multi-tenant industrial building (see photo #21). There were no visible signs of spills or contamination on the adjacent property.

Eastern Border

East of the subject property is Woodruff Avenue, and further east is a multi-tenant industrial building (see photo #22). There were no visible signs of spills or contamination on the adjacent property.

Southern Border

South of the subject property are several smaller industrial buildings (see photo #23). There were

no visible signs of spills or contamination on the adjacent properties.

Western Border

West of the subject property are several smaller industrial buildings (see photo #24). There were no visible signs of spills or contamination on the adjacent properties.

## 7.0 INTERVIEWS

7.1 Interview with Owner

No interview with the property owner was conducted.

7.2 Interview with Site Manager

Mike Kilroy, the marketing and sales manager of the Kirkhill Manufacturing Company, stated the company has operated on the site for over 50 years, and they manufacture various rubber products and gaskets. He stated they sublease the northern portion of the building to Kong Pet Toys, and his company manufactures about 50% of the products for Kong Pet Toys. Mr. Kilroy advised they store and use large quantities of hazardous materials, including process oil, rubber additives, solvents, and lubricants. He stated the manufacturing process generates waste lubricants and solvents, which are stored in a secure area in the center of the building.

Mr. Kilroy stated an underground storage tank was removed from the site over ten years ago, and there are currently no underground storage tanks, waste water clarifiers, or septic tanks on the property. He advised the company is coming out of bankruptcy, and they are in the process of moving and replacing equipment, and changing the warehouse and materials storage areas. Mr. Kilroy stated he is not aware of any chemical spills or contamination problems with the site.

7.3 Interviews with Occupants

No interviews with the other occupants were conducted.

7.4 Interviews with Local Government Officials

No interviews with local government officials were conducted.

7.5 Interview with Others

No interviews with other people were conducted concerning the subject property.

## 8.0 FINDINGS

### 8.1 Recognized Environmental Conditions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E 1527-00 on the industrial buildings located at 12021-12023 Woodruff Avenue, Downey, California, the Property. Any exceptions to, or deletions from the Standard Practice are described in Section 2.4 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Property, except as follows:

1) An inspection of the subject property determined there were visible stains of oil on the paved surface and on the exterior wall near the aboveground process oil storage tank on the south side of the building. In addition, water-soluble oil was observed on the paved surface near the cooling system in the open area near the center of the building; and

2) In addition, three offsite locations have been identified as potential risks or threats to the subject property. According to the data, the sites are not located in the near vicinity, and there is no indication that contaminants from these sites have migrated onto the subject property.

### 8.2 Historical Recognized Environmental Conditions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E 1527-00 on the industrial buildings located at 12021-12023 Woodruff Avenue, Downey, California, the Property. Any exceptions to, or deletions from the Standard Practice are described in Section 2.4 of this report. This assessment has revealed no evidence of *historical recognized environmental conditions* in connection with the Property, except as follows:

According to the records of the State of California Regional Water Quality Control Board (RWQCB), in March 1990, the subject property reported an unauthorized release of diesel fuel from a leaking underground storage tank. The tank and the impacted soil was removed from the site, and the file was closed in August 1992.

## 9.0 OPINION

Based on a review of regulatory and historical records, an interview with the property manager, and a visual inspection of the site and surrounding area, this assessment has found evidence of *recognized environmental conditions* which may have impacted the subject property.

## 10.0 CONCLUSIONS

Based on the results of this assessment, it is recommended samples be obtained in the area of the process oil storage tank and in the area of the water-soluble oil cooling system, to determine if the soil has been impacted from the spilled materials. In addition, the company needs to institute better housekeeping procedures to prevent spilled materials in the outdoor storage areas from being washed into the local stormwater runoff system.

## 11.0 DEVIATIONS

This report was prepared in conformance to meet or exceed the scope and practice as set forth by the American Society for Testing & Materials (ASTM) Standard Practice E 1527-00, "Standard Practice of Environmental Site Assessments: Phase I Environmental Site Assessment Process." No significant deviations or deletions were made from this practice.

## 12.0 ADDITIONAL SERVICES

No additional services including a broader scope of services, liability/risk evaluations, or remedial activities are included in this report.

## 13.0 REFERENCES

All government records and maps were obtained directly from the regulatory agencies identified in this report. The fire insurance map information was obtained from Digital Sanborn Maps, 1867-1970, Ann Arbor, Michigan. The aerial photographs were obtained from Rupp Aerial Photography, Corona, California; the United States Geological Survey, Menlo Park, California; or the United States Department of Agriculture, Salt Lake City, Utah.

## 14.0 APPENDICES

### 14.1 Qualifications of the Environmental Professionals

Attached to this report are the résumés of Jack Orswell and Marty Kasman, who conducted the site inspection, the records review, and prepared the report.

### 14.2 Site and Vicinity Map

A United States Geological Survey (USGS) 7.5 Minute Topographical map of the subject property and surrounding area is included in the appendices of the report. The map shows the locations of the identified offsite environmental risks or threats described in the report.

14.3 Site Plan

A site plan of the subject property is included in the appendices of the report. The site plan shows the general location of the structures on the property, and other items of interest which were identified in the description of the site.

14.4 Site and Vicinity Photographs

Photographs of the subject property and surrounding neighborhood are attached to this report. These photographs were taken at the time of the site inspection.

14.5 Historical Research Documentation

Building permit records were obtained directly from the regulatory agency identified in this report. The aerial photographs summarized in this report were obtained from Rupp Aerial Photography, Corona, California; the United States Geological Survey, Menlo Park, California; or the United States Department of Agriculture, Salt Lake City, Utah. The Sanborn Fire Insurance Map information was obtained from Digital Sanborn Maps, 1867-1970, Ann Arbor, Michigan.

14.6 Regulatory Records Documentation

All government records were obtained directly from the regulatory agencies identified in this report.

14.7 Interview and Research Documentation

All of the field notes and supporting information obtained from interviews and research concerning the subject property are maintained in the report file at the offices of Orswell & Kasman, Inc.

14.8 Special Contractual Conditions between User and Environmental Professional

No special contractual conditions or agreements exist between the client and any of the employees of Orswell & Kasman, Inc., and Orswell & Kasman, Inc. does not have any financial interest in the subject property.

# APPENDIX

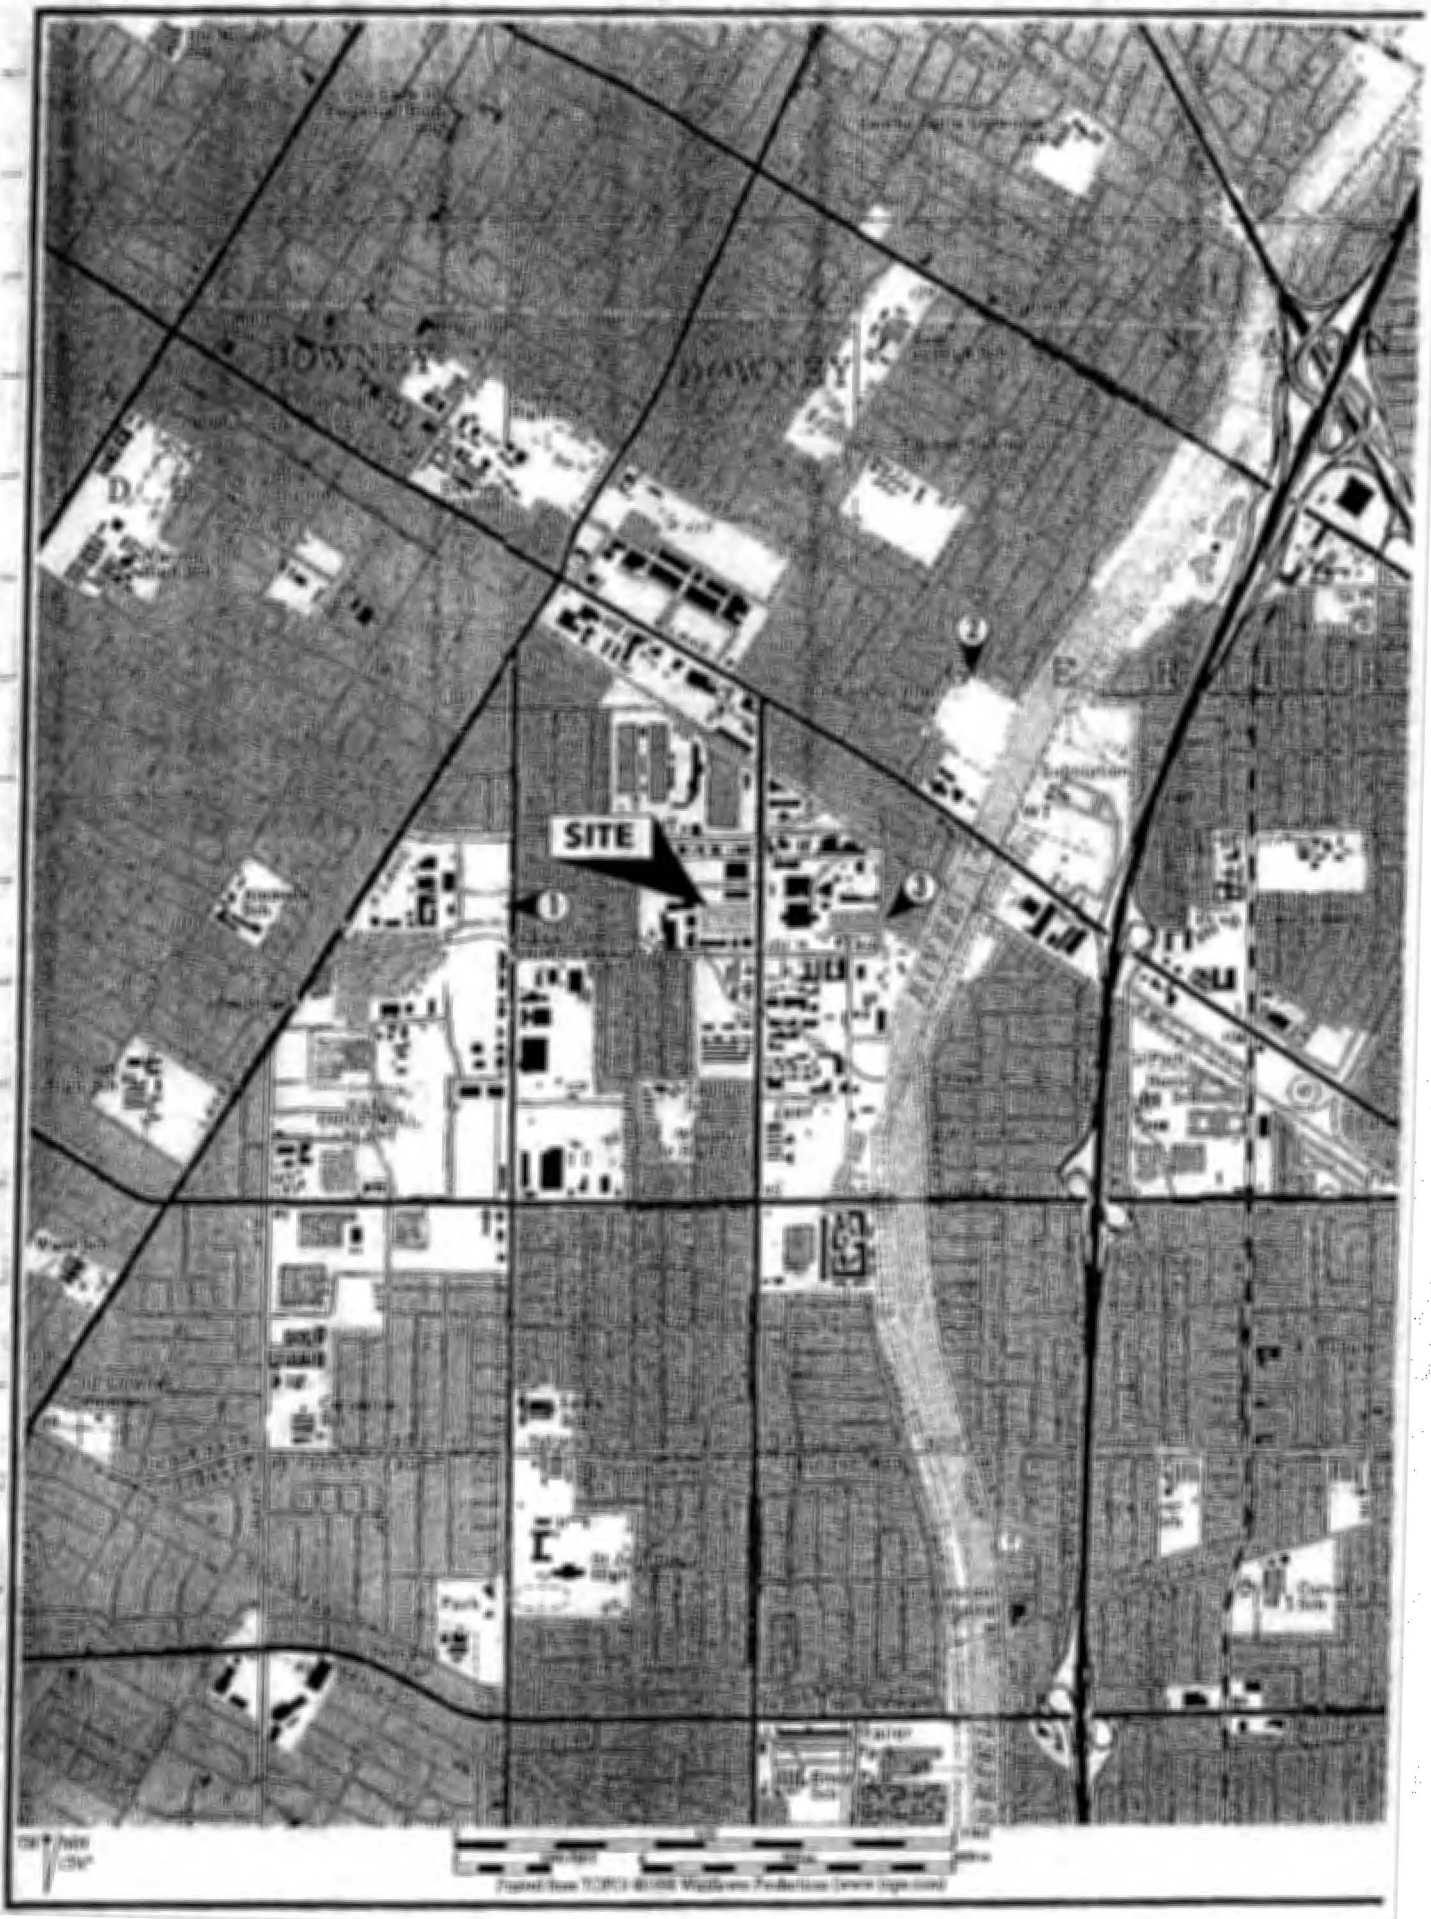
# JACK ORSWELL

Jack Orswell, a principal of the company, is a Registered Environmental Assessor (#1263) and a licensed Private Investigator (#PI 14366) with the State of California. He is also a USEPA/AHERA accredited Asbestos Management Planner and California Certified Asbestos Consultant (#92-0869). He received his Bachelor of Science degree in Business Administration from the University of Southern California, and spent 15 years as a Special Agent with the Federal Bureau of Investigation in the Denver, San Francisco and Los Angeles offices. Mr. Orswell received specialized training from the United States Environmental Protection Agency (EPA), and he was one of the first FBI Agents to work with the EPA in investigating federal environmental crimes.

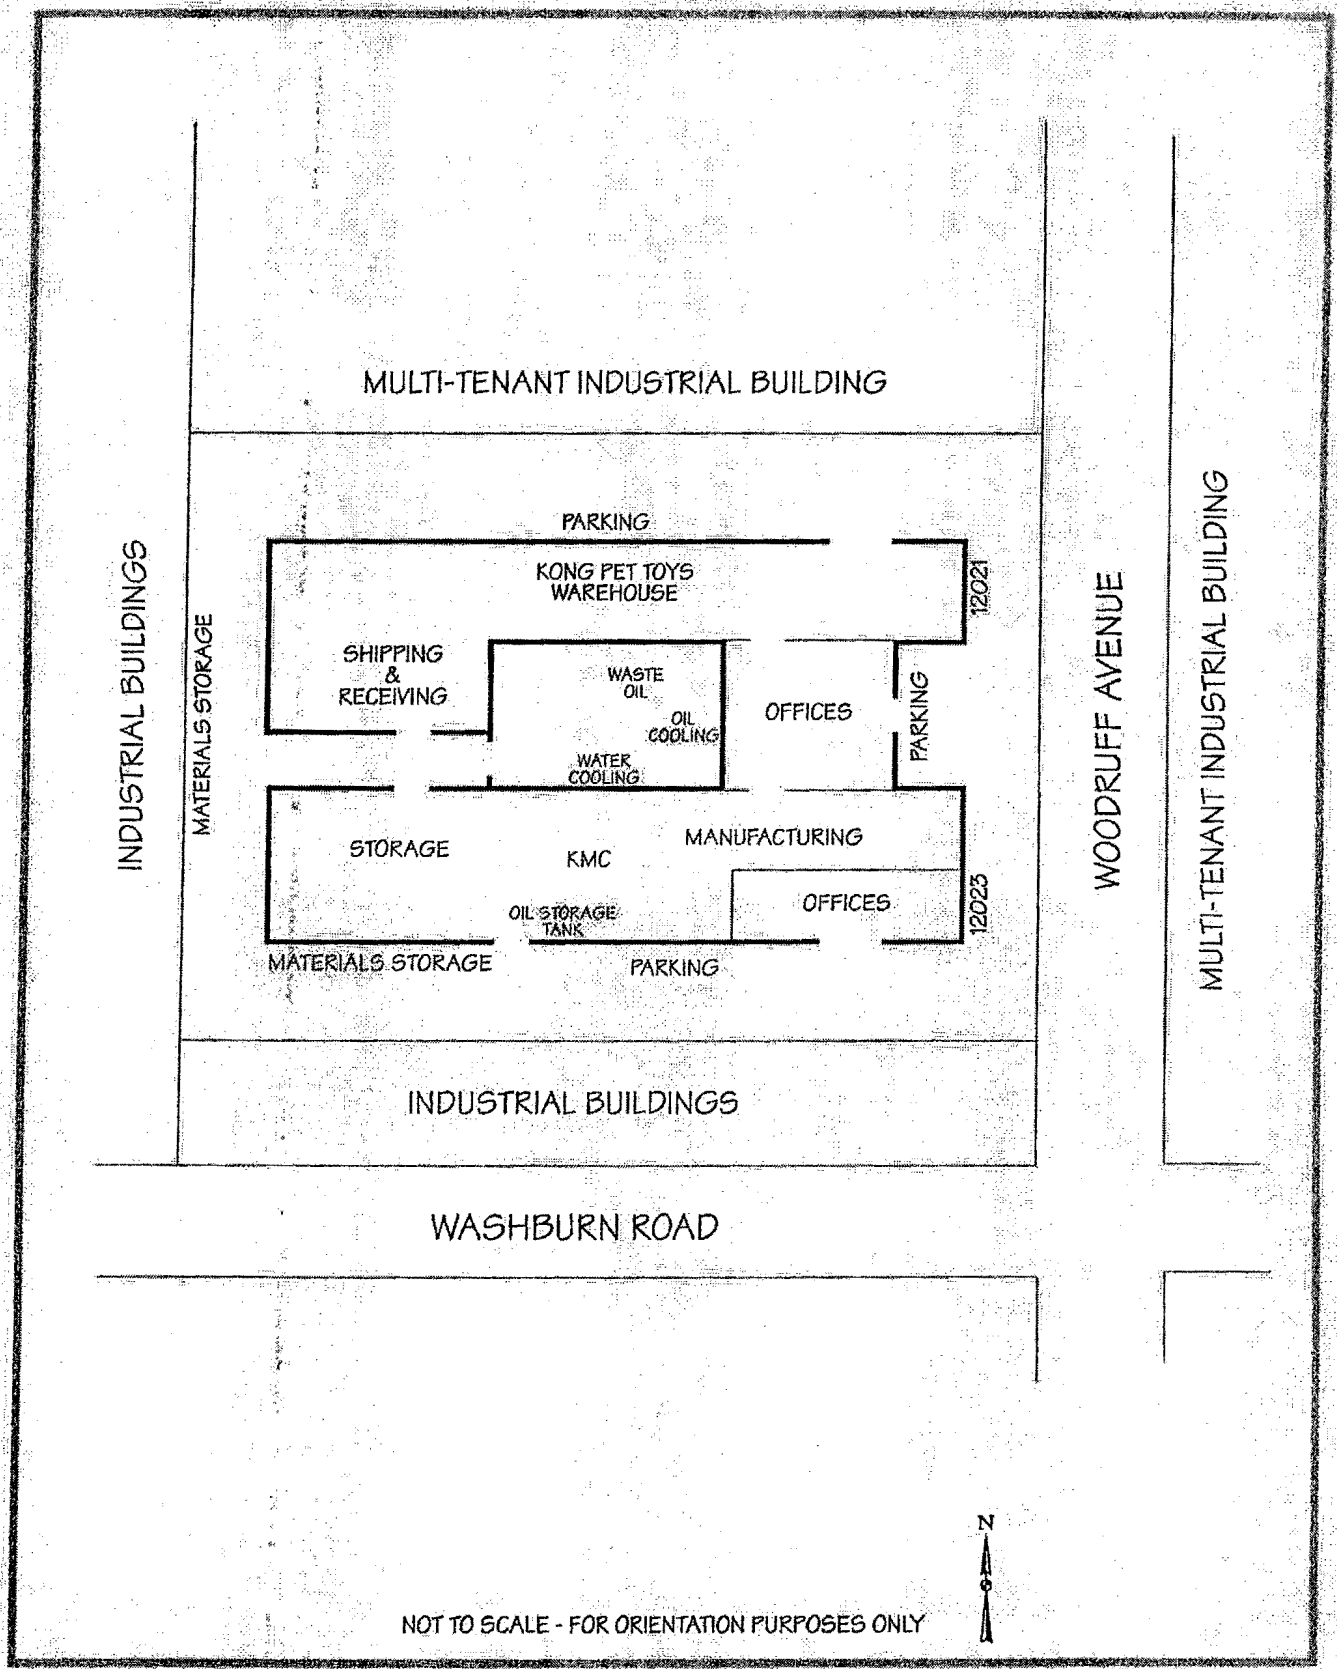
While with the FBI, Mr. Orswell worked with the EPA's National Enforcement Investigations Center (NEIC) in Denver, Colorado, and helped establish evidence control procedures for their laboratory personnel. As coordinator of environmental investigations for the FBI's Los Angeles office, Mr. Orswell gained extensive training and experience working with the California Department of Health Services and the Los Angeles County Sheriff's Department.

For the past 15 years, Mr. Orswell has been in private industry, conducting environmental assessments for several financial institutions, real estate companies and law firms. Mr. Orswell has conducted environmental investigations throughout the United States, locating and interviewing witnesses to determine how hazardous materials were handled in various manufacturing operations, and documenting the long term effects of improper disposal.

Mr. Orswell's extensive background in criminal environmental enforcement and civil litigation support make him uniquely qualified as an environmental assessor and investigator. He is a member of the California Hazardous Materials Investigators Association, the Society of Former Special Agents of the Federal Bureau of Investigation, the National Association of Environmental Professionals, the National Association of Government Guarantee Lenders, and the American Society for Testing of Materials (ASTM).



# MARTY KASMAN



Marty Kasman, a principal of the company, is a Registered Environmental Health Specialist (#4927) and a Registered Environmental Assessor (#4022) with the State of California. He is also a USEPA/AHERA accredited Asbestos Management Planner and California Certified Asbestos Consultant (#99-2553). He received his Bachelor of Science and Master of Science degrees in Environmental and Occupational Health Science from California State University at Northridge. He also has a Certificate in Hazardous Materials Management from the University of California at Los Angeles (UCLA). In addition, Mr. Kasman also received specialized hazardous materials training at the Federal Law Enforcement Training Center in Georgia.

Mr. Kasman served 14 years with the Los Angeles County Fire Department, as a Supervising Hazardous Material Specialist and Deputy Health Officer. His responsibilities included field and laboratory work in hazardous materials management, conducting inspections of industrial plant operations, and monitoring cleanup activities. In addition, Mr. Kasman has investigated hundreds of abandoned waste sites and other cases involving the illegal dumping of hazardous materials throughout Los Angeles County.

Mr. Kasman currently serves as an environmental consultant to industry management in the proper handling of hazardous materials and waste. He has taught courses in hazardous materials regulatory compliance and waste management at UCLA, California State University at Northridge, and the California Specialized Training Institute at San Luis Obispo. Mr. Kasman is also serving on the State of California Local Unified Program Implementation Committee (LUPIC) to develop a standardized hazardous materials contingency plan.

Mr. Kasman's extensive education, training, and experience in hazardous materials management make him fully qualified to conduct environmental assessments and investigations. He is the former president and director of the California Hazardous Materials Investigators Association. He is also a former director of the Local Environmental Enforcement Officers Association, and the Los Angeles County Association of Environmental Health Specialists. He is a member of California and National Environmental Health Associations, and the National Association of Government Guarantee Lenders.

# REFERENCE GUIDE TO THE REGULATORY AGENCY DATABASES

| SOURCE | DESCRIPTION |
|---|---|
| **NPL:**<br>*1 mile search radius*<br>*Date: May 2005* | The Natonal Priority List (NPL) identifies abandoned or uncontrolled hazardous waste sites, which have been identified as possibly representing a long-term threat to the public health or environment. These sites have been identified as being highly contaminated with hazardous substances and represent the USEPA's target enforcement and cleanup efforts. Studies of individual sites are conducted by the USEPA to determine the level of contamination, and the sites are then compared and ranked to other sites on the NPL. |
| **CORRACTS:**<br>*1 mile search radius*<br>*Date: November2004* | The USEPA maintains a list of facilities which have been authorized to receive hazardous waste. These facilities have permits to treat, store or dispose of the waste as determined by the RCRA regulations. In addition, the USEPA publishes a list of those facilities who are subject to a corrective action based on the facilities waste handling and storage procedures. The facilities, which are subject to a corrective action, are identified as CORRACTS sites. |
| **CERCLIS:**<br>*½ mile search radius*<br>*Date: May 2005* | The USEPA has developed a database known as the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS), which contains information on potential hazardous waste sites located throughout the United States. There are over 33,000 sites on the CERCLIS inventory. All sites are subjected to a preliminary assessment and thereafter are either placed on the National Priority List (NPL) or are placed in a category for those sites requiring no further Federal Superfund action. |
| **CALST:**<br>*½ mile search radius*<br>*Date: June 2005* | The State of California Environmental Protection Agency maintains the "CalSite" database, which is a listing of 7,800 known active, inactive and abandoned hazardous sites. These sites have previously been reported in the Abandoned Site Program Information System (ASPIS), Bond Ependiture Plan (BEP) and Cortese database. |
| **LUSTIS:**<br>*½ mile search radius*<br>*Date: May 2005* | The State of California Water Resources Control Board is responsible for monitoring the quality of flow of the groundwater and compiles lists of known leaking undergound storage tanks. The list is maintained as the Leaking Underground Storage Tank Information System (LUSTIS). The local Regional Water Quality Control Board (RWQCB) monitors the contamination problem, the investigation and any remedial activities. |
| **SWIS:**<br>*½ mile search radius*<br>*Date: December 2003* | The State of California Integrated Waste Management Board maintains a list of active and inactive landfill sites within California and provides information concerning the ownership and types of wastes brought to the landfills. |
| **TSD:**<br>*½ mile search radius*<br>*Date: November 2004* | Treatment, Storage or Disposal Facilities (TSDF) is a federal listing of facilities, which have been authorized to receive hazardous waste. These facilities have permits to treat, store or dispose of waste as determined by the RCRA regulations. |
| **ERNS:**<br>*Property & adjacent*<br>*Date: January 2004* | The Emergency Response Notification System (ERNS) is a list of locations which have reported a release of oil or hazardous substances to the USEPA Office of Emergency and Remedial Response. Most of the data in this system is based on information that was received during the initial notification. |
| **HWG:**<br>*Property & adjacent*<br>*Date: November 2004* | The United States Environmental Protection Agency maintains a list of known hazardous waste generators in the nation. A company on the list generates reportable quantities of hazardous waste, and the disposal and transportation of the waste is monitored through the use of a hazardous waste manifest. |
| **UTANK:**<br>*Property & adjacent*<br>*Date: May 2005* | The location and identy of registered underground tanks is maintained by the State of California Water Resources Control Board in the Hazardous Substance Storage Container Database. The list was compiled in 1991 and there are currently no plans to update the database at the present time. |
| **SFL:**<br>*Property & adjacent*<br>*Date: July 1993* | The USEPA maintains a list of Superfund Leins that have been issued on properties throughout the United States. These sites have been remediated through the expenditures of Superfund monies. The purpose of the lein is to prevent the property owner from gaining a financial benefit from the federal government's cleanup and restoration activities. |

# GEOSCIENCE ANALYTICAL "SUPPLEMENTAL PHASE II REPORT" DATED SEPTEMBER 14, 2005

GeoScience Analytical, Inc. "established March 1981"

608 HAILEY COURT SIMI VALLEY, CA 93065 (805) 526-6532 FAX 526-3570 EMAIL GEOSCI10@AOL.COM

2005

14 September 2005

Mr. Paul Minoo (323) 583-3898
6270 S. Boyle Avenue
Vernon, CA 90058

**RE: Supplemental Phase II Environmental Audit at 12021-12023 Woodruff Avenue, Downey, CA 90241**

Dear Mr. Minoo:

We have reviewed the following documents that have been prepared as part of the environmental review of the above referenced property:

- Phase I Environmental Site Assessment Report prepared August 10, 2005: Industrial Buildings 12021-12023 Woodruff Avenue, Downey, CA 90241 prepared by Orswell & Kasman, Inc.
- Letter Report for Limited Soil Sampling prepared August 31, 2005: 12021-12023 Woodruff Avenue, Downey, CA prepared by Converse Consultants

The Phase I report identified the follow areas of environmental concern:

- A release of diesel fuel from a leaking underground storage tank in 1990. The tank and the impacted soil were removed from the site.
- Visible stains of oil on the paved surface and on the exterior wall near the aboveground process oil storage tank on the south side of the building. Water-soluble oil was observed on the paved surface near the cooling system in the open area near the center of the building.

The Phase II report provided the following analytical data:

- Soils in the vicinity of the above ground storage tanks were void of contaminants above regulatory levels.

- Soils in the vicinity of the oil-water separator in a cooling water processing area contained elevated concentrations of arsenic in one soil sample at a depth 2.0' with deeper soils void of these elevated levels.
- Soils in the vicinity of the rubber presses were void of contaminants above regulatory levels.
- Soils in the vicinity of the west property line adjacent to a drainage swale were void of contaminants above regulatory levels.

The Phase II report identified total arsenic at a concentration of 79.2 mg/kg at a depth of 2.0 ft. (bg) with soil boring GW-4. This concentration was significantly below the regulatory level threshold of 500.0 mg/kg. Soluble (STLC) arsenic was identified at a concentration of 5.28 mg/L. This concentration was slightly above the regulatory level threshold of 5.0 mg/L; however the Total Characteristic Leaching Potential (TCLP) at this location was 0.65 mg/L significantly below the regulatory limit of 5.0 mg/L. At deeper depths at this location, arsenic was significantly below regulatory levels at both 4.0 ft. and 8.0 ft.

In order to further define the arsenic anomaly at the location of GW-4, GSA advanced four (4) soil borings to depths of 6.0 ft. in soils surrounding this location as shown in Figure 1, attached. Soils from depths of 2.0 ft. and 6.0 ft. (bg) were analyzed for total arsenic (TTLC). Arsenic concentrations ranged from <0.5 – 90.0 mg/kg. Maximum arsenic concentrations were identified at GSA-3 and GSA-4 at the 2.0 ft. depth interval at both locations with TTLC arsenic concentrations of 33.0 and 90.0 mg/kg, respectively. All TTLC arsenic concentrations were significantly below regulatory thresholds in all cases.

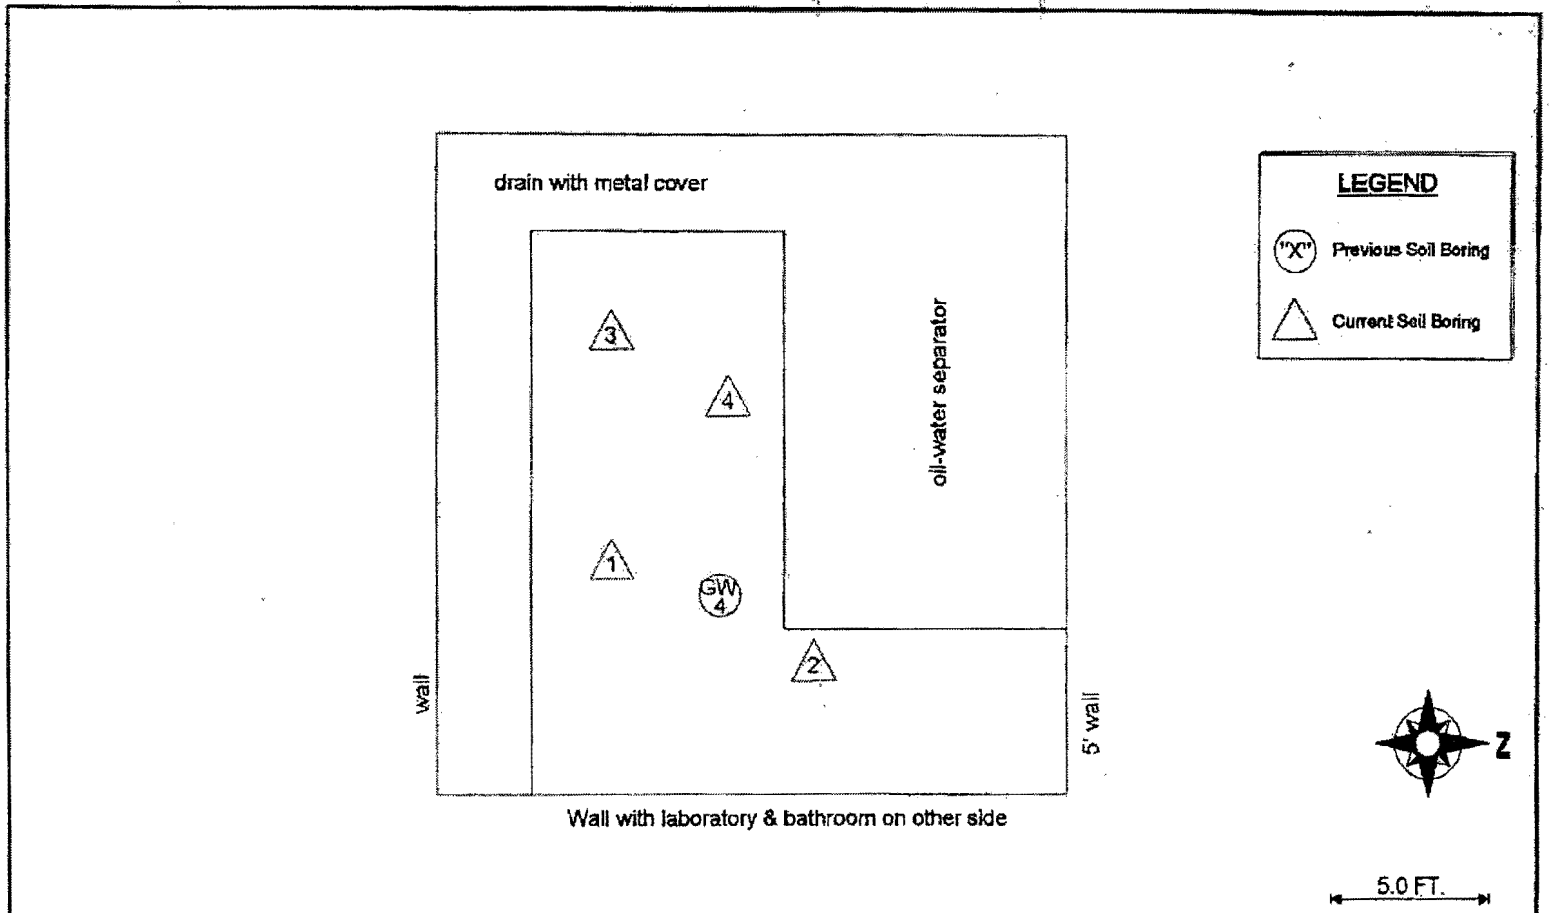
Additional characterization of soil at GSA-4 at a depth of 2.0 ft. was advanced with the analysis of soluble arsenic (STLC). Analytical results identified soluble arsenic at a concentration of 7.3 mg/L. This concentration is slightly above the regulatory levels threshold of 5.0 mg/L and in close agreement with the concentration observed at GW-4 reported previously.

Arsenic concentration isopleths have been contoured in Figure 2. Based on the available analytical data, maximum volume of soil potentially containing arsenic in excess of STLC concentrations for disposal purposes is estimated to be 3 – 6 cu.yds.

In summary, the subject site contains total arsenic within allowable limits. Within a small area of the site and in the immediate vicinity of the oil-water separator, soluble arsenic is present at a concentration slightly above threshold limits. Based on the low concentration of arsenic present under a capped surface, no remediation is recommended.

**Please call us at your opportunity in the event we can provide you with any additional review.**

Sincerely yours,



Louis J. Pandolfi

# EXECUTIVE SUMMARY

S&S Commercial Environmental Services (S&S), Inc. was contracted by Foothill Independent Bank to conduct a Phase II Soil Investigation to better qualify the findings from two previous Phase II Investigations. The previous investigations found arsenic at concentrations above California State Hazardous levels, however the impacted soil was extremely limited in total extent (i.e., between 3-6 $yds^3$ impacted).

The additional Phase II Investigation conducted by S&S found nothing to indicate any greater arsenic contamination to exist, than what had previously been identified in the two prior Phase II Soil Investigations.

However, within the immediate area of the oil/water separator, elevated concentrations of oil impacted soil as high as 54,100 parts per million were identified, with quantifiable oil impacted soil concentrations found to 20-feet below grade. The impacted soil first appeared directly beneath the bottom (i.e., 5-feet down) of the oil/water separator discharge conveyance system, which appears to be more-or-less an open, concrete, gravity flow culvert type system.

Ultimately S&S identified a 25-foot "Clean Earth" interval between the last identified impacted soil depth interval of 20-feet and 45-feet beneath ground surface (bgs). Having met the 25-foot clean earth interval and knowing the contaminant in question is one of the lowest rated regulated compounds by the State, S&S believes no significant threat to the immediate environment, or human health risk upon physical contact exists as a result of the TPH impacted soil found during this project.

Based on S&S findings, it is our opinion that nothing further needs to be conducted with reference to the immediate area around the oil/water separator, however if future plans require disturbance of the soil in this area, then the soil must be properly handled and taken to a Cal-EPA certified recycler.

Based on boring locations and sample results, it is the opinion of S&S that if the entire site were leveled, a conservative cost estimate (in 2005 dollars) of $90,000 would be necessary to properly remediate the impacted soil, so that a "no further action" letter could be issued by the Los Angeles County, Department of Public Works – Environmental Programs Division.

Appendix II Soil Boring Logs

Phase 1

# 1.0 INTRODUCTION

S&S was contracted by Foothill Independent Bank to confirm the recommendations of GeoScience Analytical's September 14, 2005 Phase II Environmental Investigation at a commercial property located at 12021-12023 Woodruff Ave., Downey, CA (Site). The additional Phase II Investigation was conducted in response to an initial Phase II Investigation conducted by Converse Consultants in August 2005 and an additional Phase II Investigation conducted by GeoScience Analytical, Inc. on September 6, 2005. The initial Phase II Investigation was conducted throughout the entire site beneath areas of concern. The additional Phase II Investigation conducted by GeoScience Analytical was conducted specifically near the oil-water separator, where Converse Consultants found an Arsenic concentration above Cal-Hazardous levels. The additional Phase II Investigation by GeoScience Analytical concluded the Arsenic contamination to be no more than 3-6 $yds^3$ and of no immediate concern.

# 2.0 SOIL INVESTIGATIVE METHODS

## 2.1 Boring Location Determination

The boring locations were determined based on the two prior Phase II Investigations conducted by Converse Consultants and GeoScience Analytical. Ultimately a total of 14 soil borings were drilled during this project with a maximum total penetrated depth of 45-feet being investigated in boring SS5-Alt

## 2.2 Geo Probe 2400 Direct-Push Rig Soil Investigation

On September 28, 2005, S&S advanced eight (8) exploratory borings to a total depth of 5-feet below ground surface (bgs). The borings were drilled using a Geo Probe, model 2420 confined space, hydraulic punch drill rig. On October 5, 2005 S&S conducted an additional soil characterization which comprised of drilling four additional borings near the previous four borings drilled by S&S by the oil/water separator, but drilling to greater depths. Finally an additional field investigation was conducted by S&S on October 10, 2005, which consisted of drilling boring SS5-Alt to a total depth of 30-feet to 45-feet below grade.

Undisturbed soil samples were collected at ½, 1, 2 and 5-feet bgs in each boring from the September 28th investigation, at 5-foot intervals beginning at 10-feet below grade to total boring depth (varying between 15 to 30-feet below grade) in the October 5th investigation and at 35, 40 and 45-feet below grade in boring SS5-Alt in the October 10th investigation. All samples collected during this project were collected by driving a 2-inch diameter by 2-foot long spoon sampler containing four 1½" diameter by six-inch long brass sample sleeves in advance of the bore-hole, using the hydraulic drill hammer. The "lead" sample

sleeve from each sampling interval was secured with Parafilm™ lined plastic end caps. Soil from the second sleeve was evacuated into one Encore™ 25-gram Teflon sampler. The evacuation was conducted by manually driving the Encore sampler into the brass sample sleeve using the Encore twist-loc sample handle. All soil samples were collected and logged per EPA method 5035 guidelines, by William C. Lachmar, R.G. # 6168.

The lead brass sample sleeve and 25-gram Encore sample was then clearly marked as to boring number and sample depth interval, then placed in a zip-loc bag that was also clearly labeled. The bagged sample was then placed in a chilled ice chest for temporary storage pending transport to the laboratory.

The remaining soil from the second brass sample sleeve was placed in zip-loc bags, marked as to boring location and sample depth and placed on S&S's vehicle to heat in the sun. After approximately 10-minutes to warm and equilibrate, the probe from a Micro Rae model PGM-7600, Photo Ionization Detector (PID) was placed approximately ½ the headspace width inside the zip-loc bag. The soil was then "turned" by hand and readings from the OVA posted on boring logs, along with the soil description. All soil borings were logged using the Unified Soil Classification System (USCS) and included a description of the soil matrix, with reference to classification, color, grain-size, sorting, plasticity/hardness, transition zones, moisture, field reading and any odors or signs of staining (discoloration).

## 2.3 Soil Sampling Methods

The collected soil samples were submitted to Southland Technical Services (STS), Inc., located in Montebello, CA. Based on field observations selected samples were submitted for testing of total petroleum hydrocarbons (TPH), by EPA method 8015m Arsenic by EPA method 7060A and total chromium by EPA method 7190 (for outside chiller). In addition the most elevated TPH sample (SS5-5') was further tested for Volatile Organic Compounds (VOC's) by EPA method 8260B and Semi-Volatile Organic Compounds by EPA method 8270C. A summary of the soil chemical analyses results is provided in Table 1 below. The certified laboratory chemical analyses results, with QA/QC data is provided in Appendix I.

**TABLE 1:**

### 2.4 Soil Sample Results

Results of the laboratory soil analyses testing found nothing in the soil to warrant further investigation. No organic compounds specified for analyses through EPA method 418.1, 8260B, 8270C, or 335.2 testing were found to exist, while the metals results found nothing above what can be considered normal soil background levels.

## 3.0 GEOLOGY / HYDROGEOLOGY

### 3.1 Regional

The site lies within the Montebello Forebay Area of the Central Basin of the Los Angeles Coastal Plain. The Central Basin is one of four identified groundwater basins within the Los Angeles Coastal Plain and its southeast boundary coincides with the Los Angeles-Orange County line. The Coastal Plain consists mainly of unconsolidated sediments or alluvium, which is underlain and bounded on the north and east, by essentially bedrock. The recent alluvium contains parts of the Gaspur and Gage aquifers.

The Central Basin is overlain by the Montebello and Downey Plains. The freshwater bearing sediments vary in age from recent, to early Pleistocene and extend to a maximum depth of approximately 900-feet below average mean sea level (AMSL). The aquifers to note within the Montebello Forebay area consist of the Lynwood and Silverado aquifers. The Lynwood and Silverado aquifers lie entirely within the San Pedro Formation[1].

### 3.2 Local

Referencing the 1989 Seismicity Map of the Los Angeles Region, published by the State of California, Division of Mines and Geology, the general site area lies to the interpreted most westerly extension of the Whittier Fault.

Referencing Cross Section B-B' from Bulletin 104, posts the Gaspur Aquifer at approximately 70-feet beneath the site. The more significant Lynwood and Silverado aquifers are shown to be approximately 290 and 410-feet beneath the site, with an estimated thickness of 80-feet and 220-feet respectively.

[1] State of California, Department of Water Resources, Bulletin 104

### 3.3 Site Specific

Shallow soil types encountered while drilling consisted mainly of a moist silt and silty-sand and fine-medium sand (please reference the soil boring logs in Appendix II). A nearby Los Angeles County water monitor well #1587Y, is located approximately 100 yards south of the site, at the intersection of Woodruff Avenue and Washburn Road. Depth to water as last recorded on March 31, 2005 was 74.3-feet bgs, with a measured surface elevation of 107.0-feet AMSL.

## 4.0 CONCLUSIONS

Based on all environmental information collected to date, S&S Commercial Environmental Services concludes the following:

- Nothing was found in this additional soil characterization that would alter the general conclusions presented in GeoScience Analytical, Inc.'s September 14, 2005 report, with reference to Arsenic contamination. GeoScience concluded a total of 3-6 cubic yards of soil exists on-site with Arsenic concentrations slightly above Cal-Hazardous levels. The impacted soil depth does not appear to continue beyond 3-feet below grade.

- Elevated oil concentrations as high as 54,100 parts per million (ppm) and quantifiable oil impacted soil concentrations to 20-feet below grade were found to exist during this project. The impacted soil first appeared directly beneath the bottom (i.e., 5-feet down) of the oil/water separator discharge conveyance system, which appears to be more-or-less an open, concrete, gravity flow culvert type system.

- S&S did identify a 25-foot "Clean Earth" interval between the last identified oil impacted soil depth interval of 20-feet and 45-feet beneath ground surface (bgs).

- The general site area is located approximately 70-feet above the first recognized commercially producible aquifer (Gage Aquifer).

- The general soil types found during this investigation was generally a moist silt and silty-fine sand to 20-feet, followed by a fine-medium sand to 45-feet below grade.

- Depth to groundwater is estimated at approximately 70-feet beneath this site.

## 5.0 RECOMMENDATIONS

Based on the soil chemical analyses results, recognized 25-foot "Clean Earth" interval for the oil impacted soil, the fact the Cal-Hazardous Arsenic soil is beneath a capped area and all Arsenic concentrations were found below the Cal-Hazardous Total Threshold Limit Concentration (TTLC) and only failed when tested for soluble Arsenic, no remediation is recommended at this time. Furthermore, it is the opinion of S&S Commercial Environmental Services, Inc. that no significant threat to the immediate environment, or human health risk upon physical contact exists as a result of the oil impacted soil found to exist during this project.

## 6.0 REPORT LIMITATIONS

The conclusions and recommendations presented above are based upon the agreed scope of work as approved by the client. S&S makes no guarantees as to the accuracy or completeness of information obtained from others. It is possible that additional soil and/or water data exists beyond what was presented or cited in this report.

The services performed by S&S have been conducted in a manner consistent with the level of care ordinarily exercised by members of our profession currently practicing under similar conditions.

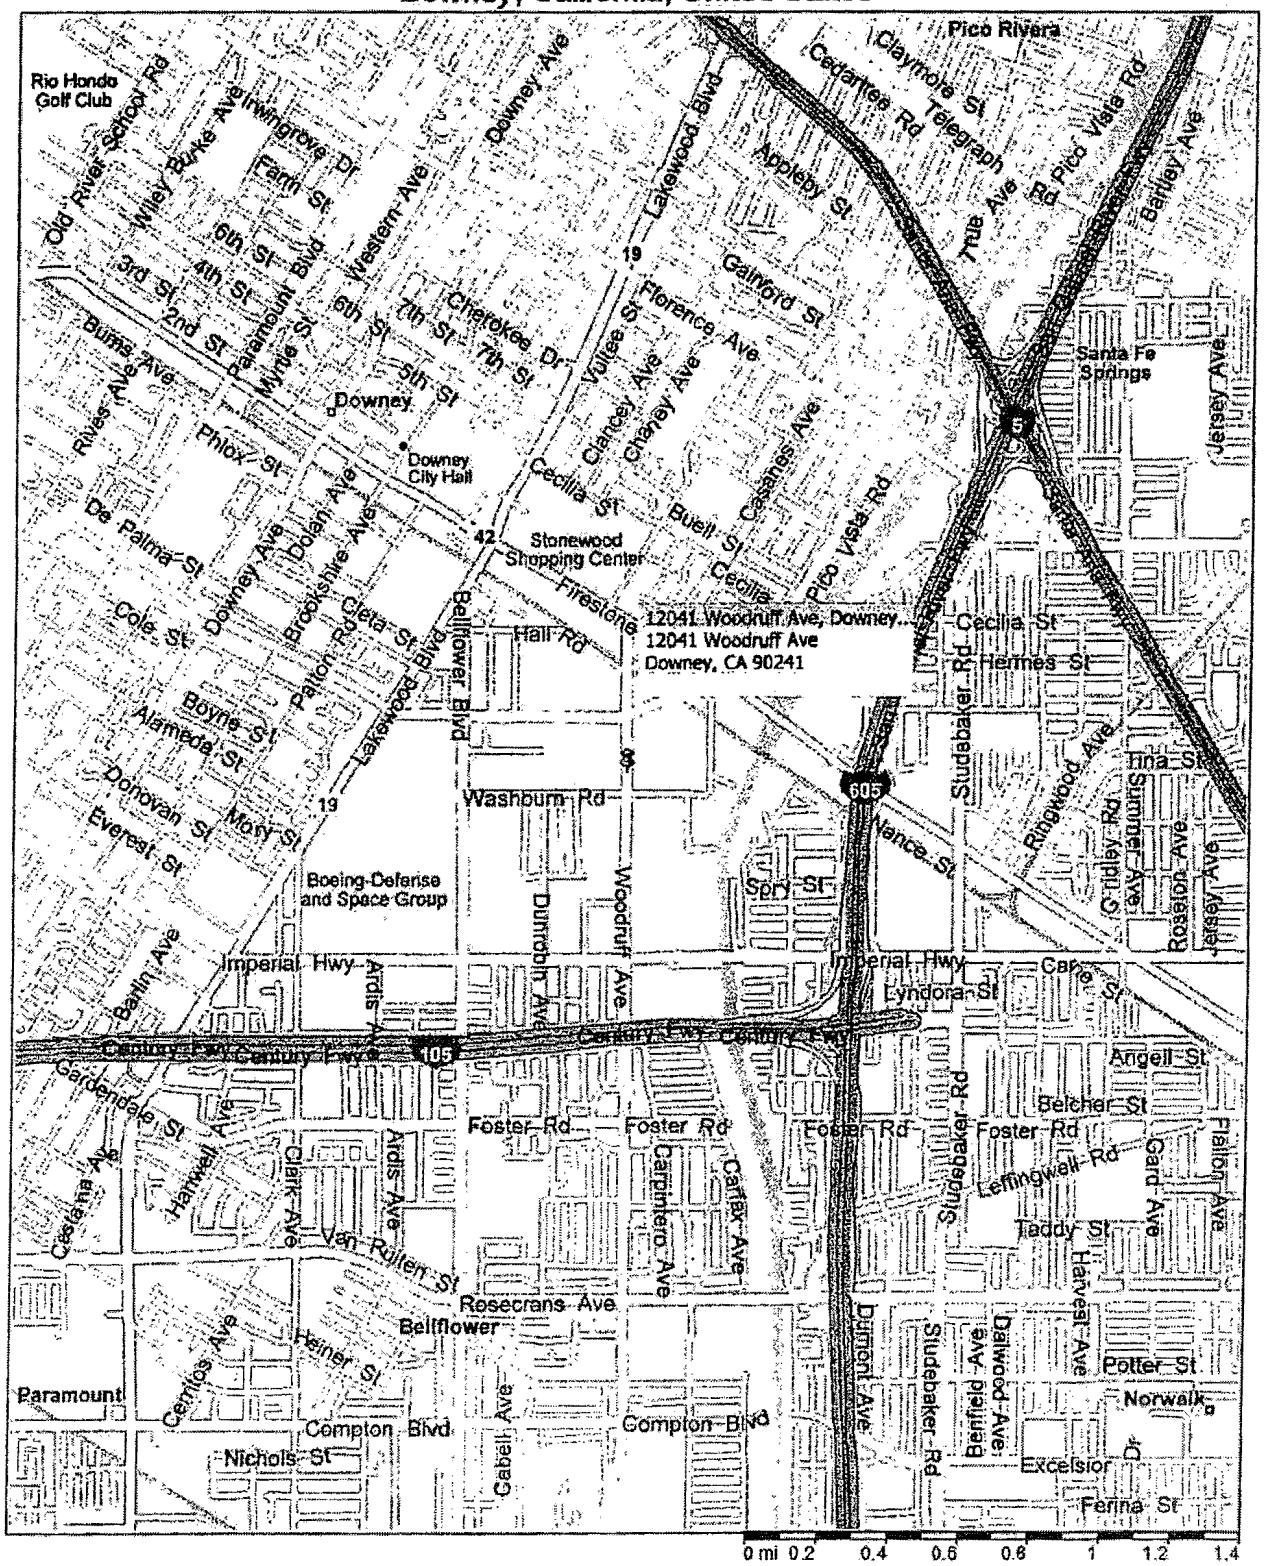
This report is not a legal opinion, but may under certain circumstances be prepared at the direction of counsel, may be in anticipation of litigation, and may be classified as an attorney client communication, or as an attorney-work product.

The findings in this report are based on field observations, and on the analytical data provided by an independent laboratory. Interpretations of the subsurface conditions at the site were made from a limited number of data points provided by the four investigative borings. Subsurface conditions may vary from these data points.

Furthermore, results of this investigation represent conditions at the time and specific locations where samples were collected and does not fully characterize the site for products not specified for analyses, or for other areas/structures not investigated.

All laboratory work cited in this report was prepared under the direction of Southland Technical Services, Inc., who is solely responsible for the contents and conclusions of the chemical analyses data.

If there are any questions regarding soil sample collection or soil analysis, please contact Mr. William C. Lachmar, Project Manager: at (714) 508-9794.



Respectfully,

*S&S Commercial Environmental Services, Inc.*

# APPENDIX I

Cal-EPA Certified Laboratory Chemical Analyses Results

**Southland Technical Services, Inc.**
Environmental Laboratories

09-30-20

Mr. Bill Lachmar
S & S Commercial Environmental Services
13520 Amber Road
Chino, CA 91710

Project: 5928
Project Site: KMS-12021-23 Woodruff Ave., Downey, CA
Date Sampled: 09-28-2005
Lab Job No.: Z509167

Dear Mr. Lachmar:

Enclosed please find the analytical report for the sample(s) received by STS Environmental Laboratories on 09-28-20 and analyzed by the following EPA methods:

EPA 8015M (Total Petroleum Hydrocarbons)
EPA 8260B (VOCs & Oxygenates)
EPA 7060A (Arsenic, TTLC )
EPA 7190 (Chromium, TTLC)
EPA 8270C (SVOCs by GC/MS)

All analyses have met the QA/QC criteria of this laboratory.

The sample arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

STS Environmental Laboratory is certified by CA DHS (Certificate Number 1986). Thank you for giving us t opportunity to serve you. Please feel free to call me at (323) 888-0728 if oB1-5ur laboratory can be of further servi to you.

Sincerely,

Roger Wang, Ph.D.
Laboratory Director

Environmental Laboratories

10-10-200

Mr. Bill Lachmar
S & S Commercial Environmental Services
13520 Amber Road
Chino, CA 91710

Project: 5928
Project Site: KMS-12021-23 Woodruff Ave., Downey, CA
Date Sampled: 10-05-2005
Lab Job No.: Z510018

Dear Mr. Lachmar:

Enclosed please find the analytical report for the sample(s) received by STS Environmental Laboratories on 10-05-200 and analyzed by the following EPA methods:

EPA 8015M (Total Petroleum Hydrocarbons)

All analyses have met the QA/QC criteria of this laboratory.

The sample arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

STS Environmental Laboratory is certified by CA DHS (Certificate Number 1986). Thank you for giving us th opportunity to serve you. Please feel free to call me at (323) 888-0728 if oB1-5ur laboratory can be of further servic to you.

Sincerely,

Roger Wang, Ph.D.
Laboratory Director

Environmental Laboratories

10/10/200:

Mr. Bill Lachmar
S & S Commercial Environmental Services
13520 Amber Road
Chino, CA 91710

Project: 5928
Project Site: KMS-12021-23 Woodruff Ave., Downey, CA
Date Sampled: 10-10-2005
Lab Job No.: Z510042

Dear Mr. Lachmar:

Enclosed please find the analytical report for the sample(s) received by STS Environmental Laboratories on 10-10-200 and analyzed by the following EPA methods:

EPA 8015M (Total Petroleum Hydrocarbons)

All analyses have met the QA/QC criteria of this laboratory.

The sample arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

STS Environmental Laboratory is certified by CA DHS (Certificate Number 1986). Thank you for giving us th opportunity to serve you. Please feel free to call me at (323) 888-0728 if oB1-5ur laboratory can be of further servic to you.

Sincerely,

Roger Wang, Ph.D.
Laboratory Director

## LITHOLOGIC DESCRIPTION

Standard Classification, Texture, Relative Moisture, Density, Firmness, Odor-Staining, USCS Designation

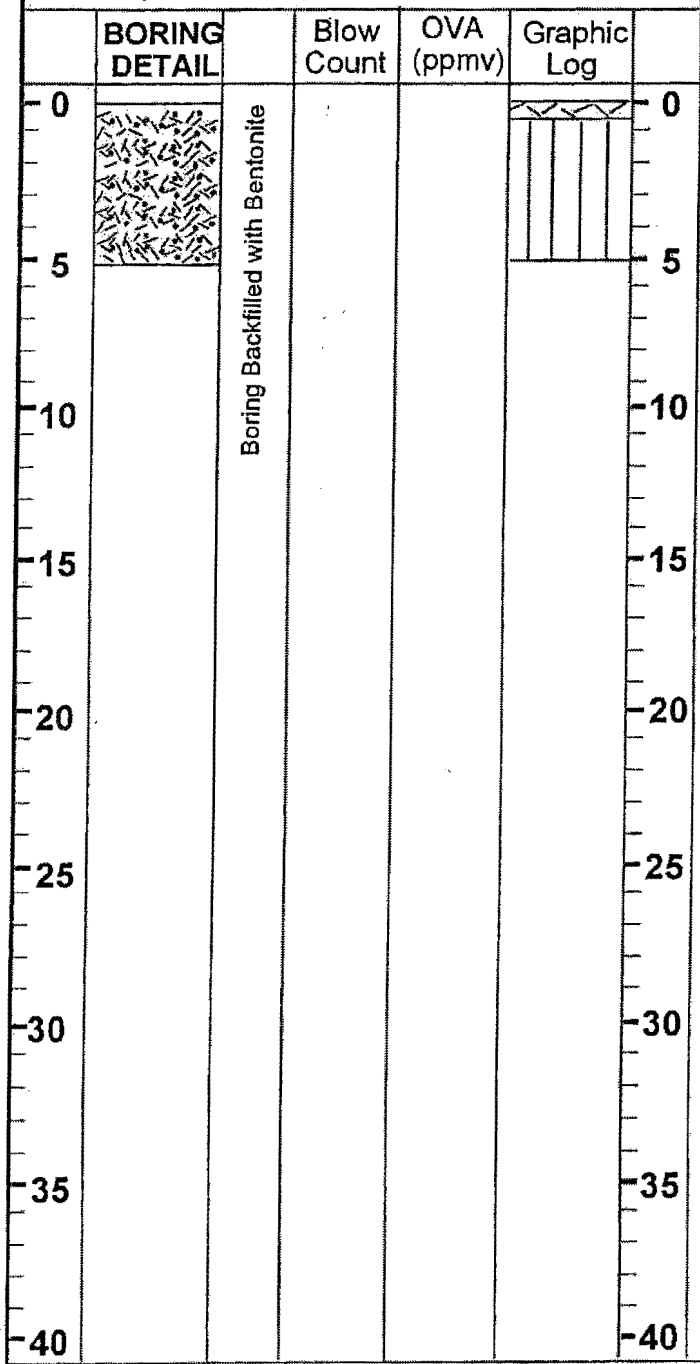
And (40-50%) With (25-40%) Some (10-25%) Trace (0-10%)

Approximately 3-inches of concrete



Generally Brown, Moist Silt (ML) from 0-5 Feet

Olive Brown Silt, (ML), moist, firm, well sorted, faint odor, ho discoloration

Olive-Brown Silty-Clay to Clay (ML-CL), moist, cohesive, plastic,, no discoloration, faint oil odor

Olive-Brown Silty-Clay to Clay (ML-CL), moist, cohesive, medium plasticity, no discoloration, no odor

Light Brown Silt (ML), moist, relatively friable, contact to fine-medium sand, no discoloration, no odor

S&S Form 20-A

Gentlemen:

2. NAPHTHENIC OIL &

This report summarizes the work done on the above said site by Tank Protect Engineering, regarding removal of two diesel 10,000 gallon tanks, one oil 10,000 - gallon tank, site investigation and additional excavation activities to determine lateral and vertical extend of contamination.

(1))

## TANKS PULL - UP ACTIVITIES

On August 24, 1989 one 10,000 gallon gas tank which contained naphthenic type oil and two 10,000 gallon diesel tanks were removed from the subject site. The tanks were removed in accordance with local city and state regulations (i.e. drained, uncovered, washed, triple rinsed, decontaminated, purged with dry ice, and removed when L.E.L. readings were below the allowable level). The tanks were disposed of by delivery to American Metal Recycling Inc., at their facility located at 2202 S. Millken, Ontario, Ca 91761 for destruction. The liquid waste from triple rinse were shipped to De Menno/Kerdoon, at their location at 2000 N. Alameda St. Compton, Ca 90222 for disposal. Copy of liquid manifest and certificate of tank disposal attached.

## ON-SITE INVESTIGATION

After removal, a total of seven soil samples were taken on August 24, 1989 using a backhoe, from approximately 3 feet below the each end of the three underground storage tanks (sample points K-1, K-2, K-3, K-4, K-5 and K-6; see Figure 1) and one soil sample from Spoil pile (sample points K-7). All the soil samples obtained were immediately packed overflowing into brass jars, capped with a polyethylene lid, sealed with duct tape, labeled and immediately placed into a refrigerated ice chest. The samples were then transported by a company vehicle to a state certified laboratory (Ensotech Inc) accompanied by a chain-of-custody form. The chain-of-custody and history of events for the soil samples and analysis are documented in the attached enclosures. Originally liquid contents of the tank # 1 and the tank # 3 were mistakenly identified as diesel and oil respectively. An additional investigation of historical events indicates correct contents of the tank # 1 was naphthenic type oil and the tank # 3 was diesel.

As indicated from the laboratory test results, soil sample taken from under east end of oil tank #1 (sample point K-5) and soil sample from spoil pile (sample point K-7) showed high levels of total petroleum hydrocarbon (TPH) of 45,714 mg/kg and 5,030 mg/kg of total hydrocarbons respectively. Less than maximum allowable levels of hydrocarbon contamination were found in the soil samples K-1, K-2, K-3, K-4 and K-6. The contaminated soil was removed. The contamination was identified by color and odor.

K-4 has 325 ppm TPH

## EXPLORATORY WELL DRILLING

Based upon the laboratory test results obtained and our site observation, it was recommended that a total of six exploratory borings be made in order to approximate the limits of vertical and lateral contamination.

Four borings (B-1, B-2, B-3 and B-4) were drilled on September 26 and two more (B-5 and B-6) on September 27, 1989 at locations shown on Figure 2 - Plot Plan to determined a vertical extent of hydrocarbon contaminations. A Drill-Line Mobile E-53, 3-inch-dimeter hollow stem auger drilling rig was utilized for

(1))

this borings. Soil samples were collected at 5 feet intervals using a california split sampler. The borings were drilled to a total depth of 40 feet. The lithologies of the samples were classified in accordance with the Unified Soil Classification System (Plate A-2). The lithologic logs of drilled well are enclosed. Upon completion of drilling, the borings were backfilled with soil.

## SOIL SAMPLING

Soil samples were monitored using Organic Vapor Analysis (OVA) for analyses of the emission of Volatile Organic Compounds (VOC) from soil per SCAQMD requirement. OVA reading were conducted continuously. A GasTechtor Hydrocarbon Surveyor Model 1314 was used to detect and indicate in parts per million (PPM) concentrations of hydrocarbons vapor from soil samples. The instrument has been properly calibrated by Allied Industrial Distributors.

The on-site observation and OVA reading were utilized to select a soil sample for laboratory analysis. A total of twelve soil samples from depths between 15 feet to 40 feet of six borings were considered to be most representative of the contamination. The selected soil samples were immediately end wrapped, capped, sealed by tape, labeled, placed into an ice chest and submitted for Hydrocarbon 418.1 analysis to Associated Laboratories and Ensotech Inc. Both laboratories are state-certified laboratories and chain of custody forms are attached. Copies of the laboratory test results on soil samples are enclosed.

Soil samples B-3/20 and B-6/20 indicated slight levels of hydrocarbon contamination. Laboratory results of soil samples taken at the depth of 20 feet (samples B-3 and B-6) showed 285 mg/kg and 158 mg/kg of TPH respectively. Test results of soil samples B-1/15, B-2/20, B-3/20, B-4/20, B-4/30, B-5/20 and B-6/20 are well within the acceptable limits of hydrocarbon content. Based on the above mentioned laboratory test results (see Appendix) contaminated soil zones are located in the vicinity of the removed oil tank pit #1 (Figure 2).

## GROUNDWATER

Groundwater was not encountered during the excavation. The depth of water table is reported to be at 89 feet below the surface of the ground at water well #1587, which located approximately .2 mile to the east from the site of investigation, as measured in April, 1989. (Data obtained from Flood Control District, ph: (818) 458-6120.

## EXCAVATION ACTION

Based on the data presented herein, it is evident that high levels of hydrocarbon contamination of the soil existed in the oil tank pit. Based on the lithological data presented and typical alluvial basin setting, the soil texture ranges from clay to sand. Based on lithology in conjunction with analytical data

(1))

for a number of leaks that have been investigated in the area, we assume hydrocarbon contamination is contained within clayey formation under the leak location.

On October 31, 1989 additional excavation of oil and diesel contaminated soil from removed tank pits down to 23 feet using a 235 Ecco excavator was performed. OVA monitoring and visual observation was utilized to determine the extent of contamination. A total of eight verification samples were collected using the excavator. All soil samples were immediately end wrapped, capped, sealed by tape, labeled, placed into ice chest and immediately delivered to state certified laboratory - Associated Laboratories, for Hydrocarbon 418.1 analysis with 24-hour turnaround. Chain of custody forms are attached as are copies of laboratory test results.

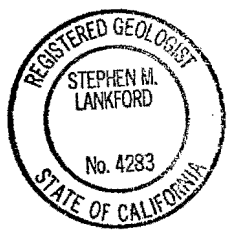
Six samples were analyze to characterize the soil contamination profile. As shown from the laboratory test results, soil samples taken from west end of oil tank pit#1 (sample point VS-6) indicated high level of hydrocarbon of 27,100 mg/kg. Non detectable level of hydrocarbon reported in the soil samples VS-1, VS-2, VS-3, VS-5 and VS-7. Additional excavation down to 25 feet was conducted on November 6, 1989 in the south west corner of the oil tank pit # 1. The contaminated soil was removed and piled separately. Soil sample VS-8 was collected from the west end of the oil tank pit#1, as was analyzed within 24-hours by Associated laboratories. The laboratory result indicated 55 mg/kg of hydrocarbon.

## REMEDIAL ACTION PROPOSAL

Based on the procedure and analysis discussed above, it was concluded that all contaminated soil has been removed from tank pits area. We propose to slurry in place the diesel tank # 4. The non-treatable naphthenic oil contaminated soil and the clumps to be hauled to the state approved waste dump landfill. The Tank Protect Engineering soil remediation process will be performed to abate the level of hydrocarbon contamination in piles, utilizing a special silica catalyst and hydrogen peroxide.

Hydrogen peroxide is adsorbed onto the the silica catalyst resulting in a slow release over time, enabling the treatment process to continue for several hours after application. A unique characteristic of silica catalyst is its catalytic surface which makes it several times more reactive and brings about rapid and complete oxidation of all hydrocarbons and other organics. Hydrogen peroxide also reacts with organic tetraethyl lead, cyanides, sulfides, and mercaptans. Hydrogen peroxide spontaneously decomposes to oxygen and water over time, so excessive peroxide during the treatment will not leave a hazardous residue. Nor is hydrogen peroxide toxic. When the soil is sprayed with hydrogen peroxide, an aerosol of hydrogen peroxide stays on top of the soil surface. This aerosol "blanket" prevents the escape of volatiles during mixing, thus no odors are produced. It is also in this aerosol space that photochemical oxidation of the hydrocarbons takes place. The

(1))



retained peroxide acts as a source of oxygen in the soil. Oxygen promotes aerobic bacterial growth, which further decompose any remaining organic residue.

Laboratory analysis will be performed of soil samples collected at three inches under the surface of the treated soil and continuing until a non-detectable level of hydrocarbon is reached. All soil samples will be analyzed by EPA Method 418.1.

After complete final verification soil sampling process the excavation site will be backfilled and compacted, using the clean decontaminated soil.

We trust that this proposal provides the required information for investigated site and we are looking forward to working with you on this project. Should you have any questions or suggestions regarding this remediation proposal, please contact Tank Protect Engineering office.

Very Truly Yours,

Stephen M. Lankford.....California State
Registered Geologist # 4283

Gentlemen:

TPE Environmental, Inc. (affiliate of Tank Protect Engineering) is pleased to submit the enclosed report documenting closure of four (4) underground storage tanks at the subject site, and our report of remediation of contaminated soils on site. The closure, excavation and treatment of contaminated soils and site investigation was performed in accordance with the requirements of Waste Management Division's (WMD) closure permit and the agreements between Kirkhill, Inc. and Tank Protect Engineering, dated July 28, August 15, September 11, October 25, 1989, and November 13, 1989.

## 1.0 INTRODUCTION

The following summarizes the tank removal/abandonment, site investigation and site remediation work related to closure of four (4) underground storage tanks (UST) at the subject site.

## 2.0 SITE INFORMATION AND BACKGROUND

The site is located at 12021 Woodruff Avenue in Downey, California, (See Figure 1 - Site Location Map). The Kirkhill Plant, a facility for manufacture of plumbing and hardware parts, had the following underground storage tanks located on site which were to be abandoned:

| Tank No. | Capacity | Material Stored in Tank | Method of Abandonment |
|---|---|---|---|
| 1 | 10,000 Gal. | Naphthene, Cutting Oil | Removal |
| 2 | 10,000 Gal. | Diesel | Removal |
| 3 | 10,000 Gal. | Diesel | Removal |
| 4 | 7,500 Gal. | Diesel | Abandoned in Place by Slurry |

The locations are shown on Figure 2.

In July, 1989 Tank Protect Engineering submitted a workplan/proposal to Kirkhill, Inc. to remove and/or abandon-in-place these four tanks. Permits were applied for in August, 1989 and tank closure work proceeded. For abandonment-in-place of Tank No. 4, a site investigation by drilling and soil sampling/testing was required per Los Angeles County regulations. during removal of Tanks 1-3, soil samples from beneath the tanks were tested and some contamination was found, therefore, additional site investigation, excavation and remediation work was performed.

