Menlo Park, California

DLT:mb

PROJECT NO.	DATE	BORING NO.
196-11	March 1987	MW-1

Piezometer/Well No: MW-1

Location: Northeast corner of lot

Date Installed: 03/02/87

Installed By: A.D. Murray

Piezometer:

type:

remarks:

Piezometer Leads:

Casing: 2-inch diameter PVC

Hole Diameter: 8-inches

Method of Drilling: hollow stem auger

Comments: perforated PVC extends from 7 feet to 20 feet

APPENDIX A — FIELD INVESTIGATION

The field investigation consisted of a surface reconnaissance and subsurface exploration program. A subsurface investigation was performed on March 2, 1987 using truck-mounted continuous flight auger drilling equipment. A total of one 8-inch diameter exploratory boring was drilled for the investigation to a depth of 20 feet at the location shown on the Site Plan, Figure 1. The boring was completed as a monitoring well. The soils encountered in the boring was logged continuously with the Unified Soil Classification System (ASTM D 2487). The log of the boring and details of the monitoring well installation as well as a key to the classification of the soil (Figure A-1) are included as part of this appendix.

The location of the boring was approximately determined by tape and compass measurement from the site plan provided to us. The location and elevation of the borings should be considered accurate only to the degree implied by the method used.

Representative soil samples were obtained from the exploratory boring at selected depths appropriate to the subsurface exploration. All samples were taken to our laboratory for evaluation and testing.

The standard penetration resistance blow counts were obtained by dropping a 140-pound hammer through a 30-inch free fall. The blows per foot recorded on the boring logs represent the accumulated number of blows required to drive the sampler the last 12 inches of the interval indicated. 2.5-inch I.D. soil samples were obtained from selected depths in the monitoring well using a Modified California Sampler driven into the

soil with the 140-pound hammer previously described. The 2-inch O.D. split spoon sampler was also utilized for sampling the exploratory boring and was driven 18 inches. The split spoon sampler is designated on the boring logs as having a single vertical line placed through the sampled interval.

The attached boring log and related information depict subsurface conditions only at the locations indicated and at the particular date designated on the log. Subsurface conditions at other locations may differ from conditions occurring at this boring location. The passage of time may result in a change in the subsurface conditions due to environmental changes. In addition, any stratification lines on the log represent the approximate boundary between soil types and the transition may be gradual.

RE: Groundwater Sampling Report
119 Independence Drive
Menlo Park California

Dear Mr. Carter:

Environmental Risk Specialties Corporation (ERS) has enclosed two hard copies of the Groundwater Sampling Report for 119 Independence Drive, Menlo Park, California.

If you have any questions regarding this report or the findings of the work, please contact ERS at (408) 496-0801, extension 17 or via email at adiaz@erscorp.us.

Sincerely,

Alfred R. Diaz, PG, CEG
Senior Scientist

INTRODUCTION

This Groundwater Sampling Report was prepared by Environmental Risk Specialties Corporation (ERS) at the request of Mr. Chris Carter (Client) for the groundwater monitoring and sampling work performed at 119 Independence Drive, Menlo Park, California (Site). The project objectives were to purge and sample two groundwater monitoring wells, laboratory analyze the ground water samples and report the results. A Site Location Map is presented as Figure 1.

BACKGROUND

The approximately one acre Site consists of an approximately 15,000 square foot building with paved parking and landscape areas. The Site is currently occupied by Davy Tree Service. The two onsite ground water monitoring wells are located near the northeast corner of the Site (MW-1) and in the front landscape area in the southern portion of the site (MW-2). See Site Plan (Figure 2).

GROUNDWATER MONITORING AND SAMPLING

Groundwater monitoring and sampling of the Site was performed on October 16, 2009. Work at the Site included measuring depth to water, evaluating groundwater in the wells for any floating products, purging and sampling the wells, and submitting the samples to a state-certified laboratory for analysis of constituents of concern. Constituents of concern are Halogenated Volatile Organic Compounds analyzed by EPA Test Method 8260.

1.1 Groundwater Monitoring Well Sampling

Before groundwater purging and sampling, the depth to the water table was measured from the top of each well casing using a Solinst Water Level Meter. The water level measurements were recorded to the nearest 0.01 foot. All recorded groundwater monitoring data are included as Appendix A (Monitoring Well Data Sheets). Information regarding well elevations and groundwater depths for the Site is summarized in Table 1.

TABLE 1 – GROUNDWATER ELEVATIONS

Well Number	Date Measured	Well Elevation* (feet above MSL)	Depth to Groundwater	Groundwater Elevation
MW-1	10/16/09	14.31	4.39	9.92
MW-2	10/16/09	14.64	4.69	9.95

Notes: All measurements are in feet, measured from top of well casing.
** Well casing elevations from Lowney Associates, 1991.*

1.2 Groundwater Gradient

An assessment of groundwater gradient and flow direction requires a minimum of three monitoring wells. Since only two ground water monitoring wells exist at the Site, an assessment of groundwater gradient and flow direction cannot be performed.

1.3 Groundwater Sample Collection

Before groundwater sampling, each well was purged using a disposable polyethylene bailer. Groundwater samples were collected after four well casing volumes of water were removed and measured for temperature, conductivity, pH, and dissolved oxygen (DO). Following purging, each well was allowed to recharge before sampling. When recovery to 80 percent of the static water level was observed, a sample was collected for analysis.

The ground water monitoring wells were sampled using disposable polyethylene bailers attached to new rope for each well. From each monitoring well, four laboratory-supplied 40-milliliter sample vials were filled to overflowing and sealed to eliminate trapped air. Once filled, sample vials were inverted and tapped to test for air bubbles. Sample containers were labeled with self adhesive, preprinted tags. The samples were stored in a pre-chilled, insulated container and returned to ERS's Walnut Creek Office pending courier pickup by AccuTest, a state-certified analytical laboratory, for the requested analyses.

Ground water purged during the sampling of the ground water monitoring wells is being temporarily stored onsite in a 5-gallon buckets pending laboratory analysis and proper disposal.

RESULTS OF GROUNDWATER SAMPLING

Groundwater samples collected from each well were submitted for analysis, following chain of custody protocol. Groundwater samples collected from wells MW-1 and MW-2 were analyzed for Halogenated Volatile Organic Compounds analyzed by EPA Test Method 8260. Copies of the laboratory analytical reports and chain of custody record are included as Appendix B. The values for those analytical results above the laboratory reporting limits are summarized in Table 2.

TABLE 2 – GROUNDWATER ANALYTICAL RESULTS

Well Number	Date Sampled	1,1-Dichloroethylene (µg/L)	Cis-1,2-Dichloroethylene (µg/L)	Trichloroethylene (µg/L)
MW-1	10/16/09	1.9	22.4	303
MW-2	10/16/09	0.61	8.9	108

Notes: µg/L = micrograms per liter

DISCUSSION

An assessment of groundwater gradient and flow direction requires a minimum of three monitoring wells. Since only two ground water monitoring wells exist at the Site, an assessment of groundwater gradient and flow direction cannot be performed. The groundwater gradient and flow direction may vary due to tidal influenced. The current use of the Site did not appear to be the source for the Halogenated Volatile Organic Compounds detected in the groundwater samples.

LIMITATIONS

The service performed by ERS has been conducted in a manner consistent with the levels of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in the area. No other warranty, expressed or implied, is made.

The conclusions presented in this report are professional opinions based on the indicated data described in this report and applicable regulations and guidelines currently in place. They are intended only for the purpose, site, and project indicated. Opinions and recommendations presented herein apply to site conditions existing at the time of our study.

ERS has included analytical results from a state-certified laboratory, which performs analyses according to procedures suggested by the U.S. Environmental Protection Agency and the State of California. ERS is not responsible for laboratory errors in procedure or result reporting.

75-01-4	Vinyl chloride	ND	2.0	0.60	ug/l	

ND = Not detected MDL - Method Detection Limit
RL = Reporting Limit
E = Indicates value exceeds calibration range
J = Indicates an estimated value
B = Indicates analyte found in associated method blank
N = Indicates presumptive evidence of a compound

RESUMES OF ENVIRONMENTAL PROFESSIONALS

MATTHEW R. EDDY, E.I.T.

Staff Engineer

Mr. Eddy is a staff engineer who has participated in a variety of site assessments and investigations, as well as remediation projects. His field experience has included: Phase I Environmental Site Assessments; soil, groundwater and soil gas sampling; monitoring well installation; and supervision of a soil remediation project. He is proficient with AutoCAD, Matlab, and Excel.

EDUCATION

B.S., Civil Engineering, Specialization in Environmental Engineering, University of California Davis, 2013

EXPERIENCE

April 2014 – Present PES Environmental, Inc., Novato, California

PROFESSIONAL REGISTRATION

Engineer in Training (E.I.T.) Certification – California 2013
License #: 150929

HEALTH AND SAFETY TRAINING

40-hour HAZWOPER training

WILLIAM F. FRIZZELL

President
Principal Engineer

Mr. Frizzell is a civil/environmental engineer with 36 years of experience, specializing in environmental assessments of properties, soil and groundwater investigations and remediation, and hazardous and solid waste management. He has been the project manager responsible for all phases of Remedial Investigations/Feasibility Studies and remedial action planning and design. He has evaluated hazardous waste disposal facilities throughout the U.S., focusing on facilities' compliance with Federal and State regulations, and hydrogeological characteristics of the disposal sites. For real estate transfer projects, Mr. Frizzell has performed and/or managed more than 200 environmental assessments for developers, lenders, and attorneys. He has worked closely with developers on residential and commercial projects, which require environmental cleanup strategies and remediation of soils and/or groundwater. He also provides third party review of environmental projects for preparation of Environmental Impact Reports and litigation support. Mr. Frizzell has developed plans and specifications for hazardous waste site closures and has been involved in the design of gas, leachate, and surface water control systems. In addition, he has designed and prepared plans and specifications for slurry walls to control the migration of contaminated groundwater, and have been responsible for the selection and installation of synthetic liners for hazardous waste applications.

Mr. Frizzell's project experience also includes dredging feasibility studies for open water and land disposal sites. These projects have included characterization of sediments in contaminated and uncontaminated environments, biological and water quality assessments, monitoring programs and maintenance of disposal areas.

Mr. Frizzell has also performed site investigations for foundation studies and has experience in design and construction of projects involving structural grouting, dam construction, and earthwork.

EDUCATION

B.S., Civil Engineering, University of California, Berkeley, 1978

Postgraduate education has included courses and seminars in Storm Water Management, Geotechnical Engineering of Waste Management Systems, Groundwater Hydrology, Hazardous Materials Management and Handling, Stabilization and Solidification of Hazardous Waste, and Management Training.

SAFETY TRAINING

Health and safety training and update courses following EPA and OSHA requirements. Courses included training in physical, chemical, and toxicological properties of hazardous materials; hazard evaluation and control; selection and use of personal protective equipment; sampling and monitoring techniques and equipment; site entrance and decontamination procedures; and safety plan development.

EXPERIENCE

1989 - Present:	PES Environmental, Inc., Novato, California
1981 - 1989:	Harding Lawson Associates, Novato, California
1978 - 1981:	Woodward Clyde Consultants, San Francisco, California.

REGISTRATION

Civil Engineer - California, Arizona, Washington

Environmental Assessor - California, Washington

REPRESENTATIVE PROJECTS

Storm Water Management – Program manager for assisting various clients in compliance with the State of California Industrial Activities Storm Water General Permit. Activities included preparation of storm water pollution prevention plans, storm water monitoring plans and annual reports.

Litigation Support/Expert Witness Projects - Litigation support and expert witness services have included the areas of soil and groundwater remediation cost recovery actions; standard of care evaluations for environmental site assessments; assessment of damages due to releases from underground storage tanks; and claims due to a residential development over contaminated soils and groundwater. Client: Various Law Firms

Real Estate Assessment Projects - Program and project manager responsible for all phases of numerous real estate transfer assessment projects. Projects involve evaluating properties for potential liability due to hazardous waste contamination, site history evaluations, site inspections, regulatory review, and preparation of assessment reports. Program responsibilities include marketing, business development, training, and quality assurance/

quality control program development. Clients: Various Lending Institutions, Insurance Companies, Attorneys, Finance Companies and Developers

Dredging Feasibility Studies, Port of Oakland, California - Project manager responsible for dredged sediment disposal project involving site characterization and geochemical and surface water modeling to predict effluent water quality. Project involved conducting a feasibility study to dispose highly saline and contaminated sediments in an upland environment and development of control measures. Client: Port of Oakland

Richmond Marsh Restoration, Richmond, California - Large amounts of paint residue were uncovered during construction of new channels to restore marshland on edge of San Francisco Bay. As project manager: developed and implemented site-characterization plans; developed, tested, and analyzed potential remedial actions; selected preferred remedial action; prepared draft and final Remedial Action Plans; attended public hearings; developed community Relations Plan; and developed construction plans and specifications and post-construction monitoring plans. Managed all negotiations with state regulatory agencies. Client: City of Richmond

Hazardous-Waste Investigation, State Superfund Site, Richmond, California - Project manager for investigation at former pesticide formulating and packaging site. Responsible for all phases of investigation, including hydrogeological studies, analytical testing program, contaminant transport evaluations, study of offshore contaminant migration in marine sediments, evaluation of bioavailability of contaminants to marine organisms, and dredging of contaminated sediments. Planned and implemented remedial actions involving construction of temporary waste piles, installing synthetic membranes, and removing and transporting contaminated soils and debris. Project has included close coordination and involvement with various state regulatory agencies. Client: Levin Richmond Terminal Corporation

PCB Spill Investigation and Cleanup, Northern California State Superfund Site - Engineer for study to determine extent of contamination from PCB spill. Organized hydrogeologic study to determine contaminant migration potential, examined cleanup options, and prepared economic analysis of alternatives. Client: MGM Brakes

Landfill Closure Plans and Specifications, Alameda, California - Project manager responsible for preparing plans and specifications for closing 43-acre sanitary landfill adjacent to San Francisco Bay. Project included construction of surface impoundments for placing dredge spoils for use as cover material and preparation of earthwork plans and specifications for cover system. Project also included designing and installing post-closure groundwater monitoring system and performing leachate characterization study and contingency plan. Client: City of Alameda

Soil Process and Treatment Program, Richmond, California - Project manager for site remediation involving processing and treatment of 35,000 cubic yards of lead-contaminated

soil. Processing involved physical separation through screening; treatment involved proprietary fixation process. Responsible for regulatory negotiations, contractor selection, and quality control program. Client: City of Richmond

Site Remediation Program, Pittsburg, California - Project engineer responsible for plans and specifications to remediate 4-acre asbestos-contaminated site. Project involved examination and evaluation of cover options, selection of contractors, regulatory negotiations, and construction observation. Client: John Mansville

Slurry-Wall Design, Martinez, California - Project engineer responsible for designing 3300-foot-long slurry wall through existing surface impoundments containing effluent from oil refinery. Responsible for setting up and evaluating effluent/bentonite slurry permeability testing program for development of design criteria. Duties also included preparing plans and specifications, evaluating contractors' bids, and reviewing construction-control program for slurry-wall installation. Client: Shell Oil

Surveys of Hazardous-Waste Treatment, Storage, and Disposal Sites, Nationwide - Project manager responsible for conducting surveys and preparing evaluation reports for over 50 commercial hazardous-waste facilities. Evaluations focus on hydrogeologic, managerial, environmental, regulatory, financial, and safety aspects of disposal-site operations. Projects have been performed in response to generator concern for "cradle to grave" responsibility for hazardous waste. Clients: Shell Oil Company, Chevron U.S.A. Inc., and IBM Corporation

Landfill Assessment and Geotechnical Studies, Albany and Berkeley, California - Project manager for investigating and evaluating inactive sanitary landfills in regard to generation and migration of leachate and methane, providing recommendations for developing landfills to support various structures, assessing potential impact of landfill on future development, and preparing preliminary closure plans. Project has also included preliminary geotechnical studies for landfills involving geohazards evaluation, general foundation recommendations, and slope-stability studies. Client: Hall, Goodhue, Haisley and Barker, for Santa Fe Land Improvement Company

Closure Plan Development, Tucson, Arizona - Project engineer for closure plan for 18 sludge-drying beds from wastewater treatment plant. Project included developing analytical testing program, decontamination procedures, and plans for closing system. Client: Hughes Aircraft Company

Hazardous-Waste Investigation, State Superfund Site, Richmond, California - Project manager for site investigation and remedial-action planning at site contaminated with heavy metals from uncontrolled releases from waste piles and buried drums. Duties included setting up field investigations and analytical programs for site characterization and planning remedial actions. Client: Summer del Caribe

RCRA Part B Permit Application Review, Hazardous-Waste Facility - Responsible for reviewing Part B permit applications for various treatment, storage, and disposal facilities.

Reviews focus on operators' compliance with federal regulations. Client: A. T. Kearney, for U.S. Environmental Protection Agency

Hydrogeological and Geotechnical Investigation of Dioxin Contamination, Times Beach, Missouri - Served as alternate field operations manager. Conducted drilling and sampling and implemented decontamination and chain-of-custody procedures. Client: CH2M Hill, for U.S. EPA

Environmental Risk Assessment, Santa Rosa, California - Developed risk assessment report focusing on environmental risks associated with City of Santa Rosa operations, including sewer treatment plants, sludge disposal, and hazardous-material storage. Client: Environmental Risk Assessors, U.S.A.

Hazardous Waste Investigation, Sacramento, California - Engineer and assistant project manager for site investigation to characterize unknown wastes and to determine lateral and vertical extent of contamination due to unmanaged-disposal practices. Client: Aerojet

Hazardous Waste Investigation, Santa Rosa, California - Engineer for site investigation to determine existence and direction of migration of organic solvents from point sources of pollution. Organized analytical testing program to determine amounts and extent of groundwater pollution. Client: Hewlett-Packard

Landfill Closure, Alameda, California - Project engineer responsible for preparing all phases of plans and specifications for combination sanitary landfill closure and dredge spoils pond construction on 110-acre site. Project involved design of landfill closure system, slurry wall for leachate control, passive methane gas venting system, dike construction, seawall repair, decant structure, and hydraulic control systems. Client: U.S. Navy

Hazardous Waste Investigation, Martinez, California - Field engineer during investigation to determine extent of contamination due to leaching from disposal pond containing tetra ethyl lead. Supervised drilling activities and safety procedures for initial phase of cleanup study. Client: E.I. DuPont Nemours

Gasoline Spill Investigation, Novato, California - Project engineer during investigation conducted to determine extent of groundwater and soil contamination resulting from leaking underground gasoline storage ranks. Project involved using soil-gas and groundwater monitoring techniques. Client: Texaco Incorporated

Gasoline Spill Investigation, Stockton, California - Conducted post-remedial-action investigation to assess potential for future migration of gasoline from service station with residual soil contamination. Client: Exxon Company U.S.A.

Tailings Dam, Green River, Wyoming - Resident engineer during construction of tailings dam for solid-waste management program. Responsible for quality control, redesigned plans to accommodate field conditions, and prepared final earthwork report. Client: Allied Chemical

Hillside Development, Walnut Creek, California - Resident engineer in charge of construction for many phases of earthwork. Supervised mass grading operations including landslide repair, installation of subsurface drainage, and rebuilding of cut slopes. Installed and monitored hydraugers and piezometers for groundwater control. Client: Terra California

Gravel Island, Beaufort Sea, Alaska - Design verification agent during construction of island for drilling platform. Reviewed design criteria and observed construction in arctic environment. Client: Exxon Company, U.S.A.

Foundation Construction, Oakland, California - Field engineer during construction of drilled-pier foundations. Client: Peralta Hospital

Structural Grouting, Port Clinton, Ohio - Field engineer for stabilization of power plant foundation. Designed grout mixes according to varying subsurface conditions, supervised grouting batch plant operation, and installed extensometers to measure rock displacement during construction. Client: Toledo Edison Company

Earthquake Engineering, San Francisco, California - Developed seismic-response spectra for several sites in California using various computer programs and data-retrieval systems. Client: Nuclear Regulatory Commission

MEMBERSHIPS

American Society of Civil Engineers
Hazardous Materials Control Resources Institute

PRESENTATIONS

1987. "Conducting Environmental Audits of Treatment, Storage, and Disposal Facilities." Environmental Auditing Forum, Concord, California, July.

1988. "Toxic Waste and Real Estate Transactions." Building Industries Association, Continuing Education Seminar, Dublin, California, August.

PUBLICATION

1987. *New Use of Existing Technologies In On-Site Decontamination of Soil - A Case Study*. Haz Mat Central Conference (with J. C. Davies and R. S. Creps).

1.0 INTRODUCTION

1.1 Purpose and Scope of Work

This report presents the results of a Phase I Environmental Site Assessment (ESA) for the commercial property located at 127 Independence Drive in Menlo Park, California (the site or subject property). The site location is shown on Plate 1, and the subject property and vicinity are shown on Plate 2. PES Environmental, Inc. (PES) performed the Phase I ESA on behalf of The Sobrato Organization (Sobrato). PES was retained by Sobrato to compile and evaluate available information to assess for Recognized Environmental Conditions (RECs) associated with the site.

The ESA was performed in general accordance with ASTM International guidelines for Phase I Environmental Site Assessments (ASTM E1527-13). These guidelines comply with the U.S. Environmental Protection Agency's All Appropriate Inquiries (AAI) rule adopted in November 2013. The following tasks were conducted during this ESA:

- Federal, State and local agency databases were reviewed to identify nearby sites which have reported the use, storage, or release of hazardous materials;
- Regulatory agency records regarding the site and adjacent properties were reviewed;
- Historical aerial photographs, Sanborn Fire Insurance maps, and historical topographic maps of the site and surrounding area were obtained and reviewed to evaluate prior land uses;
- Previous environmental reports prepared for the subject property and vicinity were reviewed;
- Individuals with knowledge of the site were interviewed;
- An inspection of the site and a reconnaissance of surrounding properties were conducted to assess the potential for contamination of the site from onsite or offsite sources. The site inspection was conducted by an environmental professional with qualifying experience; and
- This report was prepared to present the results of the Phase I ESA investigation.

A Recognized Environmental Condition, or REC, is defined in the ASTM International guidelines (ASTM E1527-13) as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. A controlled REC (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous

substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, activity/use limitations, institutional controls, or engineering controls). A historical REC (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meets unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

De minimis conditions are defined by ASTM as conditions that generally do not present a threat to human health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. A *de minimis* condition is not a REC and not a CREC.

1.2 Special Terms and Conditions

The ESA activities were conducted in general accordance with ASTM E1527-13. There are no other special terms or conditions for this report.

1.3 Limitations and Exceptions

This Phase I ESA was performed in accordance with practices and procedures generally accepted in the consulting environmental engineering profession at the time and place they were performed. The findings, opinions, conclusions, and recommendations expressed herein are applicable as of the date the services were provided. Our professional judgment to assess the potential for contamination is based on limited data; no warranty is given or implied.

The Phase I ESA was prepared at the request of Sobrato as part of its pre-acquisition due diligence of the subject property and may be relied on only by Sobrato. No other party may rely on this report without the express written permission of Sobrato and PES.

PES was not provided information regarding the value or purchase price of the subject property, nor prices of comparable properties in the site vicinity. In accordance with ASTM E1527-13, an evaluation of the purchase price relative to those of comparable properties should be conducted by the user of this Phase I ESA, as applicable.

2.0 USER PROVIDED INFORMATION

2.1 Title Records

Title records were not provided to PES for the preparation of this Phase I ESA.

2.2 Environmental Liens or Activity/Use Limitations

Copies of environmental liens, activity limitations, and use limitations were not provided to PES, and PES is not aware of any such liens or activity/use limitations associated with the subject property.

2.3 Specialized Knowledge

PES does not possess any specialized knowledge regarding the subject property. Also, as noted below, Sobrato has reported to PES that it has no specialized environmental knowledge regarding the subject property.

2.4 Owner, Property Manager, and Occupant Information

As part of this Phase I ESA, a Key Site Manager Questionnaire was completed by Ms. Jennifer Eaton, the current property manager. A copy of the User Questionnaire is provided in Appendix A.

2.5 Reason for Performing Phase I

The Phase I ESA was completed as part of the environmental due diligence by Sobrato to support a planned acquisition of the site.

3.0 SITE DESCRIPTION

3.1 Location and Site Access

The subject property is within the City of Menlo Park and consists of one legal parcel identified by San Mateo County Assessor's Parcel Number (APN) 055-236-240, covering approximately 1.18 acres. The site has a street address of 127 Independence Drive, Menlo Park, California. The subject property is accessed via driveways off Independence Drive.

3.2 Site and Vicinity Characteristics

The site is located in an area primarily used for light industrial/commercial purposes. The City of Menlo Park zoning designation for the site is M2 (General Industrial District). The site consists of one building, asphalt-paved ground level parking, and landscaped areas. The subject property and the adjacent areas are shown on Plate 2.

The site is bounded to the south by Independence Drive. The site is bound to the north, east and west by commercial and light industrial buildings and associated parking lots.

3.3 Physical Setting

According to the United States Geological Survey (USGS) *Palo Alto, California* Quadrangle 7.5-minute series topographic map dated 1999, the site is situated at an elevation of approximately 10 feet above mean sea level (MSL). The site is flat-lying. The regional topography slopes gently to the north-northeast.

3.4 Local Geology and Hydrogeology

The subject property is located in the southwest side of the San Francisco Bay basin, a sediment-filled structural basin. A subsurface investigation (Lowney, 1987) performed at 119 Independence Drive, approximately 170 feet west of the site, revealed four distinct soil zones from the ground surface to 20-feet below ground surface (bgs). Black, very stiff silty clay extended from the ground surface to approximately 7 feet bgs. A stiff to very stiff, light brown to orange brown silty clay was encountered from 7 to 11.5 feet bgs and from 15 to 17 feet bgs. Dark brown, well graded gravel was encountered between 11.5 and 15 feet bgs. From 17 to 20 feet bgs, dark brown, well graded sand was encountered.

The same report by Lowney measured the depth to groundwater at 4.1 feet bgs, though they noted potential groundwater fluctuations should be considered. At two sites southeast of the subject property, groundwater flow has been measured to the southwest, away from the San Francisco Bay and the subject property. Other sites east of the subject property have measured a groundwater flow to the north and east-northeast, toward the Bay. A CalTrans groundwater pumping station south of the site along U.S. Highway 101 was used for dewatering beneath a railroad right-of-way. Pumping at this station may have locally affected groundwater flow. It is not known whether the pumping station is still in use.

The closest surface water body is San Francisco Bay, located approximately 0.9-miles north of the Site. Salt marshes at the edge of the bay extend shoreward to within 900 feet of the site. Based on FEMA map data presented in the EDR report (Appendix A), the Site is located within the 100-year floodplain that extends to San Francisco Bay.

3.5 Wetlands

As shown in the EDR database report (Appendix A), there are no National Wetlands Inventory (NWI) identified wetlands on the subject property. There are wetlands and salt marshes bordering San Francisco Bay starting approximately 900 feet north of the site.

3.6 Descriptions of Existing On-Site Structures and Improvements

The subject property is contains one single-story building with approximately 14,400 square feet of floor space. The building is composed of steel frame and wood construction with stucco exterior and has a concrete slab-on-grade foundation. The site building was originally constructed in the late 1960s and a review of historic aerial photographs indicates that no

significant structural changes have taken place since. The remaining portions of the site have been improved with asphalt-paving, curbing, and landscaping.

3.6.1 Structures and Current Use

The building is currently occupied by Neodyne Biosciences and Transcend Medical, both specializing in the research and design of medical and surgical devices. The building is split about evenly between office space and small scale manufacturing areas. Manufacturing areas are utilized for the assemblage of prefabricated medical equipment. In addition, there is a small pathology laboratory in the center of the building.

3.6.2 Other Improvements

Electricity and natural gas are supplied by Pacific Gas and Electric (PG&E). Water is supplied by Menlo Park Municipal Water District, and sewage services are provided by West Bay Sanitary District (WBSD).

3.7 Current Uses of Adjoining Properties

A reconnaissance of the surrounding area was completed to assess whether neighboring sites represent a potential environmental condition that could affect the subject site. The current uses of the adjoining properties, as observed during the site inspection, are summarized below.

Properties to the South

The site is bordered to the south by Independence Drive. Further south is a currently vacant single story commercial/light industrial building located at 150 Independence Drive, previously occupied by Ultra Clean Technologies.

Properties to the West and North

The site is bordered to the west and north by commercial/industrial buildings occupied by L3 Randtron Antenna Systems (Randtron), located at 123-125 Independence Drive and 130 Constitution Drive respectively. The 123-125 Independence Drive site was recently purchased by Sobrato and is discussed in detail in Section 4.0.

Properties to the East

The site is bordered on the east by a commercial/industrial building at 1205 Chrysler and occupied by Pan-Pacific Plumbing-Mechanical. The property was recently acquired by Sobrato in 2015.

3.8 Past Uses of Property and Adjoining Properties

Historical site use information was obtained through a review of aerial photographs, historical topographic maps, city address directories, and results of previous investigations. Historical Sanborn Fire Insurance Maps are not available for the subject property area.

3.8.1 Historical Sources

Site use information was obtained through a review of the following list of historical sources. The results of the review of these sources are summarized below:

- **Aerial Photographs:** Aerial photographs obtained from EDR were reviewed for the following years: 1943, 1948, 1950, 1958, 1968, 1974, 1982, 1991, 1998, 2005, 2009, 2010, and 2012. A summary of the aerial photograph review and copies of these photographs are presented in Appendix B. The site location is identified on each of the aerial photographs for reference;

- **Sanborn Fire Insurance Maps:** A search for available historical Sanborn Fire Insurance Maps was performed by EDR. EDR did not identify any Sanborn Maps for the site. A copy of the EDR 'No Coverage' report is provided in Appendix C;

- **Topographic Maps:** Various topographic maps of the subject property vicinity were compiled by EDR. The following maps were included in the compilation: USGS *Palo Alto* Quadrangle 15-minute series topographic maps produced in 1899, 1943, 1947, 1948, and 1961; USGS *Santa Cruz* Quadrangle 30-minute series topographic map produced in 1902; and *Palo Alto* Quadrangle 7.5-minute series topographic maps produced in 1953, 1961, 1968 (photo revised), 1973 (photo revised), 1991, and 1997, were reviewed by PES. A summary of the topographic map review and copies of the maps are presented in Appendix D. The site location is identified on each of the topographic maps for reference;

- **City Directories:** A search of city directories was performed by EDR for the years 1970, 1977, 1980, 1985, 1992, 1995, 1999, 2003, 2008 and 2013. A summary of the city directories review and copies of the directory listings are presented in Appendix E;

- **San Mateo County:** Records related to hazardous materials, hazardous wastes, storage tanks, chemical releases and groundwater protection at the site were requested from San Mateo County Environmental Health (SMCEH), the applicable Certified Unified Program Agency (CUPA); and

- **Menlo Park City Records:** Building permit records were requested from the Menlo Park Building Department (MPBD). As of the date of this Phase I ESA, the MPBD has not responded to PES's request for files. PES will complete the file reviews once information is obtained from the MPBD.

3.8.2 Historical Review Summary

The following provides historical use information for the subject property and vicinity based on available historical resources listed in the previous sections.

Subject Property

The earliest reviewed record for the site is an 1899 topographic map, which shows the site as undeveloped land. Aerial photographs from 1943 to 1958 show the subject property as vacant land with likely agricultural use (grain and/or row crop farming). A 1968 aerial photograph shows the subject property developed with the current structure in place. The structure is surrounded by asphalt paved parking lots and landscaping. By 1991, an aerial photograph shows a corridor connecting the subject property with adjacent property at 125 Independence Drive. In addition the 125, Independence Drive property was connected by a similar corridor to 130 Constitution Drive. This was likely a covered path between the adjacent facilities operated by Randtron. By 2005, the corridor between the subject property and 125 Independence drive is no longer present. No other significant changes to the site were identified from 2005 to the present-day.

Available historical city directory references indicate the subject property address was occupied by the following tenants: from 1970 to 1977 by Litton Dental, from 1980 to 1985 by Saslow Dental, by Peninsula Control Panels in 1999, and by Cabochon Aesthetics Incorporated, Dollinger Properties, Neodyne Biosciences, and Transcend Medical Incorporated in 2013. The City Directories have gaps in tenancy information and do not identify Randtron's occupancy at any point. As discussed in Section 4.1, county records indicate Randtron operated at the subject property in the late 1980s. The corridor constructed between 125 Independence and the subject property, discussed above, further suggests the site's operation by Randtron.

Subject Property Vicinity

The history of the site vicinity is similar to the subject property. The 1899 topographic map shows the site vicinity as undeveloped land. Aerial photographs from the 1940s to 1958 also show the subject property vicinity in use for agricultural purposes (grain and/or row crops). By 1968 an aerial photograph shows adjacent properties located at 125, 123 and 120 Independence Drive developed. The 1968 aerial also shows the properties at 1205 Chrysler Drive and 130 Constitution Drive developed. Aerial photographs through 1991 show continued development of commercial type buildings in the vicinity, with no significant changes taking place after 1991.

3.8.3 Interviews

An interview was conducted with Ms. Jennifer Eaton, the current property manager. Ms. Eaton was not aware of any above ground storage tanks (ASTs) or underground storage

tanks (USTs) currently or formerly located on the subject property. Ms. Eaton was not aware of any releases of hazardous materials from current site operations. Ms. Eaton was aware of hazardous chemical storage on site, but did not have a working knowledge of the chemicals.

Based upon Ms. Eaton's interview responses summarized above, no site-specific potential environmental concerns were identified.

In addition to the interviews summarized above, Sobrato, the User of this Phase I report, was requested to provide responses to the ASTM E 1527-13 User Questionnaire. Sobrato's responses to the questionnaire are:

- Sobrato is unaware of any environmental liens recorded against the subject property;
- Sobrato is unaware of any environmental use restrictions on the subject property;
- Sobrato does not have specialized knowledge or experience potentially relevant to the subject property;
- Sobrato does not have any commonly known or reasonably ascertainable information about the subject property that would assist in the preparation of this report;
- Sobrato is not aware of any obvious indicators of the presence or likely presence of environmental releases/impacts at the subject property other than the information provided in this report; and
- Sobrato stated that the purchase price of the subject property reasonably reflects the fair market value of the property.

4.0 PREVIOUS ENVIRONMENTAL DOCUMENTS

PES was not provided with, and is not aware of, any previous environmental documents pertaining to the site. However, PES obtained a Phase I ESA performed on 123-125 Independence Drive, the property immediately adjacent and west of the site and was recently purchased by Sobrato. This document is discussed below.

4.1 123-125 Independence Drive Phase I ESA

PES reviewed an AEI Consultants' (AEI) report *Phase I Environmental Site Assessment* dated January 16, 2015 for the 123-125 Independence Drive property located immediately west of the subject property. This report was provided to Sobrato by the 123-125 Independence Drive property owner, Balco Properties, Ltd., as part of their disclosure documentation for Sobrato's due diligence in consideration of purchasing the property. The report was prepared for City National Bank for appraisal purposes.

AEI reported that this 0.96 acre site was agricultural land prior to development in the early 1960s. Since then, the site was occupied by Cal-Air Conditioning Service and Oceans Magazine (1971-1974); Triad Systems Corporation and West Coast Dental (1975-1976); Sunburst Solar Energy, Solid State Solar Controls, Granger Association, and Randtron Systems (Randtron) (1977-1982); and Randtron (1984-present). AEI reported that Randtron uses the site for assembly of antennae for the Department of Defense aircraft, testing of antennae, and typical office activities.

AEI's research of SMCEH and other regulatory agency files indicated the following:

- There is a regional plume of TCE impact to the shallow groundwater and a definitive source of the TCE has not been identified;

- There were two underground gasoline storage tanks (a 1,000 gallon tank and an 8,000 gallon tank) removed from the 123-125 Independence Drive property in 1985. A water sample was collected from the tank pit during the removal activities and analyzed for total petroleum hydrocarbons as gasoline (TPHg). The sample was found to contain 93 parts per million of TPHg. No other analyses were performed. The water from the pit was apparently "skimmed" before the pit was backfilled with excavated soil. Reportedly, the most heavily contaminated soil was set aside to "air dry". No closure documentation was found in the SMCEH files and no follow-up work was conducted. This represents a REC for the 123-125 Independence Drive property, and would require sampling and analysis of the subsurface to assess the degree of impact from the former USTs;

- AEI reported that Randtron (reported as operating under L3 Randtron Antenna Systems or Loral Randtron Systems in earlier days) conducted operations in a number of buildings in the area. The 123-125 Independence Drive property is referred to as Randtron Plant 2. Adjacent properties to the northeast and east are Randtron Plant 1 (130 Constitution) and Plant 6 (127 Independence Drive, the subject property); respectively. Apparently, most of Randtron's manufacturing occurred at Plant 1 and at nearby properties at 1150 Chrysler (Plants 3 and 4) and 150 Constitution (Plant 5). AEI reviewed files associated with Randtron's use of hazardous materials in the area and reported that Randtron had used, or is using, many oils, non-chlorinated solvents, chlorinated solvents, as well as other chemicals. AEI noted that the majority of Randtron's chlorinated solvent handling was conducted at Plants 3, 4, and 5 and, to a lesser extent, at Plant 6 (subject property) and Plant 2; (123-125 Indepednence Drive). AEI reported that the presence of TCE in the shallow groundwater and the use of the property by Randtron are RECs that would require investigation for potential impacts to groundwater and assessing vapor intrusion concerns; and

- AEI also reported that due to the age of the building there is a potential for the presence of lead-based paint and asbestos as "other environmental considerations".

AEI recommended *"The performance of a Phase II Subsurface Investigation to determine the level of chlorinated solvent contamination in the subsurface of the subject property as well as to determine whether any source areas exist at the subject property, and to determine whether any residual contamination remains in the area of the former gasoline USTs."* Furthermore AEI stated that *"Based on the results of the Phase II Investigation, the performance of a Human Health Risk Assessment may be prudent in determining the potential risk of vapor migration into the building"*.

5.0 RECORDS REVIEW

5.1 Environmental Liens and Activity and Use Limitations

Based on review of an environmental database search conducted by EDR, there are no Federal Superfund (National Priority List [NPL]) liens or State environmental deed restrictions associated with the subject property. No information indicating the presence of environmental liens on the subject property was provided by Sobrato.

No activity/use limitations were identified for the subject property. As such, no evaluation of activity/use limitations compliance was performed for this assessment.

5.2 Standard Environmental Record Sources

The discussion presented in this section is based on available information provided by environmental agencies and databases. An EDR database report dated March 25, 2015, contains listings of sites located within a one-mile radius which were selected in accordance with the ASTM E 1527-13 standard. This information is obtained from computerized databases of Federal, State, and local records. The database report, which includes descriptions of the listings, is provided in Appendix A.

The following regulatory agency databases were searched and reported in the EDR report:

- U.S. Environmental Protection Agency (U.S. EPA) – Comprehensive Environmental Response Compensation, and Liability Information System (CERCLIS);
- U.S. EPA – CERCLA NPL;
- U.S. EPA – CERCLA Proposed NPL;
- U.S. EPA – Superfund (CERCLA) Consent Decrees (CONSENT);
- U.S. EPA – CERCLA Records of Decision (ROD);
- U.S. EPA – CERCLA NPL Deletions;
- U.S. EPA – CERCLA No Further Remedial Action Planned Site (CERC-NFRAP);

- U.S. EPA – Facility Index System (FINDS);
- U.S. EPA – Emergency Response Notification System (ERNS);
- U.S. EPA – Hazardous Materials Information Reporting System (HMIRS);
- U.S. EPA – Material Licensing Tracking System (MLTS);
- U.S. EPA – Mines Master Tracking Index File (MINES);
- U.S. EPA – Federal Superfund Liens (NPL Liens);
- U.S. EPA – PCB Activity Database System (PADS);
- U.S. EPA – RCRA Administrative Action Tracking System (RAATS);
- U.S. EPA – Section 7 Tracking Systems (SSTS);
- U.S. EPA – Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA)/Toxic Substance Control Act (TSCA) Tracking System (FTTS);
- U.S. EPA – Toxic Substances Control Act (TSCA);
- U.S. EPA – Resource Conservation and Recovery Information System (RCRAInfo), Treatment, Storage, or Disposal (TSD) facilities, and Small Quantity and Large Quantity Generators (SQG and LQG) of hazardous waste;
- U.S. EPA – Emergency Response Notification System (ERNS);
- U.S. EPA RCRA Corrective Action Report (CORRACTS);
- U.S. EPA Facility Index System (FINDS);
- U.S. EPA Toxic Chemical Release Inventory System (TRIS);
- California State Water Resources Control Board (SWRCB) – Leaking Underground Storage Tank Listing (LUST) sites including Indian Land;
- SWRCB UST;
- SWRCB – Voluntary Cleanup Sites (VCP); and
- SWRCB – Solid Waste Facilities (SWF/LF).

PES also searched the following agency websites for environmental records related to the subject property:

- California State Water Resources Control Board's (SWRCB) GeoTracker website located at http://geotracker.swrcb.ca.gov/; and

- Department of Toxic Substances Control's (DTSC) EnviroStor website located at http://www.envirostor.dtsc.ca.gov/public/default.asp.

5.2.1 Subject Property Records

The subject property address was listed in two databases searched by EDR. These listings are discussed below.

- **Transcend Medical** is listed on the HAZNET database in 2013 for the storage, bulking and/or transfer of unspecified hazardous wastes. The database lists hazardous waste amounts between 0.01 to 0.03 tons. No violations were identified; and

- **Cabochon Aesthetics** is listed in the HAZNET and San Mateo County Business Inventory databases in 2009. The HAZNET database notes the disposal of waste oil, mixed oils, laboratory waste chemicals and unspecified organic liquid mixtures. Hazardous waste quantities ranged from 0.02 to 0.1 tons. The San Mateo County Business Inventory database indicates the site was inactive, but noted that Cabochon Aesthetics generated and recycled unknown quantities of waste oil/solvent and stores MV fuels. No violations were identified.

No other listings for the site address were present in the EDR report.

PES requested records from the MPBD and SMCEH to evaluate current and historical uses of the subject property. As of the date of this Phase I ESA, the MPBD has not responded to PES's request for files. PES will complete the file reviews once information is obtained from the MPBD.

- SMCEH files from 1987 indicate the subject property is listed as Randtron Systems Plant 6. Hazardous materials inventories list the following hazardous materials, and amounts, stored and used at the site annually: 15-gallons Acetone, 15-gallons 1-1-1- Trichloroethane, 20-gallons Isopropyl Alcohol, 5-gallons Silver Powder, 5-gallons Bisphenol "A" Resin Diethylene Triamine, and 5-gallons Toluene and approximately 10-gallons of Methyl Ethyl Keytone, Methyl Isobutyl Keytone, Propylene Glycol, and Monomethyl Ether. Records show that hazardous materials storage was limited to the "Rotary Coupler – Assembly and Repair" portion of the building, located in the southeastern quadrant. SMCEH files do not indicate any violations or releases associated with the hazardous materials usage; and

- SMCEH files for Cabochon Aesthetics from 2008 through 2011 list the following hazardous materials, and amounts, stored and used at the site annually: 200-gallons Formalin Waste, 100-gallons Isopropyl Alcohol (IPA) and Acetone, 100-gallons Cidex and 5-gallons Hydrochloric Acid (HCL). SMCEH hazardous materials and storm water inspections suggest that it was a well kept facility and did not identify any violations.

5.2.2 Surrounding Area

Several sites in the subject property vicinity are listed on hazardous materials release and/or storage databases, as discussed below.

130 Constitution Drive

This property is located adjacent and north of the site, and is currently occupied by Randtron. The site is listed on the RCRA-SQG, NPDES, WDS and San Mateo County Business Inventory databases. The RCRA-SQG database lists the generation and storage of ignitable/corrosive/reactive wastes, chromium, methyl ethyl keytone, halogenated solvents and non-halogenated solvents. The databases did not identify any violations.

Files maintained at the SMCEH include HMBPs, chemical inventory lists, permits and storm water inspections. SMCEH files do not identify obvious violations or releases that could affect the subject property.

1205 Chrysler Drive

This property is located adjacent and east of the site, and is being evaluated for purchase by Sobrato. It was listed in three ASTM-required databases and two non-ASTM supplemental databases searched by EDR.

Krebs Engineers, was listed on the Spills, Leaks, Investigations and Cleanup (SLIC) database. PES obtained information on this listing from the SWRCB GeoTracker website and from SMCEH. As a result of investigations conducted in beginning in 1995 and concluding in 2001, the RWQCB issued a No Further Action determination for the site on March 27, 2002.

Krebs Engineers was also listed on the RGA LUST database twice. The two listings indicated that Krebs Engineers was present on the database in 1997, 1998, 2000, 2001, 2002 and 2008. The RGA LUST database lists LUST sites that have been recovered from older, no longer in use, databases. The dates of the Krebs Engineers listings correspond with the identification and investigation of a release that occurred at the site in 1996 and received a subsequent No Further Action closure determination in 2002. The listing is consistent with the SLIC listing and associated investigation noted above.

Roto Rooter, Krebs Engineers, and Comcast of California, are listed on HAZNET database for 1205 Chrysler Drive. The HAZNET database listings indicate that Roto Rooter generated 'aqueous solutions containing less than 10 percent (%) total organic residues' in 1998 and 2001, and 'waste oil and mixed oil' in 2001. All of these wastes were reported to be recycled. The Krebs Engineers HAZNET listings indicate that from 1994 through 1996, they generated oxygenated solvents ('acetone, butanol, ethylacetate, etc.'), 'laboratory waste chemicals' (unspecified) and liquids with 'halogentated organic compounds $\geq$1,000 milligrams per liter (mg/L)'. All of these chemicals were reported to have been transferred off-site for disposal or recycling. The Comcast of California HAZNET listing indicated that they shipped unspecified wastes off-site for bulking and treatment. Wastes were shipped under hazardous waste management codes H010 through H129 and H131 through H136. These codes are used for wastes that can be treated through recovery (metals and solvents) fuel blending, and other recovery techniques. The Comcast HAZNET listing specified that there was no on-site treatment of these wastes.

SMCEH records indicated that; there were no ASTs or USTs at the site; wastes appeared to be handled in an appropriate manner and recycled or disposed of off-site; there were no records indicating significant violations of County regulations; and there were no records of a release or spill response in the records other than the information for Krebs Engineers discussed above.

120 Constitution Drive

This site is located approximately 150 feet northwest of the subject property. In 1986, a 1,000 gallon gasoline underground storage tank (UST) was removed from the site. A groundwater sample was collected from within the former tank pit and analysis indicated a concentration of 6,700 parts per billion (ppb) TPHg.

- In 1993, three groundwater monitoring wells were installed and two exploratory soil borings were advanced in the vicinity of the former UST by Pacific Environmental Group, on behalf of the J.A. Moreing Company. No petroleum hydrocarbons were detected in the soil samples and concentrations of benzene in groundwater samples ranged from 0.3-0.4 ppb. Subsequent quarterly monitoring of groundwater wells produced no detectable concentrations of petroleum hydrocarbons;

- A 1993 monitoring event identified a TCE concentration spike of 1,200 ppb in one of the monitoring wells. Subsequent monitoring events were conducted and additional wells were installed to further characterize the extent of the VOC contamination. TCE concentrations were found to range from 29 ppb to 540 ppb; and

- The SF RWQCB reviewed the findings of the phase II work and approved a request for No Further Action. The RWQCB indicated that a regional TCE plume exists in the area but was not able to determine a source. The site received formal Case Closure on April 8, 1998.

115 Independence Drive

This site is located west of the subject property, approximately 375 feet. Regulatory agency files document that the site has had investigations of soil, groundwater and soil gas between 1989 and 1997. Levine-Fricke-Recon (LFR) compiled information of the investigations performed prior to 1996 in their July 5, 1996 *Phase I Environmental Site Assessment and Limited Asbestos Survey of 115 Independence Drive, Menlo Park, California 94025*. Subsequently LFR conducted additional soil and groundwater investigation of the property in 1997. Pertinent information from the LFR reports indicate the following:

- The building was reportedly constructed in 1966. Electro Nuclear Laboratories used the property from about 1967 to 1975 for component manufacturing. There were various tenants from 1974 to 1978 including Irex Corporation, Triad Systems Corporation, Xirex Corporation, and James E. Brown, CPA. LFR did not find tenant information from 1979 through 1982. Raychem Corporation leased the property from about 1983 until 1994. Raychem divisions during its tenancy included Medical Products, Local Area Network, and GelTek;

- Two groundwater monitoring wells (MW-1 and MW-2) were sampled in 1989 and were found to contain TCE at 590 and 610 parts per billion (ppb), MW-2 was also found to contain 1,1 DCE at 25 ppb. MW-2 was also found to contain cadmium (50 ppb), chromium (150 ppb) and silver (30 ppb) all above federal and state drinking water standards. (PES notes that LFR reported the results as ppb which is roughly equivalent to μg/L; the units nomenclature that is used elsewhere in this report.);

- Raychem completed a closure process in 1994 under the oversight of the SMCEH. The closure process included collecting a soil sample next to a floor drain that exhibited etching and corrosion. The results of the analysis of the sample showed the presence of TCE at 0.005 parts per million (ppm);

- LFR also reported that the adjacent property to the east, 119 Independence Drive site was listed by VISTA on the SCL regulatory database (State equivalent CERCLIS list). LFR reported the results of the 1987 groundwater sampling and cited the results of the TCE,1,1-DCE and chlorobenzene from monitoring wells MW-1 and MW-2 that were discussed for the 119 Independence Drive in Section4.0.. LFR further indicated that they contacted Diane Mims of the RWQCB in May 1996 about the results of the sampling at 119 Independence Drive. According to LFR, the RWQCB stated that the 119 Independence Drive property is not adequately characterized and that the concentration of chlorobenzene detected in groundwater is a significant issue. (PES notes that based on review of the 1987 monitoring report for 119 Independence Drive, chlorobenzene was not detected in the groundwater. As such, it is uncertain if this was an erroneous reference or if other data is available and not found during PES' review). LFR also reported that Diane Mims indicated that additional soil and groundwater characterization may likely be required for the 119 Independence Drive site. LFR also mentioned that Raychem had been an occupant of the 119 Independence Drive site; and

- The RWQCB issued a letter dated June 27, 1996 to Ernest and Young, representatives of prospective purchasers of the 115 Independence Drive property, stating that based on the soil, groundwater and soil gas testing on the property they believed the VOC contamination of the groundwater was from an off-site source. Furthermore the RWQCB stated that the property owner would not be responsible for investigation and cleanup on their property caused by an off-site source.

LFR subsequently performed Geoprobe push sampling and analysis of soil and groundwater at 12 locations across the site in January 1997. The LFR results were presented in their January28, 1997 *Letter Report of Soil and Groundwater Sampling and Analytical Results, 115 Independence Drive, Menlo Park, California*. This sampling was apparently performed as part of environmental due diligence for LFR's client, Studio Red, prior to purchasing the site.

The results of LFR's investigation showed the presence of TCE in groundwater from 160 ppb to 340 ppb from samples collected between about 12 to 20 feet bgs. Other VOCs including 1,1,1, TCA; cis-1,2-DCE; 1,1-DCE were also detected but the predominant VOC was TCE. There were no detections of TCE or other VOCs in soil samples collected from the boreholes at depths of 5 to 6 feet bgs. Contours of the TCE in groundwater were plotted and were interpreted by LFR as indicating an off-site origin but the results were inconclusive as to the location or direction of an off-site source.

Bohannon Gateway Development

As part of PES' research into the surrounding area properties, available on-line information was reviewed for the currently proposed Bohannon Gateway Development (BGD) project. The boundaries of the BGD project include the properties directly across Independence Drive and encompassing 100 through 190 Independence Drive as well as a separate area encompassing 105 through 155 Constitution Drive located about 330 feet north of the subject property. Information reviewed included California Environmental Quality Act (CEQA) documents including the Initial Study, draft Environmental Impact Report (EIR), revised EIR and public comments to the draft EIR. Pertinent information from PES' review of the 100-190 Independence Drive portion of the BGD project is summarized below.

Phase I ESAs were performed by EFI Global for the 100 through190 Independence Drive properties in 2005. It is noted that PES did not review the Phase I ESAs but they are summarized in the CEQA documentation. There were no reported RECs associated with the historical or current use of these properties. However, it was noted that there is a regional impact of TCE to the shallow groundwater and the Phase I ESAs reportedly did not suspect any of the 100 through 190 Independence Drive properties were potential sources of the TCE. It was noted however that off-site properties where there is documented elevated concentrations of TCE include 115 and 119 Independence Drive and 120 Constitution Drive that could be potential source areas. PES did not obtain any documentation that indicates that Phase II subsurface investigations were performed for the 100 through 190 Independence Drive properties.

As part of the public comments to the Draft EIR, the SMCEH responded in letters dated July 24 and September 18, 2009. A summary of their comments include:

- The SMCEH requires that a Soil and Groundwater Management Plan be submitted and approved for any dewatering or excavation activities deeper that five feet at the site;

- The SMCEH did not agree that there were no RECS associated with these properties indicating that the presence of TCE impacted groundwater and some of the chemical use histories of properties constitute a REC that would usually lead to Phase II investigations of groundwater, soil, and soil vapor;

- The SMCEH also indicated that deficiencies in the draft EIR included possible incomplete review of files associated with 115 and 119 Independence Drive and 120 Constitution Drive properties and no recognition of the potential impacts from the VOCs in groundwater due to the vapor intrusion pathway. The SMCEH recommended that the project proponent work with the RWQCB in determining the potential impacts of the regional contaminants in groundwater; and

- Based on PES' review of the revisions to the draft EIR, it appears that the project sponsor will submit a Phase II subsurface investigation report concurrent with the first building permit submittal for each phase of construction. The Phase II report will include a risk analysis for future occupants of the buildings. Additionally, a Soils and Groundwater Management Plan will be prepared to address soil, soil vapor, and groundwater. If there are potential risks identified due to soil vapors, the project will also need to include institutional controls and a soil vapor mitigation system design.

PES is not aware of any Phase II investigative work on these properties at the time of preparing the Phase I ESA.

Remaining Sites

The following sites are listed on the San Mateo County Business Inventory Database for the generation and recycling of waste oil/solvent:

- 150 Independence Drive – located approximately 80 feet south of the subject property;

- 120 Independence Drive – located approximately 200 feet southwest of the subject property; and

- 111 Independence Drive – located approximately 600 feet northwest of the subject property.

The remaining sites in the surrounding area that are listed in the databases are not expected to present significant environmental conditions to the subject property based on one or more of the following: (1) the listed site has received case closure by the appropriate regulatory

agency; (2) the listed site is either cross gradient or down gradient of the subject property with respect to the inferred regional groundwater flow direction; (3) the listed site is a soils-only affected case; and/or (4) the listed site is located at too great a distance to represent a significant environmental condition with respect to the subject property.

6.0 SITE INSPECTION

An inspection of the subject property was conducted on June 18, 2015 by Mr. Matthew Eddy of PES. All areas of the site building and the exterior parking lots and grounds were inspected. Mr. Eddy was accompanied by Ms. Jennifer Eaton, the current property manager. Photographs taken during the site inspection are presented on Plates 3 through 13.

Exterior Observations

The subject property contains one single-story, steel frame and wood construction building with stucco exterior on a concrete slab-on-grade foundation. With the exception of a small landscaped area on the southern portion of the site, the exterior portions of the subject property are asphalt paved driveway and parking areas. Asphalt patches with distinct circular indentations were observed near the northwest corner of the site building. The patches appear to be associated with posts and the corridor that once connected the subject property with the 125 Independence Drive property. No distressed vegetation was observed. No chemical storage, indication of releases, ASTs, or USTs were observed.

Interior Observations

The building is split about evenly between office space and small scale manufacturing areas. The manufacturing areas are located primarily in the northern half of the building, with a small pathology lab located near the center of the building. In the northeastern quadrant of the site, a flammables storage container was observed. It contained approximately 10-gallons of IPA, 1-gallon of acetone, 1-gallon of chloromethane, 2.5-gallons of Glycol-ether, and small quantities of HCL and additional cleaning products. East of the flammables container, along the northeastern wall of the building, a cabinet contained 6-gallons of IPA and approximately 5-gallons of germicidal agent. A fume hood observed in the northeastern quadrant manufacturing space contained small quantities of IPA, HCL and methanol. An additional flammables storage cabinet was observed in the northwestern corner of the building, containing similar quantities of chemicals described above.

The pathology lab was located in the central portion of the building. The lab contained a refrigerator and freezer containing biological specimens, germicidal chemicals, and additional small quantities of pathology- related research compounds. Approximately 5-gallons of germicidal detergent was observed underneath the laboratory sink. Biological hazardous waste bins were located near the exterior of the room, near the entrance.

6.1 Chemical Use and Storage

Chemical use observed on site is limited to IPA, small quantities of acetone, methanol, HCL, and germicidal detergents. All chemicals appeared to be properly stored. Operations at the site do not generate large amounts of hazardous waste; most chemicals are used up in process and only small amounts are disposed of off-site.

6.2 Underground and Aboveground Storage Tanks

No evidence of historical USTs or ASTs was identified during research activities conducted for this Phase I ESA.

6.3 Generators

There are no generators located at the facility.

6.4 Elevators

No elevators are present at the site.

6.5 Hydraulic Equipment

No hydraulic equipment was present at the site.

6.6 Indications of Polychlorinated Biphenyls (PCBs)

Fluorescent lights are present throughout the facility; therefore, PCB-containing ballasts may be present.

6.7 Other Conditions

The following sections discuss investigation findings for non-ASTM issues that may present potential concerns at the site.

6.7.1 Asbestos

An assessment of asbestos-containing materials was not conducted as part of this Phase I ESA.

Standards set by the Occupational Safety and Health Administration (OSHA) require building owners to presume that thermal system insulation (TSI) and surfacing asbestos containing material (ACM) found in buildings constructed before 1981, and floor tile installed in buildings through 1981, are asbestos containing, unless demonstrated to be less than 1 percent asbestos through sampling. The rule does not permit an assumption to be made that a material does not contain asbestos in buildings constructed after 1980. However, since the late 1970s to early

1980s, asbestos has been removed or substituted for in all but a small number of construction products. For example, asbestos is still used, although at low concentrations, in various mastics and roofing materials. Based on the late-1960s construction date of the subject property building, ACM may be present in other building materials.

6.7.2 Radon

The National Radon Database includes radon information from U.S. EPA/State Residential Radon Surveys conducted between 1986 and 1992. The database includes test results from 32 sites within San Mateo County. The average value for radon level reported in this region was 0.594 pico curies per liter (pCi/l) of air for the first floor living area. This is significantly lower than the U.S. EPA's recommended action level of 4 pCi/l.

The California Radon Database included results from 101 tested sites within zip code 94025. Approximately 20 percent (%) of the sites reported radon levels exceeding the U.S. EPA's recommended action level of 4 pCi/l. The California database does not report sample location (first floor, second floor, and basement) information.

The Federal survey data indicates that radon levels in slab-on-grade structures in the subject property area are likely to be below the U.S. EPA action level.

6.7.3 Solid Waste

Solid waste and recycling receptacles are located along the east fence in the site yard and there are two metal recycling bins inside the site building. No concerns were observed with respect to solid waste disposal or recycling bins for the subject property.

6.7.4 Lead in Paint

An assessment of lead in paint was not within the scope of this Phase I ESA and no prior lead paint surveys of the subject property have been identified. The Consumer Products Safety Commission limited lead content in residential paint to 0.06 percent (600 parts per million) in 1978. Based on the late-1960s construction date of the subject property building, lead-based paint may be present.

6.7.5 Lead in Drinking Water

No on-site sampling data for lead in drinking water was identified in the Phase I ESA research. PES reviewed the most recent available (2013) water quality report from the City of Menlo Park Municipal Water District, the supplier of potable water to the site. The 2013 report stated that the 90th percentile concentration for lead in supplied water was 0.002 milligrams per liter (mg/L) and the highest concentration detected was 0.0105 mg/L. These concentrations are below the USEPA action level of 0.015 mg/L for lead.

6.7.6 Water Damage and Mold

No evidence of significant water damage or potential mold growth was identified at the subject property and Ms. Eaton was unaware of any water damage or mold growth.

7.0 SUMMARY AND CONCLUSIONS

The site consists of a single legal parcel covering approximately 1.18 acres and identified by San Mateo County Assessor's Parcel Number (APN) 055-236-240. The City of Menlo Park zoning designation for the site is M2 (General Industrial District). The subject property has one, approximately 14,400-square feet, steel frame and wood commercial building with slab-on-grade construction. The site building was originally constructed in the late 1960s and has undergone only minor interior improvements since.

The site is bounded to the south by Independence Drive. The site is bound to the north, east and west by commercial and light industrial buildings and associated parking lots.