## 3.0 PERMITS

Prior to performing the tank closure work, permits were acquired from the Los Angeles County Department of Public Works, Waste Management Division (WMD) and the City of Downey Fire Prevention Bureau. WMD issued the following two permits:

| File No. | Permit No. | Tanks | Closure |
|---|---|---|---|
| J-12987-1F | 5999 | 1-Steel 10,000 Diesel | Permanent, Tank Removal |
| | | 1-Steel 10,000 Diesel | " " " |
| | | 1-Steel 10,000 Cutting Oil | " " " |
| J-12987-1F | 6000 | 1-Steel 7,500 Diesel | Permanent, Closure in Place |
| | 6000 Supplement | 1-Steel 7,500 Diesel | Drill Two (2) Borings |

Also, the City of Downey Bureau of Fire Prevention issued a permit for abandoning one (1) underground tank and removing three (3) underground tanks at the site. Copies of these permits are included in Appendix A.

This Tank Closure Report was prepared in accordance with the permit requirements.

## 4.0 TANK REMOVAL ACTIVITIES

On August 24, 1989 one (1) 10,000 gallon tank (Tank #1), which contained naphthenic type oil and two (2) 10,000 gallon diesel tanks (Tanks 2 and 3) were removed from the subject site. The tanks were removed in accordance with local city and state regulations (i.e. drained, uncovered, washed, triple rinsed, decontaminated, purged with dry ice, and removed when L.E.L. readings were below the allowable level). The tanks were disposed of by delivery to American Metal Recycling, Inc., at their facility located at 2202 S. Millken, Ontario, CA 91761 for destruction. Copies of liquid manifest and certificate of tank disposal are included in Appendix B.
Visible evidence of contamination (soil discoloration) was observed in portions of the excavation for cutting oil tank #1 and diesel tank #2.

## 5.0 SOIL SAMPLING DURING TANK REMOVAL

After tank removal, a total of seven (7) soil samples were taken on August 24, 1989 using a backhoe, from approximately 3 feet below each end of the three underground storage tanks (sample points K-1, K-2, K-3, K-4, K-5 and K-6; see Figure 2) and one soil sample from the spoil pile (sample point K-7). All the soil samples obtained were immediately packed overflowing into brass jars, capped with a polyethylene lid, sealed with duct tape, labeled and immediately placed into a refrigerated ice chest. The samples were then transported by a company vehicle to a State Certified Laboratory (Ensotech, Inc.) accompanied by a chain-of-custody form. The chain-of-custody and history of events for the soil samples and analysis are documented in Appendix C.

## 6.0 RESULTS OF LABORATORY CHEMICAL ANALYSES OF SAMPLES FROM BENEATH TANKS

As indicated from the laboratory test results (Appendix C), soil samples taken from under the east end of cutting oil Tank #1 and the west end under diesel Tank #2 (sample points K-5 and K-4) and soil samples from the spoil pile (sample point K-7) showed high levels of total petroleum hydrocarbons (TPH) of 45,714 mg/kg, 325 mg/kg and 5,030 mg/kg, respectively. Less than 100 mg/kg of hydrocarbon contamination was found in soil samples K-1, K-2, K-3, and K-6. A summary of soil sample analyses is provided in Appendix C.

## 7.0 SITE INVESTIGATION

To investigate leaks/spills around Tank 4 (which was to be abandoned in place) and investigate the lateral and vertical extent of contamination near Tank 1 and 2, six (6) soil borings to depths of 25 to 40 feet were performed at locations shown on Figure 2. Auger boring methods were used and samples obtained by driving a split-barrel sampler containing brass liners. (Logs of these borings are included in Appendix D.) Based on visible indications and sample depths, 12 samples were submitted for laboratory chemical analyses. Each sample was tightly capped, tapped, labeled, and immediately placed in an ice cooler for transport to the lab under proper chain-of-custody documentation. As shown, only samples from the 20 ft. depth in B-3 and B-6 had TPH greater than 100 mg/kg (See Appendix C).

Groundwater was not encountered in any of the six (6) borings nor during excavation. The depth of water table is reported in April, 1989 to be at 89 feet below ground surface at water well #1587 which is located approximately 0.2 miles east of the site. (Date obtained from verbal communications with the Flood Control District, telephone (818) 458-6120.

## 8.0 TANK CLOSURE BY FILLING

Tank #4, which is located in a very difficult area (near building foundations) for removal, was permitted for abandonment-in-place by filling. Samples from the 20 foot depth in Borings B-5 and B-6 near the tank indicated TPH of 27 and 158 mg/kg, respectively. Additional samples from depths of 15, 30, and 40 feet indicated TPH was not detected. With these very moderate levels of TPH, limited extent and adverse impacts of tank removal, it was confirmed to abandon the tank by filling. The tank was subsequently cleaned and filled with slurry as specified in the permit.

## 9.0 REMEDIAL ACTIONS

To remediate the contaminated soil on site, we performed the following scope of work:

* Manifested and hauled the non-treatable "cutting oil" contaminated soil removed from the Tank 1 pit for disposal at a licensed disposal facility. Approximately 72 cubic yards was hauled for disposal. (See Manifests in Appendix B.)

* Performed laboratory analyses of soil samples collected at various depths within the soil treatment piles, one sample per about every 10 cubic yards of soil. Individual samples were analyzed for hydrocarbons by the California Department of Health Services (DHS) method for Total Petroleum Hydrocarbons and found to contain less than 100 ppm TPH remaining after treatment. (See Appendix C samples G-486 through G-490).

* Backfilled the excavations with the treated soil and some imported soil and compacted the backfill.

* Decontaminated and removed equipment and treatment supplies/containers from the site.

* Repaved the surface of each backfilled excavation with asphaltic concrete to match existing pavements.

* Prepared this written report to document the treatment and replacement process.

## 10.0 SUMMARY

Three of the four underground storage tanks at the site have been removed in accordance with permit and regulatory agency requirements, and the fourth tanks has been abandoned in place by filling with slurry sand. Initial sample testing indicated contamination of soils beneath two of the removed tanks. A site investigation indicated limited vertical extend of contamination migration and no shallow groundwater at the site. Subsequent over-excavation successfully removed contaminated soils (both vertically and laterally) from near Tank 1 and Tank 2. All of the "cutting oil" contaminated soil (approximately 72 cubic yards) was properly transported under manifest to Casmalia as California Regulated Waste. The remaining diesel contaminated soil, approximately 50 cubic yards total was treated in stockpiles on site by mixing the soil with silica catalyst and hydrogen peroxide. Verification sample tests indicated treatment had reduced TPH to below 100 ppm. Moderate levels of fuel contamination were found in one boring near Tank 4, but due to the limited extent and adverse impacts of tank removal, this tank was abandoned in place in accordance with Permit #6000 requirements.

CLOSURE PERMIT SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

Closure Permit No. 5999 B
File No. I-12987-1F

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

| SP | Depth(s) | Compounds | Analysis Method |
|---|---|---|---|
| 1A, 1B, 2A, 2B | 2-4' BELOW tank invert | TPH | 418.1 |
| 3A, 3B | | TPH | 418.1 + 8015 |
| | | | |
| | | | |

3. All soil samples obtained shall be undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report. ←

4. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed. NO

5. The analysis results for all soil samples shall be expressed in milligrams per kilogram (mg/kg). Analysis results for groundwater samples shall be expressed in parts per billion (ppb). ✓

6. Analysis results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) The method of analysis. ✓

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report. ✓

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present. NO

9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever earlier. 12/5/89 GK

No. _____

Date January 17, 1989

Region _____

District Downey C4

Tel. (213) 861-9993

Type of Permit ANNUAL EXCAVATION/TRENCHING PERMIT - 1989

Pursuant to Labor Code Sections 6500 and 6502, this Permit is issued to the above-named employer for the projects described below.

| State Contractor's License Number | | | Permit Valid through | |
|---|---|---|---|---|
| 489994 B | | | December 31, 1989 | |
| Description of Project | Location Address | City and County | Anticipated Dates | |
| | | | Starting | Completion |
| Excavation/Trenching | Various | Various | 1/17/89 | 12/31/89 |
| THIS PERMIT IS ISSUED SUBJECT TO THE CONDITION THAT THE WORK IS PERFORMED BY THE SAME EMPLOYER. THE APPROPRIATE DISTRICT OFFICE SHALL BE NOTIFIED IN WRITING OF LOCATION OF JOB SITE PRIOR TO COMMENCEMENT. | | | | |

It is the Division's policy to send copies of permits and [illegible] appropriate local [illegible] office.

***This Permit is issued upon the following conditions:***

1. That the work is performed by the same employer. If this is an annual permit the appropriate District Office shall be notified, in writing, of dates and location of job site prior to commencement.
2. That employer will comply with all occupational safety and health standards or orders applicable to the above projects, and any other lawful orders of the Division.
3. That if any unforeseen condition causes deviation from the plans or statements contained in the Permit Application Form the employer will notify the Division immediately.
4. Any variation from the specification and assertions of the Permit Application Form or violation of safety orders may be cause to revoke the permit.
5. This permit shall be posted at or near each place of employment as provided in 8 CAC 341.4.

## WASTE CHARACTERIZATION FORM: Please read instructions on reverse side before completing.

**Part A:** Generator/Transporter Information

Waste G
Company Name: KIRKHILL, INC. US EPA I.D. No.: CAC000199973
Technical Contact Person: CYRUS D. NAMINI Telephone No.: (714) 921-0888
Generating Facility Address: City 12021 Woodruff, Downey State CA Zip 90241

Transporter:
Company Name: JERVICON US EPA I.D. No.: CAC000199973
Contact Person: Jerry Telephone No.: (805) 722-0771
Address: City 1565 Better Avia Rd., Santa Maria State CA Zip 93454

**Part B:** Waste Stream Identification

General Description of Waste: SOIL CONTAMINATED WITH NEW OIL.
Process Generating Waste: UNDERGROUND TANK

**Part C:** Physical Characteristics

Color: _____ Physical State: ☐ Solid ☐ Liquid Slurry ☐ Paste ☐ Powder pH. _____
Layers: ☐ One Phase ☐ Two Layers ☐ Multi-Layered Flashpoint: _____ Free Liquids: ☐ No ☐ Yes
Odor: ☐ Strong ☐ Mild ☐ None Characterized as: _____ ☐ Organic ☐ Aqueous
Density _____ ☐ lb/gal. ☐ lb/cu.yd. Moisture or Water _____ % Settleable Solids (for liquids) _____ %

**Part D:** Waste Composition (must total 100%)

| | |
|---|---|
| PLEASE SEE ATTACHED | % |
| LABORATORY ANALYSIS | % |
| | % |
| | % |
| | % |
| | % |
| | % |
| | % |
| | % |

**Part E:** Metals **N/A**

☐ Total, ppm
☐ Extract (☐ EP Toxicity, ☐ TCLP, ☐ Cal. WET)

| | | | |
|---|---|---|---|
| Arsenic (As) | | Mercury (Hg) | |
| Barium (Ba) | | Nickel (Ni) | |
| Cadmium (Cd) | | Selenium (Se) | |
| Chromium (Cr) | | Silver (Ag) | |
| Copper (Cu) | | Thallium (Tl) | |
| Lead (Pb) | | Zinc (Zn) | |
| Hexavalent Chromium (Cr-VI) | | | |

**Part F:** Other Constituents, ppm **N/A**

| | Pesticides (list): | | Other Components (list): | |
|---|---|---|---|---|
| Total Cyanides | | ppm | | ppm |
| Reactive Cyanide (If total CN ≥ 250 ppm) | | ppm | | ppm |
| Total Sulfides | | ppm | | ppm |
| Reactive Sulfide (If total $S^{=}$ ≥ 500 ppm) | | ppm | | ppm |
| PCBs | | ppm | | ppm |

**Part G:** Hazardous Characteristics

☐ Cancer Suspect Agent ☐ EP Toxic ☐ Ignitable ☐ Corrosive ☐ Poison ☐ Radioactive ☐ Etiologic Agent
Reactivity: ☐ None ☐ Water Reactive ☐ Explosive ☐ Pyrophoric ☐ Oxidizer ☐ Cyanide/Sulfide
☐ Other _____
RCRA Hazardous Waste? XX No ☐ Yes RCRA Waste Code No. _____
State Hazardous Waste? ☐ No ☐ Yes State Waste Code No. _____
California Extremely Hazardous Waste? ☐ No ☐ Yes Permit No. _____ (Attach copy of E.H. Waste Permit)

**Part H:** Shipping Information

DOT Hazardous? ☐ Yes XX No Proper Shipping Name/I.D. Number CALIFORNIA REGULATORY AGENCY
Method: ☐ Bulk Liquid XX Bulk Solid ☐ Containerized (type) EST. < 50 Tons
Quantity: _____ gal _____ cu. yd. _____ Containers per: ☐ Month ☐ Quarter ☐ Year ☐ One Time ☐ Other _____

**Part I:** Certification Statement

I hereby certify that the above and attached waste description is complete and accurate to the best of my knowledge and that all known or suspected hazards have been identified. Further, I understand that, should the waste constituents vary from those described, a new Waste Characterization Form must be submitted with another representative sample.

# APPENDIX D

## LOGS OF TEST BORINGS

| MAJOR DIVISIONS | | | | | TYPICAL NAMES |
|---|---|---|---|---|---|
| COARSE-GRAINED SOILS (MORE THAN HALF IS LARGER THAN No. 200 SIEVE) | GRAVELS (MORE THAN HALF COARSE FRACTION IS LARGER THAN No. 4 SIEVE SIZE) | CLEAN GRAVELS WITH LITTLE OR NO FINES | GW | | WELL-GRADED GRAVELS, GRAVEL-SAND MIXTURES |
| | | | GP | | POORLY GRADED GRAVELS, GRAVEL-SAND MIXTURES |
| | | GRAVELS WITH OVER 12% FINES | GM | | SILTY GRAVELS, POORLY GRADED GRAVEL-SAND-SILT MIXTURES |
| | | | GC | | CLAYEY GRAVELS, POORLY GRADED GRAVEL-SAND-CLAY MIXTURES |
| | SANDS (MORE THAN HALF COARSE FRACTION IS SMALLER THAN No. 4 SIEVE SIZE) | CLEAN SANDS WITH LITTLE OR NO FINES | SW | | WELL-GRADED SANDS, GRAVELLY SANDS |
| | | | SP | | POORLY GRADED SANDS, GRAVELLY SANDS |
| | | SANDS WITH OVER 12% FINES | SM | | SILTY SANDS, POORLY GRADED SAND-SILT MIXTURES |
| | | | SC | | CLAYEY SANDS, POORLY GRADED SAND-CLAY MIXTURES |
| FINE-GRAINED SOILS (MORE THAN HALF IS SMALLER THAN No. 200 SIEVE) | SILTS AND CLAYS (LIQUID LIMIT 50% OR LESS) | | ML | | INORGANIC SILTS AND VERY FINE SANDS, ROCK FLOUR, SILTY OR CLAYEY FINE SANDS, OR CLAYEY SILTS WITH SLIGHT PLASTICITY |
| | | | CL | | INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS |
| | | | OL | | ORGANIC CLAYS AND ORGANIC SILTY CLAYS OF LOW PLASTICITY |
| | SILTS AND CLAYS (LIQUID LIMIT GREATER THAN 50%) | | MH | | INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS FINE SANDY OR SILTY SOILS, ELASTIC SILTS |
| | | | CH | | INORGANIC CLAYS OF HIGH PLASTICITY, FAT CLAYS |
| | | | OH | | ORGANIC CLAYS OF MEDIUM TO HIGH PLASTICITY, ORGANIC SILTS |
| HIGHLY ORGANIC SOILS | | | Pt | | PEAT AND OTHER HIGHLY ORGANIC SOILS |

■ – "Undisturbed" S&H or Shelby tube sample

⊘ – Bulk or classification sample

⊠ – Standard Penetration Test sample

▤ – No sample recovered

I – Core sample

Blows/ft – Blows required to drive sampler 12 inches with a 140-pound hammer falling 30 inches. Blow counts for S&H samplers are converted to approximate "equivalent" SPT N values (N = 0.5 X S&H blows per foot)

HC Odor – Hydrocarbon Odor

- No – No Odor
- Lo – Slight Odor
- Md – Moderate Odor
- Sg – Strong Odor

PID – Photoionization Detector reading (10.2-electron-volt lamp, calibrated using a benzene standard)

OVA – Organic Vapor Analyzer (flame ionization detector) calibrated using a methane standard

* – Sample submitted for chemical analysis

** – Based on HLA Temporary Bench Mark (TBM) shown on Plate 2. Assumed elevation = 100.00'.

Downey, CA 90241-0030

Attention: Mr. Raymond Ballanger

**Subject: Tank Closure and Site Remediation Report**
**Kirkhill, Inc.**
**12021 Woodruff**
**Downey, CA 90241**

Dear Mr. Ballanger:

Based on the information requirements specified by the Department of Public Works, County of Los Angeles (File No. I-12987, dated 5/17/90) in their review of the subject report, we are herewith submitting the following information:

1. Two geological cross sections (refer to Figure 1 and Figure 2) along $A_1$ - $A_2$ and $B_1$ - $B_2$ of the plot plan (refer to Figure 3). The contaminated soil was excavated and treated/disposed.

2. A total of 54 $yds^3$ of oil contaminated soil and clumps of diesel contaminated soil was removed from Tank #1 and Tank #2 pits, and shipped under manifest to Casmalia Resources, NTU Road, Casmalia, CA 93429. Remaining contaminated soil of approximately 50 $yds_3$ was removed and treated on-site using Tank Protect Engineering's hydrogen peroxide process with silica catalyst. The treated soil was backfilled into the pits using Tank Protect Engineering's standard compaction procedures. Calculations on the excavated soils are presented in Appendix A. Location of different soil spoils during excavation are depicted in Figure 3.

3. Figure 4 contains the location of the tank post-excavation backhoe samples collected from each pit and/or stockpile, marked with yellow color. Figure 5 contains the location of tank post-excavation borehole samples, marked with yellow color. Figure 5 contains the location of deep excavation verification samples, marked in pink color. Figure 6 contains the location of treatment verification samples from soil spoil piles, marked in yellow color.

1963 N. Main St.
Orange, CA 92665
714/921-0888
213/592-4771
FAX: 714/921-1832

4. Appendix B contains field raw-data boring logs and the refined boring logs showing depths and contamination levels. The logs contain available information on description of the earth material (USCS), drilling date, and signature of a registered Civil Engineer. Description of the drilling, and soil sampling, handling and preparation procedures used is in Appendix C.

5. A list containing all laboratory samples and field equivalent numbers is given in Appendix D.

6. During borings, except for borehole #5, none of the holes indicated hydrocarbon contamination by the Gas Techtor Organic Vapor Meter (refer to Appendix B).

In borehole #5, the Gas Techtor detected low concentrations (about 15 ppm) of hydrocarbon contamination in samples collected at 20′ and 30′ depths. The borehole was further drilled up to 40′ depth, and field and laboratory measurements detected no hydrocarbon contamination. Therefore, it is obvious from the boring logs that none of the borings were terminated at any depth showing contamination. It is to be noted that, excavation and direct disposal or treatment of soil was conducted wherever there was suspected contamination.

7. Sample handling protocol:

Each of the post-excavation samples K-1 to K-7, verification samples VS-1 to VS-8 (no laboratory #) during excavation, and verification samples after treatment VS-1 to VS-5 (laboratory #'s G486 to G490) were immediately packed overflowing into brass jars, capped with a polyethylene lid, sealed with duct tape, labeled and immediately placed into a refrigerated ice chest. The samples were then transported by a company vehicle to state certified laboratories (Ensotech, Inc. and Associated Laboratories) under a chain of custody (refer to Appendix E for the completed chain-of custody forms).

In sampling all six boreholes, a split-barrel sampler with clean brass liners was primarily used. In some instances, samples were acquired by grabbing drill cuttings and placing them overflowing into clean glass jars. A total of 12 samples suspected for hydrocarbon contamination were collected and submitted for laboratory chemical analyses. Sampling details are as follows:

| Sample Number | Sample Location | Test Required |
|---|---|---|
| B-1, 15′ | Borehole #1, Depth 15′ | 418.1 |
| B-2, 20′ | Borehole #2, Depth 20′ | 8015 |

| | | |
|---|---|---|
| B-3, 20′ | Borehole #3, Depth 20′ | 418.1 |
| B-4, 20′ | Borehole #4, Depth 20′ | 418.1 |
| B-4, 30′ | Borehole #4, Depth 30′ | 418.1 |
| B-5, 15′ | Borehole #5, Depth 15′ | 418.1 |
| B-5, 20′ | Borehole #5, Depth 20′ | 418.1 |
| B-5, 30′ | Borehole #5, Depth 30′ | 418.1 |
| B-6, 15′ | Borehole #6, Depth 15′ | 418.1 |
| B-6, 20′ | Borehole #6, Depth 20′ | 418.1 |
| B-6, 30′ | Borehole #6, Depth 30′ | 418.1 |
| B-6, 40′ | Borehole #6, Depth 40′ | 418.1 |

Each of the samples was collected in a clean brass liner or a clean glass jar, tightly capped with polyethylene caps on each end or lid, sealed with duct tape, labeled and immediately placed in a refrigerated ice chest. The samples were transported to state certified laboratories (Ensotech, Inc. and Associated Laboratories) under chain-of-custody (refer to Appendix E for the completed chain of custody forms).

8. On the DPW permit, naphthalene type oil was indicated as cutting oil (refer to permit #5999, Appendix F). The trade name for the cutting oil is EDGIFLEX-200. Chemically, cutting oil contains petroleum distillate. The chemical family name for this oil is petroleum hydrocarbon. The common name for the cutting oil is naphthenic type oil. The oil is a ~~complex~~ mixture of naphthenic, paraffinic and aromatic petroleum hydrocarbons. From the information provided by the cutting oil manufacturers (refer to Edgington Oil Company, Inc., Material Safety Data Sheet, Appendix G), there is no indication of the presence of naphthalene as a chemical compound in the oil. In addition, it is noted by Bellanger that the oil referred to here as a cutting oil is not a thread cutting oil. Therefore, during the closure or remediation of the subject site, for all purposes, the contaminant was considered and tested (by EPA Method 418.1) as petroleum hydrocarbon and no reference of naphthalene was made.

9. Treatment process used in the remediation:

Excavation of Soil:

Using a 235 Ecco Excavator, contaminated soil was excavated up to 23′ below ground surface in Tank #1 pit and Tank #2 pit on 10/31/89. During the excavation, OVA monitoring and visual observation was utilized to determine the extent of contamination. A total of eight verification samples were collected using the excavator. Refer to Appendix E for the chain-of-custody. Six samples (VS-1, VS-2, VS-3, VS-5, VS-6 and VS-7) were analyzed by a state certified laboratory (Associated Laboratories) to characterize the soil contamination profile. Laboratory test results (refer to Appendix E) indicated a high level of TPH (27,100 mg/kg) in soil sample VS-6 from the west end of oil tank pit #1. Non-detectable levels of TPH were reported in the remaining five samples. Additional excavation down to 25′ was conducted on 11/6/89 in the west end of the oil tank pit #1. The contaminated soil was removed and piled separately. Soil sample VS-8 was collected from the newly excavated depth and analyzed for TPH. Laboratory results showed allowable concentration of TPH (55 mg/kg). Therefore, no further excavation was beyond the 25′ depth was required.

Similar to oil tank pit #1; sampling/testing, over excavation to 23′ depth, and resampling/testing was performed in diesel tank pit #2. These details are shown on Figure 2.

Treatment:

Based on the chemical analyses and visual observation, a total of approximately 56 $yds^3$. of non-treatable naphthenic type oil contaminated soil and clumps of diesel contaminated soil was hauled to a state approved disposal facility under manifest (refer to Appendix H for completely filled in manifest forms).

The remaining approximately 50 $yds^3$ of excavated soil was treated by TPE soil remediation process using a special silica catalyst and hydrogen peroxide to oxidize the hydrocarbons. Refer to Appendix I for details of the treatment process.

On 11/22/90 five grab soil samples VS-1 to VS-5 were collected from the treatment piles (as depicted in Figure 6) and chemically tested for TPH using EPA Method 418.1. The chemical analyses detected (refer to Appendix E) TPH values <100 mg/kg (17 mg/kg to 87 mg/kg). Therefore, further treatment of the contaminated soil was terminated, and the excavated pits were backfilled with the clean, treated soil and additional imported clean soil using TPE's standard compaction procedure (according to the contract).

10. As per the Tank Removal Proposal/Contract between Kirkhill, Inc. and Tank Protect Engineering dated 7/28/89 (page 2, paragraph 6) the excavated pits were backfilled using TPE's standard compaction procedure. In the DPW Closure Permits {refer to Appendix F, Permit #'s 5999 (File #12987 R/C 1F) and 6000B (File #12987 R/C 1F)}, Closure Permit Supplements {refer to Appendix F, Permit #'s 12987-1F and 6000B (File #I-12987-1F)}, and City of Downey Fire Department permit for tank closure (refer to Appendix F), the requirement of certified soil compaction was not specified.

    Proper backfilling and compaction procedures followed by TPE at the subject site included:

    > Imported and treated soil was placed in the excavated pits using 8" lifts. Utilizing vibrating plates, compaction (anticipating that there will not be any future construction at the excavated site) was achieved for each lift. During the backfill, moisture condition of the soil was observed.

11. Figures 7 and 8 are the legible location map and a plot plan respectively showing two adjacent cross streets and a north arrow.

12. Lithology of the site subsurface contains clays, sands and silts within the 40' drilled depth. Clays are moist, plastic and brown in color. They extend uniformly to about 22'depth in the site area. Due to the possible disturbance during the building construction, clays and sands encountered in borehole #5 and borehole #6 under Tank #4 appear to be disturbed (due to anthropogenic causes). If they were to represent the natural geological setting, they represent a vertical facies change which is not anticipated from the regional geology. A sand layer of about 8' thick underlies the clay layer. Sands are yellow in color, poorly-sorted-ranging in grain size from fine grained to medium grained. Vertically the sand bed ranges in composition from clayey sands, to sands and silty sands. The sands are underlined by silty sands and silts. Silts and silty sands are moist, dense and fine grained. Subsurface geology observed in all six boreholes drilled at the site is matching with the regional geology. Hydrogeologically, the subject site is located in the Gaspur water-bearing zone. Regionally, the Gaspur water-bearing zone is located in the extensive lowland of the coastal plain in Los Angeles and Orange Counties which is called the "Downey Plain". Essentially, the Downey Plain comprises the alluvial fans of the Los Angeles, San Gabriel, and Santa Ana Rivers. The subject site is located near the San Gabriel River. A regional geological cross section (refer to Figure 9) near the subject site (near Firestone Blvd.) from plate Number 7 of the geological survey water-supply paper 1109 entitled "Ground-Water Geology of the Coastal Zone, Long Beach - Santa Ana Area,

California" reveals the presence of clays near the surface, underlined by interbedded silts, silty clays, sandy silts and sands. Boreholes drilled at the site up to a depth of 40' encountered no groundwater. The nearest recorded water well (#1587) to the subject site (approximately 0.2 miles east from the subject site) indicates groundwater depth to be 89' from the surface (measured in April, 1989). The top of the sandy/sand and gravel of Gaspur water-bearing zone at the subject site is around 60' deep from the surface.

13. Site History (Past and Present Business Operation):

Land use of the subject site until 1952 was for agricultural purposes. In 1952 the site was initially developed for the current industrial use by the construction of buildings. Fuel Tank #4 was installed (along with the building construction) in 1952 to store diesel fuel. Over the course of time, with the expansion of the facility's business, the other three tanks (Tank #1, Tank #2, and Tank #3) were installed. Approximate periods of installation of the three tanks are: Tank #1, mid to late 60's, Tank #2 in 1974, and Tank #3, early 70's. Currently, the site is used for manufacturing rubber goods used in plumbing.

14. Detailed Information on Abandonment-In-Place of Tank:

Due to the likelihood of building foundation disturbances by the excavation operations, and difficult site conditions to approach the underground storage tank (UST) #4, it was decided to abandon the tank in place. To this affect, permits (refer to Appendix F) were obtained from the Department of Public Works (DPW), Waste Management Division, Los Angeles County (Closure Permit No. 6000B, File No. I-12987-1F) and from Fire Department, City of Downey (dated 8/10/89). To investigate the possibility of contamination from the UST, as per the specification of the DPW permit, two boreholes were drilled on either side of the tank, up to a depth of 40' (borehole numbers 5 and 6). In the laboratory, chemical analyses using EPA Method 418.1 (as per the supplemental permit, refer to Appendix F) were performed. Except for samples collected at 20' depth, no other sample (at 15', 30' and 40') in both the wells showed any detectable TPH. Analysis of the samples collected at 20' depth in borings B-5 and B-6 detected low TPH contents of 27 and 158 mg/kg, respectively. The presence of less permeable clays below the contaminated zone, groundwater level at approximately 90' depth, and the presence of allowable concentrations of TPH contamination (per LUFT Field Manual and past/current DPW/WMD guidelines), confirmed the decision to abandon the tank in place. Leaching potential analysis for diesel using Table 2-1 of Leaking Underground Fuel Tank (LUFT) Field Manual revealed the following ratings for the subject site:

| | | | |
|---|---|---|---|
| * | Minimum depth to groundwater | 89' | 9 pts. |
| * | Fractures in subsurface | None | 10 pts. |
| * | Average annual precipitation | 10-25" | 9 pts. |
| * | Man made conduits | None | 10 pts. |
| * | Unique site features | At least one | 9 pts. |
| | Total Points | | 47 pts. |

Thereofore the maximum allowable TPH (Diesel) levels at the subject is 1000 ppm.

The tank was cleansed using standard triple rinse methods on 8/24/89 (by Roadwest Oil and Vacuum Company, Inc., Whittier, CA 90603) and abandoned in place by filling it with a slurry mixture as approved by the Fire Department. 400 gallons of rinse water derived from cleaning was disposed under manifest (refer to Appendix H, Manifest Document #89809229, dated 8/24/89) at DeMenno/Kerdoon, 2000 N. Alameda Street, Compton, CA 90222.

15. Site Health and Safety Plan:

For each job conducted by TPE, a standard site health and safety plan is followed. TPE has a seven sectioned corporate safety manual. TPE field personnel have undergone hazardous waste handling health and safety training. An example of the short version of health and safety plan followed at the subject site is attached in Appendix J.

In the Tank Protect Engineering progress report (dated 12/5/89) page 2, paragraph 2, it was noted that originally (in the DPW permit #5999) liquid contents of Tank #1 and Tank #3 were mistakenly identified as diesel and oil, respectively. Based on Tank Protect Engineering's on-site investigation of historical events, it was indicated that the correct contents of Tank #1 was naphthenic type oil and that of Tank #3 was diesel.

Nearly all of the information provided in the above description was derived either from the Final Closure Report submitted by TPE Environmental on 2/26/90, or from the work progress report submitted to the Department of Public Works, County of Los Angeles on 12/5/89. Therefore, it is TPE Environmental's opinion that most of the information provided here is repetitive from previous reports incurring extra efforts and expenditure on behalf of the TPE Environmental Staff. It is requested that Los Angeles County DPW, WMD issue a closure letter for this project as soon as possible to Kirkhill, Inc. with a copy to TPE Environmental.

Thank you once again for the opportunity to be of service. If you should have any questions regarding any of the information provided above, please contact Mike Leonard.

Respectfully submitted,

Dear Mr. Ballange:

**CLOSURE SITE ASSESSMENT**
**SOIL REMEDIATION REPORT**
**12021 WOODRUFF AVENUE, DOWNEY**

This office has reviewed the report submitted on February 28, 1990 which contained information on the Site Assessment and the remediation of soil contaminated with cutting oil and diesel subsequent to the removal of three underground storage tanks. The following information must be submitted to our office to aid the review process:

1. Provide a cross-section of the plume under each tank.
2. Indicate the total volume of the soil removed. Support your answer with calculations for the each tank pit.
3. Indicate the post-excavation samples from each pit and/or stockpile.
4. Submit the field raw-data boring logs and the refined boring logs showing depths and contamination levels. Boring logs must include the description of the earth material (USCS), drilling date, company methods and signed by either a registered Civil Engineer with sufficient experience in soil or engineering geologist/geologist.
5. Identify all sample shown on the laboratory report.
6. Explain why borings were terminated at depth which showed contamination.
7. Describe the handling protocol.

8. Explain why the presence of napthtalene was not indicated on the closure permit application.

9. Describe the treatment process (including progress reports) used for the remediation and the laboratory results of the confirmation samples.

10. Provide evidence of proper soil compaction.

11. Submit a legible location map and a plot plan showing two adjacent cross streets and a north arrow.

12. Describe site hydrogeology and its features.

13. Provide information on site history (past and present business operation).

14. Submit detailed information on abandonment-of-tank-in-place.

15. Submit the site Health and Safety Plan used during the excavation and the treatment process.

Please submit the request by June 22, 1990.

Pleas fell free to contact Ofori Amoah at (818) 458-3573 for any further assistance.

Very truly yours,

# APPENDIX A

# CALCULATION OF EXCAVATED SOIL VOLUMES

TANK # 1 : Naphthenic Type Oil

Pit Volume of Tank #1 Pit (V)

V = Length x Width x Height

ABCD Volume ($V_1$) = 30' x 10' x 23' = 6,900 $ft^3$

CED Section Volume ($V_2$) = $\frac{1}{2}$ 30 x 10 x 2 = 300 $ft^3$

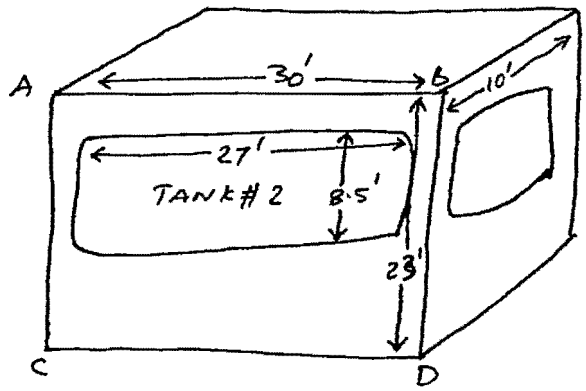
Total Tank# 1 Pit Volume (V) = $V_1 + V_2$ = 7,200 $ft^3$

= $7200/27$ = 266.7 $yd^3$

Tank #1 Volume ($T_1$)

Tank outer Diameter = 8.5' Length (h) = 27'

Tank Volume (T) $\approx \pi r^2 h$



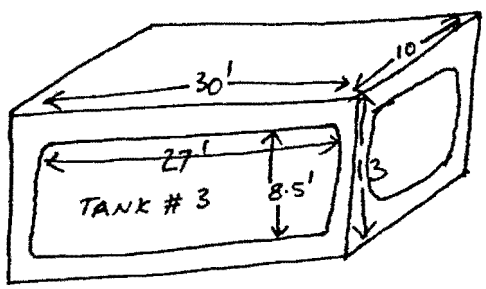
$T = \pi \times (4.25)^2 \times 27 = 1532.7$ $ft^3$

= $1532.7/27$ = 56.8 $yd^3$

Volume of Soil Excavated (S) = V − T

S = 266.7 − 56.8 = 209.9 $yd^3$

Tank # 2 : Diesel Tank



Pit volume = $30' \times 23' \times 10'$ = 6,900 $ft^3$
= 255.6 $yd^3$

Tank volume = $\pi (4.25)^2 27$ = 1532.7 $ft^3$
= 56.8 $yd^3$

Excavated Soil vol. = 255.6 − 56.8 = 198.8 $yd^3$

Tank # 3 : Diesel Tank

Pit Volume = $30' \times 13' \times 10'$ = 3900 $ft^3$
= 144.5 $yd^3$

Tank Volume = $\pi (4.25)^2 27$ = 1532.7 $ft^3$ ?
= 56.8 $yd^3$

Excavated Soil vol. = 144.5 − 56.8 = 87.7 $yd^3$

Total Volume of Three Tank Pits

$= 7200 + 6900 + 3900 = 18,000\ ft^3$

$= 666.7\ yd^3$

Total Volume of Three Tanks Removed

$= 1532.7 \times 3 = 4598.1\ ft^3$

$= 170.3\ yd^3$

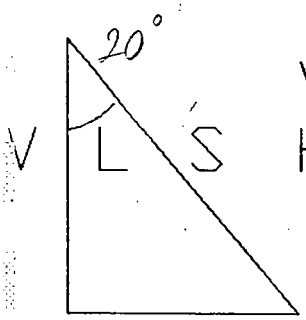
Total Volume of Soil Excavated

$= 666.7 - 170.3 = 496.4\ yd^3$

Volume of Soil Disposed at a State Certified Disposal Facility $= 18\ yd^3 + 18\ yd^3 + 18\ yd^3 = 54\ yd^3$

Volume of Soil treated using TPE's Special Silica catalyst and hydrogen peroxide method

$\approx 50\ yd^3$



Uncontaminated Soil Excavated from Three Tank pits

$= 496.4 - (54 + 50) = 392.4\ yd^3$

Volume of Clean Soil Imported for Backfilling Three Excavated Tank pits.

$= 666.7 - (50 + 392.4) = \underline{224.3\ yd^3}$

# APPENDIX C

# APPENDIX C

## DESCRIPTION OF DRILLING, AND SOIL SAMPLING, HANDLING AND PREPARATION PROCEDURES

Auger flights used during the drilling were hollow-stem type with an inside diameter of 3.75 inches and an outside diameter of 8.0 inches. Individual auger flights were 5 feet in length. A retractable plug prevented soil from entering into the auger flights during the boring process. The plug, which is inserted and retrieved by a wireline, is at the end of a 140-pound drive hammer. When target depth is reached, a Modified California Sampler is placed at the bottom of the hammer and lowered by wireline, to the bottom of the boring. The sampler is then driven into the soil, and the soil into the sampler barrel. Details of the components of the Modified California Sampler are described below. Following the driving operation, the hammer and sampler are retrieved from the boring and separated; soil samples are removed from the sampler and prepared for shipment to an analytical laboratory.

The Modified California Sampler consists of an outer sampler barrel and an inner, thin-walled set of brass tubes. As soil is forced into the sample barrel by the driving action described above, a soil sample is collected in the inner tubes. For this application, three 6-inch long by 2.0-inch diameter brass tubes were used. After retrieval from the boring and subsequent detachment from the hammer, the sampler was dismantled and the inner tubes containing the soil sample were removed. The middle tube sample was sealed by covering the ends with aluminum foil, placing plastic caps on each tube end, and securing the caps with duct tape. The sample was then labeled and placed in an ice chest for cold storage. In instances where split-barrel sampling was difficult, samples were acquired by grabbing drill cuttings and placing them overflowing into clean glass jars.

Each soil sample collected was analyzed in the field for possible hydrocarbon contamination by use of a Gas Techtor organic vapor meter. The sample was "sniffed" and the meter readings (parts per million) recorded on the boring log. The model 1314 Gas Techtor is a battery-powered instrument that can detect and indicate concentrations of organic gas or vapor in air, in parts per million.

Samples under test are drawn continuously by means of a built-in pump and analyzed by the relative excitation level produced from a heated platinum catalyst coil. This instrument will respond to a variety of different gases including various petroleum products. Because the Gas Techtor will show positive readings for gases which occur naturally in soil materials (for example: butane and hydrogen sulfate), the readings produced by the instrument were used along with visual inspection of soil materials in evaluating whether or not soil samples were believed contaminated. After a review of all field data, selected soil samples were forwarded to the analytical laboratory for testing.

To avoid cross-contamination between samples and boreholes, the Modified California Sampler and the brass tube inserts were cleaned before each use. The sampling equipment was washed with an aqueous solution of alconox, rinsed once with tap water, twice with distilled water and allowed to air dry. Rotation of clean auger flights while boring was also performed.

| CHEMICAL NAME | PETROLEUM DISTILLATE |
| CHEMICAL FAMILY | PETROLEUM HYDROCARBON |
| DOT PROPER SHIPPING NAME | PETROLEUM DISTILLATE |

## WARNING STATEMENTS

CAUTION

HEALTH WARNING: Over exposure to mist from this product may cause pulmonary irritation, dizziness and nausea. The handling procedures and safety precautions in this MSDS should be followed to minimize employee exposure.

## SECTION I - INGREDIENTS

*THRESHOLD LIMIT VALUE SET BY: A. OSHA B. ACGIH C. SEE SECTION III D. OTHER NE. NOT ESTABLISHED

NOTE: UNITS ARE IN ppm UNLESS SPECIFIED OTHERWISE

| | % | TLV* |
|---|---|---|
| This product is a complex mixture of naphthenic, paraffinic and aromatic petroleum hydrocarbons. The composition will vary depending on the crude source. | 100 | Oil Mist: 5 mg/$M^3$ A,B |

## SECTION VII - STORAGE AND SPECIAL PRECAUTIONS

| | |
|---|---|
| HANDLING AND STORING PRECAUTIONS | Keep away from heat and open flames. Keep containers tightly closed. Store away from strong oxidizing agents in a cool, dry place with adequate ventilation. |
| OTHER PRECAUTIONS | Remove product contaminated clothing and launder before re-use. Avoid generating oil mists while handling.<br><br>NOTICE:<br>There is no evidence that similar oils showing positive results on laboratory animals have any adverse effects on humans if simple precautions are taken in using protective equipment and good personal hygiene. |

## SECTION VIII - FIRE AND EXPLOSION HAZARD DATA

| | | | |
|---|---|---|---|
| DOT FLAMMABILITY CLASSIFICATION | N/A | FLASH POINT: RANGE: LEL-UEL | 320°F (232°C) C.O.C.<br>2.0% - 6.0% |
| EXTINGUISHING MEDIA | Use water fog, foam, dry chemical or $CO_2$. Do not use direct stream of water. Product will float and can be reignited on surface of water. | | |
| UNUSUAL FIRE AND EXPLOSION HAZARDS | Containers exposed to intense heat from fires should be cooled with water to prevent vapor pressure buildup which could result in container rupture. | | |
| FIRE FIGHTING PROCEDURES | Clean fire area of unprotected personnel. Do not enter confined fire space without full bunker gear (helmet with face shield, bunker coats, gloves and rubber boots) including a positive pressure NIOSH approved self-contained breathing apparatus. Cool exposed containers and structures with water. | | |

## SECTION IX - PHYSICAL DATA

| APPROXIMATE BOILING RANGE | VAPOR DENSITY | EVAPORATION RATE | PERCENT VOLATILE | SOLUBILITY IN WATER |
|---|---|---|---|---|
| D1160 DIST. IBP 535°F (329°C) | Heavier than air | Nil | @ 70°F Ø | No |

| SPECIFIC GRAVITY | APPROXIMATE BULK DENSITY | VAPOR PRESSURE |
|---|---|---|
| 0.9328 | 7.65 lbs/gal @ 70°F | Nil |

| | |
|---|---|
| APPEARANCE AND ODOR | This product is a clear, amber liquid with a characteristic machine oil odor. |

## SECTION X - DOCUMENTARY INFORMATION

| PRODUCT CODE NO. | ISSUE DATE | REPLACES MSDS NO. | PREVIOUS PRODUCT CODE NO. | PREVIOUSLY ISSUE |
|---|---|---|---|---|
| 705 | 8/12/85 | | 606 | |

DISCLAIMER OF EXPRESS AND IMPLIED WARRANTIES

The information in this document is believed to be correct as of the date issued. HOWEVER, NO WARRANTY MERCHANTABILITY, FITNESS FOR ANY USE, OR ANY OTHER WARRANTY IS EXPRESSED OR IS TO BE IMPLIED REGARDING THE ACCURACY OR COMPLETENESS OF THIS INFORMATION, THE RESULTS TO BE OBTAINED FROM USE OF THIS INFORMATION OR THE PRODUCT, THE SAFETY OF THIS PRODUCT, OR THE HAZARDS RELATED TO ITS USE. This information and the product are furnished on the condition that the person receiving them shall make his own determination as to the suitability of the product for his particular purpose and on the condition that he assume the risk of his use thereof.

## SECTION IV - SPECIAL PROTECTION INFORMATION

| | |
|---|---|
| RESPIRATORY PROTECTION (SPECIFY TYPE) | If airborne concentrations exceed the TLV, use a NIOSH approved organic filter/cartridge type respirator. For high concentrations and/or oxygen deficiency, use air supplied respirator. |
| VENTILATION | General mechanical ventilation may be adequate for maintaining airborne concentrations below established exposure limits. If general ventilation is inadequate, supplemental local exhaust may be required. Other special precautions, such as respiratory protection may be required if airborne concentrations cannot be reduced to below the recommended exposure limit by ventilation. |
| PROTECTIVE GLOVES | The use of neoprene gloves which are impermeable to this product is advised to prevent skin contact and possible irritation. |
| EYE PROTECTION | Chemical goggles are recommended to safeguard against eye contact, irritation or injury. |
| OTHER PROTECTIVE EQUIPMENT | It is recommended that an emergency shower and eyewash be available in the work area. Barrier creams that are specific for oil based materials are recommended when gloves are impractical. |

## SECTION V - REACTIVITY DATA

| | |
|---|---|
| STABILITY | Stable. |
| CONDITIONS TO AVOID | Avoid elevated temperatures and all sources of ignition. |
| INCOMPATIBILITY (MATERIALS TO AVOID) | Avoid contact with strong oxidizing agents such as oxygen and fluorine. |
| HAZARDOUS DECOMPOSITION PRODUCTS | Thermal decomposition in the presence of air may yield major amounts of oxides of carbon. |
| HAZARDOUS POLYMERIZATION | Will not occur. |
| CONDITIONS TO AVOID | |

## SECTION VI - SPILL OR LEAK PROCEDURES

HIGHWAY OR RAILWAY SPILLS:
CHEMTREC (800) 424-9300

| | |
|---|---|
| PRECAUTIONS IN CASE OF RELEASE OR SPILL | Use recommended protective equipment listed in Section IV. Eliminate potential sources of ignition. Shut off source of leak/spill when safe to do so. Dike and contain large spills. Keep out of surface waters and any water courses or sewers entering or leading to surface waters. |
| WASTE DISPOSAL METHOD | Pick up large spills with vacuum trucks or pumps. Absorb residue and small leaks/spills with sand or inert absorbent, and collect in suitable containers. Dispose of per RCRA, Title 42 of the United States Code, beginning at Section 6901 and applicable state and local requirements. |

## SECTION II - EMERGENCY AND FIRST AID PROCEDURES

LOS ANGELES POISON INFORMATION CENTER: (213) 664-2121

| | |
|---|---|
| EYE CONTACT | If irritation from exposure to fumes or vapors develops, move away from exposure and into fresh air. Flush the affected eye(s) with clean running water for at least 15 minutes. If redness or irritation develops, seek medical attention. |
| SKIN CONTACT | DO NOT USE GASOLINES, THINNERS OR SOLVENTS TO REMOVE THIS PRODUCT FROM THE SKIN. Wipe any excess material from the skin with a clean dry cloth. Remove contaminated clothing. Cleanse the affected skin area(s) thoroughly with soap and water and, if necessary, a waterless cleanser. If irritation or redness develops and persists, seek medical attention. |
| INHALATION | If respiratory tract irritation or symptoms of intoxication develop, victim should be moved from exposure into fresh air. If the victim is not breathing or if breathing difficulties develop, artificial respiration or oxygen should be administered by qualified personnel. Seek medical attention. |
| INGESTION | DO NOT INDUCE VOMITING. If victim is conscious and alert, give two (2) to three (3) cups of milk or water to drink. If gastrointestinal irritation develops and persists, seek medical attention. |

## SECTION III - PHYSIOLOGICAL EFFECTS AND HEALTH INFORMATION

| | |
|---|---|
| EYE EFFECTS | This product may cause eye irritation. Direct cotnact with thi product, or repeated or prolonged exposure to its vapors, fumes or mists may cause burning, tearing, redness and conjunctivitis. |
| SKIN EFFECTS | Repeated or prolonged contact with this product or its vapors, fumes or mists may cause redness, irritation and dermatitis. |
| ACUTE EFFECTS | Exposure to mists, or repeated or prolonged exposure to vapors when this product is heated, may cause transient irritation to the nose, throat and upper respiratory tract. Exposure to higher concentrations for prolonged periods may result in more serious respiratory tract irritation and inflammation, dizziness, lightheadedness and headache.<br><br>Ingestion of this product may cause irritation to the stomach and intestinal tract. |
| CHRONIC EFFECTS | This product has not undergone long term laboratory tests to determine chronic effects. Some similar mineral oils have been shown to induce cancer in laboratory animals. However, there is no evidence that oils showing positive results have any adverse effects on humans if simple precautions are taken in using protective equipment and good personal hygiene. |

# APPENDIX I

## TPE SOIL REMEDIATION PROCESS USING SPECIAL SILICATE CATALYST AND HYDROGEN PEROXIDE

At the subject site, remediation was conducted by utilizing TPE's soil remediation process using special silica catalyst and hydrogen peroxide. Silica catalyst, a synthetic polysilicate, provided a large surface area for adsorption of volatile hydrocarbons, reducing their emission into the atmosphere. Because of this adsorptive capability, hydrogen peroxide was adsorbed onto the silica catalyst resulting in a slow release over time, enabling the treatment process to continue for several hours after application. Another unique characteristic of silica catalyst was its catalytic surface which made it several times more reactive and brought about rapid oxidation of all hydrocarbons and other organics. With the adsorptive and catalytic properties of silica catalyst, and the oxidative property of hydrogen peroxide, oxidation of fuel hydrocarbons and other organics was achieved through the TPE method.

Hydrogen peroxide had several additional advantages over other strong oxidants. Hydrogen peroxide spontaneously decomposes to oxygen and water over time, so excessive peroxide during the treatment would not leave a hazardous residue. Nor was hydrogen peroxide toxic. This compares favorably with such other common oxidants as chlorine, which can be acutely toxic, and which forms hydrochloric acid and chlorinated hydrocarbons as by-products.

When the soil was sprayed with hydrogen peroxide, an aerosol of hydrogen peroxide stayed on top of the soil surface. This aerosol "blanket" prevented the escape of volatiles during mixing, thus no odors were produced. It was also in this aerosol space that photochemical oxidation of the hydrocarbons had taken place. The retained peroxide acted as a source of oxygen in the soil. Oxygen promoted aerobic bacterial growth, which further decomposed any remaining organic residue. The presence of oxygen also inhibited the growth of anaerobic bacteria (those that produced foul-smelling by-products) and partly accounted for the lack of odors where TPE process was utilized.

Personal tools were decontaminated at the end of each working day. Major treatment equipment was left in the treatment area until the project was completed. It was then decontaminated prior to leaving the job site.

Five soil samples were collected at various depths in the treatment pile, one sample per 10 cubic yards, and analyzed for total hydrocarbon content utilizing E.P.A. Method 418.1.

After final verification soil sampling process was completed, the excavation site was backfilled and compacted using the clean decontaminated soil and imported gravel. Equipment was decontaminated and removed from the site, as were the treatment supplies and containers.

Dear Mr. Amoah:

As per your specifications, I am enclosing nine re-typed figures for your perusal.

If you need any additional information, please call me at 1-800-464-TANK.

Thank you for your time and patient review.

Respectfully submitted,

**TPE ENVIRONMENTAL, INC.**

Ravi P. Pendurthi

TPE ENVIRONMENTAL SITE SAFETY PLAN

Site Kirkhill, Inc. Project Number E90-1514A

Original Site Safety Plan: Yes (XX) No ( ) Revision Number _____

Plan Prepared by Cyrus D. Namini Date 11-22-89

Plan Approved by Cyrus D. Namini Date 11-22-89

Please respond to each item as completely as possible. Where an item is not applicable, please mark "N/A".

## 1.0 FACILITY BACKGROUND

### 1.1 Site Description

Type: Spill ( ) Fire ( ) HW Site ( ) Industrial Facility ( )

Other Manufacturer

Physical Description Plant and Warehouse

Location _____

Size 85' x 120' Lot

History Manufacturer for 30 years

Status: Active(XX) Inactive ( )

Surrounding Population Commercial/Industrial

Surrounding Buildings/Homes _____

Have nearby people been evacuated: Yes ( ) No (XX) Not applicable ( )

Evacuation Distance _____

Evaluation Initiated By _____

Topography Flat

Receiving Waters N/A

TPEE SITE SAFETY PLAN

Site Plan/Sketch completed (next page): Yes (X) No ( )

The site sketch should include the following:

- Nearby roads and structures
- On-site roads and structures
- Sample locations if applicable
- Location of waste, if known or applicable
- Location of work, support and decontamination zones
- Location of:

  Emergency showers
  Emergency eye wash
  First aid kit
  Telephones
  Stretchers
  Fire extinguishers
  Binoculars
  Megaphone
  SCBA's and tanks
- Location of any other relevant Health & Safety or project-related equipment
- Escape routes from site

## SITE SKETCH

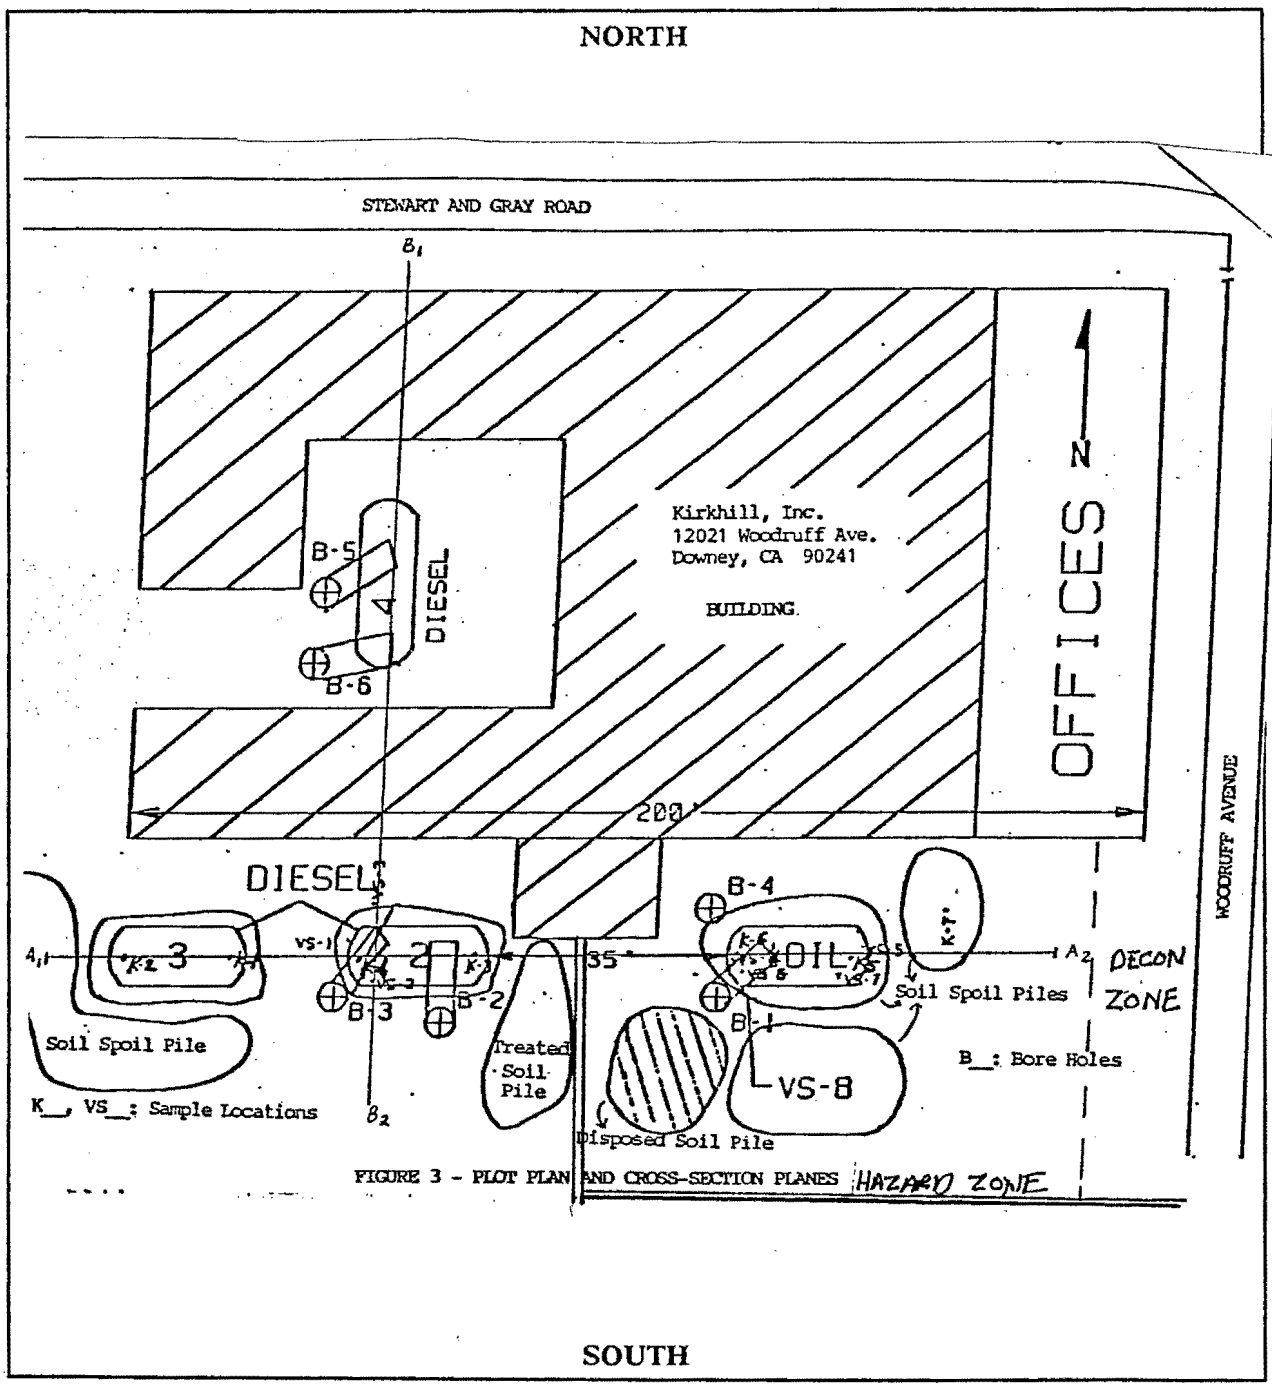

FIGURE 3 - PLOT PLAN AND CROSS-SECTION PLANES

## 2.0 KEY PERSONNEL AND RESPONSIBILITIES

(Include name, telephone number and health and safety responsibilities; i.e., Project Manager - Joe Smith - responsible for supervision of all site activities.)

Site Manager Cyrus Namini, 714/921-0888

Field Team Members

Federal Agency Reps

State Agency Reps

Local Agency Reps LACDPW - SCAQMD

Contractor(s)

## 3.0 JOB HAZARD ANALYSIS

### 3.1 Overall Hazard Evaluation

Hazard Level: High ( ) Moderate ( ) Low (XX) Unknown ( )

Hazard Type: Liquid (XX) Solid (XX) Sludge ( ) Vapor/Gas (XX)

Known or suspected hazardous materials present onsite Hydrocarbon Petroleum Products

#1 Diesel

#2 New Oil

Characteristics of hazardous materials included above (complete for each chemical present):

| | | | |
|---|---|---|---|
| **Material #1** | Corrosive ( ) | Ignitable ( ) | Toxic (XX) |
| | Reactive ( ) | Volatile (XX) | Radioactive ( ) |
| | Biological Agent ( ) | | |
| Exposure Routes: | Inhalation ( ) | Ingestion (XX) | Contact ( ) |
| **Material #2** | Corrosive ( ) | Ignitable ( ) | Toxic ( ) |
| | Reactive ( ) | Volatile (XX) | Radioactive ( ) |
| | Biological Agent ( ) | | |
| Exposure Routes: | Inhalation ( ) | Ingestion (XX) | Contact ( ) |
| **Material #3** | Corrosive ( ) | Ignitable ( ) | Toxic ( ) |
| | Reactive ( ) | Volatile ( ) | Radioactive ( ) |
| | Biological Agent ( ) | | |
| Exposure Routes: | Inhalation ( ) | Ingestion ( ) | Contact ( ) |
| **Material #4** | Corrosive ( ) | Ignitable ( ) | Toxic ( ) |
| | Reactive ( ) | Volatile ( ) | Radioactive ( ) |
| | Biological Agent ( ) | | |
| Exposure Routes: | Inhalation ( ) | Ingestion ( ) | Contact ( ) |

| | | | |
|---|---|---|---|
| Material #5 | Corrosive ( ) | Ignitable ( ) | Toxic ( ) |
| | Reactive ( ) | Volatile ( ) | Radioactive ( ) |
| | Biological Agent ( ) | | |
| Exposure Routes: | Inhalation ( ) | Ingestion ( ) | Contact ( ) |

3.2 Job-Specific Hazards

For each labor category (driller, project manager, etc.) involved on the project, delineate the possible hazards referencing the information contained in Section 1.3 (i.e., task-driller, Hazards-trauma from drill rig accidents, chemical exposure to PCB's, etc.) For each hazard, indicate steps to the taken to minimize the hazard.

Backhoe operator & Laborer

Slip, Trip,Fall, Noise, Working around backhoe

The following additional hazards are expected onsite (i.e., snake infested area, extreme heat, etc.):

Measures to minimize the effects of the additional hazards are:

## 4.0 RISK ASSESSMENT SUMMARY

Using any available analytical data for the site, along with published data on the suspected contaminants and consideration of all possible exposure routes, provide a summary of the potential risks to site workers and the nearby community during the project. This information may not be available during early stages of the project. However, this section must be updated as data becomes available.

Due to the size of the property and the amount of excavation possible the risk to the community is considered very low.

## 5.0 AIR MONITORING PLAN

5.1 Action levels for implementation of air monitoring. (Action levels should be based on published data available on contaminants of concern. Action levels should be set by persons experienced in industrial hygiene).

| Level (i.e., >5ppm) | Action Taken (i.e., commence perimeter monitoring) |
|---|---|
| Under 50 ppm | Level D |
| | |
| | |
| | |

5.2 Air Monitoring Equipment

Outline the specific equipment to be used, calibration method, frequency of monitoring, locations to be monitored, and analysis of samples (if applicable).

Gastecher

If air monitoring is not to be implemented for this site, explain why:

## 6.0 PERSONAL PROTECTIVE EQUIPMENT (PPE)

6.1 Rationale for selection of PPE. (Rationale should be based on available analytical data for, and familiarity with, the capabilities of the suggested PPE. The selection of PPE should be made by persons experienced in industrial hygiene.)

Hardhat, Gloves, Boots

6.2 Equipment

Be specific (i.e., hard hat, impact resistant goggles, fully encapsulating tyvek suit with hood, inner latex gloves, outer nitrile gloves, neoprene boots with steel toe, etc.). PPE should be specified for each job classification onsite.

Level of Protection: A ( ) B ( ) C (X) D (X)

Respiratory Protection: SCBA ( ) Airline ( ) Air-Purifying (X)
Dust Mask ( )

If Air-Purifying: Cannister ( ) Cartridge (X)
Half face(X) Full face ( )

Canister/Cartridge Type Organic

Protective Clothing:

Suit Type _____ Boot Type Rubber

Glove Type(s) Rubber Head Protection Type Plastic

Eye Protection Type Goggles Other Protective Clothing _____

Hearing Protection _____

Action levels for upgrade and downgrade of respiratory protection/PPE.

| Level (i.e., >5ppm) | Action Taken (i.e., commence perimeter monitoring) |
|---|---|
| Over 50 ppm | Go to Level C |
| | |
| | |
| | |

Rationale for upgrade/downgrade matrix (rationale should be based on published data for contaminants of concern and should be prepared by persons familiar with PPE).

The 50 ppm is SCAQMD Requirement

## 7.0 WORK ZONES AND SECURITY MEASURES

The site sketch included in Section 1.1 should indicate the work, support and decontamination zones.

The following general work zone and security guidelines should be implemented:

- Excavations shall be closed when drilling and sampling activities are not actually taking place.
- No excavation shall be left unattended. Visitors will not enter the work zone unless they have attended a project safety briefing.
- Visitors who do not have business related to the project will be excluded from the site.

List the requirements for moving between different zones and general site security measures, equipment and responsible personnel (i.e., persons will not leave the work zone without first passing through the decontamination zone).

All PPE and equipment is to be decontaminated before leaving the job site.

## 8.0 DECONTAMINATION PROCEDURES

List the procedures and specific steps to be taken to decontaminate equipment and PPE. A flow chart diagram may be utilized to show a step-wise decontamination line.

Wash or disgard PPE Pressure wash all equipment before leaving site.

Decontamination Line Sketch

The small site is the contaminated zone. Only the area in front of the gate is decon zone.

List the equipment which will be used in the decontamination procedure (i.e., water, steam cleaner, 5-gallon plastic buckets, etc.)

Water

Pressure washer

Buckets

Alconox

Brushes

Trash Bags

## 9.0 GENERAL SAFE WORK PRACTICES

Attach any available Standard Operating Procedures for activities that can be standardized due to their repetitive nature (i.e, instrument calibration, don and doff of PPE, etc.).

Schaefer Dixon Associates, Inc. is responsible for the safety of all Schaefer Dixon Associates employees onsite. Each contractor shall provide all the equipment necessary to meet safe operating practices and procedures for their personnel onsite (this includes respirators, cartridges, steel toed boots, eye protection, tyvek suits, hearing protectors, and neoprene latex, and viton gloves) and be responsible for the safety of their workers. All general safety guidelines and procedures will conform to:

- 29 CFR 1910.120
- Standard Operating Safety Guides (U.S.E.P.A., November 1984).

Schaefer Dixon Associates will update versions of these safety guidelines and procedures if changes in the Operations Plan occur.

Schaefer Dixon Associates will utilize a "three warning" system to enforce compliance with Health and Safety procedures as follows:

- First infraction - violator receives a verbal warning.
- Second infraction of same rule - violators receives a written warning.
- Third infraction of same rule - violator will be requested to leave the site.

The "three warning" system applies to the following safe work practices which will be implemented at the site for worker safety:

- Eating, drinking, chewing gum or tobacco, and smoking will be allowed only in designated areas.
- Wash facilities will be utilized by workers in the work areas before eating, drinking, or use of the toilet facilities.
- Containers will be labeled identifying them as waste, debris, or contaminated clothing.
- All excavation/drilling work will comply with Title 8, Article G of the California Administrative Code.
- Personnel at the site will use the "buddy system" when wearing any respiratory protective equipment. No one will be allowed to engage in drilling or sampling operations alone.
- No facial hair which interferes with a satisfactory fit of the mask-to-face seal will be allowed. (No beards, large mustaches, or long sideburns.)
- All respiratory protection selection, use, and maintenance will meet the requirements of established procedures, recognized consensus standards (AINA, ANSI, MSHA, and NIOSH), and will comply in all respects to the requirements set forth in 29 CFR 1910.134.
- All site personnel will be required to wear hard hats, protective glasses and adequate hand protection when in the work zone.
- Any other action which is determined to be unsafe by the Site Safety Officer.

## 10.0 EMERGENCY RESPONSE PLANS

Provide a list of site personnel certified in first aid and CPR:

Cyrus D. Namini

Relevant Phone Numbers:

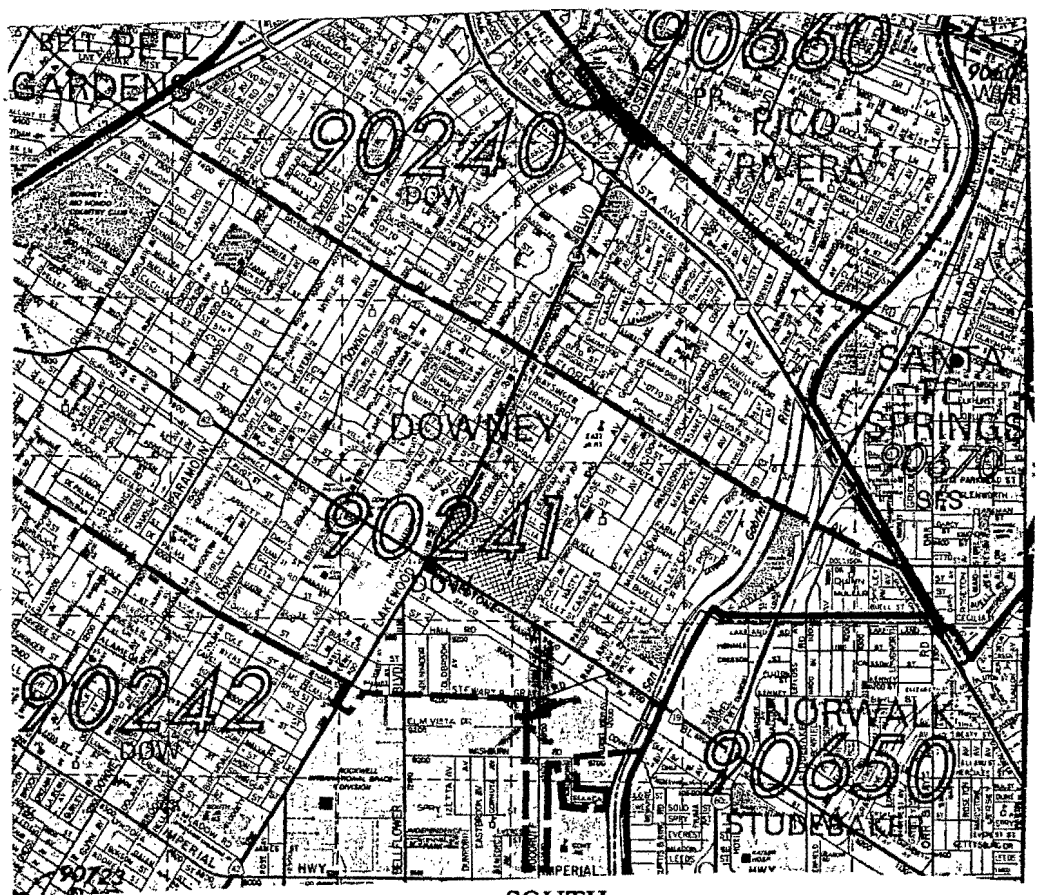
| Person | Title | Phone # |
|---|---|---|
| Cyrus D. Namini | Project Manager | |
| | Fire | 911 or |
| | Police | 911 or |
| | Ambulance | 911 or |
| | Poison Control Center | |
| | Site Phone | |
| | Nearest Off-site Phone | |
| | Medical Advisor | |
| | Client Contact | |
| U.S. EPA - ERT | | (201) 321-6660 |
| Chemtrec | | (800) 424-9300 |
| Centers for Disease Control | | (day) (404) 329-3311<br>(night) (404) 329-2888 |
| National Response Center | | (800) 424-8802 |
| Superfund/RCRA Hotline | | (800) 424-9346 |
| TSCA Hotline | | (800) 424-9065 |
| National Pesticide Information Service | | (800) 845-7633 |
| Bureau of Alcohol, Tobacco, and Firearms (Explosives) | | (800) 424-9555 |

Indicate on the site sketch included in Section 1.1 the locations of the following emergency response equipment if available:

- Emergency Shower
- Emergency Eye Wash
- First Aid Kit
- Telephone
- Stretcher
- Fire Extinguisher(s)
- Binoculars
- Megaphone
- SCBA and Tanks

Include written and visual directions to the nearest hospital:

_____



_____

_____

_____

Sketch of route to nearest hospital:

NORTH

SOUTH

Include arrows on the site sketch in Section 1.1 showing major escape routes from the site in case of an emergency.

Emergency Signals

The following communication signals will be utilized, if necessary, in case of emergency onsite.

| Gesture | | Meaning |
|---|---|---|
| Hand clutching throat | - | Out of air/can't breathe |
| Hands on top of head | - | Need assistance |
| Thumbs up | - | OK/I'm alright/I understand |
| Thumbs down | - | No/negative |
| Grip partner's wrists | - | Informing partner to leave area immediately |

**Emergency Decontamination** - In an emergency, the primary concern is to prevent the loss of life or severe injury to site personnel. If immediate medical treatment is required to save a life, decontamination should be delayed until the victim is stabilized. If decontamination can be performed without interfering with essential life-saving techniques or first aid, or if a worker has been contaminated with an extremely toxic or corrosive material that could cause severe injury or loss of life, decontamination must be performed immediately. If an emergency due to heat-related illness develops, protective clothing should be removed from the victim as soon as possible to reduce heat stress. All emergency decontamination procedures must be supervised by the Site Safety Officer and the Field Team Leader.

## 11.0 TRAINING REQUIREMENTS

prior to mobilization at the job site, all contractors shall submit evidence that site workers have completed a 40-hour course in hazardous waste site operations training as specified in 29 CFR part 1910.120, along with a letter from a physician stating that they have received a physical examination within one year and are physically capable of working on hazardous sites and wearing respiratory protection devices.

Prior involvement in any field program, all personnel will attend a safety briefing. The briefing will include the nature of the wastes at the site, donning personnel protection equipment, decontamination procedures, respirator fit testing, and emergency procedures. Included in the initial briefing will be training which will provide an understanding of:

- Use of visual emergency signals.
- The limitations and capabilities of the equipment.
- Proper use and maintenance of the selected PPE.
- The nature of the hazards and the consequences of not using the PPE.
- The human factor influencing PPE performance.

- Inspection, donning, checking, fitting, and using the PPE.
- Provide individualized respirator fit testing to ensure proper fit.
- The user's responsibility for decontamination, cleaning, maintenance, and repair (if any) of PPE.
- Emergency procedures and self-rescue in the event of PPE failure.
- The Site Safety Plan and the individual's responsibilities and duties in an emergency.

Daily, prior to commencement of operations, all personnel involved with the remedial investigations shall attend a short "tailgate" safety briefing which will cover:

- Expected conditions at the site.
- Daily activities.
- Safety deficiencies previously observed
- Any changes in the emergency procedure.

**Record of Training** - Upon completion of the project safety briefing, all personnel will sign a statement indicating that they have read and understand that they agree to abide by this project Health and Safety Plan. A record of attendance will be kept for all safety briefings. The Schaefer Dixon Associates compliance agreement is included as Attachment A.

## 12.0 MEDICAL SURVEILLANCE PROGRAM

Prior to assignment to any task requiring a level of personnel protection above Level D, personnel will submit evidence that they have received a physical examination within the previous twelve months which incorporates the following:

- An occupational and general physical history.
- Complete physical examination which incorporates the head, torso, abdomen, limbs, and musculo-skeletal system.
- Chest X-ray.
- Audiometric exam for persons working around drill rigs.
- Laboratory testing of blood and urine to include the following:

  C.B.C., albumin phosphates, total bilirubin, SGOT, SGPT, cholesterol, total protein, albumin, globulin, A/G ratio, BUN, and creatinin

- Vision test.
- Electrocardiogram.

To aid in the prevention of heat stress, the following will be provided for personnel working at the site:

- Potable Water
  - Potable water with 1% salt or commercial mix (such as Gatoraid) will be within easy access to all workers.
- Work Schedules
  - Work/rest regimens will be developed on recommendations by the Health & Safety Officer. The initial work schedule will consist of a 55-minute work regime followed by a 5-minute rest period. This work schedule will be modified as is necessary to conform with the heat stress monitoring criteria outlined below.

Personnel will be instructed to look for the following initial symptoms of heat stress:

- Heat Exhaustion:
  - pale, clammy skin
  - profuse perspiration
  - tiredness, weakness
  - headache, perhaps cramps
  - nausea, dizziness (possible vomiting)
  - possible fainting
- Heat Cramps:
  - cramping of muscles in legs and abdomen
- Heat Stroke:
  - high body temperature
  - skin is characteristically hot, red, and dry (the sweating mechanism is blocked).

Heat stress monitoring will commence when the ambient temperature reaches 70 degrees Fahrenheit if Tyvek or Saranek (Level C) garments are in use. Otherwise, heat stress monitoring will commence at an ambient temperature of 85 degrees Fahrenheit. The monitoring will consist of the following:

- Heart rate (HR) will be measured by the radial pulse during 30 seconds as early as possible in the resting period. The heart rate at the beginning of the rest period should not exceed 110 beats per minute. If the HR is in excess of the above value, the next work period will be shortened by 33% while the length of the rest period stays the same. If the pulse rate is in excess of 110 beats per minute at the beginning of the next rest period, the following work cycle will be further shortened by 33%.
- Workers will be asked to report any dizziness, faintness, cramps, or other symptoms of heat stress as discussed above.
- Workers will also be questioned about any history of asthma, or if currently taking asthma medications. Persons taking asthma medications are typically more susceptible to heat stress reactions.

First aid for heat stress will include the following:

- Heat Stress
  - Exposed person will be removed from the work zone and placed in a shaded area.
  - Person will be required to rest in a recumbent position.
  - Fluids will be administered (Gatorade).
  - Workload will be reduced to a level which will prevent heat stress symptoms from recurring.
- Heat Cramps and Heat Exhaustion
  - Same first aid procedures as described above except that exposed person will be requested to leave the site for the remainder of the day.
- Heat Stroke
  - Exposed person will be placed in a shaded area and medical attention (Paramedics) will be sought immediately.

## HEALTH AND SAFETY COMPLIANCE STATEMENT

I, _____, have received and read a copy of the project Health and Safety Plan.

I understand that I am required to have read the aforementioned document and have received proper training under the Occupational Safety and Health Act (29 CFR, Part 1910.120) prior to conducting site activities at the site.

Attention: Mr. Ofori Amoah

**Subject: Addendum to Closure Site Assessment Soil Remediation Report for Kirkhill, Inc. 12021 Woodruff Avenue Downey, CA 90241**

Dear Mr. Amoah:

In accordance with our meeting of August 17, 1990, we have prepared for submittal this addendum to the subject site report.

The modifications/items requested included:

1. The attached table "Summary of Sample Reports" which lists all soil samples (post tank excavation, boring, post excavation verification, and post treatment verification samples). We have included the sample no., date sampled, type of sample (tube or grab), level or depth, location and chemical test results. The post treatment verification samples are labelled PVS. All sample locations are shown on the attached plot plan and cross-sections drawn to scale (Figures 1, 2 and 3).

2. Depth of excavation for each pit and correlation between the boring logs and the excavated pits are shown on Figures 2 and 3 attached. The pit excavation depths were as follows:

   Tank #1 (Cutting Oil) - 23ft. on S. end sloping to 25ft. on N. end
   Tank #2 (Diesel) - 23ft.
   Tank #3 (Diesel) - 15ft.

3. Five of the borings were drilled at an angle to place sampling points below the tanks. Vertical

1963 N. Main St.
Orange, CA 92665
714/921-0888
213/592-4771
FAX: 714/921-1832

depth below ground surface was calculated for each sample interval and recorded on the boring log under the column heading "V,ft.". Total vertical depth below ground surface for each boring was:

| | |
|---|---|
| B - 1 | 28.1ft. |
| B - 2 | 28.9ft. |
| B - 3 | 24.1ft. |
| B - 4 | 40.0 ft. |
| B - 5 | 39.3ft. |
| B - 6 | 39.3ft. |

These total depths (TD) are shown on the attached cross-sections along with the excavation pit depths and a vertical depth scale along the left margin.

4. Samples were obtained at all vertical depths shown on the boring logs except where "No Recovery Twice" is noted on Log of Boring B - 1. The "No Recovery" was due to very loose clean sand which would not stay in the sample tubes when the sampler was extracted. Samples were not obtained above the first sample depth shown on each log because the investigation was intended to sample below UST bottom depth for leakage. Samples to be laboratory tested were selected based on depth with respect to tank bottom depth, visual suspicion of contamination due to discoloration or moistness, and field organic vapor analyzer readings. Out of the 26 samples obtained, 10 were submitted for laboratory testing. Boring logs with Mr. Leonards' RCE stamp are attached.

5. Compaction of the backfill material was performed following our standard procedures, i.e. the material was placed in loose lifts not exceeding two feet, moistened with proper water to facilitate compaction, and compacted using a vibratory plate attached to a Case 580C backhoe.

With this information we understand you will be able to finish your review and issue a closure letter to Kirkhill, Inc.

Respectfully submitted,

**TPE ENVIRONMENTAL, INC.**

**File No. I-12987**
**Closure Permit No. 5999B and 6000B**
**Facility: Kirkhill, Inc.**
**12021 Woodruff Ave., Downey**

Dear Mr. Small:

In response to your letter of October 11, 1990 the following information is submitted:

1. The estimated quantity of soil that was in each stockpile is shown on attached Figure 1.

2. The stockpile soil directly east of the oil tank excavation was transported under manifest to Casmalia for disposal.

3. Compaction tests and report were not required by permit and not included in Tank Protect Engineering's scope of work. Also, the client states that the backfill areas are so close to the property line that no building is allowed, therefore the area will only be used as parking lot or drives.

4. Samples from B5 and B6 as shown on Table 1 of our August 30, 1990 submittal were all drive tube samples.

5. The LUFT Manual Risk Assessment as detailed in the attached indicates a maximum allowable diesel TPH level of 1000 mg/kg can be left in place under the tank abandoned in place.

• 1963 N. Main St.
Orange, CA 92665
714/921-0888
213/592-4771
FAX: 714/921-1832

This information should satisfy your review needs. Please issue your closure letter to Kirkhill, Inc. as soon as possible.

Respectfully submitted,

**TPE ENVIRONMENTAL, INC.**

Mr. Raymond Ballanger
Kirkhill, Inc.
P.O. Box 7012
Downey, CA 90241-0030

Dear Mr. Ballanger:

**UST LOCAL OVERSIGHT PROGRAM REVIEW SHEET**
**HAZARDOUS MATERIALS UNDERGROUND STORAGE**
**REMEDIAL ACTION REPORT**
**CLOSURE PERMIT NO. 5999B AND 6000B**
**FACILITY: 12021 WOODRUFF AVENUE, DOWNEY**

This office has reviewed the subject document(s) submitted on September 17, 1990, dated August 30, 1990. The comments in this letter must be addressed and submitted to this office by November 8, 1990.

In order to better evaluate the Remedial Action Report, the information listed below must be submitted:

Note: The estimated quantity of soil that was or is in each stockpile on the site.

The end use of the stockpiled soil directly east of the oil tank excavation.

Compaction test results.

Clarification of samples from borings B5 and B6 being designated as grab samples.

A risk assessment report must be submitted for leaving the contamination in place under the diesel tank that was abandoned in place.

You are cautioned that any contaminated soils or hazardous materials generated during the approved operation must be manifested and transported to a hazardous waste disposal facility as required by California Health and Safety Code, Division 20, Chapter 6.5, unless evidence is presented indicating that the material may be disposed of at a less restricted facility. Copies of all completed manifests shall be submitted to this office as part of the final report.

Notify Dave Lobato at (818) 458-4374 a minimum of 72 hours prior to commencing any significant investigation, remediation, or assessment activities on site. The Los Angeles County Department of Public Works may disregard the work performed if the County was not properly notified.

Correspondence should be submitted to the Los Angeles County Department of Public Works, UST Local Oversight Program, Annex Building, P. O. Box 1460, Alhambra, CA 91802-1460.

If you have any questions regarding this matter, please contact Scott Small at (818) 458-3996.

Very truly yours,

T. A. TIDEMANSON
Director of Public Works

## Kirkhill, Inc.
## Leaching Potential Analysis for Diesel

| Site Feature | Site Condition | Score | Remark |
|---|---|---|---|
| 1) Minimum Depth to Groundwater from the soil sample (ft) | 40 feet | 5 | Refer to Note #1 |
| 2) Fractures in subsurface | None | 10 | Refer to Note #2 |
| 3) Average Annual precipitation (inches) | Seasonal Normal Precipitation is 13.71" | 9 | Refer to Note #3 |
| 4) Man-Made Conduits which increase vertical migration of leachate | None | 10 | Within the excavated depth no conduit was observed. In addition, USA Service Alert didn't report any artificial conduits. |
| 5) Unique site features: Recharge area, coarse soil, nearby wells, etc. | None | 10 | Presence of low precipitation, clays, and fine grained silts & sands indicate no unique site features. The reference well is approximately 0.2 miles east of the subject site. |

Maximum allowable Diesel TPH for the subject site is 1000 ppm or mg/kg per 41-48 point range.

Soil sample G-112 indicated 158 ppm TPH.

Notes:

#1 The nearest recorded water well (LACFCD Well #1587) approximately 0.2 miles east of the subject site indicates groundwater depth at 89 feet from the surface (April, 1989 measurement). However, the top of the sandy/sand and gravel of the Gaspur water-bearing zone at the subject site is approximately 60 feet deep from the surface.

Considering the highest concentration, soil sample G-112 at 20 feet, and historical high, the minimum depth to groundwater from the soil sample at the subject site is

$$60'-20' = 40 \text{ feet}$$

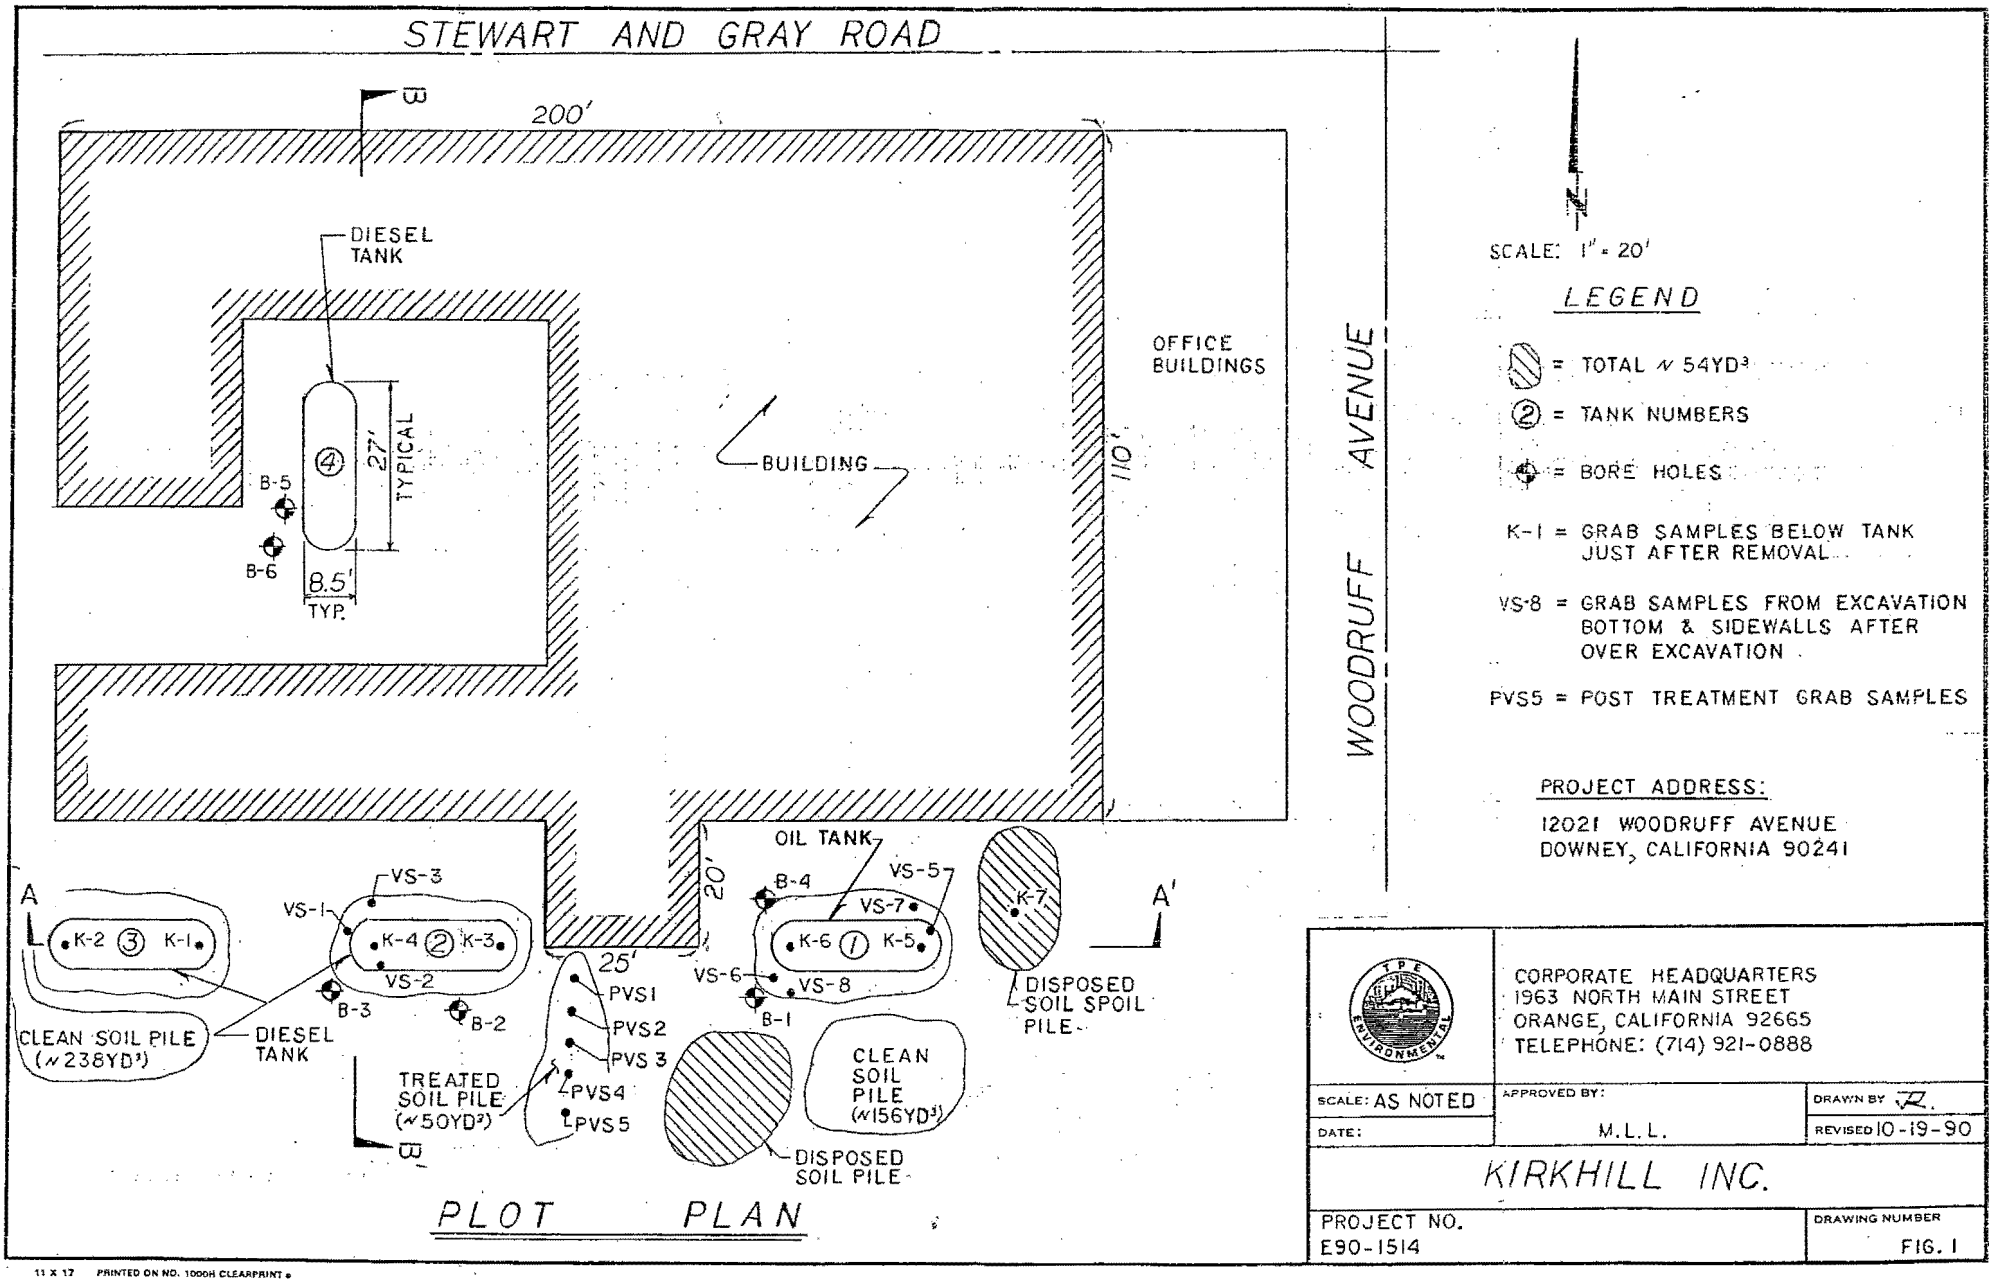
Sample G-112 was collected at 20 feet depth from surface consisting of am EPA 418.1 Diesel TPH of 158 mg/kg:

#2 The subject site contains no reported consolidated formations. The subsurface contains relatively soft clays, silts, and fine sand soils. Therefore no fractures are expected.

#3 Nearest active rainfall station to the subject site is Downey-Fire Department Station (#107D) located in the coastal plain rainfall region according to Los Angeles County Department of Public Works, "Hydrologic Report 1980-1987". Historical seasonal normal precipitation for the coastal plain region was reported to be 13.71 inches (Hydrologic Report page number A-15).

Table 2-1
Leaching Potential Analysis for Gasoline and Diesel
Using Total Petroleum Hydrocarbons(TPH)
and Benzene, Toluene, Xylene and Ethylbenzene (BTX&E)

The following table was designed to permit estimating the concentrations of TPH and BTX&E that can be left in place without threatening ground water. Three levels of TPH and BTX&E concentrations were derived (from modeling) for sites which fall into categories of low, medium or high leaching potential. To use the table, find the appropriate description for each of the features. Score each feature using the weighting system shown at the top of each column. Sum the points for each column and total them. Match the total points to the allowable BTX&E and TPH levels.



| SITE FEATURE | SCORE | SCORE 10 PTS IF CONDITION IS MET | SCORE | SCORE 9 PTS IF CONDITION IS MET | SCORE | SCORE 5 PTS IF CONDITION IS MET |
|---|---|---|---|---|---|---|
| Minimum Depth to Ground Water from the Soil Sample (feet) | | >100 | | 51-100 | | 25-50\1 |
| Fractures in subsurface (applies to foothills or mountain areas) | | None | | Unknown | | Present |
| Average Annual Precipitation (inches) | | <10 | | 10-25 | | 26-40\2 |
| Man-made conduits which increase vertical migration of leachate | | None | | Unknown | | Present |
| Unique site features: recharge area, coarse soil, nearby wells, etc | | None | | At least one | | More than one |
| COLUMN TOTALS→TOTAL PTS | | + | | + | | = |

| | | | | |
|---|---|---|---|---|
| RANGE OF TOTAL POINTS | | 49pts or more | 41 - 48 pts | 40pts or less |
| MAXIMUM ALLOWABLE B/T/X/E LEVELS (PPM) | | 1/50/50/50 | .3/.3/1/1 | NA\3 |
| MAXIMUM ALLOWABLE TPH LEVELS (PPM) | GASOLINE | 1000 | 100 | 10 |
| | DIESEL | 10000 | 1000 | 100 |

\1 If depth is greater than 5 ft. and less than 25 ft., score 0points.
If depth is 5 ft. or less, this table should not be used.

\2 If precipitation is over 40 inches, score 0 points.

\3 Levels for BTX&E are not applicable at a TPH concentration of 10ppm (gasoline) or 100ppm (diesel)

UST Pilot Program - Annex Building
P.O. Box 1460
Alhambra, California 91802-1460

Attention: Mr. Scott Small

**SUBJECT: WORK PLAN FOR ADDITIONAL SITE ASSESSMENT Kirkhill, Inc. located at 12021 Woodruff Avenue, Downey, California 90241 (FILE NO. I-12987-1F)**

Dear Mr. Small:

TPE Environmental, Inc. ("TPEE") submits this work plan to conduct additional subsurface investigation work at Kirkhill, Inc. located in Downey, California (see Figures 1 and 2). This additional work is being requested by the Los Angeles County, Department of Public Works, Waste Management Division, UST Local Oversite Program (LACDPW). This additional work will be conducted in the area of closure of three underground storage tanks at the subject site.

The purpose of this investigation is to evaluate the extent of the hydrocarbon contamination which presently exists at the site.

This Work Plan is being submitted to the LACDPW for review and approval.

**PROPOSED SCOPE OF WORK**

The following outlines the proposed field work activities to be conducted at the subject site:

**Task 1** - TPEE personnel will meet on-site with the client to review site conditions, operations, traffic, utility locations, etc., and select and mark the initial boring locations to minimize impacts to site operations.

• 1071 N. Batavia St.
Orange, CA 92665
714/282-5642
800/464-8265
FAX: 714/282-5644

**Task 2 -** TPEE will contact Underground Service Alert and receive their report on known underground services at the property and review any available site plans showing utilities. Final locations of the initial borings will then be delineated.

**Task 3 -** Initially, drilling of four (4) vertical soil borings. Two borings (designated B-7 and B-8) are proposed to be drilled to depths of approximately 30 feet below grade. One boring (B-7) will be drilled immediately adjacent to Abandoned Tank No. 4. and the other (B-8) adjacent to the removed diesel Tank No. 2. Proposed borings B-9 and B-10 will be drilled adjacent to the removed Tank No.1 to depths of approximately 35 feet below grade. The proposed boring locations are shown in Figure 2. Each of the borings will be drilled using a truck-mounted drill rig equipped with either eight or ten-inch diameter continuous flight hollow stem augers, under the supervision of TPEE geologists. All borings will be logged in accordance with the Unified Soil Classification System.

TPEEs Health and Safety Plan procedures will be implemented prior to and during all field work activities associated with this project (see Attachment).

**Task 4 -** Obtain soil samples from each boring at approximately 5 feet below grade and every 5-foot intervals thereafter until termination depth. The samples will be collected by using 2-inch diameter by 6-inch long brass tubes mounted within a Californian Sampler used in advance of the augers. Prior to sampling, all brass tubes will be washed in a solution of Alconox detergent, rinsed with tap water, and then rinsed with distilled water. After sample recovery, the lowermost brass ring from each sample interval will be immediately end-wrapped with aluminum foil, polyethylene caps taped over the ends, labeled, placed into an ice chest chilled using frozen blue ice, and transported by a private vehicle to a State Certified Laboratory. All samples will be logged and accompanied by chain-of-custody record forms.

A portable Photo-ionization Detector will be used on the soil samples contained within the sampler at each sampling interval within the borings to determine whether volatile hydrocarbons (vapors) are being emitted directly from the soil.

In all cases, the sampling equipment will be decontaminated prior to each sampling. Clean auger flights will be used for each boring.

**Task 5 -** The drill cuttings generated during drilling from each boring will be placed and sealed in DOT approved 55-gallon drums and left on-site until laboratory testing results are made available at which time the appropriate disposal method(s) will be determined.

**Task 6 -** All of soil samples obtained from proposed borings B-7 and B-8 will be analytically tested for total petroleum hydrocarbons (TPH) using modified EPA Method 8015, for diesel, (Luft Manual Procedure, May 1989).

The soil samples obtained from proposed borings B-9 and B-10 will be analytically tested for TRPH using EPA Method 418.1.

**Task 7 -** Evaluate all the data and prepare a technical report describing our procedures and findings.

**Task 8 -** Meet with client to present our findings and discuss our recommendations, if required.

After review and approval of this plan by the LACDPW, TPEE will contact LACDPW at least forty-eight hours prior to initiating any field work activities.

If there are any questions please address them to Michael Leonard or Anthony Lizzi at 714/282-5642.

Respectfully submitted,

**TPE ENVIRONMENTAL, INC.**

# HEALTH AND SAFETY PLAN

# TPE ENVIRONMENTAL GROUP SITE SAFETY PLAN

Site: Kirkhill, Inc. Project Number: E90-1514

Original Site Safety Plan: Yes () No (X) Revision No.: One

Plan Prepared by: Anthony Lizzi Date: January 9, 1991

Plan Approved by: Michael L. Leonard Date: January 9, 1991

Please respond to each item as completely as possible. Where an item is not applicable, please mark "N/A".

## 1.0 FACILITY BACKGROUND

### 1.1 Site Description

Type: Spill () Fire () HW Site () Industrial Facility ()

Other (X)Manufacturer

Physical Description: The site is presently occupied by several plant and warehouses buildings, and is generally flat.

Location: 12021 Woodruff Avenue, Downey, CA at intersection of Stewart and Gray Road

Size: Approximately 200' X 220'

History: The facility was established as a manufacturer of?? for over 30 years.

Status: Active (X) Inactive ( )

Surrounding Population: People working/living in surrounding commercial and industrial facilities.

Surrounding Structures: Industrial and Commercial

Have nearby people been evacuated: Yes () No () N/A (X)

Evacuation Distance: N/A

Evacuation Initiated By: N/A

Topography: Gently Sloping

Site Plan/Sketch completed (next page): Yes (X) No()

The site sketch should include the following:

- Nearby roads and structures
- On-site roads and structures
- Sample location if applicable
- Location of waste, if known or applicable
- Location of work, support and decontamination zone

## 2.0 KEY PERSONNEL AND RESPONSIBILITIES

(Include name, telephone number and health and safety responsibilities;i.e., including Project Manager responsible for supervision of all site activities.)

Project Manager: Michael L. Leonard, responsible for supervision of all site activities.

Site Manager: Anthony Lizzi/Ravi Pendurthi, responsible for supervision of all on-site activities.

Field Team Members: John Simmer, Field Technician, responsible for sampling protocol procedures and sampling activities.

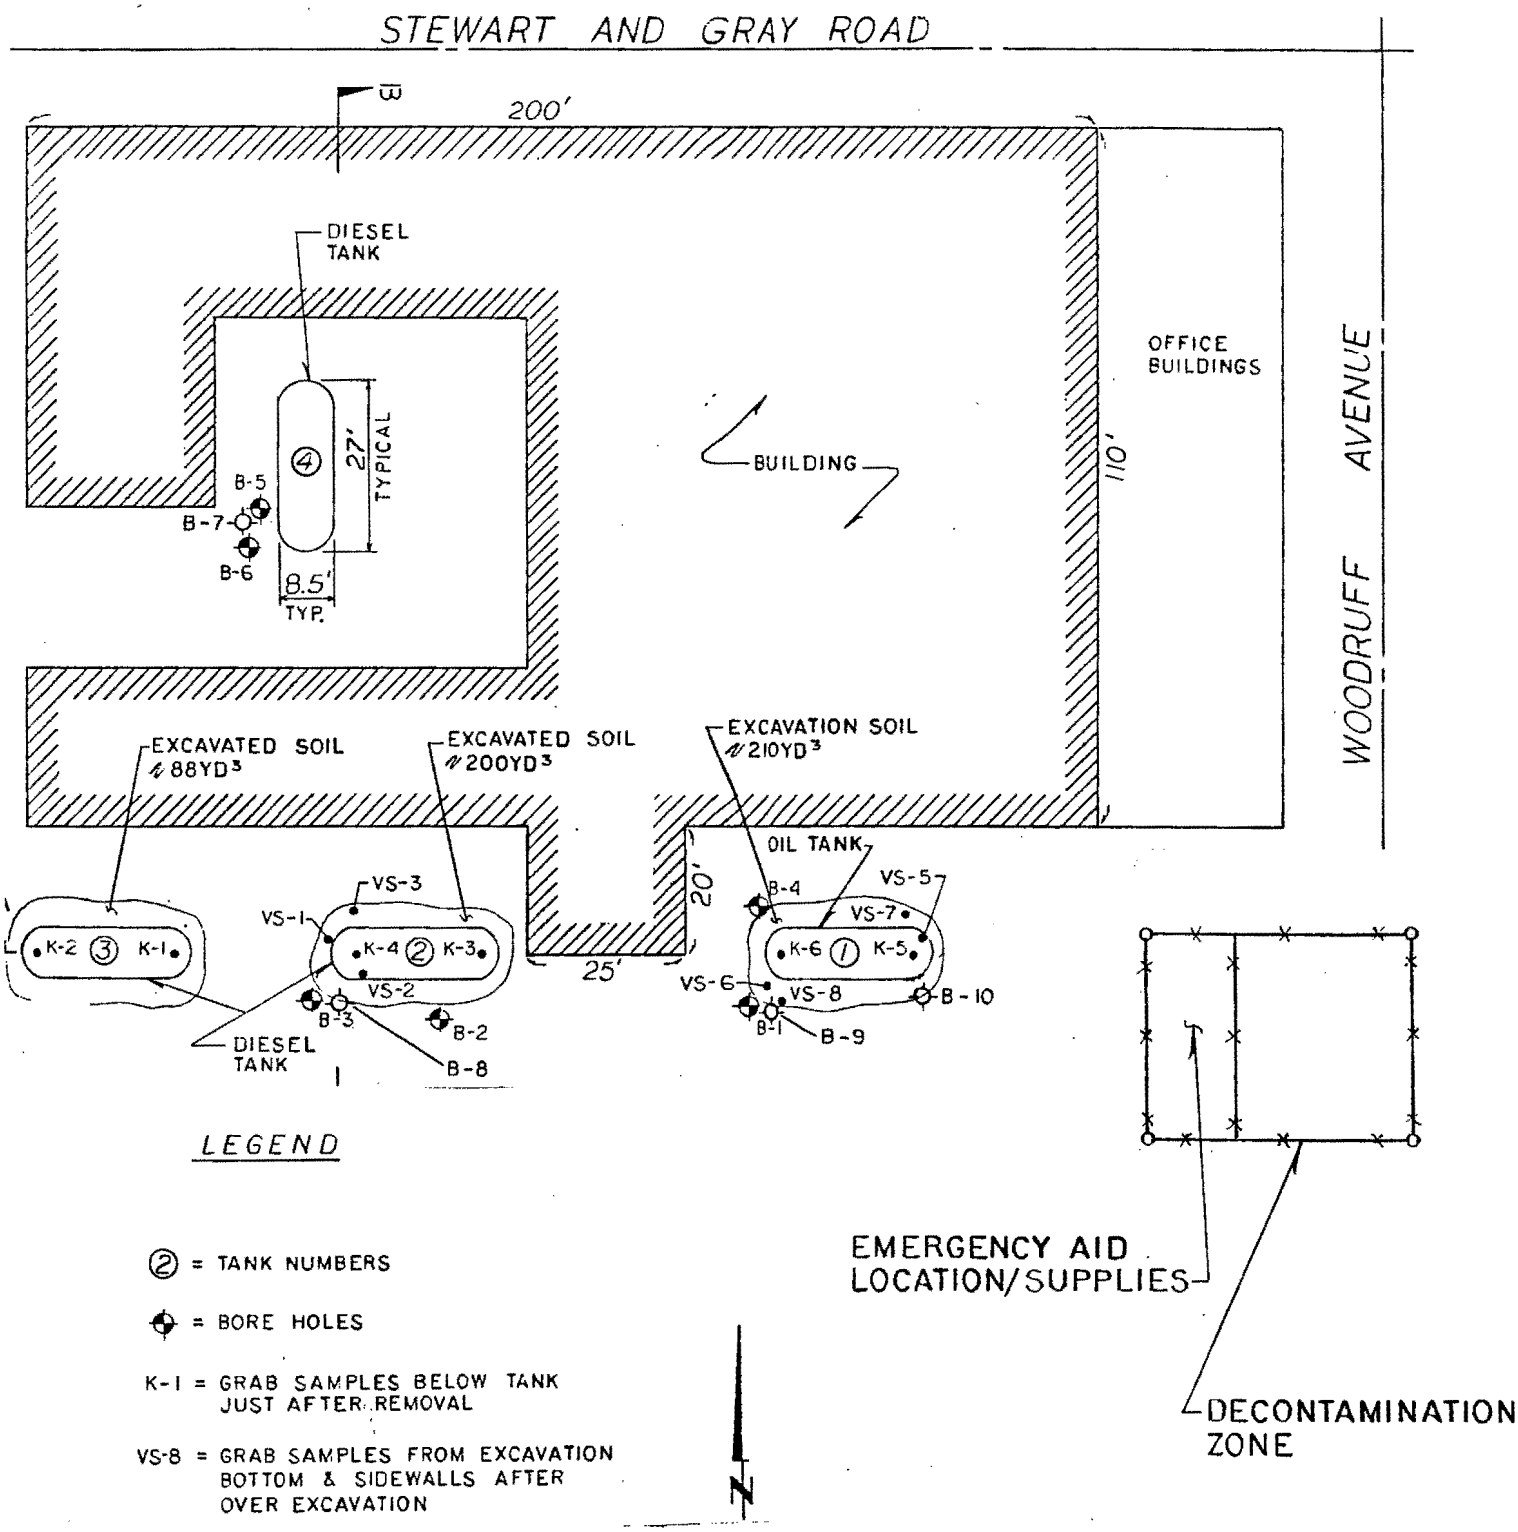
Federal Agency Reps.: N/A

State Agency Reps.: California Regional Water Quality Control Board - Los Angeles Region (CRWQCB) reps. responsible for inspecting the water regulatory compliance.

Local Agency Reps.: Los Angeles County, Department of Public Works, Waste Management Division, Scott Small, responsible for inspecting/regulating/previewing the investigation and remediation activities.

Contractor(s): West Hazmat Drilling Corp., responsible for borehole drilling and retrieving soil samples.

## 3.0 JOB HAZARD ANALYSIS



### 3.1 Overall Hazard Evaluation

Hazard Level: High () Moderate () Low (X) Unknown ()

Hazard Type: Liquid () Solid (X) Sludge () Vapor/Gas (X)

**TPEE SITE SAFETY PLAN**

Site Sketch:

LEGEND

② = TANK NUMBERS

⊕ = BORE HOLES

K-1 = GRAB SAMPLES BELOW TANK JUST AFTER REMOVAL

VS-8 = GRAB SAMPLES FROM EXCAVATION BOTTOM & SIDEWALLS AFTER OVER EXCAVATION

⊖ = PROPOSED BORING LOCATION

PROJECT ADDRESS:

12021 WOODRUFF AVENUE
DOWNEY, CALIFORNIA 90241

Known or suspected hazardous materials present on-site along with their hazardous characters:
Diesel fuel petroleum hydrocarbon and naphthalenic oil contaminated soil. Hazard associated with the chemicals is primarily ignitability and direct contact.

## 3.2 Job-Specific Hazards

For each labor category (driller, project manager,etc.) involved on the project, delineate the possible hazards referencing the information contained in Section 1.3 (i.e., task-driller, Hazards-trauma from drill rig accidents, chemical exposure to PCB's ect.) For each hazard, indicate steps to the taken to minimize the hazard.

All Field Personnel: Trauma from soil moving equipment accidents, slip, trip and fall. Direct contact of diesel contaminated soil may be harmful. To minimize the possibilities of hazards, precautions required to avoid equipment accidents, direct contact and fire accidents are to be taken. No smoking will be permitted within working area.

## 4.0 RISK ASSESSMENT SUMMARY

Using any available analytical data for the site, along with published data on the suspected contaminants and consideration of all possible exposure routes, provide a summary of the potential risks to site workers and the nearby community during the project. This information may not be available during early stages of the project. However, this section must be updated as data becomes available.

Potential risk to site activity personnel and surrounding populations is low from hazards associated with the project. The rating of low is relatively low risk in a scale ranging as low, moderate, and high.

No volatile organic compounds (VOCs) are expected to be encountered during the field work activities. The tanks previously stored diesel fuel and heavy oil. Therefore, no VOCs will be monitored. Further operations will be conducted only after personnel protection equipment (Level "C") is implemented.

## 5.0 AIR MONITORING PLAN

**5.1** Action levels for implementation of air monitoring. Action levels should be based on published data available on contaminants of concern. Action levels should be set by persons experienced in industrial hygiene.

| Level | Action Taken |
|---|---|
| > 50 ppm | Cease operations and evaluate for proper protection |

### 5.2 Air Monitoring Equipment

Outline the specific equipment to be used, calibration method, frequency of monitoring, locations to be monitored, and analysis of samples (if applicable).

During field activities, continuous air monitoring will be performed using a calibrated organic vapor meter (OVM), Model 580B (Thermo Environmental Instruments Inc.)

If air monitoring is not to be implemented for this site, explain why: Not Applicable

## 6.0 PERSONAL PROTECTIVE EQUIPMENT (PPE)

**6.1** Rationale for selection of PPE (Rationale should be based on available analytical data for, and familiarity with, the capabilities of the suggested PPE. The selection of PPE should be made by persons experienced in industrial hygiene).

Due to trauma from accidents related to remediation, toxic affects from direct contact of contaminated soil, and ignitability of hazardous materials at the site, following PPE are selected.

### 6.2 Equipment

Be specific (i.e., hard hat, impact resistant goggles, fully encapsulating tyvek suit, inner latex gloves, outer nitrile gloves, neoprene boots with steel toe, etc.). PPE should be specified for each job classification on-site.

**TPEE SITE SAFETY PLAN**

Level of Protection: A () B () C () D (X) and provision to go to "C" when required.

Respiratory Protection: SCBA () Airline ()
Air-Purifying (X) Dust Mask ()

If Air-Purifying: Canister () Cartridge (X)
Half Face (X) Full Face ()

Canister/Cartridge Type: Acid gas/organic vapor/HEPA

Protective Clothing:

Suit Type: Chemically resistant coveralls (Tyvek, Polyethylene coated)

Boot Type: Chemically resistent, steel toed

Glove Type(s): Chemically resistant (rubber gloves)

Head Protection Type: Hard hat

Eye Protection Type: Goggles

Hearing Protection: Ear plugs (if necessary)

Action levels for upgrade and downgrade of respiratory protection/PPE.

| Levels | Action Taken |
|---|---|
| > 50 ppm | Go to level 'C' PPE (Tyvek and air purifying equipment) |

Rationale for upgrade/downgrade matrix (rationale should be based on published data for contaminates of concern and should be prepared by persons familiar with PPE).

No gasoline fuel contaminated soils are expected. The time weighted average (TWA) exposure limit for gasoline constituent such as benzene is 10 ppm per American Conference of Governmental Industrial Hygienists. In the event that benzene concentration is detected in the air, a 50 ppm action level will be used. At this time respirators will be donned.

## 7.0 WORK ZONES AND SECURITY MEASURES

The site sketch included in Section 1.1 should indicate the work, support and decontamination zones.

The following general work zone security guidelines should be implemented:

- Excavations shall be closed when drilling and sampling activities are not actually taking place.
- No excavations shall be left unattended. Visitors will not enter the work zone unless they have attended a project safety briefing.
- Visitors who do not have business related to the project will be excluded from the site.

List the requirement for moving between different zones and general site security measures, equipment and responsible personnel (i.e., persons will not leave the work zone without first passing through the decontamination zone).

Step 1: Decontamination of earth moving tools prior to field activities with high pressure hot water.

Step 2: Decontamination of sampling devices before, during, and after acquisition of each soil sample with DSO or TSP/Distilled water triple rinse/wash.

Step 3: Decontaminate rubber boots, gloves, respirators (if used) at the end of each shift and prior to leaving the site with DSO or TSP/Distilled water triple rinse/wash.

## 8.0 DECONTAMINATION PROCEDURES

List the procedures and specific steps to be taken to decontaminate equipment and PPE. A flow chart diagram may be utilized to show a step-wise decontamination line.

At the end of each field activity, sampling equipment, drilling equipment and PPE will be decontaminated. Decontamination will include steam cleaning for drilling equipment and triple rinsing of sampling equipment and PPE.

**Decontamination Line:**

Steam cleaning will be conducted on site using steam cleaner according to set procedures.

PPE decontamination will include:

| Rinsing in Soap Water Bucket | Rinsing in Tap Water Bucket | Rinsing in Distilled Water Bucket |
|---|---|---|

The equipment which will be used in the decontamination procedure includes steam cleaner with trough, 5-gallon plastic buckets, a bristle brushes, a putty knife, and Alconox Detergent.

## 9.0 GENERAL SAFE WORK PRACTICES

Attach any available Standard Operating Procedures for activities that can be standardized due to their repetitive nature (i.e., instrument calibration, don and doff of PPE,etc.)

TPE Environmental Group is responsible for the safety of all TPE Environmental Group employees on-site. Each contractor shall provide all the equipment necessary to meet safe operating practices and procedures for their personnel on-site (this includes respirators, cartridges, steel toed boots, eye protection, tyvek suits, hearing protectors, and neoprene latex, and viton gloves) and be responsible for the safety of their workers. All general safety guidelines and procedures will conform to:

* 29 CFR 1910.120
* Standard Operating Safety Guides (U.S.E.P.A., Nov. 1984)

TPE Environmental Group will update versions of these safety guidelines and procedures if changes in the Operations Plan occur.

TPE Environmental Group will utilize a " three warning" system to enforce compliance with Health and Safety procedures as follows:

- First infraction - violator receives a verbal warning.
- Second infraction of same rule - violators receives a written warning.

- Third infraction of same rule - violators will be requested to leave the site.

The "three warning" system applies to the following safe work practices which will be implemented at the site for worker safety:

* Eating, drinking, chewing gum or tobacco, and smoking will be allowed only in designated areas.

* Wash facilities will be utilized by workers in the work areas before eating, drinking, or use of the toilet facilities.

* Containers will be labeled identifying them as waste, debris, or contaminated clothing.

* All excavation/drilling work will comply with Title 8, Article G of the California Administrative Code.

* Personnel at the site will use the "buddy system" when wearing any respiratory protective equipment. No one will be allowed to engage in drilling or sampling operations alone.

* No facial hair which interferes with a satisfactory fit of the mask-to-face seal will be allowed (no beards, large mustaches, or long sideburns.)

* All respiratory protection selection, use, and maintenance will meet the requirements of established procedures, recognized consensus standards (ANNA, ANSI, MSHA, and NIOSH), and will comply in all respects to the requirements set forth in 29 CFR 1910.134.

* All site personnel will be required to wear hard hats, protective glasses and adequate hand protection when in the work zone.

* Any other action which is determined to be unsafe by the Site Safety Officer.

## 10.0 EMERGENCY RESPONSE PLANS

Provide a list of site personnel certified in first aid and CPR:

Ravi. P. Pendurthi - certified in CPR

**TPEE SITE SAFETY PLAN**

**Relevant Phone Numbers:**

| Person | Title | Phone No. |
|---|---|---|
| Michael L. Leonard | Project Manager | (800) 464-8265 |
| | Fire | 911 |
| | Police | 911 |
| | Ambulance | 911 |
| | Poison Control Center | (213) 484-5151 |
| Rio Hondo Hospital | Medical Advisor | (213) 806-1821 |
| Raymond Bellanger | Client Contact | (213) 803-3421 |

U.S. EPA - ERT.....(201) 321-6660

Chemtrec.....(800)424-9300

Centers for Disease Control.....day(404) 329-3311
night(404)329-2888

National Response Center.....(800) 424-8802

Superfund/RCRA Hotline.....(800) 424-9346

TSCA Hotline.....(800) 424-9065

National Pesticide Information Service.....(800) 845-7633

Bureau of Alcohol, Tobacco, and Firearms.....(800) 424-9555
(Explosives)

The locations of the following emergency response equipment will be made available at the site:

- Fire Extinguisher(s)
- First Aid Kit
- Telephone

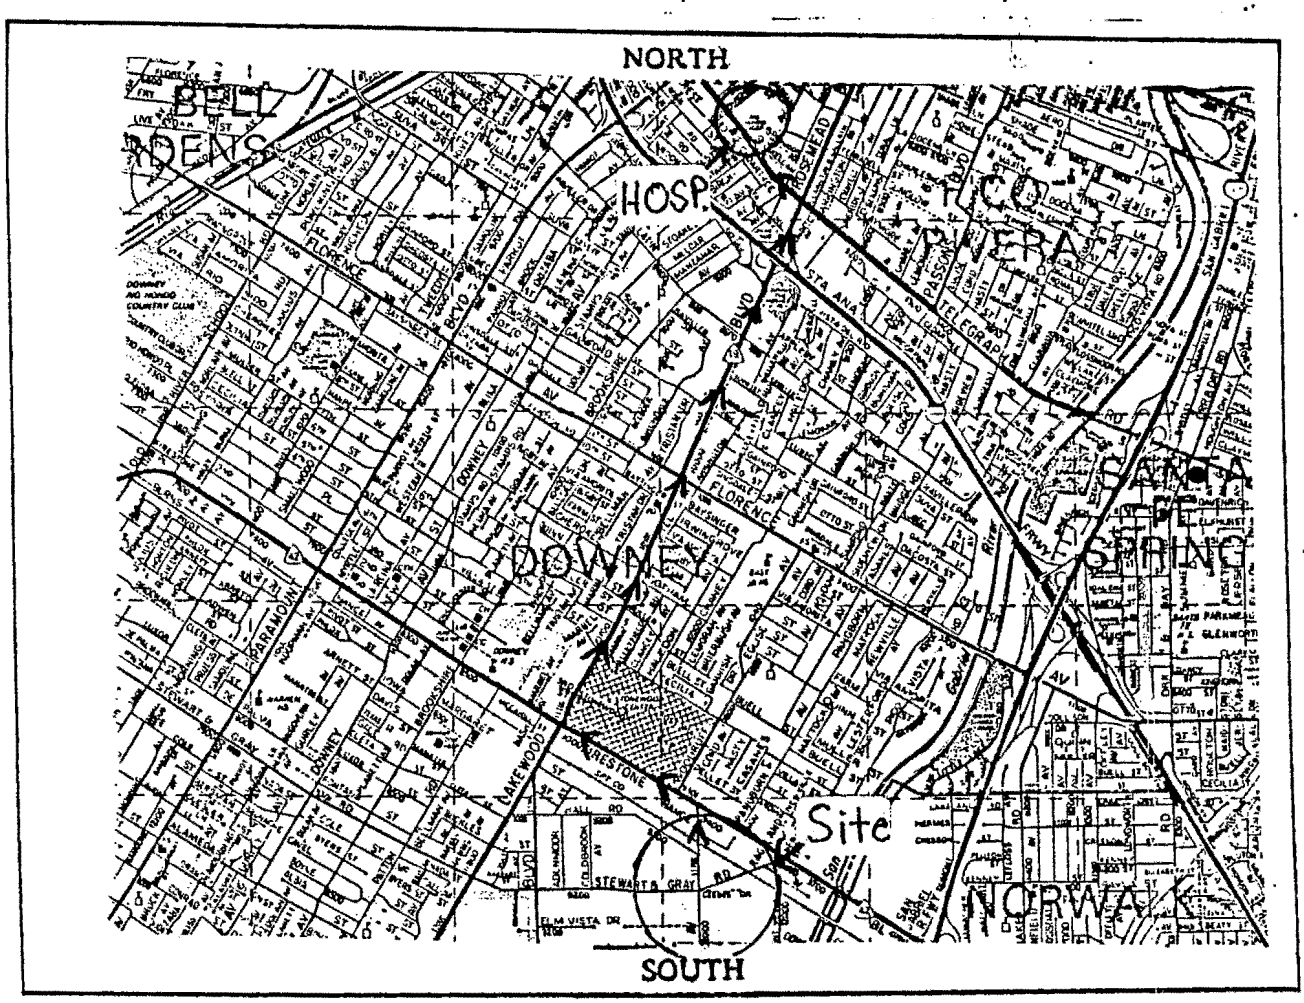
## Emergency Signals

The following communication signals will be utilized, if necessary, in case of emergency on-site.

| Gesture | Meaning |
|---|---|
| Hand clutching throat | - Out of air/can't breathe |
| Hands on top of head | - Need assistance |
| Thumbs up | - OK/I'm alright/I understand |
| Thumbs down | - No/negative |
| Grip partner's wrists | - Informing partner to leave area immediately |

Emergency Decontamination - In an emergency, the primary concern is to prevent the loss of life or severe injury to site personnel. If immediate medical treatment is required to save a life, decontamination should be delayed until the victim is stabilized. If decontamination can be performed without interfering with essential life-saving techniques or first aid, or ia a worker has been contaminated with an extremely toxic or corrosive material that could cause severe injury or loss of life, decontamination must be performed immediately. If an emergency due to heat-related illness develops, protective clothing should be removed from the victim as soon as possible to reduce heat stress. All emergency decontamination procedures must be supervised by the Site Safety Officer and the Field Team Leader.

## Emergency Medical Facility



Include written and visual directions to the nearest hospital:

Go north on Woodruff Avenue, go west (left turn) on Firestone Boulevard, go north (right turn) on Lakewood Boulevard, then go west (left turn) on Telegraph Road. Rio Hondo Hospital is located on the south side of Telegraph Road.

Address: Rio Hondo Hospital
8300 E. Telegraph Road
Downey, CA

Refer to the attached map (from Thomas Brothers Guide) on the following page showing the major escape routes from the site in case of an emergency.

Sketch of Route to nearest Hospital:

## 11.0 TRAINING REQUIREMENTS

Prior to mobilization at the job site, all contractors shall submit evidence that site workers have completed a 40-hour course in hazardous waste site operations training as specified in 29 CFR part 1910.120, along with a letter from a physician stating that they have received a physical examination within one year and are physically capable of working on hazardous sites and wearing respiratory protection devices.

**TPEE SITE SAFETY PLAN**

Prior involvement in any field program, all personnel will attend a safety briefing. The briefing will include the nature of the wastes at the site, donning personnel protection equipment, decontamination procedures, respirator fit testing, and emergency procedures. Included in the initial briefing will be training which will provide an understanding of:

* Use of visual emergency signals
* The limitations and capabilities of the equipment.
* Proper use and maintenance of the selected PPE.
* The nature of the hazards and the consequences of not using the PPE.
* The human factor influencing PPE performance.
* Inspection, donning, checking, fitting, and using the PPE.
* Provide individualized respirator fit testing to ensure proper fit.
* The user's responsibility for decontamination, cleaning, maintenance, and repair (if any) of PPE.
* Emergency procedures and self-rescue in the event of PPE failure.
* The Site Safety Plan and the individual's responsibilities and duties in an emergency.

Daily, prior to commencement of operations, all personnel involved with the remedial investigations shall attend short "tailgate" safety briefing which will cover:

* Expected conditions at the site.
* Daily activities.
* Safety deficiencies previously observed.

* Any changes in the emergency procedure.

Record of Training - Upon completion of the project safety briefing, all personnel will sign a statement indicating that they have read and understand that they agree to abide by this project Health and Safety Plan. A record of attendance will be kept for all safety briefings. The TPE Environmental Group compliance agreement is included at the end.

## 12.0 MEDICAL SURVEILLANCE PROGRAM

Prior to assignment to any task requiring a level of personnel protection above Level D, personnel will submit evidence that they have received a physical examination within the previous twelve months which incorporates the following:

* An occupational and general physical history.
* Complete physical examination which incorporates the head, torso, abdomen, limbs, and musculo-skeletal system.
* Chest X-ray.
* Audiometric exam for persons working around drill rigs.
* Laboratory testing of blood and urine to include the following:
  C.B.C., albumin phosphates, total bilirubin, SGOT, SGPT, cholesterol, total protein, albumin, globulin, A/G ratio, BUN, and creatinin
* Vision test.
* Electrocardiogram

To aid in the prevention of heat stress, the following will be provided for personnel working at the site:

* Potable Water

  - Potable water with 1 per cent salt or commercial mix (such as Gatoraid) will be within easy access to all workers.

* Work Schedules

  - Work/rest regimens will be developed on recommendations by the Health & Safety Officer. The initial work schedule will consist of a 55-min. work regime followed by a 5-min. rest period. This work schedule will be modified as is necessary to conform with the heat stress monitoring criteria outlined below.

Personnel will be instructed to look for the following initial symptoms of heat stress:

* Heat Exhaustion:

  - pale, clammy skin
  - profuse perspiration

- tiredness, weakness
- headache, perhaps cramps
- nausea, dizziness (possible vomiting)
- possible fainting

* Heat Cramps:

  - cramping of muscles in legs and abdomen

* Heat Stroke:

  - High body temperature
  - skin is characteristically hot, red, and dry (the sweating mechanism is blocked).

Heat stress monitoring will commence when the ambient temperature reaches 70 degrees Fahrenheit if Tyvek or Saranek (Level C) garments are in use. Otherwise, heat stress monitoring will commence at an ambient temperature of 85 degrees Fahrenheit. The monitoring will consist of the following:

* Heart rate (HR) will be measured by the radial pulse in the resting period. The heart rate at the beginning of the rest period should not exceed 110 beats per minute. If the HR is in excess of the above value the next work period will be shortened by 33% while the length of the rest period stays the same. If the pulse rate is in excess of 110 beats per minute at the beginning of the nest rest period, the following work cycle will be further shortened by 33%.

* Workers will be asked to report any dizziness, faintness, cramps, or other symptoms of heat stress as discussed above.

* Workers will also be questioned about any history of asthma, or if currently taking asthma medications. Persons taking asthma medications are typically more susceptible to heat stress reactions.

First aid for heat stress will include the following:

* Heat Stress

  - Exposed person will be removed from the work zone and placed in a shaded area.

- Person will be required to rest in a recumbent position.
- Fluids will be administered (Gatorade).
- Workloads will be reduced to a level which will prevent heat stress symptoms from recurring.

* Heat Cramps and Heat Exhaustion

  - Same first aid procedures as described above except that exposed person will be requested to leave the site for the remainder of the day.

* Heat Stroke

  - Exposed person will be placed in a shaded area medical attention (Paramedics) will be sought immediately.

## HEALTH AND SAFETY COMPLIANCE STATEMENT

The undersigned certify that they have received, read and understood the procedues and requirements contained in the Health and Site Safety Plan prepared for this project.

Further, the undersigned have received proper training under the Occupational Safety and Health Act (29 CFR, Part 1910.120) prior to conducting any activities at the site.

Tank Protect Engineering

"ENVIRONMENTAL MANAGEMENT"

RECEIVED

JUL 2 1991

DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION

June 28, 1991

Los Angeles County
Department of Public Works
Waste Management Division
UST Local Oversight Program, Annex Building
P.O. Box 1460
Alhambra, California 91802-1460

Attention: Mr. Scott Small

101713

**SUBJECT: WORK PLAN FOR SITE ASSESSMENT**
**Kirkhill, Inc. located at 12021 Woodruff Avenue, Downey, California 90241**
**(FILE NO. I-12987-1F)**

Dear Mr. Small:

Tank Protect Engineering ("TPE") submits this work plan to conduct a subsurface investigation in area which previously contained one (1) 10,000 naphthalenic-type processing oil underground storage tank (UST). This site assessment in this area is being requested by the Los Angeles County Department of Public Works, Waste Management Division, Local Oversight Program ("LACDPW") in order to evaluate the extent of the hydrocarbon contamination which presently exists around the area which previously contained the 10,000 gallon oil UST at the subject site (see Figure 1).

In response to your letter dated May 9, 1991 (see Attachment), regarding a "missing" hazardous waste soil manifest form, the following information is submitted.

As stated on TPEs Tank Closure and Remediation report dated June 5, 1990, a total of approximately 54 cubic yards of non-treatable naphthenic type oil contaminated soil and clumps of diesel contaminated soil was transported and properly manifested to a state approved disposal facility. (i.e., three completed manifest forms each identified with a quantity of 18 cubic yards). In response to your comment No. 2, "According to the report dated March 9, 1990,...", (our Closure report is dated February 26, 1990 and not March 9, 1990) on the volume of contaminated soil, it stated 72 cubic yards of soil were hauled away for disposal. The figure indicated in the report should have read 72 tons. This discrepancy is clarified in TPEs site assessment report dated April 15, 1991, page 2. It was documented that approximately 73 tons of contaminated soil was hauled off to a disposal facility. A conversion factor was used to convert cubic yards into tons and the wrong unit of weight was inadvertently used. Therefore, a hazardous waste manifest form was definitely not "missing" in our report.

800/464-TANK
FAX: 916/366-9657

Engr. Contr. Lic.#
489994

The purpose of this investigation is to evaluate the extent of the hydrocarbon contamination which presently exists in the area formerly occupied by UST No.1.

This Work Plan is being submitted to the LACDPW for review and approval.

## PROPOSED SCOPE OF WORK

The following outlines the proposed field work activities to be conducted in the area which previously contained a 10,000 gallon oil UST at the subject site:

**Task 1 -** TPE personnel will meet on-site with the client to review site conditions, operations, traffic, utility locations, etc., and select and mark the initial boring locations to minimize impacts to site operations.

**Task 2 -** TPE will contact Underground Service Alert and receive their report on known underground services at the property and review any available site plans showing utilities. Final locations of the initial borings will then be delineated.

**Task 3 -** Drilling of three (3) vertical soil borings to depths of approximately 50 feet below grade. Proposed borings will be drilled around the area which previously contained UST No.1. The proposed boring locations are shown in Figure 2. Each of the borings will be drilled using a truck-mounted drill rig equipped with either eight or ten-inch diameter continuous flight hollow stem augers, under the supervision of TPE geologists. All borings will be logged in accordance with the Unified Soil Classification System.

TPEs Health and Safety Plan procedures will be implemented prior to and during all field work activities associated with this project. A copy of this plan will be left on-site.

**Task 4 -** Obtain soil samples from each boring at approximately 5 feet below grade and every 5-foot intervals thereafter until termination depth. In the event that contamination is still present at the termination depth then the borings will continue an additional 10 feet. The samples will be collected by using 2.5-inch diameter by 3-inch long brass tubes mounted within a Californian Sampler

used in advance of the augers. Prior to sampling, all brass tubes will be washed in a solution of Alconox detergent, rinsed with tap water, and then rinsed with distilled water. After sample recovery, the lowermost brass ring from each sample interval will be immediately end-wrapped with aluminum foil, polyethylene caps taped over the ends, labeled, placed into an ice-chest chilled using frozen blue ice, and transported by a private vehicle to a State Certified Laboratory. All samples will be logged on and accompanied by chain-of-custody record forms.

A portable Flame-ionization Detector calibrated against hexane or similar equipment will be used on the soil samples contained within the sampler at each sampling interval within each boring to monitor the volatile organic compounds (VOCs) which are being emitted directly from the soil.

In all cases, the sampling equipment will be decontaminated prior to each sampling. Clean auger flights will be used for each boring.

**Task 5** - The drill cuttings generated during drilling from each boring will be placed and sealed in DOT approved 55-gallon drums and left on-site pending analytical results for appropriate disposal.

**Task 6** - All of soil samples obtained from proposed borings will be analytically tested for total recoverable petroleum hydrocarbons (TRPH) using modified EPA Method 418.1

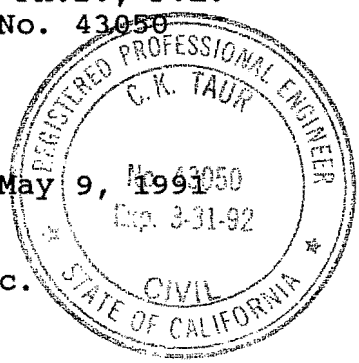
## PROPOSED PROCEDURE

After review and approval of this plan by the LACDPW, the procedures to be implemented will be as follows:

- Contact and notify LACDPW at least seventy-two (72) hours prior to initiating any field work activities;
- Drill, sample and test the soil samples for TRPH; and
- Evaluate data and prepare a report describing our procedures and findings.

If there are any questions or need additional information please call Anthony Lizzi at 714/282-5639.

Respectfully submitted,



**TANK PROTECT ENGINEERING**

Dear Mr. Ballanger:

**UST LOCAL OVERSIGHT PROGRAM REVIEW SHEET**
**HAZARDOUS MATERIALS UNDERGROUND STORAGE**
**SITE ASSESSMENT REPORT**
**CLOSURE PERMIT NOS. 5999B AND 6000B**
**FACILITY: 12021 WOODRUFF AVENUE, DOWNEY**

This office has reviewed the subject document(s) submitted on April 18, 1991, dated April 15, 1991.

In order to better evaluate the site status, the information indicated below must be submitted:

1. Based on the results of borings CB-9 and CB-10, a Site Assessment proposal must be submitted to define the extent of all remaining contamination.

2. According to the report dated March 9, 1990, there appears to be a missing hazardous waste soil manifest. The report states that 72 cubic yards were hauled away for disposal, but only 54 cubic yards are accounted for on the manifests (#88243329, #88243343, and # 89469174).

You are cautioned that any contaminated soils or hazardous materials generated during any operation must be manifested and transported to a hazardous waste disposal facility as required by California Health and Safety Code, Division 20, Chapter 6.5, unless evidence is presented indicating that the material may be disposed of at a less restricted facility. Copies of all completed manifests shall be submitted to this office as part of the final report.

Notify Dave Lobato at (818) 458-4374 a minimum of 72 hours prior to commencing any significant investigation, remediation, or assessment activities on site. The Los Angeles County Department of Public Works may disregard the work performed if the County was not properly notified.

Correspondence should be submitted to the Los Angeles County Department of Public Works, UST Local Oversight Program, Annex Building, P. O. Box 1460, Alhambra, CA 91802-1460.

If you have any questions regarding this matter, please contact Scott Small at (818) 458-3996.

Very truly yours,

T. A. TIDEMANSON

**SUBJECT: ADDENDUM TO WORK PLAN DATED JUNE 28, 1991 Kirkhill, Inc. located at 12021 Woodruff Avenue, Downey, California 90241 (FILE NO. I-12987-1F)**

Dear Mr. Small:

Pursuant to our telephone conversation as of this date, Tank Protect Engineering ("TPE") submits this letter as an addendum to the work plan dated June 28, 1991. This addendum includes information you requested on additional borings to be drilled in the area which previously contained one (1) 10,000 naphthalenic-type processing oil underground storage tank (UST) at the subject site.

Per your request (in addition to the three borings proposed in TPEs workplan), two additional borings are proposed to be drilled to depths of approximately 50 feet below grade. Boring CB-9A will be drilled immediately beneath the location of boring CB-9; and one boring to be drilled at approximately 20 feet northwest of boring CB-9 (see Figure 1 for boring locations).

All proposed field work activities and procedures as outlined in TPEs workplan dated June 28, 1991, will be implemented as described therein.

If there are any questions or need additional information please call Anthony Lizzi at 714/282-5639.

**SUBJECT: SITE ASSESSMENT FOR CONFIRMATION BORINGS KIRKHILL, INC., 12021 WOODRUFF AVENUE DOWNEY, CALIFORNIA 90241 (FILE NO. I-12987-1F)**

Dear Mr. Small:

Tank Protect Engineering ("TPE") is pleased to submit this site assessment report on additional field work activities pursuant to a request from Los Angeles County, Department of Public Works, Waste Management Divison ("LACDPW"), in order to determine that the backfilled treated soil within each excavation which contained an underground storage tank (UST) is clean to acceptable levels, and to address closure in the area of an abandoned UST at the subject site.

## BACKGROUND

On August 24, 1989, one (1) 10,000 gallon naphthalenic type processing oil UST (henceforth referred to as UST No. 1); and two (2) 10,000 diesel fuel USTs (henceforth referred to as USTs No. 2 and No. 3, respectively) were removed from the subject site.

In or about October 1989, a 7,500 diesel fuel UST located near the building, in an alley at the site was abandoned-in-place (henceforth referred to as UST No. 4); please refer to Figures 1 and 2.

Initial soil testing results indicated that contamination was present beneath the east end of the excavtion which contained UST No. 1 and the west end of the excavation which contained UST No. 2. The testing results of the soil samples obtained beneath the former location of UST No. 3 indicated TPH concentrations less than 100 parts per million (ppm). UST No. 4 was abandoned in-place (please refer to TPEs closure and site remediation report dated February 26, 1990 for details).

P.O. Box 7066

Engr. Contr. Lic.#
489994

In September 1989, a site assessment was conducted in the previous USTs No. 1 and No. 2 locations, and in the area of the abandoned-in-place UST No. 4 to investigate the extent of the soil contamination. No additional field work was required in the previous UST No. 3 location. Six borings were drilled (B-1 through B-6) and sampled to depths of approximately between 25 to 40 feet below grade. The soil testing results indicated that only the soil samples obtained from borings B-3, drilled to about 20 feet below grade, in the previous location of UST No. 2, and boring B-6 drilled immediately adjacent to the abandoned diesel fuel UST each at about 20 feet below grade contained TPH concentrations greater than 100 ppm. No detectable TPH concentrations were present in the soil samples obtained at depths greater than 20 feet from boring B-6 drilled adjacent to the abandoned-in-place UST. Additional excavation work was needed beneath the former UST No. 2 location. On October 31, 1989, verification soil samples were obtained from the bottom of the excavation which contained UST No. 2, and testing results indicated that no detectable TPH concentrations were present.

The naphthalenic type oil contaminated soils removed from the excavation which contained UST No. 1 were transported off-site to a disposal facility (approximately 73 tons). The remaining contaminated soils were treated on-site using TPEs transportable treatment unit. The soils were mixed using hydrogen peroxide with silica catalyst. On November 22, 1989, following the treatment process, five soil samples were obtained from the stockpiled soil for verification of treatment process. The testing results indicated that the TPH concentrations were less than 100 ppm.

The excavations which contained the previous USTs were then backfilled with the treated soils and some imported material, and then compacted using standard procedures (please reference TPEEs UST Closure and Site Remediation Report dated June 5, 1990, and Addendum to Remedial Action Report dated October 19, 1990 for details).

## OBJECTIVE

The purpose of this site assessment was to investigate the areas of the backfilled excavation pits which consists of: 1) a removed 10,000 gallon processing oil storage UST No. 1; 2) a removed 10,000 gallon diesel fuel UST No. 2); and 3) an existing 7,500 gallon processing oil abandoned-in-place UST No. 4 located in an alley at the site. No additional work was required in the area of the excavation which contained a 10,000 gallon diesel fuel UST No. 3; please refer to Figure 2).

## FIELD WORK

Prior to conducting any field work activities TPE contacted Underground Service Alert to determine whether any subsurface obstructions were present in the vicinity of the proposed boring locations.

**Drilling and Sampling:**

On February 25 ,1991, four borings were drilled (CB-7 through CB-10). Borings CB-7 was a slant boring drilled immediately adjacent to the abandoned processing oil UST No. 4. This slant boring was drilled at approximately $12^{o}$ from the vertical to a depth of approximately 30 feet below grade. Borings CB-8 was drilled within the treated backfill material which contained UST No. 2 to a depth of approximately 30 feet below grade. CB-9 and CB-10 were drilled in the area formerly occupied by the UST No. 1 to depths of approximately 35 feet below grade (see Figure 2). All borings were drilled using a truck-mounted CME-75 drill rig equipped with eight-inch diameter continuous flight hollow stem augers, under the supervision of TPE geologists.

All borings were logged in accordance with the Unified Soil Classification System (see Attachment A). TPEs Site Health and Safety Plan was implemented during all field work activities.

Soil samples from borings CB-7 through CB-10 were obtained at approximately 5 feet below grade and at every 5 foot interval thereafter until termination depth. The samples were collected using six 2-inch diameter by 3-inch long brass tubes mounted within a Californian split-spoon sampler used in advance of the augers. Prior to sampling, the sampler and all brass tubes were washed in an aqueous solution of Alconox detergent, rinsed with tap water, and then rinsed with distilled water. After sample recovery, the lowermost brass ring from each sample interval was immediately end-wrapped with aluminum foil, polyethylene caps taped over the ends, labeled, placed into an ice chest chilled using frozen blue ice, and transported by a TPE vehicle to a State certified laboratory for analyses. The soil samples obtained from all borings were delivered to American Environmental Laboratories (AEL) located in Orange, California. All samples were logged on and accompanied by chain-of-custody record forms (see Attachment B).

A set of split samples were also obtained from borings CB-8 at 30 feet below grade and CB-9 at 35 feet below grade, at their respective termination depths. These two soil samples were requested by and relinquished to Mr. Dave Lobato from LACDPW.

A portable Flame-ionization Detector (FID) was used on the soil samples contained within the sampler at each sampling interval to monitor the volatile organic compounds (VOCs). Each sample was placed in an airtight "Ziploc" plastic bag. The samples were allowed to sit in the sun, and then the head space was monitored using the FID. No VOC readings were detected in any of the soil samples monitored (see Attachment A). Further, no soil contamination in any of the soil samples collected from borings was present based on visual evidence, FID monitoring, and lack of discoloration.

In all cases, the sampling equipment was decontaminated prior to each sampling. Auger flights were steam cleaned prior to drilling of each boring.

The drill cuttings generated during drilling borings CB-7 through CB-10 were placed and sealed in DOT approved 55-gallon drums and left on-site pending analytical results for appropriate disposal.

All borings were backfilled from total depth to surface grade using hydrated bentonite and then patched with asphalt.

**Site Geology:**

The subsurface conditions encountered in the soil borings is presented in Attachment A. The following is a summary of the soil types encountered.

In borings CB-7 the native soil horizon encountered consisted of a brown, fine grain size, poorly graded, loose, dry, micaceous-bearing silty sand. At approximately between 12 to 20 feet below grade, a brown, micaceous-bearing, dry sandy silt was present, with minor sand lenses.

The next soil horizons encountered in boring CB-7, at approximately 20 feet below grade consisted of a light grey to brown, fine to medium grain size, well to poorly sorted, loose, dry sands. These sandy horizons were present until termination depth at about 30 feet below grade.

Within borings CB-8 through CB-10 the initial soil encountered consisted of backfill material. The backfill material in these borings existed until depths of approximately 22 feet below grade. This fill material consisted of pea gravel with sand, poorly sorted gravelly sands, coarse grain sands and sandy silts with coarse grain size sand fraction. The native soil beneath the backfill material consisted of brown to grey, medium to coarse grain size, poorly sorted, loose, dry sand. No contamination (i.e.,

discoloration) was present based on field observation, and instrument readings.