The building is currently occupied by Neodyne Biosciences and Transcend Medical, both specializing in the research and design of medical and surgical devices. The building is split about evenly between office space and small scale manufacturing areas. Manufacturing areas are utilized for the assemblage of prefabricated medical equipment. In addition, there is a small pathology laboratory in the center of the building.

Chemical use observed on site is limited IPA, small quantities of acetone, methanol, HCL, and germicidal detergents. All chemicals appeared to be properly stored. Operations at the site do not generate large amounts of hazardous waste; most chemicals are used up in process and only small amounts are disposed of off-site.

Historical Site Use

Subject Property

The earliest reviewed record for the site is an 1899 topographic map, which shows the site as undeveloped land. Aerial photographs from 1943 to 1958 show the subject property as vacant land with likely agricultural use (grain and/or row crop farming). A 1968 aerial photograph shows the subject property developed with the current structure in place. The structure is surrounded by asphalt paved parking lots and landscaping.

No surveys for lead-based paint have been identified for the site. Based in the late 1960s date of construction, lead-based paint may be present at the site.

Site Observations

With the exception of a small landscaped area on the southern portion of the site, the exterior portions of the subject property are asphalt paved driveway and parking areas. No distressed vegetation was observed. No chemical storage, indication of releases, ASTs, or USTs were observed.

The manufacturing areas are located primarily in the northern half of the building, with a small pathology lab located near the center of the building. Two flammable storage containers and an under-sink cabinet were observed in the manufacturing space containing IPA, small quantities of acetone, methanol, HCL, and germicidal detergents. In addition, IPA and germicidal detergents were observed in the pathology lab.

Regulatory Agency Records

Transcend Medical is listed on the HAZNET database in 2013 for the storage, bulking and/or transfer of unspecified hazardous wastes. The database lists hazardous waste amounts between 0.01 to 0.03 tons. No violations were identified; and

Cabochon Aesthetics is listed in the HAZNET and San Mateo County Business Inventory databases in 2009. The HAZNET database notes the disposal of waste oil, mixed oils, laboratory waste chemicals and unspecified organic liquid mixtures. Hazardous waste quantities ranged from 0.02 to 0.1 tons. The San Mateo County Business Inventory database indicates the site was inactive, but noted that Cabochon Aesthetics generated and recycled unknown quantities of waste oil/solvent and stores MV fuels. No violations were identified.

SMCEH files from 1987 indicate the subject property is listed as Randtron Systems Plant 6. Hazardous materials inventories indicate the following chemicals were used and stored on the subject property during Randtron operations: Acetone, 1-1-1- Trichloroethane, Isopropyl Alcohol, Silver Powder, Bisphenol "A" Resin Diethylene Triamine, Toluene, Methyl Ethyl Keytone, Methyl Isobutyl Keytone, Propylene Glycol, and Monomethyl Ether. Records show that hazardous materials storage was limited to the "Rotary Coupler – Assembly and Repair" portion of the building, located in the southeastern quadrant. SMCEH files do not indicate any violations or releases associated with the hazardous materials usage.

SMCEH files for Cabochon Aesthetics from 2008 through 2011 list the following hazardous materials, and amounts, stored and used at the site annually: 200-gallons Formalin Waste, 100-gallons Isopropyl Alcohol (IPA) and Acetone, 100-gallons Cidex and 5-gallons Hydrochloric Acid (HCL). SMCEH hazardous materials and storm water inspections indicate it was a clean facility and did not identify any violations.

Conclusion

PES has performed a Phase I Environmental Site Assessment, in conformance with the scope and limitations of ATSM Practice E 1527-13, of the property located at 127 Independence Drive, Menlo Park, California. Any exceptions to, or deletions from, this practice are described in Sections 1.2 and 1.3 of this report. PES did not identify any RECs associated with the subject property.

While it is not currently a REC for the subject property, it is noted that there is a regional TCE plume impacting shallow groundwater in the area. The RWQCB has not specifically identified a source of the contamination and has not pursued the case thus far.

It also appears that potential vapor intrusion concerns have not been evaluated in this area as they have been in many other South Bay areas where TCE has been detected in shallow groundwater. Relatively new guidelines adopted by the RWQCB for evaluation of vapor intrusion include multiple lines of sampling including soil gas, sub-slab vapors, and indoor air are being conducted for similar areas overlying plumes of TCE in groundwater.

Potential environmental concerns for the subject property that are not RECs, HRECs or CRECs include;

- The potential presence of LBP and ACMs based on the age of construction of the original building in the late 1960s.
- The regional PCE plume identified in the subject property vicinity.

7.0 DATA GAPS STATEMENT

No data gaps that may have affected our ability to identify RECs associated with the subject property were identified. Two shipping containers on the western boundary of the subject property were not inspected and the MPBD has not responded to PES's request for files. PES will complete the file reviews once information is obtained from the MPBD, but it is not anticipated to have a material effect on the conclusions presented herein.

8.0 ADDITIONAL SERVICES

No additional services were provided during the preparation of this Phase I ESA.

9.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes of the Environmental Professionals signing this report are presented in Appendix G.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/09/2015 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
TYCO ELECTRONICS COR	***300 CONSTITUTION DRI***	***ESE 1/4 - 1/2 (0.486 mi.)***	***U85***	***152***

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 16 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 06/09/2015 has revealed that

there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/03/2015 has revealed that there are 7 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 08/03/2015 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 16 HIST CORTESE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there is 1 EDR US Hist Auto Stat site within approximately 0.25 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002795431

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History: Extracted from Geologica's October 2, 2013 Supplemental Soil Sampling and Remedial Excavation Completion Report. San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. In April 2013, GEOLOGICA completed a supplemental soil quality sampling investigation of the former CT International site at 3645 Haven Avenue in Menlo Park, CA. The investigation was conducted to evaluate soil quality conditions relative to the current Residential Environmental Screening Levels (ESLs) established by the San

FORMER CT INTERNATIONAL SITE (Continued) **S102445197**

Francisco Bay Regional Water Quality Control Board (RWQCB). Between June and August 2013, GEOLOGICA conducted a focused soil excavation program to remove soil containing petroleum hydrocarbons and/or lead at concentrations greater than the RWQCBs Residential ESLs. This scope of work was developed by GEOLOGICA based on discussion with Mr. Charles Ice of the San Mateo County Environmental Health System (SMCEHS). The purpose of the investigation and excavation was to remove the no-residential use deed restriction on the property.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs):	27895
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs):	9572
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs):	7756
Waste code:	D004

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 01/13/1988
Comments: Site screening done: Site is an active TSD. SI done 8/86. Subsurface PCB contamination. DCE, CD and Pb in groundwater. > drinking. Pending action by RCRA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/20/1991
Comments: Raychem Corporation submitted a PEA to the Dept on 5/17/91. Results of the PEA indicate PCB in soil above extremely hazardous ttlc. Contaminated GW under site. A residential neighborhood and a school are located less than 200' to the South of site. A tidal slough and sensitive wetland are adjacent to the north boundary of the site. High-tech chemical, plastics and materials manufacturer operated at site since 1965. PEA submitted in May 1991 indicates that nickel and cadmium may be present in soils above their respective TTLC and/or STLC. Elevated levels of solvents found in GW under the site. PCB found in soils at levels above the extremely hazardous waste TTLC. PCB has also migrated off-site via surface runoff. Draft ISE determination and RAO sent to TLO for review on June 11, 1991.

Environmental Interest/Information System
STATE MASTER

Registry ID: 110000482399

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TSCA SUBMITTER

AIR SYNTHETIC MINOR

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Latitude:	37.4865732879897
Longitude:	-122.184340953827
Case Type:	Cleanup Program Site
Case Worker:	CLI
Local Agency:	SAN MATEO COUNTY LOP
RB Case Number:	Not reported
File Location:	Not reported
Potential Media Affected:	Contaminated Surface / Structure, Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Other Chlorinated Hydrocarbons, Chlordane, DDD / DDE / DDT, Other Insecticides / Pesticide / Fumigants / Herbicides, Copper, Mercury (elemental), Other Metal, Diesel, Ethylbenzene, Gasoline, Napthalene, Waste Oil / Motor / Hydraulic / Lubricating
Site History:	Extrated from AMEC's July 24, 2013 Site Management Plan. San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The site is located in an industrial portion of Menlo Park, San Mateo County, California, between Highway 101 and the

ANTON MENLO (Continued) **S113186828**

San Francisco Bay (Figure 1). The overall site is bounded by Haven Avenue to the south, 3585 Haven Avenue to the west, 3645 Haven Avenue to the east, and 3641 Haven Avenue and salt ponds to the north. The site is relatively flat, sloping gently to the north toward San Francisco Bay. AMEC understands that SAP intends to develop the site for multi-unit rental housing. Figure 2 presents an initial proposed layout for the residential complex. In addition, AMEC understands that SAP intends to raise the site elevation by approximately 2.5 to 3 feet through the import of clean fill material to be compacted on site prior to development. In general, approximately 2 to 3 feet of fill is distributed across the site. The fill material is of varying quality and includes debris such as wood, rubber material, concrete, brick, and ceramics. The results of the Phase II ESA activities indicate that the general character of chemical impacts to the fill material are likely insignificant relative to residential human health screening criteria1, with the exception of the following locations: h At the northwestern portion of the site, impacted soil was identified at boring location SB-13 (Figure 3), which may be associated with the historical operation of an automotive salvage facility. h At one boring location (SB-10) within an enclosed yard north of the 3611 Haven Avenue building, several pesticides were detected at concentrations exceeding their respective residential Environmental Screening Levels (ESLs) in the soil sample collected at 1 foot bgs. h One polychlorinated biphenyl (PCB) congener (PCB-1260) was detected above its residential ESL in the surface soil sample (SB-19-SUR) collected adjacent to a transformer located west of the 3611 Haven Avenue building. Concrete samples were collected from the pad around the transformer and the swale directly adjacent to the pad to evaluate whether the materials will require special handling during demolition activities. PCBs were not detected in any concrete samples, indicating that the concrete may be disposed of as part of the building demolition.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2015

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/26/2015

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/09/2015

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 06/01/2015

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Data Release Frequency: Quarterly

SAN DIEGO COUNTY:

Hazardous Materials Management Division Database

The database includes: HE58 - This report contains the business name, site address, business phone number, establishment 'H' permit number, type of permit, and the business status. HE17 - In addition to providing the same information provided in the HE58 listing, HE17 provides inspection dates, violations received by the establishment, hazardous waste generated, the quantity, method of storage, treatment/disposal of waste and the hauler, and information on underground storage tanks. Unauthorized Release List - Includes a summary of environmental contamination cases in San Diego County (underground tank cases, non-tank cases, groundwater contamination, and soil contamination are included.)

Date of Government Version: 09/23/2013

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

North Map:	5640622 REDWOOD POINT, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

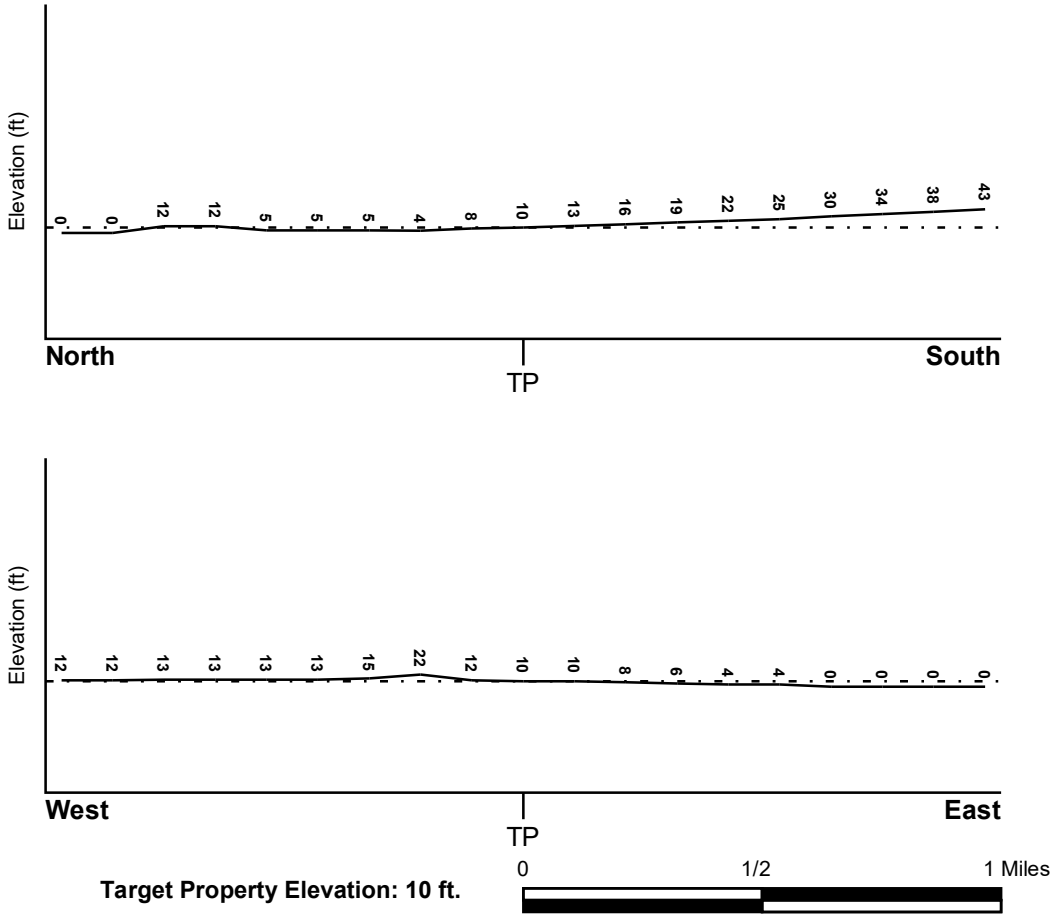
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SAN MATEO, CA	YES - refer to the Overview Map and Detail Map

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PALO ALTO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	0 - 1/8 Mile North	NNW
2	1/8 - 1/4 Mile SSE	NE, Flat

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

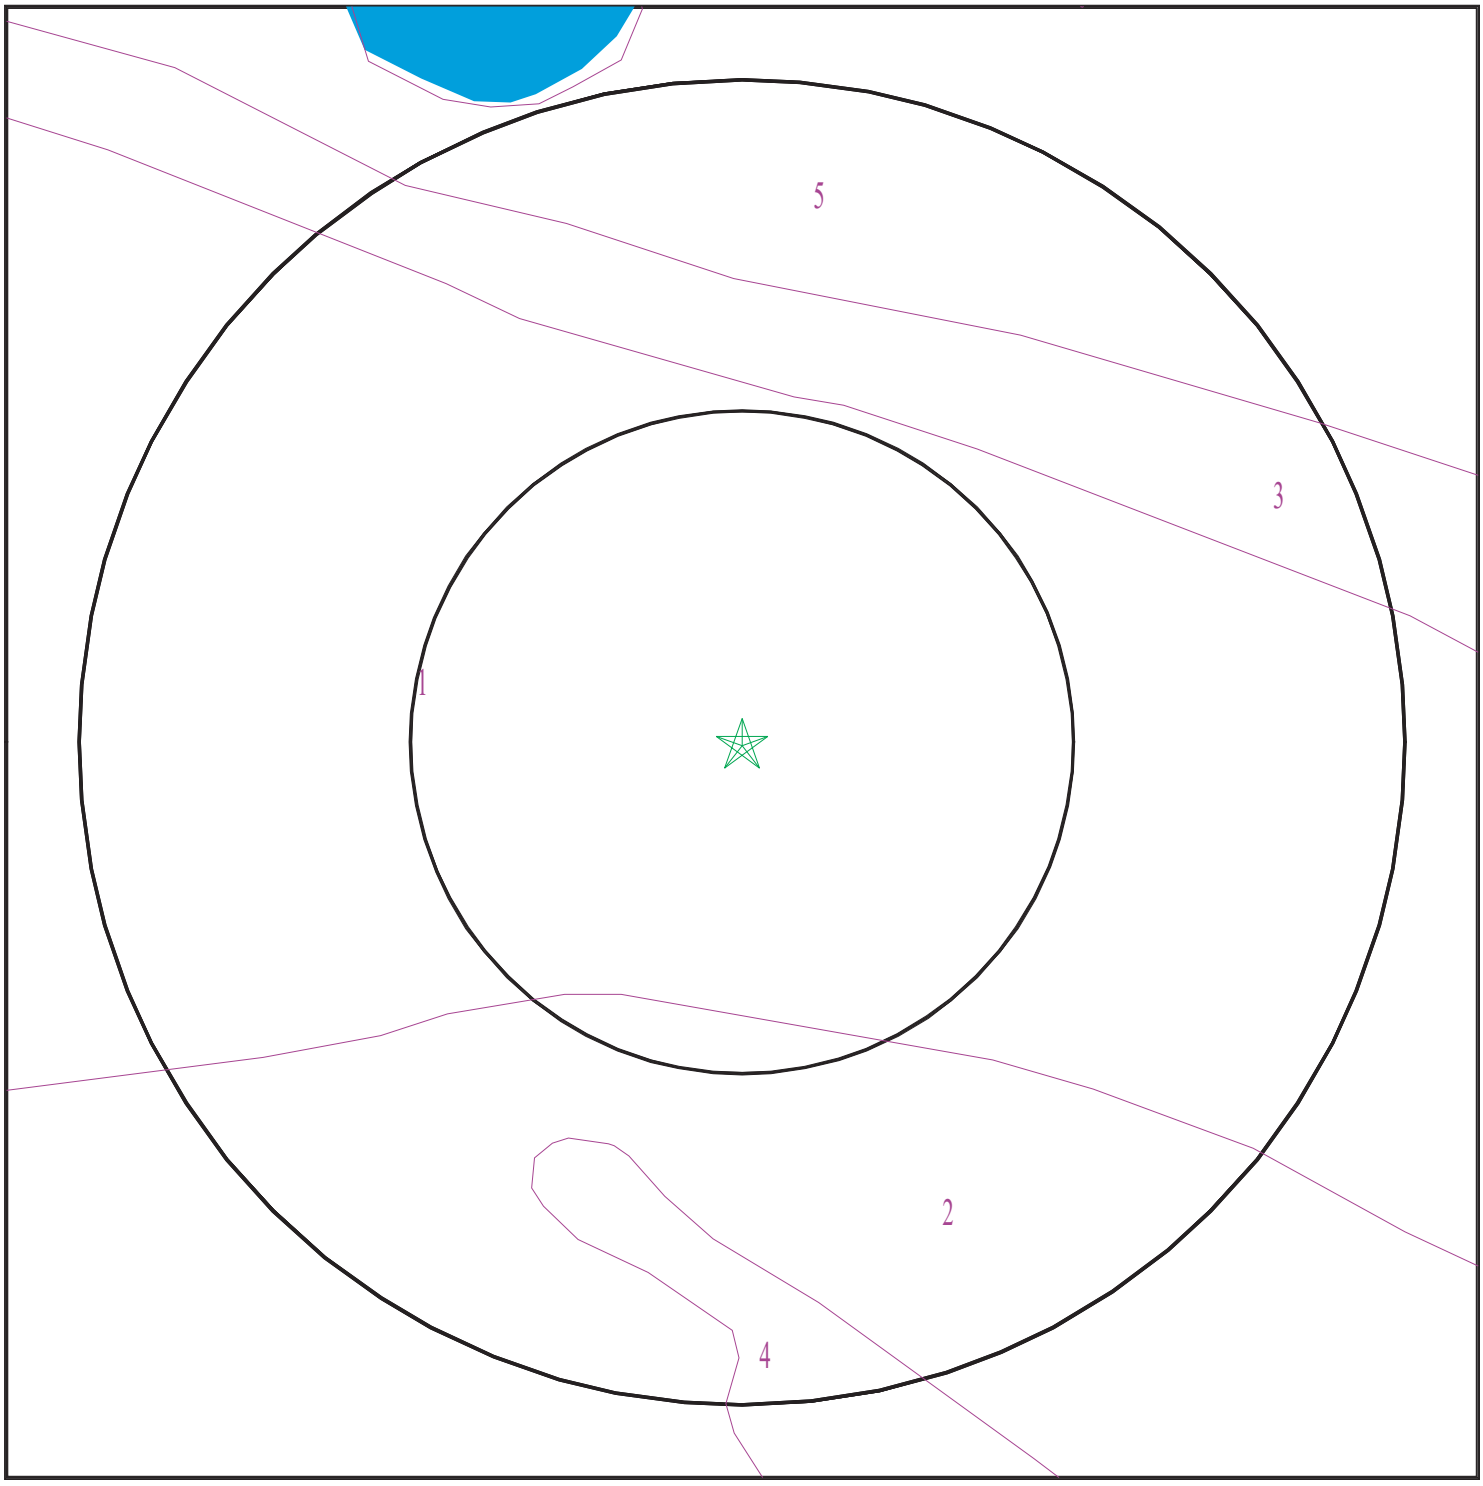
GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT



Era:	Cenozoic
System:	Quaternary
Series:	Quaternary

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 3

Soil Component Name: Novato

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9
2	16 inches	59 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9

Soil Map ID: 4

Soil Component Name: Orthents

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

AERIAL PHOTOGRAPHS

Appendix B
Aerial Photographs Review
127 Independence Drive
Menlo Park, California

Subject Property

Date	Photo Quality	Content
1943	Fair	The subject property appears to be developed for agricultural/hay production.
1948	Fair	No notable changes to the subject property compared to the 1943 photograph.
1950	Fair	No notable changes to the subject property compared to the 1948 photograph.
1958	Good	No notable changes to the subject property compared to the 1950 photograph.
1968	Fair	The subject property is developed with the current structure in place. The structure is surrounded by asphalt paved parking and driveway areas. A small landscaped portion on the southwest portion of the site.
1974	Good	No notable changes to the subject property compared to the 1968 photograph.
1982	Fair	No notable changes to the subject property compared to the 1974 photograph.
1991	Fair	A corridor is developed bridging the the site building with the building located at 125 Independence Drive.
1998	Poor	No notable changes to the subject property compared to the 1991 photograph.
2005	Good	The corridor from the 1991 photograph is no longer present.
2009	Good	No notable changes to the subject property compared to the 2005 photograph.
2010	Good	No notable changes to the subject property compared to the 2009 photograph.
2012	Good	No notable changes to the subject property compared to the 2010 photograph.

Appendix B
Aerial Photographs Review
127 Independence Drive
Menlo Park, California

Subject Property Vicinity

Date	Photo Quality	Content
1943	Fair	The subject property vicinity consists of grasslands and hay fields. Marshlands associated with the San Francisco Bay are north of the subject property.
1948	Fair	No notable changes to the subject property vicinity compared to the 1943 photograph.
1950	Fair	No notable changes to the subject property vicinity compared to the 1948 photograph.
1958	Good	Highway 101 is developed south of the subject property. Highway 84 and Marsh Road are currently being developed west of the subejct property.
1968	Fair	Commercial properties in the site vicnity are dveloped along Independent Drive and Chrysler Drive. Adjacent properties located at 125 Indepence Drive and 1205 Chrisler Drive are developed. The property adjacent and north of the subject property, at 130 Constitution Drive, is developed.
1974	Good	Additional commercial/industrial buildings are present northeasteast of the subject property, along Constitution Drive.
1982	Fair	Additional commercial/industrial buildings are present southeast of the subject property, across Independence Drive. A square asphalt patch is present in the paved area assocaited with the building at 130 Constitution Drive.
1991	Fair	Additional commercial/industrial buildings are present northeast of the subject property.
1998	Poor	No notable changes to the subject property vicinity compared to the 1991 photograph.
2005	Good	No notable changes to the subject property vicinity compared to the 1998 photograph.
2009	Good	No notable changes to the subject property vicinity compared to the 2005 photograph.
2010	Good	No notable changes to the subject property vicinity compared to the 2009 photograph.
2012	Good	No notable changes to the subject property vicinity compared to the 2010 photograph.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Historical Topographic Maps Review
127 Independence Drive
Menlo Park, California

Subject Property

Date	Comments
1899	The map shows the subject property as undeveloped.
1902	No notable change to the subject property compared to the 1899 map.
1943	No notable change to the subject property compared to the 1902 map.
1947	No notable change to the subject property compared to the 1943 map.
1948	No notable change to the subject property compared to the 1947 map.
1953	No notable change to the subject property compared to the 1948 map.
1961	No notable change to the subject property compared to the 1953 map.
1968	A building is present on the Site in the footprint of the present-day building.
1973	No notable change to the subject property compared to the 1968 map.
1991	No notable change to the subject property compared to the 1973 map.
1997	No notable change to the subject property compared to the 1991 map.

Subject Property Vicinity

Date	Comments
1899	The map shows the immediate subject property vicinity undeveloped. The San Francisco Bay is approximately 900 feet north of the site.
1902	No notable change to the subject property vicinity compared to the 1899 map.
1943	Bayshore Boulevard is developed south of the subject property.
1947	No notable change to the subject property vicinity compared to the 1943 map.
1948	No notable change to the subject property vicinity compared to the 1947 map.
1953	A road to the approximate southeast corner of the subject property has been constructed. No other significant changes.
1961	Chrysler, Independence and Constitution Drives are present. A building is present to the southeast and to the north of the subject property. No other change from previous map.
1968	Commercial-type buildings are present on the adjacent properties to the north, east, west and south across Independence Drive. A number of lots across Independence Drive, southwest and southeast of the site, remain undeveloped. The general area has been developed for commercial use.
1973	No notable change to the subject property vicinity compared to the 1968 map.
1991	No notable change to the subject property vicinity compared to the 1973 map.
1997	No notable change to the subject property vicinity compared to the 1991 map.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

ppm	Parts per Million
PCE	Perchloroethylene, Tetrachloroethylene, Tetrachloroethene, PERC
PTO	Permit to Operate
pCi/L	PicoCuries per Liter
PCB	Polychlorinated Biphenyl
REC	Recognized Environmental Condition
RCRA	Resource Conservation and Recovery Act
RP	Responsible Party
SVOC	Semi-Volatile Organic Compound
SQG	Small Quantity Generator
SLIC	Spills, Leaks, Investigation, and Cleanup
TPH	Total Petroleum Hydrocarbons
TPHd	Total Petroleum Hydrocarbons (diesel range)
TPHg	Total Petroleum Hydrocarbons (gasoline range)
TPHo	Total Petroleum Hydrocarbons (oil range)
TRPH	Total Recoverable Petroleum Hydrocarbons
TCE	Trichloroethylene, Trichloroethene
UST	Underground Storage Tank
USDA	United States Department of Agriculture
USGS	United States Geological Survey
VOC	Volatile Organic Compound

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by City National Bank to conduct a Phase I ESA in conformance with our project award and the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property referenced in the table below. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5 and 1.6 of this report.

PROPERTY DESCRIPTION

PROPERTY INFORMATION	
Property Name	Balco Properties, Ltd., LLC
Street Addresses	123 & 125 Independence Drive
City	Menlo Park
State	California
Location	North side of Independence Drive, approximately 525 feet northwest of the intersection of Independence and Chrysler Drives
Vicinity Characteristics	Light industrial and office use
Approximate Site Acreage/Source	0.96-acre/Measuring tool on the San Mateo County Assessor's Online GIS Mapping System
Property Type	Light industrial
Subject Property Use	Research and development, light assembly, and office use
Assessor Parcel Number	055-236-140
SITE AND BUILDING INFORMATION	
Number of Buildings	One (1)
Year of Construction	1961
Number of Floors/Stories	One (1) with mezzanine
Basement or Subgrade Area(s)	None identified
Number of Units	One (1)
Building Area (SF)/Source	12,804 SF/ San Mateo County Assessor's Office
Building Description	One single-story office/warehouse building with mezzanine
Building Occupant	L3 Randtron Antenna Systems
Additional Improvements	Two storage sheds used for storage of antennae and testing fixtures, an attached compressor shed, concrete-paved patio and walkway, asphalt-paved parking and driveways, and associated landscaping
Current On-site Operations	Assembly of small antennae used on Department of Defense (DOD) aircraft, light machining of metal parts used for the antennae, testing of antennae in anechoic chambers, and typical office activities
Current Use of Hazardous Substances	Acetone, isopropyl alcohol, adhesives, epoxies, solder, resin, and waste wipes; refer to Section 7.1
UTILITY PROVIDER INFORMATION	
Natural Gas Provider	Pacific Gas & Electric (PG&E)
Electricity Provider	PG&E
Potable Water Provider or Source	Menlo Park Municipal Water District (MPMWD)
Sewage Disposal Provider or Treatment System	West Bay Sanitary District

REGULATORY INFORMATION	
Regulatory Database Listings	None identified
Institutional Controls	None identified
Engineering Controls	None identified
Environmental Liens	None identified

Based on a review of historical sources, the subject property was identified to consist of agricultural land from at least 1943 to at least 1958. The current development was constructed circa 1960/1961. The subject property was occupied concurrently by Cal-Air Conditioning Service and Johnson & Mape Construction from 1961 to at least 1967. Cal-Air Conditioning Service continued to occupy the subject property to the mid-1970s, with Oceans Magazine also occupying the property from at least 1971 to 1974. Triad Systems Corp. and West Coast Dental occupied the subject property in the mid-1970s. From at least the late 1970s to the early 1980s, the subject property was concurrently occupied by Sunburst Solar Energy, associated with solar heating devices, Solid State Solar Controls, and Granger Association, a telecommunications equipment manufacturer, along with Randtron Systems in the early 1980s. By the mid-1980s, Randtron was the sole occupant of the subject property. Randtron began to occupy the surrounding area circa 1972, using the northeastern adjacent property's address, 130 Constitution Drive, as the main address for the entire facility. No information was found during AEI's research regarding the types of operations conducted by former tenants. Earlier tenants presumably used the subject property for warehousing purposes. Environmental concerns regarding historical agricultural use and the occupancy of Randtron in the surrounding area are discussed in the Findings Section below, as well as in Sections 3.2, 4.1.1, and 5.1.

The immediately surrounding properties consist of the following:

Direction from Site	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Office building occupied by Carr/Ferrell, LLP, Attorneys at Law (120 Constitution Drive)	LUST, SLIC, Historical Cortese, HMBP
Northeast	Light industrial warehouse building occupied by L3 Randtron Antenna Systems (130 Constitution Drive)	RCRA SQG, San Mateo Co. BI, NPDES, WDS
Northwest	Warehouse building occupied by Davey Tree Expert Company (119 Independence Drive)	EnviroStor, San Mateo Co. BI
East	Light industrial warehouse building occupied by Transcend Medical, Neodyne Bioscience, and Dollinger Properties (127 Independence Drive)	San Mateo Co. BI
South	Independence Drive, beyond which is a light industrial warehouse building occupied by Ultra Clean Technology (150 Independence Drive)	San Mateo Co. BI
West	Independence Drive, beyond which is a light industrial warehouse building occupied by TechShop (120 Independence Drive)	San Mateo Co. BI, EMI

Please refer to Section 5.1 for discussion of adjacent sites listed in the regulatory database as noted above.

Based on groundwater monitoring data for the northern adjacent property and obtained from records at the San Mateo County Environmental Health Department (SMCEHD), the direction of groundwater flow beneath the subject property is variable due to tidal influences; depth to groundwater has been measured between four and nine feet bgs.

FINDINGS

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. AEI's assessment has revealed the following RECs associated with the subject property or nearby properties:

- As discussed in detail in Sections 4.1.1 and 5.1, a regional groundwater plume of chlorinated VOCs exists in the surrounding area, principally consisting of TCE, 1,1-dichloroethene (1,1-DCE), and cis-1,2-DCE, which represent an REC. Groundwater sampling conducted during separate occasions at the adjacent properties to the north and northwest in 1987, 1993-1995, 2009 and 2010 indicate the presence of these contaminants. Additionally, nearby release sites to the northwest, southeast, and southwest have also been impacted with chlorinated VOCs in the groundwater. Investigations conducted at the majority of these sites have not specifically identified responsible parties for the contamination; however, the property located at 3695-3723 Haven Avenue, approximately 0.284-mile to the west-northwest of the subject property, was formerly occupied by Siltec, a semiconductor manufacturer, which was identified as a responsible party for TCE contamination in the groundwater. Other nearby sites were reportedly occupied by a semiconductor manufacturer and Raychem Corporation, presumably of interest as sources to the regional groundwater plume.

  No evidence was found during AEI's research that indicates Randtron Antenna Systems has been investigated as a possible source; however, records at the SMCEHD indicate that Randtron handled and generated 1,1,1-trichloroethane (1,1,1-TCA) and Freon, as well as other hazardous substances which may have contained chlorinated VOCs, in at least the mid-1980s throughout the various plants that make up the Randtron facility, including the subject property (Plant 2), the northeastern and eastern adjacent properties (Plants 1 & 6, respectively), and nearby sites further to the northeast and east at 150 Constitution Drive (Plant 5) and 1150 Chrysler Drive (Plants 3 & 4), respectively. Information obtained from SMCEHD records indicate that Randtron settled in the area as early as 1972, manufacturing airborne radar used by the military. According to records, the bulk of the manufacturing work conducted by Randtron has been located at the northeastern adjacent property (Plant 1) and at the nearby sites located at 1150 Chrysler Drive (Plants 3 & 4) and at 150 Constitution Drive (Plant 5) and has consisted of machining, dip brazing, alodining (chromate conversion coating), assembly, and some coating operations. Records indicate that the majority of chlorinated solvent handling was conducted further to the northeast at Plant 5, to the east at Plants 3 & 4, and, at a lesser level, adjacent to the east at Plant 6 and at the subject property. It appears that 1,1,1-TCA and Freon were generated at the subject property in at least 1985 and presumably consisted of small quantities, based on the type of operations currently conducted by Randtron at the subject property. Additionally, wastewater discharged by Randtron has, on occasion, contained levels of metals, including hexavalent chromium, and cyanide above allowable limits. Given the duration of occupancy

by Randtron at the subject property and the surrounding area, their former use of chlorinated solvents, and that cyanide and hexavalent chromium exceeded allowable limits in wastewater discharges, there is a potential that the subsurface has been impacted by their operations, if not directly on the subject property, then indirectly, and may have contributed to the regional chlorinated solvent groundwater plume. Therefore, the long duration of their occupancy in the surrounding area is also considered an REC.

- Information on file at the SMCEHD for the subject property, under the address 123 Independence Drive, consists of the removal of two gasoline USTs from the subject property in 1985 by Randtron. The USTs were 8,000 gallons and 1,000 gallons in size and located to the northwest of the subject property building. Documents indicate the USTs were never used by Randtron and were empty at the time of the tank removal. The USTs were installed by a previous tenant. A groundwater sample was collected from the "down-gradient end" of the tank pit. The tank pit was reportedly backfilled with excavated soil, except for the most heavily contaminated portions, which were set aside to "air-dry". A product line was still attached to one of the tanks, which severed when the tank was pulled. A small amount of product drained into the pit. The pit was reportedly skimmed before it was filled. The groundwater sample collected from the pit contained 93 ppm of gasoline. The groundwater sample was not analyzed for any other contaminants, including BTEX, and no other sampling was conducted, including the collection of soil samples from the tank excavation or from beneath the dispensers, located to the northeast of the tanks. No closure letter from the County was on file at the SMCEHD, nor was there any documentation indicating further investigations needed to be conducted regarding the former USTs. Based on the variability of groundwater flow in the region, the limited sampling conducted, and the lack of analysis for BTEX, there is a potential that significant contamination remains in the subsurface. Therefore, the former USTs are considered an REC.

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. AEI's assessment has revealed the following CRECs associated with the subject property or nearby properties:

- AEI did not identify evidence of on-site CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. AEI's assessment has revealed the following HRECs associated with the subject property or nearby properties:

- AEI did not identify evidence of on-site HRECs during the course of this assessment.

Other Environmental Considerations warrant discussion, but do not qualify as RECs as defined by the ASTM Standard Practice E1527-13. These include, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject

property. AEI's assessment has revealed the following environmental considerations associated with the subject property or nearby properties:

- The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used on site. The entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for light industrial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time.

- Due to the age of the subject property building, there is a potential that ACMs are present. All observed suspect ACMs at the subject property were in good condition at the time of the site reconnaissance and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Based on the potential presence of ACMs, AEI recommends the implementation of an O&M Plan which stipulates that the repair and maintenance of damaged materials should be performed to protect the health and safety of the building occupants. In the event that building renovation or demolition activities are planned, a thorough asbestos survey to identify asbestos-containing building materials is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb suspect ACMs. '

- Due to the age of the subject property building, there is a potential that LBP is present. All observed painted surfaces were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Local regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. Actual material samples would need to be collected or an x-ray fluorescence (XRF) survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

CONCLUSIONS, OPINIONS AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) of 123 & 125 Independence Drive in the City of Menlo Park, San Mateo County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5 and 1.6 of this report.

AEI did not identify evidence of RECs or CRECs in connection with the property except for those previously identified in the Findings section. AEI recommends the following:

- The performance of a Phase II Subsurface Investigation to determine the level of chlorinated solvent contamination in the subsurface of the subject property, as well as to determine whether any source areas exist at the subject property, and to determine whether any residual contamination remains in the area of the former gasoline USTs.

- Based on the results of the Phase II Subsurface Investigation, the performance of a Human Health Risk Assessment may be prudent in determining the potential risk of vapor migration into the building.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I ESA performed in conformance with the project award and scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 123 & 125 Independence Drive in the City of Menlo Park, San Mateo County, California (Figure 1: Topographic Map, Figure 2: Site Map, and Appendix A: Property Photographs).

1.1 SCOPE OF WORK

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-13, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 ADDITIONAL SERVICES

Other environmental considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1) 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
2) Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3) 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I ESA is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted

procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

1.5 LIMITING CONDITIONS/DEVIATIONS

The performance of this Phase I ESA was limited by the following conditions:

- Due to the classified and sensitive nature of operations conducted at the subject property for the DOD by Randtron Antenna Systems, AEI was provided limited access to the interior of the subject property building. Additionally, AEI was not allowed to take photographs of the interior of the subject property building. Based on the nature of operations conducted at the subject property and the descriptions provided for those areas that were not accessed, this limited inspection method is expected to be adequate for the purposes of this assessment. Please refer to Section 7.0 for a list of the areas accessed and not accessed in the subject property building.

- The User did not complete the ASTM User questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

Site reconnaissance observations were limited to readily accessible areas of the subject property and the specific areas not accessed are identified in Section 7.0.

1.6 DATA GAPS AND DATA FAILURE

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 DATA FAILURE

The following data failure was identified during the course of this assessment:

Data Failure	The earliest historical resource obtained during this assessment was an aerial photograph dated 1943. The lack of historical sources for the subject property between 1940 and 1943 represents historical data source failure. In the 1943 aerial photograph, the subject property and surrounding area appear as agricultural land. Thus, it is assumed that prior to 1943 the subject property would have been used for agricultural purposes, if not undeveloped. Therefore, this data failure is not expected to significantly alter the Findings of this assessment.
Information/ Sources Consulted	Agency records, aerial photographs, and interviews

1.6.2 DATA GAPS

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 RELIANCE

All reports, both verbal and written, are for the benefit of City National Bank, their client, and their client's assigns and lender. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms and Conditions executed by City National Bank on December 4, 2014. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

PROPERTY INFORMATION	
Property Name	Balco Properties, Ltd., LLC
Street Addresses	123 & 125 Independence Drive
City	Menlo Park
State	California
Location	North side of Independence Drive, approximately 525 feet northwest of the intersection of Independence and Chrysler Drives
Vicinity Characteristics	Light industrial and office use
Approximate Site Acreage/Source	0.96-acre/Measuring tool on the San Mateo County Assessor's Online GIS Mapping System
Property Type	Light industrial
Subject Property Use	Research and development, light assembly, and office use
Assessor Parcel Number	055-236-140
SITE AND BUILDING INFORMATION	
Number of Buildings	One (1)
Year of Construction	1961
Number of Floors/Stories	One (1) with mezzanine
Basement or Subgrade Area(s)	None identified
Number of Units	One (1)
Building Area (SF)/Source	12,804 SF/ San Mateo County Assessor's Office
Building Description	One single-story office/warehouse building with mezzanine
Building Occupant	L3 Randtron Antenna Systems
Additional Improvements	Two storage sheds used for storage of antennae and testing fixtures, an attached compressor shed, concrete-paved patio and walkway, asphalt-paved parking and driveways, and associated landscaping
Current On-site Operations	Assembly of small antennae used on DOD aircraft, light machining of metal parts used for the antennae, testing of antennae in anechoic chambers, and typical office activities
Current Use of Hazardous Substances	Acetone, isopropyl alcohol, adhesives, epoxies, solder, resin, and waste wipes; refer to Section 7.1
UTILITY PROVIDER INFORMATION	
Natural Gas Provider	Pacific Gas & Electric (PG&E)
Electricity Provider	PG&E
Potable Water Provider or Source	Menlo Park Municipal Water District (MPMWD)
Sewage Disposal Provider or Treatment System	West Bay Sanitary District
REGULATORY INFORMATION	
Regulatory Database Listings	None identified
Institutional Controls	None identified
Engineering Controls	None identified
Environmental Liens	None identified

Refer to Figure 1: Topographic Map, Figure 2: Site Map and Appendix A: Property Photographs for site location and description.

2.2 SITE AND VICINITY CHARACTERISTICS

The immediately surrounding properties consist of the following:

Direction from Site	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Office building occupied by Carr/Ferrell, LLP, Attorneys at Law (120 Constitution Drive)	LUST, SLIC, Historical Cortese, HMBP
Northeast	Light industrial warehouse building occupied by L3 Randtron Antenna Systems (130 Constitution Drive)	RCRA SQG, San Mateo Co. BI, NPDES, WDS
Northwest	Warehouse building occupied by Davey Tree Expert Company (119 Independence Drive)	EnviroStor, San Mateo Co. BI
East	Light industrial warehouse building occupied by Transcend Medical, Neodyne Bioscience, and Dollinger Properties (127 Independence Drive)	San Mateo Co. BI
South	Independence Drive, beyond which is a light industrial warehouse building occupied by Ultra Clean Technology (150 Independence Drive)	San Mateo Co. BI
West	Independence Drive, beyond which is a light industrial warehouse building occupied by TechShop (120 Independence Drive)	San Mateo Co. BI, EMI

Please refer to Section 5.1 for discussion of adjacent sites listed in the regulatory database as noted above.

2.3 PHYSICAL SETTING

Geology: Based on a review of the United States Department of Agriculture (USDA) Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as Urban Land-Orthents. The Urban Land-Orthents designation indicates that 65 percent of the original soils have been disturbed or covered by paved surfaces, buildings or other structures, 30 percent consist of orthents and similar soils, and four percent consists of minor components. Due to the variability of the soil material, on-site investigation would be required to determine the specific soil composition at the subject property.	
USGS Topographic Map:	Palo Alto, CA Quadrangle
Nearest surface water to subject property:	Ravenswood Slough / Approximately 960 feet to the north
Gradient Direction/Source:	Variable – tidally influenced: East, southwest, northwest, and east-northeast/Groundwater monitoring data for the northern adjacent property and obtained from records at the SMCEHD
Estimated Depth to Groundwater/Source:	Between 4 and 9 feet bgs/ Groundwater monitoring data for the northern adjacent property and obtained from records at the SMCEHD

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in

precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

3.1 HISTORICAL SUMMARY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps and agency records is as follows:

Date Range	Subject Property Description/Use	Source(s)
1943-1958	Agricultural land	Aerial Photographs
1960-1967	Current development occupied by Cal-Air Conditioning Service and Johnson & Mape Construction	City Directories, Building Records, Assessor's Information
1971-1974	Current development occupied by Cal-Air Conditioning Service and Oceans Magazine	Aerial Photographs, City Directories, Building Records
1975-1976	Current development occupied by Triad Systems Corp. and West Coast Dental	Building Records
1977-1982	Current development occupied by Sunburst Solar Energy, Solid State Solar Controls, Granger Association, and Randtron Systems	Aerial Photographs, City Directories, Building Records
1984-Present	Current development occupied by Randtron Systems	Aerial Photographs, City Directories, Building Records, Interviews, Oversight Agency Records

Based on a review of historical sources, the subject property was identified to consist of agricultural land from at least 1943 to at least 1958. The current development was constructed circa 1960/1961. The subject property was occupied concurrently by Cal-Air Conditioning Service and Johnson & Mape Construction from 1961 to at least 1967. Cal-Air Conditioning Service continued to occupy the subject property to the mid-1970s, with Oceans Magazine also occupying the property from at least 1971 to 1974. Triad Systems Corp. and West Coast Dental occupied the subject property in the mid-1970s. From at least the late 1970s to the early 1980s, the subject property was concurrently occupied by Sunburst Solar Energy, associated with solar heating devices, Solid State Solar Controls, Granger Association, a telecommunications equipment manufacturer, and Randtron Systems. By the mid-1980s, Randtron was the sole occupant of the subject property. Randtron began to occupy the surrounding area circa 1972, using the northeastern adjacent property's address, 130 Constitution Drive, as the main address for the entire facility. No information was found during AEI's research regarding the types of operations conducted by former tenants. AEI presumes the tenants who occupied the subject property concurrently with Randtron conducted operations similar to Randtron's activities. Earlier tenants presumably used the subject property for warehousing purposes. Environmental concerns regarding historical agricultural use and the occupancy of Randtron in the surrounding area are discussed in Sections 3.2, 4.1.1, and 5.1.

3.2 AERIAL PHOTOGRAPH REVIEW

AEI reviewed aerial photographs of the subject property and surrounding area. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjacent Site Descriptions
1943, 1948, 1950	Agricultural land	Agricultural land
1958	Agricultural land	Agricultural land, with Independence Drive to the south
1968, 1974	Current development	**North:** Current building with an addition to the southeast **Northeast:** Current light industrial building **Northwest:** Current light industrial building **East:** Current light industrial building **South:** Independence Drive, followed by agricultural land **West:** Independence Drive, followed by the current light industrial building
1982, 1991	No significant changes	No significant changes, except that the southern adjacent property, across Independence Drive, is developed with the current light industrial building
1998, 2005, 2010	No significant changes	No significant changes, except that the northern adjacent property is developed with the current configuration of the current building

The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used on site. The entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for light industrial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time.

Environmental concerns associated with the industrial use of the surrounding area are discussed in Sections 4.1.1 and 5.1.

If available, copies of historical aerial photographs are provided in the report appendices.

3.3 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the Environmental Data Resources, Inc. (EDR) collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.4 CITY DIRECTORIES

A search of historical city directories was conducted for the subject property Menlo Park and San Mateo Libraries. The following table summarizes the results of the city directory search.

City Directory Search Results

Year(s)	Address — Occupant Listed
1955,	Independence and Constitution Drives not listed

Year(s)	Address — Occupant Listed
1957, 1959	
1961	Cal-Air Conditioning Service (123 Independence Drive) Johnson & Mape Construction Co. Inc., building contractor (125 Independence Drive)
1963, 1965, 1967	Cal-Air Conditioning Service (123 Independence Drive) Johnson & Mape Construction Co. Inc., building contractor (125 Independence Drive) TRG West, electronics research (130 Constitution Drive)
1971	Cal-Air Conditioning Service (123 Independence Drive) Vacant (125 Independence Drive) Vacant (130 Constitution Drive)
1974	Cal-Air Conditioning Service (123 Independence Drive) Oceans Magazine (125 Independence Drive) Randtron Company (130 Constitution Drive)
1977	Sunburst Solar Energy, Inc., solar heating devices (123 Independence Drive) Granger Association, telecommunications equipment manufacturing (125 Independence Drive) Randtron (130 Constitution Drive)
1980	Sunburst Solar Energy, Inc., solar heating devices; Solid State Solar Controls (123 Independence Drive) Granger Association, telecommunications equipment manufacturing; Randtron Systems (Plant 2) (125 Independence Drive) Randtron (130 Constitution Drive)
1982	Sunburst Solar Energy, Inc. (123 Independence Drive) Randtron Systems (130 Constitution Drive)
1984, 1986, 1988, 1991	Randtron Systems (130 Constitution Drive)
1994, 1997	Loral Randtron Systems (130 Constitution Drive)
2000, 2003	Randtron Antenna Systems (130 Constitution Drive)
2006	L3 Randtron Antenna Systems (130 Constitution Drive)
2009, 2013	L3 Communications (125 Independence Drive); L3 Randtron Antenna Systems (130 Constitution Drive)

XXXX: valid address but no occupancy information available

Based on a review of city directories, building records (discussed in Section 4.1.3), and an interview with the key site manager for Randtron (discussed in Section 6.1.2), the subject property was occupied concurrently by Cal-Air Conditioning Service and Johnson & Mape Construction from 1961 to at least 1967. Cal-Air Conditioning Service continued to occupy the subject property to the mid-1970s, with Oceans Magazine also occupying the property from at least 1971 to 1974. Triad Systems Corp. and West Coast Dental occupied the subject property in the mid-1970s. From at least the late 1970s to the early 1980s, the subject property was concurrently occupied by Sunburst Solar Energy, associated with solar heating devices, Solid State Solar Controls, Granger Association, a telecommunications equipment manufacturer, and Randtron Systems. By the mid-1980s, Randtron was the sole occupant of the subject property. No information was found during AEI's research regarding the types of operations conducted by former tenants. AEI presumes the tenants who occupied the subject property concurrently with Randtron conducted operations similar to Randtron's activities. Earlier tenants presumably used

the subject property for warehousing purposes. Environmental concerns regarding the occupancy of Randtron in the surrounding area are discussed in Section 4.1.1.

3.5 HISTORICAL TOPOGRAPHIC MAPS

In accordance with our approved scope of services, historical topographic maps were not reviewed as a part of this assessment.

3.6 CHAIN OF TITLE

In accordance with our approved scope of services, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

4.1 REGULATORY AGENCIES

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

On December 12, 17, and 23, 2014 AEI contacted the San Mateo County Environmental Health Division (SMCEHD) via online submittals for information on the subject property and nearby sites of concern. Files at this agency may contain information regarding hazardous substance storage and use, underground storage tanks, unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area, as well as wells and/or septic systems.

According to Ms. Tanya Adamovich of the SMCEHD, information on file for the subject property, under the address 123 Independence Drive, consists of the removal of two gasoline USTs from the subject property in 1985 by Randtron. The USTs were 8,000 gallons and 1,000 gallons in size and located to the northwest of the subject property building. Documents indicate the USTs were never used by Randtron and were empty at the time of the tank removal. The USTs were installed by a previous tenant. A groundwater sample was collected from the "down-gradient end" of the tank pit. The tank pit was reportedly backfilled with excavated soil, except for the most heavily contaminated portions, which were set aside to "air-dry". A product line was still attached to one of the tanks, which severed when the tank was pulled. A small amount of product drained into the pit. The pit was reportedly skimmed before it was filled. The groundwater sample collected from the pit contained 93 ppm of gasoline. The groundwater sample was not analyzed for any other contaminants, including BTEX, and no other sampling was conducted, including the collection of soil samples from the tank excavation or from beneath the dispensers, located to the northeast of the tanks. No closure letter from the County was on file at the SMCEHD, nor was there any documentation indicating further investigations needed to be conducted regarding the former USTs. Based on the variability of groundwater flow in the region, the limited sampling conducted, and the lack of analysis for BTEX, there is a potential that significant contamination remains in the subsurface. Therefore, the former USTs are considered an REC.

As discussed in Section 3.1, the subject property, northeastern adjacent property, and other nearby properties are occupied by L3 Randtron Antenna Systems, which is identified with the northeastern adjacent property's address, 130 Constitution Drive. According to Mr. Randy Perkins, more substantial hazardous materials handling is conducted at the northeastern adjacent property and other nearby properties, where heavy machining and bath solutions are used in manufacturing larger antennae than what is conducted at the subject property.

Since the subject property is used in association with the northeastern adjacent property, AEI also obtained records from the SMCEHD filed under the northeastern adjacent property's address, 130 Constitution Drive, which is the main address for the facility. All the records on

file for 130 Constitution Drive pertained to L3 Randtron Antenna Systems, or Loral Randtron Systems in earlier days, and consisted of Hazardous Materials Business Plans (HMBPs), hazardous materials inventories, spill prevention plans, emergency evacuations plans, and inspection records, which spanned the time from 1984 to the present. Randtron has not only occupied the subject property (referred to as Plant 2 or Building 2) and the northeastern adjacent property (Plant 1), but has also occupied the eastern adjacent property (at 127 Independence Drive, Plant 6), as well as properties located further to the northeast (at 150 Constitution Drive, Plant 5) and further to the east across Chrysler Drive (at 1150 Chrysler Drive, Plants 3 & 4). Additionally, spill prevention plans indicate hazardous waste storage areas, for the most part, have been located at the other plants and not on the subject property. However, a hazardous waste storage area has been located at the rear of Plant 1 (the northeastern adjacent property), which is right on the border with the subject property; additionally, a 1987 site plan indicates two 55-gallon waste containers were located right on the boundary between the subject property and eastern adjacent property in the rear storage yard.

Hazardous material inventories dating from 1994 to 2006 indicate the following hazardous substances were handled at the subject property/Plant 2, ranging from one to ten gallons total for each substance, and stored in hazardous materials storage cabinets: copper and solder cleaner, solder flux, mold release, paint thinner, paint primer, epoxy resin, epoxy hardener, part marking inks, adhesives & sealants, isopropyl alcohol, methyl etyhl ketone (MEK), and butyl cellosolve. Hazardous waste generator inspection reports indicate that waste wipes with solvents, waste acids and waste solvents were generated at the subject property; the type of solvents (chlorinated or non-chlorinated) and quantity of hazardous wastes at the subject property were not indicated in the inspection reports. Additionally, a 1995 site plan is similar to the current configuration of the subject property building, depicting the presence of anechoic chambers and a small antenna assembly area. Records suggest that earlier operations and the handling of hazardous substances conducted by Randtron at the subject property were similar to present day activities.

However, it should be noted that a 1985 policy and procedure document for the handling and disposal of hazardous materials by Randtron indicates that three containers were used at the subject property for the storage of spent mixed flammable solvents, including acetone and alcohol; Freon; and 1,1,1-TCA. The storage of hazardous substances and wastes at the other adjacent and nearby sites was also listed in this document, as well as other records, which included multiple drums of soluble oils, toluene, alcohols, acetone, acids, Freon, plastic cleaners, MEK, and 1,1,1-TCA. Additionally, a hazardous materials inventory statement for 150 Constitution Drive (Plant 5) indicated the storage of 40 gallons of 1,1,1-TCA and 185 gallons of waste 1,1,1-TCA, among other hazardous substances. Records obtained for the eastern adjacent property at 127 Independence Drive (Plant 6) from the SMCEHD included a hazardous materials inventory dated 1987 indicating the storage of five gallons of 1,1,1-TCA and 15 gallons of waste 1,1,1-TCA, as well as acetone, isopropyl alcohol, toluene, MEK, propylene glycol, and monomethyl ether in quantities ranging from 5 to 20 gallons. Randtron occupied the eastern adjacent property from 1980 to 1994. The storage of drums of Freon was noted near Plants 3 & 4. The handling of 1,1,1-TCA, Freon, or other chlorinated solvents was not noted in later inventory records for the entire Randtron facility. Minor violations, such as keeping hazardous waste containers properly labeled and sealed and missing paperwork, were indicated in inspection records for the entire facility. Additionally, notices of violations were issued regarding contaminants exceeding allowable limits in wastewater discharges associated

with the etching and chemical conversion coating of metals taking place at Plants 3 & 4 and presumably at Plant 1. The contaminants consisted of metals, including hexavalent chromium, and cyanide.

Although records indicate that the majority of chlorinated solvent handling was conducted further to the northeast at Plant 5, to the east at Plants 3 & 4, and, at a lesser level, adjacent to the east at Plant 6, it appears that 1,1,1-TCA and Freon were also generated at the subject property in at least 1985 and presumably consisted of small quantities, based on the type of operations currently conducted by Randtron at the subject property. As indicated in Section 5.1, detailing the presence of regional chlorinated solvent groundwater plume, chlorinated solvents are highly mobile chemicals and, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with on-site operations, accumulating in soil and migrating to groundwater beneath a facility. Additionally, wastewater discharged by Randtron has, on occasion, contained levels of metals, including hexavalent chromium, and cyanide above allowable limits. Given the duration of occupancy by Randtron at the subject property and the surrounding area, their former use of chlorinated solvents, and that cyanide and hexavalent chromium exceeded allowable limits in wastewater discharges, there is a potential that the subsurface has been impacted by their operations, if not directly on the subject property, then indirectly. Therefore, the long duration of their occupancy is considered a REC.

Copies of select records from the SMCEHD are included in Appendix D.

Records from the SMCEHD were also reviewed for the northern and northwestern adjacent properties, as well as a nearby site, which are discussed in Section 5.1.

4.1.2 FIRE DEPARTMENT

On December 12, 23, and 24, 2014, AEI contacted the Menlo Park Fire Protection District (MPFPD) via fax and email for information on the subject property and the northeastern adjacent property to identify any evidence of previous or current hazardous substance usage, and/or for any historical information available for the subject property.

According to Ms. Lindsay Murtha, an administrative specialist, the following information was on file for the subject property:

Records Reviewed

Date	Occupant	Document Type	Document Notes/Violations
1992, 1995, 2002, 2004, 2008, 2009	L3 Communications, Randtron Antenna Systems	Fire Safety Inspection	Minor fire code violations
2010	L3 Communications, Randtron Antenna Systems	Fire Safety Inspection	Minor fire code violations, and in anechoic chamber 4, provide a method to control dust created during manufacturing operations, a combustible (paper) bag over the sprinkler head in the spray booth to prevent over-spray from accumulating on the fusible link.

Date	Occupant	Document Type	Document Notes/Violations
2011, 2012	L3 Communications, Randtron Antenna Systems	Fire Safety Inspection	Minor fire code violations, including providing a fire suppression system inside a spray booth; subsequent plan reviews indicate
2012	Randtron Antenna Systems	Fire Safety Inspection	No violations
2014	L3 Communications	Fire Safety Inspection	Provide copies of most recent Safety Inspection Records for the classified areas. There were no Fire Code violations noted in unclassified areas, at the time of this inspection; a copy of the self assessment for the classified testing chambers was provided, which indicated that chemicals and all hazardous waste materials were stored correctly

Based on correspondence documentation, the spray booth used in one of the anechoic chambers appears to be an exhaust hood, where less than two gallons of flammable liquid is emitted over the course of a year by a q-tip, tube and fine brush applications. Chemical usage beneath the exhaust hood includes the use of acetone, alcohols, acids, acrylic clear spray, adhesives, epoxy, primer, a silver coating, resins, and sealants. Based on AEI's observations during the site reconnaissance, as well as records on file at the SMCEHD, the handling of hazardous substances in the classified areas of the subject property building is presumably very small in quantity.

Records filed under Randtron's main facility address at the northeastern adjacent property, 130 Constitution Drive, were also reviewed. Most of these records were duplicates of what was on file for the subject property. No additional pertinent information was provided in these records.

4.1.3 BUILDING DEPARTMENT

On December 23, 2014 and January 8, 2015, AEI contacted the Menlo Park Building Department (MPBD) via an office visit for information on the subject property in order to identify historical tenants, features of concern and property use.

Please refer to the following table for a listing of permits reviewed:

Building Permits Reviewed

Year(s)	Owner/Applicant	Description of Permit/Building Use
1960	Vern Doolittle (123 Independence Drive)	Plans for current building
1966	Harkins Sign Co.; Federal Sign (125 Independence Drive)	Listed on a job card with no description of activities
1966	Johnson & Mape Construction; Cal Air Conditioning (125 Independence Drive)	Office alterations
1967	Cal Air Conditioning (123 Independence Drive)	Office alterations
1968	Cal Air Conditioning (123 Independence Drive)	New gas tank

Year(s)	Owner/Applicant	Description of Permit/Building Use
1971	Oceans Magazine (125 Independence Drive)	Sign permit
1975	Triad Systems Corp. (125 Independence Drive)	Listed on a job card with no description of activities
1976	West Coast Dental (125 Independence Drive)	Sign permit
1976	Larry Newton (123 Independence Drive)	Sign permit
1986	Randtron Systems, Inc. (125 Independence Drive)	New walkway
1994	Randtron Systems (123 Independence Drive)	Compressor shed
2006	L3 Communications (125 Independence Drive)	Install exhaust fan

According to building records, the current building was constructed circa 1960. Prior to Randtron's occupancy by at least 1986, the subject property was occupied by a construction company, an air conditioning company, Oceans Magazine, Triad Systems Corp., and West Coast Dental. Operations conducted by the former tenants were not indicated in building records. Cal Air Conditioning installed a gas tank at the subject property in 1968. Environmental concerns regarding the presence of former gasoline USTs at the subject property were previously discussed in Section 4.1.1.

4.1.4 PLANNING DEPARTMENT

On December 23, 2014, AEI contacted the AEI contacted the Menlo Park Planning Department (MPPD) via an office visit for information on the subject property in order to identify AULs associated with the subject property.

AEI spoke with Mr. Tom Smith, a planner with the MPPD, who indicated that evidence indicating the existence of AULs was not on file for the subject property with the department.

4.1.5 COUNTY ASSESSOR OFFICE

On December 8, 2014, AEI contacted the San Mateo County Assessor's Office via the internet for information on the subject property in order to determine the earliest recorded date of development and use.

According to the San Mateo County Assessor's website, the current building was constructed in 1961 for R&D flex use and is reported to total 12,804 square feet. The Assessor's Parcel Number provided for the subject property is 055-236-140.

4.1.6 OIL AND GAS WELLS

On December 9, 2014, visited the California Division of Oil, Gas, and Geothermal Resources (DOGGR) well finder website concerning the subject property and nearby properties. The DOGGR online well finder contains information regarding oil and gas development.

According to the California DOGGR online well finder, oil or gas wells are not located within 500 feet of the subject property. AEI did not identify evidence of environmental concerns during the map review.

4.1.7 OTHER AGENCIES SEARCHED

On December 9, 2014, the **Regional Water Quality Control Board's (RWQCB) GeoTracker** website was visited for information on the subject property and/or nearby properties of concern to identify any evidence of unauthorized releases of hazardous materials to the groundwater. Cases typically handled by the RWQCB include releases from underground storage tanks (USTs).

No information indicating any release of hazardous materials from the subject property was found on the GeoTracker website. The northern adjacent property was identified as a closed LUST and SLIC case on the GeoTracker website. Additionally, other nearby release sites were identified on GeoTracker. These sites are discussed in Section 5.1.

On December 9, 2014, the **Hazardous Waste Tracking System (HWTS)**, an online database maintained by the Department of Toxic Substances Control (DTSC), was visited for information regarding documented hazardous wastes generated at the subject property.

No listings were found for the subject property's addresses on the DTSC's HWTS. Listings were found for L3 Communications Randtron Antenna Systems under the northeastern adjacent property's address of 130 Constitution Drive. Several hazardous wastes were listed including alkaline solution, unspecified aqueous solution, oxygenated solvents, unspecified solvent mixture, waste and mixed oil, oil/water separation sludge, adhesives, laboratory waste chemicals, liquids with metals, including chromium, lead, and mercury, non-halogenated and halogenated solvents. These hazardous wastes likely apply to the entire Randtron facility, occupying the subject property and northeastern adjacent property, as well as two nearby sites. Based on AEI's site reconnaissance, the only hazardous wastes generated at the subject property are acetone, isopropyl alcohol, and waste wipes, the storage of which is discussed in Section 7.1.

On December 9, 2014, the DTSC's **EnviroStor** website was visited for information on the subject property and/or nearby sites of concern to identify any evidence of unauthorized releases of hazardous materials to the subsurface in the vicinity. Cases typically handled by the DTSC include hazardous material releases which have impacted the subsurface.

The subject property was not identified on the EnviroStor website. The northwestern adjacent property was identified on the EnviroStor website, which is discussed in Section 5.1. No other adjacent properties were identified on the EnviroStor website.

On December 9, 2014, the **Bay Area Air Quality Management District (BAAQMD)** was contacted for information regarding any records of Permits to Operate (PTO), Notices of Violation (NOV), or Notices to Comply (NTC) issued to occupants of the subject property and associated with air emission equipment primarily related to stationary sources of air pollution, such as dry cleaning machines, boilers, and/or underground storage tanks.

No records were found for the subject property's addresses at the BAAQMD. Records from the BAAQMD filed under the northeastern adjacent property's address indicate that Randtron is permitted for the emission of 0.75-ton of organics per year, generated by fuel combustion (generator), surface coaters (paint spray booths), and organic solvent use (exhaust hoods).

4.1.8 STATE ENVIRONMENTAL SUPERLIENS AND PROPERTY TRANSFER LAWS

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state environmental superliens and/or property transfer laws.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted Environmental Data Resources, Inc. (EDR) to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-13 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report is included in Appendix B of this report.

The subject property's addresses were not identified in the regulatory databases reviewed.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	Recognized Environmental Condition or Other Environmental Consideration (Yes, No or N/A)
NPL	1	No	0	N/A
DELISTED NPL	0.5	No	0	N/A
CERCLIS	0.5	No	0	N/A
CERCLIS NFRAP	0.5	No	0	N/A
RCRA CORRACTS	1	No	3	No
RCRA-TSDF	0.5	No	0	N/A
RCRA LQG, SQG, CESQGs, VGN, NLR	SP/ADJ	No	1	Yes; the northeast adjacent property is discussed below.
US ENG CONTROLS	SP	No	0	N/A
US INST CONTROLS	SP	No	0	N/A
ERNS	SP	No	0	N/A

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	Recognized Environmental Condition or Other Environmental Consideration (Yes, No or N/A)
STATE/TRIBAL HWS	1	No	21	Yes; the northwestern and northern adjacent properties and three nearby sites are discussed below.
STATE/TRIBAL SWLF	0.5	No	1	No
STATE/TRIBAL REGISTERED STORAGE TANKS	SP/ADJ	No	0	N/A
STATE/TRIBAL LUST	0.5	No	27	Yes; the northern adjacent property and a nearby site are discussed below.
STATE/TRIBAL EC and IC	SP	No	0	N/A
STATE/TRIBAL VCP	0.5	No	1	No
STATE/TRIBAL BROWNFIELD	0.5	No	0	N/A
ORPHAN	N/A	No	5	No; none of the identified orphan sites are located in the immediate vicinity (500-feet) of the subject property, and/or based upon the distance and relative gradient, the sites are not expected to represent a significant environmental concern.
ADDITIONAL ENVIRONMENTAL RECORD SOURCES	SP/ADJ	No	8	Yes; the all of the adjacent sites are discussed below.

SP: subject property
ADJ: adjacent property

Facility Name:	Randtron Antenna Systems, a Division of L3 Comm; L3 Communications Corp.
Databases:	RCRA SQG, San Mateo Co. BI, NPDES, WDS
Address:	130 Constitution Drive
Distance:	Adjacent
Direction:	Northeast

Comments:
According to the database report, L3 Communications Corp. generates one to five tons of hazardous waste per year and stores less than 1,199 gallons, 9,999 pounds, and/or 4,799 cubic feet of hazardous materials. Hazardous wastes listed in the RCRA SQG database include ignitable hazardous wastes, wastes with pH less than 2 or greater than 12.5, reactive hazardous wastes, chromium, methyl ethyl ketone, and non-halogenated solvents. This facility was also identified for treating wastewater generated from manufacturing processes. No further pertinent information was provided in the database report. Environmental concerns regarding the Randtron facility were previously discussed in Section 4.1.1.

Facility Name:	Moreing Company
Databases:	SLIC, LUST, Historical Cortese
Address:	120 Constitution Drive
Distance:	Adjacent
Direction:	North

Comments:

According to the database report, the northern adjacent property was identified for releases of gasoline and VOCs, which resulted in the opening of LUST and SLIC cases, respectively. The type of media impacted is not indicated in the database report. The SLIC case reportedly received closure in 1970 and the LUST case in 1998. No further pertinent information was provided in the database report or on the RWQCB's GeoTracker website.

According to records obtained from the SMCEHD, a 1,000-gallon gasoline UST was removed from the eastern portion of this site in 1986. A groundwater sample collected from the tank excavation contained 6,700 µg/L of gasoline, 460 µg/L of benzene, 470 µg/L of toluene, and 1,700 µg/L of xylenes and ethylbenzene. No further assessment was conducted at this site until 1993, when three groundwater monitoring wells (MW-1 through MW-3) were installed to the north (MW-1 and MW-3) and northeast (MW-2) of the former UST to determine the extent of the contamination. Groundwater samples from the wells contained minor levels of benzene and no other gasoline contaminants. Groundwater was measured flowing to the east. Subsequent groundwater monitoring events indicated no detectable concentrations of gasoline or BTEX in groundwater samples; however, groundwater samples were analyzed for HVOCs in December 1993, and concentrations of TCE were detected at 1,100 to 1,200 µg/L and 1,1-DCE at 36 to 40 µg/L. No other HVOCs were detected in the groundwater samples. During this sampling event, groundwater was measured flowing to the southwest. Two additional monitoring wells (MW-4 and MW-5) were installed up-gradient in the southwestern portion of the property in March 1994 to explore an up-gradient off-site source of the TCE and 1,1-DCE in the groundwater, as no potential on-site source of TCE was identified. Concentrations of TCE and 1,1-DCE were less in groundwater samples collected from MW-4 and MW-5 with TCE detected at 180 to 350 µg/L and 1,1 DCE at non-detectable to 33 µg/L. Concentrations of TCE in MW-1 through MW-3 were detected at 900 to 1,700 µg/L (with the highest concentration detected at MW-2) and 1,1,-DCE at non-detectable in MW-1 and MW-3 and at 36 µg/L in MW-2. Groundwater was measured flowing to the northwest during this monitoring event. In July 1994, temporary piezometers (TP-1 and TP-2) were installed along the eastern boundary of the property, and groundwater samples were collected and analyzed for VOCs. Concentrations of TCE in TP-1 and TP-2 were detected at 370 to 740 µg/L; 1,1-DCE at 14 to 30 µg/L; and 1,1,1-TCA at 12 to 18 µg/L. Additionally, research was conducted at the Menlo Park Fire Department for hazardous materials handling conducted by the sites adjacent to 120 Constitution Drive to determine a potential off-site source of the chlorinated solvent contamination, including Loral Randtron Systems occupying the northeastern adjacent property at 130 Constitution Drive, the subject property at 123 and 125 Independence Drive, the eastern adjacent at 127 Independence Drive, and the other nearby sites at 150 Constitution Drive and 1150 Chrysler Drive. The research indicated VOCs were stored at the Randtron facility. The 1987 HMBP for Randtron was included in the appendices of this investigation report, which was previously discussed in Section 4.1.1 and indicated the use of 1,1,1-TCA by Randtron. Additionally, research for 115 Independence Drive was conducted, which indicated Raychem Corporation's GelTek Systems also stored hazardous substances. Another temporary piezometer (TP-3) was installed along the eastern property boundary in May 1995, and groundwater levels were measured at the monitoring wells to determine the direction of groundwater flow, which was found to be to the east-northeast. Groundwater flow was thought to be influenced by the tide, based on the shifting directions of the groundwater, making finding an up-gradient source of the chlorinated solvent plume difficult. Groundwater samples collected from TP-3 contained 490 µg/L of TCE and no other detectable VOCs. This site eventually received "no further action" status concerning VOCs from the RWQCB in 1998, with the RWQCB stating that a regional TCE plume exists in the area based on groundwater monitoring data obtained at this site, as well as at 110 Constitution Drive, 115 and 119 Independence Drive (discussed below) and 149 Commonwealth Drive. The VOC contamination

Facility Name:	Moreing Company
Databases:	SLIC, LUST, Historical Cortese

at these sites were in a similar range.

SMCEHD records for the northern adjacent site also contained a subsurface investigation report dated May 13, 2010, documenting soil gas and groundwater sampling conducted at the northern adjacent property to assess for the presence of VOCs in shallow soil, the results of which were then used to assess the potential for VOCs to impact indoor air inside the building. Soil gas samples were collected at 3-3.5 feet bgs from two borings located near the northeast corner of the building. Groundwater samples were also collected from these two borings. According to the report, the soil gas samples contained a variety of detected VOCs, all of which were well below ESLs for shallow soil gas for both residential and commercial/industrial land use. The groundwater samples contained concentrations of TCE at 6 to 110 µg/L, cis-1,2-DCE at 5 to 27 µg/L, acetone at 18 µg/L, and minor levels of other VOCs; no detectable levels of 1,1,1-TCA were found in the groundwater samples.

SMCEHD records reviewed for this site indicate that a regional TCE groundwater plume exists in the surrounding area. Assessments conducted for this site did not identify a potential on-site source of chlorinated solvents; however, a former insurance company tenant conducted printing operations on site, but no information was found regarding the types of hazardous substances used by this former tenant. Based on the presence of 1,1,1-TCA in groundwater samples collected at this site along the eastern property boundary (TP-1 and TP-2) and that records from the SMCEHD, discussed in Section 4.1.1, indicate Randtron used 1,1,1-TCA during their operations, there is a great likelihood that operations conducted by Randtron have contributed to the regional chlorinated solvent groundwater plume. The presence of a regional chlorinated solvent groundwater plume is considered an REC.

Facility Name:	J. Seibert Machine Corp.
Databases:	EnviroStor, San Mateo Co. BI
Address:	119 Independence Drive
Distance:	Adjacent
Direction:	Northwest

Comments:
According to the database report, J. Seibert Machine Corp. was permitted by the County for generating less than 27 gallons per year of hazardous wastes and for the storage of hazardous substances less than 219 gallons, 1,999 pounds, and/or 879 cubic feet. The EnviroStor database indicates this facility was identified as inactive during initial research in 1980; in 1988, a site screening was performed, indicating that more information was needed. No further pertinent information was provided in the database report or on the DTSC's EnviroStor website.

Records for this site were obtained from the SMCEHD which indicate that two groundwater monitoring wells (MW-1 and MW-2) were located on the northwestern adjacent property, which were sampled in October 2009 for VOCs. Concentrations of TCE were detected at 108 to 303 µg/L; 1,1-DCE at 0.61 to 1.9 µg/L; and cis-1,2-DCE at 8.9 to 22.4 µg/L; no other VOCs were detected. The monitoring wells were destroyed in April 2011, apparently because the wells were not being sampled annually as a part of a requirement for due diligence purposes. SMCEHD records indicate that the wells may have been installed as a part of an effort to evaluate regional groundwater contamination and were installed in 1987 and 1991. No information was found in the SMCEHD records that indicate that this site is a source of the region-wide chlorinated solvent groundwater plume. However, as discussed later in this section, RWQCB records obtained for the property at 115 Independence Drive indicate the northwestern adjacent property was formerly occupied by Raychem, which appears to be of interest as a source of the regional groundwater plume. As previously indicated in this section, the presence of a regional chlorinated solvent groundwater plume is considered an REC.

Facility Name:	Cybeq Systems
Database:	San Mateo Co. BI
Address:	150 Independence Drive
Distance:	Adjacent, across Independence Drive
Direction:	South

Comments:
According to the database report, Cybeq Systems was permitted by the County for the generation and recycling of waste oils and solvents of less than one ton per year. Cybeq was also permitted for hazardous materials storage of less than 15,999 gallons, 111,999 pounds, and/or 5,599 cubic feet. This site was not identified on any databases reporting releases of hazardous substances to the subsurface. Based on the lack of a documented release, this site is not expected to represent a significant environmental concern at this time.

Facility Name:	Cabochon Aesthetics, Inc.
Database:	San Mateo Co. BI
Address:	127 Independence Drive
Distance:	Adjacent
Direction:	East

Comments:
According to the database report, Cabochon Aesthetics, Inc. was permitted by the County for the generation and recycling of waste oils and solvents and storing motor vehicle fuels or waste only. No further pertinent information was provided in the database report.

The eastern adjacent site was formerly occupied by Randtron Antenna Systems, the current tenant of the subject property and northeastern adjacent properties. Environmental concerns regarding the Randtron facility were previously discussed in Section 4.1.1.

Facility Name:	Raychem Corporation
Databases:	San Mateo Co. BI, EMI
Address:	120 Independence Drive
Distance:	Adjacent, across Independence Drive
Direction:	West

Comments:
According to the database report, Raychem Corporation was permitted by the County for the generation and recycling of waste oils and solvents and the storage of hazardous materials less than 219 gallons, 1,999 pounds, and/or 879 cubic feet. This facility was permitted by the BAAQMD in 1987. No further pertinent information was provided in the database report. This site was not identified on any databases reporting releases of hazardous substances to the subsurface. Based on the lack of a documented release, this site is not expected to represent a significant environmental concern at this time. However, as discussed below, Raychem occupied the northwestern adjacent property, as well as the nearby property at 115 Independence Drive, appears to be of interest as a source of the regional groundwater plume.

Facility Name:	Studio Red
Databases:	SLIC, San Mateo Co. BI, EMI
Address:	115 Independence Drive
Distance:	0.04-mile
Direction:	Northwest

Comments:
According to the database, this site is an open SLIC case. This site was permitted by the County for the generation of less than 27 gallons of hazardous wastes per year and was also permitted by the BAAQMD in 1990. No further pertinent information was provided in the database report

Facility Name:	Studio Red
Databases:	SLIC, San Mateo Co. BI, EMI

Information was obtained from the RWQCB's GeoTracker website for this site, including a Phase I ESA dated 1996, which indicates that this site was originally used for semiconductor component manufacturing from approximately 1967 to 1983, which included the use of a neutralizer tank, a concrete pad for liquid nitrogen, an RNH canopy, a machine shop, laboratory, dark room, and diffusion room. A floor drain was observed inside the building in the area of a former chemical storage room; the concrete around the drain was observed to be patched, during the Phase I ESA. The medical products and GelTek Divisions of Raychem occupied this site from approximately 1983 to 1994, as well as the northwestern adjacent property from approximately 1981 to 1994. The Phase I ESA noted that a release case was still open at this site under the jurisdiction of the DTSC and the RWQCB. Two groundwater monitoring wells (MW-1 and MW-2) were located at this site, from which groundwater samples were collected in 1989 that contained 590 to 610 µg/L of TCE and 25 µg/L of DCE. Additionally the groundwater sample collected from MW-2 contained 50 µg/L of cadmium, 150 µg/L of chromium, and 130 µg/L of silver. The Phase I ESA also indicates that one of the groundwater monitoring wells at the northwestern adjacent property at 119 Independence Drive was also sampled in 1987 and contained 420 µg/L of TCE, 35 µg/L of DCE, and 35, 000 µg/L of chlorobenzene. A soil sample was collected two feet north of the floor drain at 115 Independence Drive, directly below the concrete slab, and contained 0.005 ppm of TCE. According to the Phase I ESA, the RWQCB's position regarding the open release case associated with this site is that soil and groundwater have not been adequately characterized; this was likely to be required before the site was removed from the North Bay Toxics list. The RWQCB issued a letter in June 1997 indicating that a responsible party had not been identified for the groundwater contamination in the area and that should a responsible party be identified at a later time, remediation of the groundwater beneath this site may be required. No other more recent sampling data was found for this site on the GeoTracker website. Additionally, the RWQCB was contacted to determine whether they had any additional records for this site at their office, and they responded indicating they had no other records. As previously indicated in this section, the presence of a regional chlorinated solvent groundwater plume is considered an REC.

Facility Name:	Exponent, Inc.
Databases:	LUST, SLIC, Historical Cortese, San Mateo Co. BI
Address:	149 Commonwealth
Distance:	0.275-mile
Direction:	Southeast

Comments:
The database indicates this site is an open, inactive SLIC case as of 2002 and is also a closed LUST site. According to documentation obtained from the RWQCB's GeoTracker website, two on-site groundwater monitoring wells were sampled in 1987 and contained concentration of TCE at 630 µg/L, 1,1-DCE at 1.1 µg/L, cis-1,2-DCE at 41 µg/L, and 1,1,1-TCA at 0.9 µg/L. This site was reportedly only used for liquor storage and was vacant at the time of the 1987 assessment. More recent sampling data was not available on the GeoTracker's website. Again, as previously indicated in this section, the presence of a regional chlorinated solvent groundwater plume is considered an REC.

Facility Name:	Fitness 101 and Former Critchfield Mechanical Facilities
Database:	SLIC
Address:	4085 Campbell Avenue
Distance:	0.261-mile
Direction:	West-southwest

Comments:
This site was identified as an open SLIC site for the release of PCE to groundwater. The latest groundwater monitoring report for this site was obtained from the RWQCB's GeoTracker website, which indicates groundwater monitoring was conducted in August 2014. The closest groundwater monitoring

Facility Name:	Fitness 101 and Former Critchfield Mechanical Facilities
Database:	SLIC
wells to the subject property, approximately 1,000 feet to the southwest, contained 24 to 72 µg/L of PCE and 5.6 to 11 µg/L of TCE, as well as other lower levels of VOCs. The source of the VOCs at this site is unknown. Again, the presence of a regional chlorinated solvent groundwater plume is considered an REC.	

Facility Name:	Siltec
Database:	SLIC
Address:	3695-3723 Haven Avenue
Distance:	0.284-mile
Direction:	West-northwest
Comments:	
This site was identified as an open SLIC site in the database for the release of chlorinated hydrocarbons to groundwater and soil including TCE and vinyl chloride. The latest groundwater monitoring report for this site was obtained from the RWQCB's GeoTracker website, which indicates groundwater monitoring was conducted in 2008 and 2009 from three particular groundwater monitoring wells to evaluate the stability of the VOC plume at this site in the B-Zone. The closest groundwater monitoring well to the subject property, MW-FE2B, approximately 1,130 feet to the northwest, contained a maximum of 324 µg/L of TCE, 64.5 µg/L of cis-1,2-DCE, 0.79 µg/L of 1,1,1-TCA, 228 µg/L of CFC-113, and 12.4 µg/L of chloroform. It was noted in a 2013 document requesting closure for this site that concentrations of minor constituents, such as 1,1,1-TCA and 1,1-DCA, have been detected in groundwater samples collected from off-site wells, but these chemicals were not detected in on-site wells, suggesting that other sources of chemicals in off-site groundwater may exist. This site was formerly used for semiconductor manufacturing, and groundwater monitoring was conducted at this site for 13 years. VOCs in groundwater have migrated off-site to the east and northeast, but the concentrations of chemicals of concern in groundwater, principally TCE and cis-1,2-DCE, have stabilized or declined over this time period through natural attenuation. In June 2014, the RWQCB agreed that No Further Action was required at this site. There is a potential that the groundwater plume at this site has impacted the area of the subject property and commingled with groundwater plumes from other sources. The presence of 1,1,1-TCA in groundwater samples at off-site wells used for this site, suggest that Randtron's former use of 1,1,1-TCA may have impacted the groundwater in the area. Again, the presence of a regional chlorinated solvent groundwater plume is considered an REC.	

5.2 VAPOR MIGRATION

AEI reviewed reasonably ascertainable information for the subject and nearby properties, including a regulatory database, files for nearby release sites, and/or historical documentation, to determine if potential vapor-phase migration concerns may be present which could impact the subject property.

During the course of Phase I ESA activities, AEI identified the following sites/sources for vapor-phase migration which could potentially impact the subject property:

Site Name/Address
Regional chlorinated solvent groundwater plume
Randtron Antenna Systems/130 & 150 Constitution Drive, 127 Independence Drive, and 1150 Chrysler Drive
J. Seibert Machine Corp./ 119 Independence Drive
Studio Red/ 115 Independence Drive
Siltec/3695-3723 Haven Avenue

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 INTERVIEW WITH OWNER

Ms. Corrine Satalaya, a representative of the subject property ownership, Balco Properties, was contacted via telephone and email on December 5 through 17, 2014. Ms. Satalaya has been associated with the subject property since June 2014, approximately six months, when Balco Properties purchased the subject property. Therefore, Ms. Satalaya, had very limited information regarding the subject property. Ms. Satalaya was asked if she was aware of any of the following:

Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.	☐Yes ☒ No
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.	☐Yes ☒ No
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.	☐Yes ☒ No
Any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality.	☐Yes ☒ No

6.1.2 INTERVIEW WITH KEY SITE MANAGER

The key site manager, Mr. Randy Perkins of L3 Randtron Antenna Systems, was contacted in person on January 8, 2015. Mr. Perkins has been associated with the subject property for approximately 12 years. Mr. Perkins indicated that coworkers had stated that they had started work at the subject property building with Randtron in 1979. Mr. Perkins believes that Randtron has conducted the same operations, since they began their occupancy of the subject property. Mr. Perkins was not aware of the use of chlorinated solvents at the subject property or by Randtron in general. Mr. Perkins was asked if he was aware of any of the following:

Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.	☐Yes ☒ No
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.	☐Yes ☒ No
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.	☐Yes ☒ No
Any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality.	☐Yes ☒ No

6.1.3 PAST OWNERS, OPERATORS AND OCCUPANTS

In attempt to interview past owners, operators and occupants regarding historical on-site operations, AEI requested the contact information for these entities from Ms. Corrine Satalaya, a representative of the subject property ownership. Ms. Satalaya was unable to provide the

contact information for the past owners, operators and occupants. Other methods of researching the contact information for past owners, operators and occupants are performed by AEI when a data gap is encountered and/or if an item of environmental concern is identified for the subject property, which include reviewing historical agency records and/or online research, none of which were encountered during the course of this investigation. As such, interviews with past owners, operators and occupants regarding historical on-site operations were not reasonably ascertainable.

6.1.4 INTERVIEW WITH OTHERS

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

6.2 USER PROVIDED INFORMATION

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

6.3 PREVIOUS REPORTS AND OTHER PROVIDED DOCUMENTATION

No prior reports or other relevant documentation in association with the subject property was made available to AEI during the course of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	January 8, 2015
AEI Site Assessor	Carrie Locke
Property Escort/Relationship to Property	Randy Perkins/Environmental Health & Safety Facilities Manager
Units/Areas Observed	Hallway, break room, restrooms, small antenna assembly room, and mezzanine level
Areas not accessed/Reasons	Two anechoic chambers used for testing of antennae, three classified conference rooms, interiors of the two storage sheds, and the attached compressor shed/These are areas where classified and sensitive operations are conducted for the DOD, and keys were not found for the sheds.
Weather	Clear and sunny

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
☒	☐	Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use
☐	☒	Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs)
☐	☒	Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use
☐	☒	Unidentified Substance Containers
☒	☐	Electrical or Mechanical Equipment Likely to Contain Fluids
☐	☒	Interior Stains or Corrosion
☐	☒	Strong, Pungent or Noxious Odors
☐	☒	Pools of Liquid
☐	☒	Drains, Sumps and Clarifiers
☐	☒	Pits, Ponds and Lagoons
☐	☒	Stained Soil or Pavement
☐	☒	Stressed Vegetation
☐	☒	Solid Waste Disposal or Evidence of Fill Materials
☐	☒	Waste Water Discharges
☐	☒	Wells
☐	☒	Septic Systems
☐	☒	Biomedical Wastes
☐	☒	Other

The subject property is currently occupied by L3 Randtron Antenna Systems. On-site operations consist of the assembly of small antennae used on DOD aircraft, light machining of metal parts used for the antennae, testing of antennae in anechoic chambers, and typical office activities

REGULATED HAZARDOUS SUBSTANCES/WASTES AND/OR PETROLEUM PRODUCTS IN CONNECTION WITH PROPERTY USE

Regulated Hazardous Substances/Wastes (size/quantity)	Location	Operations Associated with Material	Secondary Containment	Staining/ Spills
Four (4) five-gallon container of solder	Flammable storage cabinet in antenna assembly room	Assembly of small antennae	☒Yes ☐ No	☐Yes ☒ No
Epoxies, adhesives, acetone, and isopropyl alcohol in small containers, less than a liter	Flammable storage cabinet in antenna assembly room	Assembly of small antennae	☒Yes ☐ No	☐Yes ☒ No
One (1) five-gallon container of resin	Flammable storage cabinet in antenna assembly room	Assembly of small antennae	☒Yes ☐ No	☐Yes ☒ No
One (1) 2.5-gallon container of waste acetone and isopropyl alcohol	Flammable storage cabinet in antenna assembly room	Assembly of small antennae	☒Yes ☐ No	☐Yes ☒ No
One (1) 14-gallon container and seven (7) 6-gallon containers of waste wipes	Throughout antenna assembly room	Assembly of small antennae	☒Yes ☐ No	☐Yes ☒ No

Besides the hazardous waste cans used for storage of the waste wipes, hazardous substances handled at the subject property are stored in a flammable storage cabinet located in the antenna assembly room. Work stations in the antenna assembly room are equipped with small containers of acetone and isopropyl alcohol, used for wiping down metal surfaces of components of the antennae. No leaks, spills, staining, floor drains, or other conduits to the subsurface were observed in the vicinity of the flammable storage cabinet or at the work station. Excellent housekeeping was observed throughout the areas accessed by AEI. Based on these observations, the handling of the hazardous substances listed in the above table are not expected to represent a significant environmental concern.

ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing". Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

Type	Quantity	Owner	Presumed Date of Installation	Spills or Stains Observed	Non-PCB Label
Pole-Mounted	2	PG&E	1960/1961	☐Yes ☒ No	☐Yes ☒ No

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Transformers installed prior to 1977 may be PCB containing while transformers installed after 1977 are unlikely to be PCB containing. Federal Regulations (40 CFR 761 Subpart G) require any release of material containing >50 ppm PCB and occurring after May 4, 1987, be cleaned up by the transformer owner following the United States EPA's PCB spill cleanup policy.

AEI did not observe evidence of spills, staining or leaks on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

7.2 ADJACENT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
☐	☒	Hazardous Substances and/or Petroleum Products in Connection with Property Use
☐	☒	Aboveground and Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs)
☐	☒	Hazardous Substance and Petroleum Product Containers and Unidentified Containers Not in Connection with Property Use
☐	☒	Unidentified Substance Containers
☒	☐	Electrical or Mechanical Equipment Likely to Contain Fluids
☐	☒	Strong, Pungent or Noxious Odors
☐	☒	Pools of Liquid
☐	☒	Drains, Sumps and Clarifiers
☐	☒	Pits, Ponds and Lagoons
☐	☒	Stained Soil or Pavement
☐	☒	Stressed Vegetation
☐	☒	Solid Waste Disposal or Evidence of Fill Materials
☐	☒	Waste Water Discharges
☐	☒	Wells
☐	☒	Septic Systems
☐	☒	Other

ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Transformers

Several pole-mounted and pad-mounted transformers were observed on the adjacent sites during the site reconnaissance. No spills, staining or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

8.0 OTHER ENVIRONMENTAL CONSIDERATIONS

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Asbestos is the name for a group of naturally occurring silicate minerals that are considered to be "fibrous" and through processing can be separated into smaller and smaller fibers. The fibers are strong, durable, chemical resistant, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos was considered an ideal product and has been used in thousands of consumer, industrial, maritime, automotive, scientific and building products.

At the federal level, asbestos is primarily regulated by the US Environmental Protection Agency (USEPA) primarily through the EPA's National Emission Standards for Hazardous Air Pollutants (EPA's NESHAP Standard 40 CFR Chapter 61, Subpart M), the Occupational Health and Safety Administration (OSHA) through the General Industry Standard and the Construction Industry Standard (29 CFR 1926.1101 and 29 CFR 1910.1001). Many states have regulations in place for the inspection, management, and remediation of asbestos including company and individual licensing requirements for all activities relating to asbestos. Under both federal and state regulations building Owners and employers may be required to perform certain activities related to the in-place management of asbestos, and prior to renovations or demolition activities (i.e. asbestos inspections or remediation) that may disturb building materials suspected of containing asbestos.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Due to the age of the subject property building, there is a potential that ACMs are present. A limited list of typical suspect ACMs is included in the following table:

Typical Suspect ACMs

Material Type	Location
Plaster (Acoustical and Smooth)	Walls and Ceilings
Ceiling Tile	Ceiling Systems
Thermal Systems Insulations, Packings, Gaskets	Heating Systems, Cooling Systems, Domestic and Heating and Cooling Piping, Ductwork, Other Equipment
Floor Tile and Associated Mastics, Flooring Felts, Papers (under hardwood/other)	Floors
Vinyl Sheet Flooring and Adhesives	Floors
Cove Base and Associated Mastics	Walls
Ceramic Tile Adhesives and Grouts	Walls and Floors and Ceilings
All Adhesives	Mirrors, Wall Coverings, Construction, etc.
Grout and Caulking	Windows and Doors
Gypsum Board, Tape and Joint Compound	Wall and Ceiling Systems
Insulation Materials	Walls, Ceilings, Attic Spaces
Roofing Materials (Felts, Rolled, Shingle, Flashings, Adhesives, Tar, Insulations)	Roof and Parapet Wall Systems
Brick and Block, Mortars	Walls

All observed suspect ACMs at the subject property were in good condition at the time of the site reconnaissance and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Based on the potential presence of ACMs, AEI recommends the implementation of an O&M Plan which stipulates that the repair and maintenance of damaged materials should be performed to protect the health and safety of the building occupants. In the event that building renovation or demolition activities are planned, a thorough asbestos survey to identify asbestos-containing building materials is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb suspect ACMs.

8.2 LEAD-BASED PAINT

LBP is defined as any paint, varnish, stain, or other applied coating that has ≥1 mg/cm^2 (5,000 µg/g or 5,000 ppm) of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm^2 to 2.0 mg/cm^2. Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X", defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard", although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, federally owned or subsidized housing is affected by this rule.

LCP is defined as any paint with any detectable amount of lead present in it. It is important to note that LCP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LCP is subject to abrading, sanding, torching and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state or local regulations in regards to LCP.

In buildings constructed after 1978, it is unlikely that LBP is present. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

Due to the age of the subject property building, there is a potential that LBP is present. All observed painted surfaces were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Local regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. Actual material samples would need to be collected or an XRF survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

8.3 RADON

Radon is a naturally-occurring, odorless, invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The United States EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action Limit of 4.0 pCi/L. It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the United States EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2 pCi/L and 4 pCi/L, which is equal to or below the action level of 4 pCi/L set forth by the EPA.

8.4 DRINKING WATER SOURCES AND LEAD IN DRINKING WATER

The Menlo Park Municipal Water District (MPMWD) supplies potable water to the subject property. The most recent water quality report states that lead levels in the area's water supply are well within standards established by the US EPA.

8.5 MOLD/INDOOR AIR QUALITY ISSUES

Molds are simple, microscopic organisms, which can often be seen in the form of discoloration, frequently green, gray, white, brown or black. When excessive moisture or water accumulates indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or is not addressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting often play host to such growth. Mold spores primarily cause health problems through the inhalation of mold spores or the toxins they emit when they are present in large numbers. This can occur primarily when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

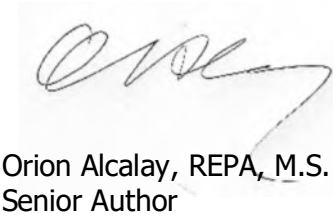
AEI observed interior areas of the subject property in order to identify the presence/absence of visible mold (fungal) growth. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage. As such, bulk sampling of suspect surfaces was not conducted as part of this assessment and additional action with respect to mold does not appear to be warranted at this time.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based

on observed areas) mold growth is present at the subject property. Additional areas of mold not observed as part of this limited assessment, possibly in pipe chases, HVAC systems and behind enclosed walls and ceilings, may be present on the subject property.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.



We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/10/2014 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/10/2014 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/10/2014 has revealed that there are 12 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/10/2014 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/05/2014 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 08/18/2014 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 08/05/2014 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/10/2014 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EXECUTIVE SUMMARY

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there is 1 EDR US Hist Auto Stat site within approximately 0.25 miles of the target property.

Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 04/17/1997
Site name: L 3 COMMUNICATIONS RANDTRON SYS
Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D007
Waste name: CHROMIUM

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

RANDTRON ANTENNA SYS A DIV OF L 3 COMM (Continued) **1000192898**

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No

RANDTRON ANTENNA SYSTEMS (Continued) **1008879896**

Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 10/05/2005
Site name: RANTRON ANTENNA SYSTEMS
Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS

RANDTRON ANTENNA SYSTEMS (Continued) **1008879896**

CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F019
Waste name: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Violation Status: No violations found

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

FINDS:

Registry ID: 110002146302

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

FINDS:

Registry ID: 110002795431

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History:	Extracted from Geologica's October 2, 2013 Supplemental Soil Sampling and Remedial Excavation Completion Report. San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. In April 2013, GEOLOGICA completed a supplemental soil quality sampling investigation of the former CT International site at 3645 Haven Avenue in Menlo Park, CA. The investigation was conducted to evaluate soil quality conditions relative to the current Residential Environmental Screening Levels (ESLs) established by the San Francisco Bay Regional Water Quality Control Board (RWQCB). Between June and August 2013, GEOLOGICA conducted a focused soil excavation program to remove soil containing petroleum hydrocarbons and/or lead at concentrations greater than the RWQCBs Residential ESLs. This scope of work was developed by GEOLOGICA based on discussion with Mr. Charles Ice of the San Mateo County Environmental Health System (SMCEHS). The purpose of the investigation and excavation was to remove the no-residential use deed restriction on the property.

Case Worker:	CLI
Local Agency:	SAN MATEO COUNTY LOP
RB Case Number:	Not reported
File Location:	Not reported
Potential Media Affected:	Contaminated Surface / Structure, Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Other Chlorinated Hydrocarbons, Chlordane, DDD / DDE / DDT, Other Insecticides / Pesticide / Fumigants / Herbicides, Copper, Mercury (elemental), Other Metal, Diesel, Ethylbenzene, Gasoline, Napthalene, Waste Oil / Motor / Hydraulic / Lubricating
Site History:	Extrated from AMEC's July 24, 2013 Site Management Plan. San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The site is located in an industrial portion of Menlo Park, San Mateo County, California, between Highway 101 and the San Francisco Bay (Figure 1). The overall site is bounded by Haven Avenue to the south, 3585 Haven Avenue to the west, 3645 Haven Avenue to the east, and 3641 Haven Avenue and salt ponds to the north. The site is relatively flat, sloping gently to the north toward San Francisco Bay. AMEC understands that SAP intends to develop the site for multi-unit rental housing. Figure 2 presents an initial proposed layout for the residential complex. In addition, AMEC understands that SAP intends to raise the site elevation by approximately 2.5 to 3 feet through the import of clean fill material to be compacted on site prior to development. In general, approximately 2 to 3 feet of fill is distributed across the site. The fill material is of varying quality and includes debris such as wood, rubber material, concrete, brick, and ceramics. The results of the Phase II ESA activities indicate that the general character of chemical impacts to the fill material are likely insignificant relative to residential human health screening criteria1, with the exception of the following locations: h At the northwestern portion of the site, impacted soil was identified at boring location SB-13 (Figure 3), which may be associated with the historical operation of an automotive salvage facility. h At one boring location (SB-10) within an enclosed yard north of the 3611 Haven Avenue building, several pesticides were detected at concentrations exceeding their respective residential Environmental Screening Levels (ESLs) in the soil sample collected at 1 foot bgs. h One polychlorinated biphenyl (PCB) congener (PCB-1260) was detected above its residential ESL in the surface soil sample (SB-19-SUR) collected adjacent to a transformer located west of the 3611 Haven Avenue building. Concrete samples were collected from the pad around the transformer and the swale directly adjacent to the pad to evaluate whether the materials will require special handling during demolition activities. PCBs were not detected in any concrete samples, indicating that the concrete may be disposed of as part of the building demolition.

Waste name: 724

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

TYCO ELECTRONICS (Continued) **1000170323**

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D011
Waste name: SILVER
Amount (Lbs): 9035

Waste code: D026
Waste name: CRESOL
Amount (Lbs): 7748

Waste code: D035
Waste name: METHYL ETHYL KETONE
Amount (Lbs): 16677

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 24708

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 16960

TYCO ELECTRONICS (Continued) **1000170323**

Waste code: LABP
Waste name: LAB PACK
Amount (Lbs): 7748

Waste code: P015
Waste name: BERYLLIUM
Amount (Lbs): 12

Waste code: P029
Waste name: COPPER CYANIDE
Amount (Lbs): 8

Waste code: P030
Waste name: CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED
Amount (Lbs): 8

Waste code: P087
Waste name: OSMIUM OXIDE OSO4, (T-4)-
Amount (Lbs): 7

Waste code: P098
Waste name: POTASSIUM CYANIDE
Amount (Lbs): 14

Waste code: P099
Waste name: ARGENTATE(1-), BIS(CYANO-C)-, POTASSIUM
Amount (Lbs): 14

Waste code: U080
Waste name: METHANE, DICHLORO-
Amount (Lbs): 7748

Waste code: U134
Waste name: HYDROFLUORIC ACID (C,T)
Amount (Lbs): 1643

Waste code: U160
Waste name: 2-BUTANONE, PEROXIDE (R,T)
Amount (Lbs): 7748

Corrective Action Summary:
Event date: 05/01/1986
Event: CA049PA

Event date: 05/01/1986
Event: CA074HI

Event date: 05/01/1986
Event: CA029ST

Event date: 08/01/1986
Event: CA049SI

Event date: 10/02/1989
Event: RFA Completed

TYCO ELECTRONICS (Continued) **1000170323**

Event date: 04/11/1994
Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

Event date: 04/11/1994
Event: Stabilization Measures Evaluation,This facility is amenable to stabilization activity based on the status of corrective action work at the facility, technical factors, the degree of risk, timing considerations and administrative considerations.

Event date: 06/26/1996
Event: CA021

Event date: 06/26/1996
Event: RFI Imposition

Event date: 10/07/2002
Event: RFI Workplan Approved

Event date: 10/07/2002
Event: RFI Approved

Event date: 10/10/2002
Event: CMI Workplan Approved

Event date: 03/05/2004
Event: RFI Approved

Event date: 06/04/2004
Event: RFI Workplan Approved

Event date: 10/04/2004
Event: RFI Approved

Event date: 04/26/2005
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 07/10/2006
Event: CMS Approved

Event date: 07/27/2006
Event: Date For Public Notice On Proposed Remedy

Event date: 11/30/2006
Event: Date For Remedy Selection (CM Imposed)

Event date: 11/30/2006
Event: Date For Remedy Selection (CM Imposed)

Event date: 01/19/2007
Event: CA772GC

TYCO ELECTRONICS (Continued) **1000170323**

Event date: 02/02/2007
Event: Stabilization Measures Implemented, Primary measure is source removal and/or treatment (e.g., soil or waste excavation, in-situ soil treatment, off-site treatment).

Event date: 04/18/2007
Event: CA650SR

Event date: 07/27/2007
Event: CA772GC

Event date: 09/06/2007
Event: Certification Of Remedy Completion Or Construction Completion

Event date: 09/06/2007
Event: CA550RC

Event date: 02/01/2008
Event: CA805

Event date: 03/30/2011
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TSCA SUBMITTER

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that

TYCO ELECTRONICS (Continued) **1000170323**

these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	06/20/1991
Comments:	Raychem Corporation submitted a PEA to the Dept on 5/17/91. Results of the PEA indicate PCB in soil above extremely hazardous ttlc.

TYCO ELECTRONICS (Continued) **1000170323**

Contaminated GW under site. A residential neighborhood and a school are located less than 200' to the South of site. A tidal slough and sensitive wetland are adjacent to the north boundary of the site. High-tech chemical, plastics and materials manufacturer operated at site since 1965. PEA submitted in May 1991 indicates that nickel and cadmium may be present in soils above their respective TTLC and/or STLC. Elevated levels of solvents found in GW under the site. PCB found in soils at levels above the extremely hazardous waste TTLC. PCB has also migrated off-site via surface runoff. Draft ISE determination and RAO sent to TLO for review on June 11, 1991.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Land type:	Facility is not located on Indian land. Additional information is not known.
Classification:	TSDF
Description:	Handler is engaged in the treatment, storage or disposal of hazardous waste

Owner/Operator Summary:

Owner/operator name:	GENERAL CIRCUITS, INC.
Owner/operator address:	3549 J HAVEN AVENUE CITY NOT REPORTED, CA 99999
Owner/operator country:	Not reported
Owner/operator telephone:	(415) 364-7717
Legal status:	Private
Owner/Operator Type:	Operator
Owner/Op start date:	Not reported
Owner/Op end date:	Not reported

Owner/operator name:	HAVEN ASSOCIATES
Owner/operator address:	100 HARBOR BLVD BELMONT, CA 94002
Owner/operator country:	Not reported
Owner/operator telephone:	(415) 592-0933
Legal status:	Private
Owner/Operator Type:	Owner
Owner/Op start date:	Not reported
Owner/Op end date:	Not reported

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No

GENERAL CIRCUITS INC. (Continued) **1000214027**

User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/29/2014

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/29/2014

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 09/29/2014

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Last EDR Contact: 12/03/2014
Next Scheduled EDR Contact: 03/16/2015
Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/25/2014

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

SSTS: Section 7 Tracking Systems
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009

Next Scheduled EDR Contact: 12/22/2014
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Data Release Frequency: No Update Planned

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HWT: Registered Hazardous Waste Transporter Database
A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

On April 1, 2014, the Fire District conducted a Fire Safety Inspection at the above referenced location. During the inspection the following items were noted as requiring compliance to the 2013 California Fire Code:

130 Constitution Drive
There were no Fire Code violations noted at the time of this inspection.

150 Constitution Drive
There were no Fire Code violations noted at the time of this inspection.

123 Jefferson.
Provide copies of most recent Safety Inspection Records for the classified areas.
There were no Fire Code violations noted in unclassified areas, at the time of this inspection.

138 Jefferson Drive
There were no Fire Code violations noted at the time of this inspection.

1150 Chrysler Drive
There were no Fire Code violations noted at the time of this inspection.

You will be given 30 days from the above date to submit a letter, email, or Fax to the Fire District stating compliance to the above items. If you have any questions or need addition time for compliance please feel free to contact my office, Monday – Thursday, from 7:00 am to 5:00 pm.

On April 14, 2011, the Fire District conducted a Fire Safety Inspection at the above referenced location. During the inspection the following items were noted as requiring compliance to the 2010 California Fire Code:

130 Constitution Drive
1. Fire alarm pull stations shall be operational. Verify that the pull stations have been tested within the last year and that they operate correctly and sound a local alarm.

150 Constitution Drive
There were no violations noted in this building during the inspection.

123 Independence Drive
1. Provide an approved automatic fire suppression system in the spray booth. Fire suppression system require service at least annually and shall have a service tag indicating as such.
2. Maintain 24 inches of clear space from the ceiling for all storage.
3. Remove excess combustible storage in the second floor storage room.
4. Maintain the exits from the chamber machine room. At the time of inspection, the second ext from this machine room was blocked with a table and carts.

1150 Chrysler
1. Maintain 24 inches of clear space from the ceiling for all storage.

138 Jefferson Drive
1. Valves on fire sprinkler systems (above the spray booths) shall be indicating type valves (quarter turn valve or OS&Y). Valves may be locked in the open position however at the time of inspection valves were locked and it could not be determined if the valve was open or closed.
2. Flammable liquids shall be properly store in an approved flammable liquid storage cabinet. Bench top storage is not allowed.
3. Separate incompatible hazardous materials while they are in storage. At the time of inspection, acids were being stored with flammable liquids.
4. Discontinue welding operations. Welding operations shall only occur in buildings equipped with an approved fire sprinkler system.

5. Maintain dip tanks that show signs of corrosion. Keep a preventive maintenance plan.
6. Natural gas line piping was showing signs of corrosion. Replace the piping as needed.

Note: If the heated salt solution is causing excess corrosion in the building, proper ventilation is needed to capture fumes and vapors at the point of generation. Provide a plan that will indicate compliance with the Fire Code.

You will be given 30 days from the above date to submit a letter, email, or Fax to the Fire District stating compliance to the above items. If you have any questions or need addition time for compliance please feel free to contact my office, Monday – Thursday, from 7:00 am to 5:00 pm.

On July 26, 2010, the Fire District conducted a Fire Safety Inspection at the above referenced location. During the inspection the following items were noted as requiring compliance to the 2007 California Fire Code:

130 Constitution Drive

Document Center	Fire extinguisher shall not be blocked (by the copy machine).
2nd Floor Storage	Provide a cover plate on the open electrical junction box.
	Replace the ceiling tiles to maintain the fire rated construction.

150 Constitution Drive

Env. Lab	Electrical connections shall conform with the Electric Code. At the time of inspection a yellow electric cord ran from a junction box to an appliance cord.
UPS Room	Replace missing ceiling tiles.
	Remove excess combustible materials.
2nd Floor Office	A STOP WORK ORDER was issued for construction underway without City of Menlo Park Building Permits. Obtain proper permits BEFORE any work continues.

123 Independence

Chamber 4	Provide a method to control dust created during manufacturing operations.
	Provide a combustible (paper) bag over the sprinkler head in the spray booth to prevent over-spray from accumulating on the fusable link.
2nd Floor	Remove excess combustible storage.

1150 Chrysler / 138 Jefferson

1. Separate incompatible hazardous materials while in storage. At the time of inspection, flammables, oxidizers, acids and bases were all being stored in the same corrosive cabinet; each being incompatible with the other.

2. Maintain the conduit used to run electrical wiring in the tank area. At the time of inspection, some metal conduit appeared corroded possibly from fugitive corrosive fumes.

3. Provide the Fire District with copies of service records from tank heaters and liquid level sensors. Records shall indicate the time of inspection, the results of the inspection, and what measures, if any, were taken to

correct deficiencies.

You will be given 30 days from the above date to submit a letter, email, or Fax to the Fire District stating compliance to the above items. If you have any questions or need addition time for compliance please feel free to contact my office, Monday – Thursday, from 7:00 am to 5:00 pm.

Ref. 130 & 150 Constitution Dr, 123 Independence Dr, 1150 Chrysler Dr, 138 Jefferson Dr, Menlo Park

On August 31, 2009, the Fire District conducted a Fire Safety Inspection at the above referenced location. During the inspection the following items were noted as requiring compliance to the 2007 California Fire Code:

130 Constitution Drive
Except as noted in the general section below, no violations were noted during the inspection.

150 Constitution Drive
1. Provide a lip or guard for storage racks of flammable liquids in the exterior storage building.
2. The newly installed industrial oven shall be seismically anchored.
3. Remove excess combustible materials from the second floor server room.
4. Provide annual maintenance on the temperature control system for the saline solution tank on the first floor.
5. Label copper piping as to its contents. This shall include Freon piping and compressed air piping. Labels shall be visible from the floor and shall be placed every 20 feet.
6. Provide a cover plate for the open electrical connection on the equipment noted during inspection.

123 Independence
1. Repair holes in the attic walls to maintain fire rated construction.
2. Provide a cover plate for the open electrical connection on the floor of the attic.

1150 Chrysler
1. Replace missing or broken ceiling tile in the second floor office.
2. Discontinue use of extension cords. At the time of inspection, an extension cord was extended to a remote workstation, with the excess cord pushed into a hold in the wall. Repair the hole in the wall to maintain fire rated construction.
3. Remove the hazardous materials storage cabinets from the exit passageways.

138 Jefferson
1. Remove the hazardous materials storage cabinets from the exit passageways.
2. Compressed gases shall be secured at 1/3 and 2/3 the length of the cylinders
3. When compressed gases are not in use, valve protection caps shall be in place.
4. Remove the plywood siding on the aboveground tanks.
5. When the generator is maintained, verify that the outer tank monitor is checked for proper functioning.

6. Tanks that are heated shall be maintained to prevent over heating and liquid level. Devices used to prevent over heating shall be maintained annually for proper function and records kept on site.

General Requirement
1. Fire Detection Systems shall be maintained. At the time of inspection, several smoke detection devices appeared loose and may not be functional. This item was noted at all the above L3, Rantron Buildings.

You will be given 30 days from the above date to submit a letter, email, or Fax to the Fire District stating compliance to the above items. If you have any questions or need addition time for compliance please feel free to contact my office, Monday – Thursday, from 7:00 am to 5:00 pm.

130 Constitution Drive
Menlo Park, CA. 94025

Ref. L3/Rantron, 130, 150 Constitution, 123 Independence, 1150 Chrysler, 138 Jefferson, Menlo Park

On July 26, 2010, the Fire District conducted a Fire Safety Inspection at the above referenced location. During the inspection the following items were noted as requiring compliance to the 2007 California Fire Code:

130 Constitution Drive

Document Center	Fire extinguisher shall not be blocked (by the copy machine). (Relocated extinguisher)
2nd Floor Storage	Provide a cover plate on the open electrical junction box. (Cover plate replaced)
	Replace the ceiling tiles to maintain the fire rated construction. (Ceiling tiles replaced)

150 Constitution Drive

Env. Lab	Electrical connections shall conform with the Electric Code. At the time of inspection a yellow electric cord ran from a junction box to an appliance cord. (Wiring now conforms to the Electric Code)
UPS Room	Replace missing ceiling tiles. (Ceiling tiles have been replaced)
	Remove excess combustible materials. (Excess combustible materials have been removed)
2nd Floor Office	A STOP WORK ORDER was issued for construction underway without City of Menlo Park Building Permits. Obtain proper permits BEFORE any work continues. (Contractor is awaiting inspection by the City of Menlo Park)

123 Independence

Chamber 4	Provide a method to control dust created during manufacturing operations. (The extra dust from the manufacturing operation is now contained with the equipment – bad door seal was replaced)
	Provide a combustible (paper) bag over the sprinkler head in the spray booth to prevent over-spray from accumulating on the fusable link. (Paper bag installed over sprinkler head)
2nd Floor	Remove excess combustible storage. (Excess combustible materials have been removed)

1150 Chrysler / 138 Jefferson

1. Separate incompatible hazardous materials while in storage. At the time of inspection, flammables, oxidizers, acids and bases were all being stored in the same corrosive cabinet; each being incompatible with the other. (Incompatible hazardous materials are now separated into different cabinets)

2. Maintain the conduit used to run electrical wiring in the tank area. At the time of inspection, some metal conduit appeared corroded possibly from fugitive corrosive fumes. (Electrical wiring in the Dip Braze tank area has been inspected and anti-corrosion protective coating applied to prevent further corrosion and we plan to replace a good portion of the electrical during the holiday shutdown later this year)

3. Provide the Fire District with copies of service records from tank heaters and liquid level sensors. Records shall indicate the time of inspection, the results of the inspection, and what measures, if any, were taken to correct deficiencies. (Tank inspections and corrective actions are attached)

General Requirement

1. The Menlo Park Fire District highly suggests that all location that store locations or use areas (the tank area) be coated with a nonreactive chemical resistant surface, to prevent spills from penetrating the floor surface. This may be accomplished during annual shut-downs for preventive maintenance. (Suggestion to coat surfaces with a nonreactive chemical resistant surface is being considered and would need to be done during a shut-down of the areas)

You will be given 30 days from the above date to submit a letter, email, or Fax to the Fire District stating compliance to the above items. If you have any questions or need addition time for compliance please feel free to contact my office, Monday – Thursday, from 7:00 am to 5:00 pm.

On May 22, 2012, the Fire District conducted a Fire Safety Inspection at the above referenced location. During the inspection the following items were noted as requiring compliance to the 2010 California Fire Code:

130 Constitution Drive

Machine Shop	Discontinue use of the extension cord with exposed wiring at the plug.
Raw Storage	Maintain storage and storage racks 24 inches below the overhead wooden structural members.
Electric Plug #B-28	Repair or replace the broken electrical plug.

150 Constitution Drive

1. Sprinkler valves for spray booths shall be locked in the open position. Indicating valves shall remain visible.
2. Post an exit sign over the exit pathway from the portable clean room.
3. Replace the missing ceiling tile in the server room.

138 Jefferson

1. Verify that the monitor in the secondary space of the generator fuel tank is tested at least annually.
2. Label empty containers as such. The marking "MT" is not allowed.

123 Independence & 1150 Chrysler

There were no Fire Code violations noted at these locations at the time of this inspection.

You will be given 30 days from the above date to submit a letter, email, or Fax to the Fire District stating compliance to the above items. If you have any questions or need addition time for compliance please feel free to contact my office, Monday – Thursday, from 7:00 am to 5:00 pm.

During the month of January, the Fire District conducted a Fire Safety Inspection at the referenced locations. During the inspections the following items were noted as requiring compliance to the 1998 California Fire Code:

130 Constitution Drive

1. Remove the excess combustible materials from the (3rd) floor telephone room. CFC 1103.3.2.1
2. Check all exit passageway lighting for properly charged back-up power supply. CFC 1211.2
3. All exit doors with secondary locks (dead-bolts) shall be posted with a sign stating "This Door to Remain Unlocked During Business Hours." CFC 1207.3
4. Repair holes in walls in the machine shop. CFC 1111.1
5. Maintain 30 inches of clear space in front of electrical panels. CFC 8509.2
6. Outside storage for LPG shall be labeled. CFC 8001.7

150 Constitution Drive

7. Maintain 30 inches of clear space in front of the electrical panel in the MIS Room. CFC 8509.2
8. Replace broken or missing ceiling tiles in the UPS Room. CFC 1111.1
9. Place a "corrosive" label on the UPS system that houses the batteries. CFC 8001.7
10. Surge protectors shall be plugged directly into wall circuits. At the time of inspection, the mechanical engineering room was using a power tap with an extension cord. CFC 8508.3
11. Remove all storage from the side(s) of the drying ovens. CFC 6203.3

12. Cabinets used for the storage of flammable liquids shall be labeled with the hazard class of the materials. CFC 8001.7

13. Remove the file-boxes from the rear exit passageway. Repair the hole in the wall in this general area, and replace the broken or missing ceiling tiles in the storage closet. CFC 1111.1 & 1203

14. Quantities of flammable liquids in the outside storage building shall not exceed 60 gallons in storage, with not more than 15 gallons in open use, or there shall be an automatic fire suppression system provided. The building shall be provided with interior fire resistive construction, with a fire resistance rating of not less than 1-hour, if flammable liquids continue to be stored in the building. CFC 7902.5.11

15. Quantities of flammable liquids inside the building shall not exceed 60 gallons in storage, with not more than 15 gallons in open use. CFC 7902.5-D

123 Independence

16. Exit doors shall be unobstructed. At the time of inspection, an exit door was obstructed with a window shade. CFC 1203

17. Inside storage shall be not closer than 24 inches from the ceiling. CFC 1103.3.2.2

18. Surge protectors shall be plugged directly into wall circuits. At the time of inspection, a surge protector was plugged into another power tap unit. CFC 8508.3

1150 Chrysler & 138 Jefferson

19. Label all exposed compressed gas or liquid filled piping as to its contents. Piping shall be labeled every 20 feet or change in pipe direction. CFC 9003a.2.1

20. When compressed gases are not in use, valve protection caps shall be in place. CFC 7401.7.2

21. Verify that water control valves to the spray booth fire protection systems are in the open position. CFC 1001.5.1

22. Separate incompatible hazardous materials while they are in storage. At the time of inspection, a corrosive cabinet was storing bases and oxidizers in the same cabinet. CFC 8001.11.8

23. Repair the hole in the wall of the chemical storage building, next to the salt bath. CFC 1111.1

24. Devices used to heat chemical tanks shall be maintained. Provide maintenance records that indicate the devices are maintained semiannually to prevent overheating and over filling the tanks. CFC 8004.1.5.1

25. Reduce second floor storage to maintain a clearance of 24 inches from the ceiling. CFC 1103.3.2.2

You will be given 30 days from the above date to submit a letter to the Fire District stating compliance to the numbered items. If you have any questions or need addition time for compliance please contact the Fire Prevention Bureau at the above telephone number during normal business hours.

Menlo Park, CA. 94025

Ref: Buildings, 1,2, 3, 4, & 5, Menlo Park

On August 19, 2004, the Fire District conducted a Fire Safety Inspection at the referenced locations. During the inspection the following items were noted as requiring compliance to the 2001 California Fire Code:

130 Constitution

First Floor Corridor	Post exit signs on the exit door and the entrance to the lobby and it doorway.
Contracts Room	Remove the file cabinet to allow clear unobstructed access to the electrical panel.
2nd Floor Storage	Remove excess combustible materials from the room.
Machine Shop	Mount the Fire Extinguisher (currently located on a shelf)
	Remove metal shavings at least every 24 hours.

150 Constitution

Spray Booths	The fire extinguishing systems shall be serviced at least every 5 years.
Drying Ovens	There shall be NO storage within 3 feet of drying ovens.
Computer Room	Replace missing or broken ceiling tiles.
Outside Storage	Flammable Waste Solids shall be stored in a Metal Container.
Outside Flammable Storage	The fire extinguishing system shall be serviced at least annually.

123 Independence
Any freight doors that are blocked from the interior shall be labeled on the outside, DOOR BLOCKED. The letters shall have a minimum ¾ inch stroke wide and at least 6 inches high.
Power taps shall be plugged directly into wall circuits.
Holes in walls shall be repaired to maintain their fire resistance.

138 Jefferson / 1211 Chrysler

Spray Booth	The fire extinguishing system shall be serviced at least every 5 years.
Stores	Discontinue the use of extension cords as permanent wiring.
Bldg 4 Lab	Maintain at least one exit door from the shop area. The door shall be openable from the inside with a single action and without the use of any special knowledge. The exit shall be labeled, and may be marked as an emergency exit only.
Welding Shop	Compressed gases shall be secured with racks or shall be secured to a fixed object at 1/3 and 2/3 the length of the cylinder, with noncombustible chains.