Site Hydrogeology:

No groundwater was encountered during drilling activities at the site. According to LACDPW - Ground Water Records (Dora Herrera, personal communication, February 1991), the nearest well in the vicinity of the subject site is well #1587Y, located approximately 0.20 miles east of the site at an elevation of approximately 107 feet above mean sea level (MSL). The depth to groundwater based on measurement obtained on April 30, 1990, was approximately 97 feet below grade. The site elevation is at approximately 105 feet above MSL based on U.S.G.S. topographic map, Los Angeles Quadrangle. Based on interpretation and extrapolation of the well data at the subject site from the above referenced data, the groundwater depth may be encountered at approximately 95 feet below grade. The upper portion of the Gaspur water-bearing zone at the subject site is at approximately 60 feet below grade. This does not necessarily imply that the upper portion of this aquifer is saturated. Thus, the information obtained from well #1587Y will be used as the ground water depth for the site.

## ANALYTICAL RESULTS

The soil samples obtained from borings CB-7 through CB-10 were delivered to AEL for analyses, a California DOHS certified laboratory (Certification No. 1224) located in Orange, California. All samples were accompanied by proper chain of custody record forms (see Attachment B).

Soil samples obtained from borings CB-7 and CB-8 were analyzed for total petroleum hydrocarbons (TPH) using EPA Method 8015, modified for diesel.

The soil samples obtained from borings CB-9 through CB-10 were analyzed for TRPH using EPA Method 418.1. The results of the testing are shown in Table 1. The laboratory reports are contained in Attachment C.

**TABLE 1**

**CONCENTRATIONS OF TPH AND TRPH IN SOIL SAMPLES OBTAINED ON FEBRUARY 25, 1991**

Parts per Million (ppm)

Discussion:

General

Based on the LACDPW, USTLOP guidelines for report submittal issued in September 1990, the maximum acceptable level of contamination in

soil or ground water is determined on a site by site basis. For diesel and gasoline fuel contamination, most southern California regulatory agencies are following the guidelines contained in the "Leaking Underground Fuel Tank (LUFT) Field Manual", dated October 1990, prepared by the State Water Resources Control Board. According to Table 2-1, in the LUFT manual a calculation format may be used to determine that the TPH and BTXE concentrations could be left in place without threatening ground water. This calculation takes into account such factors as depth to ground water, average annual precipitation, subsurface fractures and man-made conduits. Given the conditions that presently exist at the site, i.e., sampling depth to ground water is at approximately 60 feet below grade, no fractures in subsurface, no man-made conduits, no unique site features, etc, the total score for the subject site obtained from Table 2-1 is 48 points, which indicates that the TPH concentrations (for diesel) may be left at the site is 1000 ppm. Table 2-1 is attached for reference.

Soil

The analytical results of the soil samples obtained from borings show that: 1) no detectable TPH concentrations were present in soil samples collected from borings CB-7 and CB-8; and 2) the samples obtained from borings CB-9 and CB-10 contained detectable concentrations of TRPH ranging from 25 ppm to 852 ppm.

Analytical results of soil samples from borings CB-9 indicated that detectable TPH concentration were present in samples collected at approximately 15, 25, and 35 feet below grade with concentrations of 745, 303, and 800 ppm, respectively.

Boring CB-9 was terminated at 35 feet below grade since no signs of contamination was present based on field instrumentation (see boring logs) and visual evidence (i.e., no discoloration or odor was encountered in this boring).

Based on the soil testing results from boring CB-10, only the samples obtained at 5, 10, and 15 feet below grade contained TRPH concentrations of 781, 25, and 852 ppm, respectively. No detectable TPH concentrations were present in the remaining soil samples obtained from this boring.

**Conclusions:**

Based on above discussion and the information contained herein the following are concluded:

- Based on Table 2-1 in LUFT manual, the maximum allowable level of TPH concentration that could be left in place is 1,000 ppm.
- The analytical results of all soil samples indicate that the TPH concentrations are less than 1000 ppm TPH);

- Ground water has not been encountered during drilling and sampling activities;

- The sample collected from boring CB-9 at approximately 35 feet below grade which contained 800 ppm (about 70 feet above MSL) is about 60 feet from ground water depth.

It is TPEs opinion that the data presented herein has characterized the treated backfill material within the excavations which contained UST NO. 2 and No. 4 and additional actions may not be warranted at this time. Further, the soil testing results obtained from boring CB-9 at termination depth indicates that contamination exists at about 35 feet below grade (800 ppm). Based on LUFT manual (Table 2-1), the contamination present may not pose a serious threat to ground water.

## LIMITATIONS

The findings and conclusions presented in this report were based solely upon the scope of work described above, upon our interpretation of the information described above, and are intended to address closure of the areas which contained UST No. 1 and No. 2, and the area which contains an abandoned-in-place UST No. 4 in accordance with the regulatory requirements.

This report should be used solely for its intended purpose and within the limitations of our scope of work. Prior to use for other than its intended purpose or beyond the limitations described herein, sufficient and thorough studies should be performed to confirm the findings presented in this report.

Changes in conditions at a property can occur with the passage of time whether they be due to acts of man or natural causes. In addition, the broadening of knowledge or legislative or regulatory actions relative to hazardous materials could result in varying standards concerning the presence of hazardous materials at the site.

If there are any questions or need additional information please call Anthony Lizzi at 714/282-5639. Thank you.

Respectfully submitted,

**TANK PROTECT ENGINEERING**

Mr. Raymond Ballenger
Kirkhill, Inc.
P.O. Box 7012
Downey, CA 90241-0030

Dear Mr. Ballenger:

**UST LOCAL OVERSIGHT PROGRAM REVIEW SHEET**
**HAZARDOUS MATERIALS UNDERGROUND STORAGE**
**CONFIRMATION PROPOSAL**
**CLOSURE PERMIT NOS. 5999B AND 6000B**
**FACILITY: 12021 WOODRUFF AVENUE, DOWNEY**

This office has reviewed the subject document(s) submitted on January 15, 1991, dated January 9, 1991. The comments in this letter must be addressed and submitted to this office by April 25, 1991.

The Confirmation Proposal has been reviewed and found adequate, and must incorporate the comment below. You may proceed with the plan as proposed.

> Boring B-7 should be drilled at the same angle and direction as the previously drilled borings B-5 and B-6. Samples must be taken and analyzed every five feet. The borings should extend at least ten feet below non-detectable levels. Detection limits for the lab analyses must comply with the Los Angeles County Guidelines.

You are cautioned that any contaminated soils or hazardous materials generated during the approved operation must be manifested and transported to a hazardous waste disposal facility as required by California Health and Safety Code, Division 20, Chapter 6.5, unless evidence is presented indicating that the material may be disposed of at a less restricted facility. Copies of all completed manifests shall be submitted to this office as part of the final report.

Notify Dave Lobato at (818) 458-4374 a minimum of 72 hours prior to commencing any significant investigation, remediation, or assessment activities on site. The Los Angeles County Department of Public Works may disregard the work performed if the County was not properly notified.

Correspondence should be submitted to the Los Angeles County Department of Public Works, UST Local Oversight Program, Annex Building, P. O. Box 1460, Alhambra, CA 91802-1460.

If you have any questions regarding this matter, please contact Scott Small at (818) 458-3996.

Very truly yours,

T. A. TIDEMANSON

**TABLE 2-1**

Table 2-1
Leaching Potential Analysis for Gasoline and Diesel
Using Total Petroleum Hydrocarbons(TPH)
and Benzene, Toluene, Xylene and Ethylbenzene (BTX&E)

The following table was designed to permit estimating the concentrations of TPH and BTX&E that can be left in place without threatening ground water. Three levels of TPH and BTX&E concentrations were derived (from modeling) for sites which fall into categories of low, medium or high leaching potential. To use the table, find the appropriate description for each of the features. Score each feature using the weighting system shown at the top of each column. Sum the points for each column and total them. Match the total points to the allowable BTX&E and TPH levels.

| SITE FEATURE | SCORE | SCORE 10 PTS IF CONDITION IS MET | SCORE | SCORE 9 PTS IF CONDITION IS MET | SCORE | SCORE 5 PTS IF CONDITION IS MET |
|---|---|---|---|---|---|---|
| Minimum Depth to Ground Water from the Soil Sample (feet) | | >100 | 9 | 51-100 | | 25-50\1 |
| Fractures in subsurface (applies to foothills or mountain areas) | 10 | None | | Unknown | | Present |
| Average Annual Precipitation (inches) | | <10 | 9 | 10-25 | | 26-40\2 |
| Man-made conduits which increase vertical migration of leachate | 10 | None | | Unknown | | Present |
| Unique site features: recharge area, coarse soil, nearby wells, etc | 10 | None | | At least one | | More than one |
| COLUMN TOTALS→TOTAL PTS | 30 | + | 18 | + | 0 | = 48 |
| RANGE OF TOTAL POINTS | 49pts or more | | 41 - 48 pts | | 40pts or less | |
| MAXIMUM ALLOWABLE B/T/X/E LEVELS (PPM) | 1/50/50/50 | | .3/.3/1/1 | | NA\3 | |
| MAXIMUM ALLOWABLE TPH LEVELS (PPM) GASOLINE | 1000 | | 100 | | 10 | |
| MAXIMUM ALLOWABLE TPH LEVELS (PPM) DIESEL | 10000 | | 1000 | | 100 | |

\1 If depth is greater than 5 ft. and less than 25 ft., score 0 points.
If depth is 5 ft. or less, this table should not be used.

\2 If precipitation is over 40 inches, score 0 points.

\3 Levels for BTX&E are not applicable at a TPH concentration of 10ppm (gasoline) or 100ppm (diesel) (For explanation see step 6, page 27.)

**SUBJECT: ADDITIONAL SITE ASSESSMENT FOR KIRKHILL, INC., 12021 WOODRUFF AVENUE DOWNEY, CALIFORNIA 90241 (FILE NO. I-12987-1F)**

Dear Mr. Small:

Tank Protect Engineering ("TPE") is pleased to submit this report on additional site assessment activities pursuant to a request from Los Angeles County, Department of Public Works, Waste Management Division ("LACDPW"), in order to define the extent of the contamination in the immediate vicinity of the removed 10,000 gallon underground naphthalene oil storage tank (UST) at the subject site (see Figures 1 and 2).

## BACKGROUND

On August 24, 1989, one (1) 10,000 gallon naphthalenic type processing oil UST (henceforth referred to as UST No. 1); and two (2) 10,000 diesel fuel USTs (henceforth referred to as USTs No. 2 and No. 3, respectively) were removed from the subject site.

Engr. Contr. Lic.#
489994

In or about October 1989, a 7,500 gallon diesel fuel UST located near the building, in an alley at the site was abandoned-in-place (henceforth referred to as UST No. 4); please refer to Figures 2 and 3.

Initial soil testing results indicated that contamination was present beneath the east end of the excavation which contained UST No. 1 and the west end of the excavation which contained UST No. 2. The testing results of the soil samples obtained beneath the former location of UST No. 3 indicated TPH concentrations less than 100 parts per million ("ppm"). UST No. 4 was abandoned in-place (please refer to TPEs closure and site remediation report dated February 26, 1990 for details).

In September 1989, a site assessment was conducted in the previous USTs No. 1 and No. 2 locations, and in the area of the abandoned-in-place UST No. 4 to investigate the extent of the soil contamination. No additional field work was required in the previous UST No. 3 location. Six borings were drilled (B-1 through B-6) and sampled to depths of approximately between 25 to 40 feet below grade. The soil testing results indicated that only the soil samples obtained from borings B-3, drilled to about 20 feet below grade, in the previous location of UST No. 2, and boring B-6 drilled immediately adjacent to the abandoned diesel fuel UST at about 20 feet below grade contained TPH concentrations greater than 100 ppm. No detectable TPH concentrations were present in the soil samples obtained at depths greater than 20 feet from boring B-6 drilled adjacent abandoned-in-place UST. Additional excavation work was completed beneath the former UST No. 2 location.

On October 31, 1989, verification soil samples were obtained from the bottom of the excavation which contained UST No. 2, and testing results indicated that no detectable TPH concentrations were present.

The naphthalenic type oil contaminated soil removed from the excavation which contained UST No. 1 were transported off-site to a disposal facility. Approximately 73 tons of soil was hauled off. The remaining contaminated soil was treated on-site using TPEs transportable treatment unit. The soil was mixed using hydrogen peroxide with silica catalyst. On November 22, 1989, following the treatment process, five soil samples were obtained from the stockpiled soil for verification of treatment process. The testing results indicated that the TPH concentrations were less than 100 ppm.

The excavations which contained the previous USTs were then backfilled with the treated soil and some imported material, and then compacted using standard procedures (please reference TPEEs UST Closure and Site Remediation Report dated June 5, 1990, and Addendum to Remedial Action Report dated October 19, 1990 for details).

Mr. S. Small
LACDPW
October 30, 1991

On February 25, 1991, two test borings CB-9 and CB-10 were drilled to depths of approximately 35 feet below grade within the excavation which previously contained a 10,000 gallon oil UST (UST No. 1).

Analytical results of soil samples from boring CB-9 indicated that detectable TRPH concentration were present in samples collected at approximately 15, 25, and 35 feet below grade with concentrations of 745, 303, and 800 ppm, respectively.

Based on the soil testing results from boring CB-10, only the samples obtained at 5, 10, and 15 feet below grade contained TRPH concentrations of 781, 25, and 852 ppm, respectively. No detectable TRPH concentrations were present in the remaining soil samples obtained from borings CB-9 and CB-10.

Based on the above results, LACDPW requested additional investigation be conducted in the area of the removed UST No. 1 to define the extent of the contamination.

## OBJECTIVE

The purpose of this site assessment was to investigate the area in and around the backfilled excavation pit area which previously contained UST No. 1 in order to define the extent of the TRPH contamination.

## FIELD WORK

### Drilling and Sampling:

On August 15, 1991, five test borings were drilled (CB-11 through CB-14, and CB-9A). All test borings were drilled in and around the area which formerly contained the 10,000 gallon UST. The borings were drilled to depths of approximately 50 feet below grade (see Figure 3). All borings were drilled using a truck-mounted CME-75 drill rig equipped with eight-inch diameter continuous flight hollow stem augers, under the supervision of TPE geologists. All borings were logged in accordance with the Unified Soil Classification System (see Attachment A).

TPEs Site Health and Safety Plan was implemented prior to and during all field work activities.

Soil samples from all borings (CB-11 through CB-14), except boring CB-9A, were obtained at approximately 5 feet below grade and at

every 5 foot interval thereafter until termination depth. Samples from boring CB-9A were collected at every 5 feet commencing at 30 feet below ground surface until termination depth. The samples were collected using six 2-inch diameter by 3-inch long brass tubes mounted within a Californian split-spoon sampler used in advance of the augers. Prior to sampling, the sampler and all brass tubes were washed in an aqueous solution of Alconox detergent, rinsed with tap water, and then rinsed with distilled water. After sample recovery, the lowermost brass ring from each sample interval was immediately end-wrapped with aluminum foil, polyethylene caps taped over the ends, labeled, placed into an ice chest chilled using frozen blue ice, and transported by a TPE vehicle to State certified laboratories for analyses. The soil samples obtained from all borings were delivered to American Environmental Laboratories ("AEL") and to Chemtek, Inc. located in located in Orange and Santa Fe Springs, California, respectively. All samples were logged on and accompanied by chain-of-custody record forms (see Attachment B).

The drilling activities of boring CB-9A were witnessed by Mr. Dave Lobato with LACDPW.

A Baccharach Sniffer Model No. 503A was used on the soil samples contained within the sampler at each sampling interval to monitor the volatile organic compounds ("VOCs"). Each sample was placed in an airtight "Ziploc" plastic bag. The samples were allowed to sit in the sun, and then the head space was monitored using the FID. No VOC readings were detected in any of the soil samples monitored (see Attachment A). Further, no soil contamination in any of the soil samples collected from borings was present based on visual evidence, instrument monitoring, and lack of discoloration. A very dark grey organic soil type was encountered in all borings at about 35 to 45 feet below grade (see Attachment A for boring log descriptions).

In all cases, the sampling equipment was decontaminated prior to each sampling interval. Auger flights were steam cleaned prior to drilling of each boring. The water effluent was stored in 55-gallon drums. A water sample (W-1) was collected from the drums for TPH and BTXE testing. The sample was sealed in two 40 ml VOA vials. No detectable TPH or BTXE concentrations were present in the water sample (see Attachment C for laboratory reports).

The drill cuttings generated during drilling all borings were placed and sealed in DOT approved 55-gallon drums and left on-site pending analytical results for appropriate disposal.

All borings were backfilled from total depth to surface grade using

hydrated bentonite and then patched with asphalt.

**Site Geology:**

The subsurface conditions encountered in the soil borings is presented in Attachment A. The following is a summary of the soil types encountered.

In all borings the soil was covered by a 3-inch layer of asphalt.

Within borings CB-9A the initial soil encountered consisted of backfill material. The backfill material in this boring existed until depths of approximately 23 feet below ground surface ("bgs"). This fill material consisted of a brown, dry sandy silt with minor sand.

In the remaining borings the native soil horizon encountered consisted of a brown to grey-brown, dry, micaceous-bearing sandy silt/silt and clayey silt to a depth of approximately 18 feet bgs.

The next soil horizon encountered in all borings, at approximately 18 feet below grade consisted of a brown to grey, medium grain size, moderately sorted, loose, dry sands. These sandy horizons were present until about 28 feet bgs.

At approximately 28 feet bgs, the soil horizon consisted of a light to medium grey, medium to coarse grain size, poorly sorted, loose, dry sand.

At approximately between 35 to 39 feet bgs the next soil type encountered was a grey to dark grey, compact, micaceous-bearing, cohesive, moderate to highly plastic, dry to slightly moist clayey silt and/or silty clay. These soil horizons were present to a depth of approximately 47 feet bgs and possessed a dark appearance consisting of organic matter.

At about 47 feet bgs to termination depth of about 50 feet bgs, the soil consisted of grey, coarse grain size, poorly sorted, loose, slightly moist, sand with some pebbles present.

**Site Hydrogeology:**

No groundwater was encountered during drilling activities at the site. According to LACDPW - Ground Water Records (Dora Herrera, personal communication, September 1991), the nearest well in the vicinity of the subject site is well #1587Y, located approximately 0.20 miles east of the site at an elevation of approximately 107 feet above mean sea level (MSL). The depth to groundwater based on

measurement obtained on April 30, 1991, was approximately 103.3 feet below grade. The site elevation is at approximately 105 feet above MSL based on U.S.G.S. topographic map, Los Angeles Quadrangle. Based on interpretation and extrapolation of the well data at the subject site from the above referenced data, the groundwater depth may be encountered at approximately 95 feet below grade. The upper portion of the Gaspur water-bearing zone at the subject site is at approximately 60 feet below grade. This does not necessarily imply that the upper portion of this aquifer is saturated. Thus, the information obtained from well #1587Y will be used as the ground water depth for the site.

## ANALYTICAL RESULTS

The soil samples obtained from all borings were delivered to AEL and Chemtek, Inc. for analyses, both California DOHS certified laboratories (Certification Nos. 1580 and 1435, respectively). All samples were accompanied by proper chain of custody record forms (see Attachment B).

The soil samples obtained from all borings were analyzed for TRPH using EPA Method 418.1. The results of the testing are shown in Table 1. The laboratory reports are contained in Attachment C.

## DISCUSSION

Based on the analytical results of soil samples collected from the tank removal on September 26, 1989 and from the test borings conducted on February 25, and August 15, 1991, the TRPH concentrations discovered around the previous naphthalene type oil tank are summarized as follows:

**TABLE 2**

**SUMMARY OF TRPH CONCENTRATIONS DISCOVERED AROUND THE EXCAVATION PIT AREA OF UST NO. 1**

Parts per Million (ppm)

| Sampling Depth | UST Removed on 09-26-89 | Borings Drilled on 02-15-91 CB-9 | CB-10 | 08-15-91 CB-9A | CB-11 | CB-12 | CB-13 | CB-14 |
|---|---|---|---|---|---|---|---|---|
| 5′ | | ND* | 781 | | 252 | 11.1 | ND | ND |
| 10′ | | ND | 25 | | 183 | 138 | ND | ND |
| 15′ | 10 | 745 | 852 | | ND | ND | 29 | ND |
| 20′ | | ND | ND | | 315 | ND | ND | 85 |
| 25′ | | 303 | ND | | ND | ND | ND | ND |
| 30′ | | ND | ND | 28 | ND | ND | ND | ND |
| 35′ | | 800 | ND | ND | 12.1 | ND | ND | ND |
| 40′ | | | | ND | ND | ND | ND | 72 |
| 45′ | | | | ND | ND | ND | ND | 76 |
| 50′ | | | | ND | ND | ND | ND | ND |

* ND = Not Detected.

The location of each boring is shown in Figure 3. The boring CB-9A was drilled immediately next to the boring CB-9 to verify the contamination (800 ppm TRPH) discovered at the completion depth of about 35 bgs in boring CB-9. Based on the analytical results of soil samples collected from the boring CB-9A (all less than 100 ppm), it seems that the 800 ppm TRPH concentration discovered in boring CB-9 may belong to an independent contamination pocket (i.e., localized).

Also, according to the tank closure report, it is indicated that the excavation was completed at 25 feet below ground surface in the previous tank pit. It is obvious that the concentration of 800 ppm TRPH has not originated from the backfill soil.

Mr. S. Small
LACDPW
October 30, 1991

The site assessment has adequately defined the possible contamination left on the job site after the UST removal. The soil contamination may have resulted from the leakage of the previous naphthalene oil UST No. 1. The major components in the naphthalene type oil consists promarily of naphthenic and paraffinic petroleum hydrocarbons, according to the MSDS data sheet included in the tank closure report.

Based on the LACDPW, USTLOP guidelines for report submitted issued in March 1991, the maximum acceptable level of contamination in soil or groundwater is determined on a site by site basis. According to the Table 2-1 of LUFT manual (October, 1989), given the conditions that presently exist at the site, i.e.,

Sampling depth to groundwater - 45 feet;
No fractures in subsurface;
No man-made conduits; and
No unique site feature.

The total score for the subject site obtained from Table 2-1 is 44 points, which indicates that the TPH concentrations (for diesel) which may be left in place at the site is 1,000 ppm (see Attached Table). However, the Table 2-1 was developed for the diesel and gasoline fuel contamination. Since the naphthenic and paraffinic petroleum hydrocarbons (naphthalene oil) are heavier hydrocarbon compounds and, are less mobile and volatile than diesel, the Table 2-1 could be applicable to the leaching potential analysis for naphthalene type oil contamination. Also, it should be noted that all soil samples were analyzed for TRPH by EPA Method 418.1 which detects all hydrocarbon compounds containing carbon chain higher than C12.

The area which previously contained the UST No. 1 is protected against leaching since the area is paved with asphalt and used as a parking lot. In consideration of the four potential exposure pathways, namely: eye contact, skin absorption, inhalation and ingestion, the probability of the abovementioned routes of exposure for the contaminated soil is minimal to humans and/or animals.

## CONCLUSIONS

Based on above discussion and the information contained herein the following are concluded:

- Based on Table 2-1 in LUFT manual, the maximum allowable level of TPH concentration that could be left in place is 1,000 ppm;

- The analytical results of all soil samples indicate that the TRPH concentrations are less than 1,000 ppm;

- Ground water has not been encountered during drilling and sampling activities. The groundwater depth is approximately 95 feet below ground at the site (45 feet from sampling depth); and

- The site assessment has completely defined the contamination left after the UST removal. Based on the naphthalene oil characters and site situations, it is TPE's opinion that the contamination present may not pose a threat to groundwater and additional actions may not be warranted at this time.

TPE suggests that a meeting be scheduled at your facility with yourself, Mr. Dave Lobato and TPE personnel to discuss the site closure.

## LIMITATIONS

The findings and conclusions presented in this report were based solely upon the scope of work described above, upon our interpretation of the information described above, and are intended to address closure of the areas which contained UST No. 1 and No. 2, and the area which contains an abandoned-in-place UST No. 4 in accordance with the regulatory requirements.

This report should be used solely for its intended purpose and within the limitations of our scope of work. Prior to use for other than its intended purpose or beyond the limitations described herein, sufficient and thorough studies should be performed to confirm the findings presented in this report.

Changes in conditions at a property can occur with the passage of time whether they be due to acts of man or natural causes. In addition, the broadening of knowledge or legislative or regulatory actions relative to hazardous materials could result in varying standards concerning the presence of hazardous materials at the site.

Mr. S. Small
LACDPW
October 30, 1991

If there are any questions or need additional information please call the undersigned at 714/282-5639.

Respectfully submitted,

**TANK PROTECT ENGINEERING**

**TABLE 2-1**

Table 2-1
Leaching Potential Analysis for Gasoline and Diesel
Using Total Petroleum Hydrocarbons(TPH)
and Benzene, Toluene, Xylene and Ethylbenzene (BTX&E)

The following table was designed to permit estimating the concentrations of TPH and BTX&E that can be left in place without threatening ground water. Three levels of TPH and BTX&E concentrations were derived (from modeling) for sites which fall into categories of low, medium or high leaching potential. To use the table, find the appropriate description for each of the features. Score each feature using the weighting system shown at the top of each column. Sum the points for each column and total them. Match the total points to the allowable BTX&E and TPH levels.

| SITE FEATURE | SCORE | SCORE 10 PTS IF CONDITION IS MET | SCORE | SCORE 9 PTS IF CONDITION IS MET | SCORE | SCORE 5 PTS IF CONDITION IS MET |
|---|---|---|---|---|---|---|
| Minimum Depth to Ground Water from the Soil Sample (feet) | | >100 | | 51-100 | 5 | 25-50\1 |
| Fractures in subsurface (applies to foothills or mountain areas) | 10 | None | | Unknown | | Present |
| Average Annual Precipitation (inches) | | <10 | 9 | 10-25 | | 26-40\2 |
| Man-made conduits which increase vertical migration of leachate | 10 | None | | Unknown | | Present |
| Unique site features: recharge area, coarse soil, nearby wells, etc | 10 | None | | At least one | | More than one |
| COLUMN TOTALS→TOTAL PTS | 30 | + | 9 | + | 5 | = 44 |
| RANGE OF TOTAL POINTS | 49pts or more | | 41 - 48 pts | | 40pts or less | |
| MAXIMUM ALLOWABLE B/T/X/E LEVELS (PPM) | 1/50/50/50 | | .3/.3/1/1 | | NA\3 | |
| MAXIMUM ALLOWABLE TPH LEVELS (PPM) GASOLINE | 1000 | | 100 | | 10 | |
| MAXIMUM ALLOWABLE TPH LEVELS (PPM) DIESEL | 10000 | | 1000 | | 100 | |

\1 If depth is greater than 5 ft. and less than 25 ft., score 0 points.
If depth is 5 ft. or less, this table should not be used.

\2 If precipitation is over 40 inches, score 0 points.

\3 Levels for BTX&E are not applicable at a TPH concentration of 10ppm (gasoline) or 100ppm (diesel) (For explanation see step 6, page 27.)

RECEIVED
FEB 10 1992
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION

Attention: Mr. Scott Small

Reference: (a) Los Angeles County Department of Public Works Letter dated December 4, 1991

**SUBJECT: WORK PLAN FOR CONFIRMATION BORING Kirkhill, Inc. 12021 Woodruff Avenue, Downey, California 90241 (FILE NO. I-12987-1F)**

Dear Mr. Small:

Per our telephone conversation on January 27, 1992, Tank Protect Engineering ("TPE") submits this work plan to further investigate the area between previously drilled borings CB-10 and CB-11 around the excavation which used to contain one (1) 10,000 naphthalenic-type processing oil underground storage tank (UST). This additional work is being requested by the Los Angeles County Department of Public Works, Waste Management Division, Local Oversight Program ("LACDPW") in Reference (a) in order to determine whether the hydrocarbon contamination exists around the southeast corner of the excavation which previously contained the 10,000 gallon UST at the subject site (see Figure 1).

In response to the four items of concern addressed in Reference (a), the following information is presented:

1) As we discussed, it is our understanding that a Remedial Action Plan is not warranted at the present time.

2) The additional work for an additional test boring is described in the proposed workplan below. Figure 2 illustrates a cross-section which shows the subsurface conditions encountered in the borings along with the total petroleum hydrocarbon ("TPH") contaminant levels detected at each sampling interval, based on 100 ppm TPH concentration contour. The isolated "plumes" seem to be very discontinuous and quite uncommon to occur under natural conditions within the same soil lithology. The "plumes" do not continually extend laterally nor vertically.

3) In response to the item No. 3, "...Specify the location and reason why this sample was obtained". TPEs Site Assessment report dated October 30, 1991, clearly states that the water sample was obtained from the steam cleaning effluent which was stored in a drum. This water sample was collected for analysis to determine whether the rinseate should be disposed of to a recycling facility if it contained dissolved TPH and BTXE contaminants.

The analytical report of the water sample obtained from the rinseate indicated non-detection for TPH at a detection limit of 0.5 ppm and for BTE and xylenes at detection limits of 0.3 ppb amd 0.6 ppb, respectively. This may provide additional evidence that the soil is probably not contaminated based on the testing results of rinse water generated from the steam cleaning activities of the drilling augers.

4) Pursuant to our telephone conversation TPE is proposing to test the soil samples for TPH using EPA Method 8015, with full carbon range analysis, which characterizes the entire hydrocarbon chain spectrum (gas, diesel to oil and grease) in lieu of using EPA Method 418.1. Analyzing future samples for Polynuclear Aromatic Hydrocarbons ("PNA") using EPA Method 8100 is a more suitable testing method. Naphthalene typically consists of hydrocarbon chain, $C_{10,}$ which is a medium boiling hydrocarbon within a low end diesel fuel range. Further, it was agreed that only the sample collected from boring with the highest TPH concentration will be tested for BTXE.

The purpose of this workplan is to determine whether contamination actually exists or whether it is attributed to organic matter in the soil in the area formerly occupied by the 10,000 gallon UST.

This Work Plan is being submitted to the LACDPW for review and approval.

## PROPOSED SCOPE OF WORK

The following outlines the proposed field work activities to be conducted in the area which previously contained a 10,000 gallon UST at the subject site:

**Task 1** - Drilling of one (1) vertical soil boring to a depth of approximately 30 feet below grade. Proposed boring will be drilled in between previously drilled borings CB-10 and CB-11. The proposed boring location is shown in Figure 1. The boring will be drilled using a truck-mounted drill rig equipped with either eight or ten-inch

diameter continuous flight hollow stem augers, under the super- vision of TPE geologists. The boring will be logged in accordance with the Unified Soil Classification System. TPEs Health and Safety Plan procedures will be implemented prior to and during all field work activities associated with this project. A copy of this plan will be left on-site (see Attachment A).

**Task 2 -** Obtain soil samples from boring at approximately 5 feet below grade and every 5-foot intervals thereafter until termination depth. In the event that contamination is still present at the termination depth, based on visual evidence and instrument field screening, then the boring will be advanced an additional 10 feet. The samples will be collected using 2.5-inch diameter by 3-inch long brass tubes mounted within a Californian split-spoon sampler used in advance of the augers. Prior to sampling, all brass tubes will be washed in an aqueous solution of Alconox detergent, rinsed with tap water, and then triple rinsed with distilled water. After sample recovery, the lowermost brass ring from each sample interval will be immediately end-wrapped with aluminum foil, polyethylene caps taped over the ends, labeled, placed into an ice-chest chilled using frozen blue ice, and transported by a private vehicle to a State Certified Laboratory. All samples will be logged on and accompanied by a chain-of-custody record form.

A portable Flame-ionization Detector calibrated against hexane or similar equipment will be used on the soil samples contained within the sampler at each sampling interval within the boring to monitor the volatile organic compounds (VOCs) which are being emitted directly from the soil (if any). No VOC concentrations were ever detected in the soil samples from previous drilled borings.

In all cases, the sampling equipment will be decontaminated prior to each sampling. Clean auger flights will be used for the boring.

**Task 5 -** The drill cuttings generated during drilling of boring will be placed and sealed in DOT approved 55-gallon drums and left on-site pending analytical results for appropriate disposal.

**Task 6 -** All of soil samples obtained from proposed boring will be analytically tested for total petroleum hydrocarbons

(TPH) using modified EPA Method 8015 full hydrocarbon chain, for PNA using EPA Method 8100. The sample with the highest TPH concentration will be analyzed for BTXE.

**PROPOSED PROCEDURE**

After review and approval of this plan by the LACDPW, the procedures to be implemented will be as follows:

- Contact and notify LACDPW at least seventy-two (72) hours prior to initiating any field work activities;
- Drill, sample and test the soil sample(s) for TPH, PNA and BTXE; and
- Evaluate data and prepare a report describing our procedures and findings.

TPE has not received a copy of the latest correspondence letter from LACDPW, dated December 4, 1991. TPE would appreciate if LACDPW can forward copies of any future correspondence regarding the subject site to our office.

If there are any questions or need additional information please call the undersigned at 714/282-5639.

Respectfully submitted,

**TANK PROTECT ENGINEERING**

(b) Tank Protect Engineering Work Plan for Confirmation Boring dated February 5, 1992

**SUBJECT: REVISED WORK PLAN FOR CONFIRMATION BORING**
**Kirkhill, Inc. 12021 Woodruff Avenue, Downey, California 90241**
**(FILE NO. I-12987-1F)**

Dear Mr. Proano:

Pursuant to the conclusion of our meeting on April 6, 1992, Tank Protect Engineering ("TPE") is pleased to submit this revised work plan for further site and risk assessment at the subject site. This revised work plan will replace the previous work plan addressed in Reference (b).

## REVISED SCOPE OF WORK

As discussed in the meeting, TPE will drill two 30 foot depth borings between a previous naphthalenic-type processing oil underground storage tank (UST) and the property line to define the extent of contamination and characterize the contaminants. Also a risk assessment will be conducted to evaluate hazardous potential of the contaminant to human and animals. The following outlines the revised scope of work for the subject site:

1. Site Assessment

Two soil borings (FB-1 &FB-2) will be drilled around the area of the previous naphthalenic-type processing oil UST. The location of two borings are shown in the attached Figure 1.

Each borings will be drilled down to 30 feet below grade

• 1071 N. Batavia
Orange, CA 92667
714/282-5635
800/464-TANK
FAX: 714/282-5644

• 1963 N. Main St.

using a truck-mounted drill rig equipped with eight or ten inch diameter continuous flight hollow stem augers. Soil samples will be obtained every 5-foot interval starting 5 feet below grade until the termination depth. In the event that contamination is still present at the termination depth, based on visual evidence and instrument field screening, then the boring will be advanced an additional 10 feet.

The samples will be collected using 2.5-inch diameter by 3-inch long brass tubes mounted within a Californian split-spoon sampler used in advance of the augers. Prior to sampling, all brass tubes will be washed in an aqueous solution of Alconox detergent, rinsed with tap water, and then triple rinsed with distilled water. After sample recovery, the lowermost brass ring from each sample interval will be immediately end-wrapped with aluminum foil, polyethylene caps taped over the ends, labeled, placed into an ice-chest chilled using frozen blue ice, and transported by a private vehicle to a State Certified Laboratory. All samples will be logged on and accompanied by a chain-of-custody record form.

A portable flame-ionization detector or photo-ionization detector calibrated against hexane or similar equipment will be used on the soil samples contained within the sampler at each sampling interval within the boring to monitor the volatile organic compounds (VOCs).

The sampling equipment will be decontaminated prior to and between each sampling. The drilling augers will be environmentally cleaned before the drilling process.

The soil cuttings generated during drilling will be placed and sealed in DOT approved 55-gallon drums and left on-site pending analytical results for appropriate disposal.

The soil samples will be analyzed by EPA Method 8015 for total petroleum hydrocarbon (TPH) with full hydrocarbon chain analysis and by EPA Method 8100 for polynuclear aromatics hydrocarbon (PNA). The sample of the highest TPH concentration will also be analyzed by EPA Method 8020 for benzene, toluenes, ethylbenzene and xylenes (BTEX).

2. Risk Assessment

As we discussed in the meeting, TPE will conduct a full-scale risk assessment for the subject site. The risk assessment includes the following outlines:

* Chemical characterization of the UST site

* Characterization of chemical concerns
    - Transport and fate evaluation
    - Hazard evaluation

* Exposure assessment
  - Eye contact
  - Skin contact
  - Inhalation
  - Ingestion

* Risk evaluation

Based on the above findings, the risk assessment report will evaluate the potential risks caused by the chemical to human and animals and finalize the conclusions.

**PROPOSED PROCEDURE**

After approval of this revised plan by the LACDPW, the procedures to be implemented will be as follows:

- Contact and notify LACDPW at least seventy-two (72) hours prior to initiating any field work activities;
- Drill, sample and test the soil sample(s) for TPH, PNA and BTXE; and
- Prepare the site and risk assessment report.

The same health and safety plan proposed in Reference (b) will be conducted for the site assessment. If there are any questions or need additional information please call the undersigned at 714/282-5639.

Respectfully submitted,

**Subject:** **FINAL CONFIRMATION BORINGS REPORT**
**Kirkhill, Inc.**
**12021 Woodruff Avenue**
**Downey, California 90241**
**(File No. I-12987-1F)**

Dear Mr. Proano:

Pursuant to Tank Protect Engineering's ("TPE's") revised workplan and your review sheet referenced above, TPE conducted the final confirmation borings, soil sampling and analyses between July 7 and July 24, 1992.

In accordance with the workplan, a total of 12 samples from two 30-foot soil borings were collected and analyzed for total recoverable petroleum hydrocarbons (TRPH) using EPA Method 418.1, for benzene, toluene, xylenes and ethylbenzene (BTXE) using EPA Method 8020, and for polynuclear aromatic hydrocarbons (PAHs) using EPA Method 8100. The soil samples indicated TRPH concentrations ranging from non-detectable (<10 parts per million (ppm)) to 91 ppm, and non-detectable (ND) levels of BTXE (<0.001 ppm) and PAHs (<0.005 ppm).

In addition to the soil sample analyses, a liquid sample of Edgiflex-200® (source liquid) provided by Kirkhill, Inc. was analyzed for aromatic compounds (BTXE) using EPA Method 8020 and for PAHs using EPA Method 8100. The source liquid samples indicated non-detectable levels of targeted compounds. According to the reasoning provided by the analytical laboratory (refer to Appendix A), the lowest detection limits that could be achieved without sacrificing the accuracy of the method for analyzing Edgiflex-200 was 1 ppm for BTXE and 50 ppm for PAHs. The analytical laboratory also indicated that the compound has a carbon range which will match the diesel or heavier range.

• 1071 N. Batavia
Orange, CA 92667

Orange, CA 92665

• 3050 Fite Circle
Suite 108
Sacramento, CA 95827

Engr. Contr. Lic.#
489994

An inquiry to the supplier and manufacturer of Edgiflex-200 to better define the chemical composition of the compound revealed the following:

"Edgiflex-200 general use oil was a blend of two oils each carefully refined from segregated, single source, virgin crude. The Edgiflex series oils were considered specialty products by Edgington. Edgiflex-200 was not, nor did it contain, reused petroleum oils or substances thought to be 'toxic'. Its boiling range was typically 550°F to above 900°F. This boiling range effectively excludes BTXE compounds.

"The flash point of Edgiflex-200 is well over 300°F, making the product safe at ambient and most elevated temperatures."

According to the president of Kirkhill, Inc., Mr. Gary Riopelle, "Edgiflex-200 was used by Kirkhill and other rubber manufacturers in the compounding of gaskets and washers for use with potable water in industry and homes."

No aromatics (BTXE) or PAHs were detected either in the soil samples collected at the site or in the source liquid that warrants a toxicologic risk assessment. Therefore, risk assessment to determine the acute or chronic toxic affects could not be performed for the site.

The UST under question was used to store Edgiflex-200. According to the MSDS sheet of the stored product, the common name is Naphthenic-type oil, generic name is Naphthenic distillate, chemical name is Petroleum Distillate, chemical family name is Petroleum Hydrocarbon and DOT proper shipping name is Petroleum Distillate. The product ingredients are a complex mixture of naphthenic, paraffinic and aromatic petroleum hydrocarbons.

In the past correspondence regarding the project, Los Angeles County Department of Public Works, Waste Management Division, UST Local Oversight Program (the County) expressed or implied that Edgiflex-200 contained naphthalene. Due to typographical errors made by TPE in past reports, TPE referenced 'naphthalene'. However, it is clarified that based on the available information on the compound, Edgiflex-200 contained **no** naphthalene.

The maximum TRPH detected and left in-place near the underground storage tank (UST) in question to date are 852 ppm at a depth of 15 feet below ground surface. Assuming that the Edgiflex-200 contained hydrocarbons in the range of diesel or heavier, and according to the leaching potential analysis conducted for the site (please refer to TPE reports dated June 5, 1990, April 15, 1991 and October 30, 1991), a total of 1,000 ppm of diesel could be left in-place. Therefore, it is requested that the County allow Kirkhill to leave the maximum detected 852 ppm of TRPH detected in a soil sample at 15 feet below ground surface (BGS) be left-in place and the site file be closed.

Following are the details on the field procedures and findings of the site assessment.

## DRILLING AND SOIL SAMPLING

Per the revised workplan and the County approved sampling locations, on July 14, 1992, TPE supervised drilling two 30-foot depth borings near the former Edgiflex-200 (naphthenic-type oil) UST using a mobile B-53 drill rig. Please refer to Figure 1 for the sampling locations.

As described in the workplan, soil samples were properly collected at five-foot intervals starting from five feet below ground surface (BGS) until the termination depth. Based on the field indications such as visual observations and field screening instrument (Flame Ionization Detector (FID)) readings, evidence of contamination was not observed. Therefore, drilling and sampling past 30 feet BGS in each boring was discontinued. Bore logs prepared for the site based on the soil sample description are provided in Appendix B.

According to the workplan, soil samples were collected using 2.5-inch-diameter by 3-inch-long brass tubes mounted within a Californian split-spoon sampler used in advance of the augers. Prior to sampling, all brass tubes were washed in an aqueous solution of Alconox detergent, rinsed with tap water, and then triple rinsed with distilled water. After sample recovery, the lowermost brass ring from each sample interval was immediately end-wrapped with aluminum foil, polyethylene caps taped over the ends, labeled, placed into an ice chest chilled using frozen blue ice, and relinquished to Redi Express, Rancho Cucamonga, CA, a courier service, to transportation to Applied P & Ch Laboratory (APCL), Pomona, CA, a State-certified laboratory. All the samples were logged and accompanied by a chain-of-custody record form.

A portable flame-ionization detector (FID) calibrated against hexane was used on the soil samples contained within the sampler at each sampling interval within the boring to monitor the volatile organic compounds (VOCs).

The sampling equipment was decontaminated prior to and between each sampling. The drilling augers were environmentally cleaned before the drilling process.

The soil cuttings generated during drilling were placed and sealed in four 17H DOT-approved 55-gallon drums. Based on the analytical results of the soil samples, it is determined that the soil cuttings could be disposed of by handling as a non-hazardous material.

## SAMPLE ANALYSES

According to the County review sheet on the workplan and a telephone conversation with Mr. Ofari Amoah on July 15, 1992, all twelve soil samples collected from the two borings were analyzed for TRPH using EPA Method 418.1. All samples with detectable TRPH were analyzed for BTXE using EPA Method 8020. One soil sample from each boring with highest TRPH was analyzed for PAHs using EPA Method 8100. In addition, a sample of the source liquid (Edgiflex-200) supplied by Kirkhill, Inc. was analyzed for BTXE and PAHs using EPA Method 8100. A summary of the analytical results is provided in Table 1. Copies of detailed analytical result reports and chain-of-custody record are provided in Appendix C. Per Mr. Amoah's request, a copy of the SDOHS certification on the methods to be performed at APCL are also provided in Appendix C.

TABLE 1: SUMMARY OF SAMPLE (COLLECTED ON 7/14/92) ANALYSES

| SAMPLE # | TRPH (mg/kg) | BTXE ug/kg | PAHs ug/kg |
|---|---|---|---|
| FB-1/5' | 13 | ND | ND |
| FB-1/10' | ND | - | - |
| FB-1/15' | 17 | ND | - |
| FB-1/20' | ND | - | - |
| FB-1/25' | 21 | ND | - |
| FB-1/30' | 25 | ND | ND |
| FB-2/5' | ND | - | - |
| FB-2/10' | 13 | ND | - |
| FB-2/15' | ND | - | - |
| FB-2/20' | 21 | ND | - |
| FB-2/25' | 91 | ND | ND |
| FB-2/30' | ND | - | - |
| Edgiflex-200* | - | ND* | ND* |
| DETECTION LIMIT | 10 | 1 | 50 |

* = Measurements are in mg/L. ND = Not detected - = Not analyzed

As shown in the table, the soil samples indicated TRPH concentrations in the range of ND (< 10 ppm) and 91 ppm. None of the samples indicated detectable levels of either BTXE or PAHs.

## RISK ASSESSMENT

As proposed in the revised workplan, a full-scale risk assessment for the subject site could not be conducted, as there were no detectable levels of suspected toxic chemicals in the subsurface soil or the source liquid (Edgiflex-200). However, based on the previously conducted leaching potential analysis, it is TPE's opinion that the maximum concentration of 852 ppm TRPH previously discovered in the previous investigation at the site could be left in-place.

## NOTIFICATION PROCEDURES

Upon obtaining the County review sheet on the TPE revised workplan, Kirkhill, Inc. authorized TPE to proceed with the plan in first week of July to implement the plan. Per the requirement, TPE notified Mr. Dave Lobato at (818) 458-4374 on the site assessment on July 8, 1992.

## SITE HEALTH AND SAFETY PLAN

The health and safety plan prepared for the site was implemented during the site assessment. Air monitoring near the drilling operations did not warrant level "C" personnel protection. Therefore the assess-

ment was conducted under level "D" protection. A statement on the health and safety plan implementation and compliance from the site personnel is provided in Appendix D.

## CLOSURE

It is TPE's opinion that the information provided in this report and in the previous site assessment conducted at the site adequately defines the problem and there is no imminent threat to environment or human health based on the compounds discovered near the location of the site under investigation. Therefore, it is requested that the County allow the maximum detected 852 ppm of TRPH be left in-place and to close the subject site file.

## LIMITATIONS

This report should be used solely for its intended purpose and within the limitations of our scope of work. Prior to use for other than its intended purpose or beyond the limitations described herein, sufficient and thorough studies should be performed to confirm the findings presented in this report.

Changes in conditions at a property can occur with the passage of time whether they be due to acts of man or natural causes. Due to increased knowledge, concerning hazardous materials, and subsequent code alterations by legislative or regulatory agencies, standards concerning the presence of hazardous material on the site could change.

If you have any questions and/or need further information, regarding this matter, please feel free to contact the undersigned.

Respectfully submitted,

**TANK PROTECT ENGINEERING**

Re: Laboratory Analyses

Dear Mr. Pendurthi:

Our analysis for your sample EDGIFLEX-200 from Kirkhill, Inc. indicates that the sample is diesel fuel or a type of lubrication oil. The sample is a mixture of organics (hydrocarbons) which mask the presence of polynuclear aromatic hydrocarbons (PAH). As a result, it cannot be concentrated to achieve a lower detection limit and, in fact, has to be diluted in order to get the response to your sample into the operating range of the GC. Consequently, we have 50ppm of MDL for your sample EDGIFLEX-200.

Sincerely,

George Zhou, Ph.D.
Service Manager
Applied P & Ch Laboratory

## DEPARTMENT OF PUBLIC WORKS

900 SOUTH FREMONT AVENUE
ALHAMBRA, CALIFORNIA 91803-1331
Telephone: (818) 458-5100

THOMAS A. TIDEMANSON, Director

ADDRESS ALL CORRESPONDENCE TO:
P.O.BOX 1460
ALHAMBRA, CALIFORNIA 91802-1460

May 12, 1992

IN REPLY PLEASE REFER TO FILE. I-12987

Mr. Ray Ballenger
Kirkhill, Inc.
P. O. Box 7012
Downey, CA 90241-0030

Dear Mr. Ballenger:

**UST LOCAL OVERSIGHT PROGRAM REVIEW SHEET**
**CLOSURE PERMIT NO. 5999B**
**LOCATION: 12021 WOODRUFF AVENUE, DOWNEY**

The proposal to drill additional borings has been reviewed and approved. Borings must be drilled to 30 feet at the locations shown in the attached plot plan. If contamination is encountered at 30 feet borings must be drilled to five and 15 feet below the last detected contamination. Analyze all soil samples collected at every five feet using a State certified laboratory. Using the highest levels of total recoverable petroleum hydrocarbons by EPA 418.1 Method, analyze for naphthalene using EPA methods 8100 and 8020. As discussed at the meeting of April 6, 1992 based on the highest levels of contamination prepare a health-based risk assessment report demonstrating that the contaminants left in place will not cause a threat to human health and/or groundwater.

Use all necessary precautions and comply with all NIOSH requirements of Health and Safety for the protection of all personnel during the drilling operations.

Submit a Site Assessment Report and Risk Assessment Report on/before July 30, 1992.

Notify Dave Lobato at (818) 458-4374 a minimum of 72 hours prior to commencing any significant investigation, remediation, or assessment activities on site. The Los Angeles County Department of Public Works may disregard the work performed if the County was not properly notified.

Correspondence should be submitted in duplicate to the Los Angeles County Department of Public Works, UST Local Oversight Program, Annex Building, P. O. Box 1460, Alhambra, CA 91802-1460.

If you have any questions regarding this matter, please contact Ofori Amoah at (818) 458-3573.

Very truly yours,

T. A. TIDEMANSON
Director of Public Works

Our Environmental Lien and AUL report provides a summary of recorded information on a specific property from the time the current owner purchased the property, to present time. The report is intended to assist in the search for environmental liens filed in land title records. The report will verify property ownership and provide information on recorded environmental liens and/or Activity and Use Limitations that have been recorded from the time the current owner purchased the property, forward.

Our professional network of trained researchers follow established industry protocols and use client-supplied property information to complete this Environmental Lien and AUL report. The research is conducted at all appropriate government offices based on the location of the subject property. This would include city, county, state, federal and tribal offices as needed. The report includes:

- Current deed information (i.e. grantor, grantee, recording dates)
- Legal Description
- Environmental Lien information
- Activity and Use Limitation information
- Copies of any Environmental Liens and/or documents referencing AULs that are listed within our summary report

**-Disclaimer-**

This report was prepared for the use of **AFX Research LLC** (AFX), exclusively. This report is neither a guarantee of title, a commitment to insure, nor a policy of title insurance. **NO WARRANTY, EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT.** AFX specifically disclaims the making of any such warranties, including without limitation, merchantability or fitness for a particular use or purpose. ## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Los Angeles County, California, Southeastern Part
Survey Area Data: Version 4, Sep 12, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 13, 2015—Mar 28, 2015

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

# Map Unit Legend

## 1000—Urban land-Hueneme, drained-San Emigdio complex, 0 to 2 percent slopes

### Map Unit Setting

*National map unit symbol:* 2lts5
*Elevation:* 10 to 300 feet
*Mean annual precipitation:* 12 to 16 inches
*Mean annual air temperature:* 64 to 66 degrees F
*Frost-free period:* 350 to 365 days
*Farmland classification:* Prime farmland if irrigated and drained

### Map Unit Composition

*Urban land:* 45 percent
*Hueneme, drained, and similar soils:* 20 percent
*San emigdio and similar soils:* 15 percent
*Minor components:* 20 percent
*Estimates are based on observations, descriptions, and transects of the mapunit.*

### Description of Urban Land

#### Setting

*Landform:* Alluvial fans

#### Properties and qualities

*Slope:* 0 to 2 percent
*Depth to restrictive feature:* 0 inches to manufactured layer
*Runoff class:* Very high
*Frequency of flooding:* Rare

#### Interpretive groups

*Land capability classification (irrigated):* None specified
*Land capability classification (nonirrigated):* 8
*Hydric soil rating:* No

### Description of Hueneme, Drained

#### Setting

*Landform:* Alluvial fans
*Landform position (three-dimensional):* Talf
*Down-slope shape:* Linear
*Across-slope shape:* Linear
*Parent material:* Discontinuous human-transported material over mixed alluvium derived from granite and/or sedimentary rock

#### Typical profile

*A - 0 to 5 inches:* sandy loam
*C1 - 5 to 16 inches:* sandy loam
*C2 - 16 to 22 inches:* loamy fine sand
*C3 - 22 to 31 inches:* very fine sandy loam
*C4 - 31 to 53 inches:* fine sandy loam

*C5 - 53 to 77 inches:* silt loam
*C6 - 77 to 79 inches:* loamy sand

**Properties and qualities**

*Slope:* 0 to 2 percent
*Depth to restrictive feature:* More than 80 inches
*Natural drainage class:* Somewhat poorly drained
*Runoff class:* Very low
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately high to high (0.57 to 1.98 in/hr)
*Depth to water table:* More than 80 inches
*Frequency of flooding:* Rare
*Frequency of ponding:* None
*Calcium carbonate, maximum in profile:* 5 percent
*Salinity, maximum in profile:* Very slightly saline to slightly saline (2.0 to 4.0 mmhos/cm)
*Sodium adsorption ratio, maximum in profile:* 8.0
*Available water storage in profile:* Moderate (about 8.0 inches)

**Interpretive groups**

*Land capability classification (irrigated):* None specified
*Land capability classification (nonirrigated):* 3w
*Hydrologic Soil Group:* B
*Hydric soil rating:* No

## Description of San Emigdio

**Setting**

*Landform:* Alluvial fans
*Landform position (three-dimensional):* Rise
*Down-slope shape:* Linear
*Across-slope shape:* Linear
*Parent material:* Discontinuous human-transported material over mixed alluvium derived from granite and/or sedimentary rock

**Typical profile**

*A - 0 to 4 inches:* fine sandy loam
*C1 - 4 to 16 inches:* fine sandy loam
*C2 - 16 to 20 inches:* silt loam
*C3 - 20 to 39 inches:* sandy loam
*C4 - 39 to 67 inches:* loamy sand

**Properties and qualities**

*Slope:* 0 to 2 percent
*Depth to restrictive feature:* More than 80 inches
*Natural drainage class:* Well drained
*Runoff class:* Very low
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately high to high (0.57 to 1.98 in/hr)
*Depth to water table:* More than 80 inches
*Frequency of flooding:* Rare
*Frequency of ponding:* None
*Calcium carbonate, maximum in profile:* 5 percent

*Salinity, maximum in profile:* Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
*Available water storage in profile:* Moderate (about 6.5 inches)

**Interpretive groups**
*Land capability classification (irrigated):* None specified
*Land capability classification (nonirrigated):* 3e
*Hydrologic Soil Group:* B
*Hydric soil rating:* No

**Minor Components**

**Pico**
*Percent of map unit:* 10 percent
*Landform:* Alluvial fans
*Landform position (three-dimensional):* Talf
*Down-slope shape:* Linear
*Across-slope shape:* Linear
*Hydric soil rating:* No

**Xerorthents**
*Percent of map unit:* 5 percent
*Landform:* Alluvial fans
*Landform position (three-dimensional):* Rise
*Down-slope shape:* Linear
*Across-slope shape:* Linear
*Hydric soil rating:* No

**Metz**
*Percent of map unit:* 5 percent
*Landform:* Alluvial fans
*Landform position (three-dimensional):* Talf
*Down-slope shape:* Linear
*Across-slope shape:* Linear
*Hydric soil rating:* No

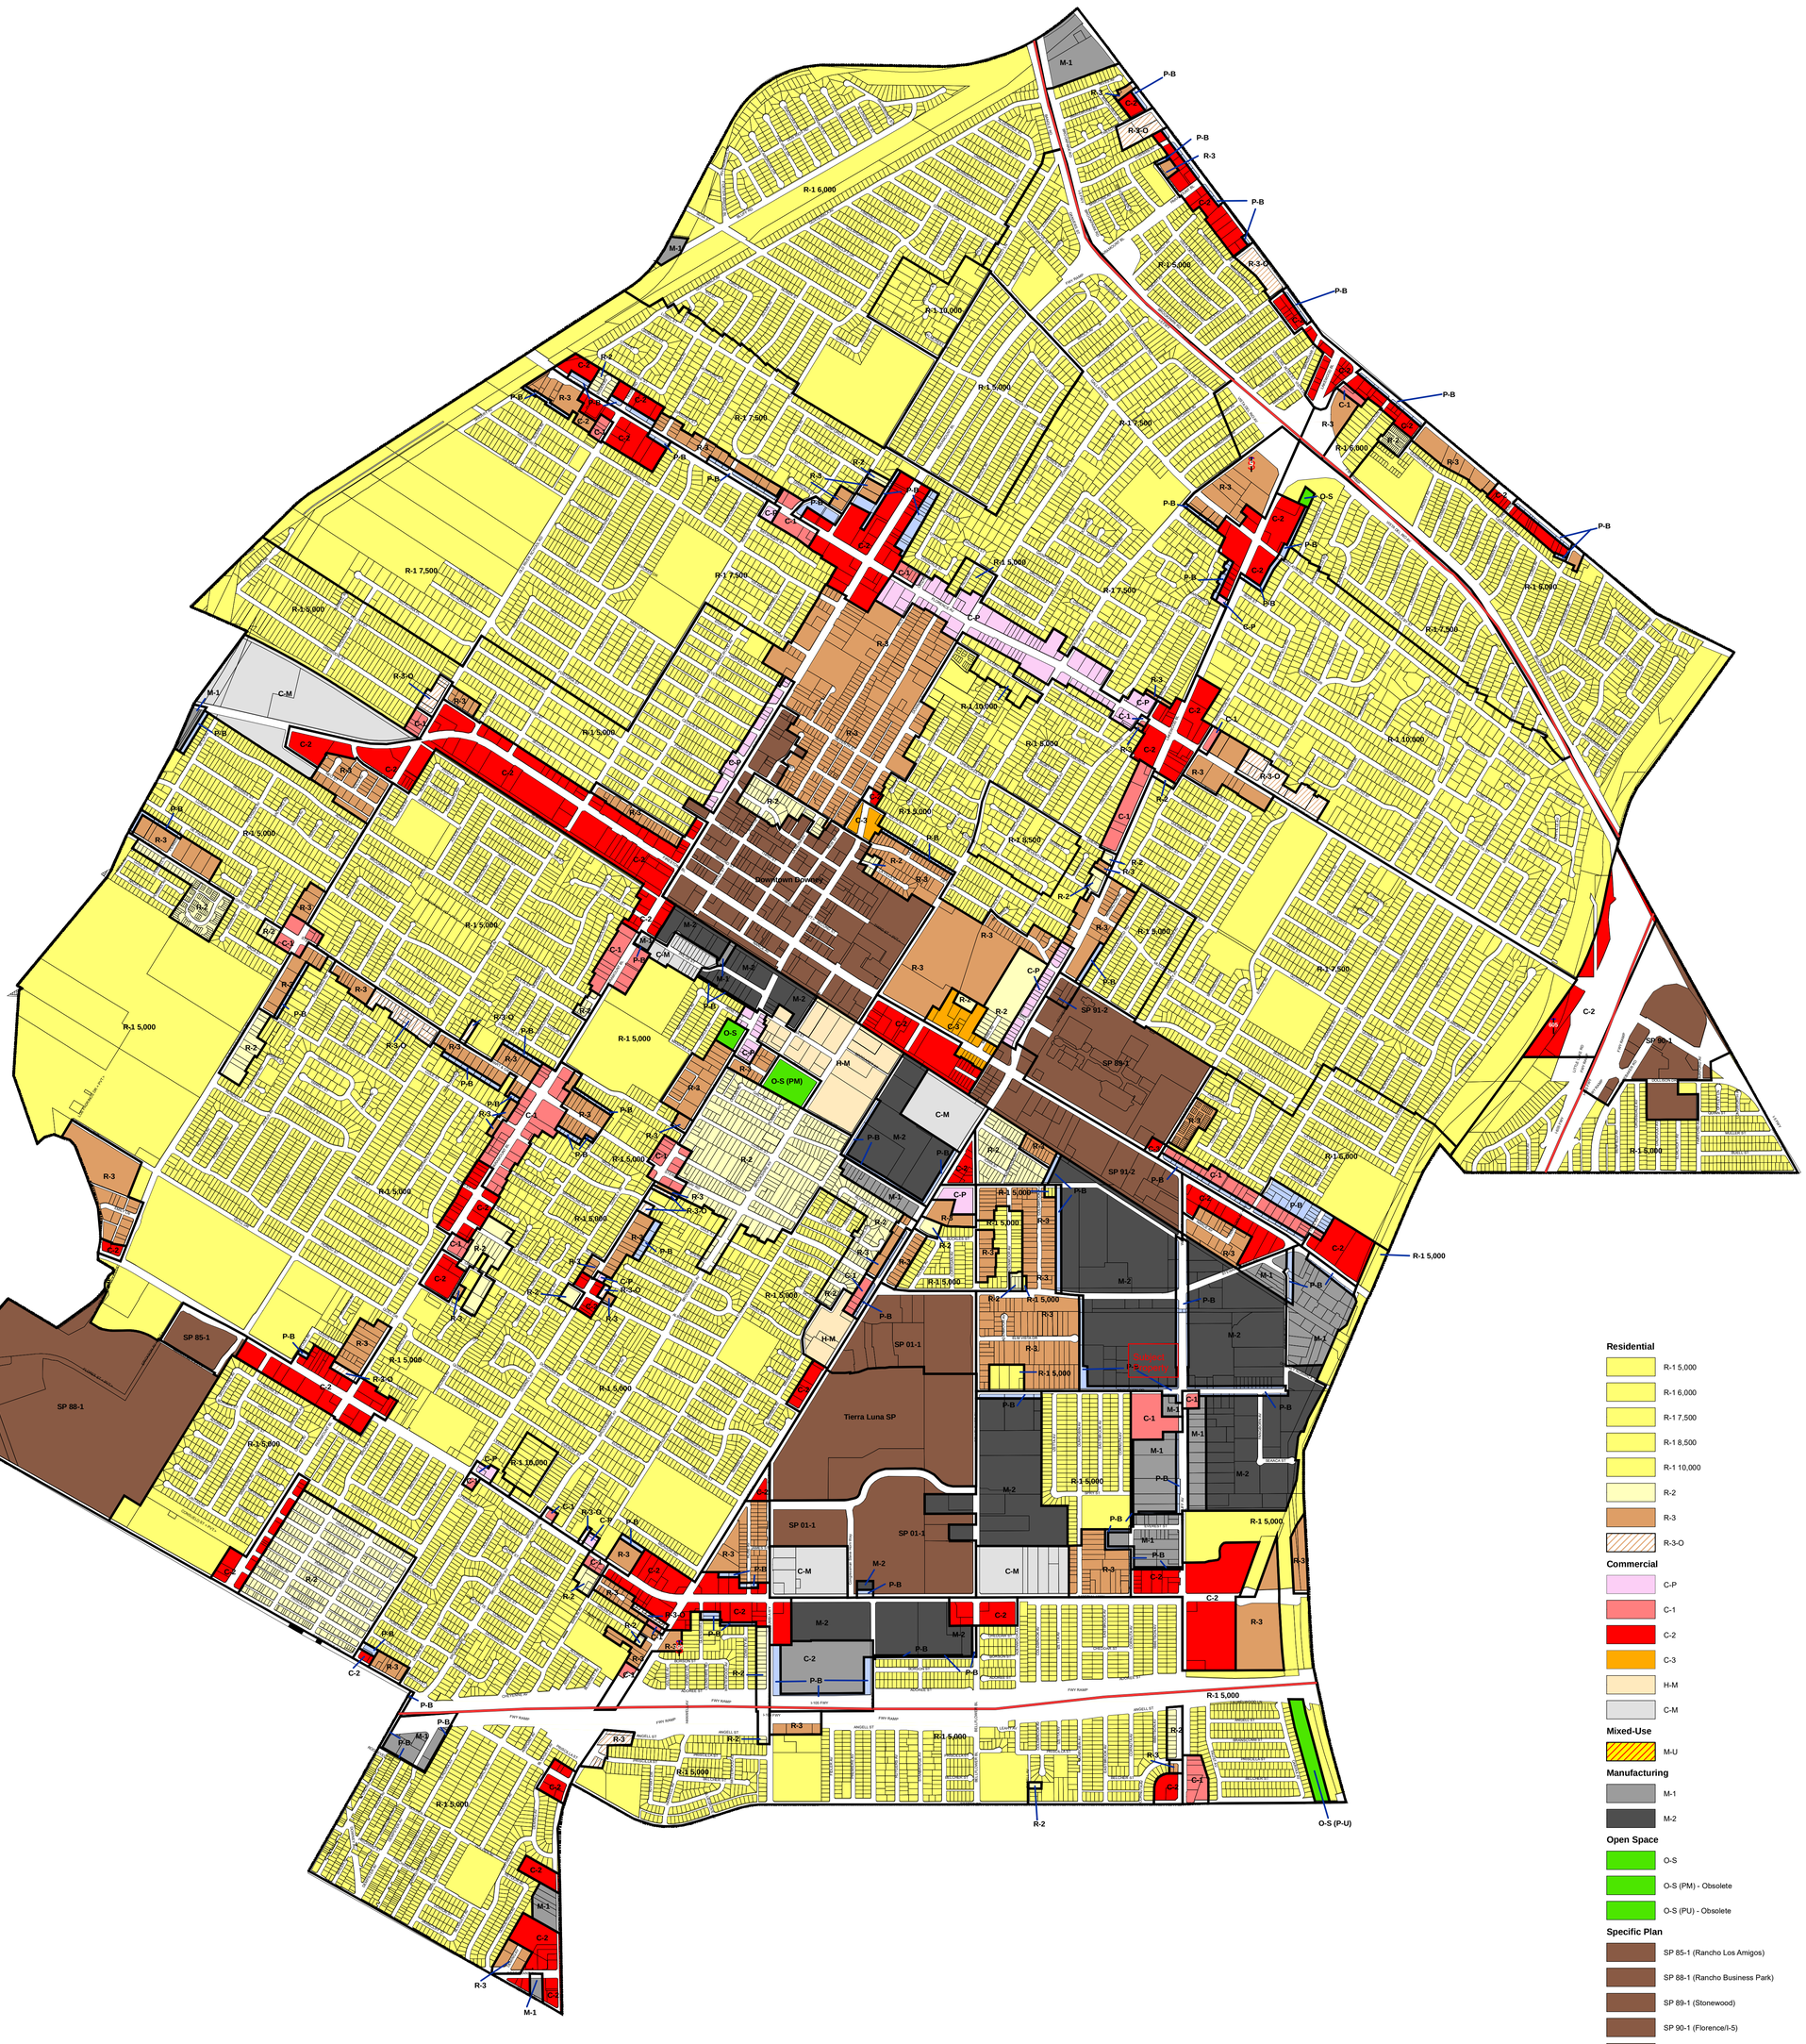
N



The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 9/17/2018 at 9:24:06 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

City of Downey

# 2017 Annual Water Quality Report

## A Message from the Downey Utilities Division

The City's water supply and distribution system is operated by the City of Downey Department of Public Works. Our water supply and distribution system is composed of 20 groundwater wells located throughout the City and approximately 276 miles of distribution pipeline with diameters ranging from 4 to 24 inches. Our groundwater wells provide one hundred percent of our domestic water supply. As a result, City of Downey residents are able to enjoy one of the least expensive water rates in Southern California.

In 2017, the City of Downey water system delivered more than 4.7 billion gallons of potable (i.e. drinking) water to approximately 112,500 residential, commercial, and industrial customers via 23,500 metered connections. In an effort to conserve water, the City utilizes recycled water to offset potable water needs by as much as 5.1% of the City's overall water demand through the application of recycled water for landscaping irrigation, dual-plumbed buildings, lakes, and ponds at 96 sites located throughout the City. Trained water distribution system operators, operate, inspect, repair, and replace these critical components of our drinking water infrastructure.

## Committed to Providing Quality Water

We are once again proud to present our annual water quality report covering all testing performed between January 1 and December 31, 2017. Over the years, we have dedicated ourselves to producing drinking water that meets all State and Federal standards. As new challenges to drinking water quality emerge, we remain vigilant in meeting the goals of source water protection, water conservation, and community education while continuing to serve the needs of all our water users. This report summarizes information regarding water sources used, any detected contaminants, compliance, and educational information.

During 2017, as in years past, your tap water met all U.S. Environmental Protection Agency (U.S. EPA) and the State Water Resources Control Board (State Water Board) health standards. There were no violations of a contaminant level or of any other water quality standard during 2017. We are always available to assist you with any questions or concerns you may have about your water by calling us at (562) 904-7202.

## Source Water Assessment

An assessment of the City's drinking water sources was completed in 2003 by the State Department of Drinking Water. The sources are considered most vulnerable to the following activities: automobile gas stations, dry cleaners, injection wells, dry wells, sumps, metal plating, finishing, fabricating, fleet truck, bus terminals, furniture repair, manufacturing, machine shops, and National Pollutant Discharge Elimination System (NPDES)/Waste Discharge Requirement permitted discharges. A copy of the complete assessment is available by contacting the SWRCB-DDW at (818) 551-2004 or by calling the City of Downey Utilities Division at (562) 904-7202.

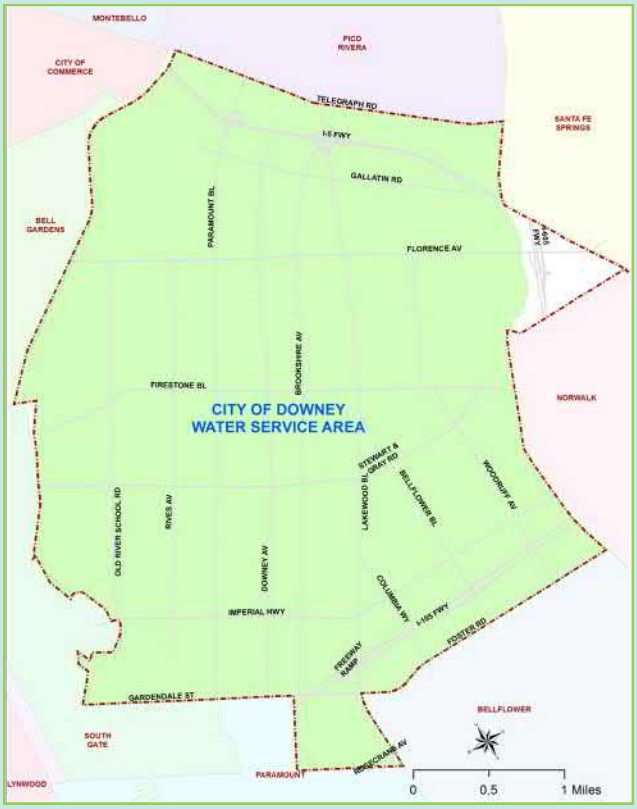
## Contaminants That May Be Present in Source Water Include

**Microbial contaminants**, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

**Inorganic contaminants,** such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

**Pesticides and herbicides,** that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

**Organic chemical contaminants,** including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.



**Radioactive contaminants,** that can be naturally-occurring or be the result of oil and gas production and mining activities.

## *Your Water Supply*

Downey's groundwater is pumped from the Central Groundwater Basin. The Central Basin is a series of large natural aquifers below the ground that stretch from Los Angeles to Orange County.

The City of Downey conveniently overlies the Central Basin. Groundwater from the Central Basin is pumped from 20 wells located within the City's boundaries and provides the City with its principal source of potable water. The City's service area is shown on the map to the right.

The Central Basin receives natural inflows from the conservation of rainfall and snow melt, artificial inflows from imported and recycled water, as well as groundwater underflow from adjacent basins. Surface water slowly percolates through the ground to the aquifers and the ground acts as a natural filter to clean the water.

## *Spreading Grounds*

Spreading grounds located at the major inflows from the Rio Hondo and San Gabriel Rivers of the Montebello Forebay, allow water from various sources to artificially seep down into the Central Basin aquifers. The ground acts as a natural filter to clean the water as it percolates to the aquifer.

***Thank you for doing your part in conserving water and helping to protect our local groundwater!***

During the past year over, we tested our water for over 100 regulated contaminants in order to determine the presence of any biological, inorganic, volatile organic or synthetic organic, and radioactive contaminants. The following table includes those contaminants that were detected in the water. Both Federal and State regulations require us to monitor for certain substances less than once per year because the concentrations of these substances do not change frequently. In these cases, the most recent sample data are included.

## Lead and Copper

Lead can cause serious health problems if present at elevated levels, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Lead can be released when your tap water comes in contact with pipes and plumbing fixtures containing lead. The City of Downey is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at (1-800-426-4791) or at http://www.epa.gov/safewater/lead

## Important Health Information

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline at (1-800-426-4791)

## Federal and State Water Quality Regulations

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Water Board prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The State Water Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling U.S. EPA's Safe Drinking Water Hotline at (1-800-426-4791). The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health.