Tank Area	Secondary containment area shall be dry unless there is a leak from an aboveground tank. The area shall NOT be used to catch over-spray from processes or operations.
2nd Floor Office	Replace the broken electrical cover plate
Outside	Replace all NFPA 704 Diamonds that have faded. Access to the outside storage locker was not available during the inspection. Post a NFPA 704 Diamond on the fence that secures the standby generator and spare propane containers.

You will be given 30 days from the above date to submit a letter to the Fire District stating compliance to the numbered items. If you have any questions or need addition time for compliance please contact the Fire Prevention Bureau at the above telephone number during normal business hours.

FIRE SAFETY / HAZARDOUS MATERIALS
INSPECTION REPORT

Mr. Gary Schneider
Loral-Rantron Systems
130 Constitution Drive
Menlo Park, Ca. 94025

March 2, 1995

Ref. Company-wide Multi-Location Site (See Below)

On February 22, 1995 the Fire District conducted a Fire Safety / Hazardous Materials Inspection at the above referenced locations. During the inspections, the following items were noted as requiring compliance to the 1991 California Uniform Fire Code:

1150 Chrysler

1. Label all exposed compressed gas (including air) or liquid filled piping as to its contents. Piping shall be labeled every 20 feet or change in pipe direction. UFC 2.304(b)

2. Label the water tank as to its contents. Include any concentrations of additives to the tank. UFC 80.107

125 Independence

3. Replace or repair broken or remove ceiling tiles in attic spaces. UFC 10.601

4. Replace the ventilation duct from the terpene bath from Plastic to metal. UFC 79.114

138 Jefferson

5. Storage of solid chemicals (ei. Lithium Chloride, Aluminum Fluoride & Fluoride Salts) shall not exceed 5,000 pounds in the building. UFC 80.315-A Incompatible materials, in storage, shall be separated by a distance of 20 feet or by a noncombustible partition that extends 18 inches above and to the sides of the material being separated. UFC 80.301(a)3D

130 & 150 Constitution

A. These sites were inspected and found to be in compliance with the Uniform Fire Code.

Loral-Rantron Systems

You will be given 30 days from the above date to submit a letter of compliance to the Fire District regarding compliance to the above numbered items. If you have any questions or need additional time for compliance, please contact the Fire Prevention Office at the above telephone number during normal business hours.

During the month of September, the Fire District conducted a Fire Safety Inspection at the above referenced locations. During the inspections, the following items were noted as requiring compliance with the 1995 California Fire Code:

130 Constitution
Tooling Area Repair holes in the wall. UFC 1112.1

Eng. Lab. Exit doors shall open with a single turn. Remove the Dead Bolt or place a sign over the door stating "Door To Remain Unlocked During Business Hours." UFC 1207.3

The freight door shall either be unobstructed or post a sign indicated "Door Blocked." UFC 902.3.2

Power taps (surge protectors) shall be plugged directly into branch circuits. UFC 8508.3

Extension cords shall not be used in place of permanent wiring. UFC 8506.1

2nd Floor Store Rm Remove excessive combustible materials; Storage of materials shall be maintained 24 inches below the ceiling. UFC 1103.3.2.2

General Comments Partitions shall not exceed 5 feet 9 inches in height. UFC 1209
Remove NFPA 704 Diamonds in locations where hazardous materials are no longer stored. UFC 8001.7

150 Constitution

Rec Center Combustible materials shall not be stored under stairways. UFC 1203

Mens Rm Repair hole in the wall. UFC 1112.1

Back Door Identify the contents of, and label the (white) portable tank. UFC 8001.7

2nd Floor Office Replace the broken or missing electrical cover. UFC 8504
Replace broken or missing ceiling tiles UFC 1112.1
Shredded paper (trash) shall be removed daily. UFC 1103.2.1.5

Outside Storage Quantities of flammable liquids, in storage shall not exceed 60 gallons. Dispensing of flammable liquids shall not exceed 15 gallons. If higher quantities are needed, an automatic fire suppression system will be required. Contact the Fire District regarding this item. UFC 7902.5-A & 7903.2-B
Flammable liquids shall be stacked not higher than 2 containers. UFC 7902.5.10.1
The ventilation duct from the flammable liquid storage cabinet, if in place, shall be noncombustible. UFC 7901.10
Workbenches where flammable liquids are used shall be noncombustible. UFC 7901.10

138 Jefferson & 1150 Chrysler

Production Area Flammable liquids shall be stored in refrigerators approved for such storage. UFC 7901.10

Leak Test Area Label the above ground tank of water. UFC 8001.7

Storage Room Storage shall be maintained 24 inches below the ceiling. UFC 1103.3.2.2
Discontinue use of extension cords in place of permanent wiring. UFC 8506.1

Chemistry/ Shop Provide a lip on bench tops that use or store hazardous materials. UFC 8003.1.4
Separate incompatible hazardous materials while in storage. UFC 8001.9.8
Welding shall be conducted on a noncombustible surface. UFC 4907.8
Compressed gas cylinders shall be strapped at 1/3 and 2/3 the length of the cylinder. UFC 7401.6.4
Storage of LPG inside the building shall not exceed 15 gallons, including cylinders in use. UFC Table 8001.13-A

Repair the loose electrical wall circuit near the manager's office UFC 8504

Plating Area Tanks in open use with concentrations of acids shall be limited to not more than 100 gallons. UFC Table 8001.13-B
Liquid temperature and level controls shall be physically tested monthly. Test results shall be recorded. UFC 8004.1.6.2

Outside Area
Cooling Tower (Salt Bath) Label all exposed piping as to its contents. UFC 9003a2.1

Generator Provide secondary containment for the diesel fuel tank. Check with the Fire District for monitoring requirements. UFC 7901.8
Post a NFPA 704 Diamond at the entrance to the gate to the area.
Label the Generator with either the same NFPA 704 Diamond or label the tank "DIESEL." UFC 8001.7

123 independence
2nd Floor Store Rm Remove excessive combustible materials UFC 1103.2.1.5
Repair hole in the ceiling UFC 1112.1
Storage of plastic or other high hazard materials shall not exceed 6 feet. UFC 209
Flammable liquids shall not be stored under the stairway or in the exit passageway. UFC 1203

Conference Rm A Power taps shall be plugged directly into branch circuits. UFC 8508.3

Repower Rm Label the exposed copper piping as to its contents. UFC 9003a.2.1
Repair holes in the ceiling. UFC 1112.1

Exit Corridor There shall be no storage of combustible materials in the exit corridor. At the time of inspection, a paper shredder and a trash bag of shredded paper were being stored in the exit corridor near a (required) exit door. UFC 1203

Chamber 4 The Fire Extinguisher shall be mounted. UFC 1001.5.1
Power taps shall be plugged directly into branch circuits. UFC 8508.3

Chamber 237 Provide 30 inches of clearance around electrical panels. UFC 8509.2

You will be given 30 days from the above date to submit a letter to the Fire District stating compliance to the above items. A reinspection will be conducted. If you have any questions or need additional time for compliance, please contact the Fire Prevention Office at any of the above telephone numbers or addresses.

Ref. 130 Constitution, 150 Constitution, 123 Independence, 1150 Chrysler, 138 Jefferson

On October 14, 2008, the Fire District conducted a Fire Safety Inspection at the above referenced location. During the inspection the following items were noted as requiring compliance to the 2007 California Fire Code:

130 Constitution
1. Label all exposed liquid or gas filled piping as to its contents. Labels shall be visible from floor level and shall be placed every 20 feet or change in pipe direction.
2. Maintain 30 inches of clear space in front of electrical panels. At the time of inspection, trash containers were placed in front of the electrical panel in the copy room.
3. Verify that the fire extinguisher will not be blocked by a copy machine in the Records Room.
4. Label the door leading to the roof "Roof Access".

150 Constitution
1. Label all exposed liquid or gas filled piping as to its contents. Labels shall be visible from floor level and shall be placed every 20 feet or change in pipe direction.
2. When containers of flammable liquids are grounded for static control, connections shall be metal to metal and not connected to painted surfaces.
3. Verify that the grounding rod in the exterior storage shed is properly installed.

123 Independence
1. All storage shall be maintained 24 inches below the ceiling level.

1150 Chrysler
No violations noted at this location.

138 Jefferson
1. Replace corroded electrical connections in the wet chemical tank location.
2. Verify that storage of solid chemicals are compatible. If the chemicals are incompatible, they shall be separated by a distance of 20 feet or, a noncombustible patrician that extends 18 inches above and to the sides of the materials being separated.

All Locations
New Fire and Building Codes now require all shelving greater than 6 feet in height to be seismically anchored.

You will be given 30 days from the above date to submit a letter, email, or Fax to the Fire District stating compliance to the above items. If you have any questions or need addition time for compliance please feel free to contact my office, Monday – Thursday, from 7:00 am to 5:00 pm.

Ref. L3 Communications

On Thursday, September 19, 2013, the Fire District conducted a Fire Safety Inspection at the above referenced locations. During the inspection the following items were noted as requiring compliance to the 2010 California Fire Code:

130 Constitution Bldg. #1
There were no Fire Code violations noted at the time of this inspection.

123 Independence #2
Storage shall be maintained 24 inches below the ceiling level. Boxes were stored up to the ceiling in the Small Antenna Packaging storage area. All boxes have been moved to maintain 24 inches of ceiling clearance.

1150 Chrysler #3
There were no Fire Code violations noted at the time of this inspection.

138 Jefferson #4
Secondary containment shall be clean and dry. Liquid was present in the secondary containment for the Dip Braze Clean Line. The water that was present from a water leak has been cleaned up and the secondary containment is now clean and dry.

All combustible waste material and rubbish shall be stored in approved containers. Chemical fiber drums were being used as trash cans. The old chemical fiber drum has been properly disposed of and in the future no fiber drums will be used as trash cans.

Remove the Propane storage sign near the generator. The Propane sign has been removed.

150 Constitution #5
There was no Fire Code violations noted at the time of this inspection.

You will be given 30 days from the above date to submit a letter, email, or Fax to the Fire District stating compliance to the above items. If you have any questions or need addition time for compliance please feel free to contact my office, Monday – Thursday, from 7:00 am to 5:00 pm.

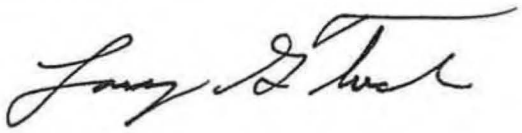
Re: Record # 007 123-125 Independence Drive, Menlo Park, CA local exhaust permit application



Dear Mr. Keefer,

This is a follow up to our conversation on April 12, 2006 concerning the building and fire permit application to install a local exhaust hood at 123-125 Independence Drive, Menlo Park, CA. Per our discuss installation of a water sprinkler suppression head in the hood is not necessary due to the following information. I attest that the following information is true regarding this application.

- The local exhaust hood is being installed in a building without fire sprinkler protection.
- The hood will be used to locally exhaust chemical previously emitted into the Small Antenna Assembly work area.
- Less than two gallons of flammable liquid will be emitted in the course of a year by q-tip, tube and fine brush applications. See attached excel spread sheet.
- When materials are used in the hood, personnel will be in active attendance. No chemicals will be stored in the hood.
- All flammable and combustible liquids will be stored in approved flammable storage cabinets when not in active use.
- The hood is three foot long, two feet deep and 22 inches high. The base is a non-combustible epoxy composite material, the back is a metal plenum, the front, sides and top are glass with metal framing.
- No electrical fixtures are installed in the hood nor brought into the hood.
- The exhaust is metal duct four inches in diameter and transitions into a six inch diameter metal duct.
- The fan pulls 200 CFM
- An application is being filed with the BAAQMD for this hood to document that the BAAQMD has been advised. Chemical usage is so minimal that no permit is required with the BAAQMD based upon their current regulations.

Please advise if you need additional information or clarification. I am forwarding a copy of this letter to Randy Silva with ICOM who is responsible for permitting this operation. Thank you for your assistance in this regard.

Sincerely

Larry George Tuck

FIRE SAFETY / HAZARDOUS MATERIALS
INSPECTION REPORT

Mr. Gary Schneider
Loral-Rantron Systems
130 Constitution Drive
Menlo Park, Ca. 94025

March 2, 1995

Ref. Company-wide Multi-Location Site (See Below)

On February 22, 1995 the Fire District conducted a Fire Safety / Hazardous Materials Inspection at the above referenced locations. During the inspections, the following items were noted as requiring compliance to the 1991 California Uniform Fire Code:

1150 Chrysler

1. Label all exposed compressed gas (including air) or liquid filled piping as to its contents. Piping shall be labeled every 20 feet or change in pipe direction. UFC 2.304(b)

2. Label the water tank as to its contents. Include any concentrations of additives to the tank. UFC 80.107

125 Independence

3. Replace or repair broken or remove ceiling tiles in attic spaces. UFC 10.601

4. Replace the ventilation duct from the terpene bath from Plastic to metal. UFC 79.114

138 Jefferson

5. Storage of solid chemicals (ei. Lithium Chloride, Aluminum Fluoride & Fluoride Salts) shall not exceed 5,000 pounds in the building. UFC 80.315-A Incompatible materials, in storage, shall be separated by a distance of 20 feet or by a noncombustible partition that extends 18 inches above and to the sides of the material being separated. UFC 80.301(a)3D

130 & 150 Constitution

A. These sites were inspected and found to be in compliance with the Uniform Fire Code.

You will be given 30 days from the above date to submit a letter of compliance to the Fire District regarding compliance to the above numbered items. If you have any questions or need additional time for compliance, please contact the Fire Prevention Office at the above telephone number during normal business hours.

Attachment

1) Labels for all types of gas piping systems have been ordered and received (9/9/92). Placement of labels will be completed by 10/31/92.

2) All missing or damaged ceiling tiles have been repaired/replaced as of 8/31/92.

3) All sprinkler heads in paint spray booths have been enclosed with a protective covering as of 9/9/92. All hand held fire extinguishers are inspected on a yearly basis by a Factory Mutual representative. Note that a preventative Maintenance Program has also been put in place. Every February the Facility Manager will receive notification to contact an outside licensed contractor for "full servicing" of all fire extinguishers, hoses, and sprinkler heads located throughout our facility.

4) All incompatible hazard classes have been separated from one another. In particular the alodine waste rinse water has been isolated from all other incompatible hazard classes (moved to new location).

5) The amount of solvents kept at our facility will be substantially reduced. Material no longer required will be removed from our facility (9/28/92) by Rollins ChemPac. All other material will be allocated between two non-contiguous sites so that Randtron System meets the requirements of Table 9-A and 9-B of the UBC.

6) All materials will have been relocated from under the stairway in our plastics shop as of 10/31/92.

7) NFPA signs on order and will be posted by 10/31/92 on all required interior locations.

8) NFPA signs on order and will be posted by 10/31/92 on all required exterior locations.

9) A MSDS sheet for the microwave absorber used in our test chambers is attached to this itemized response. Note that the material is fire retardant.

HAZARDOUS MATERIALS INSPECTION REPORT

August 26, 1992

Mr. Gary Schneider
Loral Randtron Systems
130 Constitution Drive
Menlo Park, Ca. 94025

Ref. Site of Randtron Systems, all Six Buildings

On August 14, 1992 the Fire District conducted a Hazardous Materials Inspection at the above referenced locations. During the inspection, the following items were noted as requiring compliance with the 1991 Uniform Fire Code:

1. Label all exposed compressed gas lines as to their contents every 20 feet. 74.205(g)

2. Replace or repair broken or missing ceiling tiles. 10.601, 10.603

3. The fire extinguishing system in the spray booth requires servicing by a State Licensed technician annually. The heat detector spray head shall be covered with paper or plastic to prevent accumulation of overspray. 45.209(a) & 10.504(a)

4. Separate incompatible hazard classes (flammables from corrosives) by one of the following methods:
   a. Distance of 20 feet between materials.
   b. Isolation by noncombustible patrician extending 18 inches above and beyond the materials being separated. Separation shall also extend to the floor area that shall include spill control.
   c. Separation by hazardous materials storage cabinet. 80.301(n)

See attached Appendix VI-A for Fire Code defined Hazard Classes and examples of chemicals in each Class.

5. The total quantity of hazardous materials allowed in all buildings, including bulk storage areas shall not exceed the quantities stated on the back of the attached blue Fee Schedule. When the materials are stored in hazardous materials storage cabinets, the listed quantities may be doubled. UBC Table 9-A & 9-B

6. There shall be no storage or use of hazardous materials under stairways. 12.109(c)

7. Post NFPA 704 diamonds at each interior entrance to locations where hazardous materials are stored or used. 80.107 Signs shall indicate the worst of all possible hazards contained within the room or area.

8. Post NFPA 704 diamonds on the exterior of each building, including bulk storage areas, where hazardous materials are stored or used at either:

A. Each exterior entrance to the building or,
B. Two corners of the building, visible to approaching Fire Apparatus from the street in two separate locations.

The numbers shall be the worst of all possible hazards with the building. 80.107 Contact the Fire Prevention Office if you have trouble finding the proper numbers to use.

9. Provide a Material Safety Data Sheet (MSDS) for the foam used in the Production Test Area of Building 2. If there in no MSDS available, please obtain the manufacturer's specifications for the foam product and the supplier. 10.603

You will be given 30 days from the above date to comply with the above numbered items. If you have any questions or need additional time for specific items, please contact the Fire Prevention Office at 688-8425 during normal business hours.

Comments:

7/23/85
1:30 pm

Tanks much bigger than anticipated - removal delayed until 7/24. Initial inspection showed no obvious signs of contamination. Paul Dana, John Garibaldi (MPFD) also present.

7/24/85
9:00 a.m.

Location #134 for water sample, taken with bailer on DG side of pit. Excavated soil put back into pit to get at 2nd tank except for most heavily contaminated section which was set aside to air-dry. One product line still attached to 2nd tank - severed when pulled. Small amount of product drained into pit - asked Gail to skim before filling. Pit will be filled today - asphalting will wait until verbal results on water sample. Both tanks larger than expected (8,000 + 1,000 gal. vs. 1000 + 500 gal) but no signs of leakage - probably a slight overfill.

J. Garibaldi & MPFD
E. Rivers

Attn: Mark A. Kostielney

Subj: Underground Storage Tank Permits

Dear Sir:

In reply to your letter of March 15, 1985 we wish to advise the following:

1. Two of our five leased plants in Menlo Park were equipped with underground gasoline storage tanks prior to our leasing the properties several years ago. We do not use these tanks for gasoline (or any other) storage and have verified that they are empty.

2. Randtron Systems does not have the data on tank size, material of construction, age, etc., necessary to complete your permit applications. We are contacting the property owners in an attempt to obtain this data, and to determine responsibility for future action on this matter.

3. It is our judgement at this time, and without any consultation with the property owners, that the most probable action will be the removal of the tanks. The necessary permits will be filed when this removal is agreed to by the property owners.

We trust that this response will fulfill your requirements for the present, and be assured that we will provide the additional data and permit applications as soon as the information is received from the property owners.

Very truly yours,

RANDTRON SYSTEMS, INC.

RE: Groundwater Sampling Report
119 Independence Drive
Menlo Park California

Dear Mr. Carter:

Environmental Risk Specialties Corporation (ERS) has enclosed two hard copies of the Groundwater Sampling Report for 119 Independence Drive, Menlo Park, California.

If you have any questions regarding this report or the findings of the work, please contact ERS at (408) 496-0801, extension 17 or via email at adiaz@erscorp.us.

Sincerely,

Alfred R. Diaz, PG, CEG

INTRODUCTION

This Groundwater Sampling Report was prepared by Environmental Risk Specialties Corporation (ERS) at the request of Mr. Chris Carter (Client) for the groundwater monitoring and sampling work performed at 119 Independence Drive, Menlo Park, California (Site). The project objectives were to purge and sample two groundwater monitoring wells, laboratory analyze the ground water samples and report the results. A Site Location Map is presented as Figure 1.

BACKGROUND

The approximately one acre Site consists of an approximately 15,000 square foot building with paved parking and landscape areas. The Site is currently occupied by Davy Tree Service. The two onsite ground water monitoring wells are located near the northeast corner of the Site (MW-1) and in the front landscape area in the southern portion of the site (MW-2). See Site Plan (Figure 2).

GROUNDWATER MONITORING AND SAMPLING

Groundwater monitoring and sampling of the Site was performed on October 16, 2009. Work at the Site included measuring depth to water, evaluating groundwater in the wells for any floating products, purging and sampling the wells, and submitting the samples to a state-certified laboratory for analysis of constituents of concern. Constituents of concern are Halogenated Volatile Organic Compounds analyzed by EPA Test Method 8260.

1.1 Groundwater Monitoring Well Sampling

Before groundwater purging and sampling, the depth to the water table was measured from the top of each well casing using a Solinst Water Level Meter. The water level measurements were recorded to the nearest 0.01 foot. All recorded groundwater monitoring data are included as Appendix A (Monitoring Well Data Sheets). Information regarding well elevations and groundwater depths for the Site is summarized in Table 1.

TABLE 1 – GROUNDWATER ELEVATIONS

Well Number	Date Measured	Well Elevation* (feet above MSL)	Depth to Groundwater	Groundwater Elevation
MW-1	10/16/09	14.31	4.39	9.92
MW-2	10/16/09	14.64	4.69	9.95

Notes: All measurements are in feet, measured from top of well casing.
** Well casing elevations from Lowney Associates, 1991.*

1.2 Groundwater Gradient

An assessment of groundwater gradient and flow direction requires a minimum of three monitoring wells. Since only two ground water monitoring wells exist at the Site, an assessment of groundwater gradient and flow direction cannot be performed.

1.3 Groundwater Sample Collection

Before groundwater sampling, each well was purged using a disposable polyethylene bailer. Groundwater samples were collected after four well casing volumes of water were removed and measured for temperature, conductivity, pH, and dissolved oxygen (DO). Following purging, each well was allowed to recharge before sampling. When recovery to 80 percent of the static water level was observed, a sample was collected for analysis.

The ground water monitoring wells were sampled using disposable polyethylene bailers attached to new rope for each well. From each monitoring well, four laboratory-supplied 40-milliliter sample vials were filled to overflowing and sealed to eliminate trapped air. Once filled, sample vials were inverted and tapped to test for air bubbles. Sample containers were labeled with self adhesive, preprinted tags. The samples were stored in a pre-chilled, insulated container and returned to ERS's Walnut Creek Office pending courier pickup by AccuTest, a state-certified analytical laboratory, for the requested analyses.

Ground water purged during the sampling of the ground water monitoring wells is being temporarily stored onsite in a 5-gallon buckets pending laboratory analysis and proper disposal.

RESULTS OF GROUNDWATER SAMPLING

Groundwater samples collected from each well were submitted for analysis, following chain of custody protocol. Groundwater samples collected from wells MW-1 and MW-2 were analyzed for Halogenated Volatile Organic Compounds analyzed by EPA Test Method 8260. Copies of the laboratory analytical reports and chain of custody record are included as Appendix B. The values for those analytical results above the laboratory reporting limits are summarized in Table 2.

TABLE 2 – GROUNDWATER ANALYTICAL RESULTS

Well Number	Date Sampled	1,1-Dichloroethylene (µg/L)	Cis-1,2-Dichloroethylene (µg/L)	Trichloroethylene (µg/L)
MW-1	10/16/09	1.9	22.4	303
MW-2	10/16/09	0.61	8.9	108

Notes: µg/L = micrograms per liter

DISCUSSION

An assessment of groundwater gradient and flow direction requires a minimum of three monitoring wells. Since only two ground water monitoring wells exist at the Site, an assessment of groundwater gradient and flow direction cannot be performed. The groundwater gradient and flow direction may vary due to tidal influenced. The current use of the Site did not appear to be the source for the Halogenated Volatile Organic Compounds detected in the groundwater samples.

LIMITATIONS

The service performed by ERS has been conducted in a manner consistent with the levels of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in the area. No other warranty, expressed or implied, is made.

The conclusions presented in this report are professional opinions based on the indicated data described in this report and applicable regulations and guidelines currently in place. They are intended only for the purpose, site, and project indicated. Opinions and recommendations presented herein apply to site conditions existing at the time of our study.

ERS has included analytical results from a state-certified laboratory, which performs analyses according to procedures suggested by the U.S. Environmental Protection Agency and the State of California. ERS is not responsible for laboratory errors in procedure or result reporting.

1145 Merrill Street
Menlo Park, California 94025

Re: J.A. Moreing Company Facility
120 Constitution Drive
Menlo Park, California

Dear Mr. LaPoint:

This letter documents the installation of two soil borings in the location of a former underground storage tank (UST) (SB-3 and SB-4) and one crossgradient temporary piezometer TP-3 at the site referenced above (Figures 1 and 2). Installation, sampling, and reporting was performed by Pacific Environmental Group, Inc. (PACIFIC) on behalf of J.A. Moreing Company (J.A. Moreing). The current investigation was performed at the request of the San Mateo County Health Services Agency Environmental Health Services Division (San Mateo County). A January 13, 1995 letter from San Mateo County requested soil boring sample analysis for trichloroethene (TCE) in the location of the site's former UST. J.A. Moreing also desired to further investigate the presence of TCE and related compounds in the shallow groundwater along the northeastern property boundary. Included in this report is a brief discussion of the site location and setting, background, scope of work, and findings.

BACKGROUND

Site History

The site is located in Menlo Park, California (Figures 1 and 2). Land usage in the vicinity of the site is primarily industrial and commercial. The site consists of a parking lot and a two-story building containing office and warehouse space. A single 1,000-gallon UST formerly existed on the property. The former UST was located in the north-central portion of the site.

Previous Investigations

Previous investigations have been performed by Blaine Tech Services, Inc. (Blaine), Certified/Earth Metrics Company (CEM), McLaren/Hart, Inc., and PACIFIC. A brief review of past investigations at the site are summarized below:

- On March 21, 1986, Blaine removed a 1,000-gallon UST. During excavation operations a groundwater sample was collected within the former tank pit. Analytical results of the groundwater sample indicated 6,700 parts per billion (ppb) total petroleum hydrocarbons calculated as gasoline (TPH-g).
- During April 1993, CEM performed a Phase I environmental site assessment. The findings indicated that no other potential sources of hazardous materials existed or had existed on the property apart from the former UST.
- On May 27, 28, and 29, 1993, McLaren/Hart, Inc. installed three groundwater monitoring wells (MW-1, MW-2, and MW-3) and drilled two exploratory soil borings (SB-1 and SB-2) in the vicinity of the former UST excavation. No petroleum hydrocarbons were detected in the soil samples collected from the exploratory soil borings and the borings for the wells. Low concentrations of benzene were detected in groundwater samples collected from Wells MW-2 and MW-3 at 0.33 and 0.40 ppb, respectively. Details of the soil and groundwater investigation are documented in a McLaren/Hart, Inc. report dated June 7, 1993.
- Quarterly monitoring of Wells MW-1, MW-2, and MW-3 has found no TPH-g, benzene, toluene, ethylbenzene, or xylenes (BTEX compounds) in the groundwater since the initial low values present immediately after well installation. Groundwater flow has been primarily northeasterly.
- During December 1993, a previously unidentified analyte peak that did not match the chromatographic pattern of gasoline was identified as TCE at a maximum concentration of 1,200 ppb within the groundwater from Well MW-2. Historic groundwater concentrations of TPH-g, BTEX compounds, and halogenated volatile organic compounds (HVOCs) are presented on Table 2.
- In March 1994, PACIFIC installed two groundwater monitoring wells (MW-4 and MW-5). Analysis for HVOCs in these wells detected TCE at concentrations of 350 and 180 ppb, respectively. Groundwater elevation measurements taken in March 1994 reflected the

possibility of tidal influence on groundwater levels beneath the site. The overall flow direction remains northerly.

- On July 22, 1994, PACIFIC installed two temporary piezometers, TP-1 and TP-2 along the southeastern boundary of the site to further investigate potential upgradient sources of TCE. Groundwater samples from TP-1 and TP-2 were analyzed for HVOCs by EPA Method 8010. TCE was detected in Piezometers TP-1 and TP-2 at concentrations of 740 and 370 ppb, respectively. 1,1-Dichloroethene (1,1-DCE) was also detected in TP-1 and TP-2 at concentrations of 30 and 14 ppb, respectively. Wells MW-1, MW-2, and MW-3 have all contained detectable concentrations of 1,1-DCE in groundwater samples collected during previous sampling events. Piezometers TP-1 and TP-2 also contained detectable concentrations of 1,1,1-trichloroethane (1,1,1-TCA). 1,1,1-TCA had not previously been detected in any of the wells at the site. 1,1,1-TCA typically was used as a replacement product for the more toxic TCE
- The subject site is located in a light industrial area with many possible sources of HVOCs. To investigate the potential for off-site sources of HVOCs in the site groundwater, a representative of J.A. Moreing reviewed City of Menlo Park Fire Department records regarding the use of hazardous materials in adjacent facilities. The records search indicated several potential sources of HVOCs in the area of the site.

SCOPE OF WORK

The objective of the current subsurface investigation was two fold: (1) at the request of San Mateo County, to investigate the potential presence of TCE in the area of the former UST, and (2) to further assess the presence of TCE and other HVOCs in the groundwater along the eastern boundary of the property. Another objective was a site background investigation, also at the request of San Mateo County, to document that historic or current sources of TCE have never existed at the site and to provide more specific information regarding the most likely source of upgradient TCE based upon gradient determination and documentation of TCE storage.

The proposed scope of work for this investigation included: (1) the installation of two shallow soil borings (SB-3 and SB-4) with recovery of a soil sample at a depth of 7-1/2 feet below ground surface (bgs) in each boring, (2) the sampling of groundwater at one point, TP-3, by driving a temporary piezometer to a depth of approximately 15 feet bgs, (3) analysis of soil from the soil borings and groundwater from the temporary piezometer for the presence of HVOCs using EPA Method 8010, and (4) preparation

and submittal of a soil and groundwater investigation report documenting the analytical results and the site background investigation findings.

FINDINGS

Subsurface Conditions

Borings SB-3 and SB-4 were advanced to 7.5 feet bgs. The boring for TP-3 was advanced to a depth of 15 feet bgs. The stratigraphy found in the borings and piezometer locations appears to be consistent with previous findings from the other borings for site wells. The boring logs for Wells MW-1 through MW-5 are presented as Attachment A, and are considered to represent site stratigraphy. Groundwater was encountered at an approximate depth of 10 feet during drilling of TP-3, and stabilized at a depth between 4.5 and 5 feet.

Soil Analytical Results

Soil samples from Borings SB-3 and SB-4 were collected at 7.5 to 8 feet bgs on May 1, 1995. Samples were collected at this depth to simulate the depth of bottom samples from the original UST excavation. These samples, however, were collected from beneath the top of the groundwater level at the site. The soil samples were analyzed for HVOCs by EPA Method 8010. TCE was detected in the soil sample from SB-3 at a concentration of 110 ppb. No other HVOCs were detected in the soil sample from SB-3. No HVOCs were detected in the soil sample from SB-4. No soil samples were analyzed from TP-3 because groundwater occurred at such a shallow depth.

Field and laboratory procedures are presented as Attachment A. The certified analytical reports which include analytical methods and detection limits are presented as Attachment B. Soil analytical data are presented in Table 1.

Groundwater Analytical Results

PACIFIC collected a groundwater sample from newly-installed Piezometers TP-3 on May 1, 1995. The groundwater sample was analyzed for HVOCs by EPA Method 8010. TCE was detected in the new Piezometer TP-3 at a concentration of 490 ppb. No other HVOCs were detected in TP-3.

Field and laboratory procedures are presented as Attachment A. The certified analytical reports which include analytical methods and detection limits are presented as Attachment B. Groundwater analytical data are presented in Table 2. TCE concentrations for the May 1, 1995 piezometer and soil boring sampling, the March 10, 1994 monitor well sampling, and the July 22, 1994 piezometer sampling are shown on Figure 2.

SITE BACKGROUND INVESTIGATION

Two other issues were addressed in San Mateo County's letter of January 13, 1995. First, San Mateo County had asked for "documentation that historic or current sources do not indicate the usage of TCE at the subject site." Second, San Mateo County has asked "Based upon gradient determination and TCE storage, what is the most likely source of upgradient TCE?"

J.A. Moreing has investigated the operations that have occupied the subject property. The property was previously used as a grocery warehouse and as offices for an insurance company. No indication of TCE usage is recorded from either of these operations. The insurance company that previously occupied the property operated printing presses in the area of the warehouse. J.A. Moreing representatives tried contacting the insurance company regarding chemical use information for the site during that operation. Currently, no reply correspondence has been received. The subject property is currently occupied by a telecommunications company that also does not store or use TCE.

PACIFIC collected groundwater elevation measurements from existing site Wells MW-1 through MW-5 on May 11, 1995. A groundwater contour map based upon the measurements is shown on Figure 3. Groundwater flow on May 11, 1995 was to the east-northeast at an approximate gradient of 0.001. Groundwater elevation data are presented in Table 3. Field procedures for water level elevation measurements are included in Attachment A.

The shift in groundwater flow direction compared with previous measurements and the shallow gradient both suggest that tidal influence may be affecting groundwater flow. Overall, long-term flow is still believed to be toward the Bay or to the north-northeast. The shift in flow direction and the indication of tidal influence make determination of specific upgradient sources of HVOCs difficult. PACIFIC's December 22, 1994 case closure report presents the findings of J.A. Moreing's file search that identified several potential sources of HVOCs at properties that are generally upgradient of the subject site.

SUMMARY OF FINDINGS

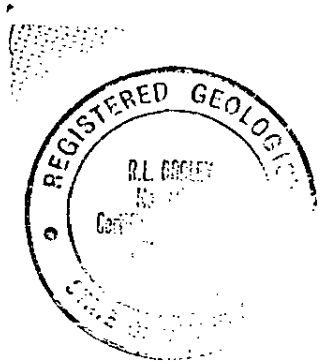
The following summarizes the findings of this investigation:

- Soils encountered during drilling were consistent with those found during previous investigations.
- Groundwater was encountered at an approximate depth of 10 feet during drilling, and stabilized at a depth between 4.5 and 5 feet.
- TCE was detected in the soil sample from SB-3 at a concentration of 110 ppb. No other HVOCs were detected in the sample from SB-3.

No HVOCs were detected in the soil sample from SB-4. Analyses from these soil samples (both from below the water table) more likely reflect concentrations in water than soil.

- TCE was detected in Piezometer TP-3 at a concentration of 490 ppb. No other HVOCs were detected in the water sample from TP-3.

It is recommended that the next step of groundwater assessment associated with HVOCs be performed by neighboring upgradient properties. It is also recommended that the subject property be granted a letter of "no further action" for the underground fuel storage case that originally prompted this investigation.



If you have any questions regarding this letter, please call.

Sincerely,

Pacific Environmental Group, Inc.

FIELD AND LABORATORY PROCEDURES, SOIL BORING PERMIT, AND BORING LOGS

ATTACHMENT A
FIELD AND LABORATORY PROCEDURES

Temporary Piezometer Installation and Sampling

The location for the installation of the temporary Piezometer TP-3 was hand augured to a depth of 5 feet to check for utilities. The piezometer was installed by driving a 3/4-inch diameter perforated galvanized steel pipe to a depth of 10 feet using a pneumatic hammer. A 1/2-inch diameter bailer was used to retrieve groundwater from the piezometer. The groundwater sample was placed into appropriate EPA-approved containers, labeled, logged onto chain-of-custody documents, and transported on ice to the laboratory. The piezometer was then removed and the hole was grouted using neat cement.

Soil Boring Installation and Sampling

The procedure for the shallow soil borings was to pneumatically advance 1-1/2-inch diameter steel hollow-stem rods fitted with acetate liners for collecting soil samples at the bottom of the borings. Soil samples for laboratory analysis were collected by advancing the hollow-stem rods into undisturbed soil. The sampler was driven 2 feet using a pneumatic hammer and hydraulic pressure. Soil samples for chemical analysis were retained in the acetate liners, capped with Teflon® and plastic end caps and sealed in zip-lock plastic bags. The samples were placed in a cooler with ice for transport to the laboratory accompanied by chain-of-custody documentation. The temperature of the cooler was recorded upon delivery to the laboratory. The hollow stem rods were then removed and the hole was grouted using neat cement.

Groundwater Elevation Measurements

To collect groundwater elevation measurements, well caps were first removed to release pressure and allow the water level to stabilize. Next an electric water level indicator was lowered into the well until water was reached and the indicator sounded. The depth to water was then measured to both the top of the well box and a marked point on the top of the well casing. Depth to water measurements were made to the nearest 1/100th foot. The measurements were recorded on the field data sheet and the well head was secured.

Laboratory Procedure

The groundwater sample collected from the temporary piezometers and soil samples collected from the soil borings were analyzed for the presence of halogenated volatile organic compounds (HVOCs) by EPA Method 8010. The samples of HVOCs were examined using the purge and trap technique with final detection by gas chromatography. All analyses were performed by a California State-certified laboratory.

Subject: Work Plan for Additional Groundwater Characterization, 120 Constitution Drive, Menlo Park, California

Dear Mr. Lee:

On behalf of Moreing Properties, Inc., Geomatrix Consultants, Inc. (Geomatrix), is pleased to submit this work plan for additional groundwater characterization at 120 Constitution Drive in Menlo Park, California (Site). We have developed this work plan based on our conversations with you and our review of available documents. The following presents a brief background of the Site along with the objective and scope of the proposed work.

BACKGROUND

The area of concern at the site is a former 1000-gallon underground fuel tank, which was located in the north-central portion of the site. Investigations in the vicinity of the former fuel tank indicated no significant petroleum impact, but halogenated volatile organic compounds (HVOCs) were detected in groundwater samples. Because no evidence of use of HVOCs has been identified, it is suspected that the source of these compounds is off-site. Investigations have shown that groundwater flows to the east; however, no groundwater quality data have been collected west of the former tank location to verify that groundwater flowing onto the site from the upgradient direction contains HVOCs.

OBJECTIVE AND SCOPE OF WORK

The objective of the work is to confirm an off-site source of HVOCs in groundwater in the vicinity of the former fuel tank in order to pursue a finding of no further action. To accomplish this objective Geomatrix will collect upgradient groundwater samples as indicated on the attached figure (Figure 1).

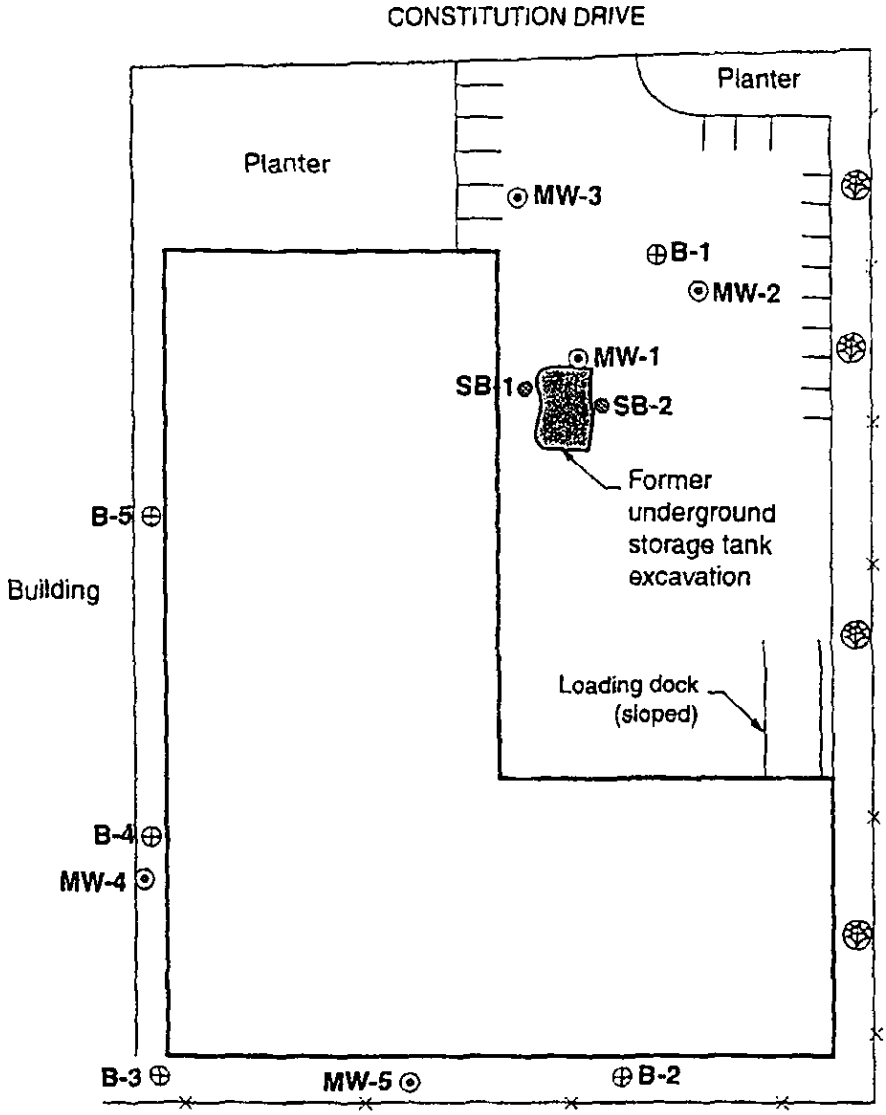
Groundwater samples will be collected at the five locations shown on Figure 1. At each location, we will attempt to collect two samples, one of first encountered groundwater and one 5 feet below first encountered groundwater. The samples will be collected using a hydropunch technique. Groundwater samples will be collected in 40-milliliter VOA vials and placed in a chilled cooler for transport to the analytical laboratory using standard chain-of-custody procedures. The samples will be analyzed by a California-certified laboratory for HVOCs using U.S. Environmental Protection Agency Method 8010.

GEOMATRIX

Sampling equipment will be steam-cleaned or cleaned with laboratory-grade detergent and rinsed with deionized water between each sampling location. Waste soil and water generated during the field program will be stored in 55-gallon drums that will be sealed and labeled pending analysis of soil samples. Sample boreholes will be backfilled with cement-bentonite grout.

We have scheduled contractors to conduct field activities on 13 February 1998. We greatly appreciate your expeditious review of the work plan. Should you have any questions, please contact either of the undersigned.

Sincerely,



GEOMATRIX CONSULTANTS, INC.

Re: J.A. Moreing Property
120 Constitution Drive
Menlo Park, California

Dear Ms. Lee:

This letter presents a work plan prepared by Pacific Environmental Group, Inc. (PACIFIC), on behalf of J.A. Moreing Company to install one temporary piezometer and two shallow soil borings at the site referenced above (Figure 1). The proposed work is being conducted in response to the County of San Mateo, Environmental Health Department's January 13, 1995 letter requesting additional investigation. Included in this work plan are discussions of the site background and proposed scope of work.

BACKGROUND

Site History

The site is located in Menlo Park, California. Land usage in the vicinity of the site is primarily industrial and commercial. The site consists of a parking lot and a two-story building containing office and warehouse space. A single 1,000-gallon underground fuel storage tank formerly existed on the property. The former tank was located in the north-central portion of the site. Analytical results obtained from a water sample collected within the tank excavation during tank removal operations showed a concentration of 6,700 parts per billion (ppb) total petroleum hydrocarbons calculated as gasoline (TPH-g).

Previous Investigations

A Phase 1 environmental site assessment was performed for the site by Certified/Earth Metrics Company in April 1993. A review of the records of the San Mateo County Health Department found that there had been a 1,000-gallon underground storage tank

(UST) at the site. As indicated by review of the files, there had been a possible leakage incident at the site discovered at the time of tank removal on March 21, 1986. Testing done by Blaine Tech Services, Inc. on the date of tank of removal revealed the presence in the groundwater of 6,700 ppb TPH-g. No data was found regarding analysis of soil samples from the tank excavation.

In May 1993, McLaren/Hart, Inc. installed three groundwater monitoring wells (MW-1, MW-2, and MW-3) and drilled two exploratory soil borings (SB-1 and SB-2) in the vicinity of the former UST excavation. No hydrocarbons were detected in the soil samples collected from the exploratory soil boring or the borings for the wells. Low concentrations of benzene were detected in groundwater samples collected from Wells MW-2 and MW-3.

Quarterly monitoring of Wells MW-1, MW-2, and MW-3 has found no TPH-g, benzene, toluene, ethylbenzene, or xylenes (BTEX compounds) in the groundwater since the initial low values present immediately after well installation. The only other reported values for hydrocarbons were gasoline concentrations that were reported with the March 1994 sampling event. These concentrations were reported by the laboratory as being within the gasoline range but were caused by a discrete peak that is not indicative of gasoline.

During December 1993, the previously unidentified analyte peak that did not match the chromatographic pattern of gasoline was identified as trichloroethene (TCE) at a maximum concentration of 1,200 ppb within the groundwater from Well MW-2. No historic or current sources of TCE are known to exist on the site.

On March 4, 1994, PACIFIC installed upgradient Wells MW-4 and MW-5. Groundwater was encountered at an approximate depth of 10 feet during drilling, and stabilized at a depth between 4.5 to 5 feet. Using groundwater elevation data from the new and old wells it was found that groundwater flow was generally to the north-northwest at an approximate gradient of 0.004. Historic groundwater flow has ranged directionally from northeast to west-southwest. Tidal influences are suspected to play a role in the apparent fluctuation of the direction of groundwater flow. TCE was detected in the new wells at concentrations ranging from 180 to 350 ppb. Details of the groundwater investigation are documented in a report dated April 20, 1994.

On July 22, 1994, PACIFIC installed two temporary piezometers, TP-1 and TP-2 along the southeastern boundary of the site to further investigate potential upgradient sources of TCE. Groundwater samples from TP-1 and TP-2 were analyzed for halogenated volatile organic compounds (HVOCs) by EPA Method 8010. TCE was detected in Piezometers TP-1 and TP-2 at concentrations of 740 and 370 ppb, respectively. 1,1-Dichloroethene (1,1-DCE) was also detected in TP-1 and TP-2 at concentrations of 30 and 14 ppb. Wells MW-1, MW-2, and MW-3 have all contained detectable concentrations of 1,1-DCE in groundwater samples collected during previous sampling events.

Piezometers TP-1 and TP-2 also contained detectable concentrations of 1,1,1-trichloroethane (1,1,1-TCA). 1,1,1-TCA had not previously been detected in any of the wells at the site.

The J.A. Moreing Company site is located in a light industrial area with many possible sources of HVOCs. To investigate the potential for off-site sources of HVOCs in the site groundwater, a representative of the J.A. Moreing Company reviewed City of Menlo Park Fire Department records regarding the use of hazardous materials in adjacent facilities. The records search indicated several potential sources of SVOCs in the area of the site.

PROPOSED SCOPE OF WORK

The proposed scope of work for this investigation includes: (1) the installation of two shallow soil borings (SB-3 and SB-4) with recovery of a soil sample at a depth of 7-1/2 feet bgs in each boring, (2) the sampling of groundwater at one point, TP-3, by driving a temporary piezometer to a depth of approximately 15 feet bgs, (3) analysis of soil from the soil borings and groundwater from the temporary piezometer for the presence of HVOCs using EPA Method 8010, and (4) preparation and submittal of a soil and groundwater investigation report documenting the analytical results.

The location of the proposed soil borings and temporary piezometer are shown on Figure 1. Field and laboratory procedures are presented as Attachment A. The soil and groundwater investigation report will also address the other concerns of the County of San Mateo Environmental Health Department letter written January 13, 1995.

If you have any questions regarding this letter, please call.

Sincerely,

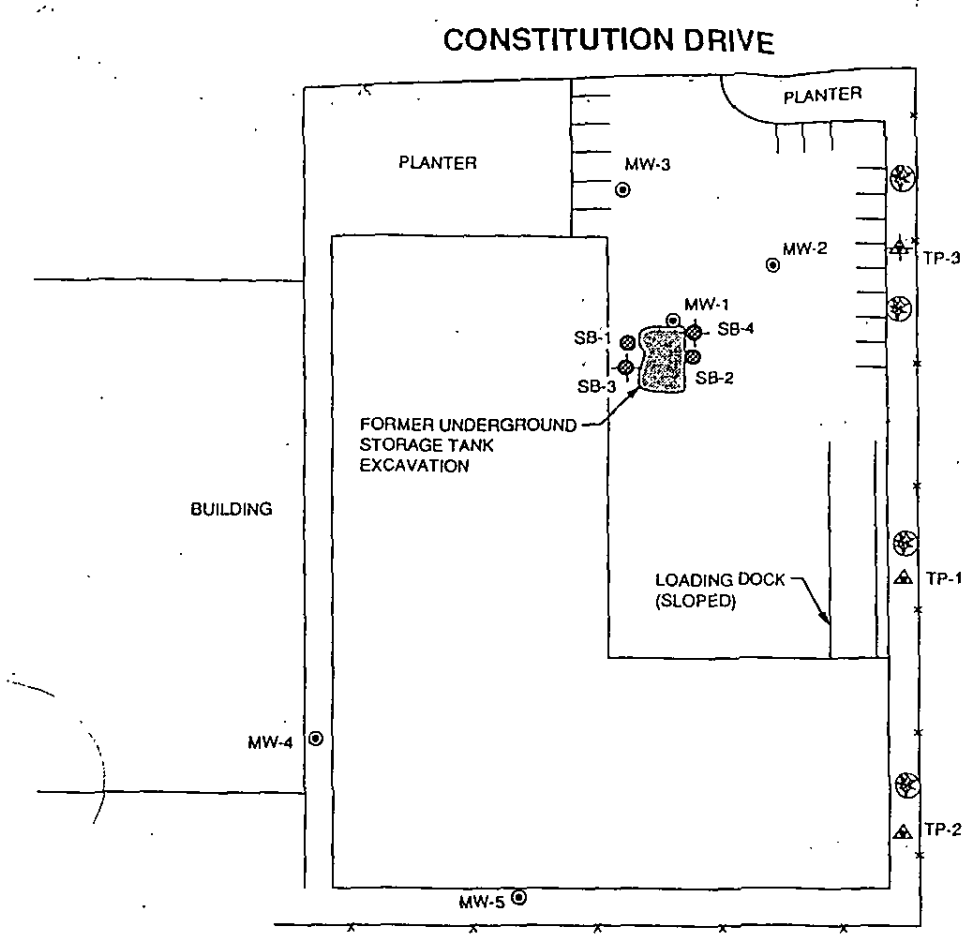
PROJECT:
247-001.6B

ATTACHMENT A

FIELD AND LABORATORY PROCEDURES

ATTACHMENT A
FIELD AND LABORATORY PROCEDURES

Soil Sampling



The procedure for the shallow soil borings will be to pneumatically advance a 1-1/2-inch diameter steel hollow-stem rods fitted with acetate liners for collecting a soil sample at the bottom of the borings. Soil samples for laboratory analysis will be collected by advancing the hollow-stem rods into undisturbed soil. The sampler will be driven 2 feet using a pneumatic hammer and hydraulic pressure. Soil samples will be analyzed in the field for volatile organic compounds (VOCs) using a photo-ionization detector (PID) by a PACIFIC Geologist. Soil samples for chemical analysis will be retained in the acetate liners, capped with Teflon® and plastic end caps and sealed in zip-lock plastic bags. The samples will be placed in a cooler with ice for transport to the laboratory accompanied by chain-of-custody documentation. The temperature of the cooler will be recorded upon delivery to the laboratory.

Temporary Piezometer Installation and Sampling

The installation of the temporary piezometer will be performed by driving a 3/4-inch galvanized piezometer casing and insert rods to an approximate depth of 15 feet. The deepest portion of the piezometer is perforated to allow water to flow into the piezometer casing. Sampling is performed by removing the insert rods and bailing water from the piezometer using a 1/2-inch diameter bailer. The sample will be placed in a cooler with ice for transport to the laboratory accompanied by chain-of-custody documentation. The temperature of the cooler will be recorded upon delivery to the laboratory.

Laboratory Procedures

Soil and groundwater samples will be analyzed in the laboratory for the presence of volatile organic compounds using EPA Method 8010. Extraction will be performed by the purge and trap technique, EPA Method 5030. Final detection will be by gas chromatography using a flame-ionization detector and a photo-ionization detector.

Menlo Park, CA 94025

Subject: Approval of No Further Action at the Property of 120 Constitution Drive, Menlo Park, San Mateo County, California

Dear Mr. Taylor:

The Regional Board staff has reviewed the results in recent site investigation reports and a request for no further action concerning the volatile organic compounds, especially Trichloroethene (TCE), detected in groundwater beneath the subject site. These reports were submitted on your behalf by your consultants, including: (a) Groundwater Monitoring Results by PES Environmental, Inc., dated November 24, 1997, and (b) Results of Additional Groundwater Characterization by Geomatrix, dated March 11, 1998.

According to these reports, TCE concentrations in the range from 29 µg/l to 540 µg/l were detected in groundwater samples. Other VOCs (e.g., PCE, 1,1,1-TCA, 1,1-DCE, cis-1,2-DCE, vinyl chloride, etc.) are also present in the groundwater, although at much lower levels.

A review of available groundwater information of the subject site and neighboring sites (e.g., 110 Constitution Drive to the immediate west, 115 and 119 Independence Drive to the immediate south, and 149 Commonwealth Drive 1/3 miles to the southeast) shows that a regional TCE plume exists in the area. The source of the contamination, however, has yet to be determined.

Board staff has compared the groundwater monitoring data of the subject site to that of the neighboring sites and found them to be in the similar range of VOCs contamination found in the area. Therefore, the VOCs detected in the groundwater of the subject site is probably the result of an off-site source. Moreover, the levels of TCE in the groundwater appear to be decreasing over time.

With the provision that the information provided to this agency was accurate and representative of site conditions, we conclude that the pollution in groundwater beneath

the subject property as noted above appears to be the result of the migration of pollutants in groundwater from an off-site source. Accordingly, Board staff does not intend to require any further action by the property owner at this time in defining the migration of pollutants currently found on the subject property.

This letter is to advise you that the Regional Board would not name the owner of the subject property (or future owners that purchase the property) as a responsible party with respect to any investigations or cleanup of VOCs that migrate onto the site from an off-site source. This is in accordance with the Regional Board's policy not to pursue enforcement actions against property owners whose land overlies contaminated groundwater that results from the migration of pollutants in groundwater from an off-site source.

However, should new information become available indicating that the pollution is caused by on-site source or should any owners refuse reasonable access to Board staff or any other responsible party for the purpose of performing necessary investigation or remedial activities at the subject property, the Regional Board would reconsider its decision. Similarly, should any owners or occupants have a future release of hazardous materials at the property that commingles with any existing contamination, the Regional Board would also reconsider its decision.

Please call Randy Lee of my staff at (510) 286-4224 if you have any questions.

Sincerely,

SUBJECT: PROPER CLOSURE OF MONITORING WELLS AT 120 CONSTITUTION DRIVE, MENLO PARK, CALIFORNIA

Dear Mr. Moreing:

We understand that the Regional Water Quality Control Board issued a "no further action" letter dated **April 8, 1998** regarding volatile organic compounds contamination at the subject site. Since, the monitoring wells will no longer be used, they will need to be properly destroyed. The purpose of this is to prevent potential surface contamination from migrating to the groundwater via the wells.

Please submit a drilling application (enclosed) and fees, and schedule with me 72 hours in advance of field activities. The wells should be properly destroyed within ninety (90) days of this letter.

Thank you for your cooperation. Should you have questions, I can be reached at (650) 363-4957.

SMCo SITE #440042

SUBJECT: SUBSURFACE INVESTIGATION AT 120 CONSTITUTION DRIVE, MENLO PARK, CALIFORNIA

Thank you for the Pacific Environmental Group's June 15, 1995 report for the subject site. The lack of TCE in the soil, except for the capillary fringe, and lack of historical use of TCE at the site indicates that the source of contamination is likely a neighboring site. "No further action" status for this site is appropriate but final case closure will not be given until the actual source of the TCE is identified. Any new information you may have regarding this issue this would be appreciated.

Should you have any questions, you may reach me at (415)363-4972. Thank you for your cooperation.

Sincerely,

Gail D. Lee

SMCo SITE #440043

SUBJECT: SUBSURFACE INVESTIGATION AT 120 CONSTITUTION DRIVE, MENLO PARK, CALIFORNIA

Thank you for the Pacific Environmental Group Case Closure request for the subject site. After review of the file and the report, several details need to be addressed before further considerations can be made for case closure. They are as follows:

- Because no soil boring samples results were submitted, it is unclear whether the subject site may have been the source of the TCE contamination. Soil samples indicating non-detect for TCE in the appropriate areas will demonstrate this.

- Present documentation that historic or current sources do not indicate usage of TCE at the subject site.

- Based upon gradient determination and TCE storage, what is the most likely source of up-gradient TCE? Evidence must be provided to the Regional Water Quality Control Board to assign responsibility for the TCE contamination.

Should you have any questions, you may reach me at (415)363-4972. Thank you for your cooperation.

Sincerely,

Gail D. Lee

County LUFT Enforcement Program

Dear Gail,

We recieved the information you sent us dated April 8, 1993 regarding our property at 120 Consitution Drive, Menlo Park(SMCo Site: #440042). We are currently soliciting proposals for the work from a couple of engineering firms.

These firms have been notified to your requirements as stated in your letter dated April 8, 1993.

We are working to remedy this situation as quickly as we can.

I'll be calling you this week to discuss this further.

Sincerely,

Ken LaPoint
Property Manager

SMCo SITE: #440042

SUBJECT: **M0REING COMPANY, 120 CONSTITUTION DRIVE, MENLO PARK, CALIFORNIA**

Our files identify your company as a discharger, or potential discharger, of waste to waters and/or soil of the State as the result of petroleum product leaks from underground tanks at facilities it owns, operates, or for which it is liable. This letter is intended to clarify your responsibilities for reporting, investigating, and conducting cleanup of such discharges.

The San Francisco Bay Regional Water Quality Control Board (RWQCB) is responsible for oversight of soil and ground water pollution cases which threaten or impact waters of the State. However, due to the large number of fuel leak cases reported, the RWQCB Staff is not able to respond to each incident. Therefore, the San Mateo County Leaking Underground Fuel Tank (LUFT) Enforcement Program (CLEP) is working with the RWQCB and is taking the lead role for case-handling. Regardless of the level of oversight from agencies, you are responsible for the timely reporting, investigation, and cleanup of soil and ground water pollution such that the beneficial uses of waters of the State are protected, and in compliance with appropriate policies.

As described in enclosure (1), you are responsible to reimburse the State of California for up to 150 percent of the site specific oversight costs incurred by the County while overseeing the cleanup of your site.

Investigations and Cleanup Responsibilities:

The subject underground tank leak case has been reported as your responsibility. The following steps are the minimum required for addressing your site:

1. Determine the lateral and vertical extent of soil and ground water pollution.

2. Assess the local and regional hydrogeology as appropriate to evaluate actual or potential impacts of contamination to beneficial uses of surface and/or ground water.

3. Evaluate and implement appropriate remedial action alternatives.

4. Remove all floating or free product. Dissolved constituents and contaminated soil should be remediated consistent with State Water Resources Control Board Resolution No. 68-16.

Reporting Responsibilities

You are responsible to forward reports to this office, with copies to the RWQCB, as follows:

1. Submittal of individual technical reports, for the site, detailing all investigative and remedial actions associated with the site. These reports shall be submitted on a quarterly basis, unless more frequent reports are requested by this office or the RWQCB. These reports shall be submitted until such time as the case is closed by CLEP and the RWQCB.

2. A summary report shall be submitted on a quarterly basis and include the following information, at a minimum:

    a. Site name, address, city and county site number.

    b. A brief background history of the investigation and remedial actions.

    c. A chronological listing of actions that were taken regarding investigation and remediation during the previous quarter.

    d. A listing, with scheduled dates, of actions planned for the next quarter.

    e. Status on the characterization of soil pollution, free product, and dissolved constituents.

    f. Status on remediation of soil pollution, free product, and dissolved constituents. This shall include a report of the gallons of product recovered, and a calculation for the amount of product recovered from dissolved phase removal and/or vapor extraction.

The first quarterly summary report shall be submitted thirty (30) calendar days from the date of this letter, and quarterly thereafter.

All proposals and reports which contain engineering or geological information, interpretations, or other opinions as specified by The Business and Professions Code, must be signed AND STAMPED by an appropriately registered professional. In general, all reports on investigation and remediation require this type of signature.

All proposals and reports submitted to us must be accompanied by a cover letter signed by an officer or legally authorized representative of your company which states at a minimum:

> "I declare under penalty of perjury, that the information and/or recommendations contained in the attached proposal or report is true and correct."

You are required to submit the above reports pursuant to Section 13267(b) of the California Water Code. Failure to comply may subject you to the imposition of administrative civil liabilities by the Regional Board of up to one thousand dollars ($1,000) per day of non-compliance.

Two (2) additional enclosures include:

- A partial resource list of consultants that may assist you in meeting the above requirements.

and

- A brief informational packet discussing possible state monies available to you.

Thank you for your cooperation in this matter. Please contact me within 15 days at (415) 363-4972 to further discuss your case and answer any questions.

Sincerely,

Gail D. Lee
Hazardous Materials Specialist
County LUFT Enforcement Program

SUBJECT: UNDERGROUND TANK REMOVAL AT 120 CONSTITUTION DRIVE, MENLO PARK, CALIFORNIA

The San Mateo County Remedial Oversight Program files indicate that an underground tank was removed from the subject site in March 1986. Subsequent soil and groundwater samples reveal contaminated soils of 470 ppm and contaminated groundwater of 6700 ppb ppm gasoline. Even though some time has passed, California Water Code still requires that this contamination be cleaned up or remediated. It is possible that natural bacterial degradation may have occurred to reduce these levels to an acceptable amount. Until this is verified, this site will be considered to have had a contaminant release and under regulatory requirements.

Please call me at (415)363-4972 by April 15, 1993 to discuss these issues so that we can reach an agreeable solution to this problem. Thank you for your cooperation.

Sincerely,

Gail D. Lee

Mr. Barry Carr
Carr & Ferrell, LLP
200 Geng Road
Palo Alto, CA 94303

Subject: Limited Soil Vapor and Groundwater Investigation
120 Constitution Drive, Menlo Park, California
ERAS Project Number 10030A

Dear Mr. Carr:

ERAS Environmental, Inc. (ERAS) is pleased to present the results of the subsurface investigation for the collection of soil gas and groundwater samples near the corner of the building located at 120 Constitution Drive in Menlo Park, California (the "Property").

The purpose of this investigation was to assess for the presence of volatile organic compounds (VOCs) in vapor in shallow unsaturated soil due to migration from VOCs in groundwater in that area of the Property. The results of the soil vapor investigation could be then used to assess the potential for VOCs to impact indoor air inside the building on the Property.

The location of the Property is shown on **Figure 1**. The Property layout and boring locations are shown on **Figure 2**. The maps are included as **Attachment A**.

BACKGROUND

ERAS performed a Phase I Environmental Site Assessment project for the Property, and the results were presented in a report dated March 5, 2010. A summary of information from the Phase 1 project is included below.

Previous subsurface investigations were performed on the Property due to the former use of a leaking gasoline UST. The UST was removed from the Property in 1986 and was described as a 1,000-gallon capacity gasoline tank. A groundwater sample collected from the UST pit was reported to contain elevated concentrations of gasoline. In 1993, McLaren/Hart, Inc. conducted a preliminary site assessment of the Property which included soil sampling, Hydropunch groundwater sampling and groundwater monitoring well installation.

Groundwater elevations were measured and a groundwater flow direction was calculated to the east. Soil and groundwater samples were collected and analyzed. No petroleum hydrocarbons were detected in soil samples. Two groundwater samples contained low concentrations of benzene (0.33 and 0.4 ppb Benzene).

Pacific Environmental Group, Inc. prepared a work plan dated June 23, 1994 for the Property that included a summary of previous environmental work and noted the presence of trichloroethene (TCE) concentrations in groundwater under the Property. No detectable concentrations of total petroleum hydrocarbons as gasoline range organics (TPH-GRO) or the gasoline constituents benzene, toluene, ethyl benzene and xylenes (BTEX) were detected during four quarters of subsequent groundwater monitoring. However, concentrations of TCE ranging from 1,100 micrograms per liter (µg/L) to 1,700 µg/L TCE were measured in groundwater from wells MW-1, MW-2 and MW-3.

Two up-gradient groundwater monitoring wells were installed and sampled and later groundwater was sampled along the northeast margin of the Property and TCE was also detected in these locations.

After a "No Further Action" letter was issued on April 1, 1998 for the VOCs in the groundwater beneath the Property, the groundwater monitoring wells were properly abandoned. ERAS ESA report concluded that although the Property owner is not considered to be responsible for the VOC contamination beneath the Property, due to the high former identified concentrations in groundwater and the shallow depth to groundwater, a potential risk exists for VOC vapor migration into the building.

REGIONAL GEOLOGY/HYDROLOGY

The Property is underlain by alluvial sediments that have been derived from the nearby upland surfaces and were deposited in a series of coalescing alluvial fans. The sediments underlying this part of the Santa Clara Valley are divided into two units, based upon age (California Department of Water Resources, 1967). The younger alluvium is of Holocene to Pleistocene age and is composed primarily of unconsolidated sands, gravels, silts and clays and is up to 200 feet thick. Thick deposits of coarse grained alluvial deposits are found in the vicinity. The Property is likely underlain by near surface clayey soils with coarser grained sands and gravels occurring to a depth of several hundred feet. Below the younger alluvium is the less permeable Santa Clara Formation, of Pleistocene age. The Santa Clara Formation is composed of poorly sorted and irregularly bedded gravels, silts, sands and clays. This unit is underlain by Franciscan basement rock of Cretaceous to Jurassic age.

The subject site is located in the northern part of the San Jose Plain, the surface of which slopes gently down toward San Francisco Bay. The San Jose Plain subarea is considered a separate groundwater subarea because groundwater exists here under nearly completely confined

conditions, which makes it unique from any other subarea of the Santa Clara Valley groundwater basin (Department of Water Resources, 1967). The San Jose Plain Subarea is the most important portion of the South Bay Groundwater Basin because water-bearing sediments are extremely permeable, groundwater is confined, recharge occurs on three sides, and the total thickness of water-bearing sediments is greater than in any other portion of the basin.

The reported depth to groundwater at the Property is reported to be between approximately 4 to 5 feet below the ground surface (PES, 199&). The regional groundwater flow follows the topography, moving from areas of higher elevation to areas of lower elevation. The regional groundwater flow direction in the area of the Property is calculated to be to be toward the east or northeast (PES, 1997).

FIELD WORK PERFORMED

Prior to field activities, ERAS prepared a short Work Summary for Soil Vapor and Groundwater Sampling and submitted it with a drilling permit application for the project from the San Mateo County Environmental Health Department. The proposed drilling locations were in the area of former monitoring well MW-3 which once contained 1,400 µg/L TCE and both borings were as close as possible to the edge of the building in this area. A copy of the approved permit is included in **Attachment B**.

Two 2.5-inch diameter soil borings were drilled using a direct-push sample rig by Vironex Inc. of Pacheco on April 26, 2010. The locations of the borings are shown on **Figure 2** in **Attachment A**. Borings B-1 and B-2 were located approximately six feet from the building and approximately 24 feet apart near the northeastern corner of the building. The borings were advanced to a total depth of 10 feet bellow ground surface (bgs).

Soil was continuously cored for lithologic logging and monitored using an organic vapor meter (OVM) for indication of hydrocarbon contamination. The soil cores were logged by ERAS geologist Andrew Savage. One soil gas sample was collected for analysis from each boring (B-1, 3'-3.5' and B-2, 3'-3.5') and one groundwater sample was collected for analysis. The Standard Operating Procedures for soil gas sampling and groundwater sampling with a direct-push sample rig are included as **Attachment C**.

The subsurface lithologic conditions encountered consisted of silty clay to a depth of 9.5 feet bgs which was underlain by gravely sand. Groundwater was found to be present at 9.5 feet bgs. No signs of contamination such as odor, discoloration or elevated OVM reading were observed during the drilling of the borings. Details of subsurface conditions are provided on the soil boring logs in **Attachment D**.

ANALYTICAL RESULTS

The soil gas samples collected were transported under chain-of-custody procedures to Air Toxics

Ltd., a state-certified analytical laboratory in Folsom, California. The samples were analyzed for VOCs by EPA method TO-15. The laboratory report and chain of custody form are included in **Attachment E**.

The soil gas samples collected contained a variety of detected VOC compounds. All of the detected compounds were well below the environmental screening levels (ESLs) for shallow soil gas screening levels for both residential and commercial/industrial land use (Regional Water Quality Control Board (RWQCB) Environmental Screening Levels, May 2008).

The groundwater samples collected were transported under chain-of-custody procedures to McCampbell Analytical, a state-certified laboratory in Pittsburg, California. The samples were analyzed for VOCs by EPA method 8260B. The laboratory report and chain of custody form are included in **Attachment F**.

The groundwater sample collected from boring B-1 contained cis-1,2-dichloroethene (cis-1,2-DCE) at a concentration of 27µg/L and TCE at a concentration of 110µg/L. The groundwater sample collected from boring B-2 contained 18µg/L of acetone, 5µg/L of cis-1,2-DCE, 1.3µg/L of toluene, 0.73µg/L of 1,2,4-trimethylbenzene, 6µg/L of TCE, and 2.7µg/L of xylenes. The concentrations of cis-1,2-DCE and TCE were above the ESLs for groundwater which is considered a potential source of drinking water.

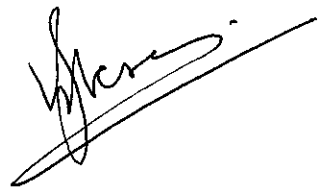
CONCLUSIONS

Soil vapor samples and groundwater samples were collected close to the location known to have contained high concentrations of VOCs in groundwater in 1994.

Based on the sampling and analysis, the groundwater below the Property still contains concentrations of VOCs above the current ESLs. The concentrations of TCE were an order of magnitude lower that those reported from former groundwater monitoring wells in 1994.

Although VOCs are still present in groundwater, the concentrations of VOC vapors found in the shallow subsurface soil were at concentrations below those which the RWQCB considers a threat to indoor air. The results indicate no threat to the indoor air in that part of the Property. The concentrations of TCE and other solvents have decreased since 1994 and are expected to continue to decrease with time.

Based the findings of this investigation and the No Further Action Letter dated April 1, 1998, ERAS recommends no further actions be performed regarding subsurface environmental conditions or indoor air quality at the Property.



No subsurface investigation is complete enough to guarantee that no contamination exists on a particular site and are therefore limited and incomplete. Judgments leading to conclusions and recommendations are generally made based on the data collected according to the scope of work

performed and are therefore potentially limited and incomplete. More extensive studies can tend to reduce the uncertainties associated with this type of investigation.

If you have questions or comments regarding this report please contact Andrew Savage at 510-247-9885 x302, or by e-mail andrew@eras.biz.

ERAS thanks you for the opportunity to serve you.

Sincerely,
ERAS Environmental, Inc.

Andrew Savage

Revised every January 1

 2010 SUBSURFACE DRILLING PERMIT APPLICATION

REQUIREMENTS:

An accurate & correct map of existing and proposed well/boring locations **must** be included with the permit application. The well/boring location map **must** include the following.

1. North arrow, existing & historic site features, wells, approximate property lines and any other pertinent existing & historic features and information.
2. Proposed well/boring locations to scale.

A work plan describing the drilling and construction/destruction methodology, at a minimum, is **required** by County Staff. Upon review of information on this application and the submitted work plan, and subject to approval noted below, a permit will be issued allowing well/boring owner, driller, and responsible professional (consultant) to perform the specified work. The permit is subject to both General and Special Conditions stated below. A copy of the approved Subsurface Drilling Permit **must** be available on site while work related to the permit is being performed. Drilling date and time **must** be scheduled with County staff at least three (3) working days in advance of field work but at least two (2) working days after application submittal. Drilling may begin at the notified date and time whether County staff is present or not.

GENERAL CONDITIONS:

A. Well and boring construction and destruction under this permit is subject to the Standards for the Construction of Wells in San Mateo County, County Groundwater Protection Program (GPP) Guidelines, Policies & Procedures, the State Water Well Standards, and any instructions by a Health Department representative.

B. Well/Boring Owner, Driller, and Responsible Professional assume responsibility for all activities and uses under the permit, including compliance with Workmen's Compensation Laws, and indemnify, defend and save the County of San Mateo, its' officers, agents and employees, free and harmless from any and all expense, cost, or liability in connection with or resulting from work or stopped-work associated with the permit, including, but not limited to, property damage, personal injury, wrongful death, and loss of income.

C. All borings **must** be properly destroyed (grouted/sealed) within 24 hours of drilling unless special conditions are approved in writing as part of this permit.

D. Analytical results of all soil and groundwater samples collected during the execution of drilling under this permit **must** be submitted to County GPP staff by the Responsible Professional within 60 days of sample collection. If contamination is discovered during drilling, verbal notification to County GPP by the Responsible Professional is **required** within 72 hours of discovery. Proper storage, labeling & disposal of investigation-derived residual wastes are the responsibility of the consultant unless stated otherwise contractually.

E. In addition to the County copy of the State DWR Form 188, boring logs and well construction details for all borings/wells except geotechnical borings, signed by a Responsible Professional, **must** be submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction. As-built locations/dimensions **must** be finalized in subsequent report of findings submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction.

F. Permit is valid only for the purpose specified herein. No change in purpose or required procedures, as described on this permit application, in the associated workplan, or in the special conditions below, will be allowed except upon written permission from the County. Construction aspects can be changed based on conditions encountered in the field.

G. Permit is valid for one mobilization only and is automatically canceled if not exercised, or if an extension is not applied for and granted by County GPP, within 120 days of the original permit issuance date. Failure to notify staff of cancellation or delay in start time, at least one minute prior to notified start time, will result in the Consultant will be billed an Inspection Cancellation fee of $257 for 2010 if GPP staff attempted to perform an inspection.

H. Wells installed under this permit may not be used for domestic, municipal, commercial, or irrigation water supply.

I. All work plans and reports related to work performed under County oversight **must** conform to Business and Profession Codes and State Water Well Standards.

J. Top-of-casing elevation of all wells **must** be surveyed to the nearest 0.01-foot relative to Mean Sea Level (NAVD88) and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate. Geotechnical wells are exempt from this requirement if a written variance from GPP is obtained prior to drilling.

K. Latitude and longitude of all wells **must** be surveyed with sub-meter accuracy relative to NAD83 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate.

L. Violation of any requirement or general or special permit condition may result in an order by GPP staff to cease work under this permit, correct the violation, and potentially re-permit the work as a new mobilization.

SPECIAL CONDITIONS:

County Approval: _____ (RO)SD# 674 Date: 4/14/10

ATTACHMENT C
STANDARD OPERATING PROCEDURES

STANDARD OPERATING PROCEDURE – DIRECT PUSH BORINGS

SOIL CORING AND SAMPLING PROCEDURES

Prior to drilling, all boreholes will be hand dug to a depth of 4-5 feet below ground surface (bgs) to check for underground utility lines.

Soil and groundwater samples are collected for lithologic and chemical analyses using a direct driven soil coring system. A hydraulic hammer drives sampling rods into the ground to collect continuous soil cores. As the rods are advanced, soil is driven into an approximately 2.5-inch-diamter sample barrel that is attached to the end of the rods. Soil samples are collected in sleeves inside the sample barrel as the rods are advanced. After being driven 4 to 5 feet into the ground, the rods are removed from the borehole. The sleeve containing the soil core is removed from the sample barrel, and can then be preserved for chemical analyses, or used for lithologic description. This process is repeated until the desired depth is reached.

A soil core interval selected for analyses is cut from the sleeve using a hacksaw. The ends of the tube are covered with aluminum foil or Teflon liner and sealed with plastic caps. The soil-filled liner is labeled with the bore number, sample depth, site location, date, and time. The samples are placed in bags and stored in a cooler containing ice. Soil from the core adjacent to the interval selected for analyses is placed in a plastic zip-top bag. The soil is allowed to volatilize for a period of time, depending on the ambient temperature. The soil is scanned with a flame-ionization detector (FID) or photo-ionization detector (PID).

All sample barrels, rods, and tools are cleaned with Alconox or equivalent detergent and de-ionized water. All rinsate from the cleaning is contained in 55-gallon drums at the project site.

GROUNDWATER SAMPLING FROM DIRECT PUSH BORINGS

After the targeted water-bearing zone has been penetrated, the soil-sample barrel is removed from the borehole. Small-diameter well casing with 0.010-inch slotted well screen may be installed in the borehole to facilitate the collection of groundwater samples. Threaded sections of PVC are lowered into the borehole. Groundwater samples may then be collected with a bailer, peristaltic pump, or WaTerra pump until adequate sample volume is obtained.

Groundwater samples are preserved, stored in an ice-filled cooler, and are delivered, under chain-of-custody, to a laboratory certified by the California Department of Health Services (DHS) for hazardous materials analysis.

BOREHOLE GROUTING FOR DIRECT PUSH BORINGS

Upon completion of soil and water sampling, boreholes will be abandoned with neat cement grout to the surface. If the borehole was advanced into groundwater, the grout is pumped through a grouting tube positioned at the bottom of the borehole.

STANDARD OPERATING PROCEDURE
– GEOPORBE SOIL-GAS SAMPLING

A soil-gas sample will not be collected within seven days following a measurable precipitation event.

Sample rods are driven to the desired depth. A soil-gas sampling tubing system is inserted into the rods and connected to an expendable point holder. The rods are retracted a desired 6-inch interval and the expendable drive point on the bottom of the rods is released. Hydrated bentonite is placed around where the drill rod exits the ground to prevent surface air migrating down the outer portion of the rods. The bentonite will be allowed to hydrate and expand for at least 30 minutes prior to purging the sample line.

The soil sample is then collected into a Summa canister. A summa canister is a stainless steel vessel which has had the internal surfaces specially passivated using a "Summa" process. The Summa canister arrives pre-cleaned from the laboratory and with an internal vacuum between 25" Hg and 20" Hg. Prior to use, the pressure in the summa canister is checked with a pressure gauge to ensure a vacuum of at least 25" Hg for quality control purposes.

As a check for air leaks a paper towel or rag wetted with isopropyl alcohol will be placed on all sample line fittings and the top of the inside of the drill rod. Analysis of the sample for isopropyl alcohol will indicate if ambient air entered the sample.

A vacuum is applied to the tubing to purge at least three volumes of air from the sample tubing using a flow regulator at a purge rate from 100 to 200 ml/min.

Once the tubing has been purged of ambient air, it is connected to a summa canister. A particulate filter is used in-line to filter out particles and liquids. A flow controller is placed in line between the filter and the canister to maintain a low purge rate.

The valve on the summa canister is opened, and the soil-gas sample is drawn into the canister. The sample tubing will be checked for condensation. If observed, the sample will be discarded. The flow controller will stop drawing in air after a pre-set time interval. The remaining canister vacuum should be about 5-inches Hg. The vacuum left inside the canister is recorded on the chain-of-custody. The soil-gas samples will be transferred under chain-of-custody procedures to a state certified laboratory for analyses. Upon receipt, the laboratory will check the pressure in the canister and compare it to the pressure recorded on the chain-of-custody for quality control purposes.

LABORATORY REPORT AND CHAIN OF CUSTODY FORM – SOIL GAS

Air Toxics LTD.
Laboratory Services Since 1989

5/10/2010
Mr. Andrew Savage
ERAS Environmental
1533 B St.

Hayward CA 94541

Project Name: 120 Constitution
Project #: 10030A
Workorder #: 1004575

Dear Mr. Andrew Savage

The following report includes the data for the above referenced project for sample(s) received on 4/27/2010 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kyle Vagadori at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kyle Vagadori
Project Manager

LABORATORY NARRATIVE
Modified TO-15
ERAS Environmental
Workorder# 1004575

Two 1 Liter Summa Canister samples were received on April 27, 2010. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

Requirement	*TO-15*	*ATL Modifications*
Daily CCV	</= 30% Difference	</= 30% Difference; Compounds exceeding this criterion and associated data are flagged and narrated.
Sample collection media	Summa canister	ATL recommends use of summa canisters to insure data defensibility, but will report results from Tedlar bags at client request
Method Detection Limit	Follow 40CFR Pt.136 App. B	The MDL met all relevant requirements in Method TO-15 (statistical MDL less than the LOQ). The concentration of the spiked replicate may have exceeded 10X the calculated MDL in some cases

Receiving Notes

The Chain of Custody (COC) was not relinquished properly. A date was not provided.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

	Client Contact: Andrew Savage	Date Reported: 04/29/10
Hayward, CA 94541	Client P.O.:	Date Completed: 04/28/10

WorkOrder: 1004808

April 29, 2010

Dear Andrew:

Enclosed within are:

1) The results of the **2** analyzed samples from your project: **#10030A,**
2) A QC report for the above samples,
3) A copy of the chain of custody, and
4) An invoice for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius
Laboratory Manager
McCampbell Analytical, Inc.

BATCH 50248 SUMMARY

Lab ID	Date Sampled	Date Extracted	Date Analyzed	Lab ID	Date Sampled	Date Extracted	Date Analyzed
1004808-001A	04/26/10 10:37 AM	04/28/10	04/28/10 12:11 AM	1004808-002A	04/26/10 11:51 AM	04/28/10	04/28/10 12:50 AM

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

surrogate diluted out of range or coelutes with another peak; &) low surrogate due to matrix interference.

Laboratory extraction solvents such as methylene chloride and acetone may occasionally appear in the method blank at low levels.

POLICY AND PROCEDURE

DEPARTMENT		ISSUE DATE	PROCEDURE NO.
	MANUFACTURING	11-21-85	700-2
SUBJECT	HAZARDOUS MATERIAL HANDLING AND WASTE DISPOSAL	EFFECTIVE DATE 11-21-85	SUPERSEDES New
RESP. MGR. N. W. Sickler DATE 11/15/85	RESP. EXEC. T C Bond DATE 11-15-85	Q.A. [illegible] DATE 11/21/85	

I. POLICY

It shall be the policy of Randtron Systems to handle and dispose of its waste products in the most proper and economical way possible while complying with applicable regulations and laws.

II. PURPOSE

The purpose of this procedure is to outline the process, establish responsibilities and identify forms and documents governing the handling, storage and disposal of Hazardous Materials.

III. REFERENCED EXHIBITS, DOCUMENTS & FORMS

A. California Administrative Code, Title 8, Industrial Relations, Chapter 4, Division of Industrial Safety, Sub Chapter 7, General Industrial Safety Orders.

B. Resource Conservation and Recovery Act (RCRA) OF 1976. Sub Title C, Hazardous Waste Management.

IV. DEFINITIONS

A. Waste Handler: A specially trained person in the Shipping/Receiving Department.

B. Storage Area: A bermed, covered, locked area specially designed for the containment of Hazardous Waste or Hazardous Materials.

C. Berm: A raised dike or ledge encircling an area for the purpose of containing liquid.

D. All of the various processing solvents, oils, chemicals, paints, thinners, etc are defined as Hazardous Materials.

E. Used, discarded, Hazardous Material is defined as "Hazardous Waste".

V. DUTIES AND RESPONSIBILITIES

A. Waste Handler:

1. Pick up waste containers when full; transport to area at rear of building #1; dump in proper drum; and return container to proper building.

2. Pick up full drums of waste Acetone or PM-4082 from building 5 or 4 respectively; transport to storage area at rear of building 1. Obtain an empty drum; affix proper label; and deliver same to respective area.

3. Prior to the end of a 3-month storage time,for a given lot call the designated Hazardous Waste Disposal Company for pick up. Supervise the loading of our waste; fill out and sign the Manifest (supplied by the Disposal Company); and forward a copy to the Randtron Systems Safety Coordinator.

4. Maintain a 'Log' showing the dates when starting the filling of drums at the rear of building 1 and the dates when full drums are moved into this area from the other buildings and dates when materials are shipped to the Disposal Company.

5. Accidental spills are to be handled as follows:

   Minor - Use rubber gloves and wipe up with shop rags, squeeze out and drain material into proper Waste Solvent Drum, place used rags in safety container for laundering.

   Major - Use absorbent material and pick up by shovel, placing material in open head drum, disposal to be in accordance with Procedure VIII - "F". Keep area clean. Notify management of any major spills.

VI. SPECIAL CAUTIONS

A. Flammable solvents must never be mixed with Freons or Trichlorethane III because this will downgrade the product and make disposal very expensive.

B. All drums must be kept closed to prevent fumes from escaping and moisture from entering.

C. The funnels affixed in the Acetone and PM-4082 drums at buildings 4 and 5 are to be kept closed.

D. All drums are to have grounding connectors affixed at all times.

E. When transferring liquids, a grounding connection is to be made from the drum to the container before pouring or filling. This is to prevent static electricity from igniting flammable materials.

F. All containers are to be properly marked with adhesive-backed vinyl labels; these are obtainable from the Safety Coordinator.

G. No acids or oxidants shall be stored with solvents, paints or related products.

VII. STORAGE LOCATIONS

A. Rear of building #1. For the storage of waste materials only.

B. South side (in yard) of building #4. Two areas: One for the storage of new solvents and 1 drum of waste product PM-4082; another area for the storage of acids.

C. Rear of building #5. For the storage of new materials and 1 drum of waste Acetone.

VIII. **PROCEDURES**

A. Building #1: All waste oil, from machines, is to be placed in 55-gallon drums by the machine shop, marked "WASTE OIL" and placed in the bermed area at the rear of building #1 by the Waste Handler.

NOTE: If the product is Soluble Oil, it is to be marked "SOLUBLE OIL" and handled the same way.

B. Building #2: Three special Safety Waste Containers are to be used. They are marked as follows:

Mixed Flammable Solvents, Acetone and Alcohol
Freon, TP-35
Trichlorethane III

When these need to be emptied, the Waste Handler is to be called for disposal.

C. Building #3: Two special Safety Waste Containers are to be used. They are marked as follows:

PM-4082
Mixed Waste Freon, TP, TF, and TA

The PM-4082 container is to be used by the shop personnel to transport the product to the waste drum in the bermed area. When the Freon container is full, the Waste Handler is to be called for disposal.

D. Building #5: Four special Safety Waste Containers are to be used. They are marked as follows:

Acetone
Freon TF, TP35
Trichlorethane III
Mixed Flammable Solvents, MIBK, MEK, Tolulol, Alcohol, PT-1003, PT-1002

The Acetone container is to be used by the shop personnel to transport the product to the waste drum in the bermed area. When the other containers are full, the Waste Handler is to be called for disposal.

E. Bermed Area, Rear Building #1: Waste drums in this area are to be labeled as follows:

Mixed Flammable Solvents, MIBK, MEK, Tolulol, Alcohol, PT-1003, PT-1002, PT-1004, Acetone
Trichlorethane III
Freon, TP-35, TP, TA, TF

The 'Filling Log' is to be kept in this area.

F. The disposal of "Out of date" resins, paints, adhesives and any other dated materials and/or acids and chemical mixtures used in the Dip Brazing Process shall be in accordance with procedures certified by an outside laboratory or professional Waste Handler.

G. The disposal of empty drums shall be made to Commercial Sources or in accordance with specific instructions as issued by management from time to time.

LORAL
RANDTRON SYSTEMS
A SUBSIDIARY OF LORAL CORPORATION

WRITTEN HAZARD COMMUNICATION PROGRAM

Purpose: To describe plans and methods used to accomplish objectives in three major areas:

1. Material Safety Data Sheets
2. Labeling
3. Employee Training

Material Safety Data Sheets:

1. A master volume of all Material Safety Data Sheets for all chemicals used by Randtron Systems is maintained in the Personnel Department. The master volume contains a list of all chemicals, in alphabetical order and according to the building they are used in.

2. Incoming Material Safety Data Sheets are distributed by Lee D'Anna to the master volumes and to individual departments. She is also responsible for requesting Material Safety Data Sheets in writing if we do not receive them from the manufacturer. If the written request does not result in receipt of an Material Safety Data Sheet, a letter is sent to Cal/OSHA (Division of Occupational Safety and Health, Right-to-Know Unit, 1625 Shattuck Avenue, Berkeley, CA 94709). If an MSDS is obviously incomplete, a new MSDS will be requested from the manufacturer. Managers/Supervisors are responsible for requesting an MSDS for any new chemicals used in their department from Lee. Within 30 days of receipt of a new or revised MSDS, information regarding significantly increased risk(s) will be communicated to employees.

3. Material Safety Data Sheets for chemicals used in individual departments are readily available to employees on all shifts in their departments.

4. Training on how to read a Material Safety Data Sheet is included in overall training of the Written Hazard Communication Program (See Training)

Labeling:

1. The suppliers' original containers should have a label providing the following information:

   a. Identity of the hazardous substance(s)
   b. Name and address of manufacturer, importer or other responsible party
   c. Appropriate hazard warnings

10/30/86

Labeling: Con't

2. As hazardous substances are transferred from the original container to secondary containers, we need to ensure that these secondary containers are labeled with the identity and hazard warning statement. Individual supervisors or managers are responsible for ensuring secondary containers are properly labeled and may refer to the Manufacturer's label and MSDS for content information. Preprinted labels for hazardous substances currently used are available internally.

Training:

1. Training must be completed within 30 days after a new assignment (hire or transfer) or introduction of a new hazardous substance and be reviewed annually. The training is to be completed by the individual supervisor or manager, using the attached checklist.

2. Employees will be required to sign the attached checklist.

3. The signed checklist is to be filed in the personnel file.

4. Temporary employees will receive training appropriate for their assignment.

Availability of Written Hazard Communication Program:

The Written Hazard Communication Program, is maintained in the Personnel office and is available to all employees on request.

HAZARD COMMUNICATION TRAINING CHECKLIST

Employee_____

Department_____

Supv/Mgr_____

Hire/Trans Date_____

Return By_____

____ Distribute booklet on Hazard Communication Program

____ Explain where MSDS' are located in department and their availability

____ Explain how to read an MSDS and discuss the basic sections

____ Inform employee where master volume of MSDS' is located and what to do if an MSDS needs to be obtained

____ Identify any operations where hazardous substances are used and explain the health and safety risks (refer to MSDS' as necessary)

____ Discuss and demonstrate any personal protective equipment where applicable to the job (i.e. safety glasses, respirators, etc.)

____ Explain emergency procedures for handling spills, fire, disposal and first aid as indicated on the MSDS

130 CONSTITUTION DRIVE • MENLO PARK, CALIFORNIA 94025 • TELEPHONE (415) 326-9500

____ Review labeling requirements.

____ Discuss the Hazard Communication Standard, including employee rights:

a) To be made aware of the recognized hazards of substances they work with and precautions necessary to work safely.
b) To provide information to employee's personal physician regarding hazardous substances on an as needed basis.
c) To be protected against separation or other discrimination for exercising rights under the standard, including the right to ask questions.

____ Inform employee of location and availability of written program

I have been informed of the items listed on this checklist and have been given the opportunity to ask questions.

MONITORING REPORT

Mo Ottman
Randtron Systems
130 Constitution Drive
Menlo Park, CA 94025

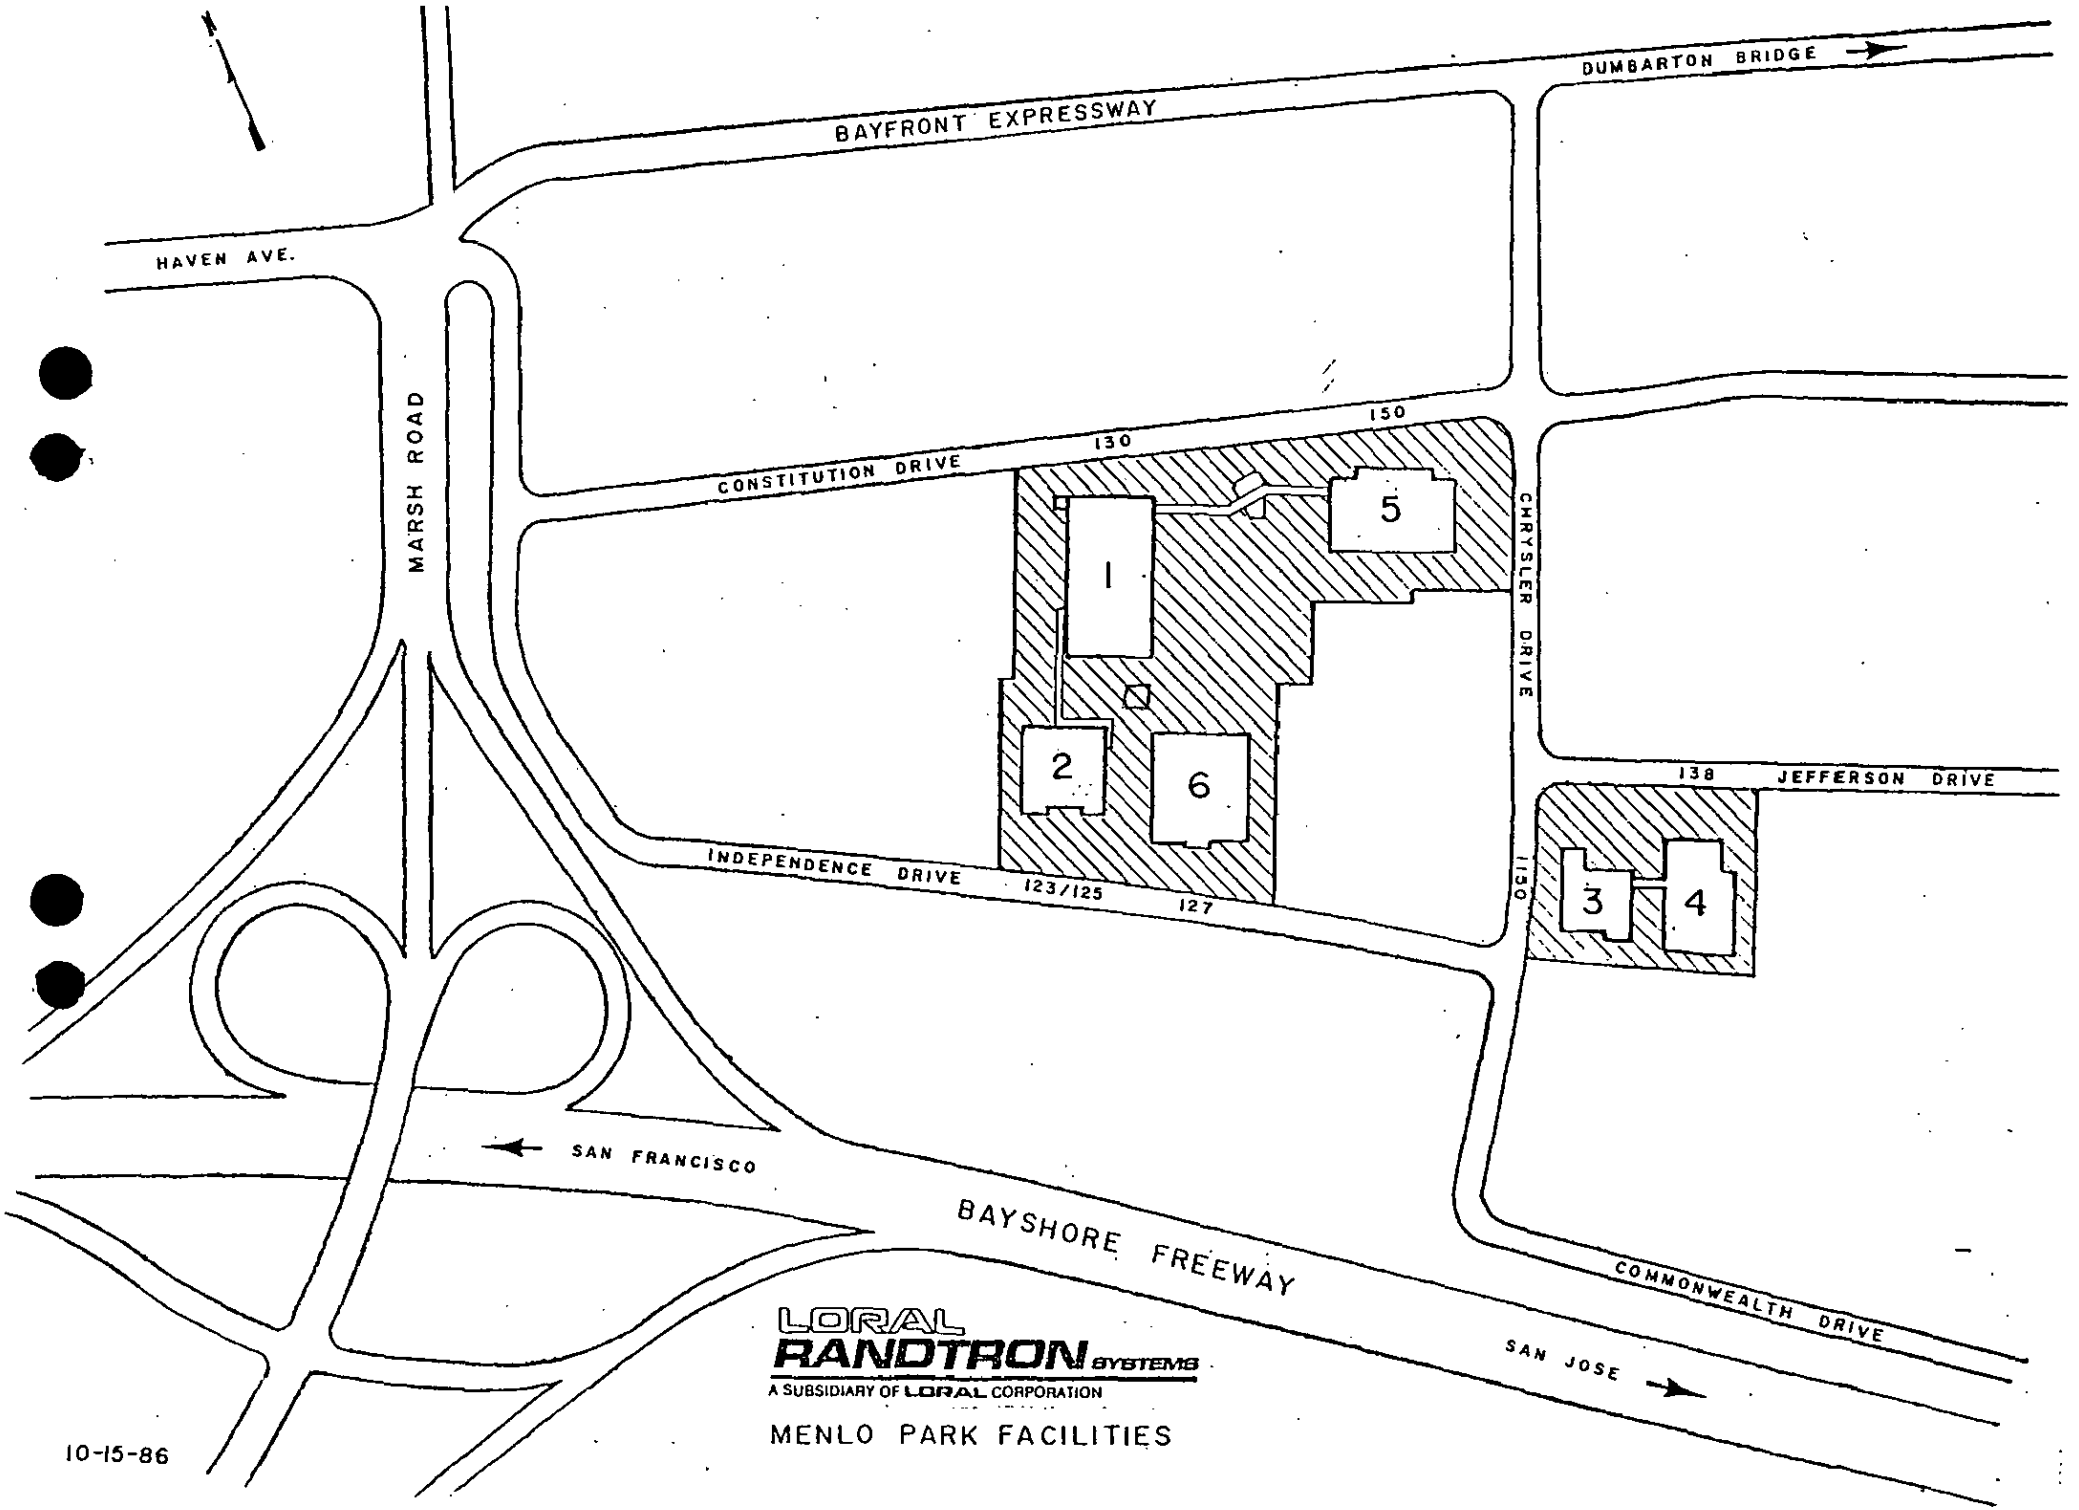
Dear Sir:

A sample of wastewater from your plant was collected on May 6, 1986, by personnel of the South Bayside System Authority. Analysis of the sample resulted in the following findings:

Cadmium	0.020	pH	7.3 units
Chromium	0.54	Cyanide	0.03
Copper	0.26	TOC	5.7
Lead	<0.05	Suspended Solids	24
Nickel	0.05	Common Solvents	<0.1
Zinc	0.142		

concentrations in mg/L

Sample collected at 138 Jefferson Avenue wet process area sump.



Values reported are within requirements for this facility.

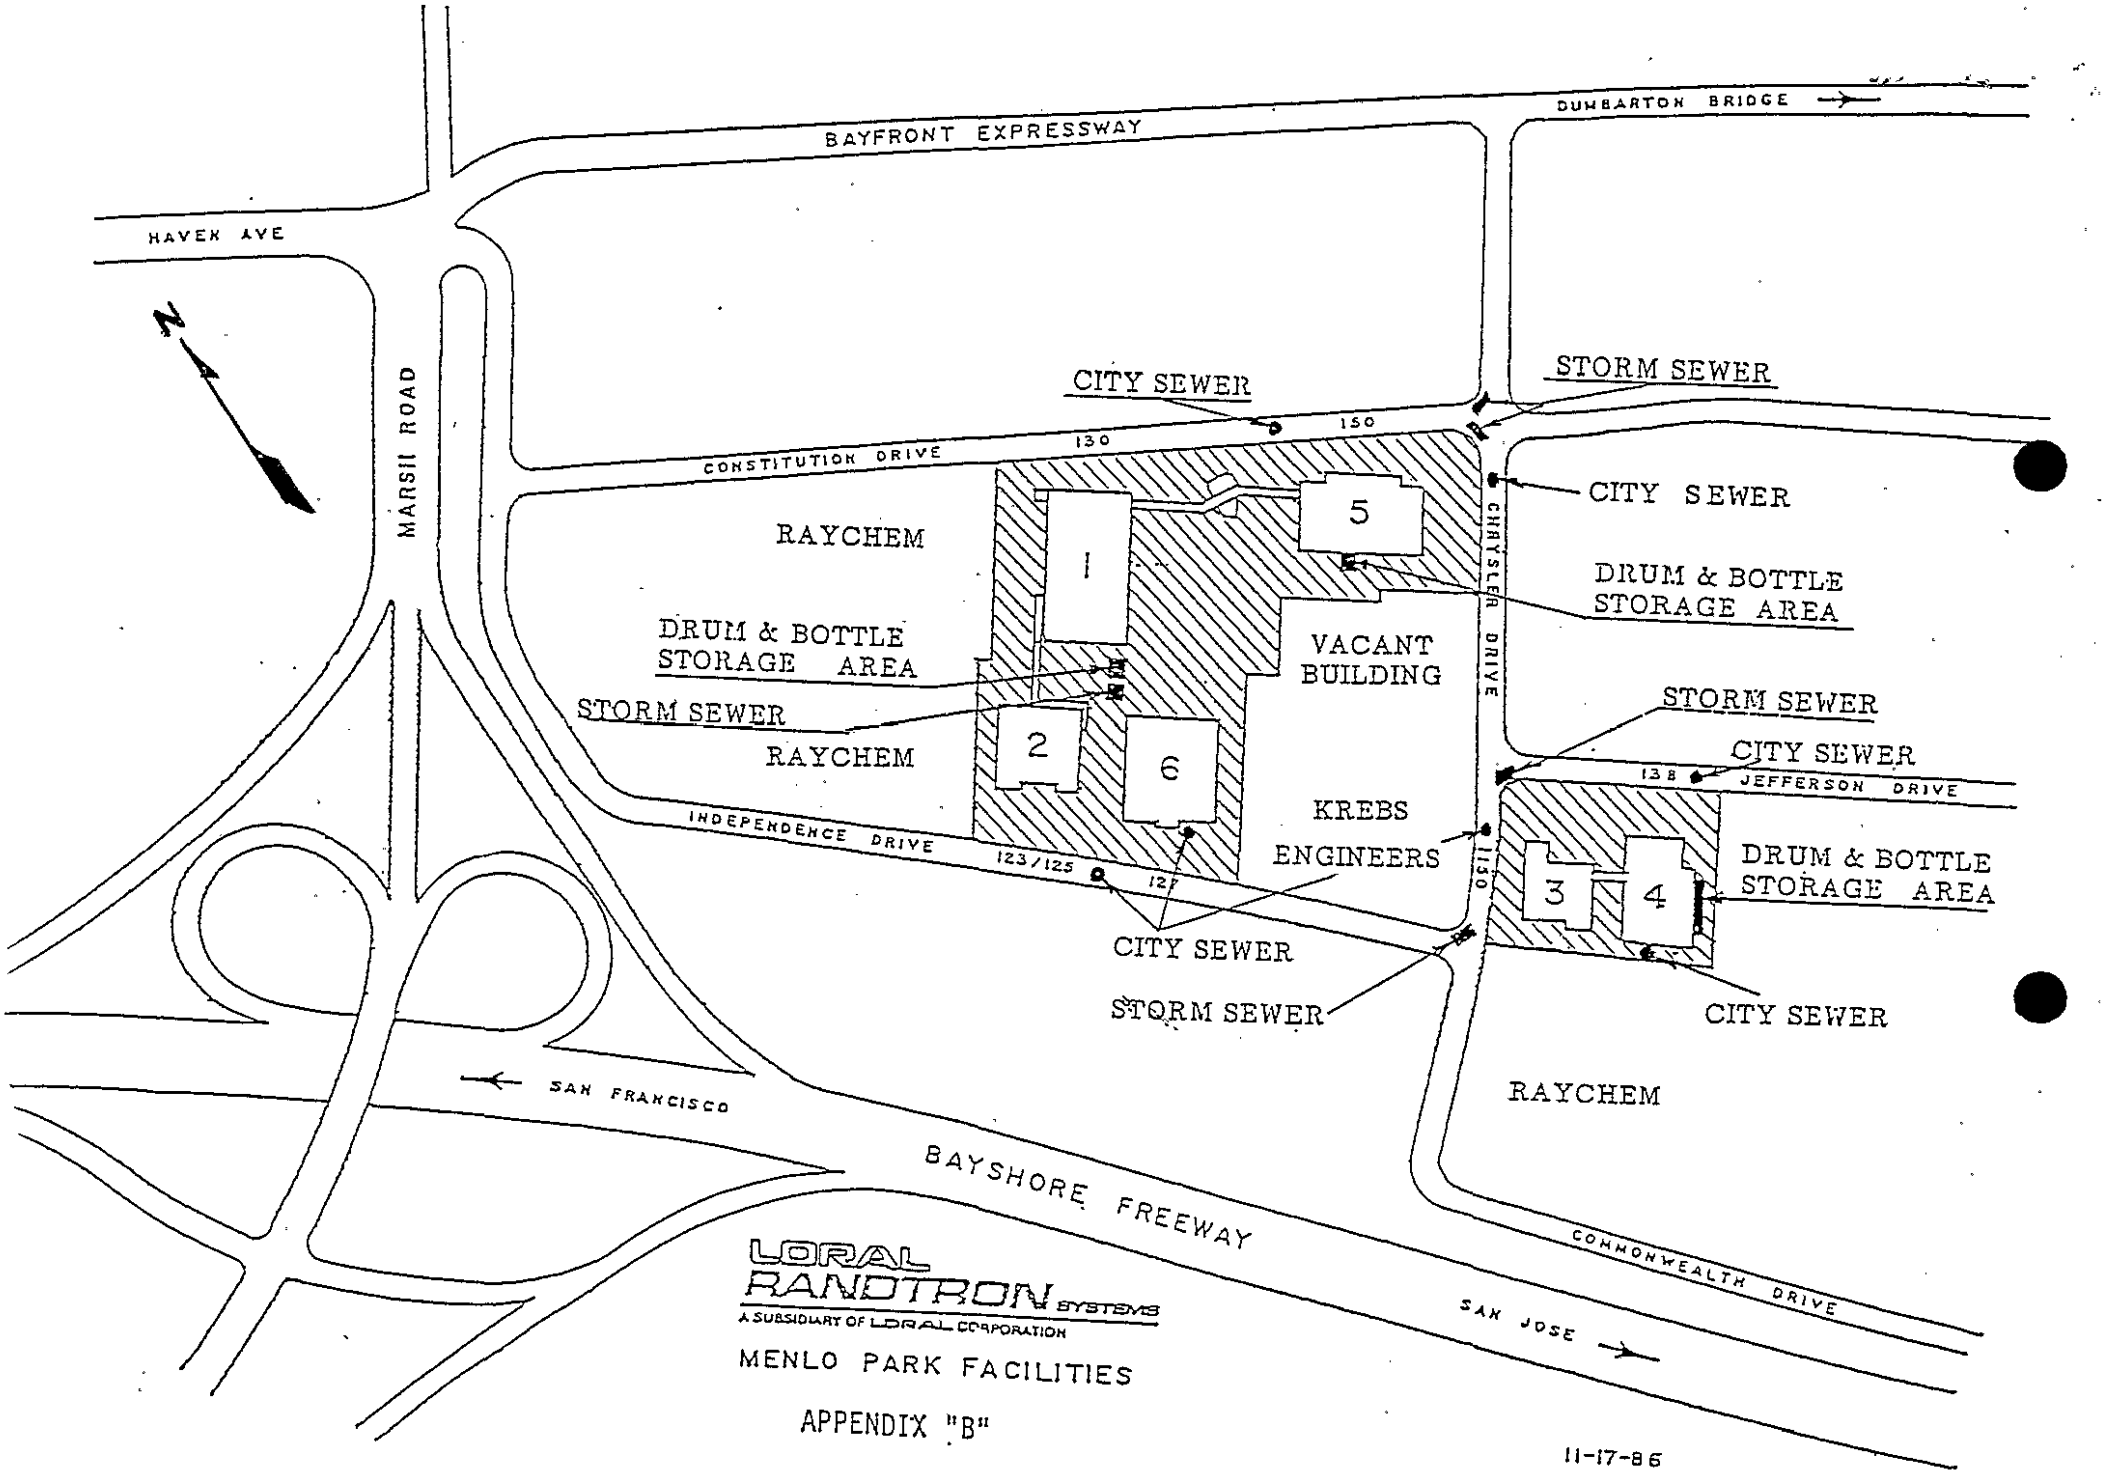
M. Emergency Response Plans and Procedures

Emergency Response Plans and Procedures:

In the event of a fire or other emergency situtation, any employee is to dial (9) and then (911), explain the situation, also relay the building number, street address and general location. He/she should advise the respective supervisor and fellow employees to vacate the building. In the event of fire, personnel are to use fire extinguihsers, search out the rest rooms and any other closed rooms for personnel. The area supervisor or lead person is to designate a responsible employee to go outside and direct the fire department to the emergency area. Personnel will gather in the main parking area between Buildings 1 and 5 for head count.

In the event of a reportable spill or threatned release of a hazardous material, immediate notification must be made to the County's office of Environmental Health at (415) 363-4305.

N. Employee Training Program



Randtron Systems training program is included in **Policy and Procedures 7002-2.**

I certify that the information contained in this business plan is accurate, that the plan meets the requirements of Chapter 6.95 (Section 25500 et seq.) of the Health and Safety Code, that amendments and revisions to it will be submitted in accordance with that chapter, and that I am authorized to make this certification on behalf of the above named business.

PREPAREDNESS AND PREVENTION/ CONTINGENCY PROGRAM

REVISION C

PREPAREDNESS AND PREVENTION/CONTINGENCY PLAN

SUMMARY INSTRUCTIONS

PURPOSE: The following instructions summarize the essential information needed by employees in an emergency.

INDIVIDUAL EMPLOYEES: Contact your supervisor if you believe an emergency exists. Evacuate and/or alert other employees of a potential problem. Obtain direction from super-visor regarding safety measures.

SUPERVISORS: First evacuate area if necessary. Contact an Emergency Medical Team (EMT) member if there is a medical emergency, then contact the Emergency Coordinator and give details concerning the emergency. If instructed by the Coordinator, authorize employees to evacuate. Conduct head count.

EMERGENCY COORDINATOR: Evaluate emergency. Summon Emergency Response Team to scene. Authorize evacuation if necessary. Authorize contacts to outside agencies if required. Supervise emergency response.

EMERGENCY CONTACTS:

Primary Emergency Coordinator - Mark Gardner (x-426)

Alternate Emergency Coordinator - Jerry Cornell (x-450)

Legal Counsel - Dave Sweet (714) 424-3019

Menlo Park Police - 911 or 325-4425

Menlo Park Fire Department - 911 or 323-2404

Palo Alto Medical Clinic Urgent Care - 853-2959

Menlo Park Emergency Services - Civil Disaster Hotline - 858-3455

National Response Center - 800-424-8802
CHEMTREC - 800-424-9300

1.0 INTRODUCTION

1.1 FACILITY DESCRIPTION

Randtron Antenna Systems manufactures airborne radar used by the military. Machining, dip brazing, alodining, assembly, and some coating operations comprise the bulk of our manufacturing work located at two noncontinuous sites (130 Constitution Drive, and 1150 Chrysler Drive);

Hazardous wastes and materials are stored in the hazardous waste and material storage areas, located at 130 and 150 Constitution Drive and 1150 Chrysler Drive. Hazardous waste is also occasionally stored at the point of generation as allowed under California satellite accumulation regulations. Drummed hazardous waste materials are removed off-site and disposed of by properly licensed and permitted Treatment, Storage and Disposal (TSD) vendors.

1.2 PURPOSE

The purpose of this Contingency Plan/Emergency Procedures (Plan) is to minimize the hazards to human health and the environment from fires, explosions, or any unplanned sudden or non-sudden release of hazardous wastes to air, soil or surface water. This Plan complies with the requirements of the California Hazardous Waste Regulations and shall be carried out immediately whenever there is an explosion, fire or release of hazardous wastes or any constituents which could threaten human health or the environment. It is important that the facility personnel shall comply with this Plan and its procedures in response to an emergency situation (such as fire or explosion), or sudden or non-sudden accidental release of hazardous wastes or hazardous substances to the air, soil or surface water.

1.3 AMENDMENT OF CONTINGENCY PLAN

The Plan must be reviewed annually and revised if needed for the reasons noted below:

1) Applicable regulations are revised.
2) The Plan fails in an emergency.
3) The facility is modified in its design, construction, operation, maintenance, or other circumstances in a way that materially increases the potential for fires, explosions, or releases of hazardous wastes or hazardous wastes constituents, or changes the response necessary in an emergency.
4) The lists of emergency, safety, or technical personnel changes.

5) The lists of emergency equipment changes.
6) Any telephone number changes.

1.4 DISTRIBUTION OF THE CONTINGENCY PLAN

A copy of the Plan will be issued to the Primary Emergency Coordinator, Alternates and in the possession of all Shift and Area Supervisors. Copies of the plan will also be maintained in all Environmental Health and Safety Manuals. Copies of the Contingency Plan, and all revisions, will be submitted to the following Public Safety Agencies:

Menlo Park Police Department

Menlo Park Fire Department

Palo Alto Clinic

1.5 MATERIALS INVENTORY

Randtron Antenna Systems maintains a minimum materials inventory. This reduces the possibility of a major incident which could threaten human health and/or the environment due to a sudden accident release. Materials stored on-site consists of the following:

MATERIAL	LOCATION	Storage VL
Nitric Acid	Bldg. 4	
Chromic Acid (Alodine/ Chromate Conversion)	Bldg. 4 & 5	
Sulfuric Acid	Bldg. 4	
Sodium Hydroxide	Bldg. 4	
Sodium Fluoride (Liquid Salt)	Bldg. 4	
Lithum Chloride (Liquid Salt)	Bldg. 4	
Solvents (Acetone, IPA,MEK)	All	
Paints (Oil & Water Base)	Bldg. 3 & 5	
Paint Thinners	Bldg. 3 & 5	
Epoxy Resins	Bldg. 3 & 5	
RTV's	Bldg. 3 & 5	
Oil	Bldg. 1	

2.0 EMERGENCY RESPONSE PROCEDURES

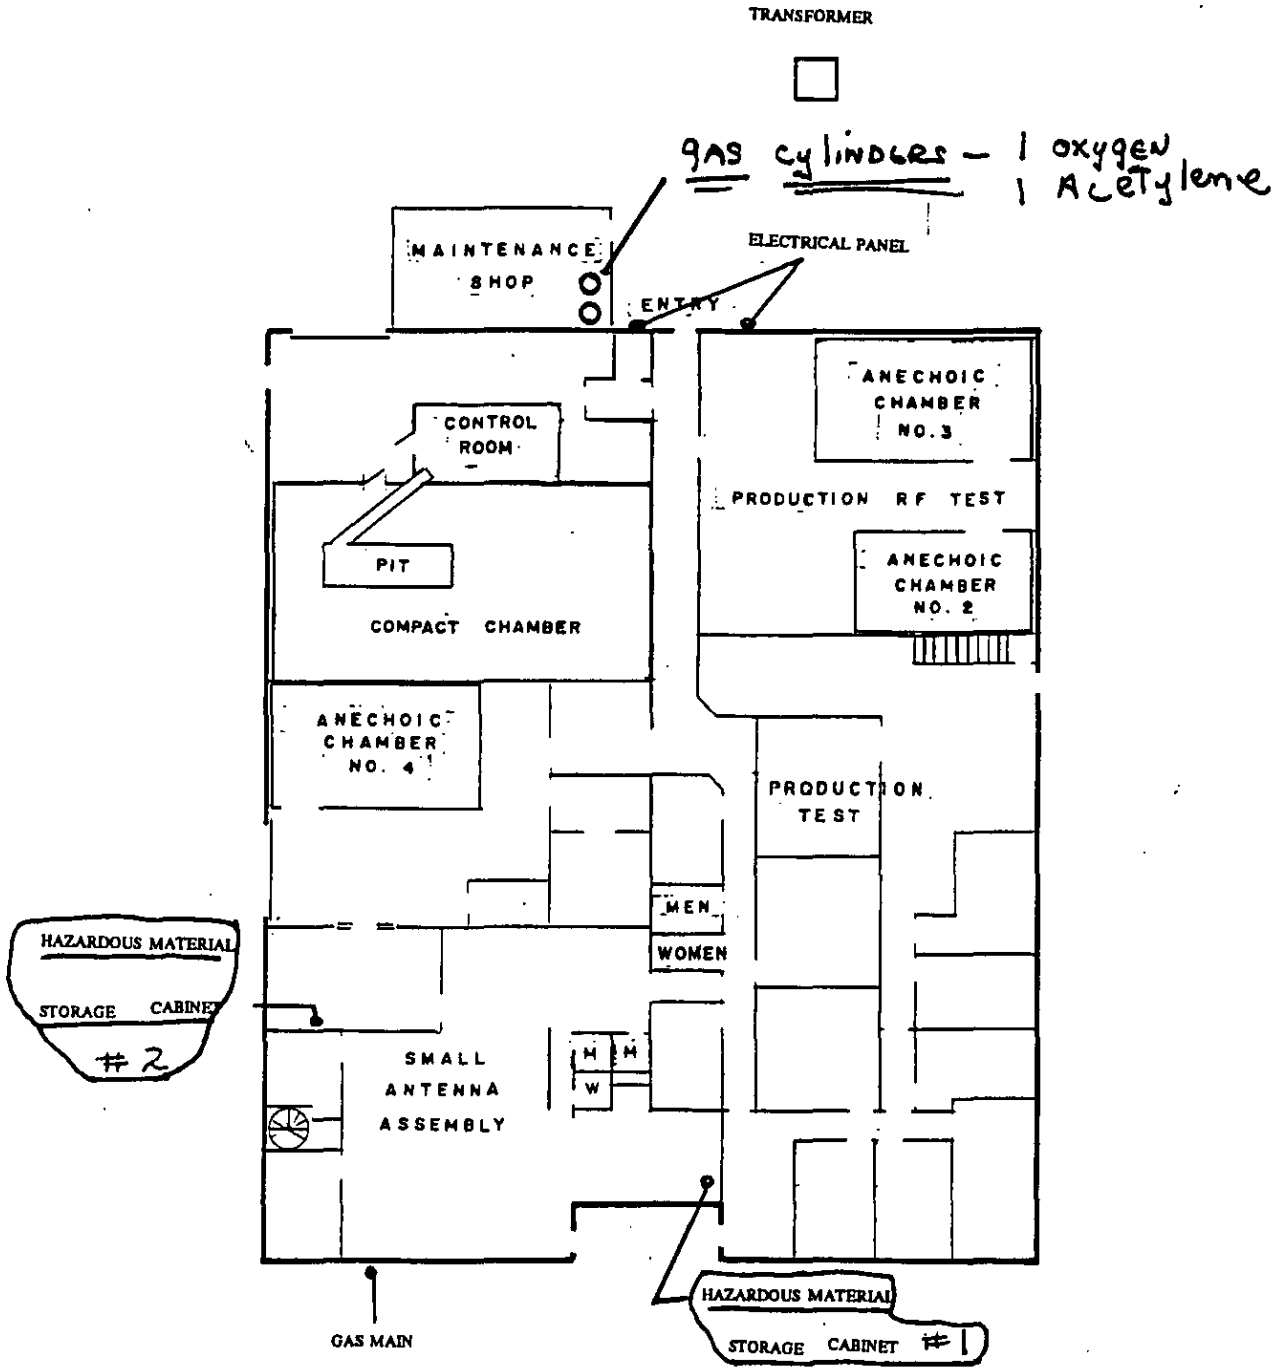
2.1 IMPLEMENTATION

Whenever there is an imminent or actual emergency situation such as fire, explosion, emission of hazardous gas or the spillage or discharge of a volume of waste material which could be deemed a threat to personnel and/or the environment inside the facility, or area residents and the environment outside the facility, this Plan must be implemented.