Additional information regarding bottled water is available on the California Department of Public Health website https://www.cdph.ca.gov/Programs/CEH/DFDCS/Pages/FDBPrograms/FoodSafetyProgram/Water.aspx

## Substances that Could Be in Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and groundwater wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

## Water Conservation Tips

As California continues to deal with the effects of the drought, the City of Downey encourages everyone to look closely at their water usage habits and for ways to use less water and help meet the State's latest conservation requirements.

### Use Drought Tolerant Landscaping

For every square foot of grass lawn replaced with attractive drought tolerant landscaping, 40-60 gallons of water can be saved annually.

### Mulch Around your Plants

Mulch helps retain maximum moisture. Mulch reduces water lost to evaporation. Up to 80% of rainwater will evaporate where no mulch is used.

### Find and Fix Leaks

Locate your water meter and check the leak indicator. Make sure no water is being used inside or outside your home at this time. If the leak indicator is spinning, this means you may have found a leak. Leaks should be repaired within 48 hours.

### Low Flow Fixtures

By installing low-flow aerators that utilize a maximum of 1.5 gallons per minute you can help reduce a sink's water used by 30% or more from the standard flow of 2.2 gallons per minute.

# Only Water What Is Necessary

| CITY OF DOWNEY OUTDOOR WATER SCHEDULE | |

# City of Downey 2017 Water Quality Analyses Results

## Primary Standards (Monitored for Health Concerns)

| Substance (Unit) | MCL (SMCL) | PHG (MCLG) | Average | Range (Low-High) | Violation | Typical Source of Contaminant |
|---|---|---|---|---|---|---|
| **Microbiological** | | | | | | |
| Total Coliform Bacteria (%) (State Total Coliform Rule) | 5 | (0) | Highest Monthly Average= (2.2%) | Water System Range = (0 - 2.2) | NO | Naturally present in the environment |
| **Radiologicals** | | | | | | |
| Gross Alpha Particle Activity (pCi/L) | 15 | (0) | ND | ND - 4.54 | NO | Erosion of natural deposits |
| Uranium (pCi/L) | 20 | 0.43 | 2.1 | ND - 3.8 | NO | Erosion of natural deposits |
| **Volatile Organic Compounds** | | | | | | |
| Tetrachloroethylene (PCE) (ppb) | 5 | 0.06 | ND | ND - 3.0 | NO | Discharge from factories, dry cleaners, and auto shops (metal degreaser) |
| Trichloroethylene (TCE) (ppb) | 5 | 1.7 | ND | ND - 1.0 | NO | Discharge from metal degreasing sites and other factories |
| cis-1,2- Dichloroethylene (ppb) | 6 | 100 | ND | ND - 0.3 | NO | Discharge from industrial chemical factories; major biodegradation byproduct of TCE & PCE groundwater contamination |
| **Inorganic Compounds** | | | | | | |
| Arsenic (ppb) | 10 | 0.004 | ND | ND - 3.5 | NO | Erosion of natural deposits; runoff from orchards; glass and electronics production wastes |
| Barium (ppm) | 1 | 2 | ND | ND - 0.12 | NO | Discharge of oil drilling wastes and from metal refineries; erosion of natural deposits |
| Fluoride (ppm) | 2 | 1 | 0.35 | 0.25 -0.43 | NO | Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories |
| Nitrate as N (ppm) | 10 | 10 | 2.2 | ND - 3.7 | NO | Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits |
| **Secondary Standards (Monitored for aesthetic qualities)** | | | | | | |
| Chloride (ppm) | (500) | n/a | 68 | 31 - 91 | NO | Runoff and leaching from natural deposits |
| Copper (ppm) | (1) | 0.3 | ND | ND - 0.2 | NO | Erosion of natural deposits; leaching from wood preservatives |
| Iron (ppb) | (300) | n/a | ND | ND- 260 | NO | Leaching from natural deposits; industrial wastes |
| Specific Conductance (µS/cm) | (1600) | n/a | 739 | 290 - 920 | NO | Substances that form ions when in water; seawater influence |
| Sulfate (ppm) | (500) | n/a | 105 | 33 -150 | NO | Runoff/leaching from natural deposits; industrial wastes |
| Total Dissolved Solids (ppm) | (1000) | n/a | 480 | 220 - 660 | NO | Runoff/leaching from natural deposits |
| **Water Characteristics (No MCL or MRDL but state or federal monitoring required)** | | | | | | |
| Alkalinity (ppm) | n/a | n/a | 163 | 49 - 230 | NO | Naturally occurring soluble mineral |
| Calcium (ppm) | n/a | n/a | 74 | 15 - 120 | NO | Abundant naturally occurring element |
| Magnesium (ppm) | n/a | n/a | 15 | 3.3 - 23 | NO | Abundant naturally occurring element |
| pH (units) | (6.5 - 8.5) | n/a | 7.5 | 7.2 - 8.1 | NO | Hydrogen ion concentration |
| Potassium (ppm) | n/a | n/a | 4 | 2.8 - 6.1 | NO | Runoff or leaching from natural deposits |
| Sodium (ppm) | n/a | n/a | 56 | 37 - 79 | NO | Erosion of natural deposits |
| Total Hardness (grains per gallon) | n/a | n/a | 14.4 | 3.0 - 22.8 | NO | "Hardness" is the sum of polyvalent cations present in the water, generally magnesium and calcium. The cations are usually naturally occurring |
| **State Unregulated Contaminants with No MCL** | | | | | | |
| Hexavalent Chromium (ppb) | n/a | 0.02 | ND | ND -1.1 | NO | Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing facilities; erosion of natural deposits |
| **Federal Unregulated Contaminants Rule UCMR3 Data** | | | | **(Unregulated contaminant monitoring helps USEPA and the State Water Resources Control Board to determine where certain contaminants occur and whether the contaminants need to be regulated)** | | |
| 1, 4 Dioxane (ppb) | n/a | n/a | 1.75 | 0.54 - 2.8 | NA | Used in many products including paint strippers, dyes, greases, varnishes, and waxes; also found as an impurity antifreeze and aircraft deicing fluids and in some consumer products (deodorants, shampoos, and cosmetics) |
| Chlorate (ppb) | n/a | n/a | 21.3 | ND - 54 | NA | Agricultural defoliant or desiccant; disinfection byproduct; and used in production of chlorine dioxide |
| Chromium, Total (ppb) | 50 | (100) | 0.7 | 0.43 - 1.2 | NO | Discharge from steel and pulp mills and chrome planting; Erosion of natural deposits |
| Molybdenum (ppb) | n/a | n/a | 1.92 | ND - 2.4 | NA | Naturally present in the environment |
| Perfluoro-1-octanesulfonate (PFOS) (ppb) | n/a | n/a | 0.01 | ND - 0.05 | NA | Surfactant or emulsifier; used in fire-fighting foam, circuit board etching acids, alkaline cleaners, floor polish, and as a pesticide active ingredient for insect bait traps |
| Strontium (ppb) | n/a | n/a | 524 | 410 - 620 | NA | Naturally present in the environment |
| Vanadium (ppb) | n/a | n/a | 2.65 | 2.3 - 3.4 | NA | Naturally present in the environment |

## Tap water samples were collected for lead and copper analyses from sample sites throughout the community

| Substance (Unit) | Action Level (AL) | PHG | 90th Percentile | Above AL | Violation | Typical Source |
|---|---|---|---|---|---|---|
| Lead (ppb) | 15 | 0.2 | 3.4 | 0 out of 52 | NO | Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits |
| Copper (ppm) | 1.3 | 0.3 | 0.26 | 0 out of 52 | NO | Internal corrosion of household water plumbing systems; erosion of natural deposits; leaching from wood preservatives |

## Number of Schools that requested lead sampling in 2017

**A total of 21 schools submitted requests to be sampled for lead during 2017. Up to 5 samples were collected at each school.**

# Glossary of Terms/Abbreviations

**Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs (SMCLs) are set to protect odor, taste, and appearance of drinking water.

**Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. EPA.

**Detection Limits for Purposes of Reporting (DLR):** The DLR is a parameter that is set by regulation by each reportable analyte. It is not laboratory specific and it is independent of the analytical method used (in cases where several methods are approved). It is expected that a laboratory can achieve a Reporting Limit that is lower than or equal to the DLR set by the State. This is also known as the Minimum Reporting Level (MRL).

**Primary Drinking Water Standard (PDWS):** MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

**Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

**Regulatory Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

**Units of Measurement:**
ppm= parts per million
ppb= parts per billion
pCi/L = picocuries per liter
µS/cm=micro Siemens per centimeter
% = percent

**NA:** Contaminant or property was not analyzed.
**ND:** Contaminant was not detected. The contaminant is less than the DLR.
**n/a:** Not applicable

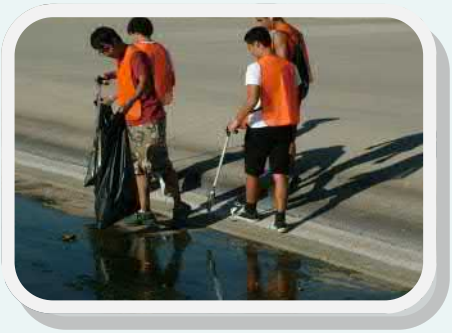
City of Downey Water Conservation & Restrictions:
http://www.downeyca.org/depts/pw/utilities/water_conservation.asp



You are welcome to attend the following public meetings at City Hall, 11111 Brookshire Ave.
City Council Meetings on the second and fourth Tuesday of each month at 6:30 p.m.
Public Works Committee meetings on the third Thursday of each month at 4:00 p.m.

Visit us at www.downeyca.org
For Additional questions about your water quality please contact:
Bridgeth Tapia at (562) 904-7202
9252 Stewart & Gray Rd,
Downey, CA 90241

## *Prevent Pollution*

Polluted runoff flows to storm drains directly into our rivers, bays, beaches, and the ocean. Contaminated runoff can pollute our beaches, and also harm fish and wildlife. As a community it is important to prevent chemicals, automobile fluid, and trash from entering our storm drains.

City of Downey

This report contains important information about your drinking water. Translate it, or speak with someone who understands it.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien.

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Federal RCRA generators list***

# EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 14 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is

1 RCRA-CESQG site within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/30/2018 has revealed that there are 13 ENVIROSTOR sites within approximately 1 mile of the target property.

***Other Ascertainable Records***

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110002631000

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

FINDS:

Registry ID: 110002623778

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Large Quantity Generator

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

FINDS:

Registry ID: 110006477400

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Historical Generators:
Date form received by agency: 02/27/2002
Site name: MCGEAN-ROHCO INC
Classification: Large Quantity Generator

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: 801
. Waste name: Waste potentially containing dioxins

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: D004
. Waste name: ARSENIC

. Waste code: D005
. Waste name: BARIUM

. Waste code: D007
. Waste name: CHROMIUM

FINDS:

Registry ID: 110002657045

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

**MCGEAN CHEM CO INC (Continued)** **1000200129**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002653049

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002629237

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002788546

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be

**CALSAN INC (Continued)** **1000376765**

considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

**MANUFACTURERS WIRE CORP (Continued)** **1000424734**

corrective action activities required under RCRA.

FINDS:

Registry ID: 110002688547

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

| Description: | The property is actually a concrete building of approximately 1,150 sq. ft. of floor area. The site is located in the City of Downey, Los Angeles County, California. The site is an old, unsuitable building that is no longer required for use by the National Aeronautic and Space Administration/Rockwell International. |
| Current Program: | Not reported |
| History: | Building No. 125 was constructed of reinforced concrete (12 in. thick roof and walls) in 1941. Its original use was a bomb shelter constructed during World War II by the U.S. Army Air Corps. During 1940 and 1941, the Air Force acquired the property by direct purchase. It was later used as a hazardous materials testing laboratory. It has now been abandoned in place. The General Services Administration concurred with NASA plans to demolish the building in accordance with federal property management regulations. Air Force Plant #16 was transferred to NASA in July of 1964. The facility was renamed NASA Industrial Plant, Downey, California. At this time NASA assumed status as the holding agency. Since 9 August 1972 RI was contracted to be custodian of building #125 and other property. |

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: P001
. Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

. Waste code: P075
. Waste name: NICOTINE, & SALTS

. Waste code: U034
. Waste name: ACETALDEHYDE, TRICHLORO-

Date form received by agency: 08/20/2001
Site name: COSTCO WHOLESALE NO 410
Classification: Small Quantity Generator

. Waste code: D011
. Waste name: SILVER

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 2371

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

**COSTCO WHOLESALE # 410 (Continued)** **1004677945**

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 642

Waste code: D009
Waste name: MERCURY
Amount (Lbs): 38

Waste code: D010
Waste name: SELENIUM
Amount (Lbs): 11

Waste code: D011
Waste name: SILVER
Amount (Lbs): 11

Waste code: P001
Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%
Amount (Lbs): 14

Waste code: P075
Waste name: NICOTINE, & SALTS
Amount (Lbs): 7

File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern: Not reported
Site History: The former NASA Industrial Plant (site) occupies approximately 155 acres in Downey, California, and is bound to the north by Stewart and Gray Road, to the south by Imperial Highway, to the west by Lakewood Boulevard and to the east by Bellflower Boulevard. The site was used for aircraft, and later, aerospace manufacturing by a series of entities from 1929 through 1999. The site was government owned and contractor operated. NASA utilized the plant for manufacture of Apollo and Space Shuttle components. Site activities included the use and storage of chlorinated solvents in support of various manufacturing processes. In 1986 the government declared the property excess to its needs and site manufacturing operations ceased at the site. During the fourth quarter of 2003, the property was transferred from NASA to the City of Downey, California. Following early transfer from NASA to the City of Downey, the various portions of the property were redeveloped. International Risk Assumption-Downey LLC assumed the role of responsible party as part of the early transfer arrangements between NASA, the State of California, and the City of Downey. Site assessments conducted at the site indicated that the soil and groundwater were impacted with volatile organic compounds

**NASA INDUSTRIAL PLANT (UNI (Continued)** **S104564877**

(VOCs) mainly perchloroethylene (PCE), trichloroethene (TCE) and Freon 113. A soil vapor extraction (SVE) system was installed and operated at various locations of the site from 2000 to 2008 to cleanup the soil. During the period of operation, the system removed approximately 6,000 pounds of VOCs. Sodium permanganate solution was injected into a silt layer at the 40 to 45 feet bgs interval below former Building 244 for in situ remediation to cleanup the residual VOCs in the silt layer of the vadose zone. In February 2012, the Regional Board issued a No Further Action (NFA) for site soils. Groundwater beneath the site has been subjected to in situ bioremediation using Enhanced Reductive Dechlorination (ERD) to address the dissolved phase PCE and TCE as well as the subsequent breakdown products from the remedial activities. The ERD process involved the injection of approximately 14,000,000 gallons of dilute carbohydrate solution at 174 points across the site beginning in November 2005. In October 2010, a de-halogenating bacteria was added to the solution injected in the southernmost site locations to enhance the remediation of VOCs at this location. Active injections of carbohydrate solution were stopped after first quarter 2012. Post-remediation groundwater monitoring was conducted from 2012 to 2016. On March 8, 2017, the Regional Board issued an NFA for the groundwater, which constituted a site closure.

***Federal NPL site list***

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Brownfield lists***

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

CERS: CalEPA Regulated Site Portal Data
The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 01/03/2018
Date Data Arrived at EDR: 02/14/2018
Date Made Active in Reports: 03/22/2018

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

**USGS TOPOGRAPHIC MAP**

| | |
|---|---|
| Target Property Map: | 5633777 WHITTIER, CA |
| Version Date: | 2012 |
| | |
| West Map: | 5633765 SOUTH GATE, CA |
| Version Date: | 2012 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

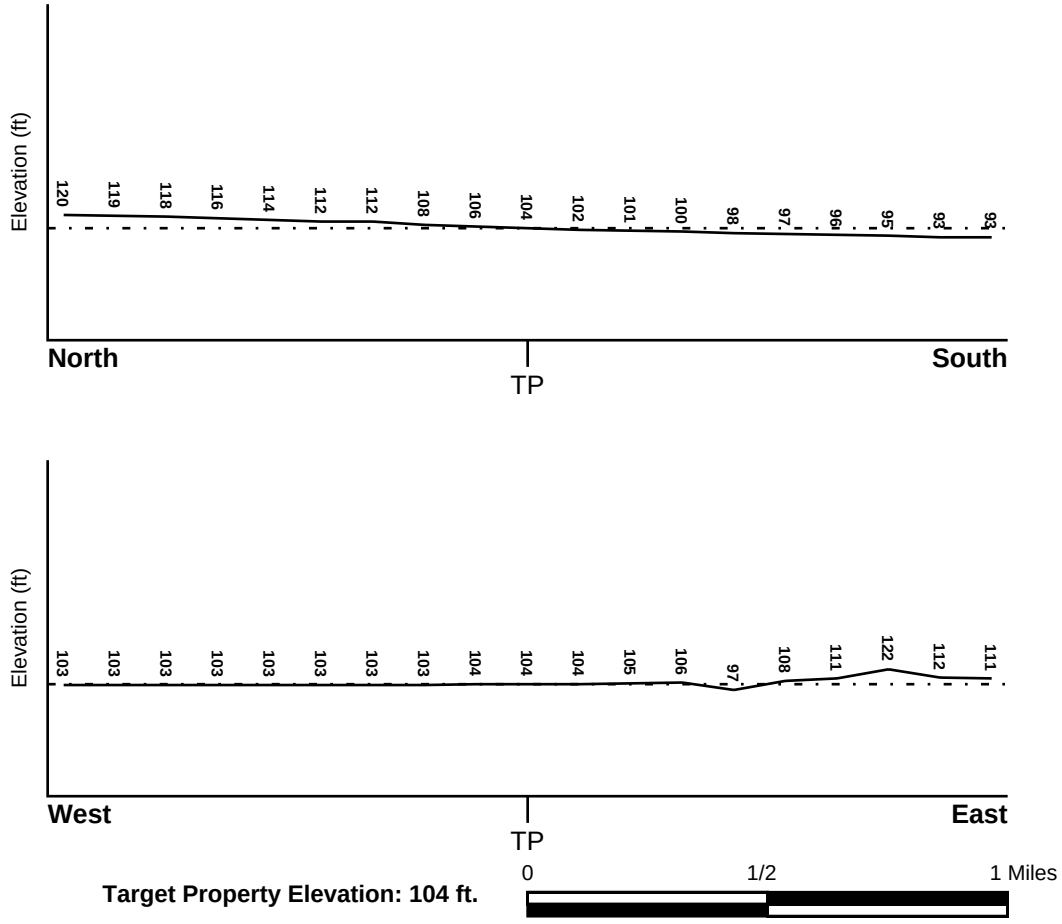
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General SSW

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**FEMA FLOOD ZONE**

| Flood Plain Panel at Target Property | FEMA Source Type |
|---|---|
| 06037C1840F | FEMA FIRM Flood data |

| Additional Panels in search area: | FEMA Source Type |
|---|---|
| 06037C1810F | FEMA FIRM Flood data |
| 06037C1830F | FEMA FIRM Flood data |
| 06037C1820F | FEMA FIRM Flood data |

**NATIONAL WETLAND INVENTORY**

| NWI Quad at Target Property | NWI Electronic Data Coverage |
|---|---|
| WHITTIER | YES - refer to the Overview Map and Detail Map |

**HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

***Site-Specific Hydrogeological Data*:***

| | |
|---|---|
| Search Radius: | 1.25 miles |
| Status: | Not found |

**AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| MAP ID | LOCATION FROM TP | GENERAL DIRECTION GROUNDWATER FLOW |
|---|---|---|
| Not Reported | | |

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

**ROCK STRATIGRAPHIC UNIT**

| | |
|---|---|
| Era: | Cenozoic |
| System: | Quaternary |
| Series: | Quaternary |
| Code: | Q *(decoded above as Era, System & Series)* |

**GEOLOGIC AGE IDENTIFICATION**

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

**DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information | | | | | | | |
|---|---|---|---|---|---|---|---|
| | Boundary | | | Classification | | | |
| Layer | Upper | Lower | Soil Texture Class | AASHTO Group | Unified Soil | Permeability Rate (in/hr) | Soil Reaction (pH) |
| 1 | 0 inches | 6 inches | variable | Not reported | Not reported | Max: 0.00<br>Min: 0.00 | Max: 0.00<br>Min: 0.00 |

**OTHER SOIL TYPES IN AREA**

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

AQUIFLOW$^{R}$ Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

# EDR Site Report™

6 Armstrong Road, 4th floor
Shelton, CT 06484
Toll Free: 800.352.0050
www.edrnet.com

# TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of federal, state and local environmental databases. The report is divided into three sections:

**Section 1: Facility Summary . . . . . Page 3**

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

**Section 2: Facility Detail Reports . . . . . Page 4**

All available detailed information from databases where sites are identified.

**Section 3: Databases and Update Information. . . . . Page 11**

Name, source, update dates, contact phone number and description of each of the databases for this report.

***Thank you for your business.***
Please contact EDR at 1-800-352-0050
with any questions or comments.

# SECTION 1: FACILITY SUMMARY

| FACILITY<br><br>AREA | FACILITY 1<br>**KIRKHILL INC**<br>12021 WOODRUFF AVENUE<br>DOWNEY, CA 90241<br>EDR ID #S113157677 |
|---|---|
| **WASTE MANAGEMENT**<br>Facility generates hazardous waste (RCRA) | NO |
| Facility treats, stores, or disposes of hazardous waste on-site (RCRA/TSDF) | NO |
| Facility has received Notices of Violations (RCRA/VIOL) | NO |
| Facility has been subject to RCRA administrative actions (RAATS) | NO |
| Facility has been subject to corrective actions (CORRACTS) | NO |
| Facility handles PCBs (PADS) | NO |
| Facility uses radioactive materials (MLTS) | NO |
| Facility is a FUSRAP Site | NO |
| Facility is a UXO Site | NO |
| Facility is a FUELS Site | NO |
| Facility is an DockHWC/ECHO Site | NO |
| Facility manages registered aboveground storage tanks (AST) | NO |
| Facility manages registered underground storage tanks (UST) | NO |
| Facility has reported leaking underground storage tank incidents (LUST) | NO |
| Facility has reported emergency releases to the soil (ERNS) | NO |
| Facility has reported hazardous material incidents to DOT (HMIRS) | NO |
| **WASTE DISPOSAL**<br>Facility is a Superfund Site (NPL) | NO |
| Facility has a known or suspect abandoned, inactive or uncontrolled hazardous waste site (SEMS) | NO |
| Facility has a reported Superfund Lien on it (LIENS) | NO |
| Facility is listed as a state hazardous waste site (SHWS) | NO |
| Facility has disposed of solid waste on-site (SWF/LF) | NO |
| **MULTIMEDIA**<br>Facility uses toxic chemicals and has notified EPA under SARA Title III, Section 313 (TRIS) | NO |
| Facility produces pesticides and has notified EPA under Section 7 of FIFRA (SSTS) | NO |
| Facility manufactures or imports toxic chemicals on the TSCA list (TSCA) | NO |
| Facility has inspections under FIFRA, TSCA or EPCRA (FTTS) | NO |
| Facility is listed in EPA's index system (FINDS) | NO |
| Facility is listed in other database records (OTHER) | **YES - p4** |
| **POTENTIAL SUPERFUND LIABILITY**<br>Facility has a list of potentially responsible parties PRP | NO |
| **TOTAL (YES)** | 1 |

# SECTION 3: DATABASES AND UPDATE DATES

To maintain currency of the following federal, state and local databases, EDR contacts the appropriate government agency on a monthly or quarterly basis as required.

**Elapsed ASTM days:** Provides confirmation that this report meets or exceeds the 90-day updating requirement of the ASTM standard.

## DATABASES FOUND IN THIS REPORT

**CA HIST UST: Hazardous Substance Storage Container Database**
Source: State Water Resources Control Board
Telephone: 916-341-5851
The Hazardous Substance Storage Container Database is a historical listing of UST sites. Refer to local/county source for current data.

Date of Government Version: 10/15/1990
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 07/26/2001
Date of Next Scheduled Update: Not reported

**CA HAZNET: Facility and Manifest Data**
Source: California Environmental Protection Agency
Telephone: 916-255-1136
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2016
Database Release Frequency: Annually
Date of Last EDR Contact: 07/13/2018
Date of Next Scheduled Update: 10/22/2018

# APPENDIX D: QUALIFICATIONS/INSURANCE

PARTNER

## Education

Bachelor of Arts, Political Science, University of California, Irvine
Diploma, Executive Assistant Business Program, Heald Business College, Hayward, California

## Registrations

California EPA Registered Environmental Assessor I – 07364
California OSHA Certified Site Surveillance Technician No. 97-2116

## Training

40-Hour OSHA HAZWOPER Training
EPA-Certified AHERA Asbestos Building Inspector
EPA-Certified AHERA Contractor/Supervisor/Competent Person

## Highlights

15 years of experience in the environmental due diligence industry:

- Phase I Environmental Site Assessments
- Phase II Environmental Site Assessments
- Property Condition Assessments
- Asbestos Surveys
- Transaction Screen Assessments
- Environmental Desktop Reviews and Reports
- UST Removal
- Regulatory Work Plan Preparation for remediation of hazardous materials
- Business Development / Client Relations

## Experience Summary

Ms. Thomas is a Staff Assessor at Partner Engineering and Science, In and is located in their Torrance, California office. She is responsible for conducting Phase I Environmental Site Assessments (ESA) including site reconnaissance, regulatory file review, historical research, interpretation of data and maps, and technical writing. Ms. Thomas has broad project experience from small privately owned properties to large portfolios of industrial sites in both the private and public sectors. This experience included properties with impact to soil and groundwater from petroleum and solvent releases and required extensive regulatory file review. Ms. Thomas has received training in risk management and liability as it pertains to environmentally impacted properties.

## Project Experience

*Initial Site Assessment for Freeway Expansion, Los Angeles County, California*. Performed an *Initial Site Assessment* for California Department of Transportation (Caltrans) for the Interstate 5 Freeway expansion project in Burbank, Glendale and Los Angeles, which included 10 miles of assessment area and many properties with hazardous materials, USTs and groundwater contamination issues.

*Initial Study and Biological Survey, Madera, California.* City of Madera, California: Performed an *Initial Study* for the City of Madera Wastewater Treatment Plant expansion project, which included a Biological Survey

and assessment for hazardous materials.

*Phase I Environmental Site Assessment and Underground Storage Tank Removal, Beverly Hills, California.* Project Manager for the removal of an old waste oil underground storage tank that was identified through due diligence research, which was subsequently removed and received case closure from the Los Angeles County Environmental Programs Division.

*Phase II Environmental Site Assessment and Work Plan for Remedial Action, Garden Grove, California.* Project Manager for site characterization of a former dry cleaner that included a soil gas survey, soil sampling and the installation of five groundwater monitoring wells. Ms. Thomas conducted the initial Phase II ESA, which identified soil and groundwater impact. Preparation of a Work Plan for site characterization was approved by the Santa Ana Regional Water Quality Control Board and implemented.

*Phase II Environmental Site Assessment, Inglewood, California*. Project Manager of a *Phase II ESA* on a former gas station property that was redeveloped in the early 1980s into a coin operated laundry mat. The client was a prospective buyer of the property. Limited information pertaining to the former gas station was identified at the local regulatory agencies; therefore, a Phase II scope of work was designed and implemented to best identify the former UST and piping locations. Significantly contaminated soil was identified.

*Phase I Environmental Site Assessment, Downtown Los Angeles, California.* Performed a *Phase I ESA* for the Los Angeles County Metropolitan Transportation Authority (MTA) for its Division One Bus Depot Expansion project on a site in downtown Los Angeles that was a former Texaco Super Truck Service Depot with former fueling, carwash and automotive services. Ms. Thomas has performed several Phase I ESA projects for the Los Angeles County MTA.

Transaction Screens
Phase II ESAs
Contaminant Transport Evaluations
Remediation Design
Implementation of Remediation

## Experience Summary

Ms. Lehnus is currently a project manager providing staff oversight and quality reviews for Phase I ESAs and desktop reviews. Ms. Lehnus focuses on portfolios for purchase or refinance.

Ms. Lehnus has 20 years of experience in the environmental assessment and remediation industry. She has extensive experience conducting due diligence assessments for a variety of property types using a varied number of reporting standards, including ASTM standards, EPA's All Appropriate Inquiry (AAI), and customized client formats. Specifically, Mrs. has performed and managed Phase I Environmental Site Assessments, Environmental Transaction Screens, Phase II and III Subsurface Investigations, and remediation projects.

Further, Ms. Lehnus is a Licensed Environmental Professional in Connecticut and has served as a project manager for large industrial sites involved with Brownfield initiatives for transfer, sale, and redevelopment. Duties included strategic planning of future redevelopment of properties based on the current environmental conditions and the determination of proper remedies required based on future use. Duties also included working with legal counsel to review sale agreements to ensure that remediation measures are appropriately documented for compliance. Ms. Lehnus has also designed and implemented investigation and remediation plans in order to verify closure of projects under the Connecticut Transfer Act.

Responsibilities include managing projects to complete large-scale soil and groundwater investigation and remediation tasks, completion of closure letters, variances, permitting, and other submittals to state agencies, and participation on internal and external committees to improve sampling, reporting, and regulatory processes.

## Project Experience

*Johnny on the Spot Dry Cleaner, Whitestone, New York*. Ms. Lehnus managed the contaminate delineation (Phase III) investigation of groundwater, soil vapor, and indoor air at a former dry cleaner facility in the New York Department of Environmental Conservation (NYDEC) cleanup program. Work included soil, groundwater, soil vapor, and indoor air sampling in compliance with NYDEC guidance documents, and oversight of the design of a sub-slab depressurization system to alleviate vapor intrusion.

*Ansonia Copper and Brass, Ansonia, Connecticut*. Responsible for the completion of Phase III activities at release areas with completion of several Connecticut Department of Energy and Environmental Protection (CTDEEP) submittals, which include proposed remediation strategies for final closure under the Remediation Standard Regulations (RSRs) to allow for property redevelopment. Remediation activities included incorporating capped areas into land use restrictions to allow for extensive reuse of the brownfield property.

*Starbuck Sprague Facility, Waterbury, Connecticut*. Responsible for the completion of the Phase I, II and III activities, reporting, and completion of DEEP submittals to administer a remediation strategy to bring the property into compliance with the RSRs while allowing for minimal disturbance of the existing conditions;

*Farrel Corporation, Ansonia, Connecticut.* Responsible for the completion of Phase III activities at release areas, quarterly groundwater monitoring and contaminant plume mapping, reporting, and completion of several DEEP submittals, which include proposed remediation strategies for final closure.

*Latex Foam, Shelton, Connecticut.* Responsible for permitting and oversight of remediation of wetland area near an Indian burial ground, quarterly groundwater sampling with plume mapping in overburden and bedrock groundwater, and Phase III delineation of a No. 6 oil spill.

*Antares, Stamford, Connecticut*. Included on the team to investigate and assess a portfolio of properties for the prospect of quick-turn purchase, as well as investigation and remediation of properties added to the portfolio.

*Verizon Wireless, Inc., Environmental Assessments, Various Connecticut Locations*. Responsible for the Verizon Wireless account, duties include oversight of staff members and review of reports for the account, client interaction, and applying DEP regulations and National Environmental Policy Act (NEPA) protocol to work scopes and templates.

*Foxon Road, North Haven, Connecticut*. Participated with a team to design an active vapor extraction system at a former dry cleaning facility. Work included conducting a soil gas survey, installing soil vapor extraction points, creating a site-specific geologic cross section with respect to soil permeability, and performing a pilot test to determine design specifications.

*Home Depot, Bloomfield, Connecticut.* Oversight of initial soil and groundwater assessment, followed by site-wide soil excavation and the installation of a passive vapor barrier at a former manufacturing facility. This work was conducted coincident with Site development activities at a high profile retail chain and required working closely with development contractors to ensure the safety of the barrier while exposed. Post remediation work included the installation monitoring wells and soil vapor points with quarterly sampling and DEP submittals.

*Talcottville Road, Vernon, Connecticut*. Excavation of gasoline-contaminated soil and application of Oxygen Release Compound (ORC) in order to remediate release area. Study included DEP permitting, and pre- and post-remediation water chemistry monitoring.

*General Electric, Hazardous Ranking System Package, Pittsfield, Massachusetts*. Worked with a team of geologists assessing and ranking sources at this high profile Site for proposal to the National Priority List.

*American Optical Company, Site Inspection Prioritization, Southbridge, Massachusetts*. As Site Leader for this Site Inspection Prioritization, duties included the preparation of a report to summarize current site conditions and rate the potential for further regulation under the EPA Superfund program. Duties included review of previous analytical data to assess potential sources.

## Experience Summary

Ms. Ponce is an environmental engineer with more than 16 years of experience in the environmental and engineering services industries. As a Principal and National Client Manager working within Partner's Investment Advisory Group, Ms. Ponce strives to provide the expected high level of client service for the Equity Asset Management industry.

Ms. Ponce has significant experience in the field of environmental due diligence, site assessment, remediation, and regulatory compliance. Ms. Ponce provides environmental support to clients nationwide during the acquisition, disposition, development, and on-going management and operation of commercial, industrial, and multifamily residential properties.

Ms. Ponce has considerable experience in Phase I and Phase II Environmental Site Assessments (ESAs) of commercial, agricultural, and industrial properties and projects involving water quality, soil quality, and regulatory compliance including hazardous and solid waste site characterization and remediation; remediation system design installation, and operation; tank removals; asbestos surveys; lead-based paint surveys; radon studies; mold assessments; lead-in water sampling and analysis; and technical reporting.

Ms. Ponce has been involved with feasibility and treatability studies associated with several remediation projects including soil and groundwater treatment systems, UST/LUST closures, and management of construction soils generated during redevelopment of agricultural and industrial properties. Other equity and finance level services managed and directed by Ms. Ponce include management of Property Condition Assessments, ALTA Land Surveys, zoning reports, Seismic Risk Assessments (PML), Construction Risk Management, construction monitoring services, and construction document cost review analysis.

Real estate investors, financial institutions, insurance lenders, property managers, developers, and brokers have come to rely on her advice and judgment to help them with their real estate business decisions. Ms. Ponce is a dedicated professional who takes pride and pleasure in meeting her client's needs and spearheading and assembling the team with the expertise to handle any issue that may come up during the real estate transaction.

## Project Experience

Ms. Ponce has conducted, managed, and directed thousands of ESAs, industrial hygiene, and engineering assessments throughout her career, nationally and globally. The following select projects and client base provide a glimpse of her consulting experience and due diligence background:

*Ford Leasing Development Company / Sunset Ford, Westminster, California.* Conducted a Phase I and II ESA and remedial activities at a closing automobile dealership with 41 service bays containing active, decommissioned, or removed in-ground hydraulic vehicle lifts. The Phase II ESA identified petroleum hydrocarbon and VOC impacts in soil and groundwater in the immediate vicinity of the lifts. Based on the identified impacts, managed the removal of all lifts and contaminated soil under regulatory oversight and conducted a comprehensive site investigation, including well installation and soil, groundwater, and soil vapor sampling. Prepared and submitted final reports to the client and regulatory agencies and obtained regulatory site closure.

*UBS Realty Investors, LLC, Riverside, California.* Conducted a Phase I ESA of an approximately 36-acre commercial shopping center containing retail stores; restaurants; banks; grocery stores; a movie theater; hair, nail, and beauty salons; and a dry cleaner in a total of 16 buildings. Work included site reconnaissance, tenant inspections, site history review, database search, and final report preparation with recommendations for additional assessment.

*USDA Forest Service, Mountain Center, California.* Prepared a Soil Excavation and Groundwater Well Installation Workplan to assess a release that was discovered during the removal of two 1,000-gallon USTs. Elevated contaminant concentrations were detected in confirmation soil samples collected at that time. Installed one groundwater monitoring well into fractured bedrock and later abandoned the well due to planned excavation activities in the area. A groundwater sample collected prior to well abandonment contained elevated contaminant concentrations. Prepared a Site Investigation Summary Report summarizing site activities and investigations to date. Prepared a Groundwater Assessment Workplan to assess the extent of contaminant concentrations in groundwater. Site assessment work is pending.

*American Golf Corporation, Eighteen Sites in Southern California.* Managed underground storage tank removal and closure activities. Work included performing initial confirmation soil sampling and analysis and subsequent monitoring and soil and/or groundwater testing in association with the removal of the

underground storage tanks, associated dispensers, and piping at sixteen sites located throughout Southern California. Prepared soil and/or groundwater investigation workplans as needed to address contamination issues at several of the sites and closure reports for the various State and local authorities. To date, regulatory closure has been obtained at most of the facilities. Currently managing ongoing monitoring and/or remediation is occurring at several of the facilities.

*G.E. Capital, Tijuana, Mexico.* Managed and conducted more than 30 Phase I and Phase II ESAs for active and proposed industrial developments within various areas of Tijuana, Mexico. Work included site reconnaissance, site history review, and final report preparation.

Appendix F Infiltration Feasibility

# Owner's Certification

This Low Impact Development (LID) has been prepared for **12021 Woodruff LLC** (Owner) by **Thienes Engineering, Inc.** (Engineers).

The LID is intended to comply with the requirements of the City of Downey, Public Works Department, and Department of Planning and Redevelopment, requiring the preparation of a LID. The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to date conditions on the site consistent with the Los Angeles Regional Board's Basin Plan and the intent of the non-point source National Pollutant Discharge Elimination System (NPDES) Permit for Waste Discharge Requirements for the County of Los Angeles, Los Angeles County Flood Control District and the incorporated cities of Los Angeles County within the California Regional Water Quality Control Board, Los Angeles Region. Once the undersigned transfers its interest in the property, its successors-in-interest shall bear the aforementioned responsibility to implement and amend the LID. An appropriate number of approved-signed copies of this document shall be available on the subject site in perpetuity.

# 1.0 Project Description

The project site is located within the City of Downey (Figure 1 - Vicinity Map), at APN(s): 3284-025-18, of Los Angeles County. It's for commercial use with a lot size of approximately 6.30 acres. It's located at 12021 Woodruff Avenue, Downey, CA 90241.

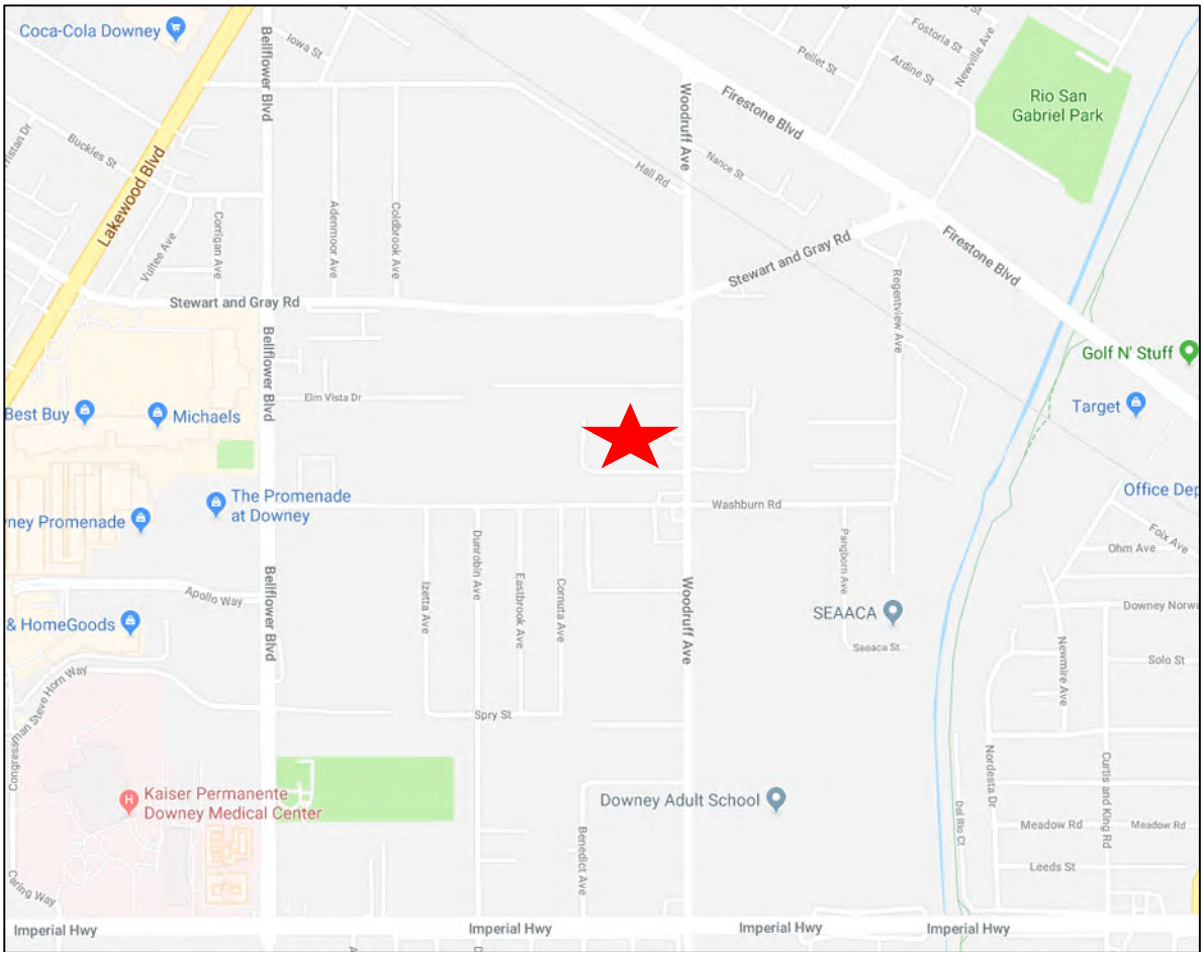

**Figure 1 - Vicinity Map (North↑)**

The proposed site is a Designated Project identified as a significant redevelopment where 50 percent or more of the impervious surface of a previously developed site is proposed to be altered and the previous development project was not subject to post-construction stormwater quality control measures. Hence, the entire development site must meet the requirements of the LID Standards Manual.

The project will treat stormwater runoff generated by the project through the use of one WetlandMOD biofiltration system and underground chambers (detention only) sized to treat 1.5 times the Stormwater Quality Design volume (SWQDv). Infiltration is infeasible due onsite contamination as described in Section 1.3 and as described in the Phase I Environmental Site Assessment Report within Appendix F.

## 1.1 Existing Site Description

The project site has an existing one story masonry and metal building of approximately 159,335 square feet. Vehicle parking is located along the perimeter of the site. A drive aisle wraps around the existing building.

Runoff from the majority of the site drains southwesterly via valley gutter. The valley gutter jogs the northerly and westerly property line. Per existing topography, given the location of the roof drains along the building perimeter, most if not all of the roof runoff will drain to this valley gutter. Flows will be conveyed from the site through the southerly offsite property and eventually discharge to Washburn Road via parkway culvert.

Runoff from the vehicle parking lot and the landscaping fronting Woodruff Avenue will sheet flow toward the street. Some flows will drain via a parkway culvert located at the southeast portion of the site.

## 1.2 Proposed Site Description

The project site encompasses approximately 6.30 acres. Proposed improvements to the site include one industrial warehouse type building (SIC Code 4225) of 43,788 square feet. There will be two separate truck yards on both the north and south sides of the building. Vehicle parking lots will be located on the east side of the building. Trailer stalls will be located on the northerly and southerly part of the site. Landscaping will be located along the easterly property line fronting Woodruff Avenue and throughout the easterly vehicle parking lot.

The site will consist of one outlet location (connection to public storm drain) located at the southerly driveway entrance. Before runoff discharges offsite, catch basins and a sump pump will be utilized to divert the 1.5x SWQDv to the WetlandMOD biofiltration system and underground chambers for treatment. The WetlandMOD biofiltration system will utilize plants and soil media from MS4 Permit's Attachment H to biotreat pollutants. Treated flows will ultimately get discharged onto the proposed onsite storm drain via an underdrain system and a sump pump.

Runoff from portions of the driveways and landscaping fronting Woodruff Avenue (Subarea 10B) will sheet flow to the public street without being routed to an LID BMP.

| SITE CONDITION | IMPERVIOUS AREA (ac.)* | PERVIOUS AREA (ac.)* | TOTAL PROJECT AREA (ac.) | IMPERVIOUS % |
|---|---|---|---|---|
| Existing | 6.30 | 0.00 | 6.30 | 100% |
| Proposed | 5.64 | 0.66 | 6.30 | 10% |

## 1.3 Geological Investigation/Infiltration Feasibility

The site lies above LA County Soil Type 006 known as Hanford Fine Sandy Loam. Based on the "Phase I Environmental Site Assessment Report" dated September 26, 2018 and prepared by Partner Engineering and Science, Inc.; a Phase II conducted in 2013 determined that to an approximate depth of 50 feet below surface (bgs), soil consists of brown, fine grained sand and silt overlying grey, clayey silt. In the same Phase II, groundwater was encountered at 45 feet bgs.

The historic use of the site has been for manufacturing purposes. Kirkhill, a manufacturer of custom rubber products has occupied all or part of the subject building since 1951 and in an earlier Phase II report (2005), high concentrations of diesel range and oil range petroleum were found in the soil. Therefore, infiltration is deemed infeasible. The project will instead propose a WetlandMOD biofiltration system to meet water quality requirements for 1.5x SWQDv. Refer to Appendix F for the Phase I report.

# 2.0 Project Specific Requirements

The proposed site is a Designated Project identified as a significant redevelopment where 50 percent or more of the impervious surface of a previously developed site is proposed to be altered and the previous development project was not subject to post-construction stormwater quality control measures. Thus, the entire development site must meet the requirements of the LID Standards Manual.

## 2.1 Peak Storm Water Runoff Discharge Rates

Runoff from the northerly half of the building and the northerly truck yard (Subarea 1A) drains to catch basins in the truck yard. The 50-year peak flow rate is approximately 9.3 cfs.

Runoff from the easterly vehicle parking lot (Subareas 2A and 3A) drain to catch basins within the parking lot. The 50-year peak flow rate for subareas 2A and 3A is approximately 0.5 cfs and 0.7 cfs, respectively.

Runoff from the southerly half of the building and the southerly truck yard (Subarea 4A) drains to catch basin in the southerly truck yard. The 50-year peak flow rate for this area is approximately 9.0 cfs. All flows from subareas 1A, 2A, 3A, and 4A are conveyed southeasterly of the site via onsite storm drain. Flows from the site will discharge to the 36” storm drain in Woodruff Avenue, located east of the site.

Runoff from portions of both driveways and landscaping fronting Woodruff will sheet flow to the public street.

As previously mentioned, runoff from the site is limited to 1.25 cfs/acre. Discharge from the site is limited to 7.9 cfs (6.30 acres x 1.25 cfs/acre). Both the northerly and southerly truck yard will be used to detain the peak flow rate. Runoff from the site is limited due to the shallow hydraulic grade line at the proposed connection to the existing 36” storm drain in Woodruff Avenue.

## 2.2 Source Controls

Source control measures are designed to prevent pollutants from contacting stormwater runoff or prevent discharge of contaminated stormwater runoff to the storm drain system and/or receiving water. This section describes structural-type, source control measures that must be considered for implementation in conjunction with appropriate nonstructural source control measures, such as good housekeeping and employee training, to optimize pollution prevention.

Source control measures should be implemented to the maximum extent practicable to mitigate pollutant mobilization from the project site in stormwater and non-stormwater runoff. A summary of the source control measures that should be implemented for each type of project is summarized below.

## 2.2.A Storm Drain Message and Signage (S-1)

All proposed and any existing inlets to remain will be stenciled with prohibitive language and/or graphical icons to prevent dumping. Legibility of the stencils/markers will be maintained on a yearly basis, or as needed.

## 2.2.B Outdoor Material Storage Area (S-2)

There are no proposed outdoor material storage areas for this project. Any and all materials will be stored indoors.

## 2.2.C Outdoor Trash Storage/Waste Handling Areas (S-3)

Trash enclosures will be located away from roof drainage. The bin's lid will remain closed when not in use and will be walled off to prevent transport by wind and contact with rainfall.

## 2.2.D Outdoor Loading/Unloading Dock Area (S-4)

The project proposes to construct several aboveground loading docks with dock high doors which will remain closed when not in use. The concrete surface is designed to drain away from the building and minimize run-on to the loading docks. This area will be treated via underground chambers (detention only) and a WetlandMOD biofiltration system. Dock area flows are captured by inlets that utilize drain inserts to filter out pollutants prior to entering the biofiltration system. Additionally, the proposed buildings will be utilized as a warehouse for finished goods and consequently, items being loaded/unloaded do not have the potential to contribute to stormwater pollution. Please refer to Appendix B for loading dock locations.

## 2.2.F Outdoor Vehicle/Equipment Repair/Maintenance Area (S-5)

Not applicable

## 2.2.G Outdoor Vehicle/Equipment Accessory Wash Area (S-6)

Not applicable

## 2.2.H Fuel & Maintenance Area (S-7)

Not applicable

## 2.2.I Landscape Irrigation Practices (S-8)

Install irrigation systems that utilize a weather-based smart irrigation controller to minimize water usage and reduce dry weather urban runoff.

## 2.2.J Building Materials (S-9)

Alternative building materials could not be used in-lieu of traditional materials due to the nature of the project (commercial building).

## 2.2.K Animal Care and Handling Facilities (S-10)

Not applicable

## 2.2.L Outdoor Horticulture Areas (S-11)

Not applicable

# 2.3 Low Impact Development (LID)

## 2.3.A Infiltration Feasibility

Refer to Section 1.3's Geotechnical Investigation/Infiltration Feasibility within this LID report. Infiltration is not feasible due to contaminated soil.

## 2.3.B Harvest and Use

This concept was not utilized because it is a commercial facility where the amount of impervious area is much greater than landscape and toilet use. However, stormwater is detained for biofiltration prior to discharging offsite.

## 2.3.C Biofiltration

One WetlandMOD biofiltration unit with 114 underground chambers will be proposed. The WetlandMOD will utilize plants and soil media from MS4 Permit's Attachment H to biotreat pollutants. Flows will be collected and stored in proposed underground chamber systems for detention only; no infiltration is assumed. Stormwater will then be pumped into the at-grade WetlandMOD for a constant treatment flowrate as listed in the table below. The systems are sized to drawdown the detained 1.5x SWQDv within 96 hours.

HydroCalc was used to determine the 1.5x SWQDv using the 85th percentile storm. The WetlandMOD biofilter a device-specific and constant flowrate for water quality treatment. Flowrates from the 85th percentile storm that exceeds the WetlandMOD's constant flowrate will be detained and slowly biofiltered over the allowable 96 hours. The 114 underground chambers are used to detain that portion of the 1.5x SWQDv. See summary table below and Appendix A for calculations.

| SUMMARY TABLE | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | | WETLANDMOD | | | MC-4500 CHAMBERS | | | |
| SUBAREAS | AREA (ACRES) | 1.5x SWQDv (CF) | WETLANDMOD MODEL | CONSTANT FLOWRATE (CFS) | AMOUNT FILTERED DURING STORM (CF) | DETENTION REQUIRED (CF) | DETENTION PROVIDED (CF) | # OF CHAMBERS | ACTUAL TREATMENT FILTERED + STORAGE (CF) |
| 1A-4A | 5.95 | 25,716 | WM-11-22-V | 0.076 | 6,635 | 19,114 | 19,188 | 114 | 25,823 |
| **TOTAL** | **5.95** | **25,716** | | | **6,635** | **19,114** | **19,188** | **114** | **25,823** |

## 2.4 Hydromodification

The proposed site is tributary to an engineered channel (San Gabriel River) that is regularly maintained and is not susceptible to hydromodification impacts. In addition, the onsite water quality BMPs will assist in decreasing the time of concentration.

## 2.5 Conserve Natural Areas

*During the subdivision design and approval process, the site layout must be consistent with the applicable General Plan and Local Area Plan policies and implement the following:*

- *Concentrate or cluster development on portions of the site while leaving the remaining land in a natural undisturbed condition;*
- *Limit clearing and grading of native vegetation at the site to the minimum amount needed to build lots, allow access, and provide fire protection;*
- *Maximize trees and other vegetation at the site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants;*
- *Promote natural vegetation by using parking lot islands and other landscaped areas;*
- *Preserve riparian areas and wetlands.*

The property was previously developed with no natural areas to conserve.

## 2.6 Minimize Storm Water Pollutants of Concern

*Stormwater runoff from a site has the potential to contribute oil and grease, suspended solids, metals, gasoline, pesticides, and pathogens to the stormwater conveyance system. The development must be designed so as to minimize, to the maximum extent practicable, the introduction of pollutants of concern that may result in significant impacts, generated from site runoff of directly connected impervious areas (DCIA), to the stormwater conveyance system as approved by the building official. Pollutants of concern, consist of any pollutants that exhibit one or more of the following characteristics: current loadings or historic deposits of the pollutant are impacting the beneficial uses of a receiving water, elevated levels of the pollutant are found in sediments of a receiving water and/or have the potential to bioaccumulate in organisms therein, or the detectable inputs of the pollutant are at concentrations or loads considered potentially toxic to humans and/or flora and fauna.*

*In meeting this specific requirement, "minimization of the pollutants of concern" will require the incorporation of a BMP or combination of BMPs best suited to maximize the reduction of pollutant loadings in that runoff to the Maximum Extent Practicable.*

Anticipated pollutants generated from the proposed development are:

- Suspended Solids
- Total Phosphorus

- Total Nitrogen
- Total Kjeldahl Nitrogen
- Cadmium, Total
- Chromium, Total
- Copper, Total
- Lead, Total
- Zinc, Total
-

The receiving waters are:

- San Gabriel River (Reach 2): Engineered Channel
- San Gabriel River (Reach 1): Engineered Channel
- San Gabriel River Estuary
- San Pedro Bay Near/Off Shore Zones
- Pacific Ocean

TMDL's for receiving waters:

- San Gabriel River (Reach 2): None
- San Gabriel River (Reach 1): Bacteria, Metals and Trash
- San Gabriel River Estuary: Bacteria, Metals and Trash
- San Pedro Bay Near/Off Shore Zones: None
- Pacific Ocean: None

303d List for receiving waters:

- San Gabriel River (Reach 2): Coliform Bacteria, Cyanide and Lead
- San Gabriel River (Reach 1): Coliform Bacteria and pH
- San Gabriel River Estuary: Copper, Dioxin, Nickel and Oxygen (Dissolved)
- San Pedro Bay Near/Off Shore Zones: Chlordane, DDT (tissue & sediment), PCBs (Polychlorinated biphenyls) and Sediment Toxicity
- Pacific Ocean: None

The pollutants of concern of the project site are:

- Heavy Metals
- Bacteria
- Trash and Debris

The proposed project will treat stormwater runoff and disconnect runoff from impervious areas by means of biofiltration. The proposed WetlandMOD biofiltration system will utilize plants and soil media from MS4 Permit's Attachment H to biotreat pollutants.

## 2.7 Protect Slopes and Channels

*Project plans must include BMPs consistent with local codes and ordinances and LID to decrease the potential of slopes and/or channels from eroding and impacting stormwater runoff:*

- *Convey runoff safely from the tops of slopes and stabilize disturbed slopes.*
- *Utilize natural drainage systems to the maximum extent practicable.*
- *Control or reduce or eliminate flow to natural drainage systems to the maximum extent practicable.*
- *Stabilize permanent channel crossings.*
- *Vegetate slopes with native or drought tolerant vegetation.*
- *Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion, with the approval of all agencies with jurisdiction, e.g., the U.S. Army Corps of Engineers and the California Department of Fish and Game.*

The proposed project site is located on a flat terrain. There are no natural drainage systems, or channel crossings to protect.

## 2.8 Provide Proof of Ongoing BMP Maintenance

*Improper maintenance is one of the most common reasons why water quality controls will not function as designed or which may cause the system to fail entirely. It is important to consider who will be responsible for maintenance of a permanent BMP, and what equipment is required to perform the maintenance properly. If Structural or Treatment Control BMPs are required or included in project plans, the applicant must provide verification of maintenance provisions through such means as may be appropriate, including, but not limited to legal agreements, covenants, CEQA mitigation requirements and/or Conditional Use Permits.*

*The verification will include the developer's signed statement, as part of the project application, accepting responsibility for all Structural and Treatment Control BMP maintenance until the time the property is transferred and, where applicable, a signed agreement from the public entity assuming responsibility for Structural or Treatment Control BMP maintenance. The transfer of property to a private or public owner must have conditions requiring the recipient to assume responsibility for maintenance of any Structural or Treatment Control BMP to be included in the sales or lease agreement for that property, and will be the owner's responsibility. The condition of transfer shall include a provision that the property owners conduct maintenance inspection of all Structural or Treatment Control BMPs at least once a year and retain proof of inspection. For residential properties where the Structural or Treatment Control BMPs are located within a common area, which will be maintained by a homeowner's association, language regarding the responsibility for maintenance must be included in the project's conditions, covenants and restrictions (CC&Rs). Printed educational materials will be required to accompany the first deed transfer to highlight the existence of the requirement and to provide information on what stormwater management facilities are present, signs that maintenance is needed, how the*

*necessary maintenance can be performed, and assistance that the Permittee can provide. The transfer of this information shall also be required with any subsequent sale of the property.*

*Structural or Treatment Control BMPs located within a public area proposed for transfer will be the responsibility of the developer until accepted for transfer by the appropriate public agency. Structural or Treatment Control BMPs proposed for transfer must meet design standards adopted by the public entity for the BMP installed and should be approved by the appropriate public agency prior to its installation.*

The property owner/operator will maintain proof of ongoing maintenance at the site as recorded in the Operation and Maintenance (Appendix C) and Covenant and Agreement (Appendix D).

## 2.9 Design Standards for Structural or Treatment Controls BMPs

The proposed project is required to incorporate appropriate stormwater mitigation measures into the design plan for the entire site. The proposed project will treat and mitigate flows per LID guidelines by effectively treating the pollutants of concern by means of biofiltration.

Before runoff discharges offsite, catch basins and a sump pump will be utilized to divert the 1.5x SWQDv to the WetlandMOD biofiltration system and underground chambers for treatment. The WetlandMOD biofiltration system will utilize plants and soil media from MS4 Permit's Attachment H to biotreat pollutants. Treated flows will ultimately get discharged onto the proposed onsite storm drain via an underdrain system and a sump pump.

## 2.10 Provisions Applicable to Individual Priority Project Categories

## 2.10.A Parking Lots

### *2.10.A.1 Properly Design Parking Area*

*Parking lots contain pollutants such as heavy metals, oil and grease, and polycyclic aromatic hydrocarbons that are deposited on parking lot surfaces by motor-vehicles. These pollutants are directly transported to surface waters. To minimize the offsite transport of pollutants, the following design criteria are required:*

- *Reduce impervious land coverage of parking areas.*
- *Infiltrate runoff before it reaches storm drain system.*
- *Treat runoff before it reaches storm drain system.*

The proposed project is designed so that pollutants from the impervious surfaces are disconnected prior to discharging offsite. Runoff from the parking lots are transported through a WetlandMOD biofiltration system for treatment.

***2.10.B.2 Properly Design to Limit Oil Contamination and Perform Maintenance***

*Parking lots may accumulate oil, grease, and water insoluble hydrocarbons from vehicle drippings and engine system leaks.*

- *Treat to remove oil and petroleum hydrocarbons at parking lots that are heavily used (e.g. fast food outlets, lots with 25 or more parking spaces, sports event parking lots, shopping malls, grocery stores, discount warehouse stores).*
- *Ensure adequate operation and maintenance of treatment systems particularly sludge and oil removal, and system fouling and plugging prevention control.*

The project owner will ensure that grease and oil are contained. The parking lot will be swept on a monthly basis, minimum, and before any rain events. Absorbent materials will be used to collect any spilled oil, and disposed of properly, to ensure they do not contaminate stormwater.

# 2.11 Waiver

*A Permittee may, through adoption of an ordinance or code incorporating the treatment requirements of LID, provide for a waiver from the requirement if impracticability for a specific property can be established. A waiver of impracticability shall be granted only when all other Structural or Treatment Control BMPs have been considered and rejected as infeasible. Recognized situations of impracticability include, (i) extreme limitations of space for treatment on a redevelopment project, (ii) unfavorable or unstable soil conditions at a site to attempt infiltration, and (iii) risk of ground water contamination because a known unconfined aquifer lies beneath the land surface or an existing or potential underground source of drinking water is less than 10 feet from the soil surface. Any other justification for impracticability must be separately petitioned by the Permittee and submitted to the Regional Board for consideration. The Regional Board may consider approval of the waiver justification or may delegate the authority to approve a class of waiver justifications to the Regional Board Executive Officer. The supplementary waiver justification becomes recognized and effective only after approval by the Regional Board or the Regional Board Executive Officer. A waiver granted by a Permittee to any development or redevelopment project may be revoked by the Regional Board Executive Officer for cause and with proper notice upon petition.*

The proposed project does not require a waiver of impracticability from any LID conditions.

# 2.12 Mitigation Funding

*The Permittees may propose a management framework, for endorsement by the Regional Board Executive Officer, to support regional or sub-regional solutions to storm water pollution, where any of the following situations occur:*

- *A waiver for impracticability is granted;*
- *Legislative funds become available;*
- *Off-site mitigation is required because of loss of environmental habitat; or*

- *An approved watershed management plan or a regional storm water mitigation plan exists that incorporates an equivalent or improved strategy for storm water mitigation.*

No management framework for mitigation funding is necessary for the proposed project.

Funding will be the responsibility of the owner:

## 2.13 Limitation on Use of Infiltration BMPs

*Three factors significantly influence the potential for storm water to contaminate ground water. They are (i) pollutant mobility, (ii) pollutant abundance in storm water, (iii) and soluble fraction of pollutant. The risk of contamination of groundwater may be reduced by pretreatment of storm water. A discussion of limitations and guidance for infiltration practices is contained in, Potential Groundwater Contamination from Intentional and Non-Intentional Stormwater Infiltration, Report No. EPA/600/R-94/051, USEPA (1994).*

*In addition, the distance of the groundwater table from the infiltration BMP may also be a factor determining the risk of contamination. A water table distance separation of ten feet depth in California presumptively poses negligible risk for storm water not associated with industrial activity or high vehicular traffic.*

*Infiltration BMPs are not recommended for areas of industrial activity or areas subject to high vehicular traffic (25,000 or greater average daily traffic (ADT) on main roadway or 15,000 or more ADT on any intersecting roadway) unless appropriate pretreatment is provided to ensure groundwater is protected and the infiltration BMP is not rendered ineffective by overload.*

See Section 1.3 for discussion on the limitation of infiltration at the project site.

## 2.14 Alternative Certification for Storm Water Treatment Mitigation

*In lieu of conducting detailed BMP review to verify Structural or Treatment Control BMPs adequacy, a Permittee may elect to accept a signed certification from a Civil Engineer or a Licensed Architect registered in the State of California, that the plan meets the criteria established herein. The Permittee is encouraged to verify that certifying person(s) have been trained on BMP design for water quality, not more than two years prior to the signature date. Training conducted by an organization with storm water BMP design expertise (e.g., a University, American Society of Civil Engineers, American Society of Landscape Architects,*

*American Public Works Association, or the California Water Environment Association) may be considered qualifying.*

A California licensed civil engineer has provided a detailed BMP review of this report.

# WetlandMOD - 24" Media Thickness, Volume Based

| | |
|---|---|
| **Project ID:** | TEI 3700b |
| **Project Name:** | 12021 Woodruff Avenue (1A-4A) |
| **City, State, ZIP:** | Downey, CA |
| **Date:** | 26-Jul |

| |
|---|
| Blue = User Input |
| Gray = Formula |
| Green = Proceed |
| Red = Redo |

| **WetlandMOD Size** | **WM-11-22-V** |
|---|---|

LA County 24"; Bay Area 18"
Provided by EOR/ DMA area(s)
Drain Down Time in hours
LA 5-12in/hr; Bay Area 10 in/hr
Add Row(s) to gain treatment flow
RIM/FS to Outlet pipe

| **User Input Data** | |
|---|---|
| Media Thickness (in) | 24 |
| Treatment Volume (CF) | 25716 |
| Drain Down Time (hrs) | 96 |
| Infiltration Rate (in/hr) | 12 |
| Number of Row(s) | 2 |
| Unit Depth (ft) | 4.50 |

treatment volume x 448.8 =
in/hr / 100 =
treatment flow / loading rate =

| **Treatment Data** | |
|---|---|
| Treatment Flow (gpm) | 33.40 |
| Media Loading Rate (gpm/sf) | 0.12 |
| Requried Media Area (sf) | 278.29 |

Provding 3" Multch on top
Reduced by 4" from FS
Length of cage in each row

| **Cage, HGL Height** | |
|---|---|
| Cage Height (ft) | 4.25 |
| HGL Height (ft) | 4.17 |
| Cage Length/ Row (ft) | 17.0 |

Based on Gravel Layer surface area
Unit discharge rate

| **Final Checks** | |
|---|---|
| Provided Media Surface Area (sf) | 283.33 |
| Discharge Rate (cfs) | 0.076 |

Provided >= Required surface area, unit dimensions in good standing.

Length of Media row + Baffle wall
Pre-treatment + Filtration chm.
Total width of unit

| **Unit Dimensions** | |
|---|---|
| Length Media Row(s) (ft) | 18.0 |
| Length of Unit (ft) | 22.0 |
| Width of Unit (ft) | 11.0 |

| **Media, Gravel Volume** | |
|---|---|
| WM Media Volume (cy) | 21.41 |
| Gravel Layer Volume (cy) | 4.46 |

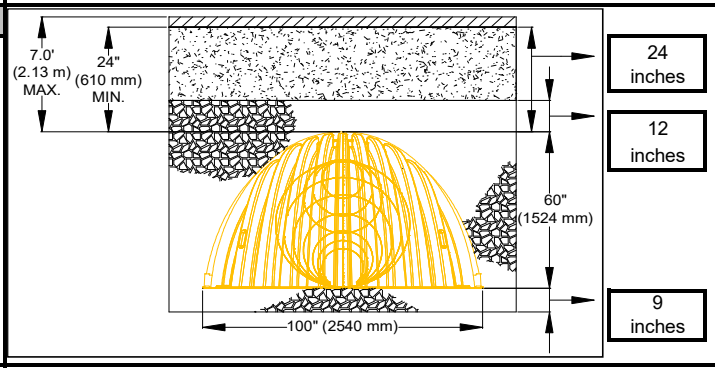
**Project Information:**

| | |
|---|---|
| Project Name: | 12021 Woodruff Avenue (1A-4A) |
| Location: | Downey, CA |
| Date: | 7/26/2019 |
| Engineer: | Thienes Engineering Inc. |
| StormTech RPM: | |

## System Requirements

| | | | |
|---|---|---|---|
| Units | | Imperial | |
| Required Storage Volume | | 19114 | CF |
| Stone Porosity (Industry Standard = 40%) | | 40 | % |
| Stone Above Chambers | (12 inch min.) | 12 | inches |
| Stone Foundation Depth | (9 inch min.) | 9 | inches |
| Average Cover over Chambers | (24 inch min.) | 24 | inches |
| Bed size controlled by WIDTH or LENGTH? | | WIDTH | |
| Limiting WIDTH or LENGTH dimension | | 30 | feet |
| Storage Volume per Chamber | | 162.6 | CF |
| Storage Volume per End Cap | | 108.6 | CF |

## System Sizing



| | | |
|---|---|---|
| Number of Chambers Required | 114 | each |
| Number of End Caps Required | 6 | each |
| Bed Size (including perimeter stone) | 4,562 | square feet |
| Stone Required (including perimeter stone) | 968 | tons |
| Volume of Excavation | 1309 | cubic yards |
| Non-woven Filter Fabric Required (20% Safety Factor) | 1556 | square yards |
| Length of Isolator Row | 160.1 | feet |
| Woven Isolator Row Fabric (20% Safety Factor) | 440 | square yards |
| Installed Storage Volume | 19,188 | cubic feet |

## Controlled by Width (Rows)

| | | |
|---|---|---|
| Maximum Width = | 30 | feet |

3 rows of 38 chambers

| | | |
|---|---|---|
| Maximum Length = | 160.1 | feet |
| Maximum Width = | 28.5 | feet |

| SUMMARY TABLE | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|

MC-4500 Chamber

# StormTech™ MC-4500 Chamber

Designed to meet the most stringent industry performance standards for superior structural integrity while providing designers with a cost-effective method to save valuable land and protect water resources. The StormTech system is designed primarily to be used under parking lots thus maximizing land usage for commercial and municipal applications.

**StormTech MC-4500 Chamber** (not to scale)

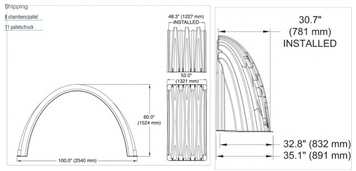
Nominal Chamber Specifications

| | |
|---|---|
| Size (L x W x H) | 52" (1321 mm) x 100" (2540 mm) x 60" (1524 mm) |
| Chamber Storage | 106.5 ft³ (3.01 m³) |
| Min. Installed Storage* | 160.9 ft³ (4.60 m³) |
| Nominal Weight | 120 lbs (54.4 kg) |

* This assumes a minimum of 12" (305 mm) of stone above, 9" (229 mm) of stone below chambers, 9" (229 mm) of stone between chambers/caps and 40% stone porosity.

**StormTech MC-4500 End Cap** (not to scale)

Nominal End Cap Specifications



| | |
|---|---|
| Size (L x W x H) | 35.7" (891 mm) x 90.3" (2291 mm) x 59.4" (1509 mm) |
| End Cap Storage | 35.7 ft³ (1.01 m³) |
| Min. Installed Storage* | 106.7 ft³ (3.08 m³) |
| Nominal Weight | 120 lbs (54.4 kg) |

* This assumes a minimum of 12" (305 mm) of stone above, 9" (229 mm) of stone below, 12" (305 mm) of stone perimeter, 9" (229 mm) of stone between chambers/end caps and 40% stone porosity.

Shipping

6 chambers/pallet

11 pallets/truck

**Storage Volume Per Chamber/End Cap ft³ (m³)**

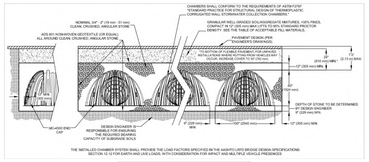
| | Base Unit Storage | Chamber/End Cap and Stone Volume — Stone Foundation Depth in. (mm) | | | |
|---|---|---|---|---|---|
| | 81" (m³) | 9" (229 mm) | 12" (305 mm) | 15" (381 mm) | 18" (457 mm) |
| Chamber | 106.5 (3.02) | 162.6 (4.60) | 166.3 (4.71) | 169.9 (4.81) | 173.6 (4.91) |
| End Cap | 35.7 (1.01) | 108.7 (3.08) | 111.9 (3.17) | 115.2 (3.26) | 118.4 (3.35) |

*NOTE: Assumes 9" (229 mm) min. row spacing, 12" (305 mm) min. of stone above, 40% stone porosity and includes the bare chamber/end cap volume. End cap volume assumes 12" (305 mm) min. stone perimeter.*

**Volume of Excavation Per Chamber/End Cap in yd³ (m³)**

| | Stone Foundation Depth | | | |
|---|---|---|---|---|
| | 9" (229 mm) | 12" (305 mm) | 15" (381 mm) | 18" (457 mm) |
| Chamber | 10.5 (8.0) | 10.8 (8.3) | 11.2 (8.5) | 11.5 (8.8) |
| End Cap | 9.3 (7.1) | 9.6 (7.3) | 9.9 (7.6) | 10.2 (7.8) |

*NOTE: Assumes 9" (229 mm) min. of separation between chamber rows, 12" (305 mm) min. of perimeter in front of end caps, and 24" (610 mm) of cover. The volume of excavation will vary as the depth of cover increases.*



**Amount of Stone Per Chamber**

| ENGLISH (tons (pm*)) | Stone Foundation Depth | | | |
|---|---|---|---|---|
| | 9" (229 mm) | 12" (305 mm) | 15" (381 mm) | 18" (457 mm) |
| Chamber | 7.4 (5.2) | 7.8 (5.5) | 8.3 (5.9) | 8.8 (6.2) |
| End Cap | 5.8 (6.8) | 10.0 (7.1) | 10.4 (7.4) | 10.9 (7.7) |
| METRIC kg (m³) | 229 mm | 305 mm | 381 mm | 457 mm |
| Chamber | 6691 (4.0) | 7117 (4.2) | 7552 (4.5) | 7987 (4.7) |
| End Cap | 8691 (5.2) | 9075 (5.4) | 9460 (5.6) | 9845 (5.9) |

*NOTE: Assumes 12" (305 mm) of stone above, 9" (229 mm) min. row spacing, and 12" (305) mm min. of perimeter stone in front of end caps.*

**General Cross Section**

**Contact your local StormTech representative or visit www.stormtech.com for a copy of the latest installation instructions.