2.2 EMERGENCY COORDINATOR

The Emergency Coordinator is the person responsible for coordinating all emergency response procedures as outlined in this Plan.

The Coordinator shall be thoroughly familiar with all aspects of the facility's plan, all operations and activities at the facility, the location and characteristics of waste handled, the location of all records within the facility, and the facility layout. In addition, the Emergency Coordinator has the authority to commit the necessary resources needed to carry out and implement the Plan.



2.3 CHAIN OF COMMAND

The chain of command for responsibility and supervision of the Contingency Plan is as follows:

1) Individual Employees: All emergencies shall be immediately reported to the employee's Area Supervisor and/or the Emergency Coordinator.

2) Area Supervisor: If the incident cannot be immediately and completely contained, it shall be immediately reported to the Emergency Coordinator. If immediate medical help is required, the Area Supervisor shall initiate the call for an Emergency Medical Team or dial 911 for outside response. If immediate fire containment cannot be achieved, the Area Supervisor shall call the fire department.

3) Emergency Coordinator: Following a reported incident, the Emergency Coordinator shall report the status of the emergency to the Emergency Response Team, plant management and government agencies, as applicable.

BUSINESS NAME (Same as FACILITY NAME or DBA-Doing Business As) 3
L-3 Communications, Randtron Antenna Systems

II. ACTIVITIES DECLARATION

NOTE: If you answer YES to any part of this form, submit the Business Owner/Operator Identification page (OES Form 2730).

Does your facility...		If Yes, please complete these pages of the UPCF:
A. HAZARDOUS MATERIALS Have on site (for any purpose) hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs)? See instructions for additional reporting criteria.	Circle Yes or No (YES) NO 4	HAZARDOUS MATERIALS INVENTORY CHEMICAL DESCRIPTION (OES 2731)
B. UNDERGROUND STORAGE TANKS (USTs)		
1. Own or operate underground storage tanks?	YES (NO) 5	UST FACILITY (Formerly SWRCB Form A) UST TANK (one per tank) (Formerly Form B)
2. Intend to upgrade existing or install new USTs?	YES (NO) 6	UST FACILITY UST TANK (one per tank) UST INSTALLATION - CERTIFICATE OF COMPLIANCE (one per tank)(Formerly Form C)
3. Need to report closing a UST?	YES (NO) 7	UST TANK (closure portion--one per tank)
C. ABOVE GROUND PETROLEUM STORAGE TANKS (ASTs) Own or operate ASTs above these thresholds: ---single tank capacity is greater than 660 gallons, or ---total capacity for multiple tanks is greater than 1,320 gallons?	YES (NO) 8	NO FORM REQUIRED BY CUPA
D. HAZARDOUS WASTE		
1. Generate hazardous waste?	(YES) NO 9	EPA ID NUMBER—provide at the top of this page
2. Recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC Section 25143.2)?	YES (NO) 10	RECYCLABLE MATERIALS REPORT (one per recycler)
3. Treat hazardous waste on site?	YES (NO) 11	ONSITE HAZARDOUS WASTE TREATMENT - FACILITY (Formerly DTSC Form 1772) ONSITE HAZARDOUS WASTE TREATMENT - UNIT (one per unit) (Formerly DTSC Forms 1772 A,B,C,D, and L)
4. Treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	YES (NO) 12	CERTIFICATION OF FINANCIAL ASSURANCE (Formerly DTSC Form 1232)
5. Consolidate hazardous waste generated at a remote site?	YES (NO) 13	REMOTE WASTE/CONSOLIDATION SITE ANNUAL NOTIFICATION (Formerly DTSC Form 1196)
6. Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned onsite?	YES (NO) 14	HAZARDOUS WASTE TANK CLOSURE CERTIFICATION (Formerly DTSC Form 1249)

E. LOCAL REQUIREMENTS 15

Pursuant to the California Health and Safety Code Division 20, Chapter 6.95, Section 25506, this agency must obtain consent from the business owner/operator or designated business representative in order to release chemical location information to the public. This includes, but is not limited to, chemical locations provided in the chemical description section and site maps. Please circle "Yes" or "No" to indicate whether or not this information can be released to the public and sign/print your name on the line below.

Consent: Yes (No) Signature/Printed Name: HZ / Heather Zinn

Material	QTY
Waste Solvent	0-55 gal
Industrial Waste	0-220 gal

Emergency Response/Contingency Plan

(Hazardous Materials Business Plan Module)

Authority Cited: HSC, Section 25504(b); Title 22, Div. 4.5, Ch. 12, Art. 3 CCR

facilities that handle hazardous materials in specified quantities must have a written emergency response plan. In addition, facilities that generate 1,000 kilograms or more of hazardous waste per month, or accumulate more than 6,000 kilograms of hazardous waste on-site at any one time, must prepare a contingency plan. Because the requirements are similar, they have been combined in a single document, provided below, for your convenience. This plan is a required module of the Hazardous Materials Business Plan (HMBP). **If you already have a plan that meets these requirements, you should not complete the blank plan, below, but you must include a copy of your existing plan as part of your HMBP.**

This site-specific Emergency Response/Contingency Plan is the facility's plan for dealing with emergencies and shall be implemented immediately whenever there is a fire, explosion, or release of hazardous materials that could threaten human health and/or the environment. **At least one copy of the plan shall be maintained at the facility for use in the event of an emergency and for inspection by the local agency.** Within Santa Clara County, hospitals and police agencies have delegated receipt of these plans to the local agencies administering Hazardous Materials Business Plans, so additional copies need not be submitted. However, a copy of the plan and any revisions must be provided to any contractor, hospital, or agency with whom special (i.e. contractual) emergency services arrangements have been made *(see section 3, below)*.

1. Evacuation Plan:

a. The following alarm signal(s) will be used to begin evacuation of the facility *(check all that apply)*:

☐ Bells; ☒ Horns/Sirens; ☒ Verbal *(i.e. shouting)*; ☒ Other *(specify)* **Phones, PA System**

b. ☒ Evacuation map is prominently displayed throughout the facility.

Note: A properly completed HMBP Site Plan satisfies contingency plan map requirements. This drawing (or any other drawing that shows primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas) must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

2. a. Emergency Contacts*:

Fire/Police/Ambulance	Phone No. 911
State Office of Emergency Services	Phone No. (800) 852-7550

b. Post-Incident Contacts*:

Fire Department Hazardous Materials Program	Phone No.: (650) 522-7940
San Mateo County Environmental Health Division	Phone No. (650) 363-4305
California EPA Department of Toxic Substances Control	Phone No. (510) 540-3739
Cal-OSHA Division of Occupational Safety and Health	Phone No. (408) 452-7288
Air Quality Management District	Phone No. (415) 771-6000
Regional Water Quality Control Board	Phone No. (510) 622-2300

** These telephone numbers are provided as a general aid to emergency notification. Be advised that additional agencies may be required to be notified.*

c. Emergency Resources:

Poison Control Center	Phone No. (800) 876-4766
Nearest Hospital: Name: **Sequoia Hospital**	Phone No.: (650) 369-5811
Address: **170 Alameda de las pulgas**	City: **Redwood City**

3. Arrangements With Emergency Responders:

If you have made special (i.e. contractual) arrangements with any police department, fire department, hospital, contractor, or State or local emergency response team to coordinate emergency services, describe those arrangements below:

4. Emergency Procedures:

...ergency Coordinator Responsibilities:

a. Whenever there is an imminent or actual emergency situation such as a explosion, fire, or release, the emergency coordinator *(or his/her designee when the emergency coordinator is on call)* shall:
   i. Identify the character, exact source, amount, and areal extent of any released hazardous materials.
   ii. Assess possible hazards to human health or the environment that may result from the explosion, fire, or release. This assessment must consider both direct and indirect effects *(e.g. the effects of any toxic, irritating, or asphyxiating gases that are generated, the effects of any hazardous surface water run-off from water or chemical agents used to control fire, etc.)*.
   iii. Activate internal facility alarms or communications systems, where applicable, to notify all facility personnel.
   iv. Notify appropriate local authorities *(i.e. call 911)*.
   v. Notify the State Office of Emergency Services at 1-800-852-7550.
   vi. Monitor for leaks, pressure build-up, gas generation, or ruptures in valves, pipes, or other equipment shut down in response to the incident.
   vii. Take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous materials at the facility.

b. Before facility operations are resumed in areas of the facility affected by the incident, the emergency coordinator shall:
   i. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from a explosion, fire, or release at the facility.
   ii. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.
   iii. Ensure that all emergency equipment is cleaned, fit for its intended use, and available for use.
   iv. Notify the California Environmental Protection Agency's Department of Toxic Substances Control, the County of San Mateo Environmental Health Division, and the local fire department's hazardous materials program that the facility is in compliance with requirements b-i and b-ii, above.

Responsibilities of Other Personnel:

On a separate page, list any emergency response functions not covered in the "Emergency Coordinator Responsibilities" section, ...bove. Next to each function, list the job title or name of each person responsible for performing the function. Number the page(s) ...propriately.

5. Post-Incident Reporting/Recording:

The time, date, and details of any hazardous materials incident that requires implementation of this plan shall be noted in the facility's operating record.

Within 15 days of any hazardous materials emergency incident or threatened hazardous materials emergency incident that triggers implementation of this plan, a written Emergency Incident Report, including, but not limited to a description of the incident and the facility's response to the incident, must be submitted to the California Environmental Protection Agency's Department of Toxic Substances Control, the County of San Mateo Environmental Health Division, and the local fire department's hazardous materials program. The report shall include:

a. Name, address, and telephone number of the facility's owner/operator;
b. Name, address, and telephone number of the facility;
c. Date, time, and type of incident *(e.g. fire, explosion, etc.)*;
d. Name and quantity of material(s) involved;
e. The extent of injuries, if any;
f. An assessment of actual or potential hazards to human health or the environment, where this is applicable;
g. Estimated quantity and disposition of recovered material that resulted from the incident;
h. Cause(es) of the incident;
i. Actions taken in response to the incident;
j. Administrative or engineering controls designed to prevent such incidents in the future.

6. Earthquake Vulnerability: [19 CCR §2731(e)]

Identify any areas of the facility and mechanical or other systems that require immediate inspection or isolation because of their vulnerability to earthquake-related ground motion:

All chemical and waste storage areas must be inspected for leaks and spills. All buildings will be inspected for structural damage.

7. Emergency Equipment:

CCR §66265.52(e) [as referenced by 22 CCR §66262.34(a)(4)] and the Hazardous Materials Storage Ordinance require that emergency equipment at the facility be listed. Completion of the following Emergency Equipment Inventory Table meets this requirement.

EMERGENCY EQUIPMENT INVENTORY TABLE

1. Equipment Category	2. Equipment Type	3. Locations *	4. Description**
Personal Protective Equipment, Safety Equipment, and First Aid Equipment	☒ Cartridge Respirators		Organic vapors/Acid gas
	☐ Chemical Monitoring Equipment *(describe)*		
	☒ Chemical Protective Aprons/Coats		
	☒ Chemical Protective Boots		
	☒ Chemical Protective Gloves		
	☒ Chemical Protective Suits *(describe)*		
	☒ Face Shields		
	☒ First Aid Kits/Stations *(describe)*	bldg 3, 4	Standard 1st kit, bllod clean up kit and AED
	☒ Hard Hats		
	☒ Plumbed Eye Wash Stations		
	☒ Portable Eye Wash Kits *(i.e. bottle type)*		
	☐ Respirator Cartridges *(describe)*		
	☒ Safety Glasses/Splash Goggles		
	☒ Safety Showers		
	☐ Self-Contained Breathing Apparatuses (SCBA)		
	☐ Other *(describe)*		
***re* Extinguishing Systems**	☒ Automatic Fire Sprinkler Systems		
	☒ Fire Alarm Boxes/Stations		
	☒ Fire Extinguisher Systems *(describe)*		Halon Extinguishers
	☐ Other *(describe)*		
Spill Control Equipment and Decontamination Equipment	☒ Absorbents *(describe)*		Granular absorbent, absorbent pillows
	☐ Berms/Dikes *(describe)*		
	☐ Decontamination Equipment *(describe)*		
	☐ Emergency Tanks *(describe)*		
	☐ Exhaust Hoods		
	☐ Gas Cylinder Leak Repair Kits *(describe)*		
	☐ Neutralizers *(describe)*		
	☐ Overpack Drums		
	☐ Sumps *(describe)*		
	☐ Other *(describe)*

	☒ Intercoms/ PA Systems		
	☐ Portable Radios		
	☒ Telephones		
	☐ Underground Tank Leak Detection Monitors		
	☐ Other *(describe)*		
Additional Equipment *(Use Additional Pages if Needed.)*	☐		
	☐		
	☐		
	☐		
	☐		
	☐		

* *Use the map and grid numbers from the Storage Map prepared earlier for your HMBP.*

** *Describe the equipment and its capabilities. If applicable, specify any testing/maintenance procedures/intervals. Attach additional pages, numbered appropriately, if needed.*

Employee Training Plan

(Hazardous Materials Business Plan Module)

Authority Cited: HSC, Section 25504(c); Title 22, Div. 4.5, Ch. 12, Art. 3 CCR

All facilities that handle hazardous materials must have a written employee training plan. This plan is a required module of the Hazardous Materials Business Plan (HMBP). A blank plan has been provided below for you to complete and submit if you do not already have such a plan. **If you already have a brief written description of your training program that addresses all subjects covered below, you are not required to complete the blank plan, below, but you must include a copy of your existing document as part of your HMBP.**

Check all boxes that apply. *[Note: Items marked with an asterisk (*) are required.]*:

1. **Personnel** are trained in the following procedures:

☒	Internal alarm/notification *
☒	Evacuation/re-entry procedures & assembly point locations*
☐	Emergency incident reporting
☐	External emergency response organization notification
☐	Location(s) and contents of Emergency Response/Contingency Plan
☐	Facility evacuation drills, that are conducted at least *(specify)* _____ *(e.g. "Quarterly", etc.)*

2. **Chemical Handlers** are additionally trained in the following:

☒	Safe methods for handling and storage of hazardous materials *
☐	Location(s) and proper use of fire and spill control equipment
☒	Spill procedures/emergency procedures
☒	Proper use of personal protective equipment *
☒	Specific hazard(s) of each chemical to which they may be exposed, including routes of exposure *(i.e. inhalation, ingestion, absorption)* *
☒	**Hazardous Waste Handlers/Managers** are trained in all aspects of hazardous waste management specific to their job duties *(e.g. container accumulation time requirements, labeling requirements, storage area inspection requirements, manifesting requirements, etc.)* *

3. **Emergency Response Team Members** are capable of and engaged in the following:

☐	Personnel rescue procedures
☐	Shutdown of operations
☐	Liaison with responding agencies
☐	Use, maintenance, and replacement of emergency response equipment
☒	Refresher training, which is provided at least annually *
☐	Emergency response drills, which are conducted at least *(specify)* _____ *(e.g. "Quarterly", etc.)*

Record Keeping

(Hazardous Materials Business Plan Module)

All facilities that handle hazardous materials must maintain records associated with their management. A summary of your recordkeeping procedures is a required module of the Hazardous Materials Business Plan (HMBP). A blank summary has been provided below for you to complete and submit if you do not already have such a document. **If you already have a brief written description of your hazardous materials recordkeeping systems that addresses all subjects covered below, you are not required to complete this page, but you must include a copy of your existing document as part of your HMBP.**

Check all boxes that apply. The following records are maintained at the facility. *[Note: Items marked with an asterisk (*) are required.]*:

☒	Current employees' training records *(to be retained until closure of the facility)* *
☒	Former employees' training records *(to be retained at least three years after termination of employment)* *
☒	Training Program(s) *(i.e. written description of introductory and continuing training)* *
☒	Current copy of this Emergency Response/Contingency Plan *
☒	Record of recordable/reportable hazardous material/waste releases *
☒	Record of hazardous material/waste storage area inspections *
☐	Record of hazardous waste tank daily inspections *
☐	Description and documentation of facility emergency response drills

Note: The above list of records does not necessarily identify every type of record required to be maintained by the facility.

A copy of the Inspection Check Sheet(s) or Log(s) used in conjunction with required routine self-inspections of your facility must be submitted with your HMBP. *(Exception: Available from your local agency is a Hazardous Materials/Waste Storage Area Inspection Form that you may use if you do not already have your own form. If you use the example provided, you do not need to attach a copy.)*

Check the appropriate box:

☒	We will use the Unidocs "Hazardous Materials/Waste Storage Area Inspection Form" to document inspections.
☐	We will use our own documents to record inspections. ***(A blank copy of each document used must be attached to this HMBP.)***

HAZARDOUS MATERIALS BUSINESS PLAN
SPILL PREVENTION, EMERGENCY RESPONSE, TRAINING AND CLOSURE PLAN

Business Name: L-3 Communications, Randtron Antenna Systems
Business Address: 130 Constitution Drive, 150 Constitution Drive
123 Independence Drive, Menlo Park, CA 94025

In addition to the general business, chemical inventory and site map information, the San Mateo County Environmental Health Division requires completion of the following sections pertaining to spill prevention, emergency response, employee training and site closure. These sections contain specific elements pertaining to the Hazardous Materials Business Plan, the hazardous waste contingency plan, stormwater pollution prevention, and underground storage tank(UST) monitoring.

SPILL PREVENTION PLAN

1. Describe how hazardous materials are handled, stored and monitored to prevent or minimize a spill or release from occurring (e.g., secondary containment, segregation of incompatibles, daily visual monitoring).
   All liquids are stored in a bermed storage area and or NFPA approved storage cabinets; solids are stored in secured areas. Material is transferred from storage areas to work stations or dispensing areas in their original sealed containers. Incompatible materials are kept separate. Hazardous waste is handled per all Federal and State hazardous waste regulations. Hazardous waste is maintained in a secured, bermed area for no longer than 90 days and disposed of by a licensed transporter/TSDF. All storage areas are inspected on a weekly basis.

2. Describe operations, activities and/or storage locations where a release is most likely to occur.
   We have three areas at this site where a release may occur. 1) Hazardous Waste storage shed beside 150 Constitution Drive. 2) Hazardous Material storage shed beside 150 Constitution Drive. 3) Bermed storage area behind 130 Constitution Drive.

3. Describe Best Management Practices (BMP's) you use to reduce or eliminate illicit discharge of pollutants to the storm sewer system.
   All area where hazardous materials and wastes are stored are confined to areas where there exists secondary containment and no exposure to stormwater. Materials are handled in small quantities to minimize the likelihood of a released and personnel are trained in spill response procedures.

4. Describe underground storage tank and/or aboveground storage tank monitoring procedures used to prevent an unauthorized release from occurring.
   Underground Storage Tanks are not located at this facility.

EMERGENCY RESPONSE PLAN

1. Provide a list of emergency response equipment designated for a hazardous materials emergency (e.g, fire extinguishers, fire suppression systems, spill control equipment, shut-off switches, personal protective equipment, decontamination equipment, and communication and alarm systems).

EQUIPMENT TYPE	LOCATION	CAPABILITY
Gramular absorbents	Through out bldgs	liquid spills
Absorbent pads, boom	Haz Waste shed	liquid spills
Plastic shovel	Haz Waste shed	absorbent clean up
Fire Extinguisher	Through out bldgs	ABC dry powder
Eyewash Station	Through out bldgs	plumbed & mounted portable
Emergency Alarm	Haz Waste shed	bell alarm/flashing light

2. Describe pre-emergency arrangements with local fire departments, police departments, hospitals, contractors, and other state and local emergency response agencies.
Sequoia Occupational Health Clinic, treatment of injured employees.

3. The definition of a release or threatened release of a hazardous material includes incidents that pose an actual or potential hazard to human health and safety, property or the environment. In the event of a hazardous materials release or threatened release, state law requires immediate verbal notification to the agencies listed below.

   a. Local Fire Department
   b. County Environmental Health
   c. State Office of Emergency Services (OES)

   Provide phone number other than 9-1-1 for the following:

Local Fire Department	(650) 688-8400
Local Police Department	(650) 858-3300
Nearest Hospital Sequoia Hospital	(650) 369-5811
County Environmental Health	(650) 363-4305
State Office of Emergency Services	(800) 852-7550 or (916) 262-1621

4. Describe procedures for notifying onsite emergency response personnel and outside agencies (e.g., Fire, Health, Police, State, OES) needed during hazardous materials emergencies.
   All employees have been trained to dial the internal emergency extension (ext.555) from any phone to initiate the ERT. Once on scene the ERT will determine whether or not outside agencies need to be notified.

5. Describe any security system or equipment that could impede site access by emergency responders.
   All entrances, besides the front lobby, require an access badge to unlock/open the door. After business hours the gates at the building 1 and 5 parking lot entrances are locked. During non-working hours there is a security guard stationed in the lobby located in Building1 (130 Constitution Drive.

6. Describe procedures for notification and evacuations of visitors and employees during hazardous materials emergencies. Primary and alternate evacuation routes and assembly areas must be clearly identified on the site map.
   Employees and visitors will be notified to evacuate via the PA system or an alarm. Evacuation maps are posted through out the buildings.

7. Describe mitigation or clean-up procedures to be implemented by onsite personnel in the event of a release, threatened release, fire or explosion involving hazardous materials. Indicate if the business has an onsite emergency response team (ERT) and if so, describe how the ERT will interact with outside emergency response agencies if additional assistance is required.
   L-3 Communications has an ERT which has been trained to the First Responder Operations level. Spills or releases will be contained by the ERT in a defensive manner. L-3's hazardous waste hauler will be contracted fro clean up and removal of waste.

8. Describe procedures for immediate inspection, isolation, and shutdown of equipment or systems that may be involved in a hazardous materials release or threatened release.
   All hazardous materials and wastes are stored in bermed areas of NFPA compliant cabinets. If it is safe to do so, a visual inspection of hazardous waste and material storage areas will be done to ensure that there is not a release.

EMPLOYEE TRAINING PLAN

All employees must participate in an on-going training program that addresses proper hazardous material handling and emergency response procedures. New hires must receive initial training and existing employees must receive annual "refresher" training.

1. Describe employee training as it pertains to the following:

   a. Safe handling and management of hazardous materials or wastes
   b. Notification and evacuation of facility personnel and visitors
   c. Notification of local emergency responders and other agencies
   d. Use and maintenance of emergency response equipment
   e. Implementation of emergency response procedures
   f. UST monitoring and release response procedures (N/A)

   L-3 Communications performs annual Hazardous Waste training which covers spill response, handling, storing, and labeling of hazardous waste. Hazards Communication training covers spill response, handling, storing, and labeling of hazardous material. L-3 Communications has established evacuation procedures which are covered during New Hire Orientation. Employees are informed during Hazard Communication and New Hire Orientation that anyone may active the ERT by dialing 555 or make notification to local emergency responders by simply dialing 9-911. Other agencies would be contacted by the EH&S Coordinator as required.

2. Describe documentation and record keeping procedures for training activities. Please note that if you generate hazardous waste at your business, you must also maintain documents onsite that indicate employee names and job titles, job descriptions, and descriptions of the type and amount of initial and refresher training.

   Training documentation is kept in the EH&S office as well as in each employees personnel file in Human Resources. EH&S keeps the class attendance sign in sheet and Human Resources keeps a page which employee has signed stating that he/she understands the material covered in the class.

CLOSURE PLAN

Contact San Mateo County Environmental Health prior to business closure. Business closure guidelines are available upon request.

1. Describe procedures that will be implemented in the event of a full or partial site closure. Include agency notification, hazardous materials removal, hazardous waste disposal, equipment breakdown and removal, and site decontamination.

   Should L-3 Communications discontinue business operations at their current facility then all hazardous materials and wastes would be disposed of per Federal and State regulations within 90 Days. San Mateo County Health would be notified of the closure by the EH&S Coordinator and arrangements for a closure inspection would be made.

HMBP ACCIDENTIAL SPILL PREVENTION PLAN

Randtron Antenna Systems (RAS) policy requires that the health and safety of the employee and protection of the environment be primary considerations in the conduct of its businesses. To implement this policy, programs are in place to assure conformity with all applicable regulations, environmental laws, and other requirements.

The primary objective of this plan is to prevent the discharge of any hazardous substance that may risk the safety of employees or the environment. The main focus of this plan is employee participation.

The following are covered by this plan:

- Drainage Control
- Storage, Containment and Security
- Transfer Operations
- Inspections and Record Keeping
- Training and Spill Prevention Procedures

Drainage Control

All sinks that are in close proximity to chemical workstations clearly state no chemicals allowed and the employee have been instructed that chemicals are not to be used at the sinks. Water samples are taken twice a year.

All storm drains are inspected quarterly for signs of discharge and they are also inspected monthly during rainfall to insure that the storms are not discharging pollutants into the environment. BMP's are in place to minimize any pollutants that might find it's way into the storm drain.

Storage, Containment and Security

RAS has four areas that are outside where a release may occur and they are:

- Bermed storage area behind 130 Constitution Drive
- Hazardous Waste storage shed behind 150 Constitution Drive
- Hazardous Material storage shed behind 150 Constitution Drive
- Hazardous Waste storage shed beside 1150 Chrysler Drive

Hazardous materials are stored in secured, storage sheds and or approved storage cabinets. All storage sheds have secondary containment and are clearly marked. Only authorized employees have access to these sheds and after hours the site is patrolled by an outside security company.

Transfer Operations

Any hazardous materials transferred from storage areas to work stations or dispensing areas are done in their original sealed containers and materials that are handled are in small quantities to minimize the likelihood of a released. All hazardous waste is handled per Federal and State hazardous waste regulations by trained employees and are disposed of by Clean Harbors, a hazardous waste transporter.

There is an adequate amount of adsorbent materials kept at each storage area in case of leaks or spills. There are empty drums and shovels to contain any spilled material. All contaminated material would be collected in a 55-gallon drum and disposed of as hazardous waste.

Inspections and Record Keeping

All hazardous waste storage areas are inspected weekly by company employees to insure that all areas are free from spills, waste containers are properly labeled, incompatible materials are separated and all Emergency Response equipment is functioning properly. Any discrepancies found are corrected immediately. All inspection records and spill records are kept onsite for at least 3 years.

Training

All employees that work with hazardous materials must participate in an on-going training program that addresses proper hazardous material handling, storage and emergency response procedures. New employees receive initial training and existing employees receive annual "refresher" training. The employee training focuses on the following:

- Understanding hazardous materials and MSDS
- Safe handling and management of hazardous materials or wastes
- Implementation of emergency response procedures
- Spill response
- Notification and evacuation of facility personnel and visitors
- Use and maintenance of emergency response equipment
- Notification of local emergency responders and other agencies

RAS has established evacuation procedures, which are covered during New Hire Orientation and annual refresher training. Evacuation drills are conducted annually

RE: Notice of Violation, Dated 6/22/93

Dear Bill Klokke,

I am writing to you as part of Loral Randtron Systems' ongoing effort to conform to all SBSA regulations. Specifically, this letter addresses the requirement in section 6.9 for a documented explanation of why it was necessary that we receive a "notice of violation" from your office. Wastewater sampling was conducted by SBSA on 4/29/93 and a notice of violation was delivered on 6/23/93. This notice was issued due to lab results indicating Randtron Systems exceeded our allowed cyanide concentration limits in mg/l and possibly, as well, our daily mass limits.

Loral Randtron Systems operates an etching and chemical conversion coating facility on a non-continuous basis, as if it were a job shop. Etching of 6061 Aluminum precede both dip braze and chemical conversion coating operations. The etching operation removes oxides prior to conversion coating and conversion coating provides corrosion resistance and/or minimizes electrical resistance on finished parts. Our conversion coating operations utilize two distinct types of material manufactured by Parker and Amchem Company (Alodine 600 and Alodine 1200). The Alodine 600 consists basically of chromic acid and Alodine 1200 is chromic acid agumented with potassium ferracyanide, which is utilized as a thickening and drying agent. The class of finish required dictates the type of material and the processing time.

When Randtron Systems applied for a wastewater discharge permit, SBSA conducted an inspection of our facility and collected 24 hour grab samples of our rinse water waste stream on several occasions. SBSA reports dated 8/25/92, 10/21/92, and 1/22/93 all indicated that we were always well

below our permitted concentration and mass limits for cyanide and hexavalent chrome releases.

Along with your reported lab analysis, Randtron Systems conducted experimentation to insure that chrome levels would not exceed Federal and local permitted values. We assumed that our system was in balance and therefore, no problems existed with the function of our wastewater discharge system.

Unfortunately, on April 4, 1993, as results indicate, shop loading required the usage of Alodine 1200, which caused a peak in cyanide release resulting in our exceeding the concentration limits allowed in our permit.

Normally, Alodine 1200 is not utilized on a daily basis and therefore, when SBSA conducted testing for the initial settings of our permit limits, no cyanide was detected. In addition, minimal levels of cyanide were detected during all subsequent samplings.

While the measurement as reported by your office is in excess of our permitted value, we feel that it is an aberration of an actual representative value if our waste water were discharged on a continuous basis rather than in a batch process. Never the less, Randtron Systems acknowledges the fact that we need to address the issue of cyanide release.

For the short term we have implemented in our operating procedure the requirement that all cyanide bearing rinse water be collected and treated as a hazardous waste. This rinse water will be manifested and disposed of at a TSDS by a licensed facility. In addition, we request that an intermediate solution be considered by amending our permitted value for cyanide release to a number more representative of our actual usage. We base this request on the fact that the quantity of cyanide-bearing rinse water release varies greatly from day to day and quite frequently no cyanide is released for long periods of time. A more realistic value for our facility would be the Federal limits as set by 40CFR433 (.65 mg/l). Finally, as a long term solution to cyanide release, Randtron Systems will explore material

product substitutions so that we may eliminate all cyanide release. Please note that a substitution process is a long term project due to required customer approval on all military contracts.

If you can help to expedite our request for a permit amendment, or have any questions, please feel free to contact me at (415) 326-9500.

Sincerely,

Gary Schneider

N O T I C E O F V I O L A T I O N - MONITORING REPORT

Lockheed Martin Randtron Sys.
130 Constitution Dr.
Menlo Park, CA
94025

File No. : 77-10.11
Date : 03/23/97
Sample No.: 15-086A
CERTIFIED MAIL

To: Gary Schnieder I.E.

A [✓] grab or [ ] composite sample of wastewater was collected from the P Trap Bldg 4 (IWD-1) monitoring location at your facility on 02/11/97 by personnel of the South Bayside System Authority. Laboratory analysis gave the following results:

Parameter	Value		Limits	Status
cyanide	1.3000	mg/l	0.6500	Violation

*Range *** Concentration in mg/l

COMPLIANCE WITH WASTEWATER DISCHARGE LIMITS: YES [ ]
NO [XX]

SBSA Regulation section 6.9. requires a written explanation of the cause of this violation. This report is due within 30 days from the delivery of this NOTICE OF VIOLATION.

Please call us at (415) 594-8411 if you have any questions.

NOTICE OF VIOLATION

A composite/grab sample of wastewater, Sample # 19-124B was collected from the deburring sump (Bldg. 1) monitoring location at your facility on 1/18/2002 by personnel of the South Bayside System Authority.

This sample was NOT in compliance with all limits in your wastewater discharge permit. SBSA Regulations Section 6.9 requires a written explanation of the cause of the violation. This explanation is due within 30 days from the delivery of this NOTICE OF VIOLATION.

Laboratory and computer results are attached.

Please call us at (650) 594-8411 if you have any questions.

Environmental Records Request

Asterisks (*) indicate required fields

This form was successfully submitted and saved

Section 6256 of the Public Records Act requires access to public records within 10 days the date of receipt. The Division will make every effort to provide access within 10 days with advance notification for an appointment to review records. This allows us time to retrieve files from off-site and review files. Should the request take longer than 10 days, the department will inform the requestor of additional time needed to perform the request.

County policy for file review: An Expedited File Review can be arranged for a fee of $50 and we will contact you within three (3) working days to schedule your expedited appointment. Seven (7) site addresses per expedited request. ***Please indicate in the comment box below if you are requesting files to be expedited.*

Provide complete address (street number, street name and city) or Assessor's Parcel Number.

The requesting party will be notified as soon as files/documents are available.

Cancelling a records request, contact Environmental Health at 650-372-6200.

Rochelle Reed <publicrecords@baaqmd.gov> Thu, Dec 18, 2014 at 7:58 PM
To: Carrie Locke <carrie.locke@gmail.com>

Dear Carrie Locke,

Thank you for your request. We have searched our records and have no records that respond to your below request for:

123 Independence Drive
Menlo Park

If you have any questions or concerns, please call or e-mail me.

Sincerely,

Rochelle Reed
Public Records Section
BAAQMD
415-749-4784

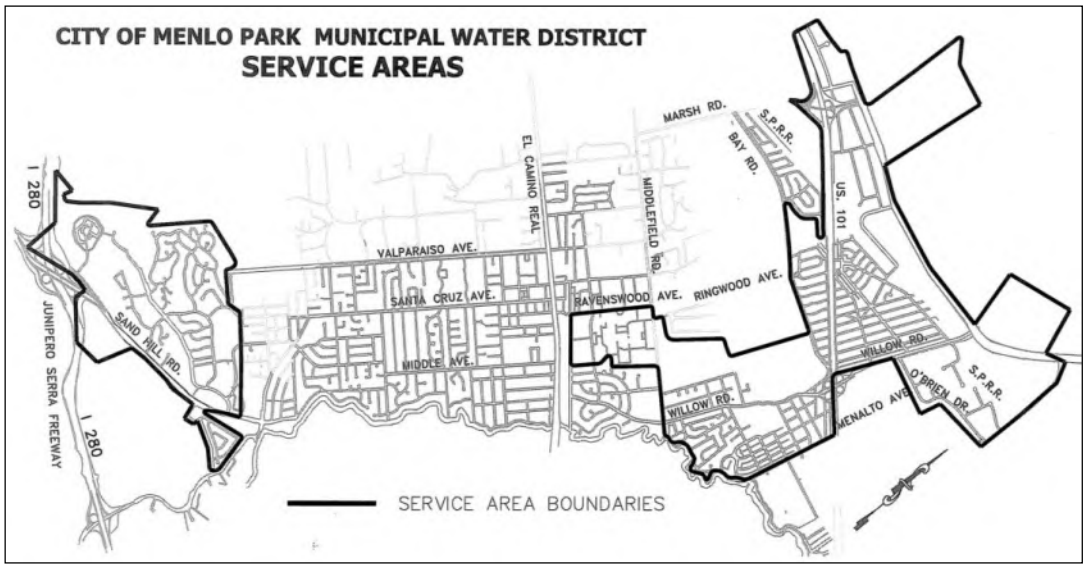
2013 Annual Water Quality Report

The City of Menlo Park Municipal Water District (Water District) is pleased to provide our water customers with pertinent information about the quality of our drinking water. This annual water quality report tells you where our water comes from, what our tests show about it, and more. You can be assured that the safety of your water supply is our top priority and we will notify you immediately if there is any reason for concern about our water. We are providing this information to you so you can make informed choices about our water supply.

The Water District is committed to providing its customers with a safe and reliable supply of high-quality drinking water that meets Federal and State standards. Each year the District provides a summary of the water quality sampling results and other information through an Annual Water Quality Report. This Report was prepared in accordance with the Federal Safe Drinking Water Act and California Department of Public Health (CDPH) requirements.



Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien.

這是一份有關您飲用水的品質報告，內含重要資訊。若您對報告內容有不甚瞭解之處，請務必找人為您翻譯及詳細解釋。

Our Drinking Water Source

The District purchases all of its water from the San Francisco Public Utilities Commission (SFPUC). SFPUC water is primarily from the Hetch Hetchy watershed located in the Sierra Nevada Mountains and is supplemented by water from the Alameda watershed. In 2013, the District supplied an average of 3.26 million gallons of water per day to approximately 16,000 residents through two service areas; the eastern service area and the western service area (see map below). The eastern service area is primarily located east of El Camino Real and the western service area is in the Sharon Heights area of the City. The California Water Service Bear Gulch District provides water to the middle area of the City.

The Hetch Hetchy System

Water from SFPUC's Hetch Hetchy system originates from spring snowmelt flowing down the Tuolumne River to storage in Hetch Hetchy Reservoir. Our pristine, well protected Sierra water source is approved by the United States Environmental Protection Agency (USEPA) and California Department of Public Health (CDPH) so that no filtration is required. Hetch Hetchy water is supplemented with surface water from two local watersheds. Rainfall and runoff from the 35,000-acre Alameda Watershed spanning Alameda and Santa Clara counties—are collected in the Calaveras Reservoirs and San Antonio Reservoir for filtration and disinfection at the Sunol Valley Water Treatment Plant. Rainfall and runoff from the 23,000-acre Peninsula Watershed in San Mateo County are stored in the Crystal Springs Reservoir, San

Andreas Reservoir, and Pilarcitos Reservoir, and are filtered and disinfected at the Harry Tracy Water Treatment Plant. As in the past, the Hetch Hetchy Watershed provided the majority of our total water supply, with the remainder contributed by the two local watersheds in 2013.

Protecting the SFPUC Water System from Seismic Disaster

More than $4 billion is being invested in seismic-related water infrastructure repairs, replacements or retrofits to protect the SFPUC's regional water system in the event of an earthquake. The SFPUC and the Water District are making this investment in the Water System Improvement Program (WSIP) to ensure that the regional water system will be able to deliver water for public health, fighting fires and disaster recovery as quickly as possible following a seismic event. To date, almost 80% of the 84 water infrastructure projects have been completed.

The U.S. Geological Survey has commended the SFPUC and its regional partners for taking the initiative to address the seismic threats in the region with this massive water infrastructure program. However, despite these significant efforts to safeguard the Hetch Hetchy regional system from an earthquake, there is a chance that up to 30% of the regional turnouts that supply water to your service area could be without service for up to 60 days. There is no way to predict where the next earthquake might strike or what areas could be impacted.

Tap Versus Bottled: Water Quality Testing

Did you know that Tap water is more stringently regulated than Bottled water? Tap water is highly regulated by the EPA, and the Water District must meet all CA Department of Public Health testing requirements.

Contaminants and Regulations

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming. Pesticides and herbicides may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Pesticides and herbicides may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, can come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production, and mining activities.

More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline **800-426-4791**.

Special Health Needs

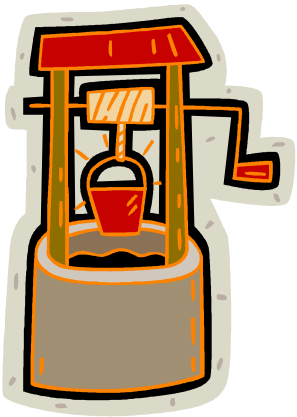
Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons, such as those with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly people, and infants, can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the USEPA's Safe Drinking Water Hotline **800-426-4791** or at **www.epa.gov/safewater**.

Fluoridation and Dental Fluorosis

Mandated by State law, water fluoridation is a widely accepted practice proven to be safe and effective for preventing and controlling tooth decay. Our water is optimally fluoridated at 1.0 mg/l. Infants fed formula mixed with water containing fluoride at the optimal level may have an increased chance of developing tiny white lines or streaks in their teeth. These marks are referred to as mild to very mild fluorosis, and are often only visible under a microscope. Even in cases where the marks are visible, they do not pose any health risk. CDC considers it safe to use optimally fluoridated water for preparing infant formula. To lessen this chance of dental fluorosis, you may choose to use low-fluoride bottled water to prepare infant formula. Nevertheless, children may still develop dental fluorosis due to fluoride intake from other sources such as food, toothpaste and dental products. Contact your health provider or CDPH if you have concerns about dental fluorosis. Additional information can be found at CDPH website **www.cdph.ca.gov/certlic/drinkingwater/pages/fluoridation.aspx** or **CDC website www.cdc.gov/fluoridation**.

Lead from Plumbing Fixtures

Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. There are no known lead service lines in our water distribution system. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. It is possible that lead levels at your home may be higher than at others because of plumbing materials used on your property.



If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Infants and young children are typically more vulnerable to lead in drinking water than the general population. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead levels in your water, you may wish to have your water tested. Additional information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the USEPA's Safe Drinking Water Hotline **800-426-4791**, or at **www.epa.gov/safewater/lead**

Tap Versus Bottled: Water Costs

Did you know that Bottled water is more than 300 times the cost of Tap water?

A gallon of Bottled water costs about $7.50 compared to a gallon of Tap water which costs less than one penny.

Menlo Park Emergency Water Supply Project Update

The District has two reservoirs in the western service area for emergency storage; however the eastern service area does not have emergency storage or a dedicated secondary water supply. In May 2009, the City Council completed a feasibility study for the eastern service area which stated that multiple wells could provide about 3,000 gpm (gallons per minute) to meet average-day potable water needs. In January 2013, the City Council authorized design of the first emergency well to be constructed at the City's Corporation Yard located at 333 Burgess Drive.

Design and construction of the Corp Yard Well consists of design, environmental review, well drilling, and construction of the above-ground wellhead facilities. The design process is underway, and the City anticipates the environmental document will be available for public review later this year, with the well drilling to occur in 2015 and construction of the wellhead facilities in 2016.

Later this year the City anticipates holding Community Meetings to obtain public feedback on additional emergency well locations. For more information, please visit http://www.menlopark.org/emergencysupplywells.

Managing our Water Wisely: Urban Water Management Planning

The California Water Code requires urban water suppliers to prepare an Urban Water Management Plan (UWMP) to assess water supplies and demands 20 years into the future. Plan requirements include discussions of current and planned water sources, future demands, water supply reliability, and water shortage contingency plans. The UWMP must be updated every five years and Menlo Park completed the most recent update in 2010. The City worked collaboratively with SFPUC to assess supplies and demands during normal precipitation year and reviewed shortage contingency plans for dry periods. The UWMP can be found on the City's website at: http://www.menlopark.org/watermanagementplan.

2013 Annual Water Quality Report

This annual report contains important information about the quality of your drinking water and our commitment to providing excellence in water quality.

Prepare Yourself for Emergencies

Recent earthquakes in the news are fitting reminders to prepare ourselves with emergency provisions. Although the SFPUC and the Water District strive to ensure a reliable supply of water for our customers, a natural disaster such as a major earthquake could interrupt water delivery. As a result, **it is imperative that everyone be prepared for the unexpected both in your homes and place of business.**

- Store tap water in a dark, cool place — at least three to five days worth of water (one gallon of water per person, per day, including pets) in clean, plastic, airtight food grade containers, such as two-liter soda bottles.
- Label each container with a date, and replace the water every six months.
- At the time of usage, add 16 drops of bleach to each gallon to ensure disinfection. (Use pure household bleach only—not products with scents or other additives.) Mix and allow the water to stand for 30 minutes before use. If a camp stove is available, you can also disinfect the water by bringing water to a rolling boil for 5 to 10 minutes.
- If you run out of stored drinking water, strain and treat water from your water heater. To strain, pour it through a clean cloth or layers of paper towels. Treat with household bleach, as directed above. Other sources of water inside the home are ice cubes, and the reservoir tank of your toilet (not the bowl).
- If your water supply is not sufficient for hand washing, use antiseptic hand gel or wipes.

Water Conservation Tips

Ways to conserve indoors:

- Fix leaking faucets, pipes, toilets, etc.
- Do not use the toilet for trash disposal.
- Take shorter showers.
- Do not let the water run while shaving or brushing your teeth.
- Soak dishes before washing.
- Install water-saving devices in faucets, toilets and appliances.

Ways to conserve outdoors:

- Use a broom instead of a hose to clean the driveway.
- Water the lawn and garden in the early morning or evening.
- Use mulch around plants and shrubs.
- Repair leaks in faucets and hoses.
- Use water-saving nozzles.

Water Quality Data for Year 2013

The enclosed table lists all detected drinking water contaminants in calendar year 2013 and the information about their typical sources. Contaminants below detection limits for reporting are not shown, in accord with regulatory guidance. We received a monitoring waiver from the CDPH for some contaminants which reduces their monitoring frequencies.

Maintaining Water Quality

The City continually works to maintain the quality of its water through the following activities:

Hydrant and Water Main Flushing: City maintenance crews routinely flush fire hydrants and water mains to remove sediment and keep the distribution system refreshed. As a result, residents in the immediate vicinity may experience temporary discoloration in their water. This discoloration does not affect the safety of the water. If you experience discoloration in your water after crews have been flushing in your neighborhood, clear the water from your home pipes by running water faucets for a few minutes.

Backflow Testing: Backflow prevention devices keep the water supply safe by ensuring that the water used at commercial, industrial, and irrigation sites does not flow back into the City's distribution system. The District sends out notifications and tracks the testing and repair of over 800 backflow devices each year.

Key Water Quality Terms

Following are definitions of key terms referring to standards and goals of water quality noted on the adjacent data table.

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the USEPA.

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs or MCLGs as is economically and technologically feasible. Secondary MCLs (SMCLs) are set to protect the odor, taste, and appearance of drinking water.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standard (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Regulatory Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Turbidity: A water clarity indicator that measures cloudiness of the water, and is also used to indicate the effectiveness of the filtration system. High turbidity can hinder the effectiveness of disinfectants.

Cryptosporidium is a parasitic microbe found in most surface water. We regularly test for this waterborne pathogen, and found it at very low levels in source water and treated water in 2013. However, current test methods approved by the USEPA do not distinguish between dead organisms and those capable of causing disease. Ingestion of *Cryptosporidium* may produce symptoms of nausea, abdominal cramps, diarrhea, and associated headaches. *Cryptosporidium* must be ingested to cause disease, and it may be spread through means other than drinking water.

City of Menlo Park - Water Quality Data for Year 2013 [1]

DETECTED CONTAMINANTS	Unit	MCL	PHG or (MCLG)	Range or Level Found	Average or [Max]	Major Sources in Drinking Water
TURBIDITY						
Unfiltered Hetch Hetchy Water	NTU	5	N/A	0.2 - 0.3 [2]	[3.6] [3]	Soil runoff
Filtered Water from Sunol Valley Water Treatment Plant (SVWTP)	NTU	1 [4]	N/A	-	[0.98]	Soil runoff
	-	Min 95% of samples ≤ 0.3 NTU [4]	N/A	99.9%	-	Soil runoff
Filtered Water from Harry Tracy Water Treatment Plant (HTWTP)	NTU	1 [4]	N/A	-	[0.13]	Soil runoff
	-	Min 95% of samples ≤ 0.3 NTU [4]	N/A	100%	-	Soil runoff
DISINFECTION BYPRODUCTS AND PRECURSOR						
Total Trihalomethanes	ppb	80	N/A	0.8 - 54.4	[32] [5]	Byproduct of drinking water disinfection
Haloacetic Acids	ppb	60	N/A	2.1 - 43.8	[21] [5]	Byproduct of drinking water disinfection
Total Organic Carbon [6]	ppm	TT	N/A	1 - 3.4	2.2	Various natural and man-made sources
MICROBIOLOGICAL						
Total Coliform [7]	-	NoP ≤ 5.0% of monthly samples	(0)	-	**[0%]**	Naturally present in the environment
Giardia lamblia	cyst/L	TT	(0)	<0.01 - 0.04	<0.01	Naturally present in the environment
INORGANICS						
Fluoride (source water) [8]	ppm	2.0	1	ND - 0.8	0.4 [9]	Erosion of natural deposits; water additive to promote strong teeth
Chloramine (as chlorine)	ppm	MRDL = 4.0	MRDLG = 4	1.5 - 2.9	[2.4] [10]	Drinking water disinfectant added for treatment
RADIONUCLIDES						
Gross Alpha Particle Activity	pCi/L	15	(0)	ND - 3.9	ND	Erosion of natural deposits

CONSTITUENTS WITH SECONDARY STANDARDS	Unit	SMCL	PHG	Range	Average	Major Sources of Contaminant
Aluminum [11]	ppb	200	600	ND - 52	ND	Erosion of natural deposits; some water treatment residue
Chloride	ppm	500	N/A	<3 - 18	10.2	Runoff / leaching from natural deposits
Color	unit	15	N/A	<5 - 6	<5	Naturally occurring organic materials
Specific Conductance	µS/cm	1600	N/A	29 - 258	169	Substances that form ions when in water
Sulfate	ppm	500	N/A	0.8 - 33	16.6	Runoff / leaching from natural deposits
Total Dissolved Solids	ppm	1000	N/A	<20 - 109	71	Runoff / leaching from natural deposits
Turbidity	NTU	5	N/A	0.1 - 0.3	0.1	Soil runoff

LEAD AND COPPER	Unit	AL	PHG	Range	90th Percentile	Major Sources in Drinking Water
Copper	ppb	1300	300	<1.0 - 179 [12]	76.9	Internal corrosion of household water plumbing systems
Lead	ppb	15	0.2	<1.0 - 10.5 [13]	2.0	Internal corrosion of household water plumbing systems

OTHER WATER QUALITY PARAMETERS	Unit	ORL	Range	Average
Alkalinity (as $CaCO_3$)	ppm	N/A	7 - 71	46
Bromide [14]	ppb	N/A	17 - 24	21
Calcium (as Ca)	ppm	N/A	3 - 23	13
Chlorate [15]	ppb	800 (NL)	39 - 690	303
Hardness (as $CaCO_3$)	ppm	N/A	7 - 89	53
Magnesium	ppm	N/A	<0.2 - 8.3	5.3
pH	-	N/A	6.5 - 9.4	8.4
Silica	ppm	N/A	4.8 - 5.2	5
Sodium	ppm	N/A	3 - 18	12

KEY:	
< / ≤	= less than / less than or equal to
AL	= Action Level
Max	= Maximum
Min	= Minimum
N/A	= Not Available
ND	= Non-detect
NL	= Notification Level
NoP	= Number of Coliform-Positive Sample
NTU	= Nephelometric Turbidity Unit
ORL	= Other Regulatory Level
pCi/L	= picocurie per liter
ppb	= part per billion
ppm	= part per million
µS/cm	= microSiemens/centimeter

Footnotes:

(1) All results met State and Federal drinking water health standards.

(2) Turbidity is measured every four hours. These are monthly average turbidity values.

(3) The highest turbidity of the unfiltered water in 2013 was 3.6 NTU.

(4) There is no turbidity MCL for filtered water. The limits are based on the TT requirements for filtration systems.

(5) This is the highest locational running annual average value.

(6) Total organic carbon is a precursor for disinfection byproduct formation. The TT requirement applies to the filtered water from the SVWTP only.

(8) The SFPUC adds fluoride to an optimum level of 0.9 ppm to help prevent dental caries in consumers. The CDPH specifies the fluoride levels in the treated water be maintained within a range of 0.8 ppm - 1.5 ppm. In 2013, the range and average of the fluoride levels were 0.7 ppm - 1.4 ppm and 0.9 ppm, respectively.

(9) The natural fluoride level in the Hetch Hetchy supply was ND. Elevated fluoride levels in the SVWTP and HTWTP raw water are attributed to the transfer of fluoridated Hetch Hetchy water into the reservoirs.

(10) This is the highest running annual average value.

(11) Aluminum also has a primary MCL of 1000 ppb.

(12) The most recent Lead and Copper Rule monitoring was in 2012. Of the 38 site samples collected at consumer taps none had copper concentrations above the AL.

(13) The most recent Lead and Copper Rule monitoring was in 2012. Of 38 site samples collected at consumer taps none had lead concentrations above the AL.

(14) Bromide was monitored at HTWTP treated water in 2013.

(15) The detected chlorate in the treated water is a degradation product of sodium hypochlorite used by the SFPUC for water disinfection.

PROPERTY USE AND SPECIFICATIONS

☐ Single-Family Residential	☐ Vacant or undeveloped
☐ Multi-Family Residential	☐ Agricultural *specify type:*
☐ Commercial Office	☑ Industrial *specify type:*
☐ Commercial Retail	☐ Other *specify type:*

Provide a general site description:

Single-Story building w/ one tenant.

Total Property Size: 12,000 SF	Original Construction Date: N/A
Total Number of Buildings: 1	Was Construction Phased? ☐Yes ☐No ☑Unk
Total Sq. Ft. of Buildings: 12,000 SF	Dates of Renovations/Phases: Unknown

Are there any bodies of water on or immediately adjacent to the site? ☐Yes ☑No If yes, please describe:

Potable Water Source/Provider:	Electricity Provider:	Gas Provider:

Any waste water discharge at the site? ☐ Septic Tank/Leachfield ☐ Sanitary Sewer ☐ Other	Sanitary Sewer Provider (if applicable):

OCCUPANTS/TENANTS

Current Occupant(s)/Tenant(s)	*Length of occupancy*	*Brief description of on-site operations*
L-3 Communications		Antenna Systems

Project Number: 337789
Project Manager: Carrie Locke

Please return via fax (415-520-5858)
or email (carrie.locke@gmail.com)

Previous Occupant(s)/Tenant(s)	Length of occupancy	Brief description of on-site operations

Has the subject site ever been occupied by the following:
☐ Dry Cleaner ☐ Gas Station ☐ Printing Facility ☐ Manufacturing Facility
If yes, provide length of occupancy: UNKNOWN

Have any previous investigations been performed at the subject property? ☐Yes ☑No If Yes, are copies available?

If Yes, note type and describe: ☐ Phase I ESA ☐ Phase II ☐ Asbestos ☐ Lead Paint ☐ Radon

ON-SITE ENVIRONMENTAL CONDITIONS

Are you aware of any of the following environmental conditions, either current or former, on the subject site? **NOTE:** If applicable, please provide inventory records, inspection records and material safety data sheets to site inspector during site inspection.

Environmental Condition/Issue	Response	Notes on Yes Responses
Aboveground Storage Tanks	☐ Yes ☐ No	
Underground Storage Tanks	☐ Yes ☐ No	
Hazardous/Toxic Substances	☐ Yes ☐ No	
Stored Chemicals	☐ Yes ☐ No	
Chemical Spills/Releases	☐ Yes ☐ No	
Dump Areas/Landfills	☐ Yes ☐ No	
Waste Treatment Systems	☐ Yes ☐ No	
Wastewater Discharges	☐ Yes ☐ No	
Floor Drains/Sumps/Clarifiers	☐ Yes ☐ No	
Pits, Ponds, Lagoons	☐ Yes ☐ No	
Stained Soil/Vegetation	☐ Yes ☐ No	
Pesticide/Herbicide Use	☐ Yes ☐ No	
Polychlorinated Biphenyls (PCBs)	☐ Yes ☐ No	
Electrical Transformers	☐ Yes ☐ No	
Hydraulic Lifts	☐ Yes ☐ No	
Elevators	☐ Yes ☐ No	

Asbestos	☐ Yes ☐ No	
Environmental Condition/Issue	*Response*	*Notes on Yes Responses*
Lead-based paint	☐ Yes ☐ No	
Oil/Gas Wells	☐ Yes ☐ No	
Environmental Clean-ups	☐ Yes ☐ No	
Environmental Permits	☐ Yes ☐ No	

OTHER ENVIRONMENTAL CONDITIONS

Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?
☐ Yes ☒ No
If yes, provide brief explanation.

Are you aware of any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?
☐ Yes ☒ No
If yes, provide brief explanation.

Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?
☐ Yes ☒ No
If yes, provide brief explanation.

Are you aware of any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality?
☐ Yes ☒ No
If yes, provide brief explanation.

Are you aware of any cases of extreme water damage or mold throughout the building(s)?
☐ Yes ☒ No
If yes, provide brief explanation.

Person completing questionnaire: Corrine Satalaya

Title/Affiliation to the subject property: Property manager

Number of years associated with the subject property: building bought June 2014

Date: 12/17/14

APPENDIX F

QUALIFICATIONS

Carrie Locke – Associate Consultant

BCE – Civil Engineering, Georgia Institute of Technology

Ms. Locke has over 15 years of experience in the environmental consulting and engineering industry. Her project experience includes Phase I Environmental Site Assessments and Real Estate Transaction Screens in conformance with ASTM, Freddie Mac, Fannie Mae and HUD standards; design and implementation of soil and groundwater investigations for due diligence purposes and regulatory agency requirements; groundwater monitoring well installation and monitoring projects; development of Sewer Master Plans and Collection System Models, projecting future sewer system needs based on population growth and land use; and water distribution feasibility studies.

Select project experience for Ms. Locke includes:

- Assessment of numerous auto repair facilities, gas stations, dry cleaning facilities, and complex industrial sites
- Assessment of high-rise hotel buildings in San Francisco and Los Angeles
- Review of Phase I Environmental Site Assessments by others for finalization to the client for over 7 years
- Design and oversight of subsurface investigations at a variety of sites such as dry-cleaning facilities, gas stations, automotive repair shops, agricultural properties, and other industrial facilities
- In the State of California, development of Sewer Master Plans for the Cities of Livermore, Chico, and Fresno. This involved using various modeling software programs and mapping software, such as ArcGIS.
- Contribution to a feasibility study for the repair of a raw water pipeline for the City of Santa Cruz

Orion Alcalay – Executive Vice President, Due Diligence Services

MS – Environmental Management, University of San Francisco
BS – Environmental Science, University of California, San Diego
EPA Accredited Asbestos Inspector
OSHA 40-Hour Hazardous Waste Worker Training

Mr. Alcalay has worked in the environmental consulting industry since 1999. As Executive Vice President of Due Diligence Services, Mr. Alcalay is responsible for ensuring the consistency and quality of due diligence services throughout AEI.

Mr. Alcalay provides senior review expertise on a company-wide basis to ensure compliance with ASTM and AAI standards as well as satisfying client requirements for Phase I Environmental Site Assessments, Transaction Screens, and Property Condition Assessments. Day to day responsibilities include senior reviewing, project oversight, staff supervision, business development and client management.

Mr. Alcalay's project management experience has included:

- Phase I Environmental Site Assessments, Real Estate Transaction Screens and Property Condition Assessments in conformance with ASTM, Housing and Urban Development (HUD) Multi-Family Accelerated Processing (MAP) 223(f) and 232, CMBS, Freddie Mac, and Fannie Mae protocols.

- The design and implementation of Phase II soil and groundwater investigations for a variety of suspected contaminants for due diligence and liability purposes.

- The design and implementation of regulatory agency driven soil and groundwater investigations and corrective action projects (Groundwater Monitoring Well Installation and Monitoring Projects).

- Asbestos Inspections and Metals Sampling.

In addition, Mr. Alcalay is well-informed in the areas of NEPA/CEQA compliance. His experience has allowed him to be a successful liaison between clients and regulatory agencies in order to effectively address the needs of both parties.

APPENDIX G

RESUMES OF ENVIRONMENTAL PROFESSIONALS

MATTHEW R. EDDY, E.I.T.

Staff Engineer

Mr. Eddy is a staff engineer who has participated in a variety of site assessments and investigations, as well as remediation projects. His field experience has included: Phase I Environmental Site Assessments; soil, groundwater and soil gas sampling; monitoring well installation; and supervision of a soil remediation project. He is proficient with AutoCAD, Matlab, and Excel.

EDUCATION

B.S., Civil Engineering, Specialization in Environmental Engineering, University of California Davis, 2013

EXPERIENCE

April 2014 – Present PES Environmental, Inc., Novato, California

PROFESSIONAL REGISTRATION

Engineer in Training (E.I.T.) Certification – California 2013
License #: 150929

HEALTH AND SAFETY TRAINING

40-hour HAZWOPER training

WILLIAM F. FRIZZELL

President
Principal Engineer

Mr. Frizzell is a civil/environmental engineer with 36 years of experience, specializing in environmental assessments of properties, soil and groundwater investigations and remediation, and hazardous and solid waste management. He has been the project manager responsible for all phases of Remedial Investigations/Feasibility Studies and remedial action planning and design. He has evaluated hazardous waste disposal facilities throughout the U.S., focusing on facilities' compliance with Federal and State regulations, and hydrogeological characteristics of the disposal sites. For real estate transfer projects, Mr. Frizzell has performed and/or managed more than 200 environmental assessments for developers, lenders, and attorneys. He has worked closely with developers on residential and commercial projects, which require environmental cleanup strategies and remediation of soils and/or groundwater. He also provides third party review of environmental projects for preparation of Environmental Impact Reports and litigation support. Mr. Frizzell has developed plans and specifications for hazardous waste site closures and has been involved in the design of gas, leachate, and surface water control systems. In addition, he has designed and prepared plans and specifications for slurry walls to control the migration of contaminated groundwater, and have been responsible for the selection and installation of synthetic liners for hazardous waste applications.

Mr. Frizzell's project experience also includes dredging feasibility studies for open water and land disposal sites. These projects have included characterization of sediments in contaminated and uncontaminated environments, biological and water quality assessments, monitoring programs and maintenance of disposal areas.

Mr. Frizzell has also performed site investigations for foundation studies and has experience in design and construction of projects involving structural grouting, dam construction, and earthwork.

EDUCATION

B.S., Civil Engineering, University of California, Berkeley, 1978

Postgraduate education has included courses and seminars in Storm Water Management, Geotechnical Engineering of Waste Management Systems, Groundwater Hydrology, Hazardous Materials Management and Handling, Stabilization and Solidification of Hazardous Waste, and Management Training.

SAFETY TRAINING

Health and safety training and update courses following EPA and OSHA requirements. Courses included training in physical, chemical, and toxicological properties of hazardous materials; hazard evaluation and control; selection and use of personal protective equipment; sampling and monitoring techniques and equipment; site entrance and decontamination procedures; and safety plan development.

EXPERIENCE

1989 - Present:	PES Environmental, Inc., Novato, California
1981 - 1989:	Harding Lawson Associates, Novato, California
1978 - 1981:	Woodward Clyde Consultants, San Francisco, California.

REGISTRATION

Civil Engineer - California, Arizona, Washington

Environmental Assessor - California, Washington

REPRESENTATIVE PROJECTS

Storm Water Management – Program manager for assisting various clients in compliance with the State of California Industrial Activities Storm Water General Permit. Activities included preparation of storm water pollution prevention plans, storm water monitoring plans and annual reports.

Litigation Support/Expert Witness Projects - Litigation support and expert witness services have included the areas of soil and groundwater remediation cost recovery actions; standard of care evaluations for environmental site assessments; assessment of damages due to releases from underground storage tanks; and claims due to a residential development over contaminated soils and groundwater. Client: Various Law Firms

Real Estate Assessment Projects - Program and project manager responsible for all phases of numerous real estate transfer assessment projects. Projects involve evaluating properties for potential liability due to hazardous waste contamination, site history evaluations, site inspections, regulatory review, and preparation of assessment reports. Program responsibilities include marketing, business development, training, and quality assurance/

quality control program development. Clients: Various Lending Institutions, Insurance Companies, Attorneys, Finance Companies and Developers

Dredging Feasibility Studies, Port of Oakland, California - Project manager responsible for dredged sediment disposal project involving site characterization and geochemical and surface water modeling to predict effluent water quality. Project involved conducting a feasibility study to dispose highly saline and contaminated sediments in an upland environment and development of control measures. Client: Port of Oakland

Richmond Marsh Restoration, Richmond, California - Large amounts of paint residue were uncovered during construction of new channels to restore marshland on edge of San Francisco Bay. As project manager: developed and implemented site-characterization plans; developed, tested, and analyzed potential remedial actions; selected preferred remedial action; prepared draft and final Remedial Action Plans; attended public hearings; developed community Relations Plan; and developed construction plans and specifications and post-construction monitoring plans. Managed all negotiations with state regulatory agencies. Client: City of Richmond

Hazardous-Waste Investigation, State Superfund Site, Richmond, California - Project manager for investigation at former pesticide formulating and packaging site. Responsible for all phases of investigation, including hydrogeological studies, analytical testing program, contaminant transport evaluations, study of offshore contaminant migration in marine sediments, evaluation of bioavailability of contaminants to marine organisms, and dredging of contaminated sediments. Planned and implemented remedial actions involving construction of temporary waste piles, installing synthetic membranes, and removing and transporting contaminated soils and debris. Project has included close coordination and involvement with various state regulatory agencies. Client: Levin Richmond Terminal Corporation

PCB Spill Investigation and Cleanup, Northern California State Superfund Site - Engineer for study to determine extent of contamination from PCB spill. Organized hydrogeologic study to determine contaminant migration potential, examined cleanup options, and prepared economic analysis of alternatives. Client: MGM Brakes

Landfill Closure Plans and Specifications, Alameda, California - Project manager responsible for preparing plans and specifications for closing 43-acre sanitary landfill adjacent to San Francisco Bay. Project included construction of surface impoundments for placing dredge spoils for use as cover material and preparation of earthwork plans and specifications for cover system. Project also included designing and installing post-closure groundwater monitoring system and performing leachate characterization study and contingency plan. Client: City of Alameda

Soil Process and Treatment Program, Richmond, California - Project manager for site remediation involving processing and treatment of 35,000 cubic yards of lead-contaminated

soil. Processing involved physical separation through screening; treatment involved proprietary fixation process. Responsible for regulatory negotiations, contractor selection, and quality control program. Client: City of Richmond

Site Remediation Program, Pittsburg, California - Project engineer responsible for plans and specifications to remediate 4-acre asbestos-contaminated site. Project involved examination and evaluation of cover options, selection of contractors, regulatory negotiations, and construction observation. Client: John Mansville

Slurry-Wall Design, Martinez, California - Project engineer responsible for designing 3300-foot-long slurry wall through existing surface impoundments containing effluent from oil refinery. Responsible for setting up and evaluating effluent/bentonite slurry permeability testing program for development of design criteria. Duties also included preparing plans and specifications, evaluating contractors' bids, and reviewing construction-control program for slurry-wall installation. Client: Shell Oil

Surveys of Hazardous-Waste Treatment, Storage, and Disposal Sites, Nationwide - Project manager responsible for conducting surveys and preparing evaluation reports for over 50 commercial hazardous-waste facilities. Evaluations focus on hydrogeologic, managerial, environmental, regulatory, financial, and safety aspects of disposal-site operations. Projects have been performed in response to generator concern for "cradle to grave" responsibility for hazardous waste. Clients: Shell Oil Company, Chevron U.S.A. Inc., and IBM Corporation

Landfill Assessment and Geotechnical Studies, Albany and Berkeley, California - Project manager for investigating and evaluating inactive sanitary landfills in regard to generation and migration of leachate and methane, providing recommendations for developing landfills to support various structures, assessing potential impact of landfill on future development, and preparing preliminary closure plans. Project has also included preliminary geotechnical studies for landfills involving geohazards evaluation, general foundation recommendations, and slope-stability studies. Client: Hall, Goodhue, Haisley and Barker, for Santa Fe Land Improvement Company

Closure Plan Development, Tucson, Arizona - Project engineer for closure plan for 18 sludge-drying beds from wastewater treatment plant. Project included developing analytical testing program, decontamination procedures, and plans for closing system. Client: Hughes Aircraft Company

Hazardous-Waste Investigation, State Superfund Site, Richmond, California - Project manager for site investigation and remedial-action planning at site contaminated with heavy metals from uncontrolled releases from waste piles and buried drums. Duties included setting up field investigations and analytical programs for site characterization and planning remedial actions. Client: Summer del Caribe

RCRA Part B Permit Application Review, Hazardous-Waste Facility - Responsible for reviewing Part B permit applications for various treatment, storage, and disposal facilities.

Reviews focus on operators' compliance with federal regulations. Client: A. T. Kearney, for U.S. Environmental Protection Agency

Hydrogeological and Geotechnical Investigation of Dioxin Contamination, Times Beach, Missouri - Served as alternate field operations manager. Conducted drilling and sampling and implemented decontamination and chain-of-custody procedures. Client: CH2M Hill, for U.S. EPA

Environmental Risk Assessment, Santa Rosa, California - Developed risk assessment report focusing on environmental risks associated with City of Santa Rosa operations, including sewer treatment plants, sludge disposal, and hazardous-material storage. Client: Environmental Risk Assessors, U.S.A.

Hazardous Waste Investigation, Sacramento, California - Engineer and assistant project manager for site investigation to characterize unknown wastes and to determine lateral and vertical extent of contamination due to unmanaged-disposal practices. Client: Aerojet

Hazardous Waste Investigation, Santa Rosa, California - Engineer for site investigation to determine existence and direction of migration of organic solvents from point sources of pollution. Organized analytical testing program to determine amounts and extent of groundwater pollution. Client: Hewlett-Packard

Landfill Closure, Alameda, California - Project engineer responsible for preparing all phases of plans and specifications for combination sanitary landfill closure and dredge spoils pond construction on 110-acre site. Project involved design of landfill closure system, slurry wall for leachate control, passive methane gas venting system, dike construction, seawall repair, decant structure, and hydraulic control systems. Client: U.S. Navy

Hazardous Waste Investigation, Martinez, California - Field engineer during investigation to determine extent of contamination due to leaching from disposal pond containing tetra ethyl lead. Supervised drilling activities and safety procedures for initial phase of cleanup study. Client: E.I. DuPont Nemours

Gasoline Spill Investigation, Novato, California - Project engineer during investigation conducted to determine extent of groundwater and soil contamination resulting from leaking underground gasoline storage ranks. Project involved using soil-gas and groundwater monitoring techniques. Client: Texaco Incorporated

Gasoline Spill Investigation, Stockton, California - Conducted post-remedial-action investigation to assess potential for future migration of gasoline from service station with residual soil contamination. Client: Exxon Company U.S.A.

Tailings Dam, Green River, Wyoming - Resident engineer during construction of tailings dam for solid-waste management program. Responsible for quality control, redesigned plans to accommodate field conditions, and prepared final earthwork report. Client: Allied Chemical

Hillside Development, Walnut Creek, California - Resident engineer in charge of construction for many phases of earthwork. Supervised mass grading operations including landslide repair, installation of subsurface drainage, and rebuilding of cut slopes. Installed and monitored hydraugers and piezometers for groundwater control. Client: Terra California

Gravel Island, Beaufort Sea, Alaska - Design verification agent during construction of island for drilling platform. Reviewed design criteria and observed construction in arctic environment. Client: Exxon Company, U.S.A.

Foundation Construction, Oakland, California - Field engineer during construction of drilled-pier foundations. Client: Peralta Hospital

Structural Grouting, Port Clinton, Ohio - Field engineer for stabilization of power plant foundation. Designed grout mixes according to varying subsurface conditions, supervised grouting batch plant operation, and installed extensometers to measure rock displacement during construction. Client: Toledo Edison Company

Earthquake Engineering, San Francisco, California - Developed seismic-response spectra for several sites in California using various computer programs and data-retrieval systems. Client: Nuclear Regulatory Commission

1.0 INTRODUCTION

1.1 Purpose and Scope of Work

This report presents the results of a Phase I Environmental Site Assessment (ESA) for the commercial property located at 130 Constitution Drive in Menlo Park, California (the site or subject property). The site location is shown on Plate 1, and the subject property and vicinity are shown on Plate 2. PES Environmental, Inc. (PES) performed the Phase I ESA on behalf of The Sobrato Organization (Sobrato). PES was retained by Sobrato to compile and evaluate available information to assess for Recognized Environmental Conditions (RECs) associated with the site.

The ESA was performed in general accordance with ASTM International guidelines for Phase I Environmental Site Assessments (ASTM E1527-13). These guidelines comply with the U.S. Environmental Protection Agency's All Appropriate Inquiries (AAI) rule adopted in November 2013. The following tasks were conducted during this ESA:

- Federal, State and local agency databases were reviewed to identify nearby sites which have reported the use, storage, or release of hazardous materials;
- Regulatory agency records regarding the site and adjacent properties were reviewed;
- Historical aerial photographs, Sanborn Fire Insurance maps, and historical topographic maps of the site and surrounding area were obtained and reviewed to evaluate prior land uses;
- Previous environmental reports prepared for the subject property vicinity were reviewed;
- Individuals with knowledge of the site were interviewed;
- An inspection of the site and a reconnaissance of surrounding properties were conducted to assess the potential for contamination of the site from onsite or offsite sources. The site inspection was conducted by an environmental professional with qualifying experience; and
- This report was prepared to present the results of the Phase I ESA investigation.

A Recognized Environmental Condition, or REC, is defined in the ASTM International guidelines (ASTM E1527-13) as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. A controlled REC (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous

substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, activity/use limitations, institutional controls, or engineering controls). A historical REC (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meets unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

De minimis conditions are defined by ASTM as conditions that generally do not present a threat to human health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. A *de minimis* condition is not a REC and not a CREC.

1.2 Special Terms and Conditions

The ESA activities were conducted in general accordance with ASTM E1527-13. There are no other special terms or conditions for this report.

1.3 Limitations and Exceptions

This Phase I ESA was performed in accordance with practices and procedures generally accepted in the consulting environmental engineering profession at the time and place they were performed. The findings, opinions, conclusions, and recommendations expressed herein are applicable as of the date the services were provided. Our professional judgment to assess the potential for contamination is based on limited data; no warranty is given or implied.

The Phase I ESA was prepared at the request of Sobrato as part of its pre-acquisition due diligence of the subject property and may be relied on only by Sobrato. No other party may rely on this report without the express written permission of Sobrato and PES.

PES was not provided information regarding the value or purchase price of the subject property, nor prices of comparable properties in the site vicinity. In accordance with ASTM E1527-13, an evaluation of the purchase price relative to those of comparable properties should be conducted by the user of this Phase I ESA, as applicable.

2.0 USER PROVIDED INFORMATION

2.1 Title Records

Title records were not provided to PES for the preparation of this Phase I ESA.

2.2 Environmental Liens or Activity/Use Limitations

Copies of environmental liens, activity limitations, and use limitations were not provided to PES, and PES is not aware of any such liens or activity/use limitations associated with the subject property.

2.3 Specialized Knowledge

PES does not possess any specialized knowledge regarding the subject property. Also, as noted below, Sobrato has reported to PES that it has no specialized environmental knowledge regarding the subject property.

2.4 Owner, Property Manager, and Occupant Information

As part of this Phase I ESA, a User Questionnaire was completed by Mr. Chase Lyman of Sobrato. A copy of the User Questionnaire is provided in Appendix A.

Sobrato's responses to the questionnaire are:

- Sobrato is unaware of any environmental liens recorded against the subject property;
- Sobrato is unaware of any environmental use restrictions on the subject property;
- Sobrato does not have specialized knowledge or experience potentially relevant to the subject property;
- Sobrato does not have any commonly known or reasonably ascertainable information about the subject property that would assist in the preparation of this report;
- Sobrato is not aware of any obvious indicators of the presence or likely presence of environmental releases/impacts at the subject property other than the information provided in this report; and
- Sobrato stated that the purchase price of the subject property reasonably reflects the fair market value of the property.

2.5 Reason for Performing Phase I

The Phase I ESA was completed as part of the environmental due diligence by Sobrato to support a planned acquisition of the site.

3.0 SITE DESCRIPTION

3.1 Location and Site Access

The subject property is within the City of Menlo Park and consists of one legal parcel identified by San Mateo County Assessor's Parcel Number (APN) 055-236-280, covering approximately 2.6 acres. The site has a street address of 130 Constitution Drive, Menlo Park, California. The subject property is accessed via driveways off Constitution Drive.

3.2 Site and Vicinity Characteristics

The site is located in an area primarily used for light industrial/commercial purposes. The City of Menlo Park zoning designation for the site is M2 (General Industrial District). The site consists of one building, enclosed storage areas, asphalt-paved ground level parking, and landscaped areas. The subject property and the adjacent areas are shown on Plate 2.

The site is bounded to the north by Constitution Drive. The site is bound to the south, east and west by commercial and light industrial buildings and associated parking lots.

3.3 Physical Setting

According to the United States Geological Survey (USGS) *Palo Alto, California* Quadrangle 7.5-minute series topographic map dated 1999, the site is situated at an elevation of approximately 10 feet above mean sea level (MSL). The site is flat-lying. The regional topography slopes gently to the north-northeast.

3.4 Local Geology and Hydrogeology

The subject property is located in the southwest side of the San Francisco Bay basin, a sediment-filled structural basin. A subsurface investigation (Lowney, 1987) performed at 119 Independence Drive, approximately 200 feet southwest of the site, revealed four distinct soil zones from the ground surface to 20 feet below ground surface (bgs). Black, very stiff silty clay extended from the ground surface to approximately 7 feet bgs. A stiff to very stiff, light brown to orange brown silty clay was encountered from 7 to 11.5 feet bgs and from 15 to 17 feet bgs. Dark brown, well graded gravel was encountered between 11.5 and 15 feet bgs. From 17 to 20 feet bgs, dark brown, well graded sand was encountered.

Lowney measured the depth to groundwater at 4.1 feet bgs, though they noted potential groundwater fluctuations should be considered. At two sites southeast of the subject property, groundwater flow has been measured to the southwest, away from the San Francisco Bay and the subject property. Other sites east of the subject property have measured a groundwater flow to the north and east-northeast, toward the Bay. A CalTrans groundwater pumping station south of the site along U.S. Highway 101 was used for dewatering beneath a railroad

right-of-way. Pumping at this station may have locally affected groundwater flow. It is not known whether the pumping station is still in use.

The closest surface water body is San Francisco Bay, located approximately 1 mile north of the site. Salt marshes at the edge of the bay extend shoreward to within 650 feet of the site. Based on FEMA map data presented in the EDR report (Appendix B), the site is located within the 100-year floodplain that extends to San Francisco Bay.

3.5 Wetlands

As shown in the EDR database report (Appendix B), there are no National Wetlands Inventory (NWI) identified wetlands on the subject property. There are wetlands and salt marshes bordering San Francisco Bay beginning approximately 650 feet north of the site.

3.6 Descriptions of Existing On-Site Structures and Improvements

The subject property contains one approximately 28,800 square-foot single-story building with a partial mezzanine. The site building was constructed in the late 1960s. A review of historic aerial photographs indicates that no significant structural changes have taken place since construction of the building. The remaining portions of the site have been improved with enclosed storage areas, asphalt paving, curbing, and landscaping.

3.6.1 Structures and Current Use

The building is currently occupied by L3 Randtron Antenna Systems (Randtron). Randtron uses the building to design and manufacture antenna systems. The building includes office space and small scale manufacturing areas.

3.6.2 Other Improvements

Electricity and natural gas are supplied by Pacific Gas and Electric (PG&E). Water is supplied by Menlo Park Municipal Water District, and sewage services are provided by West Bay Sanitary District (WBSD).

3.7 Current Uses of Adjoining Properties

A reconnaissance of the surrounding area was completed to assess whether neighboring sites represent a potential environmental condition that could affect the subject site. The current uses of the adjoining properties, as observed during the site inspection, are summarized below.

Properties to the South

The site is bordered to the south by commercial/industrial buildings occupied by Randtron at 123-125 Independence Drive and 127 Independence Drive.

Properties to the West

The site is bordered to the west by a commercial building occupied by Carr and Farrell law offices at 120 Constitution Drive.

Properties to the North

The site is bordered to the north by Constitution Drive. Across Constitution Drive is a commercial building occupied by Atieva (125 Constitution Drive).

Properties to the East

The site is bordered on the east by a commercial/industrial building at 150 Constitution Drive occupied by Randtron, and a commercial building at 1215 Chrysler Drive occupied by Clean Filtration Technologies.

3.8 Past Uses of Property and Adjoining Properties

Historical site use information was obtained through a review of aerial photographs, historical topographic maps, city address directories, and results of previous investigations. Historical Sanborn Fire Insurance Maps are not available for the subject property area.

3.8.1 Historical Sources

Site use information was obtained through a review of the following list of historical sources. The results of the review of these sources are summarized below:

- Aerial Photographs: Aerial photographs obtained from EDR were reviewed for the following years: 1943, 1948, 1950, 1958, 1968, 1974, 1982, 1991, 1998, 2005, 2009, 2010, and 2012. A summary of the aerial photograph review and copies of these photographs are presented in Appendix C;

- Sanborn Fire Insurance Maps: A search for available historical Sanborn Fire Insurance Maps was performed by EDR. EDR did not identify any Sanborn Maps for the site. A copy of the EDR 'No Coverage' report is provided in Appendix D;

- Topographic Maps: Various topographic maps of the subject property vicinity were compiled by EDR. The following maps were included in the compilation: USGS Palo Alto Quadrangle 15-minute series topographic maps produced in 1899, 1943, 1947, 1948, and 1961; USGS Santa Cruz Quadrangle 30-minute series topographic map produced in 1902; and Palo Alto Quadrangle 7.5-minute series topographic maps produced in 1953, 1961, 1968 (photo revised), 1973 (photo revised), 1991, and 1997, were reviewed by PES. A summary of the topographic map review and copies of the maps are presented in Appendix E;

- City Directories: A search of city directories was performed by EDR for the years 1970, 1977, 1980, 1985, 1992, 1995, 1999, 2003, 2008 and 2013. A summary of the city directories review and copies of the directory listings are presented in Appendix F; and

- San Mateo County: Records related to hazardous materials, hazardous wastes, storage tanks, chemical releases and groundwater protection at the site were requested from San Mateo County Environmental Health (SMCEH), the applicable Certified Unified Program Agency (CUPA).

3.8.2 Interviews

An interview was conducted with Mr. Randy Perkins, Randtron Environmental Health & Safety/Facilities Manager. Mr. Perkins has been in this position since approximately 2003. Mr. Perkins indicated that Randtron activities at the subject property have not changed significantly since 1972, and that hazardous material use at the property has been limited to cutting oils and small quantities of acetone and isopropyl alcohol (IPA). He was not aware of any above ground storage tanks (ASTs) or underground storage tanks (USTs) currently or formerly located on the subject property. Mr. Perkins was not aware of any releases of hazardous materials from Randtron site operations.

3.8.3 Historical Review Summary

The following provides historical use information for the subject property and vicinity based on available historical resources listed in the previous sections.

Subject Property

The earliest reviewed record for the site is an 1899 topographic map, which shows the site as undeveloped land. Aerial photographs from 1943 to 1958 show the subject property as vacant land with likely agricultural use (grain and/or grass farming). The subject property building is first visible on the 1968 aerial photograph. The building may still be under construction as the parking lot has not yet been developed. The 1982 aerial photograph shows the presence of the storage enclosures at the south end of the building. Subsequent photographs show the subject property as currently existing.

Randtron has operated at the subject property building since 1972. No information was available concerning previous tenants, if any.

Subject Property Vicinity

The history of the site vicinity is similar to the subject property. The 1899 topographic map shows the site vicinity as undeveloped land. Aerial photographs from the 1940s to 1958 show the subject property vicinity in use for agricultural purposes (grain and/or grass crops). By 1968, an aerial photograph shows adjacent properties located at 125, 123, and 120

Independence Drive developed. The 1968 aerial also shows the existing commercial buildings west, south, and east of the subject property. Aerial photographs through 1991 show continued development of commercial type buildings in the vicinity, with no significant changes taking place after 1991.

4.0 PREVIOUS ENVIRONMENTAL DOCUMENTS

PES was not provided with, and is not aware of, any previous environmental documents pertaining to the site. However, PES obtained a Phase I ESA performed for 123-125 Independence Drive, the property immediately south of the site which was recently acquired by Sobrato. This document is discussed below.

4.1 123-125 Independence Drive Phase I ESA

PES reviewed an AEI Consultants' (AEI) report *Phase I Environmental Site Assessment* dated January 16, 2015 for the 123-125 Independence Drive property located immediately south of the subject property. This report was provided to Sobrato by the former 123-125 Independence Drive property owner as part of their disclosure documentation for Sobrato's due diligence in consideration of purchasing the property.

AEI reported that this 0.96 acre site was agricultural land prior to development in the early 1960s. Since then, the site was occupied by Cal-Air Conditioning Service and Oceans Magazine (1971-1974); Triad Systems Corporation and West Coast Dental (1975-1976); Sunburst Solar Energy, Solid State Solar Controls, Granger Association, and Randtron (1977-1982); and Randtron (1984-present). AEI reported that Randtron uses the site for assembly of antennae for the Department of Defense aircraft, testing of antennae, and office activities.

AEI's review of SMCEH and other regulatory agency files indicated the following:

- There is a regional shallow groundwater plume of trichloroethene (TCE) in the site vicinity, however the source has not been identified;

- There were two underground gasoline storage tanks (USTs; one 1,000-gallon tank and one 8,000-gallon tank) removed from the 123-125 Independence Drive property in 1985. Analysis of a water sample collected from the excavation during the removal activities indicated the presence of total petroleum hydrocarbons quantified as gasoline (TPHg) at a concentration of 93 micrograms per liter (μg/L). No other analyses were performed. The water from the pit was apparently "skimmed" before the pit was backfilled with excavated soil. Reportedly, the most heavily contaminated soil was set aside to aerate. No evidence of further investigations or closure documentation was found in SMCEH files. AEI identified this as a REC for the 123-125 Independence Drive property, and would require further investigation to evaluate potential impacts from the former USTs;

- AEI reported that Randtron conducted operations in a number of buildings in the area, including 123-125 Independence Drive (Plant 2), 130 Constitution (Plant 1) and 127 Independence Drive (Plant 6). AEI further reported that most of Randtron's manufacturing occurred at Plant 1 and at nearby properties at 1150 Chrysler (Plants 3 and 4) and 150 Constitution (Plant 5). AEI's file reviews indicated that Randtron had used, or is using, many oils, non-chlorinated solvents, chlorinated solvents, as well as other chemicals. AEI noted that the majority of Randtron's chlorinated solvent handling was conducted at Plants 3, 4, and 5 and, to a lesser extent, at Plant 6 and Plant 2. AEI reported that the presence of TCE in the shallow groundwater and the use of the property by Randtron are RECs requiring investigation to evaluate potential impacts to groundwater and assess vapor intrusion concerns; and

- AEI also reported that due to the age of the building there is a potential for the presence of lead-based paint and asbestos containing material.

5.0 RECORDS REVIEW

5.1 Environmental Liens and Activity and Use Limitations

Based on review of an environmental database search conducted by EDR, there are no Federal Superfund (National Priority List [NPL]) liens or State environmental deed restrictions associated with the subject property. No information indicating the presence of environmental liens on the subject property was provided by Sobrato.

No activity/use limitations were identified for the subject property. As such, no evaluation of activity/use limitations compliance was performed for this assessment.

5.2 Standard Environmental Record Sources

The discussion presented in this section is based on available information provided by environmental agencies and databases. An EDR database report dated November 6, 2015, contains listings of sites located within a one-mile radius which were selected in accordance with the ASTM E 1527-13 standard. This information is obtained from computerized databases of Federal, State, and local records. The database report, which includes descriptions of the listings, is provided in Appendix A.

The following regulatory agency databases were searched and reported in the EDR report:

- U.S. Environmental Protection Agency (U.S. EPA) – Comprehensive Environmental Response Compensation, and Liability Information System (CERCLIS);

- U.S. EPA – CERCLA NPL;

- U.S. EPA – CERCLA Proposed NPL;

- U.S. EPA – Superfund (CERCLA) Consent Decrees (CONSENT);
- U.S. EPA – CERCLA Records of Decision (ROD);
- U.S. EPA – CERCLA NPL Deletions;
- U.S. EPA – CERCLA No Further Remedial Action Planned Site (CERC-NFRAP);
- U.S. EPA – Facility Index System (FINDS);
- U.S. EPA – Emergency Response Notification System (ERNS);
- U.S. EPA – Hazardous Materials Information Reporting System (HMIRS);
- U.S. EPA – Material Licensing Tracking System (MLTS);
- U.S. EPA – Mines Master Tracking Index File (MINES);
- U.S. EPA – Federal Superfund Liens (NPL Liens);
- U.S. EPA – PCB Activity Database System (PADS);
- U.S. EPA – RCRA Administrative Action Tracking System (RAATS);
- U.S. EPA – Section 7 Tracking Systems (SSTS);
- U.S. EPA – Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA)/Toxic Substance Control Act (TSCA) Tracking System (FTTS);
- U.S. EPA – Toxic Substances Control Act (TSCA);
- U.S. EPA – Resource Conservation and Recovery Information System (RCRAInfo), Treatment, Storage, or Disposal (TSD) facilities, and Small Quantity and Large Quantity Generators (SQG and LQG) of hazardous waste;
- U.S. EPA – Emergency Response Notification System (ERNS);
- U.S. EPA RCRA Corrective Action Report (CORRACTS);
- U.S. EPA Facility Index System (FINDS);
- U.S. EPA Toxic Chemical Release Inventory System (TRIS);
- California State Water Resources Control Board (SWRCB) – Leaking Underground Storage Tank Listing (LUST) sites including Indian Land;
- SWRCB UST;

- SWRCB – Voluntary Cleanup Sites (VCP); and
- SWRCB – Solid Waste Facilities (SWF/LF).

PES also searched the following agency websites for environmental records related to the subject property:

- California State Water Resources Control Board's (SWRCB) GeoTracker website located at http://geotracker.swrcb.ca.gov/; and
- Department of Toxic Substances Control's (DTSC) EnviroStor website located at http://www.envirostor.dtsc.ca.gov/public/default.asp.

5.2.1 Subject Property Records

Randtron was listed in the RCRA-SQG, CHMIRS, EMI, NPDES, WDS, ERNS, FINDS, and HAZNET databases. These listings are discussed below. Note that 130 Constitution Drive is the main administrative facility, and is the mailing address used for administrative issues for all five Randtron buildings. As a result, some database listings may pertain to other facilities.

- Randtron is listed on the RCRA-SQG database. No violations are listed for the site. The listing is consistent with hazardous wastes generated at the facility, as discussed below;
- Two CHMIRS incidents are listed for the subject property. In 1997, approximately 50 to 55 gallons of metalworking coolant overfilled a drum and secondary containment, and was released to the storm drain. The spill was flushed with significant amounts of water. No further investigation was required by SMCEH. In 2004, an herbicide was spilled in the parking lot by an outside contractor, and traveled to a storm drain. The drain was plugged with debris. Following cleanup activities and sampling of debris within the drain pipe, no further action was required by SMCEH. Randtron is also listed on the ERNS database for this incident;
- Randtron is listed on the EMI and FINDS databases for an air emission permitted with Bay Area Air Quality Management District (BAAQMD). According to Mr. Perkins, this applies to activities at other Randtron facilities; there are no air emitting activities at the subject property;
- Randtron is listed on the NPDES and WDS for a wastewater discharge permitted with South Bayside System Authority. Violations associated with the permit are discussed below; and

- Randtron is listed on the HAZNET database for waste oil, aqueous solution, laboratory chemicals, solvent solutions, alkaline solutions, aged or surplus chemicals, organic solids, and wastewater discharges. Based on SMCEH records (see below), wastes generated by Randtron at the subject property are limited to waste oils and aluminum shavings. Many of the HAZNET listings appear to apply to other Randtron facilities.

PES also reviewed SMCEH records concerning the subject property. Noteworthy information is discussed below.

- A 1985 Hazard Materials Inventory lists annual generation of 120 gallons of cutting and 20 gallons of WD-40. A Procedure Manual from 1985/86 states that waste drums in the bermed area behind Plant 1 should be labeled as "Mixed Flammable Solvents, MIBK, MEK, Tolulol, Alcohol, PT-1003, PT-1002, PT-1004, Acetone", "Trichloroethane 111", and "Freon, TP-35, TP, TA, TF". Because the only wastes generated by the subject property were waste oil and WD-40, it appears that wastes from other Randtron buildings were stored in the bermed storage area at the subject property. Hazardous Materials Inventories from the Randtron facility at 150 Constitution indicated use of the chemicals listed above;

- A 1986 facility map of the subject property building shows uses consistent with current building uses (see Section 6.0);

- A 1987 inspection reports that water from the tumbler process, which was high in solids, cannot drain to the storm sewer. The wastewater should be discharged to the sanitary sewer;

- In 1993, a Notice of Violation was issued because the wastewater discharge from the facility exceeded cyanide concentration limits. Randtron responded that the cyanide discharge was due to use of a cyanide-containing compound infrequently used. Randtron indicated that any cyanide-containing wastewater would be contained and disposed as hazardous waste until new discharge limits could be established;

- A 2001 Hazardous Material Inventory listed Biasocut 2000 CF (cutting oil) as the only hazardous material used at the facility. A maximum daily amount stored onsite was listed as 450 gallons;

- In 2002, a Notice of Violation was issued because the wastewater discharge from the facility exceeded cadmium, copper, lead, and zinc concentration limits. Randtron responded that the zinc discharge was due to incorrect disposal of unused chemicals by janitorial staff;

- In 2010, a Notice of Violation was issued because the wastewater discharge from the facility exceeded zinc concentration limits. Randtron responded that the zinc discharge was associated with water discharged to the sanitary sewer during roof improvement activities;

- A 2014 Hazardous Material Inventory listed water-miscible mineral oil (cutting oil) as the only hazardous material used at the facility. A maximum daily amount stored onsite was listed as 200 gallons; and

- Hazardous material inspections performed at the site beginning in 1985 did not list any significant violations for the subject property.

5.2.2 Surrounding Area

Several sites in the subject property vicinity are listed on hazardous materials release and/or storage databases, as discussed below.

150 Constitution Drive

The building at 150 Constitution Drive has been occupied by Randtron since the early 1970s, and is referred to as Randtron Building #5. The address is not listed on any environmental databases, likely because the Randtron 130 Constitution Drive address is the administrative address for all of the Randtron buildings. As a result, during our review of records for the subject property, several records for the 150 Constitution Drive building were included. Noteworthy records include the following:

- A 1985/86 Hazardous Materials Inventory shows an exterior storage area on the west side of the building where acetone, 1,1,1-TCA, MEK, toluene, IPA, butyl cellosolve, Release All 20 and 30, Garalease 915 are stored. Four waste containers were marked as Acetone; Freon TF, TP35; 1,1,1-TCA; and Mixed Flammable Solvents, MIBK, MEK, Tolulol, Alcohol, PT-1003, PT-1002;

- A 1987 Hazardous Material Inventory lists use of acetone, 1,1,1-TCA, MEK, hexane, IPA, and xylenes;

- During a 1987 inspection, it was noted that an outside tumbler must be hooked to the sanitary sewer, and can't drain to the ground surface; and

- A 2001 Hazardous Material Inventory lists use of acetone, ethyl alcohol, IPA, toluene, and MEK. A 2004 Hazardous Material Inventory shows similar usage.

127 Independence Drive

SMCEH files from 1987 indicate the property is listed as Randtron Systems Plant 6. Hazardous materials inventories list the following amounts of chemicals stored and used at the site annually: 15 gallons acetone, 15 gallons 1-1-1- TCA, 20 gallons IPA, 5 gallons silver powder, 5 gallons bisphenol "A" resin diethylene triamine, 5 gallons toluene and approximately 10 gallons each of MEK, methyl isobutyl ketone, propylene glycol, and monomethyl ether. Records show that hazardous materials storage was limited to the "Rotary Coupler – Assembly and Repair" portion of the building, located in the southeastern

quadrant. SMCEH files do not indicate any violations or releases associated with the hazardous materials usage; and

SMCEH files for Cabochon Aesthetics from 2008 through 2011 list the following amounts of chemicals stored and used at the site annually: 200 gallons formalin waste, 100 gallons IPA and acetone, 100 gallons Cidex and 5 gallons hydrochloric acid (HCL). SMCEH hazardous materials and storm water inspections suggest that it was a well-kept facility; no violations were noted.

1205 Chrysler Drive

Krebs Engineers was listed on the SLIC and LUST databases. As a result of investigations conducted from 1995 to 2001, the RWQCB issued a No Further Action determination for the site in 2002 (RWQCB, 2002).

Roto Rooter, Krebs Engineers, and Comcast of California are listed on HAZNET database, indicating manifested offsite disposal of hazardous wastes. The database indicates that Roto Rooter disposed of aqueous solutions and waste oil. Krebs Engineers disposed oxygenated solvents, laboratory waste chemicals, and liquids with halogentated organic compounds. Comcast of California disposed of unspecified wastes.

SMCEH records did not list any violations for any of the occupants of 1205 Chrysler Drive.

120 Constitution Drive

This site is located approximately 150 feet northwest of the subject property. In 1986, a 1,000 gallon gasoline UST was removed from the site. A groundwater sample collected from the former tank pit indicated the presence of TPHg a concentration of 6,700 micrograms per liter (µg/L).

In 1993, three groundwater monitoring wells were installed and two exploratory soil borings were advanced in the vicinity of the former UST (McLaren Hart, 1993). No petroleum hydrocarbons were detected in the soil samples, and no significant contaminant concentrations were detected in groundwater. Subsequent quarterly monitoring of groundwater wells produced no detectable concentrations of petroleum hydrocarbons. However, TCE was detected in one of the wells at a concentration of 1,200 µg/L. Additional wells were installed to further characterize the extent of the VOC contamination. Detected TCE concentrations ranged from 29 to 540 µg/L (Pacific Environmental Group, 1994). The RWQCB reviewed the findings of the investigations and approved a closure request in April 1998 (RWQCB, 1998). The RWQCB indicated that a regional TCE plume exists in the area but was not able to determine a source.

115 Independence Drive

This site is located approximately 375 feet west of the subject property. Regulatory agency files document that soil, groundwater, and soil gas investigations were performed at the site between 1989 and 1997.

A 1996 Phase I performed for the property indicated the building, reportedly constructed in 1966, was historically occupied by Electro Nuclear Laboratories, Irex Corporation, Triad Systems Corporation, Xirex Corporation, and a CPA firm, and Raychem Corporation (Levine-Fricke-Recon, 1996).

Two groundwater monitoring wells were sampled in 1989. TCE was detected at concentrations of 590 and 610 parts μg/L, and one well contained 1,1-dichloroethene (1,1 DCE) at 25 μg/L. Cadmium, chromium, and silver were detected at concentration of 50, 150, and 30 μg/L; respectively, which are all above federal and state drinking water standards.

Raychem completed a closure process in 1994 under the oversight of the SMCEH. The closure process included collecting a soil sample next to a floor drain that exhibited etching and corrosion. The results of the analysis of the sample showed the presence of TCE at 0.005 mg/kg.

The Phase I ESA noted that the adjacent property to the east at 119 Independence Drive site was listed on the SCL database. In an interview, the RWQCB reportedly stated that the 119 Independence Drive property was not adequately characterized and that the chlorobenzene detected in groundwater was a significant issue, and that additional soil and groundwater characterization may likely be required for the 119 Independence Drive site (Levine-Fricke-Recon, 1996). (PES notes that based on review of the 1987 groundwater monitoring report for 119 Independence Drive, chlorobenzene was not detected in the groundwater. As such, it is uncertain if this was an erroneous reference or if other data is available and not found during PES' review). The Phase I also reported that Raychem had been a historical occupant of the 119 Independence Drive site.

The RWQCB issued a letter dated June 27, 1996, stating that based on the soil, groundwater and soil gas testing on the property, they believed the VOC contamination in groundwater was from an off-site source (RWQCB, 1996). Furthermore, the RWQCB stated that the property owner would not be responsible for investigation and cleanup on their property caused by an off-site source.

In January 1997, soil and grab groundwater samples were collected from12 locations across the site (Levine-Fricke-Recon, 1997). The results of the investigation showed the presence of TCE in groundwater at concentrations ranging from 160 to 340 μg/L. Other VOCs, including 1,1,1, TCA; cis-1,2-DCE; and 1,1-DCE were detected at lower concentrations. There were no detections of VOCs in soil samples collected from the boreholes at depths of 5 to 6 feet bgs. The source of the VOCs in groundwater was interpreted as being of offsite origin.

Bohannon Gateway Development

As part of PES' research into the surrounding area properties, available on-line information was reviewed for the currently proposed Bohannon Gateway Development (BGD) project, known as the Menlo Gateway Development. The boundaries of the BGD project include the properties directly across Independence Drive and encompassing 100 through 190 Independence Drive as well as a separate area encompassing 105 through 155 Constitution Drive located about 330 feet north of the subject property. The Final Environmental Impact Report (EIR) prepared for the development includes mitigations measures for construction activities associated with future development of the site (PBS&J, 2010). A Phase II subsurface investigation will be performed concurrent with the first building permit submittal for each phase of construction, and will include a risk analysis for future occupants of the buildings. If there are potential risks identified due to soil vapors, the project will also need to include institutional controls and a soil vapor mitigation system design.

Remaining Sites

The remaining sites in the surrounding area that are listed in the databases are not expected to present significant environmental conditions to the subject property based on one or more of the following: (1) the listed site has received case closure by the appropriate regulatory agency; (2) the listed site is either cross gradient or down gradient of the subject property with respect to the inferred regional groundwater flow direction; (3) the listed site is a soils-only affected case; and/or (4) the listed site is located at too great a distance to represent a significant environmental condition with respect to the subject property.

6.0 SITE INSPECTION

An inspection of the subject property was conducted on November 23, 2015 by Ms. Julie Turnross of PES. All areas of the site building and the exterior parking lots and grounds were inspected. Ms. Turnross was accompanied by Mr. Randy Perkins, Randtron Environmental Health & Safety/Facilities Manager. Photographs were not allowed within the facility. Photographs taken during the site inspection are presented on Plates 3 through 5.

The subject property contains one approximately 28,800 square-foot single-story building with a partial mezzanine. The remaining portions of the site have been improved with enclosed storage areas, asphalt paving, curbing, and landscaping. Randtron uses the building to design and manufacture antenna systems. The building includes office space and small scale manufacturing areas.

Interior Observations

The building includes office space and small scale manufacturing areas. A small mezzanine contains a single row of offices along the front (north side) of the building. Manufacturing-related areas of the building include a machine shop, inspection area, material storage, deburring room, tool crib, and a shipping/receiving area.

The machine shop contains several CNC machines and lathes. Cutting oil is used in the machines. No staining or evidence of leakage of cutting oil was observed in the machine room.

In the inspection area, small containers (1-liter or less) of isopropyl alcohol (IPA) and acetone were observed stored on work benches. The chemicals are used for minor cleaning prior to shipping. No staining or evidence of leakage was observed in the inspection area.
Mr. Perkins reported that waste wipes were stored in the hazardous waste closure in the adjacent Randtron plant at 150 Constitution Drive.

A tumbler deburrer is used to deburr small aluminum parts. Fluids used in the process include water and a non-hazardous cleaner. Wastewater is discharged to the sanitary sewer under a permit issued by South Bayside Systems Authority. Mr. Perkins reported that the deburring machine is used infrequently, and that wastewater discharges average approximately 5 gallons per day.

Exterior Observations

The exterior area of the site includes paved parking areas, landscaped areas, and a gated enclosure housing fenced storage areas on the south side of the building. Large shipping containers were present in the parking area. The stored equipment and materials included air compressors, propane for forklifts, universal waste (batteries, bulbs), new and waste cutting oil, and waste aluminum.

New and waste cutting oil is stored in 5- and 55-gallon containers in a concrete bermed storage area. In the waste storage area, staining was observed within the bermed area, on the berm, and on the pavement in front of the berm.

Waste aluminum is stored in plastic refuse containers prior to pick up by a recycler.

6.1 Chemical Use and Storage

Chemical use and storage is limited to new and waste cutting oil, and small amounts of IPA and acetone, as discussed above.

6.2 Underground and Aboveground Storage Tanks

No evidence of historical USTs or ASTs was identified during research activities conducted for this Phase I ESA.

6.3 Generators

There are no generators located at the facility.

6.4 Elevators

No elevators are present at the site.

6.5 Hydraulic Equipment

No hydraulic equipment is present at the site.

6.6 Indications of Polychlorinated Biphenyls (PCBs)

A pad-mounted PG&E-owned transformer is present on the subject property. No staining or evidence of leakage was observed in the vicinity of the transformer. Fluorescent lights are present throughout the facility; therefore, PCB-containing ballasts may be present.

6.7 Other Conditions

The following sections discuss investigation findings for non-ASTM issues that may present potential concerns at the site.

6.7.1 Asbestos

An assessment of asbestos-containing materials was not conducted as part of this Phase I ESA.

Standards set by the Occupational Safety and Health Administration (OSHA) require building owners to presume that thermal system insulation (TSI) and surfacing asbestos containing material (ACM) found in buildings constructed before 1981, and floor tile installed in buildings through 1981, are asbestos containing, unless demonstrated to be less than 1 percent asbestos through sampling. The rule does not permit an assumption to be made that a material does not contain asbestos in buildings constructed after 1980. However, since the late 1970s to early 1980s, asbestos has been removed or substituted for in all but a small number of construction products. For example, asbestos is still used, although at low concentrations, in various mastics and roofing materials.

Mr. Perkins reported that an asbestos survey was previously performed at the subject property, and ACM was identified in floor tiles and mastic in some areas of the subject property building (L3 Communications, 2015). An asbestos operations and maintenance (O&M) plan has been developed for the facility (L3 Communications, 2006).

6.7.2 Radon

The National Radon Database includes radon information from U.S. EPA/State Residential Radon Surveys conducted between 1986 and 1992. The database includes test results from 32 sites within San Mateo County. The average value for radon level reported in this region was 0.594 pico curies per liter (pCi/l) of air for the first floor living area. This is significantly lower than the U.S. EPA's recommended action level of 4 pCi/l.

The California Radon Database included results from 101 tested sites within zip code 94025. Approximately 20 percent (%) of the sites reported radon levels exceeding the U.S. EPA's recommended action level of 4 pCi/l. The California database does not report sample location (first floor, second floor, and basement) information.

The Federal survey data indicates that radon levels in slab-on-grade structures in the subject property area are likely to be below the U.S. EPA action level.

6.7.3 Solid Waste

Solid waste and recycling receptacles are present in gated enclosures on the north side of the building. No concerns were observed with respect to solid waste disposal or recycling bins for the subject property.

6.7.4 Lead in Paint

An assessment of lead in paint was not within the scope of this Phase I ESA and no prior lead paint surveys of the subject property have been identified. The Consumer Products Safety Commission limited lead content in residential paint to 0.06 percent (600 parts per million) in 1978. Based on the late 1960s construction date of the subject property building, lead-based paint may be present.

6.7.5 Lead in Drinking Water

No on-site sampling data for lead in drinking water was identified in the Phase I ESA research. PES reviewed the most recent available (2013) water quality report from the City of Menlo Park Municipal Water District, the supplier of potable water to the site. The 2013 report stated that the 90th percentile concentration for lead in supplied water was 0.002 milligrams per liter (mg/L) and the highest concentration detected was 0.0105 mg/L. These concentrations are below the USEPA action level of 0.015 mg/L for lead.

6.7.6 Water Damage and Mold

No evidence of significant water damage or potential mold growth was identified at the subject property. Mr. Perkins was unaware of any water damage or mold growth.

6.7.7 Vapor Intrusion

PES is unaware of any vapor intrusion investigations that may have been performed on the subject property or in the site vicinity. As discussed above in Section 5.2.2, there is a known TCE plume in groundwater in the site vicinity. TCE has been detected in groundwater in the site vicinity as high as 1,200 μg/L. The RWQCB groundwater screening level for evaluation of potential vapor intrusion for TCE is 130 μg/L for residential land use, and 1,300 μg/L for commercial/industrial land use (RWQCB, 2013), assuming a soil mixed of fine and coarse grains. As a result, the potential exists for vapor intrusion concerns at the subject property based on the known TCE plume in the site vicinity.

7.0 SUMMARY AND CONCLUSIONS

The subject property consists of one legal parcel covering approximately 2.6 acres with a street address of 130 Constitution Drive, Menlo Park, California. The subject property contains one approximately 28,800 square-foot single-story building with a partial mezzanine and was constructed in the late 1960s. The remaining portions of the site have been improved with enclosed storage areas, asphalt paving, curbing, and landscaping. The site is bounded to the north by Constitution Drive. The site is bound to the south, east and west by commercial and light industrial buildings and associated parking lots.

The building is currently occupied by Randtron. Randtron uses the building to design and manufacture antenna systems. The building includes office space and small scale manufacturing areas.

Historical Site Use

The subject property was undeveloped at least from 1899, and was in agricultural use from at least 1943 to 1958. The subject property building was constructed in the late 1960s. Randtron has operated at the subject property building since 1972. No information was available concerning previous tenants, if any.

ACM is present at the subject property, and an asbestos O&M plan has been prepared for the site. No surveys for lead-based paint have been identified for the site. Based in the late 1960s date of construction, lead-based paint may be present at the site.

Site Observations

The building includes office space and small scale manufacturing areas. A small mezzanine contains a single row of offices along the front (north side) of the building. Manufacturing-related areas of the building include a machine shop, inspection area, material storage, deburring room, tool crib, and a shipping/receiving area.

The machine shop contains several CNC machines and lathes. Cutting oil is used in the machines. In the inspection area, small containers (1-liter or less) of IPA and acetone used for minor cleaning were observed stored on work benches. A tumbler deburrer is used to deburr small aluminum parts. Fluids used in the process include water and a non-hazardous cleaner. Wastewater is discharged to the sanitary sewer under a permit issued by South Bayside Systems Authority. No staining or evidence of leakage was observed in interior hazardous material use or storage areas.

The exterior area of the site includes paved parking areas, landscaped areas, and a gated enclosure housing fenced storage areas on the south side of the building. The stored equipment and materials included air compressors, propane for forklifts, universal waste (batteries, bulbs), new and waste cutting oil, and waste aluminum.

New and waste cutting oil is stored in 5- and 55-gallon containers in a concrete bermed storage area. In the waste oil storage area, staining was observed within the bermed area, on the berm, and on the pavement in front of the berm.

Regulatory Agency Records

Randtron was listed in the RCRA-SQG, CHMIRS, EMI, NPDES, WDS, ERNS, FINDS, and HAZNET databases. In general, these listings are consistent with Randtron's current and historical uses of the site. No significant concerns were identified regarding environmental database listings.

SMCEH records indicated that Randtron's historical chemical use has been limited to cutting oils. However, records from 1985 suggest that hazardous wastes from other Randtron facilities may have been stored on the subject property. No significant concerns were noted in SMCEH hazardous material inspection records.

Offsite Concerns

A regional TCE groundwater plume is present within the site vicinity. The source of the plume has not been identified. It does not appear that potential vapor intrusions concerns have been evaluated in the subject property vicinity, however, the potential exists for vapor intrusion concerns based on the known TCE plume.

Conclusion

PES has performed a Phase I Environmental Site Assessment, in conformance with the scope and limitations of ATSM Practice E 1527-13, of the property located at 130 Constitution Drive, Menlo Park, California. Any exceptions to, or deletions from, this practice are described in Sections 1.2 and 1.3 of this report. PES did not identify any RECs associated with the subject property.

PES made the following noteworthy observations during the performance of this ESA:

- Staining was observed in the vicinity of the bermed area containing waste cutting oil;
- A regional TCE groundwater plume is present within the site vicinity. The source of the plume has not been identified. It does not appear that potential vapor intrusions concerns have been evaluated in the subject property vicinity; and
- Asbestos-containing material has been identified at the site, but is managed under an O&M plan. Based on the construction date of the building, lead-based paint may be present.

7.0 DATA GAPS STATEMENT

No information was available concerning tenants at the subject property prior to 1972. No data other gaps that may have affected our ability to identify RECs associated with the subject property were identified.

8.0 ADDITIONAL SERVICES

No additional services were provided during the preparation of this Phase I ESA.

9.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes of the Environmental Professionals signing this report are presented in Appendix G.

APPENDIX A

USER QUESTIONNAIRE

USER QUESTIONNAIRE[1]
PHASE I ENVIRONMENTAL SITE ASSESSMENT

In order to qualify for one of the *Landowner Liability Protections (LLPs)*[2] offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *"Brownfields Amendments"*), the User must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

User Information
Name: Chase Lyman
Title: Vice President, Leasing and Acquisitions
Company: **The Sobrato Organization**
Representing, if applicable:
Signature: Chase Lyman Date: 11/20/15

Site Information
Site Name:
Address: 130 Constitution Dr., Menlo Park, CA

1. Environmental liens that are filed or recorded against the property (40 CFR 312.25)
Did a search of recorded land title records (or judicial records where appropriate[3]) identify any environmental cleanup liens filed or recorded against the property under federal, tribal, state or local law?
No

2. Activity and land use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi))
Did a search of recorded land title records (or judicial records, where appropriate[3]) identify any activity or use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?
No

[1] In accordance with Appendix X3 of ASTM E1527-13.

[2] *Landowner Liability Protections,* or *LLPs,* is the term used to describe the three types of potential defenses to Superfund liability in EPA's *Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability* (*"Common Elements"* Guide) issued on March 6, 2003.

[3] In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental lien and Activity and Use Limitations (AULs) be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)

As the user of this Phase I ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former property occupants of the property or an adjoining property so that you have specialized knowledge of the chemicals and processes used by this type of business?

No

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29)

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

~~Yes~~ N/A

5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30)

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as User:

(a) Do you know the past uses of the property?

No

(b) Do you know of specific chemicals that are present or once present at the property?

No

(c) Do you know of spills or other chemical releases that have taken place at the property?

No

(d) Do you know of any environmental cleanups that have taken place at the property?

No

6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

No

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/09/2015 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 10 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/03/2015 has revealed that there are

7 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 10/21/2015 has revealed that there are 26 LUST sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there is 1 EDR US Hist Auto Stat site within approximately 0.125 miles of the target property.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS AIR POLLUTANT MAJOR

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher

L3 COMMUNICATIONS RANDTRON ANTENNA SYSTEMS (Continued) **S101308616**

Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History:	Extracted from Geologica's October 2, 2013 Supplemental Soil Sampling and Remedial Excavation Completion Report. San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. In April 2013, GEOLOGICA completed a supplemental soil quality sampling investigation of the former CT International site at 3645 Haven Avenue in Menlo Park, CA. The investigation was conducted to evaluate soil quality conditions relative to the current Residential Environmental Screening Levels (ESLs) established by the San Francisco Bay Regional Water Quality Control Board (RWQCB). Between June and August 2013, GEOLOGICA conducted a focused soil excavation program to remove soil containing petroleum hydrocarbons and/or lead at concentrations greater than the RWQCBs Residential ESLs. This scope of work was developed by GEOLOGICA based on discussion with Mr. Charles Ice of the San Mateo County Environmental Health System (SMCEHS). The purpose of the investigation and excavation was to remove the no-residential use deed restriction on the property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location: Not reported
Potential Media Affected: Contaminated Surface / Structure, Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Chlordane, DDD / DDE / DDT, Other Insecticides / Pesticide / Fumigants / Herbicides, Copper, Mercury (elemental), Other Metal, Diesel, Ethylbenzene, Gasoline, Napthalene, Waste Oil / Motor / Hydraulic / Lubricating
Site History: Extrated from AMEC's July 24, 2013 Site Management Plan. San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The site is located in an industrial portion of Menlo Park, San Mateo County, California, between Highway 101 and the San Francisco Bay (Figure 1). The overall site is bounded by Haven

ANTON MENLO (Continued) **S113186828**

Avenue to the south, 3585 Haven Avenue to the west, 3645 Haven Avenue to the east, and 3641 Haven Avenue and salt ponds to the north. The site is relatively flat, sloping gently to the north toward San Francisco Bay. AMEC understands that SAP intends to develop the site for multi-unit rental housing. Figure 2 presents an initial proposed layout for the residential complex. In addition, AMEC understands that SAP intends to raise the site elevation by approximately 2.5 to 3 feet through the import of clean fill material to be compacted on site prior to development. In general, approximately 2 to 3 feet of fill is distributed across the site. The fill material is of varying quality and includes debris such as wood, rubber material, concrete, brick, and ceramics. The results of the Phase II ESA activities indicate that the general character of chemical impacts to the fill material are likely insignificant relative to residential human health screening criteria1, with the exception of the following locations: h At the northwestern portion of the site, impacted soil was identified at boring location SB-13 (Figure 3), which may be associated with the historical operation of an automotive salvage facility. h At one boring location (SB-10) within an enclosed yard north of the 3611 Haven Avenue building, several pesticides were detected at concentrations exceeding their respective residential Environmental Screening Levels (ESLs) in the soil sample collected at 1 foot bgs. h One polychlorinated biphenyl (PCB) congener (PCB-1260) was detected above its residential ESL in the surface soil sample (SB-19-SUR) collected adjacent to a transformer located west of the 3611 Haven Avenue building. Concrete samples were collected from the pad around the transformer and the swale directly adjacent to the pad to evaluate whether the materials will require special handling during demolition activities. PCBs were not detected in any concrete samples, indicating that the concrete may be disposed of as part of the building demolition.

EPA Region: 09
Land type: Private
Classification: TSDF
Description: Handler is engaged in the treatment, storage or disposal of hazardous waste
Classification: Large Quantity Generator
Description: Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: Yes
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Universal Waste Summary:
Waste type: C
Accumulated waste on-site: No
Generated waste on-site: Yes

Waste type: E
Accumulated waste on-site: No
Generated waste on-site: Yes

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs):	27895
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs):	9572
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs):	7756
Waste code:	D004
Waste name:	ARSENIC
Amount (Lbs):	668

Event date: 08/01/1986
Event: CA049SI

Event date: 10/02/1989
Event: RFA Completed

Event date: 04/11/1994
Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

Event date: 04/11/1994
Event: Stabilization Measures Evaluation,This facility is amenable to stabilization activity based on the status of corrective action work at the facility, technical factors, the degree of risk, timing considerations and administrative considerations.

Event date: 06/26/1996
Event: RFI Imposition

Event date: 06/26/1996
Event: CA021

Event date: 10/07/2002
Event: RFI Workplan Approved

Event date: 10/07/2002
Event: RFI Approved

Event date: 10/10/2002
Event: CMI Workplan Approved

TYCO ELECTRONICS CORPORATION (Continued) **1000170323**

Event date: 03/05/2004
Event: RFI Approved

Event date: 06/04/2004
Event: RFI Workplan Approved

Event date: 10/04/2004
Event: RFI Approved

Event date: 04/26/2005
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 07/10/2006
Event: CMS Approved

Event date: 07/27/2006
Event: Date For Public Notice On Proposed Remedy

Event date: 11/30/2006
Event: Date For Remedy Selection (CM Imposed)

Event date: 11/30/2006
Event: Date For Remedy Selection (CM Imposed)

Event date: 01/19/2007
Event: CA772GC

Event date: 02/02/2007
Event: Stabilization Measures Implemented, Primary measure is source removal and/or treatment (e.g., soil or waste excavation, in-situ soil treatment, off-site treatment).

Event date: 04/18/2007
Event: CA650SR

Event date: 07/27/2007
Event: CA772GC

Event date: 09/06/2007
Event: Certification Of Remedy Completion Or Construction Completion

Event date: 09/06/2007
Event: CA550RC

Event date: 02/01/2008
Event: CA805

Event date: 03/30/2011
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are

TYCO ELECTRONICS CORPORATION (Continued) **1000170323**

expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 03/30/2011

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 01/13/1988
Comments: Site screening done: Site is an active TSD. SI done 8/86. Subsurface PCB contamination. DCE, CD and Pb in groundwater. > drinking. Pending action by RCRA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/20/1991
Comments: Raychem Corporation submitted a PEA to the Dept on 5/17/91. Results of the PEA indicate PCB in soil above extremely hazardous ttlc. Contaminated GW under site. A residential neighborhood and a school are located less than 200' to the South of site. A tidal slough and sensitive wetland are adjacent to the north boundary of the site. High-tech chemical, plastics and materials manufacturer operated at site since 1965. PEA submitted in May 1991 indicates that nickel and cadmium may be present in soils above their respective TTLC and/or STLC. Elevated levels of solvents found in GW under the site. PCB found in soils at levels above the extremely hazardous waste TTLC. PCB has also migrated off-site via surface runoff. Draft ISE determination and RAO sent to TLO for review on June 11, 1991.

Environmental Interest/Information System
STATE MASTER

Registry ID: 110000482399

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TSCA SUBMITTER

AIR SYNTHETIC MINOR

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/26/2015

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2015

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/26/2015

Data Release Frequency: Varies

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 08/12/2015

DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

SAN DIEGO COUNTY:

Hazardous Materials Management Division Database

The database includes: HE58 - This report contains the business name, site address, business phone number, establishment 'H' permit number, type of permit, and the business status. HE17 - In addition to providing the same information provided in the HE58 listing, HE17 provides inspection dates, violations received by the establishment, hazardous waste generated, the quantity, method of storage, treatment/disposal of waste and the hauler, and information on underground storage tanks. Unauthorized Release List - Includes a summary of environmental contamination cases in San Diego County (underground tank cases, non-tank cases, groundwater contamination, and soil contamination are included.)