CHAMBERS SHALL CONFORM TO THE REQUIREMENTS OF ASTM F2787 "STANDARD PRACTICE FOR STRUCTURAL DESIGN OF THERMOPLASTIC CORRUGATED WALL STORMWATER COLLECTION CHAMBERS."
GRANULAR WELL GRADED SOIL/AGGREGATE MIXTURES, <35% FINES. PROVIDE MINIMUM 6" (150 mm) COVER ON ALL SIDES. COMPACTION REQUIREMENT: 95% PROCTOR AND 60% RELATIVE DENSITY. SEE THE TABLE OF ACCEPTABLE FILL MATERIALS.
PAVEMENT DESIGN PER ENGINEER'S DRAWINGS.
NOMINAL 24" - 3" (76 mm - 51 mm) CLEAN, CRUSHED, ANGULAR STONE
ASTM F2418 POLYPROPYLENE (PP) WOVEN GEOTEXTILE OR EQUAL
ALL WOVEN GEOTEXTILES MUST HAVE MINIMUM FLOW RATE OF 80 gpm/ft² (3200 lpm/m²) PER ASTM D4491
ALL NON-WOVEN GEOTEXTILES MUST HAVE MINIMUM FLOW RATE OF 110 gpm/ft² (4400 lpm/m²) PER ASTM D4491
6" (150 mm) MIN.
12" (305 mm) MIN.
DEPTH OF STONE TO BE DETERMINED BY ENGINEER PER SITE SPECIFIC DESIGN
6" (150 mm) MIN.
6" (150 mm) MIN.
6" (150 mm) MIN.

# APPENDIX C

# BMP Operation and Maintenance

The owner is responsible for all funding and maintenance of the project's BMPs:

12021 WOODRUFF LLC
1800 WAZEE STREET, SUITE 500
DENVER, CO 80202
PHONE: (303) 567-500
CONTACT: BLAKE KELLEY

| Treatment Control BMP Operation and Maintenance | | | |
|---|---|---|---|
| **BMP** | **Operation/Maintenance** | **Inspection Frequency** | **Responsibility** |
| WetlandMOD System | ➢ All work to be done by the supplier or by a supplier approved contractor.<br>➢ Clean separation (sediment) chamber. The chamber is located directly under the manhole.<br>➢ Replace media in pre-filtration cartridges. Media life depends on the loading conditions and can easily be replaced and disposed of without any equipment. The BioMediaGREEN filter can be ordered from the manufacturer.<br>➢ Replace drain down filter media. Replacement of media takes approximately 5 minutes and is performed without any equipment.<br>➢ Replace wetland media. The life of the media can be up to 20 years. Remove spent media with shovel or vacuum truck and replace with new media. Media can be ordered from the manufacturer.<br>➢ See manufacturer's maintenance requirements for additional information. | Semi-annually (October 1st and February 1st) through maintenance service contract with the vendor or equally qualified contractor. | Owner |
| Underground Chambers | ➢ The isolator row shall be inspected semi-annually (October 1st and February 1st) and maintained once sediment depth is greater than 3-inches. The isolator row shall be inspected and maintained by a qualified technician and he/she will properly dispose of all wastes. A manhole is installed in order to inspect and maintain the isolator row. It is installed per OSHA codes to ensure operator and inspector safety.<br>➢ See manufacturer's maintenance requirements for additional information. | Semi-annually (October 1st and February 1st) through maintenance service contract with the vendor or equally qualified contractor. | Owner |

| Treatment Control BMP Operation and Maintenance | | | |
|---|---|---|---|
| **BMP** | **Operation/Maintenance** | **Inspection Frequency** | **Responsibility** |
| Sump Pump | ➢ Verify automatic and manual operations of pump(s)<br>➢ Inspect floats for proper elevation and movement. Correct any obstructions.<br>➢ Check incoming power and amperage for proper voltage.<br>➢ Hose down lift station to clean pump and floats. | Semi-annually (October 1st and February 1st) through maintenance service contract with the vendor or equally qualified contractor. | Owner |
| Drain Inserts | ➢ Visually inspect for defects and illegal dumping. Notify proper authorities if illegal dumping has occurred.<br>➢ Using an industrial vacuum, the collected materials shall be removed from the filter basket and disposed of properly.<br>➢ Inspect biosorb hydrocarbon boom and replace as necessary.<br>➢ See manufacturer's maintenance requirements for additional information. | Semi-annually (October 1st and February 1st) through maintenance service contract with the vendor or equally qualified contractor. | Owner |
| Maintenance Log | ➢ Keep a log of all inspection and maintenance performed on the above mentioned BMPs for at least 5 years. Keep this log on-site. | Ongoing | Owner |

**N1.** Education for Property Owners, Tenants, And Occupants. The owners will provide the tenants with information concerning good housekeeping practices that contribute to protection of storm water quality. Please see site-specific Low Impact Development report's Appendix E for educational materials and descriptions of concepts that will be addressed by education and training.

- BMP implementation: Start up to begin immediately after construction is completed.
- Maintenance Schedule: The owner will check with City and County at least once a year to obtain new or updated educational materials and provide these materials to tenants. Employees shall be trained to clean up spills and participate in ongoing maintenance. The project site will have annual employee training and new hires within 1 month.
- The owner is responsible for the tenants, employes, etcetera, being trained.

**N2.** Activity Restrictions. Conditions, Covenants and Restrictions (CC&R's) will identify restricting or prohibiting activities once the project is operational. These activities include, but will not be limited to:

- Prohibit discharges of fertilizer, pesticides, or animal wastes to streets or storm drains.
- Prohibit blowing or sweeping of debris (leaf litter, grass clippings, litter, etc.) into streets or storm drains.
- Requirement to keep trash receptacles covered or sheltered by a roof overhang or canopy.
- Prohibit vehicle washing, maintenance, or repair on the premises.
- BMP implementation: Start up to begin immediately after construction is completed.
- Maintenance Schedule: the owner will inspect the site weekly to ensure that landscaping materials and activities, trash receptacles, and vehicle washing, maintenance, or repair on the premises is managed, disposed of, and implemented to standard.
- The owner will be responsible for inspections of the site to ensure that no prohibited activities are being practiced.

**N3.** Common Area Landscaping Management. Maintenance of the landscaping shall be done weekly. Irrigation must be consistent with applicable Water Conservation Ordinance. Fertilizer and pesticide usage will be consistent with County Management Guidelines for Use of Fertilizers and Pesticides.

- BMP Implementation: Start up upon completion of landscaping.
- Maintenance Schedule: Irrigation system shall be inspected monthly by landscape contractor to check for over-watering, leaks, or excessive runoff to paved areas and landscaping shall be maintained weekly and maintenance contractor shall properly dispose of all landscape wastes.
- The owner will be responsible for inspection and maintenance of the landscaping and irrigation system.

**N4.** BMP Maintenance. BMP maintenance, implementation schedules, and responsible parties are included with each specific BMP narrative.

**N5.** Not applicable, no hazardous wastes onsite.

**N6.** Local Water Quality Permit Compliance: Not applicable. All activities will be done indoors and all materials will be stored indoors.

**N7.** Spill Contingency Plan: Spill contingency plans apply to those facilities having bulk liquid storage in tanks or drums. A spillage control plan will be established following the guidelines and to handle smaller potential spills. Each user may need to update or revise spillage control plan to reflect onsite use of liquids.

- BMP Implementation: Start up upon completion of the site.
- Maintenance Schedule: Daily inspections and maintenance and immediate dry clean up of any spills.
- The tenants and owner will be responsible for the spill contingency plan.

**N8.** Underground Storage Tanks: Not applicable. There will be no underground storage tanks on-site.

**N9.** Hazardous Materials Disclosure Statement: Site will be in compliance with ordinances typically enforced by respective fire protection agency for the management of hazardous

materials, if any. The County, Health care agencies, and/or other appropriate agencies (i.e. Department of Toxics Substances Control is typically responsible for enforcing hazardous materials and hazardous waste handling and disposal regulations. The owner will be responsible.

**N10.** Uniform Fire Code Implementation: Site will be in compliance with article 80 of the Uniform Fire Code enforced by fire protection agency. The owner will be responsible for compliance.

**N11.** Common Area Litter Control: Future employees, gardeners, and the property manager will help keep the site free of trash and other debris. The trash enclosure is located on the west side of the service building. It will be the owner's responsibility for having the site inspected weekly and cleaned as necessary.

- BMP Implementation: Start up upon completion of the site.
- Maintenance Schedule: Weekly inspections and maintenance and immediate dry clean up of any trash or debris.
- The owner/tenants will be responsible for common area litter control.

**N12.** Employee Training: The owner will prepare guidelines for the tenant and their employees discussing both structural and non-structural BMPs and how to implement them. See Educational Materials in Appendix E of the site-specific Low Impact Development report.

**N13.** Housekeeping of Loading Docks: Loading/unloading docks will be kept in a clean and orderly condition through a regular program of sweeping and litter control and immediate cleanup of spills and broken containers.

**N14.** Common Area Catch Basin Inspection: The owner/maintenance contractor will be responsible for cleaning the catch basins on-site on a regular basis prior to the storm season, no later than October 1st of each year.

- BMP Implementation: Maintenance to begin upon completion of storm drain system.
- Maintenance Schedule: Catch basins and storm drain system will be cleaned at least twice a year and prior to October 1. Catch basin filters will be inspected four times a year and prior, during and following a rain event, and serviced by a qualified technician. Service contractor will properly dispose of all wastes.
- The owner will be responsible for inspections and maintenance of all drainage facilities.

**N15.** Parking Lot Sweeping: The owner/maintenance contractor will have the private drive swept. Hosing or watering of the site will not be permitted as a method of cleaning.

- BMP Implementation: Start up upon completion of the paving.
- Maintenance Schedule: Parking lots and drive isles will be swept or vacuumed at least quarterly, October 1, January 1, April 1 and July 1 and as necessary. If there is any trash or debris in between the routine sweeping it will be swept or vacuumed immediately.
- The owner will be responsible for inspection and maintenance of parking lots and drive isles.

**N16.** Retail Gasoline Outlets: Not applicable. Not a retail gasoline outlet.

# Structural Source Control BMPs

| Structural Source Control BMPs | | | | |
|---|---|---|---|---|
| **Identifier** | **Name** | **Check One** | | **If not applicable, state brief reason** |
| | | **Included** | **Not Applicable** | |
| S1 | Provide storm drain system stenciling and signage | ☒ | ☐ | |
| S2 | Design and construct outdoor material storage areas to reduce pollution introduction | ☐ | ☒ | No outdoor storage areas onsite. |
| S3 | Design and construct trash and waste storage areas to reduce pollution introduction | ☒ | ☐ | |
| S4 | Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control | ☒ | ☐ | |
| S5 | Protect slopes and channels and provide energy dissipation | ☒ | ☐ | |
| S6 | Incorporate requirements applicable to individual priority project categories | ☒ | ☐ | |
| S7 | Dock areas | ☒ | ☐ | |
| S8 | Maintenance bays | ☐ | ☒ | No maintenance bay proposed. |
| S9 | Vehicle wash areas | ☐ | ☒ | No vehicle wash areas proposed. |
| S10 | Outdoor processing areas | ☐ | ☒ | No outdoor processing areas proposed. |
| S11 | Equipment wash areas | ☐ | ☒ | No equipment washing onsite. |
| S12 | Fueling areas | ☐ | ☒ | No fueling areas proposed. |
| S13 | Hillside landscaping | ☐ | ☒ | No hillsides. |
| S14 | Wash water control for food preparation areas | ☐ | ☒ | No food preparation onsite. |
| S15 | Community car wash racks | ☐ | ☒ | No community car wash. |

**S1.** Provide storm drain system stenciling and signage
Storm drain system stenciling and signage will be incorporated on the site at catch basins and inlets.

- BMP Implementation: Start up upon completion of the paving.
- Maintenance Schedule: stenciling and signage at catch basins will be inspected quarterly. If signage is missing or broken or stenciling is illegible, repairs are to be made immediately.
- The owner will be responsible for inspection and maintenance of stenciling and signage at catch basins onsite.

**S3.** Design and construct trash and waste storage areas to reduce pollution introduction (see Appendix E of the site-specific Low Impact Development report for CASQA Fact Sheet SC-30 for Oudoor Loading/Unloading)

- BMP Implementation: Start up upon completion of construction
- Maintenance Schedule: Remove waste from facility weekly by outside contractor. Make sure that trash container's lids are closed after use to prevent contact with rainfall and/or become windblown.
- The owner will be responsible for inspection and maintenance of stenciling and signage at catch basins onsite.

**S4.** Use efficient irrigation systems and landscape design, water conservation, smart controllers, and source control

- BMP Implementation: Start up upon completion of landscape installation.
- Maintenance Schedule: landscaping, irrigation system and controllers inspected at every routine maintenance on company's landscape maintenance schedule. If leakage, broken irriation or controllers are broken, shut off water and repair immediately. Regular source control and water conservation practices are required.
- The owner will be responsible for inspection and maintenance of landscape and irrigation at the site as well as water conservation and source control practices.

**S5.** Protect slopes and channels and provide energy dissipation

- BMP Implementation: Start up upon completion of vegetated swale.
- Maintenance Schedule: Weekly or with typical lanscape maintenance frequency. Revegetate slopes that may have eroded and/or unbury the energy disspator into the vegetated swale to prevent erosion and transport of sediment.
- The owner will be responsible for inspection and maintenance of the vegetated swale.

**S6.** Incorporate requirements applicable to individual priority project categories
See Section 2.2.D and 2.10.A of site-specific Low Impact Development report for industrial developments and parking lots, repsectively.

**S7.** Dock Areas (see Appendix E for CASQA Fact Sheet SC-30 for Oudoor Loading/Unloading)
Loading/unloading docks will be kept in a clean and orderly condition through a regular program of sweeping and litter control and immediate cleanup of spills and broken containers.

- BMP Implementation: Start up upon completion of the paving.

- Maintenance Schedule: Weekly inspection, cleaning and sweeping of trash; immediate clean up of spills is required. Keep docks property maintained.
- The owner will be responsible for inspection and maintenance of dock areas.

# Storm Drain Signage SD-13

**Design Objectives**

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- ☑ Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

## Description

Waste materials dumped into storm drain inlets can have severe impacts on receiving and ground waters. Posting notices regarding discharge prohibitions at storm drain inlets can prevent waste dumping. Storm drain signs and stencils are highly visible source controls that are typically placed directly adjacent to storm drain inlets.

## Approach

The stencil or affixed sign contains a brief statement that prohibits dumping of improper materials into the urban runoff conveyance system. Storm drain messages have become a popular method of alerting the public about the effects of and the prohibitions against waste disposal.

## Suitable Applications

Stencils and signs alert the public to the destination of pollutants discharged to the storm drain. Signs are appropriate in residential, commercial, and industrial areas, as well as any other area where contributions or dumping to storm drains is likely.

## Design Considerations

Storm drain message markers or placards are recommended at all storm drain inlets within the boundary of a development project. The marker should be placed in clear sight facing toward anyone approaching the inlet from either side. All storm drain inlet locations should be identified on the development site map.

### *Designing New Installations*

The following methods should be considered for inclusion in the project design and show on project plans:

- Provide stenciling or labeling of all storm drain inlets and catch basins, constructed or modified, within the project area with prohibitive language. Examples include “NO DUMPING

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

– DRAINS TO OCEAN" and/or other graphical icons to discourage illegal dumping.

- Post signs with prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area.

Note - Some local agencies have approved specific signage and/or storm drain message placards for use. Consult local agency stormwater staff to determine specific requirements for placard types and methods of application.

### *Redeveloping Existing Installations*

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. If the project meets the definition of "redevelopment", then the requirements stated under " designing new installations" above should be included in all project design plans.

## Additional Information

### *Maintenance Considerations*

- Legibility of markers and signs should be maintained. If required by the agency with jurisdiction over the project, the owner/operator or homeowner's association should enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards or signs.

### *Placement*

- Signage on top of curbs tends to weather and fade.

- Signage on face of curbs tends to be worn by contact with vehicle tires and sweeper brooms.

## Supplemental Information

### *Examples*

- Most MS4 programs have storm drain signage programs. Some MS4 programs will provide stencils, or arrange for volunteers to stencil storm drains as part of their outreach program.

SAMPLE CATCH BASIN STENCIL
PER BMP SD-13

## LIFT STATION REQUIRED MAINTENANCE

The lift station should be inspected twice a year for proper operation, and should be checked for overabundance of solid matter such as grease and soap buildup.

Proper operation and inspection would include the following:

1) Automatic operation of the system by float activation. One pump starting at lead on levels, second pump starting at high level conditions; manual operation by use of the selector switches.

2) Inspect floats for proper elevation and for proper movement. Correct any obstructions.

3) Check incoming power for proper voltage. Check voltage at motor connections.

4) Check amperage of each motor.

5) Hose down lift station to clean the walls of the wet well, pumps and floats.

## MECHANICAL SEAL INSPECTION OF PUMPS

Inspection of the mechanical seals should be done every two years.

The inspection will include the following:

Pull pump out of wet well. Remove oil seal plug and inspect the oil for clarity. Clear oil indicates no water intrusion and chamber is to be topped off with 30 weight turbine oil. If oil is cloudy the mechanical seal and oil needs to be replaced.

PSI recommends that preventive maintenance and service be performed by a qualified technician.

Any question regarding your lift station should be directed to Scott Richardson at 800-358-9095.

# Drain Inserts MP-52

## Description

Drain inserts are manufactured filters or fabric placed in a drop inlet to remove sediment and debris. There are a multitude of inserts of various shapes and configurations, typically falling into one of three different groups: socks, boxes, and trays. The sock consists of a fabric, usually constructed of polypropylene. The fabric may be attached to a frame or the grate of the inlet holds the sock. Socks are meant for vertical (drop) inlets. Boxes are constructed of plastic or wire mesh. Typically a polypropylene "bag" is placed in the wire mesh box. The bag takes the form of the box. Most box products are one box; that is, the setting area and filtration through media occur in the same box. Some products consist of one or more trays or mesh grates. The trays may hold different types of media. Filtration media vary by manufacturer. Types include polypropylene, porous polymer, treated cellulose, and activated carbon.

## California Experience

The number of installations is unknown but likely exceeds a thousand. Some users have reported that these systems require considerable maintenance to prevent plugging and bypass.

## Advantages

- Does not require additional space as inserts as the drain inlets are already a component of the standard drainage systems.
- Easy access for inspection and maintenance.
- As there is no standing water, there is little concern for mosquito breeding.
- A relatively inexpensive retrofit option.

## Limitations

Performance is likely significantly less than treatment systems that are located at the end of the drainage system such as ponds and vaults. Usually not suitable for large areas or areas with trash or leaves than can plug the insert.

## Design and Sizing Guidelines

Refer to manufacturer's guidelines. Drain inserts come any many configurations but can be placed into three general groups: socks, boxes, and trays. The sock consists of a fabric, usually constructed of polypropylene. The fabric may be attached to a frame or the grate of the inlet holds the sock. Socks are meant for vertical (drop) inlets. Boxes are constructed of plastic or wire mesh. Typically a polypropylene "bag" is placed in the wire mesh box. The bag takes the form of the box. Most box products are

### Design Considerations

- Use with other BMPs
- Fit and Seal Capacity within Inlet

### Targeted Constituents

- ☑ Sediment
- ☑ Nutrients
- ☑ Trash
- ☑ Metals
- Bacteria
- ☑ Oil and Grease
- ☑ Organics

*Removal Effectiveness*

See New Development and Redevelopment Handbook-Section 5.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

one box; that is, the setting area and filtration through media occurs in the same box. One manufacturer has a double-box. Stormwater enters the first box where setting occurs. The stormwater flows into the second box where the filter media is located. Some products consist of one or more trays or mesh grates. The trays can hold different types of media. Filtration media vary with the manufacturer: types include polypropylene, porous polymer, treated cellulose, and activated carbon.

### *Construction/Inspection Considerations*

Be certain that installation is done in a manner that makes certain that the stormwater enters the unit and does not leak around the perimeter. Leakage between the frame of the insert and the frame of the drain inlet can easily occur with vertical (drop) inlets.

## Performance

Few products have performance data collected under field conditions.

## Siting Criteria

It is recommended that inserts be used only for retrofit situations or as pretreatment where other treatment BMPs presented in this section area used.

## Additional Design Guidelines

Follow guidelines provided by individual manufacturers.

## Maintenance

Likely require frequent maintenance, on the order of several times per year.

## Cost

- The initial cost of individual inserts ranges from less than $100 to about $2,000. The cost of using multiple units in curb inlet drains varies with the size of the inlet.
- The low cost of inserts may tend to favor the use of these systems over other, more effective treatment BMPs. However, the low cost of each unit may be offset by the number of units that are required, more frequent maintenance, and the shorter structural life (and therefore replacement).

398 Via El Centro
Oceanside, CA 92058

www.BioCleanEnvironmental.com
p: 760.433.7640
f: 760.433.3176

# OPERATION & MAINTENANCE

The Bio Clean Grate Inlet Filter is a stormwater device designed to remove high levels of trash, debris, sediments and hydrocarbons. The filter is available in several configurations including trash full capture, multi-level screening, Kraken membrane filter and media filter variations. This manual covers maintenance procedures of the trash full capture and multi-level screening configurations. A supplemental manual is available for the Kraken and media filter variations. This filter is made of 100% stainless steel and is available and various sizes and depths allowing it to fit in any grated catch basin inlet. The filters heavy duty construction allows for cleaning with any vacuum truck. The filet can also easily be cleaned by hand.

As with all stormwater BMPs, inspection and maintenance on the Grate Inlet Filter is necessary. Stormwater regulations require BMPs be inspected and maintained to ensure they are operating as designed to allow for effective pollutant removal and provide protection to receiving water bodies. It is recommended that inspections be performed multiple times during the first year to assess site-specific loading conditions. This is recommended because pollutant loading can vary greatly from site to site. Variables such as nearby soil erosion or construction sites, winter sanding of roads, amount of daily traffic and land use can increase pollutant loading on the system. The first year of inspections can be used to set inspection and maintenance intervals for subsequent years. Without appropriate maintenance a BMP can exceed its storage capacity which can negatively affect its continued performance in removing and retaining captured pollutants.

*System Diagram:*

*Inspection Equipment*

Following is a list of equipment to allow for simple and effective inspection of the Grate Inlet Filter:

- Bio Clean Environmental Inspection Form (contained within this manual).
- Manhole hook or appropriate tools to remove access hatches and covers.
- Appropriate traffic control signage and procedures.
- Protective clothing and eye protection.
- Note: entering a confined space requires appropriate safety and certification. It is generally not required for routine inspections or maintenance of the system.

*Inspection Steps*

The core to any successful stormwater BMP maintenance program is routine inspections. The inspection steps required on the Grate Inlet Filter are quick and easy. As mentioned above the first year should be seen as the maintenance interval establishment phase. During the first year more frequent inspections should occur in order to gather loading data and maintenance requirements for that specific site. This information can be used to establish a base for long-term inspection and maintenance interval requirements.

The Grate Inlet Filter can be inspected though visual observation. All necessary pre-inspection steps must be carried out before inspection occurs, such as safety measures to protect the inspector and nearby pedestrians from any dangers associated with an open grated inlet. Once the grate has been safely removed the inspection process can proceed:

- Prepare the inspection form by writing in the necessary information including project name, location, date & time, unit number and other info (see inspection form).
- Observe the filter with the grate removed.
- Look for any out of the ordinary obstructions on the grate or in the filter and its bypass. Write down any observations on the inspection form.
- Through observation and/or digital photographs estimate the amount of trash, foliage and sediment accumulated inside the filter basket. Record this information on the inspection form.
- Observe the condition and color of the hydrocarbon boom. Record this information on the inspection form.
- Finalize inspection report for analysis by the maintenance manager to determine if maintenance is required.

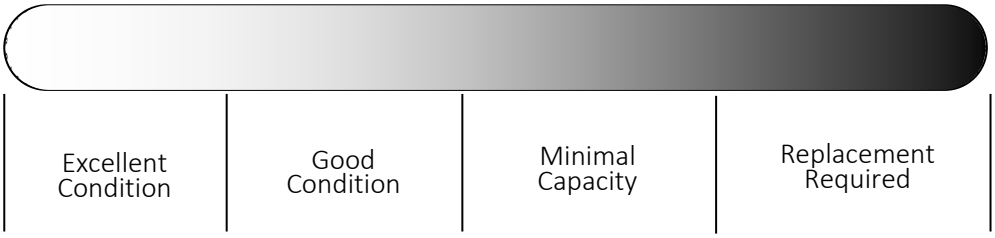
*Maintenance Indicators*

Based upon observations made during inspection, maintenance of the system may be required based on the following indicators:

- Missing or damaged internal components.
- Obstructions in the filter basket and its bypass.
- Excessive accumulation of trash, foliage and sediment in the filter basket. Maintenance is required when the basket is greater than half-full.
- The following chart shows the 50% and 100% storage capacity of each filter height:

| Model | Filter Basket Diameter (in) | Filter Basket Height (in) | 50% Storage Capacity (cu ft) | 100% Storage Capacity (cu ft) |
|---|---|---|---|---|
| **BC-GRATE-12-12-12** | 10.00 | 12.00 | 0.27 | 0.55 |
| **BC-GRATE-18-18-18** | 16.00 | 18.00 | 1.05 | 2.09 |
| **BC-GRATE-24-24-24** | 21.00 | 24.00 | 2.41 | 4.81 |
| **BC-GRATE-30-30-24** | 27.00 | 24.00 | 3.98 | 7.95 |
| **BC-GRATE-36-36-24** | 33.00 | 24.00 | 5.94 | 11.88 |
| **BC-GRATE-48-48-18** | 44.00 | 18.00 | 7.92 | 15.84 |

*Maintenance Equipment*



It is recommended that a vacuum truck be utilized to minimize the time required to maintain the Curb Inlet Filter, though it can easily cleaned by hand:

- Bio Clean Environmental Maintenance Form (contained in O&M Manual).
- Manhole hook or appropriate tools to remove the grate.
- Appropriate safety signage and procedures.
- Protective clothing and eye protection.
- Note: entering a confined space requires appropriate safety and certification. It is generally not required for routine maintenance of the system. Small or large vacuum truck (with pressure washer attachment preferred).

*Maintenance Procedures*

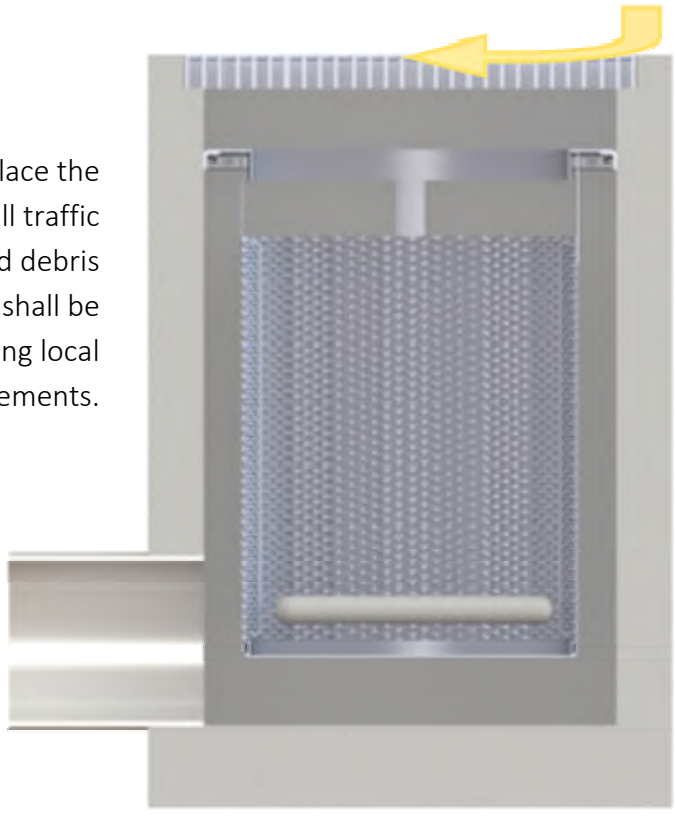
It is recommended that maintenance occurs at least two days after the most recent rain event to allow debris and sediments to dry out. Maintaining the system while flows are still entering it will increase the time and complexity required for maintenance. Cleaning of the Grate Inlet Filter can be performed utilizing a vacuum truck. Once all safety measures have been set up cleaning of the Grate Inlet Filter can proceed as followed:

- Remove grate (traffic control and safety measures to be completed prior).
- Using an extension on a vacuum truck position the hose over the opened catch basin. Insert the vacuum hose down into the filter basket and suck out trash, foliage and sediment. A pressure wash is recommended and will assist in spraying of any debris stuck on the side or bottom of the filter basket. Power wash off the filter basket sides and bottom.
- Next remove the hydrocarbon boom that is attached to the inside of the filter basket. The hydrocarbon boom is fastened to rails on two opposite sides of the basket (vertical rails). Assess the color and condition of the boom using the following information in the next bullet point. If replacement is required install and fasten on a new hydrocarbon boom. Booms can be ordered directly from the manufacturer.
- Follow is a replacement indication color chart for the hydrocarbon booms:

- The last step is to replace the grate and remove all traffic control.
- All removed debris and pollutants shall be disposed of following local and state requirements.
- Disposal requirements for recovered pollutants may vary depending on local guidelines. In most areas the sediment, once dewatered, can be disposed of in a sanitary landfill. It is not anticipated that the sediment would be classified as hazardous waste.
- In the case of damaged components, replacement parts can be ordered from the manufacturer. Hydrocarbon booms can also be ordered directly from the manufacturer as previously noted.

*Maintenance Sequence*

Remove grate and set up vacuum truck to clean the filter basket.



Insert the vacuum hose down into the filter basket and suck out debris. Use a pressure washer to assist in vacuum removal. Pressure wash off screens.

Remove the hydrocarbon boom that is attached to the inside of the filter basket. The hydrocarbon boom is fastened to rails on two opposite sides of the basket (vertical rails). Assess the color and condition of the boom using the following information in the next bullet point. If replacement is required install and fasten on a new hydrocarbon boom.

Close up and replace the grate and remove all traffic control. All removed debris and pollutants shall be disposed of following local and state requirements.

# OPERATION & MAINTENANCE

The Bio Clean Curb Inlet Filter is a stormwater device designed to remove high levels of trash, debris, sediments and hydrocarbons. The filter is available in several configurations including trash full capture, multi-level screening, Kraken membrane filter and media filter variations. This manual covers maintenance procedures of the trash full capture and multi-level screening configurations. A supplemental manual is available for the Kraken and media filter variations. The innovative trough & weir system is mounted along the curb face and directs incoming stormwater toward the filter basket which is positioned "directly" under the manhole access opening regardless of its location in the catch basin. This innovative design allows the filter to be cleaned from finish surface without access into the catch basin, therefore drastically reducing maintenance time and eliminating confined space entry. The filter has a lifting handle allowing for the filter to be removed easily through the manhole. The weir also folds up to allow for unimpeded access into the basin for routine maintenance or pipe jetting.

As with all stormwater BMPs, inspection and maintenance on the Curb Inlet Filter is necessary. Stormwater regulations require BMPs be inspected and maintained to ensure they are operating as designed to allow for effective pollutant removal and provide protection to receiving water bodies. It is recommended that inspections be performed multiple times during the first year to assess site-specific loading conditions. This is recommended because pollutant loading can vary greatly from site to site. Variables such as nearby soil erosion or construction sites, winter sanding of roads, amount of daily traffic and land use can increase pollutant loading on the system. The first year of inspections can be used to set inspection and maintenance intervals for subsequent years. Without appropriate maintenance a BMP can exceed its storage capacity which can negatively affect its continued performance in removing and retaining captured pollutants.

*System Diagram:*

*Inspection Equipment*

Following is a list of equipment to allow for simple and effective inspection of the Curb Inlet Filter:

- Bio Clean Environmental Inspection Form (contained within this manual).
- Manhole hook or appropriate tools to remove access hatches and covers.
- Appropriate traffic control signage and procedures.
- Protective clothing and eye protection.
- Note: entering a confined space requires appropriate safety and certification. It is generally not required for routine inspections or maintenance of the system.

*Inspection Steps*

The core to any successful stormwater BMP maintenance program is routine inspections. The inspection steps required on the Curb Inlet Fitler are quick and easy. As mentioned above the first year should be seen as the maintenance interval establishment phase. During the first year more frequent inspections should occur in order to gather loading data and maintenance requirements for that specific site. This information can be used to establish a base for long-term inspection and maintenance interval requirements.

The Curb Inlet Filter can be inspected though visual observation without entry into the catch basin. All necessary pre-inspection steps must be carried out before inspection occurs, such as safety measures to protect the inspector and nearby pedestrians from any dangers associated with an open access hatch or manhole. Once the manhole has been safely opened the inspection process can proceed:

- Prepare the inspection form by writing in the necessary information including project name, location, date & time, unit number and other info (see inspection form).
- Observe the inside of the catch basin through the manhole. If minimal light is available and vision into the unit is impaired utilize a flashlight to see inside the catch basin.
- Look for any out of the ordinary obstructions in the catch basin, trough, weir, filter basket, basin floor our outlet pipe. Write down any observations on the inspection form.
- Through observation and/or digital photographs estimate the amount of trash, foliage and sediment accumulated inside the filter basket. Record this information on the inspection form.
- Observe the condition and color of the hydrocarbon boom. Record this information on the inspection form.

- Finalize inspection report for analysis by the maintenance manager to determine if maintenance is required.

*Maintenance Indicators*

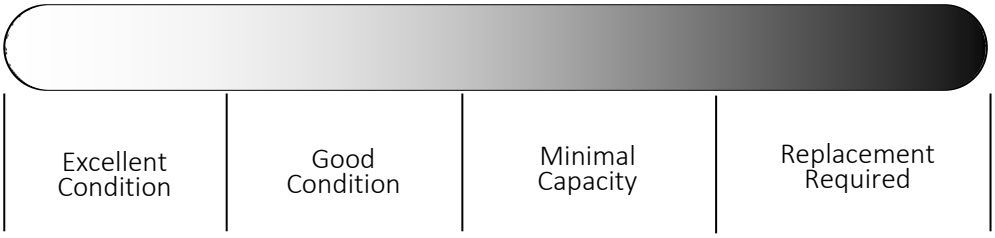
Based upon observations made during inspection, maintenance of the system may be required based on the following indicators:

- Missing or damaged internal components.
- Obstructions in the trough, weir, filter basket or catch basin.
- Excessive accumulation of trash, foliage and sediment in the filter basket and/or trough and weir sections. Maintenance is required when the basket is greater than half-full.
- The following chart shows the 50% and 100% storage capacity of each filter height:

| Model | Filter Basket Diameter (in) | Filter Basket Height (in) | 50% Storage Capacity (cu ft) | 100% Storage Capacity (cu ft) |
|---|---|---|---|---|
| **BC-CURB-30** | 18 | 30 | 2.21 | 4.42 |
| **BC-CURB-24** | 18 | 24 | 1.77 | 3.53 |
| **BC-CURB-18** | 18 | 18 | 1.33 | 2.65 |
| **BC-CURB-12** | 18 | 12 | 0.88 | 1.77 |

*Maintenance Equipment*

It is recommended that a vacuum truck be utilized to minimize the time required to maintain the Curb Inlet Filter though it can easily cleaned by hand:

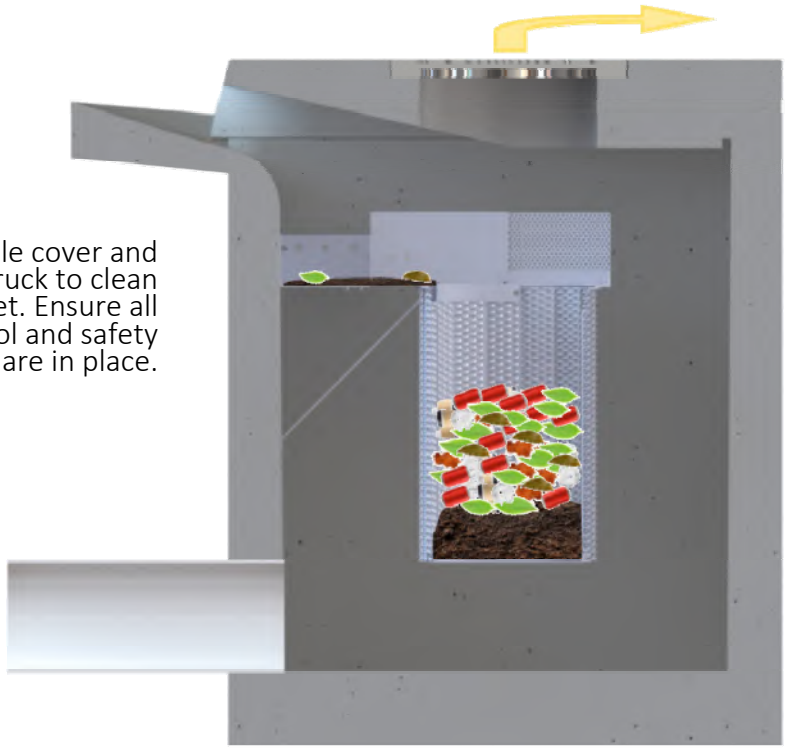


- Bio Clean Environmental Maintenance Form (contained in O&M Manual).
- Manhole hook or appropriate tools to access hatches and covers.
- Appropriate safety signage and procedures.
- Protective clothing and eye protection.
- Note: entering a confined space requires appropriate safety and certification. It is generally not required for routine maintenance of the system. Small or large vacuum truck (with pressure washer attachment preferred).

*Maintenance Procedures*

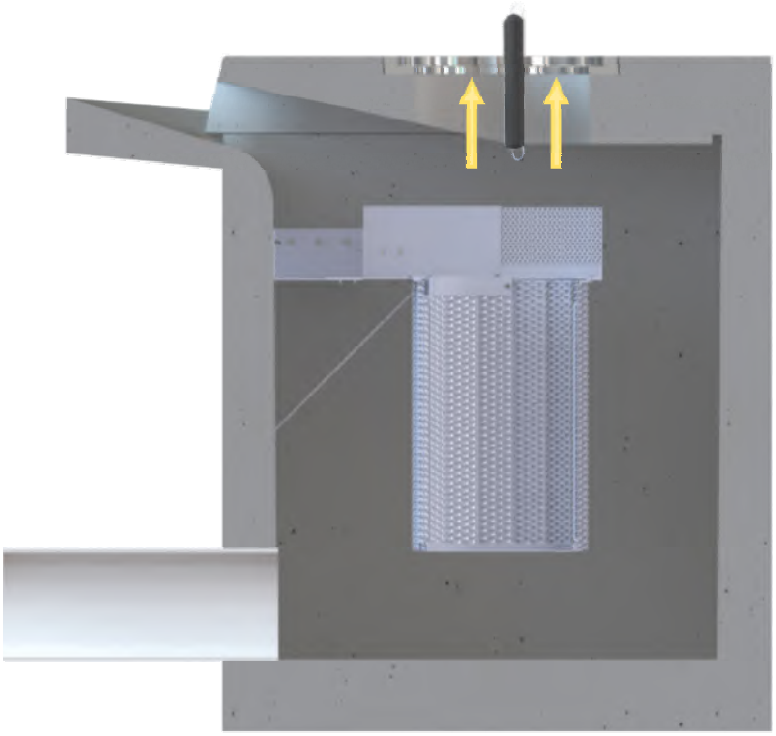
It is recommended that maintenance occurs at least two days after the most recent rain event to allow debris and sediments to dry out. Maintaining the system while flows are still entering it will increase the time and complexity required for maintenance. Cleaning of the Curb Inlet Filter can be performed from finish surface without entry into catch basin utilizing a vacuum truck. Some unique

and custom configurations may create conditions which would require entry for some or all of the maintenance procedures. Once all safety measures have been set up cleaning of the Curb Inlet Filter can proceed as followed:



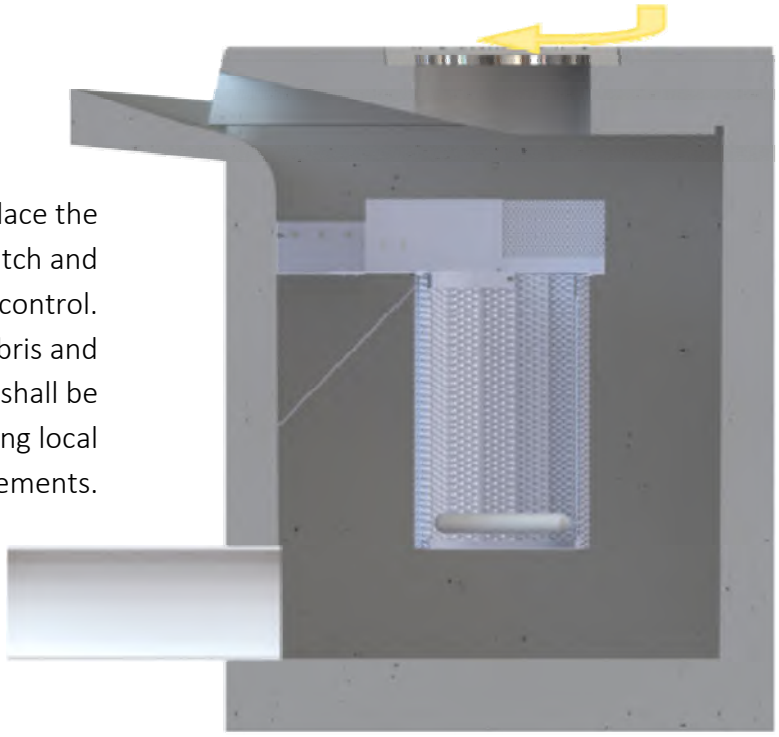
- Remove all manhole cover or access hatches (traffic control and safety measures to be completed prior).
- Using an extension on a vacuum truck position the hose over the opened manhole or hatch opening. Insert the vacuum hose down into the filter basket and suck out trash, foliage and sediment. A pressure wash is recommended and will assist in spraying of any debris stuck on the side or bottom of the filter basket. If the filter basket is full, trash, sediment, and debris will accumulate inside the trough and weir sections of the system. Once the filter basket is clean power wash the weir and trough pushing these debris into the filter basket (leave the hose in the filter basket during this process so entering debris will be sucked out). Power wash off the trough, weir, debris screen, and filter basket sides and bottom.
- Next remove the hydrocarbon boom that is attached to the inside of the filter basket. The hydrocarbon boom is fastened to rails on two opposite sides of the basket (vertical rails). Assess the color and condition of the boom using the following information in the next bullet point. If replacement is required install and fasten on a new hydrocarbon boom. Booms can be ordered directly from the manufacturer.
- Follow is a replacement indication color chart for the hydrocarbon booms:

- The last step is to close up and replace the manhole or hatch and remove all traffic control.
- All removed debris and pollutants shall be disposed of following local and state requirements.
- Disposal requirements for recovered pollutants may vary depending on local guidelines. In most areas the sediment, once dewatered, can be disposed of in a sanitary landfill. It is not anticipated that the sediment would be classified as hazardous waste.
- In the case of damaged components, replacement parts can be ordered from the manufacturer. Hydrocarbon booms can also be ordered directly from the manufacturer as previously noted.



*Maintenance Sequence*

Remove manhole cover and set up vacuum truck to clean the filter basket. Ensure all traffic control and safety measures are in place.



Insert the vacuum hose down into the filter basket and suck out debris. Use a pressure washer to assist in vacuum removal. Pressure wash off the weir and trough and vacuum out any remaining debris.

Remove the hydrocarbon boom that is attached to the inside of the filter basket. The hydrocarbon boom is fastened to rails on two opposite sides of the basket (vertical rails). Assess the color and condition of the boom using the following information in the next bullet point. If replacement is required install and fasten on a new hydrocarbon boom.

Close up and replace the manhole or hatch and remove all traffic control. All removed debris and pollutants shall be disposed of following local and state requirements.

MODULAR WETLANDS™

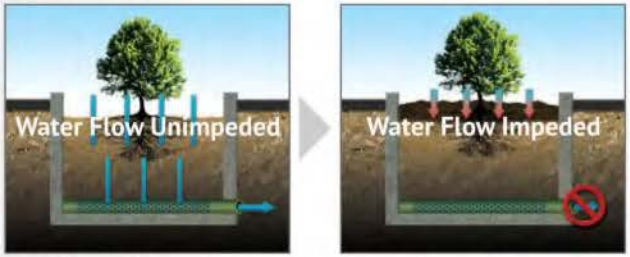
*Advanced **Stormwater** Biofiltration*

# WetlandMod™

MODULAR WETLAND TREATMENT VOLUME REDUCTION, REUSE & STORAGE SYSTEM

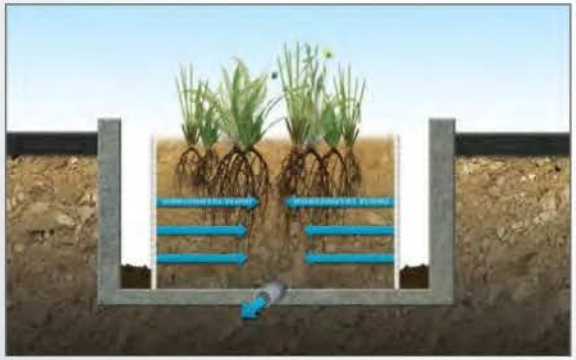
A NEW DIRECTION IN TRADITIONAL BIORETENTION / BIOFILTRATION SYSTEMS

## Overview

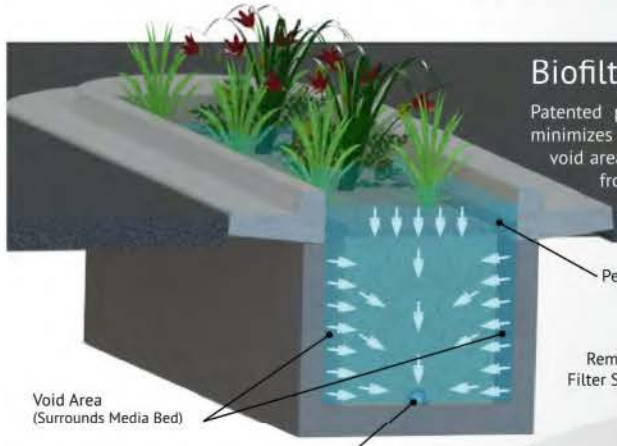


Modular Wetland Systems, Inc. continues to provide groundbreaking stormwater treatment and volume reduction/control technology with the **WetlandMod™**. This modular system provides the same treatment train concept as the industry leading MWS Linear (Modular Wetland System Linear™) - screening, separation, & biofiltration - combined with the capacity to reduce and control water volume in a more efficient way when compared to traditional downward flow bioretention systems.

The system is built upon the concept of horizontal flow biofiltration, which was first introduced by the MWS Linear in 2007. Horizontal flow works with gravity, not against it, to prevent clogging, standing water and other problems associated with traditional downward flow bioretention systems. Bioretention systems have an inherent flaw, the force of gravity. As stormwater runoff carries pollutants into the system, including sediments and hydrocarbons, they are deposited on top of the bioretention media where it accumulates and quickly clogs the filter media.



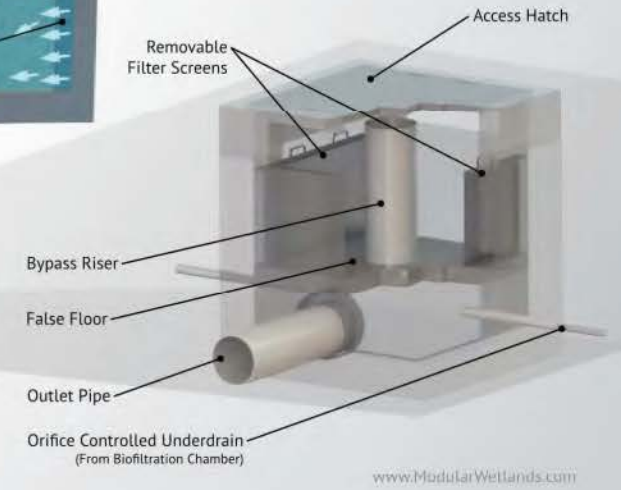
It has been documented that sediment accumulation from just a few storm events can completely clog a bioretention system. This leads to drastically reduced infiltration rates, expensive maintenance burdens, and safety issues associated with standing water, depressed landscaping and vector control.



**Downward Flow**

**Sediments Accumulate on Top of the Media Leading to Clogging**

The **WetlandMod™** overcomes these challenges by utilizing pre-treatment, a horizontal flow biofiltration bed, and orifice flow control. The initial surface of the media bed in the **WetlandMod™** is oriented on a vertical plane, as opposed to horizontally, therefore running parallel with the force of gravity as opposed to perpendicular. This simple concept, increases surface area, reduces BMP footprint, prevents clogging and leads to an enhanced overall system with lower maintenance costs. The **WetlandMod™** can utilize various blends to meet local stormwater bioretention media specifications. The system is also available with an organic-free WetlandMEDIA to prevent nutrient leaching and maximize pollutant removal.



### Biofiltration Chamber

Patented perimeter void area maximizes surface area and minimizes footprint, saving space and money. The perimeter void area allows water to penetrate the media bed, not only from the top, but from all four sides.

### Pre-Treatment & Discharge Chamber

## Configuration

One of the biggest challenges of the implementation of LID and bioretention/biofiltration systems is the associated space requirements. The large space requirements of traditional bioretention systems can cause design and feasibility issues, increasing the overall cost to comply with local and state stormwater regulations.

The **WetlandMod™** marks the first technological breakthrough to address how we comply with these regulations. The goal of the system is to minimize footprint and land costs associated with traditional bioretention/ biofiltration systems. This is acheived by utilizing horizontal flow technology and combining it with traditional downward flow, therefore maximizing the surface area for a given footprint.

### Designed To Minimize Required BMP Footprint and Maximize Buildable Space

This system is constructed from modular precast concrete structures. The system comes standard with a curb-type pre-treatment structure, including internal bypass. The biofiltration chambers can be made in any length and shape (shown below) to allow for easy integration with parking lot island designs. The system comes in two standard widths, 4 feet (18" minimum media requirement - San Diego County) and 5 feet (24" minimum media requirement - Los Angeles County).

### Footprint Reduction Up To 61% Over Traditional Bioretention Systems

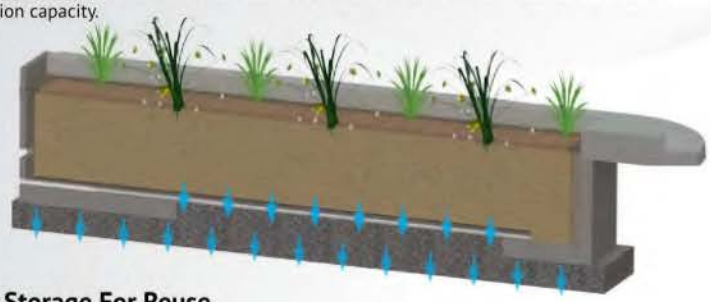
**(Example: Planter Boxes, Rain Gardens, Biofiltration)**

## Wetland Chamber Module

The *Wetland Chamber Module* is constructed of precast concrete and available in various lengths and heights. The chamber also includes rebar dowels to attach structure to curb and gutter. Units can be connected mechanically end-to-end for longer modules.

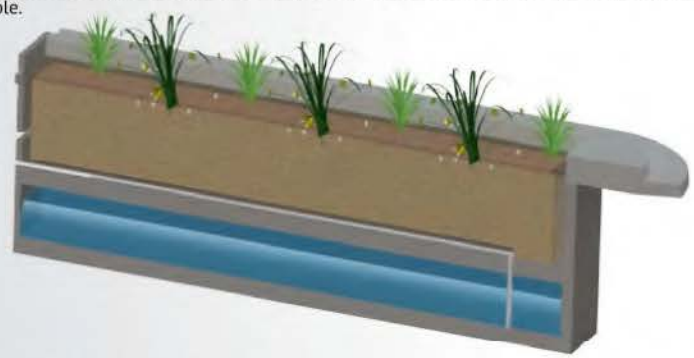
## Pre-Treatment Chamber Module

*Pre-treatment Chambers* come standard with built-in curb inlets to intercept sheet flows from surrounding areas. The pre-treatment chamber is available with an optional internal bypass for high flows and it is easily accessible for quick maintenance. Trash, debris and sediments are isolated in a central location, minimizing maintenance requirements on the biofiltration chamber.



Curb inlet

# Configurations



## Open Bottom - Infiltration

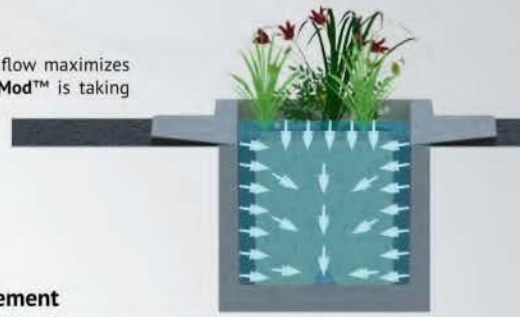
This configuration is available with an open basin to maximize infiltration and meet "partial infiltration" requirements in many jurisdictions. A 12" rock base is recommended under the structure to maximize storage and infiltration capacity.

## Cistern - Storage For Reuse

An optional storage vessel under the biofiltration chamber stores water for reuse, including irrigation and grey water. The *Cistern* configuration allows for treated runoff to be stored for later use and a removable sump pump is available.

## WetlandMEDIA

WetlandMEDIA is an organic free alternative to traditional bioretention media. It offers higher infiltration rates and a sorptive media mix with high ion exchange capacity. This makes it ideal for nutrient removal. WetlandMEDIA also supports robust vegetation and prevents standing water.



## Bioretention Mix

The **WetlandMod™** is designed to utilize any type of bioretention mix required to meet local requirements and specifications, including a *5-Inch Per Hour* sand compost mix found in most LID manuals.

# Sizing

The combination of horizontal flow and downward flow maximizes surface area and minimizes footprint. The **WetlandMod™** is taking bioretention/biofiltration to a new level.

### 18" Media - San Diego County Minimum Requirement

| 18" Media Thickness | WetlandMod | Traditional Bioretention |
|---|---|---|
| Chamber Width I.D. (ft.) | 4.00 | 4.00 |
| Cage Width (ft.) | 3.34 | n/a |
| Void Width (ft.) | 0.33 | n/a |
| Chamber Height Max (TC) (ft.) | 4.40 | n/a |
| Assoc. Cage Height Max (ft.) | 3.52 | n/a |
| TC to Top of Cage Distance (ft.) | 0.88 | n/a |
| Ponding Over Media (ft.) | 0.33 | Variable |
| Chamber Height Min (ft.) | 1.61 | Variable |
| Assoc. Cage Height Min (ft.) | 1.83 | Variable |
| TC to Top of Cage Distance (ft.) | 0.88 | Variable |
| **MAX Surface Area Per Linear Foot (sq. ft.)** | **10.38** | **4** |
| **Footprint Reduction Provided** | **61%** | |
| **MIN Surface Area Per Linear Foot (sq. ft.)** | **7** | **4** |
| **Footprint Reduction Provided** | **43%** | |

### 24" Media - Los Angeles County Minimum Requirement

| 24" Media Thickness | WetlandMod | Traditional Bioretention |
|---|---|---|
| Chamber Width I.D. (ft.) | 5.00 | 5.00 |
| Cage Width (ft.) | 4.34 | n/a |
| Void Width (ft.) | 0.33 | n/a |
| Chamber Height Max (TC) (ft.) | 4.40 | n/a |
| Assoc. Cage Height Max (ft.) | 3.52 | n/a |
| TC to Top of Cage Distance (ft.) | 0.88 | n/a |
| Ponding Over Media (ft.) | 0.33 | Variable |
| Chamber Height Min (ft.) | 2.05 | Variable |
| Assoc. Cage Height Min (ft.) | 2.33 | Variable |
| TC to Top of Cage Distance (ft.) | 0.88 | Variable |
| **MAX Surface Area Per Linear Foot (sq. ft.)** | **11.38** | **5** |
| **Footprint Reduction Provided** | **56%** | |
| **MIN Surface Area Per Linear Foot (sq. ft.)** | **9** | **5** |
| **Footprint Reduction Provided** | **44%** | |

## Advantages of WetlandMod™ Over Traditional Downward Flow Bioretention/Biofiltration Systems

- Minimizes Clogging
- Advanced Pre-Treatment
- Maximized Surface Area
- Minimal Footprint
- High Nutrient Removal
- Easy Maintenance
- No Standing Water Concerns
- Greater Volume Reduction, Moisture Retention and Evapotranspiration
- Orifice Controlled Discharge

Maintenance Overview –

A. Every installed WetlandMOD unit is to be maintained by the Supplier, or a Supplier approved contractor. The cost of this service varies among providers.

B. The WetlandMOD is a multi-stage self-contained treatment train for stormwater treatment. Each stage protects subsequent stages from clogging. Stages include: screening, separation, and Biofiltration. The biofiltration stage contains various types of vegetation which will require annual evaluation and trimming.

1. Clean Bio Clean® Pre-Filter Screen – Screening is provided by well proven continuous modular screen filter. The filter removes gross solids, including litter, and sediments greater than 5 mm. This procedure is easily done by hand or with a small industrial vacuum device.

2. Clean Separation (sediment) Chamber – separation occurs in the pre-treatment chamber. This chamber targets TSS, and particulate metals and nutrients. This procedure can be performed with a standard vacuum truck. This chamber is located directly under the manhole, hatch, or grate access cover.

3. Trim Vegetation – The system utilizes multiple plants in the biofiltration chamber to provide enhanced treatment. The vegetation will need to be maintained (trimmed) as needed. This can be done as part of the project normal landscape maintenance. NO FERTILIZER SHALL BE USED IN THIS CHAMBER.

4. Evaluate Biofiltration Media Flow Hydraulic Conductivity – The systems flow can be assessed from the discharge. This should be done during a rain event. By viewing into the discharge pipe the flow out of the system can be observed. If little to no flow is observed this is a sign of potential Biofiltration media maintenance needs.

5. **Biofiltration Media Replacement** –This filter contains a mix that supports abundant plant life. Replacement of the media is simple. Removal of spent media can be done with a shovel of a vacuum truck.

C. The WetlandMOD pre-filter, separation chamber, and Biofiltration media are designed to allow for the use of vacuum removal of captured pollutants and spent filter media by centrifugal compressor vacuum units without causing damage to the filter or during normal cleaning and maintenance. Filter and chambers can be cleaned from finish surface through standard manhole, hatch, or grate access.

**Maintenance Procedures –**

1. **Clean Bio Clean® Pre-Filter –** Bio Clean recommends the **pre-filter** be inspected and cleaned a minimum of once every six months. The procedure is easily done with the use of any standard vacuum truck. *This procedure takes approximately 15 minutes.*

1. Remove grate, manhole, or hatch to gain access to catch basin filter insert. Where possible the maintenance should be performed from the ground surface. Note: entry into an underground stormwater vault such as an inlet vault may require certification in confined space training.
2. Remove all trash, debris, organics, and sediments collected by the pre-filter. Removal of the trash and debris can be done manually or with the use of a vacuum truck. The hose of the vacuum truck will not damage the screen of the filter.
3. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements. Hazardous material can only be handled by a certified hazardous waste trained person (minimum 24-hour hazwoper).

2. Clean Separation (sediment) Chamber – Bio Clean recommends the **separation chamber** be inspected and cleaned a minimum of once a year. The procedure is easily done with the use of any standard vacuum truck. *This procedure takes approximately 30 minutes.*

1. Remove grate, manhole, or hatch to gain access to the Separation Chamber.
2. Where possible the maintenance should be performed from the ground surface. Note: entry into an underground stormwater vault such as an inlet vault may require certification in confined space training.
3. With a pressure washer spray down pollutants accumulated on walls and pre-filters.
4. Vacuum out separation chamber and remove all accumulated debris and sediments.
5. Replace grate, manhole, or hatch cover.
6. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.

3. Trim Vegetation – Bio Clean recommends the plants/vegetation be inspected and maintained a minimum of once a year. It is also recommended that the plants receive the same care as other landscaped areas. Note: No fertilizer is to be used on this area. *Trimming of vegetation takes approximately 15 minutes.*

4. Evaluate Biofiltration Media Flow Hydraulic Conductivity – Bio Clean recommends system flow be inspected and observed a minimum of once a year. This needs to be done during a rain event. *Inspection and Observation takes approximately 5 minutes.*

1. Observe discharge out of system
2. Observe the level of flow from the bottom of the pipe.
3. If flow is steady and high the system is operating normally.
4. If little or no flow is observed exiting the discharge pipe possible maintenance to the Biofiltration media may be needed. Contact Bio Clean for further assistance.

5. Biofiltration Media Replacement – Bio Clean recommends the Biofiltration media be replaced a minimum of one every 20 years. *Inspection takes approximately 15 minutes. Replacement of rock media takes approximately 6 hours and requires a vacuum truck.*

1. Remove plants from the Biofiltration chamber.
2. Use a vacuum truck or shovel to remove all wetland media.
3. Spray down the walls and floor of the chamber and vacuum out any accumulated pollutants.
4. Spray down perforated piping and netting of flow matrix and the inflow and outflow end to remove any accumulated pollutants.
5. Vacuum out any standing water from the media removal and insure the chamber is cleaning.
6. Use a small backhoe to fill chamber with new media. Call Bio Clean for media delivery information.
7. Plant new vegetation in the same configuration and quantity as old vegetation.
8. Spray down the plants and media with water to saturate.
9. Continue supplemental irrigation (spray or drip) for at lest 90 days.

6. Other Maintenance Notes –

1. Following maintenance and/or inspection, the maintenance operator shall prepare a maintenance/inspection record. The record shall include any maintenance activities performed, amount and description of debris collected, and condition of the system and its various filter mechanism. .
2. The owner shall retain the maintenance/inspection record for a minimum of five years from the date of maintenance. These records shall be made available to the governing municipality for inspection upon request at any time.
3. Any person performing maintenance activities must have completed a minimum of OSHA 24-hour hazardous waste worker (hazwoper) training.
4. Remove access manhole lid or grate to gain access to filter screens and sediment chambers. Where possible the maintenance should be performed

from the ground surface.  Note: entry into an underground stormwater vault such as an inlet vault requires certification in confined space training.

5. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.
6. The hydrocarbon boom is classified as hazardous material and will have to be picked up and disposed of as hazardous waste.  Hazardous material can only be handled by a certified hazardous waste trained person (minimum 24-hour hazwoper).

## Inspection Checklist

Modular Wetland System Type (Curb, Grate or UG Vault): _____ Size (22', 14' or etc.): _____

| **Structural Integrity:** | **Yes** | **No** | **Comments** |
|---|---|---|---|
| Damage to pre-treatment access cover (manhole cover/grate) or cannot be opened using normal lifting pressure? | | | |
| Damage to discharge chamber access cover (manhole cover/grate) or cannot be opened using normal lifting pressure? | | | |
| Does the MWS unit show signs of structural deterioration (cracks in the wall, damage to frame)? | | | |
| Is the inlet/outlet pipe or drain down pipe damaged or otherwise not functioning properly? | | | |
| **Working Condition:** | | | |
| Is there evidence of illicit discharge or excessive oil, grease, or other automobile fluids entering and clogging the unit? | | | |
| Is there standing water in inappropriate areas after a dry period? | | | |
| Is the filter insert (if applicable) at capacity and/or is there an accumulation of debris/trash on the shelf system? | | | |
| Does the depth of sediment/trash/debris suggest a blockage of the inflow pipe, bypass or cartridge filter? If yes, specify which one in the comments section. Note depth of accumulation in in pre-treatment chamber. | | | Depth: |
| Does the cartridge filter media need replacement in pre-treatment chamber and/or discharge chamber? | | | Chamber: |
| Any signs of improper functioning in the discharge chamber? Note issues in comments section. | | | |
| **Other Inspection Items:** | | | |
| Is there an accumulation of sediment/trash/debris in the wetland media (if applicable)? | | | |
| Is it evident that the plants are alive and healthy (if applicable)? Please note Plant Information below. | | | |
| Is there a septic or foul odor coming from inside the system? | | | |

| **Waste:** | **Yes** | **No** |
|---|---|---|
| Sediment / Silt / Clay | | |
| Trash / Bags / Bottles | | |
| Green Waste / Leaves / Foliage | | |

| **Recommended Maintenance** | |

MC-4500 Chamber

# StormTech™ MC-4500 Chamber

Designed to meet the most stringent industry performance standards for superior structural integrity while providing designers with a cost-effective method to save valuable land and protect water resources. The StormTech system is designed primarily to be used under parking lots thus maximizing land usage for commercial and municipal applications.

**StormTech MC-4500 Chamber** (not to scale)

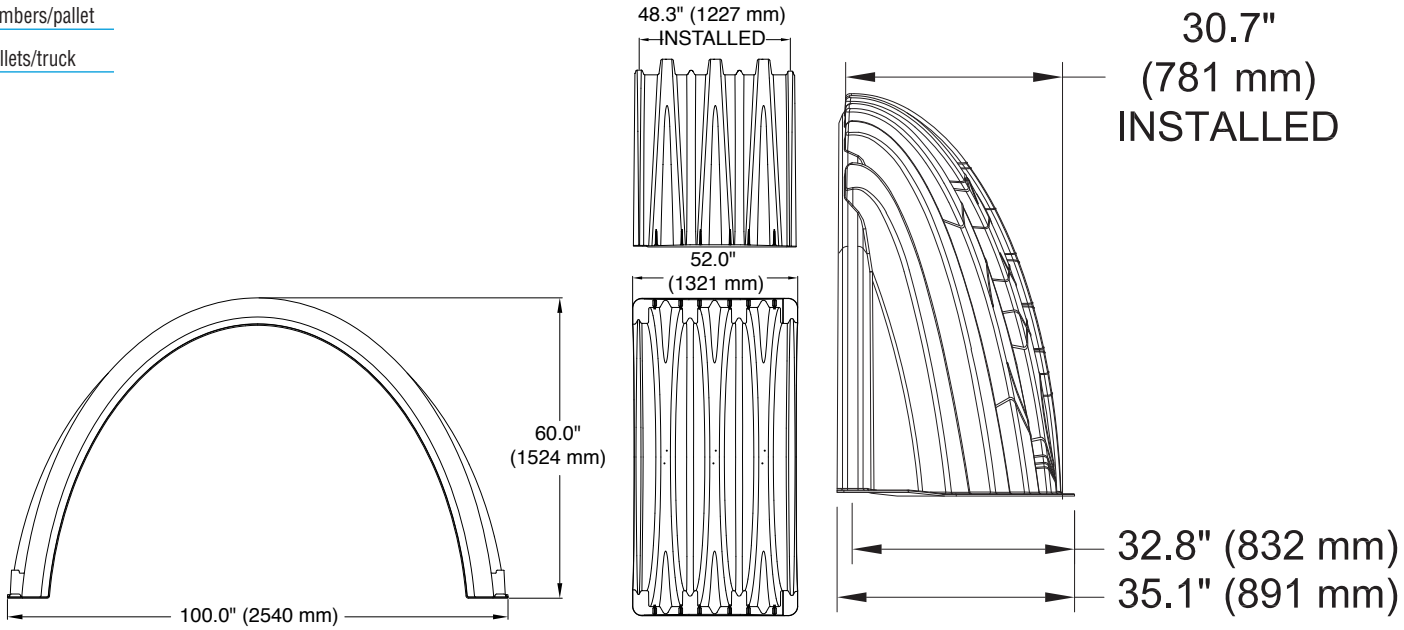
Nominal Chamber Specifications

| | |
|---|---|
| Size (L x W x H) | 52" (1321 mm) x 100" (2540 mm) x 60" (1524 mm) |
| Chamber Storage | 106.5 ft³ (3.01 m³) |
| Min. Installed Storage* | 162.6 ft³ (4.60 m³) |
| Nominal Weight | 120 lbs (54.4 kg) |

* This assumes a minimum of 12" (305 mm) of stone above, 9" (229 mm) of stone below chambers, 9" (229 mm) of stone between chambers/end caps and 40% stone porosity.

**StormTech MC-4500 End Cap** (not to scale)

Nominal End Cap Specifications



| | |
|---|---|
| Size (L x W x H) | 35.1" (891 mm) x 90.2" (2291 mm) x 59.4" (1509 mm) |
| End Cap Storage | 35.7 ft³ (1.01 m³) |
| Min. Installed Storage* | 108.7 ft³ (3.08 m³) |
| Nominal Weight | 120 lbs (54.4 kg) |

*This assumes a minimum of 12" (305 mm) of stone above, 9" (229 mm) of stone below, 12" (305 mm) of stone perimeter, 9" (229 mm) of stone between chambers/end caps and 40% stone porosity.

Shipping

8 chambers/pallet

11 pallets/truck

### Storage Volume Per Chamber/End Cap ft³ (m³)

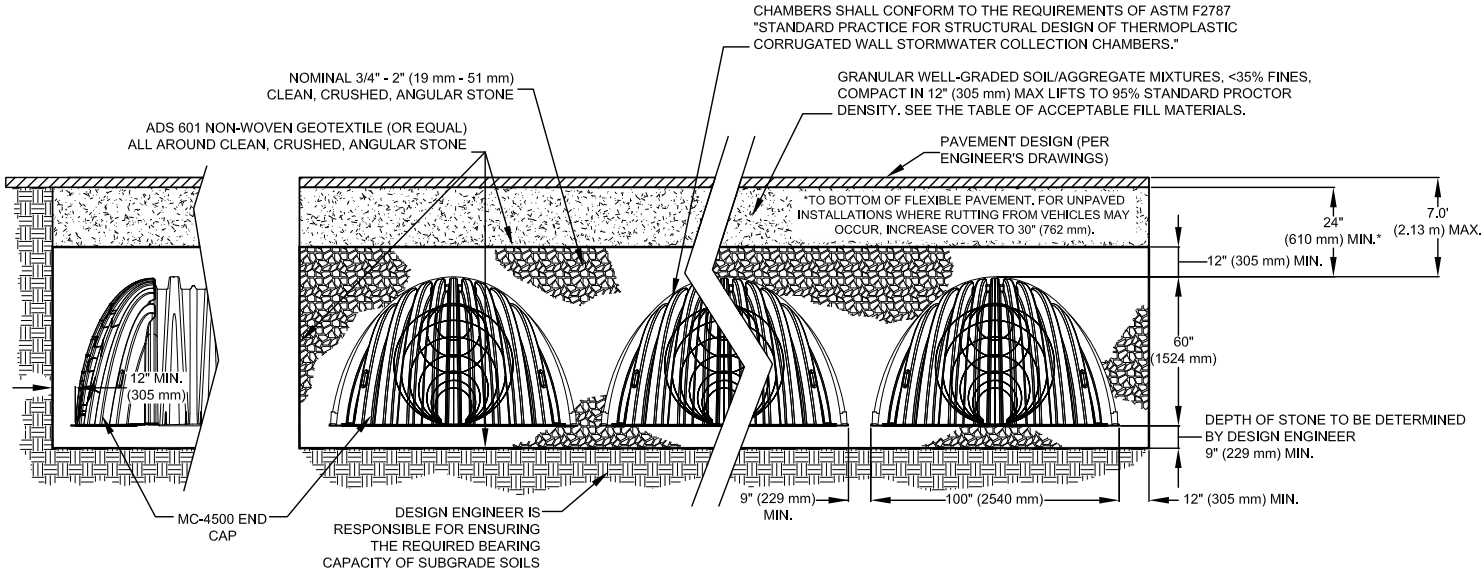
| | Bare Unit Storage | Chamber/End Cap and Stone Volume — Stone Foundation Depth in. (mm) | | | |
|---|---|---|---|---|---|
| | ft³ (m³) | 9" (229 mm) | 12" (305 mm) | 15" (381 mm) | 18" (457 mm) |
| **Chamber** | 106.5 (3.02) | 162.6 (4.60) | 166.3 (4.71) | 169.9 (4.81) | 173.6 (4.91) |
| **End Cap** | 35.7 (1.01) | 108.7 (3.08) | 111.9 (3.17) | 115.2 (3.26) | 118.4 (3.35) |

*NOTE: Assumes 9" (229 mm) min. row spacing, 12" (305 mm) min. of stone above, 40% stone porosity and includes the bare chamber/end cap volume. End cap volume assumes 12" (305 mm) min. stone perimeter.*

### Volume of Excavation Per Chamber/End Cap in yd³ (m³)

| | Stone Foundation Depth | | | |
|---|---|---|---|---|
| | 9" (229 mm) | 12" (305 mm) | 15" (381 mm) | 18" (457 mm) |
| **Chamber** | 10.5 (8.0) | 10.8 (8.3) | 11.2 (8.5) | 11.5 (8.8) |
| **End Cap** | 9.3 (7.1) | 9.6 (7.3) | 9.9 (7.6) | 10.2 (7.8) |

*NOTE: Assumes 9" (229 mm) min. of separation between chamber rows, 12" (305 mm) min. of perimeter in front of end caps, and 24" (610 mm) of cover. The volume of excavation will vary as the depth of cover increases.*



### Amount of Stone Per Chamber

| ENGLISH tons (yds³) | Stone Foundation Depth | | | |
|---|---|---|---|---|
| | 9" (229 mm) | 12" (305 mm) | 15" (381 mm) | 18" (457 mm) |
| **Chamber** | 7.4 (5.2) | 7.8 (5.5) | 8.3 (5.9) | 8.8 (6.2) |
| **End Cap** | 9.6 (6.8) | 10.0 (7.1) | 10.4 (7.4) | 10.9 (7.7) |
| METRIC kg (m³) | **229 mm** | **305 mm** | **381 mm** | **457 mm** |
| **Chamber** | 6681 (4.0) | 7117 (4.2) | 7552 (4.5) | 7987 (4.7) |
| **End Cap** | 8691 (5.2) | 9075 (5.4) | 9460 (5.6) | 9845 (5.9) |

*NOTE: Assumes 12" (305 mm) of stone above, 9" (229 mm) min. row spacing, and 12" (305 mm) min. of perimeter stone in front of end caps.*

### General Cross Section

**Contact your local StormTech representative or visit www.stormtech.com for a copy of the latest installation instructions.