Date of Government Version: 09/23/2013

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

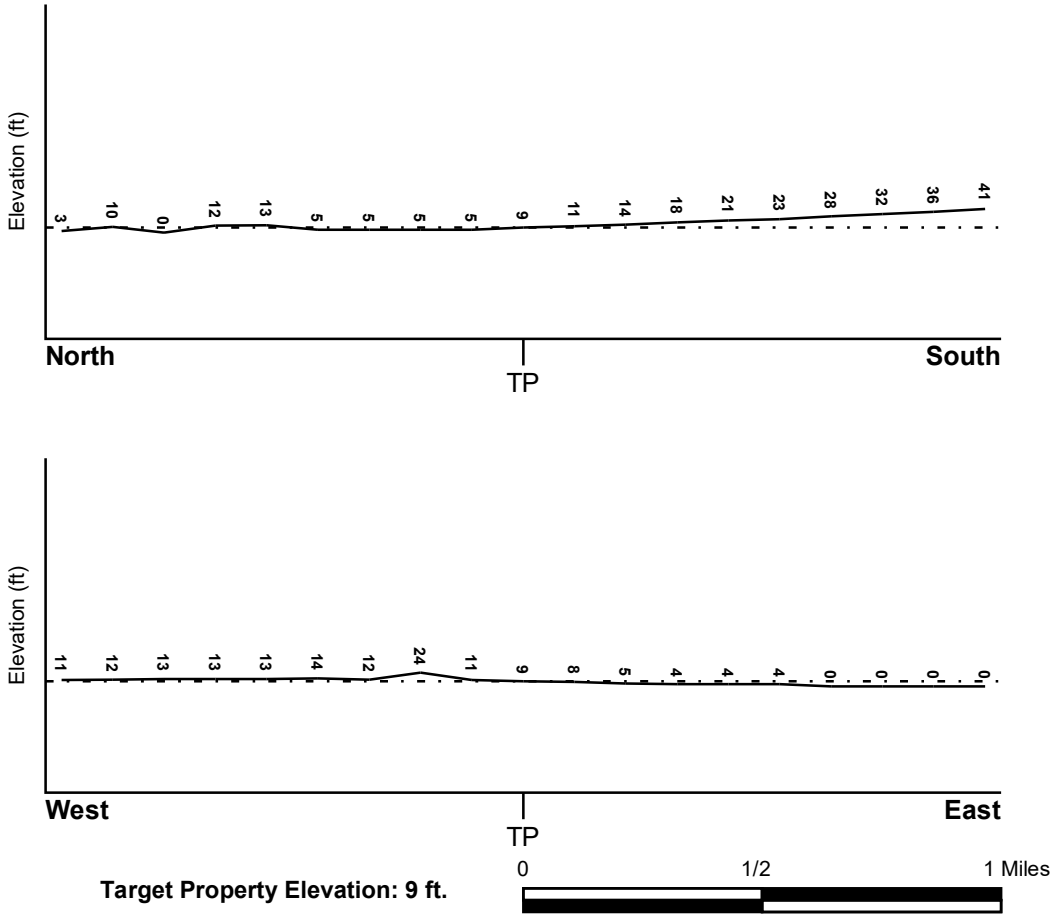
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SAN MATEO, CA	YES - refer to the Overview Map and Detail Map

NWI Quad at Target Property	NWI Electronic Data Coverage
PALO ALTO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

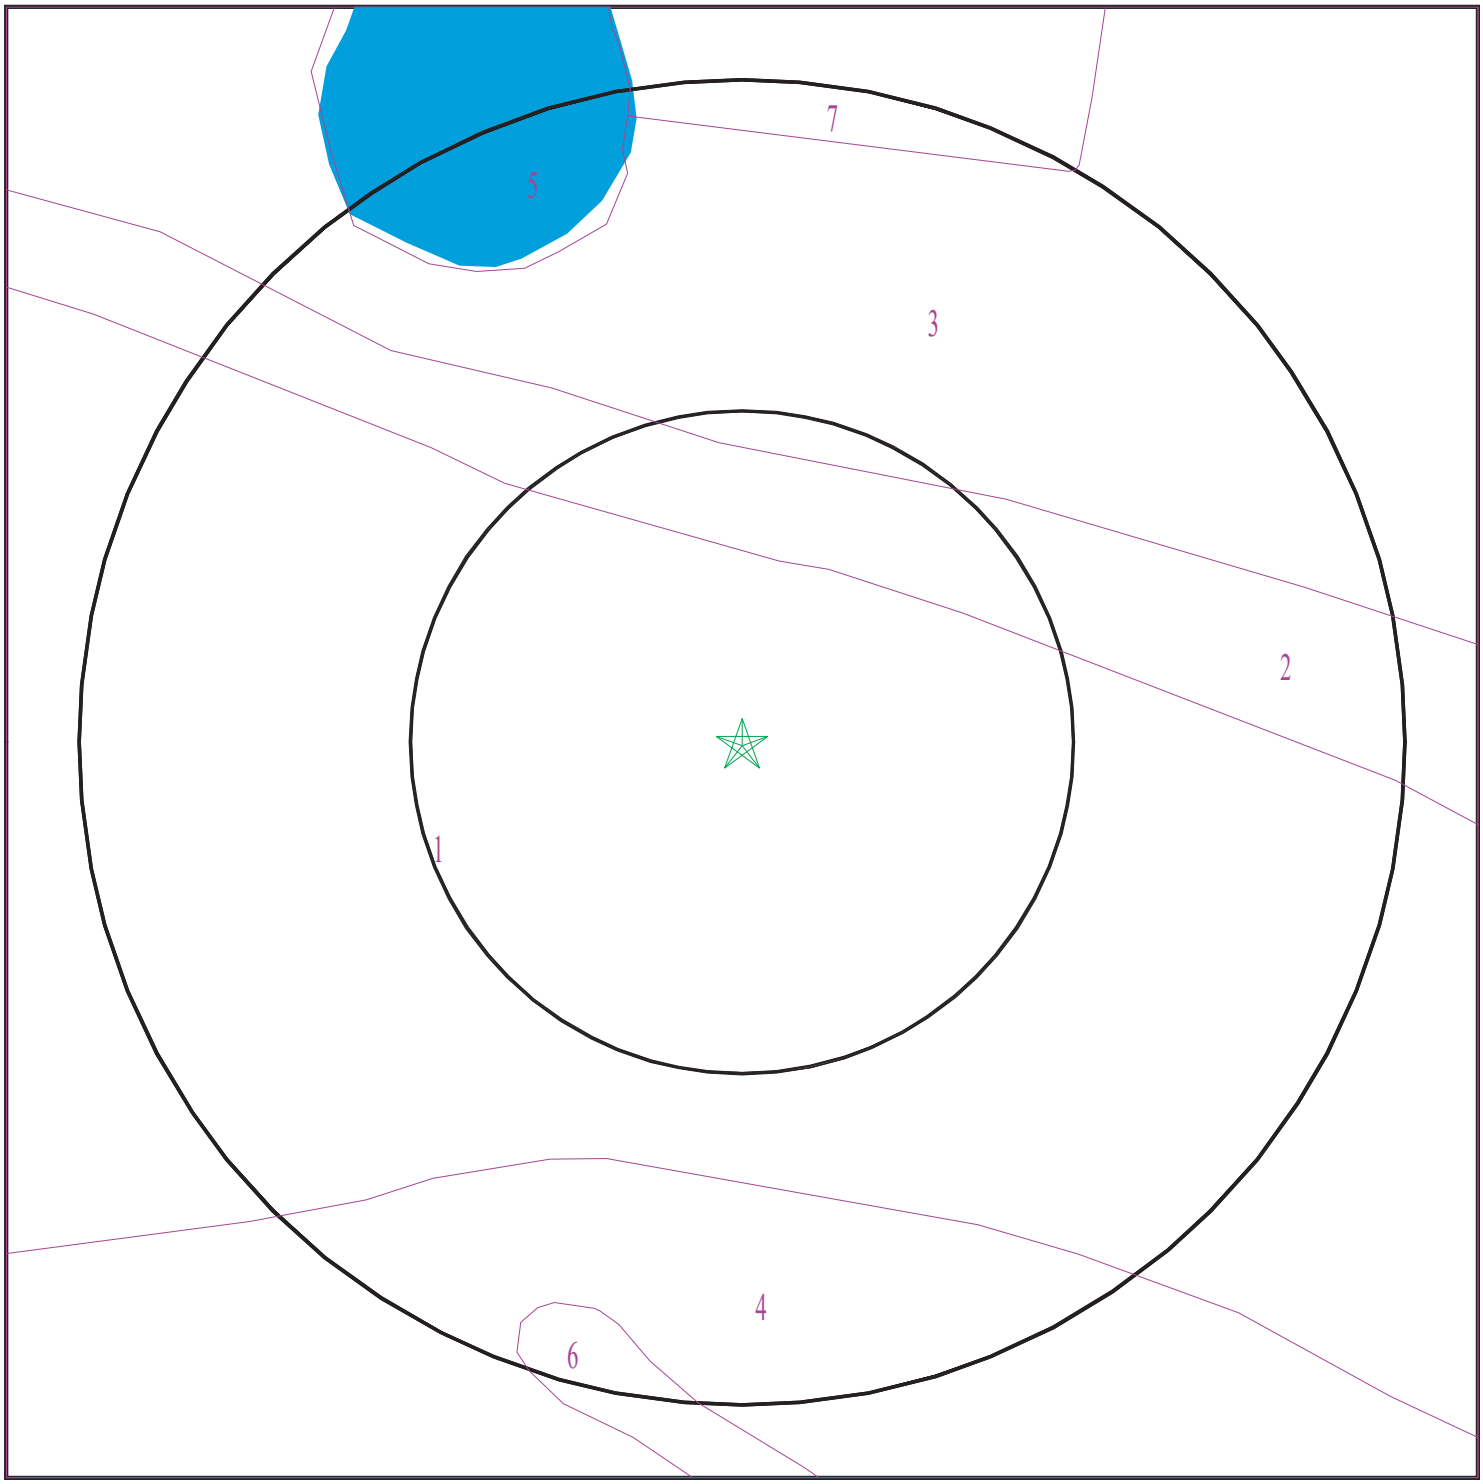
GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT



Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: Novato

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9
2	16 inches	59 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9

Soil Map ID: 3

Soil Component Name: Novato

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9
2	16 inches	59 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9

Soil Map ID: 4

Soil Component Name: Urban land

Soil Surface Texture:

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 5

Soil Component Name: Water

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 6

Soil Component Name: Orthents

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	59 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 7

Soil Component Name: Dumps

Soil Surface Texture:
Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	59 inches		Not reported	Not reported	Max: Min:	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by PES Environmental, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

APPENDIX G

RESUMES OF ENVIRONMENTAL PROFESSIONALS

JULIE TURNROSS

Senior Hydrogeologist

Ms. Turnross has over 31 years experience serving in technical and management capacities on a variety of projects in the areas of groundwater hydrogeology and geophysics. Her projects have included Phase I environmental site assessments, remedial investigations, feasibility studies, risk characterizations, and implementation of remedial alternatives at RCRA, CERCLA, and other facilities with soil, groundwater, surface water, and air contamination. Contaminants of concern have included organic solvents, petroleum hydrocarbons, metals, and explosives.

Ms. Turnross has provided litigation support and peer review for a wide variety of cases, and has served as an expert witness. She has also worked extensively with regulatory agencies throughout California and the west coast.

EDUCATION

University of California, Berkeley: M.S., Engineering Geoscience, 1984
University of Arizona, Tucson: B.S., Geoscience, 1982

EXPERIENCE

2005 – present	PES Environmental, Inc., Novato, California
1995 – present	JTEC Environmental, Sebastopol, California
1991 - 1995	Treadwell and Rollo, San Francisco, California
1984 - 1991	Harding Lawson Associates, Novato, California
1982 - 1984	U.S. Geological Survey, Denver, Colorado & Berkeley, California
1983	Laurence Berkeley Laboratory, Berkeley, California
1981	ARCO Exploration Company, Lafayette, Louisiana

REGISTRATION

California Registered Environmental Assessor No. 7862

REPRESENTATIVE PROJECTS

Naval Air Station: Performed review of remedial investigation, risk characterization, remedial alternative selection, remediation, and remediation verification for a Naval facility. Contaminants of concern included ordnance, solvents, metals, and petroleum hydrocarbons.

Litigation Support: Provided peer review of soil and groundwater investigation and remediation in support of lawsuit resulting from incomplete site cleanup. Analyzed investigation design and procedures, remedial alternative evaluation, cleanup methods, and confirmation testing.

Phase I Environmental Site Assessments: Performed or reviewed over 250 Phase I Environmental Site Assessments using ASTM standards. Clients have included lending institutions, real estate developers, insurance companies, law firms, and property owners. Properties assessed have included manufacturing facilities, office buildings, industrial sites, residential properties, and shopping centers.

Navy Shipyard: Provided technical review of Navy investigation and remedial activities and support for developer of former Navy shipyard. Site contaminants included metals, solvents, PCBs, and radiological material. Remediation included innovative technologies and implementation of land use controls.

Explosives Manufacturing Facility: Project manager for demolition of former explosives manufacturing facility, soil and groundwater investigation, and preparation of remedial investigation report. Project included development of facility use history, preparation of bid specifications, and coordination and documentation of demolition, and hazardous waste identification and disposal process.

Semiconductor Facility: Project manager for remedial investigation and feasibility study at CERCLA facility in Mountain View, California. Investigations included soil gas surveys, geophysical surveys, and soil, groundwater, and air sampling. Soil vapor extraction and groundwater extraction and treatment were used as interim remedial measures. Monitored effectiveness of 100-foot-deep, 3400-foot-perimeter slurry wall to be used to isolate contaminant source to allow dewatering and subsequent remediation by soil vapor extraction.

Chemical Facility: Project manager for remedial field investigation and corrective measures study for highly contaminated RCRA facility in Oregon. Contamination included presence of numerous free-phase and dissolved chemicals. Investigation included soil gas survey, soil borings, monitoring well installations, and air monitoring. Part of the investigation was conducted in Level B protection.

Geothermal Investigation: Performed integrated analysis of geophysical, hydrogeologic, and geologic data to develop conceptual model for geothermal basin. Designed geophysical field program using prototype equipment to evaluate geothermal reserve.

Water Supply Study: Provided water supply evaluation for proposed 300-family development with golf course and conference facility. Project included investigation of groundwater resources and water quality, and aquifer testing.

Oil Refinery: Served as technical advisor for remedial investigation and cleanup at oil refinery in southern California. Tasks included aquifer testing, investigating potential of supplying water supply well, estimating effects of saltwater intrusion on contaminant movement, and designing groundwater extraction system.

Groundwater Flow Modeling: Used three-dimensional finite-difference groundwater flow model to optimize groundwater extraction well locations and to evaluate extraction system efficiency at electronics facility in Santa Clara, California. The site was comprised of multiple discontinuous aquifers with considerable variances in thickness and hydraulic conductivity.

WILLIAM F. FRIZZELL

President
Principal Engineer

Mr. Frizzell is a civil/environmental engineer with 36 years of experience, specializing in environmental assessments of properties, soil and groundwater investigations and remediation, and hazardous and solid waste management. He has been the project manager responsible for all phases of Remedial Investigations/Feasibility Studies and remedial action planning and design. He has evaluated hazardous waste disposal facilities throughout the U.S., focusing on facilities' compliance with Federal and State regulations, and hydrogeological characteristics of the disposal sites. For real estate transfer projects, Mr. Frizzell has performed and/or managed more than 200 environmental assessments for developers, lenders, and attorneys. He has worked closely with developers on residential and commercial projects, which require environmental cleanup strategies and remediation of soils and/or groundwater. He also provides third party review of environmental projects for preparation of Environmental Impact Reports and litigation support. Mr. Frizzell has developed plans and specifications for hazardous waste site closures and has been involved in the design of gas, leachate, and surface water control systems. In addition, he has designed and prepared plans and specifications for slurry walls to control the migration of contaminated groundwater, and have been responsible for the selection and installation of synthetic liners for hazardous waste applications.

Mr. Frizzell's project experience also includes dredging feasibility studies for open water and land disposal sites. These projects have included characterization of sediments in contaminated and uncontaminated environments, biological and water quality assessments, monitoring programs and maintenance of disposal areas.

Mr. Frizzell has also performed site investigations for foundation studies and has experience in design and construction of projects involving structural grouting, dam construction, and earthwork.

EDUCATION

B.S., Civil Engineering, University of California, Berkeley, 1978

Postgraduate education has included courses and seminars in Storm Water Management, Geotechnical Engineering of Waste Management Systems, Groundwater Hydrology, Hazardous Materials Management and Handling, Stabilization and Solidification of Hazardous Waste, and Management Training.

SAFETY TRAINING

Health and safety training and update courses following EPA and OSHA requirements. Courses included training in physical, chemical, and toxicological properties of hazardous materials; hazard evaluation and control; selection and use of personal protective equipment; sampling and monitoring techniques and equipment; site entrance and decontamination procedures; and safety plan development.

EXPERIENCE

1989 - Present:	PES Environmental, Inc., Novato, California
1981 - 1989:	Harding Lawson Associates, Novato, California
1978 - 1981:	Woodward Clyde Consultants, San Francisco, California.

REGISTRATION

Civil Engineer - California, Arizona, Washington

Environmental Assessor - California, Washington

REPRESENTATIVE PROJECTS

Storm Water Management – Program manager for assisting various clients in compliance with the State of California Industrial Activities Storm Water General Permit. Activities included preparation of storm water pollution prevention plans, storm water monitoring plans and annual reports.

Litigation Support/Expert Witness Projects - Litigation support and expert witness services have included the areas of soil and groundwater remediation cost recovery actions; standard of care evaluations for environmental site assessments; assessment of damages due to releases from underground storage tanks; and claims due to a residential development over contaminated soils and groundwater. Client: Various Law Firms

Real Estate Assessment Projects - Program and project manager responsible for all phases of numerous real estate transfer assessment projects. Projects involve evaluating properties for potential liability due to hazardous waste contamination, site history evaluations, site inspections, regulatory review, and preparation of assessment reports. Program responsibilities include marketing, business development, training, and quality assurance/

quality control program development. Clients: Various Lending Institutions, Insurance Companies, Attorneys, Finance Companies and Developers

Dredging Feasibility Studies, Port of Oakland, California - Project manager responsible for dredged sediment disposal project involving site characterization and geochemical and surface water modeling to predict effluent water quality. Project involved conducting a feasibility study to dispose highly saline and contaminated sediments in an upland environment and development of control measures. Client: Port of Oakland

Richmond Marsh Restoration, Richmond, California - Large amounts of paint residue were uncovered during construction of new channels to restore marshland on edge of San Francisco Bay. As project manager: developed and implemented site-characterization plans; developed, tested, and analyzed potential remedial actions; selected preferred remedial action; prepared draft and final Remedial Action Plans; attended public hearings; developed community Relations Plan; and developed construction plans and specifications and post-construction monitoring plans. Managed all negotiations with state regulatory agencies. Client: City of Richmond

Hazardous-Waste Investigation, State Superfund Site, Richmond, California - Project manager for investigation at former pesticide formulating and packaging site. Responsible for all phases of investigation, including hydrogeological studies, analytical testing program, contaminant transport evaluations, study of offshore contaminant migration in marine sediments, evaluation of bioavailability of contaminants to marine organisms, and dredging of contaminated sediments. Planned and implemented remedial actions involving construction of temporary waste piles, installing synthetic membranes, and removing and transporting contaminated soils and debris. Project has included close coordination and involvement with various state regulatory agencies. Client: Levin Richmond Terminal Corporation

PCB Spill Investigation and Cleanup, Northern California State Superfund Site - Engineer for study to determine extent of contamination from PCB spill. Organized hydrogeologic study to determine contaminant migration potential, examined cleanup options, and prepared economic analysis of alternatives. Client: MGM Brakes

Landfill Closure Plans and Specifications, Alameda, California - Project manager responsible for preparing plans and specifications for closing 43-acre sanitary landfill adjacent to San Francisco Bay. Project included construction of surface impoundments for placing dredge spoils for use as cover material and preparation of earthwork plans and specifications for cover system. Project also included designing and installing post-closure groundwater monitoring system and performing leachate characterization study and contingency plan. Client: City of Alameda

Soil Process and Treatment Program, Richmond, California - Project manager for site remediation involving processing and treatment of 35,000 cubic yards of lead-contaminated

soil. Processing involved physical separation through screening; treatment involved proprietary fixation process. Responsible for regulatory negotiations, contractor selection, and quality control program. Client: City of Richmond

Site Remediation Program, Pittsburg, California - Project engineer responsible for plans and specifications to remediate 4-acre asbestos-contaminated site. Project involved examination and evaluation of cover options, selection of contractors, regulatory negotiations, and construction observation. Client: John Mansville

Slurry-Wall Design, Martinez, California - Project engineer responsible for designing 3300-foot-long slurry wall through existing surface impoundments containing effluent from oil refinery. Responsible for setting up and evaluating effluent/bentonite slurry permeability testing program for development of design criteria. Duties also included preparing plans and specifications, evaluating contractors' bids, and reviewing construction-control program for slurry-wall installation. Client: Shell Oil

Surveys of Hazardous-Waste Treatment, Storage, and Disposal Sites, Nationwide - Project manager responsible for conducting surveys and preparing evaluation reports for over 50 commercial hazardous-waste facilities. Evaluations focus on hydrogeologic, managerial, environmental, regulatory, financial, and safety aspects of disposal-site operations. Projects have been performed in response to generator concern for "cradle to grave" responsibility for hazardous waste. Clients: Shell Oil Company, Chevron U.S.A. Inc., and IBM Corporation

Landfill Assessment and Geotechnical Studies, Albany and Berkeley, California - Project manager for investigating and evaluating inactive sanitary landfills in regard to generation and migration of leachate and methane, providing recommendations for developing landfills to support various structures, assessing potential impact of landfill on future development, and preparing preliminary closure plans. Project has also included preliminary geotechnical studies for landfills involving geohazards evaluation, general foundation recommendations, and slope-stability studies. Client: Hall, Goodhue, Haisley and Barker, for Santa Fe Land Improvement Company

Closure Plan Development, Tucson, Arizona - Project engineer for closure plan for 18 sludge-drying beds from wastewater treatment plant. Project included developing analytical testing program, decontamination procedures, and plans for closing system. Client: Hughes Aircraft Company

Hazardous-Waste Investigation, State Superfund Site, Richmond, California - Project manager for site investigation and remedial-action planning at site contaminated with heavy metals from uncontrolled releases from waste piles and buried drums. Duties included setting up field investigations and analytical programs for site characterization and planning remedial actions. Client: Summer del Caribe

RCRA Part B Permit Application Review, Hazardous-Waste Facility - Responsible for reviewing Part B permit applications for various treatment, storage, and disposal facilities.

Reviews focus on operators' compliance with federal regulations. Client: A. T. Kearney, for U.S. Environmental Protection Agency

Hydrogeological and Geotechnical Investigation of Dioxin Contamination, Times Beach, Missouri - Served as alternate field operations manager. Conducted drilling and sampling and implemented decontamination and chain-of-custody procedures. Client: CH2M Hill, for U.S. EPA

Environmental Risk Assessment, Santa Rosa, California - Developed risk assessment report focusing on environmental risks associated with City of Santa Rosa operations, including sewer treatment plants, sludge disposal, and hazardous-material storage. Client: Environmental Risk Assessors, U.S.A.

Hazardous Waste Investigation, Sacramento, California - Engineer and assistant project manager for site investigation to characterize unknown wastes and to determine lateral and vertical extent of contamination due to unmanaged-disposal practices. Client: Aerojet

Hazardous Waste Investigation, Santa Rosa, California - Engineer for site investigation to determine existence and direction of migration of organic solvents from point sources of pollution. Organized analytical testing program to determine amounts and extent of groundwater pollution. Client: Hewlett-Packard

Landfill Closure, Alameda, California - Project engineer responsible for preparing all phases of plans and specifications for combination sanitary landfill closure and dredge spoils pond construction on 110-acre site. Project involved design of landfill closure system, slurry wall for leachate control, passive methane gas venting system, dike construction, seawall repair, decant structure, and hydraulic control systems. Client: U.S. Navy

Hazardous Waste Investigation, Martinez, California - Field engineer during investigation to determine extent of contamination due to leaching from disposal pond containing tetra ethyl lead. Supervised drilling activities and safety procedures for initial phase of cleanup study. Client: E.I. DuPont Nemours

Gasoline Spill Investigation, Novato, California - Project engineer during investigation conducted to determine extent of groundwater and soil contamination resulting from leaking underground gasoline storage ranks. Project involved using soil-gas and groundwater monitoring techniques. Client: Texaco Incorporated

Gasoline Spill Investigation, Stockton, California - Conducted post-remedial-action investigation to assess potential for future migration of gasoline from service station with residual soil contamination. Client: Exxon Company U.S.A.

Tailings Dam, Green River, Wyoming - Resident engineer during construction of tailings dam for solid-waste management program. Responsible for quality control, redesigned plans to accommodate field conditions, and prepared final earthwork report. Client: Allied Chemical

Hillside Development, Walnut Creek, California - Resident engineer in charge of construction for many phases of earthwork. Supervised mass grading operations including landslide repair, installation of subsurface drainage, and rebuilding of cut slopes. Installed and monitored hydraugers and piezometers for groundwater control. Client: Terra California

Gravel Island, Beaufort Sea, Alaska - Design verification agent during construction of island for drilling platform. Reviewed design criteria and observed construction in arctic environment. Client: Exxon Company, U.S.A.

Foundation Construction, Oakland, California - Field engineer during construction of drilled-pier foundations. Client: Peralta Hospital

Structural Grouting, Port Clinton, Ohio - Field engineer for stabilization of power plant foundation. Designed grout mixes according to varying subsurface conditions, supervised grouting batch plant operation, and installed extensometers to measure rock displacement during construction. Client: Toledo Edison Company

Earthquake Engineering, San Francisco, California - Developed seismic-response spectra for several sites in California using various computer programs and data-retrieval systems. Client: Nuclear Regulatory Commission

RE: Well Destruction Report
119 Independence Drive
Menlo Park California

Dear Mr. Milano:

Environmental Risk Specialties Corporation (ERS) has completed the well destruction for two ground water monitoring wells (MW-1 and MW-2) located at 119 Independence Drive in Menlo Park, California. ERS previously submitted a work plan to your office (dated April 13, 2011) detailing the intended procedure for destroying the ground water monitoring wells. The ground water monitoring wells were destroyed on April 29, 2011 by Hew Drilling of East Palo Alto, California. The completed California State Department of Water Resources Well Completion Report Forms (DWR 188) will be sent to the State Department of Water Resources and copies will be emailed to you under separate cover.

Drilling, logging and construction of MW-2 was performed by Lowney Associates as described in their report entitled *Ground Water and Soil Quality Reconnaissance for 119 Independence Drive, Menlo Park, CA* dated October 28, 1991. A copy of the drilling log and well construction detail are attached. MW-2 was destroyed by being drilled out to the total depth of the original boring (15 feet) using an 8-inch diameter hollow stem auger. The well casing and all annular materials were removed and the boring was tremmie grouted to the surface using Type I/II cement grout. Prior to destruction the depth to ground water was measured at 4.90 feet and the total depth was measured at 14.90 feet. All soil cuttings and annular materials were placed in a labeled, 55-gallon drum and left onsite in a secured location at the back on the property. Characterization, transport and disposal of the 55-gallon drum were beyond the scope of services for this project.

Drilling, logging and construction of MW-1 was performed by Lowney Associates as described in their report entitled *Ground Water and Soil Quality Reconnaissance Investigation*

for the Independence Drive Site, Menlo Park, CA, dated March 25, 1987. A copy of the drilling log and well construction detail are attached. MW-1 was intended to be destroyed by being drilled out but an adjacent canopy structure obstructed access for the drilling rig. We called San Mateo County Environmental Health and spoke to Mr. Charles Ice. After describing the situation and providing pertinent information we were allowed to destroy MW-1 by pressure grouting. Pressure grouting of MW-1 was performed using Type I/II cement grout tremmied into the well followed by application of 25 psi pressure maintained for a period of 5 minutes. Prior to destruction the depth to ground water was measured at 4.75 feet and the total depth was measured at 19.55 feet.

If you have any questions regarding this report or the findings of the work, please contact ERS at (408) 496-0801, extension 17 or via email at adiaz@erscorp.us.

Sincerely,

Alfred R. Diaz, PG, CEG
Senior Scientist

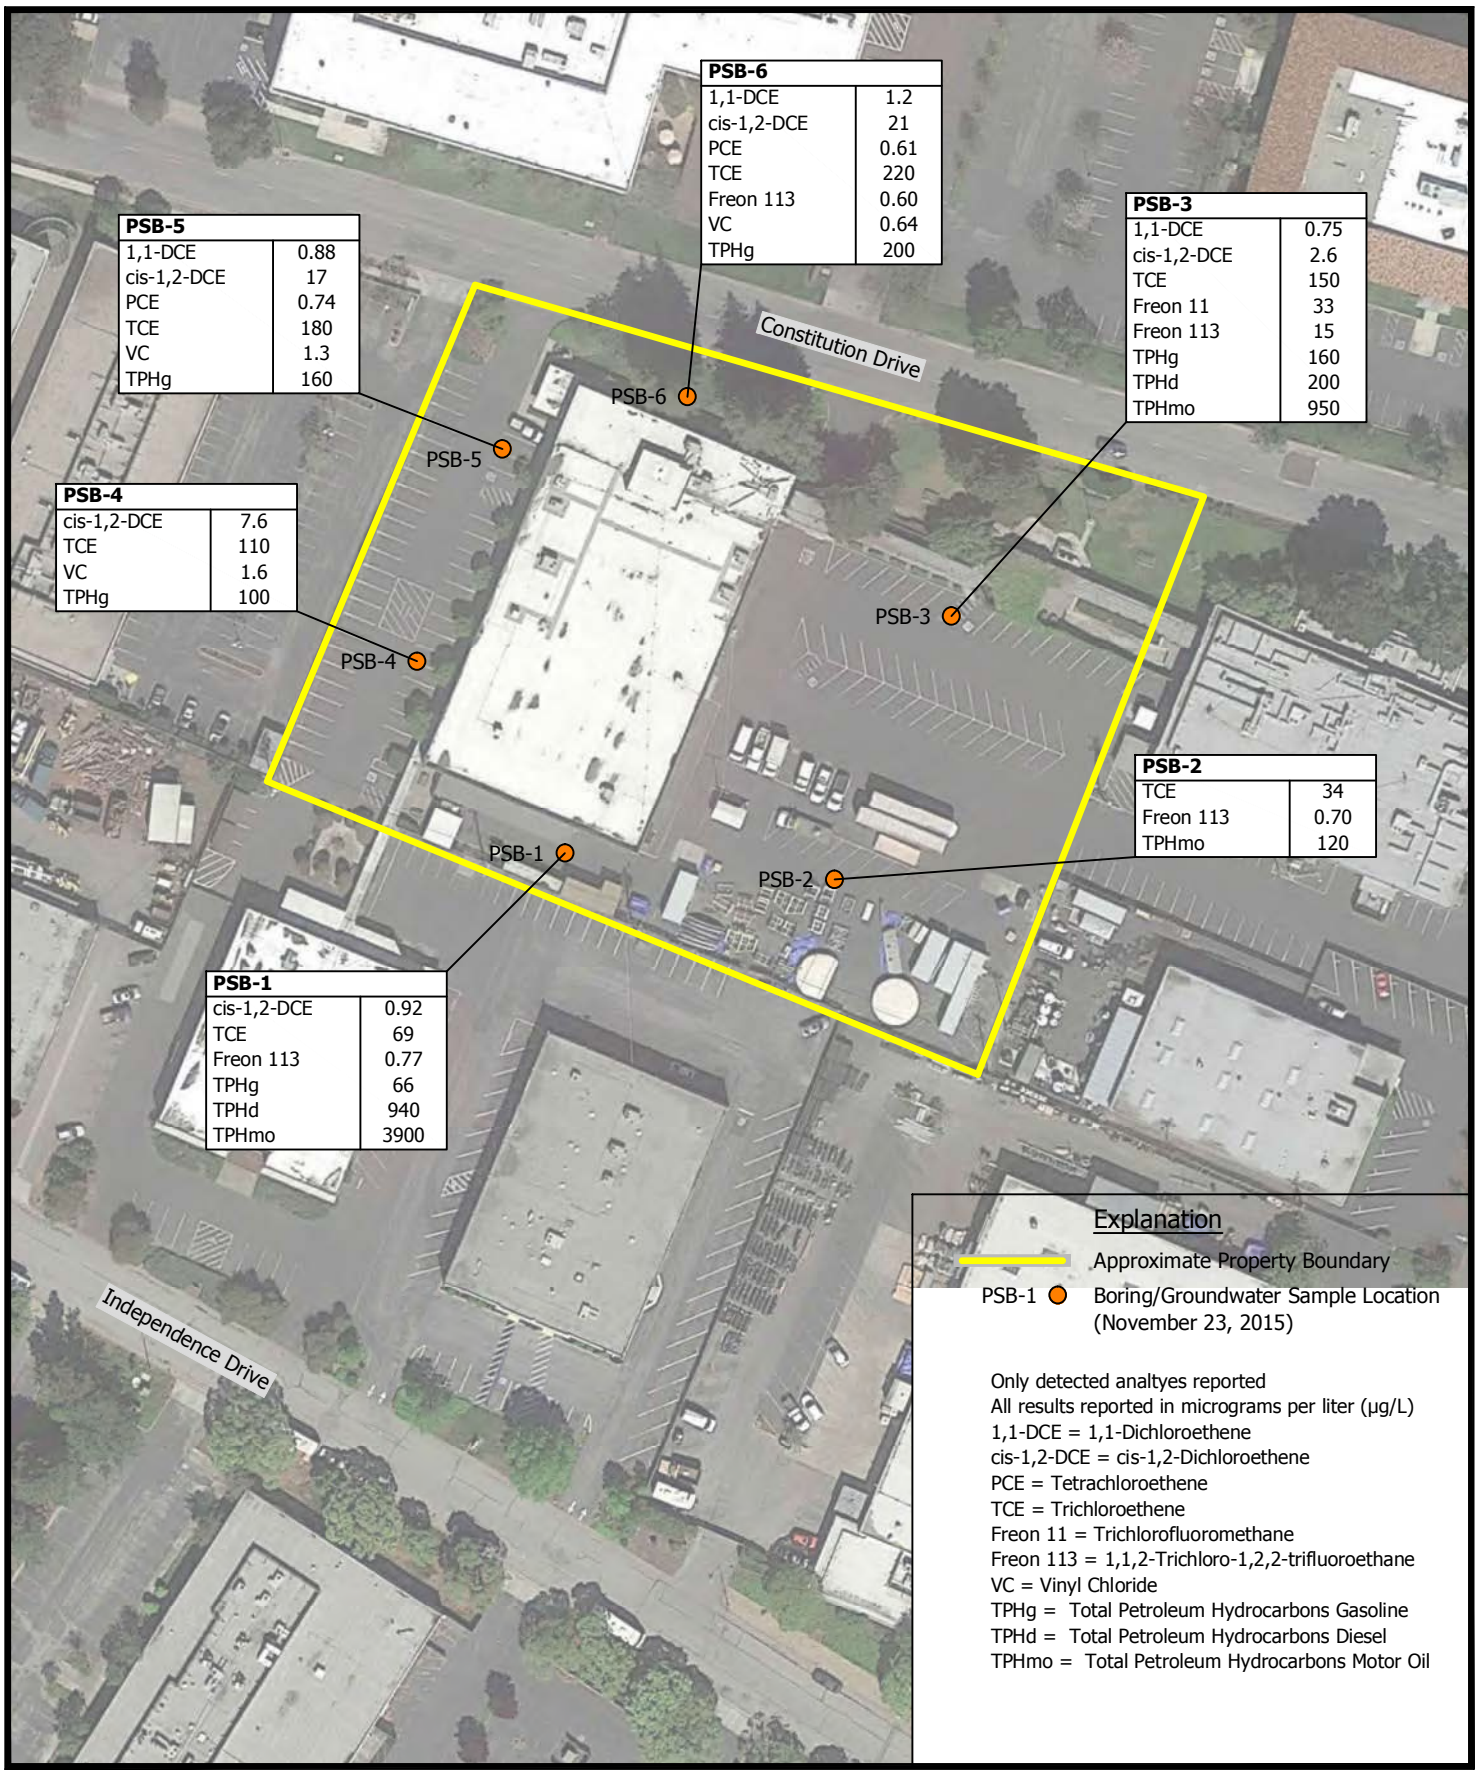
Melissa,
The requested follow up documentation of the groundwater sampling that was performed at 130 Constitution Drive, Menlo Park on November 23, 2015 (Permit# 15-2347) is attached.



- Site Map showing sample locations and all analytical detections
- Analytical Report
- Boring Logs
- Copy of the permit

Please let me know if you need anything else for the county records.

Thanks,

John T. Alexander, PE, LEED AP

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 720-68803-1

Laboratory: TestAmerica Pleasanton

Narrative

Job Narrative
720-68803-1

Comments
No additional comments.

Receipt
The samples were received on 11/23/2015 4:05 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.5º C and 2.9º C.

Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received. Received an extra set of Trip Blanks labeled TB-2, logged on hold.

GC/MS VOA
Method(s) 8260B: The following samples were collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, the pH was outside the required criteria when verified by the laboratory, and corrective action was not possible: PSB-1-GW (720-68803-2).

Method(s) 8260B: The Gasoline Range Organics (GRO) concentration reported for the following samples is due to the presence of discrete peaks: PSB-1-GW (720-68803-2), PSB-3-GW (720-68803-4), PSB-4-GW (720-68803-5), PSB-5-GW (720-68803-6) and PSB-6-GW (720-68803-7). Trichloroethene

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 720-193167 recovered above the upper control limit for Dichlorodifluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: TB-1 (720-68803-1), PSB-1-GW (720-68803-2), PSB-2-GW (720-68803-3), PSB-3-GW (720-68803-4), PSB-4-GW (720-68803-5), PSB-5-GW (720-68803-6), PSB-6-GW (720-68803-7).

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 720-193167 recovered outside control limits for the following analytes: Dichlorodifluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: PES Environmental, Inc.
Project/Site: 130 Constitution DR

TestAmerica Job ID: 720-68803-1

Client Sample ID: TB-1 — Lab Sample ID: 720-68803-1

No Detections.

Client Sample ID: PSB-1-GW — Lab Sample ID: 720-68803-2

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type

APPENDIX H

RESUMES OF ENVIRONMENTAL PROFESSIONALS

KIERSTEN HOEY

Senior Environmental Scientist

Kiersten Hoey is an environmental scientist with 17 years of experience in the environmental consulting industry. During this time, Ms. Hoey has served as a project manager and technical consultant for numerous site characterization investigations, remedial actions, and site assessments. Her experiences include: (1) conducting Phase I and Phase II site assessments and investigations; (2) planning, implementing, and managing sampling and analysis programs; (3) designing, evaluating, and implementing remedial alternatives; and (4) remedial action planning and reporting. Ms. Hoey has had extensive field experience with various drilling and sampling techniques, including cone penetrometer testing (CPT), hollow stem auger drilling, and direct push and HydroPunch™ drilling and sampling methods. She also has extensive field experience in well installation and development, soil excavation, and soil and groundwater sampling.

EDUCATION

B.S., Environmental Studies, The University of California at Santa Barbara, Santa Barbara, California

EXPERIENCE

2018 – Present:	PES Environmental, Inc., Novato, California
2007 – 2018:	GHD, Inc (Previously Conestoga-Rovers & Associates)
2004 – 2007:	Cambria Environmental Consultants
2002 – 2003:	Auckland Regional Council

HEALTH AND SAFETY TRAINING

Health and Safety training courses following EPA requirements
40-hour HAZWOPER training and annual 8-hour refresher courses

REPRESENTATIVE PROJECTS

Phase I Site Investigations, California – Have conducted numerous Phase I ESAs at commercial/industrial properties, retail shopping centers, office buildings, land located at the Port of Stockton, vineyards, auto-repair facilities, and manufacturing buildings; and 9,427 acres of forested land with barns, various waste and chemical storages, abandoned cars, debris, railcar bridges, and former homesteads and ranches. Tasks completed include historical property and surrounding site use research, site and offsite inspections, review of environmental reports and regulatory agency files, assessment of hazardous

materials/hazardous waste handling practices, interviews, and completing reports describing recognized environmental conditions, business environmental risks, and related potential environmental impairment issues.

UST Removal and Environmental Compliance, Berkeley, California – Project Manager for the removal of an abandoned underground storage tank (UST) and associated piping, and environmental compliance. Prepared UST Removal and Sampling Plan, coordinated with subcontractors and the City of Berkeley certified unified program agency (CUPA), managed the UST removal, excavation of contaminated soil for off-site disposal, and collection of compliance soil samples, and prepared subsequent UST Removal Report.

Environmental Compliance, Bay Area, California – Project Manager for environmental compliance soil and groundwater sampling during numerous retail service station demolitions and upgrades. Prepared Sampling Plans, collected compliance soil and groundwater samples, coordinated with subcontractors and local CUPAs, managed excavation of contaminated soil for off-site disposal, and prepared subsequent UST Removal Report

Site Investigation and Remediation, Bay Area and Sacramento, California – Project Manager for site investigations and remediation of petroleum hydrocarbon contamination at numerous existing and historical retail gasoline service stations throughout the San Francisco Bay Area and Sacramento. Managed environmental site investigations and preparation and implementation of various types of remedial approaches including separate phase hydrocarbon removal, air sparging, dual phase extraction, and soil excavation. Achieved environmental case closure for dozens of Leaking Underground Storage Tank (LUST) cases by characterizing hydrogeological site conditions, delineating the lateral and vertical extent of petroleum hydrocarbons, and remediation.

Site Investigation, Union City, California - Project manager of a chlorinated solvent site with contamination beneath a commercial laundry warehouse. Assessment activities included the collection of soil and groundwater samples to characterize hydrogeological site conditions and delineate the lateral and vertical extent of chlorinated solvents and the collection soil vapor and indoor ambient air samples to assess the potential vapor intrusion risk to the warehouse employees.

Site Investigations, Bay Area and Sacramento, California - Field scientist for site investigations of petroleum hydrocarbon contamination at numerous gasoline service stations throughout the San Francisco Bay Area and Sacramento. Project tasks included all logistical aspects of environmental assessments including field coordination, permitting, health and safety, oversight of drilling (hollow stem auger, mud rotary, direct push, cone penetration testing), well installations (conductor casing, monitoring and remediation wells, and vapor probes), soil, soil vapor, and groundwater sampling, and soil logging.

Land Management, Auckland, New Zealand – Auckland Regional Council Inspector for wastewater permits. Tasks included review of wastewater discharge permit applications and environmental impact reports, preparation of wastewater discharge permits, and compliance monitoring visits. Additional tasks included coordinating a habitat restoration program planting native trees and plants to reduce soil erosion along streams and conducting interactive educational sessions with the public to increase awareness of storm water pollution.

KYLE S. FLORY, P.G.

Principal Geologist

Mr. Flory has more than 35 years professional experience managing and performing technical studies in the fields of geology, hydrogeology, and environmental engineering. Mr. Flory has extensive experience in all phases of investigation, remediation, management, and closure of hazardous waste sites. Mr. Flory has conducted environmental work on aero-space manufacturing facilities, operating airports, nursery facilities, former shipyard manufacturing facilities, former solvent recycling facilities, pulp mills, wood mill sites, hazardous waste landfills, hazardous waste incinerator facilities, decommissioned oil refineries, oil drilling sites, dry-cleaning facilities, pesticide and chemical manufacturing plants, government research and development laboratories, freeze-drying facilities, wood treatment facilities, and leaking underground fuel storage tank sites.

Mr. Flory has evaluated field data to determine geologic and hydrogeologic characteristics of the vadose and saturated zones, defined the extent of contamination in the subsurface, determined contaminant volumes in the subsurface, conducted feasibility studies for remedial alternatives, performed cost-analysis to determine cost-effective remedial options in conjunction with redevelopment plans, assessment and evaluation of monitored natural attenuation parameters, developed health risk-based closure plans, designed and supervised the installation of remediation systems, supervised ongoing remediation activities, and monitored remediation progress through the life of each project. Through the application of his expertise in these areas, Mr. Flory has supported the investigation, remediation, and closure of many sites across the country that have been impacted with a wide variety of contaminants. Mr. Flory has also provided technical support in litigation cases.

Mr. Flory is experienced in a wide variety of drilling techniques, direct-push sampling technologies, cone penetrometer testing, membrane interface probe analysis, soil and sediment sampling, groundwater monitoring and extraction well design and installation, groundwater sampling, evaluating soil and groundwater analytical results, aquifer testing and analysis, soil vapor extraction well installation, vapor extraction testing and analysis, groundwater sparge testing and analysis. Mr. Flory has also performed vapor intrusion analysis, conducted indoor air sampling, health risk assessments, developing risk-based target soil and groundwater cleanup levels, regulatory negotiations, litigation support, establishing terms of sale contracts, developing the amount of escrow hold-back accounts, client relations, and project management.

EDUCATION

B.S., Geology, 1984, University of Missouri-Columbia

EXPERIENCE

1996 - Present:	PES Environmental, Inc., Novato, California
1990 - 1996:	Philip Environmental, Emeryville, California
1990 - 1990:	EMCON Associates, San Jose, California
1985 - 1988:	Woodward-Clyde Consultants, St. Louis, Missouri
1985 - 1985:	Exploration Logging Co., Houston, Texas

REGISTRATION

Professional Geologist - California

REPRESENTATIVE PROJECTS

Former Manufacturing Facility, 6701-6707 Shellmound Street, Emeryville, California – Conducted supplemental subsurface investigations to evaluate extent and volume of chemically-affected soil and soil gas related to historic landfill as well as releases of volatile organic compounds (VOCs). Developed cleanup strategy and approach for cleanup of VOC-affected soil and soil gas. The site is an active cleanup project and Alameda County Department of Environmental Health is the lead regulatory agency. Remediation included excavation of approximately 500 cubic yards of VOC-affected soil, soil vapor extraction, and design and construction of a vapor intrusion mitigation system. Client: AMCAL, Ms. Carol Schwartz.

Dry-Cleaning Facilities in California, Delaware, Illinois, Maryland, North Carolina, New Jersey, New Mexico, Oregon, Pennsylvania, South Carolina, Virginia, Washington, Washington D.C., and Wisconsin – Managed and supervised numerous subsurface investigations at approximately 75 dry-cleaning facilities. Initial investigations were conducted on behalf of potential buyer of shopping centers as part of due diligence. Investigations established baseline conditions at the time of the property transfer and allowed buyer to receive indemnity from seller or fund remediation and monitoring through escrow hold-back accounts. Also assisted other environmental consultants develop and implement subsurface investigations and remedial strategies. Developed and implemented remedial plans for cleanup of numerous dry-cleaning facilities. Clients: Confidential Real Estate Investment Trusts and Property Owners.

Former Jet Engine Repair and Testing Facility, Oakland, California -
Managed facility closure operations related to hazardous materials for jet engine repair and testing facilities used for the repair, service, and testing of aircraft engines at the Oakland

International Airport. The project included management of hazardous waste and fixed equipment, building demolition, remedial soil excavation, confirmation sampling, in-situ groundwater remediation, removal of separate phase hydrocarbons, and groundwater monitoring. Facility closure and related remediation activities were completed under the oversight of both the Alameda County Department of Environmental Health's (ACDEH) Local Oversight Program for Hazardous Materials Release (LOP), the ACDEH Certified Unified Program Agency (CUPA), as well as the San Francisco Bay Regional Water Quality Control Board (RWQCB). The work was completed under proper permits including a permit from San Francisco Bay Conservation and Development Commission (BCDC). Prior to demolition, all unused and waste chemicals and equipment were profiled, segregated, and removed from the site in accordance with applicable State and Federal laws and regulations. Mr. Flory managed oversight of decontamination contractor activities, clearance sampling and chemical analyses, and documentation of closure activities. The project also included oversight of abatement/stabilization for asbestos-containing materials (ACM), lead-containing paints (LCP) or lead-based paints (LBP), and polychlorinated biphenyl (PCB)-containing construction materials. After completion of building decontamination activities, selected buildings were demolished, including removal of foundations and subsurface infrastructure. Soil excavation and groundwater remediation including the removal of separate phase hydrocarbons were conducted to remove residual chemicals of concern. Verification testing and post-remediation groundwater monitoring was conducted to assess the effectiveness of the facility closure activities. The RWQCB issued case closure and facility closure reports have been prepared and closure is pending approval from ACDEH. Client: Rolls-Royce Corporation.

San Francisco International Airport – Provided technical consulting, litigation support and conducted technical settlement negotiations on behalf of the City and County of San Francisco regarding contaminated soil and groundwater encountered during development of the San Francisco International Airport and future costs associated with handling and managing contaminated soil and groundwater. The process included conducting detailed analysis of historical and current operations at SFIA (i.e., number of tenants at a particular location, types of operations, length of operations, leases with SFIA and agreements with other tenants, types and nature of contaminants encountered, groundwater flow direction, underground utility corridors, etc.). Based on the review of the available information, past costs incurred, and future costs expected to be incurred by SFIA were allocated to current and former tenants in accordance with the unique set of circumstances associated with each discrete development project. The results of the findings were presented to current and former tenants as technical basis for damage claim. Clients: Morrison & Foerster LLP and City and County of San Francisco.

Former Shipyard Operations Facilities, California – Conducted supplemental subsurface investigations to evaluate extent and volume of chemically-affected soil. Developed cleanup strategy and approach for cleanup of lead- and petroleum hydrocarbon-affected soil. Managed remediation of site through case closure. Remediation included excavation and relocation of 5,000 cubic yards of lead-affected soil beneath public roadway, excavation, and bioremediation of 7,400 cubic yards of petroleum hydrocarbon-affected soil and groundwater monitoring.

Case was closed by DTSC and the property was redeveloped. Clients: Confidential Developer and City of Richmond Redevelopment Agency.

Former Solvent Recycling Facility, California – Managed and supervised Remedial Investigation, Interim Remedial Action and Remedial Action Plan development and implementation under RWQCB Cleanup Order at former solvent recycling facility in San Jose, California. RI work scope included soil gas sampling, soil sampling, groundwater monitoring well installations and sampling, monitored natural attenuation parameter evaluation and reporting. IRA work scope included on and off-site groundwater monitoring well installations and sampling, geophysical survey, underground utilities survey, UST removals, monitored natural attenuation parameter evaluation and reporting. Developed and prepared an NCP-compliant Remedial Action Plan including health risk assessment, vadose zone fate and transport modeling, groundwater fate and transport modeling, evaluation of natural attenuation data, development of target soil and groundwater cleanup goals, feasibility study, and development of proposed remedy. Remedial Action Plan was accepted by the community and the RWQCB. Implemented the remedy which included source removal and monitored natural attenuation with periodic injection of hydrogen enrichment material at downgradient locations. Client: Confidential.

Nursery Facilities, California – Conducted historical review and supplemental subsurface investigations to investigate pesticide-, lead-, and petroleum hydrocarbon-affected soil and groundwater. Investigation included multi-depth discrete groundwater sampling, geophysical surveys for former fuel sources of boilers, soil sampling within greenhouses and exterior areas, and groundwater monitoring well installation and sampling. The investigation indicated that VOC-affected groundwater had affected multiple water-bearing zones beneath the site and the VOCs had originated at an off-site location(s). Developed cleanup strategy and approach for cleanup of pesticide-, lead-, and petroleum hydrocarbon-affected soil and groundwater. Prepared NCP-compliant Remedial Action Plan and participated in extensive community outreach program as part of remedial planning process. Remediation plan included excavation and off-site disposal of pesticide-, lead-, and petroleum hydrocarbon-affected soil and groundwater remediation and monitoring. The remediation was certified complete by DTSC in 2015. Clients: Eden Housing, Inc. and Community Housing Development Corporation of North Richmond.

Pulp Mill, California – Developed Areas of Interest on large pulp mill in Humboldt County. Pulp mill is located in sensitive environment with Humboldt Bay immediately east and the Pacific Ocean to the immediate west. Investigations included cone-penetrometer testing, soil gas sampling and analysis, soil and groundwater sampling, and installation, development, and sampling of multi-depth groundwater monitoring wells. Analysis of geochemical parameters was conducted to establish boundaries of freshwater-seawater intrusion and levels of background metals dissolved in groundwater. Pulp mill was sold and additional actions are pending. Client: Evergreen Pulp, Inc.

Wood Mill, California – Conducted historical research for property developer as part of environmental due diligence. Results of Phase I ESA resulted in subsurface investigations designed to investigate soil and groundwater conditions related to current or historical operations. Investigations included soil and groundwater sampling, geophysical surveys using electromagnetic and ground penetrating radar and asbestos/lead-based paint sampling. The investigation indicated that petroleum hydrocarbon- and VOC-affected soil and groundwater is present at the site. Up to seven distinct groundwater plumes were identified on the 30-acre property. Project is on hold pending recovery of real estate market. Client: Signature Properties.

Former Food Drying Facility, California – Managed and supervised Remedial Action Plan development and implementation under RWQCB SLIC Program, and provided litigation support for cost recovery at former food drying facility in Palo Alto, California. Remedial Action Plan was developed based on RI work conducted by others. Developed and prepared an NCP-compliant Remedial Action Plan including health risk assessment, vadose zone fate and transport modeling, development of target soil cleanup goals for TCE, feasibility study, and development of proposed remedy. Remedial Action Plan was accepted by the community and the RWQCB. Implemented the remedy which included source removal from interior locations through slot trenching down to 20 feet below grade. RWQCB granted no further action status for the case on the basis of the remediation results. Client: Confidential.

Investigation and Remediation of Dry-Cleaning Facilities in California – Developed and implemented investigation and remediation plans for numerous dry-cleaning facilities. Developed risk-based target soil cleanup levels and negotiated acceptance of target levels with regulatory agencies. Soil remediation was conducted via selective soil removal or soil vapor extraction. Soil excavation consisted of removal of 25 to 60 in-place cubic yards of soil and confirmation sampling. Vapor extraction was conducted using one vapor extraction well to ten soil vapor extraction wells depending on site conditions. Mitigation of vapor intrusion into commercial and residential structures has been conducted at select dry cleaners and offsite properties. Case closure was achieved at numerous dry-cleaning facilities following confirmation soil sampling or on the basis of vapor extraction system performance. Clients: Confidential Real Estate Investment Trusts and Property Owners.

Hazardous Liquid Waste Incinerator, Michigan - Performed as onsite geologist and onsite manager for a $2.5 million field investigation and subsequent RI/FS at a liquid waste incineration plant site in Michigan. The site was number one on the Environmental Protection Agency (EPA) National Priority List. The field work consisted of drilling and sampling 175 soil borings, 40 of which were completed as groundwater monitoring wells; well development, soil gas survey, residential well sampling, geophysics, supervision of eight field personnel, coordination of drilling and sampling operations, preparation of reports and posters for presentations, and representing the company to the EPA, MDNR, and PRP's on a daily basis. Mr. Flory was onsite for 1.5 years. Client: Berlin & Farro Trust Fund.

Aerospace Manufacturing Plant Closure Program, California - Managed and supervised regulatory mandated investigation and remediation at an aerospace manufacturing facility in

Southern California with light and dense nonaqueous phase liquid contamination. Activities included preparing work plans for all phases of field work, performing an extensive soil gas survey, installing and monitoring multi-level semi-permanent soil gas probes, supervising quarterly groundwater monitoring events, designing and installing a dual-completion vapor extraction wells, designing and installing a vapor extraction system for chlorinated hydrocarbons, managing remediation of vadose zone; supervising sump, clarifier, and underground fuel storage tank removals; managing hazardous and non-hazardous waste disposal, managing subcontractors, reducing data, preparing investigation and closure reports, agency negotiation and project management. Client: Confidential.

Oil Field Closure, Redondo Beach, California - Managed and supervised a decommissioned oil drilling site, a pipeline run, and a crude oil processing tank farm in Southern California. Field activities consisted of conducting subsurface investigations to determine extent of hydrocarbon impacted soil and groundwater plumes, drilling in Level B protection to define formaldehyde impact to soil, supervising soil excavation activities, performing confirmation soil sampling, reducing data, preparing investigative reports, and regulatory negotiation and project management. Client: Triton Oil & Gas Corp.

Closure of Hydrocarbon Contaminated Wetlands, California - Managed and supervised a remedial investigation to determine type and extent of hydrocarbon contamination to approximately 43,000 cubic yards of fill. Fill was dumped on a wetland area under Army Corps. of Engineers jurisdiction in Northern California. Through extensive sampling and gas chromatography analysis, asphalt was determined to be the source of the hydrocarbons in the fill. Case was closed by the regulatory oversight agency. Client: City of Fairfield.

RCRA Permitting Investigation, California - Performed RCRA permitting investigation for expanding Class I landfill in California. Supervised drilling and sampling of approximately 50 soil boreholes, monitoring wells, and vibrating wire piezometers. Also supervised downhole geophysics including spontaneous potential log, e-log, resistivity, gamma-gamma, caliper log and video log. Also assisted in data reduction for investigation report.
Client: Casmalia Landfill.

Closure of Medical Research & Development Laboratories, California – Managed and supervised a multi-phase decommissioning and closure of medical R&D laboratories. Closure included permitted hazardous waste management areas, conditionally-authorized acid waste neutralization system, drum crusher, 1,000-gallon diesel fuel UST, three vapor scrubber systems, underground fire containment tank, process, house and portable vacuum systems, burn box lines, x-ray room, chiller water sumps, and sandblaster system. Decommissioning and assessment resulted in leaving approximately 5,000 feet of ductwork in-place. Following successful decommissioning and closure the building was demolished. Client: Varian Medical Systems, Inc.

Closure of USGS Research & Development Laboratories, California – Managed and supervised a multi-phase investigation and subsequent remediation of 200,000 square feet of

R&D laboratories. Conducted extensive negotiations with U.S. Federal government. Federal government agreed to compensate client for majority of investigation and all remediation costs. Achieved closure of the facilities through health risk-based closure plan. Worked closely with new tenant's environmental consultant in establishing cleanup goals consistent with clients and new tenant's goals. Client: WSJ Properties.

RI Investigation at Former Aerospace Manufacturing Facility, California – Designed and managed subsurface investigation at former General Dynamics facility. Investigation was conducted following comprehensive Phase I ESA. Subsurface investigation included assessment of soil gas, soil, and groundwater. On the basis of the results of the work, several parcels of property were eliminated as suitable for redevelopment and several other parcels were identified as appropriate for redevelopment. Client: Frito-Lay, Inc.

RI Investigation at Former TNT Manufacturing Facility, California – Designed and managed subsurface investigation at former TNT, DNT and DNB manufacturing facility. Investigation was conducted following exhaustive Phase I ESA. Subsurface investigation included assessment of fill material, native soil, and underlying groundwater. Work was conducted to evaluate suitability for residential development. Client: Confidential Developer.

Multiple Subsurface Investigations, Various States - Developed relationship with a nationwide transportation firm to provide environmental consulting to facilities located across the United States. Activities include multi-phase subsurface investigations to define hydrocarbon impact to soil and groundwater, soil gas surveys to determine volatile organic compound impact to shallow soils, and investigation of soil impacted with virgin motor oil. Client: Penske Truck Leasing Company.

Pesticide Investigation, Missouri - Conducted an onsite and offsite subsurface investigation of a pesticide manufacturing plant in Missouri. Field work consisted of drilling and installing groundwater monitoring wells and subsequent monitoring of groundwater quality. Client: Ortho-Chevron.

Wood Treatment Plant Remedial Investigations, Illinois and Ohio - Supervised remedial investigations at wood treatment plants in Illinois and Ohio. Supervised drilling and installation of numerous groundwater monitoring wells, and evaluation of onsite extraction of naphthalene to assess potential for onsite product recovery. Client: Confidential.

Underground Fuel Storage Tank Removals, Various States - Supervised field activities and prepared closure reports for over 20 underground fuel storage tank removals for national telecommunications firm as part of due diligence for property transfers. The sites were located in various states and cities across New England and the eastern United States. Client: MCI Communications.

RI/FS Investigation, Nebraska - Supervised drilling and sampling of numerous groundwater monitoring wells at federal munitions plant in Nebraska during USEPA mandated RI/FS.

Groundwater monitoring wells in excess of 180 feet deep were drilled using mud rotary drilling techniques. Also conducted extensive groundwater testing at the Superfund site. Client: Confidential.

Remediation Pilot Tests, California - Conducted soil vapor extraction and groundwater sparging pilot tests. Developed testing protocol used in tests, supervised field testing, reduced data generated during pilot testing, and prepared reports presenting results of pilot testing. Clients: Kilpatricks Bakery, Penske Truck Leasing Company.

SAFETY TRAINING

Health and Safety training courses following EPA and OSHA requirements. Courses included training in physical, chemical, and toxicological properties of hazardous materials; hazard evaluation and control; enhanced reductive dichlorination; groundwater hydraulics; selection and use of personal protective equipment; sampling and monitoring techniques and equipment; site entrance and decontamination procedures; and safety plan development. Mr. Flory has also completed Supervisor Training and 8-hour Level B Training.