THE INSTALLED CHAMBER SYSTEM SHALL PROVIDE THE LOAD FACTORS SPECIFIED IN THE AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS SECTION 12.12 FOR EARTH AND LIVE LOADS, WITH CONSIDERATION FOR IMPACT AND MULTIPLE VEHICLE PRESENCES.

# THE ISOLATOR® ROW

## INTRODUCTION

An important component of any Stormwater Pollution Prevention Plan is inspection and maintenance. The StormTech Isolator Row is a technique to inexpensively enhance Total Suspended Solids (TSS) removal and provide easy access for inspection and maintenance.

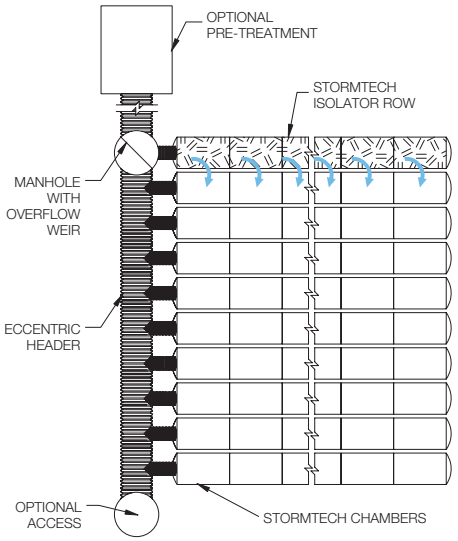
## THE ISOLATOR ROW

The Isolator Row is a row of StormTech chambers, either SC-160LP, SC-310, SC-310-3, SC-740, DC-780, MC-3500 or MC-4500 models, that is surrounded with filter fabric and connected to a closely located manhole for easy access. The fabric-wrapped chambers provide for settling and filtration of sediment as storm water rises in the Isolator Row and ultimately passes through the filter fabric. The open bottom chambers and perforated sidewalls (SC-310, SC- 310-3 and SC-740 models) allow storm water to flow both vertically and horizontally out of the chambers. Sediments are captured in the Isolator Row protecting the storage areas of the adjacent stone and chambers from sediment accumulation.

Two different fabrics are used for the Isolator Row. A woven geotextile fabric is placed between the stone and the Isolator Row chambers. The tough geotextile provides a media for storm water filtration and provides a durable surface for maintenance operations. It is also designed to prevent scour of the underlying stone and remain intact during high pressure jetting. A non-woven fabric is placed over the chambers to provide a filter media for flows passing through the perforations in the sidewall of the chamber. The non-woven fabric is not required over the SC-160LP, DC-780, MC-3500 or MC-4500 models as these chambers do not have perforated side walls.

The Isolator Row is typically designed to capture the “first flush” and offers the versatility to be sized on a volume basis or flow rate basis. An upstream manhole not only provides access to the Isolator Row but typically includes a high flow weir such that storm water flowrates or volumes that exceed the capacity of the Isolator Row overtop the over flow weir and discharge through a manifold to the other chambers.

The Isolator Row may also be part of a treatment train. By treating storm water prior to entry into the chamber system, the service life can be extended and pollutants such as hydrocarbons can be captured. Pre-treatment best management practices can be as simple as deep sump catch basins, oil-water separators or can be innovative storm water treatment devices. The design of the treatment train and selection of pretreatment devices by the design engineer is often driven by regulatory requirements. Whether pretreatment is used or not, the Isolator Row is recommended by StormTech as an effective means to minimize maintenance requirements and maintenance costs.



*Note: See the StormTech Design Manual for detailed information on designing inlets for a StormTech system, including the Isolator Row.*

**Looking down the Isolator Row from the manhole opening, woven geotextile is shown between the chamber and stone base.**

**StormTech Isolator Row with Overflow Spillway** (not to scale)

# ISOLATOR ROW INSPECTION/MAINTENANCE

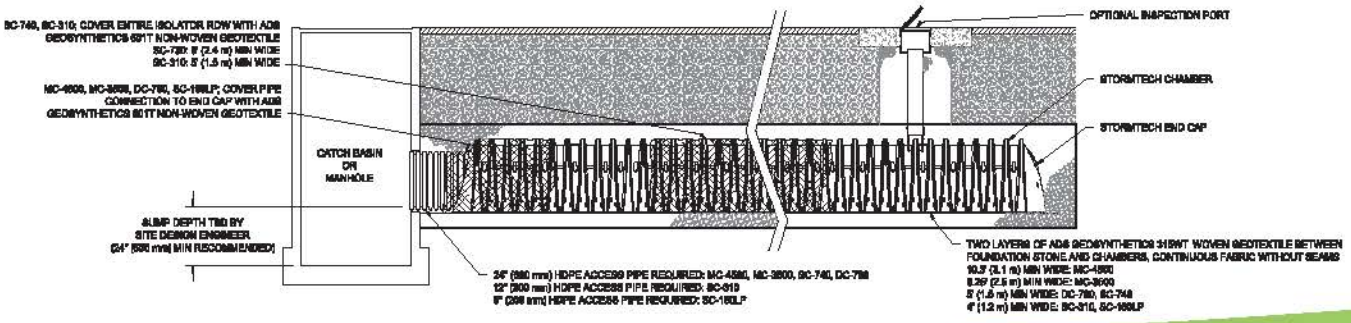
## INSPECTION

The frequency of inspection and maintenance varies by location. A routine inspection schedule needs to be established for each individual location based upon site specific variables. The type of land use (i.e. industrial, commercial, residential), anticipated pollutant load, percent imperviousness, climate, etc. all play a critical role in determining the actual frequency of inspection and maintenance practices.

At a minimum, StormTech recommends annual inspections. Initially, the Isolator Row should be inspected every 6 months for the first year of operation. For subsequent years, the inspection should be adjusted based upon previous observation of sediment deposition.

The Isolator Row incorporates a combination of standard manhole(s) and strategically located inspection ports (as needed). The inspection ports allow for easy access to the system from the surface, eliminating the need to perform a confined space entry for inspection purposes.

If upon visual inspection it is found that sediment has accumulated, a stadia rod should be inserted to determine the depth of sediment. When the average depth of sediment exceeds 3 inches throughout the length of the Isolator Row, clean-out should be performed.



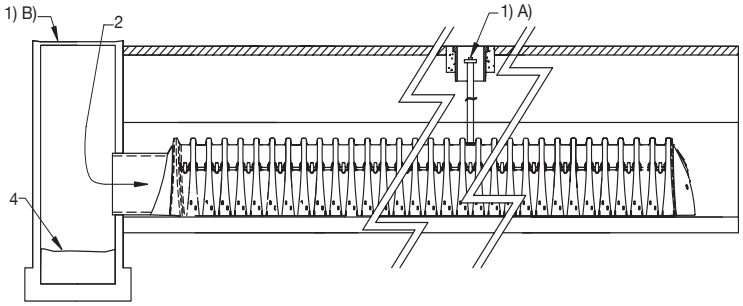
## MAINTENANCE

The Isolator Row was designed to reduce the cost of periodic maintenance. By "isolating" sediments to just one row, costs are dramatically reduced by eliminating the need to clean out each row of the entire storage bed. If inspection indicates the potential need for maintenance, access is provided via a manhole(s) located on the end(s) of the row for cleanout. If entry into the manhole is required, please follow local and OSHA rules for a confined space entries.

Maintenance is accomplished with the JetVac process. The JetVac process utilizes a high pressure water nozzle to propel itself down the Isolator Row while scouring and suspending sediments. As the nozzle is retrieved, the captured pollutants are flushed back into the manhole for vacuuming. Most sewer and pipe maintenance companies have vacuum/JetVac combination vehicles. Selection of an appropriate JetVac nozzle will improve maintenance efficiency. Fixed nozzles designed for culverts or large diameter pipe cleaning are preferable. Rear facing jets with an effective spread of at least 45" are best. Most JetVac reels have 400 feet of hose allowing maintenance of an Isolator Row up to 50 chambers long. **The JetVac process shall only be performed on StormTech Isolator Rows that have AASHTO class 1 woven geotextile (as specified by StormTech) over their angular base stone.**

**StormTech Isolator Row** (not to scale)

*Note: Non-woven fabric is only required over the inlet pipe connection into the end cap for SC-160LP, DC-780, MC-3500 and MC-4500 chamber models and is not required over the entire Isolator Row.*



# ISOLATOR ROW STEP BY STEP MAINTENANCE PROCEDURES

**STEP 1**
Inspect Isolator Row for sediment.
- A) Inspection ports (if present)
  - i. Remove lid from floor box frame
  - ii. Remove cap from inspection riser
  - iii. Using a flashlight and stadia rod,measure depth of sediment and record results on maintenance log.
  - iv. If sediment is at or above 3 inch depth, proceed to Step 2. If not, proceed to Step 3.
- B) All Isolator Rows
  - i. Remove cover from manhole at upstream end of Isolator Row
  - ii. Using a flashlight, inspect down Isolator Row through outlet pipe
    1. Mirrors on poles or cameras may be used to avoid a confined space entry
    2. Follow OSHA regulations for confined space entry if entering manhole
  - iii. If sediment is at or above the lower row of sidewall holes (approximately 3 inches), proceed to Step 2. If not, proceed to Step 3.

**STEP 2**
Clean out Isolator Row using the JetVac process.
- A) A fixed floor cleaning nozzle with rear facing nozzle spread of 45 inches or more is preferable
- B) Apply multiple passes of JetVac until backflush water is clean
- C) Vacuum manhole sump as required

**STEP 3**
Replace all caps, lids and covers, record observations and actions.

**STEP 4**
Inspect & clean catch basins and manholes upstream of the StormTech system.

**SAMPLE MAINTENANCE LOG**

| Date | Stadia Rod Readings | | Sediment Depth (1)–(2) | Observations/Actions | Inspector |
|---|---|---|---|---|---|
| | Fixed point to chamber bottom (1) | Fixed point to top of sediment (2) | | | |
| 3/15/11 | 6.3 ft | none | | New installation. Fixed point is CI frame at grade | DJM |
| 9/24/11 | | 6.2 | 0.1 ft | Some grit felt | SM |
| 6/20/13 | | 5.8 | 0.5 ft | Mucky feel, debris visible in manhole and in Isolator Row, maintenance due | NV |
| 7/7/13 | 6.3 ft | | 0 | System jetted and vacuumed | DJM |

## Description

Non-stormwater discharges are those flows that do not consist entirely of stormwater. Some non-stormwater discharges do not include pollutants and may be discharged to the storm drain. These include uncontaminated groundwater and natural springs. There are also some non-stormwater discharges that typically do not contain pollutants and may be discharged to the storm drain with conditions. These include car washing, air conditioner condensate, etc. However there are certain non-stormwater discharges that pose environmental concern. These discharges may originate from illegal dumping or from internal floor drains, appliances, industrial processes, sinks, and toilets that are connected to the nearby storm drainage system. These discharges (which may include: process waste waters, cooling waters, wash waters, and sanitary wastewater) can carry substances such as paint, oil, fuel and other automotive fluids, chemicals and other pollutants into storm drains. They can generally be detected through a combination of detection and elimination. The ultimate goal is to effectively eliminate non-stormwater discharges to the stormwater drainage system through implementation of measures to detect, correct, and enforce against illicit connections and illegal discharges of pollutants on streets and into the storm drain system and creeks.

## Approach

Initially the industry must make an assessment of non-stormwater discharges to determine which types must be eliminated or addressed through BMPs. The focus of the following approach is in the elimination of non-stormwater discharges.

CASQA California Stormwater Quality Association

***Pollution Prevention***

- Ensure that used oil, used antifreeze, and hazardous chemical recycling programs are being implemented. Encourage litter control.

***Suggested Protocols***

*Recommended Complaint Investigation Equipment*

- Field Screening Analysis
  - pH paper or meter
  - Commercial stormwater pollutant screening kit that can detect for reactive phosphorus, nitrate nitrogen, ammonium nitrogen, specific conductance, and turbidity
  - Sample jars
  - Sample collection pole
  - A tool to remove access hole covers
- Laboratory Analysis
  - Sample cooler
  - Ice
  - Sample jars and labels
  - Chain of custody forms
- Documentation
  - Camera
  - Notebook
  - Pens
  - Notice of Violation forms
  - Educational materials

*General*

- Develop clear protocols and lines of communication for effectively prohibiting non-stormwater discharges, especially those that are not classified as hazardous. These are often not responded to as effectively as they need to be.
- Stencil or demarcate storm drains, where applicable, to prevent illegal disposal of pollutants. Storm drain inlets should have messages such as “Dump No Waste Drains to Stream” stenciled or demarcated next to them to warn against ignorant or intentional dumping of pollutants into the storm drainage system.

- See SC44 Stormwater Drainage System Maintenance for additional information.

*Illicit Connections*

- Locate discharges from the industrial storm drainage system to the municipal storm drain system through review of "as-built" piping schematics.
- Isolate problem areas and plug illicit discharge points.
- Locate and evaluate all discharges to the industrial storm drain system.

*Visual Inspection and Inventory*

- Inventory and inspect each discharge point during dry weather.
- Keep in mind that drainage from a storm event can continue for a day or two following the end of a storm and groundwater may infiltrate the underground stormwater collection system. Also, non-stormwater discharges are often intermittent and may require periodic inspections.

*Review Infield Piping*

- A review of the "as-built" piping schematic is a way to determine if there are any connections to the stormwater collection system.
- Inspect the path of floor drains in older buildings.

*Smoke Testing*

- Smoke testing of wastewater and stormwater collection systems is used to detect connections between the two systems.
- During dry weather the stormwater collection system is filled with smoke and then traced to sources. The appearance of smoke at the base of a toilet indicates that there may be a connection between the sanitary and the stormwater system.

*Dye Testing*

- A dye test can be performed by simply releasing a dye into either your sanitary or process wastewater system and examining the discharge points from the stormwater collection system for discoloration.

*TV Inspection of Drainage System*

- TV Cameras can be employed to visually identify illicit connections to the industrial storm drainage system.

*Illegal Dumping*

- Regularly inspect and clean up hot spots and other storm drainage areas where illegal dumping and disposal occurs.
- On paved surfaces, clean up spills with as little water as possible. Use a rag for small spills, a damp mop for general cleanup, and absorbent material for larger spills. If the spilled material is hazardous, then the used cleanup materials are also hazardous and must be sent to a certified laundry (rags) or disposed of as hazardous waste.

- Never hose down or bury dry material spills. Sweep up the material and dispose of properly.
- Use adsorbent materials on small spills rather than hosing down the spill. Remove the adsorbent materials promptly and dispose of properly.
- For larger spills, a private spill cleanup company or Hazmat team may be necessary.

Once a site has been cleaned:

- Post "No Dumping" signs with a phone number for reporting dumping and disposal.
- Landscaping and beautification efforts of hot spots may also discourage future dumping, as well as provide open space and increase property values.
- Lighting or barriers may also be needed to discourage future dumping.
- See fact sheet SC11 Spill Prevention, Control, and Cleanup.

*Inspection*

- Regularly inspect and clean up hot spots and other storm drainage areas where illegal dumping and disposal occurs.
- Conduct field investigations of the industrial storm drain system for potential sources of non-stormwater discharges.
- Pro-actively conduct investigations of high priority areas. Based on historical data, prioritize specific geographic areas and/or incident type for pro-active investigations.

*Reporting*

- A database is useful for defining and tracking the magnitude and location of the problem.
- Report prohibited non-stormwater discharges observed during the course of normal daily activities so they can be investigated, contained, and cleaned up or eliminated.
- Document that non-stormwater discharges have been eliminated by recording tests performed, methods used, dates of testing, and any on-site drainage points observed.
- Document and report annually the results of the program.
- Maintain documentation of illicit connection and illegal dumping incidents, including significant conditionally exempt discharges that are not properly managed.

***Training***

- Training of technical staff in identifying and documenting illegal dumping incidents is required.
- Consider posting the quick reference table near storm drains to reinforce training.
- Train employees to identify non-stormwater discharges and report discharges to the appropriate departments.

- Educate employees about spill prevention and cleanup.
- Well-trained employees can reduce human errors that lead to accidental releases or spills. The employee should have the tools and knowledge to immediately begin cleaning up a spill should one occur. Employees should be familiar with the Spill Prevention Control and Countermeasure Plan.
- Determine and implement appropriate outreach efforts to reduce non-permissible non-stormwater discharges.
- Conduct spill response drills annually (if no events occurred to evaluate your plan) in cooperation with other industries.
- When a responsible party is identified, educate the party on the impacts of his or her actions.

***Spill Response and Prevention***

- See SC11 Spill Prevention Control and Cleanup.

***Other Considerations***

- Many facilities do not have accurate, up-to-date schematic drawings.

## Requirements

***Costs (including capital and operation & maintenance)***

- The primary cost is for staff time and depends on how aggressively a program is implemented.
- Cost for containment and disposal is borne by the discharger.
- Illicit connections can be difficult to locate especially if there is groundwater infiltration.
- Indoor floor drains may require re-plumbing if cross-connections to storm drains are detected.

***Maintenance (including administrative and staffing)***

- Illegal dumping and illicit connection violations requires technical staff to detect and investigate them.

## Supplemental Information

***Further Detail of the BMP***

*Illegal Dumping*

- Substances illegally dumped on streets and into the storm drain systems and creeks include paints, used oil and other automotive fluids, construction debris, chemicals, fresh concrete, leaves, grass clippings, and pet wastes. All of these wastes cause stormwater and receiving water quality problems as well as clog the storm drain system itself.
- Establish a system for tracking incidents. The system should be designed to identify the following:
  - Illegal dumping hot spots

- Types and quantities (in some cases) of wastes
- Patterns in time of occurrence (time of day/night, month, or year)
- Mode of dumping (abandoned containers, "midnight dumping" from moving vehicles, direct dumping of materials, accidents/spills)
- Responsible parties

One of the keys to success of reducing or eliminating illegal dumping is increasing the number of people at the facility who are aware of the problem and who have the tools to at least identify the incident, if not correct it. Therefore, train field staff to recognize and report the incidents.

What constitutes a "non-stormwater" discharge?

- Non-stormwater discharges to the stormwater collection system may include any water used directly in the manufacturing process (process wastewater), air conditioning condensate and coolant, non-contact cooling water, cooling equipment condensate, outdoor secondary containment water, vehicle and equipment wash water, sink and drinking fountain wastewater, sanitary wastes, or other wastewaters.

*Permit Requirements*

- Facilities subject to stormwater permit requirements must include a certification that the stormwater collection system has been tested or evaluated for the presence of non-stormwater discharges. The State's General Industrial Stormwater Permit requires that non-stormwater discharges be eliminated prior to implementation of the facility's SWPPP.

*Performance Evaluation*

- Review annually internal investigation results; assess whether goals were met and what changes or improvements are necessary.
- Obtain feedback from personnel assigned to respond to, or inspect for, illicit connections and illegal dumping incidents.

**Objectives**

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

## Description

Many activities that occur at an industrial or commercial site have the potential to cause accidental or illegal spills. Preparation for accidental or illegal spills, with proper training and reporting systems implemented, can minimize the discharge of pollutants to the environment.

Spills and leaks are one of the largest contributors of stormwater pollutants. Spill prevention and control plans are applicable to any site at which hazardous materials are stored or used. An effective plan should have spill prevention and response procedures that identify potential spill areas, specify material handling procedures, describe spill response procedures, and provide spill clean-up equipment. The plan should take steps to identify and characterize potential spills, eliminate and reduce spill potential, respond to spills when they occur in an effort to prevent pollutants from entering the stormwater drainage system, and train personnel to prevent and control future spills.

**Targeted Constituents**

| | |
|---|---|
| Sediment | |
| Nutrients | |
| Trash | |
| Metals | ✓ |
| Bacteria | |
| Oil and Grease | ✓ |
| Organics | ✓ |

## Approach

### *Pollution Prevention*

- Develop procedures to prevent/mitigate spills to storm drain systems. Develop and standardize reporting procedures, containment, storage, and disposal activities, documentation, and follow-up procedures.

- Develop a Spill Prevention Control and Countermeasure (SPCC) Plan. The plan should include:

- Description of the facility, owner and address, activities and chemicals present
- Facility map
- Notification and evacuation procedures
- Cleanup instructions
- Identification of responsible departments
- Identify key spill response personnel

- Recycle, reclaim, or reuse materials whenever possible. This will reduce the amount of process materials that are brought into the facility.

***Suggested Protocols (including equipment needs)***

*Spill Prevention*

- Develop procedures to prevent/mitigate spills to storm drain systems. Develop and standardize reporting procedures, containment, storage, and disposal activities, documentation, and follow-up procedures.

- If consistent illegal dumping is observed at the facility:
  - Post "No Dumping" signs with a phone number for reporting illegal dumping and disposal. Signs should also indicate fines and penalties applicable for illegal dumping.
  - Landscaping and beautification efforts may also discourage illegal dumping.
  - Bright lighting and/or entrance barriers may also be needed to discourage illegal dumping.

- Store and contain liquid materials in such a manner that if the tank is ruptured, the contents will not discharge, flow, or be washed into the storm drainage system, surface waters, or groundwater.

- If the liquid is oil, gas, or other material that separates from and floats on water, install a spill control device (such as a tee section) in the catch basins that collects runoff from the storage tank area.

- Routine maintenance:
  - Place drip pans or absorbent materials beneath all mounted taps, and at all potential drip and spill locations during filling and unloading of tanks. Any collected liquids or soiled absorbent materials must be reused/recycled or properly disposed.
  - Store and maintain appropriate spill cleanup materials in a location known to all near the tank storage area; and ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.
  - Sweep and clean the storage area monthly if it is paved, *do not hose down the area to a storm drain.*

  - Check tanks (and any containment sumps) daily for leaks and spills. Replace tanks that are leaking, corroded, or otherwise deteriorating with tanks in good condition. Collect all spilled liquids and properly dispose of them.

- Label all containers according to their contents (e.g., solvent, gasoline).
- Label hazardous substances regarding the potential hazard (corrosive, radioactive, flammable, explosive, poisonous).
- Prominently display required labels on transported hazardous and toxic materials (per US DOT regulations).
- Identify key spill response personnel.

*Spill Control and Cleanup Activities*

- Follow the Spill Prevention Control and Countermeasure Plan.
- Clean up leaks and spills immediately.
- Place a stockpile of spill cleanup materials where it will be readily accessible (e.g., near storage and maintenance areas).
- On paved surfaces, clean up spills with as little water as possible. Use a rag for small spills, a damp mop for general cleanup, and absorbent material for larger spills. If the spilled material is hazardous, then the used cleanup materials are also hazardous and must be sent to a certified laundry (rags) or disposed of as hazardous waste. Physical methods for the cleanup of dry chemicals include the use of brooms, shovels, sweepers, or plows.
- Never hose down or bury dry material spills. Sweep up the material and dispose of properly.
- Chemical cleanups of material can be achieved with the use of adsorbents, gels, and foams. Use adsorbent materials on small spills rather than hosing down the spill. Remove the adsorbent materials promptly and dispose of properly.
- For larger spills, a private spill cleanup company or Hazmat team may be necessary.

*Reporting*

- Report spills that pose an immediate threat to human health or the environment to the Regional Water Quality Control Board.
- Federal regulations require that any oil spill into a water body or onto an adjoining shoreline be reported to the National Response Center (NRC) at 800-424-8802 (24 hour).
- Report spills to local agencies, such as the fire department; they can assist in cleanup.
- Establish a system for tracking incidents. The system should be designed to identify the following:

  - Types and quantities (in some cases) of wastes

  - Patterns in time of occurrence (time of day/night, month, or year)

- Mode of dumping (abandoned containers, "midnight dumping" from moving vehicles, direct dumping of materials, accidents/spills)

- Responsible parties

***Training***

- Educate employees about spill prevention and cleanup.

- Well-trained employees can reduce human errors that lead to accidental releases or spills:

  - The employee should have the tools and knowledge to immediately begin cleaning up a spill should one occur.

  - Employees should be familiar with the Spill Prevention Control and Countermeasure Plan.

- Employees should be educated about aboveground storage tank requirements. Employees responsible for aboveground storage tanks and liquid transfers should be thoroughly familiar with the Spill Prevention Control and Countermeasure Plan and the plan should be readily available.

- Train employees to recognize and report illegal dumping incidents.

***Other Considerations (Limitations and Regulations)***

- State regulations exist for facilities with a storage capacity of 10,000 gallons or more of petroleum to prepare a Spill Prevention Control and Countermeasure (SPCC) Plan (Health & Safety Code Chapter 6.67).

- State regulations also exist for storage of hazardous materials (Health & Safety Code Chapter 6.95), including the preparation of area and business plans for emergency response to the releases or threatened releases.

- Consider requiring smaller secondary containment areas (less than 200 sq. ft.) to be connected to the sanitary sewer, prohibiting any hard connections to the storm drain.

## Requirements

***Costs (including capital and operation & maintenance)***

- Will vary depending on the size of the facility and the necessary controls.

- Prevention of leaks and spills is inexpensive. Treatment and/or disposal of contaminated soil or water can be quite expensive.

***Maintenance (including administrative and staffing)***

- This BMP has no major administrative or staffing requirements. However, extra time is needed to properly handle and dispose of spills, which results in increased labor costs.

## Supplemental Information

***Further Detail of the BMP***

*Reporting*

Record keeping and internal reporting represent good operating practices because they can increase the efficiency of the facility and the effectiveness of BMPs. A good record keeping system helps the facility minimize incident recurrence, correctly respond with appropriate cleanup activities, and comply with legal requirements. A record keeping and reporting system should be set up for documenting spills, leaks, and other discharges, including discharges of hazardous substances in reportable quantities. Incident records describe the quality and quantity of non-stormwater discharges to the storm sewer. These records should contain the following information:

- Date and time of the incident
- Weather conditions
- Duration of the spill/leak/discharge
- Cause of the spill/leak/discharge
- Response procedures implemented
- Persons notified
- Environmental problems associated with the spill/leak/discharge

Separate record keeping systems should be established to document housekeeping and preventive maintenance inspections, and training activities. All housekeeping and preventive maintenance inspections should be documented. Inspection documentation should contain the following information:

- The date and time the inspection was performed
- Name of the inspector
- Items inspected
- Problems noted
- Corrective action required
- Date corrective action was taken

Other means to document and record inspection results are field notes, timed and dated photographs, videotapes, and drawings and maps.

*Aboveground Tank Leak and Spill Control*

Accidental releases of materials from aboveground liquid storage tanks present the potential for contaminating stormwater with many different pollutants. Materials spilled, leaked, or lost from

tanks may accumulate in soils or on impervious surfaces and be carried away by stormwater runoff.

The most common causes of unintentional releases are:

- Installation problems
- Failure of piping systems (pipes, pumps, flanges, couplings, hoses, and valves)
- External corrosion and structural failure
- Spills and overfills due to operator error
- Leaks during pumping of liquids or gases from truck or rail car to a storage tank or vice versa

Storage of reactive, ignitable, or flammable liquids should comply with the Uniform Fire Code and the National Electric Code. Practices listed below should be employed to enhance the code requirements:

- Tanks should be placed in a designated area.
- Tanks located in areas where firearms are discharged should be encapsulated in concrete or the equivalent.
- Designated areas should be impervious and paved with Portland cement concrete, free of cracks and gaps, in order to contain leaks and spills.
- Liquid materials should be stored in UL approved double walled tanks or surrounded by a curb or dike to provide the volume to contain 10 percent of the volume of all of the containers or 110 percent of the volume of the largest container, whichever is greater. The area inside the curb should slope to a drain.
- For used oil or dangerous waste, a dead-end sump should be installed in the drain.
- All other liquids should be drained to the sanitary sewer if available. The drain must have a positive control such as a lock, valve, or plug to prevent release of contaminated liquids.
- Accumulated stormwater in petroleum storage areas should be passed through an oil/water separator.

Maintenance is critical to preventing leaks and spills. Conduct routine inspections and:

- Check for external corrosion and structural failure.
- Check for spills and overfills due to operator error.
- Check for failure of piping system (pipes, pumps, flanger, coupling, hoses, and valves).
- Check for leaks or spills during pumping of liquids or gases from truck or rail car to a storage facility or vice versa.

- Visually inspect new tank or container installation for loose fittings, poor welding, and improper or poorly fitted gaskets.
- Inspect tank foundations, connections, coatings, and tank walls and piping system. Look for corrosion, leaks, cracks, scratches, and other physical damage that may weaken the tank or container system.
- Frequently relocate accumulated stormwater during the wet season.
- Periodically conduct integrity testing by a qualified professional.

*Vehicle Leak and Spill Control*

Major spills on roadways and other public areas are generally handled by highly trained Hazmat teams from local fire departments or environmental health departments. The measures listed below pertain to leaks and smaller spills at vehicle maintenance shops.

In addition to implementing the spill prevention, control, and clean up practices above, use the following measures related to specific activities:

*Vehicle and Equipment Maintenance*

- Perform all vehicle fluid removal or changing inside or under cover to prevent the run-on of stormwater and the runoff of spills.
- Regularly inspect vehicles and equipment for leaks, and repair immediately.
- Check incoming vehicles and equipment (including delivery trucks, and employee and subcontractor vehicles) for leaking oil and fluids. Do not allow leaking vehicles or equipment onsite.
- Always use secondary containment, such as a drain pan or drop cloth, to catch spills or leaks when removing or changing fluids.
- Immediately drain all fluids from wrecked vehicles.
- Store wrecked vehicles or damaged equipment under cover.
- Place drip pans or absorbent materials under heavy equipment when not in use.
- Use adsorbent materials on small spills rather than hosing down the spill.
- Remove the adsorbent materials promptly and dispose of properly.
- Promptly transfer used fluids to the proper waste or recycling drums. Don't leave full drip pans or other open containers lying around.
- Oil filters disposed of in trashcans or dumpsters can leak oil and contaminate stormwater. Place the oil filter in a funnel over a waste oil recycling drum to drain excess oil before disposal. Oil filters can also be recycled. Ask your oil supplier or recycler about recycling oil filters.

- Store cracked batteries in a non-leaking secondary container. Do this with all cracked batteries, even if you think all the acid has drained out. If you drop a battery, treat it as if it is cracked. Put it into the containment area until you are sure it is not leaking.

*Vehicle and Equipment Fueling*

- Design the fueling area to prevent the run-on of stormwater and the runoff of spills:
  - Cover fueling area if possible.
  - Use a perimeter drain or slope pavement inward with drainage to a sump.
  - Pave fueling area with concrete rather than asphalt.
- If dead-end sump is not used to collect spills, install an oil/water separator.
- Install vapor recovery nozzles to help control drips as well as air pollution.
- Discourage "topping-off' of fuel tanks.
- Use secondary containment when transferring fuel from the tank truck to the fuel tank.
- Use adsorbent materials on small spills and general cleaning rather than hosing down the area. Remove the adsorbent materials promptly.
- Carry out all Federal and State requirements regarding underground storage tanks, or install above ground tanks.
- Do not use mobile fueling of mobile industrial equipment around the facility; rather, transport the equipment to designated fueling areas.
- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Train employees in proper fueling and cleanup procedures.

*Industrial Spill Prevention Response*

For the purposes of developing a spill prevention and response program to meet the stormwater regulations, facility managers should use information provided in this fact sheet and the spill prevention/response portions of the fact sheets in this handbook, for specific activities. The program should:

- Integrate with existing emergency response/hazardous materials programs (e.g., Fire Department)
- Develop procedures to prevent/mitigate spills to storm drain systems
- Identify responsible departments
- Develop and standardize reporting procedures, containment, storage, and disposal activities, documentation, and follow-up procedures
- Address spills at municipal facilities, as well as public areas

- Provide training concerning spill prevention, response and cleanup to all appropriate personnel

# Outdoor Loading/Unloading SC-30

Photo Credit: Geoff Brosseau

## Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

## Description

The loading/unloading of materials usually takes place outside on docks or terminals; therefore, materials spilled, leaked, or lost during loading/unloading may collect in the soil or on other surfaces and have the potential to be carried away by stormwater runoff or when the area is cleaned. Additionally, rainfall may wash pollutants from machinery used to unload or move materials. Implementation of the following protocols will prevent or reduce the discharge of pollutants to stormwater from outdoor loading/unloading of materials.

## Targeted Constituents

| | |
|---|---|
| Sediment | ✓ |
| Nutrients | ✓ |
| Trash | |
| Metals | ✓ |
| Bacteria | |
| Oil and Grease | ✓ |
| Organics | ✓ |

## Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

### *Pollution Prevention*

- Keep accurate maintenance logs to evaluate materials removed and improvements made.
- Park tank trucks or delivery vehicles in designated areas so that spills or leaks can be contained.
- Limit exposure of material to rainfall whenever possible.
- Prevent stormwater run-on.
- Check equipment regularly for leaks.

CASQA California Stormwater Quality Association

### *Suggested Protocols*

*Loading and Unloading – General Guidelines*

- Develop an operations plan that describes procedures for loading and/or unloading.
- Conduct loading and unloading in dry weather if possible.
- Cover designated loading/unloading areas to reduce exposure of materials to rain.
- Consider placing a seal or door skirt between delivery vehicles and building to prevent exposure to rain.
- Design loading/unloading area to prevent stormwater run-on, which would include grading or berming the area, and position roof downspouts so they direct stormwater away from the loading/unloading areas.
- Have employees load and unload all materials and equipment in covered areas such as building overhangs at loading docks if feasible.
- Load/unload only at designated loading areas.
- Use drip pans underneath hose and pipe connections and other leak-prone spots during liquid transfer operations, and when making and breaking connections. Several drip pans should be stored in a covered location near the liquid transfer area so that they are always available, yet protected from precipitation when not in use. Drip pans can be made specifically for railroad tracks. Drip pans must be cleaned periodically, and drip collected materials must be disposed of properly.
- Pave loading areas with concrete instead of asphalt.
- Avoid placing storm drains in the area.
- Grade and/or berm the loading/unloading area to a drain that is connected to a deadend.

*Inspection*

- Check loading and unloading equipment regularly for leaks, including valves, pumps, flanges and connections.
- Look for dust or fumes during loading or unloading operations.

### *Training*

- Train employees (e.g., fork lift operators) and contractors on proper spill containment and cleanup.
- Have employees trained in spill containment and cleanup present during loading/unloading.
- Train employees in proper handling techniques during liquid transfers to avoid spills.
- Make sure forklift operators are properly trained on loading and unloading procedures.

***Spill Response and Prevention***

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Contain leaks during transfer.
- Store and maintain appropriate spill cleanup materials in a location that is readily accessible and known to all and ensure that employees are familiar with the site's spill control plan and proper spill cleanup procedures.
- Have an emergency spill cleanup plan readily available.
- Use drip pans or comparable devices when transferring oils, solvents, and paints.

***Other Considerations (Limitations and Regulations)***

- Space and time limitations may preclude all transfers from being performed indoors or under cover.
- It may not be possible to conduct transfers only during dry weather.

## Requirements

***Costs***

Costs should be low except when covering a large loading/unloading area.

***Maintenance***

- Conduct regular inspections and make repairs as necessary. The frequency of repairs will depend on the age of the facility.
- Check loading and unloading equipment regularly for leaks.
- Conduct regular broom dry-sweeping of area.

## Supplemental Information

***Further Detail of the BMP***

*Special Circumstances for Indoor Loading/Unloading of Materials*

Loading or unloading of liquids should occur in the manufacturing building so that any spills that are not completely retained can be discharged to the sanitary sewer, treatment plant, or treated in a manner consistent with local sewer authorities and permit requirements.

- For loading and unloading tank trucks to above and below ground storage tanks, the following procedures should be used:
  - The area where the transfer takes place should be paved. If the liquid is reactive with the asphalt, Portland cement should be used to pave the area.
  - The transfer area should be designed to prevent run-on of stormwater from adjacent areas. Sloping the pad and using a curb, like a speed bump, around the uphill side of the transfer area should reduce run-on.

- The transfer area should be designed to prevent runoff of spilled liquids from the area. Sloping the area to a drain should prevent runoff. The drain should be connected to a dead-end sump or to the sanitary sewer. A positive control valve should be installed on the drain.

- For transfer from rail cars to storage tanks that must occur outside, use the following procedures:

  - Drip pans should be placed at locations where spillage may occur, such as hose connections, hose reels, and filler nozzles. Use drip pans when making and breaking connections.

  - Drip pan systems should be installed between the rails to collect spillage from tank cars.

# Outdoor Equipment Operations SC-32

## Description

Outside process equipment operations and maintenance can contaminate stormwater runoff. Activities, such as grinding, painting, coating, sanding, degreasing or parts cleaning, landfills and waste piles, solid waste treatment and disposal, are examples of process operations that can lead to contamination of stormwater runoff. Source controls for outdoor process equipment operations and maintenance include reducing the amount of waste created, enclosing or covering all or some of the equipment, installing secondary containment, and training employees.

**Objectives**

- Cover
- Contain
- Educate
- Reduce/Minimize

## Approach

### *Pollution Prevention*

- Perform the activity during dry periods.
- Use non-toxic chemicals for maintenance and minimize or eliminate the use of solvents.

**Targeted Constituents**

| | |
|---|---|
| Sediment | ✓ |
| Nutrients | |
| Trash | |
| Metals | ✓ |
| Bacteria | |
| Oil and Grease | ✓ |
| Organics | ✓ |

### *Suggested Protocols*

- Consider enclosing the activity in a building and connecting the floor drains to the sanitary sewer.
- Cover the work area with a permanent roof if possible.
- Minimize contact of stormwater with outside process equipment operations through berming and drainage routing (run-on prevention). If possible, connect process equipment area to public sewer or facility wastewater treatment system. Some municipalities require that secondary containment areas be connected to the sanitary sewer, prohibiting any hard connections to the storm drain.
- Dry clean the work area regularly.

### *Training*

- Train employees to perform the activity during dry periods only or substituting benign materials for more toxic ones.
- Train employee and contractors in proper techniques for spill containment and cleanup. Employees should have the tools and knowledge to immediately begin cleaning up a spill should one occur.

### *Spill Response and Prevention*

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.

- Have employees trained in emergency spill cleanup procedures present when dangerous waste, liquid chemicals, or other wastes are delivered.
- Place a stockpile of spill cleanup materials where it will be readily accessible.
- Prevent operator errors by using engineering safe guards and thus reducing accidental releases of pollutant.
- Inspect storage areas regularly for leaks or spills. Also check for structural failure, spills and overfills due to operator error, and/or failure of piping system.

***Other Considerations***

- Providing cover may be expensive.
- Space limitations may preclude enclosing some equipment.
- Storage sheds often must meet building and fire code requirements.

## Requirements

***Costs***

Costs vary depending on the complexity of the operation and the amount of control necessary for stormwater pollution control.

***Maintenance***

- Conduct routine preventive maintenance, including checking process equipment for leaks.
- Clean the storm drain system regularly.

## Supplemental Information

***Further Detail of the BMP***

*Hydraulic/Treatment Modifications*

If stormwater becomes polluted, it should be captured and treated. If you do not have your own process wastewater treatment system, consider discharging to the public sewer system. Use of the public sewer might be allowed under the following conditions:

- If the activity area is very small (less than a few hundred square feet), the local sewer authority may be willing to allow the area to remain uncovered with the drain connected to the public sewer.
- It may be possible under unusual circumstances to connect a much larger area to the public sewer, as long as the rate of stormwater discharges does not exceed the capacity of the wastewater treatment plant. The stormwater could be stored during the storm and then transferred to the public sewer when the normal flow is low, such as at night.

Industries that generate large volumes of process wastewater typically have their own treatment system and corresponding permit. These industries have the discretion to use their wastewater treatment system to treat stormwater within the constraints of their permit requirements for process treatment. It may also be possible for the industry to discharge the stormwater directly to an effluent outfall without treatment as long as the total loading of the discharged process

water and stormwater does not exceed the loading had a stormwater treatment device been used. This could be achieved by reducing the loading from the process wastewater treatment system. Check with your Regional Water Quality Control Board or local sewering agency, as this option would be subject to permit constraints and potentially regular monitoring.

# Waste Handling & Disposal SC-34

Photo Credit: Geoff Brosseau

## Description

Improper storage and handling of solid wastes can allow toxic compounds, oils and greases, heavy metals, nutrients, suspended solids, and other pollutants to enter stormwater runoff. The discharge of pollutants to stormwater from waste handling and disposal can be prevented and reduced by tracking waste generation, storage, and disposal; reducing waste generation and disposal through source reduction, reuse, and recycling; and preventing run-on and runoff.

## Approach

### *Pollution Prevention*

- Accomplish reduction in the amount of waste generated using the following source controls:
  - Production planning and sequencing
  - Process or equipment modification
  - Raw material substitution or elimination
  - Loss prevention and housekeeping
  - Waste segregation and separation
  - Close loop recycling
- Establish a material tracking system to increase awareness about material usage. This may reduce spills and minimize contamination, thus reducing the amount of waste produced.
- Recycle materials whenever possible.

### Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

### Targeted Constituents

| | |
|---|---|
| Sediment | |
| Nutrients | |
| Trash | |
| Metals | ✓ |
| Bacteria | ✓ |
| Oil and Grease | ✓ |
| Organics | ✓ |

CASQA California Stormwater Quality Association

***Suggested Protocols***

*General*

- Cover storage containers with leak proof lids or some other means. If waste is not in containers, cover all waste piles (plastic tarps are acceptable coverage) and prevent stormwater run-on and runoff with a berm. The waste containers or piles must be covered except when in use.
- Use drip pans or absorbent materials whenever grease containers are emptied by vacuum trucks or other means. Grease cannot be left on the ground. Collected grease must be properly disposed of as garbage.
- Check storage containers weekly for leaks and to ensure that lids are on tightly. Replace any that are leaking, corroded, or otherwise deteriorating.
- Sweep and clean the storage area regularly. If it is paved, do not hose down the area to a storm drain.
- Dispose of rinse and wash water from cleaning waste containers into a sanitary sewer if allowed by the local sewer authority. Do not discharge wash water to the street or storm drain.
- Transfer waste from damaged containers into safe containers.
- Take special care when loading or unloading wastes to minimize losses. Loading systems can be used to minimize spills and fugitive emission losses such as dust or mist. Vacuum transfer systems can minimize waste loss.

*Controlling Litter*

- Post "No Littering" signs and enforce anti-litter laws.
- Provide a sufficient number of litter receptacles for the facility.
- Clean out and cover litter receptacles frequently to prevent spillage.

*Waste Collection*

- Keep waste collection areas clean.
- Inspect solid waste containers for structural damage regularly. Repair or replace damaged containers as necessary.
- Secure solid waste containers; containers must be closed tightly when not in use.
- Do not fill waste containers with washout water or any other liquid.
- Ensure that only appropriate solid wastes are added to the solid waste container. Certain wastes such as hazardous wastes, appliances, fluorescent lamps, pesticides, etc., may not be disposed of in solid waste containers (see chemical/ hazardous waste collection section below).

- Do not mix wastes; this can cause chemical reactions, make recycling impossible, and complicate disposal.

*Good Housekeeping*

- Use all of the product before disposing of the container.
- Keep the waste management area clean at all times by sweeping and cleaning up spills immediately.
- Use dry methods when possible (e.g., sweeping, use of absorbents) when cleaning around restaurant/food handling dumpster areas. If water must be used after sweeping/using absorbents, collect water and discharge through grease interceptor to the sewer.

*Chemical/Hazardous Wastes*

- Select designated hazardous waste collection areas on-site.
- Store hazardous materials and wastes in covered containers and protect them from vandalism.
- Place hazardous waste containers in secondary containment.
- Make sure that hazardous waste is collected, removed, and disposed of only at authorized disposal areas.
- Stencil or demarcate storm drains on the facility's property with prohibitive message regarding waste disposal.

*Run-on/Runoff Prevention*

- Prevent stormwater run-on from entering the waste management area by enclosing the area or building a berm around the area.
- Prevent waste materials from directly contacting rain.
- Cover waste piles with temporary covering material such as reinforced tarpaulin, polyethylene, polyurethane, polypropyleneor hypalon.
- Cover the area with a permanent roof if feasible.
- Cover dumpsters to prevent rain from washing waste out of holes or cracks in the bottom of the dumpster.
- Move the activity indoor after ensuring all safety concerns such as fire hazard and ventilation are addressed.

*Inspection*

- Inspect and replace faulty pumps or hoses regularly to minimize the potential of releases and spills.
- Check waste management areas for leaking containers or spills.

- Repair leaking equipment including valves, lines, seals, or pumps promptly.

***Training***

- Train staff in pollution prevention measures and proper disposal methods.
- Train employees and contractors in proper spill containment and cleanup. The employee should have the tools and knowledge to immediately begin cleaning up a spill should one occur.
- Train employees and subcontractors in proper hazardous waste management.

***Spill Response and Prevention***

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Have an emergency plan, equipment and trained personnel ready at all times to deal immediately with major spills
- Collect all spilled liquids and properly dispose of them.
- Store and maintain appropriate spill cleanup materials in a location known to all near the designated wash area.
- Ensure that vehicles transporting waste have spill prevention equipment that can prevent spills during transport. Spill prevention equipment includes:
  - Vehicles equipped with baffles for liquid waste
  - Trucks with sealed gates and spill guards for solid waste

***Other Considerations (Limitations and Regulations)***

Hazardous waste cannot be reused or recycled; it must be disposed of by a licensed hazardous waste hauler.

## Requirements

***Costs***

Capital and O&M costs for these programs will vary substantially depending on the size of the facility and the types of waste handled. Costs should be low if there is an inventory program in place.

***Maintenance***

- None except for maintaining equipment for material tracking program.

## Supplemental Information

***Further Detail of the BMP***

*Land Treatment System*

Minimize runoff of polluted stormwater from land application by:

- Choosing a site where slopes are under 6%, the soil is permeable, there is a low water table, it is located away from wetlands or marshes, and there is a closed drainage system

- Avoiding application of waste to the site when it is raining or when the ground is saturated with water
- Growing vegetation on land disposal areas to stabilize soils and reduce the volume of surface water runoff from the site
- Maintaining adequate barriers between the land application site and the receiving waters (planted strips are particularly good)
- Using erosion control techniques such as mulching and matting, filter fences, straw bales, diversion terracing, and sediment basins
- Performing routine maintenance to ensure the erosion control or site stabilization measures are working

***Examples***

The port of Long Beach has a state-of-the-art database for identifying potential pollutant sources, documenting facility management practices, and tracking pollutants.

# Safer Alternative Products SC-35

## Description

Promote the use of less harmful products and products that contain little or no TMDL pollutants. Alternatives exist for most product classes including chemical fertilizers, pesticides, cleaning solutions, janitorial chemicals, automotive and paint products, and consumables (batteries, fluorescent lamps).

## Approach

Pattern a new program after the many established programs around the state and country. Integrate this best management practice as much as possible with existing programs at your facility.

Develop a comprehensive program based on:

- The "Precautionary Principle," which is an alternative to the "Risk Assessment" model that says it's acceptable to use a potentially harmful product until physical evidence of its harmful effects are established and deemed too costly from an environmental or public health perspective. For instance, a risk assessment approach might say it's acceptable to use a pesticide until there is direct proof of an environmental impact. The Precautionary Principle approach is used to evaluate whether a given product is safe, whether it is really necessary, and whether alternative products would perform just as well.
- Environmentally Preferable Purchasing Program to minimize the purchase of products containing hazardous ingredients used in the facility's custodial services, fleet maintenance, and facility maintenance in favor of using alternate products that pose less risk to employees and to the environment.
- Integrated Pest Management (IPM) or Less-Toxic Pesticide Program, which uses a pest management approach that minimizes the use of toxic chemicals and gets rid of pests by methods that pose a lower risk to employees, the public, and the environment.
- Energy Efficiency Program including no-cost and low-cost energy conservation and efficiency actions that can reduce both energy consumption and electricity bills, along with long-term energy efficiency investments.

Consider the following mechanisms for developing and implementing a comprehensive program:

- Policies

### Objectives

- Educate
- Reduce/Minimize
- Product Substitution

### Targeted Constituents

| | |
|---|---|
| Sediment | |
| Nutrients | ✓ |
| Trash | |
| Metals | ✓ |
| Bacteria | |
| Oil and Grease | ✓ |
| Organics | ✓ |

CASQA California Stormwater Quality Association

- Procedures
  - Standard operating procedures (SOPs)
  - Purchasing guidelines and procedures
  - Bid packages (services and supplies)
- Materials
  - Preferred or approved product and supplier lists
  - Product and supplier evaluation criteria
  - Training sessions and manuals
  - Fact sheets for employees

Implement this BMP in conjunction with the Vehicle and Equipment Management fact sheets (SC20 – SC22) and SC41, Building and Grounds Maintenance.

***Training***

- Employees who handle potentially harmful materials in the use of safer alternatives.
- Purchasing departments should be encouraged to procure less hazardous materials and products that contain little or no harmful substances or TMDL pollutants.

***Regulations***

This BMP has no regulatory requirements. Existing regulations already encourage facilities to reduce the use of hazardous materials through incentives such as reduced:

- Specialized equipment storage and handling requirements,
- Storm water runoff sampling requirements,
- Training and licensing requirements, and
- Record keeping and reporting requirements.

***Equipment***

- There are no major equipment requirements to this BMP.

***Limitations***

- Alternative products may not be available, suitable, or effective in every case.

**Requirements**

***Cost Considerations***

- The primary cost is for staff time to: 1) develop new policies and procedures and 2) educate purchasing departments and employees who handle potentially harmful materials about the availability, procurement, and use of safer alternatives.

- Some alternative products may be slightly more expensive than conventional products.

### Supplemental Information

Employees and contractors / service providers can both be educated about safer alternatives by using information developed by a number of organizations including the references and resources listed below.

The following discussion provides some general information on safer alternatives. More specific information on particular hazardous materials and the available alternatives may be found in the references and resources listed below.

- Automotive products – Less toxic alternatives are not available for many automotive products, especially engine fluids. But there are alternatives to grease lubricants, car polishes, degreasers, and windshield washer solution. Rerefined motor oil is also available.
- Vehicle/Trailer lubrication – Fifth wheel bearings on trucks require routine lubrication. Adhesive lubricants are available to replace typical chassis grease.
- Cleaners – Vegetables-based or citrus-based soaps are available to replace petroleum-based soaps/detergents.
- Paint products – Water-based paints, wood preservatives, stains, and finishes are available.
- Pesticides – Specific alternative products or methods exist to control most insects, fungi, and weeds.
- Chemical Fertilizers – Compost and soil amendments are natural alternatives.
- Consumables – Manufacturers have either reduced or are in the process of reducing the amount of heavy metals in consumables such as batteries and fluorescent lamps. All fluorescent lamps contain mercury, however low-mercury containing lamps are now available from most hardware and lighting stores. Fluorescent lamps are also more energy efficient than the average incandescent lamp.
- Janitorial chemicals – Even biodegradable soap can harm fish and wildlife before it biodegrades. Biodegradable does not mean non-toxic. Safer products and procedures are available for floor stripping and cleaning, as well as carpet, glass, metal, and restroom cleaning and disinfecting.

#### *Examples*

There are a number of business and trade associations, and communities with effective programs. Some of the more prominent are listed below in the references and resources section.

### References and Resources

Note: Many of these references provide alternative products for materials that typically are used inside and disposed to the sanitary sewer as well as alternatives to products that usually end up in the storm drain.

# Building & Grounds Maintenance SC-41

## Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

## Targeted Constituents

| | |
|---|---|
| Sediment | ✓ |
| Nutrients | ✓ |
| Trash | |
| Metals | ✓ |
| Bacteria | ✓ |
| Oil and Grease | |
| Organics | |

## Description

Stormwater runoff from building and grounds maintenance activities can be contaminated with toxic hydrocarbons in solvents, fertilizers and pesticides, suspended solids, heavy metals, abnormal pH, and oils and greases. Utilizing the protocols in this fact sheet will prevent or reduce the discharge of pollutants to stormwater from building and grounds maintenance activities by washing and cleaning up with as little water as possible, following good landscape management practices, preventing and cleaning up spills immediately, keeping debris from entering the storm drains, and maintaining the stormwater collection system.

## Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

### *Pollution Prevention*

- Switch to non-toxic chemicals for maintenance when possible.
- Choose cleaning agents that can be recycled.
- Encourage proper lawn management and landscaping, including use of native vegetation.

CASQA California Stormwater Quality Association

- Encourage use of Integrated Pest Management techniques for pest control.
- Encourage proper onsite recycling of yard trimmings.
- Recycle residual paints, solvents, lumber, and other material as much as possible.

***Suggested Protocols***

*Pressure Washing of Buildings, Rooftops, and Other Large Objects*

- In situations where soaps or detergents are used and the surrounding area is paved, pressure washers must use a water collection device that enables collection of wash water and associated solids. A sump pump, wet vacuum or similarly effective device must be used to collect the runoff and loose materials. The collected runoff and solids must be disposed of properly.
- If soaps or detergents are not used, and the surrounding area is paved, wash runoff does not have to be collected but must be screened. Pressure washers must use filter fabric or some other type of screen on the ground and/or in the catch basin to trap the particles in wash water runoff.
- If you are pressure washing on a grassed area (with or without soap), runoff must be dispersed as sheet flow as much as possible, rather than as a concentrated stream. The wash runoff must remain on the grass and not drain to pavement.

*Landscaping Activities*

- Dispose of grass clippings, leaves, sticks, or other collected vegetation as garbage, or by composting. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Use mulch or other erosion control measures on exposed soils.

*Building Repair, Remodeling, and Construction*

- Do not dump any toxic substance or liquid waste on the pavement, the ground, or toward a storm drain.
- Use ground or drop cloths underneath outdoor painting, scraping, and sandblasting work, and properly dispose of collected material daily.
- Use a ground cloth or oversized tub for activities such as paint mixing and tool cleaning.
- Clean paintbrushes and tools covered with water-based paints in sinks connected to sanitary sewers or in portable containers that can be dumped into a sanitary sewer drain. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents (e.g., paint thinner, turpentine, etc.) for recycling or proper disposal.
- Use a storm drain cover, filter fabric, or similarly effective runoff control mechanism if dust, grit, wash water, or other pollutants may escape the work area and enter a catch basin. This is particularly necessary on rainy days. The containment device(s) must be in place at the beginning of the work day, and accumulated dirty runoff and solids must be collected and disposed of before removing the containment device(s) at the end of the work day.

- If you need to de-water an excavation site, you may need to filter the water before discharging to a catch basin or off-site. If directed off-site, you should direct the water through hay bales and filter fabric or use other sediment filters or traps.
- Store toxic material under cover during precipitation events and when not in use. A cover would include tarps or other temporary cover material.

*Mowing, Trimming, and Planting*

- Dispose of leaves, sticks, or other collected vegetation as garbage, by composting or at a permitted landfill. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Use mulch or other erosion control measures when soils are exposed.
- Place temporarily stockpiled material away from watercourses and drain inlets, and berm or cover stockpiles to prevent material releases to the storm drain system.
- Consider an alternative approach when bailing out muddy water: do not put it in the storm drain; pour over landscaped areas.
- Use hand weeding where practical.

*Fertilizer and Pesticide Management*

- Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers and pesticides and training of applicators and pest control advisors.
- Use less toxic pesticides that will do the job when applicable. Avoid use of copper-based pesticides if possible.
- Do not use pesticides if rain is expected.
- Do not mix or prepare pesticides for application near storm drains.
- Use the minimum amount needed for the job.
- Calibrate fertilizer distributors to avoid excessive application.
- Employ techniques to minimize off-target application (e.g., spray drift) of pesticides, including consideration of alternative application techniques.
- Apply pesticides only when wind speeds are low.
- Fertilizers should be worked into the soil rather than dumped or broadcast onto the surface.
- Irrigate slowly to prevent runoff and then only as much as is needed.
- Clean pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.
- Dispose of empty pesticide containers according to the instructions on the container label.

- Use up the pesticides. Rinse containers, and use rinse water as product. Dispose of unused pesticide as hazardous waste.
- Implement storage requirements for pesticide products with guidance from the local fire department and County Agricultural Commissioner. Provide secondary containment for pesticides.

*Inspection*

- Inspect irrigation system periodically to ensure that the right amount of water is being applied and that excessive runoff is not occurring. Minimize excess watering and repair leaks in the irrigation system as soon as they are observed.

***Training***

- Educate and train employees on pesticide use and in pesticide application techniques to prevent pollution.
- Train employees and contractors in proper techniques for spill containment and cleanup.
- Be sure the frequency of training takes into account the complexity of the operations and the nature of the staff.

***Spill Response and Prevention***

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Place a stockpile of spill cleanup materials, such as brooms, dustpans, and vacuum sweepers (if desired) near the storage area where it will be readily accessible.
- Have employees trained in spill containment and cleanup present during the loading/unloading of dangerous wastes, liquid chemicals, or other materials.
- Familiarize employees with the Spill Prevention Control and Countermeasure Plan.
- Clean up spills immediately.

***Other Considerations***

Alternative pest/weed controls may not be available, suitable, or effective in many cases.

## Requirements

***Costs***

- Cost will vary depending on the type and size of facility.
- Overall costs should be low in comparison to other BMPs.

***Maintenance***

Sweep paved areas regularly to collect loose particles. Wipe up spills with rags and other absorbent material immediately, do not hose down the area to a storm drain.

## Supplemental Information

***Further Detail of the BMP***

*Fire Sprinkler Line Flushing*

Building fire sprinkler line flushing may be a source of non-stormwater runoff pollution. The water entering the system is usually potable water, though in some areas it may be non-potable reclaimed wastewater. There are subsequent factors that may drastically reduce the quality of the water in such systems. Black iron pipe is usually used since it is cheaper than potable piping, but it is subject to rusting and results in lower quality water. Initially, the black iron pipe has an oil coating to protect it from rusting between manufacture and installation; this will contaminate the water from the first flush but not from subsequent flushes. Nitrates, poly-phosphates and other corrosion inhibitors, as well as fire suppressants and antifreeze may be added to the sprinkler water system. Water generally remains in the sprinkler system a long time (typically a year) and between flushes may accumulate iron, manganese, lead, copper, nickel, and zinc. The water generally becomes anoxic and contains living and dead bacteria and breakdown products from chlorination. This may result in a significant BOD problem and the water often smells. Consequently dispose fire sprinkler line flush water into the sanitary sewer. Do not allow discharge to storm drain or infiltration due to potential high levels of pollutants in fire sprinkler line water.

|---|---|
| Sediment | ✓ |
| Nutrients | |
| Trash | ✓ |
| Metals | ✓ |
| Bacteria | |
| Oil and Grease | ✓ |
| Organics | ✓ |

## Description

Modifications are common particularly at large industrial sites. The activity may vary from minor and normal building repair to major remodeling, or the construction of new facilities. These activities can generate pollutants including solvents, paints, paint and varnish removers, finishing residues, spent thinners, soap cleaners, kerosene, asphalt and concrete materials, adhesive residues, and old asbestos installation. Protocols in this fact sheet are intended to prevent or reduce the discharge of pollutants to stormwater from building repair, remodeling, and construction by using soil erosion controls, enclosing or covering building material storage areas, using good housekeeping practices, using safer alternative products, and training employees.

## Approach

### *Pollution Prevention*

- Recycle residual paints, solvents, lumber, and other materials to the maximum extent practical.
- Buy recycled products to the maximum extent practical.
- Inform on-site contractors of company policy on these matters and include appropriate provisions in their contract to ensure certain proper housekeeping and disposal practices are implemented.

CASQA California Stormwater Quality Association

- Make sure that nearby storm drains are well marked to minimize the chance of inadvertent disposal of residual paints and other liquids.

***Suggested Protocols***

*Repair & Remodeling*

- Follow BMPs identified in Construction BMP Handbook.
- Maintain good housekeeping practices while work is underway.
- Keep the work site clean and orderly. Remove debris in a timely fashion. Sweep the area.
- Cover materials of particular concern that must be left outside, particularly during the rainy season.
- Do not dump waste liquids down the storm drain.
- Dispose of wash water, sweepings, and sediments properly.
- Store materials properly that are normally used in repair and remodeling such as paints and solvents.
- Sweep out the gutter or wash the gutter and trap the particles at the outlet of the downspout if when repairing roofs, small particles have accumulated in the gutter. A sock or geofabric placed over the outlet may effectively trap the materials. If the downspout is tight lined, place a temporary plug at the first convenient point in the storm drain and pump out the water with a vactor truck, and clean the catch basin sump where you placed the plug.
- Properly store and dispose waste materials generated from construction activities. See Construction BMP Handbook.
- Clean the storm drain system in the immediate vicinity of the construction activity after it is completed.

*Painting*

- Enclose painting operations consistent with local air quality regulations and OSHA.
- Local air pollution regulations may, in many areas of the state, specify painting procedures which if properly carried out are usually sufficient to protect water quality.
- Develop paint handling procedures for proper use, storage, and disposal of paints.
- Transport paint and materials to and from job sites in containers with secure lids and tied down to the transport vehicle.
- Test and inspect spray equipment prior to starting to paint. Tighten all hoses and connections and do not overfill paint containers.
- Mix paint indoors before using so that any spill will not be exposed to rain. Do so even during dry weather because cleanup of a spill will never be 100% effective.
- Transfer and load paint and hot thermoplastic away from storm drain inlets.

- Do not transfer or load paint near storm drain inlets.
- Plug nearby storm drain inlets prior to starting painting and remove plugs when job is complete when there is significant risk of a spill reaching storm drains.
- Cover nearby storm drain inlets prior to starting work if sand blasting is used to remove paint.
- Use a ground cloth to collect the chips if painting requires scraping or sand blasting of the existing surface. Dispose the residue properly.
- Cover or enclose painting operations properly to avoid drift.
- Clean the application equipment in a sink that is connected to the sanitary sewer if using water based paints.
- Capture all cleanup-water and dispose of properly.
- Dispose of paints containing lead or tributyl tin and considered a hazardous waste properly.
- Store leftover paints if they are to be kept for the next job properly, or dispose properly.
- Recycle paint when possible. Dispose of paint at an appropriate household hazardous waste facility.

### *Training*

Proper education of off-site contractors is often overlooked. The conscientious efforts of well trained employees can be lost by unknowing off-site contractors, so make sure they are well informed about what they are expected to do.

### *Spill Response and Prevention*

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Place a stockpile of spill cleanup materials where it will be readily accessible.
- Clean up spills immediately.
- Excavate and remove the contaminated (stained) soil if a spill occurs on dirt.

### *Limitations*

- This BMP is for minor construction only. The State's General Construction Activity Stormwater Permit has more requirements for larger projects. The companion "Construction Best Management Practice Handbook" contains specific guidance and best management practices for larger-scale projects.
- Hazardous waste that cannot be reused or recycled must be disposed of by a licensed hazardous waste hauler.
- Be certain that actions to help stormwater quality are consistent with Cal- and Fed-OSHA and air quality regulations.

# SC-42 Building Repair and Construction

## Requirements

***Costs***

These BMPs are generally low to modest in cost.

***Maintenance***

N/A

## Supplemental Information

***Further Detail of the BMP***

*Soil/Erosion Control*

If the work involves exposing large areas of soil, employ the appropriate soil erosion and control techniques. See the Construction Best Management Practice Handbook. If old buildings are being torn down and not replaced in the near future, stabilize the site using measures described in SC-40 Contaminated or Erodible Areas.

If a building is to be placed over an open area with a storm drainage system, make sure the storm inlets within the building are covered or removed, or the storm line is connected to the sanitary sewer. If because of the remodeling a new drainage system is to be installed or the existing system is to be modified, consider installing catch basins as they serve as effective "in-line" treatment devices. See Treatment Control Fact Sheet TC-20 Wet Pond/Basin in Section 5 of the New Development and Redevelopment Handbook regarding design criteria. Include in the catch basin a "turn-down" elbow or similar device to trap floatables.

# Parking/Storage Area Maintenance SC-43

## Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

## Targeted Constituents

| | |
|---|---|
| Sediment | ✓ |
| Nutrients | |
| Trash | ✓ |
| Metals | ✓ |
| Bacteria | |
| Oil and Grease | ✓ |
| Organics | ✓ |

## Description

Parking lots and storage areas can contribute a number of substances, such as trash, suspended solids, hydrocarbons, oil and grease, and heavy metals that can enter receiving waters through stormwater runoff or non-stormwater discharges. The protocols in this fact sheet are intended to prevent or reduce the discharge of pollutants from parking/storage areas and include using good housekeeping practices, following appropriate cleaning BMPs, and training employees.

## Approach

The goal of this program is to ensure stormwater pollution prevention practices are considered when conducting activities on or around parking areas and storage areas to reduce potential for pollutant discharge to receiving waters. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

### *Pollution Prevention*

- Encourage alternative designs and maintenance strategies for impervious parking lots. (See New Development and Redevelopment BMP Handbook)
- Keep accurate maintenance logs to evaluate BMP implementation.

CASQA California Stormwater Quality Association

# SC-43 Parking/Storage Area Maintenance

***Suggested Protocols***

*General*

- Keep the parking and storage areas clean and orderly. Remove debris in a timely fashion.
- Allow sheet runoff to flow into biofilters (vegetated strip and swale) and/or infiltration devices.
- Utilize sand filters or oleophilic collectors for oily waste in low quantities.
- Arrange rooftop drains to prevent drainage directly onto paved surfaces.
- Design lot to include semi-permeable hardscape.
- Discharge soapy water remaining in mop or wash buckets to the sanitary sewer through a sink, toilet, clean-out, or wash area with drain.

*Controlling Litter*

- Post "No Littering" signs and enforce anti-litter laws.
- Provide an adequate number of litter receptacles.
- Clean out and cover litter receptacles frequently to prevent spillage.
- Provide trash receptacles in parking lots to discourage litter.
- Routinely sweep, shovel, and dispose of litter in the trash.

*Surface Cleaning*

- Use dry cleaning methods (e.g., sweeping, vacuuming) to prevent the discharge of pollutants into the stormwater conveyance system if possible.
- Establish frequency of public parking lot sweeping based on usage and field observations of waste accumulation.
- Sweep all parking lots at least once before the onset of the wet season.
- Follow the procedures below if water is used to clean surfaces:
  - Block the storm drain or contain runoff.
  - Collect and pump wash water to the sanitary sewer or discharge to a pervious surface. Do not allow wash water to enter storm drains.
  - Dispose of parking lot sweeping debris and dirt at a landfill.
- Follow the procedures below when cleaning heavy oily deposits:
  - Clean oily spots with absorbent materials.
  - Use a screen or filter fabric over inlet, then wash surfaces.

- Do not allow discharges to the storm drain.
- Vacuum/pump discharges to a tank or discharge to sanitary sewer.
- Appropriately dispose of spilled materials and absorbents.

*Surface Repair*

- Preheat, transfer or load hot bituminous material away from storm drain inlets.
- Apply concrete, asphalt, and seal coat during dry weather to prevent contamination from contacting stormwater runoff.
- Cover and seal nearby storm drain inlets where applicable (with waterproof material or mesh) and manholes before applying seal coat, slurry seal, etc. Leave covers in place until job is complete and all water from emulsified oil sealants has drained or evaporated. Clean any debris from these covered manholes and drains for proper disposal.
- Use only as much water as necessary for dust control, to avoid runoff.
- Catch drips from paving equipment that is not in use with pans or absorbent material placed under the machines. Dispose of collected material and absorbents properly.

*Inspection*

- Have designated personnel conduct inspections of parking facilities and stormwater conveyance systems associated with parking facilities on a regular basis.
- Inspect cleaning equipment/sweepers for leaks on a regular basis.

### *Training*

- Provide regular training to field employees and/or contractors regarding cleaning of paved areas and proper operation of equipment.
- Train employees and contractors in proper techniques for spill containment and cleanup.

### *Spill Response and Prevention*

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Place a stockpile of spill cleanup materials where it will be readily accessible or at a central location.
- Clean up fluid spills immediately with absorbent rags or material.
- Dispose of spilled material and absorbents properly.

### *Other Considerations*

Limitations related to sweeping activities at large parking facilities may include high equipment costs, the need for sweeper operator training, and the inability of current sweeper technology to remove oil and grease.

# SC-43 Parking/Storage Area Maintenance

## Requirements

### *Costs*

Cleaning/sweeping costs can be quite large. Construction and maintenance of stormwater structural controls can be quite expensive as well.

### *Maintenance*

- Sweep parking lot regularly to minimize cleaning with water.
- Clean out oil/water/sand separators regularly, especially after heavy storms.
- Clean parking facilities regularly to prevent accumulated wastes and pollutants from being discharged into conveyance systems during rainy conditions.

## Supplemental Information

### *Further Detail of the BMP*

*Surface Repair*

Apply concrete, asphalt, and seal coat during dry weather to prevent contamination from contacting stormwater runoff. Where applicable, cover and seal nearby storm drain inlets (with waterproof material or mesh) and manholes before applying seal coat, slurry seal, etc. Leave covers in place until job is complete and all water from emulsified oil sealants has drained or evaporated. Clean any debris from these covered manholes and drains for proper disposal. Only use only as much water as is necessary for dust control to avoid runoff.

# Drainage System Maintenance SC-44

**Objectives**

- Cover
- Contain
- Educate
- Reduce/Minimize

## Description

As a consequence of its function, the stormwater conveyance system collects and transports urban runoff and stormwater that may contain certain pollutants. The protocols in this fact sheet are intended to reduce pollutants reaching receiving waters through proper conveyance system operation and maintenance.

**Targeted Constituents**

| | |
|---|---|
| Sediment | ✓ |
| Nutrients | |
| Trash | ✓ |
| Metals | |
| Bacteria | ✓ |
| Oil and Grease | |
| Organics | |

## Approach

### *Pollution Prevention*

Maintain catch basins, stormwater inlets, and other stormwater conveyance structures on a regular basis to remove pollutants, reduce high pollutant concentrations during the first flush of storms, prevent clogging of the downstream conveyance system, restore catch basins' sediment trapping capacity, and ensure the system functions properly hydraulically to avoid flooding.

### *Suggested Protocols*

*Catch Basins/Inlet Structures*

- Staff should regularly inspect facilities to ensure compliance with the following:
  - Immediate repair of any deterioration threatening structural integrity.
  - Cleaning before the sump is 40% full. Catch basins should be cleaned as frequently as needed to meet this standard.
  - Stenciling of catch basins and inlets (see SC34 Waste Handling and Disposal).

CASQA California Stormwater Quality Association

- Clean catch basins, storm drain inlets, and other conveyance structures before the wet season to remove sediments and debris accumulated during the summer.
- Conduct inspections more frequently during the wet season for problem areas where sediment or trash accumulates more often. Clean and repair as needed.
- Keep accurate logs of the number of catch basins cleaned.
- Store wastes collected from cleaning activities of the drainage system in appropriate containers or temporary storage sites in a manner that prevents discharge to the storm drain.
- Dewater the wastes if necessary with outflow into the sanitary sewer if permitted. Water should be treated with an appropriate filtering device prior to discharge to the sanitary sewer. If discharge to the sanitary sewer is not allowed, water should be pumped or vacuumed to a tank and properly disposed. Do not dewater near a storm drain or stream.

*Storm Drain Conveyance System*

- Locate reaches of storm drain with deposit problems and develop a flushing schedule that keeps the pipe clear of excessive buildup.
- Collect and pump flushed effluent to the sanitary sewer for treatment whenever possible.

*Pump Stations*

- Clean all storm drain pump stations prior to the wet season to remove silt and trash.
- Do not allow discharge to reach the storm drain system when cleaning a storm drain pump station or other facility.
- Conduct routine maintenance at each pump station.
- Inspect, clean, and repair as necessary all outlet structures prior to the wet season.

*Open Channel*

- Modify storm channel characteristics to improve channel hydraulics, increase pollutant removals, and enhance channel/creek aesthetic and habitat value.
- Conduct channel modification/improvement in accordance with existing laws. Any person, government agency, or public utility proposing an activity that will change the natural (emphasis added) state of any river, stream, or lake in California, must enter into a Steam or Lake Alteration Agreement with the Department of Fish and Game. The developer-applicant should also contact local governments (city, county, special districts), other state agencies (SWRCB, RWQCB, Department of Forestry, Department of Water Resources), and Federal Corps of Engineers and USFWS.

*Illicit Connections and Discharges*

- Look for evidence of illegal discharges or illicit connections during routine maintenance of conveyance system and drainage structures:
  - Is there evidence of spills such as paints, discoloring, etc?

- Are there any odors associated with the drainage system?
- Record locations of apparent illegal discharges/illicit connections?
- Track flows back to potential dischargers and conduct aboveground inspections. This can be done through visual inspection of upgradient manholes or alternate techniques including zinc chloride smoke testing, fluorometric dye testing, physical inspection testing, or television camera inspection.
- Eliminate the discharge once the origin of flow is established.

- Stencil or demarcate storm drains, where applicable, to prevent illegal disposal of pollutants. Storm drain inlets should have messages such as "Dump No Waste Drains to Stream" stenciled next to them to warn against ignorant or intentional dumping of pollutants into the storm drainage system.
- Refer to fact sheet SC-10 Non-Stormwater Discharges.

*Illegal Dumping*

- Inspect and clean up hot spots and other storm drainage areas regularly where illegal dumping and disposal occurs.
- Establish a system for tracking incidents. The system should be designed to identify the following:
  - Illegal dumping hot spots
  - Types and quantities (in some cases) of wastes
  - Patterns in time of occurrence (time of day/night, month, or year)
  - Mode of dumping (abandoned containers, "midnight dumping" from moving vehicles, direct dumping of materials, accidents/spills)
  - Responsible parties
- Post "No Dumping" signs in problem areas with a phone number for reporting dumping and disposal. Signs should also indicate fines and penalties for illegal dumping.
- Refer to fact sheet SC-10 Non-Stormwater Discharges.

### *Training*

- Train crews in proper maintenance activities, including record keeping and disposal.
- Allow only properly trained individuals to handle hazardous materials/wastes.
- Have staff involved in detection and removal of illicit connections trained in the following:
  - OSHA-required Health and Safety Training (29 CFR 1910.120) plus annual refresher training (as needed).

- OSHA Confined Space Entry training (Cal-OSHA Confined Space, Title 8 and Federal OSHA 29 CFR 1910.146).

- Procedural training (field screening, sampling, smoke/dye testing, TV inspection).

***Spill Response and Prevention***

- Investigate all reports of spills, leaks, and/or illegal dumping promptly.
- Clean up all spills and leaks using "dry" methods (with absorbent materials and/or rags) or dig up, remove, and properly dispose of contaminated soil.
- Refer to fact sheet SC-11 Spill Prevention, Control, and Cleanup.

***Other Considerations (Limitations and Regulations)***

- Clean-up activities may create a slight disturbance for local aquatic species. Access to items and material on private property may be limited. Trade-offs may exist between channel hydraulics and water quality/riparian habitat. If storm channels or basins are recognized as wetlands, many activities, including maintenance, may be subject to regulation and permitting.
- Storm drain flushing is most effective in small diameter pipes (36-inch diameter pipe or less, depending on water supply and sediment collection capacity). Other considerations associated with storm drain flushing may include the availability of a water source, finding a downstream area to collect sediments, liquid/sediment disposal, and prohibition against disposal of flushed effluent to sanitary sewer in some areas.
- Regulations may include adoption of substantial penalties for illegal dumping and disposal.
- Local municipal codes may include sections prohibiting discharge of soil, debris, refuse, hazardous wastes, and other pollutants into the storm drain system.

## Requirements

***Costs***

- An aggressive catch basin cleaning program could require a significant capital and O&M budget.
- The elimination of illegal dumping is dependent on the availability, convenience, and cost of alternative means of disposal. The primary cost is for staff time. Cost depends on how aggressively a program is implemented. Other cost considerations for an illegal dumping program include:

  - Purchase and installation of signs.

  - Rental of vehicle(s) to haul illegally-disposed items and material to landfills.

  - Rental of heavy equipment to remove larger items (e.g., car bodies) from channels.

  - Purchase of landfill space to dispose of illegally-dumped items and material.

- Methods used for illicit connection detection (smoke testing, dye testing, visual inspection, and flow monitoring) can be costly and time-consuming. Site-specific factors, such as the level of impervious area, the density and ages of buildings, and type of land use will determine the level of investigation necessary.

***Maintenance***

- Two-person teams may be required to clean catch basins with vactor trucks.
- Teams of at least two people plus administrative personnel are required to identify illicit discharges, depending on the complexity of the storm sewer system.
- Arrangements must be made for proper disposal of collected wastes.
- Technical staff are required to detect and investigate illegal dumping violations.

## Supplemental Information

***Further Detail of the BMP***

*Storm Drain Flushing*

Flushing is a common maintenance activity used to improve pipe hydraulics and to remove pollutants in storm drainage systems. Flushing may be designed to hydraulically convey accumulated material to strategic locations, such as an open channel, another point where flushing will be initiated, or the sanitary sewer and the treatment facilities, thus preventing resuspension and overflow of a portion of the solids during storm events. Flushing prevents "plug flow" discharges of concentrated pollutant loadings and sediments. Deposits can hinder the designed conveyance capacity of the storm drain system and potentially cause backwater conditions in severe cases of clogging.

Storm drain flushing usually takes place along segments of pipe with grades that are too flat to maintain adequate velocity to keep particles in suspension. An upstream manhole is selected to place an inflatable device that temporarily plugs the pipe. Further upstream, water is pumped into the line to create a flushing wave. When the upstream reach of pipe is sufficiently full to cause a flushing wave, the inflated device is rapidly deflated with the assistance of a vacuum pump, thereby releasing the backed up water and resulting in the cleaning of the storm drain segment.

To further reduce impacts of stormwater pollution, a second inflatable device placed well downstream may be used to recollect the water after the force of the flushing wave has dissipated. A pump may then be used to transfer the water and accumulated material to the sanitary sewer for treatment. In some cases, an interceptor structure may be more practical or required to recollect the flushed waters.

It has been found that cleansing efficiency of periodic flush waves is dependent upon flush volume, flush discharge rate, sewer slope, sewer length, sewer flow rate, sewer diameter, and population density. As a rule of thumb, the length of line to be flushed should not exceed 700 feet. At this maximum recommended length, the percent removal efficiency ranges between 65-75% for organics and 55-65% for dry weather grit/inorganic material. The percent removal efficiency drops rapidly beyond that. Water is commonly supplied by a water truck, but fire hydrants can also supply water. To make the best use of water, it is recommended that reclaimed water be used or that fire hydrant line flushing coincide with storm sewer flushing.

# Drain Insert MP-52

## General Description

Drain inserts are manufactured filters or fabric placed in a drop inlet to remove sediment and debris. There are a multitude of inserts of various shapes and configurations, typically falling into one of three different groups: socks, boxes, and trays. The sock consists of a fabric, usually constructed of polypropylene. The fabric may be attached to a frame or the grate of the inlet holds the sock. Socks are meant for vertical (drop) inlets. Boxes are constructed of plastic or wire mesh. Typically a polypropylene "bag" is placed in the wire mesh box. The bag takes the form of the box. Most box products are one box; that is, the setting area and filtration through media occur in the same box. Some products consist of one or more trays or mesh grates. The trays may hold different types of media. Filtration media vary by manufacturer. Types include polypropylene, porous polymer, treated cellulose, and activated carbon.

## Inspection/Maintenance Considerations

Washout problems increase with rain intensity. Susceptibility of accumulated sediments to be re-suspended at low flow rates, can be corrected with an energy dissipater between gate and treatment areas.

| Inspection Activities | Suggested Frequency |
|---|---|
| ■ Inspect for sediment buildup and proper functioning. | At the beginning of the wet season and after significant storms |
| ■ Verify that stormwater enters the unit and does not leak around the perimeter. | After construction. |
| **Maintenance Activities** | **Suggested Frequency** |
| ■ Remove sediment as needed. | At the beginning of the wet season and as necessary |

## Maintenance Concerns, Objectives, and Goals

■ Sediment Removal

## Targeted Constituents

# Efficient Irrigation SD-12

**Design Objectives**

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

## Description

Irrigation water provided to landscaped areas may result in excess irrigation water being conveyed into stormwater drainage systems.

## Approach

Project plan designs for development and redevelopment should include application methods of irrigation water that minimize runoff of excess irrigation water into the stormwater conveyance system.

## Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

## Design Considerations

### *Designing New Installations*

The following methods to reduce excessive irrigation runoff should be considered, and incorporated and implemented where determined applicable and feasible by the Permittee:

- Employ rain-triggered shutoff devices to prevent irrigation after precipitation.
- Design irrigation systems to each landscape area's specific water requirements.
- Include design featuring flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.
- Implement landscape plans consistent with County or City water conservation resolutions, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Design timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water drainage system.
- Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider design features such as:
  - Using mulches (such as wood chips or bar) in planter areas without ground cover to minimize sediment in runoff
  - Installing appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant materials where possible and/or as recommended by the landscape architect
  - Leaving a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible
  - Choosing plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth
- Employ other comparable, equally effective methods to reduce irrigation water runoff.

### *Redeveloping Existing Installations*

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

## Other Resources

# Storm Drain Signage SD-13

**Design Objectives**

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- ☑ Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

## Description

Waste materials dumped into storm drain inlets can have severe impacts on receiving and ground waters. Posting notices regarding discharge prohibitions at storm drain inlets can prevent waste dumping. Storm drain signs and stencils are highly visible source controls that are typically placed directly adjacent to storm drain inlets.

## Approach

The stencil or affixed sign contains a brief statement that prohibits dumping of improper materials into the urban runoff conveyance system. Storm drain messages have become a popular method of alerting the public about the effects of and the prohibitions against waste disposal.

## Suitable Applications

Stencils and signs alert the public to the destination of pollutants discharged to the storm drain. Signs are appropriate in residential, commercial, and industrial areas, as well as any other area where contributions or dumping to storm drains is likely.

## Design Considerations

Storm drain message markers or placards are recommended at all storm drain inlets within the boundary of a development project. The marker should be placed in clear sight facing toward anyone approaching the inlet from either side. All storm drain inlet locations should be identified on the development site map.

### *Designing New Installations*

The following methods should be considered for inclusion in the project design and show on project plans:

- Provide stenciling or labeling of all storm drain inlets and catch basins, constructed or modified, within the project area with prohibitive language. Examples include “NO DUMPING

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

– DRAINS TO OCEAN" and/or other graphical icons to discourage illegal dumping.

- Post signs with prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area.

Note - Some local agencies have approved specific signage and/or storm drain message placards for use. Consult local agency stormwater staff to determine specific requirements for placard types and methods of application.

### *Redeveloping Existing Installations*

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. If the project meets the definition of "redevelopment", then the requirements stated under " designing new installations" above should be included in all project design plans.

## Additional Information

### *Maintenance Considerations*

- Legibility of markers and signs should be maintained. If required by the agency with jurisdiction over the project, the owner/operator or homeowner's association should enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards or signs.

### *Placement*

- Signage on top of curbs tends to weather and fade.

- Signage on face of curbs tends to be worn by contact with vehicle tires and sweeper brooms.

## Supplemental Information

### *Examples*

- Most MS4 programs have storm drain signage programs. Some MS4 programs will provide stencils, or arrange for volunteers to stencil storm drains as part of their outreach program.

Ventura Countywide Technical Guidance Manual for Stormwater Quality Control Measures, July 2002.

# Maintenance Bays & Docks SD-31

**Design Objectives**

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- ☑ Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

## Description

Several measures can be taken to prevent operations at maintenance bays and loading docks from contributing a variety of toxic compounds, oil and grease, heavy metals, nutrients, suspended solids, and other pollutants to the stormwater conveyance system.

## Approach

In designs for maintenance bays and loading docks, containment is encouraged. Preventative measures include overflow containment structures and dead-end sumps. However, in the case of loading docks from grocery stores and warehouse/distribution centers, engineered infiltration systems may be considered.

## Suitable Applications

Appropriate applications include commercial and industrial areas planned for development or redevelopment.

## Design Considerations

Design requirements for vehicle maintenance and repair are governed by Building and Fire Codes, and by current local agency ordinances, and zoning requirements. The design criteria described in this fact sheet are meant to enhance and be consistent with these code requirements.

### *Designing New Installations*

Designs of maintenance bays should consider the following:

- Repair/maintenance bays and vehicle parts with fluids should be indoors; or designed to preclude urban run-on and runoff.
- Repair/maintenance floor areas should be paved with Portland cement concrete (or equivalent smooth impervious surface).

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Repair/maintenance bays should be designed to capture all wash water leaks and spills. Provide impermeable berms, drop inlets, trench catch basins, or overflow containment structures around repair bays to prevent spilled materials and wash-down waters form entering the storm drain system. Connect drains to a sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is prohibited. If required by local jurisdiction, obtain an Industrial Waste Discharge Permit.

- Other features may be comparable and equally effective.

The following designs of loading/unloading dock areas should be considered:

- Loading dock areas should be covered, or drainage should be designed to preclude urban run-on and runoff.

- Direct connections into storm drains from depressed loading docks (truck wells) are prohibited.

- Below-grade loading docks from grocery stores and warehouse/distribution centers of fresh food items should drain through water quality inlets, or to an engineered infiltration system, or an equally effective alternative. Pre-treatment may also be required.

- Other features may be comparable and equally effective.

### *Redeveloping Existing Installations*

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

## Additional Information

Stormwater and non-stormwater will accumulate in containment areas and sumps with impervious surfaces. Contaminated accumulated water must be disposed of in accordance with applicable laws and cannot be discharged directly to the storm drain or sanitary sewer system without the appropriate permit.

## Other Resources

A Manual for the Standard Urban Stormwater Mitigation Plan (SUSMP), Los Angeles County Department of Public Works, May 2002.

Model Standard Urban Storm Water Mitigation Plan (SUSMP) for San Diego County, Port of San Diego, and Cities in San Diego County, February 14, 2002.

Model Water Quality Management Plan (WQMP) for County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County, Draft February 2003.

Ventura Countywide Technical Guidance Manual for Stormwater Quality Control Measures, July 2002.

# Trash Storage Areas SD-32

## Description

Trash storage areas are areas where a trash receptacle (s) are located for use as a repository for solid wastes. Stormwater runoff from areas where trash is stored or disposed of can be polluted. In addition, loose trash and debris can be easily transported by water or wind into nearby storm drain inlets, channels, and/or creeks. Waste handling operations that may be sources of stormwater pollution include dumpsters, litter control, and waste piles.

## Approach

This fact sheet contains details on the specific measures required to prevent or reduce pollutants in stormwater runoff associated with trash storage and handling. Preventative measures including enclosures, containment structures, and impervious pavements to mitigate spills, should be used to reduce the likelihood of contamination.

**Design Objectives**

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

## Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

## Design Considerations

Design requirements for waste handling areas are governed by Building and Fire Codes, and by current local agency ordinances and zoning requirements. The design criteria described in this fact sheet are meant to enhance and be consistent with these code and ordinance requirements. Hazardous waste should be handled in accordance with legal requirements established in Title 22, California Code of Regulation.

Wastes from commercial and industrial sites are typically hauled by either public or commercial carriers that may have design or access requirements for waste storage areas. The design criteria in this fact sheet are recommendations and are not intended to be in conflict with requirements established by the waste hauler. The waste hauler should be contacted prior to the design of your site trash collection areas. Conflicts or issues should be discussed with the local agency.

### *Designing New Installations*

Trash storage areas should be designed to consider the following structural or treatment control BMPs:

- Design trash container areas so that drainage from adjoining roofs and pavement is diverted around the area(s) to avoid run-on. This might include berming or grading the waste handling area to prevent run-on of stormwater.
- Make sure trash container areas are screened or walled to prevent off-site transport of trash.

- Use lined bins or dumpsters to reduce leaking of liquid waste.
- Provide roofs, awnings, or attached lids on all trash containers to minimize direct precipitation and prevent rainfall from entering containers.
- Pave trash storage areas with an impervious surface to mitigate spills.
- Do not locate storm drains in immediate vicinity of the trash storage area.
- Post signs on all dumpsters informing users that hazardous materials are not to be disposed of therein.

### *Redeveloping Existing Installations*

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

## Additional Information

### *Maintenance Considerations*

The integrity of structural elements that are subject to damage (i.e., screens, covers, and signs) must be maintained by the owner/operator. Maintenance agreements between the local agency and the owner/operator may be required. Some agencies will require maintenance deed restrictions to be recorded of the property title. If required by the local agency, maintenance agreements or deed restrictions must be executed by the owner/operator before improvement plans are approved.

# PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

**Kirkhill**
12021 and 12023 Woodruff Avenue
Downey, California 90241

Report Date: September 26, 2018
Partner Project No. 18-220634.1

Prepared for:

**Prologis, Inc.**
Pier 1, Bay 1
San Francisco, California 94111

# EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and as set forth by the Master Services Agreement between Prologis and Partner dated April 18, 2013 for the property located at 12021 and 12023 Woodruff Avenue in the City of Downey, Los Angeles County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Prologis, Inc. with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

### Property Description

The subject property is located on the west side of Woodruff Avenue just north of Washburn Road within an industrial area of Los Angeles County. Please refer to the table below for further description of the subject property:

| ***Subject Property Data*** | |
|---|---|
| **Addresses:** | 12021 and 12023 Woodruff Avenue, Downey, California 90241 |
| **Additional Addresses:** | None Identified |
| **Historical Addresses:** | None Identified |
| **Property Use:** | Industrial (zone M-2, General Manufacturing) |
| **Land Acreage (Ac):** | 6.31 +/- Ac (per Assessor's map) |
| **Number of Buildings:** | One (five separate additions) |
| **Number of Floors:** | One |
| **Gross Building Area (SF):** | 193,451 SF (per Assessor's records) |
| **Dates of Construction:** | 1951 to 1971 |
| **Assessor's Parcel Number (APN):** | 6284-025-018 |
| **Type of Construction:** | Concrete Tilt-Up/Concrete Block/Concrete Slab |
| **Current Tenants:** | Kirkhill, manufacturer of custom rubber products |
| **Site Assessment Performed By:** | Margaret Thomas and Kathy Lehnus of Partner |
| **Site Assessment Conducted On:** | September 6, 2018 |

The subject property is currently occupied by Kirkhill, a manufacturer of custom rubber products who has occupied all or part of the subject building since initial construction in 1951. The subject property consists of one large single-story building that was constructed in piecemeal fashion starting in 1951 that has a central open courtyard. Onsite operations consist of the manufacture of unvolcanized rubber from raw materials through a series of processes starting with large-scale mixing of a variety of polymers, fillers, and various grades of petroleum-based process oils through rubber injection molding, rubber compression molding, sponge rubber molding, and mold fabrication. Product is then warehoused and shipped through several loading dock areas. There are up to 30 hydraulic rubber presses on three lines within the eastern side of the manufacturing area, and various mixing equipment toward the west side of the manufacturing area. The building also includes two laboratories for research and development (R&D),

newer interior 2-story mixing equipment with batch-off conveyors, special mixing rooms, a cold room, warehouse storage, and office space.

Solid raw materials such as custom polymers, talc, neoprene, carbon black, monomers, and zinc are stored in 55-gallon drums and larger totes up to 300 gallons at the subject property. Liquids used in the process include petroleum hydrocarbons as lubricating oils, waste lubricating oil, and the process oils (classified as a solvent). In addition to the current structure, the subject property is also improved with paved parking and driveways that extend around the building, front landscaping and exterior storage of raw materials, large dumpsters, empty containers, and other miscellaneous active and idle equipment.

According to available historical sources, the subject property was formerly open farm land from at least 1928 until it was developed in 1951. The property appeared to be occupied by row crops with no farm structures identified in aerial photographs; however, the property may have been developed in the late 19th Century with a farm home Occupants of the subject property have included Kirkhill Inc. (et. al, including Kirkhill Chemical) on the southern/manufacturing areas of the subject property, as well as tenants including Charcoal Masters International, Immanuel Industries Inc., Source One Staffing, Felchco Investment Group LLC, Cal Pipe Industries Inc., Cal Pipe Manufacturing Inc., Carnaval Access, Discount Advertising Xpress, Ikeep Inventing Corporation, Kollaborator Productions, Inc., Monster Sells, Hector Moran, Nomad Trading, Perimeter Defense Tech Inc., PTG International Inc., Standard industries and Kong Pet Toys on the warehouse/northern portions. Based on interviews with the site contact, it appears that the northern side of the subject property was leased at various times for warehouse and office space and light manufacturing operations.

The immediately surrounding properties consist primarily of industrial facilities including some office usage to the south and a restaurant to the southeast. The adjacent properties are zoned M-2 for industrial usage. None of the adjacent properties were identified to present an immediate environmental concern.

According to information reported by the State Water Resources Control Board GeoTracker website for a property located approximately 0.53-miles south of the subject property, at 9851 Imperial Highway, the depth of groundwater in the vicinity of the subject property is inferred to be approximately 33 to 53 feet below ground surface (bgs), with groundwater flow reported toward the southeast. In addition, during a 2013 Phase II ESA investigation conducted at the subject property, groundwater was encountered at 45 feet bgs (not sampled at the time).

### Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- All or part of the subject property building has been occupied by Kirkhill, a manufacturer of custom rubber products, since initial construction in 1951, utilizing raw materials including polymers, talc, neoprene, carbon black, monomers, and zinc as well as petroleum hydrocarbons as

lubricating oils, waste lubricating oil, and the process oils (classified as a solvent). Process oils are currently stored in three interior aboveground storage tanks (ASTs) (two 3,000-gallon ASTs and one 4,000-gallon AST) within the manufacturing area. In addition, the manufacturing area includes an internal hydraulic system comprised of a network of below-grade trenches and overhead piping that deliver a recirculated water and hydraulic oil mixture to the rubber presses and molding machines. Additionally, a central clarifier is present that is used primarily for boiler blowdown and cooling tower discharges. The clarifier previously received rinse water from a former tank wash out area that included acid and caustic tanks and rinse water tanks, which were used to clean molds, as the molds would get covered with rubber and need to be washed, which then discharged through the clarifier. The subject property operates a small electrical substation that includes one large pad-mounted transformer and additional electrical equipment situated within a chain link fence within the central courtyard, with apparent associated equipment on the interior adjacent wall. The transformer was not labeled indicating PCB content. The electrical equipment is not original and has been replaced at least once or twice. No staining or leakage was observed in the vicinity of the transformer equipment.

A prior Phase II ESA was conducted at the subject property by S&S Commercial Environmental Services, Inc., dated November 9, 2005, that identified high concentrations of diesel range and oil range petroleum in the soil located in the courtyard area to a maximum depth of 20 feet. The investigation included the advancement of 14 soil borings in the central courtyard area adjacent to the clarifier/discharge channel and cooling tower. Concentrations of diesel were reported as high as 54,100 milligrams per kilogram (mg/kg) at 5 feet bgs and 21,300 mg/kg at 20 feet bgs at the Boring SS-5 location. No volatile organic compounds (VOCs) or semi-VOCs were detected at SS-5 (the only boring analyzed for VOCs). Arsenic was detected at concentrations slightly above Cal-Hazardous levels, which was later determined to be an isolated area of 3 to 6 cubic yards of soluble arsenic above threshold limits that was left in place due to the presence of a capped surface. Additionally, the diesel and oil impacted soils were left in place and not remediated due to a reported clean earth interval between the last identified diesel impacted soil at 20 feet bgs and the maximum depth explored to 45 feet bgs. This clean earth interval was evaluated at only one boring location (SS-5 Alt); therefore, Partner notes that diesel contaminated soils may extend deeper than 20 feet bgs in this general area.

Due to the known release of petroleum in the courtyard area and the number of years the subject property has operated as a rubber manufacturing plant. including the presence of subsurface conduits/trenches that carry a petroleum based cutting fluid and a clarifier that was previously used for wash down of rubber residues, soil beneath the concrete slab may be impacted with petroleum-based cutting oils or other constituents. Of note, polychlorinated biphenyls (PCBs) may be associated with historical usage of hydraulic equipment and electrical transformers on the subject property.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable

regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- A total of four steel underground storage tanks (USTs) were formerly operated at the subject property, three of which contained diesel to fuel the two boilers associated with rubber molding (when the rubber products produced were volcanized), and one of which contained naphthene cutting oil. Three of the USTs (Tanks 1, 2, and 3) were located along the exterior south side of the subject property and were removed in 1989. A fourth UST (Tank 4 containing diesel) was abandoned in place in the central courtyard area in or around 1989. During the removal of Tanks 1 through 3, soil samples from beneath the tanks were tested and a release was detected; therefore, additional site investigation, excavation, and remediation work was performed in this area under the oversight of the Los Angeles County Department of Public Works (LACDPW). Subsequently, a No Further Action (NFA) letter was issued for Closure Permit Number 5999B by the Los Angeles County Department of Public Works, Waste Management Division (currently Environmental Programs Division) dated August 6, 1992, which pertains to the three exterior removed USTs. The abandoned in-place UST was assigned a separate Closure Permit Number of 6000B, which was not listed on the NFA letter. However, based on preliminary conversations with LACDPW staff, this appears to be an error in which Tank 4 should have been noted, as all four USTs appear to have been closed under this NFA letter.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Partner noted exterior storage at the subject property including raw materials (covered) and unused hydraulic equipment, as well as approximately eight 55-gallon drums with no secondary containment, predominantly on the exterior west side of the building. Due to the presence of excessive storage covered with plastic sheeting (to protect raw material from sun exposure), this area was not fully accessed and evaluated by Partner. Partner noted that the observed drums were labelled as Non-Resource Conservation and Recovery Act (RCRA) hazardous waste solid, which is an oily debris, and Non-RCRA liquid waste oil. Minor oil staining was observed on the pavement under one of the drums that was covered with an absorbent material. According to site personnel, the waste is routinely collected by Express Oil Company, a third party vendor, on a regular basis. Based on the nature of the reported contents issuance of a Stormwater Pollution

Prevention Plan (SWPPP), and lack of violations noted, the exterior storage is not expected to represent a significant environmental concern;

- The subject property formerly operated printing machinery, which is no longer conducted. The printing area was located in the southeast portion of the building that was constructed in 1973. This area is used for general storage at this time. According to reported information in a prior Environmental Audit Report dated 1990, small amounts of oil-based ink and methyl ethyl ketone (MEK) (35 gallons/year) were used. No drains or other subsurface conduits are located in this area. Former printing operations are not expected to present a significant environmental concern;
- Due to the age of the subject property buildings, there is a potential that asbestos-containing material (ACM) and/or lead-based paint (LBP) are present. Overall, all suspect ACMs and painted surfaces were observed in fair to good condition and do not pose a health and safety concern to the occupants of the subject property at this time. The identified suspect ACMs would need to be sampled to confirm the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants. A prior survey conducted in 1990 (Environmental Audit report by Tetra Tech February 1990) identified asbestos in drywall next to the cooling tower and office ceiling tiles (1,360 SF of material). The amount of asbestos containing drywall was not reported.

**Conclusions, Opinions and Recommendations**

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 12021 and 12023 Woodruff Avenue in the City of Downey, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of a recognized environmental condition and environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- A limited subsurface investigation should be conducted in order to determine the presence or absence of soil and/or soil vapor contamination due to the current and historical use of the subject property;
- A Soil Management Plan (SMP) should be prepared to appropriately handle the known oil releases at the subject property and any unknown releases associated with the current and former industrial use;
- The NFA letter dated August 6, 1992, pertaining to the historical USTs at the subject property should be revised to clearly include Closure Permit Number 6000B for the abandoned in-place UST to avoid confusion in the future as to whether it was officially closed.
- An asbestos survey conducted in 1990 identified asbestos in the subject property building. It is not known if the survey was conducted for all equipment and building materials at the time;

therefore, an asbestos survey should be performed and known ACM should be abated or removed for safety purposes (or an Operations and Maintenance (O&M) Program should be implemented in order to safely manage the known and suspect ACMs located at the subject property).

was collected during Second Quarter 2018 groundwater monitoring activities at this property. In addition, during a 2013 Phase II ESA investigation conducted at the subject property by PCI Environmental Services (PIC), groundwater was encountered at 45 feet bgs in two soil borings at PIC-1 and PIC-2 (but not sampled).

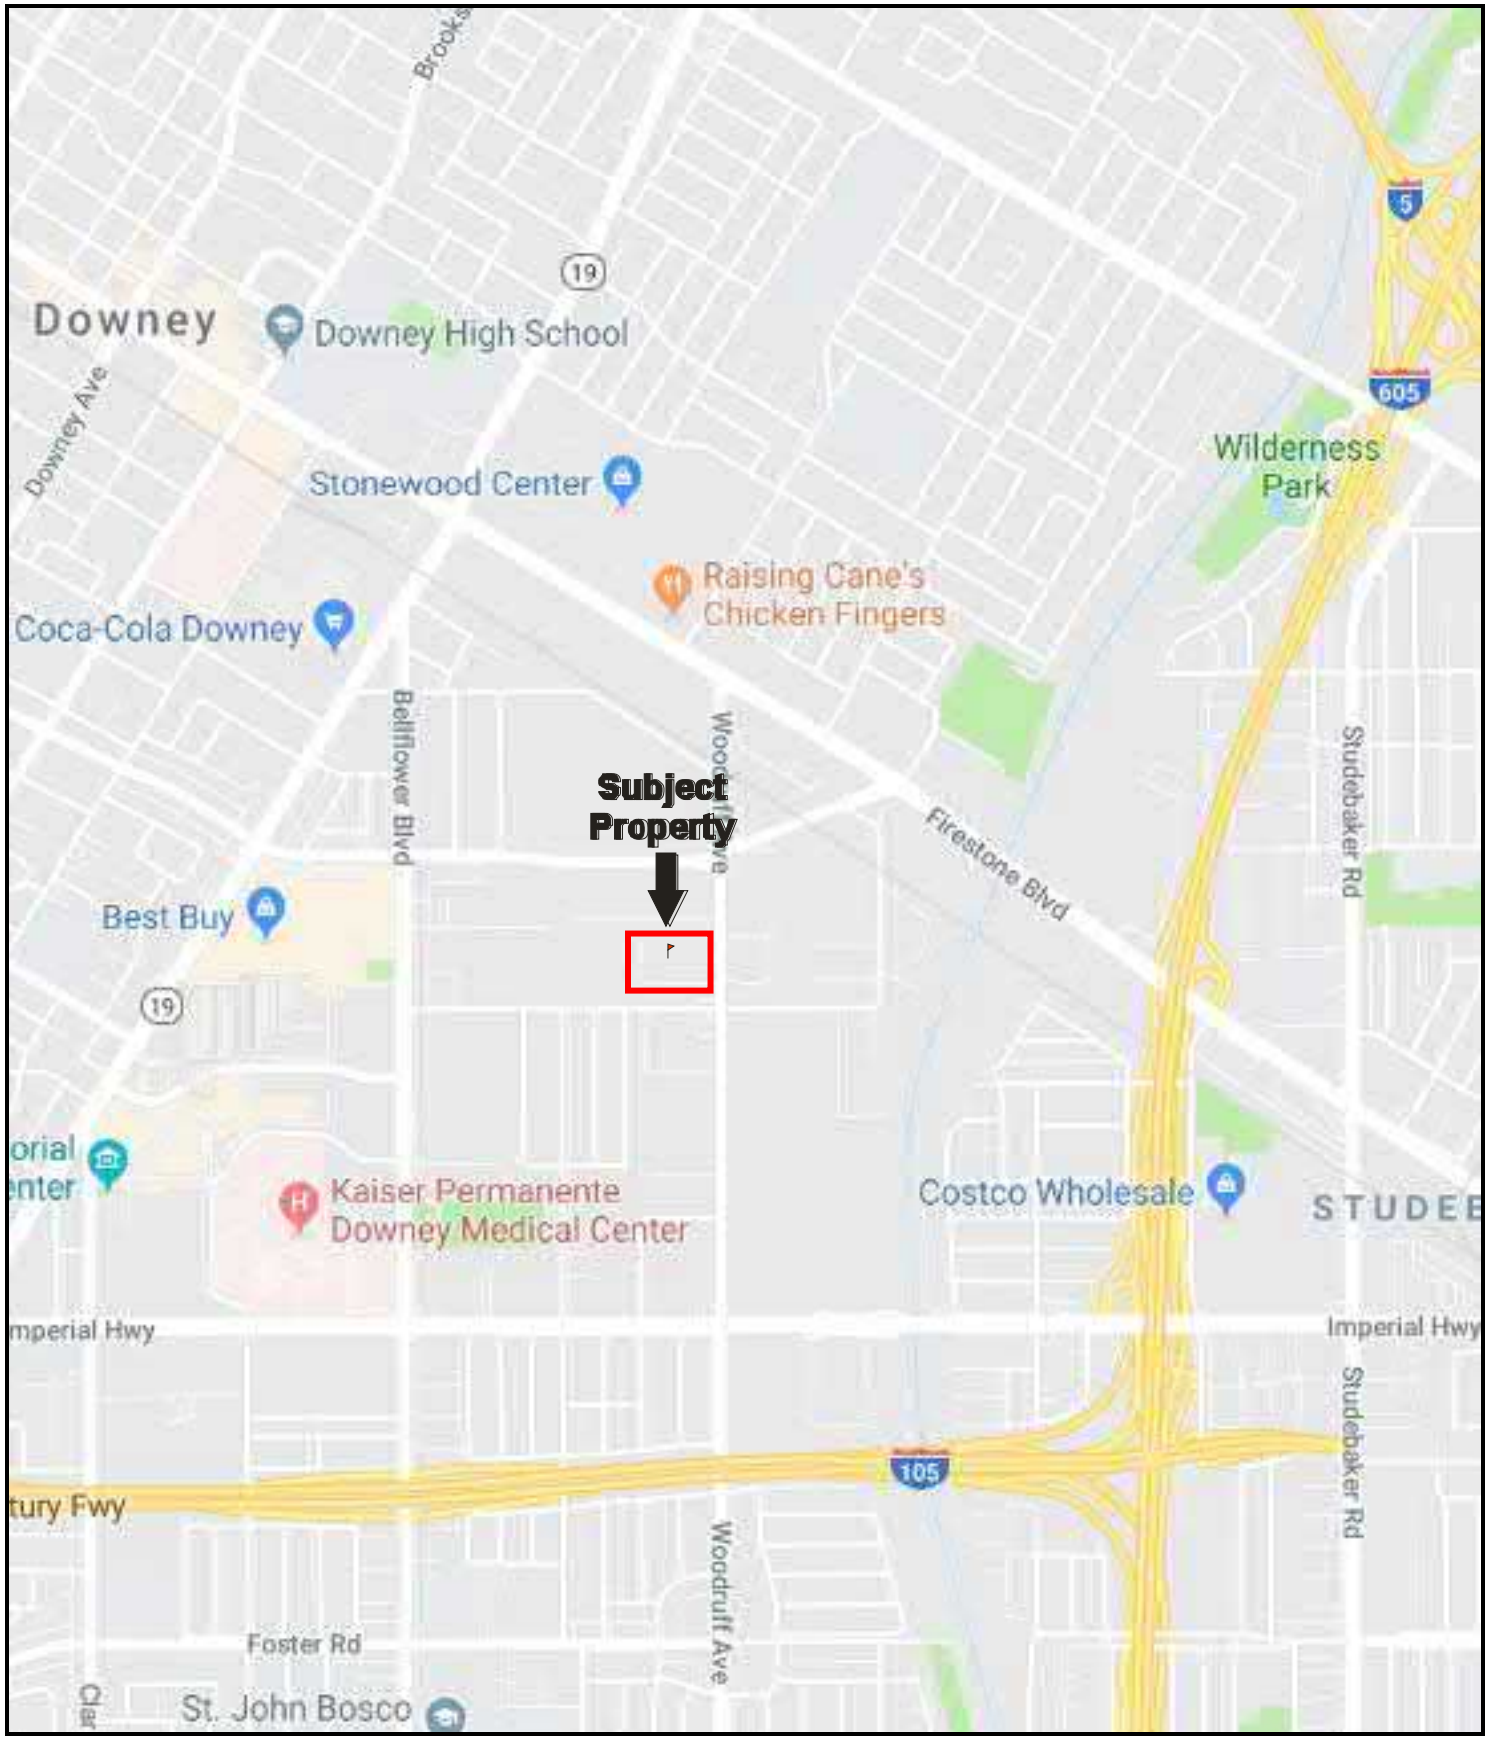
### *2.4.3 Geology/Soils*

The subject property is located within the San Gabriel River flood plain. Underlying soil consists of Pleistocene alluvial sediments. PIC's 2013 Phase II Investigation reviewed herein determined that to an approximate depth of 50 feet below surface, soil consists of brown, fine grained sand and silt overlying grey, clayey silt. The lithology is consistent with alluvial deposition within the San Gabriel River Flood Plain.

Based on information obtained from the USDA Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Urban land-Hueneme, drained-San Emigdio complex, 0 to 2 percent slopes (#1000). The landform is described as alluvial fans and the parent material is described as discontinuous human-transported material over mixed alluvium derived from granite and/or sedimentary rock.

### *2.4.4 Flood Zone Information*

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency (FEMA). According to Community Panel Number 06037C1840F dated September 26, 2008, the subject property is mapped as located in Zone X, an area of 0.2 percent annual chance flood hazard.



A copy of the reviewed flood map is included in Appendix B of this report.

# VICINITY MAP

FOR

## 12021 WOODRUFF AVENUE, DOWNEY CA

NTS

# DISCUSSION

The project site encompasses approximately 6.30 acres. Proposed improvements to the site include one industrial warehouse type building of 43,960 square feet. There will be two separate truck yards on both the north and south side of the building. Vehicle parking lots will be located on the east side of the building. Trailer stalls will be located on the northerly and southerly part of the site. Landscaping will be located along the easterly property line fronting Woodruff Avenue and throughout the easterly vehicle parking lot.

## County Hydrology

The project site is part of County subarea 2A and drains to the County maintained Woodruff Avenue Drain per as built drawing No. 494-D 2.1–2.8 (See County correspondence in referenced materials). Per the correspondence, the allocated peak flow rate for the site is 1.25 cfs/acre.

See Appendix "A" for county correspondence and as built storm drain plans.

## Existing Condition

The project site has an existing one story masonry and metal building of approximately 159,335 square feet. Vehicle parking is located along the perimeter of the site. A drive aisle wraps around the existing building.

Runoff from the majority of the site (Subarea 1A) drains southwesterly via valley gutter. The valley gutter jogs the northerly and westerly property line. Per existing topography, given the location of the roof drains along the building perimeter, most if not all of the roof runoff will drain to this valley gutter. Flows will be conveyed from the site through the southerly offsite property and eventually discharge to Washburn Road via parkway culvert. The 50-year peak flow rate is approximately 13.6 cfs.

Runoff from the vehicle parking lot and the landscaping fronting (Subarea 2B) Woodruff Avenue will sheet flow toward the street. Some flows will drain via parkway culvert located at the southeast portion of the site. The 50-year peak flow rate draining directly to Woodruff Avenue is approximately 2.8 cfs.

See Appendix "B" for existing condition hydrology calculations and Appendix "D" for existing condition hydrology map.

Proposed Condition

Runoff from the northerly half of the building and the northerly truck yard (Subarea 1A) drains to catch basins in the truck yard. The 50-year peak flow rate is approximately 9.3 cfs.

Runoff from the easterly vehicle parking lot (Subareas 2A and 3A) drain to catch basins within the parking lot. The 50-year peak flow rate for subareas 2A and 3A is approximately 0.5 cfs and 0.7 cfs, respectively.

Runoff from the southerly half of the building and the southerly truck yard (Subarea 4A) drains to catch basin in the southerly truck yard. The 50-year peak flow rate for this area is approximately 9.0 cfs. All flows from subareas 1A, 2A, 3A, and 4A are conveyed southeasterly of the site via onsite storm drain. Flows from the site will discharge to the 36" storm drain in Woodruff Avenue, located east of the site.

Runoff from portions of both driveways and landscaping fronting Woodruff will sheet flow to the public street.

See Appendix "B" for proposed condition hydrology calculations and Appendix "D" for proposed condition hydrology map.

Detention Analysis

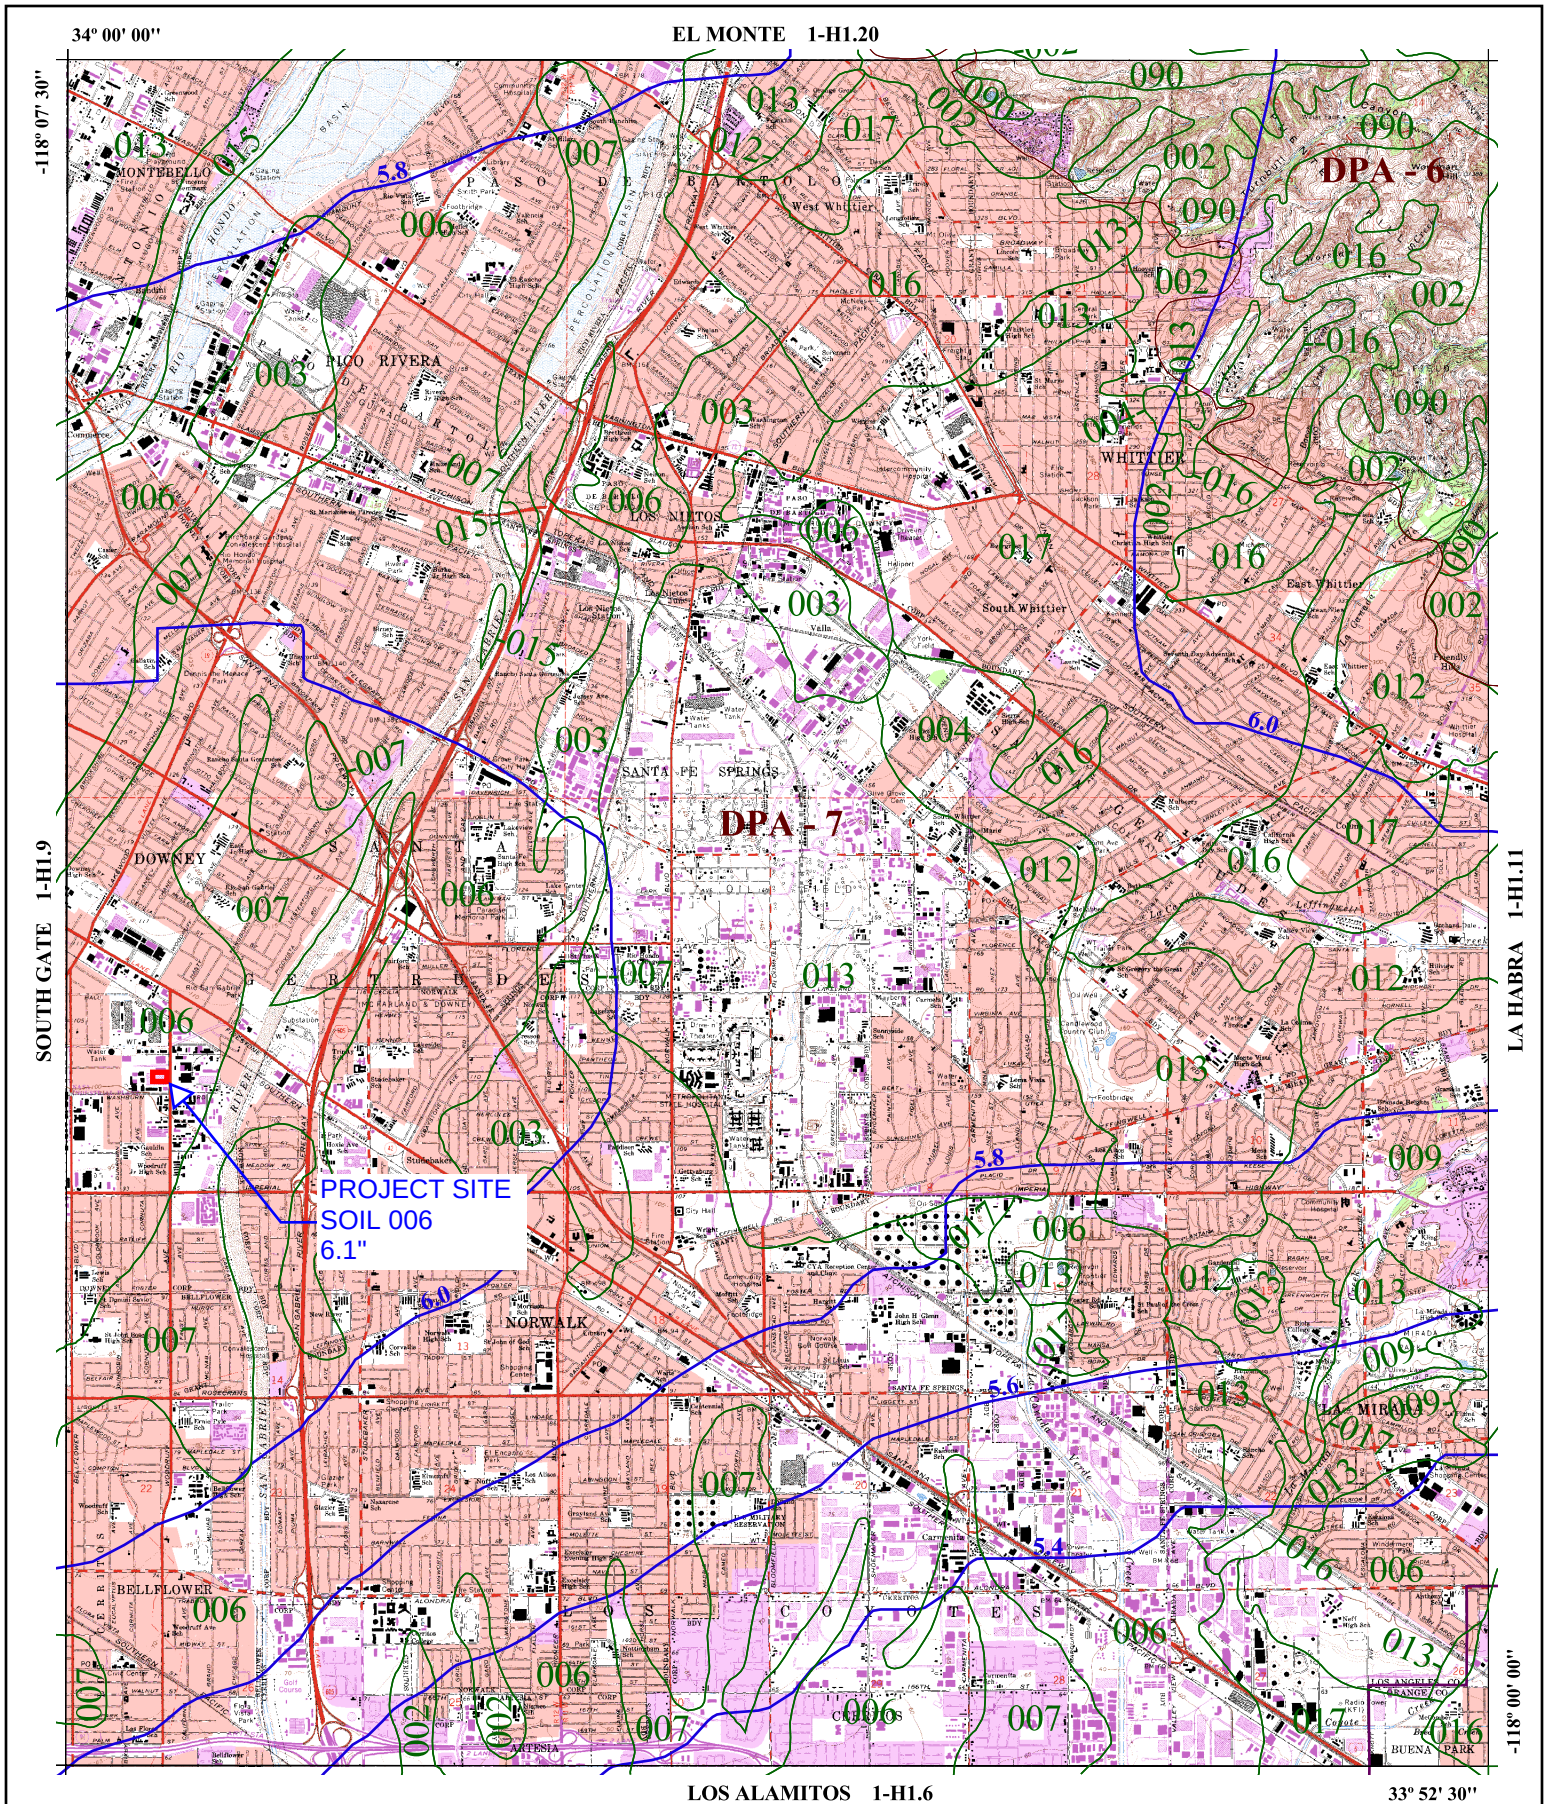
As previously mentioned, runoff from the site is limited to 1.25 cfs/acre. Discharge from the site is limited to 7.9 cfs (6.30 acres x 1.25 cfs/acre). Both the northerly and southerly truck yard will be used to detain the peak flow rate. Runoff from the site is limited due to the shallow hydraulic grade line at the proposed connection to the existing 36" storm drain in Woodruff Avenue.

Hydraulics analysis of the proposed onsite storm drain was used to determine discharge from the site. Flows from the northerly truck yard will be limited to 1.8 cfs and flows from the southerly truck yard will be limited to 1.8 cfs. Flows from the easterly vehicle parking lot will drain from the site un-detained (0.5 cfs + 0.7 cfs = 1.2 cfs total). Flows from the driveway and landscape fronting Woodruff Avenue will drain from the site un-detained (0.9 cfs).

Hydrograph volumes for each truck yard was determined from the Hydro-Calc Excel spreadsheet. Cumulative volumes are shown up to the allowable peak flow rate before and after the peak occur. The difference in the volume before and after the peak (along with the volume of the allowable peak flow rate) is the volume to be detained in the truck yards. Max ponding in the northerly truck yard (Subarea 1A) is approximately 0.8', detaining 3,897 cf. Max ponding in the southerly truck yard (Subarea 4A) is approximately 0.8', detaining 3,618 cf.

During the 50-year storm event, discharge to the site is limited to 5.7 cfs (1.8 + 1.8 + 0.5 +0.7 + 0.9 cfs). This is less than the allowed rate of 7.9 cfs, therefore downstream facilities will not be negatively impacted by the development of this site.

See Appendix "C" for detention analysis and Appendix "D" for hydraulics calculations.



Methodology

Hydrology calculations were calculated using Los Angeles County Hydro-Calc spreadsheet. Detention calculations were calculated using Los Angeles County Hydro-Calc spreadsheet. Hydraulics calculations were calculated using WSPG software. The site is composed of soil type "6" and rainfall zone 6.1" per the 1991 Addendum to Hydrology Manual. (see referenced material in Appendix "A").

## GENERAL NOTES

1. NUMBERS IN CIRCLES INDICATE ITEMS UNDER WHICH PAYMENT WILL BE MADE.
2. STATIONS SHOWN ON DRAWINGS ARE ALONG CENTER LINE OF CONDUIT OR ON A LINE NORMAL TO CENTER LINE OF CONDUIT.
3. ELEVATIONS SHOWN ARE IN FEET ABOVE THE U.S.G.S. MEAN SEA LEVEL DATUM, BASED ON LOS ANGELES COUNTY ENGINEER, 1962 ADJUSTMENT.
4. STATIONS AND INVERT ELEVATIONS OF PIPE INLETS SHOWN ON THE PROFILES ARE AT THE INSIDE FACE OF THE CONDUIT, UNLESS OTHERWISE SHOWN.
5. PIPE CONNECTIONS TO STORM DRAIN SHALL CONFORM TO STANDARD DRAWING 2-D 193, UNLESS OTHERWISE SHOWN.
6. ALL PIPE IN OPEN TRENCH SHALL BE BEDDED ACCORDING TO STANDARD DRAWING 2-D 177, CASE III, UNLESS OTHERWISE SHOWN. 'W' VALUES SHALL BE AS SPECIFIED ON STANDARD DRAWING 2-D 177 FOR CASE III BEDDING, NOTES 3(a), 3(b), AND 3(c). IF THE "W" VALUE AT THE TOP OF THE PIPE IS EXCEEDED, THE BEDDING SHALL BE MODIFIED, AND/OR PIPE OF ADDITIONAL STRENGTH SHALL BE APPROVED. THE PROPOSED MODIFICATION SHALL BE APPROVED BY THE DISTRICT.
7. CONCRETE BACKFILL SHALL BE PROVIDED AROUND PIPE 21 INCHES IN DIAMETER OR LESS WHERE THE COVER IS EQUAL TO OR LESS THAN 2'-0", AROUND PIPE GREATER THAN 21 INCHES IN DIAMETER BUT LESS THAN 39 INCHES WHERE THE COVER IS LESS THAN 1'-3", AND FOR PIPE 39 INCHES OR GREATER WHERE THE COVER IS LESS THAN 1'-0". THE CONCRETE BACKFILL SHALL BE AS SPECIFIED ON STANDARD DRAWING NO. 2-D 177, NOTE 3.
8. ASBESTOS CEMENT PIPE MAY BE USED IN LIEU OF REINFORCED CONCRETE PIPE 42 INCHES OR LESS IN DIAMETER.
9. THE REQUIRED D-LOAD FOR THE ASBESTOS CEMENT PIPE SHALL BE 1.5 TIMES THAT SPECIFIED ON THE PLANS FOR THE REINFORCED CONCRETE PIPE.
10. EXISTING UTILITIES SHALL BE MAINTAINED IN PLACE BY THE CONTRACTOR, UNLESS OTHERWISE NOTED.
11. ALL RESURFACING, CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS, AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED SHALL BE CONSTRUCTED AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS, UNLESS OTHERWISE NOTED.
12. STREET RESURFACING PLAN IS SHOWN ON SHEET 7.
13. UTILITIES DESIGNATED BY THE SYMBOL "#" WILL BE ABANDONED IN PLACE AND THE OWNER WILL INSTALL A NEW SECTION OF THE AFFECTED UTILITY AT A LOCATION IN CLOSE PROXIMITY TO, BUT WHICH DOES NOT PHYSICALLY INTERFERE WITH, THE PROPOSED STORM DRAIN CONDUIT AND APPURTENANT STRUCTURES.
14. UTILITIES DESIGNATED BY THE SYMBOL ✝ WILL BE REMOVED BY THE OWNER AND THE OWNER WILL REINSTALL A NEW SECTION OF THE AFFECTED UTILITY AT A LOCATION IN CLOSE PROXIMITY TO, BUT WHICH DOES NOT PHYSICALLY INTERFERE WITH, THE PROPOSED CONDUIT AND APPURTENANT STRUCTURES.
15. SANITARY SEWER HOUSE CONNECTION RECONSTRUCTION ON RECONNECTION SHALL BE IN ACCORDANCE WITH STANDARD DRAWING 2-D 250, UNLESS OTHERWISE SHOWN.
16. WHEN INDICATED ON THE DRAWINGS, SANITARY SEWERS AND HOUSE CONNECTIONS SHALL BE ENCASED OR BLANKETED IN ACCORDANCE WITH STANDARD DRAWING 2-D 251.
17. "Vi" IS THE DEPTH OF INLET OF CATCH BASINS IN SERIES MEASURED FROM TOP OF CURB TO INVERT OF CONNECTOR PIPE.
18. LOCATIONS SHOWN ON THE PLANS FOR EXISTING SANITARY SEWER HOUSE CONNECTIONS ARE APPROXIMATE ONLY.
19. TIES FOR CATCH BASINS, AS SHOWN ON THE DRAWINGS ARE FROM CURB RETURN TO CENTER LINE OF CATCH BASIN, UNLESS OTHERWISE SHOWN.
20. REFER TO SHEET 7 FOR TYPICAL CATCH BASIN CONNECTOR PIPE PROFILE.
21. LOCATIONS OF CATCH BASIN CONNECTOR PIPE JUNCTIONS WITH CATCH BASINS AS SHOWN ON THE DRAWINGS ARE SCHEMATIC. IT IS INTENDED THAT SUCH JUNCTIONS BE LOCATED AT THE DOWNSTREAM ENDS OF THE CATCH BASINS, UNLESS OTHERWISE SHOWN. IN ALL CASES, THE EXACT LOCATIONS WILL BE DETERMINED IN THE FIELD TO MEET FIELD CONDITIONS.
22. MONOLITHIC CATCH BASIN CONNECTIONS SHALL BE CONSTRUCTED, WHERE APPLICABLE, PER STANDARD DRAWING 2-D 224.
23. STRUCTURAL NOTES WILL BE FOUND ON THE APPLICABLE STRUCTURAL SHEETS.
24. SOIL TEST BORINGS FOR THIS PROJECT WERE MADE ON MAY 16, MAY 17, AND AUGUST 2, 1974.

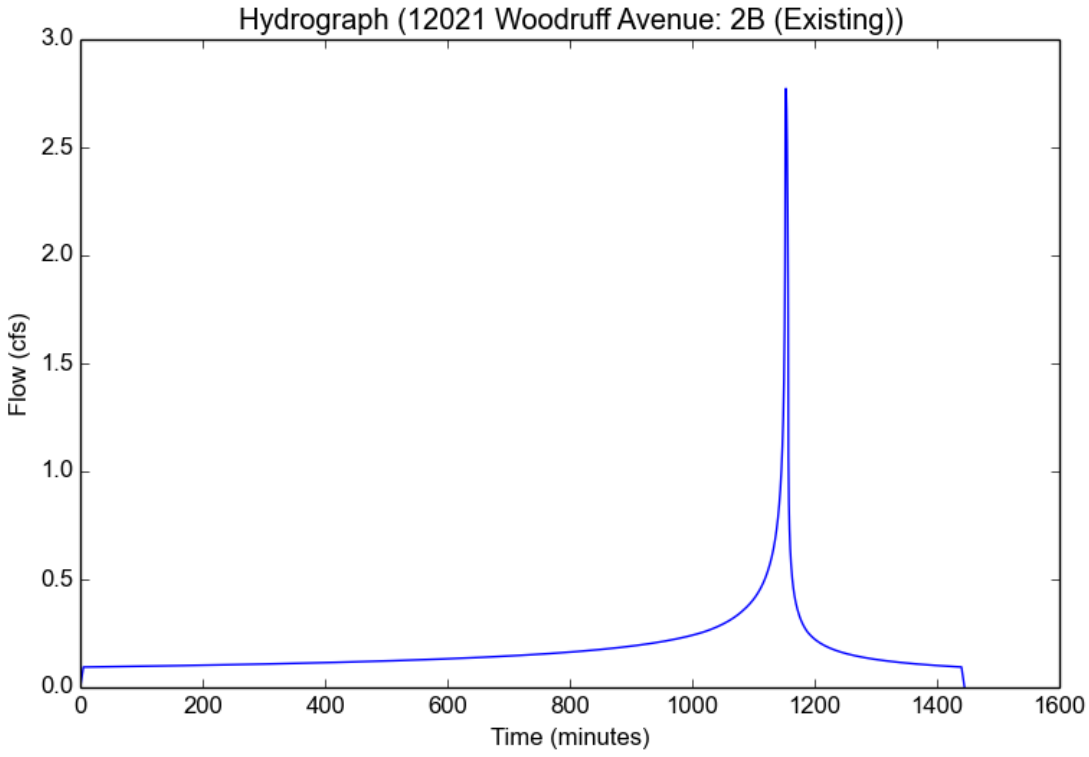
## Input Parameters

| | |
|---|---|
| Project Name | 12021 Woodruff Avenue |
| Subarea ID | 1A (Existing) |
| Area (ac) | 5.5 |
| Flow Path Length (ft) | 896.0 |
| Flow Path Slope (vft/hft) | 0.00379 |
| 50-yr Rainfall Depth (in) | 6.1 |
| Percent Impervious | 0.9 |
| Soil Type | 6 |
| Design Storm Frequency | 50-yr |
| Fire Factor | 0 |
| LID | False |

## Output Results

| | |
|---|---|
| Modeled (50-yr) Rainfall Depth (in) | 6.1 |
| Peak Intensity (in/hr) | 2.4118 |
| Undeveloped Runoff Coefficient (Cu) | 0.7775 |
| Developed Runoff Coefficient (Cd) | 0.8877 |
| Time of Concentration (min) | 12.0 |
| Clear Peak Flow Rate (cfs) | 11.7757 |
| Burned Peak Flow Rate (cfs) | 11.7757 |
| 24-Hr Clear Runoff Volume (ac-ft) | 2.3061 |
| 24-Hr Clear Runoff Volume (cu-ft) | 100453.6572 |

# Peak Flow Hydrologic Analysis



File location: O:/3700-3799/3700/HYDROLOGY/HYDROCALC/12021 Woodruff Avenue Report.pdf
Version: HydroCalc 1.0.2

## Input Parameters

| | |
|---|---|
| Project Name | 12021 Woodruff Avenue |
| Subarea ID | 10B (Proposed) |
| Area (ac) | 0.35 |
| Flow Path Length (ft) | 453.0 |
| Flow Path Slope (vft/hft) | 0.0034 |
| 50-yr Rainfall Depth (in) | 6.1 |
| Percent Impervious | 0.9 |
| Soil Type | 6 |
| Design Storm Frequency | 50-yr |
| Fire Factor | 0 |
| LID | False |

## Output Results

| | |
|---|---|
| Modeled (50-yr) Rainfall Depth (in) | 6.1 |
| Peak Intensity (in/hr) | 2.9181 |
| Undeveloped Runoff Coefficient (Cu) | 0.8165 |
| Developed Runoff Coefficient (Cd) | 0.8917 |
| Time of Concentration (min) | 8.0 |
| Clear Peak Flow Rate (cfs) | 0.9107 |
| Burned Peak Flow Rate (cfs) | 0.9107 |
| 24-Hr Clear Runoff Volume (ac-ft) | 0.1468 |
| 24-Hr Clear Runoff Volume (cu-ft) | 6393.2176 |

# APPENDIX C

# DETENTION ANALYSIS

Job # 3700 12021 Woodruff Avenue, Downey

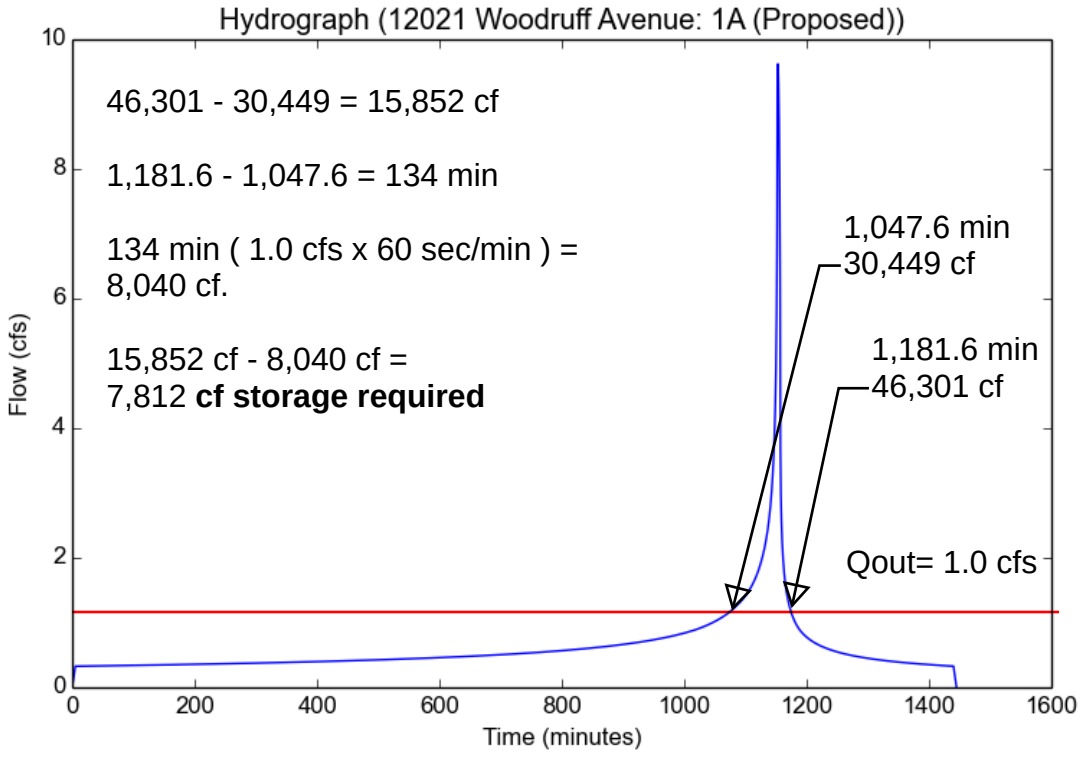
# Peak Flow Hydrologic Analysis



File location: O:/3700-3799/3700/HYDROLOGY/HYDROCALC/12021 Woodruff Avenue Report.pdf
Version: HydroCalc 1.0.2

## Input Parameters

| | |
|---|---|
| Project Name | 12021 Woodruff Avenue |
| Subarea ID | 4A (Proposed) |
| Area (ac) | 3.0 |
| Flow Path Length (ft) | 355.0 |
| Flow Path Slope (vft/hft) | 0.0182 |
| 50-yr Rainfall Depth (in) | 6.1 |
| Percent Impervious | 0.9 |
| Soil Type | 6 |
| Design Storm Frequency | 50-yr |
| Fire Factor | 0 |
| LID | False |

## Output Results

| | |
|---|---|
| Modeled (50-yr) Rainfall Depth (in) | 6.1 |
| Peak Intensity (in/hr) | 3.6394 |
| Undeveloped Runoff Coefficient (Cu) | 0.8627 |
| Developed Runoff Coefficient (Cd) | 0.8963 |
| Time of Concentration (min) | 5.0 |
| Clear Peak Flow Rate (cfs) | 9.7857 |
| Burned Peak Flow Rate (cfs) | 9.7857 |
| 24-Hr Clear Runoff Volume (ac-ft) | 1.2581 |
| 24-Hr Clear Runoff Volume (cu-ft) | 54804.7611 |

Inputs: 12021 Woodruff Avenue

# FIELD NOISE MEASUREMENT DATA

PROJECT: DOWNEY TRUCK TERMINAL — PROJECT #: 2818
SITE ID:
SITE ADDRESS: — OBSERVER(S): PEYE VIYAR
START DATE: 7/8/20 — END DATE: 7/8/20
START TIME: — END TIME:

**METEOROLOGICAL CONDITIONS**

TEMP: 82 F — HUMIDITY: 46 % R.H. — WIND: CALM (LIGHT) MODERATE
WINDSPD: 6 MPH — DIR. N NE E SE S SW W NW — VARIABLE STEADY GUSTY
SKY: (SUNNY) (CLEAR) — OVRCAST PRTLY CLDY FOG RAIN

**ACOUSTIC MEASUREMENTS**

MEAS. INSTRUMENT: PICCOLO SLM-3 — TYPE 1 2 — SERIAL #: 10309270 46
CALIBRATOR: BSWA CA 114 — SERIAL #: 490151
CALIBRATION CHECK — PRE-TEST: ____ dBA SPL — POST-TEST: ____ dBA SPL — WINDSCRN: YES

SETTINGS: (A-WTD) (SLOW) FAST FRONTAL RANDOM ANSI OTHER:

| (ST1) REC. # | BEGIN | END | Leq | Lmax | Lmin | L90 | L50 | L10 | OTHER (SPECIFY METRIC |
|---|---|---|---|---|---|---|---|---|---|
| 21-22 | 14:00 | 14:15 | 71.0 | 87.8 | 57.7 | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |

COMMENTS: READING TAKEN IN FRONT OF 12112 WOODRUFF AVE (CURB); PRIMARY NOISE SOURCE IS TRAFFIC ON WOODRUFF AVE AND ON WASHBURN RD TO THE NORTH.

**SOURCE INFO AND TRAFFIC COUNTS**

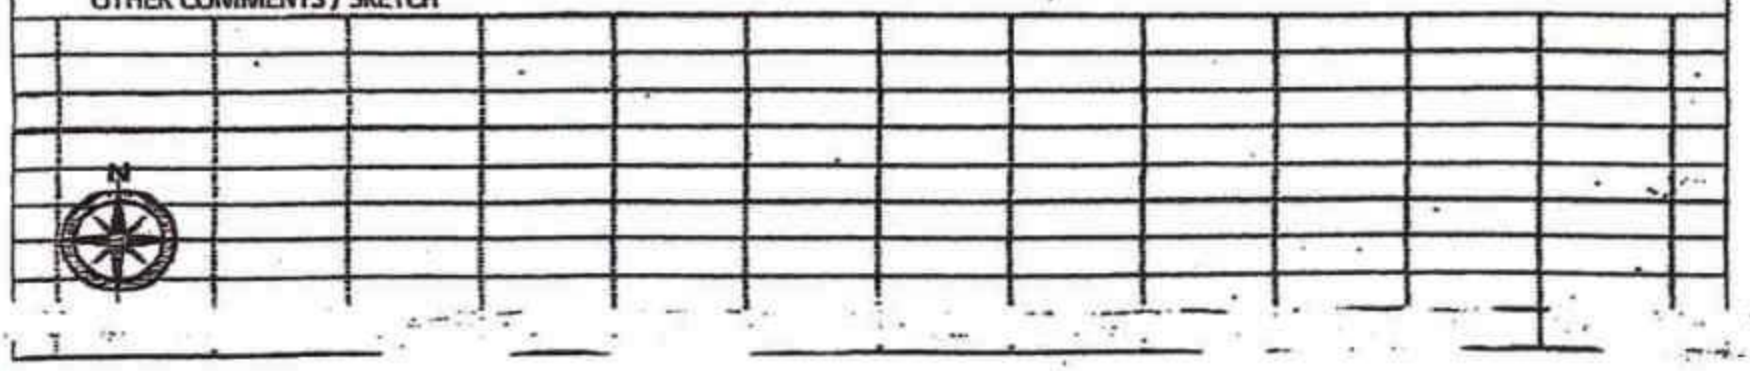
PRIMARY NOISE SOURCE: (TRAFFIC) AIRCRAFT RAIL INDUSTRIAL OTHER:
ROADWAY TYPE: ASPHALT — DIST. TO RDWY C/L OR EOP: 35' FROM WOODRUFF C/L

TRAFFIC COUNT DURATION: 15 MIN — SPEED

| COUNT 1 (OR RDWY 1) DIRECTION | NB/EB | SB/WB | NB/EB | SB/WB |
|---|---|---|---|---|
| AUTOS | 225 | | | |
| MED TRKS | 4 | | | |
| HVY TRKS | 12 | | | |
| BUSES | 0 | | | |
| MOTRCLS | 1 | | | |

IF COUNTING BOTH DIRECTIONS AS ONE, CHECK HERE ✓

TRAFFIC ON WOODRUFF AVE



| COUNT 2 (OR RDWY 2) | ___ MIN | | SPEED | |
|---|---|---|---|---|
| | NB/EB | SB/WB | NB/EB | SB/WB |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

SPEEDS ESTIMATED BY: RADAR / DRIVING THE PACE
POSTED SPEED LIMIT SIGNS SAY: 40 MPH

OTHER NOISE SOURCES (BACKGROUND): DIST. AIRCRAFT RUSTLING LEAVES DIST. BARKING DOGS (BIRDS) DIST. INDUSTRIAL
DIST. KIDS PLAYING DIST. CONVRSTNS / YELLING DIST. TRAFFIC (LIST RDWYS BELOW) DISTD GARDENERS/LANDSCAPING NOISE
OTHER:

28 September 2020
TNM 2.5
Calculated with TNM 2.5

RESULTS: SOUND LEVELS
PROJECT/CONTRACT: Downey Truck Terminal
RUN: Existing + Project 092020
BARRIER DESIGN: INPUT HEIGHTS
ATMOSPHERICS: 68 deg F, 50% RH

Average pavement type shall be used unless a State highway agency substantiates the use of a different type with approval of FHWA.
